The old French houses engaged in the Indian trade had gathered round them a train of dependents, mongrel Indians, and mongrel Frenchmen, who had intermarried with Indians. These they employed in their various expeditions by land and water. Various individuals of other countries had, of late years, pushed the trade further into the interior, to the upper waters of the Missouri, and had swelled the number of these hangers-on. Several of these traders had, two or three years previously, formed themselves into a company, composed of twelve partners, with a capital of about forty thousand dollars, called the Missouri Fur Company; the object of which was, to establish posts along the upper part of that river, and monopolize the trade. The leading partner of this company was Mr. Manuel Lisa, a Spaniard by birth, and a man of bold and enterprising character, who had ascended the Missouri almost to its source, and made himself well acquainted and popular with several of its tribes. By his exertions, trading posts had been established, in 1808, in the Sioux country, and among the Aricara and Mandan tribes; and a principal one, under Mr. Henry, one of the partners, at the forks of the Missouri. This company had in its employ about two hundred and fifty men, partly American and partly creole voyageurs.

All these circumstances combined to produce a population at St. Louis even still more motley than that at Mackinaw. Here were to be seen, about the river banks, the hectoring, extravagant bragging boatmen of the Mississippi, with the gay, grimacing, singing, good-humored Canadian voyageurs. Vagrant Indians, of various tribes, loitered about the streets. Now and then a stark Kentucky hunter, in leathern hunting-dress, with rifle on shoulder and knife in belt, strode along. Here and there were new brick houses and shops, just set up by bustling, driving, and eager men of traffic from the Atlantic States; while, on the other hand, the old French mansions, with open casements, still retained the easy, indolent air of the original colonists; and now and then the scraping of a fiddle, a strain of an ancient French song, or the sound of billiard balls, showed that the happy Gallic turn for gayety and amusement still lingered about the place.

Such was St. Louis at the time of Mr. Hunt's arrival there, and the appearance of a new fur company, with ample funds at its command, produced a strong sensation among the I traders of the place, and awakened keen jealousy and opposition on the part of the Missouri Company. Mr. Hunt proceeded to strengthen himself against all competition. For this purpose, he secured to the interests of the association another of those enterprising men, who had been engaged in individual traffic with the tribes of the Missouri. This was a Mr. Joseph Miller, a gentleman well educated and well informed, and of a respectable family of Baltimore. He had been an officer in the army of the United States, but had resigned in disgust, on being refused a furlough, and had taken to trapping beaver and trading among the Indians. He was easily induced by Mr. Hunt to join as a partner, and was considered by him, on account of his education and acquirements, and his experience in Indian trade, a valuable addition to the company.

Several additional men were likewise enlisted at St. Louis, some as boatmen, and others as hunters. These last were engaged, not merely to kill game for provisions, but also, and indeed chiefly, to trap beaver and other animals of rich furs, valuable in the trade. They enlisted on different terms. Some were to have a fixed salary of three hundred dollars; others were to be fitted out and maintained at the expense of the company, and were to hunt and trap on shares.

As Mr. Hunt met with much opposition on the part of rival traders, especially the Missouri Fur Company, it took him some weeks to complete his preparations. The delays which he had previously experienced at Montreal, Mackinaw, and on the way, added to those at St. Louis, had thrown him much behind his original calculations, so that it would be impossible to effect his voyage up the Missouri in the present year. This river, flowing from high and cold latitudes, and through wide and open plains, exposed to chilling blasts, freezes early. The winter may be dated from the first of November; there was every prospect, therefore, that it would be closed with ice long before Mr. Hunt could reach its upper waters. To avoid, however, the expense of wintering at St. Louis, he determined to push up the river as far as possible, to some point above the settlements, where game was plenty, and where his whole party could be subsisted by hunting, until the breaking up of the ice in the spring should permit them to resume their voyage.

Accordingly on the twenty-first of October he took his departure from St. Louis. His party was

distributed in three boats. One was the barge which he had brought from Mackinaw; another was of a larger size, such as was formerly used in navigating the Mohawk River, and known by the generic name of the Schenectady barge; the other was a large keel boat, at that time the grand conveyance on the Mississippi.

In this way they set out from St. Louis, in buoyant spirits, and soon arrived at the mouth of the Missouri. This vast river, three thousand miles in length, and which, with its tributary streams, drains such an immense extent of country, was as yet but casually and imperfectly navigated by the adventurous bark of the fur trader. A steamboat had never yet stemmed its turbulent current. Sails were but of casual assistance, for it required a strong wind to conquer the force of the stream. The main dependence was on bodily strength and manual dexterity. The boats, in general, had to be propelled by oars and setting poles, or drawn by the hand and by grappling hooks from one root or overhanging tree to another; or towed by the long cordelle, or towing line, where the shores were sufficiently clear of woods and thickets to permit the men to pass along the banks.

During this slow and tedious progress the boat would be exposed to frequent danger from floating trees and great masses of drift-wood, or to be impaled upon snags and sawyers; that is to say, sunken trees, presenting a jagged or pointed end above the surface of the water. As the channel of the river frequently shifted from side to side according to the bends and sand-banks, the boat had, in the same way, to advance in a zigzag course. Often a part of the crew would have to leap into the water at the shallows, and wade along with the towing line, while their comrades on board toilsomely assisted with oar and setting pole. Sometimes the boat would seem to be retained motionless, as if spell-bound, opposite some point round which the current set with violence, and where the utmost labor scarce effected any visible progress.

On these occasions it was that the merits of the Canadian voyageurs came into full action. Patient of toil, not to be disheartened by impediments and disappointments, fertile in expedients, and versed in every mode of humoring and conquering the wayward current, they would ply every exertion, sometimes in the boat, sometimes on shore, sometimes in the water, however cold; always alert, always in good humor; and, should they at any time flag or grow weary, one of their popular songs, chanted by a veteran oarsman, and responded to in chorus, acted as a never-failing restorative.

By such assiduous and persevering labor they made their way about four hundred and fifty miles up the Missouri, by the 16th of November, to the mouth of the Nodowa. As this was a good hunting country, and as the season was rapidly advancing, they determined to establish their winter quarters at this place; and, in fact, two days after they had come to a halt, the river closed just above their encampment.

The party had not been long at this place when they were joined by Mr. Robert M'Lellan, another trader of the Missouri; the same who had been associated with Mr. Crooks in the unfortunate expedition in which they had been intercepted by the Sioux Indians, and obliged to make a rapid retreat down the river.

M'Lellan was a remarkable man. He had been a partisan under General Wayne, in his Indian wars, where he had distinguished himself by his fiery spirit and reckless daring, and marvelous stories were told of his exploits. His appearance answered to his character. His frame was meagre, but muscular; showing strength, activity, and iron firmness. His eyes were dark, deep-set, and piercing. He was restless, fearless, but of impetuous and sometimes ungovernable temper. He had been invited by Mr. Hunt to enroll himself as a partner, and gladly consented; being pleased with the thoughts of passing with a powerful force through the country of the Sioux, and perhaps having an opportunity of revenging himself upon that lawless tribe for their past offenses.

Another recruit that joined the camp at Nodowa deserves equal mention. This was John Day, a hunter from the backwoods of Virginia, who had been several years on the Missouri in the service of Mr. Crooks, and of other traders. He was about forty years of age, six feet two inches high, straight as an Indian; with an elastic step as if he trod on springs, and a handsome, open, manly countenance. It was his boast that, in his younger days, nothing could hurt or daunt him; but he had "lived too fast," and injured his constitution by his excesses. Still he was strong of hand, bold of heart, a prime woodman, and an almost unerring shot. He had the frank spirit of a Virginian, and the rough heroism of a pioneer of the west.

The party were now brought to a halt for several months. They were in a country abounding with deer and wild turkeys, so that there was no stint of provisions, and every one appeared cheerful and contented. Mr. Hunt determined to avail himself of this interval to return to St. Louis and obtain a reinforcement.

He wished to procure an interpreter, acquainted with the language of the Sioux, as, from all accounts, he apprehended difficulties in passing through the country of that nation. He felt the necessity, also, of having a greater number of hunters, not merely to keep up a supply of provisions throughout their long and arduous expedition, but also as a protection and defense, in case of Indian hostilities. For such service the Canadian voyageurs were little to be depended upon, fighting not being a part of their profession. The proper kind of men were American hunters, experienced in savage life and savage warfare, and possessed of the true game spirit of the west.

Leaving, therefore, the encampment in charge of the other partners, Mr. Hunt set off on foot on the first of January (1810), for St. Louis. He was accompanied by eight men as far as Fort Osage, about one hundred and fifty miles below Nodowa. Here he procured a couple of horses, and proceeded on the remainder of his journey with two men, sending the other six back to the encampment. He arrived at St. Louis on the 20th of January.

ON this his second visit to St. Louis, Mr. Hunt was again impeded in his plans by the opposition of the Missouri Fur Company. The affairs of that company were, at this time, in a very dubious state. During the preceding year, their principal establishment at the forks of the Missouri had been so much harassed by the Blackfeet Indians, that its commander, Mr. Henry, one of the partners, had been compelled to abandon the post and cross the Rocky Mountains, with the intention of fixing himself upon one of the upper branches of the Columbia. What had become of him and his party was unknown. The most intense anxiety was felt concerning them, and apprehensions that they might have been cut off by the savages. At the time of Mr. Hunt's arrival at St. Louis, the Missouri Company were fitting out an expedition to go in quest of Mr. Henry. It was to be conducted by Mr. Manuel Lisa, the partner already mentioned.

There being thus two expeditions on foot at the same moment, an unusual demand was occasioned for hunters and voyageurs, who accordingly profited by the circumstance, and stipulated for high terms. Mr. Hunt found a keen and subtle competitor in Lisa, and was obliged to secure his recruits by liberal advances of pay, and by other pecuniary indulgences.

The greatest difficulty was to procure the Sioux interpreter. There was but one man to be met with at St. Louis who was fitted for the purpose, but to secure him would require much management. The individual in question was a half-breed, named Pierre Dorion; and, as he figures hereafter in this narrative, and is, withal, a striking specimen of the hybrid race on the frontier, we shall give a few particulars concerning him. Pierre was the son of Dorion, the French interpreter, who accompanied Messrs. Lewis and Clark in their famous exploring expedition across the Rocky Mountains. Old Dorion was one of those French creoles, descendants of the ancient Canadian stock, who abound on the western frontier, and amalgamate or cohabit with the savages. He had sojourned among various tribes, and perhaps left progeny among them all; but his regular, or habitual wife, was a Sioux squaw. By her he had a hopeful brood of half-breed sons, of whom Pierre was one. The domestic affairs of old Dorion were conducted on the true Indian plan. Father and sons would occasionally get drunk together, and then the cabin was a scene of ruffian brawl and fighting, in the course of which the old Frenchman was apt to get soundly belabored by his mongrel offspring. In a furious scuffle of the kind, one of the sons got the old man upon the ground, and was upon the point of scalping him. "Hold! my son," cried the old fellow, in imploring accents, "you are too brave, too honorable to scalp your father!" This last appeal touched the French side of the half-breed's heart, so he suffered the old man to wear his scalp unharmed.

Of this hopeful stock was Pierre Dorion, the man whom it was now the desire of Mr. Hunt to engage as an interpreter. He had been employed in that capacity by the Missouri Fur Company during the preceding year, and conducted their traders in safety through the different tribes of the Sioux. He had proved himself faithful and serviceable while sober; but the love of liquor, in which

---

he had been nurtured and brought up, would occasionally break out, and with it the savage side of his character.

It was his love of liquor which had embroiled him with the Missouri Company. While in their service at Fort Mandan, on the frontier, he had been seized with a whiskey mania; and, as the beverage was only to be procured at the company's store, it had been charged in his account at the rate of ten dollars a quart. This item had ever remained unsettled, and a matter of furious dispute, the mere mention of which was sufficient to put him in a passion.

The moment it was discovered by Mr. Lisa that Pierre Dorion was in treaty with the new and rival association, he endeavored, by threats as well as promises, to prevent his engaging in their service. His promises might, perhaps, have prevailed; but his threats, which related to the whiskey debt, only served to drive Pierre into the opposite ranks. Still he took advantage of this competition for his services to stand out with Mr. Hunt on the most advantageous terms, and, after a negotiation of nearly two weeks, capitulated to serve in the expedition, as hunter and interpreter, at the rate of three hundred dollars a year, two hundred of which were to be paid in advance.

When Mr. Hunt had got everything ready for leaving St. Louis, new difficulties arose. Five of the American hunters from the encampment at Nodowa, suddenly made their appearance. They alleged that they had been ill treated by the partners at the encampment, and had come off clandestinely, in consequence of a dispute. It was useless at the present moment, and under present circumstances, to attempt any compulsory measures with these deserters. Two of them Mr. Hunt prevailed upon, by mild means, to return with him. The rest refused; nay, what was worse, they spread such reports of the hardships and dangers to be apprehended in the course of the expedition, that they struck a panic into those hunters who had recently engaged at St. Louis, and, when the hour of departure arrived, all but one refused to embark. It was in vain to plead or remonstrate; they shouldered their rifles and turned their backs upon the expedition, and Mr. Hunt was fain to put off from shore with the single hunter and a number of voyageurs whom he had engaged. Even Pierre Dorion, at the last moment, refused to enter the boat until Mr. Hunt consented to take his squaw and two children on board also. But the tissue of perplexities, on account of this worthy individual, did not end here.

Among the various persons who were about to proceed up the Missouri with Mr. Hunt, were two scientific gentlemen; one Mr. John Bradbury, a man of mature age, but great enterprise and personal activity, who had been sent out by Linnaean Society of Liverpool to make a collection of American plants; the other, a Mr. Nuttall, likewise an Englishman, younger in years, who has since made himself known as the author of *Travels in Arkansas*, and a work on the *Genera of American Plants*. Mr. Hunt had offered them the protection and facilities of his party, in their scientific research up the Missouri River. As they were not ready to depart at the moment of embarkation, they put their trunks on board of the boat, but remained at St. Louis until the next day, for the arrival of the post, intending to join the expedition at St. Charles, a short distance above the mouth of the Missouri.

The same evening, however, they learned that a writ had been issued against Pierre Dorion for his whiskey debt, by Mr. Lisa, as agent of the Missouri Company, and that it was the intention to entrap the mongrel linguist on his arrival at St. Charles.

Upon hearing this, Mr. Bradbury and Mr. Nuttall set off a little after midnight, by land, got ahead of the boat as it was ascending the Missouri, before its arrival at St. Charles, and gave Pierre Dorion warning of the legal toil prepared to ensnare him.

The knowing Pierre immediately landed and took to the woods, followed by his squaw laden with their papooses, and a large bundle containing their most precious effects, promising to rejoin the party some distance above St. Charles. There seemed little dependence to be placed upon the promises of a loose adventurer of the kind, who was at the very time playing an evasive game with his former employers; who had already received two-thirds of his year's pay, and his rifle on his shoulder, his family and worldly fortunes at his heels, and the wild woods before him. There was no alternative, however, and it was hoped his pique against his old employers would render him faithful to his new ones.

The party reached St. Charles in the afternoon, but the harpies of the law looked in vain for their expected prey. The boats resumed their course on the following morning, and had not proceeded far when Pierre Dorion made his appearance on the shore. He was gladly taken on board, but he came without his squaw. They had quarreled in the night; Pierre had administered the Indian discipline of the cudgel, whereupon she had taken to the woods, with their children and all their worldly goods. Pierre evidently was deeply grieved and disconcerted at the loss of his wife and his knapsack, whereupon Mr. Hunt despatched one of the Canadian voyageurs in search of the fugitive; and the whole party, after proceeding a few miles further, encamped on an island to wait his return. The Canadian rejoined the party, but without the squaw; and Pierre Dorion passed a solitary and anxious night, bitterly regretting his indiscretion in having exercised his conjugal authority so near home. Before daybreak, however, a well-known voice reached his ears from the opposite shore. It was his repentant spouse, who had been wandering the woods all night in quest of the party, and had at length descried it by its fires. A boat was despatched for her, the interesting family was once more united, and Mr. Hunt now flattered himself that his perplexities with Pierre Dorion were at an end.

Bad weather, very heavy rains, and an unusually early rise in the Missouri, rendered the ascent of the river toilsome, slow, and dangerous. The rise of the Missouri does not generally take place until the month of May or June: the present swelling of the river must have been caused by a freshet in some of its more southern branches. It could not have been the great annual flood, as the higher branches must still have been ice-bound.

And here we cannot but pause, to notice the admirable arrangement of nature, by which the annual swellings of the various great rivers which empty themselves into the Mississippi, have been made to precede each other at considerable intervals. Thus, the flood of the Red River precedes that of the Arkansas by a month. The Arkansas, also, rising in a much more southern latitude than

the Missouri, takes the lead of it in its annual excess, and its superabundant waters are disgorged and disposed of long before the breaking up of the icy barriers of the north; otherwise, did all these mighty streams rise simultaneously, and discharge their vernal floods into the Mississippi, an inundation would be the consequence, that would submerge and devastate all the lower country.

On the afternoon of the third day, January, 17th, the boats touched at Charette, one of the old villages founded by the original French colonists. Here they met with Daniel Boone, the renowned patriarch of Kentucky, who had kept in the advance of civilization, and on the borders of the wilderness, still leading a hunter's life, though now in his eighty-fifth year. He had but recently returned from a hunting and trapping expedition, and had brought nearly sixty beaver skins as trophies of his skill. The old man was still erect in form, strong in limb, and unflinching in spirit, and as he stood on the river bank, watching the departure of an expedition destined to traverse the wilderness to the very shores of the Pacific, very probably felt a throb of his old pioneer spirit, impelling him to shoulder his rifle and join the adventurous band. Boone flourished several years after this meeting, in a vigorous old age, the Nestor of hunters and backwoodsmen; and died, full of sylvan honor and renown, in 1818, in his ninety-second year.

The next morning early, as the party were yet encamped at the mouth of a small stream, they were visited by another of these heroes of the wilderness, one John Colter, who had accompanied Lewis and Clarke in their memorable expedition. He had recently made one of those vast internal voyages so characteristic of this fearless class of men, and of the immense regions over which they hold their lonely wanderings; having come from the head waters of the Missouri to St. Louis in a small canoe. This distance of three thousand miles he had accomplished in thirty days. Colter kept with the party all the morning. He had many particulars to give them concerning the Black-foot Indians, a restless and predatory tribe, who had conceived an implacable hostility to the white men, in consequence of one of their warriors having been killed by Captain Lewis, while attempting to steal horses. Through the country infested by these savages the expedition would have to proceed, and Colter was urgent in reiterating the precautions that ought to be observed respecting them. He had himself experienced their vindictive cruelty, and his story deserves particular citation, as showing the hairbreadth adventures to which these solitary rovers of the wilderness are exposed.

Colter, with the hardihood of a regular trapper, had cast himself loose from the party of Lewis and Clarke in the very heart of the wilderness, and had remained to trap beaver alone on the head waters of the Missouri. Here he fell in with another lonely trapper, like himself, named Potts, and they agreed to keep together. They were in the very region of the terrible Blackfeet, at that time thirsting to revenge the death of their companion, and knew that they had to expect no mercy at their hands. They were obliged to keep concealed all day in the woody margins of the rivers, setting their traps after nightfall and taking them up before daybreak. It was running a fearful risk for the sake of a few beaver skins; but such is the life of the trapper.

They were on a branch of the Missouri called Jefferson Fork, and had set their traps at night,

---

about six miles up a small river that emptied into the fork. Early in the morning they ascended the river in a canoe, to examine the traps. The banks on each side were high and perpendicular, and cast a shade over the stream. As they were softly paddling along, they heard the trampling of many feet upon the banks. Colter immediately gave the alarm of "Indians!" and was for instant retreat. Potts scoffed at him for being frightened by the trampling of a herd of buffaloes. Colter checked his uneasiness and paddled forward. They had not gone much further when frightful whoops and yells burst forth from each side of the river, and several hundred Indians appeared on either bank. Signs were made to the unfortunate trappers to come on shore. They were obliged to comply. Before they could get out of their canoe, a savage seized the rifle belonging to Potts. Colter sprang on shore, wrestled the weapon from the hands of the Indian, and restored it to his companion, who was still in the canoe, and immediately pushed into the stream. There was the sharp twang of a bow, and Potts cried out that he was wounded. Colter urged him to come on shore and submit, as his only chance for life; but the other knew there was no prospect of mercy, and determined to die game. Leveling his rifle, he shot one of the savages dead on the spot. The next moment he fell himself, pierced with innumerable arrows.

The vengeance of the savages now turned upon Colter. He was stripped naked, and, having some knowledge of the Blackfoot language, overheard a consultation as to the mode of despatching him, so as to derive the greatest amusement from his death. Some were for setting him up as a mark, and having a trial of skill at his expense. The chief, however, was for nobler sport. He seized Colter by the shoulder, and demanded if he could run fast. The unfortunate trapper was too well acquainted with Indian customs not to comprehend the drift of the question. He knew he was to run for his life, to furnish a kind of human hunt to his persecutors. Though in reality he was noted among his brother hunters for swiftness of foot, he assured the chief that he was a very bad runner. His stratagem gained him some vantage ground. He was led by the chief into the prairie, about four hundred yards from the main body of savages, and then turned loose to save himself if he could. A tremendous yell let him know that the whole pack of bloodhounds were off in full cry. Colter flew rather than ran; he was astonished at his own speed; but he had six miles of prairie to traverse before he should reach the Jefferson Fork of the Missouri; how could he hope to hold out such a distance with the fearful odds of several hundred to one against him! The plain, too, abounded with the prickly pear, which wounded his naked feet. Still he fled on, dreading each moment to hear the twang of a bow, and to feel an arrow quivering at his heart. He did not even dare to look round, lest he should lose an inch of that distance on which his life depended. He had run nearly half way across the plain when the sound of pursuit grew somewhat fainter, and he ventured to turn his head. The main body of his pursuers were a considerable distance behind; several of the fastest runners were scattered in the advance; while a swift-footed warrior, armed with a spear, was not more than a hundred yards behind him.

Inspired with new hope, Colter redoubled his exertions, but strained himself to such a degree, that the blood gushed from his mouth and nostrils, and streamed down his breast. He arrived within a mile of the river. The sound of footsteps gathered upon him. A glance behind showed his pursuer within twenty yards, and preparing to launch his spear. Stopping short he turned round and spread out his arms. The savage, confounded by this sudden action, attempted to stop

and hurl his spear, but fell in the very act. His spear stuck in the ground, and the shaft broke in his hand. Colter plucked up the pointed part, pinned the savage to the earth, and continued his flight. The Indians, as they arrived at their slaughtered companion, stopped to howl over him. Colter made the most of this precious delay, gained the skirt of cotton-wood bordering the river, dashed through it, and plunged into the stream. He swam to a neighboring island, against the upper end of which the driftwood had lodged in such quantities as to form a natural raft; under this he dived, and swam below water until he succeeded in getting a breathing place between the floating trunks of trees, whose branches and bushes formed a covert several feet above the level of the water. He had scarcely drawn breath after all his toils, when he heard his pursuers on the river bank, whooping and yelling like so many fiends. They plunged in the river, and swam to the raft. The heart of Colter almost died within him as he saw them, through the chinks of his concealment, passing and repassing, and seeking for him in all directions. They at length gave up the search, and he began to rejoice in his escape, when the idea presented itself that they might set the raft on fire. Here was a new source of horrible apprehension, in which he remained until nightfall. Fortunately the idea did not suggest itself to the Indians. As soon as it was dark, finding by the silence around that his pursuers had departed, Colter dived again and came up beyond the raft. He then swam silently down the river for a considerable distance, when he landed, and kept on all night, to get as far as possible from this dangerous neighborhood.

By daybreak he had gained sufficient distance to relieve him from the terrors of his savage foes; but now new sources of inquietude presented themselves. He was naked and alone, in the midst of an unbounded wilderness; his only chance was to reach a trading post of the Missouri Company, situated on a branch of the Yellowstone River. Even should he elude his pursuers, days must elapse before he could reach this post, during which he must traverse immense prairies destitute of shade, his naked body exposed to the burning heat of the sun by day, and the dews and chills of the night season, and his feet lacerated by the thorns of the prickly pear. Though he might see game in abundance around him, he had no means of killing any for his sustenance, and must depend for food upon the roots of the earth. In defiance of these difficulties he pushed resolutely forward, guiding himself in his trackless course by those signs and indications known only to Indians and backwoodsmen; and after braving dangers and hardships enough to break down any spirit but that of a western pioneer, arrived safe at the solitary post in question. \* (\* Bradbury, *Travels in America*, p. 17.)

Such is a sample of the rugged experience which Colter had to relate of savage life; yet, with all these perils and terrors fresh in his recollection, he could not see the present band on their way to those regions of danger and adventure, without feeling a vehement impulse to join them. A western trapper is like a sailor; past hazards only stimulate him to further risks. The vast prairie is to the one what the ocean is to the other, a boundless field of enterprise and exploit. However he may have suffered in his last cruise, he is always ready to join a new expedition; and the more adventurous its nature, the more attractive is it to his vagrant spirit.

Nothing seems to have kept Colter from continuing with the party to the shores of the Pacific but the circumstances of his having recently married. All the morning he kept with them, balancing

---

in his mind the charms of his bride against those of the Rocky Mountains; the former, however, prevailed, and after a march of several miles, he took a reluctant leave of the travellers, and turned his face homeward.

Continuing their progress up the Missouri, the party encamped on the evening of the 21st of March, in the neighborhood of a little frontier village of French creoles. Here Pierre Dorion met with some of his old comrades, with whom he had a long gossip, and returned to the camp with rumors of bloody feuds between the Osages and the loways, or Ayaways, Potowatomies, Sioux, and Sawkees. Blood had already been shed, and scalps been taken. A war party, three hundred strong, were prowling in the neighborhood; others might be met with higher up the river; it behooved the travellers, therefore, to be upon their guard against robbery or surprise, for an Indian war-party on the march is prone to acts of outrage.

In consequence of this report, which was subsequently confirmed by further intelligence, a guard was kept up at night round the encampment, and they all slept on their arms. As they were sixteen in number, and well supplied with weapons and ammunition, they trusted to be able to give any marauding party a warm reception. Nothing occurred, however, to molest them on their voyage, and on the 8th of April they came in sight of Fort Osage. On their approach the flag was hoisted on the fort, and they saluted it by a discharge of fire-arms. Within a short distance of the fort was an Osage village, the inhabitants of which, men, women, and children, thronged down to the water side to witness their landing. One of the first persons they met on the river bank was Mr. Crooks, who had come down in a boat, with nine men, from their winter encampment at Nodowa to meet them.

They remained at Fort Osage a part of three days, during which they were hospitably entertained at the garrison by Lieutenant Brownson, who held a temporary command. They were regaled also with a war-feast at the village; the Osage warriors having returned from a successful foray against the loways, in which they had taken seven scalps. They were paraded on poles about the village, followed by the warriors decked out in all their savage ornaments, and hideously painted as if for battle.

By the Osage warriors, Mr. Hunt and his companions were again warned to be on their guard in ascending the river, as the Sioux tribe meant to lay in wait and attack them.

On the 10th of April they again embarked their party, being now augmented to twenty-six, by the addition of Mr. Crooks and his boat's crew. They had not proceeded far, however, when there was a great outcry from one of the boats; it was occasioned by a little domestic discipline in the Dorion family. The squaw of the worthy interpreter, it appeared, had been so delighted with the scalp-dance, and other festivities of the Osage village, that she had taken a strong inclination to remain there. This had been as strongly opposed by her liege lord, who had compelled her to embark. The good dame had remained sulky ever since, whereupon Pierre, seeing no other mode of exorcising the evil spirit out of her, and being, perhaps, a little inspired by whiskey, had resorted to the Indian remedy of the cudgel, and before his neighbors could interfere, had belabored her

so soundly, that there is no record of her having shown any refractory symptoms throughout the remainder of the expedition.

For a week they continued their voyage, exposed to almost incessant rains. The bodies of drowned buffaloes floated past them in vast numbers; many had drifted upon the shore, or against the upper ends of the rafts and islands. These had attracted great flights of turkey-buzzards; some were banqueting on the carcasses, others were soaring far aloft in the sky, and others were perched on the trees, with their backs to the sun, and their wings stretched out to dry, like so many vessels in harbor, spreading their sails after a shower.

The turkey-buzzard (*vultur aura*, or golden vulture), when on the wing, is one of the most specious and imposing of birds. Its flight in the upper regions of the air is really sublime, extending its immense wings, and wheeling slowly and majestically to and fro, seemingly without exerting a muscle or fluttering a feather, but moving by mere volition, and sailing on the bosom of the air, as a ship upon the ocean. Usurping the empyreal realm of the eagle, he assumes for a time the port and dignity of that majestic bird, and often is mistaken for him by ignorant crawlers upon the earth. It is only when he descends from the clouds to pounce upon carrion that he betrays his low propensities, and reveals his caitiff character. Near at hand he is a disgusting bird, ragged in plumage, base in aspect, and of loathsome odor.

On the 17th of April Mr. Hunt arrived with his party at the station near the Nodowa River, where the main body had been quartered during the winter.

Washington Irving's Astoria

CHAPTER XVI.

Return of Spring.- Appearance of Snakes.- Great Flights of Wild Pigeons.- Renewal of the Voyage.- Night Encampments.- Platte River. - Ceremonials on Passing It.- Signs of Indian War Parties.- Magnificent Prospect at Papillion Creek.- Desertion of Two Hunters.An Irruption Into the Camp of Indian Desperadoes.- Village of the Omahas.-A necdotes of the Tribe.- Feudal Wars of the Indians.-Story of Blackbird, the Famous Omaha Chief.

THE weather continued rainy and ungenial for some days after Mr. Hunt's return to Nodowa; yet spring was rapidly advancing and vegetation was putting forth with all its early freshness and beauty. The snakes began to recover from their torpor and crawl forth into day; and the neighborhood of the wintering house seems to have been much infested with them. Mr. Bradbury, in the course of his botanical researches, found a surprising number in a half torpid state, under flat stones upon the banks which overhung the cantonment, and narrowly escaped being struck by a rattlesnake, which darted at him from a cleft in the rock, but fortunately gave him warning by his rattle.

The pigeons, too, were filling the woods in vast migratory flocks. It is almost incredible to describe the prodigious flights of these birds in the western wildernesses. They appear absolutely in clouds, and move with astonishing velocity, their wings making a whistling sound as they fly.

The rapid evolutions of these flocks wheeling and shifting suddenly as if with one mind and one impulse; the flashing changes of color they present, as their backs' their breasts, or the under part of their wings are turned to the spectator, are singularly pleasing. When they alight, if on the ground, they cover whole acres at a time; if upon trees, the branches often break beneath their weight. If suddenly startled while feeding in the midst of a forest, the noise they make in getting on the wing is like the roar of a cataract or the sound of distant thunder.

A flight of this kind, like an Egyptian flight of locusts, devours everything that serves for its food as it passes along. So great were the numbers in the vicinity of the camp that Mr. Bradbury, in the course of a morning's excursion, shot nearly three hundred with a fowling-piece. He gives a curious, though apparently a faithful, account of the kind of discipline observed in these immense flocks, so that each may have a chance of picking up food. As the front ranks must meet with the greatest abundance, and the rear ranks must have scanty pickings, the instant a rank finds itself the hindmost, it rises in the air, flies over the whole flock and takes its place in the advance. The next rank follows in its course, and thus the last is continually becoming first and all by turns have a front place at the banquet.

The rains having at length subsided, Mr. Hunt broke up the encampment and resumed his course up the Missouri.

The party now consisted of nearly sixty persons, of whom five were partners, one, John Reed, was a clerk; forty were Canadian "voyageurs," or "engages," and there were several hunters. They embarked in four boats, one of which was of a large size, mounting a swivel, and two howitzers. All were furnished with masts and sails, to be used when the wind was sufficiently favorable and strong to overpower the current of the river. Such was the case for the first four or five days, when they were wafted steadily up the stream by a strong southeaster.

Their encampments at night were often pleasant and picturesque: on some beautiful bank, beneath spreading trees, which afforded them shelter and fuel. The tents were pitched, the fires made, and the meals prepared by the voyageurs, and many a story was told, and joke passed, and song sung round the evening fire. All, however, were asleep at an early hour. Some under the tents, others wrapped in blankets before the fire, or beneath the trees; and some few in the boats and canoes.

On the 28th, they breakfasted on one of the islands which lie at the mouth of the Nebraska or Platte River - the largest tributary of the Missouri, and about six hundred miles above its confluence with the Mississippi. This broad but shallow stream flows for an immense distance through a wide and verdant valley scooped out of boundless prairies. It draws its main supplies, by several forks or branches, from the Rocky Mountains. The mouth of this river is established as the dividing point between the upper and lower Missouri; and the earlier voyagers, in their toilsome ascent, before the introduction of steamboats, considered one-half of their labors accomplished when they reached this place. The passing of the mouth of the Nebraska, therefore, was equivalent among boatmen to the crossing of the line among sailors, and was celebrated with like ceremo-

nials of a rough and waggish nature, practiced upon the uninitiated; among which was the old nautical joke of shaving. The river deities, however, like those of the sea, were to be propitiated by a bribe, and the infliction of these rude honors to be parried by a treat to the adepts.

At the mouth of the Nebraska new signs were met with of war parties which had recently been in the vicinity. There was the frame of a skin canoe, in which the warriors had traversed the river. At night, also, the lurid reflection of immense fires hung in the sky, showing the conflagration of great tracts of the prairies. Such fires not being made by hunters so late in the season, it was supposed they were caused by some wandering war parties. These often take the precaution to set the prairies on fire behind them to conceal their traces from their enemies. This is chiefly done when the party has been unsuccessful, and is on the retreat and apprehensive of pursuit. At such time it is not safe even for friends to fall in with them, as they are apt to be in savage humor, and disposed to vent their spleen in capricious outrage. These signs, therefore, of a band of marauders on the prowl, called for some degree of vigilance on the part of the travellers.

After passing the Nebraska, the party halted for part of two days on the bank of the river, a little above Papillion Creek, to supply themselves with a stock of oars and poles from the tough wood of the ash, which is not met with higher up the Missouri. While the voyagers were thus occupied, the naturalists rambled over the adjacent country to collect plants. From the summit of a range of bluffs on the opposite side of the river, about two hundred and fifty feet high, they had one of those vast and magnificent prospects which sometimes unfold themselves in those boundless regions. Below them was the Valley of the Missouri, about seven miles in breadth, clad in the fresh verdure of spring; enameled with flowers and interspersed with clumps and groves of noble trees, between which the mighty river poured its turbulent and turbid stream. The interior of the country presented a singular scene; the immense waste being broken up by innumerable green hills, not above eight feet in height, but extremely steep, and actually pointed at their summits. A long line of bluffs extended for upwards of thirty miles parallel to the Missouri, with a shallow lake stretching along their base, which had evidently once formed a bed of the river. The surface of this lake was covered with aquatic plants, on the broad leaves of which numbers of water-snakes, drawn forth by the genial warmth of spring, were basking in the sunshine.

On the 2d day of May, at the usual hour of embarking, the camp was thrown into some confusion by two of the hunters, named Harrington, expressing their intention to abandon the expedition and return home. One of these had joined the party in the preceding autumn, having been hunting for two years on the Missouri; the other had engaged at St. Louis, in the following March, and had come up from thence with Mr. Hunt. He now declared that he had enlisted merely for the purpose of following his brother, and persuading him to return; having been enjoined to do so by his mother, whose anxiety had been awakened by the idea of his going on such a wild and distant expedition.

The loss of two stark hunters and prime riflemen was a serious affair to the party, for they were approaching the region where they might expect hostilities from the Sioux; indeed, throughout the whole of their perilous journey, the services of such men would be all important, for little

reliance was to be placed upon the valor of the Canadians in case of attack. Mr. Hunt endeavored by arguments, expostulations, and entreaties, to shake the determination of the two brothers. He represented to them that they were between six and seven hundred miles above the mouth of the Missouri; that they would have four hundred miles to go before they could reach the habitation of a white man, throughout which they would be exposed to all kinds of risks; since, he declared, if they persisted in abandoning him and breaking their faith, he would not furnish them with a single round of ammunition. All was in vain; they obstinately persisted in their resolution; whereupon, Mr. Hunt, partly incited by indignation, partly by the policy of deterring others from desertion, put his threat into execution, and left them to find their way back to the settlements without, as he supposed, a single bullet or charge of powder.

The boats now continued their slow and toilsome course for several days, against the current of the river. The late signs of roaming war parties caused a vigilant watch to be kept up at night when the crews encamped on shore; nor was this vigilance superfluous; for on the night of the seventh instant, there was a wild and fearful yell, and eleven Sioux warriors, stark naked, with tomahawks in their hands, rushed into the camp. They were instantly surrounded and seized, whereupon their leader called out to his followers to desist from any violence, and pretended to be perfectly pacific in his intentions. It proved, however, that they were a part of the war party, the skeleton of whose canoe had been seen at the mouth of the river Platte, and the reflection of whose fires had been descried in the air. They had been disappointed or defeated in the foray, and in their rage and mortification these eleven warriors had "devoted their clothes to the medicine." This is a desperate act of Indian braves when foiled in war, and in dread of scoffs and sneers. In such case they sometimes threw off their clothes and ornaments, devote themselves to the Great Spirit, and attempt some reckless exploit with which to cover their disgrace. Woe to any defenseless party of white men that may then fall in their way!

Such was the explanation given by Pierre Dorion, the half-breed interpreter, of this wild intrusion into the camp; and the party were so exasperated when appraised of the sanguinary intentions of the prisoners, that they were for shooting them on the spot. Mr. Hunt, however, exerted his usual moderation and humanity, and ordered that they should be conveyed across the river in one of the boats, threatening them however, with certain death if again caught in any hostile act.

On the 10th of May the party arrived at the Omaha (pronounced Omawhaw) village, about eight hundred and thirty miles above the mouth of the Missouri, and encamped in its neighborhood. The village was situated under a hill on the bank of the river, and consisted of about eighty lodges. These were of a circular and conical form, and about sixteen feet in diameter; being mere tents of dressed buffalo skins, sewed together and stretched on long poles, inclined towards each other so as to cross at about half their height. Thus the naked tops of the poles diverge in such a manner that, if they were covered with skins like the lower ends, the tent would be shaped like an hour-glass, and present the appearance of one cone inverted on the apex of another.

The forms of Indian lodges are worthy of attention, each tribe having a different mode of shaping and arranging them, so that it is easy to tell, on seeing a lodge or an encampment at a distance, to

what tribe the inhabitants belong. The exterior of the Omaha lodges have often a gay and fanciful appearance, being painted with undulating bands of red or yellow, or decorated with rude figures of horses, deer, and buffaloes, and with human faces, painted like full moons, four and five feet broad.

The Omahas were once one of the numerous and powerful tribes of the prairies, vying in warlike might and prowess with the Sioux, the Pawnees, the Sauks, the Kongsas, and the Iatans. Their wars with the Sioux, however, had thinned their ranks, and the small-pox in 1802 had swept off two thirds of their number. At the time of Mr. Hunt's visit they still boasted about two hundred warriors and hunters, but they are now fast melting away, and before long, will be numbered among those extinguished nations of the west that exist but in tradition.

In his correspondence with Mr. Astor, from this point of his journey, Mr. Hunt gives a sad account of the Indian tribes bordering on the river. They were in continual war with each other, and their wars were of the most harassing kind; consisting, not merely of main conflicts and expeditions of moment, involving the sackings, burnings, and massacres of towns and villages, but of individual acts of treachery, murder, and cold-blooded cruelty; or of vaunting and foolhardy exploits of single warriors, either to avenge some personal wrong, or gain the vainglorious trophy of a scalp. The lonely hunter, the wandering wayfarer, the poor squaw cutting wood or gathering corn, was liable to be surprised and slaughtered. In this way tribes were either swept away at once, or gradually thinned out, and savage life was surrounded with constant horrors and alarms. That the race of red men should diminish from year to year, and so few should survive of the numerous nations which evidently once peopled the vast regions of the west, is nothing surprising; it is rather matter of surprise that so many should survive; for the existence of a savage in these parts seems little better than a prolonged and all-besetting death. It is, in fact, a caricature of the boasted romance of feudal times; chivalry in its native and uncultured state, and knight-errantry run wild.

In their most prosperous days, the Omahas looked upon themselves as the most powerful and perfect of human beings, and considered all created things as made for their peculiar use and benefit. It is this tribe of whose chief, the famous Wash-ing-guhsah-ba, or Blackbird, such savage and romantic stories are told. He had died about ten years previous to the arrival of Mr. Hunt's party, but his name was still mentioned with awe by his people. He was one of the first among the Indian chiefs on the Missouri to deal with the white traders, and showed great sagacity in levying his royal dues. When a trader arrived in his village, he caused all his goods to be brought into his lodge and opened. From these he selected whatever suited his sovereign pleasure; blankets, tobacco, whiskey, powder, ball, beads, and red paint; and laid the articles on one side, without deigning to give any compensation. Then calling to him his herald or crier, he would order him to mount on top of the lodge and summon all the tribe to bring in their peltries, and trade with the white man. The lodge would soon be crowded with Indians bringing bear, beaver, otter, and other skins. No one was allowed to dispute the prices fixed by the white trader upon his articles; who took care to indemnify himself five times over for the goods set apart by the chief. In this way the Blackbird enriched himself, and enriched the white men, and became exceedingly popular

---

among the traders of the Missouri. His people, however, were not equally satisfied by a regulation of trade which worked so manifestly against them, and began to show signs of discontent. Upon this a crafty and unprincipled trader revealed a secret to the Blackbird, by which he might acquire unbounded sway over his ignorant and superstitious subjects. He instructed him in the poisonous qualities of arsenic, and furnished him with an ample supply of that baneful drug. From this time the Blackbird seemed endowed with supernatural powers, to possess the gift of prophecy, and to hold the disposal of life and death within his hands. Woe to any one who questioned his authority or dared to dispute his commands! The Blackbird prophesied his death within a certain time, and he had the secret means of verifying his prophecy. Within the fated period the offender was smitten with strange and sudden disease, and perished from the face of the earth. Every one stood aghast at these multiplied examples of his superhuman might, and dreaded to displease so omnipotent and vindictive a being; and the Blackbird enjoyed a wide and undisputed sway.

It was not, however, by terror alone that he ruled his people; he was a warrior of the first order, and his exploits in arms were the theme of young and old. His career had begun by hardships, having been taken prisoner by the Sioux, in early youth. Under his command, the Omahas obtained great character for military prowess, nor did he permit an insult or an injury to one of his tribe to pass unrevenged. The Pawnee republicans had inflicted a gross indignity on a favorite and distinguished Omaha brave. The Blackbird assembled his warriors, led them against the Pawnee town, attacked it with irresistible fury, slaughtered a great number of its inhabitants, and burnt it to the ground. He waged fierce and bloody war against the Ottoes for many years, until peace was effected between them by the mediation of the whites. Fearless in battle, and fond of signaling himself, he dazzled his followers by daring acts. In attacking a Kanza village, he rode singly round it, loading and discharging his rifle at the inhabitants as he galloped past them. He kept up in war the same idea of mysterious and supernatural power. At one time, when pursuing a war party by their tracks across the prairies, he repeatedly discharged his rifle into the prints made by their feet and by the hoofs of their horses, assuring his followers that he would thereby cripple the fugitives, so that they would easily be overtaken. He in fact did overtake them, and destroyed them almost to a man; and his victory was considered miraculous, both by friends and foe. By these and similar exploits, he made himself the pride and boast of his people, and became popular among them, notwithstanding his death-denouncing fiat.

With all his savage and terrific qualities, he was sensible of the power of female beauty, and capable of love. A war party of the Poncas had made a foray into the lands of the Omahas, and carried off a number of women and horses. The Blackbird was roused to fury, and took the field with all his braves, swearing to "eat up the Ponca nation" - the Indian threat of exterminating war. The Poncas, sorely pressed, took refuge behind a rude bulwark of earth; but the Blackbird kept up so galling a fire, that he seemed likely to execute his menace. In their extremity they sent forth a herald, bearing the calumet or pipe of peace, but he was shot down by order of the Blackbird. Another herald was sent forth in similar guise, but he shared a like fate. The Ponca chief then, as a last hope, arrayed his beautiful daughter in her finest ornaments, and sent her forth with a calumet, to sue for peace. The charms of the Indian maid touched the stern heart of the Blackbird; he accepted the pipe at her hand, smoked it, and from that time a peace took place between the Poncas and

---

the Omahas.

This beautiful damsel, in all probability, was the favorite wife whose fate makes so tragic an incident in the story of the Blackbird. Her youth and beauty had gained an absolute sway over his rugged heart, so that he distinguished her above all of his other wives. The habitual gratification of his vindictive impulses, however, had taken away from him all mastery over his passions, and rendered him liable to the most furious transports of rage. In one of these his beautiful wife had the misfortune to offend him, when suddenly drawing his knife, he laid her dead at his feet with a single blow.

In an instant his frenzy was at an end. He gazed for a time in mute bewilderment upon his victim; then drawing his buffalo robe over his head, he sat down beside the corpse, and remained brooding over his crime and his loss. Three days elapsed, yet the chief continued silent and motionless; tasting no food, and apparently sleepless. It was apprehended that he intended to starve himself to death; his people approached him in trembling awe, and entreated him once more to uncover his face and be comforted; but he remained unmoved. At length one of his warriors brought in a small child, and laying it on the ground, placed the foot of the Blackbird upon its neck. The heart of the gloomy savage was touched by this appeal; he threw aside his robe; made an harangue upon what he had done; and from that time forward seemed to have thrown the load of grief and remorse from his mind.

He still retained his fatal and mysterious secret, and with it his terrific power; but, though able to deal death to his enemies, he could not avert it from himself or his friends. In 1802 the small-pox, that dreadful pestilence, which swept over the land like a fire over the prairie, made its appearance in the village of the Omahas. The poor savages saw with dismay the ravages of a malady, loathsome and agonizing in its details, and which set the skill and experience of their conjurors and medicine men at defiance. In a little while, two thirds of the population were swept from the face of the earth, and the doom of the rest seemed sealed. The stoicism of the warriors was at an end; they became wild and desperate; some set fire to the village as a last means of checking the pestilence; others, in a frenzy of despair, put their wives and children to death, that they might be spared the agonies of an inevitable disease, and that they might all go to some better country.

When the general horror and dismay was at its height, the Blackbird himself was struck down with the malady. The poor savages, when they saw their chief in danger, forgot their own miseries, and surrounded his dying bed. His dominant spirit, and his love for the white men, were evinced in his latest breath, with which he designated his place of sepulture. It was to be on a hill or promontory, upwards of four hundred feet in height, overlooking a great extent of the Missouri, from whence he had been accustomed to watch for the barks of the white men. The Missouri washes the base of the promontory, and after winding and doubling in many links and mazes in the plain below, returns to within nine hundred yards of its starting-place; so that for thirty miles navigating with sail and oar the voyager finds himself continually near to this singular promontory as if spell-bound.

It was the dying command of the Blackbird that his tomb should be on the summit of this hill, in which he should be interred, seated on his favorite horse, that he might overlook his ancient domain, and behold the barks of the white men as they came up the river to trade with his people.

His dying orders were faithfully obeyed. His corpse was placed astride of his war-steed and a mound raised over them on the summit of the hill. On top of the mound was erected a staff, from which fluttered the banner of the chieftain, and the scalps that he had taken in battle. When the expedition under Mr. Hunt visited that part of the country, the staff still remained, with the fragments of the banner; and the superstitious rite of placing food from time to time on the mound, for the use of the deceased, was still observed by the Omahas. That rite has since fallen into disuse, for the tribe itself is almost extinct. Yet the hill of the Blackbird continues an object of veneration to the wandering savage, and a landmark to the voyager of the Missouri; and as the civilized traveller comes within sight of its spell-bound crest, the mound is pointed out to him from afar, which still incloses the grim skeletons of the Indian warrior and his horse.

Washington Irving's Astoria

CHAPTER XVII.

Rumors of Danger From the Sioux Tetons.- Ruthless Character of Those Savages.- Pirates of the Missouri.- Their Affair with Crooks and M'Lellan.- A Trading Expedition Broken Up.- M'Lellan's Vow of Vengeance.- Uneasiness in the Camp.- Desertions.- Departure From the Omaha Village.- Meeting With Jones and Carson, two Adventurous Trappers.- Scientific Pursuits of Messrs. Bradbury and Nuttall. - Zeal of a Botanist.- Adventure of Mr. Bradbury with a Ponca Indian. - Expedient of the Pocket Compass and Microscope.- A Messenger From Lisa.- Motives for Pressing Forward.

WHILE Mr. Hunt and his party were sojourning at the village of the Omahas, three Sioux Indians of the Yankton Alma tribe arrived, bringing unpleasant intelligence. They reported that certain bands of the Sioux Tetons, who inhabited a region many leagues further up the Missouri, were near at hand, awaiting the approach of the party, with the avowed intention of opposing their progress.

The Sioux Tetons were at that time a sort of pirates of the Missouri, who considered the well freighted bark of the American trader fair game. They had their own traffic with the British merchants of the Northwest, who brought them regular supplies of merchandise by way of the river St. Peter. Being thus independent of the Missouri traders for their supplies, they kept no terms with them, but plundered them whenever they had an opportunity. It has been insinuated that they were prompted to these outrages by the British merchants, who wished to keep off all rivals in the Indian trade; but others allege another motive, and one savoring of a deeper policy. The Sioux, by their intercourse with the British traders, had acquired the use of firearms, which had given them vast superiority over other tribes higher up the Missouri. They had made themselves also, in a manner, factors for the upper tribes, supplying them at second hand, and at greatly advanced prices, with goods derived from the white men. The Sioux, therefore, saw with jealousy the American traders pushing their way up the Missouri; foreseeing that the upper tribes would

thus be relieved from all dependence on them for supplies; nay, what was worse, would be furnished with fire-arms, and elevated into formidable rivals.

We have already alluded to a case in which Mr. Crooks and Mr. M'Lellan had been interrupted in a trading voyage by these ruffians of the river, and, as it is in some degree connected with circumstances hereafter to be related, we shall specify it more particularly.

About two years before the time of which we are treating, Crooks and M'Lellan were ascending the river in boats with a party of about forty men, bound on one of their trading expeditions to the upper tribes. In one of the bends of the river, where the channel made a deep curve under impending banks, they suddenly heard yells and shouts above them, and beheld the cliffs overhead covered with armed savages. It was a band of Sioux warriors, upwards of six hundred strong. They brandished their weapons in a menacing manner, and ordered the boats to turn back and land lower down the river. There was no disputing these commands, for they had the power to shower destruction upon the white men, without risk to themselves. Crooks and M'Lellan, therefore, turned back with feigned alacrity, and, landing, had an interview with the Sioux. The latter forbade them, under pain of exterminating hostility, from attempting to proceed up the river, but offered to trade peacefully with them if they would halt where they were. The party, being principally composed of voyageurs, was too weak to contend with so superior a force, and one so easily augmented; they pretended, therefore, to comply cheerfully with their arbitrary dictation, and immediately proceeded to cut down trees and erect a trading house. The warrior band departed for their village, which was about twenty miles distant, to collect objects of traffic; they left six or eight of their number, however, to keep watch upon the white men, and scouts were continually passing to and fro with intelligence.

Mr. Crooks saw that it would be impossible to prosecute his voyage without the danger of having his boats plundered, and a great part of his men massacred; he determined, however, not to be entirely frustrated in the objects of his expedition. While he continued, therefore, with great apparent earnestness and assiduity, the construction of the trading house, he despatched the hunters and trappers of his party in a canoe, to make their way up the river to the original place of destination, there to busy themselves in trapping and collecting peltries, and to await his arrival at some future period.

As soon as the detachment had had sufficient time to ascend beyond the hostile country of the Sioux, Mr. Crooks suddenly broke up his feigned trading establishment, embarked his men and effects, and, after giving the astonished rear-guard of savages a galling and indignant message to take to their countrymen, pushed down the river with all speed, sparing neither oar nor paddle, day nor night, until fairly beyond the swoop of these river hawks.

What increased the irritation of Messrs. Crooks and M'Lellan, at this mortifying check to their gainful enterprise, was the information that a rival trader was at the bottom of it; the Sioux, it is said, having been instigated to this outrage by Mr. Manuel Lisa, the leading partner and agent of the Missouri Fur Company, already mentioned. This intelligence, whether true or false, so roused

the fiery temper of M'Lellan, that he swore, if ever he fell in with Lisa in the Indian country, he would shoot him on the spot; a mode of redress perfectly in unison with the character of the man, and the code of honor prevalent beyond the frontier.

If Crooks and M'Lellan had been exasperated by the insolent conduct of the Sioux Tetons, and the loss which it had occasioned, those freebooters had been no less indignant at being outwitted by the white men, and disappointed of their anticipated gains, and it was apprehended they would be particularly hostile against the present expedition, when they should learn that these gentlemen were engaged in it.

All these causes of uneasiness were concealed as much as possible from the Canadian voyageurs, lest they should become intimidated; it was impossible, however, to prevent the rumors brought by the Indians from leaking out, and they became subjects of gossiping and exaggeration. The chief of the Omahas, too, on returning from a hunting excursion, reported that two men had been killed some distance above, by a band of Sioux. This added to the fears that already began to be excited. The voyageurs pictured to themselves bands of fierce warriors stationed along each bank of the river, by whom they would be exposed to be shot down in their boats: or lurking hordes, who would set on them at night, and massacre them in their encampments. Some lost heart, and proposed to return, rather than fight their way, and, in a manner, run the gauntlet through the country of these piratical marauders. In fact, three men deserted while at this village. Luckily, their place was supplied by three others who happened to be there, and who were prevailed on to join the expedition by promises of liberal pay, and by being fitted out and equipped in complete style.

The irresolution and discontent visible among some of his people, arising at times almost to mutiny, and the occasional desertions which took place while thus among friendly tribes, and within reach of the frontiers, added greatly to the anxieties of Mr. Hunt, and rendered him eager to press forward and leave a hostile tract behind him, so that it would be as perilous to return as to keep on, and no one would dare to desert.

Accordingly, on the 15th of May he departed from the village of the Omahas, and set forward towards the country of the formidable Sioux Tetons. For the first five days they had a fair and fresh breeze, and the boats made good progress. The wind then came ahead, and the river beginning to rise, and to increase in rapidity, betokened the commencement of the annual flood, caused by the melting of the snow on the Rocky Mountains, and the vernal rains of the upper prairies.

As they were now entering a region where foes might be lying in wait on either bank, it was determined, in hunting for game, to confine themselves principally to the islands, which sometimes extend to considerable length, and are beautifully wooded, affording abundant pasturage and shade. On one of these they killed three buffaloes and two elks, and halting on the edge of a beautiful prairie, made a sumptuous hunter's repast. They had not long resumed their boats and pulled along the river banks when they descried a canoe approaching, navigated by two men, whom, to their surprise, they ascertained to be white men. They proved to be two of those strange and

fearless wanderers of the wilderness, the trappers. Their names were Benjamin Jones and Alexander Carson. They had been for two years past hunting and trapping near the head of the Missouri, and were thus floating for thousands of miles in a cockle-shell, down a turbulent stream, through regions infested by savage tribes, yet apparently as easy and unconcerned as if navigating securely in the midst of civilization.

The acquisition of two such hardy, experienced, and dauntless hunters was peculiarly desirable at the present moment. They needed but little persuasion. The wilderness is the home of the trapper; like the sailor, he cares but little to which point of the compass he steers; and Jones and Carson readily abandoned their voyage to St. Louis, and turned their faces towards the Rocky Mountains and the Pacific.

The two naturalists, Mr. Bradbury and Mr. Nuttall, who had joined the expedition at St. Louis, still accompanied it, and pursued their researches on all occasions. Mr. Nuttall seems to have been exclusively devoted to his scientific pursuits. He was a zealous botanist, and all his enthusiasm was awakened at beholding a new world, as it were, opening upon him in the boundless prairies, clad in the vernal and variegated robe of unknown flowers. Whenever the boats landed at meal times, or for any temporary purpose, he would spring on shore, and set out on a hunt for new specimens. Every plant or flower of a rare or unknown species was eagerly seized as a prize. Delighted with the treasures spreading themselves out before him, he went groping and stumbling along among the wilderness of sweets, forgetful of everything but his immediate pursuit, and had often to be sought after when the boats were about to resume their course. At such times he would be found far off in the prairies, or up the course of some petty stream, laden with plants of all kinds.

The Canadian voyageurs, who are a class of people that know nothing out of their immediate line, and with constitutional levity make a jest of anything they cannot understand, were extremely puzzled by this passion for collecting what they considered mere useless weeds. When they saw the worthy botanist coming back heavy laden with his specimens, and treasuring them up as carefully as a miser would his hoard, they used to make merry among themselves at his expense, regarding him as some whimsical kind of madman.

Mr. Bradbury was less exclusive in his tastes and habits, and combined the hunter and sportsman with the naturalist. He took his rifle or his fowling-piece with him in his geological researches, conformed to the hardy and rugged habits of the men around him, and of course gained favor in their eyes. He had a strong relish for incident and adventure, was curious in observing savage manners, and savage life, and ready to join any hunting or other excursion. Even now, that the expedition was proceeding through a dangerous neighborhood, he could not check his propensity to ramble. Having observed, on the evening of the 22d of May, that the river ahead made a great bend which would take up the navigation of the following day, he determined to profit by the circumstance. On the morning of the 23d, therefore, instead of embarking, he filled his shot-pouch with parched corn, for provisions, and set off to cross the neck on foot and meet the boats in the afternoon at the opposite side of the bend. Mr. Hunt felt uneasy at his venturing thus alone, and reminded him that he was in an enemy's country; but Mr. Bradbury made light of the danger,

and started off cheerily upon his ramble. His day was passed pleasantly in traversing a beautiful tract, making botanical and geological researches, and observing the habits of an extensive village of prairie dogs, at which he made several ineffectual shots, without considering the risk he ran of attracting the attention of any savages that might be lurking in the neighborhood. In fact he had totally forgotten the Sioux Tetons, and all the other perils of the country, when, about the middle of the afternoon, as he stood near the river bank, and was looking out for the boat, he suddenly felt a hand laid on his shoulder. Starting and turning round, he beheld a naked savage with a bow bent, and the arrow pointed at his breast. In an instant his gun was leveled and his hand upon the lock. The Indian drew his bow still further, but forbore to launch the shaft. Mr. Bradbury, with admirable presence of mind, reflected that the savage, if hostile in his intents, would have shot him without giving him a chance of defense; he paused, therefore, and held out his hand. The other took it in sign of friendship, and demanded in the Osage language whether he was a Big Knife, or American. He answered in the affirmative, and inquired whether the other were a Sioux. To his great relief he found that he was a Ponca. By his time two other Indians came running up, and all three laid hold of Mr. Bradbury and seemed disposed to compel him to go off with them among the hills. He resisted, and sitting down on a sand hill contrived to amuse them with a pocket compass. When the novelty of this was exhausted they again seized him, but he now produced a small microscope. This new wonder again fixed the attention of the savages, who have more curiosity than it has been the custom to allow them. While thus engaged, one of them suddenly leaped up and gave a war-whoop. The hand of the hardy naturalist was again on his gun, and he was prepared to make battle, when the Indian pointed down the river and revealed the true cause of his yell. It was the mast of one of the boats appearing above the low willows which bordered the stream. Mr. Bradbury felt infinitely relieved by the sight. The Indians on their part now showed signs of apprehension, and were disposed to run away; but he assured them of good treatment and something to drink if they would accompany him on board of the boats. They lingered for a time, but disappeared before the boats came to land.

On the following morning they appeared at camp accompanied by several of their tribe. With them came also a white man, who announced himself as a messenger bearing missives for Mr. Hunt. In fact he brought a letter from Mr. Manuel Lisa, partner and agent of the Missouri Fur Company. As has already been mentioned, this gentleman was going in search of Mr. Henry and his party, who had been dislodged from the forks of the Missouri by the Blackfeet Indians, and had shifted his post somewhere beyond the Rocky Mountains. Mr. Lisa had left St. Louis three weeks after Mr. Hunt, and having heard of the hostile intentions of the Sioux, had made the greatest exertions to overtake him, that they might pass through the dangerous part of the river together. He had twenty stout oarsmen in his service and they plied their oars so vigorously, that he had reached the Omaha village just four days after the departure of Mr. Hunt. From this place he despatched the messenger in question, trusting to his overtaking the barges as they toiled up against the stream, and were delayed by the windings of the river. The purport of his letter was to entreat Mr. Hunt to wait until he could come up with him, that they might unite their forces and be a protection to each other in their perilous course through the country of the Sioux. In fact, as it was afterwards ascertained, Lisa was apprehensive that Mr. Hunt would do him some ill office with the Sioux band, securing his own passage through their country by pretending that he, with

whom they were accustomed to trade, was on his way to them with a plentiful supply of goods. He feared, too, that Crooks and M'Lellan would take this opportunity to retort upon him the perfidy which they accused him of having used, two years previously, among these very Sioux. In this respect, however, he did them signal injustice. There was no such thing as court design or treachery in their thought; but M'Lellan, when he heard that Lisa was on his way up the river, renewed his open threat of shooting him the moment he met him on Indian land.

The representations made by Crooks and M'Lellan of the treachery they had experienced, or fancied, on the part of Lisa, had great weight with Mr. Hunt, especially when he recollected the obstacles that had been thrown in his way by that gentleman at St. Louis. He doubted, therefore, the fair dealing of Lisa, and feared that, should they enter the Sioux country together, the latter might make use of his influence with that tribe, as he had in the case of Crooks and M'Lellan, and instigate them to oppose his progress up the river.

He sent back, therefore, an answer calculated to beguile Lisa, assuring him that he would wait for him at the Poncas village, which was but a little distance in advance; but, no sooner had the messenger departed, than he pushed forward with all diligence, barely stopping at the village to procure a supply of dried buffalo meat, and hastened to leave the other party as far behind as possible, thinking there was less to be apprehended from the open hostility of Indian foes than from the quiet strategy of an Indian trader.

#### CHAPTER XVIII.

Camp Gossip.- Deserters.- Recruits.- Kentucky Hunters.- A Veteran Woodman.- Tidings of Mr. Henry.- Danger From the Blackfeet. - Alteration of Plans.- Scenery of the River.- Buffalo Roads.- Iron Ore.- Country of the Sioux.- A Land of Danger.- apprehensions of the Voyageurs.- Indian Scouts.- Threatened Hostilities.- A Council of War.- An Array of Battle.- A Parley.- The Pipe of Peace.- Speech-Making.

IT was about noon when the party left the Poncas village, about a league beyond which they passed the mouth of the Quicourt, or Rapid River (called, in the original French, l'Eau Qui Court). After having proceeded some distance further, they landed, and encamped for the night. In the evening camp, the voyageurs gossiped, as usual, over the events of the day; and especially over intelligence picked up among the Poncas. These Indians had confirmed the previous reports of the hostile intentions of the Sioux, and had assured them that five tribes, or bands, of that fierce nation were actually assembled higher up the river, and waiting to cut them off. This evening gossip, and the terrific stories of Indian warfare to which it gave rise, produced a strong effect upon the imagination of the irresolute; and in the morning it was discovered that the two men, who had joined the party at the Omaha village, and been so bounteously fitted out, had deserted in the course of the night, carrying with them all their equipments. As it was known that one of them could not swim, it was hoped that the banks of the Quicourt River would bring them to a halt. A general pursuit was therefore instituted, but without success.

On the following morning (May 26th), as they were all on shore, breakfasting on one of the beautiful banks of the river, they observed two canoes descending along the opposite side. By the aid of spy-glasses, they ascertained that there were two white men in one of the canoes, and one in the other. A gun was discharged, which called the attention of the voyagers, who crossed over. They proved to be the three Kentucky hunters, of the true "dreadnought" stamp. Their names were Edward Robinson, John Hoback, and Jacob Rizner. Robinson was a veteran backwoodsman, sixty-six years of age. He had been one of the first settlers of Kentucky, and engaged in many of the conflicts of the Indians on "the Bloody Ground." In one of these battles he had been scalped, and he still wore a handkerchief bound round his head to protect the part. These men had passed several years in the upper wilderness. They had been in the service of the Missouri Company under Mr. Henry, and had crossed the Rocky Mountains with him in the preceding year, when driven from his post on the Missouri by the hostilities of the Blackfeet. After crossing the mountains, Mr. Henry had established himself on one of the head branches of the Columbia River. There they had remained with him some months, hunting and trapping, until, having satisfied their wandering propensities, they felt disposed to return to the families and comfortable homes which they had left in Kentucky. They had accordingly made their way back across the mountains, and down the rivers, and were in full career for St. Louis, when thus suddenly interrupted. The sight of a powerful party of traders, trappers, hunters, and voyageurs, well armed and equipped, furnished at all points, in high health and spirits, and banqueting lustily on the green margin of the river, was a spectacle equally stimulating to these veteran backwoodsmen with the glorious array of a campaigning army to an old soldier; but when they learned the grand scope and extent of the enterprise in hand, it was irresistible; homes and families and all the charms of green Kentucky vanished from their thoughts; they cast loose their canoes to drift down the stream, and joyfully enlisted in the band of adventurers. They engaged on similar terms with some of the other hunters. The company was to fit them out, and keep them supplied with the requisite equipments and munitions, and they were to yield one half of the produce of their hunting and trapping.

The addition of three such staunch recruits was extremely acceptable at this dangerous part of the river. The knowledge of the country which they had acquired, also, in their journeys and hunting excursions along the rivers and among the Rocky Mountains was all important; in fact, the information derived from them induced Mr. Hunt to alter his future course. He had hitherto intended to proceed by the route taken by Lewis and Clarke in their famous exploring expedition, ascending the Missouri to its forks, and thence going, by land, across the mountains. These men informed him, however, that, on taking that course he would have to pass through the country invested by the savage tribe of the Blackfeet, and would be exposed to their hostilities; they being, as has already been observed, exasperated to deadly animosity against the whites, on account of the death of one of their tribe by the hand of Captain Lewis. They advised him rather to pursue a route more to the southward, being the same by which they had returned. This would carry them over the mountains about where the head-waters of the Platte and the Yellowstone take their rise, at a place much more easy and practicable than that where Lewis and Clarke had crossed. In pursuing this course, also, he would pass through a country abounding with game, where he would have a better chance of procuring a constant supply of provisions than by the other route, and would run less risk of molestation from the Blackfeet. Should he adopt this advice, it would be better for him

to abandon the river at the Arickara town, at which he would arrive in the course of a few days. As the Indians at that town possessed horses in abundance, he might purchase a sufficient number of them for his great journey overland, which would commence at that place.

After reflecting on this advice, and consulting with his associates, Mr. Hunt came to the determination to follow the route thus pointed out, to which the hunters engaged to pilot him.

The party continued their voyage with delightful May weather. The prairies bordering on the river were gayly painted with innumerable flowers, exhibiting the motley confusion of colors of a Turkey carpet. The beautiful islands, also, on which they occasionally halted, presented the appearance of mingled grove and garden. The trees were often covered with clambering grapevines in blossom, which perfumed the air. Between the stately masses of the groves were grassy lawns and glades, studded with flowers, or interspersed with rose-bushes in full bloom. These islands were often the resort of the buffalo, the elk, and the antelope, who had made innumerable paths among the trees and thickets, which had the effect of the mazy walks and alleys of parks and shrubberies. Sometimes, where the river passed between high banks and bluffs, the roads made by the tramp of buffaloes for many ages along the face of the heights, looked like so many well-travelled highways. At other places the banks were banded with great veins of iron ore, laid bare by the abrasion of the river. At one place the course of the river was nearly in a straight line for about fifteen miles. The banks sloped gently to its margin, without a single tree, but bordered with grass and herbage of a vivid green. Along each bank, for the whole fifteen miles, extended a stripe, one hundred yards in breadth, of a deep rusty brown, indicating an inexhaustible bed of iron, through the center of which the Missouri had worn its way. Indications of the continuance of this bed were afterwards observed higher up the river. It is, in fact, one of the mineral magazines which nature has provided in the heart of this vast realm of fertility, and which, in connection with the immense beds of coal on the same river, seem garnered up as the elements of the future wealth and power of the mighty West.

The sight of these mineral treasures greatly excited the curiosity of Mr. Bradbury, and it was tantalizing to him to be checked in his scientific researches, and obliged to forego his usual rambles on shore; but they were now entering the fated country of the Sioux Tetons, in which it was dangerous to wander about unguarded.

This country extends for some days' journey along the river, and consists of vast prairies, here and there diversified by swelling hills, and cut up by ravines, the channels of turbid streams in the rainy seasons, but almost destitute of water during the heats of summer. Here and there on the sides of the hills, or along the alluvial borders and bottoms of the ravines, are groves and skirts of forest: but for the most part the country presented to the eye a boundless waste, covered with herbage, but without trees.

The soil of this immense region is strongly impregnated with sulphur, copperas, alum, and glauber salts; its various earths impart a deep tinge to the streams which drain it, and these, with the crumbling of the banks along the Missouri, give to the waters of that river much of the coloring

---

matter with which they are clouded.

Over this vast tract the roving bands of the Sioux Tetons hold their vagrant sway, subsisting by the chase of the buffalo, the elk, the deer, and the antelope, and waging ruthless warfare with other wandering tribes.

As the boats made their way up the stream bordered by this land of danger, many of the Canadian voyageurs, whose fears had been awakened, would regard with a distrustful eye the boundless waste extending on each side. All, however, was silent, and apparently untenanted by a human being. Now and then a herd of deer would be seen feeding tranquilly among the flowery herbage, or a line of buffaloes, like a caravan on its march, moving across the distant profile of the prairie. The Canadians, however, began to apprehend an ambush in every thicket, and to regard the broad, tranquil plain as a sailor eyes some shallow and perfidious sea, which, though smooth and safe to the eye, conceals the lurking rock or treacherous shoal. The very name of a Sioux became a watchword of terror. Not an elk, a wolf, or any other animal, could appear on the hills, but the boats resounded with exclamations from stem to stern, "voila les Sioux! voila les Sioux!" (there are the Sioux! there are the Sioux!) Whenever it was practicable, the night encampment was on some island in the center of the stream.

On the morning of the 31st of May, as the travellers were breakfasting on the right bank of the river, the usual alarm was given, but with more reason, as two Indians actually made their appearance on a bluff on the opposite or northern side, and harangued them in a loud voice. As it was impossible at that distance to distinguish what they said, Mr. Hunt, after breakfast, crossed the river with Pierre Dorion, the interpreter, and advanced boldly to converse with them, while the rest remained watching in mute suspense the movements of the parties. As soon as Mr. Hunt landed, one of the Indians disappeared behind the hill, but shortly reappeared on horseback, and went scouring off across the heights. Mr. Hunt held some conference with the remaining savage, and then recrossed the river to his party.

These two Indians proved to be spies or scouts of a large war party encamped about a league off, and numbering two hundred and eighty lodges, or about six hundred warriors, of three different tribes of Sioux; the Yangtons Ahna, the Tetons Bois-brule, and the Tetons Min-na-kine-azzo. They expected daily to be reinforced by two other tribes, and had been waiting eleven days for the arrival of Mr. Hunt's party, with a determination to oppose their progress up the river; being resolved to prevent all trade of the white men with their enemies the Arickaras, Mandans, and Minatarees. The Indian who had galloped off on horseback had gone to give notice of the approach of the party, so that they might now look out for some fierce scenes with those piratical savages, of whom they had received so many formidable accounts.

The party braced up their spirits to the encounter, and reembarking, pulled resolutely up the stream. An island for some time intervened between them and the opposite side of the river; but on clearing the upper end, they came in full view of the hostile shore. There was a ridge of hills down which the savages were pouring in great numbers, some on horseback, and some on foot.

Reconnoitering them with the aid of glasses, they perceived that they were all in warlike array, painted and decorated for battle. Their weapons were bows and arrows, and a few short carbines, and most of them had round shields. Altogether they had a wild and gallant appearance, and, taking possession of a point which commanded the river, ranged themselves along the bank as if prepared to dispute their passage.

At sight of this formidable front of war, Mr. Hunt and his companions held counsel together. It was plain that the rumors they had heard were correct, and the Sioux were determined to oppose their progress by force of arms. To attempt to elude them and continue along the river was out of the question. The strength of the mid-current was too violent to be withstood, and the boats were obliged to ascend along the river banks. These banks were often high and perpendicular, affording the savages frequent stations, from whence, safe themselves, and almost unseen, they might show down their missiles upon the boats below, and retreat at will, without danger from pursuit. Nothing apparently remained, therefore, but to fight or turn back. The Sioux far outnumbered them, it is true, but their own party was about sixty strong, well armed and supplied with ammunition; and, beside their guns and rifles, they had a swivel and two howitzers mounted in the boats. Should they succeed in breaking this Indian force by one vigorous assault, it was likely they would be deterred from making any future attack of consequence. The fighting alternative was, therefore, instantly adopted, and the boats pulled to shore nearly opposite to the hostile force. Here the arms were all examined and put in order. The swivel and howitzers were then loaded with powder and discharged, to let the savages know by the report how formidably they were provided. The noise echoed along the shores of the river, and must have startled the warriors who were only accustomed to sharp reports of rifles. The same pieces were then loaded with as many bullets as they would probably bear; after which the whole party embarked, and pulled across the river. The Indians remained watching them in silence, their painted forms and visages glaring in the sun, and their feathers fluttering in the breeze. The poor Canadians eyed them with rueful glances, and now and then a fearful ejaculation escaped them. "Parbleu! this is a sad scrape we are in, brother!" one would mutter to the next oarsman. "Aye, aye!" the other would reply, "we are not going to a wedding, my friend!"

When the boats arrived within rifle-shot, the hunters and other fighting personages on board seized their weapons, and prepared for action. As they rose to fire, a confusion took place among the savages. They displayed their buffalo robes, raised them with both hands above their heads, and then spread them before them on the ground. At sight of this, Pierre Dorion eagerly cried out to the party not to fire, as this movement was a peaceful signal, and an invitation to a parley. Immediately about a dozen of the principal warriors, separating from the rest, descended to the edge of the river, lighted a fire, seated themselves in a semicircle round it, and, displaying the calumet, invited the party to land. Mr. Hunt now called a council of the partners on board of his boat. The question was, whether to trust to the amicable overtures of these ferocious people? It was determined in the affirmative; for, otherwise, there was no alternative but to fight them. The main body of the party were ordered to remain on board of the boats, keeping within shot and prepared to fire in case of any signs of treachery; while Mr. Hunt and the other partners (M'Kenzie, Crooks, Miller, and M'Lellan) proceeded to land, accompanied by the interpreter and Mr. Bradbury. The

chiefs, who awaited them on the margin of the river, remained seated in their semicircle, without stirring a limb or moving a muscle, motionless as so many statues. Mr. Hunt and his companions advanced without hesitation, and took their seats on the sand so as to complete the circle. The band of warriors who lined the banks above stood looking down in silent groups and clusters, some ostentatiously equipped and decorated, others entirely naked but fantastically painted, and all variously armed.

The pipe of peace was now brought forward with due ceremony. The bowl was of a species of red stone resembling porphyry; the stem was six feet in length, decorated with tufts of horse-hair dyed red. The pipe-bearer stepped within the circle, lighted the pipe, held it towards the sun, then towards the different points of the compass, after which he handed it to the principal chief. The latter smoked a few whiffs, then, holding the head of the pipe in his hand, offered the other end to Mr. Hunt, and to each one successively in the circle. When all had smoked, it was considered that an assurance of good faith and amity had been interchanged. Mr. Hunt now made a speech in French, which was interpreted as he proceeded by Pierre Dorion. He informed the Sioux of the real object of the expedition of himself and his companions, which was, not to trade with any of the tribes up the river, but to cross the mountains to the great salt lake in the west, in search of some of their brothers, whom they had not seen for eleven months. That he had heard of the intention of the Sioux to oppose his passage, and was prepared, as they might see, to effect it at all hazards; nevertheless, his feelings towards the Sioux were friendly, in proof of which he had brought them a present of tobacco and corn. So saying, he ordered about fifteen carottes of tobacco, and as many bags of corn, to be brought from the boat and laid in a heap near the council fire.

The sight of these presents mollified the chieftain, who had, doubtless, been previously rendered considerate by the resolute conduct of the white men, the judicious disposition of their little armament, the completeness of their equipments, and the compact array of battle which they presented. He made a speech in reply, in which he stated the object of their hostile assemblage, which had been merely to prevent supplies of arms and ammunition from going to the Arickaras, Mandans, and Minatarees, with whom they were at war; but being now convinced that the party were carrying no supplies of the kind, but merely proceeding in quest of their brothers beyond the mountains, they would not impede them in their voyage. He concluded by thanking them for their present, and advising them to encamp on the opposite side of the river, as he had some young men among his warriors for whose discretion he could not be answerable, and who might be troublesome.

Here ended the conference: they all arose, shook hands, and parted. Mr. Hunt and his companions re-embarked, and the boats proceeded on their course unmolested.

CHAPTER XIX.

The Great Bend of the Missouri- Crooks and M'Lellan Meet With Two of Their Indian Opponents- Wanton Outrage of a White Man the Cause of Indian Hostility- Dangers and Precautions.-An Indian War Party.- Dangerous Situation of Mr. Hunt.- A Friendly Encampment.

---

-Feasting and Dancing.- Approach of Manuel Lisa and His Party -.A Grim Meeting Between Old Rivals.- Pierre Dorion in a Fury.- A Burst of chivalry.

ON the afternoon of the following day (June 1st) they arrived at the great bend, where the river winds for about thirty miles round a circular peninsula, the neck of which is not above two thousand yards across. On the succeeding morning, at an early hour, they descried two Indians standing on a high bank of the river, waving and spreading their buffalo robes in signs of amity. They immediately pulled to shore and landed. On approaching the savages, however, the latter showed evident symptoms of alarm, spreading out their arms horizontally, according to their mode of supplicating clemency. The reason was soon explained. They proved to be two chiefs of the very war party that had brought Messrs. Crooks and M'Lellan to a stand two years before, and obliged them to escape down the river. They ran to embrace these gentlemen, as if delighted to meet with them; yet they evidently feared some retaliation of their past misconduct, nor were they quite at ease until the pipe of peace had been smoked.

Mr. Hunt having been informed that the tribe to which these men belonged had killed three white men during the preceding summer, reproached them with the crime, and demanded their reasons for such savage hostility. "We kill white men," replied one of the chiefs, "because white men kill us. That very man," added he, pointing to Carson, one of the new recruits, "killed one of our brothers last summer. The three white men were slain to avenge his death."

Their chief was correct in his reply. Carson admitted that, being with a party of Arickaras on the banks of the Missouri, and seeing a war party of Sioux on the opposite side, he had fired with his rifle across. It was a random shot, made without much expectation of effect, for the river was full half a mile in breadth. Unluckily it brought down a Sioux warrior, for whose wanton destruction threefold vengeance had been taken, as has been stated. In this way outrages are frequently committed on the natives by thoughtless or mischievous white men; the Indians retaliate according to a law of their code, which requires blood for blood; their act, of what with them is pious vengeance, resounds throughout the land, and is represented as wanton and unprovoked; the neighborhood is roused to arms; a war ensues, which ends in the destruction of half the tribe, the ruin of the rest, and their expulsion from their hereditary homes. Such is too often the real history of Indian warfare, which in general is traced up only to some vindictive act of a savage; while the outrage of the scoundrel white man that provoked it is sunk in silence.

The two chiefs, having smoked their pipe of peace and received a few presents, departed well satisfied. In a little while two others appeared on horseback, and rode up abreast of the boats. They had seen the presents given to their comrades, but were dissatisfied with them, and came after the boats to ask for more. Being somewhat peremptory and insolent in their demands, Mr. Hunt gave them a flat refusal, and threatened, if they or any of their tribes followed him with similar demands, to treat them as enemies. They turned and rode off in a furious passion. As he was ignorant what force these chiefs might have behind the hills, and as it was very possible they might take advantage of some pass of the river to attack the boats, Mr. Hunt called all stragglers on board and prepared for such emergency. It was agreed that the large boat commanded by Mr.

Hunt should ascend along the northeast side of the river, and the three smaller boats along the south side. By this arrangement each party would command a view of the opposite heights above the heads and out of sight of their companions, and could give the alarm should they perceive any Indians lurking there. The signal of alarm was to be two shots fired in quick succession.

The boats proceeded for the greater part of the day without seeing any signs of an enemy. About four o'clock in the afternoon the large boat, commanded by Mr. Hunt, came to where the river was divided by a long sand-bar, which apparently, however, left a sufficient channel between it and the shore along which they were advancing. He kept up this channel, therefore, for some distance, until the water proved too shallow for the boat. It was necessary, therefore, to put about, return down the channel, and pull round the lower end of the sand-bar into the main stream. Just as he had given orders to this effect to his men, two signal guns were fired from the boats on the opposite side of the river. At the same moment, a file of savage warriors was observed pouring down from the impending bank, and gathering on the shore at the lower end of the bar. They were evidently a war party, being armed with bows and arrows, battle clubs and carbines, and round bucklers of buffalo hide, and their naked bodies were painted with black and white stripes. The natural inference was, that they belonged to the two tribes of Sioux which had been expected by the great war party, and that they had been incited to hostility by the two chiefs who had been enraged by the refusal and the menace of Mr. Hunt. Here then was a fearful predicament. Mr. Hunt and his crew seemed caught, as it were, in a trap. The Indians, to a number of about a hundred, had already taken possession of a point near which the boat would have to pass: others kept pouring down the bank, and it was probable that some would remain posted on the top of the height.

The hazardous situation of Mr. Hunt was perceived by those in the other boats, and they hastened to his assistance. They were at some distance above the sand-bar, however, and on the opposite side of the river, and saw, with intense anxiety, the number of savages continually augmenting, at the lower end of the channel, so that the boat would be exposed to a fearful attack before they could render it any assistance. Their anxiety increased, as they saw Mr. Hunt and his party descending the channel and dauntlessly approaching the point of danger; but it suddenly changed into surprise on beholding the boat pass close by the savage horde unmolested, and steer out safely into the broad river.

The next moment the whole band of warriors was in motion. They ran along the bank until they were opposite to the boats, then throwing by their weapons and buffalo robes, plunged into the river, waded and swam off to the boats and surrounded them in crowds, seeking to shake hands with every individual on board; for the Indians have long since found this to be the white man's token of amity, and they carried it to an extreme.

All uneasiness was now at an end. The Indians proved to be a war party of Arickaras, Mandans, and Minatarees, consisting of three hundred warriors, and bound on a foray against the Sioux. Their war plans were abandoned for the present, and they determined to return to the Arickara town, where they hoped to obtain from the white men arms and ammunition that would enable them to take the field with advantage over their enemies.

The boats now sought the first convenient place for encamping. The tents were pitched; the warriors fixed their camp at about a hundred yards distant; provisions were furnished from the boats sufficient for all parties; there was hearty though rude feasting in both camps, and in the evening the red warriors entertained their white friends with dances and songs, that lasted until after midnight.

On the following morning (July 3) the travellers re-embarked, and took a temporary leave of their Indian friends, who intended to proceed immediately for the Arickara town, where they expected to arrive in three days, long before the boats could reach there. Mr. Hunt had not proceeded far before the chief came galloping along the shore and made signs for a parley. He said, his people could not go home satisfied unless they had something to take with them to prove that they had met with the white men. Mr. Hunt understood the drift of the speech, and made the chief a present of a cask of powder, a bag of balls, and three dozen of knives, with which he was highly pleased. While the chief was receiving these presents an Indian came running along the shore, and announced that a boat, filled with white men, was coming up the river. This was by no means agreeable tidings to Mr. Hunt, who correctly concluded it to be the boat of Mr. Manuel Lisa; and he was vexed to find that alert and adventurous trader upon his heels, whom he hoped to have out-manuevered, and left far behind. Lisa, however, was too much experienced in the wiles of Indian trade to be lulled by the promise of waiting for him at the Poncas village; on the contrary, he had allowed himself no repose, and had strained every nerve to overtake the rival party, and availing himself of the moonlight, had even sailed during a considerable part of the night. In this he was partly prompted by his apprehensions of the Sioux, having met a boat which had probably passed Mr. Hunt's party in the night, and which had been fired into by these savages.

On hearing that Lisa was so near at hand, Mr. Hunt perceived that it was useless to attempt any longer to evade him; after proceeding a few miles further, therefore, he came to a halt and waited for him to come up. In a little while the barge of Lisa made its appearance. It came sweeping gently up the river, manned by its twenty stout oarsmen, and armed by a swivel mounted at the bow. The whole number on board amounted to twenty-six men: among whom was Mr. Henry Breckenridge, then a young, enterprising man; who was a mere passenger, tempted by notions of curiosity to accompany Mr. Lisa. He has since made himself known by various writings, among which may be noted a narrative of this very voyage.

The approach of Lisa, while it was regarded with uneasiness by Mr. Hunt, roused the ire of M'Lellan; who, calling to mind old grievances, began to look round for his rifle, as if he really intended to carry his threat into execution and shoot him on the spot; and it was with some difficulty that Mr. Hunt was enabled to restrain his ire, and prevent a scene of outraged confusion.

The meeting between the two leaders, thus mutually distrustful, could not be very cordial: and as to Messrs. Crooks and M'Lellan, though they refrained from any outbreak, yet they regarded in grim defiance their old rival and underplotter. In truth a general distrust prevailed throughout the party concerning Lisa and his intentions. They considered him artful and slippery, and secret-

ly anxious for the failure of their expedition. There being now nothing more to be apprehended from the Sioux, they suspected that Lisa would take advantage of his twenty-oared barge to leave them and get first among the Arickaras. As he had traded with those people and possessed great influence over them, it was feared he might make use of it to impede the business of Mr. Hunt and his party. It was resolved, therefore, to keep a sharp look-out upon his movements; and M'Lellan swore that if he saw the least sign of treachery on his part, he would instantly put his old threat into execution.

Notwithstanding these secret jealousies and heart-burnings, the two parties maintained an outward appearance of civility, and for two days continued forward in company with some degree of harmony. On the third day, however, an explosion took place, and it was produced by no less a personage than Pierre Dorion, the half-breed interpreter. It will be recollected that this worthy had been obliged to steal a march from St. Louis, to avoid being arrested for an old whiskey debt which he owed to the Missouri Fur Company, and by which Mr. Lisa had hoped to prevent his enlisting in Mr. Hunt's expedition. Dorion, since the arrival of Lisa, had kept aloof and regarded him with a sullen and dogged aspect. On the fifth of July the two parties were brought to a halt by a heavy rain, and remained encamped about a hundred yards apart. In the course of the day Lisa undertook to tamper with the faith of Pierre Dorion, and, inviting him on board of his boat, regaled him with his favorite whiskey. When he thought him sufficiently mellowed, he proposed to him to quit the service of his new employers and return to his old allegiance. Finding him not to be moved by soft words, he called to mind his old debt to the company, and threatened to carry him off by force, in payment of it. The mention of this debt always stirred up the gall of Pierre Dorion, bringing with it the remembrance of the whiskey extortion. A violent quarrel arose between him and Lisa, and he left the boat in high dudgeon. His first step was to repair to the tent of Mr. Hunt and reveal the attempt that had been made to shake his faith. While he was yet talking Lisa entered the tent, under the pretext of coming to borrow a towing line. High words instantly ensued between him and Dorion, which ended by the half-breed's dealing him a blow. A quarrel in the "Indian country", however, is not to be settled with fisticuffs. Lisa immediately rushed to his boat for a weapon. Dorion snatched up a pair of pistols belonging to Mr. Hunt, and placed himself in battle array. The noise had roused the camp, and every one pressed to know the cause. Lisa now reappeared upon the field with a knife stuck in his girdle. Mr. Breckenridge, who had tried in vain to mollify his ire, accompanied him to the scene of action. Pierre Dorion's pistols gave him the advantage, and he maintained a most warlike attitude. In the meantime, Crooks and M'Lellan had learnt the cause of the affray, and were each eager to take the quarrel into their own hands. A scene of uproar and hubbub ensued that defies description. M'Lellan would have brought his rifle into play and settled all old and new grudges by a pull of the trigger, had he not been restrained by Mr. Hunt. That gentleman acted as moderator, endeavoring to prevent a general melee; in the midst of the brawl, however, an expression was made use of by Lisa derogatory to his own honor. In an instant the tranquil spirit of Mr. Hunt was in a flame. He now became as eager for the fight as any one on the ground, and challenged Lisa to settle the dispute on the spot with pistols. Lisa repaired to his boat to arm himself for the deadly feud. He was followed by Messrs. Bradbury and Breckenridge, who, novices in Indian life and the "chivalry" of the frontier, had no relish for scenes of blood and brawl. By their earnest mediation the quarrel was brought to a close without

bloodshed; but the two leaders of the rival camps separated in anger, and all personal intercourse ceased between them.

THE rival parties now coasted along the opposite sides of the river, within sight of each other; the barges of Mr. Hunt always keeping some distance in the advance, lest Lisa should push on and get first to the Arickara village. The scenery and objects, as they proceeded, gave evidence that they were advancing deeper and deeper into the domains of savage nature. Boundless wastes kept extending to the eye, more and more animated by herds of buffalo. Sometimes these unwieldy animals were seen moving in long procession across the silent landscape; at other times they were scattered about, singly or in groups, on the broad, enameled prairies and green acclivities, some cropping the rich pasturage, others reclining amidst the flowery herbage; the whole scene realizing in a manner the old Scriptural descriptions of the vast pastoral countries of the Orient, with "cattle upon a thousand hills."

At one place the shores seemed absolutely lined with buffaloes; many were making their way across the stream, snorting, and blowing, and floundering. Numbers, in spite of every effort, were borne by the rapid current within shot of the boats, and several were killed. At another place a number were descried on the beach of a small island, under the shade of the trees, or standing in the water, like cattle, to avoid the flies and the heat of the day.

Several of the best marksmen stationed themselves in the bow of a barge which advanced slowly and silently, stemming the current with the aid of a broad sail and a fair breeze. The buffaloes stood gazing quietly at the barge as it approached, perfectly unconscious of their danger. The fattest of the herd was selected by the hunters, who all fired together and brought down their victim.

Besides the buffaloes they saw abundance of deer, and frequent gangs of stately elks, together with light troops of sprightly antelopes, the fleetest and most beautiful inhabitants of the prairies.

There are two kinds of antelopes in these regions, one nearly the size of the common deer, the other not much larger than a goat. Their color is a light gray, or rather dun, slightly spotted with white; and they have small horns like those of the deer, which they never shed. Nothing can surpass the delicate and elegant finish of their limbs, in which lightness, elasticity, and strength are wonderfully combined. All the attitudes and movements of this beautiful animal are graceful and picturesque; and it is altogether as fit a subject for the fanciful uses of the poet as the oft-sung gazelle of the East.

Their habits are shy and capricious; they keep on the open plains, are quick to take the alarm, and bound away with a fleetness that defies pursuit. When thus skimming across a prairie in the autumn, their light gray or dun color blends with the hue of the withered herbage, the swiftness of their motion baffles the eye, and they almost seem unsubstantial forms, driven like gossamer before the wind.

While they thus keep to the open plain and trust to their speed, they are safe; but they have a prurient curiosity that sometimes betrays them to their ruin. When they have scud for some distance and left their pursuer behind, they will suddenly stop and turn to gaze at the object of their alarm. If the pursuit is not followed up they will, after a time, yield to their inquisitive hankering, and return to the place from whence they have been frightened.

John Day, the veteran hunter already mentioned, displayed his experience and skill in entrapping one of these beautiful animals. Taking advantage of its well known curiosity, he laid down flat among the grass, and putting his handkerchief on the end of his ramrod, waved it gently in the air. This had the effect of the fabled fascination of the rattlesnake. The antelope approached timidly, pausing and reconnoitering with increased curiosity; moving round the point of attraction in a circle, but still drawing nearer and nearer, until being within range of the deadly rifle, he fell a victim to his curiosity.

On the 10th of June, as the party were making brisk progress with a fine breeze, they met a canoe with three Indians descending the river. They came to a parley, and brought news from the Arickara village. The war party, which had caused such alarm at the sand-bar, had reached the village some days previously, announced the approach of a party of traders, and displayed with great ostentation the presents they had received from them. On further conversation with these three Indians, Mr. Hunt learnt the real danger which he had run, when hemmed up within the sand-bar. The Mandans who were of the war party, when they saw the boat so completely entrapped and apparently within their power, had been eager for attacking it, and securing so rich a prize. The Minatarees, also, were nothing loath, feeling in some measure committed in hostility to the whites, in consequence of their tribe having killed two white men above the fort of the Missouri Fur Company. Fortunately, the Arickaras, who formed the majority of the war party, proved true in their friendship to the whites, and prevented any hostile act, otherwise a bloody affray, and perhaps a horrible massacre might have ensued.

On the 11th of June, Mr. Hunt and his companions encamped near an island about six miles below the Arickara village. Mr. Lisa encamped, as usual, at no great distance; but the same sullen jealous reserve and non-intercourse continued between them. Shortly after pitching the tents, Mr. Breckenridge made his appearance as an ambassador from the rival camp. He came on behalf of his companions, to arrange the manner of making their entrance into the village and of receiving the chiefs; for everything of the kind is a matter of grave ceremonial among the Indians.

The partners now expressed frankly their deep distrust of the intentions of Mr. Lisa, and their

---

apprehensions, that, out of the jealousy of trade, and resentment of recent disputes, he might seek to instigate the Arickaras against them. Mr. Breckenridge assured them that their suspicions were entirely groundless, and pledged himself that nothing of the kind should take place. He found it difficult, however, to remove their distrust; the conference, therefore, ended without producing any cordial understanding; and M'Lellan recurred to his old threat of shooting Lisa the instant he discovered anything like treachery in his proceedings.

That night the rain fell in torrents, accompanied by thunder and lightning. The camp was deluged, and the bedding and baggage drenched. All hands embarked at an early hour, and set forward for the village. About nine o'clock, when half way, they met a canoe, on board of which were two Arickara dignitaries. One, a fine-looking man, much above the common size, was hereditary chief of the village; he was called the Left-handed, on account of a personal peculiarity. The other, a ferocious-looking savage, was the war chief, or generalissimo; he was known by the name of the Big Man, an appellation he well deserved from his size, for he was of a gigantic frame. Both were of fairer complexion than is usual with savages.

They were accompanied by an interpreter; a French creole, one of those haphazard wights of Gallic origin who abound upon our frontiers, living among the Indians like one of their own race. He had been twenty years among the Arickaras, had a squaw and troop of piebald children, and officiated as interpreter to the chiefs. Through this worthy organ the two dignitaries signified to Mr. Hunt their sovereign intention to oppose the further progress of the expedition up the river unless a boat were left to trade with them. Mr. Hunt, in reply, explained the object of his voyage, and his intention of debarking at their village and proceeding thence by land; and that he would willingly trade with them for a supply of horses for his journey. With this explanation they were perfectly satisfied, and putting about, steered for their village to make preparations for the reception of the strangers.

The village of the Rikaras, Arickaras, or Ricarees, for the name is thus variously written, is between the 46th and 47th parallels of north latitude, and fourteen hundred and thirty miles above the mouth of the Missouri. The party reached it about ten o'clock in the morning, but landed on the opposite side of the river, where they spread out their baggage and effects to dry. From hence they commanded an excellent view of the village. It was divided into two portions, about eighty yards apart, being inhabited by two distinct bands. The whole extended about three-quarters of a mile along the river bank, and was composed of conical lodges, that looked like so many small hillocks, being wooden frames intertwined with osier, and covered with earth. The plain beyond the village swept up into hills of considerable height, but the whole country was nearly destitute of trees. While they were regarding the village, they beheld a singular fleet coming down the river. It consisted of a number of canoes, each made of a single buffalo hide stretched on sticks, so as to form a kind of circular trough. Each one was navigated by a single squaw, who knelt in the bottom and paddled; towing after her frail bark a bundle of floating wood intended for firing. This kind of canoe is in frequent use among the Indians; the buffalo hide being readily made up into a bundle and transported on horseback; it is very serviceable in conveying baggage across the rivers.

The great number of horses grazing around the village, and scattered over the neighboring hills and valleys, bespoke the equestrian habit of the Arickaras, who are admirable horsemen. Indeed, in the number of his horses consists the wealth of an Indian of the prairies; who resembles an Arab in his passion for this noble animal, and in his adroitness in the management of it.

After a time, the voice of the sovereign chief, "the Left-handed," was heard across the river, announcing that the council lodge was preparing, and inviting the white men to come over. The river was half a mile in width, yet every word uttered by the chieftain was heard; this may be partly attributed to the distinct manner in which every syllable of the compound words in the Indian language is articulated and accented; but in truth, a savage warrior might often rival Achilles himself for force of lungs. \* (\* Bradbury, p. 110.)

Now came the delicate point of management - how the two rival parties were to conduct their visit to the village with proper circumspection and due decorum. Neither of the leaders had spoken to each other since their quarrel. All communication had been by ambassadors. Seeing the jealousy entertained of Lisa, Mr. Breckenridge, in his negotiation, had arranged that a deputation from each party should cross the river at the same time, so that neither would have the first access to the ear of the Arickaras.

The distrust of Lisa, however, had increased in proportion as they approached the sphere of action; and M'Lellan, in particular, kept a vigilant eye upon his motions, swearing to shoot him if he attempted to cross the river first.

About two o'clock the large boat of Mr. Hunt was manned, and he stepped on board, accompanied by Messrs. M'Kenzie and M'Lellan; Lisa at the same time embarked in his barge; the two deputations amounted in all to fourteen persons, and never was any movement of rival potentates conducted with more wary exactness.

They landed amidst a rabble crowd, and were received on the bank by the left-handed chief, who conducted them into the village with grave courtesy; driving to the right and left the swarms of old squaws, imp-like boys, and vagabond dogs, with which the place abounded. They wound their way between the cabins, which looked like dirt-heaps huddled together without any plan, and surrounded by old palisades; all filthy in the extreme, and redolent of villainous smells.

At length they arrived at the council lodge. It was somewhat spacious, and formed of four forked trunks of trees placed upright, supporting cross-beams and a frame of poles interwoven with osiers, and the whole covered with earth. A hole sunken in the center formed the fireplace, and immediately above was a circular hole in the apex of the lodge, to let out the smoke and let in the daylight. Around the lodge were recesses for sleeping, like the berths on board ships, screened from view by curtains of dressed skins. At the upper end of the lodge was a kind of hunting and warlike trophy, consisting of two buffalo heads garishly painted, surmounted by shields, bows, quivers of arrows, and other weapons.

On entering the lodge the chief pointed to mats or cushions which had been placed around for the strangers, and on which they seated themselves, while he placed himself on a kind of stool. An old man then came forward with the pipe of peace or good-fellowship, lighted and handed it to the chief, and then falling back, squatted himself near the door. The pipe was passed from mouth to mouth, each one taking a whiff, which is equivalent to the inviolable pledge of faith, of taking salt together among the ancient Britons. The chief then made a sign to the old pipe-bearer, who seemed to fill, likewise, the station of herald, seneschal, and public crier, for he ascended to the top of the lodge to make proclamation. Here he took his post beside the aperture for the emission of smoke and the admission of light; the chief dictated from within what he was to proclaim, and he bawled it forth with a force of lungs that resounded over all the village. In this way he summoned the warriors and great men to council; every now and then reporting progress to his chief through the hole in the roof.

In a little while the braves and sages began to enter one by one, as their names were called or announced, emerging from under the buffalo robe suspended over the entrance instead of a door, stalking across the lodge to the skins placed on the floor, and crouching down on them in silence. In this way twenty entered and took their seats, forming an assemblage worthy of the pencil: for the Arickaras are a noble race of men, large and well formed, and maintain a savage grandeur and gravity of demeanor in their solemn ceremonials.

All being seated, the old seneschal prepared the pipe of ceremony or council, and having lit it, handed it to the chief. He inhaled the sacred smoke, gave a puff upward to the heaven, then downward to the earth, then towards the east; after this it was as usual passed from mouth to mouth, each holding it respectfully until his neighbor had taken several whiffs; and now the grand council was considered as opened in due form.

The chief made an harangue welcoming the white men to his village, and expressing his happiness in taking them by the hand as friends; but at the same time complaining of the poverty of himself and his people; the usual prelude among Indians to begging or hard bargaining.

Lisa rose to reply, and the eyes of Hunt and his companions were eagerly turned upon him, those of M'Lellan glaring like a basilisk's. He began by the usual expressions of friendship, and then proceeded to explain the object of his own party. Those persons, however, said he, pointing to Mr. Hunt and his companions, are of a different party, and are quite distinct in their views; but, added he, though we are separate parties, we make but one common cause when the safety of either is concerned. Any injury or insult offered to them I shall consider as done to myself, and will resent it accordingly. I trust, therefore, that you will treat them with the same friendship that you have always manifested for me, doing everything in your power to serve them and to help them on their way. The speech of Lisa, delivered with an air of frankness and sincerity, agreeably surprised and disappointed the rival party.

Mr. Hunt then spoke, declaring the object of his journey to the great Salt Lake beyond the moun-

---

tains, and that he should want horses for the purpose, for which he was ready to trade, having brought with him plenty of goods. Both he and Lisa concluded their speeches by making presents of tobacco.

The left-handed chieftain in reply promised his friendship and aid to the new comers, and welcomed them to his village. He added that they had not the number of horses to spare that Mr. Hunt required, and expressed a doubt whether they should be able to part with any. Upon this, another chieftain, called Gray Eyes, made a speech, and declared that they could readily supply Mr. Hunt with all the horses he might want, since, if they had not enough in the village, they could easily steal more. This honest expedient immediately removed the main difficulty; but the chief deferred all trading for a day or two; until he should have time to consult with his subordinate chiefs as to market rates; for the principal chief of a village, in conjunction with his council, usually fixes the prices at which articles shall be bought and sold, and to them the village must conform.

The council now broke up. Mr. Hunt transferred his camp across the river at a little distance below the village, and the left-handed chief placed some of his warriors as a guard to prevent the intrusion of any of his people. The camp was pitched on the river bank just above the boats. The tents, and the men wrapped in their blankets and bivouacking on skins in the open air, surrounded the baggage at night. Four sentinels also kept watch within sight of each other outside of the camp until midnight, when they were relieved by four others who mounted guard until daylight. Mr. Lisa encamped near to Mr. Hunt, between him and the village.

The speech of Mr. Lisa in the council had produced a pacific effect in the encampment. Though the sincerity of his friendship and good-will towards the new company still remained matter of doubt, he was no longer suspected of an intention to play false. The intercourse between the two leaders was therefore resumed, and the affairs of both parties went on harmoniously.

A TRADE now commenced with the Arickaras under the regulation and supervision of their two chieftains. Lisa sent a part of his goods to the lodge of the left-handed dignitary, and Mr. Hunt established his mart in the lodge of the Big Man. The village soon presented the appearance of a busy fair; and as horses were in demand, the purlieu and the adjacent plain were like the vicinity of a Tartar encampment; horses were put through all their paces, and horsemen were careering

about with that dexterity and grace for which the Arickaras are noted. As soon as a horse was purchased, his tail was cropped, a sure mode of distinguishing him from the horses of the tribe; for the Indians disdain to practice this absurd, barbarous, and indecent mutilation, invented by some mean and vulgar mind, insensible to the merit and perfections of the animal. On the contrary, the Indian horses are suffered to remain in every respect the superb and beautiful animals which nature formed them.

The wealth of an Indian of the far west consists principally in his horses, of which each chief and warrior possesses a great number, so that the plains about an Indian village or encampment are covered with them. These form objects of traffic, or objects of depredation, and in this way pass from tribe to tribe over great tracts of country. The horses owned by the Arickaras are, for the most part, of the wild stock of the prairies; some, however, had been obtained from the Poncas, Pawnees, and other tribes to the southwest, who had stolen them from the Spaniards in the course of horse-stealing expeditions into Mexican territories. These were to be known by being branded; a Spanish mode of marking horses not practiced by the Indians.

As the Arickaras were meditating another expedition against their enemies the Sioux, the articles of traffic most in demand were guns, tomahawks, scalping-knives, powder, ball, and other munitions of war. The price of a horse, as regulated by the chiefs, was commonly ten dollars' worth of goods at first cost. To supply the demand thus suddenly created, parties of young men and braves had sallied forth on expeditions to steal horses; a species of service among the Indians which takes precedence of hunting, and is considered a department of honorable warfare.

While the leaders of the expedition were actively engaged in preparing for the approaching journey, those who had accompanied it for curiosity or amusement, found ample matter for observation in the village and its inhabitants. Wherever they went they were kindly entertained. If they entered a lodge, the buffalo robe was spread before the fire for them to sit down; the pipe was brought, and while the master of the lodge conversed with his guests, the squaw put the earthen vessel over the fire well filled with dried buffalo-meat and pounded corn; for the Indian in his native state, before he has mingled much with white men, and acquired their sordid habits, has the hospitality of the Arab: never does a stranger enter his door without having food placed before him; and never is the food thus furnished made a matter of traffic.

The life of an Indian when at home in his village is a life of indolence and amusement. To the woman is consigned the labors of the household and the field; she arranges the lodge; brings wood for the fire; cooks; jerks venison and buffalo meat; dresses the skins of the animals killed in the chase; cultivates the little patch of maize, pumpkins, and pulse, which furnishes a great part of their provisions. Their time for repose and recreation is at sunset, when the labors of the day being ended, they gather together to amuse themselves with petty games, or to hold gossiping convocations on the tops of their lodges.

As to the Indian, he is a game animal, not to be degraded by useful or menial toil. It is enough that he exposes himself to the hardships of the chase and the perils of war; that he brings home

food for his family, and watches and fights for its protection. Everything else is beneath his attention. When at home, he attends only to his weapons and his horses, preparing the means of future exploit. Or he engages with his comrades in games of dexterity, agility and strength; or in gambling games in which everything is put at hazard with a recklessness seldom witnessed in civilized life.

A great part of the idle leisure of the Indians when at home is passed in groups, squatted together on the bank of a river, on the top of a mound on the prairie, or on the roof of one of their earth-covered lodges, talking over the news of the day, the affairs of the tribe, the events and exploits of their last hunting or fighting expedition; or listening to the stories of old times told by some veteran chronicler; resembling a group of our village quidnuncs and politicians, listening to the prosings of some superannuated oracle, or discussing the contents of an ancient newspaper.

As to the Indian women, they are far from complaining of their lot. On the contrary, they would despise their husbands could they stoop to any menial office, and would think it conveyed an imputation upon their own conduct. It is the worst insult one virago can cast upon another in a moment of altercation. "Infamous woman!" will she cry, "I have seen your husband carrying wood into his lodge to make the fire. Where was his squaw, that he should be obliged to make a woman of himself!"

Mr. Hunt and his fellow-travellers had not been many days at the Arickara village, when rumors began to circulate that the Sioux had followed them up, and that a war party, four or five hundred in number, were lurking somewhere in the neighborhood. These rumors produced much embarrassment in the camp. The white hunters were deterred from venturing forth in quest of game, neither did the leaders think it proper to expose them to such a risk. The Arickaras, too, who had suffered greatly in their wars with this cruel and ferocious tribe, were roused to increased vigilance, and stationed mounted scouts upon the neighboring hills. This, however, is a general precaution among the tribes of the prairies. Those immense plains present a horizon like the ocean, so that any object of importance can be descried afar, and information communicated to a great distance. The scouts are stationed on the hills, therefore, to look out both for game and for enemies, and are, in a manner, living telegraphs conveying their intelligence by concerted signs. If they wish to give notice of a herd of buffalo in the plain beyond, they gallop backwards and forwards abreast, on the summit of the hill. If they perceive an enemy at hand, they gallop to and fro, crossing each other; at sight of which the whole village flies to arms.

Such an alarm was given in the afternoon of the 15th. Four scouts were seen crossing and recrossing each other at full gallop, on the summit of a hill about two miles distant down the river. The cry was up that the Sioux were coming. In an instant the village was in an uproar. Men, women, and children were all brawling and shouting; dogs barking, yelping, and howling. Some of the warriors ran for the horses to gather and drive them in from the prairie, some for their weapons. As fast as they could arm and equip they sallied forth; some on horseback, some on foot. Some hastily arrayed in their war dress, with coronets of fluttering feathers, and their bodies smeared with paint; others naked and only furnished with the weapons they had snatched up. The wom-

en and children gathered on the tops of the lodges and heightened the confusion of the scene by their vociferation. Old men who could no longer bear arms took similar stations, and harangued the warriors as they passed, exhorting them to valorous deeds. Some of the veterans took arms themselves, and sallied forth with tottering steps. In this way, the savage chivalry of the village to the number of five hundred, poured forth, helter-skelter, riding and running, with hideous yells and war-whoops, like so many bedlamites or demoniacs let loose.

After a while the tide of war rolled back, but with far less uproar. Either it had been a false alarm, or the enemy had retreated on finding themselves discovered, and quiet was restored to the village. The white hunters continuing to be fearful of ranging this dangerous neighborhood, fresh provisions began to be scarce in the camp. As a substitute, therefore, for venison and buffalo meat, the travellers had to purchase a number of dogs to be shot and cooked for the supply of the camp. Fortunately, however chary the Indians might be of their horses, they were liberal of their dogs. In fact, these animals swarm about an Indian village as they do about a Turkish town. Not a family but has two or three dozen belonging to it, of all sizes and colors; some of a superior breed are used for hunting; others, to draw the sledge, while others, of a mongrel breed, and idle vagabond nature, are fattened for food. They are supposed to be descendant from the wolf, and retain something of his savage but cowardly temper, howling rather than barking; showing their teeth and snarling on the slightest provocation, but sneaking away on the least attack.

The excitement of the village continued from day to day. On the day following the alarm just mentioned, several parties arrived from different directions, and were met and conducted by some of the braves to the council lodge, where they reported the events and success of their expeditions, whether of war or hunting; which news was afterwards promulgated throughout the village, by certain old men who acted as heralds or town criers. Among the parties which arrived was one that had been among the Snake nation stealing horses, and returned crowned with success. As they passed in triumph through the village they were cheered by the men, women, and children, collected as usual on the tops of the lodges, and were exhorted by the Nesters of the village to be generous in their dealings with the white men.

The evening was spent in feasting and rejoicing among the relations of the successful warriors; but the sounds of grief and wailing were heard from the hills adjacent to the village - the lamentations of women who had lost some relative in the foray.

An Indian village is subject to continual agitations and excitements. The next day arrived a deputation of braves from the Cheyenne or Shienne nation; a broken tribe, cut up, like the Arickaras, by wars with the Sioux, and driven to take refuge among the Black Hills, near the sources of the Cheyenne River, from which they derive their name. One of these deputies was magnificently arrayed in a buffalo robe, on which various figures were fancifully embroidered with split quills dyed red and yellow; and the whole was fringed with the slender hoofs of young fawns, that rattled as he walked.

The arrival of this deputation was the signal for another of those ceremonials which occupy so

much of Indian life; for no being is more courtly and punctilious, and more observing of etiquette and formality than an American savage.

The object of the deputation was to give notice of an intended visit of the Shienne (or Cheyenne) tribe to the Arickara village in the course of fifteen days. To this visit Mr. Hunt looked forward to procure additional horses for his journey; all his bargaining being ineffectual in obtaining a sufficient supply from the Arickaras. Indeed, nothing could prevail upon the latter to part with their prime horses, which had been trained to buffalo hunting.

As Mr. Hunt would have to abandon his boats at this place, Mr. Lisa now offered to purchase them, and such of his merchandise as was superfluous, and to pay him in horses to be obtained at a fort belonging to the Missouri Fur Company, situated at the Mandan villages, about a hundred and fifty miles further up the river. A bargain was promptly made, and Mr. Lisa and Mr. Crooks, with several companions, set out for the fort to procure the horses. They returned, after upwards of a fortnight's absence, bringing with them the stipulated number of horses. Still the cavalry was not sufficiently numerous to convey the party and baggage and merchandise, and a few days more were required to complete the arrangements for the journey.

On the 9th of July, just before daybreak, a great noise and vociferation was heard in the village. This being the usual Indian hour of attack and surprise, and the Sioux being known to be in the neighborhood, the camp was instantly on the alert. As the day broke Indians were descried in considerable number on the bluffs, three or four miles down the river. The noise and agitation in the village continued. The tops of the lodges were crowded with the inhabitants, all earnestly looking towards the hills, and keeping up a vehement chattering. Presently an Indian warrior galloped past the camp towards the village, and in a little while the legions began to pour forth.

The truth of the matter was now ascertained. The Indians upon the distant hills were three hundred Arickara braves, returning home from a foray. They had met the war party of Sioux who had been so long hovering about the neighborhood, had fought them the day before, killed several, and defeated the rest with the loss of but two or three of their own men and about a dozen wounded; and they were now halting at a distance until their comrades in the village should come forth to meet them, and swell the parade of their triumphal entry. The warrior who had galloped past the camp was the leader of the party hastening home to give tidings of his victory.

Preparations were now made for this great martial ceremony. All the finery and equipments of the warriors were sent forth to them, that they might appear to the greatest advantage. Those, too, who had remained at home, tasked their wardrobes and toilets to do honor to the procession.

The Arickaras generally go naked, but, like all savages, they have their gala dress, of which they are not a little vain. This usually consists of a gray surcoat and leggins of the dressed skin of the antelope, resembling chamois leather, and embroidered with porcupine quills brilliantly dyed. A buffalo robe is thrown over the right shoulder, and across the left is slung a quiver of arrows. They wear gay coronets of plumes, particularly those of the swan; but the feathers of the black eagle are

considered the most worthy, being a sacred bird among the Indian warriors.

He who has killed an enemy in his own land, is entitled to drag at his heels a fox-skin attached to each moccasin; and he who has slain a grizzly bear, wears a necklace of his claws, the most glorious trophy that a hunter can exhibit.

An Indian toilet is an operation of some toil and trouble; the warrior often has to paint himself from head to foot, and is extremely capricious and difficult to please, as to the hideous distribution of streaks and colors. A great part of the morning, therefore, passed away before there were any signs of the distant pageant. In the meantime a profound stillness reigned over the village. Most of the inhabitants had gone forth; others remained in mute expectation. All sports and occupations were suspended, excepting that in the lodges the painstaking squaws were silently busied in preparing the repasts for the warriors.

It was near noon that a mingled sound of voices and rude music, faintly heard from a distance, gave notice that the procession was on the march. The old men and such of the squaws as could leave their employments hastened forth to meet it. In a little while it emerged from behind a hill, and had a wild and picturesque appearance as it came moving over the summit in measured step, and to the cadence of songs and savage instruments; the warlike standards and trophies flaunting aloft, and the feathers, and paint, and silver ornaments of the warriors glaring and glittering in the sunshine.

The pageant had really something chivalrous in its arrangement. The Arickaras are divided into several bands, each bearing the name of some animal or bird, as the buffalo, the bear, the dog, the pheasant. The present party consisted of four of these bands, one of which was the dog, the most esteemed in war, being composed of young men under thirty, and noted for prowess. It is engaged in the most desperate occasions. The bands marched in separate bodies under their several leaders. The warriors on foot came first, in platoons of ten or twelve abreast; then the horsemen. Each band bore as an ensign a spear or bow decorated with beads, porcupine quills, and painted feathers. Each bore its trophies of scalps, elevated on poles, their long black locks streaming in the wind. Each was accompanied by its rude music and minstrelsy. In this way the procession extended nearly a quarter of a mile. The warriors were variously armed, some few with guns, others with bows and arrows, and war clubs; all had shields of buffalo hide, a kind of defense generally used by the Indians of the open prairies, who have not the covert of trees and forests to protect them. They were painted in the most savage style. Some had the stamp of a red hand across their mouths, a sign that they had drunk the life-blood of a foe!

As they drew near to the village the old men and the women began to meet them, and now a scene ensued that proved the fallacy of the old fable of Indian apathy and stoicism. Parents and children, husbands and wives, brothers and sisters met with the most rapturous expressions of joy; while wailings and lamentations were heard from the relatives of the killed and wounded. The procession, however, continued on with slow and measured step, in cadence to the solemn chant, and the warriors maintained their fixed and stern demeanor.

Between two of the principal chiefs rode a young warrior who had distinguished himself in the battle. He was severely wounded, so as with difficulty to keep on his horse; but he preserved a serene and steadfast countenance, as if perfectly unharmed. His mother had heard of his condition. She broke through the throng, and rushing up, threw her arms around him and wept aloud. He kept up the spirit and demeanor of a warrior to the last, but expired shortly after he had reached his home.

The village was now a scene of the utmost festivity and triumph. The banners, and trophies, and scalps, and painted shields were elevated on poles near the lodges. There were warfeasts, and scalp-dances, with warlike songs and savage music; all the inhabitants were arrayed in their festal dresses; while the old heralds went round from lodge to lodge, promulgating with loud voices the events of the battle and the exploits of the various warriors.

Such was the boisterous revelry of the village; but sounds of another kind were heard on the surrounding hills; piteous wailings of the women, who had retired thither to mourn in darkness and solitude for those who had fallen in battle. There the poor mother of the youthful warrior who had returned home in triumph but to die, gave full vent to the anguish of a mother's heart. How much does this custom among the Indian woman of repairing to the hilltops in the night, and pouring forth their wailings for the dead, call to mind the beautiful and affecting passage of Scripture, "In Rama was there a voice heard, lamentation, and weeping, and great mourning, Rachel weeping for her children, and would not be comforted, because they are not."

CHAPTER XXII.

Wilderness of the Far West.- Great American Desert- Parched Seasons. -Black Hills.- Rocky Mountains.- Wandering and Predatory Hordes. -Speculations on What May Be the Future Population.-Apprehended Dangers.-A Plot to Desert.-Rose the Interpreter.- His Sinister Character-Departure From the Arickara Village.

WHILE Mr. Hunt was diligently preparing for his arduous journey, some of his men began to lose heart at the perilous prospect before them; but before we accuse them of want of spirit, it is proper to consider the nature of the wilderness into which they were about to adventure. It was a region almost as vast and trackless as the ocean, and, at the time of which we treat, but little known, excepting through the vague accounts of Indian hunters. A part of their route would lay across an immense tract, stretching north and south for hundreds of miles along the foot of the Rocky Mountains, and drained by the tributary streams of the Missouri and the Mississippi. This region, which resembles one of the immeasurable steppes of Asia, has not inaptly been termed "the great American desert." It spreads forth into undulating and treeless plains, and desolate sandy wastes wearisome to the eye from their extent and monotony, and which are supposed by geologists to have formed the ancient floor of the ocean, countless ages since, when its primeval waves beat against the granite bases of the Rocky Mountains.

It is a land where no man permanently abides; for, in certain seasons of the year there is no food either for the hunter or his steed. The herbage is parched and withered; the brooks and streams are dried up; the buffalo, the elk and the deer have wandered to distant parts, keeping within the verge of expiring verdure, and leaving behind them a vast uninhabited solitude, seamed by ravines, the beds of former torrents, but now serving only to tantalize and increase the thirst of the traveller.

Occasionally the monotony of this vast wilderness is interrupted by mountainous belts of sand and limestone, broken into confused masses; with precipitous cliffs and yawning ravines, looking like the ruins of a world; or is traversed by lofty and barren ridges of rock, almost impassable, like those denominated the Black Hills. Beyond these rise the stern barriers of the Rocky Mountains, the limits, as it were, of the Atlantic world. The rugged defiles and deep valleys of this vast chain form sheltering places for restless and ferocious bands of savages, many of them the remnants of tribes, once inhabitants of the prairies, but broken up by war and violence, and who carry into their mountain haunts the fierce passions and reckless habits of desperadoes.

Such is the nature of this immense wilderness of the far West; which apparently defies cultivation, and the habitation of civilized life. Some portions of it along the rivers may partially be subdued by agriculture, others may form vast pastoral tracts, like those of the East; but it is to be feared that a great part of it will form a lawless interval between the abodes of civilized man, like the wastes of the ocean or the deserts of Arabia; and, like them, be subject to the depredations of the marauder. Here may spring up new and mongrel races, like new formations in geology, the amalgamation of the "debris" and "abrasions" of former races, civilized and savage; the remains of broken and almost extinguished tribes; the descendants of wandering hunters and trappers; of fugitives from the Spanish and American frontiers; of adventurers and desperadoes of every class and country, yearly ejected from the bosom of society into the wilderness. We are contributing incessantly to swell this singular and heterogeneous cloud of wild population that is to hang about our frontier, by the transfer of whole tribes from the east of the Mississippi to the great wastes of the far West. Many of these bear with them the smart of real or fancied injuries; many consider themselves expatriated beings, wrongfully exiled from their hereditary homes, and the sepulchres of their fathers, and cherish a deep and abiding animosity against the race that has dispossessed them. Some may gradually become pastoral hordes, like those rude and migratory people, half shepherd, half warrior, who, with their flocks and herds, roam the plains of upper Asia; but others, it is to be apprehended, will become predatory bands, mounted on the fleet steeds of the prairies, with the open plains for their marauding grounds, and the mountains for their retreats and lurking-places. Here they may resemble those great hordes of the North, "Gog and Magog with their bands," that haunted the gloomy imaginations of the prophets. "A great company and a mighty host, all riding upon horses, and warring upon those nations which were at rest, and dwelt peaceably, and had gotten cattle and goods."

The Spaniards changed the whole character and habits of the Indians when they brought the horse among them. In Chili, Tucuman, and other parts, it has converted them, we are told, into Tartar-like tribes, and enabled them to keep the Spaniards out of their country, and even to make

it dangerous for them to venture far from their towns and settlements. Are we not in danger of producing some such state of things in the boundless regions of the far West? That these are not mere fanciful and extravagant suggestions we have sufficient proofs in the dangers already experienced by the traders to the Spanish mart of Santa Fe, and to the distant posts of the fur companies. These are obliged to proceed in armed caravans, and are subject to murderous attacks from bands of Pawnees, Camanches, and Blackfeet, that come scouring upon them in their weary march across the plains, or lie in wait for them among the passes of the mountains.

We are wandering, however, into excursive speculations, when our intention was merely to give an idea of the nature of the wilderness which Mr. Hunt was about to traverse; and which at that time was far less known than at present; though it still remains in a great measure an unknown land. We cannot be surprised, therefore, that some of the resolute of his party should feel dismay at the thoughts of adventuring into this perilous wilderness under the uncertain guidance of three hunters, who had merely passed once through the country and might have forgotten the landmarks. Their apprehensions were aggravated by some of Lisa's followers, who, not being engaged in the expedition, took a mischievous pleasure in exaggerating its dangers. They painted in strong colors, to the poor Canadian voyageurs, the risk they would run of perishing with hunger and thirst; of being cut off by war-parties of the Sioux who scoured the plains; of having their horses stolen by the Upsarokas or Crows, who infested the skirts of the Rocky Mountains; or of being butchered by the Blackfeet, who lurked among the defiles. In a word, there was little chance of their getting alive across the mountains; and even if they did, those three guides knew nothing of the howling wilderness that lay beyond.

The apprehensions thus awakened in the minds of some of the men came well-nigh proving detrimental to the expedition. Some of them determined to desert, and to make their way back to St. Louis. They accordingly purloined several weapons and a barrel of gunpowder, as ammunition for their enterprise, and buried them in the river bank, intending to seize one of the boats, and make off in the night. Fortunately their plot was overheard by John Day, the Kentuckian, and communicated to the partners, who took quiet and effectual means to frustrate it.

The dangers to be apprehended from the Crow Indians had not been overrated by the camp gossips. These savages, through whose mountain haunts the party would have to pass, were noted for daring and excursive habits, and great dexterity in horse stealing. Mr. Hunt, therefore, considered himself fortunate in having met with a man who might be of great use to him in any intercourse he might have with the tribe. This was a wandering individual named Edward Rose, whom he had picked up somewhere on the Missouri - one of those anomalous beings found on the frontier, who seem to have neither kin nor country. He had lived some time among the Crows, so as to become acquainted with their language and customs; and was, withal, a dogged, sullen, silent fellow, with a sinister aspect, and more of the savage than the civilized man in his appearance. He was engaged to serve in general as a hunter, but as guide and interpreter when they should reach the country of the Crows.

On the 18th of July, Mr. Hunt took up his line of march by land from the Arickara village, leaving

Mr. Lisa and Mr. Nuttall there, where they intended to await the expected arrival of Mr. Henry from the Rocky Mountains. As to Messrs. Bradbury and Breckenridge, they had departed some days previously, on a voyage down the river to St. Louis, with a detachment from Mr. Lisa's party. With all his exertions, Mr. Hunt had been unable to obtain a sufficient number of horses for the accommodation of all his people. His cavalcade consisted of eighty-two horses, most of them heavily laden with Indian goods, beaver traps, ammunition, Indian corn, corn meal and other necessaries. Each of the partners was mounted, and a horse was allotted to the interpreter, Pierre Dorion, for the transportation of his luggage and his two children. His squaw, for the most part of the time, trudged on foot, like the residue of the party; nor did any of the men show more patience and fortitude than this resolute woman in enduring fatigue and hardship.

The veteran trappers and voyageurs of Lisa's party shook their heads as their comrades set out, and took leave of them as of doomed men; and even Lisa himself gave it as his opinion, after the travellers had departed, they would never reach the shores of the Pacific, but would either perish with hunger in the wilderness, or be cut off by the savages.

CHAPTER XXIII.

Summer Weather of the Prairies.- Purity of the Atmosphere.- Canadians on the March.- Sickness in the Camp.- Big River.- Vulgar Nomenclature.- Suggestions About the Original Indian Names.- Camp of Cheyennes.- Trade for Horses.- Character of the Cheyennes.- Their Horsemanship.- Historical Anecdotes of the Tribe.

THE course taken by Mr. Hunt was at first to the northwest, but soon turned and kept generally to the southwest, to avoid the country infested by the Blackfeet. His route took him across some of the tributary streams of the Missouri, and over immense prairies, bounded only by the horizon, and destitute of trees. It was now the height of summer, and these naked plains would be intolerable to the traveller were it not for the breezes which swept over them during the fervor of the day, bringing with them tempering airs from the distant mountains. To the prevalence of these breezes, and to the want of all leafy covert, may we also attribute the freedom from those flies and other insects so tormenting to man and beast during the summer months, in the lower plains, which are bordered and interspersed with woodland.

The monotony of these immense landscapes, also, would be as wearisome as that of the ocean, were it not relieved in some degree by the purity and elasticity of the atmosphere, and the beauty of the heavens. The sky has that delicious blue for which the sky of Italy is renowned; the sun shines with a splendor unobscured by any cloud or vapor, and a starlight night on the prairies is glorious. This purity and elasticity of atmosphere increases as the traveller approaches the mountains and gradually rises into more elevated prairies.

On the second day of the journey, Mr. Hunt arranged the party into small and convenient messes, distributing among them the camp kettles. The encampments at night were as before; some sleeping under tents, and others bivouacking in the open air. The Canadians proved as patient

of toll and hardship on the land as on the water; indeed, nothing could surpass the patience and good-humor of these men upon the march. They were the cheerful drudges of the party, loading and unloading the horses, pitching the tents, making the fires, cooking; in short, performing all those household and menial offices which the Indians usually assign to the squaws; and, like the squaws, they left all the hunting and fighting to others. A Canadian has but little affection for the exercise of the rifle.

The progress of the party was but slow for the first few days. Some of the men were indisposed; Mr. Crooks, especially, was so unwell that he could not keep on his horse. A rude kind of litter was, therefore, prepared for him, consisting of two long poles, fixed, one on each side of two horses, with a matting between them, on which he reclined at full length, and was protected from the sun by a canopy of boughs.

On the evening of the 23d (July) they encamped on the banks of what they term Big River; and here we cannot but pause to lament the stupid, commonplace, and often ribald names entailed upon the rivers and other features of the great West, by traders and settlers. As the aboriginal tribes of these magnificent regions are yet in existence, the Indian names might easily be recovered; which, besides being in general more sonorous and musical, would remain mementoes of the primitive lords of the soil, of whom in a little while scarce any traces will be left. Indeed, it is to be wished that the whole of our country could be rescued, as much as possible, from the wretched nomenclature inflicted upon it, by ignorant and vulgar minds; and this might be done, in a great degree, by restoring the Indian names, wherever significant and euphonious. As there appears to be a spirit of research abroad in respect to our aboriginal antiquities, we would suggest, as a worthy object of enterprise, a map, or maps, of every part of our country, giving the Indian names wherever they could be ascertained. Whoever achieves such an object worthily, will leave a monument to his own reputation.

To return from this digression. As the travellers were now in a country abounding with buffalo, they remained for several days encamped upon the banks of Big River, to obtain a supply of provisions, and to give the invalids time to recruit.

On the second day of their sojourn, as Ben Jones, John Day, and others of the hunters were in pursuit of game, they came upon an Indian camp on the open prairie, near to a small stream which ran through a ravine. The tents or lodges were of dressed buffalo skins, sewn together and stretched on tapering pine poles, joined at top, but radiating at bottom, so as to form a circle capable of admitting fifty persons. Numbers of horses were grazing in the neighborhood of the camp, or straying at large in the prairie; a sight most acceptable to the hunters. After reconnoitering the camp for some time, they ascertained it to belong to a band of Cheyenne Indians, the same that had sent a deputation to the Arickaras. They received the hunters in the most friendly manner; invited them to their lodges, which were more cleanly than Indian lodges are prone to be, and set food before them with true uncivilized hospitality. Several of them accompanied the hunters back to the camp, when a trade was immediately opened. The Cheyennes were astonished and delighted to find a convoy of goods and trinkets thus brought into the very heart of the prairie; while Mr.

Hunt and his companions were overjoyed to have an opportunity of obtaining a further supply of horses from these equestrian savages.

During a fortnight that the travellers lingered at this place, their encampment was continually thronged by the Cheyennes. They were a civil, well-behaved people, cleanly in their persons, and decorous in their habits. The men were tall, straight and vigorous, with aquiline noses, and high cheek bones. Some were almost as naked as ancient statues, and might have stood as models for a statuary; others had leggins and moccasins of deer skin, and buffalo robes, which they threw gracefully over their shoulders. In a little while, however, they began to appear in more gorgeous array, tricked out in the finery obtained from the white men; bright cloths, brass rings, beads of various colors; and happy was he who could render himself hideous with vermilion.

The travellers had frequent occasions to admire the skill and grace with which these Indians managed their horses. Some of them made a striking display when mounted; themselves and their steeds decorated in gala style; for the Indians often bestow more finery upon their horses than upon themselves. Some would hang around the necks, or rather on the breasts of their horses, the most precious ornaments they had obtained from the white men; others interwove feathers in their manes and tails. The Indian horses, too, appear to have an attachment to their wild riders, and indeed, it is said that the horses of the prairies readily distinguish an Indian from a white man by the smell, and give a preference to the former. Yet the Indians, in general, are hard riders, and, however they may value their horses, treat them with great roughness and neglect. Occasionally the Cheyennes joined the white hunters in pursuit of the elk and buffalo; and when in the ardor of the chase, spared neither themselves nor their steeds, scouring the prairies at full speed, and plunging down precipices and frightful ravines that threatened the necks of both horse and horseman. The Indian steed, well trained to the chase, seems as mad as the rider, and pursues the game as eagerly as if it were his natural prey, on the flesh of which he was to banquet.

The history of the Cheyennes is that of many of those wandering tribes of the prairies. They were the remnant of a once powerful people called the Shaways, inhabiting a branch of the Red River which flows into Lake Winnipeg. Every Indian tribe has some rival tribe with which it wages implacable hostility. The deadly enemies of the Shaways were the Sioux, who, after a long course of warfare, proved too powerful for them, and drove them across the Missouri. They again took root near the Warricanne Creek, and established themselves there in a fortified village.

The Sioux still followed with deadly animosity; dislodged them from their village, and compelled them to take refuge in the Black Hills, near the upper waters of the Sheyenne or Cheyenne River. Here they lost even their name, and became known among the French colonists by that of the river they frequented.

The heart of the tribe was now broken; its numbers were greatly thinned by their harassing wars. They no longer attempted to establish themselves in any permanent abode that might be an object of attack to their cruel foes. They gave up the cultivation of the fruits of the earth, and became a wandering tribe, subsisting by the chase, and following the buffalo in its migrations.

Their only possessions were horses, which they caught on the prairies, or reared, or captured on predatory incursions into the Mexican territories, as has already been mentioned. With some of these they repaired once a year to the Arickara villages, exchanged them for corn, beans, pumpkins, and articles of European merchandise, and then returned into the heart of the prairies.

Such are the fluctuating fortunes of these savage nations. War, famine, pestilence, together or singly, bring down their strength and thin their numbers. Whole tribes are rooted up from their native places, wander for a time about these immense regions, become amalgamated with other tribes, or disappear from the face of the earth. There appears to be a tendency to extinction among all the savage nations; and this tendency would seem to have been in operation among the aboriginals of this country long before the advent of the white men, if we may judge from the traces and traditions of ancient populousness in regions which were silent and deserted at the time of the discovery; and from the mysterious and perplexing vestiges of unknown races, predecessors of those found in actual possession, and who must long since have become gradually extinguished or been destroyed. The whole history of the aboriginal population of this country, however, is an enigma, and a grand one - will it ever be solved?

Washington Irving's Astoria

CHAPTER XXIV.

New Distribution of Horses- Secret Information of Treason in the Camp.- Rose the Interpreter- His Perfidious Character- His Plots. -Anecdotes of the Crow Indians.- Notorious Horse Stealers.- Some Account of Rose.- A Desperado of the Frontier.

ON the sixth of August the travellers bade farewell to the friendly band of Cheyennes, and resumed their journey. As they had obtained thirty-six additional horses by their recent traffic, Mr. Hunt made a new arrangement. The baggage was made up in smaller loads. A horse was allotted to each of the six prime hunters, and others were distributed among the voyageurs, a horse for every two, so that they could ride and walk alternately. Mr. Crooks being still too feeble to mount the saddle, was carried on a litter.

Their march this day lay among singular hills and knolls of an indurated red earth, resembling brick, about the bases of which were scattered pumice stones and cinders, the whole bearing traces of the action of fire. In the evening they encamped on a branch of Big River.

They were now out of the tract of country infested by the Sioux, and had advanced such a distance into the interior that Mr. Hunt no longer felt apprehensive of the desertion of any of his men. He was doomed, however, to experience new cause of anxiety. As he was seated in his tent after nightfall, one of the men came to him privately, and informed him that there was mischief brewing in the camp. Edward Rose, the interpreter, whose sinister looks we have already mentioned, was denounced by this secret informer as a designing, treacherous scoundrel, who was tampering with the fidelity of certain of the men, and instigating them to a flagrant piece of treason. In the course of a few days they would arrive at the mountainous district infested by the Upsarokas or

Crows, the tribe among which Rose was to officiate as interpreter. His plan was that several of the men should join with him, when in that neighborhood, in carrying off a number of the horses with their packages of goods, and deserting to those savages. He assured them of good treatment among the Crows, the principal chiefs and warriors of whom he knew; they would soon become great men among them, and have the finest women, and the daughters of the chiefs for wives; and the horses and goods they carried off would make them rich for life.

The intelligence of this treachery on the part of Rose gave much disquiet to Mr. Hunt, for he knew not how far it might be effective among his men. He had already had proofs that several of them were disaffected to the enterprise, and loath to cross the mountains. He knew also that savage life had charms for many of them, especially the Canadians, who were prone to intermarry and domesticate themselves among the Indians.

And here a word or two concerning the Crows may be of service to the reader, as they will figure occasionally in the succeeding narration.

The tribe consists of four bands, which have their nestling-places in fertile, well-wooded valleys, lying among the Rocky Mountains, and watered by the Big Horse River and its tributary streams; but, though these are properly their homes, where they shelter their old people, their wives, and their children, the men of the tribe are almost continually on the foray and the scamper. They are, in fact, notorious marauders and horse-stealers; crossing and re-crossing the mountains, robbing on the one side, and conveying their spoils to the other. Hence, we are told, is derived their name, given to them on account of their unsettled and predatory habits; winging their flight, like the crows, from one side of the mountains to the other, and making free booty of everything that lies in their way. Horses, however, are the especial objects of their depredations, and their skill and audacity in stealing them are said to be astonishing. This is their glory and delight; an accomplished horse-stealer fills up their idea of a hero. Many horses are obtained by them, also, in barter from tribes in and beyond the mountains. They have an absolute passion for this noble animal; besides which he is with them an important object of traffic. Once a year they make a visit to the Mandans, Minatarees, and other tribes of the Missouri, taking with them droves of horses which they exchange for guns, ammunition, trinkets, vermilion, cloths of bright colors, and various other articles of European manufacture. With these they supply their own wants and caprices, and carry on the internal trade for horses already mentioned.

The plot of Rose to rob and abandon his countrymen when in the heart of the wilderness, and to throw himself into the hands of savages, may appear strange and improbable to those unacquainted with the singular and anomalous characters that are to be found about the borders. This fellow, it appears, was one of those desperadoes of the frontiers, outlawed by their crimes, who combine the vices of civilized and savage life, and are ten times more barbarous than the Indians with whom they consort. Rose had formerly belonged to one of the gangs of pirates who infested the islands of the Mississippi, plundering boats as they went up and down the river, and who sometimes shifted the scene of their robberies to the shore, waylaying travellers as they returned by land from New Orleans with the proceeds of their downward voyage, plundering them of their

money and effects, and often perpetrating the most atrocious murders.

These hordes of villains being broken up and dispersed, Rose had betaken himself to the wilderness, and associated himself with the Crows, whose predatory habits were congenial with his own, had married a woman of the tribe, and, in short, had identified himself with those vagrant savages.

Such was the worthy guide and interpreter, Edward Rose. We give his story, however, not as it was known to Mr. Hunt and his companions at the time, but as it has been subsequently ascertained. Enough was known of the fellow and his dark and perfidious character to put Mr. Hunt upon his guard: still, as there was no knowing how far his plans might have succeeded, and as any rash act might blow the mere smouldering sparks of treason into a sudden blaze, it was thought advisable by those with whom Mr. Hunt consulted, to conceal all knowledge or suspicion of the meditated treachery, but to keep up a vigilant watch upon the movements of Rose, and a strict guard upon the horses at night.

Washington Irving's Astoria

CHAPTER XXV.

Substitute for Fuel on the Prairies.- Fossil Trees.- Fierceness of the Buffaloes When in Heat.- Three Hunters Missing.- Signal Fires and Smokes.- Uneasiness Concerning the Lost Men.- A Plan to Forestall a Rogue.- New Arrangement With Rose.- Return of the Wanderers.

THE plains over which the travellers were journeying continued to be destitute of trees or even shrubs; insomuch that they had to use the dung of the buffalo for fuel, as the Arabs of the desert use that of the camel. This substitute for fuel is universal among the Indians of these upper prairies, and is said to make a fire equal to that of turf. If a few chips are added, it throws out a cheerful and kindly blaze.

These plains, however, had not always been equally destitute of wood, as was evident from the trunks of the trees which the travellers repeatedly met with, some still standing, others lying about in broken fragments, but all in a fossil state, having flourished in times long past. In these singular remains, the original grain of the wood was still so distinct that they could be ascertained to be the ruins of oak trees. Several pieces of the fossil wood were selected by the men to serve as whetstones.

In this part of the journey there was no lack of provisions, for the prairies were covered with immense herds of buffalo. These, in general, are animals of peaceful demeanor, grazing quietly like domestic cattle; but this was the season when they are in heat, and when the bulls are usually fierce and pugnacious. There was accordingly a universal restlessness and commotion throughout the plain; and the amorous herds gave utterance to their feelings in low bellowings that resounded like distant thunder. Here and there fierce duellos took place between rival enamorados; butting their huge shagged fronts together, goring each other with their short black horns, and tearing up the earth with their feet in perfect fury.

In one of the evening halts, Pierre Dorion, the interpreter, together with Carson and Gardpie, two of the hunters, were missing, nor had they returned by morning. As it was supposed they had wandered away in pursuit of buffalo, and would readily find the track of the party, no solicitude was felt on their account. A fire was left burning, to guide them by its column of smoke, and the travellers proceeded on their march. In the evening a signal fire was made on a hill adjacent to the camp, and in the morning it was replenished with fuel so as to last throughout the day. These signals are usual among the Indians, to give warnings to each other, or to call home straggling hunters; and such is the transparency of the atmosphere in those elevated plains, that a slight column of smoke can be discerned from a great distance, particularly in the evenings. Two or three days elapsed, however, without the reappearance of the three hunters; and Mr. Hunt slackened his march to give them time to overtake him.

A vigilant watch continued to be kept upon the movements of Rose, and of such of the men as were considered doubtful in their loyalty; but nothing occurred to excite immediate apprehensions. Rose evidently was not a favorite among his comrades, and it was hoped that he had not been able to make any real partisans.

On the 10th of August they encamped among hills, on the highest peak of which Mr. Hunt caused a huge pyre of pine wood to be made, which soon sent up a great column of flame that might be seen far and wide over the prairies. This fire blazed all night, and was amply replenished at day-break; so that the towering pillar of smoke could not but be descried by the wanderers if within the distance of a day's journey.

It is a common occurrence in these regions, where the features of the country so much resemble each other, for hunters to lose themselves and wander for many days, before they can find their way back to the main body of their party. In the present instance, however, a more than common solicitude was felt, in consequence of the distrust awakened by the sinister designs of Rose.

The route now became excessively toilsome, over a ridge of steep rocky hills, covered with loose stones. These were intersected by deep valleys, formed by two branches of Big River, coming from the south of west, both of which they crossed. These streams were bordered by meadows, well stocked with buffaloes. Loads of meat were brought in by the hunters; but the travellers were rendered dainty by profusion, and would cook only the choice pieces.

They had now travelled for several days at a very slow rate, and had made signal-fires and left traces of their route at every stage, yet nothing was heard or seen of the lost men. It began to be feared that they might have fallen into the hands of some lurking band of savages. A party numerous as that of Mr. Hunt, with a long train of pack horses, moving across plains or naked hills, is discoverable at a great distance by Indian scouts, who spread the intelligence rapidly to various points, and assemble their friends to hang about the skirts of the travellers, steal their horses, or cut off any stragglers from the main body.

Mr. Hunt and his companions were more and more sensible how much it would be in the power of this sullen and daring vagabond Rose, to do them mischief, when they should become entangled in the defiles of the mountains, with the passes of which they were wholly unacquainted, and which were infested by his freebooting friends, the Crows. There, should he succeed in seducing some of the party into his plans, he might carry off the best horses and effects, throw himself among his savage allies, and set all pursuit at defiance. Mr. Hunt resolved, therefore, to frustrate the knave, divert him, by management, from his plans, and make it sufficiently advantageous for him to remain honest.

He took occasion, accordingly, in the course of conversation, to inform Rose that, having engaged him chiefly as a guide and interpreter through the country of the Crows, they would not stand in need of his services beyond. Knowing, therefore, his connection by marriage with that tribe, and his predilection for a residence among them, they would put no restraint upon his will, but, whenever they met with a party of that people, would leave him at liberty to remain among his adopted brethren. Furthermore, that, in thus parting with him, they would pay him a half a year's wages in consideration of his past services, and would give him a horse, three beaver traps, and sundry other articles calculated to set him up in the world.

This unexpected liberality, which made it nearly as profitable and infinitely less hazardous for Rose to remain honest than to play the rogue, completely disarmed him. From that time his whole deportment underwent a change. His brow cleared up and appeared more cheerful; he left off his sullen, skulking habits, and made no further attempts to tamper with the faith of his comrades.

On the 13th of August Mr. Hunt varied his course, and inclined westward, in hopes of falling in with the three lost hunters; who, it was now thought, might have kept to the right hand of Big River. This course soon brought him to a fork of the Little Missouri, about a hundred yards wide, and resembling the great river of the same name in the strength of its current, its turbid water, and the frequency of drift-wood and sunken trees.

Rugged mountains appeared ahead, crowding down to the water edge, and offering a barrier to further progress on the side they were ascending. Crossing the river, therefore, they encamped on its northwest bank, where they found good pasturage and buffalo in abundance. The weather was overcast and rainy, and a general gloom pervaded the camp; the voyageurs sat smoking in groups, with their shoulders as high as their heads, croaking their foreboding, when suddenly towards evening a shout of joy gave notice that the lost men were found. They came slowly lagging into camp, with weary looks, and horses jaded and wayworn. They had, in fact, been for several days incessantly on the move. In their hunting excursion on the prairies they had pushed so far in pursuit of buffalo, as to find it impossible to retrace their steps over plains trampled by innumerable herds; and were baffled by the monotony of the landscape in their attempts to recall landmarks. They had ridden to and fro until they had almost lost the points of the compass, and became totally bewildered; nor did they ever perceive any of the signal fires and columns of smoke made by their comrades. At length, about two days previously, when almost spent by anxiety and hard riding, they came, to their great joy, upon the "trail" of the party, which they had since followed

up steadily.

Those only who have experienced the warm cordiality that grows up between comrades in wild and adventurous expeditions of the kind, can picture to themselves the hearty cheering with which the stragglers were welcomed to the camp. Every one crowded round them to ask questions, and to hear the story of their mishaps; and even the squaw of the moody half-breed, Pierre Dorion, forgot the sternness of his domestic rule, and the conjugal discipline of the cudgel, in her joy at his safe return.

CHAPTER XXVI.

The Black Mountains.- Haunts of Predatory Indians.- Their Wild and Broken Appearance.- Superstitions Concerning Them - Thunder Spirits.- Singular Noises in the Mountains- Secret Mines.-Hidden Treasures.- Mountains in Labor. - Scientific Explanation.-Impassable Defiles.- Black-Tailed Deer.-The Bighorn or Ahsahta.- Prospect From a Lofty Height.- Plain With Herds of Buffalo.- Distant Peaks of the Rocky Mountains.- Alarms in the Camp.- Tracks of Grizzly Bears.- Dangerous Nature of This Animal.- Adventures of William Cannon and John Day With Grizzly Bears.

MR. Hunt and his party were now on the skirts of the Black Hills, or Black Mountains, as they are sometimes called; an extensive chain, lying about a hundred miles east of the Rocky Mountains, and stretching in a northeast direction from the south fork of the Nebraska, or Platte River, to the great north bend of the Missouri. The Sierra or ridge of the Black Hills, in fact, forms the dividing line between the waters of the Missouri and those of the Arkansas and the Mississippi, and gives rise to the Cheyenne, the Little Missouri, and several tributary streams of the Yellowstone.

The wild recesses of these hills, like those of the Rocky Mountains, are retreats and lurking-places for broken and predatory tribes, and it was among them that the remnants of the Cheyenne tribe took refuge, as has been stated, from their conquering enemies, the Sioux.

The Black Hills are chiefly composed of sandstone, and in many places are broken into savage cliffs and precipices, and present the most singular and fantastic forms; sometimes resembling towns and castellated fortresses. The ignorant inhabitants of plains are prone to clothe the mountains that bound their horizon with fanciful and superstitious attributes. Thus the wandering tribes of the prairies, who often behold clouds gathering round the summits of these hills, and lightning flashing, and thunder pealing from them, when all the neighboring plains are serene and sunny, consider them the abode of the genii or thunder-spirits who fabricate storms and tempests. On entering their defiles, therefore, they often hang offerings on the trees, or place them on the rocks, to propitiate the invisible "lords of the mountains," and procure good weather and successful hunting; and they attach unusual significance to the echoes which haunt the precipices. This superstition may also have arisen, in part, from a natural phenomenon of a singular nature. In the most calm and serene weather, and at all times of the day or night, successive reports are now and then heard among these mountains, resembling the discharge of several pieces of ar-

tillery. Similar reports were heard by Messrs. Lewis and Clarke in the Rocky Mountains, which they say were attributed by the Indians to the bursting of the rich mines of silver contained in the bosom of the mountains.

In fact, these singular explosions have received fanciful explanations from learned men, and have not been satisfactorily accounted for even by philosophers. They are said to occur frequently in Brazil. Vasconcelles, Jesuit father, describes one which he heard in the Sierra, or mountain region of Piratininga, and which he compares to the discharges of a park of artillery. The Indians told him that it was an explosion of stones. The worthy father had soon a satisfactory proof of the truth of their information, for the very place was found where a rock had burst and exploded from its entrails a stony mass, like a bomb-shell, and of the size of a bull's heart. This mass was broken either in its ejection or its fall, and wonderful was the internal organization revealed. It had a shell harder even than iron; within which were arranged, like the seeds of a pomegranate, jewels of various colors; some transparent as crystals; others of a fine red, and others of mixed hues. The same phenomenon is said to occur occasionally in the adjacent province of Guayra, where stones of the bigness of a man's hand are exploded, with a loud noise, from the bosom of the earth, and scatter about glittering and beautiful fragments that look like precious gems, but are of no value.

The Indians of the Orellanna, also, tell of horrible noises heard occasionally in the Paraguaxo, which they consider the throes and groans of the mountains, endeavoring to cast forth the precious stones hidden within its entrails. Others have endeavored to account for these discharges of "mountain artillery" on humbler principles; attributing them to the loud reports made by the disruption and fall of great masses of rock, reverberated and prolonged by the echoes; others, to the disengagement of hydrogen, produced by subterraneous beds of coal in a state of ignition. In whatever way this singular phenomenon may be accounted for, the existence of it appears to be well established. It remains one of the lingering mysteries of nature which throw something of a supernatural charm over her wild mountain solitudes; and we doubt whether the imaginative reader will not rather join with the poor Indian in attributing it to the thunderspirits, or the guardian genii of unseen treasures, than to any commonplace physical cause.

Whatever might be the supernatural influences among these mountains, the travellers found their physical difficulties hard to cope with. They made repeated attempts to find a passage through or over the chain, but were as often turned back by impassable barriers. Sometimes a defile seemed to open a practicable path, but it would terminate in some wild chaos of rocks and cliffs, which it was impossible to climb. The animals of these solitary regions were different from those they had been accustomed to. The black-tailed deer would bound up the ravines on their approach, and the bighorn would gaze fearlessly down upon them from some impending precipice, or skip playfully from rock to rock. These animals are only to be met with in mountainous regions. The former is larger than the common deer, but its flesh is not equally esteemed by hunters. It has very large ears, and the tip of the tail is black, from which it derives its name.

The bighorn is so named from its horns; which are of a great size, and twisted like those of a ram.

---

It is called by some the argali, by others the ibex, though differing from both of these animals. The Mandans call it the ahsakta, a name much better than the clumsy appellation which it generally bears. It is of the size of a small elk, or large deer, and of a dun color, excepting the belly and round the tail, where it is white. In its habits it resembles the goat, frequenting the rudest precipices; cropping the herbage from their edges; and like the chamois, bounding lightly and securely among dizzy heights, where the hunter dares not venture. It is difficult, therefore, to get within shot of it. Ben Jones the hunter, however, in one of the passes of the Black Hills, succeeded in bringing down a bighorn from the verge of a precipice, the flesh of which was pronounced by the gormands of the camp to have the flavor of excellent mutton.

Baffled in his attempts to traverse this mountain chain, Mr. Hunt skirted along it to the southwest, keeping it on the right; and still in hopes of finding an opening. At an early hour one day, he encamped in a narrow valley on the banks of a beautifully clear but rushy pool; surrounded by thickets bearing abundance of wild cherries, currants, and yellow and purple gooseberries.

While the afternoon's meal was in preparation, Mr. Hunt and Mr. M'Kenzie ascended to the summit of the nearest hill, from whence, aided by the purity and transparency of the evening atmosphere, they commanded a vast prospect on all sides. Below them extended a plain, dotted with innumerable herds of buffalo. Some were lying among the herbage, others roaming in their unbounded pastures, while many were engaged in fierce contests like those already described, their low bellowings reaching the ear like the hoarse murmurs of the surf on a distant shore.

Far off in the west they descried a range of lofty mountains printing the clear horizon, some of them evidently capped with snow. These they supposed to be the Bighorn Mountains, so called from the animal of that name, with which they abound. They are a spur of the great Rocky chain. The hill from whence Mr. Hunt had this prospect was, according to his computation, about two hundred and fifty miles from the Arickara village.

On returning to the camp, Mr. Hunt found some uneasiness prevailing among the Canadian voyageurs. In straying among the thickets they had beheld tracks of grizzly bears in every direction, doubtless attracted thither by the fruit. To their dismay, they now found that they had encamped in one of the favorite resorts of this dreaded animal. The idea marred all the comfort of the encampment. As night closed, the surrounding thickets were peopled with terrors; insomuch that, according to Mr. Hunt, they could not help starting at every little breeze that stirred the bushes.

The grizzly bear is the only really formidable quadruped of our continent. He is the favorite theme of the hunters of the far West, who describe him as equal in size to a common cow and of prodigious strength. He makes battle if assailed, and often, if pressed by hunger, is the assailant. If wounded, he becomes furious and will pursue the hunter. His speed exceeds that of a man but is inferior to that of a horse. In attacking he rears himself on his hind legs, and springs the length of his body. Woe to horse or rider that comes within the sweep of his terrific claws, which are sometimes nine inches in length, and tear everything before them.

---

At the time we are treating of, the grizzly bear was still frequent on the Missouri and in the lower country, but, like some of the broken tribes of the prairie, he has gradually fallen back before his enemies, and is now chiefly to be found in the upland regions, in rugged fastnesses like those of the Black Hills and the Rocky Mountains. Here he lurks in caverns, or holes which he has dugged in the sides of hills, or under the roots and trunks of fallen trees. Like the common bear, he is fond of fruits, and mast, and roots, the latter of which he will dig up with his foreclaws. He is carnivorous also, and will even attack and conquer the lordly buffalo, dragging his huge carcass to the neighborhood of his den, that he may prey upon it at his leisure.

The hunters, both white and red men, consider this the most heroic game. They prefer to hunt him on horseback, and will venture so near as sometimes to singe his hair with the flash of the rifle. The hunter of the grizzly bear, however, must be an experienced hand, and know where to aim at a vital part; for of all quadrupeds, he is the most difficult to be killed. He will receive repeated wounds without flinching, and rarely is a shot mortal unless through the head or heart.

That the dangers apprehended from the grizzly bear, at this night encampment, were not imaginary, was proved on the following morning. Among the hired men of the party was one William Cannon, who had been a soldier at one of the frontier posts, and entered into the employ of Mr. Hunt at Mackinaw. He was an inexperienced hunter and a poor shot, for which he was much bantered by his more adroit comrades. Piqued at their raillery, he had been practicing ever since he had joined the expedition, but without success. In the course of the present afternoon, he went forth by himself to take a lesson in venerie and, to his great delight, had the good fortune to kill a buffalo. As he was a considerable distance from the camp, he cut out the tongue and some of the choice bits, made them into a parcel, and slinging them on his shoulders by a strap passed round his forehead, as the voyageurs carry packages of goods, set out all glorious for the camp, anticipating a triumph over his brother hunters. In passing through a narrow ravine, he heard a noise behind him, and looking round beheld, to his dismay, a grizzly bear in full pursuit, apparently attracted by the scent of the meat. Cannon had heard so much of the invulnerability of this tremendous animal, that he never attempted to fire, but, slipping the strap from his forehead, let go the buffalo meat and ran for his life. The bear did not stop to regale himself with the game, but kept on after the hunter. He had nearly overtaken him when Cannon reached a tree, and, throwing down his rifle scrambled up it. The next instant Bruin was at the foot of the tree; but, as this species of bear does not climb, he contented himself with turning the chase into a blockade. Night came on. In the darkness Cannon could not perceive whether or not the enemy maintained his station; but his fears pictured him rigorously mounting guard. He passed the night, therefore, in the tree, a prey to dismal fancies. In the morning the bear was gone. Cannon warily descended the tree, gathered up his gun, and made the best of his way back to the camp, without venturing to look after his buffalo meat.

While on this theme we will add another anecdote of an adventure with a grizzly bear, told of John Day, the Kentucky hunter, but which happened at a different period of the expedition. Day was hunting in company with one of the clerks of the company, a lively youngster, who was a

great favorite with the veteran, but whose vivacity he had continually to keep in check. They were in search of deer, when suddenly a huge grizzly bear emerged from a thicket about thirty yards distant, rearing himself upon his hind legs with a terrific growl, and displaying a hideous array of teeth and claws. The rifle of the young man was leveled in an instant, but John Day's iron hand was as quickly upon his arm. "Be quiet, boy! be quiet!" exclaimed the hunter between his clenched teeth, and without turning his eyes from the bear. They remained motionless. The monster regarded them for a time, then, lowering himself on his fore paws, slowly withdrew. He had not gone many paces, before he again returned, reared himself on his hind legs, and repeated his menace. Day's hand was still on the arm of his young companion; he again pressed it hard, and kept repeating between his teeth, "Quiet, boy! - keep quiet! - keep quiet!" - though the latter had not made a move since his first prohibition. The bear again lowered himself on all fours, retreated some twenty yards further, and again turned, reared, showed his teeth, and growled. This third menace was too much for the game spirit of John Day. "By Jove!" exclaimed he, "I can stand this no longer," and in an instant a ball from his rifle whizzed into his foe. The wound was not mortal; but, luckily, it dismayed instead of enraged the animal, and he retreated into the thicket.

Day's companion reproached him for not practicing the caution which he enjoined upon others. "Why, boy," replied the veteran, "caution is caution, but one must not put up with too much, even from a bear. Would you have me suffer myself to be bullied all day by a varmint?"

Indian Trail.- Rough Mountain Travelling.- Sufferings From Hunger and Thirst- Powder River.- Game in Abundance.-A Hunter's Paradise.- Mountain Peak Seen at a Great Distance.- One of the Bighorn Chain.- Rocky Mountains.- Extent.- Appearance.- Height.- The Great American Desert.- Various Characteristics of the Mountains.- Indian Superstitions Concerning Them.- Land of Souls.- Towns of the Free and Generous Spirits- Happy Hunting Grounds.

FOR the two following days, the travellers pursued a westerly course for thirty-four miles along a ridge of country dividing the tributary waters of the Missouri and the Yellowstone. As landmarks they guided themselves by the summits of the far distant mountains, which they supposed to belong to the Bighorn chain. They were gradually rising into a higher temperature, for the weather was cold for the season, with a sharp frost in the night, and ice of an eighth of an inch in thickness.

On the twenty-second of August, early in the day, they came upon the trail of a numerous band. Rose and the other hunters examined the foot-prints with great attention, and determined it to be the trail of a party of Crows, returning from an annual trading visit to the Mandans. As this trail afforded more commodious travelling, they immediately struck into it, and followed it for two days. It led them over rough hills, and through broken gullies, during which time they suffered great fatigue from the ruggedness of the country. The weather, too, which had recently been frosty, was now oppressively warm, and there was a great scarcity of water, insomuch that a valuable dog belonging to Mr. M'Kenzie died of thirst.

---

At one time they had twenty-five miles of painful travel, without a drop of water, until they arrived at a small running stream. Here they eagerly slaked their thirst; but, this being allayed, the calls of hunger became equally importunate. Ever since they had got among these barren and arid hills where there was a deficiency of grass, they had met with no buffaloes; those animals keeping in the grassy meadows near the streams. They were obliged, therefore, to have recourse to their corn meal, which they reserved for such emergencies. Some, however, were lucky enough to kill a wolf, which they cooked for supper, and pronounced excellent food.

The next morning they resumed their wayfaring, hungry and jaded, and had a dogged march of eighteen miles among the same kind of hills. At length they emerged upon a stream of clear water, one of the forks of Powder River, and to their great joy beheld once more wide grassy meadows, stocked with herds of buffalo. For several days they kept along the banks of the river, ascending it about eighteen miles. It was a hunter's paradise; the buffaloes were in such abundance that they were enabled to kill as many as they pleased, and to jerk a sufficient supply of meat for several days' journeying. Here, then, they reveled and reposed after their hungry and weary travel, hunting and feasting, and reclining upon the grass. Their quiet, however, was a little marred by coming upon traces of Indians, who, they concluded, must be Crows: they were therefore obliged to keep a more vigilant watch than ever upon their horses. For several days they had been directing their march towards the lofty mountain descried by Mr. Hunt and Mr. M'Kenzie on the 17th of August, the height of which rendered it a landmark over a vast extent of country. At first it had appeared to them solitary and detached; but as they advanced towards it, it proved to be the principal summit of a chain of mountains. Day by day it varied in form, or rather its lower peaks, and the summits of others of the chain emerged above the clear horizon, and finally the inferior line of hills which connected most of them rose to view. So far, however, are objects discernible in the pure atmosphere of these elevated plains, that, from the place where they first descried the main mountain, they had to travel a hundred and fifty miles before they reached its base. Here they encamped on the 30th of August, having come nearly four hundred miles since leaving the Arickara village.

The mountain which now towered above them was one of the Bighorn chain, bordered by a river, of the same name, and extending for a long distance rather east of north and west of south. It was a part of the great system of granite mountains which forms one of the most important and striking features of North America, stretching parallel to the coast of the Pacific from the Isthmus of Panama almost to the Arctic Ocean; and presenting a corresponding chain to that of the Andes in the southern hemisphere. This vast range has acquired, from its rugged and broken character and its summits of naked granite, the appellation of the Rocky Mountains, a name by no means distinctive, as all elevated ranges are rocky. Among the early explorers it was known as the range of Chippewyan Mountains, and this Indian name is the one it is likely to retain in poetic usage. Rising from the midst of vast plains and prairies, traversing several degrees of latitude, dividing the waters of the Atlantic and the Pacific, and seeming to bind with diverging ridges the level regions on its flanks, it has been figuratively termed the backbone of the northern continent.

The Rocky Mountains do not present a range of uniform elevation, but rather groups and occasionally detached peaks. Though some of these rise to the region of perpetual snows, and are upwards of eleven thousand feet in real altitude, yet their height from their immediate basis is not so great as might be imagined, as they swell up from elevated plains, several thousand feet above the level of the ocean. These plains are often of a desolate sterility; mere sandy wastes, formed of the detritus of the granite heights, destitute of trees and herbage, scorched by the ardent and reflected rays of the summer's sun, and in winter swept by chilling blasts from the snow-clad mountains. Such is a great part of that vast region extending north and south along the mountains, several hundred miles in width, which has not improperly been termed the Great American Desert. It is a region that almost discourages all hope of cultivation, and can only be traversed with safety by keeping near the streams which intersect it. Extensive plains likewise occur among the higher regions of the mountains, of considerable fertility. Indeed, these lofty plats of table-land seem to form a peculiar feature in the American continents. Some occur among the Cordilleras of the Andes, where cities, and towns, and cultivated farms are to be seen eight thousand feet above the level of the sea.

The Rocky Mountains, as we have already observed, occur sometimes singly or in groups, and occasionally in collateral ridges. Between these are deep valleys, with small streams winding through them, which find their way into the lower plains, augmenting as they proceed, and ultimately discharging themselves into those vast rivers, which traverse the prairies like great arteries, and drain the continent.

While the granitic summits of the Rocky Mountains are bleak and bare, many of the inferior ridges are scantily clothed with scrubbed pines, oaks, cedar, and furze. Various parts of the mountains also bear traces of volcanic action. Some of the interior valleys are strewn with scoria and broken stones, evidently of volcanic origin; the surrounding rocks bear the like character, and vestiges of extinguished craters are to be seen on the elevated heights.

We have already noticed the superstitious feelings with which the Indians regard the Black Hills; but this immense range of mountains, which divides all that they know of the world, and gives birth to such mighty rivers, is still more an object of awe and veneration. They call it "the crest of the world," and think that Wacondah, or the master of life, as they designate the Supreme Being, has his residence among these aerial heights. The tribes on the eastern prairies call them the mountains of the setting sun. Some of them place the "happy hunting-grounds," their ideal paradise, among the recesses of these mountains; but say that they are invisible to living men. Here also is the "Land of Souls," in which are the "towns of the free and generous spirits," where those who have pleased the master of life while living, enjoy after death all manner of delights.

Wonders are told of these mountains by the distant tribes, whose warriors or hunters have ever wandered in their neighborhood. It is thought by some that, after death, they will have to travel to these mountains and ascend one of their highest and most rugged peaks, among rocks and snows and tumbling torrents. After many moons of painful toil they will reach the summit, from whence they will have a view over the land of souls. There they will see the happy hunting-grounds, with

the souls of the brave and good living in tents in green meadows, by bright running streams, or hunting the herds of buffalo, and elk, and deer, which have been slain on earth. There, too, they will see the villages or towns of the free and generous spirits brightening in the midst of delicious prairies. If they have acquitted themselves well while living, they will be permitted to descend and enjoy this happy country; if otherwise they will but be tantalized with this prospect of it, and then hurled back from the mountain to wander about the sandy plains, and endure the eternal pangs of unsatisfied thirst and hunger.

Washington Irving's Astoria

CHAPTER XXVIII.

Region of the Crow Indians- Scouts on the Lookout- Visit From a Crew of Hard Riders.- A Crow Camp.- Presents to the Crow Chief.-Bargaining.-Crow Bullies.-Rose Among His Indian Friends.-Parting With the Crows.- Perplexities Among the Mountains.- More of the Crows.- Equestrian Children.- Search After Stragglers.

THE travellers had now arrived in the vicinity of the mountain regions infested by the Crow Indians. These restless marauders, as has already been observed, are apt to be continually on the prowl about the skirts of the mountains; and even when encamped in some deep and secluded glen, they keep scouts upon the cliffs and promontories, who, unseen themselves, can discern every living thing that moves over the subjacent plains and valleys. It was not to be expected that our travellers could pass unseen through a region thus vigilantly sentineled; accordingly, in the edge of the evening, not long after they had encamped at the foot of the Bighorn Sierra, a couple of wild-looking beings, scantily clad in skins, but well armed, and mounted on horses as wild-looking as themselves, were seen approaching with great caution from among the rocks. They might have been mistaken for two of the evil spirits of the mountains so formidable in Indian fable.

Rose was immediately sent out to hold a parley with them, and invite them to the camp. They proved to be two scouts from the same band that had been tracked for some days past, and which was now encamped at some distance in the folds of the mountain. They were easily prevailed upon to come to the camp, where they were well received, and, after remaining there until late in the evening, departed to make a report of all they had seen and experienced to their companions.

The following day had scarce dawned, when a troop of these wild mountain scamperers came galloping with whoops and yells into the camp, bringing an invitation from their chief for the white men to visit him. The tents were accordingly struck, the horses laden, and the party were soon on the march. The Crow horsemen, as they escorted them, appeared to take pride in showing off their equestrian skill and hardihood; careering at full speed on their half-savage steeds, and dashing among rocks and crags, and up and down the most rugged and dangerous places with perfect ease and unconcern.

A ride of sixteen miles brought them, in the afternoon, in sight of the Crow camp. It was composed of leathern tents, pitched in a meadow on the border of a small clear stream at the foot of the mountain. A great number of horses were grazing in the vicinity, many of them doubtless

captured in marauding excursions,

The Crow chieftain came forth to meet his guests with great professions of friendship, and conducted them to his tents, pointing out, by the way, a convenient place where they might fix their camp. No sooner had they done so, than Mr. Hunt opened some of the packages and made the chief a present of a scarlet blanket and a quantity of powder and ball; he gave him also some knives, trinkets, and tobacco to be distributed among his warriors, with all which the grim potentate seemed, for the time, well pleased. As the Crows, however, were reputed to be perfidious in the extreme, and as errant freebooters as the bird after which they were so worthily named; and as their general feelings towards the whites were known to be by no means friendly, the intercourse with them was conducted with great circumspection.

The following day was passed in trading with the Crows for buffalo robes and skins, and in bartering galled and jaded horses for others that were in good condition. Some of the men, also, purchased horses on their own account, so that the number now amounted to one hundred and twenty-one, most of them sound and active, and fit for mountain service.

Their wants being supplied, they ceased all further traffic, much to the dissatisfaction of the Crows, who became extremely urgent to continue the trade, and, finding their importunities of no avail, assumed an insolent and menacing tone. All this was attributed by Mr. Hunt and his associates to the perfidious instigations of Rose the interpreter, whom they suspected of the desire to foment ill-will between them and the savages, for the promotion of his nefarious plans. M'Lellan, with his usual tranchant mode of dealing out justice, resolved to shoot the desperado on the spot in case of any outbreak. Nothing of the kind, however, occurred. The Crows were probably daunted by the resolute, though quiet demeanor of the white men, and the constant vigilance and armed preparations which they maintained; and Rose, if he really still harbored his knavish designs, must have perceived that they were suspected, and, if attempted to be carried into effect, might bring ruin on his own head.

The next morning, bright and early, Mr. Hunt proposed to resume his journeying. He took a ceremonious leave of the Crow chieftain, and his vagabond warriors, and according to previous arrangements, consigned to their cherishing friendship and fraternal adoption, their worthy confederate Rose; who, having figured among the water pirates of the Mississippi, was well fitted to rise to distinction among the land pirates of the Rocky Mountains.

It is proper to add, that the ruffian was well received among the tribe, and appeared to be perfectly satisfied with the compromise he had made; feeling much more at his ease among savages than among white men. It is outcasts from justice, and heartless desperadoes of this kind who sow the seeds of enmity and bitterness among the unfortunate tribes of the frontier. There is no enemy so implacable against a country or a community as one of its own people who has rendered himself an alien by his crimes.

Right glad to be delivered from this treacherous companion, Mr. Hunt pursued his course along

---

the skirts of the mountain, in a southern direction, seeking for some practicable defile by which he might pass through it; none such presented, however, in the course of fifteen miles, and he encamped on a small stream, still on the outskirts. The green meadows which border these mountain streams are generally well stocked with game, and the hunters killed several fat elks, which supplied the camp with fresh meat. In the evening the travellers were surprised by an unwelcome visit from several Crows belonging to a different band from that which they recently left, and who said their camp was among the mountains. The consciousness of being environed by such dangerous neighbors, and of being still within the range of Rose and his fellow ruffians, obliged the party to be continually on the alert, and to maintain weary vigils throughout the night, lest they should be robbed of their horses.

On the third of September, finding that the mountain still stretched onwards, presenting a continued barrier, they endeavored to force a passage to the westward, but soon became entangled among rocks and precipices which set all their efforts at defiance. The mountain seemed, for the most part, rugged, bare, and sterile; yet here and there it was clothed with pines, and with shrubs and flowering plants, some of which were in bloom. In toiling among these weary places, their thirst became excessive, for no water was to be met with. Numbers of the men wandered off into rocky dells and ravines in hopes of finding some brook or fountain; some of whom lost their way and did not rejoin the main party.

After a day of painful and fruitless scrambling, Mr. Hunt gave up the attempt to penetrate in this direction, and, returning to the little stream on the skirts of the mountain, pitched his tents within six miles of his encampment of the preceding night. He now ordered that signals should be made for the stragglers in quest of water; but the night passed away without their return.

The next morning, to their surprise, Rose made his appearance at the camp, accompanied by some of his Crow associates. His unwelcome visit revived their suspicions; but he announced himself as a messenger of good-will from the chief, who, finding they had taken the wrong road, had sent Rose and his companions to guide them to a nearer and better one across the mountain.

Having no choice, being themselves utterly at fault, they set out under this questionable escort. They had not gone far before they fell in with the whole party of Crows, who, they now found, were going the same road with themselves. The two cavalcades of white and red men, therefore, pushed on together, and presented a wild and picturesque spectacle, as, equipped with various weapons and in various garbs, with trains of pack-horses, they wound in long lines through the rugged defiles, and up and down the crags and steepes of the mountain.

The travellers had again an opportunity to see and admire the equestrian habitudes and address of this hard-riding tribe. They were all mounted, man, woman, and child, for the Crows have horses in abundance, so that no one goes on foot. The children are perfect imps on horseback. Among them was one so young that he could not yet speak. He was tied on a colt of two years old, but managed the reins as if by instinct, and plied the whip with true Indian prodigality. Mr. Hunt inquired the age of this infant jockey, and was answered that "he had seen two winters."

This is almost realizing the fable of the centaurs; nor can we wonder at the equestrian adroitness of these savages, who are thus in a manner cradled in the saddle, and become in infancy almost identified with the animal they bestride.

The mountain defiles were exceedingly rough and broken, and the travelling painful to the burdened horses. The party, therefore, proceeded but slowly, and were gradually left behind by the band of Crows, who had taken the lead. It is more than probable that Mr. Hunt loitered in his course, to get rid of such doubtful fellow-travellers. Certain it is that he felt a sensation of relief as he saw the whole crew, the renegade Rose and all, disappear among the windings of the mountain, and heard the last yelp of the savages die away in the distance.

When they were fairly out of sight, and out of hearing, he encamped on the head waters of the little stream of the preceding day, having come about sixteen miles. Here he remained all the succeeding day, as well to give time for the Crows to get in the advance, as for the stragglers, who had wandered away in quest of water two days previously, to rejoin the camp. Indeed, considerable uneasiness began to be felt concerning these men, lest they should become utterly bewildered in the defiles of the mountains, or should fall into the hands of some marauding band of savages. Some of the most experienced hunters were sent in search of them; others, in the meantime, employed themselves in hunting. The narrow valley in which they encamped being watered by a running stream, yielded fresh pasturage, and though in the heart of the Bighorn Mountains, was well stocked with buffalo. Several of these were killed, as also a grizzly bear. In the evening, to the satisfaction of all parties, the stragglers made their appearance, and provisions being in abundance, there was hearty good cheer in the camp.

#### CHAPTER XXIX

Mountain Glens.- Wandering Band of Savages- Anecdotes of Shoshonies and Flatheads.- Root Diggers- Their Solitary Lurking Habits.- Gnomes of the Mountains.- Wind River.- Scarcity of Food.- Alteration of Route.- The Pilot Knobs or Tetons.- Branch of the Colorado. - Hunting Camp.

RESUMING their course on the following morning, Mr. Hunt and his companions continued on westward through a rugged region of hills and rocks, but diversified in many places by grassy little glens, with springs of water, bright sparkling brooks, clumps of pine trees, and a profusion of flowering plants, which were in bloom, although the weather was frosty. These beautiful and verdant recesses, running through and softening the rugged mountains, were cheering and refreshing to the wayworn travellers.

In the course of the morning, as they were entangled in a defile, they beheld a small band of savages, as wild-looking as the surrounding scenery, who reconnoitred them warily from the rocks before they ventured to advance. Some of them were mounted on horses rudely caparisoned with bridles or halters of buffalo hide, one end trailing after them on the ground. They proved to be a mixed party of Flatheads and Shoshonies, or Snakes; and as these tribes will be frequently men-

tioned in the course of this work, we shall give a few introductory particulars concerning them.

The Flatheads in question are not to be confounded with those of the name who dwell about the lower waters of the Columbia; neither do they flatten their heads, as the others do. They inhabit the banks of a river on the west side of the mountains, and are described as simple, honest, and hospitable. Like all people of similar character, whether civilized or savage, they are prone to be imposed upon; and are especially maltreated by the ruthless Blackfeet, who harass them in their villages, steal their horses by night, or openly carry them off in the face of day, without provoking pursuit or retaliation.

The Shoshonies are a branch of the once powerful and prosperous tribe of the Snakes, who possessed a glorious hunting country about the upper forks of the Missouri, abounding in beaver and buffalo. Their hunting ground was occasionally invaded by the Blackfeet, but the Snakes battled bravely for their domains, and a long and bloody feud existed, with variable success. At length the Hudson's Bay Company, extending their trade into the interior, had dealings with the Blackfeet, who were nearest to them, and supplied them with fire-arms. The Snakes, who occasionally traded with the Spaniards, endeavored, but in vain, to obtain similar weapons; the Spanish traders wisely refused to arm them so formidably. The Blackfeet had now a vast advantage, and soon dispossessed the poor Snakes of their favorite hunting grounds, their land of plenty, and drove them from place to place, until they were fain to take refuge in the wildest and most desolate recesses of the Rocky Mountains. Even here they are subject to occasional visits from their implacable foes, as long as they have horses, or any other property to tempt the plunderer. Thus by degrees the Snakes have become a scattered, broken-spirited, impoverished people; keeping about lonely rivers and mountain streams, and subsisting chiefly upon fish. Such of them as still possess horses, and occasionally figure as hunters, are called Shoshonies; but there is another class, the most abject and forlorn, who are called Shuckers, or more commonly Diggers and Root Eaters. These are a shy, secret, solitary race, who keep in the most retired parts of the mountains, lurking like gnomes in caverns and clefts of the rocks, and subsisting in a great measure on the roots of the earth. Sometimes, in passing through a solitary mountain valley, the traveller comes perchance upon the bleeding carcass of a deer or buffalo that has just been slain. He looks round in vain for the hunter; the whole landscape is lifeless and deserted: at length he perceives a thread of smoke, curling up from among the crags and cliffs, and scrambling to the place, finds some forlorn and skulking brood of Diggers, terrified at being discovered.

The Shoshonies, however, who, as has been observed, have still "horse to ride and weapon to wear," are somewhat bolder in their spirit, and more open and wide in their wanderings. In the autumn, when salmon disappear from the rivers, and hunger begins to pinch, they even venture down into their ancient hunting grounds, to make a foray among the buffaloes. In this perilous enterprise they are occasionally joined by the Flatheads, the persecutions of the Blackfeet having produced a close alliance and cooperation between these luckless and maltreated tribes. Still, notwithstanding their united force, every step they take within the debatable ground is taken in fear and trembling, and with the utmost precaution: and an Indian trader assures us that he has seen at least five hundred of them, armed and equipped for action, and keeping watch upon the hill

tops, while about fifty were hunting in the prairie. Their excursions are brief and hurried; as soon as they have collected and jerked sufficient buffalo meat for winter provisions, they pack their horses, abandon the dangerous hunting grounds, and hasten back to the mountains, happy if they have not the terrible Blackfeet rattling after them.

Such a confederate band of Shoshonies and Flatheads was the one met by our travellers. It was bound on a visit to the Arrapahoes, a tribe inhabiting the banks of the Nebraska. They were armed to the best of their scanty means, and some of the Shoshonies had bucklers of buffalo hide, adorned with feathers and leathern fringes, and which have a charmed virtue in their eyes, from having been prepared, with mystic ceremonies, by their conjurers.

In company with this wandering band our travellers proceeded all day. In the evening they encamped near to each other in a defile of the mountains, on the borders of a stream running north, and falling into Bighorn River. In the vicinity of the camp, they found gooseberries, strawberries, and currants in great abundance. The defile bore traces of having been a thoroughfare for countless herds of buffaloes, though not one was to be seen. The hunters succeeded in killing an elk and several black-tailed deer.

They were now in the bosom of the second Bighorn ridge, with another lofty and snow-crowned mountain full in view to the west. Fifteen miles of western course brought them, on the following day, down into an intervening plain, well stocked with buffalo. Here the Snakes and Flatheads joined with the white hunters in a successful hunt, that soon filled the camp with provisions.

On the morning of the 9th of September, the travellers parted company with their Indian friends, and continued on their course to the west. A march of thirty miles brought them, in the evening, to the banks of a rapid and beautifully clear stream about a hundred yards wide. It is the north fork or branch of the Bighorn River, but bears its peculiar name of the Wind River, from being subject in the winter season to a continued blast which sweeps its banks and prevents the snow from lying on them. This blast is said to be caused by a narrow gap or funnel in the mountains, through which the river forces its way between perpendicular precipices, resembling cut rocks.

This river gives its name to a whole range of mountains consisting of three parallel chains, eighty miles in length, and about twenty or twenty-five broad. One of its peaks is probably fifteen thousand feet above the level of the sea, being one of the highest of the Rocky Sierra. These mountains give rise, not merely to the Wind or Bighorn River, but to several branches of the Yellowstone and the Missouri on the east, and of the Columbia and Colorado on the west; thus dividing the sources of these mighty streams.

For five succeeding days, Mr. Hunt and his party continued up the course of the Wind River, to the distance of about eighty miles, crossing and recrossing it, according to its windings, and the nature of its banks; sometimes passing through valleys, at other times scrambling over rocks and hills. The country in general was destitute of trees, but they passed through groves of wormwood, eight and ten feet in height, which they used occasionally for fuel, and they met with large quanti-

ties of wild flax.

The mountains were destitute of game; they came in sight of two grizzly bears, but could not get near enough for a shot; provisions, therefore, began to be scanty. They saw large flights of the kind of thrush commonly called the robin, and many smaller birds of migratory species; but the hills in general appeared lonely and with few signs of animal life. On the evening of the 14th September, they encamped on the forks of the Wind or Bighorn River. The largest of these forks came from the range of Wind River Mountains.

The hunters who served as guides to the party in this part of their route, had assured Mr. Hunt that, by following up Wind River, and crossing a single mountain ridge, he would come upon the head waters of the Columbia. This scarcity of game, however, which already had been felt to a pinching degree, and which threatened them with famine among the sterile heights which lay before them, admonished them to change their course. It was determined, therefore, to make for a stream, which they were informed passed the neighboring mountains, to the south of west, on the grassy banks of which it was probable they would meet with buffalo. Accordingly, about three o'clock on the following day, meeting with a beaten Indian road which led in the proper direction, they struck into it, turning their backs upon Wind River.

In the course of the day, they came to a height that commanded an almost boundless prospect. Here one of the guides paused, and, after considering the vast landscape attentively, pointed to three mountain peaks glistening with snow, which rose, he said, above a fork of Columbia River. They were hailed by the travellers with that joy with which a beacon on a seashore is hailed by mariners after a long and dangerous voyage.

It is true there was many a weary league to be traversed before they should reach these landmarks, for, allowing for their evident height and the extreme transparency of the atmosphere, they could not be much less than a hundred miles distant. Even after reaching them, there would yet remain hundreds of miles of their journey to be accomplished. All these matters were forgotten in the joy at seeing the first landmarks of the Columbia, that river which formed the bourne of the expedition. These remarkable peaks were known as the Tetons; as guiding points for many days, to Mr. Hunt, he gave them the names of the Pilot Knobs.

The travellers continued their course to the south of west for about forty miles, through a region so elevated that patches of snow lay on the highest summits and on the northern declivities. At length they came to the desired stream, the object of their search, the waters of which flowed to the west. It was, in fact, a branch of the Colorado, which falls into the Gulf of California, and had received from the hunters the name of Spanish River, from information given by the Indians that Spaniards resided upon its lower waters.

The aspect of this river and its vicinity was cheering to the wayworn and hungry travellers. Its banks were green, and there were grassy valleys running from it various directions, into the heart of the rugged mountains, with herds of buffalo quietly grazing. The hunters sallied forth with

keen alacrity, and soon returned laden with provisions.

In this part of the mountains Mr. Hunt met with three different kinds of gooseberries. The common purple, on a low and very thorny bush; a yellow kind, of an excellent flavor, growing on a stock free from thorns; and a deep purple, of the size and taste of our winter grape, with a thorny stalk. There were also three kinds of currants, one very large and well tasted, of a purple color, and growing on a bush eight or nine feet high. Another of a yellow color, and of the size and taste of the large red currant, the bush four or five feet high; and the third a beautiful scarlet, resembling the strawberry in sweetness, though rather insipid, and growing on a low bush.

On the 17th they continued down the course of the river, making fifteen miles to the southwest. The river abounded with geese and ducks, and there were signs of its being inhabited by beaver and otters: indeed they were now approaching regions where these animals, the great objects of the fur trade, are said to abound. They encamped for the night opposite the end of a mountain in the west, which was probably the last chain of the Rocky Mountains. On the following morning they abandoned the main course of the Spanish River, and taking a northwest direction for eight miles, came upon one of its little tributaries, issuing out of the bosom of the mountains, and running through green meadows, yielding pasturage to herds of buffalo. As these were probably the last of that animal they would meet with, they encamped on the grassy banks of the river, determined to spend several days in hunting, so as to be able to jerk sufficient meat to supply them until they should reach the waters of the Columbia, where they trusted to find fish enough for their support. A little repose, too, was necessary for both men and horses, after their rugged and incessant marching; having in the course of the last seventeen days traversed two hundred and sixty miles of rough, and in many parts sterile, mountain country.

Washington Irving's Astoria

CHAPTER XXX.

A Plentiful Hunting Camp.-Shoshonie Hunters - Hoback's River - Mad River- Encampment Near the Pilot Knobs.- A Consultation. - Preparations for a Perilous Voyage.

FIVE days were passed by Mr. Hunt and his companions in the fresh meadows watered by the bright little mountain stream. The hunters made great havoc among the buffaloes, and brought in quantities of meat; the voyageurs busied themselves about the fires, roasting and stewing for present purposes, or drying provisions for the journey; the pack-horses, eased of their burdens, rolled on the grass, or grazed at large about the ample pasture; those of the party who had no call upon their services, indulged in the luxury of perfect relaxation, and the camp presented a picture of rude feasting and revelry, of mingled bustle and repose, characteristic of a halt in a fine hunting country. In the course of one of their excursions, some of the men came in sight of a small party of Indians, who instantly fled in great apparent consternation. They immediately retreated to camp with the intelligence: upon which Mr. Hunt and four others flung themselves upon their horses, and sallied forth to reconnoitre. After riding for about eight miles, they came upon a wild mountain scene. A lonely green valley stretched before them, surrounded by rugged heights. A herd of buffalo were careering madly through it, with a troop of savage horsemen in full chase,

plying them with their bows and arrows. The appearance of Mr. Hunt and his companions put an abrupt end to the hunt; the buffalo scuttled off in one direction, while the Indians plied their lashes and galloped off in another, as fast as their steeds could carry them. Mr. Hunt gave chase; there was a sharp scamper, though of short continuance. Two young Indians, who were indifferently mounted, were soon overtaken. They were terribly frightened, and evidently gave themselves up for lost. By degrees their fears were allayed by kind treatment; but they continued to regard the strangers with a mixture of awe and wonder, for it was the first time in their lives they had ever seen a white man.

They belonged to a party of Snakes who had come across the mountains on their autumnal hunting excursion to provide buffalo meat for the winter. Being persuaded of the peaceful intentions of Mr. Hunt and his companions, they willingly conducted them to their camp. It was pitched in a narrow valley on the margin of a stream. The tents were of dressed skins, some of them fantastically painted; with horses grazing about them. The approach of the party caused a transient alarm in the camp, for these poor Indians were ever on the look-out for cruel foes. No sooner, however, did they recognize the garb and complexion of their visitors, than their apprehensions were changed into Joy; for some of them had dealt with white men, and knew them to be friendly, and to abound with articles of singular value. They welcomed them, therefore, to their tents, set food before them; and entertained them to the best of their power.

They had been successful in their hunt, and their camp was full of jerked buffalo meat, all of the choicest kind, and extremely fat. Mr. Hunt purchased enough of them, in addition to what had been killed and cured by his own hunters, to load all the horses excepting those reserved for the partners and the wife of Pierre Dorion. He found, also, a few beaver skins in their camp, for which he paid liberally, as an inducement to them to hunt for more; informing them that some of his party intended to live among the mountains, and trade with the native hunters for their peltries. The poor Snakes soon comprehended the advantages thus held out to them, and promised to exert themselves to procure a quantity of beaver skins for future traffic. Being now well supplied with provisions, Mr. Hunt broke up his encampment on the 24th of September, and continued on to the west. A march of fifteen miles, over a mountain ridge, brought them to a stream about fifty feet in width, which Hoback, one of their guides, who had trapped about the neighborhood when in the service of Mr. Henry, recognized for one of the head waters of the Columbia. The travellers hailed it with delight, as the first stream they had encountered tending toward their point of destination. They kept along it for two days, during which, from the contribution of many rills and brooks, it gradually swelled into a small river. As it meandered among rocks and precipices, they were frequently obliged to ford it, and such was its rapidity that the men were often in danger of being swept away. Sometimes the banks advanced so close upon the river that they were obliged to scramble up and down their rugged promontories, or to skirt along their bases where there was scarce a foothold. Their horses had dangerous falls in some of these passes. One of them rolled, with his load, nearly two hundred feet down hill into the river, but without receiving any injury. At length they emerged from these stupendous defiles, and continued for several miles along the bank of Hoback's River, through one of the stern mountain valleys. Here it was joined by a river of greater magnitude and swifter current, and their united waters swept off through the valley

in one impetuous stream, which, from its rapidity and turbulence, had received the name of the Mad River. At the confluence of these streams the travellers encamped. An important point in their arduous journey had been attained; a few miles from their camp rose the three vast snowy peaks called the Tetons, or the Pilot Knobs, the great landmarks of the Columbia, by which they had shaped their course through this mountain wilderness. By their feet flowed the rapid current of Mad River, a stream ample enough to admit of the navigation of canoes, and down which they might possibly be able to steer their course to the main body of the Columbia. The Canadian voyageurs rejoiced at the idea of once more launching themselves upon their favorite element; of exchanging their horses for canoes, and of gliding down the bosoms of rivers, instead of scrambling over the backs of mountains. Others of the party, also, inexperienced in this kind of travelling, considered their toils and troubles as drawing to a close. They had conquered the chief difficulties of this great rocky barrier, and now flattered themselves with the hope of an easy downward course for the rest of their journey. Little did they dream of the hardships and perils by land and water, which were yet to be encountered in the frightful wilderness that intervened between them and the shores of the Pacific!

Washington Irving's Astoria

CHAPTER XXXI.

A Consultation Whether to Proceed by Land or Water- Preparations for Boat-Building.- An Exploring Party.- A Party of Trappers Detached.- Two Snake Visitors.- Their Report Concerning the River. - Confirmed by the Exploring Party. - Mad River Abandoned.- Arrival at Henry's Fort.- Detachment of Robinson, Hoback, and Rezner to Trap.- Mr. Miller Resolves to Accompany Them.- Their Departure.

ON the banks of Mad River Mr. Hunt held a consultation with the other partners as to their future movements. The wild and impetuous current of the river rendered him doubtful whether it might not abound with impediments lower down, sufficient to render the navigation of it slow and perilous, if not impracticable. The hunters who had acted as guides knew nothing of the character of the river below; what rocks, and shoals, and rapids might obstruct it, or through what mountains and deserts it might pass. Should they then abandon their horses, cast themselves loose in fragile barks upon this wild, doubtful, and unknown river; or should they continue their more toilsome and tedious, but perhaps more certain wayfaring by land?

The vote, as might have been expected, was almost unanimous for embarkation; for when men are in difficulties every change seems to be for the better. The difficulty now was to find timber of sufficient size for the construction of canoes, the trees in these high mountain regions being chiefly a scrubbed growth of pines and cedars, aspens, haws, and service-berries, and a small kind of cotton-tree, with a leaf resembling that of the willow. There was a species of large fir, but so full of knots as to endanger the axe in hewing it. After searching for some time, a growth of timber, of sufficient size, was found lower down the river, whereupon the encampment was moved to the vicinity.

The men were now set to work to fell trees, and the mountains echoed to the unwonted sound of

their axes. While preparations were thus going on for a voyage down the river, Mr. Hunt, who still entertained doubts of its practicability, despatched an exploring party, consisting of John Reed, the clerk, John Day, the hunter, and Pierre Dorion, the interpreter, with orders to proceed several days' march along the stream, and notice its course and character.

After their departure, Mr. Hunt turned his thoughts to another object of importance. He had now arrived at the head waters of the Columbia, which were among the main points embraced by the enterprise of Mr. Astor. These upper streams were reputed to abound in beaver, and had as yet been unmolested by the white trapper. The numerous signs of beaver met with during the recent search for timber gave evidence that the neighborhood was a good "trapping ground." Here, then, it was proper to begin to cast loose those leashes of hardy trappers, that are detached from trading parties, in the very heart of the wilderness. The men detached in the present instance were Alexander Carson, Louis St. Michel, Pierre Detaye, and Pierre Delaunay. Trappers generally go in pairs, that they may assist, protect, and comfort each other in their lonely and perilous occupations. Thus Carson and St. Michel formed one couple, and Detaye and Delaunay another. They were fitted out with traps, arms, ammunition, horses, and every other requisite, and were to trap upon the upper part of Mad River, and upon the neighboring streams of the mountains. This would probably occupy them for some months; and, when they should have collected a sufficient quantity of peltries, they were to pack them upon their horses and make the best of their way to the mouth of Columbia River, or to any intermediate post which might be established by the company. They took leave of their comrades and started off on their several courses with stout hearts and cheerful countenances; though these lonely cruisions into a wild and hostile wilderness seem to the uninitiated equivalent to being cast adrift in the ship's yawl in the midst of the ocean.

Of the perils that attend the lonely trapper, the reader will have sufficient proof, when he comes, in the after part of this work, to learn the hard fortunes of these poor fellows in the course of their wild peregrinations.

The trappers had not long departed, when two Snake Indians wandered into the camp. When they perceived that the strangers were fabricating canoes, they shook their heads and gave them to understand that the river was not navigable. Their information, however, was scoffed at by some of the party, who were obstinately bent on embarkation, but was confirmed by the exploring party, who returned after several days' absence. They had kept along the river with great difficulty for two days, and found it a narrow, crooked, turbulent stream, confined in a rocky channel, with many rapids, and occasionally overhung with precipices. From the summit of one of these they had caught a bird's-eye view of its boisterous career for a great distance through the heart of the mountain, with impending rocks and cliffs. Satisfied from this view that it was useless to follow its course, either by land or water, they had given up all further investigation.

These concurring reports determined Mr. Hunt to abandon Mad River, and seek some more navigable stream. This determination was concurred in by all his associates excepting Mr. Miller, who had become impatient of the fatigue of land travel, and was for immediate embarkation at all hazards. This gentleman had been in a gloomy and irritated state of mind for some time past,

being troubled with a bodily malady that rendered travelling on horseback extremely irksome to him, and being, moreover, discontented with having a smaller share in the expedition than his comrades. His unreasonable objections to a further march by land were overruled, and the party prepared to decamp.

Robinson, Hoback, and Rezner, the three hunters who had hitherto served as guides among the mountains, now stepped forward, and advised Mr. Hunt to make for the post established during the preceding year by Mr. Henry, of the Missouri Fur Company. They had been with Mr. Henry, and, as far as they could judge by the neighboring landmarks, his post could not be very far off. They presumed there could be but one intervening ridge of mountains, which might be passed without any great difficulty. Henry's post, or fort, was on an upper branch of the Columbia, down which they made no doubt it would be easy to navigate in canoes.

The two Snake Indians being questioned in the matter, showed a perfect knowledge of the situation of the post, and offered, with great alacrity, to guide them to the place. Their offer was accepted, greatly to the displeasure of Mr. Miller, who seemed obstinately bent upon braving the perils of Mad River.

The weather for a few days past had been stormy, with rain and sleet. The Rocky Mountains are subject to tempestuous winds from the west; these sometimes come in flaws or currents, making a path through the forests many yards in width, and whirling off trunks and branches to a great distance. The present storm subsided on the third of October, leaving all the surrounding heights covered with snow; for while rain had fallen in the valley, it had snowed on the hill tops.

On the 4th, they broke up their encampment, and crossed the river, the water coming up to the girths of their horses. After travelling four miles, they encamped at the foot of the mountain, the last, as they hoped, which they should have to traverse. Four days more took them across it, and over several plains, watered by beautiful little streams, tributaries of Mad River. Near one of their encampments there was a hot spring continually emitting a cloud of vapor. These elevated plains, which give a peculiar character to the mountains, are frequented by large gangs of antelopes, fleet as the wind.

On the evening of the 8th of October, after a cold wintry day, with gusts of westerly wind and flurries of snow, they arrived at the sought-for post of Mr. Henry. Here he had fixed himself, after being compelled by the hostilities of the Blackfeet, to abandon the upper waters of the Missouri. The post, however, was deserted, for Mr. Henry had left it in the course of the preceding spring, and, as it afterwards appeared, had fallen in with Mr. Lisa, at the Arickara village on the Missouri, some time after the separation of Mr. Hunt and his party.

The weary travellers gladly took possession of the deserted log huts which had formed the post, and which stood on the bank of a stream upwards of a hundred yards wide, on which they intended to embark. There being plenty of suitable timber in the neighborhood, Mr. Hunt immediately proceeded to construct canoes. As he would have to leave his horses and their accoutrements

here, he determined to make this a trading post, where the trappers and hunters, to be distributed about the country, might repair; and where the traders might touch on their way through the mountains to and from the establishment at the mouth of the Columbia. He informed the two Snake Indians of this determination, and engaged them to remain in that neighborhood and take care of the horses until the white men should return, promising them ample rewards for their fidelity. It may seem a desperate chance to trust to the faith and honesty of two such vagabonds; but, as the horses would have, at all events, to be abandoned, and would otherwise become the property of the first vagrant horde that should encounter them, it was one chance in favor of their being regained.

At this place another detachment of hunters prepared to separate from the party for the purpose of trapping beaver. Three of these had already been in this neighborhood, being the veteran Robinson and his companions, Hoback and Rezner, who had accompanied Mr. Henry across the mountains, and who had been picked up by Mr. Hunt on the Missouri, on their way home to Kentucky. According to agreement they were fitted out with horses, traps, ammunition, and everything requisite for their undertaking, and were to bring in all the peltries they should collect, either to this trading post, or to the establishment at the mouth of Columbia River. Another hunter, of the name of Cass, was associated with them in their enterprise. It is in this way that small knots of trappers and hunters are distributed about the wilderness by the fur companies, and like cranes and bitterns, haunt its solitary streams. Robinson, the Kentuckian, the veteran of the "bloody ground," who, as has already been noted, had been scalped by the Indians in his younger days, was the leader of this little band. When they were about to depart, Mr. Miller called the partners together and threw up his share in the company, declaring his intention of joining the party of trappers.

This resolution struck every one with astonishment, Mr. Miller being a man of education and of cultivated habits, and little fitted for the rude life of a hunter. Besides, the precarious and slender profits arising from such a life were beneath the prospects of one who held a share in the general enterprise. Mr. Hunt was especially concerned and mortified at his determination, as it was through his advice and influence he had entered into the concern. He endeavored, therefore, to dissuade him from this sudden resolution; representing its rashness, and the hardships and perils to which it would expose him. He earnestly advised him, however he might feel dissatisfied with the enterprise, still to continue on in company until they should reach the mouth of Columbia River. There they would meet the expedition that was to come by sea; when, should he still feel disposed to relinquish the undertaking, Mr. Hunt pledged himself to furnish him a passage home in one of the vessels belonging to the company.

To all this Miller replied abruptly, that it was useless to argue with him, as his mind was made up. They might furnish him, or not, as they pleased, with the necessary supplies, but he was determined to part company here, and set off with the trappers. So saying, he flung out of their presence without vouchsafing any further conversation.

Much as this wayward conduct gave them anxiety, the partners saw it was in vain to remonstrate.

---

Every attention was paid to fit him out for his headstrong undertaking. He was provided with four horses, and all the articles he required. The two Snakes undertook to conduct him and his companions to an encampment of their tribe, lower down among the mountains, from whom they would receive information as to the trapping grounds. After thus guiding them, the Snakes were to return to Fort Henry, as the new trading post was called, and take charge of the horses which the party would leave there, of which, after all the hunters were supplied, there remained seventy-seven. These matters being all arranged, Mr. Miller set out with his companions, under guidance of the two Snakes, on the 10th of October; and much did it grieve the friends of that gentleman to see him thus wantonly casting himself loose upon savage life. How he and his comrades fared in the wilderness, and how the Snakes acquitted themselves of their trust respecting the horses, will hereafter appear in the course of these rambling anecdotes.

Scanty Fare.- A Mendicant Snake.- Embarkation on Henry River- Joy of the Voyageurs.-Arrival at Snake River.- Rapids and Breakers. - Beginning of Misfortunes.- Snake Encampments.- Parley With a Savage.- A Second Disaster. - Loss of a Boatman.- The Caldron Linn.

WHILE the canoes were in preparation, the hunters ranged about the neighborhood, but with little success. Tracks of buffaloes were to be seen in all directions, but none of a fresh date. There were some elk, but extremely wild; two only were killed. Antelopes were likewise seen, but too shy and fleet to be approached. A few beavers were taken every night, and salmon trout of a small size, so that the camp had principally to subsist upon dried buffalo meat.

On the 14th, a poor, half-naked Snake Indian, one of that forlorn caste called the Shuckers, or Diggers, made his appearance at the camp. He came from some lurking-place among the rocks and cliffs, and presented a picture of that famishing wretchedness to which these lonely fugitives among the mountains are sometimes reduced. Having received wherewithal to allay his hunger, he disappeared, but in the course of a day or two returned to the camp, bringing with him his son, a miserable boy, still more naked and forlorn than himself. Food was given to both; they skulked about the camp like hungry hounds, seeking what they might devour, and having gathered up the feet and entrails of some beavers that were lying about, slunk off with them to their den among the rocks.

By the 18th of October, fifteen canoes were completed, and on the following day the party embarked with their effects; leaving their horses grazing about the banks, and trusting to the honesty of the two Snakes, and some special turn of good luck for their future recovery.

The current bore them along at a rapid rate; the light spirits of the Canadian voyageurs, which had occasionally flagged upon land, rose to their accustomed buoyancy on finding themselves again upon the water. They wielded their paddles with their wonted dexterity, and for the first time made the mountains echo with their favorite boat songs.

In the course of the day the little squadron arrived at the confluence of Henry and Mad Rivers, which, thus united, swelled into a beautiful stream of a light pea-green color, navigable for boats of any size, and which, from the place of junction, took the name of Snake River, a stream doomed to be the scene of much disaster to the travellers. The banks were here and there fringed with willow thickets and small cotton-wood trees. The weather was cold, and it snowed all day, and great flocks of ducks and geese, sporting in the water or streaming through the air, gave token that winter was at hand; yet the hearts of the travellers were light, and, as they glided down the little river, they flattered themselves with the hope of soon reaching the Columbia. After making thirty miles in a southerly direction, they encamped for the night in a neighborhood which required some little vigilance, as there were recent traces of grizzly bears among the thickets.

On the following day the river increased in width and beauty; flowing parallel to a range of mountains on the left, which at times were finely reflected in its light green waters. The three snowy summits of the Pilot Knobs or Tetons were still seen towering in the distance. After pursuing a swift but placid course for twenty miles, the current began to foam and brawl, and assume the wild and broken character common to the streams west of the Rocky Mountains. In fact the rivers which flow from those mountains to the Pacific are essentially different from those which traverse the prairies on their eastern declivities. The latter, though sometimes boisterous, are generally free from obstructions, and easily navigated; but the rivers to the west of the mountains descend more steeply and impetuously, and are continually liable to cascades and rapids. The latter abounded in the part of the river which the travellers were now descending. Two of the canoes filled among the breakers; the crews were saved, but much of the lading was lost or damaged, and one of the canoes drifted down the stream and was broken among the rocks.

On the following day, October 21st, they made but a short distance when they came to a dangerous strait, where the river was compressed for nearly half a mile between perpendicular rocks, reducing it to the width of twenty yards, and increasing its violence. Here they were obliged to pass the canoes down cautiously by a line from the impending banks. This consumed a great part of a day; and after they had reembarked they were soon again impeded by rapids, when they had to unload their canoes and carry them and their cargoes for some distance by land. It is at these places, called "portages," that the Canadian voyageur exhibits his most valuable qualities; carrying heavy burdens, and toiling to and fro, on land and in the water, over rocks and precipices, among brakes and brambles, not only without a murmur, but with the greatest cheerfulness and alacrity, joking and laughing and singing scraps of old French ditties.

The spirits of the party, however, which had been elated on first varying their journeying from land to water, had now lost some of their buoyancy. Everything ahead was wrapped in uncertainty. They knew nothing of the river on which they were floating. It had never been navigated by a white man, nor could they meet with an Indian to give them any information concerning it. It kept on its course through a vast wilderness of silent and apparently uninhabited mountains, without a savage wigwam upon its banks, or bark upon its waters. The difficulties and perils they had already passed made them apprehend others before them, that might effectually bar their progress. As they glided onward, however, they regained heart and hope. The current continued

---

to be strong; but it was steady, and though they met with frequent rapids, none of them were bad. Mountains were constantly to be seen in different directions, but sometimes the swift river glided through prairies, and was bordered by small cotton-wood trees and willows. These prairies at certain seasons are ranged by migratory herds of the wide-wandering buffalo, the tracks of which, though not of recent date, were frequently to be seen. Here, too, were to be found the prickly pear or Indian fig, a plant which loves a more southern climate. On the land were large flights of magpies and American robins; whole fleets of ducks and geese navigated the river, or flew off in long streaming files at the approach of the canoes; while the frequent establishments of the painstaking and quiet-loving beaver showed that the solitude of these waters was rarely disturbed, even by the all-pervading savage.

They had now come near two hundred and eighty miles since leaving Fort Henry, yet without seeing a human being, or a human habitation; a wild and desert solitude extended on either side of the river, apparently almost destitute of animal life. At length, on the 24th of October, they were gladdened by the sight of some savage tents, and hastened to land and visit them, for they were anxious to procure information to guide them on their route. On their approach, however, the savages fled in consternation. They proved to be a wandering band of Shoshonies. In their tents were great quantities of small fish about two inches long, together with roots and seeds, or grain, which they were drying for winter provisions. They appeared to be destitute of tools of any kind, yet there were bows and arrows very well made; the former were formed of pine, cedar, or bone, strengthened by sinews, and the latter of the wood of rosebushes, and other crooked plants, but carefully straightened, and tipped with stone of a bottle-green color.

There were also vessels of willow and grass, so closely wrought as to hold water, and a seine neatly made with meshes, in the ordinary manner, of the fibres of wild flax or nettle. The humble effects of the poor savages remained unmolested by their visitors, and a few small articles, with a knife or two, were left in the camp, and were no doubt regarded as invaluable prizes.

Shortly after leaving this deserted camp, and reembarking in the canoes, the travellers met with three of the Snakes on a triangular raft made of flags or reeds; such was their rude mode of navigating the river. They were entirely naked excepting small mantles of hare skins over their shoulders. The canoes approached near enough to gain a full view of them, but they were not to be brought to a parley.

All further progress for the day was barred by a fall in the river of about thirty feet perpendicular; at the head of which the party encamped for the night.

The next day was one of excessive toil and but little progress: the river winding through a wild rocky country, and being interrupted by frequent rapids, among which the canoes were in great peril. On the succeeding day they again visited a camp of wandering Snakes, but the inhabitants fled with terror at the sight of a fleet of canoes, filled with white men, coming down their solitary river.

As Mr. Hunt was extremely anxious to gain information concerning his route, he endeavored by all kinds of friendly signs to entice back the fugitives. At length one, who was on horseback, ventured back with fear and trembling. He was better clad, and in better condition, than most of his vagrant tribe that Mr. Hunt had yet seen. The chief object of his return appeared to be to intercede for a quantity of dried meat and salmon trout, which he had left behind; on which, probably, he depended for his winter's subsistence. The poor wretch approached with hesitation, the alternate dread of famine and of white men operating upon his mind. He made the most abject signs, imploring Mr. Hunt not to carry off his food. The latter tried in every way to reassure him, and offered him knives in exchange for his provisions; great as was the temptation, the poor Snake could only prevail upon himself to spare a part; keeping a feverish watch over the rest, lest it should be taken away. It was in vain Mr. Hunt made inquiries of him concerning his route, and the course of the river. The Indian was too much frightened and bewildered to comprehend him or to reply; he did nothing but alternately commend himself to the protection of the Good Spirit, and supplicate Mr. Hunt not to take away his fish and buffalo meat; and in this state they left him, trembling about his treasures.

In the course of that and the next day they made nearly eight miles; the river inclined to the south of west, and being clear and beautiful, nearly half a mile in width, with many populous communities of the beaver along its banks. The 28th of October, however, was a day of disaster. The river again became rough and impetuous, and was chafed and broken by numerous rapids. These grew more and more dangerous, and the utmost skill was required to steer among them. Mr. Crooks was seated in the second canoe of the squadron, and had an old experienced Canadian for steersman, named Antoine Clappine, one of the most valuable of the voyageurs. The leading canoe had glided safely among the turbulent and roaring surges, but in following it, Mr. Crooks perceived that his canoe was bearing towards a rock. He called out to the steersman, but his warning voice was either unheard or unheeded. In the next moment they struck upon the rock. The canoe was split and overturned. There were five persons on board. Mr. Crooks and one of his companions were thrown amidst roaring breakers and a whirling current, but succeeded, by strong swimming, to reach the shore. Clappine and two others clung to the shattered bark, and drifted with it to a rock. The wreck struck the rock with one end, and swinging round, flung poor Clappine off into the raging stream, which swept him away, and he perished. His comrades succeeded in getting upon the rock, from whence they were afterwards taken off.

This disastrous event brought the whole squadron to a halt, and struck a chill into every bosom. Indeed they had arrived at a terrific strait, that forbade all further progress in the canoes, and dismayed the most experienced voyageur. The whole body of the river was compressed into a space of less than thirty feet in width, between two ledges of rocks, upwards of two hundred feet high, and formed a whirling and tumultuous vortex, so frightfully agitated as to receive the name of "The Caldron Linn." Beyond this fearful abyss, the river kept raging and roaring on, until lost to sight among impending precipices.

CHAPTER XXXIII.

Gloomy Council.-Exploring Parties- Discouraging Reports- Disastrous Experiment.- Detachments in Quest of Succor.- Caches, How Made. -Return of One of the Detachments- Unsuccessful.- Further Disappointments- The Devil's Scuttle Hole

MR. HUNT and his companions encamped upon the borders of the Caldron Linn, and held gloomy counsel as to their future course. The recent wreck had dismayed even the voyageurs, and the fate of their popular comrade, Clappine, one of the most adroit and experienced of their fraternity, had struck sorrow to their hearts, for with all their levity, these thoughtless beings have great kindness towards each other.

The whole distance they had navigated since leaving Henry's Fort was computed to be about three hundred and forty miles; strong apprehensions were now entertained that the tremendous impediments before them would oblige them to abandon their canoes. It was determined to send exploring parties on each side of the river to ascertain whether it was possible to navigate it further. Accordingly, on the following morning, three men were despatched along the south bank, while Mr. Hunt and three others proceeded along the north. The two parties returned after a weary scramble among swamps, rocks, and precipices, and with very disheartening accounts. For nearly forty miles that they had explored, the river foamed and roared along through a deep and narrow channel, from twenty to thirty yards wide, which it had worn, in the course of ages, through the heart of a barren, rocky country. The precipices on each side were often two and three hundred feet high, sometimes perpendicular, and sometimes overhanging, so that it was impossible, excepting in one or two places, to get down to the margin of the stream. This dreary strait was rendered the more dangerous by frequent rapids, and occasionally perpendicular falls from ten to forty feet in height; so that it seemed almost hopeless to attempt to pass the canoes down it. The party, however, who had explored the south side of the river, had found a place, about six miles from the camp, where they thought it possible the canoes might be carried down the bank and launched upon the stream, and from whence they might make their way with the aid of occasional portages. Four of the best canoes were accordingly selected for the experiment, and were transported to the place on the shoulders of sixteen of the men. At the same time Mr. Reed, the clerk, and three men were detached to explore the river still further down than the previous scouting parties had been, and at the same time to look out for Indians, from whom provisions might be obtained, and a supply of horses, should it be found necessary to proceed by land.

The party who had been sent with the canoes returned on the following day, weary and dejected. One of the canoes had been swept away with all the weapons and effects of four of the voyageurs, in attempting to pass it down a rapid by means of a line. The other three had stuck fast among the rocks, so that it was impossible to move them; the men returned, therefore, in despair, and declared the river unnavigable.

The situation of the unfortunate travellers was now gloomy in the extreme. They were in the heart of an unknown wilderness, untraversed as yet by a white man. They were at a loss what route to take, and how far they were from the ultimate place of their destination, nor could they meet in these uninhabited wilds with any human being to give them information. The repeated accidents

to their canoes had reduced their stock of provisions to five days' allowance, and there was now every appearance of soon having famine added to their other sufferings.

This last circumstance rendered it more perilous to keep together than to separate. Accordingly, after a little anxious but bewildered counsel, it was determined that several small detachments should start off in different directions, headed by the several partners. Should any of them succeed in falling in with friendly Indians, within a reasonable distance, and obtaining a supply of provisions and horses, they were to return to the aid of the main body: otherwise they were to shift for themselves, and shape their course according to circumstances; keeping the mouth of the Columbia River as the ultimate point of their wayfaring. Accordingly, three several parties set off from the camp at Caldron Linn, in opposite directions. Mr. M'Lellan, with three men, kept down along the bank of the river. Mr. Crooks, with five others, turned their steps up it; retracing by land the weary course they had made by water, intending, should they not find relief nearer at hand, to keep on until they should reach Henry's Fort, where they hoped to find the horses they had left there, and to return with them to the main body.

The third party, composed of five men, was headed by Mr. M'Kenzie, who struck to the northward, across the desert plains, in hopes of coming upon the main stream of the Columbia.

Having seen these three adventurous bands depart upon their forlorn expeditions, Mr. Hunt turned his thoughts to provide for the subsistence of the main body left to his charge, and to prepare for their future march. There remained with him thirty-one men, besides the squaw and two children of Pierre Dorion. There was no game to be met with in the neighborhood; but beavers were occasionally trapped about the river banks, which afforded a scanty supply of food; in the meantime they comforted themselves that some one or other of the foraging detachments would be successful, and return with relief.

Mr. Hunt now set to work with all diligence, to prepare caches, in which to deposit the baggage and merchandise, of which it would be necessary to disburden themselves, preparatory to their weary march by land: and here we shall give a brief description of those contrivances, so noted in the wilderness.

A cache is a term common among traders and hunters, to designate a hiding-place for provisions and effects. It is derived from the French word "cacher", to conceal, and originated among the early colonists of Canada and Louisiana; but the secret depository which it designates was in use among the aboriginals long before the intrusion of the white men. It is, in fact, the only mode that migratory hordes have of preserving their valuables from robbery, during their long absences from their villages or accustomed haunts, on hunting expeditions, or during the vicissitudes of war. The utmost skill and caution are required to render these places of concealment invisible to the lynx eye of an Indian. The first care is to seek out a proper situation, which is generally some dry, low, bank of clay, on the margin of a water-course. As soon as the precise spot is pitched upon, blankets, saddle-cloths, and other coverings are spread over the surrounding grass and bushes, to prevent foot-tracks, or any other derangement; and as few hands as possible are

employed. A circle of about two feet in diameter is then nicely cut in the sod, which is carefully removed, with the loose soil immediately beneath it, and laid aside in a place where it will be safe from anything that may change its appearance. The uncovered area is then dug perpendicular to the depth of about three feet, and is then gradually widened so as to form a conical chamber six or seven feet deep. The whole of the earth displaced by this process, being of a different color from that on the surface, is handed up in a vessel, and heaped into a skin or cloth, in which it is conveyed to the stream and thrown into the midst of the current, that it may be entirely carried off. Should the cache not be formed in the vicinity of a stream, the earth thus thrown up is carried to a distance, and scattered in such manner as not to leave the minutest trace. The cave, being formed, is well lined with dry grass, bark, sticks, and poles, and occasionally a dried hide. The property intended to be hidden is then laid in, after having been well aired: a hide is spread over it, and dried grass, brush, and stones thrown in, and trampled down until the pit is filled to the neck. The loose soil which had been put aside is then brought and rammed down firmly, to prevent its caving in, and is frequently sprinkled with water, to destroy the scent, lest the wolves and bears should be attracted to the place, and root up the concealed treasure. When the neck of the cache is nearly level with the surrounding surface, the sod is again fitted in with the utmost exactness, and any bushes, stocks, or stones, that may have originally been about the spot, are restored to their former places. The blankets and other coverings are then removed from the surrounding herbage; all tracks are obliterated; the grass is gently raised by the hand to its natural position, and the minutest chip or straw is scrupulously gleaned up and thrown into the stream. After all this is done, the place is abandoned for the night, and, if all be right next morning, is not visited again, until there be a necessity for reopening the cache. Four men are sufficient, in this way, to conceal the amount of three tons weight of merchandise in the course of two days. Nine caches were required to contain the goods and baggage which Mr. Hunt found it necessary to leave at this place.

Three days had been thus employed since the departure of the several detachments, when that of Mr. Crooks unexpectedly made its appearance. A momentary joy was diffused through the camp, for they supposed succor to be at hand. It was soon dispelled. Mr. Crooks and his companions had been completely disheartened by this retrograde march through a bleak and barren country; and had found, computing from their progress and the accumulating difficulties besetting every step, that it would be impossible to reach Henry's Fort and return to the main body in the course of the winter. They had determined, therefore, to rejoin their comrades, and share their lot.

One avenue of hope was thus closed upon the anxious sojourners at the Caldron Linn; their main expectation of relief was now from the two parties under Reed and M'Lellan, which had proceeded down the river; for, as to Mr. M'Kenzie's detachment, which had struck across the plains, they thought it would have sufficient difficulty in struggling forward through the trackless wilderness. For five days they continued to support themselves by trapping and fishing. Some fish of tolerable size were speared at night by the light of cedar torches; others, that were very small, were caught in nets with fine meshes. The product of their fishing, however, was very scanty. Their trapping was also precarious; and the tails and bellies of the beavers were dried and put by for the journey.

At length two of the companions of Mr. Reed returned, and were hailed with the most anxious ea-

gerness. Their report served but to increase the general despondency. They had followed Mr. Reed for some distance below the point to which Mr. Hunt had explored, but had met with no Indians from whom to obtain information and relief. The river still presented the same furious aspect, brawling and boiling along a narrow and rugged channel, between rocks that rose like walls.

A lingering hope, which had been indulged by some of the party, of proceeding by water, was now finally given up: the long and terrific strait of the river set all further progress at defiance, and in their disgust at the place, and their vexation at the disasters sustained there, they gave it the indignant, though not very decorous, appellation of the Devil's Scuttle Hole.

Washington Irving's Astoria

CHAPTER XXXIV.

Determination of the Party to Proceed on Foot.- Dreary Deserts Between Snake River and the Columbia.- Distribution of Effects Preparatory to a March- Division of the Party.- Rugged March Along the River.- Wild and Broken Scenery.- Shoshonies.- Alarm of a Snake Encampment- Intercourse with the Snakes.- Horse Dealing. - Value of a Tin Kettle.- Sufferings From Thirst- A Horse Reclaimed. -Fortitude of an Indian Woman.- Scarcity of Food.- Dog's Flesh a Dainty.-News of Mr. Crooks and His Party.-Painful Travelling Among the Mountains.- Snow Storms.- A Dreary Mountain Prospect. -A Bivouac During a Wintry Night.- Return to the River Bank.

THE resolution of Mr. Hunt and his companions was now taken to set out immediately on foot. As to the other detachments that had in a manner gone forth to seek their fortunes, there was little chance of their return; they would probably make their own way through the wilderness. At any rate, to linger in the vague hope of relief from them would be to run the risk of perishing with hunger. Besides, the winter was rapidly advancing, and they had a long journey to make through an unknown country, where all kinds of perils might await them. They were yet, in fact, a thousand miles from Astoria, but the distance was unknown to them at the time: everything before and around them was vague and conjectural, and wore an aspect calculated to inspire despondency.

In abandoning the river, they would have to launch forth upon vast trackless plains destitute of all means of subsistence, where they might perish of hunger and thirst. A dreary desert of sand and gravel extends from Snake River almost to the Columbia. Here and there is a thin and scanty herbage, insufficient for the pasturage of horse or buffalo. Indeed, these treeless wastes between the Rocky Mountains and the Pacific are even more desolate and barren than the naked, upper prairies on the Atlantic side; they present vast desert tracts that must ever defy cultivation, and interpose dreary and thirsty wilds between the habitations of man, in traversing which the wanderer will often be in danger of perishing.

Seeing the hopeless character of these wastes, Mr. Hunt and his companions determined to keep along the course of the river, where they would always have water at hand, and would be able occasionally to procure fish and beaver, and might perchance meet with Indians, from whom they could obtain provisions.

They now made their final preparations for the march. All their remaining stock of provisions consisted of forty pounds of Indian corn, twenty pounds of grease, about five pounds of portable soup, and a sufficient quantity of dried meat to allow each man a pittance of five pounds and a quarter, to be reserved for emergencies. This being properly distributed, they deposited all their goods and superfluous articles in the caches, taking nothing with them but what was indispensable to the journey. With all their management, each man had to carry twenty pounds' weight besides his own articles and equipments.

That they might have the better chance of procuring subsistence in the scanty region they were to traverse, they divided their party into two bands. Mr. Hunt, with eighteen men, besides Pierre Dorion and his family, was to proceed down the north side of the river, while Mr. Crooks, with eighteen men, kept along the south side.

On the morning of the 9th of October, the two parties separated and set forth on their several courses. Mr. Hunt and his companions followed along the right bank of the river, which made its way far below them, brawling at the foot of perpendicular precipices of solid rock, two and three hundred feet high. For twenty-eight miles that they travelled this day, they found it impossible to get down to the margin of the stream. At the end of this distance they encamped for the night at a place which admitted a scrambling descent. It was with the greatest difficulty, however, that they succeeded in getting up a kettle of water from the river for the use of the camp. As some rain had fallen in the afternoon, they passed the night under the shelter of the rocks.

The next day they continued thirty-two miles to the northwest, keeping along the river, which still ran in its deep-cut channel. Here and there a shady beach or a narrow strip of soil, fringed with dwarf willows, would extend for a little distance along the foot of the cliffs, and sometimes a reach of still water would intervene like a smooth mirror between the foaming rapids.

As through the preceding day, they journeyed on without finding, except in one instance, any place where they could get down to the river's edge, and they were fain to allay the thirst caused by hard travelling, with the water collected in the hollow of the rocks.

In the course of their march on the following morning, they fell into a beaten horse path leading along the river, which showed that they were in the neighborhood of some Indian village or encampment. They had not proceeded far along it, when they met with two Shoshonies, or Snakes. They approached with some appearance of uneasiness, and accosting Mr. Hunt, held up a knife, which by signs they let him know they had received from some of the white men of the advance parties. It was with some difficulties that Mr. Hunt prevailed upon one of the savages to conduct him to the lodges of his people. Striking into a trail or path which led up from the river, he guided them for some distance in the prairie, until they came in sight of a number of lodges made of straw, and shaped like hay-stacks. Their approach, as on former occasions, caused the wildest affright among the inhabitants. The women hid such of their children as were too large to be carried, and too small to take care of themselves, under straw, and, clasping their infants to

their breasts, fled across the prairie. The men awaited the approach of the strangers, but evidently in great alarm.

Mr. Hunt entered the lodges, and, as he was looking about, observed where the children were concealed; their black eyes glistening like those of snakes, from beneath the straw. He lifted up the covering to look at them; the poor little beings were horribly frightened, and their fathers stood trembling, as if a beast of prey were about to pounce upon their brood.

The friendly manner of Mr. Hunt soon dispelled these apprehensions; he succeeded in purchasing some excellent dried salmon, and a dog, an animal much esteemed as food by the natives; and when he returned to the river one of the Indians accompanied him. He now came to where the lodges were frequent along the banks, and, after a day's journey of twenty-six miles to the northwest, encamped in a populous neighborhood. Forty or fifty of the natives soon visited the camp, conducting themselves in a very amicable manner. They were well clad, and all had buffalo robes, which they procured from some of the hunting tribes in exchange for salmon. Their habitations were very comfortable; each had its pile of wormwood at the door for fuel, and within was abundance of salmon, some fresh, but the greater part cured. When the white men visited the lodges, however, the women and children hid themselves through fear. Among the supplies obtained here were two dogs, on which our travellers breakfasted, and found them to be very excellent, well-flavored, and hearty food.

In the course of the three following days they made about sixty-three miles, generally in a northwest direction. They met with many of the natives in their straw-built cabins, who received them without alarm. About their dwellings were immense quantities of the heads and skins of salmon, the best part of which had been cured, and hidden in the ground. The women were badly clad; the children worse; their garments were buffalo robes, or the skins of foxes, hares, and badgers, and sometimes the skins of ducks, sewed together, with the plumage on. Most of the skins must have been procured by traffic with other tribes, or in distant hunting excursions, for the naked prairies in the neighborhood afforded few animals, excepting hares, which were abundant. There were signs of buffaloes having been there, but a long time before.

On the 15th of November they made twenty-eight miles along the river, which was entirely free from rapids. The shores were lined with dead salmon, which tainted the whole atmosphere. The natives whom they met spoke of Mr. Reed's party having passed through that neighborhood. In the course of the day Mr. Hunt saw a few horses, but the owners of them took care to hurry them out of the way. All the provisions they were able to procure were two dogs and a salmon. On the following day they were still worse off, having to subsist on parched corn and the remains of their dried meat. The river this day had resumed its turbulent character, forcing its way through a narrow channel between steep rocks and down violent rapids. They made twenty miles over a rugged road, gradually approaching a mountain in the northwest, covered with snow, which had been in sight for three days past.

On the 17th they met with several Indians, one of whom had a horse. Mr. Hunt was extremely

desirous of obtaining it as a pack-horse; for the men, worn down by fatigue and hunger, found the loads of twenty pounds' weight which they had to carry, daily growing heavier and more galling. The Indians, however, along this river, were never willing to part with their horses, having none to spare. The owner of the steed in question seemed proof against all temptation; article after article of great value in Indian eyes was offered and refused. The charms of an old tin-kettle, however, were irresistible, and a bargain was concluded.

A great part of the following morning was consumed in lightening the packages of the men and arranging the load for the horse. At this encampment there was no wood for fuel, even the wormwood on which they had frequently depended having disappeared. For the two last days they had made thirty miles to the northwest.

On the 19th of November, Mr. Hunt was lucky enough to purchase another horse for his own use, giving in exchange a tomahawk, a knife, a fire steel, and some beads and gartering. In an evil hour, however, he took the advice of the Indians to abandon the river, and follow a road or trail leading into the prairies. He soon had cause to regret the change. The road led across a dreary waste, without verdure; and where there was neither fountain, nor pool, nor running stream. The men now began to experience the torments of thirst, aggravated by their diet of dried fish. The thirst of the Canadian voyageurs became so insupportable as to drive them to the most revolting means of allaying it. For twenty-five miles did they toll on across this dismal desert, and laid themselves down at night, parched and disconsolate, beside their wormwood fires; looking forward to still greater sufferings on the following day. Fortunately it began to rain in the night, to their infinite relief; the water soon collected in puddles and afforded them delicious draughts.

Refreshed in this manner, they resumed their wayfaring as soon as the first streaks of dawn gave light enough for them to see their path. The rain continued all day, so that they no longer suffered from thirst, but hunger took its place, for after travelling thirty-three miles they had nothing to sup on but a little parched corn.

The next day brought them to the banks of a beautiful little stream, running to the west, and fringed with groves of cottonwood and willow. On its borders was an Indian camp, with a great many horses grazing around it. The inhabitants, too, appeared to be better clad than usual. The scene was altogether a cheering one to the poor half-famished wanderers. They hastened to their lodges, but on arriving at them met with a check that at first dampened their cheerfulness. An Indian immediately laid claim to the horse of Mr. Hunt, saying that it had been stolen from him. There was no disproving a fact supported by numerous bystanders, and which the horse stealing habits of the Indians rendered but too probable; so Mr. Hunt relinquished his steed to the claimant; not being able to retain him by a second purchase.

At this place they encamped for the night, and made a sumptuous repast upon fish and a couple of dogs, procured from their Indian neighbors. The next day they kept along the river, but came to a halt after ten miles' march, on account of the rain. Here they again got a supply of fish and dogs from the natives; and two of the men were fortunate enough each to get a horse in exchange

for a buffalo robe. One of these men was Pierre Dorion, the half-breed interpreter, to whose suffering family the horse was a timely acquisition. And here we cannot but notice the wonderful patience, perseverance, and hardihood of the Indian women, as exemplified in the conduct of the poor squaw of the interpreter. She was now far advanced in her pregnancy, and had two children to take care of; one four, and the other two years of age. The latter of course she had frequently to carry on her back, in addition to the burden usually imposed upon the squaw, yet she had borne all her hardships without a murmur, and throughout this weary and painful journey had kept pace with the best of the pedestrians. Indeed on various occasions in the course of this enterprise, she displayed a force of character that won the respect and applause of the white men.

Mr. Hunt endeavored to gather some information from these Indians concerning the country and the course of the rivers. His communications with them had to be by signs, and a few words which he had learnt, and of course were extremely vague. All that he could learn from them was that the great river, the Columbia, was still far distant, but he could ascertain nothing as to the route he ought to take to arrive at it. For the two following days they continued westward upwards of forty miles along the little stream, until they crossed it just before its junction with Snake River, which they found still running to the north. Before them was a wintry-looking mountain covered with snow on all sides.

In three days more they made about seventy miles; fording two small rivers, the waters of which were very cold. Provisions were extremely scarce; their chief sustenance was portable soup; a meagre diet for weary pedestrians.

On the 27th of November the river led them into the mountains through a rocky defile where there was scarcely room to pass. They were frequently obliged to unload the horses to get them by the narrow places; and sometimes to wade through the water in getting round rocks and butting cliffs. All their food this day was a beaver which they had caught the night before; by evening, the cravings of hunger were so sharp, and the prospect of any supply among the mountains so faint, that they had to kill one of the horses. "The men," says Mr. Hunt in his journal, "find the meat very good, and, indeed, so should I, were it not for the attachment I have to the animal."

Early the following day, after proceeding ten miles to the north, they came to two lodges of Shoshonies, who seemed in nearly as great extremity as themselves, having just killed two horses for food. They had no other provisions excepting the seed of a weed which they gather in great quantities, and pound fine. It resembles hemp-seed. Mr. Hunt purchased a bag of it, and also some small pieces of horse flesh, which he began to relish, pronouncing them "fat and tender."

From these Indians he received information that several white men had gone down the river, some one side, and a good many on the other; these last he concluded to be Mr. Crooks and his party. He was thus released from much anxiety about their safety, especially as the Indians spoke about Mr. Crooks having one of his dogs yet, which showed that he and his men had not been reduced to extremity of hunger.

As Mr. Hunt feared that he might be several days in passing through this mountain defile, and run the risk of famine, he encamped in the neighborhood of the Indians, for the purpose of bartering with them for a horse. The evening was expended in ineffectual trials. He offered a gun, a buffalo robe, and various other articles. The poor fellows had, probably, like himself, the fear of starvation before their eyes. At length the women, learning the object of his pressing solicitations and tempting offers, set up such a terrible hue and cry that he was fairly howled and scolded from the ground.

The next morning early, the Indians seemed very desirous to get rid of their visitors, fearing, probably, for the safety of their horses. In reply to Mr. Hunt's inquiries about the mountains, they told him that he would have to sleep but three nights more among them; and that six days' travelling would take him to the falls of the Columbia; information in which he put no faith, believing it was only given to induce him to set forward. These, he was told, were the last Snakes he would meet with, and that he would soon come to a nation called Sciatogas.

Forward then did he proceed on his tedious journey, which, at every step, grew more painful. The road continued for two days through narrow defiles, where they were repeatedly obliged to unload the horses. Sometimes the river passed through such rocky chasms and under such steep precipices that they had to leave it, and make their way, with excessive labor, over immense hills, almost impassable for horses. On some of these hills were a few pine trees, and their summits were covered with snow. On the second day of this scramble one of the hunters killed a black-tailed deer, which afforded the half-starved travellers a sumptuous repast. Their progress these two days was twenty-eight miles, a little to the northward of east.

The month of December set in drearily, with rain in the valleys and snow upon the hills. They had to climb a mountain with snow to the midleg, which increased their painful toil. A small beaver supplied them with a scanty meal, which they eked out with frozen blackberries, haws, and choke-cherries, which they found in the course of their scramble. Their journey this day, though excessively fatiguing, was but thirteen miles; and all the next day they had to remain encamped, not being able to see half a mile ahead, on account of a snow-storm. Having nothing else to eat, they were compelled to kill another of their horses. The next day they resumed their march in snow and rain, but with all their efforts could only get forward nine miles, having for a part of the distance to unload the horses and carry the packs themselves. On the succeeding morning they were obliged to leave the river and scramble up the hills. From the summit of these, they got a wide view of the surrounding country, and it was a prospect almost sufficient to make them despair. In every direction they beheld snowy mountains, partially sprinkled with pines and other evergreens, and spreading a desert and toilsome world around them. The wind howled over the bleak and wintry landscape, and seemed to penetrate to the marrow of their bones. They waded on through the snow, which at every step was more than knee deep.

After tolling in this way all day, they had the mortification to find that they were but four miles distant from the encampment of the preceding night, such was the meandering of the river among these dismal hills. Pinched with famine, exhausted with fatigue, with evening approach-

ing, and a wintry wild still lengthening as they advanced, they began to look forward with sad forebodings to the night's exposure upon this frightful waste. Fortunately they succeeded in reaching a cluster of pines about sunset. Their axes were immediately at work; they cut down trees, piled them in great heaps, and soon had huge fires "to cheer their cold and hungry hearts."

About three o'clock in the morning it again began to snow, and at daybreak they found themselves, as it were, in a cloud, scarcely being able to distinguish objects at the distance of a hundred yards. Guarding themselves by the sound of running water, they set out for the river, and by slipping and sliding contrived to get down to its bank. One of the horses, missing his footing, rolled down several hundred yards with his load, but sustained no injury. The weather in the valley was less rigorous than on the hills. The snow lay but ankle deep, and there was a quiet rain now falling. After creeping along for six miles, they encamped on the border of the river. Being utterly destitute of provisions, they were again compelled to kill one of their horses to appease their famishing hunger.

CHAPTER XXXV.

An Unexpected Meeting.-Navigation in a Skin Canoe.-Strange Fears of Suffering Men.-Hardships of Mr. Crooks and His Comrades.-Tidings of McLellan.- A Retrograde March.- A Willow Raft.- Extreme Suffering of Some of the Party - Illness of Mr. Crooks.- Impatience of Some of the Men.- Necessity of Leaving the Laggards Behind.

THE wanderers had now accomplished four hundred and seventy-two miles of their dreary journey since leaving the Caldron Linn; how much further they had yet to travel, and what hardships to encounter, no one knew.

On the morning of the 6th of December, they left their dismal encampment, but had scarcely begun their march when, to their surprise, they beheld a party of white men coming up along the opposite bank of the river. As they drew nearer, they were recognized for Mr. Crooks and his companions. When they came opposite, and could make themselves heard across the murmuring of the river, their first cry was for food; in fact, they were almost starved. Mr. Hunt immediately returned to the camp, and had a kind of canoe made out of the skin of the horse killed on the preceding night. This was done after the Indian fashion, by drawing up the edges of the skin with thongs, and keeping them distended by sticks or thwart pieces. In this frail bark, Sardepie, one of the Canadians, carried over a portion of the flesh of the horse to the famishing party on the opposite side of the river, and brought back with him Mr. Crooks and the Canadian, Le Clerc. The forlorn and wasted looks and starving condition of these two men struck dismay to the hearts of Mr. Hunt's followers. They had been accustomed to each other's appearance, and to the gradual operation of hunger and hardship upon their frames, but the change in the looks of these men, since last they parted, was a type of the famine and desolation of the land; and they now began to indulge the horrible presentiment that they would all starve together, or be reduced to the direful alternative of casting lots!

When Mr. Crooks had appeased his hunger, he gave Mr. Hunt some account of his wayfaring. On the side of the river along which he had kept, he had met with but few Indians, and those were too miserably poor to yield much assistance. For the first eighteen days after leaving the Caldron Linn, he and his men had been confined to half a meal in twenty-four hours; for three days following, they had subsisted on a single beaver, a few wild cherries, and the soles of old moccasins; and for the last six days their only animal food had been the carcass of a dog. They had been three days' journey further down the river than Mr. Hunt, always keeping as near to its banks as possible, and frequently climbing over sharp and rocky ridges that projected into the stream. At length they had arrived to where the mountains increased in height, and came closer to the river, with perpendicular precipices, which rendered it impossible to keep along the stream. The river here rushed with incredible velocity through a defile not more than thirty yards wide, where cascades and rapids succeeded each other almost without intermission. Even had the opposite banks, therefore, been such as to permit a continuance of their journey, it would have been madness to attempt to pass the tumultuous current either on rafts or otherwise. Still bent, however, on pushing forward, they attempted to climb the opposing mountains; and struggled on through the snow for half a day until, coming to where they could command a prospect, they found that they were not half way to the summit, and that mountain upon mountain lay piled beyond them, in wintry desolation. Famished and emaciated as they were, to continue forward would be to perish; their only chance seemed to be to regain the river, and retrace their steps up its banks. It was in this forlorn and retrograde march that they had met Mr. Hunt and his party.

Mr. Crooks also gave information of some others of their fellow adventurers. He had spoken several days previously with Mr. Reed and Mr. M'Kenzie, who with their men were on the opposite side of the river, where it was impossible to get over to them. They informed him that Mr. M'Lellan had struck across from the little river above the mountains, in the hope of falling in with some of the tribe of Flatheads, who inhabit the western skirts of the Rocky range. As the companions of Reed and M'Kenzie were picked men, and had found provisions more abundant on their side of the river, they were in better condition, and more fitted to contend with the difficulties of the country, than those of Mr. Crooks, and when he lost sight of them, were pushing onward, down the course of the river.

Mr. Hunt took a night to revolve over his critical situation, and to determine what was to be done. No time was to be lost; he had twenty men and more in his own party, to provide for, and Mr. Crooks and his men to relieve. To linger would be to starve. The idea of retracing his steps was intolerable, and, notwithstanding all the discouraging accounts of the ruggedness of the mountains lower down the river, he would have been disposed to attempt them, but the depth of the snow with which they were covered deterred him; having already experienced the impossibility of forcing his way against such an impediment.

The only alternative, therefore, appeared to be, return and seek the Indian bands scattered along the small rivers above the mountains. Perhaps, from some of these he might procure horses enough to support him until he could reach the Columbia; for he still cherished the hope of arriving at that river in the course of the winter, though he was apprehensive that few of Mr. Crooks's

---

party would be sufficiently strong to follow him. Even in adopting this course, he had to make up his mind to the certainty of several days of famine at the outset, for it would take that time to reach the last Indian lodges from which he had parted, and until they should arrive there, his people would have nothing to subsist upon but haws and wild berries, excepting one miserable horse, which was little better than skin and bone.

After a night of sleepless cogitation, Mr. Hunt announced to his men the dreary alternative he had adopted, and preparations were made to take Mr. Crooks and Le Clerc across the river, with the remainder of the meat, as the other party were to keep up along the opposite bank. The skin canoe had unfortunately been lost in the night; a raft was constructed therefore, after the manner of the natives, of bundles of willows, but it could not be floated across the impetuous current. The men were directed, in consequence, to keep on along the river by themselves, while Mr. Crooks and Le Clerc would proceed with Mr. Hunt. They all, then, took up their retrograde march with drooping spirits.

In a little while, it was found that Mr. Crooks and Le Clerc were so feeble as to walk with difficulty, so that Mr. Hunt was obliged to retard his pace, that they might keep up with him. His men grew impatient at the delay. They murmured that they had a long and desolate region to traverse, before they could arrive at the point where they might expect to find horses; that it was impossible for Crooks and Le Clerc, in their feeble condition, to get over it; that to remain with them would only be to starve in their company. They importuned Mr. Hunt, therefore, to leave these unfortunate men to their fate, and think only of the safety of himself and his party. Finding him not to be moved either by entreaties or their clamors, they began to proceed without him, singly and in parties. Among those who thus went off was Pierre Dorion, the interpreter. Pierre owned the only remaining horse; which was now a mere skeleton. Mr. Hunt had suggested, in their present extremity, that it should be killed for food; to which the half-breed flatly refused his assent, and cudgeling the miserable animal forward, pushed on sullenly, with the air of a man doggedly determined to quarrel for his right. In this way Mr. Hunt saw his men, one after another, break away, until but five remained to bear him company.

On the following morning another raft was made, on which Mr. Crooks and Le Clerc again attempted to ferry themselves across the river, but after repeated trials had to give up in despair. This caused additional delay; after which they continued to crawl forward at a snail's pace. Some of the men who had remained with Mr. Hunt now became impatient of these incumbrances, and urged him clamorously to push forward, crying out that they should all starve. The night which succeeded was intensely cold, so that one of the men was severely frost-bitten. In the course of the night, Mr. Crooks was taken ill, and in the morning was still more incompetent to travel. Their situation was now desperate, for their stock of provisions was reduced to three beaver skins. Mr. Hunt, therefore, resolved to push on, overtake his people, and insist upon having the horse of Pierre Dorion sacrificed for the relief of all hands. Accordingly, he left two of his men to help Crooks and Le Clerc on their way, giving them two of the beaver skins for their support; the remaining skin he retained, as provision for himself and the three other men who struck forward with him.

Mr. Hunt Overtakes the Advance Party.- Pierre Dorion, and His Skeleton Horse.- A Shoshonie Camp.- A Justifiable Outrage.- Feasting on Horse Flesh.- Mr. Crooks Brought to the Camp.- Undertakes to Relieve His Men.- The Skin Ferry-Boat.- Frenzy of Prevost.- His Melancholy Fate.- Enfeebled State of John Day.-Mr. Crooks Again Left Behind.-The Party Emerge From Among the Mountains.-Interview With Shoshonies.-A Guide Procured to Conduct the Party Across a Mountain. -Ferriage Across Snake River.-Reunion With Mr Crook's Men.- Final Departure From the River.

ALL that day, Mr. Hunt and his three comrades travelled without eating. At night they made a tantalizing supper on their beaver skin, and were nearly exhausted by hunger and cold. The next day, December 10th, they overtook the advance party, who were all as much famished as themselves, some of them not having eaten since the morning of the seventh. Mr. Hunt now proposed the sacrifice of Pierre Dorion's skeleton horse. Here he again met with positive and vehement opposition from the half-breed, who was too sullen and vindictive a fellow to be easily dealt with. What was singular, the men, though suffering such pinching hunger, interfered in favor of the horse.

They represented that it was better to keep on as long as possible without resorting to this last resource. Possibly the Indians, of whom they were in quest, might have shifted their encampment, in which case it would be time enough to kill the horse to escape starvation. Mr. Hunt, therefore, was prevailed upon to grant Pierre Dorion's horse a reprieve.

Fortunately, they had not proceeded much further, when, towards evening, they came in sight of a lodge of Shoshonies, with a number of horses grazing around it. The sight was as unexpected as it was joyous. Having seen no Indians in this neighborhood as they passed down the river, they must have subsequently come out from among the mountains. Mr. Hunt, who first descried them, checked the eagerness of his companions, knowing the unwillingness of these Indians to part with their horses, and their aptness to hurry them off and conceal them, in case of an alarm. This was no time to risk such a disappointment. Approaching, therefore, stealthily and silently, they came upon the savages by surprise, who fled in terror. Five of their horses were eagerly seized, and one was despatched upon the spot. The carcass was immediately cut up, and a part of it hastily cooked and ravenously devoured. A man was now sent on horseback with a supply of the flesh to Mr. Crooks and his companions. He reached them in the night; they were so famished that the supply sent them seemed but to aggravate their hunger, and they were almost tempted to kill and eat the horse that had brought the messenger. Availing themselves of the assistance of the animal, they reached the camp early in the morning.

On arriving there, Mr. Crooks was shocked to find that, while the people on this side of the river were amply supplied with provisions, none had been sent to his own forlorn and famishing men on the opposite bank. He immediately caused a skin canoe to be constructed, and called out to his

men to fill their camp-kettles with water and hang them over the fire, that no time might be lost in cooking the meat the moment it should be received. The river was so narrow, though deep, that everything could be distinctly heard and seen across it. The kettles were placed on the fire, and the water was boiling by the time the canoe was completed. When all was ready, however, no one would undertake to ferry the meat across. A vague and almost superstitious terror had infected the minds of Mr. Hunt's followers, enfeebled and rendered imaginative of horrors by the dismal scenes and sufferings through which they had passed. They regarded the haggard crew, hovering like spectres of famine on the opposite bank, with indefinite feelings of awe and apprehension: as if something desperate and dangerous was to be feared from them.

Mr. Crooks tried in vain to reason or shame them out of this singular state of mind. He then attempted to navigate the canoe himself, but found his strength incompetent to brave the impetuous current. The good feelings of Ben Jones, the Kentuckian, at length overcame his fears, and he ventured over. The supply he brought was received with trembling avidity. A poor Canadian, however, named Jean Baptiste Prevost, whom famine had rendered wild and desperate, ran frantically about the bank, after Jones had returned, crying out to Mr. Hunt to send the canoe for him, and take him from that horrible region of famine, declaring that otherwise he would never march another step, but would lie down there and die.

The canoe was shortly sent over again, under the management of Joseph Delaunay, with further supplies. Prevost immediately pressed forward to embark. Delaunay refused to admit him, telling him that there was now a sufficient supply of meat on his side of the river. He replied that it was not cooked, and he should starve before it was ready; he implored, therefore, to be taken where he could get something to appease his hunger immediately. Finding the canoe putting off without him, he forced himself aboard. As he drew near the opposite shore, and beheld meat roasting before the fire, he jumped up, shouted, clapped his hands, and danced in a delirium of joy, until he upset the canoe. The poor wretch was swept away by the current and drowned, and it was with extreme difficulty that Delaunay reached the shore.

Mr. Hunt now sent all his men forward excepting two or three. In the evening he caused another horse to be killed, and a canoe to be made out of the skin, in which he sent over a further supply of meat to the opposite party. The canoe brought back John Day, the Kentucky hunter, who came to join his former employer and commander, Mr. Crooks. Poor Day, once so active and vigorous, was now reduced to a condition even more feeble and emaciated than his companions. Mr. Crooks had such a value for the man, on account of his past services and faithful character, that he determined not to quit him; he exhorted Mr. Hunt, however, to proceed forward, and join the party, as his presence was all important to the conduct of the expedition. One of the Canadians, Jean Baptiste Dubreuil, likewise remained with Mr. Crooks.

Mr. Hunt left two horses with them, and a part of the carcass of the last that had been killed. This, he hoped, would be sufficient to sustain them until they should reach the Indian encampment.

One of the chief dangers attending the enfeebled condition of Mr. Crooks and his companions

---

was their being overtaken by the Indians whose horses had been seized, though Mr. Hunt hoped that he had guarded against any resentment on the part of the savages, by leaving various articles in their lodge, more than sufficient to compensate for the outrage he had been compelled to commit.

Resuming his onward course, Mr. Hunt came up with his people in the evening. The next day, December 13th, he beheld several Indians, with three horses, on the opposite side of the river, and after a time came to the two lodges which he had seen on going down. Here he endeavored in vain to barter a rifle for a horse, but again succeeded in effecting the purchase with an old tin kettle, aided by a few beads.

The two succeeding days were cold and stormy; the snow was augmenting, and there was a good deal of ice running in the river. Their road, however, was becoming easier; they were getting out of the hills, and finally emerged into the open country, after twenty days of fatigue, famine, and hardship of every kind, in the ineffectual attempt to find a passage down the river.

They now encamped on a little willowed stream, running from the east, which they had crossed on the 26th of November. Here they found a dozen lodges of Shoshonies, recently arrived, who informed them that had they persevered along the river, they would have found their difficulties augment until they became absolutely insurmountable. This intelligence added to the anxiety of Mr. Hunt for the fate of Mr. M'Kenzie and his people, who had kept on.

Mr. Hunt now followed up the little river, and encamped at some lodges of Shoshonies, from whom he procured a couple of horses, a dog, a few dried fish, and some roots and dried cherries. Two or three days were exhausted in obtaining information about the route, and what time it would take to get to the Sciatogas, a hospitable tribe on the west of the mountains, represented as having many horses. The replies were various, but concurred in saying that the distance was great, and would occupy from seventeen to twenty-one nights. Mr. Hunt then tried to procure a guide; but though he sent to various lodges up and down the river, offering articles of great value in Indian estimation, no one would venture. The snow, they said, was waist deep in the mountains; and to all his offers they shook their heads, gave a shiver, and replied, "we shall freeze! we shall freeze!" at the same time they urged him to remain and pass the winter among them.

Mr. Hunt was in a dismal dilemma. To attempt the mountains without a guide would be certain death to him and all his people; to remain there, after having already been so long on the journey, and at such great expense, was worse to him, he said, than two "deaths." He now changed his tone with the Indians, charged them with deceiving him in respect to the mountains, and talking with a "forked tongue," or, in other words, with lying. He upbraided them with their want of courage, and told them they were women, to shrink from the perils of such a journey. At length one of them, piqued by his taunts, or tempted by his offers, agreed to be his guide; for which he was to receive a gun, a pistol, three knives, two horses, and a little of every article in possession of the party; a reward sufficient to make him one of the wealthiest of his vagabond nation.

Once more, then, on the 21st of December, they set out upon their wayfaring, with newly excited spirits. Two other Indians accompanied their guide, who led them immediately back to Snake River, which they followed down for a short distance, in search of some Indian rafts made of reeds, on which they might cross. Finding none, Mr. Hunt caused a horse to be killed, and a canoe to be made out of its skin. Here, on the opposite bank, they saw the thirteen men of Mr. Crooks's party, who had continued up along the river. They told Mr. Hunt, across the stream, that they had not seen Mr. Crooks, and the two men who had remained with him, since the day that he had separated from them.

The canoe proving too small, another horse was killed, and the skin of it joined to that of the first. Night came on before the little bark had made more than two voyages. Being badly made it was taken apart and put together again, by the light of the fire. The night was cold; the men were weary and disheartened with such varied and incessant toil and hardship. They crouched, dull and drooping, around their fires; many of them began to express a wish to remain where they were for the winter. The very necessity of crossing the river dismayed some of them in their present enfeebled and dejected state. It was rapid and turbulent, and filled with floating ice, and they remembered that two of their comrades had already perished in its waters. Others looked forward with misgivings to the long and dismal journey through lonesome regions that awaited them, when they should have passed this dreary flood.

At an early hour of the morning, December 23d, they began to cross the river. Much ice had formed during the night, and they were obliged to break it for some distance on each shore. At length they all got over in safety to the west side; and their spirits rose on having achieved this perilous passage. Here they were rejoined by the people of Mr. Crooks, who had with them a horse and a dog, which they had recently procured. The poor fellows were in the most squalid and emaciated state. Three of them were so completely prostrated in strength and spirits that they expressed a wish to remain among the Snakes. Mr. Hunt, therefore, gave them the canoe, that they might cross the river, and a few articles, with which to procure necessities, until they should meet with Mr. Crooks. There was another man, named Michael Carriere, who was almost equally reduced, but he determined to proceed with his comrades, who were now incorporated with the party of Mr. Hunt. After the day's exertions they encamped together on the banks of the river. This was the last night they were to spend upon its borders. More than eight hundred miles of hard travelling, and many weary days, had it cost them; and the sufferings connected with it rendered it hateful in their remembrance, so that the Canadian voyageurs always spoke of it as "La maudite riviere enragee" - the accursed mad river - thus coupling a malediction with its name.

---

Scattered Members of the Expedition.- Scenery on the Columbia.- Tidings of Astoria- Arrival at the Falls.

ON the 24th of December, all things being arranged, Mr. Hunt turned his back upon the disastrous banks of Snake River, and struck his course westward for the mountains. His party, being augmented by the late followers of Mr. Crooks, amounted now to thirty-two white men, three Indians, and the squaw and two children of Pierre Dorion. Five jaded, halfstarved horses were laden with their luggage, and, in case of need, were to furnish them with provisions. They travelled painfully about fourteen miles a day, over plains and among hills, rendered dreary by occasional falls of snow and rain. Their only sustenance was a scanty meal of horse flesh once in four-and-twenty hours.

On the third day the poor Canadian, Carriere, one of the famished party of Mr. Crooks, gave up in despair, and laying down upon the ground declared he could go no further. Efforts were made to cheer him up, but it was found that the poor fellow was absolutely exhausted and could not keep on his legs. He was mounted, therefore, upon one of the horses, though the forlorn animal was in little better plight than himself.

On the 28th, they came upon a small stream winding to the north, through a fine level valley; the mountains receding on each side. Here their Indian friends pointed out a chain of woody mountains to the left, running north and south, and covered with snow, over which they would have to pass. They kept along the valley for twenty-one miles on the 29th, suffering much from a continued fall of snow and rain, and being twice obliged to ford the icy stream. Early in the following morning the squaw of Pierre Dorion, who had hitherto kept on without murmuring or flinching, was suddenly taken in labor, and enriched her husband with another child. As the fortitude and good conduct of the poor woman had gained for her the goodwill of the party, her situation caused concern and perplexity. Pierre, however, treated the matter as an occurrence that could soon be arranged and need cause no delay. He remained by his wife in the camp, with his other children and his horse, and promised soon to rejoin the main body, who proceeded on their march.

Finding that the little river entered the mountains, they abandoned it, and turned off for a few miles among hills. Here another Canadian, named La Bonte, gave out, and had to be helped on horseback. As the horse was too weak to bear both him and his pack, Mr. Hunt took the latter upon his own shoulders. Thus, with difficulties augmenting at every step, they urged their toilsome way among the hills, half famished and faint at heart, when they came to where a fair valley spread out before them, of great extent and several leagues in width, with a beautiful stream meandering through it. A genial climate seemed to prevail here, for though the snow lay upon all the mountains within sight, there was none to be seen in the valley. The travellers gazed with delight upon this serene, sunny landscape, but their joy was complete on beholding six lodges of Shoshonies pitched upon the borders of the stream, with a number of horses and dogs about them. They all pressed forward with eagerness and soon reached the camp. Here their first attention was to obtain provisions. A rifle, an old musket, a tomahawk, a tin kettle, and a small quantity of am-

munition soon procured them four horses, three dogs, and some roots. Part of the live stock was immediately killed, cooked with all expedition, and as promptly devoured. A hearty meal restored every one to good spirits. In the course of the following morning the Dorion family made its reappearance. Pierre came trudging in the advance, followed by his valued, though skeleton steed, on which was mounted his squaw with her new-born infant in her arms, and her boy of two years old wrapped in a blanket and slung at her side. The mother looked as unconcerned as if nothing had happened to her; so easy is nature in her operations in the wilderness, when free from the enfeebling refinements of luxury, and the tamperings and appliances of art.

The next morning ushered in the new year (1812). Mr. Hunt was about to resume his march, when his men requested permission to celebrate the day. This was particularly urged by the Canadian voyageurs, with whom New-Year's day is a favorite festival; and who never willingly give up a holiday, under any circumstances. There was no resisting such an application; so the day was passed in repose and revelry; the poor Canadians contrived to sing and dance in defiance of all their hardships; and there was a sumptuous New-Year's banquet of dog's meat and horse flesh.

After two days of welcome rest, the travellers addressed themselves once more to the painful journey. The Indians of the lodges pointed out a distant gap through which they must pass in traversing the ridge of mountains. They assured them that they would be but little incommoded by snow, and in three days would arrive among the Sciatogas. Mr. Hunt, however, had been so frequently deceived by Indian accounts of routes and distances, that he gave but little faith to this information.

The travellers continued their course due west for five days, crossing the valley and entering the mountains. Here the travelling became excessively toilsome, across rough stony ridges, and amidst fallen trees. They were often knee deep in snow, and sometimes in the hollows between the ridges sank up to their waists. The weather was extremely cold; the sky covered with clouds so that for days they had not a glimpse of the sun. In traversing the highest ridge they had a wide but chilling prospect over a wilderness of snowy mountains.

On the 6th of January, however, they had crossed the dividing summit of the chain, and were evidently under the influence of a milder climate. The snow began to decrease; the sun once more emerged from the thick canopy of clouds, and shone cheerfully upon them, and they caught a sight of what appeared to be a plain, stretching out in the west. They hailed it as the poor Israelites hailed the first glimpse of the promised land, for they flattered themselves that this might be the great plain of the Columbia, and that their painful pilgrimage might be drawing to a close,

It was now five days since they had left the lodges of the Shoshonies, during which they had come about sixty miles, and their guide assured them that in the course of the next day they would see the Sciatogas.

On the following morning, therefore, they pushed forward with eagerness, and soon fell upon a stream which led them through a deep narrow defile, between stupendous ridges. Here among

the rocks and precipices they saw gangs of that mountain-loving animal, the black-tailed deer, and came to where great tracks of horses were to be seen in all directions, made by the Indian hunters.

The snow had entirely disappeared, and the hopes of soon coming upon some Indian encampment induced Mr. Hunt to press on. Many of the men, however, were so enfeebled that they could not keep up with the main body, but lagged at intervals behind; and some of them did not arrive at the night encampment. In the course of this day's march the recently-born child of Pierre Dorion died.

The march was resumed early the next morning, without waiting for the stragglers. The stream which they had followed throughout the preceding day was now swollen by the influx of another river; the declivities of the hills were green and the valleys were clothed with grass. At length the jovial cry was given of "an Indian camp!" It was yet in the distance, in the bosom of the green valley, but they could perceive that it consisted of numerous lodges, and that hundreds of horses were grazing the grassy meadows around it. The prospect of abundance of horse flesh diffused universal joy, for by this time the whole stock of travelling provisions was reduced to the skeleton steed of Pierre Dorion, and another wretched animal, equally emaciated, that had been repeatedly reprieved during the journey.

A forced march soon brought the weary and hungry travellers to the camp. It proved to be a strong party of Sciatogas and Tusche-pas. There were thirty-four lodges, comfortably constructed of mats; the Indians, too, were better clothed than any of the wandering bands they had hitherto met on this side of the Rocky Mountains. Indeed, they were as well clad as the generality of the wild hunter tribes. Each had a good buffalo or deer skin robe; and a deer skin hunting shirt and leggins. Upwards of two thousand horses were ranging the pastures around their encampment; but what delighted Mr. Hunt was, on entering the lodges, to behold brass kettles, axes, copper tea-kettles, and various other articles of civilized manufacture, which showed that these Indians had an indirect communication with the people of the sea-coast who traded with the whites. He made eager inquiries of the Sciatogas, and gathered from them that the great river (the Columbia) was but two days' march distant, and that several white people had recently descended it; who he hoped might prove to be M'Lellan, M'Kenzie, and their companions.

It was with the utmost joy and the most profound gratitude to heaven, that Mr. Hunt found himself and his band of weary and famishing wanderers thus safely extricated from the most perilous part of their long journey, and within the prospect of a termination of their toils. All the stragglers who had lagged behind arrived, one after another, excepting the poor Canadian voyageur, Carriere. He had been seen late in the preceding afternoon, riding behind a Snake Indian, near some lodges of that nation, a few miles distant from the last night's encampment; and it was expected that he would soon make his appearance. The first object of Mr. Hunt was to obtain provisions for his men. A little venison, of an indifferent quality, and some roots were all that could be procured that evening; but the next day he succeeded in purchasing a mare and colt, which were immediately killed, and the cravings of the half-starved people in some degree appeased.

---

For several days they remained in the neighborhood of these Indians, reposing after all their hardships, and feasting upon horse flesh and roots, obtained in subsequent traffic. Many of the people ate to such excess as to render themselves sick, others were lame from their past journey; but all gradually recruited in the repose and abundance of the valley. Horses were obtained here much more readily, and at a cheaper rate, than among the Snakes. A blanket, a knife, or a half pound of blue beads would purchase a steed, and at this rate many of the men bought horses for their individual use.

This tribe of Indians, who are represented as a proud-spirited race, and uncommonly cleanly, never eat horses or dogs, nor would they permit the raw flesh of either to be brought into their huts. They had a small quantity of venison in each lodge, but set so high a price upon it that the white men, in their impoverished state could not afford to purchase it. They hunted the deer on horseback, "ringing," or surrounding them, and running them down in a circle. They were admirable horsemen, and their weapons were bows and arrows, which they managed with great dexterity. They were altogether primitive in their habits, and seemed to cling to the usages of savage life, even when possessed of the aids of civilization. They had axes among them, yet they generally made use of a stone mallet wrought into the shape of a bottle, and wedges of elk horn, in splitting their wood. Though they might have two or three brass kettles hanging, in their lodges, yet they would frequently use vessels made of willow, for carrying water, and would even boll their meat in them, by means of hot stones. Their women wore caps of willow neatly worked and figured.

As Carriere, the Canadian straggler, did not make his appearance for two or three days after the encampment in the valley two men were sent out on horseback in search of him. They returned, however, without success. The lodges of the Snake Indians near which he had been seen were removed, and they could find no trace of him. Several days more elapsed, yet nothing was seen or heard of him, or the Snake horseman, behind whom he had been last observed. It was feared, therefore, that he had either perished through hunger and fatigue; had been murdered by the Indians; or, being left to himself, had mistaken some hunting tracks for the trail of the party, and been led astray and lost.

The river on the banks of which they were encamped, emptied into the Columbia, was called by the natives the Eu-o-tal-la, or Umatilla, and abounded with beaver. In the course of their sojourn in the valley which it watered, they twice shifted their camp, proceeding about thirty miles down its course, which was to the west. A heavy fall of rain caused the river to overflow its banks, dislodged them from their encampment, and drowned three of their horses which were tethered in the low ground.

Further conversation with the Indians satisfied them that they were in the neighborhood of the Columbia. The number of the white men who they said had passed down the river, agreed with that of M'Lellan, M'Kenzie, and their companions, and increased the hope of Mr. Hunt that they might have passed through the wilderness with safety.

These Indians had a vague story that white men were coming to trade among them; and they often spoke of two great men named Ke-Koosh and Jacquean, who gave them tobacco, and smoked with them. Jacquean, they said, had a house somewhere upon the great river. Some of the Canadians supposed they were speaking of one Jacquean Finlay, a clerk of the Northwest Company, and inferred that the house must be some trading post on one of the tributary streams of the Columbia. The Indians were overjoyed when they found this band of white men intended to return and trade with them. They promised to use all diligence in collecting quantities of beaver skins, and no doubt proceeded to make deadly war upon that sagacious, but ill-fated animal, who, in general, lived in peaceful insignificance among his Indian neighbors, before the intrusion of the white trader. On the 20th of January, Mr. Hunt took leave of these friendly Indians, and of the river on which they encamped, and continued westward.

At length, on the following day, the wayworn travellers lifted up their eyes and beheld before them the long-sought waters of the Columbia. The sight was hailed with as much transport as if they had already reached the end of their pilgrimage; nor can we wonder at their joy. Two hundred and forty miles had they marched, through wintry wastes and rugged mountains, since leaving Snake River; and six months of perilous wayfaring had they experienced since their departure from the Arickara village on the Missouri. Their whole route by land and water from that point had been, according to their computation, seventeen hundred and fifty-one miles, in the course of which they had endured all kinds of hardships. In fact, the necessity of avoiding the dangerous country of the Blackfeet had obliged them to make a bend to the south and traverse a great additional extent of unknown wilderness.

The place where they struck the Columbia was some distance below the junction of its two great branches, Lewis and Clarke rivers, and not far from the influx of the Wallah-Wallah. It was a beautiful stream, three-quarters of a mile wide, totally free from trees; bordered in some places with steep rocks, in others with pebbled shores.

On the banks of the Columbia they found a miserable horde of Indians, called Akai-chies, with no clothing but a scanty mantle of the skins of animals, and sometimes a pair of sleeves of wolf's skin. Their lodges were shaped like a tent, and very light and warm, being covered with mats and rushes; besides which they had excavations in the ground, lined with mats, and occupied by the women, who were even more slightly clad than the men. These people subsisted chiefly by fishing; having canoes of a rude construction, being merely the trunks of pine trees split and hollowed out by fire. Their lodges were well stored with dried salmon, and they had great quantities of fresh salmon trout of an excellent flavor, taken at the mouth of the Umatilla; of which the travellers obtained a most acceptable supply.

Finding that the road was on the north side of the river, Mr. Hunt crossed, and continued five or six days travelling rather slowly down along its banks, being much delayed by the straying of the horses, and the attempts made by the Indians to steal them. They frequently passed lodges, where they obtained fish and dogs. At one place the natives had just returned from hunting, and had brought back a large quantity of elk and deer meat, but asked so high a price for it as to be

beyond the funds of the travellers, so they had to content themselves with dog's flesh. They had by this time, however, come to consider it very choice food, superior to horse flesh, and the minutes of the expedition speak rather exultingly now and then, of their having made a famous "repast," where this viand happened to be unusually plenty.

They again learnt tidings of some of the scattered members of the expedition, supposed to be M'Kenzie, M'Lellan, and their men, who had preceded them down the river, and had overturned one of their canoes, by which they lost many articles. All these floating pieces of intelligence of their fellow adventurers, who had separated from them in the heart of the wilderness, they received with eager interest.

The weather continued to be temperate, marking the superior softness of the climate on this side of the mountains. For a great part of the time, the days were delightfully mild and clear, like the serene days of October on the Atlantic borders. The country in general, in the neighborhood of the river, was a continual plain, low near the water, but rising gradually; destitute of trees, and almost without shrubs or plants of any kind, excepting a few willow bushes. After travelling about sixty miles, they came to where the country became very hilly and the river made its way between rocky banks and down numerous rapids. The Indians in this vicinity were better clad and altogether in more prosperous condition than those above, and, as Mr. Hunt thought, showed their consciousness of ease by something like sauciness of manner. Thus prosperity is apt to produce arrogance in savage as well as in civilized life. In both conditions, man is an animal that will not bear pampering.

From these people Mr. Hunt for the first time received vague but deeply interesting intelligence of that part of the enterprise which had proceeded by sea to the mouth of the Columbia. The Indians spoke of a number of white men who had built a large house at the mouth of the great river, and surrounded it with palisades. None of them had been down to Astoria themselves; but rumors spread widely and rapidly from mouth to mouth among the Indian tribes, and are carried to the heart of the interior by hunting parties and migratory hordes.

The establishment of a trading emporium at such a point, also, was calculated to cause a sensation to the most remote parts of the vast wilderness beyond the mountains. It in a manner struck the pulse of the great vital river, and vibrated up all its tributary streams.

It is surprising to notice how well this remote tribe of savages had learnt, through intermediate gossips, the private feelings of the colonists at Astoria; it shows that Indians are not the incurious and indifferent observers that they have been represented. They told Mr. Hunt that the white people at the large house had been looking anxiously for many of their friends, whom they had expected to descend the great river; and had been in much affliction, fearing that they were lost. Now, however, the arrival of him and his party would wipe away all their tears, and they would dance and sing for joy.

On the 31st of January, Mr. Hunt arrived at the falls of the Columbia, and encamped at the village

---

of the Wish-ram, situated at the head of that dangerous pass of the river called "the Long Narrows".

Washington Irving's Astoria  
CHAPTER XXXVIII.

The Village of Wish-ram.- Roguery of the Inhabitants.- Their Habitations.- Tidings of Astoria.- Of the Tonquin Massacre.- Thieves About the Camp.- A Band of Braggarts- Embarkation.- Arrival at Astoria.- A Joyful Reception.- Old Comrades- Adventures of Reed, M'Lellan, and M'Kenzie Among the Snake River Mountains.- Rejoicing at Astoria.

OF the village of Wish-ram, the aborigines' fishing mart of the Columbia, we have given some account in an early chapter of this work. The inhabitants held a traffic in the productions of the fisheries of the falls, and their village was the trading resort of the tribes from the coast and from the mountains. Mr. Hunt found the inhabitants shrewder and more intelligent than any Indians he had met with. Trade had sharpened their wits, though it had not improved their honesty; for they were a community of arrant rogues and freebooters. Their habitations comported with their circumstances, and were superior to any the travellers had yet seen west of the Rocky Mountains. In general, the dwellings of the savages on the Pacific side of that great barrier were mere tents and cabins of mats, or skins, or straw, the country being destitute of timber. In Wish-ram, on the contrary, the houses were built of wood, with long sloping roofs. The floor was sunk about six feet below the surface of the ground, with a low door at the gable end, extremely narrow, and partly sunk. Through this it was necessary to crawl and then to descend a short ladder. This inconvenient entrance was probably for the purpose of defense; there were loop-holes also under the eaves, apparently for the discharge of arrows. The houses were large, generally containing two or three families. Immediately within the door were sleeping places, ranged along the walls, like berths in a ship; and furnished with pallets of matting. These extended along one half of the building; the remaining half was appropriated to the storing of dried fish.

The trading operations of the inhabitants of Wish-ram had given them a wider scope of information, and rendered their village a kind of headquarters of intelligence. Mr. Hunt was able, therefore, to collect more distinct tidings concerning the settlement of Astoria and its affairs. One of the inhabitants had been at the trading post established by David Stuart on the Oakinagan, and had picked up a few words of English there. From him, Mr. Hunt gleaned various particulars about that establishment, as well as about the general concerns of the enterprise. Others repeated the name of Mr. M'Kay, the partner who perished in the massacre on board of the Tonquin, and gave some account of that melancholy affair. They said Mr. M'Kay was a chief among the white men, and had built a great house at the mouth of the river, but had left it and sailed away in a large ship to the northward where he had been attacked by bad Indians in canoes. Mr. Hunt was startled by this intelligence, and made further inquiries. They informed him that the Indians had lashed their canoes to the ship, and fought until they killed him and all his people. This is another instance of the clearness with which intelligence is transmitted from mouth to mouth among the Indian tribes. These tidings, though but partially credited by Mr. Hunt, filled his mind with anxious forebodings. He now endeavored to procure canoes, in which to descend the Columbia,

---

but none suitable for the purpose were to be obtained above the Narrows; he continued on, therefore, the distance of twelve miles, and encamped on the bank of the river. The camp was soon surrounded by loitering savages, who went prowling about seeking what they might pilfer. Being baffled by the vigilance of the guard, they endeavored to compass their ends by other means. Towards evening, a number of warriors entered the camp in ruffling style; painted and dressed out as if for battle, and armed with lances, bows and arrows, and scalping knives. They informed Mr. Hunt that a party of thirty or forty braves were coming up from a village below to attack the camp and carry off the horses, but that they were determined to stay with him and defend him. Mr. Hunt received them with great coldness, and, when they had finished their story, gave them a pipe to smoke. He then called up all hands, stationed sentinels in different quarters, but told them to keep as vigilant an eye within the camp as without.

The warriors were evidently baffled by these precautions, and, having smoked their pipe, and vaped off their valor, took their departure. The farce, however, did not end here. After a little while the warriors returned, ushering in another savage, still more heroically arrayed. This they announced as the chief of the belligerent village, but as a great pacificator. His people had been furiously bent upon the attack, and would have doubtless carried it into effect, but this gallant chief had stood forth as the friend of white men, and had dispersed the throng by his own authority and prowess. Having vaunted this signal piece of service, there was a significant pause; all evidently expecting some adequate reward. Mr. Hunt again produced the pipe, smoked with the chieftain and his worthy compeers; but made no further demonstrations of gratitude. They remained about the camp all night, but at daylight returned, baffled and crestfallen, to their homes, with nothing but smoke for their pains.

Mr. Hunt now endeavored to procure canoes, of which he saw several about the neighborhood, extremely well made, with elevated stems and sterns, some of them capable of carrying three thousand pounds weight. He found it extremely difficult, however, to deal with these slippery people, who seemed much more inclined to pilfer. Notwithstanding a strict guard maintained round the camp, various implements were stolen, and several horses carried off. Among the latter, we have to include the long-cherished steed of Pierre Dorion. From some wilful caprice, that worthy pitched his tent at some distance from the main body, and tethered his invaluable steed beside it, from whence it was abstracted in the night, to the infinite chagrin and mortification of the hybrid interpreter.

Having, after several days' negotiation, procured the requisite number of canoes, Mr. Hunt would gladly have left this thievish neighborhood, but was detained until the 5th of February by violent head winds, accompanied by snow and rain. Even after he was enabled to get under way, he had still to struggle against contrary winds and tempestuous weather. The current of the river, however, was in his favor; having made a portage at the grand rapid, the canoes met with no further obstruction, and, on the afternoon of the 15th of February, swept round an intervening cape, and came in sight of the infant settlement of Astoria. After eleven months wandering in the wilderness, a great part of the time over trackless wastes, where the sight of a savage wigwam was a rarity, we may imagine the delight of the poor weatherbeaten travellers, at beholding the embryo

establishment, with its magazines, habitations, and picketed bulwarks, seated on a high point of land, dominating a beautiful little bay, in which was a trim-built shallop riding quietly at anchor. A shout of joy burst from each canoe at the long-wished-for sight. They urged their canoes across the bay, and pulled with eagerness for shore, where all hands poured down from the settlement to receive and welcome them. Among the first to greet them on their landing, were some of their old comrades and fellow-sufferers, who, under the conduct of Reed, M'Lellan, and M'Kenzie, had parted from them at the Caldron Linn. These had reached Astoria nearly a month previously, and, judging from their own narrow escape from starvation, had given up Mr. Hunt and his followers as lost. Their greeting was the more warm and cordial. As to the Canadian voyageurs, their mutual felicitations, as usual, were loud and vociferous, and it was almost ludicrous to behold these ancient "comrades" and "confreres," hugging and kissing each other on the river bank.

When the first greetings were over, the different bands interchanged accounts of their several wanderings, after separating at Snake River; we shall briefly notice a few of the leading particulars. It will be recollected by the reader, that a small exploring detachment had proceeded down the river, under the conduct of Mr. John Reed, a clerk of the company; that another had set off under M'Lellan, and a third in a different direction, under M'Kenzie. After wandering for several days without meeting with Indians, or obtaining any supplies, they came together fortuitously among the Snake River mountains, some distance below that disastrous pass or strait which had received the appellation of the Devil's Scuttle Hole.

When thus united, their party consisted of M'Kenzie, M'Lellan, Reed, and eight men, chiefly Canadians. Being all in the same predicament, without horses, provisions, or information of any kind, they all agreed that it would be worse than useless to return to Mr. Hunt and encumber him with so many starving men, and that their only course was to extricate themselves as soon as possible from this land of famine and misery and make the best of their way for the Columbia. They accordingly continued to follow the downward course of Snake River; clambering rocks and mountains, and defying all the difficulties and dangers of that rugged defile, which subsequently, when the snows had fallen, was found impassable by Messrs. Hunt and Crooks.

Though constantly near to the borders of the river, and for a great part of the time within sight of its current, one of their greatest sufferings was thirst. The river had worn its way in a deep channel through rocky mountains, destitute of brooks or springs. Its banks were so high and precipitous, that there was rarely any place where the travellers could get down to drink of its waters. Frequently they suffered for miles the torments of Tantalus; water continually within sight, yet fevered with the most parching thirst. Here and there they met with rainwater collected in the hollows of the rocks, but more than once they were reduced to the utmost extremity; and some of the men had recourse to the last expedient to avoid perishing.

Their sufferings from hunger were equally severe. They could meet with no game, and subsisted for a time on strips of beaver skin, broiled on the coals. These were doled out in scanty allowances, barely sufficient to keep up existence, and at length failed them altogether. Still they crept feebly on, scarce dragging one limb after another, until a severe snow-storm brought them to a

pause. To struggle against it, in their exhausted condition, was impossible, so cowering under an impending rock at the foot of a steep mountain, they prepared themselves for that wretched fate which seemed inevitable.

At this critical juncture, when famine stared them in the face, M'Lellan casting up his eyes, beheld an ahsahta, or bighorn, sheltering itself under a shelving rock on the side of the hill above them. Being in a more active plight than any of his comrades, and an excellent marksman, he set off to get within shot of the animal. His companions watched his movements with breathless anxiety, for their lives depended upon his success. He made a cautious circuit; scrambled up the hill with the utmost silence, and at length arrived, unperceived, within a proper distance. Here leveling his rifle he took so sure an aim, that the bighorn fell dead on the spot; a fortunate circumstance, for, to pursue it, if merely wounded, would have been impossible in his emaciated state. The declivity of the hill enabled him to roll the carcass down to his companions, who were too feeble to climb the rocks. They fell to work to cut it up; yet exerted a remarkable self-denial for men in their starving condition, for they contented themselves for the present with a soup made from the bones, reserving the flesh for future repasts. This providential relief gave them strength to pursue their journey, but they were frequently reduced to almost equal straits, and it was only the smallness of their party, requiring a small supply of provisions, that enabled them to get through this desolate region with their lives.

At length, after twenty-one days of to 11 and suffering, they got through these mountains, and arrived at a tributary stream of that branch of the Columbia called Lewis River, of which Snake River forms the southern fork. In this neighborhood they met with wild horses, the first they had seen west of the Rocky Mountains. From hence they made their way to Lewis River, where they fell in with a friendly tribe of Indians, who freely administered to their necessities. On this river they procured two canoes, in which they dropped down the stream to its confluence with the Columbia, and then down that river to Astoria, where they arrived haggard and emaciated, and perfectly in rags.

Thus, all the leading persons of Mr. Hunt's expedition were once more gathered together, excepting Mr. Crooks, of whose safety they entertained but little hope, considering the feeble condition in which they had been compelled to leave him in the heart of the wilderness.

A day was now given up to jubilee, to celebrate the arrival of Mr. Hunt and his companions, and the joyful meeting of the various scattered bands of adventurers at Astoria. The colors were hoisted; the guns, great and small, were fired; there was a feast of fish, of beaver, and venison, which relished well with men who had so long been glad to revel on horse flesh and dogs' meat; a genial allowance of grog was issued, to increase the general animation, and the festivities wound up, as usual, with a grand dance at night, by the Canadian voyageurs. \*

\*The distance from St. Louis to Astoria, by the route travelled by Hunt and M'Kenzie, was upwards of thirty-five hundred miles, though in a direct line it does not exceed eighteen hundred.

CHAPTER XXXIX.

Scanty Fare During the Winter.- A Poor Hunting Ground.- The Return of the Fishing Season.- The Uthlecan or Smelt.- Its Qualities. - Vast Shoals of it.- Sturgeon.- Indian Modes of Taking It.- The Salmon- Different Species.- Nature of the Country About the Coast. -Forests and Forest Trees.- A Remarkable Flowering Vine.- Animals. - Birds.- Reptiles - Climate West of the Mountains - Mildness of the Temperature.- Soil of the Coast and the Interior.

THE winter passed away tranquilly at Astoria. The apprehensions of hostility from the natives had subsided; indeed, as the season advanced, the Indians for the most part had disappeared from the neighborhood, and abandoned the sea-coast, so that, for want of their aid, the colonists had at times suffered considerably for want of provisions. The hunters belonging to the establishment made frequent and wide excursions, but with very moderate success. There were some deer and a few bears to be found in the vicinity, and elk in great numbers; the country, however, was so rough, and the woods so close and entangled that it was almost impossible to beat up the game. The prevalent rains of winter, also, rendered it difficult for the hunter to keep his arms in order. The quantity of game, therefore, brought in by the hunters was extremely scanty, and it was frequently necessary to put all hands on very moderate allowance. Towards spring, however, the fishing season commenced - the season of plenty on the Columbia. About the beginning of February, a small kind of fish, about six inches long, called by the natives the uthlecan, and resembling the smelt, made its appearance at the mouth of the river. It is said to be of delicious flavor, and so fat as to burn like a candle, for which it is often used by the natives. It enters the river in immense shoals, like solid columns, often extending to the depth of five or more feet, and is scooped up by the natives with small nets at the end of poles. In this way they will soon fill a canoe, or form a great heap upon the river banks. These fish constitute a principal article of their food; the women drying them and stringing them on cords. As the uthlecan is only found in the lower part of the river, the arrival of it soon brought back the natives to the coast; who again resorted to the factory to trade, and from that time furnished plentiful supplies of fish.

The sturgeon makes its appearance in the river shortly after the uthlecan, and is taken in different ways by the natives: sometimes they spear it; but oftener they use the hook and line, and the net. Occasionally, they sink a cord in the river by a heavy weight, with a buoy at the upper end, to keep floating. To this cord several hooks are attached by short lines, a few feet distant from each other, and baited with small fish. This apparatus is often set towards night, and by the next morning several sturgeon will be found hooked by it; for though a large and strong fish, it makes but little resistance when ensnared.

The salmon, which are the prime fish of the Columbia, and as important to the piscatory tribes as are the buffaloes to the hunters of the prairies, do not enter the river until towards the latter part of May, from which time, until the middle of August, they abound and are taken in vast quantities, either with the spear or seine, and mostly in shallow water. An inferior species succeeds, and continues from August to December. It is remarkable for having a double row of teeth, half an inch long and extremely sharp, from whence it has received the name of the dog-toothed salmon. It is generally killed with the spear in small rivulets, and smoked for winter provision. We have

noticed in a former chapter the mode in which the salmon are taken and cured at the falls of the Columbia; and put tip in parcels for exportation. From these different fisheries of the river tribes, the establishment at Astoria had to derive much of its precarious supplies of provisions.

A year's residence at the mouth of the Columbia, and various expeditions in the interior, had now given the Astorians some idea of the country. The whole coast is described as remarkably rugged and mountainous; with dense forests of hemlock, spruce, white and red cedar, cotton-wood, white oak, white and swamp ash, willow, and a few walnut. There is likewise an undergrowth of aromatic shrubs, creepers, and clambering vines, that render the forests almost impenetrable; together with berries of various kinds, such as gooseberries, strawberries, raspberries, both red and yellow, very large and finely flavored whortleberries, cranberries, serviceberries, blackberries, currants, sloes, and wild and choke cherries.

Among the flowering vines is one deserving of particular notice. Each flower is composed of six leaves or petals, about three inches in length, of a beautiful crimson, the inside spotted with white. Its leaves, of a fine green, are oval, and disposed by threes. This plant climbs upon the trees without attaching itself to them; when it has reached the topmost branches, it descends perpendicularly, and as it continues to grow, extends from tree to tree, until its various stalks interlace the grove like the rigging of a ship. The stems or trunks of this vine are tougher and more flexible than willow, and are from fifty to one hundred fathoms in length. From the fibres, the Indians manufacture baskets of such close texture as to hold water.

The principal quadrupeds that had been seen by the colonists in their various expeditions were the stag, fallow deer, hart, black and grizzly bear, antelope, ahsahta or bighorn, beaver, sea and river otter, muskrat, fox, wolf, and panther, the latter extremely rare. The only domestic animals among the natives were horses and dogs.

The country abounded with aquatic and land birds, such as swans, wild geese, brant, ducks of almost every description, pelicans, herons, gulls, snipes, curlews, eagles, vultures, crows, ravens, magpies, woodpeckers, pigeons, partridges, pheasants, grouse, and a great variety of singing birds.

There were few reptiles; the only dangerous kinds were the rattlesnake, and one striped with black, yellow, and white, about four feet long. Among the lizard kind was one about nine or ten inches in length, exclusive of the tail, and three inches in circumference. The tail was round, and of the same length as the body. The head was triangular, covered with small square scales. The upper part of the body was likewise covered with small scales, green, yellow, black, and blue. Each foot had five toes, furnished with strong nails, probably to aid it in burrowing, as it usually lived under ground on the plains.

A remarkable fact, characteristic of the country west of the Rocky Mountains, is the mildness and equability of the climate. The great mountain barrier seems to divide the continent into different climates, even in the same degrees of latitude. The rigorous winters and sultry summers, and all the capricious inequalities of temperature prevalent on the Atlantic side of the mountains, are

but little felt on their western declivities. The countries between them and the Pacific are blessed with milder and steadier temperature, resembling the climates of parallel latitudes in Europe. In the plains and valleys but little snow falls throughout the winter, and usually melts while falling. It rarely lies on the ground more than two days at a time, except on the summits of the mountains. The winters are rainy rather than cold. The rains for five months, from the middle of October to the middle of March, are almost incessant, and often accompanied by tremendous thunder and lightning. The winds prevalent at this season are from the south and southeast, which usually bring rain. Those from the north to the southwest are the harbingers of fair weather and a clear sky. The residue of the year, from the middle of March to the middle of October, an interval of seven months, is serene and delightful. There is scarcely any rain throughout this time, yet the face of the country is kept fresh and verdant by nightly dews, and occasionally by humid fogs in the mornings. These are not considered prejudicial to health, since both the natives and the whites sleep in the open air with perfect impunity. While this equable and bland temperature prevails throughout the lower country, the peaks and ridges of the vast mountains by which it is dominated, are covered with perpetual snow. This renders them discernible at a great distance, shining at times like bright summer clouds, at other times assuming the most aerial tints, and always forming brilliant and striking features in the vast landscape. The mild temperature prevalent throughout the country is attributed by some to the succession of winds from the Pacific Ocean, extending from latitude twenty degrees to at least fifty degrees north. These temper the heat of summer, so that in the shade no one is incommoded by perspiration; they also soften the rigors of winter, and produce such a moderation in the climate, that the inhabitants can wear the same dress throughout the year.

The soil in the neighborhood of the sea-coast is of a brown color, inclining to red, and generally poor; being a mixture of clay and gravel. In the interior, and especially in the valleys of the Rocky Mountains, the soil is generally blackish, though sometimes yellow. It is frequently mixed with marl, and with marine substances in a state of decomposition. This kind of soil extends to a considerable depth, as may be perceived in the deep cuts made by ravines, and by the beds of rivers. The vegetation in these valleys is much more abundant than near the coast; in fact, it is these fertile intervals, locked up between rocky sierras, or scooped out from barren wastes, that population must extend itself, as it were, in veins and ramifications, if ever the regions beyond the mountains should become civilized.

Washington Irving's Astoria  
CHAPTER XL.

Natives in the Neighborhood of Astoria- Their Persons and Characteristics. - Causes of Deformity -- Their Dress. - Their Contempt of Beards- Ornaments- Armor and Weapons.-Mode of Flattening the Head.- Extent of the Custom.- Religious Belief.- The Two Great Spirits of the Air and of the Fire.- Priests or Medicine Men.- The Rival Idols.- Polygamy a Cause of Greatness- Petty Warfare.- Music, Dancing, Gambling.- Thieving a Virtue.- Keen Traders- Intrusive Habits - Abhorrence of Drunkenness- Anecdote of Comcomly.

A BRIEF mention has already been made of the tribes or hordes existing about the lower part

---

of the Columbia at the time of the settlement; a few more particulars concerning them may be acceptable. The four tribes nearest to Astoria, and with whom the traders had most intercourse, were, as has heretofore been observed, the Chinooks, the Clatsops, the Wahkiacums, and the Cathlamets. The Chinooks reside chiefly along the banks of a river of the same name, running parallel to the sea-coast, through a low country studded with stagnant pools, and emptying itself into Baker's Bay, a few miles from Cape Disappointment. This was the tribe over which Comcomly, the one-eyed chieftain, held sway; it boasted two hundred and fourteen fighting men. Their chief subsistence was on fish, with an occasional regale of the flesh of elk and deer, and of wild-fowl from the neighboring ponds.

The Clatsops resided on both sides of Point Adams; they were the mere relics of a tribe which had been nearly swept off by the small-pox, and did not number more than one hundred and eighty fighting men.

The Wahkiacums, or Waak-i-cums, inhabited the north side of the Columbia, and numbered sixty-six warriors. They and the Chinooks were originally the same; but a dispute arising about two generations previous to the time of the settlement, between the ruling chief and his brother Wahkiacum, the latter seceded, and with his adherents formed the present horde which continues to go by his name. In this way new tribes or clans are formed, and lurking causes of hostility engendered.

The Cathlamets lived opposite to the lower village of the Wahkiacums, and numbered ninety-four warriors.

These four tribes, or rather clans, have every appearance of springing from the same origin, resembling each other in person, dress, language, and manners. They are rather a diminutive race, generally below five feet five inches, with crooked legs and thick ankles - a deformity caused by their passing so much of their time sitting or squatting upon the calves of their legs and their heels, in the bottom of their canoes - a favorite position, which they retain, even when on shore. The women increase the deformity by wearing tight bandages round the ankles, which prevent the circulation of the blood, and cause a swelling of the muscles of the leg.

Neither sex can boast of personal beauty. Their faces are round, with small but animated eyes. Their noses are broad and flat at top, and fleshy at the end, with large nostrils. They have wide mouths, thick lips, and short, irregular and dirty teeth. Indeed good teeth are seldom to be seen among the tribes west of the Rocky Mountains, who live simply on fish.

In the early stages of their intercourse with white men, these savages were but scantily clad. In summer time the men went entirely naked; in the winter and in bad weather the men wore a small robe, reaching to the middle of the thigh, made of the skins of animals, or of the wool of the mountain sheep. Occasionally, they wore a kind of mantle of matting, to keep off the rain but, having thus protected the back and shoulders, they left the rest of the body naked.

The women wore similar robes, though shorter, not reaching below the waist; besides which, they had a kind of petticoat, or fringe, reaching from the waist to the knee, formed of the fibres of cedar bark, broken into strands, or a tissue of silk grass twisted and knotted at the ends. This was the usual dress of the women in summer; should the weather be inclement, they added a vest of skins, similar to the robe.

The men carefully eradicated every vestige of a beard, considering it a great deformity. They looked with disgust at the whiskers and well-furnished chins of the white men, and in derision called them Long-beards. Both sexes, on the other hand, cherished the hair of the head, which with them is generally black and rather coarse. They allowed it to grow to a great length and were very proud and careful of it, sometimes wearing it plaited, sometimes wound round the head in fanciful tresses. No greater affront could be offered to them than to cut off their treasured locks.

They had conical hats with narrow rims, neatly woven of bear grass or of the fibres of cedar bark, interwoven with designs of various shapes and colors; sometimes merely squares and triangles, at other times rude representations of canoes, with men fishing and harpooning. These hats were nearly waterproof, and extremely durable.

The favorite ornaments of the men were collars of bears' claws, the proud trophies of hunting exploits; while the women and children wore similar decorations of elks' tusks. An intercourse with the white traders, however, soon effected a change in the toilets of both sexes. They became fond of arraying themselves in any article of civilized dress which they could procure, and often made a most grotesque appearance. They adapted many articles of finery, also, to their own previous tastes. Both sexes were fond of adorning themselves with bracelets of iron, brass, or copper. They were delighted, also, with blue and white beads, particularly the former, and wore broad tight bands of them round the waist and ankles, large rolls of them round the neck, and pendants of them in the ears. The men, especially, who in savage life carry a passion for personal decoration further than the females, did not think their gala equipments complete unless they had a jewel of hiaqua, or wampum, dangling at the nose. Thus arrayed, their hair besmeared with fish oil, and their bodies bedaubed with red clay, they considered themselves irresistible.

When on warlike expeditions, they painted their faces and bodies in the most hideous and grotesque manner, according to the universal practice of American savages. Their arms were bows and arrows, spears, and war clubs. Some wore a corselet of pieces of hard wood laced together with bear grass, so as to form a light coat of mail, pliant to the body; and a kind of casque of cedar bark, leather, and bear grass, sufficient to protect the head from an arrow or war club. A more complete article of defensive armor was a buff jerkin or shirt of great thickness, made of doublings of elk skin, and reaching to the feet, holes being left for the head and arms. This was perfectly arrowproof; add to which, it was often endowed with charmed virtues, by the spells and mystic ceremonials of the medicine man, or conjurer.

Of the peculiar custom, prevalent among these people, of flattening the head, we have already spoken. It is one of those instances of human caprice, like the crippling of the feet of females in

China, which are quite incomprehensible. This custom prevails principally among the tribes on the sea-coast, and about the lower parts of the rivers. How far it extends along the coast we are not able to ascertain. Some of the tribes, both north and south of the Columbia, practice it; but they all speak the Chinook language, and probably originated from the same stock. As far as we can learn, the remoter tribes, which speak an entirely different language, do not flatten the head. This absurd custom declines, also, in receding from the shores of the Pacific; few traces of it are to be found among the tribes of the Rocky Mountains, and after crossing the mountains it disappears altogether. Those Indians, therefore, about the head waters of the Columbia, and in the solitary mountain regions, who are often called Flatheads, must not be supposed to be characterized by this deformity. It is an appellation often given by the hunters east of the mountain chain, to all western Indians, excepting the Snakes.

The religious belief of these people was extremely limited and confined; or rather, in all probability, their explanations were but little understood by their visitors. They had an idea of a benevolent and omnipotent spirit, the creator of all things. They represent him as assuming various shapes at pleasure, but generally that of an immense bird. He usually inhabits the sun, but occasionally wings his way through the aerial regions, and sees all that is doing upon earth. Should anything displease him, he vents his wrath in terrific storms and tempests, the lightning being the flashes of his eyes, and the thunder the clapping of his wings. To propitiate his favor they offer to him annual sacrifices of salmon and venison, the first fruits of their fishing and hunting.

Besides this aerial spirit they believe in an inferior one, who inhabits the fire, and of whom they are in perpetual dread, as, though he possesses equally the power of good and evil, the evil is apt to predominate. They endeavor, therefore, to keep him in good humor by frequent offerings. He is supposed also to have great influence with the winged spirit, their sovereign protector and benefactor. They implore him, therefore, to act as their interpreter, and procure them all desirable things, such as success in fishing and hunting, abundance of game, fleet horses, obedient wives, and male children.

These Indians have likewise their priests, or conjurers, or medicine men, who pretend to be in the confidence of the deities, and the expounders and enforcers of their will. Each of these medicine men has his idols carved in wood, representing the spirits of the air and of the fire, under some rude and grotesque form of a horse, a bear, a beaver, or other quadruped, or that of bird or fish. These idols are hung round with amulets and votive offerings, such as beavers' teeth, and bears' and eagles' claws.

When any chief personage is on his death-bed, or dangerously ill, the medicine men are sent for. Each brings with him his idols, with which he retires into a canoe to hold a consultation. As doctors are prone to disagree, so these medicine men have now and then a violent altercation as to the malady of the patient, or the treatment of it. To settle this they beat their idols soundly against each other; whichever first loses a tooth or a claw is considered as confuted, and his votary retires from the field. Polygamy is not only allowed, but considered honorable, and the greater number of wives a man can maintain, the more important is he in the eyes of the tribe. The first wife,

however, takes rank of all the others, and is considered mistress of the house. Still the domestic establishment is liable to jealousies and cabals, and the lord and master has much difficulty in maintaining harmony in his jangling household.

In the manuscript from which we draw many of these particulars, it is stated that he who exceeds his neighbors in the number of his wives, male children, and slaves, is elected chief of the village; a title to office which we do not recollect ever before to have met with.

Feuds are frequent among, these tribes, but are not very deadly. They have occasionally pitched battles, fought on appointed days, and at specific places, which are generally the banks of a rivulet. The adverse parties post themselves on the opposite sides of the stream, and at such distances that the battles often last a long while before any blood is shed. The number of killed and wounded seldom exceed half a dozen. Should the damage be equal on each side, the war is considered as honorably concluded; should one party lose more than the other, it is entitled to a compensation in slaves or other property, otherwise hostilities are liable to be renewed at a future day. They are also given to predatory inroads into the territories of their enemies, and sometimes of their friendly neighbors. Should they fall upon a band of inferior force, or upon a village, weakly defended, they act with the ferocity of true poltroons, slaying all the men, and carrying off the women and children as slaves. As to the property, it is packed upon horses which they bring with them for the purpose. They are mean and paltry as warriors, and altogether inferior in heroic qualities to the savages of the buffalo plains on the east side of the mountains.

A great portion of their time is passed in revelry, music, dancing, and gambling. Their music scarcely deserves the name; the instruments being of the rudest kind. Their singing is harsh and discordant; the songs are chiefly extempore, relating to passing circumstances, the persons present, or any trifling object that strikes the attention of the singer. They have several kinds of dances, some of them lively and pleasing. The women are rarely permitted to dance with the men, but form groups apart, dancing to the same instrument and song.

They have a great passion for play, and a variety of games. To such a pitch of excitement are they sometimes roused, that they gamble away everything they possess, even to their wives and children. They are notorious thieves, also, and proud of their dexterity. He who is frequently successful, gains much applause and popularity; but the clumsy thief, who is detected in some bungling attempt, is scoffed at and despised, and sometimes severely punished.

Such are a few leading characteristics of the natives in the neighborhood of Astoria. They appear to us inferior in many respects to the tribes east of the mountains, the bold rovers of the prairies; and to partake much of Esquimaux character; elevated in some degree by a more genial climate and more varied living style.

The habits of traffic engendered at the cataracts of the Columbia, have had their influence along the coast. The Chinooks and other Indians at the mouth of the river, soon proved themselves keen traders, and in their early dealings with the Astorians never hesitated to ask three times what they

considered the real value of an article. They were inquisitive, also, in the extreme, and impertinently intrusive; and were prone to indulge in scoffing and ridicule at the expense of the strangers.

In one thing, however, they showed superior judgment and self-command to most of their race; this was, in their abstinence from ardent spirits, and the abhorrence and disgust with which they regarded a drunkard. On one occasion a son of Comcomly had been induced to drink freely at the factory, and went home in a state of intoxication, playing all kinds of mad pranks, until he sank into a stupor, in which he remained for two days. The old chieftain repaired to his friend, M'Dougal, with indignation flaming in his countenance, and bitterly reproached him for having permitted his son to degrade himself into a beast, and to render himself an object of scorn and laughter to his slave.

Washington Irving's Astoria

CHAPTER XLI.

Spring Arrangements at Astoria.- Various Expeditions Set Out.- The Long Narrows.- Pilfering Indians.- Thievish Tribe at Wish-ram. - Portage at the Falls- Portage by Moonlight.- An Attack, a Route, and a Robbery.- Indian Cure for Cowardice.- A Parley and Compromise.- The Despatch Party Turn Back.- Meet Crooks and John Day.- Their Sufferings.- Indian Perfidy.- Arrival at Astoria.

AS the spring opened, the little settlement of Astoria was in agitation, and prepared to send forth various expeditions. Several important things were to be done. It was necessary to send a supply of goods to the trading post of Mr. David Stuart, established in the preceding autumn on the Oakinagan. The cache, or secret deposit, made by Mr. Hunt at the Caldron Linn, was likewise to be visited, and the merchandise and other effects left there, to be brought to Astoria. A third object of moment was to send despatches overland to Mr. Astor at New York, informing him of the state of affairs at the settlement, and the fortunes of the several expeditions.

The task of carrying supplies to Oakinagan was assigned to Mr. Robert Stuart, a spirited and enterprising young man, nephew to the one who had established the post. The cache was to be sought out by two of the clerks, named Russell Farnham and Donald M'Gilles, conducted by a guide, and accompanied by eight men, to assist in bringing home the goods.

As to the despatches, they were confided to Mr. John Reed, the clerk, the same who had conducted one of the exploring detachments of Snake River. He was now to trace back his way across the mountains by the same route by which he had come, with no other companions or escort than Ben Jones, the Kentucky hunter, and two Canadians. As it was still hoped that Mr. Crooks might be in existence, and that Mr. Reed and his party might meet with him in the course of their route, they were charged with a small supply of goods and provisions, to aid that gentleman on his way to Astoria.

When the expedition of Reed was made known, Mr. M'Lellan announced his determination to

---

accompany it. He had long been dissatisfied with the smallness of his interest in the copartnership, and had requested an additional number of shares; his request not being complied with, he resolved to abandon the company. M'Lellan was a man of a singularly self-willed and decided character, with whom persuasion was useless; he was permitted, therefore, to take his own course without opposition.

As to Reed, he set about preparing for his hazardous journey with the zeal of a true Irishman. He had a tin case made, in which the letters and papers addressed to Mr. Astor were carefully soldered up. This case he intended to strap upon his shoulders, so as to bear it about with him, sleeping and waking, in all changes and chances, by land or by water, and never to part with it but with his life!

As the route of these several parties would be the same for nearly four hundred miles up the Columbia, and within that distance would lie through the piratical pass of the rapids, and among the freebooting tribes of the river, it was thought advisable to start about the same time, and to keep together. Accordingly, on the 22d of March, they all set off, to the number of seventeen men, in two canoes - and here we cannot but pause to notice the hardihood of these several expeditions, so insignificant in point of force, and severally destined to traverse immense wildernesses where larger parties had experienced so much danger and distress. When recruits were sought in the preceding year among experienced hunters and voyageurs at Montreal and St. Louis, it was considered dangerous to attempt to cross the Rocky Mountains with less than sixty men; and yet here we find Reed ready to push his way across those barriers with merely three companions. Such is the fearlessness, the insensibility to danger, which men acquire by the habitude of constant risk. The mind, like the body, becomes callous by exposure.

The little associated band proceeded up the river, under the command of Mr. Robert Stuart, and arrived early in the month of April at the Long Narrows, that notorious plundering place. Here it was necessary to unload the canoes, and to transport both them and their cargoes to the head of the Narrows by land. Their party was too few in number for the purpose. They were obliged, therefore, to seek the assistance of the Cathlasco Indians, who undertook to carry the goods on their horses. Forward then they set, the Indians with their horses well freighted, and the first load convoyed by Reed and five men, well armed; the gallant Irishman striding along at the head, with his tin case of despatches glittering on his back. In passing, however, through a rocky and intricate defile, some of the freebooting vagrants turned their horses up a narrow path and galloped off, carrying with them two bales of goods, and a number of smaller articles. To follow them was useless; indeed, it was with much ado that the convoy got into port with the residue of the cargoes; for some of the guards were pillaged of their knives and pocket handkerchiefs, and the lustrous tin case of Mr. John Reed was in imminent jeopardy.

Mr. Stuart heard of these depredations, and hastened forward to the relief of the convoy, but could not reach them before dusk, by which time they had arrived at the village of Wish-ram, already noted for its great fishery, and the knavish propensities of its inhabitants. Here they found themselves benighted in a strange place, and surrounded by savages bent on pilfering, if not upon open

robbery. Not knowing what active course to take, they remained under arms all night, without closing an eye, and at the very first peep of dawn, when objects were yet scarce visible, everything was hastily embarked, and, without seeking to recover the stolen effects, they pushed off from shore, "glad to bid adieu," as they said, "to this abominable nest of miscreants."

The worthies of Wish-ram, however, were not disposed to part so easily with their visitors. Their cupidity had been quickened by the plunder which they had already taken, and their confidence increased by the impunity with which their outrage had passed. They resolved, therefore, to take further toll of the travellers, and, if possible, to capture the tin case of despatches; which shining conspicuously from afar, and being guarded by John Reed with such especial care, must, as they supposed, be "a great medicine."

Accordingly, Mr. Stuart and his comrades had not proceeded far in the canoes, when they beheld the whole rabble of Wishram stringing in groups along the bank, whooping and yelling, and gibbering in their wild jargon, and when they landed below the falls, they were surrounded by upwards of four hundred of these river ruffians, armed with bows and arrows, war clubs, and other savage weapons. These now pressed forward, with offers to carry the canoes and effects up the portage. Mr Stuart declined forwarding the goods, alleging the lateness of the hour; but, to keep them in good humor, informed them, that, if they conducted themselves well, their offered services might probably be accepted in the morning; in the meanwhile, he suggested that they might carry up the canoes. They accordingly set off with the two canoes on their shoulders, accompanied by a guard of eight men well armed.

When arrived at the head of the falls, the mischievous spirit of the savages broke out, and they were on the point of destroying the canoes, doubtless with a view to impede the white men from carrying forward their goods, and laying them open to further pilfering. They were with some difficulty prevented from committing this outrage by the interference of an old man, who appeared to have authority among them; and, in consequence of his harangue, the whole of the hostile band, with the exception of about fifty, crossed to the north side of the river, where they lay in wait, ready for further mischief.

In the meantime, Mr. Stuart, who had remained at the foot of the falls with the goods, and who knew that the proffered assistance of the savages was only for the purpose of having an opportunity to plunder, determined, if possible, to steal a march upon them, and defeat their machinations. In the dead of the night, therefore, about one o'clock, the moon shining brightly, he roused his party, and proposed that they should endeavor to transport the goods themselves, above the falls, before the sleeping savages could be aware of their operations. All hands sprang to the work with zeal, and hurried it on in the hope of getting all over before daylight. Mr. Stuart went forward with the first loads, and took his station at the head of the portage, while Mr. Reed and Mr. M'Lellan remained at the foot to forward the remainder.

The day dawned before the transportation was completed. Some of the fifty Indians who had remained on the south side of the river, perceived what was going on, and, feeling themselves too

weak for an attack, gave the alarm to those on the opposite side, upwards of a hundred of whom embarked in several large canoes. Two loads of goods yet remained to be brought up. Mr. Stuart despatched some of the people for one of the loads, with a request to Mr. Reed to retain with him as many of the men as he thought necessary to guard the remaining load, as he suspected hostile intentions on the part of the Indians. Mr. Reed, however, refused to retain any of them, saying that M'Lellan and himself were sufficient to protect the small quantity that remained. The men accordingly departed with the load, while Mr. Reed and M'Lellan continued to mount guard over the residue. By this time, a number of the canoes had arrived from the opposite side. As they approached the shore, the unlucky tin box of John Reed, shining afar like the brilliant helmet of Euryalus, caught their eyes. No sooner did the canoes touch the shore, than they leaped forward on the rocks, set up a war-whoop, and sprang forward to secure the glittering prize. Mr. M'Lellan, who was at the river bank, advanced to guard the goods, when one of the savages attempted to hoodwink him with his buffalo robe with one hand, and to stab him with the other. M'Lellan sprang back just far enough to avoid the blow, and raising his rifle, shot the ruffian through the heart.

In the meantime, Reed, who with the want of forethought of an Irishman, had neglected to remove the leathern cover from the lock of his rifle, was fumbling at the fastenings, when he received a blow on the head with a war club that laid him senseless on the ground. In a twinkling he was stripped of his rifle and pistols, and the tin box, the cause of all this onslaught, was borne off in triumph.

At this critical juncture, Mr. Stuart, who had heard the war-whoop, hastened to the scene of action with Ben Jones, and seven others of the men. When he arrived, Reed was weltering in his blood, and an Indian standing over him and about to despatch him with a tomahawk. Stuart gave the word, when Ben Jones leveled his rifle, and shot the miscreant on the spot. The men then gave a cheer, and charged upon the main body of the savages, who took to instant flight. Reed was now raised from the ground, and borne senseless and bleeding to the upper end of the portage. Preparations were made to launch the canoes and embark in all haste, when it was found that they were too leaky to be put in the water, and that the oars had been left at the foot of the falls. A scene of confusion now ensued. The Indians were whooping and yelling, and running about like fiends. A panic seized upon the men, at being thus suddenly checked, the hearts of some of the Canadians died within them, and two young men actually fainted away. The moment they recovered their senses, Mr. Stuart ordered that they should be deprived of their arms, their under garments taken off, and that a piece of cloth should be tied round their waists, in imitation of a squaw; an Indian punishment for cowardice. Thus equipped, they were stowed away among the goods in one of the canoes. This ludicrous affair excited the mirth of the bolder spirits, even in the midst of their perils, and roused the pride of the wavering. The Indians having crossed back again to the north side, order was restored, some of the hands were sent back for the oars, others set to work to calk and launch the canoes, and in a little while all were embarked and were continuing their voyage along the southern shore.

No sooner had they departed, than the Indians returned to the scene of action, bore off their two

comrades who had been shot, one of whom was still living, and returned to their village. Here they killed two horses; and drank the hot blood to give fierceness to their courage. They painted and arrayed themselves hideously for battle; performed the dead dance round the slain, and raised the war song of vengeance. Then mounting their horses to the number of four hundred and fifty men, and brandishing their weapons, they set off along the northern bank of the river, to get ahead of the canoes, lie in wait for them, and take a terrible revenge on the white men.

They succeeded in getting some distance above the canoes without being discovered, and were crossing the river to post themselves on the side along which the white men were coasting, when they were fortunately descried. Mr. Stuart and his companions were immediately on the alert. As they drew near to the place where the savages had crossed, they observed them posted among steep and overhanging rocks, close along which, the canoes would have to pass. Finding that the enemy had the advantage of the ground, the whites stopped short when within five hundred yards of them, and discharged and reloaded their pieces. They then made a fire, and dressed the wounds of Mr. Reed, who had received five severe gashes in the head. This being done, they lashed the canoes together, fastened them to a rock at a small distance from the shore, and there awaited the menaced attack.

They had not been long posted in this manner, when they saw a canoe approaching. It contained the war-chief of the tribe, and three of his principal warriors. He drew near, and made a long harangue, in which he informed them that they had killed one and wounded another of his nation; that the relations of the slain cried out for vengeance, and he had been compelled to lead them to fight. Still he wished to spare unnecessary bloodshed; he proposed, therefore, that Mr. Reed, who, he observed, was little better than a dead man, might be given up to be sacrificed to the manes of the deceased warrior. This would appease the fury of his friends; the hatchet would then be buried, and all thenceforward would be friends. The answer was a stern refusal and a defiance, and the war-chief saw that the canoes were well prepared for a vigorous defense. He withdrew, therefore, and returning to his warriors among the rocks held long deliberations. Blood for blood is a principle in Indian equity and Indian honor; but though the inhabitants of Wish-ram were men of war, they were likewise men of traffic, and it was suggested that honor for once might give way to profit. A negotiation was accordingly opened with the white men, and after some diplomacy, the matter was compromised for a blanket to cover the dead, and some tobacco to be smoked by the living. This being granted, the heroes of Wish-ram crossed the river once more, returned to their villages to feast upon the horses whose blood they had so vaingloriously drunk, and the travellers pursued their voyage without further molestation.

The tin case, however, containing the important despatches for New York, was irretrievably lost; the very precaution taken by the worthy Hibernian to secure his missives, had, by rendering them conspicuous, produced their robbery. The object of his overland journey, therefore, being defeated, he gave up the expedition. The whole party repaired with Mr. Robert Stuart to the establishment of Mr. David Stuart, on the Oakinagan River. After remaining here two or three days, they all set out on their return to Astoria accompanied by Mr. David Stuart. This gentleman had a large quantity of beaver skins at his establishment, but did not think it prudent to take them with him.

---

fearing the levy of "black mail" at the falls.

On their way down, when below the forks of the Columbia, they were hailed one day from the shore in English. Looking around, they descried two wretched men, entirely naked. They pulled to shore; the men came up and made themselves known. They proved to be Mr. Crooks and his faithful follower, John Day.

The reader will recollect that Mr. Crooks, with Day and four Canadians, had been so reduced by famine and fatigue, that Mr. Hunt was obliged to leave them, in the month of December, on the banks of the Snake River. Their situation was the more critical, as they were in the neighborhood of a band of Shoshonies, whose horses had been forcibly seized by Mr. Hunt's party for provisions. Mr. Crooks remained here twenty days, detained by the extremely reduced state of John Day, who was utterly unable to travel, and whom he would not abandon, as Day had been in his employ on the Missouri, and had always proved himself most faithful. Fortunately the Shoshonies did not offer to molest them. They had never before seen white men, and seemed to entertain some superstitions with regard to them, for though they would encamp near them in the daytime, they would move off with their tents in the night; and finally disappeared, without taking leave.

When Day was sufficiently recovered to travel, they kept feebly on, sustaining themselves as well as they could, until in the month of February, when three of the Canadians, fearful of perishing with want, left Mr. Crooks on a small river, on the road by which Mr Hunt had passed in quest of Indians. Mr. Crooks followed Mr. Hunt's track in the snow for several days, sleeping as usual in the open air, and suffering all kinds of hardships. At length, coming to a low prairie, he lost every appearance of the "trail," and wandered during the remainder of the winter in the mountains, subsisting sometimes on horse meat, sometimes on beavers and their skins, and a part of the time on roots.

About the last of March, the other Canadian gave out and was left with a lodge of Shoshonies; but Mr. Crooks and John Day still kept on, and finding the snow sufficiently diminished, undertook, from Indian information, to cross the last mountain ridge. They happily succeeded, and afterwards fell in with the Wallah-Wallahs, a tribe of Indians inhabiting the banks of a river of the same name, and reputed as being frank, hospitable, and sincere. They proved worthy of the character, for they received the poor wanderers kindly, killed a horse for them to eat, and directed them on their way to the Columbia. They struck the river about the middle of April, and advanced down it one hundred miles, until they came within about twenty miles of the falls.

Here they met with some of the "chivalry" of that noted pass, who received them in a friendly way, and set food before them; but, while they were satisfying their hunger, perfidiously seized their rifles. They then stripped them naked, and drove them off, refusing the entreaties of Mr. Crooks for a flint and steel of which they had robbed him; and threatening his life if he did not instantly depart

In this forlorn plight, still worse off than before, they renewed their wanderings. They now sought

to find their way back to the hospitable Wallah-Wallahs, and had advanced eighty miles along the river, when fortunately, on the very morning that they were going to leave the Columbia and strike inland, the canoes of Mr. Stuart hove in sight.

It is needless to describe the joy of these poor men at once more finding themselves among countrymen and friends, or of the honest and hearty welcome with which they were received by their fellow adventurers. The whole party now continued down the river, passed all the dangerous places without interruption, and arrived safely at Astoria on the 11th of May.

Comprehensive Views.- To Supply the Russian Fur Establishment.- An Agent Sent to Russia.- Project of an Annual Ship.- The Beaver Fitted Out.- Her Equipment and Crew.- Instructions to the Captain.- The Sandwich Islands. Rumors of the Fate of the Tonquin.- Precautions on Reaching the Mouth of the Columbia.

HAVING traced the fortunes of the two expeditions by sea and land to the mouth of the Columbia, and presented a view of affairs at Astoria, we will return for a moment to the master spirit of the enterprise, who regulated the springs of Astoria, at his residence in New York.

It will be remembered, that a part of the plan of Mr. Astor was to furnish the Russian fur establishment on the northwest coast with regular supplies, so as to render it independent of those casual vessels which cut up the trade and supplied the natives with arms. This plan had been countenanced by our own government, and likewise by Count Pahlen, the Russian minister at Washington. As its views, however, were important and extensive, and might eventually affect a wide course of commerce, Mr Astor was desirous of establishing a complete arrangement on the subject with the Russian American Fur Company, under the sanction of the Russian government. For this purpose, in March 1811, he despatched a confidential agent to St. Petersburg, full empowered to enter into the requisite negotiations. A passage was given to this gentleman by the government of the United States in the John Adams, an armed vessel, bound for Europe.

The next step of Mr. Astor was, to despatch the annual ship contemplated on his general plan. He had as yet heard nothing of the success of the previous expeditions, and had to proceed upon the presumption that everything had been effected according to his instructions. He accordingly fitted out a fine ship of four hundred and ninety tons, called the Beaver, and freighted her with a valuable cargo destined for the factory at the mouth of the Columbia, the trade along the coast, and the supply of the Russian establishment. In this ship embarked a reinforcement, consisting of a partner, five clerks, fifteen American laborers, and six Canadian voyageurs. In choosing his agents for his first expedition, Mr. Astor had been obliged to have recourse to British subjects experienced in the Canadian fur trade; henceforth it was his intention, as much as possible, to select Americans, so as to secure an ascendancy of American influence in the management of the company, and to make it decidedly national.

Accordingly, Mr. John Clarke, the partner who took the lead in the present expedition, was a

native of the United States, though he had passed much of his life in the northwest, having been employed in the trade since the age of sixteen. Most of the clerks were young gentlemen of good connections in the American cities, some of whom embarked in the hope of gain, others through the mere spirit of adventure incident to youth.

The instructions given by Mr. Astor to Captain Sowle, the commander of the *Beaver*, were, in some respects, hypothetical, in consequence of the uncertainty resting upon the previous steps of the enterprise.

He was to touch at the Sandwich Islands, inquire about the fortunes of the *Tonquin*, and whether an establishment had been formed at the mouth of the *Columbia*. If so, he was to take as many Sandwich Islanders as his ship could accommodate, and proceed thither. On arriving at the river, he was to observe great caution, for even if an establishment should have been formed, it might have fallen into hostile hands. He was, therefore, to put in as if by casualty or distress, to give himself out as a coasting trader, and to say nothing about his ship being owned by Mr. Astor, until he had ascertained that everything was right. In that case, he was to land such part of his cargo as was intended for the establishment, and to proceed to New Archangel with the supplies intended for the Russian post at that place, where he could receive peltries in payment. With these he was to return to Astoria; take in the furs collected there, and, having completed his cargo by trading along the coast, was to proceed to Canton. The captain received the same injunctions that had been given to Captain Thorn of the *Tonquin*, of great caution and circumspection in his intercourse with the natives, and that he should not permit more than one or two to be on board at a time.

The *Beaver* sailed from New York on the 10th of October, 1811, and reached the Sandwich Islands without any occurrence of moment. Here a rumor was heard of the disastrous fate of the *Tonquin*. Deep solicitude was felt by every one on board for the fate of both expeditions, by sea and land. Doubts were entertained whether any establishment had been formed at the mouth of the *Columbia*, or whether any of the company would be found there. After much deliberation, the Captain took twelve Sandwich Islanders on board, for the service of the factory, should there be one in existence, and proceeded on his voyage.

On the 6th of May, he arrived off the mouth of the *Columbia* and running as near as possible, fired two signal guns. No answer was returned, nor was there any signal to be descried. Night coming on, the ship stood out to sea, and every heart drooped as the land faded away. On the following morning they again ran in within four miles of shore, and fired other signal guns, but still without reply. A boat was then despatched, to sound the channel, and attempt an entrance; but returned without success there being a tremendous swell, and breakers. Signal guns were fired again in the evening, but equally in vain, and once more the ship stood off to sea for the night. The captain now gave up all hope of finding any establishment at the place, and indulged in the most gloomy apprehensions. He feared his predecessor had been massacred before they had reached their place of destination; or if they should have erected a factory, that it had been surprised and destroyed by the natives.

In this moment of doubt and uncertainty, Mr. Clarke announced his determination, in case of the worst, to found an establishment with the present party, and all hands bravely engaged to stand by him in the undertaking. The next morning the ship stood in for the third time, and fired three signal guns, but with little hope of reply. To the great joy of the crew, three distinct guns were heard in answer. The apprehensions of all but Captain Sowle were now at rest. That cautious commander recollected the instructions given him by Mr. Astor, and determined to proceed with great circumspection. He was well aware of Indian treachery and cunning. It was not impossible, he observed, that these cannon might have been fired by the savages themselves. They might have surprised the fort, massacred its inmates; and these signal guns might only be decoys to lure him across the bar, that they might have a chance of cutting him off, and seizing his vessel.

At length a white flag was descried hoisted as a signal on Cape Disappointment. The passengers pointed to it in triumph, but the captain did not yet dismiss his doubts. A beacon fire blazed through the night on the same place, but the captain observed that all these signals might be treacherous.

On the following morning, May 9th, the vessel came to anchor off Cape Disappointment, outside of the bar. Towards noon an Indian canoe was seen making for the ship and all hands were ordered to be on the alert. A few moments afterwards, a barge was perceived following the canoe. The hopes and fears of those on board of the ship were in tumultuous agitation, as the boat drew nigh that was to let them know the fortunes of the enterprise, and the fate of their predecessors. The captain, who was haunted with the idea of possible treachery, did not suffer his curiosity to get the better of his caution, but ordered a party of his men under arms, to receive the visitors. The canoe came first alongside, in which were Comcomly and six Indians; in the barge were M'Dougal, M'Lellan, and eight Canadians. A little conversation with these gentlemen dispelled all the captain's fears, and the Beaver crossing the bar under their pilotage, anchored safely in Baker's Bay.

Washington Irving's Astoria

CHAPTER XLIII.

Active Operations at Astoria- Various Expeditions Fitted Out.- Robert Stuart and a Party Destined for New York - Singular Conduct of John Day.- His Fate.- Piratical Pass and Hazardous Portage.-Rattlesnakes. - Their Abhorrence of Tobacco.- Arrival Among the Wallah-Wallahs. - Purchase of Horses- Departure of Stuart and His Band for the Mountains.

THE arrival of the Beaver with a reinforcement and supplies, gave new life and vigor to affairs at Astoria. These were means for extending the operations of the establishment, and founding interior trading posts. Two parties were immediately set on foot to proceed severally under the command of Messrs. M'Kenzie and Clarke, and establish posts above the forks of the Columbia, at points where most rivalry and opposition were apprehended from the Northwest Company.

A third party, headed by Mr. David Stuart, was to repair with supplies to the post of that gen-

tleman on the Oakinagan. In addition to these expeditions, a fourth was necessary to convey despatches to Mr. Astor, at New York, in place of those unfortunately lost by John Reed. The safe conveyance of these despatches was highly important, as by them Mr. Astor would receive an account of the state of the factory, and regulate his reinforcements and supplies accordingly. The mission was one of peril and hardship and required a man of nerve and vigor. It was confided to Robert Stuart, who, though he had never been across the mountains, and a very young man, had given proofs of his competency to the task. Four trusty and well-trying men, who had come overland in Mr. Hunt's expedition, were given as his guides and hunters. These were Ben Jones and John Day, the Kentuckians, and Andri Vallar and Francis Le Clerc, Canadians. Mr. M'Lellan again expressed his determination to take this opportunity of returning to the Atlantic States. In this he was joined by Mr. Crooks, -who, notwithstanding all that he had suffered in the dismal journey of the preceding winter, was ready to retrace his steps and brave every danger and hardship, rather than remain at Astoria. This little handful of adventurous men we propose to accompany in its long and perilous peregrinations.

The several parties we have mentioned all set off in company on the 29th of June, under a salute of cannon from the fort. They were to keep together for mutual protection through the piratical passes of the river, and to separate, on their different destinations, at the forks of the Columbia. Their number, collectively, was nearly sixty, consisting of partners and clerks, Canadian voyageurs, Sandwich Islanders, and American hunters; and they embarked in two barges and ten canoes.

They had scarcely got under way, when John Day, the Kentucky hunter, became restless and uneasy, and extremely wayward in his deportment. This caused surprise, for in general he was remarkable for his cheerful, manly deportment. It was supposed that the recollection of past sufferings might harass his mind in undertaking to retrace the scenes where they had been experienced. As the expedition advanced, however, his agitation increased. He began to talk wildly and incoherently, and to show manifest symptoms of derangement.

Mr. Crooks now informed his companions that in his desolate wanderings through the Snake River country during the preceding winter, in which he had been accompanied by John Day, the poor fellow's wits had been partially unsettled by the sufferings and horrors through which they had passed, and he doubted whether they had ever been restored to perfect sanity. It was still hoped that this agitation of spirits might pass away as they proceeded; but, on the contrary, it grew more and more violent. His comrades endeavored to divert his mind and to draw him into rational conversation, but he only became the more exasperated, uttering wild and incoherent ravings. The sight of any of the natives put him in an absolute fury, and he would heap on them the most opprobrious epithets; recollecting, no doubt, what he had suffered from Indian robbers.

On the evening of the 2d of July he became absolutely frantic, and attempted to destroy himself. Being disarmed, he sank into quietude, and professed the greatest remorse for the crime he had meditated. He then pretended to sleep, and having thus lulled suspicion, suddenly sprang up, just before daylight, seized a pair of loaded pistols, and endeavored to blow out his brains. In his hurry

he fired too high, and the balls passed over his head. He was instantly secured and placed under a guard in one of the boats. How to dispose of him was now the question, as it was impossible to keep him with the expedition. Fortunately Mr. Stuart met with some Indians accustomed to trade with Astoria. These undertook to conduct John Day back to the factory, and deliver him there in safety. It was with the utmost concern that his comrades saw the poor fellow depart; for, independent of his invaluable services as a first-rate hunter, his frank and loyal qualities had made him a universal favorite. It may be as well to add that the Indians executed their task faithfully, and landed John Day among his friends at Astoria; but his constitution was completely broken by the hardships he had undergone, and he died within a year.

On the evening of the 6th of July the party arrived at the piratical pass of the river, and encamped at the foot of the first rapid. The next day, before the commencement of the portage, the greatest precautions were taken to guard against lurking treachery, or open attack. The weapons of every man were put in order, and his cartridge-box replenished. Each one wore a kind of surcoat made of the skin of the elk, reaching from his neck to his knees, and answering the purpose of a shirt of mail, for it was arrow proof, and could even resist a musket ball at the distance of ninety yards. Thus armed and equipped, they posted their forces in military style. Five of the officers took their stations at each end of the portage, which was between three and four miles in length; a number of men mounted guard at short distances along the heights immediately overlooking the river, while the residue, thus protected from surprise, employed themselves below in dragging up the barges and canoes, and carrying up the goods along the narrow margin of the rapids. With these precautions they all passed unmolested. The only accident that happened was the upsetting of one of the canoes, by which some of the goods sunk, and others floated down the stream. The alertness and rapacity of the hordes which infest these rapids, were immediately apparent. They pounced upon the floating merchandise with the keenness of regular wreckers. A bale of goods which landed upon one of the islands was immediately ripped open, one half of its contents divided among the captors, and the other half secreted in a lonely hut in a deep ravine. Mr. Robert Stuart, however, set out in a canoe with five men and an interpreter, ferreted out the wreckers in their retreat, and succeeded in wresting from them their booty.

Similar precautions to those already mentioned, and to a still greater extent, were observed in passing the Long Narrows, and the falls, where they would be exposed to the depredations of the chivalry of Wish-ram, and its freebooting neighborhood. In fact, they had scarcely set their first watch one night, when an alarm of "Indians!" was given. "To arms" was the cry, and every man was at his post in an instant. The alarm was explained; a war party of Shoshonies had surprised a canoe of the natives just below the encampment, had murdered four men and two women, and it was apprehended they would attack the camp. The boats and canoes were immediately hauled up, a breastwork was made of them and the packages, forming three sides of a square, with the river in the rear, and thus the party remained fortified throughout the night.

The dawn, however, dispelled the alarm; the portage was conducted in peace; the vagabond warriors of the vicinity hovered about them while at work, but were kept at a wary distance. They regarded the loads of merchandise with wistful eyes, but seeing the "long-beards" so formidable in

number, and so well prepared for action, they made no attempt either by open force or sly pilfering to collect their usual toll, but maintained a peaceful demeanor, and were afterwards rewarded for their good conduct with presents of tobacco.

Fifteen days were consumed in ascending from the foot of the first rapid to the head of the falls, a distance of about eighty miles, but full of all kinds of obstructions. Having happily accomplished these difficult portages, the party, on the 19th of July, arrived at a smoother part of the river, and pursued their way up the stream with greater speed and facility.

They were now in the neighborhood where Mr. Crooks and John Day had been so perfidiously robbed and stripped a few months previously, when confiding in the proffered hospitality of a ruffian band. On landing at night, therefore, a vigilant guard was maintained about the camp. On the following morning a number of Indians made their appearance, and came prowling round the party while at breakfast. To his great delight, Mr. Crooks recognized among them two of the miscreants by whom he had been robbed. They were instantly seized, bound hand and foot, and thrown into one of the canoes. Here they lay in doleful fright, expecting summary execution. Mr. Crooks, however, was not of a revengeful disposition, and agreed to release the culprits as soon as the pillaged property should be restored. Several savages immediately started off in different directions, and before night the rifles of Crooks and Day were produced; several of the smaller articles pilfered from them, however, could not be recovered.

The bands of the culprits were then removed, and they lost no time in taking their departure, still under the influence of abject terror, and scarcely crediting their senses that they had escaped the merited punishment of their offenses.

The country on each side of the river now began to assume a different character. The hills, and cliffs, and forests disappeared; vast sandy plains, scantily clothed here and there with short tufts of grass, parched by the summer sun, stretched far away to the north and south. The river was occasionally obstructed with rocks and rapids, but often there were smooth, placid intervals, where the current was gentle, and the boatmen were enabled to lighten their labors with the assistance of the sail.

The natives in this part of the river resided entirely on the northern side. They were hunters, as well as fishermen, and had horses in plenty. Some of these were purchased by the party, as provisions, and killed on the spot, though they occasionally found a difficulty in procuring fuel wherewith to cook them. One of the greatest dangers that beset the travellers in this part of their expedition, was the vast number of rattlesnakes which infested the rocks about the rapids and portages, and on which the men were in danger of treading. They were often found, too, in quantities about the encampments. In one place, a nest of them lay coiled together, basking in the sun. Several guns loaded with shot were discharged at them, and thirty-seven killed and wounded. To prevent any unwelcome visits from them in the night, tobacco was occasionally strewed around the tents, a weed for which they have a very proper abhorrence.

On the 28th of July the travellers arrived at the mouth of the Wallah-Wallah, a bright, clear stream, about six feet deep, and fifty-five yards wide, which flows rapidly over a bed of sand and gravel, and throws itself into the Columbia, a few miles below Lewis River. Here the combined parties that had thus far voyaged together were to separate, each for its particular destination.

On the banks of the Wallah-Wallah lived the hospitable tribe of the same name who had succored Mr. Crooks and John Day in the time of their extremity. No sooner did they hear of the arrival of the party, than they hastened to greet them. They built a great bonfire on the bank of the river, before the camp, and men and women danced round it to the cadence of their songs, in which they sang the praises of the white men, and welcomed them to their country.

On the following day a traffic was commenced, to procure horses for such of the party as intended to proceed by land. The Wallah-Wallahs are an equestrian tribe. The equipments of their horses were rude and inconvenient. High saddles, roughly made of deer skin, stuffed with hair, which chafe the horse's back and leave it raw; wooden stirrups, with a thong of raw hide wrapped round them; and for bridles they have cords of twisted horse-hair, which they tie round the under jaw. They are, like most Indians, bold but hard riders, and when on horseback gallop about the most dangerous places, without fear for themselves, or pity for their steeds.

From these people Mr. Stuart purchased twenty horses for his party; some for the saddle, and others to transport the baggage. He was fortunate in procuring a noble animal for his own use, which was praised by the Indians for its great speed and bottom, and a high price set upon it. No people understand better the value of a horse than these equestrian tribes; and nowhere is speed a greater requisite, as they frequently engage in the chase of the antelope, one of the fleetest of animals. Even after the Indian who sold this boasted horse to Mr. Stuart had concluded his bargain, he lingered about the animal, seeming loth to part from him, and to be sorry for what he had done.

A day or two were employed by Mr. Stuart in arranging packages and pack-saddles, and making other preparations for his long and arduous journey. His party, by the loss of John Day, was now reduced to six, a small number for such an expedition. They were young men, however, full of courage, health, and good spirits, and stimulated rather than appalled by danger.

On the morning of the 31st of July, all preparations being concluded, Mr. Stuart and his little band mounted their steeds and took a farewell of their fellow-travellers, who gave them three hearty cheers as they set out on their dangerous journey. The course they took was to the southeast, towards the fated region of the Snake River. At an immense distance rose a chain of craggy mountains, which they would have to traverse; they were the same among which the travellers had experienced such sufferings from cold during the preceding winter, and from their azure tints, when seen at a distance, had received the name of the Blue Mountains.

IN retracing the route which had proved so disastrous to Mr. Hunt's party during the preceding winter, Mr. Stuart had trusted, in the present more favorable season, to find easy travelling and abundant supplies. On these great wastes and wilds, however, each season has its peculiar hardships. The travellers had not proceeded far, before they found themselves among naked and arid hills, with a soil composed of sand and clay, baked and brittle, that to all appearance had never been visited by the dews of heaven.

Not a spring, or pool, or running stream was to be seen; the sunburnt country was seamed and cut up by dry ravines, the beds of winter torrents, serving only to balk the hopes of man and beast with the sight of dusty channels, where water had once poured along in floods.

For a long summer day they continued onward without halting, a burning sky above their heads, a parched desert beneath their feet, with just wind enough to raise the light sand from the knolls, and envelop them in stifling clouds. The sufferings from thirst became intense; a fine young dog, their only companion of the kind, gave out, and expired. Evening drew on without any prospect of relief, and they were almost reduced to despair, when they descried something that looked like a fringe of forest along the horizon. All were inspired with new hope, for they knew that on these arid wastes, in the neighborhood of trees, there is always water.

They now quickened their pace; the horses seemed to understand their motives, and to partake of their anticipations; for, though before almost ready to give out, they now required neither whip nor spur. With all their exertions, it was late in the night before they drew near to the trees. As they approached, they heard, with transport, the rippling of a shallow stream. No sooner did the refreshing sound reach the ears of the horse, than the poor animals snuffed the air, rushed forward with ungovernable eagerness, and plunging their muzzles into the water, drank until they seemed in danger of bursting. Their riders had but little more discretion, and required repeated draughts to quench their excessive thirst. Their weary march that day had been forty-five miles, over a tract that might rival the deserts of Africa for aridity. Indeed, the sufferings of the traveller on these American deserts is frequently more severe than in the wastes of Africa or Asia, from being less habituated and prepared to cope with them.

On the banks of this blessed stream the travellers encamped for the night; and so great had been their fatigue, and so sound and sweet was their sleep, that it was a late hour the next morning before they awoke. They now recognized the little river to be the Umatilla, the same on the banks of which Mr. Hunt and his followers had arrived after their painful struggle through the Blue Mountains, and experienced such a kind relief in the friendly camp of the Sciatogas.

That range of Blue Mountains now extended in the distance before them; they were the same among which poor Michael Carriere had perished. They form the southeast boundary of the great plains along the Columbia, dividing the waters of its main stream from those of Lewis River. They are, in fact, a part of a long chain, which stretches over a great extent of country, and includes in its links the Snake River Mountains.

The day was somewhat advanced before the travellers left the shady banks of the Umatilla. Their route gradually took them among the Blue Mountains, which assumed the most rugged aspect on a near approach. They were shagged with dense and gloomy forests, and cut up by deep and precipitous ravines, extremely toilsome to the horses. Sometimes the travellers had to follow the course of some brawling stream, with a broken, rocky bed, which the shouldering cliffs and promontories on either side obliged them frequently to cross and recross. For some miles they struggled forward through these savage and darkly wooded defiles, when all at once the whole landscape changed, as if by magic. The rude mountains and rugged ravines softened into beautiful hills, and intervening meadows, with rivulets winding through fresh herbage, and sparkling and murmuring over gravelly beds, the whole forming a verdant and pastoral scene, which derived additional charms from being locked up in the bosom of such a hard-hearted region.

Emerging from the chain of Blue Mountains, they descended upon a vast plain, almost a dead level, sixty miles in circumference, Of excellent soil, with fine streams meandering through it in every direction, their courses marked out in the wide landscape by serpentine lines of cotton-wood trees, and willows, which fringed their banks, and afforded sustenance to great numbers of beavers and otters.

In traversing this plain, they passed, close to the skirts of the hills, a great pool of water, three hundred yards in circumference, fed by a sulphur spring, about ten feet in diameter, boiling up in one corner. The vapor from this pool was extremely noisome, and tainted the air for a considerable distance. The place was much frequented by elk, which were found in considerable numbers in the adjacent mountains, and their horns, shed in the spring-time, were strewed in every direction around the pond.

On the 10th of August, they reached the main body of Woodvile Creek, the same stream which Mr. Hunt had ascended in the preceding year, shortly after his separation from Mr. Crooks.

On the banks of this stream they saw a herd of nineteen antelopes; a sight so unusual in that part of the country, that at first they doubted the evidence of their senses. They tried by every means to get within shot of them, but they were too shy and fleet, and after alternately bounding to a distance, and then stopping to gaze with capricious curiosity at the hunter, they at length scampered out of sight.

On the 12th of August, the travellers arrived on the banks of Snake River, the scene of so many trials and mishaps to all of the present party excepting Mr. Stuart. They struck the river just above the place where it entered the mountains, through which Messrs. Stuart and Crooks had vainly

endeavored to find a passage. The river was here a rapid stream, four hundred yards in width, with high sandy banks, and here and there a scanty growth of willow. Up the southern side of the river they now bent their course, intending to visit the caches made by Mr. Hunt at the Caldron Linn.

On the second evening, a solitary Snake Indian visited their camp, at a late hour, and informed them that there was a white man residing at one of the cantonments of his tribe, about a day's journey higher up the river. It was immediately concluded that he must be one of the poor fellows of Mr. Hunt's party, who had given out, exhausted by hunger and fatigue, in the wretched journey of the preceding winter. All present who had borne a part in the sufferings of that journey, were eager now to press forward, and bring relief to a lost comrade. Early the next morning, therefore, they pushed forward with unusual alacrity. For two days, however, did they travel without being able to find any trace of such a straggler.

On the evening of the second day, they arrived at a place where a large river came in from the east, which was renowned among all the wandering hordes of the Snake nation for its salmon fishery, that fish being taken in incredible quantities in this neighborhood. Here, therefore, during the fishing season, the Snake Indians resort from far and near, to lay in their stock of salmon, which, with esculent roots, forms the principal food of the inhabitants of these barren regions.

On the bank of a small stream emptying into Snake River at this place, Mr. Stuart found an encampment of Shoshonies. He made the usual inquiry of them concerning the white man of whom he had received intelligence. No such person was dwelling among them, but they said there were white men residing with some of their nation on the opposite side of the river. This was still more animating information. Mr. Crooks now hoped that these might be the men of his party, who, disheartened by perils and hardships, had preferred to remain among the Indians. Others thought they might be Mr. Miller and the hunters who had left the main body at Henry's Fort, to trap among the mountain streams. Mr. Stuart halted, therefore, in the neighborhood of the Shoshonie lodges, and sent an Indian across the river to seek out the white men in question, and bring them to his camp.

The travellers passed a restless, miserable night. The place swarmed with myriads of mosquitoes, which, with their stings and their music, set all sleep at defiance. The morning dawn found them in a feverish, irritable mood, and their spleen was completely aroused by the return of the Indian without any intelligence of the white men. They now considered themselves the dupes of Indian falsehoods, and resolved to put no more confidence in Snakes. They soon, however, forgot this resolution. In the course of the morning, an Indian came galloping after them; Mr. Stuart waited to receive him; no sooner had he come up, than, dismounting and throwing his arms around the neck of Mr. Stuart's horse, he began to kiss and caress the animal, who, on his part, seemed by no means surprised or displeased with his salutation. Mr. Stuart, who valued his horse highly, was somewhat annoyed by these transports; the cause of them was soon explained. The Snake said the horse had belonged to him, and been the best in his possession, and that it had been stolen by the Wallah-Wallahs. Mr. Stuart was by no means pleased with this recognition of his steed, nor

disposed to admit any claim on the part of its ancient owner. In fact, it was a noble animal, admirably shaped, of free and generous spirit, graceful in movement, and fleet as an antelope. It was his intention, if possible, to take the horse to New York, and present him to Mr. Astor.

In the meantime, some of the party came up, and immediately recognized in the Snake an old friend and ally. He was, in fact, one of the two guides who had conducted Mr. Hunt's party, in the preceding autumn, across Mad River Mountain to Fort Henry, and who subsequently departed with Mr. Miller and his fellow trappers, to conduct them to a good trapping ground. The reader may recollect that these two trusty Snakes were engaged by Mr. Hunt to return and take charge of the horses which the party intended to leave at Fort Henry, when they should embark in canoes.

The party now crowded round the Snake, and began to question him with eagerness. His replies were somewhat vague, and but partially understood. He told a long story about the horses, from which it appeared that they had been stolen by various wandering bands, and scattered in different directions. The cache, too, had been plundered, and the saddles and other equipments carried off. His information concerning Mr. Miller and his comrades was not more satisfactory. They had trapped for some time about the upper streams, but had fallen into the hands of a marauding party of Crows, who had robbed them of horses, weapons, and everything.

Further questioning brought forth further intelligence, but all of a disastrous kind. About ten days previously, he had met with three other white men, in very miserable plight, having one horse each, and but one rifle among them. They also had been plundered and maltreated by the Crows, those universal freebooters. The Snake endeavored to pronounce the names of these three men, and as far as his imperfect sounds could be understood, they were supposed to be three of the party of four hunters, namely, Carson, St. Michael, Detaye, and Delaunay, who were detached from Mr. Hunt's party on the 28th of September, to trap beaver on the head waters of the Columbia.

In the course of conversation, the Indian informed them that the route by which Mr. Hunt had crossed the Rocky Mountains was very bad and circuitous, and that he knew one much shorter and easier. Mr. Stuart urged him to accompany them as guide, promising to reward him with a pistol with powder and ball, a knife, an awl, some blue beads, a blanket, and a looking-glass. Such a catalogue of riches was too tempting to be resisted; besides the poor Snake languished after the prairies; he was tired, he said, of salmon, and longed for buffalo meat, and to have a grand buffalo hunt beyond the mountains. He departed, therefore, with all speed, to get his arms and equipments for the journey, promising to rejoin the party the next day. He kept his word, and, as he no longer said anything to Mr. Stuart on the subject of the pet horse, they journeyed very harmoniously together; though now and then, the Snake would regard his quondam steed with a wistful eye.

They had not travelled many miles, when they came to a great bend in the river. Here the Snake informed them that, by cutting across the hills they would save many miles of distance. The route across, however, would be a good day's journey. He advised them, therefore, to encamp here for

the night, and set off early in the morning. They took his advice, though they had come but nine miles that day.

On the following morning they rose, bright and early, to ascend the hills. On mustering their little party, the guide was missing. They supposed him to be somewhere in the neighborhood, and proceeded to collect the horses. The vaunted steed of Mr. Stuart was not to be found. A suspicion flashed upon his mind. Search for the horse of the Snake! He likewise was gone -- the tracks of two horses, one after the other, were found, making off from the camp. They appeared as if one horse had been mounted, and the other led. They were traced for a few miles above the camp, until they both crossed the river. It was plain the Snake had taken an Indian mode of recovering his horse, having quietly decamped with him in the night.

New vows were made never more to trust in Snakes, or any other Indians. It was determined, also, to maintain, hereafter, the strictest vigilance over their horses, dividing the night into three watches, and one person mounting guard at a time. They resolved, also, to keep along the river, instead of taking the short cut recommended by the fugitive Snake, whom they now set down for a thorough deceiver. The heat of the weather was oppressive, and their horses were, at times, rendered almost frantic by the stings of the prairie flies. The nights were suffocating, and it was almost impossible to sleep, from the swarms of mosquitoes.

On the 20th of August they resumed their march, keeping along the prairie parallel to Snake River. The day was sultry, and some of the party, being parched with thirst, left the line of march, and scrambled down the bank of the river to drink. The bank was overhung with willows, beneath which, to their surprise, they beheld a man fishing. No sooner did he see them, than he uttered an exclamation of joy. It proved to be John Hoback, one of their lost comrades. They had scarcely exchanged greetings, when three other men came out from among the willows. They were Joseph Miller, Jacob Rezner, and Robinson, the scalped Kentuckian, the veteran of the Bloody Ground.

The reader will perhaps recollect the abrupt and willful manner in which Mr. Miller threw up his interest as a partner of the company, and departed from Fort Henry, in company with these three trappers, and a fourth, named Cass. He may likewise recognize in Robinson, Rezner, and Hoback, the trio of Kentucky hunters who had originally been in the service of Mr. Henry, and whom Mr. Hunt found floating down the Missouri, on their way homeward; and prevailed upon, once more, to cross the mountains. The haggard looks and naked condition of these men proved how much they had suffered. After leaving Mr. Hunt's party, they had made their way about two hundred miles to the southward, where they trapped beaver on a river which, according to their account, discharged itself into the ocean to the south of the Columbia, but which we apprehend to be Bear River, a stream emptying itself into Lake Bonneville, an immense body of salt water, west of the Rocky Mountains.

Having collected a considerable quantity of beaver skins, they made them into packs, loaded their horses, and steered two hundred miles due east. Here they came upon an encampment of sixty lodges of Arapahays, an outlawed band of the Arrapahoes, and notorious robbers. These fell

upon the poor trappers; robbed them of their peltries, most of their clothing, and several of their horses. They were glad to escape with their lives, and without being entirely stripped, and after proceeding about fifty miles further, made their halt for the winter.

Early in the spring they resumed their wayfaring, but were unluckily overtaken by the same rufian horde, who levied still further contributions, and carried off the remainder of their horses, excepting two. With these they continued on, suffering the greatest hardships. They still retained rifles and ammunition, but were in a desert country, where neither bird nor beast was to be found. Their only chance was to keep along the rivers, and subsist by fishing; but at times no fish were to be taken, and then their sufferings were horrible. One of their horses was stolen among the mountains by the Snake Indians; the other, they said, was carried off by Cass, who, according to their account, "villainously left them in their extremities." Certain dark doubts and surmises were afterwards circulated concerning the fate of that poor fellow, which, if true, showed to what a desperate state of famine his comrades had been reduced.

Being now completely unhorsed, Mr. Miller and his three companions wandered on foot for several hundred miles, enduring hunger, thirst, and fatigue, while traversing the barren wastes which abound beyond the Rocky Mountains. At the time they were discovered by Mr. Stuart's party, they were almost famished, and were fishing for a precarious meal. Had Mr. Stuart made the short cut across the hills, avoiding this bend of the river, or had not some of his party accidentally gone down to the margin of the stream to drink, these poor wanderers might have remained undiscovered, and have perished in the wilderness. Nothing could exceed their joy on thus meeting with their old comrades, or the heartiness with which they were welcomed. All hands immediately encamped; and the slender stores of the party were ransacked to furnish out a suitable regale.

The next morning they all set out together; Mr. Miller and his comrades being resolved to give up the life of a trapper, and accompany Mr. Stuart back to St. Louis.

For several days they kept along the course of Snake River, occasionally making short cuts across hills and promontories, where there were bends in the stream. In their way they passed several camps of Shoshonies, from some of whom they procured salmon, but in general they were too wretchedly poor to furnish anything. It was the wish of Mr. Stuart to purchase horses for the recent recruits of his party; but the Indians could not be prevailed upon to part with any, alleging that they had not enough for their own use.

On the 25th of August they reached a great fishing place, to which they gave the name of the Salmon Falls. Here there is a perpendicular fall of twenty feet on the north side of the river, while on the south side there is a succession of rapids. The salmon are taken here in incredible quantities, as they attempt to shoot the falls. It was now a favorable season, and there were about one hundred lodges of Shoshonies busily engaged killing and drying fish. The salmon begin to leap shortly after sunrise. At this time the Indians swim to the centre of the falls, where some station themselves on rocks, and others stand to their waists in the water, all armed with spears, with which they assail the salmon as they attempt to leap, or fall back exhausted. It is an incessant

slaughter, so great is the throng of the fish.

The construction of the spears thus used is peculiar. The head is a straight piece of elk horn, about seven inches long, on the point of which an artificial barb is made fast, with twine well gummed. The head is stuck on the end of the shaft, a very long pole of willow, to which it is likewise connected by a strong cord, a few inches in length. When the spearsman makes a sure blow, he often strikes the head of the spear through the body of the fish. It comes off easily, and leaves the salmon struggling with the string through its body, while the pole is still held by the spearsman. Were it not for the precaution of the string, the willow shaft would be snapped by the struggles and the weight of the fish. Mr. Miller, in the course of his wanderings, had been at these falls, and had seen several thousand salmon taken in the course of one afternoon. He declared that he had seen a salmon leap a distance of about thirty feet, from the commencement of the foam at the foot of the falls, completely to the top.

Having purchased a good supply of salmon from the fishermen, the party resumed their journey, and on the twenty-ninth, arrived at the Caldron Linn, the eventful scene of the preceding autumn. Here, the first thing that met their eyes was a memento of the perplexities of that period; the wreck of a canoe lodged between two ledges of rocks. They endeavored to get down to it, but the river banks were too high and precipitous.

They now proceeded to that part of the neighborhood where Mr. Hunt and his party had made the caches, intending to take from them such articles as belonged to Mr. Crooks, M'Lellan, and the Canadians. On reaching the spot, they found, to their astonishment, six of the caches open and rifled of their contents, excepting a few books which lay scattered about the vicinity. They had the appearance of having been plundered in the course of the summer. There were tracks of wolves in every direction, to and from the holes, from which Mr. Stuart concluded that these animals had first been attracted to the place by the smell of the skins contained in the caches, which they had probably torn up, and that their tracks had betrayed the secret to the Indians.

The three remaining caches had not been molested; they contained a few dry goods, some ammunition, and a number of beaver traps. From these Mr. Stuart took whatever was requisite for his party; he then deposited within them all his superfluous baggage, and all the books and papers scattered around; the holes were then carefully closed up, and all traces of them effaced. And here we have to record another instance of the indomitable spirit of the western trappers. No sooner did the trio of Kentucky hunters, Robinson, Rezner, and Hoback, find that they could once more be fitted out for a campaign of beaver-trapping, than they forgot all that they had suffered, and determined upon another trial of their fortunes; preferring to take their chance in the wilderness, rather than return home ragged and penniless. As to Mr. Miller, he declared his curiosity and his desire of travelling through the Indian countries fully satisfied; he adhered to his determination, therefore, to keep on with the party to St. Louis, and to return to the bosom of civilized society.

The three hunters, therefore, Robinson, Rezner, and Hoback, were furnished, as far as the caches and the means of Mr. Stuart's party afforded, with the requisite munitions and equipments for a

“two years' hunt;” but as their fitting out was yet incomplete, they resolved to wait in this neighborhood until Mr. Reed should arrive; whose arrival might soon be expected, as he was to set out for the caches about twenty days after Mr. Stuart parted with him at the Wallah-Wallah River.

Mr. Stuart gave in charge to Robinson a letter to Mr. Reed, reporting his safe journey thus far, and the state in which he had found the caches. A duplicate of this letter he elevated on a pole, and set it up near the place of deposit.

All things being thus arranged, Mr. Stuart and his little band, now seven in number, took leave of the three hardy trappers, wishing them all possible success in their lonely and perilous sojourn in the wilderness; and we, in like manner, shall leave them to their fortunes, promising to take them up again at some future page, and to close the story of their persevering and ill-fated enterprise.

CHAPTER XLV.

The Snake River Deserts.- Scanty Fare.- Bewildered Travellers -.Prowling Indians- A Giant Crow Chief.- A Bully Rebuked- Indian Signals.- Smoke on the Mountains.- Mad River.- An Alarm.- An Indian Foray- A Scamper.- A Rude Indian joke.- A Sharp-Shooter Balked of His Shot.

ON the 1st of September, Mr. Stuart and his companions resumed their journey, bending their course eastward, along the course of Snake River. As they advanced the country opened. The hills which had hemmed in the river receded on either hand, and great sandy and dusty plains extended before them. Occasionally there were intervals of pasturage, and the banks of the river were fringed with willows and cottonwood, so that its course might be traced from the hilltops, winding under an umbrageous covert, through a wide sunburnt landscape. The soil, however, was generally poor; there was in some places a miserable growth of wormwood, and a plant called saltweed, resembling pennyroyal; but the summer had parched the plains, and left but little pasturage. The game, too, had disappeared. The hunter looked in vain over the lifeless landscape; now and then a few antelope might be seen, but not within reach of the rifle. We forbear to follow the travellers in a week's wandering over these barren wastes, where they suffered much from hunger, having to depend upon a few fish from the streams, and now and then a little dried salmon, or a dog, procured from some forlorn lodge of Shoshonies.

Tired of these cheerless wastes, they left the banks of Snake River on the 7th of September, under guidance of Mr. Miller, who having acquired some knowledge of the country during his trapping campaign, undertook to conduct them across the mountains by a better route than that by Fort Henry, and one more out of the range of the Blackfeet. He proved, however, but an indifferent guide, and they soon became bewildered among rugged hills and unknown streams, and burnt and barren prairies.

At length they came to a river on which Mr. Miller had trapped, and to which they gave his name; though, as before observed, we presume it to be the same called Bear River, which empties itself into Lake Bonneville. Up this river and its branches they kept for two or three days, supporting

themselves precariously upon fish. They soon found that they were in a dangerous neighborhood. On the 12th of September, having encamped early, they sallied forth with their rods to angle for their supper. On returning, they beheld a number of Indians prowling about their camp, whom, to their infinite disquiet, they soon perceived to be Upsarokas, or Crows. Their chief came forward with a confident air. He was a dark herculean fellow, full six feet four inches in height, with a mingled air of the ruffian and the rogue. He conducted himself peaceably, however, and despatched some of his people to their camp, which was somewhere in the neighborhood, from whence they returned with a most acceptable supply of buffalo meat. He now signified to Mr. Stuart that he was going to trade with the Snakes who reside on the west base of the mountains, below Henry's Fort. Here they cultivate a delicate kind of tobacco, much esteemed and sought after by the mountain tribes. There was something sinister, however, in the look of this Indian, that inspired distrust. By degrees, the number of his people increased, until, by midnight, there were twenty-one of them about the camp, who began to be impudent and troublesome. The greatest uneasiness was now felt for the safety of the horses and effects, and every one kept vigilant watch throughout the night.

The morning dawned, however, without any unpleasant occurrence, and Mr. Stuart, having purchased all the buffalo meat that the Crows had to spare, prepared to depart. His Indian acquaintances, however, were disposed for further dealings; and above all, anxious for a supply of gunpowder, for which they offered horses in exchange. Mr. Stuart declined to furnish them with the dangerous commodity. They became more importunate in their solicitations, until they met with a flat refusal.

The gigantic chief now stepped forward, assumed a swelling air, and, slapping himself upon the breast, gave Mr. Crooks to understand that he was a chief of great power and importance. He signified, further, that it was customary for great chiefs when they met, to make each other presents. He requested, therefore, that Mr. Stuart would alight, and give him the horse upon which he was mounted. This was a noble animal, of one of the wild races of the prairies; on which Mr. Stuart set great value; he, of course, shook his head at the request of the Crow dignitary. Upon this the latter strode up to him, and taking hold of him, moved him backwards and forwards in his saddle, as if to make him feel that he was a mere child within his grasp. Mr. Stuart preserved his calmness, and still shook his head. The chief then seized the bridle, and gave it a jerk that startled the horse, and nearly brought the rider to the ground. Mr. Stuart instantly drew forth a pistol, and presented it at the head of the bully-ruffian. In a twinkling his swaggering was at an end, and he dodged behind his horse to escape the expected shot. As his subject Crows gazed on the affray from a little distance, Mr. Stuart ordered his men to level their rifles at them, but not to fire. The whole crew scampered among the bushes, and throwing themselves upon the ground, vanished from sight.

The chieftain thus left alone was confounded for an instant; but, recovering himself with true Indian shrewdness, burst into a loud laugh, and affected to turn off the whole matter as a piece of pleasantry. Mr. Stuart by no means relished such equivocal joking, but it was not his policy to get into a quarrel; so he joined with the best grace he could assume in the merriment of the jocular giant; and, to console the latter for the refusal of the horse, made him a present of twenty charges

of powder. They parted, according to all outward professions, the best friends in the world; it was evident, however, that nothing but the smallness of his own force, and the martial array and alertness of the white men, had prevented the Crow chief from proceeding to open outrage. As it was, his worthy followers, in the course of their brief interview, had contrived to purloin a bag containing almost all the culinary utensils of the party.

The travellers kept on their way due east, over a chain of hills. The recent rencontre showed them that they were now in a land of danger, subject to the wide roamings of a predacious tribe; nor, in fact, had they gone many miles before they beheld sights calculated to inspire anxiety and alarm. From the summits of some of the loftiest mountains, in different directions, columns of smoke began to rise. These they concluded to be signals made by the runners of the Crow chieftain, to summon the stragglers of his band, so as to pursue them with greater force. Signals of this kind, made by outrunners from one central point, will rouse a wide circuit of the mountains in a wonderfully short space of time; and bring the straggling hunters and warriors to the standard of their chieftain.

To keep as much as possible out of the way of these freebooters, Mr. Stuart altered his course to the north, and, quitting the main stream of Miller's River, kept up a large branch that came in from the mountains. Here they encamped, after a fatiguing march of twenty-five miles. As the night drew on, the horses were hobbled or fettered, and tethered close to the camp; a vigilant watch was maintained until morning, and every one slept with his rifle on his arm.

At sunrise, they were again on the march, still keeping to the north. They soon began to ascend the mountains, and occasionally had wide prospects over the surrounding country. Not a sign of a Crow was to be seen; but this did not assure them of their security, well knowing the perseverance of these savages in dogging any party they intend to rob, and the stealthy way in which they can conceal their movements, keeping along ravines and defiles. After a mountain scramble of twenty-one miles, they encamped on the margin of a stream running to the north.

In the evening there was an alarm of Indians, and everyone was instantly on the alert. They proved to be three miserable Snakes, who were no sooner informed that a band of Crows was prowling in the neighborhood than they made off with great signs of consternation.

A couple more of weary days and watchful nights brought them to a strong and rapid stream, running due north, which they concluded to be one of the upper branches of Snake River. It was probably the same since called Salt River.

They determined to bend their course down this river, as it would take them still further out of the dangerous neighborhood of the Crows. They then would strike upon Mr. Hunt's track of the preceding autumn, and retrace it across the mountains. The attempt to find a better route under guidance of Mr. Miller had cost them a large bend to the south; in resuming Mr. Hunt's track, they would at least be sure of their road. They accordingly turned down along the course of this stream, and at the end of three days' journey came to where it was joined by a larger river, and

assumed a more impetuous character, raging and roaring among rocks and precipices. It proved, in fact, to be Mad River, already noted in the expedition of Mr. Hunt. On the banks of this river, they encamped on the 18th of September, at an early hour.

Six days had now elapsed since their interview with the Crows; during that time they had come nearly a hundred and fifty miles to the north and west, without seeing any signs of those marauders. They considered themselves, therefore, beyond the reach of molestation, and began to relax in their vigilance, lingering occasionally for part of a day, where there was good pasturage. The poor horses needed repose.

They had been urged on, by forced marches, over rugged heights, among rocks and fallen timber, or over low swampy valleys, inundated by the labors of the beaver. These industrious animals abounded in all the mountain streams and watercourses, wherever there were willows for their subsistence. Many of them they had so completely dammed up as to inundate the low grounds, making shallow pools or lakes, and extensive quagmires; by which the route of the travellers was often impeded.

On the 19th of September, they rose at early dawn; some began to prepare breakfast, and others to arrange the packs preparatory to a march. The horses had been hobbled, but left at large to graze upon the adjacent pasture. Mr. Stuart was on the bank of a river, at a short distance from the camp, when he heard the alarm cry - "Indians! Indians! -to arms! to arms!"

A mounted Crow galloped past the camp, bearing a red flag. He reined his steed on the summit of a neighboring knoll, and waved his flaring banner. A diabolical yell now broke forth on the opposite side of the camp, beyond where the horses were grazing, and a small troop of savages came galloping up, whooping and making a terrific clamor. The horses took fright, and dashed across the camp in the direction of the standard-bearer, attracted by his waving flag. He instantly put spurs to his steed, and scoured off followed by the panic-stricken herd, their fright being increased by the yells of the savages in their rear.

At the first alarm, Mr. Stuart and his comrades had seized their rifles, and attempted to cut off the Indians who were pursuing the horses. Their attention was instantly distracted by whoops and yells in an opposite direction.

They now apprehended that a reserve party was about to carry off their baggage. They ran to secure it. The reserve party, however, galloped by, whooping and yelling in triumph and derision. The last of them proved to be their commander, the identical giant joker already mentioned. He was not cast in the stern poetical mold of fashionable Indian heroism, but on the contrary, was grievously given to vulgar jocularities. As he passed Mr. Stuart and his companions, he checked his horse, raised himself in his saddle, and clapping his hand on the most insulting part of his body, uttered some jeering words, which, fortunately for their delicacy, they could not understand. The rifle of Ben Jones was leveled in an instant, and he was on the point of whizzing a bullet into the target so tauntingly displayed. "Not for your life! not for your life!" exclaimed Mr. Stuart, "you will

bring destruction on us all!"

It was hard to restrain honest Ben, when the mark was so fair and the insult so foul. "O, Mr. Stuart," exclaimed he, "only let me have one crack at the infernal rascal, and you may keep all the pay that is due to me."

"By heaven, if you fire," cried Mr. Stuart, "I'll blow your brains out."

By this time the Indian was far out of reach, and had rejoined his men, and the whole dare-devil band, with the captured horses, scuttled off along the defiles, their red flag flaunting overhead, and the rocks echoing to their whoops and yells, and demoniac laughter.

The unhorsed travellers gazed after them in silent mortification and despair; yet Mr. Stuart could not but admire the style and spirit with which the whole exploit had been managed, and pronounced it one of the most daring and intrepid actions he had ever heard of among Indians. The whole number of the Crows did not exceed twenty. In this way a small gang of lurkers will hurry off the cavalry of a large war party, for when once a drove of horses are seized with panic, they become frantic, and nothing short of broken necks can stop them.

No one was more annoyed by this unfortunate occurrence than Ben Jones. He declared he would actually have given his whole arrears of pay, amounting to upwards of a year's wages, rather than be balked of such a capital shot. Mr. Stuart, however, represented what might have been the consequence of so rash an act. Life for life is the Indian maxim. The whole tribe would have made common cause in avenging the death of a warrior. The party were but seven dismounted men, with a wide mountain region to traverse, infested by these people, and which might all be roused by signal fires. In fact, the conduct of the band of marauders in question, showed the perseverance of savages when once they have fixed their minds upon a project. These fellows had evidently been silent and secretly dogging the party for a week past, and a distance of a hundred and fifty miles, keeping out of sight by day, lurking about the encampment at night, watching all their movements, and waiting for a favorable moment when they should be off their guard. The menace of Mr. Stuart, in their first interview, to shoot the giant chief with his pistol, and the fright caused among the warriors by presenting the rifles, had probably added the stimulus of pique to their usual horse-stealing propensities. And in this mood of mind they would doubtless have followed the party throughout their whole course over the Rocky Mountains, rather than be disappointed in their scheme.

CHAPTER XLVI.

Travellers Unhorsed- Pedestrian Preparations- Prying Spies.- Bonfires of Baggage- A March on Foot.- Rafting a River - The Wounded Elk.- Indian Trails.- Willful Conduct of Mr. M'Lellan.- Grand Prospect From a Mountain.- Distant Craters of Volcanoes- Illness of Mr. Crooks.

FEW reverses in this changeful world are more complete and disheartening than that of a travel-

---

ler, suddenly unhorsed, in the midst of the wilderness. Our unfortunate travellers contemplated their situation, for a time, in perfect dismay. A long journey over rugged mountains and immeasurable plains lay before them, which they must painfully perform on foot, and everything necessary for subsistence or defense must be carried on their shoulders. Their dismay, however, was but transient, and they immediately set to work, with that prompt expediency produced by the exigencies of the wilderness, to fit themselves for the change in their condition.

Their first attention was to select from their baggage such articles as were indispensable to their journey; to make them up into convenient packs, and to deposit the residue in caches. The whole day was consumed in these occupations; at night, they made a scanty meal of their remaining provisions, and lay down to sleep with heavy hearts. In the morning, they were up and about at an early hour, and began to prepare their knapsacks for a march, while Ben Jones repaired to an old beaver trap which he had set in the river bank at some little distance from the camp. He was rejoiced to find a middle-sized beaver there, sufficient for a morning's meal to his hungry comrades. On his way back with his prize, he observed two heads peering over the edge of an impending cliff, several hundred feet high, which he supposed to be a couple of wolves. As he continued on, he now and then cast his eye up; heads were still there, looking down with fixed and watchful gaze. A suspicion now flashed across his mind that they might be Indian scouts; and, had they not been far above the reach of his rifle, he would undoubtedly have regaled them with a shot.

On arriving at the camp, he directed the attention of his comrades to these aerial observers. The same idea was at first entertained, that they were wolves; but their immovable watchfulness soon satisfied every one that they were Indians. It was concluded that they were watching the movements of the party, to discover their place of concealment of such articles as they would be compelled to leave behind. There was no likelihood that the caches would escape the search of such keen eyes and experienced rummagers, and the idea was intolerable that any more booty should fall into their hands. To disappoint them, therefore, the travellers stripped the caches of the articles deposited there, and collecting together everything that they could not carry away with them, made a bonfire of all that would burn, and threw the rest into the river. There was a forlorn satisfaction in thus balking the Crows, by the destruction of their own property; and, having thus gratified their pique, they shouldered their packs, about ten o'clock in the morning, and set out on their pedestrian wayfaring.

The route they took was down along the banks of Mad River. This stream makes its way through the defiles of the mountains, into the plain below Fort Henry, where it terminates in Snake River. Mr. Stuart was in hopes of meeting with Snake encampments in the plain, where he might procure a couple of horses to transport the baggage. In such case, he intended to resume his eastern course across the mountains, and endeavor to reach the Cheyenne River before winter. Should he fail, however, of obtaining horses, he would probably be compelled to winter on the Pacific side of the mountains, somewhere on the head waters of the Spanish or Colorado River.

With all the care that had been observed in taking nothing with them that was not absolutely necessary, the poor pedestrians were heavily laden, and their burdens added to the fatigues of their

rugged road. They suffered much, too, from hunger. The trout they caught were too poor to yield much nourishment; their main dependence, therefore, was upon an old beaver trap, which they had providentially retained. Whenever they were fortunate enough to entrap a beaver, it was cut up immediately and distributed, that each man might carry his share.

After two days of toilsome travel, during which they made but eighteen miles, they stopped on the 21st, to build two rafts on which to cross to the north side of the river. On these they embarked on the following morning, four on one raft, and three on the other, and pushed boldly from shore. Finding the rafts sufficiently firm and steady to withstand the rough and rapid water, they changed their minds, and instead of crossing, ventured to float down with the current. The river was, in general, very rapid, and from one to two hundred yards in width, winding in every direction through mountains of hard black rock, covered with pines and cedars. The mountains to the east of the river were spurs of the Rocky range, and of great magnitude; those on the west were little better than hills, bleak and barren, or scantily clothed with stunted grass.

Mad River, though deserving its name from the impetuosity of its current, was free from rapids and cascades, and flowed on in a single channel between gravel banks, often fringed with cotton-wood and dwarf willows in abundance. These gave sustenance to immense quantities of beaver, so that the voyagers found no difficulty in procuring food. Ben Jones, also, killed a fallow deer and a wolverine, and as they were enabled to carry the carcasses on their rafts, their larder was well supplied. Indeed, they might have occasionally shot beavers that were swimming in the river as they floated by, but they humanely spared their lives, being in no want of meat at the time. In this way, they kept down the river for three days, drifting with the current and encamping on land at night, when they drew up their rafts on shore. Towards the evening of the third day, they came to a little island on which they descried a gang of elk. Ben Jones landed, and was fortunate enough to wound one, which immediately took to the water, but, being unable to stem the current, drifted above a mile, when it was overtaken and drawn to shore. As a storm was gathering, they now encamped on the margin of the river, where they remained all the next day, sheltering themselves as well as they could from the rain and snow - a sharp foretaste of the impending winter. During their encampment, they employed themselves in jerking a part of the elk for future supply. In cutting up the carcass, they found that the animal had been wounded by hunters, about a week previously, an arrow head and a musket ball remaining in the wounds. In the wilderness, every trivial circumstance is a matter of anxious speculation. The Snake Indians have no guns; the elk, therefore, could not have been wounded by one of them. They were on the borders of the country infested by the Blackfeet, who carry fire-arms. It was concluded, therefore, that the elk had been hunted by some of that wandering and hostile tribe, who, of course, must be in the neighborhood. The idea put an end to the transient solace they had enjoyed in the comparative repose and abundance of the river.

For three days longer they continued to navigate with their rafts. The recent storm had rendered the weather extremely cold. They had now floated down the river about ninety-one miles, when finding the mountains on the right diminished to moderate sized hills, they landed, and prepared to resume their journey on foot. Accordingly, having spent a day in preparations, making moc-

casins, and parceling out their jerked meat in packs of twenty pounds to each man, they turned their backs upon the river on the 29th of September and struck off to the northeast, keeping along the southern skirt of the mountain on which Henry's Fort was situated.

Their march was slow and toilsome; part of the time through an alluvial bottom, thickly grown with cotton-wood, hawthorn, and willows, and part of the time over rough hills. Three antelopes came within shot, but they dared not fire at them, lest the report of their rifles should betray them to the Blackfeet. In the course of the day, they came upon a large horse-track, apparently about three weeks old, and in the evening encamped on the banks of a small stream, on a spot which had been the camping place of this same band.

On the following morning they still observed the Indian track, but after a time they came to where it separated in every direction, and was lost. This showed that the band had dispersed in various hunting parties, and was, in all probability, still in the neighborhood; it was necessary, therefore, to proceed with the utmost caution. They kept a vigilant eye as they marched, upon every height where a scout might be posted, and scanned the solitary landscapes and the distant ravines, to observe any column of smoke; but nothing of the kind was to be seen; all was indescribably stern and lifeless.

Towards evening they came to where there were several hot springs, strongly impregnated with iron and sulphur, and sending up a volume of vapor that tainted the surrounding atmosphere, and might be seen at the distance of a couple of miles.

Near to these they encamped in a deep gully, which afforded some concealment. To their great concern, Mr. Crooks, who had been indisposed for the two preceding days, had a violent fever in the night.

Shortly after daybreak they resumed their march. On emerging from the glen, a consultation was held as to their course. Should they continue round the skirt of the mountain, they would be in danger of falling in with the scattered parties of Blackfeet, who were probably hunting in the plain. It was thought most advisable, therefore, to strike directly across the mountain, since the route, though rugged and difficult, would be most secure. This counsel was indignantly derided by M'Lellan as pusillanimous. Hot-headed and impatient at all times, he had been rendered irascible by the fatigues of the journey, and the condition of his feet, which were chafed and sore. He could not endure the idea of encountering the difficulties of the mountain, and swore he would rather face all the Blackfeet in the country. He was overruled, however, and the party began to ascend the mountain, striving, with the ardor and emulation of young men, who should be first up. M'Lellan, who was double the age of some of his companions, soon began to lose breath, and fall in the rear. In the distribution of burdens, it was his turn to carry the old beaver trap. Piqued and irritated, he suddenly came to a halt, swore he would carry it no further, and jerked it half-way down the hill. He was offered in place of it a package of dried meat, but this he scornfully threw upon the ground. They might carry it, he said, who needed it; for his part, he could provide his daily bread with his rifle. He concluded by flinging off from the party, and keeping along the

skirts of the mountain, leaving those, he said, to climb rocks, who were afraid to face Indians. It was in vain that Mr. Stuart represented to him the rashness of his conduct, and the dangers to which he exposed himself: he rejected such counsel as craven. It was equally useless to represent the dangers to which he subjected his companions; as he could be discovered at a great distance on those naked plains, and the Indians, seeing him, would know that there must be other white men within reach. M'Lellan turned a deaf ear to every remonstrance, and kept on his wilful way.

It seemed a strange instance of perverseness in this man thus to fling himself off alone, in a savage region, where solitude itself was dismal, and every encounter with his fellow-man full of peril. Such, however, is the hardness of spirit, and the insensibility to danger that grow upon men in the wilderness. M'Lellan, moreover, was a man of peculiar temperament, ungovernable in his will, of a courage that absolutely knew no fear, and somewhat of a braggart spirit, that took a pride in doing desperate and hair-brained things.

Mr. Stuart and his party found the passages of the mountain somewhat difficult, on account of the snow, which in many places was of considerable depth, though it was but the 1<sup>st</sup> of October. They crossed the summit early in the afternoon, and beheld below them, a plain about twenty miles wide, bounded on the opposite side by their old acquaintances, the Pilot Knobs, those towering mountains which had served Mr. Hunt as landmarks in part of his route of the preceding year. Through the intermediate plain wandered a river about fifty yards wide, sometimes gleaming in open day, but oftener running through willowed banks, which marked its serpentine course.

Those of the party who had been across these mountains, pointed out much of the bearings of the country to Mr. Stuart. They showed him in what direction must lie the deserted post called Henry's Fort, where they had abandoned their horses and embarked in canoes, and they informed him that the stream which wandered through the plain below them, fell into Henry River, half way between the fort and the mouth of Mad or Snake River. The character of all this mountain region was decidedly volcanic; and to the northwest, between Henry's Fort and the source of the Missouri, Mr. Stuart observed several very high peaks covered with snow, from two of which smoke ascended in considerable volumes, apparently from craters in a state of eruption.

On their way down the mountain, when they had reached the skirts, they descried M'Lellan at a distance, in the advance, traversing the plain. Whether he saw them or not, he showed no disposition to rejoin them, but pursued his sullen and solitary way.

After descending into the plain, they kept on about six miles, until they reached the little river, which was here about knee deep, and richly fringed with willow. Here they encamped for the night. At this encampment the fever of Mr. Crooks increased to such a degree that it was impossible for him to travel. Some of the men were strenuous for Mr. Stuart to proceed without him, urging the imminent danger they were exposed to by delay in that unknown and barren region, infested by the most treacherous and inveterate foes. They represented that the season was rapidly advancing; the weather for some days had been extremely cold; the mountains were already almost impassable from snow, and would soon present effectual barriers. Their provisions were

exhausted; there was no game to be seen, and they did not dare to use their rifles, through fear of drawing upon them the Blackfeet.

The picture thus presented was too true to be contradicted, and made a deep impression on the mind of Mr. Stuart; but the idea of abandoning a fellow being, and a comrade, in such a forlorn situation, was too repugnant to his feelings to be admitted for an instant. He represented to the men that the malady of Mr. Crooks could not be of long duration, and that, in all probability, he would be able to travel in the course of a few days. It was with great difficulty, however, that he prevailed upon them to abide the event.

CHAPTER XLVII.

Ben Jones and a Grizzly Bear.- Rocky Heights- Mountain Torrents. -Traces of M'Lellan.- Volcanic Remains- Mineral Earths.- Peculiar Clay for Pottery.- Dismal Plight of M'Lellan.- Starvation.- Shocking Proposition of a Desperate Man.- A Broken-Down Bull.- A Ravenous Meal.- Indian Graves- Hospitable Snakes.-A Forlorn Alliance.

AS the travellers were now in a dangerous neighborhood, where the report of a rifle might bring the savages upon them, they had to depend upon their old beaver-trap for subsistence. The little river on which they were encamped gave many "beaver signs," and Ben Jones set off at daybreak, along the willowed banks, to find a proper trapping-place. As he was making his way among the thickets, with his trap on his shoulder and his rifle in his hand, he heard a crushing sound, and turning, beheld a huge grizzly bear advancing upon him, with terrific growl. The sturdy Kentuckian was not to be intimidated by man or monster. Leveling his rifle, he pulled the trigger. The bear was wounded, but not mortally: instead, however, of rushing upon his assailant, as is generally the case with this kind of bear, he retreated into the bushes. Jones followed him for some distance, but with suitable caution, and Bruin effected his escape.

As there was every prospect of a detention of some days in this place, and as the supplies of the beaver-trap were too precarious to be depended upon, it became absolutely necessary to run some risk of discovery by hunting in the neighborhood. Ben Jones, therefore, obtained permission to range with his rifle some distance from the camp, and set off to beat up the river banks, in defiance of bear or Blackfeet.

He returned in great spirits in the course of a few hours, having come upon a gang of elk about six miles off, and killed five. This was joyful news, and the party immediately moved forward to the place where he had left the carcasses. They were obliged to support Mr. Crooks the whole distance, for he was unable to walk. Here they remained for two or three days, feasting heartily on elk meat, and drying as much as they would be able to carry away with them.

By the 5th of October, some simple prescriptions, together with an "Indian sweat," had so far benefited Mr. Crooks, that he was enabled to move about; they therefore set forward slowly, dividing his pack and accoutrements among them, and made a creeping day's progress of eight

miles south. Their route for the most part lay through swamps caused by the industrious labors of the beaver; for this little animal had dammed up numerous small streams, issuing from the Pilot Knob Mountains, so that the low grounds on their borders were completely inundated. In the course of their march they killed a grizzly bear, with fat on its flanks upwards of three inches in thickness. This was an acceptable addition to their stock of elk meat. The next day Mr. Crooks was sufficiently recruited in strength to be able to carry his rifle and pistols, and they made a march of seventeen miles along the borders of the plain.

Their journey daily became more toilsome, and their sufferings more severe, as they advanced. Keeping up the channel of a river, they traversed the rugged summit of the Pilot Knob Mountain, covered with snow nine inches deep. For several days they continued, bending their course as much as possible to the east, over a succession of rocky heights, deep valleys, and rapid streams. Sometimes their dizzy path lay along the margin of perpendicular precipices, several hundred feet in height, where a single false step might precipitate them into the rocky bed of a torrent which roared below. Not the least part of their weary task was the fording of the numerous windings and branchings of the mountain rivers, all boisterous in their currents, and icy cold.

Hunger was added to their other sufferings, and soon became the keenest. The small supply of bear and elk meat which they had been able to carry, in addition to their previous burdens, served but for a short time. In their anxiety to struggle forward, they had but little time to hunt, and scarce any game in their path. For three days they had nothing to eat but a small duck, and a few poor trout. They occasionally saw numbers of the antelopes, and tried every art to get within shot; but the timid animals were more than commonly wild, and after tantalizing the hungry hunters for a time, bounded away beyond all chance of pursuit. At length they were fortunate enough to kill one: it was extremely meagre, and yielded but a scanty supply; but on this they subsisted for several days.

On the 11th, they encamped on a small stream, near the foot of the Spanish River Mountain. Here they met with traces of that wayward and solitary being, M'Lellan, who was still keeping on ahead of them through these lonely mountains. He had encamped the night before on this stream; they found the embers of the fire by which he had slept, and the remains of a miserable wolf on which he had supped. It was evident he had suffered, like themselves, the pangs of hunger, though he had fared better at this encampment; for they had not a mouthful to eat.

The next day, they rose hungry and alert, and set out with the dawn to climb the mountain, which was steep and difficult. Traces of volcanic eruptions were to be seen in various directions. There was a species of clay also to be met with, out of which the Indians manufactured pots and jars, and dishes. It is very fine and light, of an agreeable smell, and of a brown color spotted with yellow, and dissolves readily in the mouth. Vessels manufactured of it are said to impart a pleasant smell and flavor to any liquids. These mountains abound also with mineral earths, or chalks of various colors; especially two kinds of ochre, one a pale, the other a bright red, like vermilion; much used by the Indians, in painting their bodies.

About noon, the travellers reached the "drains" and brooks that formed the head waters of the river, and later in the day, descended to where the main body, a shallow stream, about a hundred and sixty yards wide, poured through its mountain valley.

Here the poor famishing wanderers had expected to find buffalo in abundance, and had fed their hungry hopes during their scrambling toll, with the thoughts of roasted ribs, juicy humps, and broiled marrow bones. To their great disappointment, the river banks were deserted - a few old tracks showed where a herd of bulls had some time before passed along, but not a horn nor hump was to be seen in the sterile landscape. A few antelopes looked down upon them from the brow of a crag, but flitted away out of sight at the least approach of the hunter.

In the most starving mood they kept for several miles further along the bank of the river, seeking for "beaver signs." Finding some, they encamped in the vicinity, and Ben Jones immediately proceeded to set the trap. They had scarce come to a halt, when they perceived a large smoke at some distance to the southwest. The sight was hailed with joy, for they trusted it might rise from some Indian camp, where they could procure something to eat, and the dread of starvation had now overcome even the terror of the Blackfeet. Le Clerc, one of the Canadians, was instantly despatched by Mr. Stuart, to reconnoitre; and the travellers sat up till a late hour, watching and listening for his return, hoping he might bring them food. Midnight arrived, but Le Clerc did not make his appearance, and they laid down once more supperless to sleep, comforting themselves with the hopes that their old beaver trap might furnish them with a breakfast.

At daybreak they hastened with famished eagerness to the trap. They found in it the forepaw of a beaver, the sight of which tantalized their hunger, and added to their dejection. They resumed their journey with flagging spirits, but had not gone far when they perceived Le Clerc approaching at a distance. They hastened to meet him, in hopes of tidings of good cheer. He had none to give them; but news of that strange wanderer, M'Lellan. The smoke had risen from his encampment which took fire while he was at a little distance from it fishing. Le Clerc found him in forlorn condition. His fishing had been unsuccessful. During twelve days that he had been wandering alone through these savage mountains, he had found scarce anything to eat. He had been ill, wayworn, sick at heart, still he had kept forward; but now his strength and his stubbornness were exhausted. He expressed his satisfaction at hearing that Mr. Stuart and his party were near, and said he would wait at his camp for their arrival, in hopes they would give him something to eat, for without food he declared he should not be able to proceed much further.

When the party reached the place, they found the poor fellow lying on a parcel of withered grass, wasted to a perfect skeleton, and so feeble that he could scarce raise his head or speak. The presence of his old comrades seemed to revive him, but they had no food to give him, for they themselves were almost starving. They urged him to rise and accompany them, but he shook his head. It was all in vain, he said; there was no prospect of their getting speedy relief, and without it he should perish by the way; he might as well, therefore, stay and die where he was. At length, after much persuasion, they got him upon his legs; his rifle and other effects were shared among them, and he was cheered and aided forward. In this way they proceeded for seventeen miles, over a

level plain of sand, until seeing a few antelopes in the distance, they encamped on the margin of a small stream. All now that were capable of the exertion, turned out to hunt for a meal. Their efforts were fruitless, and after dark they returned to their camp, famished almost to desperation.

As they were preparing for the third time to lay down to sleep without a mouthful to eat, Le Clerc, one of the Canadians, gaunt and wild with hunger, approached Mr. Stuart with his gun in his hand. "It was all in vain," he said, "to attempt to proceed any further without food. They had a barren plain before them, three or four days' journey in extent, on which nothing was to be procured. They must all perish before they could get to the end of it. It was better, therefore, that one should die to save the rest." He proposed, therefore, that they should cast lots; adding, as an inducement for Mr. Stuart to assent to the proposition, that he, as leader of the party, should be exempted.

Mr. Stuart shuddered at the horrible proposition, and endeavored to reason with the man, but his words were unavailing. At length, snatching up his rifle, he threatened to shoot him on the spot if he persisted. The famished wretch dropped on his knees, begged pardon in the most abject terms, and promised never again to offend him with such a suggestion.

Quiet being restored to the forlorn encampment, each one sought repose. Mr. Stuart, however, was so exhausted by the agitation of the past scene, acting upon his emaciated frame, that he could scarce crawl to his miserable couch; where, notwithstanding his fatigues, he passed a sleepless night, revolving upon their dreary situation, and the desperate prospect before them.

Before daylight the next morning, they were up and on their way; they had nothing to detain them; no breakfast to prepare, and to linger was to perish. They proceeded, however, but slowly, for all were faint and weak. Here and there they passed the skulls and bones of buffaloes, which showed that these animals must have been hunted here during the past season; the sight of these bones served only to mock their misery. After travelling about nine miles along the plain, they ascended a range of hills, and had scarcely gone two miles further, when, to their great joy, they discovered "an old run-down buffalo bull;" the laggard probably of some herd that had been hunted and harassed through the mountains. They now all stretched themselves out to encompass and make sure of this solitary animal, for their lives depended upon their success. After considerable trouble and infinite anxiety, they at length succeeded in killing him. He was instantly flayed and cut up, and so ravenous was their hunger, that they devoured some of the flesh raw. The residue they carried to a brook near by, where they encamped, lit a fire, and began to cook.

Mr. Stuart was fearful that in their famished state they would eat to excess and injure themselves. He caused a soup to be made of some of the meat, and that each should take a quantity of it as a prelude to his supper. This may have had a beneficial effect, for though they sat up the greater part of the night, cooking and cramming, no one suffered any inconvenience.

The next morning the feasting was resumed, and about midday, feeling somewhat recruited and refreshed, they set out on their journey with renovated spirits, shaping their course towards a

---

mountain, the summit of which they saw towering in the east, and near to which they expected to find the head waters of the Missouri.

As they proceeded, they continued to see the skeletons of buffaloes scattered about the plain in every direction, which showed that there had been much hunting here by the Indians in the recent season. Further on they crossed a large Indian trail forming a deep path, about fifteen days old, which went in a north direction. They concluded it to have been made by some numerous band of Crows, who had hunted in this country for the greater part of the summer.

On the following day they forded a stream of considerable magnitude, with banks clothed with pine trees. Among these they found the traces of a large Indian camp, which had evidently been the headquarters of a hunting expedition, from the great quantities of buffalo bones strewed about the neighborhood. The camp had apparently been abandoned about a month.

In the centre was a singular lodge one hundred and fifty feet in circumference, supported by the trunks of twenty trees, about twelve inches in diameter and forty-four feet long. Across these were laid branches of pine and willow trees, so as to yield a tolerable shade. At the west end, immediately opposite to the door, three bodies lay interred with their feet towards the east. At the head of each was a branch of red cedar firmly planted in the ground. At the foot was a large buffalo's skull, painted black. Savage ornaments were suspended in various parts of the edifice, and a great number of children's moccasins. From the magnitude of this building, and the time and labor that must have been expended in erecting it, the bodies which it contained were probably those of noted warriors and hunters.

The next day, October 17th, they passed two large tributary streams of the Spanish River. They took their rise in the Wind River Mountains, which ranged along to the east, stupendously high and rugged, composed of vast masses of black rock, almost destitute of wood, and covered in many places with snow. This day they saw a few buffalo bulls, and some antelopes, but could not kill any; and their stock of provisions began to grow scanty as well as poor.

On the 18th, after crossing a mountain ridge, and traversing a plain, they waded one of the branches of Spanish River, and on ascending its bank, met with about a hundred and thirty Snake Indians. They were friendly in their demeanor, and conducted them to their encampment, which was about three miles distant. It consisted of about forty wigwams, constructed principally of pine branches. The Snakes, like most of their nation, were very poor; the marauding Crows, in their late excursion through the country, had picked this unlucky band to the very bone, carrying off their horses, several of their squaws, and most of their effects. In spite of their poverty, they were hospitable in the extreme, and made the hungry strangers welcome to their cabins. A few trinkets procured from them a supply of buffalo meat, and of leather for moccasins, of which the party were greatly in need. The most valuable prize obtained from them, however, was a horse; it was a sorry old animal in truth, but it was the only one that remained to the poor fellows, after the fell swoop of the Crows; yet this they were prevailed upon to part with to their guests for a pistol, an axe, a knife, and a few other trifling articles.

They had doleful stories to tell of the Crows, who were encamped on a river at no great distance to the east, and were in such force that they dared not venture to seek any satisfaction for their outrages, or to get back a horse or squaw. They endeavored to excite the indignation of their visitors by accounts of robberies and murders committed on lonely white hunters and trappers by Crows and Blackfeet. Some of these were exaggerations of the outrages already mentioned, sustained by some of the scattered members of Mr. Hunt's expedition; others were in all probability sheer fabrications, to which the Snakes seem to have been a little prone. Mr. Stuart assured them that the day was not far distant when the whites would make their power to be felt throughout that country, and take signal vengeance on the perpetrators of these misdeeds. The Snakes expressed great joy at the intelligence, and offered their services to aid the righteous cause, brightening at the thoughts of taking the field with such potent allies, and doubtless anticipating their turn at stealing horses and abducting squaws. Their offers, of course, were accepted; the calumet of peace was produced, and the two forlorn powers smoked eternal friendship between themselves, and vengeance upon their common spoilers, the Crows.

Washington Irving's Astoria

CHAPTER XLVIII.

Spanish River Scenery.-Trail of Crow Indians.- A Snow-Storm.- A Rousing Fire and a Buffalo Feast.-A Plain of Salt.-Climbing a Mountain. -Volcanic Summit.- Extinguished Crater.- Marine Shells.- Encampment on a Prairie. - Successful Hunting.- Good Cheer.- Romantic Scenery - Rocky Defile.- Foaming Rapids.- The Fiery Narrows.

BY sunrise on the following morning (October 19th) , the travellers had loaded their old horse with buffalo meat, sufficient for five days' provisions, and, taking leave of their new allies, the poor, but hospitable Snakes, set forth in somewhat better spirits, though the increasing cold of the weather, and the sight of the snowy mountains which they had yet to traverse, were enough to chill their very hearts. The country along this branch of the Spanish River, as far as they could see, was perfectly level, bounded by ranges of lofty mountains, both to the east and west. They proceeded about three miles to the south, where they came again upon the large trail of Crow Indians, which they had crossed four days previously, made, no doubt, by the same marauding band that had plundered the Snakes; and which, according to the account of the latter, was now encamped on a stream to the eastward. The trail kept on to the southeast, and was so well beaten by horse and foot, that they supposed at least a hundred lodges had passed along it. As it formed, therefore, a convenient highway, and ran in a proper direction, they turned into it, and determined to keep along it as far as safety would permit: as the Crow encampment must be some distance off, and it was not likely those savages would return upon their steps. They travelled forward, therefore, all that day, in the track of their dangerous predecessors, which led them across mountain streams, and long ridges, and through narrow valleys, all tending generally towards the southeast. The wind blew coldly from the northeast, with occasional flurries of snow, which made them encamp early, on the sheltered banks of a brook. The two Canadians, Vallee and Le Clerc, killed a young buffalo bull in the evening, which was in good condition, and afforded them a plentiful supply of fresh beef. They loaded their spits, therefore, and crammed their camp kettle

with meat, and while the wind whistled, and the snow whirled around them, huddled round a rousing fire, basked in its warmth, and comforted both soul and body with a hearty and invigorating meal. No enjoyments have greater zest than these, snatched in the very midst of difficulty and danger; and it is probable the poor wayworn and weather-beaten travellers relished these creature comforts the more highly from the surrounding desolation, and the dangerous proximity of the Crows.

The snow which had fallen in the night made it late in the morning before the party loaded their solitary packhorse, and resumed their march. They had not gone far before the Crow trace which they were following changed its direction, and bore to the north of east. They had already begun to feel themselves on dangerous ground in keeping along it, as they might be descried by some scouts and spies of that race of Ishmaelites, whose predatory life required them to be constantly on the alert. On seeing the trace turn so much to the north, therefore, they abandoned it, and kept on their course to the southeast for eighteen miles, through a beautifully undulating country, having the main chain of mountains on the left, and a considerably elevated ridge on the right. Here the mountain ridge which divides Wind River from the head waters of the Columbia and Spanish Rivers, ends abruptly, and winding to the north of east, becomes the dividing barrier between a branch of the Big Horn and Cheyenne Rivers, and those head waters which flow into the Missouri below the Sioux country.

The ridge which lay on the right of the travellers having now become very low, they passed over it, and came into a level plain, about ten miles in circumference, and incrustated to the depth of a foot or eighteen inches with salt as white as snow. This is furnished by numerous salt springs of limpid water, which are continually welling up, overflowing their borders, and forming beautiful crystallizations. The Indian tribes of the interior are excessively fond of this salt, and repair to the valley to collect it, but it is held in distaste by the tribes of the sea-coast, who will eat nothing that has been cured or seasoned by it.

This evening they encamped on the banks of a small stream, in the open prairie. The northeast wind was keen and cutting; they had nothing wherewith to make a fire, but a scanty growth of sage, or wormwood, and were fain to wrap themselves up in their blankets, and huddle themselves in their "nests," at an early hour. In the course of the evening, Mr. M'Lellan, who had now regained his strength, killed a buffalo, but it was some distance from the camp, and they postponed supplying themselves from the carcass until the following morning.

The next day (October 21st), the cold continued, accompanied by snow. They set forward on their bleak and toilsome way, keeping to the east northeast, towards the lofty summit of a mountain, which it was necessary for them to cross. Before they reached its base they passed another large trail, steering a little to the right of the point of the mountain. This they presumed to have been made by another band of Crows, who had probably been hunting lower down on the Spanish River.

The severity of the weather compelled them to encamp at the end of fifteen miles, on the skirts

---

of the mountain, where they found sufficient dry aspen trees to supply them with fire, but they sought in vain about the neighborhood for a spring or rill of water.

At daybreak they were up and on the march, scrambling up the mountain side for the distance of eight painful miles. From the casual hints given in the travelling memoranda of Mr. Stuart, this mountain would seem to offer a rich field of speculation for the geologist. Here was a plain three miles in diameter, strewn with pumice stones and other volcanic reliques, with a lake in the centre, occupying what had probably been the crater. Here were also, in some places, deposits of marine shells, indicating that this mountain crest had at some remote period been below the waves.

After pausing to repose, and to enjoy these grand but savage and awful scenes, they began to descend the eastern side of the mountain. The descent was rugged and romantic, along deep ravines and defiles, overhung with crags and cliffs, among which they beheld numbers of the ahsahta or bighorn, skipping fearlessly from rock to rock. Two of them they succeeded in bringing down with their rifles, as they peered fearlessly from the brow of their airy precipices.

Arrived at the foot of the mountain, the travellers found a rill of water oozing out of the earth, and resembling in look and taste, the water of the Missouri. Here they encamped for the night, and supped sumptuously upon their mountain mutton, which they found in good condition, and extremely well tasted.

The morning was bright, and intensely cold. Early in the day they came upon a stream running to the east, between low hills of bluish earth, strongly impregnated with copperas. Mr. Stuart supposed this to be one of the head waters of the Missouri, and determined to follow its banks. After a march of twenty-six miles, however, he arrived at the summit of a hill, the prospect of which induced him to alter his intention. He beheld, in every direction south of east, a vast plain, bounded only by the horizon, through which wandered the stream in question, in a south-south-east direction. It could not, therefore, be a branch of the Missouri. He now gave up all idea of taking the stream for his guide, and shaped his course towards a range of mountains in the east, about sixty miles distant, near which he hoped to find another stream.

The weather was now so severe, and the hardships of travelling so great, that he resolved to halt for the winter, at the first eligible place. That night they had to encamp on the open prairie, near a scanty pool of water, and without any wood to make a fire. The northeast wind blew keenly across the naked waste, and they were fain to decamp from their inhospitable bivouac before the dawn.

For two days they kept on in an eastward direction, against wintry blasts and occasional snow storms. They suffered, also, from scarcity of water, having occasionally to use melted snow; this, with the want of pasturage, reduced their old pack-horse sadly. They saw many tracks of buffalo, and some few bulls, which, however, got the wind of them, and scampered off.

On the 26th of October, they steered east-northeast, for a wooded ravine in a mountain, at a small distance from the base of which, to their great joy, they discovered an abundant stream, running

---

between willowed banks. Here they halted for the night, and Ben Jones having luckily trapped a beaver, and killed two buffalo bulls, they remained all the next day encamped, feasting and reposing, and allowing their jaded horse to rest from his labors.

The little stream on which they were encamped, was one of the head waters of the Platte River, which flows into the Missouri; it was, in fact, the northern fork, or branch of that river, though this the travellers did not discover until long afterwards. Pursuing the course of this stream for about twenty miles, they came to where it forced a passage through a range of high hills, covered with cedars, into an extensive low country, affording excellent pasture to numerous herds of buffalo. Here they killed three cows, which were the first they had been able to get, having hitherto had to content themselves with bull beef, which at this season of the year is very poor. The hump meat afforded them a repast fit for an epicure.

Late on the afternoon of the 30th, they came to where the stream, now increased to a considerable size, poured along in a ravine between precipices of red stone, two hundred feet in height. For some distance it dashed along, over huge masses of rock, with foaming violence, as if exasperated by being compressed into so narrow a channel, and at length leaped down a chasm that looked dark and frightful in the gathering twilight.

For a part of the next day, the wild river, in its capricious wanderings, led them through a variety of striking scenes. At one time they were upon high plains, like platforms among the mountains, with herds of buffaloes roaming about them; at another among rude rocky defiles, broken into cliffs and precipices, where the blacktailed deer bounded off among the crags, and the bighorn basked in the sunny brow of the precipice.

In the after part of the day, they came to another scene, surpassing in savage grandeur those already described. They had been travelling for some distance through a pass of the mountains, keeping parallel with the river, as it roared along, out of sight, through a deep ravine. Sometimes their devious path approached the margin of cliffs below which the river foamed, and boiled, and whirled among the masses of rock that had fallen into its channel. As they crept cautiously on, leading their solitary pack-horse along these giddy heights, they all at once came to where the river thundered down a succession of precipices, throwing up clouds of spray, and making a prodigious din and uproar. The travellers remained, for a time, gazing with mingled awe and delight, at this furious cataract, to which Mr. Stuart gave, from the color of the impending rocks, the name of "The Fiery Narrows."

---

THE travellers encamped for the night on the banks of the river below the cataract. The night was cold, with partial showers of rain and sleet. The morning dawned gloomily, the skies were sullen and overcast, and threatened further storms; but the little band resumed their journey, in defiance of the weather. The increasing rigor of the season, however, which makes itself felt early in these mountainous regions, and on these naked and elevated plains, brought them to a pause, and a serious deliberation, after they had descended about thirty miles further along the course of the river.

All were convinced that it was in vain to attempt to accomplish their journey, on foot, at this inclement season. They had still many hundred miles to traverse before they should reach the main course of the Missouri, and their route would lay over immense prairies, naked and bleak, and destitute of fuel. The question then was, where to choose their wintering place, and whether or not to proceed further down the river. They had at first imagined it to be one of the head waters, or tributary streams, of the Missouri. Afterwards they had believed it to be the Rapid, or Quicourt River, in which opinion they had not come nearer to the truth; they now, however, were persuaded, with equal fallacy, by its inclining somewhat to the north of east, that it was the Cheyenne. If so, by continuing down it much further they must arrive among the Indians, from whom the river takes its name. Among these they would be sure to meet some of the Sioux tribe. These would appraise their relatives, the piratical Sioux of the Missouri, of the approach of a band of white traders; so that, in the spring time, they would be likely to be waylaid and robbed on their way down the river, by some party in ambush upon its banks.

Even should this prove to be the Quicourt or Rapid River, it would not be prudent to winter much further down upon its banks, as, though they might be out of the range of the Sioux, they would be in the neighborhood of the Poncas, a tribe nearly as dangerous. It was resolved, therefore, since they must winter somewhere on this side of the Missouri, to descend no lower, but to keep up in these solitary regions, where they would be in no danger of molestation.

They were brought the more promptly and unanimously to this decision, by coming upon an excellent wintering place, that promised everything requisite for their comfort. It was on a fine bend of the river, just below where it issued out from among a ridge of mountains, and bent towards the northeast. Here was a beautiful low point of land, covered by cotton-wood, and surrounded by a thick growth of willow, so as to yield both shelter and fuel, as well as materials for building. The river swept by in a strong current, about a hundred and fifty yards wide. To the southeast were mountains of moderate height, the nearest about two miles off, but the whole chain ranging to the east, south, and southwest, as far as the eye could reach. Their summits were crowned with extensive tracts of pitch pine, checkered with small patches of the quivering aspen. Lower down were thick forests of firs and red cedars, growing out in many places from the very fissures of the rocks. The mountains were broken and precipitous, with huge bluffs protruding from among the forests.

Their rocky recesses and beetling cliffs afforded retreats to innumerable flocks of the bighorn,

---

while their woody summits and ravines abounded with bears and black-tailed deer. These, with the numerous herds of buffalo that ranged the lower grounds along the river, promised the travelers abundant cheer in their winter quarters.

On the 2d of November, therefore, they pitched their camp for the winter, on the woody point, and their first thought was to obtain a supply of provisions. Ben Jones and the two Canadians accordingly sallied forth, accompanied by two others of the party, leaving but one to watch the camp. Their hunting was uncommonly successful. In the course of two days, they killed thirty-two buffaloes, and collected their meat on the margin of a small brook, about a mile distant. Fortunately, a severe frost froze the river, so that the meat was easily transported to the encampment. On a succeeding day, a herd of buffalo came trampling through the woody bottom on the river banks, and fifteen more were killed.

It was soon discovered, however, that there was game of a more dangerous nature in the neighborhood. On one occasion, Mr. Crooks had wandered about a mile from the camp, and had ascended a small hill commanding a view of the river. He was without his rifle, a rare circumstance, for in these wild regions, where one may put up a wild animal, or a wild Indian, at every turn, it is customary never to stir from the camp-fire unarmed. The hill where he stood overlooked the place where the massacre of the buffalo had taken place. As he was looking around on the prospect, his eye was caught by an object below, moving directly towards him. To his dismay, he discovered it to be a grizzly bear, with two cubs. There was no tree at hand into which he could climb; to run, would only be to provoke pursuit, and he should soon be overtaken. He threw himself on the ground, therefore, and lay motionless, watching the movements of the animal with intense anxiety. It continued to advance until at the foot of the hill, when it turned, and made into the woods, having probably gorged itself with buffalo flesh. Mr. Crooks made all haste back to the camp, rejoicing at his escape, and determining never to stir out again without his rifle. A few days after this circumstance, a grizzly bear was shot in the neighborhood by Mr. Miller.

As the slaughter of so many buffaloes had provided the party with beef for the winter, in case they met with no further supply, they now set to work, heart and hand, to build a comfortable wigwam. In a little while the woody promontory rang with the unwonted sound of the axe. Some of its lofty trees were laid low, and by the second evening the cabin was complete. It was eight feet wide, and eighteen feet long. The walls were six feet high, and the whole was covered with buffalo skins. The fireplace was in the centre, and the smoke found its way out by a hole in the roof.

The hunters were next sent out to procure deer-skins for garments, moccasins, and other purposes. They made the mountains echo with their rifles, and, in the course of two days' hunting, killed twenty-eight bighorns and black-tailed deer.

The party now revelled in abundance. After all that they had suffered from hunger, cold, fatigue and watchfulness; after all their perils from treacherous and savage men, they exulted in the snugness and security of their isolated cabin, hidden, as they thought, even from the prying eyes of Indian scouts, and stored with creature comforts; and they looked forward to a winter of peace

and quietness, of roasting, and boiling, and broiling, and feasting upon venison, and mountain mutton, and bear's meat, and marrow bones, and buffalo humps, and other hunter's dainties, and of dozing and reposing round their fire, and gossiping over past dangers and adventures, and telling long hunting stories, until spring should return; when they would make canoes of buffalo skins and float themselves down the river.

From such halcyon dreams, they were startled one morning, at daybreak, by a savage yell. They started tip and seized their rifles. The yell was repeated by two or three voices. Cautiously peeping out, they beheld, to their dismay, several Indian warriors among the trees, all armed and painted in warlike style; being evidently bent on some hostile purpose.

Miller changed countenance as he regarded them. "We are in trouble," said he, "these are some of the rascally Arapahays that robbed me last year." Not a word was uttered by the rest of the party, but they silently slung their powder horns and ball pouches, and prepared for battle. M'Lellan, who had taken his gun to pieces the evening before, put it together in all haste. He proposed that they should break out the clay from between the logs, so as to be able to fire upon the enemy.

"Not yet," replied Stuart; "it will not do to show fear or distrust; we must first hold a parley. Some one must go out and meet them as a friend."

Who was to undertake the task! It was full of peril, as the envoy might be shot down at the threshold.

"The leader of a party," said Miller, "always takes the advance."

"Good!" replied Stuart; "I am ready." He immediately went forth; one of the Canadians followed him; the rest of the party remained in the garrison, to keep the savages in check.

Stuart advanced holding his rifle in one hand, and extending the other to the savage that appeared to be the chief. The latter stepped forward and took it; his men followed his example, and all shook hands with Stuart, in token of friendship. They now explained their errand. They were a war party of Arapahay braves. Their village lay on a stream several days' journey to the eastward. It had been attacked and ravaged during their absence, by a band of Crows, who had carried off several of their women, and most of their horses. They were in quest of vengeance. For sixteen days they had been tracking the Crows about the mountains, but had not yet come upon them. In the meantime, they had met with scarcely any game, and were half famished. About two days previously, they had heard the report of fire-arms among the mountains, and on searching in the direction of the sound, had come to a place where a deer had been killed. They had immediately put themselves upon the track of the hunters, and by following it up, had arrived at the cabin.

Mr. Stuart now invited the chief and another, who appeared to be his lieutenant, into the hut, but made signs that no one else was to enter. The rest halted at the door; others came straggling up, until the whole party, to the number of twenty-three, were gathered before the hut. They were

armed with bows and arrows, tomahawks and scalping knives, and some few with guns. All were painted and dressed for war, and had a wild and fierce appearance. Mr. Miller recognized among them some of the very fellows who had robbed him in the preceding year; and put his comrades upon their guard. Every man stood ready to resist the first act of hostility; the savages, however, conducted themselves peaceably, and showed none of that swaggering arrogance which a war party is apt to assume.

On entering the hut the chief and his lieutenant cast a wistful look at the rafters, laden with venison and buffalo meat. Mr. Stuart made a merit of necessity, and invited them to help themselves. They did not wait to be pressed. The rafters were soon eased of their burden; venison and beef were passed out to the crew before the door, and a scene of gormandizing commenced, of which few can have an idea, who have not witnessed the gastronomic powers of an Indian, after an interval of fasting. This was kept up throughout the day; they paused now and then, it is true, for a brief interval, but only to return to the charge with renewed ardor. The chief and the lieutenant surpassed all the rest in the vigor and perseverance of their attacks; as if from their station they were bound to signalize themselves in all onslaughts. Mr. Stuart kept them well supplied with choice bits, for it was his policy to overfeed them, and keep them from leaving the hut, where they served as hostages for the good conduct of their followers. Once, only, in the course of the day, did the chief sally forth. Mr. Stuart and one of his men accompanied him, armed with their rifles, but without betraying any distrust. The chieftain soon returned, and renewed his attack upon the larder. In a word, he and his worthy coadjutor, the lieutenant, ate until they were both stupefied.

Towards evening the Indians made their preparations for the night according to the practice of war parties. Those outside of the hut threw up two breastworks, into which they retired at a tolerably early hour, and slept like overfed hounds. As to the chief and his lieutenant, they passed the night in the hut, in the course of which, they, two or three times, got up to eat. The travellers took turns, one at a time, to mount guard until the morning.

Scarce had the day dawned, when the gormandizing was renewed by the whole band, and carried on with surprising vigor until ten o'clock, when all prepared to depart. They had six days' journey yet to make, they said, before they should come up with the Crows, who, they understood, were encamped on a river to the northward. Their way lay through a hungry country, where there was no game; they would, moreover, have but little time to hunt; they, therefore, craved a small supply of provisions for their journey. Mr. Stuart again invited them to help themselves. They did so with keen forethought, loading themselves with the choicest parts of the meat, and leaving the late plenteous larder far gone in a consumption. Their next request was for a supply of ammunition, having guns, but no powder and ball. They promised to pay magnificently out of the spoils of their foray. "We are poor now," said they, "and are obliged to go on foot, but we shall soon come back laden with booty, and all mounted on horseback, with scalps hanging at our bridles. We will then give each of you a horse to keep you from being tired on your journey."

"Well," said Mr. Stuart, "when you bring the horses, you shall have the ammunition, but not before." The Indians saw by his determined tone, that all further entreaty would be unavailing, so

they desisted, with a good-humored laugh, and went off exceedingly well freighted, both within and without, promising to be back again in the course of a fortnight.

No sooner were they out of hearing, than the luckless travellers held another council. The security of their cabin was at an end and with it all their dreams of a quiet and cozy winter. They were between two fires. On one side were their old enemies, the Crows; on the other side, the Arapahays, no less dangerous freebooters. As to the moderation of this war party, they considered it assumed, to put them off their guard against some more favorable opportunity for a surprisal. It was determined, therefore, not to await their return, but to abandon, with all speed, this dangerous neighborhood. From the accounts of their recent visitors, they were led to believe, though erroneously, that they were upon the Quicourt, or Rapid River. They proposed now to keep along it to its confluence with the Missouri; but, should they be prevented by the rigors of the season from proceeding so far, at least to reach a part of the river where they might be able to construct canoes of greater strength and durability than those of buffalo skins.

Accordingly, on the 13th of December, they bade adieu, with many a regret, to their comfortable quarters where for five weeks they had been indulging the sweets of repose, of plenty, and of fancied security. They were still accompanied by their veteran pack-horse, which the Arapahays had omitted to steal, either because they intended to steal him on their return, or because they thought him not worth stealing.

Washington Irving's Astoria

CHAPTER L.

Rough Wintry Travelling - Hills and Plains.- Snow and Ice.- Disappearance of Game.- A Vast Dreary Plain.- A. Second Halt for the Winter.- Another Wigwam.- New Year's Feast.- Buffalo Humps, Tongues, and Marrow-Bones.- Return of Spring.- Launch of Canoes. - Bad Navigation. - Pedestrian March. - Vast Prairies. - Deserted Camps.- Pawnee Squaws.- An Otto Indian.- News of War.- Voyage Down the Platte and the Missouri.- Reception at Fort Osage. - Arrival at St. Louis.

THE interval of comfort and repose which the party had enjoyed in their wigwam, rendered the renewal of their fatigues intolerable for the first two or three days. The snow lay deep, and was slightly frozen on the surface, but not sufficiently to bear their weight. Their feet became sore by breaking through the crust, and their limbs weary by floundering on without firm foothold. So exhausted and dispirited were they, that they began to think it would be better to remain and run the risk of being killed by the Indians, than to drag on thus painfully, with the probability of perishing by the way. Their miserable horse fared no better than themselves, having for the first day or two no other fodder than the ends of willow twigs, and the bark of the cotton-wood tree.

They all, however, appeared to gain patience and hardihood as they proceeded, and for fourteen days kept steadily on, making a distance of about three hundred and thirty miles. For some days, the range of mountains which had been near to their wigwam kept parallel to the river at no great distance, but at length subsided into hills. Sometimes they found the river bordered with alluvial bottoms, and groves with cotton-wood and willows; sometimes the adjacent country was naked

and barren. In one place it ran for a considerable distance between rocky hills and promontories covered with cedar and pitch pines, and peopled with the bighorn and the mountain deer; at other places it wandered through prairies well stocked with buffaloes and antelopes. As they descended the course of the river, they began to perceive the ash and white oak here and there among the cotton-wood and willow; and at length caught a sight of some wild horses on the distant prairies.

The weather was various; at one time the snow lay deep; then they had a genial day or two, with the mildness and serenity of autumn; then, again, the frost was so severe that the river was sufficiently frozen to bear them upon the ice.

During the last three days of their fortnight's travel, however, the face of the country changed. The timber gradually diminished, until they could scarcely find fuel sufficient for culinary purposes. The game grew more and more scanty, and, finally, none were to be seen but a few miserable broken-down buffalo bulls, not worth killing. The snow lay fifteen inches deep, and made the traveling grievously painful and toilsome. At length they came to an immense plain, where no vestige of timber was to be seen; nor a single quadruped to enliven the desolate landscape. Here, then, their hearts failed them, and they held another consultation. The width of the river, which was upwards of a mile, its extreme shallowness, the frequency of quicksands, and various other characteristics, had at length made them sensible of their errors with respect to it, and they now came to the correct conclusion, that they were on the banks of the Platte or Shallow River. What were they to do? Pursue its course to the Missouri? To go on at this season of the year seemed dangerous in the extreme. There was no prospect of obtaining either food or firing. The country was destitute of trees, and though there might be drift-wood along the river, it lay too deep beneath the snow for them to find it.

The weather was threatening a change, and a snowstorm on these boundless wastes might prove as fatal as a whirlwind of sand on an Arabian desert. After much dreary deliberation, it was at length determined to retrace their three last days' journey of seventy-seven miles, to a place which they had remarked where there was a sheltering growth of forest trees, and a country abundant in game. Here they would once more set up their winter quarters, and await the opening of the navigation to launch themselves in canoes.

Accordingly, on the 27th of December, they faced about, retraced their steps, and on the 30th, regained the part of the river in question. Here the alluvial bottom was from one to two miles wide, and thickly covered with a forest of cotton-wood trees; while herds of buffalo were scattered about the neighboring prairie, several of which soon fell beneath their rifles.

They encamped on the margin of the river, in a grove where there were trees large enough for canoes. Here they put up a shed for immediate shelter, and immediately proceeded to erect a hut. New Year's day dawned when, as yet, but one wall of their cabin was completed; the genial and jovial day, however, was not permitted to pass uncelebrated, even by this weatherbeaten crew of wanderers. All work was suspended, except that of roasting and boiling. The choicest of the buf-

falo meat, with tongues, and humps, and marrow-bones, were devoured in quantities that would astonish any one that has not lived among hunters or Indians; and as an extra regale, having no tobacco left, they cut up an old tobacco pouch, still redolent with the potent herb, and smoked it in honor of the day. Thus for a time, in present revelry, however uncouth, they forgot all past troubles and all anxieties about the future, and their forlorn wigwam echoed to the sound of gayety.

The next day they resumed their labors, and by the 6th of the month it was complete. They soon killed abundance of buffalo, and again laid in a stock of winter provisions. The party were more fortunate in this, their second cantonment. The winter passed away without any Indian visitors, and the game continued to be plenty in the neighborhood. They felled two large trees, and shaped them into canoes; and, as the spring opened, and a thaw of several days' continuance melted the ice in the river, they made every preparation for embarking. On the 8th of March they launched forth in their canoes, but soon found that the river had not depth sufficient even for such slender barks. It expanded into a wide but extremely shallow stream, with many sand-bars, and occasionally various channels. They got one of their canoes a few miles down it, with extreme difficulty, sometimes wading and dragging it over the shoals; at length they had to abandon the attempt, and to resume their journey on foot, aided by their faithful old pack-horse, who had recruited strength during the repose of the winter.

The weather delayed them for a few days, having suddenly become more rigorous than it had been at any time during the winter; but on the 20th of March they were again on their journey.

In two days they arrived at the vast naked prairie, the wintry aspect of which had caused them, in December, to pause and turn back. It was now clothed in the early verdure of spring, and plentifully stocked with game. Still, when obliged to bivouac on its bare surface, without any shelter, and by a scanty fire of dry buffalo dung, they found the night blasts piercing cold. On one occasion, a herd of buffalo straying near their evening camp, they killed three of them merely for their hides, wherewith to make a shelter for the night.

They continued on for upwards of a hundred miles; with vast prairies extending before them as they advanced; sometimes diversified by undulating hills, but destitute of trees. In one place they saw a gang of sixty-five wild horses, but as to the buffaloes, they seemed absolutely to cover the country. Wild geese abounded, and they passed extensive swamps that were alive with innumerable flocks of water-fowl, among which were a few swans, but an endless variety of ducks.

The river continued a winding course to the east-north-east, nearly a mile in width, but too shallow to float even an empty canoe. The country spread out into a vast level plain, bounded by the horizon alone, excepting to the north, where a line of hills seemed like a long promontory stretching into the bosom of the ocean. The dreary sameness of the prairie wastes began to grow extremely irksome. The travellers longed for the sight of a forest, or grove, or single tree, to break the level uniformity, and began to notice every object that gave reason to hope they were drawing towards the end of this weary wilderness. Thus the occurrence of a particular kind of grass was hailed as a proof that they could not be far from the bottoms of the Missouri; and they were

rejoiced at putting up several prairie hens, a kind of grouse seldom found far in the interior. In picking up driftwood for fuel, also, they found on some pieces the mark of an axe, which caused much speculation as to the time when and the persons by whom the trees had been felled. Thus they went on, like sailors at sea, who perceive in every floating weed and wandering bird, harbingers of the wished-for land.

By the close of the month the weather became very mild, and, heavily burdened as they were, they found the noontide temperature uncomfortably warm. On the 30th, they came to three deserted hunting camps, either of Pawnees or Ottoes, about which were buffalo skulls in all directions; and the frames on which the hides had been stretched and cured. They had apparently been occupied the preceding autumn.

For several days they kept patiently on, watching every sign that might give them an idea as to where they were, and how near to the banks of the Missouri.

Though there were numerous traces of hunting parties and encampments, they were not of recent date. The country seemed deserted. The only human beings they met with were three Pawnee squaws, in a hut in the midst of a deserted camp. Their people had all gone to the south, in pursuit of the buffalo, and had left these poor women behind, being too sick and infirm to travel.

It is a common practice with the Pawnees, and probably with other roving tribes, when departing on a distant expedition, which will not admit of incumbrance or delay, to leave their aged and infirm with a supply of provisions sufficient for a temporary subsistence. When this is exhausted, they must perish; though sometimes their sufferings are abridged by hostile prowlers who may visit the deserted camp.

The poor squaws in question expected some such fate at the hands of the white strangers, and though the latter accosted them in the kindest manner, and made them presents of dried buffalo meat, it was impossible to soothe their alarm, or get any information from them.

The first landmark by which the travellers were enabled to conjecture their position with any degree of confidence, was an island about seventy miles in length, which they presumed to be Grand Isle. If so, they were within one hundred and forty miles of the Missouri. They kept on, therefore, with renewed spirit, and at the end of three days met with an Otto Indian, by whom they were confirmed in their conjecture. They learnt at the same time another piece of information, of an uncomfortable nature. According to his account, there was war between the United States and England, and in fact it had existed for a whole year, during which time they had been beyond the reach of all knowledge of the affairs of the civilized world.

The Otto conducted the travellers to his village, situated a short distance from the banks of the Platte. Here they were delighted to meet with two white men, Messrs. Dornin and Roi, Indian traders recently from St. Louis. Of these they had a thousand inquiries to make concerning all affairs, foreign and domestic, during their year of sepulture in the wilderness; and especially about

the events of the existing war.

They now prepared to abandon their weary travel by land, and to embark upon the water. A bargain was made with Mr. Dornin, who engaged to furnish them with a canoe and provisions for the voyage, in exchange for their venerable and well-trying fellow traveller, the old Snake horse.

Accordingly, in a couple of days, the Indians employed by that gentleman constructed for them a canoe twenty feet long, four feet wide, and eighteen inches deep. The frame was of poles and willow twigs, on which were stretched five elk and buffalo hides, sewed together with sinews, and the seams payed with unctuous mud. In this they embarked at an early hour on the 16th of April, and drifted down ten miles with the stream, when the wind being high they encamped, and set to work to make oars, which they had not been able to procure at the Indian village.

Once more afloat, they went merrily down the stream, and after making thirty-five miles, emerged into the broad turbid current of the Missouri. Here they were borne along briskly by the rapid stream; though, by the time their fragile bark had floated a couple of hundred miles, its frame began to show the effects of the voyage. Luckily they came to the deserted wintering place of some hunting party, where they found two old wooden canoes. Taking possession of the largest, they again committed themselves to the current, and after dropping down fifty-five miles further, arrived safely at Fort Osage.

Here they found Lieutenant Brownson still in command; the officer who had given the expedition a hospitable reception on its way up the river, eighteen months previously. He received this remnant of the party with a cordial welcome, and endeavored in every way to promote their comfort and enjoyment during their sojourn at the fort. The greatest luxury they met with on their return to the abode of civilized man, was bread, not having tasted any for nearly a year.

Their stay at Fort Osage was but short. On re-embarking they were furnished with an ample supply of provisions by the kindness of Lieutenant Brownson, and performed the rest of their voyage without adverse circumstance. On the 30th of April they arrived in perfect health and fine spirits at St. Louis, having been ten months in performing this perilous expedition from Astoria. Their return caused quite a sensation at the place, bringing the first intelligence of the fortune of Mr. Hunt and his party in their adventurous route across the Rocky Mountains, and of the new establishment on the shores of the Pacific.

Washington Irving's Astoria

CHAPTER LI.

Agreement Between Mr. Astor and the Russian Fur Company- War Between the United States and Great Britain.- Instructions to Captain Sowle of the Beaver- Fitting Out of the Lark.- News of the Arrival of Mr. Stuart.

IT is now necessary, in linking together the parts of this excursive narrative, that we notice the proceedings of Mr. Astor in support of his great undertaking. His project with respect to the

---

Russian establishments along the northwest coast had been diligently prosecuted. The agent sent by him to St. Petersburg, to negotiate in his name as president of the American Fur Company, had, under sanction of the Russian government, made a provisional agreement with the Russian company.

By this agreement, which was ratified by Mr. Astor in 1813, the two companies bound themselves not to interfere with each other's trading and hunting grounds, nor to furnish arms and ammunition to the Indians. They were to act in concert, also, against all interlopers, and to succor each other in case of danger. The American company was to have the exclusive right of supplying the Russian posts with goods and necessaries, receiving peltries in payment at stated prices. They were also, if so requested by the Russian governor, to convey the furs of the Russian company to Canton, sell them on commission, and bring back the proceeds, at such freight as might be agreed on at the time. This agreement was to continue in operation four years, and to be renewable for a similar term, unless some unforeseen contingency should render a modification necessary.

It was calculated to be of great service to the infant establishment at Astoria; dispelling the fears of hostile rivalry on the part of the foreign companies in its neighborhood, and giving a formidable blow to the irregular trade along the coast. It was also the intention of Mr. Astor to have coasting vessels of his own, at Astoria, of small tonnage and draft of water, fitted for coasting service. These, having a place of shelter and deposit, could ply about the coast in short voyages, in favorable weather, and would have vast advantage over chance ships, which must make long voyages, maintain numerous crews, and could only approach the coast at certain seasons of the year. He hoped, therefore, gradually to make Astoria the great emporium of the American fur trade in the Pacific, and the nucleus of a powerful American state. Unfortunately for these sanguine anticipations, before Mr. Astor had ratified the agreement, as above stated, war broke out between the United States and Great Britain. He perceived at once the peril of the case. The harbor of New York would doubtless be blockaded, and the departure of the annual supply ship in the autumn prevented; or, if she should succeed in getting out to sea, she might be captured on her voyage.

In this emergency, he wrote to Captain Sowle, commander of the *Beaver*. The letter, which was addressed to him at Canton, directed him to proceed to the factory at the mouth of the *Columbia*, with such articles as the establishment might need; and to remain there, subject to the orders of Mr. Hunt, should that gentleman be in command there.

The war continued. No tidings had yet been received from Astoria; the despatches having been delayed by the misadventure of Mr. Reed at the falls of the *Columbia*, and the unhorsing of Mr. Stuart by the Crows among the mountains. A painful uncertainty, also, prevailed about Mr. Hunt and his party. Nothing had been heard of them since their departure from the Arickara village; Lisa, who parted from them there, had predicted their destruction; and some of the traders of the Northwest Company had actually spread a rumor of their having been cut off by the Indians.

It was a hard trial of the courage and means of an individual to have to fit out another costly expedition, where so much had already been expended, so much uncertainty prevailed, and where the

risk of loss was so greatly enhanced, that no insurance could be effected.

In spite of all these discouragements, Mr. Astor determined to send another ship to the relief of the settlement. He selected for this purpose a vessel called the Lark, remarkable for her fast sailing. The disordered state of the times, however, caused such a delay, that February arrived, while the vessel was yet lingering in port.

At this juncture, Mr. Astor learnt that the Northwest Company were preparing to send out an armed ship of twenty guns, called the Isaac Todd, to form an establishment at the mouth of the Columbia. These tidings gave him great uneasiness. A considerable proportion of the persons in his employ were Scotchmen and Canadians, and several of them had been in the service of the Northwest Company. Should Mr. Hunt have failed to arrive at Astoria, the whole establishment would be under the control of Mr. M'Dougal, of whose fidelity he had received very disparaging accounts from Captain Thorn. The British government, also, might deem it worth while to send a force against the establishment, having been urged to do so some time previously by the Northwest Company.

Under all these circumstances, Mr. Astor wrote to Mr. Monroe, then secretary of state, requesting protection from the government of the United States. He represented the importance of his settlement, in a commercial point of view, and the shelter it might afford to the American vessels in those seas. All he asked was that the American government would throw forty or fifty men into the fort at his establishment, which would be sufficient for its defense until he could send reinforcements over land.

He waited in vain for a reply to this letter, the government, no doubt, being engrossed at the time by an overwhelming crowd of affairs. The month of March arrived, and the Lark was ordered by Mr. Astor to put to sea. The officer who was to command her shrunk from his engagement, and in the exigency of the moment, she was given in charge to Mr. Northrup, the mate. Mr. Nicholas G. Ogden, a gentleman on whose talents and integrity the highest reliance could be placed, sailed as supercargo. The Lark put to sea in the beginning of March, 1813.

By this opportunity, Mr. Astor wrote to Mr. Hunt, as head of the establishment at the mouth of the Columbia, for he would not allow himself to doubt of his welfare. "I always think you are well," said he, "and that I shall see you again, which Heaven, I hope, will grant."

He warned him to be on his guard against any attempts to surprise the post; suggesting the probability of armed hostility on the part of the Northwest Company, and expressing his indignation at the ungrateful returns made by that association for his frank and open conduct, and advantageous overtures. "Were I on the spot," said he, "and had the management of affairs, I would defy them all; but, as it is, everything depends upon you and your friends about you. Our enterprise is grand, and deserves success, and I hope in God it will meet it. If my object was merely gain of money, I should say, think whether it is best to save what we can, and abandon the place; but the very idea is like a dagger to my heart." This extract is sufficient to show the spirit and the views

which actuated Mr. Astor in this great undertaking.

Week after week and month after month elapsed, without anything to dispel the painful incertitude that hung over every part of this enterprise. Though a man of resolute spirit, and not easily cast down, the dangers impending over this darling scheme of his ambition, had a gradual effect upon the spirits of Mr. Astor. He was sitting one gloomy evening by his window, revolving over the loss of the Tonquin and the fate of her unfortunate crew, and fearing that some equally tragical calamity might have befallen the adventurers across the mountains, when the evening newspaper was brought to him. The first paragraph that caught his eye, announced the arrival of Mr. Stuart and his party at St. Louis, with intelligence that Mr. Hunt and his companions had effected their perilous expedition to the mouth of the Columbia. This was a gleam of sunshine that for a time dispelled every cloud, and he now looked forward with sanguine hope to the accomplishment of all his plans.

Washington Irving's Astoria

CHAPTER LII.

Banks of the Wallah-Wallah.- Departure of David Stuart for the Oakinagan.- Mr. Clarke's Route Up Lewis River.- Chipunnish, or Pierced-Nose Indians- Their Character, Appearance, and Habits.- Thievish Habits.- Laying Up of the Boats.- Post at Pointed Heart and Spokane Rivers.- M'Kenzie, His Route Up the Camoenum.- Bands of Travelling Indians.- Expedition of Reed to the Caches.- Adventures of Wandering Voyageurs and Trappers.

THE course of our narrative now takes us back to the regions beyond the mountains, to dispose of the parties that set out from Astoria, in company with Mr. Robert Stuart, and whom he left on the banks of the Wallah-Wallah. Those parties likewise separated from each other shortly after his departure, proceeding to their respective destinations, but agreeing to meet at the mouth of the Wallah-Wallah about the beginning of June in the following year, with such peltries as they should have collected in the winter, so as to convoy each other through the dangerous passes of the Columbia.

Mr. David Stuart, one of the partners, proceeded with his men to the post already established by him at the mouth of the Oakinagan; having furnished this with goods and ammunition, he proceeded three hundred miles up that river, where he established another post in a good trading neighborhood.

Mr. Clarke, another partner, conducted his little band up Lewis River to the mouth of a small stream coming in from the north, to which the Canadians gave the name of the Pavion. Here he found a village or encampment of forty huts or tents, covered with mats, and inhabited by Nez Perces, or Pierced-nose Indians, as they are called by the traders; but Chipunnish, as they are called by themselves. They are a hardy, laborious, and somewhat knavish race, who lead a precarious life, fishing and digging roots during the summer and autumn, hunting the deer on snowshoes during the winter, and traversing the Rocky Mountains in the spring, to trade for buffalo skins with the hunting tribes of the Missouri. In these migrations they are liable to be waylaid

and attacked by the Blackfeet, and other warlike and predatory tribes, and driven back across the mountains with the loss of their horses, and of many of their comrades.

A life of this unsettled and precarious kind is apt to render man selfish, and such Mr. Clarke found the inhabitants of this village, who were deficient in the usual hospitality of Indians; parting with everything with extreme reluctance, and showing no sensibility to any act of kindness. At the time of his arrival, they were all occupied in catching and curing salmon. The men were stout, robust, active, and good looking, and the women handsomer than those of the tribes nearer to the coast.

It was the plan of Mr. Clarke to lay up his boats here, and proceed by land to his place of destination, which was among the Spokane tribe of Indians, about a hundred and fifty miles distant. He accordingly endeavored to purchase horses for the journey, but in this he had to contend with the sordid disposition of these people. They asked high prices for their horses, and were so difficult to deal with, that Mr. Clarke was detained seven days among them before he could procure a sufficient number. During that time he was annoyed by repeated pilferings, for which he could get no redress. The chief promised to recover the stolen articles; but failed to do so, alleging that the thieves belonged to a distant tribe, and had made off with their booty. With this excuse Mr. Clarke was fain to content himself, though he laid up in his heart a bitter grudge against the whole Pierced-nose race, which it will be found he took occasion subsequently to gratify in a signal manner.

Having made arrangements for his departure, Mr. Clarke laid up his barge and canoes in a sheltered place, on the banks of a small bay, overgrown with shrubs and willows, confiding them to the care of the Nez Perce chief, who, on being promised an ample compensation, engaged to have a guardian eye upon them; then mounting his steed, and putting himself at the head of his little caravan, he shook the dust off his feet as he turned his back upon this village of rogues and hard dealers. We shall not follow him minutely in his journey; which lay at times over steep and rocky hills, and among crags and precipices; at other times over vast naked and sunburnt plains, abounding with rattlesnakes, in traversing which, both men and horses suffered intolerably from heat and thirst. The place on which he fixed for a trading post, was a fine point of land, at the junction of the Pointed Heart and Spokane Rivers. His establishment was intended to compete with a trading post of the Northwest Company, situated at no great distance, and to rival it in the trade with the Spokane Indians; as well as with the Cootonais and Flatheads. In this neighborhood we shall leave him for the present.

Mr. M'Kenzie, who conducted the third party from the Wallah-Wallah, navigated for several days up the south branch of the Columbia, named the Camoenum by the natives, but commonly called Lewis River, in honor of the first explorer. Wandering bands of various tribes were seen along this river, travelling in various directions; for the Indians generally are restless, roving beings, continually intent on enterprises of war, traffic, and hunting. Some of these people were driving large gangs of horses, as if to a distant market. Having arrived at the mouth of the Shahaptan, he ascended some distance up that river, and established his trading post upon its banks. This ap-

peared to be a great thoroughfare for the tribes from the neighborhood of the Falls of the Columbia, in their expeditions to make war upon the tribes of the Rocky Mountains; to hunt buffalo on the plains beyond, or to traffic for roots and buffalo robes. It was the season of migration, and the Indians from various distant parts were passing and repassing in great numbers.

Mr. M'Kenzie now detached a small band, under the conduct of Mr. John Reed, to visit the caches made by Mr. Hunt at the Caldron Linn, and to bring the contents to his post; as he depended, in some measure, on them for his supplies of goods and ammunition. They had not been gone a week, when two Indians arrived of the Pallatapalla tribe, who live upon a river of the same name. These communicated the unwelcome intelligence that the caches had been robbed. They said that some of their tribe had, in the course of the preceding spring, been across the mountains, which separated them from Snake River, and had traded horses with the Snakes in exchange for blankets, robes and goods of various descriptions. These articles the Snakes had procured from caches to which they were guided by some white men who resided among them, and who afterwards accompanied them across the Rocky Mountains. This intelligence was extremely perplexing to Mr. M'Kenzie, but the truth of part of it was confirmed by the two Indians, who brought them an English saddle and bridle, which was recognized as having belonged to Mr. Crooks. The perfidy of the white men who revealed the secret of the caches, was, however, perfectly inexplicable. We shall presently account for it in narrating the expedition of Mr. Reed.

That worthy Hibernian proceeded on his mission with his usual alacrity. His forlorn travels of the preceding winter had made him acquainted with the topography of the country, and he reached Snake River without any material difficulty. Here, in an encampment of the natives, he met with six white men, wanderers from the main expedition of Mr. Hunt, who, after having had their respective shares of adventures and mishaps, had fortunately come together at this place. Three of these men were Turcotte, La Chapelle, and Francis Landry; the three Canadian voyageurs who, it may be recollected, had left Mr. Crooks in February, in the neighborhood of Snake River, being dismayed by the increasing hardships of the journey, and fearful of perishing of hunger. They had returned to a Snake encampment, where they passed the residue of the winter.

Early in the spring, being utterly destitute, and in great extremity, and having worn out the hospitality of the Snakes, they determined to avail themselves of the buried treasures within their knowledge. They accordingly informed the Snake chieftains that they knew where a great quantity of goods had been left in caches, enough to enrich the whole tribe; and offered to conduct them to the place, on condition of being rewarded with horses and provisions. The chieftains pledged their faith and honor as great men and Snakes, and the three Canadians conducted them to the place of deposit at the Caldron Linn. This is the way that the savages got knowledge of the caches, and not by following the tracks of wolves, as Mr. Stuart had supposed. Never did money diggers turn up a miser's hoard with more eager delight, than did the savages lay open the treasures of the caches. Blankets and robes, brass trinkets and blue beads were drawn forth with chuckling exultation, and long strips of scarlet cloth produced yells of ecstasy.

The rifling of the caches effected a change in the fortunes and deportment of the whole party. The

---

Snakes were better clad and equipped than ever were Snakes before, and the three Canadians, suddenly finding themselves with horse to ride and weapon to wear, were like beggars on horse-back, ready to ride on any wild scamper. An opportunity soon presented. The Snakes determined on a hunting match on the buffalo prairies, to lay in a supply of beef, that they might live in plenty, as became men of their improved condition. The three newly mounted cavaliers, must fain accompany them. They all traversed the Rocky Mountains in safety, descended to the head waters of the Missouri, and made great havoc among the buffaloes.

Their hunting camp was full of meat; they were gorging themselves, like true Indians, with present plenty, and drying and jerking great quantities for a winter's supply. In the midst of their revelry and good cheer, the camp was surprised by the Blackfeet. Several of the Snakes were slain on the spot; the residue, with their three Canadian allies, fled to the mountains, stripped of horses, buffalo meat, everything; and made their way back to the old encampment on Snake River, poorer than ever, but esteeming themselves fortunate in having escaped with their lives. They had not been long there when the Canadians were cheered by the sight of a companion in misfortune, Dubreull, the poor voyageur who had left Mr. Crooks in March, being too much exhausted to keep on with him. Not long afterwards, three other straggling members of the main expedition made their appearance. These were Carson, St. Michael, and Pierre Delaunay, three of the trappers who, in company with Pierre Detaye, had been left among the mountains by Mr. Hunt, to trap beaver, in the preceding month of September. They had departed from the main body well armed and provided, with horses to ride, and horses to carry the peltries they were to collect. They came wandering into the Snake camp as ragged and destitute as their predecessors. It appears that they had finished their trapping, and were making their way in the spring to the Missouri, when they were met and attacked by a powerful band of the all-pervading Crows. They made a desperate resistance, and killed seven of the savages, but were overpowered by numbers. Pierre Detaye was slain, the rest were robbed of horses and effects, and obliged to turn back, when they fell in with their old companions as already mentioned.

We should observe, that at the heels of Pierre Delaunay came dragging an Indian wife, whom he had picked up in his wanderings; having grown weary of celibacy among the savages.

The whole seven of this forlorn fraternity of adventurers, thus accidentally congregated on the banks of Snake River, were making arrangements once more to cross the mountains, when some Indian scouts brought word of the approach of the little band headed by John Reed.

The latter, having heard the several stories of these wanderers, took them all into his party, and set out for the Caldron Linn, to clear out two or three of the caches which had not been revealed to the Indians.

At that place he met with Robinson, the Kentucky veteran, who, with his two comrades, Reznor and Hoback, had remained there when Mr. Stuart went on. This adventurous trio had been trapping higher up the river, but Robinson had come down in a canoe, to await the expected arrival of the party, and obtain horses and equipments. He told Reed the story of the robbery of his party by

the Arapahays, but it differed, in some particulars, from the account given by him to Mr. Stuart. In that, he had represented Cass as having shamefully deserted his companions in their extremity, carrying off with him a horse; in the one now given, he spoke of him as having been killed in the affray with the Arapahays. This discrepancy, of which, of course, Reed could have had no knowledge at the time, concurred with other circumstances, to occasion afterwards some mysterious speculations and dark surmises as to the real fate of Cass; but as no substantial grounds were ever adduced for them, we forbear to throw any deeper shades into this story of sufferings in the wilderness.

Mr. Reed, having gathered the remainder of the goods from the caches, put himself at the head of his party, now augmented by the seven men thus casually picked up, and the squaw of Pierre Delaunay, and made his way successfully to M'Kenzie's Post, on the waters of the Shahaptan.

Washington Irving's Astoria

CHAPTER LIII.

Departure of Mr. Hunt in the Beaver- Precautions at the Factory.- Detachment to the Wollamut.- Gloomy Apprehensions.- Arrival of M'Kenzie.- Affairs at the Shahaptan.- News of War.- Dismay of M'Dougal.- Determination to Abandon Astoria.- Departure of M'Kenzie for the Interior.- Adventure at the Rapids.- Visit to the Ruffians of Wish-ram. - A Perilous Situation.- Meeting With M'Tavish and His Party.- Arrival at the Shahaptan.- Plundered Caches.- Determination of the Wintering Partners Not to Leave the Country.- Arrival of Clarke Among the Nez Perces.- The Affair of the Silver Goblet.- Hanging of An Indian.- Arrival of the Wintering Partners at Astoria.

AFTER the departure of the different detachments, or brigades, as they are called by the fur traders, the Beaver prepared for her voyage along the coast, and her visit to the Russian establishment, at New Archangel, where she was to carry supplies. It had been determined in the council of partners at Astoria, that Mr. Hunt should embark in this vessel, for the purpose of acquainting himself with the coasting trade, and of making arrangements with the commander of the Russian post, and that he should be re-landed in October, at Astoria, by the Beaver, on her way to the Sandwich Islands and Canton.

The Beaver put to sea in the month of August. Her departure and that of the various brigades, left the fortress of Astoria but slightly garrisoned. This was soon perceived by some of the Indian tribes, and the consequence was increased insolence of deportment, and a disposition to hostility. It was now the fishing season, when the tribes from the northern coast drew into the neighborhood of the Columbia. These were warlike and perfidious in their dispositions; and noted for their attempts to surprise trading ships. Among them were numbers of the Neweetees, the ferocious tribe that massacred the crew of the Tonquin.

Great precautions, therefore, were taken at the factory, to guard against surprise while these dangerous intruders were in the vicinity. Galleries were constructed inside of the palisades; the bastions were heightened, and sentinels were posted day and night. Fortunately, the Chinooks and other tribes resident in the vicinity manifested the most pacific disposition. Old Comcomly,

---

who held sway over them, was a shrewd calculator. He was aware of the advantages of having the whites as neighbors and allies, and of the consequence derived to himself and his people from acting as intermediate traders between them and the distant tribes. He had, therefore, by this time, become a firm friend of the Astorians, and formed a kind of barrier between them and the hostile intruders from the north.

The summer of 1812 passed away without any of the hostilities that had been apprehended; the Neweetees, and other dangerous visitors to the neighborhood, finished their fishing and returned home, and the inmates of the factory once more felt secure from attack.

It now became necessary to guard against other evils. The season of scarcity arrived, which commences in October, and lasts until the end of January. To provide for the support of the garrison, the shallop was employed to forage about the shores of the river. A number of the men, also, under the command of some of the clerks, were sent to quarter themselves on the banks of the Wollamut (the Multnomah of Lewis and Clarke), a fine river which disembogues itself into the Columbia, about sixty miles above Astoria. The country bordering on the river is finely diversified with prairies and hills, and forests of oak, ash, maple, and cedar. It abounded, at that time, with elk and deer, and the streams were well stocked with beaver. Here the party, after supplying their own wants, were enabled to pack up quantities of dried meat, and send it by canoes to Astoria.

The month of October elapsed without the return of the Beaver. November, December, January, passed away, and still nothing was seen or heard of her. Gloomy apprehensions now began to be entertained: she might have been wrecked in the course of her coasting voyage, or surprised, like the Tonquin, by some of the treacherous tribes of the north.

No one indulged more in these apprehensions than M'Dougal, who had now the charge of the establishment. He no longer evinced the bustling confidence and buoyancy which once characterized him. Command seemed to have lost its charms for him, or rather, he gave way to the most abject despondency, decrying the whole enterprise, magnifying every untoward circumstance, and foreboding nothing but evil.

While in this moody state, he was surprised, on the 16th of January, by the sudden appearance of M'Kenzie, wayworn and weather-beaten by a long wintry journey from his post on the Shaphtan, and with a face the very frontispiece for a volume of misfortune. M'Kenzie had been heartily disgusted and disappointed at his post. It was in the midst of the Tushepaws, a powerful and warlike nation, divided into many tribes, under different chiefs, who possessed innumerable horses, but, not having turned their attention to beaver trapping, had no furs to offer. According to M'Kenzie, they were but a "rascally tribe;" from which we may infer that they were prone to consult their own interests more than comported with the interests of a greedy Indian trader.

Game being scarce, he was obliged to rely, for the most part, on horse-flesh for subsistence, and the Indians discovering his necessities, adopted a policy usual in civilized trade, and raised the price of horses to an exorbitant rate, knowing that he and his men must eat or die. In this way, the

goods he had brought to trade for beaver skins, were likely to be bartered for horseflesh, and all the proceeds devoured upon the spot.

He had despatched trappers in various directions, but the country around did not offer more beaver than his own station. In this emergency he began to think of abandoning his unprofitable post, sending his goods to the posts of Clarke and David Stuart, who could make a better use of them, as they were in a good beaver country, and returning with his party to Astoria, to seek some better destination. With this view he repaired to the post of Mr. Clarke, to hold a consultation. While the two partners were in conference in Mr. Clarke's wigwam, an unexpected visitor came bustling in upon them.

This was Mr. John George M'Tavish, a partner of the Northwest Company, who had charge of the rival trading posts established in that neighborhood. Mr. M'Tavish was the delighted messenger of bad news. He had been to Lake Winnipeg, where he received an express from Canada, containing the declaration of war, and President Madison's proclamation, which he handed with the most officious complaisance to Messrs. Clarke and M'Kenzie. He moreover told them that he had received a fresh supply of goods from the Northwest posts on the other side of the Rocky Mountains, and was prepared for vigorous opposition to the establishment of the American Company. He capped the climax of this obliging but belligerent intelligence, by informing them that the armed ship, Isaac Todd, was to be at the mouth of the Columbia about the beginning of March, to get possession of the trade of the river, and that he was ordered to join her there at that time.

The receipt of this news determined M'Kenzie. He immediately returned to the Shahaptan, broke up his establishment, deposited his goods in cache, and hastened with all his people to Astoria.

The intelligence thus brought, completed the dismay of M'Dougal, and seemed to produce a complete confusion of mind. He held a council of war with M'Kenzie, at which some of the clerks were present, but of course had no votes. They gave up all hope of maintaining their post at Astoria. The Beaver had probably been lost; they could receive no aid from the United States, as all the ports would be blockaded. From England nothing could be expected but hostility. It was determined, therefore, to abandon the establishment in the course of the following spring, and return across the Rocky Mountains. In pursuance of this resolution, they suspended all trade with the natives, except for provisions, having already more peltries than they could carry away, and having need of all the goods for the clothing and subsistence of their people, during the remainder of their sojourn, and on their journey across the mountains, This intention of abandoning Astoria was, however, kept secret from the men, lest they should at once give up all labor, and become restless and insubordinate.

In the meantime, M'Kenzie set off for his post at the Shahaptan, to get his goods from the caches, and buy horses and provisions with them for the caravan across the mountains. He was charged with despatches from M'Dougal to Messrs. Stuart and Clarke, appraising them of the intended migration, that they might make timely preparations.

M'Kenzie was accompanied by two of the clerks, Mr. John Reed, the Irishman, and Mr. Alfred Seton, of New York. They embarked in two canoes, manned by seventeen men, and ascended the river without any incident of importance, until they arrived in the eventful neighborhood of the rapids. They made the portage of the narrows and the falls early in the afternoon, and, having partaken of a scanty meal, had now a long evening on their hands.

On the opposite side of the river lay the village of Wish-ram, of freebooting renown. Here lived the savages who had robbed and maltreated Reed, when bearing his tin box of despatches. It was known that the rifle of which he was despoiled was retained as a trophy at the village. M'Kenzie offered to cross the river, and demand the rifle, if any one would accompany him. It was a hare-brained project, for these villages were noted for the ruffian character of their inhabitants; yet two volunteers promptly stepped forward; Alfred Seton, the clerk, and Joe de la Pierre, the cook. The trio soon reached the opposite side of the river. On landing, they freshly primed their rifles and pistols. A path winding for about a hundred yards among rocks and crags, led to the village. No notice seemed to be taken of their approach. Not a solitary being, man, woman, or child, greeted them.

The very dogs, those noisy pests of an Indian town, kept silence. On entering the village, a boy made his appearance, and pointed to a house of larger dimensions than the rest. They had to stoop to enter it; as soon as they had passed the threshold, the narrow passage behind them was filled up by a sudden rush of Indians, who had before kept out of sight.

M'Kenzie and his companions found themselves in a rude chamber of about twenty-five feet long and twenty wide. A bright fire was blazing at one end, near which sat the chief, about sixty years old. A large number of Indians, wrapped in buffalo robes, were squatted in rows, three deep, forming a semicircle round three sides of the room. A single glance around sufficed to show them the grim and dangerous assembly into which they had intruded, and that all retreat was cut off by the mass which blocked up the entrance.

The chief pointed to the vacant side of the room opposite to the door, and motioned for them to take their seats. They complied. A dead pause ensued. The grim warriors around sat like statues; each muffled in his robe, with his fierce eyes bent on the intruders. The latter felt they were in a perilous predicament.

"Keep your eyes on the chief while I am addressing him," said M'Kenzie to his companions. "Should he give any sign to his band, shoot him, and make for the door."

M'Kenzie advanced, and offered the pipe of peace to the chief, but it was refused. He then made a regular speech, explaining the object of their visit, and proposing to give in exchange for the rifle two blankets, an axe, some beads and tobacco.

When he had done, the chief rose, began to address him in a low voice, but soon became loud and violent, and ended by working himself up into a furious passion. He upbraided the white men for

---

their sordid conduct in passing and repassing through their neighborhood, without giving them a blanket or any other article of goods, merely because they had no furs to barter in exchange, and he alluded, with menaces of vengeance, to the death of the Indian killed by the whites in the skirmish at the falls.

Matters were verging to a crisis. It was evident the surrounding savages were only waiting a signal from the chief to spring upon their prey. M'Kenzie and his companions had gradually risen on their feet during the speech, and had brought their rifles to a horizontal position, the barrels resting in their left hands; the muzzle of M'Kenzie's piece was within three feet of the speaker's heart. They cocked their rifles; the click of the locks for a moment suffused the dark cheek of the savage, and there was a pause. They coolly, but promptly, advanced to the door; the Indians fell back in awe, and suffered them to pass. The sun was just setting, as they emerged from this dangerous den. They took the precaution to keep along the tops of the rocks as much as possible on their way back to the canoe, and reached their camp in safety, congratulating themselves on their escape, and feeling no desire to make a second visit to the grim warriors of Wish-ram.

M'Kenzie and his party resumed their journey the next morning. At some distance above the falls of the Columbia, they observed two bark canoes, filled with white men, coming down the river, to the full chant of a set of Canadian voyageurs. A parley ensued. It was a detachment of North-westerners, under the command of Mr. John George M'Tavish, bound, full of song and spirit, to the mouth of the Columbia, to await the arrival of the Isaac Todd.

Mr. M'Kenzie and M'Tavish came to a halt, and landing, encamped for the night. The voyageurs of either party hailed each other as brothers, and old "comrades," and they mingled together as if united by one common interest, instead of belonging to rival companies, and trading under hostile flags.

In the morning they proceeded on their different ways, in style corresponding to their different fortunes: the one toiling painfully against the stream, the other sweeping down gayly with the Current.

M'Kenzie arrived safely at his deserted post on the Shahaptan, but found, to his chagrin, that his caches had been discovered and rifled by the Indians. Here was a dilemma, for on the stolen goods he had depended to purchase horses of the Indians. He sent out men in all directions to endeavor to discover the thieves, and despatched Mr. Reed to the posts of Messrs. Clarke and David Stuart, with the letters of Mr. M'Dougal.

The resolution announced in these letters, to break up and depart from Astoria, was condemned by both Clarke and Stuart. These two gentlemen had been very successful at their posts, and considered it rash and pusillanimous to abandon, on the first difficulty, an enterprise of such great cost and ample promise. They made no arrangements, therefore, for leaving the country, but acted with a view to the maintenance of their new and prosperous establishments.

The regular time approached, when the partners of the interior -posts were to rendezvous at the mouth of the Wallah-Wallah, on their way to Astoria, with the peltries they had collected. Mr. Clarke accordingly packed all his furs on twenty-eight horses, and, leaving a clerk and four men to take charge of the post, departed on the 25th of May with the residue of his force.

On the 30th, he arrived at the confluence of the Pavion and Lewis rivers, where he had left his barge and canoes, in the guardianship of the old Pierced-nosed chieftain. That dignitary had acquitted himself more faithfully to his charge than Mr. Clarke had expected, and the canoes were found in very tolerable order. Some repairs were necessary, and, while they were making, the party encamped close by the village. Having had repeated and vexatious proofs of the pilfering propensities of this tribe during his former visit, Mr. Clarke ordered that a wary eye should be kept upon them.

He was a tall, good-looking man, and somewhat given to pomp and circumstance, which made him an object of note in the eyes of the wondering savages. He was stately, too, in his appointments, and had a silver goblet or drinking cup, out of which he would drink with a magnificent air, and then lock it up in a large garde vin, which accompanied him in his travels, and stood in his tent. This goblet had originally been sent as a present from Mr. Astor to Mr. M'Kay, the partner who had unfortunately been blown up in the Tonquin. As it reached Astoria after the departure of that gentleman, it had remained in the possession of Mr. Clarke.

A silver goblet was too glittering a prize not to catch the eye of a Pierced-nose. It was like the shining tin case of John Reed. Such a wonder had never been seen in the land before. The Indians talked about it to one another. They marked the care with which it was deposited in the garde vin, like a relic in its shrine, and concluded that it must be a "great medicine." That night Mr. Clarke neglected to lock up his treasure; in the morning the sacred casket was open - the precious relic gone!

Clarke was now outrageous. All the past vexations that he had suffered from this pilfering community rose to mind, and he threatened that, unless the goblet was promptly returned, he would hang the thief, should he eventually discover him. The day passed away, however, without the restoration of the cup. At night sentinels were secretly posted about the camp. With all their vigilance, a Pierced-nose contrived to get into the camp unperceived, and to load himself with booty; it was only on his retreat that he was discovered and taken.

At daybreak the culprit was brought to trial, and promptly convicted. He stood responsible for all the spoliations of the camp, the precious goblet among the number, and Mr. Clarke passed sentence of death upon him.

A gibbet was accordingly constructed of oars; the chief of the village and his people were assembled, and the culprit was produced, with his legs and arms pinioned. Clarke then made a harangue. He reminded the tribe of the benefits he had bestowed upon them during his former visits, and the many thefts and other misdeeds which he had overlooked. The prisoner, especially,

---

had always been peculiarly well treated by the white men, but had repeatedly been guilty of pilfering. He was to be punished for his own misdeeds, and as a warning to his tribe.

The Indians now gathered round Mr. Clarke, and interceded for the culprit. They were willing he should be punished severely, but implored that his life might be spared. The companions, too, of Mr. Clarke, considered the sentence too severe, and advised him to mitigate it; but he was inexorable. He was not naturally a stern or cruel man; but from his boyhood he had lived in the Indian country among Indian traders, and held the life of a savage extremely cheap. He was, moreover, a firm believer in the doctrine of intimidation.

Farnham, a clerk, a tall "Green Mountain boy" from Vermont, who had been robbed of a pistol, acted as executioner. The signal was given, and the poor Pierced-nose resisting, struggling, and screaming, in the most frightful manner, was launched into eternity. The Indians stood round gazing in silence and mute awe, but made no attempt to oppose the execution, nor testified any emotion when it was over. They locked up their feelings within their bosoms until an opportunity should arrive to gratify them with a bloody act of vengeance.

To say nothing of the needless severity of this act, its impolicy was glaringly obvious. Mr. M'Lennan and three men were to return to the post with the horses, their loads having been transferred to the canoes. They would have to pass through a tract of country infested by this tribe, who were all horsemen and hard riders, and might pursue them to take vengeance for the death of their comrade. M'Lennan, however, was a resolute fellow, and made light of all dangers. He and his three men were present at the execution, and set off as soon as life was extinct in the victim; but, to use the words of one of their comrades, "they did not let the grass grow under the heels of their horses, as they clattered out of the Pierced-nose country," and were glad to find themselves in safety at the post.

Mr. Clarke and his party embarked about the same time in their canoes, and early on the following day reached the mouth of the Wallah-Wallah, where they found Messrs. Stuart and M'Kenzie awaiting them; the latter having recovered part of the goods stolen from his cache. Clarke informed them of the signal punishment he had inflicted on the Pierced-nose, evidently expecting to excite their admiration by such a hardy act of justice, performed in the very midst of the Indian country, but was mortified at finding it strongly censured as inhuman, unnecessary, and likely to provoke hostilities.

The parties thus united formed a squadron of two boats and six canoes, with which they performed their voyage in safety down the river, and arrived at Astoria on the 12th of June, bringing with them a valuable stock of peltries.

About ten days previously, the brigade which had been quartered on the banks of the Wollamut, had arrived with numerous packs of beaver, the result of a few months' sojourn on that river. These were the first fruits of the enterprise, gathered by men as yet mere strangers in the land; but they were such as to give substantial grounds for sanguine anticipations of profit, when the coun-

try should be more completely explored, and the trade established.

Washington Irving's Astoria

CHAPTER LIV.

The Partners Displeas'd With M'Dougal.- Equivocal Conduct of That Gentleman.- Partners Agree to Abandon Astoria.- Sale of Goods to M'Tavish.- Arrangements for the Year.- Manifesto Signed by the Partners.- Departure of M'Tavish for the Interior.

THE partners found Mr. M'Dougal in all the bustle of preparation; having about nine days previously announced at the factory, his intention of breaking up the establishment, and fixed upon the 1st of July for the time of departure. Messrs. Stuart and Clarke felt highly displeas'd at his taking so precipitate a step, without waiting for their concurrence, when he must have known that their arrival could not be far distant.

Indeed, the whole conduct of Mr. M'Dougal was such as to awaken strong doubts as to his loyal devotion to the cause. His old sympathies with the Northwest Company seem to have revived. He had received M'Tavish and his party with uncalled for hospitality, as though they were friends and allies, instead of being a party of observation, come to reconnoitre the state of affairs at Astoria, and to await the arrival of a hostile ship. Had they been left to themselves, they would have been starved off for want of provisions, or driven away by the Chinooks, who only wanted a signal from the factory to treat them as intruders and enemies. M'Dougal, on the contrary, had supplied them from the stores of the garrison, and had gained them the favor of the Indians, by treating them as friends.

Having set his mind fixedly on the project of breaking up the establishment at Astoria, in the current year, M'Dougal was sorely disappoint'd at finding that Messrs. Stuart and Clarke had omitted to comply with his request to purchase horses and provisions for the caravan across the mountains. It was now too late to make the necessary preparations in time for traversing the mountains before winter, and the project had to be postponed.

In the meantime, the non-arrival of the annual ship, and the apprehensions entertain'd of the loss of the Beaver and of Mr. Hunt, had their effect upon the minds of Messrs. Stuart and Clarke. They began to listen to the desponding representations of M'Dougal, seconded by M'Kenzie, who inveigh'd against their situation as desperate and forlorn; left to shift for themselves, or perish upon a barbarous coast; neglected by those who sent them there; and threaten'd with dangers of every kind. In this way they were brought to consent to the plan of abandoning the country in the ensuing year.

About this time, M'Tavish apply'd at the factory to purchase a small supply of goods wherewith to trade his way back to his post on the upper waters of the Columbia, having waited in vain for the arrival of the Isaac Todd. His request brought on a consultation among the partners. M'Dougal urg'd that it should be complied with. He furthermore propos'd, that they should give up to M'Tavish, for a proper consideration, the post on the Spokan, and all its dependencies, as they

had not sufficient goods on hand to supply that post themselves, and to keep up a competition with the Northwest Company in the trade with the neighboring Indians. This last representation has since been proved incorrect. By inventories, it appears that their stock in hand for the supply of the interior posts, was superior to that of the Northwest Company; so that they had nothing to fear from competition.

Through the influence of Messrs. M'Dougal and M'Kenzie, this proposition was adopted, and was promptly accepted by M'Tavish. The merchandise sold to him amounted to eight hundred and fifty-eight dollars, to be paid for, in the following spring, in horses, or in any other manner most acceptable to the partners at that period.

This agreement being concluded, the partners formed their plans for the year that they would yet have to pass in the country. Their objects were, chiefly, present subsistence, and the purchase of horses for the contemplated journey, though they were likewise to collect as much peltries as their diminished means would command. Accordingly, it was arranged that David Stuart should return to his former post on the Oakinagan, and Mr. Clarke should make his sojourn among the Flat-heads. John Reed, the sturdy Hibernian, was to undertake the Snake River country, accompanied by Pierre Dorion and Pierre Delaunay, as hunters, and Francis Landry, Jean Baptiste Turcotte, Andre la Chapelle, and Gilles le Clerc, Canadian voyageurs.

Astoria, however, was the post about which they felt the greatest solicitude, and on which they all more or less depended. The maintenance of this in safety throughout the coming year, was, therefore, their grand consideration. Mr. M'Dougal was to continue in command of it, with a party of forty men. They would have to depend chiefly upon the neighboring savages for their subsistence. These, at present, were friendly, but it was to be feared that, when they should discover the exigencies of the post, and its real weakness, they might proceed to hostilities; or, at any rate, might cease to furnish their usual supplies. It was important, therefore, to render the place as independent as possible, of the surrounding tribes for its support; and it was accordingly resolved that M'Kenzie, with four hunters, and eight common men, should winter in the abundant country of Wollamut, from whence they might be enabled to furnish a constant supply of provisions to Astoria.

As there was too great a proportion of clerks for the number of privates in the service, the engagements of three of them, Ross Cox, Ross, and M'Lennan, were surrendered to them, and they immediately enrolled themselves in the service of the Northwest Company; glad, no doubt, to escape from what they considered a sinking ship.

Having made all these arrangements, the four partners, on the first of July, signed a formal manifesto, stating the alarming state of their affairs, from the non-arrival of the annual ship, and the absence and apprehended loss of the Beaver, their want of goods, their despair of receiving any further supply, their ignorance of the coast, and their disappointment as to the interior trade, which they pronounced unequal to the expenses incurred, and incompetent to stand against the powerful opposition of the Northwest Company. And as by the 16th article of the company's

---

agreement, they were authorized to abandon this undertaking, and dissolve the concern, if before the period of five years it should be found unprofitable, they now formally announced their intention to do so on the 1st day of June, of the ensuing year, unless in the interim they should receive the necessary support and supplies from Mr. Astor, or the stockholders, with orders to continue.

This instrument, accompanied by private letters of similar import, was delivered to Mr. M'Tavish, who departed on the 5th of July. He engaged to forward the despatches to Mr. Astor, by the usual winter express sent overland by the Northwest Company.

The manifesto was signed with great reluctance by Messrs. Clarke and D. Stuart, whose experience by no means justified the discouraging account given in it of the internal trade, and who considered the main difficulties of exploring an unknown and savage country, and of ascertaining the best trading and trapping grounds, in a great measure overcome. They were overruled, however, by the urgent instances of M'Dougal and M'Kenzie, who, having resolved upon abandoning the enterprise, were desirous of making as strong a case as possible to excuse their conduct to Mr. Astor and to the world.

CHAPTER LV.

Anxieties of Mr. Astor.- Memorial of the Northwest Company.- Tidings of a British Naval Expedition Against Astoria. - Mr. Astor Applies to Government for Protection.- The Frigate Adams Ordered to be Fitted Out.- Bright News From Astoria.- Sunshine Suddenly Overclouded.

WHILE difficulties and disasters had been gathering about the infant settlement of Astoria, the mind of its projector at New York was a prey to great anxiety. The ship Lark, despatched by him with supplies for the establishment, sailed on the 6th of March, 1813. Within a fortnight afterwards, he received intelligence which justified all his apprehensions of hostility on the part of the British. The Northwest Company had made a second memorial to that government, representing Astoria as an American establishment, stating the vast scope of its contemplated operations, magnifying the strength of its fortifications, and expressing their fears that, unless crushed in the bud, it would effect the downfall of their trade.

Influenced by these representations, the British government ordered the frigate Phoebe to be detached as a convoy for the armed ship, Isaac Todd, which was ready to sail with men and munitions for forming a new establishment. They were to proceed together to the mouth of the Columbia, capture or destroy whatever American fortress they should find there, and plant the British flag on its ruins.

Informed of these movements, Mr. Astor lost no time in addressing a second letter to the secretary of state, communicating this intelligence, and requesting it might be laid before the President; as no notice, however, had been taken of his previous letter, he contented himself with this simple communication, and made no further application for aid.

Awakened now to the danger that menaced the establishment at Astoria, and aware of the importance of protecting this foothold of American commerce and empire on the shores of the Pacific, the government determined to send the frigate Adams, Captain Crane, upon this service. On hearing of this determination, Mr. Astor immediately proceeded to fit out a ship called the Enterprise, to sail in company with the Adams, freighted with additional supplies and reinforcements for Astoria.

About the middle of June, while in the midst of these preparations, Mr. Astor received a letter from Mr. R. Stuart, dated St. Louis, May 1st, confirming the intelligence already received through the public newspapers, of his safe return, and of the arrival of Mr. Hunt and his party at Astoria, and giving the most flattering accounts of the prosperity of the enterprise.

So deep had been the anxiety of Mr. Astor, for the success of this object of his ambition, that this gleam of good news was almost overpowering. "I felt ready," said he, "to fall upon my knees in a transport of gratitude."

At the same time he heard that the Beaver had made good her voyage from New York to the Columbia. This was additional ground of hope for the welfare of the little colony. The post being thus relieved and strengthened, with an American at its head, and a ship of war about to sail for its protection, the prospect for the future seemed full of encouragement, and Mr. Astor proceeded with fresh vigor to fit out his merchant ship.

Unfortunately for Astoria, this bright gleam of sunshine was soon overclouded. just as the Adams had received her complement of men, and the two vessels were ready for sea, news came from Commodore Chauncey, commanding on Lake Ontario, that a reinforcement of seamen was wanted in that quarter. The demand was urgent, the crew of the Adams was immediately transferred to that service, and the ship was laid up.

This was a most ill-timed and discouraging blow, but Mr. Astor would not yet allow himself to pause in his undertaking. He determined to send the Enterprise to sea alone, and let her take the chance of making her unprotected way across the ocean. Just at this time, however, a British force made its appearance off the Hook; and the port of New York was effectually blockaded. To send a ship to sea under these circumstances, would be to expose her to almost certain capture. The Enterprise was, therefore, unloaded and dismantled, and Mr. Astor was obliged to comfort himself with the hope that the Lark might reach Astoria in safety and, that, aided by her supplies, and by the good management of Mr. Hunt and his associates, the little colony might be able to maintain itself until the return of peace.

ria.

WE have hitherto had so much to relate of a gloomy and disastrous nature, that it is with a feeling of momentary relief we turn to something of a more pleasing complexion, and record the first, and indeed only nuptials in high life that took place in the infant settlement of Astoria.

M'Dougal, who appears to have been a man of a thousand projects, and of great, though somewhat irregular ambition, suddenly conceived the idea of seeking the hand of one of the native princesses, a daughter of the one-eyed potentate Comcomly, who held sway over the fishing tribe of the Chinooks, and had long supplied the factory with smelts and sturgeons.

Some accounts give rather a romantic origin to this affair, tracing it to the stormy night when M'Dougal, in the course of an exploring expedition, was driven by stress of weather to seek shelter in the royal abode of Comcomly. Then and there he was first struck with the charms of the piscatory princess, as she exerted herself to entertain her father's guest.

The "journal of Astoria," however, which was kept under his own eye, records this union as a high state alliance, and great stroke of policy. The factory had to depend, in a great measure, on the Chinooks for provisions. They were at present friendly, but it was to be feared they would prove otherwise, should they discover the weakness and the exigencies of the post, and the intention to leave the country. This alliance, therefore, would infallibly rivet Comcomly to the interests of the Astorians, and with him the powerful tribe of the Chinooks. Be this as it may, and it is hard to fathom the real policy of governors and princes, M'Dougal despatched two of the clerks as ambassadors extraordinary, to wait upon the one-eyed chieftain, and make overtures for the hand of his daughter.

The Chinooks, though not a very refined nation, have notions of matrimonial arrangements that would not disgrace the most refined sticklers for settlements and pin-money. The suitor repairs not to the bower of his mistress, but to her father's lodge, and throws down a present at his feet. His wishes are then disclosed by some discreet friend employed by him for the purpose. If the suitor and his present find favor in the eyes of the father, he breaks the matter to his daughter, and inquires into the state of her inclinations. Should her answer be favorable, the suit is accepted and the lover has to make further presents to the father, of horses, canoes, and other valuables, according to the beauty and merits of the bride; looking forward to a return in kind whenever they shall go to housekeeping.

We have more than once had occasion to speak of the shrewdness, of Comcomly; but never was it exerted more adroitly than on this occasion. He was a great friend of M'Dougal, and pleased with the idea of having so distinguished a son-in-law; but so favorable an opportunity of benefiting his own fortune was not likely to occur a second time, and he determined to make the most of it. Accordingly, the negotiation was protracted with true diplomatic skill. Conference after conference was held with the two ambassadors. Comcomly was extravagant in his terms; rating the charms of his daughter at the highest price, and indeed she is represented as having one of the flattest and

most aristocratical heads in the tribe. At length the preliminaries were all happily adjusted. On the 20th of July, early in the afternoon, a squadron of canoes crossed over from the village of the Chinooks, bearing the royal family of Comcomly, and all his court.

That worthy sachem landed in princely state, arrayed in a bright blue blanket and red breech clout, with an extra quantity of paint and feathers, attended by a train of half-naked warriors and nobles. A horse was in waiting to receive the princess, who was mounted behind one of the clerks, and thus conveyed, coy but compliant, to the fortress. Here she was received with devout, though decent joy, by her expecting bridegroom.

Her bridal adornments, it is true, at first caused some little dismay, having painted and anointed herself for the occasion according to the Chinook toilet; by dint, however, of copious ablutions, she was freed from all adventitious tint and fragrance, and entered into the nuptial state, the cleanest princess that had ever been known, of the somewhat unctuous tribe of the Chinooks.

From that time forward, Comcomly was a daily visitor at the fort, and was admitted into the most intimate councils of his son-in-law. He took an interest in everything that was going forward, but was particularly frequent in his visits to the blacksmith's shop; tasking the labors of the artificer in iron for every state, insomuch that the necessary business of the factory was often postponed to attend to his requisitions.

The honey-moon had scarce passed away, and M'Dougal was seated with his bride in the fortress of Astoria, when, about noon of the 20th of August, Gassacop, the son of Comcomly, hurried into his presence with great agitation, and announced a ship at the mouth of the river. The news produced a vast sensation. Was it a ship of peace or war? Was it American or British? Was it the Beaver or the Isaac Todd? M'Dougal hurried to the waterside, threw himself into a boat, and ordered the hands to pull with all speed for the mouth of the harbor. Those in the fort remained watching the entrance of the river, anxious to know whether they were to prepare for greeting a friend or fighting an enemy. At length the ship was descried crossing the bar, and bending her course towards Astoria. Every gaze was fixed upon her in silent scrutiny, until the American flag was recognized. A general shout was the first expression of joy, and next a salutation was thundered from the cannon of the fort.

The vessel came to anchor on the opposite side of the river, and returned the salute. The boat of Mr. M'Dougal went on board, and was seen returning late in the afternoon. The Astorians watched her with straining eyes, to discover who were on board, but the sun went down, and the evening closed in, before she was sufficiently near. At length she reached the land, and Mr. Hunt stepped on shore. He was hailed as one risen from the dead, and his return was a signal for merriment almost equal to that which prevailed at the nuptials of M'Dougal.

We must now explain the cause of this gentleman's long absence, which had given rise to such gloomy and dispiriting surmises.

CHAPTER LVII.

Voyage of the Beaver to New Archangel.- A Russian Governor.-Roystering Rule.- The Tyranny of the Table- Hard Drinking Bargainings.- Voyage to Kamtschatka.- Seal Catching Establishment at St. Paul's.- Storms at Sea.- Mr. Hunt Left at the Sandwich Islands. -Transactions of the Beaver at Canton.-Return of Mr. Hunt to Astoria.

IT will be recollected that the destination of the Boston, when she sailed from Astoria on the 4th of August in 1812, was to proceed northwardly along the coast to Sheetka, or New Archangel, there to dispose of that part of her cargo intended for the supply of the Russian establishment at that place, and then to return to Astoria, where it was expected she would arrive in October.

New Archangel is situated in Norfolk Sound, lat. 57deg 2' N., long. 135deg 50' W. It was the head-quarters of the different colonies of the Russian Fur Company, and the common rendezvous of the American vessels trading along the coast.

The Beaver met with nothing worthy of particular mention in her voyage, and arrived at New Archangel on the 19th of August. The place at that time was the residence of Count Baranoff, the governor of the different colonies; a rough, rugged, hospitable, hard-drinking old Russian; somewhat of a soldier; somewhat of a trader; above all, a boon companion of the old roystering school, with a strong cross of the bear.

Mr. Hunt found this hyperborean veteran ensconced in a fort which crested the whole of a rocky promontory. It mounted one hundred guns, large and small, and was impregnable to Indian attack, unaided by artillery. Here the old governor lorded it over sixty Russians, who formed the corps of the trading establishment, besides an indefinite number of Indian hunters of the Kodiak tribe, who were continually coming and going, or lounging and loitering about the fort like so many hounds round a sportsman's hunting quarters. Though a loose liver among his guests, the governor was a strict disciplinarian among his men; keeping them in perfect subjection, and having seven on guard night and day.

Besides those immediate serfs and dependents just mentioned, the old Russian potentate exerted a considerable sway over a numerous and irregular class of maritime traders, who looked to him for aid and munitions, and through whom he may be said to have, in some degree, extended his power along the whole northwest coast. These were American captains of vessels engaged in a particular department of the trade. One of these captains would come, in a manner, empty-handed to New Archangel. Here his ship would be furnished with about fifty canoes and a hundred Kodiak hunters, and fitted out with provisions, and everything necessary for hunting the sea-otter on the coast of California, where the Russians have another establishment. The ship would ply along the California coast from place to place, dropping parties of otter hunters in their canoes, furnishing them only with water, and leaving them to depend upon their own dexterity for a maintenance. When a sufficient cargo was collected, she would gather up her canoes and hunters, and return with them to Archangel; where the captain would render in the returns of his voyage,

and receive one half of the skins for his share.

Over these coasting captains, as we have hinted, the veteran governor exerted some sort of sway, but it was of a peculiar and characteristic kind; it was the tyranny of the table. They were obliged to join him in his "prosnics" or carousals, and to drink "potations pottle deep." His carousals, too, were not of the most quiet kind, nor were his potations as mild as nectar. "He is continually," said Mr. Hunt, "giving entertainments by way of parade, and if you do not drink raw rum, and boiling punch as strong as sulphur, he will insult you as soon as he gets drunk, which is very shortly after sitting down to table."

As to any "temperance captain" who stood fast to his faith, and refused to give up his sobriety, he might go elsewhere for a market, for he stood no chance with the governor. Rarely, however, did any cold-water caitiff of the kind darken the doors of old Baranoff; the coasting captains knew too well his humor and their own interests; they joined in his revels, they drank, and sang, and whooped, and hiccuped, until they all got "half seas over," and then affairs went on swimmingly.

An awful warning to all "flinchers" occurred shortly before Mr. Hunt's arrival. A young naval officer had recently been sent out by the emperor to take command of one of the company's vessels. The governor, as usual, had him at his "prosnics," and plied him with fiery potations. The young man stood on the defensive until the old count's ire was completely kindled; he carried his point, and made the greenhorn tipsy, willy nilly. In proportion as they grew fuddled they grew noisy, they quarrelled in their cups; the youngster paid old Baranoff in his own coin by rating him soundly; in reward for which, when sober, he was taken the rounds of four pickets, and received seventy-nine lashes, taled out with Russian punctuality of punishment.

Such was the old grizzled bear with whom Mr. Hunt had to do his business. How he managed to cope with his humor; whether he pledged himself in raw rum and blazing punch, and "clinked the can" with him as they made their bargains, does not appear upon record; we must infer, however, from his general observations on the absolute sway of this hard-drinking potentate, that he had to conform to the customs of his court, and that their business transactions presented a maudlin mixture of punch and peltry.

The greatest annoyance to Mr. Hunt, however, was the delay to which he was subjected, in disposing of the cargo of the ship, and getting the requisite returns. With all the governor's devotions to the bottle, he never obfuscated his faculties sufficiently to lose sight of his interest, and is represented by Mr. Hunt as keen, not to say crafty, at a bargain, as the most arrant waterdrinker. A long time was expended negotiating with him, and by the time the bargain was concluded, the month of October had arrived. To add to the delay he was to be paid for his cargo in seal skins. Now it so happened that there was none of this kind of peltry at the fort of old Baranoff. It was necessary, therefore, for Mr. Hunt to proceed to a seal-catching establishment, which the Russian company had at the island of St. Paul, in the Sea of Kamtschatka. He accordingly set sail on the 4th of October, after having spent forty-five days at New Archangel boosing and bargaining with its roystering commander, and right glad was he to escape from the clutches of "this old man of the sea."

The Beaver arrived at St. Paul's on the 31st of October; by which time, according to arrangement, he ought to have been back at Astoria. The island of St. Paul is in latitude 57deg N., longitude 170deg or 171deg W. Its shores, in certain places, and at certain seasons, are covered with seals, while others are playing about in the water. Of these, the Russians take only the small ones, from seven to ten months old, and carefully select the males, giving the females their freedom, that the breed may not be diminished. The islanders, however, kill the large ones for provisions, and for skins wherewith to cover their canoes. They drive them from the shore over the rocks, until within a short distance of their habitations, where they kill them. By this means, they save themselves the trouble of carrying the skins and have the flesh at hand. This is thrown in heaps, and when the season for skinning is over, they take out the entrails and make one heap of the blubber. This, with drift-wood, serves for fuel, for the island is entirely destitute of trees. They make another heap of the flesh, which, with the eggs of sea-fowls, preserved in oil, an occasional sea-lion, a few ducks in winter, and some wild roots, compose their food.

Mr. Hunt found several Russians at the island, and one hundred hunters, natives of Oonalaska, with their families. They lived in cabins that looked like canoes; being, for the most part formed of the jaw-bone of a whale, put up as rafters, across which were laid pieces of driftwood covered over with long grass, the skins of large sea animals, and earth; so as to be quite comfortable, in despite of the rigors of the climate; though we are told they had as ancient and fish-like an odor, "as had the quarters of Jonah, when he lodged within the whale."

In one of these odoriferous mansions, Mr. Hunt occasionally took up his abode, that he might be at hand to hasten the loading of the ship. The operation, however, was somewhat slow, for it was necessary to overhaul and inspect every pack to prevent imposition, and the peltries had then to be conveyed in large boats, made of skins, to the ship, which was some little distance from the shore, standing off and on.

One night, while Mr. Hunt was on shore, with some others of the crew, there arose a terrible gale. When the day broke, the ship was not to be seen. He watched for her with anxious eyes until night, but in vain. Day after day of boisterous storms, and howling wintry weather, were passed in watchfulness and solicitude. Nothing was to be seen but a dark and angry sea, and a scowling northern sky; and at night he retired within the jaws of the whale, and nestled disconsolately among seal skins.

At length, on the 13th of November, the Beaver made her appearance; much the worse for the stormy conflicts which she had sustained in those hyperborean seas. She had been obliged to carry a press of sail in heavy gales to be able to hold her ground, and had consequently sustained great damage in her canvas and rigging. Mr. Hunt lost no time in hurrying the residue of the cargo on board of her; then, bidding adieu to his seal-fishing friends, and his whalebone habitation, he put forth once more to sea.

He was now for making the best of his way to Astoria, and fortunate would it have been for the

interests of that place, and the interests of Mr. Astor, had he done so; but, unluckily, a perplexing question rose in his mind. The sails and rigging of the *Beaver* had been much rent and shattered in the late storm; would she be able to stand the hard gales to be expected in making Columbia River at this season? Was it prudent, also, at this boisterous time of the year to risk the valuable cargo which she now had on board, by crossing and recrossing the dangerous bar of that river? These doubts were probably suggested or enforced by Captain Sowle, who, it has already been seen, was an over-cautious, or rather, a timid seaman, and they may have had some weight with Mr. Hunt; but there were other considerations, which more strongly swayed his mind. The lateness of the season, and the unforeseen delays the ship had encountered at New Archangel, and by being obliged to proceed to St. Paul's, had put her so much back in her calculated time, that there was a risk of her arriving so late at Canton, as to come to a bad market, both for the sale of her peltries, and the purchase of a return cargo. He considered it to the interest of the company, therefore, that he should proceed at once to the Sandwich Islands; there wait the arrival of the annual vessel from New York, take passage in her to Astoria, and suffer the *Beaver* to continue on to Canton.

On the other hand, he was urged to the other course by his engagements; by the plan of the voyage marked out for the *Beaver*, by Mr. Astor; by his inclination, and the possibility that the establishment might need his presence, and by the recollection that there must already be a large amount of peltries collected at Astoria, and waiting for the return of the *Beaver*, to convey them to market.

These conflicting questions perplexed and agitated his mind and gave rise to much anxious reflection, for he was a conscientious man that seems ever to have aimed at a faithful discharge of his duties, and to have had the interests of his employers earnestly at heart. His decision in the present instance was injudicious, and proved unfortunate. It was, to bear away for the Sandwich Islands. He persuaded himself that it was a matter of necessity, and that the distressed condition of the ship left him no other alternative; but we rather suspect he was so persuaded by the representations of the timid captain. They accordingly stood for the Sandwich Islands, arrived at Woahoo, where the ship underwent the necessary repairs, and again put to sea on the 1st of January, 1813; leaving Mr. Hunt on the island.

We will follow the *Beaver* to Canton, as her fortunes, in some measure, exemplify the evil of commanders of ships acting contrary to orders; and as they form a part of the tissue of cross purposes that marred the great commercial enterprise we have undertaken to record.

The *Beaver* arrived safe at Canton, where Captain Sowle found the letter of Mr. Astor, giving him information of the war and directing him to convey the intelligence to Astoria. He wrote a reply, dictated either by timidity or obstinacy, in which he declined complying with the orders of Mr. Astor, but said he would wait for the return of peace, and then come home. The other proceedings of Captain Sowle were equally wrongheaded and unlucky. He was offered one hundred and fifty thousand dollars for the fur he had taken on board at St. Paul's. The goods for which it had been procured cost but twenty-five thousand dollars in New York. Had he accepted this offer,

and re-invested the amount in nankeens, which at that time, in consequence of the interruption to commerce by the war, were at two thirds of their usual price, the whole would have brought three hundred thousand dollars in New York. It is true, the war would have rendered it unsafe to attempt the homeward voyage, but he might have put the goods in store at Canton, until after the peace, and have sailed without risk of capture to Astoria; bringing to the partners at that place tidings of the great profits realized on the outward cargo, and the still greater to be expected from the returns. The news of such a brilliant commencement to their undertaking would have counterbalanced the gloomy tidings of the war; it would have infused new spirit into them all, and given them courage and constancy to persevere in the enterprise. Captain Sowle, however, refused the offer of one hundred and fifty thousand dollars, and stood wavering and chaffering for higher terms. The furs began to fall in value; this only increased his irresolution; they sunk so much that he feared to sell at all; he borrowed money on Mr. Astor's account at an interest of eighteen per cent, and laid up his ship to await the return of peace.

In the meanwhile, Mr. Hunt soon saw reason to repent the resolution he had adopted in altering the destination of the ship. His stay at the Sandwich Islands was prolonged far beyond expectation. He looked in vain for the annual ship in the spring. Month after month passed by, and still she did not make her appearance. He, too, proved the danger of departing from orders. Had he returned from St. Paul's to Astoria, all the anxiety and despondency about his fate, and about the whole course of the undertaking, would have been obviated. The Beaver would have received the furs collected at the factory and taken them to Canton, and great gains, instead of great losses, would have been the result. The greatest blunder, however, was that committed by Captain Sowle.

At length, about the 20th of June, the ship Albatross, Captain Smith, arrived from China, and brought the first tidings of the war to the Sandwich Islands. Mr. Hunt was no longer in doubt and perplexity as to the reason of the non-appearance of the annual ship. His first thoughts were for the welfare of Astoria, and, concluding that the inhabitants would probably be in want of provisions, he chartered the Albatross for two thousand dollars, to land him, with some supplies, at the mouth of the Columbia, where he arrived, as we have seen, on the 20th of August, after a year's seafaring that might have furnished a chapter in the wanderings of Sinbad.

Washington Irving's Astoria

#### CHAPTER LVIII.

Arrangements Among the Partners- Mr. Hunt Sails in the Albatross. - Arrives at the Marquesas- News of the Frigate Phoebe.- Mr. Hunt Proceeds to the Sandwich Islands.- Voyage of the Lark.- Her Shipwreck.- Transactions With the Natives of the Sandwich Islands - Conduct of Tamaah-maah.

MR. HUNT was overwhelmed with surprise when he learnt the resolution taken by the partners to abandon Astoria. He soon found, however, that matters had gone too far, and the minds of his colleagues had become too firmly bent upon the measure, to render any opposition of avail. He was beset, too, with the same disparaging accounts of the interior trade, and of the whole concerns and prospects of the company that had been rendered to Mr. Astor. His own experience had

been full of perplexities and discouragements. He had a conscientious anxiety for the interests of Mr. Astor, and, not comprehending the extended views of that gentleman, and his habit of operating with great amounts, he had from the first been daunted by the enormous expenses required, and had become disheartened by the subsequent losses sustained, which appeared to him to be ruinous in their magnitude. By degrees, therefore, he was brought to acquiesce in the step taken by his colleagues, as perhaps advisable in the exigencies of the case; his only care was to wind up the business with as little further loss as possible to Mr. Astor.

A large stock of valuable furs was collected at the factory, which it was necessary to get to a market. There were twenty-five Sandwich Islanders also in the employ of the company, whom they were bound, by express agreement, to restore to their native country. For these purposes a ship was necessary.

The Albatross was bound to the Marquesas, and thence to the Sandwich Islands. It was resolved that Mr. Hunt should sail in her in quest of a vessel, and should return, if possible, by the 1st of January, bringing with him a supply of provisions. Should anything occur, however, to prevent his return, an arrangement was to be proposed to Mr. M'Tavish, to transfer such of the men as were so disposed, from the service of the American Fur Company into that of the Northwest, the latter becoming responsible for the wages due them, on receiving an equivalent in goods from the storehouse of the factory. As a means of facilitating the despatch of business, Mr. M'Dougal proposed, that in case Mr. Hunt should not return, the whole arrangement with Mr. M'Tavish should be left solely to him. This was assented to; the contingency being considered possible, but not probable.

It is proper to note, that, on the first announcement by Mr. M'Dougal of his intention to break up the establishment, three of the clerks, British subjects, had, with his consent, passed into the service of the Northwest Company, and departed with Mr. M'Tavish for his post in the interior.

Having arranged all these matters during a sojourn of six days at Astoria, Mr. Hunt set sail in the Albatross on the 26th of August, and arrived without accident at the Marquesas. He had not been there long, when Porter arrived in the frigate Essex, bringing in a number of stout London whalers as prizes, having made a sweeping cruise in the Pacific. From Commodore Porter he received the alarming intelligence that the British frigate Phoebe, with a store-ship mounted with battering pieces, calculated to attack forts, had arrived at Rio Janeiro, where she had been joined by the sloops of war Cherub and Raccoon, and that they had all sailed in company on the 6th of July for the Pacific, bound, as it was supposed, to Columbia River.

Here, then, was the death-warrant of unfortunate Astoria! The anxious mind of Mr. Hunt was in greater perplexity than ever. He had been eager to extricate the property of Mr. Astor from a failing concern with as little loss as possible; there was now danger that the whole would be swallowed up. How was it to be snatched from the gulf? It was impossible to charter a ship for the purpose, now that a British squadron was on its way to the river. He applied to purchase one of the whale ships brought in by Commodore Porter. The commodore demanded twenty-five thousand dollars for her. The price appeared exorbitant, and no bargain could be made. Mr. Hunt

then urged the commodore to fit out one of his prizes, and send her to Astoria, to bring off the property and part of the people, but he declined, "from want of authority." He assured Mr. Hunt, however, that he would endeavor to fall in with the enemy, or should he hear of their having certainly gone to the Columbia, he would either follow or anticipate them, should his circumstances warrant such a step.

In this tantalizing state of suspense, Mr. Hunt was detained at the Marquesas until November 23d, when he proceeded in the Albatross to the Sandwich Islands. He still cherished a faint hope that, notwithstanding the war, and all other discouraging circumstances, the annual ship might have been sent by Mr. Astor, and might have touched at the islands, and proceeded to the Columbia. He knew the pride and interest taken by that gentleman in his great enterprise, and that he would not be deterred by dangers and difficulties from prosecuting it; much less would he leave the infant establishment without succor and support in the time of trouble. In this, we have seen, he did but justice to Mr. Astor; and we must now turn to notice the cause of the non-arrival of the vessel which he had despatched with reinforcements and supplies. Her voyage forms another chapter of accidents in this eventful story.

The Lark sailed from New York on the 6th of March, 1813, and proceeded prosperously on her voyage, until within a few degrees of the Sandwich Islands. Here a gale sprang up that soon blew with tremendous violence. The Lark was a staunch and noble ship, and for a time buffeted bravely with the storm. Unluckily, however, she "broached to," and was struck by a heavy sea, that hove her on her beam-ends. The helm, too, was knocked to leeward, all command of the vessel was lost, and another mountain wave completely overset her. Orders were given to cut away the masts. In the hurry and confusion, the boats also were unfortunately cut adrift. The wreck then righted, but was a mere hulk, full of water, with a heavy sea washing over it, and all the hatches off. On mustering the crew, one man was missing, who was discovered below in the forecabin, drowned.

In cutting away the masts, it had been utterly impossible to observe the necessary precaution of commencing with the lee rigging, that being, from the position of the ship, completely under water. The masts and spars, therefore, being linked to the wreck by the shrouds and the rigging, remained alongside for four days. During all this time the ship lay rolling in the trough of the sea, the heavy surges breaking over her, and the spars heaving and banging to and fro, bruising the half-drowned sailors that clung to the bowsprit and the stumps of the masts. The sufferings of these poor fellows were intolerable. They stood to their waists in water, in imminent peril of being washed off by every surge. In this position they dared not sleep, lest they should let go their hold and be swept away. The only dry place on the wreck was the bowsprit. Here they took turns to be tied on, for half an hour at a time, and in this way gained short snatches of sleep.

On the 14th, the first mate died at his post, and was swept off by the surges. On the 17th, two seamen, faint and exhausted, were washed overboard. The next wave threw their bodies back upon the deck, where they remained, swashing backward and forward, ghastly objects to the almost perishing survivors. Mr. Ogden, the supercargo, who was at the bowsprit, called to the men nearest to the bodies, to fasten them to the wreck; as a last horrible resource in case of being driven to

extremity by famine!

On the 17th the gale gradually subsided, and the sea became calm. The sailors now crawled feebly about the wreck, and began to relieve it from the main incumbrances. The spars were cleared away, the anchors and guns heaved overboard; the sprit-sail yard was rigged for a jury-mast, and a mizzen topsail set upon it. A sort of stage was made of a few broken spars, on which the crew were raised above the surface of the water, so as to be enabled to keep themselves dry, and to sleep comfortably. Still their sufferings from hunger and thirst were great; but there was a Sandwich Islander on board, an expert swimmer, who found his way into the cabin, and occasionally brought up a few bottles of wine and porter, and at length got into the rum, and secured a quarter cask of wine. A little raw pork was likewise procured, and dealt out with a sparing hand. The horrors of their situation were increased by the sight of numerous sharks prowling about the wreck, as if waiting for their prey. On the 24th, the cook, a black man, died, and was cast into the sea, when he was instantly seized on by these ravenous monsters.

They had been several days making slow headway under their scanty sail, when, on the 25th, they came in sight of land. It was about fifteen leagues distant, and they remained two or three days drifting along in sight of it. On the 28th, they descried, to their great transport, a canoe approaching, managed by natives. They came alongside, and brought a most welcome supply of potatoes. They informed them that the land they had made was one of the Sandwich Islands. The second mate and one of the seamen went on shore in the canoe for water and provisions, and to procure aid from the islanders, in towing the wreck into a harbor.

Neither of the men returned, nor was any assistance sent from shore. The next day, ten or twelve canoes came alongside, but roamed round the wreck like so many sharks, and would render no aid in towing her to land.

The sea continued to break over the vessel with such violence, that it was impossible to stand at the helm without the assistance of lashings. The crew were now so worn down by famine and thirst, that the captain saw it would be impossible for them to withstand the breaking of the sea, when the ship should ground; he deemed the only chance for their lives, therefore, was to get to land in the canoes, and stand ready to receive and protect the wreck when she should drift ashore. Accordingly, they all got safe to land, but had scarcely touched the beach when they were surrounded by the natives, who stripped them almost naked. The name of this inhospitable island was Tahoorowa.

In the course of the night, the wreck came drifting to the strand, with the surf thundering around her, and shortly afterwards bilged. On the following morning, numerous casks of provisions floated on shore. The natives staved them for the sake of the iron hoops, but would not allow the crew to help themselves to the contents, or to go on board of the wreck.

As the crew were in want of everything, and as it might be a long time before any opportunity occurred for them to get away from these islands, Mr. Ogden, as soon as he could get a chance,

made his way to the island of Owyhee, and endeavored to make some arrangement with the king for the relief of his companions in misfortune.

The illustrious Tamaahmaah, as we have shown on a former occasion, was a shrewd bargainer, and in the present instance proved himself an experienced wrecker. His negotiations with M'Dougal, and the other "Eris of the great American Fur Company," had but little effect on present circumstances, and he proceeded to avail himself of their misfortunes. He agreed to furnish the crew with provisions during their stay in his territories, and to return to them all their clothing that could be found, but he stipulated that the wreck should be abandoned to him as a waif cast by fortune on his shores. With these conditions Mr. Ogden was fain to comply. Upon this the great Tamaahmaah deputed his favorite, John Young, the tarpaulin governor of Owyhee, to proceed with a number of royal guards, and take possession of the wreck on behalf of the crown. This was done accordingly, and the property and crew were removed to Owyhee. The royal bounty appears to have been but scanty in its dispensations. The crew fared but meagerly; though, on reading the journal of the voyage, it is singular to find them, after all the hardships they had suffered, so sensitive about petty inconveniences, as to exclaim against the king as a "savage monster," for refusing them a "pot to cook in," and denying Mr. Ogden the use of a knife and fork which had been saved from the wreck.

Such was the unfortunate catastrophe of the Lark; had she reached her destination in safety, affairs at Astoria might have taken a different course. A strange fatality seems to have attended all the expeditions by sea, nor were those by land much less disastrous.

Captain Northrop was still at the Sandwich Islands, on December 20th, when Mr. Hunt arrived. The latter immediately purchased, for ten thousand dollars, a brig called the Pedler, and put Captain Northrop in command of her. They set sail for Astoria on the 22d January, intending to remove the property from thence as speedily as possible to the Russian settlements on the northwest coast, to prevent it from falling into the hands of the British. Such were the orders of Mr. Astor, sent out by the Lark.

We will now leave Mr. Hunt on his voyage, and return to see what has taken place at Astoria during his absence.

Washington Irving's Astoria  
CHAPTER LIX.

Arrival of M'Tavish at Astoria.- Conduct of His Followers.- Negotiations of M'Dougal and M'Tavish. - Bargain for the Transfer of Astoria- Doubts Entertained of the Loyalty of M'Dougal.

ON the 2d of October, about five weeks after Mr. Hunt had sailed in the Albatross from Astoria, Mr. M'Kenzie set off with two canoes, and twelve men, for the posts of Messrs. Stuart and Clarke, to appraise them of the new arrangements determined upon in the recent conference of the partners at the factory.

He had not ascended the river a hundred miles, when he met a squadron of ten canoes, sweeping merrily down under British colors, the Canadian oarsmen, as usual, in full song.

It was an armament fitted out by M'Tavish, who had with him Mr. J. Stuart, another partner of the Northwest Company, together with some clerks, and sixty-eight men - seventy-five souls in all. They had heard of the frigate Phoebe and the Isaac Todd being on the high seas, and were on their way down to await their arrival. In one of the canoes Mr. Clarke came as a passenger, the alarming intelligence having brought him down from his post on the Spokan. Mr. M'Kenzie immediately determined to return with him to Astoria, and, veering about, the two parties encamped together for the night. The leaders, of course, observed a due decorum, but some of the subalterns could not restrain their chuckling exultation, boasting that they would soon plant the British standard on the walls of Astoria, and drive the Americans out of the country.

In the course of the evening, Mr. M'Kenzie had a secret conference with Mr. Clarke, in which they agreed to set off privately before daylight, and get down in time to appraise M'Dougal of the approach of these Northwesters. The latter, however, were completely on the alert; just as M'Kenzie's canoes were about to push off, they were joined by a couple from the Northwest squadron, in which was M'Tavish, with two clerks, and eleven men. With these, he intended to push forward and make arrangements, leaving the rest of the convoy, in which was a large quantity of furs, to await his orders.

The two parties arrived at Astoria on the 7th of October. The Northwesters encamped under the guns of the fort, and displayed the British colors. The young men in the fort, natives of the United States, were on the point of hoisting the American flag, but were forbidden by Mr. M'Dougal. They were astonished at such a prohibition, and were exceedingly galled by the tone and manner assumed by the clerks and retainers of the Northwest Company, who ruffled about in that swelling and braggart style which grows up among these heroes of the wilderness; they, in fact, considered themselves lords of the ascendant and regarded the hampered and harassed Astorians as a conquered people.

On the following day M'Dougal convened the clerks, and read to them an extract from a letter from his uncle, Mr. Angus Shaw, one of the principal partners of the Northwest Company, announcing the coming of the Phoebe and Isaac Todd, "to take and destroy everything American on the northwest coast."

This intelligence was received without dismay by such of the clerks as were natives of the United States. They had felt indignant at seeing their national flag struck by a Canadian commander, and the British flag flowed, as it were, in their faces. They had been stung to the quick, also, by the vaunting airs assumed by the Northwesters. In this mood of mind, they would willingly have nailed their colors to the staff, and defied the frigate. She could not come within many miles of the fort, they observed, and any boats she might send could be destroyed by their cannon.

There were cooler and more calculating spirits, however, who had the control of affairs, and

felt nothing of the patriotic pride and indignation of these youths. The extract of the letter had, apparently, been read by M'Dougal, merely to prepare the way for a preconcerted stroke of management. On the same day Mr. M'Tavish proposed to purchase the whole stock of goods and furs belonging to the company, both at Astoria and in the interior, at cost and charges. Mr. M'Dougal undertook to comply; assuming the whole management of the negotiation in virtue of the power vested in him, in case of the non-arrival of Mr. Hunt. That power, however, was limited and specific, and did not extend to an operation of this nature and extent; no objection, however, was made to his assumption, and he and M'Tavish soon made a preliminary arrangement, perfectly satisfactory to the latter.

Mr. Stuart, and the reserve party of Northwesters, arrived shortly afterwards, and encamped with M'Tavish. The former exclaimed loudly against the terms of the arrangement, and insisted upon a reduction of the prices. New negotiations had now to be entered into. The demands of the Northwesters were made in a peremptory tone, and they seemed disposed to dictate like conquerors. The Americans looked on with indignation and impatience. They considered M'Dougal as acting, if not a perfidious, certainly a craven part. He was continually repairing to the camp to negotiate, instead of keeping within his walls and receiving overtures in his fortress. His case, they observed, was not so desperate as to excuse such crouching. He might, in fact, hold out for his own terms. The Northwest party had lost their ammunition; they had no goods to trade with the natives for provisions; and they were so destitute that M'Dougal had absolutely to feed them, while he negotiated with them. He, on the contrary, was well lodged and victualled; had sixty men, with arms, ammunition, boats, and everything requisite either for defense or retreat. The party, beneath the guns of his fort, were at his mercy; should an enemy appear in the offing, he could pack up the most valuable part of the property and retire to some place of concealment, or make off for the interior.

These considerations, however, had no weight with Mr. M'Dougal, or were overruled by other motives. The terms of sale were lowered by him to the standard fixed by Mr. Stuart, and an agreement executed on the 16th of October, by which the furs and merchandise of all kinds in the country, belonging to Mr. Astor, passed into the possession of the Northwest Company at about a third of their value. \* A safe passage through the Northwest posts was guaranteed to such as did not choose to enter into the service of that Company, and the amount of wages due to them was to be deducted from the price paid for Astoria.

The conduct and motives of Mr. M'Dougal, throughout the whole of this proceeding, have been strongly questioned by the other partners. He has been accused of availing himself of a wrong construction of powers vested in him at his own request, and of sacrificing the interests of Mr. Astor to the Northwest Company, under the promise or hope of advantage to himself.

He always insisted, however, that he made the best bargain for Mr. Astor that circumstances would permit; the frigate being hourly expected, in which case the whole property of that gentleman would be liable to capture. That the return of Mr. Hunt was problematical; the frigate intending to cruise along the coast for two years, and clear it of all American vessels. He moreover

averred, and M'Tavish corroborated his averment by certificate, that he proposed an arrangement to that gentleman, by which the furs were to be sent to Canton, and sold there at Mr. Astor's risk, and for his account; but the proposition was not acceded to.

Notwithstanding all his representations, several of the persons present at the transaction, and acquainted with the whole course of the affair, and among the number Mr. M'Kenzie himself, his occasional coadjutor, remained firm in the belief that he had acted a hollow part. Neither did he succeed in exculpating himself to Mr. Astor; that gentleman declaring, in a letter written some time afterwards, to Mr. Hunt, that he considered the property virtually given away. "Had our place and our property," he adds, "been fairly captured, I should have preferred it; I should not feel as if I were disgraced."

All these may be unmerited suspicions; but it certainly is a circumstance strongly corroborative of them, that Mr. M'Dougal, shortly after concluding this agreement, became a member of the Northwest Company, and received a share productive of a handsome income.

\* Not quite \$40,000 were allowed for furs worth upwards of \$100,000. Beaver was valued at two dollars per skin, though worth five dollars. Land otter at fifty cents, though worth five dollars. Sea-otter at twelve dollars, worth from forty-five to sixty dollars; and for several kinds of furs nothing was allowed. Moreover, the goods and merchandise for the Indian trade ought to have brought three times the amount for which they were sold.

The following estimate has been made of the articles on hand, and the prices:

17,705 lbs. beaver parchment, valued at \$2.00 worth \$5.00

465 old coat beaver, valued at 1.66 worth 3.50

907 land otter, valued at .50 worth 5.00

68 sea-otter, valued at 12.00 worth 45 to 60.00

30 sea-otter, valued at 5.00 worth 25.00

Nothing was allowed for

179 mink skins, worth each .40

22 raccoon, worth each .40

28 lynx, worth each 2.00

18 fox, worth each 1.00

106 fox, worth each 1.50

71 black bear, worth each 4.00

16 grizzly bear, worth each 10.00

Washington Irving's Astoria

CHAPTER LX.

Arrival of a Strange Sail.- Agitation at Astoria.- Warlike Offer of Comcomly. - Astoria Taken Possession of by the British. - Indignation of Comcomly at the Conduct of His Son-in-Law.

ON the morning of the 30th of November, a sail was descried doubling Cape Disappointment. It

came to anchor in Baker's Bay, and proved to be a ship of war. Of what nation? was now the anxious inquiry. If English, why did it come alone? where was the merchant vessel that was to have accompanied it? If American, what was to become of the newly acquired possession of the Northwest Company?

In this dilemma, M'Tavish, in all haste, loaded two barges with all the packages of furs bearing the mark of the Northwest Company, and made off for Tongue Point, three miles up the river. There he was to await a preconcerted signal from M'Dougal, on ascertaining the character of the ship. If it should prove American, M'Tavish would have a fair start, and could bear off his rich cargo to the interior. It is singular that this prompt mode of conveying valuable, but easily transportable effects beyond the reach of a hostile ship should not have suggested itself while the property belonged to Mr. Astor.

In the meantime, M'Dougal, who still remained nominal chief at the fort, launched a canoe, manned by men recently in the employ of the American Fur Company, and steered for the ship. On the way, he instructed his men to pass themselves for Americans or Englishmen, according to the exigencies of the case.

The vessel proved to be the British sloop of war Raccoon, of twenty-six guns, and one hundred and twenty men, commanded by Captain Black. According to the account of that officer, the frigate Phoebe, and two sloops of war Cherub and Raccoon, had sailed in convoy of the Isaac Todd from Rio Janeiro. On board of the Phoebe, Mr. John M'Donald, a partner of the Northwest Company, embarked as passenger, to profit by the anticipated catastrophe at Astoria. The convoy was separated by stress of weather off Cape Horn. The three ships of war came together again at the island of Juan Fernandez, their appointed rendezvous, but waited in vain for the Isaac Todd.

In the meantime, intelligence was received of the mischief that Commodore Porter was doing among the British whale ships. Commodore Hillyer immediately set sail in quest of him with the Phoebe and the Cherub, transferring Mr. M'Donald to the Raccoon, and ordered that vessel to proceed to the Columbia.

The officers of the Raccoon were in high spirits. The agents of the Northwest Company, in instigating the expedition, had talked of immense booty to be made by the fortunate captors of Astoria. Mr. M'Donald had kept up the excitement during the voyage, so that not a midshipman but revelled in dreams of ample prize-money, nor a lieutenant that would have sold his chance for a thousand pounds. Their disappointment, therefore, may easily be conceived, when they learned that their warlike attack upon Astoria had been forestalled by a snug commercial arrangement; that their anticipated booty had become British property in the regular course of traffic, and that all this had been effected by the very Company which had been instrumental in getting them sent on what they now stigmatized as a fool's errand. They felt as if they had been duped and made tools of, by a set of shrewd men of traffic, who had employed them to crack the nut, while they carried off the kernel. In a word, M'Dougal found himself so ungraciously received by his countrymen on board of the ship, that he was glad to cut short his visit, and return to shore. He was

busy at the fort, making preparations for the reception of the captain of the Raccoon, when his one-eyed Indian father-in-law made his appearance, with a train of Chinook warriors, all painted and equipped in warlike style.

Old Comcomly had beheld, with dismay, the arrival of a "big war canoe" displaying the British flag. The shrewd old savage had become something of a politician in the course of his daily visits at the fort. He knew of the war existing between the nations, but knew nothing of the arrangement between M'Dougal and M'Tavish. He trembled, therefore, for the power of his white son-in-law, and the new-fledged grandeur of his daughter, and assembled his warriors in all haste. "King George," said he, "has sent his great canoe to destroy the fort, and make slaves of all the inhabitants. Shall we suffer it? The Americans are the first white men that have fixed themselves in the land. They have treated us like brothers. Their great chief has taken my daughter to be his squaw: we are, therefore, as one people."

His warriors all determined to stand by the Americans to the last, and to this effect they came painted and armed for battle. Comcomly made a spirited war-speech to his son-in-law. He offered to kill every one of King George's men that should attempt to land. It was an easy matter. The ship could not approach within six miles of the fort; the crew could only land in boats. The woods reached to the water's edge; in these, he and his warriors would conceal themselves, and shoot down the enemy as fast as they put foot on shore.

M'Dougal was, doubtless, properly sensible of this parental devotion on the part of his savage father-in-law, and perhaps a little rebuked by the game spirit, so opposite to his own. He assured Comcomly, however, that his solicitude for the safety of himself and the princess was superfluous; as, though the ship belonged to King George, her crew would not injure the Americans, or their Indian allies. He advised him and his warriors, therefore, to lay aside their weapons and war shirts, wash off the paint from their faces and bodies, and appear like clean and civil savages, to receive the strangers courteously.

Comcomly was sorely puzzled at this advice, which accorded so little with his Indian notions of receiving a hostile nation, and it was only after repeated and positive assurances of the amicable intentions of the strangers that he was induced to lower his fighting tone. He said something to his warriors explanatory of this singular posture of affairs, and in vindication, perhaps, of the pacific temper of his son-in-law. They all gave a shrug and an Indian grunt of acquiescence, and went off sulkily to their village, to lay aside their weapons for the present.

The proper arrangements being made for the reception of Captain Black, that officer caused his ship's boats to be manned, and landed with befitting state at Astoria. From the talk that had been made by the Northwest Company of the strength of the place, and the armament they had required to assist in its reduction, he expected to find a fortress of some importance. When he beheld nothing but stockades and bastions, calculated for defense against naked savages, he felt an emotion of indignant surprise, mingled with something of the ludicrous. "Is this the fort," cried he, "about which I have heard so much talking? D-n me, but I'd batter it down in two hours with a

four pounder!"

When he learned, however, the amount of rich furs that had been passed into the hands of the Northwesters, he was outrageous, and insisted that an inventory should be taken of all the property purchased of the Americans, "with a view to ulterior measures in England, for the recovery of the value from the Northwest Company."

As he grew cool, however, he gave over all idea of preferring such a claim, and reconciled himself, as well as he could, to the idea of having been forestalled by his bargaining coadjutors.

On the 12th of December, the fate of Astoria was consummated by a regular ceremonial. Captain Black, attended by his officers, entered the fort, caused the British standard to be erected, broke a bottle of wine and declared, in a loud voice, that he took possession of the establishment and of the country, in the name of his Britannic Majesty, changing the name of Astoria to that of Fort George.

The Indian warriors, who had offered their services to repel the strangers, were present on this occasion. It was explained to them as being a friendly arrangement and transfer, but they shook their heads grimly, and considered it an act of subjugation of their ancient allies. They regretted that they had complied with M'Dougal's wishes, in laying aside their arms, and remarked, that, however the Americans might conceal the fact, they were undoubtedly all slaves; nor could they be persuaded of the contrary, until they beheld the Raccoon depart without taking away any prisoners.

As to Comcomly, he no longer prided himself upon his white son-in-law, but, whenever he was asked about him, shook his head, and replied, that his daughter had made a mistake, and, instead of getting a great warrior for a husband, had married herself to a squaw.

Washington Irving's Astoria  
CHAPTER LXI.

Arrival of the Brig Pedler at Astoria.- Breaking Up of the Establishment .-Departure of Several of the Company. - Tragical Story Told by the Squaw of Pierre Dorion.- Fate of Reed and His Companions. - Attempts of Mr. Astor to Renew His Enterprise.- Disappointment. - Concluding Observations and Reflection.

HAVING given the catastrophe at the Fort of Astoria, it remains now but to gather up a few loose ends of this widely excursive narrative and conclude. On the 28th of February the brig Pedler anchored in Columbia River. It will be recollected that Mr. Hunt had purchased this vessel at the Sandwich Islands, to take off the furs collected at the factory, and to restore the Sandwich Islanders to their homes. When that gentleman learned, however, the precipitate and summary manner in which the property had been bargained away by M'Dougal, he expressed his indignation in the strongest terms, and determined to make an effort to get back the furs. As soon as his wishes were known in this respect, M'Dougal came to sound him on behalf of the Northwest Company,

---

intimating that he had no doubt the peltries might be repurchased at an advance of fifty per cent. This overture was not calculated to soothe the angry feelings of Mr. Hunt, and his indignation was complete, when he discovered that M'Dougal had become a partner of the Northwest Company, and had actually been so since the 23d of December. He had kept his partnership a secret, however; had retained the papers of the Pacific Fur Company in his possession; and had continued to act as Mr. Astor's agent, though two of the partners of the other company, Mr. M'Kenzie and Mr. Clarke, were present. He had, moreover, divulged to his new associates all that he knew as to Mr. Astor's plans and affairs, and had made copies of his business letters for their perusal.

Mr. Hunt now considered the whole conduct of M'Dougal hollow and collusive. His only thought was, therefore, to get all the papers of the concern out of his hands, and bring the business to a close; for the interests of Mr. Astor were yet completely at stake; the drafts of the Northwest Company in his favor, for the purchase money, not having yet been obtained. With some difficulty he succeeded in getting possession of the papers. The bills or drafts were delivered without hesitation. The latter he remitted to Mr. Astor by some of his associates, who were about to cross the continent to New York. This done, he embarked on board the *Pedler*, on the 3d of April, accompanied by two of the clerks, Mr. Seton and Mr. Halsey, and bade a final adieu to Astoria.

The next day, April 4th, Messrs. Clarke, M'Kenzie, David Stuart, and such of the Astorians as had not entered into the service of the Northwest Company, set out to cross the Rocky Mountains. It is not our intention to take the reader another journey across those rugged barriers; but we will step forward with the travellers to a distance on their way, merely to relate their interview with a character already noted in this work.

As the party were proceeding up the Columbia, near the mouth of the Wallah-Wallah River, several Indian canoes put off from the shore to overtake them, and a voice called upon them in French and requested them to stop. They accordingly put to shore, and were joined by those in the canoes. To their surprise, they recognized in the person who had hailed them the Indian wife of Pierre Dorion, accompanied by her two children. She had a story to tell, involving the fate of several of our unfortunate adventurers.

Mr. John Reed, the Hibernian, it will be remembered, had been detached during the summer to the Snake River. His party consisted of four Canadians, Giles Le Clerc, Francois Landry, Jean Baptiste Turcot, and Andre La Chapelle, together with two hunters, Pierre Dorion and Pierre Delaunay; Dorion, as usual, being accompanied by his wife and children. The objects of this expedition were twofold: to trap beaver, and to search for the three hunters, Robinson, Hoback, and Rezner.

In the course of the autumn, Reed lost one man, Landry, by death; another one, Pierre Delaunay, who was of a sullen, perverse disposition, left him in a moody fit, and was never heard of afterwards. The number of his party was not, however, reduced by these losses, as the three hunters, Robinson, Hoback, and Rezner, had joined it.

Reed now built a house on the Snake River, for their winter quarters; which being completed, the party set about trapping. Rezner, Le Clerc, and Pierre Dorion went about five days' journey from the wintering house, to a part of the country well stocked with beaver. Here they put up a hut, and proceeded to trap with great success. While the men were out hunting, Pierre Dorion's wife remained at home to dress the skins and prepare the meals. She was thus employed one evening about the beginning of January, cooking the supper of the hunters, when she heard footsteps, and Le Clerc staggered, pale and bleeding, into the hut. He informed her that a party of savages had surprised them, while at their traps, and had killed Rezner and her husband. He had barely strength left to give this information, when he sank upon the ground.

The poor woman saw that the only chance for life was instant flight, but, in this exigency, showed that presence of mind and force of character for which she had frequently been noted. With great difficulty, she caught two of the horses belonging to the party. Then collecting her clothes and a small quantity of beaver meat and dried salmon, she packed them upon one of the horses, and helped the wounded man to mount upon it. On the other horse she mounted with her two children, and hurried away from this dangerous neighborhood, directing her flight to Mr. Reed's establishment. On the third day, she descried a number of Indians on horseback proceeding in an easterly direction. She immediately dismounted with her children, and helped LeClerc likewise to dismount, and all concealed themselves. Fortunately they escaped the sharp eyes of the savages, but had to proceed with the utmost caution. That night they slept without fire or water; she managed to keep her children warm in her arms; but before morning, poor Le Clerc died.

With the dawn of day the resolute woman resumed her course, and, on the fourth day, reached the house of Mr. Reed. It was deserted, and all round were marks of blood and signs of a furious massacre. Not doubting that Mr. Reed and his party had all fallen victims, she turned in fresh horror from the spot. For two days she continued hurrying forward, ready to sink for want of food, but more solicitous about her children than herself. At length she reached a range of the Rocky Mountains, near the upper part of the Wallah-Wallah River. Here she chose a wild lonely ravine, as her place of winter refuge.

She had fortunately a buffalo robe and three deer-skins; of these, and of pine bark and cedar branches, she constructed a rude wigwam, which she pitched beside a mountain spring. Having no other food, she killed the two horses, and smoked their flesh. The skins aided to cover her hut. Here she dragged out the winter, with no other company than her two children. Towards the middle of March her provisions were nearly exhausted. She therefore packed up the remainder, slung it on her back, and, with her helpless little ones, set out again on her wanderings. Crossing the ridge of mountains, she descended to the banks of the Wallah-Wallah, and kept along them until she arrived where that river throws itself into the Columbia. She was hospitably received and entertained by the Wallah-Wallahs, and had been nearly two weeks among them when the two canoes passed.

On being interrogated, she could assign no reason for this murderous attack of the savages; it appeared to be perfectly wanton and unprovoked. Some of the Astorians supposed it an act of

---

butchery by a roving band of Blackfeet; others, however, and with greater probability of correctness, have ascribed it to the tribe of Pierced-nose Indians, in revenge for the death of their comrade hanged by order of Mr. Clarke. If so, it shows that these sudden and apparently wanton outbreaks of sanguinary violence on the part of the savages have often some previous, though perhaps remote, provocation.

The narrative of the Indian woman closes the checkered adventures of some of the personages of this motley story; such as the honest Hibernian Reed, and Dorion the hybrid interpreter. Turcot and La Chapelle were two of the men who fell off from Mr. Crooks in the course of his wintry journey, and had subsequently such disastrous times among the Indians. We cannot but feel some sympathy with that persevering trio of Kentuckians, Robinson, Rezner, and Hoback, who twice turned back when on their way homeward, and lingered in the wilderness to perish by the hands of savages.

The return parties from Astoria, both by sea and land, experienced on the way as many adventures, vicissitudes, and mishaps, as the far-famed heroes of the Odyssey; they reached their destination at different times, bearing tidings to Mr. Astor of the unfortunate termination of his enterprise.

That gentleman, however, was not disposed, even yet, to give the matter up as lost. On the contrary, his spirit was roused by what he considered ungenerous and unmerited conduct on the part of the Northwest Company. "After their treatment of me," said he, in a letter to Mr. Hunt, "I have no idea of remaining quiet and idle." He determined, therefore, as soon as circumstances would permit, to resume his enterprise.

At the return of peace, Astoria, with the adjacent country, reverted to the United States by the treaty of Ghent, on the principle of status ante bellum, and Captain Biddle was despatched in the sloop of war, Ontario, to take formal possession.

In the winter of 1815, a law was passed by Congress prohibiting all traffic of British traders within the territories of the United States.

The favorable moment seemed now to Mr. Astor to have arrived for the revival of his favorite enterprise, but new difficulties had grown up to impede it. The Northwest Company were now in complete occupation of the Columbia River, and its chief tributary streams, holding the posts which he had established, and carrying on a trade throughout the neighboring region, in defiance of the prohibitory law of Congress, which, in effect, was a dead letter beyond the mountains.

To dispossess them would be an undertaking of almost a belligerent nature; for their agents and retainers were well armed, and skilled in the use of weapons, as is usual with Indian traders. The ferocious and bloody contests which had taken place between the rival trading parties of the Northwest and Hudson's Bay Companies had shown what might be expected from commercial feuds in the lawless depths of the wilderness. Mr. Astor did not think it advisable, therefore, to at-

tempt the matter without the protection of the American flag; under which his people might rally in case of need. He accordingly made an informal overture to the President of the United States, Mr. Madison, through Mr. Gallatin, offering to renew his enterprise, and to reestablish Astoria, provided it would be protected by the American flag, and made a military post; stating that the whole force required would not exceed a lieutenant's command.

The application, approved and recommended by Mr. Gallatin, one of the most enlightened statesmen of our country, was favorably received, but no step was taken in consequence; the President not being disposed, in all probability, to commit himself by any direct countenance or overt act. Discouraged by this supineness on the part of the government, Mr. Astor did not think fit to renew his overtures in a more formal manner, and the favorable moment for the re-occupation of Astoria was suffered to pass unimproved.

The British trading establishments were thus enabled, without molestation, to strike deep their roots, and extend their ramifications, in despite of the prohibition of Congress, until they had spread themselves over the rich field of enterprise opened by Mr. Astor. The British government soon began to perceive the importance of this region, and to desire to include it within their territorial domains. A question has consequently risen as to the right to the soil, and has become one of the most perplexing now open between the United States and Great Britain. In the first treaty relative to it, under date of October 20th, 1818, the question was left unsettled, and it was agreed that the country on the northwest coast of America, westward of the Rocky Mountains, claimed by either nation, should be open to the inhabitants of both for ten years, for the purpose of trade, with the equal right of navigating all its rivers. When these ten years had expired, a subsequent treaty, in 1828, extended the arrangement to ten additional years. So the matter stands at present.

On casting back our eyes over the series of events we have recorded, we see no reason to attribute the failure of this great commercial undertaking to any fault in the scheme, or omission in the execution of it, on the part of the projector. It was a magnificent enterprise; well concerted and carried on, without regard to difficulties or expense. A succession of adverse circumstances and cross purposes, however, beset it almost from the outset; some of them, in fact, arising from neglect of the orders and instructions of Mr. Astor. The first crippling blow was the loss of the *Tonquin*, which clearly would not have happened, had Mr. Astor's earnest injunctions with regard to the natives been attended to. Had this ship performed her voyage prosperously, and revisited Astoria in due time, the trade of the establishment would have taken its preconcerted course, and the spirits of all concerned been kept up by a confident prospect of success. Her dismal catastrophe struck a chill into every heart, and prepared the way for subsequent despondency.

Another cause of embarrassment and loss was the departure from the plan of Mr. Astor, as to the voyage of the *Beaver*, subsequent to her visiting Astoria. The variation from this plan produced a series of cross purposes, disastrous to the establishment, and detained Mr. Hunt absent from his post, when his presence there was of vital importance to the enterprise; so essential is it for an agent, in any great and complicated undertaking, to execute faithfully, and to the letter, the part marked out for him by the master mind which has concerted the whole.

The breaking out of the war between the United States and Great Britain multiplied the hazards and embarrassments of the enterprise. The disappointment as to convoy rendered it difficult to keep up reinforcements and supplies; and the loss of the Lark added to the tissue of misadventures.

That Mr. Astor battled resolutely against every difficulty, and pursued his course in defiance of every loss, has been sufficiently shown. Had he been seconded by suitable agents, and properly protected by government, the ultimate failure of his plan might yet have been averted. It was his great misfortune that his agents were not imbued with his own spirit. Some had not capacity sufficient to comprehend the real nature and extent of his scheme; others were alien in feeling and interest, and had been brought up in the service of a rival company. Whatever sympathies they might originally have had with him, were impaired, if not destroyed, by the war. They looked upon his cause as desperate, and only considered how they might make interest to regain a situation under their former employers. The absence of Mr. Hunt, the only real representative of Mr. Astor, at the time of the capitulation with the Northwest Company, completed the series of cross purposes. Had that gentleman been present, the transfer, in all probability, would not have taken place.

It is painful, at all times, to see a grand and beneficial stroke of genius fall of its aim: but we regret the failure of this enterprise in a national point of view; for, had it been crowned with success, it would have redounded greatly to the advantage and extension of our commerce. The profits drawn from the country in question by the British Fur Company, though of ample amount, form no criterion by which to judge of the advantages that would have arisen had it been entirely in the hands of the citizens of the United States. That company, as has been shown, is limited in the nature and scope of its operations, and can make but little use of the maritime facilities held out by an emporium and a harbor on that coast. In our hands, besides the roving bands of trappers and traders, the country would have been explored and settled by industrious husbandmen; and the fertile valleys bordering its rivers, and shut up among its mountains, would have been made to pour forth their agricultural treasures to contribute to the general wealth.

In respect to commerce, we should have had a line of trading posts from the Mississippi and the Missouri across the Rocky Mountains, forming a high road from the great regions of the west to the shores of the Pacific. We should have had a fortified post and port at the mouth of the Columbia, commanding the trade of that river and its tributaries, and of a wide extent of country and sea-coast; carrying on an active and profitable commerce with the Sandwich Islands, and a direct and frequent communication with China. In a word, Astoria might have realized the anticipations of Mr. Astor, so well understood and appreciated by Mr. Jefferson, in gradually becoming a commercial empire beyond the mountains, peopled by "free and independent Americans, and linked with us by ties of blood and interest."

We repeat, therefore, our sincere regret that our government should have neglected the overture of Mr. Astor, and suffered the moment to pass by, when full possession of this region might have been taken quietly, as a matter of course, and a military post established, without dispute, at Asto-

ria. Our statesmen have become sensible, when too late, of the importance of this measure. Bills have repeatedly been brought into Congress for the purpose, but without success; and our rightful possessions on that coast, as well as our trade on the Pacific, have no rallying point protected by the national flag, and by a military force.

In the meantime, the second period of ten years is fast elapsing. In 1838, the question of title will again come up, and most probably, in the present amicable state of our relations with Great Britain, will be again postponed. Every year, however, the litigated claim is growing in importance. There is no pride so jealous and irritable as the pride of territory. As one wave of emigration after another rolls into the vast regions of the west, and our settlements stretch towards the Rocky Mountains, the eager eyes of our pioneers will pry beyond, and they will become impatient of any barrier or impediment in the way of what they consider a grand outlet of our empire. Should any circumstance, therefore, unfortunately occur to disturb the present harmony of the two nations, this ill-adjusted question, which now lies dormant, may suddenly start up into one of belligerent import, and Astoria become the watchword in a contest for dominion on the shores of the Pacific.

Since the above was written, the question of dominion over the vast territory beyond the Rocky Mountains, which for a time threatened to disturb the peaceful relations with our transatlantic kindred, has been finally settled in a spirit of mutual concession, and the venerable projector whose early enterprise forms the subject of this work had the satisfaction of knowing, ere his eyes closed upon the world, that the flag of his country again waved over "ASTORIA."

Washington Irving's Astoria

APPENDIX

Draught of a Petition to Congress, sent by Mr. Astor in 1812.

To the honorable the Senate and House of Representatives of the United States, in Congress assembled,

The petition of the American Fur Company respectfully sheweth:

THAT the trade with the several Indian tribes of North America has, for many years past, been almost exclusively carried on by the merchants of Canada; who, having formed powerful and extensive associations for that purpose, being aided by British capital, and being encouraged by the favor and protection of the British government, could not be opposed, with any prospect of success by individuals of the United States.

That by means of the above trade, thus systematically pursued, not only the inhabitants of the United States have been deprived of commercial profits and advantages, to which they appear to have just and natural pretensions, but a great and dangerous influence has been established over the Indian tribes, difficult to be counteracted, and capable of being exerted at critical periods, to

the great injury and annoyance of our frontier settlements.

That in order to obtain at least a part of the above trade, and more particularly that which is within the boundaries of the United States, your petitioners, in the year 1808, obtained an act of incorporation from the State of New York, whereby they are enabled, with a competent capital, to carry on the said trade with the Indians in such a manner as may be conformable to the laws and regulations of the United States, in relation to such a commerce.

That the capital mentioned in the said act, amounting to one million of dollars, having been duly formed, your petitioners entered with zeal and alacrity into those large and important arrangements, which were necessary for, or conducive to the object of their incorporation; and, among other things, purchased a great part of the stock in trade, and trading establishments, of the Michilimackinac Company of Canada. Your petitioners also, with the expectation of great public and private advantages from the use of the said establishments, ordered, during the spring and summer of 1810, an assortment of goods from England, suitable for the Indian trade; which, in consequence of the President's proclamation of November of that year, were shipped to Canada instead of New York, and have been transported, under a very heavy expense, into the interior of the country. But as they could not legally be brought into the Indian country within the boundaries of the United States, they have been stored on the Island of St. Joseph, in Lake Huron, where they now remain.

Your petitioners, with great deference and implicit submission to the wisdom of the national legislature, beg leave to suggest for consideration, whether they have not some claim to national attention and encouragement, from the nature and importance of their undertaking; which though hazardous and uncertain as concerns their private emolument, must, at any rate, redound to the public security and advantage. If their undertaking shall appear to be of the description given, they would further suggest to your honorable bodies, that unless they can procure a regular supply for the trade in which they are engaged, it may languish, and be finally abandoned by American citizens; when it will revert to its former channel, with additional, and perhaps with irresistible, power.

Under these circumstances, and upon all those considerations of public policy which will present themselves to your honorable bodies, in connection with those already mentioned, your petitioners respectfully pray that a law may be passed to enable the President, or any of the heads of departments acting under his authority, to grant permits for the introduction of goods necessary for the supply of the Indians, into the Indian country that is within the boundaries of the United States, under such regulations, and with such restrictions, as may secure the public revenue and promote the public welfare.

And your petitioners shall ever pray, &c.

In witness whereof, the common seal of the American Fur Company is

hereunto affixed, the day of March, 1812.

By order of the Corporation.

---

AN ACT to enable the American Fur Company, and other citizens, to introduce goods necessary for the Indian trade into the territories within the boundaries of the United State.

WHEREAS, the public peace and welfare require that the native Indian tribes, residing within the boundaries of the United States, should receive their necessary supplies under the authority and from the citizens of the United States: Therefore, be it enacted by the Senate and House of Representatives of the United States, in Congress assembled, that it shall be lawful for the President of the United States, or any of the heads of departments thereunto by him duly authorized, from time to time to grant permits to the American Fur Company, their agents or factors, or any other citizens of the United States engaged in the Indian trade, to introduce into the Indian country, within the boundaries of the United States, such goods, wares, and merchandise, as may be necessary for the said trade, under such regulations and restrictions as the said President or heads of departments may judge proper; any law or regulation to the contrary, in anywise, notwithstanding.

---

Letter from Mr. Gallatin to Mr. Astor, dated

New York, August 5, 1835.

DEAR SIR, - In compliance with your request, I will state such facts as I recollect touching the subjects mentioned in your letter of 28th ult. I may be mistaken respecting dates and details, and will only relate general facts, which I well remember.

In conformity with the treaty of 1794 with Great Britain, the citizens and subjects of each country were permitted to trade with the Indians residing in the territories of the other party. The reciprocity was altogether nominal. Since the conquest of Canada, the British had inherited from the French the whole fur trade, through the great lakes and their communications, with all the western Indians, whether residing in the British dominions or the United States. They kept the important western posts on those lakes till about the year 1797. And the defensive Indian war, which the United States had to sustain from 1776 to 1795, had still more alienated the Indians, and secured to the British their exclusive trade, carried through the lakes, wherever the Indians in that quarter lived. No American could, without imminent danger of property and life, carry on that trade, even within the United States, by the way of either Michilimackinac or St. Mary's. And independent of the loss of commerce, Great Britain was enabled to preserve a most dangerous influence over our Indians.

---

It was under these circumstances that you communicated to our government the prospect you had to be able, and your intention, to purchase one half of the interest of the Canadian Fur Company, engaged in trade by the way of Michilimackinac with our own Indians. You wished to know whether the plan met with the approbation of government, and how far you could rely on its protection and encouragement. This overture was received with great satisfaction by the administration, and Mr. Jefferson, then President, wrote you to that effect. I was also directed, as Secretary of the Treasury, to write to you an official letter to the same purpose. On investigating the subject, it was found that the Executive had no authority to give you any direct aid; and I believe you received nothing more than an entire approbation of your plan, and general assurances of the protection due to every citizen engaged in lawful and useful pursuits.

You did effect the contemplated purchase, but in what year I do not recollect. Immediately before the war, you represented that a large quantity of merchandise, intended for the Indian trade, and including arms and munitions of war, belonging to that concern of which you owned one half, was deposited at a post on Lake Huron, within the British dominions; that, in order to prevent their ultimately falling into the hands of Indians who might prove hostile, you were desirous to try to have them conveyed into the United States; but that you were prevented by the then existing law of non-intercourse with the British dominions.

The Executive could not annul the provisions of that law. But I was directed to instruct the collectors on the lakes, in case you and your agents should voluntarily bring in and deliver to them any part of the goods above mentioned, to receive and keep them in their guard, and not to commence prosecutions until further instructions: the intention being then to apply to Congress for an act remitting the forfeiture and penalties. I wrote accordingly, to that effect, to the collectors of Detroit and Michilimackinac.

The attempt to obtain the goods did not, however, succeed; and I cannot say how far the failure injured you. But the war proved fatal to another much more extensive and important enterprise.

Previous to that time, but I also forget the year, you had undertaken to carry on a trade on your own account, though I believe under the New York charter of the American Fur Company, with the Indians west of the Rocky Mountains. This project was also communicated to government, and met, of course, with its full approbation, and best wishes, for your success. You carried it on, on the most extensive scale, sending several ships to the mouth of the Columbia River, and a large party by land across the mountains, and finally founding the establishment of Astoria.

This unfortunately fell into the hands of the enemy during the war, from circumstances with which I am but imperfectly acquainted - being then absent on a foreign mission. I returned in September, 1815, and sailed again on a mission to France in June, 1816. During that period I visited Washington twice - in October or November, 1815, and in March, 1816. On one of these occasions, and I believe on the last, you mentioned to me that you were disposed once more to renew the attempt, and to reestablish Astoria, provided you had the protection of the American flag; for

which purpose, a lieutenant's command would be sufficient to you. You requested me to mention this to the President, which I did. Mr. Madison said he would consider the subject, and, although he did not commit himself, I thought that he received the proposal favorably. The message was verbal, and I do not know whether the application was ever renewed in a more formal manner. I sailed soon after for Europe, and was seven years absent. I never had the pleasure, since 1816, to see Mr. Madison, and never heard again anything concerning the subject in question.

I remain, dear sir, most respectfully, Your obedient servant,

ALBERT GALLATIN.

John Jacob Astor, Esq.,  
New York.

---

Notices of the Present State of the Fur Trade, chiefly extracted from an article published in Silliman's Magazine for January, 1834.

THE Northwest Company did not long enjoy the sway they had acquired over the trading regions of the Columbia. A competition, ruinous in its expenses, which had long existed between them and the Hudson's Bay Company, ended in their downfall and the ruin of most of the partners. The relict of the company became merged in the rival association, and the whole business was conducted under the name of the Hudson's Bay Company.

This coalition took place in 1821. They then abandoned Astoria, and built a large establishment sixty miles up the river, on the right bank, which they called Fort Vancouver. This was in a neighborhood where provisions could be more readily procured, and where there was less danger from molestation by any naval force. The company are said to carry on an active and prosperous trade, and to give great encouragement to settlers. They are extremely jealous, however, of any interference or participation in their trade, and monopolize it from the coast of the Pacific to the mountains, and for a considerable extent north and south. The American traders and trappers who venture across the mountains, instead of enjoying the participation in the trade of the river and its tributaries, that had been stipulated by treaty, are obliged to keep to the south, out of the track of the Hudson's Bay parties.

Mr. Astor has withdrawn entirely from the American Fur Company, as he has, in fact, from active business of every kind. That company is now headed by Mr. Ramsay Crooks; its principal establishment is at Michilimackinac, and it receives its furs from the posts depending on that station, and from those on the Mississippi, Missouri, and Yellow Stone Rivers, and the great range of country extending thence to the Rocky Mountains. This company has steamboats in its employ, with which it ascends the rivers, and penetrates to a vast distance into the bosom of those regions formerly so painfully explored in keel-boats and barges, or by weary parties on horseback and on foot. The first irruption of steamboats in the heart of these vast wildernesses is said to have caused

the utmost astonishment and affright among their savage inhabitants.

In addition to the main companies already mentioned, minor associations have been formed, which push their way in the most intrepid manner to the remote parts of the far West, and beyond the mountain barriers. One of the most noted of these is Ashley's company, from St. Louis, who trap for themselves, and drive an extensive trade with the Indians. The spirit, enterprise, and hardihood of Ashley are themes of the highest eulogy in the far West, and his adventures and exploits furnish abundance of frontier stories.

Another company of one hundred and fifty persons from New York, formed in 1831, and headed by Captain Bonneville of the United States army, has pushed its enterprise into tracts before but little known, and has brought considerable quantities of furs from the region between the Rocky Mountains and the coasts of Monterey and Upper California, on the Buenaventura and Timpanogos rivers.

The fur countries, from the Pacific, east to the Rocky Mountains, are now occupied (exclusive of private combinations and individual trappers and traders) by the Russians; and on the northwest from Behring's Strait to Queen Charlotte's Island, in north latitude fifty-three degrees, and by the Hudson's Bay Company thence, south of the Columbia River; while Ashley's company, and that under Captain Bonneville, take the remainder of the region to California. Indeed, the whole compass from the Mississippi to the Pacific Ocean is traversed in every direction. The mountains and forests, from the Arctic Sea to the Gulf of Mexico, are threaded through every maze, by the hunter. Every river and tributary stream, from the Columbia to the mouth of the Rio del Norte, and from the M'Kenzie to the Colorado of the West, from their head springs to their junction, are searched and trapped for beaver. Almost all the American furs, which do not belong to the Hudson's Bay Company, find their way to New York, and are either distributed thence for home consumption, or sent to foreign markets.

The Hudson's Bay Company ship their furs from their factories of York Fort and from Moose River, on Hudson's Bay; their collection from Grand River, &c., they ship from Canada; and the collection from Columbia goes to London. None of their furs come to the United States, except through the London market.

The export trade of furs from the United States is chiefly to London. Some quantities have been sent to Canton, and some few to Hamburg; and an increasing export trade in beaver, otter, nutria, and vicunia wool, prepared for the hatter's use, is carried on in Mexico. Some furs are exported from Baltimore, Philadelphia, and Boston; but the principal shipments from the United States are from New York to London, from whence they are sent to Leipsic, a well-known mart for furs, where they are disposed of during the great fair in that city, and distributed to every part of the continent.

The United States import from South America, nutria, vicunia, chinchilla, and a few deer-skins; also fur seals from the Lobos Islands, off the river Plate. A quantity of beaver, otter, &c., are

brought annually from Santa Fe. Dressed furs for edgings, linings, caps, muffs, &c., such as squirrel, genet, fitch-skins, and blue rabbit, are received from the north of Europe; also cony and hare's fur; but the largest importations are from London, where is concentrated nearly the whole of the North American fur trade.

Such is the present state of the fur trade, by which it will appear that the extended sway of the Hudson's Bay Company, and the monopoly of the region of which Astoria was the key, has operated to turn the main current of this opulent trade into the coffers of Great Britain, and to render London the emporium instead of New York, as Mr. Astor had intended.

We will subjoin a few observations on the animals sought after in this traffic, extracted from the same intelligent source with the preceding remarks.

Of the fur-bearing animals, "the precious ermine," so called by way of preeminence, is found, of the best quality, only in the cold regions of Europe and Asia. \* Its fur is of the most perfect whiteness, except the tip of its tail, which is of a brilliant shining black. With these back tips tacked on the skins, they are beautifully spotted, producing an effect often imitated, but never equalled in other furs. The ermine is of the genus *mustela* (weasel), and resembles the common weasel in its form, is from fourteen to sixteen inches from the tip of the nose to the end of the tail. The body is from ten to twelve inches long. It lives in hollow trees, river banks, and especially in beech forests; preys on small birds, is very shy, sleeping during the day, and employing the night in search of food. The fur of the older animals is preferred to the younger. It is taken by snares and traps, and sometimes shot with blunt arrows. Attempts have been made to domesticate it; but it is extremely wild and has been found untameable.

The sable can scarcely be called second to the ermine. It is a native of Northern Europe and Siberia, and is also of the genus *mustela*. In Samoieda, Yakutsk, Kamtschatka, and Russian Lapland, it is found of the richest quality, and darkest color. In its habits, it resembles the ermine. It preys on small squirrels and birds, sleeps by day, and prowls for food during the night. It is so like the marten in every particular except its size, and the dark shade of its color, that naturalists have not decided whether it is the richest and finest of the marten tribe, or a variety of that species: It varies in dimensions from eighteen to twenty inches.

The rich dark shades of the sable, and the snowy whiteness of the ermine, the great depth, and the peculiar, almost flowing softness of their skins and fur, have combined to gain them a preference in all countries, and in all ages of the world. In this age, they maintain the same relative estimate in regard to other furs, as when they marked the rank of the proud crusader, and were emblazoned in heraldry: but in most European nations, they are now worn promiscuously by the opulent.

The martens from Northern Asia and the Mountains of Kamtschatka are much superior to the American, though in every pack of American marten skins there are a certain number which are beautifully shaded, and of a dark brown olive color, of great depth and richness.

Next these in value, for ornament and utility, are the sea-otter, the mink, and the fiery fox.

The fiery fox is the bright red of Asia; is more brilliantly colored and of finer fur than any other of the genus. It is highly valued for the splendor of its red color and the fineness of its fur. It is the standard of value on the northeastern coast of Asia.

The sea-otter which was first introduced into commerce in 1725, from the Aleutian and Kurile Islands, is an exceedingly fine, soft, close fur, jet black in winter, with a silken gloss. The fur of the young animal is of a beautiful brown color. It is met with in great abundance in Behring's Island, Kamtschatka, Aleutian and Fox Islands, and is also taken on the opposite coasts of North America. It is sometimes taken with nets, but more frequently with clubs and spears. Their food is principally lobster and other shell-fish.

In 1780 furs had become so scarce in Siberia that the supply was insufficient for the demand in the Asiatic countries. It was at this time that the sea-otter was introduced into the markets for China. The skins brought such incredible prices, as to originate immediately several American and British expeditions to the northern islands of the Pacific, to Nootka Sound, and the northwest coast of America; but the Russians already had possession of the tract which they now hold, and had arranged a trade for the sea-otter with the Koudek tribes. They do not engross the trade, however; the American northwest trading ships procure them, all along the coast, from the Indians.

At one period, the fur seals formed no inconsiderable item in the trade. South Georgia, in south latitude fifty-five degrees, discovered in 1675, was explored by Captain Cook in 1771. The Americans immediately commenced carrying seal skins thence to China, where they obtained the most exorbitant prices. One million two hundred thousand skins have been taken from that island alone, and nearly an equal number from the Island of Desolation, since they were first resorted to for the purpose of commerce.

The discovery of the South Shetlands, sixty-three degrees south latitude, in 1818, added surprisingly to the trade in fur seals. The number taken from the South Shetlands in 1821 and 1822 amounted to three hundred and twenty thousand. This valuable animal is now almost extinct in all these islands, owing to the exterminating system adopted by the hunters. They are still taken on the Lobos Islands, where the provident government of Montevideo restrict the fishery, or hunting, within certain limits, which insures an annual return of the seals. At certain seasons, these amphibia, for the purpose of renewing their coat, come up on the dark frowning rocks and precipices, where there is not a trace of vegetation. In the middle of January, the islands are partially cleared of snow, where a few patches of short straggling grass spring up in favorable situations; but the seals do not resort to it for food. They remain on the rocks not less than two months, without any sustenance, when they return much emaciated to the sea.

Bears of various species and colors, many varieties of the fox, the wolf, the beaver, the otter, the marten, the raccoon, the badger, the wolverine, the mink, the lynx, the muskrat, the woodchuck,

---

the rabbit, the hare, and the squirrel, are natives of North America.

The beaver, otter, lynx fisher, hare, and raccoon, are used principally for hats; while the bears of several varieties furnish an excellent material for sleigh linings, for cavalry caps, and other military equipments. The fur of the black fox is the most valuable of any of the American varieties; and next to that the red, which is exported to China and Smyrna. In China, the red is employed for trimmings, linings, and robes; the latter being variegated by adding the black fur of the paws, in spots or waves. There are many other varieties of American fox, such as the gray, the white, the cross, the silver, and the dun-colored. The silver fox is a rare animal, a native of the woody country below the falls of the Columbia River. It has a long, thick, deep lead-colored fur, intermingled with long hairs, invariably white at the top, forming a bright lustrous silver gray, esteemed by some more beautiful than any other kind of fox.

The skins of the buffalo, of the Rocky Mountain sheep, of various deer and of the antelope, are included in the fur trade with the Indians and trappers of the north and west.

Fox and seal skins are sent from Greenland to Denmark. The white fur of the arctic fox and polar bear is sometimes found in the packs brought to the traders by the most northern tribes of Indians, but is not particularly valuable. The silver-tipped rabbit is peculiar to England, and is sent thence to Russia and China.

Other furs are employed and valued according to the caprices of fashion, as well in those countries where they are needed for defenses against the severity of the seasons, as among the inhabitants of milder climates, who, severely of Tartar or Slavonian descent, are said to inherit an attachment to furred clothing. Such are the inhabitants of Poland, of Southern Russia, of China, of Persia, of Turkey, and all the nations of Gothic origin in the middle and western parts of Europe. Under the burning suns of Syria and Egypt, and the mild climes of Bucharia and Independent Tartary, there is also a constant demand, and a great consumption, where there exists no physical necessity. In our own temperate latitudes, besides their use in the arts, they are in request for ornament and warmth during the winter, and large quantities are annually consumed for both purposes in the United States.

From the foregoing statements, it appears that the fur trade must henceforward decline. The advanced state of geographical science shows that no new countries remain to be explored. In North America the animals are slowly decreasing, from the persevering efforts and the indiscriminate slaughter practiced by the hunters, and by the appropriation to the uses of man of those forests and rivers which have afforded them food and protection. They recede with the aborigines, before the tide of civilization; but a diminished supply will remain in the mountains and uncultivated tracts of this and other countries, if the avidity of the hunter can be restrained within proper limitations.

\* An animal called the stoat, a kind of ermine, is said to be found in North America, but very inferior to the European and Asiatic.

\* \* The finest fur and the darkest color are most esteemed; and whether the difference arises from the age of the animal, or from some peculiarity of location, is not known. They do not vary more from the common marten than the Arabian horse from the shaggy Canadian.

Height of the Rocky Mountains.

VARIOUS estimates have been made of the height of the Rocky Mountains, but it is doubtful whether any have, as yet, done justice to their real altitude, which promises to place them only second to the highest mountains of the known world. Their height has been diminished to the eye by the great elevation of the plains from which they rise. They consist, according to Long, of ridges, knobs, and peaks, variously disposed. The more elevated parts are covered with perpetual snows, which contribute to give them a luminous, and, at a great distance, even a brilliant appearance; whence they derive, among some of the first discoverers, the name of the Shining Mountains.

James's Peak has generally been cited as the highest of the chain; and its elevation above the common level has been ascertained, by a trigonometrical measurement, to be about eight thousand five hundred feet. Mr. Long, however, judged, from the position of the snow near the summits of other peaks and ridges at no great distance from it, that they were much higher. Having heard Professor Renwick, of New York, express an opinion of the altitude of these mountains far beyond what had usually been ascribed to them, we applied to him for the authority on which he grounded his observation, and here subjoin his reply:

Columbia College, New York, February 23, 1836.

Dear Sir, - In compliance with your request, I have to communicate some facts in relation to the heights of the Rocky Mountains, and the sources whence I obtained the information.

In conversation with Simon M'Gillivray, Esq., a partner of the Northwest Company, he stated to me his impression, that the mountains in the vicinity of the route pursued by the traders of that company were nearly as high as the Himalayas. He had himself crossed by this route, seen the snowy summits of the peaks, and experienced a degree of cold which required a spirit thermometer to indicate it. His authority for the estimate of the heights was a gentleman who had been employed for several years as surveyor of that company. This conversation occurred about sixteen years since.

A year or two afterwards, I had the pleasure of dining, at Major Delafield's with Mr. Thompson, the gentleman referred to by Mr. M'Gillivray. I inquired of him in relation to the circumstances mentioned by Mr. M'Gillivray, and he stated that, by the joint means of the barometric and trigonometric measurement, he had ascertained the height of one of the peaks to be about twenty-five thousand feet, and there were others of nearly the same height in the vicinity.

---

I am, dear sir,  
To W. Irving, Esq.  
Yours truly,  
JAMES RENWICK.

Suggestions with respect to the Indian tribes, and the protection of our Trade.

IN the course of this work, a few general remarks have been hazarded respecting the Indian tribes of the prairies, and the dangers to be apprehended from them in future times to our trade beyond the Rocky Mountains and with the Spanish frontiers. Since writing those remarks, we have met with some excellent observations and suggestions, in manuscript, on the same subject, written by Captain Bonneville, of the United States army, who had lately returned from a long residence among the tribes of the Rocky Mountains. Captain B. approves highly of the plan recently adopted by the United States government for the organization of a regiment of dragoons for the protection of our western frontier, and the trade across the prairies. "No other species of military force," he observes, "is at all competent to cope with these restless and wandering hordes, who require to be opposed with swiftness quite as much as with strength; and the consciousness that a troop, uniting these qualifications, is always on the alert to avenge their outrages upon the settlers and traders, will go very far towards restraining them from the perpetration of those thefts and murders which they have heretofore committed with impunity, whenever stratagem or superiority of force has given them the advantage. Their interest already has done something towards their pacification with our countrymen. From the traders among them, they receive their supplies in the greatest abundance, and upon very equitable terms; and when it is remembered that a very considerable amount of property is yearly distributed among them by the government, as presents, it will readily be perceived that they are greatly dependent upon us for their most valued resources. If, superadded to this inducement, a frequent display of military power be made in their territories, there can be little doubt that the desired security and peace will be speedily afforded to our own people. But the idea of establishing a permanent amity and concord amongst the various east and west tribes themselves, seems to me, if not wholly impracticable, at least infinitely more difficult than many excellent philanthropists have hoped and believed. Those nations which have so lately emigrated from the midst of our settlements to live upon our western borders, and have made some progress in agriculture and the arts of civilization, have, in the property they have acquired, and the protection and aid extended to them, too many advantages to be induced readily to take up arms against us, particularly if they can be brought to the full conviction that their new homes will be permanent and undisturbed; and there is every reason and motive, in policy as well as humanity, for our ameliorating their condition by every means in our power. But the case is far different with regard to the Osages, the Kanzas, the Pawnees, and other roving hordes beyond the frontiers of the settlements. Wild and restless in their character and habits, they are by no means so susceptible of control or civilization; and they are urged by strong, and, to them, irresistible causes in their situation and necessities, to the daily perpetuation of violence and fraud. Their permanent subsistence, for example, is derived from the buffalo hunting grounds, which lie a great distance from their towns. Twice a year they are obliged to make long and dangerous expe-

ditions, to procure the necessary provisions for themselves and their families. For this purpose horses are absolutely requisite, for their own comfort and safety, as well as for the transportation of their food, and their little stock of valuables; and without them they would be reduced, during a great portion of the year, to a state of abject misery and privation. They have no brood mares, nor any trade sufficiently valuable to supply their yearly losses, and endeavor to keep up their stock by stealing horses from the other tribes to the west and southwest. Our own people, and the tribes immediately upon our borders, may indeed be protected from their depredations; and the Kansas, Osages, Pawnees, and others, may be induced to remain at peace among themselves, so long as they are permitted to pursue the old custom of levying upon the Camanches and other remote nations for their complement of steeds for the warriors, and pack-horses for their transportation to and from the hunting ground. But the instant they are forced to maintain a peaceful and inoffensive demeanor towards the tribes along the Mexican border, and find that every violation of their rights is followed by the avenging arm of our government, the result must be, that, reduced to a wretchedness and want which they can ill brook, and feeling the certainty of punishment for every attempt to ameliorate their condition in the only way they as yet comprehend, they will abandon their unfruitful territory and remove to the neighborhood of the Mexican lands, and there carry on a vigorous predatory warfare indiscriminately upon the Mexicans and our own people trading or travelling in that quarter.

“The Indians of the prairies are almost innumerable. Their superior horsemanship, which in my opinion, far exceeds that of any other people on the face of the earth, their daring bravery, their cunning and skill in the warfare of the wilderness, and the astonishing rapidity and secrecy with which they are accustomed to move in their martial expeditions, will always render them most dangerous and vexatious neighbors, when their necessities or their discontents may drive them to hostility with our frontiers. Their mode and principles of warfare will always protect them from final and irretrievable defeat, and secure their families from participating in any blow, however severe, which our retribution might deal out to them.

“The Camanches lay the Mexicans under contribution for horses and mules, which they are always engaged in stealing from them in incredible numbers; and from the Camanches, all the roving tribes of the far West, by a similar exertion of skill and daring, supply themselves in turn. It seems to me, therefore, under all these circumstances, that the apparent futility of any philanthropic schemes for the benefit of these nations, and a regard for our own protection, concur in recommending that we remain satisfied with maintaining peace upon our own immediate borders, and leave the Mexicans and the Camanches, and all the tribes hostile to these last, to settle their differences and difficulties in their own way.

“In order to give full security and protection to our trading parties circulating in all directions through the great prairies, I am under the impression that a few judicious measures on the part of the government, involving a very limited expense, would be sufficient. And, in attaining this end, which of itself has already become an object of public interest and import, another, of much greater consequence, might be brought about, namely, the securing to the States a most valuable and increasing trade, now carried on by caravans directly to Santa Fe.

“As to the first desideratum: the Indians can only be made to respect the lives and property of the American parties, by rendering them dependent upon us for their supplies; which alone can be done with complete effect by the establishment of a trading post, with resident traders, at some point which will unite a sufficient number of advantages to attract the several tribes to itself, in preference to their present places of resort for that purpose; for it is a well-known fact that the Indians will always protect their trader, and those in whom he is interested, so long as they derive benefits from him. The alternative presented to those at the north, by the residence of the agents of the Hudson’s Bay Company amongst them, renders the condition of our people in that quarter less secure; but I think it will appear at once, upon the most cursory examination, that no such opposition further south could be maintained, so as to weaken the benefits of such an establishment as is here suggested.

“In considering this matter, the first question which presents itself is, where do these tribes now make their exchanges, and obtain their necessary supplies. They resort almost exclusively to the Mexicans, who, themselves, purchase from us whatever the Indians most seek for. In this point of view, therefore, *coeteris paribus*, it would be an easy matter for us to monopolize the whole traffic. All that is wanted is some location more convenient for the natives than that offered by the Mexicans, to give us the undisputed superiority; and the selection of such a point requires but a knowledge of the single fact, that these nations invariably winter upon the head waters of the Arkansas, and there prepare all their buffalo robes for trade. These robes are heavy, and, to the Indian, very difficult of transportation. Nothing but necessity induces them to travel any great distance with such inconvenient baggage. A post, therefore, established upon the head waters of the Arkansas, must infallibly secure an uncontested preference over that of the Mexicans; even at their prices and rates of barter. Then let the dragoons occasionally move about among these people in large parties, impressing them with the proper estimate of our power to protect and to punish, and at once we have complete and assured security for all citizens whose enterprise may lead them beyond the border, and an end to the outrages and depredations which now dog the footsteps of the traveller, in the prairies, and arrest and depress the most advantageous commerce. Such a post need not be stronger than fifty men; twenty-five to be employed as hunters, to supply the garrison, and the residue as a defense against any hostility. Situated here upon the good lands of the Arkansas, in the midst of abundance of timber, while it might be kept up at a most inconsiderable expense, such an establishment within ninety miles of Santa Fe or Taos would be more than justified by the other and more important advantages before alluded to, leaving the protection of the traders with the Indian tribes entirely out of the question.

“This great trade, carried on by caravans to Santa Fe, annually loads one hundred wagons with merchandise, which is bartered in the northern provinces or Mexico for cash and for beaver furs. The numerous articles excluded as contraband, and the exorbitant duties laid upon all those that are admitted by the Mexican government, present so many obstacles to commerce, that I am well persuaded, that if a post, such as is here suggested, should be established on the Arkansas, it would become the place of deposit, not only for the present trade, but for one infinitely more extended. Here the Mexicans might purchase their supplies, and might well afford to sell them at

prices which would silence all competition from any other quarter.

“These two trades, with the Mexicans and the Indians, centring at this post, would give rise to a large village of traders and laborers, and would undoubtedly be hailed, by all that section of country, as a permanent and invaluable advantage. A few pack-horses would carry all the clothing and ammunition necessary for the post during the first year, and two light field-pieces would be all the artillery required for its defense. Afterwards, all the horses required for the use of the establishment might be purchased from the Mexicans at the low price of ten dollars each; and, at the same time, whatever animals might be needed to supply the losses among the dragoons traversing the neighborhood, could be readily procured. The Upper Missouri Indians can furnish horses, at very cheap rates, to any number of the same troops who might be detailed for the defense of the northern frontier; and, in other respects, a very limited outlay of money would suffice to maintain a post in that section of the country.

“From these considerations, and my own personal observations, I am, therefore, disposed to believe that two posts established by the government, one at the mouth of the Yellowstone River, and one on the Arkansas, would completely protect all our people in every section of the great wilderness of the West; while other advantages, at least with regard to one of them, confirm and urge the suggestion. A fort at the mouth of the Yellowstone, garrisoned by fifty men would be perfectly safe. The establishment might be constructed simply with a view to the stores, stables for the dragoons' horses, and quarters for the regular garrison; the rest being provided with sheds or lodges, erected in the vicinity, for their residence during the winter months.”

THE END

Washington Irving's The Adventures of Captain Bonneville

Chapter 1

State of the fur trade of the Rocky Mountains-- American enterprises--General Ashley and his associates--Sublette, a famous leader--Yearly rendezvous among the mountains--Stratagems and dangers of the trade--Bands of trappers--Indian banditti--Crows and Blackfeet--Mountaineers--Traders of the Far West--Character and habits of the trapper

IN A RECENT WORK we have given an account of the grand enterprise of Mr. John Jacob Astor to establish an American emporium for the fur trade at the mouth of the Columbia, or Oregon River; of the failure of that enterprise through the capture of Astoria by the British, in 1814; and of the way in which the control of the trade of the Columbia and its dependencies fell into the hands of the Northwest Company. We have stated, likewise, the unfortunate supineness of the American government in neglecting the application of Mr. Astor for the protection of the American flag, and a small military force, to enable him to reinstate himself in the possession of Astoria at the return of peace; when the post was formally given up by the British government, though still occupied by the Northwest Company. By that supineness the sovereignty in the country has been virtually lost to the United States; and it will cost both governments much trouble and difficulty to settle matters on that just and rightful footing on which they would readily have been placed had the proposition of Mr. Astor been attended to. We shall now state a few particulars of subsequent events, so as to lead the reader up to the period of which we are about to treat, and to prepare him for the circumstances of our narrative.

In consequence of the apathy and neglect of the American government, Mr. Astor abandoned all thoughts of regaining Astoria, and made no further attempt to extend his enterprises beyond the Rocky Mountains; and the Northwest Company considered themselves the lords of the country. They did not long enjoy unmolested the sway which they had somewhat surreptitiously attained. A fierce competition ensued between them and their old rivals, the Hudson's Bay Company; which was carried on at great cost and sacrifice, and occasionally with the loss of life. It ended in the ruin of most of the partners of the Northwest Company; and the merging of the relics of that establishment, in 1821, in the rival association. From that time, the Hudson's Bay Company enjoyed a monopoly of the Indian trade from the coast of the Pacific to the Rocky Mountains, and for a considerable extent north and south. They removed their emporium from Astoria to Fort Vancouver, a strong post on the left bank of the Columbia River, about sixty miles from its mouth; whence they furnished their interior posts, and sent forth their brigades of trappers.

The Rocky Mountains formed a vast barrier between them and the United States, and their stern and awful defiles, their rugged valleys, and the great western plains watered by their rivers, remained almost a terra incognita to the American trapper. The difficulties experienced in 1808, by Mr. Henry of the Missouri Company, the first American who trapped upon the head-waters of the Columbia; and the frightful hardships sustained by Wilson P. Hunt, Ramsay Crooks, Robert Stuart, and other intrepid Astorians, in their ill-fated expeditions across the mountains, appeared for a time to check all further enterprise in that direction. The American traders contented themselves with following up the head branches of the Missouri, the Yellowstone, and other rivers and streams on the Atlantic side of the mountains, but forbore to attempt those great snow-crowned sierras.

One of the first to revive these tramontane expeditions was General Ashley, of Missouri, a man

whose courage and achievements in the prosecution of his enterprises have rendered him famous in the Far West. In conjunction with Mr. Henry, already mentioned, he established a post on the banks of the Yellowstone River in 1822, and in the following year pushed a resolute band of trappers across the mountains to the banks of the Green River or Colorado of the West, often known by the Indian name of the Seeds-ke-dee Agie. This attempt was followed up and sustained by others, until in 1825 a footing was secured, and a complete system of trapping organized beyond the mountains.

It is difficult to do justice to the courage, fortitude, and perseverance of the pioneers of the fur trade, who conducted these early expeditions, and first broke their way through a wilderness where everything was calculated to deter and dismay them. They had to traverse the most dreary and desolate mountains, and barren and trackless wastes, uninhabited by man, or occasionally infested by predatory and cruel savages. They knew nothing of the country beyond the verge of their horizon, and had to gather information as they wandered. They beheld volcanic plains stretching around them, and ranges of mountains piled up to the clouds, and glistening with eternal frost: but knew nothing of their defiles, nor how they were to be penetrated or traversed. They launched themselves in frail canoes on rivers, without knowing whither their swift currents would carry them, or what rocks and shoals and rapids they might encounter in their course. They had to be continually on the alert, too, against the mountain tribes, who beset every defile, laid ambushes in their path, or attacked them in their night encampments; so that, of the hardy bands of trappers that first entered into these regions, three-fifths are said to have fallen by the hands of savage foes.

In this wild and warlike school a number of leaders have sprung up, originally in the employ, subsequently partners of Ashley; among these we may mention Smith, Fitzpatrick, Bridger, Robert Campbell, and William Sublette; whose adventures and exploits partake of the wildest spirit of romance. The association commenced by General Ashley underwent various modifications. That gentleman having acquired sufficient fortune, sold out his interest and retired; and the leading spirit that succeeded him was Captain William Sublette; a man worthy of note, as his name has become renowned in frontier story. He is a native of Kentucky, and of game descent; his maternal grandfather, Colonel Wheatley, a companion of Boon, having been one of the pioneers of the West, celebrated in Indian warfare, and killed in one of the contests of the "Bloody Ground." We shall frequently have occasion to speak of this Sublette, and always to the credit of his game qualities. In 1830, the association took the name of the Rocky Mountain Fur Company, of which Captain Sublette and Robert Campbell were prominent members.

In the meantime, the success of this company attracted the attention and excited the emulation of the American Fur Company, and brought them once more into the field of their ancient enterprise. Mr. Astor, the founder of the association, had retired from busy life, and the concerns of the company were ably managed by Mr. Ramsay Crooks, of Snake River renown, who still officiates as its president. A competition immediately ensued between the two companies for the trade with the mountain tribes and the trapping of the head-waters of the Columbia and the other great tributaries of the Pacific. Beside the regular operations of these formidable rivals, there have been from time to time desultory enterprises, or rather experiments, of minor associations, or of adventurous individuals beside roving bands of independent trappers, who either hunt for themselves, or engage for a single season, in the service of one or other of the main companies.

---

The consequence is that the Rocky Mountains and the ulterior regions, from the Russian possessions in the north down to the Spanish settlements of California, have been traversed and ransacked in every direction by bands of hunters and Indian traders; so that there is scarcely a mountain pass, or defile, that is not known and threaded in their restless migrations, nor a nameless stream that is not haunted by the lonely trapper.

The American fur companies keep no established posts beyond the mountains. Everything there is regulated by resident partners; that is to say, partners who reside in the tramontane country, but who move about from place to place, either with Indian tribes, whose traffic they wish to monopolize, or with main bodies of their own men, whom they employ in trading and trapping. In the meantime, they detach bands, or "brigades" as they are termed, of trappers in various directions, assigning to each a portion of country as a hunting or trapping ground. In the months of June and July, when there is an interval between the hunting seasons, a general rendezvous is held, at some designated place in the mountains, where the affairs of the past year are settled by the resident partners, and the plans for the following year arranged.

To this rendezvous repair the various brigades of trappers from their widely separated hunting grounds, bringing in the products of their year's campaign. Hither also repair the Indian tribes accustomed to traffic their peltries with the company. Bands of free trappers resort hither also, to sell the furs they have collected; or to engage their services for the next hunting season.

To this rendezvous the company sends annually a convoy of supplies from its establishment on the Atlantic frontier, under the guidance of some experienced partner or officer. On the arrival of this convoy, the resident partner at the rendezvous depends to set all his next year's machinery in motion.

Now as the rival companies keep a vigilant eye upon each other, and are anxious to discover each other's plans and movements, they generally contrive to hold their annual assemblages at no great distance apart. An eager competition exists also between their respective convoys of supplies, which shall first reach its place of rendezvous. For this purpose, they set off with the first appearance of grass on the Atlantic frontier and push with all diligence for the mountains. The company that can first open its tempting supplies of coffee, tobacco, ammunition, scarlet cloth, blankets, bright shawls, and glittering trinkets has the greatest chance to get all the peltries and furs of the Indians and free trappers, and to engage their services for the next season. It is able, also, to fit out and dispatch its own trappers the soonest, so as to get the start of its competitors, and to have the first dash into the hunting and trapping grounds.

A new species of strategy has sprung out of this hunting and trapping competition. The constant study of the rival bands is to forestall and outwit each other; to supplant each other in the good will and custom of the Indian tribes; to cross each other's plans; to mislead each other as to routes; in a word, next to his own advantage, the study of the Indian trader is the disadvantage of his competitor.

The influx of this wandering trade has had its effects on the habits of the mountain tribes. They have found the trapping of the beaver their most profitable species of hunting; and the traffic with the white man has opened to them sources of luxury of which they previously had no idea. The introduction of firearms has rendered them more successful hunters, but at the same time, more formidable foes; some of them, incorrigibly savage and warlike in their nature, have found the expeditions of the fur traders grand objects of profitable adventure. To waylay and harass a band

of trappers with their pack-horses, when embarrassed in the rugged defiles of the mountains, has become as favorite an exploit with these Indians as the plunder of a caravan to the Arab of the desert. The Crows and Blackfeet, who were such terrors in the path of the early adventurers to Astoria, still continue their predatory habits, but seem to have brought them to greater system. They know the routes and resorts of the trappers; where to waylay them on their journeys; where to find them in the hunting seasons, and where to hover about them in winter quarters. The life of a trapper, therefore, is a perpetual state militant, and he must sleep with his weapons in his hands. A new order of trappers and traders, also, has grown out of this system of things. In the old times of the great Northwest Company, when the trade in furs was pursued chiefly about the lakes and rivers, the expeditions were carried on in batteaux and canoes. The voyageurs or boatmen were the rank and file in the service of the trader, and even the hardy "men of the north," those great rufflers and game birds, were fain to be paddled from point to point of their migrations.

A totally different class has now sprung up:--"the Mountaineers," the traders and trappers that scale the vast mountain chains, and pursue their hazardous vocations amidst their wild recesses. They move from place to place on horseback. The equestrian exercises, therefore, in which they are engaged, the nature of the countries they traverse, vast plains and mountains, pure and exhilarating in atmospheric qualities, seem to make them physically and mentally a more lively and mercurial race than the fur traders and trappers of former days, the self-vaunting "men of the north." A man who bestrides a horse must be essentially different from a man who cowers in a canoe. We find them, accordingly, hardy, lithe, vigorous, and active; extravagant in word, and thought, and deed; heedless of hardship; daring of danger; prodigal of the present, and thoughtless of the future.

A difference is to be perceived even between these mountain hunters and those of the lower regions along the waters of the Missouri. The latter, generally French creoles, live comfortably in cabins and log-huts, well sheltered from the inclemencies of the seasons. They are within the reach of frequent supplies from the settlements; their life is comparatively free from danger, and from most of the vicissitudes of the upper wilderness. The consequence is that they are less hardy, self-dependent and game-spirited than the mountaineer. If the latter by chance comes among them on his way to and from the settlements, he is like a game-cock among the common roosters of the poultry-yard. Accustomed to live in tents, or to bivouac in the open air, he despises the comforts and is impatient of the confinement of the log-house. If his meal is not ready in season, he takes his rifle, hies to the forest or prairie, shoots his own game, lights his fire, and cooks his repast. With his horse and his rifle, he is independent of the world, and spurns at all its restraints. The very superintendents at the lower posts will not put him to mess with the common men, the hirelings of the establishment, but treat him as something superior.

There is, perhaps, no class of men on the face of the earth, says Captain Bonneville, who lead a life of more continued exertion, peril, and excitement, and who are more enamored of their occupations, than the free trappers of the West. No toil, no danger, no privation can turn the trapper from his pursuit. His passionate excitement at times resembles a mania. In vain may the most vigilant and cruel savages beset his path; in vain may rocks and precipices and wintry torrents oppose his progress; let but a single track of a beaver meet his eye, and he forgets all dangers and defies all difficulties. At times, he may be seen with his traps on his shoulder, buffeting his way across rapid streams, amidst floating blocks of ice: at other times, he is to be found with his

---

traps swung on his back clambering the most rugged mountains, scaling or descending the most frightful precipices, searching, by routes inaccessible to the horse, and never before trodden by white man, for springs and lakes unknown to his comrades, and where he may meet with his favorite game. Such is the mountaineer, the hardy trapper of the West; and such, as we have slightly sketched it, is the wild, Robin Hood kind of life, with all its strange and motley populace, now existing in full vigor among the Rocky Mountains.

Having thus given the reader some idea of the actual state of the fur trade in the interior of our vast continent, and made him acquainted with the wild chivalry of the mountains, we will no longer delay the introduction of Captain Bonneville and his band into this field of their enterprise, but launch them at once upon the perilous plains of the Far West.

Chapter 2

Departure from Fort Osage--Modes of transportation--Pack-horses--Wagons--Walker and Cerre; their characters--Buoyant feelings on launching upon the prairies--Wild equipments of the trappers--Their gambols and antics--Difference of character between the American and French trappers--Agency of the Kansas--General Clarke--White Plume, the Kansas chief--Night scene in a trader's camp--Colloquy between White Plume and the captain--Bee-hunters--Their expeditions--Their feuds with the Indians--Bargaining talent of White Plume

IT WAS ON THE FIRST of May, 1832, that Captain Bonneville took his departure from the frontier post of Fort Osage, on the Missouri. He had enlisted a party of one hundred and ten men, most of whom had been in the Indian country, and some of whom were experienced hunters and trappers. Fort Osage, and other places on the borders of the western wilderness, abound with characters of the kind, ready for any expedition.

The ordinary mode of transportation in these great inland expeditions of the fur traders is on mules and pack-horses; but Captain Bonneville substituted wagons. Though he was to travel through a trackless wilderness, yet the greater part of his route would lie across open plains, destitute of forests, and where wheel carriages can pass in every direction. The chief difficulty occurs in passing the deep ravines cut through the prairies by streams and winter torrents. Here it is often necessary to dig a road down the banks, and to make bridges for the wagons.

In transporting his baggage in vehicles of this kind, Captain Bonneville thought he would save the great delay caused every morning by packing the horses, and the labor of unpacking in the evening. Fewer horses also would be required, and less risk incurred of their wandering away, or being frightened or carried off by the Indians. The wagons, also, would be more easily defended, and might form a kind of fortification in case of attack in the open prairies. A train of twenty wagons, drawn by oxen, or by four mules or horses each, and laden with merchandise, ammunition, and provisions, were disposed in two columns in the center of the party, which was equally divided into a van and a rear-guard. As subleaders or lieutenants in his expedition, Captain Bonneville had made choice of Mr. I. R. Walker and Mr. M. S. Cerre. The former was a native of Tennessee, about six feet high, strong built, dark complexioned, brave in spirit, though mild in manners. He had resided for many years in Missouri, on the frontier; had been among the earliest adventurers to Santa Fe, where he went to trap beaver, and was taken by the Spaniards. Being liberated, he engaged with the Spaniards and Sioux Indians in a war against the Pawnees; then returned to

---

Missouri, and had acted by turns as sheriff, trader, trapper, until he was enlisted as a leader by Captain Bonneville.

Cerre, his other leader, had likewise been in expeditions to Santa Fe, in which he had endured much hardship. He was of the middle size, light complexioned, and though but about twenty-five years of age, was considered an experienced Indian trader. It was a great object with Captain Bonneville to get to the mountains before the summer heats and summer flies should render the travelling across the prairies distressing; and before the annual assemblages of people connected with the fur trade should have broken up, and dispersed to the hunting grounds.

The two rival associations already mentioned, the American Fur Company and the Rocky Mountain Fur Company, had their several places of rendezvous for the present year at no great distance apart, in Pierre's Hole, a deep valley in the heart of the mountains, and thither Captain Bonneville intended to shape his course.

It is not easy to do justice to the exulting feelings of the worthy captain at finding himself at the head of a stout band of hunters, trappers, and woodmen; fairly launched on the broad prairies, with his face to the boundless West. The tamest inhabitant of cities, the veriest spoiled child of civilization, feels his heart dilate and his pulse beat high on finding himself on horseback in the glorious wilderness; what then must be the excitement of one whose imagination had been stimulated by a residence on the frontier, and to whom the wilderness was a region of romance!

His hardy followers partook of his excitement. Most of them had already experienced the wild freedom of savage life, and looked forward to a renewal of past scenes of adventure and exploit. Their very appearance and equipment exhibited a piebald mixture, half civilized and half savage. Many of them looked more like Indians than white men in their garbs and accoutrements, and their very horses were caparisoned in barbaric style, with fantastic trappings. The outset of a band of adventurers on one of these expeditions is always animated and joyous. The welkin rang with their shouts and yelps, after the manner of the savages; and with boisterous jokes and light-hearted laughter. As they passed the straggling hamlets and solitary cabins that fringe the skirts of the frontier, they would startle their inmates by Indian yells and war-whoops, or regale them with grotesque feats of horsemanship, well suited to their half-savage appearance. Most of these abodes were inhabited by men who had themselves been in similar expeditions; they welcomed the travellers, therefore, as brother trappers, treated them with a hunter's hospitality, and cheered them with an honest God speed at parting.

And here we would remark a great difference, in point of character and quality, between the two classes of trappers, the "American" and "French," as they are called in contradistinction. The latter is meant to designate the French creole of Canada or Louisiana; the former, the trapper of the old American stock, from Kentucky, Tennessee, and others of the western States. The French trapper is represented as a lighter, softer, more self-indulgent kind of man. He must have his Indian wife, his lodge, and his petty conveniences. He is gay and thoughtless, takes little heed of landmarks, depends upon his leaders and companions to think for the common weal, and, if left to himself, is easily perplexed and lost.

The American trapper stands by himself, and is peerless for the service of the wilderness. Drop him in the midst of a prairie, or in the heart of the mountains, and he is never at a loss. He notices every landmark; can retrace his route through the most monotonous plains, or the most perplexed labyrinths of the mountains; no danger nor difficulty can appal him, and he scorns to

complain under any privation. In equipping the two kinds of trappers, the Creole and Canadian are apt to prefer the light fusee; the American always grasps his rifle; he despises what he calls the "shot-gun." We give these estimates on the authority of a trader of long experience, and a foreigner by birth. "I consider one American," said he, "equal to three Canadians in point of sagacity, aptness at resources, self-dependence, and fearlessness of spirit. In fact, no one can cope with him as a stark tramper of the wilderness."

Beside the two classes of trappers just mentioned, Captain Bonneville had enlisted several Delaware Indians in his employ, on whose hunting qualifications he placed great reliance.

On the 6th of May the travellers passed the last border habitation, and bade a long farewell to the ease and security of civilization. The buoyant and clamorous spirits with which they had commenced their march gradually subsided as they entered upon its difficulties. They found the prairies saturated with the heavy cold rains, prevalent in certain seasons of the year in this part of the country, the wagon wheels sank deep in the mire, the horses were often to the fetlock, and both steed and rider were completely jaded by the evening of the 12th, when they reached the Kansas River; a fine stream about three hundred yards wide, entering the Missouri from the south. Though fordable in almost every part at the end of summer and during the autumn, yet it was necessary to construct a raft for the transportation of the wagons and effects. All this was done in the course of the following day, and by evening, the whole party arrived at the agency of the Kansas tribe. This was under the superintendence of General Clarke, brother of the celebrated traveller of the same name, who, with Lewis, made the first expedition down the waters of the Columbia. He was living like a patriarch, surrounded by laborers and interpreters, all snugly housed, and provided with excellent farms. The functionary next in consequence to the agent was the blacksmith, a most important, and, indeed, indispensable personage in a frontier community. The Kansas resemble the Osages in features, dress, and language; they raise corn and hunt the buffalo, ranging the Kansas River, and its tributary streams; at the time of the captain's visit, they were at war with the Pawnees of the Nebraska, or Platte River.

The unusual sight of a train of wagons caused quite a sensation among these savages; who thronged about the caravan, examining everything minutely, and asking a thousand questions: exhibiting a degree of excitability, and a lively curiosity totally opposite to that apathy with which their race is so often reproached.

The personage who most attracted the captain's attention at this place was "White Plume," the Kansas chief, and they soon became good friends. White Plume (we are pleased with his chivalrous soubriquet) inhabited a large stone house, built for him by order of the American government: but the establishment had not been carried out in corresponding style. It might be palace without, but it was wigwam within; so that, between the stateliness of his mansion and the squalidness of his furniture, the gallant White Plume presented some such whimsical incongruity as we see in the gala equipments of an Indian chief on a treaty-making embassy at Washington, who has been generously decked out in cocked hat and military coat, in contrast to his breech-clout and leathern legging; being grand officer at top, and ragged Indian at bottom.

White Plume was so taken with the courtesy of the captain, and pleased with one or two presents received from him, that he accompanied him a day's journey on his march, and passed a night in his camp, on the margin of a small stream. The method of encamping generally observed by the captain was as follows: The twenty wagons were disposed in a square, at the distance of thir-

ty-three feet from each other. In every interval there was a mess stationed; and each mess had its fire, where the men cooked, ate, gossiped, and slept. The horses were placed in the centre of the square, with a guard stationed over them at night.

The horses were "side lined," as it is termed: that is to say, the fore and hind foot on the same side of the animal were tied together, so as to be within eighteen inches of each other. A horse thus fettered is for a time sadly embarrassed, but soon becomes sufficiently accustomed to the restraint to move about slowly. It prevents his wandering; and his being easily carried off at night by lurking Indians. When a horse that is "foot free" is tied to one thus secured, the latter forms, as it were, a pivot, round which the other runs and curvets, in case of alarm. The encampment of which we are speaking presented a striking scene. The various mess-fires were surrounded by picturesque groups, standing, sitting, and reclining; some busied in cooking, others in cleaning their weapons: while the frequent laugh told that the rough joke or merry story was going on. In the middle of the camp, before the principal lodge, sat the two chieftains, Captain Bonneville and White Plume, in soldier-like communion, the captain delighted with the opportunity of meeting on social terms with one of the red warriors of the wilderness, the unsophisticated children of nature. The latter was squatted on his buffalo robe, his strong features and red skin glaring in the broad light of a blazing fire, while he recounted astounding tales of the bloody exploits of his tribe and himself in their wars with the Pawnees; for there are no old soldiers more given to long campaigning stories than Indian "braves."

The feuds of White Plume, however, had not been confined to the red men; he had much to say of brushes with bee hunters, a class of offenders for whom he seemed to cherish a particular abhorrence. As the species of hunting prosecuted by these worthies is not laid down in any of the ancient books of venerie, and is, in fact, peculiar to our western frontier, a word or two on the subject may not be unacceptable to the reader.

The bee hunter is generally some settler on the verge of the prairies; a long, lank fellow, of fever and ague complexion, acquired from living on new soil, and in a hut built of green logs. In the autumn, when the harvest is over, these; frontier settlers form parties of two or three, and prepare for a bee hunt. Having provided themselves with a wagon, and a number of empty casks, they sally off, armed with their rifles, into the wilderness, directing their course east, west, north, or south, without any regard to the ordinance of the American government, which strictly forbids all trespass upon the lands belonging to the Indian tribes.

The belts of woodland that traverse the lower prairies and border the rivers are peopled by innumerable swarms of wild bees, which make their hives in hollow trees and fill them with honey tolled from the rich flowers of the prairies. The bees, according to popular assertion, are migrating like the settlers, to the west. An Indian trader, well experienced in the country, informs us that within ten years that he has passed in the Far West, the bee has advanced westward above a hundred miles. It is said on the Missouri, that the wild turkey and the wild bee go up the river together: neither is found in the upper regions. It is but recently that the wild turkey has been killed on the Nebraska, or Platte; and his travelling competitor, the wild bee, appeared there about the same time.

Be all this as it may: the course of our party of bee hunters is to make a wide circuit through the woody river bottoms, and the patches of forest on the prairies, marking, as they go out, every tree in which they have detected a hive. These marks are generally respected by any other bee hunter

that should come upon their track. When they have marked sufficient to fill all their casks, they turn their faces homeward, cut down the trees as they proceed, and having loaded their wagon with honey and wax, return well pleased to the settlements.

Now it so happens that the Indians relish wild honey as highly as do the white men, and are the more delighted with this natural luxury from its having, in many instances, but recently made its appearance in their lands. The consequence is numberless disputes and conflicts between them and the bee hunters: and often a party of the latter, returning, laden with rich spoil, from one of their forays, are apt to be waylaid by the native lords of the soil; their honey to be seized, their harness cut to pieces, and themselves left to find their way home the best way they can, happy to escape with no greater personal harm than a sound rib-roasting.

Such were the marauders of whose offences the gallant White Plume made the most bitter complaint. They were chiefly the settlers of the western part of Missouri, who are the most famous bee hunters on the frontier, and whose favorite hunting ground lies within the lands of the Kansas tribe. According to the account of White Plume, however, matters were pretty fairly balanced between him and the offenders; he having as often treated them to a taste of the bitter, as they had robbed him of the sweets.

It is but justice to this gallant chief to say that he gave proofs of having acquired some of the lights of civilization from his proximity to the whites, as was evinced in his knowledge of driving a bargain. He required hard cash in return for some corn with which he supplied the worthy captain, and left the latter at a loss which most to admire, his native chivalry as a brave, or his acquired adroitness as a trader.

Washington Irving's The Adventures of Captain Bonneville

Chapter 3

Wide prairies--Vegetable productions--Tabular hills-- Slabs of sandstone--Nebraska or Platte River--Scanty fare--Buffalo skulls--Wagons turned into boats-- Herds of buffalo--Cliffs resembling castles--The chimney--Scott's Bluffs--Story connected with them--The bighorn or ahsahta--Its nature and habits--Difference between that and the "woolly sheep," or goat of the mountains  
FROM THE MIDDLE to the end of May, Captain Bonneville pursued a western course over vast undulating plains, destitute of tree or shrub, rendered miry by occasional rain, and cut up by deep water-courses where they had to dig roads for their wagons down the soft crumbling banks and to throw bridges across the streams. The weather had attained the summer heat; the thermometer standing about fifty-seven degrees in the morning, early, but rising to about ninety degrees at noon. The incessant breezes, however, which sweep these vast plains render the heats endurable. Game was scanty, and they had to eke out their scanty fare with wild roots and vegetables, such as the Indian potato, the wild onion, and the prairie tomato, and they met with quantities of "red root," from which the hunters make a very palatable beverage. The only human being that crossed their path was a Kansas warrior, returning from some solitary expedition of bravado or revenge, bearing a Pawnee scalp as a trophy.

The country gradually rose as they proceeded westward, and their route took them over high ridges, commanding wide and beautiful prospects. The vast plain was studded on the west with innumerable hills of conical shape, such as are seen north of the Arkansas River. These hills have

---

their summits apparently cut off about the same elevation, so as to leave flat surfaces at top. It is conjectured by some that the whole country may originally have been of the altitude of these tabular hills; but through some process of nature may have sunk to its present level; these insulated eminences being protected by broad foundations of solid rock.

Captain Bonneville mentions another geological phenomenon north of Red River, where the surface of the earth, in considerable tracts of country, is covered with broad slabs of sandstone, having the form and position of grave-stones, and looking as if they had been forced up by some subterranean agitation. "The resemblance," says he, "which these very remarkable spots have in many places to old church-yards is curious in the extreme. One might almost fancy himself among the tombs of the pre-Adamites."

On the 2d of June, they arrived on the main stream of the Nebraska or Platte River; twenty-five miles below the head of the Great Island. The low banks of this river give it an appearance of great width. Captain Bonneville measured it in one place, and found it twenty-two hundred yards from bank to bank. Its depth was from three to six feet, the bottom full of quicksands. The Nebraska is studded with islands covered with that species of poplar called the cotton-wood tree. Keeping up along the course of this river for several days, they were obliged, from the scarcity of game, to put themselves upon short allowance, and, occasionally, to kill a steer. They bore their daily labors and privations, however, with great good humor, taking their tone, in all probability, from the buoyant spirit of their leader. "If the weather was inclement," said the captain, "we watched the clouds, and hoped for a sight of the blue sky and the merry sun. If food was scanty, we regaled ourselves with the hope of soon falling in with herds of buffalo, and having nothing to do but slay and eat." We doubt whether the genial captain is not describing the cheeriness of his own breast, which gave a cheery aspect to everything around him.

There certainly were evidences, however, that the country was not always equally destitute of game. At one place, they observed a field decorated with buffalo skulls, arranged in circles, curves, and other mathematical figures, as if for some mystic rite or ceremony. They were almost innumerable, and seemed to have been a vast hecatomb offered up in thanksgiving to the Great Spirit for some signal success in the chase.

On the 11th of June, they came to the fork of the Nebraska, where it divides itself into two equal and beautiful streams. One of these branches rises in the west-southwest, near the headwaters of the Arkansas. Up the course of this branch, as Captain Bonneville was well aware, lay the route to the Camanche and Kioway Indians, and to the northern Mexican settlements; of the other branch he knew nothing. Its sources might lie among wild and inaccessible cliffs, and tumble and foam down rugged defiles and over craggy precipices; but its direction was in the true course, and up this stream he determined to prosecute his route to the Rocky Mountains. Finding it impossible, from quicksands and other dangerous impediments, to cross the river in this neighborhood, he kept up along the south fork for two days, merely seeking a safe fording place. At length he encamped, caused the bodies of the wagons to be dislodged from the wheels, covered with buffalo hide, and besmeared with a compound of tallow and ashes; thus forming rude boats. In these,

they ferried their effects across the stream, which was six hundred yards wide, with a swift and strong current. Three men were in each boat, to manage it; others waded across pushing the barks before them. Thus all crossed in safety. A march of nine miles took them over high rolling prairies to the north fork; their eyes being regaled with the welcome sight of herds of buffalo at a distance, some careering the plain, others grazing and reposing in the natural meadows.

Skirting along the north fork for a day or two, excessively annoyed by mosquitoes and buffalo gnats, they reached, in the evening of the 17th, a small but beautiful grove, from which issued the confused notes of singing birds, the first they had heard since crossing the boundary of Missouri. After so many days of weary travelling through a naked, monotonous and silent country, it was delightful once more to hear the song of the bird, and to behold the verdure of the grove. It was a beautiful sunset, and a sight of the glowing rays, mantling the tree-tops and rustling branches, gladdened every heart. They pitched their camp in the grove, kindled their fires, partook merrily of their rude fare, and resigned themselves to the sweetest sleep they had enjoyed since their outset upon the prairies.

The country now became rugged and broken. High bluffs advanced upon the river, and forced the travellers occasionally to leave its banks and wind their course into the interior. In one of the wild and solitary passes they were startled by the trail of four or five pedestrians, whom they supposed to be spies from some predatory camp of either Arickara or Crow Indians. This obliged them to redouble their vigilance at night, and to keep especial watch upon their horses. In these rugged and elevated regions they began to see the black-tailed deer, a species larger than the ordinary kind, and chiefly found in rocky and mountainous countries. They had reached also a great buffalo range; Captain Bonneville ascended a high bluff, commanding an extensive view of the surrounding plains. As far as his eye could reach, the country seemed absolutely blackened by innumerable herds. No language, he says, could convey an adequate idea of the vast living mass thus presented to his eye. He remarked that the bulls and cows generally congregated in separate herds.

Opposite to the camp at this place was a singular phenomenon, which is among the curiosities of the country. It is called the chimney. The lower part is a conical mound, rising out of the naked plain; from the summit shoots up a shaft or column, about one hundred and twenty feet in height, from which it derives its name. The height of the whole, according to Captain Bonneville, is a hundred and seventy-five yards. It is composed of indurated clay, with alternate layers of red and white sandstone, and may be seen at the distance of upward of thirty miles.

On the 21st, they encamped amidst high and beetling cliffs of indurated clay and sandstone, bearing the semblance of towers, castles, churches, and fortified cities. At a distance, it was scarcely possible to persuade one's self that the works of art were not mingled with these fantastic freaks of nature. They have received the name of Scott's Bluffs, from a melancholy circumstance. A number of years since, a party were descending the upper part of the river in canoes, when their frail barks were overturned and all their powder spoiled. Their rifles being thus rendered useless, they were unable to procure food by hunting and had to depend upon roots and wild fruits for subsis-

tence. After suffering extremely from hunger, they arrived at Laramie's Fork, a small tributary of the north branch of the Nebraska, about sixty miles above the cliffs just mentioned. Here one of the party, by the name of Scott, was taken ill; and his companions came to a halt, until he should recover health and strength sufficient to proceed. While they were searching round in quest of edible roots, they discovered a fresh trail of white men, who had evidently but recently preceded them. What was to be done? By a forced march they might overtake this party, and thus be able to reach the settlements in safety. Should they linger, they might all perish of famine and exhaustion. Scott, however, was incapable of moving; they were too feeble to aid him forward, and dreaded that such a clog would prevent their coming up with the advance party. They determined, therefore, to abandon him to his fate. Accordingly, under presence of seeking food, and such simples as might be efficacious in his malady, they deserted him and hastened forward upon the trail. They succeeded in overtaking the party of which they were in quest, but concealed their faithless desertion of Scott; alleging that he had died of disease.

On the ensuing summer, these very individuals visiting these parts in company with others, came suddenly upon the bleached bones and grinning skull of a human skeleton, which, by certain signs they recognized for the remains of Scott. This was sixty long miles from the place where they had abandoned him; and it appeared that the wretched man had crawled that immense distance before death put an end to his miseries. The wild and picturesque bluffs in the neighborhood of his lonely grave have ever since borne his name.

Amidst this wild and striking scenery, Captain Bonneville, for the first time, beheld flocks of the ahsahta or bighorn, an animal which frequents these cliffs in great numbers. They accord with the nature of such scenery, and add much to its romantic effect; bounding like goats from crag to crag, often trooping along the lofty shelves of the mountains, under the guidance of some venerable patriarch with horns twisted lower than his muzzle, and sometimes peering over the edge of a precipice, so high that they appear scarce bigger than crows; indeed, it seems a pleasure to them to seek the most rugged and frightful situations, doubtless from a feeling of security.

This animal is commonly called the mountain sheep, and is often confounded with another animal, the "woolly sheep," found more to the northward, about the country of the Flatheads. The latter likewise inhabits cliffs in summer, but descends into the valleys in the winter. It has white wool, like a sheep, mingled with a thin growth of long hair; but it has short legs, a deep belly, and a beard like a goat. Its horns are about five inches long, slightly curved backwards, black as jet, and beautifully polished. Its hoofs are of the same color. This animal is by no means so active as the bighorn; it does not bound much, but sits a good deal upon its haunches. It is not so plentiful either; rarely more than two or three are seen at a time. Its wool alone gives a resemblance to the sheep; it is more properly of the flesh is said to have a musty flavor; some have thought the fleece might be valuable, as it is said to be as fine as that of the goat Cashmere, but it is not to be procured in sufficient quantities.

The ahsahta, argali, or bighorn, on the contrary, has short hair like a deer, and resembles it in shape, but has the head and horns of a sheep, and its flesh is said to be delicious mutton. The Indians consider it more sweet and delicate than any other kind of venison. It abounds in the

Rocky Mountains, from the fiftieth degree of north latitude, quite down to California; generally in the highest regions capable of vegetation; sometimes it ventures into the valleys, but on the least alarm, regains its favorite cliffs and precipices, where it is perilous, if not impossible for the hunter to follow.

Washington Irving's The Adventures of Captain Bonneville

Chapter 4

An alarm--Crow Indians--Their appearance--Mode of approach--Their vengeful errand--Their curiosity--Hostility between the Crows and Blackfeet-- Loving conduct of the Crows--Laramie's Fork-- First navigation of the Nebraska--Great elevation of the country--Rarity of the atmosphere--Its effect on the wood-work of wagons--Black Hills--Their wild and broken scenery--Indian dogs--Crow trophies-- Sterile and dreary country--Banks of the Sweet Water--Buffalo hunting--Adventure of Tom Cain the Irish cook

WHEN ON THE MARCH, Captain Bonneville always sent some of his best hunters in the advance to reconnoitre the country, as well as to look out for game. On the 24th of May, as the caravan was slowly journeying up the banks of the Nebraska, the hunters came galloping back, waving their caps, and giving the alarm cry, Indians! Indians!

The captain immediately ordered a halt: the hunters now came up and announced that a large war-party of Crow Indians were just above, on the river. The captain knew the character of these savages; one of the most roving, warlike, crafty, and predatory tribes of the mountains; horse-stealers of the first order, and easily provoked to acts of sanguinary violence. Orders were accordingly given to prepare for action, and every one promptly took the post that had been assigned him in the general order of the march, in all cases of warlike emergency.

Everything being put in battle array, the captain took the lead of his little band, and moved on slowly and warily. In a little while he beheld the Crow warriors emerging from among the bluffs. There were about sixty of them; fine martial-looking fellows, painted and arrayed for war, and mounted on horses decked out with all kinds of wild trappings. They came prancing along in gallant style, with many wild and dexterous evolutions, for none can surpass them in horsemanship; and their bright colors, and flaunting and fantastic embellishments, glaring and sparkling in the morning sunshine, gave them really a striking appearance.

Their mode of approach, to one not acquainted with the tactics and ceremonies of this rude chivalry of the wilderness, had an air of direct hostility. They came galloping forward in a body, as if about to make a furious charge, but, when close at hand, opened to the right and left, and wheeled in wide circles round the travellers, whooping and yelling like maniacs.

This done, their mock fury sank into a calm, and the chief, approaching the captain, who had remained warily drawn up, though informed of the pacific nature of the maneuver, extended to him the hand of friendship. The pipe of peace was smoked, and now all was good fellowship.

The Crows were in pursuit of a band of Cheyennes, who had attacked their village in the night and killed one of their people. They had already been five and twenty days on the track of the marauders, and were determined not to return home until they had sated their revenge.

A few days previously, some of their scouts, who were ranging the country at a distance from the main body, had discovered the party of Captain Bonneville. They had dogged it for a time in secret, astonished at the long train of wagons and oxen, and especially struck with the sight of a cow and calf, quietly following the caravan; supposing them to be some kind of tame buffalo. Having

satisfied their curiosity, they carried back to their chief intelligence of all that they had seen. He had, in consequence, diverged from his pursuit of vengeance to behold the wonders described to him. "Now that we have met you," said he to Captain Bonneville, "and have seen these marvels with our own eyes, our hearts are glad." In fact, nothing could exceed the curiosity evinced by these people as to the objects before them. Wagons had never been seen by them before, and they examined them with the greatest minuteness; but the calf was the peculiar object of their admiration. They watched it with intense interest as it licked the hands accustomed to feed it, and were struck with the mild expression of its countenance, and its perfect docility.

After much sage consultation, they at length determined that it must be the "great medicine" of the white party; an appellation given by the Indians to anything of supernatural and mysterious power that is guarded as a talisman. They were completely thrown out in their conjecture, however, by an offer of the white men to exchange the calf for a horse; their estimation of the great medicine sank in an instant, and they declined the bargain.

At the request of the Crow chieftain the two parties encamped together, and passed the residue of the day in company. The captain was well pleased with every opportunity to gain a knowledge of the "unsophisticated sons of nature," who had so long been objects of his poetic speculations; and indeed this wild, horse-stealing tribe is one of the most notorious of the mountains. The chief, of course, had his scalps to show and his battles to recount. The Blackfoot is the hereditary enemy of the Crow, toward whom hostility is like a cherished principle of religion; for every tribe, besides its casual antagonists, has some enduring foe with whom there can be no permanent reconciliation. The Crows and Blackfeet, upon the whole, are enemies worthy of each other, being rogues and ruffians of the first water. As their predatory excursions extend over the same regions, they often come in contact with each other, and these casual conflicts serve to keep their wits awake and their passions alive.

The present party of Crows, however, evinced nothing of the invidious character for which they are renowned. During the day and night that they were encamped in company with the travellers, their conduct was friendly in the extreme. They were, in fact, quite irksome in their attentions, and had a caressing manner at times quite importunate. It was not until after separation on the following morning that the captain and his men ascertained the secret of all this loving-kindness. In the course of their fraternal caresses, the Crows had contrived to empty the pockets of their white brothers; to abstract the very buttons from their coats, and, above all, to make free with their hunting knives.

By equal altitudes of the sun, taken at this last encampment, Captain Bonneville ascertained his latitude to be 41° 47' north. The thermometer, at six o'clock in the morning, stood at fifty-nine degrees; at two o'clock, P. M., at ninety-two degrees; and at six o'clock in the evening, at seventy degrees.

The Black Hills, or Mountains, now began to be seen at a distance, printing the horizon with their rugged and broken outlines; and threatening to oppose a difficult barrier in the way of the travellers.

On the 26th of May, the travellers encamped at Laramie's Fork, a clear and beautiful stream, rising in the west-southwest, maintaining an average width of twenty yards, and winding through broad meadows abounding in currants and gooseberries, and adorned with groves and clumps of trees. By an observation of Jupiter's satellites, with a Dolland reflecting telescope, Captain Bonneville

ascertained the longitude to be 102° 57' west of Greenwich.

We will here step ahead of our narrative to observe that about three years after the time of which we are treating, Mr. Robert Campbell, formerly of the Rocky Mountain Fur Company, descended the Platte from this fork, in skin canoes, thus proving, what had always been discredited, that the river was navigable. About the same time, he built a fort or trading post at Laramie's Fork, which he named Fort William, after his friend and partner, Mr. William Sublette. Since that time, the Platte has become a highway for the fur traders.

For some days past, Captain Bonneville had been made sensible of the great elevation of country into which he was gradually ascending by the effect of the dryness and rarefaction of the atmosphere upon his wagons. The wood-work shrunk; the paint boxes of the wheels were continually working out, and it was necessary to support the spokes by stout props to prevent their falling asunder. The travellers were now entering one of those great steppes of the Far West, where the prevalent aridity of the atmosphere renders the country unfit for cultivation. In these regions there is a fresh sweet growth of grass in the spring, but it is scanty and short, and parches up in the course of the summer, so that there is none for the hunters to set fire to in the autumn. It is a common observation that "above the forks of the Platte the grass does not burn." All attempts at agriculture and gardening in the neighborhood of Fort William have been attended with very little success. The grain and vegetables raised there have been scanty in quantity and poor in quality. The great elevation of these plains, and the dryness of the atmosphere, will tend to retain these immense regions in a state of pristine wildness.

In the course of a day or two more, the travellers entered that wild and broken tract of the Crow country called the Black Hills, and here their journey became toilsome in the extreme. Rugged steeps and deep ravines incessantly obstructed their progress, so that a great part of the day was spent in the painful toil of digging through banks, filling up ravines, forcing the wagons up the most forbidding ascents, or swinging them with ropes down the face of dangerous precipices. The shoes of their horses were worn out, and their feet injured by the rugged and stony roads. The travellers were annoyed also by frequent but brief storms, which would come hurrying over the hills, or through the mountain defiles, rage with great fury for a short time, and then pass off, leaving everything calm and serene again.

For several nights the camp had been infested by vagabond Indian dogs, prowling about in quest of food. They were about the size of a large pointer; with ears short and erect, and a long bushy tail--altogether, they bore a striking resemblance to a wolf. These skulking visitors would keep about the purlieu of the camp until daylight; when, on the first stir of life among the sleepers, they would scamper off until they reached some rising ground, where they would take their seats, and keep a sharp and hungry watch upon every movement. The moment the travellers were fairly on the march, and the camp was abandoned, these starving hangers-on would hasten to the deserted fires, to seize upon the half-picked bones, the offal and garbage that lay about; and, having made a hasty meal, with many a snap and snarl and growl, would follow leisurely on the trail of the caravan. Many attempts were made to coax or catch them, but in vain. Their quick and suspicious eyes caught the slightest sinister movement, and they turned and scampered off. At length one was taken. He was terribly alarmed, and crouched and trembled as if expecting instant death. Soothed, however, by caresses, he began after a time to gather confidence and wag his tail, and at length was brought to follow close at the heels of his captors, still, however, darting around furtive

and suspicious glances, and evincing a disposition to scamper off upon the least alarm. On the first of July the band of Crow warriors again crossed their path. They came in vaunting and vainglorious style; displaying five Cheyenne scalps, the trophies of their vengeance. They were now bound homewards, to appease the manes of their comrade by these proofs that his death had been revenged, and intended to have scalp-dances and other triumphant rejoicings. Captain Bonneville and his men, however, were by no means disposed to renew their confiding intimacy with these crafty savages, and above all, took care to avoid their pilfering caresses. They remarked one precaution of the Crows with respect to their horses; to protect their hoofs from the sharp and jagged rocks among which they had to pass, they had covered them with shoes of buffalo hide. The route of the travellers lay generally along the course of the Nebraska or Platte, but occasionally, where steep promontories advanced to the margin of the stream, they were obliged to make inland circuits. One of these took them through a bold and stern country, bordered by a range of low mountains, running east and west. Everything around bore traces of some fearful convulsion of nature in times long past. Hitherto the various strata of rock had exhibited a gentle elevation toward the southwest, but here everything appeared to have been subverted, and thrown out of place. In many places there were heavy beds of white sandstone resting upon red. Immense strata of rocks jutted up into crags and cliffs; and sometimes formed perpendicular walls and overhanging precipices. An air of sterility prevailed over these savage wastes. The valleys were destitute of herbage, and scantily clothed with a stunted species of wormwood, generally known among traders and trappers by the name of sage. From an elevated point of their march through this region, the travellers caught a beautiful view of the Powder River Mountains away to the north, stretching along the very verge of the horizon, and seeming, from the snow with which they were mantled, to be a chain of small white clouds, connecting sky and earth.

Though the thermometer at mid-day ranged from eighty to ninety, and even sometimes rose to ninety-three degrees, yet occasional spots of snow were to be seen on the tops of the low mountains, among which the travellers were journeying; proofs of the great elevation of the whole region.

The Nebraska, in its passage through the Black Hills, is confined to a much narrower channel than that through which it flows in the plains below; but it is deeper and clearer, and rushes with a stronger current. The scenery, also, is more varied and beautiful. Sometimes it glides rapidly but smoothly through a picturesque valley, between wooded banks; then, forcing its way into the bosom of rugged mountains, it rushes impetuously through narrow defiles, roaring and foaming down rocks and rapids, until it is again soothed to rest in some peaceful valley.

On the 12th of July, Captain Bonneville abandoned the main stream of the Nebraska, which was continually shouldered by rugged promontories, and making a bend to the southwest, for a couple of days, part of the time over plains of loose sand, encamped on the 14th on the banks of the Sweet Water, a stream about twenty yards in breadth, and four or five feet deep, flowing between low banks over a sandy soil, and forming one of the forks or upper branches of the Nebraska. Up this stream they now shaped their course for several successive days, tending, generally, to the west. The soil was light and sandy; the country much diversified. Frequently the plains were studded with isolated blocks of rock, sometimes in the shape of a half globe, and from three to four hundred feet high. These singular masses had occasionally a very imposing, and even sublime appearance, rising from the midst of a savage and lonely landscape.

As the travellers continued to advance, they became more and more sensible of the elevation of the country. The hills around were more generally capped with snow. The men complained of cramps and colics, sore lips and mouths, and violent headaches. The wood-work of the wagons also shrank so much that it was with difficulty the wheels were kept from falling to pieces. The country bordering upon the river was frequently gashed with deep ravines, or traversed by high bluffs, to avoid which, the travellers were obliged to make wide circuits through the plains. In the course of these, they came upon immense herds of buffalo, which kept scouring off in the van, like a retreating army.

Among the motley retainers of the camp was Tom Cain, a raw Irishman, who officiated as cook, whose various blunders and expedients in his novel situation, and in the wild scenes and wild kind of life into which he had suddenly been thrown, had made him a kind of butt or droll of the camp. Tom, however, began to discover an ambition superior to his station; and the conversation of the hunters, and their stories of their exploits, inspired him with a desire to elevate himself to the dignity of their order. The buffalo in such immense droves presented a tempting opportunity for making his first essay. He rode, in the line of march, all prepared for action: his powder-flask and shot-pouch knowingly slung at the pommel of his saddle, to be at hand; his rifle balanced on his shoulder. While in this plight, a troop of Buffalo came trotting by in great alarm. In an instant, Tom sprang from his horse and gave chase on foot. Finding they were leaving him behind, he levelled his rifle and pulled [the] trigger. His shot produced no other effect than to increase the speed of the buffalo, and to frighten his own horse, who took to his heels, and scampered off with all the ammunition. Tom scampered after him, hallooing with might and main, and the wild horse and wild Irishman soon disappeared among the ravines of the prairie. Captain Bonneville, who was at the head of the line, and had seen the transaction at a distance, detached a party in pursuit of Tom. After a long interval they returned, leading the frightened horse; but though they had scoured the country, and looked out and shouted from every height, they had seen nothing of his rider.

As Captain Bonneville knew Tom's utter awkwardness and inexperience, and the dangers of a bewildered Irishman in the midst of a prairie, he halted and encamped at an early hour, that there might be a regular hunt for him in the morning.

At early dawn on the following day scouts were sent off in every direction, while the main body, after breakfast, proceeded slowly on its course. It was not until the middle of the afternoon that the hunters returned, with honest Tom mounted behind one of them. They had found him in a complete state of perplexity and amazement. His appearance caused shouts of merriment in the camp,--but Tom for once could not join in the mirth raised at his expense: he was completely chapfallen, and apparently cured of the hunting mania for the rest of his life.

Chapter 5

Magnificent scenery-- Wind River Mountains-- Treasury of waters-- A stray horse-- An Indian trail-- Trout streams-- The Great Green River Valley-- An alarm-- A band of trappers-- Fontenelle, his information-- Sufferings of thirst-- Encampment on the Seeds-ke-dee-- Strategy of rival traders-- Fortification of the camp-- The Blackfeet-- Banditti of the mountains-- Their character and habits

---

IT WAS ON THE 20TH of July that Captain Bonneville first came in sight of the grand region of his hopes and anticipations, the Rocky Mountains. He had been making a bend to the south, to avoid some obstacles along the river, and had attained a high, rocky ridge, when a magnificent prospect burst upon his sight. To the west rose the Wind River Mountains, with their bleached and snowy summits towering into the clouds. These stretched far to the north-northwest, until they melted away into what appeared to be faint clouds, but which the experienced eyes of the veteran hunters of the party recognized for the rugged mountains of the Yellowstone; at the feet of which extended the wild Crow country: a perilous, though profitable region for the trapper. To the southwest, the eye ranged over an immense extent of wilderness, with what appeared to be a snowy vapor resting upon its horizon. This, however, was pointed out as another branch of the Great Chippewyan, or Rocky chain; being the Eutaw Mountains, at whose basis the wandering tribe of hunters of the same name pitch their tents. We can imagine the enthusiasm of the worthy captain when he beheld the vast and mountainous scene of his adventurous enterprise thus suddenly unveiled before him. We can imagine with what feelings of awe and admiration he must have contemplated the Wind River Sierra, or bed of mountains; that great fountainhead from whose springs, and lakes, and melted snows some of those mighty rivers take their rise, which wander over hundreds of miles of varied country and clime, and find their way to the opposite waves of the Atlantic and the Pacific.

The Wind River Mountains are, in fact, among the most remarkable of the whole Rocky chain; and would appear to be among the loftiest. They form, as it were, a great bed of mountains, about eighty miles in length, and from twenty to thirty in breadth; with rugged peaks, covered with eternal snows, and deep, narrow valleys full of springs, and brooks, and rock-bound lakes. From this great treasury of waters issue forth limpid streams, which, augmenting as they descend, become main tributaries of the Missouri on the one side, and the Columbia on the other; and give rise to the Seeds-ke-dee Agie, or Green River, the great Colorado of the West, that empties its current into the Gulf of California.

The Wind River Mountains are notorious in hunters' and trappers' stories: their rugged defiles, and the rough tracts about their neighborhood, having been lurking places for the predatory hordes of the mountains, and scenes of rough encounter with Crows and Blackfeet. It was to the west of these mountains, in the valley of the Seeds-ke-dee Agie, or Green River, that Captain Bonneville intended to make a halt for the purpose of giving repose to his people and his horses after their weary journeying; and of collecting information as to his future course. This Green River valley, and its immediate neighborhood, as we have already observed, formed the main point of rendezvous, for the present year, of the rival fur companies, and the motley populace, civilized and savage, connected with them. Several days of rugged travel, however, yet remained for the captain and his men before they should encamp in this desired resting-place.

On the 21st of July, as they were pursuing their course through one of the meadows of the Sweet Water, they beheld a horse grazing at a little distance. He showed no alarm at their approach, but suffered himself quietly to be taken, evincing a perfect state of tameness. The scouts of the party were instantly on the look-out for the owners of this animal; lest some dangerous band of savages might be lurking in the vicinity. After a narrow search, they discovered the trail of an Indian party, which had evidently passed through that neighborhood but recently. The horse was accordingly taken possession of, as an stray; but a more vigilant watch than usual was kept round the camp

at nights, lest his former owners should be upon the prowl.

The travellers had now attained so high an elevation that on the 23d of July, at daybreak, there was considerable ice in the waterbuckets, and the thermometer stood at twenty-two degrees. The rarefy of the atmosphere continued to affect the wood-work of the wagons, and the wheels were incessantly falling to pieces. A remedy was at length devised. The tire of each wheel was taken off; a band of wood was nailed round the exterior of the felloes, the tire was then made red hot, replaced round the wheel, and suddenly cooled with water. By this means, the whole was bound together with great compactness.

The extreme elevation of these great steppes, which range along the feet of the Rocky Mountains, takes away from the seeming height of their peaks, which yield to few in the known world in point of altitude above the level of the sea.

On the 24th, the travellers took final leave of the Sweet Water, and keeping westwardly, over a low and very rocky ridge, one of the most southern spurs of the Wind River Mountains, they encamped, after a march of seven hours and a half, on the banks of a small clear stream, running to the south, in which they caught a number of fine trout.

The sight of these fish was hailed with pleasure, as a sign that they had reached the waters which flow into the Pacific; for it is only on the western streams of the Rocky Mountains that trout are to be taken. The stream on which they had thus encamped proved, in effect, to be tributary to the Seeds-ke-dee Agie, or Green River, into which it flowed at some distance to the south.

Captain Bonneville now considered himself as having fairly passed the crest of the Rocky Mountains; and felt some degree of exultation in being the first individual that had crossed, north of the settled provinces of Mexico, from the waters of the Atlantic to those of the Pacific, with wagons. Mr. William Sublette, the enterprising leader of the Rocky Mountain Fur Company, had, two or three years previously, reached the valley of the Wind River, which lies on the northeast of the mountains; but had proceeded with them no further.

A vast valley now spread itself before the travellers, bounded on one side by the Wind River Mountains, and to the west, by a long range of high hills. This, Captain Bonneville was assured by a veteran hunter in his company, was the great valley of the Seedske-dee; and the same informant would have fain persuaded him that a small stream, three feet deep, which he came to on the 25th, was that river. The captain was convinced, however, that the stream was too insignificant to drain so wide a valley and the adjacent mountains: he encamped, therefore, at an early hour, on its borders, that he might take the whole of the next day to reach the main river; which he presumed to flow between him and the distant range of western hills.

On the 26th of July, he commenced his march at an early hour, making directly across the valley, toward the hills in the west; proceeding at as brisk a rate as the jaded condition of his horses would permit. About eleven o'clock in the morning, a great cloud of dust was descried in the rear, advancing directly on the trail of the party. The alarm was given; they all came to a halt, and held a council of war. Some conjectured that the band of Indians, whose trail they had discovered in the neighborhood of the stray horse, had been lying in wait for them in some secret fastness of the mountains; and were about to attack them on the open plain, where they would have no shelter. Preparations were immediately made for defence; and a scouting party sent off to reconnoitre. They soon came galloping back, making signals that all was well. The cloud of dust was made by a band of fifty or sixty mounted trappers, belonging to the American Fur Company, who soon

---

came up, leading their pack-horses. They were headed by Mr. Fontenelle, an experienced leader, or "partisan," as a chief of a party is called in the technical language of the trappers.

Mr. Fontenelle informed Captain Bonneville that he was on his way from the company's trading post on the Yellowstone to the yearly rendezvous, with reinforcements and supplies for their hunting and trading parties beyond the mountains; and that he expected to meet, by appointment, with a band of free trappers in that very neighborhood. He had fallen upon the trail of Captain Bonneville's party, just after leaving the Nebraska; and, finding that they had frightened off all the game, had been obliged to push on, by forced marches, to avoid famine: both men and horses were, therefore, much travel-worn; but this was no place to halt; the plain before them he said was destitute of grass and water, neither of which would be met with short of the Green River, which was yet at a considerable distance. He hoped, he added, as his party were all on horseback, to reach the river, with hard travelling, by nightfall: but he doubted the possibility of Captain Bonneville's arrival there with his wagons before the day following. Having imparted this information, he pushed forward with all speed.

Captain Bonneville followed on as fast as circumstances would permit. The ground was firm and gravelly; but the horses were too much fatigued to move rapidly. After a long and harassing day's march, without pausing for a noontide meal, they were compelled, at nine o'clock at night, to encamp in an open plain, destitute of water or pasturage. On the following morning, the horses were turned loose at the peep of day; to slake their thirst, if possible, from the dew collected on the sparse grass, here and there springing up among dry sand-banks. The soil of a great part of this Green River valley is a whitish clay, into which the rain cannot penetrate, but which dries and cracks with the sun. In some places it produces a salt weed, and grass along the margins of the streams; but the wider expanses of it are desolate and barren. It was not until noon that Captain Bonneville reached the banks of the Seeds-ke-dee, or Colorado of the West; in the meantime, the sufferings of both men and horses had been excessive, and it was with almost frantic eagerness that they hurried to allay their burning thirst in the limpid current of the river.

Fontenelle and his party had not fared much better; the chief part had managed to reach the river by nightfall, but were nearly knocked up by the exertion; the horses of others sank under them, and they were obliged to pass the night upon the road.

On the following morning, July 27th, Fontenelle moved his camp across the river; while Captain Bonneville proceeded some little distance below, where there was a small but fresh meadow yielding abundant pasturage. Here the poor jaded horses were turned out to graze, and take their rest: the weary journey up the mountains had worn them down in flesh and spirit; but this last march across the thirsty plain had nearly finished them.

The captain had here the first taste of the boasted strategy of the fur trade. During his brief, but social encampment, in company with Fontenelle, that experienced trapper had managed to win over a number of Delaware Indians whom the captain had brought with him, by offering them four hundred dollars each for the ensuing autumnal hunt. The captain was somewhat astonished when he saw these hunters, on whose services he had calculated securely, suddenly pack up their traps, and go over to the rival camp. That he might in some measure, however, be even with his competitor, he dispatched two scouts to look out for the band of free trappers who were to meet Fontenelle in this neighborhood, and to endeavor to bring them to his camp.

As it would be necessary to remain some time in this neighborhood, that both men and horses

might repose, and recruit their strength; and as it was a region full of danger, Captain Bonneville proceeded to fortify his camp with breastworks of logs and pickets.

These precautions were, at that time, peculiarly necessary, from the bands of Blackfeet Indians which were roving about the neighborhood. These savages are the most dangerous banditti of the mountains, and the inveterate foe of the trappers. They are Ishmaelites of the first order, always with weapon in hand, ready for action. The young braves of the tribe, who are destitute of property, go to war for booty; to gain horses, and acquire the means of setting up a lodge, supporting a family, and entitling themselves to a seat in the public councils. The veteran warriors fight merely for the love of the thing, and the consequence which success gives them among their people.

They are capital horsemen, and are generally well mounted on short, stout horses, similar to the prairie ponies to be met with at St. Louis. When on a war party, however, they go on foot, to enable them to skulk through the country with greater secrecy; to keep in thickets and ravines, and use more adroit subterfuges and stratagems. Their mode of warfare is entirely by ambush, surprise, and sudden assaults in the night time. If they succeed in causing a panic, they dash forward with headlong fury: if the enemy is on the alert, and shows no signs of fear, they become wary and deliberate in their movements.

Some of them are armed in the primitive style, with bows and arrows; the greater part have American fuses, made after the fashion of those of the Hudson's Bay Company. These they procure at the trading post of the American Fur Company, on Marias River, where they traffic their peltries for arms, ammunition, clothing, and trinkets. They are extremely fond of spirituous liquors and tobacco; for which nuisances they are ready to exchange not merely their guns and horses, but even their wives and daughters. As they are a treacherous race, and have cherished a lurking hostility to the whites ever since one of their tribe was killed by Mr. Lewis, the associate of General Clarke, in his exploring expedition across the Rocky Mountains, the American Fur Company is obliged constantly to keep at that post a garrison of sixty or seventy men.

Under the general name of Blackfeet are comprehended several tribes: such as the Surcies, the Peagans, the Blood Indians, and the Gros Ventres of the Prairies: who roam about the southern branches of the Yellowstone and Missouri Rivers, together with some other tribes further north. The bands infesting the Wind River Mountains and the country adjacent at the time of which we are treating, were Gros Ventres of the Prairies, which are not to be confounded with Gros Ventres of the Missouri, who keep about the lower part of that river, and are friendly to the white men. This hostile band keeps about the headwaters of the Missouri, and numbers about nine hundred fighting men. Once in the course of two or three years they abandon their usual abodes, and make a visit to the Arapahoes of the Arkansas. Their route lies either through the Crow country, and the Black Hills, or through the lands of the Nez Perces, Flatheads, Bannacks, and Shoshonies. As they enjoy their favorite state of hostility with all these tribes, their expeditions are prone to be conducted in the most lawless and predatory style; nor do they hesitate to extend their maraudings to any party of white men they meet with; following their trails; hovering about their camps; waylaying and dogging the caravans of the free traders, and murdering the solitary trapper. The consequences are frequent and desperate fights between them and the "mountaineers," in the wild defiles and fastnesses of the Rocky Mountains.

The band in question was, at this time, on their way homeward from one of their customary visits to the Arapahoes; and in the ensuing chapter we shall treat of some bloody encounters between

them and the trappers, which had taken place just before the arrival of Captain Bonneville among the mountains.

Washington Irving's The Adventures of Captain Bonneville

Chapter 6

Sublette and his band--Robert Campbell--Mr. Wyeth and a band of "down-easters" --Yankee enterprise-- Fitzpatrick--His adventure with the Blackfeet--A rendezvous of mountaineers--The battle of Pierre's Hole--An Indian ambush--Sublette's return

LEAVING CAPTAIN BONNEVILLE and his band ensconced within their fortified camp in the Green River valley, we shall step back and accompany a party of the Rocky Mountain Fur Company in its progress, with supplies from St. Louis, to the annual rendezvous at Pierre's Hole. This party consisted of sixty men, well mounted, and conducting a line of packhorses. They were commanded by Captain William Sublette, a partner in the company, and one of the most active, intrepid, and renowned leaders in this half military kind of service. He was accompanied by his associate in business, and tried companion in danger, Mr. Robert Campbell, one of the pioneers of the trade beyond the mountains, who had commanded trapping parties there in times of the greatest peril.

As these worthy compeers were on their route to the frontier, they fell in with another expedition, likewise on its way to the mountains. This was a party of regular "down-easters," that is to say, people of New England, who, with the all-penetrating and all-pervading spirit of their race, were now pushing their way into a new field of enterprise with which they were totally unacquainted. The party had been fitted out and was maintained and commanded by Mr. Nathaniel J. Wyeth, of Boston. This gentleman had conceived an idea that a profitable fishery for salmon might be established on the Columbia River, and connected with the fur trade. He had, accordingly, invested capital in goods, calculated, as he supposed, for the Indian trade, and had enlisted a number of eastern men in his employ, who had never been in the Far West, nor knew anything of the wilderness. With these, he was bravely steering his way across the continent, undismayed by danger, difficulty, or distance, in the same way that a New England coaster and his neighbors will coolly launch forth on a voyage to the Black Sea, or a whaling cruise to the Pacific.

With all their national aptitude at expedient and resource, Wyeth and his men felt themselves completely at a loss when they reached the frontier, and found that the wilderness required experience and habitudes of which they were totally deficient. Not one of the party, excepting the leader, had ever seen an Indian or handled a rifle; they were without guide or interpreter, and totally unacquainted with "wood craft" and the modes of making their way among savage hordes, and subsisting themselves during long marches over wild mountains and barren plains.

In this predicament, Captain Sublette found them, in a manner becalmed, or rather run aground, at the little frontier town of Independence, in Missouri, and kindly took them in tow. The two parties travelled amicably together; the frontier men of Sublette's party gave their Yankee comrades some lessons in hunting, and some insight into the art and mystery of dealing with the Indians, and they all arrived without accident at the upper branches of the Nebraska or Platte River. In the course of their march, Mr. Fitzpatrick, the partner of the company who was resident at that time beyond the mountains, came down from the rendezvous at Pierre's Hole to meet them and hurry them forward. He travelled in company with them until they reached the Sweet Water; then

taking a couple of horses, one for the saddle, and the other as a pack-horse, he started off express for Pierre's Hole, to make arrangements against their arrival, that he might commence his hunting campaign before the rival company.

Fitzpatrick was a hardy and experienced mountaineer, and knew all the passes and defiles. As he was pursuing his lonely course up the Green River valley, he described several horsemen at a distance, and came to a halt to reconnoitre. He supposed them to be some detachment from the rendezvous, or a party of friendly Indians. They perceived him, and setting up the war-whoop, dashed forward at full speed: he saw at once his mistake and his peril--they were Blackfeet. Springing upon his fleetest horse, and abandoning the other to the enemy, he made for the mountains, and succeeded in escaping up one of the most dangerous defiles. Here he concealed himself until he thought the Indians had gone off, when he returned into the valley. He was again pursued, lost his remaining horse, and only escaped by scrambling up among the cliffs. For several days he remained lurking among rocks and precipices, and almost famished, having but one remaining charge in his rifle, which he kept for self-defence.

In the meantime, Sublette and Campbell, with their fellow traveller, Wyeth, had pursued their march unmolested, and arrived in the Green River valley, totally unconscious that there was any lurking enemy at hand. They had encamped one night on the banks of a small stream, which came down from the Wind River Mountains, when about midnight, a band of Indians burst upon their camp, with horrible yells and whoops, and a discharge of guns and arrows. Happily no other harm was done than wounding one mule, and causing several horses to break loose from their pickets. The camp was instantly in arms; but the Indians retreated with yells of exultation, carrying off several of the horses under cover of the night.

This was somewhat of a disagreeable foretaste of mountain life to some of Wyeth's band, accustomed only to the regular and peaceful life of New England; nor was it altogether to the taste of Captain Sublette's men, who were chiefly creoles and townsmen from St. Louis. They continued their march the next morning, keeping scouts ahead and upon their flanks, and arrived without further molestation at Pierre's Hole.

The first inquiry of Captain Sublette, on reaching the rendezvous, was for Fitzpatrick. He had not arrived, nor had any intelligence been received concerning him. Great uneasiness was now entertained, lest he should have fallen into the hands of the Blackfeet who had made the midnight attack upon the camp. It was a matter of general joy, therefore, when he made his appearance, conducted by two half-breed Iroquois hunters. He had lurked for several days among the mountains, until almost starved; at length he escaped the vigilance of his enemies in the night, and was so fortunate as to meet the two Iroquois hunters, who, being on horseback, conveyed him without further difficulty to the rendezvous. He arrived there so emaciated that he could scarcely be recognized.

The valley called Pierre's Hole is about thirty miles in length and fifteen in width, bounded to the west and south by low and broken ridges, and overlooked to the east by three lofty mountains, called the three Tetons, which domineer as landmarks over a vast extent of country.

A fine stream, fed by rivulets and mountain springs, pours through the valley toward the north, dividing it into nearly equal parts. The meadows on its borders are broad and extensive, covered with willow and cotton-wood trees, so closely interlocked and matted together as to be nearly impassable.

---

In this valley was congregated the motley populace connected with the fur trade. Here the two rival companies had their encampments, with their retainers of all kinds: traders, trappers, hunters, and half-breeds, assembled from all quarters, awaiting their yearly supplies, and their orders to start off in new directions. Here, also, the savage tribes connected with the trade, the Nez Perces or Chopunnish Indians, and Flatheads, had pitched their lodges beside the streams, and with their squaws, awaited the distribution of goods and finery. There was, moreover, a band of fifteen free trappers, commanded by a gallant leader from Arkansas, named Sinclair, who held their encampment a little apart from the rest. Such was the wild and heterogeneous assemblage, amounting to several hundred men, civilized and savage, distributed in tents and lodges in the several camps. The arrival of Captain Sublette with supplies put the Rocky Mountain Fur Company in full activity. The wares and merchandise were quickly opened, and as quickly disposed of to trappers and Indians; the usual excitement and revelry took place, after which all hands began to disperse to their several destinations.

On the 17th of July, a small brigade of fourteen trappers, led by Milton Sublette, brother of the captain, set out with the intention of proceeding to the southwest. They were accompanied by Sinclair and his fifteen free trappers; Wyeth, also, and his New England band of beaver hunters and salmon fishers, now dwindled down to eleven, took this opportunity to prosecute their cruise in the wilderness, accompanied with such experienced pilots. On the first day, they proceeded about eight miles to the southeast, and encamped for the night, still in the valley of Pierre's Hole. On the following morning, just as they were raising their camp, they observed a long line of people pouring down a defile of the mountains. They at first supposed them to be Fontenelle and his party, whose arrival had been daily expected. Wyeth, however, reconnoitred them with a spy-glass, and soon perceived they were Indians. They were divided into two parties, forming, in the whole, about one hundred and fifty persons, men, women, and children. Some were on horseback, fantastically painted and arrayed, with scarlet blankets fluttering in the wind. The greater part, however, were on foot. They had perceived the trappers before they were themselves discovered, and came down yelling and whooping into the plain. On nearer approach, they were ascertained to be Blackfeet.

One of the trappers of Sublette's brigade, a half-breed named Antoine Godin, now mounted his horse, and rode forth as if to hold a conference. He was the son of an Iroquois hunter, who had been cruelly murdered by the Blackfeet at a small stream below the mountains, which still bears his name. In company with Antoine rode forth a Flathead Indian, whose once powerful tribe had been completely broken down in their wars with the Blackfeet. Both of them, therefore, cherished the most vengeful hostility against these marauders of the mountains. The Blackfeet came to a halt. One of the chiefs advanced singly and unarmed, bearing the pipe of peace. This overture was certainly pacific; but Antoine and the Flathead were predisposed to hostility, and pretended to consider it a treacherous movement.

"Is your piece charged?" said Antoine to his red companion.

"It is."

"Then cock it, and follow me."

They met the Blackfoot chief half way, who extended his hand in friendship. Antoine grasped it.

"Fire!" cried he.

The Flathead levelled his piece, and brought the Blackfoot to the ground. Antoine snatched off

---

his scarlet blanket, which was richly ornamented, and galloped off with it as a trophy to the camp, the bullets of the enemy whistling after him. The Indians immediately threw themselves into the edge of a swamp, among willows and cotton-wood trees, interwoven with vines. Here they began to fortify themselves; the women digging a trench, and throwing up a breastwork of logs and branches, deep hid in the bosom of the wood, while the warriors skirmished at the edge to keep the trappers at bay.

The latter took their station in a ravine in front, whence they kept up a scattering fire. As to Wyeth, and his little band of "downeasters," they were perfectly astounded by this second specimen of life in the wilderness; the men, being especially unused to bushfighting and the use of the rifle, were at a loss how to proceed. Wyeth, however, acted as a skilful commander. He got all his horses into camp and secured them; then, making a breastwork of his packs of goods, he charged his men to remain in garrison, and not to stir out of their fort. For himself, he mingled with the other leaders, determined to take his share in the conflict.

In the meantime, an express had been sent off to the rendezvous for reinforcements. Captain Sublette, and his associate, Campbell, were at their camp when the express came galloping across the plain, waving his cap, and giving the alarm; "Blackfeet! Blackfeet! a fight in the upper part of the valley!--to arms! to arms!"

The alarm was passed from camp to camp. It was a common cause. Every one turned out with horse and rifle. The Nez Perces and Flatheads joined. As fast as horseman could arm and mount he galloped off; the valley was soon alive with white men and red men scouring at full speed. Sublette ordered his men to keep to the camp, being recruits from St. Louis, and unused to Indian warfare. He and his friend Campbell prepared for action. Throwing off their coats, rolling up their sleeves, and arming themselves with pistols and rifles, they mounted their horses and dashed forward among the first. As they rode along, they made their wills in soldier-like style; each stating how his effects should be disposed of in case of his death, and appointing the other his executor. The Blackfeet warriors had supposed the brigade of Milton Sublette all the foes they had to deal with, and were astonished to behold the whole valley suddenly swarming with horsemen, galloping to the field of action. They withdrew into their fort, which was completely hid from sight in the dark and tangled wood. Most of their women and children had retreated to the mountains. The trappers now sallied forth and approached the swamp, firing into the thickets at random; the Blackfeet had a better sight at their adversaries, who were in the open field, and a half-breed was wounded in the shoulder.

When Captain Sublette arrived, he urged to penetrate the swamp and storm the fort, but all hung back in awe of the dismal horrors of the place, and the danger of attacking such desperadoes in their savage den. The very Indian allies, though accustomed to bushfighting, regarded it as almost impenetrable, and full of frightful danger. Sublette was not to be turned from his purpose, but offered to lead the way into the swamp. Campbell stepped forward to accompany him. Before entering the perilous wood, Sublette took his brothers aside, and told them that in case he fell, Campbell, who knew his will, was to be his executor. This done, he grasped his rifle and pushed into the thickets, followed by Campbell. Sinclair, the partisan from Arkansas, was at the edge of the wood with his brother and a few of his men. Excited by the gallant example of the two friends, he pressed forward to share their dangers.

The swamp was produced by the labors of the beaver, which, by damming up a stream, had in-

undated a portion of the valley. The place was all overgrown with woods and thickets, so closely matted and entangled that it was impossible to see ten paces ahead, and the three associates in peril had to crawl along, one after another, making their way by putting the branches and vines aside; but doing it with caution, lest they should attract the eye of some lurking marksman. They took the lead by turns, each advancing about twenty yards at a time, and now and then hallooing to their men to follow. Some of the latter gradually entered the swamp, and followed a little distance in their rear.

They had now reached a more open part of the wood, and had glimpses of the rude fortress from between the trees. It was a mere breastwork, as we have said, of logs and branches, with blankets, buffalo robes, and the leathern covers of lodges, extended round the top as a screen. The movements of the leaders, as they groped their way, had been descried by the sharp-sighted enemy. As Sinclair, who was in the advance, was putting some branches aside, he was shot through the body. He fell on the spot. "Take me to my brother," said he to Campbell. The latter gave him in charge to some of the men, who conveyed him out of the swamp.

Sublette now took the advance. As he was reconnoitring the fort, he perceived an Indian peeping through an aperture. In an instant his rifle was levelled and discharged, and the ball struck the savage in the eye. While he was reloading, he called to Campbell, and pointed out to him the hole; "Watch that place," said he, "and you will soon have a fair chance for a shot." Scarce had he uttered the words, when a ball struck him in the shoulder, and almost wheeled him around. His first thought was to take hold of his arm with his other hand, and move it up and down. He ascertained, to his satisfaction, that the bone was not broken. The next moment he was so faint that he could not stand. Campbell took him in his arms and carried him out of the thicket. The same shot that struck Sublette wounded another man in the head.

A brisk fire was now opened by the mountaineers from the wood, answered occasionally from the fort. Unluckily, the trappers and their allies, in searching for the fort, had got scattered, so that Wyeth, and a number of Nez Perces, approached the fort on the northwest side, while others did the same on the opposite quarter. A cross-fire thus took place, which occasionally did mischief to friends as well as foes. An Indian was shot down, close to Wyeth, by a ball which, he was convinced, had been sped from the rifle of a trapper on the other side of the fort.

The number of whites and their Indian allies had by this time so much increased by arrivals from the rendezvous, that the Blackfeet were completely overmatched. They kept doggedly in their fort, however, making no offer of surrender. An occasional firing into the breastwork was kept up during the day. Now and then, one of the Indian allies, in bravado, would rush up to the fort, fire over the ramparts, tear off a buffalo robe or a scarlet blanket, and return with it in triumph to his comrades. Most of the savage garrison that fell, however, were killed in the first part of the attack. At one time it was resolved to set fire to the fort; and the squaws belonging to the allies were employed to collect combustibles. This however, was abandoned; the Nez Perces being unwilling to destroy the robes and blankets, and other spoils of the enemy, which they felt sure would fall into their hands.

The Indians, when fighting, are prone to taunt and revile each other. During one of the pauses of the battle, the voice of the Blackfeet chief was heard.

"So long," said he, "as we had powder and ball, we fought you in the open field: when those were spent, we retreated here to die with our women and children. You may burn us in our fort; but,

stay by our ashes, and you who are so hungry for fighting will soon have enough. There are four hundred lodges of our brethren at hand. They will soon be here--their arms are strong--their hearts are big--they will avenge us!"

This speech was translated two or three times by Nez Perce and creole interpreters. By the time it was rendered into English, the chief was made to say that four hundred lodges of his tribe were attacking the encampment at the other end of the valley. Every one now was for hurrying to the defence of the rendezvous. A party was left to keep watch upon the fort; the rest galloped off to the camp. As night came on, the trappers drew out of the swamp, and remained about the skirts of the wood. By morning, their companions returned from the rendezvous with the report that all was safe. As the day opened, they ventured within the swamp and approached the fort. All was silent. They advanced up to it without opposition. They entered: it had been abandoned in the night, and the Blackfeet had effected their retreat, carrying off their wounded on litters made of branches, leaving bloody traces on the herbage. The bodies of ten Indians were found within the fort; among them the one shot in the eye by Sublette. The Blackfeet afterward reported that they had lost twenty-six warriors in this battle. Thirty-two horses were likewise found killed; among them were some of those recently carried off from Sublette's party, in the night; which showed that these were the very savages that had attacked him. They proved to be an advance party of the main body of Blackfeet, which had been upon the trail of Sublette's party. Five white men and one halfbreed were killed, and several wounded. Seven of the Nez Perces were also killed, and six wounded. They had an old chief, who was reputed as invulnerable. In the course of the action he was hit by a spent ball, and threw up blood; but his skin was unbroken. His people were now fully convinced that he was proof against powder and ball.

A striking circumstance is related as having occurred the morning after the battle. As some of the trappers and their Indian allies were approaching the fort through the woods, they beheld an Indian woman, of noble form and features, leaning against a tree. Their surprise at her lingering here alone, to fall into the hands of her enemies, was dispelled, when they saw the corpse of a warrior at her feet. Either she was so lost in grief as not to perceive their approach; or a proud spirit kept her silent and motionless. The Indians set up a yell, on discovering her, and before the trappers could interfere, her mangled body fell upon the corpse which she had refused to abandon. We have heard this anecdote discredited by one of the leaders who had been in the battle: but the fact may have taken place without his seeing it, and been concealed from him. It is an instance of female devotion, even to the death, which we are well disposed to believe and to record. After the battle, the brigade of Milton Sublette, together with the free trappers, and Wyeth's New England band, remained some days at the rendezvous, to see if the main body of Blackfeet intended to make an attack; nothing of the kind occurring, they once more put themselves in motion, and proceeded on their route toward the southwest. Captain Sublette having distributed his supplies, had intended to set off on his return to St. Louis, taking with him the peltries collected from the trappers and Indians. His wound, however obliged him to postpone his departure. Several who were to have accompanied him became impatient of this delay. Among these was a young Bostonian, Mr. Joseph More, one of the followers of Mr. Wyeth, who had seen enough of mountain life and savage warfare, and was eager to return to the abodes of civilization. He and six others, among whom were a Mr. Foy, of Mississippi, Mr. Alfred K. Stephens, of St. Louis, and two grandsons of the celebrated Daniel Boon, set out together, in advance of Sublette's party, thinking

they would make their way through the mountains.

It was just five days after the battle of the swamp that these seven companions were making their way through Jackson's Hole, a valley not far from the three Tetons, when, as they were descending a hill, a party of Blackfeet that lay in ambush started up with terrific yells. The horse of the young Bostonian, who was in front, wheeled round with affright, and threw his unskilled rider. The young man scrambled up the side of the hill, but, unaccustomed to such wild scenes, lost his presence of mind, and stood, as if paralyzed, on the edge of a bank, until the Blackfeet came up and slew him on the spot. His comrades had fled on the first alarm; but two of them, Foy and Stephens, seeing his danger, paused when they got half way up the hill, turned back, dismounted, and hastened to his assistance. Foy was instantly killed. Stephens was severely wounded, but escaped, to die five days afterward. The survivors returned to the camp of Captain Sublette, bringing tidings of this new disaster. That hardy leader, as soon as he could bear the journey, set out on his return to St. Louis, accompanied by Campbell. As they had a number of pack-horses richly laden with peltries to convoy, they chose a different route through the mountains, out of the way, as they hoped, of the lurking bands of Blackfeet. They succeeded in making the frontier in safety. We remember to have seen them with their band, about two or three months afterward, passing through a skirt of woodland in the upper part of Missouri. Their long cavalcade stretched in single file for nearly half a mile. Sublette still wore his arm in a sling. The mountaineers in their rude hunting dresses, armed with rifles and roughly mounted, and leading their pack-horses down a hill of the forest, looked like banditti returning with plunder. On the top of some of the packs were perched several half-breed children, perfect little imps, with wild black eyes glaring from among elf locks. These, I was told, were children of the trappers; pledges of love from their squaw spouses in the wilderness.

Washington Irving's The Adventures of Captain Bonneville

Chapter 7

Retreat of the Blackfeet--Fontenelle's camp in danger--Captain Bonneville and the Blackfeet--Free trappers--Their character, habits, dress, equipments, horses--Game fellows of the mountains-- Their visit to the camp--Good fellowship and good cheer --A carouse--A swagger, a brawl, and a reconciliation

THE BLACKFEET WARRIORS, when they effected their midnight retreat from their wild fastness in Pierre's Hole, fell back into the valley of the Seeds-ke-dee, or Green River where they joined the main body of their band. The whole force amounted to several hundred fighting men, gloomy and exasperated by their late disaster. They had with them their wives and children, which incapacitated them from any bold and extensive enterprise of a warlike nature; but when, in the course of their wanderings they came in sight of the encampment of Fontenelle, who had moved some distance up Green River valley in search of the free trappers, they put up tremendous war-cries, and advanced fiercely as if to attack it. Second thoughts caused them to moderate their fury. They recollected the severe lesson just received, and could not but remark the strength of Fontenelle's position; which had been chosen with great judgment.

A formal talk ensued. The Blackfeet said nothing of the late battle, of which Fontenelle had as yet received no accounts; the latter, however, knew the hostile and perfidious nature of these savages, and took care to inform them of the encampment of Captain Bonneville, that they might know

there were more white men in the neighborhood. The conference ended, Fontenelle sent a Delaware Indian of his party to conduct fifteen of the Blackfeet to the camp of Captain Bonneville. There was [sic] at that time two Crow Indians in the captain's camp, who had recently arrived there. They looked with dismay at this deputation from their implacable enemies, and gave the captain a terrible character of them, assuring him that the best thing he could possibly do, was to put those Blackfeet deputies to death on the spot. The captain, however, who had heard nothing of the conflict at Pierre's Hole, declined all compliance with this sage counsel. He treated the grim warriors with his usual urbanity. They passed some little time at the camp; saw, no doubt, that everything was conducted with military skill and vigilance; and that such an enemy was not to be easily surprised, nor to be molested with impunity, and then departed, to report all that they had seen to their comrades.

The two scouts which Captain Bonneville had sent out to seek for the band of free trappers, expected by Fontenelle, and to invite them to his camp, had been successful in their search, and on the 12th of August those worthies made their appearance.

To explain the meaning of the appellation, free trapper, it is necessary to state the terms on which the men enlist in the service of the fur companies. Some have regular wages, and are furnished with weapons, horses, traps, and other requisites. These are under command, and bound to do every duty required of them connected with the service; such as hunting, trapping, loading and unloading the horses, mounting guard; and, in short, all the drudgery of the camp. These are the hired trappers.

The free trappers are a more independent class; and in describing them, we shall do little more than transcribe the graphic description of them by Captain Bonneville. "They come and go," says he, "when and where they please; provide their own horses, arms, and other equipments; trap and trade on their own account, and dispose of their skins and peltries to the highest bidder. Sometimes, in a dangerous hunting ground, they attach themselves to the camp of some trader for protection. Here they come under some restrictions; they have to conform to the ordinary rules for trapping, and to submit to such restraints, and to take part in such general duties, as are established for the good order and safety of the camp. In return for this protection, and for their camp keeping, they are bound to dispose of all the beaver they take, to the trader who commands the camp, at a certain rate per skin; or, should they prefer seeking a market elsewhere, they are to make him an allowance, of from thirty to forty dollars for the whole hunt."

There is an inferior order, who, either from prudence or poverty, come to these dangerous hunting grounds without horses or accoutrements, and are furnished by the traders. These, like the hired trappers, are bound to exert themselves to the utmost in taking beaver, which, without skinning, they render in at the trader's lodge, where a stipulated price for each is placed to their credit. These though generally included in the generic name of free trappers, have the more specific title of skin trappers.

The wandering whites who mingle for any length of time with the savages have invariably a proneness to adopt savage habitudes; but none more so than the free trappers. It is a matter of vanity and ambition with them to discard everything that may bear the stamp of civilized life, and to adopt the manners, habits, dress, gesture, and even walk of the Indian. You cannot pay a free trapper a greater compliment, than to persuade him you have mistaken him for an Indian brave; and, in truth, the counterfeit is complete. His hair suffered to attain to a great length, is

carefully combed out, and either left to fall carelessly over his shoulders, or plaited neatly and tied up in otter skins, or parti-colored ribands. A hunting-shirt of ruffled calico of bright dyes, or of ornamented leather, falls to his knee; below which, curiously fashioned legging, ornamented with strings, fringes, and a profusion of hawks' bells, reach to a costly pair of moccasins of the finest Indian fabric, richly embroidered with beads. A blanket of scarlet, or some other bright color, hangs from his shoulders, and is girt around his waist with a red sash, in which he bestows his pistols, knife, and the stem of his Indian pipe; preparations either for peace or war. His gun is lavishly decorated with brass tacks and vermilion, and provided with a fringed cover, occasionally of buckskin, ornamented here and there with a feather. His horse, the noble minister to the pride, pleasure, and profit of the mountaineer, is selected for his speed and spirit, and prancing gait, and holds a place in his estimation second only to himself. He shares largely of his bounty, and of his pride and pomp of trapping. He is caparisoned in the most dashing and fantastic style; the bridles and crupper are weightily embossed with beads and cockades; and head, mane, and tail, are interwoven with abundance of eagles' plumes, which flutter in the wind. To complete this grotesque equipment, the proud animal is bestreaked and bespotted with vermilion, or with white clay, whichever presents the most glaring contrast to his real color.

Such is the account given by Captain Bonneville of these rangers of the wilderness, and their appearance at the camp was strikingly characteristic. They came dashing forward at full speed, firing their fuses, and yelling in Indian style. Their dark sunburned faces, and long flowing hair, their legging, flaps, moccasins, and richly-dyed blankets, and their painted horses gaudily caparisoned, gave them so much the air and appearance of Indians, that it was difficult to persuade one's self that they were white men, and had been brought up in civilized life.

Captain Bonneville, who was delighted with the game look of these cavaliers of the mountains, welcomed them heartily to his camp, and ordered a free allowance of grog to regale them, which soon put them in the most braggart spirits. They pronounced the captain the finest fellow in the world, and his men all *bons garçons*, jovial lads, and swore they would pass the day with them. They did so; and a day it was, of boast, and swagger, and *rodomontade*. The prime bullies and braves among the free trappers had each his circle of novices, from among the captain's band; mere greenhorns, men unused to Indian life; *mangeurs de lard*, or pork-eaters; as such new-comers are superciliously called by the veterans of the wilderness. These he would astonish and delight by the hour, with prodigious tales of his doings among the Indians; and of the wonders he had seen, and the wonders he had performed, in his adventurous peregrinations among the mountains.

In the evening, the free trappers drew off, and returned to the camp of Fontenelle, highly delighted with their visit and with their new acquaintances, and promising to return the following day. They kept their word: day after day their visits were repeated; they became "hail fellow well met" with Captain Bonneville's men; treat after treat succeeded, until both parties got most potently convinced, or rather confounded, by liquor. Now came on confusion and uproar. The free trappers were no longer suffered to have all the swagger to themselves. The camp bullies and prime trappers of the party began to ruffle up, and to brag, in turn, of their perils and achievements. Each now tried to out-boast and out-talk the other; a quarrel ensued as a matter of course, and a general fight, according to frontier usage. The two factions drew out their forces for a pitched battle. They fell to work and belabored each other with might and main; kicks and cuffs and dry

blows were as well bestowed as they were well merited, until, having fought to their hearts' content, and been drubbed into a familiar acquaintance with each other's prowess and good qualities, they ended the fight by becoming firmer friends than they could have been rendered by a year's peaceable companionship.

While Captain Bonneville amused himself by observing the habits and characteristics of this singular class of men, and indulged them, for the time, in all their vagaries, he profited by the opportunity to collect from them information concerning the different parts of the country about which they had been accustomed to range; the characters of the tribes, and, in short, everything important to his enterprise. He also succeeded in securing the services of several to guide and aid him in his peregrinations among the mountains, and to trap for him during the ensuing season. Having strengthened his party with such valuable recruits, he felt in some measure consoled for the loss of the Delaware Indians, decoyed from him by Mr Fontenelle.

Washington Irving's The Adventures of Captain Bonneville

Chapter 8

Plans for the winter--Salmon River--Abundance of salmon west of the mountains--New arrangements-- Caches--Cerre's detachment--Movements in Fontenelle's camp--Departure of the Black-foot--Their fortunes--Wind Mountain streams--Buckeye, the Delaware hunter, and the grizzly bear--Bones of murdered travellers--Visit to Pierre's Hole--Traces of the battle--Nez Perce Indians--Arrival at Salmon River

THE INFORMATION derived from the free trappers determined Captain Bonneville as to his further movements. He learned that in the Green River valley the winters were severe, the snow frequently falling to the depth of several feet; and that there was no good wintering ground in the neighborhood. The upper part of Salmon River was represented as far more eligible, besides being in an excellent beaver country; and thither the captain resolved to bend his course.

The Salmon River is one of the upper branches of the Oregon or Columbia; and takes its rise from various sources, among a group of mountains to the northwest of the Wind River chain. It owes its name to the immense shoals of salmon which ascend it in the months of September and October. The salmon on the west side of the Rocky Mountains are, like the buffalo on the eastern plains, vast migratory supplies for the wants of man, that come and go with the seasons. As the buffalo in countless throngs find their certain way in the transient pasturage on the prairies, along the fresh banks of the rivers, and up every valley and green defile of the mountains, so the salmon, at their allotted seasons, regulated by a sublime and all-seeing Providence, swarm in myriads up the great rivers, and find their way up their main branches, and into the minutest tributary streams; so as to pervade the great arid plains, and to penetrate even among barren mountains. Thus wandering tribes are fed in the desert places of the wilderness, where there is no herbage for the animals of the chase, and where, but for these periodical supplies, it would be impossible for man to subsist.

The rapid currents of the rivers which run into the Pacific render the ascent of them very exhausting to the salmon. When the fish first run up the rivers, they are fat and in fine order. The struggle against impetuous streams and frequent rapids gradually renders them thin and weak, and great numbers are seen floating down the rivers on their backs. As the season advances and the water becomes chilled, they are flung in myriads on the shores, where the wolves and bears assemble

to banquet on them. Often they rot in such quantities along the river banks as to taint the atmosphere. They are commonly from two to three feet long.

Captain Bonneville now made his arrangements for the autumn and the winter. The nature of the country through which he was about to travel rendered it impossible to proceed with wagons. He had more goods and supplies of various kinds, also, than were required for present purposes, or than could be conveniently transported on horseback; aided, therefore, by a few confidential men, he made caches, or secret pits, during the night, when all the rest of the camp were asleep, and in these deposited the superfluous effects, together with the wagons. All traces of the caches were then carefully obliterated. This is a common expedient with the traders and trappers of the mountains. Having no established posts and magazines, they make these caches or deposits at certain points, whither they repair, occasionally, for supplies. It is an expedient derived from the wandering tribes of Indians.

Many of the horses were still so weak and lame, as to be unfit for a long scramble through the mountains. These were collected into one cavalcade, and given in charge to an experienced trapper, of the name of Matthieu. He was to proceed westward, with a brigade of trappers, to Bear River; a stream to the west of the Green River or Colorado, where there was good pasturage for the horses. In this neighborhood it was expected he would meet the Shoshonie villages or bands, on their yearly migrations, with whom he was to trade for peltries and provisions. After he had traded with these people, finished his trapping, and recruited the strength of the horses, he was to proceed to Salmon River and rejoin Captain Bonneville, who intended to fix his quarters there for the winter.

While these arrangements were in progress in the camp of Captain Bonneville, there was a sudden bustle and stir in the camp of Fontenelle. One of the partners of the American Fur Company had arrived, in all haste, from the rendezvous at Pierre's Hole, in quest of the supplies. The competition between the two rival companies was just now at its height, and prosecuted with unusual zeal. The tramontane concerns of the Rocky Mountain Fur Company were managed by two resident partners, Fitzpatrick and Bridger; those of the American Fur Company, by Vanderburgh and Dripps. The latter were ignorant of the mountain regions, but trusted to make up by vigilance and activity for their want of knowledge of the country.

Fitzpatrick, an experienced trader and trapper, knew the evils of competition in the same hunting grounds, and had proposed that the two companies should divide the country, so as to hunt in different directions: this proposition being rejected, he had exerted himself to get first into the field. His exertions, as have already been shown, were effectual. The early arrival of Sublette, with supplies, had enabled the various brigades of the Rocky Mountain Company to start off to their respective hunting grounds. Fitzpatrick himself, with his associate, Bridger, had pushed off with a strong party of trappers, for a prime beaver country to the north-northwest.

This had put Vanderburgh upon his mettle. He had hastened on to meet Fontenelle. Finding him at his camp in Green River valley, he immediately furnished himself with the supplies; put himself at the head of the free trappers and Delawares, and set off with all speed, determined to follow hard upon the heels of Fitzpatrick and Bridger. Of the adventures of these parties among the mountains, and the disastrous effects of their competition, we shall have occasion to treat in a future chapter.

Fontenelle having now delivered his supplies and accomplished his errand, struck his tents and set

off on his return to the Yellowstone. Captain Bonneville and his band, therefore, remained alone in the Green River valley; and their situation might have been perilous, had the Blackfeet band still lingered in the vicinity. Those marauders, however, had been dismayed at finding so many resolute and well-appointed parties of white men in the neighborhood. They had, therefore, abandoned this part of the country, passing over the headwaters of the Green River, and bending their course towards the Yellowstone. Misfortune pursued them. Their route lay through the country of their deadly enemies, the Crows. In the Wind River valley, which lies east of the mountains, they were encountered by a powerful war party of that tribe, and completely put to rout. Forty of them were killed, many of their women and children captured, and the scattered fugitives hunted like wild beasts until they were completely chased out of the Crow country.

On the 22d of August Captain Bonneville broke up his camp, and set out on his route for Salmon River. His baggage was arranged in packs, three to a mule, or pack-horse; one being disposed on each side of the animal and one on the top; the three forming a load of from one hundred and eighty to two hundred and twenty pounds. This is the trappers' style of loading pack-horses; his men, however, were inexpert at adjusting the packs, which were prone to get loose and slip off, so that it was necessary to keep a rear-guard to assist in reloading. A few days' experience, however, brought them into proper training.

Their march lay up the valley of the Seeds-ke-dee, overlooked to the right by the lofty peaks of the Wind River Mountains. From bright little lakes and fountain-heads of this remarkable bed of mountains poured forth the tributary streams of the Seeds-ke-dee. Some came rushing down gullies and ravines; others tumbled in crystal cascades from inaccessible clefts and rocks, and others winding their way in rapid and pellucid currents across the valley, to throw themselves into the main river. So transparent were these waters that the trout with which they abounded could be seen gliding about as if in the air; and their pebbly beds were distinctly visible at the depth of many feet. This beautiful and diaphanous quality of the Rocky Mountain streams prevails for a long time after they have mingled their waters and swollen into important rivers.

Issuing from the upper part of the valley, Captain Bonneville continued to the east-northeast, across rough and lofty ridges, and deep rocky defiles, extremely fatiguing both to man and horse. Among his hunters was a Delaware Indian who had remained faithful to him. His name was Buckeye. He had often prided himself on his skill and success in coping with the grizzly bear, that terror of the hunters. Though crippled in the left arm, he declared he had no hesitation to close with a wounded bear, and attack him with a sword. If armed with a rifle, he was willing to brave the animal when in full force and fury. He had twice an opportunity of proving his prowess, in the course of this mountain journey, and was each time successful. His mode was to seat himself upon the ground, with his rifle cocked and resting on his lame arm. Thus prepared, he would await the approach of the bear with perfect coolness, nor pull trigger until he was close at hand. In each instance, he laid the monster dead upon the spot.

A march of three or four days, through savage and lonely scenes, brought Captain Bonneville to the fatal defile of Jackson's Hole, where poor More and Foy had been surprised and murdered by the Blackfeet. The feelings of the captain were shocked at beholding the bones of these unfortunate young men bleaching among the rocks; and he caused them to be decently interred.

On the 3d of September he arrived on the summit of a mountain which commanded a full view of the eventful valley of Pierre's Hole; whence he could trace the winding of its stream through green

meadows, and forests of willow and cotton-wood, and have a prospect, between distant mountains, of the lava plains of Snake River, dimly spread forth like a sleeping ocean below.

After enjoying this magnificent prospect, he descended into the valley, and visited the scenes of the late desperate conflict. There were the remains of the rude fortress in the swamp, shattered by rifle shot, and strewed with the mingled bones of savages and horses. There was the late populous and noisy rendezvous, with the traces of trappers' camps and Indian lodges; but their fires were extinguished, the motley assemblage of trappers and hunters, white traders and Indian braves, had all dispersed to different points of the wilderness, and the valley had relapsed into its pristine solitude and silence.

That night the captain encamped upon the battle ground; the next day he resumed his toilsome peregrinations through the mountains. For upwards of two weeks he continued his painful march; both men and horses suffering excessively at times from hunger and thirst. At length, on the 19th of September, he reached the upper waters of Salmon River.

The weather was cold, and there were symptoms of an impending storm. The night set in, but Buckeye, the Delaware Indian, was missing. He had left the party early in the morning, to hunt by himself, according to his custom. Fears were entertained lest he should lose his way and become bewildered in tempestuous weather. These fears increased on the following morning, when a violent snow-storm came on, which soon covered the earth to the depth of several inches. Captain Bonneville immediately encamped, and sent out scouts in every direction. After some search Buckeye was discovered, quietly seated at a considerable distance in the rear, waiting the expected approach of the party, not knowing that they had passed, the snow having covered their trail.

On the ensuing morning they resumed their march at an early hour, but had not proceeded far when the hunters, who were beating up the country in the advance, came galloping back, making signals to encamp, and crying Indians! Indians!

Captain Bonneville immediately struck into a skirt of wood and prepared for action. The savages were now seen trooping over the hills in great numbers. One of them left the main body and came forward singly, making signals of peace. He announced them as a band of Nez Perces or Pierced-nose Indians, friendly to the whites, whereupon an invitation was returned by Captain Bonneville for them to come and encamp with him. They halted for a short time to make their toilette, an operation as important with an Indian warrior as with a fashionable beauty. This done, they arranged themselves in martial style, the chiefs leading the van, the braves following in a long line, painted and decorated, and topped off with fluttering plumes. In this way they advanced, shouting and singing, firing off their fuses, and clashing their shields. The two parties encamped hard by each other. The Nez Perces were on a hunting expedition, but had been almost famished on their march. They had no provisions left but a few dried salmon, yet finding the white men equally in want, they generously offered to share even this meager pittance, and frequently repeated the offer, with an earnestness that left no doubt of their sincerity. Their generosity won the heart of Captain Bonneville, and produced the most cordial good will on the part of his men. For two days that the parties remained in company, the most amicable intercourse prevailed, and they parted the best of friends. Captain Bonneville detached a few men, under Mr. Cerre, an able leader, to accompany the Nez Perces on their hunting expedition, and to trade with them for meat for the winter's supply. After this, he proceeded down the river, about five miles below the forks, when he came to a halt on the 26th of September, to establish his winter quarters.

Chapter 9

Horses turned loose--Preparations for winter quarters--Hungry times--Nez Perces, their honesty, piety, pacific habits, religious ceremonies--Captain Bonneville's conversations with them--Their love of gambling

IT WAS GRATIFYING to Captain Bonneville, after so long and toilsome a course of travel, to relieve his poor jaded horses of the burden under which they were almost ready to give out, and to behold them rolling upon the grass, and taking a long repose after all their sufferings. Indeed, so exhausted were they, that those employed under the saddle were no longer capable of hunting for the daily subsistence of the camp.

All hands now set to work to prepare a winter cantonment. A temporary fortification was thrown up for the protection of the party; a secure and comfortable pen, into which the horses could be driven at night; and huts were built for the reception of the merchandise.

This done, Captain Bonneville made a distribution of his forces: twenty men were to remain with him in garrison to protect the property; the rest were organized into three brigades, and sent off in different directions, to subsist themselves by hunting the buffalo, until the snow should become too deep.

Indeed, it would have been impossible to provide for the whole party in this neighborhood. It was at the extreme western limit of the buffalo range, and these animals had recently been completely hunted out of the neighborhood by the Nez Perces, so that, although the hunters of the garrison were continually on the alert, ranging the country round, they brought in scarce game sufficient to keep famine from the door. Now and then there was a scanty meal of fish or wild-fowl, occasionally an antelope; but frequently the cravings of hunger had to be appeased with roots, or the flesh of wolves and muskrats. Rarely could the inmates of the cantonment boast of having made a full meal, and never of having wherewithal for the morrow. In this way they starved along until the 8th of October, when they were joined by a party of five families of Nez Perces, who in some measure reconciled them to the hardships of their situation by exhibiting a lot still more destitute. A more forlorn set they had never encountered: they had not a morsel of meat or fish; nor anything to subsist on, excepting roots, wild rosebuds, the barks of certain plants, and other vegetable production; neither had they any weapon for hunting or defence, excepting an old spear: yet the poor fellows made no murmur nor complaint; but seemed accustomed to their hard fare. If they could not teach the white men their practical stoicism, they at least made them acquainted with the edible properties of roots and wild rosebuds, and furnished them a supply from their own store. The necessities of the camp at length became so urgent that Captain Bonneville determined to dispatch a party to the Horse Prairie, a plain to the north of his cantonment, to procure a supply of provisions. When the men were about to depart, he proposed to the Nez Perces that they, or some of them, should join the hunting-party. To his surprise, they promptly declined. He inquired the reason for their refusal, seeing that they were in nearly as starving a situation as his own people. They replied that it was a sacred day with them, and the Great Spirit would be angry should they devote it to hunting. They offered, however, to accompany the party if it would delay its departure until the following day; but this the pinching demands of hunger would not permit, and the detachment proceeded.

A few days afterward, four of them signified to Captain Bonneville that they were about to hunt. "What!" exclaimed he, "without guns or arrows; and with only one old spear? What do you expect to kill?" They smiled among themselves, but made no answer. Preparatory to the chase, they performed some religious rites, and offered up to the Great Spirit a few short prayers for safety and success; then, having received the blessings of their wives, they leaped upon their horses and departed, leaving the whole party of Christian spectators amazed and rebuked by this lesson of faith and dependence on a supreme and benevolent Being. "Accustomed," adds Captain Bonneville, "as I had heretofore been, to find the wretched Indian revelling in blood, and stained by every vice which can degrade human nature, I could scarcely realize the scene which I had witnessed. Wonder at such unaffected tenderness and piety, where it was least to have been sought, contended in all our bosoms with shame and confusion, at receiving such pure and wholesome instructions from creatures so far below us in the arts and comforts of life." The simple prayers of the poor Indians were not unheard. In the course of four or five days they returned, laden with meat. Captain Bonneville was curious to know how they had attained such success with such scanty means. They gave him to understand that they had chased the buffalo at full speed, until they tired them down, when they easily dispatched them with the spear, and made use of the same weapon to flay the carcasses. To carry through their lessons to their Christian friends, the poor savages were as charitable as they had been pious, and generously shared with them the spoils of their hunting, giving them food enough to last for several days.

A further and more intimate intercourse with this tribe gave Captain Bonneville still greater cause to admire their strong devotional feeling. "Simply to call these people religious," says he, "would convey but a faint idea of the deep hue of piety and devotion which pervades their whole conduct. Their honesty is immaculate, and their purity of purpose, and their observance of the rites of their religion, are most uniform and remarkable. They are, certainly, more like a nation of saints than a horde of savages."

In fact, the antibelligerent policy of this tribe may have sprung from the doctrines of Christian charity, for it would appear that they had imbibed some notions of the Christian faith from Catholic missionaries and traders who had been among them. They even had a rude calendar of the fasts and festivals of the Romish Church, and some traces of its ceremonials. These have become blended with their own wild rites, and present a strange medley; civilized and barbarous. On the Sabbath, men, women, and children array themselves in their best style, and assemble round a pole erected at the head of the camp. Here they go through a wild fantastic ceremonial; strongly resembling the religious dance of the Shaking Quakers; but from its enthusiasm, much more striking and impressive. During the intervals of the ceremony, the principal chiefs, who officiate as priests, instruct them in their duties, and exhort them to virtue and good deeds.

"There is something antique and patriarchal," observes Captain Bonneville, "in this union of the offices of leader and priest; as there is in many of their customs and manners, which are all strongly imbued with religion."

The worthy captain, indeed, appears to have been strongly interested by this gleam of unlooked for light amidst the darkness of the wilderness. He exerted himself, during his sojourn among this simple and well-disposed people, to inculcate, as far as he was able, the gentle and humanizing precepts of the Christian faith, and to make them acquainted with the leading points of its history; and it speaks highly for the purity and benignity of his heart, that he derived unmixed happi-

ness from the task.

"Many a time," says he, "was my little lodge thronged, or rather piled with hearers, for they lay on the ground, one leaning over the other, until there was no further room, all listening with greedy ears to the wonders which the Great Spirit had revealed to the white man. No other subject gave them half the satisfaction, or commanded half the attention; and but few scenes in my life remain so freshly on my memory, or are so pleasurably recalled to my contemplation, as these hours of intercourse with a distant and benighted race in the midst of the desert."

The only excesses indulged in by this temperate and exemplary people, appear to be gambling and horseracing. In these they engage with an eagerness that amounts to infatuation. Knots of gamblers will assemble before one of their lodge fires, early in the evening, and remain absorbed in the chances and changes of the game until long after dawn of the following day. As the night advances, they wax warmer and warmer. Bets increase in amount, one loss only serves to lead to a greater, until in the course of a single night's gambling, the richest chief may become the poorest varlet in the camp.

Washington Irving's The Adventures of Captain Bonneville

Chapter 10

Black feet in the Horse Prairie--Search after the hunters--Difficulties and dangers--A card party in the wilderness--The card party interrupted--"Old Sledge" a losing game--Visitors to the camp--Ir-  
quois hunters--Hanging-eared Indians.

ON the 12th of October, two young Indians of the Nez Perce tribe arrived at Captain Bonneville's encampment. They were on their way homeward, but had been obliged to swerve from their ordinary route through the mountains, by deep snows. Their new route took them though the Horse Prairie. In traversing it, they had been attracted by the distant smoke of a camp fire, and on stealing near to reconnoitre, had discovered a war party of Blackfeet. They had several horses with them; and, as they generally go on foot on warlike excursions, it was concluded that these horses had been captured in the course of their maraudings.

This intelligence awakened solicitude on the mind of Captain Bonneville for the party of hunters whom he had sent to that neighborhood; and the Nez Percés, when informed of the circumstances, shook their heads, and declared their belief that the horses they had seen had been stolen from that very party. Anxious for information on the subject, Captain Bonneville dispatched two hunters to beat up the country in that direction. They searched in vain; not a trace of the men could be found; but they got into a region destitute of game, where they were well-nigh famished. At one time they were three entire days with-out a mouthful of food; at length they beheld a buffalo grazing at the foot of the mountain. After manoeuvring so as to get within shot, they fired, but merely wounded him. He took to flight, and they followed him over hill and dale, with the eagerness and per-severance of starving men. A more lucky shot brought him to the ground. Stanfield sprang upon him, plunged his knife into his throat, and allayed his raging hunger by drinking his blood: A fire was instantly kindled beside the carcass, when the two hunters cooked, and ate again and again, until, perfectly gorged, they sank to sleep before their hunting fire. On the following morning they rose early, made another hearty meal, then loading themselves with buffalo meat, set out on their return to the camp, to report the fruitlessness of their mission.

At length, after six weeks' absence, the hunters made their appearance, and were received with joy proportioned to the anxiety that had been felt on their account. They had hunted with success on the prairie, but, while busy drying buffalo meat, were joined by a few panic-stricken Flatheads, who informed them that a powerful band of Blackfeet was at hand. The hunters immediately abandoned the dangerous hunting ground, and accompanied the Flatheads to their village. Here they found Mr. Cerre, and the detachment of hunters sent with him to accompany the hunting party of the Nez Percés.

After remaining some time at the village, until they supposed the Blackfeet to have left the neighborhood, they set off with some of Mr. Cerre's men for the cantonment at Salmon River, where they arrived without accident. They informed Captain Bonneville, however, that not far from his quarters they had found a wallet of fresh meat and a cord, which they supposed had been left by some prowling Blackfeet. A few days afterward Mr. Cerre, with the remainder of his men, likewise arrived at the cantonment.

Mr. Walker, one of his subleaders, who had gone with a band of twenty hunters to range the country just beyond the Horse Prairie, had likewise his share of adventures with the all-pervading Blackfeet. At one of his encampments the guard stationed to keep watch round the camp grew weary of their duty, and feeling a little too secure, and too much at home on these prairies, retired to a small grove of willows to amuse themselves with a social game of cards called "old sledge," which is as popular among these trampers of the prairies as whist or ecarte among the polite circles of the cities. From the midst of their sport they were suddenly roused by a discharge of firearms and a shrill war-whoop. Starting on their feet, and snatching up their rifles, they beheld in dismay their horses and mules already in possession of the enemy, who had stolen upon the camp unperceived, while they were spell-bound by the magic of old sledge. The Indians sprang upon the animals barebacked, and endeavored to urge them off under a galling fire that did some execution. The mules, however, confounded by the hurly-burly and disliking their new riders kicked up their heels and dismounted half of them, in spite of their horsemanship. This threw the rest into confusion; they endeavored to protect their unhorsed comrades from the furious assaults of the whites; but, after a scene of "confusion worse confounded," horses and mules were abandoned, and the Indians betook themselves to the bushes. Here they quickly scratched holes in the earth about two feet deep, in which they prostrated themselves, and while thus screened from the shots of the white men, were enabled to make such use of their bows and arrows and fuses, as to repulse their assailants and to effect their retreat. This adventure threw a temporary stigma upon the game of "old sledge."

In the course of the autumn, four Iroquois hunters, driven by the snow from their hunting grounds, made their appearance at the cantonment. They were kindly welcomed, and during their sojourn made themselves useful in a variety of ways, being excellent trappers and first-rate woodsmen. They were of the remnants of a party of Iroquois hunters that came from Canada into these mountain regions many years previously, in the employ of the Hudson's Bay Company. They were led by a brave chieftain, named Pierre, who fell by the hands of the Blackfeet, and gave his

name to the fated valley of Pierre's Hole. This branch of the Iroquois tribe has ever since remained among these mountains, at mortal enmity with the Blackfeet, and have lost many of their prime hunters in their feuds with that ferocious race. Some of them fell in with General Ashley, in the course of one of his gallant excursions into the wilderness, and have continued ever since in the employ of the company.

Among the motley Visitors to the winter quarters of Captain Bonneville was a party of Pends Oreilles (or Hanging-ears) and their chief. These Indians have a strong resemblance, in character and customs, to the Nez Perces. They amount to about three hundred lodges, are well armed, and possess great numbers of horses. During the spring, summer, and autumn, they hunt the buffalo about the head-waters of the Missouri, Henry's Fork of the Snake River, and the northern branches of Salmon River. Their winter quarters are upon the Racine Amere, where they subsist upon roots and dried buffalo meat. Upon this river the Hudson's Bay Company have established a trading post, where the Pends Oreilles and the Flatheads bring their peltries to exchange for arms, clothing and trinkets.

This tribe, like the Nez Perces, evince strong and peculiar feelings of natural piety. Their religion is not a mere superstitious fear, like that of most savages; they evince abstract notions of morality; a deep reverence for an overruling spirit, and a respect for the rights of their fellow men. In one respect their religion partakes of the pacific doctrines of the Quakers. They hold that the Great Spirit is displeased with all nations who wantonly engage in war; they abstain, therefore, from all aggressive hostilities. But though thus unoffending in their policy, they are called upon continually to wage defensive warfare; especially with the Blackfeet; with whom, in the course of their hunting expeditions, they come in frequent collision and have desperate battles. Their conduct as warriors is without fear or reproach, and they can never be driven to abandon their hunting grounds.

Like most savages they are firm believers in dreams, and in the power and efficacy of charms and amulets, or medicines as they term them. Some of their braves, also, who have had numerous hairbreadth 'scapes, like the old Nez Perce chief in the battle of Pierre's Hole, are believed to wear a charmed life, and to be bullet-proof. Of these gifted beings marvelous anecdotes are related, which are most potently believed by their fellow savages, and sometimes almost credited by the white hunters.

Chapter 11

Rival trapping parties--Manoeuvring--A desperate game--Vanderburgh and the Blackfeet--Deserted camp fire--A dark defile--An Indian ambush--A fierce melee--Fatal consequences--Fitzpatrick and Bridger--Trappers precautions--Meeting with the Blackfeet--More fighting--Anecdote of a young Mexican and an Indian girl.

WHILE Captain Bonneville and his men are sojourning among the Nez Perces, on Salmon River, we will inquire after the fortunes of those doughty rivals of the Rocky Mountains and American Fur Companies, who started off for the trapping grounds to the north-northwest.

---

Fitzpatrick and Bridger, of the former company, as we have already shown, having received their supplies, had taken the lead, and hoped to have the first sweep of the hunting grounds. Vanderburgh and Dripps, however, the two resident partners of the opposite company, by extraordinary exertions were enabled soon to put themselves upon their traces, and pressed forward with such speed as to overtake them just as they had reached the heart of the beaver country. In fact, being ignorant of the best trapping grounds, it was their object to follow on, and profit by the superior knowledge of the other party.

Nothing could equal the chagrin of Fitzpatrick and Bridger at being dogged by their inexperienced rivals, especially after their offer to divide the country with them. They tried in every way to blind and baffle them; to steal a march upon them, or lead them on a wrong scent; but all in vain. Vanderburgh made up by activity and intelligence for his ignorance of the country; was always wary, always on the alert; discovered every movement of his rivals, however secret and was not to be eluded or misled.

Fitzpatrick and his colleague now lost all patience; since the others persisted in following them, they determined to give them an unprofitable chase, and to sacrifice the hunting season rather than share the products with their rivals. They accordingly took up their line of march down the course of the Missouri, keeping the main Blackfoot trail, and tramping doggedly forward, without stopping to set a single trap. The others beat the hoof after them for some time, but by degrees began to perceive that they were on a wild-goose chase, and getting into a country perfectly barren to the trapper. They now came to a halt, and be-thought themselves how to make up for lost time, and improve the remainder of the season. It was thought best to divide their forces and try different trapping grounds. While Dripps went in one direction, Vanderburgh, with about fifty men, proceeded in another. The latter, in his headlong march had got into the very heart of the Blackfoot country, yet seems to have been unconscious of his danger. As his scouts were out one day, they came upon the traces of a recent band of savages. There were the deserted fires still smoking, surrounded by the carcasses of buffaloes just killed. It was evident a party of Blackfeet had been frightened from their hunting camp, and had retreated, probably to seek reinforcements. The scouts hastened back to the camp, and told Vanderburgh what they had seen. He made light of the alarm, and, taking nine men with him, galloped off to reconnoitre for himself. He found the deserted hunting camp just as they had represented it; there lay the carcasses of buffaloes, partly dismembered; there were the smouldering fires, still sending up their wreaths of smoke; everything bore traces of recent and hasty retreat; and gave reason to believe that the savages were still lurking in the neighborhood. With heedless daring, Vanderburgh put himself upon their trail, to trace them to their place of concealment: It led him over prairies, and through skirts of woodland, until it entered a dark and dangerous ravine. Vanderburgh pushed in, without hesitation, followed by his little band. They soon found themselves in a gloomy dell, between steep banks overhung with trees, where the profound silence was only broken by the tramp of their own horses.

Suddenly the horrid war-whoop burst on their ears, mingled with the sharp report of rifles, and a legion of savages sprang from their concealments, yelling, and shaking their buffalo robes to frighten the horses. Vanderburgh's horse fell, mortally wounded by the first discharge. In his fall he pinned his rider to the ground, who called in vain upon his men to assist in extricating him. One was shot down scalped a few paces distant; most of the others were severely wounded, and sought their safety in flight. The savages approached to dispatch the unfortunate leader, as he lay

struggling beneath his horse.. He had still his rifle in his hand and his pistols in his belt. The first savage that advanced received the contents of the rifle in his breast, and fell dead upon the spot; but before Vanderburgh could draw a pistol, a blow from a tomahawk laid him prostrate, and he was dispatched by repeated wounds.

Such was the fate of Major Henry Vanderburgh, one of the best and worthiest leaders of the American Fur Company, who by his manly bearing and dauntless courage is said to have made himself universally popular among the bold-hearted rovers of the wilderness.

Those of the little band who escaped fled in consternation to the camp, and spread direful reports of the force and ferocity of the enemy. The party, being without a head, were in complete confusion and dismay, and made a precipitate retreat, without attempting to recover the remains of their butchered leader. They made no halt until they reached the encampment of the Pends Oreilles, or Hanging-ears, where they offered a reward for the recovery of the body, but without success; it never could be found.

In the meantime Fitzpatrick and Bridger, of the Rocky Mountain Company, fared but little better than their rivals. In their eagerness to mislead them they betrayed themselves into danger, and got into a region infested with the Blackfeet. They soon found that foes were on the watch for them; but they were experienced in Indian warfare, and not to be surprised at night, nor drawn into an ambush in the daytime. As the evening advanced, the horses were all brought in and picketed, and a guard was stationed round the camp. At the earliest streak of day one of the leaders would mount his horse, and gallop off full speed for about half a mile; then look round for Indian trails, to ascertain whether there had been any lurkers round the camp; returning slowly, he would reconnoitre every ravine and thicket where there might be an ambush. This done, he would gallop off in an opposite direction and repeat the same scrutiny. Finding all things safe, the horses would be turned loose to graze, but always under the eye of a guard.

A caution equally vigilant was observed in the march, on approaching any defile or place where an enemy might lie in wait; and scouts were always kept in the advance, or along the ridges and rising grounds on the flanks.

At length, one day, a large band of Blackfeet appeared in the open field, but in the vicinity of rocks and cliffs. They kept at a wary distance, but made friendly signs. The trappers replied in the same way, but likewise kept aloof. A small party of Indians now advanced, bearing the pipe of peace; they were met by an equal number of white men, and they formed a group midway between the two bands, where the pipe was circulated from hand to hand, and smoked with all due ceremony. An instance of natural affection took place at this pacific meeting. Among the free trappers in the Rocky Mountain band was a spirited young Mexican named Loretto, who, in the course of his wanderings, had ransomed a beautiful Blackfoot girl from a band of Crows by whom she had been captured. He made her his wife, after the Indian style, and she had followed his fortunes ever since, with the most devoted affection.

Among the Blackfeet warriors who advanced with the calumet of peace she recognized a brother. Leaving her infant with Loretto she rushed forward and threw herself upon her brother's neck, who clasped his long-lost sister to his heart with a warmth of affection but little compatible with the reputed stoicism of the savage.

While this scene was taking place, Bridger left the main body of trappers and rode slowly toward the group of smokers, with his rifle resting across the pommel of his saddle. The chief of the

Blackfeet stepped forward to meet him. From some unfortunate feeling of distrust Bridger cocked his rifle just as the chief was extending his hand in friendship. The quick ear of the savage caught the click of the lock; in a twinkling he grasped the barrel, forced the muzzle downward, and the contents were discharged into the earth at his feet. His next movement was to wrest the weapon from the hand of Bridger and fell him with it to the earth. He might have found this no easy task had not the unfortunate leader received two arrows in his back during the struggle.

The chief now sprang into the vacant saddle and galloped off to his band. A wild hurry-scurry scene ensued; each party took to the banks, the rocks and trees, to gain favorable positions, and an irregular firing was kept up on either side, without much effect. The Indian girl had been hurried off by her people at the outbreak of the affray. She would have returned, through the dangers of the fight, to her husband and her child, but was prevented by her brother. The young Mexican saw her struggles and her agony, and heard her piercing cries. With a generous impulse he caught up the child in his arms, rushed forward, regardless of Indian shaft or rifle, and placed it in safety upon her bosom. Even the savage heart of the Blackfoot chief was reached by this noble deed. He pronounced Loretto a madman for his temerity, but bade him depart in peace. The young Mexican hesitated; he urged to have his wife restored to him, but her brother interfered, and the countenance of the chief grew dark. The girl, he said, belonged to his tribe-she must remain with her people. Loretto would still have lingered, but his wife implored him to depart, lest his life should be endangered. It was with the greatest reluctance that he returned to his companions.

The approach of night put an end to the skirmishing fire of the adverse parties, and the savages drew off without renewing their hostilities. We cannot but remark that both in this affair and that of Pierre's Hole the affray commenced by a hostile act on the part of white men at the moment when the Indian warrior was extending the hand of amity. In neither instance, as far as circumstances have been stated to us by different persons, do we see any reason to suspect the savage chiefs of perfidy in their overtures of friendship. They advanced in the confiding way usual among Indians when they bear the pipe of peace, and consider themselves sacred from attack. If we violate the sanctity of this ceremonial, by any hostile movement on our part, it is we who incur the charge of faithlessness; and we doubt not that in both these instances the white men have been considered by the Blackfeet as the aggressors, and have, in consequence, been held up as men not to be trusted.

A word to conclude the romantic incident of Loretto and his Indian bride. A few months subsequent to the event just related, the young Mexican settled his accounts with the Rocky Mountain Company, and obtained his discharge. He then left his comrades and set off to rejoin his wife and child among her people; and we understand that, at the time we are writing these pages, he resides at a trading-house established of late by the American Fur Company in the Blackfoot country, where he acts as an interpreter, and has his Indian girl with him.

feet--Long suffering of the Nez Perces--A hunter's Elysium among the mountains--More robberies--The Captain preaches up a crusade--The effect upon his hearers.

FOR the greater part of the month of November Captain Bonneville remained in his temporary post on Salmon River. He was now in the full enjoyment of his wishes; leading a hunter's life in the heart of the wilderness, with all its wild populace around him. Beside his own people, motley in character and costume--creole, Kentuckian, Indian, half-breed, hired trapper, and free trapper--he was surrounded by encampments of Nez Perces and Flatheads, with their droves of horses covering the hills and plains. It was, he declares, a wild and bustling scene. The hunting parties of white men and red men, continually sallying forth and returning; the groups at the various encampments, some cooking, some working, some amusing themselves at different games; the neighing of horses, the braying of asses, the resounding strokes of the axe, the sharp report of the rifle, the whoop, the halloo, and the frequent burst of laughter, all in the midst of a region suddenly roused from perfect silence and loneliness by this transient hunters' sojourn, realized, he says, the idea of a "populous solitude."

The kind and genial character of the captain had, evidently, its influence on the opposite races thus fortuitously congregated together. The most perfect harmony prevailed between them. The Indians, he says, were friendly in their dispositions, and honest to the most scrupulous degree in their intercourse with the white men. It is true they were somewhat importunate in their curiosity, and apt to be continually in the way, examining everything with keen and prying eye, and watching every movement of the white men. All this, however, was borne with great good-humor by the captain, and through his example by his men. Indeed, throughout all his transactions he shows himself the friend of the poor Indians, and his conduct toward them is above all praise.

The Nez Perces, the Flatheads, and the Hanging-ears pride themselves upon the number of their horses, of which they possess more in proportion than any other of the mountain tribes within the buffalo range. Many of the Indian warriors and hunters encamped around Captain Bonneville possess from thirty to forty horses each. Their horses are stout, well-built ponies, of great wind, and capable of enduring the severest hardship and fatigue. The swiftest of them, however, are those obtained from the whites while sufficiently young to become acclimated and inured to the rough service of the mountains.

By degrees the populousness of this encampment began to produce its inconveniences. The immense droves of horses owned by the Indians consumed the herbage of the surrounding hills; while to drive them to any distant pasturage, in a neighborhood abounding with lurking and deadly enemies, would be to endanger the loss both of man and beast. Game, too, began to grow scarce. It was soon hunted and frightened out of the vicinity, and though the Indians made a wide circuit through the mountains in the hope of driving the buffalo toward the cantonment, their expedition was unsuccessful. It was plain that so large a party could not subsist themselves there, nor in any one place throughout the winter. Captain Bonneville, therefore, altered his whole arrangements. He detached fifty men toward the south to winter upon Snake River, and to trap about its waters in the spring, with orders to rejoin him in the month of July at Horse Creek, in Green River Valley, which he had fixed upon as the general rendezvous of his company for the ensuing year.

Of all his late party, he now retained with him merely a small number of free trappers, with whom he intended to sojourn among the Nez Perces and Flatheads, and adopt the Indian mode

of moving with the game and grass. Those bands, in effect, shortly afterward broke up their encampments and set off for a less beaten neighborhood. Captain Bonneville remained behind for a few days, that he might secretly prepare caches, in which to deposit everything not required for current use. Thus lightened of all superfluous encumbrance, he set off on the 20th of November to rejoin his Indian allies. He found them encamped in a secluded part of the country, at the head of a small stream. Considering themselves out of all danger in this sequestered spot from their old enemies, the Blackfeet, their encampment manifested the most negligent security. Their lodges were scattered in every direction, and their horses covered every hill for a great distance round, grazing upon the upland bunch grass which grew in great abundance, and though dry, retained its nutritious properties instead of losing them like other grasses in the autumn.

When the Nez Percés, Flatheads, and Pends Oreilles are encamped in a dangerous neighborhood, says Captain Bonneville, the greatest care is taken of their horses, those prime articles of Indian wealth, and objects of Indian depredation. Each warrior has his horse tied by one foot at night to a stake planted before his lodge. Here they remain until broad daylight; by that time the young men of the camp are already ranging over the surrounding hills. Each family then drives its horses to some eligible spot, where they are left to graze unattended. A young Indian repairs occasionally to the pasture to give them water, and to see that all is well. So accustomed are the horses to this management, that they keep together in the pasture where they have been left. As the sun sinks behind the hills, they may be seen moving from all points toward the camp, where they surrender themselves to be tied up for the night. Even in situations of danger, the Indians rarely set guards over their camp at night, intrusting that office entirely to their vigilant and well-trained dogs. In an encampment, however, of such fancied security as that in which Captain Bonneville found his Indian friends, much of these precautions with respect to their horses are omitted. They merely drive them, at nightfall, to some sequestered little dell, and leave them there, at perfect liberty, until the morning.

One object of Captain Bonneville in wintering among these Indians was to procure a supply of horses against the spring. They were, however, extremely unwilling to part with any, and it was with great difficulty that he purchased, at the rate of twenty dollars each, a few for the use of some of his free trappers who were on foot and dependent on him for their equipment.

In this encampment Captain Bonneville remained from the 21st of November to the 9th of December. During this period the thermometer ranged from thirteen to forty-two degrees. There were occasional falls of snow; but it generally melted away almost immediately, and the tender blades of new grass began to shoot up among the old. On the 7th of December, however, the thermometer fell to seven degrees.

The reader will recollect that, on distributing his forces when in Green River Valley, Captain Bonneville had detached a party, headed by a leader of the name of Matthieu, with all the weak and disabled horses, to sojourn about Bear River, meet the Shoshonie bands, and afterward to rejoin him at his winter camp on Salmon River.

More than sufficient time had elapsed, yet Matthieu failed to make his appearance, and uneasiness began to be felt on his account. Captain Bonneville sent out four men, to range the country through which he would have to pass, and endeavor to get some information concerning him; for his route lay across the great Snake River plain, which spreads itself out like an Arabian desert, and on which a cavalcade could be descried at a great distance. The scouts soon returned, having

proceeded no further than the edge of the plain, pretending that their horses were lame; but it was evident they had feared to venture, with so small a force, into these exposed and dangerous regions.

A disease, which Captain Bonneville supposed to be pneumonia, now appeared among the Indians, carrying off numbers of them after an illness of three or four days. The worthy captain acted as physician, prescribing profuse sweatings and copious bleedings, and uniformly with success, if the patient were subsequently treated with proper care. In extraordinary cases, the poor savages called in the aid of their own doctors or conjurors, who officiated with great noise and mummery, but with little benefit. Those who died during this epidemic were buried in graves, after the manner of the whites, but without any regard to the direction of the head. It is a fact worthy of notice that, while this malady made such ravages among the natives, not a single white man had the slightest symptom of it.

A familiar intercourse of some standing with the Pierced-nose and Flathead Indians had now convinced Captain Bonneville of their amicable and inoffensive character; he began to take a strong interest in them, and conceived the idea of becoming a pacificator, and healing the deadly feud between them and the Blackfeet, in which they were so deplorably the sufferers. He proposed the matter to some of the leaders, and urged that they should meet the Blackfeet chiefs in a grand pacific conference, offering to send two of his men to the enemy's camp with pipe, tobacco and flag of truce, to negotiate the proposed meeting.

The Nez Percés and Flathead sages upon this held a council of war of two days' duration, in which there was abundance of hard smoking and long talking, and both eloquence and tobacco were nearly exhausted. At length they came to a decision to reject the worthy captain's proposition, and upon pretty substantial grounds, as the reader may judge.

"War," said the chiefs, "is a bloody business, and full of evil; but it keeps the eyes of the chiefs always open, and makes the limbs of the young men strong and supple. In war, every one is on the alert. If we see a trail we know it must be an enemy; if the Blackfeet come to us, we know it is for war, and we are ready. Peace, on the other hand, sounds no alarm; the eyes of the chiefs are closed in sleep, and the young men are sleek and lazy. The horses stray into the mountains; the women and their little babes go about alone. But the heart of a Blackfoot is a lie, and his tongue is a trap. If he says peace it is to deceive; he comes to us as a brother; he smokes his pipe with us; but when he sees us weak, and off our guard, he will slay and steal. We will have no such peace; let there be war!"

With this reasoning Captain Bonneville was fain to acquiesce; but, since the sagacious Flatheads and their allies were content to remain in a state of warfare, he wished them at least to exercise the boasted vigilance which war was to produce, and to keep their eyes open. He represented to them the impossibility that two such considerable clans could move about the country without leaving trails by which they might be traced. Besides, among the Blackfeet braves were several Nez Percés, who had been taken prisoners in early youth, adopted by their captors, and trained up and imbued with warlike and predatory notions; these had lost all sympathies with their native tribe, and would be prone to lead the enemy to their secret haunts. He exhorted them, therefore, to keep upon the alert, and never to remit their vigilance while within the range of so crafty and cruel a foe. All these counsels were lost upon his easy and simple-minded hearers. A careless indifference reigned throughout their encampments, and their horses were permitted to range the hills at

night in perfect freedom. Captain Bonneville had his own horses brought in at night, and properly picketed and guarded. The evil he apprehended soon took place. In a single night a swoop was made through the neighboring pastures by the Blackfeet, and eighty-six of the finest horses carried off. A whip and a rope were left in a conspicuous situation by the robbers, as a taunt to the simpletons they had unhorsed.

Long before sunrise the news of this calamity spread like wildfire through the different encampments. Captain Bonneville, whose own horses remained safe at their pickets, watched in momentary expectation of an outbreak of warriors, Pierced-nose and Flathead, in furious pursuit of the marauders; but no such thing -- they contented themselves with searching diligently over hill and dale, to glean up such horses as had escaped the hands of the marauders, and then resigned themselves to their loss with the most exemplary quiescence.

Some, it is true, who were entirely unhorsed, set out on a begging visit to their cousins, as they called them, the Lower Nez Perces, who inhabit the lower country about the Columbia, and possess horses in abundance. To these they repair when in difficulty, and seldom fail, by dint of begging and bartering, to get themselves once more mounted on horseback.

Game had now become scarce in the neighborhood of the camp, and it was necessary, according to Indian custom, to move off to a less beaten ground. Captain Bonneville proposed the Horse Prairie; but his Indian friends objected that many of the Nez Perces had gone to visit their cousins, and that the whites were few in number, so that their united force was not sufficient to venture upon the buffalo grounds, which were infested by bands of Blackfeet.

They now spoke of a place at no great distance, which they represented as a perfect hunter's elysium. It was on the right branch, or head stream of the river, locked up among cliffs and precipices where there was no danger from roving bands, and where the Blackfeet dare not enter. Here, they said, the elk abounded, and the mountain sheep were to be seen trooping upon the rocks and hills. A little distance beyond it, also, herds of buffalo were to be met with, Out of range of danger. Thither they proposed to move their camp.

The proposition pleased the captain, who was desirous, through the Indians, of becoming acquainted with all the secret places of the land. Accordingly, on the 9th of December, they struck their tents, and moved forward by short stages, as many of the Indians were yet feeble from the late malady.

Following up the right fork of the river they came to where it entered a deep gorge of the mountains, up which lay the secluded region so much valued by the Indians. Captain Bonneville halted and encamped for three days before entering the gorge. In the meantime he detached five of his free trappers to scour the hills, and kill as many elk as possible, before the main body should enter, as they would then be soon frightened away by the various Indian hunting parties.

While thus encamped, they were still liable to the marauds of the Blackfeet, and Captain Bonneville admonished his Indian friends to be upon their guard. The Nez Perces, however, notwithstanding their recent loss, were still careless of their horses; merely driving them to some secluded spot, and leaving them there for the night, without setting any guard upon them. The consequence was a second swoop, in which forty-one were carried off. This was borne with equal philosophy with the first, and no effort was made either to recover the horses, or to take vengeance on the thieves.

The Nez Perces, however, grew more cautious with respect to their remaining horses, driving

---

them regularly to the camp every evening, and fastening them to pickets. Captain Bonneville, however, told them that this was not enough. It was evident they were dogged by a daring and persevering enemy, who was encouraged by past impunity; they should, therefore, take more than usual precautions, and post a guard at night over their cavalry. They could not, however, be persuaded to depart from their usual custom. The horse once picketed, the care of the owner was over for the night, and he slept profoundly. None waked in the camp but the gamblers, who, absorbed in their play, were more difficult to be roused to external circumstances than even the sleepers.

The Blackfeet are bold enemies, and fond of hazardous exploits. The band that were hovering about the neighborhood, finding that they had such pacific people to deal with, redoubled their daring. The horses being now picketed before the lodges, a number of Blackfeet scouts penetrated in the early part of the night into the very centre of the camp. Here they went about among the lodges as calmly and deliberately as if at home, quietly cutting loose the horses that stood picketed by the lodges of their sleeping owners. One of these prowlers, more adventurous than the rest, approached a fire round which a group of Nez Perces were gambling with the most intense eagerness. Here he stood for some time, muffled up in his robe, peering over the shoulders of the players, watching the changes of their countenances and the fluctuations of the game. So completely engrossed were they, that the presence of this muffled eaves-dropper was unnoticed and, having executed his bravado, he retired undiscovered.

Having cut loose as many horses as they could conveniently carry off, the Blackfeet scouts rejoined their comrades, and all remained patiently round the camp. By degrees the horses, finding themselves at liberty, took their route toward their customary grazing ground. As they emerged from the camp they were silently taken possession of, until, having secured about thirty, the Blackfeet sprang on their backs and scampered off. The clatter of hoofs startled the gamblers from their game. They gave the alarm, which soon roused the sleepers from every lodge. Still all was quiescent; no marshalling of forces, no saddling of steeds and dashing off in pursuit, no talk of retribution for their repeated outrages. The patience of Captain Bonneville was at length exhausted. He had played the part of a pacificator without success; he now altered his tone, and resolved, if possible, to rouse their war spirit.

Accordingly, convoking their chiefs, he inveighed against their craven policy, and urged the necessity of vigorous and retributive measures that would check the confidence and presumption of their enemies, if not inspire them with awe. For this purpose, he advised that a war party should be immediately sent off on the trail of the marauders, to follow them, if necessary, into the very heart of the Blackfoot country, and not to leave them until they had taken signal vengeance. Beside this, he recommended the organization of minor war parties, to make reprisals to the extent of the losses sustained. "Unless you rouse yourselves from your apathy," said he, "and strike some bold and decisive blow, you will cease to be considered men, or objects of manly warfare. The very squaws and children of the Blackfeet will be set against you, while their warriors reserve themselves for nobler antagonists."

This harangue had evidently a momentary effect upon the pride of the hearers. After a short pause, however, one of the orators arose. It was bad, he said, to go to war for mere revenge. The Great Spirit had given them a heart for peace, not for war. They had lost horses, it was true, but they could easily get others from their cousins, the Lower Nez Perces, without incurring any risk;

whereas, in war they should lose men, who were not so readily replaced. As to their late losses, an increased watchfulness would prevent any more misfortunes of the kind. He disapproved, therefore, of all hostile measures; and all the other chiefs concurred in his opinion.

Captain Bonneville again took up the point. "It is true," said he, "the Great Spirit has given you a heart to love your friends; but he has also given you an arm to strike your enemies. Unless you do something speedily to put an end to this continual plundering, I must say farewell. As yet I have sustained no loss; thanks to the precautions which you have slighted; but my property is too unsafe here; my turn will come next; I and my people will share the contempt you are bringing upon yourselves, and will be thought, like you, poor-spirited beings, who may at any time be plundered with impunity."

The conference broke up with some signs of excitement on the part of the Indians. Early the next morning, a party of thirty men set off in pursuit of the foe, and Captain Bonneville hoped to hear a good account of the Blackfeet marauders. To his disappointment, the war party came lagging back on the following day, leading a few old, sorry, broken-down horses, which the free-booters had not been able to urge to sufficient speed. This effort exhausted the martial spirit, and satisfied the wounded pride of the Nez Perces, and they relapsed into their usual state of passive indifference.

Washington Irving's The Adventures of Captain Bonneville

Chapter 13

Story of Kosato, the Renegade Blackfoot.

IF the meekness and long-suffering of the Pierced-noses grieved the spirit of Captain Bonneville, there was another individual in the camp to whom they were still more annoying. This was a Blackfoot renegade, named Kosato, a fiery hot-blooded youth who, with a beautiful girl of the same tribe, had taken refuge among the Nez Perces. Though adopted into the tribe, he still retained the warlike spirit of his race, and loathed the peaceful, inoffensive habits of those around him. The hunting of the deer, the elk, and the buffalo, which was the height of their ambition, was too tame to satisfy his wild and restless nature. His heart burned for the foray, the ambush, the skirmish, the scamper, and all the haps and hazards of roving and predatory warfare.

The recent hoverings of the Blackfeet about the camp, their nightly prowls and daring and successful marauds, had kept him in a fever and a flutter, like a hawk in a cage who hears his late companions swooping and screaming in wild liberty above him. The attempt of Captain Bonneville to rouse the war spirit of the Nez Perces, and prompt them to retaliation, was ardently seconded by Kosato. For several days he was incessantly devising schemes of vengeance, and endeavoring to set on foot an expedition that should carry dismay and desolation into the Blackfeet town. All his art was exerted to touch upon those springs of human action with which he was most familiar. He drew the listening savages round him by his nervous eloquence; taunted them with recitals of past wrongs and insults; drew glowing pictures of triumphs and trophies within their reach; recounted tales of daring and romantic enterprise, of secret marchings, covert lurkings, midnight surprisals, sackings, burnings, plunderings, scalplings; together with the triumphant return, and the feasting and rejoicing of the victors. These wild tales were intermingled with the beating of the drum, the yell, the war-whoop and the war-dance, so inspiring to Indian valor. All, however, were lost upon the peaceful spirits of his hearers; not a Nez Perce was to be

roused to vengeance, or stimulated to glorious war. In the bitterness of his heart, the Blackfoot renegade repined at the mishap which had severed him from a race of congenial spirits, and driven him to take refuge among beings so destitute of martial fire.

The character and conduct of this man attracted the attention of Captain Bonneville, and he was anxious to hear the reason why he had deserted his tribe, and why he looked back upon them with such deadly hostility. Kosato told him his own story briefly: it gives a picture of the deep, strong passions that work in the bosoms of these miscalled stoics.

"You see my wife," said he, "she is good; she is beautiful --I love her. Yet she has been the cause of all my troubles. She was the wife of my chief. I loved her more than he did; and she knew it. We talked together; we laughed together; we were always seeking each other's society; but we were as innocent as children. The chief grew jealous, and commanded her to speak with me no more. His heart became hard toward her; his jealousy grew more furious. He beat her without cause and without mercy; and threatened to kill her outright if she even looked at me. Do you want traces of his fury? Look at that scar! His rage against me was no less persecuting. War parties of the Crows were hovering round us; our young men had seen their trail. All hearts were roused for action; my horses were before my lodge. Suddenly the chief came, took them to his own pickets, and called them his own. What could I do? he was a chief. I durst not speak, but my heart was burning. I joined no longer in the council, the hunt, or the war-feast. What had I to do there? an unhorsed, degraded warrior. I kept by myself, and thought of nothing but these wrongs and outrages.

"I was sitting one evening upon a knoll that overlooked the meadow where the horses were pastured. I saw the horses that were once mine grazing among those of the chief. This maddened me, and I sat brooding for a time over the injuries I had suffered, and the cruelties which she I loved had endured for my sake, until my heart swelled and grew sore, and my teeth were clinched. As I looked down upon the meadow I saw the chief walking among his horses. I fastened my eyes upon him as a hawk's; my blood boiled; I drew my breath hard. He went among the willows. In an instant I was on my feet; my hand was on my knife --I flew rather than ran -- before he was aware I sprang upon him, and with two blows laid him dead at my feet. I covered his body with earth, and strewed bushes over the place; then I hastened to her I loved, told her what I had done, and urged her to fly with me. She only answered me with tears. I reminded her of the wrongs I had suffered, and of the blows and stripes she had endured from the deceased; I had done nothing but an act of justice. I again urged her to fly; but she only wept the more, and bade me go. My heart was heavy, but my eyes were dry. I folded my arms. 'Tis well,' said I; 'Kosato will go alone to the desert. None will be with him but the wild beasts of the desert. The seekers of blood may follow on his trail. They may come upon him when he sleeps and glut their revenge; but you will be safe. Kosato will go alone.

"I turned away. She sprang after me, and strained me in her arms. 'No,' she cried, 'Kosato shall not go alone! Wherever he goes I will go -- he shall never part from me.

"We hastily took in our hands such things as we most needed, and stealing quietly from the village, mounted the first horses we encountered. Speeding day and night, we soon reached this tribe. They received us with welcome, and we have dwelt with them in peace. They are good and kind; they are honest; but their hearts are the hearts of women.

Such was the story of Kosato, as related by him to Captain Bonneville. It is of a kind that often occurs in Indian life; where love elopements from tribe to tribe are as frequent as among the nov-

el-read heroes and heroines of sentimental civilization, and often give rise to bloods and lasting feuds.

Washington Irving's The Adventures of Captain Bonneville

Chapter 14

The party enters the mountain gorge--A wild fastness among hills--Mountain mutton--Peace and plenty--The amorous trapper--A piebald wedding--A free trapper's wife--Her gala equipments--Christmas in the wilderness.

ON the 19th of December Captain Bonneville and his confederate Indians raised their camp, and entered the narrow gorge made by the north fork of Salmon River. Up this lay the secure and plenteous hunting region so temptingly described by the Indians.

Since leaving Green River the plains had invariably been of loose sand or coarse gravel, and the rocky formation of the mountains of primitive limestone. The rivers, in general, were skirted with willows and bitter cottonwood trees, and the prairies covered with wormwood. In the hollow breast of the mountains which they were now penetrating, the surrounding heights were clothed with pine; while the declivities of the lower hills afforded abundance of bunch grass for the horses. As the Indians had represented, they were now in a natural fastness of the mountains, the ingress and egress of which was by a deep gorge, so narrow, rugged, and difficult as to prevent secret approach or rapid retreat, and to admit of easy defence. The Blackfeet, therefore, refrained from venturing in after the Nez Perces, awaiting a better chance, when they should once more emerge into the open country.

Captain Bonneville soon found that the Indians had not exaggerated the advantages of this region. Besides the numerous gangs of elk, large flocks of the ahsahta or bighorn, the mountain sheep, were to be seen bounding among the precipices. These simple animals were easily circumvented and destroyed. A few hunters may surround a flock and kill as many as they please. Numbers were daily brought into camp, and the flesh of those which were young and fat was extolled as superior to the finest mutton.

Here, then, there was a cessation from toil, from hunger, and alarm. Past ills and dangers were forgotten. The hunt, the game, the song, the story, the rough though good-humored joke, made time pass joyously away, and plenty and security reigned throughout the camp.

Idleness and ease, it is said, lead to love, and love to matrimony, in civilized life, and the same process takes place in the wilderness. Filled with good cheer and mountain mutton, one of the free trappers began to repine at the solitude of his lodge, and to experience the force of that great law of nature, "it is not meet for man to live alone."

After a night of grave cogitation he repaired to Kowsoter, the Pierced-nose chief, and unfolded to him the secret workings of his bosom.

"I want," said he, "a wife. Give me one from among your tribe. Not a young, giddy-pated girl, that will think of nothing but flaunting and finery, but a sober, discreet, hard-working squaw; one that will share my lot without flinching, however hard it may be; that can take care of my lodge, and be a companion and a helpmate to me in the wilderness." Kowsoter promised to look round among the females of his tribe, and procure such a one as he desired. Two days were requisite for the search. At the expiration of these, Kowsoter, called at his lodge, and informed him that he would bring his bride to him in the course of the afternoon. He kept his word. At the appointed time he

approached, leading the bride, a comely copper-colored dame attired in her Indian finery. Her father, mother, brothers by the half dozen and cousins by the score, all followed on to grace the ceremony and greet the new and important relative.

The trapper received his new and numerous family connection with proper solemnity; he placed his bride beside him, and, filling the pipe, the great symbol of peace, with his best tobacco, took two or three whiffs, then handed it to the chief who transferred it to the father of the bride, from whom it was passed on from hand to hand and mouth to mouth of the whole circle of kinsmen round the fire, all maintaining the most profound and becoming silence.

After several pipes had been filled and emptied in this solemn ceremonial, the chief addressed the bride, detailing at considerable length the duties of a wife which, among Indians, are little less onerous than those of the pack-horse; this done, he turned to her friends and congratulated them upon the great alliance she had made. They showed a due sense of their good fortune, especially when the nuptial presents came to be distributed among the chiefs and relatives, amounting to about one hundred and eighty dollars. The company soon retired, and now the worthy trapper found indeed that he had no green girl to deal with; for the knowing dame at once assumed the style and dignity of a trapper's wife: taking possession of the lodge as her undisputed empire, arranging everything according to her own taste and habitudes, and appearing as much at home and on as easy terms with the trapper as if they had been man and wife for years.

We have already given a picture of a free trapper and his horse, as furnished by Captain Bonneville: we shall here subjoin, as a companion picture, his description of a free trapper's wife, that the reader may have a correct idea of the kind of blessing the worthy hunter in question had invoked to solace him in the wilderness.

"The free trapper, while a bachelor, has no greater pet than his horse; but the moment he takes a wife (a sort of brevet rank in matrimony occasionally bestowed upon some Indian fair one, like the heroes of ancient chivalry in the open field), he discovers that he has a still more fanciful and capricious animal on which to lavish his expenses.

"No sooner does an Indian belle experience this promotion, than all her notions at once rise and expand to the dignity of her situation, and the purse of her lover, and his credit into the bargain, are taxed to the utmost to fit her out in becoming style. The wife of a free trapper to be equipped and arrayed like any ordinary and undistinguished squaw? Perish the grovelling thought! In the first place, she must have a horse for her own riding; but no jaded, sorry, earth-spirited hack, such as is sometimes assigned by an Indian husband for the transportation of his squaw and her pap-pooes: the wife of a free trader must have the most beautiful animal she can lay her eyes on. And then, as to his decoration: headstall, breast-bands, saddle and crupper are lavishly embroidered with beads, and hung with thimbles, hawks' bells, and bunches of ribbons. From each side of the saddle hangs an esquimoot, a sort of pocket, in which she bestows the residue of her trinkets and nick-nacks, which cannot be crowded on the decoration of her horse or herself. Over this she folds, with great care, a drapery of scarlet and bright-colored calicoes, and now considers the caparison of her steed complete.

"As to her own person, she is even still more extravagant. Her hair, esteemed beautiful in proportion to its length, is carefully plaited, and made to fall with seeming negligence over either breast. Her riding hat is stuck full of parti-colored feathers; her robe, fashioned somewhat after that of the whites, is of red, green, and sometimes gray cloth, but always of the finest texture that can be

procured. Her leggings and moccasins are of the most beautiful and expensive workman-ship, and fitted neatly to the foot and ankle, which with the Indian woman are generally well formed and delicate. Then as to jewelry: in the way of finger-rings, ear-rings, necklaces, and other female glories, nothing within reach of the trapper's means is omitted that can tend to impress the beholder with an idea of the lady's high estate. To finish the whole, she selects from among her blankets of various dyes one of some glowing color, and throwing it over her shoulders with a native grace, vaults into the saddle of her gay, prancing steed, and is ready to follow her mountaineer 'to the last gasp with love and loyalty.' "

Such is the general picture of the free trapper's wife, given by Captain Bonneville; how far it applied in its details to the one in question does not altogether appear, though it would seem from the outset of her connubial career, that she was ready to avail herself of all the pomp and circumstance of her new condition. It is worthy of mention that wherever there are several wives of free trappers in a camp, the keenest rivalry exists between them, to the sore detriment of their husbands' purses. Their whole time is expended and their ingenuity tasked by endeavors to eclipse each other in dress and decoration. The jealousies and heart-burnings thus occasioned among these so-styled children of nature are equally intense with those of the rival leaders of style and fashion in the luxurious abodes of civilized life.

The genial festival of Christmas, which throughout all Christendom lights up the fireside of home with mirth and jollity, followed hard upon the wedding just described. Though far from kindred and friends, Captain Bonneville and his handful of free trappers were not disposed to suffer the festival to pass unenjoyed; they were in a region of good cheer, and were disposed to be joyous; so it was determined to "light up the yule clog," and celebrate a merry Christmas in the heart of the wilderness.

On Christmas eve, accordingly, they began their rude fetes and rejoicings. In the course of the night the free trappers surrounded the lodge of the Pierced-nose chief and in lieu of Christmas carols, saluted him with a feude joie.

Kowsoter received it in a truly Christian spirit, and after a speech, in which he expressed his high gratification at the honor done him, invited the whole company to a feast on the following day. His invitation was gladly accepted. A Christmas dinner in the wigwam of an Indian chief! There was novelty in the idea. Not one failed to be present. The banquet was served up in primitive style: skins of various kinds, nicely dressed for the occasion, were spread upon the ground; upon these were heaped up abundance of venison, elk meat, and mountain mutton, with various bitter roots which the Indians use as condiments.

After a short prayer, the company all seated themselves cross-legged, in Turkish fashion, to the banquet, which passed off with great hilarity. After which various games of strength and agility by both white men and Indians closed the Christmas festivities.

Chapter 15

A hunt after hunters--Hungry times--A voracious repast--Wintry weather--Godin's River--Splendid winter scene on the great Lava Plain of Snake River--Severe travelling and tramping in the snow--Manoeuvres of a solitary Indian horseman--Encampment on Snake River--Banneck Indians--The horse chief--His charmed life.

---

THE continued absence of Matthieu and his party had, by this time, caused great uneasiness in the mind of Captain Bonneville; and, finding there was no dependence to be placed upon the perseverance and courage of scouting parties in so perilous a quest, he determined to set out himself on the search, and to keep on until he should ascertain something of the object of his solicitude. Accordingly on the 20th December he left the camp, accompanied by thirteen stark trappers and hunters, all well mounted and armed for dangerous enterprise. On the following morning they passed out at the head of the mountain gorge and sallied forth into the open plain. As they confidently expected a brush with the Blackfeet, or some other predatory horde, they moved with great circumspection, and kept vigilant watch in their encampments.

In the course of another day they left the main branch of Salmon River, and proceeded south toward a pass called John Day's defile. It was severe and arduous travelling. The plains were swept by keen and bitter blasts of wintry wind; the ground was generally covered with snow, game was scarce, so that hunger generally prevailed in the camp, while the want of pasturage soon began to manifest itself in the declining vigor of the horses.

The party had scarcely encamped on the afternoon of the 28th, when two of the hunters who had sallied forth in quest of game came galloping back in great alarm. While hunting they had perceived a party of savages, evidently manoeuvring to cut them off from the camp; and nothing had saved them from being entrapped but the speed of their horses.

These tidings struck dismay into the camp. Captain Bonneville endeavored to reassure his men by representing the position of their encampment, and its capability of defence. He then ordered the horses to be driven in and picketed, and threw up a rough breastwork of fallen trunks of trees and the vegetable rubbish of the wilderness. Within this barrier was maintained a vigilant watch throughout the night, which passed away without alarm. At early dawn they scrutinized the surrounding plain, to discover whether any enemies had been lurking about during the night; not a foot-print, however, was to be discovered in the coarse gravel with which the plain was covered. Hunger now began to cause more uneasiness than the apprehensions of surrounding enemies. After marching a few miles they encamped at the foot of a mountain, in hopes of finding buffalo. It was not until the next day that they discovered a pair of fine bulls on the edge of the plain, among rocks and ravines. Having now been two days and a half without a mouthful of food, they took especial care that these animals should not escape them. While some of the surest marksmen advanced cautiously with their rifles into the rough ground, four of the best mounted horsemen took their stations in the plain, to run the bulls down should they only be maimed.

The buffalo were wounded and set off in headlong flight. The half-famished horses were too weak to overtake them on the frozen ground, but succeeded in driving them on the ice, where they slipped and fell, and were easily dispatched. The hunters loaded themselves with beef for present and future supply, and then returned and encamped at the last night's fire. Here they passed the remainder of the day, cooking and eating with a voracity proportioned to previous starvation, forgetting in the hearty revel of the moment the certain dangers with which they were environed. The cravings of hunger being satisfied, they now began to debate about their further progress. The men were much disheartened by the hardships they had already endured. Indeed, two who had been in the rear guard, taking advantage of their position, had deserted and returned to the lodges of the Nez Perces. The prospect ahead was enough to stagger the stoutest heart. They were in the dead of winter. As far as the eye could reach the wild landscape was wrapped in snow, which

---

was evidently deepening as they advanced. Over this they would have to toil, with the icy wind blowing in their faces: their horses might give out through want of pasturage, and they themselves must expect intervals of horrible famine like that they had already experienced.

With Captain Bonneville, however, perseverance was a matter of pride; and, having undertaken this enterprise, nothing could turn him back until it was accomplished: though he declares that, had he anticipated the difficulties and sufferings which attended it, he should have flinched from the undertaking.

Onward, therefore, the little band urged their way, keeping along the course of a stream called John Day's Creek. The cold was so intense that they had frequently to dismount and travel on foot, lest they should freeze in their saddles. The days which at this season are short enough even in the open prairies, were narrowed to a few hours by the high mountains, which allowed the travellers but a brief enjoyment of the cheering rays of the sun. The snow was generally at least twenty inches in depth, and in many places much more: those who dismounted had to beat their way with toilsome steps. Eight miles were considered a good day's journey. The horses were almost famished; for the herbage was covered by the deep snow, so that they had nothing to subsist upon but scanty wisps of the dry bunch grass which peered above the surface, and the small branches and twigs of frozen willows and wormwood.

In this way they urged their slow and painful course to the south down John Day's Creek, until it lost itself in a swamp. Here they encamped upon the ice among stiffened willows, where they were obliged to beat down and clear away the snow to procure pasturage for their horses.

Hence they toiled on to Godin River; so called after an Iroquois hunter in the service of Sublette, who was murdered there by the Blackfeet. Many of the features of this remote wilderness are thus named after scenes of violence and bloodshed that occurred to the early pioneers. It was an act of filial vengeance on the part of Godin's son Antoine that, as the reader may recollect, brought on the recent battle at Pierre's Hole.

From Godin's River, Captain Bonneville and his followers came out upon the plain of the Three Butes, so called from three singular and isolated hills that rise from the midst. It is a part of the great desert of Snake River, one of the most remarkable tracts beyond the mountains. Could they have experienced a respite from their sufferings and anxieties, the immense landscape spread out before them was calculated to inspire admiration. Winter has its beauties and glories as well as summer; and Captain Bonneville had the soul to appreciate them.

Far away, says he, over the vast plains, and up the steep sides of the lofty mountains, the snow lay spread in dazzling whiteness: and whenever the sun emerged in the morning above the giant peaks, or burst forth from among clouds in his midday course, mountain and dell, glazed rock and frosted tree, glowed and sparkled with surpassing lustre. The tall pines seemed sprinkled with a silver dust, and the willows, studded with minute icicles reflecting the prismatic rays, brought to mind the fairy trees conjured up by the caliph's story-teller to adorn his vale of diamonds.

The poor wanderers, however, nearly starved with hunger and cold, were in no mood to enjoy the glories of these brilliant scenes; though they stamped pictures on their memory which have been recalled with delight in more genial situations.

Encamping at the west Bute, they found a place swept by the winds, so that it was bare of snow, and there was abundance of bunch grass. Here the horses were turned loose to graze throughout the night. Though for once they had ample pasturage, yet the keen winds were so intense that, in

the morning, a mule was found frozen to death. The trappers gathered round and mourned over him as over a cherished friend. They feared their half-famished horses would soon share his fate, for there seemed scarce blood enough left in their veins to withstand the freezing cold. To beat the way further through the snow with these enfeebled animals seemed next to impossible; and despondency began to creep over their hearts, when, fortunately, they discovered a trail made by some hunting party. Into this they immediately entered, and proceeded with less difficulty. Shortly afterward, a fine buffalo bull came bounding across the snow and was instantly brought down by the hunters. A fire was soon blazing and crackling, and an ample repast soon cooked, and sooner dispatched; after which they made some further progress and then encamped. One of the men reached the camp nearly frozen to death; but good cheer and a blazing fire gradually restored life, and put his blood in circulation.

Having now a beaten path, they proceeded the next morning with more facility; indeed, the snow decreased in depth as they receded from the mountains, and the temperature became more mild. In the course of the day they discovered a solitary horseman hovering at a distance before them on the plain. They spurred on to overtake him; but he was better mounted on a fresher steed, and kept at a wary distance, reconnoitring them with evident distrust; for the wild dress of the free trappers, their leggings, blankets, and cloth caps garnished with fur and topped off with feathers, even their very elf-locks and weather-bronzed complexions, gave them the look of Indians rather than white men, and made him mistake them for a war party of some hostile tribe.

After much manoeuvring, the wild horseman was at length brought to a parley; but even then he conducted himself with the caution of a knowing prowler of the prairies. Dismounting from his horse, and using him as a breastwork, he levelled his gun across his back, and, thus prepared for defence like a wary cruiser upon the high seas, he permitted himself to be approached within speaking distance.

He proved to be an Indian of the Banneck tribe, belonging to a band at no great distance. It was some time before he could be persuaded that he was conversing with a party of white men and induced to lay aside his reserve and join them. He then gave them the interesting intelligence that there were two companies of white men encamped in the neighborhood. This was cheering news to Captain Bonneville; who hoped to find in one of them the long-sought party of Matthieu. Pushing forward, therefore, with renovated spirits, he reached Snake River by nightfall, and there fixed his encampment.

Early the next morning (13th January, 1833), diligent search was made about the neighborhood for traces of the reported parties of white men. An encampment was soon discovered about four miles farther up the river, in which Captain Bonneville to his great joy found two of Matthieu's men, from whom he learned that the rest of his party would be there in the course of a few days. It was a matter of great pride and selfgratulation to Captain Bonneville that he had thus accomplished his dreary and doubtful enterprise; and he determined to pass some time in this encampment, both to await the return of Matthieu, and to give needful repose to men and horses.

It was, in fact, one of the most eligible and delightful wintering grounds in that whole range of country. The Snake River here wound its devious way between low banks through the great plain of the Three Butes; and was bordered by wide and fertile meadows. It was studded with islands which, like the alluvial bottoms, were covered with groves of cotton-wood, thickets of willow, tracts of good lowland grass, and abundance of green rushes. The adjacent plains were so vast in

---

extent that no single band of Indians could drive the buffalo out of them; nor was the snow of sufficient depth to give any serious inconvenience. Indeed, during the sojourn of Captain Bonneville in this neighborhood, which was in the heart of winter, he found the weather, with the exception of a few cold and stormy days, generally mild and pleasant, freezing a little at night but invariably thawing with the morning's sun-resembling the spring weather in the middle parts of the United States.

The lofty range of the Three Tetons, those great landmarks of the Rocky Mountains rising in the east and circling away to the north and west of the great plain of Snake River, and the mountains of Salt River and Portneuf toward the south, catch the earliest falls of snow. Their white robes lengthen as the winter advances, and spread themselves far into the plain, driving the buffalo in herds to the banks of the river in quest of food; where they are easily slain in great numbers. Such were the palpable advantages of this winter encampment; added to which, it was secure from the prowlings and plunderings of any petty band of roving Blackfeet, the difficulties of retreat rendering it unwise for those crafty depredators to venture an attack unless with an overpowering force.

About ten miles below the encampment lay the Banneck Indians; numbering about one hundred and twenty lodges. They are brave and cunning warriors and deadly foes of the Blackfeet, whom they easily overcome in battles where their forces are equal. They are not vengeful and enterprising in warfare, however; seldom sending war parties to attack the Blackfeet towns, but contenting themselves with defending their own territories and house. About one third of their warriors are armed with fuses, the rest with bows and arrows.

As soon as the spring opens they move down the right bank of Snake River and encamp at the heads of the Boisee and Payette. Here their horses wax fat on good pasturage, while the tribe revels in plenty upon the flesh of deer, elk, bear, and beaver. They then descend a little further, and are met by the Lower Nez Perces, with whom they trade for horses; giving in exchange beaver, buffalo, and buffalo robes. Hence they strike upon the tributary streams on the left bank of Snake River, and encamp at the rise of the Portneuf and Blackfoot streams, in the buffalo range. Their horses, although of the Nez Perce breed, are inferior to the parent stock from being ridden at too early an age, being often bought when but two years old and immediately put to hard work. They have fewer horses, also, than most of these migratory tribes.

At the time that Captain Bonneville came into the neighborhood of these Indians, they were all in mourning for their chief, surnamed The Horse. This chief was said to possess a charmed life, or rather, to be invulnerable to lead; no bullet having ever hit him, though he had been in repeated battles, and often shot at by the surest marksmen. He had shown great magnanimity in his intercourse with the white men. One of the great men of his family had been slain in an attack upon a band of trappers passing through the territories of his tribe. Vengeance had been sworn by the Bannecks; but The Horse interfered, declaring himself the friend of white men and, having great influence and authority among his people, he compelled them to forgo all vindictive plans and to conduct themselves amicably whenever they came in contact with the traders.

This chief had bravely fallen in resisting an attack made by the Blackfeet upon his tribe, while encamped at the head of Godin River. His fall in nowise lessened the faith of his people in his charmed life; for they declared that it was not a bullet which laid him low, but a bit of horn which had been shot into him by some Blackfoot marksman aware, no doubt, of the inefficacy of lead.

Since his death there was no one with sufficient influence over the tribe to restrain the wild and predatory propensities of the young men. The consequence was they had become troublesome and dangerous neighbors, openly friendly for the sake of traffic, but disposed to commit secret depredations and to molest any small party that might fall within their reach.

Washington Irving's The Adventures of Captain Bonneville

Chapter 16

Misadventures of Matthieu and his party -- Return to the caches at Salmon River -- Battle between Nez Perces and Black feet -- Heroism of a Nez Perce woman -- Enrolled among the braves. ON the 3d of February Matthieu, with the residue of his band, arrived in camp. He had a disastrous story to relate. After parting with Captain Bonneville in Green River Valley he had proceeded to the westward, keeping to the north of the Eutaw Mountains, a spur of the great Rocky chain. Here he experienced the most rugged travelling for his horses, and soon discovered that there was but little chance of meeting the Shoshonie bands. He now proceeded along Bear River, a stream much frequented by trappers, intending to shape his course to Salmon River to rejoin Captain Bonneville.

He was misled, however, either through the ignorance or treachery of an Indian guide, and conducted into a wild valley where he lay encamped during the autumn and the early part of the winter, nearly buried in snow and almost starved. Early in the season he detached five men, with nine horses, to proceed to the neighborhood of the Sheep Rock, on Bear River, where game was plenty, and there to procure a supply for the camp.

They had not proceeded far on their expedition when their trail was discovered by a party of nine or ten Indians, who immediately commenced a lurking pursuit, dogging them secretly for five or six days. So long as their encampments were well chosen and a proper watch maintained the wary savages kept aloof; at length, observing that they were badly encamped, in a situation where they might be approached with secrecy, the enemy crept stealthily along under cover of the river bank, preparing to burst suddenly upon their prey.

They had not advanced within striking distance, however, before they were discovered by one of the trappers. He immediately but silently gave the alarm to his companions. They all sprang upon their horses and prepared to retreat to a safe position. One of the party, however, named Jennings, doubted the correctness of the alarm, and before he mounted his horse wanted to ascertain the fact. His companions urged him to mount, but in vain; he was incredulous and obstinate. A volley of firearms by the savages dispelled his doubts, but so overpowered his nerves that he was unable to get into his saddle. His comrades, seeing his peril and confusion, generously leaped from their horses to protect him. A shot from a rifle brought him to the earth; in his agony he called upon the others not to desert him. Two of them, Le Roy and Ross, after fighting desperately, were captured by the savages; the remaining two vaulted into their saddles and saved themselves by headlong flight, being pursued for nearly thirty miles. They got safe back to Matthieu's camp, where their story inspired such dread of lurking Indians that the hunters could not be prevailed upon to undertake another foray in quest of provisions. They remained, therefore, almost starving in their camp; now and then killing an old or disabled horse for food, while the elk and the mountain sheep roamed unmolested among the surrounding mountains.

The disastrous surprisal of this hunting party is cited by Captain Bonneville to show the impor-

---

tance of vigilant watching and judicious encampments in the Indian country. Most of this kind of disasters to traders and trappers arise from some careless inattention to the state of their arms and ammunition, the placing of their horses at night, the position of their camping ground, and the posting of their night watches. The Indian is a vigilant and crafty foe, by no means given to hair-brained assaults; he seldom attacks when he finds his foe well prepared and on the alert. Caution is at least as efficacious a protection against him as courage.

The Indians who made this attack were at first supposed to be Blackfeet; until Captain Bonneville found subsequently, in the camp of the Bannecks, a horse, saddle, and bridle, which he recognized as having belonged to one of the hunters. The Bannecks, however, stoutly denied having taken these spoils in fight, and persisted in affirming that the outrage had been perpetrated by a Black-foot band.

Captain Bonneville remained on Snake River nearly three weeks after the arrival of Matthieu and his party. At length his horses having recovered strength sufficient for a journey, he prepared to return to the Nez Percés, or rather to visit his caches on Salmon River; that he might take thence goods and equipments for the opening season. Accordingly, leaving sixteen men at Snake River, he set out on the 19th of February with sixteen others on his journey to the caches.

Fording the river, he proceeded to the borders of the deep snow, when he encamped under the lee of immense piles of burned rock. On the 21st he was again floundering through the snow, on the great Snake River plain, where it lay to the depth of thirty inches. It was sufficiently incrustated to bear a pedestrian, but the poor horses broke through the crust, and plunged and strained at every step. So lacerated were they by the ice that it was necessary to change the front every hundred yards, and put a different one in advance to break the way. The open prairies were swept by a piercing and biting wind from the northwest. At night, they had to task their ingenuity to provide shelter and keep from freezing. In the first place, they dug deep holes in the snow, piling it up in ramparts to windward as a protection against the blast. Beneath these they spread buffalo skins, upon which they stretched themselves in full dress, with caps, cloaks, and moccasins, and covered themselves with numerous blankets; notwithstanding all which they were often severely pinched with the cold.

On the 28th of February they arrived on the banks of Godin River. This stream emerges from the mountains opposite an eastern branch of the Malade River, running southeast, forms a deep and swift current about twenty yards wide, passing rapidly through a defile to which it gives its name, and then enters the great plain where, after meandering about forty miles, it is finally lost in the region of the Burned Rocks.

On the banks of this river Captain Bonneville was so fortunate as to come upon a buffalo trail. Following it up, he entered the defile, where he remained encamped for two days to allow the hunters time to kill and dry a supply of buffalo beef. In this sheltered defile the weather was moderate and grass was already sprouting more than an inch in height. There was abundance, too, of the salt weed which grows most plentiful in clayey and gravelly barrens. It resembles pennyroyal, and derives its name from a partial saltness. It is a nourishing food for the horses in the winter, but they reject it the moment the young grass affords sufficient pasturage.

On the 6th of March, having cured sufficient meat, the party resumed their march, and moved on with comparative ease, excepting where they had to make their way through snow-drifts which

had been piled up by the wind.

On the 11th, a small cloud of smoke was observed rising in a deep part of the defile. An encampment was instantly formed and scouts were sent out to reconnoitre. They returned with intelligence that it was a hunting party of Flatheads, returning from the buffalo range laden with meat. Captain Bonneville joined them the next day, and persuaded them to proceed with his party a few miles below to the caches, whither he proposed also to invite the Nez Perces, whom he hoped to find somewhere in this neighborhood. In fact, on the 13th, he was rejoined by that friendly tribe who, since he separated from them on Salmon River, had likewise been out to hunt the buffalo, but had continued to be haunted and harassed by their old enemies the Blackfeet, who, as usual, had contrived to carry off many of their horses.

In the course of this hunting expedition, a small band of ten lodges separated from the main body in search of better pasturage for their horses. About the 1st of March, the scattered parties of Blackfoot banditti united to the number of three hundred fighting men, and determined upon some signal blow. Proceeding to the former camping ground of the Nez Perces, they found the lodges deserted; upon which they hid themselves among the willows and thickets, watching for some straggler who might guide them to the present "whereabout" of their intended victims. As fortune would have it Kosato, the Blackfoot renegade, was the first to pass along, accompanied by his blood-bought bride. He was on his way from the main body of hunters to the little band of ten lodges. The Blackfeet knew and marked him as he passed; he was within bowshot of their ambush; yet, much as they thirsted for his blood, they forbore to launch a shaft; sparing him for the moment that he might lead them to their prey. Secretly following his trail, they discovered the lodges of the unfortunate Nez Perces, and assailed them with shouts and yellings. The Nez Perces numbered only twenty men, and but nine were armed with fusees. They showed themselves, however, as brave and skilful in war as they had been mild and long-suffering in peace. Their first care was to dig holes inside of their lodges; thus ensconced they fought desperately, laying several of the enemy dead upon the ground; while they, though some of them were wounded, lost not a single warrior.

During the heat of the battle, a woman of the Nez Perces, seeing her warrior badly wounded and unable to fight, seized his bow and arrows, and bravely and successfully defended his person, contributing to the safety of the whole party.

In another part of the field of action, a Nez Perce had crouched behind the trunk of a fallen tree, and kept up a galling fire from his covert. A Blackfoot seeing this, procured a round log, and placing it before him as he lay prostrate, rolled it forward toward the trunk of the tree behind which his enemy lay crouched. It was a moment of breathless interest; whoever first showed himself would be in danger of a shot. The Nez Perce put an end to the suspense. The moment the logs touched he sprang upon his feet and discharged the contents of his fusee into the back of his antagonist. By this time the Blackfeet had got possession of the horses, several of their warriors lay dead on the field, and the Nez Perces, ensconced in their lodges, seemed resolved to defend themselves to the last gasp. It so happened that the chief of the Blackfeet party was a renegade from the Nez Perces; unlike Kosato, however, he had no vindictive rage against his native tribe, but was rather disposed, now he had got the booty, to spare all unnecessary effusion of blood. He held a long parley, therefore, with the besieged, and finally drew off his warriors, taking with him seventy horses. It appeared, afterward, that the bullets of the Blackfeet had been entirely expended

---

in the course of the battle, so that they were obliged to make use of stones as substitute. At the outset of the fight Kosato, the renegade, fought with fury rather than valor, animating the others by word as well as deed. A wound in the head from a rifle ball laid him senseless on the earth. There his body remained when the battle was over, and the victors were leading off the horses. His wife hung over him with frantic lamentations. The conquerors paused and urged her to leave the lifeless renegade, and return with them to her kindred. She refused to listen to their solicitations, and they passed on. As she sat watching the features of Kosato, and giving way to passionate grief, she thought she perceived him to breathe. She was not mistaken. The ball, which had been nearly spent before it struck him, had stunned instead of killing him. By the ministry of his faithful wife he gradually recovered, reviving to a redoubled love for her, and hatred of his tribe.

As to the female who had so bravely defended her husband, she was elevated by the tribe to a rank far above her sex, and beside other honorable distinctions, was thenceforward permitted to take a part in the war dances of the braves!

Washington Irving's The Adventures of Captain Bonneville

Chapter 17

Opening of the caches -- Detachments of Cerre and Hodgkiss -- Salmon River Mountains -- Superstition of an Indian trapper -- Godin's River -- Preparations for trapping -- An alarm -- An interruption -- A rival band -- Phenomena of Snake River Plain -- Vast clefts and chasms -- Ingulfed streams -- Sublime scenery -- A grand buffalo hunt.

CAPTAIN BONNEVILLE found his caches perfectly secure, and having secretly opened them he selected such articles as were necessary to equip the free trappers and to supply the inconsiderable trade with the Indians, after which he closed them again. The free trappers, being newly rigged out and supplied, were in high spirits, and swaggered gayly about the camp. To compensate all hands for past sufferings, and to give a cheerful spur to further operations, Captain Bonneville now gave the men what, in frontier phrase, is termed "a regular blow-out." It was a day of uncouth gambols and frolics and rude feasting. The Indians joined in the sports and games, and all was mirth and good-fellowship.

It was now the middle of March, and Captain Bonneville made preparations to open the spring campaign. He had pitched upon Malade River for his main trapping ground for the season. This is a stream which rises among the great bed of mountains north of the Lava Plain, and after a winding course falls into Snake River. Previous to his departure the captain dispatched Mr. Cerre, with a few men, to visit the Indian villages and purchase horses; he furnished his clerk, Mr. Hodgkiss, also, with a small stock of goods, to keep up a trade with the Indians during the spring, for such peltries as they might collect, appointing the caches on Salmon River as the point of rendezvous, where they were to rejoin him on the 15th of June following.

This done he set out for Malade River, with a band of twenty-eight men composed of hired and free trappers and Indian hunters, together with eight squaws. Their route lay up along the right fork of Salmon River, as it passes through the deep defile of the mountains. They travelled very slowly, not above five miles a day, for many of the horses were so weak that they faltered and staggered as they walked. Pasturage, however, was now growing plentiful. There was abundance of fresh grass, which in some places had attained such height as to wave in the wind. The native

flocks of the wilderness, the mountain sheep, as they are called by the trappers, were continually to be seen upon the hills between which they passed, and a good supply of mutton was provided by the hunters, as they were advancing toward a region of scarcity.

In the course of his journey Captain Bonneville had occasion to remark an instance of the many notions, and almost superstitions, which prevail among the Indians, and among some of the white men, with respect to the sagacity of the beaver. The Indian hunters of his party were in the habit of exploring all the streams along which they passed, in search of "beaver lodges," and occasionally set their traps with some success. One of them, however, though an experienced and skilful trapper, was invariably unsuccessful. Astonished and mortified at such unusual bad luck, he at length conceived the idea that there was some odor about his person of which the beaver got scent and retreated at his approach. He immediately set about a thorough purification. Making a rude sweating-house on the banks of the river, he would shut himself up until in a reeking perspiration, and then suddenly emerging, would plunge into the river. A number of these sweatings and plungings having, as he supposed, rendered his person perfectly "inodorous," he resumed his trapping with renovated hope.

About the beginning of April they encamped upon Godin's River, where they found the swamp full of "musk-rat houses." Here, therefore, Captain Bonneville determined to remain a few days and make his first regular attempt at trapping. That his maiden campaign might open with spirit, he promised the Indians and free trappers an extra price for every musk-rat they should take. All now set to work for the next day's sport. The utmost animation and gayety prevailed throughout the camp. Everything looked auspicious for their spring campaign. The abundance of musk-rats in the swamp was but an earnest of the nobler game they were to find when they should reach the Malade River, and have a capital beaver country all to themselves, where they might trap at their leisure without molestation.

In the midst of their gayety a hunter came galloping into the camp, shouting, or rather yelling, "A trail! a trail! -- lodge poles! lodge poles!"

These were words full of meaning to a trapper's ear. They intimated that there was some band in the neighborhood, and probably a hunting party, as they had lodge poles for an encampment. The hunter came up and told his story. He had discovered a fresh trail, in which the traces made by the dragging of lodge poles were distinctly visible. The buffalo, too, had just been driven out of the neighborhood, which showed that the hunters had already been on the range.

The gayety of the camp was at an end; all preparations for musk-rat trapping were suspended, and all hands sallied forth to examine the trail. Their worst fears were soon confirmed. Infallible signs showed the unknown party in the advance to be white men; doubtless, some rival band of trappers! Here was competition when least expected; and that too by a party already in the advance, who were driving the game before them. Captain Bonneville had now a taste of the sudden transitions to which a trapper's life is subject. The buoyant confidence in an uninterrupted hunt was at an end; every countenance lowered with gloom and disappointment.

Captain Bonneville immediately dispatched two spies to over-take the rival party, and endeavor to learn their plans; in the meantime, he turned his back upon the swamp and its musk-rat houses and followed on at "long camps, which in trapper's language is equivalent to long stages. On the 6th of April he met his spies returning. They had kept on the trail like hounds until they overtook the party at the south end of Godin's defile. Here they found them comfortably encamped: twen-

ty-two prime trappers, all well appointed, with excellent horses in capital condition led by Milton Sublette, and an able coadjutor named Jarvie, and in full march for the Malade hunting ground. This was stunning news. The Malade River was the only trapping ground within reach; but to have to compete there with veteran trappers, perfectly at home among the mountains, and admirably mounted, while they were so poorly provided with horses and trappers, and had but one man in their party acquainted with the country-it was out of the question.

The only hope that now remained was that the snow, which still lay deep among the mountains of Godin's River and blocked up the usual pass to the Malade country, might detain the other party until Captain Bonneville's horses should get once more into good condition in their present ample pasturage.

The rival parties now encamped together, not out of companionship, but to keep an eye upon each other. Day after day passed by without any possibility of getting to the Malade country. Sublette and Jarvie endeavored to force their way across the mountain; but the snows lay so deep as to oblige them to turn back. In the meantime the captain's horses were daily gaining strength, and their hoofs improving, which had been worn and battered by mountain service. The captain, also was increasing his stock of provisions; so that the delay was all in his favor.

To any one who merely contemplates a map of the country this difficulty of getting from Godin to Malade River will appear inexplicable, as the intervening mountains terminate in the great Snake River plain, so that, apparently, it would be perfectly easy to proceed round their bases.

Here, however, occur some of the striking phenomena of this wild and sublime region. The great lower plain which extends to the feet of these mountains is broken up near their bases into crests, and ridges resembling the surges of the ocean breaking on a rocky shore.

In a line with the mountains the plain is gashed with numerous and dangerous chasms, from four to ten feet wide, and of great depth. Captain Bonneville attempted to sound some of these openings, but without any satisfactory result. A stone dropped into one of them reverberated against the sides for apparently a very great depth, and, by its sound, indicated the same kind of substance with the surface, as long as the strokes could be heard. The horse, instinctively sagacious in avoiding danger, shrinks back in alarm from the least of these chasms, pricking up his ears, snorting and pawing, until permitted to turn away.

We have been told by a person well acquainted with the country that it is sometimes necessary to travel fifty and sixty miles to get round one of these tremendous ravines. Considerable streams, like that of Godin's River, that run with a bold, free current, lose themselves in this plain; some of them end in swamps, others suddenly disappear, finding, no doubt, subterranean outlets.

Opposite to these chasms Snake River makes two desperate leaps over precipices, at a short distance from each other; one twenty, the other forty feet in height.

The volcanic plain in question forms an area of about sixty miles in diameter, where nothing meets the eye but a desolate and awful waste; where no grass grows nor water runs, and where nothing is to be seen but lava. Ranges of mountains skirt this plain, and, in Captain Bonneville's opinion, were formerly connected, until rent asunder by some convulsion of nature. Far to the east the Three Tetons lift their heads sublimely, and dominate this wide sea of lava -- one of the most striking features of a wilderness where everything seems on a scale of stern and simple grandeur.

We look forward with impatience for some able geologist to explore this sublime but almost un-

known region.

It was not until the 25th of April that the two parties of trappers broke up their encampments, and undertook to cross over the southwest end of the mountain by a pass explored by their scouts. From various points of the mountain they commanded boundless prospects of the lava plain, stretching away in cold and gloomy barrenness as far as the eye could reach. On the evening of the 26th they reached the plain west of the mountain, watered by the Malade, the Boisee, and other streams, which comprised the contemplated trapping-ground.

The country about the Boisee (or Woody) River is extolled by Captain Bonneville as the most enchanting he had seen in the Far West, presenting the mingled grandeur and beauty of mountain and plain, of bright running streams and vast grassy meadows waving to the breeze.

We shall not follow the captain throughout his trapping campaign, which lasted until the beginning of June, nor detail all the manoeuvres of the rival trapping parties and their various schemes to outwit and out-trap each other. Suffice it to say that, after having visited and camped about various streams with varying success, Captain Bonneville set forward early in June for the appointed rendezvous at the caches. On the way, he treated his party to a grand buffalo hunt. The scouts had reported numerous herds in a plain beyond an intervening height. There was an immediate halt; the fleetest horses were forthwith mounted and the party advanced to the summit of the hill. Hence they beheld the great plain below; absolutely swarming with buffalo. Captain Bonneville now appointed the place where he would encamp; and toward which the hunters were to drive the game. He cautioned the latter to advance slowly, reserving the strength and speed of the horses until within a moderate distance of the herds. Twenty-two horsemen descended cautiously into the plain, conformably to these directions. "It was a beautiful sight," says the captain, "to see the runners, as they are called, advancing in column, at a slow trot, until within two hundred and fifty yards of the outskirts of the herd, then dashing on at full speed until lost in the immense multitude of buffaloes scouring the plain in every direction." All was now tumult and wild confusion. In the meantime Captain Bonneville and the residue of the party moved on to the appointed camping ground; thither the most expert runners succeeded in driving numbers of buffalo, which were killed hard by the camp, and the flesh transported thither without difficulty. In a little while the whole camp looked like one great slaughter-house; the carcasses were skilfully cut up, great fires were made, scaffolds erected for drying and jerking beef, and an ample provision was made for future subsistence. On the 15th of June, the precise day appointed for the rendezvous, Captain Bonneville and his party arrived safely at the caches.

Here he was joined by the other detachments of his main party, all in good health and spirits. The caches were again opened, supplies of various kinds taken out, and a liberal allowance of aqua vitae distributed throughout the camp, to celebrate with proper conviviality this merry meeting.

---

HAVING now a pretty strong party, well armed and equipped, Captain Bonneville no longer felt the necessity of fortifying himself in the secret places and fastnesses of the mountains; but sallied forth boldly into the Snake River plain, in search of his clerk, Hodgkiss, who had remained with the Nez Perces. He found him on the 24th of June, and learned from him another chapter of misfortunes which had recently befallen that ill-fated race.

After the departure of Captain Bonneville in March, Kosato, the renegade Blackfoot, had recovered from the wound received in battle; and with his strength revived all his deadly hostility to his native tribe. He now resumed his efforts to stir up the Nez Perces to reprisals upon their old enemies; reminding them incessantly of all the outrages and robberies they had recently experienced, and assuring them that such would continue to be their lot until they proved themselves men by some signal retaliation.

The impassioned eloquence of the desperado at length produced an effect; and a band of braves enlisted under his guidance, to penetrate into the Blackfoot country, harass their Villages, carry off their horses, and commit all kinds of depredations.

Kosato pushed forward on his foray as far as the Horse Prairie, where he came upon a strong party of Blackfeet. Without waiting to estimate their force, he attacked them with characteristic fury, and was bravely seconded by his followers. The contest, for a time, was hot and bloody; at length, as is customary with these two tribes, they paused, and held a long parley, or rather a war of words.

“What need,” said the Blackfoot chief, tauntingly, “have the Nez Perces to leave their homes, and sally forth on war parties, when they have danger enough at their own doors? If you want fighting, return to your villages; you will have plenty of it there. The Blackfeet warriors have hitherto made war upon you as children. They are now coming as men. A great force is at hand; they are on their way to your towns, and are determined to rub out the very name of the Nez Perces from the mountains. Return, I say, to your towns, and fight there, if you wish to live any longer as a people.”

Kosato took him at his word; for he knew the character of his native tribe. Hastening back with his band to the Nez Perces village, he told all that he had seen and heard, and urged the most prompt and strenuous measures for defence. The Nez Perces, however, heard him with their accustomed phlegm; the threat of the Blackfeet had been often made, and as often had proved a mere bravado; such they pronounced it to be at present, and, of course, took no precautions. They were soon convinced that it was no empty menace. In a few days a band of three hundred Blackfeet warriors appeared upon the hills. All now was consternation in the village. The force of the Nez Perces was too small to cope with the enemy in open fight; many of the young men having gone to their relatives on the Columbia to procure horses. The sages met in hurried council. What was to be done to ward off a blow which threatened annihilation? In this moment of imminent peril, a Pierced-nose chief, named Blue John by the whites, offered to approach secretly with a small, but chosen band, through a defile which led to the encampment of the enemy, and, by a sudden onset, to drive off the horses. Should this blow be successful, the spirit and strength of the invaders would be broken, and the Nez Perces, having horses, would be more than a match for them. Should it fail, the village would not be worse off than at present, when destruction appeared inevitable.

Twenty-nine of the choicest warriors instantly volunteered to follow Blue John in this hazardous

enterprise. They prepared for it with the solemnity and devotion peculiar to the tribe. Blue John consulted his medicine, or talismanic charm, such as every chief keeps in his lodge as a supernatural protection. The oracle assured him that his enterprise would be completely successful, provided no rain should fall before he had passed through the defile; but should it rain, his band would be utterly cut off.

The day was clear and bright; and Blue John anticipated that the skies would be propitious. He departed in high spirits with his forlorn hope; and never did band of braves make a more gallant display-horsemen and horses being decorated and equipped in the fiercest and most glaring style - glittering with arms and ornaments, and fluttering with feathers.

The weather continued serene until they reached the defile; but just as they were entering it a black cloud rose over the mountain crest, and there was a sudden shower. The warriors turned to their leader, as if to read his opinion of this unlucky omen; but the countenance of Blue John remained unchanged, and they continued to press forward. It was their hope to make their way undiscovered to the very vicinity of the Blackfoot camp; but they had not proceeded far in the defile, when they met a scouting party of the enemy. They attacked and drove them among the hills, and were pursuing them with great eagerness when they heard shouts and yells behind them, and beheld the main body of the Blackfeet advancing.

The second chief wavered a little at the sight and proposed an instant retreat. "We came to fight!" replied Blue John, sternly. Then giving his war-whoop, he sprang forward to the conflict. His braves followed him. They made a headlong charge upon the enemy; not with the hope of victory, but the determination to sell their lives dearly. A frightful carnage, rather than a regular battle, succeeded. The forlorn band laid heaps of their enemies dead at their feet, but were overwhelmed with numbers and pressed into a gorge of the mountain; where they continued to fight until they were cut to pieces. One only, of the thirty, survived. He sprang on the horse of a Blackfoot warrior whom he had slain, and escaping at full speed, brought home the baleful tidings to his village. Who can paint the horror and desolation of the inhabitants? The flower of their warriors laid low, and a ferocious enemy at their doors. The air was rent by the shrieks and lamentations of the women, who, casting off their ornaments and tearing their hair, wandered about, frantically bewailing the dead and predicting destruction to the living. The remaining warriors armed themselves for obstinate defence; but showed by their gloomy looks and sullen silence that they considered defence hopeless. To their surprise the Blackfeet refrained from pursuing their advantage; perhaps satisfied with the blood already shed, or disheartened by the loss they had themselves sustained. At any rate, they disappeared from the hills, and it was soon ascertained that they had returned to the Horse Prairie.

The unfortunate Nez Perces now began once more to breathe. A few of their warriors, taking pack-horses, repaired to the defile to bring away the bodies of their slaughtered brethren. They found them mere headless trunks; and the wounds with which they were covered showed how bravely they had fought. Their hearts, too, had been torn out and carried off; a proof of their signal valor; for in devouring the heart of a foe renowned for bravery, or who has distinguished himself in battle, the Indian victor thinks he appropriates to himself the courage of the deceased. Gathering the mangled bodies of the slain, and strapping them across their pack-horses, the warriors returned, in dismal procession, to the village. The tribe came forth to meet them; the women with piercing cries and wailings; the men with downcast countenances, in which gloom and sor-

row seemed fixed as if in marble. The mutilated and almost undistinguishable bodies were placed in rows upon the ground, in the midst of the assemblage; and the scene of heart-rending anguish and lamentation that ensued would have confounded those who insist on Indian stoicism.

Such was the disastrous event that had overwhelmed the Nez Perces tribe during the absence of Captain Bonneville; and he was informed that Kosato, the renegade, who, being stationed in the village, had been prevented from going on the forlorn hope, was again striving to rouse the vindictive feelings of his adopted brethren, and to prompt them to revenge the slaughter of their devoted braves.

During his sojourn on the Snake River plain, Captain Bonneville made one of his first essays at the strategy of the fur trade. There was at this time an assemblage of Nez Perces, Flatheads, and Cottonois Indians encamped together upon the plain; well provided with beaver, which they had collected during the spring. These they were waiting to traffic with a resident trader of the Hudson's Bay Company, who was stationed among them, and with whom they were accustomed to deal. As it happened, the trader was almost entirely destitute of Indian goods; his spring supply not having yet reached him. Captain Bonneville had secret intelligence that the supplies were on their way, and would soon arrive; he hoped, however, by a prompt move, to anticipate their arrival, and secure the market to himself. Throwing himself, therefore, among the Indians, he opened his packs of merchandise and displayed the most tempting wares: bright cloths, and scarlet blankets, and glittering ornaments, and everything gay and glorious in the eyes of warrior or squaw; all, however, was in vain. The Hudson's Bay trader was a perfect master of his business, thoroughly acquainted with the Indians he had to deal with, and held such control over them that none dared to act openly in opposition to his wishes; nay, more -- he came nigh turning the tables upon the captain, and shaking the allegiance of some of his free trappers, by distributing liquors among them. The latter, therefore, was glad to give up a competition, where the war was likely to be carried into his own camp.

In fact, the traders of the Hudson's Bay Company have advantages over all competitors in the trade beyond the Rocky Mountains. That huge monopoly centers within itself not merely its own hereditary and long-established power and influence; but also those of its ancient rival, but now integral part, the famous Northwest Company. It has thus its races of traders, trappers, hunters, and voyageurs, born and brought up in its service, and inheriting from preceding generations a knowledge and aptitude in everything connected with Indian life, and Indian traffic. In the process of years, this company has been enabled to spread its ramifications in every direction; its system of intercourse is founded upon a long and intimate knowledge of the character and necessities of the various tribes; and of all the fastnesses, defiles, and favorable hunting grounds of the country. Their capital, also, and the manner in which their supplies are distributed at various posts, or forwarded by regular caravans, keep their traders well supplied, and enable them to furnish their goods to the Indians at a cheap rate. Their men, too, being chiefly drawn from the Canadas, where they enjoy great influence and control, are engaged at the most trifling wages, and supported at little cost; the provisions which they take with them being little more than Indian corn and grease. They are brought also into the most perfect discipline and subordination, especially when their leaders have once got them to their scene of action in the heart of the wilderness.

These circumstances combine to give the leaders of the Hudson's Bay Company a decided advan-

tage over all the American companies that come within their range, so that any close competition with them is almost hopeless.

Shortly after Captain Bonneville's ineffectual attempt to participate in the trade of the associated camp, the supplies of the Hudson's Bay Company arrived; and the resident trader was enabled to monopolize the market.

It was now the beginning of July; in the latter part of which month Captain Bonneville had appointed a rendezvous at Horse Creek in Green River Valley, with some of the parties which he had detached in the preceding year. He now turned his thoughts in that direction, and prepared for the journey.

The Cottonois were anxious for him to proceed at once to their country; which, they assured him, abounded in beaver. The lands of this tribe lie immediately north of those of the Flatheads and are open to the inroads of the Blackfeet. It is true, the latter professed to be their allies; but they had been guilty of so many acts of perfidy, that the Cottonois had, latterly, renounced their hollow friendship and attached themselves to the Flatheads and Nez Perces. These they had accompanied in their migrations rather than remain alone at home, exposed to the outrages of the Blackfeet. They were now apprehensive that these marauders would range their country during their absence and destroy the beaver; this was their reason for urging Captain Bonneville to make it his autumnal hunting ground. The latter, however, was not to be tempted; his engagements required his presence at the rendezvous in Green River Valley; and he had already formed his ulterior plans.

An unexpected difficulty now arose. The free trappers suddenly made a stand, and declined to accompany him. It was a long and weary journey; the route lay through Pierre's Hole, and other mountain passes infested by the Blackfeet, and recently the scenes of sanguinary conflicts. They were not disposed to undertake such unnecessary toils and dangers, when they had good and secure trapping grounds nearer at hand, on the head-waters of Salmon River.

As these were free and independent fellows, whose will and whim were apt to be law -- who had the whole wilderness before them, "where to choose," and the trader of a rival company at hand, ready to pay for their services -- it was necessary to bend to their wishes. Captain Bonneville fitted them out, therefore, for the hunting ground in question; appointing Mr. Hodgkiss to act as their partisan, or leader, and fixing a rendezvous where he should meet them in the course of the ensuing winter. The brigade consisted of twenty-one free trappers and four or five hired men as camp-keepers. This was not the exact arrangement of a trapping party; which when accurately organized is composed of two thirds trappers whose duty leads them continually abroad in pursuit of game; and one third camp-keepers who cook, pack, and unpack; set up the tents, take care of the horses and do all other duties usually assigned by the Indians to their women. This part of the service is apt to be fulfilled by French creoles from Canada and the valley of the Mississippi.

In the meantime the associated Indians having completed their trade and received their supplies, were all ready to disperse in various directions. As there was a formidable band of Blackfeet just over a mountain to the northeast, by which Hodgkiss and his free trappers would have to pass; and as it was known that those sharp-sighted marauders had their scouts out watching every movement of the encampments, so as to cut off stragglers or weak detachments, Captain Bonneville prevailed upon the Nez Perces to accompany Hodgkiss and his party until they should be beyond the range of the enemy.

The Cottonois and the Pends Oreilles determined to move together at the same time, and to pass close under the mountain infested by the Blackfeet; while Captain Bonneville, with his party, was to strike in an opposite direction to the southeast, bending his course for Pierre's Hole, on his way to Green River.

Accordingly, on the 6th of July, all the camps were raised at the same moment; each party taking its separate route. The scene was wild and picturesque; the long line of traders, trappers, and Indians, with their rugged and fantastic dresses and accoutrements; their varied weapons, their innumerable horses, some under the saddle, some burdened with packages, others following in droves; all stretching in lengthening cavalcades across the vast landscape, making for different points of the plains and mountains.

Chapter 19

Precautions in dangerous defiles -- Trappers' mode of defence on a prairie -- A mysterious visitor -- Arrival in Green River Valley -- Adventures of the detachments -- The forlorn partisan -- His tale of disasters.

AS the route of Captain Bonneville lay through what was considered the most perilous part of this region of dangers, he took all his measures with military skill, and observed the strictest circumspection. When on the march, a small scouting party was thrown in the advance to reconnoitre the country through which they were to pass. The encampments were selected with great care, and a watch was kept up night and day. The horses were brought in and picketed at night, and at daybreak a party was sent out to scour the neighborhood for half a mile round, beating up every grove and thicket that could give shelter to a lurking foe. When all was reported safe, the horses were cast loose and turned out to graze. Were such precautions generally observed by traders and hunters, we should not so often hear of parties being surprised by the Indians.

Having stated the military arrangements of the captain, we may here mention a mode of defence on the open prairie, which we have heard from a veteran in the Indian trade. When a party of trappers is on a journey with a convoy of goods or peltries, every man has three pack-horses under his care; each horse laden with three packs. Every man is provided with a picket with an iron head, a mallet, and hobbles, or leathern fetters for the horses. The trappers proceed across the prairie in a long line; or sometimes three parallel lines, sufficiently distant from each other to prevent the packs from interfering. At an alarm, when there is no covert at hand, the line wheels so as to bring the front to the rear and form a circle. All then dismount, drive their pickets into the ground in the centre, fasten the horses to them, and hobble their forelegs, so that, in case of alarm, they cannot break away. Then they unload them, and dispose of their packs as breastworks on the periphery of the circle; each man having nine packs behind which to shelter himself. In this promptly-formed fortress, they await the assault of the enemy, and are enabled to set large bands of Indians at defiance.

The first night of his march, Captain Bonneville encamped upon Henry's Fork; an upper branch of Snake River, called after the first American trader that erected a fort beyond the mountains. About an hour after all hands had come to a halt the clatter of hoofs was heard, and a solitary female, of the Nez Perce tribe, came galloping up. She was mounted on a mustang or half wild

horse, which she managed by a long rope hitched round the under jaw by way of bridle. Dismounting, she walked silently into the midst of the camp, and there seated herself on the ground, still holding her horse by the long halter.

The sudden and lonely apparition of this woman, and her calm yet resolute demeanor, awakened universal curiosity. The hunters and trappers gathered round, and gazed on her as something mysterious. She remained silent, but maintained her air of calmness and self-possession. Captain Bonneville approached and interrogated her as to the object of her mysterious visit. Her answer was brief but earnest -- "I love the whites -- I will go with them." She was forthwith invited to a lodge, of which she readily took possession, and from that time forward was considered one of the camp.

In consequence, very probably, of the military precautions of Captain Bonneville, he conducted his party in safety through this hazardous region. No accident of a disastrous kind occurred, excepting the loss of a horse, which, in passing along the giddy edge of a precipice, called the Cornice, a dangerous pass between Jackson's and Pierre's Hole, fell over the brink, and was dashed to pieces.

On the 13th of July (1833), Captain Bonneville arrived at Green River. As he entered the valley, he beheld it strewn in every direction with the carcasses of buffaloes. It was evident that Indians had recently been there, and in great numbers. Alarmed at this sight, he came to a halt, and as soon as it was dark, sent out spies to his place of rendezvous on Horse Creek, where he had expected to meet with his detached parties of trappers on the following day. Early in the morning the spies made their appearance in the camp, and with them came three trappers of one of his bands, from the rendezvous, who told him his people were all there expecting him. As to the slaughter among the buffaloes, it had been made by a friendly band of Shoshonies, who had fallen in with one of his trapping parties, and accompanied them to the rendezvous. Having imparted this intelligence, the three worthies from the rendezvous broached a small keg of "alcohol," which they had brought with them. to enliven this merry meeting. The liquor went briskly round; all absent friends were toasted, and the party moved forward to the rendezvous in high spirits.

The meeting of associated bands, who have been separated from each other on these hazardous enterprises, is always interesting; each having its tales of perils and adventures to relate. Such was the case with the various detachments of Captain Bonneville's company, thus brought together on Horse Creek. Here was the detachment of fifty men which he had sent from Salmon River, in the preceding month of November, to winter on Snake River. They had met with many crosses and losses in the course of their spring hunt, not so much from Indians as from white men. They had come in competition with rival trapping parties, particularly one belonging to the Rocky Mountain Fur Company; and they had long stories to relate of their manoeuvres to forestall or distress each other. In fact, in these virulent and sordid competitions, the trappers of each party were more intent upon injuring their rivals, than benefitting themselves; breaking each other's traps, trampling and tearing to pieces the beaver lodges, and doing every thing in their power to mar the success of the hunt. We forbear to detail these pitiful contentions.

The most lamentable tale of disasters, however, that Captain Bonneville had to hear, was from a partisan, whom he had detached in the preceding year, with twenty men, to hunt through the outskirts of the Crow country, and on the tributary streams of the Yellowstone; whence he was to proceed and join him in his winter quarters on Salmon River. This partisan appeared at the ren-

devious without his party, and a sorrowful tale of disasters had he to relate. In hunting the Crow country, he fell in with a village of that tribe; notorious rogues, jockeys, and horse stealers, and errant scamperers of the mountains. These decoyed most of his men to desert, and carry off horses, traps, and accoutrements. When he attempted to retake the deserters, the Crow warriors ruffled up to him and declared the deserters were their good friends, had determined to remain among them, and should not be molested. The poor partisan, therefore, was fain to leave his vagabonds among these birds of their own feather, and being too weak in numbers to attempt the dangerous pass across the mountains to meet Captain Bonneville on Salmon River, he made, with the few that remained faithful to him, for the neighborhood of Tullock's Fort, on the Yellowstone, under the protection of which he went into winter quarters.

He soon found out that the neighborhood of the fort was nearly as bad as the neighborhood of the Crows. His men were continually stealing away thither, with whatever beaver skins they could secrete or lay their hands on. These they would exchange with the hangers-on of the fort for whiskey, and then revel in drunkenness and debauchery.

The unlucky partisan made another move. Associating with his party a few free trappers, whom he met with in this neighborhood, he started off early in the spring to trap on the head waters of Powder River. In the course of the journey, his horses were so much jaded in traversing a steep mountain, that he was induced to turn them loose to graze during the night. The place was lonely; the path was rugged; there was not the sign of an Indian in the neighborhood; not a blade of grass that had been turned by a footstep. But who can calculate on security in the midst of the Indian country, where the foe lurks in silence and secrecy, and seems to come and go on the wings of the wind? The horses had scarce been turned loose, when a couple of Arickara (or Rickaree) warriors entered the camp. They affected a frank and friendly demeanor; but their appearance and movements awakened the suspicions of some of the veteran trappers, well versed in Indian wiles. Convinced that they were spies sent on some sinister errand, they took them in custody, and set to work to drive in the horses. It was too late -- the horses were already gone. In fact, a war party of Arickaras had been hovering on their trail for several days, watching with the patience and perseverance of Indians, for some moment of negligence and fancied security, to make a successful swoop. The two spies had evidently been sent into the camp to create a diversion, while their confederates carried off the spoil.

The unlucky partisan, thus robbed of his horses, turned furiously on his prisoners, ordered them to be bound hand and foot, and swore to put them to death unless his property were restored. The robbers, who soon found that their spies were in captivity, now made their appearance on horseback, and held a parley. The sight of them, mounted on the very horses they had stolen, set the blood of the mountaineers in a ferment; but it was useless to attack them, as they would have but to turn their steeds and scamper out of the reach of pedestrians. A negotiation was now attempted. The Arickaras offered what they considered fair terms; to barter one horse, or even two horses, for a prisoner. The mountaineers spurned at their offer, and declared that, unless all the horses were relinquished, the prisoners should be burnt to death. To give force to their threat, a pyre of logs and fagots was heaped up and kindled into a blaze.

The parley continued; the Arickaras released one horse and then another, in earnest of their proposition; finding, however, that nothing short of the relinquishment of all their spoils would purchase the lives of the captives, they abandoned them to their fate, moving off with many parting

---

words and lamentable howlings. The prisoners seeing them depart, and knowing the horrible fate that awaited them, made a desperate effort to escape. They partially succeeded, but were severely wounded and retaken; then dragged to the blazing pyre, and burnt to death in the sight of their retreating comrades.

Such are the savage cruelties that white men learn to practise, who mingle in savage life; and such are the acts that lead to terrible recrimination on the part of the Indians. Should we hear of any atrocities committed by the Arickaras upon captive white men, let this signal and recent provocation be borne in mind. Individual cases of the kind dwell in the recollections of whole tribes; and it is a point of honor and conscience to revenge them.

The loss of his horses completed the ruin of the unlucky partisan. It was out of his power to prosecute his hunting, or to maintain his party; the only thought now was how to get back to civilized life. At the first water-course, his men built canoes, and committed themselves to the stream. Some engaged themselves at various trading establishments at which they touched, others got back to the settlements. As to the partisan, he found an opportunity to make his way to the rendezvous at Green River Valley; which he reached in time to render to Captain Bonneville this forlorn account of his misadventures.

Washington Irving's The Adventures of Captain Bonneville

Chapter 20

Gathering in Green River valley--Visitings and feastings of leaders--Rough wassailing among the trappers--Wild blades of the mountains--Indian belles--Potency of bright beads and red blankets--Arrival of supplies--Revelry and extravagance--Mad wolves--The lost Indian

THE GREEN RIVER VALLEY was at this time the scene of one of those general gatherings of traders, trappers, and Indians, that we have already mentioned. The three rival companies, which, for a year past had been endeavoring to out-trade, out-trap and out-wit each other, were here encamped in close proximity, awaiting their annual supplies. About four miles from the rendezvous of Captain Bonneville was that of the American Fur Company, hard by which, was that also of the Rocky Mountain Fur Company.

After the eager rivalry and almost hostility displayed by these companies in their late campaigns, it might be expected that, when thus brought in juxtaposition, they would hold themselves warily and sternly aloof from each other, and, should they happen to come in contact, brawl and bloodshed would ensue.

No such thing! Never did rival lawyers, after a wrangle at the bar, meet with more social good humor at a circuit dinner. The hunting season over, all past tricks and manoeuvres are forgotten, all feuds and bickerings buried in oblivion. From the middle of June to the middle of September, all trapping is suspended; for the beavers are then shedding their furs and their skins are of little value. This, then, is the trapper's holiday, when he is all for fun and frolic, and ready for a saturnalia among the mountains.

At the present season, too, all parties were in good humor. The year had been productive. Competition, by threatening to lessen their profits, had quickened their wits, roused their energies, and

made them turn every favorable chance to the best advantage; so that, on assembling at their respective places of rendezvous, each company found itself in possession of a rich stock of peltries.

The leaders of the different companies, therefore, mingled on terms of perfect good fellowship; interchanging visits, and regaling each other in the best style their respective camps afforded. But the rich treat for the worthy captain was to see the "chivalry" of the various encampments, engaged in contests of skill at running, jumping, wrestling, shooting with the rifle, and running horses. And then their rough hunters' feasting and carousels. They drank together, they sang, they laughed, they whooped; they tried to out-brag and out-lie each other in stories of their adventures and achievements. Here the free trappers were in all their glory; they considered themselves the "cocks of the walk," and always carried the highest crests. Now and then familiarity was pushed too far, and would effervesce into a brawl, and a "rough and tumble" fight; but it all ended in cordial reconciliation and maudlin endearment.

The presence of the Shoshonie tribe contributed occasionally to cause temporary jealousies and feuds. The Shoshonie beauties became objects of rivalry among some of the amorous mountaineers. Happy was the trapper who could muster up a red blanket, a string of gay beads, or a paper of precious vermilion, with which to win the smiles of a Shoshonie fair one.

The caravans of supplies arrived at the valley just at this period of gallantry and good fellowship. Now commenced a scene of eager competition and wild prodigality at the different encampments. Bales were hastily ripped open, and their motley contents poured forth. A mania for purchasing spread itself throughout the several bands--munitions for war, for hunting, for gallantry, were seized upon with equal avidity--rifles, hunting knives, traps, scarlet cloth, red blankets, garish beads, and glittering trinkets, were bought at any price, and scores run up without any thought how they were ever to be rubbed off. The free trappers, especially, were extravagant in their purchases. For a free mountaineer to pause at a paltry consideration of dollars and cents, in the attainment of any object that might strike his fancy, would stamp him with the mark of the beast in the estimation of his comrades. For a trader to refuse one of these free and flourishing blades a credit, whatever unpaid scores might stare him in the face, would be a flagrant affront scarcely to be forgiven.

Now succeeded another outbreak of revelry and extravagance. The trappers were newly fitted out and arrayed, and dashed about with their horses caparisoned in Indian style. The Shoshonie beauties also flaunted about in all the colors of the rainbow. Every freak of prodigality was indulged to its fullest extent, and in a little while most of the trappers, having squandered away all their wages, and perhaps run knee-deep in debt, were ready for another hard campaign in the wilderness.

During this season of folly and frolic, there was an alarm of mad wolves in the two lower camps. One or more of these animals entered the camps for three nights successively, and bit several of the people.

Captain Bonneville relates the case of an Indian, who was a universal favorite in the lower camp.

He had been bitten by one of these animals. Being out with a party shortly afterwards, he grew silent and gloomy, and lagged behind the rest as if he wished to leave them. They halted and urged him to move faster, but he entreated them not to approach him, and, leaping from his horse, began to roll frantically on the earth, gnashing his teeth and foaming at the mouth. Still he retained his senses, and warned his companions not to come near him, as he should not be able to restrain himself from biting them. They hurried off to obtain relief; but on their return he was nowhere to be found. His horse and his accoutrements remained upon the spot. Three or four days afterwards a solitary Indian, believed to be the same, was observed crossing a valley, and pursued; but he darted away into the fastnesses of the mountains, and was seen no more.

Another instance we have from a different person who was present in the encampment. One of the men of the Rocky Mountain Fur Company had been bitten. He set out shortly afterwards in company with two white men on his return to the settlements. In the course of a few days he showed symptoms of hydrophobia, and became raving toward night. At length, breaking away from his companions, he rushed into a thicket of willows, where they left him to his fate!

Washington Irving's The Adventures of Captain Bonneville

Chapter 21

Schemes of Captain Bonneville--The Great Salt Lake--Expedition to explore it--Preparations for a journey to the Bighorn

CAPTAIN BONNEVILLE now found himself at the head of a hardy, well-seasoned and well-appointed company of trappers, all benefited by at least one year's experience among the mountains, and capable of protecting themselves from Indian wiles and stratagems, and of providing for their subsistence wherever game was to be found. He had, also, an excellent troop of horses, in prime condition, and fit for hard service. He determined, therefore, to strike out into some of the bolder parts of his scheme. One of these was to carry his expeditions into some of the unknown tracts of the Far West, beyond what is generally termed the buffalo range. This would have something of the merit and charm of discovery, so dear to every brave and adventurous spirit. Another favorite project was to establish a trading post on the lower part of the Columbia River, near the Multnomah valley, and to endeavor to retrieve for his country some of the lost trade of Astoria.

The first of the above mentioned views was, at present, uppermost in his mind--the exploring of unknown regions. Among the grand features of the wilderness about which he was roaming, one had made a vivid impression on his mind, and been clothed by his imagination with vague and ideal charms. This is a great lake of salt water, laving the feet of the mountains, but extending far to the west-southwest, into one of those vast and elevated plateaus of land, which range high above the level of the Pacific.

Captain Bonneville gives a striking account of the lake when seen from the land. As you ascend the mountains about its shores, says he, you behold this immense body of water spreading itself before you, and stretching further and further, in one wide and far-reaching expanse, until the eye, wearied with continued and strained attention, rests in the blue dimness of distance, upon lofty ranges of mountains, confidently asserted to rise from the bosom of the waters. Nearer to

you, the smooth and unruffled surface is studded with little islands, where the mountain sheep roam in considerable numbers. What extent of lowland may be encompassed by the high peaks beyond, must remain for the present matter of mere conjecture though from the form of the summits, and the breaks which may be discovered among them, there can be little doubt that they are the sources of streams calculated to water large tracts, which are probably concealed from view by the rotundity of the lake's surface. At some future day, in all probability, the rich harvest of beaver fur, which may be reasonably anticipated in such a spot, will tempt adventurers to reduce all this doubtful region to the palpable certainty of a beaten track. At present, however, destitute of the means of making boats, the trapper stands upon the shore, and gazes upon a promised land which his feet are never to tread.

Such is the somewhat fanciful view which Captain Bonneville gives to this great body of water. He has evidently taken part of his ideas concerning it from the representations of others, who have somewhat exaggerated its features. It is reported to be about one hundred and fifty miles long, and fifty miles broad. The ranges of mountain peaks which Captain Bonneville speaks of, as rising from its bosom, are probably the summits of mountains beyond it, which may be visible at a vast distance, when viewed from an eminence, in the transparent atmosphere of these lofty regions. Several large islands certainly exist in the lake; one of which is said to be mountainous, but not by any means to the extent required to furnish the series of peaks above mentioned.

Captain Sublette, in one of his early expeditions across the mountains, is said to have sent four men in a skin canoe, to explore the lake, who professed to have navigated all round it; but to have suffered excessively from thirst, the water of the lake being extremely salt, and there being no fresh streams running into it.

Captain Bonneville doubts this report, or that the men accomplished the circumnavigation, because, he says, the lake receives several large streams from the mountains which bound it to the east. In the spring, when the streams are swollen by rain and by the melting of the snows, the lake rises several feet above its ordinary level during the summer, it gradually subsides again, leaving a sparkling zone of the finest salt upon its shores.

The elevation of the vast plateau on which this lake is situated, is estimated by Captain Bonneville at one and three-fourths of a mile above the level of the ocean. The admirable purity and transparency of the atmosphere in this region, allowing objects to be seen, and the report of firearms to be heard, at an astonishing distance; and its extreme dryness, causing the wheels of wagons to fall in pieces, as instanced in former passages of this work, are proofs of the great altitude of the Rocky Mountain plains. That a body of salt water should exist at such a height is cited as a singular phenomenon by Captain Bonneville, though the salt lake of Mexico is not much inferior in elevation.

To have this lake properly explored, and all its secrets revealed, was the grand scheme of the captain for the present year; and while it was one in which his imagination evidently took a leading part, he believed it would be attended with great profit, from the numerous beaver streams with

which the lake must be fringed.

This momentous undertaking he confided to his lieutenant, Mr. Walker, in whose experience and ability he had great confidence. He instructed him to keep along the shores of the lake, and trap in all the streams on his route; also to keep a journal, and minutely to record the events of his journey, and everything curious or interesting, making maps or charts of his route, and of the surrounding country.

No pains nor expense were spared in fitting out the party, of forty men, which he was to command. They had complete supplies for a year, and were to meet Captain Bonneville in the ensuing summer, in the valley of Bear River, the largest tributary of the Salt Lake, which was to be his point of general rendezvous.

The next care of Captain Bonneville was to arrange for the safe transportation of the peltries which he had collected to the Atlantic States. Mr. Robert Campbell, the partner of Sublette, was at this time in the rendezvous of the Rocky Mountain Fur Company, having brought up their supplies. He was about to set off on his return, with the peltries collected during the year, and intended to proceed through the Crow country, to the head of navigation on the Bighorn River, and to descend in boats down that river, the Missouri, and the Yellowstone, to St. Louis.

Captain Bonneville determined to forward his peltries by the same route, under the especial care of Mr. Cerre. By way of escort, he would accompany Cerre to the point of embarkation, and then make an autumnal hunt in the Crow country.

Washington Irving's The Adventures of Captain Bonneville

Chapter 22

The Crow country--A Crow paradise--Habits of the Crows--Anecdotes of Rose, the renegade white man-- His fights with the Blackfeet--His elevation--His death--Arapoosh, the Crow chief--His eagle-- Adventure of Robert Campbell--Honor among Crows

BEFORE WE ACCOMPANY Captain Bonneville into the Crow country, we will impart a few facts about this wild region, and the wild people who inhabit it. We are not aware of the precise boundaries, if there are any, of the country claimed by the Crows; it appears to extend from the Black Hills to the Rocky Mountains, including a part of their lofty ranges, and embracing many of the plains and valleys watered by the Wind River, the Yellowstone, the Powder River, the Little Missouri, and the Nebraska. The country varies in soil and climate; there are vast plains of sand and clay, studded with large red sand-hills; other parts are mountainous and picturesque; it possesses warm springs, and coal mines, and abounds with game.

But let us give the account of the country as rendered by Arapoosh, a Crow chief, to Mr. Robert Campbell, of the Rocky Mountain Fur Company.

“The Crow country,” said he, “is a good country. The Great Spirit has put it exactly in the right place; while you are in it you fare well; whenever you go out of it, whichever way you travel, you

fare worse.

“If you go to the south, you have to wander over great barren plains j the water is warm and bad, and you meet the fever and ague.

“To the north it is cold; the winters are long and bitter, with no grass j you cannot keep horses there, but must travel with dogs. What is a country without horses?

“On the Columbia they are poor and dirty, paddle about in canoes, and eat fish. Their teeth are worn out; they are always taking fish-bones out of their mouths. Fish is poor food.

“To the east, they dwell in villages; they live well; but they drink the muddy water of the Missouri--that is bad. A Crow's dog would not drink such water.

“About the forks of the Missouri is a fine country; good water; good grass; plenty of buffalo. In summer, it is almost as good as the Crow country; but in winter it is cold; the grass is gone; and there is no salt weed for the horses.

“The Crow country is exactly in the right place. It has snowy mountains and sunny plains; all kinds of climates and good things for every season. When the summer heats scorch the prairies, you can draw up under the mountains, where the air is sweet and cool, the grass fresh, and the bright streams come tumbling out of the snow-banks. There you can hunt the elk, the deer, and the antelope, when their skins are fit for dressing; there you will find plenty of white bears and mountain sheep.

“In the autumn, when your horses are fat and strong from the mountain pastures, you can go down into the plains and hunt the buffalo, or trap beaver on the streams. And when winter comes on, you can take shelter in the woody bottoms along the rivers; there you will find buffalo meat for yourselves, and cotton-wood bark for your horses: or you may winter in the Wind River valley, where there is salt weed in abundance.

“The Crow country is exactly in the right place. Everything good is to be found there. There is no country like the Crow country.”

Such is the eulogium on his country by Arapooish.

We have had repeated occasions to speak of the restless and predatory habits of the Crows. They can muster fifteen hundred fighting men, but their incessant wars with the Blackfeet, and their vagabond, predatory habits, are gradually wearing them out.

In a recent work, we related the circumstance of a white man named Rose, an outlaw, and a designing vagabond, who acted as guide and interpreter to Mr. Hunt and his party, on their journey across the mountains to Astoria, who came near betraying them into the hands of the Crows,

and who remained among the tribe, marrying one of their women, and adopting their congenial habits. A few anecdotes of the subsequent fortunes of that renegade may not be uninteresting, especially as they are connected with the fortunes of the tribe.

Rose was powerful in frame and fearless in spirit; and soon by his daring deeds took his rank among the first braves of the tribe. He aspired to command, and knew it was only to be attained by desperate exploits. He distinguished himself in repeated actions with Blackfeet. On one occasion, a band of those savages had fortified themselves within a breastwork, and could not be harmed. Rose proposed to storm the work. "Who will take the lead?" was the demand. "I!" cried he; and putting himself at their head, rushed forward. The first Blackfoot that opposed him he shot down with his rifle, and, snatching up the war-club of his victim, killed four others within the fort. The victory was complete, and Rose returned to the Crow village covered with glory, and bearing five Blackfoot scalps, to be erected as a trophy before his lodge. From this time, he was known among the Crows by the name of Che-ku-kaats, or "the man who killed five." He became chief of the village, or rather band, and for a time was the popular idol. His popularity soon awakened envy among the native braves; he was a stranger, an intruder, a white man. A party seceded from his command. Feuds and civil wars succeeded that lasted for two or three years, until Rose, having contrived to set his adopted brethren by the ears, left them, and went down the Missouri in 1823. Here he fell in with one of the earliest trapping expeditions sent by General Ashley across the mountains. It was conducted by Smith, Fitzpatrick, and Sublette. Rose enlisted with them as guide and interpreter. When he got them among the Crows, he was exceedingly generous with their goods; making presents to the braves of his adopted tribe, as became a high-minded chief.

This, doubtless, helped to revive his popularity. In that expedition, Smith and Fitzpatrick were robbed of their horses in Green River valley; the place where the robbery took place still bears the name of Horse Creek. We are not informed whether the horses were stolen through the instigation and management of Rose; it is not improbable, for such was the perfidy he had intended to practice on a former occasion toward Mr. Hunt and his party.

The last anecdote we have of Rose is from an Indian trader. When General Atkinson made his military expedition up the Missouri, in 1825, to protect the fur trade, he held a conference with the Crow nation, at which Rose figured as Indian dignitary and Crow interpreter. The military were stationed at some little distance from the scene of the "big talk"; while the general and the chiefs were smoking pipes and making speeches, the officers, supposing all was friendly, left the troops, and drew near the scene of ceremonial. Some of the more knowing Crows, perceiving this, stole quietly to the camp, and, unobserved, contrived to stop the touch-holes of the field-pieces with dirt. Shortly after, a misunderstanding occurred in the conference: some of the Indians, knowing the cannon to be useless, became insolent. A tumult arose. In the confusion, Colonel O'Fallan snapped a pistol in the face of a brave, and knocked him down with the butt end. The Crows were all in a fury. A chance-medley fight was on the point of taking place, when Rose, his natural sympathies as a white man suddenly recurring, broke the stock of his fusée over the head of a Crow warrior, and laid so vigorously about him with the barrel, that he soon put the whole throng to flight. Luckily, as no lives had been lost, this sturdy rib roasting calmed the fury of the

Crows, and the tumult ended without serious consequences.

What was the ultimate fate of this vagabond hero is not distinctly known. Some report him to have fallen a victim to disease, brought on by his licentious life; others assert that he was murdered in a feud among the Crows. After all, his residence among these savages, and the influence he acquired over them, had, for a time, some beneficial effects. He is said, not merely to have rendered them more formidable to the Blackfeet, but to have opened their eyes to the policy of cultivating the friendship of the white men.

After Rose's death, his policy continued to be cultivated, with indifferent success, by Arapooish, the chief already mentioned, who had been his great friend, and whose character he had contributed to develop. This sagacious chief endeavored, on every occasion, to restrain the predatory propensities of his tribe when directed against the white men. "If we keep friends with them," said he, "we have nothing to fear from the Blackfeet, and can rule the mountains." Arapooish pretended to be a great "medicine man", a character among the Indians which is a compound of priest, doctor, prophet, and conjurer. He carried about with him a tame eagle, as his "medicine" or familiar. With the white men, he acknowledged that this was all charlatanism, but said it was necessary, to give him weight and influence among his people.

Mr. Robert Campbell, from whom we have most of these facts, in the course of one of his trapping expeditions, was quartered in the village of Arapooish, and a guest in the lodge of the chieftain. He had collected a large quantity of furs, and, fearful of being plundered, deposited but a part in the lodge of the chief; the rest he buried in a cache. One night, Arapooish came into the lodge with a cloudy brow, and seated himself for a time without saying a word. At length, turning to Campbell, "You have more furs with you," said he, "than you have brought into my lodge?"

"I have," replied Campbell.

"Where are they?"

Campbell knew the uselessness of any prevarication with an Indian; and the importance of complete frankness. He described the exact place where he had concealed his peltries.

" 'Tis well," replied Arapooish; "you speak straight. It is just as you say. But your cache has been robbed. Go and see how many skins have been taken from it."

Campbell examined the cache, and estimated his loss to be about one hundred and fifty beaver skins.

Arapooish now summoned a meeting of the village. He bitterly reproached his people for robbing a stranger who had confided to their honor; and commanded that whoever had taken the skins, should bring them back: declaring that, as Campbell was his guest and inmate of his lodge, he would not eat nor drink until every skin was restored to him.

The meeting broke up, and every one dispersed. Arapooish now charged Campbell to give neither reward nor thanks to any one who should bring in the beaver skins, but to keep count as they were delivered.

In a little while, the skins began to make their appearance, a few at a time; they were laid down in the lodge, and those who brought them departed without saying a word. The day passed away. Arapooish sat in one corner of his lodge, wrapped up in his robe, scarcely moving a muscle of his countenance. When night arrived, he demanded if all the skins had been brought in. Above a hundred had been given up, and Campbell expressed himself contented. Not so the Crow chief-tain. He fasted all that night, nor tasted a drop of water. In the morning, some more skins were brought in, and continued to come, one and two at a time, throughout the day, until but a few were wanting to make the number complete. Campbell was now anxious to put an end to this fasting of the old chief, and again declared that he was perfectly satisfied. Arapooish demanded what number of skins were yet wanting. On being told, he whispered to some of his people, who disappeared. After a time the number were brought in, though it was evident they were not any of the skins that had been stolen, but others gleaned in the village.

"Is all right now?" demanded Arapooish.

"All is right," replied Campbell.

"Good! Now bring me meat and drink!"

When they were alone together, Arapooish had a conversation with his guest.

"When you come another time among the Crows," said he, "don't hide your goods: trust to them and they will not wrong you. Put your goods in the lodge of a chief, and they are sacred; hide them in a cache, and any one who finds will steal them. My people have now given up your goods for my sake; but there are some foolish young men in the village, who may be disposed to be troublesome. Don't linger, therefore, but pack your horses and be off."

Campbell took his advice, and made his way safely out of the Crow country. He has ever since maintained that the Crows are not so black as they are painted. "Trust to their honor," says he, "and you are safe: trust to their honesty, and they will steal the hair off your head."

Having given these few preliminary particulars, we will resume the course of our narrative.

ON THE 25TH of July, Captain Bonneville struck his tents, and set out on his route for the Bighorn, at the head of a party of fifty-six men, including those who were to embark with Cerre. Crossing the Green River valley, he proceeded along the south point of the Wind River range of mountains, and soon fell upon the track of Mr. Robert Campbell's party, which had preceded him by a day. This he pursued, until he perceived that it led down the banks of the Sweet Water to the southeast. As this was different from his proposed direction, he left it; and turning to the northeast, soon came upon the waters of the Popo Agie. This stream takes its rise in the Wind River Mountains. Its name, like most Indian names, is characteristic. Popo, in the Crow language, signifies head; and Agie, river. It is the head of a long river, extending from the south end of the Wind River Mountains in a northeast direction, until it falls into the Yellowstone. Its course is generally through plains, but is twice crossed by chains of mountains; the first called the Littlehorn; the second, the Bighorn. After it has forced its way through the first chain, it is called the Horn River; after the second chain, it is called the Bighorn River. Its passage through this last chain is rough and violent; making repeated falls, and rushing down long and furious rapids, which threaten destruction to the navigator; though a hardy trapper is said to have shot down them in a canoe. At the foot of these rapids, is the head of navigation; where it was the intention of the parties to construct boats, and embark.

Proceeding down along the Popo Agie, Captain Bonneville came again in full view of the "Bluffs," as they are called, extending from the base of the Wind River Mountains far away to the east, and presenting to the eye a confusion of hills and cliffs of red sandstone, some peaked and angular, some round, some broken into crags and precipices, and piled up in fantastic masses; but all naked and sterile. There appeared to be no soil favorable to vegetation, nothing but coarse gravel; yet, over all this isolated, barren landscape, were diffused such atmospherical tints and hues, as to blend the whole into harmony and beauty.

In this neighborhood, the captain made search for "the great Tar Spring," one of the wonders of the mountains; the medicinal properties of which, he had heard extravagantly lauded by the trappers. After a toilsome search, he found it at the foot of a sand-bluff, a little east of the Wind River Mountains; where it exuded in a small stream of the color and consistency of tar. The men immediately hastened to collect a quantity of it, to use as an ointment for the galled backs of their horses, and as a balsam for their own pains and aches. From the description given of it, it is evidently the bituminous oil, called petroleum or naphtha, which forms a principal ingredient in the potent medicine called British Oil. It is found in various parts of Europe and Asia, in several of the West India islands, and in some places of the United States. In the state of New York, it is called Seneca Oil, from being found near the Seneca lake.

The Crow country has other natural curiosities, which are held in superstitious awe by the In-

---

dians, and considered great marvels by the trappers. Such is the Burning Mountain, on Powder River, abounding with anthracite coal. Here the earth is hot and cracked; in many places emitting smoke and sulphurous vapors, as if covering concealed fires. A volcanic tract of similar character is found on Stinking River, one of the tributaries of the Bighorn, which takes its unhappy name from the odor derived from sulphurous springs and streams. This last mentioned place was first discovered by Colter, a hunter belonging to Lewis and Clarke's exploring party, who came upon it in the course of his lonely wanderings, and gave such an account of its gloomy terrors, its hidden fires, smoking pits, noxious streams, and the all-pervading "smell of brimstone," that it received, and has ever since retained among trappers, the name of "Colter's Hell!"

Resuming his descent along the left bank of the Popo Agie, Captain Bonneville soon reached the plains; where he found several large streams entering from the west. Among these was Wind River, which gives its name to the mountains among which it takes its rise. This is one of the most important streams of the Crow country. The river being much swollen, Captain Bonneville halted at its mouth, and sent out scouts to look for a fording place. While thus encamped, he beheld in the course of the afternoon a long line of horsemen descending the slope of the hills on the opposite side of the Popo Agie. His first idea was that they were Indians; he soon discovered, however, that they were white men, and, by the long line of pack-horses, ascertained them to be the convoy of Campbell, which, having descended the Sweet Water, was now on its way to the Horn River.

The two parties came together two or three days afterwards, on the 4th of August, after having passed through the gap of the Littlehorn Mountain. In company with Campbell's convoy was a trapping party of the Rocky Mountain Company, headed by Fitzpatrick; who, after Campbell's embarkation on the Bighorn, was to take charge of all the horses, and proceed on a trapping campaign. There were, moreover, two chance companions in the rival camp. One was Captain Stewart, of the British army, a gentleman of noble connections, who was amusing himself by a wandering tour in the Far West; in the course of which, he had lived in hunter's style; accompanying various bands of traders, trappers, and Indians; and manifesting that relish for the wilderness that belongs to men of game spirit.

The other casual inmate of Mr. Campbell's camp was Mr. Nathaniel Wyeth; the self-same leader of the band of New England salmon fishers, with whom we parted company in the valley of Pierre's Hole, after the battle with the Blackfeet. A few days after that affair, he again set out from the rendezvous in company with Milton Sublette and his brigade of trappers. On his march, he visited the battle ground, and penetrated to the deserted fort of the Blackfeet in the midst of the wood. It was a dismal scene. The fort was strewed with the mouldering bodies of the slain; while vultures soared aloft, or sat brooding on the trees around; and Indian dogs howled about the place, as if bewailing the death of their masters. Wyeth travelled for a considerable distance to the southwest, in company with Milton Sublette, when they separated; and the former, with eleven men, the remnant of his band, pushed on for Snake River; kept down the course of that eventful stream; traversed the Blue Mountains, trapping beaver occasionally by the way, and finally, after hardships of all kinds, arrived, on the 29th of October, at Vancouver, on the Columbia, the main factory of the Hudson's Bay Company.

---

He experienced hospitable treatment at the hands of the agents of that company; but his men, heartily tired of wandering in the wilderness, or tempted by other prospects, refused, for the most part, to continue any longer in his service. Some set off for the Sandwich Islands; some entered into other employ. Wyeth found, too, that a great part of the goods he had brought with him were unfitted for the Indian trade; in a word, his expedition, undertaken entirely on his own resources, proved a failure. He lost everything invested in it, but his hopes. These were as strong as ever. He took note of every thing, therefore, that could be of service to him in the further prosecution of his project; collected all the information within his reach, and then set off, accompanied by merely two men, on his return journey across the continent. He had got thus far "by hook and by crook," a mode in which a New England man can make his way all over the world, and through all kinds of difficulties, and was now bound for Boston; in full confidence of being able to form a company for the salmon fishery and fur trade of the Columbia.

The party of Mr. Campbell had met with a disaster in the course of their route from the Sweet Water. Three or four of the men, who were reconnoitering the country in advance of the main body, were visited one night in their camp, by fifteen or twenty Shoshonies. Considering this tribe as perfectly friendly, they received them in the most cordial and confiding manner. In the course of the night, the man on guard near the horses fell sound asleep; upon which a Shoshonie shot him in the head, and nearly killed him. The savages then made off with the horses, leaving the rest of the party to find their way to the main body on foot.

The rival companies of Captain Bonneville and Mr. Campbell, thus fortuitously brought together, now prosecuted their journey in great good fellowship; forming a joint camp of about a hundred men. The captain, however, began to entertain doubts that Fitzpatrick and his trappers, who kept profound silence as to their future movements, intended to hunt the same grounds which he had selected for his autumnal campaign; which lay to the west of the Horn River, on its tributary streams. In the course of his march, therefore, he secretly detached a small party of trappers, to make their way to those hunting grounds, while he continued on with the main body; appointing a rendezvous, at the next full moon, about the 28th of August, at a place called the Medicine Lodge.

On reaching the second chain, called the Bighorn Mountains, where the river forced its impetuous way through a precipitous defile, with cascades and rapids, the travellers were obliged to leave its banks, and traverse the mountains by a rugged and frightful route, emphatically called the "Bad Pass." Descending the opposite side, they again made for the river banks; and about the middle of August, reached the point below the rapids where the river becomes navigable for boats. Here Captain Bonneville detached a second party of trappers, consisting of ten men, to seek and join those whom he had detached while on the route; appointing for them the same rendezvous, (at the Medicine Lodge,) on the 28th of August.

All hands now set to work to construct "bull boats," as they are technically called; a light, fragile kind of bark, characteristic of the expedients and inventions of the wilderness; being formed of

buffalo skins, stretched on frames. They are sometimes, also, called skin boats. Wyeth was the first ready; and, with his usual promptness and hardihood, launched his frail bark, singly, on this wild and hazardous voyage, down an almost interminable succession of rivers, winding through countries teeming with savage hordes. Milton Sublette, his former fellow traveller, and his companion in the battle scenes of Pierre's Hole, took passage in his boat. His crew consisted of two white men, and two Indians. We shall hear further of Wyeth, and his wild voyage, in the course of our wanderings about the Far West.

The remaining parties soon completed their several armaments. That of Captain Bonneville was composed of three bull boats, in which he embarked all his peltries, giving them in charge of Mr. Cerre, with a party of thirty-six men. Mr. Campbell took command of his own boats, and the little squadrons were soon gliding down the bright current of the Bighorn.

The secret precautions which Captain Bonneville had taken to throw his men first into the trapping ground west of the Bighorn, were, probably, superfluous. It did not appear that Fitzpatrick had intended to hunt in that direction. The moment Mr. Campbell and his men embarked with the peltries, Fitzpatrick took charge of all the horses, amounting to above a hundred, and struck off to the east, to trap upon Littlehorn, Powder, and Tongue rivers. He was accompanied by Captain Stewart, who was desirous of having a range about the Crow country. Of the adventures they met with in that region of vagabonds and horse stealers, we shall have something to relate hereafter.

Captain Bonneville being now left to prosecute his trapping campaign without rivalry, set out, on the 17th of August, for the rendezvous at Medicine Lodge. He had but four men remaining with him, and forty-six horses to take care of; with these he had to make his way over mountain and plain, through a marauding, horse-stealing region, full of peril for a numerous cavalcade so slightly manned. He addressed himself to his difficult journey, however, with his usual alacrity of spirit.

In the afternoon of his first day's journey, on drawing near to the Bighorn Mountain, on the summit of which he intended to encamp for the night, he observed, to his disquiet, a cloud of smoke rising from its base. He came to a halt, and watched it anxiously. It was very irregular; sometimes it would almost die away; and then would mount up in heavy volumes. There was, apparently, a large party encamped there; probably, some ruffian horde of Blackfeet. At any rate, it would not do for so small a number of men, with so numerous a cavalcade, to venture within sight of any wandering tribe. Captain Bonneville and his companions, therefore, avoided this dangerous neighborhood; and, proceeding with extreme caution, reached the summit of the mountain, apparently without being discovered. Here they found a deserted Blackfoot fort, in which they ensconced themselves; disposed of every thing as securely as possible, and passed the night without molestation. Early the next morning they descended the south side of the mountain into the great plain extending between it and the Littlehorn range. Here they soon came upon numerous footprints, and the carcasses of buffaloes; by which they knew there must be Indians not far off. Captain Bonneville now began to feel solicitude about the two small parties of trappers which he had detached, lest the Indians should have come upon them before they had united their forces. But

he felt still more solicitude about his own party; for it was hardly to be expected he could traverse these naked plains undiscovered, when Indians were abroad; and should he be discovered, his chance would be a desperate one. Everything now depended upon the greatest circumspection. It was dangerous to discharge a gun, or light a fire, or make the least noise, where such quick-eared and quick-sighted enemies were at hand. In the course of the day they saw indubitable signs that the buffalo had been roaming there in great numbers, and had recently been frightened away. That night they encamped with the greatest care; and threw up a strong breastwork for their protection.

For the two succeeding days they pressed forward rapidly, but cautiously, across the great plain; fording the tributary streams of the Horn River; encamping one night among thickets; the next, on an island; meeting, repeatedly, with traces of Indians; and now and then, in passing through a defile, experiencing alarms that induced them to cock their rifles.

On the last day of their march hunger got the better of their caution, and they shot a fine buffalo bull at the risk of being betrayed by the report. They did not halt to make a meal, but carried the meat on with them to the place of rendezvous, the Medicine Lodge, where they arrived safely, in the evening, and celebrated their arrival by a hearty supper.

The next morning they erected a strong pen for the horses, and a fortress of logs for themselves; and continued to observe the greatest caution. Their cooking was all done at mid-day, when the fire makes no glare, and a moderate smoke cannot be perceived at any great distance. In the morning and the evening, when the wind is lulled, the smoke rises perpendicularly in a blue column, or floats in light clouds above the tree-tops, and can be discovered from afar.

In this way the little party remained for several days, cautiously encamped, until, on the 29th of August, the two detachments they had been expecting, arrived together at the rendezvous. They, as usual, had their several tales of adventures to relate to the captain, which we will furnish to the reader in the next chapter.

---

Washington Irving's The Adventures of Captain Bonneville

Chapter 24

Adventures of the party of ten--The Balaamite mule-- A dead point--The mysterious elks--A night attack-- A retreat--Travelling under an alarm--A joyful meeting--Adventures of the other party--A decoy elk--Retreat to an island--A savage dance of triumph--Arrival at Wind River  
THE ADVENTURES of the detachment of ten are the first in order. These trappers, when they separated from Captain Bonneville at the place where the furs were embarked, proceeded to the foot of the Bighorn Mountain, and having encamped, one of them mounted his mule and went out to set his trap in a neighboring stream. He had not proceeded far when his steed came to a full stop. The trapper kicked and cudgelled, but to every blow and kick the mule snorted and kicked up, but still refused to budge an inch. The rider now cast his eyes warily around in search of some cause for this demur, when, to his dismay, he discovered an Indian fort within gunshot distance, lowering through the twilight. In a twinkling he wheeled about; his mule now seemed as eager to

---

get on as himself, and in a few moments brought him, clattering with his traps, among his comrades. He was jeered at for his alacrity in retreating; his report was treated as a false alarm; his brother trappers contented themselves with reconnoitring the fort at a distance, and pronounced that it was deserted.

As night set in, the usual precaution, enjoined by Captain Bonneville on his men, was observed. The horses were brought in and tied, and a guard stationed over them. This done, the men wrapped themselves in their blankets, stretched themselves before the fire, and being fatigued with a long day's march, and gorged with a hearty supper, were soon in a profound sleep.

The camp fires gradually died away; all was dark and silent; the sentinel stationed to watch the horses had marched as far, and supped as heartily as any of his companions, and while they snored, he began to nod at his post. After a time, a low trampling noise reached his ear. He half opened his closing eyes, and beheld two or three elks moving about the lodges, picking, and smelling, and grazing here and there. The sight of elk within the purlieu of the camp caused some little surprise; but having had his supper, he cared not for elk meat, and, suffering them to graze about unmolested, soon relapsed into a doze.

Suddenly, before daybreak, a discharge of firearms, and a struggle and tramp of horses, made every one start to his feet. The first move was to secure the horses. Some were gone; others were struggling, and kicking, and trembling, for there was a horrible uproar of whoops, and yells, and firearms. Several trappers stole quietly from the camp, and succeeded in driving in the horses which had broken away; the rest were tethered still more strongly. A breastwork was thrown up of saddles, baggage, and camp furniture, and all hands waited anxiously for daylight. The Indians, in the meantime, collected on a neighboring height, kept up the most horrible clamor, in hopes of striking a panic into the camp, or frightening off the horses. When the day dawned, the trappers attacked them briskly and drove them to some distance. A desultory fire was kept up for an hour, when the Indians, seeing nothing was to be gained, gave up the contest and retired. They proved to be a war party of Blackfeet, who, while in search of the Crow tribe, had fallen upon the trail of Captain Bonneville on the Popo Agie, and dogged him to the Bighorn; but had been completely baffled by his vigilance. They had then waylaid the present detachment, and were actually housed in perfect silence within their fort, when the mule of the trapper made such a dead point.

The savages went off uttering the wildest denunciations of hostility, mingled with opprobrious terms in broken English, and gesticulations of the most insulting kind.

In this melee, one white man was wounded, and two horses were killed. On preparing the morning's meal, however, a number of cups, knives, and other articles were missing, which had, doubtless, been carried off by the fictitious elk, during the slumber of the very sagacious sentinel.

As the Indians had gone off in the direction which the trappers had intended to travel, the latter changed their route, and pushed forward rapidly through the "Bad Pass," nor halted until night; when, supposing themselves out of the reach of the enemy, they contented themselves with tying up their horses and posting a guard. They had scarce laid down to sleep, when a dog strayed into

the camp with a small pack of moccasins tied upon his back; for dogs are made to carry burdens among the Indians. The sentinel, more knowing than he of the preceding night, awoke his companions and reported the circumstance. It was evident that Indians were at hand. All were instantly at work; a strong pen was soon constructed for the horses, after completing which, they resumed their slumbers with the composure of men long inured to dangers.

In the next night, the prowling of dogs about the camp, and various suspicious noises, showed that Indians were still hovering about them. Hurrying on by long marches, they at length fell upon a trail, which, with the experienced eye of veteran woodmen, they soon discovered to be that of the party of trappers detached by Captain Bonneville when on his march, and which they were sent to join. They likewise ascertained from various signs, that this party had suffered some maltreatment from the Indians. They now pursued the trail with intense anxiety; it carried them to the banks of the stream called the Gray Bull, and down along its course, until they came to where it empties into the Horn River. Here, to their great joy, they discovered the comrades of whom they were in search, all strongly fortified, and in a state of great watchfulness and anxiety.

We now take up the adventures of this first detachment of trappers. These men, after parting with the main body under Captain Bonneville, had proceeded slowly for several days up the course of the river, trapping beaver as they went. One morning, as they were about to visit their traps, one of the camp-keepers pointed to a fine elk, grazing at a distance, and requested them to shoot it. Three of the trappers started off for the purpose. In passing a thicket, they were fired upon by some savages in ambush, and at the same time, the pretended elk, throwing off his hide and his horn, started forth an Indian warrior.

One of the three trappers had been brought down by the volley; the others fled to the camp, and all hands, seizing up whatever they could carry off, retreated to a small island in the river, and took refuge among the willows. Here they were soon joined by their comrade who had fallen, but who had merely been wounded in the neck.

In the meantime the Indians took possession of the deserted camp, with all the traps, accoutrements, and horses. While they were busy among the spoils, a solitary trapper, who had been absent at his work, came sauntering to the camp with his traps on his back. He had approached near by, when an Indian came forward and motioned him to keep away; at the same moment, he was perceived by his comrades on the island, and warned of his danger with loud cries. The poor fellow stood for a moment, bewildered and aghast, then dropping his traps, wheeled and made off at full speed, quickened by a sportive volley which the Indians rattled after him.

In high good humor with their easy triumph, the savages now formed a circle round the fire and performed a war dance, with the unlucky trappers for rueful spectators. This done, emboldened by what they considered cowardice on the part of the white men, they neglected their usual mode of bush-fighting, and advanced openly within twenty paces of the willows. A sharp volley from the trappers brought them to a sudden halt, and laid three of them breathless. The chief, who had stationed himself on an eminence to direct all the movements of his people, seeing three of his warriors laid low, ordered the rest to retire. They immediately did so, and the whole band soon

disappeared behind a point of woods, carrying off with them the horses, traps, and the greater part of the baggage.

It was just after this misfortune that the party of ten men discovered this forlorn band of trappers in a fortress, which they had thrown up after their disaster. They were so perfectly dismayed, that they could not be induced even to go in quest of their traps, which they had set in a neighboring stream. The two parties now joined their forces, and made their way, without further misfortune, to the rendezvous.

Captain Bonneville perceived from the reports of these parties, as well as from what he had observed himself in his recent march, that he was in a neighborhood teeming with danger. Two wandering Snake Indians, also, who visited the camp, assured him that there were two large bands of Crows marching rapidly upon him. He broke up his encampment, therefore, on the 1st of September, made his way to the south, across the Littlehorn Mountain, until he reached Wind River, and then turning westward, moved slowly up the banks of that stream, giving time for his men to trap as he proceeded. As it was not in the plan of the present hunting campaigns to go near the caches on Green River, and as the trappers were in want of traps to replace those they had lost, Captain Bonneville undertook to visit the caches, and procure a supply. To accompany him in this hazardous expedition, which would take him through the defiles of the Wind River Mountains, and up the Green River valley, he took but three men; the main party were to continue on trapping up toward the head of Wind River, near which he was to rejoin them, just about the place where that stream issues from the mountains. We shall accompany the captain on his adventurous errand.

Washington Irving's The Adventures of Captain Bonneville

Chapter 25

Captain Bonneville sets out for Green River valley-- Journey up the Popo Agie--Buffaloes--The staring white bears--The smoke--The warm springs-- Attempt to traverse the Wind River Mountains--The Great Slope--Mountain dells and chasms--Crystal lakes--Ascent of a snowy peak--Sublime prospect-- A panorama--"Les dignes de pitie," or wild men of the mountains  
HAVING FORDED WIND RIVER a little above its mouth, Captain Bonneville and his three companions proceeded across a gravelly plain, until they fell upon the Popo Agie, up the left bank of which they held their course, nearly in a southerly direction. Here they came upon numerous droves of buffalo, and halted for the purpose of procuring a supply of beef. As the hunters were stealing cautiously to get within shot of the game, two small white bears suddenly presented themselves in their path, and, rising upon their hind legs, contemplated them for some time with a whimsically solemn gaze. The hunters remained motionless; whereupon the bears, having apparently satisfied their curiosity, lowered themselves upon all fours, and began to withdraw. The hunters now advanced, upon which the bears turned, rose again upon their haunches, and repeated their serio-comic examination. This was repeated several times, until the hunters, piqued at their unmannerly staring, rebuked it with a discharge of their rifles. The bears made an awkward bound or two, as if wounded, and then walked off with great gravity, seeming to commune together, and every now and then turning to take another look at the hunters. It was well for the

latter that the bears were but half grown, and had not yet acquired the ferocity of their kind.

The buffalo were somewhat startled at the report of the firearms; but the hunters succeeded in killing a couple of fine cows, and, having secured the best of the meat, continued forward until some time after dark, when, encamping in a large thicket of willows, they made a great fire, roasted buffalo beef enough for half a score, disposed of the whole of it with keen relish and high glee, and then "turned in" for the night and slept soundly, like weary and well fed hunters.

At daylight they were in the saddle again, and skirted along the river, passing through fresh grassy meadows, and a succession of beautiful groves of willows and cotton-wood. Toward evening, Captain Bonneville observed a smoke at a distance rising from among hills, directly in the route he was pursuing. Apprehensive of some hostile band, he concealed the horses in a thicket, and, accompanied by one of his men, crawled cautiously up a height, from which he could overlook the scene of danger. Here, with a spy-glass, he reconnoitred the surrounding country, but not a lodge nor fire, not a man, horse, nor dog, was to be discovered; in short, the smoke which had caused such alarm proved to be the vapor from several warm, or rather hot springs of considerable magnitude, pouring forth streams in every direction over a bottom of white clay. One of the springs was about twenty-five yards in diameter, and so deep that the water was of a bright green color.

They were now advancing diagonally upon the chain of Wind River Mountains, which lay between them and Green River valley. To coast round their southern points would be a wide circuit; whereas, could they force their way through them, they might proceed in a straight line. The mountains were lofty, with snowy peaks and cragged sides; it was hoped, however, that some practicable defile might be found. They attempted, accordingly, to penetrate the mountains by following up one of the branches of the Popo Agie, but soon found themselves in the midst of stupendous crags and precipices that barred all progress. Retracing their steps, and falling back upon the river, they consulted where to make another attempt. They were too close beneath the mountains to scan them generally, but they now recollected having noticed, from the plain, a beautiful slope rising, at an angle of about thirty degrees, and apparently without any break, until it reached the snowy region. Seeking this gentle acclivity, they began to ascend it with alacrity, trusting to find at the top one of those elevated plains which prevail among the Rocky Mountains. The slope was covered with coarse gravel, interspersed with plates of freestone. They attained the summit with some toil, but found, instead of a level, or rather undulating plain, that they were on the brink of a deep and precipitous ravine, from the bottom of which rose a second slope, similar to the one they had just ascended. Down into this profound ravine they made their way by a rugged path, or rather fissure of the rocks, and then labored up the second slope. They gained the summit only to find themselves on another ravine, and now perceived that this vast mountain, which had presented such a sloping and even side to the distant beholder on the plain, was shagged by frightful precipices, and seamed with longitudinal chasms, deep and dangerous.

In one of these wild dells they passed the night, and slept soundly and sweetly after their fatigues. Two days more of arduous climbing and scrambling only served to admit them into the heart of

this mountainous and awful solitude; where difficulties increased as they proceeded. Sometimes they scrambled from rock to rock, up the bed of some mountain stream, dashing its bright way down to the plains; sometimes they availed themselves of the paths made by the deer and the mountain sheep, which, however, often took them to the brinks of fearful precipices, or led to rugged defiles, impassable for their horses. At one place, they were obliged to slide their horses down the face of a rock, in which attempt some of the poor animals lost their footing, rolled to the bottom, and came near being dashed to pieces.

In the afternoon of the second day, the travellers attained one of the elevated valleys locked up in this singular bed of mountains. Here were two bright and beautiful little lakes, set like mirrors in the midst of stern and rocky heights, and surrounded by grassy meadows, inexpressibly refreshing to the eye. These probably were among the sources of those mighty streams which take their rise among these mountains, and wander hundreds of miles through the plains.

In the green pastures bordering upon these lakes, the travellers halted to repose, and to give their weary horses time to crop the sweet and tender herbage. They had now ascended to a great height above the level of the plains, yet they beheld huge crags of granite piled one upon another, and beetling like battlements far above them. While two of the men remained in the camp with the horses, Captain Bonneville, accompanied by the other men [man], set out to climb a neighboring height, hoping to gain a commanding prospect, and discern some practicable route through this stupendous labyrinth. After much toil, he reached the summit of a lofty cliff, but it was only to behold gigantic peaks rising all around, and towering far into the snowy regions of the atmosphere. Selecting one which appeared to be the highest, he crossed a narrow intervening valley, and began to scale it. He soon found that he had undertaken a tremendous task; but the pride of man is never more obstinate than when climbing mountains. The ascent was so steep and rugged that he and his companion were frequently obliged to clamber on hands and knees, with their guns slung upon their backs. Frequently, exhausted with fatigue, and dripping with perspiration, they threw themselves upon the snow, and took handfuls of it to allay their parching thirst. At one place, they even stripped off their coats and hung them upon the bushes, and thus lightly clad, proceeded to scramble over these eternal snows. As they ascended still higher, there were cool breezes that refreshed and braced them, and springing with new ardor to their task, they at length attained the summit.

Here a scene burst upon the view of Captain Bonneville, that for a time astonished and overwhelmed him with its immensity. He stood, in fact, upon that dividing ridge which Indians regard as the crest of the world; and on each side of which, the landscape may be said to decline to the two cardinal oceans of the globe. Whichever way he turned his eye, it was confounded by the vastness and variety of objects. Beneath him, the Rocky Mountains seemed to open all their secret recesses: deep, solemn valleys; treasured lakes; dreary passes; rugged defiles, and foaming torrents; while beyond their savage precincts, the eye was lost in an almost immeasurable landscape; stretching on every side into dim and hazy distance, like the expanse of a summer's sea. Whichever way he looked, he beheld vast plains glimmering with reflected sunshine; mighty streams wandering on their shining course toward either ocean, and snowy mountains, chain

---

beyond chain, and peak beyond peak, till they melted like clouds into the horizon. For a time, the Indian fable seemed realized: he had attained that height from which the Blackfoot warrior, after death, first catches a view of the land of souls, and beholds the happy hunting grounds spread out below him, brightening with the abodes of the free and generous spirits. The captain stood for a long while gazing upon this scene, lost in a crowd of vague and indefinite ideas and sensations. A long-drawn inspiration at length relieved him from this enthrallment of the mind, and he began to analyze the parts of this vast panorama. A simple enumeration of a few of its features may give some idea of its collective grandeur and magnificence.

The peak on which the captain had taken his stand commanded the whole Wind River chain; which, in fact, may rather be considered one immense mountain, broken into snowy peaks and lateral spurs, and seamed with narrow valleys. Some of these valleys glittered with silver lakes and gushing streams; the fountain heads, as it were, of the mighty tributaries to the Atlantic and Pacific Oceans. Beyond the snowy peaks, to the south, and far, far below the mountain range, the gentle river, called the Sweet Water, was seen pursuing its tranquil way through the rugged regions of the Black Hills. In the east, the head waters of Wind River wandered through a plain, until, mingling in one powerful current, they forced their way through the range of Horn Mountains, and were lost to view. To the north were caught glimpses of the upper streams of the Yellowstone, that great tributary of the Missouri. In another direction were to be seen some of the sources of the Oregon, or Columbia, flowing to the northwest, past those towering landmarks the Three Tetons, and pouring down into the great lava plain; while, almost at the captain's feet, the Green River, or Colorado of the West, set forth on its wandering pilgrimage to the Gulf of California; at first a mere mountain torrent, dashing northward over a crag and precipice, in a succession of cascades, and tumbling into the plain where, expanding into an ample river, it circled away to the south, and after alternately shining out and disappearing in the mazes of the vast landscape, was finally lost in a horizon of mountains. The day was calm and cloudless, and the atmosphere so pure that objects were discernible at an astonishing distance. The whole of this immense area was inclosed by an outer range of shadowy peaks, some of them faintly marked on the horizon, which seemed to wall it in from the rest of the earth.

It is to be regretted that Captain Bonneville had no instruments with him with which to ascertain the altitude of this peak. He gives it as his opinion that it is the loftiest point of the North American continent; but of this we have no satisfactory proof. It is certain that the Rocky Mountains are of an altitude vastly superior to what was formerly supposed. We rather incline to the opinion that the highest peak is further to the northward, and is the same measured by Mr. Thompson, surveyor to the Northwest Company; who, by the joint means of the barometer and trigonometric measurement, ascertained it to be twenty-five thousand feet above the level of the sea; an elevation only inferior to that of the Himalayas.

For a long time, Captain Bonneville remained gazing around him with wonder and enthusiasm; at length the chill and wintry winds, whirling about the snow-clad height, admonished him to descend. He soon regained the spot where he and his companions [companion] had thrown off their coats, which were now gladly resumed, and, retracing their course down the peak, they safe-

ly rejoined their companions on the border of the lake.

Notwithstanding the savage and almost inaccessible nature of these mountains, they have their inhabitants. As one of the party was out hunting, he came upon the solitary track of a man in a lonely valley. Following it up, he reached the brow of a cliff, whence he beheld three savages running across the valley below him. He fired his gun to call their attention, hoping to induce them to turn back. They only fled the faster, and disappeared among the rocks. The hunter returned and reported what he had seen. Captain Bonneville at once concluded that these belonged to a kind of hermit race, scanty in number, that inhabit the highest and most inaccessible fastnesses. They speak the Shoshonie language, and probably are offsets from that tribe, though they have peculiarities of their own, which distinguish them from all other Indians. They are miserably poor; own no horses, and are destitute of every convenience to be derived from an intercourse with the whites. Their weapons are bows and stone-pointed arrows, with which they hunt the deer, the elk, and the mountain sheep. They are to be found scattered about the countries of the Shoshonie, Flathead, Crow, and Blackfeet tribes; but their residences are always in lonely places, and the clefts of the rocks.

Their footsteps are often seen by the trappers in the high and solitary valleys among the mountains, and the smokes of their fires descried among the precipices, but they themselves are rarely met with, and still more rarely brought to a parley, so great is their shyness, and their dread of strangers.

As their poverty offers no temptation to the marauder, and as they are inoffensive in their habits, they are never the objects of warfare: should one of them, however, fall into the hands of a war party, he is sure to be made a sacrifice, for the sake of that savage trophy, a scalp, and that barbarous ceremony, a scalp dance. These forlorn beings, forming a mere link between human nature and the brute, have been looked down upon with pity and contempt by the creole trappers, who have given them the appellation of "les dignes de pitie," or "the objects of pity"; They appear more worthy to be called the wild men of the mountains.

Washington Irving's The Adventures of Captain Bonneville

Chapter 26

A retrograde move--Channel of a mountain torrent--Alpine scenery--Cascades--Beaver valleys--Beavers at work--Their architecture--Their modes of felling trees--Mode of trapping beaver--Contests of skill--A beaver "up to trap"--Arrival at the Green River caches

THE VIEW from the snowy peak of the Wind River Mountains, while it had excited Captain Bonneville's enthusiasm, had satisfied him that it would be useless to force a passage westward, through multiplying barriers of cliffs and precipices. Turning his face eastward, therefore, he endeavored to regain the plains, intending to make the circuit round the southern point of the mountain. To descend, and to extricate himself from the heart of this rock-piled wilderness, was almost as difficult as to penetrate it. Taking his course down the ravine of a tumbling stream, the commencement of some future river, he descended from rock to rock, and shelf to shelf, between stupendous cliffs and beetling crags that sprang up to the sky. Often he had to cross and recross

the rushing torrent, as it wound foaming and roaring down its broken channel, or was walled by perpendicular precipices; and imminent was the hazard of breaking the legs of the horses in the clefts and fissures of slippery rocks. The whole scenery of this deep ravine was of Alpine wildness and sublimity. Sometimes the travellers passed beneath cascades which pitched from such lofty heights that the water fell into the stream like heavy rain. In other places, torrents came tumbling from crag to crag, dashing into foam and spray, and making tremendous din and uproar.

On the second day of their descent, the travellers, having got beyond the steepest pitch of the mountains, came to where the deep and rugged ravine began occasionally to expand into small levels or valleys, and the stream to assume for short intervals a more peaceful character. Here, not merely the river itself, but every rivulet flowing into it, was dammed up by communities of industrious beavers, so as to inundate the neighborhood, and make continual swamps.

During a mid-day halt in one of these beaver valleys, Captain Bonneville left his companions, and strolled down the course of the stream to reconnoitre. He had not proceeded far when he came to a beaver pond, and caught a glimpse of one of its painstaking inhabitants busily at work upon the dam. The curiosity of the captain was aroused, to behold the mode of operating of this far-famed architect; he moved forward, therefore, with the utmost caution, parting the branches of the water willows without making any noise, until having attained a position commanding a view of the whole pond, he stretched himself flat on the ground, and watched the solitary workman. In a little while, three others appeared at the head of the dam, bringing sticks and bushes. With these they proceeded directly to the barrier, which Captain Bonneville perceived was in need of repair. Having deposited their loads upon the broken part, they dived into the water, and shortly reappeared at the surface. Each now brought a quantity of mud, with which he would plaster the sticks and bushes just deposited. This kind of masonry was continued for some time, repeated supplies of wood and mud being brought, and treated in the same manner. This done, the industrious beavers indulged in a little recreation, chasing each other about the pond, dodging and whisking about on the surface, or diving to the bottom; and in their frolic, often slapping their tails on the water with a loud clacking sound. While they were thus amusing themselves, another of the fraternity made his appearance, and looked gravely on their sports for some time, without offering to join in them. He then climbed the bank close to where the captain was concealed, and, rearing himself on his hind quarters, in a sitting position, put his forepaws against a young pine tree, and began to cut the bark with his teeth. At times he would tear off a small piece, and holding it between his paws, and retaining his sedentary position, would feed himself with it, after the fashion of a monkey. The object of the beaver, however, was evidently to cut down the tree; and he was proceeding with his work, when he was alarmed by the approach of Captain Bonneville's men, who, feeling anxious at the protracted absence of their leader, were coming in search of him. At the sound of their voices, all the beavers, busy as well as idle, dived at once beneath the surface, and were no more to be seen. Captain Bonneville regretted this interruption. He had heard much of the sagacity of the beaver in cutting down trees, in which, it is said, they manage to make them fall into the water, and in such a position and direction as may be most favorable for conveyance to the desired point. In the present instance, the tree was a tall straight pine, and as it grew perpendicularly, and there was not a breath of air stirring the beaver could have felled it in any direc-

tion he pleased, if really capable of exercising a discretion in the matter. He was evidently engaged in "belting" the tree, and his first incision had been on the side nearest to the water.

Captain Bonneville, however, discredits, on the whole, the alleged sagacity of the beaver in this particular, and thinks the animal has no other aim than to get the tree down, without any of the subtle calculation as to its mode or direction of falling. This attribute, he thinks, has been ascribed to them from the circumstance that most trees growing near water-courses, either lean bodily toward the stream, or stretch their largest limbs in that direction, to benefit by the space, the light, and the air to be found there. The beaver, of course, attacks those trees which are nearest at hand, and on the banks of the stream or pond. He makes incisions round them, or in technical phrase, belts them with his teeth, and when they fall, they naturally take the direction in which their trunks or branches preponderate.

"I have often," says Captain Bonneville, "seen trees measuring eighteen inches in diameter, at the places where they had been cut through by the beaver, but they lay in all directions, and often very inconveniently for the after purposes of the animal. In fact, so little ingenuity do they at times display in this particular, that at one of our camps on Snake River, a beaver was found with his head wedged into the cut which he had made, the tree having fallen upon him and held him prisoner until he died."

Great choice, according to the captain, is certainly displayed by the beaver in selecting the wood which is to furnish bark for winter provision. The whole beaver household, old and young, set out upon this business, and will often make long journeys before they are suited. Sometimes they cut down trees of the largest size and then cull the branches, the bark of which is most to their taste. These they cut into lengths of about three feet, convey them to the water, and float them to their lodges, where they are stored away for winter. They are studious of cleanliness and comfort in their lodges, and after their repasts, will carry out the sticks from which they have eaten the bark, and throw them into the current beyond the barrier. They are jealous, too, of their territories, and extremely pugnacious, never permitting a strange beaver to enter their premises, and often fighting with such virulence as almost to tear each other to pieces. In the spring, which is the breeding season, the male leaves the female at home, and sets off on a tour of pleasure, rambling often to a great distance, recreating himself in every clear and quiet expanse of water on his way, and climbing the banks occasionally to feast upon the tender sprouts of the young willows. As summer advances, he gives up his bachelor rambles, and bethinking himself of housekeeping duties, returns home to his mate and his new progeny, and marshals them all for the foraging expedition in quest of winter provisions.

After having shown the public spirit of this praiseworthy little animal as a member of a community, and his amiable and exemplary conduct as the father of a family, we grieve to record the perils with which he is environed, and the snares set for him and his painstaking household.

Practice, says Captain Bonneville, has given such a quickness of eye to the experienced trapper in all that relates to his pursuit, that he can detect the slightest sign of beaver, however wild; and al-

though the lodge may be concealed by close thickets and overhanging willows, he can generally, at a single glance, make an accurate guess at the number of its inmates. He now goes to work to set his trap; planting it upon the shore, in some chosen place, two or three inches below the surface of the water, and secures it by a chain to a pole set deep in the mud. A small twig is then stripped of its bark, and one end is dipped in the "medicine," as the trappers term the peculiar bait which they employ. This end of the stick rises about four inches above the surface of the water, the other end is planted between the jaws of the trap. The beaver, possessing an acute sense of smell, is soon attracted by the odor of the bait. As he raises his nose toward it, his foot is caught in the trap. In his fright he throws a somerset into the deep water. The trap, being fastened to the pole, resists all his efforts to drag it to the shore; the chain by which it is fastened defies his teeth; he struggles for a time, and at length sinks to the bottom and is drowned.

Upon rocky bottoms, where it is not possible to plant the pole, it is thrown into the stream. The beaver, when entrapped, often gets fastened by the chain to sunken logs or floating timber; if he gets to shore, he is entangled in the thickets of brook willows. In such cases, however, it costs the trapper diligent search, and sometimes a bout at swimming, before he finds his game.

Occasionally it happens that several members of a beaver family are trapped in succession. The survivors then become extremely shy, and can scarcely be "brought to medicine," to use the trapper's phrase for "taking the bait." In such case, the trapper gives up the use of the bait, and conceals his traps in the usual paths and crossing places of the household. The beaver now being completely "up to trap," approaches them cautiously, and springs them ingeniously with a stick. At other times, he turns the traps bottom upwards, by the same means, and occasionally even drags them to the barrier and conceals them in the mud. The trapper now gives up the contest of ingenuity, and shouldering his traps, marches off, admitting that he is not yet "up to beaver."

On the day following Captain Bonneville's supervision of the industrious and frolicsome community of beavers, of which he has given so edifying an account, he succeeded in extricating himself from the Wind River Mountains, and regaining the plain to the eastward, made a great bend to the south, so as to go round the bases of the mountains, and arrived without further incident of importance, at the old place of rendezvous in Green River valley, on the 17th of September.

He found the caches, in which he had deposited his superfluous goods and equipments, all safe, and having opened and taken from them the necessary supplies, he closed them again; taking care to obliterate all traces that might betray them to the keen eyes of Indian marauders.

ON THE 18TH of September, Captain Bonneville and his three companions set out, bright and early, to rejoin the main party, from which they had parted on Wind River. Their route lay up the Green River valley, with that stream on their right hand, and beyond it, the range of Wind River Mountains. At the head of the valley, they were to pass through a defile which would bring them out beyond the northern end of these mountains, to the head of Wind River; where they expected to meet the main party, according to arrangement.

We have already adverted to the dangerous nature of this neighborhood, infested by roving bands of Crows and Blackfeet; to whom the numerous defiles and passes of the country afford capital places for ambush and surprise. The travellers, therefore, kept a vigilant eye upon everything that might give intimation of lurking danger.

About two hours after mid-day, as they reached the summit of a hill, they discovered buffalo on the plain below, running in every direction. One of the men, too, fancied he heard the report of a gun. It was concluded, therefore, that there was some party of Indians below, hunting the buffalo.

The horses were immediately concealed in a narrow ravine; and the captain, mounting an eminence, but concealing himself from view, reconnoitred the whole neighborhood with a telescope. Not an Indian was to be seen; so, after halting about an hour, he resumed his journey. Convinced, however, that he was in a dangerous neighborhood, he advanced with the utmost caution; winding his way through hollows and ravines, and avoiding, as much as possible, any open tract, or rising ground, that might betray his little party to the watchful eye of an Indian scout.

Arriving, at length, at the edge of the open meadow-land bordering on the river, he again observed the buffalo, as far as he could see, scampering in great alarm. Once more concealing the horses, he and his companions remained for a long time watching the various groups of the animals, as each caught the panic and started off; but they sought in vain to discover the cause.

They were now about to enter the mountain defile, at the head of Green River valley, where they might be waylaid and attacked; they, therefore, arranged the packs on their horses, in the manner most secure and convenient for sudden flight, should such be necessary. This done, they again set forward, keeping the most anxious look-out in every direction.

It was now drawing toward evening; but they could not think of encamping for the night, in a place so full of danger. Captain Bonneville, therefore, determined to halt about sunset, kindle a fire, as if for encampment, cook and eat supper; but, as soon as it was sufficiently dark, to make a rapid move for the summit of the mountain, and seek some secluded spot for their night's lodgings.

Accordingly, as the sun went down, the little party came to a halt, made a large fire, spitted their buffalo meat on wooden sticks, and, when sufficiently roasted, planted the savory viands before them; cutting off huge slices with their hunting knives, and supping with a hunter's appetite. The light of their fire would not fail, as they knew, to attract the attention of any Indian horde in the

neighborhood; but they trusted to be off and away, before any prowlers could reach the place. While they were supping thus hastily, however, one of their party suddenly started up and shouted "Indians!" All were instantly on their feet, with their rifles in their hands; but could see no enemy. The man, however, declared that he had seen an Indian advancing, cautiously, along the trail which they had made in coming to the encampment; who, the moment he was perceived, had thrown himself on the ground, and disappeared. He urged Captain Bonneville instantly to decamp. The captain, however, took the matter more coolly. The single fact, that the Indian had endeavored to hide himself, convinced him that he was not one of a party, on the advance to make an attack. He was, probably, some scout, who had followed up their trail, until he came in sight of their fire. He would, in such case, return, and report what he had seen to his companions. These, supposing the white men had encamped for the night, would keep aloof until very late, when all should be asleep. They would, then, according to Indian tactics, make their stealthy approaches, and place themselves in ambush around, preparatory to their attack, at the usual hour of daylight.

Such was Captain Bonneville's conclusion; in consequence of which, he counselled his men to keep perfectly quiet, and act as if free from all alarm, until the proper time arrived for a move. They, accordingly, continued their repast with pretended appetite and jollity; and then trimmed and replenished their fire, as if for a bivouac. As soon, however, as the night had completely set in, they left their fire blazing; walked quietly among the willows, and then leaping into their saddles, made off as noiselessly as possible. In proportion as they left the point of danger behind them, they relaxed in their rigid and anxious taciturnity, and began to joke at the expense of their enemy; whom they pictured to themselves mousing in the neighborhood of their deserted fire, waiting for the proper time of attack, and preparing for a grand disappointment.

About midnight, feeling satisfied that they had gained a secure distance, they posted one of their number to keep watch, in case the enemy should follow on their trail, and then, turning abruptly into a dense and matted thicket of willows, halted for the night at the foot of the mountain, instead of making for the summit, as they had originally intended.

A trapper in the wilderness, like a sailor on the ocean, snatches morsels of enjoyment in the midst of trouble, and sleeps soundly when surrounded by danger. The little party now made their arrangements for sleep with perfect calmness; they did not venture to make a fire and cook, it is true, though generally done by hunters whenever they come to a halt, and have provisions. They comforted themselves, however, by smoking a tranquil pipe; and then calling in the watch, and turning loose the horses, stretched themselves on their pallets, agreed that whoever should first awake, should rouse the rest, and in a little while were all as sound asleep as though in the midst of a fortress.

A little before day, they were all on the alert; it was the hour for Indian maraud. A sentinel was immediately detached, to post himself at a little distance on their trail, and give the alarm, should he see or hear an enemy.

With the first blink of dawn, the rest sought the horses; brought them to the camp, and tied them

---

up, until an hour after sunrise; when, the sentinel having reported that all was well, they sprang once more into their saddles, and pursued the most covert and secret paths up the mountain, avoiding the direct route.

At noon, they halted and made a hasty repast; and then bent their course so as to regain the route from which they had diverged. They were now made sensible of the danger from which they had just escaped. There were tracks of Indians, who had evidently been in pursuit of them; but had recently returned, baffled in their search.

Trusting that they had now got a fair start, and could not be overtaken before night, even in case the Indians should renew the chase, they pushed briskly forward, and did not encamp until late; when they cautiously concealed themselves in a secure nook of the mountains.

Without any further alarm, they made their way to the head waters of Wind River, and reached the neighborhood in which they had appointed the rendezvous with their companions. It was within the precincts of the Crow country; the Wind River valley being one of the favorite haunts of that restless tribe. After much searching, Captain Bonneville came upon a trail which had evidently been made by his main party. It was so old, however, that he feared his people might have left the neighborhood; driven off, perhaps by some of those war parties which were on the prowl. He continued his search with great anxiety, and no little fatigue; for his horses were jaded, and almost crippled, by their forced marches and scramblings through rocky defiles.

On the following day, about noon, Captain Bonneville came upon a deserted camp of his people, from which they had, evidently, turned back; but he could find no signs to indicate why they had done so; whether they had met with misfortune, or molestation, or in what direction they had gone. He was now, more than ever, perplexed.

On the following day, he resumed his march with increasing anxiety. The feet of his horses had by this time become so worn and wounded by the rocks, that he had to make moccasins for them of buffalo hide. About noon, he came to another deserted camp of his men; but soon after lost their trail. After great search, he once more found it, turning in a southerly direction along the eastern bases of the Wind River Mountains, which towered to the right. He now pushed forward with all possible speed, in hopes of overtaking the party. At night, he slept at another of their camps, from which they had but recently departed. When the day dawned sufficiently to distinguish objects, he perceived the danger that must be dogging the heels of his main party. All about the camp were traces of Indians who must have been prowling about it at the time his people had passed the night there; and who must still be hovering about them. Convinced, now, that the main party could not be at any great distance, he mounted a scout on the best horse, and sent him forward to overtake them, to warn them of their danger, and to order them to halt, until he should rejoin them.

In the afternoon, to his great joy, he met the scout returning, with six comrades from the main party, leading fresh horses for his accommodation; and on the following day (September 25th),

all hands were once more reunited, after a separation of nearly three weeks. Their meeting was hearty and joyous; for they had both experienced dangers and perplexities.

The main party, in pursuing their course up the Wind River valley, had been dogged the whole way by a war party of Crows. In one place, they had been fired upon, but without injury; in another place, one of their horses had been cut loose, and carried off. At length, they were so closely beset, that they were obliged to make a retrograde move, lest they should be surprised and overcome. This was the movement which had caused such perplexity to Captain Bonneville.

The whole party now remained encamped for two or three days, to give repose to both men and horses. Some of the trappers, however, pursued their vocations about the neighboring streams. While one of them was setting his traps, he heard the tramp of horses, and looking up, beheld a party of Crow braves moving along at no great distance, with a considerable cavalcade. The trapper hastened to conceal himself, but was discerned by the quick eye of the savages. With whoops and yells, they dragged him from his hiding-place, flourished over his head their tomahawks and scalping-knives, and for a time, the poor trapper gave himself up for lost. Fortunately, the Crows were in a jocose, rather than a sanguinary mood. They amused themselves heartily, for a while, at the expense of his terrors; and after having played off divers Crow pranks and pleasantries, suffered him to depart unharmed. It is true, they stripped him completely, one taking his horse, another his gun, a third his traps, a fourth his blanket, and so on, through all his accoutrements, and even his clothing, until he was stark naked; but then they generously made him a present of an old tattered buffalo robe, and dismissed him, with many complimentary speeches, and much laughter. When the trapper returned to the camp, in such sorry plight, he was greeted with peals of laughter from his comrades and seemed more mortified by the style in which he had been dismissed, than rejoiced at escaping with his life. A circumstance which he related to Captain Bonneville, gave some insight into the cause of this extreme jocularly on the part of the Crows. They had evidently had a run of luck, and, like winning gamblers, were in high good humor. Among twenty-six fine horses, and some mules, which composed their cavalcade, the trapper recognized a number which had belonged to Fitzpatrick's brigade, when they parted company on the Big-horn. It was supposed, therefore, that these vagabonds had been on his trail, and robbed him of part of his cavalry.

On the day following this affair, three Crows came into Captain Bonneville's camp, with the most easy, innocent, if not impudent air imaginable; walking about with the imperturbable coolness and unconcern, in which the Indian rivals the fine gentleman. As they had not been of the set which stripped the trapper, though evidently of the same band, they were not molested. Indeed, Captain Bonneville treated them with his usual kindness and hospitality; permitting them to remain all day in the camp, and even to pass the night there. At the same time, however, he caused a strict watch to be maintained on all their movements; and at night, stationed an armed sentinel near them. The Crows remonstrated against the latter being armed. This only made the captain suspect them to be spies, who meditated treachery; he redoubled, therefore, his precautions. At the same time, he assured his guests, that while they were perfectly welcome to the shelter and comfort of his camp, yet, should any of their tribe venture to approach during the night, they

would certainly be shot; which would be a very unfortunate circumstance, and much to be deplored. To the latter remark, they fully assented; and shortly afterward commenced a wild song, or chant, which they kept up for a long time, and in which they very probably gave their friends, who might be prowling round the camp, notice that the white men were on the alert. The night passed away without disturbance. In the morning, the three Crow guests were very pressing that Captain Bonneville and his party should accompany them to their camp, which they said was close by. Instead of accepting their invitation, Captain Bonneville took his departure with all possible dispatch, eager to be out of the vicinity of such a piratical horde; nor did he relax the diligence of his march, until, on the second day, he reached the banks of the Sweet Water, beyond the limits of the Crow country, and a heavy fall of snow had obliterated all traces of his course.

He now continued on for some few days, at a slower pace, round the point of the mountain toward Green River, and arrived once more at the caches, on the 14th of October.

Here they found traces of the band of Indians who had hunted them in the defile toward the head waters of Wind River. Having lost all trace of them on their way over the mountains, they had turned and followed back their trail down the Green River valley to the caches. One of these they had discovered and broken open, but it fortunately contained nothing but fragments of old iron, which they had scattered about in all directions, and then departed. In examining their deserted camp, Captain Bonneville discovered that it numbered thirty-nine fires, and had more reason than ever to congratulate himself on having escaped the clutches of such a formidable band of freebooters.

He now turned his course southward, under cover of the mountains, and on the 25th of October reached Liberge's Ford, a tributary of the Colorado, where he came suddenly upon the trail of this same war party, which had crossed the stream so recently that the banks were yet wet with the water that had been splashed upon them. To judge from their tracks, they could not be less than three hundred warriors, and apparently of the Crow nation.

Captain Bonneville was extremely uneasy lest this overpowering force should come upon him in some place where he would not have the means of fortifying himself promptly. He now moved toward Hane's Fork, another tributary of the Colorado, where he encamped, and remained during the 26th of October. Seeing a large cloud of smoke to the south, he supposed it to arise from some encampment of Shoshonies, and sent scouts to procure information, and to purchase a lodge. It was, in fact, a band of Shoshonies, but with them were encamped Fitzpatrick and his party of trappers. That active leader had an eventful story to relate of his fortunes in the country of the Crows. After parting with Captain Bonneville on the banks of the Bighorn, he made for the west, to trap upon Powder and Tongue Rivers. He had between twenty and thirty men with him, and about one hundred horses. So large a cavalcade could not pass through the Crow country without attracting the attention of its freebooting hordes. A large band of Crows was soon on their traces, and came up with them on the 5th of September, just as they had reached Tongue River. The Crow chief came forward with great appearance of friendship, and proposed to Fitzpatrick that they should encamp together. The latter, however, not having any faith in Crows, declined

the invitation, and pitched his camp three miles off. He then rode over with two or three men, to visit the Crow chief, by whom he was received with great apparent cordiality. In the meantime, however, a party of young braves, who considered them absolved by his distrust from all scruples of honor, made a circuit privately, and dashed into his encampment. Captain Stewart, who had remained there in the absence of Fitzpatrick, behaved with great spirit; but the Crows were too numerous and active. They had got possession of the camp, and soon made booty of every thing --carrying off all the horses. On their way back they met Fitzpatrick returning to his camp; and finished their exploit by rifling and nearly stripping him.

A negotiation now took place between the plundered white men and the triumphant Crows; what eloquence and management Fitzpatrick made use of, we do not know, but he succeeded in prevailing upon the Crow chieftain to return him his horses and many of his traps; together with his rifles and a few rounds of ammunition for each man. He then set out with all speed to abandon the Crow country, before he should meet with any fresh disasters.

After his departure, the consciences of some of the most orthodox Crows pricked them sorely for having suffered such a cavalcade to escape out of their hands. Anxious to wipe off so foul a stigma on the reputation of the Crow nation, they followed on his trail, nor quit hovering about him on his march until they had stolen a number of his best horses and mules. It was, doubtless, this same band which came upon the lonely trapper on the Popo Agie, and generously gave him an old buffalo robe in exchange for his rifle, his traps, and all his accoutrements. With these anecdotes, we shall, for present, take our leave of the Crow country and its vagabond chivalry.

Washington Irving's The Adventures of Captain Bonneville

Chapter 28

A region of natural curiosities--The plain of white clay--Hot springs--The Beer Spring--Departure to seek the free trappers--Plain of Portneuf--Lava-- Chasms and gullies--Bannack Indians--Their hunt of the buffalo--Hunter's feast--Trencher heroes-- Bullying of an absent foe--The damp comrade--The Indian spy--Meeting with Hodgkiss--His adventures--Poordevil Indians--Triumph of the Bannacks--Blackfeet policy in war

CROSSING AN ELEVATED RIDGE, Captain Bonneville now came upon Bear River, which, from its source to its entrance into the Great Salt Lake, describes the figure of a horse-shoe. One of the principal head waters of this river, although supposed to abound with beaver, has never been visited by the trapper; rising among rugged mountains, and being barricadoed [sic] by fallen pine trees and tremendous precipices.

Proceeding down this river, the party encamped, on the 6th of November, at the outlet of a lake about thirty miles long, and from two to three miles in width, completely imbedded in low ranges of mountains, and connected with Bear River by an impassable swamp. It is called the Little Lake, to distinguish it from the great one of salt water.

On the 10th of November, Captain Bonneville visited a place in the neighborhood which is quite a region of natural curiosities. An area of about half a mile square presents a level surface of white

clay or fuller's earth, perfectly spotless, resembling a great slab of Parian marble, or a sheet of dazzling snow. The effect is strikingly beautiful at all times: in summer, when it is surrounded with verdure, or in autumn, when it contrasts its bright immaculate surface with the withered herbage. Seen from a distant eminence, it then shines like a mirror, set in the brown landscape. Around this plain are clustered numerous springs of various sizes and temperatures. One of them, of scalding heat, boils furiously and incessantly, rising to the height of two or three feet. In another place, there is an aperture in the earth, from which rushes a column of steam that forms a perpetual cloud. The ground for some distance around sounds hollow, and startles the solitary trapper, as he hears the tramp of his horse giving the sound of a muffled drum. He pictures to himself a mysterious gulf below, a place of hidden fires, and gazes round him with awe and uneasiness.

The most noted curiosity, however, of this singular region, is the Beer Spring, of which trappers give wonderful accounts. They are said to turn aside from their route through the country to drink of its waters, with as much eagerness as the Arab seeks some famous well of the desert. Captain Bonneville describes it as having the taste of beer. His men drank it with avidity, and in copious draughts. It did not appear to him to possess any medicinal properties, or to produce any peculiar effects. The Indians, however, refuse to taste it, and endeavor to persuade the white men from doing so.

We have heard this also called the Soda Spring, and described as containing iron and sulphur. It probably possesses some of the properties of the Ballston water.

The time had now arrived for Captain Bonneville to go in quest of the party of free trappers, detached in the beginning of July, under the command of Mr. Hodgkiss, to trap upon the head waters of Salmon River. His intention was to unite them with the party with which he was at present travelling, that all might go into quarters together for the winter. Accordingly, on the 11th of November, he took a temporary leave of his band, appointing a rendezvous on Snake River, and, accompanied by three men, set out upon his journey. His route lay across the plain of the Portneuf, a tributary stream of Snake River, called after an unfortunate Canadian trapper murdered by the Indians. The whole country through which he passed bore evidence of volcanic convulsions and conflagrations in the olden time. Great masses of lava lay scattered about in every direction; the crags and cliffs had apparently been under the action of fire; the rocks in some places seemed to have been in a state of fusion; the plain was rent and split with deep chasms and gullies, some of which were partly filled with lava.

They had not proceeded far, however, before they saw a party of horsemen, galloping full tilt toward them. They instantly turned, and made full speed for the covert of a woody stream, to fortify themselves among the trees. The Indians came to a halt, and one of them came forward alone. He reached Captain Bonneville and his men just as they were dismounting and about to post themselves. A few words dispelled all uneasiness. It was a party of twenty-five Bannack Indians, friendly to the whites, and they proposed, through their envoy, that both parties should encamp together, and hunt the buffalo, of which they had discovered several large herds hard by. Captain Bonneville cheerfully assented to their proposition, being curious to see their manner of hunting.

Both parties accordingly encamped together on a convenient spot, and prepared for the hunt. The Indians first posted a boy on a small hill near the camp, to keep a look-out for enemies. The "runners," then, as they are called, mounted on fleet horses, and armed with bows and arrows, moved slowly and cautiously toward the buffalo, keeping as much as possible out of sight, in hollows and ravines. When within a proper distance, a signal was given, and they all opened at once like a pack of hounds, with a full chorus of yells, dashing into the midst of the herds, and launching their arrows to the right and left. The plain seemed absolutely to shake under the tramp of the buffalo, as they scoured off. The cows in headlong panic, the bulls furious with rage, uttering deep roars, and occasionally turning with a desperate rush upon their pursuers. Nothing could surpass the spirit, grace, and dexterity, with which the Indians managed their horses; wheeling and coursing among the affrighted herd, and launching their arrows with unerring aim. In the midst of the apparent confusion, they selected their victims with perfect judgment, generally aiming at the fattest of the cows, the flesh of the bull being nearly worthless, at this season of the year. In a few minutes, each of the hunters had crippled three or four cows. A single shot was sufficient for the purpose, and the animal, once maimed, was left to be completely dispatched at the end of the chase. Frequently, a cow was killed on the spot by a single arrow. In one instance, Captain Bonneville saw an Indian shoot his arrow completely through the body of a cow, so that it struck in the ground beyond. The bulls, however, are not so easily killed as the cows, and always cost the hunter several arrows; sometimes making battle upon the horses, and chasing them furiously, though severely wounded, with the darts still sticking in their flesh.

The grand scamper of the hunt being over, the Indians proceeded to dispatch the animals that had been disabled; then cutting up the carcasses, they returned with loads of meat to the camp, where the choicest pieces were soon roasting before large fires, and a hunters' feast succeeded; at which Captain Bonneville and his men were qualified, by previous fasting, to perform their parts with great vigor.

Some men are said to wax valorous upon a full stomach, and such seemed to be the case with the Bannack braves, who, in proportion as they crammed themselves with buffalo meat, grew stout of heart, until, the supper at an end, they began to chant war songs, setting forth their mighty deeds, and the victories they had gained over the Blackfeet. Warming with the theme, and inflating themselves with their own eulogies, these magnanimous heroes of the trencher would start up, advance a short distance beyond the light of the fire, and apostrophize most vehemently their Blackfeet enemies, as though they had been within hearing. Ruffling, and swelling, and snorting, and slapping their breasts, and brandishing their arms, they would vociferate all their exploits; reminding the Blackfeet how they had drenched their towns in tears and blood; enumerate the blows they had inflicted, the warriors they had slain, the scalps they had brought off in triumph. Then, having said everything that could stir a man's spleen or pique his valor, they would dare their imaginary hearers, now that the Bannacks were few in number, to come and take their revenge--receiving no reply to this valorous bravado, they would conclude by all kinds of sneers and insults, deriding the Blackfeet for dastards and poltroons, that dared not accept their challenge. Such is the kind of swaggering and rhodomontade in which the "red men" are prone to indulge in

their vainglorious moments; for, with all their vaunted taciturnity, they are vehemently prone at times to become eloquent about their exploits, and to sound their own trumpet.

Having vented their valor in this fierce effervescence, the Bannack braves gradually calmed down, lowered their crests, smoothed their ruffled feathers, and betook themselves to sleep, without placing a single guard over their camp; so that, had the Blackfeet taken them at their word, but few of these braggart heroes might have survived for any further boasting.

On the following morning, Captain Bonneville purchased a supply of buffalo meat from his bragadocio friends; who, with all their vapping, were in fact a very forlorn horde, destitute of fire-arms, and of almost everything that constitutes riches in savage life. The bargain concluded, the Bannacks set off for their village, which was situated, they said, at the mouth of the Portneuf, and Captain Bonneville and his companions shaped their course toward Snake River.

Arrived on the banks of that river, he found it rapid and boisterous, but not too deep to be forded. In traversing it, however, one of the horses was swept suddenly from his footing, and his rider was flung from the saddle into the midst of the stream. Both horse and horseman were extricated without any damage, excepting that the latter was completely drenched, so that it was necessary to kindle a fire to dry him. While they were thus occupied, one of the party looking up, perceived an Indian scout cautiously reconnoitring them from the summit of a neighboring hill. The moment he found himself discovered, he disappeared behind the hill. From his furtive movements, Captain Bonneville suspected him to be a scout from the Blackfeet camp, and that he had gone to report what he had seen to his companions. It would not do to loiter in such a neighborhood, so the kindling of the fire was abandoned, the drenched horseman mounted in dripping condition, and the little band pushed forward directly into the plain, going at a smart pace, until they had gained a considerable distance from the place of supposed danger. Here encamping for the night, in the midst of abundance of sage, or wormwood, which afforded fodder for their horses, they kindled a huge fire for the benefit of their damp comrade, and then proceeded to prepare a sumptuous supper of buffalo humps and ribs, and other choice bits, which they had brought with them. After a hearty repast, relished with an appetite unknown to city epicures, they stretched themselves upon their couches of skins, and under the starry canopy of heaven, enjoyed the sound and sweet sleep of hardy and well-fed mountaineers.

They continued on their journey for several days, without any incident worthy of notice, and on the 19th of November, came upon traces of the party of which they were in search; such as burned patches of prairie, and deserted camping grounds. All these were carefully examined, to discover by their freshness or antiquity the probable time that the trappers had left them; at length, after much wandering and investigating, they came upon the regular trail of the hunting party, which led into the mountains, and following it up briskly, came about two o'clock in the afternoon of the 20th, upon the encampment of Hodgkiss and his band of free trappers, in the bosom of a mountain valley.

It will be recollected that these free trappers, who were masters of themselves and their move-

ments, had refused to accompany Captain Bonneville back to Green River in the preceding month of July, preferring to trap about the upper waters of the Salmon River, where they expected to find plenty of beaver, and a less dangerous neighborhood. Their hunt had not been very successful. They had penetrated the great range of mountains among which some of the upper branches of Salmon River take their rise, but had become so entangled among immense and almost impassable barricades of fallen pines, and so impeded by tremendous precipices, that a great part of their season had been wasted among these mountains. At one time, they had made their way through them, and reached the Boisee River; but meeting with a band of Bannack Indians, from whom they apprehended hostilities, they had again taken shelter among the mountains, where they were found by Captain Bonneville. In the neighborhood of their encampment, the captain had the good fortune to meet with a family of those wanderers of the mountains, emphatically called "les dignes de pitie," or Poordevil Indians. These, however, appear to have forfeited the title, for they had with them a fine lot of skins of beaver, elk, deer, and mountain sheep. These, Captain Bonneville purchased from them at a fair valuation, and sent them off astonished at their own wealth, and no doubt objects of envy to all their pitiful tribe.

Being now reinforced by Hodgkiss and his band of free trappers, Captain Bonneville put himself at the head of the united parties, and set out to rejoin those he had recently left at the Beer Spring, that they might all go into winter quarters on Snake River. On his route, he encountered many heavy falls of snow, which melted almost immediately, so as not to impede his march, and on the 4th of December, he found his other party, encamped at the very place where he had partaken in the buffalo hunt with the Bannacks.

That braggart horde was encamped but about three miles off, and were just then in high glee and festivity, and more swaggering than ever, celebrating a prodigious victory. It appeared that a party of their braves being out on a hunting excursion, discovered a band of Blackfeet moving, as they thought, to surprise their hunting camp. The Bannacks immediately posted themselves on each side of a dark ravine, through which the enemy must pass, and, just as they were entangled in the midst of it, attacked them with great fury. The Blackfeet, struck with sudden panic, threw off their buffalo robes and fled, leaving one of their warriors dead on the spot. The victors eagerly gathered up the spoils; but their greatest prize was the scalp of the Blackfoot brave. This they bore off in triumph to their village, where it had ever since been an object of the greatest exultation and rejoicing. It had been elevated upon a pole in the centre of the village, where the warriors had celebrated the scalp dance round it, with war feasts, war songs, and warlike harangues. It had then been given up to the women and boys; who had paraded it up and down the village with shouts and chants and antic dances; occasionally saluting it with all kinds of taunts, invectives, and revilings.

The Blackfeet, in this affair, do not appear to have acted up to the character which has rendered them objects of such terror. Indeed, their conduct in war, to the inexperienced observer, is full of inconsistencies; at one time they are headlong in courage, and heedless of danger; at another time cautious almost to cowardice. To understand these apparent incongruities, one must know their principles of warfare. A war party, however triumphant, if they lose a warrior in the fight, bring back a cause of mourning to their people, which casts a shade over the glory of their achievement.

Hence, the Indian is often less fierce and reckless in general battle, than he is in a private brawl; and the chiefs are checked in their boldest undertakings by the fear of sacrificing their warriors.

This peculiarity is not confined to the Blackfeet. Among the Osages, says Captain Bonneville, when a warrior falls in battle, his comrades, though they may have fought with consummate valor, and won a glorious victory, will leave their arms upon the field of battle, and returning home with dejected countenances, will halt without the encampment, and wait until the relatives of the slain come forth and invite them to mingle again with their people.

Washington Irving's The Adventures of Captain Bonneville

Chapter 29

Winter camp at the Portneuf--Fine springs--The Bannack Indians--Their honesty--Captain Bonneville prepares for an expedition--Christmas--The American Falls--Wild scenery--Fishing Falls--Snake Indians--Scenery on the Bruneau--View of volcanic country from a mountain--Powder River-- Shoshokoes, or Root Diggers--Their character, habits, habitations, dogs--Vanity at its last shift

IN ESTABLISHING his winter camp near the Portneuf, Captain Bonneville had drawn off to some little distance from his Bannack friends, to avoid all annoyance from their intimacy or intrusions. In so doing, however, he had been obliged to take up his quarters on the extreme edge of the flat land, where he was encompassed with ice and snow, and had nothing better for his horses to subsist on than wormwood. The Bannacks, on the contrary, were encamped among fine springs of water, where there was grass in abundance. Some of these springs gush out of the earth in sufficient quantity to turn a mill; and furnish beautiful streams, clear as crystal, and full of trout of a large size, which may be seen darting about the transparent water.

Winter now set in regularly. The snow had fallen frequently, and in large quantities, and covered the ground to a depth of a foot; and the continued coldness of the weather prevented any thaw.

By degrees, a distrust which at first subsisted between the Indians and the trappers, subsided, and gave way to mutual confidence and good will. A few presents convinced the chiefs that the white men were their friends; nor were the white men wanting in proofs of the honesty and good faith of their savage neighbors. Occasionally, the deep snow and the want of fodder obliged them to turn their weakest horses out to roam in quest of sustenance. If they at any time strayed to the camp of the Bannacks, they were immediately brought back. It must be confessed, however, that if the stray horse happened, by any chance, to be in vigorous plight and good condition, though he was equally sure to be returned by the honest Bannacks, yet it was always after the lapse of several days, and in a very gaunt and jaded state; and always with the remark that they had found him a long way off. The uncharitable were apt to surmise that he had, in the interim, been well used up in a buffalo hunt; but those accustomed to Indian morality in the matter of horseflesh, considered it a singular evidence of honesty that he should be brought back at all.

Being convinced, therefore, from these, and other circumstances, that his people were encamped in the neighborhood of a tribe as honest as they were valiant, and satisfied that they would pass

their winter unmolested, Captain Bonneville prepared for a reconnoitring expedition of great extent and peril. This was, to penetrate to the Hudson's Bay establishments on the banks of the Columbia, and to make himself acquainted with the country and the Indian tribes; it being one part of his scheme to establish a trading post somewhere on the lower part of the river, so as to participate in the trade lost to the United States by the capture of Astoria. This expedition would, of course, take him through the Snake River country, and across the Blue Mountains, the scenes of so much hardship and disaster to Hunt and Crooks, and their Astorian bands, who first explored it, and he would have to pass through it in the same frightful season, the depth of winter.

The idea of risk and hardship, however, only served to stimulate the adventurous spirit of the captain. He chose three companions for his journey, put up a small stock of necessaries in the most portable form, and selected five horses and mules for themselves and their baggage. He proposed to rejoin his band in the early part of March, at the winter encampment near the Portneuf. All these arrangements being completed, he mounted his horse on Christmas morning, and set off with his three comrades. They halted a little beyond the Bannack camp, and made their Christmas dinner, which, if not a very merry, was a very hearty one, after which they resumed their journey.

They were obliged to travel slowly, to spare their horses; for the snow had increased in depth to eighteen inches; and though somewhat packed and frozen, was not sufficiently so to yield firm footing. Their route lay to the west, down along the left side of Snake River; and they were several days in reaching the first, or American Falls. The banks of the river, for a considerable distance, both above and below the falls, have a volcanic character: masses of basaltic rock are piled one upon another; the water makes its way through their broken chasms, boiling through narrow channels, or pitching in beautiful cascades over ridges of basaltic columns.

Beyond these falls, they came to a picturesque, but inconsiderable stream, called the Cassie. It runs through a level valley, about four miles wide, where the soil is good; but the prevalent coldness and dryness of the climate is unfavorable to vegetation. Near to this stream there is a small mountain of mica slate, including garnets. Granite, in small blocks, is likewise seen in this neighborhood, and white sandstone. From this river, the travellers had a prospect of the snowy heights of the Salmon River Mountains to the north; the nearest, at least fifty miles distant.

In pursuing his course westward, Captain Bonneville generally kept several miles from Snake River, crossing the heads of its tributary streams; though he often found the open country so encumbered by volcanic rocks, as to render travelling extremely difficult. Whenever he approached Snake River, he found it running through a broad chasm, with steep, perpendicular sides of basaltic rock. After several days' travel across a level plain, he came to a part of the river which filled him with astonishment and admiration. As far as the eye could reach, the river was walled in by perpendicular cliffs two hundred and fifty feet high, beetling like dark and gloomy battlements, while blocks and fragments lay in masses at their feet, in the midst of the boiling and whirling current. Just above, the whole stream pitched in one cascade above forty feet in height, with a thundering sound, casting up a volume of spray that hung in the air like a silver mist. These are called by some the Fishing Falls, as the salmon are taken here in immense quantities. They cannot

get by these falls.

After encamping at this place all night, Captain Bonneville, at sunrise, descended with his party through a narrow ravine, or rather crevice, in the vast wall of basaltic rock which bordered the river; this being the only mode, for many miles, of getting to the margin of the stream.

The snow lay in a thin crust along the banks of the river, so that their travelling was much more easy than it had been hitherto. There were foot tracks, also, made by the natives, which greatly facilitated their progress. Occasionally, they met the inhabitants of this wild region; a timid race, and but scantily provided with the necessaries of life. Their dress consisted of a mantle about four feet square, formed of strips of rabbit skins sewed together; this they hung over their shoulders, in the ordinary Indian mode of wearing the blanket. Their weapons were bows and arrows; the latter tipped with obsidian, which abounds in the neighborhood. Their huts were shaped like haystacks, and constructed of branches of willow covered with long grass, so as to be warm and comfortable. Occasionally, they were surrounded by small inclosures of wormwood, about three feet high, which gave them a cottage-like appearance. Three or four of these tenements were occasionally grouped together in some wild and striking situation, and had a picturesque effect. Sometimes they were in sufficient number to form a small hamlet. From these people, Captain Bonneville's party frequently purchased salmon, dried in an admirable manner, as were likewise the roes. This seemed to be their prime article of food; but they were extremely anxious to get buffalo meat in exchange.

The high walls and rocks, within which the travellers had been so long inclosed, now occasionally presented openings, through which they were enabled to ascend to the plain, and to cut off considerable bends of the river.

Throughout the whole extent of this vast and singular chasm, the scenery of the river is said to be of the most wild and romantic character. The rocks present every variety of masses and grouping. Numerous small streams come rushing and boiling through narrow clefts and ravines: one of a considerable size issued from the face of a precipice, within twenty-five feet of its summit; and after running in nearly a horizontal line for about one hundred feet, fell, by numerous small cascades, to the rocky bank of the river.

In its career through this vast and singular defile, Snake River is upward of three hundred yards wide, and as clear as spring water. Sometimes it steals along with a tranquil and noiseless course; at other times, for miles and miles, it dashes on in a thousand rapids, wild and beautiful to the eye, and lulling the ear with the soft tumult of plashing waters.

Many of the tributary streams of Snake River, rival it in the wildness and picturesqueness of their scenery. That called the Bruneau; is particularly cited. It runs through a tremendous chasm, rather than a valley, extending upwards of a hundred and fifty miles. You come upon it on a sudden, in traversing a level plain. It seems as if you could throw a stone across from cliff to cliff; yet, the valley is near two thousand feet deep: so that the river looks like an inconsiderable stream. Basaltic

rocks rise perpendicularly, so that it is impossible to get from the plain to the water, or from the river margin to the plain. The current is bright and limpid. Hot springs are found on the borders of this river. One bursts out of the cliffs forty feet above the river, in a stream sufficient to turn a mill, and sends up a cloud of vapor.

We find a characteristic picture of this volcanic region of mountains and streams, furnished by the journal of Mr. Wyeth, which lies before us; who ascended a peak in the neighborhood we are describing. From this summit, the country, he says, appears an indescribable chaos; the tops of the hills exhibit the same strata as far as the eye can reach; and appear to have once formed the level of the country; and the valleys to be formed by the sinking of the earth, rather than the rising of the hills. Through the deep cracks and chasms thus formed, the rivers and brooks make their way, which renders it difficult to follow them. All these basaltic channels are called cut rocks by the trappers. Many of the mountain streams disappear in the plains; either absorbed by their thirsty soil, and by the porous surface of the lava, or swallowed up in gulfs and chasms.

On the 12th of January (1834), Captain Bonneville reached Powder River; much the largest stream that he had seen since leaving the Portneuf. He struck it about three miles above its entrance into Snake River. Here he found himself above the lower narrows and defiles of the latter river, and in an open and level country. The natives now made their appearance in considerable numbers, and evinced the most insatiable curiosity respecting the white men; sitting in groups for hours together, exposed to the bleakest winds, merely for the pleasure of gazing upon the strangers, and watching every movement. These are of that branch of the great Snake tribe called Shoshokoes, or Root Diggers, from their subsisting, in a great measure, on the roots of the earth; though they likewise take fish in great quantities, and hunt, in a small way. They are, in general, very poor; destitute of most of the comforts of life, and extremely indolent: but a mild, inoffensive race. They differ, in many respects, from the other branch of the Snake tribe, the Shoshonies; who possess horses, are more roving and adventurous, and hunt the buffalo.

On the following day, as Captain Bonneville approached the mouth of Powder River, he discovered at least a hundred families of these Diggers, as they are familiarly called, assembled in one place. The women and children kept at a distance, perched among the rocks and cliffs; their eager curiosity being somewhat dashed with fear. From their elevated posts, they scrutinized the strangers with the most intense earnestness; regarding them with almost as much awe as if they had been beings of a supernatural order.

The men, however, were by no means so shy and reserved; but importuned Captain Bonneville and his companions excessively by their curiosity. Nothing escaped their notice; and any thing they could lay their hands on underwent the most minute examination. To get rid of such inquisitive neighbors, the travellers kept on for a considerable distance, before they encamped for the night.

The country, hereabout, was generally level and sandy; producing very little grass, but a considerable quantity of sage or wormwood. The plains were diversified by isolated hills, all cut off, as

it were, about the same height, so as to have tabular summits. In this they resembled the isolated hills of the great prairies, east of the Rocky Mountains; especially those found on the plains of the Arkansas.

The high precipices which had hitherto walled in the channel of Snake River had now disappeared; and the banks were of the ordinary height. It should be observed, that the great valleys or plains, through which the Snake River wound its course, were generally of great breadth, extending on each side from thirty to forty miles; where the view was bounded by unbroken ridges of mountains.

The travellers found but little snow in the neighborhood of Powder River, though the weather continued intensely cold. They learned a lesson, however, from their forlorn friends, the Root Diggers, which they subsequently found of great service in their wintry wanderings. They frequently observed them to be furnished with long ropes, twisted from the bark of the wormwood. This they used as a slow match, carrying it always lighted. Whenever they wished to warm themselves, they would gather together a little dry wormwood, apply the match, and in an instant produce a cheering blaze.

Captain Bonneville gives a cheerless account of a village of these Diggers, which he saw in crossing the plain below Powder River. "They live," says he, "without any further protection from the inclemency of the season, than a sort of break-weather, about three feet high, composed of sage (or wormwood), and erected around them in the shape of a half moon." Whenever he met with them, however, they had always a large suite of half-starved dogs: for these animals, in savage as well as in civilized life, seem to be the concomitants of beggary.

These dogs, it must be allowed, were of more use than the beggary curs of cities. The Indian children used them in hunting the small game of the neighborhood, such as rabbits and prairie dogs; in which mongrel kind of chase they acquitted themselves with some credit.

Sometimes the Diggers aspire to nobler game, and succeed in entrapping the antelope, the fleetest animal of the prairies. The process by which this is effected is somewhat singular. When the snow has disappeared, says Captain Bonneville, and the ground become soft, the women go into the thickest fields of wormwood, and pulling it up in great quantities, construct with it a hedge, about three feet high, inclosing about a hundred acres. A single opening is left for the admission of the game. This done, the women conceal themselves behind the wormwood, and wait patiently for the coming of the antelopes; which sometimes enter this spacious trap in considerable numbers. As soon as they are in, the women give the signal, and the men hasten to play their part. But one of them enters the pen at a time; and, after chasing the terrified animals round the inclosure, is relieved by one of his companions. In this way the hunters take their turns, relieving each other, and keeping up a continued pursuit by relays, without fatigue to themselves. The poor antelopes, in the end, are so wearied down, that the whole party of men enter and dispatch them with clubs; not one escaping that has entered the inclosure. The most curious circumstance in this chase is, that an animal so fleet and agile as the antelope, and straining for its life, should range round and

---

round this fated inclosure, without attempting to overleap the low barrier which surrounds it. Such, however, is said to be the fact; and such their only mode of hunting the antelope.

Notwithstanding the absence of all comfort and convenience in their habitations, and the general squalidness of their appearance, the Shoshokoes do not appear to be destitute of ingenuity. They manufacture good ropes, and even a tolerably fine thread, from a sort of weed found in their neighborhood; and construct bowls and jugs out of a kind of basket-work formed from small strips of wood plaited: these, by the aid of a little wax, they render perfectly water tight. Beside the roots on which they mainly depend for subsistence, they collect great quantities of seed, of various kinds, beaten with one hand out of the tops of the plants into wooden bowls held for that purpose. The seed thus collected is winnowed and parched, and ground between two stones into a kind of meal or flour; which, when mixed with water, forms a very palatable paste or gruel.

Some of these people, more provident and industrious than the rest, lay up a stock of dried salmon, and other fish, for winter: with these, they were ready to traffic with the travellers for any objects of utility in Indian life; giving a large quantity in exchange for an awl, a knife, or a fish-hook. Others were in the most abject state of want and starvation; and would even gather up the fish-bones which the travellers threw away after a repast, warm them over again at the fire, and pick them with the greatest avidity.

The farther Captain Bonneville advanced into the country of these Root Diggers, the more evidence he perceived of their rude and forlorn condition. "They were destitute," says he, "of the necessary covering to protect them from the weather; and seemed to be in the most unsophisticated ignorance of any other propriety or advantage in the use of clothing. One old dame had absolutely nothing on her person but a thread round her neck, from which was pendant a solitary bead."

What stage of human destitution, however, is too destitute for vanity! Though these naked and forlorn-looking beings had neither toilet to arrange, nor beauty to contemplate, their greatest passion was for a mirror. It was a "great medicine," in their eyes. The sight of one was sufficient, at any time, to throw them into a paroxysm of eagerness and delight; and they were ready to give anything they had for the smallest fragment in which they might behold their squalid features. With this simple instance of vanity, in its primitive but vigorous state, we shall close our remarks on the Root Diggers.

Washington Irving's The Adventures of Captain Bonneville

Chapter 30

Temperature of the climate--Root Diggers on horseback--An Indian guide--Mountain prospects--The Grand Rond--Difficulties on Snake River--A scramble over the Blue Mountains--Sufferings from hunger--Prospect of the Immahah Valley-- The exhausted traveller

THE TEMPERATURE of the regions west of the Rocky Mountains is much milder than in the same latitudes on the Atlantic side; the upper plains, however, which lie at a distance from the sea-coast, are subject in winter to considerable vicissitude; being traversed by lofty "sierras," crowned with perpetual snow, which often produce flaws and streaks of intense cold This was

experienced by Captain Bonneville and his companions in their progress westward. At the time when they left the Bannacks Snake River was frozen hard: as they proceeded, the ice became broken and floating; it gradually disappeared, and the weather became warm and pleasant, as they approached a tributary stream called the Little Wyer; and the soil, which was generally of a watery clay, with occasional intervals of sand, was soft to the tread of the horses. After a time, however, the mountains approached and flanked the river; the snow lay deep in the valleys, and the current was once more icebound.

Here they were visited by a party of Root Diggers, who were apparently rising in the world, for they had "horse to ride and weapon to wear," and were altogether better clad and equipped than any of the tribe that Captain Bonneville had met with. They were just from the plain of Boisee River, where they had left a number of their tribe, all as well provided as themselves; having guns, horses, and comfortable clothing. All these they obtained from the Lower Nez Perces, with whom they were in habits [sic] of frequent traffic. They appeared to have imbibed from that tribe their noncombative principles, being mild and inoffensive in their manners. Like them, also, they had something of religious feelings; for Captain Bonneville observed that, before eating, they washed their hands, and made a short prayer; which he understood was their invariable custom. From these Indians, he obtained a considerable supply of fish, and an excellent and well-conditioned horse, to replace one which had become too weak for the journey.

The travellers now moved forward with renovated spirits; the snow, it is true, lay deeper and deeper as they advanced, but they trudged on merrily, considering themselves well provided for the journey, which could not be of much longer duration.

They had intended to proceed up the banks of Gun Creek, a stream which flows into Snake River from the west; but were assured by the natives that the route in that direction was impracticable. The latter advised them to keep along Snake River, where they would not be impeded by the snow. Taking one of the Diggers for a guide, they set off along the river, and to their joy soon found the country free from snow, as had been predicted, so that their horses once more had the benefit of tolerable pasturage. Their Digger proved an excellent guide, trudging cheerily in the advance. He made an unsuccessful shot or two at a deer and a beaver; but at night found a rabbit hole, whence he extracted the occupant, upon which, with the addition of a fish given him by the travellers, he made a hearty supper, and retired to rest, filled with good cheer and good humor.

The next day the travellers came to where the hills closed upon the river, leaving here and there intervals of undulating meadow land. The river was sheeted with ice, broken into hills at long intervals. The Digger kept on ahead of the party, crossing and recrossing the river in pursuit of game, until, unluckily, encountering a brother Digger, he stole off with him, without the ceremony of leave-taking.

Being now left to themselves, they proceeded until they came to some Indian huts, the inhabitants of which spoke a language totally different from any they had yet heard. One, however, understood the Nez Perce language, and through him they made inquiries as to their route. These Indians were extremely kind and honest, and furnished them with a small quantity of meat; but none of them could be induced to act as guides.

Immediately in the route of the travellers lay a high mountain, which they ascended with some difficulty. The prospect from the summit was grand but disheartening. Directly before them towered the loftiest peaks of Immahah, rising far higher than the elevated ground on which they

stood: on the other hand, they were enabled to scan the course of the river, dashing along through deep chasms, between rocks and precipices, until lost in a distant wilderness of mountains, which closed the savage landscape.

They remained for a long time contemplating, with perplexed and anxious eye, this wild congregation of mountain barriers, and seeking to discover some practicable passage. The approach of evening obliged them to give up the task, and to seek some camping ground for the night. Moving briskly forward, and plunging and tossing through a succession of deep snow-drifts, they at length reached a valley known among trappers as the "Grand Rond," which they found entirely free from snow.

This is a beautiful and very fertile valley, about twenty miles long and five or six broad; a bright cold stream called the Fourche de Glace, or Ice River, runs through it. Its sheltered situation, embosomed in mountains, renders it good pasturing ground in the winter time; when the elk come down to it in great numbers, driven out of the mountains by the snow. The Indians then resort to it to hunt. They likewise come to it in the summer time to dig the camash root, of which it produces immense quantities. When this plant is in blossom, the whole valley is tinted by its blue flowers, and looks like the ocean when overcast by a cloud.

After passing a night in this valley, the travellers in the morning scaled the neighboring hills, to look out for a more eligible route than that upon which they had unluckily fallen; and, after much reconnoitring, determined to make their way once more to the river, and to travel upon the ice when the banks should prove impassable.

On the second day after this determination, they were again upon Snake River, but, contrary to their expectations, it was nearly free from ice. A narrow riband ran along the shore, and sometimes there was a kind of bridge across the stream, formed of old ice and snow. For a short time, they jogged along the bank, with tolerable facility, but at length came to where the river forced its way into the heart of the mountains, winding between tremendous walls of basaltic rock, that rose perpendicularly from the water's edge, frowning in bleak and gloomy grandeur. Here difficulties of all kinds beset their path. The snow was from two to three feet deep, but soft and yielding, so that the horses had no foothold, but kept plunging forward, straining themselves by perpetual efforts. Sometimes the crags and promontories forced them upon the narrow riband of ice that bordered the shore; sometimes they had to scramble over vast masses of rock which had tumbled from the impending precipices; sometimes they had to cross the stream upon the hazardous bridges of ice and snow, sinking to the knee at every step; sometimes they had to scale slippery acclivities, and to pass along narrow cornices, glazed with ice and sleet, a shouldering wall of rock on one side, a yawning precipice on the other, where a single false step would have been fatal. In a lower and less dangerous pass, two of their horses actually fell into the river; one was saved with much difficulty, but the boldness of the shore prevented their rescuing the other, and he was swept away by the rapid current.

In this way they struggled forward, manfully braving difficulties and dangers, until they came to where the bed of the river was narrowed to a mere chasm, with perpendicular walls of rock that defied all further progress. Turning their faces now to the mountain, they endeavored to cross directly over it; but, after clambering nearly to the summit, found their path closed by insurmountable barriers.

Nothing now remained but to retrace their steps. To descend a cragged mountain, however, was

more difficult and dangerous than to ascend it. They had to lower themselves cautiously and slowly, from steep to steep; and, while they managed with difficulty to maintain their own footing, to aid their horses by holding on firmly to the rope halters, as the poor animals stumbled among slippery rocks, or slid down icy declivities. Thus, after a day of intense cold, and severe and incessant toil, amidst the wildest of scenery, they managed, about nightfall, to reach the camping ground, from which they had started in the morning, and for the first time in the course of their rugged and perilous expedition, felt their hearts quailing under their multiplied hardships.

A hearty supper, a tranquillizing pipe, and a sound night's sleep, put them all in better mood, and in the morning they held a consultation as to their future movements. About four miles behind, they had remarked a small ridge of mountains approaching closely to the river. It was determined to scale this ridge, and seek a passage into the valley which must lie beyond. Should they fail in this, but one alternative remained. To kill their horses, dry the flesh for provisions, make boats of the hides, and, in these, commit themselves to the stream--a measure hazardous in the extreme. A short march brought them to the foot of the mountain, but its steep and cragged sides almost discouraged hope. The only chance of scaling it was by broken masses of rock, piled one upon another, which formed a succession of crags, reaching nearly to the summit. Up these they wrought their way with indescribable difficulty and peril, in a zigzag course, climbing from rock to rock, and helping their horses up after them; which scrambled among the crags like mountain goats; now and then dislodging some huge stone, which, the moment they had left it, would roll down the mountain, crashing and rebounding with terrific din. It was some time after dark before they reached a kind of platform on the summit of the mountain, where they could venture to encamp. The winds, which swept this naked height, had whirled all the snow into the valley beneath, so that the horses found tolerable winter pasturage on the dry grass which remained exposed. The travellers, though hungry in the extreme, were fain to make a very frugal supper; for they saw their journey was likely to be prolonged much beyond the anticipated term.

In fact, on the following day they discerned that, although already at a great elevation, they were only as yet upon the shoulder of the mountain. It proved to be a great sierra, or ridge, of immense height, running parallel to the course of the river, swelling by degrees to lofty peaks, but the outline gashed by deep and precipitous ravines. This, in fact, was a part of the chain of Blue Mountains, in which the first adventurers to Astoria experienced such hardships.

We will not pretend to accompany the travellers step by step in this tremendous mountain scramble, into which they had unconsciously betrayed themselves. Day after day did their toil continue; peak after peak had they to traverse, struggling with difficulties and hardships known only to the mountain trapper. As their course lay north, they had to ascend the southern faces of the heights, where the sun had melted the snow, so as to render the ascent wet and slippery, and to keep both men and horses continually on the strain; while on the northern sides, the snow lay in such heavy masses, that it was necessary to beat a track down which the horses might be led. Every now and then, also, their way was impeded by tall and numerous pines, some of which had fallen, and lay in every direction.

In the midst of these toils and hardships, their provisions gave out. For three days they were without food, and so reduced that they could scarcely drag themselves along. At length one of the mules, being about to give out from fatigue and famine, they hastened to dispatch him. Husbanding this miserable supply, they dried the flesh, and for three days subsisted upon the nutriment

extracted from the bones. As to the meat, it was packed and preserved as long as they could do without it, not knowing how long they might remain bewildered in these desolate regions.

One of the men was now dispatched ahead, to reconnoitre the country, and to discover, if possible, some more practicable route. In the meantime, the rest of the party moved on slowly. After a lapse of three days, the scout rejoined them. He informed them that Snake River ran immediately below the sierra or mountainous ridge, upon which they were travelling; that it was free from precipices, and was at no great distance from them in a direct line; but that it would be impossible for them to reach it without making a weary circuit. Their only course would be to cross the mountain ridge to the left.

Up this mountain, therefore, the weary travellers directed their steps; and the ascent, in their present weak and exhausted state, was one of the severest parts of this most painful journey. For two days were they toiling slowly from cliff to cliff, beating at every step a path through the snow for their faltering horses. At length they reached the summit, where the snow was blown off; but in descending on the opposite side, they were often plunging through deep drifts, piled in the hollows and ravines.

Their provisions were now exhausted, and they and their horses almost ready to give out with fatigue and hunger; when one afternoon, just as the sun was sinking behind a blue line of distant mountain, they came to the brow of a height from which they beheld the smooth valley of the Immahah stretched out in smiling verdure below them.

The sight inspired almost a frenzy of delight. Roused to new ardor, they forgot, for a time, their fatigues, and hurried down the mountain, dragging their jaded horses after them, and sometimes compelling them to slide a distance of thirty or forty feet at a time. At length they reached the banks of the Immahah. The young grass was just beginning to sprout, and the whole valley wore an aspect of softness, verdure, and repose, heightened by the contrast of the frightful region from which they had just descended. To add to their joy, they observed Indian trails along the margin of the stream, and other signs, which gave them reason to believe that there was an encampment of the Lower Nez Perces in the neighborhood, as it was within the accustomed range of that pacific and hospitable tribe.

The prospect of a supply of food stimulated them to new exertion, and they continued on as fast as the enfeebled state of themselves and their steeds would permit. At length, one of the men, more exhausted than the rest, threw himself upon the grass, and declared he could go no further. It was in vain to attempt to rouse him; his spirit had given out, and his replies only showed the dogged apathy of despair. His companions, therefore, encamped on the spot, kindled a blazing fire, and searched about for roots with which to strength~n and revive him. They all then made a starveling repast; but gathering round the fire, talked over past dangers and troubles, soothed themselves with the persuasion that all were now at an end, and went to sleep with the comforting hope that the morrow would bring them into plentiful quarters.

Washington Irving's The Adventures of Captain Bonneville

Chapter 31

Progress in the valley--An Indian cavalier--The captain falls into a lethargy--A Nez Perce patriarch-- Hospitable treatment--The bald head--Bargaining-- Value of an old plaid cloak--The family horse-- The cost of an Indian present

---

A TRANQUIL NIGHT'S REST had sufficiently restored the broken down traveller to enable him to resume his wayfaring, and all hands set forward on the Indian trail. With all their eagerness to arrive within reach of succor, such was their feeble and emaciated condition, that they advanced but slowly. Nor is it a matter of surprise that they should almost have lost heart, as well as strength. It was now (the 16th of February) fifty-three days that they had been travelling in the midst of winter, exposed to all kinds of privations and hardships: and for the last twenty days, they had been entangled in the wild and desolate labyrinths of the snowy mountains; climbing and descending icy precipices, and nearly starved with cold and hunger.

All the morning they continued following the Indian trail, without seeing a human being, and were beginning to be discouraged, when, about noon, they discovered a horseman at a distance. He was coming directly toward them; but on discovering them, suddenly reined up his steed, came to a halt, and, after reconnoitring them for a time with great earnestness, seemed about to make a cautious retreat. They eagerly made signs of peace, and endeavored, with the utmost anxiety, to induce him to approach. He remained for some time in doubt; but at length, having satisfied himself that they were not enemies, came galloping up to them. He was a fine, haughty-looking savage, fancifully decorated, and mounted on a high-mettled steed, with gaudy trappings and equipments. It was evident that he was a warrior of some consequence among his tribe. His whole deportment had something in it of barbaric dignity; he felt, perhaps, his temporary superiority in personal array, and in the spirit of his steed, to the poor, ragged, travel-worn trappers and their half-starved horses. Approaching them with an air of protection, he gave them his hand, and, in the Nez Perce language, invited them to his camp, which was only a few miles distant; where he had plenty to eat, and plenty of horses, and would cheerfully share his good things with them. His hospitable invitation was joyfully accepted: he lingered but a moment, to give directions by which they might find his camp, and then, wheeling round, and giving the reins to his mettlesome steed, was soon out of sight. The travellers followed, with gladdened hearts, but at a snail's pace; for their poor horses could scarcely drag one leg after the other. Captain Bonneville, however, experienced a sudden and singular change of feeling. Hitherto, the necessity of conducting his party, and of providing against every emergency, had kept his mind upon the stretch, and his whole system braced and excited. In no one instance had he flagged in spirit, or felt disposed to succumb. Now, however, that all danger was over, and the march of a few miles would bring them to repose and abundance, his energies suddenly deserted him; and every faculty, mental and physical, was totally relaxed. He had not proceeded two miles from the point where he had had the interview with the Nez Perce chief, when he threw himself upon the earth, without the power or will to move a muscle, or exert a thought, and sank almost instantly into a profound and dreamless sleep. His companions again came to a halt, and encamped beside him, and there they passed the night. The next morning, Captain Bonneville awakened from his long and heavy sleep, much refreshed; and they all resumed their creeping progress. They had not long been on the march, when eight or ten of the Nez Perce tribe came galloping to meet them, leading fresh horses to bear them to their camp. Thus gallantly mounted, they felt new life infused into their languid frames, and dashing forward, were soon at the lodges of the Nez Percés. Here they found about twelve families living together, under the patriarchal sway of an ancient and venerable chief. He received them with the hospitality of the golden age, and with something of the same kind of fare; for, while he opened his arms to make them welcome, the only repast he set before them consisted of roots.

---

They could have wished for something more hearty and substantial; but, for want of better, made a voracious meal on these humble viands. The repast being over, the best pipe was lighted and sent round: and this was a most welcome luxury, having lost their smoking apparatus twelve days before, among the mountains.

While they were thus enjoying themselves, their poor horses were led to the best pastures in the neighborhood, where they were turned loose to revel on the fresh sprouting grass; so that they had better fare than their masters.

Captain Bonneville soon felt himself quite at home among these quiet, inoffensive people. His long residence among their cousins, the Upper Nez Perces, had made him conversant with their language, modes of expression, and all their habitudes. He soon found, too, that he was well known among them, by report, at least, from the constant interchange of visits and messages between the two branches of the tribe. They at first addressed him by his name; giving him his title of captain, with a French accent: but they soon gave him a title of their own; which, as usual with Indian titles, had a peculiar signification. In the case of the captain, it had somewhat of a whimsical origin.

As he sat chatting and smoking in the midst of them, he would occasionally take off his cap. Whenever he did so, there was a sensation in the surrounding circle. The Indians would half rise from their recumbent posture, and gaze upon his uncovered head, with their usual exclamation of astonishment. The worthy captain was completely bald; a phenomenon very surprising in their eyes. They were at a loss to know whether he had been scalped in battle, or enjoyed a natural immunity from that belligerent infliction. In a little while, he became known among them by an Indian name, signifying "the bald chief." "A sobriquet," observes the captain, "for which I can find no parallel in history since the days of 'Charles the Bald.'"

Although the travellers had banqueted on roots, and been regaled with tobacco smoke, yet their stomachs craved more generous fare. In approaching the lodges of the Nez Perces, they had indulged in fond anticipations of venison and dried salmon; and dreams of the kind still haunted their imaginations, and could not be conjured down. The keen appetites of mountain trappers, quickened by a fortnight's fasting, at length got the better of all scruples of pride, and they fairly begged some fish or flesh from the hospitable savages. The latter, however, were slow to break in upon their winter store, which was very limited; but were ready to furnish roots in abundance, which they pronounced excellent food. At length, Captain Bonneville thought of a means of attaining the much-coveted gratification.

He had about him, he says, a trusty plaid; an old and valued travelling companion and comforter; upon which the rains had descended, and the snows and winds beaten, without further effect than somewhat to tarnish its primitive lustre. This coat of many colors had excited the admiration, and inflamed the covetousness of both warriors and squaws, to an extravagant degree. An idea now occurred to Captain Bonneville, to convert this rainbow garment into the savory viands so much desired. There was a momentary struggle in his mind, between old associations and projected indulgence; and his decision in favor of the latter was made, he says, with a greater promptness, perhaps, than true taste and sentiment might have required. In a few moments, his plaid cloak was cut into numerous strips. "Of these," continues he, "with the newly developed talent of a man-miliner, I speedily constructed turbans a la Turque, and fanciful head-gears of divers conformations. These, judiciously distributed among such of the womenkind as seemed of most consequence

---

and interest in the eyes of the patres conscripti, brought us, in a little while, abundance of dried salmon and deers' hearts; on which we made a sumptuous supper. Another, and a more satisfactory smoke, succeeded this repast, and sweet slumbers answering the peaceful invocation of our pipes, wrapped us in that delicious rest, which is only won by toil and travail." As to Captain Bonneville, he slept in the lodge of the venerable patriarch, who had evidently conceived a most disinterested affection for him; as was shown on the following morning. The travellers, invigorated by a good supper, and "fresh from the bath of repose," were about to resume their journey, when this affectionate old chief took the captain aside, to let him know how much he loved him. As a proof of his regard, he had determined to give him a fine horse, which would go further than words, and put his good will beyond all question. So saying, he made a signal, and forthwith a beautiful young horse, of a brown color, was led, prancing and snorting, to the place. Captain Bonneville was suitably affected by this mark of friendship; but his experience in what is proverbially called "Indian giving," made him aware that a parting pledge was necessary on his own part, to prove that his friendship was reciprocated. He accordingly placed a handsome rifle in the hands of the venerable chief, whose benevolent heart was evidently touched and gratified by this outward and visible sign of amity.

Having now, as he thought, balanced this little account of friendship, the captain was about to shift his saddle to this noble gift-horse when the affectionate patriarch plucked him by the sleeve, and introduced to him a whimpering, whining, leathern-skinned old squaw, that might have passed for an Egyptian mummy, without drying. "This," said he, "is my wife; she is a good wife--I love her very much.--She loves the horse--she loves him a great deal--she will cry very much at losing him.--I do not know how I shall comfort her--and that makes my heart very sore."

What could the worthy captain do, to console the tender-hearted old squaw, and, peradventure, to save the venerable patriarch from a curtain lecture? He bethought himself of a pair of ear-bobs: it was true, the patriarch's better-half was of an age and appearance that seemed to put personal vanity out of the question, but when is personal vanity extinct? The moment he produced the glittering earbobs, the whimpering and whining of the sempiternal beldame was at an end. She eagerly placed the precious baubles in her ears, and, though as ugly as the Witch of Endor, went off with a sideling gait and coquettish air, as though she had been a perfect Semiramis.

The captain had now saddled his newly acquired steed, and his foot was in the stirrup, when the affectionate patriarch again stepped forward, and presented to him a young Pierced-nose, who had a peculiarly sulky look. "This," said the venerable chief, "is my son: he is very good; a great horseman--he always took care of this very fine horse--he brought him up from a colt, and made him what he is.--He is very fond of this fine horse--he loves him like a brother-- his heart will be very heavy when this fine horse leaves the camp."

What could the captain do, to reward the youthful hope of this venerable pair, and comfort him for the loss of his foster-brother, the horse? He bethought him of a hatchet, which might be spared from his slender stores. No sooner did he place the implement into the hands of the young hopeful, than his countenance brightened up, and he went off rejoicing in his hatchet, to the full as much as did his respectable mother in her ear-bobs.

The captain was now in the saddle, and about to start, when the affectionate old patriarch stepped forward, for the third time, and, while he laid one hand gently on the mane of the horse, held up the rifle in the other. "This rifle," said he, "shall be my great medicine. I will hug it to my heart--I

will always love it, for the sake of my good friend, the bald-headed chief.--But a rifle, by itself, is dumb--I cannot make it speak. If I had a little powder and ball, I would take it out with me, and would now and then shoot a deer; and when I brought the meat home to my hungry family, I would say--This was killed by the rifle of my friend, the bald-headed chief, to whom I gave that very fine horse."

There was no resisting this appeal; the captain, forthwith, furnished the coveted supply of powder and ball; but at the same time, put spurs to his very fine gift-horse, and the first trial of his speed was to get out of all further manifestation of friendship, on the part of the affectionate old patriarch and his insinuating family.

Washington Irving's The Adventures of Captain Bonneville

Chapter 32

Nez Perce camp--A chief with a hard name--The Big Hearts of the East--Hospitable treatment--The Indian guides--Mysterious councils--The loquacious chief--Indian tomb--Grand Indian reception--An Indian feast--Town-criers--Honesty of the Nez Percés--The captain's attempt at healing.

FOLLOWING THE COURSE of the Immahah, Captain Bonneville and his three companions soon reached the vicinity of Snake River. Their route now lay over a succession of steep and isolated hills, with profound valleys. On the second day, after taking leave of the affectionate old patriarch, as they were descending into one of those deep and abrupt intervals, they descried a smoke, and shortly afterward came in sight of a small encampment of Nez Percés.

The Indians, when they ascertained that it was a party of white men approaching, greeted them with a salute of firearms, and invited them to encamp. This band was likewise under the sway of a venerable chief named Yo-mus-ro-y-e-cut; a name which we shall be careful not to inflict often than is necessary upon the reader. This ancient and hard-named chieftain welcomed Captain Bonneville to his camp with the same hospitality and loving kindness that he had experienced from his predecessor. He told the captain he had often heard of the Americans and their generous deeds, and that his buffalo brethren (the Upper Nez Percés) had always spoken of them as the Big-hearted whites of the East, the very good friends of the Nez Percés.

Captain Bonneville felt somewhat uneasy under the responsibility of this magnanimous but costly appellation; and began to fear he might be involved in a second interchange of pledges of friendship. He hastened, therefore, to let the old chief know his poverty-stricken state, and how little there was to be expected from him.

He informed him that he and his comrades had long resided among the Upper Nez Percés, and loved them so much, that they had thrown their arms around them, and now held them close to their hearts. That he had received such good accounts from the Upper Nez Percés of their cousins, the Lower Nez Percés, that he had become desirous of knowing them as friends and brothers.

That he and his companions had accordingly loaded a mule with presents and set off for the country of the Lower Nez Percés; but, unfortunately, had been entrapped for many days among the snowy mountains; and that the mule with all the presents had fallen into Snake River, and been swept away by the rapid current. That instead, therefore, of arriving among their friends, the Nez Percés, with light hearts and full hands, they came naked, hungry, and broken down; and instead of making them presents, must depend upon them even for food. "But," concluded he, "we are

going to the white men's fort on the Wallah-Wallah, and will soon return; and then we will meet our Nez Perce friends like the true Big Hearts of the East."

Whether the hint thrown out in the latter part of the speech had any effect, or whether the old chief acted from the hospitable feelings which, according to the captain, are really inherent in the Nez Perce tribe, he certainly showed no disposition to relax his friendship on learning the destitute circumstances of his guests. On the contrary, he urged the captain to remain with them until the following day, when he would accompany him on his journey, and make him acquainted with all his people. In the meantime, he would have a colt killed, and cut up for travelling provisions. This, he carefully explained, was intended not as an article of traffic, but as a gift; for he saw that his guests were hungry and in need of food.

Captain Bonneville gladly assented to this hospitable arrangement. The carcass of the colt was forthcoming in due season, but the captain insisted that one half of it should be set apart for the use of the chieftain's family.

At an early hour of the following morning, the little party resumed their journey, accompanied by the old chief and an Indian guide. Their route was over a rugged and broken country; where the hills were slippery with ice and snow. Their horses, too, were so weak and jaded, that they could scarcely climb the steep ascents, or maintain their foothold on the frozen declivities. Throughout the whole of the journey, the old chief and the guide were unremitting in their good offices, and continually on the alert to select the best roads, and assist them through all difficulties. Indeed, the captain and his comrades had to be dependent on their Indian friends for almost every thing, for they had lost their tobacco and pipes, those great comforts of the trapper, and had but a few charges of powder left, which it was necessary to husband for the purpose of lighting their fires. In the course of the day the old chief had several private consultations with the guide, and showed evident signs of being occupied with some mysterious matter of mighty import. What it was, Captain Bonneville could not fathom, nor did he make much effort to do so. From some casual sentences that he overheard, he perceived that it was something from which the old man promised himself much satisfaction, and to which he attached a little vainglory but which he wished to keep a secret; so he suffered him to spin out his petty plans unmolested.

In the evening when they encamped, the old chief and his privy counsellor, the guide, had another mysterious colloquy, after which the guide mounted his horse and departed on some secret mission, while the chief resumed his seat at the fire, and sat humming to himself in a pleasing but mystic reverie.

The next morning, the travellers descended into the valley of the Way-lee-way, a considerable tributary of Snake River. Here they met the guide returning from his secret errand. Another private conference was held between him and the old managing chief, who now seemed more inflated than ever with mystery and self-importance. Numerous fresh trails, and various other signs, persuaded Captain Bonneville that there must be a considerable village of Nez Perces in the neighborhood; but as his worthy companion, the old chief, said nothing on the subject, and as it appeared to be in some way connected with his secret operations, he asked no questions, but patiently awaited the development of his mystery.

As they journeyed on, they came to where two or three Indians were bathing in a small stream. The good old chief immediately came to a halt, and had a long conversation with them, in the course of which he repeated to them the whole history which Captain Bonneville had related to

him. In fact, he seems to have been a very sociable, communicative old man; by no means afflicted with that taciturnity generally charged upon the Indians. On the contrary, he was fond of long talks and long smokings, and evidently was proud of his new friend, the bald-headed chief, and took a pleasure in sounding his praises, and setting forth the power and glory of the Big Hearts of the East.

Having disburdened himself of everything he had to relate to his bathing friends, he left them to their aquatic disports, and proceeded onward with the captain and his companions. As they approached the Way-lee-way, however, the communicative old chief met with another and a very different occasion to exert his colloquial powers. On the banks of the river stood an isolated mound covered with grass. He pointed to it with some emotion. "The big heart and the strong arm," said he, "lie buried beneath that sod."

It was, in fact, the grave of one of his friends; a chosen warrior of the tribe; who had been slain on this spot when in pursuit of a war party of Shoshokoes, who had stolen the horses of the village. The enemy bore off his scalp as a trophy; but his friends found his body in this lonely place, and committed it to the earth with ceremonials characteristic of their pious and reverential feelings. They gathered round the grave and mourned; the warriors were silent in their grief; but the women and children bewailed their loss with loud lamentations. "For three days," said the old man, "we performed the solemn dances for the dead, and prayed the Great Spirit that our brother might be happy in the land of brave warriors and hunters. Then we killed at his grave fifteen of our best and strongest horses, to serve him when he should arrive at the happy hunting grounds; and having done all this, we returned sorrowfully to our homes."

While the chief was still talking, an Indian scout came galloping up, and, presenting him with a powder-horn, wheeled round, and was speedily out of sight. The eyes of the old chief now brightened; and all his self-importance returned. His petty mystery was about to explode. Turning to Captain Bonneville, he pointed to a hill hard by, and informed him, that behind it was a village governed by a little chief, whom he had notified of the approach of the bald-headed chief, and a party of the Big Hearts of the East, and that he was prepared to receive them in becoming style. As, among other ceremonials, he intended to salute them with a discharge of firearms, he had sent the horn of gunpowder that they might return the salute in a manner correspondent to his dignity.

They now proceeded on until they doubled the point of the hill, when the whole population of the village broke upon their view, drawn out in the most imposing style, and arrayed in all their finery. The effect of the whole was wild and fantastic, yet singularly striking. In the front rank were the chiefs and principal warriors, glaringly painted and decorated; behind them were arranged the rest of the people, men, women, and children.

Captain Bonneville and his party advanced slowly, exchanging salutes of firearms. When arrived within a respectful distance, they dismounted. The chiefs then came forward successively, according to their respective characters and consequence, to offer the hand of good fellowship; each filing off when he had shaken hands, to make way for his successor. Those in the next rank followed in the same order, and so on, until all had given the pledge of friendship. During all this time, the chief, according to custom, took his stand beside the guests. If any of his people advanced whom he judged unworthy of the friendship or confidence of the white men, he motioned them off by a wave of the hand, and they would submissively walk away. When Captain Bonneville turned upon

him an inquiring look, he would observe, "he was a bad man," or something quite as concise, and there was an end of the matter.

Mats, poles, and other materials were now brought, and a comfortable lodge was soon erected for the strangers, where they were kept constantly supplied with wood and water, and other necessaries; and all their effects were placed in safe keeping. Their horses, too, were unsaddled, and turned loose to graze, and a guard set to keep watch upon them.

All this being adjusted, they were conducted to the main building or council house of the village, where an ample repast, or rather banquet, was spread, which seemed to realize all the gastronomical dreams that had tantalized them during their long starvation; for here they beheld not merely fish and roots in abundance, but the flesh of deer and elk, and the choicest pieces of buffalo meat. It is needless to say how vigorously they acquitted themselves on this occasion, and how unnecessary it was for their hosts to practice the usual cramming principle of Indian hospitality.

When the repast was over, a long talk ensued. The chief showed the same curiosity evinced by his tribe generally, to obtain information concerning the United States, of which they knew little but what they derived through their cousins, the Upper Nez Perces; as their traffic is almost exclusively with the British traders of the Hudson's Bay Company. Captain Bonneville did his best to set forth the merits of his nation, and the importance of their friendship to the red men, in which he was ably seconded by his worthy friend, the old chief with the hard name, who did all that he could to glorify the Big Hearts of the East.

The chief, and all present, listened with profound attention, and evidently with great interest; nor were the important facts thus set forth, confined to the audience in the lodge; for sentence after sentence was loudly repeated by a crier for the benefit of the whole village.

This custom of promulgating everything by criers, is not confined to the Nez Perces, but prevails among many other tribes. It has its advantage where there are no gazettes to publish the news of the day, or to report the proceedings of important meetings. And in fact, reports of this kind, viva voce, made in the hearing of all parties, and liable to be contradicted or corrected on the spot, are more likely to convey accurate information to the public mind than those circulated through the press. The office of crier is generally filled by some old man, who is good for little else. A village has generally several of these walking newspapers, as they are termed by the whites, who go about proclaiming the news of the day, giving notice of public councils, expeditions, dances, feasts, and other ceremonials, and advertising anything lost. While Captain Bonneville remained among the Nez Perces, if a glove, handkerchief, or anything of similar value, was lost or mislaid, it was carried by the finder to the lodge of the chief, and proclamation was made by one of their criers, for the owner to come and claim his property.

How difficult it is to get at the true character of these wandering tribes of the wilderness! In a recent work, we have had to speak of this tribe of Indians from the experience of other traders who had casually been among them, and who represented them as selfish, inhospitable, exorbitant in their dealings, and much addicted to thieving; Captain Bonneville, on the contrary, who resided much among them, and had repeated opportunities of ascertaining their real character, invariably speaks of them as kind and hospitable, scrupulously honest, and remarkable, above all other Indians that he had met with, for a strong feeling of religion. In fact, so enthusiastic is he in their praise, that he pronounces them, all ignorant and barbarous as they are by their condition, one of the purest hearted people on the face of the earth.

---

Some cures which Captain Bonneville had effected in simple cases, among the Upper Nez Perces, had reached the ears of their cousins here, and gained for him the reputation of a great medicine man. He had not been long in the village, therefore, before his lodge began to be the resort of the sick and the infirm. The captain felt the value of the reputation thus accidentally and cheaply acquired, and endeavored to sustain it. As he had arrived at that age when every man is, experimentally, something of a physician, he was enabled to turn to advantage the little knowledge in the healing art which he had casually picked up; and was sufficiently successful in two or three cases, to convince the simple Indians that report had not exaggerated his medical talents. The only patient that effectually baffled his skill, or rather discouraged any attempt at relief, was an antiquated squaw with a churchyard cough, and one leg in the grave; it being shrunk and rendered useless by a rheumatic affection. This was a case beyond his mark; however, he comforted the old woman with a promise that he would endeavor to procure something to relieve her, at the fort on the Wallah-Wallah, and would bring it on his return; with which assurance her husband was so well satisfied, that he presented the captain with a colt, to be killed as provisions for the journey: a medical fee which was thankfully accepted.

While among these Indians, Captain Bonneville unexpectedly found an owner for the horse which he had purchased from a Root Digger at the Big Wyr. The Indian satisfactorily proved that the horse had been stolen from him some time previous, by some unknown thief. "However," said the considerate savage, "you got him in fair trade--you are more in want of horses than I am: keep him; he is yours--he is a good horse; use him well."

Thus, in the continued experience of acts of kindness and generosity, which his destitute condition did not allow him to reciprocate, Captain Bonneville passed some short time among these good people, more and more impressed with the general excellence of their character.

Washington Irving's The Adventures of Captain Bonneville

Chapter 33

Scenery of the Way-lee-way--A substitute for tobacco--Sublime scenery of Snake River--The garrulous old chief and his cousin--A Nez Perce meeting--A stolen skin--The scapegoat dog--Mysterious conferences--The little chief--His hospitality--The captain's account of the United States--His healing skill

IN RESUMING HIS JOURNEY, Captain Bonneville was conducted by the same Nez Perce guide, whose knowledge of the country was important in choosing the routes and resting places. He also continued to be accompanied by the worthy old chief with the hard name, who seemed bent upon doing the honors of the country, and introducing him to every branch of his tribe. The Way-lee-way, down the banks of which Captain Bonneville and his companions were now travelling, is a considerable stream winding through a succession of bold and beautiful scenes. Sometimes the landscape towered into bold and mountainous heights that partook of sublimity; at other times, it stretched along the water side in fresh smiling meadows, and graceful undulating valleys.

Frequently in their route they encountered small parties of the Nez Perces, with whom they invariably stopped to shake hands; and who, generally, evinced great curiosity concerning them and their adventures; a curiosity which never failed to be thoroughly satisfied by the replies of the worthy Yo-mus-ro-y-e-cut, who kindly took upon himself to be spokesman of the party.

The incessant smoking of pipes incident to the long talks of this excellent, but somewhat garru-

lous old chief, at length exhausted all his stock of tobacco, so that he had no longer a whiff with which to regale his white companions. In this emergency, he cut up the stem of his pipe into fine shavings, which he mixed with certain herbs, and thus manufactured a temporary succedaneum to enable him to accompany his long colloquies and harangues with the customary fragrant cloud. If the scenery of the Way-lee-way had charmed the travellers with its mingled amenity and grandeur, that which broke upon them on once more reaching Snake River, filled them with admiration and astonishment. At times, the river was overhung by dark and stupendous rocks, rising like gigantic walls and battlements; these would be rent by wide and yawning chasms, that seemed to speak of past convulsions of nature. Sometimes the river was of a glassy smoothness and placidity; at other times it roared along in impetuous rapids and foaming cascades. Here, the rocks were piled in the most fantastic crags and precipices; and in another place, they were succeeded by delightful valleys carpeted with green-award. The whole of this wild and varied scenery was dominated by immense mountains rearing their distant peaks into the clouds. "The grandeur and originality of the views, presented on every side," says Captain Bonneville, "beggar both the pencil and the pen. Nothing we had ever gazed upon in any other region could for a moment compare in wild majesty and impressive sternness, with the series of scenes which here at every turn astonished our senses, and filled us with awe and delight."

Indeed, from all that we can gather from the journal before us, and the accounts of other travellers, who passed through these regions in the memorable enterprise of Astoria, we are inclined to think that Snake River must be one of the most remarkable for varied and striking scenery of all the rivers of this continent. From its head waters in the Rocky Mountains, to its junction with the Columbia, its windings are upward of six hundred miles through every variety of landscape. Rising in a volcanic region, amid extinguished craters, and mountains awful with the traces of ancient fires, it makes its way through great plains of lava and sandy deserts, penetrates vast sierras or mountainous chains, broken into romantic and often frightful precipices, and crowned with eternal snows; and at other times, careers through green and smiling meadows, and wide landscapes of Italian grace and beauty. Wildness and sublimity, however, appear to be its prevailing characteristics.

Captain Bonneville and his companions had pursued their journey a considerable distance down the course of Snake River, when the old chief halted on the bank, and dismounting, recommended that they should turn their horses loose to graze, while he summoned a cousin of his from a group of lodges on the opposite side of the stream. His summons was quickly answered. An Indian, of an active elastic form, leaped into a light canoe of cotton-wood, and vigorously plying the paddle, soon shot across the river. Bounding on shore, he advanced with a buoyant air and frank demeanor, and gave his right hand to each of the party in turn. The old chief, whose hard name we forbear to repeat, now presented Captain Bonneville, in form, to his cousin, whose name, we regret to say, was no less hard being nothing less than Hay-she-in-cow-cow. The latter evinced the usual curiosity to know all about the strangers, whence they came whither they were going, the object of their journey, and the adventures they had experienced. All these, of course, were ample and eloquently set forth by the communicative old chief. To all his grandiloquent account of the bald-headed chief and his countrymen, the Big Hearts of the East, his cousin listened with great attention, and replied in the customary style of Indian welcome. He then desired the party to await his return, and, springing into his canoe, darted across the river. In a little while he re-

turned, bringing a most welcome supply of tobacco, and a small stock of provisions for the road, declaring his intention of accompanying the party. Having no horse, he mounted behind one of the men, observing that he should procure a steed for himself on the following day.

They all now jogged on very sociably and cheerily together. Not many miles beyond, they met others of the tribe, among whom was one, whom Captain Bonneville and his comrades had known during their residence among the Upper Nez Perces, and who welcomed them with open arms. In this neighborhood was the home of their guide, who took leave of them with a profusion of good wishes for their safety and happiness. That night they put up in the hut of a Nez Perce, where they were visited by several warriors from the other side of the river, friends of the old chief and his cousin, who came to have a talk and a smoke with the white men. The heart of the good old chief was overflowing with good will at thus being surrounded by his new and old friends, and he talked with more spirit and vivacity than ever. The evening passed away in perfect harmony and good-humor, and it was not until a late hour that the visitors took their leave and recrossed the river.

After this constant picture of worth and virtue on the part of the Nez Perce tribe, we grieve to have to record a circumstance calculated to throw a temporary shade upon the name. In the course of the social and harmonious evening just mentioned, one of the captain's men, who happened to be something of a virtuoso in his way, and fond of collecting curiosities, produced a small skin, a great rarity in the eyes of men conversant in peltries. It attracted much attention among the visitors from beyond the river, who passed it from one to the other, examined it with looks of lively admiration, and pronounced it a great medicine.

In the morning, when the captain and his party were about to set off, the precious skin was missing. Search was made for it in the hut, but it was nowhere to be found; and it was strongly suspected that it had been purloined by some of the connoisseurs from the other side of the river. The old chief and his cousin were indignant at the supposed delinquency of their friends across the water, and called out for them to come over and answer for their shameful conduct. The others answered to the call with all the promptitude of perfect innocence, and spurned at the idea of their being capable of such outrage upon any of the Big-hearted nation. All were at a loss on whom to fix the crime of abstracting the invaluable skin, when by chance the eyes of the worthies from beyond the water fell upon an unhappy cur, belonging to the owner of the hut. He was a gallops-looking dog, but not more so than most Indian dogs, who, take them in the mass, are little better than a generation of vipers. Be that as it may, he was instantly accused of having devoured the skin in question. A dog accused is generally a dog condemned; and a dog condemned is generally a dog executed. So was it in the present instance. The unfortunate cur was arraigned; his thievish looks substantiated his guilt, and he was condemned by his judges from across the river to be hanged. In vain the Indians of the hut, with whom he was a great favorite, interceded in his behalf. In vain Captain Bonneville and his comrades petitioned that his life might be spared. His judges were inexorable. He was doubly guilty: first, in having robbed their good friends, the Big Hearts of the East; secondly, in having brought a doubt on the honor of the Nez Perce tribe. He was, accordingly, swung aloft, and pelted with stones to make his death more certain. The sentence of the judges being thoroughly executed, a post mortem examination of the body of the dog was held, to establish his delinquency beyond all doubt, and to leave the Nez Perces without a shadow of suspicion. Great interest, of course, was manifested by all present, during this opera-

tion. The body of the dog was opened, the intestines rigorously scrutinized, but, to the horror of all concerned, not a particle of the skin was to be found--the dog had been unjustly executed! A great clamor now ensued, but the most clamorous was the party from across the river, whose jealousy of their good name now prompted them to the most vociferous vindications of their innocence. It was with the utmost difficulty that the captain and his comrades could calm their lively sensibilities, by accounting for the disappearance of the skin in a dozen different ways, until all idea of its having been stolen was entirely out of the question.

The meeting now broke up. The warriors returned across the river, the captain and his comrades proceeded on their journey; but the spirits of the communicative old chief, Yo-mus-ro-y-e-cut, were for a time completely dampened, and he evinced great mortification at what had just occurred. He rode on in silence, except, that now and then he would give way to a burst of indignation, and exclaim, with a shake of the head and a toss of the hand toward the opposite shore--"bad men, very bad men across the river"; to each of which brief exclamations, his worthy cousin, Hay-she-in-cow-cow, would respond by a guttural sound of acquiescence, equivalent to an amen. After some time, the countenance of the-old chief again cleared up, and he fell into repeated conferences, in an under tone, with his cousin, which ended in the departure of the latter, who, applying the lash to his horse, dashed forward and was soon out of sight. In fact, they were drawing near to the village of another chief, likewise distinguished by an appellation of some longitude, O-pushy-e-cut; but commonly known as the great chief. The cousin had been sent ahead to give notice of their approach; a herald appeared as before, bearing a powder-horn, to enable them to respond to the intended salute. A scene ensued, on their approach to the village, similar to that which had occurred at the village of the little chief. The whole population appeared in the field, drawn up in lines, arrayed with the customary regard to rank and dignity. Then came on the firing of salutes, and the shaking of hands, in which last ceremonial every individual, man, woman, and child, participated; for the Indians have an idea that it is as indispensable an overture of friendship among the whites as smoking of the pipe is among the red men. The travellers were next ushered to the banquet, where all the choicest viands that the village could furnish, were served up in rich profusion. They were afterwards entertained by feats of agility and horseraces; indeed, their visit to the village seemed the signal for complete festivity. In the meantime, a skin lodge had been spread for their accommodation, their horses and baggage were taken care of, and wood and water supplied in abundance. At night, therefore, they retired to their quarters, to enjoy, as they supposed, the repose of which they stood in need. No such thing, however, was in store for them. A crowd of visitors awaited their appearance, all eager for a smoke and a talk. The pipe was immediately lighted, and constantly replenished and kept alive until the night was far advanced. As usual, the utmost eagerness was evinced by the guests to learn everything within the scope of their comprehension respecting the Americans, for whom they professed the most fraternal regard. The captain, in his replies, made use of familiar illustrations, calculated to strike their minds, and impress them with such an idea of the might of his nation, as would induce them to treat with kindness and respect all stragglers that might fall in their path. To their inquiries as to the numbers of the people of the United States, he assured them that they were as countless as the blades of grass in the prairies, and that, great as Snake River was, if they were all encamped upon its banks, they would drink it dry in a single day. To these and similar statistics, they listened with profound attention, and apparently, implicit belief. It was, indeed, a striking scene: the captain,

with his hunter's dress and bald head in the midst, holding forth, and his wild auditors seated around like so many statues, the fire lighting up their painted faces and muscular figures, all fixed and motionless, excepting when the pipe was passed, a question propounded, or a startling fact in statistics received with a movement of surprise and a half-suppressed ejaculation of wonder and delight.

The fame of the captain as a healer of diseases, had accompanied him to this village, and the great chief, O-push-y-e-cut, now entreated him to exert his skill on his daughter, who had been for three days racked with pains, for which the Pierced-nose doctors could devise no alleviation. The captain found her extended on a pallet of mats in excruciating pain. Her father manifested the strongest paternal affection for her, and assured the captain that if he would but cure her, he would place the Americans near his heart. The worthy captain needed no such inducement. His kind heart was already touched by the sufferings of the poor girl, and his sympathies quickened by her appearance; for she was but about sixteen years of age, and uncommonly beautiful in form and feature. The only difficulty with the captain was, that he knew nothing of her malady, and that his medical science was of a most haphazard kind. After considering and cogitating for some time, as a man is apt to do when in a maze of vague ideas, he made a desperate dash at a remedy. By his directions, the girl was placed in a sort of rude vapor bath, much used by the Nez Percés, where she was kept until near fainting. He then gave her a dose of gunpowder dissolved in cold water, and ordered her to be wrapped in buffalo robes and put to sleep under a load of furs and blankets. The remedy succeeded: the next morning she was free from pain, though extremely languid; whereupon, the captain prescribed for her a bowl of colt's head broth, and that she should be kept for a time on simple diet.

The great chief was unbounded in his expressions of gratitude for the recovery of his daughter. He would fain have detained the captain a long time as his guest, but the time for departure had arrived. When the captain's horse was brought for him to mount, the chief declared that the steed was not worthy of him, and sent for one of his best horses, which he presented in its stead; declaring that it made his heart glad to see his friend so well mounted. He then appointed a young Nez Perce to accompany his guest to the next village, and "to carry his talk" concerning them; and the two parties separated with mutual expressions of good will.

The vapor bath of which we have made mention is in frequent use among the Nez Perce tribe, chiefly for cleanliness. Their sweating houses, as they call them, are small and close lodges, and the vapor is produced by water poured slowly upon red-hot stones.

On passing the limits of O-push-y-e-cut's domains, the travellers left the elevated table-lands, and all the wild and romantic scenery which has just been described. They now traversed a gently undulating country, of such fertility that it excited the rapturous admiration of two of the captain's followers, a Kentuckian and a native of Ohio. They declared that it surpassed any land that they had ever seen, and often exclaimed what a delight it would be just to run a plough through such a rich and teeming soil, and see it open its bountiful promise before the share.

Another halt and sojourn of a night was made at the village of a chief named He-mim-el-pilp, where similar ceremonies were observed and hospitality experienced, as at the preceding villages. They now pursued a west-southwest course through a beautiful and fertile region, better wooded than most of the tracts through which they had passed. In their progress, they met with several bands of Nez Percés, by whom they were invariably treated with the utmost kindness. Within

---

seven days after leaving the domain of He-mim-el-pilp, they struck the Columbia River at Fort Wallah-Wallah, where they arrived on the 4th of March, 1834.

Washington Irving's The Adventures of Captain Bonneville

Chapter 34

Fort Wallah-Wallah--Its commander--Indians in its neighborhood--Exertions of Mr. Pambrune for their improvement--Religion--Code of laws--Range of the Lower Nez Perces--Camash, and other roots-- Nez Perce horses--Preparations for departure-- Refusal of supplies--Departure--A laggard and glutton

FORT WALLAH - WALLAH is a trading post of the Hudson's Bay Company, situated just above the mouth of the river by the same name, and on the left bank of the Columbia. It is built of drift-wood, and calculated merely for defence against any attack of the natives. At the time of Captain Bonneville's arrival, the whole garrison mustered but six or eight men; and the post was under the superintendence of Mr. Pambrune, an agent of the Hudson's Bay Company.

The great post and fort of the company, forming the emporium of its trade on the Pacific, is Fort Vancouver; situated on the right bank of the Columbia, about sixty miles from the sea, and just above the mouth of the Wallamut. To this point, the company removed its establishment from Astoria, in 1821, after its coalition with the Northwest Company.

Captain Bonneville and his comrades experienced a polite reception from Mr. Pambrune, the superintendent: for, however hostile the members of the British Company may be to the enterprises of American traders, they have always manifested great courtesy and hospitality to the traders themselves.

Fort Wallah-Wallah is surrounded by the tribe of the same name, as well as by the Skynses and the Nez Perces; who bring to it the furs and peltries collected in their hunting expeditions. The Wallah-Wallahs are a degenerate, worn-out tribe. The Nez Perces are the most numerous and tractable of the three tribes just mentioned. Mr. Pambrune informed Captain Bonneville that he had been at some pains to introduce the Christian religion, in the Roman Catholic form, among them, where it had evidently taken root; but had become altered and modified, to suit their peculiar habits of thought, and motives of action; retaining, however, the principal points of faith, and its entire precepts of morality. The same gentleman had given them a code of laws, to which they conformed with scrupulous fidelity. Polygamy, which once prevailed among them to a great extent, was now rarely indulged. All the crimes denounced by the Christian faith met with severe punishment among them. Even theft, so venial a crime among the Indians, had recently been punished with hanging, by sentence of a chief.

There certainly appears to be a peculiar susceptibility of moral and religious improvement among this tribe, and they would seem to be one of the very, very few that have benefited in morals and manners by an intercourse with white men. The parties which visited them about twenty years previously, in the expedition fitted out by Mr. Astor, complained of their selfishness, their extortion, and their thievish propensities. The very reverse of those qualities prevailed among them during the prolonged sojourns of Captain Bonneville.

The Lower Nez Perces range upon the Way-lee-way, Immahah, Yenghies, and other of the streams west of the mountains. They hunt the beaver, elk, deer, white bear, and mountain sheep. Besides the flesh of these animals, they use a number of roots for food; some of which would be well

---

worth transplanting and cultivating in the Atlantic States. Among these is the camash, a sweet root, about the form and size of an onion, and said to be really delicious. The cowish, also, or biscuit root, about the size of a walnut, which they reduce to a very palatable flour; together with the jackap, aisish, quako, and others; which they cook by steaming them in the ground.

In August and September, these Indians keep along the rivers, where they catch and dry great quantities of salmon; which, while they last, are their principal food. In the winter, they congregate in villages formed of comfortable huts, or lodges, covered with mats. They are generally clad in deer skins, or woollens, and extremely well armed. Above all, they are celebrated for owning great numbers of horses; which they mark, and then suffer to range in droves in their most fertile plains. These horses are principally of the pony breed; but remarkably stout and long-winded. They are brought in great numbers to the establishments of the Hudson's Bay Company, and sold for a mere trifle.

Such is the account given by Captain Bonneville of the Nez Perces; who, if not viewed by him with too partial an eye, are certainly among the gentlest, and least barbarous people of these remote wildernesses. They invariably signified to him their earnest wish that an American post might be established among them; and repeatedly declared that they would trade with Americans, in preference to any other people.

Captain Bonneville had intended to remain some time in this neighborhood, to form an acquaintance with the natives, and to collect information, and establish connections that might be advantageous in the way of trade. The delays, however, which he had experienced on his journey, obliged him to shorten his sojourn, and to set off as soon as possible, so as to reach the rendezvous at the Portneuf at the appointed time. He had seen enough to convince him that an American trade might be carried on with advantage in this quarter; and he determined soon to return with a stronger party, more completely fitted for the purpose.

As he stood in need of some supplies for his journey, he applied to purchase them of Mr. Pambrune; but soon found the difference between being treated as a guest, or as a rival trader. The worthy superintendent, who had extended to him all the genial rites of hospitality, now suddenly assumed a withered-up aspect and demeanor, and observed that, however he might feel disposed to serve him, personally, he felt bound by his duty to the Hudson's Bay Company, to do nothing which should facilitate or encourage the visits of other traders among the Indians in that part of the country. He endeavored to dissuade Captain Bonneville from returning through the Blue Mountains; assuring him it would be extremely difficult and dangerous, if not impracticable, at this season of the year; and advised him to accompany Mr. Payette, a leader of the Hudson's Bay Company, who was about to depart with a number of men, by a more circuitous, but safe route, to carry supplies to the company's agent, resident among the Upper Nez Perces. Captain Bonneville, however, piqued at his having refused to furnish him with supplies, and doubting the sincerity of his advice, determined to return by the more direct route through the mountains; though varying his course, in some respects, from that by which he had come, in consequence of information gathered among the neighboring Indians.

Accordingly, on the 6th of March, he and his three companions, accompanied by their Nez Perce guides, set out on their return. In the early part of their course, they touched again at several of the Nez Perce villages, where they had experienced such kind treatment on their way down. They were always welcomed with cordiality; and everything was done to cheer them on their journey.

On leaving the Way-lee-way village, they were joined by a Nez Perce, whose society was welcomed on account of the general gratitude and good will they felt for his tribe. He soon proved a heavy clog upon the little party, being doltish and taciturn, lazy in the extreme, and a huge feeder. His only proof of intellect was in shrewdly avoiding all labor, and availing himself of the toil of others. When on the march, he always lagged behind the rest, leaving to them the task of breaking a way through all difficulties and impediments, and leisurely and lazily jogging along the track, which they had beaten through the snow. At the evening encampment, when others were busy gathering fuel, providing for the horses, and cooking the evening repast, this worthy Sancho of the wilderness would take his seat quietly and cosily by the fire, puffing away at his pipe, and eyeing in silence, but with wistful intensity of gaze, the savory morsels roasting for supper. When meal-time arrived, however, then came his season of activity. He no longer hung back, and waited for others to take the lead, but distinguished himself by a brilliancy of onset, and a sustained vigor and duration of attack, that completely shamed the efforts of his competitors--albeit, experienced trenchermen of no mean prowess. Never had they witnessed such power of mastication, and such marvellous capacity of stomach, as in this native and uncultivated gastronome. Having, by repeated and prolonged assaults, at length completely gorged himself, he would wrap himself up and lie with the torpor of an anaconda; slowly digesting his way on to the next repast. The gormandizing powers of this worthy were, at first, matters of surprise and merriment to the travellers; but they soon became too serious for a joke, threatening devastation to the fleshpots; and he was regarded askance, at his meals, as a regular kill-crop, destined to waste the substance of the party. Nothing but a sense of the obligations they were under to his nation induced them to bear with such a guest; but he proceeded, speedily, to relieve them from the weight of these obligations, by eating a receipt in full.

Washington Irving's The Adventures of Captain Bonneville

Chapter 35

The uninvited guest--Free and easy manners--Salutary jokes--A prodigal son--Exit of the glutton-- A sudden change in fortune--Danger of a visit to poor relations--Plucking of a prosperous man--A vagabond toilet--A substitute for the very fine horse--Hard travelling--The uninvited guest and the patriarchal colt--A beggar on horseback--A catastrophe--Exit of the merry vagabond

As CAPTAIN BONNEVILLE and his men were encamped one evening among the hills near Snake River, seated before their fire, enjoying a hearty supper, they were suddenly surprised by the visit of an uninvited guest. He was a ragged, half-naked Indian hunter, armed with bow and arrows, and had the carcass of a fine buck thrown across his shoulder. Advancing with an alert step, and free and easy air, he threw the buck on the ground, and, without waiting for an invitation, seated himself at their mess, helped himself without ceremony, and chatted to the right and left in the liveliest and most unembarrassed manner. No adroit and veteran dinner hunter of a metropolis could have acquitted himself more knowingly. The travellers were at first completely taken by surprise, and could not but admire the facility with which this ragged cosmopolite made himself at home among them. While they stared he went on, making the most of the good cheer upon which he had so fortunately alighted; and was soon elbow deep in "pot luck," and greased from the tip of his nose to the back of his ears.

As the company recovered from their surprise, they began to feel annoyed at this intrusion. Their uninvited guest, unlike the generality of his tribe, was somewhat dirty as well as ragged and they had no relish for such a messmate. Heaping up, therefore, an abundant portion of the "provant" upon a piece of bark, which served for a dish, they invited him to confine himself thereto, instead of foraging in the general mess.

He complied with the most accommodating spirit imaginable; and went on eating and chatting, and laughing and smearing himself, until his whole countenance shone with grease and good-humor. In the course of his repast, his attention was caught by the figure of the gastronome, who, as usual, was gorging himself in dogged silence. A droll cut of the eye showed either that he knew him of old, or perceived at once his characteristics. He immediately made him the butt of his pleasantries; and cracked off two or three good hits, that caused the sluggish dolt to prick up his ears, and delighted all the company. From this time, the uninvited guest was taken into favor; his jokes began to be relished; his careless, free and easy air, to be considered singularly amusing; and in the end, he was pronounced by the travellers one of the merriest companions and most entertaining vagabonds they had met with in the wilderness.

Supper being over, the redoubtable Shee-wee-she-ouaiter, for such was the simple name by which he announced himself, declared his intention of keeping company with the party for a day or two, if they had no objection; and by way of backing his self-invitation, presented the carcass of the buck as an earnest of his hunting abilities. By this time, he had so completely effaced the unfavorable impression made by his first appearance, that he was made welcome to the camp, and the Nez Perce guide undertook to give him lodging for the night. The next morning, at break of day, he borrowed a gun, and was off among the hills, nor was anything more seen of him until a few minutes after the party had encamped for the evening, when he again made his appearance, in his usual frank, careless manner, and threw down the carcass of another noble deer, which he had borne on his back for a considerable distance.

This evening he was the life of the party, and his open communicative disposition, free from all disguise, soon put them in possession of his history. He had been a kind of prodigal son in his native village; living a loose, heedless life, and disregarding the precepts and imperative commands of the chiefs. He had, in consequence, been expelled from the village, but, in nowise disheartened at this banishment, had betaken himself to the society of the border Indians, and had led a careless, haphazard, vagabond life, perfectly consonant to his humors; heedless of the future, so long as he had wherewithal for the present; and fearing no lack of food, so long as he had the implements of the chase, and a fair hunting ground.

Finding him very expert as a hunter, and being pleased with his eccentricities, and his strange and merry humor, Captain Bonneville fitted him out handsomely as the Nimrod of the party, who all soon became quite attached to him. One of the earliest and most signal services he performed, was to exorcise the insatiate kill-crop that hitherto oppressed the party. In fact, the doltish Nez Perce, who had seemed so perfectly insensible to rough treatment of every kind, by which the travellers had endeavored to elbow him out of their society, could not withstand the good-humored bantering, and occasionally sharp wit of She-wee-she. He evidently quailed under his jokes, and sat blinking like an owl in daylight, when pestered by the flouts and peckings of mischievous birds. At length his place was found vacant at meal-time; no one knew when he went off, or whither he had gone, but he was seen no more, and the vast surplus that remained when the

repast was over, showed what a mighty gormandizer had departed.

Relieved from this incubus, the little party now went on cheerily. She-wee-she kept them in fun as well as food. His hunting was always successful; he was ever ready to render any assistance in the camp or on the march; while his jokes, his antics, and the very cut of his countenance, so full of whim and comicality, kept every one in good-humor.

In this way they journeyed on until they arrived on the banks of the Immahah, and encamped near to the Nez Perce lodges. Here She-wee-she took a sudden notion to visit his people, and show off the state of worldly prosperity to which he had so suddenly attained. He accordingly departed in the morning, arrayed in hunter's style, and well appointed with everything benefitting his vocation. The buoyancy of his gait, the elasticity of his step, and the hilarity of his countenance, showed that he anticipated, with chuckling satisfaction, the surprise he was about to give those who had ejected him from their society in rags. But what a change was there in his whole appearance when he rejoined the party in the evening! He came skulking into camp like a beaten cur, with his tail between his legs. All his finery was gone; he was naked as when he was born, with the exception of a scanty flap that answered the purpose of a fig leaf. His fellow-travellers at first did not know him, but supposed it to be some vagrant Root Digger sneaking into the camp; but when they recognized in this forlorn object their prime wag, She-wee-she, whom they had seen depart in the morning in such high glee and high feather, they could not contain their merriment, but hailed him with loud and repeated peals of laughter.

She-wee-she was not of a spirit to be easily cast down; he soon joined in the merriment as heartily as any one, and seemed to consider his reverse of fortune an excellent joke. Captain Bonneville, however, thought proper to check his good-humor, and demanded, with some degree of sternness, the cause of his altered condition. He replied in the most natural and self-complacent style imaginable, "that he had been among his cousins, who were very poor; they had been delighted to see him; still more delighted with his good fortune; they had taken him to their arms; admired his equipments; one had begged for this; another for that"--in fine, what with the poor devil's inherent heedlessness, and the real generosity of his disposition, his needy cousins had succeeded in stripping him of all his clothes and accoutrements, excepting the fig leaf with which he had returned to camp.

Seeing his total want of care and forethought, Captain Bonneville determined to let him suffer a little, in hopes it might prove a salutary lesson; and, at any rate, to make him no more presents while in the neighborhood of his needy cousins. He was left, therefore, to shift for himself in his naked condition; which, however, did not seem to give him any concern, or to abate one jot of his good-humor. In the course of his lounging about the camp, however, he got possession of a deer skin; whereupon, cutting a slit in the middle, he thrust his head through it, so that the two ends hung down before and behind, something like a South American poncho, or the tabard of a herald. These ends he tied together, under the armpits; and thus arrayed, presented himself once more before the captain, with an air of perfect self-satisfaction, as though he thought it impossible for any fault to be found with his toilet.

A little further journeying brought the travellers to the petty village of Nez Perces, governed by the worthy and affectionate old patriarch who had made Captain Bonneville the costly present of the very fine horse. The old man welcomed them once more to his village with his usual cordiality, and his respectable squaw and hopeful son, cherishing grateful recollections of the hatchet and

ear-bobs, joined in a chorus of friendly gratulation.

As the much-vaunted steed, once the joy and pride of this interesting family, was now nearly knocked up by travelling, and totally inadequate to the mountain scramble that lay ahead, Captain Bonneville restored him to the venerable patriarch, with renewed acknowledgments for the invaluable gift. Somewhat to his surprise, he was immediately supplied with a fine two years' old colt in his stead, a substitution which he afterward learnt, according to Indian custom in such cases, he might have claimed as a matter of right. We do not find that any after claims were made on account of this colt. This donation may be regarded, therefore, as a signal punctilio of Indian honor; but it will be found that the animal soon proved an unlucky acquisition to the party.

While at this village, the Nez Perce guide had held consultations with some of the inhabitants as to the mountain tract the party were about to traverse. He now began to wear an anxious aspect, and to indulge in gloomy forebodings. The snow, he had been told, lay to a great depth in the passes of the mountains, and difficulties would increase as he proceeded. He begged Captain Bonneville, therefore, to travel very slowly, so as to keep the horses in strength and spirit for the hard times they would have to encounter. The captain surrendered the regulation of the march entirely to his discretion, and pushed on in the advance, amusing himself with hunting, so as generally to kill a deer or two in the course of the day, and arriving, before the rest of the party, at the spot designated by the guide for the evening's encampment.

In the meantime, the others plodded on at the heels of the guide, accompanied by that merry vagabond, She-wee-she. The primitive garb worn by this droll left all his nether man exposed to the biting blasts of the mountains. Still his wit was never frozen, nor his sunshiny temper beclouded; and his innumerable antics and practical jokes, while they quickened the circulation of his own blood, kept his companions in high good-humor.

So passed the first day after the departure from the patriarch's. The second day commenced in the same manner; the captain in the advance, the rest of the party following on slowly. She-wee-she, for the greater part of the time, trudged on foot over the snow, keeping himself warm by hard exercise, and all kinds of crazy capers. In the height of his foolery, the patriarchal colt, which, unbroken to the saddle, was suffered to follow on at large, happened to come within his reach. In a moment, he was on his back, snapping his fingers, and yelping with delight. The colt, unused to such a burden, and half wild by nature, fell to prancing and rearing and snorting and plunging and kicking; and, at length, set off full speed over the most dangerous ground. As the route led generally along the steep and craggy sides of the hills, both horse and horseman were constantly in danger, and more than once had a hairbreadth escape from deadly peril. Nothing, however, could daunt this madcap savage. He stuck to the colt like a plaister [sic], up ridges, down gullies; whooping and yelling with the wildest glee. Never did beggar on horseback display more headlong horsemanship. His companions followed him with their eyes, sometimes laughing, sometimes holding in their breath at his vagaries, until they saw the colt make a sudden plunge or start, and pitch his unlucky rider headlong over a precipice. There was a general cry of horror, and all hastened to the spot. They found the poor fellow lying among the rocks below, sadly bruised and mangled. It was almost a miracle that he had escaped with life. Even in this condition, his merry spirit was not entirely quelled, and he summoned up a feeble laugh at the alarm and anxiety of those who came to his relief. He was extricated from his rocky bed, and a messenger dispatched to inform Captain Bonneville of the accident. The latter returned with all speed, and encamped

---

the party at the first convenient spot. Here the wounded man was stretched upon buffalo skins, and the captain, who officiated on all occasions as doctor and surgeon to the party, proceeded to examine his wounds. The principal one was a long and deep gash in the thigh, which reached to the bone. Calling for a needle and thread, the captain now prepared to sew up the wound, admonishing the patient to submit to the operation with becoming fortitude. His gayety was at an end; he could no longer summon up even a forced smile; and, at the first puncture of the needle, flinched so piteously, that the captain was obliged to pause, and to order him a powerful dose of alcohol. This somewhat rallied up his spirit and warmed his heart; all the time of the operation, however, he kept his eyes riveted on the wound, with his teeth set, and a whimsical wincing of the countenance, that occasionally gave his nose something of its usual comic curl.

When the wound was fairly closed, the captain washed it with rum, and administered a second dose of the same to the patient, who was tucked in for the night, and advised to compose himself to sleep. He was restless and uneasy, however; repeatedly expressing his fears that his leg would be so much swollen the next day, as to prevent his proceeding with the party; nor could he be quieted, until the captain gave a decided opinion favorable to his wishes.

Early the next morning, a gleam of his merry humor returned, on finding that his wounded limb retained its natural proportions. On attempting to use it, however, he found himself unable to stand. He made several efforts to coax himself into a belief that he might still continue forward; but at length, shook his head despondingly, and said, that "as he had but one leg," it was all in vain to attempt a passage of the mountain.

Every one grieved to part with so boon a companion, and under such disastrous circumstances. He was once more clothed and equipped, each one making him some parting present. He was then helped on a horse, which Captain Bonneville presented to him; and after many parting expressions of good will on both sides, set off on his return to his old haunts; doubtless, to be once more plucked by his affectionate but needy cousins.

---

Washington Irving's The Adventures of Captain Bonneville

Chapter 36

The difficult mountain--A smoke and consultation--The captain's speech--An icy turnpike-- Danger of a false step-- Arrival on Snake River-- Return to Portneuf-- Meeting of comrades

CONTINUING THEIR JOURNEY UP the course of the Immahah, the travellers found, as they approached the headwaters, the snow increased in quantity, so as to lie two feet deep. They were again obliged, therefore, to beat down a path for their horses, sometimes travelling on the icy surface of the stream. At length they reached the place where they intended to scale the mountains; and, having broken a pathway to the foot, were agreeably surprised to find that the wind had drifted the snow from off the side, so that they attained the summit with but little difficulty. Here they encamped, with the intention of beating a track through the mountains. A short experiment, however, obliged them to give up the attempt, the snow lying in vast drifts, often higher than the horses' heads.

Captain Bonneville now took the two Indian guides, and set out to reconnoitre the neighborhood. Observing a high peak which overtopped the rest, he climbed it, and discovered from the summit a pass about nine miles long, but so heavily piled with snow, that it seemed impracticable. He now lit a pipe, and, sitting down with the two guides, proceeded to hold a consultation after

the Indian mode. For a long while they all smoked vigorously and in silence, pondering over the subject matter before them. At length a discussion commenced, and the opinion in which the two guides concurred was, that the horses could not possibly cross the snows. They advised, therefore, that the party should proceed on foot, and they should take the horses back to the village, where they would be well taken care of until Captain Bonneville should send for them. They urged this advice with great earnestness; declaring that their chief would be extremely angry, and treat them severely, should any of the horses of his good friends, the white men, be lost, in crossing under their guidance; and that, therefore, it was good they should not attempt it.

Captain Bonneville sat smoking his pipe, and listening to them with Indian silence and gravity. When they had finished, he replied to them in their own style of language.

"My friends," said he, "I have seen the pass, and have listened to your words; you have little hearts. When troubles and dangers lie in your way, you turn your backs. That is not the way with my nation. When great obstacles present, and threaten to keep them back, their hearts swell, and they push forward. They love to conquer difficulties. But enough for the present. Night is coming on; let us return to our camp."

He moved on, and they followed in silence. On reaching the camp, he found the men extremely discouraged. One of their number had been surveying the neighborhood, and seriously assured them that the snow was at least a hundred feet deep. The captain cheered them up, and diffused fresh spirit in them by his example. Still he was much perplexed how to proceed. About dark there was a slight drizzling rain. An expedient now suggested itself. This was to make two light sleds, place the packs on them, and drag them to the other side of the mountain, thus forming a road in the wet snow, which, should it afterward freeze, would be sufficiently hard to bear the horses. This plan was promptly put into execution; the sleds were constructed, the heavy baggage was drawn backward and forward until the road was beaten, when they desisted from their fatiguing labor. The night turned out clear and cold, and by morning, their road was incrustated with ice sufficiently strong for their purpose. They now set out on their icy turnpike, and got on well enough, excepting that now and then a horse would sidle out of the track, and immediately sink up to the neck. Then came on toil and difficulty, and they would be obliged to haul up the floundering animal with ropes. One, more unlucky than the rest, after repeated falls, had to be abandoned in the snow. Notwithstanding these repeated delays, they succeeded, before the sun had acquired sufficient power to thaw the snow, in getting all the rest of their horses safely to the other side of the mountain.

Their difficulties and dangers, however, were not yet at an end. They had now to descend, and the whole surface of the snow was glazed with ice. It was necessary; therefore, to wait until the warmth of the sun should melt the glassy crust of sleet, and give them a foothold in the yielding snow. They had a frightful warning of the danger of any movement while the sleet remained. A wild young mare, in her restlessness, strayed to the edge of a declivity. One slip was fatal to her; she lost her balance, careered with headlong velocity down the slippery side of the mountain for more than two thousand feet, and was dashed to pieces at the bottom. When the travellers afterward sought the carcass to cut it up for food, they found it torn and mangled in the most horrible manner.

It was quite late in the evening before the party descended to the ultimate skirts of the snow. Here they planted large logs below them to prevent their sliding down, and encamped for the night.

The next day they succeeded in bringing down their baggage to the encampment; then packing all up regularly, and loading their horses, they once more set out briskly and cheerfully, and in the course of the following day succeeded in getting to a grassy region.

Here their Nez Perce guides declared that all the difficulties of the mountains were at an end, and their course was plain and simple, and needed no further guidance; they asked leave, therefore, to return home. This was readily granted, with many thanks and presents for their faithful services. They took a long farewell smoke with their white friends, after which they mounted their horses and set off, exchanging many farewells and kind wishes.

On the following day, Captain Bonneville completed his journey down the mountain, and encamped on the borders of Snake River, where he found the grass in great abundance and eight inches in height. In this neighborhood, he saw on the rocky banks of the river several prismoids of basaltes, rising to the height of fifty or sixty feet.

Nothing particularly worthy of note occurred during several days as the party proceeded up along Snake River and across its tributary streams. After crossing Gun Creek, they met with various signs that white people were in the neighborhood, and Captain Bonneville made earnest exertions to discover whether they were any of his own people, that he might join them. He soon ascertained that they had been starved out of this tract of country, and had betaken themselves to the buffalo region, whither he now shaped his course. In proceeding along Snake River, he found small hordes of Shoshonies lingering upon the minor streams, and living upon trout and other fish, which they catch in great numbers at this season in fish-traps. The greater part of the tribe, however, had penetrated the mountains to hunt the elk, deer, and ahsahta or bighorn.

On the 12th of May, Captain Bonneville reached the Portneuf River, in the vicinity of which he had left the winter encampment of his company on the preceding Christmas day. He had then expected to be back by the beginning of March, but circumstances had detained him upward of two months beyond the time, and the winter encampment must long ere this have been broken up. Halting on the banks of the Portneuf, he dispatched scouts a few miles above, to visit the old camping ground and search for signals of the party, or of their whereabouts, should they actually have abandoned the spot. They returned without being able to ascertain anything.

Being now destitute of provisions, the travellers found it necessary to make a short hunting excursion after buffalo. They made caches, therefore, on an island in the river, in which they deposited all their baggage, and then set out on their expedition. They were so fortunate as to kill a couple of fine bulls, and cutting up the carcasses, determined to husband this stock of provisions with the most miserly care, lest they should again be obliged to venture into the open and dangerous hunting grounds. Returning to their island on the 18th of May, they found that the wolves had been at the caches, scratched up the contents, and scattered them in every direction. They now constructed a more secure one, in which they deposited their heaviest articles, and then descended Snake River again, and encamped just above the American Falls. Here they proceeded to fortify themselves, intending to remain here, and give their horses an opportunity to recruit their strength with good pasturage, until it should be time to set out for the annual rendezvous in Bear River valley.

On the first of June they descried four men on the other side of the river, opposite to the camp, and, having attracted their attention by a discharge of rifles, ascertained to their joy that they were some of their own people. From these men Captain Bonneville learned that the whole party

which he had left in the preceding month of December were encamped on Blackfoot River, a tributary of Snake River, not very far above the Portneuf. Thither he proceeded with all possible dispatch, and in a little while had the pleasure of finding himself once more surrounded by his people, who greeted his return among them in the heartiest manner; for his long-protracted absence had convinced them that he and his three companions had been cut off by some hostile tribe.

The party had suffered much during his absence. They had been pinched by famine and almost starved, and had been forced to repair to the caches at Salmon River. Here they fell in with the Blackfeet bands, and considered themselves fortunate in being able to retreat from the dangerous neighborhood without sustaining any loss.

Being thus reunited, a general treat from Captain Bonneville to his men was a matter of course. Two days, therefore, were given up to such feasting and merriment as their means and situation afforded. What was wanting in good cheer was made up in good will; the free trappers in particular, distinguished themselves on the occasion, and the saturnalia was enjoyed with a hearty holiday spirit, that smacked of the game flavor of the wilderness.

Washington Irving's The Adventures of Captain Bonneville

Chapter 37

Departure for the rendezvous--A war party of Blackfeet--A mock bustle--Sham fires at night--Warlike precautions--Dangers of a night attack-- A panic among horses--Cautious march--The Beer Springs--A mock carousel--Skirmishing with buffaloes--A buffalo bait--Arrival at the rendezvous-- Meeting of various bands

AFTER THE TWO DAYS of festive indulgence, Captain Bonneville broke up the encampment, and set out with his motley crew of hired and free trappers, half-breeds, Indians, and squaws, for the main rendezvous in Bear River valley. Directing his course up the Blackfoot River, he soon reached the hills among which it takes its rise. Here, while on the march, he descried from the brow of a hill, a war party of about sixty Blackfeet, on the plain immediately below him. His situation was perilous; for the greater part of his people were dispersed in various directions. Still, to betray hesitation or fear would be to discover his actual weakness, and to invite attack. He assumed, instantly, therefore, a belligerent tone; ordered the squaws to lead the horses to a small grove of ashen trees, and unload and tie them; and caused a great bustle to be made by his scanty handful; the leaders riding hither and thither, and vociferating with all their might, as if a numerous force was getting under way for an attack.

To keep up the deception as to his force, he ordered, at night, a number of extra fires to be made in his camp, and kept up a vigilant watch. His men were all directed to keep themselves prepared for instant action. In such cases the experienced trapper sleeps in his clothes, with his rifle beside him, the shot-belt and powder-flask on the stock: so that, in case of alarm, he can lay his hand upon the whole of his equipment at once, and start up, completely armed.

Captain Bonneville was also especially careful to secure the horses, and set a vigilant guard upon them; for there lies the great object and principal danger of a night attack. The grand move of the lurking savage is to cause a panic among the horses. In such cases one horse frightens another, until all are alarmed, and struggle to break loose. In camps where there are great numbers of Indians, with their horses, a night alarm of the kind is tremendous. The running of the horses that

have broken loose; the snorting, stamping, and rearing of those which remain fast; the howling of dogs; the yelling of Indians; the scampering of white men, and red men, with their guns; the overturning of lodges, and trampling of fires by the horses; the flashes of the fires, lighting up forms of men and steeds dashing through the gloom, altogether make up one of the wildest scenes of confusion imaginable. In this way, sometimes, all the horses of a camp amounting to several hundred will be frightened off in a single night.

The night passed off without any disturbance; but there was no likelihood that a war party of Blackfeet, once on the track of a camp where there was a chance for spoils, would fail to hover round it. The captain, therefore, continued to maintain the most vigilant precautions; throwing out scouts in the advance, and on every rising ground.

In the course of the day he arrived at the plain of white clay, already mentioned, surrounded by the mineral springs, called Beer Springs, by the trappers. Here the men all halted to have a regale. In a few moments every spring had its jovial knot of hard drinkers, with tin cup in hand, indulging in a mock carouse; quaffing, pledging, toasting, bandying jokes, singing drinking songs, and uttering peals of laughter, until it seemed as if their imaginations had given potency to the beverage, and cheated them into a fit of intoxication. Indeed, in the excitement of the moment, they were loud and extravagant in their commendations of "the mountain tap"; elevating it above every beverage produced from hops or malt. It was a singular and fantastic scene; suited to a region where everything is strange and peculiar:--These groups of trappers, and hunters, and Indians, with their wild costumes, and wilder countenances; their boisterous gayety, and reckless air; quaffing, and making merry round these sparkling fountains; while beside them lay their weep ons, ready to be snatched up for instant service. Painters are fond of representing banditti at their rude and picturesque carousels; but here were groups, still more rude and picturesque; and it needed but a sudden onset of Blackfeet, and a quick transition from a fantastic revel to a furious melee, to have rendered this picture of a trapper's life complete.

The beer frolic, however, passed off without any untoward circumstance; and, unlike most drinking bouts, left neither headache nor heartache behind. Captain Bonneville now directed his course up along Bear River; amusing himself, occasionally, with hunting the buffalo, with which the country was covered. Sometimes, when he saw a huge bull taking his repose in a prairie, he would steal along a ravine, until close upon him; then rouse him from his meditations with a pebble, and take a shot at him as he started up. Such is the quickness with which this animal springs upon his legs, that it is not easy to discover the muscular process by which it is effected. The horse rises first upon his fore legs; and the domestic cow, upon her hinder limbs; but the buffalo bounds at once from a couchant to an erect position, with a celerity that baffles the eye. Though from his bulk, and rolling gait, he does not appear to run with much swiftness; yet, it takes a stanch horse to overtake him, when at full speed on level ground; and a buffalo cow is still fleeter in her motion.

Among the Indians and half-breeds of the party, were several admirable horsemen and bold hunters; who amused themselves with a grotesque kind of buffalo bait. Whenever they found a huge bull in the plains, they prepared for their teasing and barbarous sport. Surrounding him on horseback, they would discharge their arrows at him in quick succession, goading him to make an attack; which, with a dexterous movement of the horse, they would easily avoid. In this way, they hovered round him, feathering him with arrows, as he reared and plunged about, until he was

bristled all over like a porcupine. When they perceived in him signs of exhaustion, and he could no longer be provoked to make battle, they would dismount from their horses, approach him in the rear, and seizing him by the tail, jerk him from side to side, and drag him backward; until the frantic animal, gathering fresh strength from fury, would break from them, and rush, with flashing eyes and a hoarse bellowing, upon any enemy in sight; but in a little while, his transient excitement at an end, would pitch headlong on the ground, and expire. The arrows were then plucked forth, the tongue cut out and preserved as a dainty, and the carcass left a banquet for the wolves. Pursuing his course up Bear River, Captain Bonneville arrived, on the 13th of June, at the Little Snake Lake; where he encamped for four or five days, that he might examine its shores and outlets. The latter, he found extremely muddy, and so surrounded by swamps and quagmires, that he was obliged to construct canoes of rushes, with which to explore them. The mouths of all the streams which fall into this lake from the west, are marshy and inconsiderable; but on the east side, there is a beautiful beach, broken, occasionally, by high and isolated bluffs, which advance upon the lake, and heighten the character of the scenery. The water is very shallow, but abounds with trout, and other small fish.

Having finished his survey of the lake, Captain Bonneville proceeded on his journey, until on the banks of the Bear River, some distance higher up, he came upon the party which he had detached a year before, to circumambulate the Great Salt Lake, and ascertain its extent, and the nature of its shores. They had been encamped here about twenty days; and were greatly rejoiced at meeting once more with their comrades, from whom they had so long been separated. The first inquiry of Captain Bonneville was about the result of their journey, and the information they had procured as to the Great Salt Lake; the object of his intense curiosity and ambition. The substance of their report will be found in the following chapter.

---

Washington Irving's The Adventures of Captain Bonneville

Chapter 38

Plan of the Salt Lake expedition--Great sandy deserts--Sufferings from thirst--Ogden's River--Trails and smoke of lurking savages--Thefts at night-- A trapper's revenge--Alarms of a guilty conscience-- A murderous victory--Californian mountains--Plains along the Pacific--Arrival at Monterey--Account of the place and neighborhood--Lower California-- Its extent--The Peninsula--Soil--Climate-- Production--Its settlements by the Jesuits--Their sway over the Indians--Their expulsion--Ruins of a missionary establishment--Sublime scenery--Upper California--Missions--Their power and policy-- Resources of the country--Designs of foreign nations

IT WAS ON THE 24TH of July, in the preceding year (1833), that the brigade of forty men set out from Green River valley, to explore the Great Salt Lake. They were to make the complete circuit of it, trapping on all the streams which should fall in their way, and to keep journals and make charts, calculated to impart a knowledge of the lake and the surrounding country. All the resources of Captain Bonneville had been tasked to fit out this favorite expedition. The country lying to the southwest of the mountains, and ranging down to California, was as yet almost unknown; being out of the buffalo range, it was untraversed by the trapper, who preferred those parts of the wilderness where the roaming herds of that species of animal gave him comparatively an abundant and luxurious life. Still it was said the deer, the elk, and the bighorn were to be found there, so that, with a little diligence and economy, there was no danger of lacking food. As a precaution,

however, the party halted on Bear River and hunted for a few days, until they had laid in a supply of dried buffalo meat and venison; they then passed by the head waters of the Cassie River, and soon found themselves launched on an immense sandy desert. Southwardly, on their left, they beheld the Great Salt Lake, spread out like a sea, but they found no stream running into it. A desert extended around them, and stretched to the southwest, as far as the eye could reach, rivalling the deserts of Asia and Africa in sterility. There was neither tree, nor herbage, nor spring, nor pool, nor running stream, nothing but parched wastes of sand, where horse and rider were in danger of perishing.

Their sufferings, at length, became so great that they abandoned their intended course, and made towards a range of snowy mountains, brightening in the north, where they hoped to find water. After a time, they came upon a small stream leading directly towards these mountains. Having quenched their burning thirst, and refreshed themselves and their weary horses for a time, they kept along this stream, which gradually increased in size, being fed by numerous brooks. After approaching the mountains, it took a sweep toward the southwest, and the travellers still kept along it, trapping beaver as they went, on the flesh of which they subsisted for the present, husbanding their dried meat for future necessities.

The stream on which they had thus fallen is called by some, Mary River, but is more generally known as Ogden's River, from Mr. Peter Ogden, an enterprising and intrepid leader of the Hudson's Bay Company, who first explored it. The wild and half-desert region through which the travellers were passing, is wandered over by hordes of Shoshokoes, or Root Diggers, the forlorn branch of the Snake tribe. They are a shy people, prone to keep aloof from the stranger. The travellers frequently met with their trails, and saw the smoke of their fires rising in various parts of the vast landscape, so that they knew there were great numbers in the neighborhood, but scarcely ever were any of them to be met with.

After a time, they began to have vexatious proofs that, if the Shoshokoes were quiet by day, they were busy at night. The camp was dogged by these eavesdroppers; scarce a morning, but various articles were missing, yet nothing could be seen of the marauders. What particularly exasperated the hunters, was to have their traps stolen from the streams. One morning, a trapper of a violent and savage character, discovering that his traps had been carried off in the night, took a horrid oath to kill the first Indian he should meet, innocent or guilty. As he was returning with his comrades to camp, he beheld two unfortunate Diggers, seated on the river bank, fishing. Advancing upon them, he levelled his rifle, shot one upon the spot, and flung his bleeding body into the stream. The other Indian fled and was suffered to escape. Such is the indifference with which acts of violence are regarded in the wilderness, and such the immunity an armed ruffian enjoys beyond the barriers of the laws, that the only punishment this desperado met with, was a rebuke from the leader of the party. The trappers now left the scene of this infamous tragedy, and kept on westward, down the course of the river, which wound along with a range of mountains on the right hand, and a sandy, but somewhat fertile plain, on the left. As they proceeded, they beheld columns of smoke rising, as before, in various directions, which their guilty consciences now converted into alarm signals, to arouse the country and collect the scattered bands for vengeance. After a time, the natives began to make their appearance, and sometimes in considerable numbers, but always pacific; the trappers, however, suspected them of deep-laid plans to draw them into ambuscades; to crowd into and get possession of their camp, and various other crafty and

daring conspiracies, which, it is probable, never entered into the heads of the poor savages. In fact, they are a simple, timid, inoffensive race, unpractised in warfare, and scarce provided with any weapons, excepting for the chase. Their lives are passed in the great sand plains and along the adjacent rivers; they subsist sometimes on fish, at other times on roots and the seeds of a plant, called the cat's-tail. They are of the same kind of people that Captain Bonneville found upon Snake River, and whom he found so mild and inoffensive.

The trappers, however, had persuaded themselves that they were making their way through a hostile country, and that implacable foes hung round their camp or beset their path, watching for an opportunity to surprise them. At length, one day they came to the banks of a stream emptying into Ogden's River, which they were obliged to ford. Here a great number of Shoshokoes were posted on the opposite bank. Persuaded they were there with hostile intent, they advanced upon them, levelled their rifles, and killed twenty five of them upon the spot. The rest fled to a short distance, then halted and turned about, howling and whining like wolves, and uttering the most piteous wailings. The trappers chased them in every direction; the poor wretches made no defence, but fled with terror; neither does it appear from the accounts of the boasted victors, that a weapon had been wielded or a weapon launched by the Indians throughout the affair. We feel perfectly convinced that the poor savages had no hostile intention, but had merely gathered together through motives of curiosity, as others of their tribe had done when Captain Bonneville and his companions passed along Snake River.

The trappers continued down Ogden's River, until they ascertained that it lost itself in a great swampy lake, to which there was no apparent discharge. They then struck directly westward, across the great chain of California mountains intervening between these interior plains and the shores of the Pacific.

For three and twenty days they were entangled among these mountains, the peaks and ridges of which are in many places covered with perpetual snow. Their passes and defiles present the wildest scenery, partaking of the sublime rather than the beautiful, and abounding with frightful precipices. The sufferings of the travellers among these savage mountains were extreme: for a part of the time they were nearly starved; at length, they made their way through them, and came down upon the plains of New California, a fertile region extending along the coast, with magnificent forests, verdant savannas, and prairies that looked like stately parks. Here they found deer and other game in abundance, and indemnified themselves for past famine. They now turned toward the south, and passing numerous small bands of natives, posted upon various streams, arrived at the Spanish village and post of Monterey.

This is a small place, containing about two hundred houses, situated in latitude 37° north. It has a capacious bay, with indifferent anchorage. The surrounding country is extremely fertile, especially in the valleys; the soil is richer, the further you penetrate into the interior, and the climate is described as a perpetual spring. Indeed, all California, extending along the Pacific Ocean from latitude 19° 30' to 42° north, is represented as one of the most fertile and beautiful regions in North America.

Lower California, in length about seven hundred miles, forms a great peninsula, which crosses the tropics and terminates in the torrid zone. It is separated from the mainland by the Gulf of California, sometimes called the Vermilion Sea; into this gulf empties the Colorado of the West, the Seeds-ke-dee, or Green River, as it is also sometimes called. The peninsula is traversed by stern

and barren mountains, and has many sandy plains, where the only sign of vegetation is the cylindrical cactus growing among the clefts of the rocks. Wherever there is water, however, and vegetable mould, the ardent nature of the climate quickens everything into astonishing fertility. There are valleys luxuriant with the rich and beautiful productions of the tropics. There the sugar-cane and indigo plant attain a perfection unequalled in any other part of North America. There flourish the olive, the fig, the date, the orange, the citron, the pomegranate, and other fruits belonging to the voluptuous climates of the south; with grapes in abundance, that yield a generous wine. In the interior are salt plains; silver mines and scanty veins of gold are said, likewise, to exist; and pearls of a beautiful water are to be fished upon the coast.

The peninsula of California was settled in 1698, by the Jesuits, who, certainly, as far as the natives were concerned, have generally proved the most beneficent of colonists. In the present instance, they gained and maintained a footing in the country without the aid of military force, but solely by religious influence. They formed a treaty, and entered into the most amicable relations with the natives, then numbering from twenty-five to thirty thousand souls, and gained a hold upon their affections, and a control over their minds, that effected a complete change in their condition. They built eleven missionary establishments in the various valleys of the peninsula, which formed rallying places for the surrounding savages, where they gathered together as sheep into the fold, and surrendered themselves and their consciences into the hands of these spiritual pastors. Nothing, we are told, could exceed the implicit and affectionate devotion of the Indian converts to the Jesuit fathers, and the Catholic faith was disseminated widely through the wilderness. The growing power and influence of the Jesuits in the New World at length excited the jealousy of the Spanish government, and they were banished from the colonies. The governor, who arrived at California to expel them, and to take charge of the country, expected to find a rich and powerful fraternity, with immense treasures hoarded in their missions, and an army of Indians ready to defend them. On the contrary, he beheld a few venerable silverhaired priests coming humbly forward to meet him, followed by a throng of weeping, but submissive natives. The heart of the governor, it is said, was so touched by this unexpected sight, that he shed tears; but he had to execute his orders.

The Jesuits were accompanied to the place of their embarkation by their simple and affectionate parishioners, who took leave of them with tears and sobs. Many of the latter abandoned their hereditary abodes, and wandered off to join their southern brethren, so that but a remnant remained in the peninsula. The Franciscans immediately succeeded the Jesuits, and subsequently the Dominicans; but the latter managed their affairs ill. But two of the missionary establishments are at present occupied by priests; the rest are all in ruins, excepting one, which remains a monument of the former power and prosperity of the order. This is a noble edifice, once the seat of the chief of the resident Jesuits. It is situated in a beautiful valley, about half way between the Gulf of California and the broad ocean, the peninsula being here about sixty miles wide. The edifice is of hewn stone, one story high, two hundred and ten feet in front, and about fifty-five feet deep. The walls are six feet thick, and sixteen feet high, with a vaulted roof of stone, about two feet and a half in thickness. It is now abandoned and desolate; the beautiful valley is without an inhabitant-- not a human being resides within thirty miles of the place!

In approaching this deserted mission-house from the south, the traveller passes over the mountain of San Juan, supposed to be the highest peak in the Californias. From this lofty eminence, a vast and magnificent prospect unfolds itself; the great Gulf of California, with the dark blue sea

beyond, studded with islands; and in another direction, the immense lava plain of San Gabriel. The splendor of the climate gives an Italian effect to the immense prospect. The sky is of a deep blue color, and the sunsets are often magnificent beyond description. Such is a slight and imperfect sketch of this remarkable peninsula.

Upper California extends from latitude  $31^{\circ} 10'$  to  $42^{\circ}$  on the Pacific, and inland, to the great chain of snow-capped mountains which divide it from the sand plains of the interior. There are about twenty-one missions in this province, most of which were established about fifty years since, and are generally under the care of the Franciscans. These exert a protecting sway over about thirty-five thousand Indian converts, who reside on the lands around the mission houses. Each of these houses has fifteen miles square of land allotted to it, subdivided into small lots, proportioned to the number of Indian converts attached to the mission. Some are enclosed with high walls; but in general they are open hamlets, composed of rows of huts, built of sunburnt bricks; in some instances whitewashed and roofed with tiles. Many of them are far in the interior, beyond the reach of all military protection, and dependent entirely on the good will of the natives, which never fails them. They have made considerable progress in teaching the Indians the useful arts. There are native tanners, shoemakers, weavers, blacksmiths, stonecutters, and other artificers attached to each establishment. Others are taught husbandry, and the rearing of cattle and horses; while the females card and spin wool, weave, and perform the other duties allotted to their sex in civilized life. No social intercourse is allowed between the unmarried of the opposite sexes after working hours; and at night they are locked up in separate apartments, and the keys delivered to the priests.

The produce of the lands, and all the profits arising from sales, are entirely at the disposal of the priests; whatever is not required for the support of the missions, goes to augment a fund which is under their control. Hides and tallow constitute the principal riches of the missions, and, indeed, the main commerce of the country. Grain might be produced to an unlimited extent at the establishments, were there a sufficient market for it. Olives and grapes are also reared at the missions. Horses and horned cattle abound throughout all this region; the former may be purchased at from three to five dollars, but they are of an inferior breed. Mules, which are here of a large size and of valuable qualities, cost from seven to ten dollars.

There are several excellent ports along this coast. San Diego, San Barbara, Monterey, the bay of San Francisco, and the northern port of Bondago; all afford anchorage for ships of the largest class. The port of San Francisco is too well known to require much notice in this place. The entrance from the sea is sixty-seven fathoms deep, and within, whole navies might ride with perfect safety. Two large rivers, which take their rise in mountains two or three hundred miles to the east, and run through a country unsurpassed for soil and climate, empty themselves into the harbor. The country around affords admirable timber for ship-building. In a word, this favored port combines advantages which not only fit it for a grand naval depot, but almost render it capable of being made the dominant military post of these seas.

Such is a feeble outline of the Californian coast and country, the value of which is more and more attracting the attention of naval powers. The Russians have always a ship of war upon this station, and have already encroached upon the Californian boundaries, by taking possession of the port of Bondago, and fortifying it with several guns. Recent surveys have likewise been made, both by the Russians and the English; and we have little doubt, that, at no very distant day, this neglected,

and, until recently, almost unknown region, will be found to possess sources of wealth sufficient to sustain a powerful and prosperous empire. Its inhabitants, themselves, are but little aware of its real riches; they have not enterprise sufficient to acquaint themselves with a vast interior that lies almost a terra incognita; nor have they the skill and industry to cultivate properly the fertile tracts along the coast; nor to prosecute that foreign commerce which brings all the resources of a country into profitable action.

Washington Irving's The Adventures of Captain Bonneville

Chapter 39

Gay life at Monterey--Mexican horsemen--A bold dragoon--Use of the lasso--Vaqueros--Noosing a bear--Fight between a bull and a bear--Departure from Monterey--Indian horse stealers--Outrages committed by the travellers--Indignation of Captain Bonneville

THE WANDERING BAND of trappers was well received at Monterey, the inhabitants were desirous of retaining them among them, and offered extravagant wages to such as were acquainted with any mechanic art. When they went into the country, too, they were kindly treated by the priests at the missions; who are always hospitable to strangers, whatever may be their rank or religion. They had no lack of provisions; being permitted to kill as many as they pleased of the vast herds of cattle that graze the country, on condition, merely, of rendering the hides to the owners. They attended bull-fights and horseraces; forgot all the purposes of their expedition; squandered away, freely, the property that did not belong to them; and, in a word, revelled in a perfect fool's paradise.

What especially delighted them was the equestrian skill of the Californians. The vast number and the cheapness of the horses in this country makes every one a cavalier. The Mexicans and half-breeds of California spend the greater part of their time in the saddle. They are fearless riders; and their daring feats upon unbroken colts and wild horses, astonished our trappers; though accustomed to the bold riders of the prairies.

A Mexican horseman has much resemblance, in many points, to the equestrians of Old Spain; and especially to the vain-glorious caballero of Andalusia. A Mexican dragoon, for instance, is represented as arrayed in a round blue jacket, with red cuffs and collar; blue velvet breeches, unbuttoned at the knees to show his white stockings; bottinas of deer skin; a round-crowned Andalusian hat, and his hair cued. On the pommel of his saddle, he carries balanced a long musket, with fox skin round the lock. He is cased in a cuirass of double-fold deer skin, and carries a bull's hide shield; he is forked in a Moorish saddle, high before and behind; his feet are thrust into wooden box stirrups, of Moorish fashion, and a tremendous pair of iron spurs, fastened by chains, jingle at his heels. Thus equipped, and suitably mounted, he considers himself the glory of California, and the terror of the universe.

The Californian horsemen seldom ride out without the laso [sic]; that is to say, a long coil of cord, with a slip noose; with which they are expert, almost to a miracle. The laso, now almost entirely confined to Spanish America, is said to be of great antiquity; and to have come, originally, from the East. It was used, we are told, by a pastoral people of Persian descent; of whom eight thousand accompanied the army of Xerxes. By the Spanish Americans, it is used for a variety of purposes; and among others, for hauling wood. Without dismounting, they cast the noose around a log, and thus drag it to their houses. The vaqueros, or Indian cattle drivers, have also learned the use of

the laso from the Spaniards; and employ it to catch the half-wild cattle by throwing it round their horns.

The laso is also of great use in furnishing the public with a favorite, though barbarous sport; the combat between a bear and a wild bull. For this purpose, three or four horsemen sally forth to some wood, frequented by bears, and, depositing the carcass of a bullock, hide themselves in the vicinity. The bears are soon attracted by the bait. As soon as one, fit for their purpose, makes his appearance, they run out, and with the laso, dexterously noose him by either leg. After dragging him at full speed until he is fatigued, they secure him more effectually; and tying him on the carcass of the bullock, draw him in triumph to the scene of action. By this time, he is exasperated to such frenzy, that they are sometimes obliged to throw cold water on him, to moderate his fury; and dangerous would it be, for horse and rider, were he, while in this paroxysm, to break his bonds.

A wild bull, of the fiercest kind, which has been caught and exasperated in the same manner, is now produced; and both animals are turned loose in the arena of a small amphitheatre. The mortal fight begins instantly; and always, at first, to the disadvantage of Bruin; fatigued, as he is, by his previous rough riding. Roused, at length, by the repeated goading of the bull, he seizes his muzzle with his sharp claws, and clinging to this most sensitive part, causes him to bellow with rage and agony. In his heat and fury, the bull lolls out his tongue; this is instantly clutched by the bear; with a desperate effort he overturns his huge antagonist; and then dispatches him without difficulty. Beside this diversion, the travellers were likewise regaled with bull-fights, in the genuine style of Old Spain; the Californians being considered the best bull-fighters in the Mexican dominions. After a considerable sojourn at Monterey, spent in these very edifying, but not very profitable amusements, the leader of this vagabond party set out with his comrades, on his return journey. Instead of retracing their steps through the mountains, they passed round their southern extremity, and, crossing a range of low hills, found themselves in the sandy plains south of Ogden's River; in traversing which, they again suffered, grievously, for want of water.

In the course of their journey, they encountered a party of Mexicans in pursuit of a gang of natives, who had been stealing horses. The savages of this part of California are represented as extremely poor, and armed only with stone-pointed arrows; it being the wise policy of the Spaniards not to furnish them with firearms. As they find it difficult, with their blunt shafts, to kill the wild game of the mountains, they occasionally supply themselves with food, by entrapping the Spanish horses. Driving them stealthily into fastnesses and ravines, they slaughter them without difficulty, and dry their flesh for provisions. Some they carry off to trade with distant tribes; and in this way, the Spanish horses pass from hand to hand among the Indians, until they even find their way across the Rocky Mountains.

The Mexicans are continually on the alert, to intercept these marauders; but the Indians are apt to outwit them, and force them to make long and wild expeditions in pursuit of their stolen horses. Two of the Mexican party just mentioned joined the band of trappers, and proved themselves worthy companions. In the course of their journey through the country frequented by the poor Root Diggers, there seems to have been an emulation between them, which could inflict the greatest outrages upon the natives. The trappers still considered them in the light of dangerous foes; and the Mexicans, very probably, charged them with the sin of horse-stealing; we have no other mode of accounting for the infamous barbarities of which, according to their own story, they were

guilty; hunting the poor Indians like wild beasts, and killing them without mercy. The Mexicans excelled at this savage sport; chasing their unfortunate victims at full speed; noosing them round the neck with their lasos, and then dragging them to death!

Such are the scanty details of this most disgraceful expedition; at least, such are all that Captain Bonneville had the patience to collect; for he was so deeply grieved by the failure of his plans, and so indignant at the atrocities related to him, that he turned, with disgust and horror, from the narrators. Had he exerted a little of the Lynch law of the wilderness, and hanged those dexterous horsemen in their own lasos, it would but have been a well-merited and salutary act of retributive justice. The failure of this expedition was a blow to his pride, and a still greater blow to his purse. The Great Salt Lake still remained unexplored; at the same time, the means which had been furnished so liberally to fit out this favorite expedition, had all been squandered at Monterey; and the peltries, also, which had been collected on the way. He would have but scanty returns, therefore, to make this year, to his associates in the United States; and there was great danger of their becoming disheartened, and abandoning the enterprise.

Washington Irving's The Adventures of Captain Bonneville

Chapter 40

Traveller's tales -- Indian lurkers -- Prognostics of Buckeye -- Signs and portents -- The medicine wolf -- An alarm -- An ambush -- The captured provant Triumph of Buckeye -- Arrival of supplies -- Grand carouse -- Arrangements for the year -- Mr. Wyeth and his new-levied band.

THE horror and indignation felt by Captain Bonneville at the excesses of the Californian adventurers were not participated by his men; on the contrary, the events of that expedition were favorite themes in the camp. The heroes of Monterey bore the palm in all the gossipings among the hunters. Their glowing descriptions of Spanish bear-baits and bull-fights especially, were listened to with intense delight; and had another expedition to California been proposed, the difficulty would have been to restrain a general eagerness to volunteer.

The captain had not long been at the rendezvous when he perceived, by various signs, that Indians were lurking in the neighborhood. It was evident that the Blackfoot band, which he had seen when on his march, had dogged his party, and were intent on mischief. He endeavored to keep his camp on the alert; but it is as difficult to maintain discipline among trappers at a rendezvous as among sailors when in port.

Buckeye, the Delaware Indian, was scandalized at this heedlessness of the hunters when an enemy was at hand, and was continually preaching up caution. He was a little prone to play the prophet, and to deal in signs and portents, which occasionally excited the merriment of his white comrades. He was a great dreamer, and believed in charms and talismans, or medicines, and could foretell the approach of strangers by the howling or barking of the small prairie wolf. This animal, being driven by the larger wolves from the carcasses left on the hunting grounds by the hunters, follows the trail of the fresh meat carried to the camp. Here the smell of the roast and broiled, mingling with every breeze, keeps them hovering about the neighborhood; scenting every blast, turning up their noses like hungry hounds, and testifying their pinching hunger by long whining howls and impatient barkings. These are interpreted by the superstitious Indians into warnings that strangers are at hand; and one accidental coincidence, like the chance fulfillment of an almanac prediction, is sufficient to cover a thousand failures. This little, whining, feast-smelling animal

is, therefore, called among Indians the "medicine wolf;" and such was one of Buckeye's infallible oracles.

One morning early, the soothsaying Delaware appeared with a gloomy countenance. His mind was full of dismal presentiments, whether from mysterious dreams, or the intimations of the medicine wolf, does not appear. "Danger," he said, "was lurking in their path, and there would be some fighting before sunset." He was bantered for his prophecy, which was attributed to his having supped too heartily, and been visited by bad dreams. In the course of the morning a party of hunters set out in pursuit of buffaloes, taking with them a mule, to bring home the meat they should procure. They had been some few hours absent, when they came clattering at full speed into camp, giving the war cry of Blackfeet! Blackfeet! Every one seized his weapon and ran to learn the cause of the alarm. It appeared that the hunters, as they were returning leisurely, leading their mule well laden with prime pieces of buffalo meat, passed close by a small stream overhung with trees, about two miles from the camp. Suddenly a party of Blackfeet, who lay in ambush along the thickets, sprang up with a fearful yell, and discharged a volley at the hunters. The latter immediately threw themselves flat on their horses, put them to their speed, and never paused to look behind, until they found themselves in camp. Fortunately they had escaped without a wound; but the mule, with all the "provant," had fallen into the hands of the enemy. This was a loss, as well as an insult, not to be borne. Every man sprang to horse, and with rifle in hand, galloped off to punish the Blackfeet, and rescue the buffalo beef. They came too late; the marauders were off, and all that they found of their mule was the dents of his hoofs, as he had been conveyed off at a round trot, bearing his savory cargo to the hills, to furnish the scampering savages with a banquet of roast meat at the expense of the white men.

The party returned to camp, balked of their revenge, but still more grievously balked of their supper. Buckeye, the Delaware, sat smoking by his fire, perfectly composed. As the hunters related the particulars of the attack, he listened in silence, with unruffled countenance, then pointing to the west, "the sun has not yet set," said he: "Buckeye did not dream like a fool!"

All present now recollected the prediction of the Indian at daybreak, and were struck with what appeared to be its fulfilment. They called to mind, also, a long catalogue of foregone presentiments and predictions made at various times by the Delaware, and, in their superstitious credulity, began to consider him a veritable seer; without thinking how natural it was to predict danger, and how likely to have the prediction verified in the present instance, when various signs gave evidence of a lurking foe.

The various bands of Captain Bonneville's company had now been assembled for some time at the rendezvous; they had had their fill of feasting, and frolicking, and all the species of wild and often uncouth merrymaking, which invariably take place on these occasions. Their horses, as well as themselves, had recovered from past famine and fatigue, and were again fit for active service; and an impatience began to manifest itself among the men once more to take the field, and set off on some wandering expedition.

At this juncture M. Cerre arrived at the rendezvous at the head of a supply party, bringing goods and equipments from the States. This active leader, it will be recollected, had embarked the year previously in skin-boats on the Bighorn, freighted with the year's collection of peltries. He had met with misfortune in the course of his voyage: one of his frail barks being upset, and part of the furs lost or damaged.

The arrival of the supplies gave the regular finish to the annual revel. A grand outbreak of wild debauch ensued among the mountaineers; drinking, dancing, swaggering, gambling, quarrelling, and fighting. Alcohol, which, from its portable qualities, containing the greatest quantity of fiery spirit in the smallest compass, is the only liquor carried across the mountains, is the inflammatory beverage at these carousals, and is dealt out to the trappers at four dollars a pint. When inflamed by this fiery beverage, they cut all kinds of mad pranks and gambols, and sometimes burn all their clothes in their drunken bravadoes. A camp, recovering from one of these riotous revels, presents a seriocomic spectacle; black eyes, broken heads, lack-lustre visages. Many of the trappers have squandered in one drunken frolic the hard-earned wages of a year; some have run in debt, and must toil on to pay for past pleasure. All are sated with this deep draught of pleasure, and eager to commence another trapping campaign; for hardship and hard work, spiced with the stimulants of wild adventures, and topped off with an annual frantic carousal, is the lot of the restless trapper. The captain now made his arrangements for the current year. Cerre and Walker, with a number of men who had been to California, were to proceed to St. Louis with the packages of furs collected during the past year. Another party, headed by a leader named Montero, was to proceed to the Crow country, trap upon its various streams, and among the Black Hills, and thence to proceed to the Arkansas, where he was to go into winter quarters.

The captain marked out for himself a widely different course. He intended to make another expedition, with twenty-three men to the lower part of the Columbia River, and to proceed to the valley of the Multnomah; after wintering in those parts, and establishing a trade with those tribes, among whom he had sojourned on his first visit, he would return in the spring, cross the Rocky Mountains, and join Montero and his party in the month of July, at the rendezvous of the Arkansas; where he expected to receive his annual supplies from the States.

If the reader will cast his eye upon a map, he may form an idea of the contempt for distance which a man acquires in this vast wilderness, by noticing the extent of country comprised in these projected wanderings. Just as the different parties were about to set out on the 3d of July, on their opposite routes, Captain Bonneville received intelligence that Wyeth, the indefatigable leader of the salmon-fishing enterprise, who had parted with him about a year previously on the banks of the Bighorn, to descend that wild river in a bull boat, was near at hand, with a new levied band of hunters and trappers, and was on his way once more to the banks of the Columbia,

As we take much interest in the novel enterprise of this eastern man," and are pleased with his pushing and persevering spirit; and as his movements are characteristic of life in the wilderness, we will, with the reader's permission, while Captain Bonneville is breaking up his camp and saddling his horses, step back a year in time, and a few hundred miles in distance to the bank of the Bighorn, and launch ourselves with Wyeth in his bull boat; and though his adventurous voyage will take us many hundreds of miles further down wild and wandering rivers; yet such is the magic power of the pen, that we promise to bring the reader safe to Bear River Valley, by the time the last horse is saddled.

---

Washington Irving's The Adventures of Captain Bonneville

Chapter 41

A voyage in a bull boat.

It was about the middle of August (1833) that Mr. Nathaniel J. Wyeth, as the reader may recol-

---

lect, launched his bull boat at the foot of the rapids of the Bighorn, and departed in advance of the parties of Campbell and Captain Bonneville. His boat was made of three buffalo skins, stretched on a light frame, stitched together, and the seams paid with elk tallow and ashes. It was eighteen feet long, and about five feet six inches wide, sharp at each end, with a round bottom, and drew about a foot and a half of water—a depth too great for these upper rivers, which abound with shallows and sand-bars. The crew consisted of two half-breeds, who claimed to be white men, though a mixture of the French creole and the Shawnee and Potawattomie. They claimed, moreover, to be thorough mountaineers, and first-rate hunters -- the common boast of these vagabonds of the wilderness. Besides these, there was a Nez Perce lad of eighteen years of age, a kind of servant of all work, whose great aim, like all Indian servants, was to do as little work as possible; there was, moreover, a half-breed boy, of thirteen, named Baptiste, son of a Hudson's Bay trader by a Flat-head beauty; who was travelling with Wyeth to see the world and complete his education. Add to these, Mr. Milton Sublette, who went as passenger, and we have the crew of the little bull boat complete.

It certainly was a slight armament with which to run the gauntlet through countries swarming with hostile hordes, and a slight bark to navigate these endless rivers, tossing and pitching down rapids, running on snags and bumping on sand-bars; such, however, are the cockle-shells with which these hardy rovers of the wilderness will attempt the wildest streams; and it is surprising what rough shocks and thumps these boats will endure, and what vicissitudes they will live through. Their duration, however, is but limited; they require frequently to be hauled out of the water and dried, to prevent the hides from becoming water-soaked; and they eventually rot and go to pieces.

The course of the river was a little to the north of east; it ran about five miles an hour, over a gravelly bottom. The banks were generally alluvial, and thickly grown with cottonwood trees, intermingled occasionally with ash and plum trees. Now and then limestone cliffs and promontories advanced upon the river, making picturesque headlands. Beyond the woody borders rose ranges of naked hills.

Milton Sublette was the Pelorus of this adventurous bark; being somewhat experienced in this wild kind of navigation. It required all his attention and skill, however, to pilot her clear of sand-bars and snags of sunken trees. There was often, too, a perplexity of choice, where the river branched into various channels, among clusters of islands; and occasionally the voyagers found themselves aground and had to turn back.

It was necessary, also, to keep a wary eye upon the land, for they were passing through the heart of the Crow country, and were continually in reach of any ambush that might be lurking on shore. The most formidable foes that they saw, however, were three grizzly bears, quietly promenading along the bank, who seemed to gaze at them with surprise as they glided by. Herds of buffalo, also, were moving about, or lying on the ground, like cattle in a pasture; excepting such inhabitants as these, a perfect solitude reigned over the land. There was no sign of human habitation; for the Crows, as we have already shown, are a wandering people, a race of hunters and warriors, who live in tents and on horseback, and are continually on the move.

At night they landed, hauled up their boat to dry, pitched their tent, and made a rousing fire. Then, as it was the first evening of their voyage, they indulged in a regale, relishing their buffalo beef with inspiring alcohol; after which, they slept soundly, without dreaming of Crows or Black-

feet. Early in the morning, they again launched the boat and committed themselves to the stream. In this way they voyaged for two days without any material occurrence, excepting a severe thunder storm, which compelled them to put to shore, and wait until it was passed. On the third morning they descried some persons at a distance on the river bank. As they were now, by calculation, at no great distance from Fort Cass, a trading post of the American Fur Company, they supposed these might be some of its people. A nearer approach showed them to be Indians. Descrying a woman apart from the rest, they landed and accosted her. She informed them that the main force of the Crow nation, consisting of five bands, under their several chiefs, were but about two or three miles below, on their way up along the river. This was unpleasant tidings, but to retreat was impossible, and the river afforded no hiding place. They continued forward, therefore, trusting that, as Fort Cass was so near at hand, the Crows might refrain from any depredations. Floating down about two miles further, they came in sight of the first band, scattered along the river bank, all well mounted; some armed with guns, others with bows and arrows, and a few with lances. They made a wildly picturesque appearance managing their horses with their accustomed dexterity and grace. Nothing can be more spirited than a band of Crow cavaliers. They are a fine race of men averaging six feet in height, lithe and active, with hawks' eyes and Roman noses. The latter feature is common to the Indians on the east side of the Rocky Mountains; those on the western side have generally straight or flat noses.

Wyeth would fain have slipped by this cavalcade unnoticed; but the river, at this place, was not more than ninety yards across; he was perceived, therefore, and hailed by the vagabond warriors, and, we presume, in no very choice language; for, among their other accomplishments, the Crows are famed for possessing a Billingsgate vocabulary of unrivalled opulence, and for being by no means sparing of it whenever an occasion offers. Indeed, though Indians are generally very lofty, rhetorical, and figurative in their language at all great talks, and high ceremonials, yet, if trappers and traders may be believed, they are the most unsavory vagabonds in their ordinary colloquies; they make no hesitation to call a spade a spade; and when they once undertake to call hard names, the famous pot and kettle, of vituperating memory, are not to be compared with them for scurrility of epithet.

To escape the infliction of any compliments of this kind, or the launching, peradventure, of more dangerous missiles, Wyeth landed with the best grace in his power and approached the chief of the band. It was Arapooish, the quondam friend of Rose the outlaw, and one whom we have already mentioned as being anxious to promote a friendly intercourse between his tribe and the white men. He was a tall, stout man, of good presence, and received the voyagers very graciously. His people, too, thronged around them, and were officiously attentive after the Crow fashion. One took a great fancy to Baptiste the Flathead boy, and a still greater fancy to a ring on his finger, which he transposed to his own with surprising dexterity, and then disappeared with a quick step among the crowd.

Another was no less pleased with the Nez Perce lad, and nothing would do but he must exchange knives with him; drawing a new knife out of the Nez Perce's scabbard, and putting an old one in its place. Another stepped up and replaced this old knife with one still older, and a third helped himself to knife, scabbard and all. It was with much difficulty that Wyeth and his companions extricated themselves from the clutches of these officious Crows before they were entirely plucked. Falling down the river a little further, they came in sight of the second band, and sheered to the

opposite side, with the intention of passing them. The Crows were not to be evaded. Some pointed their guns at the boat, and threatened to fire; others stripped, plunged into the stream, and came swimming across. Making a virtue of necessity, Wyeth threw a cord to the first that came within reach, as if he wished to be drawn to the shore.

In this way he was overhauled by every band, and by the time he and his people came out of the busy hands of the last, they were eased of most of their superfluities. Nothing, in all probability, but the proximity of the American trading post, kept these land pirates from making a good prize of the bull boat and all its contents.

These bands were in full march, equipped for war, and evidently full of mischief. They were, in fact, the very bands that overran the land in the autumn of 1833; partly robbed Fitzpatrick of his horses and effects; hunted and harassed Captain Bonneville and his people; broke up their trapping campaigns, and, in a word, drove them all out of the Crow country. It has been suspected that they were set on to these pranks by some of the American Fur Company, anxious to defeat the plans of their rivals of the Rocky Mountain Company; for at this time, their competition was at its height, and the trade of the Crow country was a great object of rivalry. What makes this the more probable, is, that the Crows in their depredation seemed by no means bloodthirsty, but intent chiefly on robbing the parties of their traps and horses, thereby disabling them from prosecuting their hunting.

We should observe that this year, the Rocky Mountain Company were pushing their way up the rivers, and establishing rival posts near those of the American Company; and that, at the very time of which we are speaking, Captain Sublette was ascending the Yellowstone with a keel boat, laden with supplies; so that there was every prospect of this eager rivalry being carried to extremes.

The last band of Crow warriors had scarcely disappeared in the clouds of dust they had raised, when our voyagers arrived at the mouth of the river and glided into the current of the Yellowstone. Turning down this stream, they made for Fort Cass, which is situated on the right bank, about three miles below the Bighorn. On the opposite side they beheld a party of thirty-one savages, which they soon ascertained to be Blackfeet. The width of the river enabled them to keep at a sufficient distance, and they soon landed at Fort Cass. This was a mere fortification against Indians; being a stockade of about one hundred and thirty feet square, with two bastions at the extreme corners. M'Tulloch, an agent of the American Company, was stationed there with twenty men; two boats of fifteen tons burden were lying here; but at certain seasons of the year a steamboat can come up to the fort.

They had scarcely arrived, when the Blackfeet warriors made their appearance on the opposite bank, displaying two American flags in token of amity. They plunged into the river, swam across, and were kindly received at the fort. They were some of the very men who had been engaged, the year previously, in the battle at Pierre's Hole, and a fierce-looking set of fellows they were; tall and hawk-nosed, and very much resembling the Crows. They professed to be on an amicable errand, to make peace with the Crows, and set off in all haste, before night, to overtake them. Wyeth predicted that they would lose their scalps; for he had heard the Crows denounce vengeance on them, for having murdered two of their warriors who had ventured among them on the faith of a treaty of peace. It is probable, however, that this pacific errand was all a pretence, and that the real object of the Blackfeet braves was to hang about the skirts of the Crow band, steal their horses,

and take the scalps of stragglers.

At Fort Cass, Mr. Wyeth disposed of some packages of beaver, and a quantity of buffalo robes. On the following morning (August 18th), he once more launched his bull boat, and proceeded down the Yellowstone, which inclined in an east-northeast direction. The river had alluvial bottoms, fringed with great quantities of the sweet cotton-wood, and interrupted occasionally by "bluffs" of sandstone. The current occasionally brings down fragments of granite and porphyry.

In the course of the day, they saw something moving on the bank among the trees, which they mistook for game of some kind; and, being in want of provisions, pulled toward shore. They discovered, just in time, a party of Blackfeet, lurking in the thickets, and sheered, with all speed, to the opposite side of the river.

After a time, they came in sight of a gang of elk. Wyeth was immediately for pursuing them, rifle in hand, but saw evident signs of dissatisfaction in his half-breed hunters; who considered him as trenching upon their province, and meddling with things quite above his capacity; for these veterans of the wilderness are exceedingly pragmatical, on points of venery and woodcraft, and tenacious of their superiority; looking down with infinite contempt upon all raw beginners. The two worthies, therefore, sallied forth themselves, but after a time returned empty-handed. They laid the blame, however, entirely on their guns; two miserable old pieces with flint locks, which, with all their picking and hammering, were continually apt to miss fire. These great boasters of the wilderness, however, are very often exceeding bad shots, and fortunate it is for them when they have old flint guns to bear the blame.

The next day they passed where a great herd of buffalo was bellowing on a prairie. Again the Castor and Pollux of the wilderness sallied forth, and again their flint guns were at fault, and missed fire, and nothing went off but the buffalo. Wyeth now found there was danger of losing his dinner if he depended upon his hunters; he took rifle in hand, therefore, and went forth himself. In the course of an hour he returned laden with buffalo meat, to the great mortification of the two regular hunters, who were annoyed at being eclipsed by a greenhorn.

All hands now set to work to prepare the midday repast. A fire was made under an immense cotton-wood tree, that overshadowed a beautiful piece of meadow land; rich morsels of buffalo hump were soon roasting before it; in a hearty and prolonged repast, the two unsuccessful hunters gradually recovered from their mortification; threatened to discard their old flint guns as soon as they should reach the settlements, and boasted more than ever of the wonderful shots they had made, when they had guns that never missed fire.

Having hauled up their boat to dry in the sun, previous to making their repast, the voyagers now set it once more afloat, and proceeded on their way. They had constructed a sail out of their old tent, which they hoisted whenever the wind was favorable, and thus skimmed along down the stream. Their voyage was pleasant, notwithstanding the perils by sea and land, with which they were environed. Whenever they could they encamped on islands for the greater security. If on the mainland, and in a dangerous neighborhood, they would shift their camp after dark, leaving their fire burning, dropping down the river some distance, and making no fire at their second encampment. Sometimes they would float all night with the current; one keeping watch and steering while the rest slept. In such case, they would haul their boat on shore, at noon of the following day to dry; for notwithstanding every precaution, she was gradually getting water-soaked and rotten. There was something pleasingly solemn and mysterious in thus floating down these wild rivers at

---

night. The purity of the atmosphere in these elevated regions gave additional splendor to the stars, and heightened the magnificence of the firmament. The occasional rush and laving of the waters; the vague sounds from the surrounding wilderness; the dreary howl, or rather whine of wolves from the plains; the low grunting and bellowing of the buffalo, and the shrill neighing of the elk, struck the ear with an effect unknown in the daytime.

The two knowing hunters had scarcely recovered from one mortification when they were fated to experience another. As the boat was gliding swiftly round a low promontory, thinly covered with trees, one of them gave the alarm of Indians. The boat was instantly shoved from shore and every one caught up his rifle. "Where are they?" cried Wyeth.

"There -- there! riding on horseback!" cried one of the hunters.

"Yes; with white scarfs on!" cried the other.

Wyeth looked in the direction they pointed, but descried nothing but two bald eagles, perched on a low dry branch beyond the thickets, and seeming, from the rapid motion of the boat, to be moving swiftly in an opposite direction. The detection of this blunder in the two veterans, who prided themselves on the sureness and quickness of their sight, produced a hearty laugh at their expense, and put an end to their vauntings.

The Yellowstone, above the confluence of the Bighorn, is a clear stream; its waters were now gradually growing turbid, and assuming the yellow clay color of the Missouri. The current was about four miles an hour, with occasional rapids; some of them dangerous, but the voyagers passed them all without accident. The banks of the river were in many places precipitous with strata of bituminous coal.

They now entered a region abounding with buffalo -- that ever-journeying animal, which moves in countless droves from point to point of the vast wilderness; traversing plains, pouring through the intricate defiles of mountains, swimming rivers, ever on the move, guided on its boundless migrations by some traditionary knowledge, like the finny tribes of the ocean, which, at certain seasons, find their mysterious paths across the deep and revisit the remotest shores.

These great migratory herds of buffalo have their hereditary paths and highways, worn deep through the country, and making for the surest passes of the mountains, and the most practicable fords of the rivers. When once a great column is in full career, it goes straight forward, regardless of all obstacles; those in front being impelled by the moving mass behind. At such times they will break through a camp, trampling down everything in their course.

It was the lot of the voyagers, one night, to encamp at one of these buffalo landing places, and exactly on the trail. They had not been long asleep, when they were awakened by a great bellowing, and tramping, and the rush, and splash, and snorting of animals in the river. They had just time to ascertain that a buffalo army was entering the river on the opposite side, and making toward the landing place. With all haste they moved their boat and shifted their camp, by which time the head of the column had reached the shore, and came pressing up the bank.

It was a singular spectacle, by the uncertain moonlight, to behold this countless throng making their way across the river, blowing, and bellowing, and splashing. Sometimes they pass in such dense and continuous column as to form a temporary dam across the river, the waters of which rise and rush over their backs, or between their squadrons. The roaring and rushing sound of one of these vast herds crossing a river, may sometimes in a still night be heard for miles.

The voyagers now had game in profusion. They could kill as many buffaloes as they pleased, and,

---

occasionally, were wanton in their havoc; especially among scattered herds, that came swimming near the boat. On one occasion, an old buffalo bull approached so near that the half-breeds must fain try to noose him as they would a wild horse. The noose was successfully thrown around his head, and secured him by the horns, and they now promised themselves ample sport. The buffalo made prodigious turmoil in the water, bellowing, and blowing, and floundering; and they all floated down the stream together. At length he found foothold on a sandbar, and taking to his heels, whirled the boat after him like a whale when harpooned; so that the hunters were obliged to cast off their rope, with which strange head-gear the venerable bull made off to the prairies. On the 24th of August, the bull boat emerged, with its adventurous crew, into the broad bosom of the mighty Missouri. Here, about six miles above the mouth of the Yellowstone, the voyagers landed at Fort Union, the distributing post of the American Fur Company in the western country. It was a stockaded fortress, about two hundred and twenty feet square, pleasantly situated on a high bank. Here they were hospitably entertained by Mr. M'Kenzie, the superintendent, and remained with him three days, enjoying the unusual luxuries of bread, butter, milk, and cheese, for the fort was well supplied with domestic cattle, though it had no garden. The atmosphere of these elevated regions is said to be too dry for the culture of vegetables; yet the voyagers, in coming down the Yellowstone, had met with plums, grapes, cherries, and currants, and had observed ash and elm trees. Where these grow the climate cannot be incompatible with gardening.

At Fort Union, Wyeth met with a melancholy memento of one of his men. This was a powder-flask, which a clerk had purchased from a Blackfoot warrior. It bore the initials of poor More, the unfortunate youth murdered the year previously, at Jackson's Hole, by the Blackfeet, and whose bones had been subsequently found by Captain Bonneville. This flask had either been passed from hand to hand of the youth, or, perhaps, had been brought to the fort by the very savage who slew him.

As the bull boat was now nearly worn out, and altogether unfit for the broader and more turbulent stream of the Missouri, it was given up, and a canoe of cottonwood, about twenty feet long, fabricated by the Blackfeet, was purchased to supply its place. In this Wyeth hoisted his sail, and bidding adieu to the hospitable superintendent of Fort Union, turned his prow to the east, and set off down the Missouri.

He had not proceeded many hours, before, in the evening, he came to a large keel boat at anchor. It proved to be the boat of Captain William Sublette, freighted with munitions for carrying on a powerful opposition to the American Fur Company. The voyagers went on board, where they were treated with the hearty hospitality of the wilderness, and passed a social evening, talking over past scenes and adventures, and especially the memorable fight at Pierre's Hole.

Here Milton Sublette determined to give up further voyaging in the canoe, and remain with his brother; accordingly, in the morning, the fellow-voyagers took kind leave of each other. and Wyeth continued on his course. There was now no one on board of his boat that had ever voyaged on the Missouri; it was, however, all plain sailing down the stream, without any chance of missing the way.

All day the voyagers pulled gently along, and landed in the evening and supped; then re-embarking, they suffered the canoe to float down with the current; taking turns to watch and sleep. The night was calm and serene; the elk kept up a continual whinnying or squealing, being the commencement of the season when they are in heat. In the midst of the night the canoe struck on a

sand-bar, and all hands were roused by the rush and roar of the wild waters, which broke around her. They were all obliged to jump overboard, and work hard to get her off, which was accomplished with much difficulty.

In the course of the following day they saw three grizzly bears at different times along the bank. The last one was on a point of land, and was evidently making for the river, to swim across. The two half-breed hunters were now eager to repeat the manoeuvre of the noose; promising to entrap Bruin, and have rare sport in strangling and drowning him. Their only fear was, that he might take fright and return to land before they could get between him and the shore. Holding back, therefore, until he was fairly committed in the centre of the stream, they then pulled forward with might and main, so as to cut off his retreat, and take him in the rear. One of the worthies stationed himself in the bow, with the cord and slip-noose, the other, with the Nez Perce, managed the paddles. There was nothing further from the thoughts of honest Bruin, however, than to beat a retreat. Just as the canoe was drawing near, he turned suddenly round and made for it, with a horrible snarl and a tremendous show of teeth. The affrighted hunter called to his comrades to paddle off. Scarce had they turned the boat when the bear laid his enormous claws on the gunwale, and attempted to get on board. The canoe was nearly overturned, and a deluge of water came pouring over the gunwale. All was clamor, terror, and confusion. Every one bawled out - the bear roared and snarled - one caught up a gun; but water had rendered it useless. Others handled their paddles more effectually, and beating old Bruin about the head and claws, obliged him to relinquish his hold. They now plied their paddles with might and main, the bear made the best of his way to shore, and so ended the second exploit of the noose; the hunters determined to have no more naval contests with grizzly bears.

The voyagers were now out of range of Crows and Black-feet; but they were approaching the country of the Rees, or Arickaras; a tribe no less dangerous; and who were, generally, hostile to small parties.

In passing through their country, Wyeth laid by all day, and drifted quietly down the river at night. In this way he passed on, until he supposed himself safely through the region of danger; when he resumed his voyage in the open day. On the 3d of September he had landed, at midday, to dine; and while some were making a fire, one of the hunters mounted a high bank to look out for game. He had scarce glanced his eye round, when he perceived horses grazing on the opposite side of the river. Crouching down he slunk back to the camp, and reported what he had seen. On further reconnoitering, the voyagers counted twenty-one lodges; and from the number of horses, computed that there must be nearly a hundred Indians encamped there. They now drew their boat, with all speed and caution, into a thicket of water willows, and remained closely concealed all day. As soon as the night closed in they re-embarked. The moon would rise early; so that they had but about two hours of darkness to get past the camp. The night, however, was cloudy, with a blustering wind. Silently, and with muffled oars, they glided down the river, keeping close under the shore opposite to the camp; watching its various lodges and fires, and the dark forms passing to and fro between them. Suddenly, on turning a point of land, they found themselves close upon a camp on their own side of the river. It appeared that not more than one half of the band had crossed. They were within a few yards of the shore; they saw distinctly the savages -- some standing, some lying round the fire. Horses were grazing around. Some lodges were set up, others had been sent across the river. The red glare of the fires upon these wild groups and harsh faces,

contrasted with the surrounding darkness, had a startling effect, as the voyagers suddenly came upon the scene. The dogs of the camp perceived them, and barked; but the Indians, fortunately, took no heed of their clamor. Wyeth instantly sheered his boat out into the stream; when, unluckily it struck upon a sand-bar, and stuck fast. It was a perilous and trying situation; for he was fixed between the two camps, and within rifle range of both. All hands jumped out into the water, and tried to get the boat off; but as no one dared to give the word, they could not pull together, and their labor was in vain. In this way they labored for a long time; until Wyeth thought of giving a signal for a general heave, by lifting his hat. The expedient succeeded. They launched their canoe again into deep water, and getting in, had the delight of seeing the camp fires of the savages soon fading in the distance.

They continued under way the greater part of the night, until far beyond all danger from this band, when they pulled to shore, and encamped.

The following day was windy, and they came near upsetting their boat in carrying sail. Toward evening, the wind subsided and a beautiful calm night succeeded. They floated along with the current throughout the night, taking turns to watch and steer. The deep stillness of the night was occasionally interrupted by the neighing of the elk, the hoarse lowing of the buffalo, the hooting of large owls, and the screeching of the small ones, now and then the splash of a beaver, or the gonglike sound of the swan.

Part of their voyage was extremely tempestuous; with high winds, tremendous thunder, and soaking rain; and they were repeatedly in extreme danger from drift-wood and sunken trees. On one occasion, having continued to float at night, after the moon was down, they ran under a great snag, or sunken tree, with dry branches above the water. These caught the mast, while the boat swung round, broadside to the stream, and began to fill with water. Nothing saved her from total wreck, but cutting away the mast. She then drove down the stream, but left one of the unlucky half-breeds clinging to the snag, like a monkey to a pole. It was necessary to run in shore, toil up, laboriously, along the eddies and to attain some distance above the snag, when they launched forth again into the stream and floated down with it to his rescue.

We forbear to detail all the circumstances and adventures of upward of a months voyage, down the windings and doublings of this vast river; in the course of which they stopped occasionally at a post of one of the rival fur companies, or at a government agency for an Indian tribe. Neither shall we dwell upon the changes of climate and productions, as the voyagers swept down from north to south, across several degrees of latitude; arriving at the regions of oaks and sycamores; of mulberry and basswood trees; of paroquets and wild turkeys. This is one of the characteristics of the middle and lower part of the Missouri; but still more so of the Mississippi, whose rapid current traverses a succession of latitudes so as in a few days to float the voyager almost from the frozen regions to the tropics.

The voyage of Wyeth shows the regular and unobstructed flow of the rivers, on the east side of the Rocky Mountains, in contrast to those of the western side; where rocks and rapids continually menace and obstruct the voyager. We find him in a frail bark of skins, launching himself in a stream at the foot of the Rocky Mountains, and floating down from river to river, as they empty themselves into each other; and so he might have kept on upward of two thousand miles, until his little bark should drift into the ocean. At present we shall stop with him at Cantonment Leavenworth, the frontier post of the United States; where he arrived on the 27th of September.

---

Here his first care was to have his Nez Perce Indian, and his half-breed boy, Baptiste, vaccinated. As they approached the fort, they were hailed by the sentinel. The sight of a soldier in full array, with what appeared to be a long knife glittering on the end of a musket, struck Baptiste with such affright that he took to his heels, bawling for mercy at the top of his voice. The Nez Perce would have followed him, had not Wyeth assured him of his safety. When they underwent the operation of the lancet, the doctor's wife and another lady were present; both beautiful women. They were the first white women that they had seen, and they could not keep their eyes off of them. On returning to the boat, they recounted to their companions all that they had observed at the fort; but were especially eloquent about the white squaws, who, they said, were white as snow, and more beautiful than any human being they had ever beheld.

We shall not accompany the captain any further in his Voyage; but will simply state that he made his way to Boston, where he succeeded in organizing an association under the name of "The Columbia River Fishing and Trading Company," for his original objects of a salmon fishery and a trade in furs. A brig, the *May Dacres*, had been dispatched for the Columbia with supplies; and he was now on his way to the same point, at the head of sixty men, whom he had enlisted at St. Louis; some of whom were experienced hunters, and all more habituated to the life of the wilderness than his first band of "down-easters."

We will now return to Captain Bonneville and his party, whom we left, making up their packs and saddling their horses, in Bear River Valley.

---

Washington Irving's The Adventures of Captain Bonneville

Chapter 42

Departure of Captain Bonneville for the Columbia -- Advance of Wyeth -- Efforts to keep the lead -- Hudson's Bay party -- A junketing -- A delectable beverage -- Honey and alcohol -- High carousing -- The Canadian "bon vivant" -- A cache -- A rapid move -- Wyeth and his plans -- His travelling companions -- Buffalo hunting -- More conviviality -- An interruption.

IT was the 3d of July that Captain Bonneville set out on his second visit to the banks of the Columbia, at the head of twenty-three men. He travelled leisurely, to keep his horses fresh, until on the 10th of July a scout brought word that Wyeth, with his band, was but fifty miles in the rear, and pushing forward with all speed. This caused some bustle in the camp; for it was important to get first to the buffalo ground to secure provisions for the journey. As the horses were too heavily laden to travel fast, a cache was dugged, as promptly as possible, to receive all superfluous baggage. Just as it was finished, a spring burst out of the earth at the bottom. Another cache was therefore digged, about two miles further on; when, as they were about to bury the effects, a line of horsemen with pack-horses, were seen streaking over the plain, and encamped close by.

It proved to be a small band in the service of the Hudson's Bay Company, under the command of a veteran Canadian; one of those petty leaders, who, with a small party of men, and a small supply of goods, are employed to follow up a band of Indians from one hunting ground to another, and buy up their peltries.

Having received numerous civilities from the Hudson's Bay Company, the captain sent an invitation to the officers of the party to an evening regale; and set to work to make jovial preparations. As the night air in these elevated regions is apt to be cold, a blazing fire was soon made, that

---

would have done credit to a Christmas dinner, instead of a midsummer banquet. The parties met in high good-fellowship. There was abundance of such hunters' fare as the neighborhood furnished; and it was all discussed with mountain appetites. They talked over all the events of their late campaigns; but the Canadian veteran had been unlucky in some of his transactions; and his brow began to grow cloudy. Captain Bonneville remarked his rising spleen, and regretted that he had no juice of the grape to keep it down.

A man's wit, however, is quick and inventive in the wilderness; a thought suggested itself to the captain, how he might brew a delectable beverage. Among his stores was a keg of honey but half exhausted. This he filled up with alcohol, and stirred the fiery and mellifluous ingredients together. The glorious results may readily be imagined; a happy compound of strength and sweetness, enough to soothe the most ruffled temper and unsettle the most solid understanding.

The beverage worked to a charm; the can circulated merrily; the first deep draught washed out every care from the mind of the veteran; the second elevated his spirit to the clouds. He was, in fact, a boon companion; as all veteran Canadian traders are apt to be. He now became glorious; talked over all his exploits, his huntings, his fightings with Indian braves, his loves with Indian beauties; sang snatches of old French ditties, and Canadian boat songs; drank deeper and deeper, sang louder and louder; until, having reached a climax of drunken gayety, he gradually declined, and at length fell fast asleep upon the ground. After a long nap he again raised his head, imbibed another potation of the "sweet and strong," flashed up with another slight blaze of French gayety, and again fell asleep.

The morning found him still upon the field of action, but in sad and sorrowful condition; suffering the penalties of past pleasures, and calling to mind the captain's dulcet compound, with many a retch and spasm. It seemed as if the honey and alcohol, which had passed so glibly and smoothly over his tongue, were at war within his stomach; and that he had a swarm of bees within his head. In short, so helpless and woebegone was his plight, that his party proceeded on their march without him; the captain promised to bring him on in safety in the after part of the day.

As soon as this party had moved off, Captain Bonneville's men proceeded to construct and fill their cache; and just as it was completed the party of Wyeth was descried at a distance. In a moment all was activity to take the road. The horses were prepared and mounted; and being lightened of a great part of their burdens, were able to move with celerity. As to the worthy convive of the preceding evening, he was carefully gathered up from the hunter's couch on which he lay, repentant and supine, and, being packed upon one of the horses, was hurried forward with the convoy, groaning and ejaculating at every jolt.

In the course of the day, Wyeth, being lightly mounted, rode ahead of his party, and overtook Captain Bonneville. Their meeting was friendly and courteous; and they discussed, sociably, their respective fortunes since they separated on the banks of the Bighorn. Wyeth announced his intention of establishing a small trading post at the mouth of the Portneuf, and leaving a few men there, with a quantity of goods, to trade with the neighboring Indians. He was compelled, in fact, to this measure, in consequence of the refusal of the Rocky Mountain Fur Company to take a supply of goods which he had brought out for them according to contract; and which he had no other mode of disposing of. He further informed Captain Bonneville that the competition between the Rocky Mountain and American Fur Companies which had led to such nefarious stratagems and deadly feuds, was at an end; they having divided the country between them, allotting boundaries

---

within which each was to trade and hunt, so as not to interfere with the other.

In company with Wyeth were travelling two men of science; Mr. Nuttall, the botanist; the same who ascended the Missouri at the time of the expedition to Astoria; and Mr. Townshend, an ornithologist; from these gentlemen we may look forward to important information concerning these interesting regions. There were three religious missionaries, also, bound to the shores of the Columbia, to spread the light of the Gospel in that far wilderness.

After riding for some time together, in friendly conversation, Wyeth returned to his party, and Captain Bonneville continued to press forward, and to gain ground. At night he sent off the sadly sober and moralizing chief of the Hudson's Bay Company, under a proper escort, to rejoin his people; his route branching off in a different direction. The latter took a cordial leave of his host, hoping, on some future occasion, to repay his hospitality in kind.

In the morning the captain was early on the march; throwing scouts out far ahead, to scour hill and dale, in search of buffalo. He had confidently expected to find game in abundance, on the head-waters of the Portneuf; but on reaching that region, not a track was to be seen.

At length, one of the scouts, who had made a wide sweep away to the head-waters of the Blackfoot River, discovered great herds quietly grazing in the adjacent meadows. He set out on his return, to report his discoveries; but night overtaking him, he was kindly and hospitably entertained at the camp of Wyeth. As soon as day dawned he hastened to his own camp with the welcome intelligence; and about ten o'clock of the same morning, Captain Bonneville's party were in the midst of the game.

The packs were scarcely off the backs of the mules, when the runners, mounted on the fleetest horses, were full tilt after the buffalo. Others of the men were busied erecting scaffolds, and other contrivances, for jerking or drying meat; others were lighting great fires for the same purpose; soon the hunters began to make their appearance, bringing in the choicest morsels of buffalo meat; these were placed upon the scaffolds, and the whole camp presented a scene of singular hurry and activity. At daylight the next morning, the runners again took the field, with similar success; and, after an interval of repose made their third and last chase, about twelve o'clock; for by this time, Wyeth's party was in sight. The game being now driven into a valley, at some distance, Wyeth was obliged to fix his camp there; but he came in the evening to pay Captain Bonneville a visit. He was accompanied by Captain Stewart, the amateur traveller; who had not yet sated his appetite for the adventurous life of the wilderness. With him, also, was a Mr. M'Kay, a half-breed; son of the unfortunate adventurer of the same name who came out in the first maritime expedition to Astoria and was blown up in the Tonquin. His son had grown up in the employ of the British fur companies; and was a prime hunter, and a daring partisan. He held, moreover, a farm in the valley of the Wallamut.

The three visitors, when they reached Captain Bonneville's camp, were surprised to find no one in it but himself and three men; his party being dispersed in all directions, to make the most of their present chance for hunting. They remonstrated with him on the imprudence of remaining with so trifling a guard in a region so full of danger. Captain Bonneville vindicated the policy of his conduct. He never hesitated to send out all his hunters, when any important object was to be attained; and experience had taught him that he was most secure when his forces were thus distributed over the surrounding country. He then was sure that no enemy could approach, from any direction, without being discovered by his hunters; who have a quick eye for detecting the slightest

---

signs of the proximity of Indians; and who would instantly convey intelligence to the camp. The captain now set to work with his men, to prepare a suitable entertainment for his guests. It was a time of plenty in the camp; of prime hunters' dainties; of buffalo humps, and buffalo tongues; and roasted ribs, and broiled marrow-bones: all these were cooked in hunters' style; served up with a profusion known only on a plentiful hunting ground, and discussed with an appetite that would astonish the puny gourmands of the cities. But above all, and to give a bacchanalian grace to this truly masculine repast, the captain produced his mellifluous keg of home-brewed nectar, which had been so potent over the senses of the veteran of Hudson's Bay. Potations, pottle deep, again went round; never did beverage excite greater glee, or meet with more rapturous commendation. The parties were fast advancing to that happy state which would have insured ample cause for the next day's repentance; and the bees were already beginning to buzz about their ears, when a messenger came spurring to the camp with intelligence that Wyeth's people had got entangled in one of those deep and frightful ravines, piled with immense fragments of volcanic rock, which gash the whole country about the head-waters of the Blackfoot River. The revel was instantly at an end; the keg of sweet and potent home-brewed was deserted; and the guests departed with all speed to aid in extricating their companions from the volcanic ravine.

Washington Irving's The Adventures of Captain Bonneville  
Chapter 43

A rapid march -- A cloud of dust -- Wild horsemen -- "High Jinks" -- Horseracing and rifle-shooting -- The game of hand -- The fishing season -- Mode of fishing -- Table lands -- Salmon fishers -- The captain's visit to an Indian lodge -- The Indian girl -- The pocket mirror -- Supper -- Troubles of an evil conscience.

"UP and away!" is the first thought at daylight of the Indian trader, when a rival is at hand and distance is to be gained. Early in the morning, Captain Bonneville ordered the half dried meat to be packed upon the horses, and leaving Wyeth and his party to hunt the scattered buffalo, pushed off rapidly to the east, to regain the plain of the Portneuf. His march was rugged and dangerous; through volcanic hills, broken into cliffs and precipices; and seamed with tremendous chasms, where the rocks rose like walls.

On the second day, however, he encamped once more in the plain, and as it was still early some of the men strolled out to the neighboring hills. In casting their eyes round the country, they perceived a great cloud of dust rising in the south, and evidently approaching. Hastening back to the camp, they gave the alarm. Preparations were instantly made to receive an enemy; while some of the men, throwing themselves upon the "running horses" kept for hunting, galloped off to reconnoitre. In a little while, they made signals from a distance that all was friendly. By this time the cloud of dust had swept on as if hurried along by a blast, and a band of wild horsemen came dashing at full leap into the camp, yelling and whooping like so many maniacs. Their dresses, their accoutrements, their mode of riding, and their uncouth clamor, made them seem a party of savages arrayed for war; but they proved to be principally half-breeds, and white men grown savage in the wilderness, who were employed as trappers and hunters in the service of the Hudson's Bay Company.

Here was again "high jinks" in the camp. Captain Bonneville's men hailed these wild scamperers as congenial spirits, or rather as the very game birds of their class. They entertained them with

the hospitality of mountaineers, feasting them at every fire. At first, there were mutual details of adventures and exploits, and broad joking mingled with peals of laughter. Then came on boasting of the comparative merits of horses and rifles, which soon engrossed every tongue. This naturally led to racing, and shooting at a mark; one trial of speed and skill succeeded another, shouts and acclamations rose from the victorious parties, fierce altercations succeeded, and a general melee was about to take place, when suddenly the attention of the quarrellers was arrested by a strange kind of Indian chant or chorus, that seemed to operate upon them as a charm. Their fury was at an end; a tacit reconciliation succeeded and the ideas of the whole mongrel crowd whites, half-breeds and squaws were turned in a new direction. They all formed into groups and taking their places at the several fires, prepared for one of the most exciting amusements of the Nez Percés and the other tribes of the Far West.

The choral chant, in fact, which had thus acted as a charm, was a kind of wild accompaniment to the favorite Indian game of "Hand." This is played by two parties drawn out in opposite platoons before a blazing fire. It is in some respects like the old game of passing the ring or the button, and detecting the hand which holds it. In the present game, the object hidden, or the cache as it is called by the trappers, is a small splint of wood, or other diminutive article that may be concealed in the closed hand. This is passed backward and forward among the party "in hand," while the party "out of hand" guess where it is concealed. To heighten the excitement and confuse the guessers, a number of dry poles are laid before each platoon, upon which the members of the party "in hand" beat furiously with short staves, keeping time to the choral chant already mentioned, which waxes fast and furious as the game proceeds. As large bets are staked upon the game, the excitement is prodigious. Each party in turn bursts out in full chorus, beating, and yelling, and working themselves up into such a heat that the perspiration rolls down their naked shoulders, even in the cold of a winter night. The bets are doubled and trebled as the game advances, the mental excitement increases almost to madness, and all the worldly effects of the gamblers are often hazarded upon the position of a straw.

These gambling games were kept up throughout the night; every fire glared upon a group that looked like a crew of maniacs at their frantic orgies, and the scene would have been kept up throughout the succeeding day, had not Captain Bonneville interposed his authority, and, at the usual hour, issued his marching orders.

Proceeding down the course of Snake River, the hunters regularly returned to camp in the evening laden with wild geese, which were yet scarcely able to fly, and were easily caught in great numbers. It was now the season of the annual fish-feast, with which the Indians in these parts celebrate the first appearance of the salmon in this river. These fish are taken in great numbers at the numerous falls of about four feet pitch. The Indians flank the shallow water just below, and spear them as they attempt to pass. In wide parts of the river, also, they place a sort of chevaux-de-frize, or fence, of poles interwoven with withes, and forming an angle in the middle of the current, where a small opening is left for the salmon to pass. Around this opening the Indians station themselves on small rafts, and ply their spears with great success.

The table lands so common in this region have a sandy soil, inconsiderable in depth, and covered with sage, or more properly speaking, wormwood. Below this is a level stratum of rock, riven occasionally by frightful chasms. The whole plain rises as it approaches the river, and terminates with high and broken cliffs, difficult to pass, and in many places so precipitous that it is impossi-

ble, for days together, to get down to the water's edge, to give drink to the horses. This obliges the traveller occasionally to abandon the vicinity of the river, and make a wide sweep into the interior. It was now far in the month of July, and the party suffered extremely from sultry weather and dusty travelling. The flies and gnats, too, were extremely troublesome to the horses; especially when keeping along the edge of the river where it runs between low sand-banks. Whenever the travellers encamped in the afternoon, the horses retired to the gravelly shores and remained there, without attempting to feed until the cool of the evening. As to the travellers, they plunged into the clear and cool current, to wash away the dust of the road and refresh themselves after the heat of the day. The nights were always cool and pleasant.

At one place where they encamped for some time, the river was nearly five hundred yards wide, and studded with grassy islands, adorned with groves of willow and cotton-wood. Here the Indians were assembled in great numbers, and had barricaded the channels between the islands, to enable them to spear the salmon with greater facility. They were a timid race, and seemed unaccustomed to the sight of white men. Entering one of the huts, Captain Bonneville found the inhabitants just proceeding to cook a fine salmon. It is put into a pot filled with cold water, and hung over the fire. The moment the water begins to boil, the fish is considered cooked.

Taking his seat unceremoniously, and lighting his pipe, the captain awaited the cooking of the fish, intending to invite himself to the repast. The owner of the hut seemed to take his intrusion in good part. While conversing with him the captain felt something move behind him, and turning round and removing a few skins and old buffalo robes, discovered a young girl, about fourteen years of age, crouched beneath, who directed her large black eyes full in his face, and continued to gaze in mute surprise and terror. The captain endeavored to dispel her fears, and drawing a bright ribbon from his pocket, attempted repeatedly to tie it round her neck. She jerked back at each attempt, uttering a sound very much like a snarl; nor could all the blandishments of the captain, albeit a pleasant, good-looking, and somewhat gallant man, succeed in conquering the shyness of the savage little beauty. His attentions were now turned toward the parents, whom he presented with an awl and a little tobacco, and having thus secured their good-will, continued to smoke his pipe, and watch the salmon. While thus seated near the threshold, an urchin of the family approached the door, but catching a sight of the strange guest, ran off screaming with terror and ensconced himself behind the long straw at the back of the hut.

Desirous to dispel entirely this timidity, and to open a trade with the simple inhabitants of the hut, who, he did not doubt, had furs somewhere concealed, the captain now drew forth that grand lure in the eyes of a savage, a pocket mirror. The sight of it was irresistible. After examining it for a long time with wonder and admiration, they produced a musk-rat skin, and offered it in exchange. The captain shook his head; but purchased the skin for a couple of buttons - superfluous trinkets! as the worthy lord of the hovel had neither coat nor breeches on which to place them. The mirror still continued the great object of desire, particularly in the eyes of the old housewife, who produced a pot of parched flour and a string of biscuit roots. These procured her some trifle in return; but could not command the purchase of the mirror. The salmon being now completely cooked, they all joined heartily in supper. A bounteous portion was deposited before the captain by the old woman, upon some fresh grass, which served instead of a platter; and never had he tasted a salmon boiled so completely to his fancy.

Supper being over, the captain lighted his pipe and passed it to his host, who, inhaling the smoke,

puffed it through his nostrils so assiduously, that in a little while his head manifested signs of confusion and dizziness. Being satisfied, by this time, of the kindly and companionable qualities of the captain, he became easy and communicative; and at length hinted something about exchanging beaver skins for horses. The captain at once offered to dispose of his steed, which stood fastened at the door. The bargain was soon concluded, whereupon the Indian, removing a pile of bushes under which his valuables were concealed, drew forth the number of skins agreed upon as the price.

Shortly afterward, some of the captain's people coming up, he ordered another horse to be saddled, and, mounting it, took his departure from the hut, after distributing a few trifling presents among its simple inhabitants. During all the time of his visit, the little Indian girl had kept her large black eyes fixed upon him, almost without winking, watching every movement with awe and wonder; and as he rode off, remained gazing after him, motionless as a statue. Her father, however, delighted with his new acquaintance, mounted his newly purchased horse, and followed in the train of the captain, to whom he continued to be a faithful and useful adherent during his sojourn in the neighborhood.

The cowardly effects of an evil conscience were evidenced in the conduct of one of the captain's men, who had been in the California expedition. During all their intercourse with the harmless people of this place, he had manifested uneasiness and anxiety. While his companions mingled freely and joyously with the natives, he went about with a restless, suspicious look; scrutinizing every painted form and face and starting often at the sudden approach of some meek and inoffensive savage, who regarded him with reverence as a superior being. Yet this was ordinarily a bold fellow, who never flinched from danger, nor turned pale at the prospect of a battle. At length he requested permission of Captain Bonneville to keep out of the way of these people entirely. Their striking resemblance, he said, to the people of Ogden's River, made him continually fear that some among them might have seen him in that expedition; and might seek an opportunity of revenge. Ever after this, while they remained in this neighborhood, he would skulk out of the way and keep aloof when any of the native inhabitants approached. "Such," observed Captain Bonneville, "is the effect of self-reproach, even upon the roving trapper in the wilderness, who has little else to fear than the stings of his own guilty conscience."

---

Washington Irving's The Adventures of Captain Bonneville

Chapter 44

Outfit of a trapper -- Risks to which he is subjected -- Partnership of trappers -- Enmity of Indians -- Distant smoke -- A country on fire -- Gun Creek -- Grand Rond Fine pastures -- Perplexities in a smoky country -- Conflagration of forests.

IT had been the intention of Captain Bonneville, in descending along Snake River, to scatter his trappers upon the smaller streams. In this way a range of country is trapped by small detachments from a main body. The outfit of a trapper is generally a rifle, a pound of powder, and four pounds of lead, with a bullet mould, seven traps, an axe, a hatchet, a knife and awl, a camp kettle, two blankets, and, where supplies are plenty, seven pounds of flour. He has, generally, two or three horses, to carry himself and his baggage and peltries. Two trappers commonly go together, for the purposes of mutual assistance and support; a larger party could not easily escape the eyes of the Indians. It is a service of peril, and even more so at present than formerly, for the Indians, since

they have got into the habit of trafficking peltries with the traders, have learned the value of the beaver, and look upon the trappers as poachers, who are filching the riches from their streams, and

interfering with their market. They make no hesitation, therefore, to murder the solitary trapper, and thus destroy a competitor, while they possess themselves of his spoils. It is with regret we add, too, that this hostility has in many cases been instigated by traders, desirous of injuring their rivals, but who have themselves often reaped the fruits of the mischief they have sown.

When two trappers undertake any considerable stream, their mode of proceeding is, to hide their horses in some lonely glen, where they can graze unobserved. They then build a small hut, dig out a canoe from a cotton-wood tree, and in this poke along shore silently, in the evening, and set their traps. These they revisit in the same silent way at daybreak. When they take any beaver they bring it home, skin it, stretch the skins on sticks to dry, and feast upon the flesh. The body, hung up before the fire, turns by its own weight, and is roasted in a superior style; the tail is the trapper's tidbit; it is cut off, put on the end of a stick, and toasted, and is considered even a greater dainty than the tongue or the marrow-bone of a buffalo.

With all their silence and caution, however, the poor trappers cannot always escape their hawk-eyed enemies. Their trail has been discovered, perhaps, and followed up for many a mile; or their smoke has been seen curling up out of the secret glen, or has been scented by the savages, whose sense of smell is almost as acute as that of sight. Sometimes they are pounced upon when in the act of setting their traps; at other times, they are roused from their sleep by the horrid war-whoop; or, perhaps, have a bullet or an arrow whistling about their ears, in the midst of one of their beaver banquets. In this way they are picked off, from time to time, and nothing is known of them, until, perchance, their bones are found bleaching in some lonely ravine, or on the banks of some nameless stream, which from that time is called after them. Many of the small streams beyond the mountains thus perpetuate the names of unfortunate trappers that have been murdered on their banks.

A knowledge of these dangers deterred Captain Bonneville, in the present instance, from detaching small parties of trappers as he had intended; for his scouts brought him word that formidable bands of the Bannock Indians were lying on the Boisee and Payette Rivers, at no great distance, so that they would be apt to detect and cut off any stragglers. It behooved him, also, to keep his party together, to guard against any predatory attack upon the main body; he continued on his way, therefore, without dividing his forces. And fortunate it was that he did so; for in a little while he encountered one of the phenomena of the western wilds that would effectually have prevented his scattered people from finding each other again. In a word, it was the season of setting fire to the prairies. As he advanced he began to perceive great clouds of smoke at a distance, rising by degrees, and spreading over the whole face of the country. The atmosphere became dry and surcharged with murky vapor, parching to the skin, and irritating to the eyes. When travelling among the hills, they could scarcely discern objects at the distance of a few paces; indeed, the least exertion of the vision was painful. There was evidently some vast conflagration in the direction toward which they were proceeding; it was as yet at a great distance, and during the day they could only see the smoke rising in larger and denser volumes, and rolling forth in an immense canopy. At night the skies were all glowing with the reflection of unseen fires, hanging in an immense body of lurid light high above the horizon.

Having reached Gun Creek, an important stream coming from the left, Captain Bonneville turned up its course, to traverse the mountain and avoid the great bend of Snake River. Being now out of the range of the Bannecks, he sent out his people in all directions to hunt the antelope for present supplies; keeping the dried meats for places where game might be scarce.

During four days that the party were ascending Gun Creek, the smoke continued to increase so rapidly that it was impossible to distinguish the face of the country and ascertain landmarks. Fortunately, the travellers fell upon an Indian trail, which led them to the head-waters of the Fourche de Glace or Ice River, sometimes called the Grand Rond. Here they found all the plains and valleys wrapped in one vast conflagration; which swept over the long grass in billows of flame, shot up every bush and tree, rose in great columns from the groves, and set up clouds of smoke that darkened the atmosphere. To avoid this sea of fire, the travellers had to pursue their course close along the foot of the mountains; but the irritation from the smoke continued to be tormenting. The country about the head-waters of the Grand Rond spreads out into broad and level prairies, extremely fertile, and watered by mountain springs and rivulets. These prairies are resorted to by small bands of the Skynses, to pasture their horses, as well as to banquets upon the salmon which abound in the neighboring waters. They take these fish in great quantities and without the least difficulty; simply taking them out of the water with their hands, as they flounder and struggle in the numerous long shoals of the principal streams. At the time the travellers passed over these prairies, some of the narrow, deep streams by which they were intersected were completely choked with salmon, which they took in great numbers. The wolves and bears frequent these streams at this season, to avail themselves of these great fisheries.

The travellers continued, for many days, to experience great difficulties and discomforts from this wide conflagration, which seemed to embrace the whole wilderness. The sun was for a great part of the time obscured by the smoke, and the loftiest mountains were hidden from view. Blundering along in this region of mist and uncertainty, they were frequently obliged to make long circuits, to avoid obstacles which they could not perceive until close upon them. The Indian trails were their safest guides, for though they sometimes appeared to lead them out of their direct course, they always conducted them to the passes.

On the 26th of August, they reached the head of the Way-lee-way River. Here, in a valley of the mountains through which this head-water makes its way, they found a band of the Skynses, who were extremely sociable, and appeared to be well disposed, and as they spoke the Nez Perce language, an intercourse was easily kept up with them.

In the pastures on the bank of this stream, Captain Bonneville encamped for a time, for the purpose of recruiting the strength of his horses. Scouts were now sent out to explore the surrounding country, and search for a convenient pass through the mountains toward the Wallamut or Multnomah. After an absence of twenty days they returned weary and discouraged. They had been harassed and perplexed in rugged mountain defiles, where their progress was continually impeded by rocks and precipices. Often they had been obliged to travel along the edges of frightful ravines, where a false step would have been fatal. In one of these passes, a horse fell from the brink of a precipice, and would have been dashed to pieces had he not lodged among the branches of a tree, from which he was extricated with great difficulty. These, however, were not the worst of their difficulties and perils. The great conflagration of the country, which had harassed the main party in its march, was still more awful the further this exploring party proceeded. The flames

which swept rapidly over the light vegetation of the prairies assumed a fiercer character and took a stronger hold amid the wooded glens and ravines of the mountains. Some of the deep gorges and defiles sent up sheets of flame, and clouds of lurid smoke, and sparks and cinders that in the night made them resemble the craters of volcanoes. The groves and forests, too, which crowned the cliffs, shot up their towering columns of fire, and added to the furnace glow of the mountains. With these stupendous sights were combined the rushing blasts caused by the rarefied air, which roared and howled through the narrow glens, and whirled forth the smoke and flames in impetuous wreaths. Ever and anon, too, was heard the crash of falling trees, sometimes tumbling from crags and precipices, with tremendous sounds.

In the daytime, the mountains were wrapped in smoke so dense and blinding, that the explorers, if by chance they separated, could only find each other by shouting. Often, too, they had to grope their way through the yet burning forests, in constant peril from the limbs and trunks of trees, which frequently fell across their path. At length they gave up the attempt to find a pass as hopeless, under actual circumstances, and made their way back to the camp to report their failure.

Chapter 45

Skynses -- Their traffic -- Hunting -- Food -- Horses -- A horse-race -- Devotional feeling of the Skynses, Nez Perces and Flatheads -- Prayers -- Exhortations -- A preacher on horseback -- Effect of religion on the manners of the tribes -- A new light.

DURING the absence of this detachment, a sociable intercourse had been kept up between the main party and the Skynses, who had removed into the neighborhood of the camp. These people dwell about the waters of the Way-lee-way and the adjacent country, and trade regularly with the Hudson's Bay Company; generally giving horses in exchange for the articles of which they stand in need. They bring beaver skins, also, to the trading posts; not procured by trapping, but by a course of internal traffic with the shy and ignorant Shoshokoes and Too-el-icans, who keep in distant and unfrequented parts of the country, and will not venture near the trading houses. The Skynses hunt the deer and elk occasionally; and depend, for a part of the year, on fishing. Their main subsistence, however, is upon roots, especially the kamash. This bulbous root is said to be of a delicious flavor, and highly nutritious. The women dig it up in great quantities, steam it, and deposit it in caches for winter provisions. It grows spontaneously, and absolutely covers the plains. This tribe was comfortably clad and equipped. They had a few rifles among them, and were extremely desirous of bartering for those of Captain Bonneville's men; offering a couple of good running horses for a light rifle. Their first-rate horses, however, were not to be procured from them on any terms. They almost invariably use ponies; but of a breed infinitely superior to any in the United States. They are fond of trying their speed and bottom, and of betting upon them. As Captain Bonneville was desirous of judging of the comparative merit of their horses, he purchased one of their racers, and had a trial of speed between that, an American, and a Shoshonie, which were supposed to be well matched. The race-course was for the distance of one mile and a half out and back. For the first half mile the American took the lead by a few hands; but, losing his wind, soon fell far behind; leaving the Shoshonie and Skynse to contend together. For a mile and a half they went head and head: but at the turn the Skynse took the lead and won the race with great ease, scarce drawing a quick breath when all was over.

The Skynses, like the Nez Perces and the Flatheads, have a strong devotional feeling, which has been successfully cultivated by some of the resident personages of the Hudson's Bay Company. Sunday is invariably kept sacred among these tribes. They will not raise their camp on that day, unless in extreme cases of danger or hunger: neither will they hunt, nor fish, nor trade, nor perform any kind of labor on that day. A part of it is passed in prayer and religious ceremonies. Some chief, who is generally at the same time what is called a "medicine man," assembles the community. After invoking blessings from the Deity, he addresses the assemblage, exhorting them to good conduct; to be diligent in providing for their families; to abstain from lying and stealing; to avoid quarrelling or cheating in their play, and to be just and hospitable to all strangers who may be among them. Prayers and exhortations are also made, early in the morning, on week days. Sometimes, all this is done by the chief from horseback; moving slowly about the camp, with his hat on, and uttering his exhortations with a loud voice. On all occasions, the bystanders listen with profound attention; and at the end of every sentence respond one word in unison, apparently equivalent to an amen. While these prayers and exhortations are going on, every employment in the camp is suspended. If an Indian is riding by the place, he dismounts, holds his horse, and attends with reverence until all is done. When the chief has finished his prayer or exhortation, he says, "I have done," upon which there is a general exclamation in unison.

With these religious services, probably derived from the white men, the tribes above-mentioned mingle some of their old Indian ceremonials, such as dancing to the cadence of a song or ballad, which is generally done in a large lodge provided for the purpose. Besides Sundays, they likewise observe the cardinal holidays of the Roman Catholic Church.

Whoever has introduced these simple forms of religions among these poor savages, has evidently understood their characters and capacities, and effected a great melioration of their manners. Of this we speak not merely from the testimony of Captain Bonneville, but likewise from that of Mr. Wyeth, who passed some months in a travelling camp of the Flatheads. "During the time I have been with them," says he, "I have never known an instance of theft among them: the least thing, even to a bead or pin, is brought to you, if found; and often, things that have been thrown away. Neither have I known any quarrelling, nor lying. This absence of all quarrelling the more surprised me, when I came to see the various occasions that would have given rise to it among the whites: the crowding together of from twelve to eighteen hundred horses, which have to be driven into camp at night, to be picketed, to be packed in the morning; the gathering of fuel in places where it is extremely scanty. All this, however, is done without confusion or disturbance.

"They have a mild, playful, laughing disposition; and this is portrayed in their countenances. They are polite, and unobtrusive. When one speaks, the rest pay strict attention: when he is done, another assents by 'yes,' or dissents by 'no;' and then states his reasons, which are listened to with equal attention. Even the children are more peaceable than any other children. I never heard an angry word among them, nor any quarrelling; although there were, at least, five hundred of them together, and continually at play. With all this quietness of spirit, they are brave when put to the test; and are an overmatch for an equal number of Blackfeet."

The foregoing observations, though gathered from Mr. Wyeth as relative to the Flatheads, apply, in the main, to the Skynses also. Captain Bonneville, during his sojourn with the latter, took constant occasion, in conversing with their principal men, to encourage them in the cultivation of moral and religious habits; drawing a comparison between their peaceable and comfortable

---

course of life and that of other tribes, and attributing it to their superior sense of morality and religion. He frequently attended their religious services, with his people; always enjoining on the latter the most reverential deportment; and he observed that the poor Indians were always pleased to have the white men present.

The disposition of these tribes is evidently favorable to a considerable degree of civilization. A few farmers settled among them might lead them, Captain Bonneville thinks, to till the earth and cultivate grain; the country of the Skynses and Nez Perces is admirably adapted for the raising of cattle. A Christian missionary or two, and some trifling assistance from government, to protect them from the predatory and warlike tribes, might lay the foundation of a Christian people in the midst of the great western wilderness, who would "wear the Americans near their hearts."

We must not omit to observe, however, in qualification of the sanctity of this Sabbath in the wilderness, that these tribes who are all ardently addicted to gambling and horseracing, make Sunday a peculiar day for recreations of the kind, not deeming them in any wise out of season. After prayers and pious ceremonies are over, there is scarce an hour in the day, says Captain Bonneville, that you do not see several horses racing at full speed; and in every corner of the camp are groups of gamblers, ready to stake everything upon the all-absorbing game of hand. The Indians, says Wyeth, appear to enjoy their amusements with more zest than the whites. They are great gamblers; and in proportion to their means, play bolder and bet higher than white men.

The cultivation of the religious feeling, above noted, among the savages, has been at times a convenient policy with some of the more knowing traders; who have derived great credit and influence among them by being considered "medicine men;" that is, men gifted with mysterious knowledge. This feeling is also at times played upon by religious charlatans, who are to be found in savage as well as civilized life. One of these was noted by Wyeth, during his sojourn among the Flat-heads. A new great man, says he, is rising in the camp, who aims at power and sway. He covers his designs under the ample cloak of religion; inculcating some new doctrines and ceremonials among those who are more simple than himself. He has already made proselytes of one-fifth of the camp; beginning by working on the women, the children, and the weak-minded. His followers are all dancing on the plain, to their own vocal music. The more knowing ones of the tribe look on and laugh; thinking it all too foolish to do harm; but they will soon find that women, children, and fools, form a large majority of every community, and they will have, eventually, to follow the new light, or be considered among the profane. As soon as a preacher or pseudo prophet of the kind gets followers enough, he either takes command of the tribe, or branches off and sets up an independent chief and "medicine man."

Washington Irving's The Adventures of Captain Bonneville

Chapter 46

Scarcity in the camp -- Refusal of supplies by the Hudson's Bay Company -- Conduct of the Indians -- A hungry retreat -- John Day's River -- The Blue Mountains -- Salmon fishing on Snake River -- Messengers from the Crow country -- Bear River Valley -- immense migration of buffalo -- Danger of buffalo hunting -- A wounded Indian -- Eutaw Indians -- A "surround" of antelopes. PROVISIONS were now growing scanty in the camp, and Captain Bonneville found it necessary to seek a new neighborhood. Taking leave, therefore, of his friends, the Skynses, he set off to the

---

westward, and, crossing a low range of mountains, encamped on the head-waters of the Ottolais. Being now within thirty miles of Fort Wallah-Wallah, the trading post of the Hudson's Bay Company, he sent a small detachment of men thither to purchase corn for the subsistence of his party. The men were well received at the fort; but all supplies for their camp were peremptorily refused. Tempting offers were made them, however, if they would leave their present employ, and enter into the service of the company; but they were not to be seduced.

When Captain Bonneville saw his messengers return empty-handed, he ordered an instant move, for there was imminent danger of famine. He pushed forward down the course of the Ottolais, which runs diagonal to the Columbia, and falls into it about fifty miles below the Wallah-Wallah. His route lay through a beautiful undulating country, covered with horses belonging to the Skynses, who sent them there for pasturage.

On reaching the Columbia, Captain Bonneville hoped to open a trade with the natives, for fish and other provisions, but to his surprise they kept aloof, and even hid themselves on his approach. He soon discovered that they were under the influence of the Hudson's Bay Company, who had forbidden them to trade, or hold any communion with him. He proceeded along the Columbia, but it was everywhere the same; not an article of provisions was to be obtained from the natives, and he was at length obliged to kill a couple of his horses to sustain his famishing people. He now came to a halt, and consulted what was to be done. The broad and beautiful Columbia lay before them, smooth and unruffled as a mirror; a little more journeying would take them to its lower region; to the noble valley of the Wallamut, their projected winter quarters. To advance under present circumstances would be to court starvation. The resources of the country were locked against them, by the influence of a jealous and powerful monopoly. If they reached the Wallamut, they could scarcely hope to obtain sufficient supplies for the winter; if they lingered any longer in the country the snows would gather upon the mountains and cut off their retreat. By hastening their return, they would be able to reach the Blue Mountains just in time to find the elk, the deer, and the bighorn; and after they had supplied themselves with provisions, they might push through the mountains before they were entirely blocked by snow. Influenced by these considerations, Captain Bonneville reluctantly turned his back a second time on the Columbia, and set off for the Blue Mountains. He took his course up John Day's River, so called from one of the hunters in the original Astorian enterprise. As famine was at his heels, he travelled fast, and reached the mountains by the 1st of October. He entered by the opening made by John Day's River; it was a rugged and difficult defile, but he and his men had become accustomed to hard scrambles of the kind. Fortunately, the September rains had extinguished the fires which recently spread over these regions; and the mountains, no longer wrapped in smoke, now revealed all their grandeur and sublimity to the eye.

They were disappointed in their expectation of finding abundant game in the mountains; large bands of the natives had passed through, returning from their fishing expeditions, and had driven all the game before them. It was only now and then that the hunters could bring in sufficient to keep the party from starvation.

To add to their distress, they mistook their route, and wandered for ten days among high and bald hills of clay. At length, after much perplexity, they made their way to the banks of Snake River, following the course of which, they were sure to reach their place of destination.

It was the 20th of October when they found themselves once more upon this noted stream. The

Shoshokoes, whom they had met with in such scanty numbers on their journey down the river, now absolutely thronged its banks to profit by the abundance of salmon, and lay up a stock for winter provisions. Scaffolds were everywhere erected, and immense quantities of fish drying upon them. At this season of the year, however, the salmon are extremely poor, and the travellers needed their keen sauce of hunger to give them a relish.

In some places the shores were completely covered with a stratum of dead salmon, exhausted in ascending the river, or destroyed at the falls; the fetid odor of which tainted the air.

It was not until the travellers reached the head-waters of the Portneuf that they really found themselves in a region of abundance. Here the buffaloes were in immense herds; and here they remained for three days, slaying and cooking, and feasting, and indemnifying themselves by an enormous carnival, for a long and hungry Lent. Their horses, too, found good pasturage, and enjoyed a little rest after a severe spell of hard travelling.

During this period, two horsemen arrived at the camp, who proved to be messengers sent express for supplies from Montero's party; which had been sent to beat up the Crow country and the Black Hills, and to winter on the Arkansas. They reported that all was well with the party, but that they had not been able to accomplish the whole of their mission, and were still in the Crow country, where they should remain until joined by Captain Bonneville in the spring. The captain retained the messengers with him until the 17th of November, when, having reached the caches on Bear River, and procured thence the required supplies, he sent them back to their party; appointing a rendezvous toward the last of June following, on the forks of Wind River Valley, in the Crow country.

He now remained several days encamped near the caches, and having discovered a small band of Shoshonies in his neighborhood, purchased from them lodges, furs, and other articles of winter comfort, and arranged with them to encamp together during the winter.

The place designed by the captain for the wintering ground was on the upper part of Bear River, some distance off. He delayed approaching it as long as possible, in order to avoid driving off the buffaloes, which would be needed for winter provisions. He accordingly moved forward but slowly, merely as the want of game and grass obliged him to shift his position. The weather had already become extremely cold, and the snow lay to a considerable depth. To enable the horses to carry as much dried meat as possible, he caused a cache to be made, in which all the baggage that could be spared was deposited. This done, the party continued to move slowly toward their winter quarters.

They were not doomed, however, to suffer from scarcity during the present winter. The people upon Snake River having chased off the buffaloes before the snow had become deep, immense herds now came trooping over the mountains; forming dark masses on their sides, from which their deep-mouthed bellowing sounded like the low peals and mutterings from a gathering thunder-cloud. In effect, the cloud broke, and down came the torrent thundering into the valley. It is utterly impossible, according to Captain Bonneville, to convey an idea of the effect produced by the sight of such countless throngs of animals of such bulk and spirit, all rushing forward as if swept on by a whirlwind.

The long privation which the travellers had suffered gave uncommon ardor to their present hunting. One of the Indians attached to the party, finding himself on horseback in the midst of the buffaloes, without either rifle, or bow and arrows, dashed after a fine cow that was passing close

by him, and plunged his knife into her side with such lucky aim as to bring her to the ground. It was a daring deed; but hunger had made him almost desperate.

The buffaloes are sometimes tenacious of life, and must be wounded in particular parts. A ball striking the shagged frontlet of a bull produces no other effect than a toss of the head and greater exasperation; on the contrary, a ball striking the forehead of a cow is fatal. Several instances occurred during this great hunting bout, of bulls fighting furiously after having received mortal wounds. Wyeth, also, was witness to an instance of the kind while encamped with Indians. During a grand hunt of the buffaloes, one of the Indians pressed a bull so closely that the animal turned suddenly on him. His horse stopped short, or started back, and threw him. Before he could rise the bull rushed furiously upon him, and gored him in the chest so that his breath came out at the aperture. He was conveyed back to the camp, and his wound was dressed. Giving himself up for slain, he called round him his friends, and made his will by word of mouth. It was something like a death chant, and at the end of every sentence those around responded in concord. He appeared no ways intimidated by the approach of death. "I think," adds Wyeth, "the Indians die better than the white men; perhaps from having less fear about the future."

The buffaloes may be approached very near, if the hunter keeps to the leeward; but they are quick of scent, and will take the alarm and move off from a party of hunters to the windward, even when two miles distant.

The vast herds which had poured down into the Bear River Valley were now snow-bound, and remained in the neighborhood of the camp throughout the winter. This furnished the trappers and their Indian friends a perpetual carnival; so that, to slay and eat seemed to be the main occupations of the day. It is astonishing what loads of meat it requires to cope with the appetite of a hunting camp.

The ravens and wolves soon came in for their share of the good cheer. These constant attendants of the hunter gathered in vast numbers as the winter advanced. They might be completely out of sight, but at the report of a gun, flights of ravens would immediately be seen hovering in the air, no one knew whence they came; while the sharp visages of the wolves would peep down from the brow of every hill, waiting for the hunter's departure to pounce upon the carcass.

Besides the buffaloes, there were other neighbors snow-bound in the valley, whose presence did not promise to be so advantageous. This was a band of Eutaw Indians who were encamped higher up on the river. They are a poor tribe that, in a scale of the various tribes inhabiting these regions, would rank between the Shoshonies and the Shoshokoes or Root Diggers; though more bold and warlike than the latter. They have but few rifles among them, and are generally armed with bows and arrows.

As this band and the Shoshonies were at deadly feud, on account of old grievances, and as neither party stood in awe of the other, it was feared some bloody scenes might ensue. Captain Bonneville, therefore, undertook the office of pacificator, and sent to the Eutaw chiefs, inviting them to a friendly smoke, in order to bring about a reconciliation. His invitation was proudly declined; whereupon he went to them in person, and succeeded in effecting a suspension of hostilities until the chiefs of the two tribes could meet in council. The braves of the two rival camps sullenly acquiesced in the arrangement. They would take their seats upon the hill tops, and watch their quondam enemies hunting the buffalo in the plain below, and evidently repine that their hands were tied up from a skirmish. The worthy captain, however, succeeded in carrying through his be-

nevolent mediation. The chiefs met; the amicable pipe was smoked, the hatchet buried, and peace formally proclaimed. After this, both camps united and mingled in social intercourse. Private quarrels, however, would occasionally occur in hunting, about the division of the game, and blows would sometimes be exchanged over the carcass of a buffalo; but the chiefs wisely took no notice of these individual brawls.

One day the scouts, who had been ranging the hills, brought news of several large herds of antelopes in a small valley at no great distance. This produced a sensation among the Indians, for both tribes were in ragged condition, and sadly in want of those shirts made of the skin of the antelope. It was determined to have "a surround," as the mode of hunting that animal is called. Everything now assumed an air of mystic solemnity and importance. The chiefs prepared their medicines or charms each according to his own method, or fancied inspiration, generally with the compound of certain simples; others consulted the entrails of animals which they had sacrificed, and thence drew favorable auguries. After much grave smoking and deliberating it was at length proclaimed that all who were able to lift a club, man, woman, or child, should muster for "the surround." When all had congregated, they moved in rude procession to the nearest point of the valley in question, and there halted. Another course of smoking and deliberating, of which the Indians are so fond, took place among the chiefs. Directions were then issued for the horsemen to make a circuit of about seven miles, so as to encompass the herd. When this was done, the whole mounted force dashed off simultaneously, at full speed, shouting and yelling at the top of their voices. In a short space of time the antelopes, started from their hiding-places, came bounding from all points into the valley. The riders, now gradually contracting their circle, brought them nearer and nearer to the spot where the senior chief, surrounded by the elders, male and female, were seated in supervision of the chase. The antelopes, nearly exhausted with fatigue and fright, and bewildered by perpetual whooping, made no effort to break through the ring of the hunters, but ran round in small circles, until man, woman, and child beat them down with bludgeons. Such is the nature of that species of antelope hunting, technically called "a surround."

---

Washington Irving's The Adventures of Captain Bonneville  
Chapter 47

A festive winter -- Conversion of the Shoshonies -- Visit of two free trappers -- Gayety in the camp -- A touch of the tender passion -- The reclaimed squaw -- An Indian fine lady -- An elopement -- A pursuit -- Market value of a bad wife.

GAME continued to abound throughout the winter, and the camp was overstocked with provisions. Beef and venison, humps and haunches, buffalo tongues and marrow-bones, were constantly cooking at every fire; and the whole atmosphere was redolent with the savory fumes of roast meat. It was, indeed, a continual "feast of fat things," and though there might be a lack of "wine upon the lees," yet we have shown that a substitute was occasionally to be found in honey and alcohol.

Both the Shoshonies and the Eutaws conducted themselves with great propriety. It is true, they now and then filched a few trifles from their good friends, the Big Hearts, when their backs were turned; but then, they always treated them to their faces with the utmost deference and respect, and good-humoredly vied with the trappers in all kinds of feats of activity and mirthful sports. The two tribes maintained toward each other, also a friendliness of aspect which gave Captain

Bonneville reason to hope that all past animosity was effectually buried.

The two rival bands, however, had not long been mingled in this social manner before their ancient jealousy began to break out in a new form. The senior chief of the Shoshonies was a thinking man, and a man of observation. He had been among the Nez Percés, listened to their new code of morality and religion received from the white men, and attended their devotional exercises. He had observed the effect of all this, in elevating the tribe in the estimation of the white men; and determined, by the same means, to gain for his own tribe a superiority over their ignorant rivals, the Eutaws. He accordingly assembled his people, and promulgated among them the mongrel doctrines and form of worship of the Nez Percés; recommending the same to their adoption. The Shoshonies were struck with the novelty, at least, of the measure, and entered into it with spirit. They began to observe Sundays and holidays, and to have their devotional dances, and chants, and other ceremonials, about which the ignorant Eutaws knew nothing; while they exerted their usual competition in shooting and horseracing, and the renowned game of hand.

Matters were going on thus pleasantly and prosperously, in this motley community of white and red men, when, one morning, two stark free trappers, arrayed in the height of savage finery, and mounted on steeds as fine and as fiery as themselves, and all jingling with hawks' bells, came galloping, with whoop and halloo, into the camp.

They were fresh from the winter encampment of the American Fur Company, in the Green River Valley; and had come to pay their old comrades of Captain Bonneville's company a visit. An idea may be formed from the scenes we have already given of conviviality in the wilderness, of the manner in which these game birds were received by those of their feather in the camp; what feasting, what revelling, what boasting, what bragging, what ranting and roaring, and racing and gambling, and squabbling and fighting, ensued among these boon companions. Captain Bonneville, it is true, maintained always a certain degree of law and order in his camp, and checked each fierce excess; but the trappers, in their seasons of idleness and relaxation require a degree of license and indulgence, to repay them for the long privations and almost incredible hardships of their periods of active service.

In the midst of all this feasting and frolicking, a freak of the tender passion intervened, and wrought a complete change in the scene. Among the Indian beauties in the camp of the Eutaws and Shoshonies, the free trappers discovered two, who had whilom figured as their squaws. These connections frequently take place for a season, and sometimes continue for years, if not perpetually; but are apt to be broken when the free trapper starts off, suddenly, on some distant and rough expedition.

In the present instance, these wild blades were anxious to regain their belles; nor were the latter loath once more to come under their protection. The free trapper combines, in the eye of an Indian girl, all that is dashing and heroic in a warrior of her own race -- whose gait, and garb, and bravery he emulates -- with all that is gallant and glorious in the white man. And then the indulgence with which he treats her, the finery in which he decks her out, the state in which she moves, the sway she enjoys over both his purse and person; instead of being the drudge and slave of an Indian husband, obliged to carry his pack, and build his lodge, and make his fire, and bear his cross humors and dry blows. No; there is no comparison in the eyes of an aspiring belle of the wilderness, between a free trapper and an Indian brave.

With respect to one of the parties the matter was easily arranged. 'The beauty in question was a

pert little Eutaw wench, that had been taken prisoner, in some war excursion, by a Shoshonie. She was readily ransomed for a few articles of trifling value; and forthwith figured about the camp in fine array, "with rings on her fingers, and bells on her toes," and a tossed-up coquettish air that made her the envy, admiration, and abhorrence of all the leathern-dressed, hard-working squaws of her acquaintance.

As to the other beauty, it was quite a different matter. She had become the wife of a Shoshonie brave. It is true, he had another wife, of older date than the one in question; who, therefore, took command in his household, and treated his new spouse as a slave; but the latter was the wife of his last fancy, his latest caprice; and was precious in his eyes. All attempt to bargain with him, therefore, was useless; the very proposition was repulsed with anger and disdain. The spirit of the trapper was roused, his pride was piqued as well as his passion. He endeavored to prevail upon his quondam mistress to elope with him. His horses were fleet, the winter nights were long and dark, before daylight they would be beyond the reach of pursuit; and once at the encampment in Green River Valley, they might set the whole band of Shoshonies at defiance.

The Indian girl listened and longed. Her heart yearned after the ease and splendor of condition of a trapper's bride, and throbbed to be free from the capricious control of the premier squaw; but she dreaded the failure of the plan, and the fury of a Shoshonie husband. They parted; the Indian girl in tears, and the madcap trapper more than ever, with his thwarted passion.

Their interviews had, probably, been detected, and the jealousy of the Shoshonie brave aroused: a clamor of angry voices was heard in his lodge, with the sound of blows, and of female weeping and lamenting. At night, as the trapper lay tossing on his pallet, a soft voice whispered at the door of his lodge. His mistress stood trembling before him. She was ready to follow whithersoever he should lead.

In an instant he was up and out. He had two prime horses, sure and swift of foot, and of great wind. With stealthy quiet, they were brought up and saddled; and in a few moments he and his prize were careering over the snow, with which the whole country was covered. In the eagerness of escape, they had made no provision for their journey; days must elapse before they could reach their haven of safety, and mountains and prairies be traversed, wrapped in all the desolation of winter. For the present, however they thought of nothing but flight; urging their horses forward over the dreary wastes, and fancying, in the howling of every blast, they heard the yell of the pursuer.

At early dawn, the Shoshonie became aware of his loss. Mounting his swiftest horse, he set off in hot pursuit. He soon found the trail of the fugitives, and spurred on in hopes of overtaking them. The winds, however, which swept the valley, had drifted the light snow into the prints made by the horses' hoofs. In a little while he lost all trace of them, and was completely thrown out of the chase. He knew, however, the situation of the camp toward which they were bound, and a direct course through the mountains, by which he might arrive there sooner than the fugitives. Through the most rugged defiles, therefore, he urged his course by day and night, scarce pausing until he reached the camp. It was some time before the fugitives made their appearance. Six days had they traversed the wintry wilds. They came, haggard with hunger and fatigue, and their horses faltering under them. The first object that met their eyes on entering the camp was the Shoshonie brave. He rushed, knife in hand, to plunge it in the heart that had proved false to him. The trapper threw himself before the cowering form of his mistress, and, exhausted as he was, prepared for a deadly

struggle. The Shoshonie paused. His habitual awe of the white man checked his arm; the trapper's friends crowded to the spot, and arrested him. A parley ensued. A kind of crim. con. adjudication took place; such as frequently occurs in civilized life. A couple of horses were declared to be a fair compensation for the loss of a woman who had previously lost her heart; with this, the Shoshonie brave was fain to pacify his passion. He returned to Captain Bonneville's camp, somewhat crest-fallen, it is true; but parried the officious condolences of his friends by observing that two good horses were very good pay for one bad wife.

Chapter 48

Breaking up of winter quarters -- Move to Green River -- A trapper and his rifle -- An arrival in camp -- A free trapper and his squaw in distress -- Story of a Blackfoot belle.

THE winter was now breaking up, the snows were melted, from the hills, and from the lower parts of the mountains, and the time for decamping had arrived. Captain Bonneville dispatched a party to the caches, who brought away all the effects concealed there, and on the 1st of April (1835), the camp was broken up, and every one on the move. The white men and their allies, the Eutaws and Shoshonies, parted with many regrets and sincere expressions of good-will; for their intercourse throughout the winter had been of the most friendly kind.

Captain Bonneville and his party passed by Ham's Fork, and reached the Colorado, or Green River, without accident, on the banks of which they remained during the residue of the spring. During this time, they were conscious that a band of hostile Indians were hovering about their vicinity, watching for an opportunity to slay or steal; but the vigilant precautions of Captain Bonneville baffled all their manoeuvres. In such dangerous times, the experienced mountaineer is never without his rifle even in camp. On going from lodge to lodge to visit his comrades, he takes it with him. On seating himself in a lodge, he lays it beside him, ready to be snatched up; when he goes out, he takes it up as regularly as a citizen would his walking-staff. His rifle is his constant friend and protector.

On the 10th of June, the party was a little to the east of the Wind River Mountains, where they halted for a time in excellent pasturage, to give their horses a chance to recruit their strength for a long journey; for it was Captain Bonneville's intention to shape his course to the settlements; having already been detained by the complication of his duties, and by various losses and impediments, far beyond the time specified in his leave of absence.

While the party was thus reposing in the neighborhood of the Wind River Mountains, a solitary free trapper rode one day into the camp, and accosted Captain Bonneville. He belonged, he said, to a party of thirty hunters, who had just passed through the neighborhood, but whom he had abandoned in consequence of their ill treatment of a brother trapper; whom they had cast off from their party, and left with his bag and baggage, and an Indian wife into the bargain, in the midst of a desolate prairie. The horseman gave a piteous account of the situation of this helpless pair, and solicited the loan of horses to bring them and their effects to the camp.

The captain was not a man to refuse assistance to any one in distress, especially when there was a woman in the case; horses were immediately dispatched, with an escort, to aid the unfortunate couple. The next day they made their appearance with all their effects; the man, a stalwart mountaineer, with a peculiarly game look; the woman, a young Blackfoot beauty, arrayed in the trap-

pings and trinketry of a free trapper's bride.

Finding the woman to be quick-witted and communicative, Captain Bonneville entered into conversation with her, and obtained from her many particulars concerning the habits and customs of her tribe; especially their wars and huntings. They pride themselves upon being the "best legs of the mountains," and hunt the buffalo on foot. This is done in spring time, when the frosts have thawed and the ground is soft. The heavy buffaloes then sink over their hoofs at every step, and are easily overtaken by the Blackfeet, whose fleet steps press lightly on the surface. It is said, however, that the buffaloes on the Pacific side of the Rocky Mountains are fleeter and more active than on the Atlantic side; those upon the plains of the Columbia can scarcely be overtaken by a horse that would outstrip the same animal in the neighborhood of the Platte, the usual hunting ground of the Blackfeet. In the course of further conversation, Captain Bonneville drew from the Indian woman her whole story; which gave a picture of savage life, and of the drudgery and hardships to which an Indian wife is subject.

"I was the wife," said she, "of a Blackfoot warrior, and I served him faithfully. Who was so well served as he? Whose lodge was so well provided, or kept so clean? I brought wood in the morning, and placed water always at hand. I watched for his coming; and he found his meat cooked and ready. If he rose to go forth, there was nothing to delay him. I searched the thought that was in his heart, to save him the trouble of speaking. When I went abroad on errands for him, the chiefs and warriors smiled upon me, and the young braves spoke soft things, in secret; but my feet were in the straight path, and my eyes could see nothing but him.

"When he went out to hunt, or to war, who aided to equip him, but I? When he returned, I met him at the door; I took his gun; and he entered without further thought. While he sat and smoked, I unloaded his horses; tied them to the stakes, brought in their loads, and was quickly at his feet. If his moccasins were wet I took them off and put on others which were dry and warm. I dressed all the skins he had taken in the chase. He could never say to me, why is it not done? He hunted the deer, the antelope, and the buffalo, and he watched for the enemy. Everything else was done by me. When our people moved their camp, he mounted his horse and rode away; free as though he had fallen from the skies. He had nothing to do with the labor of the camp; it was I that packed the horses and led them on the journey. When we halted in the evening, and he sat with the other braves and smoked, it was I that pitched his lodge; and when he came to eat and sleep, his supper and his bed were ready.

"I served him faithfully; and what was my reward? A cloud was always on his brow, and sharp lightning on his tongue. I was his dog; and not his wife.

"Who was it that scarred and bruised me? It was he. My brother saw how I was treated. His heart was big for me. He begged me to leave my tyrant and fly. Where could I go? If retaken, who would protect me? My brother was not a chief; he could not save me from blows and wounds, perhaps death. At length I was persuaded. I followed my brother from the village. He pointed away to the Nez Percés, and bade me go and live in peace among them. We parted. On the third day I saw the lodges of the Nez Percés before me. I paused for a moment, and had no heart to go on; but my horse neighed, and I took it as a good sign, and suffered him to gallop forward. In a little while I was in the midst of the lodges. As I sat silent on my horse, the people gathered round me, and inquired whence I came. I told my story. A chief now wrapped his blanket close around him, and bade me dismount. I obeyed. He took my horse to lead him away. My heart grew small within

---

me. I felt, on parting with my horse, as if my last friend was gone. I had no words, and my eyes were dry. As he led off my horse a young brave stepped forward. 'Are you a chief of the people?' cried he. 'Do we listen to you in council, and follow you in battle? Behold! a stranger flies to our camp from the dogs of Blackfeet, and asks protection. Let shame cover your face! The stranger is a woman, and alone. If she were a warrior, or had a warrior at her side, your heart would not be big enough to take her horse. But he is yours. By right of war you may claim him; but look!' - his bow was drawn, and the arrow ready! - 'you never shall cross his back!' The arrow pierced the heart of the horse, and he fell dead.

"An old woman said she would be my mother. She led me to her lodge; my heart was thawed by her kindness, and my eyes burst forth with tears; like the frozen fountains in springtime. She never changed; but as the days passed away, was still a mother to me. The people were loud in praise of the young brave, and the chief was ashamed. I lived in peace.

"A party of trappers came to the village, and one of them took me for his wife. This is he. I am very happy; he treats me with kindness, and I have taught him the language of my people. As we were travelling this way, some of the Blackfeet warriors beset us, and carried off the horses of the party. We followed, and my husband held a parley with them. The guns were laid down, and the pipe was lighted; but some of the white men attempted to seize the horses by force, and then a battle began. The snow was deep, the white men sank into it at every step; but the red men, with their snow-shoes, passed over the surface like birds, and drove off many of the horses in sight of their owners. With those that remained we resumed our journey. At length words took place between the leader of the party and my husband. He took away our horses, which had escaped in the battle, and turned us from his camp. My husband had one good friend among the trappers. That is he (pointing to the man who had asked assistance for them). He is a good man. His heart is big. When he came in from hunting, and found that we had been driven away, he gave up all his wages, and followed us, that he might speak good words for us to the white captain."

Rendezvous at Wind River -- Campaign of Montero and his brigade in the Crow country -- Wars between the Crows and Blackfeet -- Death of Arapooish Blackfeet lurkers -- Sagacity of the horse -- Dependence of the hunter on his horse -- Return to the settlements.

ON the 22d of June Captain Bonneville raised his camp, and moved to the forks of Wind River; the appointed place of rendezvous. In a few days he was joined there by the brigade of Montero, which had been sent, in the preceding year, to beat up the Crow country, and afterward proceed to the Arkansas. Montero had followed the early part of his instructions; after trapping upon some of the upper streams, he proceeded to Powder River. Here he fell in with the Crow villages or bands, who treated him with unusual kindness, and prevailed upon him to take up his winter quarters among them.

The Crows at that time were struggling almost for existence with their old enemies, the Blackfeet; who, in the past year, had picked off the flower of their warriors in various engagements, and among the rest, Arapooish, the friend of the white men. That sagacious and magnanimous chief had beheld, with grief, the ravages which war was making in his tribe, and that it was declining in force, and must eventually be destroyed unless some signal blow could be struck to retrieve its

fortunes. In a pitched battle of the two tribes, he made a speech to his warriors, urging them to set everything at hazard in one furious charge; which done, he led the way into the thickest of the foe. He was soon separated from his men, and fell covered with wounds, but his self-devotion was not in vain. The Blackfeet were defeated; and from that time the Crows plucked up fresh heart, and were frequently successful.

Montero had not been long encamped among them, when he discovered that the Blackfeet were hovering about the neighborhood. One day the hunters came galloping into the camp, and proclaimed that a band of the enemy was at hand. The Crows flew to arms, leaped on their horses, and dashed out in squadrons in pursuit. They overtook the retreating enemy in the midst of a plain. A desperate fight ensued. The Crows had the advantage of numbers, and of fighting on horseback. The greater part of the Blackfeet were slain; the remnant took shelter in a close thicket of willows, where the horse could not enter; whence they plied their bows vigorously.

The Crows drew off out of bow-shot, and endeavored, by taunts and bravadoes, to draw the warriors out of their retreat. A few of the best mounted among them rode apart from the rest. One of their number then advanced alone, with that martial air and equestrian grace for which the tribe is noted. When within an arrow's flight of the thicket, he loosened his rein, urged his horse to full speed, threw his body on the opposite side, so as to hang by one leg, and present no mark to the foe; in this way he swept along in front of the thicket, launching his arrows from under the neck of his steed. Then regaining his seat in the saddle, he wheeled round and returned whooping and scoffing to his companions, who received him with yells of applause.

Another and another horseman repeated this exploit; but the Blackfeet were not to be taunted out of their safe shelter. The victors feared to drive desperate men to extremities, so they forbore to attempt the thicket. Toward night they gave over the attack, and returned all-glorious with the scalps of the slain. Then came on the usual feasts and triumphs, the scalp-dance of warriors round the ghastly trophies, and all the other fierce revelry of barbarous warfare. When the braves had finished with the scalps, they were, as usual, given up to the women and children, and made the objects of new parades and dances. They were then treasured up as invaluable trophies and decorations by the braves who had won them.

It is worthy of note, that the scalp of a white man, either through policy or fear, is treated with more charity than that of an Indian. The warrior who won it is entitled to his triumph if he demands it. In such case, the war party alone dance round the scalp. It is then taken down, and the shagged frontlet of a buffalo substituted in its place, and abandoned to the triumph and insults of the million.

To avoid being involved in these guerillas, as well as to escape from the extremely social intercourse of the Crows, which began to be oppressive, Montero moved to the distance of several miles from their camps, and there formed a winter cantonment of huts. He now maintained a vigilant watch at night. Their horses, which were turned loose to graze during the day, under heedful eyes, were brought in at night, and shut up in strong pens, built of large logs of cotton-wood. The snows, during a portion of the winter, were so deep that the poor animals could find but little sustenance. Here and there a tuft of grass would peer above the snow; but they were in general driven to browse the twigs and tender branches of the trees. When they were turned out in the morning, the first moments of freedom from the confinement of the pen were spent in frisking and gambolling. This done, they went soberly and sadly to work, to glean their scanty subsistence

for the day. In the meantime the men stripped the bark of the cotton-wood tree for the evening fodder. As the poor horses would return toward night, with sluggish and dispirited air, the moment they saw their owners approaching them with blankets filled with cotton-wood bark, their whole demeanor underwent a change. A universal neighing and capering took place; they would rush forward, smell to the blankets, paw the earth, snort, whinny and prance round with head and tail erect, until the blankets were opened, and the welcome provender spread before them. These evidences of intelligence and gladness were frequently recounted by the trappers as proving the sagacity of the animal.

These veteran rovers of the mountains look upon their horses as in some respects gifted with almost human intellect. An old and experienced trapper, when mounting guard upon the camp in dark nights and times of peril, gives heedful attention to all the sounds and signs of the horses. No enemy enters nor approaches the camp without attracting their notice, and their movements not only give a vague alarm, but it is said, will even indicate to the knowing trapper the very quarter whence the danger threatens.

In the daytime, too, while a hunter is engaged on the prairie, cutting up the deer or buffalo he has slain, he depends upon his faithful horse as a sentinel. The sagacious animal sees and smells all round him, and by his starting and whinnying, gives notice of the approach of strangers. There seems to be a dumb communion and fellowship, a sort of fraternal sympathy between the hunter and his horse. They mutually rely upon each other for company and protection; and nothing is more difficult, it is said, than to surprise an experienced hunter on the prairie while his old and favorite steed is at his side.

Montero had not long removed his camp from the vicinity of the Crows, and fixed himself in his new quarters, when the Blackfeet marauders discovered his cantonment, and began to haunt the vicinity. He kept up a vigilant watch, however, and foiled every attempt of the enemy, who, at length, seemed to have given up in despair, and abandoned the neighborhood. The trappers relaxed their vigilance, therefore, and one night, after a day of severe labor, no guards were posted, and the whole camp was soon asleep. Toward midnight, however, the lightest sleepers were roused by the trampling of hoofs; and, giving the alarm, the whole party were immediately on their legs and hastened to the pens. The bars were down; but no enemy was to be seen or heard, and the horses being all found hard by, it was supposed the bars had been left down through negligence. All were once more asleep, when, in about an hour there was a second alarm, and it was discovered that several horses were missing. The rest were mounted, and so spirited a pursuit took place, that eighteen of the number carried off were regained, and but three remained in possession of the enemy. Traps for wolves, had been set about the camp the preceding day. In the morning it was discovered that a Blackfoot was entrapped by one of them, but had succeeded in dragging it off. His trail was followed for a long distance which he must have limped alone. At length he appeared to have fallen in with some of his comrades, who had relieved him from his painful encumbrance.

These were the leading incidents of Montero's campaign in the Crow country. The united parties now celebrated the 4th of July, in rough hunters' style, with hearty conviviality; after which Captain Bonneville made his final arrangements. Leaving Montero with a brigade of trappers to open another campaign, he put himself at the head of the residue of his men, and set off on his return to civilized life. We shall not detail his journey along the course of the Nebraska, and so, from

point to point of the wilderness, until he and his band reached the frontier settlements on the 22d of August.

Here, according to his own account, his cavalcade might have been taken for a procession of tatterdemalion savages; for the men were ragged almost to nakedness, and had contracted a wildness of aspect during three years of wandering in the wilderness. A few hours in a populous town, however, produced a magical metamorphosis. Hats of the most ample brim and longest nap; coats with buttons that shone like mirrors, and pantaloons of the most ample plenitude, took place of the well-worn trapper's equipments; and the happy wearers might be seen strolling about in all directions, scattering their silver like sailors just from a cruise.

The worthy captain, however, seems by no means to have shared the excitement of his men, on finding himself once more in the thronged resorts of civilized life, but, on the contrary, to have looked back to the wilderness with regret. "Though the prospect," says he, "of once more tasting the blessings of peaceful society, and passing days and nights under the calm guardianship of the laws, was not without its attractions; yet to those of us whose whole lives had been spent in the stirring excitement and perpetual watchfulness of adventures in the wilderness, the change was far from promising an increase of that contentment and inward satisfaction most conducive to happiness. He who, like myself, has roved almost from boyhood among the children of the forest, and over the unfurrowed plains and rugged heights of the western wastes, will not be startled to learn, that notwithstanding all the fascinations of the world on this civilized side of the mountains, I would fain make my bow to the splendors and gayeties of the metropolis, and plunge again amidst the hardships and perils of the wilderness."

We have Only to add that the affairs of the captain have been satisfactorily arranged with the War Department, and that he is actually in service at Fort Gibson, on our western frontier, where we hope he may meet with further opportunities of indulging his peculiar tastes, and of collecting graphic and characteristic details of the great western wilds and their motley inhabitants.

--

We here close our picturings of the Rocky Mountains and their wild inhabitants, and of the wild life that prevails there; which we have been anxious to fix on record, because we are aware that this singular state of things is full of mutation, and must soon undergo great changes, if not entirely pass away. The fur trade itself, which has given life to all this portraiture, is essentially evanescent. Rival parties of trappers soon exhaust the streams, especially when competition renders them heedless and wasteful of the beaver. The furbearing animals extinct, a complete change will come over the scene; the gay free trapper and his steed, decked out in wild array, and tinkling with bells and trinketry; the savage war chief, plumed and painted and ever on the prowl; the traders' cavalcade, winding through defiles or over naked plains, with the stealthy war party lurking on its trail; the buffalo chase, the hunting camp, the mad carouse in the midst of danger, the night attack, the stampede, the scamper, the fierce skirmish among rocks and cliffs -- all this romance of savage life, which yet exists among the mountains, will then exist but in frontier story, and seem like the fictions of chivalry or fairy tale.

Some new system of things, or rather some new modification, will succeed among the roving people of this vast wilderness; but just as opposite, perhaps, to the inhabitants of civilization. The great Chippewyan chain of mountains, and the sandy and volcanic plains which extend on either side, are represented as incapable of cultivation. The pasturage which prevails there during a cer-

tain portion of the year, soon withers under the aridity of the atmosphere, and leaves nothing but dreary wastes. An immense belt of rocky mountains and volcanic plains, several hundred miles in width, must ever remain an irreclaimable wilderness, intervening between the abodes of civilization, and affording a last refuge to the Indian. Here roving tribes of hunters, living in tents or lodges, and following the migrations of the game, may lead a life of savage independence, where there is nothing to tempt the cupidity of the white man. The amalgamation of various tribes, and of white men of every nation, will in time produce hybrid races like the mountain Tartars of the Caucasus. Possessed as they are of immense droves of horses should they continue their present predatory and warlike habits, they may in time become a scourge to the civilized frontiers on either side of the mountains, as they are at present a terror to the traveller and trader.

The facts disclosed in the present work clearly manifest the policy of establishing military posts and a mounted force to protect our traders in their journeys across the great western wilds, and of pushing the outposts into the very heart of the singular wilderness we have laid open, so as to maintain some degree of sway over the country, and to put an end to the kind of "blackmail," levied on all occasions by the savage "chivalry of the mountains."

Nathaniel J. Wyeth, and the Trade of the Far West

WE HAVE BROUGHT Captain Bonneville to the end of his western campaigning; yet we cannot close this work without subjoining some particulars concerning the fortunes of his contemporary, Mr. Wyeth; anecdotes of whose enterprise have, occasionally, been interwoven in the party-colored web of our narrative. Wyeth effected his intention of establishing a trading post on the Portneuf, which he named Fort Hall. Here, for the first time, the American flag was unfurled to the breeze that sweeps the great naked wastes of the central wilderness. Leaving twelve men here, with a stock of goods, to trade with the neighboring tribes, he prosecuted his journey to the Columbia; where he established another post, called Fort Williams, on Wappatoo Island, at the mouth of the Wallamut. This was to be the head factory of his company; whence they were to carry on their fishing and trapping operations, and their trade with the interior; and where they were to receive and dispatch their annual ship.

The plan of Mr. Wyeth appears to have been well concerted. He had observed that the Rocky Mountain Fur Company, the bands of free trappers, as well as the Indians west of the mountains, depended for their supplies upon goods brought from St. Louis; which, in consequence of the expenses and risks of a long land carriage, were furnished them at an immense advance on first cost. He had an idea that they might be much more cheaply supplied from the Pacific side. Horses would cost much less on the borders of the Columbia than at St. Louis: the transportation by land was much shorter; and through a country much more safe from the hostility of savage tribes; which, on the route from and to St. Louis, annually cost the lives of many men. On this idea, he grounded his plan. He combined the salmon fishery with the fur trade. A fortified trading post was to be established on the Columbia, to carry on a trade with the natives for salmon and peltries, and to fish and trap on their own account. Once a year, a ship was to come from the United States, to bring out goods for the interior trade, and to take home the salmon and furs which had

been collected. Part of the goods, thus brought out, were to be dispatched to the mountains, to supply the trapping companies and the Indian tribes, in exchange for their furs; which were to be brought down to the Columbia, to be sent home in the next annual ship: and thus an annual round was to be kept up. The profits on the salmon, it was expected, would cover all the expenses of the ship; so that the goods brought out, and the furs carried home, would cost nothing as to freight.

His enterprise was prosecuted with a spirit, intelligence, and perseverance, that merited success. All the details that we have met with, prove him to be no ordinary man. He appears to have the mind to conceive, and the energy to execute extensive and striking plans. He had once more reared the American flag in the lost domains of Astoria; and had he been enabled to maintain the footing he had so gallantly effected, he might have regained for his country the opulent trade of the Columbia, of which our statesmen have negligently suffered us to be dispossessed.

It is needless to go into a detail of the variety of accidents and cross-purposes, which caused the failure of his scheme. They were such as all undertakings of the kind, involving combined operations by sea and land, are liable to. What he most wanted, was sufficient capital to enable him to endure incipient obstacles and losses; and to hold on until success had time to spring up from the midst of disastrous experiments.

It is with extreme regret we learn that he has recently been compelled to dispose of his establishment at Wappatoo Island, to the Hudson's Bay Company; who, it is but justice to say, have, according to his own account, treated him throughout the whole of his enterprise, with great fairness, friendship, and liberality. That company, therefore, still maintains an unrivalled sway over the whole country washed by the Columbia and its tributaries. It has, in fact, as far as its chartered powers permit, followed out the splendid scheme contemplated by Mr. Astor, when he founded his establishment at the mouth of the Columbia. From their emporium of Vancouver, companies are sent forth in every direction, to supply the interior posts, to trade with the natives, and to trap upon the various streams. These thread the rivers, traverse the plains, penetrate to the heart of the mountains, extend their enterprises northward, to the Russian possessions, and southward, to the confines of California. Their yearly supplies are received by sea, at Vancouver; and thence their furs and peltries are shipped to London. They likewise maintain a considerable commerce, in wheat and lumber, with the Pacific islands, and to the north, with the Russian settlements.

Though the company, by treaty, have a right to a participation only, in the trade of these regions, and are, in fact, but tenants on sufferance; yet have they quietly availed themselves of the original oversight, and subsequent supineness of the American government, to establish a monopoly of the trade of the river and its dependencies; and are adroitly proceeding to fortify themselves in their usurpation, by securing all the strong points of the country.

Fort George, originally Astoria, which was abandoned on the removal of the main factory to Vancouver, was renewed in 1830; and is now kept up as a fortified post and trading house. All the places accessible to shipping have been taken possession of, and posts recently established at them by the company.

The great capital of this association; their long established system; their hereditary influence over the Indian tribes; their internal organization, which makes every thing go on with the regularity of a machine; and the low wages of their people, who are mostly Canadians, give them great advantages over the American traders: nor is it likely the latter will ever be able to maintain any

footing in the land, until the question of territorial right is adjusted between the two countries. The sooner that takes place, the better. It is a question too serious to national pride, if not to national interests, to be slurred over; and every year is adding to the difficulties which environ it. The fur trade, which is now the main object of enterprise west of the Rocky Mountains, forms but a part of the real resources of the country. Beside the salmon fishery of the Columbia, which is capable of being rendered a considerable source of profit; the great valleys of the lower country, below the elevated volcanic plateau, are calculated to give sustenance to countless flocks and herds, and to sustain a great population of graziers and agriculturists.

Such, for instance, is the beautiful valley of the Wallamut; from which the establishment at Vancouver draws most of its supplies. Here, the company holds mills and farms; and has provided for some of its superannuated officers and servants. This valley, above the falls, is about fifty miles wide, and extends a great distance to the south. The climate is mild, being sheltered by lateral ranges of mountains; while the soil, for richness, has been equalled to the best of the Missouri lands. The valley of the river Des Chutes, is also admirably calculated for a great grazing country. All the best horses used by the company for the mountains are raised there. The valley is of such happy temperature, that grass grows there throughout the year, and cattle may be left out to pasture during the winter.

These valleys must form the grand points of commencement of the future settlement of the country; but there must be many such, enfolded in the embraces of these lower ranges of mountains; which, though at present they lie waste and uninhabited, and to the eye of the trader and trapper, present but barren wastes, would, in the hands of skilful agriculturists and husbandmen, soon assume a different aspect, and teem with waving crops, or be covered with flocks and herds.

The resources of the country, too, while in the hands of a company restricted in its trade, can be but partially called forth; but in the hands of Americans, enjoying a direct trade with the East Indies, would be brought into quickening activity; and might soon realize the dream of Mr. Astor, in giving rise to a flourishing commercial empire.

---

#### Wreck of a Japanese Junk on the Northwest Coast

THE FOLLOWING EXTRACT of a letter which we received, lately, from Mr. Wyeth, may be interesting, as throwing some light upon the question as to the manner in which America has been peopled.

“Are you aware of the fact, that in the winter of 1833, a Japanese junk was wrecked on the northwest coast, in the neighborhood of Queen Charlotte’s Island; and that all but two of the crew, then much reduced by starvation and disease, during a long drift across the Pacific, were killed by the natives? The two fell into the hands of the Hudson’s Bay Company, and were sent to England. I saw them, on my arrival at Vancouver, in 1834.”

Instructions to Captain Bonneville from the Major-General Commanding the Army of the United States.

Copy

Head Quarters of the Army.

Washington 29th July 1831.

Sir,

The leave of absence which you have asked for the purpose of enabling you to carry into execution your designs of exploring the country to the Rocky Mountains, and beyond with a view of ascertaining the nature and character of the various tribes of Indians inhabiting those regions; the trade which might be profitably carried on with them, the quality of the soil, the productions, the minerals, the natural history, the climate, the Geography, and Topography, as well as Geology of the various parts of the Country within the limits of the Territories belonging to the United States, between our frontier, and the Pacific;--has been duly considered, and submitted to the War Department, for approval, and has been sanctioned.

You are therefore authorised to be absent from the Army until October 1833.

It is understood that the Government is to be at no expence, in reference to your proposed expedition, it having originated with yourself, and all that you required was the permission from the proper authority to undertake the enterprise. You will naturally in providing your self for the expedition, provide suitable instruments, and especially the best Maps of the interior to be found. It is desirable besides what is enumerated as the object of enterprise that you note particularly the number of Warriors that may belong to each tribe, or nation that you may meet with: their alliances with other tribes and their relative position as to a state of peace or war, and whether their friendly or warlike dispositions towards each other are recent or of long standing. You will gratify us by describing the manner of their making War, of the mode of subsisting themselves during a state of war, and a state of peace, their Arms, and the effect of them, whether they act on foot or on horse back, detailing the discipline, and manuevers of the war parties, the power of their horses, size and general discription; in short any information which you may conceive would be useful to the Government. You will avail yourself of every opportunity of informing us of your position and progress, and at the expiration of your leave of absence will join your proper station.

I have the honor to be Sir,

Your Ot St

(Signed) Alexr Macomb Maj Genl Comg

Chapter I

Introduction — Missouri Fur Company — Terms of Engagement with them — Departure for the Trapping Grounds — Incidents on the Route — The Pork Meeting — Scenery — Check — A Western Pioneer — His affair with the Irishman — A Hunting Excursion — The Rickarees — The Mandans — The Gros Ventres — The Company's Fort — Cheek and Ried — Friends between the French and Americans — Violation of Contract by Company — Departure for Upper Missouri — Wintering — Trip across the Country — Famine and Cold — Scenery on the Yellow Stone — Manuel's Fort — Col. Menard and Manuel Liza — Indian Murders — A Snow Storm in the Mountains — Blindness — Arrival at the Forks of the Missouri — Preparations for business.

I HAVE OFTEN amused myself and friends, by relating stories of my adventures in the West, and am led to believe, by the, perhaps, too partial representations of those friends, that my life in the Prairies and Mountains for three years, is worthy of a record more enduring than their memories. I have passed a year and a half on the head waters of the Missouri and among the gorges of the Rocky Mountains, as a hunter and a trapper, and two years among the Spaniards and Camanches. I have suffered much from the inclemency of nature and of man, had many "hair breadth 'scapes" and acquired considerable information illustrative of Indian and Mexican character and customs. By a plain, unvarnished tale of Western life, of perils and of hardships, I hope to amuse the reader who delights in accounts of wild adventure, though found out of the pages of a novel and possessing no attraction but their unadorned truthfulness. I am now on the shady side of sixty, with mind and memory unimpaired. If my reminiscences, as recorded in the following pages, serve to awaken my countrymen of the West and South-west, now thank God, including Texas, to the importance of peaceful and friendly relations with the most powerful tribe of Indians on the continent, the Camanches, I shall not regard the labor of preparing these sheets as bestowed in vain. In the year 1803, when twenty-two years of age, I emigrated with my father from Kentucky to Illinois. In the spring of 1807 we removed from Illinois to Missouri, which were then, both Territories, and settled in the town of St. Ferdinand, near St. Louis. In the fall of this year, Lewis and Clark returned from Oregon and the Pacific Ocean, whither they had been sent by the administration of Jefferson in the first exploring expedition west of the Rocky Mountains, and their accounts of that wild region, with those of their companions, first excited a spirit of trafficking adventure among the young men of the West. They had brought with them from the Upper Missouri, a Chief named Shehaka, of the Mandan tribe of Indians. This Chief, in company with Lewis and Clark visited the "Great Father" at Washington City, and returned to St. Louis in the following Spring (1808) with Lewis, who, in the mean time had been appointed Governor of Missouri Territory. He sent the Chief Shehaka up the Missouri with an escort of about forty United States troops, under Capt. Prior. On their arrival in the country of the Rickarees, a war-like tribe, next East or this side of the Mandans, they were attacked by the former tribe, and eight or ten soldiers killed. This event so disheartened the rest, that they returned with Shehaka to St.

Three Years Among the Indians and Mexicans

Louis. The Missouri Fur Company had just been formed, and they projected an expedition up the Missouri and to the Rocky Mountains, which was to start in the spring of the following year, 1809. The company consisted of ten partners, among whom was M. Gratiot, Pierre Menard, Sam'l. Morrison, Pierrie Chouteau, Manuel Liza, Major Henry, M. L'Abbadeau and Reuben Lewis. Gov. Lewis was also said to have had an interest in the concern. The company contracted with him to convey the Mandan Chief to his tribe, for the sum, as I was informed of \$10,000. I enlisted in this expedition, which was raised for trading with the Indians and trapping for beaver on the head waters of the Missouri and Columbia rivers. The whole party, at starting, consisted of 350 men, of whom about one half were Americans and the remainder Canadian Frenchmen and Creoles of Kaskaskia, St. Louis and other places. The French were all veteran voyageurs, thoroughly inured to boating and trapping. Manuel Liza, called by the men "Esaw" had enlisted many of them in Detroit for this expedition, and hired them by the year. We Americans were all private adventurers, each on his own hook, and were led into the enterprise by the promises of the company, who agreed to subsist us to the trapping grounds, we helping to navigate the boats, and on our arrival there they were to furnish us each with a rifle and sufficient ammunition, six good beaver traps and also four men of their hired French, to be under our individual commands for a period of three years. By the terms of the contract each of us was to divide one-fourth of the profits of our joint labor with the four men thus to be appointed to us. How we were deceived and taken in, will be seen in the sequel. The "company" made us the fairest promises in St. Louis, only to break them in the Indian country. Liza, or Esaw, or Manuel as he was variously called, had the principal command. He was a Spaniard or Mexican by birth, and bore a very bad reputation in the country and among the Americans. He had been on the head waters of the Missouri, the year before with a company of about fifty men and had met with great success in catching beaver and trading with the Indians. He had built a Fort, called "Manuel's Fort" at the junction or fork of the Big Horn and Yellow Stone rivers, and left a garrison of hunters in it when he returned in the Spring of this year, and went into the Missouri Fur Company. He was suspected of having invited the Rickarees to attack the Government troops under Capt. Prior, with Shehaka the year before, for the purpose of preventing the traders and trappers who were with the troops from getting into the upper country. Mr. Choteau and Col. Menard acted jointly with Liza in conducting the expedition. I went as steersman or "captain" of one of the barges, with about twenty-four men, all Americans, under my command. There were thirteen barges and keel boats in all. On my barge I had Doct. Thomas, the surgeon of the company, and Reuben Lewis, brother of Merryweather Lewis, the Governor. We started from St. Louis in the month of June, A. D. 1809, and ascended the Missouri by rowing, pushing with poles, cordeling, or pulling with ropes, warping, and sailing. My crew were light hearted, jovial men, with no care or anxiety for the future, and little fear of any danger. In the morning we regularly started by day break and stopped, generally, late at night. The partners or bourgeois, as the French called them, were in the forward barge, with a strong crew of hardy and skilful voyageurs, and there Liza and some of his colleagues forded it over the poor fellows most arrogantly, and made them work as if their lives depended on their getting forward, with the greatest possible speed. They peremptorily required all the boats to stop in company for the night, and our barge being large and heavily loaded, the crew frequently had great difficulty in overtaking them in the evening. We occasionally had races with some of the forward barges, in which my crew of Americans proved themselves equal in a short race to their more experienced French

---

---

competitors. We thus continued, with nothing of interest occurring till we passed the Platte. Six weeks of hard labor on our part, had been spent, when our allotted provisions gave out and we were compelled to live on boiled corn, without salt. At the same time all the other boats were well supplied and the gentlemen proprietors in the leading barge were faring in the most sumptuous and luxurious manner. The French hands were much better treated on all occasions than the Americans. The former were employed for a long period at stated wages and were accustomed to such service and such men as those in command of them, while we were private adventurers for our own benefit, as well as that of the company, who regarded us with suspicion and distrust. Many Americans on the passage up the river, disgusted with the treatment they received, fell off in small companies and went back. At Cote Sans Desans, opposite the mouth of the Osage, most of them returned. On reaching the Mandan country we numbered about ten Americans, having started from St. Louis with about one hundred and seventy-five and an equal number of French. After passing the Platte river my crew were worn down with hard labor and bad fare. Their boiled corn without salt or meat, did not sustain them under the fatigue of navigating the barge and the contrast between their treatment and that of the French enraged them. A meeting was the result. The company had, on our barge, thirty barrels of pork, and one morning my crew came to me in a body demanding some of these provisions. I commanded them not to break into the pork without permission, and promised, if they would work and keep up till noon, to procure some for dinner. At noon when we stopped, the men rolled up a barrel of pork on to the deck and one of them, named Cheek bestrided with a tomahawk, crying out "give the word Captain." I forbade them, as before, and went ashore to find Lewis, who had left the boat at the beginning of trouble. He said the pork was the company's and told me not to touch it. I said the men would and should have some of it, and went back to the boat to give the "word" to Cheek. Lewis hastened to the "bourgeoise" in their barge close by, to give the alarm. I could see them in their cabin, from the shore where I stood, playing cards and drinking. Lewis entered with the news that "James' crew were taking the provisions." Manuel Liza seized his pistols and ran out followed by the other partners. "What the devil, said he to me, is the matter with you and your men?" We are starving, said I, and we must have something better than boiled corn. At the same time Cheek was brandishing his tomahawk over the pork barrel and clamoring for the "word." "Shall I break it open Captain, speak the word," he cried, while the rest of my crew were drawn up in line on the boat, with rifles, ready for action. The gentlemen bourgeoisie, yielded before this determined array, and gave us a large supply of pork; that is, as much as we pleased to take. A few days after this we stopped to clean out the barges and the pork in ours was removed to another and its place supplied with lead. The Cheek who figured as ring-leader on this occasion was a Tennessean, about six feet high and well proportioned. His courage was equal to any enterprise, and his rashness and headstrong obstinacy at last, in the Indian country, cost him his life. I had on my barge a large, lazy, and very impertinent Irishman, who was frequently very sulky and remiss in his duties. I was compelled one day, to call him by name for not working at the oars, saying to him he was not rowing the weight of his head. The height of disgrace among boatsmen is, to be publicly named by the Captain. The Irishman took my treatment in very ill humour and swore he would have satisfaction for the insult. When the boat stopped for breakfast, the men dispersed as usual, to get wood, and with them went Cheek and my friend, the Irishman. Cheek returned without him and informed me, he had whipped him "for saucing the captain." I said, Cheek I can attend to my own fighting

---

---

without your assistance, or any other man's. "No by G — d said he, my Captain shan't fight while I am about." The Irishman returned, at length, to the boat, but was so badly hurt as to be unable to work for several days.

The scenery of the Upper Missouri is so familiar to the world as to render any particular description unnecessary. As you ascend the river, the woods diminish in number and extent. Beyond Council Bluffs, about 700 miles above the mouth they entirely disappear, except on the river bottoms, which are heavily timbered. The Prairies were covered with a short thick grass, about three or four inches high. At this time the game was very abundant. We saw Elk and Buffalo in vast numbers, and killed many of them. Prairie dogs and wolves were also very numerous. The Indians have thinned off the game since that time, so much that their own subsistence is frequently very scanty, and they are often in danger of starvation. Their range for hunting now extends far down into the Camanche country and Texas, and the buffalo, their only game of importance, are fast disappearing. When these valuable animals are all gone, when they are extinct on the West as they are on the East side of the Mississippi, then will the Indian race, the aboriginals of that vast region, be near their own extinction and oblivion. They cannot survive the game and with it will disappear.

The Western declivity of the Mississippi valley from the mountains to the "Father of Waters" is nearly all one great plain, with occasional rocky elevations. We saw hills at the foot of which were large heaps of pumice stone, which had the appearance of having been crumbled off from above by the action of fire. The scenery of Illinois or Missouri is a fair example of that of the whole country West to the mountains. The Prairies here, however, are vaster and more desolate. One extensive plain is usually presented to the eye of the traveller, and stretches to the horizon, without a hill, mound, tree or shrub to arrest the sight.

We continued our ascent of the river without any occurrence of importance. Below Council Bluffs we met Capt. Crooks, agent for John J. Astor, and who was trading with the Mohaws. Here all the few Americans remaining, with myself, were on the point of returning. By the solicitations and promises of the company we were induced to continue with them.

The first Indians we saw were a party of Mohaws hunting; with them were two Sioux Chiefs. They sent forward a runner to their village above and themselves came on board our boats. We found the village at the mouth of the Jaques river, perhaps twelve hundred miles, by its course, from the mouth of the Missouri. They were of the Teton tribe, which is kindred with the Sioux. As we approached the bank, which was lined with hundreds; they fired into the water before the forward barge, and as we landed, they retreated with great rapidity, making a startling noise with whistles and rattles. After landing and making fast the boats, about fifty savages took charge of them, as a guard. They wore raven feathers on the head. Their bodies were naked, save about the middle, and painted entirely black. They presented on the whole a most martial and warlike appearance in their savage mode, and performed their office of guarding the boats so well that not even a Chief was allowed to go onto them. Other Indians came with buffalo skins to be used as pulanquins or litters for carrying the partners to their council house; each was taken up and carried off in state. I was compelled by some Indians to go in the same style to the place of council. Here was a large company of old men awaiting us, and for dinner we had served up a great feast of dog's meat — a great delicacy with the Indians. The rich repast was served in forty-one wooden bowls, as I counted them, and from each bowl a dog's foot was hanging out, evidently to prove that this rarity was

---

---

not a sham but a reality. Not feeling very desirous of eating of this particular dainty, I stole out and was pulled by a young Indian and invited to his wigwam. I went and partook with him of buffalo meat. We stayed with these hospitable savages two days. On arriving, we found the British flag flying, but easily persuaded them to haul it down. The Hudson's Bay Company had had their emisaries among them and were then dealing with them precisely as they are now dealing with the savages in our territory of Oregon — namely: buying them up with presents and promises, and persuading them to act as allies of Britain, in any future war with the United States. On the third day we left the friendly Tetons and proceeded up the river as before. Capt. Choteau had conceived a prejudice against Cheek, and on one occasion, ordered him to leave the boats. Lewis conveyed the order to me. I remonstrated against the cruelty of sending a man adrift in a wilderness, 1400 miles from home. He insisted, and Cheek took his gun as if he was going to obey. Lewis ordered him to leave the gun behind, which he refused to do. Lewis then commanded me to take it from him. I replied, that he or Choteau might do that themselves. The men of my boat flew to their arms, and avowed their determination of defending Cheek and sharing his fate. The order was not pursued any further. Such recontres and difficulties between the Americans and the partners, embittered their hands against us, and ultimately did us no good. Much of the ill treatment we afterwards received from them, was probably owing to the reckless assertion of our independence on every occasion and at every difficulty that occurred. After leaving the Teton village, our boat again failed of provisions, and by request of Lewis I went ashore on the North bank with one of our best hunters, named Brown, to kill some game. We went up the river, and in the evening, killed an elk, brought it to the river bank, and waited there for the boats till morning. They came up on the opposite shore and sent over a canoe to take us and our game across. The wind rose in the mean time, and blew so strong as to raise the waves very high, and render it dangerous for us all to cross together in the same canoe. We sent over the game and Brown and myself continued our course, afoot, expecting to get aboard when the boats crossed at some one of the river bends. By the middle of the day the wind had risen so high that the boats with sails hoisted, quickly went out of sight. We travelled on till evening, and struck a large bayou, which we could not cross, and took the backward course till we encamped within a mile of the spot where we had stayed the night before. The next morning we struck off from the river into the prairie, and took the best course we could, to reach the boats. Seven days elapsed, however, before we overtook them. The wind blew a strong breeze, and drove the boats along very rapidly. We killed another elk and some small game, which subsisted us till the fifth day, when our amunition gave out. Our moccasins being worn out, fell off and our feet were perfectly cut up by the prickly pear, which abounds on these prairies. At last, nearly famished and worn down, sore, lame and exhausted, we found the boats. My crew had, in vain, requested leave to wait for us, and we might have perished before the bourgeois would have slackened their speed in the least, on our account. We had a narrow escape from starvation in this excursion and I was ever afterwards careful to have plenty of amunition with me when I went out — as I frequently did — on similar expeditions.

In two days after this event, we arrived at the country of the Rickarees. On approaching their village, we took precautions against an attack. A guard marched along the shore, opposite to the boats, well armed. My crew composed a part of this force. When within half a mile of the village we drew up the cannon and prepared to encamp. The whole village came out in a body, as it seemed, to met us. They had not come far toward us when an old chief rode out at full speed and

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

with violent gestures and exclamations, warned and motioned back his countrymen from before our cannon. The event of the year before was fresh in his recollection. He supposed we were about to inflict a proper and deserved punishment for the attack on Capt. Prior's troops and the murder of eight or ten of them, the year before. This old chief drove back all who were coming out to meet us. Choteau then sent for the chief to come down to his camp and hold a council. They refused to comply with this request and appeared very suspicious of our designs. After further negotiation, they agreed to come to us and hold a council if the company's force would lay aside their arms and turn the cannon in the opposite direction. This was agreed to by the company, with the provision that a guard should be on the ground, armed, during the conference. The council was held, and Choteau harangued them on the crime committed against the government the year before. They promised better conduct for the future, but made no reparation or apology even, for the past. In a few days we started forward through a country marked by the same general features as that described before. Thousands of buffaloe cover the prairies on both sides of the river, making them black as far as the eye could reach. In ten or twelve days the boats reached the Mandan village, where I was awaiting them. I had sallied out five days before in a hunting excursion, and arrived at the village of the Mandans in advance of the boats. These are a poor, thieving, spiritless tribe, tributary to the Gros-Ventres, who inhabit the country above them on the river. The village is on the north side of the river. The boats came up on the opposite shore. The wind, as they arrived, blew a hurricane and lashed the waves to a prodigious height. The Indians saw their chief, Shehaka, on our boats, and were almost frantic with joy and eagerness to speak with him. They have a round canoe made of hoops fastened together and a buffalo's skin stretched over them, very light and portable. With these they rowed themselves across the turbulent river, one moment lost from view between the waves, and the next, riding over them like corks. In these tubs of canoes they crossed the stream to our boats. The natives made a jubilee and celebration for the return of Shehaka and neglected every thing and every body else. They hardly saw or took the least notice of their white visitors. The partners distributed the presents sent by the government and we then made haste to leave this boorish inhospitable tribe. We ascended the Missouri to the village of the Gros-Ventres, on the south side of the river, fifteen miles above that of the Mandans. Here we found a far different race from the last; a manly, warlike and independent tribe, who might well be called for their daring and enterprising qualities, the Gros-coeurs or big-hearts instead of bigbellies. Here was our place of stopping for a short time, and of preparation for the business which had brought us hither. On our arrival at their village, four or five agents of the Hudson's Bay Company were among them, but immediately crossed the river with their goods, and bore off to the north east. We suspected them of inciting the Black Feet against us and many of our company attributed our subsequent misfortunes to their hostility. We afterwards heard that a large army of these Indians were encamped at the falls above. They traded regularly with the British traders and procured of them their arms and amunition. We built a fort near the Gros-Ventre village, and unloaded all the larger boats for the purpose of sending them back to the settlements. Having now arrived at our destination and being near the beaver region, we, the Americans, ten in number, requested the partners to furnish out traps, amunition, guns and men, according to contract. But this, they seemed to have forgotten entirely, or intended never to fulfil. We found ourselves taken in, cheated chizzled, gulfed and swindled in a style that has not, perhaps, been excelled by Yankees or French, or men of any other nation, at any time in the thirty-six

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

years that have passed over my head since this feat was performed. A stock of old and worthless traps had been brought up the river, apparently to be put off on the Americans. They offered us these traps, which we refused to take. They then endeavored to deprive us of the arms and amunition belonging to them, in our possession, and they succeeded in getting from most of us all the guns and powder of theirs that we had. Mine were taken from me with the others, by order of the partners. I do not know that all of them consented to this nefarious proceeding; I hope and should have expected that several of them would not sanction such conduct. But I heard of no protest or opposition to the acts of the majority, who behaved toward us with a want of principle and of honor that would shame most gentleman robbers of the highway. They seemed determined to turn us out on the prairie and among the Indians, without arms, provisions or amunition. Our situation in that event, would have nearly realized the one implied in the popular expression "a cat in hell without claws." We were kept waiting two or three weeks without employment or any provisions, except what we purchased at most exhorbitant prices. We bought goods, knives, &c. of the company, on credit, and sold them to the Indians for provisions and in this way were rapidly running in debt, which the company expected us to discharge to them in beaver fur. Their object was to make the most out of us without regard to their previous professions and promises. Finding myself, like most of my comrades, destitute of all means of support and sustenance, of defense and offense, I looked around for something by which I could live in that wild region. On Arriving at the Gros-Ventre village we had found a hunter and trapper named Colter, who had been one of Lewis & Clarke's men, and had returned thus far with them in 1807. Of him I purchased a set of beaver traps for \$120, a pound and a half of powder for \$6, and a gun for \$40. Seeing me thus equipped, Liza, the most active, the meanest and most rascally of the whole, offered me new and good traps, a gun and amunition. I told him he appeared willing enough to help when help was not needed, and after I was provided at my own expense. I then selected two companions, Miller and McDaniel, who had been imposed on by the bourgeoisie in the same manner with myself, and in their company I prepared to begin business. These two had, by good fortune bought with them six traps, two guns and amunition of their own. We cut down a tree and of the trunk made a canoe in which we prepared to ascend to the "Forks" and head waters of the Missouri and the mountains. We were young, and sanguine of success. No fears of the future clouded our prospects and the adventures that lay before us excited our hopes and fancies to the highest pitch. "No dangers daunted and no labors tired us." Before leaving the Fort and my old companions, I will relate a characteristic anecdote of Cheek, who so soon after this, expiated his follies by a violent death. In an early part of the voyage, when coming up the river, about two months before, I had sent Cheek to draw our share of provisions from the provision boat. Francois Ried, who dealt them out for the company, offered Cheek a bear's head, saying it was good enough for "you fellows," by this meaning the Americans. Cheek returned to his boat in great rage at the insult, as he deemed it, and threatened to whip him (Ried) for the said contumely on himself and fellow companions, as soon as he was out of Government employ — that is, as soon as we had delivered up Shehaka to the Mandans. The matter passed on and I supposed was forgotten by Cheek himself, until the Fort was built, and the Americans were about separating with many grievances unredressed and wrongs unavenged. Cheek meeting Ried one morning on the bank of the river, told him that he had promised to whip him and that he could not break his word on any account. He thereupon struck at the audacious Frenchman, who had presumed to call Americans "fellows,"

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

and offer them a bear's head. Ried saved himself by running aboard one of the boats, where he obtained a reinforcement. Cheek beat a retreat, and a truce was observed by both parties till night fall. I had encamped with Cheek and two others, a few hundred yards above the Fort. We were all, except Cheek, in the tent, about nine o'clock in the evening, when Ried with a company, all armed with pistols and dirks came up and demanded to see Cheek, saying that he had attacked him within the lines of the Fort, when he knew he could not fight without violating orders. I told him that Cheek was not in the tent. "He is hid, the cowardly rascal," cried Ried, and went to searching the bushes. After he and his company were gone, I found Cheek at Major Henry's tent, amusing himself with cards and wine. I took him with me to our own tent, fearing that Ried's company might kill him if they found him that night. He was silent while hearing my account and for some minutes after entering our tent. He then spoke as if on maturest reflection, and said that he had intended to have let Ried go, with what he had got, "but now I will whip him in the morning if I lose my life by it." In the morning he started unarmed and wrapped in his blanket for the Fort. I with a few others followed to see fair play which is ever a jewel with the American. Cheek soon found Ried and accosted him in front of the Fort, by informing him that he had come down to accommodate him with the interview which he had understood had been sought for, so anxiously the night before. Ried said he was in liquor the night before — wanted to have nothing to do with him and began to make for the Fort. "You must catch a little anyhow" said Cheek, and springing towards Ried like a wild cat, with one blow he felled him to the earth. Capt. Chouteau who had seen the whole proceeding from the Fort, immediately rushed out with about thirty of his men all armed. "Bring out the irons, seize him, seize him," cried Chouteau, frantic with passion, and raging like a mad bull. Cheek prudently retired to our company on the bank of the river, a short distance, and said he would die rather than be ironed. We were ready to stand by him to the last. Chouteau now ordered his men to fire on us and the next moment would have seen blood-shed and the death of some of us, had not L'Abbadieu, Valle, Menard, Morrison, Henry and one of Chouteau's sons thrown themselves between us and the opposite party and thus preventing the execution of Chouteau's order. Him they forced back, struggling like a mad child in its mothers arms into the Fort. On the next day after this fracas, Miller, McDaniel and myself parted from our companions after agreeing to meet them again on the Forks or head-waters of the Missouri and started in our canoe up the river. The river is very crooked in this part and much narrower than we had found it below. We came to a Mandan village on the south side of the stream on the day of our departure from the Fort. On arriving here, we were on the north side of the river, and on account of the violence of the wind, did not cross to the village. Late in the evening a woman in attempting to cross in a skin canoe, was upset in the middle of the river. She was seen from the village, and immediately, a multitude of men rushed into the water and seemed to run rather than swim to the woman whom they rescued from the water with wonderful rapidity. Their dexterity in swimming was truly astonishing to us. We pushed or rather paddled on in a shower of rain, till late that night and encamped. In the morning we went on in a snowstorm and in four days the ice floating in the river, prevented further navigation of the stream with the canoe. We stopped on the south side of the river, built a small cabin, banked it round with earth and soon made ourselves quite comfortable. This was in the month of November. We had caught a few beaver skins in our route from the Gros-Ventre village, and were employed ourselves in making moccasins and leggins and in killing game which was very plenty all around us. Here we determined to pass the

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

winter and in the Spring continue our ascent of the Missouri to the Forks. On Christmas day I froze my feet and became so disabled as to be confined to the house unable to walk. Miller and McDaniel soon after started back for the Fort, with our stock of beaver skins to exchange them for ammunition. They were gone twice the length of time agreed on for their stay. I began to consume the last of my rations and should have suffered for food, had not a company of friendly Indians called at the cabin and bartered provisions for trinkets and tobacco. My next visitors were two Canadians and an American named Ayers, from the Fort, who were going on with despatches for the main company, that was supposed to be at Manual's Fort at the mouth of the Big Horn, a branch of the Yellow Stone. These men informed me that Miller and McDaniel had changed their mind; that they did not intend to continue further up the river and seemed to be in no haste to return to me. They urged me to accompany them, and promised me the use of one of their horses till my feet should become well enough for me to walk. I consented to go with them and prepared to leave my cabin. Before doing so, I buried the traps and other accoutrements of my two former companions in a corner of the lodge, and peeling off the bark from a log above them, I wrote on it, "In this corner your things lie" I learned on my return in the Spring that both of them had been killed as was supposed by the Rickarees. Their guns, traps, &c., were seen in the hands of some of that tribe; but they were never heard of afterwards.

On the third of February, 1810, eight months after my departure from St. Louis, I started from my winter lodge; but I soon repented my undertaking. The horses were all too weak to carry more than the load appropriated to them, and I was thus compelled to walk. My feet became very sore and gave me great pain, while the crust on the snow made the traveling of all of us, both slow and difficult. I suffered severely at starting but gradually improved in strength and was able in a few days to keep up with less torture to myself than at first. We ascended the south bank of the river till we struck the Little Missouri a branch from the south. Here we found some Indians who advised us to keep up the banks of this river for two days, and then turning northwardly, a half-days travel would bring us to the Gunpowder river near its head: this is a branch of the Yellow Stone. We travelled two days as directed and left the Little Missouri in search of the river. We missed it entirely, on account of our traveling so much slower than the Indians are accustomed to do. Over two day's travel was not greater than one of theirs. For five days we kept our course to the north in an open plain, and in the heart of winter. The cold was intense and the wind from the mountains most piercing. The snow blew directly in our faces and ice was formed on our lips and eyebrows. In this high latitude and in the open prairies in the vicinity of the mountains where we then were, the winters are very cold. On the first night we were covered where we lay to the depth of three feet by the snow. No game was to be seen and we were destitute of provisions. For five days we tasted not a morsel of food, and not even the means of making a fire. We saw not a mound or hill, tree or shrub, not a beast nor a bird until the fifth day when we discried afar off a high mound. We were destitute, alone in that vast desolate and to us limitless expanse, of drifting snow, which the winds drove into our faces and heaped around our steps. Snow was our only food and drink, and snow made our covering at night. We suffered dreadfully from hunger. On the first and second days after leaving the Little Missouri for the desert we were now traversing, our appetites were sharper and the pangs of hunger more intense than afterwards. A languor and faintness succeeded which made travelling most laborious and painful. On the fifth day we had lost so much of strength and felt such weakness for want of food, that the most terrible of deaths, a death by

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

famine, stared us in the face. The pangs and miseries we endured are vividly described by Mr. Kendall, from actual experience in his "Santa Fe Expedition." My feet, in addition to all other sufferings, now became sore and more painful than ever. The men had made for me a moccasin of skin taken from the legs of a buffalo, and which I wore with the hair next my feet and legs. I felt the blood gurgling and bubbling in this casing at every step. We were about to ward off starvation by killing a horse, and eating the raw flesh and blood, when on the fifth day of our wandering in this wilderness a mound was seen, as above mentioned, in the distance. We reached and ascended it in the evening, whence we saw woods and buffaloes before us. We hastened to kill several of these noblest of all animals of game, and encamped in the woods, where we quickly made a fire and cut up the meat. We were all so voracious in our appetites, as not to wait for the cooking, but ate great quantities nearly raw. The first taste, stimulated our languor and appetites to an ungovernable pitch. We ate and ate and ate, as if there were no limit to our capacity, and no quantity could satisfy us. At length when gorged to the full and utterly unable to hold any more, we gave out and sought repose about midnight under our tents. But sleep fled from our eyes and in the morning we arose, without having rested, feverish and more fatigued than when we supped and retired the night before. Our feet, limbs and bodies were swollen and bloated, and we all found ourselves laid up on the sick list, by our debauch on buffaloe meat. We had no desire to eat again on that day, and remained in camp utterly unable to travel, till the next morning, when we started forward, travelling slowly. We soon struck the river which we had suffered so much in seeking, and bent our course up the stream, crossing its bends on the ice. On one occasion when saving distance by cutting off a bend of the river, the horse carrying my pack and worldly goods, fell into an air hole and would have instantly disappeared had I not caught him by the tail and dragged him out to some distance, with a risk to myself of plunging under the ice into a rapid current, that made me shudder the moment I coolly looked at the danger. Hair breadth escapes from death are so frequent in the life of a hunter in this wild region as to lose all novelty and may seem unworthy of mention. I shall relate a few as I proceed, for the purpose of strewing the slight tenure the pioneer holds of life. And yet Boone, the prince of the prairies, "lived hunting up to ninety." Perhaps pure air and continual exercise are more than a counterbalance toward a long life, against all the dangers of a hunters and trappers existence, even among hostile savages, such as we were now rapidly approaching.

We continued our course up the Yellow Stone, gradually recovering from the effects of our unnatural surfeit and gross gormandizing of buffalo meat. The country here is one immense, level plain, and abounded, at this time, with large herds of buffalo, which subsisted on the buds of trees and the grass which the powerful winds laid bare of snow in many places. The river was skirted on either side by woods. At last, after fifteen days of painful travel and much suffering, we reached "Manuel's Fort," at the mouth of the Big Horn, where I found the most of my crew, and a small detachment of the company's men from whom I had parted the previous fall. This Fort, as before mentioned, was built by Liza in the spring of 1808, and a small garrison left in it, who had remained there ever since. Here I found Cheek, Brown, Dougherty and the rest of my crew rejoicing to see me. I was not a little surprised to find Col. Pierre Menard in command, who was to have returned to St. Louis from the Fort at the Gros Ventre village, and Liza intended to take command of the party on the head waters of the Missouri. Such was the arrangement at the commencement of the voyage. I soon learned from the men what they supposed to be the cause of the change. The

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

next day after I had left the Fort on the Missouri, in the fall, Cheek and several Americans were in the office or marque of the company, endeavoring to get their equipments according to contract. Liza was present. Chouteau's name was mentioned in the course of the conversation, when Cheek coolly remarked that if he caught Chouteau a hundred yards from camp he would shoot him. "Cheek! Cheek!!" exclaimed Liza, "mind what you say." "I do that," said Cheek, "and Liza, I have heard some of our boys say that if they ever caught you two hundred yards from camp they would shoot you, and if they don't I will. You ought not to expect any thing better from the Americans after having treated them with so much meanness, treachery and cruelty as you have. Now Liza," continued he, "you are going to the forks of the Missouri, mark my words, you will never come back alive." Liza's cheeks blanched at this bold and reckless speech from a man who always performed his promises, whether good or evil. He returned to St. Louis and sent up Col. Menard's in his place. Col. M. was an honorable, high minded gentleman and enjoyed our esteem in a higher degree than any other at the company. Liza we thoroughly detested and despised, both for his acts and his reputation. There were many tales afloat concerning villainies said to have been perpetrated by him on the frontiers. These may have been wholly false or greatly exaggerated, but in his looks there was no deception. Rascality sat on every feature of his dark complexioned, Mexican face — gleamed from his black, Spanish, eyes, and seemed enthroned in a forehead "villainous low." We were glad to be relieved of his presence. After remaining at this Fort or camp a few days we started westward for the "Forks" and mountains in a company of thirty-two men, French and Americans. On first arriving at the Fort I had learned that two of the men with an Indian chief of the Snake tribe and his two wives and a son had gone forward, with the intention of killing game for our company and awaiting our approach on the route. Our second day's journey brought us to an Indian lodge; stripped, and near by, we saw a woman and boy lying on the ground, with their heads split open, evidently by a tomahawk. These were the Snake's elder wife and son, he having saved himself and his younger wife by flight on horseback. Our two men who had started out in company with him, were not molested. They told us that a party of Gros Ventres had come upon them, committed these murders, and passed on as if engaged in a lawful and praiseworthy business. These last were the most powerful and warlike Indians of that region. The poor Snake tribe, on the contrary, were the weakest, and consequently became the prey and victims of the others. They inhabit the caves and chasms of the mountains and live a miserable and precarious life in eluding the pursuit of enemies. All the neighboring tribes were at war with these poor devils. Every party we met pretended to be out on an expedition against the Snakes, when they frequently reduce to slavery. Thus the strong prey upon the weak in savage as well as civilized life. Our course now lay to the north-west for the Forks of the Missouri, which meet in latitude — — among the mountains, whence the last named river runs directly north as high as latitude — — miles, where it turns to the south and south east, which last course it generally holds to its junction with the Mississippi. On the evening of the day when we left Manuel's Fort, my friend Brown became blind from the reflection of the sun on the snow; his eyes pained him so much that he implored us to put an end to his torment by shooting him. I watched him during that night for fear he would commit the act himself. He complained that his eye balls had bursted, and moaned and groaned most piteously. In the morning, I opened the swollen lids, and informed him to his great joy that the balls were whole and sound. He could now distinguish a faint glimmering of light. I led him all that day and the next, on the third he had so far recovered that he could

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

see, though but indistinctly. Our guide on this route was Colter, who thoroughly knew the road, having twice escaped over it from capture and death at the hands of the Indians. In ten or twelve days after leaving the Fort we reentered an opening or gap in the mountains, where it commenced snowing most violently and so continued all night. The morning showed us the heads and backs of our horses just visible above the snow which had crushed down all our tents. We proceeded on with the greatest difficulty. As we entered the ravine or opening of the mountain the snow greatly increased in depth being in places from fifty to sixty feet on the ground, a third of which had fallen and drifted in that night. The wind had heaped it up in many places to a prodigious height. The strongest horses took the front to make a road for us, but soon gave out and the ablest bodied men took their places as pioneers. A horse occasionally stepped out of the beaten track and sunk entirely out of sight in the snow. By night we had made about four miles for that day's travel. By that night we passed the ravine and reached the Gallatin river, being the eastern fork of the Missouri. The river sweeps rapidly by the pass at its western extremity, on each side of which the mountain rises perpendicularly from the bank of the river; and apparently stopped our progress up and down the east side of the stream. I forded it and was followed by Dougherty, Ware, and another, when Colter discovered an opening through the mountain on the right or north side, and through it led the rest of the company. We, however, proceeded down the left bank of the river till night, when we encamped and supped (four of us) on a piece of buffalo meat about the size of the two hands. During this and the proceeding day we suffered from indistinct vision, similar to Brown's affliction of leaving the Big Horn. We all now became blind as he had been, from the reflection of the sun's rays on the snow. The hot tears trickled from the swollen eyes nearly blistering the cheeks, and the eye-balls seemed bursting from our heads. At first, the sight was obscured as by a silk veil or handkerchief, and we were unable to hunt. Now we could not even see our way before us, and in this dreadful situation we remained two days and nights. Hunger was again inflicting its sharp pangs upon us, and we were upon the point of killing one of the pack horses, when on the fourth day after crossing the Gallatin, one of the men killed a goose, of which, being now somewhat recovered from our blindness, we made a soup and stayed the gnawings of hunger. The next day our eyes were much better, and we fortunately killed an elk, of which we ate without excess, being taught by experience, the dangers of gluttony after a fast. We continued on down the river and soon came in sight of our comrades in the main body on the right bank. They, like ourselves, had all been blind, and had suffered more severely than we from the same causes. They had killed three dogs, one a present to me from an Indian, and two horses to appease the demands of hunger before they had sufficiently recovered to take sight on their guns. Which in this distressed situation enveloped by thick darkness at midday, thirty Snake Indians came among them, and left without committing any depredation. Brown and another, who suffered less than the others, saw and counted these Indians, who might have killed them all and escaped with their effects with perfect impunity. Their preservation was wonderful. When we overtook them they were slowly recovering from blindness and we all encamped together, with thankful and joyous hearts for our late narrow escape from painful and lingering death. We proceeded on in better spirits. On the next day we passed a battle field of the Indians, where the skulls and bones were lying around on the ground in vast numbers. The battle which had caused this terrible slaughter, took place in 1808, the year but one before, between the Black-Foot to the number of fifteen hundred on the one side, and the Flat-Heads and Crows, numbering together about eight hundred on the other.

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

Colter was in the battle on the side of the latter, and was wounded in the leg, and thus disabled from standing. He crawled to a small thicket and there loaded and fired while sitting on the ground. The battle was desperately fought on both sides, but victory remained with the weaker party. The Black-Feet engaged at first with about five hundred Flat-Heads, whom they attacked in great fury. The noise, shouts and firing brought a reinforcement of Crows to the Flat-Heads, who were fighting with great spirit and defending the ground manfully. The Black-Feet who are the Arabs of this region, were at length repulsed, but retired in perfect order and could hardly be said to have been defeated. The Flat-Heads are a noble race of men, brave, generous and hospitable. They might be called the Spartans of Oregon. Lewis & Clark had received much kindness from them in their expedition to the Columbia, which waters their country; and at the time of this well fought battle, Colter was leading them to Manuel's Fort to trade with the Americans, when the Black Feet fell upon them in such numbers as seemingly to make their destruction certain. Their desperate courage saved them from a general massacre.

The following day we reached the long sought "Forks of the Missouri," or the place of confluence of the Gallatin, Madison and Jefferson rivers. Here at last, after ten months of travel, we encamped, commenced a Fort in the point made by the Madison and Jefferson forks, and prepared to begin business. This point was the scene of Colter's escape in the fall of the year but one before, from the Indians and a death by torture; an event so extraordinary and thrilling, as he related it to me, that it deserves a brief narration.

NOTE. — The following is the description given by G. W. KENDALL, of the sufferings from starvation, referred to on the 19th page.

"For the first two days through which a strong and hearty man is doomed to exist upon nothing, his sufferings are, perhaps, more acute than in the remaining stages. He feels an inordinate, unappeasable, craving at the stomach, night and day. The mind runs upon beef, bread and other substantial; but still in a great measure, the body retains its strength. On the third and fourth days, but especially on the fourth, this incessant craving gives place to a sinking and weakness of the stomach, accompanied by nausea. The unfortunate sufferer still desires food, but with loss of strength he loses that eager craving which is felt in the earlier stages. Should he chance to obtain a morsel or two of food, as was occasionally the case with us, he swallows it with a wolfish avidity; but five minutes afterwards his sufferings are more intense than ever. He feels as if he had swallowed a living lobster, which is clawing and feeding upon the very foundations of his existence. On the fifth day his cheeks suddenly appear hollow and sunken, his body attenuated, his color an ashy pale, and his eye wild, glassy, cannibalish. The different parts of the system now wage war with each other. The stomach calls upon the legs to go with it, in quest of food: the legs from very weakness refuse. The sixth day brings with it incessant suffering, although the pangs of hunger are lost in an overpowering languor and sickness. The head becomes giddy — the ghosts of well remembered dinners pass in hideous procession through the mind. The seventh day comes bringing in train lassitude and further prostration of the system. The arms hang listlessly, the legs drag heavily. The desire for food is still left, to a degree, but it must be brought, not sought. The miserable remnant of life which still hangs to the sufferer is a burden almost too grievous to be borne, yet his inherent love of existence induces a desire still to preserve it, if it can be saved without a tax upon bodily exertion. The mind wanders. At one moment he thinks his weary limbs cannot sustain him a mile — the next he is endowed with unnatural strength and if there be a certainty

---

---

of relief before him, dashes bravely and strongly onward, wondering where proceeds this new and sudden impulse. Farther than this my experience runneth not." — Vol. I. P. 266. The whole of the company — ninety eight men — subsisted for thirteen days on what was "really not provisions enough for three, and then came upon a herd of 17000 sheep, about eighty miles south east of Santa fe. Here a scene of feasting ensued which beggars description. \* \* \* Our men abandoned themselves at once to eating — perhaps I should rather call it gormandizing or stuffing. \* \* \* Had the food been any thing but mutton, and had we not procured an ample supply of salt from the Mexicans to season it, our men might have died of the surfeit." — p. 265.

This lively writer, Geo. W. Kendall, has told a tale in the book just quoted, of prairie life and adventures as well as of Mexican barbarity and treachery, and his embellished his story with all the graces of style and description calculated to render it a work of enduring interest.

Chapter II

Colter's Race and escapes — Separation for trapping — Descent of the Missouri — A fine Landscape — Bad luck — Alarm from Indians — Retreat to the Fort — Death of Cheek — Pursuit of the Indians — Return — The White Bears — Incidents of hunting — Return to the Twenty Five Yard river — A party of Gros Ventres — Suspected Robbery — Interview with the Crows — Rapid crossing of the Yellow Stone — Descent to the Fort and the "Cache" — Robbery made certain — Passage to the Missouri — Indian character and customs — A Spree, ending almost tragically — Generosity of the Company — Settlement with them — A sage reflection.

WHEN COLTER was resuming in 1807 with Lewis & Clark, from Oregon, he met a company of hunters ascending the Missouri, by whom he was persuaded to return to the trapping region, to hunt and trap with them. Here he was found by Liza in the following year, whom he assisted in building the Fort at the Big Horn. In one of his many excursions from this post to the Forks of the Missouri, for beaver, he made the wonderful escape adverted to in the last chapter and which I give precisely as he related it to me. His veracity was never questioned among us and his character was that of a true American backwoodsman. He was about thirty-five years of age, five feet ten inches in height and wore an open, ingenious, and pleasing countenance of the Daniel Boone stamp. Nature had formed him, like Boone, for hardy endurance of fatigue, privations and perils. He had gone with a companion named Potts to the Jefferson river, which is the most western of the three Forks, and runs near the base of the mountains. They were both proceeding up the river in search of beaver, each in his own canoe, when a war party of about eight hundred Black-Foot Indians suddenly appeared on the east bank of the river. The Chiefs ordered them to come ashore, and apprehending robbery only, and knowing the utter hopelessness of flight and having dropped his traps over the side of the canoe from the Indians, into the water, which was here quite shallow, he hastened to obey their mandate. On reaching the shore, he was seized, disarmed and stripped entirely naked. Potts was still in his canoe in the middle of the stream, where he remained stationary, watching the result. Colter requested him to come ashore, which he refused to do, saying he might as well lose his life at once, as be stripped and robbed in the manner Colter had been. An Indian immediately fired and shot him about the hip; he dropped down in the canoe, but instantly rose with his rifle in his hands. "Are you hurt," said Colter. "Yes, said he, too much hurt to escape; if you can get away do so. I will kill at least one of them." He leveled his rifle and shot an Indian dead. In an instant, at least a hundred bullets pierced his body and as many savages rushed into the stream and pulled the canoe, containing his riddled corpse, ashore. They dragged the

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

body up onto the bank, and with their hatchets and knives cut and hacked it all to pieces, and limb from limb. The entrails, heart, lungs, &c., they threw into Colter's face. The relations of the killed Indian were furious with rage and struggled, with tomahawk in hand, to reach Colter, while others held them back. He was every moment expecting the death blow or the fatal shot that should lay him beside his companion. A council was hastily held over him and his fate quickly determined upon. He expected to die by tomahawk, slow, lingering and horrible. But they had magnanimously determined to give him a chance, though a slight one, for his life. After the council, a Chief pointed to the prairie and motioned him away with his hand, saying in the Crow language, "go — go away." He supposed they intended to shoot him as soon as he was out of the crowd and presented a fair mark to their guns. He started in a walk, and an old Indian with impatient signs and exclamations, told him to go faster, and as he still kept a walk, the same Indian manifested his wishes by still more violent gestures and adjurations. When he had gone a distance of eighty or a hundred yards from the army of his enemies, he saw the younger Indians throwing off their blankets, leggings, and other incumbrances, as if for a race. Now he knew their object. He was to run a race, of which the prize was to be his own life and scalp. Off he started with the speed of the wind. The war-whoop and yell immediately arose behind him; and looking back, he saw a large company of young warriors, with spears, in rapid pursuit. He ran with all the strength that nature, excited to the utmost, could give; fear and hope lent a supernatural vigor to his limbs and the rapidity of his flight astonished himself. The Madison Fork lay directly before him, five miles from his starting place. He had run half the distance when his strength began to fail and the blood to gush from his nostrils. At every leap the red stream spurted before him, and his limbs were growing rapidly weaker and weaker. He stopped and looked back; he had far outstripped all his pursuers and could get off if strength would only hold out. One solitary Indian, far ahead of the others, was rapidly approaching, with a spear in his right hand, and a blanket streaming behind from his left hand and shoulder. Despairing of escape, Colter awaited his pursuer and called to him in the Crow language, to save his life. The savage did not seem to hear him, but letting go his blanket, and seizing his spear with both hands, he rushed at Colter, naked and defenseless as he stood before him and made a desperate lunge to transfix him. Colter seized the spear, near the head, with his right hand, and exerting his whole strength, aided by the weight of the falling Indian, who had lost his balance in the fury of the onset, he broke off the iron head or blade which remained in his hand, while the savage fell to the ground and lay prostrate and disarmed before him. Now was his turn to beg for his life, which he did in the Crow language, and held up his hands imploringly, but Colter was not in a mood to remember the golden rule, and pinned his adversary through the body to the earth one stab with the spear head. He quickly drew the weapon from the body of the now dying Indian, and seizing his blanket as lawful spoil, he again set out with renewed strength, feeling, he said to me, as if he had not run a mile. A shout and yell arose from the pursuing army in his rear as from a legion of devils, and he saw the prairie behind him covered with Indians in full and rapid chase. Before him, if any where was life and safety; behind him certain death; and running as never man before sped the foot, except, perhaps, at the Olympic Games, he reached his goal, the Madison river and the end of his five mile heat. Dashing through the willows on the bank he plunged into the stream and saw close beside him a beaver house, standing like a coal-pit about ten feet above the surface of the water, which was here of about the same depth. This presented to him a refuge from his ferocious enemies of which he

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

immediately availed himself. Diving under the water he arose into the beaver house, where he found a dry and comfortable resting place on the upper floor or story of this singular structure. The Indians soon came up, and in their search for him they stood upon the roof of his house of refuge, which he expected every moment to hear them breaking open. He also feared that they would set it on fire. After a diligent search on that side of the river, they crossed over, and in about two hours returned again to his temporary habitation in which he was enjoying bodily rest, though with much anxious foreboding. The beaver houses are divided into two stories and will generally accommodate several men in a dry and comfortable lodging. In this asylum Colter kept fast till night. The cries of his terrible enemies had gradually died away, and all was still around him, when he ventured out of his hiding place, by the same opening under the water by which he entered and which admits the beavers to their building. He swam the river and hastened towards the mountain gap or ravine, about thirty miles above on the river, through which our company passed in the snow with so much difficulty. Fearing that the Indians might have guarded this pass, which was the only outlet from the valley, and to avoid the danger of a surprise, Colter ascended the almost perpendicular mountain before him, the tops and sides of which a great way down, were covered with perpetual snow. He clambered up this fearful ascent about four miles below the gap, holding on by the rocks, shrubs and branches of trees, and by morning had reached the top. He lay there concealed all that day, and at night proceeded on in the descent of the mountain, which he accomplished by dawn. He now hastened on in the open plain towards Manuel's Fort on the Big Horn, about three hundred miles a head in the north-east. He travelled day and night, stopping only for necessary repose, and eating roots and the bark of trees for eleven days. He reached the Fort, nearly exhausted by hunger, fatigue and excitement. His only clothing was the Indian's blanket, whom he had killed in the race, and his only weapon, the same Indian's spear which he brought to the Fort as a trophy. His beard was long, his face and whole body were thin and emaciated by hunger, and his limbs and feet swollen and sore. The company at the Fort did not recognize him in this dismal plight until he had made himself known. Colter now with me passed over the scene of his capture and wonderful escape, and described his emotions during the whole adventure with great minuteness. Not the least of his exploits was the scaling of the mountain, which seemed to me impossible even by the mountain goat. As I looked at its rugged and perpendicular sides I wondered how he ever reached the top — a feat probably never performed before by mortal man. The whole affair is a fine example of the quick and ready thoughtfulness and presence of mind in a desperate situation, and the power of endurance, which characterise the western pioneer. As we passed over the ground where Colter ran his race, and listened to his story an undefinable fear crept over all. We felt awe-struck by the nameless and numerous dangers that evidently beset us on every side. Even Cheek's courage sunk and his hitherto buoyant and cheerful spirit was depressed at hearing of the perils of the place. He spoke despondingly and his mind was uneasy, restless and fearful. "I am afraid," said he, "and I acknowledge it. I never felt fear before but now I feel it." A melancholy that seemed like a presentiment of his own fate, possessed him, and to us he was serious almost to sadness, until he met his death a few days afterwards from the same Blackfeet from whom Colter escaped. Colter told us the particulars of a second adventure which I will give to the reader. In the winter when he had recovered from the fatigues of his long race and journey, he wished to recover the traps which he had dropped into the Jefferson Fork on the first appearance of the Indians who captured him. He supposed the Indians were all

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

quiet in winter quarters, and retraced his steps to the Gallatin Fork. He had just passed the mountain gap, and encamped on the bank of the river for the night and kindled a fire to cook his supper of buffalo meat when he heard the crackling of leaves and branches behind him in the direction of the river. He could see nothing, it being quite dark, but quickly he heard the cocking of guns and instantly leaped over the fire. Several shots followed and bullets whistled around him, knocking the coals off his fire over the ground. Again he fled for life, and the second time, ascended the perpendicular mountain which he had gone up in his former flight fearing now as then, that the pass might be guarded by Indians. He reached the top before morning and resting for the day descended the next night, and then made his way with all possible speed, to the Fort. He said that at the time, he promised God Almighty that he would never return to this region again if he were only permitted to escape once more with his life. He did escape once more, and was now again in the same country, courting the same dangers, which he had so often braved, and that seemed to have for him a kind of fascination. Such men, and there are thousands of such, can only live in a state of excitement and constant action. Perils and danger are their natural element and their familiarity with them and indifference to their fate, are well illustrated in these adventures of Colter.

A few days afterward, when Cheek was killed and Colter had another narrow escape, he came into the Fort, and said he had promised his Maker to leave the country, and “now” said he, throwing down his hat on the ground, “If God will only forgive me this time and let me off I will leave the country day after tomorrow — and be d — d if I ever come into it again.” He left accordingly, in company with young Bryant of Philadelphia, whose father was a merchant of that city, and one other whose name I forget. They were attacked by the Blackfeet just beyond the mountains, but escaped by hiding in a thicket, where the Indians were afraid to follow them, and at night they proceeded towards the Big Horn, lying concealed in the daytime. They reached St. Louis safely and a few years after I heard of Colter’s death by jaundice.

We arrived at the Forks of the Missouri on the third day of April, 1810, ten months after leaving St. Louis and two months and one day after quitting my cabin above the Gros Ventre village. We had now reached our place of business, trapping for beaver, and prepared to set to work. Dougherty, Brown, Ware and myself agreed to trap in company on the Missouri between the Forks and the Falls, which lie several hundred miles down the river to the north, from the Forks. We made two canoes by hollowing out the trunks of two trees and on the third or fourth day after our arrival at the Forks we were ready to start on an expedition down the river. The rest of the Americans with a few French, in all eighteen in number, determined to go up the Jefferson river for trapping, and the rest of the company under Col. Menard remained to complete the Fort and trading house at the Forks between the Jefferson and Madison rivers. On parting from Cheek, he said in a melancholy tone, “James you are going down the Missouri, and it is the general opinion that you will be killed. The Blackfeet are at the falls, encamped I hear, and we fear you will never come back. But I am afraid for myself as well as you. I know not the cause, but I have felt fear ever since I came to the Forks, and I never was afraid of anything before. You may come out safe, and I may be killed. Then you will say, there was Cheek afraid to go with us down the river for fear of death, and now he has found his grave by going up the river. I may be dead when you return.” His words made little impression on me at the time, but his tragical end a few days afterwards recalled them to my mind and stamped them on my memory forever. I endeavored to persuade him to

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

join our party, while he was equally urgent for me to join his, saying that if we went in one company our force would afford more protection from Indians, than in small parties, while I contended that the fewer our numbers the better would be our chance of concealment and escape from any war parties that might be traversing the country. We parted never to meet again, taking opposite directions and both of us going into the midst of dangers. My company of four started down the river and caught some beaver on the first day. On the second we passed a very high spur of the mountain on our right. The mountains in sight on our left, were not so high as those to the east of us. On the third day we issued from very high and desolate mountains on both sides of us, whose tops are covered with snow throughout the year, and came upon a scene of beauty and magnificence combined, unequalled by any other view of nature that I ever beheld. It really realized all my conception of the Garden of Eden. In the west the peaks and pinnacles of the Rocky Mountains shone resplendent in the sun. The snow on their tops sent back a beautiful reflection of the rays of the morning sun. From the sides of the dividing ridge between the waters of the Missouri and Columbia, there sloped gradually down to the bank of the river we were on, a plain, then covered with every variety of wild animals peculiar to this region, while on the east another plain arose by a very gradual ascent, and extended as far as the eye could reach. These and the mountain sides were dark with Buffalo, Elk, Deer, Moose, wild Goats and wild Sheep; some grazing, some lying down under the trees and all enjoying a perfect millenium of peace and quiet. On the margin the swan, geese, and pelicans, cropped the grass or floated on the surface of the water. The cotton wood trees seemed to have been planted by the hand of man on the bank of the river to shade our way, and the pines and cedars waved their tall, majestic heads along the base and on the sides of the mountains. The whole landscape was that of the most splendid English park. The stillness, beauty and loveliness of this scene, stuck us all with indescribable emotions. We rested on the oars and enjoyed the whole view in silent astonishment and admiration. Nature seemed to have rested here, after creating the wild mountains and chasms among which we had voyaged for two days. Dougherty, as if inspired by the scene with the spirit of poetry and song, broke forth in one of Burns' noblest lyrics, which found a deep echo in our hearts. We floated on till evening through this most delightful country, when we stopped and prepared supper on the bank of the river. We set our traps and before going to rest for the night we examined them and found a beaver in every one, being twenty-three in all. In the evening we were nearly as successful as before and were cheered with thoughts of making a speedy fortune. We determined to remain in this second paradise as long as our pursuits would permit. We skinned our beaver, ate breakfast and started to go further down the river in search of a good camp ground. Brown and Dougherty started in a canoe, before Ware and I were ready, and after going about two hundred yards, they struck a rock concealed under the water, overturned the canoe, and lost all our skins and amunition except the little powder in our horns and few skins left behind. They also lost their guns, but saved themselves and the canoe. Ware and I soon followed them, and we all encamped at the mouth of a small creek on the left side of the river. Here Ware and I remained while the two others went back to the Fort to procure other guns and amunition, taking with them one of our guns. They reached the Fort the first night, having saved a great distance by crossing the country and cutting off the bend of the river which here makes a large sweep to the east. They went up on the west side or that next to the mountains, waded Jefferson's Fork and entered the Fort late at night. Early the next morning the whole garrison was

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

aroused by an alarm made by Valle and several Frenchmen who came in, as if pursued by enemies, and informed them that the whole party who had gone up the Jefferson, at the time of our departure down the Missouri, had been killed by the Indians, and that they expected an immediate attack on the Fort. The whole garrison prepared for resistance. The next morning after Valle's arrival, Colter came in unhurt, with a few others, and said there were no Indians near the Fort. Col. Menard despatched Dougherty and Brown, on the same day, to us with the request that we should hasten to the Fort to assist in its defense. Being well mounted, they came up to our camp as we were preparing dinner. Their faces were pale with fright, and in great trepidation they told us they had seen Indian "signs" on the route from the Fort — that a horse with a rope about his neck had run up and snuffed around them as if in search of his master, and then disappeared — that an Indian dog had performed the same action. Every thing indicated that Indians were near, and we hastened to depart for the Fort. We proceeded up the creek near whose mouth we had encamped, and were screened from view on the north by the willows on our right. We had gone very cautiously four miles, when we left the river, and I perceived a small herd of buffalo in the creek bottom far to our right, start bounding off as if from pursuers in the rear, and immediately after, I descried through an opening in the willows, eight Indians, walking rapidly across the plain in the direction of our late camp. I informed the others of my observation, and Ware horror stricken proposed immediate flight. I protested against this course and no one seconded him, but we were all alarmed and the chins and lips of some quivered as they spoke. I said that we could not all escape, having but two horses among us, that we had, perhaps, seen the whole force of the Indians, and that they might not have seen us at all; that we could fight eight with success. I proposed that if attacked we should make a breast-work of our horses and two of us should fire upon them at a hundred yards, that the other two should fire at fifty yards, that the reloaded guns should despatch the third couple, and our knives and pistols finish the seventh and eighth. This Bobadil proposition revived their spirits wonderfully, and they instantly dismissed all thoughts of flight. Ware and I ascended a small height to watch the Indians, while the rest went on with the horses, which travelled slowly with packs. Here we saw the Indians go up to our deserted camp, the smoke from which had attracted them thither. The smoke in this clear atmosphere is visible to a great distance. The hunters said they had seen the smoke from an ordinary fire in the prairies for three hundred miles. We proceeded without pursuit, and at two o'clock the next morning we reached the Jefferson Fork, opposite the Fort. Unwilling to risk the danger of an attack by delay we forded the river with great difficulty, and went towards the Fort, whence some dogs rushed upon us, barking furiously. I spoke to the dogs, and a voice hailed us from the Fort with "who's there"? I answered promptly, and thus saved ourselves from a volley, for when we entered the Fort, the whole garrison was drawn up with fingers upon triggers. They were expecting an attack every moment, and did not look for us so soon. They were all in the greatest consternation. Lieutenant Emmel with those before mentioned of the trapping party up the river, had come in and they supposed that all the rest had been killed. They had had a very narrow escape themselves, as all but Colter probably considered it; he with his large experience, naturally looked upon the whole as an ordinary occurrence. During the day others came in and we learned from them the extent of our losses. The company consisting of eighteen, had proceeded up the bank of the Jefferson, trapping, and on the third day had pitched their tents for the night, near the river, and about forty miles from the Fort. Cheek, Hull and Ayers were employed in preparing the camp,

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

while the rest had dispersed in various directions to kill game, when some thirty or forty Indians appeared on the prairie south of them, running a foot and on horses, toward the camp. Valle and two men whose names I forget, came running up to Cheek and others and told them to catch their horses and escape. This Cheek refused to do, but, seizing his rifle and pistols, said he would stay and abide his fate. "My time has come, but I will kill at least two of them, and then I don't care." His gloomy forebodings were about to be fulfilled through his own recklessness and obstinacy. Ayers ran frantically about, paralysed by fear and crying, "O God, O God, what can I do." Though a horse was within his reach he was disabled by terror from mounting and saving his life. Courage and cowardice met the same fate, though in very different manners. Hull stood coolly examining his rifle as if for battle. The enemy were coming swiftly toward them, and Valle and his two companions started off pursued by mounted Indians. The sharp reports of Cheek's rifle and pistols were soon heard, doing the work of death upon the savages, and then a volley of musketry sent the poor fellow to his long home.

Lieutenant Emmel and another came in from hunting, about dusk, ignorant of the fate of their fellows, and seeing the tent gone they supposed the place of the camp had been changed. Hearing a noise at the river, Emmel went down to the bank, whence he saw through the willows, on the opposite side, a camp of thirty Indian lodges, a woman coming down to the river with a brass kettle which he would have sworn was his own, and also a white man bound by both arms to a tree. He could not recognise the prisoner, but supposed he was an American. On returning to the place where Cheek had pitched his tent, he saw his dead body without the scalp, lying where he had bravely met his end. He then hastened to the Fort where his arrival has been noticed before. A greater part of the garrison, with myself, started out on the morning of my coming in to go in pursuit of the Indians, up the river, and to bury our dead. We found and buried the corpses of our murdered comrades, Cheek and Ayers; the latter being found in the river near the bank. Hull was never heard of, and two others, Rucker and Fleehart were also missing; being killed or taken prisoners by the Indians. An Indian was found dead, with two bullets in his body, supposed to be from Cheek's pistol. The body was carefully concealed under leaves and earth, and surrounded by logs. We followed the trail of the savages for two days when we missed it and gave up the chase. Many of the men wished to pursue them into the mountains, but Col. Menard judged it imprudent to go further in search of them, as we should, probably, come upon an army of which this party was but a detachment. He thought the main body was very large, and not distant from us or the Fort, and therefore determined to return and await them there. We accordingly retraced our steps to the Fort, and remained in it, with our whole force, for several days, expecting an attack. No attack was made, however, nor did an enemy make his appearance afterwards, except in the shape of white, grey, brown and grizzly bears. Seeing nothing of our enemies, the Blackfeet, we soon became emboldened and ventured out of the Fort to hunt and trap, to the distance of about six miles. In these short expeditions the men had frequent encounters with bears, which in this region are of enormous size, sometimes weighing 800 pounds each, and when wounded, are the most terribly ferocious and dangerous to the hunter of all other animals. The African Lion and Bengal Tiger are the only beasts of prey, that in ferocity and power, can be compared with the Grey or Grizzly Bear of the Rocky Mountains. These were the terrors of our men as much as were the Indians, and they usually spoke of them both as equally terrible and equally to be avoided. The great strength of the Bear, his swiftness and utter insensibility to danger when wounded,

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

render him as dangerous to the hunter as the Tiger or the Lion. The first shot is seldom fatal upon him, on account of the thickness of his skin and skull, and the great quantity of fat and flesh that envelope his heart, and make an almost impenetrable shield in front. I will relate a few adventures with this North American king of beasts, and then proceed with my narrative.

Ware, an American, was hunting on an island in the Madison river, a short distance from the Fort and came suddenly, in a buffalo path, upon a white or grey Bear. He fired at the monster, wounded him in the breast, and then ran for his life, with the Bear at his heels, and saved himself by plunging into the river. His pursuer laid himself down on the bank and in the last struggle of death, fell into the water, where he died. Ware drew him out, took off the skin and was cutting and hanging up the meat, when he heard the noise of another Bear in the thicket near by. He hastened to the Fort for assistance and a party, with me, went over to the island. When there, we separated in our search, and in beating about the bushes, I, with my dog, entered a narrow path, and had gone some distance, when I saw the dog ahead, suddenly bristle up, bark and walk lightly as if scenting danger. I called to the men to come up, and watched the dog. He soon found the bear guarding a dead elk, which he and his dead companion had killed and covered with leaves. As soon as he saw the dog he plunged at him, and came furiously toward me, driving the dog before him and snorting and raging like a mad bull. I levelled my gun and snapped, and then ran with the bear at my heels, and his hot breath upon me. I reached the river bank, and turned short up a path, in which I met my companions coming to my call. They, however, seeing me running, were panic stricken and took to their heels also, thus were we all in full retreat from bruin, who crossed the river and fled through the willows on the other side. We heard him crashing his way for many hundred yards. On another occasion, a party had wounded a bear which instantly gave chase and overtook a Shawnee Indian in the company named Luthecaw, who had stumbled over some brush and fallen. He grasped the Indian by the double capeau and coat collar and stood over him, while we fired six shots into the bear, which fell dead upon the Indian, who cried out that the bear was crushing him to death, but arose unhurt, as soon as we removed the tremendous weight of the dead monster from his body. His jaws were firmly closed upon the Shawnee's "capeau" and coat collar, who arose at last with "sacre moste, l'est crazy, monte" — "damn the bear, he almost mashed me."

We kept the flag flying a month, frequently seeing Indians without getting an interview with them; they always fleeing at our approach. We then pulled down the flag and hoisted the scalp of the Indian whom Cheek had killed. By this time the Fort was completed and put in a good state of defense. We subsisted ourselves in the meantime, by hunting in small parties, which started out of Fort before day and went some twenty or thirty miles, and after having killed a buffalo or elk, come back with the meat loaded on the horses.

The Grizzly Bears frequently made their appearance and we killed great numbers of them. A Yankee, named Pelton, was remarkable for his contracted, narrow eyes, which resembled those of a bear. He was a jovial, popular fellow, and had greatly amused the company in coming up the river, by his songs and sermons. At every stopping place he held a meeting for the mock trial of offenders and exhorted us in the New England style to mend our courses and eschew sin. He had an adventure with a bear, about this time, which is worth relating. While trapping near the Fort with a small party, including myself, he was watching his traps alone, a short distance from us, when he heard a rustling in the bushes at his right, and before turning around he was attacked by

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

a large bear, which grasped him by the breast, bore him to the earth and stood over him with his head back and eyes fixed on his face as if observing his features; Pelton screamed and yelled in a most unearthly manner, and his new acquaintance, as if frightened by his appearance and voice, leaped from over his body, stood and looked at him a moment, over his shoulder, growled, and then walked off. We ran in the direction of the cries and soon met Pelton coming towards us in a walk, grumbling and cursing, with his head down, as if he had been disturbed in a comfortable sleep, and altogether wearing an air of great dissatisfaction. He told us the story, and thought he owed his escape to his bearish eyes which disconcerted his friendly relation in the act of making a dinner of him.

The Indians, we thought, kept the game away from the vicinity of the Fort. Thus we passed the time till the month of May, when a party of twenty-one, of whom I was one, determined to go up the Jefferson river to trap. By keeping together we hoped to repel any attack of the savages. We soon found the trapping in such numbers not very profitable, and changed our plan by separating in companies of four, of whom, two men would trap while two watched the camp. In this manner we were engaged, until the fear of Indians began to wear off, and we all became more venturesome. One of our company, a Shawnee half-breed named Druyer, the principal hunter of Lewis & Clark's party, went up the river one day and set his traps about a mile from the camp. In the morning he returned alone and brought back six beavers. I warned him of his danger. "I am too much of an Indian to be caught by Indians," said he. On the next day he repeated the adventure and returned with the product of his traps, saying, "this is the way to catch beavers." On the third morning he started again up the river to examine his traps, when we advised him to wait for the whole party, which was about moving further up the stream, and at the same time two other Shawnees left us against our advice, to kill deer. We started forward in company, and soon found the dead bodies of the last mentioned hunters, pierced with lances, arrows and bullets and lying near each other. Further on, about one hundred and fifty yards, Druyer and his horse lay dead, the former mangled in a horrible manner; his head was cut off, his entrails torn out and his body hacked to pieces. We saw from the marks on the ground that he must have fought in a circle on horseback, and probably killed some of his enemies, being a brave man, and well armed with a rifle, pistol, knife and tomahawk. We pursued the trail of the Indians till night, without overtaking them, and then returned, having buried our dead, with saddened hearts to Fort.

Soon after this time, Marie and St. John, my two Canadian companions on the route from my winter quarters on the Missouri to the Big Horn, came to the Fort at the Forks. Marie's right eye was out and he carried the yet fresh marks of a horrible wound on his head and under his jaw. After I had left them at the Big Horn to come to the Forks, they came on to the Twenty-five Yard river, the most western branch of the Yellow Stone, for the purpose of trapping. One morning after setting his traps, Marie strolled out into the prairie for game, and soon perceived a large White Bear rolling on the ground in the shade of a tree. Marie fired at and missed him. The bear snuffed around him without rising, and did not see the hunter until he had re-loaded, fired again and wounded him. His majesty instantly, with ears set back, flew towards his enemy like an arrow, who ran for life, reached a beaver dam across the river, and seeing no escape by land, plunged into the water above the dam. The Bear followed and soon proved himself as much superior to his adversary in swimming as in running. Marie dove and swam under the water as long as he could, when he rose to the surface near the Bear. He saved himself by diving and swimming in

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

this manner several times, but his enemy followed close upon him and watched his motions with the sagacity which distinguishes these animals. At last he came up from under the water, directly beneath the jaws of the monster, which seized him by the head, the tushes piercing the scalp and neck under the right jaw and crushing the ball of his right eye. In this situation with his head in the Bear's mouth and he swimming with him ashore, St. John having heard his two shots in quick succession, came running to his rescue. St. John levelled his rifle and shot the Bear in the head, and then dragged out Marie from the water more dead than alive. I saw him six days afterwards, with a swelling on his head an inch thick, and his food and drink gushed through the opening under his jaw, made by the teeth of his terrible enemy.

We made frequent hunting excursions in small parties, in which nothing of consequence occurred. Many of us had narrow escapes from Indians and still narrower from the Grizzly and White Bears. Game became very scarce and our enemies seemed bent upon starving us out. We all became tired of this kind of life, cooped up in a small enclosure and in perpetual danger of assassination when outside the pickets. The Blackfeet manifested so determined a hatred and jealousy of our presence, that we could entertain no hope of successfully prosecuting our business, even if we could save our lives, in their country. Discouraged by the prospect before us, most of the Americans prepared to go back to the settlements, while Col. Henry and the greater part of the company, with a few Americans were getting ready to cross the mountains and go onto the Columbia beyond the vicinity of our enemies. A party which had been left at Manuel's Fort, for the purpose, had brought up one of the boats and part of the goods from the "cache" on the Yellow Stone below the Fort, as far as Clark's river, where, on account of the rapidity of the current, they had been compelled to leave them. Thither Menard went with men and horses to get the goods for the trip to the Columbia, and I accompanied him with most of the Americans on our way back to civilized life and the enjoyments of home. When we reached the Twenty-five Yard river we met one hundred and fifty Indians of the Gros Ventre tribe. One of the men observing a new calico shirt belonging to him, around the neck of an Indian, informed Menard of his suspicions that this party had robbed the "cache" (from the French, *cachee* to hide, ) of the goods which they had hid in the earth near the bank of the Yellow Stone, in the fall before. Menard questioned them, but they denied the theft, saying they got the calico at the trading house. In the evening they entrenched themselves behind breastworks of logs and brush, as if fearing an attack from us, and in the morning, departed on an expedition against the snakes, of which miserable nation, we heard afterwards, they killed and took for slaves, a large number. Thus the whales of this wilderness destroy the minnows.

Here we made three canoes of buffalo bull's skins, by sewing together two skins, for each canoe, and then stretching them over a frame similar in shape to a Mackinaw boat. Our canoe contained three men, about sixty steel traps, five hundred beaver skins, our guns and ammunition, besides other commodities. Nine of us started down the river in these canoes and in two days reached Clark's river where the boats with the goods was awaiting us. The rest with the horses by land. Clark's river enters the Yellow Stone from the south; near its mouth we found an army of the Crow nation encamped. This is a wandering tribe like most of the Indians in this region, without any fixed habitation. These were then at war with the Blackfeet, whom they were seeking to give battle. Having remained with us a few days, they went off towards the south. One of our hunters came into camp, on the evening of the day when they had departed, and informed us of

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

a large force of Indians about four miles to the north, stationed behind a breast-work of rock and earth near a cliff. These were supposed to be Blackfeet, and early in the morning, the land party with the horses, having arrived, we mustered our whole force and went out to attack them in their entrenchment. We were all eager for the fight, and advancing upon them in Indian style, we discovered instead of Blackfeet, about a hundred warriors of the Crow nation, who had been out in an expedition against the Blackfeet and had just returned. They were a detachment from the army which had left us the day before. They marched into our camp on horse, two abreast, and there learning from us the news of their comrades, they immediately crossed the river in pursuit of them. Their manner of crossing the river was singular, and reminded me of the roving Tartars. They stripped themselves entirely naked, and every ten piled their accoutrements together, blankets, saddles, weapons, &c., on a tent skin made of buffalo robes, and tying it up in a large round bundle, threw it into the river and plunged after, some swimming with these huge heaps, floating like corks, and others riding the horses or holding by the tails till they had all crossed the river. Arrived on the opposite bank, which they reached in little less time than I have taken to describe their passage, they dressed, mounted their horses, and marched off two and two, as before, and were quickly out of our sight.

Here we parted from our companions, who were going to the Columbia, and who returned hence to the Forks with the goods and amunition for their trip, while we, the homeward bound, continued our course down the river in the canoes and the boat they had left, to the Fort on the Big Horn. We remained here several days, repairing a keel boat left by Manuel two years before, which we loaded with the goods from the canoes, and then recommended our descent of the Yellow Stone with the canoes and two boats. Col. Menard accompanied us in one of the boats, and I with two companions kept to our canoe in advance of the others for the purpose of killing game. On reaching the place "cacheing" the goods and leaving the boats, on account of the ice the year before, Menard verified his suspicions of the Gros Ventres whom he met on the Twenty-five Yard river. The pit containing the goods and effects of the men had been opened and forty trunks robbed of their contents. Another pit containing the company's goods had also been opened, and the most valuable of its store left by Menard was taken off by the Gros Ventres. They had also cut up and nearly destroyed the boats. We required one with the fragments of the other, and then passed down the river with three boats. I kept ahead as before in my skin canoe. This river is very rapid throughout its whole course, and very shallow. We were now near the Falls which are difficult and dangerous of navigation. In the morning I killed two buffalos with my pistol and rifle, and my two companions killed two more, which we up and stowed away. We approached the Falls sooner than we expected, and were directing our course to the left side among the sunken rocks and breakers, where we would certainly have been lost, when we heard a gun behind and saw the men on the boats waving us with handkerchiefs to the right. We were barely able to gain the channel, when the canoe shot down the descent with wonderful rapidity. We flew along the water like a sledge down an icy hill. My two companions lay in the bottom of the canoe, which frequently rebounded from the waves made by the rocks under the water and stood nearly upright. The waves washed over us and nearly filled the canoe with water. The boats behind commenced the descent soon after we had ended it in safety. They several times struck and one of them hung fast on a concealed rock. We hauled our canoe ashore, carried it above, and coming down to the foundered boat and lighting it of part of its load, we got it off the rocks. We now passed rapidly down

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

to the Missouri river, where I left my friendly canoe and went aboard one of the boats. Here my spirits were cheered with the near prospect of home. I longed to see the familiar faces of kindred and friends with a yearning of the heart, which few can realize who have not wandered as I had done, among savages and wild beasts and made the earth my bed and the sky my canopy for more than a year. My way homeward was clear and comparatively safe; the tribes along the river being friendly, or if hostile, unable to annoy us as the Blackfeet had done so long in the prairies.

In my wanderings in this expedition I saw much of the Indians and their manner of living. Those in this region were then more savage, less degraded, and more virtuous than they are at the present time. The white man and his "fire water" have sadly demoralized them, thinned their numbers, and will soon sink them into oblivion. They are no longer the proud, haughty, simple minded warriors and orators that I found so many of them to be in 1809-10. Sunk in poverty and intemperance, they are fast dwindling away. I have seen some of the finest specimens of men among our North American Indians. I have seen Chiefs with the dignity of real Princes and the eloquence of real orators, and Braves with the valor of the ancient Spartans. Their manner of speaking is extremely dignified and energetic. They gesticulate with infinite grace, freedom and animation. Their words flow deliberately, conveying their ideas with great force and vividness of expression, deep into the hearts of their hearers. Among their speakers I recognized all the essentials in manner of consummate orators. I shall have occasion, in the following chapters to bring out some of their nobler qualities in bolder relief than was possible in the preceding, on account of the more intimate relations I afterwards formed with these children of nature and the prairies.

In five days after entering the Missouri, we descended to the Gros Ventre village and our Fort, and were there joyfully received by our old companions. Whiskey flowed like milk and honey in the land of Canaan, being sold to the men by the disinterested and benevolent gentlemen of the Missouri Fur Company, for the moderate sum of twelve dollars per gallon, they taking in payment, beaver skins at one dollar and a half, each, which were worth in St. Louis, six. Their prices for every thing else were in about the same proportion. Even at this price some of the men bought whiskey by the bucket full, and drank.

'Till they forgot their loves and debts  
And cared for grief na mair.

During the carousel an incident occurred that nearly brought ruin upon us all. Three Shawnee Indians in the company from Kaskaskia, had started from the Upper Yellow Stone in a skin canoe, in advance, and had arrived a day or two before us. In their way down, one of them named Placota had wantonly killed a Crow Indian on the Yellow Stone, and a Gros Ventre on the Missouri, about sixty miles above the village, and taken their scalps. In his drunken fit Placota brought out one of these scalps in full view of the friendly Gros Ventres. Menard caught it out of his hand and hid it from view. The Indians became greatly excited, crowded around us and demanded to know whose scalp it was. Menard then produced to them the scalp of the Indian whom Cheek had killed and which they had seen before. They said this was a "dry" and the other a "green" scalp. We at last, and with great difficulty, pacified them and quieted their suspicions. Placota, who was raging mad, by Menard's orders was tied behind the trading house till he became sober, when I released him on his promise of good behavior.

This tribe was then very powerful, having in all five villages, and mustering, in case of emergency, as many as three thousand warriors. I have already noticed their character and warlike qualities.

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

A singular custom prevails among them in cutting off a finger or inflicting a severe wound in remembrance of any severe misfortune. Few of the men thirty years of age, were without the marks of these wounds, made on the death of some near relation or on occasion of a defeat of the nation in war. Some I saw with three and one with four fingers cut off. I saw a young man bewailing the death of his father in a battle with the Blackfeet. He had compelled his friends to draw leather cords through the flesh under his arms and on his back, and attaching three Buffalo skulls, weighing at least twenty-five pounds, to the ends of the cords he dragged them over the ground after him through the village, moaning and lamenting in great distress. At their meals, the Indians on the Missouri, throw the first piece of meat in the direction of an absent friend. In smoking, they send the first whiff upwards in honor of the Great Spirit, the second downward as a tribute to their great mother, the third to the right and the fourth to the left, in thanks to the Great Spirit for the game. He sends them so abundantly on the bosom of the earth. Their name for Chief is Inca, the same as that of the South American and Mexican Indians. For knife they say messa; for horses, cowalla. A comparison of their languages will show an identity in their origin and race. They secure their dead by setting four poles, forked at the top, and about twenty five feet in height, in the ground. On these they put a scaffold of buffalo skin, fastened to the poles, and on this the corpse is placed, covered by a buffalo skin bound around it very tightly. In this way the corpse is protected from the birds and beasts, and thus it remains till the scaffold falls by decay. The bones are then gathered by the relatives and put into a common heap. I saw in the rear of the Gros Ventre village an immense extent of ground covered by these tombs in the air, and near by was a heap of skulls and bones which had fallen to the earth from these air graves.

After a few day's stay at the Fort and village, we again started down the river with Col. Menard and two boats. We arrived at St. Louis in the month of August, A. D. 1810, without any occurrence of interest on the voyage. We never got our dues or any thing of the least similitude to justice from the company. They brought me in their debt two hundred dollars, and some of the other Americans, for still larger sums. The reader may ask how this could be. He can easily imagine the process when he is told that the company charged us six dollars per pound for powder, three dollars for lead, six dollars for coarse calico shirts, one dollar and a half per yard for coarse tow linen for tents, the same for a common butcher knife, and so on, and allowed us only what I have mentioned for our beaver skins, our only means of payment. Capt. Lewis told me not to lay in any supplies in St. Louis, as the Company had plenty and could sell them to me as cheaply as I could get them in St. Louis, or nearly so, allowing only for a reasonable profit. Lewis did not intend to deceive us and was chagrined at the villanous conduct of the Company afterwards. This, with the fraudulent violation of their contracts and promises in the Indian country, by this concern, makes up a piece of extortion, fraud and swindling, that ought to consign the parties engaged in it to eternal infamy. The heaviest blame must rest on the unprincipled Liza; but the rest of the company must suffer the stigma of having connived at and profited by the villainy, if they did not actually originate and urge it onward. I sued them on my contract, and was the only one who did so. After many delays and continuances from term to term, I was glad to get rid of the suits and them, by giving my note for one hundred dollars to the Company. This, with my debt to Colter, made me a loser to the amount of three hundred dollars by one years trapping on the head waters of the Missouri. Some of the Americans, however, fared much worse, and were deterred from returning to the settlements at all, by their debts to the Company, which they were hopeless of

discharging by any ordinary business in which they could engage. Such is one instance of the kind and considerate justice of wealth, to defenceless poverty, beautifully illustrating the truth of the sentiment uttered by somebody, "take care of the rich and the rich will take care of the poor."

Chapter III

Employment from 1810 to 1821 — The First Santa Fe Traders — Members of the Fourth Santa Fe expedition — Ascent of the Arkansas — Vaugan — Removal of the Town of Little Rock — Fort Smith and Major Bradford — Trading with the Osages — Capt. Prior — Salt River — Salt Plains and Shining Mountains — Robbery by the Indians — Sufferings from thirst — Attack by the Indians — Further Robberies — The One Eyed Chief and Big Star — Indian Council — Critical Situation — Rescue by Spanish officers — Cordaro — Journey continued — San Miguil Peccas and its Indian inhabitants — Santa Fe — Farming.

AFTER MY RETURN from the Upper Missouri, I went in the fall of 1810 to Pennsylvania, where I remained two years and married. I returned to St. Louis, in the fall of 1813, procured a keel-boat and with it, navigated the Ohio and Mississippi, between Pittsburgh and St. Louis, carrying goods for large profits. I continued in this business till the fall of 1815, when I took a stock of goods from McKnight & Brady of St. Louis, and opened a store in Harrisonville, Illinois, dividing profits equally among us. In the fall of 1818, I went to Baltimore with letters of recommendation and bought goods for cash and on credit to the amount of seventeen thousand dollars, and brought them in waggons to Pittsburgh where I left them to await a rise of the river, which was too low for navigation, and came to St. Louis. My goods were not sent on till the following spring, when they had greatly fallen in price and the market was filled with a large supply. I was unable to dispose of my stock even at cost. I struggled on through the years 1819-'20, with the certain prospect of bankruptcy before my face, amid the clamors of creditors, and without the hope of extricating myself from impending ruin. About this time Baum, Beard, and Chambers, with some others, came to St. Louis from Santa Fe, where they had been imprisoned by the Government ever since the year 1810. They, with Robert, brother of John McKnight of the firm of McKnight and Brady, and eight others, were the first American Santa Fe traders that carried goods from St. Louis to New Mexico. Immediately on reaching Santa Fe their goods were confiscated by the Governor, sold at public auction, and themselves taken to Chihuahua and there thrown into prison, where they were kept in more or less strict confinement for the space of ten years, being supported during that time by the proceeds of McKnight's goods, the Government allowing 18 3/4 cents per day to each man. This, I believe was the second company of Americans that ever entered Santa Fe. Clem. Morgan, a Portuguese and very wealthy, made his way thither at a very early day, while Louisiana belonged to Spain, and returned in safety, making a good venture. Gen. Zebulon Pike was the first American visitor to that country. He went in the year 1807, and on his arrival was marched through Mexico as a prisoner of war, but was soon after released on demand of our Government. One of his men was detained thirteen years by the Spaniards, and returned with Chambers to St. Louis. Pike in the beginning of our last war with England, met a soldier's death at Queenston Heights. The second company from the United States was McKnight's and their treatment has been noticed. The third was under the command of Augustus Chouteau and Demun of St. Louis, and was composed entirely of French. They made a very unsuccessful venture, being deprived of their goods worth \$40,000., without the least remuneration, and themselves imprisoned for a short time. I commanded the fourth expedition to Santa Fe from the United

---

Three Years Among the Indians and Mexicans

---

States, and the first that was made after the Mexican Revolution and the declaration of their independence on Spain, and I was the first American that ever visited the country and escaped a prison while there. John McKnight desired to go to Mexico to see his brother, procure his release if he were still in prison, and return with him to the States. The first information he had received, concerning Robert, in ten years, came by his companions above named, who had left him in the interior of Mexico. He proposed that I should take my goods and accompany him, and supposed that under Spanish protection we could go unmolested by the Government. The news of the Revolution had not yet reached this country. This appeared to be the best course to retrieve my affairs, and I prepared for the journey by procuring a passport from Don Onis the Spanish Minister, countersigned by John Q. Adams, then Secretary of State under Monroe. I loaded a keel-boat with goods to the value of \$10,000, and laid in a large quantity of biscuit, whiskey, flour, lead and powder, for trading with the Indians on the route. I started from St. Louis on the tenth of May, A. D. 1821, and descended the Mississippi to the mouth of the Arkansas. The company consisted, besides myself, of McKnight, my brother John G. James, David Kirkee, Wm. Shearer, Alexander Howard, Benjamin Potter, John Ivy, and Francois Maesaw, a Spaniard. Two joined us after starting, Frederick Hector at the mouth of the Ohio, and James Wilson in the Cherokee country, making eleven in all, young and daring men, eager for excitement and adventure. Ascending the Arkansas, the first settlement we reached was "Eau Post," inhabited principally by French. A few days afterwards we arrived in the country of the Quawpaws, where we met with a Frenchman named Veaugean, an old man of considerable wealth, who treated us with hospitality. His son had just returned from hunting with a party of Quawpaws and had been attacked by the Pawnees, who killed several of his Indian companions. Pawnee was then the name of all the tribes that are now known as Camanches. I had never known or heard of any Indians of that name before I visited their country on my way to Santa Fe. The Americans previously knew them only as Pawnees. The account brought by Veaugean's son surprised me, as we had heard that all the Indians on our route were friendly. Leaving Veaugean's, we proceeded up the river through a very fertile country. Dense and heavy woods of valuable timber lined both sides of the river, both below "Eau Post" and above as far as we went, and the river bottoms, which are large, were covered by extensive cane-brakes, which appeared impenetrable even by the rattlesnake. Small fields of corn, squash and pumpkins, cultivated by Indians, appeared in view on the low banks of the river. Since entering the Arkansas we had found the country quite level; after sailing and pushing about three hundred miles from the mouth, we now reached the first high land, near Little Rock the capital of the Territory as established that spring. The archives had not yet been removed from Eau Post, the former capital. As we approached Little Rock we beheld a scene of true Western life and character, that no other country could present. First we saw a large wood and stone building in flames, and then about one hundred men, painted, masked and disguised in almost every conceivable manner, engaged in removing the Town. These men, with ropes and chains would march off a frame house on wheels and logs, place it about three or four hundred yards from its former site and then return and move off another in the same manner. They all seemed tolerably drunk, and among them I recognized almost every European language spoken. They were a jolly set indeed. Thus they worked amid songs and shouts, until by night-fall they had completely changed the site of their Town. Such buildings as they could not move they burned down, without a dissentant voice. The occasion of this strange proceeding was as follows: The Territorial Court was then in session

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

at Diamond Hill, about thirty miles distant on the river above, and the news had reached Little Rock on the morning of our arrival, that a suit pending in this Court and involving the title to the town, wherein one Russell of St. Louis was the claimant, had gone against the citizens of Little Rock and in favor of Russell. The whole community instantly turned out en masse and in one day and night Mr. Russell's land was disencumbered of the Town of Little Rock. They coolly and quietly, though not without much unnecessary noise, took the Town up and set it down on a neighboring claim of the Quawpaw tribe, and fire removed what was irremovable in a more convenient way. The free and enlightened citizens of Little Rock made a change of Landlords more rapidly than Bonaparte took Moscow. Here I saw Matthew Lyon, then quite an old man, canvassing for Congress. He was a man of some note in John Adam's administration, by whom he was imprisoned, under the Alien and Sedition law. He came into Little Rock, with the Judge and Lawyers, from Diamond Hill, the day after the grand moving of the Town. He rode a mule, which had thrown him into a bayou, and his appearance as he came in, covered with mud from head to foot, was a subject of much laughter for his companions and the town of Little Rock, which had now began to assume a look of some age, being just twenty-four hours old. Lyon was not returned to Congress and he died a few years afterwards. In 1824 I saw his grave at Spadre, in the Cherokee country, where he had kept a trading establishment. Before I left Little Rock I procured a license to trade with all the Indian tribes on the Arkansas and its tributaries, from Secretary Charles Crittenden, Governor Miller being out of the Territory. I gave bond in the sum of \$3000, with Judge Scott as security, to observe the laws of the United States, and it always appeared to me that I was entitled to indemnity from my country for the robberies which I suffered from the Indians. My losses in this way were tremendous and have weighed me down to the earth from that day to this, the best portion of my life; but not one cent have I ever been able to obtain from the justice of Congress, whose laws I was bound to obey, whose license from the hands of a Government officer I carried with me, and who by every rule of justice was bound to protect me in a business which it authorized by license and regulated by heavy penalties.

Continuing our course up the river, we passed through a more rocky and uneven country than that below Little Rock. The Maumel mountain, some fifty or sixty miles above this Town, and a mile from the south bank of the river, is a great curiosity. It rises six hundred feet above the level of the river, and in shape resembles a coal-pint. A large spring of fresh water gushes from the top and runs down its side to the river. We now passed through the country of the Cherokees, whose farms and log houses made a fine appearance on the banks of the river, and would compare favorably with those of any western State. They were at this time highly civilized and have since made great advances in the arts. These were that part of the nation called the Rogers party, who just emigrated from the east to the west side of the Mississippi, and ultimately, about the year 1833, with the powerful agency of the General Government, caused the removal of the whole nation to this country, where they are making rapid progress in national prosperity. Their Delegate will take his seat in our next Congress as Representative of the first Indian Territory ever organized. If this nation shall form a nucleus for the preservation of the race from annihilation, the cheerless predictions of the Physiologists will be most fortunately falsified, and the Philanthropist will rejoice in the perpetuation of the true Indian race and character.

Fort Smith lies about six hundred miles from the mouth of the Arkansas on the western confines of the Cherokee country, and near that of the Osages, which tribes were now at war with each

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

other. We stopped a few days at this post, where we were well received by Lieutenant Scott and the commandant Major Bradford, who examined and approved our license. The Major was a small stern looking man, an excellent disciplinarian and a gallant officer. He invited McKnight and me to make his house our home until we had rested our company and put our guns in good order preparatory to entering the Indian country. He and his wife treated us with the utmost kindness and hospitality, and on leaving, presented us a large supply of garden vegetables, with a barrel of onions, which we were not to broach until we had killed our first buffalo, when we were enjoined to have "a general feast in honor of old Billy Bradford." His kindness made a deep impression on us. We here tried to mark out our course for the future, which we determined should be the Arkansas to within sixty miles Loas in New Mexico, Baum having told me that this river was navigable thus far, and the Canadian being too shallow for our boat. Parting from the hospitable old Major, we ascended the river to the Salt Fork, which enters from the south, passing in our way the Grand River, then called the Six Bulls, and the Verdigris, at whose mouth Fort Gibson has since been built. The waters of the Salt Fork are very much saturated with salt, tasting like strong brine where they enter the Arkansas. After this we proceeded with great difficulty, and about thirty miles above the South Fork our further progress was entirely stopped by the lowness of the water. There being no prospect of a speedy rise in the river at this time, which was the mouth of August, we returned four miles to an Osage road, which we had observed in going up, and here I sent three men to the Osage village, which I knew could not be far distant, for the purpose of opening a trade with this tribe. In five or six days these men returned to me with forty Osages and a Capt. Prior, formerly of the United States army. I mentioned him in the first chapter as the commander of the escort of the Mandan Chief Shehaka. He was a Sergeant in Lewis and Clark's expedition, and a Captain at the battle of New Orleans. On the reduction of the army after the war, he was discharged to make way for some parlor soldier and sunshine patriot, and turned out in his old age upon the "world's wide common." I found him here among the Osages, with whom he had taken refuge from his country's ingratitude, and was living as one of their tribe, where he may yet be unless death has discharged the debt his country owed him.

I took out some goods, and with McKnight, my brother, and the Spaniard Macsaw, accompanied Capt. Prior and the Indians to their village, to the south east, which we reached in two days. Here we found our old friend, Maj. Bradford Hugh Glenn, from Cincinnati, with goods and about twenty men, on his way to the Spanish country, and also, Capt. Barbour, and Indian trader from the mouth of the Verdigris, and formerly of Pittsburgh. I proposed to Glenn, whom I shall have to mention unfavorably hereafter, to travel in company to the Spanish country; but he appearing averse to the arrangement, I did not urge it upon him. I bought twenty-three horses of the Osages at high prices, for packing my goods, and agreed with Barbour to "cache" (hide in the earth) my heaviest and least portable goods near the Arkansas, for him to take in the following spring down to his store at the mouth of the Verdigris, sell them and account to me for the proceeds on my return. I returned with my companions to the river and carefully concealed my flour, whiskey, lead, hardware and other heavy goods. I showed Capt. Prior, who came up the next day with a party of Osages going out on their fall hunt, the place where I had hid these goods, and packing the rest on my horses, we left the Arkansas to our right, or the north, and travelled with Prior and the Indians for two days toward the south-west. We then left them and bore directly to the west in the direction as pointed out to us by the Indians, of the Salt Plains and Shining Mountains. In eleven

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

days we struck the Salt Fork, mentioned before, and which is set down on the latest maps as the Cinnamon river. In the distance before us we discerned the bright mountains before mentioned, which the Indians had directed us to pass in our route. We held on our course for two days along the right bank of the Salt Fork, over mounds and between hills of sand which the wind had blown up in some place to the height of one hundred feet. Our progress was very slow, the horses sometimes sinking to their breasts in the sand. The bed of the river in many places was quite dry, the water being lost in the sand, and as we advanced, it appeared covered over with salt, like snow. The water, mantled over with salt, stood in frequent pools, from the bottom of which we could scoop up that mineral in bushels. The channel of the Salt river became narrower and more shallow as we proceeded. The sand so obstructed our progress that we crossed the river where traveling was less difficult, and soon struck a branch of the Salt Fork, equally impregnated with salt as the main stream. Large crusts of salt lay at the water's edge. Proceeding on we came to the Shining Mountains, and a high hill evidently based upon salt. It stands near the salt branch, the banks of which were composed of salt rocks, from which the men broke off large pieces with their tomahawks. Here, and in the Salt river was enough of this valuable mineral to supply the world for an indefinite period. The Shining Mountains lay south of us about four miles and had been visible for several days. We visited them and found one of the greatest curiosities in our country. I have never seen them nor the salt plains in which they stand put down on any map or described by any white man. All of our travellers in this region appear to have passed to the north or south of them, as I have never seen or heard of a description of them, except by the Indians, who come here regularly and in great force, for salt. The mountains stand separate from each other, are about three hundred feet in height, and are quite flat on the summit. They are composed, in part, of a shining semi-transparent rock, which reflects the rays of the sun to a great distance. It is soft, being easily cut with a knife, and the hand is visible through thin pieces of it when held in the sun light. They extend about thirty miles on the left of Salt river in a north-west and south-east direction, are all of an equal height, containing an area on the top of from ten rods to a hundred acres, and are entirely destitute of timber. The tops of most of them were inaccessible. With great difficulty we ascended one of about ten acres in extent, from which we saw along the tops of the others, they all being on the same plane. We found the short thin grass of the prairie below, but no shrub except the prickly pear. The ground was covered with immense quantities of buffalo manure, when left there it would be vain to conjecture. The substance from the ground was clay for upwards of two hundred feet, then came the rock from ten to twenty feet thick, projecting over the earth, and the soil above was about ten feet in depth. The rock is fast crumbling away by the action of water, which seems to dissolve it, as we found very few fragments at the foot of the mountains and none of any considerable size. The whole country was evidently at one time, on a level with these singular elevations.

We continued our course up the bank of the same branch of Salt river by which we had come. Its water was now, after leaving the salt plains, fresh and wholesome, and we travelled along its bank two days, when finding it took us too much to the north, we left it and bore to the southwest. This was the sixth day after reaching the Salt Fork, and seventeen after parting with Capt. Prior and the Osages. We killed seven buffalo after leaving the Shining Mountains, and dried the meat. The carcasses of the buffaloes attracting the buzzards with some old shoes and other small articles left on the ground by the men, served to discover us to a war party of Camanches who were now on

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

our trail. After leaving the Salt Branch we travelled till near night without finding wood or water, and then bore again to the north-west till we struck the Branch. We cooked our meat with fuel of buffalo manure which we gathered for the purpose. Towards morning we were all alarmed by the barking of our dogs, followed by a clapping noise and the sound of footsteps. We slept no more on that night, and in the morning saw upwards of a hundred Indians at a short distance coming with the design of intercepting our horses, which were some distance from the camp. One horse was pierced by a lance. I exhibited the flag, which diverted their course, and they came among us in a very hostile manner, seizing whatever they could lay their hands on. The interpreter told us they were a war party and advised me to make peace with them by giving them presents. I did so, distributing about three thousand dollars worth of goods among them. There were two Chiefs in this party, one of whom was friendly and the other, called the one-eyed Chief, seemed determined to take our lives. His party, however, was in a minority and soon after went off. The friendly Chief then came up to me and on account of his interference in our behalf demanded more presents, which I made to him. He told me that if I came to the village I should be well treated and implored me not to go up the Arkansas. I afterwards learned that the one-eyed Chief had left me with the purpose of waylaying us on that river and taking our lives, which was the reason of the friendly Chief's advice. Those who were hostile, and they were the whole of the one-eyed Chief's party, seemed perfectly infuriated against us. They scrutinized our equipments, said we had Osage horses and were spies of that nation, with whom they were then at war. At last we were rid of the presence of these unpleasant visitors with many dismal apprehensions for the future. The friendly Chief left a Mexican Indian, an interpreter, with us as a guide. With him we struck from the south branch of Salt river, for the north Fork of the Canadian, which the Indians told us we should reach in one day's travel. Going in a direction west of south we struck the river on the second day, having suffered dreadfully for want of water. McKnight and I went forward to find water and killed a buffalo. We drank large draughts of the blood of this animal, which I recollect tasted like milk. We found several ponds of water, so tainted with buffalo manure as to cause us to vomit on drinking of it. We missed the party on that night and found them on the next day, all sick from the water they had drunk, and exhausted by previous fatigue and thirst. The horses were nearly worn out by the same causes. We travelled along the North Fork of the Canadian for seven or eight days, until we reached its head in a large morass, or swamp, about two miles wide, and five or six long, situate in a valley which gradually narrows and disappears at last in the vast plain to the west. We went up this valley which was now dry, but in the spring is filled with a rapid stream. We saw thousands of buffalo along its course, and found a large pond about an acre in extent, but the water was so spoiled by manure, as to sicken us all. After passing through this valley we bore for the Canadian river towards the south, and on the second day, after intense suffering from thirst, we struck a fine spring of fresh water. This was a rich source of real refreshment and enjoyment. Following the stream made by this spring we reached the Canadian, and travelled up its course for several days. We had encamped for the night on the twenty-first day after meeting the Camanches who had robbed us on the branch of Salt river, when we saw a great number of mounted Indians coming over a rising ground in our front, and at their head the friendly Chief, who advanced with outstretched hands crying towauc, towae, - "good, good." Coming up he embraced me in Indian custom, and requested me to go with him to his village. Here an Indian seized a brass kettle and rode off with it. This act alarmed me, and I asked the

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

Chief if he could protect my property if I went with him. He said he could not, and I declined his invitation for that night, and requested him to leave a body of trusty Indians, to defend me till morning. He did so, and we were not molested that night. In the morning we marched with our guard from the left bank of the river, where we had encamped, to the right bank, and in two miles above we found the whole village of the Indians, numbering a thousand lodges, situated in the bottom near the base of a large mound. We were met by one of the principal Chiefs, whose looks were to me ominous of evil. He was a little vicious looking old man and eyed me most maliciously. We were taken close to the foot of the mound near this Chief's lodge, and there we encamped, having piled up my goods and covered them with skins. The Indians then demanded presents and about a thousand chiefs and warriors surrounded us. I laid out for them tobacco, powder, lead, vermilion, calico, and other articles, amounting to about \$1,000 in value. This did not satisfy them, and they began to break open my bales of cloth and divide my finest woolens designed for the Spanish market, among them. After losing about \$1000 more in this way, I induced them to desist from further robbery. The principal chief named Big Star, now appeared and said they had enough. They divided the spoil among two or three thousand, of whom all got some. They tore up the cloth into garments for the middle and blankets. They tied the silk handkerchiefs to their hair as ornaments, which streamed in the wind. This robbery over, I smoked with them and prepared to go on my journey. This they forbade and we were compelled to stay over that day. We kept a strong guard through the night on our goods and horses. On the next morning they pretended that another party had arrived who required presents. This information was brought by a one-eyed Spaniard, who acted as interpreter and had got from me as a present, a whole suit of cloth and a large supply of ammunition. He was the instigator of this new demand. The Indians began to gather around us, and break open and drag about the goods. The Chiefs stood off, taking no part. I then made them another set of presents, worth, probably, a thousand dollars more. We now hoped to be allowed to pass on, and requested leave to go, but they refused it; and the friendly chief advised us to stay. I had seen many savages, but none so suspicious and little as these. They seemed to regard us as spies in their country. We staid with them the second day and night without any further robbery than that I have mentioned. On the third day of my stay, the one-eyed Chief came into the village from the Arkansas, where he had been, with a hundred men, awaiting us with murderous designs. On his coming in, the interpreter, Maesaw, ran to me, saying we should certainly be killed, and the woman and children ran from their lodges like chickens before a hawk. I had made the Big Star Chief my friend by presenting him with a splendid sword. He now came up and took me into the little old Chiefs lodge, saying I would be shot if I remained out. Our time seemed nearly come. In the distance we saw the one-eyed with his troop approaching, all painted black and armed with guns, bows and arrows and lances. We were eleven against a hundred at least, perhaps thousands. The Big Star sent a messenger to my enemy and asked him what would satisfy him in lieu of our lives. He replied that he must have for each of his men as much cloth as his outstretched arms would once measure; an equal quantity of calico; powder, lead, vermilion, knives, beads, looking glasses, &c., and for himself the sword which he had seen on the south branch of Salt river. I sent him word that I had not the vermilion, knives, beads and looking glasses, nor the sword, which I had presented to the Big Star. He said the story about the sword was a lie, that I had given it to Big Star to prevent him from getting it, and that he would have it or my scalp, and as to the other articles he would take cloth instead of them. The Big Star

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

here sent to his lodge for the sword, and taking it in his hand, he pressed its side to his heart and then handed it to me, saying, "take it and send it to the one-eyed Chief. You have no other way of saving your life and the lives of your people." I did as he advised, and measured off about five hundred yards of cloth and calicoe, of which the former cost me seven dollars per yard in Baltimore, and sent them to my deadly enemy. This appeared to pacify him and again I proposed to go on my way. To this they again objected, saying that the whole village would go down the river in the morning, and we should then be permitted to part from them and continue our course up the river as before meeting with them. We had the horses brought up, and prepared, that evening, for an early start in the morning. One half kept guard while the rest of our party endeavored to sleep. But there was no rest for any of us on that most dismal night. This was the third sleepless night which we had passed with these ferocious savages, and we were nearly worn down by fatigue, anxiety and watching. Before day-light a party of boys ascended the mound in our rear, and from the top stoned our company until they were dislodged and driven down by the exertions of the friendly Chief. Uncertain of our fate and nearly exhausted, we awaited in sullen patience, the issue of events. The sun as he rose seemed to wear an aspect of gloom, and every thing portended evil to our little band. Six of my horses had been taken in the night, and I ordered my men out to find and bring them back. The friendly Chief now came to me with great concern and dejection in his countenance, and begged of me not to leave my station or allow the men to go out.

"Keep together," said he, "or you will be killed. The men that go out will be murdered. Don't try to get back your horses." I saw that the whole army were preparing to decamp, and pulling down their lodges. Sometime after sunrise, I perceived about fifty of the Chiefs and older Indians going up unto the mound above us, in our rear, followed by a multitude of young warriors and boys. An old man turned and drove them back: the two friendly Chiefs did not go up. Arrived at the top, this company formed the circle, sat down and smoked. Then one of their number commenced what seemed to us, from his gestures, to be a violent harangue, designed to inflame their passions. I told my company that this council would decide our fate. They asked me how I knew this. If they come down, said I, friendly, we shall have nothing to fear; but if sulky, and out of humor, we have nothing to hope. Put your guns in good order, and be prepared for the worst. We must sell our lives as dearly as possible. In this sentiment they all agreed with me, and we prepared to meet our fate, whatever it should be, like men. During this time, the lodges, with the women and children, were fast disappearing, and the men assembling before us on horseback and afoot, armed with guns, bows, and lances. The council on the hill, after an hour's consultation, descended, and we soon learned that our deaths were determined upon. Those Indians who before were sociable, were now distant and sulky. When spoken to by any of us they made no answer.

The friendly Chief and Big Star, who had taken no part in the council, now came and shook hands, and bade us farewell. I besought them to stay with us; shaking their heads sorrowfully, they went away. The press in front now greatly increased. Nearly two thousand warriors stood before and around us, with the evident intention of making an attack, and appeared to be waiting the signal for the onslaught. We stood in a circle with our backs to the goods and saddles heaped up above all our heads; and with our rifles raised to our breasts, and our fingers on the triggers. We were also armed with knives and tomahawks. Old Jemmy Wilson seized an axe, having no gun, and swore he would hew his way as far as he could. Thus we stood eleven against two thousand, with death staring us in the face. All seemed unwilling to commence the bloody work. The

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

suspense was awful. I stood between John McKnight and my brother, and noticed their countenances. McKnight's face was white, and his chin and lips were quivering. My brother, as brave a man as ever lived, looked desperate and determined. Not a man but seemed bent to die in arms and fighting, and none were overcome by fear.

Thus we stood near half an hour in deathly silence; at length the White Bear warrior, a Chief dressed in a whole Bear skin, with the claws hanging over his hands, rode swiftly towards us, through the crowd, with his lance in his hand, as if to annihilate us at once; but seeing the dangerous position he was in, he stopped short about five paces from us, and glared upon me with the most deadly malignity. Finding he could not reach me with his lance, he took out his pistol, examined the priming, tossed out the powder from the pan, re-primed, and again fixed his devilish eyes full upon me. But he saw that I could fire first, and he kept his pistol down. Here McKnight first broke the dreadful silence, saying, "let us commence James, you will be the first one killed — this suspense is worse than death; the black Chief is my mark." I said no, McKnight, let us forbear as long as they do; for us to begin is folly in the extreme; but as soon as a gun is fired, we must fire, rush in and sell our lives as dearly as possible. Here Kirker walked out with his gun over his head, gave it up, and passed into the crowd unmolested. In a minute afterwards we heard a cry from a distance, approaching nearer and nearer, of Tabbaho, Tabbaho.\* (\*White men.) This I supposed was on account of Kirker's surrender. The cry increased and spread throughout the crowd. Looking towards the south-west, whence the cry arose, while the White Bear's attention was withdrawn, I saw six horsemen riding at full speed, and as they came nearer, we heard the words in Spanish, save them! save them! In a moment a Spanish officer rushed into our arms, exclaiming, thank God we are in time; you are all safe and unhurt. He said that he had heard of our danger by accident, that morning, and ridden twenty miles to save us. All the circumstances of our rescue we learned the next day. With joyous and thankful hearts for our escape from a death that, five minutes before seemed inevitable, we prepared to depart with our preservers. I had bidden farewell, as I thought forever, to my wife, child, home and all its endearments, and the thoughts of them were now overpowering to me. The Spaniards asked the Indians why they were going to kill us. They answered, that the Spanish governor at Santa Fe had commanded them not to let any American pass, but that we were determined to go in spite of them, so that to stop us and keep their promise to the Spanish Governor, they thought they were compelled to take our lives. The Spaniards told them that this was under the government of Spain, but that they were now independent and free, and brothers to the Americans. This was the first news I had heard of the Mexican revolution.

The two friendly Chiefs now returned, and I showed the Spaniards our passport. The Indians brought in and delivered up four of my horses. The whole village, soon after the arrival of the Spaniards, went down the river; and our party, except Maesaw and myself, with two of the Spanish officers, started forward towards the Spanish camp, about twenty miles distant. We four remained behind to recover the two missing horses, and then followed our companions. We were lost, at dark, among the cliffs bordering the river, where we made fire for cooking our suppers, and encamped for the night. Early the next morning we reached the Spanish encampment, where our party was awaiting us. As we approached the camp there came out to meet us, a tall Indian of about seventy years of age, dressed in the complete regimentals of an American Colonel, with blue coat, red sash, white pantaloons, epaulets and sword. He advanced with an erect, military air

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

and saluted us with great dignity and address. His eyes were still bright and piercing, undimmed in the least by age, and he had a high, noble forehead and Roman nose. His whole port and air struck me forcibly as those of a real commander and a hero. After saluting us he handed me a paper which I read as follows, as nearly as I now remember.

This is to certify that Cordaro, a Chief of the Camanches has visited the Fort at Nacotoche with fifteen of his tribe, that he remained here two weeks, and during the whole time behaved very well. It is my request that all Americans who meet him or any of his tribe, should treat him and them with great respect and kindness, as they are true friends of the United States.

JOHN JAMESON

U. S. Indian Agent at Nacotoche on Red River

This Chief, Cordaro, was the cause of our being then in existence. He told us he had promised his "great friend at Nacotoche" that he would protect all Americans that came through his country, and he very earnestly requested us to inform his "great friend" that he had been as good as his word. On entering the encampment, we found about fifty Spaniards and three hundred Camanche warriors, who had just returned from an expedition against the Navahoes, a tribe inhabiting the country west of Santa Fe and the mountains, and who were then at war with the Spaniards. On their return from this campaign this party had come from Santa Fe with their Camanche allies into their country to hunt for buffalo and had encamped the night before our rescue from the Camanches, on the spot where we now found them. On the next morning a party of Indians belong to this band were hunting their horses in the prairie and met another party from the army below, who had us in custody, engaged in the same manner, who informed them that their countrymen had taken a company of Americans prisoners, and were going to kill them all that morning, and divide their goods among the army; that the whole village was breaking up and preparing to go down the Canadian, and that the pulling down of the last lodge was to be the signal for our massacre. On hearing this the first party hastened back to their camp with the news which brought out most of the young warriors to come down for a share of the plunder of my goods. The Chief Cordaro went instantly, on hearing this account, to the Spanish officers, told them that a company of Americans were to be murdered that morning by his countrymen, mentioned the signal for the attack, said he was too old to ride fast, or he would go himself to the rescue, and adjured them to mount and ride without sparing the horses, as not a moment was to be lost. Six of them mounted and rode as Cordaro had told them to do, and we saw their foaming steeds and heard the cry of Tabbaho — (white men) — just in time to save us from extermination. A minute after would probably have been too late. Our determined attitude averted the blow and prolonged our time to the last moment, when our deliverers appeared; but without them, the next instant would have seen a volley of shot and arrows lay most of us low and the lance and tomahawk would have soon completed the work on us all.

Cordaro, the noble and true hearted savage, appeared to rejoice at our escape as much as we. He desired particularly that his "great friend" at Nacotoche should hear of his agency in saving us, and I had to promise him repeatedly that I would surely inform Col. Jameson when I saw him, of the manner in which his friend, Cordaro, had performed his promise to him. If John Jameson be still alive and this page meet his eye, I shall have cause to felicitate myself in having at last kept my word to my Camanche preserver.

We spent that day with Cordaro and the Spaniards, and held a council or "talk" with them. Corda-

---

ro made a speech dissuading me from going to Santa Fe on account of the treatment which the Americans had always received from the Government there. "They will imprison you," said he to me, "as they have imprisoned all Americans that ever went to Santa Fe. You will meet the fate of all your countrymen before you." The Spanish officers, who were all present at this harangue, smiled and said there was no danger of any mis-treatment to us, now that they had an independent government. Cordaro shook his head incredulously, and told them that we were under his protection; that he would himself go to Sante Fe after we had arrived there, and if he found us imprisoned, he would immediately go to war with them. "The Americans are my friends," said he, "and I will not permit them to be hurt. I have promised my great friend of Nacotoche to protect all Americans that come through my country." The Spaniards promised to treat us well, but our protector seemed to be very suspicious of them and evidently gave little faith to their promises. We found at this camp an excellent Spanish interpreter, who spoke the Camanche language as well as his own. By him I was informed that the Indians took me for the Frenchman Vaugan, whom we had seen in the country of the Quawpaws, a tribe of kin to the Osages, and who, while hunting on the Canadian in the spring before with a party of thirty French and Indians of the former tribe, had been attacked by the Camanches, who were defeated and driven back with considerable loss. Vaugan, like myself, was a tall man, and the Indians here and those we had met before, considered me the commander in this battle. The one-eyed interpreter had concealed this fact from me, and we now had some difficulty in satisfying the Indians that we were not the same party who with Vaugan, were in alliance with their enemies, the Osages. The charge was frequently renewed, but we at last succeeded in repelling it and quieting their suspicions. On the next day, the third day after meeting with the Spanish officers, we parted with Cordero who followed his countrymen down the Canadian, with the Spanish force in his company. Two of the Spanish officers remained to accompany us to Santa Fe. They were all very gentlemanly and liberal minded men. One Spanish citizen of Santa Fe had hired to return with me as a guide. We once more took up our march along the Canadian and over the immense plains by the trail of the Spaniards we had just parted with. The whole country here is one immense prairie. I observed many huge granite rocks standing like stone buildings, some of them, one hundred feet high. The earth seemed to have been washed from around them and the prairies below to have been formed by deposits of earth and crumbled rocks from these and similar elevations. Some were covered with earth and cedar trees, but most of them were entirely bare. In three days after leaving Cordaro we came in sight of the Rocky Mountains, whose three principal peaks, covered with perpetual snow were glittering in the sun. The most northern and highest of these peaks is set down on the latest map I have seen as "James' Peak or Pike's." Gen. Pike endeavored to reach its top, but without success. After my return I made a rough map with a pen, of this country, for the use of Senator Kane of Illinois, and in the next map published by Government, I saw my name affixed to this peak, as I supposed, by the agency of Mr. Kane. The peak bore no name known to our company when we saw it and I gave it none then or afterwards. In two days more we came to an old Spanish Fort, dismantled and deserted, which had been built many years before in expectation of an invasion from the United States. This was about one hundred miles from Sante Fe. We soon encountered large herds of sheep, attended by Shepherds, and on the second day after passing the Fort, came to a small town in a narrow ravine on the Peccas river and at the foot of a high cliff. Here I became acquainted with an old Spaniard, named Ortiso, who in his youth had been cap-

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

tured by the Pawnees and sold to Chouteau of St. Louis, where he had learned French and whence he returned home by the way of New Orleans, St. Antoine in Texas and the interior of Mexico. He informed me more particularly than I had yet heard, of the Mexican Revolution, and foretold that Iturbide would be elected President at the ensuing election. We proceeded up the bank of the Peccas by a narrow road, impassable for waggons. One of the horses with all my powder and some of the most valuable goods, here fell down a precipice into a beaver dam in the river. The horse was uninjured but the goods were nearly all spoiled. The next town on our route was San Miguel, fifteen miles from the last, an old Spanish town of about a hundred houses, a large church, and two miserably constructed flour mills. Here was the best water-power for mills, and the country in the vicinity abounded in the finest pine timber I had ever seen. But no attempt is made to improve the immense advantages which nature offers. Every thing that the inhabitants were connected with seemed going to decay. We left San Miguel on the following morning with the Alcalde and a company of Spaniards bound for Sante Fe. We stopped at night at the ancient Indian village of Peccas about fifteen miles from San Miguel. I slept in the Fort, which encloses two or three acres in an oblong, the sides of which are bounded by brick houses three stories high, and without any entrances in front. The window frames were five feet long and three-fourths of a foot in width, being made thus narrow to prevent all ingress through them. The lights were made of izing-glass and each story was supplied with similar windows. A balcony surmounted the first and second stories and moveable ladders were used in ascending to them on the front. We entered the Fort by a gate which led into a large square. On the roofs, which like those of all the houses in Mexico are flat, were large heaps of stones for annoying an enemy. I noticed that the timbers which extended out from the walls about six feet and supported the balconies, were all hewn with stone hatchets. The floors were of brick, laid on poles, bark and mortar. The brick was burned in the sun and made much larger than ours, being about two feet by one. The walls were covered with plaster made of lime and izing-glass. I was informed by the Spaniards and Indians that this town and Fort are of unknown antiquity, and stood there in considerable splendor in the time of the Conquerors. The climate being dry and equable and the wood in the buildings the best of pine and cedar, the towns here suffer but little by natural decay. The Indians have lost all tradition of the settlement of the town of Peccas. It stood a remarkable proof of the advance made by them in the arts of civilization before the Spaniards came among them. All the houses are well built and showed marks of comfort and refinement. The inhabitants, who were all Indians, treated us with great kindness and hospitality. In the evening I employed an Indian to take my horses to pasture, and in the morning when he brought them up I asked him what I should pay him. He asked for powder and I was about to give him some, when the Spanish officer forbade me, saying it was against the law to supply the Indians with ammunition. Arms are kept out of their hands by their masters who prohibit all trade in those articles with any of the tribes around them. On the next day in the evening, we came in sight of Santa Fe, which presented a fine appearance in the distance. It is beautifully situated on a plain of dry and rolling ground, at the foot of a high mountain, and a small stream which rises in the mountain to the west runs directly through the city. It contained a population at this time of six thousand. The houses were all white-washed outside and in, and presented a very neat and pleasing sight to the eye of the traveller. They are all flat on the roof and most of them one story in height. There are five very splendid churches, all Roman Catholic, which are embellished with pictures, and ornaments of gold and silver in the most

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

costly style. The chalices were of pure gold and candlesticks of silver. The principal buildings, including the Fort, are built around the public square in the middle of the city. The Fort, which occupies the whole side of this square, encloses about ten acres, and is built on the plan of the Peccas Fort above described. There is an outer wall about eight feet in height, enclosing the buildings, which like those at Peccas bound the inner square. The whole was falling to decay and but few soldiers were stationed in it. The farms are without fences or walls, and the cattle, hogs, &c., have to be confined during the raising and harvesting of crops. They raise onions, peas, beans, corn, wheat and red pepper — the last a principal ingredient in Spanish food. Potatoes and turnips were unknown. I saw peach trees, but none of apples, cherries, or pears. The gardens were enclosed.

The country is entirely destitute of rains except in the month of June and July, when the rivers are raised to a great height. A continual drought prevails throughout all the rest of the year, not even relieved by dews. Consequently the ground has to be irrigated by means of the many streams which rise in the mountains and flow into the Rio Grande; and for this purpose canals are cut through every farm. Land that can be watered is of immense value, while that which is not near the streams is worthless. While in Santa Fe, a Spaniard took me sixteen miles south, to show me his farm of 15 acres, for which he had just paid \$100 per acre, and which lay conveniently to water. Hogs and poultry are scarce, while sheep, goats, and cattle are very abundant.

Chapter IV

Interview with Governor Malgaris — Commencement of business — Departure of McKnight — Arrival of Cordaro — His Speech — His visit to Nacotoche — His death and character — Hugh Glenn — Celebration of Mexican Independence — Gambling and dissipation — Mexican Indians — Domestic manufactures — Visit of the Utahs — Their Horses — Speech of the Chief Lechat — War with the Navahoes — Cowardly murder of their Chiefs by the Spaniards — Militia of Santa Fe — Attempt to go to Senoria — Stopped by the Governor — Interview with the Adjutant — Selling out — Hugh Glenn again — How the Governor paid me a Debt — Spanish Justice — Departure for home.

I ENTERED SANTE FE on the first day of December, A. D. 1821, and immediately went with Ortise as interpreter, to the Governor's palatia or house, to whom I made known my object in visiting his country, and showed my passport. He remarked on reading it, that they were entirely independent of Spain, that the new government had not laid any duties on imports and gave me permission to vend my goods. I rented a house, and on the next day commenced business. In about two weeks I took in \$200, which I advanced to John McKnight for the expenses of his journey to Durango, about sixteen hundred miles south, where his brother Robert was living after his enlargement from prison. They both returned in the month of April following. Soon after McKnight's departure, I heard of Hugh Glenn's arrival at Loas, sixty miles north of Santa Fe and was soon after favored with a visit from him. He came down to Santa Fe, borrowed \$60 from me, and at the end of a week returned to Loas.

About six weeks after I reached Santa Fe my true friend and protector, Cordaro, came in according to promise, with thirty of his tribe, to ascertain if we were at liberty. He was dressed in his full regimentals and commanded the respect of the Spanish officials, who behaved towards him with great deference. By his request a council was held, which convened in the Spanish Council House on the public square, and was attended by the Spanish officers, magistrates, and principal citizens

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

of Santa Fe. Cordaro made the speech for which he had caused the council to be held. He expressed his pleasure at finding that we and the Spaniards were friends, that he would be pleased to see us always living together like brothers and hoped that the American trade would come to his country as well as to the Spaniards. He complained that we traded with their enemies, the Osages, and furnished them with powder, lead, and guns, but had no intercourse with the Camanches. He hoped the Government of the United States would interfere and stop the depredations of the Osages upon his nation. "They steal our horses and murder our people," said he, "and the Americans sell them the arms and amunition which they use in war upon us. We want your trade, and if you will come among us we will not cheat nor rob you. I have had a talk with my nation and told them they had done a great wrong in treating you as they did, and they promised never to do so again. They say they will pay you in horses and mules for the goods they took from you on the Canadian, if you will only come once more into our country. Come with your goods among us; you shall be well treated. I pledge you my word, the word of Cordaro, that you shall not be hurt nor your goods taken from you without full payment. Each of my nation promises to give you a horse if you will come and trade with us once more, and though poor, and though I got none of your goods, yet will I give you two of the best horses in the nation. Come to our country once more and you shall find friends among the Camanches. Come and you shall be safe. Cordaro says it." The old warrior spoke like an orator and looked like a statesman. He appeared conscious of the vast superiority of the whites, or rather of the Americans, to his own race and desired the elevation of his countrymen by adopting some of our improvements and customs. For the Spaniards he entertained a strong aversion and dislike; not at all mingled with fear, however, for he spoke to them always as an equal or superior. They refused to trade with his nation in arms and had nothing besides which his people wanted. Their remarkable disposition to treachery appeared to be perfectly known to the old Chieftain.

After the council, Cordaro desired me to write a letter for him to his great friend Col. Jameson of Nacatoche, and make known to him the manner in which he had remembered his promise to protect the Americans in his country, by saving me and my company from death at the hands of his countrymen. I wrote the letter and delivered it to him. On the next day we parted, and I never saw him again. In my trip to the Camanche country in 1824 I was informed by the Indians that he went to Nacatoche with my letter to Col. Jameson, who gave him three horses, loaded with presents. By this means he returned to his country a rich man, and soon after became sick and died. He was a sagacious, right-hearted patriot and a brave warrior, who in different circumstances might have accomplished the destiny of a hero and savior of his country.

I continued my trading, though without much success on account of the scarcity of money. I had seen enough of Mexican society to be thoroughly disgusted with it. I had not supposed it possible for any society to be as profligate and vicious as I found all ranks of that in Santa Fe. The Indians are much superior to their Spanish masters in all the qualities of a useful and meritorious population.

On the fifth of February a celebration took place of Mexican Independence. A few days before this appointed time, a meeting of the Spanish officers and principal citizens was held at the house of the Alcalde to make arrangements for the celebration. They sent for me, asked what was the custom in my country on such occasions, and requested my advice in the matter. I advised them to raise a liberty pole, hoist a flag, and fire a salute for each Province. They counted up the Prov-

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

inces or States, and discovered that Mexico contained twenty-one, including Texas. They said they knew nothing of the rule of proceeding in such cases and desired me to superintend the work. I sent out men to the neighboring mountains for the tallest pine that could be found. They returned with one thirty feet long. I sent them out again, and they brought in another much longer than the first. I spliced these together, prepared a flag rope, and raised the whole, as a liberty pole, about seventy feet high. There was now great perplexity for a national emblem and motto for the flag, none having yet been devised, and those of Spain being out of the question. I recommended the Eagle, but they at last agreed upon two clasped hands in sign of brotherhood and amity with all nations. By day light on the morning of the fifth I was aroused to direct the raising of the flag. I arose and went to the square, where I found about a dozen men with the Governor, John Facundo Malgaris, all in a quandary, not knowing what to do. I informed the Governor that all was ready for raising the flag, which honor belonged to him. "Oh do it yourself," said he, "you understand such things." So, I raised the first flag in the free and independent State of New Mexico. As the flag went up, the cannon fired and men and women from all quarters of the city came running, some half dressed, to the public square, which was soon filled with the population of this city. The people of the surrounding country also came in, and for five days the square was covered with Spaniards and Indians from every part of the province. During this whole time the city exhibited a scene of universal carousing and revelry. All classes abandoned themselves to the most reckless dissipation and profligacy. No Italian carnival ever exceeded this celebration in thoughtlessness, vice and licentiousness of every description. Men, women and children crowded every part of the city, and the carousal was kept up equally by night and day. There seemed to be no time for sleep. Tables for gambling surrounded the square and continually occupied the attention of crowds. Dice and Faro-banks were all the time in constant play. I never saw any people so infatuated with the passion for gaming. Women of rank were seen betting at the Faro-banks and dice tables. They frequently lost all their money; then followed the jewelry from their fingers, arms and ears: then the ribose or sash edged with gold, which they wear over the shoulders, was staked and lost, when the fair gamesters would go to their homes for money to redeem the last pledge and if possible, continue the play. Men and women on all sides of me, were thus engaged, and were all equally absorbed in the fluctuating fortunes of these games. The Demon of chance and of avarice seemed to possess them all, to the loss of what little reason nature had originally made theirs. One universal jubilee, like bedlam broke loose, reigned in Santa Fe for five days and nights. Freedom without restraint or license, was the order of the day; and thus did these rejoicing republicans continue the celebration of their Independence, till nature was too much exhausted to support the dissipation any longer. The crowds then dispersed to their homes with all the punishments of excess, with which pleasure visits her votaries. I saw enough during this five days revelry to convince me that the republicans of New Mexico were unfit to govern themselves or any body else. The Indians acted with more moderation and reason in their rejoicing than the Spaniards. On the second day of the celebration a large company of men and women from San Felipe, an Indian town forty miles south of Santa Fe, marched into the city, displaying the best formed persons I had yet seen in the country. The men were a head taller than the Spaniards around them, and their women were extremely beautiful, with fine figure and a graceful, elegant carriage. They were all tastefully dressed in cotton cloth of their own weaving and decorated with coral beads of a brilliant red color. Many wore rich pearl necklaces and jewelry of great value. I was told by Ortise that the ornaments of

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

stone, silver and gold which some of these Indian ladies wore, were worth five hundred dollars. The red coral was worth one hundred dollars per pound. Many of the Indians, as the reader may suppose from this description of their women, are very wealthy. The men were also elegantly dressed in fine cloth, manufactured by their own wives and daughters. The Americans with their Tariff and "protection of home industry," might learn a lesson from these wise and industrious Indians. I heard nothing among them of a Tariff to protect their "domestic manufactures." They worked and produced and protection came of itself without the curse of government interference. This Indian company danced very gracefully upon the public square to the sound of a drum and the singing of the older members of their band. In this exercise they displayed great skill and dexterity. When intermingled in apparently hopeless confusion in a very complicated figure, so that the dance seemed on the point of breaking up, suddenly at the tap of the drum, each found his partner and each couple their place, without the least disorder and in admirable harmony. About the same time the Peccas Indians came into the city, dressed in skins of bulls and bears. At a distance their disguise was quite successful and they looked like the animals which they counterfeited so well that the people fled frightened at their appearance, in great confusion from the square. I have spoken before, in favorable terms of the Mexican Indians. They are a nobler race of people than their masters the descendants of the conquerors; more courageous and more generous; more faithful to their word and more ingenious and intellectual than the Spaniards. The men are generally six feet in stature, well formed and of an open, frank, and manly deportment. Their women are very fascinating, and far superior in virtue, as in beauty, to the greater number of the Spanish females. I was informed that all the tribes, the Utahs, the Navahoes, and others inhabiting the country west of the Mountains to the Gulf of California, like those in Mexico, lived in comfortable houses, raised wheat and corn, and had good mills for grinding their grain. I saw many specimens of their skills in the useful arts, and brought home with me some blankets and counterpanes, of Indian manufacture, of exquisite workmanship, which I have used in my family for twenty-five years. They are, generally far in advance of the Spaniards around them, in all the arts of civilized life as well as in the virtues that give value to national character.

In the latter part of February I received a deputation of fifty Indians from the Utah tribe on the west side of the mountains. They came riding into the city, and paraded on the public square, all well mounted on the most elegant horses I had ever seen. The animals were of a very superior breed, with their slender tapering legs and short, fine hair, like our best blooded racers. They were of almost every color, some spotted and striped as if painted for ornament. The Indians alighted at the Council House and sent a request for me to visit them. On arriving I found them all awaiting me in the Council House, with a company of Spanish officers and gentlemen led hither by curiosity. On entering I was greeted by the Chief and his companions, who shook hands with me. The Chief, whose name was Lechat, was a young man of about thirty and of a right Princely port and bearing. He told me in the Spanish language, which he spoke fluently, that he had come expressly to see me and have a talk with me. "You are Americans, we are told, and you have come from your country afar off to trade with the Spaniards. We want your trade. Come to our country with your goods. Come and trade with the Utahs. We have horses, mules and sheep, more than we want. We heard that you wanted beaver skins. The beavers in our country are eating up our corn. All our rivers are full of them. Their dams back up the water in the rivers all along their course from the mountains to the Big water. Come over among us and you shall have as many beaver skins as you

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

want.” Turning round and pointing to the Spaniards, in most contemptuous manner and with a scornful look he said, “What can you get from these? They have nothing to trade with you. They have nothing but a few poor horses and mules, a little puncha, and a little tola (tobacco and corn meal porridge ) not fit for any body to use. They are poor — too poor for you to trade with. Come among the Utahs if you wish to trade with profit. Look at our horses here. Have the Spaniards any such horses? No, they are too poor. Such as these we have in our country by the thousand, and also cattle, sheep and mules. These Spaniards,” said he, turning and pointing his finger at them in a style of contempt which John Randolph would have envied, “what are they? What have they? They wont even give us two loads of powder and lead for a beaver skin, and for a good reason they have not as much as they want themselves. They have nothing that you want. We have every thing that they have, and many things that they have not.” Here a Spaniard cried out: “You have no money.” Like a true stump orator the Utah replied, “and you have very little. You are depicca.” In other words you are poor miserable devils and we are the true capitalists of the country. With this and much more of the same purport, he concluded his harangue, which was delivered in the most independent and lordly manner possible. He looked like a King upbraiding his subjects for being poor, when they might be rich, and his whole conduct seemed to me like bearding a wild beast in his den. The “talk” being had, Lechat produced the calama or pipe, and we smoked together in the manner of the Indians. I sent to my store and procured six plugs of tobacco and some handkerchiefs, which I presented to him and his company, telling them when they smoked the tobacco with their Chiefs to remember the Americans, and treat all who visited their country from mine as they would their own brothers. The council now broke up and the Chief, reiterating his invitations to me to visit his country, mounted his noble steed, and with his company rode out of the city, singing and displaying the handkerchiefs I had presented them, from the ends of their lances as standards. They departed without the least show of respect for the Spaniards, but rather with a strong demonstration on the part of Lechat of contempt for them. I noticed them at the council enquiring of this Chief with considerable interest what the Navahoes were doing, and whether they were preparing to attack the Spanish settlements. They had been at war with this tribe for several years, and seemed to fear that the Utahs might take part in it as allies of the Navahoes, for which reason they conducted themselves with the utmost respect and forbearance towards Lechat and his band. What was the immediate cause of this war, I did not learn, but I saw and heard enough of it to enlist my sympathies with the Navahoes. A few days after the visit of the Utahs, I saw a solitary Indian of that tribe, crossing the public square in the direction of the Governor’s house, and driving before him a fat heifer. He went up to the Governor’s door, to whom he sent word that he had a present for him, and was admitted. What followed I learned from Ortise, an old Alcalde, with whom I boarded during the time of my stay in Santa Fe. As he entered the room of the Governor, the Navaho prostrated himself on his face. The Governor stepped towards him and with a spurning motion of the foot, which touched the Indians head, asked him who he was and what he wanted. The poor Indian arose on his knees and said he was a Navaho, and had come to implore peace for his nation. “We are tired of war and we want peace,” said he; “our crops are destroyed, our women and children are starving. Oh! give us peace!” The Governor asked the interpreter what he said, and being told, the christian replied — “Tell him I do not want peace, I want war.” With this answer the Indian was dismissed, the Governor keeping his heifer. The poor fellow came to my store, announced his name and nation, and requested me

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

to go among his tribe and trade. He said the rivers were full of beaver and beaver dams — that they had horses and mules which they would exchange for powder, lead and tobacco. The Indians are destitute of amunition and guns, and Spanish laws prohibit all trade with them in these articles. I gave him several plugs of tobacco, a knife and other small articles, and told him when he went back to his country to smoke my tobacco with his Chiefs and tell them if any Americans came to their country to treat them like brothers. He went off with a guard as far as the outposts on the route to his country. But I have no doubt he was murdered by the Spaniards long before reaching his home. About a week after this, sixteen Navaho Chiefs came into the town of St. James, sixty miles below Santa Fe on the Del Norte, and requested the commander of the Fort to allow them to pass on to the Governor at Santa Fe, saying that they had come to make peace. The commander invited them into the Fort, smoked with them and made a show of friendship. He had placed a Spaniard on each side of every Indian as they sat and smoked in a circle, and at a signal each Indian was seized by his two Spanish companions and held fast while others despatched them by stabbing each one to the heart. A Spaniard who figured in this butchery showed me his knife which he said had killed eight of them. Their dead bodies were thrown over the wall of the Fort and covered with a little earth in a gully. A few days afterwards five more of the same nation appeared on the bank of the river opposite the town, and enquired for their countrymen. The Spaniards told them they had gone on to Sante Fe, invited them to come over the river, and said they should be well treated. They crossed and were murdered in the same manner as the others. There again appeared three Indians on the opposite bank, enquiring for their Chiefs. They were decoyed across, taken into the town under the mask of friendship, and also murdered in cold blood. In a few days two more appeared, but could not be induced to cross; when some Spanish horsemen went down the river to intercept them. Perceiving this movement, they fled and no more embassies came in. The next news that came told of a descent made by the Navahoes in great force, on the settlements in the south, in which they killed all of every age and condition, burned and destroyed all they could not take away with them, and drove away the sheep, cattle and horses. They came from the south directly towards Santa Fe, sweeping everything before them, and leaving the land desolate behind them. They recrossed the Del Norte below Santa Fe, and passed to the north, laid bare the country around the town of Toas, and then disappeared with all their booty. While this was going on, Malgaris was getting out the militia, and putting nearly all the inhabitants under arms, preparatory to an expedition. I was requested to go, but I preferred to be a spectator in such a war. The militia of Santa Fe when on parade, beggared all description. Falstaff's company was well equipped and well furnished compared with these troops of Gov. Malgaris! Such a gang of tatterdemallions I never saw before or since. They were of all colors, with all kinds of dresses and every species of arms. Some were bare headed, others bare backed — some had hats without rims or crowns, and some wore coats without skirts; others again wore coats without sleeves. Most of them were armed with bows and arrows. A few had guns that looked as if they had been imported by Cortez, while others had iron hoops fastened to the ends of poles, which passed for lances. The doughty Governor Facunda Malgaris, on foot, in his cloak and chapeau de bras, was reviewing this noble army. He was five feet high, nearly as thick as he was long, and as he waddled from one end of the line to the other I thought of Alexander and Hannibal and Caesar, and how their glories would soon be eclipsed by this hero of Santa Fe. After him followed the Adjutant in his jacket with red cuffs and collar, and with his frog-stick-

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

er, called a sword, at his side. He examined the bows and arrows, lances and other arms of these invincibles. He with the little Governor seemed big with the fate of New Mexico. At last when all was ready the Governor sent them forth to the war and himself went to his dinner. In the mean time where was the enemy — the blood-thirsty Navahoes? They had returned in safety to their own country with all their plunder, and were even then far beyond the reach of Gov. Malgaris' troop of scare crows.

In the beginning of March finding that trade was dull and money very scarce in Santa Fe, I enquired for a better place of business and was advised by Ortise to go to Senora on the Gulf of California, where gold and silver was more abundant than in New Mexico. I requested him to go with me; he declined going himself but procured his brother, whom I hired, to go as guide for \$12, for each mule load. I packed up my goods, and had got ready for the journey when Ortise came in with a gloomy countenance and asked if I had asked permission of the Governor to go to Senora. I said I had not, and he advised me to see him. I went to his house, apprehensive of hostility, and found the dignitary walking with a lordly air up and down his piazza. As I approached he strutted away from me to the opposite end of the gallery without deigning to notice me. I stood and awaited his return, and as he came up, I accosted him politely, and said I could not sell my goods in Santa Fe and had called to obtain his permission to go with them to Senora, where I had understood money was more plenty than in Santa Fe. "You can't go sir," growled his Excellency, and continued his promenade. I followed and asked him why I could not go. He said he had no orders to let me go. I asked him if he had any orders to prevent me. He said no. I then said, you know that I have a passport from my government, approved by the Spanish minister. "Oh we have nothing to do with the Spanish Government." But you have something to do with my Government. I shall start for Senora, and if you arrest or imprison me on my way, my Government shall hear from me. This appeared to agitate the little grandee and set him to thinking for a moment. He paced to and fro a while, stopped short, and asked how I was going. With Don Francisco Ortise, as guide. At this he burst into a loud laugh. "Ho, ho! Don Francisco will go with you, will he? Well Don Thomas, you can go, but I will send a party of soldiers with you to the outposts, and if any Spaniard attempt to go further with you I will have him brought back in irons and thrown into prison. You will have to pass through the country of the Apaches, and you will be robbed, perhaps murdered if you have no Spaniard with you. Now go, Don Thomas, now go — ha, ha, ha." I now turned and left him. Ortise, whom I considered my friend, advised me by no means, to make the attempt to reach Senora without a Spanish guide and I gave up the project. I regarded this, the result of a plot to detain me in Santa Fe till Spring, when they knew I was to return, and would have to sell my goods at any price. I went on the evening of my interview with the Governor, to the house of a sick Lieutenant, where I found the Adjutant and several other officers. They asked, with a sly glance at each other, when I was going to Senora. I am not going. "Why so, we heard you were all ready to start. You have a passport, have you not?" Yes, said I, but the Governor threatens to imprison any Spaniard that attempts to go with me. He has imprisoned all my countrymen that came here before me, and I suppose, if he dared, he would imprison me. Here the sick Lieutenant shook my knee by way of caution, and the Adjutant leaped up exclaiming, "If he dared! What do you mean sir, be careful how you talk;" and put his hand on the butcher knife at his side, called a sword. I had a dirk at my breast, as good a weapon as his, and facing him I repeated, yes, if he dared; but he dares not, nor dare any of you imprison me while I observe your laws. You have

---

---

robbed and imprisoned all my countrymen heretofore, but my Government will now stop this baseness and cruelty to the Americans. If you violate my rights while I have an American passport my Government will avenge my wrongs on your heads. This appeared to cool the Adjutant, who said we were friends and that he would not tell the Governor. Tell him or not as you please said I. I wish for the honor of my country, or rather of my Government, that the name of American citizen were a better protection in a foreign country than it is. Ancient Rome and modern England are examples to us in this respect. A subject of the English monarchy in a foreign country is sure that any flagrant violation of his natural rights will be avenged, if necessary, by the whole military and naval power of his country. An Englishman like an ancient Roman citizen, knows that his Government will look after him and is sure of protection. An American is sure of nothing. His Government may amid the turmoil of electioneering, demand him from his jailors, but it is much more likely to overlook him entirely as beneath its regard. The case of Robert McKnight, who returned in April with John, his brother, from Durango, after an imprisonment of ten years, was a remarkable instance of the delinquency of our Government in this particular. His goods had been confiscated and himself and his companions thrown into prison, where they remained ten years, and during the whole time their own Government was sleeping on their wrongs. No notice whatever was taken of them; and when McKnight returned to his country he was equally unsuccessful in seeking redress. "I will go back to Mexico, said he, swear allegiance to their Government and become a citizen. I have resided the prescribed term of years, and there is a better chance for obtaining justice from the Mexicans, scoundrels as they are, than from my own Government. I will go and recover as a citizen of Mexico what I lost as a citizen of the United States. My own Government refuses to do me justice, and I will renounce it forever. I would not raise a straw in its defence." He accordingly returned to Mexico, where he probably received remuneration for his losses, and where he now lives a citizen of the country.

While in Santa Fe I was a frequent visitor at the house of the parish Priest, a very gentlemanly, intelligent man, where I often found an interesting company assembled. I supped at his house on one occasion with sixteen Spanish gentlemen of education, and some of distinction. The conversation happened to turn on the power and condition of the United States, and particularly on the country west of the Mississippi. They said the country west of this river once belonged to them, and agreed that it would some day return to their possession. They said that Spain had ceded it to Bonaparte without their consent, and that, it of right, belonged to Mexico. They also expressed great dissatisfaction with the line of the Sabine, alleging that it ought to have been and would yet be the Mississippi instead of the former river. I told them that my countrymen were also dissatisfied with the Sabine as the boundary. "Ah exclaimed one, then we shall have little difficulty in changing it; both sides will be agreed." Not so fast, said I, we think the boundary ought to have been the Rio Del Norte. "What! said they, the Del Norte; that would take in Santa Fe." Yes, Seignors, said I, we claim to the Del Norte. "Never, never — you will never get it, and if it ever comes to a trial of power between Mexico and the States, we will have to the Mississippi. You will be compelled to give it to us." I told them to mark my words and said, if ever the boundary is changed you will see it go westward and not to the east.

The Spring was nearly gone and most of my goods remained unsold. Money was very scarce, and I had little prospect of selling them at any price. I offered them at cost, and at last found a purchaser of most of them in a Spaniard named Pino, who paid me one thousand dollars in cash and

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

an equal sum in horses and mules. He borrowed the money of Francisco Chavis, the father of Antonio, who was murdered in the United States by Mason, Brown and McDaniel. The last two were convicted of the murder on the testimony of Mason, and executed in St. Louis in 1844. After this trade with Pino I had still on my hands a large quantity of brown and grey cloths, which were unsaleable in the Spanish market; blue and other colors being preferred. These cloths I sold to Hugh Glenn, who again honored me with a visit in the latter part of May, staid with me two weeks, borrowed forty dollars, in addition to the sixty I had already loaned him, and gave me his note for the money and goods, which (the note) I have held to this day. He wanted the goods to sell to his company who were trapping near Toas, and promised to pay me the money as soon as he reached St. Louis and disposed of his beaver fur. Taking him for a man of honor I treated him as such, to my own loss. I was now ready to depart for home, having disposed or got rid rather of my goods and collected all my debts except one from the Governor. During the winter his Excellency had sent his Excellency's Secretary to my store for some samples of cloth. The Secretary after taking these with some shawls for the examination of his master, returned and purchased goods for his Excellency to the sum of eighty-three dollars and told me to charge them to his Excellency. I did so, and on the day before my departure I called at his Excellency's house and found his Excellency looking every inch a Governor, and very pompously pacing the piazza as was the custom of his Excellency. I remarked that I was going home. "Very well," said his Excellency, "you can go;" and walked on. I awaited his Excellency's return, and again remarked that I was going home; that I did not expect to return, and would be thankful for the amount of his Excellency's account with me. "I have not a dollar. The Government has not paid me in ten years, and how can I pay my creditors." I offered to take two mules. "I have no more mules than I want myself," said his Excellency. With this I parted forever with Gov. Malgaris of New Mexico. Ortise told me I could not sue him as he was "the head of the law."

Some time before this I saw a Spaniard who had been imprisoned for more than a year, and was then set at liberty. He had just come from the Commandant, whom he asked for the cause of his imprisonment. "You are at liberty now, are you not?" "Yes; but I wish to know why I have been so long deprived of liberty." "You are at liberty now, and that is enough for you to know," said the Commandant: And this was all the satisfaction the poor Spaniard could get. The following will illustrate the summary method of administering justice in Santa Fe. There were many American deserters in the city from the Fort at Nacatoche, some of whom had lived here sixteen years, and were generally of bad character. Robert McKnight had entrusted one of these, named Finch, with a valuable sword to sell for him. Finch pawned the sword for twelve dollars, and seeing him with money I told McKnight he would never get any thing for his sword as Finch was spending the money he had raised on it. "There is no danger," said he, "Finch would not trifle with me." On the next day he demanded his sword or the money from Finch, who refused to give him any satisfaction; whereupon McKnight seized and dashed him about twelve feet, head foremost against a door of the Fort. I interfered and saved Finch from any further injury than a severe cut on his head. He then confessed the fact of his having pawned the sword and named the place where it could be found. McKnight now went before the Alcalde, a stern old Spaniard, who called his officer and handed him his gold headed cane as a warrant bringing up Finch, the sword and the pawnee. They all arrived, Finch with his head tied up in a handkerchief, when the Alcade took the sword from the Spaniard who had taken it in pledge, and asked him if he knew for what purpose

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

Finch had received it. He admitted that Finch told him at the time of pawning it, that he had received it to sell. "Then," said the Alcalde, "if you had bought it, though only for five dollars, you could now keep it, but you had no right to take it in pawn;" and thereupon handed the sword to McKnight as the true owner. "But who will pay me my twelve dollars?" said the bailee. "That lies between you and Finch." "And what am I to get for my broken head," said Finch. "I know nothing about that Finch," said the magistrate, "but if you do not behave yourself better than you have done of late, I will drive you out of the province." So, McKnight got his sword and a little revenge without having a bill of costs or lawyer's fee to pay.

Most of my company had been engaged in trapping during my stay in Santa Fe, and some had gone far into the interior of Mexico. Collecting such as remained, and in company with the McKnights, I now, on the first of June 1822, bade adieu forever to the capital of New Mexico, and was perfectly content never to repeat my visit to it or any other part of the country.

Chapter V

Col. Glenn's conversion — His profits thereby — Avenues to New Mexico — An instance of Spanish treachery and cruelty — Glenn's cowardice — Meeting with the Pawnees — Mexican Indians — Battle between the Pawnees and Osages — Disappearance of Glenn — Chouteau and the Osages — Indian revenge — Passage of the Shoshoua — Singular Ferrying — Entrance into Missouri — Robbery by the Osages — Interview with Missionaries — Arrival at St. Louis — More of Glenn — Home — Still greater troubles with creditors than with the Indians.

I STARTED FROM Santa Fe with Hugh Glenn on his return to Toas, whence he was to go with me to St. Louis. On arriving at the Spanish village of San Domingo, about thirty miles north of Santa Fe and five from the Indian village of St. John, we stopped by invitation, at the house of the parish Priest, where the principal citizens visited us during the evening. Here I was somewhat astonished to hear Glenn, late at night, tell the Priest that he wished to be baptised and join the Church. He said in answer to the Priest's questions, that he had entertained this intention for a long time before coming to this country; that he had endeavored to instruct himself in relation to the tenets of the Church, and produced a Catholic book, called the "Pious Guide." The Priest told him to reflect on the subject and pray to the Almighty for light. In the morning Glenn appeared with a very sanctimonious face, and repeated his request. The Priest questioned him on the Catholic faith and the noviciate answered very intelligently. It being Sunday, they went to the Church to have the ceremony of baptism performed on the new convert. Leroy, one of his company, acted as God-father, and the Priest procured a very respectable old lady of the place to act as God-mother. The saintly Colonel Glenn looked the very picture of sanctity during the performance of the rite; and he afterwards made a good penny by the operation. The people were very fond of their new convert, and showered honors and presents on Col. Glenn. He was talking of coming back from the States with goods for this market, and many of the inhabitants entrusted him with mules and money to make purchases for them, of which they never heard again. Among his religious rewards was a lot of the finest Indian blankets. The Colonel was a great and good man among the people from this time and bore the cross of his religion with edifying humility. On the next day we reached Toas, a small settlement near the mountains, in a beautiful and fertile valley through which the Rio Grande flows and offers most valuable inducements to the manufacturer by its water power; but none are here found with sufficient enterprise to seize the offer. The country in the hands of the Americans would bloom like a garden, while now it languishes in a

Three Years Among the Indians and Mexicans

---

state of half wilderness — half cultivation.

Leaving Toas with eighty-three horses and mules, with Glenn and his company who had about sixty, we travelled in one day half way over the mountains, stopping at night in the middle of the pass. Here we were overtaken by some Spaniards with a mule load of bread, biscuit, sugar, chocolate and other delicacies, all sent as a present to the godly Glenn by his God-mother. He took them, I suppose, with pious thankfulness, much as a hog takes the acorns that fall to him from an oak tree — without ever looking up. On my return to St. Louis I heard of Glenn's sneers and ridicule of the clergy of New Mexico. The truth concerning them was bad enough, but I was astonished to hear them villified and abused by the so lately converted Col. Glenn. He changed his religion more rapidly than his clothes, and made each change a profitable speculation to himself. Such pliability of conscience may serve a temporary purpose to its fortunate possessor, but I have found very few of my countrymen, thank God, so base as to practice hypocrisy to the alarming extent to which this sordid miscreant carried its exercise.

On the next day we marched to the foot of the mountain over which we had travelled for about fifty miles, with the utmost ease through a regular and even pass with a very gradual ascent half the distance and thence with an equally gradual descent. There are three principal routes over the mountains to New Mexico. One below San Miguel, by which I went to Santa Fe, and which is easily passible for a large army without danger of surprise. The second, through which I was now returning to the States, and the third, a few miles to the north of this last and of Toas, are both excellent passes for travellers and emigrants, but would not admit of an army in the face of an enemy. They are quite narrow and closed in by mountains of a great height and by numerous defiles, which in possession of an enemy would present great obstacles to an invading army. McKnight, who came through the northern pass, informed me that it was much better than this, near Toas. These three passes are all of slight elevation, and present a gradual ascent and descent for about fifty miles, of no difficulty to the passenger and his teams. The most northern pass will probably become the great outlet of American emigration to California.

At the end of our two days journey from Toas we encamped at the foot of the mountain near large piles of stones placed on each side of a ravine or gully. These were in shape like immense walls, from ten to sixty feet in length, about ten wide, and from four to six feet in height. They were the tombs of Camanche Indians, who had been massacred at this place many years before by the Spaniards. An old man in Santa Fe whom I employed about my store, informed me of the circumstances of this cold blooded butchery, in which he as a Spanish soldier took part. It happened when my informant was about twenty years of age, which was a few years previous to our revolutionary war. According to his account, the Spaniards and Camanches had been at war with each other for many years with various fortune on both sides, when the Spanish authorities determined to offer peace to their enemies. For this purpose they marched with a large army to this place of tombs, and encamped, whence they sent out heralds to the Camanches with an invitation to the whole nation to come in and smoke the pipe of peace and bury the hatchet of war forever. The unsuspecting Indians came in pursuant to the invitation, and brought their women and children to the number of several thousands. The council was held and a solemn treaty formed which one side hoped and expected would be inviolate forever. They smoked the pipe of peace and of brotherhood. Every thing betokened lasting harmony, and for three days an apparently friendly and cordial intercourse took place between the two powers. During this time the Spaniards insidious-

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

ly bought up all the bows and arrows, and other arms of the Indians, at very high prices, and the third day found these simple children of nature stripped of their arms and entirely defenceless, in the midst of their treacherous enemies. Then ensued a scene of murder exceeding in atrocity even the celebrated slaughter of Glenco, which occurred in Scotland a few years before this, and under very similar circumstances. The Spaniards having surrounded the Indians, fell suddenly, at a concerted signal upon them and killed all without regard to age or sex. The women and children clung to their protectors, who would not leave them and could not fight, and thus they were all slaughtered together. The bloody work continued most of the day and the dead were left in large heaps over the ground. The drain or gully, between the stone walls ran with blood on this terrible day, as the old Spaniard told me, like a spring freshet. Not a man, woman or child was spared; and my informant supposed that the example had deterred all the tribes of Camanches from making war on the people of Santa Fe from that day to this. The citizens of this town may have been exempt from attack, but we have always heard of the incursions of these tribes on the Spanish settlements, and conduct like this of the Spaniards near Toas would, and did sow deep the seeds of incurable hate which have frequently germinated since in bloody retributions. The countrymen of the slaughtered Indians afterwards erected the stone walls near to which we were now encamped, and which covered a large extent of ground, as tombs and monuments for the dead. Their power was greatly broken by the loss of so many warriors and the nation was a long time in recovering its former strength.

On the next morning after crossing the mountain we entered the prairies, which were frequently quite broken and uneven. The spurs of the mountains were covered with pine and cedar. Directing our course to the northeast, in four days we struck the Arkansas a considerable distance from its head. On the next day, and the seventh since leaving Toas, Col. Glenn, who marched in advance of me, sent back a man with the news that the "Camanches were ahead." I hastened forward with the McKnights, and found Glenn stretched out on his blanket in a cold sweat and shaking with fear as if he had the ague. I asked, where are the Indians? "Oh there they are, hid behind that willow bar." I searched and found nothing, when Glenn again cried out, "Oh there they are," pointing to two men riding towards us on the opposite or north side of river, and also to a company of about two lodges, or twelve Indians going from us to the north-west. I soon perceived that the two men first seen were white, and one crossed the river to our company. They were a company of about twelve from Boone's Lick, of whom one was named Cooper, on their way to Santa Fe. Glenn, as much frightened as before, now insisted that the Indians whom we had seen had gone off to bring up their companions to attack us in the night. He had his horses and mules tied together and ordered his company to prepare for action. I determined to allow my horses to separate for grazing, and in looking for a good place for herding them, I espied and shot a buffalo under the cliff. This brought up all my company and a part of Glenn's to ascertain the cause of the shot, while Glenn was crying out to them, "Come back, you'll all be killed by the Indians." When I returned to the camp I told him to send some of his men for a part of the buffalo, if he wanted any meat. "No, I want no meat and I will not travel with men so rash as to fire their guns while so near the Indians." In the morning we took up our march, with one of Cooper's party on his return St. Louis, and with Glenn in advance, who, intent on getting out of danger, soon outtravelled us. About two o'clock one of his men returned at full speed, calling to us to hurry on — "here are two thousand Pawnees." On overtaking Glenn I found two Indians, who said the main army would

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

soon be with them. I had brought with me from Toas two Mexican Indians who wished to go to the United States.

Glenn knowing that the Pawnees were at war with the Spaniards, said these Mexicans would be killed on the coming up of the Pawnee army, and implored us to let them be killed "peaceably" and not endanger the whole party by any unnecessary resistance. I replied that these Indians were under my protection and should not be hurt. In a short time we saw the whole army pouring over the bend or knove before us, which for half a mile was red with them, all afoot, except three, and every man carrying a rope lasso or cabras in his hand. Again did Glenn shake as with the ague, and the cold sweat stood on his face in drops. "Oh they are coming, they are coming," said he. One of their three horsemen rode past our band, then returned and halted at some distance as for a parley. I told Glenn to get up from the ground where he was lying and go out to speak with this Indian. No, no, said he, we shall be shot down if we go out there. The creature's courage and senses seemed to have left him together. I went out with McKnight, shook hands with the Chiefs and brought them in among our men who spread buffalo skins on the ground for their reception, while I prepared the pipe which we smoked together. The leader of this army was a brother of the head Chief of the Pawnee nation, and one of the finest formed and best looking men I have ever seen. He was six feet in height, with large and powerful limbs, a large head, with a well developed front, and keen dark hazel eyes. His manner was dignified and commanding, and he evidently possessed the confidence of his tribe. There was something in him that at once drew out my heart towards him and secured my esteem and respect. He was now going, he told me, down to the country of the Camanches, Arrippahoes and other tribes, near the Salt Plains, to conclude treaties of peace. They had been out ten days from their country and would have passed this place five days before had not this Chief been taken sick. He now looked feverish and weak. After smoking, the whole party of Indians, to the number of one thousand, gathered around us and four of them marched my Mexican friends into the circle and placed them before the Chief above mentioned, who was sitting on the ground. All the Indians except this Chief declared that these two were Mexicans and therefore their enemies, and many called for their scalps. A Kioway Chief made a violent speech against them. He understanding the Spanish language, desired them to speak with each other. They remained silent, he then requested me to make them speak. I appeared not to understand, but said they were my men and under my protection. The Kioway then walked close to the Mexicans and in a friendly manner and confidential tone he said: "You are Spanish Indians, are you not? You can tell me; I am your friend. You know I am a Kioway; we are not at war with you. We are friends. You are a Spanish Indian are you not? The Mexicans looked like condemned criminals during this shower of questions, and one of them looking up and meeting the eye of the Kioway, slightly nodded an affirmative to the last question. Instantly that Chief clapped his hands and exclaimed: "Do you hear that, they acknowledge it — they are Spaniards, these are the men who have been murdering your women and children; kill them — kill them." I placed myself before the Mexicans to defend them, and told the Pawnee Chiefs they should not be killed, and the older Chiefs cried out, "come, come, go and get some wood and make fires. Kill some buffalos and get something to eat." This entirely changed the current. Loosing sight of their Mexican enemies, they ran off with a shout in obedience to their Chief and scattered over the prairies on my horses which I loaned them. Away they went in all directions and soon returned with an abundance of buffalo meat.

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

When they had disappeared, the Chief who had so soon dispersed them looked at me with a smile and said, pointing to the two Mexicans, "they are Spanish Indians I know; but they are with you and shall not be hurt. Last winter my brother went to Washington and saw our Great Father there. He said a great many things to my brother and made him a great many presents. And what he said went into his ear, and my brother told it again to me and it went into my ear and down to my heart. Our Great Father told my brother to treat all Americans well who visited his country, and my brother promised the Great Father, in the name of the whole nation, that we would do as he wished us to do towards the Americans. You and your friends are safe. You shall not be hurt." This Chief told me of some of his exploits as a warrior, one of which, then the latest, I will relate. His nation were at war with the Osages and in the fall before he had approached near to one of their largest villages with a war party, too small however, to risk an attack. He concealed himself and his men behind a large mound in the prairie at some distance from the village, and sent forward eight well mounted Pawnees to reconnoitre. A large party of Osages gave chase to these eight, who retreated before them to the mound and then separated, four going to the right and four to the left around the mound, and were followed by their enemies who rushed blindly into the ambuscade. Our hero, the Pawnee, now gave the war whoop, and fell upon the Osages, whose jaded horses were unable to carry them out of danger. A hundred of the Osages were killed in the fight or rather flight, and our hero, the Pawnee Chief, felt all the pride and pleasure of a Spartan in relating the triumph of his craft and valor.

We encamped at night in company with the Indians, the Chief lying near me, and in the morning nothing had been disturbed. I made presents of tobacco to the Indians and selecting one of my best horses and a Spanish saddle, bridle and rope, and leading him up to the Chief, who had no horse of his own, I presented him with this one and the trappings. The Chief appeared ashamed at not having any thing to give in return, and said, "if you ever come again to my country, I will have two horses ready for you." I told him to treat all Americans well when visiting his country, and to protect them from their enemies. He appeared greatly affected and at parting, embraced me with both arms.

After proceeding about a mile on our way we saw about thirty Indians running towards us and Glenn took another fright, said that these were coming to kill the two Mexicans, and again prayed me to give them up "peaceably." I said no, and the McKnights swore they would die themselves, rather than desert any of their comrades. They, with the rest of my company formed a circle around the Mexicans, while Glenn and his men hurried forward, and I stopped to speak with the advancing Indians. These were a hunting party belonging to the Pawnee army, who had not seen us before, having just returned from hunting, and now came to shake hands with us. They overtook Glenn for the same friendly purpose and then returned in high spirits to their countrymen. Glenn now pushed on in a trot and soon went out of my sight where he has remained from that day to this. He sold his fur in St. Louis, went to Cincinnati, and cheated me out of his debt to me, as I ought to have expected him to do after his previous cowardice and hypocrisy.

We now kept our course down the Arkansas, and on the next day crossed to the north bank of the river. One of my trunks fell into the river in crossing, and some rhubarb dissolving, became mixed with my shirts, journal, invoice and other papers in the trunk, and entirely destroyed them. The writing was obliterated from the papers, and my journal which I had kept since leaving home was rendered useless. My memory, which was always very retentive of events and incidents, en-

ables me to supply this loss with sufficient accuracy.

On the third day after parting with the Pawnees we found the prairie strewed with buffalo skeletons, and saw at a distance in a bend of the river, a company of men wearing hats. I learned afterwards that this was a company of traders bound for Santa Fe, who had been robbed by the Osages. Supposing it to be Glenn's company, I passed on without hailing them, and encamped at night in a small grove in the edge of the prairie. We secured the horses and prepared our camp with care against an attack from Indians, who were evidently in our vicinity. One-half of our band slept while the rest stood as sentinels. In the morning about an hour before day a sound of violent crying and lamentation was heard, such as is customary with the Indians when bewailing the loss of a near relation. This is usually continued from early dawn till sun-rise, when they end in a sobbing hiccough like that of children after long crying. A mounted Indian soon after day light, circled around the camp and stopped at a distance of a quarter of a mile. I cried out Mawhatonga, (long knife). The Indian repeated the word interrogatively, Mawhatonga? The Indians call the whites Longknives, from their swords. On my answering howai, (yes ) this Indian came into our camp and informed me that an Osage village was near by, and that Chouteau, Tonish and Pelche, French traders, were with them. I started with the Indian for the village and came in view of it on ascending a hill a short way from the camp, where my companion went off at full speed, shouting at the top of his voice, and soon brought out the whole village with Chouteau and other French traders to meet me. A large company of Indians passed me to meet the company with the horses behind, and by their shouts and tumultuous riding gave my drove a stampede which made the earth shake beneath them. Chouteau invited me to breakfast with him, assuring me that my horses, which were now out of sight, would be recovered. I partook with him of a dish of coffee, the first I had tasted in twelve months, and of bread and other luxuries of civilization, which brought before my mind all the comforts of home to which I had been so long a stranger. After returning from Chouteau's marqui, about noon, we discovered that four horses and several articles belonging to me and McKnight and a keg of Chouteau's powder had been stolen by the Indians. Chouteau raged and stormed like a mad man and threatened to abandon the nation forever and stop all the American trade with them, unless they produced the stolen articles and abstained from molesting the property of his friends. At last two of the horses were brought up. Chouteau commanded them to return the rest of the missing goods, which however, could not be found. The Conjuror now appeared with his wand lined with bells, which he carried jingling through the village. When he started, Chouteau remarked that the lost goods would certainly be found by him; as the Indians had no hope of concealing any thing from their medicine man. The wand carried him directly towards the place of concealment, and the thieves to avoid detection soon brought up the goods which they had fortunately found. Two of my horses were lost beyond recovery. I remained with Chouteau that day till evening, and was treated by him and his French companions, like a brother. I saw a singular instance of Indian revenge, while here, which will illustrate their stern and inflexible sense of wrong. An old Osage was sitting on the ground when a younger Indian with a rope in hand stopped before him and said: "You struck me one blow when I was a boy, I will now return it." The sitting Indian without a murmur bent his head and body forward to receive the justice which awaited him, while the avenger of youthful wrongs drew two large knots in his rope, and after swinging it around his head several times, brought it down with all his weight upon the back of his old enemy. The knots seemed to sink into his back their whole

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

depth. Leaping up in a furious rage, the culprit rushed at the executioner, seized the rope and endeavored to wrest it from him, claiming one blow in return. As the pain subsided they became friends and thought no more of the old feud. "An eye for eye and a tooth for a tooth," is strictly their motto. The blow which he had received when a boy, had rankled in this Indian's heart for ten or twenty years, and now having paid it back with interest, he was satisfied and happy. Their method of curing diseases is very similar to the operations of our animal magnetizers. The Con-jour or Medicine man has an old cloth, which they supposed possessed the charm and power to restore health. With this magic cloth assisted by other Indians in the same exercise, he rubs the patient from head to foot, in manner similar to the passes of the magnetizers, on their subjects. This is continued until the patient acknowledges himself relieved, or relief is proved to be hopeless. My company started forward before me, and I remained behind till evening with Cunigam, for the purpose of finding the two missing horses, which were among the best. Failing in this, I with my companion, followed in the track of the company. Before we had gone far a black cloud gathered over our heads, with thunder and lightning in terrific grandeur. We hastened forward till night, when the storm broke upon us in torrents of rain which deluged the earth. We lay in the rain all night, and in the morning the river had risen above the banks, and nearly reached our place of sleeping. The marks of the muddy water and leaves was visible in a straight line on my companion as he lay asleep in a gully which the flood had washed without waking him. We saw, a little distance off, our company, encamped on the spot occupied by the Osages, the night but one before. Pursuing our course down the river, we came to the Little Arkansas, which enters the main river from the north, and crossing it, we encamped on its bank which is here very high. The river rose twenty feet during the night from the heavy rains which had just fallen. Here we left the Arkansas, which goes to the south, after making what is called the great northern bend. We travelled to the northeast, the rain falling abundantly, and came to a creek we were unable to cross. We encamped on its bank for that night, and the next morning before starting, some thirty Osages came up with some goods which they had stolen from a party of Santa Fe traders on the Arkansas above, and offered to us for sale. Our refusal to buy incensed them greatly, and they blustered and bullied around us until we showed them plainly how little we were effected by their bravado. One seized a belt of McKnight's, who wrenched it out of his hands and struck him with it a tremendous blow over the shoulder. After these Indians left us, we pursued our course on the trail of the Osages. The streams were all full and difficult in crossing, and the game exceedingly scarce. In ten or twelve days, after severe suffering for want of food, we reached the Shoshona or Grand River, where we found corn growing: this was just in the silk without any grain on the ear. We boiled and ate the cob with a hearty relish. Soon after this we were hailed by Indians, who came from the north, and finding we were whites, approached us in a friendly manner and invited us to their village, two miles distant. They laughed at our last meal and promised us something better than corn cobs. We fared well, with them, on hominy, meat and bread, which last was made of flour furnished to them by Mr. Sibley, the factor at Fiery-Prairie Fort. After smoking with these friendly Osages, we proceeded on our way, and with great difficulty crossed the Shoshona, which flowed with the rapidity of a mill race. I hired some Indians to swim our horses and goods tied up in buffalo skins, across, while we followed, some swimming and others in skin boats towed by men and women in the water. I was ferried over by two women and a man, the former swimming with cords between their teeth attached to the boat, and the latter pushing behind, by which

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

means I was safely landed on the shore. Here I found a new party of Indians, who while our party was crossing the river had stolen three of my horses. Continuing our course we crossed a creek on a raft near the White-haired village, which was deserted, and in the evening of the third day after passing the Shoshona, we crossed the Missouri line. Here my brother exclaimed, - "Thank God we are once more in the United States." We encamped for the night, and lay down in fancied security, without setting a guard, and in the morning discovered that a large number of the horses and mules had been stolen. We had not seen any Indians for three days, but had been followed by the prowling Osages, who had now effected their designs upon us. Thirty-eight of my best horses and mules were missing. We followed the thieves to the White-haired village, and found that they had crossed the creek on our rafts, and were now beyond all pursuit. We returned and proceeded on with the remains of my drove. Our next stopping place was Chouteau's trading house on the north side of the Osage river, about six miles from our last, where we found a hospitable reception from the French traders. McKnight and I went to the factory or Government store a few miles above on the river, where we saw a few Indians, the factor, and an interpreter, who advised me to go, or send some persons back to Grand River for my horses, where they would probably be found. I hired him and an Indian, for forty dollars, to return with one of my men to recover the stolen property. In a few days they came back with the news that the thieves had hastened on towards Chermout's village on the Arkansas, where they had probably concealed my chattels. Giving them up for lost, I returned to Chouteau's establishment and endeavored to obtain a skiff for descending the river. Most of my remaining horses were sore on the back or jaded so much as to be unable to carry any burdens. We learned from a blacksmith that there was a missionary station on the river a few miles above, where a good skiff which he had made, could be procured. The two McKnights, the blacksmith, and myself, went up to the station, where we found a small village of about fifty inhabitants, old and young, and a dozen houses. A fine water mill was going up on the opposite or south side of the river. We found the owners of the skiff, related to them our wants and misfortunes, and requested the privilege of buying their skiff. They doubted if they could spare the skiff. We went down to the river and examined the subject of our negotiation, which was a rough made article, of the value in St. Louis of about three dollars. "We have no stuff to make another with, should we let this go," said one of the missionaries. "I have some plank," said the blacksmith, "the same as this was made of, that you may have to make another if you wish it. These men," continued he, "have been very unfortunate, and by letting them have the skiff you will do an act of charity. They can't travel without it;" and I told them I would give any reasonable price for the accommodation. "Well, said the missionary, what would you be willing to give?" Ten dollars.

"Ho, ho! — I couldn't take that for the skiff, even if I could spare it. But we can't let it go, we want it for crossing the river to the mill. I v(e)ow and declare I can't spare it." I will give you fifteen dollars, said I. "Oh no," whined the philanthropist, "we couldn't take that little, and besides I have no nails to make another with." "I will make nails for you said the blacksmith; that need not be in your way," and again the benevolent trader was headed. "But I v(e)ow I don't know how to spare it," said he. I then offered twenty dollars in specie. "Oh no," said the missionary, "the skiff is worth more than that, but I don't think we can spare it;" and here the negotiation ended, my companions protesting that I had offered too much already. We went up to the village where they had three half-breed children under instruction, and these were all their pupils or converts whom

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

they were paid by Government to instruct — truly a disinterested company of men. Learning that we had arrived from Mexico, a number of them gathered around us with many questions concerning that country, and one asked if they were not in need of missionaries in that country, and whether much good could not be done and many converts made there Robert McKnight replied, “they would convert you into the calaboose d — nd quick, if you were to go among them — you had better stay here.” We left then, shaking the dust of the town from our feet and glad to get rid of the canting sharpers. We returned to the trading post, made a few bark canoes, and proceeded down the river; part of our company being in the canoes and the rest afoot with the horses and goods. At the mouth of the Osage, Rogers, the ferryman, informed us that at the village of Cote Sans Desans, on the opposite side of the Missouri, I could procure some perogues of the French inhabitants there. I crossed over to the village and purchased a canoe and perogue for sixteen dollars — loaded them with goods, and with the McKnights I hastened forward to St. Louis. The rest of my company with the horses, joined me soon afterwards. I here heard that Glenn had sold out his fur and gone to Cincinnati. As I remarked before, he has been among the missing to me ever since. His note I will sell for one per cent on the principal.

I learned on the morning of my arrival at St. Louis, that Col. Graham, the Indian Agent, had just started for the Osage country, to pay out annuities to the Osages. The two McKnights pursued and overtook him — gave him a written statement of my losses by that tribe, and claimed compensation, which he undertook to obtain for me. The Osages delivered up twenty-seven of my horses and mules, and said that these were all they had taken. The agent took their words for the fact against the written and sworn statements of the McKnights, which could have been corroborated by the oaths of my whole company, and neglected to retain the amount of what they had cost me in Santa Fe, which was forty dollars each, out of the annuities of the Osages, which were then paid in money. He brought on the twenty-seven, which he recovered as far as the Osage river in Missouri, where he left them, at the house of a man named Rogers, who wrote to inform me in the winter following that they were dying with hunger. Col. Graham had turned them out to go at large, and when two men whom I sent for them, arrived, only sixteen could be found. Four mules which were unable to travel were left, and only twelve horses and mules were brought back; to recover which I expended much more than their value. The agent, Col. Graham, was greatly culpable in not retaining the whole value of the horses stolen, out of the annuities of the Osages. The claim was proved and might and ought to have been secured by him.

In the latter part of July, 1822, I arrived at my home in Monroe county, Illinois, after an absence of fifteen months. I was supposed to be dead by many, and my family were entertaining the most alarming apprehensions for me. The husband and the father only, can appreciate the joy and rejoicing which my coming occasioned, and the cordial welcome I received. After the hardships, exposures and wearing anxieties which I had endured for more than a year, I needed repose and relaxation, and I hoped to enjoy them for a short time. But in this hope I was disappointed. My creditors swarmed around me like bees, and were as clamorous as a drove of hungry wolves. I had brought from Santa Fe about \$2500, the sole proceeds of my stock of \$12000 with which I had left St. Louis the year before. This sum I immediately paid on my debts, and offered all my remaining property to my creditors; but they wanted money. The Sheriff, the Marshal, and Constables immediately beset me on every side, and seized and sold almost every thing of mine that was levyable. I worked and struggled bravely to emerge from this thick cloud of difficulties. I drove a mill and

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

distillery, and fattened a drove of hogs for which I could find no sale. The way was dark before me and I found more real trouble and corroding care in getting out of debt than I had experienced among the savages. Man in civilized society frequently requires more firmness of mind, constancy, fortitude, and real strength of character than in the most critical and dangerous crisis of a savage state. The poor man, struggling bravely against an accumulation of debt and difficulty, I have always thought, is entitled to more respect than the military chieftain, whose courage is only inflamed by the excitements of war and ambition. Peace has its victories as well as war, and a high state of civilization as it has stronger temptations to evil and higher though less pressing incitements to exertion, so it requires more energy and determined resolution of mind than any other condition of human existence. Many a brave and true man in the peaceful shades of private life will receive a meed of honor equal to that of

Great men battling with the storms of fate

And greatly falling with a falling State.

Chapter VI

Endeavors to get out of debt — Proposition of John McKnight — Preparations for another expedition — Journey to the Arkansas — Ascent of the Canadian and North Fork — Hunting Bears, Elks, &c. — Fort commenced — Conversation with McKnight and his departure in search of Camanches — Continued ascent of the Canadian North Fork — A new Fort — Return of Potter and Ivy — Robert McKnight goes out in search of his brother — He returns with Indians — Charges them with the murder of his brother — I go out to the Camanche village — Incidents there — A council — The One Eyed Chief — The whole band start for the Fort — A guard placed over me — Encampment — The One Eyed adopts me as his brother — He changes my relations with his tribes — Catching wild horses — Arrival at the Fort — Fright of some “brave” men — Trade — A robbery — The One Eyed punishes the thieves — Fate of John McKnight — Mourning stopped — Indian customs — A dance — A case of arbitration by the One Eyed — Indian horsemanship — Parting with the Chiefs — Conversation with Alsarea — The horse Checoba — A Bucephalus.

SEEING NO WAY of extricating myself from debt by any regular employment at home, I cast about for some other means of self preservation. John McKnight, who was to me a true and faithful friend, went to the mines to obtain for me a lucrative situation, but without success. He then proposed to make another venture among the Camanches, and endeavor to obtain from them the fulfilment of Cordaro’s promise to remunerate my losses among his countrymen. McKnight was sanguine of success, and I fell in with his proposal. We procured goods in St. Louis, on credit, to the value of \$5500, shipped them on a keel boat, and the two McKnights, John and Robert, with eight men, started with them in the fall of 1822 for the mouth of the Canadian, where I was to meet them in the winter following. I went by land to the place of rendezvous, with a company of twelve men, through the towns of Batesville, ( now Fredericktown, ) St. Francisville, and the Cherokee country, and joined McKnight in the latter part of February. We had five horses with packs and travelled the whole route afoot. McKnight had awaited us about six weeks. We found him with the boat frozen up, about four miles above the Canadian, on the north side of the Arkansas and about thirty miles below Barbour’s trading house. On going up to Barbour’s, McKnight and I found that he had secured the goods which we had cached on the island above in my former trip; but that the flour was damaged when he took it down to his house. He was just starting, when we

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

arrived, for New Orleans, with furs and peltry on my keel-boat, which I had left with him the year before, and he promised to pay me, on his return, for the boat and goods. I never saw him again: he died on this trip in New Orleans. The ice being now gone, and our boat released, we prepared for ascending the Canadian. Robert McKnight with most of the men, descended the Arkansas with the boat, to enter the Canadian four miles below, while John, who was seldom separated from me, with the horses and a few men crossed the point and awaited them. After joining them we travelled in sight of the boat till we passed the falls about twenty five miles from the mouth, when we struck into the best farming country I had ever seen; a beautiful land of prairies and woods in fine proportion. Below the falls we passed a very salt spring. Elk, buffalo, deer, wild turkeys and black bears were very abundant, and we fared on the fat of the land. The soil is extremely fertile, judging from the heavy grass of the prairies and the large and valuable timber of the woods, which were composed of walnut, ash, hackberry, spice, pawpaw, and oaks of a very heavy growth and of every species. The Canadian is very crooked and bounded by extensive bottoms. After travelling five days through this fine region, we struck the North Fork of the Canadian at its mouth. This river, like the other, is exceedingly crooked, and numerous rapids greatly obstruct its navigation. Our ascent was slow and difficult, and the boat twice stopped at night within a hundred yards of our encampment of the night before, owing to the irregular course of the stream. Our progress in the boat was at length stopped entirely by a rapid which we could not ascend. We made fast the boat to trees with strong ropes, put our bear and deer skins into it, and buried the heaviest hardware in the ground, where it remains probably to this day, as I never returned to its place of concealment. We made three perouges, into which we put our remaining goods except such as could be packed on the horses, and with them, we continued our ascent of the Canadian North Fork. Game of every kind known to the country was extremely plenty. We killed on this and the main river about twenty black bears, all of which we found in the hollow of trees where they had remained in a torpid state all winter. In one tree four were found, a she and three yearling cubs, which the men killed with axes, after felling the tree and stopping up the top to prevent their escape. After proceeding with our perouges about ten days the game became scarce and the company began to suffer from want of food. We stopped and all sallied out to hunt: the first day furnished but one wild turkey. The second and third days produced nothing more, the turkey subsisting us all for three days. John McKnight and I then went about ten miles in search of game, and found a bear's track, but our pursuit of the bear was unsuccessful. Returning by a different route from that by which we came, we descried a herd of elk, lying down in the prairie. We crept on our hands and knees in the short grass to within two hundred yards of them, when one discovered us, leaped up, snorted and brought the rest to their feet. I instantly fired and wounded one, which we found and killed, and returned with a part of the meat to our companions, who were feasting on a wild horse. In the morning, after bringing in the remainder of my elk, we pursued our journey and in a few days the game, became plentiful. We had hitherto travelled through a very fertile and beautiful country, which will in a few years teem with a dense population. The prairies are interspersed with valuable woodland, and will make as fine a farming country as any in the Union. We now reached the vast and sterile prairie west of the Cross-Timbers, through the northern end of which we had passed, and we commenced our journey over the boundless plains beyond them. This is the region designated on the maps as the Great American Desert, though it is very different from those plains of sand in the Old World which bear that name. A short grass

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

grows here, but no timber except the cottonwood and willows in the bends of the rivers. Our path had before lain through fine groves of oak, walnut and ash as we issued from one prairie and entered another, but now one vast plain extending on all sides to the horizon, presented no object to relieve the vision.

We soon discovered trails of Indians and came upon a deserted camp of what seemed a Camanche war party about five hundred strong. As we proceeded, the Indian "sign" increased. We next struck an Osage camp, also deserted, which seemed to have been made a few weeks before by a war party or a horse stealing party of Osages on their route northward from a plundering expedition against the Camanches. The country, as we proceeded, became more and more sterile, the grass shorter and the timber on the river banks smaller and more scarce than before. Travelling on, through a country nearly destitute of vegetation, in about ten days after passing the Osage camp, we arrived at the place of encampment of an immense Indian force in the summer previous, as we judged from the signs on the ground. The river had now become too shallow to be navigated any further without great difficulty, even by perogues. Here we stopped and commenced the building of a Fort. One of the men, now a near neighbor of mine, Justus Varnum, had taken a cold, so severe that it affected his hip and back and prevented him from walking. He was conveyed up the river in a perogue for several weeks previous to our stopping, and he had to be carried every night in a blanket from the boat to the fires of the camp, and back again to the boats in the morning. One of the men, when we had stopped to build a Fort, killed a large rattlesnake with the entire bodies of two prairie dogs, larger than squirrels, contained within the stomach of his snakeship. I advised Varnum to try out the oil of the snake and rub it on his joints as a remedy. He applied the oil as I recommended, and in consequence became so limber and supple as to render walking painful to him, when I told him to stop the applications. I have frequently tried the same remedy for stiffness of the joints and think it might be of service in rheumatism.

The Fort being nearly completed, I proposed to go out with two men and find the Camanches, in whose country we then were, and who, we supposed from "signs" around us, could not be very distant. John McKnight objected to my going out, saying that he or I must remain with the men and superintend the building of the Fort, as his brother Robert could not govern the company. "You, James," said he, "have a family. I have none, and therefore I can better afford to lose my life than you. As we cannot, both of us go, you must remain." At his urgent solicitation, I acquiesced, though unwillingly, in this arrangement, and agreed with him in the event of the river's rising before we finished the Fort, to put the goods in the perogues, and ascend the stream a hundred miles, after leaving a letter for him in a certain part of the Fort. I wished to get into the heart of the Camanche country with my goods, where I would sooner be able to open a trade with the nation. McKnight departed according to our arrangement towards the south, in company with Potter, Ivy, and Clark, the last of whom was an obstinate, disaffected man, and went against the desire of McKnight. He, poor fellow, never returned. He found a soldier's death and a brave man's grave from the hands of the Camanche warriors. He was my friend — faithful and true to me — and I mourned his loss as that of one whose place could never be supplied to me or to society. I learned soon after this, the probable circumstances attending his death. A few days after McKnight left us, a heavy rain fell, causing the river to rise, and we thereupon abandoned the Fort about half completed, and with our perogues and goods ascended about the distance agreed upon, where the low water stopped our fur-progress. We encamped and commenced a Fort in an

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

excellent position where the timber was abundant. We proceeded in building the Fort as expeditiously as possible, and with great labor soon completed it and a trading house, surrounded by stockades and defended by our swivel, which we mounted on wheels in an angle of the Fort. Before this, however, Potter and Ivy returned with the news that on the ninth day after their departure they fell in with Camanches and were conducted to one of their principal villages, (the bands in camp, are called by that name) and that McKnight called a counsel with their Chiefs, but could not, for want of an interpreter, make himself well understood; Potter knowing less of the language than was supposed. McKnight then gave them to understand that he had a good interpreter in Spanish, referring to his brother Robert, and requested leave to return to us for him, in company with one man. The Indians permitted him to start alone and kept the remaining three as hostages. They gave him five days for his journey to our camp and back to them, and he left them with the promise to return on the fifth day. After his departure, Clark made known to them by signs that McKnight's company had many guns and a cannon. This excited their fears and they gave evident symptoms of alarm. On the same day a party of Indians came in, as from a hunt, and the Americans were told that two Camanches of their village had just been killed by Osages. The whole army then decamped and removed fifteen miles further south. The three prisoners heard moaning and lamentation for the deceased in two lodges, during the whole night. For seven days they were kept awaiting McKnight, when the Indians upbraided them with his failure and pretended treachery, but permitted Potter and Ivy to go out for the Spanish interpreter. They came in much surprised that McKnight had not appeared. I instantly conjectured his fate. A man sent by me down to the unfinished Fort, returned with the information that the letter, I had left, was still there. Robert McKnight returned with Potter and Ivy to the Camanche village, and here he charged the Indians with the murder of his brother. His conduct among them was like a mad man's, storming and raging with no regard to consequences. At length they were persuaded, on the assurance that I was at the Fort, to send out forty mounted warriors, with McKnight, while the rest remained as hostages. On the third day after Robert McKnight went out, I saw an Indian on a mound, surveying our encampment. I hoisted the flag and fired the swivel, when he was soon joined by others, all splendidly mounted on the best of horses, and I noticed Robert McKnight on a mule in their midst, and guarded. They stopped on the hill as if waiting for a parley with us, and I took my pistols, placed a plume in my hat, and went out to them. McKnight pointed me to their Chief, who was a Towash, and whom I invited into the Fort. He advanced with his band very cautiously and when within two hundred yards of the Fort alighted and walked around to the river bank, looking for some traces of the Osages. Finding none, but still suspicious, he entered the Fort and examined every nook and corner of it, and then looked at my goods. He appeared satisfied and called to his company, who rode up; but before they would enter the Fort, they searched up and down the river bank for vestiges of their enemies. I entertained them with boiled buffalo meat, and while they were eating I enquired of McKnight if Big Star was at the village. He said no, and that these were another tribe whom I had not seen before. I remarked to him that I recognised one Indian among them, whom I had certainly seen before, and had endeavored to hire as an interpreter, at the village where we were robbed in my former trip. His name said I is Whon, ( from the Spanish John ). As I mentioned his name the Indian raised his head, looked at me and instantly cast his eyes on the ground. The Chief asked the interpreter what I said, and on hearing it, asked me where I had seen Whon. When I had told him of our former acquaintance,

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

he and Whon conversed together a moment, when Whon arose and threw his arms around my neck and asked in Spanish how I had been. McKnight asked why he had not spoken to him in Spanish as he spoke it so well. He said he had come to see if I was really the man spoken of by John McKnight and that he had been commanded not to speak Spanish or let us know who he was. John McKnight had told them as plainly as he could by Potter, that I had visited their country the year before, and had now returned because I had promised Cordaro that I would do so, for the purpose of trading with them. The Chief now told me that the nation would not come to the Fort to trade, on account of the Osages, and I agreed to go with them in the morning with goods to their village. McKnight proposed in the night to put all the goods into the boats and escape down the river, as they had undoubtedly killed his brother and might do the same deed upon us all. He was an impulsive, passionate man, with but little cool reflection. His courage in the midst of danger was of the highest order and perfectly unyielding, but he was unfit for a leader or guide in critical situations, requiring coolness and presence of mind. I refused to attempt an escape as utterly impracticable, and the height of injustice to the men who were in custody with the Camanches. In the morning I started alone with four mules loaded with goods and escorted by the Indians under Alsarea, for the village, where we arrived in the evening and were met by the head Chief about two miles from the town. He appeared friendly and took the goods and deposited them in his lodge. Potter and the other hostages were all in safety and had been well treated. They informed me that my old and formidable enemy the One-Eyed Chief was in the village. On the next morning, I prepared for trading by making presents, according to custom, of knives, tobacco, cloths for breech garments, &c., which, though a large heap when together, made a small appearance when divided among all this band. The trade then began. They claimed twelve articles for a horse. I made four yards of British strouding at \$5.50 per yard and two yards of calico at 62 cents to count three, and a knife, flint, tobacco, looking-glass, and other small articles made up the compliment. They brought to me some horses for which I refused the stipulated price. They then produced others, which were really fine animals, worth at least \$100 each in St. Louis. I bought seventeen of these, but would not take any more at the same price, the rest being inferior. The refusal enraged the Chief, who said I must buy them, and on my persisting in my course, drove away the Indians from around me, and left me alone. After a short time he returned with a request that I should buy some buffalo and beaver skins, to which I acceded. He went away and the woman soon returned with the fur and skins, of which I bought a much larger quantity than I wished then to have on my hands. The Chief again came up and drove away all my women customers, and I was again left alone with the three who had come with McKnight. No Indian came near me for the rest of the day, and I sauntered around the village and amused myself as well as I could till night-fall. During this time and most of the night before I had heard moaning, lamentations and weeping from two lodges in the outskirts of the village, on account of the two Indians, killed, their countrymen said, by Osages, but who undoubtedly met their death from the hands of John McKnight, fighting desperately in his own defence. In the evening the old Chief in whose lodge I staid, entered my tent with five old Indians, and all with a grave and solemn air sat themselves down in silence. The Chief, who was a little, low flat headed and simple looking old man, soon arose, took a pipe which he filled with tobacco and presented it to each of his companions in succession. He passed me by unnoticed and all regarded me with lowering brows. This I knew portended evil, and I feared the worst. After they had all smoked, the Chief made them a speech

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

in Camanche, which I knew nothing of, and then turned to me and spoke in Spanish fluently. I understood perfectly, every word he uttered and heard him with intense interest. He asked when I was going away. I replied that I was an American and had come from my own country, a great distance, to trade with his people, because I had promised the Chief Cordaro the year before that I would come; that I had done according to my promise and brought them guns, powder, knives, tomahawks, and other things which I knew his people wanted. The Chief replied that they did not want to trade, but wished me to go immediately out of their country. "We are going to the Nachatoshauwa, ( Red River) and you must leave us." I offered to accompany them. "No, no," said he, "our meat is scarce, the game is scarce; you must not go; away! away! (waving his hand) go out of our country." I felt that my fate and that of my men rested with this council, and that as they arose friendly or hostile, should we live or die the death of John McKnight. This old Chief evidently wished me to start on my way back to the Fort, and intended then to pursue me with his warriors and make my scalp and goods the prizes of the race or the spoil of the battle. I concealed all alarm in my demeanor, and reaching back as I sat to a tobacco keg, I broke off twelve plugs, and took out of a box six wampums, which are strings of long beads, variously colored, and greatly prized by the Indians. I then took out my calama or Indian pipe, and slowly filled it with tobacco, saying in an under tone and a musing manner, as if speaking to myself as much as to them, I shall have to go back to my own country after coming all this distance to trade with my red brethren, and when I tell the people of my nation how our red brothers have treated me, they will never come into this country. I have bought every thing that my red brothers want for war or for peace, guns and powder and ball, and clothes for their women, and now they are driving me out of their country like a spy or a thief, instead of a friend and brother as I am. When I had lighted the pipe, I presented it with one hand and the two plugs of tobacco and a wampum with the other, to the Chief, saying to him, this is better than you get from the Spaniards. I well knew the sacredness of this offer, and that the Indian dare not offend the Great Spirit by refusing a present of tobacco and wampum, even from his bitterest enemy. The Chief hesitated long, but at last slowly raised his hand, took my presents and smoked the pipe. Giving one puff to the skies, one to the earth, two to the winds and waters on the right and left, and then a few whiffs on his own and our accounts, he returned the pipe to me. In the same manner I presented it to an old Indian who sat beside me, and who kept his head down and his eyes shut. I held the presents close to his face for some time, when the Chief spoke to him, and he slowly raised his hand without looking up, took the presents, smelled of the tobacco, pressed it to his heart and raised his head with a smile. Then white man had gained the ascendant. The scene changed and all was friendly welcome where before was nothing but menacing and frowning coldness. All the others now received my presents and we smoked out the pipe in the friendship and confidence of brothers. The Chief then very earnestly asked me if I had seen the Osages. I said, I have not, but you know that this is their hunting ground and they may be in the country. They said they knew this, and some further conversation established our intimacy on a firm footing. The Chief then went out into the village and proclaimed in a loud voice that all should prepare to go next morning, over to the Canadian, to trade with the Tabbahoes, their white friends. Before this we were called Americanos, which was a less familiar and friendly appellation than the former. The proclamation was continued by the herald on horseback till late at night, each sentence ending with Tabbahoes. "Get up your horses and make ready to go over to the white man's and trade with the Tabbahoes. They have come a great

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

way and brought us many good things — the Tabbahoes are good.” This was loudly sounded before my lodge, and throughout the village all was preparation, joy and gladness.

About sundown Potter entered our lodge with the greatest alarm depicted in his countenance, and gave me a gun barrel which the One Eyed Chief had just thrown down before him, and told him to carry to me. This was the last man on earth that I desired to see, for I regarded him my most deadly and most dangerous enemy, who had probably killed John McKnight and was now seeking my blood. I asked Potter what else he said, and as he answered, “nothing more,” he looked out and exclaimed, “there he is now, sitting on his horse. What shall I say to him?” I walked out to my old enemy and offered my hand. He took it with a steady and piercing look into my very soul; I returned his glance with an air of calm consideration and requested him to alight and enter my lodge. He did so, after delivering his horse to a bystander. In the lodge I motioned to him to be seated on a heap of skins. He sat down in silence and deep gravity. I lighted and smoked out the pipe with him in utter silence, and then took a silver gorges or breast-plate, and with a ribbon attached I hung it around his neck and placed two silver arm bands just above the elbows, and two upon his wrists. The warrior submitted to all this in passive and abstracted silence, as if unconscious of what I was doing. I then put two plugs of tobacco, a knife and wampum, in his lap, while he preserved the rigid and inflexible appearance of a statue. I again lighted the pipe and smoked with him, when he arose, without a word, went out, and rode off with great rapidity.

In the morning, all was confusion and busy activity in the village, and one half of the band started for the Fort before me. I followed with the three men, and without a guard. In crossing a creek near the village, a horse became entangled and I told the men to hasten on and take care of the goods, while I loosened the horse, which I did, and on crossing the creek found sixty men drawn up in two lines on either side and who closed around me as I approached them. I asked the Chief — who was Alasarea, the Towash — what he meant by this conduct. “Kesh, kesh, kinsable,” said he, “stop, stop; who knows but you are taking us over to your Fort to have us all killed by the Osages?” I asked him if he ever knew me to lie. He said he had not, but he knew that the Spaniards were great liars. That may be said I, but the Americans never lie. “I do not know the Americans, said he, but I know that the Spaniards are great liars. I then reiterated my bold assertion of American veracity and said, when your tribe robbed me on the South Fork and I promised to visit your village on the Canadian and trade with you, did I not go as I promised? “Yes,” said the Chief. And when Cordaro came to see me in Santa Fe, I promised him to go home and return with goods this year to your country. You know this, and have I not performed my promise? “Yes you have,” he said, and asked if I had not seen Osages. I told him I had not. With my words he appeared but partially satisfied, and reluctantly proceeded with me under a strong guard, but promised that my mules, horses, and goods, should be secured. In this manner I traveled all day, during which time the One Eyed spoke not a word to me. Late in the evening we crossed the Canadian and encamped on the bank. I was marched to the head Chief’s lodge, where I found the men at liberty and my horses, &c., in good order. I went into the lodge to prepare for passing the night as comfortably as possible, and was engaged in looking at my goods, when my enemy the One Eyed rode up and to my surprise addressed me fluently in the Spanish language. This was the first time he had ever spoken to me. The man who had done me more injury than any other human being, from whose hands I had twice, narrowly escaped a bloody death, such, as I had every reason to suppose, McKnight had suffered from him — this man spoke to me kindly and invited me to go

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

with him to his lodge. Suspecting treachery, I was loath to accept the invitation, and while I was hesitating, the old Chief came up, and called me to him. On hearing what the One Eyed wanted, he told me not to go, because "he is a bad man." Again the One Eyed came to me and repeated his request, which I refused peremptorily, and he walked a few steps away with an impatient, angry air, then suddenly turning around, he fixed his piercing black eye intently upon me, walked up to me and implored, with a beseeching look and tones, that I should go with him to his lodge. I saw that he was unarmed, while I had two pistols, a tomahawk, and knife in my belt, and could anticipate the first hostile motion from him; also, that we were four men, in the midst of three thousand, and entirely at their mercy should they design to do us any injury. I offered to visit the One Eyed on the following morning. "No, no," said he, "come now — oh! do come — come with me," in a tone of supplication. I, at length, yielded and walked on towards his lodge, till the village dogs attacked me so furiously that he was obliged to dismount from his horse to my defence. He then offered me a seat on his horse, in front of him. I mounted behind him as the safest position, when he applied the whip and flew with me to his lodge, which we entered and were received by one of his wives with smiles and glad welcoming. A wife of the One Eyed took his horse as he alighted. In the lodge I took a seat opposite that of the Chief, and, facing his arms which hung over his bed or cot of buffalo robe. I could thus watch his motions and foil any murderous design that he might manifest, by shooting him on the spot and making my escape on his horse. He lighted a pipe, however, and we smoked till his wife brought in some buffalo meat, of which we ate, while she apologised to me very kindly and politely for its poorness. "We have no marrow to cook with the meat and the buffalo are poor. It is the best we have, and you are welcome," said this charming squaw. The One Eyed only urged me to eat heartily, and when the repast was over, we again smoked the pipe in silence. Shaking the ashes into his hand, he slowly raised his head, looked into my face and asked if I knew him. I replied, yes. "Where did you first see me?" On the Salt Fork of the Canadian. "Where, the second time?" At the village on the Canadian Fork. "Did you know then that I wanted to kill you?" Yes I knew it. "True, I sought your life, and but for Big Star, the head Chief of the Ampireka band, I should have killed you and your men. I knew that you were traders with the Osages; you had their horses, their ropes, their skins, their saddles. The Osages had come and taken about two hundred of our horses, and I went out with a war party to recover them and punish the robbers. We found them, and fought a battle with them, in which my brother was killed. My brother was a great warrior, a good hunter and a good man. I loved my brother." He then talked in a strain of mournful eulogy on his brother, while the tears coursed down his face, and he ended in violent weeping. Recovering himself, he said that he had gone out on a second expedition to revenge his brother's death, when he overtook me on the Salt Fork of the Canadian, and there intended to murder our company. He then put the ashes which he held in his hand, on the ground, and taking a handful of earth from the fire place, covered the ashes with it, patting it three times with his hand. Another handful he used in the same manner, and then a third, during which time he moaned and wept violently; so much so that I was uneasy for my own safety in this outbreak of grief. He then looked up with an altered countenance, and exclaimed, "there, I have now buried my brother; but I have found another. I will take you for my brother;" and in a transport of feeling he embraced me with the words, "my brother my brother." He then placed a charm around my neck, which he said would protect me from all enemies. It had been his brother's, but when going into his last battle with the Osages, the owner left it behind with his

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

blanket, and therefore, was killed. He then asked if the old Chief had tried to dissuade me from coming to his lodge, and on hearing that he had, he said: "He is an old fool: he does not know whether he will kill you or not, and he wants me to be your enemy, so that he may have my assistance should he determine to destroy you. If he dreams a good dream he is pleasant and friendly to you; if a bad one, he is grum and gloomy and wishes me to join him in killing you. He is an old fool. He and his men expect to get back all the horses that you bought of them at the village, and that was the reason of their selling so many of the best to you; but you are now safe, you and your property. They shall not harm you or take back any of the horses. Though my men are few, yet every Indian in the nation fears me. They shall treat you well. I will describe you to all the nation, so that whenever you come among us you shall be safe from all danger. I will tell them you are my brother." We then conversed on various subjects, the battles he had fought, his ideas of religion, &c. He bore proofs of his courage on his person, in five wounds; some of them large and dangerous. An arrow had pierced his left eye and a lance his side; but owing to the charm, or "medicine," which he wore, his enemies had been unable to kill him. He had been christened in the Spanish country, and said, "I believe as you do in the Great Spirit. If I do well I shall go to a good place and be happy. If I do badly I shall go to the bad place and be miserable.

On taking leave, I requested him to accompany me to keep off the dogs. Take my horse said he. But how shall I return him? "You will not return him, you will keep him my brother — keep him in remembrance of me." I left with a lighter heart than I had brought to the lodge of the One Eyed Chief. I counted much on the benefit of his friendship, and subsequent events proved that I did not overrate its advantages. I met the old Chief on my return, who asked me if I had bought the horse of the One Eyed. His countenance fell on hearing the manner of my acquiring the animal, and he requested me to exchange for a fine spotted war horse of his own, and then offered to give two for that of "my brother's". I refused the insidious proposal, which was intended only to sow dissension between me and my new friend, and the Chief appeared very angry at his failure. Early the following morning, I saw the One Eyed Chief coming with two ribs of buffalo meat, and calling to me moneta, moneta, (my brother) "your sister has sent some buffalo meat for your breakfast." The Chiefs of the army, who were all present and heard this unexpected salutation, looked at each other in astonishment at this extraordinary treatment of me by their greatest brave, who so lately appeared so implacable in his hostility to me. Their conduct towards me and the men immediately changed. No guard was, after this, kept over us, and we were treated with respect and kindness. My powerful "brother," put a new face on our affairs and very probably saved us from the fate of McKnight. We now proceeded towards the Fort, the One Eyed riding by my side and talking very good humoredly and with great animation on a variety of topics. About the middle of the day I noticed preparations making by the warriors as for battle. I asked the One Eyed what this signified, and before he could reply, Alasarea rode up and exclaimed, "Osages, Osages, a heap," and asked me whether I would stay or go over to them. I will stay said I. "Will you fight for us?" I will, said I, and the One Eyed laughed and said they were only wild horses that had caused the alarm. I ascended a mound with him, whence I could observe the manner of catching these animals. In an incredible short time one hundred were captured and tamed so as to be nearly as subject to their masters as domestic horses reared on a farm. A small party of less than a hundred well mounted Indians were in ambush, while a multitude scattered themselves over the prairie in all directions and drove the wild horses to the place where the others were concealed,

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

which was a deep ravine. As soon as the wild drove were sufficiently near, these last rushed among them and every Indian secured his horse with his lasso or noosed rope, which he threw around the neck of the animal, and by a sudden turn brought him to the ground and there tied his heels together. This was the work of a few minutes, during which both horses and men were intermingled together in apparently inextricable confusion. The whole drove was taken at the first onset, except a fine black stud which flew like the wind, pursued by a hundred Indians, and in about two hours was brought back tamed and gentle. He walked close by the Indian who had captured him, and who led him by a rope and wished to sell him to me. I feared his wild look and dilated eye, but his Indian master and protector said he was gentle and gave me the end of the rope with which he led him, when the noble animal immediately came near to me as to a new friend and master. He seemed by his manner to have ratified the transfer and chosen me in preference to the Indian. In twenty-four hours after their capture these horses became tamed and ready for use, and keep near to their owners as their only friends. I could perceive little difference between them and our farm horses. The Indians use their fleetest horses for catching the wild ones, and throw the lasso with great dexterity over their necks, when by turning quickly round and sometimes entangling their feet in the rope, they throw them on the ground, and then tie their legs together two and two, after which they release the neck from the tightened noose which in a short time would produce death by strangling. The sport is attended with the wildest excitement, and exceeds in interest and enjoyment all other sports of the chase that I ever saw.

A thunder shower now blew up, and the army stretched their lodges and encamped. After the shower, a war party of about seven hundred men, under the command of Alasarea, started with me for the Fort, where we arrived about sundown. Each Indian was armed with a short gun, a bow and arrows, and a lance; some had pistols, and each had two horses, one of which he rode for marching, and one, his war horse, which he led, for the battle. Their appearance was formidable indeed as they approached the Fort, and somewhat alarmed the garrison. They encamped for that night outside of the Fort, and in the morning I made them presents with which they were greatly pleased. At about ten o'clock the whole Camanche army came in sight, when some of my company were still more alarmed than they had been the day before. Several who before starting, talked boastingly of making a razor strap of an Indian's skin, now lay in their tents quaking with fear and sweating cold drops. This was the first Indian army they had ever seen, and their courage fast melted away before the spectacle. Come out, said I to them, now is your time to get a razor strap. The Camanches encamped in front of the Fort, on a space a mile and a half in length and about half a mile wide, and exhibited a friendly disposition. I traded with them for horses, mules, beaver fur, and buffalo robes. The former I sent as fast as I bought them, to a drove about a mile from the village, under charge of three men. On the morning of the third day four Indians, armed, went to the drove and took four of the best horses, in spite of the resistance of the guard, who were intimidated by their violence. I immediately went to my "brother," the One Eyed, and informed him of the robbery. He mounted his horse, with whip in hand, and in about two hours returned with two of the stolen horses. In the afternoon he brought back a third, and at night, came up with the fourth. His whip was bloody, and his face distorted with rage. He was in a mood to make men tremble before him, when none but the boldest spirits would dare to cross his path or oppose his will. After he had left the last horse with me, I heard his voice in every part of the camp, proclaiming what, the interpreter told me was a warning for the protection of my property. "Your horses

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

are yours," said he, "to sell or keep as you please; but when you once sell them you cannot take them back. My brother has come from afar to trade with you and brought things that are good for you; and when you have sold him your horses and got your pay, you must not take them back." After this I was not molested again in a similar manner. The One Eyed Chief spent much of his time in my trading house, and assisted me by his advice and influence over the Indians. He allowed me to judge of the horses for myself, but selected the buffalo robes for me and settled their prices. I bought many more of the latter than I brought back with me and might have purchased thousands. One plug of tobacco, a knife and a few strings of beads, in all worth but little more than a dime, bought one of these valuable skins or "rober," worth at least five dollars in any of the States.

The Indians had with them a great many young Spaniards as prisoners, one of whom, an excellent interpreter, wished me to purchase him. I offered the price of ten horses for him, but without success. I gave him many presents, which, he said, his masters took from him as soon as they saw them, and he requested me to give him no more, as said he, "it is of no use." He was an intelligent and interesting boy.

The Indians spent much time in drilling and fighting mock battles. Their skill and discipline would have made our militia dragoons blush for their inferiority. They marched and counter-marched, charged and retreated, rapidly and in admirable order. Their skill in horsemanship is truly wonderful, and I think, is not surpassed by that of the Cossacks or Mamelukes. I frequently put a plug of tobacco on the ground for them to pick up when riding at full speed. A dozen horsemen would start in a line for the prize, and if the leader missed it, the second or third was always successful in seizing it, when he took the rear to give the others fair chance in the next race.

There were six Pawnees from the river Platte, among these Camanches; one of whom came to me and said he knew me. Where did you ever see me? "At the Osage village, said he, when you were buying horses." I then recollected that this Pawnee with several others had come into the village to make a treaty. He knew O'Fallan, of Council Bluff, very well, and gave me some news of the Upper Missouri, and the traders there. He went off and soon returned with several Camanches, and again talked about the Osages and my trading with them. Perceiving his treacherous purpose, I made no reply to his remarks which were as follows: "I saw you with the Osages; you bought horses of the Osages. Do you know where Osage village is? Is it not here?" marking on the ground the courses of the Arkansas, the Grand and the Verdigris rivers, and pointing to the place of their enemies' village. At last I told him I knew nothing about the Osages or their villages, which seemed to enrage him greatly, and he reiterated his assertions about having met me among the hereditary enemies of the Pawnees and Camanches. Seeing the evil suspicions produced by his talk among the Indians, and the necessity of putting down the bad report without delay, I went to my "brother" and told him the Pawnee was setting his countrymen against me. He immediately went with me to the head Chief's lodge and had my Pawnee enemy brought before him. Fixing his dark eye upon him, the One Eyed Chief regarded him a moment in silence, and then said, "we have treated you well ever since you came among us. You lied to us when you said that you had seen the 'white haired man' (meaning John McKnight) at the village of the Osages. And now you say you have seen my brother, too, among the Osages. This is all a lie. You are trying to make mischief between our people and my brother, and if you say any thing more against him I will drive you out of the nation. You shall not stay with us." The Pawnee trembled under this rebuke and walked off in

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

silence, with the manner of a whipped spaniel. I heard no more from him.

On one occasion my "brother" asked permission to bring, in the evening, a party of his friends into the Fort to dance, and I consenting to the proposal, a party of forty, headed by the One Eyed, entered the Fort and danced for several hours, to their own singing and the sound of bells on a wand, carried by their leader. They were gorgeously attired in the height of Indian fashion and bon ton. They wore eagle and owl feathers, and were gaudily painted in every conceivable manner. The One Eyed wore a showy head dress of feather work, from under which, the false hair fell to the ground; they all danced with wonderful agility and grace, and kept time better than most of dancers in more civilized and fashionable life. At the close they danced backward out of the gate, the Chief in front driving them with his wand, and they, in compliment to their host, feigning reluctance to go. With a loud shout of pleasure they at last went out together with regularity and order.

At night we were aroused by shouting and singing on all sides of the Fort, and we took our arms to repel an attack. I saw hundreds of Indians, most of them young men, clambering up the sides of the Fort and trying the doors to get in. The noise suddenly ceased and in the morning the One Eyed told me that the young men had taken the opportunity when the old men were asleep to improve their acquaintance with me and to get some presents of tobacco as the dancing party had done in the evening before, and that he had quelled the disturbance and driven them off. I heard among this party, both here and at the village where I first met them, the sound of moaning and loud wailing in two lodges, from a short time before sun set till dark. I had made a present of a gorges and arm bands to the Chief who befriended me so much on the Salt Fork of the Canadian in my former expedition, and who was now in the village. A young Indian came to me, one evening, with the gorges and arm bands as a token, and requested me to go and see this Chief in his tent. I went with the young man towards the tent whence the sound of weeping was heard, and when within thirty steps, the messenger stopped and looked at my feet. I noticed that he was bare-footed; he took off my shoes, and with me approached the Chief, who was sitting in front of his lodge with bare feet, like the spectators who were standing deferentially around; and on the ground I saw two women and two girls, also barefooted and smeared over the heads and faces, with mud and ashes. These were the same, whose voices I had heard on first entering the Camanche village. They were now rolling on the ground from side to side and weeping violently. Occasionally they scattered ashes over their heads, and after short intervals of quiet, arising from exhaustion, they would burst out afresh in irrepressible fits of weeping and sobbing. The Chief arose, took me aside, and said that I could make these women stop crying. On my enquiring how I could do this, he replied, "by covering them with cloth;" meaning calico. I went to the store and got four pieces of calico, with which I returned, and covered each with a piece. The Chief now spoke to them in his language, and appeared to console them, and remonstrated against any further exhibition of grief. Their crying gradually subsided into deep, long drawn sobs and hiccoughs, like those of children after violent weeping. From this night forth I heard their lamentations no more, and a few Indians who had heretofore been cold and distant, now became friendly to me. I concluded that McKnight, in fighting for his life, had killed the husbands of the women and fathers of the two girls who were thus lamenting, and that they required a token of friendship from me as an atonement and sign of reconciliation. The Indians had now discovered their mistake; that in killing McKnight they had destroyed a friend instead of an enemy, and all

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

regarded me more kindly on account of their own injustice to my friend. The One Eyed Chief, who was probably foremost in the murder, had taken me to his heart as his only brother, and was now ready to die for me, to atone for depriving me of my bosom friend, McKnight — “the white haired Tabbaho.” The Pawnee’s tale of having seen McKnight at the Osage village, was, I suppose, the reason for dispatching him; and in doing this, they had met with a desperate resistance from their victim, who was well armed and a most excellent marksman. The One Eyed did all in his power to recompense me for his loss. He was my fast friend, and exerted himself to the utmost to advance all my interests and wishes. His wife daily sent to her “brother” some delicacy, such as buffalo tongue, carefully cooked by herself. I began to be reconciled to a savage life and enamored with the simplicity of nature. Here were no debts, no Sheriffs or Marshals; no hypocrisies or false friendships. With these simple children of the mountains and prairies, love and hate are honestly felt and exerted in their full intensity. No half-way passions, no interested feelings govern their attachments to their friends. When once enlisted for or against you, little short of Omnipotence can reverse the Indian’s position. He loves and hates with steady persistence and consistency, and generally carries his first feelings regarding you, to his grave. His revenge is sure, his love is true and disinterested. You can count upon either with certainty, and need entertain no fear of being deceived as to their operations.

A scouting war party on one occasion, brought in seven American horses, shod and branded, a tent, a kettle, an axe, and some other articles, which I knew must have belonged to a trading party. They brought up the horses to the Fort to have the shoes taken off by our blacksmith, when I charged them with the robbery of my countrymen. They denied the charge, and said that they had taken this spoil from a party of Osages with whom they had had a battle, and exhibited, in proof of their operations, two scalps as those of their deadly enemies, the Osages. I learned, at Barbour’s, on my return that they told me the truth. The Osages had robbed a Santa Fe company and were themselves attacked in the night, by a party they knew not of what tribe, who killed two men and robbed them of the booty I have mentioned. It was a fair instance of the biters being bitten, the game played by Prince Hal upon Falstaff, who, after robbing four travellers was attacked by the Prince and plundered of his spoil. From the warriors of this scouting party we learned that the whole nation of Osages was very near to us; being encamped on the Salt Fork at the distance of about a day’s journey, and they advised us to leave our present position for one of more safety. The Camanche Chiefs held a council of war, or grand talk, and determined to go out and give battle to their enemies. On the next day they sent all their women and children up the river and went themselves, with their warriors, towards the Salt Fork in quest of the Osages. When the last of the nation were about going, an Indian came to me and claimed his horse, which another Indian had sold to me without his authority. I was about to give him the horse, when the One Eyed came up and enquired into the case, which he decided at once in my favor and told the claimant he must look to the Indian who sold him, for his indemnity. Not liking the law of this decision, I paid the Indian for his horse, and he went away satisfied and highly pleased. Before starting, the Chiefs in a body, came and expressed great friendship for me and regret at leaving me as they were compelled to do. They said they wanted the American trade, and united in requesting me to encourage my countrymen to visit them with goods and trade with them. Trade with the Spaniards they said, was unprofitable; they had nothing to give them for their horses except ammunition, and this they refused to sell to the Indians They wished the Americans to be friendly and intimate with

Three Years Among the Indians and Mexicans

---

them, and complained bitterly that we supplied their enemies, the Osages, with arms and ammunition with which they made war upon the Camanches. "The Osages" said they, "get their powder, balls and guns from the Americans, but we can get none, or very few from them; this is wrong, very wrong." The One Eyed, and several other Chiefs wished to visit their "Great Father," the President, and have a talk with him. They would have offered to accompany me to my "village" to see the Great Father, but said they, "you cannot defend us from the Osages, the Cherokees, and the Choctaws; these nations are all at war with us, and we should have to go through their country. But tell our Great Father when you go back to your village, that we want him to stop these nations from stealing our horses and killing our people, as they have been doing for many years! Tell him to protect us and send his people out to trade with us. We will not hurt his people, but will defend them when they come among us. We will be brothers with the Americans." The Chief of the Towashes told me that his tribe lived on the head waters of the Red River, and owned sixteen thousand horses, which were better than any I had bought of them. Judging from those which his warriors rode, I could believe what he said respecting the quality of their horses. He wished me to visit his tribe and trade with them. Many things did these wild Chiefs tell me to say for them to the "Great Father" when I reached my "village," and all insisted very earnestly that I should return to them in the Fall with goods, and bring the answer of their Great Father and all he said about them. "Then," said they, "we will go back with you and talk with him face to face." My "brother" told me to ascend the Red River in the Fall, and I should find the nation not far from the three big mounds near the head of that river, by which I suppose he meant some spurs of the Rocky mountains. "And when you reach these mounds," said he, "you will see the smoke from the grass that we will burn every day so that you may find us. You can come with but two men and you shall be safe. I will speak of you to all the Camanches, and tell them you are my brother: and none will hurt you. You can travel without fear through all our country; no one will dare to injure you or take your property." At parting with the Chiefs, they all embraced me most affectionately. My "brother," especially, showed all the feeling of a real brother; he threw his arms around my neck and burst into tears. Alasarea, the Towash, came to me last, and sat down with a grave and serious countenance. He several times struck his breast and said his heart was troubled. On my asking him the cause of his trouble, he said "when you came here, you had twenty-three men and now you have but twenty-two; one is dead. You say he was a good man." Yes, said I, he was a very good man. "You do not know how he was killed." No, I do not, but perhaps I shall know one day. "Many Camanches," said he, "are bad; many Quampas are bad; many of the Arripahoes are bad; many Towashes are bad, and so are many Pawnees. Some of all these are bad and they all hunt in this country. They might have killed the white haired man. He might have wounded a buffalo and been killed by him. A rattlesnake might have bit him. He is dead and you know not how. Here is my war horse Checoba. I give him to you: no horse among the Camanches will catch him. He will carry you away from every enemy and out of any danger." With this he led up a splendid black horse, worthy and fit to have borne a Richard Coeur De Leon, or a Saladin, into their greatest battles. No Arab could ever boast a finer animal than this; the finest limbed, the best proportioned, the swiftest and the most beautiful I ever saw. I brought him home, but before leaving the wilderness, his speed was greatly impaired by the bite of a rattlesnake.

Chapter VII

We start for home — A stampedo — Loss of a hundred horses — Interview with a Chief and his

tribe — Pursued by Indians — Passage through the Cross Timbers — Death of horses by flies — Night travelling — Arrival at the Arkansas — Death of horses by the Feresy — Loss of skins and robes by embezzlement — Start for home — Breakfast with a Cherokee Chief — James Rogers — An old Cherokee — Interview with Missionaries — Arrival at home — Troubles from debt — An emergence at last — Conclusion.

AFTER PARTING with these simple children of nature, we prepared for our departure homeward. On the next day after packing up the goods, we abandoned the Fort and began to descend the river in perogues and by land, with the horses. Those in the boats who started before the others with the horses, were to stop at the unfinished Fort one hundred miles below, and there await them. I travelled by land with the horses and met with no occurrence worth mentioning till the second day. Then commenced a series of misfortunes and unavoidable accidents, which continued till I reached the settlements, and which destroyed all hope of profit from the adventure, and the consequences of which, have weighed upon me to this day with a crushing weight. As we travelled along the north bank of the river, a small herd of buffalo suddenly rushed out from the river bank on our left, before the horses and frightened many of them into a stampede as the Spaniards call the thundering sound of their stamping, flying hoofs on the prairie. A few of the men rode after them and succeeded in turning them back; but their shouts and use of the whips gave them another fright and they returned in a stampede among the drove, and thus spread the panic among them. About one hundred ran off at a furious rate, on the route of the river by which we had come. Placing the best rider in my company on Checoba, I ordered him to try his best speed and bottom in the pursuit. He started and ran sixteen miles, where he headed the flying horses that had become mingled with a wild drove, and he was driving them all before him and Checoba, when a rattlesnake bit the noble animal on the fore foot. Checoba immediately sickened and was brought back with great difficulty. On the following morning his foot and leg were swelled, and he was very lame and weak. I placed him in mud and water where he stood for several hours, when the swelling subsided and he was much relieved. By this accident I lost all the horses which ran off in the stampede, and Checoba was materially injured for life. I remained till the next morning, when Checoba was able to travel, and I started with him in advance of the company. Soon after crossing a small branch, I saw an Indian about two hundred yards ahead in the prairie, who riding onto a high mound, hailed me with the word Tabbaho? As I replied, yes. I perceived several Indians approaching me from the prairie and my company behind, also observed them. McKnight and Adams hastened to reach me before the Indians, who came up friendly, and spoke to us in the Spanish language. As we three spoke Spanish, they took us for Spaniards, and said that they were of the Caddo tribe, who were in alliance with the Camanches. Some of the latter tribe and a number of Towashes were in their party, which they said was on its march behind them. They had just come out of a battle with the Osages, by whom they had been defeated, and were proceeding to tell us of the battle when I observed a party of about two hundred Indians coming towards us and also noticed a small grove a short distance before us. I ordered my party to hasten forward to this grove and occupy it in advance of the Indians. As they drove the horses forward, the rope which held the pack on a horse, which I had brought from home with me, got loose and was trod on by the horses behind, which pulled the pack under his belly. He started forward, kicking and pitching until he had got rid of his load, and then returned at full speed among the drove, which broke into another stampede. Off they flew, and many of them ran entirely out

---

of sight on the level prairie, with the speed of birds on the wing. I lost about thirty in this flight. We reached the grove at the same time with the Indians, who then discovered us to be Americans and not Spaniards, which greatly displeased some. The Chief, however, was friendly. An Indian took up and examined McKnight's gun, which he had left leaning against a tree, and riding into the crowd, brandished it over his head, exclaiming that we had stolen the horses; that they ought to take them from us and kill us. The old Chief ordered him to be silent, and he said if they would not kill us he would go and bring men who would do so, and started off in a gallop towards the Canadian with McKnight's gun. Many of the Indians charged us with having stolen Checoba from Alasarea the Towash, and seemed to believe the charge, and to consider us thieves who had been preying upon their countrymen. One who appeared to be the most blood thirsty, shot an arrow into the side of one of their own horses near the lights. The horse bounded forward and fell dead. This act excited them to the highest pitch, and the old Chief had great difficulty in protecting us from an attack; by an harangue and a decisive course he at length assuaged their animosity and excitement. Their late defeat by the Osages had embittered their minds, and pre-disposed them to view us with suspicion. Seven men among them carried wounds received in the late battle, and by request of the Chief I dressed these wounds with salve and sticking plaster. While I was thus engaged, I sent the men forward a short distance, when they awaited me with their rifles ready to return the fire of the Indians. But they parted with us peaceably, and the Chief with great cordiality entreated me to return to his country and trade with his tribe. We want, said he, the friendship and trade of the Americans. I always observed that the most sagacious and far-seeing of the Camanche Chieftains sincerely desired the friendship and alliance of the Americans. A proper course towards them will make them our fast friends and most valuable allies. An opposite one will render them most deadly and dangerous enemies, and especially so in the event of a war with England. A course of justice, fairness and liberality is the only judicious one; and in dealing with them, the greatest tact and much knowledge of Indian character is requisite for success in gaining their confidence and securing their lasting esteem and friendship. The Pawnees and all the tribes west of the Osages, called by the national name of Camanches, are all of the same original tribe, though bearing various names, and all speak the same language. They are in the strictest alliance with each other, and could probably muster a force of forty or fifty thousand warriors at the time I was among them. The United States should provide against the consequences of their hostility. After parting from the Caddo Chief, I sent the company with the horses forward, and remained behind with McKnight to watch against pursuit by the Indians. Finding that we were not followed, we hastened on and overtook the rest of the company, and all reached the unfinished Fort in the afternoon, where we found the perogues and swivel in charge of the men who had brought them down the river and were awaiting us according to arrangement. We travelled on in company till night fall, when the land party crossed the river at a bend and encamped with the others in a grove. We carefully secured our horses. On the following morning, as we issued from the timber into the prairie, a dead buffalo cow was seen with her calf standing near her. We soon saw another cow lately killed by a party evidently in pursuit of us. We travelled in company with the perogues, that we might have the benefit of the swivel in case of an attack. In the Cross Timbers, which we reached in four or five days after leaving the last mentioned Fort; we again parted company with the perogues and struck out into the prairie. Here we soon afterwards observed a herd of buffalo running rapidly with their tongues hanging out of their mouths, and also, eight Indians mounted,

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

who did not perceive us. In three days we passed the Cross Timbers and reached the long-grass prairies on the east of them. Here the horse flies were so numerous and ravenous as nearly to destroy the horses which were frequently covered entirely by them. Many of the horses died and all were wasting away under the inflictions of these venomous insects. To avoid them, we travelled only by night and slept by day. I took the direction by guess and in eight days, or rather, nights, we struck the Arkansas just five miles below the three forks, where Fort Gibson now stands, and the point which I was aiming to reach. I went up to the forks where Barbour's trading establishment was then situated and there obtained a canoe. Barbour, I afterwards learned, had died in New Orleans, whither he started with my keel boat on my outward trip. We travelled down the Arkansas to the mouth of the Canadian, and found the rest of my company with the perogues, awaiting us at the Salt works. Here I took an account of my stock, and found that out of three hundred and twenty-three horses and mules which I had purchased of the Indians and started with for home, I had lost by flies and stampedos, just two hundred and fifty-three, leaving but seventy-one now in my possession. These I allowed to rest one day, and on the next day lost five of them by a disease called the Feresy, which causes a swelling of the breast and belly and generally terminates fatally. On the day and night following, eight or ten more of the horses died and about twenty were sick with the disease. I was too anxious for my family and too desirous of seeing them to delay my departure any longer. Here, at the mouth of the Illinois River, a branch of the Arkansas, and near the mouth of the Canadian, I left the few horses and mules remaining, and the perogue containing the skins and robes, in charge of Adams & Denison. I never saw them again and lost all — horses and mules, beaver skins and buffalo robes. I returned home with five horses; just the same number I had started out with. Most of them died, and those that lived were never accounted for to me. The skins and robes were sold by James Adams, at Eau-Post, in Arkansas, on the river of that name, and the whole proceeds, amounting to a large sum of my money, were embezzled by him, the said Adams. He had been employed by McKnight and was unknown to me. In every respect, pecuniarily and otherwise, this was a most unfortunate venture. I lost by it my best and dearest friend, John McKnight, and all the money I had invested in it, with the vain hope of being thereby set free from debt and made an independent man. The object was a great one, and the risk proportionately great. I lost all that I had set upon the stake and was still more deeply involved than before. A dreary future lay ahead, but I determined to meet and struggle with it like a man. Leaving the river, in company with twelve men, some afoot and some with horses, we directed our course for the Cherokee country. We found no game and for several days all suffered severely from hunger. We at length approached the Cherokee settlements; and I went forward alone promising the men to have a meal prepared for them at the house of John Rogers, a half breed Cherokee Chief. When in sight of his place I met Rogers and told him I wanted breakfast for myself and twelve men; that I had been among the Camanches trading, and that my company was coming up nearly starved. He replied that his tribe had been at war that year, with the Osages and had raised but a small crop, and that he had to pay one dollar per bushel for his bread "But," said he, "I will get you something to eat," and entering his house, requested his wife to prepare breakfast for twelve men, and with a smile, "twelve hungry men at that." I noticed in his house, all the usual furniture of our best farmers, and he was evidently living well and comfortably. The men came up, and by their rough exteriors, long beards and hair, lantern jaws and lank bodies, they strongly impressed me with the idea of a gang of famished wolves. They glared at Mrs. Rogers, while she

---

By Gen. Thomas James, of Monroe County, Illinois

---

was getting their breakfast, like so many cannibals, and had she not been very quick in appeasing their appetites, I cannot swear but that they would have eaten her up. She, the good woman, squaw though she was, exerted herself in our behalf like an angel of mercy, and in a miraculously short time she set before us a noble meal of bacon, eggs, corn bread, milk and coffee; there was enough for us all and we arose filled, leaving some on the table, not from politeness but from inability to eat any more. Well Mr. Rogers, said I, what shall I pay you for our breakfast. "What," said he, laughing, "would be the use of charging men who have just come out of the woods and cannot possibly have any money." No, said I, I am not begging my way; I will pay you with goods that I have. I then drew out my stock and sold him twelve dollars' worth, after paying for our meal. The father and sister of Rogers now came in and talked with us some time. The father, who was a white man, said that his son John killed the first Indian at the battle of the Horse-shoe, where both served on the side of the Americans under Jackson. "The Creeks," said he, "always fight till death. It takes one Cherokee for every Creek, and of the whites a little more than one for one." Both father and son spoke in the highest terms of Gen. Jackson, as a man, a soldier and a commander.

I requested provisions to subsist us till we could get a supply, and obtained from him sufficient to carry us to Matthew Lyon's trading house at the Spadre. Below this is a large Missionary station, which we were informed was well supplied with flour and meat, of which a boat load for their use had lately arrived. "If you find the missionaries in good humor," said Mrs. Rogers, "and do not go on the Lord's Day, you will be able to get some provisions, but not without. I was down at the station last week on Saturday and staid over Sunday. A Cherokee woman came in on Sunday from Piney, twenty miles above on the river, with some chickens to buy some sugar and coffee for a poor woman who had been lately confined. I interpreted for the woman, and went to brother Vail and told him what the woman wanted. I don't deal with the females, said he; you must go to sister — — . We went to the sister that brother Vail had named, and she told me that they neither bought nor sold on the Lord's Day. Then take the chickens as a gift said I, and give the woman what she wants. We neither give nor take on the Lord's Day, said she, and the poor woman had to go back with her chickens, and so I advise you not to go to the Missionaries on the Lord's Day." I could hardly believe that bigotry and fanaticism could go so far as this, until I found by experience, when I reached the station, that their meanness was fully equal to all I had heard. We left the hospitable house of the Cherokee Chief with many thanks and proceeded on our way. At a short distance from the Spadre, I was riding alone in advance of the company, when I met a gentlemanly and intelligent halfbreed Cherokee, of whom I enquired if I could procure provisions at that place. He said I could not, but invited me to alight and take breakfast with him. There are too many of us said I, twelve beside myself. This did not daunt him and he immediately extended his invitation to all, and the whole company accordingly entered his house and partook of an excellent breakfast, such as that which his brother had furnished us two days before. This man was James, the brother of John Rogers, and lived like him in comfort and elegance. His wife was a handsome half-breed, whom I presented with some articles of dress, against the wish of her husband, who refused all pay for our breakfast. He purchased of me goods to the amount of fifteen dollars and paid me the money for them. We passed the Spadre that morning, where I saw the grave of Matthew Lyon, a man who made a considerable figure in politics in the Alien and Sedition times of John Adams. "After life's fitful fever he sleeps well." At Piney I saw a number of

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

Indians, and enquired of them for provisions. We are hungry said I, and have nothing to eat. A negro woman said they were starving themselves and could not help us to any thing. I told the man we should be compelled to fast until we reached Weber's or the Missionaries. An old Indian who stood behind me during this colloquy, caught hold of my arm as I started on, and with a sharp enquiring look into my eyes, exclaimed, "nothing! nothing to eat?" Nothing at all said I. Come with me said he. I followed him about one hundred yards up the bank of a creek where he turned up a hollow and entered a cabin under the brow of a hill: going to the chimney he took from within it a stick holding three pieces of bacon and gave me two of them. I offered him money. "No, said he, I take no money, but when you meet a hungry Cherokee share with him whatever you have, as I have shared with you." Such conduct as this, thought I, is practical Christianity, call it by what name you please. Parting with this warmhearted Indian, we hastened on toward the Missionary station, which we reached the next day. This was situated on the north side of the river, and was composed of about one hundred persons, old and young, who occupied some twenty buildings arranged in a square. Here we hoped to obtain a full supply of provisions, being informed that one hundred barrels of pork and one hundred and fifty barrels of flour had lately arrived for the use of the Missionaries and their families. Entering the town I enquired for and found the head of the concern, named Vail, laid before him our destitute condition and misfortunes in the Camanche country, and asked him for provisions enough to last us to the settlements on the Little Red, seventy miles below. "Well, said he, I will speak to brother such a one about it," and went away for that purpose. Another man soon came up and asked me how much we wanted. I replied, about one hundred pounds of flour and fifty of pork. "Well I vow and declare, I don't know how we shall be able to spare it; how much would you be willing to give?" Any reasonable price said I; what do you ask? We are suffering from hunger and must have provisions. He left me, saying he would see brother Vail about it and I waited an hour without seeing either of them. I then searched out brother Vail and repeated my request for provisions. He vowed and declared that he did not think they had more than enough "to do them the year round." I then asked for one half the quantity I had named before. "We have a very large family, and if we should get out we could not get any more from the settlements." I said that what little we wanted would not make more than one meal for his family, and he could easily procure a new supply to prevent any suffering. "Well, said he, what would you be willing to give?" Set your own price on your property, said I, and I will give it, as I cannot do without provisions. He then went away, saying he would see the others, naming them. Robert McKnight now came from the blacksmith's shop, where he had got his mule shod on the fore feet and had been charged for that service the sum of two dollars. We concluded that they knew the price of horse-shoes, if not of flour and pork. Again I sought out the "brethren," Vail and the other, reiterated to them our wants, and requested relief as before: the eternal question was again put, what would you be willing to give? Any thing that you choose to ask said I. "We do not think we can spare any provisions," said one. They were waiting for a bid, and I determined not to huckster with the canting hypocrites, nor gratify them by paying an outrageously exorbitant price, which they were expecting to get from my necessities. Without further parley I left them and went up to the bakery of the Station, where some of my company were trying to get some bread. I offered to pay for whatever they could sell. "No, we can't sell any thing without brother Vail's permission. I offered to buy two or three bushels of fragments of bread, which I noticed on the table in a corner. 'We

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

use them in soups and for puddings and do not waste any thing." My men were now furious and ready to take possession of the bakery and divide it out among them. With great difficulty I restrained them from this act. I told them they would render us all infamous in the settlements as robbers of Missionaries, those holy men of God; that we should be regarded with horror by all, wherever we went, if we preyed upon these lamb-like and charitable christians. I told them we must go on and trust to Providence. "What!" said McKnight, "travel on without provisions when there are plenty of them here. I will have some if need be by force." I at length prevailed on them to start without committing any depredation. When leaving the town, I saw Vail at a distance, rode up to him asked, what are you doing here? "We are instructing the Indians in the Christian religion." I think, said I, you might learn some of the principles of your religion from the Indians themselves. An old Cherokee yesterday gave me two out of three pieces of meat which he had, and refused pay for them in money. He told me to do the same by a Cherokee should I meet one in want. Here you are afraid to put a price on your flour and meat for fear of not charging enough. You wish me to name an exorbitant price. You wish to make the most out of me and you shall make nothing. He was saying that charity began at home, he must provide for his own household and so forth, as I left him in disgust with his meanness and hypocrisy. We now left the river and bore eastwardly, and that evening killed a turkey, upon which we lived two days and a half, when we reached Little Red River, where we procured an excellent dinner, and a supply of food from a settler whose name I forget. This was the first meal we had eaten, sufficient to break our fasts, since we had left James Rogers' house, five days before.

From this place I hastened home without any occurrence of note. My family was sick when I arrived, and my creditors soon became more clamorous than ever: each endeavored to anticipate the others, and the executive officers of all the Courts, from the United States District Court down to those of Justices of the Peace, swarmed around me like insects in August. I gave up all my property, even the beds upon which my children were born, and after all was sold, though the officers supposed there was enough to satisfy the judgments against me, there yet remained a large amount still due. The whole is now paid: in the twenty years which have intervened, I discharged all my debts on account of these two expeditions of which the narration is now closed. I lost by them about the sum of twelve thousand dollars, and after all the hardships I had endured, found myself poorer than ever. The reader has been told how I incurred these losses, most of which were, perhaps, under the circumstances, to have been expected. I was the first American that ever went among the Camanches for the purpose of trading. Before my first trip among them, their name was unknown to our people: the Americans called them Pawnees and knew them only by that name. They were then wilder and more ignorant of our power than now, when they have probably learned that we do not all live in one village, and derived from their kindred tribe, the Pawnees, and other neighbors, a tolerably correct idea of our strength and numbers. Traders would now run very little risk of the robberies which I suffered from them, and probably none at all of being killed in time of peace. The trade would now be profitable; equally so as when I was among them, and from the greater cheapness of goods a greater profit could be made, while the dangers would be far less. Were it not for advancing age, I should repeat the adventures, notwithstanding their unfortunate issues heretofore. Age, however, forbids any farther attempts to retrieve my fortune in this manner. I have been enabled through the real friendship of a brother to support my family and give my children the rudiments and foundation of an education;

---

Three Years Among the Indians and Mexicans

By Gen. Thomas James, of Monroe County, Illinois

---

which, though not such as I would have given them had better fortune attended me, is sufficient, if properly improved, to enable them to go through the world with honor and usefulness. I have uniformly endeavored to instil in their minds principles of integrity and republicanism; and for myself, to bequeath, as the richest inheritance I could leave them, a good example and an unsullied name. With strong bodies and habits of labor, with honor and intelligence, they will succeed in a country of liberty and equal rights to all. I have always been true to my country, and uniformly studied to advance the interests of my countrymen in all my transactions with the savages and Spaniards; and I have my reward in the satisfaction derived from a consciousness and patriotic discharge of duty on all occasions. At the age of sixty-three, with broken health, I feel none of the peevishness of age; I look forward cheerfully and hopefully on the coming days, without Shuddering to feel their shadows o'er me creep, and rejoice, in my decline, over the rise and glorious prospects of my country. I have the consolation of being able to recall to my mind several manifestations of the confidence and esteem of my fellow-citizens, exerted towards me at a time when the hand of misfortune bore heaviest upon my head. They did me the honor, in eighteen hundred and twenty-five, of electing me General of the Second Brigade, First Division of the Militia of Illinois, an office which I now hold. I was also elected, in the same year, to represent the country of Monroe in the Legislature of Illinois, of which I was a member for two sessions. I was appointed Post Master in the same county in eighteen hundred and twenty-seven and have held the appointment ever since. I would mention my agency in the Black Hawk war of eighteen hundred and thirty-two, in which I served as Major, were it not a war in which no honor was gained by any one; and the history of which, for the credit of the country, ought never to be written. These proofs of the esteem of my countrymen are gratifying and consoling amidst the difficulties which have so long weighed me down, and are evidence that a generous people will appreciate the intrinsic character of a man, independent of adventitious circumstances, the frowns or the favors of fortune.

Journal of a Voyage to the Rocky Mountains

From My Leaving the Assinibois River on the 2nd June, 1805

Francois Antoine Larocque

JOURNAL OF A VOYAGE TO THE ROCKY MOUNTAINS FROM MY LEAVING THE ASSINIBOIS RIVER ON THE 2nd JUNE, 1805.

At my arrival at Rivière Fort de la Bosse I prepared for going on a voyage of discovery to the Rocky Mountains and set off on the 2nd June with two men having each of us two horses, one of which was laden with goods to facilitate an intercourse with the Indians we might happen to see on our road. Mr. Charles McKenzie and Mr. Lassana set out with me to go & pass the summer at the Missouri, and having to pursue the same road we kept company as far as the B.B. village. Mr. McKenzie with the other men set off about two in the afternoon, but I having [been] so very busy that I had not as yet been able to write my letters to my friends remained and wrote letters and settled some little business of my own. After sunset we supped & bidding farewell to Mr. Chabelly & Henry & to all the people, departed, every one being affected at our departure thinking it more than probable that I should not return with my men, and I confess I left the fort with a heavy heart but riding at a good rate I soon got cheerful again, and thought of nothing but the [means] of ensuring success to my undertaking.

At 10 at night I arrived at the River aux Prunes where I found the people encamped asleep. Monday 3rd. I sat up early in the morning and stopped at 12 to refresh our horses, and encamped at night at River la Sorie, where we had not been two hours encamped when three, and after many other Assinibois rushed in upon us, a few endeavouring to take our horses, but seeing our guns and running to them we made them depart. They ran afterwards to our fire and seeing us well armed and by our looks that we would well defend ourselves and our property they remained quiet. There were 40 tents of them not 10 acres from us without that we had perceived them. I gave 1 fm. tobacco to their Chief to make his young men smoke & engage them to remain peaceable. Some of them offered to accompany us to the Missouri, but upon being told that we would like it well they spoke no more of it.

Thinking it however not prudent to pass the night so close to them we saddled our horses and departed although they did all in their power of engaging us to sleep at those tents. One of them conducted us to a good fording place of River la Sourie which we crossed striking in the plain. We walked all night to come out of their reach for they are worst cunning horse thieves that ever I said or heard of. A little before day light we stopped and took a nap.

Tuesday 4th. We proceeded on our journey early in the morning having very fine weather all day, and at night encamped on the banks of the River la Sourie at a place called Green River for its having no wood on its side for about 30 miles. We saw no other animals but four cabois of which we killed two.

Wednesday 5th. We followed the Green River till eleven o'clock when we arrived at the woods, where being an appearance of rainy weather we encamped. There was no Buffalo in sight. At 12 it began to rain and continued hard and uninterruptedly until next morning. Here we saw plenty of wild fowls, Ducks, Bustards, Geese, Swans, &c., and killed a number of them.

Thursday 6th. There being an appearance of fine weather, we set off and walked about three miles, when the weather being cloudy we stopped to encamp, but before we could make a hut for our goods the rain began again, and fell amazingly hard so that in a few hours every hollow or valley

in the plains were full of water, and every brook or creek was swollen to rivers. There were plenty of Buffaloes and the rain ceasing in the evening we killed a very fat young bull and a fat Elk deer. At night the rain began again and continued without intermission until morning.

Friday 7th. The weather continued cloudy, but the sun appearing now and then we hoped for fair weather and past of but as yesterday it began to rain at 12, at two we found some wood on some sandy hills in the plains where we stopped to cook our goods, being completely trenched [drenched]. There being no water on the sand hills, we raised a Bark of Elm tree and pulling one end in a Kettle, the other end a little higher, all the water that fell on the Bark ran into the kettle and we had presently a sufficient quantity; we also made a tent with bark and passed the night comfortably enough.

Saturday 8th. We sat of to go to a hill called Grosse Butte to dry our things, and water our horses, but their being none here, arrived there two hours and a half where we stopped for the remainder of the day & night. The Grosse Bute is a high hill which is seen at 20 miles off on either side. At its foot on the north side is a Lake of about 8 miles in circumference in which there are middle sized pikes. Between the Lake and the hill there is some wood chiefly Elm; all around are many lakes, which by the late rain communicated with each other. From the top of the hill the turtle mountain was soon being due North, River la Sourie likewise was of in N.N.E. and south and south west, being seen on all sides of the hill excepted west.

Sunday 9th. We sat of early in the morning, in a course S.S.W. and at 1 o'clock in the afternoon we arrived on the Bank of the River la Sourie. The water being amazing high we made a raft to cross our things over the River and the horses swam over. We saddled immediately and encamped in a Coulé about three miles from the River.

Monday 10th. Leaving this we went and slept in the Mandan plain, saw plenty of buffaloes all along, but did not dare to fire at them, being on the enemies lands is Sioux. It rained a little in the night.

Tuesday 11th. At 8 in the morning I saw the banks of the Missouri, at 12 arrived at the River Bourbeuse, when we unsad[dl]ed our horses where we unloaded our horses and crossed the property on our shoulders there being not more than 2 feet of water, but we sunk up to our middle in mud, the horses bemired themselves in crossing and it was with difficulty we got them over the bank beings bogs as also the bed of the river. We intended to get the villages today but being overtaken by a Shower of rain we encamped in a coulé at the Serpent lodge, being a winter vil-lage of the B. Belly's at the Elbow of the River, where I passed part of last winter. Being unwilling to untie my things before the Indians of the village as I was necessarily be put to some expence I took here a small equipment of different article for present expence, as the sight of my goods would perhaps cause the B.B. to refuse our passage to the Rocky Mountains.

Wednesday 12th. I arrived at 9 o'clock in the morning on the banks of the Missouri, fired a few shots to inform the Indians of our being there and in a few hours many came over with Canoes to cross us and our things.

Lafrance proceeded to the Mandans but I and my men with Mr. McKenzie crossed here at the B. Belly's & entered into dift lodges, gave my men each a small equipment of Knives Tobacco and ammunition to give the landlords.

Thursday, 13th. Three Assiniboins arrived in the evening. 4 Canadians from the Illinois, who are hunting Beaver in these parts, came to see me. I gave each of them 6 inches of [Brazil] Tobacco

which pleased them very much as they had for several months not smoked any but Indian Tobacco.

Fryday 14th. The Indians here are exceedingly troublesome to sell their horses to us, the prise that we usually pay them for a horse can purchas two from the Rocky Mountain Indians who are expected dayly, & they would wish us to have more goods when those Indians arrive, so as to have the whole trade themselves. I told them that the purpose of our coming was not to purchase horses either from them or the Rocky Mountains, that we came for Skins and Robes and that for that purpose one of us was to pass the summer with them and one at the Mandans; that I and two men were sent by the white people's Chief to smoke a pipe of peace & amity with the Rocky Mountain Indians and to accompany them to their lands to examine them and see if there were Beavers as is reported & to engage them to hunt it, that we would not purchase a horse from none, therefore that their best plan would be to dress Buffalo Robes, so as to have ammuniton to trade with the Rocky Mountain Indians.

They pretend to be in fear of the surrounding nations, that is Assineboines, Sioux, Cheyennes & Ricaras, so as to have an excuse for not trading their guns with the Rocky Mountain Indians, and likewise to prevent us. Some of those Rocky Mountain Indians have been here already and are gone back, but more are expected, with whom I intend to go.

Saturday 15th. I was sent for by one of the Chiefs who asked me what I intended to do with the pipe stem I had brought, upon my telling him that it was for the Rocky Mountain Indians he made a long harangue to dissuade me from going there, saying that I would be obliged to winter there on account of the length of the way, that the Cheyennes and Ricaras were enemies and constantly on the Road, and that it was probable we should be killed by them. He gave the worst character possible to the Rocky Mountain Indians, saying they were thieves and liar, of which he gave an example that is of a Canadian of the name of Menard, who had lived here about 40 years and a few years ago sett of to go to the Rocky Mountains to trade horses and Beavers, these Indians did all in their power to prevent him, but seeing him absolutely bent upon going they let him go, he arrived at the Rocky Mountain Indians tents, where he was well treated, & got 9 horses and 2 female slaves, besides a quantity of Beaver, he left the lodge very well pleased, but were followed by some young men who in the night stole 7 horses, a few nights after his 2 Slaves deserted with the other horses and other young men coming took from him everything he had even to his knife, he came crying to the B. B. Village almost dead having but his robe to make shoes (with flint stone) which he tied about his feet with cords, which so pained the B.B. that they killed some of the Roche Mountain for revenge & &. he told me many other stories, to all which I answered that my Chief had sent me to go, and that I would or die.

There is seven nights that 5 young men are gone to meet the Rocky Mountain Indians, they are expected dayly & the Rocky Mountain with them.

Sunday 16th. This Evening the Indian women danced the scalp of a Black feet Indian which they killed the last spring. The Canadians from below said they had killed some white men at the same time, that they had seen cloths such as Corduroy jackets and trousers, collars, shirts, part of Linnen Tents, Casimer waist coats, and many other things belonging to the whites. The Borgne the Great Chief of this village told me that war party had fired upon and killed people who were going down a very large River, in skin canoes, but that they could not tell whether they were Crees or Sauteux or whites. I spoke to old Cerina Grape the father of the Chief of that party, and to the

Chief himself, they prove by the fire, Earth and Heaven that they were not whites. They made a plan of the Country through which they passed, and in my opinion it is some where [about] the Sas Ratchewini or its branches. They showed me part of what they plundered but I saw nothing that could prove them to have killed Whites except the quantity of gun powder he had, for it was no less than half a Keg and at least 200 balls. Their plunder was parted among all the warriors and their relations. Among the articles that the Cerina Grappe showed me there was a Coat made of the skin of a young horse wrought with porcupine quills and human hair, 2 skunk skins garnished with red stroud and blue beads which those Indians generally wear round their ancles, one musket by Ketland one gun by Barnett, and lastly one scalp which was evidently that of an Indian. But I really believe they have killed some white people about Fort Des Prairies for they brought more goods than ever I saw in the possession of Indians at one time.

Monday 17th. I went down to the Mandan Village on horse back and purchased a saddle there for which I paid 30 lbs ammunition desired Lafrance to get some provision made for my voyage as there is no corn where I live. I returned home to my lodge. In the evening having settled some business with a man of the name of Jusseaux who was indebted to the Company.

Tuesday 18th. The son of the White Wolf fell from his horse and bruised his leg terribly, the flesh was taken clean of the bone from the ancle, round the leg to the calf. The Indian doctor was sent for who began his cure by blowing and singing while the child suffered quietly. Thunder storm.

Wednesday 19th. There being another sick person in my Lodge and there being rather too much fuss about medicines, conjuring & singing I went & lived in another lodge where I had placed one of my men before. Went to see the Borgne our Chief and being desirous that he should stand by me in case of need I made him a present of  $\frac{3}{4}$  lb. Tobacco, one knife and 50 Rounds of ammunition at which he was well pleased—he is the greatest Chief in this place, but does not talk against our going to the Rocky Mountains as the other Chiefs do—Thunder and rain at night.

Thursday 20th. I was again teased by some of the Chief to purchase horses and was told the Big Bellys had two hearts and that they not know whether they would allow me to go to the Rocky Mountains, and in the course of a long harangue they made use of all their art to induce me not to go representing the journey as dangerous to the last degree and that the Rocky Mountain would not come, for they were afraid of the Ricaras & Assiniboines to all which I could make no answer but by signs, as there was no one present that could speak to them properly, one of my men of the name of Souci spoke the Sioux language but there was no one there that understood that language. About [noon] two of the young B.B. that had been sent to meet the Rocky Mountains arrived, they left the Rocky Mountain Indians in the morning and they will be here in 3 or 4 days. Upon the receipt of those news, the Chief pretended to have received information that the Crils & Assiniboines were assembled to come and war upon them (which is false) and harangues were made to the people to keep their guns and ammunitions and not to trade them with the Rocky Mountain Indians, &c. All this I believe a scheme to prevent me from going, for as yet they do not like to tell me so exactly, but are for ever saying that they have two hearts which means that they are undetermined in what manner to act.

Fryday 21st. I went to see the Borgne enquired of him what he and the Big Bellys thought of our going to the Rocky Mountains and whether they have a mind to prevent us. He answered to my wish, that the Rocky Mountains were good people, that they had plenty of Beaver on their hands, and that his adopted son, one of the Chiefs of the Rocky Mountains & the greater would

take care of us, for that he would strongly recommend to him to put the white people in his heart and watch over them. I told him that the B.B. had no reason to be displeased for that one of us remains with them who has plenty of ammunition, Knives, tobacco, Hatchets and other articles, where with to supply their wants, whenever they would be disposed to trade. He said it was true that none would molest us. He is the only Chief that speaks so, but as he has the most authority of any I hope by his means we will pass. A certain method to get the road clear would be to assemble the Chiefs, make them a present of Tobacco and ammunition, make them smoke & speak to them what occasion I may have for them in future. I like not to do it only when I see that I cannot otherwise for assembling a Council and haranging without a present is no better than speaking to a heap of stones. Besides I am apprehensive that paying as it were for our first going to these nations will give a footing to the B. Bellys which they will endeavour to improve every time we should go there if a trading interest takes place. So we pass this time without making them any present at all, I believe it will be done away for ever. If the Borgne retains that authority he formerly had he alone will be able to clear the Road for us and he appears to be sincerely our friend.

Saturday 22nd. In the beginning I went to an Indian's tent whose two sons had been in that party that defeated the White on the Saskatchion, he gave me a full account and more like truth than any other. He says there were four Linnen tents and four leather on the sides of the River where there were Skin Canoes; they fired upon the largest leather tent and Killed three men, two of whom were Indians, the other they believe to be a White man but not certain. They brought one scalp & if it is that which they showed me, it is an Indian. There was plenty of tents in all kinds besides goods. What they could not take with them, they broke and threw in the River.

Sunday 23rd. Three men and one woman arrived from the Rocky Mountains about noon, the other are near hand and would have arrived today but for rain which fell in the evening.

In the evening I went to see the Brother of the Borgne, where I found two Rocky Mountain Indians, one of whom was the Chief of whom the Borgne had spoken with me . I smoked with them for some time when the Borgne told them that I was going with them and spoke very much in our favor. They appeared to be very well pleased.

Monday 24th. Lafrance, with the other white people from below who reside at the Mandans came to see the people which were arrived from the Rocky Mountains, who were prevented from coming by appearance of bad weather. It thundered the whole day but it did not rain. I gave a small knife to my Land Lady.

Tuesday 25th. About one in the afternoon the Rocky Mountain Indians arrived, they encamped at a little distance from the village with the warriors, to the number of 645, passed through the village on horseback with their shields & other war-like implements, they proceeded to the little village, Souliers and then to the Mandans and returned.

There did not remain 20 persons in the village, men women and children all went to the newly arrived camp carrying a quantity of Corn raw and cooked which they traded for Leggins, Robes and dried meat. There are 20 lodges of the snake Indians & about 40 men. The other bands are more numerous.

This morning the Borgne sent for me, he showed me the Rocky Mountain Chief of the Ererokas, and told him before me that I was going with him & to take good care of us & he spoke very much in our favour telling me that the B. Bellys were undetermined whether they would allow us to go or not, but that we would go if we liked it for that he would clear the road before us if necessary. I

Journal of a Voyage to the Rocky Mountains

Francois Antoine Larocque

---

gave to two of the Ererokas each 6 [feet] of tobacco and 20 Rounds of ammunitions.

Wednesday 26th. The Mandans, Souliers, little village people & the people of the Village, went on horse back and arived to perform the same ceremonys round the Rocky Mountain Camp, as the Rocky Mountains did yesterday here, they were about 500, but a great many Warriors are absent being gone to war.

Thursday 27th. Assembled the chiefs of the different Bands of the Rocky Mountains and made them a present of

2 Large Axes

2 Small Axes

8 Ivory Combs

10 Wampum Shells

8 fire steels and Flint

4 cassetete

6 Masses B.C. Beads

4 f. Tobacco

8 Cock feathers

16 large Knives

12 Small do

2 lbs. Vermillion

8 doz. Rings

4 papers co'd Glasses

4 Doz. Awls

11/ lb. Blue Beads

2 Doz. do

1000 balls & powder

Made them smoke in a stem which I told them was that of the Chief of the White people who was desirous of making them his Children & Brethren, that he knew they were pitiful and had no arms to defend themselves from their enemies, but that they should cease to be pityful as soon as they would make themselves brave hunters. That I and two men were going with them to see their lands and that we took with us some articles to supply their present want. That our Chief sent them those goods that lay before them, to make them listen to what we were now telling them, that he expected they would treat all white people as their Brethren for that we were in peace and friendship with the Red skined people and did not go about to get a scalp, that probably they would see White people on their lands from another quarter but that they were our brethren and of course we expected they would not hurt them, that a few years ago they pillaged and ill treated a white man who went to trade with them, that we would see how they would treat us and if they have behaved well towards us and kill Beavers, Otters & Bears they would have white people on the lands in a few years, who would winter with them and supply them with all their wants & &. I told them many other things which I thought was necessary and closed the Harangue by making them smoke the Medicin Pipe. They thanked [me] and make a present of 6 robes, one Tyger skin, 4 shirts, 2 women Cotillons 2 dressed Elk skins, 3 saddles and 13 pair leggins. I clothed the Chief of the Ererokas at the same time and gave him a flag and a Wanpoon Belt and told them that our Chief did not expect that we would pass many different nations and therefore had sent but one

Chief Clothing, but that in the course of the summer we would fix upon a spot most convenient for them all where we would build & trade with them, if we saw that they wished to encourage the white people to go on their lands by being good hunters and that then all their Chiefs who would behave well would get a Coat.

The ceremony of adopting Children was going on at the same time, but I was so very busy that I could not attend, but about the middle of the ceremony, and therefore can give but an imperfect account of it from my own observation, but as the two people were present I will give an account of it in another place.

Fryday 28th. I preferred to go of in the evening to the lodge of the Ereroka Chief in order to be ready with them in the morning but he and the other Chiefs were called to a farewell Council in the Borges Lodge so that I did not Stir.

Saturday 29th. Saddled our horses and left the B. Belly village. We remained about half an hour in the Rocky Mountain Camp where they threw down their tents and all sat of. We marched along the Knife Rivers for about eight miles when we stopped and encamped. The Borgne and many other B. Belly's came and slept with us.

Sunday 30th. We followed a south course for about 4 mile and stoped to dine and resumed a S.S.W. course and encamped for night, Knife River in Sight when no hills intervned, about 6 miles on our right, a thunder storm in the evening.

July 1st, Monday. We sat [out] at 8 o'clock in the morning and encamped at 12 having followed a South West course; we crossed three small creeks running North and N. East into the Knife River. It began to rain as soon as the lodges were pitched and continued so all day. The Indians hunted and Killed a few Bulls. I gave the people of my lodge a few articles, as Beads, Knives.

Tuesday 2nd. We sat out at 9 o'clock followed a south Course and encamped at 2 after noon. It thundered very much the whole of the afternoon and at sun set there fell such a shower of hail as I never saw before, some of the hail stones being as large as hen eggs and the rest as a Yolk; they fell with amazing violence and broke down several tents. The wind during the storm was West, it breezed to the North and continued during the whole night.

Wednesday 3rd. We continued our journey for about 4 hours, through a very hilly country and encamped at the foot of a very high Hill on the top of which I ascended, but could see at no considerable distance, another range of hills surrounding this on all sides. I lost my spy glass in coming down the hill and could not find it again. Our course was south.

Thursday 4th. We stopped after a south course for the night on the side of a small hill at a Creek which empties in the Missouri above the Panis village about 5 leagues distant from our last encampment having crossed another a little before emptying in the Missury about one mile below the Mandans. The Scouts reported that Buffaloes were at hand.

Fryday 5th. We discovered a thief last night in the act of stealing a gun from under our loads thinking we were asleep. The Chief sent two young men to sleep behind the lodge and guard our property. After three hours and a half march in a southerly direction we espied Buffaloes, and stopped all. The Chief harangued and the young men set out to hunt after which we marched on for about a league and a half and encamped. There was no Creek or River here for water only a few ponds of stagnant water which by reason of so many dogs and horses bathing in them was not drinkeable being as thick as mud.

Saturday 6th. A Big Belly found my spy glass and returned it to me, we set of at 8. At 11 the scouts

reported that they had seen enemies. We all stopped, the men armed themselves and mounting their fleetest horses went in pursuit. They returned in a few hours, as what the scouts had taken for enemies were a party of their own people who were gone hunting and not been seen. We proceeded and encamped at one on the side of a small River running West and emptying in the lesser Missouri. It blew a hurricane in the evening. Course south about four leagues.

Sunday 7th. At ten o'clock we rose the Camp and at 3 we saw Buffaloes, harangues were made to the Young Men to go and hunt while a party of these latter who are a guard of soldiers paraded before the body of the people preventing any one from setting off till all the huntsmen were gone; after which we set off again and encamped at the foot of a hill, which we had in sight since the day before yesterday. Course S. West about 18 miles.

Monday 8th. Before we rose the camp a general muster of all the guns in the Camp was taken and the number found to be 204 exclusive of ours. Our huntsmen had brought in a plenty of Buffaloes. We marched this day by a south Course about 7 miles.

Tuesday 9th. From the Big Belly village to the place I lost my spy glass the country was very hilly, from that to this place it was much more upon a level though not entirely so. The plains produce plenty of fine grass. In the course of this days journey we passed between two big hills on the top of which as far as the eye could discern Buffalo were seen in amazing number, we camped on the side of a small Creek running West into the lesser Missouri. The Indian hunted and killed many Buffaloes. Course South S. West & S.W. 9 miles. It blew a hurricane at night without rain. Many lodges were thrown down although well tied and picketed.

Wednesday 10th. We remained the greatest part of the day at this place to dry the meat and bury a woman that died here, and sat of at 4 in the afternoon and pitched the tents by a small creek running west after having pursued our road S.W. by West for 5 miles. The Country was hilly but producing plenty of grass and numberless flowers of different Kinds.

Thursday 11th. We passed through a range of hills of about 3 miles broad, on the top of every one was a heap of stones appearing as if burnt, part of the rocks had fallen down the hills. Leaving those hills we had a pretty level plain till we reach a small brook running N. West where we encamped, the lesser Missouri in Sight at about 4 miles on our right, by a course south west, we had advanced about 12 miles. On our way we saw a few Rattle Snakes but none of them very large; they are the first I saw in the Indian countries and none are to be found more northwards.

Fryday 12th. This day we passed through a pleasant plain and pitched the tents by a small brook 5 miles S.W. of our last encampment.

Saturday 13th. We set of at 9 through hilly and barren Country, in crossing two small Creeks, and arrived at 12 on the bank of lesser Missouri. We crossed it and encamped on its border about 2 miles higher. The River is here about 3/4 of an acre in breadth from bank to bank but there is very little water running, the bed appearing dry in many places and is of sand and gravel. A few liards scattered thinly along its banks. The rugged and barren aspect of the hills which are composed of Whitish Clay looking like rocks at a distance. The ground on which [we] stood [was covered] with a prickly heap of..... so very thick that one does not know where to set ones feet, no grass at all. The whole forms a prospect far from pleasing. Our Course was for 12 miles S.S.W. A few days ago a child being sick I gave him a few drops of Turlington balsam which eased him immediately of his cholic. This cure gave me such a reputation of being a great physician that I am plagered to cure every distemper in the camp. A man came today to me desiring me to act the man mid wife

to his wife.

Sunday 14th. We remained the whole day here the Indians being busy with drying meat. I went a little distance up the River and saw a little Beaver work.

Monday 15th. We crossed the river at three different times in the Course of this days journey when it happened to intersect the line of our course which was S.S.W. and encamped on its borders about 14 miles higher up. It had the same appearance in every respect as when we arrived at it. The Indians Killed a few Beavers of which I got two dressed by my men to show them how to do it.

Tuesday 16th. We remained here the whole day. The Indians tried to dance the Bull dance in imitation of the B. Belly's but did it very ill.

Wednesday 17th. It rained in the morning, at 11 before noon the weather clearing up, we sat of following the river in a Course S.S. West about 9 miles. The bed and Banks in many places were solid Rock; there is very little water running. There is a few trees in the decline of the hill here.

Thursday 18th. I went hunting with the Chief while the camp flitted, we killed one cow and returned to the river at 3 in the after noon where we found the people encamped 15 miles S.W. of our last encampment. The banks and bed of the river are rocks; the plains are a continual series of high rocky hills whose sides and tops are partly covered with the red pine and other wood such as poplar, Elm, Ash, and a kind of Maple.

Fryday 19th. We [stopped] at an hour before sun set and encamped 5 miles higher up the river.

Saturday 20th. Some one being sick we did not stir. Here the point of the River was pretty large and well stocked with wood, viz. Liard, Ash and a kind of shrub resembling the prickly Ash which bears a fruit of the size of a small pea, red and of a sourish taste but not disagreeable.

Sunday 21st. The Camp rose at 8 in the morning and proceeded along the River for about 15 miles in a S.S. Westerly direction; the banks and bed of the river are of soil but muddy. I saw a beaver lying dead on the banks, here the river is fordable, without wetting ones feet in stepping over upon loose large stones, as we trotted almost the whole of this day's journey the unusual jolting of the Packages on the horses back occasioned the breaking of my thermometre. From this place we left the lesser Missouri on our left, its Course above this appears to be South to north, and stopping in the plains we encamped at one in the after noon on the side of a little river running into the lesser Missouri our course S.W. The Banks of L.M. [Lesser Missouri] in sight. We crossed two small Creeks in which there was no running water but many deep ponds in which there are Beavers. We saw this day plenty of Buffaloes.

We remained at this place 2 days. I have been very sick since some time, and so weak that it was difficult I could keep my saddle, the Indians on that occasion did not flit. I traded a few Beavers.

Thursday 25th. We sat of this morning at 10 following the little Creek on which we were encamped for 4 miles by a S.W. course and encamped. Wind S. E.

Fryday 26th. We passed through a Range of hills whose tops and sides are covered with pine, and at the foot are many small creeks well wooded with Ash and Maple, there are plenty of different kinds of mint here which emit a very odoriferant smell. We crossed three small Creeks running north and N.W. into the Powder River whose bancs we had in sight from the top of those hills. The wind was N.W. & very strong, a hurricane blew at night. The course we have pursued on a very barren soil for 22 Miles was West.

Saturday 27th. We arrived at noon at the Powder River after 6 hours ride by course West by South

Journal of a Voyage to the Rocky Mountains  
Francois Antoine Larocque

---

for about 20 miles. The Powder River is here about 3/4 of an acre in breadth, its waters middling deep, but it appears to have risen lately as a quantity of leaves and wood was drifting on it. The points of the river are large with plenty of full grown trees, but no underwood, so that on our arrival we perceived diverse herds of Elk Deers through the woods. There are Beaver dams all along the river. Three of these animals have been felled by our Indians.

When we arrived here the plains on the western side of the river were covered with Buffaloes and the bottoms full of Elk and jumping deers & Bears which last are mostly yellow and very fierce. It is amazing how very barren the ground is between this and the lesser Missouri, nothing can hardly be seen but those Corne de Raquettes. Our horses were nearly starved. There is grass in the woods but none in the plains which by the by might with more propriety be called hills, for though there is very little wood it is impossible to find a level spot of one or two miles in extent except close to the River. The current in that river is very strong and the water so muddy as to be hardly drinkable. The Indians say it is always so, and that is the reason they call it Powder River, from the quantity of drifting fine sand set in motion by the coast wind which blinds people and dirtys the water. There are very large sand shoals along the river for several acres breadth and length, the bed of the river is likewise sand, and its Course North East.

Sunday 28th. We remained here the whole day to let the horses feed, the women were bussily employed in dressing and drying the skins of those animals that were Killed Yesterday. I traded one 3 Beavers and one Bear skin.

Monday 29th. We rose the Camp late in the evening and pitched the tents about 4 miles higher up the river having followed for that short space a course S. W.

Tuesday 30th. Early this morning we set out; the body of the people followed the river for about 17 miles S.W. while I with the Chief and a few others went hunting. We wounded Cabrio, Buffalo, and the large horned animal, but did not Kill any, which made the Chief say that some one had thrown bad medicin on our guns and that if he could Know him he would surely die.

The Country is very hilly about the river, but it does not appear to be so much so towards the North. About two miles above the encampment a range of high hills begins on the west side of the River, and Continues North for about 20 miles, when it appears to finish. The tongu River is close on the other side of it. There is a parting ridge between the two Rivers.

I assended some very high hills on the side of which I found plenty of shells of the Comu amonys Species by some called snake shell, likewise a kind of shining stone lying bare at the surface of the ground having to all appearance been left there by the rain water washing away the surrounding earth, they are of different size and form, of a Clear water Colour and reflect with as much force as a looking glass of its size. It is certainly those stones that have given the name of shining to that Mountain. The hills are high, rugged and barren mostly Rocks with beds of loose red gravel on their tops or near it which being washed down by the rain water give the hills a redish appearance. On many hills a heape of calomid stone among which some time I find pumice stone.

When we left the encampment this morning we were stopped by a party of their soldiers who would not allow us to proceed, as they intended to have a general hunt, for fear that we should rise the Buffaloes, but upon promise being made by the Chief whom I accompanied that he would not hunt in the way of the Camp, and partly on my account we were suffered to go on. We were however under the necessity of gliding away unperceived to prevent Jealousy.

Wednesday 31st. We sat out at 7 in the morning and proceeded up the River in a Southern course

for about 13 miles and encamped about mid day; the weather being very warm and the wind from the south. I traded a few Beaver skins.

Thursday August 1st. Rain and thunder storm prevented our stirring this day. The water rose about 6 inches in the river and is as thick as mud. The current very swift.

Fryday 2nd. Last night some children playing at some distance from the Camp on the river, were fired at. The Camp was alarmed and watchers were set for the night but nothing appeared. It rained hard during most part of the night. We rose the Camp at one in the afternoon following the river for about 9 miles in a south course. The hills of the River are at a less distance from one another than they were here tofore. The bottoms or points of the river are not so large nor so well wooded and the grass entirely eat up by the Buffaloes and Elk.

Saturday 3rd. We sat out at sun rise and encamped at one in the afternoon having pursued a South Course with fare [fair] weather and a south east wind. We followed the River as usually; its bends are very short not exceeding two miles and many not one. The face of the Country indicates our approach to the large Mountains and to the heads of the River. A few jumping [deer] or chevreuils were Killed today. It has been very Cold these few nights.

Sunday 4th. We did not rise the Camp till late in the evening. In the morning we assended the hills of the River and saw the Rocky Mountains not at a very great distance with Spy Glass, its cliffs and hollows could be easily observed with the wood interspersed among the Rocks. We removed our camp about 4 miles higher up the River having pursued a S.E. Course.

Monday 5th. We had a thick fog in the morning, the night was so Cold that one Blanket could not Keep us warm enough to sleep, so that I purchased two Buffaloe Robes. About midday however it is generally very warm. We sat of at 7 and continued our way for about 12 miles by a south course along the River and with a north West wind. We arrived at the forks of the Pine River which are assunder for about one mile, and encamped. The water in this River is clear and good issuing from the Mountains at a short distance from this, and is very cold, while that of the Powder River was so muddy that the Indians were under the necessity of making [holes] in the Beach and drink the water that gathered in them. We left this last mentioned river on our left where we went up the Pine River which is between 20 & 30 yards in breadth and runs over rocks. There is a rapid at every point and very little wood along its banks.

Tuesday 6th. We rose the Camp at 7 and proceeded upwards along the Pine River in a S. Western direction for 12 miles, having the Rocky Mountains ahead and in sight all day. The weather was foggy with a N.W. wind. An Indian shot another mans wife in the breast and wounded her dangerously. Jealousy was the occasion thereof. The Indian after inquire when I intend to depart. They appear to wish me to be off. I have 23 Beaver skins which they think a great deal, and more than we have occasion for. They thought that upon seeing the Rocky Mountains we would immediately depart as they cannot imagine what I intend to see in them. It is hard to make them understand by signs only, especially in this case for they do not want to understand.

Wednesday 7th. We sat of at 6 and pitched the tents at 9 miles higher up the River having followed a South course. The Indians hunted and killed many Buffaloes and one cow came and took refuge among the horses where she were killed. At 5 in the evening we again flitted and encamped 5 miles higher up having pursued the same course as in the morning with a head wind.

Thursday 8th. We marched 24 miles in a south West course along the Pine River. Many small Branches fall in it at a little distance from one another. A man and horse were wounded by a Bear

but not dangerously. There is much fruit here about and many Bears. Wind S.E. We are here encamped at the foot of the mountain.

Fryday 9th. The people went out hunting and returned with many skins to be dressed for tents. The weather is Cloudy and the wind south. Rapids succeed each other in the River here very fast and the current between is very swift running on a bed of Rocks.

Saturday 10th. Some Indians arrived from hunting and brought 9 Beavers which I traded for Beads. Weather the same as yesterday.

Sunday 11th. They are undetermined in what course to proceed from this place they have sent a party of young men along the Mountains Westerly and are to wait here until they return. They often enquire with anxious expectation of our departure when I intend to leave them and to day they were more troublesome than usual. What I have seen of their lands hitherto has not given me the satisfaction I look for [in] Beavers. I told them that I would remain with them 20 or 30 days more. That I wished very much to see the River aux Roches Jaunes and the place they usually inhabit, otherwise that I would be unable to return and bring them their wants. They saw it was true, but to remove the objection of my not knowing their lands a few of them assembled and draughted on a dressed skin I believe a very good map of their Country and they showed me the place where at different season they were to be found. The only reason I think they have in wishing my departure, is their haste to get what goods I still have. Besides we not a little embarrass the people in whose tent we live. They pretend to be fond of us, treat us well and say they will shed tears when we leave them.

Monday 12th. In the evening the young men that had been sent to reconnoitre returned and reported that there was plenty of Buffaloes & fruit on the tongue and small horn River, that they had seen a lately left encampment of their people who had not been at the Missouri (about 9 lodges) that they were gone across the Mountains that they had seen no appearance of their being enemies on that side. A Council ensued, and harangues were made to raise the Camp in the morning and proceed along to the River aux Roches Jaunes.

Tuesday 13th. We sat of at half after 8 in the morning following a West Course along the Mountain, through Creeks and hills such as I never saw before, it being impossible to climb these hills with Loaded Horses we were obliged to go round them about the middle of their hight from whence we were in imminent danger of rolling down being so steep that one side of the horses load rubbed against the side of the hill. One false step of the horse would certainly have been fatal to himself and rider. The wind was S. E. in the morning and north W. in the evening and the weather sultry. We encamped at 12 on the banks of a small branch of the Tongue River, whose water was very clear and cold as Ice. The people Killed two Bears to day. I traded a few Bears. I saw a few crows today which are the only birds I have seen since I left the Missouri except a few wood Peckers.

Wednesday 14th. It rained part of the morning, as soon as the rain ceased we sat off when it began again and continued raining until we reached another branch of the Tongue River, where we encamped. We went close along the mountain all the way for about 10 miles by a West Course crossing many small Creeks all running into the Tongue River, most of them were dry but thickly wooded with the Saule blanc; there was no Beaver work I saw a few Cranes.

Thursday 15th. Fine clear weather. I traded 8 Beavers and purchased a horse for which I paid a gun 200 balls, one flanel Robe, one shirt, one half axe, one battle do, one bow iron, one comb, one

Journal of a Voyage to the Rocky Mountains

Francois Antoine Larocque

---

But Knife, one small do, 2 Wampoon hair pipes, one....., 2 axes, one Wampoon shell, 40 B. Blue Beads, 2 Mass Barley Corn do and one fm W.S. Red Stroud. We left this place at 11 before noon and proceeded 9 miles in a North West Course and encamped on another branch of the Tongue River. Wind N.W. fine warm weather. The Indians Killed Buffaloes and a few Bears, the latter they hunt for pleasure only as they do not eat the flesh but in case of absolute necessity. Perhaps the whole nation is employed about a bear, whom they have caused to take refuge in a thicket, there they plague him a long while and then Kill him, he is seldom stript of his skin.

Fryday 16th. I purchased a saddle and [bridle?] for the horse I purchased yesterday for which I paid 40 shots Powder Being short of Balls. I gave 20 pounds Powder only for a Beaver 1 Knife, I sell 2 Beavers 10 String Blue Beads, 1 Beaver & so on. We proceeded along the mountain as usual by a N.W. Course about 15 miles, crossed 3 small Creeks emptying in the Tongue River where we arrived at one in the afternoon, we forded it and encamped on the north side, N. & N.E. is a small Mountain lying between this river and the large Horn River, they call it the Wolf Teeth. (Se la is in the Rocky Mountain language and Seja in the Big Belly's.) Fine weather wind N.W.

Saturday 17th. The Indians having hunted yesterday we did not rise the Camp but remained here all day. There were many Bears here about, who are attracted by the quantity of Choak Cherries and other fruit there is here. The Woods along the Rivers are as thickly covered with Bears Dung as a Barn door is of that of the Cattle, large Cherry trees are broken down by them in Great number. The Indians Kill one or two almost every day. The Tongue River here is small being only about 20 feet broad with two feet water in the deepest part of the rapids. It receives many additional small stream in its way to the River Roches Jaunes. The points of the River are pretty large and well stocked with wood viz.... & maple.

Sunday 18th. At 7 o'clock we left our encampment and proceeded Northward; at noon we stopped on a branch of the small Horn River & the greatest part of the Indians went on to the small Horn River to hunt. At half past two in the afternoon we sat off again and crossing the River we encamped on its Borders where we found the hunting party with their horses loaded with fresh meat. We travelled about 15 miles this day and are farther from the mountain than yesterday though still close to it.

Monday 19th. Since we are close to the mountain many women have deserted with their lovers to their fine tents that are across the mountain, there are no Cattle in the mountain nor on the other side, so that they are loth to go that way, while the desertion of their wives strongly Call them there. Harangues were twice made to rise the Camp, and counter order were given before the tents were thrown down. The reason of this is that the wife of the Spotted Crow who regulates our mo[ve]ments has deserted, he is for going one way while the Chief of the other bands are for following our old course. Horses have been Killed and women wounded since I am with them on the score of jealousy. Today a snake Indian shot his wife dead but it seems not without reason for it is said it was the third time he found her and the Gallant together. The Small Horn river runs East from the Mountain to this place here it makes a bend N by East and passing round of the wolf teeth it falls into the large Horn river. The bed of the River here is Rocks a continual rapid, the water clear and cold as Ice, the ground barren and the banks of the river thinly wooded with same Kind of wood as heretofore. I traded 6 Beavers.

Tuesday 20th. We flitted and encamped 3 miles higher up the River on a beautiful spot where there was plenty of fine grass for the horses, our Course West. I traded 3 Beavers.

---

Journal of a Voyage to the Rocky Mountains

Francois Antoine Larocque

---

Wednesday 21st. I made a present of a few articles to the Chief and a few other Considered Persons. We remained here all day. There is plenty of ash here. There were very few persons in the Camp that were not employed in making themselves horse whip handles with that wood; it was with that design they came here, as that wood is seldom found elsewhere. I saw some Beavers work on that River.

Thursday 22nd. Water froze the thickness of paper last night in horsetracks. I was called to a Council in the Chiefs Brothers tent Lodge, where the Spotted Crow resigned his employment of regulating our marches, an other old man took the office upon himself and told me that he intended to pursue their old course to the River aux Roches Jaune. I traded 8 Beavers with the Snake Indians in whose possession I saw a Kettle or Pot hewn out of a solid stone, it was about 11/ inch thick & contained about 6 or 8 quarts; it had been made with no other instrument but a piece of Iron.

Fryday 23rd. We rose the Camp at 11 in the forenoon and followed a N.E. Course for one mile N.W. 6 de, & encamped on a branch of the .... River, where there is a Beaver Dam and other work occasionally found. I traded -- 4 Beavers. Wind S.E. the only roads practicable to Cross the mountain are at the heads of this and the Tongue River.

Saturday 24th. This morning we were allarmed by the report that three Indians had been seen on the first hill of the mountain and that three Buffaloes were in motion and that two shots had been heard towards the large Horn River. Thirty men saddled their horses and immediately went off to see what was the matter while all the other Kept in readiness to follow if necessary. In a few hours some came back and told us that they had seen 35 on foot walking on the banks of one of the branches of the Large Horn River. In less time than the Courier Could well tell his news no one remained in the Camp, but a few old men and women, all the rest scampered off in pursuit. I went along with them we did not all Set off together nor could we all Keep together as some horses were slower than others but the foremost stopped galloping on a hill, and continued on with a small trot as people came up. They did the dance when the Chief arrived, he and his band or part of it galloped twice before the main body of the people who still continued their trot intersecting the line of their course while one of his friends I suppose his aide de Camp harangued. They were all dressed in their best Cloths. Many of them were followed by their wives who carried their arms, and who were to deliver them at the time of Battle. There were likewise many children, but who could Keep their saddles. Ahead of us were some young men on different hills making signs with their Robes which way we were to go. As soon as all the Chiefs were come up and had made their harangue every one set off the way he liked best and pursued according to his own judgement. The Country is very hilly and full of large Creeks whose banks are Rocks so that the pursued had the advantage of being able to get into places where it was impossible to go with horses & hide themselves. All escaped but two of the foremost who being scouts of the party had advanced nearer to us than the others and had not discovered us, they were surrounded after a long race but Killed and scalped in a twinkling. When I arrived at the dead bodies they had taken but his scalp and the fingers of his right hand with which the outor was off. The[y] Borrowed my hanger with which the[y] cut off his left hand and returned it [the knife] to me bloody as a mark of honour and desired me to..... at him. Men women and children were thronging to see the dead Bodies and taste the Blood. Everyone was desirous of stabbing the bodies to show what he would have done had he met them alive and insulted & frotted at them in the worst language they

---

could give. In a short time the remains of a human body was hardly distinguishable. Every young man had a piece of flesh tied to his gun or lance with which he rode off to the Camp singing and exultingly showing it to every young woman in his way, some women had whole limb dangling from their saddles. The sight made me Shudder with horror at such Cruelties and I returned home in quite [a] different frame from that in which I left it.

Sunday 25th. The Scalp dance was danced all night and the scalps carried in procession through the day.

Monday 26th. It rained in the morning as it did yesterday, at noon the Weather Clearing we sat off Course S.W. wind S.E. fine weather. We encamped in the mountain 9 miles distant from our last encampment by a small Creek in which there was little running water, but an amazing number of Beaver Dams. I counted 6 in about 2 points of the River but most of them appeared to be old Dams. The young men paraded all day with the scalps tied to their horses bridles sing[ing] and keeping time with the Drum and Sheskequois or Rattle.

Tuesday 27th. We remained here all day, 10 Young Men were sent to observe the motions of those who were routed lately, they are afraid of being attacked having seen the road of a numerous body of people on the large Horn River. In the evening news came that the Buffaloes were in motion on the Large Horn River, and harangues were made to guard the Camp.

Wednesday 28th. Two hours before day light, all the Indians horses were saddled at their doors, they put all their young children on horse back & tied to the saddles, then they slept the remainder of the night. They likewise loaded some horses with the most valuable part of their property while they in the expectation of being attacked sat in the tents their arms ready & their horses saddled at the door. At broad day light nothing appearing they took in their children and unloaded their horses. At 9 in the morning 4 young men arrived and reported that they had seen nothing of the enemy, that there were party Buffaloes between the Large Horn and the River aux Roches Jaunes.

Thursday 29th. We rose the Camp this morning and marched a Course West by North. The Indians hunted and saw Strange Indians. There was a Continual harangue by different Chiefs the whole night which with the singing and dancing of the scalp prevented any Sleep being had. We pitched the tents on a small creek running into the large Horn River distant about 20 miles from our last encampment.

Fryday 30th. We left the place and encamped on the Large Horn River close to the foot of the mountain and of very high Rocks. Course West about 5 miles.

Saturday 31st. We remained at this place the whole day. Some young one who had been en découverte returned from a deserted camp of about 30 Lodges where they found Chief Coats N.B. straud Wampoon shells and other articles, which it seems had been left by the people inhabiting those tents upon some panic. This is what these Indians say but it is my opinion that those goods are rather an offering to the supreme being which those Indians often make and leave in tree well wrapt up, and which our young men found. This River is broad deep and clear water strong courrent, bed stone and gravel about 1/2 mile above this encampment, the River runs between 2 big Rocks & loses 2/3 of its breadth but gains proportionally in depth. There is no beach at the foot of the Rocks, they are but perpendicular down to the water. It is aweful to behold and makes one giddy to look down upon the river from the top of those Rocks. The River appears quite narrow and runs with great rapidity immediately under our feet, so that I did not dare to look down but

---

when I could find a stone behind which I could keep & looking over it to see the foaming water without danger of falling in. This river does not take its rise in this mountain, it passes through the mountains and takes its water in the next range. There is a fall in this River 30 or 40 miles above this where presides a Manitou or Devil. These Indians say it is a Man Wolf who lives in the fall and rises out of it to devour any person or beast that go to near. They say it is impossible to Kill him for he is ball proof. I measured a Ram's horn which I found when walking along the River, it was 5 spans in length and was very weighty, it seems to me that the animal who carried it died of old age for the small end of the horn was much worn and broke into small splinters, which was not the case in any of the animals I saw Killed, nor were their horns of that size neither.

The Mountain is here a solid Rock in most places bare and naked, in other places Cloathed with a few Red Pine. The sides of some Coulé are as smooth and perpendicular as any wall, and of an amazing hight; and in places there are holes in those perpendicular Rocks resembling much those niches in which statues are placed. Others like church doors & vaults, the tout ensemble is grand and striking. Beautiful prospects are to be had from some parts of those Rocks, but the higher places are inaccessible. The Large Horn River is seen winding through a level plain of about 3 miles breadth for a great distance almost to its conflux with the River aux Roches Jaunes.

Sunday, September 1st. We Left this place and pitched our tents about 3 miles lower down where we remained two days, while we were here a Snake Indian arrived, he had been absent since the Spring and had seen part of his nation who traded with the Spaniards, he brought a Spanish B[r]idle and Battle ax, a large thick blanket, striped white and black and a few other articles, such as Beads, etc. A Missouri Big Belly fished here and caught 14 moyens Cat fish in a very short time. We had much dancing at this place still for the scalps. There are Islands in the River here but most of them are heaps of sand. The Wooded points of the River do not join the open plain is seen between them but there is plenty of wood in some places. The leaves beg[in] to fall.

Wednesday 4th. We left the encampment and proceeded N.W. by North about 15 miles and pitched the tents on a Small Creek running into the Large Horn River. Where we left the River we had a level plain for about 4 or 5 miles when the Country became hilly and barren.

Thursday 5th. We Kept the same Course as yesterday and encamped on a most small Creek running as the former about the same nature.

Fryday 6th. We rose the Camp early and at 11 before noon arrived at Mampoia or Shot stone River, from whence the Indians went out to hunt, there being plenty of Buffaloes on the road to this place, the mountains were as follows. The mountain along which we travelled from the Pine River lay S. E. another called Amanchabé Clije south, the Boa [or Bod] Mountain S.W. but appeared faintly on account of a thick fog that covered it.

Saturday 7th. We remained all day here, the Indian women being very bussy to dry tongues and the best part of the meat and dressing skins for a great feast they are preparing while their war exploits are recapitulated.

Sunday 8th. I sat off early this morning with two Indians to visit the River aux Roches Jaunes and the adjacent part. I intended to return from this place as the Indians will take a very round about road to go there. We were not half ways, when we fell in with Buffaloes, my guides were so bent upon hunting that they did not guide me where I wanted, and we returned at night to the tents with meat, but with rain as it rained from noon till night. The Indians showed me a mountain lying North West which they told me was in direct line to the Missouri falls and not far from it.

We passed through two new raised Camps of strange Indians at the door of the largest tent were 7 heaps of sticks each containing 10 sticks denoting the number of lodges in the Camp, to have been 70.

Monday 9th. I purchased a horse we had information that four strangers had been seen who likewise saw our people & hid themselves. At night a young man arrived who saw and conversed (I cannot say he spoke for the whole conversation was carried on by signs they not understanding one another language) with a fort de prairie Big Belly, they wanted to bring each other to their respective Camps but both were afraid and neither of them dared to go to the other Camp. The B.B. are encamped on the large Horn River behind the mountain and are come on peaceable terms they are 275 or 300 Lodges.

Tuesday 10th. We rose the Camp at 9 and took a N. West Course to the River aux Roches Jaunes where we arrived at two in the afternoon distant 16 miles we forded into a large Island in which we encamped. This is a fine large River in which there is a strong current, but the Indians say there are no falls. Fordable places are not easily found although I believe the water to be at its lowest. The bottoms are large and well wooded.

Wednesday 11th. 5 Big Bellies arrived and came into our lodge being the Chief Lodge. They brought words of peace from their nation and say they Come to trade horses. They were well received by the Indians and presents of different articles were made them. They told me they had traded last winter with Mr. Donald whom they made Known to me a[s] crooked arm. I went round the Island in which we are encamped, it is about 5 miles in circumference and thickly wooded in some places all along the North Side of the Island. The Beaver has cut down about 50 feet of the wood. 9 Lodges of the people that were left in the Spring was joined in they are 15 tents at present, they encamped on the opposite side of the River.

Thursday 12th. I traded six large Beavers from the Snake Indians. We crossed from the Island to the West side of the River & proceeded upward for about 9 miles south West and encamped in a point where they usually make their fall medicine.

Fryday 13th. I bought a Horn Bow & a few Arrows a Saddle & pichimom, part of a tent and a few of those blue Glass Beads they have from the Spaniards, and on which they set such value that a horse is given for 100 grains.

Saturday 14th. Having now full filled the instructions I received from Mr. Chaboillez, which were to examine the lands of the Crow Indians and see if there is Beaver as was reported, and I to invite them to hunt it, I now prepared to depart, I assembled the Chiefs in Council, and after having smoked a few pipes, I informed them that I was setting off, that I was well pleased with them and their behaviour towards me, and that I would return to them next fall. I desired them to kill Beavers and Bears all winter for that I would come and trade with them and bring them their wants. I added many reasons to show them that it was their interest to hunt Beavers, and then proceeded to settle the manners of Knowing one another next fall, and how I am to find them which is as follows. Upon my arrival at the Island if I do not find them I am to go to the Mountain called Amanchabé Chije & then light 4 dift fires on 4 successive days, and they will Come to us (for it is very high and the fire can be seen at a great distance) in number 4 & not more, if more than four come to us we are to act upon the defensive for it will be other Indians. If we light less than 3 fires they will not come to us but think it is enemies. They told me that in winter they were always to be found at a Park by the foot of the Mountain a few miles from this or thereabouts. In the spring

and fall they are upon this River and in summer upon the Tongue and Horses River.

I have 122 Beavers 4 Bears and two otters which I traded not so much for their value (for they are all summer skins) as to show them that I set some value on the Beavers and our property. The presents I made them I thought were sufficient to gain their good will in which I think I succeeded. I never gave them any thing without finding means to let them know it was not for nothing. Had more been given they would have thought that good[s] were so common among us than to set no value upon them, for Indians that have seen few White men will be more thankful for a few articles given them than for great many, as they think that little or no value is attached to what is so liberally given. It was therefore I purchased their Bears and likewise as a proof that there is Beaver in those parts, besides it saved to distribute the good I had into the most deserving hands, that is the less lazy.

We departed about noon 2 Chiefs accompanied us about 8 miles, we stopped and smoked a parting pipe, the[y] embrased us, we shook hands & parted they followed us about one mile, at a distance gradually lessening their steps till we were almost out of sight and Crying or pretending to Cry they then turned their backs and went home. At parting they promised that none of their young men would follow us, they took heaven and earth to witness to attest their sincerity in what they had told us, and that they had opened their ears to my words and would do as I desired them, they made me swear by the same that I would return and that I told them no false words (and certainly I had no intention of breaking my oath nor have I still. If I do not keep them my word it certainly is not my fault).

Our course was N.E. 20 miles, a little before sun set we were overtaken by a storm which forced us into a point of the River where we encamped & passed the night during which our horses were frightened & it was with difficulty we could get them together again. We Kept watch by night. Sunday 15th. We followed a N.E. course and crossed the River Roches Jaunes at 9 and proceeded along the South side, at 10 we crossed Manpoa River at its entrance into River Roches Jaunes, Manpoa or the Shot Storm River is about 10 feet in breadth and with very little water it take its waters in Amanabe Chief at a short distance there is wood along its Banks, especially close to the mountain and Beaver on the east side of this River, close to its discharge in the River Roches Jaunes is a Whitish perpendicular Rock on which is painted with Red earth a battle between three persons on horseback and 3 on foot, at 2 in the afternoon we arrived at a high hill on the side of the river called by the Natives Erpian Macolié where we stopped to refresh our horses & killed one Cow. An hour before sun set we sat of again and encamped after dark making no fire for fear of being discovered by horse thieves or enemies. From Manpoa to this p[l]ace our Course was east. Buffaloes and Elk we found in great plenty. Wind S.W.

Monday 16th. It froze hard last night North, Weather Cloudy N.E. 9 miles and stopped to Cook victuals for the day as we make no fire at night. Elk and Buffaloes in the greatest plenty. It rained till 3 in the afternoon, when weather clearing we sat off and encamped at the Rocks of the large Horn River where we arrived at 8 in the evening.

Tuesday 17th. We crossed the river early in the morning, its points here are large & beautiful well stocked with wood, we passed through a most abominable Country and often despaired of being able to get clear of this place enceting (sic) with Rocks which it was impossible to ascend or to go round so we were obliged often to go back on other road which presented us with the same difficulties, at last we ascended the hill but being on the top did not offer a more pleasing prospect,

we were often obliged to unload the horses and carry baggage ourselves and the horses being light we made chump [jump] over ..... in the Rock and climb precipices, but were near losing then at last at 3 in the afternoon we passed the whole of that bad road and arrived at the Border of Rocks where we could see a fine level country before us but the sun was set before we could find a practicable road to come down to it, which we effected not without unloading the horses and carrying down their loads part of the way, while: the horses slid down upon their rumps about 25 yards. We broke some of our saddles, and arrived in the plain just as the day was setting and encamped further on by the side of the River. It is probable that had we had a guide with us we could have avoided those Rocks, while our ignorance of the Road made us enter into & once engaged among the difficulty was as great to return as to proceed. We Kept no regular course, but went on as we could to all points of the compass in order to extricate ourselves. We Killed one Elk.

Wednesday 18th. This morning we saw the points of wood where we encamped last night 9 miles south of us from which we were parted by the River on one side and the Rocks on the other. I heard the noise of the fall or Great Rapids yesterday, but now at too great a distance from the River and too busily engaged to go and see it. It froze hard last night, we left our encampment later our horses were tired, but after having set out did not stop till after sun set having followed for 22 miles a north East course wind South West. Fine weather plenty Elk and Buffaloes.

Thursday 19th. Cold and Cloudy and followed the same course as last day for 22 miles stopped at 2 in the afternoon. and Killed a stag which was very poor being its Rutting Season. We resumed our course to the N. East for 8 miles and encamped for the night.

Friday 20th. We sat this day early out, assended the hills which are rugged and barren proceeding N.E. for 36 miles. Killed one large . . , fine weather with a N.E. wind.

Saturday 21st. We had a very bad road. Came down to the River to see if we could find a better passage but it was impossible, the River striking the Rock at every bend and assended the hill again and with difficulty made our way over Rocks. After sun set we encamped on the River a la Langue Killed 2 Elks which were very fat. Course East for 18 miles wind N. E.

Sunday 22nd. We crossed the River a la Langue and passed over a plain of about 9 miles in breadth where we came again to Rocks and precipices without number over which we jogged on without stopping till 2 hours before sun set when we encamped on the side of the River close to a Rapid. There is little or no wood here along the River except a few Liards scattered here and there and no grass at all. Course N.E. for about 18 miles. Wind S.W.

Monday 23rd. We had a pretty level plain the whole of the day 12 miles West and 24 miles N. E. At 10 we crossed the Powder River, 121 it has no wood on its bank here and is much shallower than when we crossed it going; its water is the same being still muddy, we encamped at night by a small Creek, having been unable to find grass for our horses throughout the day we were obliged to cut down three Lair[d]s and let the horses feed on the bark.

Tuesday 24th. Set off early, at 9 in the morning we found a place where there was grass where we stopped and let our horses eat. At three in the afternoon we saddled our horses and went on until we encamped after sunset having followed an Eastern Course for 13 miles. Wind S.W. fine weather. It is 4 nights since it froze.

Wednesday 25th. We passed through a very uneven country, but there being no Rocks we had no very great difficulties and encamped at night in a very large point of wood in which there was plenty of Deer -- watched all night having seen something like a man Creeping on the beach.

We had made this day 37 miles by a North Course. The fire is in the plains from which the wind brought columns of thick smoke in abundance so that we could barely see. We shod our horses with raw deer hide as their hoofs are worn out to the flesh with continual walking since last Spring setting their feet on loose stones lames then & sometimes makes them bleed.

Thursday 26th. What we saw last night and mistook for a man was a Bear whose tracks we found this morning. We sat out at 8 and the plain being even we went on at a great rate, at 2 in the afternoon we stopped to Kill a cow, our provision being out, at three we sat off again and met on our road a female bear eating .... we killed her and took the skin it being good. At five we stopped for the night.

Here the River is divided into many channels forming so many islands, the banks and islands are thickly covered with woods, chiefly Liard, oak and maple. Our course was North which followed for 39 miles having the wind ahead, which brought us thick smoke in abundance. We saw this day plenty Elk and Buffaloes.

Fryday 27th. We crossed a plain of about 6 miles and arrived at a bend of the River where it was impossible to continue on the hill so that we were fain to descend to the River and Beach. We bemired 3 of our horses and got them out but with great difficulty. At one we stopped to let the horses eat. The wind was south and we had no appearance of smoke but the weather threatened rain. We encamped at sun set after having followed a North course for 24 miles and found plenty of grass.

Saturday 28th. This whole day we travelled through a level country having fine weather. We made 30 miles in a Northerly direction and passed 3 Indian encampment of this summer, whom I suppose must have been occupied by warriors for the[y] had no tents.

Sunday 29th. We passed through a most beautiful and pleasant country, the river being well wooded. We found here more fine grass than in any place since I left the Missouri and of course the greatest number of Buffaloes. The wind was N.W. and the weather Cloudy and Cold. Having made 30 miles by a N.N.E. Course we encamped on a small creek round which the river passed.

Monday 30th. We assended the hill which produces plenty of fine grass; about 6 miles further we saw the forks of the River aux Roches Jaunes and the Missouri Course N.E. 27 miles and descended to the River (the Missouri) having but a bend. We had followed the River for 7 miles when we heard the report of a gun twice, and the voice of a woman as crying. We stopped and sent Morrison en decouverté and I and Souci remained to watch the horses and property. Morrison returned in about 2 hours and reported that what we had taken for a Woman's voice was that of a young Cub, and as to the gun we supposed it proceeded from trees thrown down by the wind, as it blew very hard, and the Buffaloes, Bears and Elk were very quiet in the wood and plain, so that there was no appearance of being any human Creature there about. We went on & assended the hills to cut a large bend of the River following an east course for 11 miles and encamped in a large point of Elm trees for the night. The Wind was North West and very strong tearing down trees by their roots every moment.

Tuesday October 1st. Weather Cloudy raining now and then, Wind N.W. very cold Course North 12 miles. Passing through a Coulé yesterday I found a lodge made in the form of those of the Mandans & Big Bellys (I suppose made by them) surrounded by a small Fort. The Lodge appears to have been made 3 or 4 years ago but was inhabited last winter. Outside of the fort was a Kind of Stable in which the[y] kept their horses. There was plenty of Buffaloes heads in the Fort some of

them painted red.

Wednesday 2nd. Strong N.W. wind Cold and Cloudy-Course N.E. 26 miles Killed a Cow – Country even plenty of grass.

Thursday 3rd. Set off at 7 through a very hilly and bad country N.E. 20 miles east 15 and encamped on the River it rained part of the day Wind north West very Cold.

Fryday 4th. It rained and was bad weather all night, at break of the day it began to snow and continued snowing very hard till 2 in the afternoon. Strong N.W. wind. We sought our horses all day without being able to find them till after sun set; the bad weather having drawn them in the woods.

Saturday 5th. Sat off early, fine weather Course S.E. by E. 26 miles plenty of Buffaloes on both sides of the River. Killed Cow.

Sunday 6th. All the small Creeks and Ponds were frozen over this morning Course S. E. by S. 20 miles Sout[h] – passed through a thick wood of about 4 miles.

Monday 7th. East 2 miles south 11 we arrived at the lesser Missory which we crossed S.E. 3 miles saw many Bears and Skunks.

Tuesday 8th. Assended the hills, Plains even 39 miles S.S.E. fine warm weather wind S.W.

Wednesday 9th. Proceeded on the hills through a fine Country course E. by S. 12 miles. South 2 miles and arrived at the Big Bellys who were encamped about 3 miles above their village. I found here a letter of Mr. Charles McKenzie to me.

Thursday 10th. I remained here all day to refresh the horses before I proceed to the Assinibois River. Among other news the Indians tell me that there are 14 American Crafts below the [villages?] who are ascending to this place. The Sioux have Killed 8 White men last spring upon St. Peters River & 3 Big Bellys here.

Fryday 11th. I intended crossing over today but was prevented by the strength of the wind which blew all day with amazing violence from the North West. I got a few pair of shoes made and Corn pounded for provision, news came that the Sioux were seen encamped at a short distance below. Expecting to be attacked they [the Big Bellies] were under arms all night.

Saturday 12th. About noon the weather being calm & warm we crossed the River; the horses swam the whole bredth of the River & were nearly spent. We met with 3 Assiniboines and their wives on the North side of the River who were going to the Big Bellys to trade. We went slowly on till sun set when we encamped on the side of a small lake in the Plains which are burning to the West. Course North.

Sunday 13th. Fine weather, wind N.W. plenty of ..... Buffaloes just arriving in the plain. Few being on all sides. The Buffaloes were in motion so that we could not get near enough to get a shot at them, & our horses so tired & fatigued that I did not chuse to run them. We crossed the fire at sun set and encamped by the side of a small lake whose borders had escaped the general Conflagration.

Monday 14th. We watched our horses all that night for fear of Assiniboines, of whom we had seen the tracks, in the evening; sat off before sun rise and arrived at 10 in the forenoon at the River la Sourie where we stopped for the remainder of the day. The grass on either side of the river here is not burnt but the fire appears on both sides at a distance, West and north. Soon in the evening the Buffaloes were in motion on the North side of the River which made us fear for our horses.

Journal of a Voyage to the Rocky Mountains

Francois Antoine Larocque

---

Tuesday 15th. After dark last night we left our encampment and mar[ched] two and a half hours by star light, when Clouds gathering so as to obscure our sight of the stars and of course being unable to regulate our course we stopped in a Creek and there passed the night being free of anxiety.

In the morning we proceeded weather Cold and Cloudy wind N. W. We stopped for the Night on the deep River, which does not draw the name of a Riper, being a hallow .... in the plain in which there are small deep ponds communicating with each other in the spring and rainy seasons only, nor is there a single twig to be found about. At sun set it began to rain and continued so all night. We covered the property with part of a tent we had, and we passed the whole night Shivering by a small fire made of Cowdung (which we had taken care to gather before the rain began) with the assistance of our saddle on our back, by the way of Cloaks.

Wednesday 16th. It snowed rained and hailed the whole day. Wind N.W. and amazing strong. We arrived after dark at the woods of one of the Elk Head Rivers, wet to the skin and quite benumbed with Cold.

Thursday 17th. Weather Cloudy and wind N.W. and very Cold so we were fain to stop, make a fire and warm ourselves, especially as we are not over and above well dressed to Keep off the Cold. We wrapt ourselves in Buffaloe Robes and proceeded to the Grand Coulé and encamped on the very same spot where we had the quarrel last spring with the Assiniboine.

Fryday 18th. In the morning we met with a few Assiniboines coming from the Fort, we stopped and smoked a pipe with them. They told us that Mount a la Bosse [fort] had been evacuated and that Mr. Falcon was building a house to winter in, about half ways between that and R. qu'il appelle Fort. We arrived at Mount a la Bosse Fort, where I found Mr. Charles McKenzie and 3 men taking care of the remaining property.

I remained here one day and then went to see Mr. Falcon at the Grand Bois about 15 miles above this, returned the next day and then sat out for River la Sourie Fort where I arrived the 22 October.

So ends my journal of my Journey to the Rocky Mountains.

Chapter 1

(1807—33)

MY PARENTAGE AND EARLY LIFE

In order to inspire the reader with confidence in the veracity of my writing — for it must be borne in mind that I write this book for true and faithful information of the public — I thought it would be well to give him an introduction to myself, before entering on the journey.

I was born in France, in the year 1807, five miles from Fontainebleau, on the border of the beautiful Seine, 45 miles from Paris. My father, who was neither rich nor poor, but a great Bonapartist, left France for America immediately after the battle of Waterloo, thinking that the American government would make some attempt to get Napoleon off the island of St. Helena; but after conversing with several individuals, and particularly with Commodore Porter, he found that the government would countenance no such attempt. So the project was abandoned — I say the project, for it had been started by the many French officers who were at the time in Philadelphia. Louis XVIII having issued a pardon, most of them returned to France. My father returned after an absence of one year, during which he found the American government and the country to suit him. So he sold all his property and left France in 1818, with a family of four children—three boys and one daughter, I being the youngest son. In his travels in America he had chosen Baltimore as his future residence. Having landed at New York we came to Baltimore, where he purchased a small farm of 60 acres, five miles from the city. This farm belonged to some French who had been forced to emigrate by the massacre of St. Domingo, and was established by Monsieur La Bié Du Bourgh De Berg; it was well supplied with fruits, but the soil was poor and stony, and this lad got sick of it. Hearing much of the fine rich soil of Missouri, I determined to try my luck in the Far West — for at that time it was considered quite a journey to St. Louis.

So at the age of twenty-one I determined to leave home, and started with a gentleman by the name of J. W. Johnson, who had been a sutler at Prairie du Chien, and had a large number of negroes whom he was taking to Missouri. I assisted him as far as Wheeling, where he took a steamer, and I went across country on horseback alone.

That is 43 years ago. I had a fine trip of 22 days. I remained two years about St. Louis in the capacity of overseer for Major Benjamin O'Fallon, a retired Indian agent, with whom I had a great deal to talk about Indians and Indian countries, which finally induced me to try the wilderness.

My first trip was up the Mississippi to Des Moines Rapids, the year previous to the Black Hawk War of 1832. At this time there were two stores at Keokuk — not yet called by that name; one of them belonged to an individual named Stillwell, and the other to Mr. Davenport, who was afterward murdered on Rock Island. I came up to the place in a small steamer called the Red Rover, commanded by Capt. Throckmorton, who is still alive and has made many trips up this river — as fine a gentleman as I ever knew. On the way up I became acquainted with Mr. Blondo, interpreter for the Sac and Fox Indians. He took a great fancy to me, and nothing would do but I must go with him to his farm, seven miles up the rapids, and remain there until the boat got over the rapids, which it was supposed would take a long time, as the river was very low. I consented, got a horse caloh [calesh], and we started. The improvements consisted of a comfortable log cabin,

and Blondo was indeed well fixed for the country at the time. After some little time he took me into the village and introduced me to several of the leading men, of whom a great many were drunk, and toward evening he got so drunk himself that he frequently asked me if I did not want to "smell powder," but as I never felt like smelling powder as he proposed, I declined, not knowing why he used the expression. After the spree the old gentleman was very kind, took me all over the half-breed reservation — as fine country as I ever saw — and finally remarked that he would give me all the land I wanted if I should happen to make a match with his niece, Louise Dauphin. That was said after I had given up the idea of going on to Prairie du Chien, where I was bound; but, thinking myself too young, I declined all overtures, although I confess that I came very near accepting the offer, for Louise was one of the handsomest girls I ever saw — it cost me many long sighs to leave her, and more afterward.

After two months' residence at the rapids I returned to St. Louis, with full determination to see more of the wild Indians. General Ashley, who was then carrying on great beaver trapping in the Rocky Mountains, was in the habit of hiring as many as 100 men every spring. They were engaged for 18 months, to return in the fall of the following year with the furs. Not long after I came from the rapids General Ashley's party returned from the mountains with 100 packs of beaver. A pack of beaver is made up of 60 average beavers, supposed to weigh 100 lbs., worth in New York at that time from \$7 to \$8 per lb. It is impossible to describe my feelings at the sight of all that beaver — all those mountain men unloading their mules, in their strange mountain costume — most of their garments of buckskin and buffalo hide, but all so well greased and worn that it took close examination to tell what they were made of. To see the mules rolling and dusting is interesting and shocking at the same time; most of them, having carried their burdens of 200 pounds' weight for about 2,000 miles, return with scarcely any skin on their backs; they are peeled from withers to tail, raw underneath from use of the surcingle, and many are also lame.

William Sublette and Robert Campbell had attended General Ashley on several trips to the mountains — Campbell as clerk, mostly on account of his health; he had previously been clerk for Keith and O'Fallon. Sublette was a farmer near St. Louis, but was more for trapping beaver than farming.

The sight of all this made me determined to take a trip of the same kind. The journey to the Rocky Mountains at that early period was considered very hard, and dangerous on account of the Pawnees and Blackfeet. While trapping that summer William Sublette had been badly wounded in the shoulder in a fight with the Blackfeet. But not all this danger, and the hardships to be endured on such a trip, could prevent me from engaging, in the spring of 1833.

I first provided myself with a good recommendation from Major Benjamin O'Fallon, who was well known for his integrity, and would give no one a recommendation unless he deserved it. Provided with this document I next made application to the American Fur Company, which was then carried on by P. Chouteau and Co. J. J. Astor was still in the company. Mr. J. B. Sarpy was at the time the person who engaged the men. As I was young, well dressed, and not a badlooking lad, but did not seem to be very robust, he remarked that he did not think I would answer for his purposes. I then showed him my document from the major, whom we both knew well, and the remark he made was, "Ah, if you had not deserved this, you would not have gotten it." Then, said he, "you are a Frenchman?" I replied in the affirmative. "You have some education," he continued; "why do you want to engage as a common hand?" I then told him that my desire was to see

---

the Rocky mountains, that I was willing to undergo all the hardships of such a voyage, and that I wished to start from this place on horseback. He then referred me to Messrs. Sublette and Campbell, saying that, if I engaged with him, I should have to go as far as Fort Pierre, and there start for the mountains with Mr. Fontenelle. Being anxious for an immediate ride, that proposition did not suit me. I then went to the office of Sublette and Co., which firm had bought out all Gen. Ashley's interests in the mountains, and were also making up an outfit to carry on an opposition to all the trading posts of the American Fur Co. on the Missouri; but I did not know this when I first applied to them. I found Mr. Campbell in his store, and on informing him of my intentions he appeared to have pretty much the same ideas as Mr. Sarpy. I soon discovered this and showed him my recommendation. Being very much of a gentleman, he had the politeness to invite me to his office, and there did all he could to make me abandon the idea of taking such a trip, giving me a full description of what I should be likely to undergo. But nothing could deter me; go I must, and under the promise that he should never hear me grumble, I signed an article of agreement for 18 months, for the sum \$296 and such food as could be procured in the Indian country — that excluded bread, sugar, and coffee.

Now I was thus enlisted, ready for service; but Mr. Campbell was kind to me and always did his best to make my situation pleasant. So he employed me in St. Louis to assist in packing goods for the upper country, and in equipping the men who were getting ready to leave with the mules for Lexington, Mo., to await the arrival of the steamer which was to bring all their goods up to that point, and of the keel boat which was intended to be cordelled or towed as far as Fort Union with goods for the Indian trade. I was kept in the store until all the outfits had left St. Louis.

April 7th, 1833. — Now, my dear reader, my mule is saddled, bridled, and hitched at the store in Washington Avenue, St. Louis, ready to take me to Lexington, to join the party. If you wish to sacrifice all the comforts of civil life, come with me and share what I shall endure but no! you can do better than that. For a small sum wherewith to purchase this book you can know it all without leaving your comfortable room. So good-by to civilization — not for eighteen months, but for forty years.

Myself and an individual by the name of Redman started in advance of Mr. Campbell, who was to join us at St. Charles. After we had been there two days he arrived with a young man named James Lee, and a little Snake Indian called Friday, who had been adopted by Mr. Fitzpatrick, a trapper in the mountains and afterward an Indian agent—for which tribe I do not recollect. I shall not be able to give exact dates, as I did not expect to ever write a book; but I will endeavor to come as near as possible. We were eight days on our journey from St. Charles to Lexington; we fared extremely well, Mr. Campbell having treated us like himself wherever we put up.

On the 18th [or 20th] of April we reached Lexington, where we found our party camped in tents, awaiting our arrival. There the sumptuous fares were all over. Mr. Campbell called me up and said, "Charles, I will now assign you to your mess. I have a mess of nine first-rate old voyageurs — French boys from Cahokia — you will be well off with them." I was not quite a stranger to them, having formed acquaintance with some of them before leaving St. Louis; and I am glad to say that they did all they could for me as long as I remained with them. None of those men had any education, and would frequently remark that if I took care of myself I could get into good business. Our fare during our stay at Lexington was not bad; we drew rations like soldiers, and having yet a little pocket money we could add to our provisions considerably. As to our bedding, it was not

very soft, for we were not allowed to carry more than one pair of 3-pound blankets. A few days after our arrival mules were given to each of us — two to pack and one to ride. Mr. Campbell gave me his favorite mule Simon to ride; old Simon was not so kind that he would not buck me off his back when he took a notion to do so, but on the whole was a good fellow in comparison with many others. My two pack mules were very gentle, but would kick off their packs sometimes. My two loads consisted of beaver traps and a small top pack — a choice load, not likely to turn over like dry goods. As I was a green hand my mates assisted me a great deal, and I was always thankful to them for it.

Chapter 2

(1833)

OVER THE PLAINS TO THE ROCKY MOUNTAINS

On the 12th of May we took our departure for the mountains, and at the same time the keel boat left Lexington Landing, manned by thirty men with the cordell on their shoulders, some of them for the distance of about 1800 miles. Our party consisted of 40 enlisted men; Robert Campbell, boss in charge; Louis Vasquez, an old mountain man; Mr. Johnesse, a clerk in charge of the men, whose place it was to remain in the rear to aid in readjusting the loads, which would get out of order, and to have an eye to the whole cavalcade. As guests, were Captain Stewart from England, on a pleasure trip; old General Harrison's son with the view to break him from drinking whiskey; and Mr. Edmund Christy, of St. Louis.

Now hard times commenced. At first the mules kicking off packs and running away was amusing for those who were all right, but mighty disagreeable for the poor fellows who were out of luck. I had my share of this, but it was not to be compared with the troubles of some of my comrades. This kind of kicking up lasted three or four days in full blast; it finally subsided, yet there would be a runaway almost every day. Our fare consisted of bacon and hard-tack — no sugar nor coffee — for three or four days, after which we each received a small piece of sheep meat, as we had a drove to last us until we got into the buffalo. While the sheep lasted we had but that alone. I then commenced to think that what Mr. Campbell had remarked was on the march. About a week after we had been under march the guard was established, and I was appointed an officer. It became the duty of the officer every third day to post his men around the camp, as soon as all the animals were brought in and picketed in the circle of the camp; those men were to remain quite still at their stations; the officer was to cry out "All's well" every 20 minutes, and the men to cry out the same, so as to find out whether they were asleep or awake. Should any one fail to reply, it was then the duty of the officer to go the rounds to find out the individual, and if caught asleep to take his gun to the boss' tent; then in the morning he would be informed of what he had to undergo, which was a \$5 fine and three walks. The men on guard were not permitted to move from their stations, as it was considered dangerous on account of Indians being known to creep up to camp and watch to shoot someone whom they could discover strolling about; so the officer was more in danger than his men. The usual time of guard was 2 1/2 hours. Having traveled all day, being obliged to remain quiet at one's post was very trying on the sleeping organs, and consequently there would be some poor fellow trudging along on foot almost every day. Our route, as well as I can remember, crossed the Little and Big Blue rivers and continued along the south side of the Platte. I complained, as my messmates did, of the sheep meat, but they consoled me as well as themselves by speaking of the fine feast we soon would have on the buffalo, which they said they

would prefer to all the good messes that could be gotten up in the States. Three days after we had reached the Platte the hunters brought in one evening a load of meat; but the cry of "buffalo meat!" was heard long before they came in, and there was great rejoicement in camp. Sheep meat could be had very cheap that evening, and it was amusing to see the cooks hunting their kettles — some cursing them for being too small, as though it was the poor kettle's fault for its size; but it was not long before they found the kettles were large enough. Then came trouble — there was no wood to be found about camp, and all the fuel we could obtain was the stalks of some large dried weeds, the wild sunflower. Now and then some hungry fellow would bring in a small armful of that kind of fuel, and his first words would be, "Is the kettle boiling?" Upon being answered in the negative a long string of bad expressions would be heard, the mildest being, "Waugh! I believe that damned kettle won't never boil!" Thanks to the virtue of sunflower stalks, however, it boiled at last, and every countenance became pleasant at the thought of tasting that much-talked-of buffalo meat. When it was thought cooked by the old voyageurs, preparations were made to dish it out; but, as we had no pans, a clean place was looked for on the grass, and the contents of the kettle were poured out. All hands seated around the pile hauled out their long butcher knives, opened their little sacks of salt, and then began operations. But it was not long before bad expressions were again used in regard to the highly praised quality of buffalo meat. "I can't chew it" — "Tougher'n whalebone" — "If that's the stuff we've got to live on for eighteen months, God have mercy on us!" For my part I thought about the same, but said nothing; and after I had chewed as long as I could without being able to get it in swallowing condition, I would seize an opportunity to spit it into my hand, and throw it out unseen behind me. My comrades asked me how I liked buffalo meat; I replied I thought it might be some better than it was, and they said, "Never mind, Larpenteur; wait until we get among the fat cows — then you will see the difference." At this time of the year, in the early part of June, the cows are not fit to kill; for they have their young calves, and are very poor. For several days after this sheep meat would have kept up its price, and perhaps would have risen in value; but none was allowed to come into market, what little there was being reserved for the boss' mess. So we had to go it on buffalo alone; but, thank Providence! we soon got into fine fat cows, and fared well. My comrades had told me that we should now get a sickness called by them *le mal de vache*; it is a dysentery caused by eating too much fat meat alone, and some are known to have died of it. So it was not long after we fared so well on the fat of the land that very bad expressions were used in reference to living on meat alone.

I cannot say that anything of great importance took place during our journey to the rendezvous; but nowadays, when we have a great deal to say in the newspapers about traveling from Sioux City to Fort Randall, I think that I may indulge in a few more remarks before I reach Green River. After crossing the South Fork of the Platte, the only curiosity of note is Chimney Rock; that part of the country is too well known at present for me to enter into any description of it. From this point to La Ramie's fort nothing took place worth mentioning except the overthrow of our long friend Marsh. It happened that, in traveling through a country thickly settled with prickly pears, bad luck would have it that a small particle of one accidentally found itself under the tail of his riding mule. The poor animal, finding itself so badly pricked, kicked and bucked at such a rate that our long friend was soon unsaddled, and thrown flat on his back in a large bunch of the prickly pears. Although he was over six feet in his stockings, the length of his limbs was not enough to reach out of the patch; and there he lay, begging for pity's sake of his comrades, as they

passed by, to help him out of his prickly situation. But all he heard in reply to his entreaties was bursts of laughter throughout the company as they passed by, till he was relieved by Mr. Johnesse, who had charge of the rear. I could but pity the poor fellow, but, at the same time, his situation excited mirth. There he lay in a large bunch of prickly pears, stretched out as though he had been crucified. Poor Marsh! I shall remember him as long as I live.

On approaching La Ramie's River we discovered three large buffaloes lying dead close together. The party was ordered to stop and form in double line, while the hunters were gone to find out the cause of those buffaloes' deaths, surmising that they had been killed by Indians. They were gone but a little while before they returned, reporting that the animals had been killed by lightning during a storm we had the previous day; so our fears of Indians were removed, and the party resumed their march. We soon reached the [Laramie] river, where we were ordered to dismount and go to work making a boat out of the hides of the buffalo — quite a new kind of boat to me. But the boat was made, and the party with all the goods were crossed over by sunset. The next day, or the day after, according to custom Mr. Campbell sent Mr. Vasquez with two men to hunt up some trappers, in order to find out where the rendezvous would be, and we awaited their return at this place. They were gone eight days, which time we enjoyed in hunting and feasting on the best of buffalo meat. On the arrival of the trappers and hunters a big drunken spree took place. Our boss, who was a good one, and did not like to be backward in such things, I saw flat on his belly on the green grass, pouring out what he could not hold in. Early next morning everything was right again, and orders were given to catch up and start. Everything moved quite smoothly until we reached the Divide, where my faithful old Simon — I may say the whole trinity — played out on me. About two hours before camping time the pack of one of my mules got so much out of order that I was obliged to stop to lash it again. Mr. Simon, who was in the habit of waiting for me on occasions of that kind, changed his notion and took it into his head to follow the party without me; the well packed one followed suit, and it was all I could do to prevent the third one from leaving before getting his pack on; but as soon as that was done the gentleman took to his heels, and all three got into camp about an hour before me. The want of Simon was the cause of my being obliged to wade a small creek — tributary to the Sweetwater — which was very cold, although it was the 2d of July. I was wet up to my waist, and it was my guard late that night. When I was awakened to go on guard my clothes were still wet, and on that morning, the 3d of July, water froze in our kettles nearly a quarter of an inch thick. I felt quite chilly and was sick for about eight days.

As near as I can remember we reached the rendezvous on Green River on the 8th of July. There were still some of Capt. Bonneville's men in a small stockade. He had come up the year previous [1832]. Thus ended our journey so far.

### Chapter 3

(1833)

### FROM GREEN RIVER RENDEZVOUS BY THE BIG HORN AND THE YELLOWSTONE TO THE MISSOURI

The day after we reached the rendezvous Mr. Campbell, with ten men, started to raise a beaver cache at a place called by the French Trou à Pierre, which means Peter's Hole. As I was sick, Mr. Campbell left me in camp, and placed Mr. Fitzpatrick in charge during his absence, telling the latter to take good care of me, and if the man Redman, whom he left as clerk, did not answer, to

try me. In a short time a tent was rigged up into a kind of saloon, and such drinking, yelling, and shooting as went on I, of course, never had heard before. Mr. Redman, among the rest, finally got so drunk that Mr. Fitzpatrick could do nothing with him, and there was not a sober man to be found in camp but myself. So Mr. Fitzpatrick asked me if I would try my hand at clerking. I remarked that I was willing to do my best, and at it I went. For several days nothing but whisky was sold, at \$5 a pint. There were great quarrels and fights outside, but I must say the men were very civil to me. Mr. Fitzpatrick was delighted, and wondered to me why Mr. Campbell had not mentioned me for clerk in the first instance instead of that drunken Redman. After seven or eight days Mr. Campbell returned with ten packs of beaver. A few days afterward the rumor was circulated in camp that he was about to sell out their interest in the mountains to Fitzpatrick, Edmund Christy, Frap, and Gervais. In the meantime sprees abated, and the trappers commenced to buy their little outfits, consisting of blankets, scarlet shirts, tobacco, and some few trinkets to trade with the Snake Indians, during which transactions I officiated as clerk.

The rumors at last became verified; the sales were effected, but things went on as usual until Mr. Campbell sent for me one morning. On entering his tent I was presented with a good cup of coffee and a large-sized biscuit; this was a great treat, for I believe that it was the first coffee I had drunk since I left Lexington. Then he remarked, "Charles, I suppose you have heard that I sold out our interest in the mountains; but I have reserved all your mess, ten mules, and the cattle (we had four cows and two bulls, intended for the Yellowstone). I have 30 packs of beaver, which Fitz is to assist me with as far as the Big Horn River, where I intend to make skin boats and take my beaver down to the mouth of the Yellowstone. There I expect to meet Sublette, who is to take the packs on to St. Louis. You are one of the ten men whom I have reserved, but Fitz would like much to have you remain with him, and I leave you the choice, to stay with him or come with me." My reply was, "Mr. Campbell, I have engaged to you, you have treated me like a gentleman, and I wish to follow you wherever you go." Upon which he said, "Very well, very well," with a kind smile; "go to your mess." On returning, my messmates, expecting some news, asked me what was the result of my visit to the boss; and, on being informed, a great shout of joy was the answer. The beaver was all packed and pressed ready for the march; so the next day the order came to catch up the animals, receive our packs, and move camp. This was not our final departure; it was merely to get a fresh grazing ground for the mules and horses.

A day or so later we learned that a mad wolf had got into Mr. Fontenelle's camp about five miles from us, and had bitten some of his men and horses. My messmates, who were old hands, had heard of the like before, when men had gone mad. It was very warm, toward the latter end of July; we were in the habit of sleeping in the open air, and never took the trouble to put up the tent, except in bad weather; but when evening came the boys set up the tent. Some of the other messes asked, "What is that for?" The reply was, "Oh, mad wolf come — he bite me." When the time came to retire the pack saddles were brought up to barricade the entrance of our tent; the only one up in camp, excepting that of the boss. After all hands had retired nothing was heard in the camp except, now and then, the cry of "All's well," and some loud snoring, till the sudden cry of, "Oh, I'm bitten!" — then immediately another, and another. Three of our men were bitten that night, all of them in the face. One poor fellow, by the name of George Holmes, was badly bitten on the right ear and face. All hands got up with their guns in pursuit of the animal, but he made his escape. When daylight came men were mounted to go in search, but nothing could be seen of

him. It was then thought that he had gone and was not likely to return, and no further precaution was taken than the night before. But it seems that Mr. Wolf, who was thought far away, had hidden near camp; for about midnight the cry of "mad wolf" was heard again. This time the animal was among the cattle and bit our largest bull, which went mad afterward on the Big Horn, where we made the boats. The wolf could have been shot, but orders were not to shoot in camp, for fear of accidentally killing some one, and so Mr. Wolf again escaped. But we learned afterward that he had been killed by some of Mr. Fontenelle's men.

As well as I can remember it was the first week in August when we were ordered to take final leave for the Horn. Our party was then much reduced; the members of the new company remained on Green River with the intention, according to custom, to set out through the mountains so soon as trapping time commenced. Fitzpatrick came with us, with about 20 of his men; Harrison was with Fitz, intending to winter in the mountains. We turned back on the same route by which we had reached the rendezvous, to Sweetwater, from which we struck off for Wind River. Two days after leaving the Sweetwater we reached Wind River, near the mouth of a small stream called Pappah-ah je, which place Dr. Harrison visited on account of the remarkable oil spring which puts into that stream. Some distance from the river we learned by one of the men, who had gone ahead to find a good encampment, that the Indians, the night previous, had shot a trapper asleep through the ear, that the ball had come out under his jaw, and that he had an arrow-point in his shoulder-blade. Three old trappers had left Green River some time before us, intending to meet us on Wind River. Dr. Harrison extracted the arrow-point and dressed the wound, which he pronounced not dangerous. We remained in camp two days. From this point until we got to the other side of the mountains, game became so scarce that we had to live for two days on such berries and roots as we could find. Two days before reaching the Horn one of our bulls commenced to show some symptoms of hydrophobia by bellowing at a great rate, and pawing the ground. This scared my poor friend Holmes, who was still in our party, but not destined to reach the Yellowstone. He was a young man from New York, well educated, and we became quite attached to each other on our long journey. The poor fellow now and then asked me if I thought he would go mad; although thinking within myself he would, being so badly bitten, I did all I could to make him believe otherwise. When he said to me, "Larpenteur, don't you hear the bull—he is going mad—I am getting scared," I do believe I felt worse than he did, and scarcely knew how to answer him. The bull died two days after we arrived at the Horn, and I learned, some time afterward, from Mr. Fontenelle, that Holmes had gone mad. For some days he could not bear to cross the small streams which they struck from time to time, so that they had to cover him over with a blanket to get him across; and at last they had to leave him with two men until his fit should be over. But the men soon left him and came to camp. Mr. Fontenelle immediately sent back after him; but when they arrived at the place, they found only his clothes, which he had torn off his back. He had run away quite naked, and never was found. This ended my poor friend Holmes.

It was about the 10th of August when we reached the Horn, which is the same as Wind River, only the latter loses its name after crossing the mountains. It is not navigable through the mountains, I am informed, even for a small canoe; and this is the reason why our boats had to be made on this side of the mountain. So, immediately after our arrival, a large party of hunters, with men and mules, started out, with the view of bringing in hides rather than meat; but, as luck would have it, Mr. Vasquez, clerk and old mountain man, killed one of the fattest buffalo I ever saw. Three days

---

after this three boats were completed, and everything in readiness to leave. In the morning I was sent for by Mr. Campbell, who then gave me some instructions I was not expecting. "Now," said he, "Charles, I am going down by the river with my beaver. Mr. Vasquez will go down by land in charge of the party, with the mules and cattle. There will be but five of you. You are going to travel through the most dangerous part of the country. Mr. Vasquez will keep ahead of the party on the strict lookout, and should anything happen to him, I wish you to take charge of the party." My reply was, "Very well, sir," though such instructions, I must confess, made me feel a little nervous. But it did not last; I very soon became quite cheerful, and anxious to be under way. Mr. Campbell started that same day, and we all left early next morning. For the four first days we traveled slowly and quietly. We could not travel fast on account of the cattle, whose feet were badly worn out and tender. On the fifth morning, a little while after, we left camp, we saw Mr. Vasquez coming back toward us, which made us suspect he had discovered something; we thought it might have been a band of buffalo. But when he came up to us he said that he had discovered Indians—three, on the other side of the river; but he was sure we had not been discovered by them, and moved that we should go near the river, to secure water and make some kind of a fort, for defense in case of attack. As he was in charge, and an old experienced man, we readily consented. So on we went to the river, but on arrival we found, to our great surprise, the opposite shore red with Indians, who commenced to yell enough to frighten Old Nick himself. No time to make a fort, or even to unsaddle, before they began to throw themselves into the river and make toward us. Mr. Vasquez ordered us to take position behind a large cluster of cottonwoods and cock our rifles, but not to shoot until he gave the order. So there we stood in readiness, like veterans; the first fright was over, and we were ready to make the Indians pay dearly for our hair. None of us understanding their language, we made sure they were Blackfeet, and fight we must. In less time than it takes me to write this, they were upon us. One tall scoundrel came up a little ahead of the rest with a white flag, making signs not to shoot. An old French mountaineer named Paulette Desjardins understood a few words of Crow, and as the Indian pronounced the name of his tribe, the old man said "They are Crows —there is no danger for our lives, but they are great thieves." Mr. Vasquez also knew as much about them as the old man did, and so we let them come up. Then the shaking of hands took place, and our hearts went back into the right place again. As we had a large supply of buffalo meat, we made a feast, which they appeared to relish very much, and then they expressed a desire to open trade; but we had no goods for that purpose.

We had not gone more than three miles when we discovered some ten Indians galloping toward us as fast as their horses could go; we stopped until they approached us, when we found that they were the chiefs and leading men of the camp. They looked splendid, dressed in the best of Indian costumes, and mounted on fat ponies. They all shook hands and made signs that they would look for a good place to camp, and for us to follow. Somewhat against our will we did so. It was not long before the desired spot was found, and the whole camp soon made its appearance, containing upward of 400 lodges. This was a great sight for me, who had never seen such a formidable Indian camp. The Crows, at that time, generally roamed together, and on this particular occasion they looked richer than any other Indians, for they had just made their trade at the fort, one day's march from where we were. The Crows did not drink then, and for many years remained sober; it was not until a few years ago, when they were driven out of their country by the Sioux, and became a part of the tribe on the Missouri, that they took to drinking with the Assiniboines. As they

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

did not drink, their trade was all in substantial goods, which kept them always well dressed, and extremely rich in horses; so it was really a beautiful sight to see that tribe on the move. As soon as the proper place was found for encamping, the chief made us a sign to unsaddle and to put all our plunder in a circle which he himself described; and on the arrival of the camp his lodge was immediately erected over it, so that all was safe.

We finally left the Crow camp and soon reached Fort Cass, then in charge of Mr. Tulloch, who was a man possessed of good common sense, very reliable, and brave withal. He was called the Crane by all the Indians, on account of the extreme length and slenderness for which he was remarkable—almost a curiosity; he was extremely popular among the Crows, and well liked by the mountain men. When he left Fort Union to establish this new post, Mr. McKenzie requested him to take all such articles as the Crows might fetch, so as to get them in the way of trade. His first returns consisted mostly of elk, deer, and all kinds of horns, which made great mirth at Fort Union; yet his trade had been profitable. It was started again, and when we arrived there it was his second year. We learned that this was a very dangerous post; they had had some men killed by the Blackfeet, and were even afraid to go out to chop wood. This fort was situated about two miles below the mouth of the Horn.

Next day at ten o'clock we were again on the move, with a journey of about 250 miles before us, to reach the mouth of the Yellowstone. Nothing worthy of note took place during this part of our journey, which would have been extremely pleasant had it not been for anticipated danger from Indians. We had to erect a large pen for our animals every night, for fear of sudden attacks, and to stand frequent guard, as our party was small. But we lived on the fat of the land, as at that season game was in good order, and the Yellowstone Valley abounded with all kinds of game at that early period, and for many subsequent years. We were often frightened at large bands of elk, which, at a distance, bear the exact appearance of a mounted party of Indians, till, by the aid of a good spyglass, our fears were relieved. Our two cows added a great deal to our good living; as we had no coffee, milk was a great relish. We made but slow progress, on account of the cattle, whose feet became very tender, and finally got so bad that we were obliged to make shoes of raw buffalo hide. We arrived safe and sound at the mouth of the Yellowstone on the 3d of September, and thus ended our long trip. We were soon discovered by our people, who were at the landing where our fort was to be erected, two miles below the mouth of the Yellowstone, and were informed that Mr. William Sublette arrived there eight days before and Mr. Campbell three; but he had capsized in the Horn, lost two packs of beaver, and been near losing his life. Otherwise everything was right; they would have been glad to see us across, but it was too late in the evening to attempt this, as we had to swim. Now that I am obliged to pass a night on this side, if my reader will be so kind as to help me we will try to find out how long I have been in the saddle. As near as I can come, it is five months lacking four days. We should have been much better pleased if we could have crossed over on our arrival; still we felt quite merry, and it was a long time before we could go to sleep. In the evening, after we caught up our stock, one could hear great talk to the mules, calling them by name, telling them that they were near the end of their journey, and what they might expect in future; it was really amusing, and it was almost thought that the poor dumb beasts understood what was said to them. All hands were up early, mules and cattle turned out, and we waited impatiently to cross over. Between 10 and 11 a.m. Mr. Johnesse, who had come down by water with Mr. Campbell, and was still our foreman, appeared on the opposite shore to show us the place

Forty years a fur trader on the upper Missouri: the personal narrative of  
Charles Larpenteur, 1833-1872

---

where we had to swim the stock across. The river at that season was low, and the channel so narrow that we could plainly hear all he said. When we got ready to drive the stock in, he halloosed to me, thinking I did not know how to swim, to take hold of the bull's tail. Not being an expert in the science, I took his advice and the bull's tail too, and, making use of my three loose limbs, I reached the opposite shore with ease. In a short time we were all safe on the north bank of the Missouri, upward of 2000 miles from St. Louis.

Chapter 4

(1833-34)

FORT WILLIAM

Soon after crossing the Missouri we were again in company with our former messmates, and some of our other acquaintances who had come down the Yellowstone by water; the meeting was indeed a cause for rejoicing. We were now altogether about 30 men, encamped in the willows on the river bank, about 300 yards from where Fort William was to be erected, and to be so called in honor of William Sublette. As we had no tents those willows sheltered us from the wind, and enabled us to make comfortable cabins. Next day operations commenced for building the fort; some men getting out pickets for the stockade, others sawing logs, etc. Seeing the necessity of having safer quarters, we went to work with all our might every day, and Sunday too; and by the 15th of November got into our comfortable quarters, after which the Sunday work was stopped. The day we moved in was a holiday, and in the evening a great feast was given us by Mr. Campbell — Mr. Sublette having left in the keel boat a few days after our arrival, taking with him about ten men. It consisted of half a pint of flour to each man, one cup of coffee, one of sugar, and one of molasses, to four men. Out of this a becoming feast was made, consisting of thick pancakes, the batter containing no other ingredient than pure Missouri water, greased with buffalo tallow; but as I had had nothing of the kind for upward of six months, I thought I had never tasted anything so good in my life, and swore I would have plenty of the like if I ever got back to the States.

After this our work was changed in some respects. I was appointed carter, as I was not a very good hand with an ax, and soon equipped with an old cart purchased from some of the half-breeds, who had come over early in the fall, and an American horse, which had been brought to this place by Paulette Desjardins, who had come with us as a freeman, but had sold his small outfit to Mr. Campbell and engaged in the capacity of cook. This horse was an old, overgrown, broken-winded beast, which would groan tremendously on starting his load, and keep it up for about a hundred yards afterward, at which I could not help laughing. Here I am, a regular carter of Fort William, dressed in cowskin pants, cowskin coat, buckskin shirt, wolfskin cap, red flannel undershirt, and a blue check shirt over that, stepping along behind my old horse and cart. This great suit was intended to last my time out, under faithful promise, made to myself, to leave the country as soon as my engagement should be up; for I began to find that I was in a bad box. There had been some trading previous to our entering the fort, but none of importance except one, which took place about two weeks after, as I will now relate.

The news came by an Indian that Gauché, the great chief of the Assiniboines and the terror of all the neighboring tribes, was coming in to trade with about 200 buffalo robes, beside many small peltries. As Mr. Campbell had not yet been able to turn any of the chiefs from the American Fur Company's Fort Union, Gauché was not expected to come to us. But as he was a queer kind of a grizzly-bear fellow, very odd in his way, Mr. Campbell thought he might try his luck with

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

Gauché; so he sent his interpreter and me along to see what we could do — for I must remark that, although I was only a carter, I slept in the store and assisted in trade at night. This was the favorite time for the Indians, so that I frequently traded most of the night and went to my carting in the morning. When we reached the place where the Indians had stopped, as was the custom, to vermilion and dress themselves before entering Fort Union, where their reception was awaited with the American flag up and the cannon loaded, ready for the salute, the interpreter of the Big Fort, as Fort Union was called, had already arrived on the spot. Shaking hands with the old man, he said: “Well, I hope you will not fork to-day. The great chief of the big fort has sent me after you, and he is well prepared to receive you. I hope you will not make me ashamed by going with those one-winter-house traders.” The old man was listening with half an intention; and, as we approached him, looked the interpreter straight in the face and said: “If your great chief had sent any other but you I would have gone to him, but I don’t go with the biggest liar in the country.” Then he made a sign to his people to get on the move, crying out now and then, “Co-han ! Co-han ! “ which meant “Hurry up!” I found out afterward that this was a favorite expression of his. So, to the great astonishment of Mr. Campbell and all the others, we made our triumphant entrance into Fort William. We learned afterward that Mr. McKenzie was not at all surprised at the old fellow’s caper, for he knew Gauché of old.

It was not until night that we all got ready to trade. It must be remembered that liquor, at that early day, was the principal and most profitable article of trade, although it was strictly prohibited by law, and all the boats on the Missouri were thoroughly searched on passing Fort Leavenworth. Notwithstanding this, Mr. Sublette had managed to pass through what he wanted for his trade all along the Missouri; but the American Fur Company, having at one time been detected and had their liquor confiscated, erected a distillery at Fort Union, and obtained their corn from the Gros Ventres and Mandans. I will say more, in future, about this distillery.

The liquor trade started at dark, and soon the singing and yelling commenced. The Indians were all locked up in the fort, for fear that some might go to Fort Union, which was but 2 ½ miles distant. Imagine the noise — upward of 500 Indians, with their squaws, all drunk as they could be, locked up in the small space. The old devil Gauché had provided himself with a pint tin cup, which I know he did not let go during the whole spree, and every now and then he would rush into the store with his cup, and it was “Co-han “ — telling me to fill it — and “Co-han ! hurry up about it, too!” This was a great night, but I wished that the old rascal and his band had gone to the big fort. At last daylight came and the spree abated; a great many had gone to sleep, and the goods trade did not commence until the afternoon; but old Co-han, with his cup, kept on the move pretty much of the time. It was not until midnight that the trade was entirely over, and early next morning they moved away, with the exception of the old man and a few of his staff of loafing beggars.

Mr. Campbell, who was anxious to secure Gauché for the winter, thought to make him a very impressive speech previous to his departure. So the old bear was invited into Mr. Campbell’s room, and, after quite a lengthy speech, during which the old fellow made no reply, not even by a grunt, he merely said, “Are you a-going to give me some salt before I leave?” This being all the satisfaction Mr. Campbell received for his long speech, he could not refrain from laughing. The old devil got his salt, with some other small presents, and then departed without leaving any sign of his intention to return. Thus ended this trade.

Forty years a fur trader on the upper Missouri: the personal narrative of  
Charles Larpenteur, 1833-1872

---

Mr. Campbell happened to be out of luck this year, owing to the very warm fall of 1833, which kept the buffalo far north, and the winter trade of 1833-34 was a poor one; the Indians had no confidence in his remaining, so that the bulk of the trade went to the big American Company in spite of all we could do. Fortunately for us working hands, a small trade was done in the early part of the fall, or we should have fared much worse than we did — which was bad enough, as I will go on to explain. The jerked buffalo meat which had been traded from the Indians lasted but a little while, and after this our rations consisted of about a pint of pounded meat, which had been prepared and was brought in by the squaws. This is what pemmican is made of; it has to be mixed with grease to be eaten, but the tallow for this purpose we had to buy. This was sold at 50 cents per bladder, in which it was put up by the squaws, and which weighed from five to eight pounds. I had a partner, a German, and we could together purchase a bladder; but as to salt and pepper, which we had also to buy — salt \$1 a pint, pepper \$2 — we were not in partnership; each had his small sack containing pepper and salt mixed, and used it as he thought proper. This was all we could get — no sugar, — no coffee — nothing but cold water to wash the meat down. This was generally given to us for our breakfast, then lyed corn for dinner and supper. This was pretty good, but it went so hard on the salt and pepper that I began to think that I scarcely earned my salt. This kind of living lasted nearly all winter, with the exception of a deer or an elk which the hunters would now and then kill near the fort; but, true to my word, I entered no complaint. I will here describe the construction of Fort William, which was after the usual formation of trading posts. It was first erected precisely on the spot where the Fort Buford sawmill now [about 1871] stands; but then it was about 200 yards farther from the river, the bank having caved in to that distance. It was 150 feet front and 130 deep. The stockade was of cottonwood logs, called pickets, 18 feet in length, hewn on three sides and planted three feet in the ground. The boss' house stood back, opposite the front door; it consisted of a double cabin, having two rooms of 18x20 feet, with a passage between them 12 feet wide. There was a store and warehouse 40 feet in length and 18 feet in width; two rooms for the men's quarters 16x18 feet, a carpenter's shop, blacksmith's shop, ice house, meat house, and two splendid bastions. The whole was completed by Christmas of 1833. The bastions were built more for amusement than for protection against hostile Indians; for, at that time, although they were constantly at war with other tribes, there was not the least danger for any white men except the free trappers, and we could go hunting in all directions with perfect safety. Large war parties frequently came to the fort, but behaved very well, taking their leave after getting a few loads of ammunition and some tobacco.

This post was not the only one which was out of luck, for all those along the Missouri proved a failure. Sublette, being apprised of this, sold out during the winter of 1833-34 to the American Fur Company — as I learned afterward, very much to the displeasure of Mr. McKenzie, who wished to break us down completely, as a warning to any one who might oppose such a formidable and well-conducted company.

It was not until about the 10th of June, 1834, that an express arrived, informing us of the sale, and that the steamer would be up some time between that date and the 1st of July. This news was of little importance to me, as I had made up my mind to leave, and thought that nothing could induce me to remain in the country. In those days there was but one steamer a year up river this far, and great was always the rejoicement on its arrival. This was the Assiniboine; the boat made her appearance on the 24th of June, having on board the gentlemen who were to take inventories

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

of all the posts belonging to the American Fur Company, as old Mr. Astor had this year sold out to Pierre Chouteau and Co. A few days after the arrival of the steamer the transfer of goods and peltries took place. Of the latter there were very few — 70 packs of robes, 10 in a pack, which made 700 robes; 16 packs of wolves, 30 to the pack; and some few red and gray foxes.

In the meantime preparations were made for departure, which was to be in a large Mackinaw boat. While these were going on my occupation was that of horse guard. The idea of returning to the States was indeed very pleasant; while lying on the grass the thought of relating to Baltimore friends my mountain stories would make me feel, as the Indian says, “Big man me.” Best of all, I had the means to accomplish my journey; for, out of my wages of \$296 I had saved over \$200, thanks to not indulging too much in pancake parties. Coffee being \$1 a pint, sugar \$1, and flour 25 cents, many of my poor comrades came out in debt.

One fine day [July 2, 1834] I was sent for by Mr. Campbell — I could not imagine what for. I had not yet shed my winter garments, which had become by this time quite greasy; and had it not been for my blue check shirt, which happened to be clean at the time, I should have been taken for a very dirty man. Imagine my surprise, on entering Mr. Campbell’s room, to find myself in the presence of Mr. McKenzie, who was at that time considered the king of the Missouri; and, from the style in which he was dressed, I thought really he was a king. Without any introduction he immediately asked me if I would engage to him. Having made my plans to go home and not knowing but what he wanted me for a common hand, my reply was a short “No, sir,” after which I made for the door and returned to my duty. The same evening, after I had brought in the horses, Mr. Campbell sent for me again, and then said: “Charles, I omitted to inform you of the conversation I had yesterday about you with Mr. McKenzie. This was the cause of his coming to-day. He did not want to engage you as a common hand; he wanted you for a clerk, and I should advise you to see him. He is very much of a gentleman, and I think you will do well. You will act as you think proper — but this is my advice.” Then I had to combat my made-up plans, and give up all idea of returning to Baltimore. This I thought I could never do. I did not sleep much that night.

Next morning, while I was not feeling disposed to see Mr. McKenzie, Mr. Campbell said, “Well, Charles, are you going to try your luck?” My reply induced him to think that I was not much in favor of that. Said he again, “Charles, try it — there will be no harm in that.” Knowing him to be kind, and confident that he wished me well, I at last started. I had not gone more than halfway when I turned back a few steps; but I finally made up my mind to “try my luck” as Mr. Campbell had suggested. So I resumed my journey and soon entered Fort Union, where I met Mr. McKenzie in the yard, not quite so royally attired. He came to meet me, and offered me his hand. After the usual compliments had been exchanged I remarked that I had not been apprised of his intentions when he spoke of engaging me, and that, thinking he wished to hire me as a common hand, I had declined, having had enough of it; but that, having been since informed to the contrary, I had thought I would come to see him, and hoped there was no harm done, in case no bargain were made. To which he replied, “All right! All right! No, I did not wish to engage you as a common hand. I wanted you for a clerk. You will eat at my table, and fare the same as myself. Your work will be no other than that which is the duty of all clerks in this country. Now,” he continued, “I will tell you how we engage clerks — that is, inexperienced ones. We engage them for three years, for which term we give them \$500 and a complete suit of fine broadcloth; but as you have been already one year in the country I will engage you for two years.” These terms did not suit me;

---

my strong inclination to go home made me feel quite independent, and I preferred to miss the bargain. I replied I did not feel like engaging for so long a term; but that I would engage for one year, and then, if he were pleased with me, and I with him, we should have no difficulty in arranging for another year. Finally he consented to this and the bargain was struck for one year, for which he allowed me \$250 and a complete suit of clothes.

Bargain made [July 3, 1834], I was almost sorry for it. I started back to Fort William, not after my wardrobe, which I could very well sacrifice, but to thank Mr. Campbell, and to bid adieu to my comrades. Mr. Campbell was extremely pleased to hear the result; he gave me a check for the amount due me, and after a long shake of the hand, with all his good wishes as well as those of my old messmates and others, I left Fort William. My load to Fort Union was not very encumbering; my old saddle bags, made of a yard of brown muslin, sewed at both ends with a slit in the middle, containing two red flannel shirts, pretty well worn, and one check shirt, and one old white 3-point blanket, were about all I had brought to Fort Union; my tin pan and cup I left behind. I should have been ashamed to be caught there in my skin suit, which was also sacrificed to Fort William. Now I am at Fort Union, in the service of the great American Fur Company.

#### Chapter 5

(1834-35)

#### FORT UNION

I must remark here that my dress was a little improved. I happened to have a pair of gray cassimette pants which I had brought from the States, and had seldom worn; that and my clean blue check shirt and my old cap were the only dress I possessed on entering Fort Union. All the clerks were strangers to me, and when the bell rang for supper I saw them put on their coats, for, as I found out afterward, they were not allowed to go to table in shirtsleeves. One of them, perceiving that I was coatless, was so kind as to lend me a coat, and so we started for supper. On entering the eating hall, I found a splendidly set table with a very white tablecloth, and two waiters, one a negro. Mr. McKenzie was sitting at the head of the table, extremely well dressed. The victuals consisted of fine fat buffalo meat, with plenty of good fresh butter, cream, and milk for those that chose; but I saw that only two biscuits were allowed to each one, as these were placed at each plate. I soon discovered, by the manner in which the clerks took their seats, that mine would come very near the end of the table, for it appeared to go by grade; but it was not many years until I reached next to head. I was hungry, and had such victuals been placed before me the day previous, while I was on horse guard, I should have played my part like a man. But among strangers I could not help being a little backward, and did not eat half to my satisfaction. As good luck would have it, some of the clerks used to take lunch before going to bed; so a large kettle of fat buffalo meat was put on to boil, and out of this I finished filling up. Then I went to bed with the expectation of curious dreams. What I dreamed I don't remember, neither do I now care. I awoke early, perhaps thinking in my sleep that I had my horses to turn out; but no, there were no horses for me to turn out. Mr. McKenzie, who played the nabob, went to bed late, and rose later, and as nothing could be served till he was ready, it was nine o'clock before we got to breakfast. But it came at last, and this morning I filled up fuller, with more ease.

Between ten and eleven, Mr. McKenzie sent his servant to tell me to call at the office. On entering he told me to sit down, and said, "Well, Larpenteur, we will assign you some little duty to try your hand upon, and if you prove faithful and attentive, as I hope and have all reason to believe

Forty years a fur trader on the upper Missouri: the personal narrative of  
Charles Larpenteur, 1833-1872

---

you will, your salary will be increased next year, provided you wish to remain." My reply was that I hoped he would have no cause to complain. He then went to a place where the keys were hung, and handed me a bunch, saying, "Here are the keys of the fort gates, of the tool house and harness house, and of the bastions. Now it will be your duty to open the gates early in the morning, and lock them at night; to see that the tools and harness be kept in order, and all in their proper places; and you will also lend a hand, in case it should be required, about the stores." Such was my first employment at Fort Union.

Thus I went on quite easily for some time, and I thought my berth a very light one; but it was not long before I was promoted, and this made quite an addition to my former duties. Early in September, after all the hay had been hauled in, Fort William was to be rebuilt within 150 yards of Union. A clerk by the name of Moncrévie, who was at the time a trader, and also in charge of the men, had this to attend to; but he was a little too fond of whisky, and much too fond of the squaws, to do this work or any other as it should be done.

One afternoon, after the rebuilding of the fort had commenced, Mr. Hamilton, who was in charge at the time, went to see how it was progressing. The men had half of one side of the fort up, but it was an awful piece of work. The pickets were set in crooked, some too high, some too low, and the sight made the old gentleman furious. "Where is that Moncrévie, that he is not here to attend to the work?" he asked. Being told that Moncrévie had gone to the fort, he started off quite mad and rushed into our room, his nose appearing to have grown bigger on a sudden — for such was the case whenever he got out of humor. "Mr. Moncrévie," he exclaimed, "why are you not with your men? That is a nice piece of work they are doing there!" Moncrévie, all confused, was hurrying out, when the old gentleman said, "No! no! you need not go," and then turned round to me, saying, "Mr. Larpenteur, go and oversee that work and see if you cannot do better than that Mr. Moncrévie." So I started, and when I got to the men they began to laugh, saying they expected as much. I told them that I was ordered to boss the job, of which they appeared to be glad. Then I ordered them to take all the pickets down, which was soon done, after which I had the trench straightened and the bottom leveled. Next day about noon Mr. Hamilton came to examine the work, and said, with the pleasant countenance he could assume when he chose, "Oh! this looks something like work — not like what that good-for-nothing Moncrévie has been doing." At that time I had only charge of the men allotted for the rebuilding of the fort; but that same evening Mr. Hamilton sent for me and said, "Larpenteur, I now wish you to take charge of all the men, for that Moncrévie will not do." Thus came my first promotion. Notwithstanding this addition to my former duties I still thought my situation pleasant, although it was, at times, rather disagreeable to command the men, and not infrequently some fight would come off; but the most disagreeable part of it was to come. Early in the fall trade commenced, principally in jerked buffalo meat and tallow, both mostly traded for liquor. The liquor business, which was always done at night, sometimes kept me up all night turning out drunken Indians, often by dragging them out by arms and legs. Although the still house had been destroyed, the Company found means to smuggle plenty of liquor.

Before proceeding with my narrative I will detain the reader to explain how it happened that the distillery was given up. A certain gentleman from the Eastern States, by the name of Capt. Wheitte, who had been on a tour to the Columbia, and returned by way of the Big Horn and the Yellowstone in 1833, reaching Fort Union about 10 days before we did, thought proper to have

better means of going down the Missouri, and called on Mr. McKenzie to make the necessary preparations for this journey. Mr. McKenzie, who was a perfect gentleman, not suspecting the captain, who I cannot say was a spy, did all he could to make his stay pleasant, showed all the arrangements of the fort, explained how trade was carried on, what immense profit was derived, and also showed him the distillery. Capt. Wheitte appeared to be delighted to see this fine establishment, and probably would not have done what he did, had he not found, when everything was in readiness for his departure and he came to settle his bill, that the charges were exorbitant. He said nothing, settled, and started; but made it his business, as soon as he arrived, to report Mr. McKenzie. A dispatch was sent up that winter for the distillery to be destroyed. This was the last distillery in the Indian country.

All went on as smoothly as could be expected through our many drinking scrapes with Indians and obstreperous Canadians. The time to re-engage came, and pretty soon my case was carried to the office. Mr. McKenzie said, "Well, Larpenteur, what do you think? Will you hire for another year?" My reply was, "I believe so, sir." "Well," said he, "if you wish to remain, I will allow you \$350 for this year." "All right," was my answer. And now for another year in the American Fur Company.

My first year was not yet up, but all engagements had to be made before the arrival of the steamer, and the shipping of the returns; so that, in case any men declined to re-engage, they could be sent off by one or another conveyance. All the clerks were reengaged except Moncrévie, who happened to be discharged. Nothing took place worth mentioning until the fall, after the return of some of the free trappers. There was a half-breed family named Deschamps, consisting of ten persons, among whom were the old man and three grown sons, who were in the habit of trapping, and were the very worst of subjects; and another half-breed family, headed by Jack Rem. He had two sons-in-law, and a son 19 years of age, all of whom started on their trapping expeditions together, and returned together. It was customary, on their return from a hunt, to have a spree; and as they had been lucky the hunt was big, and so was the spree. They soon began a fight in which Jack Rem's son had his brains knocked out with the butt of a gun by one of the numerous and wicked Deschamps family. Mr. Lafferrier, who was at the time the trader and storekeeper, became alarmed, for they began to threaten his life, and attempted to get liquor of him without paying for it. Mr. Hamilton, who was still in charge, did not know what to do to stop them, but at last advised Mr. Lafferrier to put laudanum in the whiskey. This advice was followed; they soon fell down and lay stretched out on the ground in every direction, so sound asleep that Mr. Hamilton became alarmed, thinking the dose had been so strong that they would never wake up again. I happened not to be there at the time, having that afternoon gone down to the garden, which was about three-quarters of a mile distant from the fort. Mr. Hamilton came there as fast as he could, half scared to death, to tell me the story. I could not help laughing at the idea, and we immediately returned to the fort. On my arrival I saw this amiable family scattered along the river bank, still fast asleep; but at dark they awakened and went home to Fort William, where all those families were kept, as were also some of the Company's men who had squaws, and the horse guard with the horses. Thus this spree ended. Nothing remarkable took place until May of the following spring [1835] — It was customary, when buffalo got too far from the fort, for hunters to camp out, and from time to time send in loads of fresh meat. On such occasions all their families also went into camp to make dried meat for their own use, and also for a kind of recreation. Such

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

a camp was called by the half-breeds of the north, who spoke broken French, mixed with many Cree words, "nick-ah-wah"; and to go into it was "aller en nick-ah-wah." It happened that, in this camp, there was a beautiful half-breed by the name of Baptiste Gardepie. The Deschamps family, who were there also, got jealous of him and, it was reported, had attempted to take his life. I will now relate an affray which took place at the fort, while they were in camp.

In the spring, after the trade was over, some stragglers always remained in camp at the fort, in spite of all we could do to get them off; for they were great nuisances, and it was dangerous for them to camp at the fort on account of hostile Indians. Early in May an express arrived from Fort Clark by which we were apprised that there would soon be a large war-party of Gros Ventres and Mandans at Fort Union. The chief wished to inform us of this and to warn our young men not to sleep in any of the Indian lodges; for, should there be any at the fort when the war-party came, they would shoot into the lodges, but would not like to kill any of the whites. So the young men were notified, and for my part I did all I could to induce Mr. Hamilton to let the Indians sleep in the Indian house, but he would not listen to me. There were only two lodges of Indians, and almost every night, unknown to the old gentleman, I let them into the fort. But, fearing to be caught at this and thus displease my boss, some nights I made them stay outside. It happened to be one of these nights that the war party of Gros Ventres arrived about twelve o'clock and fired into the two lodges. We heard the shots plainly, and immediately the cry of "Open the door!" — for there had been three white men in the lodges at the time. On our entering them to ascertain what damage had been done we found one squaw dead, shot plumb through the heart; one shot through both thighs; one through the calf of her leg, smashing the shin bone; an old woman shot through the wrist; a little boy 12 years of age shot through the bowels; and one of the white men with two balls through the left thigh, a little above the knee, cutting the artery. He died the same morning at ten o'clock; the squaw shot through the thighs died two days afterward, and the little boy the next day — sad indeed was this affair! Mr. Hamilton repented not letting them into the fort, but it was too late — the damage had been done. But the old Englishman was soon to see what could not be called fun, and be badly put to his trumps.

About a week later a party of Assiniboines, who had gone to war on the Gros Ventres and Mandans, arrived at Fort Union; and about ten o'clock at night a rap was heard at the door. As I was still doorkeeper, I went to see who was there. On asking who they were, they replied that they were a war party of 20 men, on their return from the Gros Ventres. At this time all the wounded and well Indians were inside the fort, and we were but few whites, as most of our men were in camp. Not thinking it prudent to let the Indians in, for fear of a row, I apprised Mr. Hamilton of the arrival; but he told me to let them in if there were but 20 men. I suggested to him to send them to Fort William, where there was no one at the time, the families having all gone to camp; but, as usual, he would not listen to me, and in I let them. Soon afterward more knocking at the door was heard, and the Indians in the fort said it was the balance of their party, consisting of 70 men. I went again to Mr. Hamilton, who said, "Well, we may as well let the balance in, for it may make matters worse to send them to the other fort." A little while after their entrance something unpleasant was evidently going to happen, and from what I could understand it became necessary to adopt means for our safety. So I informed Mr. Hamilton of what was going on, upon which the old gentleman, who had a sound old English head, told me to bring eight or ten muskets out of the bastion and put them on the men's table in the dining room; also to put one of the smallest

cannon in the passage of the main quarters. This was to be done with all care possible, that the Indians should know nothing of it until the proper time came; for if they saw us make such preparations, they might nip his plan in the bud. Very soon we were ready; the window blinds of the dining room were opened, and there could be seen by the three candles the bright muskets, plenty of cartridges scattered over the table, and four men ready for action. The piece of artillery was rolled back and forward in the passage, making a tremendous noise, and two men mounted guard with muskets and fixed bayonets. Such preparations the Indians had never seen or heard of before, and they became, in their turn, more frightened than we had been. They had been very lively on the move and very insulting at times, but they soon lay down and went to sleep, or pretended to, so that all became suddenly quiet. Still, we did not feel quite safe; we thought that perhaps they were shamming and that they might try what they could do before morning. This was about midnight. To my great surprise, just at the peep of day, I was called up; that was easily done, for I was wide awake, with all my clothes on. The partisan said that the Indians wished to go out, and asked me to open the door for them; and in less than ten minutes not one of the party was left in the fort. One may imagine how relieved all hands were, when informed of this, for most of them had almost made up their minds that this would be their last night. As it was yet early, I told them to go and take a nap. I then went to Mr. Hamilton's room, and, after I had informed him of this, he said, "Well, Mr. Larpenteur, what do you think of my stratagem?" To which I replied that I felt confident it had been the means of saving our lives. "Yes, yes, said he; "now go to the cellar, fill this bottle with that good Madeira; we will have a glass, and then you will have time to take a little rest before breakfast, for I presume you have not slept much." I obeyed his orders, took a drink of Madeira, and went to bed. Thus ended the fright.

As I have had frequent occasion to mention Mr. "Hamilton," I will introduce him to the reader. His real name was Archibald Palmer. He was an English nobleman who, from some cause or other unknown to many, had been obliged to leave England and come to America, apparently without any means. How Mr. McKenzie became acquainted with him I am not able to say. Mr. Hamilton was a man of uncommon education, conversant with many subjects, and quite capable of keeping books. As Mr. McKenzie required a bookkeeper at Fort Union, he made arrangements with Mr. Hamilton to come here. What salary he received I never learned. Mr. Hamilton — as I shall continue to call him, for his real name was not known until after he left Fort Union and his English difficulties were over, when he resumed his proper name — was a man of fifty, who had habitually lived high, in consequence of which he had the gout. This brought him to the two extremes of being either very pleasant or very crabbed, but, upon the whole, kept him crabbed; so he was not liked, though much respected. He remained a few years at Union, and died in St. Louis as cashier of the American Fur Company. I must say I got along remarkably well with him and was very sorry to learn of his death. Now I will return to my stories, of which I have many in store.

Chapter 6  
(1835-36)

FORT UNION: CONTINUED

A week or ten days after the above-mentioned fright, the hunters were ordered to return; the camp was broken up, and all the half-breed families went into their former quarters in Fort William, as well as some of the company's men who had families, and were to take care of the horses.

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

When they had all arrived and were reorganized, a conspiracy was gotten up, unknown to me, to kill old man Deschamps and his eldest son, François. The conspirators were Baptiste Gardepie, the two sons-in-law of Jack Rem, and Mr. Lafferrier — the latter a great hypocrite. This was in July, 1835. As Deschamps used to come to our room almost every morning after breakfast, the killing was to take place there. For this murderous work a rifle barrel was placed in the chimney corner, and Lafferrier put his dirk under his pillow, for Gardepie, who was to commence the job. François Deschamps, the son, was about 27 or 28 years old — a fine stout young man; he was then interpreter for Fort Union, and ate at the table with the boss and the clerks. Soon after breakfast the father and son came into our room, where the conspirators were already assembled. It was a fine July morning and I, knowing nothing of this, had taken a walk alone down by the garden which was already progressing well, about three-quarters of a mile from the fort. After some little conversation, which naturally took place before coming to the point, Gardepie got up and addressed the old man, saying, “Deschamps, I want to know now whether you will make peace or war with me; you have frequently attempted my life, and I find it necessary to ask you this question now, what is your answer?” To which old Deschamps replied, “I will never make peace with you as long as there is a drop of blood in my veins.” Some blood was quickly out of his veins, for Gardepie immediately seized the rifle barrel and struck a fatal blow on the old man’s head. Then he turned round to the son, and, with another blow, knocked him down. But this wound not being a mortal one, François made out to creep under one of the beds, where he begged for his life until the conspirators took pity on him. Gardepie was induced to desist from killing him; but, not thinking that the father had been mortally struck, he reached for the dirk and ripped the old man’s bowels out — which operation was not necessary. All this was done in a very short time. Returning from the garden and approaching our quarters I observed that the curtains were down, which was an unusual thing, and when I came to open the door I found it locked on the inside. At my request it was immediately opened to admit me, but directly closed again. The door being shut and curtains down, I could not at first discover what had taken place, but soon saw a sheet spread on the floor and knew there was a corpse under it. On looking about, I saw young François Deschamps sitting at a table with his head held down in his hands, which were still all bloody. No one else was in the room but Gardepie, who said, “I have settled with the old man, and I would have done the same with this coward here, had he not begged so hard for his life.” I made no reply, though, of course, I pitied the poor fellow, who was so near the corpse of his father, and uncertain as yet of his own life. It was a sad sight. Mr. Lafferrier, who, as I have already remarked, was a great hypocrite and had thus acquired his popularity among the Indians and half-breeds, had gone to the fort with the pipe of peace, to try to bring about a reconciliation between those two families; and in this he finally succeeded. The old man was buried the same day, and to all appearances everything went on as usual.

It was thought that this peace would last, as Jack Rem’s family was considered revenged by the death of the old man, and had thus been made nearly equal in strength to that of the Deschamps. What afterward induced us to think the peace would be kept was that Gardepie went on a beaver hunt with the three young Deschamps and never offered to molest them. Michel Gravel and Little Frenchman were the names of Jack Rem’s two sons-in-law who went the following fall [1835] on their hunt on Milk River, which abounded with beaver, and, like all beaver trappers, fell in with a war party of Blackfeet, by whom they were both killed. This accident reduced Jack’s family consid-

erably and enabled the Deschamps to show their wicked dispositions again. But before describing a big battle which took place the following summer [1836], I will relate a little story to show you how cunningly and quickly Indians can work destruction, and also give the character of Gauché, Robert Campbell's chief, whom I have already called Co-han (Hurry Up). Gauché was his French name, which means Left Hand. But by his tribe he was called Meenah-yau-henno, meaning the One who Holds the Knife — with which they said he could cut a rock in two, owing to his strong medicine. As I have already remarked, Hurry Up was feared by all the surrounding tribes, and was called by the whites the Wild Bonaparte. The old fellow had been so successful in his warfare that he found no difficulty in raising the number of warriors he wanted. At this time he had raised a party of 250 to 300, to make war on the Blackfeet, who were very rich in horses. Being considered so great a medicineman and warrior, he had no trouble with his young men, and could order the rush as he thought proper. On this their success always depends, for Indians seldom stand a long battle, and when they do it does not amount to much. About the middle of March the old man came within one day's march of Fort McKenzie, where he fell on the trail of a camp of Blackfeet, containing about 30 lodges, on the way to their fort to make their last spring trade. The old fellow could tell by the looks of things in their camping-place that they were rich in tradegoods and in horses, and that a big drunk would be sure to take place; for the Blackfeet are great drunkards. After the chief had well examined everything about the camping grounds he went to work at his medicine. He then told his people that he had seen a great deal of blood on the enemy's side, but very little on theirs, and that most, if not all of them, would return on horseback with many scalps, if they would obey his commands. The old fellow was not mistaken. They soon approached the Blackfoot camp, which was near the fort, making ready for a big spree. It was Gauché's intention to rush on the camp when they should be at the height of the spree, too drunk to defend themselves. When it was near daylight the order was given for the rush, and so well was it executed that in a very short time few were left alive in camp, and all the horses were captured with ease — as we learned, upward of 300 head. So great and glorious was the old man's campaign; and then it was "Co-han ! hurry up! let us go home and dance the scalp dance" — for many were the scalps they had taken of men, women, and children. We will let them go and I will return to the little story I promised to relate.

There was an old Assiniboine who had remained after our last trade, with the intention, as he said, to go down to Fort Clark in the steamer, although no peace as yet had been made between the Assiniboines and the Gros Ventres. In the meantime a war party of about 150 Blackfeet, all on horseback, came to Fort Union in search of the Assiniboines, to be revenged on the camp of old Co-han; this was about the 1st of June, and at that season men were always scarce in the fort, as most of them were required to take down the returns. So we would not allow more than 20 Indians at a time in the fort. The partisan and other important men in the Blackfoot party commenced by making a great deal of the old man, smoking with him, and telling him that they were in search of the Assiniboines with the intention of making peace with them, and that they would be very glad if he would go with them. They also said they had some fine horses which were intended for the Assiniboines, in case they would make peace, and if he would go with them they would make him a present of a nice pony. They did all they could to persuade him to go, and we did all we could to put him out of the notion. Finally the time came for them to start, and not finding the old fellow quite decided, they sent in a beautiful pony, saddled and bridled, telling him it should be his if he

would come along. The old man was tempted, mounted the pony, and started. By this time most of the party had left, and were seated on the hills back of the fort, awaiting the rest, and expecting that the old Assiniboine would be along with them; there were also 12 or 15 young men mounted on ponies, ready apparently to serve as an escort for the old man. As soon as I had turned him out — for I was still the doorkeeper — I made haste to run up on the bastion to see what would happen. The escort had not gone over 200 yards from the fort before they fired a volley into the old man, who fell dead off his pony, and in less than no time was scalped. After they had all reached the hills they made us signs that there was no danger for us, and disappeared. I then took a party of six or seven men, wrapped the old man in his robe, and stuck him up in a large elm tree to dry, as this was their own custom.

Now, reader, make ready for the battle, as it will soon come off. In the latter part of June, shortly after the last-mentioned affray took place, the company's steamboat arrived. After her departure, it was customary to have a big drunk throughout. At this time there were between 60 and 70 men at the fort. The half-breeds who were in Fort William with some of our own men also got gloriously drunk. About midnight old Mother Deschamps said to her children, "Now, my sons, if you are men, you will revenge the death of your father." This struck them favorably, and being in liquor they immediately killed old Jack Rem, swore they would also kill all the half-breeds whom they considered his friends, and even threatened the whites in the fort. This took place about midnight, when the spree in Fort Union had subsided and all hands had gone to sleep. I was awakened by loud raps and voices at the door, which latter I could distinguish to be those of females, crying, "Open the door! quick — they are fighting — they have killed my father." They were the widow of Michel Gravel and her mother, the wife of Jack Rem. I had not shut the door before eight or ten of our men came running in great fury, swearing vengeance against the Deschamps family, all of whom they would destroy, big and small. They raised all hands, and in a body went to Mr. McKenzie, of whom they demanded arms and ammunition in angry tones, declaring they were determined to put an end to the Deschamps family. This demand was made in such terms that Mr. McKenzie could not well refuse, fearing the consequences, and not being himself much averse to their intention. Having been furnished with a cannon, muskets, and ammunition, they went to work. But, in the first place, all the horses and all the company's effects were removed from the fort, and before the fight commenced the Deschamps were required to turn out their squaws, who were Assiniboine women, whom we did not want to kill for fear of the tribe. Thinking the fight would not take place as long as they kept in the squaws, they refused to turn them out. After allowing them what time we thought necessary to make up their minds on this subject, the order to fire was given. As we had a cannon we supposed they would not go into the bastions, and as we found their shots were only fired out of their own dwellings we aimed altogether at these houses. When they found we were determined to put our threats into execution they turned out their squaws, who told us that we had already killed one man, but that it would be difficult for us to destroy them all, as they had dug holes under the floors, where our balls could not reach them. Yet we kept constantly firing into the houses, until at last the old lady herself came out with the pipe of peace, begging for her life and that of her children; but she was shot through the heart in stepping out of the fort. As she was holding her pipe straight in front of her when she was hit, she fell precisely on top of it, at which the boys exclaimed in great mirth, "There's an end to the mother of the devils." In the meantime our firing was kept up; but few shots were heard from

them, and at last some of our party ventured into the fort, thinking they were all killed; but that was a mistake. They commenced firing again, and our side made a doublequick retreat; but one of them was shot through the neck as he was stooping through the small door of the fort. It was by this time getting rather late in the day, and it was feared that the fight might continue until night, under cover of which they could make their escape, which would prove serious to the Company in future; and as the bloody work had been begun, it was obliged to be accomplished. In order to do so it was thought proper to set the fort on fire, with the view of burning them in it; but for fear that some might escape through the fire, the hunter of the fort and several other good horsemen were mounted on the best horses to run them down like buffalo, should they make such an attempt. These precautions having been taken, a fire was started; as the fort was dry it soon began to blaze, and in a little while the houses were consumed. We saw one man run out of them and take refuge in the east bastion, into which the cannon was fired several times, but the ball went through without other damage than making its hole. Meanwhile the fire stopped, having burned only one side of the fort and the houses; so the bastion stood with this individual inside it, and was dangerous to approach. One of our men [Vivié], wanting to display his bravery, went near it to get a good shot through the cracks; but this cost him his life. A shot through the heart made him jump up about six feet in the air and fall dead on the spot, on which a loud yell was heard from the man in the bastion. The firing on our side was renewed faster than ever, until it was found that no shot was fired out of the bastion, when some of the boldest of our party determined to see if the individual inside it was dead or alive. On entering the bastion they discovered him backed up in one corner; they immediately fired and he fell dead. This was François Deschamps, the last survivor, as all the rest had been burned or shot in the houses. After he was brought out we found that he had a broken wrist and was out of ammunition. Had he not been thus disabled and defenseless he would probably have killed several of us and made his escape. The men thought he might go, like the balance, into flames; so they threw him into the fire with one of his brothers, and both were burned to ashes. A hole was dug, into which the old woman was put without any ceremony. Thus the battle ended, about sunset, in the death of eight of the family. The youngest son, about ten years of age, after being wounded, was suffered to come out; but he died the next day. Such was the end of this troublesome family, after which peace and comfort were enjoyed.

Now, as I have remarked, all was quieted. Outfits were made up and started for the Blackfeet and Crows, and we were left with none but the men allotted for Fort Union, numbering about 30, all told. These were assigned to their several duties, including the horse guard, for which a Mexican, a Dutchman, and a Canadian named Tibeau were appointed. The Mexican was not fit for anything else; the Dutchman was very green in one sense, and very white in another, as will be seen presently. All went on peaceably until about the middle of September [1836], when the Mexican thought he would take a ride back to Mexico on the best horse in the band, and picked out the green Dutchman to assist him in the execution of his plans. But it seems that they both were tolerably green. On one fine day they proposed to Tibeau to go to their dinner first, saying that they would not be long, and that he could go afterward and stay in the fort as long as he pleased. The proposition was accepted by Tibeau, and off started the two gentlemen, who, sure enough, were not gone long; and immediately on their return Tibeau went to his dinner. At this early time the guard was kept up more with a view to prevent the horses from straying away than for fear of

their being stolen by hostile Indians. This induced Tibeau to delay; but, fearing that he might be hurried out of the fort by the proper authorities, which he had reason to believe would be done rather roughly, he at last started back. On his return to the guard he could see neither of the two men; but, thinking that they might have gone a little way, made nothing of it and began to look around. Still seeing nothing of them, he commenced to hallo; but no answer was heard. Then he began to surmise that things were not all right, the men having been so willing to remain, and thought he would examine the band of horses. He soon discovered that the two best American horses were missing. Yet, as all the men were in the habit of strolling in search of antelope, and sometimes for pleasure, he waited a while, thinking they would soon make their appearance; but no one came, and he finally went to report the matter. Men were immediately sent in search of the thieves. Thinking that the Mexican would attempt to cross the river above, the men were first ordered up, but returned at night, having seen no tracks. Instead of going up, as it was thought they had, the Mexican and his man had concealed themselves in the point below the fort, it being his plan to steal the ferryboat at night and cross over. That night they came within three-quarters of a mile below the fort, where the Mexican left the Dutchman with the horses, while he went after the ferryboat. But when he came to the fort, it seems that he got scared at the barking of the dogs and could find no opportunity to get the boat off. When day was about breaking, he concluded to abandon that project and returned to the Dutchman, whom he found sound asleep and the horses gone. By this time it was daylight, and fearing to be discovered if they should attempt to look for the horses, they thought it advisable for each one to do as he thought proper. The Dutchman decided to give himself up to the mercy of the authorities; the Mexican concluded to try his luck at large for a while. When the door of the fort was opened one of the men, who happened to go out first, saw two horses near the hills, and came to me saying, "There are two horses which look very much like the stolen ones." I immediately sent after them, and to be sure they were the very two — Mr. McKenzie's favorite horse and the next best, a fine iron-gray. The question then was, What had become of the men? Some thought one thing, and some another, but none guessed right. Soon after breakfast Mr. Dutchman appeared, all in a tremble, and commenced to make up a story which had neither head nor tail. Not even giving him time to finish it, Mr. McKenzie requested me to take his gun from him, and put him in irons in the blacksmith shop. This was done immediately. He knew not what had become of the Mexican. Four or five days after this the Mexican came to deliver himself up, saying, "Mr. McKenzie, I have done wrong; here I am, do with me what you choose; but please don't send me to the States." Without replying to him Mr. McKenzie requested me to have him ironed and placed in confinement with the Dutchman, to await trial. Four days afterward they were tried, convicted, and sentenced to receive thirty-nine lashes. So they were tied to the flagstaff to take their punishment. The Dutchman was flogged first. When stripped to the waist his skin looked fair and tender, and was actually so; for at every blow the blood flew at such a rate that his sentence was reduced one-half. But the Mexican's hide was brown and tough; he hardly groaned, and received the full number of lashes. Both were soon taken to the States by James Beckwith," the great mulatto brave among the Crows, whose life was published some time afterward. Thus ended this scrape.

Chapter 7

(1836-38)

FORT UNION: CONTINUED

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

Having frequently mentioned Mr. McKenzie as a member of the American Fur Company, I will give him a more ample introduction to the reader. Kenneth McKenzie was born in Scotland of very respectable parents, and was some near connection of the great explorer, Sir Alexander McKenzie. He engaged to the North West at the time that Company was formed to oppose the Hudson's Bay Company. It was the custom to engage clerks for the term of three years; but after they had served seven, they had the privilege of entering the Company as partners. Those young men had to be of good standing and bear good characters. The North West could not compete with the strong Hudson's Bay Company and were finally obliged to abandon the country.

Mr. McKenzie, who had taken some liking to the trade and thought there was money in it, struck off for the upper waters of the Mississippi, in the regions where the American Fur Company was carrying on trade, in small furs particularly, to a great extent. Whether he had any means at the time I am unable to say, and also in what capacity he entered the American Fur Company; but he probably came in as a member, and they soon placed unbounded confidence in him. Having served the North West, he had become acquainted with the manner in which trade was carried on in the north, and also with the tribes in that region. He soon persuaded the American Fur Company to extend their trade on the Upper Missouri, for he knew that the Hudson's Bay Company did not and could not trade buffalo robes, which would not pay for transportation over their portages, and that their trade was entirely confined to fine furs. This idea in regard to extending trade was correct, but the distance was tremendous, as those going up had to be towed in keel boats a distance of 2,000 miles. But, as I have remarked, the persuasion of Mr. McKenzie, and the unbounded confidence they had in him, overcame all difficulties. About the year 1827 an outfit was made up and started for the mouth of the Yellowstone, Mr. McKenzie in charge. They did not reach that far the first year, but established a wintering post [1827-28] at the mouth of White River, halfway between Forts Union and Berthold — say 150 miles below the Yellowstone. After the post was finished Mr. McKenzie started for the States, and Mr. Honor & Picotte remained in charge. The returns were found encouraging, and the following year [1829] he went on to the mouth of the Yellowstone, where the chief of the band of the Rocks had desired him to build, and which was a beautiful site, abounding in the best of timber, above, below, and opposite the fort, and with all kinds of game. Mr. McKenzie made this his residence and very soon messengers were dispatched north, inviting all Assiniboines, Crees, and Chippewas to the Missouri. When they learned that Mr. McKenzie was there it was not long before large numbers of these Indians came over, together with many half-breed families. Next year [1830] he determined to extend the trade, both up the Missouri for the Blackfeet and up the Yellowstone for the Crows. As to the Crows there was no difficulty, but the Blackfeet, who were deadly enemies to the Americans, he could not well manage against their will, nor did he think it advisable to start up an outfit before learning how they were disposed. It happened at the time that there was then at the fort an old trapper named Berger, who had been in his young days in the employ of the Hudson's Bay Company, at the Fort of the Prairie, when Mr. John Rowand was in charge; and this having been a post for the Blackfeet, he had acquired the language and could speak it fluently. So Mr. McKenzie proposed to send Berger to the Blackfeet, to try to bring down a party with whom he would endeavor to make a treaty before sending up an outfit. Berger consented; but as this undertaking was extremely dangerous, Mr. McKenzie would not take it upon himself to order any of the men on the expedition. Not less than 12 men would do; but there was no difficulty in raising the required number of

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

volunteers, who were soon ready for the march. The forlorn hope, as they were called, started with the American flag unfurled, hardly expecting to return. But Mr. McKenzie was in good hopes, for they were young Canadians, who knew not a word of English, and the Blackfeet were accustomed to them, as they were also employed by the Hudson's Bay Company. He anticipated no danger, except that of being surprised by a war party while encamped, which was also Berger's fear. Having searched for the Blackfeet for about four weeks, the men were at last so fortunate as to discover a large camp, without being discovered themselves; and the time had come to try their pluck. "Blackfeet in sight — that awful tribe, of whom we have heard so many terrible stories — what is going to be our fate?" was the talk. Some moves were made to abandon the idea of entering the camp, and to skedaddle if possible; but old man Berger was grit, and succeeded in getting his men along. He knew the Indian customs as well as their language; the men put great confidence in him, and determined to follow, saying, "Now for the butcher shop!" Berger took the lead with the flag bearer by his side, and his little frightened party close in the rear. Soon after they had got on their march they were discovered, and in less time after that a large party of mounted Indians were making for them at full speed. Berger, having caused his little party to stop, advanced with the flag bearer. The Indians, perceiving this maneuver, and not knowing what to make of it, paused for a while. Berger advanced, and when at a hearing distance cried out his name; at which they rushed up to shake hands, and the party which had kept their position were ordered to come up. How their pulses quickened and their hearts thumped is not hard to imagine, for fear had not entirely left them, and they did not know what fate was reserved for them in the Blackfoot camp. They would have preferred to turn back, but it was too cowardly as well as too late, and on they had to go. On entering camp there was great yelling and shouting in all directions; but after this had subsided they were lodged, feasts commenced, and all was done in such a friendly manner that the boys began to feel reassured. When Berger had made his intentions known, a party of 40 Indians consented to accompany him to the Yellowstone. None of them had ever been there, and some showed a little reluctance; at which Berger, in order to induce them to come, represented the distance to be somewhat shorter than it really was. The party was soon ready, and they all set off. Then came trouble and renewed fear in camp, for the Indians soon commenced to complain of the distance, thinking a trap had been laid by the whites to destroy them, and it was with great difficulty that Berger could make them agree to proceed. Things began to look rather dark, but at last they consented to go on a few days more. One night, when they had come within one day's march of the fort, as Berger knew very well, the Indians swore they would go no further — that he had lied to them, and they would have revenge. Berger was put to his trumps; but, being sure of reaching the fort next day, made them a speech, saying, "I tell you you will be in the fort to-morrow, smoking the pipe of peace with the great chief who sent me. Here I am with my party and horses; if I don't bring you to the fort to-morrow, you are welcome to my scalp and all the horses." This struck them with a great deal of force, and they consented to go on another day. Next morning an early start was made to give ample time to finish the journey, and about three in the afternoon they arrived on a ridge, in full view of the fort, where they sat down to smoke and vermilion themselves. Soon they saw the large flag hoisted, heard the cannon firing, and a little while after that the forlorn hope, with all the Blackfeet, entered Fort Union. In course of time a treaty was made, and next spring [1831] an outfit was started under Mr. James Kipp, with instructions to build at the mouth of Marias River, which was the first trading post established for the Blackfeet,

and called Fort McKenzie. Fort Cass was built next spring [1832]; and after those two forts were established, the Upper Missouri Department was formed, of which Mr. McKenzie was the agent. Berger received \$800 per annum as interpreter for the Blackfeet.

Having done my best to post the reader on these matters [of 1827-33], I resume my personal narrative. Yet a few words more in reference to the energy of Mr. McKenzie, who once remarked to me, in a conversation on Indian trade, that his intention had been at that time to extend the trade into the Rocky Mountains; and that, not feeling disposed to do so without a charter, he made application to the government; but that ours being a free government, no charter could be allowed him, and thus the project was abandoned.

After the flogging of our gentlemen nothing special took place until a certain free trapper named Augustin Bourbonnais came down the Missouri in a canoe. As it was yet early, about the 1st of November [1836], his idea was to keep on to Fort Clark and winter there. But as he found many of his friends at Union, he changed his plans and made up his mind to spend the winter at this place. He had been lucky on his hunt, and had about a pack of beaver, worth something like \$500, which made him feel rich and quite able to pass a pleasant winter. Bourbonnais was only about 20 years of age, a very handsome fellow, and one thing in his favor was his long yellow hair, so much admired by the female sex of this country. This they call pah-ha-zee-zee, and one who is so adorned is sure to please them. A few days before his arrival Mr. McKenzie, who was nearly 50 years old, and perhaps thought it was too cold to sleep alone in winter, had taken to himself a pretty young bedfellow. Mr. Bourbonnais had not been long in the fort before he went shopping, and very soon was seen strolling about the fort in a fine suit of clothes, as large as life, with his long pah-ha-zee-zee hanging down over his shoulders; if he had looked well in his buckskins, he surely looked charming then. Cupid, I suppose, commenced to shoot his arrows so fast that they struck Bourbonnais, unfortunately for himself, as they also had Mr. McKenzie; and as such arrows generally wound to the heart, Mr. McKenzie determined to go on the war path. Being somewhat advanced in age, he found he could not carry on the war with arrows; so he armed himself with a good-sized cudgel and watched his opportunity. It happened one evening that Mr. Bourbonnais, encouraged by favorable returns of affection, went so far as to enter the apartments reserved for Mr. McKenzie. The latter, hearing some noises which he thought he ought not to have heard, rushed in upon the lovers and made such a display of his sprig of a shillelah that Mr. Bourbonnais incontinently found his way not only out of the house but also out of the fort, with Mr. McKenzie after him. It was amusing to see the genteel Mr. Bourbonnais, in his fine suit of broadcloth, with the tail of his surtout stretched horizontally to its full extent; but, unfortunately for the poor fellow, he would not let the affair end in that way, and swore vengeance on Mr. McKenzie. Of course, having been driven out of the fort with a club, he did not think it proper or consistent with his dignity to attempt to enter again; so he took board and lodging in an Indian tent, many of which were pitched near the fort, and all his effects were delivered to him. Then it was reported that Mr. McKenzie would be killed; for, "kill him I must," Bourbonnais had said; but, thinking that his angry passion would soon subside, we made or thought little of the threat. Yet, sure enough, he was seen next morning dressed again in buckskin, with his rifle on his shoulder and pistol in his belt, defying Mr. McKenzie to come out of the fort and swearing that he would kill him if he had to remain on the watch for him all winter. Still thinking that such performances would not last long, Mr. McKenzie preferred to remain a day or so in the fort, rather than have

any further disturbance. But Bourbonnais kept up his guard longer than Mr. McKenzie felt like remaining a prisoner in his besieged fort; in consequence of which a council of all the clerks was called with the view of raising the siege either by persuasion or by force, and so it was agreed that Bourbonnais' life was to be taken in case he could not be induced to desist. As a measure of precaution a written instrument was immediately prepared and presented to the men of the fort, to sign if they thought proper, and they were particularly informed that the main object was to scare Bourbonnais away — as in reality it was. Next morning one of his friends was sent to him on the part of Mr. McKenzie, to notify him of what had taken place, and to advise him to leave; but that availed not, for he continued his hostile demonstrations. Having given him ample time to change his mind, and seeing that he did not budge, a mulatto named John Brazo — a man of strong nerves and a brave fellow, who had on several occasions been employed to flog men at the flagstaff — was sent for and asked if he thought he had nerve enough to shoot Bourbonnais, in case he should be desired to do so. To which he replied, "Yes, sir — plenty!" "Well, will you do it?" "Yes, sir; I am ready at any time." John was then ordered to take his rifle into one of the bastions, and shoot when he got a chance. John, as good as his word, took his position. I recollect that it was early one Sunday morning, a little before sunrise, when Brazo came to my room, saying, "Mr. Larpenteur, I have shot Bourbonnais." As none of the men were up, I went to apprise Mr. McKenzie of it, who said, "Has Brazo killed him?" Bourbonnais had fallen, but it was not yet known whether he had been killed or only wounded, and I was told to take three or four men to see about it. Mr. E. T. Denig, the bookkeeper, who understood some little surgery, went with us. When we reached the spot we found Bourbonnais only wounded and that not mortally, the ball having struck him above the right breast, and gone out through the right shoulder. He was then brought into the men's quarters, where his wounds were dressed by Mr. Denig, but it was not until the following spring that he was able to leave the fort. He remarked that when he was shot he was on his way to his canoe, at the mouth of the Yellowstone, with the intention of going down to Fort Clark. He left early in the spring and what became of him I never heard; as he was quite pale and not entirely cured when he left, it was thought he might die.

Now, gentle reader, that story is told, and next comes one concerning myself, which has nothing to do with Cupid's arrows, but something to say of those made and shot by Indians. That same spring, on the 1st of March [1837], an express arrived with the information that an individual named Millieu was coming with a small outfit to trade with a band of Canoe Assiniboines who generally remained in the neighborhood of White River, and requesting Mr. McKenzie to send a party from Fort Union to oppose him. I was pitched upon to go, and next day started down with a small outfit on three one-mule sleds. These Canoes were considered at that time the worst band of Assiniboines — great thieves and troublesome to the traders; they seldom came to the fort and left it without committing depredations, and it had happened that they stole several head of horses the previous fall. As liquor was the surest means to recover stolen horses, I was provided with the article for that purpose, as well as for another. But as luck would have it, I was prevented from reaching the Indian camp on this trip, for at our first camp, which was at the Big Muddy River, 24 miles below Union, a young Assiniboine appeared with a letter from Mr. McKenzie, requesting me to turn back, as Millieu had been killed by the Sioux and there would be no opposition; besides which, the Indians had threatened to cut the ears off my mules, and would be likely to rob me. Early next morning we were on our way back to Fort Union, which we reached in good time

that day.

Having been quietly reinstated in my former functions, I thought no more of taking a tramp until another express brought the information that the Opposition had come up river and were already with the band of Canoes; and that Mr. D. D. Mitchell, the person in charge of Fort Clark, had sent a half-breed named Pierre Garreau after them, but requested Mr. McKenzie in the meantime to send some few goods, such as Garreau did not have. I was called on again, and started next day with three dog-sleds and some liquor, to recover the stolen horses if possible. The third day I arrived in camp, which was then called the Tobacco Garden; it was 100 miles by water from Union. Soon after my arrival I sent for the chiefs, and told them that the chief of the big fort had requested me to assemble them to assist me in recovering the stolen horses, and that I would make them a present of a little liquor. I then gave them each a pint of whiskey. Two of the horses were soon brought to me, for which I gave the Indians a small keg containing one gallon. For fear that those horses might be retaken, I mounted two good men upon them, and ordered them to put for the fort. There was an Indian by the name of Pet-cah-shah, which is their word for Tortoise, who was known as the greatest scamp of this band; he was the son of their biggest chief, and the identical genius who had stolen the horses. The liquor trade meanwhile commenced. Mr. Tortoise got very drunk, and rushed into my lodge, saying, "You are the meanest white man I ever saw — you traded a lodge from me too cheap last fall — you would not give me the knife I asked you for." He went on enumerating his grievances and exclaimed, "I will kill you to-night!" We knew he was not a bit too good to do it, and soon heard him yelling in an awful manner. Suddenly he rushed into the lodge with his bow and arrows, and had it not been for a young Indian — a friend of mine — who had time to draw his knife and cut the bow string, very likely I should not now be writing. After this performance he came up to me holding a handful of arrows with which he punched me in the breast, saying, "You dog of a white man, I will kill you yet!" He rushed out again and was soon seen with a short Indian gun cocked, but it was taken out of his hands by main force and the priming removed. Then he went to the fire, from which he took out some large smoldering chunks of wood and commenced to rub his dirty head with them, making the live coals fly in all parts of the lodge, as though he intended to set it afire. I don't believe Old Nick himself could have cut a worse figure in his infernal regions. But he was plainly getting too drunk for this sort of thing to last; after cutting a few more capers he rushed out again, and this was the last we saw of him that night.

Soon after that another and still uglier-looking devil of an Indian made his appearance, rushing about in the same manner. This was Hooting Owl, upward of six feet tall, blind in one eye, naked but for his breech-clout, painted in a most hideous manner, and with a long scalper in his hand. Standing immediately before us, he commenced to talk at a great rate, and was apparently very angry; but what he meant by his remarks I could not understand, as I was not well acquainted with the language. But from his postures and gestures I made sure we were gone up this time. To strengthen me in this belief he began to tear up the ground with his long knife, like a furious bull; then, without saying another word, rushed out of the lodge. I asked Garreau what this meant, to which he replied that the Indian was all right; he had only been saying that he had just heard how we had been treated by the Tortoise, and that he intended to cut up the first Indian who should trouble us again, just as he had cut up the ground. This was good news, and I thought that if I were to adopt a bird as an emblem, I would take the hooting owl in preference to the eagle. I had

already made away with the liquor on the sly, as the Indians would not let me do so publicly; the noise subsided and finally ceased, and thus the frolic ended.

Next morning some chiefs and big men came to express their regret that I had been so badly treated, and everything went on quite smoothly; but Mr. Pet-cah-shah never showed himself again. My orders being not to remain more than three days, and not knowing the way back from this camp to the Big Muddy, but wishing to make the fort the same day — a distance of 40 miles — I hired an Indian as guide. When I told him that I intended to reach the fort that day he remarked that I could not do it; that we would have to travel at night, which was impossible, on account of the prickly pears. Seeing him determined to turn back when we had come in sight of Big Muddy, and knowing the road myself from that river to the fort, I agreed to let him go. I sat down, took out my pocket book, and drew him an order for what he was to receive for his trouble, as Garreau could neither read nor write. Although I was not much of a draughtsman he understood the picture very well when I was through with the drawing, which indicated a looking-glass, a number of hawk-bells, a knife, a pallet of vermilion, and a piece of scarlet cloth in the shape of a breech-clout — though this last I had to explain to him. After he had got this and smoked his pipe we separated, and about eleven o'clock at night I entered Fort Union with my feet nearly frozen. As this was the end of March, and it had thawed all day, the river bottom was all water; but at sundown the wind changed to the northwest, the water commenced to freeze, and when I got to the fort my moccasins were so hard frozen that I had to let them thaw before I could get them off. Had there been an hour longer to travel, my feet would surely have been frozen.

Thus ended my first introduction to an Indian camp. Hoping that I should never have another occasion, I went to bed and slept soundly; but it will be seen in the sequel that I was frustrated in my hopes, if my reader will have the patience to read this book through. As I have to go on with my stories in rotation, it will be some time before I again take him to trade whiskey in an Indian camp.

After my return from the Canoe camp nothing worthy of remark took place until the arrival of the steamer, late in June [1837]. The mirth usual on such occasions was not of long duration, for immediately on the landing of the boat we learned that smallpox was on board. Mr. J. Halsey, the gentleman who was to take charge this summer, had the disease, of which several of the hands had died; but it had subsided, and this was the only case on board. Our only apprehensions were that the disease might spread among the Indians, for Mr. Halsey had been vaccinated, and soon recovered. Prompt measures were adopted to prevent an epidemic. As we had no vaccine matter we decided to inoculate with the smallpox itself; and after the systems of those who were to be inoculated had been prepared according to Dr. Thomas' medical book, the operation was performed upon about 30 Indian squaws and a few white men. This was done with the view to have it all over and everything cleaned up before any Indians should come in, on their fall trade, which commenced early in September. The smallpox matter should have been taken from a very healthy person; but, unfortunately, Mr. Halsey was not sound, and the operation proved fatal to most of our patients. About 15 days afterward there was such a stench in the fort that it could be smelt at the distance of 300 yards. It was awful — the scene in the fort, where some went crazy, and others were half eaten up by maggots before they died; yet, singular to say, not a single bad expression was ever uttered by a sick Indian. Many died, and those who recovered were so much disfigured that one could scarcely recognize them. While the epidemic was at its height a party of about 40

Indians came in, not exactly on a trade, but more on a begging visit, under the celebrated old chief Co-han; and the word was, "Hurry up! Open the door!" which had been locked for many days, to keep the crazy folks in.

Nothing else would do — we must open the door; but on showing him a little boy who had not recovered, and whose face was still one solid scab, by holding him above the pickets, the Indians finally concluded to leave. Not long afterward we learned that more than one-half of the party had died — some said all of them. In the course of time the fort became clear of the smallpox, but the danger of infection continued. Fort William was still standing, and the remaining houses, which were no longer inhabited, were used as hospitals for Indians, with no other attendants than some old squaws. It became the duty of John Brazo to take out the dead and dump them into the bushes, and some mornings, on asking him "How many?" he would say, "Only three, sir; but, according to appearances in the hospital, I think I shall have a full load to-morrow or next day." This seemed to be fun for Brazo, but was not for others, particularly myself, as I happened to be the trader, who was liable to be shot at any time; but, singular to say, not even a threat was made, though the tribe was reduced more than one-half by next spring [1838]. Trade continued very nearly up to the average; on being asked how it happened that there were so many robes brought in, the Indians would say laughingly that they expected to die soon, and wanted to have a frolic till the end came. The winter [of 1837-38] was spent in great suspense and fear, but, fortunately, nothing serious occurred except some few shots fired at me through the wicket during the night liquor trade; and as this had frequently happened before, it was not attributed to revenge for the smallpox.

Chapter 8  
(1838)

#### ROUND TRIP TO THE STATES

It happened that this was an open winter; the ice broke up early in March, and the river was clear on the 22d of that month, at which date I left for Baltimore in a small canoe, with Mr. Robert Christy of St. Louis. He had come up in the fall to winter at Fort Union for his health, and becoming anxious to return, had made up his mind to leave, in spite of all the dangers represented to him. On my part, I had not seen my parents for ten years, and as this early start would give me ample time to visit them, until our party should be ready to return in the fall, nothing could persuade me out of the notion. Mr. D. D. Mitchell, a member of the Company, and very much of a gentleman, got me to engage for another year, previous to my departure, allowing my wages to run on during my absence; so this trip was considered as a furlough.

Matters being thus well fixed Mr. Christy and I left, with two men to row our canoe.

The day was calm and beautiful; and we made good speed. I was young, and full of mirth at the idea of returning to my parents, whom I intended to take by surprise, and many other fine plans I had formed made me so happy that I forgot the danger of Indians. Suddenly a party of them, who had concealed themselves along the river banks, rose up with their bows and arrows, ready to shoot. We were not more than 20 yards from them, and their work of destruction would have been quickly done had it not been for one among them whom we saw running to and fro with his bow in his hand, striking right and left. He finally succeeded in preventing the threatened attack; and, as one can imagine, the progress of our little craft was speedily increased. We were told, on our return, by Mr. Chardon, a member of the Company in charge of Fort Clark, that we had no

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

idea how near we came to losing our lives on that occasion. Those Indians were a party of 80 Rees [Arikaras], who had gone to war on the Assiniboines; and had it not been for their partisan's great influence over them we surely would have all been killed. The Rees had had the smallpox severely, and were therefore badly disposed toward the whites. This was fright No. 1, after which I remember well the first words spoken by Mr. Christy: "Larpenteur, I think we had better stayed at Union." But it was already too late to repent; we were under way and could not turn back.

At ten o'clock of the second day after this, when we were near Heart River, on the south side of the Missouri, we discovered six Indians, who had gone hunting while the ice was still strong; but it had broken up before their return, and now they had no means of crossing the river. Thinking this a good opportunity to save themselves the trouble of making their own boat, they made signs to us to come for them. These Indians belonged to the band of Canoe Assiniboines, who had had the smallpox badly, and whom I had known to accept pay for being ferried over the river, instead of paying us for the privilege; so of course I declined the job. As soon as they saw our craft steered away from them, they threw off their robes, and, with nothing on but their leggings and breech-clouts, ran to head us off. This they were near doing, as we had to go close to the shore to avoid the waves caused by the strong current washing against sand bars. As we approached they seated themselves, steadied their guns with the ramrods to take good aim, and let fly at us. But by this time we had got a little ahead of them, rowing all the time with all our might, though we could see the flashes from the muzzles of their guns and hear the bullets strike the water. Mr. Christy, who was steering, dodged like a duck passing under a bridge, to avoid the balls which whistled about his ears. We soon got out of their reach, but this danger was not the worst that appeared. The Indian camp was only a little way off, and, having heard the firing, they were all on the alert, thinking we were enemies. They soon found out the cause of the firing, and ran down to the next bend with the intention of giving us another volley. They fired at us again, but, fortunately for us, the river was wide, the current free from waves, and we could keep our distance from the shore. Bullets fell on the water like hail, some even beyond us, and three of them lodged in our canoe. These we afterward extracted with our knives. At length, finding ourselves out of danger, and also out of breath after having paddled with all our might through two attacks, those who had pipes began to smoke, and jocose remarks were made in regard to our scare. Some said, "This is fright No. 2; I wonder what No. 3 is going to be? It cannot fail to happen, as we have already had two in so short a distance, and the third time we must surely go up!" I began to feel like agreeing with Christy, that we had better have remained at Union.

After the pipes were emptied, the paddles were again plied, and our little wounded craft slid down stream gently. We kept on in a pleasant manner until next day, at about eleven o'clock, when we discovered a large number of Indians on the south side of the river, running back and forth and gathering on a small hill quite near the bank. Their maneuvers appearing hostile to us, we knew not what to do, and began to fear we were surely gone up this time. It was thought best to land on the opposite shore, to decide upon what course to adopt, and it was left optional with each one to 'take it by land or water. Not feeling like footing it, I went in for the boat; and after a little further parley, seeing me determined to do so, they all agreed to follow my example. So I placed a good supply of tobacco on the bow of the canoe, in full sight, to produce a good effect, if possible, and on we started. When they saw us coming they increased in number and our fears rose in proportion; but keep on we must. When our fears were at the highest pitch we perceived an individual

---

---

with pants and a red flannel shirt on, looking very much like a white man. To our surprise and joy, we found that it was old Mr. Charbonneau, who had been 40 years among the Missouri Indians. He used to say that when he first came on the river it was so small that he could straddle it. Imagine our joy to find ourselves befriended instead of butchered, as we had thought we were surely going to be. The tobacco was presented to such Indians as the old gentleman advised, and we resumed our paddles.

Charbonneau told us that we were then something like 70 miles from Fort Clark, but thought that we would be detained by the ice, as frequently happened, this being about the most northern point on the Missouri. Gladdened again, fright No. 3 being over, and fairly under way, we traveled well the balance of that day. The next day we found but little current, and had to paddle hard to make much headway. We went on thus until about three in the afternoon, when we found the river nearly blocked by large dykes, which had formed across it and caused the slowness of the current; but we forced our way through a narrow channel, and kept on by hard paddling. By the time we were about 10 miles from Fort Clark the dyke broke loose and the ice came down upon us with such a rush, and tossing our canoe like an old log at such a rate, that we thought ourselves in greater danger of our lives than we had been from the Indians; but at last it brought our canoe of its accord to shore about a mile above the fort, where we were obliged to remain two days till the ice subsided. Mr. F. A. Chardon, who was then in charge, and a very singular kind of a man, entertained us in the best manner. Mr. Christy had a two-gallon keg of good whiskey, of which Mr. Chardon was so fond that he helped himself about every fifteen minutes, saying he had "a great many worms in his throat" — to the sorrow of Mr. Christy, who found his keg so nearly empty that he concluded to make Mr. Chardon a present of what was left. We remained there two days; on the third we took leave of Mr. Chardon who, not knowing he was to fall heir to the balance of the whiskey, and not having as yet destroyed all the worms in his throat, would have been glad for us to remain another day, and insisted very strongly that we should do so. I cannot say whether it was because the whiskey had been put on board before Mr. Christy made up his mind about it, that Mr. Chardon accompanied us to the boat, or whether he did so through politeness; but he felt very happy at the presentation, and hastened back to the fort in double-quick time.

All right and off again; and I am glad to say that, with the exception of high winds, which at times kept us, for three days together, camped in the willows, nothing took place worth mentioning — till we reached the Vermilion Post. Mr. Dickson, who shortly afterward committed suicide, was in charge, and showed us great kindness during the night we stayed with him. After relating to him our narrow escapes, he remarked that we were now out of danger, being among a different kind of Indians. This information sounded pleasant.

After a good breakfast next morning we left the kind Mr. Dickson, who, it appeared, did not quite know his Indians; for we had not made more than 20 miles when a volley of rifle-shots was fired at us by a deer-hunting party of Omahas. Fortunately we happened to be in a wide part of the river. The attack was so sudden that we had no time for fright before it was over; but, after this, we came to the conclusion that we could not consider ourselves safe until we reached the States. In constant dread of Indians, we kept paddling on our way, trusting to good luck to get out of the Indian country; it was a long way to travel, as there was no settlement at that time on the Missouri above Independence, Mo. Our provisions were getting low, and altogether we were not in very good humor. On reaching the mouth of the Platte we perceived a steamer; and as but one steamer

Forty years a fur trader on the upper Missouri: the personal narrative of  
Charles Larpenteur, 1833-1872

---

a year came that far up, we made sure it was the Company's boat. Our hearts were glad, expecting to hear all the news and procure a supply of eatables. We were soon on board the Antelope — that being her name. Mr. McKenzie, who was on his way to Fort Union, was much surprised to see me. Said he, "My God! Larpenteur, what's the matter? Why have you come down so early in the season?" After learning the circumstances and being assured that all was right above, he became reconciled, and told me that he had been to my father's, in Baltimore, and had left them all well; "but go on," said he, "they will be very glad to see you." After a little more talk, we continued down river, well supplied with provisions and in a very good humor, though we had still a long distance to paddle. A few days after leaving the steamer we reached a small town called Camden, where we met a boat bound for Fort Leavenworth, and made arrangements for our passage to St. Louis on her return, which we awaited at this little town. Having no further use for our little craft, we made a present of it to our two men, and next day we were comfortably lodged on board the steamer, whose name I have forgotten, as well as that of the captain. Great was the change, after paddling our own canoe for a month through all kinds of dangers, to find ourselves seated at table and gliding down stream at the rate of 20 miles an hour. At that rate it was not many days before we reached St. Louis.

I left next day for Baltimore by stage to Louisville, thence to Cincinnati, thence to Brownsville; then stage again to Baltimore. But at that time the stage stopped at Frederickstown — I believe 40 miles from Baltimore — where we took cars which were propelled by horse power, not having as yet any engine.

As it is mostly my object to relate what happened in the Indian country, I will merely state here that I had great pleasure in seeing my relatives again, after the absence of 10 years; and as nothing was spared to make my stay agreeable, I enjoyed myself very much. Leaving the reader to imagine the surprise of my unexpected return, I will soon take him with me on the way back to Fort Union. But, before starting up the Missouri, I will give a little incident of my return to St. Louis. This took place in a small town in the Alleghany Mountains called McConnellstown, and will show how one may get praised without deserving it, as happened to be my case. Mr. Denig, the bookkeeper of Fort Union, whose parents resided in this town, had given me a letter of introduction to his father, the doctor, and also a letter of his own to his parents, both of which I delivered with pleasure, as the place was on the stage route. There was great rejoicing on my arrival at Dr. Denig's. The old gentleman was about fifty and the old lady not far from it; both were good, respectable people, who paid all the attention to me that could be expected. I remained three days, during which a report was circulated that there was, at the Doctor's, a certain gentleman who was said to be a crack shot. So a target was prepared for a shooting match. Although I did not consider myself a marksman, and, in reality, was not, I accepted the challenge. There was no betting — it was merely to try me as a sharpshooter. Their best marksman was picked out — one that could knock out a squirrel's eye on the top of the highest tree in the mountains at every pop. Accompanied by the two sons of Dr. Denig, and two hired men, we started for the appointed place, where a large crowd of all sorts of people was awaiting my arrival, with targets all ready for action! The conditions were best three out of five shots at thirty paces, unless the center was driven. My opponent was a stout, fine-looking Pennsylvania Dutchman named Keizer. It was my first shot, and I made a close one; he shot nearly a tie; but out of the five I happened to have the best three. The target was taken down and handed to me, and another immediately put up. It was my

Forty years a fur trader on the upper Missouri: the personal narrative of  
Charles Larpenteur, 1833-1872

---

first shot again, close to the black on the right side; Keizer shot next, on the left, somewhat nearer than mine. Then came my second shot, when I remarked, by way of braggadocio, being far from expecting to make good my boast, "Now, gentlemen, this is what I like! When there is a shot on each side of the black, it serves as a guide to me, and I generally drive the center." As much to my own surprise as to that of all the rest, it was driven — so well that this could not have been more precisely done by hand. Imagine the looks in that crowd, disappointed to see their crack man so badly beaten! But Keizer said it was owing to his having chased his sheep that day, which made him so nervous that he could not shoot. I put both targets in my pocketbook, and brought them to Mr. Denig at Union. Old Dr. Denig was well pleased, and said, "Were I in your place, now that your name is up, I would not shoot any more." Neither did I.

Next day I left McConnellstown, and nothing took place worth mentioning on the journey to St. Louis until our departure thence for Fort Union. I should have said before that I left Baltimore on the 13th of September, 1838. Mr. D. D. Mitchell, who had come down in the steamer, and was about to return to Union, was our chief; besides whom, Clerk Jacques Bruguière, myself, and two men composed the party. We traveled on pleasantly until we reached Ponca Creek, when most of our men were taken with fever and ague at such a rate that, instead of eating down they were all throwing up. This kept us two or three days longer than we should have stayed at the creek. The day we left to strike for White Earth River I was taken with such an awful shake that, when on horseback, I could keep my seat only by holding on with all my might to my rifle across my saddle; and I cut such a figure that it excited the mirth of the party, who laughed at me all through their pretended sympathy. After the shake came the fever, and then thirst — but no water — I thought I should die for want of water. I had two such shakes before we arrived at Fort Pierre, where we remained two days. Mr. Halsey gave me some good medicine, and after a couple of light shakes I recovered entirely. Then came the tremendous appetite. I was really ashamed of myself at meal time. But Mr. Mitchell was very liberal in helping us to well-filled plates, and when he saw that I had made away with the contents of mine, would say, "Back up your cart, Larpenteur, for another load." Only those who have traveled the prairie know what a voracious appetite is acquired on such tramps. Having had the ague, which is always followed by an increase of the regular prairie appetite, we became ravenous, and soon made away with our provisions. Three days before our arrival at Fort Clark, at the Mandans, we were out of everything except sugar and coffee; for, singular to say, even at that early period buffalo had become scarce.

Thus far I had proved myself to be about the best hunter in the company, having killed some few antelopes, badgers, and prairie-dogs, as we had been all this time in the open prairies. When we were approaching Fort Clark, and had reached the points of timber of the Missouri, I proposed to Mr. Mitchell to try my luck in search of deer, as our rations had given out and we had but one cup of coffee left. He readily consented, saying, "Take Brazo along; he is somewhat of a hunter." Having been told where he would camp, I and my man started together; but we soon separated, each choosing his own direction through the wooded point. I soon perceived a fine large buck. I knew that my old horse would stand fire — you might shoot off the whole of the United States artillery around him without making him move — standing still was his forte. I rose in my stirrups and pulled the trigger; but away went the buck, not without leaving a lock of his hair, which I saw fly. Being sure that I had made a good shot, I got off my steady old horse and commenced the search. In the meantime Brazo, who had heard the shot, came up and asked what I had fired at. I replied,

“A large buck, which I am sure I wounded.” So he joined me in the search; but, as I could find no blood, I soon proposed to abandon the trail. Brazo then remarked, “No, Mr. Larpenteur, I have seen blood; let us look a little while longer.” Encouraged by this we resumed our search, and in less than ten minutes we saw the fine buck, stretched dead, having been shot through the heart. In a little while he was cut up and put on my horse, and we were on our way to camp. Brazo, not liking the idea of coming into camp without any game, struck out to try his luck again. I did not expect to get any more game on the way to camp; but luckily came full on a band of five deer, which stood about 80 paces from me. I drew a bead on one of them, which fell at the crack of the gun. No need looking for this one, as it was shot through the neck. Poor Brazo, who had got but a little way off, came up to ask what I had killed. I told him “A fine fat doe.” “Well, you are in luck!” said he. Having cut up the meat and loaded it on Brazo’s horse, we struck for camp, which we reached just at dark. I leave the reader to imagine the exclamations of joy made at the sight of so much fine meat; but the question arose, “Who killed all that?” I said I had killed both deer. Then it was “Hurrah for Larpenteur! Come, boys, get up your kettles!” While the kettles were boiling French voyageur songs resounded, and all felt quite set up except poor Brazo, who seemed to be down in the dumps.

The third day we entered Fort Clark early and found Mr. Chardon in charge, who received us with hoisted flag and several rounds from his small piece of artillery. There we took supplies to last us to Union, and the following morning resumed our journey, Mr. Mitchell being our boss and guide. It was now October and the mornings were getting quite cold, with heavy white frosts. The second morning after we left Fort Clark my old horse tumbled into a miry little creek, and, not being able to extricate himself, came down broadside before I could jump out of the saddle. When they saw me so well drenched they could not refrain from indulging in mirth at my misfortune. Our guide, not being very well scienced, struck too far south, in consequence of which we were three nights without wood and had to burn buffalo chips; but, as good luck would have it, we were favored with clear, dry weather and could make good fires. But our animals fared badly, as the route we took brought us into alkali country; some we had to leave, and others died at the fort. On the fifth day after we left Fort Clark we struck White River, too far up; but we got into some scrawly timber, which was mighty good after having nothing but buffalo chips to burn for three nights. Brazo, who was in the habit of coming into camp last, said he had heard dogs barking, and also thought he had heard squaws talking, and added, “There’s Indians close by.” This news put a stop to our pleasant feelings and a guard was set. Apprehending attack early in the morning, sleep was light that night; but we happened to be mistaken in our apprehensions. Daylight came all right, breakfast was gotten up, and still no Indians; so we commenced to think Brazo had been mistaken. But we had not left camp more than an hour when some one cried out, “Indians!” Before any preparations could be made, a whole host was upon us; but we soon found that they were some Assiniboines who had camped a little above where we did last night; it was only on account of our late arrival that they had not discovered us. They told us it would take us two more days to get to Fort Union, for our horses were poor and we could not travel fast. Some of the leading men proposed to go along with us, which was agreed upon; for the sake of a little whiskey they would have gone any distance. But some of the rabble followed, whose looks we did not like, and whom we would have been glad to see turn back; for they looked very much like those who made it a habit to borrow, and forget to return, a white man’s horse. As they excited great suspicion, the

guard was doubled; but, in spite of all our precautions, they managed to get off with two horses, one of which belonged to an individual by the name of Antoine Frenier, a half-breed whom Mr. Mitchell had engaged at Fort Clark as interpreter for Fort Union. When he found that his favorite horse had been borrowed and was not likely to be returned, he began to give the Assiniboines such a blessing, with the aid of the Virgin Mary, whom he invoked to assist him in strengthening his remarks, that I defy any Catholic priest to make a better one. The Indians, who had learned by this time that he was to be the interpreter, were convinced, by this blessing, that he understood their language. In spite of all this we were under way by sunrise, with glad hearts after all, thinking that we had but once more to sleep outside, excepting the old interpreter, who now and then addressed a prayer to the Holy Virgin for the benefit of the Assiniboines, and to the great mirth of the company, sometimes in French and sometimes in Assiniboine, but always mixed with a little Cree, as he was a half-breed from the North. It seemed impossible for him to recover from the loss of his nag sufficiently to abstain from his devotions.

Our last camp was on the Big Muddy. Although we hoped that we had gotten rid of the horse thieves, it was thought proper to keep up a strong guard, which consisted of one-half of the party for each half of the night; but as it was very dark, the Assiniboines made out to take two of our best horses, one of which was Mr. Mitchell's. The chiefs said that they knew who had stolen the horses, and told us not to be uneasy, for we should get the animals back again. They proved as good as their word; our two horses were returned shortly afterward, though the interpreter's was never recovered. Thus, half consoled, we again got under way, and did not stop until we entered Fort Union, which we did about 4 p. m., with a salute of many shots from the artillery, and the large flag flying. This was on the 12th of October [1838]; and my reader can guess who felt good after a six-weeks' ride through the wild prairies.

Chapter 9  
(1838-42)

COMPOSED OF ALL SORTS

Thanks to kind Providence, here I am again in good old Fort Union, at a splendid table, with that great prairie appetite to do it justice. The day after my arrival I was reinstated in the liquor shop, and as it was the height of the meat trade I had enough to do, night and day. Excepting plenty of buffalo, deer, and rabbit hunting, nothing took place worth mentioning until Christmas [1838]. On this anniversary a great dinner is generally made, but that was never the case here, as it was always taken out in drinkables instead of eatables; and I, who did not drink, had to do without my dinner. At the height of the spree the tailor and one of the carpenters had a fight in the shop, while others took theirs outside, and toward evening I was informed that Marseillais, our hunter, had been killed and thrown into the fireplace. We immediately ran in, and sure enough, there he was, badly burned and senseless, but not dead yet. We were not at first sure whether this was the mere effect of liquor, or had happened from fighting; but we learned that a fight had taken place, and on examination we found that he had been stabbed in several places with a small dirk. Knowing that the tailor had such a weapon, we suspected him and demanded it. He was at that time standing behind his table; I saw him jerk the dirk out of his pocket and throw it under the table. I immediately picked it up; it was bloody, and from its size we judged it to be the weapon with which the wounds had been inflicted. Having learned that the carpenter had also been in the fight, they both were placed in irons and confined to await their trial. As such Christmas frolics

could not be brought to a head much under three days, the trial took place on the fourth day, when a regular court was held. Everything being ready, the criminals were sent for, the witnesses were well examined, and after a short session the jury returned a verdict, "Guilty of murder." The judge then pronounced sentence on the convicted murderers, which was that they be hanged by the neck, until they were "dead, dead, dead!" But, not considering it entirely safe to have this sentence executed, he changed it to thirty-nine lashes apiece. John Brazo was appointed executioner. Always ready for such sport, he immediately went in quest of his large ox-whip, and, not making any difference between men and oxen, he applied it at such a rate that Mr. Mitchell, the judge, had now and then to say, "Moderate, John, moderate"; for had John been suffered to keep on, it is very likely that the first sentence would have been executed.

After this everything went on perfectly smooth. A very large trade was made, and everybody was satisfied; and in time preparations were made to take down the returns. On the 3d of June [1839] I was sent to St. Louis in charge of eight Mackinaw boats, each containing 250 packs of buffalo robes, besides many small furs. The trip was very pleasant, with the exception of being nearly shot by Assiniboines at the same place where we had been attacked the previous spring. The disagreeable features of these trips are caused, mainly, by the crews getting whiskey and becoming unruly; but I managed to get along admirably well, and succeeded in landing all my boats safe in the port of St. Louis. These were the last landed there, as no companies would insure below St. Joseph, on account of the drunkenness of the men, which had caused the loss of many boats.

For what reason I have never been able to find out, though I always attributed it to that old tyrant, Mr. Laidlaw, the Company would not then hire me again; so I remained that winter [of 1839-40] in St. Louis. It happened during this time that Mr. McKenzie, Mr. Mitchell, and old Mr. Chabané got at difference with the American Fur Co., in consequence of which they raised a large outfit to oppose it; but by some means the misunderstanding was made up.

In the meantime I had been re-engaged, and arrangements were made for my return to Fort Union. On the 31st of March [1840] I was on the steamer Trapper, and after a long, tedious trip we reached Union on the 27th of June. My being a sober man was not much to my advantage, keeping me constantly in the liquor trade, and out of the charge of posts which some of my fellow-clerks took charge of, while I did all the work, and was really in charge when they got dead drunk. Mr. Laidlaw the Father, Mr. Denig the Son, and Mr. Jacques Bruguière the Holy Ghost, formed the Trinity at Union last [?] winter, and a trio of greater drunkards could not have been got together. The consequence was that the large meat trade was lost. Indians would trade robes with Mr. Laidlaw in the office, steal them back, and trade them again with Mr. Bruguière at the regular shop. The reason why Mr. Laidlaw opened trade in the office was, he said, that Bruguière got too drunk to hold out; but Laidlaw was the greater drunkard of the two.

About the latter part of May, 1842, Mr. Alexander Culbertson, who was in charge of Union, sent me up to Fort Van Buren, at the mouth of Rosebud River, on the Yellowstone, with a party of 10 men, to bring down the returns. He also instructed me to build another post at Adams Prairie, about 20 miles above, where he expected me to remain in charge, as he was not sure that Mr. Murray, who was then in charge of Van Buren, would be re-engaged. Next day we left Union, and a pleasant trip we had. Our guide, a young man by the name of Lee, who was a first-rate hunter, made us live on buffalo tongues and marrow bones. A few days after my arrival at Van Buren the boats were off with the returns, and I remained in charge of my first post.

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

Nothing of importance occurred during the time I remained at this place except one little incident, which I think deserves a place in this narrative. Two or three weeks after the boat left, a certain Mexican, who had been employed at Fort Union, made his appearance with his squaw nearly naked, and said to me, "Mr. Larpenteur, I will tell you the truth. I killed a squaw at the meat camp. I did not intend to kill her; but she made me mad. I took a stick, struck her on the back of the head, and she fell dead. I then ran off, fearing some of her connections, who were in camp. That is the whole truth, captain" — as he called me. "Now I am very poor," he continued, "and my India" — as he called his squaw — "is going to have a child. Will you please let me go into your fort? I will do anything you want me to do." Having but four men with me, all told, and seeing the Mexican so pitiable, I allowed him to come in. Mexicans being only fit to herd horses, I employed him on horse-guard. Had his India not been with him and so near confinement, I would not have given him that employment. For a while he did very well, being attentive to his duties, and all were pleased with him. One fine afternoon he came to me, saying, "My horses are all doing well. I have got them in a good safe place. Will you be so kind as to let me go with my India in search of some pomme blanche?" which is the French name for Indian turnips. As he had done so well and his India was so near her time, I consented, and off he started, assuring me that he would not be gone more than a couple of hours. But that time passed, and neither the Mexican nor his India appeared; and some of the men said they should not wonder if he had made his escape. This being the general impression, they examined a little old box in which he kept his duds and found it empty. I immediately sent after the horses, which we supposed he had mounted, but found them all right. Next morning, knowing the situation of his squaw, and thinking that he might be lurking around for a chance to steal horses, I sent my hunter and an old Crow in search of the Mexican, under promise of \$10 reward if they should find him. About 3 p.m., I saw them returning; the old Indian having the squaw behind him on his horse, with the child in her arms, and the Mexican trotting behind with nothing on but his shirt — thus all ready to be tied up to the flagstaff. This was immediately done, and he would have received a good dose, had not he begged so hard and looked so pitiable that he was let go unpunished. They had found him about 10 miles below the fort on the banks of the Yellowstone, where he had made a raft to cross over; but the raft, not being well constructed, came apart when in the middle of the river, and he lost all his duds except his shirt in saving his squaw, who, he said, had her child immediately on landing, the fright having hurried the birth. I pitied the squaw, but the Mexican I determined to ship off. So the next morning I gave him a skin boat, a little dried buffalo meat, a knife, a steel for striking fire, and a fish-hook and line, with which I told him to clear out and never make his appearance at this place again.

Not long after this occurrence Mr. Auguste Chouteau arrived with the outfit for the Crows, also bringing back the Mexican and his lady. On reprimanding him for so doing, he told me that he could not well help it, considering the situation in which he had found them. It had happened that the Mexican, on his way down river, saw a buffalo mired near the bank; and, having no meat, thought this would be a good opportunity to lay in a supply. Judge of his surprise when Mr. Bruin, who was lying in wait behind the buffalo, made a grab at the man, tearing him so badly that, when he was met by Mr. Chouteau, he was scarcely expected to live. Thus ends the story of the Mexican, except that, some time afterward, he was killed by the relations of the squaw he had murdered at Union.

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

Among the news that Mr. Chouteau brought up was that of Alexander Harvey's killing Isidoro, the Spaniard. As I shall have frequent occasion to mention Harvey, I will here give some idea of his character. He was a native of St. Louis, who served some time learning the saddle trade with Thornton Grimsley. As he happened to be one of those men that never can be convinced, and with whom it was no use to argue unless one wished to get into a fight, he remained but a short time at his trade. Though not yet of age he engaged with a fur-trapping company for the Rocky Mountains. Having found his way to the mouth of the Yellowstone about the time that Fort McKenzie was built, he engaged with the American Fur Company for that post. There he remained for a number of years [to fall of 1839]; but became so wicked and troublesome, and was so much feared by all hands at the fort, that reports were made to Mr. Chouteau in St. Louis, who sent him his discharge by the fall express, which did not reach Fort McKenzie until about Christmas. He was undoubtedly the boldest man that was ever on the Missouri — I mean in the Indian country; a man about six feet tall, weighing 160 or 170 pounds, and inclined to do right when sober. On hearing of his discharge, and being requested to report in person at St. Louis — which was simply to get him out of the country — he remarked, "I will not let Mr. Chouteau wait long on me. I shall start in the morning; all I want for my journey is my rifle, and my dog to carry bedding." Sure enough, in spite of all remonstrances regarding the hardships to which he would expose himself on such a long journey alone at that season of the year, he set out, good as his word.

Early in March he reached St. Louis, to the great astonishment of Mr. Chouteau, who, after hearing Harvey's story, and learning what a journey he had performed, could not but re-engage him to return to Fort McKenzie. He returned at the same time that I reached Union, in the steamer *Trapper* [June 27, 1840]. On the way up he now and then remarked to me, "Larpenteur, I have several settlements to make with those gentlemen who caused me last winter's tramp; I never forget or forgive; it may not be for ten years, but they all will have to catch it." Being as good as his word, at Fort Clark he pounded awfully one of the men who had reported him, saying, "That's No. 1." On his arrival at Fort Union, where many had come down with the returns, intending to go back with the outfit to Fort McKenzie, and never thinking of coming in contact with Harvey, they were much surprised when he made his appearance among about 60 men, in search of reporters; and at every glimpse he could get of one of them it was a knockdown, followed by a good pounding. Whiskey had nothing to do with this; he was perfectly sober, only fulfilling his promises. This will show what sort of a man Harvey was; but there is more to tell, and now we return to the Spaniard's story.

It was in 1841, when the Spaniard and Harvey happened to go down together with the returns, which were then taken in Mackinaw boats to St. Louis. Both intended to return in the steamer, which they expected to meet below Fort Pierre. The report was generally believed, though I placed no reliance on it, that a plot had been laid on the way up to Union, by some members of the American Fur Company, for the Spaniard to kill Harvey. Both had long been stationed at Fort McKenzie, but had never agreed, being jealous of each other and great enemies. The next day after the departure of the steamer — a day given to the men to look about and arrange their little effects — the Spaniard took occasion to commence hostilities, and was soon parading with his rifle, saying that he would kill Harvey. For the first time in his life Harvey was persuaded to remain in the house, supposing it was only liquor that caused the Spaniard to make those threats; so the day passed, and Harvey was still alive. The second day, all the clerks were called up to get the

---

equipments ready for Fort McKenzie. Mr. Culbertson, who was in charge of Union, came into the warehouse; not seeing the Spaniard with the other clerks, he asked where the man was, and, being told, sent for him. But Isidoro, instead of going to the warehouse, went into the retail store and remained behind the counter. Mr. Culbertson and Harvey both being in the store, Harvey began by asking the Spaniard what he meant by his behavior the day before. "You are too big a coward to come out and fight me like a man; you want to shoot me behind my back!" So saying, he left the store and dared the Spaniard to come out; but the latter never moved. When Harvey found that his enemy would not come out, he went back in the store and said, "You won't fight me like a man, so take that!" and shot him through the head. After this he went to the middle of the fort, saying, "I, Alexander Harvey, have killed the Spaniard. If there are any of his friends who want to take it up, let them come on"; but no one dared to do so, and this was the last of the Spaniard. Now we will set fire to Fort Van Buren, according to instructions, and proceed to erect Fort Alexander, which I named in honor of Mr. Alexander Culbertson.

Having burned Fort Van Buren, I left with 20 laboring men for Adams Prairie, 20 miles above by land, about 40 by water. With the exception of having my horses stolen by Assiniboines on two occasions, and going on a bear hunt with Indians, which latter incident I will narrate, nothing took place at Van Buren worth mentioning. The theft of the horses put me to a great deal of trouble, and was a great drawback in the building of the new fort. One fine evening, early in September [1842], a certain Crow returned from searching for his horses, saying that a Mr. Grizzly was breakfasting on one of them, and that, as one man was not enough to make the bear let go his prey, he came for assistance. A bear being considered by Indians a more dangerous enemy than a man, a good force was raised, and I, wishing to see the fun, volunteered to go with them. We soon came to the spot, where we saw Bruin lying fast asleep behind the remains of his breakfast. Knowing that Indians considered it braver to strike an enemy after he had been shot down, than to shoot him down, I was prepared to be very brave. When we were within 30 steps, one of the Indians made a little noise, at which the bear awoke and rose up to see who were the intruders. A volley was fired; the bear dropped dead behind his breastworks, and we all counted coups upon his carcass with our ramrods, I among the first.

Soon after that Mr. Chouteau returned from St. Louis to Fort Union, having gone down with Father De Smet, who was on his way from the Columbia to the States. His most important news was that a strong Opposition had arrived; the firm was Fox, Livingston and Co. of New York. They had come up in a steamer, with a large outfit, and were building a Mackinaw boat for the Crows' trade of the Yellowstone; so that we should have opposition here. This news I did not relish; for opposition is necessarily a great nuisance.

In the meantime the work on Fort Alexander was progressing finely; my men were good hands, determined to put up a well-built little fort, which was very near completion by the 15th of November [1842]. I was already in my quarters, very comfortably located, thinking that I was going to pass a pleasant winter with my family. Like all other traders, I had taken a better half, who had made me the father of my first child on the 9th of last August. But all these fine expectations were ended by the unexpected arrival of Mr. Murray, who had been engaged to take charge of Fort Alexander, with letters from Mr. Culbertson requesting me to return immediately to Fort Union, where I was wanted mightily bad in the liquor department. This was not the first time I had found out that being a sober man was no advantage to me.

---

Forty years a fur trader on the upper Missouri: the personal narrative of  
Charles Larpenteur, 1833-1872

---

I left next day with one man and two horses — one to ride and one to pack. As it was cold, and snow on the ground, I had to leave my better half behind. One of our horses soon gave out, and our trip of eight days was a tough one.

I should remark here that, about two weeks before I left Fort Alexander, a gentleman by the name of Frederick Groscloud arrived in charge of a Mackinaw boat, with a fine equipment. He had been formerly in the employ of Mr. Tulloch, and understood the Crow language, but was not considered a person of much force of character.

Chapter 10

(1843-44)

WINTERING AT WOODY MOUNTAIN

About the 1st of December, 1842, I made my entrance again in Fort Union. It was at night; a large trading party were at the highest pitch of drunkenness; boss and clerks not far behind them in this respect. But I did not find it strange or surprising. Mr. Culbertson, on seeing me, remarked, "Well, Larpenteur, I am mighty glad to see you. We are having a hot time, and I'm tired of it. I suppose you are tired, too, and want to go to sleep." I supposed that he, having drunk so much, did not think about eating, for I had not got that invitation as yet, so I replied, "I'm not so tired as I am hungry." "Well," said he, "there's plenty to eat." I ran to the kitchen, and the cook got me up a rousing supper. I ate too much, and next morning found myself foundered; but I had received orders to resume the grog department, and, notwithstanding my stiffness, went on to set things in order. They needed it very much.

In the course of time I was informed of the cause of this appointment. A certain individual by the name of Ebbitt had, a year previous, brought up a small equipment and made his way as far as the Sioux district. He had a small Mackinaw with 12 men, which was considered by the American Fur Company too slight an affair to oppose; in consequence of which he made a very profitable return of 500 packs of robes. Elated with his success he went to New York with his returns, and there formed an acquaintance with the great firm of Fox, Livingston and Co., telling them how cheaply he had traded, and also remarking that the American Fur Company so abused the Indians and clerks that everything was working against them — in fact, if a large company, such as would inspire confidence among whites and Indians, should be organized, the American Fur Company would soon leave the country. This story took well; such a company was formed, and started in charge of a gentleman by the name of Kelsey, one of the members of the new firm. Mr. Kelsey had not ascended the Missouri very far before he began to regret what he had done, which was that he had put \$20,000 into the concern. The farther he came up river the more he regretted it; and when he arrived at the mouth of the Yellowstone and saw Fort Union in its full splendor, he could not refrain from remarking to Mr. Culbertson, "Had I known how the American Fur Company were situated, I would have kept clear of investing in this opposition"; and concluded by saying, "I hope you will not be too hard on us." The old gentleman went off, leaving a man named Cotton in charge. Mr. Kelsey, who, according to agreement, was to remain in the Indian country and make his headquarters among the Sioux, chose a point 20 miles below Fort Pierre, opposite a beautiful island. Upon this there were four men living in a small cabin, which he considered his. He ordered them several times to leave; but they paid no attention to him, and remained in possession. One morning the old gentleman armed himself and determined to make the men leave. On entering the cabin he fired at one of them, who was in the act of taking a kettle off the fire, and who

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

fell dead in the fire. Another one, who ran out, was also shot, and fell dead over the fence. By that time a third man, who was trying to escape in double-quick time, was shot through the shoulder, of which wound he came near losing his life. During the following night the old gentleman made his escape. I was informed that he went to Mexico. This was the last of Mr. Kelsey.

Mr. Cotton, the person left in charge at Fort William, which he now called Fort Mortimer, had not yet got dry — he was still green cotton, full of Mr. Ebbitt's stories about the general discontentment of Indians and whites. He soon commenced to try his hand on one of the most important chiefs of the tribe, Crazy Bear, who, like many others, on learning that a big Opposition had arrived, came in with his band to pay them a visit. Mr. Cotton invited him into his room, made him a great speech, dressed him up in a splendid military suit, such as had never been brought into the country before, and then laid a two-gallon keg of whiskey at his feet. Crazy Bear's band was at Union, waiting for his return; but, instead of going directly to them, he went into Mr. Culbertson's private room, not very drunk, took a seat, and remained some time without saying a word. Mr. Culbertson, surprised to see him so splendidly dressed, and thinking that he had lost his chief, was also silent. Finally Crazy Bear broke the ice by saying, "I suppose you think I have left our big house. No; I am not a child. I went below to see the chief, who treated me well. I did not ask him for anything. I did not refuse his presents. But these cannot make me abandon this house, where are buried the remains of our fathers, whose tracks are yet fresh in all the paths leading to this place. No, I will not abandon this house!" After which he rose from his seat and took off his fine fur hat and feathers, which he threw on the floor with all his might; then unbuckled his beautiful sword, with which he did the same; and kept on till he had stripped himself of all his fine clothes, without speaking a word. When this performance was over he said to Mr. Culbertson, who stood in great astonishment, "Take away all these things and give me such as you see fit, and don't think I am a child who can be seduced with trinkets." This Crazy Bear, who was not at all crazy, proved afterward to be the greatest chief of the Assiniboines.

Mr. Cotton, on hearing of this, was so surprised he could scarcely believe it; but when Mr. Culbertson showed him the suit which had been badly torn, he was convinced, and began to think that Mr. Ebbitt's stories had been somewhat exaggerated. That was the way the green cotton commenced to dry. Still, his trade was pushed to the extreme. He had plenty of goods and was very liberal with them. Both sides then began to send out men to the Indian camps; but as all the most important camps were soon supplied, I began to think that I might escape that disagreeable trade. Being always an unlucky man, I was still disappointed in this.

One evening toward the last of January [1844], while I was thinking of anything but that which was forthcoming, Mr. Culbertson sent for me to come to his room. It was extremely cold and a great deal of snow was on the ground. This, I believe, was the reason he did not broach the subject at once, but finally said, "Larpenteur, I want you to go to Woody Mountain to a camp of Crees and Chippewas, who have plenty of robes, and have sent for traders from both companies. The Assiniboines have also sent for traders at the meat-pen, which is on the same road that you are going. I want you and Mr. Denig to go into the store, get up your equipment to-night, and start in the morning." Such were my orders, at short notice, after thinking I was going to remain at the fort. I had to make a trip of at least 100 miles, northward into the British possessions, and this was not calculated to make me feel very good. But Mr. Denig and I went to work, and at midnight the equipments were ready. Next morning with one sled apiece, two mules and one driver to each

---

sled, we started on our journey, accompanied by several Indians, among whom was one called Wounded Leg, chief of the band of the Rocks, whose camp was at the sand hills, about 60 miles on our road from the fort to Woody Mountain.

At our first camp my interpreter, a half-breed named Andrew, was taken sick; he complained of headache, and in the morning he was so ill that I had to let him go back to the fort. I understood some little Cree, and, as many of them spoke Assiniboine, I thought I could do without him. Next day we reached Wounded Leg's camp, and took a night's lodging with him. My friend Denig had been for the past few days in such a state that it was impossible for him to freeze — he was too full of alcohol. He had not walked one step; this disgusted the chief, who proved an enemy afterward. The morning was so stormy that we would not have left camp had we not learned that the Opposition had gone by with dogsleds. Not wishing to be outdone by them, I awoke Mr. Denig, who was still under the influence of liquor, and told him that we must be off — that the Opposition had gone by, and that if they could travel I did not see why we should not. When the chief saw that I was determined to leave, he remarked that it would be well for us to go; that a certain Indian was expected from the fort with a large keg of whiskey, and that it would not be well for us to remain in camp while they were drunk; for, as he knew, we had to leave Mr. Denig behind. The mules were soon harnessed up, and into the hard storm we started, with but one Indian, who was my guide. It was an awful day; we could see no distance in any direction, floundered in deep snowdrifts, and knew not where to go for timber. But our guide was a good one, who brought us to a small cluster of scrubby elms. The snow had drifted so deep that we could find no dry wood and had to go to bed without a fire. We made ourselves as comfortable as we could by digging holes in the snow for shelter. We were then only a little distance from the meat-pen, where Mr. Denig was to stop, and reached it early next day. Mr. Denig wanted me to remain with him over night, but as he had to make a liquor trade, and I did not wish to be serenaded, I declined his kind offer. Having packed the contents of my sled on my two mules, and left the sled, which I found to be a nuisance, I proceeded on my journey to Woody Mountain. After this snowstorm the wind changed to a strong, extremely cold northwester. There were only three of us — myself; my guide, a young Chippewa; and my driver, a young Canadian named Piché, which means pitcher. As my poor Pitcher contained more water than whiskey, I was much afraid he would freeze and crack; but he was made of good metal, that could stand heat or cold. Early this evening we came to a good camping place, with plenty of dry firewood; but it was so intensely cold, and we had to dig so deep in the snow to make a fireplace, that it was with the greatest difficulty we could start a fire. But we succeeded at last in making a comfortable camp — the best one we had had since we left the fort. A little while after this we were sitting at a good supper of dried buffalo meat, a few hard-tacks we had saved, and a strong cup of coffee. After supper arrangements were made for sleeping, as a bedroom had yet to be cleared out, in a deep snowdrift, where my friend Pitcher was to be my bedfellow. We proceeded to excavate, and soon had ourselves buried alive in the snow. I believe this was the coldest night I ever felt. The guide got up first, to make a fire, to the delight of Pitcher and myself. A breakfast much like our supper was soon ready, the mules were packed, and we were off again. We had not traveled more than an hour when the wind rose, and the snow began to drift, so blinding us that we could scarcely see. We had over 10 miles to travel to timber; but, fortunately, we were on the main road, which the Indians had made so hard, in going from one camp to another, that the drifting snow could not lodge on it; so the tracks remained visible,

which enabled us to reach camp in good time. At sunset the wind fell, and we had an easy time in making preparations for our last night out. There being no road between this place and the Indian camp, which was 20 miles off, over level prairie, and wishing to reach the camp in good time, we made an early start next morning.

The day was clear, cold, and calm. In my small outfit I had about five gallons of alcohol, in two kegs of three and two gallons, neatly packed in the bales of goods. I thought this quantity would be too much to bring in camp at once and concluded to cache one of the kegs on the road, for I knew it would be impossible to keep it concealed in the Indian lodge. In order to do this my guide must be dispatched ahead, for I did not think he could be trusted. So, when we got within about five miles of the camp, I remarked to him that I wished him to go on into camp and tell Broken Arm, the chief of the Crees, that I wished him to prepare me a large lodge and make ready for a big spree to-night. To this proposition the guide readily consented, and, having pointed out the direction of the camp, he left on a dogtrot. As soon as he was out of sight and we had reached a place that my friend Pitcher would be sure to find again, we cached the smaller keg in a snowbank and resumed our journey.

We had made but a few miles when we came in sight of Indians; but, as we could see no lodges, we presumed they were Indians returning from a hunt. We soon discovered men, women, and children; still no camp, and the prairie looking level as far as the eye could reach. We could not imagine what this meant, and were not relieved of our uneasiness till some of the bucks came running up and told us that there was the camp, pointing to a deep valley. Having gone about half a mile we came to a precipice, on the north of which the Indians were camped, near the bottom. It was an awful place; I could not imagine how they could stand such a place without freezing, for the sun did not reach them more than two hours out of the twenty-four. "Now," said I, to my friend Pitcher, "we are north of north here." "Yes, sir," said he, "and we'll freeze. I can't see what made them d-d Indians camp here." For the first time my good Pitcher was overflowing with bad humor, and indeed I did not blame him, for the prospect of staying in such a hole was anything but encouraging. But there was no alternative; we had to enter the lodge — a large double one — which we found already prepared for our reception. After our mules were unpacked and our baggage was arranged, a kettle of boiled buffalo tongues was brought in; a strong cup of coffee was made from our own stores, and we took supper alongside a good fire, after which symptoms of good humor returned.

Being now ready for operations, I sent for water, telling the Indians it was to make fire-water, and it was not long in forthcoming; the news circulated through the camp, and before I was prepared to trade the lodge was full of Indians, loaded with robes, ready for the spree. The liquor trade commenced with a rush, and it was not long before the whole camp was in a fearful uproar; but they were good Indians, and there was no more trouble than is usual on such occasions.

This was the first time that I ever felt snowblind; during the spree, which lasted the whole night, I complained considerably of sore eyes, attributing it to the smoky lodge. They told me the lodge did not smoke, except at the place where it ought to, and said I must be getting snowblind. This I found to be the case, and, though I was soon over it, it was bad enough to be extremely painful. By morning I had traded 150 fine robes, about all there were dressed in the camp, and during the day I traded 30 more for goods. I then feared no opposition, as their robes were nearly all traded — that is, the dressed ones. We had plenty of leisure after that, but tremendously cold weather. It

---

frequently happens in that part of the country, that, after a clear, calm morning, a cloud rises in the northwest about ten o'clock, and in a very short time a tremendous snowdrift comes on, which lasts all day; but the weather generally becomes calm at sunset, turning very clear and cold. Such weather we were blessed with most of the time we remained there, which was about six weeks. Imagine the pleasant time we spent in camp under that steep hill, where I am certain the sun did not shine more than 24 hours altogether during those six weeks.

The third day after we arrived I sent my Pitcher to see how the mules were getting along; the Indians had them in their charge, but I wanted to know their actual condition from a surer source during such intensely cold weather: The Pitcher was so benumbed that he was unable to tell the news on his return until he had warmed his mouth, which appeared so stiff with cold that he could not move his jaws; but I could see in his countenance that something was wrong. Being anxious to learn what the matter was, and giving him scarcely time to thaw out, I said, "Well, Pitcher, how are the mules?" "Ha! the mules both froze dead — one standing up, the other down. My good fat white mule standing up — thought she alive, but she standing stiff dead." By this time his jaws had got limber, and he made them move at a great rate, with some mighty rude expressions in regard to the place where we were. When well warmed up he began to crack a smile again, and all went well until a couple of days afterward, when I found him so much out of humor one morning that I thought surely my poor Pitcher must be broken, or at least badly cracked. When breakfast was served by the wife of Mr. Broken Arm, the great chief of the Crees, who had been to Washington, Pitcher would not partake. "What is the matter, Pitcher," said I, "are you sick? Why not have some of this good fat buffalo meat?" "Not much the matter," he replied; "I will tell after a while" — fearing perhaps that the story he had to tell would not agree with my digestive organs. Some time after that, when the things were removed, dishes washed up, and the cook had gone out, my Pitcher poured out his story. "Mr. Larpenteur," he said, "if you please, after this I will do our cooking." "Why so," said I. "Why, sir, because that enfant de garce — that old squaw is too dirty. Sacré! She scrape the cloths of that baby of hers with her knife, give it a wipe, cut up the meat with it, and throw into the kettle. This morning I see some old crust on the knife — that what the matter — too much for me." After this explanation I was no longer surprised at poor Pitcher's looking so broken; and if my digestive powers had not been strong, as they have always proven to be, I am afraid my own breakfast would have returned the way it went; but with me, whenever the meat-trap was once shut down it was not easily opened again, and things had to take their natural course.

Shortly after the death of our two mules, I traded a pony of an Indian, and Pitcher would now and then go to see how the animal stood this latitude. Then the time came when I thought the Indians might have robes enough dressed to raise a frolic; so one morning I sent for the keg of alcohol I had cached on the road. Not wishing the Indians to know what we were about, on their asking where my man was going, I told them he was going to look after my pony. He delayed longer than they thought necessary, and they remarked it; but finally he appeared in the lodge with the keg on his back — that being the kind of a pony he had gone to take care of. I was soon prepared for operations, and another glorious drunk took place; but the robe trade was light, only 50 in number. This ended the business, there being no liquor and hardly any robes left in camp.

I then sent the Indian to Fort Union with a letter for Mr. Culbertson, requesting from him the means to bring back the robes I had traded. Notwithstanding continued severely cold weather, ten

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

days afterward a party of eight men and 20 horses arrived in camp, in charge of the hunter of the fort, Antoine Le Brun. Those men had suffered so much with the cold that it was almost impossible to recognize them — noses, cheeks, and eyes all scabby from frost-bite, and so dark from exposure that they looked more like Indians than white men. Mr. Culbertson's letter was anything but satisfactory, its contents being about as follows: "Larpenteur, I send you 20 horses, thinking them sufficient to bring in your trade; if not, try to get some good Indians to help you; tell them I will pay them well. From what I can learn some Indians, who are moving north on your route, have said they will steal all your horses; therefore I advise you to take a different route."

Now, what to do? The snow was drifted so deep in all the hollows that I could not possibly take any road but the old beaten one. To go any other way would be at the risk of freezing to death — or at least of losing all my animals in the snow; I preferred to take the chances of being robbed and perhaps beaten on the old road.

Next morning by ten o'clock we were under way, with all my trade. I had some few goods remaining, which I carefully concealed between the packs of robes, so that they could not be seen by the Indians whom we expected to meet; and I kept a few trinkets in sight, to make some small presents, should it be necessary. With much difficulty we made out to extricate ourselves from the awful abyss into which we had plunged when we came to this camp. The morning was clear, but extremely cold, and as we reached the level prairie we perceived the usual cloud, indicating a snowdrift. Not long afterward it came on, so bad that we had great trouble to keep our horses in the track. As the old saying is, "There is no bad wind but what will bring some good." This wind was one of them. We should have reached our camping place in good time, had it not been for this heavy snowdrift. A little before dark, when we came to camp, we were surprised by the barking of Indian dogs, which appeared to be not far off. The country was here very broken, and wooded with small oaks. We concluded that this was the camp of the very Indians who intended to rob us. Owing to the heavy snowdrift, which had lasted all day, they had not discovered us, and we arrived unknown to them. Finding ourselves undiscovered, I told the men to make no noise, build no fires, and early in the morning to go for the horses, as I wanted to be off by the peep of day. Some were reluctant to obey orders, but consented to do so on my telling them they did not know what might happen. Sleeping without any fire, in such cold weather, was certainly a hardship, but I thought it necessary for our safety. Supper was made on a little dried buffalo meat — about all we had. After a long, sleepless night, at break of day the horses were all brought up to pack, and at clear day we were under march. On the first hill we ascended we perceived an Indian with his hand on his mouth, which is a sign of surprise. He called out, "Ho! ho! have you traveled all night?" I answered, "No, we camped at the spring." "Why," said he, "did you not come to our camp? You would have been well off with us — we have meat, sugar, and coffee." I told him that if I had known the camp was so near, I certainly would have gone there. All this time my men were filing by, and as each one passed me I told him to hurry up; that I would remain behind with my packhorse, and get out of the scrape the best I could. The news soon reached the Indian camp, and in a little while I was surrounded. Their main object was to trade horses, and they wanted me to stop my men. I told them the men would not stop; they were cold, and had gone too far off. "Well," said they, "we have got a few robes we would like to trade." I found from their actions, after my poor excuse for declining the horse trade, that they were not so badly disposed as Mr. Culbertson had represented them to be; yet, if they had got the chance at night, I believe they would

Forty years a fur trader on the upper Missouri: the personal narrative of  
Charles Larpenteur, 1833-1872

---

have relieved me of some of the horses, if not the whole band. They brought a few robes, which I traded; and not wishing my men to get too far off, I made the Indians a present of what little stuff I had left. When they found I was so generous they let me go in peace, with my good Pitcher, whom I had kept by me.

With much relieved hearts we started double-quick, and soon overtook the party. We found them delighted at our good success, and glad they had followed my advice, saying, "If we had been discovered, we should not have one horse left, and God knows what would become of us." One said, "Did you see that big painted rascal, how he look? Bet you he'd have mounted one of them"; and, after several such expressions, it was agreed among them that I was a first-rate leader.

The day became pleasant, we traveled well, and came to camp at the meat-pen, where we fell in with two Indian lodges. One of these was that of He Who Fears his War Club, a respectable and brave man, who I knew could be relied on. After we had gotten everything righted in camp, the old fellow told me to come to his lodge, that he had something to tell me. As we had little to eat in camp I was in hopes that I would get a supper out of him, and perhaps something for my men to eat; but I was disappointed in that, for he was as bad off as we were. On entering he bade me sit down; and having smoked a few whiffs, he asked me if I had heard the latest news from the fort. I told him I had learned none since the news brought to me by my men. "Well," said he, "something very bad has taken place since, and, if I were in your place, I would not go to Wounded Leg's camp; for he has had a quarrel with Long Knife (meaning Mr. Denig) and your chief (meaning Mr. Culbertson). They took him by the arms and legs and threw him out of the fort, and he has sworn vengeance against the whites. It will not be good for you to go to his camp, or even in sight of it, for I tell you he is very mad."

This news struck me pretty hard. I had got out of one scrape, but was already in another; this was something else for me to cipher on that night, and if my stomach was empty my head was full. On my return to camp I was asked what the old fellow had said; the men suspected that all was not quite right, so I told them the whole story. "Now we are in a pretty fix again," said one. "Yes," said another, "they get drunk with the Indians and fight, but don't think much of us poor fellows on the prairie," and all such expressions. One said, "Don't go that way"; and another replied, "You d-d old fool, what other way can we go in this deep snow?" Finding them disconcerted, I said, "Don't be uneasy, boys; I'll figure out a plan to get through."

Meanwhile two strapping big bucks made their appearance in camp, and, of course, they were supposed to be horse thieves; but their story was that they were going to the fort, expecting to join a war party. Notwithstanding this, a guard was placed over them and I took care that they should have a good bed in camp, where they could be easily watched. Early in the morning all hands were roused up; our thieves were all right, but one of the old chief's little boys, about fourteen, had got up still earlier and mounted one of our best horses. He was seen in the act, but could not be overtaken. His father, a good man, was very sorry, and said that the horse would not be lost to the Company. The theft, at this time, was of great importance, as all our horses were getting very poor and weak.

From this place to Wounded Leg's camp was a good level road, about 25 miles, which we expected to make early. Now that all was ready for the move, the boys expressed a desire to know what plan I had to get them through safe. I said to them, "This is my plan: I am going on this road right straight to Wounded Leg's lodge. I know him well; he is a good friend of mine, and I am sure I can

fetch him all right. When we come in sight of the camp I will go ahead alone. You can come on slowly; if anything happens to me, do the best you can for yourselves; but if things are all right, I will make you signs to come in." They were apparently satisfied, placing confidence in me and so we started; but, moving at too fast a gait, we were obliged to leave two horses, which had given out. This made three loads which had been divided on the others; it was very hard on them, and we commenced to think we should be forced to leave some of our robes on the way also. About three in the afternoon the dreaded camp was in sight. I caused all hands to halt, and told them, Now, boys, I am going to the camp. When you get within 400 or 500 yards of it, stop. If you see Indians coming, not out of a walk, remain until they reach you; but if they come rushing, make up your minds that Larpenteur is gone up, and defend yourselves the best you can." Off I started. When I came into camp I inquired for Wounded Leg's lodge, which was immediately shown to me. On entering I found his old woman alone. She felt somewhat surprised, but looked cheerful, and we shook hands. She had always been a good friend of mine, and I thought myself pretty safe as far as she was concerned. I asked her where her old man was. She said he had gone to the lodge of such a one. I then requested her to send for him, which she did, and a few minutes afterward he made his appearance. His countenance was not calculated to inspire confidence. Having shaken hands, he sat down and prepared to smoke, as is customary before conversing. I had to hold my tongue, but my eyes were wide open, watching the face of my enemy while he was making ready for the smoke. To my great satisfaction I thought I could perceive a change in my favor. The pipe being ready a few whiffs were exchanged, and time to break silence came. Upon which I commenced, saying, "Comrade, I have heard some very bad talk about you. I was told not to come to your lodge, or to your camp; that you intended to harm me and my men. Knowing you to be a good friend of mine, I would not mind that talk, and you see I have come straight to your lodge." His first remark was, "Who told you all this?" On my naming the individual, he said, "He told you the truth. I did say all that. I was very angry at the way in which I had been treated at the big house. But I have thought the matter over, and given up the idea of putting my threat into execution; though I am not pleased yet." I soon found that I was in a pretty fair way of success; yet something farther on my part was to be said. So, knowing the Indian character, and, for one thing, that praise of their children goes a long way with them, I commenced thus: "Now, my comrade, you know that the difficulty you had with those men at the big house was when you were all in liquor. You know very well that you are liked by the whites. You are a chief; you have a son — your only child you love him. He is a fine boy. Although but a boy, you know that the chief of the big house has already armed him like a chief. Would you do anything to deprive your only child, as well as yourself, of chiefhood? No! certainly not. I know you too well for that." At this speech I heard the old woman groan; and, during the pause which ensued, I observed that I had them both about melted down into my affections. The idea of his boy's being so much liked and respected by the whites took the old man's fancy, and a pleasanter or more cheerful chap could scarcely have been raked up.

"Now," said I, "this is not all. I want my men to come in camp and stay with you to-night, and I want you to go to the fort with me. I assure you they will be glad to see you, and I will see that you are well paid for your trouble." Turning to the old lady, I added, "I will send you a nice cotillion." "How!" said she, which meant "Thank you!" Then Wounded Leg said, "That is all right, but you must not come into this camp; it would not be good for you. We are starving, our dogs also; they

would eat up your saddles and the cords of your packs. You had better go to camp in the cherry bushes," which he then showed me about a mile off.
