It is adduced as an argument against the abolition of slavery--of course by those whose interest it is to uphold the evil -- that the emancipation of the slaves would, in the present state of feeling against the negro race, be productive of effects which would convulse the whole social state of the country, or, in other words, that the whites would never rest until the whole race was exterminated in the United States. That there is a physical impossibility to any amalgamation in the southern States is as certain as that, year by year, the difficulty of removing the evil is surely increasing; and its very magnitude and the moral cowardice of the American people prevent this evil being grappled with at once, and some steps taken to oppose its perpetuation.

The three arguments brought forward by those who endeavor to palliate or uphold slavery, in feeble sophistry, plainly exhibit the weakness of the cause. First, they say, We admit the evil, but the cure will be worse than the disease. We have inherited it: the blame rests not upon us, but our fathers. If the negroes are emancipated, what is to become of them? They cannot, and shall not, remain in our community, on an equality with us and our children, and enjoying the privileges of white men. This cannot be. Moreover, the burden of supporting them will fall upon us, for they will not work unless compelled.

Secondly: We deny the sinfulness of the institution. Negroes are not men, but were sent into the world to be slaves to the white man. To support this they are ready with quotations from Scripture, and I blush to say that I have heard well-educated and liberal-minded men take no other ground than this to support the cause.

And, thirdly, they say no legislation can reach the evil. Law cannot deprive a citizen of his property: if so, away with liberty at once, if one act confirms rights and another removes them.

The abolitionist of the North raves at the slave-owner of the South; but let a foreigner converse with the former, and he will at once turn round and take the part of the slaveowner. It is like a third person interfering in quarrels of man and wife. "No, no, my good sir," they say, "let us settle this question amongst ourselves; this is a family affair." No one could deny the justice of this, if they really made a bona fide attempt to grapple the evil; but I must confess that abolitionism in

---

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

the United States appears to me to be anything but genuine and honest, and that, if left to themselves, the question is very, very far from any chance of settlement, unless, as I believe will be the result, the slaves themselves cut the Gordian knot.

The great difficulty to be combated in America, in freeing the country from the curse of slavery, is prejudice. The negro is not recognized (startling as this assertion may be) as a fellow-creature-I mean by the mass of the people. This anomaly, in a country where the very first principle of their social organism is the axiom, the incontrovertible truth, that "all men are born equal," is the more palpable, since the popular and universal outcry is, and ever has been, the same sentiment which animated the Fathers of the Revolution, when they offered to the world, as a palliation for the crime of rebellion, the same watchword which is now so prodigally used by every American tongue, and so basely and universally prostituted. "All men are born equal. Liberty, therefore, and equal rights to all"-except to those whose skins are black!

I have heard clergymen of the American church affirm their belief that the negro was placed on earth by God to be the white man's slave. I have heard many educated, and in every other respect moral and conscientious, Americans assert that negroes were not made in God's image, but were created as a link between man and the beast, to minister to the former's wants, and to support him by the toil of their hands and the sweat of their brows.

And when I add that by law it is felony to teach a negro to read or write, what argument can be offered to combat such unnatural prejudices? I believe that slaves are generally well treated in the United States, although many instances could be adduced where the very reverse is the fact, particularly on the western frontier. But this good treatment is on the same grounds that we take care of our horses and cows and pigs, because it is the owner's interest to do so; and the well-being -- that is, the physical healthiness--of slaves is attended to in the same degree that we feed and clothe our horses, in order that they may be in condition to work for us, and thereby bring in a return for the care we have bestowed upon them.

That this question will one day shake to its very centre, if it does not completely annihilate, the union of the American States, is as palpable as the result is certain. This belief is very generally entertained by both parties, and yet in spite of it the evil is allowed to increase, although its removal or cure thereby becomes hourly more difficult.

Hundreds of plans have been suggested for the abolition of slavery, but all have been found to be impracticable, if not impossible to be carried out. Perhaps the most feasible and practicable was that proposed by the late Mr. King many years ago, and which at the time met with the fate of every other suggestion on the same subject. Mr. King, as sound and practical a statesman as the country ever produced, proposed that a certain yearly sum should be laid aside out of the revenue derived from the sale of the public lands, to be devoted to the emancipation of slaves by the purchase their freedom. This process, however slow, at the same time that it would effect the gradual abolition of slavery, and at all events effectually prevent its increase and perpetuation, and offer a final, although distant termination to the evil, was at the same time less calculated to alarm the interested minds of the slave-owners; since, as the emancipation would be gradual, and the compensation proportional to the loss sustained, their interests were not so materially affected as they would be by the entire removal, at one swoop, of their vested rights of property and possession. As it is, however, there is no evidence of any positive action being taken by the legislature to effect the removal of this disgraceful stain on the national character. So rabid and intolerant is the tem-

---

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

per of the southern people when this question is mooted, and so fraught with danger to the union is the agitation even of the subject, that all discussion is shunned and avoided, and the evil hour protracted and put off, which will, as surely as that the sun shines in the heavens, one day plunge the country into a convulsion dreadful to think of or anticipate. Meanwhile the plague-spot remains: the foul cancer is eating its way; and only by its extirpation can the body it disfigures regain its healthfulness and beauty, and take its place in the scale of humanity and civilization, from which the loathsome pestilence has out-paled it.

As I have said, I notice the subject merely to add my humble voice to the cry for humanity's sake, which should never cease to stun the ears of the unholy men who, in spite of every law both human and divine, use their talents, and the intellect which God has given them, to uphold and perpetuate the curse of slavery.

CHAPTER XVI

THE MEXICAN WAR

PROCEEDING, on my arrival at St. Louis, to an excellent hotel called the Planter's House I that night, for the first time in nearly ten months, slept upon a bed, much to the astonishment of my limbs and body, which long accustomed to no softer mattress than mother earth, tossed about all night, unable to appreciate the unusual luxury. I found chairs a positive nuisance, and in my own room caught myself in the act more than once of squatting cross-legged on the floor. The greatest treat to me was bread: I thought it the best part of the profuse dinners of the Planter's House, and consumed prodigious quantities of the staff of life, to the astonishment of the waiters. Forks too I thought were most useless superfluities, and more than once I found myself on the point of grabbing a tempting leg of mutton mountain fashion, and butchering off a hunter's mouthful. But what words can describe the agony of squeezing my feet into boots, after nearly a year of moccasins, or discarding my turban for a great boardy hat, which seemed to crush my temples? The miseries of getting into a horrible coat-of-braces, waistcoats, gloves, and all such implements of torture-were too acute to be described and therefore I draw a veil over them.

Apart from the bustle attendant upon loading and unloading thousands and thousands of barrels of grain upon the wharf, St. Louis appeared to me one of the dullest and most commonplace cities of the Union. A great proportion of the population consists of French and Germans; the former congregating in a suburb called Vide Poche, where they retain a few of the characteristics of their lighthearted nation, and the sounds of the fiddle and tambourine may be nightly heard, making the old fashioned, tumble-down tenements shake with the tread of the merry dancers. The Dutch and Germans have their beer-gardens, where they imbibe huge quantities of malt and honeydew tobacco; and the Irish their shebeen-shops, where Monongahela is quaffed in lieu of the "rale crather."

The town was full of returned volunteers from the wars. The twelve-month's campaign they had been engaged in, and the brilliant victories achieved by them, which, according to the American newspapers, are unparalleled in the annals of the world's history, have converted these rowdy and vermin-covered veterans into perfect heroes; and every batch on arriving is feasted by the public, addresses are offered to them, the officers presented with swords and snuff-boxes, and honors of all kinds lavished upon them in every direction.

The intense glorifications at St. Louis, and in every other part of the United States, on the recent successes of their troops over the miserable Mexicans, which were so absurd as to cause a broad

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

grin on the face of an unexcited neutral, make me recur to the subject of this war, which hitherto I have avoided mentioning in the body of this little narrative.

It is scarcely necessary to trace the causes of the war at present raging between the two republics of North America. The fable of the wolf and lamb drinking at the same stream may be quoted, to explain to the world the reason why the soi-disant champion of liberty has quarrelled with its sister state "for muddying the water" which the model republic uses to quench its thirst.

A lesson has been read to the citizens of the United States which ought to open their eyes to the palpable dishonesty of their government, their unblushing selfishness, and total disregard to the interests of the country, when those of themselves or of their party are at stake; and although in the present instance President Polk has overreached himself, and raised a storm which he would be only too glad to lay at any cost, yet, in the whole history of the Mexican war, the violence of party and political feeling is evident, from the 9th of May, 1846, when the first shot was fired at Palo Alto, to the date of the last half-score despatches which inform the world that General Scott "still remained at Puebla," waiting reinforcements.

It is enough to observe that the immediate cause of hostilities was the unjustifiable invasion of Mexican territory by the army of the United States to take possession of a tract of country of which the boundary-line had been disputed between the Mexican government and one of its revolted states, which had been annexed to the American Union before its recognition as an independent state by the country from which it had seceded.

There can be no question but that the United States had deep cause of complaint against Mexico, in the total disregard evinced by the latter to the spirit of international treaties, and the injuries inflicted upon the persons and property of American citizens; all redress of which grievances was either totally refused, or procrastinated until the parties gave up every hope of ultimate compensation. The acquisition of Texas, however, was in any case a balancing injustice, and should have wiped out all old grievances, at least those of a pecuniary nature; while, if a proper spirit of conciliation had been evinced on the part of the Americans, at the period when the question of annexation was being mooted, all danger of a rupture would have been removed; and Mexico would have yielded her claims to Texas with a better grace, if taken as a receipt in full for all obligations, than in suffering a large portion of her territory to be torn from her, against all laws held sacred by civilized nations.

It is certain that such consequences, as have resulted from the advance of the American troops from the Nueces to the Rio Grande, were never anticipated by the President of the United States, whose policy in bringing on a quasi crisis of the state affairs on the Mexican frontier, and provoking the Mexicans to overt acts which could at any moment be converted into a casus belli, was not for the sake of territorial aggrandizement, but for a purpose which, it is known to those in the secret of his policy, had an object more remote, and infinitely more important, than a rupture with the Mexican government.

At that time the position taken up by Mr. Polk and his party with regard to the Oregon question involved, as a natural consequence, the probability of a war with England; nay, more, if such position were persisted in, the certainty of a war with that power. That a majority of the people, and all the right-thinking and influential classes, were opposed to such measures as would hazard or produce such a rupture, was so palpable that the government was conscious that any proposal for making preparations for a war with England (which they knew a perseverance in their policy

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

would assuredly bring about) would not be favorably received, or even tolerated, and therefore they looked about them for a means of attaining their object, by blinding the eyes of the people as to their ulterior designs. Mexico was made the scapegoat. A war with that powerless state would be popular, since its duration, it was supposed, could be but for a very brief period, the government having no resources whatever, and being sadly deficient in any of the sinews of war; and, moreover, such a war would be likely to flatter the national pride and conceit of the American people.

TO bring, therefore, affairs to such a critical position on the Texan frontier, that a state of war could at any moment be assumed, and its imminence be actually very apparent, was the stroke of policy by which Polk and his party hoped to blind the people, and, profiting by it, make such preparations as would enable them to carry out their plans in connection with the Oregon question and the probable war with England. They thought that, even if hostilities broke out with Mexico, that power would at once succumb; and, in the meantime, that the war-fever in the United States would spread, and that the people would sanction an increase in the army and navy in such a case, which could at any time be made available for another purpose.

The first shot fired on the Rio Grande changed their views. Until then the Americans were in utter ignorance of the state of Mexico and the Mexicans. They never anticipated such resistance as they have met with; but, judging from the moral and physical inferiority of the people, at once concluded that all they had to do was *venire, videre, et vincere*. Children in the art of war, they imagined that personal bravery and physical strength were the only requisites for a military people; and that, possessing these qualities in as great a degree as the Mexicans were deficient in them, the operations in Mexico would amount to nothing more arduous than a promenade through the table-lands of Anahuac -the "Halls of Montezuma," in which it was the popular belief that they were destined "to revel," being the goal of their military paseo of six weeks.

As soon, however, as the list of killed and wounded on the fields of Palo Alto and Resaca de la Palma reached Washington, President Polk saw the error into which he had fallen. It became evident to him that all the resources of the country would be required to carry on the war with one of the most feeble powers in the world, and that the sooner he pulled his foot out of the hot water, which at the temperature of 54deg 40, was likely to scald him, the better for him and his country; for it naturally occurred to him that, if such a scrimmage as the Mexican war gave him considerable trouble, an affair with such a respectable enemy as England was likely to prove anything but an agreeable pastime: and hence the very speedy acceptance of Lord Aberdeen's ultimatum, and the sudden settlement of the Oregon question.

As affairs now stand, and unless the United States very materially modify the conditions under which they signify their willingness to withdraw from the Mexican territory, and notwithstanding the avowedly pacific proposals of Commissioner Trist, it is difficult to assign any probable period for the termination of the war; and it is certain that, as the Mexican armies, one after the other, dissolve before the American attacks, the farther the latter penetrate into the country, the greater are the difficulties which they will have to surmount. Harassed by hordes of guerrillas, with a long line of country in their rear admirably adapted by nature for the system of warfare pursued by irregular troops, and through which all supplies have to pass, to defeat an army is but to increase the conqueror's difficulties, since, while before they had one tangible enemy in their front, now they are surrounded by swarms of hornets, who never run the risk of defeat by standing the brunt

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

of a regular engagement.

Neither have the invariable and signal defeats the Mexicans have met with the same moral effect which such reverses have amongst more civilized nations. They take them as matters of course, and are not dispirited; while, on the other hand, the slightest success instils new life and energy into their hearts. Until the whole country is occupied by American troops, the war, unless immediately concluded, will be carried on, and will eventually become one of conquest. But, in the meantime, the expenses it entails upon the treasury of the United States are enormous, and hourly increasing; and it would seem that the amount of compensation for the expenses of the war, which, in money or territory, is a sine qua non in the peace proposals of the American commissioner, is consequently increasing *pari passu*, and therefore the settlement of the question becomes more difficult and uncertain.

It is extremely doubtful if the Mexican people will consent to a surrender of nearly one-third of their territory, which will most probably be required as compensation for the expenses of the war, or, what is the same thing, be demanded as a security for the payment of a certain sum of money; and whether they will not rather prefer war to the knife to the alternative of losing their nationality. In reality, this war does them little harm. They were in such a state of misery and anarchy before it commenced, and have been for so long a period tyrannized over by the republican despots who have respectively held the reins of power, that no change could possibly make their condition more degraded; and the state of confusion and misrule attendant upon the war in such a country as Mexico is so congenial to the people, that, from my own observations, I believe them to be adverse, even on this account alone, to the termination of hostilities. Moreover, the feeling against the Americans, which was at first mere apathy, has increased to the bitterest hatred and animosity, and is sufficient in itself to secure the popular support to the energetic prosecution of the war: and the consciousness of the justice of their cause, and the injustice of the unprovoked aggression on the part of the United States, ought, and I have no doubt will, keep alive one spark of that honor which prompts a people to resent and oppose a wilful and wanton attack on their liberties and nationality.

CHAPTER XVII

MEN AND MANNERS

AFTER a stay of a few days in St. Louis, in order to rig myself out in civilized attire, I went on board a steamboat bound for the Illinois River and Peoria, intending to cross the prairies of Illinois to Chicago, and thence down the Canadian lakes to New York.

This river is more picturesque than the Missouri or Mississippi; the banks higher, the water clearer, and the channel dotted with pretty islands between which the steamboat passes, almost brushing the timber on the banks. At Peoria we were transferred to stagecoaches, and, suffering a martyrdom of shaking and bad living on the road-if road it can be called-we arrived at last at Chicago--the city, that is to be, of the Lakes, and which may be termed the City of Magnificent Intentions.

Chigago, or Chicago, is situated at the southwestern corner of Lake Michigan, and on the lake-shore. In spite of the pasteboard appearance of its houses, churches, and public edifices, all of wood, it is a remarkably pretty town, its streets wide and well laid out; and it will, doubtless, after it has been burned down once or twice, and rebuilt of stone or brick, be one of the finest of the western cities. It has several excellent hotels, some of which are of gigantic dimensions: a theatre,

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

court-house, and an artificial harbor, constructed at the expense of the city.

An American stage-coach has often been described: it is a huge lumbering affair with leathern springs, and it creaks and groans over the corduroy roads and unmacadamized causeways, thumping, bumping, and dislocating the limbs of its "insides," whose smothered shrieks and exclamations of despair often cause the woodsman to pause from his work, and, leaning upon his axe, listen with astonishment to the din which proceeds from its convulsed interior.

The coach contains three seats, each of which accommodates three passengers; those on the centre, and the three with their backs to the horses, face each other, and, from the confined space, the arrangement and mutual convenience of leg-placing not infrequently leads to fierce outbreaks of ire. A fat old lady got into the coach at Peoria, whose uncompromising rotundity and snappishness of temper, combined with a most unaccommodating pair of "limbs" (legs, on this side the Atlantic), rendered her the most undesirable vis-a-vis a traveler could possibly be inflicted with. The victim happened to be an exceedingly mild Hoosier, whose modest bashfulness prevented his remonstrating against the injustice of the proceeding: but, after unmitigated sufferings for fifty miles, borne with Christian resignation, he disappeared from the scene of his martyrdom, and his place was occupied by a hard-featured New Yorker, the captain of one of the Lake steamboats, whose sternness of feature and apparent determination of purpose assured us that he had been warned of the purgatory in store for him, and was resolved to grapple gallantly with the difficulty. As he took his seat, and bent his head to the right and left over his knees, looking, as it were, for some place to bestow his legs, an ominous silence prevailed in the rocking coach, and we all anxiously awaited the result of the attack which this bold man was evidently meditating; the speculations being as to whether the assault would be made in the shape of a mild rebuke, or a softly-spoken remonstrance and request for a change of posture.

Our skipper evidently imagined that his pantomimic indications of discomfort would have had a slight effect, but when the contrary was the result, and the uncompromising knees wedged him into the corner, his face turned purple with emotion, and, bending towards his tormentor, he solemnly exclaimed—"I guess, marm, it's got to be done anyhow sooner or later, so you and I, marm, must jist 'dovetail.' "

The lady bounded from her seat, aghast at the mysterious proposal.

"Must what, sir-r?"

"Dovetail, marm; you and I have got to dovetail, and no two ways about it."

"Dovetail me, you inhuman savage" she roared out, shaking her fist in the face of the skipper, who shrank, alarmed, into his corner; "dovetail a lone woman in a Christian country! if thar's law on airth, sir-r, and in the state of Illinoy, I'll have you hanged!

"Driver, stop the coach," she shrieked from the window; "I go no farther with this man. I believe I ar' a free 'ooman, and my name is Peck. Young man," she pathetically exclaimed to the driver, who sought to explain matters, whilst we, inside, were literally convulsed with laughter, "my husband shall larn of this, as shiure as shiooting. Open the door, I say, and let me out!" And, spite of all our expostulations, she actually left the coach and sought shelter in a house at the road-side; and we heard her, as we drove off, muttering "Dovetail me, will they? the Injine savages if ther's law in Illinoy, I'll have him hanged!"

It is unnecessary to say that "dovetailing" is the process of mutually accommodating each other's legs followed by stage-coach and omnibus passengers; but the term—certainly the first time I had

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

ever heard it used in that sense--shocked and alarmed the modesty of the worthy Mrs. Peck of Illinois.

A canal is in course of construction in the State of Illinois, to connect the waters of the lakes with the Mississippi-a gigantic undertaking, but one which will be of the greatest benefit to the western country. When this canal is completed, the waters of Lake Superior will, therefore, communicate with the Gulf of Mexico by way of the Mississippi, as they do already with the North Atlantic by means of the Welland and Rideau canals, which pass through Canada; and, even already, vessels have been spoken in mid-ocean, built on Lakes Michigan and Huron, cleared from Chicago, and bound for England, passing an inland navigation of upwards of three thousand miles.

Leaving Chicago, I crossed the lake to Kalamazoo, whence I "railed" across the Michigan peninsula to Detroit, the chief city of the State of Michigan. This railroad was a very primitive affair, with but one line of rails, which, in very many places, were entirely divested of the iron, and in these spots the passengers were requested to "assist" the locomotive over the "bad places." However, after killing several hogs and cows, we arrived safe enough at Detroit.

I remarked that, since a former visit to the United States, three or four years ago, there had been a very palpable increase in the feeling of jealousy and dislike to England and everything British which has very generally characterized the free and enlightened citizens from the affair of Lexington to the present time. I must, however, do them the justice to declare, that in no one instance have I ever perceived that feeling evinced towards an individual; but it exists most assuredly as a national feeling, and is exhibited in the bitterest and most uncompromising spirit in all their journals, and the sayings and doings of their public men. Thus, in travelling through the United States, an Englishman is perpetually hearing his country and its institutions abused. Everything he admires is at once seized upon, to be tortured into a comparison with the same thing in England. But what is more amusing is, that it is a very general belief that, from the Queen down to the gruel-stirrer in Marylebone workhouse, everybody's time is occupied with the affairs of the United States, and all their pleasures turned to gall and wormwood by the bitter envy they feel at her well-being and prosperity.

In passing down the lakes, I took a passage from Detroit to Buffalo in a Canadian steamer, which, by-the-by, was the most tastefully decorated and best-managed boat on the lake. As we passed through the Detroit River, which connects Lakes Erie and St. Clair, we had a fine view of the Canadian as well as the American shore; and the contrast between the flourishing settlements and busy cities of the latter, and the quaint, old-fashioned villages of the French Canadians, was certainly sufficiently striking. As the boat passed Malden, celebrated as being the scene of stirring events in the Indian wars, and the more recent one of 1812, I ascended, spite of the burning sun, to the upper deck, in order to obtain a view of the shore, which at this point, where the river enters the lake, is very picturesque and beautiful. I found a solitary passenger seated on the roof, which was red hot with the burning rays of the sun, squirting his tobacco-juice fast and furiously, and with his eyes bent on the shore,, and a facetious and self-satisfied grin on his lank, sallow countenance. His broad-brimmed brown beaver hat, with dishevelled nap, -suit of glossy black, including a shining black satin waistcoat, of course proclaimed him to be a citizen. Waving his hand towards the Canada shore, he asked me in a severe tone,

"What do you call this, sir? Is this the land of the Queen of England, sir?"

"Well, I guess it ain't nothin' else," answered, for me, the pilot of the boat. "But," he continued, "it

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

ain't a going to be so much longer.

"Longer, sir!" quoth my severe interrogator; "too long by half has that unfortunate country been oppressed by British tyrants. Look thar, sir," waving his arm towards the opposite shore; "thar's a sight, sir, where a man can look up to G ---- A'mighty's heavens, and bless him for having made him a citizen of the United States!"

"A fine country," I observed; "there's no doubt of it."

"A fine country, sir! the first country in the world, sir; and feeds the starving English with what it can't consume itself, sir. The philanthropy of our country" (he took me for a citizen) "flies on the wings of the wind, sir, and bears to the hungry slaves of the Queen of England, corn, sir, and bread-doin's of every description. Yes, sir! and to show them, sir, that we can feed 'em with one hand and whip 'em with the other, we send it over in a ship of war, which once carried their flag, until it was lowered to the flag of freedom. I allude, sir" (turning to me), "to the frigate Macedonian, and the stars and stripes of our national banner."

This speech, delivered in the most pompous manner, and with exuberant gesture, was too much for my gravity, and I exploded in an immoderate fit of laughter.

"Laugh, sir," he resumed, "pray laugh. I perceive you are not a native, and your countrymen had ort to laugh without loss of time; for soon, sir, will their smile of triumph be turned to a howl of despair, when Liberty treads to the earth your aristocracy-your titled lords, and the star-spangled banner waves over Windsor Palace." Saying which, and squirting over the deck a shower of tobacco-spray, he turned magnificently away.

"A smart man that, stranger," said the pilot to me, giving the wheel a spoke to port -- "one of the smartest men in these parts." This I easily believed.

We had the misfortune to damage a part of the machinery just after entering Lake Erie, and were compelled to wait until another steamboat made her appearance, and towed us back to Detroit, where it took twenty-four hours to repair damages.

From Buffalo I travelled by railroad to Albany, on the Hudson, and, descending that magnificent river, reached New York early in July, in eight travelling days from St. Louis, a distance of - I am afraid to say how many thousand miles.

From New York the good ship New World carried me and a dozen fellow-passengers, spite of contrary winds, in thirty days to Liverpool, where I arrived, sin novedad, some time in the middle of August, 1847.

[Pg iii]

THE LATE

GEORGE FREDERICK RUXTON.

THE London newspapers of October 1848 contained the mournful tidings of the death, at St Louis on the Mississippi, and at the early age of twenty-eight, of Lieutenant George Frederick Ruxton, formerly of her Majesty's 89th regiment, the author of the following sketches.

Many men, even in the most enterprising periods of our history, have been made the subjects of elaborate biography, with far less title to the honour than this lamented young officer. Time was not granted him to embody in a permanent shape a tithe of his personal experiences and strange adventures in three quarters of the globe. Considering, indeed, the amount of physical labour he underwent, and the extent of the fields over which his wanderings spread, it is almost surprising he found leisure to write so much. At the early age [Pg iv] of seventeen, Mr Ruxton quitted Sandhurst, to learn the practical part of a soldier's profession in the civil wars of Spain. He obtained a commission in a squadron of lancers then attached to the division of General Diego Leon, and was actively engaged in several of the most important combats of the campaign. For his marked gallantry on these occasions, he received from Queen Isabell the cross of the first class of the order of St Fernando, an honour which has seldom been awarded to one so young. On his return from Spain he found himself gazetted to a commission in the 89th regiment; and it was whilst serving with that distinguished corps in Canada that he first became acquainted with the stirring scenes of Indian life, which he has since so graphically portrayed. His eager and enthusiastic spirit soon became wearied with the monotony of the barrack-room; and, yielding to that impulse which in him was irresistibly developed, he resigned his commission, and directed his steps towards the stupendous wilds, tenanted only by the red Indian, or by the solitary American trapper. Those familiar with Mr Ruxton's writings cannot fail to have remarked the singular delight with [Pg v] which he dwells upon the recollections of this portion of his career, and the longing which he carried with him, to the hour of his death, for a return to those scenes of primitive freedom. "Although liable to an accusation of barbarism," he writes, "I must confess that the very happiest moments of my life have been spent in the wilderness of the Far West; and I never recall, but with pleasure, the remembrance of my solitary camp in the Bayou Salade, with no friend near me more faithful than my rifle, and no companions more sociable than my good horse and mules, or the attendant cayute which nightly serenaded us. With a plentiful supply of dry pine-logs on the fire, and its cheerful blaze streaming far up into the sky, illuminating the valley far and near, and exhibiting the animals, with well-filled bellies, standing contentedly at rest over their picket-fire, I

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

would sit cross-legged, enjoying the genial warmth, and, pipe in mouth, watch the blue smoke as it curled upwards, building castles in its vapoury wreaths, and, in the fantastic shapes it assumed, peopling the solitude with figures of those far away. Scarcely, however, did I ever wish to change such hours of freedom for all the luxuries of civilised life; and, unnatural and [Pg vi]extraordinary as it may appear, yet such is the fascination of the life of the mountain hunter, that I believe not one instance could be adduced of even the most polished and civilised of men, who had once tasted the sweets of its attendant liberty, and freedom from every worldly care, not regretting the moment when he exchanged it for the monotonous life of the settlements, nor sighing and sighing again once more to partake of its pleasures and allurements.”

On his return to Europe from the Far West, Mr Ruxton, animated with a spirit as enterprising and fearless as that of Raleigh, planned a scheme for the exploration of Central Africa, which was thus characterised by the president of the Royal Geographical Society, in his anniversary address for 1845:—“To my great surprise, I recently conversed with an ardent and accomplished youth, Lieutenant Ruxton, late of the 89th regiment, who had formed the daring project of traversing Africa in the parallel of the southern tropic, and has actually started for this purpose. Preparing himself by previous excursions on foot, in North Africa and Algeria, he sailed from Liverpool early in December last, in the *Royalist*, for Ichaboe. From that spot he was to [Pg vii]repair to Walvish Bay, where we have already mercantile establishments. The intrepid traveller had received from the agents of these establishments such favourable accounts of the nations towards the interior, as also of the nature of the climate, that he has the most sanguine hopes of being able to penetrate to the central region, if not of traversing it to the Portuguese colonies of Mozambique. If this be accomplished, then indeed will Lieutenant Ruxton have acquired for himself a permanent name among British travellers, by making us acquainted with the nature of the axis of the great continent of which we possess the southern extremity.”

In pursuance of this hazardous scheme, Ruxton, with a single companion, landed on the coast of Africa, a little to the south of Ichaboe, and commenced his journey of exploration. But it seemed as if both nature and man had combined to baffle the execution of his design. The course of their travel lay along a desert of moving sand, where no water was to be found, and little herbage, save a coarse tufted grass, and twigs of the resinous myrrh. The immediate place of their destination was Angra Peguena, on the coast, described as a frequented station, but which in reality was deserted. One [Pg viii]ship only was in the offing when the travellers arrived, and, to their inexpressible mortification, they discovered that she was outward bound. No trace was visible of the river or streams laid down in the maps as falling into the sea at this point, and no resource was left to the travellers save that of retracing their steps—a labour for which their strength was hardly adequate. But for the opportune assistance of a body of natives, who encountered them at the very moment when they were sinking from fatigue and thirst, Ruxton and his companion would have been added to the long catalogue of those whose lives have been sacrificed in the attempt to explore the interior of that fatal country.

The jealousy of the traders, and of the missionaries settled on the African coast, who constantly withheld or perverted that information which was absolutely necessary for the successful prosecution of the journey, induced Ruxton to abandon the attempt for the present. He made, however, several interesting excursions towards the interior, and more especially in the country of the Bosjesmans.

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

Finding his own resources inadequate for the accomplishment of his favourite project, Mr Ruxton, [Pg ix] on his return to England, made application for Government assistance. But though this demand was not altogether refused, it having been referred to the Council of the Royal Geographical Society, and favourably reported upon by that body, so many delays interposed that Ruxton, in disgust, resolved to withdraw from the scheme, and to abandon that field of African research which he had already contemplated from its borders. He next bent his steps to Mexico; and, fortunately, has presented to the world his reminiscences of that country, in one of the most fascinating volumes which, of late years, has issued from the press. It would, however, appear that the African scheme, the darling project of his life, had again recurred to him at a later period; for, in the course of the present spring, before setting out on that journey which was destined to be his last, the following expressions occur in one of his letters:—

“My movements are uncertain, for I am trying to get up a yacht voyage to Borneo and the Indian Archipelago; have volunteered to Government to explore Central Africa; and the Aborigines Protection Society wish me to go out to Canada to organise [Pg x] the Indian tribes; whilst, for my own part and inclination, I wish to go to all parts of the world at once.”

---

As regards the volume to which this notice serves as Preface, the editor does not hesitate to express very high opinion of its merits. Written by a man untrained to literature, and whose life, from boy-hood upwards, was passed in the field and on the road, in military adventure and travel, its style is yet often as remarkable for graphic terseness and vigour, as its substance every where is for great novelty and originality. The narrative of “Life in the Far West” was first offered for insertion in Blackwood’s Magazine in the spring of 1848, when the greater portion of the manuscript was sent, and the remainder shortly followed. During its publication in that periodical, the wildness of the adventures related excited suspicions in certain quarters as to their actual truth and fidelity. It may interest the reader to know that the scenes described are pictures from life, the results of the author’s personal experience. The following are extracts from letters addressed by him, in the course of last [Pg xi] a summer, to the conductors of the Magazine above named:—

“I have brought out a few more softening traits in the characters of the mountaineers—but not at the sacrifice of truth—for some of them have their good points; which, as they are rarely allowed to rise to the surface, must be laid hold of at once before they sink again. Killbuck—that ‘old hos’ par exemple, was really pretty much of a gentleman, as was La Bonté. Bill Williams, another ‘hard case,’ and Rube Herring, were ‘some’ too.

“The scene where La Bonté joins the Chase family is so far true, that he did make a sudden appearance; but, in reality, a day before the Indian attack. The Chases (and I wish I had not given the proper name [1]) did start for the Platte alone, and were stampeded upon the waters of the Platte.

“The Mexican fandango is true to the letter. [Pg xii] It does seem difficult to understand how they contrived to keep their knives out of the hump-ribs of the mountaineers; but how can you account for the fact, that, the other day, 4000 Mexicans, with 13 pieces of artillery, behind strong entrenchments and two lines of parapets, were routed by 900 raw Missourians; 300 killed, as many more wounded, all their artillery captured, as well as several hundred prisoners; and that not one American was killed in the affair? This is positive fact.

“I myself, with three trappers, cleared a fandango at Taos, armed only with bowie-knives—some

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

score Mexicans, at least, being in the room.

“With regard to the incidents of Indian attacks, starvation, cannibalism, &c., I have invented not one out of my own head. They are all matters of history in the mountains; but I have, no doubt, jumbled the dramatis personæ one with another, and may have committed anachronisms in the order of their occurrence.”

Again he wrote as follows:—

“I think it would be as well to correct a misapprehension as to the truth or fiction of the paper. It is no fiction. There is no incident in it which [Pg xiii]has not actually occurred, nor one character who is not well known in the Rocky Mountains, with the exception of two whose names are changed—the originals of these being, however, equally well known with the others.”

His last letter, written just before his departure from England, a few weeks previously to his death, will hardly be read by any one who ever knew the writer, without a tear of sympathy for the sad fate of this fine young man, dying miserably in a strange land, before he had well commenced the hazardous journey whose excitement and dangers he so joyously anticipated:—

“As you say, human nature can’t go on feeding on civilised fixings in this ‘big village;’ and this child has felt like going West for many a month, being half froze for buffler meat and mountain doins. My route takes me viâ New York, the Lakes, and St Louis, to Fort Leavenworth, or Independence on the Indian frontier. Thence packing my ‘possibles’ on a mule, and mounting a buffalo horse (Panchito, if he is alive), I strike the [Pg xiv]Santa Fé trail to the Arkansa, away up that river to the mountains, winter in the Bayou Salade, where Killbuck and La Bonté joined the Yutes, cross the mountains next spring to Great Salt Lake—and that’s far enough to look forward to—always supposing my hair is not lifted by Comanche or Pawnee on the scalping route of the Coon Creeks and Pawnee Fork.”

Poor fellow! he spoke lightly, in the buoyancy of youth and a confident spirit, of the fate he little thought to meet, but which too surely overtook him—not indeed by Indian blade, but by the no less deadly stroke of disease. Another motive, besides that love of rambling and adventure, which, once conceived and indulged, is so difficult to eradicate, impelled him across the Atlantic. He had for some time been out of health at intervals, and he thought the air of his beloved prairies would be efficacious to work a cure. In a letter to a friend, in the month of May last, he thus referred to the probable origin of the evil:—

“I have been confined to my room for many days, from the effects of an accident I met with in [Pg xv]the Rocky Mountains, having been spilt from the bare back of a mule, and falling on the sharp picket of an Indian lodge on the small of my back. I fear I injured my spine, for I have never felt altogether the thing since, and shortly after I saw you, the symptoms became rather ugly. However, I am now getting round again.”

His medical advisers shared his opinion that he had sustained internal injury from this ugly fall; and it is not improbable that it was the remote, but real cause of his dissolution. From whatsoever this ensued, it will be a source of deep and lasting regret to all who ever enjoyed opportunities of appreciating the high and sterling qualities of George Frederick Ruxton. Few men, so prepossessing on first acquaintance, gained so much by being better known. With great natural abilities and the most dauntless bravery, he united a modesty and gentleness peculiarly pleasing. Had he lived, and resisted his friends’ repeated solicitations to abandon a roving life, and settle down in England, there can be little doubt that he would have made his name eminent on the list of those

---

by GEORGE FREDERICK RUXTON

---

daring and persevering men, whose travels in distant and dangerous [Pg xvi]lands have accumulated for England, and for the world, so rich a store of scientific and general information. And, although the few words it has been thought right and becoming here to devote to his memory, will doubtless be more particularly welcome to his personal friends, we are persuaded that none will peruse without interest this brief tribute to the merits of a gallant soldier, and accomplished English gentleman.

[Pg 1]

LIFE IN THE FAR WEST.

## CHAPTER I.

AWAY to the head waters of the Platte, where several small streams run into the south fork of that river, and head in the broken ridges of the "Divide" which separates the valleys of the Platte and Arkansa, were camped a band of trappers on a creek called Bijou. It was the month of October, when the early frosts of the coming winter had crisped and dyed with sober brown the leaves of the cherry and quaking ash belting the brooks; and the ridges and peaks of the Rocky Mountains were already covered with a glittering mantle of snow, sparkling in the still powerful rays of the autumn sun.

The camp had all the appearance of permanency; for not only did it comprise one or two unusually comfortable shanties, but the numerous stages on which huge stripes of buffalo meat were hanging in [Pg 2]process of cure, showed that the party had settled themselves here in order to lay in a store of provisions, or, as it is termed in the language of the mountains, "to make meat." Round the camp fed twelve or fifteen mules and horses, their fore-legs confined by hobbles of raw hide; and, guarding these animals, two men paced backwards and forwards, driving in the stragglers, ascending ever and anon the bluffs which overhung the river, and leaning on their long rifles, whilst they swept with their eyes the surrounding prairie. Three or four fires burned in the encampment, at some of which Indian women carefully tended sundry steaming pots; whilst round one, which was in the centre of it, four or five stalwart hunters, clad in buckskin, sat cross-legged, pipe in mouth.

They were a trapping party from the north fork of Platte, on their way to wintering-ground in the more southern valley of the Arkansa; some, indeed, meditating a more extended trip, even to the distant settlements of New Mexico, the paradise of mountaineers. The elder of the company was a tall gaunt man, with a face browned by twenty years' exposure to the extreme climate of the mountains; his long black hair, as yet scarcely tinged with grey, hanging almost to his shoulders, but his cheeks and chin clean shaven, after the fashion of the mountain men. His dress was the usual hunting-frock of buckskin, with long fringes down the seams, with pantaloons similarly ornamented, and [Pg 3]moccasins of Indian make. Whilst his companions puffed their pipes in silence, he narrated a few of his former experiences of western life; and whilst the buffalo "hump-ribs" and "tender loin" are singing away in the pot, preparing for the hunters' supper, we will note down the yarn as it spins from his lips, giving it in the language spoken in the "far west:"—  
"Twas about 'calf-time,' maybe a little later, and not a hunderd year ago, by a long chalk, that the biggest kind of rendezvous was held 'to' Independence, a mighty handsome little location away up on old Missoura. A pretty smart lot of boys was camp'd thar, about a quarter from the town, and the way the whisky flowed that time was 'some' now, I can tell you. Thar was old Sam Owins—

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

him as got 'rubbed out' [2] by the Spaniards at Sacramenty, or Chihuahuy, this hos doesn't know which, but he 'went under' [3] any how. Well, Sam had his train along, ready to hitch up for the Mexican country—twenty thunderin big Pittsburg waggons; and the way his Santa Fé boys took in the liquor beat all—eh, Bill?"

"Well, it did."

"Bill Bent—his boys camped the other side the trail, and they was all mountain men, wagh!—and Bill Williams, and Bill Tharpe (the Pawnees took his hair on Pawnee Fork last spring): three Bills, [Pg 4]and them three's all 'gone under.' Surely Hatcher went out that time; and wasn't Bill Garey along, too? Didn't him and Chabonard sit in camp for twenty hours at a deck of Euker? Them was Bent's Indian traders up on Arkansa. Poor Bill Bent! them Spaniards made meat of him. He lost his topknot to Taos. A 'clever' man was Bill Bent as I ever know'd trade a robe or 'throw' a bufler in his tracks. Old St Vrain could knock the hind-sight off him though, when it came to shootin, and old silver heels spoke true, she did: 'plum-center' she was, eh?"

"Well, she wasn't nothin else."

"The Greasers [4] payed for Bent's scalp, they tell me. Old St Vrain went out of Santa Fé with a company of mountain men, and the way they made 'em sing out was 'slick as shootin'. He 'counted a coup,' did St Vrain. He throwed a Pueblo as had on poor Bent's shirt. I guess he tickled that nigger's hump-ribs. Fort William [5] aint the lodge it was, an' never will be agin, now he's gone under; but St Vrain's 'pretty much of a gentleman,' too; if he aint, I'll be dog-gone, eh, Bill?"

"He is so-o."

"Chavez had his waggons along. He was only a Spaniard any how, and some of his teamsters [Pg 5]put a ball into him his next trip, and made a raise of his dollars, wagh! Uncle Sam hung 'em for it, I heard, but can't b'lieve it, nohow. If them Spaniards wasn't born for shootin', why was beaver made? You was with us that spree, Jemmy?"

"No sirre-e; I went out when Spiers lost his animals on Cimmaron: a hunderd and forty mules and oxen was froze that night, wagh!"

"Surely Black Harris was thar; and the darndest liar was Black Harris—for lies tumbled out of his mouth like boudins out of a bufler's stomach. He was the child as saw the putrefied forest in the Black Hills. Black Harris come in from Laramie; he'd been trapping three year an' more on Platte and the 'other side;' and, when he got into Liberty, he fixed himself right off like a Saint Louiy dandy. Well, he sat to dinner one day in the tavern, and a lady says to him:—

"Well, Mister Harris, I hear you're a great travler."

"Travler, marm,' says Black Harris, 'this nigger's no travler; I ar' a trapper, marm, a mountain-man, wagh!"

"Well, Mister Harris, trappers are great travlers, and you goes over a sight of ground in your perishinations, I'll be bound to say."

"A sight, marm, this coon's gone over, if that's the way your 'stick floats.' [6] I've trapped beaver [Pg 6]on Platte and Arkansa, and away up on Missoura and Yaller Stone; I've trapped on Columbia, on Lewis Fork, and Green River; I've trapped, marm, on Grand River and the Heely (Gila). I've fout the 'Blackfoot' (and d—d bad Injuns they ar); I've 'raised the hair' [7] of more than one Apach, and made a Rapaho 'come' afore now; I've trapped in heav'n, in airth, and h—; and scalp my old head, marm, but I've seen a putrefied forest."

"La, Mister Harris, a what?"

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

“A putrefied forest, marm, as sure as my rifle’s got hind-sights, and she shoots center. I was out on the Black Hills, Bill Sublette knows the time—the year it rained fire—and every body knows when that was. If thar wasn’t cold doins about that time, this child wouldn’t say so. The snow was about fifty foot deep, and the bufler lay dead on the ground like bees after a beein’; not whar we was tho’, for thar was no bufler, and no meat, and me and my band had been livin’ on our mocassins (leastwise the parflesh [8]), for six weeks; and poor doins that feedin’ is, marm, as you’ll never know. One day we crossed a ‘cañon’ and over a ‘divide,’ and got into a peraira, whar was green grass, and green trees, and green leaves on the trees, and birds singing in the green leaves, and [Pg 7]this in Febrary, wagh! Our animals was like to die when they see the green grass, and we all sung out, ‘hurraw for summer doins.’

“‘Hyar goes for meat,’ says I, and I jest ups old Ginger at one of them singing birds, and down come the crittur elegant; its darned head spinning away from the body, but never stops singing, and when I takes up the meat, I finds it stone, wagh! ‘Hyar’s damp powder and no fire to dry it,’ I says, quite skeared.

“‘Fire be dogged,’ says old Rube. ‘Hyar’s a hos as ‘ll make fire come;’ and with that he takes his axe and lets drive at a cotton wood. Schr-u-k—goes the axe agin the tree, and out comes a bit of the blade as big as my hand. We looks at the animals, and thar they stood shaking over the g which I’m dog-gone if it wasn’t stone, too. Young Sublette comes up, and he’d been clerking down to the fort on Platte, so he know’d something. He looks and looks, and scrapes the trees with his butcher knife, and snaps the grass like pipe stems, and breaks the leaves a-snappin’ like Californy shells.’

“‘What’s all this, boy?’ I asks.

“‘Putrefactions,’ says he, looking smart, ‘putrefactions, or I’m a niggur.’

“‘La, Mister Harris,’ says the lady, ‘putrefactions! why, did the leaves, and the trees, and the grass smell badly?’

“‘Smell badly, marm!’ says Black Harris, ‘would [Pg 8]rass, a skunk stink if he was froze to stone? No, marm, this child didn’t know what putrefaction was, and young Sublette’s varsion wouldn’t ‘shine’ nohow, so I chips a piece out of a tree and puts it in my trap-sack, and carries it in safe to Laramie. Well, old Captain Stewart, (a clever man was that, though he was an Englishman), he comes along next spring, and a Dutch doctor chap was along too. I shows him the piece I chipped out of the tree, and he called it a putrefaction too; and so, marm, if that wasn’t a putrefied peraira, what was it? For this hos doesn’t know, and he knows ‘fat cow’ from ‘poor bull,’ anyhow.’

“‘Well, old Black Harris is gone under too, I believe. He went to the ‘Parks’ trapping with a Vide Poche Frenchman, who shot him for his bacca and traps. Darn them Frenchmen, they’re no account any way you lays your sight. (Any bacca in your bag, Bill? this beaver feels like chawing.)

“‘Well, any how, thar was the camp, and they was goin to put out the next morning; and the last as come out of Independence was that ar Englishman. He’d a nor-west [9] capote on, and a two-shoot gun rifled. Well, them English are darned fools; they can’t fix a rifle any ways; but that one did shoot ‘some;’ leastwise he made it throw plum-center. [Pg 9]He made the bufler ‘come,’ he did, and fout well at Pawnee Fork too. What was his name? All the boys called him Cap’en, and he got his fixings from old Choteau; but what he wanted out thar in the mountains, I never jest rightly know’d. He was no trader, nor a trapper, and flung about his dollars right smart. Thar was old grit in him, too, and a hair of the black b’ar at that. [10] They say he took the bark off the Shians when he cleared out of the village with old Beaver Tail’s squaw. He’d been on Yaller Stone afore that: Le-

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

clerc know'd him in the Blackfoot, and up in the Chippeway country; and he had the best powder as ever I flashed through life, and his gun was handsome, that's a fact. Them thar locks was grand; and old Jake Hawken's nephey, (him as trapped on Heeley that time), told me, the other day, as he saw an English gun on Arkansa last winter as beat all off hand.

"Nigh upon two hundred dollars I had in my possibles, when I went to that camp to see the boys afore they put out; and you know, Bill, as I sat to 'Euker' and 'seven up' [11] till every cent was gone.

"Take back twenty, old coon,' says Big John.

"H—'s full of such takes back,' says I; and I puts back to town and fetches the rifle and the old mule, puts my traps into the sack, gets credit for a [Pg 10]couple of pounds of powder at Owin's store, and hyar I ar on Bijou, with half a pack of beaver, and running meat yet, old hos: so put a log on, and let's have a smoke.

"Hurraw, Jake, old coon, bear a hand, and let the squaw put them tails in the pot; for sun's down, and we'll have to put out pretty early to reach 'Black Tail' by this time to-morrow. Who's fust guard, boys? them cussed 'Rapahos' will be after the animals to-night, or I'm no judge of Injun sign. How many did you see, Maurice?"

"Enfant de Gârce, me see bout honderd, when I pass Squirrel Creek, one dam war-party, parce-que, they no hosses, and have de lariats for steal des animaux. May be de Yutas in Bayou Salade." "We'll be having trouble to-night, I'm thinking, if the devils are about. Whose band was it, Maurice?"

"Slim-Face—I see him ver close—is out; mais I think it White Wolf's."

"White Wolf, maybe, will lose his hair if he and his band knock round here too often. That Injun put me afoot when we was out on 'Sandy' that fall. This niggur owes him one, any how?"

"H—'s full of White Wolves: go ahead, and roll out some of your doins across the plains that time."

"You seed sights that spree, eh, boy?"

"Well, we did. Some of em got their flints fixed this side of Pawnee Fork, and a heap of mule-meat [Pg 11]went wolfing. Just by Little Arkansa we saw the first Injun. Me and young Somes was ahead for meat, and I had hobbled the old mule and was 'approaching' some goats, [12] when I see the critturs turn back their heads and jump right away for me. 'Hurraw, Dick!' I shouts, 'hyars brown-skin acomin,' and off I makes for the mule. The young greenhorn sees the goats runnin up to him, and not being up to Injun ways, blazes at the first and knocks him over. Jest then seven darned red heads top the bluff, and seven Pawnees com a-screechin upon us. I cuts the hobbles and jumps on the mule, and, when I looks back, there was Dick Somes ramming a ball down his gun like mad, and the Injuns flinging their arrows at him pretty smart, I tell you. 'Hurraw, Dick, mind your hair,' and I ups old Greaser and let one Injun 'have it,' as was going plum into the boy with his lance. He turned on his back handsome, and Dick gets the ball down at last, blazes away, and drops another. Then we charged on em, and they clears off like runnin cows; and I takes the hair off the heads of the two we made meat of; and I do b'lieve thar's some of them scalps on my old leggings yet.

"Well, Dick was as full of arrows as a porky-pine: one was sticking right through his cheek, one in his meat-bag, and two more 'bout his hump-ribs. I tuk 'em all out slick, and away we go to [Pg 12] e camp, (for they was jost a-campin' when we went ahead) and carryin' the goat too. Thar' was a

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

hurroo when we rode in with the scalps at the end of our guns. 'Injuns! Injuns!' was the cry from the greenhorns; 'we'll be 'tacked to-night, that's certain.'

"'Tacked be ——' says old Bill; 'aint we men too, and white at that? Look to your guns, boys; send out a strong hos'-guard with the animals, and keep your eyes skinned.'

"Well, as soon as the animals were unhitched from the waggons, the guvner sends out a strong guard, seven boys, and old hands at that. It was pretty nigh upon sundown, and Bill had just sung out to 'corral.' The boys were drivin' in the animals, and we were all standin' round to get 'em in slick, when, 'howgh-owgh-owgh-owgh,' we hears right behind the bluff, and 'bout a minute and a perfect crowd of Injuns gallops down upon the animals. Wagh! war'nt thar hoopin'! We jump for the guns, but before we get to the fires, the Injuns were among the cavayard. I saw Ned Collyer and his brother, who were in the hos'-guard, let drive at 'em; but twenty Pawnees were round 'em before the smoke cleared from their rifles, and when the crowd broke the two boys were on the ground, and their hair gone. Well, that ar Englishman just saved the cavayard. He had his horse, a regular buffalo-runner, picketed round the fire quite handy, and as soon as he sees [Pg 13]the fix, he jumps upon her and rides right into the thick of the mules, and passes through 'em, firing his two-shoot gun at the Injuns, and, by Gor, he made two come. The mules, which was a snortin' with funk and running before the Injuns, as soon as they see the Englisman's mare (mules 'ill go to h— after a horse, you all know), followed her right into the corral, and thar they was safe. Fifty Pawnees come screechin' after 'em, but we was ready that time, and the way we throw'd 'em was something handsome, I tell you. But three of the hos'-guard got skeared—leastwise their mules did, and carried 'em off into the peraira, and the Injuns having enough of us, dashed after 'em right away. Them poor devils looked back miserable now, with about a hundred red varmints tearin' after their hair, and whooping like mad. Young Jem Bulcher was the last; and when he seed it was no use, and his time was nigh, he throw'd himself off the mule, and standing as upright as a hickory wiping stick, he waves his hand to us, and blazes away at the first Injun as come up, and dropped him slick; but the moment after, you may guess, he died.

"We could do nothin', for, before our guns were loaded, all three were dead and their scalps gone. Five of our boys got rubbed out that time, and seven Injuns lay wolf's meat, while a many more went away gut-shot, I'll lay. How'sever, five of us went under, and the Pawnees made a raise of a dozen mules, wagh!"

[Pg 14]

Thus far, in his own words, we have accompanied the old hunter in his tale; and probably he would have taken us, by the time that the Squaw Chilipat had pronounced the beaver tails cooked, safely across the grand prairies—fording Cotton Wood, Turkey Creek, Little Arkansa, Walnut Creek, and Pawnee Fork—passed the fireless route of the Coon Creeks, through a sea of fat buffalo meat, without fuel to cook it; have struck the big river, and, leaving at the "Crossing" the waggons destined for Santa Fé, have trailed us up the Arkansa to Bent's Fort; thence up Boiling Spring, across the divide over to the southern fork of the Platte, away up to the Black Hills, and finally camped us, with hair still preserved, in the beaver-abounding valleys of the Sweet Water, and C ache la Poudre, under the rugged shadow of the Wind River mountains; if it had not so happened, at this juncture, as all our mountaineers sat cross-legged round the fire, pipe in mouth, and with Indian gravity listened to the yarn of the old trapper, interrupting him only with an occasional wagh! or with the exclamations of some participator in the events then under narra-

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

tion, who would every now and then put in a corroborative,—“This child remembers that fix,” or, “hyar’s a niggur lifted hair that spree,” &c.—that a whizzing noise was heard in the air, followed by a sharp but suppressed cry from one of the hunters.

In an instant the mountaineers had sprung from [Pg 15]their seats, and, seizing the ever-ready rifle, each one had thrown himself on the ground a few paces beyond the light of the fire (for it was now night-fall;) but not a word escaped them, as, lying close, with their keen eyes directed towards the gloom of the thicket, near which the camp was placed, with rifles cocked, they waited a renewal of the attack. Presently the leader of the band, no other than Killbuck, who had so lately been recounting some of his experiences across the plains, and than whom no more crafty woodsman or more expert trapper ever tracked a deer or grained a beaverskin, raised his tall, leather-clad form, and, placing his hand over his mouth, made the prairie ring with the wild protracted note of an Indian war-whoop. This was instantly repeated from the direction where the animals belonging to the camp were grazing, under the charge of the horse-guard. Three shrill whoops answered the warning of the leader, and showed that the guard was on the alert, and understood the signal. However, with the manifestation of their presence, the Indians appeared to be satisfied; or, what is more probable, the act of aggression had been committed by some daring young warrior, who, being out on his first expedition, desired to strike the first coup, and thus signalise himself at the outset of the campaign. After waiting some few minutes, expecting a renewal of the attack, the mountaineers in a body rose from the ground and made towards the animals, with which they presently [Pg 16]returned to the camp; and, after carefully hobbling and securing them to pickets firmly driven into the ground, mounting an additional guard, and examining the neighbouring thicket, they once more assembled round the fire, relit their pipes, and puffed away the cheering weed as composedly as if no such being as a Redskin, thirsting for their lives, was within a thousand miles of their perilous encampment.

“If ever thar was bad Injuns on these plains,” at last growled Killbuck, biting hard the pipe-stem between his teeth, “it’s these Rapahos, and the meanest kind at that.”

“Can’t beat the Blackfeet, any how,” chimed in one La Bonté, from the Yellow Stone country, a fine handsome specimen of a mountaineer. “However, one of you quit this arrow out of my hump,” he continued, bending forwards to the fire, and exhibiting an arrow sticking out under his right shoulder-blade, and a stream of blood trickling down his buckskin coat from the wound.

This his nearest neighbour essayed to do; but finding, after a tug, that it “would not come,” expressed his opinion that the offending weapon would have to be “butchered” out. This was accordingly effected with the ready blade of a scalp-knife; and a handful of beaver-fur being placed on the wound, and secured by a strap of buckskin round the body, the wounded man donned his hunting-shirt once more, and coolly set about lighting [Pg 17]his pipe, his rifle lying across his lap, cocked and ready for use.

It was now near midnight—dark and misty; and the clouds, rolling away to the eastward from the lofty ridges of the Rocky Mountains, were gradually obscuring the dim starlight. As the lighter vapours faded from the mountains, a thick black cloud succeeded them, and settled over the loftier peaks of the chain, faintly visible through the gloom of night, whilst a mass of fleecy scud soon overspread the whole sky. A hollow moaning sound crept through the valley, and the upper branches of the cotton woods, with their withered leaves, began to rustle with the first breath of the coming storm. Huge drops of rain fell at intervals, hissing as they dropped into the blazing

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

fires, and pattering on the skins with which the hunters hurriedly covered the exposed baggage. The mules near the camp cropped the grass with quick and greedy bites round the circuit of their pickets, as if conscious that the storm would soon prevent their feeding, and already humped their backs as the chilling rain fell upon their flanks. The prairie wolves crept closer to the camp, and in the confusion that ensued from the hurry of the trappers to cover the perishable portions of their equipment, contrived more than once to dart off with a piece of meat, when their peculiar and mournful chiding would be heard as they fought for the possession of the ravished morsel.

[Pg 18]

When every thing was duly protected, the men set to work to spread their beds, those who had not troubled themselves to erect a shelter getting under the lee of the piles of packs and saddles; whilst Killbuck, disdaining even such care of his carcass, threw his buffalo robe on the bare ground, declaring his intention to “take” what was coming at all hazards, and “any how.” Selecting a high spot, he drew his knife and proceeded to cut drains round it, to prevent the water running into him as he lay; then taking a single robe he carefully spread it, placing under the end farthest from the fire a large stone brought from the creek. Having satisfactorily adjusted this pillow, he added another robe to the one already laid, and placed over all a Navajo blanket, supposed to be impervious to rain. Then he divested himself of his pouch and powder-horn, which, with his rifle, he placed inside his bed, and quickly covered up lest the wet should reach them. Having performed these operations to his satisfaction, he lighted his pipe by the hissing embers of the half-extinguished fire (for by this time the rain poured in torrents), and went the rounds of the picketed animals, cautioning the guard round the camp to keep their “eyes skinned, for there would be ‘powder burned’ before morning.” Then returning to the fire, and kicking with his moccasined foot the slumbering ashes, he squatted down before it, and thus soliloquised:—

“Thirty year have I been knocking about these [Pg 19]mountains from Missoura’s head as far sothe as the starving Gila. I’ve trapped a ‘heap,’ [13] and many a hundred pack of beaver I’ve traded in my time, wagh! What has come of it, and whar’s the dollars as ought to be in my possibles? Whar’s the ind of this, I say? Is a man to be hunted by Injuns all his days? Many’s the time I’ve said I’d strike for Taos, and trap a squaw, for this child’s getting old, and feels like wanting a woman’s face about his lodge for the balance of his days; but when it comes to caching of the old traps, I’ve the smallest kind of heart, I have. Certain, the old-state comes across my mind now and again, but who’s thar to remember my old body? But them diggings gets too over crowded now-a-days, and its hard to fetch breath amongst them big bands of corncrackers to Missoura. Beside, it goes against natur to leave bufler meat and feed on hog; and them white gals are too much like picturs, and a deal too ‘fofarraw’ (fanfaron). No; darn the settlements, I say. It won’t shine, and whar’s the dollars? Howsever, beaver’s ‘bound to rise;’ human natur can’t go on selling beaver a dollar a pound; no, no, that arn’t a going to shine much longer, I know. Them was the times when this child first went to the mountains: six dollars the plew—old ‘un or kitten. Wagh! but its bound to rise, I says agin; and hyar’s a coon knows whar [Pg 20]to lay his hand on a dozen pack right handy, and then he’ll take the Taos trail, wagh!”

Thus soliloquising, Killbuck knocked the ashes from his pipe, and placed it in the gaily ornamented case that hung round his neck, drew his knife-belt a couple of holes tighter, resumed his pouch and powder-horn, took his rifle, which he carefully covered with the folds of his Navajo blanket, and striding into the darkness, cautiously reconnoitred the vicinity of the camp. When he

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

returned to the fire he sat himself down as before, but this time with his rifle across his lap; and at intervals his keen gray eye glanced piercingly around, particularly towards an old, weather-beaten, and grizzled mule, who now, old stager as she was, having filled her belly, stood lazily over her picket pin, with her head bent down and her long ears flapping over her face, her limbs gathered under her, and her back arched to throw off the rain, tottering from side to side as she rested and slept.

“Yep, old gal!” cried Killbuck to the animal, at the same time picking a piece of burnt wood from the fire and throwing it at her, at which the mule gathered itself up and cocked her ears as she recognised her master’s voice. “Yep, old gal! and keep your nose open; thar’s brown skin about, I’m thinkin’, and maybe you’ll get ‘roped’ (lasso’d) by a Rapaho afore mornin.” Again the old trapper settled himself before the fire; and soon his head began to nod, as drowsiness stole over him. Already [Pg 21]he was in the land of dreams; revelling amongst bands of “fat cow,” or hunting along a stream well peopled with beaver; with no Indian “sign” to disturb him, and the merry rendezvous in close perspective, and his peltry selling briskly at six dollars the plew, and galore of alcohol to ratify the trade. Or, perhaps, threading the back trail of his memory, he passed rapidly through the perilous vicissitudes of his hard, hard life—starving one day, revelling in abundance the next; now beset by whooping savages thirsting for his blood, baying his enemies like the hunted deer, but with the unflinching courage of a man; now, all care thrown aside, secure and forgetful of the past, a welcome guest in the hospitable trading fort; or back, as the trail gets fainter, to his childhood’s home in the brown forests of old Kentuck, tended and cared for—his only thought to enjoy the homminy and johnny cakes of his thrifty mother. Once more, in warm and well remembered homespun, he sits on the snake fence round the old clearing, and munching his hoe-cake at set of sun, listens to the mournful note of the whip-poor-will, or the harsh cry of the noisy catbird, or watches the agile gambols of the squirrels as they chase each other, chattering the while, from branch to branch of the lofty tamarisks, wondering how long it will be before he will be able to lift his father’s heavy rifle, and use it against the tempting game. Sleep, however, sat lightly on the eyes of the wary mountaineer, and a [Pg 22]snort from the old mule in an instant stretched his every nerve. Without a movement of his body, his keen eye fixed itself upon the mule, which now stood with head bent round, and eyes and ears pointed in one direction, snuffing the night air and snorting with apparent fear. A low sound from the wakeful hunter roused the others from their sleep; and raising their bodies from their well-soaked beds, a single word apprised them of their danger.

“Injuns!”

Scarcely was the word out of Killbuck’s lips, when, above the howling of the furious wind, and the pattering of the rain, a hundred savage yells broke suddenly upon their ears from all directions round the camp; a score of rifle-shots rattled from the thicket, and a cloud of arrows whistled through the air, whilst a crowd of Indians charged upon the picketed animals. “Owgh, owgh—owgh—owgh—g-h-h.” “A foot, by gor!” shouted Killbuck, “and the old mule gone at that. On ‘em, boys, for old Kentuck!” And he rushed towards his mule, which jumped and snorted mad with fright, as a naked Indian strove to fasten a lariat round her nose, having already cut the rope which fastened her to the picket-pin.

“Quit that, you cussed devil!” roared the trapper, as he jumped upon the savage, and without raising his rifle to his shoulder, made a deliberate thrust with the muzzle at his naked breast, striking

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

him full, and at the same time pulling the trigger, [Pg 23] actually driving the Indian two paces backwards with the shock, when he fell in a heap, and dead. But at the same moment, an Indian, sweeping his club round his head, brought it with fatal force down upon Killbuck; for a moment the hunter staggered, threw out his arms wildly into the air, and fell headlong to the ground. "Owgh! owgh, owgh-h-h!" cried the Rapaho, and, striding over the prostrate body, he seized with his left hand the middle lock of the trapper's long hair, and drew his knife round the head to separate the scalp from the skull. As he bent over to his work, the trapper named La Bonté saw his companion's peril, rushed quick as thought at the Indian, and buried his knife to the hilt between his shoulders. With a gasping shudder the Rapaho fell dead upon the prostrate body of his foe. The attack, however, lasted but a few seconds. The dash at the animals had been entirely successful, and, driving them before them, with loud cries, the Indians disappeared quickly in the darkness. Without waiting for daylight, two of the three trappers who alone were to be seen, and who had been within the shanties at the time of attack, without a moment's delay commenced packing two horses, which having been fastened to the shanties had escaped the Indians, and placing their squaws upon them, showering curses and imprecations on their enemies, left the camp, fearful of another onset, and resolved to retreat and c ache themselves until the [Pg 24] danger was over. Not so La Bont e, who, stout and true, had done his best in the fight, and now sought the body of his old comrade, from which, before he could examine the wounds, he had first to remove the corpse of the Indian he had slain. Killbuck still breathed. He had been stunned; but, revived by the cold rain beating upon his face, he soon opened his eyes, and recognised his trusty friend, who, sitting down, lifted his head into his lap, and wiped away the blood that streamed from the wounded scalp.

"Is the top-knot gone, boy?" asked Killbuck; "for my head feels queersome, I tell you."

"Thar's the Injun as felt like lifting it," answered the other, kicking the dead body with his foot.

"Wagh! boy, you've struck a coup; so scalp the nigger right off, and then fetch me a drink."

The morning broke clear and cold. With the exception of a light cloud which hung over Pike's Peak, the sky was spotless; and a perfect calm had succeeded the boisterous storm of the previous night. The creek was swollen and turbid with the rains; and as La Bont e proceeded a little distance down the bank to find a passage to the water, he suddenly stopped short, and an involuntary cry escaped him. Within a few feet of the bank lay the body of one of his companions, who had formed the guard at the time of the Indians' attack. It was lying on the face, pierced through the chest [Pg 25] with an arrow which was buried to the very feathers, and the scalp torn from the bloody skull. Beyond, but all within a hundred yards, lay the three others, dead, and similarly mutilated. So certain had been the aim, and so close the enemy, that each had died without a struggle, and consequently had been unable to alarm the camp. La Bont e, with a glance at the bank, saw at once that the wily Indians had crept along the creek, the noise of the storm facilitating their approach undiscovered, and crawling up the bank, had watched their opportunity to shoot simultaneously the four hunters on guard.

Returning to Killbuck, he apprised him of the melancholy fate of their companions, and held a council of war as to their proceedings. The old hunter's mind was soon made up. "First," said he, "I get back my old mule; she's carried me and my traps these twelve years, and I aint a goin' to lose her yet. Second, I feel like taking hair, and some Rapahos has to 'go under' for this night's work. Third, We have got to c ache the beaver. Fourth, We take the Injun trail, wherever it leads."

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

No more daring mountaineer than La Bonté ever trapped a beaver, and no counsel could have more exactly tallied with his own inclination than the law laid down by old Killbuck.

“Agreed,” was his answer, and forthwith he set about forming a *câche*. In this instance they had [Pg 26]not sufficient time to construct a regular one, so they contented themselves with securing their packs of beaver in buffalo robes, and tying them in the forks of several cotton-woods, under which the camp had been made. This done, they lit a fire, and cooked some buffalo meat; and, whilst smoking a pipe, carefully cleaned their rifles, and filled their horns and pouches with good store of ammunition.

A prominent feature in the character of the hunters of the far west is their quick determination and resolve in cases of extreme difficulty and peril, and their fixedness of purpose, when any plan of operations has been laid requiring bold and instant action in carrying out. It is here that they so infinitely surpass the savage Indian, in bringing to a successful issue their numerous hostile expeditions against the natural foe of the white man in the wild and barbarous regions of the west. Ready to resolve as they are prompt to execute, and combining far greater dash and daring with equal subtlety and caution, they possess great advantage over the vacillating Indian, whose superstitious mind in a great degree paralyses the physical energy of his active body; and who, by waiting for propitious signs and seasons before he undertakes an enterprise, often loses the opportunity by which his white and more civilised enemy knows so well how to profit.

Killbuck and La Bonté were no exceptions to this characteristic rule; and before the sun was a hand's-breadth above the eastern horizon, the two hunters [Pg 27]were running on the trail of the victorious Indians. Striking from the creek where the night attack was made, they crossed to another known as Kioway, running parallel to Bijou, a few hours' journey westward, and likewise heading in the “divide.” Following this to its forks, they struck into the upland prairies lying at the foot of the mountains; and crossing to the numerous water-courses which feed the creek called “Vermilion” or “Cherry,” they pursued the trail over the mountain-spurs until it reached a fork of the Boiling Spring. Here the war-party had halted and held a consultation, for from this point the trail turned at a tangent to the westward, and entered the rugged gorges of the mountains. It was now evident to the two trappers that their destination was the Bayou Salade,—a mountain valley which is a favourite resort of the buffalo in the winter season, and which, and for this reason, is often frequented by the Yuta Indians as their wintering ground. That the Rapahos were on a war expedition against the Yutas, there was little doubt; and Killbuck, who knew every inch of the ground, saw at once, by the direction the trail had taken, that they were making for the Bayou in order to surprise their enemies, and, therefore, were not following the usual Indian trail up the cañon of the Boiling Spring River. Having made up his mind to this, he at once struck across the broken ground lying at the foot of the mountains, steering a course a little to the eastward of north, or almost in the [Pg 28]direction whence he had come: and then, pointing westward, about noon he crossed a mountain chain, and descending into a ravine through which a little rivulet tumbled over its rocky bed, he at once proved the correctness of his judgment by striking the Indian trail, now quite fresh, as it wound through the cañon along the bank of the stream. The route he had followed, impracticable to pack-animals, had saved at least half-a-day's journey, and brought them within a short distance of the object of their pursuit; for, at the head of the gorge, a lofty bluff presenting itself, the hunters ascended to the summit, and, looking down, descried at their very feet the Indian camp, with their own stolen cavallada feeding quietly round.

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

“Wagh!” exclaimed both the hunters in a breath. “And thar’s the old ga’l at that,” chuckled Killbuck, as he recognised his old grizzled mule making good play at the rich buffalo grass with which these mountain valleys abound.

“If we don’t make ‘a raise’ afore long, I wouldn’t say so. Thar plans is plain to this child as beaver sign. They’re after Yuta hair, as certain as this gun has got hind-sights; but they ar’nt agoin’ to pack them animals after ‘em, and have crawled like ‘rattlers’ along this bottom to c ache ‘em till they come back from the Bayou,—and maybe they’ll leave half a dozen ‘soldiers’ [14] with ‘em.”

[Pg 29]

How right the wily trapper was in his conjectures will be shortly proved. Meanwhile, with his companion, he descended the bluff, and pushing his way into a thicket of dwarf pine and cedar, sat down on a log, and drew from an end of the blanket, strapped on his shoulder, a portion of a buffalo’s liver, which they both discussed, raw, with infinite relish; eating in lieu of bread (an unknown luxury in these parts) sundry strips of dried fat. To have kindled a fire would have been dangerous, since it was not impossible that some of the Indians might leave their camp to hunt, when the smoke would at once have betrayed the presence of enemies. A light was struck, however for their pipes, and after enjoying this true consolation for some time, they laid a blanket on the ground, and, side by side, soon fell asleep.

If Killbuck had been a prophet, or the most prescient of “medicine men,” he could not have more exactly predicted the movements in the Indian camp. About three hours before “sundown,” he rose and shook himself, which movement was sufficient to awaken his companion. Telling La Bont e to lie down again and rest, he gave him to understand that he was about to reconnoitre the enemy’s camp; and after carefully examining his rifle, and drawing his knife-belt a hole or two tighter, he proceeded on his dangerous errand. Ascending the same bluff whence he had first discovered the Indian camp, he glanced rapidly around, and made himself master of [Pg 30]the features of the ground—choosing a ravine by which he might approach the camp more closely, and without danger of being discovered. This was soon effected; and in half an hour the trapper was lying on his belly on the summit of a pine-covered bluff, which overlooked the Indians within easy rifle-shot, and so perfectly concealed by the low spreading branches of the cedar and arbor-vit e, that not a particle of his person could be detected; unless, indeed, his sharp twinkling gray eye contrasted too strongly with the green boughs that covered the rest of his face. Moreover, there was no danger of their hitting upon his trail, for he had been careful to pick his steps on the rock-covered ground, so that not a track of his moccasin was visible. Here he lay, still as a carcagien in wait for a deer, only now and then shaking the boughs as his body quivered with a suppressed chuckle, when any movement in the Indian camp caused him to laugh inwardly at his (if they had known it) unwelcome propinquity. He was not a little surprised, however, to discover that the party was much smaller than he had imagined, counting only forty warriors; and this assured him that the band had divided, one half taking the Yuta trail by the Boiling Spring, the other (the one before him) taking a longer circuit in order to reach the Bayou, and make the attack on the Yutas in a different direction.

At this moment the Indians were in deliberation. Seated in a large circle round a very small [Pg 31]fire, [15] the smoke from which ascended in a thin straight column, they each in turn puffed a huge cloud of smoke from three or four long cherry-stemmed pipes, which went the round of the party; each warrior touching the ground with the heel of the pipe-bowl, and turning the stem up-

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

wards and away from him as “medicine” to the Great Spirit, before he himself inhaled the fragrant kinnik-kinnik. The council, however, was not general, for only fifteen of the older warriors took part in it, the others sitting outside and at some little distance from the circle. Behind each were his arms—bow and quiver, and shield hanging from a spear stuck in the ground, and a few guns in ornamented covers of buckskin were added to some of the equipments.

Near the fire, and in the centre of the inner circle, a spear was fixed upright in the ground, and on this dangled the four scalps of the trappers killed the preceding night; and underneath them, affixed to the same spear, was the mystic “medicine bag,” by which Killbuck knew that the band before him was under the command of the chief of the tribe.

Towards the grim trophies on the spear, the warriors, who in turn addressed the council, frequently [Pg 32]pointed—more than one, as he did so, making the gyratory motion of the right hand and arm, which the Indians use in describing that they have gained an advantage by skill or cunning. Then pointing westward, the speaker would thrust out his arm, extending his fingers at the same time, and closing and reopening them repeatedly, meaning, that although four scalps already ornamented the “medicine” pole, they were as nothing compared to the numerous trophies they would bring from the Salt Valley, where they expected to find their hereditary enemies the Yutas. “That now was not the time to count their coups,” (for at this moment one of the warriors rose from his seat, and, swelling with pride, advanced towards the spear, pointing to one of the scalps, and then striking his open hand on his naked breast, jumped into the air, as if about to go through the ceremony). “That before many suns all their spears together would not hold the scalps they had taken, and that they would return to their village and spend a moon relating their achievements, and counting coups.”

All this Killbuck learned: thanks to his knowledge of the language of signs—a master of which, if even he have no ears or tongue, never fails to understand, and be understood by, any of the hundred tribes whose languages are perfectly distinct and different. He learned, moreover, that at sundown the greater part of the band would resume the trail, in order to reach the Bayou by the earliest dawn; and also, that no more than four or five [Pg 33]of the younger warriors would remain with the captured animals. Still the hunter remained in his position until the sun had disappeared behind the ridge; when, taking up their arms, and throwing their buffalo robes on their shoulders, the war party of Rapahos, one behind the other, with noiseless step, and silent as the dumb, moved away from the camp. When the last dusky form had disappeared behind a point of rocks which shut in the northern end of the little valley or ravine, Killbuck withdrew his head from its screen, crawled backwards on his stomach from the edge of the bluff, and, rising from the ground, shook and stretched himself; then gave one cautious look around, and immediately proceeded to rejoin his companion.

“Lave (get up), boy,” said Killbuck, as soon as he reached him. “Hyar’s grainin’ to do afore long—and sun’s about down, I’m thinking.”

“Ready, old hos,” answered La Bonté, giving himself a shake. “What’s the sign like, and how many’s the lodge?”

“Fresh, and five, boy. How do you feel?”

“Half froze for hair. Wagh!”

“We’ll have moon to-night, and as soon as she gets up, we’ll make ‘em ‘come.’”

Killbuck then described to his companion what he had seen, and detailed his plan. This was sim-

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

ply to wait until the moon afforded sufficient light, then to approach the Indian camp and charge into it, "lift" as much "hair" as they could, recover their animals, [Pg 34]and start at once to the Bayou and join the friendly Yutas, warning them of the coming danger. The risk of falling in with either of the Rapaho bands was hardly considered; to avoid this, they trusted to their own foresight, and the legs of their mules, should they encounter them.

Between sundown and the rising of the moon, they had leisure to eat their supper, which, as before, consisted of raw buffalo-liver; after discussing which, Killbuck pronounced himself "a 'heap better," and ready for "huggin."

In the short interval of almost perfect darkness which preceded the moonlight, and taking advantage of one of the frequent squalls of wind which howl down the narrow gorges of the mountains, these two determined men, with footsteps noiseless as the panther's, crawled to the edge of the little plateau of some hundred yards' square, where the five Indians in charge of the animals were seated round the fire, perfectly unconscious of the vicinity of danger. Several clumps of cedar bushes dotted the small prairie, and amongst these the well-hobbled mules and horses were feeding. These animals, accustomed to the presence of whites, would not notice the two hunters as they crept from clump to clump nearer to the fire, and also served, even if the Indians should be on the watch, to conceal their movements from them.

This the two men at once perceived; but old Killbuck knew that if he passed within sight or smell [Pg 35]of his mule, he would be received with a hinny of recognition, which would at once alarm the enemy. He therefore first ascertained where his own animal was feeding, which luckily was at the farther side of the prairie, and would not interfere with his proceedings.

Threading their way amongst the feeding mules, they approached a clump of bushes about forty yards from the spot where the unconscious savages were seated smoking round the fire; and here they awaited, scarcely drawing breath the while, the moment when the moon rose above the mountain into the clear cold sky, and gave them light sufficient to make sure their work of bloody retribution. Not a pulsation in the hearts of these stern determined men beat higher than its wont; not the tremour of a nerve disturbed their frame. They stood with lips compressed and rifles ready, their pistols loosened in their belts, their scalp-knives handy to their gripe. The lurid glow of the coming moon already shot into the sky above the ridge, which stood out in bold relief against the light; and the luminary herself just peered over the mountain, illuminating its pine-clad summit, and throwing her beams on an opposite peak, when Killbuck touched his companion's arm, and whispered, "Wait for the full light, boy."

At this moment, however, unseen by the trapper, the old grizzled mule had gradually approached, as she fed along the plateau; and, when within a few [Pg 36]paces of their retreat, a gleam of moonshine revealed to the animal the erect forms of the two whites. Suddenly she stood still and pricked her ears, and stretching out her neck and nose, snuffed the air. Well she knew her old master.

Killbuck, with eyes fixed upon the Indians, was on the point of giving the signal of attack to his comrade, when the shrill hinny of his mule reverberated through the gorge. The Indians jumped to their feet and seized their arms, when Killbuck, with a loud shout of "At 'em boy; give the niggurs h—!" rushed from his concealment, and with La Bonté by his side, yelling a fierce war-whoop, sprung upon the startled savages.

Panic-struck with the suddenness of the attack, the Indians scarcely knew where to run, and for a

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

moment stood huddled together like sheep. Down dropped Killbuck on his knee, and stretching out his wiping-stick, planted it on the ground at the extreme length of his arm. As methodically and as coolly as if about to aim at a deer, he raised his rifle to this rest and pulled the trigger. At the report an Indian fell forward on his face, at the same moment that La Bonté, with equal certainty of aim and like effect, discharged his own rifle.

The three surviving Indians, seeing that their assailants were but two, and knowing that their guns were empty, came on with loud yells. With the left hand grasping a bunch of arrows, and holding the bow already bent and arrow fixed, they [Pg 37]steadily advanced, bending low to the ground to get their objects between them and the light, and thus render their aim more certain. The trappers, however, did not care to wait for them. Drawing their pistols, they charged at once; and although the bows twanged, and the three arrows struck their mark, on they rushed, discharging their pistols at close quarters. La Bonté threw his empty one at the head of an Indian who was pulling his second arrow to its head at a yard's distance, drew his knife at the same moment, and made at him.

But the Indian broke and ran, followed by his surviving companion; and as soon as Killbuck could ram home another ball, he sent a shot flying after them as they scrambled up the mountain side, leaving in their fright and hurry their bows and shields on the ground.

The fight was over, and the two trappers confronted each other:—"We've given 'em h—!" laughed Killbuck.

"Well, we have," answered the other, pulling an arrow out of his arm.—"Wagh!"

"We'll lift the hair, any how," continued the first, "afore the scalp's cold."

Taking his whetstone from the little sheath on his knife-belt, the trapper proceeded to "edge" his knife, and then stepping to the first prostrate body, he turned it over to examine if any symptom of vitality remained. "Thrown cold!" he exclaimed, as he dropped the lifeless arm he had lifted. [Pg 38]"I sighted him about the long ribs, but the light was bad, and I couldn't get a 'bead' 'off hand' any how."

Seizing with his left hand the long and braided lock on the centre of the Indian's head, he passed the point edge of his keen butcher-knife round the parting, turning it at the same time under the skin to separate the scalp from the skull; then, with a quick and sudden jerk of his hand, he removed it entirely from the head, and giving the reeking trophy a wring upon the grass to free it from the blood, he coolly hitched it under his belt, and proceeded to the next; but seeing La Bonté operating upon this, he sought the third, who lay some little distance from the others. This one was still alive, a pistol-ball having passed through his body, without touching a vital spot.

"Gut-shot is this niggur," exclaimed the trapper; "them pistols never throws 'em in their tracks;" and thrusting his knife, for mercy's sake, into the bosom of the Indian, he likewise tore the scalp-lock from his head, and placed it with the other.

La Bonté had received two trivial wounds, and Killbuck till now had been walking about with an arrow sticking through the fleshy part of his thigh, the point being perceptible near the surface of the other side. To free his leg from the painful encumbrance, he thrust the weapon completely through, and then, cutting off the arrow-head below the [Pg 39]barb, he drew it out, the blood flowing freely from the wound. A tourniquet of buckskin soon stopped this, and, heedless of the pain, the hardy mountaineer sought for his old mule, and quickly brought it to the fire (which La Bonté had rekindled), lavishing many a caress, and most comical terms of endearment, upon the

---

by GEORGE FREDERICK RUXTON

---

faithful companion of his wanderings. They found all the animals safe and well; and after eating heartily of some venison which the Indians had been cooking at the moment of the attack, made instant preparations to quit the scene of their exploit, not wishing to trust to the chance of the Rapahos being too frightened to again molest them.

Having no saddles, they secured buffalo robes on the backs of two mules—Killbuck, of course, riding his own—and lost no time in proceeding on their way. They followed the course of the Indians up the stream, and found that it kept the cañons and gorges of the mountains, where the road was better; but it was with no little difficulty that they made their way, the ground being much broken, and covered with rocks. Killbuck's wound became very painful, and his leg stiffened and swelled distressingly, but he still pushed on all night, and, at daybreak, recognising their position, he left the Indian trail, and followed a little creek which rose in a mountain chain of moderate elevation, and above which, and to the south, Pike's Peak towered high into the clouds. With great difficulty they crossed [Pg 40]this ridge, and ascending and descending several smaller ones, which gradually smoothed away as they met the valley, about three hours after sunrise they found themselves in the south-east corner of the Bayou Salade.

The Bayou Salade, or Salt Valley, is the most southern of three very extensive valleys, forming a series of table-lands in the very centre of the main chain of the Rocky Mountains, known to the trappers by the name of the "Parks." The numerous streams by which they are watered abound in the valuable fur-bearing beaver, whilst every species of game common to the west is found here in great abundance. The Bayou Salade especially, owing to the salitrose nature of the soil and springs, is the favourite resort of all the larger animals common to the mountains; and, in the sheltered prairies of the Bayou, the buffalo, forsaking the barren and inclement regions of the exposed plains, frequent these upland valleys, in the winter months; and feeding upon the rich and nutritious buffalo grass which, on the bare prairies, at that season, is either dry and rotten, or entirely exhausted, not only sustain life, but retain a great portion of the "condition" that the abundant fall and summer pasture of the lowlands has laid upon their bones. Therefore is this valley sought by the Indians as a wintering ground. Its occupancy has been disputed by most of the mountain tribes, and long and bloody wars have been waged to make good the claims set [Pg 41]forth by Yuta, Rapaho, Sioux, and Shians. However, to the first of these it may be said now to belong, since their "big village" has wintered there for many successive years; whilst the Rapahos seldom visit it unless on war expeditions against the Yutas.

Judging, from the direction the Rapahos were taking, that the friendly tribe of Yutas were there already, the trappers had resolved to join them as soon as possible; and therefore, without resting, pushed on through the uplands, and, towards the middle of the day, had the satisfaction of descrying the conical lodges of the village, situated on a large level plateau, through which ran a mountain stream. A numerous band of mules and horses were scattered over the pasture, and round them several mounted Indians kept guard. As the trappers descended the bluffs into the plain, some straggling Indians caught sight of them; and instantly one of them, lassoing a horse from the herd, mounted it, bare-backed, and flew like wind to the village to spread the news. Soon the lodges disgorged their inmates; first the women and children rushed to the side of the strangers' approach; then the younger Indians, unable to restrain their curiosity, mounted their horses, and galloped forth to meet them. The old chiefs, enveloped in buffalo robes (softly and delicately dressed as the Yutas alone know how), and with tomahawk held in one hand and resting in the

---

hollow of the other arm, [Pg 42] sallied last of all from their lodges, and, squatting in a row on a sunny bank outside the village, awaited, with dignified composure, the arrival of the whites. Killbuck was well known to most of them, having trapped in their country and traded with them years before at Roubideau's fort at the head waters of the Rio Grande. After shaking hands with all who presented themselves, he at once gave them to understand that their enemies, the Rapahos, were at hand, with a hundred warriors at least, elated by the coup they had just struck against the whites, bringing, moreover, four white scalps to incite them to brave deeds.

At this news the whole village was speedily in commotion: the war-shout was taken up from lodge to lodge; the squaws began to lament and tear their hair; the warriors to paint and arm themselves. The elder chiefs immediately met in council, and, over the medicine-pipe, debated as to the best course to pursue,—whether to wait the attack, or sally out and meet the enemy. In the mean time, the braves were collected together by the chiefs of their respective bands, and scouts, mounted on the fastest horses, despatched in every direction to procure intelligence of the enemy. The two whites, after watering their mules and picketing them in some good grass near the village, drew near the council fire, without, however, joining in the “talk,” until they were invited to take their seats by the eldest chief. Then Killbuck was [Pg 43] called upon to give his opinion as to the direction in which he judged the Rapahos to be approaching, which he delivered in their own language, with which he was well acquainted. In a short time the council broke up, and, without noise or confusion, a band of one hundred chosen warriors left the village, immediately after one of the scouts had galloped in and communicated some intelligence to the chiefs. Killbuck and La Bonté volunteered to accompany the war-party, weak and exhausted as they were; but this was negatived by the chiefs, who left their white brothers to the care of the women, who tended their wounds, now stiff and painful: and spreading their buffalo robes in a warm and roomy lodge, left them to the repose they so much needed.

---

[Pg 44]

## CHAPTER II.

THE next morning, Killbuck's leg was greatly inflamed, and he was unable to leave the lodge; but he made his companion bring the old mule to the door, that he might give her a couple of ears of Indian corn, the last remains of the slender store brought by the Indians from the Navajo country. The day passed, and sundown brought no tidings of the war-party. This caused no little wailing on the part of the squaws, but was interpreted by the whites as a favourable augury. A little after sunrise, on the second morning, the long line of the returning warriors was discerned winding over the prairie, and a scout having galloped in to bring the news of a great victory, the whole village was soon in a ferment of paint and drumming. A short distance from the lodges, the warriors halted to await the approach of the people. Old men, children, and squaws sitting astride their horses, sallied out to escort the victorious party in triumph to the village. With loud shouts and songs, and drums beating the monotonous Indian time, they advanced and encircled the returning braves, one of whom, his face covered with black paint, carried a pole on which dangled [Pg 45] thirteen scalps, the trophies of the expedition. As he lifted these on high, they were saluted with deafening whoops and cries of exultation and savage joy. In this manner they entered the village, almost before the friends of those fallen in the fight had ascertained their losses. Then the shouts of delight were converted into yells of grief; the mothers and wives of those braves

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

who had been killed (and seven had “gone under”) presently returned with their faces, necks, and hands blackened, and danced and howled round the scalp-pole, which had been deposited in the centre of the village, in front of the lodge of the great chief.

Killbuck now learned that a scout having brought intelligence that the two bands of Rapahos were hastening to form a junction, as soon as they learned that their approach was discovered, the Yutas had successfully prevented it; and attacking one party, had entirely defeated it, killing thirteen of the Rapaho braves. The other party had fled on seeing the issue of the fight, and a few of the Yuta warriors were now pursuing them.

To celebrate so signal a victory, great preparations sounded their notes through the village. Paints,—vermilion and ochres—red and yellow,—were in great request; whilst the scrapings of charred wood, mixed with gunpowder, were used as substitute for black, the medicine colour. The lodges of the village, numbering some two [Pg 46]hundred or more, were erected in parallel lines, and covered a large space of the level prairie in shape of a parallelogram. In the centre, however, the space which half a dozen lodges in length would have taken up was left unoccupied, save by one large one, of red-painted buffalo skins, tattooed with the mystic totems of the “medicine” peculiar to the nation. In front of this stood the grim scalp-pole, like a decayed tree trunk, its bloody fruit tossing in the wind; and on another pole, at a few feet distance, was hung the “bag” with its mysterious contents. Before each lodge a tripod of spears supported the arms and shields of the Yuta chivalry, and on many of them, smoke-dried scalps rattled in the wind, former trophies of the dusky knights who were arming themselves within. Heraldic devices were not wanting,—not, however, graved upon the shield, but hanging from the spear-head, the actual “totem” of the warrior it distinguished. The rattlesnake, the otter, the carcagien, the mountain badger, the war-eagle, the kon-qua-kish, the porcupine, the fox, &c., dangled their well-stuffed skins, displaying the guardian “medicine” of the warriors they pertained to, and representing the mental and corporeal qualities which were supposed to characterise the braves to whom they belonged. From the centre lodge, two or three “medicine men,” fantastically attired in the skins of wolves and bears, and bearing long peeled wands of cherry in [Pg 47]their hands, occasionally emerged to tend a very small fire which they had kindled in the centre of the open space; and, when a thin column of smoke arose, one of them planted the scalp-pole obliquely across the fire. Squaws in robes of white dressed buckskin, garnished with beads and porcupines’ quills, and their faces painted bright red and black, then appeared. These ranged themselves round the outside of the square, the boys and children of all ages, mounted on bare-backed horses, galloping round and round, and screaming with eagerness, excitement, and curiosity.

Presently the braves and warriors made their appearance, and squatted round the fire in two circles, those who had been engaged on the expedition being in the first or smaller one. One medicine man sat under the scalp-pole, having a drum between his knees, which he tapped at intervals with his hand, eliciting from the instrument a hollow monotonous sound. A bevy of women, shoulder to shoulder, then advanced from the four sides of the square, and some, shaking a rattle-drum in time with their steps, commenced a jumping jerking dance, now lifting one foot from the ground, and now rising with both, accompanying the dance with a chant, which swelled from a low whisper to the utmost extent of their voices—now dying away, and again bursting into vociferous measure. Thus they advanced to the centre and retreated to their former positions; when six squaws, with their faces painted a dead [Pg 48]black, made their appearance from the

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

crowd, chanting, in soft and sweet measure, a lament for the braves the nation had lost in the late battle: but soon as they drew near the scalp-pole, their melancholy note changed to the music (to them) of gratified revenge. In a succession of jumps, raising the feet alternately but a little distance from the ground, they made their way, through an interval left in the circle of warriors, to the grim pole, and encircling it, danced in perfect silence round it for a few moments. Then they burst forth with an extempore song, laudatory of the achievements of their victorious braves. They addressed the scalps as "sisters" (to be called a squaw is the greatest insult that can be offered to an Indian), and, spitting at them, upbraided them with their rashness in leaving their lodges to seek for Yuta husbands; "that the Yuta warriors and young men despised them, and chastised them for their forwardness and presumption, bringing back their scalps to their own women."

After sufficiently proving that they had any thing but lost the use of their tongues, but possessed, on the contrary, as fair a length of that formidable weapon as any of their sex, they withdrew, and left the field in undisputed possession of the men: who, accompanied by tap of drum, and by the noise of many rattles, broke out into a war-song, in which their own valour was by no means hidden in a bushel, or modestly refused the light of day. After [Pg 49]this came the more interesting ceremony of a warrior "counting his coups."

A young brave, with his face painted black, mounted on a white horse mysteriously marked with red clay, and naked to the breech-clout, holding in his hand a long taper lance, rode into the circle, and paced slowly round it; then, flourishing his spear on high, he darted to the scalp-pole, round which the warriors were now seated in a semicircle; and in a loud voice, and with furious gesticulations, related his exploits, the drums tapping at the conclusion of each. On his spear hung seven scalps, and holding it vertically above his head, and commencing with the top one, he told the feats in which he had raised the trophy hair. When he had run through these, the drums tapped loudly, and several of the old chiefs shook their rattles, in corroboration of the truth of his achievements. The brave, swelling with pride, then pointed to the fresh and bloody scalps hanging on the pole. Two of these had been torn from the heads of Rapahos struck by his own hand, and this feat, the exploit of the day, had entitled him to the honour of counting his coups. Then, sticking his spear into the ground by the side of the pole, he struck his hand twice on his brawny and naked chest, turned short round, and, swift as the antelope, galloped into the plain: as if overcome by the shock his modesty had received in being obliged to recount his own high-sounding deeds. "Wagh!" exclaimed old Killbuck, as he left the [Pg 50]circle, pointing his pipe-stem towards the fast-fading figure of the brave, "that Injun's heart's about as big as ever it will be, I'm thinking."

With the Yutas, Killbuck and La Bonté remained during the winter; and when the spring sun had opened the ice-bound creeks, and melted the snow on the mountains, and its genial warmth had expanded the earth and permitted the roots of the grass to "live" once more, and throw out green and tender shoots, the two trappers bade adieu to the hospitable Indians, who broke up their village in order to start for the valleys of the Del Norte. As they followed the trail from the bayou, at sundown, just as they thought of camping, they observed ahead of them a solitary horseman riding along, followed by three mules. His hunting-frock of fringed buckskin, and the rifle resting across the horn of his saddle, at once proclaimed him white; but as he saw the mountaineers winding through the cañon, driving before them half a dozen horses, he judged they might possibly be Indians and enemies, the more so as their dress was not the usual costume of the whites. The trappers, therefore, saw the stranger raise the rifle in the hollow of his arm, and, gathering

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

up his horse, ride steadily to meet them, as soon as he observed they were but two; two to one in mountain calculation being scarcely considered odds, if red skin to white.

However, on nearing them, the stranger discovered his mistake; and, throwing his rifle across [Pg 51]the saddle once more, reined in his horse and waited their approach; for the spot where he then stood presented an excellent camping-ground, with abundance of dry wood and convenient water.

“Where from, stranger?”

“The divide, and to the bayou for meat; and you are from there, I see. Any buffalo come in yet?”

“Heap, and seal-fat at that. What’s the sign out on the plains?”

“War-party of Rapahos passed Squirrel at sundown yesterday, and nearly raised my animals. Sign, too, of more on left fork of Boiling Spring. No buffalo between this and Bijou. Do you feel like camping?”

“Well, we do. But whar’s your companyeros?”

“I’m alone.”

“Alone! Wagh! how do you get your animals along?”

“I go ahead, and they follow the horse.”

“Well, that beats all! That’s a smart-looking hos now; and runs some, I’m thinking.”

“Well, it does.”

“Whar’s them mules from? They look like Californy.”

“Mexican country—away down south.”

“H—! Whar’s yourself from?”

“There away, too.”

“What’s beaver worth in Taos?”

“Dollar.”

[Pg 52]

“In Saint Louiy?”

“Same.”

“H—! Any call for buckskin?”

“A heap! The soldiers in Santa Fé are half froze for leather; and moccasins fetch two dollars, easy.”

“Wagh! How’s trade on Arkansa, and what’s doin to the Fort?”

“Shians at Big Timber, and Bent’s people trading smart. On North Fork, Jim Waters got a hundred pack right off, and Sioux making more.”

“Whar’s Bill Williams?”

“Gone under, they say: the Diggers took his hair.”

“How’s powder goin?”

“Two dollars a pint.”

“Bacca?”

“A plew a plug.”

“Got any about you?”

“Have so.”

“Give us a chaw; and now let’s camp.”

Whilst unpacking their own animals, the two trappers could not refrain from glancing, every now and then, with no little astonishment, at the solitary stranger they had so unexpectedly encoun-

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

tered. If truth be told, his appearance not a little perplexed them. His hunting-frock of buckskin, shining with grease, and fringed pantaloons, over which the well-greased butcher-knife had evidently been often wiped after cutting his food, or butchering [Pg 53]the carcass of deer and buffalo, were of genuine mountain make. His face, clean shaved, exhibited in its well-tanned and weather-beaten complexion, the effects of such natural cosmetics as sun and wind; and under the mountain hat of felt which covered his head, long uncut hair hung in Indian fashion on his shoulders. All this would have passed muster, had it not been for the most extraordinary equipment of a double-barrelled rifle; which, when it had attracted the eyes of the mountaineers, elicited no little astonishment, not to say derision. But, perhaps, nothing excited their admiration so much as the perfect docility of the stranger's animals; which, almost like dogs, obeyed his voice and call; and albeit that one, in a small sharp head and pointed ears, expanded nostrils, and eye twinkling and malicious, exhibited the personification of a "lurking devil," yet they could not but admire the perfect ease with which even this one, in common with the rest, permitted herself to be handled. Dismounting, and unhitching from the horn of his saddle the coil of skin rope, one end of which was secured round the neck of the horse, he proceeded to unsaddle; and whilst so engaged, the three mules, two of which were packed, one with the unbutchered carcass of a deer, the other with a pack of skins, &c., followed leisurely into the space chosen for the camp, and, cropping the grass at [Pg 54]their ease, waited until a whistle called them to be unpacked.

The horse was a strong square-built bay; and, although the severities of a prolonged winter, with scanty pasture and long and trying travel, had robbed his bones of fat and flesh, tucked up his flank, and "ewed" his neck; still his clean and well-set legs, oblique shoulder, and withers fine as a deer's, in spite of his gaunt half-starved appearance, bore ample testimony as to what he had been; while his clear cheerful eye, and the hearty appetite with which he fell to work on the coarse grass of the bottom, proved that he had something in him still, and was game as ever. His tail, gnawed by the mules in days of strait, attracted the observant mountaineers.

"Hard doins when it come to that," remarked La Bonté.

Between the horse and two of the mules a mutual and great affection appeared to subsist, which was no more than natural, when their master observed to his companions that they had travelled together upwards of two thousand miles.

One of these mules was a short, thick-set, stumpy animal, with an enormous head surmounted by proportionable ears, and a pair of unusually large eyes, beaming the most perfect good temper and docility (most uncommon qualities in a mule.) Her neck was thick, and rendered more so in appearance by [Pg 55]reason of her mane not being roached, (or, in English, hogged), which privilege she alone enjoyed of the trio; and her short, strong legs, ending in small, round, cat-like hoofs, were feathered with a profusion of dark brown hair.

As she stood stock-still, whilst the stranger removed the awkwardly packed deer from her back, she flapped her huge ears backward and forward, occasionally turning her head, and laying her cold nose against her master's cheek. When the pack was removed, he advanced to her head, and resting it on his shoulder, rubbed her broad and grizzled cheeks with both his hands for several minutes, the old mule laying her ears, like a rabbit, back upon her neck, and with half-closed eyes enjoyed mightily the manipulation. Then, giving her a smack upon the haunch, and a "hep-a" well known to the mule kind, the old favourite threw up her heels and cantered off to the horse, who was busily cropping the buffalo grass on the bluff above the stream.

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

Great was the contrast between the one just described and the next which came up to be divested of her pack. She, a tall beautifully shaped Mexican mule, of a light mouse colour, with a head like a deer's, and long springy legs, trotted up obedient to the call, but with ears bent back and curled up nose, and tail compressed between her legs. As her pack was being removed, she groaned and whined like a dog, as a thong or loosened strap touched her ticklish body, lifting her hind-quarters [Pg 56] in a succession of jumps or preparatory kicks, and looking wicked as a panther. When nothing but the fore pack-saddle remained, she had worked herself into the last stage; and as the stranger cast loose the girth of buffalo hide, and was about to lift the saddle and draw the crupper from the tail, she drew her hind legs under her, more tightly compressed her tail, and almost shrieked with rage.

"Stand clear," he roared (knowing what was coming), and raised the saddle, when out went her hind legs, up went the pack into the air, and, with it dangling at her heels, away she tore, kicking the offending saddle as she ran. Her master, however, took this as matter of course, followed her and brought back the saddle, which he piled on the others to windward of the fire one of the trappers was kindling. Fire-making is a simple process with the mountaineers. Their bullet-pouches always contain a flint and steel, and sundry pieces of "punk" [16] or tinder; and pulling a handful of dry grass, which they screw into a nest, they place the lighted punk in this, and, closing the grass over it, wave it in the air, when it soon ignites, and readily kindles the dry sticks forming the foundation of the fire.

The tit-bits of the deer the stranger had brought in were soon roasting over the fire; whilst, as soon as the burning logs had deposited a sufficiency of ashes, a hole was raked in them, and the head of [Pg 57] the deer, skin, hair, and all, placed in this primitive oven, and carefully covered with the hot ashes.

A "heap" of "fat meat" in perspective, our mountaineers enjoyed their ante-prandial pipes, recounting the news of the respective regions whence they came; and so well did they like each other's company, so sweet was the "honey-dew" tobacco of which the strange hunter had good store, so plentiful the game about the creek, and so abundant the pasture for their winter-starved animals, that before the carcass of the "two-year" buck had been more than four-fifths consumed; and, although rib after rib had been picked and chucked over their shoulders to the wolves, and one fore leg and the "bit" of all, the head, were still cooked before them,—the three had come to the resolution to join company, and hunt in their present locality for a few days at least—the owner of the "two-shoot" gun volunteering to fill their horns with powder, and find tobacco for their pipes.

Here, on plenty of meat, of venison, bear, and antelope, they merrily luxuriated; returning after their daily hunts to the brightly burning camp-fire, where one always remained to guard the animals, and unloading their packs of meat, (all choicest portions), ate late into the night, and, smoking, wiled away the time in narrating scenes in their hard-spent lives, and fighting their battles o'er again.

The younger of the trappers, he who has figured under the name of La Bonté, had excited, by scraps [Pg 58] and patches from his history, no little curiosity in the stranger's mind to learn the ups and downs of his career; and one night, when they assembled earlier than usual at the fire, he prevailed upon the modest trapper to "unpack" some passages in his wild adventurous life.

"Maybe," commenced the mountaineer, "you both remember when old Ashley went out with the

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

biggest kind of band to trap the Columbia, and head-waters of Missoura and Yellow Stone. Well, that was the time this niggur first felt like taking to the mountains.”

This brings us back to the year of our Lord 1825; and perhaps it will be as well, in order to render La Bonté's mountain language intelligible, to translate it at once into tolerable English, and to tell in the third person, but from his own lips, the scrapes which befell him in a sojourn of more than twenty years in the Far West, and the causes that impelled him to quit the comfort and civilisation of his home, to seek the perilous but engaging life of a trapper of the Rocky Mountains.

La Bonté was raised in the state of Mississippi, not far from Memphis, on the left bank of that huge and snag-filled river. His father was a Saint Louis Frenchman, his mother a native of Tennessee. When a boy, our trapper was “some,” he said, with the rifle, and always had a hankering for the west; particularly when, on accompanying his father to Saint Louis every spring, he saw the different [Pg 59]bands of traders and hunters start upon their annual expeditions to the mountains. Greatly did he envy the independent, insouciant trappers, as, in all the glory of beads and buckskin, they shouldered their rifles at Jake Hawkin's door (the rifle-maker of St Louis), and bade adieu to the cares and trammels of civilised life.

However, like a thoughtless beaver-kitten, he put his foot into a trap one fine day, set by Mary Brand, a neighbour's daughter, and esteemed “some punkins,” or in other words toasted as the beauty of Memphis County, by the susceptible Mississippians. From that moment he was “gone beaver;” “he felt queer,” he said, “all over, like a buffalo shot in the lights; he had no relish for mush and molasses; homminy and johnny cakes failed to excite his appetite. Deer and turkeys ran by him unscathed; he didn't know, he said, whether his rifle had hind-sights or not. He felt bad, that was a fact; but what ailed him he didn't know.”

Mary Brand—Mary Brand—Mary Brand! the old Dutch clock ticked it. Mary Brand! his head throbbed it when he lay down to sleep. Mary Brand! his rifle-lock spoke it plainly when he cocked it, to raise a shaking sight at a deer. Mary Brand, Mary Brand! the whip-poor-will sung it, instead of her own well-known note; the bull-frogs croaked it in the swamp, and mosquitoes droned it in his ear as he tossed about his bed at [Pg 60]night, wakeful, and striving to think what ailed him. Who could that strapping young fellow, who passed the door just now, be going to see? Mary Brand: Mary Brand. And who can Big Pete Herring be dressing that silver fox-skin so carefully for? For whom but Mary Brand? And who is it that jokes, and laughs, and dances, with all the “boys” but him; and why?

Who but Mary Brand: and because the love-sick booby carefully avoids her.

“And Mary Brand herself—what is she like?”

“She's ‘some’ now; that is a fact, and the biggest kind of punkin at that,” would have been the answer from any man, woman, or child in Memphis County, and truly spoken, too; always understanding that the pumpkin is the fruit by which the ne-plus-ultra of female perfection is expressed amongst the figuratively-speaking westerns.

Being an American woman, of course she was tall, and straight and slim as a hickory sapling, well formed withal, with rounded bust, and neck white and slender as the swan's. Her features were small, but finely chiselled; and in this, it may be remarked, the lower orders of the American women differ from, and far surpass the same class in England, or elsewhere, where the features, although far prettier, are more vulgar and commonplace. Mary Brand had the bright blue [Pg 61] eye, thin nose, and small but sweetly-formed mouth, the too fair complexion and dark brown

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

hair, which characterise the beauty of the Anglo-American, the heavy masses (hardly curls), that fell over her face and neck, contrasting with their polished whiteness. Such was Mary Brand: and when to her good looks are added a sweet disposition, and all the best qualities of a thrifty housewife, it must be allowed that she fully justified the eulogiums of the good people of Memphis. Well, to cut a love-story short, in doing which not a little moral courage is shown, young La Bonté fell desperately in love with the pretty Mary, and she with him; and small blame to her, for he was a proper lad of twenty—six feet in his moccasins—the best hunter and rifle-shot in the country, with many other advantages too numerous to mention. But when did the course, &c. éer run smooth? When the affair had become a recognised “courting” (and Americans alone know the horrors of such prolonged purgatory), they became, to use La Bonté’s words, “awful fond,” and consequently about once a-week had their tiffs and makes-up.

However, on one occasion, at a “husking,” and during one of these tiffs, Mary, every inch a woman, to gratify some indescribable feeling, brought to her aid jealousy—that old serpent who has caused such mischief in this world; and by a flirtation over the corn-cobs with Big Pete, La Bonté’s former and only rival, struck so hard a blow at the [Pg 62]latter’s heart, that on the moment his brain caught fire, blood danced before his eyes, and he became like one possessed. Pete observed and enjoyed his struggling emotion—better for him had he minded his corn-shelling alone;—and the more to annoy his rival, paid the most sedulous attention to pretty Mary.

Young La Bonté stood it as long as human nature, at boiling heat, could endure; but when Pete, in the exultation of his apparent triumph, crowned his success by encircling the slender waist of the girl with his arm, and snatching a sudden kiss, he jumped upright from his seat, and seizing a small whisky-keg which stood in the centre of the corn-shellers, he hurled it at his rival, and crying to him, hoarse with passion, “to follow if he was a man,” he left the house.

At that time, and even now, in the remoter states of the western country, rifles settled even the most trivial differences between the hot-blooded youths; and of such frequent occurrence and invariably bloody termination did these encounters become, that they scarcely produced sufficient excitement to draw together half-a-dozen spectators.

In the present case, however, so public was the quarrel, and so well known the parties concerned, that not only the people who had witnessed the affair, but all the neighbourhood, thronged to the scene of action, in a large field in front of the house, where the preliminaries of a duel between [Pg 63]Pete and La Bonté were being arranged by their respective friends.

Mary, when she discovered the mischief her thoughtlessness was likely to occasion, was almost beside herself with grief, but she knew how vain it would be to attempt to interfere. The poor girl, who was most ardently attached to La Bonté, was carried, swooning, into the house, where all the women congregated, and were locked in by old Brand, who, himself an old pioneer, thought but little of bloodshed, but refused to let the “women folk” witness the affray.

Preliminaries arranged, the combatants took up their respective positions at either end of a space marked for the purpose, at forty paces from each other. They were both armed with heavy rifles, and had the usual hunting-pouches, containing ammunition, hanging over the shoulder. Standing with the butts of their rifles on the ground, they confronted each other, and the crowd drawing away a few paces only on each side, left one man to give the word. This was the single word “fire;” and, after this signal was given, the combatants were at liberty to fire away until one or the other dropped.

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

At the word, both the men quickly raised their rifles to the shoulder, and, whilst the sharp cracks instantaneously rang, they were seen to flinch, as either felt the pinging sensation of a bullet entering his flesh. Regarding each other steadily for a few [Pg 64]moments, the blood running down La Bonté's neck from a wound under the left jaw, whilst his opponent was seen to place his hand once to his right breast, as if to feel the position of his wound, they commenced reloading their rifles. But, as Pete was in the act of forcing down the ball with his long hickory wiping-stick, he suddenly dropped his right arm—the rifle slipped from his grasp—and, reeling for a moment like a drunken man—he fell dead to the ground.

Even here, however, there was law of some kind or another, and the consequences of the duel were, that the constables were soon on the trail of La Bonté to arrest him. He easily avoided them, and taking to the woods, lived for several days in as wild a state as the beasts he hunted and killed for his support.

Tired of this, he at last resolved to quit the country, and betake himself to the mountains, for which life he had ever felt an inclination.

When, therefore, he thought the officers of justice had grown slack in their search of him, and that the coast was comparatively clear, he determined to start on his distant expedition to the Far West.

Once more, before he carried his project into execution, he sought and obtained a last interview with Mary Brand.

“Mary,” said he, “I’m about to break. They’re hunting me like a fall buck, and I’m bound to quit. [Pg 65]Don’t think any more about me, for I shall never come back.”

Poor Mary burst into tears, and bent her head on the table near which she sat. When she again raised it, she saw La Bonté, his long rifle upon his shoulder, striding with rapid steps from the house. Year after year rolled on, and he did not return.

---

[Pg 66]

## CHAPTER III.

A few days after his departure, La Bonté found himself at St Louis, the emporium of the fur trade, and the fast-rising metropolis of the precocious settlements of the west. Here, a prey to the agony of mind which jealousy, remorse, and blighted love mix into a very puchero of misery, he got into the company of certain “rowdies,” a class that every western city particularly abounds in; and, anxious to drown his sorrows in any way, and quite unscrupulous as to the means, he plunged into all the vicious excitements of drinking, gambling, and fighting, which form the every-day amusements of the rising generation of St Louis.

Perhaps in no other part of the United States, where indeed humanity is frequently to be seen in many curious and unusual phases, is there a population so marked in its general character, and at the same time divided into such distinct classes, as in the above-named city. Dating, as it does, its foundation from yesterday—for what are thirty years in the growth of a metropolis?—its founders are now scarcely passed middle life, regarding with astonishment the growing works of their hands; [Pg 67]and whilst gazing upon its busy quays, piled with grain and other produce of the west, its fleets of huge steamboats lying tier upon tier alongside the wharves, its well-stored warehouses, and all the bustling concomitants of a great commercial depôt, they can scarcely realise the memory of a few short years, when on the same spot nothing was to be seen but the miserable

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

hovels of a French village—the only sign of commerce being the unwieldy bateaux of the Indian traders, laden with peltries from the distant regions of the Platte and Upper Missouri. Where now intelligent and wealthy merchants walk erect, in conscious substantiality of purse and credit, and direct the commerce of a vast and well-peopled region, there stalked but the other day, in dress of buckskin, the Indian trader of the west; and all the evidences of life, mayhap, consisted of the eccentric vagaries of the different bands of trappers and hardy mountaineers, who accompanied, some for pleasure and some as escort, the periodically arriving bateaux, laden with the beaver skins and buffalo robes collected during the season at the different trading posts in the Far West. These, nevertheless, were the men whose hardy enterprise opened to commerce and the plough the vast and fertile regions of the West. Rough and savage though they were, they were the true pioneers of that extraordinary tide of civilisation which has poured its resistless current through tracts large [Pg 68]enough for kings to govern, over a country now teeming with cultivation, where, a few short years ago, countless herds of buffalo roamed unmolested, where the bear and deer abounded, and the savage Indian skulked through the woods and prairies, lord of the unappreciated soil that now yields its prolific treasures to the spade and plough of civilised man. To the wild and half-savage trapper, who may be said to exemplify the energy, enterprise, and hardihood characteristic of the American people, divested of all the false and vicious glare with which a high state of civilisation, too rapidly attained, has obscured their real and genuine character, in which the above traits are eminently prominent—to these men alone is due the empire of the West—destined in a few short years to become the most important of those confederate states composing the mighty union of North America.

Sprung, then, out of the wild and adventurous fur trade, St Louis, still the emporium of that species of commerce, preserves even now, in the character of its population, many of the marked peculiarities distinguishing its early founders, who were identified with the primitive Indian in hardihood and instinctive wisdom. Whilst the French portion of the population retain the thoughtless levity and frivolous disposition of their original source, the Americans of St Louis, who may lay claim to be native, as it were, are as strongly distinguished for determination and energy of character as they are for physical [Pg 69]strength and animal courage; and are remarkable, at the same time, for a singular aptitude in carrying out commercial enterprises to successful terminations, apparently incompatible with the thirst of adventure and excitement which forms so prominent a feature in their character. In St Louis and with her merchants have originated many commercial enterprises of gigantic speculation, not confined to the immediate locality or to the distant Indian fur trade, but embracing all parts of the continent, and even a portion of the Old World. And here it must be remembered that St Louis is situated inland, at a distance of upwards of one thousand miles from the sea, and three thousand from the capital of the United States. Besides her merchants and upper class, who form a little aristocracy even here, a large portion of her population, still connected with the Indian and fur trade, preserve all their original characteristics, unacted upon by the influence of advancing civilisation. There is, moreover, a large floating population of foreigners of all nations, who must possess no little amount of enterprise to be tempted to this spot, whence they spread over the remote western tracts, still infested by the savage; so that, if any of their blood is infused into the native population, the characteristic energy and enterprise is increased, and not tempered down by the foreign cross.

But perhaps the most singular of the casual population are the mountaineers, who, after several

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

seasons [Pg 70] spent in trapping, and with good store of dollars, arrive from the scene of their adventures, wild as savages, determined to enjoy themselves, for a time, in all the gaiety and dissipation of the western city. In one of the back streets of the town is a tavern well known as the "Rocky-Mountain House," and hither the trappers resort, drinking and fighting as long as their money lasts, which, as they are generous and lavish as Jack Tars, is for a few days only. Such scenes, both tragic and comic, as are enacted in the Rocky-Mountain House, are beyond the powers of pen to describe; and when a fandango is in progress, to which congregate the coquettish belles from "Vide Poche," as the French portion of the suburb is nicknamed,—the grotesque endeavours of the bear-like mountaineers to sport a figure on the light fantastic toe, and their insertions into the dance of the mystic jumps of Terpsichorean Indians when engaged in the "medicine" dances in honour of bear, of buffalo, or ravished scalp,—are such startling innovations on the choreographic art as would make the shade of Gallini quake and gibber in his pumps. Passing the open doors and windows of the Mountain House, the stranger stops short as the sounds of violin and banjo twang upon his ears, accompanied by extraordinary noises—sounding unearthly to the greenhorn listener, but recognised by the initiated as an Indian song roared out of the stentorian lungs of a mountaineer, who patting his stomach with [Pg 71] open hands, to improve the necessary shake, choruses the well-known Indian chant:—

Hi—Hi—Hi—Hi,

Hi-i—Hi-i—Hi-i—Hi-i

Hi-ya—hi-ya—hi-ya—hi-ya

Hi-ya—hi-ya—hi-ya—hi-ya

Hi-ya—hi-ya—hi—hi,

&c. &c. &c.

and polishes off the high notes with a whoop which makes the old wooden houses shake again, as it rattles and echoes down the street.

Here, over fiery "monaghahela," Jean Batiste, the sallow half-breed voyageur from the north—and who, deserting the service of the "North West" (the Hudson's Bay Company), has come down the Mississippi, from the "Falls," to try the sweets and liberty of "free" trapping—hobnobs with a stalwart leather-clad "boy," just returned from trapping on the waters of Grand River, on the western side the mountains, who interlards his mountain jargon with Spanish words picked up in Taos and California. In one corner a trapper, lean and gaunt from the starving regions of the Yellow Stone, has just recognised an old companyero, with whom he hunted years before in the perilous country of the Blackfeet.

"Why, John, old hos, how do you come on?"

"What! Meek, old 'coon! I thought you were under?"

One from Arkansa stalks into the centre of the [Pg 72] room, with a pack of cards in his hand, and a handful of dollars in his hat. Squatting cross-legged on a buffalo robe, he smacks down the money, and cries out—"Ho, boys, hyar's a deck, and hyar's the beaver (rattling the coin), who dar set his hos? Wagh!"

Tough are the yarns of wondrous hunts and Indian perils, of hairbreadth 'scapes and curious "fixes." Transcendant are the qualities of sundry rifles, which call these hunters masters; "plum" is the "centre" each vaunted barrel shoots; sufficing for a hundred wigs is the "hair" each hunter has "lifted" from Indians' scalps; multitudinous the "coups" he has "struck." As they drink so do they

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

brag, first of their guns, their horses, and their squaws, and lastly of themselves:—and when it comes to that, “ware steel.”

La Bonté, on his arrival at St Louis, found himself one day in no less a place than this; and here he made acquaintance with an old trapper about to start for the mountains in a few days, to hunt on the head waters of Platte and Green River. With this man he resolved to start, and, having still some hundred dollars in cash, he immediately set about equipping himself for the expedition. To effect this, he first of all visited the gun-store of Hawken, whose rifles are renowned in the mountains, and exchanged his own piece, which was of very small bore, for a regular mountain rifle. This was of very heavy metal, carrying about thirty-two balls [Pg 73] to the pound, stocked to the muzzle, and mounted with brass, its only ornament being a buffalo bull, looking exceedingly ferocious, which was not very artistically engraved upon the trap in the stock. Here, too, he laid in a few pounds of powder and lead, and all the necessaries for a long hunt.

His next visit was to a smith's store, which smith was black by trade and black by nature, for he was a nigger, and, moreover, celebrated as being the best maker of beaver-traps in St Louis, and of him he purchased six new traps, paying for the same twenty dollars—procuring, at the same time, an old trap-sack, made of stout buffalo skin, in which to carry them.

We next find La Bonté and his companion—one Luke, better known as Grey-Eye, one of his eyes having been “gouged” in a mountain fray—at Independence, a little town situated on the Missouri, several hundred miles above St Louis, and within a short distance of the Indian frontier. Independence may be termed the “prairie port” of the western country. Here the caravans destined for Santa Fé, and the interior of Mexico, assemble to complete their necessary equipment. Mules and oxen are purchased, teamsters hired, and all stores and outfit laid in here for the long journey over the wide expanse of prairie ocean. Here, too, the Indian traders and the Rocky-Mountain trappers rendezvous, collecting in sufficient force to ensure their safe passage through the [Pg 74] Indian country. At the seasons of departure and arrival of these bands, the little town presents a lively scene of bustle and confusion. The wild and dissipated mountaineers get rid of their last dollars in furious orgies, treating all comers to galore of drink, and pledging each other, in horns of potent whisky, to successful hunts and “heaps of beaver.” When every cent has disappeared from their pouches, the free trapper often makes away with rifle, traps, and animals, to gratify his “dry” (for your mountaineer is never “thirsty”); and then, “hos and beaver” gone, is necessitated to hire himself to one of the leaders of big bands, and hypothecate his services for an equipment of traps and animals. Thus La Bonté picked up three excellent mules for a mere song, with their accompanying pack-saddles, apishamores, [17] and lariats, and the next day, with Luke, “put out” for Platte.

As they passed through the rendezvous, which was encamped on a little stream beyond the town, even our young Mississippian was struck with the novelty of the scene. Upwards of forty huge waggons, of Conostoga and Pittsburg build, and covered with snow-white tilts, were ranged in a semicircle, or rather a horse-shoe form, on the flat open prairie, their long “tongues” (poles) pointing outwards; with the necessary harness for four [Pg 75] pairs of mules, or eight yoke of oxen, lying on the ground beside them, spread in ready order for “hitching up.” Round the waggons groups of teamsters, tall stalwart young Missourians, were engaged in busy preparation for the start, greasing the wheels, fitting or repairing harness, smoothing ox-bows, or overhauling their own moderate kits or “possibles.” They were all dressed in the same fashion: a pair of

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

“homespun” pantaloons, tucked into thick boots reaching nearly to the knee, and confined round the waist by a broad leathern belt, which supported a strong butcher-knife in a sheath. A coarse checked shirt was their only other covering, with a fur cap on the head.

Numerous camp-fires surrounded the waggons, and near them lounged wild-looking mountaineers, easily distinguished from the “greenhorn” teamsters by their dresses of buckskin, and their weather-beaten faces. Without an exception, these were under the influence of the rosy god; and one, who sat, the picture of misery, at a fire by himself—staring into the blaze with vacant countenance, his long matted hair hanging in unkempt masses over his face, begrimed with the dirt of a week, and pallid with the effects of ardent drink—was suffering from the usual consequences of having “kept it up” beyond the usual point, paying the penalty in a fit of “horrors”—as delirium tremens is most aptly termed by sailors and the unprofessional.

[Pg 76]

In another part, the merchants of the caravan and the Indian traders superintended the lading of the waggons, or mule packs. They were dressed in civilised attire, and some were even bedizened in St Louis or Eastern City dandyism, to the infinite disgust of the mountain men, who look upon a bourge-way (bourgeois) with most undisguised contempt, despising the very simplest forms of civilisation. The picturesque appearance of the encampment was not a little heightened by the addition of several Indians from the neighbouring Shawnee settlement, who, mounted on their small active horses, on which they reclined, rather than sat, in negligent attitudes, quietly looked on at the novel scene, indifferent to the “chaff” in which the thoughtless teamsters indulged at their expense. Numbers of mules and horses were picketed at hand, whilst a large herd of noble oxen were being driven towards the camp—the wo-ha of the teamsters sounding far and near, as they collected the scattered beasts in order to yoke up.

As most of the mountain men were utterly unable to move from camp, Luke and La Bonté, with three or four of the most sober, started in company, intending to wait on “Blue,” a stream which runs into the Caw or Kansas River, until the “balance” of the band came up. Mounting their mules, and leading the loose animals, they struck at once into the park-like prairie, and were speedily out of sight of civilisation.

[Pg 77]

It was the latter end of May, towards the close of the season of heavy rains, which in early spring render the climate of this country almost intolerable, at the same time that they fertilise and thaw the soil, so long bound up by the winter’s frosts. The grass was every where luxuriantly green, and gaudy flowers dotted the surface of the prairie. This term, however, should hardly be applied to the beautiful undulating scenery of this park-like country. Unlike the flat monotony of the Grand Plains, here well wooded uplands, clothed with forest trees of every species, and picturesque dells, through which run clear bubbling streams belted with gay-blossomed shrubs, every where present themselves; whilst on the level meadow-land, topes of trees with spreading foliage afford a shelter to the game and cattle, and well-timbered knolls rise at intervals from the plain.

Many clear streams dashing over their pebbly beds intersect the country, from which, in the noon-day’s heat, the red-deer jump, shaking their wet sides, as the noise of approaching man disturbs them; and booming grouse rise from the tall luxuriant herbage at every step. Where the deep escarpments of the river banks exhibit the section of the earth, a rich alluvial soil of surpassing depth courts the cultivation of civilised man; and in every feature it is evident that here nature

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

has worked with kindest and most bountiful hand.

For hundreds of miles along the western or right [Pg 78]bank of the Missouri does a country extend, with which, for fertility and natural resources, no part of Europe can stand comparison. Sufficiently large to contain an enormous population, it has, besides, every advantage of position, and all the natural capabilities which should make it the happy abode of civilised man. Through this unpeopled country the United States pours her greedy thousands, to seize upon the barren territories of her feeble neighbour.

Camping the first night on "Black Jack," our mountaineers here cut each man a spare hickory wip-  
ing-stick for his rifle; and La Bonté, who was the only greenhorn of the party, witnessed a savage ebullition of rage on the part of one of his companions, exhibiting the perfect unrestraint which these men impose upon their passions, and the barbarous anger which the slightest opposition to their will excites. One of the trappers, on arriving at the camping-place, dismounted from his horse, and, after divesting it of the saddle, endeavoured to lead his mule by the rope up to the spot where he wished to deposit his pack. Mule-like, however, the more he pulled the more stubbornly she remained in her tracks, planting her fore-legs firmly, and stretching out her neck with provoking obstinacy. Truth to tell, it does require the temper of a thousand Jobs to manage a mule; and in no case does the wilful mulishness of the animal stir up one's choler more than in the very [Pg 79]trick this one played, and which is a daily occurrence. After tugging ineffectually for several minutes, winding the rope round his body, and throwing himself suddenly forward with all his strength, the trapper actually foamed with passion; and although he might have subdued the animal at once by fastening the rope with a half-hitch round its nose, this, with an obstinacy equal to that of the mule itself, he refused to attempt, preferring to vanquish her by main strength. Failing so to do, the mountaineer, with a volley of blasphemous imprecations, suddenly seized his rifle, and levelling it at the mule's head, shot her dead.

Passing the Wa-ka-rasha, a well-timbered stream, they met a band of Osages going "to buffalo." These Indians, in common with some tribes of the Pawnees, shave the head, with the exception of a ridge from the forehead to the centre of the scalp, which is "roached" or hogged like the mane of a mule, and stands erect, plastered with unguents, and ornamented with feathers of the hawk and turkey. The naked scalp is often painted in mosaic with black and red, the face with shining vermilion. This band were all naked to the breech-clout, the warmth of the sun having made them throw their dirty blankets from their shoulders. These Indians not unfrequently levy contributions on the strangers they accidentally meet; but they easily distinguish the determined mountaineer [Pg 80]from the incautious greenhorn, and think it better to let the former alone.

Crossing Vermilion, the trappers arrived on the fifth day at "Blue," where they encamped in the broad timber belting the creek, and there awaited the arrival of the remainder of the party.

It was two days before they came up; but the following day they started for the mountains, fourteen in number, striking a trail which follows the "Big Blue" in its course through the prairies, which, as they advanced to the westward, gradually smoothed away into a vast unbroken expanse of rolling plain. Herds of antelope began to show themselves, and some of the hunters, leaving the trail, soon returned with plenty of their tender meat. The luxuriant but coarse grass they had hitherto seen now changed into the nutritious and curly buffalo grass, and their animals soon improved in appearance on the excellent pasture. In a few days, without any adventure, they struck the Platte River, its shallow waters (from which it derives its name) spreading over a wide and

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

sandy bed, numerous sand bars obstructing the sluggish current, nowhere sufficiently deep to wet the forder's knee.

By this time, but few antelope having been seen, the party ran entirely out of meat; and, one whole day and part of another having passed without so much as a stray rabbit presenting itself, not a few [Pg 81]objurgations on the buffalo grumbled from the lips of the hunters, who expected ere this to have reached the land of plenty. La Bonté killed a fine deer, however, in the river bottom, after they had encamped, not one particle of which remained after supper that night, but which hardly took the rough edge off their keen appetites. Although already in the buffalo range, no traces of these animals had yet been seen; and as the country afforded but little game, and the party did not care to halt and lose time in hunting for it, they moved along hungry and sulky, the theme of conversation being the well remembered merits of good buffalo meat,—of “fat fleece,” “hump rib,” and “tender loin;” of delicious “boudins,” and marrow bones too good to think of. La Bonté had never seen the lordly animal, and consequently but half believed the accounts of the mountaineers, who described their countless bands as covering the prairie far as the eye could reach, and requiring days of travel to pass through; but the visions of such dainty and abundant feeding as they descanted on set his mouth watering, and danced before his eyes as he slept supperless, night after night, on the banks of the hungry Platte.

One morning he had packed his animals before the rest, and was riding a mile in advance of the party, when he saw on one side the trail, looming in the refracted glare which mirages the plains, three large dark objects without shape or form, which rose and fell in the exaggerated light like [Pg 82]ships at sea. Doubting what it could be, he approached the strange objects; and as the refraction disappeared before him, the dark masses assumed a more distinct form, and clearly moved with life. A little nearer, and he made them out—they were buffalo. Thinking to distinguish himself, the greenhorn dismounted from his mule, and quickly hobbled her, throwing his lasso on the ground to trail behind when he wished to catch her. Then, rifle in hand, he approached the huge animals, and, being a good hunter, knew well to take advantage of the inequalities of the ground and face the wind; by which means he crawled at length to within forty yards of the buffalo, which quietly cropped the grass, unconscious of danger. Now, for the first time, he gazed upon the noble beast he had so often heard of, and longed to see. With coal-black beard sweeping the ground as he fed, an enormous bull was in advance of the others, his wild brilliant eyes peering from an immense mass of shaggy hair, which covered his neck and shoulder. From this point his skin was smooth as one's hand, a sleek and shining dun, and his ribs were well covered with shaking flesh. Whilst leisurely cropping the short curly grass he occasionally lifted his tail into the air, and stamped his foot as a fly or mosquito annoyed him—flapping the intruder with his tail, or snatching at the itching part with his ponderous head.

When La Bonté had sufficiently admired the buffalo, he lifted his rifle, and, taking steady aim, [Pg 83]and certain of his mark, pulled the trigger, expecting to see the huge beast fall over at the report. What was his surprise and consternation, however, to see the animal only flinch when the ball struck him, and then gallop off, followed by the others, apparently unhurt. As is generally the case with greenhorns, he had fired too high, ignorant that the only certain spot to strike a buffalo is but a few inches above the brisket, and that a higher shot is rarely fatal. When he rose from the ground, he saw all the party halting in full view of his discomfiture; and when he joined them, loud were the laughs, and deep the regrets of the hungry at his first attempt.

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

However, they now knew that they were in the country of meat; and a few miles farther, another band of stragglers presenting themselves, three of the hunters went in pursuit, La Bonté taking a mule to pack in the meat. He soon saw them crawling towards the band, and shortly two puffs of smoke, and the sharp cracks of their rifles, showed that they had got within shot; and when he rode up, two fine buffaloes were stretched upon the ground. Now, for the first time, he was initiated in the mysteries of “butchering.” He watched the hunters as they turned the carcass on the belly, stretching out the legs to support it on each side. A transverse cut was then made at the nape of the neck, and, gathering the long hair of the boss in one hand, the skin was separated from the shoulder. It was then laid [Pg 84] open from this point to the tail, along the spine, and then, freed from the sides and pulled down to the brisket, but still attached to it, was stretched upon the ground to receive the dissected portions. Then the shoulder was severed, the fleece removed from along the backbone, and the hump-ribs cut off with a tomahawk. All this was placed upon the skin; and after the “boudins” had been withdrawn from the stomach, and the tongue—a great dainty—taken from the head, the meat was packed upon the mule, and the whole party hurried to camp rejoicing.

There was merry-making in the camp that night, and the way they indulged their appetites—or, in their own language, “throw’d” the meat “cold”—would have made the heart of a dyspeptic leap for joy or burst with envy. Far into the “still watches of the tranquil night” the fat-clad “depouille” saw its fleshy mass grow small by degrees and beautifully less, before the trenchant blades of the hungry mountaineers; appetising yards of well-browned “boudin” slipped glibly down their throats; rib after rib of tender hump was picked and flung to the wolves; and when human nature, with helpless gratitude, and confident that nothing of superexcellent comestibility remained, was lazily wiping the greasy knife that had done such good service,—a skilful hunter was seen to chuckle to himself as he raked the deep ashes of the fire, and drew therefrom a pair of tongues so admirably baked, so soft, so sweet, and of such exquisite flavour, that a veil is [Pg 85] considerably drawn over the effects their discussion produced in the mind of our greenhorn La Bonté, and the raptures they excited in the bosom of that, as yet, most ignorant mountaineer. Still, as he ate he wondered, and wondering admired, that nature, in giving him such profound gastronomic powers, and such transcendent capabilities of digestion, had yet bountifully provided an edible so peculiarly adapted to his ostrich-like appetite, that after consuming nearly his own weight in rich and fat buffalo meat, he felt as easy and as little incommoded as if he had lightly supped on strawberries and cream.

Sweet was the digestive pipe after such a feast; soft was the sleep and deep, which sealed the eyes of the contented trappers that night. It felt like the old thing, they said, to be once more amongst the “meat;” and, as they were drawing near the dangerous portion of the trail, they felt at home; although they now could never be confident, when they lay down at night upon their buffalo robes, of awaking again in this life, knowing, as they did, full well, that savage men lurked near, thirsting for their blood.

However, no enemies showed themselves as yet, and they proceeded quietly up the river, vast herds of buffaloes darkening the plains around them, affording them more than abundance of the choicest meat; but, to their credit be it spoken, no more was killed than was absolutely required,—unlike the cruel slaughter made by most of the white travellers across [Pg 86] the plains, who wantonly destroy these noble animals, not even for the excitement of sport, but in cold-blooded

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

and insane butchery. La Bonté had practice enough to perfect him in the art, and, before the buffalo range was passed, he was ranked as a first-rate hunter. One evening he had left the camp for meat, and was approaching a band of cows for that purpose, crawling towards them along the bed of a dry hollow in the prairie, when he observed them suddenly jump towards him, and immediately afterwards a score of mounted Indians appeared, whom, by their dress, he at once knew to be Pawnees and enemies. Thinking they might not discover him, he crouched down in the ravine; but a noise behind caused him to turn his head, and he saw some five or six advancing up the bed of the dry creek, whilst several more were riding on the bluffs. The cunning savages had cut off his retreat to his mule, which he saw in the possession of one of them. His presence of mind, however, did not desert him; and seeing at once that to remain where he was would be like being caught in a trap (as the Indians could advance to the edge of the bluff and shoot him from above), he made for the open prairie, determined at least to sell his scalp dearly, and make "a good fight." With a yell the Indians charged, but halted when they saw the sturdy trapper deliberately kneel, and, resting his rifle on the wiping-stick, take a steady aim as they advanced. Full well the Pawnees know, to their cost, that a [Pg 87] mountaineer seldom pulls his trigger without sending a bullet to the mark; and, certain that one at least must fall, they hesitated to make the onslaught. Steadily the white retreated with his face to the foe, bringing the rifle to his shoulder the instant that one advanced within shot, the Indians galloping round, firing the few guns they had amongst them at long distances, but without effect. One young "brave," more daring than the rest, rode out of the crowd, and dashed at the hunter, throwing himself, as he passed within a few yards, from the saddle, and hanging over the opposite side of his horse, thus presenting no other mark than his left foot. As he crossed La Bonté, he discharged his bow from under his horse's neck, and with such good aim, that the arrow, whizzing through the air, struck the stock of the hunter's rifle, which was at his shoulder, and, glancing off, pierced his arm, inflicting, luckily, but a slight wound. Again the Indian turned in his course, the others encouraging him with loud war-whoops, and, once more passing at still less distance, he drew his arrow to the head. This time, however, the eagle eye of the white detected the action, and suddenly rising from his knee as the Indian approached (hanging by his foot alone over the opposite side of the horse), he jumped towards the animal with outstretched arms and a loud yell, causing it to start suddenly, and swerve from its course. The Indian lost his foot-hold, and, after a fruitless struggle to regain his position, fell to the [Pg 88]ground; but instantly rose upon his feet and gallantly confronted the mountaineer, striking his hand upon his brawny chest and shouting a loud whoop of defiance. In another instant the rifle of La Bonté had poured forth its contents; and the brave savage, springing into the air, fell dead to the ground, just as the other trappers, who had heard the firing, galloped up to the spot. At sight of them the Pawnees, with yells of disappointed vengeance, hastily retreated.

That night La Bonté first lifted hair!

A few days later the mountaineers reached the point where the Platte divides into two great forks: the northern one, stretching to the north-west, skirts the eastern base of the Black Hills, and sweeping round to the south rises in the vicinity of the mountain valley called the New Park, receiving the Laramie, Medicine Bow, and Sweet-Water creeks. The other, or "South Fork," strikes towards the mountains in a south-westerly direction, hugging the base of the main chain of the Rocky Mountains; and, fed by several small creeks, rises in the uplands of the Bayou Salade, near which is also the source of the Arkansa. To the forks of the Platte the valley of that river extends

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

from three to five miles on each side, enclosed by steep sandy bluffs, from the summits of which the prairies stretch away in broad undulating expanse to the north and south. The “bottom,” as it is termed, is but thinly covered with timber, the cotton-woods [Pg 89]being scattered only here and there; but some of the islands in the broad bed of the stream are well wooded, leading to the inference that the trees on the banks have been felled by Indians who formerly frequented the neighbourhood of this river as a chosen hunting-ground. As, during the long winters, the pasture in the vicinity is scarce and withered, the Indians feed their horses on the bark of the sweet cotton-wood, upon which they subsist, and even fatten. Thus, wherever a village has encamped, the trunks of these trees strew the ground, their upper limbs and smaller branches peeled of their bark, and looking as white and smooth as if scraped with a knife.

On the forks, however, the timber is heavier and of greater variety, some of the creeks being well wooded with ash and cherry, which break the monotony of the everlasting cotton-wood.

Dense masses of buffalo still continued to darken the plains, and numerous bands of wolves hovered round the outskirts of the vast herds, singling out the sick and wounded animals, and preying upon such calves as the rifles and arrows of the hunters had bereaved of their mothers. The white wolf is the invariable attendant upon the buffalo; and when one of these persevering animals is seen, it is certain sign that buffalo are not far distant. Besides the buffalo wolf, there are four distinct varieties common to the plains, and all more or less attendant upon the buffalo. These are, the black, the [Pg 90]gray, the brown, and last and least the coyote, or cayeute of the mountaineers, the “wach-unka-mănet,” or “medicine wolf” of the Indians, who hold the latter animal in reverential awe. This little wolf, whose fur is of great thickness and beauty, is of diminutive size, but wonderfully sagacious, making up by cunning what it wants in physical strength. In bands of from three to thirty they not unfrequently station themselves along the “runs” of the deer and the antelope, extending their line for many miles—and the quarry being started, each wolf follows in pursuit until tired, when it relinquishes the chase to another relay, following slowly after until the animal is fairly run down, when all hurry to the spot and speedily consume the carcass. The cayeute, however, is often made a tool of by his larger brethren, unless, indeed, he acts from motives of spontaneous charity. When a hunter has slaughtered game, and is in the act of butchering it, these little wolves sit patiently at a short distance from the scene of operations, while at a more respectful one the larger wolves (the white or gray) lope hungrily around, licking their chops in hungry expectation. Not unfrequently the hunter throws a piece of meat towards the smaller one, who seizes it immediately, and runs off with the morsel in his mouth. Before he gets many yards with his prize, the large wolf pounces with a growl upon him, and the cayeute, dropping the meat, returns to his former position, and will [Pg 91]continue his charitable act as long as the hunter pleases to supply him.

Wolves are so common on the plains and in the mountains, that the hunter never cares to throw away a charge of ammunition upon them, although the ravenous animals are a constant source of annoyance to him, creeping to the camp-fire at night, and gnawing his saddles and apishamores, eating the skin ropes which secure the horses and mules to their pickets, and even their very hobbles, and not unfrequently killing or entirely disabling the animals themselves.

Round the camp, during the night, the cayeute keeps unremitting watch, and the traveller not unfrequently starts from his bed with affright, as the mournful and unearthly chiding of the wolf breaks suddenly upon his ear: the long-drawn howl being taken up by others of the band, until it

dies away in the distance, or some straggler passing within hearing answers to the note, and howls as he lopes away.

Our party crossed the south fork about ten miles from its juncture with the main stream, and then, passing the prairie, struck the north fork a day's travel from the other. At the mouth of an ash-timbered creek they came upon Indian "sign," and, as now they were in the vicinity of the treacherous Sioux, they moved along with additional caution, Frapp and Gonneville, two experienced mountaineers, always heading the advance.

[Pg 92]

About noon they had crossed over to the left bank of the fork, intending to camp on a large creek where some fresh beaver "sign" had attracted the attention of some of the trappers; and as, on further examination, it appeared that two or three lodges of that animal were not far distant, it was determined to remain here a day or two, and set their traps.

Gonneville, old Luke, and La Bonté, had started up the creek, and were carefully examining the banks for "sign," when the former, who was in front, suddenly paused, and looking intently up the stream, held up his hand to his companions to signal them to stop.

Luke and La Bonté both followed the direction of the trapper's intent and fixed gaze. The former uttered in a suppressed tone the expressive exclamation, Wagh!—the latter saw nothing but a wood-duck swimming swiftly down the stream, followed by her downy progeny.

Gonneville turned his head, and extending his arm twice with a forward motion up the creek, whispered—"Les sauvages."

"Injuns, sure, and Sioux at that," answered Luke.

Still La Bonté looked, but nothing met his view but the duck with her brood, now rapidly approaching; and as he gazed, the bird suddenly took wing, and, flapping on the water, flew a short distance down the stream and once more settled on it.

[Pg 93]

"Injuns?" he asked; "where are they?"

"Whar?" repeated old Luke, striking the flint of his rifle, and opening the pan to examine the priming. "What brings a duck a-streakin it down stream, if humans aint behint her? and who's thar in these diggins but Injuns, and the worst kind? and we'd better push to camp, I'm thinking, if we mean to save our hair."

"Sign" sufficient, indeed, it was to all the trappers, who, on being apprised of it, instantly drove in their animals, and picketed them; and hardly had they done so when a band of Indians made their appearance on the banks of the creek, from whence they galloped to the bluff which overlooked the camp at the distance of about six hundred yards; and crowning this, in number some forty or more, commenced brandishing their spears and guns, and whooping loud yells of defiance. The trappers had formed a little breast-work of their packs, forming a semicircle, the chord of which was made by the animals standing in a line, side by side, closely picketed and hobbled. Behind this defence stood the mountaineers, rifle in hand, and silent and determined. The Indians presently descended the bluff on foot, leaving their animals in charge of a few of the party, and, scattering, advanced under cover of the sage bushes which dotted the bottom, to about two hundred yards of the whites. Then a chief advanced before the rest, and made the sign for a talk with the Long-knives, [Pg 94] which led to a consultation amongst the latter, as to the policy of acceding to it. They were in doubts as to the nation these Indians belonged to, some bands of the Sioux being

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

friendly, and others bitterly hostile to the whites.

Gonneville, who spoke the Sioux language, and was well acquainted with the nation, affirmed they belonged to a band called the Yanka-taus, well known to be the most evil-disposed of that treacherous nation; another of the party maintained they were Brulés, and that the chief advancing towards them was the well-known Tah-sha-tunga or Bull Tail, a most friendly chief of that tribe. The majority, however, trusted to Gonneville, and he volunteered to go out to meet the Indian, and hear what he had to say. Divesting himself of all arms save his butcher-knife, he advanced towards the savage, who awaited his approach, enveloped in the folds of his blanket. At a glance he knew him to be a Yanka-tau, from the peculiar make of his moccasins, and the way in which his face was daubed with paint.

“Howgh!” exclaimed both as they met; and, after a silence of a few moments, the Indian spoke, asking—“Why the Long-knives hid behind their packs, when his band approached? Were they afraid, or were they preparing a dog-feast to entertain their friends?” The whites were passing through his country, burning his wood, drinking his water, and killing his game; but he knew they had now [Pg 95] come to pay for the mischief they had done, and that the mules and horses they had brought with them were intended as a present to their red friends.

“He was Mah-to-ga-shane,” he said, “the Brave Bear: his tongue was short, but his arm long; and he loved rather to speak with his bow and his lance than with the weapon of a squaw. He had said it: the Long-knives had horses with them and mules; and these were for him, he knew, and for his ‘braves.’ Let the White-face go back to his people and return with the animals, or he, the ‘Brave Bear,’ would have to come and take them; and his young men would get mad and would feel blood in their eyes; and then he would have no power over them; and the whites would have to ‘go under.’”

The trapper answered shortly.—“The Long-knives,” he said, “had brought the horses for themselves—their hearts were big, but not towards the Yanka-taus: and if they had to give up their animals, it would be to men and not squaws. They were not ‘wah-keitcha,’ [18] (French engagés), but Long-knives; and, however short were the tongues of the Yanka-taus, theirs were still shorter, and their rifles longer. The Yanka-taus were dogs and squaws, and the Long-knives spat upon them.” Saying this, the trapper turned his back and [Pg 96] rejoined his companions; whilst the Indian slowly proceeded to his people, who, on learning the contemptuous way in which their threats had been treated, testified their anger with loud yells; and, seeking whatever cover was afforded, commenced a scattering volley upon the camp of the mountaineers. The latter reserved their fire, treating with cool indifference the balls which began to rattle about them; but as the Indians, emboldened by this apparent inaction, rushed for a closer position, and exposed their bodies within a long range, half-a-dozen rifles rang from the assailed, and two Indians fell dead, one or two more being wounded. As yet, not one of the whites had been touched, but several of the animals had received wounds from the enemy’s fire of balls and arrows. Indeed, the Indians remained at too great a distance to render the volleys from their crazy fusees any thing like effectual, and had to raise their pieces considerably to make their bullets reach as far as the camp. After three of their band had been killed outright, and many more wounded, their fire began to slacken, and they drew off to a greater distance, evidently resolved to beat a retreat. Retiring to the bluff, they discharged their pieces in a last volley, mounted their horses and galloped off, carrying their wounded with them. This last volley, however, although intended as a mere bravado, unfortunate-

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

ly proved fatal to one of the whites. Gonnevillle, at the moment, was standing on a pack, to get an uninterrupted [Pg 97]sight for a last shot, when one of the random bullets struck him in the breast. La Bonté caught him in his arms as he was about to fall, and laying the wounded trapper gently on the ground, stripped him of his buckskin hunting-frock, to examine the wound. A glance was sufficient to convince his companions that the blow was mortal. The ball had passed through the lungs; and in a few moments the throat of the wounded man swelled and turned to a livid blue colour, as the choking blood ascended. Only a few drops of purple blood trickled from the wound,—a fatal sign,—and the eyes of the mountaineer were already glazing with death's icy touch. His hand still grasped the barrel of his rifle, which had done good service in the fray. Anon he essayed to speak, but, choked with blood, only a few inarticulate words reached the ears of his companions, as they bent over him.

“Rubbed—out—at—last,” they heard him say, the words gurgling in his blood-filled throat; and opening his eyes once more, and turning them upwards for a last look at the bright sun, the trapper turned gently on his side and breathed his last sigh.

With no other tools than their scalp-knives, the hunters dug a grave on the banks of the creek; and whilst some were engaged in this work, others sought the bodies of the Indians they had slain in the attack, and presently returned with three reeking scalps, the trophies of the fight. The body of [Pg 98]the mountaineer was wrapped in a buffalo robe, the scalps being placed on his breast, and the dead man was then laid in the shallow grave, and quickly covered—without a word of prayer, or sigh of grief; for, however much his companions may have felt, not a word escaped them. The bitten lip and frowning brow told of anger rather than of sorrow, as they vowed—what they thought would better please the spirit of the dead man than vain regrets—bloody and lasting revenge.

Trampling down the earth which filled the grave, they raised upon it a pile of heavy stones; and packing their mules once more, and taking a last look at their comrade's lonely resting-place, they turned their backs upon the stream, which has ever since been known as “Gonneville's Creek.” If the reader casts his eye over any of the recent maps of the western country, which detail the features of the regions embracing the Rocky Mountains, and the vast prairies at their bases, he will not fail to observe that many of the creeks or smaller streams which feed the larger rivers,—as the Missouri, Platte, and Arkansa,—are called by familiar proper names, both English and French. These are invariably christened after some unfortunate trapper, killed there in Indian fight; or treacherously slaughtered by the lurking savages, while engaged in trapping beaver on the stream. Thus alone is the memory of these hardy men perpetuated, at least of those whose fate is ascertained: [Pg 99]for many, in every season, never return from their hunting expeditions, but meet a sudden death from Indians, or a more lingering fate from accident or disease in some lonely gorge of the mountains where no footfall save their own, or the heavy tread of grizzly bear, disturbs the unbroken silence of the awful solitude. Then, as many winters pass without some old familiar faces making their appearance at the merry rendezvous, their long protracted absence may perhaps elicit a remark, as to where such and such a mountain worthy can have betaken himself, to which the casual rejoinder of “Gone under, maybe,” too often gives a short but certain answer.

In all the philosophy of hardened hearts, our hunters turned from the spot where the unmourned trapper met his death. La Bonté, however, not yet entirely steeled by mountain life to a perfect indifference to human feeling, drew his hard hand across his eye, as the unbidden tear rose from his

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

rough but kindly heart. He could not forget so soon the comrade he had lost, the companion in the hunt or over the cheerful camp-fire, the narrator of many a tale of dangers past, of sufferings from hunger, cold, thirst, and untended wounds, of Indian perils, and other vicissitudes. One tear dropped from the young hunter's eye, and rolled down his cheek—the last for many a long year. In the forks of the northern branch of the Platte, [Pg 100]formed by the junction of the Laramie, they found a big village of the Sioux encamped near the station of one of the fur companies. Here the party broke up; many, finding the alcohol of the traders an impediment to their further progress, remained some time in the vicinity, while La Bonté, Luke, and a trapper named Marcelline, started in a few days to the mountains, to trap on Sweet Water and Medicine Bow. They had leisure, however, to observe all the rascalities connected with the Indian trade, although at this season (August) hardly commenced. However, a band of Indians having come in with several packs of last year's robes, and being anxious to start speedily on their return, a trader from one of the forts had erected his lodge in the village.

Here he set to work immediately, to induce the Indians to trade. First, a chief appoints three "soldiers" to guard the trader's lodge from intrusion; and these sentries amongst the thieving fraternity can be invariably trusted. Then the Indians are invited to have a drink—a taste of the fire-water being given to all to incite them to trade. As the crowd presses upon the entrance to the lodge, and those in rear become impatient, some large-mouthed savage who has received a portion of the spirit, makes his way, with his mouth full of the liquor and cheeks distended, through the throng, and is instantly surrounded by his particular friends. Drawing the face of each, by turns, near his own, [Pg 101]he squirts a small quantity into his open mouth, until the supply is exhausted, when he returns for more, and repeats the generous distribution.

When paying for the robes, the traders, in measuring out the liquor in a tin half-pint cup, thrust their thumbs or the four fingers of the hand into the measure, in order that it may contain the less, or not unfrequently fill the bottom with melted buffalo fat, with the same object. So greedy are the Indians, that they never discover the cheat, and, once under the influence of the liquor, cannot distinguish between the first cup of comparatively strong spirit, and the following ones diluted five hundred per cent, and poisonously drugged to boot.

Scenes of drunkenness, riot, and bloodshed last until the trade is over. In the winter it occupies several weeks, during which period the Indians present the appearance, under the demoralising influence of the liquor, of demons rather than of men.

---

[Pg 102]

## CHAPTER IV.

LA BONTÉ and his companions proceeded up the river, the Black Hills on their left hand, from which several small creeks or feeders swell the waters of the North Fork. Along these they hunted unsuccessfully for beaver "sign," and it was evident the spring hunt had almost exterminated the animal in this vicinity. Following Deer Creek to the ridge of the Black Hills, they crossed the mountain on to the waters of the Medicine Bow, and here they discovered a few lodges, and La Bonté set his first trap. He and old Luke finding "cuttings" near the camp, followed the "sign" along the bank until the practised eye of the latter discovered a "slide," where the beaver had ascended the bank to chop the trunk of a cotton wood, and convey the bark to its lodge. Taking a trap from "sack," the old hunter, after setting the trigger, placed it carefully under the water,

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

where the “slide” entered the stream, securing the chain to the stem of a sappling on the bank; while a stick, also attached to the trap by a thong, floated down the stream, to mark the position of the trap, should the animal carry it away. [Pg 103] A little farther on, and near another “run,” three traps were set; and over these Luke placed a little stick, which he first dipped into a mysterious-looking phial containing his “medicine.” [19]

The next morning they visited the traps, and had the satisfaction of finding three fine beaver secured in the first three they visited, and the fourth, which had been carried away, they discovered by the float-stick, a little distance down the stream, with a large drowned beaver between its teeth. The animals being carefully skinned, they returned to camp with the choicest portions of the meat, and the tails, on which they most luxuriously supped; and La Bonté was fain to confess that all his ideas of the superexcellence of buffalo were thrown in the shade by the delicious beaver tail, the rich meat of which he was compelled to allow was “great eating,” unsurpassed by “tender loin” or “boudin,” or other meat of whatever kind he had eaten of before.

The country where La Bonté and his companions were trapping, is very curiously situated in the extensive bend of the Platte which encloses the Black Hill range on the north, and which bounds the large expanse of broken tract known as the Laramie Plains, their southern limit being the base of the Medicine Bow Mountains. From the north-western corner of the bend, an inconsiderable range [Pg 104] extends to the westward, gradually decreasing in height until it reaches an elevated plain, which forms a break in the stupendous chain of the Rocky Mountains, and affords the easy passage now known as the Great, or South Pass. So gradual is the ascent of this portion of the mountain, that the traveller can scarcely believe he is crossing the dividing ridge between the waters which flow into the Atlantic and Pacific Oceans, and that in a few minutes he can fling two sticks into two neighbouring streams, one to be carried thousands of miles, traversed by the eastern waters in their course to the Gulf of Mexico, the other to be borne a lesser distance to the Gulf of California.

The country is frequented by the Crows and Snakes, who are at perpetual war with the Shians and Sioux, following them often far down the Platte, where many bloody battles have taken place. The Crows are esteemed friendly to the whites; but when on war expeditions, and “hair” their object, it is always dangerous to fall in with Indian war-parties, and particularly in the remote regions of the mountains, where they do not anticipate retaliation.

Trapping with tolerable success in this vicinity, the hunters crossed over, as soon as the premonitory storms of approaching winter warned them to leave the mountains, to the waters of Green River, one of the affluents of the Colorado, intending to winter at a rendezvous to be held in “Brown’s [Pg 105] Hole”—an enclosed valley so called—which, abounding in game, and sheltered on every side by lofty mountains, is a favourite wintering-ground of the mountaineers. Here they found several trapping bands already arrived; and a trader from the Uintah country, with store of powder, lead, and tobacco, prepared to ease them of their hardly-earned peltries.

Singly, and in bands numbering from two to ten, the trappers dropped into the rendezvous; some with many pack-loads of beaver, others with greater or less quantity, and more than one on foot, having lost his animals and peltry by Indian thieving. Here were soon congregated many mountaineers, whose names are famous in the history of the Far West. Fitzpatrick and Hatcher, and old Bill Williams, well known leaders of trapping parties, soon arrived with their bands. Sublette came in with his men from Yellow Stone, and many of Wyeth’s New Englanders were there.

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

Chabonard with his half-breeds, Wah-keitchas all, brought his peltries from the lower country; and half-a-dozen Shawanee and Delaware Indians, with a Mexican from Taos, one Marcelline, a fine strapping fellow, the best trapper and hunter in the mountains, and ever first in the fight. Here, too, arrived the "Bourgeois" traders of the "North West" [20] Company, with their superior equipments, ready [Pg 106] to meet their trappers, and purchase the beaver at an equitable value; and soon the trade opened, and the encampment assumed a busy appearance.

A curious assemblage did the rendezvous present, and representatives of many a land met there. A son of La belle France here lit his pipe from one proffered by a native of New Mexico. An Englishman and a Sandwich Islander cut a quid from the same plug of tobacco. A Swede and an "old Virginian" puffed together. A Shawanee blew a peaceful cloud with a scion of the "Six Nations." One from the Land of Cakes—a canny chiel—sought to "get round" (in trade) a right "smart" Yankee, but couldn't "shine."

The beaver went briskly, six dollars being the price paid per lb. in goods—for money is seldom given in the mountain market, where "beaver" is cash, for which the articles supplied by the traders are bartered. In a very short time peltries of every description had changed hands, either by trade, or by gambling with cards and betting. With the mountain men bets decide every question that is raised, even the most trivial; and if the Editor of Bell's Life were to pay one of these rendezvous a winter visit, he would find the broad sheet of his paper hardly capacious enough to answer all the questions which would be referred to his decision.

Before the winter was over, La Bonté had lost [Pg 107] all traces of civilised humanity, and might justly claim to be considered as "hard a case" as any of the mountaineers then present. Long before the spring opened, he had lost all the produce of his hunt and both his animals, which, however, by a stroke of luck, he recovered, and wisely "held on to" for the future. Right glad when spring appeared, he started from Brown's Hole, with four companions, to hunt the Uintah or Snake country, and the affluents of the larger streams which rise in that region and fall into the Gulf of California.

In the valley of the Bear River they found beaver abundant, and trapped their way westward until they came upon the famed locality of the Beer and Soda Springs—natural fountains of mineral water, renowned amongst the trappers as being "medicine" of the first order.

Arriving one evening, about sundown, at the Bear Spring, they found a solitary trapper sitting over the rocky basin, intently regarding, with no little awe, the curious phenomenon of the bubbling gas. Behind him were piled his saddles and a pack of skins, and at a little distance a hobbled Indian pony fed amongst the cedars which formed a grove round the spring. As the three hunters dismounted from their animals, the lone trapper scarcely noticed their arrival, his eyes being still intently fixed upon the water. Looking round at last, he was instantly recognised by one of La Bonté's companions, and saluted as "Old Rube." Dressed from head to foot [Pg 108] in buckskin, his face, neck, and hands appeared to be of the same leathery texture, so nearly did they assimilate in colour to the materials of his dress. He was at least six feet two or three in his moccasins, straight-limbed and wiry, with long arms ending in hands of tremendous grasp, and a quantity of straight black hair hanging on his shoulders. His features, which were undeniably good, wore an expression of comical gravity, never relaxing into a smile, which a broad good-humoured mouth could have grinned from ear to ear.

"What, boys," he said, "will you be simple enough to camp here, alongside these springs? Noth-

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

ing good ever came of sleeping here, I tell you, and the worst kind of devils are in those dancing waters.”

“Why, old hos,” cried La Bonté, “what brings you hyar then, and camp at that?”

“This niggur,” answered Rube solemnly, “has been down’d upon a sight too often to be skeared by what can come out from them waters; and thar arn’t a devil as hisses thar, as can ‘shine’ with this child, I tell you. I’ve tried him onest, an’ fout him to clawin’ away to Eustis, [21] and if I draws my knife again on such varmint, I’ll raise his hair, as sure as shootin’.”

Spite of the reputed dangers of the locality, the trappers camped on the spot, and many a draught of the delicious sparkling water they quaffed in [Pg 109]honour of the “medicine” of the fount. Rube, however, sat sulky and silent, his huge form bending over his legs, which were crossed, Indian fashion, under him, and his long bony fingers spread over the fire, which had been made handy to the spring. At last they elicited from him that he had sought this spot for the purpose of “making medicine,” having been persecuted by extraordinary ill luck, even at this early period of his hunt—the Indians having stolen two out of his three animals, and three of his half-dozen traps. He had, therefore, sought the springs for the purpose of invoking the fountain spirits, which, a perfect Indian in his simple heart, he implicitly believed to inhabit their mysterious waters. When the others had, as he thought, fallen asleep, La Bonté observed the ill-starred trapper take from his pouch a curiously carved red stone pipe, which he carefully charged with tobacco and kinnik-kinnik. Then approaching the spring, he walked three times round it, and gravely sat himself down. Striking fire with his flint and steel, he lit his pipe, and, bending the stem three several times towards the water, he inhaled a vast quantity of smoke, and bending back his neck and looking upwards, puffed it into the air. He then blew another puff towards the four points of the compass, and emptying the pipe into his hand, cast the consecrated contents into the spring, saying a few Indian “medicine” words of cabalistic import. Having performed the ceremony to his satisfaction, [Pg 110]he returned to the fire, smoked a pipe on his own hook, and turned into his buffalo robe, conscious of having done a most important duty.

In the course of their trapping expedition, and accompanied by Rube, who knew the country well, they passed near the Great Salt Lake, a vast inland sea, whose salitrose waters cover an extent of upwards of one hundred and forty miles in length, by eighty in breadth. Fed by several streams, of which the Big Bear River is the most considerable, this lake presents the curious phenomenon of a vast body of water without any known outlet. According to the trappers, an island, from which rises a chain of lofty mountains, nearly divides the north-western portion of the lake, whilst a smaller one, within twelve miles of the northern shore, rises six hundred feet from the level of the water. Rube declared to his companions that the larger island was known by the Indians to be inhabited by a race of giants, with whom no communication had ever been held by mortal man; and but for the casual wafting to the shores of the lake of logs of gigantic trees, cut by axes of extraordinary size, the world would never have known that such a people existed. They were, moreover, white as themselves, and lived upon corn and fruits, and rode on elephants, &c.

Whilst following a small creek at the south-west extremity of the lake, they came upon a band of miserable Indians, who, from the fact of their subsisting [Pg 111]chiefly on roots, are called the Diggers. At first sight of the whites they immediately fled from their wretched huts, and made towards the mountain; but one of the trappers, galloping up on his horse, cut off their retreat, and drove them like sheep before him back to their village. A few of these wretched creatures came

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

into camp at sundown, and were regaled with such meat as the larder afforded. They appeared to have no other food in their village but bags of dried ants and their larvæ, and a few roots of the yampah. Their huts were constructed of a few bushes of grease-wood, piled up as a sort of break-wind, in which they huddled in their filthy skins. During the night, they crawled up to the camp and stole two of the horses, and the next morning not a sign of them was visible. Now La Bonté witnessed a case of mountain law, and the practical effects of the “lex talionis” of the Far West. The trail of the runaway Diggers bore to the north-west, or along the skirt of a barren waterless desert, which stretches far away from the southern shores of the Salt Lake to the borders of Upper California. La Bonté, with three others, determined to follow the thieves, recover their animals, and then rejoin the other two (Luke and Rube) on a creek two days’ journey from their present camp. Starting at sunrise, they rode on at a rapid pace all day, closely following the trail, which led directly to the north-west, through a wretched sandy country, [Pg 112]without game or water. From the appearance of the track, the Indians must still have been several hours ahead of them, when the fatigue of their horses, suffering from want of grass and water, compelled them to camp near the head of a small water-course, where they luckily found a hole containing a little water, and whence a broad Indian trail passed, apparently frequently used. Long before daylight they were again in the saddle, and, after proceeding a few miles, saw the lights of several fires a short distance ahead of them. Halting here, one of the party advanced on foot to reconnoitre, and presently returned with the intelligence that the party they were in pursuit of had joined a village numbering thirty or forty huts.

Loosening their girths, they permitted their tired animals to feed on the scanty herbage which presented itself, whilst they refreshed themselves with a pipe of tobacco—for they had no meat of any description with them, and the country afforded no game. As the first streak of dawn appeared in the east, they mounted their horses, after first examining their rifles, and moved cautiously towards the Indian village. As it was scarcely light enough for their operations, they waited behind a sandhill in the vicinity, until objects became more distinct, and then, emerging from their cover with loud war-whoops, they charged abreast into the midst of the village.

As the frightened Indians were scarcely risen [Pg 113]from their beds, no opposition was given to the daring mountaineers, who, rushing upon the flying crowd, discharged their rifles at close quarters, and then, springing from their horses, attacked them knife in hand, and only ceased the work of butchery when nine Indians lay dead upon the ground. All this time the women, half dead with fright, were huddled together on the ground, howling piteously; and the mountaineers advancing to them, whirled their lassos round their heads, and throwing the open nooses into the midst, hauled out three of them, and securing their arms in the rope, bound them to a tree, and then proceeded to scalp the dead bodies. Whilst they were engaged in this work, an old Indian, withered and grisly, and hardly bigger than an ape, suddenly emerged from a rock, holding in his left hand a bow and a handful of arrows, whilst one was already drawn to the head. Running towards them, and almost before the hunters were aware of his presence, he discharged an arrow at a few yards’ distance, which buried itself in the ground not a foot from La Bonté’s head as he bent over the body of the Indian he was scalping; and hardly had the whiz ceased, when whirr flew another, striking him in his right shoulder. Before the Indian could fit a third arrow to his bow, La Bonté sprang upon him, seized him by the middle, and spinning his pigmy form round his head, as easily as he would have twirled a tomahawk, he threw him with tremendous force on the

---

by GEORGE FREDERICK RUXTON

---

ground at [Pg 114]the feet of one of his companions, who, stooping down, coolly thrust his knife into the Indian's breast, and quickly tore off his scalp.

The slaughter over, without casting an eye to the captive squaws, the trappers proceeded to search the village for food, of which they stood much in need. Nothing, however, was found but a few bags of dried ants, which, after eating voraciously of, but with wry mouths, they threw aside, saying the food was worse than "poor bull." They found, however, the animals they had been robbed of, and two more besides,—wretched half-starved creatures; and on these mounting their captives, they hurried away on their journey back to their companions, the distance being computed at three days' travel from their present position. However, they thought, by taking a more direct course, they might find better pasture for their animals, and water, besides saving at least half a day by the short cut. To their cost, they proved the old saying, that "a short cut is always a long road," as will be presently shown.

It has been said that from the south-western extremity of the Great Salt Lake a vast desert extends for hundreds of miles, unbroken by the slightest vegetation, destitute of game and water, and presenting a cheerless expanse of sandy plain, or rugged mountain, thinly covered with dwarf pine or cedar, the only evidence of vegetable life. Into this desert, ignorant of the country, the trappers [Pg 115]struck, intending to make their short cut; and, travelling on all day, were compelled to camp at night, without water or pasture for their exhausted animals, and themselves ravenous with hunger and parched with thirst. The next day three of their animals "gave out," and they were fain to leave them behind; but imagining that they must soon strike a creek, they pushed on until noon, but still no water presented itself, nor a sign of game of any description. The animals were nearly exhausted, and a horse which could scarcely keep up with the slow pace of the others was killed, and its blood greedily drunk; a portion of the flesh being eaten raw, and a supply carried with them for future emergencies.

The next morning two of the horses lay dead at their pickets, and one only remained, and this in such a miserable state that it could not possibly have travelled six miles further. It was, therefore, killed, and its blood drunk, of which, however, the captive squaws refused to partake. The men began to feel the effects of their consuming thirst, which the hot horse's blood only served to increase; their lips became parched and swollen, their eyes blood-shot, and a giddy sickness seized them at intervals. About mid-day they came in sight of a mountain on their right hand, which appeared to be more thickly clothed with vegetation; and arguing from this that water would be found there, they left their course and made towards it, although some eight or ten [Pg 116]miles distant. On arriving at the base, the most minute search failed to discover the slightest traces of water, and the vegetation merely consisted of dwarf piñon and cedar. With their sufferings increased by the exertions they had used in reaching the mountain, they once more sought the trail, but every step told on their exhausted frames. The sun was very powerful, the sand over which they floundered was deep and heavy, and, to complete their sufferings a high wind blew it in their faces, filling their mouths and noses with its searching particles.

Still they struggled onwards manfully, and not a murmur was heard until their hunger had entered the second stage upon the road to starvation. They had now been three days without food or water; under which privation nature can hardly sustain herself for a much longer period. On the fourth morning, the men looked wolfish, their captives following behind in sullen and perfect indifference, occasionally stooping down to catch a beetle if one presented itself, and greedily

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

devouring it. A man named Forey, a Canadian half-breed, was the first to complain. "If this lasted another sundown," he said, "some of them would 'be rubbed out;' that meat had to be 'raised' anyhow; and for his part, he knew where to look for a feed, if no game was seen before they put out of camp on the morrow; and meat was meat, anyhow they fixed it."

No answer was made to this, though his companions [Pg 117] well understood him: their natures as yet revolted against the last expedient. As for the three squaws, all of them young girls, they followed behind their captors without a word of complaint, and with the stoical indifference to pain and suffering, which alike characterises the haughty Delaware of the north and the miserable stunted Digger of the deserts of the Far West. On the morning of the fifth day, the party were seated round a small fire of piñon, hardly able to rise and commence their journey, the squaws squatting over another at a little distance, when Forey commenced again to suggest that, if nothing offered, they must either take the alternative of starving to death, for they could not hope to last another day, or have recourse to the revolting extremity of sacrificing one of the party to save the lives of all. To this, however, there was a murmur of dissent, and it was finally resolved that all should sally out and hunt; for a deer-track had been discovered near the camp, which, although it was not a fresh one, proved that there must be game in the vicinity. Weak and exhausted as they were, they took their rifles and started for the neighbouring uplands, each taking a different direction.

It was nearly sunset when La Bonté returned to the camp, where he already espied one of his companions engaged in cooking something over the fire. Hurrying to the spot, overjoyed with the anticipations of a feast, he observed that the squaws were [Pg 118] gone; but, at the same time, thought it was not improbable they had escaped during their absence. Approaching the fire, he observed Forey broiling some meat on the embers, whilst at a little distance lay what he fancied was the carcass of a deer.

"Hurrah, boy!" he exclaimed, as he drew near the fire. "You've 'made' a 'raise,' I see."

"Well, I have," rejoined the other, turning his meat with the point of his butcher knife. "There's the meat, hos—help yourself."

La Bonté drew the knife from his scabbard, and approached the spot his companion was pointing to; but what was his horror to see the yet quivering body of one of the Indian squaws, with a large portion of the flesh butchered from it, part of which Forey was already greedily devouring. The knife dropped from his hand, and his heart rose to his throat.

The next day he and his companion struck the creek where Rube and the other trapper had agreed to await them, and found them in camp with plenty of meat, and about to start again on their hunt, having given up the others for lost. From the day they parted, nothing was ever heard of La Bonté's other two companions, who doubtless fell a prey to utter exhaustion, and were unable to return to the camp. And thus ended the Digger expedition.

It may appear almost incredible that men having civilised blood in their veins could perpetrate such wanton and cold-blooded acts of aggression on the [Pg 119] wretched Indians, as that detailed above; but it is fact that the mountaineers never lose an opportunity of slaughtering these miserable Diggers, and attacking their villages, often for the purpose of capturing women, whom they carry off, and not unfrequently sell to other tribes, or to each other. In these attacks neither sex nor age is spared; and your mountaineer has as little compunction in taking the life of an Indian woman, as he would have in sending his rifle-ball through the brain of a Crow or Blackfoot

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

warrior.

La Bonté now found himself without animals, and fairly “afoot;” consequently nothing remained for him but to seek some of the trapping bands, and hire himself for the hunt. Luckily for him, he soon fell in with Roubideau, on his way to Uintah, and was supplied by him with a couple of animals; and thus equipped, he started again with a large band of trappers, who were going to hunt on the waters of Grand River and the Gila. Here they fell in with another nation of Indians, from which branch out the innumerable tribes inhabiting Northern Mexico and part of California.

They were in general friendly, but lost no opportunity of stealing horses or any articles left lying about the camp. On one occasion, the trappers being camped on a northern affluent of the Gila, a volley of arrows was discharged amongst them, severely wounding one or two of the party, as they sat round the camp fires. The attack, however, was not renewed, [Pg 120]and the next day the camp was moved further down the stream, where beaver was tolerably abundant. Before sundown a number of Indians made their appearance, and making signs of peace, were admitted into the camp.

The trappers were all sitting at their suppers over the fires, the Indians looking gravely on, when it was remarked that now would be a good opportunity to retaliate upon them for the trouble their incessant attacks had entailed upon the camp. The suggestion was highly approved of, and instantly acted upon. Springing to their feet, the trappers seized their rifles, and commenced the slaughter. The Indians, panic-struck, fled without resistance, and numbers fell before the death-dealing rifles of the mountaineers. A chief, who had been sitting on a rock near the fire where the leader of the trappers sat, had been singled out by the latter as the first mark for his rifle.

Placing the muzzle to his heart, he pulled the trigger, but the Indian, with extraordinary tenacity of life, rose and grappled with his assailant. The white was a tall powerful man, but, notwithstanding the deadly wound the Indian had received, he had his equal in strength to contend against. The naked form of the Indian twisted and writhed in his grasp, as he sought to avoid the trapper’s uplifted knife. Many of the latter’s companions advanced to administer the coup de grâce to the savage, but the trapper cried to them to keep off: [Pg 121]“If he couldn’t whip the Injun,” he said, “he’d go under.”

At length he succeeded in throwing him, and, plunging his knife no less than seven times into his body, he tore off his scalp, and went in pursuit of the flying savages. In the course of an hour or two, all the party returned, and sitting by the fires, resumed their suppers, which had been interrupted in the manner just described. Walker, the captain of the band, sat down by the fire where he had been engaged in the struggle with the Indian chief, whose body was lying within a few paces of it. He was in the act of fighting the battle over again to one of his companions, and was saying that the Indian had as much life in him as a buffalo bull, when, to the horror of all present, the savage, who had received wounds sufficient for twenty deaths, suddenly rose to a sitting posture, the fire shedding a glowing light upon the horrid spectacle. The face was a mass of clotted blood, which flowed from the lacerated scalp, whilst gouts of blood streamed from eight gaping wounds in the naked breast.

Slowly this frightful figure rose to a sitting posture, and, bending slowly forward to the fire, the mouth was seen to open wide, and a hollow gurgling—owg-h-h—broke from it.

“H—!” exclaimed the trapper—and jumping up, he placed a pistol to the ghastly head, the eyes

of which sternly fixed themselves on his, and pulling [Pg 122]the trigger, blew the poor wretch's skull to atoms.

The Gila passes through a barren, sandy country, with but little game, and sparsely inhabited by several different tribes of the great nation of the Apache. Unlike the rivers of this western region, this stream is, in most parts of its course, particularly towards its upper waters, entirely bare of timber, and the bottom, through which it runs, affords but little of the coarsest grass. Whilst on this stream, the trapping party lost several animals for want of pasture, and many more from the predatory attacks of the cunning Indians. These losses, however, they invariably made good whenever they encountered a native village—taking care, moreover, to repay themselves with interest whenever occasion offered.

Notwithstanding the sterile nature of the country, the trappers, during their passage up the Gila, saw with astonishment that the arid and barren valley had once been peopled by a race of men far superior to the present nomade tribes who roam over it. With no little awe they gazed upon the ruined walls of large cities, and the remains of houses, with their ponderous beams and joists, still testifying to the skill and industry with which they were constructed: huge ditches and irrigating canals, now filled with rank vegetation, furrowed the plains in the vicinity, marking the spot where once green waving maize and smiling gardens [Pg 123]covered what now is a bare and sandy desert. Pieces of broken pottery, of domestic utensils, stained with bright colours, every where strewn the ground; and spear and arrow-heads of stone, and quaintly carved idols, and women's ornaments of agate and obsidian, were picked up often by the wondering trappers, examined with child-like curiosity, and thrown carelessly aside. [22]

A Taos Indian, who was amongst the band, was evidently impressed with a melancholy awe, as he regarded these ancient monuments of his fallen people. At midnight he rose from his blanket and left the camp, which was in the vicinity of the ruined city, stealthily picking his way through the line of slumbering forms which lay around; and the watchful sentinel observed him approach the ruins with a slow and reverential gait. Entering the mouldering walls, he gazed silently around, where in ages past his ancestors trod proudly, a civilised race, the tradition of which, well known to his people, served but to make their present degraded position more galling and apparent. Cowering under the shadow of a crumbling wall, the Indian drew his blanket over his head, and conjured to his mind's eye the former power and grandeur of his race—that warlike people who, forsaking their own [Pg 124]country for causes of which no tradition, however dim, now exists, sought in the fruitful and teeming valleys of the south a soil and climate which their own lands did not afford; and, displacing the wild and barbarous hordes inhabiting the land, raised there a mighty empire, great in riches and civilisation.

The Indian bowed his head, and mourned the fallen greatness of his tribe. Rising, he slowly drew his tattered blanket round his body, and prepared to leave the spot, when the shadow of a moving figure, creeping past a gap in the ruined wall, through which the moonbeams played, suddenly arrested his attention. Rigid as a statue, he stood transfixed to the spot, thinking a former inhabitant of the city was visiting, in a ghostly form, the scenes his body once knew so well. The bow in his right hand shook with fear as he saw the shadow approach, but was as tightly and steadily grasped when, on the figure emerging from the shade of the wall, he distinguished the form of a naked Apache, armed with bow and arrow, crawling stealthily through the gloomy ruins.

Standing undiscovered within the shadow of the wall, the Taos raised his bow, and drew an ar-

by GEORGE FREDERICK RUXTON

---

row to the head, until the other, who was bending low to keep under cover of the wall, and thus approach the sentinel standing at a short distance, seeing suddenly the well-defined shadow on the ground, [Pg 125]rose upright on his legs, and, knowing escape was impossible, threw his arms down his sides, and, drawing himself erect, exclaimed, in a suppressed tone, "Wa-g-h!"

"Wagh!" exclaimed the Taos likewise, but quickly dropped his arrow point, and eased the bow. "What does my brother want," he asked, "that he lopes like a wolf round the fires of the white hunters?"

"Is my brother's skin not red?" returned the Apache, "and yet he asks a question that needs no answer. Why does the 'medicine wolf' follow the buffalo and deer? For blood—and for blood the Indian follows the treacherous white from camp to camp, to strike blow for blow, until the deaths of those so basely killed are fully avenged."

"My brother speaks with a big heart, and his words are true; and though the Taos and Pimo (Apache) black their faces towards each other (are at war), here, on the graves of their common fathers, there is peace between them. Let my brother go."

The Apache moved quickly away, and the Taos once more sought the camp-fires of his white companions.

Following the course of the Gila to the eastward, they crossed a range of the Sierra Madre, which is a continuation of the Rocky Mountains, and struck the waters of the Rio del Norte, below the settlements [Pg 126]of New Mexico. On this stream they fared well; besides trapping a great quantity of beaver, game of all kinds abounded, and the bluffs near the well-timbered banks of the river were covered with rich gramma grass, on which their half-starved animals speedily improved in condition.

They remained for some weeks encamped on the right bank of the stream, during which period they lost one of their number, shot with an arrow whilst lying asleep within a few feet of the camp-fire.

The Navajos continually prowl along that portion of the river which runs through the settlements of New Mexico, preying upon the cowardly inhabitants, and running off with their cattle whenever they are exposed in sufficient numbers to tempt them. Whilst ascending the river, the trappers met a party of these Indians returning to their mountain homes with a large band of mules and horses which they had taken from one of the Mexican towns, besides several women and children, whom they had captured, as slaves. The main body of the trappers halting, ten of the band followed and charged upon the Indians, who numbered at least sixty, killed seven of them, and retook the prisoners and the whole cavallada of horses and mules. Great were the rejoicings when they entered Socorro, the town whence the women and children had been taken, and as loud the remonstrances, when, handing them over to their families, the trappers rode on, driving fifty of the best of the rescued animals before them, [Pg 127]which they retained as payment for their services. Messengers were sent on to Albuquerque with intelligence of the proceeding; and as troops were stationed there, the commandant was applied to, to chastise the insolent whites. That warrior, on learning that the trappers numbered less than fifteen, became alarmingly brave, and ordering out the whole of his disposable force, some two hundred dragoons, sallied out to intercept the audacious mountaineers. About noon one day, just as the latter had emerged from a little town between Socorro and Albuquerque, they descried the imposing force of the dragoons winding along a plain ahead. As the trappers advanced, the officer in command halted his men,

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

and sent out a trumpeter to order the former to await his coming. Treating the herald to a roar of laughter, on they went, and, as they approached the soldiers, broke into a trot, ten of the number forming line in front of the packed and loose animals, and, rifle in hand, charging with loud whoops. This was enough for the New Mexicans. Before the enemy were within shooting distance, the gallant fellows turned tail, and splashed into the river, dragging themselves up the opposite bank like half-drowned rats, and saluted with loud peels of laughter by the victorious mountaineers, who, firing a volley into the air, in token of supreme contempt, quietly continued their route up the stream.

Before reaching the capital of the province, they [Pg 128] struck again to the westward, and following a small creek to its junction with the Green River, ascended that stream, trapping en route to the Uintah or Snake Fork, and arrived at Roubideau's rendezvous early in the fall, where they quickly disposed of their peltries, and were once more on "the loose."

Here La Bonté married a Snake squaw, with whom he crossed the mountains and proceeded to the Platte through the Bayou Salade, where he purchased of the Yutas a commodious lodge, with the necessary poles, &c.; and being now "rich" in mules and horses, and in all things necessary for otium cum dignitate, he took unto himself another wife, as by mountain law allowed; and thus equipped, with both his better halves attired in all the glory of fofarraw, he went his way rejoicing. In a snug little valley lying under the shadow of the mountains, watered by Vermilion Creek, and in which abundance of buffalo, elk, deer, and antelope fed and fattened on the rich grass, La Bonté raised his lodge, employing himself in hunting, and fully occupying his wives' time in dressing the skins of the many animals he killed. Here he enjoyed himself amazingly until the commencement of winter, when he determined to cross to the North Fork and trade his skins, of which he had now as many packs as his animals could carry. It happened that he one day left his camp, to spend a couple of days hunting buffalo in the mountains, whither the bulls [Pg 129] were now resorting, intending to "put out" for Platte on his return. His hunt, however, led him farther into the mountains than he anticipated, and it was only on the third day that sundown saw him enter the little valley where his camp was situated.

Crossing the creek, he was not a little disturbed at seeing fresh Indian sign on the opposite side, which led in the direction of his lodge; and his worst fears were realised when, on coming within sight of the little plateau where the conical top of his white lodge had always before met his view, he saw nothing but a blackened mass strewing the ground, and the burnt ends of the poles which had once supported it.

Squaws, animals, and peltry, all were gone—an Arapaho moccasin lying on the ground told him where. He neither fumed nor fretted, but, throwing the meat off his pack animal, and the saddle from his horse, he collected the blackened ends of the lodge poles and made a fire—led his beasts to water and hobbled them, threw a piece of buffalo meat upon the coals, squatted down before the fire, and lit his pipe. La Bonté was a true philosopher. Notwithstanding that his house, his squaws, his peltries, were gone "at one fell swoop," the loss scarcely disturbed his equanimity; and before the tobacco in his pipe was half smoked out, he had ceased to think of his misfortune. Certes, as he turned his apolla of tender loin, he sighed as he thought of the delicate manipulations with which his Shoshone squaw, [Pg 130] Sah-qua-manish, was wont to beat to tenderness the toughest bull meat—and missed the tending care of Yute Chil-co-thē, or the "reed that bends," in patching the holes worn in his neatly fitting moccasins, the work of her nimble fingers. How-

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

ever, he ate and smoked, and smoked and ate, and slept none the worse for his mishap; thought, before he closed his eyes, a little of his lost wives, and more perhaps of the “Bending Reed” than of Sah-qua-manish, or “she who runs with the stream,” drew his blanket tightly round him, felt his rifle handy to his grasp, and was speedily asleep.

Whilst the tired mountaineer breathes heavily in his dream, careless and unconscious that a living soul is near, his mule on a sudden pricks her ears and stares into the gloom, whence a figure soon emerges, and with noiseless steps draws near the sleeping hunter. Taking one look at the slumbering form, the same figure approaches the fire and adds a log to the pile; which done, it quietly seats itself at the feet of the sleeper, and remains motionless as a statue. Towards morning the hunter awoke, and, rubbing his eyes, was astonished to feel the glowing warmth of the fire striking on his naked feet, which, in Indian fashion, were stretched towards it; as by this time, he knew, the fire he left burning must long since have expired. Lazily raising himself on his elbow, he saw a figure sitting near it with the back turned to him, which, although his exclamatory wagh was loud enough in all conscience, [Pg 131] remained perfectly motionless, until the trapper, rising, placed his hand upon the shoulder: then, turning up its face, the features displayed to his wondering eye were those of Chil-co-thē], his Yuta wife. Yes, indeed, the “reed that bends” had escaped from her Arapaho captors, and made her way back to her white husband, fasting and alone.

The Indian women who follow the fortunes of the white hunters are remarkable for their affection and fidelity to their husbands, the which virtues, it must be remarked, are all on their own side; for, with very few exceptions, the mountaineers seldom scruple to abandon their Indian wives, whenever the fancy takes them to change their harems; and on such occasions the squaws, thus cast aside, wild with jealousy and despair, have been not unfrequently known to take signal vengeance both on their faithless husbands and on the successful beauties who have supplanted them in their affections. There are some honourable exceptions, however, to such cruelty, and many of the mountaineers stick to their red-skinned wives for better and for worse, often suffering them to gain the upper hand in the domestic economy of the lodges, and being ruled by their better halves in all things pertaining to family affairs; and it may be remarked, that, when once the lady dons the unmentionables, she becomes the veriest termagant that ever henpecked an unfortunate husband.

Your refined trappers, however, who, after many [Pg 132] years of bachelor life, incline to take to themselves a better half, often undertake an expedition into the settlements of New Mexico, where not unfrequently they adopt a very “Young Lochinvar” system in procuring the required rib; and have been known to carry off, *vi et armis*, from the midst of a fandango in Fernandez, or El Rancho of Taos, some dark-skinned beauty—with or without her own consent is a matter of unconcern—and bear the ravished fair one across the mountains, where she soon becomes inured to the free and roving life fate has assigned her.

American women are valued at a low figure in the mountains. They are too fine and “fofarraw.” Neither can they make moccasins, or dress skins; nor are they so schooled to perfect obedience to their lords and masters as to stand a “lodge-pole-ing,” which the western lords of the creation not unfrequently deem it their bounden duty to inflict upon their squaws for some dereliction of domestic duty.

To return, however, to La Bonté. That worthy thought himself a lucky man to have lost but one of his wives, and she the worst of the two. “Here’s the beauty,” he philosophised, “of having two

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

‘wiping-sticks’ to your rifle; if one breaks whilst ramming down a ball, there’s still hickory left to supply its place.” Although, with animals and peltry, he had lost several hundred dollars’ worth of “possibles,” he never groaned or grumbled. [Pg 133] “There’s redskin will pay for this,” he once muttered, and was done.

Packing all that was left on the mule, and mounting Chil-co-thē on his buffalo horse, he shouldered his rifle and struck the Indian trail for Platte. On Horse Creek they came upon a party of French [23] trappers and hunters, who were encamped with their lodges and Indian squaws, and formed quite a village. Several old companions were amongst them; and, to celebrate the arrival of a “camarade,” a splendid dog-feast was prepared in honour of the event. To effect this, the squaws sallied out of their lodges to seize upon sundry of the younger and plumper of the pack, to fill the kettles for the approaching feast. With a presentiment of the fate in store for them, the curs slunk away with tails between their legs, and declined the pressing invitations of the anxious squaws. These shouldered their tomahawks and gave chase; but the cunning pups outstripped them, and would have fairly beaten the kettles, if some of the mountaineers had not stepped out with their rifles and quickly laid half-a-dozen ready to the knife. A cayoute, attracted by the scent of blood, drew near, unwitting of the canine feast in progress, and was likewise soon made dog of, and thrust into the boiling kettle with the rest.

The feast that night was long protracted; and [Pg 134] so savoury was the stew, and so agreeable to the palates of the hungry hunters, that at the moment the last morsel was drawn from the pot, when all were regretting that a few more dogs had not been slaughtered, a wolfish-looking cur, who incautiously poked his long nose and head under the lodge skin, was pounced upon by the nearest hunter, who in a moment drew his knife across the animal’s throat, and threw it to a squaw to skin and prepare for the pot. The wolf had long since been vigorously discussed, and voted by all hands to be “good as dog.”

“Meat’s meat,” is a common saying in the mountains, and from the buffalo down to the rattle-snake, including every quadruped that runs, every fowl that flies, and every reptile that creeps, nothing comes amiss to the mountaineer. Throwing aside all the qualms and conscientious scruples of a fastidious stomach, it must be confessed that dog-meat takes a high rank in the wonderful variety of cuisine afforded to the gourmand and the gourmet by the prolific “mountains.” Now, when the bill of fare offers such tempting viands as buffalo beef, venison, mountain mutton, turkey, grouse, wildfowl, hares, rabbits, beaver and their tails, &c. &c., the station assigned to “dog” as No. 2 in the list can be well appreciated—No. 1, in delicacy of flavour, richness of meat, and other good qualities, being the flesh of panthers, which surpasses every other, and all put together. “Painter meat can’t ‘shine’ with this,” says a [Pg 135] hunter, to express the delicious flavour of an extraordinary cut of “tender loin,” or delicate fleece.

La Bonté started with his squaw for the North Fork early in November, and arrived at the Laramie at the moment that the big village of the Sioux came up for their winter trade. Two other villages were encamped lower down the Platte, including the Brulés and the Yanka-taus, who were now on more friendly terms with the whites. The first band numbered several hundred lodges, and presented quite an imposing appearance, the village being laid out in parallel lines, the lodge of each chief being marked with his particular totem. The traders had a particular portion of the village allotted to them, and a line was marked out which was strictly kept by the soldiers appointed for the protection of the whites. As there were many rival traders, and numerous coureurs des

---

by GEORGE FREDERICK RUXTON

---

bois, or peddling ones, the market promised to be brisk, the more so as a large quantity of ardent spirits was in their possession, which would be dealt with no unsparing hand to put down the opposition of so many competing traders.

In opening a trade a quantity of liquor is first given "on the prairie," [24] as the Indians express it in words, or by signs in rubbing the palm of one hand quickly across the other, holding both flat. Having once tasted the pernicious liquid, there is [Pg 136]no fear but they will quickly come to terms; and not unfrequently the spirit is drugged, to render the unfortunate Indians still more helpless. Sometimes, maddened and infuriated by drink, they commit the most horrid atrocities on each other, murdering and mutilating in a barbarous manner, and often attempting the lives of the traders themselves. On one occasion a band of Sioux, whilst under the influence of liquor, attacked and took possession of a trading fort of the American Fur Company, stripping it of every thing it contained, and roasting the trader himself over his own fire.

The principle on which the nefarious trade is conducted is this, that the Indians, possessing a certain quantity of buffalo robes, have to be cheated out of them, and the sooner the better. Although it is explicitly prohibited by the laws of the United States to convey spirits across the Indian frontier, and its introduction amongst the Indian tribes subjects the offender to a heavy penalty; yet the infraction of this law is of daily occurrence, perpetrated almost in the very presence of the government officers, who are stationed along the frontier for the purpose of enforcing the laws for the protection of the Indians.

The misery entailed upon these unhappy people by the illicit traffic must be seen to be fully appreciated. Before the effects of the poisonous "fire-water," they disappear from the earth like "snow before the sun." Although aware of the destruction [Pg 137]it entails upon them, the poor wretches have not moral courage to shun the fatal allurements it holds out to them, of wild excitement and a temporary oblivion of their many sufferings and privations. With such palpable effects, it appears only likely that the illegal trade is connived at by those whose policy it has ever been, gradually but surely, to exterminate the Indians, and by any means to extinguish their title to the few lands they now own on the outskirts of civilisation. Certain it is that large quantities of liquor find their way annually into the Indian country, and as certain are the fatal results of the pernicious system, and that the American government takes no steps to prevent it. There are some tribes who have as yet withstood the great temptation, and have resolutely refused to permit liquor to be brought into their villages. The marked difference between the improved condition of these, and the moral and physical abasement of those which give way to the fatal passion for drinking, sufficiently proves the pernicious effects of the liquor trade on the unfortunate and abused aborigines; and it is matter of regret that no philanthropist has sprung up in the United States to do battle for the rights of the Red men, and call attention to the wrongs they endure at the hands of their supplanters in the lands of their fathers.

Robbed of their homes and hunting-grounds, and driven by the encroachments of the whites to distant [Pg 138]regions, which hardly support existence, the Indians, day by day, gradually decrease before the accumulating evils, of body and soul, which their civilised persecutors entail upon them. With every man's hand against them, they drag on to their final destiny; and the day is not far distant when the American Indian will exist only in the traditions of his pale-faced conquerors.

The Indians trading at this time on the Platte were mostly of the Sioux nation, including the tribes

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

of Burnt-woods, Yanka-taus, Pian-Kashas, Assinaboins, Oglallahs, Broken Arrows, all of which belong to the great Sioux nation, or La-cotahs, as they call themselves, and which means cut-throats There were also some Cheyennes allied to the Sioux, as well as a small band of Republican Pawnees.

Horse-racing, gambling, and ball-play, served to pass away the time until the trade commenced, and many packs of dressed robes changed hands amongst themselves. When playing at the usual game of "hand," the stakes, comprising all the valuables the players possess, are piled in two heaps close at hand, the winner at the conclusion of the game sweeping the goods towards him, and often returning a small portion "on the prairie," with which the loser may again commence operations with another player.

The game of "hand" is played by two persons. One, who commences, places a plum or cherry-stone [Pg 139]. in the hollow formed by joining the concaved palms of the hands together, then shaking the stone for a few moments, the hands are suddenly separated, and the other player must guess which hand now contains the stone.

Large bets are often wagered on the result of this favourite game, which is also often played by the squaws, the men standing round encouraging them to bet, and laughing loudly at their grotesque excitement.

A Burnt-wood Sioux, Tah-tunganisha, one of the bravest chiefs of his tribe, was out, when a young man, on a solitary war expedition against the Crows. One evening he drew near a certain "medicine" spring, where, to his astonishment, he encountered a Crow warrior in the act of quenching his thirst. He was on the point of drawing his bow upon him, when he remembered the sacred nature of the spot, and making the sign of peace, he fearlessly drew near his foe, and proceeded likewise to slake his thirst. A pipe of kinnik-kinnik being produced, it was proposed to pass away the early part of the night in a game of "hand." They accordingly sat down beside the spring, and commenced the game.

Fortune favoured the Crow. He won arrow after arrow from the Burnt-wood brave; then his bow, his club, his knife, his robe, all followed, and the Sioux sat naked on the plain. Still he proposed another stake against the other's winnings—his [Pg 140]scalp. He played, and lost; and bending forward his head, the Crow warrior drew his knife and quickly removed the bleeding prize. Without a murmur the luckless Sioux rose to depart, but first exacted a promise from his antagonist that he would meet him once more at the same spot, and engage in another trial of skill.

On the day appointed, the Burnt-wood sought the spot, with a new equipment, and again the Crow made his appearance, and they sat down to play. This time fortune changed sides; the Sioux won back his former losses, and in his turn the Crow was stripped to his skin.

Scalp against scalp was now the stake, and this time the Crow submitted his head to the victorious Burnt-wood's knife; and both the warriors stood scalpless on the plain.

And now the Crow had but one single stake of value to offer, and the offer of it he did not hesitate to make. He staked his life against the other's winnings. They played; and fortune still being adverse, he lost. He offered his breast to his adversary. The Burnt-wood plunged his knife into his heart to the very hilt; and, laden with his spoils, returned to his village, and to this day wears suspended from his ears his own and enemy's scalp.

The village presented the usual scene of confusion as long as the trade lasted. Fighting, brawling, yelling, dancing, and all the concomitants of [Pg 141]intoxication, continued to the last

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

drop of the liquor-keg, when the reaction after such excitement was almost worse than the evil itself. During this time, all the work devolved upon the squaws, who, in tending the horses, and in packing wood and water from a long distance, had their time sufficiently occupied. As there was little or no grass in the vicinity, the animals were supported entirely on the bark of the cotton-wood; and to procure this, the women were daily engaged in felling huge trees, or climbing them fearlessly, chopping off the upper limbs—springing like squirrels from branch to branch, which, in their confined costume, appeared matter of considerable difficulty.

The most laughter-provoking scenes, however, were, when a number of squaws sallied out to the grove, with their long-nosed, wolfish-looking dogs harnessed to their travées or trabogans, on which loads of cotton-wood were piled. The dogs, knowing full well the duty required of them, refuse to approach the coaxing squaws, and, at the same time, are fearful of provoking their anger by escaping and running off. They, therefore, squat on their haunches, with tongues hanging out of their long mouths, the picture of indecision, removing a short distance as the irate squaw approaches. When once harnessed to the travée, however, which is simply a couple of lodge-poles lashed on either side of the dog, with a couple of [Pg 142]cross-bars near the ends to support the freight, they follow quietly enough, urged by bebies of children, who invariably accompany the women. Once arrived at the scene of their labours, the reluctance of the curs to draw near the piles of cotton-wood is most comical. They will lie down stubbornly at a little distance, whining their uneasiness, or sometimes scamper off bodily, with their long poles trailing after them, pursued by the yelling and half frantic squaws.

When the travées are laden, the squaws, bent double under loads of wood sufficient to break a porter's back, and calling to the dogs, which are urged on by the buffalo-fed urchins in rear, lead the line of march. The curs, taking advantage of the helpless state of their mistresses, turn a deaf ear to their coaxings, lying down every few yards to rest, growling and fighting with each other, in which encounters every cur joins the mêlée, charging pell-mell into the yelping throng, upsetting the squalling children, and making confusion worse confounded. Then, armed with lodge-poles, the squaws, throwing down their loads, rush to the rescue, dealing stalwart blows on the pugnacious curs, and finally restoring something like order to the march.

“Tszoo—tszoo!” they cry, “wah, kashne, ceit-cha—get on, you devilish beasts—tszoo—tszoo!” and belabouring them without mercy, they start them into a gallop, which, once commenced, is [Pg 143]generally continued till they reach their destination.

The Indian dogs are, however, invariably well treated by the squaws, since they assist materially the every-day labours of these patient over-worked creatures, in hauling firewood to the lodge, and, on the line of march, carrying many of the household goods and chattels, which otherwise the squaw herself would have to carry on her back. Every lodge possesses from half-a-dozen to a score—some for draught and others for eating—for dog meat forms part and parcel of an Indian feast. The former are stout, wiry animals, half wolf half sheep-dog, and are regularly trained to draught; the latter are of a smaller kind, more inclined to fat, and embrace every variety of the genus cur. Many of the southern tribes possess a breed of dogs entirely divested of hair, which evidently have come from South America, and are highly esteemed for the kettle. Their meat, in appearance and flavour, resembles young pork, but far surpasses it in richness and delicacy.

The Sioux are very expert in making their lodges comfortable, taking more pains in their construction than most Indians. They are all of conical form: a framework of straight slender poles,

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

resembling hop-poles, and from twenty to twenty-five feet long, is first erected, round which is stretched a sheeting of buffalo robes, softly dressed, and smoked to render them water-tight. The apex, through which [Pg 144]the ends of the poles protrude, is left open to allow the smoke to escape. A small opening, sufficient to permit the entrance of a man, is made on one side, over which is hung a door of buffalo hide. A lodge of the common size contains about twelve or fourteen skins, and contains comfortably a family of twelve in number. The fire is made in the centre immediately under the aperture in the roof, and a flap of the upper skins is closed or extended at pleasure, serving as a cowl or chimney-top to regulate the draught and permit the smoke to escape freely. Round the fire, with their feet towards it, the inmates sleep on skins and buffalo rugs, which are rolled up during the day, and stowed at the back of the lodge.

In travelling, the lodge-poles are secured half on each side a horse, and the skins placed on transversal bars near the ends, which trail along the ground,—two or three squaws or children mounted on the same horse, or the smallest of the latter borne in the dog travées. A set of lodge-poles will last from three to seven years, unless the village is constantly on the move, when they are soon worn out in trailing over the gravelly prairie. They are usually of ash, which grows on many of the mountain creeks, and regular expeditions are undertaken when a supply is required, either for their own lodges, or for trading with those tribes who inhabit the prairies at a great distance from the locality where the poles are procured.

[Pg 145]

There are also certain creeks where the Indians resort to lay in a store of kinnik-kinnik (the inner bark of the red willow), which they use as a substitute for tobacco, and which has an aromatic and very pungent flavour. It is prepared for smoking by being scraped in thin curly flakes from the slender saplings, and crisped before the fire, after which it is rubbed between the hands into a form resembling leaf-tobacco, and stored in skin bags for use. It has a highly narcotic effect on those not habituated to its use, and produces a heaviness sometimes approaching stupefaction, altogether different from the soothing effects of tobacco.

Every year, owing to the disappearance of the buffalo from their former haunts, the Indians are compelled to encroach upon each other's hunting-grounds, which is a fruitful cause of war between the different tribes. It is a curious fact, that the buffalo retire before the whites, whilst the presence of Indians in their pastures appears in no degree to disturb them. Wherever a few white hunters are congregated in a trading port, or elsewhere, so sure it is that, if they remain in the same locality, the buffalo will desert the vicinity, and seek pasture elsewhere. In this, the Indians affirm, the wah-keitcha, or "bad medicine," of the pale-faces is very apparent; and they ground upon it their well-founded complaints of the encroachments made upon their hunting-grounds by the white hunters.

In the winter, many of the tribes are reduced to [Pg 146]the very verge of starvation—the buffalo having passed from their country into that of their enemies, when no other alternative is offered them, but to remain where they are and starve, or to follow the game into a hostile region, a move entailing war and all its horrors.

Reckless, moreover, of the future, in order to prepare robes for the traders, and to procure the pernicious fire-water, they wantonly slaughter, every year, vast numbers of buffalo cows (the skins of which sex only are dressed), and thus add to the evils in store for them. When questioned on this subject, and reproached with such want of foresight, they answer, that however quickly the

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

buffalo disappears, the Red man “goes under” more quickly still; and that the Great Spirit has ordained that both shall be “rubbed out” from the face of nature at one and the same time,—“that arrows and bullets are not more fatal to the buffalo than the small-pox and fire-water to them, and that before many winters’ snows have disappeared, the buffalo and the Red man will only be remembered by their bones, which will strew the plains.”—“They look forward, however, to a future state, when, after a long journey, they will reach the happy hunting-grounds, where buffalo will once more blacken the prairies; where the pale-faces dare not come to disturb them; where no winter snows cover the ground, and the buffalo are always plentiful and fat.”

[Pg 147]

As soon as the streams opened, La Bonté, now reduced to two animals and four traps, sallied forth again, this time seeking the dangerous country of the Blackfeet, on the head waters of the Yellow Stone and Upper Missouri. He was accompanied by three others, a man named Wheeler, and one Cross-Eagle, a Swede, who had been many years in the western country. Reaching the forks of a small creek, on both of which appeared plenty of beaver sign, La Bonté followed the left-hand one alone, whilst the others trapped the right in company, the former leaving his squaw in the company of a Sioux woman, who followed the fortunes of Cross-Eagle, the party agreeing to rendezvous at the junction of the two forks as soon as they had trapped to their heads and again descended them. The larger party were the first to reach the rendezvous, and camped on the banks of the main stream to await the arrival of La Bonté.

The morning after their return, they had just risen from their blankets, and were lazily stretching themselves before the fire, when a volley of firearms rattled from the bank of the creek, and two of their number fell dead to the ground, whilst at the same moment the deafening yells of Indians broke upon the ears of the frightened squaws. Cross-Eagle seized his rifle, and, though severely wounded, rushed to the cover of a hollow tree which stood near, and crawling into it, defended himself the whole day with the greatest obstinacy, killing [Pg 148] five Indians outright, and wounding several more. Unable to drive the gallant trapper from his retreat, the savages took advantage of a favourable wind which suddenly sprang up, and fired the long dry grass surrounding the tree. The rotten log catching fire, at length compelled the hunter to leave his retreat. Clubbing his rifle, he charged amongst the Indians, and fell at last, pierced through and through with wounds, but not until two more of his assailants had fallen by his hand.

The two squaws were carried off, and one was sold shortly afterwards to some white men at the trading ports on the Platte; but La Bonté never recovered the “Bending Reed,” nor even heard of her existence from that day. So once more was the mountaineer bereft of his better half; and when he returned to the rendezvous, a troop of wolves were feasting on the bodies of his late companions, and of the Indians killed in the affray, of which he only heard the particulars a long time after from a trapper, who had been present when one of the squaws was offered at the trading post for sale, and had heard her recount the miserable fate of her husband and his companions on the forks of the creek, which, from the fact of La Bonté being the leader of the party, has since borne his name.

Undaunted by this misfortune, the trapper continued his solitary hunt, passing through the midst of the Crow and Blackfeet country; encountering many perils, often hunted by the Indians, but always [Pg 149] escaping. He had soon loaded both his animals with beaver, and then thought of bending his steps to some of the trading rendezvous on the other side of the mountains, where

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

employés of the Great North-west Fur Company meet the trappers with the produce of their hunts, on Lewis's fork of the Columbia, or one of its numerous affluents. His intention was to pass the winter at some of the company's trading posts in Oregon, into which country he had never yet penetrated.

---

[Pg 150]

## CHAPTER V.

WE have said that La Bonté was a philosopher: he took the streaks of ill luck which checkered his mountain life with perfect carelessness, if not with stoical indifference. Nothing ruffled his danger-steeled equanimity of temper; no sudden emotion disturbed his mind. We have seen how wives were torn from him without eliciting a groan or grumble, (but such contretemps, it may be said, can scarcely find a place in the category of ills); how the loss of mules and mustangs, harried by horse-stealing Indians, left him in the ne-plus-ultra of mountain misery—"afoot;" how packs and peltries, the hard-earned "beaver" of his perilous hunts, were "raised" at one fell swoop by free-booting bands of savages. Hunger and thirst, we know, were commonplace sensations to the mountaineer. His storm-hardened flesh scarce felt the pinging wounds of arrow-point or bullet; and when in the midst of Indian fight, it is not probable that any tender qualms of feeling would allay the itching of his fingers for his enemy's scalp-lock, nor would any remains of civilised fastidiousness prevent [Pg 151]his burying his knife again and again in the life-blood of an Indian savage.

Still, in one dark corner of his heart, there shone at intervals a faint spark of what was once a fiercely-burning fire. Neither time, that corroder of all things, nor change, that ready abettor of oblivion, nor scenes of peril and excitement, which act as dampers to more quiet memories, could smother this little smouldering spark, which now and again—when rarely-coming calm succeeded some stirring passage in the hunter's life, and left him, for a brief time, devoid of care, and victim to his thoughts—would flicker suddenly, and light up all the nooks and corners of his rugged breast, and discover to his mind's eye that one deep-rooted memory clung there still, though long neglected; proving that, spite of time and change, of life and fortune, "On revient toujours à ses premiers amours."

Often and often as La Bonté sat cross-legged before his solitary camp-fire, and, pipe in mouth, watched the blue smoke curling upwards in the clear cold sky, a well-remembered form appeared to gaze upon him from the vapoury wreaths. Then would old recollections crowd before him, and old emotions, long a stranger to his breast, shape themselves, as it were, into long-forgotten but now familiar pulsations. Again he felt the soft subduing influence which once, in days gone by, a certain passion exercised over his mind and body; and often a trembling seized him, the same he used to [Pg 152]experience at the sudden sight of one Mary Brand, whose dim and dreamy apparition so often watched his lonely bed, or, unconsciously conjured up, cheered him in the dreary watches of the long and stormy winter nights.

At first he only knew that one face haunted his dreams by night, and the few moments by day when he thought of any thing, and this face smiled lovingly upon him, and cheered him mightily. Name he had quite forgotten, or recalled it vaguely, and, setting small store by it, had thought of it no more.

For many years after he had deserted his home, La Bonté had cherished the idea of again return-

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

ing to his country. During this period he had never forgotten his old flame, and many a choice fur he had carefully laid by, intended as a present for Mary Brand; and many a gâge d'amour of cunning shape and device, worked in stained quills of porcupine and bright-coloured beads—the handiwork of nimble-fingered squaws—he had packed in his possible sack for the same destination, hoping a time would come when he might lay them at her feet.

Year after year wore on, however, and still found him, with traps and rifle, following his perilous avocation; and each succeeding one saw him more and more wedded to the wild mountain-life. He was conscious how unfitted he had become again to enter the galling harness of conventionality and civilisation. He thought, too, how changed in [Pg 153]manners and appearance he now must be, and could not believe that he would again find favour in the eyes of his quondam love, who, he judged, had long since forgotten him; and inexperienced as he was in such matters, yet he knew enough of womankind to feel assured that time and absence had long since done the work, if even the natural fickleness of woman's nature had lain dormant. Thus it was that he came to forget Mary Brand, but still remembered the all-absorbing feeling she had once created in his breast, the shadow of which still remained, and often took form and feature in the smoke-wreaths of his solitary camp-fire.

If truth be told, La Bonté had his failings as a mountaineer, and—sin unpardonable in hunter law—still possessed, in holes and corners of his breast seldom explored by his inward eye, much of the leaven of kindly human nature, which now and again involuntarily peeped out, as greatly to the contempt of his comrade trappers as it was blushing repressed by the mountaineer himself. Thus, in his various matrimonial episodes, he treated his dusky sposas with all the consideration the sex could possibly demand from hand of man. No squaw of his ever humped shoulder to receive a castigatory and marital “lodge-poling” for offence domestic; but often has his helpmate blushed to see her pale-face lord and master devote himself to the feminine labour of packing huge piles of fire-wood [Pg 154]on his back, felling trees, butchering unwieldy buffalo—all which are included in the Indian category of female duties. Thus he was esteemed an excellent parti by all the marriageable young squaws of Blackfoot, Crow, and Shoshone, of Yutah, Shian, and Arapaho; but after his last connubial catastrophe, he steeled his heart against all the charms and coquetry of Indian belles, and persevered in unblest widowhood for many a long day.

From the point where we left him on his way to the waters of the Columbia, we must jump with him over a space of nearly two years, during which time he had a most uninterrupted run of good luck; trapping with great success on the head streams of the Columbia and Yellow Stone—the most dangerous of trapping ground—and finding good market for his peltries at the “North-west” posts—beaver fetching as high a price as five and six dollars a “plew”—the “golden age” of trappers, now, alas, never to return, and existing only in the fond memory of the mountaineers. This glorious time, however, was too good to last. In mountain language, “such heap of fat meat was not going to ‘shine’ much longer.”

La Bonté was at this time one of a band of eight trappers, whose hunting ground was about the head waters of the Yellow Stone, which we have before said is in the country of the Blackfeet. With him were Killbuck, Meek, Marcellin, and three others; and the leader of the party was Bill [Pg 155]Williams, that old “hard case” who had spent forty years and more in the mountains, until he had become as tough as the parflêche soles of his moccasins. They were all good men and true, expert hunters, and well-trained mountaineers. After having trapped all the streams they were

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

acquainted with, it was determined to strike into the mountains, at a point where old Williams affirmed, from the “run” of the hills, there must be plenty of water, although not one of the party had before explored the country, or knew any thing of its nature, or of the likelihood of its affording game for themselves or pasture for their animals. However, they packed their peltry, and put out for the land in view—a lofty peak, dimly seen above the more regular summit of the chain, being their landmark.

For the first day or two their route lay between two ridges of mountains, and by following the little valley which skirted a creek, they kept on level ground, and saved their animals considerable labour and fatigue. Williams always rode ahead, his body bent over his saddle-horn, across which rested a long heavy rifle, his keen gray eyes peering from under the slouched brim of a flexible felt-hat, black and shining with grease. His buckskin hunting-shirt, bedaubed until it had the appearance of polished leather, hung in folds over his bony carcass; his nether extremities being clothed in pantaloons of the same material (with scattered fringes down the outside of the leg—which ornaments, [Pg 156]however, had been pretty well thinned to supply “whangs” for mending moccasins or pack-saddles), which, shrunk with wet, clung tightly to his long, spare, sinewy legs. His feet were thrust into a pair of Mexican stirrups made of wood, and as big as coal-scuttles; and iron spurs of incredible proportions, with tinkling drops attached to the rowels, were fastened to his heel—a bead-worked strap, four inches broad, securing them over the instep. In the shoulder-belt which sustained his powder-horn and bullet-pouch, were fastened the various instruments essential to one pursuing his mode of life. An awl, with deer-horn handle, and the point defended by a case of cherry-wood carved by his own hand, hung at the back of the belt, side by side with a worm for cleaning the rifle; and under this was a squat and quaint-looking bullet-mould, the handles guarded by strips of buckskin to save his fingers from burning when running balls, having for its companion a little bottle made from the point of an antelope’s horn, scraped transparent, which contained the “medicine” used in baiting the traps. The old coon’s face was sharp and thin, a long nose and chin hob-nobbing each other; and his head was always bent forward giving him the appearance of being hump-backed. He appeared to look neither to the right nor left, but, in fact, his little twinkling eye was everywhere. He looked at no one he was addressing, always seeming to be thinking of something else than the subject of his [Pg 157] discourse, speaking in a whining, thin, cracked voice, and in a tone that left the hearer in doubt whether he was laughing or crying. On the present occasion he had joined this band, and naturally assumed the leadership (for Bill ever refused to go in harness), in opposition to his usual practice, which was to hunt alone. His character was well known. Acquainted with every inch of the Far West, and with all the Indian tribes who inhabited it, he never failed to outwit his Red enemies, and generally made his appearance at the rendezvous, from his solitary expeditions, with galore of beaver, when numerous bands of trappers dropped in on foot, having been despoiled of their packs and animals by the very Indians through the midst of whom old Williams had contrived to pass unseen and unmolested. On occasions when he had been in company with others, and attacked by Indians, Bill invariably fought manfully, and with all the coolness that perfect indifference to death or danger could give, but always “on his own hook.” His rifle cracked away merrily, and never spoke in vain; and in a charge—if ever it came to that—his keen-edged butcher-knife tickled the fleece of many a Blackfoot. But at the same time, if he saw that discretion was the better part of valour, and affairs wore so cloudy an aspect as to render retreat advisable, he

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

would first express his opinion in curt terms, and decisively, and, charging up his rifle, would take himself off and “câche” [25] so [Pg 158]effectually that to search for him was utterly useless. Thus, when with a large party of trappers, when any thing occurred which gave him a hint that trouble was coming, or more Indians were about than he considered good for his animals, Bill was wont to exclaim—

“Do ‘ee hyar now, boys, thar’s sign about? this hos feels like caching;” and, without more words, and stoically deaf to all remonstrances, he would forthwith proceed to pack his animals, talking the while to an old, crop-eared, raw-boned Nez-percé pony, his own particular saddle-horse, who in dogged temper and iron hardiness, was a worthy companion of his self-willed master. This beast, as Bill seized his apishamore to lay upon its galled back, would express displeasure by humping its back and shaking its withers with a wincing motion, that always excited the ire of the old trapper; and no sooner had he laid the apishamore smoothly on the chafed skin, than a wriggle of the animal shook it off.

“Do ‘ee hyar now, you darned crittur?” he would whine out, “can’t ‘ee keep quiet your old fleece now? Isn’t this old coon putting out to save ‘ee from the darned Injuns now, do ‘ee hyar?” And then, continuing his work and taking no notice of his comrades, who stood by bantering the eccentric old trapper, he would soliloquise—“Do ‘ee hyar, now? This niggur sees sign ahead—he does; he’ll be afoot afore long, if he don’t keep his eye skinned,—he [Pg 159]will. Injuns is all about, they ar’: Blackfoot at that. Can’t come round this child—they can’t, wagh!” And at last, his pack animals securely tied to the tail of his horse, he would mount, and throwing the rifle across the horn of his saddle, and without noticing his companions, would drive the jingling spurs into his horse’s gaunt sides, and muttering, “Can’t come round this child—they can’t!” would ride away; and nothing more would be seen or heard of him perhaps for months, when they would not unfrequently, themselves bereft of animals in the scrape he had foreseen, find him located in some solitary valley, in his lonely camp, with his animals securely picketed around, and his peltries safe. However, if he took it into his head to keep company with a party, all felt perfectly secure under his charge. His iron frame defied fatigue, and, at night, his love for himself and his own animals was sufficient guarantee that the camp would be well guarded. As he rode ahead, his spurs jingling, and thumping the sides of his old horse at every step, he managed, with admirable dexterity, to take advantage of the best line of country to follow—avoiding the gullies and cañons and broken ground, which would otherwise have impeded his advance. This tact appeared instinctive, for he looked neither right nor left, whilst continuing a course as straight as possible at the foot of the mountains. In selecting a camping site, he displayed equal skill: wood, water, and grass began to fill his thoughts towards [Pg 160]sundown, and when these three requisites for a camping ground presented themselves, old Bill sprang from his saddle, unpacked his animals in a twinkling, and hobbled them, struck fire and ignited a few chips (leaving the rest to pack in the wood), lit his pipe, and enjoyed himself. On one occasion, when passing through the valley, they had come upon a band of fine buffalo cows, and, shortly after camping, two of the party rode in with a good supply of fat fleece. One of the party was a “greenhorn” on his first hunt, fresh from a fort on Platte, and as yet uninitiated in the mysteries of mountain cooking. Bill, lazily smoking his pipe, called to him, as he happened to be nearest, to butcher off a piece of meat and put it in his pot. Markhead seized the fleece, and commenced innocently carving off a huge ration, when a gasping roar from the old trapper caused him to drop his knife.

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

“Ti-ya,” growled Bill, “do ‘ee hyar, now, you darned greenhorn, do ‘ee spile fat cow like that whar you was raised? Them doins wont shine in this crowd, boy, do ‘ee hyar, darned you? What! butcher meat across the grain! why, whar’ll the blood be goin’ to, you precious Spaniard? Down the grain, I say,” he continued in a severe tone of rebuke, “and let your flaps be long, or out the juice’ll run slick—do ‘ee hyar, now?” But this heretical error nearly cost the old trapper his appetite, and all night long he grumbled his horror at seeing “fat cow spiled in that fashion.”

[Pg 161]

When two or three days’ journey brought them to the end of the valley, and they commenced the passage of the mountain, their march was obstructed by all kinds of obstacles; although they had chosen what appeared to be a gap in the chain, and what was in fact the only practicable passage in that vicinity. They followed the cañon of a branch of the Yellow Stone, where it entered the mountain; but from this point it became a torrent, and it was only by dint of incredible exertions that they reached the summit of the ridge. Game was exceedingly scarce in the vicinity, and they suffered extremely from hunger, having, on more than one occasion, recourse to the parflèche soles of their moccasins to allay its pangs. Old Bill, however, never grumbled; he chewed away at his shoes with relish even, and as long as he had a pipeful of tobacco in his pouch, was a happy man. Starvation was as yet far off, for all their animals were in existence; but as they were in a country where it was difficult to procure a remount, each trapper hesitated to sacrifice one of his horses to his appetite.

From the summit of the ridge, Bill recognised the country on the opposite side to that whence they had just ascended as familiar to him, and pronounced it to be full of beaver, as well as abounding in the less desirable commodity of Indians. This was the valley lying about the lakes now called Eustis and Biddle, in which are many thermal and mineral springs, well known to the trappers by the names [Pg 162]of the Soda, Beer, and Brimstone Springs, and regarded by them with no little awe and curiosity, as being the breathing-places of his Satanic majesty—considered, moreover, to be the “biggest kind” of “medicine” to be found in the mountains. If truth be told, old Bill hardly relished the idea of entering this country, which he pronounced to be of “bad medicine” notoriety, but nevertheless agreed to guide them to the best trapping ground.

One day they reached a creek full of beaver sign, and determined to halt here and establish their headquarters, while they trapped in the neighbourhood. We must here observe, that at this period—which was one of considerable rivalry amongst the various trading companies in the Indian territory—the Indians, having become possessed of arms and ammunition in great quantities, had grown unusually daring and persevering in their attacks on the white hunters who passed through their country, and consequently the trappers were compelled to roam about in larger bands for mutual protection, which, although it made them less liable to open attack, yet rendered it more difficult for them to pursue their calling without being discovered; for, where one or two men might pass unseen, the broad trail of a large party, with its animals, was not likely to escape the sharp eyes of the cunning savages.

They had scarcely encamped when the old leader, who had sallied out a short distance from camp to [Pg 163]reconnoitre the neighbourhood, returned with an Indian moccasin in his hand, and informed his companions that its late owner and others were about.

“Do ‘ee hyar now, boys, thar’s Injuns knocking round, and Blackfoot at that; but thar’s plenty of beaver too, and this child means trapping any how.”

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

His companions were anxious to leave such dangerous vicinity; but the old fellow, contrary to his usual caution, determined to remain where he was—saying that there were Indians all over the country for that matter; and as they had determined to hunt here, he had made up his mind too—which was conclusive, and all agreed to stop where they were, in spite of the Indians. La Bonté killed a couple of mountain sheep close to camp, and they feasted rarely on the fat mutton that night, and were unmolested by marauding Blackfeet.

The next morning, leaving two of their number in camp, they started in parties of two, to hunt for beaver sign and set their traps. Markhead paired with one Batiste, Killbuck and La Bonté formed another couple, Meek and Marcellin another; two Canadians trapped together, and Bill Williams and another remained to guard the camp: but this last, leaving Bill mending his moccasins, started off to kill a mountain sheep, a band of which animals was visible.

Markhead and his companion, the first couple on the list, followed a creek, which entered that on [Pg 164] which they had encamped, about ten miles distant. Beaver sign was abundant, and they had set eight traps, when Markhead came suddenly upon fresh Indian sign, where squaws had passed through the shrubbery on the banks of the stream to procure water, as he knew from observing a large stone placed by them in the stream, on which to stand to enable them to dip their kettles in the deepest water. Beckoning to his companion to follow, and cocking his rifle, he carefully pushed aside the bushes, and noiselessly proceeded up the bank, when, creeping on hands and knees, he gained the top, and, looking from his hiding-place, descried three Indian huts standing on a little plateau near the creek. Smoke curled from the roofs of branches, but the skin doors were carefully closed, so that he was unable to distinguish the number of the inmates. At a little distance, however, he observed two or three squaws gathering wood, with the usual attendance of curs, whose acuteness in detecting the scent of strangers was much to be dreaded. Markhead was a rash and daring young fellow, caring no more for Indians than he did for prairie dogs, and acting ever on the spur of the moment, and as his inclination dictated, regardless of consequences. He at once determined to enter the lodges, and attack the enemy, should any be there; and the other trapper was fain to join him in the enterprise. The lodges proved empty, but the fires were still burning, and meat cooking upon them, to which [Pg 165] the hungry hunters did ample justice, besides helping themselves to whatever goods and chattels, in the shape of leather and moccasins, took their fancy.

Gathering their spoil into a bundle, they sought their horses, which they had left tied under cover of the timber on the banks of the creek; and, mounting, took the back trail, to pick up their traps and remove from so dangerous a neighbourhood. They were approaching the spot where the first trap was set, a thick growth of ash and quaking-ash concealing the stream, when Markhead, who was riding ahead, observed the bushes agitated, as if some animal was making its way through them. He instantly stopped his horse, and his companion rode to his side, to inquire the cause of this abrupt halt. They were within a few yards of the belt of shrubs which skirted the stream; and before Markhead had time to reply, a dozen swarthy heads and shoulders suddenly protruded from the leafy screen, and as many rifle-barrels and arrows were pointing at their breasts. Before the trappers had time to turn their horses and fly, a cloud of smoke burst from the thicket almost in their faces. Batiste, pierced with several balls, fell dead, and Markhead felt himself severely wounded. However, he struck the spurs into his horse; and as some half-score Blackfeet jumped with loud cries from their cover, he discharged his rifle amongst them, and galloped off, a volley

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

of balls and arrows [Pg 166]whistling after him. He drew no bit until he reined up at the camp-fire, where he found Bill quietly dressing a deer-skin. That worthy looked up from his work; and seeing Markhead's face streaming with blood, and the very unequivocal evidence of an Indian rencontre in the shape of an arrow sticking in his back, he asked,—“Do 'ee feel bad now, boy? Whar away you see them darned Blackfoot?”

“Well, pull this arrow out of my back, and may be I'll feel like telling,” answered Markhead.

“Do 'ee hyar now! hold on till I've grained this cussed skin, will 'ee! Did 'ee ever see sich a darned pelt, now? it won't take the smoke any how I fix it.” And Markhead was fain to wait the leisure of the imperturbable old trapper, before he was eased of his annoying companion.

Old Bill expressed no surprise or grief when informed of the fate of poor Batiste. He said it was “just like greenhorns, runnin' into them cussed Blackfoot;” and observed that the defunct trapper, being only a Vide-pôche, was “no account anyhow.” Presently Killbuck and La Bonté galloped into camp, with another alarm of Indians. They had also been attacked suddenly by a band of Blackfeet, but, being in a more open country, had got clear off, after killing two of their assailants, whose scalps hung at the horns of their saddles. They had been in a different direction to that in which Markhead and his companion had proceeded, and, from the signs they had observed, expressed their belief that the [Pg 167]country was alive with Indians. Neither of these men had been wounded. Presently the two Canadians made their appearance on the bluff, galloping with might and main to camp, and shouting “Indians, Indians,” as they came. All being assembled, and a council held, it was determined to abandon the camp and neighbourhood immediately. Old Bill was already packing his animals, and as he pounded the saddle down on the withers of his old Rosinante, he muttered,—“Do 'ee hyar, now! this coon 'ull câche, he will.” So mounting his horse, and leading his pack mule by a lariat, he bent over his saddle-horn, dug his ponderous rowels into the lank sides of his beast, and, without a word, struck up the bluff and disappeared.

The others, hastily gathering up their packs, and most of them having lost their traps, quickly followed his example, and “put out.” On cresting the high ground which rose from the creek, they observed thin columns of smoke mounting into the air from many different points, the meaning of which they were at no loss to guess. However they were careful not to show themselves on elevated ground, keeping as much as possible under the banks of the creek, when such a course was practicable; but, the bluffs sometimes rising precipitously from the water, they were more than once compelled to ascend the banks, and continue their course along the uplands, whence they might easily be discovered by the Indians. It was nearly sundown [Pg 168]when they left their camp, but they proceeded during the greater part of the night at as rapid a rate as possible; their progress, however, being greatly retarded as they advanced into the mountain, their route lying up stream. Towards morning they halted for a brief space, but started again as soon as daylight permitted them to see their way over the broken ground.

The creek now forced its way through a narrow cañon, the banks being thickly clothed with a shrubbery of cottonwood and quaking-ash. The mountain rose on each side, but not abruptly, being here and there broken into plateaus and shelving prairies. In a very thick bottom, sprinkled with coarse grass, they halted about noon, and removed the saddles and packs from their wearied animals, picketing them in the best spots of grass.

La Bonté and Killbuck, after securing their animals, left the camp to hunt, for they had no provisions of any kind; and a short distance beyond it, the former came suddenly upon a recent moc-

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

casin track in the timber. After examining it for a moment, he raised his head with a broad grin, and, turning to his companion, pointed into the cover, where, in the thickest part, they discerned the well-known figure of old Bill's horse, browsing upon the cherry bushes. Pushing through the thicket in search of the brute's master, La Bonté suddenly stopped short as the muzzle of a rifle-barrel gaped [Pg 169]before his eyes at the distance of a few inches, whilst the thin voice of Bill muttered—

“Do ‘ee hyar now, I was nigh giving ‘ee h——: I was now. If I didn't think ‘ee was Blackfoot, I'm dogged now.” And not a little indignant was the old fellow that his c ache had been so easily, though accidentally, discovered. However, he presently made his appearance in camp, leading his animals, and once more joined his late companions, not deigning to give any explanation as to why or wherefore he had deserted them the day before, merely muttering, “do ‘ee hyar now, thar's trouble comin.”

The two hunters returned after sundown with a black-tailed deer; and after eating the better part of the meat, and setting a guard, the party were glad to roll in their blankets and enjoy the rest they so much needed. They were undisturbed during the night; but at dawn of day the sleepers were roused by a hundred fierce yells, from the mountains enclosing the creek on which they had encamped. The yells were instantly followed by a ringing volley, the bullets thudding into the trees, and cutting the branches near them, but without causing any mischief. Old Bill rose from his blanket and shook himself, and exclaimed “Wagh!” as at that moment a ball plumped into the fire over which he was standing, and knocked the ashes about in a cloud. All the mountaineers seized their [Pg 170]rifles and sprang to cover; but as yet it was not sufficiently light to show them their enemy, the bright flashes from the guns alone indicating their position. As morning dawned, however, they saw that both sides of the ca on were occupied by the Indians; and, from the firing, judged there must be at least a hundred warriors engaged in the attack. Not a shot had yet been fired by the trappers, but as the light increased, they eagerly watched for an Indian to expose himself, and offer a mark to their trusty rifles. La Bont , Killbuck, and old Bill, lay a few yards distant from each other, flat on their faces, near the edge of the thicket, their rifles raised before them, and the barrels resting in the forks of convenient bushes. From their place of concealment to the position of the Indians—who, however, were scattered here and there, wherever a rock afforded them cover—was a distance of about a hundred and fifty yards, or within fair rifle-shot. The trappers were obliged to divide their force, since both sides of the creek were occupied; but, such was the nature of the ground, and the excellent cover afforded by the rocks and boulders, and clumps of dwarf pine and hemlock, that not a hand's-breadth of an Indian's body had yet been seen. Nearly opposite La Bont , a shelving glade in the mountain side ended in an abrupt precipice, and at the very edge, and almost toppling over it, were several boulders, just of sufficient size to afford cover to a man's body. As [Pg 171]this bluff overlooked the trappers' position, it was occupied by the Indians, and every rock covered an assailant. At one point, just over where La Bont  and Killbuck were lying, two boulders lay together, with just sufficient interval to admit a rifle-barrel between them, and from this breas-twork an Indian kept up a most annoying fire. All his shots fell in dangerous propinquity to one or other of the trappers, and already Killbuck had been grazed by one better directed than the others. La Bont  watched for some time in vain for a chance to answer this persevering marksman, and at length an opportunity offered, by which he was not long in profiting.

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

The Indian, as the light increased, was better able to discern his mark, and fired, and yelled every time he did so, with redoubled vigour. In his eagerness, and probably whilst in the act of taking aim, he leaned too heavily against the rock which covered him, and, detaching it from its position, down it rolled into the cañon, exposing his body by its fall. At the same instant, a wreath of smoke puffed from the bushes which concealed the trappers, and the crack of La Bonté's rifle spoke the first word of reply to the Indian challenge. A few feet behind the rock, fell the dead body of the Indian, rolling down the steep sides of the cañon, and only stopped by a bush at the very bottom, within a few yards of the spot where Markhead lay concealed in some high grass.

[Pg 172]

That daring fellow instantly jumped from his cover, and drawing his knife, rushed to the body, and in another moment held aloft the Indian's scalp, giving, at the same time, a triumphant whoop. A score of rifles were levelled and discharged at the intrepid mountaineer; but in the act many Indians incautiously exposed themselves, every rifle in the timber cracked simultaneously, and for each report an Indian bit the dust.

Now, however, they changed their tactics. Finding they were unable to drive the trappers from their position, they retired from the mountain, and the firing suddenly ceased. In their retreat they were forced to expose themselves, and again the whites dealt destruction amongst them. As the Indians retired, yelling loudly, the hunters thought they had given up the contest; but presently a cloud of smoke rising from the bottom immediately below them, at once discovered the nature of their plans. A brisk wind was blowing up the cañon; and, favoured by it, they fired the brush on the banks of the stream, knowing that before this the hunters must speedily retreat. Against such a result, but for the gale of wind which drove the fire roaring before it, they could have provided—for your mountaineer never fails to find resources on a pinch. They would have fired the brush to leeward of their position, and also carefully ignited that to windward, or between them and the advancing flame, extinguishing it [Pg 173]immediately when a sufficient space had thus been cleared, over which the flame could not leap, and thus cutting themselves off from it both above and below their position. In the present instance they could not profit by such a course, as the wind was so strong that, if once the bottom caught fire, they would not be able to extinguish it; besides which, in the attempt, they would so expose themselves that they would be picked off by the Indians without difficulty. As it was, the fire came roaring before the wind with the speed of a race-horse, and, spreading from the bottom, licked the mountain sides, the dry grass burning like tinder. Huge volumes of stifling smoke rolled before it, and, in a very few minutes, the trappers were hastily mounting their animals, driving the packed ones before them. The dense clouds of smoke concealed every thing from their view, and, to avoid this, they broke from the creek and galloped up the sides of the cañon on to the more level plateau. As they attained this, a band of mounted Indians charged them. One, waving a red blanket, dashed through the cañallada, and was instantly followed by all the loose animals of the trappers, the rest of the Indians pursuing with loud shouts. So sudden was the charge, that the whites had not power to prevent the stampede. Old Bill, as usual, led his pack mules by the lariat; but the animals, mad with terror at the shouts of the Indians, broke from him, nearly pulling him out of his seat at the same time.

[Pg 174]

To cover the retreat of the others with their prey, a band of mounted Indians now appeared, threatening an attack in front, whilst their first assailants, rushing from the bottom, at least a

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

hundred strong, assaulted in rear. "Do 'ee hyar, boys!" shouted old Bill, "break, or you'll go under. This child's goin' to c ache!" and saying the word, off he went. *Sauve-qui-peut* was the order of the day, and not a moment too soon, for overwhelming numbers were charging upon them, and the mountain resounded with savage yells. La Bont  and Killbuck stuck together: they saw old Bill, bending over his saddle, dive right into the cloud of smoke, and apparently make for the creek bottom—their other companions scattering each on his own hook, and saw no more of them for many a month; and thus was one of the most daring and successful bands broken up that ever trapped in the mountains of the Far West.

It is painful to follow the steps of the poor fellows who, thus despoiled of the hardly-earned produce of their hunt, saw all their wealth torn from them at one swoop. The two Canadians were killed upon the night succeeding that of the attack. Worn with fatigue, hungry and cold, they had built a fire in what they thought was a secure retreat, and, rolled in their blankets, were soon buried in a sleep from which they never awoke. An Indian boy tracked them, and watched their camp. Burning with the idea of signalling himself thus early, he awaited his [Pg 175] opportunity, and noiselessly approaching their resting-place, shot them both with arrows, and returned in triumph to his people with their horses and scalps.

La Bont  and Killbuck sought a passage in the mountain by which to cross over to the head waters of the Columbia, and there fall in with some of the traders or trappers of the North-west. They became involved in the mountains, in a part where was no game of any description, and no pasture for their miserable animals. One of these they killed for food; the other, a bag of bones, died from sheer starvation. They had very little ammunition, their moccasins were worn out, and they were unable to procure skins to supply themselves with fresh ones. Winter was fast approaching; the snow already covered the mountains; and storms of sleet and hail poured incessantly through the valleys, benumbing their exhausted limbs, hardly protected by scanty and ragged covering. To add to their miseries, poor Killbuck was taken ill. He had been wounded in the groin by a bullet some time before, and the ball still remained. The wound, aggravated by walking and the excessive cold, assumed an ugly appearance, and soon rendered him incapable of sustained exertion, all motion even being attended with intolerable pain. La Bont  had made a shanty for his suffering companion, and spread a soft bed of pine branches for him, by the side of a small creek at the point where it came out of the mountain [Pg 176] and followed its course through a little prairie. They had been three days without other food than a piece of *parfl che*, which had formed the back of La Bont 's bullet-pouch, and which, after soaking in the creek, they eagerly devoured. Killbuck was unable to move, and sinking fast from exhaustion. His companion had hunted from morning till night, as well as his failing strength would allow him, but had not seen the traces of any kind of game, with the exception of some old buffalo tracks, made apparently months before by a band of bulls crossing the mountain.

The morning of the fourth day La Bont , as usual, rose at daybreak from his blanket, and was proceeding to collect wood for the fire during his absence while hunting, when Killbuck called to him, and in an almost inarticulate voice desired him to seat himself by his side.

"Boy," he said, "this old hos feels like goin' under, and that afore long. You're stout yet, and if thar was meat handy, you'd come round slick. Now, boy, I'll be under, as I said, afore many hours, and if you don't raise meat you'll be in the same fix. I never eat dead meat [26] myself, and wouldn't ask no one to do it neither; but meat fair killed is meat any way; so, boy, put your knife in this old

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

niggur's lights, and help yourself. It's 'poor bull,' I know, but maybe it'll do to keep life in; and [Pg 177]along the fleece thar's meat yet, and maybe my old hump ribs has picking on 'em."

"You're a good old hos," answered La Bonté, "but this child ain't turned niggur yet."

Killbuck then begged his companion to leave him to his fate, and strive himself to reach game; but this alternative La Bonté likewise generously refused, and faintly endeavouring to cheer the sick man, left him once again to look for game. He was so weak that he felt difficulty in supporting himself, and knowing how futile would be his attempts to hunt, he sallied from the camp convinced that a few hours more would see the last of him.

He had scarcely raised his eyes, when, hardly crediting his senses, he saw within a few hundred yards of him an old bull, worn with age, lying on the prairie. Two wolves were seated on their haunches before him, their tongues lolling from their mouths, whilst the buffalo was impotently rolling his ponderous head from side to side, his blood-shot eyes glaring fiercely at his tormentors, and flakes of foam, mixed with blood, dropping from his mouth over his long shaggy beard. La Bonté was transfixed; he scarcely dared to breathe, lest the animal should be alarmed and escape. Weak as it was, he could hardly have followed it, and, knowing that his own and companion's life hung upon the success of his shot, he scarcely had strength to raise his rifle. By dint of extraordinary exertions and precautions, which were totally unnecessary, for the poor old [Pg 178] bull had not a move in him, the hunter approached within shot. Lying upon the ground, he took a long steady aim, and fired. The buffalo raised its matted head, tossed it wildly for an instant, and, stretching out its limbs convulsively, turned over on its side and was dead.

Killbuck heard the shot, and crawling from under the little shanty which covered his bed, saw, to his astonishment, La Bonté in the act of butchering a buffalo within two hundred yards of camp. "Hurraw for you!" he faintly exclaimed; and exhausted by the exertion he had used, and perhaps by the excitement of an anticipated feast, fell back and fainted.

However, the killing was the easiest matter, for when the huge carcass lay dead upon the ground, our hunter had hardly strength to drive the blade of his knife through the tough hide of the old patriarch. Then having cut off as much of the meat as he could carry, eating the while sundry portions of the liver, which he dipped in the gall-bladder by way of relish, La Bonté cast a wistful look upon the half-starved wolves, who now loped round and round, licking their chops, only waiting until his back was turned to fall to with appetite equal to his own, and capabilities of swallowing and digesting far superior. La Bonté looked at the buffalo and then at the wolves, levelled his rifle and shot one dead, at which the survivor scampered off without delay.

Arrived at camp, packing in a tolerable load of [Pg 179]the best part of the animal—for hunger lent him strength—he found poor Killbuck lying on his back, deaf to time, and to all appearance gone under. Having no salvolatile or vinaigrette at hand, La Bonté flapped a lump of raw fleece into his patient's face, and this instantly revived him. Then taking the sick man's shoulder, he raised him tenderly into a sitting posture, and invited, in kindly accents, "the old hos to feed," thrusting at the same time a tolerable slice of liver into his hand, which the patient looked at wistfully and vaguely for a few short moments, and then greedily devoured. It was nightfall by the time that La Bonté, assisted by many intervals of hard eating, packed in the last of the meat, which formed a goodly pile around the fire.

"Poor bull" it was in all conscience: the labour of chewing a mouthful of the "tender loin" was equal to a hard day's hunt; but to them, poor starved fellows, it appeared the richest of meat. They

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

still preserved a small tin pot, and in this, by stress of eternal boiling, La Bonté contrived to make some strong soup, which soon restored his sick companion to marching order. For himself, as soon as a good meal had filled him, he was strong as ever, and employed himself in drying the remainder of the meat for future use. Even the wolf, bony as he was, was converted into meat, and rationed them several days. Winter, however, had set in with such severity, and Killbuck was still so weak, that [Pg 180]La Bonté determined to remain in his present position until spring, as he now found that buffalo frequently visited the valley, as it was more bare of snow than the lowlands, and afforded them better pasture; and one morning he had the satisfaction of seeing a band of seventeen bulls within long rifle-shot of the camp, out of which four of the fattest were soon laid low by his rifle.

They still had hard times before them, for towards spring the buffalo again disappeared; the greater part of their meat had been spoiled, owing to there not being sufficient sun to dry it thoroughly; and when they resumed their journey they had nothing to carry with them, and had a desert before them without game of any kind. We pass over what they suffered. Hunger and thirst were their portion, and Indians assaulted them at times, and many miraculous and hair-breadth escapes they had from these enemies.

---

[Pg 181]

## CHAPTER VI.

THE trail to Oregon, followed by traders and emigrants, crosses the Rocky Mountains at a point known as the South Pass, where a break in the chain occurs of such moderate and gradual elevation, as to permit the passage of waggons with tolerable facility. The Sweet Water Valley runs nearly to the point where the dividing ridge of the Pacific and Atlantic waters throws off its streams to their respective oceans. At one end of this valley, and situated on the right bank of the Sweet Water, a huge isolated mass of granitic rock rises to the height of three hundred feet, abruptly from the plain. On the smooth and scarped surface presented by one of its sides, are rudely carved the names and initials of traders, trappers, travellers, and emigrants, who have here recorded the memorial of their sojourn in the remote wilderness of the Far West. The face of the rock is covered with names familiar to the mountaineers as those of the most renowned of their hardy brotherhood; while others again occur, better known to the science and literature of the Old World than to the unlearned trappers of the Rocky Mountains. The huge mass [Pg 182]is a well-known landmark to the Indians and mountaineers; and travellers and emigrants hail it as the half-way beacon between the frontiers of the United States and the still distant goal of their long and perilous journey.

It was a hot sultry day in July. Not a breath of air relieved the intense and oppressive heat of the atmosphere, unusual here, where pleasant summer breezes, and sometimes stronger gales, blow over the elevated plains with the regularity of trade-winds. The sun, at its meridian height, struck the dry sandy plain and parched the drooping buffalo-grass on its surface, and its rays, refracted and reverberating from the heated ground, distorted every object seen through its lurid medium. Straggling antelope, leisurely crossing the adjoining prairie, appeared to be gracefully moving in mid-air; whilst a scattered band of buffalo bulls loomed huge and indistinct in the vapoury distance. In the timbered valley of the river, deer and elk were standing motionless in the water, under the shade of the overhanging cottonwoods, seeking a respite from the persevering attacks

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

of swarms of horse-flies and musquitos; and now and then a heavy splash was heard, as they tossed their antlered heads into the stream, to free them from the venomous insects that buzzed incessantly about them. In the sandy prairie, beetles of an enormous size were rolling in every direction huge balls of earth, pushing them with their hind legs with comical perseverance; [Pg 183]cameleons darted about, assimilating the hue of their grotesque bodies with the colour of the sand: groups of prairie-dog houses were seen, each with its inmate barking lustily on the roof; whilst under cover of nearly every bush of sage or cactus a rattlesnake lay glittering in lazy coil. Tantalising the parched sight, the neighbouring peaks of the lofty Wind River Mountains glittered in a mantle of sparkling snow, whilst Sweet Water Mountain, capped in cloud, looked gray and cool, in striking contrast to the burned up plains which lay basking at its foot.

Resting their backs against the rock (on which, we have said, are now carved the names of many travellers), and defended from the powerful rays of the sun by its precipitous sides, two white men quietly slept. They were gaunt and lantern-jawed, and clothed in tattered buckskin. Each held a rifle across his knees, but—strange sight in this country—one had its pan thrown open, which was rust-eaten and contained no priming; the other's hammer was without a flint. Their faces were as if covered with mahogany-coloured parchment; their eyes were sunken; and as their jaws fell listlessly on their breasts, their cheeks were hollow, with the bones nearly protruding from the skin. One was in the prime of manhood, with handsome features; the other, considerably past middle age, was stark and stern. Months of dire privation had brought them to this pass. The elder of the two [Pg 184]was Killbuck, of mountain fame; the other was hight La Bonté.

The former opened his eyes, and saw the buffalo feeding on the plain. "Ho, boy," he said, touching his companion, "thar's meat a-runnin'."

La Bonté looked in the direction the other pointed, stood up, and hitching round his pouch and powder-horn, drew the stopper from the latter with his teeth, and placing the mouth in the palm of his left hand, turned the horn up and shook it.

"Not a grain," he said—"not a grain, old hos."

"Wagh!" exclaimed the other, "we'll have to eat afore long," and rising, walked into the prairie. He had hardly stepped two paces, when, passing close to a sage bush, a rattlesnake whizzed a note of warning with its tail. Killbuck grinned, and taking the wiping-stick from his rifle-barrel, tapped the snake on the head, and, taking it by the tail, threw it to La Bonté, saying, "hyar's meat, any how." The old fellow followed up his success by slaying half-a-dozen more, and brought them in skewered through the head on his wiping-stick. A fire was soon kindled, and the snakes roasting before it; when La Bonté, who sat looking at the buffalo which fed close to the rock, suddenly saw them raise their heads, snuff the air, and scamper towards him. A few minutes afterwards a huge shapeless body loomed in the refracted air, approaching the spot where the buffalo had been grazing [Pg 185]The hunters looked at it and then at each other, and ejaculated "Wagh!" Presently a long white mass showed more distinctly, followed by another, and before each was a string of animals.

"Waggons, by hos and beaver! Hurrah for Conostoga!" exclaimed the trappers in a breath, as they now observed two white-tilted waggons, drawn by several pairs of mules, approaching the very spot where they sat. Several mounted men were riding about the waggons, and two on horseback, in advance of all, were approaching the rock, when they observed the smoke curling from the hunters' fire. They halted at sight of this, and one of the two, drawing a long instrument from a

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

case, which Killbuck voted a rifle, directed it towards them for a moment, and then, lowering it, again moved forward.

As they drew near, the two poor trappers, although half-dead with joy, still retained their seats with Indian gravity and immobility of feature, turning now and then the crackling snakes which lay on the embers of the fire. The two strangers approached. One, a man of some fifty years of age, of middle height and stoutly built, was clad in a white shooting-jacket, of cut unknown in mountain tailoring, and a pair of trousers of the well-known material called "shepherd's plaid;" a broad-brimmed Panama shaded his face, which was ruddy with health and exercise; a belt round the waist supported a handsome bowie-knife, and a double-barrelled [Pg 186]fowling-piece was slung across his shoulder.

His companion was likewise dressed in a light shooting-jacket, of many pockets and dandy cut, rode on an English saddle and in boots, and was armed with a superb double rifle, glossy from the case, and bearing few marks of use or service. He was a tall, fine-looking fellow of thirty, with light hair and complexion; a scrupulous beard and mustache; a wide-awake hat, with a short pipe stuck in the band, not very black with smoke; an elaborate powder-horn over his shoulder, with a Cairngorm in the butt as large as a plate; a blue handkerchief tied round his throat in a sailor's knot, and the collar of his shirt turned carefully over it. He had, moreover, a tolerable idea of his very correct appearance, and wore Woodstock gloves.

The trappers looked at them from head to foot, and the more they looked, the less could they make them out.

"H—!" exclaimed La Bonté emphatically.

"This beats grainin' bull-hide slick," broke from Killbuck as the strangers reined up at the fire, the younger dismounting, and staring with wonder at the weather-beaten trappers.

"Well, my men, how are you?" he rattled out. "Any game here? By Jove!" he suddenly exclaimed, seizing his rifle, as at that moment a large buzzard, the most unclean of birds, flew into the top-most branch of a cottonwood, and sat, a tempting [Pg 187]shot. "By Jove, there's a chance!" cried the mighty hunter; and, bending low, started off to approach the unwary bird in the most approved fashion of northern deer-stalkers. The buzzard sat quietly, and now and then stretched its neck to gaze upon the advancing sportsman, who on such occasions threw himself flat on the ground, and remained motionless, in dread of alarming the bird. It was worth while to look at the countenance of old Killbuck, as he watched the antics of the "bourgeois" hunter. He thought at first that the dandy rifleman had really discovered game in the bottom, and was nothing loth that there was a chance of his seeing meat; but when he understood the object of such manœuvres, and saw the quarry the hunter was so carefully approaching, his mouth grinned from ear to ear, and, turning to La Bonté, he said, "Wagh! he's some—he is!"

Nothing doubting, however, the stranger approached the tree on which the bird was sitting, and, getting well under it, raised his rifle and fired. Down tumbled the bird; and the successful hunter, with a loud shout, rushed frantically towards it, and bore it in triumph to the camp, earning the most sovereign contempt from the two trappers by the achievement.

The other stranger was a quieter character. He, too, smiled as he witnessed the exultation of his younger companion, (whose horse, by the way, was [Pg 188]scampering about the plain), and spoke kindly to the mountaineers, whose appearance was clear evidence of the sufferings they had endured. The snakes by this time were cooked, and the trappers gave their new acquaintances

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

the never-failing invitation to “sit and eat.” When the latter, however, understood what the viands were, their looks expressed the horror and disgust they felt.

“Good God!” exclaimed the elder, “you surely cannot eat such disgusting food?”

“This niggur doesn’t savy what disgustin is,” gruffly answered Killbuck; “but them as carries empty paunch three days an’ more, is glad to get ‘snake-meat,’ I’m thinkin.”

“What! you’ve no ammunition, then?”

“Well, we haven’t.”

“Wait till the waggons come up, and throw away that abominable stuff, and you shall have something better, I promise,” said the elder of the strangers.

“Yes,” continued the younger, “some hot preserved soup, hotch-potch, and a glass of porter, will do you good.”

The trappers looked at the speaker, who was talking Greek (to them). They thought the bourgeois were making fun, and did not half like it, so answered simply, “Wagh! h—’s full of hosh-posh and porter.”

Two large waggons presently came up, escorted by some eight or ten stout Missourians. Sublette was amongst the number, well known as a mountain [Pg 189]trader, and under whose guidance the present party, which formed a pleasure expedition at the expense of a Scotch sportsman, was leisurely making its way across the mountains to the Columbia. As several mountaineers were in company, Killbuck and La Bonté recognised more than one friend, and the former and Sublette were old compañeros. As soon as the animals were unhitched, and camp formed on the banks of the creek, a black cook set about preparing a meal. Our two trapping friends looked on with astonishment as the sable functionary drew from the waggon the different articles he required to furnish forth a feed. Hams, tongues, tins of preserved meats, bottles of pickles, of porter, brandy, coffee, sugar, flour, were tumbled promiscuously on the prairie; whilst pots and pans, knives, forks, spoons, plates, &c. &c., displayed their unfamiliar faces to the mountaineers. “Hosh-posh and porter” did not now appear such Utopian articles as they had first imagined; but no one but those who have fared for years on simple meat and water, can understand the relish with which they accepted the invitation of the Capen (as they called the Scotchman) to “take a horn of liquor.” Killbuck and La Bonté sat in the same position as when we first surprised them asleep under the shadow of Independence Rock, regarding the profuse display of comestibles with scarce-believing eyes, and childishly helpless from the novelty of the scene. Each took the proffered half-pint cup, filled to the brim [Pg 190]with excellent brandy—(no tee-totallers they!)—looked once at the amber-coloured surface, and with the usual mountain pledge of “here’s luck!” tossed off the grateful liquour at a breath. This prepared them in some measure for what was yet in store for them. The Scotchman bestirred the cook in his work, and soon sundry steaming pots were lifted from the fire, and the skillet emptied of their bread—the contents of the former poured in large flat pans, while panikins were filled with smoking coffee. The two trappers needed no second invitation, but, seizing each a panful of steaming stew, drew the butcher-knives from their belts, and fell to lustily—the hospitable Scotchman plying them with more and more, and administering corrective noggins of brandy the while; until at last they were fain to cry enough, wiped their knives on the grass, and placed them in their sheaths—a sign that human nature could no more. How can pen describe the luxury of the smoke that followed, to lips which had not kissed pipe for many months, and how the fragrant honey-dew from Old Virginia was relishingly puffed.

---

by GEORGE FREDERICK RUXTON

---

But the Scotchman's bounty did not stop here. He soon elicited from the lips of the hunters the narrative of their losses and privations, and learned that they now, without ammunition and scarcely clothed, were on their way to Platte Fort, to hire themselves to the Indian traders in order to earn another outfit, wherewith once more to betake themselves [Pg 191] to their perilous employment of trapping. What was their astonishment to see their entertainer presently lay out upon the ground two piles of goods, each consisting of a four-point Mackinaw, two tin canisters of powder, with corresponding lead and flints, a pair of moccasins, a shirt, and sufficient buckskin to make a pair of pantaloons; and how much the more was the wonder increased when two excellent Indian horses were presently lassoed from the cavallada, and with mountain saddle, bridle, and lariats complete, together with the two piles of goods described, presented to them "on the prairie" or "gift-free," by the kind-hearted stranger, who would not even listen to thanks for the most timely and invaluable present.

Once more equipped, our two hunters, filled with good brandy and fat buffalo meat, again wended on their way; their late entertainers continuing their pleasure trip across the gap of the South Pass, intending to visit the Great Salt Lake, or Timponogos, of the West. The former were bound for the North Fork of the Platte, with the intention of joining one of the numerous trapping parties which rendezvous at the American Fur Company's post on that branch of the river. On a fork of Sweet Water, however, not two days after the meeting with the Scotchman's waggons, they encountered a band of a dozen mountaineers, mounted on fine horses, and well armed and equipped, travelling along without the usual accompaniment [Pg 192] of a mulada of pack-animals, two or three mules alone being packed with meat and spare ammunition. The band was proceeding at a smart rate, the horses moving with the gait peculiar to American animals, known as "pacing" or "racking," in Indian file—each of the mountaineers with a long heavy rifle resting across the horn of his saddle. Amongst them our two friends recognised Markhead, who had been of the party dispersed months before by the Blackfeet on one of the head streams of the Yellow Stone, which event had been the origin of the dire sufferings of Killbuck and La Bonté. Markhead, after running the gauntlet of numerous Indians, through the midst of whose country he passed with his usual temerity and utter disregard to danger, suffering hunger, thirst, and cold—those every-day experiences of mountain life—riddled with balls, but with three scalps hanging from his belt, made his way to a rendezvous on Bear River, whence he struck out for the Platte in early spring, in time to join the band he now accompanied, who were on a horse-stealing expedition to the Missions of Upper California. Little persuasion did either Killbuck or La Bonté require to join the sturdy freebooters. In five minutes they had gone "files-about," and at sundown were camping on the well-timbered bottom of "Little Sandy," feasting once more on delicate hump-rib and tender loin.

For California, ho!

Fourteen good rifles in the hands of fourteen [Pg 193] mountain men, stout and true, on fourteen strong horses, of true Indian blood and training—fourteen cool heads, with fourteen pairs of keen eyes in them, each head crafty as an Indian's, directing a right arm strong as steel, and a heart as brave as grizzly bear's. Before them a thousand miles of dreary desert or wilderness, overrun by hostile savages, thirsting for the white man's blood; famine and drought, the arrows of wily hordes of Indians—and, these dangers past, the invasion of the civilised settlements of whites, the least numerous of which contained ten times their number of armed and bitter enemies,—the sudden

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

swoop upon their countless herds of mules and horses, the fierce attack and bloody slaughter;—such were the consequences of the expedition these bold mountaineers were now engaged in. Fourteen lives of any fourteen enemies who would be rash enough to stay them, were, any day you will, carried in the rifle barrels of these stout fellows; who, in all the proud consciousness of their physical qualities, neither thought, nor cared to think, of future perils; and rode merrily on their way, rejoicing in the dangers they must necessarily meet. Never a more daring band crossed the mountains; a more than ordinary want of caution characterised their march, and dangers were recklessly and needlessly invited, which even the older and more cold-blooded mountaineers seemed not to care to avoid. They had, each and all, many a debt to pay the marauding Indians. Grudges for [Pg 194]many privations, for wounds and loss of comrades, rankled in their breasts; and not one but had suffered more or less in property and person at the hands of the savages, within a few short months. Threats of vengeance on every Redskin they met were loud and deep; and the wild war-songs round their nightly camp-fires, and grotesque scalp-dances, borrowed from the Indians, proved to the initiated that they were, one and all, “half-froze for hair.” Soon after Killbuck and La Bonté joined them, they one day suddenly surprised a band of twenty Sioux, scattered on a small prairie and butchering some buffalo they had just killed. Before they could escape, the whites were upon them with loud shouts, and in three minutes the scalps of eleven were dangling from their saddle-horns.

Struggling up mountains, slipping down precipices, dashing over prairies which resounded with their Indian songs, charging the Indians wherever they met them, and without regard to their numbers; frightening with their lusty war-whoops the miserable Diggers, who were not unfrequently surprised while gathering roots in the mountain plains, and who, scrambling up the rocks and concealing themselves, like sage rabbits, in holes and corners, peered, chattering with fear, as the wild and noisy troop rode by:—scarce drawing rein, they passed rapidly the heads of Green and Grand Rivers, through a country abounding in game and in excellent pasture; encountering in the upland valleys, [Pg 195]through which meandered the well-timbered creeks on which they made their daily camps, many a band of Yutas, through whom they dashed at random, caring not whether they were friends or foes. Passing many other heads of streams, they struck at last the edge of the desert, lying along the south-eastern base of the Great Salt Lake, and which extends in almost unbroken sterility to the foot of the range of the Sierra Nevada—a mountain chain, capped with perpetual snow, that bounds the northern extremity of a singular tract of country, walled by mountains and utterly desert, whose salt lagoons and lakes, although fed by many streams, find no outlet to the ocean, but are absorbed in the spongy soil or thirsty sand, which characterise the different portions of this deserted tract. In the “Grand Basin,” it is reported, neither human nor animal life can be supported. No oases cheer the wanderer in the unbroken solitude of the vast wilderness. More than once the lone trapper has penetrated, with hardy enterprise, into the salt plains of the basin; but no signs of beaver or fur-bearing animal rewarded the attempt. The ground is scantily covered with coarse unwholesome grass that mules and horses refuse to eat; and the water of the springs, impregnated with the impurities of the soil through which it percolates, affords but nauseating draughts to the thirsty traveller.

In passing from the more fertile uplands to the lower plains, as they descended the streams, the [Pg 196]timber on their banks became scarcer, and the groves more scattered. The rich buffalo or grama grass was exchanged for a coarser species, on which the hard-worked animals soon

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

grew poor and weak. The thickets of plum and cherry, of boxalder and quaking ash, which had hitherto fringed the creeks, and where the deer and bear loved to resort—the former to browse on the leaves and tender shoots, the latter to devour the fruit—now entirely disappeared, and the only shrub seen was the eternal sage-bush, which flourishes every where in the western regions in uncongenial soils where other vegetation refuses to grow. The visible change in the scenery had also a sensible effect on the spirits of the mountaineers. They travelled on in silence through the deserted plains; the hi-hi-hiya of their Indian chants was no longer heard enlivening the line of march. More than once a Digger of the Piyutah tribe took himself and hair, in safety, from their path, and almost unnoticed; but as they advanced they became more cautious in their movements, and testified, by the vigilant watch they kept, that they anticipated hostile attacks even in these arid wastes. They had passed without molestation through the country infested by the bolder Indians. The mountain Yutas, not relishing the appearance of the hunters, had left them unmolested; but they were now entering a country inhabited by the most degraded and abject of the western tribes; who, nevertheless, ever suffering from the [Pg 197]extremities of hunger, have their brutish wits sharpened by the necessity of procuring food, and rarely fail to levy a contribution of rations, of horse or mule flesh, on the passenger in their inhospitable country. The brutish cunning and animal instinct of these wretches is such, that although arrant cowards, their attacks are more feared than those of bolder Indians. These people-called the Yamparicas or Root-Diggers—are, nevertheless, the degenerate descendants of those tribes which once overran that portion of the continent of North America now comprehended within the boundaries of Mexico, and who have left such startling evidences in their track of a comparatively superior state of civilisation. They now form an outcast tribe of the great nation of the Apache, which extends under various names from the Great Salt Lake along the table-lands on each side the Sierra Madre to the tropic of Cancer, where they merge into what are called the Mexican Indians. The whole of this nation is characterised by most abject cowardice; and they even refuse to meet the helpless Mexicans in open fight—unlike the Yuta or Camanche, who carry bold and open warfare into the territories of their civilised enemy, and never shrink from hand to hand encounter. The Apaches and the degenerate Diggers pursue a cowardly warfare, hiding in ambush, and shooting the passer-by with arrows; or, dashing upon him at night when steeped in sleep, they bury their arrow to the feather in his heaving [Pg 198]breast. As the Mexicans say, “Sin ventaja, no salen;” they never attack without odds. But they are not the less dangerous enemies on this account; and by the small bands of trappers who visit their country, they are the more dreaded by reason of this cowardly and wolfish system of warfare.

To provide against surprise, therefore, as the hunters rode along, flankers were extended en guerilla on each side, mounting the high points to reconnoitre the country, and keeping a sharp look-out for Indian sign. At night the animals were securely hobbled, and a horse-guard posted round them—a service of great danger, as the stealthy cat-like Diggers are often known to steal up silently, under cover of the darkness, towards the sentinel, shoot him with their arrows, and approaching the animals, cut the hobbles and drive them away unseen.

One night they encamped on a creek where was but little of the coarsest pasture, and that little scattered here and there; so that they were compelled to allow their animals to roam farther than usual from camp in search of food. Four of the hunters, however, accompanied them to guard against surprise; whilst but half of those in camp lay down to sleep, the others, with rifles in their

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

hands, remaining prepared for any emergency. This day they had killed one of their two pack-mules for food, game not having been met with for several days; but the animal was so poor, that it [Pg 199]scarcely afforded more than one tolerable meal to the whole party.

A short time before the dawn of day an alarm was given; the animals were heard to snort violently; a loud shout was heard, followed by the sharp crack of a rifle, and the tramp of galloping horses plainly showed that a stampede had been effected. The whites instantly sprang to their arms, and rushed in the direction of the sounds. The body of the cavallada, however, had luckily turned, and, being headed by the mountaineers, were surrounded and secured, with the loss of only three, which had probably been mounted by the Indians.

Day breaking soon after, one of their band was discovered to be missing; and it was then found that a man who had been standing horse-guard at the time of the attack, had not come into camp with his companions. At that moment a thin spiral column of smoke was seen to rise from the banks of the creek, telling but too surely the fate of the missing mountaineer. It was the signal of the Indians to their people that a "coup" had been struck, and that an enemy's scalp remained in their triumphant hands.

"H—!" exclaimed the trappers in a breath; and soon imprecations and threats of revenge, loud and deep, were showered upon the heads of the treacherous Indians. Some of the party rushed to the spot where the guard had stood, and there lay [Pg 200]the body of their comrade, pierced with lance and arrow, the scalp gone, and the body otherwise mutilated in a barbarous manner. Five were quickly in the saddle, mounted upon the strongest horses, and flying along the track of the Indians, who had made off towards the mountains with their prize and booty. We will not follow them in their work of bloody vengeance, save by saying that they followed the savages to their village, into which they charged headlong, recovered their stolen horses, and returned to camp at sundown with thirteen scalps dangling from their rifles, in payment for the loss of their unfortunate companion. [27]

In their further advance, hunger and thirst were their daily companions; they were compelled to kill several of their animals for food, but were fortunate enough to replace them by a stroke of good luck in meeting a party of Indians returning from an excursion against one of the Californian settlements with a tolerably large band of horses. Our hunters met this band one fine morning, and dashed into the midst at once; half a dozen Indians bit the dust, and twenty horses were turned over from red [Pg 201]to white masters in as many seconds, which remounted those whose animals had been eaten, and enabled the others to exchange their worn-out steeds for fresh ones. This fortunate event was considered a coup, and the event was celebrated by the slaughter of a fat young horse, which furnished an excellent supper that night—a memorable event in these starveling regions.

They were now devouring their horses and mules at the rate of one every alternate day; for, so poor were the animals, that one scarcely furnished an ample meal for the thirteen hungry hunters. They were once more reduced to the animals they rode on; and after a fast of twenty-four hours' duration, were debating on the propriety of drawing lots as to whose Rosinante should fill the kettle, when some Indians suddenly appeared making signs of peace upon the bluff, and indicating a disposition to enter the camp for the purpose of trading. Being invited to approach, they offered to trade a few dressed elk-skins; but being asked for meat, they said that their village was a long way off, and they had nothing with them but a small portion of some game they had lately killed.

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

When requested to produce this, they hesitated, but the trappers looking hungry and angry at the same moment, an old Indian drew from under his blanket several flaps of portable dried meat, which he declared was bear's. It was but a small ration amongst so many; but, being divided, was quickly laid upon the fire [Pg 202]to broil. The meat was stringy, and of whitish colour, altogether unlike any flesh the trappers had before eaten. Killbuck was the first to discover this. He had been quietly masticating the last mouthful of his portion, the stringiness of which required more than usual dental exertion, when the novelty of the flavour struck him as something singular. Suddenly his jaws ceased their work, he thought a moment, took the morsel from his mouth, looked at it intently, and dashed it into the fire.

"Man-meat, by G—!" he cried out; and at the words every jaw stopped work: the trappers looked at the meat and each other.

"I'm dog-gone if it ain't!" cried old Walker, looking at his piece, "and white meat at that, wagh!" (and report said it was not the first time he had tasted such viands;) and the conviction seizing each mind, every mouthful was quickly spat into the fire, and the ire of the deceived whites was instantly turned upon the luckless providers of the feast. They saw the storm that was brewing, and without more ado turned tail from the camp, and scuttled up the bluffs, where, turning round, they fired a volley of arrows at the tricked mountaineers, and instantly disappeared. However, the desert and its nomade pilferers were at length passed; the sandy plains became grass-covered prairies; the monstrous cottonwood on the creeks was replaced by oak and ash; the [Pg 203]surface of the country grew more undulating, and less broken up into cañons and ravines; elk and deer leaped in the bottoms, and bands of antelope dotted the plains, with occasional troops of wild horses, too wary to allow the approach of man. On the banks of a picturesque stream called the San Joaquin, the party halted a few days to recruit themselves and animals, feasting the while on the fattest of venison and other game. They then struck to the south-east for two days, until they reached a branch of the "Las Animas," a clear stream running through a pretty valley, well timbered and abounding in game. Here, as they wound along the river-banks, a horseman suddenly appeared upon the bluff above them, galloping at a furious rate along the edge. His dress approached in some degree to civilised attire. A broad-brimmed sombrero surmounted his swarthy face; a coloured blanket, through a slit in which his head was thrust, floated in the air from his shoulders; leathern leggings encased his lower limbs; and huge spurs jingled on his heels. He rode in a high-peaked Mexican saddle, his feet thrust in ponderous stirrups, and in his hand swung a coil of ready lasso, his only offensive arm. One of the trappers knew a little Spanish, and instantly hailed him.

"Compadre," he shouted, "por onde va?" The Californian reined in suddenly, throwing the horse he rode on its very haunches, and darting down the [Pg 204]bluff, galloped unhesitatingly into the midst of the hunters.

"Americanos!" he exclaimed, glancing at them; and continued, smiling—"Y caballos quieren, por eso vienen tan lejitos. Jesus, que mala gente!"—"It's horses you want, and for this you come all this way. Ah, what rogues you are!"

He was an Indian, employed at the mission of San Fernando, distant three days' journey from their present position, and was now searching for a band of horses and mules which had strayed. San Fernando, it appeared, had once before been visited by a party of mountain free-booters, and the Indian therefore divined the object of the present one. He was, he told them, "un Indio, pero

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

mansito:" an Indian, but a tame one; [28] "de mas, Christiano:" a Christian moreover (exhibiting a small cross which hung round his neck). There were many people about the mission, he said, who knew how to fight, and had plenty of arms; and there were enough to "eat up" the "Americanos, sin frijoles," without beans, as he facetiously observed. For his part, however, he was very friendly to the Americanos; he had once met a man of that nation who was a good sort of fellow, and had made him a present of tobacco, of which he was particularly fond. Finding this hint did not take, he said that the horses and mules belonging to the mission were innumerable—"like [Pg 205]that," he added, sweeping his hand to all points of the compass over the plain, to intimate that they would cover that extent; and he could point out a large herd grazing nearer at hand than the mission, and guarded but by three vaqueros. Regaled with venison, and with a smoke of his coveted tobacco, he rode off, and made his way to the mission without delay, conveying the startling intelligence that a thousand Americans were upon them.

The next morning the thirteen doughty mountaineers quietly resumed their journey, moving leisurely along towards the object of their expedition.

It will not be out of place here to digress a little, in order to describe the singular features of the establishments formed in those remote regions by the Catholic church, as nuclei round which to concentrate the wandering tribes that inhabit the country, with a view to give them the benefit of civilised example, and to wean them from their restless nomadic habits.

The establishment of missions in Upper California is coeval with the first settlement of Southern Mexico. No sooner had Spanish rule taken a firm foot-hold in the Aztec empire, than the avowed primary object of the military expedition began to be carried into effect. "To save the souls" of the savage and barbarous subjects of their most Catholic majesties was ever inculcated upon the governors of the conquered country as the grand object to be sought [Pg 206]after, as soon as tranquillity was partially restored by the submission of the Mexicans; and the Cross, the sacred emblem of the Catholic faith, was to be upraised in the remotest corners of the country, and the natives instructed and compelled to worship it, in lieu of the grotesque images of their own idolatrous religion.

To carry into effect these orthodox instructions, troops of pious priests, of friars and monks of every order, and even of saintly nuns, followed in the wake of the victorious armies of Cortez; and, girding up their loins with zealous fervour and enthusiasm, and with an enterprise and hardihood worthy of buccaneers, they pushed their adventurous way far into the bowels of the land, preaching devoutly and with commendable perseverance to savages who did not understand a syllable of what they so eloquently discoursed; and returning, after the lapse of many months passed in this first attempt, with glowing accounts of the "muy buen indole," the very ductile disposition of the savages, and of the thousands they had converted to "la santa fé catolica."

Ferdinand and Isabel, of glorious memory, at once beat up for volunteers. Crowds of Franciscan monks, greasy Capuchinos, and nuns of orthodox odour, joined the band; and saints even of the feminine gender, long since canonised and up aloft amongst the goodly muster of saints and martyrs, put foot once more on terra firma, and, rosary in hand, crossed the seas to participate in the good [Pg 207]work. As proof of this latter fact, one Venabides, a Franciscan, whose veracity is beyond impeachment, declared that, while preaching in the regions now known as New Mexico, one million Indians from the "rumbo" known as Cibolo, a mighty nation, approached his temporary pulpit on the Rio Grande, and requested in a body the favour of being baptised. Struck with

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

the singularity of this request from Indians with whom he had as yet held no communication, and with conscientious scruple as to whether he would be justified in performing such ceremony without their having received previous instruction, he hesitated a few moments before making an answer. At this juncture the Indians espied a medallion which hung around his neck, bearing the effigy of a certain saint of extraordinary virtue. At sight of this they fell on their knees before it; and it was some time before they found words (in what language does not appear) to explain to the holy father that the original of that effigy, which hung pendant from his neck, had been long amongst them instructing them in the elements of the Christian religion, and had only lately disappeared; informing them that certain reverend men would shortly appear in the land, who would finish the good work she had devoutly commenced, and clench the business by baptising the one million miserable sinners who now knelt before El Padre Venabides.

“Valgame Dios!” reverently exclaimed that worthy man, “qui milagro es este;” [what a miracle [Pg 208]. is this I hear;] and casting up his eyes, and speaking slowly, as if he weighed every word, and taxing his memory of the historical calendar of saints, continued,—

“Se murió—aquella—santissima—muger—en el año 175—es decir—ya hacen—mil—quatro—cientos—años.” [That most holy woman died in the year 175, that is to say, one thousand four hundred years ago.]

“Oh, what a strange thing is this!” the padre continues devoutly. “After so many ages spent in heaven in company of the angels, of most holy men, and of virgins the most pure; and, perhaps, also in the company of my worthy and esteemed friend and patron, Don Vincente Carvajal y Calvo, who died a few years ago in San Lucar of Xeres (bequeathing me certain arrobas of dry wine, of a class I greatly esteem—for which act he deserved to be canonised, and, I have no doubt, is), the said Don Vincente Carvajal y Calvo being, moreover, a man of the purest and holiest thoughts (Dios mio! what a puchero that man always had on his table!) this holy woman comes here—to these wild and remote regions; this holy woman (who died fifteen hundred years ago), abandoning the company of angels, of holy men, and sanctified women and virgins, and also of Don Vincente Carvajal y Calvo (that worthy man!)—comes here, I say, where there are neither pucheros, nor garbanzos, nor dry wine, nor sweet wine, neither of Xeres, nor of Val de Peñas, nor of [Pg 209]Peralta; where” (sobbed the padre, and bellowed the last word) “there is—nothing either to eat or to drink. Valgame Purissima Maria! And what is the name of this holy woman? the world will ask,” continues Venabides. “Santa Clara of Carmona is her name, one well known in my native country, who leaves heaven and all its joys, wends her way to the distant wilds of New Spain, and spends years in inducting the savage people to the holy faith. Truly a pious work, and pleasing to God!” [29]

Thus spoke Venabides the Franciscan, and no doubt he believed what he said; and many others in Old Spain were fools enough to believe it too, for the shaven heads flocked over in greater numbers, and the cry was ever “still they come.”

Along the whole extent of the table-lands, not an Indian tribe but was speedily visited by the preaching friars and monks; and, in less than a century after the conquest of Mexico by the Spaniards, these hardy and enthusiastic frayles had pushed their way into the inhospitable regions of New Mexico, nearly two thousand miles distant from the valley of Anahuac. How they succeeded in surmounting the natural obstacles presented by the wild and barren deserts they traversed; how they escaped the infinite peril they encountered at every step, at the hands of the savage

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

inhabitants of the [Pg 210]country, with whose language they were totally unacquainted, is sufficient puzzle to those who, in the present day, have attempted a journey in the same regions.

However, it is impossible not to admire the hardihood of these holy pioneers of civilisation, who, totally unfitted by their former mode of life for undergoing such hardships as they must have anticipated, threw themselves into the wilderness with fearless and stubborn zeal.

For the most part, however, they found the Indians exceedingly hospitable and well disposed; and it was not until some time after—when, receiving from the missionary monks glowing, and not always very truthful accounts of the riches of the country in which they had located themselves, the governors of Mexico despatched armed expeditions under adventurous desperadoes to take and retain possession of the said country, with orders to compel the submission of the native tribes, and enforce their obedience to the authority of the whites—that the simple and confiding Indians began to see the folly they had committed in permitting the residence amongst them of these superior beings, whom they had first looked upon as more than mortal, but who, when strong enough to do so, were not long in throwing off the mask, and proving to the simple savages that they were much “more human than divine.”

Thus, in the province of New Mexico, Fray [Pg 211]Augustin Ruiz, with his co-preachers, Marcos and Venabides, were kindly received by the native inhabitants, and we have seen how one million (?) Indians came from the “rumbo” of the Cibolo, ready and willing to receive the baptismal sacrament. This Cibolo, or Sivulo, as it is written in some old MSS., is, by the way, mysteriously alluded to by the monkish historians who have written on this region, as being a kingdom inhabited by a very superior class of Indians to any met with between Anahuac and the Vale of Taos—in the enjoyment of a high state of civilisation, inhabiting a well-built city, the houses of which were three stories high, and having attained considerable perfection in the domestic arts. This, notwithstanding the authority of Don Francisco Vasquez Coronado, who visited Cibolo, and of Solis and Venegas, who have guaranteed the assertion, must be received cum grano salis; but, at all events, the civilisation of the mysterious Cibolo may be compared to that of the Aztec empire, under Montezuma, at the time of the Spanish Conquest, both being egregiously exaggerated by the historians of the day. Cibolo was situated on a river called Tegue. At this day, neither name is known to the inhabitants of New Mexico. If pate-shaven Venabides had held his tongue, New Mexico might now be in the peaceful possession of the Catholic Missions, and the property of the Church of Mexico pretty considerably enhanced by the valuable placeres, or gold washings, [Pg 212]which abound in that province. Full, however, of the wonderful miracle of Santa Clara of Carmona, which had been brought to light through the agency of the medallion at the end of his rosario, Fray Venabides must needs return to Spain, and humbug poor old Fernando, and even the more sensible Isabel, with wonderful accounts of the riches of the country he had been instrumental in exploring, and of the excellent disposition of the natives to receive the word of God. Don Juan Oñate was, therefore, quickly despatched to take possession; and in his train followed twelve Castilian families of sangre azul, to colonise the newly-acquired territory. The names of these still remain, disgraced by the degenerate wretches who now bear them, but in whom scarce a drop of blood remains which ever filtered from the veins of the paladins of Old Castile.

Then commenced the troublous times. The missions were upheld by dint of steel alone; and frequently the Indians rose, and often massacred their white persecutors. The colonists were more than once driven bodily from New Mexico, and were only reinstated by the aid of large bodies of

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

armed men.

In California, however, they managed these things better. The wily monks took care to keep all interlopers from the country, established themselves in snug quarters, instructed the Indians in agriculture, and soon gained such an ascendancy [Pg 213] over them, that no difficulty was experienced in keeping them under proper and wholesome restraint. Strong and commodious missions were built and fortified, well stored with arms and ammunition, and containing sufficient defenders to defy attack. Luxuriant gardens and thriving vineyards soon surrounded these isolated stations: the plains waved with golden corn; whilst domestic cattle, thriving on the rich pasture, and roaming far and near, multiplied and increased a hundred-fold.

Nothing can be more beautiful than the appearance of one of these missions, to the traveller who has lately passed the arid and barren wilderness of the North-west. The adobe walls of the convent-looking building, surmounted by cross and belfry, are generally hidden in a mass of luxuriant vegetation. Fig-trees, bananas, cherry, and apple, leaf-spreading platanos, and groves of olives, form umbrageous vistas, under which the sleek monks delight to wander; gardens, cultivated by their own hands, testify to the horticultural skill of the worthy padres; whilst vineyards yield their grateful produce to gladden the hearts of the holy exiles in these western solitudes. Vast herds of cattle roam half-wild on the plains, and bands of mules and horses, whose fame has even reached the distant table-lands of the Rocky Mountains, and excited the covetousness of the hunters—and thousands of which, from the day they are foaled to that of their death, never feel a saddle on their backs—cover [Pg 214] the country. Indians (Mansitos) idle round the skirts of these vast herds (whose very numbers keep them together), living, at their own choice, upon the flesh of mule, or ox, or horse.

---

[Pg 215]

## CHAPTER VII.

THE Mission of San Fernando is situated on a small river called Las Animas, a branch of the Los Martires. The convent is built at the neck of a large plain, at the point of influx of the stream from the broken spurs of the sierra. The savana is covered with luxuriant grass, kept down, however, by the countless herds of cattle which pasture on it. The banks of the creek are covered with a lofty growth of oak and poplar, which near the Mission have been considerably thinned for the purpose of affording fuel and building materials for the increasing settlement. The convent stands in the midst of a grove of fruit-trees, its rude tower and cross peeping above them, and contrasting picturesquely with the wildness of the surrounding scenery. Gardens and orchards lie immediately in front of the building, and a vineyard stretches away to the upland ridge of the valley. The huts of the Indians are scattered here and there, built of stone and adobe, sometimes thatched with flags and boughs, but comfortable enough. The convent itself is a substantial building, of the style of architecture characterising monastic edifices in most parts of the [Pg 216] world. Loop-holes peer from its plastered walls, and on a flat portion of the roof a comically mounted gingall or wall-piece, carrying a two-pound ball, threatens the assailant in time of war. At one end of the oblong building, a rough irregular arch of sun-burned bricks is surmounted by a rude cross, under which hangs a small but deep-toned bell—the wonder of the Indian peones, and highly venerated by the frayles themselves, who received it as a present from a certain venerable archbishop of Old Spain, and who, whilst guarding it with reverential awe, tell wondrous tales of its adventures

---

## LIFE in THE FAR WEST

---

on the road to its present abiding place.

Of late years the number of the canonical inmates of the convent has been much reduced—there being but four priests now to do the duties of the eleven who formerly inhabited it: Fray Augustin, a Capuchin of due capacity of paunch, being at the head of the holy quartette. Augustin is the conventual name of the reverend father, who fails not to impress upon such casual visitants to that ultima Thule as he deems likely to appreciate the information, that, but for his humility, he might add the sonorous appellations of Ignacio Sabanal-Morales-y Fuentes—his family being of the best blood of Old Castile, and known there since the days of Ruy Gomez—el Campéador—possessing, moreover, half the “vega” of the Ebro, &c., where, had fate been propitious, he would now have been the sleek superior of a rich [Pg 217]capuchin convent, instead of vegetating, a leather-clad frayle, in the wilds of California Alta.

Nevertheless, his lot is no bad one. With plenty of the best and fattest meat to eat, whether of beef or venison, of bear or mountain mutton; with good wine and brandy of home make, and plenty of it; fruit of all climes in great abundance; wheaten or corn bread to suit his palate; a tractable flock of natives to guide, and assisted in the task by three brother shepherds; far from the strife of politics or party—secure from hostile attack (not quite, by-the-by), and eating, drinking, and sleeping away his time, one would think that Fray Augustin Ignacio Sabanal-Morales-y Fuentes had little to trouble him, and had no cause to regret even the vega of Castilian Ebro, held by his family since the days of el Campéador.

One evening Fray Augustin sat upon an adobe bench, under the fig-tree shadowing the porch of the Mission. He was dressed in a goat-skin jerkin, softly and beautifully dressed, and descending to his hips, under which his only covering—tell it not in Gath!—was a long linen shirt, reaching to his knees, and lately procured from Puebla de los Angeles, as a sacerdotal garment. Boots, stockings, or unmentionables, he had none. A cigarito, of tobacco rolled in corn shuck, was occasionally placed between his lips; whereupon huge clouds of smoke rushed in columns from his mouth and nostrils. [Pg 218]His face was of a golden yellow colour, relieved by arched and very black eyebrows; his shaven chin was of most respectable duplicity—his corporation of orthodox dimensions. Several Indians and half-bred Mexican women were pounding Indian corn on metates near at hand; whilst sundry beef-fed urchins of whitey-brown complexion sported before the door, exhibiting, as they passed Fray Augustin, a curious resemblance to the strongly marked features of that worthy padre. They were probably his nieces and nephews—a class of relations often possessed in numbers by priests and monks.

The three remaining brothers were absent from the Mission; Fray Bernardo, hunting elk in the sierra; Fray José, gallivanting at Puebla de los Angeles, ten days’ journey distant; Fray Cristoval, lassoing colts upon the plain. Augustin, thus left to his own resources, had just eaten his vespertine frijolititos and chile colorado, and was enjoying a post-coenal smoke of fragrant pouche under the shadow of his own fig-tree.

Whilst thus employed, an Indian dressed in Mexican attire approached him hat in hand, and, making a reverential bow, asked his directions concerning domestic business of the Mission. “Hola! friend José,” cried Fray Augustin in a thick guttural voice, “pensaba yo—I was thinking that it was very nearly this time three years ago when those ‘malditos Americanos’ came by here and ran off with so many of our cavallada.”

[Pg 219]

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

“True, reverend father,” answered the administrador, “just three years ago, all but fifteen days: I remember it well. Malditos sean—curse them!”

“How many did we kill, José?”

“Quizas mōochos—a great many, I dare say. But they did not fight fairly—charged right upon us, and gave us no time to do any thing. They don’t know how to fight, these Mericanos; come right at you, before you can swing a lasso, hallooing like Indios Bravos.”

“But, José, how many did they leave dead on the field?”

“Not one.”

“And we?”

“Valgame Dios! thirteen dead, and many more wounded.”

“That’s it! Now if these savages come again (and the Chemeguaba, who came in yesterday, says he saw a large trail), we must fight adentro—within—outside is no go; for as you very properly say, José, these Americans don’t know how to fight, and kill us before—before we can kill them! Vaya!” At this moment there issued from the door of the Mission Don Antonio Velez Trueba, a Gachupin—that is, a native of Old Spain—a wizened old hidalgo refugee, who had left the mother country on account of his political opinions, which were staunchly Carlist, and had found his way—how, he himself scarcely knew—from Mexico to San Francisco in Upper California, [Pg 220]where, having a most perfect contempt for every thing Mexican, and hearing that in the Mission of San Fernando, far away, were a couple of Spanish padres of “sangre regular,” he had started into the wilderness to ferret them out; and having escaped all dangers on the route (which, however, were hardly dangers to the Don, who could not realise the idea of scalp-taking savages), had arrived with a whole skin at the Mission. There he was received with open arms by his countryman Fray Augustin, who made him welcome to all the place afforded, and there he harmlessly smoked away his time; his heart far away on the banks of the Genil and in the grape-bearing vegas of his beloved Andalusia, his withered cuerpo in the sierras of Upper California. Don Antonio was the walking essence of a Spaniard of the ancien régime. His family dated from the Flood, and with the exception of sundry refreshing jets of Moorish blood, injected into the Truebas during the Moorish epoch, no strange shoot was ever engrafted on their genealogical tree. The marriages of the family were ever confined to the family itself—never looking to fresh blood in a station immediately below it, which was not hidalgueno; nor above, since any thing higher in rank than the Trueba y Trueba family, no habia, there was not.

Thus, in the male and female scions of the house, were plainly visible the ill effects of breeding “in and in.” The male Truebas were sadly degenerate [Pg 221]Dons, in body as in mind—compared to their ancestors of Boabdil’s day; and the señoritas of the name were all eyes, and eyes alone, and hardly of such stamp as would have tempted that amorous monarch to bestow a kingdom for a kiss, as ancient ballads tell.

“Dueña de la negra toca,  
Por un beso de tu boca,  
Diera un reyno, Boabdil;  
Y yo por ello, Cristiana,  
Te diera de buena gana  
Mil cielos, si fueran mil.”

Come of such poor stock, and reared on tobacco smoke and “gazpacho,” Don Antonio would not

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

have shone, even amongst pigmy Mexicans, for physical beauty. Five feet high, a framework of bones covered with a skin of Andalusian tint, the Trueba stood erect and stiff in all the consciousness of his “sangre regular.” His features were handsome, but entirely devoid of flesh, his upper lip was covered with a jet-black mustache mixed with gray, his chin was bearded “like the pard.” Every one around him clad in deer and goat skin, our Don walked conspicuous in shining suit of black—much the worse for wear, it must be confessed—with beaver hat sadly battered, and round his body and over his shoulder an unexceptionable “capa” of the amplest dimensions. Asking, as he stepped over him, the pardon of an Indian urchin who blocked the door, and bowing with punctilious politeness to the [Pg 222]sturdy mozas who were grinding corn, Don Antonio approached our friend Augustin, who was discussing warlike matters with his administrador.

“Hola! Don Antonio, how do you find yourself, sir?”

“Perfectly well, and your very humble servant, reverend father; and your worship also, I trust you are in good health?”

“Sin novedad—without novelty;” which, since it was one hour and a half since our friends had separated to take their siestas, was not impossible.

“Myself and the worthy José,” continued Fray Augustin, “were speaking of the vile invasion of a band of North American robbers, who three years since fiercely assaulted this peaceful Mission, killing many of its inoffensive inhabitants, wounding many more, and carrying off several of our finest colts and most promising mules to their dens and caves in the Rocky Mountains. Not with impunity, however, did they effect this atrocity. José informs me that many of the assailants were killed by my brave Indians. How many said you, José?”

“Quizas mo-o-ochos,” answered the Indian.

“Yes, probably a great multitude,” continued the padre; “but, unwarned by such well-merited castigation, it has been reported to me by a Chemeguaba mansito, that a band of these audacious marauders are now on the road to repeat the offence, numbering many thousands, well mounted and armed; [Pg 223]and to oppose these white barbarians it behoves us to make every preparation of defence.” [30]

“There is no cause for alarm,” answered the Andaluz. “I (tapping his breast) have served in three wars: in that glorious one ‘de la Independencia,’ when our glorious patriots drove the French like sheep across the Pyrenees; in that equally glorious one of 1821; and in the late magnanimous struggle for the legitimate rights of his majesty Charles V., king of Spain (doffing his hat), whom God preserve. With that right arm,” cried the spirited Don, extending his shrivelled member, “I have supported the throne of my kings—have fought for my country, mowing down its enemies before me; and with it,” vehemently exclaimed the Gachupin, working himself into a perfect frenzy, “I will slay these Norte Americanos, should they dare to show their faces in my front. Adios, Don Augustin Ignacio Sabanal-Morales-y Fuentes,” he cried, doffing his hat with an earth-sweeping bow; “I go to grind my sword. Till then adieu.”

“A countryman of mine!” said the frayle, admiringly, to the administrador. “With him by our side we need not to fear: neither Norte Americanos, nor the devil himself, can harm us when he is by.” [Pg 224]

Whilst the Trueba sharpens his Tizona, and the priest puffs volumes of smoke from his nose and mouth, let us introduce to the reader one of the muchachitas, who knelt grinding corn on the metate, to make tortillas for the evening meal. Juanita was a stout wench from Sonora, of Mexican

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

blood, hardly as dark as the other women who surrounded her, and with a drop or two of the Old Spanish blood struggling with the darker Indian tint to colour her plump cheeks. An enagua (a short petticoat) of red serge was confined round her waist by a gay band ornamented with beads, and a chemisette covered the upper part of the body, permitting, however, a prodigal display of her charms. Whilst pounding sturdily at the corn, she laughed and joked with her fellow-labourers upon the anticipated American attack, which appeared to have but few terrors for her. "Que vengan," she exclaimed—"let them come; they are only men, and will not molest us women. Besides, I have seen these white men before—in my own country, and they are fine fellows, very tall, and as white as the snow on the sierras. Let them come, say I!"

"Only hear the girl!" cried another: "if these savages come, then will they kill Pedrillo, and what will Juanita say to lose her sweetheart?"

"Pedrillo!" sneered the latter; "what care I for Pedrillo? Soy Mejicana, yo—a Mexican girl am I, I'd have you know, and don't demean me to look at a wild Indian. Not I, indeed, by my salvation! [Pg 225]What I say is, let the Norte Americanos come."

At this juncture Fray Augustin called for a glass of aguardiente, which Juanita was despatched to bring, and, on presenting it, the churchman facetiously inquired why she wished for the Americans, adding, "Don't think they'll come here—no, no: here we are brave men, and have Don Antonio with us, a noble fellow, well used to arms." As the words were on his lips, the clattering of a horse's hoofs was heard rattling across the loose stones and pebbles in the bed of the river, and presently an Indian herder galloped up to the door of the Mission, his horse covered with foam, and its sides bleeding from spur-wounds.

"Oh, padre mio!" he cried, as soon as he caught sight of his reverence, "vienen los Americanos—the Americans, the Americans are upon us. Ave Maria purissima!—more than ten thousand are at my heels!"

Up started the priest and shouted for the Don.

That hidalgo presently appeared, armed with the sword that had graced his thigh in so many glorious encounters—the sword with which he had mowed down the enemies of his country, and by whose aid he now proposed to annihilate the American savages, should they dare to appear before him.

The alarm was instantly given; peones, vagueros hurried from the plains; and milpas, warned by the deep-toned bell, which soon rung out its sonorous [Pg 226]alarum. A score of mounted Indians, armed with gun and lasso, dashed off to bring intelligence of the enemy. The old gingall on the roof was crammed with powder and bullets to the very muzzle, by the frayle's own hand. Arms were brought and piled in the sala, ready for use. The padre exhorted, the women screamed, the men grew pale and nervous, and thronged within the walls. Don Antonio, the fiery Andaluz, alone remained outside, flourishing his whetted sabre, and roaring to the padre, who stood on the roof with lighted match, by the side of his formidable cannon, not to be affrighted. "That he, the Trueba, was there, with his Tizona, ready to defeat the devil himself should he come on."

He was deaf to the entreaties of the priest to enter.

"Siempre en el frente—Ever in the van," he said, "was the war-cry of the Truebas."

But now a cloud of dust was seen approaching from the plain, and presently a score of horsemen dashed headlong towards the Mission. "El enemigo," shouted Fray Augustin; and, without waiting to aim, he clapped his match to the touch-hole of the gun, harmlessly pointed to the sky, and

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

crying out “in el nombre de Dios”—in God’s name—as he did so, was instantly knocked over and over by the recoil of the piece, then was as instantly seized by some of the Indian garrison, and forced through the trap-door into the building; whilst the horsemen [Pg 227] (who were his own scouts) galloped up with the intelligence that the enemy was at hand, and in overwhelming force. Thereupon the men were all mounted, and formed in a body before the building, to the amount of more than fifty, well armed with guns or bows and arrows. Here the gallant Don harangued them, and infusing into their hearts a little of his own courage, they eagerly demanded to be led against the enemy. Fray Augustin re-appeared on the roof, gave them his blessing, advised them to give no quarter, and, with slight misgivings, saw them ride off to the conflict.

About a mile from the Mission, the plain gradually ascended to a ridge of moderate elevation, on which was a growth of dwarf oak and ilex. To this point the eyes of the remaining inmates of the convent were earnestly directed, as here the enemy was first expected to make his appearance. Presently a few figures were seen to crown the ridge, clearly defined against the clear evening sky. Not more than a dozen mounted men composed this party, which all imagined must be doubtless the vanguard of the thousand invaders. On the summit of the ridge they halted a few minutes, as if to reconnoitre; and by this time the Californian horsemen were halted in the plain, midway between the Mission and the ridge, and distant from the former less than half-a-mile, so that all the operations were clearly visible to the lookers-on.

The enemy wound slowly, in Indian file, down [Pg 228] the broken ground of the descent; but when the plain was reached, they formed into something like a line, and trotted fearlessly towards the Californians. These began to sit uneasily in their saddles; nevertheless they made a forward movement, and even broke into a gallop, but soon halted, and again huddled together. Then the mountaineers quickened their pace, and their loud shout was heard as they dashed into the middle of the faltering troop. The sharp cracks of the rifles followed, and the duller reports of the smooth-bored pieces of the Californians; a cloud of smoke and dust arose from the plain, and immediately half-a-dozen horses, with empty saddles, broke from it, followed quickly by the Californians, flying like mad across the level. The little steady line of the mountaineers advanced, and puffs of smoke arose, as they loaded and discharged their rifles at the flying horsemen. As the Americans came on, however, one was seen to totter in his saddle, the rifle fell from his grasp, and he tumbled headlong to the ground. For an instant his companions surrounded the fallen man, but again forming, dashed towards the Mission, shouting fierce war-whoops, and brandishing aloft their long and heavy rifles. Of the defeated Californians some jumped off their horses at the door of the Mission, and sought shelter within; others galloped off towards the sierra in panic-stricken plight. Before the gate, however, still paced valiantly the proud hidalgo, encumbered with his cloak, and waving [Pg 229] with difficulty his sword above his head. To the priest and women, who implored him to enter, he replied with cries of defiance, “Viva Carlos Quinto,” and “Death or glory.” He shouted in vain to the flying crowd to halt; but, seeing their panic was beyond hope, he clutched his weapon more firmly as the Americans dashed at him, closed his teeth and his eyes, thought once of the vega of his beloved Genil, and of Granada la Florida, and gave himself up for lost. Those inside the Mission, when they observed the flight of their cavalry, gave up the defence as hopeless; and already the charging mountaineers were almost under the walls, when they observed the curious figure of the little Don making demonstrations of hostility. “Wagh!” exclaimed the leading hunter (no other than our friend La Bonté), “here’s a little crittur

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

as means to do all the fighting;" and seizing his rifle by the barrel, he poked at the Don with the butt-end, who parried the blow, and with such a sturdy stroke, as nearly severed the stock in two. Another mountaineer rode up, and, swinging his lasso overhead, threw the noose dexterously over the Spaniard's head, and as it fell over his shoulders, drew it taut, thus securing the arms of the pugnacious Don as in a vice.

"Quartel!" cried the latter; "por Dios, quartel!"

"Quarter be d——!" exclaimed one of the whites, who understood Spanish; "who's agoin' to hurt you, you little crittur?"

[Pg 230]

By this time Fray Augustin was waving a white flag from the roof, in token of surrender; and soon after he appeared trembling at the door, beseeching the victors to be merciful and to spare the lives of the vanquished, when all and every thing in the Mission would be freely placed at their disposal.

"What does the niggur say!" asked old Walker, the leader of the mountaineers, of the interpreter.

"Well, he talks so queer, this hos can't rightly make it out."

"Tell the old coon then to quit that, and make them darned greasers clear out of the lodge, and pock some corn and shucks here for the animals, for they're nigh give out."

This being conveyed to him in mountain Spanish, which fear alone made him understand, the padre gave orders to the men to leave the Mission, advising them, moreover, not to recommence hostilities, as himself was kept as hostage, and if a finger was lifted against the mountaineers, he would be killed at once, and the Mission burned to the ground. Once inside, the hunters had no fear of attack, they could have kept the building against all California; so, leaving a guard of two outside the gate, and first seeing their worn-out animals supplied with piles of corn and shucks, they made themselves at home, and soon were paying attention to the hot tortillas, meat, and chile colorado which were quickly placed before them, washing down the hot-spiced viands with deep draughts of wine and brandy. It [Pg 231] would have been amusing to have seen the faces of these rough fellows as they gravely pledged each other in the grateful liquor, and looked askance at the piles of fruit served by the attendant Hebes. These came in for no little share of attention, it may be imagined; but the utmost respect was paid to them, for your mountaineer, rough and bear-like though he be, never, by word or deed, offends the modesty of a woman, although sometimes obliged to use a compulsory wooing, when time is not allowed for regular courtship, and not unfrequently known to jerk a New Mexican or Californian beauty behind his saddle, should the obdurate parents refuse consent to their immediate union. It tickled the Americans not a little to have all their wants supplied, and to be thus waited upon, by what they considered the houris of paradise; and after their long journey, and the many hardships and privations they had suffered, their present luxurious situation seemed scarcely real.

The hidalgo, released from the durance vile of the lasso, assisted at the entertainment; his sense of what was due to the "sangre regular" which ran in his veins being appeased by the fact, that he sat above the wild uncouth mountaineers, these preferring to squat cross-legged on the floor in their own fashion, to the uncomfortable and novel luxury of a chair. Killbuck, indeed, seemed to have quite forgotten the use of such pieces of furniture. On Fray Augustin offering him one, and begging him, [Pg 232] with many protestations, to be seated, that old mountain worthy looked at it, and then at the padre, turned it round, and at length comprehending the intention, essayed to

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

sit. This he effected at last, and sat grimly for some moments, when, seizing the chair by the back, he hurled it out of the open door, exclaiming,—“Wagh! this coon aint hamshot anyhow, and don’t want such fixins, he don’t;” and gathering his legs under his body, reclined in the manner customary to him. There was a prodigious quantity of liquor consumed that night, the hunters making up for their many banyans; but as it was the pure juice of the grape, it had little or no effect upon their hard heads. They had not much to fear from attacks on the part of the Californians; but, to provide against all emergencies, the padre and the Gachupin were “hobbled,” and confined in an inner room, to which there was no ingress nor egress save through the door which opened into the apartment where the mountaineers lay sleeping, two of the number keeping watch. A fandango with the Indian girls had been proposed by some of them, but Walker placed a decided veto on this. He said “they had need of sleep now, for there was no knowing what to-morrow might bring forth; that they had a long journey before them, and winter was coming on; they would have to ‘streak’ it night and day, and sleep when their journey was over, which would not be until Pike’s Peak was left behind them. It was now [Pg 233]October, and the way they’d have to hump it back to the mountains would take the gristle off a painter’s tail.”

Young Ned Wooton was not to the fore when the roll was called. He was courting the Sonora wench Juanita, and to some purpose, for we may at once observe, that the maiden accompanied the mountaineer to his distant home, and at the present moment is sharing his lodge on Hard-scrabble creek of the upper Arkansa, having been duly and legally married by Fray Augustin before their departure.

But now the snow on the ridge of the Sierra Madre, and the nightly frosts; the angular flights of geese and ducks constantly passing overhead; the sober tints of the foliage, and the dead leaves that strew the ground; the withering grass on the plain, and the cold gusts, sometimes laden with snow and sleet, that sweep from the distant snow-clad mountains;—all these signs warn us to linger no longer in the tempting valley of San Fernando, but at once to pack our mules to cross the dreary and desert plains and inhospitable sierras; and to seek with our booty one of the sheltered bayous of the Rocky Mountains.

On the third day after their arrival, behold our mountaineers again upon the march, driving before them—with the assistance of half-a-dozen Indians, impressed for the first few days of the journey until the cavallada get accustomed to travel without confusion—a [Pg 234]band of four hundred head of mules and horses, themselves mounted on the strongest and fleetest they could select from at least a thousand.

Fray Augustin and the Hidalgo, from the house-top, watched them depart: the former glad to get rid of such unscrupulous guests at any cost, the latter rather loath to part with his boon companions, with whom he had quaffed many a quartillo of Californian wine. Great was the grief, and violent the sobbing, when all the girls in the Mission surrounded Juanita to bid her adieu; as she, seated en cavalier on an easy pacing mule, bequeathed her late companions to the keeping of every saint in the calendar, and particularly to the great St Ferdinand himself, under whose especial tutelage all those in the Mission were supposed to live. Pedrillo, poor forsaken Pedrillo, a sullen sulky half-breed, was overcome, not with grief, but with anger at the slight put upon him, and vowed revenge. He of the “sangre regular,” having not a particle of enmity in his heart, waved his arm—that arm with which he had mowed down the enemies of Carlos Quinto—and requested the mountaineers, if ever fate should carry them to Spain, not to fail to visit his quinta in the vega

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

of Genil, which, with all in it, he placed at their worships' disposal—con muchissima franqueza. Fat Fray Augustin likewise waved his arm, but groaned in spirit as he beheld the noble band of mules and horses, throwing back clouds of dust on the plain where they had been bred. One noble [Pg 235]roan stallion seemed averse to leave his accustomed pasture, and again and again broke away from the band. Luckily old Walker had taken the precaution to secure the “bell-mare” of the herd, and mounted on her rode ahead, the animals all following their well-known leader. As the roan galloped back, the padre was in ecstasy. It was a favourite steed, and one he would have gladly ransomed at any price.

“Ya viene, ya viene!” he cried out, “now, now it's coming! hurra for the roan!” but, under the rifle of a mountaineer, one of the Californians dashed at it, a lasso whirling round his head, and turning and twisting like a doubling hare, as the horse tried to avoid him, at last threw the open coil over the animal's head, and led him back in triumph to the band.

“Maldito sea aquel Indio—curse that Indian!” quoth the padre, and turned away.

And now our sturdy band—less two who had gone under—were fairly on their way. They passed the body of their comrade who had been killed in the fight before the Mission; the wolves, or Indian dogs, had picked it to the bones; but a mound near by, surrounded by a rude cross, showed where the Californians (seven of whom were killed) had been interred—the pile of stones at the foot of the cross testifying that many an ave maria had already been said by the poor Indians, to save the souls of [Pg 236]their slaughtered companions from the pangs of purgatory.

For the first few days progress was slow and tedious. The confusion attendant upon driving so large a number of animals over a country without trail or track of any description, was sufficient to prevent speedy travelling; and the mountaineers, desirous of improving the pace, resolved to pursue a course more easterly, and to endeavour to strike the great SPANISH TRAIL, which is the route followed by the New Mexicans in their journeys to and from the towns of Puebla de los Angeles and Santa Fé. This road, however, crosses a long stretch of desert country, destitute alike of grass and water, save at a few points, the regular halting-places of the caravans; and as but little pasture is to be found at these places at any time, there was great reason to doubt, if the Santa Fé traders had passed this season, that there would not be sufficient grass to support the numerous cavallada, after the herbage had been laid under contribution by the traders' animals. However, a great saving of time would be effected by taking this trail, although it wound a considerable distance out of the way to avoid the impassable chain of the Sierra Nevada—the gap in those mountains through which the Americans had come being far to the southward, and at this late season probably obstructed by the snow.

Urged by threats and bribes, one of the Indians [Pg 237]agreed to guide the cavallada to the trail, which he declared was not more than five days' distant. As they advanced, the country became wilder and more sterile,—the valleys, through which several small streams coursed, alone being capable of supporting so large a number of animals. No time was lost in hunting for game; the poorest of the mules and horses were killed for provisions, and the diet was improved by a little venison when a deer casually presented itself near the camping ground. Of Indians they had seen not one; but they now approached the country of the Diggers, who infest the district through which the Spanish trail passes, laying contributions on the caravans of traders, and who have been, not inaptly, termed the “Arabs of the American desert.” The Californian guide now earnestly entreated permission to retrace his steps, saying, that he should lose his life if he attempted to pass

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

the Digger country alone on his return. He pointed to a snow-covered peak, at the foot of which the trail passed; and leave being accorded, he turned his horse's head towards the Mission of San Fernando.

Although the cavallada travelled, by this time, with much less confusion than at first, still, from the want of a track to follow, great trouble and exertion were required to keep the proper direction. The bell-mare led the van, carrying Walker, who was better acquainted with the country than the others; another hunter, of considerable distinction [Pg 238] in the band, on a large mule, rode by his side. Then followed the cavallada, jumping and frisking with each other, stopping whenever a blade of grass showed, and constantly endeavouring to break away to green patches which sometimes presented themselves in the plains. Behind the troop, urging them on by dint of loud cries and objurgations, rode six mountaineers, keeping as much as possible in a line. Two others were on each flank to repress all attempts to wander, and keep the herd in a compact body. In this order the caravan had been crossing a broken country, up and down ridges, all day, the animals giving infinite trouble to their drivers, when a loud shout from the advanced guard put them all upon the qui-vive. Old Walker was seen to brandish the rifle over his head and point before him, and presently the cry of "The trail! the trail!" gladdened all hearts with the anticipation of a respite from the harassing labour of mule-driving. Descending a broken ridge, they at once struck into a distinct and tolerably well-worn track, into which the cavallada turned as easily and instinctively as if they had all their lives been accustomed to travel on beaten roads. Along this they travelled merrily—their delight being, however, alloyed by frequent indications that hunger and thirst had done their work on the mules and horses of the caravans which had preceded them on the trail. They happened to strike it in the centre of a long stretch of desert, extending sixty miles without [Pg 239] either water or pasture; and many animals had perished here, leaving their bones to bleach upon the plain. The soil was sandy, but rocks and stones covered the surface, disabling the feet of many of the young horses and mules; several of which, at this early stage of the journey, were already abandoned. Traces of the wretched Diggers became very frequent; these abject creatures resorting to the sandy plains for the purpose of feeding upon the lizards which there abound. As yet they did not show; only at night they prowled around the camp, waiting a favourable opportunity to run the animals. In the present instance, however, many of the horses having been left on the road, the Diggers found so plentiful a supply of meat as to render unnecessary any attack upon the formidable mountaineers.

One evening the Americans had encamped, earlier than usual, on a creek well-timbered with willow and quaking-ash, and affording tolerable pasture; and although it was still rather early, they determined to stop here, and give the animals an opportunity to fill themselves. Several deer had jumped out of the bottom as they entered it; and La Bonté and Killbuck had sallied from the camp with their rifles, to hunt and endeavour to procure some venison for supper. Along the river banks, herds of deer were feeding in every direction, within shot of the belt of timber; and the two hunters had no difficulty in approaching and knocking over [Pg 240] two fine bucks within a few paces of the thicket. They were engaged in butchering the animals, when La Bonté, looking up from his work, saw half-a-dozen Indians dodging among the trees, within a few yards of himself and Killbuck. At the same instant two arrows thudded into the carcass of the deer over which he knelt, passing but a few inches from his head. Hollowing to his companion, La Bonté immediately seized the deer, and, lifting it with main strength, held it as a shield before him, but not before an

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

arrow had struck him in the shoulder. Rising from the ground he retreated behind cover, yelling loudly to alarm the camp, which was not five hundred yards' distant on the other side of the stream. Killbuck, when apprised of the danger, ran bodily into the plain, and, keeping out of shot of the timber, joined La Bonté, who now, out of arrow-shot, threw down his shield of venison and fired his rifle at the assailants. The Indians appeared at first afraid to leave the cover; but three or four more joining them, one a chief, they advanced into the plain, with drawn bows, scattering wide apart, and running swiftly towards the whites, in a zigzag course, in order not to present a steady mark to their unerring rifles. The latter were too cautious to discharge their pieces, but kept a steady front, with rifle at shoulder. The Indians evidently disliked to approach nearer; but the chief, an old grizzled man, incited them by word and gesture—running in [Pg 241]advance, and calling upon the others to follow him.

“Ho, boy!” exclaimed Killbuck to his companion, “that old coon must go under, or we'll get rubbed out by these darned critturs.”

La Bonté understood him. Squatting on the ground, he planted his wiping-stick firmly at the extent of his left arm, and resting the long barrel of his rifle on his left hand, which was supported by the stick, he took a steady aim and fired. The Indian, throwing out his arms, staggered and let fall his bow—tried hard to recover himself, and then fell forward on his face. The others, seeing the death of their chief, turned and made again for the cover. “You darned critturs,” roared Killbuck, “take that!” and fired his rifle at the last one, tumbling him over as dead as a stone. The camp had also been alarmed. Five of them waded across the creek and took the Indians in rear; their rifles cracked within the timber, several more Indians fell, and the rest quickly beat a retreat. The venison, however, was not forgotten; the two deer were packed into camp, and did the duty of mule-meat that night.

This lesson had a seasonable effect upon the Diggers, who made no attempt on the cavallada that night or the next; for the camp remained two days to recruit the animals.

We will not follow the party through all the difficulties and perils of the desert route, nor detail [Pg 242]the various devilries of the Diggers, who constantly sought opportunities to stampede the animals, or, approaching them in the night as they grazed, fired their arrows indiscriminately at the herd, trusting that dead or disabled ones would be left behind, and afford them a good supply of meat. In the month of December the mountaineers crossed the great dividing ridge of the Rocky Mountains, making their way through the snowy barrier with the utmost difficulty, and losing many mules and horses in the attempt. On passing the ridge, they at once struck the head-springs of the Arkansa river, and turned into the Bayou Salade. Here they found a village of Arapahos, and were in no little fear of leaving their cavallada with these dexterous horse-thieves. Fortunately, the chief in command was friendly to the whites, and restrained his young men; and a present of three horses insured his good offices. Still, the near neighbourhood of these Indians being hardly desirable, after a few days' halt, the Americans were again on their way, and halted finally at the juncture of the Fontaine-qui-bout with the Arkansa, where they determined to construct a winter camp. They now considered themselves at home, and at once set about building a log-shanty capable of containing them all, and a large corral for securing the animals at night, or in case of Indian alarms. This they effected by felling several large cottonwoods, and throwing them in the form of a horse-shoe: the entrance, however, [Pg 243]being narrower than in that figure, and secured by upright logs, between which poles were fixed to be withdrawn at pleasure.

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

The house, or “fort”—as any thing in the shape of a house is called in these parts, where, indeed, every man must make his house a castle—was loopholed on all sides, and boasted a turf chimney of rather primitive construction; but which answered the purpose of drawing the smoke from the interior. Game was plentiful all around;—bands of buffalo were constantly passing the Arkansa; and there were always deer and antelope within sight of the fort. The pasture, too, was good and abundant—being the rich grama or buffalo grass, which, although rather dry at this season, still retains its fattening qualities; and the animals soon began to improve wonderfully in condition and strength.

Of the four hundred head of mules and horses with which they had started from California, but one-half reached the Arkansa. Many had been killed for food (indeed they had furnished the only provisions during the journey), many had been stolen by the Indians, or shot by them at night; and many had strayed off and not been recovered. We have omitted to mention that the Sonora girl, Juanita, and her spouse, Ned Wooton, remained behind at Roubideau’s fort and rendezvous on the Uintah, which our band had passed on the other side of the mountains, whence they proceeded with a party to Taos in New Mexico, and resided there [Pg 244]for some years, blessed with a fine family, &c. &c. &c., as the novels end.

As soon as the animals were fat and strong, they were taken down the Arkansa to Bent’s Indian trading fort, about sixty miles below the mouth of Fontaine-qui-bout. Here a ready sale was found for them, mules being at that time in great demand on the frontier of the United States, and every season the Bents carried across the plains to Independence a considerable number collected in the Indian country, and in the upper settlements of New Mexico. While the mountaineers were descending the Arkansa, a little incident occurred, and some of the party very unexpectedly encountered an old friend. Killbuck and La Bonté, who were generally compañeros, were riding some distance ahead of the cavallada, passing at the time the mouth of the Huerfano or Orphan Creek, when, at a long distance before them, they saw the figure of a horseman, followed by two loose animals, descending the bluff into the timbered bottom of the river. Judging the stranger to be Indian, they spurred their horses and galloped in pursuit, but the figure ahead suddenly disappeared. However, they quickly followed the track, which was plain enough in the sandy bottom, that of a horse and two mules. Killbuck scrutinised the “sign,” and puzzled over it a considerable time; and at last exclaimed—“Wagh! this sign’s as plain as mon beaver to me; look at that hos-track, boy; did ye ever see that afore?”

[Pg 245]

“Well, I have!” answered La Bonté, peering down at it: “that ar shuffle-toe seems handy to me now, I tellyou.”

“The man as used to ride that hos is long gone under, but the hos, darn the old crittur, is old Bill Williams’s, I’ll swar by hook.”

“Well, it aint nothin else,” continued La Bonté, satisfying himself by a long look; “it’s the old boy’s hos as shure as shootin: and them Rapahos has rubbed him out at last, and raised his animals. Ho, boy! let’s lift their hair.”

“Agreed,” answered Killbuck; and away they started in pursuit, determined to avenge the death of their old comrade.

They followed the track through the bottom and into the stream, which it crossed, and, passing a few yards up the bank, entered the water again, when they could see nothing more of it. Puz-

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

zled at this, they sought on each side the river, but in vain; and, not wishing to lose more time in the search, they proceeded through the timber on the banks to find a good camping-place for the night, which had been their object in riding in advance of the cavallada. On the left bank, a short distance before them, was a heavy growth of timber, and the river ran in one place close to a high bluff, between which and the water was an almost impervious thicket of plum and cherry trees. The grove of timber ended before it reached this point, and but few scattered trees grew in the little glade which intervened, and [Pg 246]which was covered with tolerable grass. This being fixed upon as an excellent camp, the two mountaineers rode into the glade, and dismounted close to the plum and cherry thicket, which formed almost a wall before them, and an excellent shelter from the wind. Jumping off their horses, they were in the act of removing the saddles from their backs, when a shrill neigh burst from the thicket not two yards behind them; a rustling in the bushes followed, and presently a man dressed in buckskin, and rifle in hand, burst out of the tangled brush, exclaiming in an angry voice—

“Doëe hy’ar now? I was nigh upon gut-shootin some of e’e—I was now; thought e’e was darned Rapahos, I did, and câched right off.”

“Ho, Bill! what, old hos! not gone under yet?” cried both the hunters. “Give us your paw.”

“Doëe now, if hy’ar ar’nt them boys as was rubbed out on Lodge Pole (creek) a time ago. Doëe hyar? if this aint ‘some’ now, I would’nt say so.”

Leaving old Bill Williams and our two friends to exchange their rough but hearty greetings, we will glance at that old worthy’s history since the time when we left him caching in the fire and smoke on the Indian battle-ground in the Rocky Mountains. He had escaped fire and smoke, or he would not have been here on Arkansa with his old grizzled Nez-percé steed. On that occasion, the veteran mountaineer had lost his two pack-animals and all [Pg 247]his beaver. He was not the man, however, to want a horse or mule as long as an Indian village was near at hand. Skulking, therefore, by day in cañons and deep gorges of the mountains, and travelling by night, he followed closely on the trail of the victorious savages, bided his time, struck his “coup,” and recovered a pair of pack-horses, which was all he required. Ever since, he had been trapping alone in all parts of the mountains; had visited the rendezvous but twice for short periods, and then with full packs of beaver; and was now on his way to Bent’s Fort, to dispose of his present loads of peltry, enjoy one good carouse on Taos whisky, and then return to some hole or corner in the mountains which he knew of, to follow in the spring his solitary avocation. He too had had his share of troubles, and had many Indian scrapes, but passed safely through all, and scarcely cared to talk of what he had done, so matter-of-fact to him were the most extraordinary of his perilous adventures.

Arrived at Bent’s Fort, the party disposed of their cavallada, and then—respect for the pardonable weaknesses of our mountain friends prompts us to draw a veil over the furious orgies that ensued. A number of hunters and trappers were “in” from their hunting-grounds, and a village of Shians and some lodges of Kioways were camped round the fort. As long as the liquor lasted, and there was good store of alcohol as well as of Taos whisky, the Arkansa resounded with furious mirth—not unmixed [Pg 248]with graver scenes; for your mountaineer, ever quarrelsome in his cups, is quick to give and take offence, when rifles alone can settle the difference, and much blood is spilt upon the prairie in his wild and frequent quarrels.

Bent’s Fort is situated on the left or northern bank of the river Arkansa, about one hundred miles from the foot of the Rocky Mountains—on a low and level bluff of the prairie which here slopes

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

gradually to the water's-edge. The walls are built entirely of adobes—or sun-burned bricks—in the form of a hollow square, at two corners of which are circular flanking towers of the same material. The entrance is by a large gateway into the square, round which are the rooms occupied by the traders and employés of the host. These are small in size, with walls coloured by a white-wash made of clay found in the prairie. Their flat roofs are defended along the exterior by parapets of adobe, to serve as a cover to marksmen firing from the top; and along the coping grow plants of cactus of all the varieties common in the plains. In the centre of the square is the press for packing the furs; and there are three large rooms, one used as a store and magazine, another as a council-room, where the Indians assemble for their “talks,” whilst the third is the common dining-hall, where the traders, trappers, and hunters, and all employés, feast upon the best provender the game-covered country affords. Over the culinary department presided of late years a [Pg 249] fair lady of colour, Charlotte by name, who was, as she loved to say, “de onlee lady in de dam Injun country,” and who moreover was celebrated from Long's Peak to the Cumbres Espanolás for slap-jacks and pumpkin pies.

Here congregate at certain seasons the merchants of the plains and mountains, with their stocks of peltry. Chiefs of the Shian, the Kioway, and Arapaho, sit in solemn conclave with the head traders, and smoke the “calumet” over their real and imaginary grievances. Now O-cun-no-whurst, the Yellow Wolf, grand chief of the Shian, complains of certain grave offences against the dignity of his nation! A trader from the “big lodge” (the fort) has been in his village, and before the trade was opened, in laying the customary chief's gift “on the prairie” [31] has not “opened his hand,” but “squeezed out his present between his fingers,” grudgingly, and with too sparing measure. This was hard to bear, but the Yellow Wolf would say no more!

Tah-kai-buhl, or, “he who jumps,” is deputed from the Kioway to warn the white traders not to proceed to the Canadian to trade with the Comanche. That nation is mad—a “heap mad” with the whites, and has “dug up the hatchet” to “rub out” all who enter its country. The Kioway loves the paleface, and gives him warning (and “he who jumps” [Pg 250] looks as if he deserves something “on the prairie” for his information).

Shawh-noh-qua-mish, “the peeled lodge-pole,” is there to excuse his Arapaho braves, who lately made free with a band of horses belonging to the fort. He promises the like shall never happen again, and he, Shawh-noh-qua-mish, speaks with a “single tongue.” Over clouds of tobacco and kinnik-kinnik, these grave affairs are settled and terms arranged.

In the corral, groups of leather-clad mountaineers, with “decks” of “euker” and “seven up,” gamble away their hard-earned peltries. The employés—mostly St Louis Frenchmen and Canadian voyageurs—are pressing packs of buffalo skins, beating robes, or engaged in other duties of a trading fort. Indian squaws, the wives of mountaineers, strut about in all the pride of beads and fofarrow, jingling with bells and bugles, and happy as paint can make them. Hunters drop in with animals packed with deer or buffalo meat to supply the fort; Indian dogs look anxiously in at the gateway, fearing to enter and encounter their natural enemies, the whites: and outside the fort, at any hour of the day or night, one may safely wager to see a dozen cayettes or prairie wolves loping round, or seated on their haunches, and looking gravely on, waiting patiently for some chance offal to be cast outside. Against the walls, groups of [Pg 251] Indians, too proud to enter without an invitation, lean, wrapped in their buffalo robes, sulky and evidently ill at ease to be so near the whites without a chance of fingering their scalp-locks; their white lodges shining in the sun, at a little

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

distance from the river-banks; their horses feeding in the plain beyond.

The appearance of the fort is very striking, standing as it does hundreds of miles from any settlement, on the vast and lifeless prairie, surrounded by hordes of hostile Indians, and far out of reach of intercourse with civilised man; its mud-built walls inclosing a little garrison of a dozen hardy men, sufficient to hold in check the numerous tribes of savages ever thirsting for their blood. Yet the solitary stranger passing this lone fort, feels proudly secure when he comes within sight of the “stars and stripes” which float above the walls.

---

[Pg 252]

## CHAPTER VIII.

AGAIN we must take a jump with La Bonté over a space of several months; when we find him, in company of half a dozen trappers, amongst them his inseparable compañero Killbuck, camped on the Greenhorn creek, en route to the settlements of New Mexico. They have a few mules packed with beaver for the Taos market: but this expedition has been planned more for pleasure than profit—a journey to Taos valley being the only civilised relaxation coveted by the mountaineers. Not a few of the present band are bound thither with matrimonial intentions; the belles of Nuevo Mejico being to them the ne plus ultra of female perfection, uniting most conspicuous personal charms (although coated with cosmetic alegría—an herb, with the juice of which the women of Mexico hideously bedaub their faces), with all the hard-working industry of Indian squaws. The ladies, on their part, do not hesitate to leave the paternal abodes, and eternal tortilla-making, to share the perils and privations of the American mountaineers in the distant wilderness. Utterly despising their own countrymen, whom they are used to contrast with the [Pg 253]dashing white hunters who swagger in all the pride of fringe and leather through their towns—they, as is but natural, gladly accept husbands from the latter class; preferring the stranger, who possesses the heart and strong right arm to defend them, to the miserable cowardly “peládos,” who hold what little they have on sufferance of savage Indians, but one degree superior to themselves.

Certainly no band of hunters that ever appeared in the vale of Taos, numbered in its ranks a properer lot of lads than those now camped on Greenhorn, intent on matrimonial foray into the settlements of New Mexico. There was young Dick Wooton, who was “some” for his inches, being six feet six, and as straight and strong as the barrel of his long rifle. Shoulder to shoulder with this “boy,” stood Rube Herring, and not a hair’s-breadth difference in height or size was there between them. Killbuck, though mountain winters had sprinkled a few snow-flakes on his head, looked up to neither; and La Bonté held his own with any mountaineer who ever set a trap in sight of Long’s Peak or the Snowy Range. Marcellin—who, though a Mexican, despised his people and abjured his blood, having been all his life in the mountains with the white hunters—looked down easily upon six feet and odd inches. In form a Hercules, he had the symmetry of an Apollo; with strikingly handsome features, and masses of long black hair hanging from his slouching beaver over the shoulders of his buckskin [Pg 254]hunting shirt. He, as he was wont to say, was “no dam Spaniard, but ‘mountainee man,’ wagh!” Chabonard, a half-breed, was not lost in the crowd;—and, the last in height, but the first in every quality which constitutes excellence in a mountaineer, whether of indomitable courage, or perfect indifference to death or danger; with an iron frame capable of withstanding hunger, thirst, heat, cold, fatigue, and hardships of every kind; of wonderful presence of mind, and endless resources in times of peril; with the instinct of an animal,

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

and the moral courage of a man—who was “taller” for his inches than KIT CARSON, paragon of mountaineers? [32] Small in stature, and slenderly limbed, but with muscles of wire, with a fair complexion and quiet intelligent features, to look at Kit none would suppose that the mild-looking being before him was an incarnate devil in Indian fight, and had raised more hair from head of Redskins than any two men in the western country; and yet, thirty winters had scarcely planted a line or furrow on his clean-shaven face. No name, however, was better known in the mountains—from Yellow Stone to Spanish Peaks, [Pg 255] from Missouri to Columbia River—than that of Kit Carson, “raised” in Boonlick, county of Missouri State, and a credit to the diggings that gave him birth.

On Huerfano or Orphan Creek, so called from an isolated hutte which stands on a prairie near the stream, our party fell in with a village of Yuta Indians, at that time hostile to the whites. Both parties were preparing for battle, when Killbuck, who spoke the language, went forward with signs of peace, and after a talk with several chiefs, entered into an armistice, each party agreeing not to molest the other. After trading for a few deer-skins, which the Yutas are celebrated for dressing delicately fine, the trappers moved hastily on out of such dangerous company, and camped under the mountain on Oak Creek, where they fortified in a strong position, and constructed a corral in which to secure their animals at night. At this point is a tolerable pass through the mountains, where a break occurs in a range, whence they gradually decrease in magnitude until they meet the sierras of Mexico, which connect the two mighty chains of the Andes and the Rocky Mountains. From the summit of the dividing ridge, to the eastward, a view is had of the vast sea of prairie which stretches away from the base of the mountains, in dreary barrenness, for nearly a thousand miles, until it meets the fertile valley of the great Missouri. Over this boundless expanse, nothing breaks the uninterrupted solitude of the view. Not a tree or atom of foliage relieves [Pg 256] the eye; for the lines of scattered timber which belt the streams running from the mountains, are lost in the shadow of their stupendous height, and beyond this nothing is seen but the bare surface of the rolling prairie. In no other part of the chain are the grand characteristics of the Far West more strikingly displayed than from this pass. The mountains here rise, on the eastern side, abruptly from the plain, and the view over the great prairies is not therefore obstructed by intervening ridges. To the westward the eye sweeps over the broken spurs which stretch from the main range in every direction; whilst distant peaks, for the most part snow-covered, are seen at intervals rising isolated above the range. On all sides the scene is wild and dismal.

Crossing by this pass, the trappers followed the Yuta trail over a plain, skirting a pine-covered ridge, in which countless herds of antelope, tame as sheep, were pasturing. Numerous creeks intersect it, well timbered with oak, pine, and cedar, and well stocked with game of all kinds. On the eleventh day from leaving the Huerfano, they struck the Taos valley settlement on Arroyo Hondo, and pushed on at once to the village of Fernandez—sometimes, but improperly, called Taos. As the dashing band clattered through the village, the dark eyes of the reboso-wrapped muchachos peered from the doors of the adobe houses, each mouth armed with cigarito, which was at intervals removed to [Pg 257] allow utterance to the salutation to each hunter as he trotted past of *Adios Americanos*,—“Welcome to Fernandez!” and then they hurried off to prepare for the fandango, which invariably followed the advent of the mountaineers. The men, however, seemed scarcely so well pleased; but leaned sulkily against the walls, their sarapes turned over the left shoulder, and concealing the lower part of the face, the hand appearing from its upper folds only to remove the

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

eternal cigarro from their lips. They, from under their broad-brimmed sombreros, scowled with little affection upon the stalwart hunters, who clattered past them, scarcely deigning to glance at the sullen Peládos, but paying incomprehensible compliments to the buxom wenches who smiled at them from the doors. Thus exchanging salutations, they rode up to the house of an old mountaineer, who had long been settled here with a New Mexican wife, and who was the recognised entertainer of the hunters when they visited Taos valley, receiving in exchange such peltry as they brought with them.

No sooner was it known that Los Americanos had arrived, than nearly all the householders of Fernandez presented themselves to offer the use of their “salas” for the fandango which invariably celebrated their arrival. This was always a profitable event; for as the mountaineers were generally pretty well “flush” of cash when on their “spree,” and as open-handed as an Indian could wish, the [Pg 258]sale of whisky, with which they regaled all comers, produced a handsome return to the fortunate individual whose room was selected for the fandango. On this occasion the sala of the Alcalde Don Cornelio Vegil was selected and put in order; a general invitation was distributed; and all the dusky beauties of Fernandez were soon engaged in arraying themselves for the fête. Off came the coats of dirt and “alegnía” which had bedaubed their faces since the last “funcion,” leaving their cheeks clear and clean. Water was profusely used, and their cuerpos were doubtless astonished by the unusual lavation. Their long black hair was washed and combed, plastered behind their ears, and plaited into a long queue, which hung down their backs. Enaguas of gaudy colour (red most affected) were donned, fastened round the waist with ornamented belts, and above this a snow-white camisita of fine linen was the only covering, allowing a prodigal display of their charms. Gold and silver ornaments, of antiquated pattern, decorate their ears and necks; and massive crosses of the precious metals, wrought from the gold or silver of their own placeres, hang pendant on their breasts. The enagua or petticoat, reaching about halfway between the knee and ankle, displays their well-turned limbs, destitute of stockings, and their tiny feet, thrust into quaint little shoes (zapatitos) of Cinderellan dimensions. Thus equipped, with the reboso drawn over their heads and faces, out of the folds of which their brilliant [Pg 259]eyes flash like lightning, and each pretty mouth armed with its cigarito, they coquettishly enter the fandango. [33] Here, at one end of a long room, are seated the musicians, their instruments being generally a species of guitar, called heaca, a bandolin, and an Indian drum, called tombé—one of each. Round the room groups of New Mexicans lounge, wrapped in the eternal sarape, and smoking of course, scowling with jealous eyes at the more favoured mountaineers. These, divested of their hunting-coats of buckskins, appear in their bran-new shirts of gaudy calico, and close fitting buckskin pantaloons, with long fringes down the outside seam from the hip to the ankle; with moccasins, ornamented with bright beads and porcupine quills. Each, round his waist, wears his mountain-belt and scalp-knife, ominous of the company he is in, and some have pistols sticking in their belt.

The dances—save the mark!—are without form or figure, at least those in which the white hunters sport the “fantastic toe.” Seizing his partner round the waist with the gripe of a grisly bear, each mountaineer whirls and twirls, jumps and stamps; introduces Indian steps used in the “scalp” or “buffalo” dances, whooping occasionally with unearthly cry, and then subsiding into the jerking step, raising each foot alternately from the ground, so [Pg 260]much in vogue in Indian ballets. The hunters have the floor all to themselves. The Mexicans have no chance in such physical force

---

by GEORGE FREDERICK RUXTON

---

dancing; and if a dancing Peládo [34] steps into the ring, a lead-like thump from a galloping mountaineer quickly sends him sprawling, with the considerate remark—"Quit, you darned Spaniard! you can't 'shine' in this crowd."

During a lull, guagés [35] filled with whisky go the rounds—offered to and seldom refused by the ladies—sturdily quaffed by the mountaineers, and freely swallowed by the Peládos, who drown their jealousy and envious hate of their entertainers in potent aguardiente. Now, as the guagés are oft refilled and as often drained, and as night advances, so do the spirits of the mountaineers become more boisterous, while their attentions to their partners become warmer—the jealousy of the natives waxes hotter thereat—and they begin to show symptoms of resenting the endearments which the mountaineers bestow upon their wives and sweethearts. And now, when the room is filled to crowding,—with two hundred people, swearing, drinking, dancing, and shouting—the half-dozen Americans monopolising the fair, to the evident disadvantage of at least threescore scowling Peládos, it happens that one of these, maddened by whisky and the green-eyed [Pg 261] monster, suddenly seizes a fair one from the waist-encircling arm of a mountaineer, and pulls her from her partner. Wagh!—La Bonté—it is he—stands erect as a pillar for a moment, then raises his hand to his mouth, and gives a ringing war-whoop—jumps upon the rash Peládo, seizes him by the body as if he were a child, lifts him over his head, and dashes him with the force of a giant against the wall.

The war, long threatened, has commenced; twenty Mexicans draw their knives and rush upon La Bonté, who stands his ground, and sweeps them down with his ponderous fist, one after another, as they throng around him. "Howgh-owgh-owgh-owgh-h!" the well-known warhoop, bursts from the throats of his companions, and on they rush to the rescue. The women scream, and block the door in their eagerness to escape; and thus the Mexicans are compelled to stand their ground and fight. Knives glitter in the light, and quick thrusts are given and parried. In the centre of the room the whites stand shoulder to shoulder—covering the floor with Mexicans by their stalwart blows; but the odds are fearful against them, and other assailants crowd up to supply the place of those who fall.

The alarm being given by the shrieking women, reinforcements of Peládos rushed to the scene of action, but could not enter the room, which was already full. The odds began to tell against the mountaineers, [Pg 262]when Kit Carson's quick eye caught sight of a high stool or stone, supported by three long heavy legs. In a moment he had cleared his way to this, and in another the three legs were broken off and in the hands of himself, Dick Wooton, and La Bonté. Sweeping them round their heads, down came the heavy weapons amongst the Mexicans with wonderful effect—each blow, dealt by the nervous arms of Wooton and La Bonté, mowing down a good half-dozen of the assailants. At this the mountaineers gave a hearty whoop, and charged the wavering enemy with such resistless vigour, that they gave way and bolted through the door, leaving the floor strewn with wounded, many most dangerously; for, as may be imagined, a thrust from the keen scalp-knife by the nervous arm of a mountaineer was no baby blow, and seldom failed to strike home—up to the "Green River" [36] on the blade.

The field being won, the whites, too, beat a quick retreat to the house where they were domiciled, and where they had left their rifles. Without their trusty weapons they felt, indeed, unarmed; and not knowing how the affair just over would be followed up, lost no time in making preparations for defence. However, after great blustering on the part of the [Pg 263]prefecto, who, accompa-

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

nied by a posse comitatus of “Greasers,” proceeded to the house, and demanded the surrender of all concerned in the affair—which proposition was received with a yell of derision—the business was compounded by the mountaineers promising to give sundry dollars to the friends of two of the Mexicans, who died during the night of their wounds, and to pay for a certain amount of masses to be sung for the repose of their souls in purgatory. Thus the affair blew over; but for several days the mountaineers never showed themselves in the streets of Fernandez without their rifles on their shoulders, and refrained from attending fandangos for the present, and until the excitement had cooled down.

A bitter feeling, however, existed on the part of the men; and one or two offers of a matrimonial nature were rejected by the papas of certain ladies who had been wooed by some of the white hunters, and their hands formally demanded from the respective padres.

La Bonté had been rather smitten with the charms of one Dolores Salazar—a buxom lass, more than three parts Indian in her blood, but confessedly the “beauty” of the Vale of Taos. She, by dint of eye, and of nameless acts of elaborate coquetry, with which the sex so universally bait their traps, whether in the salons of Belgravia, or the rancherias of New Mexico, contrived to make considerable havoc in the heart of our mountaineer; and when once [Pg 264]Dolores saw she had made an impression, she followed up her advantage with all the arts the most civilised of her sex could use when fishing for a husband.

La Bonté, however, was too old a hunter to be easily caught; and before committing himself, he sought the advice of his tried companion Killbuck. Taking him to a retired spot without the village, he drew out his pipe and charged it—seated himself cross-legged on the ground, and, with Indian gravity, composed himself for a “talk.”

“Ho, Killbuck!” he began, touching the ground with the bowl of his pipe, and then turning the stem upwards for “medicine”—“Hyar’s a child feels squamptious like, and nigh upon ‘gone beaver,’ he is—Wagh!”

“Wagh!” exclaimed Killbuck, all attention.

“Old hos,” continued the other, “thar’s no use câching anyhow what a niggur feels—so hyar’s to ‘put out.’ You’re good for beaver I know; at deer or buffler, or darned red Injun either, you’re ‘some.’ Now that’s a fact. ‘Off-hand,’ or ‘with a rest,’ you make ‘em ‘come.’ You knows the ‘sign’ of Injuns slick—Blackfoot or Sioux, Pawnee or Burnt-wood, Zeton, Rapaho, Shian, or Shoshonée, Yutah, Piyutah, or Yamhareek—their trail’s a plain as writin’, old hos, to you.”

“Wagh!” grunted Killbuck, blushing bronze at all these compliments.

“Your sight ain’t bad. Elks is elk; black-tail [Pg 265]deer ain’t white-tails; and b’ar is b’ar to you, and nothin’ else, a long mile off and more.”

“Wa-agh!”

“Thar ain’t a track as leaves its mark upon the plains or mountains but you can read off-hand; that I’ve seed myself. But tell me, old hos, can you make understand the ‘sign’ as shows itself in a woman’s breast?”

Killbuck removed the pipe from his mouth, raised his head, and puffed a rolling cloud of smoke into the air,—knocked the ashes from the bowl, likewise made his “medicine”—and answered thus:—

“From Red River, away up north amongst the Britishers, to Heely (Gila) in the Spanish country—from old Missoura to the Sea of Californy, I’ve trapped and hunted. I knows the Injuns and thar

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

‘sign,’ and they knows me, I’m thinkin. Thirty winters has snowed on me in these hyar mountains, and a niggur or a Spaniard [37] would larn ‘some’ in that time. This old tool” (tapping his rifle) “shoots ‘center’ she does; and if thar’s game afoot, this child knows ‘bull’ from ‘cow,’ and ought to could. That deer is deer, and goats is goats, is plain as paint to any but a greenhorn. Beaver’s a cunning crittur, but I’ve trapped a ‘heap;’ and at killing meat when meat’s a-running, I’ll ‘shine’ in the biggest kind of crowd. For twenty year I packed a squaw along. Not one, but a many. First I had a [Pg 266]Blackfoot—the darndest slut as ever cried for fofarrow. I lodge-poled her on Colter’s Creek, and made her quit. My buffler hos, and as good as four packs of beaver, I gave for old Bull-tail’s daughter. He was head chief of the Ricaree, and ‘came’ nicely ‘round’ me. Thar was’nt enough scarlet cloth, nor beads, nor vermilion in Sublette’s packs for her. Traps wouldn’t buy her all the fofarrow she wanted; and in two years I’d sold her to Cross-Eagle for one of Jake Hawkin’s guns—this very one I hold in my hands. Then I tried the Sioux, the Shian, and a Digger from the other side, who made the best moccasin as ever I wore. She was the best of all, and was rubbed out by the Yutas in the Bayou Salade. Bad was the best; and after she was gone under I tried no more. “Afore I left the settlements I know’d a white gal, and she was some punkins. I have never seed nothing as ‘ould beat her. Red blood won’t ‘shine’ any ways you fix it; and though I’m h— for ‘sign,’ a woman’s breast is the hardest kind of rock to me, and leaves no trail that I can see of. I’ve hearn you talk of a gal in Memphis county; Mary Brand you called her oncest. The gal I said I know’d, her name I disremember, but she stands before me as plain as Chimley Rock on Platte, and thirty year and more har’nt changed a feature in her face, to me.

“If you ask this child, he’ll tell you to leave the Spanish slut to her Greasers, and hold on till you [Pg 267]take the trail to old Missoura, whar white and Christian gals are to be had for axing. Wagh!”

La Bonté rose to his feet. The mention of Mary Brand’s name decided him; and he said—  
“Darn the Spaniard! she can’t shine with me; come, old hos! let’s move.”

And, shouldering their rifles, the two *compañeros* returned to the Ranch. More than one of the mountaineers had fulfilled the object of their journey, and had taken to themselves a partner from amongst the belles of Taos, and now they were preparing for their return to the mountains. Dick Wooton was the only unfortunate one. He had wooed a damsel whose parents peremptorily forbade their daughter to wed the hunter, and he therefore made ready for his departure with considerable regret.

The day came, however. The band of mountaineers were already mounted, and those with wives in charge were some hours on the road, leaving the remainder quaffing many a stirrup-cup before they left. Dick Wooton was as melancholy as a buffalo bull in spring; and as he rode down the village, and approached the house of his lady-love, who stood wrapped in reboso, and cigarito in mouth, on the sill of the door, he turned away his head as if dreading to say adios. La Bonté rode beside him, and a thought struck him.

“Ho, Dick!” he said, “thar’s the gal, and thar’s the mountains: shoot sharp’s the word.”

[Pg 268]

Dick instantly understood him, and was “himself again.” He rode up to the girl as if to bid her adieu, and she came to meet him. Whispering one word, she put her foot upon his, was instantly seized round the waist, and placed upon the horn of his saddle. He struck spurs into his horse, and in a minute was out of sight, his three companions covering his retreat, and menacing with

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

their rifles the crowd which was soon drawn to the spot by the cries of the girl's parents, who had been astonished spectators of the daring rape.

The trapper and his bride, however, escaped scatheless, and the whole party effected a safe passage of the mountains, and reached the Arkansa, where the band was broken up,—some proceeding to Bent's Fort, and others to the Platte, amongst whom were Killbuck and La Bonté, still in company. These two once more betook themselves to trapping, the Yellow Stone being their chief hunting-ground. But we must again leap over months and years, rather than conduct the reader through all their perilous wanderings, and at last bring him back to the camp on Bijou, where we first introduced him to our mountaineers; and as we have already followed them on the Arapaho trail, which they pursued to recover their stolen animals from a band of that nation, we will once again seat ourselves at the camp on Boiling Spring, where they had met a strange hunter on a solitary expedition to the Bayou Salade, [Pg 269] whose double-barrelled rifle had excited their wonder and curiosity.

From him they learned also that a large band of Mormons were wintering on the Arkansa, en route to the Great Salt Lake and Upper California; and as our hunters had before fallen in with the advanced guard of these fanatic emigrants, and felt no little wonder that such helpless people should undertake so long a journey through the wilderness, the stranger narrated to them the history of the sect, which we shall shortly transcribe for the benefit of the reader.

---

[Pg 270]

## CHAPTER IX.

THE Mormons were originally of the sect known as "Latter-day Saints," which sect flourishes wherever Anglo-Saxon gulls are found in sufficient numbers to swallow the egregious nonsense of fanatic humbugs who fatten upon their credulity. In the United States they especially abounded; but, the creed becoming "slow," one Joe Smith, a smart man, arose from its ranks, and instilled a little life into the decaying sect.

Joe, better known as the "Prophet Joe," was taking his siesta one fine day, upon hill in one of the New England States, when an angel suddenly appeared to him, and made known the locality of a new Bible or Testament, which contained the history of the lost tribes of Israel; that these tribes were no other than the Indian nations which possessed the continent of America at the time of its discovery, and the remains of which still existed in their savage state; that, through the agency of Joe, these were to be reclaimed, collected into the bosom of a church to be there established, according to principles which would be found in the wonderful [Pg 271] book—and which church was gradually to receive into its bosom all other churches, sects, and persuasions, with "unanimity of belief and perfect brotherhood."

After a certain probation, Joe was led in body and spirit to the mountain; by the angel who first appeared to him, was pointed out the position of the wonderful book, which was covered by a flat stone, on which would be found two round pebbles, called Urim and Thummim, and through the agency of which the mystic characters inscribed on the pages of the book were to be deciphered and translated. Joe found the spot indicated without any difficulty, cleared away the earth, and discovered a hollow place formed by four flat stones; on removing the topmost one of which sundry plates of brass presented themselves, covered with quaint and antique carving; on the top lay Urim and Thummim (commonly known to the Mormons as Mummum and Thummum, the

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

pebbles of wonderful virtue), through which the miracle of reading the plates of brass was to be performed.

Joe Smith, on whom the mantle of Moses had so suddenly fallen, carefully removed the plates and hid them, burying himself in woods and mountains whilst engaged in the work of translation. However, he made no secret of the important task imposed upon him, nor of the great work to which he had been called. Numbers at once believed him, but not a few were deaf to belief, and openly [Pg 272]derided him. Being persecuted (as the sect declares, at the instigation of the authorities), and many attempts being made to steal his precious treasure, Joe, one fine night, packed his plates in a sack of beans, bundled them into a Jersey waggon, and made tracks for the West. Here he completed the great work of translation, and not long after gave to the world the “Book of Mormon,” a work as bulky as the Bible, and called “of Mormon,” for so was the prophet named by whose hand the history of the lost tribes had been handed down in the plates of brass thus miraculously preserved for thousands of years, and brought to light through the agency of Joseph Smith.

The fame of the Book of Mormon spread over all America, and even to Great Britain and Ireland. Hundreds of proselytes flocked to Joe, to hear from his lips the doctrine of Mormonism; and in a very brief period the Mormons became a numerous and recognised sect, and Joe was at once, and by universal acclamation, installed as the head of the Mormon church, and was ever after known by the name of the “Prophet Joseph.”

However, from certain peculiarities in their social system, the Mormons became rather unpopular in the settled States, and at length moved bodily into Missouri, where they purchased several tracts of land in the neighbourhood of Independence. Here they erected a large building, which they called the Lord’s Store, where goods were collected on the [Pg 273]common account, and retailed to members of the church at moderate prices. All this time their numbers increased in a wonderful manner, and immigrants from all parts of the States, as well as Europe, continually joined them. As they became stronger, they grew bolder and more arrogant in their projects. They had hitherto been considered as bad neighbours, on account of their pilfering propensities, and their utter disregard of the conventional decencies of society—exhibiting the greatest immorality, and endeavouring to establish amongst their society an indiscriminate concubinage. This was sufficient to produce an ill feeling against them on the part of their neighbours, the honest Missourians; but they still tolerated their presence amongst them, until the Saints openly proclaimed their intention of seizing upon the country, and expelling by force the present occupants—giving, as their reason, that it had been revealed to their prophets that the “Land of Zion” was to be possessed by themselves alone.

The sturdy Missourians began to think this was a little too strong, and that, if they permitted such aggressions any longer, they would be in a fair way of being despoiled of their lands by the Mormon interlopers. At length matters came to a crisis, and the Saints, emboldened by the impunity with which they had hitherto carried out their plans, issued a proclamation to the effect that all in that part of the country, who did not belong to the [Pg 274]Mormon persuasion, must “clear out,” and give up possession of their lands and houses. The Missourians collected in a body, burned the printing-press from which the proclamation had emanated, seized several of the Mormon leaders, and, after inflicting a summary chastisement, “tared and feathered” them, and let them go.

To revenge this insult, the Mormons marshalled an army of Saints, and marched upon Indepen-

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

dence, threatening vengeance against the town and people. Here they met, however, a band of sturdy backwoodsmen, armed with rifles, determined to defend the town against the fanatic mob, who, not relishing their appearance, refused the encounter, and surrendered their leaders at the first demand. The prisoners were afterwards released, on condition that the Mormons left that part of the country without delay.

Accordingly, they once more “took up their beds and walked,” crossing the Missouri to Clay County, where they established themselves, and would finally have formed a thriving settlement but for their own acts of wilful dishonesty. At this time their blasphemous mummery knew no bounds. Joe Smith, and other prophets who had lately arisen, were declared to be chosen of God; and it was the general creed that, on the day of judgment, the former would take his stand on the right hand of the judgment-seat, and that none would pass into the kingdom of heaven without his seal and touch. [Pg 275] One of their tenets was the faith in “spiritual matrimony.” No woman, it appeared, would be admitted into heaven unless “passed” by a saint. To qualify them for this, it was necessary that the woman should first be received by the guaranteeing Mormon as an “earthly wife,” in order that he did not pass in any of whom he had no knowledge. The consequence of this state of things may be imagined. The most debasing immorality was a precept of the order, and an almost universal concubinage existed amongst the sect, which at this time numbered at least forty thousand. Their disregard to the laws of decency and morality was such as could not be tolerated in any class of civilised society.

Again did the honest Missourians set their faces against this pernicious example, and when the county to which the Mormons had removed became more thickly settled, they rose to a man against the modern Gomorrah. The Mormons, by this time, having on their part gained considerable accession to their strength, thought to set the laws at defiance, organised and armed large bodies of men, in order to maintain the ascendancy over the legitimate settlers, and bid fair to constitute an “imperium in imperio” in the State, and become the sole possessors of the public lands. This, of course, could not be tolerated. Governor Boggs at once ordered out a large force of State militia to put down this formidable demonstration, marched [Pg 276] against the Mormons, and suppressed the insurrectionary movement without bloodshed.

From Clay County they moved still farther into the wilds, and settled at last in Caldwell County, where they built the town of “Far West,” and here they remained for the space of three years. During this time they were continually receiving converts to the faith, and many of the more ignorant country people were disposed to join them, being only deterred by the fear of incurring ridicule from the stronger-minded. The body of the Mormons seeing this, called upon their prophet, Joe Smith, to perform a miracle in public before all comers, which was to prove to those of their own people who still doubted the doctrine, the truth of what it advanced—(the power of performing miracles was steadfastly declared to be in their hands by the prophets)—and to enlist those who wavered in the Mormon cause.

The prophet instantly agreed, and declared that, upon a certain day, he would walk across the broad waters of the Missouri without wetting the soles of his feet. On the appointed day, the river banks were thronged by an expectant crowd. The Mormons sang hymns of praise in honour of their prophet, and were proud of the forthcoming miracle, which was to set finally at rest all doubt as to his power and sanctity.

This power of performing miracles and effecting [Pg 277] miraculous cures of the sick, was so

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

generally believed by the Mormons, that physic was never used amongst them. The prophets visited the beds of the sick, and laid hands upon them, and if, as of course was almost invariably the case, the patient died, it was attributed to his or her want of faith; but if, on the contrary, the patient recovered, there was universal glorification on the miraculous cure.

Joe Smith was a tall, fine-looking man, of most plausible address, and possessed the gift of the gab in great perfection. At the time appointed for the performance of the walking-water miracle, he duly attended on the river banks, and descended barefoot to the edge of the water.

“My brethren!” he exclaimed in a loud voice, “this day is a happy one to me, to us all, who venerate the great and only faith. The truth of our great and blessed doctrine will now be proved before the thousands I see around me. You have asked me to prove by a miracle that the power of the prophets of old has been given to me. I say unto you, not only to me, but to all who have faith. I have faith, and can perform miracles—that faith empowers me to walk across the broad surface of that mighty river without wetting the soles of my unworthy feet; but if ye are to see this miracle performed, it is necessary that ye have faith also, not only in yourselves, but in me. Have ye this faith in yourselves?”

[Pg 278]

“We have, we have!” roared the crowd.

“Have ye the faith in me, that ye believe I can perform this miracle?”

“We have, we have!” roared the crowd.

“Then,” said Joe Smith, coolly walking away, “with such faith do ye know well that I could, but it boots not that I should, do it; therefore, my brethren, doubt no more”—and Joe put on his boots and disappeared.

Being again compelled to emigrate, the Mormons proceeded into the state of Illinois, where, in a beautiful situation, they founded the new Jerusalem, which, it had been declared by the prophet Mormon, should rise out of the wilderness of the west, and where the chosen people should be collected under one church, and governed by the elders after a “spiritual fashion.”

The city of Nauvoo soon became a large and imposing settlement. An enormous building, called the Temple of Zion, was erected, half church half hôtel, in which Joe Smith and the other prophets resided—and large storehouses were connected with it, in which the goods and chattels belonging to the community were kept for the common good.

However, here, as every where else, they were continually quarrelling with their neighbours; and as their numbers increased, so did their audacity. A regular Mormon militia was again organised and armed, under the command of experienced officers, who had joined the sect; and now the authority of [Pg 279]the state government was openly defied. In consequence, the executive took measures to put down the nuisance, and a regular war commenced, and was carried on for some time, with no little bloodshed on both sides; and this armed movement is known in the United States as the Mormon war. The Mormons, however, who, it seemed, were much better skilled in the use of the tongue than the rifle, succumbed: the city of Nauvoo was taken, Joe Smith and other ringleading prophets captured; and the former, in an attempt to escape from his place of confinement, was seized and shot. The Mormons declare he had long foretold his own fate, and that when the rifles of the firing party who were his executioners were levelled at the prophet’s breast, a flash of lightning struck the weapons from their hands, and blinded for a time the eyes of the sacrilegious soldiers.

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

With the death of Joe Smith the prestige of the Mormon cause declined; but still thousands of proselytes joined them annually, and at last the state took measures to remove them altogether, as a body, from the country.

Once again they fled, as they themselves term it, before the persecutions of the ungodly! But this time their migration was far beyond the reach of their enemies, and their intention was to place between them the impassable barrier of the Rocky Mountains, and to seek a home and resting-place in the remote regions of the Far West.

[Pg 280]

This, the most extraordinary migration of modern times, commenced in the year 1845; but it was not till the following year that the great body of the Mormons turned their backs upon the settlements of the United States, and launched boldly out into the vast and barren prairies, without any fixed destination as a goal to their endless journey. For many months, long strings of Pittsburg and Conostaga waggons, with herds of horses and domestic cattle, wound their way towards the Indian frontier, with the intention of rendezvousing at Council Bluffs on the Upper Missouri. Here thousands of waggons were congregated, with their tens of thousands of men, women, and children, anxiously waiting the route from the elders of the church, who on their parts scarcely knew whither to direct the steps of the vast crowd they had set in motion. At length the indefinite destination of Oregon and California was proclaimed, and the long train of emigrants took up the line of march. It was believed the Indian tribes would immediately fraternise with the Mormons, on their approaching their country; but the Pawnees quickly undeceived them by running off with their stock on every opportunity. Besides these losses, at every camp, horses, sheep, and oxen strayed away and were not recovered, and numbers died from fatigue and want of provender; so that, before they had been many weeks on their journey, nearly all their cattle, which they had brought to stock their new country, [Pg 281] were dead or missing, and those that were left were in most miserable condition.

They had started so late in the season, that the greater part were compelled to winter on the Platte, on Grand Island, and in the vicinity, where they endured the greatest privations and suffering from cold and hunger. Many who had lost their stock lived upon roots and pig-nuts; and scurvy, in a most malignant form, and other disorders, carried off numbers of the wretched fanatics.

Amongst them were many substantial farmers from all parts of the United States, who had given up their valuable farms, sold off all their property, and were dragging their irresponsible and unfortunate families into the wilderness—carried away by their blind and fanatic zeal in this absurd and incredible faith. There were also many poor wretches from different parts of England, mostly of the farm-labouring class, with wives and families, crawling along with helpless and almost idiotic despair, but urged forward by the fanatic leaders of the movement, who promised them a land flowing with milk and honey to reward them for all their hardships and privations.

Their numbers were soon reduced by want and disease. When too late, they often wished themselves back in the old country, and sighed many a time for the beer and bacon of former days, now preferable to the dry buffalo meat (but seldom obtainable) of the Far West.

[Pg 282]

Evil fortune pursued the Mormons, and dogged their steps. The year following, some struggled on towards the promised land, and of these a few reached Oregon and California. Many were killed by hostile Indians; many perished of hunger, cold, and thirst, in passing the great wilderness;

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

and many returned to the States, penniless and crestfallen, and heartily cursing the moment in which they had listened to the counsels of the Mormon prophet. The numbers who reached their destination of Oregon, California, and the Great Salt Lake, are computed at 20,000, of whom the United States had an unregretted riddance.

One party had followed the troops of the American government intended for the conquest of New Mexico and the Californias. Of these a battalion was formed, and part of it proceeded to Upper California; but the way being impracticable for waggons, some seventy families proceeded up the Arkansa, and wintered near the mountains, intending to cross to the Platte the ensuing spring, and join the main body of emigrants on their way by the south pass of the Rocky Mountains.

In the wide and well-timbered bottom of the Arkansa, the Mormons had erected a street of log shanties, in which to pass the inclement winter. These were built of rough logs of cottonwood, laid one above the other, the interstices filled with mud, and rendered impervious to wind or wet. At one end of the row of shanties was built the “church” [Pg 283] or temple—a long building of huge logs, in which the prayer-meetings and holdings-forth took place. The band wintering on the Arkansa were a far better class than the generality of Mormons, and comprised many wealthy and respectable farmers from the western states, most of whom were accustomed to the life of woodmen, and were good hunters. Thus they were enabled to support their families upon the produce of their rifles, frequently sallying out to the nearest point of the mountains with a waggon, which they would bring back loaded with buffalo, deer, and elk meat, thereby saving the necessity of killing any of their stock of cattle, of which but few remained.

The mountain hunters found this camp a profitable market for their meat and deer-skins, with which the Mormons were now compelled to clothe themselves, and resorted there for that purpose—to say nothing of the attraction of the many really beautiful Missourian girls who sported their tall graceful figures at the frequent fandangoes. Dancing and preaching go hand in hand in Mormon doctrine, and the “temple” was generally cleared for a hop two or three times during the week, a couple of fiddles doing the duty of orchestra. A party of mountaineers came in one day, bringing some buffalo meat and dressed deer-skins, and were invited to be present at one of these festivals.

Arrived at the temple, they were rather taken [Pg 284] aback by finding themselves in for a sermon, which one of the elders delivered preparatory to the “physical exercises.” The preacher was one Brown—called, by reason of his commanding a company of Mormon volunteers, “Cap’n Brown”—a hard-featured, black-coated man of five-and-forty, correctly got up in black continuations, and white handkerchief round his neck, a costume seldom seen at the foot of the Rocky Mountains. The Cap’n, rising, cleared his voice, and thus commenced, first turning to an elder (with whom there was a little rivalry in the way of preaching):—“Brother Dowdle!”—(brother Dowdle blushed and nodded: he was a long tallow-faced man, with black hair combed over his face)—“I feel like holding forth a little this afternoon, before we glorify the Lord,—a—a—in the—a—holy dance. As there are a many strange gentlemen now—a—present, it’s about right to tell ‘em—a—what our doctrine just is, and so I tells ‘em right off what the Mormons is. They are the chosen of the Lord; they are the children of glory, persecuted by the hand of man: they flies here to the wilderness, and, amongst the Injine and the buffler, they lifts up their heads, and cries with a loud voice, Susannah, and hurray for the promised land! Do you believe it? I know it.

[Pg 285]

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

“They wants to know whar we’re going. Whar the church goes—thar we goes. Yes, to hell, and pull the devil off his throne—that’s what we’ll do. Do you believe it? I know it.

“Thar’s milk and honey in that land as we’re goin’ to, and the lost tribes of Israel is thar, and will jine us. They say as we’ll starve on the road, bekase thar’s no game and no water; but thar’s manna up in heaven, and it ‘ll rain on us, and thar’s prophets among us can make the water ‘come.’ Can’t they, brother Dowdle?”

“Well, they can.”

“And now, what have the Gentiles and the Philistines to say against us Mormons? They says we’re thieves, and steal hogs; yes, d—— ‘em! they say we has as many wives as we like. So we have. I’ve twenty—forty, myself, and mean to have as many more as I can get. But it’s to pass unfortunate females into heaven that I has ‘em—yes, to prevent ‘em going to roaring flames and damnation that I does it.

“Brother Dowdle,” he continued, in a hoarse, low voice, “I’ve ‘give out,’ and think we’d better begin the exercises grettful to the Lord.”

Brother Dowdle rose, and, after saying that “he didn’t feel like saying much, begged to remind all hands, that dancing was solemn like, to be done with proper devotion, and not with laughing and talking, of which he hoped to hear little or none; that joy was to be in their hearts, and not on their lips; that they danced for the glory of the Lord, and not their own amusement, as did the Gentiles.” After saying thus, he called upon brother [Pg 286]Ezra to “strike up:” sundry couples stood forth, and the ball commenced.

Ezra of the violin was a tall, shambling Missourian, with a pair of “homespun” pantaloons thrust into the legs of his heavy boots. Nodding his head in time with the music, he occasionally gave instructions to such of the dancers as were at fault, singing them to the tune he was playing, in a dismal nasal tone,—

“Down the centre—hands across,”

“You, Jake Herring—thump it,”

“Now, you all go right ahead—

Every one of you hump it.

Every one of you—hump it.”

The last words being the signal that all should clap the steam on, which they did con amore, and with comical seriousness.

A mountaineer, Rube Herring, whom we have more than once met in the course of this narrative, became a convert to the Mormon creed, and held forth its wonderful doctrines to such of the incredulous trappers as he could induce to listen to him. Old Rube stood nearly six feet six in height, and was spare and bony in make. He had picked up a most extraordinary cloth coat amongst the Mormons, which had belonged to some one his equal in stature. This coat, which was of a snuff-brown colour, had its waist about a hand’s span from the nape of Rube’s neck, or about a yard above its [Pg 287]proper position, and the skirts reached to his ancles. A slouching felt-hat covered his head, from which long black hair escaped, hanging in flakes over his lantern-jaws. His pantaloons of buckskin were shrunk with wet, and reached midway between his knees and ancles, and his huge feet were encased in moccasins of buffalo-cow skin.

Rube was never without the book of Mormon in his hand, and his sonorous voice might be heard, at all hours of the day and night, reading passages from its wonderful pages. He stood the badger-

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

ing of the hunters with most perfect good humour, and said there never was such a book as that ever before printed; that the Mormons were the “biggest kind” of prophets, and theirs the best faith ever man believed in.

Rube had let out one day that he was to be hired as guide by this party of Mormons to the Great Salt Lake; but their destination being changed, and his services not required, a wonderful change came over his mind. He was, as usual, book of Mormon in hand, when brother Brown announced the change in their plans; at which the book was cast into the Arkansa, and Rube exclaimed—“Cuss your darned Mummum and Thummum! thar’s not one among you knows ‘fat cow’ from ‘poor bull,’ and you may go h—— for me.” And turning away, old Rube spat out a quid of tobacco and his Mormonism together.

[Pg 288]

Amongst the Mormons was an old man, named Brand, from Memphis county, state of Tennessee, with a family of a daughter and two sons, the latter with their wives and children. Brand was a wiry old fellow, nearly seventy years of age, but still stout and strong, and wielded axe or rifle better than many a younger man. If truth be told, he was not a very red-hot Mormon, and had joined them as much for the sake of company to California, whither he had long resolved to emigrate, as from any implicit credence in the faith. His sons were strapping fellows, of the sterling stuff that the Western pioneers are made of; his daughter Mary, a fine woman of thirty, for whose state of single blessedness there must doubtless have been sufficient reason; for she was not only remarkably handsome, but was well known in Memphis to be the best-tempered and most industrious young woman in those diggings. She was known to have received several advantageous offers, all of which she had refused; and report said, that it was from having been disappointed in very early life in an *affaire du cœur*, at an age when such wounds sometimes strike strong and deep, leaving a scar difficult to heal. Neither his daughter, nor any of his family, had been converted to the Mormon doctrine, but had ever kept themselves aloof, and refused to join or associate with them; and, for this reason, the family had been very unpopular with the Mormon families on the Arkansa; and hence, probably, [Pg 289]one great reason why they now started alone on their journey. Spring had arrived, and it was time the Mormons should proceed on their march; but whether already tired of the sample they had had of life in the wilderness, or fearful of encountering the perils of the Indian country, not one amongst them, with the exception of old Brand, seemed inclined to pursue the journey farther. That old backwoodsman, however, was not to be deterred, but declared his intention of setting out alone, with his family, and risking all the dangers to be anticipated.

One fine sunny evening in April of 1847, when the cottonwoods on the banks of the Arkansa began to put forth their buds, and robins and blue-birds—harbingers of spring—were hopping, with gaudy plumage, through the thickets, three white-tilted Conostoga waggons emerged from the timbered bottom of the river, and rumbled slowly over the prairie, in the direction of the Platte’s waters. Each waggon was drawn by eight oxen, and contained a portion of the farming implements and household utensils of the Brand family. The teams were driven by the young boys, the men following in rear with shouldered rifles—Old Brand himself mounted on an Indian horse, leading the advance. The women were safely housed under the shelter of the waggon tilts, and out of the first the mild face of Mary Brand smiled adieu to many of her old [Pg 290]companions who had accompanied them thus far, and now wished them “God-speed” on their long journey. Some

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

mountaineers, too, galloped up, dressed in buckskin, and gave them rough greeting—warning the men to keep their “eyes skinned,” and look out for the Arapahos, who were out on the waters of the Platte. Presently all retired, and then the huge waggons and the little company were rolling on their solitary way through the deserted prairies—passing the first of the many thousand miles which lay between them and the “setting sun,” as the Indians style the distant regions of the Far West. And on, without casting a look behind him, doggedly and boldly marched old Brand, followed by his sturdy family.

They made but a few miles that evening, for the first day the start is all that is effected; and nearly the whole morning is taken up in getting fairly under weigh. The loose stock had been sent off earlier, for they had been collected and corralled the previous night; and, after a twelve hours’ fast, it was necessary they should reach the end of the day’s journey betimes. They found the herd grazing in the bottom of the Arkansa, at a point previously fixed upon for their first camp. Here the oxen were unyoked, and the waggons drawn up so as to form the three sides of a small square. The women then descended from their seats, and prepared the evening meal. A huge fire was kindled before the waggons, and round this the whole party collected; [Pg 291] whilst large kettles of coffee boiled on it, and hoe-cakes baked upon the embers.

The women were sadly downhearted, as well they might be, with the dreary prospect before them; and poor Mary, when she saw the Mormon encampment shut out from her sight by the rolling bluffs, and nothing before her but the bleak, barren prairie, could not divest herself of the idea that she had looked for the last time on civilised fellow-creatures, and fairly burst into tears.

In the morning the heavy waggons rolled on again across the upland prairies, to strike the trail used by the traders in passing from the south fork of the Platte to the Arkansa. They had for guide a Canadian voyageur, who had been in the service of the Indian traders, and knew the route well, and who had agreed to pilot them to Fort Lancaster, on the north fork of the Platte. Their course led for about thirty miles up the Boiling Spring River, whence they pursued a north-easterly course to the dividing ridge which separates the waters of the Platte and Arkansa. Their progress was slow, for the ground was saturated with wet, and exceedingly heavy for the cattle, and they scarcely advanced more than ten miles a-day.

At the camp-fire at night, Antoine, the Canadian guide, amused them with tales of the wild life and perilous adventures of the hunters and trappers who make the mountains their home; often extorting a scream from the women by the description of some [Pg 292] scene of Indian fight and slaughter, or beguiling them of a commiserating tear by the narrative of the sufferings and privations endured by those hardy hunters in their arduous life.

Mary listened with the greater interest, since she remembered that such was the life which had been led by one very dear to her—by one, long supposed to be dead, of whom she had never but once, since his departure, nearly fifteen years before, heard a syllable. Her imagination pictured him as the bravest and most daring of these adventurous hunters, and conjured up his figure charging through the midst of whooping savages, or stretched on the ground perishing from wounds, or cold, or famine.

Amongst the characters who figured in Antoine’s stories, a hunter named La Bonté was made conspicuous for deeds of hardiness and daring. The first mention of the name caused the blood to rush to Mary’s face: not that she for a moment imagined it was her La Bonté, for she knew the name was a common one; but, associated with feelings which she had never got the better of, it

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

recalled a sad epoch in her former life, to which she could not look back without mingled pain and pleasure.

Once only, and about two years after his departure, had she ever received tidings of her former lover. A mountaineer had returned from the Far West to settle in his native State, and had found his way to the neighbourhood of old Brand's farm. [Pg 293] Meeting him by accident, Mary, hearing him speak of the mountain hunters, had inquired, tremblingly, after La Bonté. Her informant knew him well—had trapped in company with him—and had heard at the trading fort, whence he had taken his departure for the settlements, that La Bonté had been killed on the Yellow Stone by Blackfeet; which report was confirmed by some Indians of that nation. This was all she had ever learned of the lover of her youth.

Now, upon hearing the name of La Bonté so often mentioned by Antoine, a vague hope was raised in her breast that he was still alive, and she took an opportunity of questioning the Canadian closely on the subject.

“Who was this La Bonté, Antoine, who you say was so brave a mountaineer?” she asked one day.

“J'ne sais pas; he vas un beau garçon, and strong comme le diable—enfant de garce, mais he pas not care a dam for les sauvages, pe gar. He shoot de centare avec his carabine; and ride de cheval comme one Comanche. He trap heap castor, (what you call beevare,) and get plenty dollare—mais he open hand vare wide—and got none too. Den, he hont vid de Blackfoot and avec de Cheyenne, and all round de montaignes he hont dam sight.”

“But, Antoine, what became of him at last? and why did he not come home, when he made so many dollars?” asked poor Mary.

[Pg 294]

“Enfant de garce, mais pourquoi he com home? Pe gar, de montaigne-man, he love de montaigne and de prairie more better dan he love de grandes villes—même de Saint Louis ou de Montreal. Wagh! La Bonté, well, he one montaigne-man, wagh! He love de buffaloe and de chevreaux plus que de bœuf and de mouton, may be. Mais on-dit dat he have autre raison—dat de gal he lofe in Missouri not lofe him, and for dis he not go back. Mais now he go ondare, m' on dit. He vas go to de Californe, may be to steal de hos and de mule—pe gar, and de Espagnols rub him out, and take his hair, so he mort.”

“But are you sure of this?” she asked, trembling with grief.

“Ah, now, j'ne suis pas sûr, mais I tink you know dis La Bonté. Enfant de garce, maybe you de gal in Missouri he lofe, and not lofe him. Pe gar! 'fant de garce! fort beau garçon dis La Bonté, pourquoi you ne l'aimez pas? Maybe he not gone ondare. Maybe he turn op, autrefois. De trappares, dey go ondare tree, four, ten times, mais dey turn op twenty time. De sauvage not able for kill La Bonté, ni de dam Espagnols. Ah, non! ne craignez pas; pe gar, he not gone ondare encore.”

Spite of the good-natured attempts of the Canadian, poor Mary burst into a flood of tears: not that the information took her unawares, for she long had believed him dead; but because the very mention of his name awoke the strongest feelings [Pg 295] within her breast, and taught her how deep was the affection she had felt for him whose loss and violent fate she now bewailed.

As the waggons of the lone caravan roll on towards the Platte, we return to the camp where La Bonté, Killbuck, and the stranger, were sitting before the fire when last we saw them:—Killbuck loquitur:—

“The doins of them Mormon fools can't be beat by Spaniards, stranger. Their mummums and

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

thummums you speak of won't 'shine' whar Injuns are about; nor pint out a trail, whar nothin crossed but rattler-snakes since fust it snow'd on old Pike's Peak. If they pack along them profits, as you tell of, who can make it rain hump-ribs and marrow-guts when the crowd gets out of the buffler range, they are 'some,' now, that's a fact. But this child don't believe it. I'd laugh to get a sight on these darned Mormonites, I would. They're 'no account,' I guess; and it's the 'meanest' kind of action to haul their women critters and their young 'uns to sech a starving country as the Californys."

"They are not all Mormons in the crowd," said the strange hunter; "and there's one family amongst them with some smartish boys and girls, I tell you. Their name's Brand."

La Bonté looked up from the lock of his rifle, which he was cleaning—but either didn't hear, or, hearing, didn't heed, for he continued his work.

"And they are going to part company," continued [Pg 296]the stranger, "and put out alone for Platte and the South Pass."

"They'll lose their hair, I'm thinking," said Killbuck, "if the Rapahos are out thar."

"I hope not," continued the other, "for there's a girl amongst them worth more than that."

"Poor beaver!" said La Bonté, looking up from his work. "I'd hate to see any white gal in the hands of Injuns, and of Rapahos worse than all. Where does she come from, stranger?"

"Down below St Louis, from Tennessee, I've heard them say."

"Tennessee," cried La Bonté,—"hurrah for the old State! What's her name, stran——" At this moment Killbuck's old mule pricked her ears and snuffed the air, which action catching La Bonté's eye, he rose abruptly, without waiting a reply to his question, and exclaimed, "The old mule smells Injuns, or I'm a Spaniard!"

The hunter did the old mule justice, and she well maintained her reputation as the best "guard" in the mountains; for in two minutes an Indian stalked into the camp, dressed in a cloth capote, and in odds and ends of civilised attire.

"Rapaho," cried Killbuck, as soon as he saw him; and the Indian catching the word, struck his hand upon his breast, and exclaimed, in broken Spanish and English mixed, "Si, si, me Arapaho, white man amigo. Come to camp—eat heap carne—me amigo white man. Come from Pueblo—hunt [Pg 297]cibola—me gun break—no puedo matar nada: mucha hambre (very hungry),—heap eat."

Killbuck offered his pipe to the Indian, and spoke to him in his own language, which both he and La Bonté well understood. They learned that he was married to a Mexican woman, and lived with some hunters at the Pueblo fort on the Arkansa. He volunteered the information that a war party of his people were out on the Platte trail to intercept the Indian traders on their return from the North Fork; and as some "Mormones" had just started with three waggons in that direction, he said his people would make a "roise." Being muy amigo himself to the whites, he cautioned his present companions from crossing to the "divide," as the "braves," he said, were a "heap" mad, and their hearts were "big," and nothing in the shape of white skin would live before them.

"Wagh!" exclaimed Killbuck, "the Rapahos know me, I'm thinking; and small gain they've made against this child. I've knowed the time when my gun-cover couldn't hold more of their scalps."

The Indian was provided with some powder, of which he stood in need; and, after gorging as much meat as his capacious stomach would hold, he left the camp, and started into the mountain.

The next day our hunters started on their journey down the river, travelling leisurely, and stop-

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

ping wherever good grass presented itself. One [Pg 298] morning they suddenly struck a wheel trail, which left the creek banks and pursued a course at right angles to it, in the direction of the "divide." Killbuck pronounced it but a few hours old, and that of three waggons drawn by oxen. "Wagh!" he exclaimed, "if them poor devils of Mormonites ain't going head first into the Rapaho trap. They'll be 'gone beaver' afore long."

"Ay," said the strange hunter, "these are the waggons belonging to old Brand, and he has started alone for Laramie. I hope nothing will happen to them."

"Brand!" muttered La Bonté. "I knowed that name mighty well once, years agone; and should hate the worst kind that mischief happened to any one who bore it. This trail's as fresh as paint; and it goes against me to let these simple critters help the Rapahos to their own hair. This child feels like helping 'em out of the scrape. What do you say, old hos?"

"I thinks with you, boy," answered Killbuck, "and go in for following this waggon trail, and telling the poor critters that thar's danger ahead of them. What's your talk, stranger?"

"I go with you," shortly answered the latter; and both followed quickly after La Bonté, who was already trotting smartly on the trail.

Meanwhile the three waggons, containing the household gods of the Brand family, rumbled slowly over the rolling prairie, and towards the upland [Pg 299] ridge of the "divide," which, studded with dwarf pine and cedar thicket, rose gradually before them. They travelled with considerable caution, for already the quick eye of Antoine had discovered recent Indian sign upon the trail, and, with mountain quickness, had at once made it out to be that of a war party; for there were no horses with them, and, after one or two of the moccasin tracks, the mark of a rope which trailed upon the ground was sufficient to show him that the Indians were provided with the usual lasso of skin, with which to secure the horses stolen in the expedition. The men of the party were consequently all mounted and thoroughly armed, the waggons moved in a line abreast, and a sharp look-out was kept on all sides. The women and children were all consigned to the interior of the waggons; and the latter had also guns in readiness, to take their part in the defence, should an attack be made.

However, they had seen no Indians, and no fresh sign, for two days after they left the Boiling Spring River, and they began to think they were well out of their neighbourhood. One evening they camped on a creek called Black Horse, and, as usual, had corralled the waggons, and forted as well as circumstances would permit, when three or four Indians suddenly appeared on a bluff at a little distance, and, making signals of peaceable intentions, approached the camp. Most of the men were absent at the time, attending to the cattle or collecting [Pg 300] fuel, and only old Brand and one of his young grandchildren, about fourteen years old, remained in camp. The Indians were hospitably received, and regaled with a smoke, after which they began to evince their curiosity by examining every article lying about, and signifying their wishes that it should be given to them. Finding their hints were not taken, they laid hold of several things which took their fancies, and, amongst others, of the pot which was boiling on the fire, and with which one of them was about very coolly to walk off, when old Brand, who up to this moment had retained possession of his temper, seized it out of the Indian's hand, and knocked him down. One of the others instantly began to draw the buckskin cover from his gun, and would no doubt have taken summary vengeance for the insult offered to his companion, when Mary Brand courageously stepped up to him, and, placing her left hand upon the gun which he was in the act of uncovering, with the

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

other pointed a pistol at his breast.

Whether daunted by the bold act of the girl, or admiring her devotion to her father, the Indian drew himself back, exclaimed "Howgh!" and drew the cover again on his piece, went up to old Brand, who all this time looked him sternly in the face, and, shaking him by the hand, motioned at the same time to the others to be peaceable.

The other whites presently coming into camp, the Indians sat quietly down by the fire, and, when the [Pg 301]supper was ready, joined in the repast, after which they gathered their buffalo robes about them, and quietly withdrew. Meanwhile Antoine, knowing the treacherous character of the savages, advised that the greatest precaution should be taken to secure the stock; and before dark, therefore, all the mules and horses were hobbled and secured within the corral, the oxen being allowed to feed at liberty—for the Indians scarcely care to trouble themselves with such cattle. A guard was also set round the camp, and relieved every two hours; the fire was extinguished, lest the savages should aim, by its light, at any of the party, and all slept with rifles ready at their sides. However, the night passed quietly, and nothing disturbed the tranquillity of the camp. The prairie wolves loped hungrily around, and their mournful cry was borne upon the wind as they chased deer and antelope on the neighbouring plain; but not a sign of lurking Indians was seen or heard. In the morning, shortly after sunrise, they were in the act of yoking the oxen to the waggons, and driving in the loose animals which had been turned out to feed at daybreak, when some Indians again appeared upon the bluff, and, descending it, confidently approached the camp. Antoine strongly advised their not being allowed to enter; but Brand, ignorant of Indian treachery, replied that, so long as they came as friends, they could not be deemed enemies, and allowed no obstruction to be offered to [Pg 302]their approach. It was now observed that they were all painted, armed with bows and arrows, and divested of their buffalo robes, appearing naked to the breech-clout, their legs only being protected by deerskin leggings, reaching to the middle of the thigh. Six or seven first arrived, and others quickly followed, dropping in one after the other, until a score or more were collected round the waggons. Their demeanour, at first friendly, soon changed as their numbers increased, and they now became urgent in their demands for powder and lead, and bullying in their manner. A chief accosted Brand, and, through Antoine, informed him "that, unless the demands of his braves were acceded to, he could not be responsible for the consequences; that they were out on the 'war-trail,' and their eyes were red with blood, so that they could not distinguish between white and Yuta scalps; that the party, with all their women and waggons, were in the power of the Indian 'braves,' and therefore the white chief's best plan was to make the best terms he could; that all they required was that they should give up their guns and ammunition 'on the prairie,' and all their mules and horses—retaining the 'medicine' buffaloes (the oxen) to draw their waggons."

By this time the oxen were yoked, and the teamsters, whip in hand, only waited the word to start. Old Brand foamed whilst the Indian stated his demands, but, hearing him to the end, exclaimed, "Darn the red devil! I wouldn't give him a [Pg 303]grain of powder to save my life. Put out, boys!"—and, turning to his horse, which stood ready saddled, was about to mount, when the Indians sprang at once upon the waggons, and commenced their attack, yelling like fiends. One jumped upon old Brand, pulled him back as he was rising in the stirrup, and drew his bow upon him at the same moment. In an instant the old backwoodsman pulled a pistol from his belt, and, putting the muzzle to the Indian's heart, shot him dead. Another Indian, flourishing his war-

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

club, laid the old man at his feet; whilst some dragged the women from the waggons, and others rushed upon the men, who made brave fight in their defence.

Mary, when she saw her father struck to the ground, sprang with a shrill cry to his assistance; for at that moment a savage, frightful as red paint could make him, was standing over his prostrate body, brandishing a glittering knife in the air, preparatory to thrusting it into the old man's breast. For the rest, all was confusion: in vain the small party of whites struggled against overpowering numbers. Their rifles cracked but once, and they were quickly disarmed; whilst the shrieks of the women and children, and the loud yells of the Indians, added to the scene of horror and confusion. As Mary flew to her father's side, an Indian threw his lasso at her, the noose falling over her shoulders, and, jerking it tight, he uttered a delighted yell as [Pg 304]the poor girl was thrown back violently to the ground. As she fell, another deliberately shot an arrow at her body, whilst the one who had thrown the lasso rushed forward, his scalp-knife flashing in his hand, to seize the bloody trophy of his savage deed. The girl rose to her knees, and looked wildly towards the spot where her father lay bathed in blood; but the Indian pulled the rope violently, dragged her some yards upon the ground, and then rushed with a yell of vengeance upon his victim. He paused, however, as at that moment a shout as fierce as his own sounded at his very ear; and, looking up, he saw La Bonté galloping madly down the bluff, his long hair and the fringes of his hunting-shirt and leggins flying in the wind, his right arm supporting his trusty rifle, whilst close behind him came Killbuck and the stranger. Dashing with loud hurrahs to the scene of action, La Bonté, as he charged down the bluff, caught sight of the girl struggling in the hands of the ferocious Indian. Loud was the war-shout of the mountaineer, as he struck his heavy spurs to the rows in his horse's side, and bounded like lightning to the rescue. In a single stride he was upon the Indian, and, thrusting the muzzle of his rifle into his very breast, he pulled the trigger, driving the savage backward by the blow itself, at the same moment that the bullet passed through his heart, and tumbled him over stone-dead. Throwing down his rifle, La Bonté wheeled his obedient horse, and, [Pg 305]drawing a pistol from his belt, again charged the enemy, among whom Killbuck and the stranger were dealing death-giving blows. Yelling for victory, the mountaineers rushed at the Indians; and they, panic-struck at the sudden attack, and thinking this was but the advanced guard of a large band, fairly turned and fled, leaving five of their number dead upon the field. Mary, shutting her eyes to the expected death-stroke, heard the loud shout La Bonté gave in charging down the bluff, and, again looking up, saw the wild-looking mountaineer rush to her rescue, and save her from the savage by his timely blow. Her arms were still pinned by the lasso, which prevented her from rising to her feet; and La Bonté was the first to run to aid her, as soon as the fight was fairly over. He jumped from his horse, cut the skin rope which bound her, raised her from the ground, and, upon her turning up her face to thank him, beheld his never-to-be-forgotten Mary Brand; whilst she, hardly believing her senses, recognised in her deliverer her former lover, and still well-beloved La Bonté.

"What, Mary! can it be you?" he asked, looking intently upon the trembling woman.

"La Bonté, you don't forget me!" she answered, and threw herself sobbing into the arms of the sturdy mountaineer.

There we will leave her for the present, and help Killbuck and his companions to examine the killed [Pg 306]and wounded. Of the former, five Indians and two whites lay dead, grandchildren of old Brand, fine lads of fourteen or fifteen, who had fought with the greatest bravery, and lay

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

pierced with arrows and lance wounds. Old Brand had received a sore buffet, but a hatful of cold water from the creek sprinkled over his face soon restored him. His sons had not escaped scot-free, and Antoine was shot through the neck, and, falling, had actually been half scalped by an Indian, whom the timely arrival of La Bonté had caused to leave his work unfinished.

Silently, and with sad hearts, the survivors of the family saw the bodies of the two boys buried on the river bank, and the spot marked with a pile of loose stones, procured from the rocky bed of the creek. The carcasses of the treacherous Indians were left to be devoured by wolves, and their bones to bleach in the sun and wind—a warning to their tribe, that such foul treachery as they had meditated had met with a merited retribution.

The next day the party continued their course to the Platte. Antoine and the stranger returned to the Arkansa, starting in the night to avoid the Indians; but Killbuck and La Bonté lent the aid of their rifles to the solitary caravan, and, under their experienced guidance, no more Indian perils were encountered. Mary no longer sat perched up in her father's Conostoga, but rode a quiet mustang by La Bonté's side; and no doubt they found a theme with which to while away the monotonous journey [Pg 307]over the dreary plains. South Fork was passed, and Laramie was reached. The Sweet Water mountains, which hang over the "pass" to California, were long since in sight; but when the waters of the North Fork of Platte lay before their horses' feet, and the broad trail was pointed out which led to the great valley of Columbia and their promised land, the heads of the oxen were turned down the stream where the shallow waters flow on to join the great Missouri—and not up, towards the mountains where they leave their spring-heads, from which springs flow several waters—some coursing their way to the eastward, fertilising, in their route to the Atlantic, the lands of civilised man; others westward, forcing a passage through rocky cañons, and flowing through a barren wilderness, inhabited by fierce and barbarous tribes.

These were the routes to choose from: and, what ever was the cause, the oxen turned their yoked heads away from the rugged mountains; the teamsters joyfully cracked their ponderous whips, as the waggons rolled lightly down the Platte; and men, women, and children, waved their hats and bonnets in the air, and cried out lustily, "Hurrah for home!"

La Bonté looked at the dark sombre mountains ere he turned his back upon them for the last time. He thought of the many years he had spent beneath their rugged shadow, of the many hardships he had suffered, of all his pains and perils in those wild regions. [Pg 308]The most exciting episodes of his adventurous career, his tried companions in scenes of fierce fight and bloodshed, passed in review before him. A feeling of regret was creeping over him, when Mary laid her hand gently on his shoulder. One single tear rolled unbidden down his cheek, and he answered her inquiring eyes: "I'm not sorry to leave it, Mary," he said; "but it's hard to turn one's back upon old friends."

They had a hard battle with Killbuck, in endeavouring to persuade him to accompany them to the settlements. The old mountaineer shook his head. "The time," he said "was gone by for that. He had often thought of it, but, when the day arrived, he hadn't heart to leave the mountains. Trapping now was of no account, he knew; but beaver was bound to rise, and then the good times would come again. What could he do in the settlements, where there wasn't room to move, and where it was hard to breathe—there were so many people?"

He accompanied them a considerable distance down the river, ever and anon looking cautiously back, to ascertain that he had not gone out of sight of the mountains. Before reaching the forks,

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

however, he finally bade them adieu; and, turning the head of his old grizzled mule westward, he heartily wrung the hand of his comrade La Bonté; and, crying Yep! to his well-trying animal, disappeared behind a roll of the prairie, and was seen no more—a [Pg 309]thousand good wishes for the welfare of the sturdy trapper speeding him on his solitary way.

Four months from the day when La Bonté so opportunely appeared to rescue Brand's family from the Indians on Black Horse Creek, that worthy and the faithful Mary were duly and lawfully united in the township church of Brandville, Memphis county, State of Tennessee. We cannot say, in the concluding words of nine hundred and ninety-nine thousand novels, that "numerous pledges of mutual love surrounded and cheered them in their declining years," &c. &c.; because it was only on the 24th of July, in the year of our Lord 1847, that La Bonté and Mary Brand were finally made one, after fifteen long years of separation.

---

The fate of one of the humble characters who have figured in these pages, we must yet tarry a little longer to describe.

During the past winter, a party of mountaineers, flying from overpowering numbers of hostile Sioux, found themselves, one stormy evening, in a wild and dismal cañon near the elevated mountain valley called the "New Park."

The rocky bed of a dry mountain torrent, whose waters were now locked up at their spring-heads by icy fetters, was the only road up which they could [Pg 310]make their difficult way: for the rugged sides of the gorge rose precipitously from the creek, scarcely affording a foot-hold to even the active bighorn, which occasionally looked down upon the travellers from the lofty summit. Logs of pine, uprooted by the hurricanes which sweep incessantly through the mountain defiles, and tossed headlong from the surrounding ridges, continually obstructed their way; and huge rocks and boulders, fallen from the heights and blocking up the bed of the stream, added to the difficulty, and threatened them every instant with destruction.

Towards sundown they reached a point where the cañon opened out into a little shelving glade or prairie, a few hundred yards in extent, the entrance to which was almost hidden by a thicket of dwarf pine and cedar. Here they determined to encamp for the night, in a spot secure from Indians, and, as they imagined, untrodden by the foot of man.

What, however, was their astonishment, on breaking through the cedar-covered entrance, to perceive a solitary horse standing motionless in the centre of the prairie. Drawing near, they found it to be an old grizzled mustang, or Indian pony, with cropped ears and ragged tail, (well picked by hungry mules), standing doubled up with cold, and at the very last gasp from extreme old age and weakness. Its bones were nearly through the stiffened skin, the legs of the animal were gathered under it; whilst its forlorn-looking head and stretched-out neck hung [Pg 311]listlessly downwards, almost overbalancing its tottering body. The glazed and sunken eye—the protruding and froth-covered tongue—the heaving flank and quivering tail—declared its race was run; and the driving sleet and snow, and penetrating winter blast, scarce made impression upon its callous and worn-out frame.

One of the band of mountaineers was Marcellin, and a single look at the miserable beast was sufficient for him to recognise the once renowned Nez-percé steed of old Bill Williams. That the owner himself was not far distant he felt certain; and, searching carefully around, the hunters presently came upon an old camp, before which lay, protruding from the snow, the blackened remains of

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

pine logs. Before these, which had been the fire, and leaning with his back against a pine trunk, and his legs crossed under him, half covered with snow, reclined the figure of the old mountaineer, his snow-capped head bent over his breast. His well-known hunting-coat of fringed elk-skin hung stiff and weather-stained about him; and his rifle, packs, and traps, were strewed around. Awe-struck, the trappers approached the body, and found it frozen hard as stone, in which state it had probably lain there for many days or weeks. A jagged rent in the breast of his leather coat, and dark stains about it, showed he had received a wound before his death; but it was impossible to say, whether to his hurt, or to sickness, or to the natural [Pg 312]decay of age, was to be attributed the wretched and solitary end of poor Bill Williams.

A friendly bullet cut short the few remaining hours of the trapper's faithful steed; and burying, as well as they were able, the body of the old mountaineer, the hunters next day left him in his lonely grave, in a spot so wild and remote, that it was doubtful whether even hungry wolves would discover and disinter his attenuated corpse.

THE END.

PRINTED BY JOHN HUGHES, 3 THISTLE STREET, EDINBURGH.

## FOOTNOTES:

[1]In accordance with this suggestion, the name was changed to Brand. The mountaineers, it seems, are more sensitive to type than to tomahawks; and poor Ruxton, who always contemplated another expedition among them, would sometimes jestingly speculate upon his reception, should they learn that he had shown them up in print.

[2]Killed, or died. Both terms adapted from the Indian figurative language.

[3]Killed, or died. Both terms adapted from the Indian figurative language.

[4]The Mexicans are called "Spaniards" or "Greasers" (from their greasy appearance) by the Western people.

[5]Bent's Indian trading fort on the Arkansa.

[6]Meaning—if that's what you mean. The "stick" is tied to the beaver trap by a string; and, floating on the water, points out its position, should a beaver have carried it away.

[7]Scalped.

[8]Soles made of buffalo hide.

[9]The Hudson Bay Company having amalgamated with the American North West Company, is known by the name 'North West' to the southern trappers. Their employés usually wear Canadian capotes.

[10]A spice of the devil.

[11]"Euker," "poker," and "seven up," are the fashionable games of cards.

[12]Antelope are frequently called "goats" by the mountaineers.

[13]An Indian is always a "heap" hungry or thirsty—loves a "heap"—is a "heap" brave—in fact, "heap" is tantamount to very much.

[14]The young untried warriors of the Indians are thus called.

[15]There is a great difference between an Indian's fire and a white's. The former places the ends of logs to burn gradually; the latter, the centre, besides making such a bonfire that the Indians truly say, "The white makes a fire so hot that he cannot approach to warm himself by it."

[16]A pithy substance found in dead pine-trees.

[17]Saddle-blanket made of buffalo-calf skin.

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

[18]The French Canadians are called wah-keitcha—"bad medicine"—by the Indians, who account them treacherous and vindictive, and at the same time less daring than the American hunters.

[19]A substance obtained from a gland in the scrotum of the beaver, and used to attract that animal to the trap.

[20]The Hudson's Bay Company is so called by the American trappers.

[21]A small lake near the head waters of the Yellow Stone, near which are some curious thermal springs of ink-black water.

[22]The Aztecs are supposed to have built this city during their migration to the south; there is little doubt, however, but that the region extending from the Gila to the Great Salt Lake, and embracing the province of New Mexico, was the locality from which they emigrated.

[23]Creoles of St Louis, and French Canadians.

[24]"On the prairie," is the Indian term for a free gift.

[25]Hide—from cacher.

[26]Carrion.

[27]In Frémont's expedition to California, on a somewhat similar occasion, two mountaineers, one the celebrated Kit Carson, the other a St Louis Frenchman named Godey, and both old trappers, performed a feat surpassing the one described above, inasmuch as they were but two. They charged into an Indian village to rescue some stolen horses, and avenge the slaughter of two New Mexicans who had been butchered by the Indians; both which objects they effected, returning to camp with the lost animals and a couple of propitiatory scalps.

[28]The Mexicans call the Indians living near the missions and engaged in agriculture, mansos, or mansitos, tame.

[29]From a manuscript obtained in Santa Fé of New Mexico, describing the labours of the missionaries Fray Augustin Ruiz, Venabides, and Marcos, in the year 1585.

[30]From the report to the Governor of California by the Head of the Mission, in reference to the attacks by the American mountaineers.

[31]Indian expression for a free gift.

[32]Since the time of which we speak, Kit Carson has distinguished himself in guiding the several U. S. exploring expeditions, under Frémont, across the Rocky Mountains, and to all parts of Oregon and California; and for his services, the President of the United States presented the gallant Mountaineer with the commission of lieutenant in a newly raised regiment of mounted riflemen, of which his old leader Frémont is appointed colonel.

[33]The word fandango, in New Mexico, is not applied to the peculiar dance known in Spain by that name, but designates a ball or dancing meeting.

[34]A nickname for the idle fellows hanging about a Mexican town, translated into "Greasers" by the Americans.

[35]Cask-shaped gourds.

[36]The knives used by the hunters and trappers are manufactured at the "Green River" works, and have that name stamped upon the blade. Hence the mountain term for doing any thing effectually is "up to Green River."

[37]Always alluding to Mexicans, who are invariably called Spaniards by the Western Americans.

Transcriber's Note:

Updated editions will replace the previous one--the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg-tm electronic works to protect the PROJECT GUTENBERG-tm concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for the eBooks, unless you receive specific permission. If you do not charge anything for copies of this eBook, complying with the rules is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. They may be modified and printed and given away--you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE

#### THE FULL PROJECT GUTENBERG LICENSE

##### PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg-tm mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase "Project Gutenberg"), you agree to comply with all the terms of the Full Project Gutenberg-tm License available with this file or online at [www.gutenberg.org/license](http://www.gutenberg.org/license).

##### Section 1. General Terms of Use and Redistributing Project Gutenberg-tm electronic works

1.A. By reading or using any part of this Project Gutenberg-tm electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg-tm electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg-tm electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. "Project Gutenberg" is a registered trademark. It may only be used on or associated in any

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg-tm electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg-tm electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg-tm electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the collection of Project Gutenberg-tm electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg-tm mission of promoting free access to electronic works by freely sharing Project Gutenberg-tm works in compliance with the terms of this agreement for keeping the Project Gutenberg-tm name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg-tm License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg-tm work. The Foundation makes no representations concerning the copyright status of any work in any country outside the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg-tm License must appear prominently whenever any copy of a Project Gutenberg-tm work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at [www.gutenberg.org](http://www.gutenberg.org). If you are not located in the United States, you’ll have to check the laws of the country where you are located before using this ebook.

1.E.2. If an individual Project Gutenberg-tm electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg-tm trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg-tm electronic work is posted with the permission of the

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg-tm License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg-tm License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg-tm.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg-tm License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, non-proprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg-tm work in a format other than "Plain Vanilla ASCII" or other format used in the official version posted on the official Project Gutenberg-tm web site ([www.gutenberg.org](http://www.gutenberg.org)), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original "Plain Vanilla ASCII" or other form. Any alternate format must include the full Project Gutenberg-tm License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg-tm works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg-tm electronic works provided that

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg-tm works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg-tm trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."

- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg-tm License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg-tm works.

- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.

- You comply with all other terms of this agreement for free distribution of Project Gutenberg-tm works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg-tm electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from both the Project Gutenberg Literary Archive Foundation and The Project Gutenberg

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

Trademark LLC, the owner of the Project Gutenberg-tm trademark. Contact the Foundation as set forth in Section 3 below.

## 1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg-tm collection. Despite these efforts, Project Gutenberg-tm electronic works, and the medium on which they may be stored, may contain "Defects," such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the "Right of Replacement or Refund" described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg-tm trademark, and any other party distributing a Project Gutenberg-tm electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS,' WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg-tm electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg-tm electronic works, harmless from all liability,

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg-tm work, (b) alteration, modification, or additions or deletions to any Project Gutenberg-tm work, and (c) any Defect you cause.

#### Section 2. Information about the Mission of Project Gutenberg-tm

Project Gutenberg-tm is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg-tm's goals and ensuring that the Project Gutenberg-tm collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg-tm and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at [www.gutenberg.org](http://www.gutenberg.org).

#### Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's principal office is in Fairbanks, Alaska, with the mailing address: PO Box 750175, Fairbanks, AK 99775, but its volunteers and employees are scattered throughout numerous locations. Its business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887. Email contact links and up to date contact information can be found at the Foundation's web site and official page at [www.gutenberg.org/contact](http://www.gutenberg.org/contact)

For additional contact information:

Dr. Gregory B. Newby

Chief Executive and Director

[gbnewby@pglaf.org](mailto:gbnewby@pglaf.org)

#### Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg-tm depends upon and cannot survive without wide spread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit [www.gutenberg.org/donate](http://www.gutenberg.org/donate).

---

## LIFE in THE FAR WEST

by GEORGE FREDERICK RUXTON

---

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg Web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: [www.gutenberg.org/donate](http://www.gutenberg.org/donate)

Section 5. General Information About Project Gutenberg-tm electronic works.

Professor Michael S. Hart was the originator of the Project Gutenberg-tm concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg-tm eBooks with only a loose network of volunteer support.

Project Gutenberg-tm eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our Web site which has the main PG search facility: [www.gutenberg.org](http://www.gutenberg.org)

This Web site includes information about Project Gutenberg-tm, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.

ROCKY MOUNTAIN LIFE  
BY RUFUS B. SAGE

---

ROCKY MOUNTAIN LIFE  
OR,  
STARTLING SCENES  
AND  
PERILOUS ADVENTURES  
IN THE  
FAR WEST  
DURING AN EXPEDITION OF THREE YEARS.

BY RUFUS B. SAGE.

PREFACE.

The following work was written immediately after the author had returned from the perilous and eventful expedition which is here narrated. The intense interest which every citizen of the Union feels in relation to that vast region of our country lying between the Mississippi and the Pacific Ocean, will, it is believed, render the publication of a volume like this of more than usual importance at the present time. The lofty cliffs of the Rocky Mountains are soon to echo to the tread of advancing civilization, as symbolized in the Pacific railway, which will, in a few years, speed the iron horse and his living freight from Boston to San Francisco, forming a bond of social and commercial intercourse across the continent.

ROCKY MOUNTAIN LIFE.

CHAPTER I.

Objects of a proposed excursion. Primary plans and movements. A Digression. Rendezvous for Oregon emigrants and Santa Fe traders. Sensations on a first visit to the border Prairies. Frontier Indians.

MY purpose in visiting the Rocky Mountains, and countries adjacent, having hitherto proved a fruitful source of inquiry to the many persons I meet, when aware of my having devoted three years to travel in those remote regions, and I am so plying with almost numberless other questions, I know of no better way to dispose of them satisfactorily, than by doing what I had thought of at the outset, to wit: writing a book.

But, says one, more books have been already written upon subjects of a kindred nature, than will ever find readers. True, indeed; yet I must venture one more; and this much I promise at the start: it shall be different, in most respects, from all that have preceded it; and if I fail to produce an agreeable variety of adventures, interwoven with a large fund of valuable information, then I shall not have accomplished my purpose.

Yet, why did I go? —what was my object? Let me explain: Dame Nature bestowed upon me lavishly that innate curiosity, and fondness for things strange and new, of which every one is more or less possessed. Phrenologists would declare my organ of Inquisitiveness to be largely developed; and, certain it is, I have a great liking to tread upon unfrequented ground, and mingle

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

among scenes at once novel and romantic. Love of adventure, then, was the great prompter, while an enfeebled state of health sensibly admonished me to seek in other parts that invigorating air and climate denied by the diseased atmosphere of a populous country. I also wished to acquaint myself with the geography of those comparatively unexplored regions, —their geological character, curiosities, resources, and natural advantages, together with their real condition, present inhabitants, inducements to emigrants, and most favorable localities for settlements, to enable me to speak from personal knowledge upon subjects so interesting to the public mind, at the present time, as are the above. Here, then, were objects every way worthy of attention, and vested with an importance that would render my excursion not a mere idle jaunt for the gratification of selfish curiosity. This much by way of prelude, —now to the task in hand.

While yet undecided as to the most advisable mode of prosecuting my intended enterprise, on learning that a party of adventurers were rendezvoused at Westport, Mo., preparatory to their long and arduous journey to the new-formed settlements of the Columbia river, I hastened to that place, where I arrived in the month of May, 1841, with the design of becoming one of their number. In this, however, I was doomed to disappointment by being too late. A few weeks subsequent marked the return of several fur companies, from their annual excursions to the Indian tribes inhabiting the regions adjacent to the head-waters of the Platte and Arkansas rivers, whose outward trips are performed in the fall months. Impatient at delay and despairing of a more eligible opportunity, for at least some time to come, I made prompt arrangements with one of them, to accompany it, en route, as far as the Rocky Mountains, intending to proceed thereafter as circumstances or inclination might suggest. This plan of travelling was adhered to, notwithstanding the detention of some three months, which retarded its prosecution.

I would here beg indulgence of the reader to a seeming digression. The peculiar locality of the places to whose vicinity he is now introduced, owing to the deep interest cherished in the public mind relative to the Oregon country, will doubtless call for more than a mere passing notice: I allude to the towns of Independence and Westport. Situated as they are, at the utmost verge of civilization, and upon the direct route to Oregon and regions adjacent, they must retain and command, as the great starting points for emigrants and traders, that importance already assumed by general consent. Their facilities of access from all parts of the Union, both by land and water, are nowhere exceeded. The proud Missouri rolls its turbid waves within six miles of either place, opening the highway of steam communication, while numberless prime roads that converge from every direction, point to them as their common focus. Thus, the staid New Englander may exchange his native hills for the frontier prairies in the short interval of two weeks; and in half that time the citizen of the sunny South may reach the appointed rendezvous; and, nearer by, the hardy emigrant may commence his long overland journey, from his own door, fully supplied with all the necessaries for its successful termination.

Independence is the seat of justice for Jackson county, Mo., about four hundred miles west by north of St. Louis, and contains a population of nearly two thousand. Westport is a small town in the same county, near the mouth of the Kansas river, —three miles from the Indian territory, and thirty below the U.S. Dragoon station at Fort Leavenworth. The regular routes to Santa Fe and Oregon date their commencement at these places. The country in this vicinity is beginning to be generally settled by thrifty farmers, from whom all the articles necessary for travellers and traders, may be procured upon reasonable terms. Starting from either of the above points, a short ride

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

bears the adventurer across the state line, and affords him the opportunity of taking his initiatory lessons amid the realities of prairie life. Here, most of the trading and emigrant companies remain encamped for several weeks, to recruit their animals and complete the needful arrangements, prior to undertaking the toilsome and dangerous journey before them.

The scenery of this neighborhood is truly delightful. It seems indeed like one Nature's favored spots, where Flora presides in all her regal splendor, and with the fragrance of wild flowers, perfumes the breath of spring and lades the summer breeze with willing incense;— now, sporting beside her fountains and revelling in her dales, —then, smiling from her hill-tops, or luxurating beneath her groves.

I shall never forget the pleasing sensations produced by my first visit to the border-prairies. It was in the month of June, soon after my arrival at Westport. The day was clear and beautiful. A gentle shower the preceding night had purified the atmosphere, and the laughing flowerets, newly invigorated from the nectarine draught, seemed to vie with each other in the exhalation of their sweetest odors. The blushing strawberry, scarce yet divested of its rich burden of fruit, kissed my every step. The butter-cup, tulip, pink, violet, and daisy, with a variety of other beauties, unknown to the choicest collections of civilized life, on every side captivated the eye and delighted the fancy.

The ground was clothed with luxuriant herbage. The grass, where left uncropped by grazing herds of cattle and horses, had attained a surprising growth. The landscape brought within the scope of vision a most magnificent prospect. The groves, clad in their gayest foliage and nodding to the wind, ever and anon, crowned the gentle acclivities or reared their heads from the valleys, as if planted by the hand of art to point the way farer to Elysian retreats. The gushing fountains, softly breathing their untaught melody, before and on either hand, at short intervals, greeted the ear and tempted the taste. The lark, linnet, and martin, uniting with other feathered songsters, poured forth their sweetest strains in one grand concert, and made the air vocal with their warblings; and the brown-plumed grouse, witless of the approach of man, till dangerously near, would here and there emerge well-nigh from under foot, and whiz through the air with almost lightning speed, leaving me half frightened at her unlooked for presence and sudden exit. Hither and yon, truant bands of horses and cattle, from the less inviting pastures of the settlements, were seen in the distance, cropping the choice herbage before them, or gambolling in all the pride of native freedom. Amid such scenes I delight to wander, and often, at this late day, will my thoughts return, unbidden, to converse with them anew. There is a charm in the loneliness—an enchantment in the solitude—a witching variety in the sameness, that must ever impress the traveller, when, for the first time, he enters within the confines of the great western prairies.

One thing further and I will have done with this digression. Connected with the foregoing, it may not be deemed amiss to say something in relation to the Indian tribes inhabiting the territory adjacent to this common camping-place. The nearest native settlement is some twelve miles distant, and belongs to the Shawnees. This nation numbers in all fourteen or fifteen hundred men, women and children. Their immediate neighbors are the Delawares and Wyandotts, —the former claiming a population of eleven hundred, and the latter, three or four hundred. Many connected with these tribes outstrip the nearer whites, in point of civilization and refinement, —excelling them both in honesty and morality, and all that elevates and ennobles the human character. Their wild habits have become in a great measure subdued by the restraining influences of Christianity, and they themselves transformed into industrious cultivators of the soil, —occupying neat mansions

---

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

with smiling fields around them.

Nor are they altogether neglectful of the means of education. The mission schools are generally well attended by ready pupils, in no respect less backward than the more favored ones of other lands. It is not rare even, considering the smallness of their number, to meet among them with persons of liberal education and accomplishments. Their mode of dress assimilates that of the whites, though, as yet, fashion has made comparatively but small inroads. The unsophisticated eye would find prolific source for amusement in the uncouth appearance of their females on public occasions. Perchance a gay Indian maiden comes flaunting past, with a huge fur-hat awkwardly placed upon her head, —embanded by broad strips of figured tin, instead of ribbons, —and ears distended with large flattened rings of silver, reaching to her shoulders; and here another, solely habited in a long woolen under-dress, obtrudes to view, and skips along in all the pride and pomposity of a regular city belle! Such are sights by no means uncommon.

These tribes have a regular civil government of their own, and all laws instituted for the general welfare are duly respected. They are, also, becoming more temperate in their habits, fully convinced that ardent spirits have hitherto proved the greatest enemy to the red man. The churches of various Christian denominations, established among them, are in a flourishing condition, and include with their members many whose lives of exemplary piety adorn their professions.

Taken as a whole, the several Indian tribes, occupying this beautiful and fertile section of country, are living witnesses to the softening and benign influences of enlightened Christian effort, and furnish indubitable evidence of the susceptibility of the Aborigine for civilization and improvement.

CHAPTER II.

Preparations for leaving. Scenes at Camp. Things as they appeared. Simplicity of mountaineers. Sleep in the open air. Character, habits, and costume of mountaineers. Heterogeneous ingredients of Company. The commandant. En route. Comical exhibition and adventure with a Spanish company. Grouse. Elm Grove. A storm. Santa Fe traders. Indian battle.

AFTER many vexatious delays and disappointments, the time was at length fixed for our departure, and leaving Independence on the 2d of September, I proceeded to join the encampment without the state line. It was nearly night before I reached my destination, and the camp-fires were already lighted, in front of which the officiating cook was busily engaged in preparing the evening repast. To the windward were the dusky forms of ten or fifteen men, —some standing, others sitting a la Turk, and others half-reclining or quietly extended at full length upon the ground, —watching the operative of the culinary department with great seeming interest.

Enchairing myself upon a small log, I began to survey the surrounding objects. In the back ground stood four large Connestoga waggons, with ample canvass tops, and one dearborn, all tastefully drawn up in crescent form. To the right a small pyramid-shaped tent, with its snow-white covering, disclosed itself to the eye, and presented an air of comfort. To the left the caravan animals, securely picketed, at regular distances of some fifteen yards apart, occupied an area of several acres. Close at hand a crystal streamlet traced its course, murmuring adown the valley; and still beyond, a lovely grove waved its branches in the breeze, and contributed its willing mite to enliven and beautify the scene. The camp-fires in front, formed a kind of gateway to a small

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

enclosure, shut in as above described. Here were congregated the company, or at least, that portion of it yet arrived. Some had already spread their easily adjusted couches upon the ground, in readiness for the coming night, and seemed only awaiting supper to forget their cares and troubles in the sweet embrace of sleep.

Every thing presented such an air of primitive simplicity not altogether estranged to comfort, I began to think it nowise marvellous that this mode of life should afford such strong attractions to those inured to it.

Supper disposed of, the area within camp soon became tenanted by the devotees of slumber, — some snoring away most melodiously, and others conversing in an animated tone, now jovial, now grave, and at intervals, causing the night-air to resound with merry peals of laughter. At length the sleep-god began to assert his wonted supremacy, and silence in some measure reigned throughout camp.

The bed of a mountaineer is an article neither complex in its nature nor difficult in its adjustment. A single buffalo robe folded double and spread upon the ground, with a rock, or knoll, or some like substitute for a pillow, furnishes the sole base-work upon which the sleeper reclines, and, enveloped in an additional blanket or robe, contentedly enjoys his rest. Wishing to initiate myself to the new mode of life before me, I was not slow to imitate the example of the promiscuous throng, and the lapse of a few moments found me in a fair way to pass quite pleasantly my first night's repose in the open air.

With the first gray of morning I arose refreshed and invigorated, nor even suffered the slightest ill effect from my unusual exposure to a humid and unwholesome night-air. The whole camp, soon after, began to disclose a scene of cheerfulness and animation. The cattle and horses, unloosed from their fastenings, and accompanied by keepers, were again permitted to roam at large, and in a short time were most industriously engaged in administering to the calls of appetite.

After breakfast I improved the opportunity to look about and scan more closely the appearance of my compagnons de voyage. This opened to view a new field for the study of men and manners. A mountain company generally comprises some quaint specimens of human nature, and, perhaps, few more so than the one to which I here introduce the reader. To particularize would exceed my limits, nor could I do full justice to the subject in hand by dealing in generalities;— however, I yield to the latter. There are many crude originals mixed with the prime ingredients of these companies. A genuine mountaineer is a problem hard to solve. He seems a kind of sui genus, an oddity, both in dress, language, and appearance, from the rest of mankind. Associated with nature in her most simple forms by habit and manner of life, he gradually learns to despise the restraints of civilization, and assimilates himself to the rude and unpolished character of the scenes with which he is most conversant. Frank and open in his manners and generous in his disposition, he is, at the same time, cautious and reserved. In his frankness he will allow no one to acquire an undue advantage of him, though in his generosity, he will oftentimes expend the last cent to assist a fellow in need. Implacable in his hatred, he is also steadfast in his friendship, and knows no sacrifice too great for the benefit of those he esteems. Free as the pure air he breathes, and proudly conscious of his own independence, he will neither tyrannize over others, nor submit to be trampled upon, —and is always prepared to meet the perils he may chance to encounter, with an undaunted front. Inured to hardship and deprivation, his wants are few, and he is the last to repine at the misfortunes which so often befall him. Patience becomes as it were interwoven

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

with his very nature, and he submits to the greatest disasters without a murmur. His powers of endurance, from frequent exercise, attain a strength and capacity almost incredible, such as are altogether unknown to the more delicately nurtured. His is a trade, to become master of which requires a long and faithful apprenticeship. Of this none seems more conscious than himself, and woe to the “greenhorn” who too prematurely assumes to be “journeyman.” His ideas, his arguments, his illustrations, all partake of the unpolished simplicity of his associations; though abounding often in the most vivid imagery, pointed inferences, and luminous expositions, they need a key to make them intelligible to the novice.

His dress and appearance are equally singular. His skin, from constant exposure, assumes a hue almost as dark as that of the Aborigine, and his features and physical structure attain a rough and hardy cast. His hair, through inattention, becomes long, coarse, and bushy, and loosely dangles upon his shoulders. His head is surmounted by a low crowned wool-hat, or a rude substitute of his own manufacture. His clothes are of buckskin, gaily fringed at the seams with strings of the same material, cut and made in a fashion peculiar to himself and associates. The deer and buffalo furnish him the required covering for his feet, which he fabricates at the impulse of want. His waist is encircled with a belt of leather, holding encased his butcher-knife and pistols—while from his neck is suspended a bullet-pouch securely fastened to the belt in front, and beneath the right arm hangs a powder-horn transversely from his shoulder, behind which, upon the strap attached to it, are affixed his bullet-mould, ball-screw, wiper, awl, &c. With a gun-stick made of some hard wood, and a good rifle placed in his hands, carrying from thirty to thirty-five balls to the pound, the reader will have before him a correct likeness of a genuine mountaineer, when fully equipped. This costume prevails not only in the mountains proper, but also in the less settled portions of Oregon and California. The mountaineer is his own manufacturer, tailor, shoemaker, and butcher; and, fully accoutered and supplied with ammunition in a good game country, he can always feed and clothe himself, and enjoy all the comforts his situation affords. No wonder, then, his proud spirit, expanding with the intuitive knowledge of noble independence, becomes devotedly attached to those regions and habits that permit him to stalk forth, a sovereign amid nature’s loveliest works.

Our company, however, were not all mountaineers; some were only “entered apprentices,” and others mere “greenhorns”—taking every thing into consideration, perhaps, it was quite as agreeably composed as circumstances would well admit of. In glancing over the crowd, I remarked several countenances sinister and malign, but consented to suspend judgment till the character of each should be proven by his conduct. Hence, in the succeeding pages, I shall only speak of characters as I have occasion to speak of men. As a whole, the party before me presented a choice collection of local varieties, —here was the native of France, of Canada, of England, of Hudson Bay, of Connecticut, of Pennsylvania, of New York, of Kentucky, of Illinois, of Missouri, and of the Rocky Mountain all congregated to act in unison for a specified purpose. It might well require the pencil of Hogarth to picture such a motley group.

Our company had not as yet attained its full numerical strength; a small division of it was some distance in advance, another behind, and at least two days would be necessary to complete the arrangements prior to leaving. The idea of spending two days in camp, notwithstanding the beauty of its location, was by no means agreeable; but as the case was beyond remedy, I quietly submitted, and managed to while away the tedious interval as best I could.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

A brief acquaintance with our commandant, found him a man of small stature and gentlemanly deportment, though savoring somewhat of arrogance and self-sufficiency, — faults, by the way, not uncommon in little men. He had been engaged in the Indian trade for several years past, and had seen many “ups and downs” in former life. Graduating from West Point in his younger days, he soon after received the commission of Lieutenant of Dragoons, in the U.S. Army, and served in that capacity for some six or eight years, on the frontier and at Forts Gibson and Leavenworth. Possessed of the confidence of his men, his subsequent resignation was the occasion of much regret with those he had been accustomed to command. The private soldier loved him for his generous frankness and readiness to overlook minor offences, even upon the first show of penitence. Such unbounded popularity at length excited the jealousy of his brother officers, and gave birth to a combination against him, which nothing could appease short of his removal from the army. Aware of his ardent temperament and strong party notions as a politician, and equally violent upon the opposite side, they managed to inveigle him into a discussion of the measures and plans of the then administration of national affairs. Arguing in the excitement of feeling, he made use of an unguarded expression, denouncing the Chief Magistrate. This was immediately noted down, and charges were promptly preferred against him, for “abuse of a superior officer!” The whole affair was then referred to a Court Martial, composed exclusively of political opponents. The evidence was so strong he had little to expect from their hands, and consequently threw up his commission, to avert the disgrace of being cashiered, since which he has been engaged in his present business.

He appeared to be a man of general information, and well versed in science and literature. Indeed, I felt highly gratified in making an acquaintance so far congenial to my own taste.

An accession of two waggons and four men having completed our number, the morning of September 4th was ushered in with the din of preparations for an immediate start. The lading of the waggons was then severally overhauled and more compactly adjusted, and our arms were deposited with other freight until such time as circumstances should call for them. All was hurry and confusion, and oft-times the sharp tone of angry dispute arose above the jargon of the tumultuous throng.

At length the word was given to advance, and in an instant the whole caravan was in motion; those disconnected with the waggons, mounted upon horseback, led the van, followed by the teams and their attendants in Indian file, as the loose cattle and horses brought up the rear. The scene to me portrayed a novelty quite amusing. I began to think a more comical-looking set could scarcely be found any where; but the events of the day soon convinced me of my mistake.

Travelling leisurely along for some six or eight miles, strange objects were seen in the distance, which, on nearer approach, proved a company of Mexican traders, on their way to Independence for an equipment of goods. As they filed past us, I had full scope for the exercise of my risibilities. If a mountaineer and a mountain company are laughable objects, a Mexican and a Mexican company are triply so. The first thing that excites attention upon meeting one of this mongrel race, is his ludicrous apology for pantaloons. This is generally made of deer or buffalo skin, similar to our present fashion, except the legs, which are left unsewed from the thigh downwards; a loose pair of cotton drawers, cut and made in like manner, and worn beneath, imparts to his every movements a most grotesque appearance, leaving at each step of the wearer his denuded leg, with that of his pantaloons on one side, and drawers on the other fluttering in the breeze! The next thing

---

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

that meets the gaze, is his black, slouching, broad-brimmed hat, (sombbrero) though little darker than the features it obscures, and far less so than the coarse, jet-colored hair that protrudes from beneath it, and falls confusedly upon his shoulders. Next, if the weather tolerates the habit, a coarse parti-colored blanket (charape) envelopes the body, from his shoulders downwards, fixed to its place by an aperture in the centre through which the head is thrust, and securely girted at pleasure by a waist-band of leather. His arms, if arms he has, consist of a rude bow and arrows slung to his back, or an old fusee, not unfrequently without flint, lock, or ammunition; but doubly armed, and proudly, too, is he who can carry a good rifle with powder and lead—even if he be ignorant of their use.

Thus appearing, these creatures, some mounted upon mules, with heavy spurs attached to their heels, (bearing gaffs an inch and a half in length, jingling in response to the rolling motions of the wearer,) ensconced in bungling Spanish saddles, (finished with such ample leather skirts as almost hid the diminutive animal that bore them, and large wooden stirrups, some three inches broad,) were riding at their ease; while others, half naked, were trudging along on foot, driving their teams, or following the erratic mules of the caravan, to heap upon them the ready maledictions of their prolific vocabulary. Passing on, we were accosted:

“Como lo pasa, cabelleros?”

The salutation was returned by a simple nod.

Habla la lengua Espanola, senors?”

A shake of the head was the only response.

“Es esta el camino de Independencia ?”

No reply.

“Carraho! Que quantos jornadas tenemos en la camino de Independencia?”

Still no one answered.

“Scha! Maldijo tualmas! Los Americanos esta dijabelo!”

By this time the crowd had passed and left us no longer annoyed by its presence. The conclusion irresistibly forced itself upon my mind,” if these are true specimens of Mexicans, it is no wonder they incite both the pity and contempt of the rest of the world.” Subsequent intercourse with them, however, has served to convince me that first impressions, in this case, instead of exceeding the reality, fell far short of the true mark!

Continuing our course, we saw large numbers of prairie-hens, and succeeded in killing several. These birds assimilate the English grouse in appearance, and are of a dusky-brown color, — with short tails, and narrow-peaked wings, —and little less in size than the domestic fowl. Their flesh is tender and of superior flavor. When alarmed, they start with a cackling noise, and whiz through the air not unlike the partridge. They are very numerous on the frontier prairies, and extend to the Rocky Mountains, Oregon, California and New Mexico.

About sundown we reached a small creek known as Elm Grove, and encamped for the night, with every indication of an approaching storm. Strict orders were accordingly given for securing the animals, and the process of “picketing” was speedily under way. This consisted in driving small stakes (“pickets”) firmly into the ground, at proper distances apart, to which the animals were severally tied by strong cords, —a plan that should find nightly practice among all travellers of the grand prairies, to prevent those losses which, despite the utmost precaution, will not unfrequently occur.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Timber proved quite scarce in this vicinity, and it was with great difficulty we procured sufficient for cooking purposes. The men now began to prepare for the coming storm. Some disposed of themselves in, and others under, the waggons, making barricades to the windward; others erected shantees, by means of slender sticks, planted in parallel rows five or six feet apart, and interwoven at the tops, so as to form an arch of suitable height, over which was spread a roofage of robes or blankets, while others, snugly ensconced beneath the ready pitched tent, bade defiance to wind and weather.

Being one of those selecting a place under the waggons, I retired at an early hour to snooze away the night; and despite the anticipations of an unpleasant time, I soon lost myself in a sweet slumber, utterly unconscious of every thing around me. In thoughts I wandered back to the home of my childhood, to converse with friends whose names and features fond memory has chained to my heart, while imagination roamed with delight amid those scenes endeared to me by earliest and most cherished recollections. But all the sweet pencillings of fancy were at once spoiled by the uncivil intrusion of a full torrent of water, that came pouring from the hill-side and forced its impetuous way into the valley below, —deluging me from head to foot in its descent. My condition, as the reader may well suppose, was far from being enviable. However, resolved to make the best of a bad thing, after wringing the water from my drenched bedding, I selected another spot and again adjusted myself to pass the dreary interval till morning; this I succeeded in doing, —how or in what manner, it is unnecessary to say. Sleep was utterly out of the question, and I am quite sure I never hailed the welcome morn with greater delight than on this occasion.

Others of the company fared almost as bad as myself, and there was scarcely a dry bed in camp. But the little concern evinced by the mountaineers for their mishap, surprised me most. They crawled from their beds, reeking with wet, as good humoredly as though their nocturnal bath had in no wise disturbed their equanimity, or impaired their comfort.

The morning proved so disagreeable two of our party, who were accompanying us for the purpose of adventure, concluding this a kind of adventure they were unwilling to meet, wisely resolved to take the back track, and accordingly left for home. Towards night the rain ceased, and, the clouds having dispersed, we were again en route. Travelling on till late, we encamped in the open prairie, and early the next morning resumed our course. Having reached a small creek, about 10 o'clock, we halted for breakfast, where another Santa Fe company came up. This proved a party of Americans, with some six or eight waggons and a large number of horses and mules, on their homeward journey. They had also in their possession an elk nearly full grown, two black-tailed deer,[1] an antelope and a white-tailed fawn.

Through them we received intelligence of a battle recently fought between the Pawnee and Arapaho Indians, at the lower Cimarone Springs, south of the Arkansas. The former had been defeated with great slaughter, —losing their horses and seventy-two of their bravest warriors, to increase the trophies and enliven the scalp-dances of their enemies. This action occurred directly upon the Santa Fe trail, and the dead yet bestrewed the prairie, as our informants passed, half devoured by wolves, and filling the air with noisome stench as they wasted beneath the influence of a scorching sun.

An approving murmur ran through the crowd while listening to the recital, and all united to denounce the Pawnees as a dangerous and villainous set, and wished for their utter extermination.

CHAPTER III.

The Pottowatomies. Crossing the Wakarousha. Adventure at the Springs. The Caw chief. Kansas river and Indians. Pleading for whiskey. Hickory timber. Prairie tea. Scenes at the N. Fork of Blue. Wild honey. Return party. Mountaineers in California. Adventure with a buffalo. Indian atrocities. Liquor and the Fur Trade. Strict guard. High prices.

CONTINUING our course, we bore to the right, and struck the northern or Platte trail, and, after travelling eight or ten miles, made camp upon a small creek skirted with heavy timber, called Black Jack. An early start the next morning brought us to the Wakarousha, a considerable tributary of the Kansas, where a junction was formed with our advance party. The territory lying upon this stream as far south as Council Grove, (a noted place on the Mexican trail, 144 miles west from Independence,) belongs to the Pottowatomies. These Indians are very wealthy and are partially civilized, —the most of them being tillers of the ground. Their dwellings are of very simple construction, —large strips of bark firmly tied to a frame-work of poles with small apertures to admit light, furnishing the exterior, while the interior is finished by the suspension of two or three blankets between the apartments, as partitions, and erecting a few scaffolds for bedsteads. The fire-place in warm weather is out of doors, but in the winter it occupies the centre of the building, from which the smoke — unaided by jamb or chimney—is left to find its way through an opening in the roof. Some, however, are beginning to improve in their style of architecture, and now and then we find a tolerably spacious and comfortable house among them.

The Catholics have several missionaries with this tribe, and are using great exertions, if not to ameliorate their condition, at least, to proselyte them to their own peculiar faith. The missionaries of other christian denominations are also devoting themselves for their benefit, and not unfrequently with gratifying success.

The remainder of the day was occupied in crossing the creek—a task by no means easy, —its banks being so precipitous we were compelled to lower our waggons by means of ropes. In so doing it required the utmost caution to prevent them from oversetting or becoming broken in the abrupt descent.

The night following was passed upon the opposite bank. After travelling some twelve miles the next day, we encamped a short distance to the right of the trail at a place known as the Springs. Scarcely had we halted when two footmen appeared from an opposite direction—one of them leading a horse—whom a nearer advance proved to be a white man and an Indian. The former was immediately recognized by our engagés as an old acquaintance, by the name of Brown, who had been their recent *compagnon de voyage* from the mountains. His story was soon told. A few days subsequent to his arrival in the States. a difficulty had occurred between him and another person, who received a severe wound from a knife by the hand of Brown during the affray, when the latter was necessitated to consult his own safety by a hurried flight. He accordingly bade farewell both to enemies and law, and left for the Indian country — travelling most of the way by night. Two weeks afterwards he arrived in the Kansas nation, and remained with the Indian now accompanying him, to await our return.

Having listened to his story, I began to survey his strange companion. He was a village chief of the Kansas (Caw) tribe, and the first of his race I had ever seen so nearly dressed in his native costume. In person he was tall and stout-built, — with broad shoulders and chest, brawny arms

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

and legs, and features evincing the uncontaminated blood of the Aborigine. His hair was closely shaved to the scalp, with the exception of a narrow tuft centrewise from forehead to crown, so trimmed it stood on end like the bristles of a warring hog; then his whole head and face were so lavishly bedaubed with vermilion, our experienced city belles would doubtless have considered it an unpardonable waste of that useful material!

A string of bears' claws, tastefully arranged, encircled his neck, while ample folds of brass wire above the wrists and elbows furnished his armillary, and from his ears hung rude ornaments, — some of silver, others of brass or iron — cruelly distending the flexible members that bore them. A dirty white blanket drawn closely around the shoulders enveloped the body, which, with a breech-cloth and leggins, formed his sole covering. A bow and arrows, slung to his back by a strap passing over the left shoulder and under the right arm, were his only weapons. A belt, begirding the waist, sustained his tobacco-pouch and butcher-knife, and completed his attire and armament. Thus habited appeared before us the Caw chief, holding in one hand the lead-rope of his horse, and in the other the wing of a wild turkey, with a long-stemmed pipe, carved from a hard red stone, handsomely wrought and finely polished. Taken altogether, he presented an amusing spectacle — a real curiosity.

Having shaken hands with the company and turned his horse to graze, in a few moments his pipe was subjected to its destined use, and, as the inhaled fumes merrily curved from his mouth and nostrils, he ever and anon presented it for the indulgence of the bystanders. His knowledge of English was limited to the simple monosyllable "good," which he took occasion to pronounce at intervals as he thought proper.

Sept. 8th. Continuing on, we encamped towards night at a small creek within six miles of the crossing of the Kansas river. Here a bevy of our chief's villagers, rigged in their rude fashion, came flocking up, apparently to gratify their curiosity in gazing at us, but really in expectation of some trilling presents, or in quest of a favorable opportunity for indulging their innate propensities for theft. However, they found little encouragement, as the vigilance of our guards more than equalled the cunning of our visitors. During their stay we were frequently solicited for donations of tobacco and ammunition, (as they expressed it,) in payment for passing through their country. This was individually demanded with all the assurance of government revenue officers, or the keepers of regular toll-bridges, strongly reminding one of the petty nations upon the borders of Canaan that required tribute of the Israelites passing through them to possess the land of their forefathers.

Sept. 9th. Early in the forenoon we came to the Kansas, and were employed till nearly night in effecting a ford. This proved rather difficult, as the water was deep and the bottom sandy;— the course, bearing directly across, till near midway of the river, follows the current for six or eight hundred yards, and then turns abruptly to the opposite shore. The Kansas, at the crossing, was not far from six hundred yards wide, with steep banks of clay and sand. The fording accomplished, we travelled some six miles, and encamped for the night. Our visitors yet honored us with their presence; some, under pretence of trading horses; others, of bartering for tobacco, whiskey, coffee, and ammunition; but most of them for the real purpose of begging and stealing.

The Caw Indians are a branch of the Osage tribe—speaking the same language, and identified by the same manners and customs. They number a population of sixteen hundred, and claim all the territory west of the Delaware, Shawnee, and Pottowatomie line, to the head waters of the Kansas.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Their main village is on the left bank of the river, a few miles above the crossing. Their houses are built Pawnee fashion, being coniform and covered with a thick coat of dirt, presenting a hole at the apex to emit the smoke, and another at the side to serve the double purpose of a door and window. The whole building describes a complete circle, in whose centre is placed the hearth-fire, and at the circumference the couches of its inmates. Its floor is the bare ground, and its ceiling the grass, brush, and poles which uphold the superincumbent earth forming the roof and sides.

The Caws are generally a lazy and slovenly people, raising but little corn, and scarcely any vegetables. For a living they depend mostly upon the chase. Their regular hunts are in the summer, fall, and winter, at which time they all leave for the buffalo range, and return laden with a full supply of choice provisions. The robes and skins thus obtained, furnish their clothing and articles for traffic.

As yet, civilization has made but small advances among them. Some, however, are tolerably well educated, and a Protestant mission established with them, is beginning its slow but successful operations for their good, while two or three families of half-breeds, near by, occupy neat houses, and have splendid farms and improvements, thus affording a wholesome contrast to the poverty and misery of their rude neighbors.

The distance from Independence to this place, by the mountain trail, is some eighty miles, over a beautiful and fertile country, which I shall hereafter take occasion to notice more fully. Before leaving, we were further increased by the accession of two Canadian voyageurs—French of course. Our force now numbered some twenty-four—one sufficiently formidable for all the dangers of the route.

Sept. 10th. Resuming our way, we proceeded till late at night, still attended by our Indian friends; (not the originals, but a “few more of the same sort,” who kindly supplied their places, —seeking to levy fresh drafts upon patience and generosity.) These were more importunate for liquor than any preceding them—though, in fact, the whole nation is nowise remiss in their devotion to King Alcohol. One fellow, in particular, exhausted all his ingenuity to obtain the wherewith to “wet his whistle.” He was a shrivel-faced old man, and occasioned much sport, from his supplications in broken English, which ran pretty much as follows:

“Big man, me. Chief, —Black Warrior. Me, American soldier! Love Americans, heap. Big man, me! Love whiskey, heap. White man good. Whiskey good. Love whiskey, me, —drink heap whiskey. No give me whiskey drink? Me, Chief. Me, American. Me, Black Warrior. Heap big man, me! Love Americans. Take him hand, shake. White man good. Whiskey good. Me love whiskey! Love him heap! No give Black Warrior whiskey? No?—one leetle drink? Whiskey good. Me love him. Make Black Warrior strong. Big man, me, Chief. American soldier. Me love American. Shake him hand. Fight him, bad Indian, no love white man. Kill him. White man good. Me love white man. Whiskey good. Me love whiskey. No give Black Warrior whiskey, —one leetle drink? Me, Chief. Big man, me.” Etc.

In this strain the old fellow continued so long as he found listeners, but without success, although, as I afterwards learned, two waggons were freighted with the noxious article; none of it was suffered to find its way down the throats of our thirsty guests.

Pursuing a westerly course, nearly parallel with the Kansas, for three successive days, we passed the 14th encamped at Big Vermilion, for the purpose of procuring a quantity of hickory for gun-sticks and bow-timber. Hickory is unknown to the Rocky Mountains, and this being the last place

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

on the route affording it, each of our company took care to provide himself with an extra gun-stick. Small pieces, suitable for bows, find market among the mountain Indians, ranging at the price of a robe each, while gun-sticks command one dollar apiece, from the hunters and trappers. We were also careful to provide an extra quantity of ox-bows, axle-trees, &c., as a resource in case of accidents or breakage. These are articles with which every caravan should be furnished on a journey across the grand prairies.

In this vicinity a species of shrub, which I had before noticed in various places, (designated as "red-root" by our voyageurs,) became quite abundant. The red-root is highly esteemed as a substitute for tea, and my own experience attests its superiority of flavor to any article of that kind imported from China. In appearance it is very similar to the tea of commerce, and it affords at all times a most excellent beverage. It is found only upon the prairies between the frontiers and Big Blue, and in some portions of the Rocky Mountains.

Leaving Big Vermilion, we travelled rapidly the two days subsequent, and arrived at the North Fork of Blue, —a large and deep stream, tributary to the Kansas. We were here detained till the 24th—the creek being impassable on account of high water.

However, the beauty of the place and variety of its landscape scenery, served in a great measure to alleviate the weariness of delay. The country was most agreeably interspersed with hills, uplands, and dales—amply watered and variegated with woods and prairies, attired in all the gaudy loveliness of wild-flowers. The busy bee, afraid of the cruel persecutions of man had here sought a secure retreat to pursue, unmolested, her melliferous employ, and fill the dark chambers of her oaken palaces year by year with honeyed stores. The air was almost vocal with the music of her wings, and the flowerets were enlivened by the gentle touches of her embrace. The odor of honey filled the breeze, which, wafting the mingled melody of birds and insects with the incense of flowers, o'er the smiling prairie till lost in space, seemed more like the breath of Eden than the exhalations of earth.

As might be supposed, we were not slow in levying upon the delicious stores, which the industrious insects, claiming this as their dominion, had laid away for themselves. During our stay no less than four bee-trees were levelled, and every pan, kettle, pail, keg, or empty dish in the whole camp was filled to overflowing, and every stomach to repletion, with honey of almost crystalline transparency. The great abundance of deer, turkey and other game in the vicinity, also contributed their share of amusement, and enlivened the interval of detention.

At length, by a partial subsidence of the water, we were enabled to effect a crossing and renew our journey. Pursuing a course W. N. W., on the 27th we met a small party of whites on their return from the mountains, and, yielding to the temptation presented by a luxuriant and well-wooded valley, with a pretty streamlet, the two parties made common camp. Our new acquaintances were taking a large drove of horses, and several domesticated buffalo, with them to the States. Their horses had been mostly obtained from Upper California, the year previous, by a band of mountaineers, under the lead of one Thompson. This band, numbering twenty-two in all, had made a descent upon the Mexican ranchos and captured between two and three thousand head of horses and mules. A corps of some sixty Mexican cavalry pursued and attacked them, but were defeated and pursued in turn, with the loss of several mules and their entire camp equipage: after which the adventurers were permitted to regain their mountain homes, without further molestation; but, in passing the cheerless desert, between the Sierra Nevada and Colorado, the heat, dust, and thirst

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

were so intolerably oppressive, that full one half of their animals died. The remainder, however, were brought to rendezvous, and variously disposed of, to suit the wants and wishes of their captors.

The buffalo, in possession of our wayfaring friends, had been caught while calves, and reared by domestic cows. They appeared as tame and easily managed as other cattle. One of them, a two-year-old heifer, was rather vicious in its habits, having been spoiled, while a calf, by the too great familiarity of its keeper. After listening to a full exposition of its bad qualities, our commandant offered to bet he could handle, or even ride, the unruly beast at pleasure.

“Can you?” said the owner. “Do it, and my best horse is yours!”

“I take all such offers!” returned the commandant. “A horse could not be easier earned!” he continued, stepping towards the ill-tutored animal. “Come, boss!—Poor boss!—bossy, bossy!” addressing the buffalo, which commenced advancing, —at first slowly, then, with a sudden bound, ran full tilt against the admirer, leaving him prostrate upon the ground, as it turned away, dancing and throwing its heels exultingly at the exploit.

“Bless my stars!” he exclaimed, on recovering himself; “I’d no idea ‘twould serve me so!”

“Ha, ha, ha!” retorted the owner. “You seem to pick upon a strange place for a snooze! What in the world were you doing before that skittish beast?”

The roar of laughter which followed, told how well the joke was relished by the crowd.

Reports from the mountains brought intelligence of recent difficulties between the whites and Sioux, —the latter having murdered several trappers. A battle had also been fought in the Snake country, in which the Sioux were defeated with a loss of twenty killed and wounded, —the whites suffered in the loss of their leader (Frapp) and four others. Another affair had come off, at Fort Platte, between two factions of that tribe, while on a drunken spree, resulting in the death of Schena-Chischille, their chief, and several of his party.

The most acceptable item of intelligence was the probability of our reaching the buffalo range in ten days, at least, where we should find vast quantities of those animals. This led our voyageurs to expatiate anew upon the choice varieties of the feast of good things we might expect on that occasion.

Bidding adieu to our transient camp-mates, we were soon again en route. The day following, being unfit for travel, was devoted to overhauling and re-adjusting the freight of the waggons.

Here, for the first time, I ascertained the fact, that a portion of the above consisted of no less than twenty-four barrels of alcohol, designed for the Indian trade!

This announcement may occasion surprise to many, when aware that the laws of Congress prohibit, under severe penalties, the introduction of liquor among the Indians, as an article of traffic, —subjecting the offender to a heavy fine and confiscation of effects. Trading companies, however, find ways and means to smuggle it through, by the waggon-load, under the very noses of government officers, stationed along the frontiers to enforce the observance of laws.

I am irresistibly led to the conclusion, that these gentry are willfully negligent of their duty; and, no doubt, there are often weighty inducements presented to them to shut their eyes, close their ears, and avert their faces, to let the guilty pass unmolested. It seems almost impossible that a blind man, retaining the senses of smell, taste and hearing, could remain ignorant of a thing so palpably plain. The alcohol is put into waggons, at Westport or Independence, in open day-light, and taken into the territory, in open day light, where it remains a week or more awaiting the

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

arrival of its owners. Two Government agents reside at Westport, while six or eight companies of Dragoons are stationed at Fort Leavenworth, ostensibly for the purpose of protecting the Indians and suppressing this infamous traffic, —and yet it suffers no diminution from their vigilance!

What faithful public officers! How prompt in the discharge of their whole duty!

These gentlemen cannot plead ignorance as an excuse. They well know that alcohol is one of the principal articles in Indian trade—this fact is notorious—no one pretends to deny it; not even the traders themselves — and yet, because no one takes the trouble to produce a specimen of the kind of freight taken, more or less, by all mountain companies, and FORCE them to see, taste, touch, and smell, they affect ignorance! It is thus the benevolent designs of our Government are consummated by these pensioners upon the public treasury!

Had they the will so to do, it would be no difficult matter to put a stop to all such exportations. The departure of any one of these companies for the mountains, is a thing too difficult to be effected unknown and stealthily. It becomes public talk for days and even weeks previous. Scarcely anything would be easier than for those whose business it is, to keep on the look out, and enforce the law to its full extent upon each offender. A few examples of this kind would interpose an insuperable barrier to the further prosecution of an illicit traffic in the manner it is at present carried on. A few faithful public officers, and attentive to their duty, regardless of fear or favor, would soon accomplish an object so desirable.

In subsequent pages of this work I shall have occasion to notice a few of the many evils resulting from this criminal neglect, —but at present forbear further remarks.

Our arms were now put in order for immediate use, —each individual apportioning to himself a good supply of ammunition, to be ready at all times in case of attack. Guards were ordered to be constantly on the alert. The company was divided into two parties, — one for day and the other for night guard, and these again were subdivided for alternate relieves, —thus, one of each subdivision serving a day and a night, and the reserve the day and night succeeding. The day-guard consisted of only two persons, upon duty every other day, but the night-guard numbered ten, — two being on duty for two hours were then relieved by the two next in succession, and they by the next, and so on.

Strict orders were also given to prevent any from leaving camp, or parting from the caravan while travelling. In fact, every thing began to assume a warlike aspect, as if we were really in danger and apprehensive of an immediate reencounter.

Several boxes of clothing, &c., were also opened for such as wished to purchase. But every article disposed of was sold at an enormous rate: tobacco bringing from one to three dollars per lb., according to quality; butcher-knives, from one dollar to one fifty each; hose, one dollar per pair; shirts, from three to five dollars each, according to quality; blankets, from twelve to sixteen dollars; coats, from fifteen to forty dollars; coarse shoes, four dollars per pair; six-penny calicoes, fifty cts. per yd.; beads, one dollar per bunch, etc. These were of an indifferent quality, and afforded the vender some three or four hundred per cent advance upon purchase-price. In fact, with regard to prices, conscience had nothing to do with the matter.

CHAPTER IV.

Country from the frontiers to Big Blue; its geological character, &c. Novel cure for fever and ague.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

— Indian trails. — Game. — Large rabbits. — Antelope, and their peculiarities. — Beaver cuttings. — Big Blue and its vicinity. — Dangerous country. — Pawnee bravery. — Night-alarm, (Prairies on fire.) — Platte river. — Predominant characteristics of the Grand Prairies, and theory explanative of their phenomenon. — Something to laugh at. — "Big Jim" and the antelope.

Sept. 26th. WE are now camped upon a small creek, nearly destitute of timbers within two miles of Big Blue, or the N. W. branch of the Kansas river. The geography of this part of the country is incorrectly described upon all the published maps I have yet seen. The Republican Fork, which is the principal branch of the Kansas, is uniformly represented as the most northwesterly branch of that river, forming a junction with it at or below the usual crossing. This is not the case.

The two forks of Blue, from the northwest, united, form a large and important stream, which, according to my impression, discharges its waters into the Kansas itself, and not into the Republican. Of this, however, I am not quite positive. But be that as it may, admitting the Republican to be the main stream, Big Blue must be, as a matter of course, the most northwesterly branch of the Kansas river.

Proceeding up the Blue, the geological character of the country under goes an entire and radical change, and the traveller is introduced to a different order of things from that previously observed.

Perhaps, therefore, it is not out of place to present a general review of the territory thus far.

The interval from the frontier of Missouri to Big Blue, a distance up wards of two hundred miles, affords great uniformity in all its more prominent characteristics. It generally comprises beautifully undulating prairies, of a moist argillaceous soil, rich in sedimentary deposits and vegetable matter. It is somewhat rocky in places, but well watered by the almost innumerable streams that find their way into the Kansas, Platte and Arkansas rivers. The creeks, with but few exceptions, are heavily timbered with oak, hickory, walnut, maple, cottonwood, and other varieties found in more eastern forests. The hills too, in some parts, are more than usually abundant in springs, and covered with stately groves, as tastefully arranged as if planted by the hand of man, while luxuriant grass and fragrant flowers usurp the place of underbrush. The prairies, hemmed in on every side by the woodlands skirting the water-courses, present to the eye proud oceans of flowery verdure, tossing their wavelets to the breeze and perfuming the air with the breath of spring.

The streams are clear, with rocky or pebbly bottoms and high, steep banks — abounding in choice specimens of the finny tribes and varieties of the testaceous order, of the genus muscula. The valley of the Kansas is wide and of a deep brown vegetable mould, susceptible of a high state of cultivation. The whole country is well adapted to the double purpose of agriculture and the growth of stock.

The prevailing rock is sandstone of various shades and compactness, with siliceous and fossiliferous limestone. These specifications are generally exhibited in a detached and fragmentary form, but rarely in strata as disclosed upon the surface.

Taken as a whole, the territory holds out many inducements to emigrants, and, whenever brought into market, will no doubt become speedily and thickly populated.[2]

Sept. 30th. We are again under headway. A French engagé, who had been suffering for several days past from a severe attack of the fever and ague, experienced a sudden and novel cure. Unable to travel, quarters were prepared for him in one of the whiskey waggons, where he was comfortably disposed of as we continued our course. In passing a rough place the waggon overset, when

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

out came the invalid head foremost, and out came the whiskey barrels showering full upon him! The suddenness of the fall, with the surprise and excitement of the occasion, —one, or both, or all, or some other cause unknown, effected a complete cure, —for certain it is, he did not suffer another attack of the fever and ague during the whole journey, and the next day was able to discharge his duties as well as ever.

On striking the Big Blue, the mountain road bears a north-northwest course to the head of that stream, and from thence over an interval of highlands to the Platte river. The distance travelled up the Blue requires some eight days, for heavy waggons. Continuing our way, about noon we passed several Indian trails, in addition to one ten or twelve or fifteen miles back. These consist of a number of well-beaten, parallel foot-paths, bearing a northwest and southwest direction. They are formed by the passing and re-passing of the Otoes, Iowas, and Foxes, to and from their hunting grounds, towards the head-waters of the Kansas.

On the 3d of October we reached the antelope range, and saw four or five of these animals scouring the boundless expanse, or ascending some favorable eminence to gaze upon us. Slight signs of buffalo also appeared, and everything seemed to indicate the approach to a game country.

Parting a short distance from the trail, a large sage rabbit bounded up before me, —the first of his species I ever saw. This animal is nearly three times the size of the common rabbit, and of a white color, slightly tinged with grey. It derives its name from being found principally in countries abounding with absinthe or wild sage. In the regions adjacent to the mountains, these animals occur more frequently, —and even among the mountains, where their tails and ears are tipped with jetty black. Their fur is soft and fine, — equalling if not surpassing that of the Russia rabbit. Their flesh is also of a superior flavor, as I have had opportunities of testing.

Towards night, three antelope appearing near the trail, our hunter made an unsuccessful attempt to approach them, which afforded me a first inkling of the nature and character of these animals. The antelope of the grand prairie differs but little in size and shape from the common sheep, and is coated with long, brittle hair, —of a ruddy brown color, except at the tail and head, where it is short and white. The female is hornless, except an occasional blunt corneous excrescence, some two or three inches long protruding from the head. The male, however, is equipped with hook-shaped antlers, ebony colored, and six or eight inches in length, which he sheds annually in the months of November and December.

This is the fleetest inhabitant of the prairie. No horse can compete with it in speed. Quick of sight, keen of scent, and acute of ear, it seems ever on the alert at the approach of real or supposed danger, —now swiftly advancing towards the object of its alarm or curiosity, —then circling before you with the fleetness of the storm-wind, to mount some eminence far away beyond reach, and gaze in security. Then, again, ere you have time to catch breath for admiration, it repeats its semi-gyration from an opposite direction, still nearer and swifter, till past, —as if indeed borne on the wings of lightning—and yet again surveys you in the distance. Now, running from point, to point it examines you upon all sides, as it cautiously passes round, —then, snuffing the breeze, it again calls to aid its fleetness of limb, and with the velocity of thought is lost to view in the vast expanse.

Possessed of an inordinate share of inquisitiveness, it not unfrequently falls a victim to its own curiosity. The hunter, turbaned with a red handkerchief and half concealed behind some object, first raising, then depressing his head, then withdrawing it entirely from view, then again disclosing it

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

to the curious animal, is almost certain to allure his game within gunshot.

I have seen numbers killed in this manner. In the spring season they appear more sensitive than at any other time, and are easily lured to their fate.

With the exhibition of this strange propensity, I have time and again been minded of its more fully developed moral prototype in man. How frequently do we see persons around us who indulge their appetites and passions, as often for mere curiosity as fancied pleasure, —venturing nearer and still nearer towards the objects that command their attention and lure them into the vortex of ruin, till, with sure and deadly aim, the shafts of the tempter pierce the waning vitals of morality, and plunge the victims headlong into a yawning abyss, where they are lost to themselves, to society, and to the world—lost forever!

Here, then, is furnished for us a moral:- Beware how you indulge a vain curiosity that lures to evil;— never parley with temptation.

These animals are found from the Big Blue to the mountains—in Oregon, California, Santa Fe, and N. W. Texas. Their flesh is tender and sweet, —quite equal to venison, though seldom fat, owing, as is supposed, to their almost incessant mobility.

Near our night-camp I noticed fresh beaver “cuttings,” some of which consisted of trees, six inches in diameter, levelled by these sagacious animals.

The vicinity disclosed frequent boulders of red and dark ferruginous sandstone, with a soil somewhat arenose, reclining upon a changeable deposit of sand and gravel, succeeded by a substratum of parti-colored and friable sandstone. The valley of the Blue is bordered by hills of graceful slope, both green and beautiful.

I here remarked for the first time the appearance of cacti, which here from becomes quite common, and proves the pest of many places adjacent to the mountains.

The Blue is a deep, narrow stream, with a swift current, over a bed of gravel and pebbles, and is fringed by groves of oak, cotton-wood, and willow. Its valley is between one and two miles in width, with a superfiice of variable fertility, but generally consisting of good arable land.

This section of country is considered very dangerous in the summer and fall months, on account of the strolling bands of Pawnees which infest it. The voyageur holds the latter in great dread, unless he chances to be accompanied by a sufficient force to bid defiance to their approach. A party, numerically weak and indifferently armed, meets with rough treatment at their hands while on the open prairies. Persons and property are rarely respected, and the unfortunate traveller is not only plundered, but often whipt or murdered without mercy.

This, however, may not be said of all—it is only the young warriors, when beyond the restraint of their chiefs and seniors, who perpetrate such outrages; though, to their praise be it said, instances of this kind are quite seldom, at present, compared with former years.

The courage of these Indians is held in little repute by mountaineers; and, that this opinion is not unfounded, the following incident will prove. It was related to me by an actor in the scene:

A small party of whites on their cruise down the Platte with a cargo of furs, “lay by” to make meat, near the forks of that stream. Buffalo being at some distance from camp, our adventurers were compelled to perform the duties of pack-horses in conveying the proceeds of their hunting excursions. One day, four of them left for this object, and having proceeded some six or eight miles, a war-party of Pawnees suddenly emerged from behind an eminence, directly fronting them. Alarmed at the unwelcome apparition, and imagining the whole country to be alive with

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Indians, they immediately ran, and were pursued towards camp. One of the number, a big, lazy fellow, and rather "green" withal, soon became tired. and sung out to his companions:

"Don't let's run so fast. Blast me, if I can keep up!"

"Come on, —come on!" cried they. "A thousand 'shaved heads' are upon us, half frozen for hair!"

"Pooh! I'll bet five dollars there aint thirty!"

Done! But, who'll count the bloody varmints?"

"Why, I'll do it, just for my own satisfaction." So saying, he wheeled and advanced towards the Pawnees, as his wondering companions halted a little distance of, to learn the result of his fool-daring.

Surprised at this strange movement, the enemy also came to a stand, affording a fine opportunity to ascertain their number, which only amounted to nineteen!

"I've won!" exclaimed our hero. "Let's charge, and give'em the very devil!"

The word went for command, and the four hunters dashed boldly towards the terrified savages, who in turn fled, with greater velocity than they had called into exercise at any time during their advance, —illustrating the truth of the saying, "tyrants are always cowards." Legs proved quite convenient articles for the Pawnee braves! They were out of sight in a few minutes, and were very careful not to stop until they had left their pursuers far in the rear.

A Pawnee with a defenceless enemy in his power, like some examples among the whites, is unrivalled in courage and daring; but where there is resistance offered, and fighting to be done, he, as well as the Irishman's chickens, "comes up missing!" He is always bravest when farthest from danger.

We were careful to observe the strictest vigilance at night, to prevent the loss of horses from lurking bands of Indians. The animals of the caravan were uniformly picketed in compact order, and sentinels, posted at suitable distances, continued to pace their rounds, from dark till daylight; while each of the company slept by his arms, in readiness at any moment to repel an attack.

Having travelled for seven successive days, we made camp late in the afternoon at the head of the right fork of Blue.

During the day we had noticed a dense smoke some distance in the rear, but, with the wind in an opposite direction, no uneasiness was felt on that account. The sentries were soon at their posts and everything was snugly disposed of for the night. Those not on duty improved the opportunity to gain respite from the fatigues of the day, and, in a brief interval, were snoring away at an admirable rate.

The polar-star by its "pointers" had just told the hour of midnight, when these hurried words rang through the camp:

"Lave, ho! Lave! Prairies on fire! Quick—catch up! catch up!"[3]

This startling announcement instantly brought every man to his feet; — and such a scene as now met the eye! How awful, and how grand! The wind, new changed and freshened, to the right and rear, was tossing the flames towards us, rapidly—lighting the heavens with their lurid glare, and transforming the darkness of night into a more than noon-day splendor!

Here was, indeed, an "ocean of flame!" far as the eye could reach — dancing with fiery wavelets in the wind, or rolling its burning surges, in mad fury, eager to lick up every vestige of vegetation or semblance of combustible that appeared in its way! — now shooting its glowing missiles far, far ahead, like meteors athwart the sky, or towering aloft from the weeds and tall grass, describing

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

most hideous and fantastic forms, that, moving with the wind, more resembled a cotillion of demons among their native flames than aught terrestrial!—then driving whole sheets of the raging element into the withered herbage in front, like the advance scouts of an invading army, swept onward its desolating course, leaving in its track naught save a blackened waste of smoking ruins! Altogether, it was a sublime spectacle, a stupendous scene, grand and imposing beyond description, and terrible in its beauty! Commingled with sensations of wonder and admiration, it tended to impress the beholder with feelings of painful melancholy. The broad expanse, but a few moments since arrayed in all the mourning grandeur of fading autumn, was now a naked desert, and every vestige of loveliness in an instant snatched from view!

How sudden, how awful, how marked the change! and yet, how magnificent in its career, though doleful its sequel!

We were speedily under way, with as much earnestness of advance as that of righteous Lot, in his escape from burning Sodom.[4] For a while the pursuing enemy kept even pace, and threatened to overtake us, till, headed by the strong wind, which meanwhile had changed its course, it began to slacken its speed and abate its greediness.

About sunrise we crossed the regular Pawnee trails, (leading to and from their hunting grounds, which bore the appearance of being much frequented,) and at 10 o'clock, A. M., reached the Platte river, having travelled a distance of thirty miles—without halting.

The mountain road strikes the above stream at lat. 40° 41' 06" north, long. 99° 17' 47" west from Greenwich, some twenty miles below the head of Grand Island. This island is densely wooded and broad, and extends for fifty or sixty miles in length. The river banks are very sparsely timbered, a deficiency we had occasion to remark during the remainder of our journey.

The valley of the Platte at this place is six or seven miles wide, and the river itself between one and two miles from bank to bank. Its waters are very shallow, and are scattered over their broad bed in almost innumerable channels, nearly obscured by the naked sand-bars that bechequer its entire course through the grand prairie. Its peculiarity in this respect gave birth to the name of Platte, (shallow,) which it received from the French, and Chartre, (surface,) from the Mexicans, —the Indians, according to Washington Irving, calling it Nebraska,[5] a term synonymous with that of the French and Americans, —however, I am ignorant in reference to the latter.

The bottom upon the south bank is between three and four miles broad and of a light, deep, and, rich soil, occasionally sandy, but covered with thick and lusty vegetation. Back from the valley, ranges of broken sand-hills mark the transition to the high arid prairies in the rear, where vegetation becomes more dwarfish and stunted in its growth, and is intermingled with frequent cacti. These immense plains are generally clad with a short, curly grass, (the buffalo grass,) very fine and nutritious, and well adapted to the sustenance of the countless herds of buffalo and other wild animals that feed upon it. Their soil is generally of a thin vegetable mould, upon a substratum of indurated sand and gravel.

In many places it is quite sterile, producing little other than sand-burrs and a specimen of thin, coarse grass, that sadly fail to conceal its forbidding surface; in others, it is but little better than a desert waste of sand-hills or white sun-baked clay, so hard and impervious that neither herb nor grass can take root to grow upon it; and in others, it presents a light superface, both rich and productive, beclad with all that can beautify and adorn a wilderness of verdure.

The springs and streams of water are "few and far between,"—an evil, however, slightly atoned for

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

by the occasional pools formed in favoring depressions during the rainy season, which are retained in their places by the extreme hardness of the soil. Were it not for these it would be almost impossible, in many directions, to travel the vast prairies lying between the Arkansas and Missouri, from long. 22° 30' west from Washington to the Rocky Mountains. That this section of country should ever become inhabited by civilized man, to any extent, except in the vicinity of large water-courses, is an idea too preposterous to be entertained for a single moment.

As the reader is now inducted to the grand prairie as it is, it may not be amiss to say something relative to this phenomenon, before dismissing the subject in hand.

The steppes of Asia, the pampas of South America, and the prairies of the great West, so far as my information extends, are possessed of one general and uniform character. There is something deeply mysterious associated with them, that puzzles the philosopher and cosmogonist to explain. Why is it neither timber nor shrubs, as a general thing, are found within their confines? Why have not the same causes operated here which produced the stately forests of other regions?

The above questions are often asked, and as often answered; but never satisfactorily.

Some respond by a reference to their frequent burnings, —others to some chemical defect in their soil, —others, to the disgeniality of their climate, —others, to their infecund aridity, —and yet, others, to the supposition that some operation of nature or art has effected the destruction of quondam forests, and reduced them to their present condition.

Each of these answers, though, doubtless, partially true in many respects, fails to solve the problem before us.

Here we have, in many places, almost measureless extents of fertile soil, moist and abundantly watered, by rains, springs, and ever-flowing streams, with all the desiderata for the producing of trees, —and what withholds them? Other sections of country, under less favorable circumstances, are not wanting in this respect.

Why is it? Timber of every kind adapted to the zone and climate will gross as thriftily when planted here, as elsewhere. The frontier forests of our Western States have been observed for years past to make slow but constant encroachment upon contiguous prairies, from all sides, where, as yet, they have a foothold;— and why? Partly, because their enlargement is not circumvented by those annual burnings that formerly devoured every tender shoot daring to raise its head above ground; and, partly, through the operation of other causes, sure and gradual in their effect, which have planted the groves of other lands and taught their branches to wave in the breeze. Doubtless the same causes would produce the same results, all over these vast regions, as elsewhere.

But, why have they not?—why are the prairies timberless? Simply, because a sufficiency of time has not yet elapsed for the operation of these causes, —timber has hitherto had no possible chance for generation. The phenomenon, if rightly viewed, will thus explain itself. Geology points to the time when these vast solitudes were the bed of old Ocean and the home of waves, —but, gradually emerging or suddenly elevated from the watery abyss, they now present some of the more recent formations of dry land.

Herbage and grass, being more easily propagated than trees, —sown as are their seeds by the birds and scattered by the winds of heaven, —in a brief interval, beswathed the new-born earth with smiling green. Thus clothed with verdancy, they soon became the favorite pastures of the countless herds that thronged them. With game, appeared the red man to hunt it, and with him the yearly conflagrations that now repel the intruding woodlands and confirm the unbroken sway of

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

solitude amid her far extending domains.

Here, then, we have spread before us the prairies as we find them, —the problem of their existence needs no further solution.

Oct. 12th. Still continuing up the Platte by its south bank, we made camp at night near the head of Grand Island. During our progress we saw large quantities of wild geese and cranes in the river bottoms, that presented tempting marks for our voyageurs. One of the latter, —a tall raw-boned, half-crazed, and self-confident Missouri “Ned,” —good natured and inane, —sporting, the familiar soubriquet of “Big Jim,” —wishing to prove the truth of the Dogberry axiom, that “some things may be done as well others,” started to approach a large flock of sand-hill cranes, parading half obscured in a plat of grass near the road side.

The wary birds, however, caught glimpse of the approaching Nimrod and flew. Still our hero advanced, crawling upon all-fours, to within sixty or seventy yards of their recent position, when, raising up, he espied an object which his excited imagination portrayed a crane, and promptly yielded to it the contents of his rifle.

Of course the obstinate creature remained in status quo.

Re-loading with all possible speed, he again fired! But the second shot proved futile as the first. Determined the next should count whether or no, he advanced still nearer, and had raised for his third discharge, before the naked truth burst upon his astonished vision, —he had been shooting at a bunch of dead grass. Shouldering his rifle he now rejoined the caravan, and was received by the wags who had witnessed his exploit, as follows:

“Ho, Jim! I say, Jim! Did you kill it?”

“Hang me, but it stood fire well, —didn’t it?”

“Reckon you wanted a bigger charge.”

“Strange you couldn’t knock it cold at that distance!”

“May be your gun’s out of order?”

“Yes. I’ll bet a stewed crane of it. Have you noticed the “sights” lately?”

“Why, Jim. Really you’ve had bad luck! What, within sixty yards and not kill? I can beat that, all day!”

“Ha, ha, Jim! Shoot him grass!”

This rally was received, by our hero, in good part, who joined in the sport with as much gusto as though some one else were the victim.

The day, however, was not permitted to pass without another display of the prowess of “Big Jim.” A doe antelope, attracted by the strange appearance of the moving caravan, and impelled by its innate curiosity, had ventured to a tempting proximity. Mounted upon a fleet horse and supposing he could easily ride down the antelope, our hero started in pursuit.

Intently surveying the passing scene, the agile animal permitted him to advance within a few yards of her before she took the alarm. Now was a novel race. Away went antelope and away went Jim, in full chase. The former was soon far ahead, and stopped to gaze upon her pursuer.

Supposing she had become tired and was about to yield, our hero came dashing on, impetuously, under whip and spur, fully intent upon her capture. But, again, away went antelope, and away went Jim, whose steed, ambitious as its rider, and proud in its own fleetness, strained every nerve for the crisis. Even the antelope seemed to have found a champion to contest her unrivalled and universally acknowledged superiority. With distended mouth and protruding tongue, panting in

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

the excitement of fear, and foaming in the vehemency of effort, she gained but slowly upon the bounding charger, as both swept over the prairie almost with speed of the storm-wind!

Now, again, she stops to gaze upon her pursuer. By this time all began to feel an interest in the result of the strange race. The word resounded:

“Go it, Jim! you’ll beat the beater, yet!”

Once more, the antelope shoots from before both horse and rider, like the swift-winged arrow twanged from a giant’s bow!

A broad ravine intercepting her course was cleared at a bound, and left the flying animal far upon the other side. At a bound the steed also cleared the barrier, but, in striking upon the opposite bank, it plunged headlong upon the yielding ground, tossing its rider far away in advance, all safely sprawling in a sand heap.

The luckless wight, on recovering, found his noble beast so sprained by the fall it could scarcely stand, and its every nerve vibrating with frightful tremors. Of course here was the finale of the race, as both returned to the caravan, —the recent rider, on foot, leading his jaded steed, — the ridden slowly limping behind, —presenting a marked contrast between the opening and closing scene.

The ill-fated horse was too much disabled for further service during the journey.

As our hero joined the company, the joke-loving wags again broke loose:

“Well, Jim. I say, —ahem! did you catch the tarnal critter?”

“Pooh! Why didn’t you hold on, and not let her slide through your fingers in that way!”

“Why, man! You wasn’t spry enough, when you jumped off your horse, or you might have caught her—just as easy!”

“I’d like to know what you was diving after in that sand-bank!—the antelope wasn’t there!”

“Oh, Jim! Shoot him grass, kill horse. Me look next time he run antelope.”

The passive recipient of these sallies had little peace from henceforth, and soon began to wish he had never seen an antelope or heard of a crane.

## CHAPTER V.

Deserted camp. Big Jim’s third attempt as a hunter. Buffalo and other particulars. Big Jim lying guard. Butchering. Strange selections. Extraordinary eating, and excellence of buffalo meat. Brady’s Island. The murderer’s fate. Substitute for wood. A storm. Game in camp. Strange infatuation. Tenacity of buffalo to life, and how to hunt them. Cross S. Fork of Platte. Big Jim’s fourth adventure.

NEAR camp was the site recently occupied by the Pawnee village, whose occupants had evidently deserted it with the utmost precipitancy, leaving lodge-skins, mortars, bowls, pans, and a variety of other articles strown confusedly upon all sides. They had doubtless become alarmed at the approach of some real or supposed enemy, and consulted their own safety in flight.

Having started early the next day, our hunter soon brought in two fine antelope, the sight of which again raised the ambition of Big Jim, who would fain do deeds of equal wonder; and he accordingly strolled off into the hills with that intent. After shooting at several of the wary animals without, success, he began to get tired of the sport, and concluding the “poverty-stricken” creatures not worth the powder and lead, set his face for the caravan.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Plodding leisurely along, he espied a prairie snake, and, o'erjoyed at the thought of counting a "coup," gathered his rifle by the small, and brought it down with such force, he not only killed the snake, but broke his gunstock short off at the breech. With the pieces, one in each hand, he made his appearance before his comrades, who hailed him:

"Hallo, Jim. What's that you've killed?"

"Gun broke. Why, you must have overloaded it!"

"When'll you go hunting again? —'case I want to go too!"

"Poor Jim! Shoot grass, kill horse, break gun! Wat in do wor does him mean!"

"Never mind, Jim. Don't be skeered at these fellows. It takes you to play the devil and break things!"

Towards night, several buffalo bulls having made their appearance, our hunter, mounting a horse, started for the chase, and in a brief interval, returned laden with a supply of meat. Camp had already been struck, and preparations for the new item of fare were under speedy headway.

The beef proved miserably poor; but when cooked, indifferent as it was, I imagined it the best I had ever tasted. So keen was my relish, it seemed impossible to get enough. Each of us devoured an enormous quantity for supper, —and not content with that, several forsook their beds during the night to renew the feast, —as though they had been actually starving for a month.

The greediness of the "greenhorns," was the prolific source of amusement to our voyageurs, who made the night-air resound with laughter at the avidity with which the unsophisticated ones "walked into the affections of the old bull," as they expressed it. "Keep on your belts till we get among cows," said they, "then let out a notch or two, and take a full meal."

It was equally amusing to me, and rather disgusting withal, to see the "old birds," as they called themselves, dispose of the only liver brought in camp. Instead of boiling, frying, or roasting it, they laid hold of it raw, and, sopping it mouthful by mouthful in gall, swallowed it with surprising gusto.

This strange proceeding was at first altogether incomprehensible, but, ere the reader shall have followed me through all my adventures in the wilds of the great West, he will find me to have obtained a full knowledge of its several merits.

The beef of the male buffalo at this season of the year, is poorer than at any other. From April till the first of June, it attains its prime, in point of excellence. In July and August, these animals prosecute their knight-errant campaign, and, between running, fighting and gallantry, find little time to graze, finally emerging from the contested field, with hides well gored, and scarcely flesh enough upon their bones to make a decent shadow.

It is nowise marvellous, then, that our lavish appropriation of bullmeat at this time, when it is unprecedentedly tough, strong-tasted, and poor, should excite the mirth of our better-informed beholders.

The night was a cold one, and claimed for it Big Jim as second guard. When called for "relieve," with a borrowed gun, he commenced his rounds, —but the cold soon drove him to the camp-fire. Here, weariness and the somnific effects of a generous heat, speedily found him stretched at full length towards the fire, snoring away at a sound rate, the subject of their combined influence.

The guard time had already expired, and his partner on duty, perceiving the pleasant situation of the indomitable Jim, called the next "relieve," and retired.

These paced their rounds, and the fourth guard succeeded, but still our hero occupied the same

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

place in which he had lain his "tour." The sentinels were about to take their posts, as a loud sharp voice resounded through camp.

"Quit, there! What d'ye mean?" Hastening to the spot from which the cry proceeded, who should be seen but Big Jim, in great agony, rubbing his foot with most pitiable grimace:

His slumbers had been disturbed by a falling log, of the camp-fire, which had planted its glowing weight full against one of his feet, —becrissing the sole of his shoe and severely scorching its tenant, before awakening him. Dreaming some one had hold of his foot, and started by a sudden acuteness of pain, he exclaimed as above quoted.

The sentinels laughed at his mishap, and turning to pace their rounds, drawled out:

"What d'ye mean? Sure enough, what d'ye mean! Shoot grass, kill horse, break gun, lay guard, burn shoe, and scorch foot;— all in two days and two nights! Poor devil, —why ye no born wid better luck!"

With the morning, the subject of his recent adventures called forth fresh scintillations of wag-gish wit, —while the unrivalled capacity of our hero, as a gormandizer, gave cue to the cuts that followed:

"Well, my head for a foot-ball, if that aint the greatest idea yet What!—roast foot, basted with leather, —and his own at that! Such a meal none but Jim would ever have thought of!"

"Why, man! What put you in the notion of that dish?" "Strange, indeed, if you can't find the wherewith to stuff your devil, without cooking your feet! Souse, to be sure! Here, you can take my hat!"

The luckless wight had now enough to engagé his attention during the remainder of the journey, and began to wish he had never seen a mountain company, or left his sweet home in Missouri to cross the great prairies with such a crowd, —but all to no purpose; he was too late to retrace his steps alone.

Oct, 13th. Starting at early day, we travelled till about 11 o'clock, A. M., and halted for breakfast. The teams were scarcely turned to graze, when a dense band of buffalo cows made their appearance, from the back prairie, wending their way towards the river.

Expectation was on tip-toe, and all appetites doubly sharpened for an anticipated feast, as our hunter and his assistant started to intercept the witless animals at the river bank.

The two placed themselves in a chosen position and awaited the heavily moving throng, which soon advanced to within shooting distance. The sharp crack of a rifle now stopped their headway, and caused them to recoil a few paces, leaving one of their number struggling in death. An other discharge followed, and the affrighted herd were seen flying from their concealed enemy, with all the energy that innate dread of danger and death lent to their ready feet, —but not until another victim had dank the sod with the unsought libation of its heart's blood.

It pained me, as I came up, to witness the noble beasts as they lay extended upon the gore-dyed ground. But the present was no time for regret; we were to feed upon their carcasses.

The process of butchering was a new development of that most useful science. The carcase was first turned upon the belly, and braced to a position by its distended legs. The operator then commenced his labors by gathering the long hair of the "boss," and severing a piece obliquely at the junction of the neck and shoulders, —then parting the hide from neck to rump, a few passes of his ready knife laid bare the sides, —next paring away the loose skin and preparing a hold, with one hand he pulled the shoulder towards him and with the other severed it from the body;—

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

cutting aslant the uprights of the spina dorsi and "hump ribs," along the lateral to the curve, and parting the "fleece" from the tough flesh at that point he deposited it upon a clean grass-spot.

The same process being described upon the opposite side, the carcass was then slightly inclined, and, by aid of the leg-bone bisected at the kneejoint, the "hump-ribs" were parted from the vertebra; after which, passing his knife aside the ninth rib and around the ends at the midriff, he laid hold of the dissevered side, and, with two or three well directed jerks, removed it to be laid upon his choicely assorted pile; a few other brief minutia then completed the task.

Meanwhile, divers of the company had joined the butcher, and, while some were greedily feeding upon liver and gall, others helped themselves to marrow-bones, "boudins," and intestinum medullæ, (choice selections with mountaineers,) and others, laden with rich spoils, hastened their return to commence the more agreeable task of cooking and eating.

The remaining animal was butchered in a trice, and select portions of each were then placed upon a pack-horse and conveyed to the waggons.

The assortment was, indeed, a splendid one. The "depouille" (fleecefat) was full two inches thick upon the animal's back, and the other dainties were enough to charm the eyes and excite the voracity of an epicure.

The camp-fires soon presented a busy and amusing spectacle. Each one was ornamented with delicious roasts, en appolas, on sticks planted aslope around it, attentively watched by the longing voyageurs, who awaited the slow process of cooking. Some were seen with thin slices from the larder, barely heated through by the agency of a few coals, retreating from the admiring throng to enjoy solo their half-cooked morsels, —others, paring off bit by bit from the fresh-turned hissing roasts, while their opposite received the finishing operation of the fire, —and others, tossing their everted boudins into the flames, and in a few seconds withdrawing for the repast, each seizing his ample share, bemouthed the end in quick succession to sever the chosen esculent, which, while yielding to the eager teeth, coursed miniature rivulets of oily exuberance from the extremities of the active orifice, bedaubing both face and chin, and leaving its delighted eater in all the glories of grease!

Every man had now become his own cook, and, not to be backward, I closed in with the overture. Seizing a frying-pan replete with tempting levies from the "fleece," I twice subjected it to its duty, and as often its delicious contents found ample store-house; and even yet my longing appetite seemed loth to cry "hold, enough!"

The agreeable odor exhaled from the drippings of the frying flesh, contained in the pan, invited the taste, —a temptation claiming me for its subject. Catching up the vessel, a testing sip made way for the whole of its contents, at a single draught, —full six gills! Strange as it may seem, I did not experience the least unpleasant feeling as the result of my extraordinary potation.

The stomach never rebels against buffalo-fat. Persons, subsisting entirely upon the flesh of these animals, prefer an assortment of at least one third solid depouille.

The voyageur is never more satisfied than when he has a good supply of buffalo-beef at his command. It is then his greasy visage bespeaks content, and his jocund voice and merry laugh evince the deep-felt pleasure and gratification that reign within.

Talk not to him of the delicacies of civilized life, —of pies, puddings, soups, fricasees, roast-beef, pound-cake, and desert, —he cares for none of these things, and will laugh at your verdancy!

He knows his own preference, and will tell you your boasted excellencies are not to be compared

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

with it. If you object to the sameness of his simple fare, he will recount the several varieties of its parts, and descant upon each of their peculiar merits. He will illustrate the numerous and dissimilar modes of so preparing them, that they cannot fail to excite by their presence and appease by their taste the appetite of the most fastidious. And then, in point of health, there is nothing equal to buffalo-meat. It, alone, will cure dyspepsy, prevent consumption, amend a broken constitution, put flesh upon the bones of a skeleton, and restore a dead man again to life! — if you will give credence to one half of the manifold virtues he carefully names in your hearing.

Oct. 14th. We were early en route, and made some twenty miles. Our hunter, during the day, rejoined the caravan, laden with the best portions of three other fat cows, to add to the fund of life and good humor enjoyed by each.

Late in the afternoon, we made camp opposite a heavily wooded island, called Brady's Island, in memory of a man, so named, who was murdered upon it by his companion some eight years ago. The two were connected with a boat, laden with furs, on its passage to the States. They had frequently quarrelled, and were generally upon otherwise bad terms. On the day of the fatal occurrence, they were left alone in camp by the rest of the boat's crew, who went in quest of buffalo. At their return, Brady was found lying in his blood, — killed, as his companion affirmed, by the accidental discharge of his own rifle.

The tale was received quite doubtingly, and its listeners were only deterred from the execution of summary vengeance upon the murderer by thought of the bare possibility of its truth.

The body of the unfortunate man was buried near the spot, — but being subsequently disinterred by the wolves, his bones were left to bleach and moulder in the sun and rains of heaven. Some of them were lying scattered near by, upon our arrival, which were collected by the sympathizing voyageurs, who bestowed upon them those rites of sepulture they had been so long and cruelly denied.

The reader will naturally enquire, what became of the supposed murderer? His was a fearful retribution, — a mournful tale of suffering, worse than death, till death itself in pity came to his relief. Soon after the melancholy incident previously related, the shallowness of the Platte river compelled the company to abandon their boat, and make the best of their way to the States on foot, — a distance of two hundred and fifty miles to the nearest inhabitants, either Indian or white. Their provisions running short, and no game at hand, a separation was had about midway of their journey, and each one hurried to its termination as rapidly as possible. The murderer, being but an indifferent walker, was soon left far in the rear.

His comrades, on their arrival at the Pawnee village, sent two Indians to bring him in, and continued their course to Council Bluffs.

Nothing further was known of the subject of our sketch, till some eight or nine days subsequent, when a small party of engagés in the employ of the American Fur Company, on passing the Pawnee village, were met by the head-chief, who requested them to visit a white man lying sick at his lodge.

They went. He was the murderer, at the point of death. His story was briefly told.

The night succeeding the departure of his companions, in an attempt to light a fire with his pistol, to disperse by its smoke the myriads of musquitoes that swarmed around and nearly devoured him, an unknown charge it contained was lodged in his thigh-bone — severing it to a thousand pieces. In this condition he lay helpless. To walk was impossible;— he could scarcely move, far less

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

dress his wounds in a proper manner. He managed, however, to affix a piece of red flannel to an upright stick, to tell the transient traveller the site of his supposed last resting place, then, crawling with difficulty to the river-side, he remained six days and nights—tormented by mosquitoes, reduced by pain, and wasted by continued hunger, till scarcely the wreck of manhood was left him. It was then he longed for death to terminate his agony. Still he could not endure the thoughts of dying.

Early in the morning of the seventh day, his ear caught the indistinct murmur of sounds. Were they human voices? — No, he must be dreaming. He hears them again, It is no dream; — they are human voices!

They approach. Is it to his assistance?

O'erjoyed he beholds two Pawnees bending over him, with compassion pictured expressively upon their countenances. They gave him meat, they dressed his wounds, and did everything in their power to alleviate his misery.

Oh, say not there is no pity in the bosom of the red man!

Having constructed a rude litter of poles, and using their own robes for his bed, they carefully conveyed him upon their shoulders to the place he yet occupied. But the care of sympathizing attendants failed to atone for previous neglect. Mortification had already taken place, and death claimed him for a victim. He expired in the presence of those whom the good chief had called to his bed-side;—but, before his tongue refused to speak, he confessed the murder of Brady, and owned the justice of his punishment in all the untold miseries he had been compelled to endure. “Vengeance is mine, and I will REPAY IT, saith the Lord!”

On resuming our journey the road gradually bore towards the hills upon the left, (which presented an outline of conical eminences, rising, as the traveller advances, to an elevation of four or five hundred feet,) and finally crossed them at the point of an angle formed near the confluence of the two great forks of the Platte, upon the east side; from thence, descending to the opposite bottom, we reached a timberless spring and made camp soon after nightfall.

The lack of wood at this place was readily met by the great abundance of bois de vache, (buffalo-chips,) the common substitute of the prairies; and, in a brief interval, the camp-fires were merrily blazing, with all the appliances of cookery about them.

Early the next morning, our hunter rejoined the caravan, bringing with him the spoils of two more cows. He had passed the night upon the prairie alone, without coat or blanket, or anything to screen him from the bleak autumn winds, that swept over the naked plains, dancing their dirges to the dying year.

The sky gave evidence of an approaching storm, and we hastily started in quest of some more sheltered spot in which to weather it. A few miles brought us to the river, and, availing ourselves of a small supply of drift wood, we made halt.

The combustibles the vicinity afforded were soon collected, and the campfires imparted their generous warmth despite the falling rain. Nor were they permitted to remain long unembellished by the numerous kettles, frying-pans, and roasting-sticks at command.

I here enjoyed full test of some of the many varieties of mountain fare hitherto so freely enlarged upon by our voyageurs, —which, as they now asserted, would make a man “shed rain like an otter, and stand cold like a polar bear!”—quaintly adding, “if he could always live upon such ‘didins,’ he need never die!”

---

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

I must in justice confess that the real merits of our present "bill of fare," by far exceeded my previous expectations.

The rain continued till near night; but little did we care. The choicest the prairie afforded, was now before us, and, rain or shine, we were contented. Sound in health and buoyant in spirits, we fully enjoyed ourselves, despite the frowning elements.

A little before sundown, the rain subsided into a thick fog, and an old bull, in the consequent obscurity, straggled close upon camp.

The abrupt passage of a rifle-ball through his lights, was his first feeling sense of the presence of danger. The affrighted customer then retreated a few steps, and, falling, surrendered himself to the resistless power of cold lead.

A large band of cows also made their appearance, in the same manner and our hunter struck out to waylay them.

Permitting the unwitting animals to advance within good shooting distance, a discharge from his rifle brought down one of their number. The band then recoiled slightly; but, snuffing the odor of blood, they returned immediately to their prostrate companion.

This was enough, —a charm now riveted them to the spot, —a strange infatuation had seized upon them. They began by spurning the ground with their feet, —then, bellowing, gored the fallen beast, as if forcing her to rise, —then, rolling upon the grass, in demonstrative sympathy, —and, now that she had ceased to struggle and lay yet quivering in death, they licked her bleeding wounds and seemed to exercise a kind of mournful rivalry in the bestowment of their testimonials of affection.

She is encircled by her companions. An effort to approach from without is resisted by those within. A fight ensues, and all becomes confusion. Each turns against her neighbor, and continues the strife till the space around the carcass is again vacated; whereupon a general rush once more centers to the spot, and all unite to react the former scene.

In this manner they persisted in their frenzied devotion to the fallen one, as if determined to restore her to life and action, or perish by her side.

Meanwhile the hunter's rifle had been busily employed. But they heeded it not. Four more of their number lay gasping in death upon the ensanguined ground; and still they seemed no more disposed to leave the scene of slaughter than at first. Sixteen successive shots were fired, each bearing blood, wounds and death, and yet the spell was no nearer broken.

It was a spectacle vested with melancholy animation. The pawing, goring, bellowing, licking of wounds, and struggles of rival affection, remained the same, with no visible abatement of their vehemency.

The sun had set, and the sable hue of twilight empalled the blood-dank slaughter-ground. The death-dealing rifle had ceased its sharp crack, and the gore-scenting wolves, half starved and eager for their supposed prey, came flocking upon every side, mingling their wobegone howlings with the piteous moans of the spell-bound herd, and the loud whistlings of the prairie winds, — and yet, they lingered.

At last the impatient hunter advanced. More affrighted at the presence of man than the companionship of death, they now gave way, and reluctantly left the field to him, who had so unfeelingly occasioned their burthen of mourning and woe;—still, ever and anon stopping to gaze, as if longing to return and die with those they loved!

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

All hands were now summoned to aid at the work of butchery; but the fast-enshrouding darkness soon drove us back to camp, leaving the task not half completed.

Our withdrawal from the premises was the signal for possession by the eager wolves, whose ceaseless yelpings the livelong night, made the gloomy interval doubly dismal. By morning, nothing but bones and thick pieces of skin marked the scene of their recent revellings!

Thus early, I had learned, that to approach buffalo with success, the hunter should carefully maintain the leeward, such being their remarkable sensitiveness, they will sooner flee from the smell than the sight of a man. Their sense of smell, with the wind, in fact, far exceeds their scope of vision. It is so extremely acute, that even the fresh footsteps of a man, crossing their path, are to them a sure cause of alarm and flight.

Of all the diversities of game indigenous to the mountains and prairies of the great West, with the exception, perhaps, of the grizzly bear, no animal is more tenacious of life than the buffalo. To shoot it in the head, is an inane effort. No rifle can project a ball with sufficient force to perforate the thick hair and hide to its brain, through the double scull-bone that protects it. A paunch shot is equally vain. The only sure points for the marksman are, the heart, lights, kidneys, or vertebra; and even then the unyielding victim not unfrequently escapes.

Buffalo, wounded in the skirts of the lights, have been known to live for several days afterwards. I have witnessed their escape, even after the reception of fifteen bullet-wounds, and most of them at such points as would have proved fatal to almost any other animal.

In the summer of '43, I myself killed one of them, that had been shot through the pussy surface at the butt of the heart, apparently four or five days previous, which doubtless would have recovered had it remained unmolested.

A gun, suitable for killing this kind of game, should never carry to exceed forty balls to the pound — a lesser bore would be almost entirely useless. The distance generally required for a shot, the smallness of the ball, its liability to variation from the wind, with its failure to "hold up" and retain its force, contribute to render the use of such a piece little else than idle waste of ammunition.

Oct. 17th. The sun arose bright and clear, and with its first appearance the caravan was in motion. Proceeding up the South Fork some ten miles we halted for breakfast, and made arrangements for fording the stream.

Near us lay the carcasse of one of the cows wounded on the previous evening, and as yet scarcely dead. She had travelled thus far after being shot in the lights.

Our crossing was effected with little difficulty, but occupied till late in the afternoon. The river was full a mile wide and very shallow, with a soft sandy bed, requiring the strength of all the united teams to each waggon. The day proved cold, and the water was like an application of ice to the naked skin. Our teamsters, who were compelled to cross and recross, some dozen times, felt in not the best humor, and were better pleased than any one else at the termination of their unpleasant task.

Having safely gained the opposite bank, we travelled up the river five or six miles, and halted for the night.

During our course the bottoms upon either side presented one dense, interminable band of buffalo, far as the eye could reach. The whole prairie pictured a living mass, moved by impulsive dread, as the breeze heralded our approach, and the countless multitude made way before and on either hand.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Ever and anon, an old bull would linger, as if to intimidate, and not unfrequently venture within gun-shot. One fellow, in particular, passed sidelong, for a mile or more, stopping at intervals to gaze upon us, shaking his shaggy head in defiance, as much as to say, "you dare not come near!" Big Jim saw this, and his pride was wounded. The bull, in his opinion, had challenged the whole party, and there was no one stout-hearted enough to accept it.

Here was a chance for a full display of his bravery and skill. Ever since we had reached the buffalo range, his proud spirit had yearned to become the death of some one of these terrible monsters, that he might relate the deed of perilous exploit to wondering posterity, and incite the rising generation to emulate his noble achievement.

But, alas, for the fadeless laurels he might otherwise have won, in an evil hour his rifle had been sacrificed for the extermination of a huge, venomous serpent. He did the deed at one fell blow; — brave, but unfortunate! Yet he had one consolation amid his troubles, — no victory is ever gained without some loss to the conquerors.

Still, he needed his gun, for without it how was he to avenge the foul insult the savage beast of the prairie was even now hurling in the very face of the shrinking crowd? Something must be done. With these cogitations, an idea struck him, —he could borrow a rifle; so, advancing to a comrade, he exclaimed:

"Do lend me your rifle one minute!"

"Yes, Jim," was the ready reply. "But see you don't break it over the first paltry little snake you come across!"

"That's a lie. 'Twas a big rattle-snake I broke mine over. 'Twasn't a paltry little snake!"

Thus, vindicating his assaulted reputation, he took the gun and hastened to prostrate the impudent barbarian inviting attack.

Jim looked at the bull, and the bull looked at Jim, — shaking his head, and throwing the loose sand from beneath him high into the air with his feet, and goring the ground with his horns of burnished ebony. If the creature had looked terrible before, he now looked fourfold more so, in Jim's estimation.

Thinking caution the parent of safety, our hero was unwilling to venture further, and so, prostrating himself at full length behind a clustre of absinthe, (sage,) he planted his battery, having his high-crowned hat for a rest, and blazed away at the bull's head.

The hardened wretch stood the shot without flinching. Looking for a moment at the spot from whence the strange salute had proceeded, and again shaking his head and snorting with scorn, he wheeled and slowly trotted off.

Eager to get a second trial to finish the work so nobly begun, our hero commenced pursuit. Seeing him advancing, the bull thought it time to show his heels, and in a few minutes was lost in the distance.

The courageous Nimrod now, for the first time, bethought him of his hat, which, in the ardor of his bold charge, he had left at the spot chosen as his stand to hurl death and destruction to the naughty bull. He hastened to regain it — but no hat could be found; — the winds had borne it far away over the prairie, to be worn out in search of a wearer, and the unlucky bravo, hatless, re-joined the caravan.

Here the truth at once flashed upon the minds of the waggish clique, that had hitherto proved his sore annoyance, and they began anew:

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

“Now that beats me, clear out! How came you to give the bull your hat and leave yourself bare-headed? That’s another wrinkle!”

“It’s no such thing,” said Jim. “The wind took it away; — and it’s none of your business neither. I paid for it!”

“True. But what did the wind want with your hat? Sure, if it needed a foot-ball, to toss over the prairies, it would have taken your head, the lightest of the two!”

“You’re a fool!” retorted Jim, indignantly.

“There, now. That’s the time you cotcht it, my boy. Why, fellow, Mr. Jeems took off his hat, out of pure politeness, — to win the good opinion of the bull. He were right. Didn’t you see how the gentleman cow bowed and scraped in turn. Why, he throw’d the dirt clean over his back, not to be outdone in good breeding! Ah, but the pesky wind! While Mr. Jeems were showing his brotten up, what had it to do, but to snatch his hat and run off with it! Mr. Jeems are no fool! and the feller what says he am, — (I want you all to understand me; Mr. Jeems have been most shamefully abused and misused, and I can whip the chaps what’s done it — provided they’ll let me; — I say, then, I want you all to understand me!) Mr. Jeems are NO fool, and the man what says he am — is, — (I can’t think of words bad enough,) — is — is, as near the mark as though he’d drove centre!”

“Aye. Jim’s right. You are all a pack of dough-heads to make fun of him in the way you do. Suppose you’d be struck comical! Then what’d ye think of yourselves!”

“Poor Jim. Shoot grass, kill horse, break gun, burn shoe, scorch foot, and go bare-headed! Wat him mean?”

“I say, Jim. When’re going a hunting again? — ’case I want to go ‘long too!”

CHAPTER VI.

Ash Creek. Pawnee and Sioux battle-ground. Bread-root. The Eagle’s Nest. Mad wolf. Number and variety of prairie wolves, — their sagacity. Mad bull. Making and curing meat. Big Jim still unfortunate. Johnson’s creek. McFarlan’s Castle. Deceptiveness of distances. Express from the Fort. Brave Bear. Bull Tail. Talk with the Indians. Speech of Marto-cogershne. Reply. Tahtungah-sana’s address.

Oct 18th. BEARING to the right, over a high undulating prairie, we struck the North Fork of the Platte, after a drive of about twelve miles, and continuing up its left bank a short distance, camped for the night at the mouth of Ash Creek.

The stream at this place is a broad bed of sand, entirely dry, except in the spring months. Higher up, however, it affords a generous supply of pure running water, sustained by the numerous feeders that force their way into it, from the high grounds dividing the two rivers.

The valley is of variable width, and well timbered with beautiful ash groves, from which the creek derives its name. Here are also found several varieties of wild fruit indigenous to the mountains. As a whole, it presents to the eye a pretty flower-garden, walled in by huge piles of argillaceous rock, and watered by murmuring streamlets whose banks are ornamented with shade trees and shrubbery.

Near camp had been the scene of a fierce and bloody battle between the Pawnees and Sioux, in the winter of 1835. The affray commenced early in the morning, and continued till near night. A trader, who was present with the Sioux, on the occasion, describes it as having been remarkably

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

close. Every inch of ground was disputed — now the Pawnees advancing upon the retreating Sioux; and now the Sioux, while the Pawnees gave way; but, returning to the charge with redoubled fury, the former once more recoiled. The arrows flew in full showers, —the bullets whistled the death-song of many a warrior, —the yells of combating savages filled the air, and drowned the lesser din of arms.

At length arrows and balls were exhausted upon both sides, —but still the battle raged fiercer than before.

War-club, tomahawk and butcher-knife were bandied with terrific force, as the hostile parties engaged hand to hand, and the clash of resounding blows, commingling with the clamor of unearthly voices which rent the very heavens, seemed more to prefigure the contest of fiends than aught else.

Finally the Pawnees abandoned the field to their victorious enemies, leaving sixty of their warriors upon the ensanguined battle-ground. But the Sioux had paid dearly for their advantage; — forty-five of their bravest men lay mingled with the slain. The defeated party were pursued only a short distance, and then permitted to return without further molestation to their village, at the Forks of the Platte.

This disaster so completely disheartened the Pawnees, they immediately abandoned their station and moved down the river some four hundred miles, —nor have they again ventured so high up, unless in strong warparties.

About the same time the village on Republican fork of Kansas was also abandoned, and its inhabitants united with the Loups.

The evidences of this cruel death-harvest were yet scattered over the prairie, whose bones and skulls looked sad, indeed. One of the latter was noticed, near camp, with a huge wasp's nest occupying the vacuum once filled by the subtle organs of intellect. Strange tenant, truly, of a human skull, —but, perhaps, not an unfit antitype of the fierce passions that whilom claimed it as their dwelling place.

A specimen of the bread-root, (*psoralea esculenta*,) was procured from the creek-bank by one of the voyageurs. This is very common in the vicinity of the mountains, and attains a size from twenty to thirty inches in circumference. It is taprooted, and generally prefers the rich sandy soil of bottoms and ravines, —not unfrequently penetrating to the depth of five or six feet. In shape, it is much like the common beet. Its exterior is covered with a thick ligument of tough fibres, curiously interwoven, enveloping a white pulpy substance, which is very sweet and pleasantly tasted. The day following we proceeded some twenty miles, and camped at a place called the Eagle's Nest. A few scattering trees at the right of the bottom, here mark the transition to the high prairie. One of these was the war-eagle's eyry, upon which she rears her annual brood, and teaches it to soar far away, or levy tribute from the surrounding wilderness.

The proud bird of Jove was yet sailing aloft, in silent majesty, almost lost to vision in the long space of intervening blue that told the grandeur of her flight; and, tinged with the purple and gold of the setting sun, she seemed looking down with a jealous eye upon the unwonted invaders of her earthly home. A few light clouds, garnished with day's departing glory danced athwart the western sky, as the full moon arose, hastening to reenter her nightly pathway, and course amid the array of glittering worlds, and smile upon the wide realms of Solitude; —while countless herds of grazing buffalo covered the prairies on either side of the broad and silent river; and naught met

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

the listening ear, save the dolesome hooting of the midnight owl, as she resumed her nocturnal ditty, to enhance the deep melancholy of loneliness; or the shrill whistlings of the prairie-winds, as they sported in mirth and chanted their requiems to the dying year; or the terrific bellowings of the hoarse-toned bison, the softening cadence of whose voices sounded trebly mournful as it swept far along and became lost in the distance; or yet, the dismal howlings of the half-starved wolves, that gathered by scores upon every hill-top and renewed, in more piteous accents, their ceaseless concert; —all these united to invest the scene, so magnificent in itself, with a savage wildness, at once incitive of terror and admiration.

In our progress during the day I remarked, at frequent intervals, bare places coated with saline efflorescences, and occasional plats of fine bluish grass, (*herba salée*,) —appearances quite common from this onward.

Our night slumbers were disturbed by the quick discharge of firearms, which instantly brought every man to his feet, rifle in hand. The cause of this alarm was the appearance of a mad wolf among the caravan animals, and several shots were fired before the guard could despatch him. He proved one of the largest of his species, and looked fearful as his blood-red eyeballs and foaming mouth were exposed by the camp-fire.

In the morning it was ascertained he had bitten nine head of horses and cattle.

The buffalo range affords every variety of wolves, common to the mountains and regions still further west. Of these there are five distinct classifications, viz: The big white, or buffalo wolf; the shaggy brown; the black; the gray, or prairie wolf; and the cayeute, (*wa-chunka-monet*,) or medicine-wolf of the Indians.

The white and brown wolves are the most numerous, and follow the buffalo in bands of hundreds, subsisting upon the carcasses of such as die of themselves or are slaughtered as their necessities demand.

These wolves behave with great sagacity in their predatory operations, and appear to exercise a perfect understanding and concert of action with each other on such occasions. First, stationing themselves by files at given distances along the course their intended victim is expected to run, two or more of them enter the herd of unconscious buffalo, and, singling out the fittest one, drive it to the track at which their companions await to take part in the grand race. This done, the victim is made to run the gauntlet between two rows of wolves. As it advances, others join their fresh numbers to the chase, till at length, tired down and exhausted in strength, the ill-fated animal falls ready prey to their greediness. The poor creature is first hamstrung to prevent its escape, and then literally devoured alive!

The black wolf is seldom met with in these parts. It nearly equals the white and brown in size, and is fully as large as the common cur-dog.

The prairie wolf is not more than half the size of the above mentioned, and much less ferocious. Its color is of a dark gray, and its fur quite soft and fine.

The cayeute or medicine-wolf compares with the common feist, and is of a grayish color, much like that of the wild rabbit of the States. Its fur is fine and thick, and might be turned to good account for the manufacture of caps, muffs, &c.

The Indians cherish many superstitious notions in regard to this animal, and hold it in great veneration. They consider it as the messenger employed by the Great Spirit, on special occasions, to herald the approach of events interesting to the welfare of his red children, and for that reason

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

they are never known to harm or molest it.

Just at daylight, a large band of buffalo crossed the river nearly opposite to camp. It was headed by an old bull, that led the way, grunting and bellowing as he advanced, as if in mock personation of the bugleman of a corps of cavalry. Some three or four hundred cows and calves followed, side by side, with marked and regular tread, like platoons of infantry marching in set step to music, presenting a truly comical exhibition.

A voyageur seized his rifle and saluted with its contents the musicmaster and captain-general of the advancing army, as he was about to ascend the river bank. In an instant the whole detachment to "right about face," and retreat precipitately to the rearward shore, with no other music than the clatter of hoofs and the splashing of water, or order than the confused rivalry for speedy escape from the unexpected presence of danger.

Oct. 20th. Resuming our course, during the forenoon, the strange deportment of a buffalo bull near the trail arrested attention. He was running in a circle, at the height of his speed, and narrowing its sphere at each gyration. Several of us rode out to him, — but he still, continued, (with frothing mouth and protruding tongue, swollen to the utmost distention of his jaws, rolling eyeballs, like globes of clotted gore; and bellowing for pain,) following the last-decreasing limits of his strange course, regardless of our presence.

He soon commenced whirling round and round, with faltering, half stumbling steps, and finally fell prostrate before us, apparently in the last aroxysm of mortal agony. In vain he struggled to rise, while his tongue bled from between his jaws, chafed in fruitless effort to close them, and his head, keeping time with the convulsive throes of his fast-waning strength, tore up the prairie-sod and lashed the ground in the mad fury of effort.

The spectacle was one of the most striking exhibitions of excruciating pain I ever witnessed. Even the rough mountaineers were excited to pity, and gladly alleviated his miseries by hastening his end. A friendly bullet put a period to his sufferings, and placed him far beyond the reach of summer's heat and winter's cold, mad wolves and all the inexpressible horrors of hydrophobia.

At our noon encampment we commenced the process of "making meat," preparatory to passing a long distance devoid of game; and, as the reader may be anxious to know what kind of an operation this is, I will explain. It consists simply in cutting into thin slices the boneless parts of buffalo, or other meat, and drying them in the wind or sun. Meat thus cured may be preserved for years without salt. Ropes of raw hide were stretched around the waggons, upon which the results of our labor were left to the finishing effects of the wind and sun as we proceeded, — thus making an important saving in the item of time.

It is astonishing how long a time fresh meat may be kept without injury, upon the grand prairies, in dry weather, when it receives the free access of air. Some of that killed on our first arrival among buffalo was yet hanging to the waggons, as sweet and sound as ever. I have known it to be preserved, in this way, for ten or twelve days in the heart of summer. Meat, packed in snow, while in a frozen state, may be retained fresh for months without injury. I have known an instance of its being thus kept from January till June. The air is so pure and dry, it requires but little effort to preserve meat, for any requisite length of time, almost at any season of the year.

Our hunter, having proceeded in advance of the waggons during the afternoon, was overtaken about sundown at a place selected for nightcamp, which he had ornamented with the carcasses of three cows, —and there again, was soon witnessed another display of rare feasting, such as moun-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

taineers alone know how to appreciate and enjoy.

The night proved cold and uncomfortable, and the bright-glowing campfires presented most captivating inducements to the shivering sentinels, as they paced their dreary rounds, to step within its cheering influence. Big Jim, who was on the third "relieve," thought it too bad he should be compelled to suffer so much from cold, while a nice warm fire was permitted to waste its kind heat upon the bleak air of night, without so much as one to enjoy its beneficence.

No, it would not do. "Why mayn't I just as well stand guard at the fire, as elsewhere? I can, I'm sure. I'll stand this time, and not lay as I did before, and then there'll be no danger of falling asleep and burning one's self; nor'll they have the chance to twit me about lying guard and burning shins. I'll head'em this time, and they wont know the difference."

So saying, he approached the fire, and, giving it a kick, extended his hands towards its blaze, —ever and anon rubbing them together and then again spreading them to receive its pleasing warmth; then turning his back to partake alike of its comforting influences and obviate the jealousy that might otherwise be engendered between front and rear.

Now, he stands attent, —he hears something move. He stretches himself to his full height, on tip-toe, and gazes in the black envelope of surrounding night, made doubly obscure in contrast with the refulgence of the camp-fire.

"How dark it has grown!" said Jim. "What can it be? Wonder if it's Indians. Pooh! it's nothing but the wind. Bless me, I can't see the use of a poor devil's standing guard on such a dark night as this! (stepping backward still nearer the fire,) he can't see nothing, if he does. Feugh, —what is it smells so? (turning round.) Good gracious, how hot my back is!"

The mystery of Jim's present predicament is easily explained. The skirts of his jeans coat, having come in contact with the wind-tossed flames, caught fire, and were burned to the shoulders before he was aware of the accident. The garment was rendered entirely useless, and even his pantaloons were burnt to his skin, in several places.

Jim began to think it as bad to stand as to lay guard, and concluded that, of the two, fire was more dangerous than Indians;—for, one thing was certain, the Indians had never yet injured him, but he could not say as much of fire!

In the morning, as may be supposed, our hero's last mishap was the prolific subject of' comment, and the wags were promptly on the alert to amuse themselves still further at his expense:

"Say, would you believe it! —That's the way Jim's hit upon to shine in this crowd, —he burns up his old coat to make a light!"

"Ah, ha! So he means to shine by the light of his old clothes, and come it over us in an underhand manner! Jim, that'll never do I tell you, once for all."

"Wonder if he wont burn up himself next?"

"He? No. He's too green and sappy to burn himself, and so he takes his old clothes!"

"Poor Jim. Shoot grass, kill horse, break gun, burn shoe, scorch foot, lose hat, stick coat in him fire! Poor fellow. No can do without Jim, no how."

The third day succeeding the last mentioned adventure, we passed a stream, called by the traders Johnson's creek, in memory of a man by that name who was murdered in its vicinity, several years since, by the Indians.

He was a missionary, and on his way to Oregon, with a party headed by one John Gray. As they were about to raise camp, one morning, a band of Yanktau-Sioux came charging over the hills,

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

and preparations were made to resist them. Such a course Mr. Johnson felt scrupulous of acceding to, and stoutly protested against it, —affirming it to be wrong.

As the savages approached, the ill-fated man stepped forward to meet them unarmed, despite the remonstrances of his comrades, —imagining the Indians would not kill him, as he was a missionary and had come to do them good.

They, however, proved regardless of him or his intended good, and he fell the victim of his own foolish credulity. Three Indians fell in the conflict that ensued, and he and they tilled the same grave.

Oct. 24th. About noon we crossed Gonnevillè's creek, a large easterly affluent of the Platte. This stream also derives its name from a trapper, killed near it in an Indian fight, some eight years since.

Upon the south bank of Gonnevillè's creek, ten or twelve miles from the river, is a singular natural formation, known as the Court House, or McFarlan's Castle, on account of its fancied resemblance to such a structure. It rises in an abrupt quadrangular form, to a height of three or four hundred feet, and covers an area of two hundred yards in length by one hundred and fifty broad. Occupying a perfectly level site in an open prairie, it stands as the proud palace of Solitude, amid her boundless domains.

Its position commands a view of the country for forty miles around, and meets the eye of the traveller for several successive days, in journeying up the Platte. We have been in sight of it for three days, and even now seem no nearer than at first, notwithstanding our course, meanwhile, has borne not far from a direct line towards it.

Here, for the first time, I remarked the deceptiveness of distances, on the high prairies and in regions adjacent to the mountains. Sometimes an object will appear as if within a mile, at most, which cannot be reached short of fifteen or twenty miles; then, again, objects will seem to be much further off than they really are.

I attribute this, in part, to three several causes:—First, the variable state of the atmosphere, in regard to density. Second, the absence or plenitude of humid exhalations and effluviæ in the air of different regions. Third, the peculiar locality of some places in regard to the reception of the sun's rays.

In passing from Gonnevillè's creek to Fort Platte, we encountered no more buffalo, —these animals having been driven back into the high prairies by bands of strolling Indians.

If the prospect had hitherto been lonesome, it now seemed threefold lonely. The hard-beaten footpaths that had furrowed the bottoms and plains, in all directions, ever since our first entrance to the buffalo range, were still seen; but, unhonored by the presence and unmarked by the footprints of their whilom travellers, they looked like the once oft-trodden streets of some deserted city.

Late in the afternoon we were joined by two engagés from Fort Platte, whose object it was to hasten our advance. Soon after, we entered upon a stretch of burnt prairie, and were compelled to travel till daylight the next morning, before a sufficiency of grass could be found for a camping place.

Oct. 25th. Resuming our course about midday, we had proceeded only a few miles, when a mounted Indian appeared upon the opposite bank of the river, and accosted us:

“Chay, cullo! Hanno chaum-pa-monet ha Mena-huska tour?” (Tell me, friend!—Are those the Long-knife's wagons?)[6]

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

On being answered in the affirmative, he commenced crossing to join us.

Plunging into the river with his horse, he had proceeded about midway of the stream, when the panting beast suddenly sank into the quicksand, throwing its rider head foremost into the water. At length, having effected a ford, he hurried up to us, profusely dripping with wet, as evidence of the thoroughness of his recent drenching.

First shaking hands with the company, he began to inquire about liquor, affirming the waggons contained that article, and adding, it was "right the Long-knife should bring the fire-water to give to the red man," as did the Bad-medicine, —but it was wrong to sell it. For his part he would not buy the fire-water. He would buy blankets, knives, beads, and ammunition, not the fire-water; but the Long-knife should give it to him.

The personage thus introduced was one of the chiefs of the Brulé Sioux, and sported the name of Marto-cogershne, or Brave Bear. He was a turbulent fellow, that proved the pest of his village traders. Slim and spare-made in person, he was somewhat pale and sickly looking, and seemed about thirty years of age. His arms were a short fusee, with a bow and arrows slung to his shoulders, and a butcher-knife affixed to his belt. His hair was long, parted in front, and turned backwards; that upon the occiput, being bound in a cluster with panther's skin, hung in a plated cue and almost trailed the ground, while a lone eagle's plume completed his headdress. A robe enveloped his body, which, with moccasins, leggins, and breech-cloth, constituted his full costume, —a description of dress responding to that almost universally common among mountain tribes.

We were soon joined by others of his people, who eagerly enquired respecting the amount of liquor brought with us.

Among these were several individuals recognized by our voyageurs as old acquaintances; particularly one, an old chief called Bull Tail, (Tah-tunga-sana,) who was distinguished in attire from all his fellows by the addition of a hair-seal cap and a frock-coat, which he had received as presents from the whites.

One of our party gave a favorable account of the old fellow, and related a story much to his credit. The narrator, during the previous winter, while searching for stray horses among the hills, had become so bewildered he was unable to find his way back to camp. He thus wandered for four successive days, unarmed, with out food, and with but a single robe for covering. His destiny would, doubtless, have been to perish, had not the kind hearted Tah-tunga-sana discovered him, and, pitying his forlorn condition, taken him to the village, upon his own horse, some twenty miles off, going himself on foot the entire distance. Here, the lost one was treated to the best the lodge of his deliverer afforded, and, when sufficiently recovered, he was escorted to the nearest station of the whites.

I turned for another look at the worthy chieftain, who now rode up and greeted his protégé with much cordiality.

He appeared to be about eighty years of age, and was gray-headed, spare-visaged, and much wrinkled. His coat, buttoned close around him, served for a robe, while his matted ear-locks disclosed upon the one side a raven's and upon the other a hawk's feather, for ornaments. His face, like those of his companions, was liberally bedaubed with vermilion, and each cheek embellished with alternate spots of white and black, by way of variety. His only weapons were a bow, arrows, and a tomahawk-pipe.

As a whole, he presented rather a shabby and ludicrous appearance, that, were it not for the

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

recollection of his worthy conduct, would have excited, in the mind of the beholder, far more of contempt than interest.

A Sioux squaw, the wife of a French engagé, accompanying us on her return from the States, now received the marked attention of our visitors. It is rare that an Indian will shake hands with a woman; but now, they might break through the restraints of custom; this was a special case; she had visited the white man's lodge, and could tell them many interesting things, —she was something more than a common squaw, —they might shake hands with her. She was accordingly greeted in a most flattering manner, and found tedious employment in answering the numerous questions with which she was plied.

Continuing for a few miles further, we made camp just at nightfall, and were promptly joined by a new recruit of inquisitive visitors, from an adjoining village.

The whole throng of Indians now numbered some thirty, and demanded a "talk" with the Long-knife. Upon this a circle was formed, with the whites upon one side and Indians upon the other, when Marto-cogershe opened the harangue in behalf of his people.

He commenced in a low, distinct tone of voice. His robe, drawn loosely around him, was held to its place by the left hand, exposing his right arm and shoulder. As he proceeded he became more animated, and seemed to enter into the full spirit of his discourse. The modulations of his voice, its deep intonations and expressive cadences, coupled with a corresponding appropriateness of every look and gesture, presented one of the most perfect specimens of delivery I ever witnessed.

His speech, as imperfectly translated upon the occasion, ran as follows:

"Long-knife: We are glad to see you — we are glad to see your people, and shake you all by the hand, that we may smoke together and be friends.

"Long-knife: We are glad the Great Spirit has put it into your heart to return with the road-travelers, (waggons,) and the white buffalo, (oxen,) and the medicine-dogs, (horses,) bearing fire-water, (whiskey,) blankets, and many other good things, ere yet the chill winds and snows have compelled His children to light the lodge-fires of winter. The Long-knife brings choice things to the red man, and it is good that we trade. (Applause.)

"The Great Spirit is good to His children. To us He has given the buffalo, the elk, the deer, and the antelope, that we may be fed and clothed, and furnished with lodges to shelter us from the storms and cold. To us He has given the mountains and prairies, for hunting grounds. For us He has taught the streams to flow, and planted trees upon their banks, to give us food and drink, that we may meet around our lodge-fires with comfort and rejoice in His goodness, even while he spreads his white robe upon the hills, and lays the couch of winter upon the plains.

"All these—all this country—everything that the Long-knife beholds are ours. The Yellow-hair[7] said truly, —all, all belong to us; —we have them —the Great Spirit has given them to us, —they are ours! (Great applause.)

"Long-knife: You have come to trade with us:—it is good. Your people are wise, and make many things;—you bring them to us, and we take them; but we give you robes and horses in their stead;—we pay you for them all. Yet, the Long-knife pays not for all he takes from us.

"Do I say the Long-knife steals? No. The Long-knife will not steal. He says, none but bad men steal, and the Long-knife is not bad. But yet he takes our property without paying for it! He kills our game, he eats our meat, he burns our wood, he drinks our water, and he travels our country, and what does he give the red man in exchange for all this? (Unbounded applause.)

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

“Long-knife and friend: My people are generous, —they are brave, they are all soldiers. The Long-knife bears the fire-water in his roadtravellers, (waggon;)—we have heard of it and are glad.

“My people would drink of the fire-water that their strong hearts may become stronger. It is good that they should drink it, —it is good that the Long-knife should give it to them; that we be twice glad to see him, and bless him in our hearts while we drink around our lodge-fires. (Applause.)

“Long-knife: Would you be our friend? Then give us the fire-water. My people are generous, but they are brave. The Long-knife has taken our property, let him refuse not the fire-water, lest they be angry and rise like the mountain bear, nerved for conflict. Then will they take it of themselves and avenge the wrongs of the red man!” (Great applause.)

Upon this, the Brave Bear resumed his seat, and the commandant began his reply, which was rendered into the Sioux language, by their interpreter. The purport of it was:

“It is true, the Great Spirit is good to His children. He made all things of which the Brave Bear speaks, and He has given them to his children. The white and the red man are alike his children; the buffalo, the elk, the deer, and the antelope, with the wood, the water, and the whole country around, equally belong to both.

“I and many people have come as friends, to trade with you. We have smoked with you before. The Long-knife takes nothing from you he pays not for. He buys the things he bears to you in a far distant country, and throws for them the white-iron[8]. He brings them to you and swaps them for robes and horses.

“He takes nothing without paying for it, unless it be that which the Great Spirit has given equally to his children, —the white and the red man.

“Would the Brave Bear and his people be friends to us? We are friendly— we are generous. We will give tobacco to the Brave Bear, that he and his people may smoke and be our friends. But the Long-knife will not here give him the fire-water. Let him come to the Long-knife’s lodge, then shall he have of it a little, that he may bless the Long-knife in his heart. The Brave Bear can have none now.

“The Brave Bear says, his people are generous, but they are brave, —they are all soldiers. Be it so. My people are generous, —they are brave they are all soldiers! Does the Brave Bear wish for fight? My people are ready to either smoke or fight! The Brave Bear says, unless I give him the fire-water for his people, they will nerve their arms for conflict, and take it! Will they? Let them try! The Long-knife says, let them try!”

The conclusion of this reply was received with a bad grace by those to whom it was addressed, and created great excitement among them. Several left for the village, obviously for the purpose of arming and returning with increased numbers to the meditated attack.

Meanwhile our arms were put in a proper condition for resistance, and all needful arrangements made to give the assailants a warm reception should they commence upon us. This done, our commandant brought a few plugs of tobacco, and, laying them before the Brave Bear, said:

“It is good that the Brave Bear and his people should smoke. Here is tobacco, —let him take it to his warriors that we and they be friends; —or would he rather fight?”

Bull Tail, (Tah-tunga-sana,) who had had hitherto remained silent, now arose and addressed his companions:

“Tah-tunga-sana is grieved at the words of the Brave Bear. Would my brothers fight the Long-knife, and rob him of what he has brought to us, that they may become fools by drinking the

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

fire-water?

“Who shall then bring us medicine-irons (guns) to kill our meat; or knives to butcher it; or blankets and beads for our squaws; or the red-earth (vermilion) to paint our faces when we arm for war? And, who shall bring us all the other things so needful for us?

“The Long-knife will not do it. You rob him. No one will bring them to us. We shall be without them! We shall be poor indeed!

“Brothers: Why would you drink the fire-water, and become fools? Would it not be better that the Long-knife no more bring it to us? We give for it our robes and our horses;—it does us no good. It makes us poor. We fight our own brothers, and kill those we love, because the firewater is in us and makes our hearts bad! The fire-water is the red man’s enemy!

“Brothers: Tah-tunga-sana is old;—will you listen to him. He has been always the friend of the pale-face. When first the Yellow-hair (Gen. Clarke) came to the red man’s lodge, Tah-tunga-sana took him by the hand. He will always take the pale-face by the hand. He loves the pale-face. The pale-face is his brother, —he is our brother! —He brings us many good things.

“Brothers: The Long-knife has spoken well. It is good that we smoke, —that we, and the Long-knife, and his people may be friends. Let us accept his present, and go to our lodges, and there tell to our children how kind the Long-knife is to the red man.”

The speech was received in silence, —no one expressing either approbation or dissent, as the old man resumed his seat. The Brave Bear hung his head sullenly, but said nothing. The talk had evidently come to a close. At last, Bull Tail arose, and, shaking hands with the commandant and each of the company, took the tobacco and left for the village. The others soon after, one by one, followed his example, and we were finally rid of their unwelcome presence; not, however, until they had stolen an axe and several other articles, despite the strictness of our vigilance.

CHAPTER VII.

The Chimney. A bet. Spur of the Rocky Mountains. Scott’s Bluff. Romantic scenery. Mimic city. A pyramid. A monument. An elevated garden. Mountain sheep. An Eden. Death in camp. The wanderer’s grave. Horse creek and gold. Goche’s hole. Arrival at Fort Platte. Remarks by the way. Prairie travel. Locality and description of the Fort. Indian lodges. Migratory habits of mountain and prairie tribes. Scenes at Fort. Drunken Indians. Tragical event. Indian funeral. Speech of Etespa-huska on the death of his father.

Oct. 26th. RAISING camp at daylight we resumed our way, and soon afterwards arrived opposite the “Chimney,” an extraordinary natural curiosity that had continued in view and excited our admiration for some four days past.

This singular formation surmounts a conical eminence which rises, isolated and lonely, in the open prairie, reaching a height of three hundred feet. It is composed of terrene limestone and marl, quadrangularly shaped, like the spire of some church, six feet by ten at its base, with an altitude of more than two hundred feet, —making, together with the mound, an elevation of five hundred feet.[9] A grand and imposing spectacle, truly;—a wonderful display of the eccentricity of Nature!

How came such an immense pile so singularly situated? What causes united their aid to throw up this lone column, so majestic in its solitude, to overlook the vast and unbroken plains that sur-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

round it?

The "Chimney" is situated about three miles to the left of the mountain trail, though it seems no more than eight hundred yards distant. Upon this question our party entertained no small diversity of opinion. Some of the less knowing were confident it could not exceed a half mile; and one fellow offered to bet five dollars he could run to it in fifteen minutes.

The banter was promptly accepted, and the "greenhorn," doffing his coat and hat, started in full expectation of winning the wager. But, instead of fifteen, it took him forty-five minutes to reach the spot!

The day after passing the "Chimney," we entered a broad defile of lofty ridges, and made camp. This locality is known as Scott's Bluff, which is, properly speaking, a wing of the Rocky Mountains.

From Ash creek to this place, an almost precipitous wall of arenaceous rock, limestone, and marl, shuts the high prairie from the river bottoms. As the traveller proceeds, this wall or ledge gradually increases in height, and recedes from the river, sometimes to a distance of thirty or forty miles, till it unites in a chain of hills, many of which are covered with sturdy pines, and others are mere heaps of naked sand or indurated earth. The ridge then continues its course until it at length becomes united with the lateral chain of the Rocky Mountains, which bounds the "Plains of Laramie" upon the southeast.

At Scott's Bluff these hills crowd themselves abruptly towards the Platte, where they present a most romantic and picturesque scenery.

Our camp was in a rich opening, or valley, two miles wide, and walled in upon the right and left by perpendicular masses of earth and rock, that tower to a height of from three to eight hundred feet. In reaching it, the trail bore leftward from the river, about seven miles, through a level prairie, by which we were inducted to the valley, without any perceptible variation of its general surface.

Near the entrance, upon our left, the spectacle was grand and imposing beyond description. It seemed as if Nature, in mere sportiveness, had thought to excel the noblest works of art, and rear up a mimic city as the grand metropolis of her empire.

There stood the representations of palaces, with their domes and balustrades; churches, with their spires and cupolas; and streets, with their gigantic dwellings, stores, work-shops, and warehouses. And there, also, were parks, pleasure-grounds, and public squares, all so admirably defined by the agency of the winds and rains of ages, that the traveller might readily imagine himself to have arrived within the precincts of the deserted city of some peopleless country, whose splendor and magnificence once more than vied with the far-famed Palmyra of the desert, even in its best days. To the right arose a pile of sand-rock and marl in pyramidal form, three hundred feet high, that occupied its prairie site detached from hill or other eminence.

Near this stood a more singular natural formation than any previously noticed. It described a complete circle, of one thousand feet in circumference, and attained an altitude of not far from four hundred feet. Its sides were of great regularity, and represented masses of solid masonry, rising abruptly till within sixty or seventy feet of the summit, where they decline in a blunt, cone-like manner, reducing the periphery to one third that of its base. At this point is reposed a semi-spherical form, regularly jutting with a gradual swell upon all sides—then tapering to an oval shape till near the apex, at which the whole mass is surmounted by a rude imitation of sculp-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

tered flame, pointing upwards to the sun, as if this strange monument of nature had been erected in honor of the great source of light and heat!

Still further to the right, upon the river bank, is another immense pile, exceeding either of the before described in altitude. It is an oblong square, and presents erect lateral walls upon three sides, leaving upon the fourth a gradual acclivity which faces the river. Its summit expands into a beautiful terrace containing an area of several acres, which at the proper season is adorned with herbs, flowers, shrubbery, and grass, like a pleasure garden upon some house-top, and commands a view of the whole country, lending enchantment to the neighboring scenes. Its base is about one mile long by twelve hundred yards wide, and points endwise from the river towards the valley.

Then comes the continuous wall which bounds the locality upon the right. This likewise presents a level summit, varying from fifteen yards to a half mile in breadth, for a distance of ten miles, when, slowly sinking in its course, it finally becomes lost in the prairie.

Covered with grass and shrubs, it is the favorite home of the mountain sheep, where she breeds and rears her young, secure in her inaccessible fastnesses; and oftentimes from its precipitous edge, at elevations of six or eight hundred feet above the adjacent prairie, will her head and mammoth horns be seen, peering in wonder upon the rare traveller, as he passes adown the valley.

The interval between the two mural ridges is of uniform width for about ten miles, and is watered by a beautiful stream nearly the whole distance, when it inducts the traveller to the open prairie, —leaving the immense wall which bounded it upon the leftward, at his entrance, transformed to high conical hills, covered with pines, and almost lost to view in the growing space; while that upon his right, diminishing in size, gradually disappears and unites with the far-spreading plain. Most of the varieties of wild fruits indigenous to the mountains are found in this vicinity, and also numerous bands of buffalo, elk, deer, sheep, and antelope, with the grizzly bear.

In the summer months the prospect is most delightful, and affords to the admiring beholder an Eden of fruits and flowers. No higher encomium could be passed upon it than by employing the homely phrase of one of our voyageurs. In speaking of the varied enchantments of its scenery at that season, he said: "I could die here, then, —certain of being not far from heaven!"

Before leaving this romantic spot, feelings of gloom and melancholy usurped those of pleasing admiration, by the death of one of our number.

The deceased was on his way to the mountains for the recovery of his health, with a frame fearfully reduced by the ravages of that fell destroyer consumption. For several days past he had declined rapidly, owing to the weather and the unavoidable exposure incident to our mode of travelling.

To-day the cold was more than usually severe, and an uncomfortable rain and sleet commenced soon after camping. In an attempt to pass from the waggons to the fire, he staggered and fell; —before any one of us could arrive to his assistance, he had breathed his last.

We buried him upon the bank of the stream that wends its course through the valley. Darkness, with its sable pall, had enveloped the scene as we covered him from view, and left the winds and the wolves to howl his requiem, until the voice of spring shall bid the wild-flowers grow and bloom upon his grave.

This lovely valley had before this witnessed the death-scene of one who left his bones to bleach within its limits. His name was Scott, from whom the neighboring eminences derive their present appellation.

Attracted by the enchanting beauty of the place and the great abundance of game the vicinity

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

afforded, he wandered hither alone and made it his temporary residence. While thus enjoying the varied sweets of solitude, he became the prey of sickness and gasped his life away; —and none were there to watch over him, but the sun by day and the stars by night! or fan his fevered brow, save the kindly breezes; or bemoan his hapless fate, other than the gurgling stream that sighed its passing sympathy beside the couch of death!

There is a mournful interest and a touching melancholy associated with this simple story, that must thrill with emotion the finer feelings of our nature. The incident, which had so recently transpired, contributed to enhance these gloomy sensations to an extent I never before experienced. I felt — I cannot tell how. I felt like giving vent to my feelings in verse. Yet, I cannot write poetry. I made the attempt, however, and here is the result before the reader:

THE WANDERER'S GRAVE.

Away from friends, away from home  
And all the heart holds dear,  
A weary wand'rer laid him down,  
Nor kindly aid was near.

And sickness prey'd upon his frame  
And told its tale of woe,  
While sorrow mark'd his pallid cheeks  
And sank his spirit low.

Nor waiting friends stood round his couch  
A healing to impart, —  
Nor human voice spoke sympathy,  
To sooth his aching heart.

The stars of night his watchers were,  
His fan the rude winds' breath,  
And while they sigh'd their hollow moans,  
He closed his eyes in death.

Upon the prairie's vast expanse  
This weary wand'rer lay;  
And far from friends, and far from home,  
He breath'd his life away!

A lovely valley marks the spot  
That claims his lowly bed;  
But o'er the wand'rer's hapless fate  
No friendly tear was shed.

No willing grave received the corpse

ROCKY MOUNTAIN LIFE  
BY RUFUS B. SAGE

---

Of this poor lonely one;  
His bones, alas, were left to bleach  
And moulder 'neath the sun!

The night-wolf howl'd his requiem,  
The rude winds danced his dirge;  
And e'er anon, in mournful chime,  
Sigh'd forth the mellow surge!

The Spring shall teach the rising grass  
To twine for him a tomb;  
And, o'er the spot where he doth lie,  
Shall bid the wild flowers bloom.

But, far from friends, and far from home,  
Ah, dismal thought, to die!  
Oh, let me 'mid my friends expire,  
And with my fathers lie.

Oct. 27th. The day being clear and pleasant, we travelled rapidly, and in the course of the afternoon reached Horse creek. This stream is a large affluent of the Platte, heading in the Black Hills, and, tracing its way in a northeasterly direction, through a timberless country, (in many places mere barren wastes,) makes its debouchment nearly fifteen miles above Scott's Bluff.

The region adjacent to its head is represented as being rich in minerals, among which is gold; and from my limited information respecting its geological character, I am inclined to accredit the rumor. The story runs thus:

Six or eight years since, Du Shay, an old French hunter, while ranging in the parts above alluded to, on crossing one of the two principal forks that unite to form the main stream, observed a singular looking something in the creek bed, which he picked up. It was apparently a fragment of rock, very heavy, and contained numerous yellow specks.

Having deposited it in his bullet-pouch for preservation, subsequently, in approaching a band of buffalo, its weight became so annoying he thoughtlessly threw it away. The year following he visited Santa Fe, at which place his pouch was accidentally emptied, and, among its contents, several bright particles, that had become parted from the rock, attracted the attention of the Mexicans. These were carefully gathered up, and, upon due examination, proved to be virgin gold.

The old man, on his return, searched diligently for the spot that afforded the treasure he had so foolishly thrown away, —but (not being intellectually one of the brightest gems of nature's casket, and feeble and childish withal) he was unable to find it, or even to decide upon which of the two streams it belonged.

Upon one of the affluents of Horse creek, thirty or forty miles south of the Platte, is a beautiful valley, shut in by two ridges of precipitous hills, known as Goche's hole.

This locality, in wildness and picturesque beauty, claims affinity to the neighborhood of Scott's Bluff. Its area is broad and of several miles extent, —inaccessible except at two or three points. The

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

surrounding hills are generally composed of marl and earthy limestone. Towering in vertical walls to the height of many hundred feet, they present the appearance of a strongly fortified place. The soil is remarkably rich, well watered, and timbered, —strikingly contrasting with the nude sterility and desolation of the circumjacent country.

A heavy fall of snow during the night prevented our leaving camp until the fourth day subsequent, when we were again en route. Having passed the night of Nov. 1st at Morain's Point, the next day we arrived at Fort Platte. This latter place is situated a short distance above the mouth of Laramie river, and is our point of present destination.

From Horse creek to the Laramie river, the bottoms, in many places, afforded dense groves of heavy timber—the more agreeable as we had been so long accustomed to open and woodless prairies.

The geological character of the country is nearly the same with that previously described—though possessed of greater humidity of soil. The formations, noticed in the vicinity of Scott's Bluff and Goche's hole, have merged into strata of limestone of various shades and compactness, with occasional layers of primitive sandstone.

The prairies were beautifully undulating, and covered with lusty growths of dried vegetation. The hills, now and then, were ornamented with a few scattering pines and cedars, which stood like lonely sentinels to watch the progress of changing seasons.

As some of my readers may entertain the design of visiting these remote regions, or passing beyond them to the more distant shores of the Pacific, it may not be deemed a digression for me to present a few hints as to the most advisable mode of travelling upon this long and wearisome journey.

A caravan of waggons should make only two camps per day. Travellers should adopt the rule to start at daylight and continue until ten o'clock, A. M., —then, having halted some six hours, (if it be summer, if spring or fall, four only,) again resume their way till after sundown.

Fifteen miles, upon an average, are as far as an ox team should travel per day, —mules or horses might keep on for twenty miles.

Caravans ought always to lay by in rainy Weather, as the wet and irritation consequent upon draught, gall the neck and shoulders of their animals and soon render them unfit for service;—every precaution should be taken to preserve their strength and soundness, as upon them rests the sole dependence of a travelling company.

A mounted party ought, as a general thing, to observe the same rules, and not think of averaging over twenty-five miles per day. They might travel later; but in such cases, they should always proportionally lengthen their noon halt.

In the above manner the entire journey from Independence to the Pacific may be performed without injury to animals, or the expenses attendant upon a relay.

Fort Platte, being next to Fort Hall, the most important point on the route to Oregon, calls for a brief description. This post occupies the left bank of the North Fork of Platte river, three-fourths of a mile above the mouth of Laramie, in lat. 42° 12' 10" north, long. 105° 20' 13" west from Greenwich[10], and stands upon the direct waggon road to Oregon, via South Pass.

It is situated in the immediate vicinity of the Oglallia and Brulé divisions of the Sioux nation, and but little remote from the Chyennes and Arapaho tribes. Its structure is a fair specimen of most of the establishments employed in the Indian trade. Its walls are "adobies," (sun-baked brick,)

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

four feet thick, by twenty high — enclosing an area of two hundred and fifty feet in length, by two hundred broad. At the northwest and southwest corners are bastions which command its approaches in all directions.

Within the walls are some twelve buildings in all, consisting as follows: Office, store, warehouse, meat-house, smith's shop, carpenter's shop, kitchen, and five dwellings, —so arranged as to form a yard and cores, sufficiently large for the accommodation and security of more than two hundred head of animals. The number of men usually employed about the establishment is some thirty, whose chief duty it is to promote the interests of the trade, and otherwise act as circumstances require.

The Fort is located in a level plain, fertile and interesting, bounded upon all sides by hills, many of which present to view the nodding forms of pines and cedars, that bespatter their surface, —while the river bottoms, at various points, are thickly studded with proud growths of cottonwood, ash, willow, and box-elder, thus affording its needful supplies of timber and fuel.

One mile south of it, upon the Laramie, is Fort John, a station of the American Fur Company. Between these two posts a strong opposition is maintained in regard to the business of the country, little to the credit of either.

At the time of our arrival at the Fort, two villages of Indians were encamped near by. Their lodges, being the first I ever saw, proved objects of great interest to me.

The lodge of a mountain Indian consists of a frame work of light poles, some twenty-five feet long, bound together at the small ends, and raised by planting the opposite extremities aslope, at given distances apart, so as to describe a circle, at the base, converging to a triangular apex, for roof and sides; —over this is spread a covering of buffalo robes, so nicely dressed and seamed, it readily sheds rain and excludes the fierce winds to which the country is subject. A small aperture at the top, affords passage for the smoke emitted from the fire occupying the centre ground work. The entrance is at the side, where a large piece of undressed buffalo skin (hung from the top and so placed as to be opened or closed, at pleasure, upon the ingress or egress of the inmate) furnishes the simple substitute for a door.

These lodges (some of them containing quantities of roofage to the amount of ten or fifteen buffalo skins) are large and commodious; and, even comfortable, in the severest weather; the heat from the centre fire, being refracted on striking the sloping sides, communicates an agreeable warmth to every part.

An Indian lodge, in the summer, is admirably adapted to the pleasure of its occupants, —by raising the lower extremities of the envelope and securing them at a proper elevation, a free passage of air is obtained, which greatly contributes to increase the merits of the delightful shade afforded by the superstructure.

A lodge of the largest size may easily be made to accommodate fifteen persons. The interior is arranged by placing the fixtures for sleeping at the circumference of the circle, which afford seats to the inmates, and thus a sufficient space is left vacant between them and the centre fire.

This kind of dwelling is the one almost universally adopted by the mountain and prairie Indians, and is, perhaps, better suited to their condition and mode of life than any other that could be devised.

Dependent solely upon the chase for a subsistence, the various Indian tribes inhabiting the mountains and countries adjacent can occupy no fixed residences. Contrary to the habits of more

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

eastern nations, among whom agriculture commands attention to a greater or less extent, they are continually necessitated to rove from place to place in pursuit of game.

Give to one of them a bow, arrows, knife, lodge, and running horse, and he is rich, happy and contented. When the erratic propensities of the buffalo (upon which is his almost exclusive dependence) compel him to change his location, he has only to pull down his lodge, saddle his horse, and away.

So accustomed are they to this incessant rambling, they regard it more as a pleasure than an inconvenience. I have frequently seen hundreds of families moving together, —presenting to the unsophisticated beholder a novel and amusing spectacle, —with their horses, mules, dogs, men, squaws, children, and all the paraphernalia of savage domestic economy, and the rude accoutrements of peace and war, commingled indiscriminately.

The Sioux tribe, to whose country we have now introduced the reader, is, perhaps, the largest Indian nation upon the continent of North America, with the exception of the ancient Mexicans, if indeed they may be called Indians. This tribe occupies a territory extending from the St. Peters, of the Mississippi, to the Missouri, and from thence to the forks of the Platte, and up that river to its head-waters. They are supposed to number not far from eighty thousand men, women, and children, and are divided into many fractional parts, each bearing its own name, yet speaking the same language and claiming a common nationality.

Of these divisions are the Brulés, Oglallas, Yanktaus, Piankshaws, Minecosias, Blackfeet, Broken-arrows, and Assenaboins, with many others whose names have escaped my recollection.

The only perceptible difference in language, is, in the pronunciation of words like the following, meallo, appello and Lacota, —those upon the Mississippi, and some in the vicinity of the Missouri, pronouncing them meaddo, appeddo, and Dacota.

The members of this nation, so far as my observation extends, are a cowardly, treacherous, thieving set, taken as a body — and are well deserving the appellation of mean and contemptible; though there are some honorable exceptions to the remark.

Any effort to civilize them must necessarily prove tedious, if not altogether impracticable, while they adhere to their present roving habits; though three several missionary stations have been recently established among them, with slight success; viz: at St. Peters, Lac qui Parle, and Traverse des Sioux. But the Indians of those sections, being under the more direct influence of the U. S. Government, have begun to abandon their former wandering habits, and betake themselves to agricultural pursuits.

The term Sioux, as applied to this nation, is of Franco-Canadian origin — being a corruption of the word sued, and means drunk or drunken, —in allusion to their excessive fondness for liquor and predilection to inebriacy. The name by which they call themselves, and are known among other tribes, is Lacota, or Cut-throats, —for such is the literal meaning of the term; and rarely, indeed, were ever a pack of scoundrels more justly entitled to the appellation.

The night of our arrival at Fort Platte was the signal for a grand jollification to all hands, (with two or three exceptions,) who soon got most gloriously drunk, and such an illustration of the beauties of harmony as was then perpetrated, would have rivalled Bedlam itself, or even the famous council chamber beyond the Styx.

Yelling, screeching, firing, shouting, fighting, swearing, drinking, and such like interesting performances, were kept up without intermission, — and woe to the poor fellow who looked for repose

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

that night, —he might as well have thought of sleeping with a thousand cannon bellowing at his ears.

The scene was prolonged till near sundown the next day, and several made their egress from this beastly carousal, minus shirts and coats, —with swollen eyes, bloody noses, and empty pockets, —the latter circumstance will be easily understood upon the mere mention of the fact, that liquor, in this country, is sold for four dollars per pint.

The day following was ushered in by the enactment of another scene of comico-tragical character. The Indians encamped in the vicinity, being extremely solicitous to imitate the example of their “illustrious predecessors,” soon as the first tints of morning began to paint the east, commenced their demands for firewater; and, ere the sun had told an hour of his course, they were pretty well advanced in the state of “how came ye so,” and seemed to exercise their musical powers in wonderful rivalry with their white brethren.

Men, women, and children were seen running from lodge to lodge with vessels of liquor, inviting their friends and relatives to drink; while whooping, singing, drunkenness, and trading for fresh supplies to administer to the demands of intoxication, had evidently become the order of the day. Soon, individuals were noticed passing from one to another, with mouths full of the coveted fire-water, drawing the lips of favored friends in close contact, as if to kiss, and ejecting the contents of their own into the eager mouths of others, —thus affording the delighted recipients tests of their fervent esteem in the heat and strength of the strange draught.

At this stage of the game the American Fur Company, as is charged, commenced dealing out to them, gratuitously, strong drugged liquor, for the double purpose of preventing a sale of the article by its competitor in trade, and of creating sickness, or inciting contention among the Indians, while under the influence of sudden intoxication, —hoping thereby to induce the latter to charge its ill effects upon an opposite source, and thus, by destroying the credit of its rival, monopolize for itself the whole trade.

It is hard to predict, with certainty, what would have been the result of this reckless policy, had it been continued through the day. Already its effects became apparent, and small knots of drunken Indians were seen in various directions, quarrelling, preparing to fight, or fighting, —while others lay stretched upon the ground in helpless impotency, or staggered from place to place with all the revolting attendencies of intoxication.

The drama, however, was here brought to a temporary close by an incident which made a strange contrast in its immediate results.

One of the head chiefs of the Brulé village, in riding at full speed from Fort John to Fort Platte, being a little too drunk to navigate, plunged headlong from his horse and broke his neck when within a few rods of his destination. Then was a touching display of confusion and excitement. Men and squaws commenced bawling like children; —the whites were bad, very bad, said they, in their grief, to give Susu-ceicha the fire-water that caused his death. But the height of their censure was directed against the American Fur Company, as its liquor had done the deed.

The body of the deceased chief was brought to the Fort, by his relatives, with a request that the whites should assist at its burial; but they were in a sorry plight for such a service. There, however, were found sufficiently sober for the task, and accordingly commenced operations.

A scaffold was soon erected for the reception of the body, which, in the mean time, had been fitted for its last airy tenement. This duty was performed by the relatives of the deceased in the

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

following manner: it was first washed, then arrayed in the habiliments last worn by Susuceicha during life, and sewed in several envelopes of lodge-skin, with the bow, arrows, and pipe once claiming him as their owner. This done, all things were ready for the proposed burial.

The corpse was then borne to its final resting place, followed by a throng of relatives and friends. While moving onward with the dead, the train of mourners filled the air with their lamentations and rehearsals of the virtues and meritorious deeds of their late chief.

Arrived at the scaffold, the corpse was carefully reposed upon it facing the east, while beneath its head was placed a small sack of meat, tobacco and vermilion, with a comb, looking-glass, and knife, and at its feet, a small banner that had been carried in the procession. A covering of scarlet cloth was then spread over it, and the body firmly lashed to its place by long strips of raw hide. This done, the horse of the chieftain was produced as a sacrifice for the benefit of his master in his long journey to the celestial hunting ground.

The above mode of sepulture is that commonly practised by the mountain tribes. It is seldom indeed they ever dispose of their dead in any other way than by placing them either upon scaffolds, branches of trees, or in some elevated position, not unfrequently covered by lodges, where they are left to moulder and waste in the winds and rain, till the bones falling one by one upon the prairie, are gathered up by surviving friends, and finally entombed in mother earth.

The corpse of the ill-fated man being thus securely fixed in the airy couch assigned it, to await the speedy process of dissolution, and mingle with its kindred earth, that its bones might find their proper places beneath the prairie sod, the village once acknowledging him as its head now met round the scaffold, men, women, children, and little ones, to bewail the sad fate that had bereaved them of their loved chieftain.

First, encircling it at a respectful distance, were seated the old men, next the young men and warriors, and next the squaws and children. Etespa-huska, (Long Bow,) eldest son of the deceased, thereupon commenced speaking, while the weeping throng ceased its tumult to listen to his words:

“Oh, Susu-ceicha! thy son bemourns thee, even as was wont the fledgelings of the war-eagle to cry for the one that nourished them, ere yet thy swift arrow had laid him in dust. Sorrow fills the heart of Etespa-huska; sadness crushes it to the ground and sinks it beneath the sod upon which he treads.

“Thou hast gone, oh Susu-ceicha! Death hath conquered thee, whom none but death could conquer; and who shall now teach thy son to be brave as thou was brave; to be good as thou wast good; to fight the foe of thy people and acquaint thy chosen ones with the war-song of triumph! to deck his lodge with the scalps of the slain, and bid the feet of the young move swiftly in the dance? And who shall teach Etespa-huska to follow the chase and plunge his arrows into the yielding sides of the tired bull? Who shall teach him to call for his prey from the deer, the elk, and the antelope, as thou hast done, or win honors from the slaughtered bear!

“None. Etespa-huska has no teacher. He is alone. Susu-ceicha is dead!

“But thou wilt soon gain the happy country. Thy journey is short. There wilt thou bestride the fleet horses that never tire, and roam amid the fruits and flowers, the sweet waters and pleasure-groves of that lovely clime; for thou art worthy.

“And, oh, Wakantunga! (Great Spirit,) do thou pity Etespa-huska. Do thou teach him to be brave and good like his father, for who is there to pity or teach him now he is left alone!”

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Then, turning to the audience he continued:

“Brothers: Strong was the arm of Susu-ceicha, and fleet was the arrow shot from his bow. Thirty and five of the enemy hath he slain in battle, whose waving locks were the trophies that oft-times measured the quick step of the scalp-dance. Fourscore and ten were the medicine-dogs he brought from the land of the foeman, that their shrill neighings might greet the ears, and their strong backs carry the people he loved; for brave was the heart of Susu-ceicha!

“What warrior ever came to his lodge and went hungry, or naked, or needy away. What widow or orphan of his people blessed not their chief, when he returned from the chase and apportioned to them their wonted dues from the choice spoils of the buffalo! for generous was the soul of Susu-ceicha.

“Brothers: Susu-ceicha is dead. No more shall his voice be heard in your councils, or his courage lead you to victory, or his generosity rejoice the hearts of the needy, the widow, and the orphan. Etespahuska laments a father and a teacher. The Burnt-thighs[11] a mighty chieftain; and the nation its bravest warrior! We all mourn him; sorrow fills the hearts, and tears wash the cheeks of his people. It is good that we bemoan him, and mingle with the winds the voices of our lamentation, for who shall now stand in the place of Susu-ceicha.

“Brothers: Let us stamp his memory upon our hearts and imitate his virtues, that our acts may rear to him a living monument, which may endure till time itself shall die!”

No sooner had the orator ceased, than a tremendous howl of grief burst from the whole assemblage, men, women, and children, which was renewed in quick succession for several hours, when finally the bewailing multitude retired to their lodges.

CHAPTER VIII.

Coast clear, and Trade opened. More visitors. Smoking out the natives. Incident illustrative of Indian character. Expeditions for trade. Black Hills Rawhide. An Indian and a buffalo chase. Deep snow, extreme cold, and painful journey. Léau-qui-court. Remarks. Lost. White river; its valley, fruits, and game. Building site. The Devil's Tea-pot. Troubles with Indians. Theft and its punishment. Indian soldiers. Christmas extras. Outrageous conduct. Rascality of traders. “That Old Serpent.” Indian superstition, religious tenets and practices. Notions upon general morality. THE events of the day had for the present put an effectual stop to dissipation among the Indians, and not long afterwards they began to pull down their lodges and remove to the neighborhood of buffalo, for the purpose of selecting winter-quarters.

The disgusting scenes connected with our arrival at the Fort had pretty much ceased on the evening of the second day, and everything, with a few exceptions, began to assume its wonted aspect. The winter trade was now considered fully opened. Parties were sent with goods from the Fort to different villages, for the purpose of barter, and affairs began to show a business-like appearance. Some two weeks subsequently, a band of Brulés arrived in the vicinity. They had come for a drunken spree, and soon opened a brisk trade in liquor.

Our visitors crowded the Fort houses in quest of articles of plunder, and became an incessant source of annoyance to the engagés. One room, in particular, was thronged almost to the exclusion of its regular occupants. The latter, losing all patience, at length hit upon a plan to rid themselves of the intruders.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

After closely covering the chimney funnel, by aid of some half rotten chips a smoke was raised; the doors and windows being closed to prevent its egress. In an instant the apartment became filled to suffocation, —quite too much so for the endurance of the wondering savages, who gladly withdrew to gain the pure air of the exterior. On being told it was the Longknife's medicine[12], they replied:

“Ugh! Wakea sutiello ha Mena-huska tour!” (Ugh! The Long-knife's medicine is strong!)

During their stay at the Fort, an incident occurred which will serve to illustrate a singular trait in the character of these Indians.

A brave, named Bello-tunga, (Big Eagle,) received a blow over the head from a half crazed drunken trader, which came very near terminating in serious consequences. What would have been the result, it is hard to tell, had not the whites promptly interfered, and, with much effort, succeeded in pacifying the enraged savage by presenting him a horse.

At first he would admit of no compromise short of the offender's blood — he had been struck by the pale-face, and blood must atone for the aggression, —unless that should wipe out the disgrace, he could never again lift up his head among his people, —they would call him a coward, and say the white man struck Bello-tunga and he dared not to resent it.

The services of his father, hereupon, were secured in behalf of the offending party, which, after great ado, finally effected an adjustment of the difficulty.

An Indian considers it the greatest indignity to receive a blow from any one, even from his own brother; —and, unless the affair is settled by the bestowment of a trespass offering on the part of the aggressor, he is almost sure to seek revenge, either through blood or the destruction of property. This is a more especial characteristic of the Sioux than of any other nation. In fact, the Snakes, Crows, Arapahos, Chyennes, and most other tribes are far less nice in its observance, —though all regard the like an insult that justly calls for revenge.

Soon after, an expedition was detached to Fort Lancaster, on the South Fork Platte, and another to White river, an affluent of the Missouri, some eighty miles northwest of the main trading post. The latter party includes myself with its number.

Our purpose was to build houses in the vicinity of White river, and thus secure the trade of several villages of Brulés that had selected their winter quarters in the neighborhood, and were anxiously awaiting our arrival.

On the last of November we were under way with two carts freighted with goods and liquor, accompanied by only six whites, one negro, and an Indian.

Crossing the Platte opposite the Fort, we continued our course, west by north, over a broken and tumultuous prairie, occasionally diversified by thick clusters of pines and furrowed by deep ravines, and abounding in diminutive valleys, whose tall, withered grass gave evidence of the rich soil producing it. To our left the high, frowning summits of the Black Hills began to show themselves in the long distance, like dark clouds, and planted their dense pine forests upon the broken ridges whose irregular courses invaded the cheerless prairie far eastward.

A ride of twenty miles brought us to Rawhide, where we passed the following night and day.

This creek traces its course over a broad sandy bed, through a wide valley of rich clayey loam, slightly timbered and luxuriant in grasses. Towards its head, it is shut in upon both sides by high pine hills; but, in passing on, these mural confines are exchanged for the prairies, and the creek finally debouches into the Platte.

---

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

An abundance of *prelée* and rushes afforded fine pasturage to our animals, and a kindly grove of dry cottonwood gave us requisite fuel for camp-fire.

Before leaving, we were joined by another Indian mounted upon a dark bay horse, the noblest animal of its kind I remember to have seen among the mountain tribes. It had been stolen from the Snakes during the past summer, as its present owner informed us, and he seemed not a little proud of the admiration we bestowed upon it.

The new comer proved *Arketcheta-waka*, (*Medicine Soldier*), a brother of *Bello-tunga*, the brave referred to on a former occasion. Seating him self by the fire, he looked dejected and melancholy, and his face bore in dubitable evidence of a personal encounter with some one.

On enquiring the cause of this, we learned that he had left his father's lodge by reason of a quarrel he had had with his eldest brother, —the latter having struck him with a fire-brand and burnt his body in several places during a drunken spree, —he was now on his way to White river, there to await the suitable time for revenge, when he should kill his brother.

We told him this would not be right; —it was liquor that had done him the wrong, and not his brother; —liquor was bad!

He seemed to acknowledge the truth of our suggestions, and asked “why the pale-faces brought the fire-water to do the red man so much harm?” Our trader replied, “The whites want robes, and can get them for liquor when nothing else will do it.”

The answer evidently perplexed him, while he sat gazing silently into the fire, with his arms akimbo upon his knees, and palms supporting his chin, as if striving to work out to his own satisfaction this strange problem in morality.

The third day we resumed our course, and, after a drive of six or eight miles, came upon a large band of buffalo. Here, at our request, the *Medicine Soldier* doffed his robe, slung his arrow-case over his naked shoulders, mounted his horse bow in hand, and started for the chase.

At first he rode slowly, as if reserving the speed of his charger till the proper time. The buffalo permitted him to approach within a few hundred yards before they commenced flight. Then was a magnificent spectacle.

The affrighted beasts flew over the ground with all the speed that extreme terror lent to their straightened nerves, and plied their nimble feet with a velocity almost incredible—but they were no match for the noble steed the Indian bestrode. He was among them in a trice, and horse, Indian, and buffalo were lost in identity, as they swept over a snow-clad prairie, in one thick, black mass like the career of a fierce tornado, — tossing the loose drifts upwards in small particles, that, in their descent, pictured white clouds falling to the earth, ever and anon enshrouding the whole band from view.

Now their course is turned and makes directly towards us. They pass, all foaming with sweat—with lolling tongues and panting breath—but they still seem loath to abate from the energy of their wild terror.

Soon the Indian and his gallant steed part from them. He has selected the choicest of the band and pursues her singly. Side by side both cow and horse keep even pace, while the ready archer pours in his arrows, some of them, forcing their entire way through the bleeding beast, fall loosely to the ground upon the opposite side.

At length, spent by the toilsome flight, exhausted by loss of blood, and pierced through her vitals by the practised marksman that follows her, she halts for fight.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Now, she plunges with mad fury at the horse, — the well-trained steed clears the force of her charge at a bound. Again, she halts, — the blood spouts from her nostrils and mouth — she staggers. Again, she musters her expiring energies for one more desperate onset at her enemy, as if determined, if die she must, not to die unavenged. Her charge proves futile as the former. A death-sickness comes over her. Her life is fast ebbing from within her. She reels, — she totters — she falls, — and breathes her life away upon the blood-dyed snow.

A few moments' delay put us in possession of an ample supply of fresh meat, — the Indian reserving the robe only as his share. The cow proved a most excellent selection, and did honor to the judgment of the hunter.

As we travelled on, the snow, which scarcely an hour since had first attracted our attention, became deeper and deeper, and our progress more tedious and difficult.

From bare ground and comparatively moderate climate, we were fully inducted to the region of snow, ice, and winter. The prairie was high and undulating. To our left an immense wall of secondary rock surmounted a ridge of naked hills, that described in its course the curve of a rainbow, enclosing upon three sides a large valley facing the east, — thence, stretching westward and raising higher and higher, hastened to mingle its heads among the cloud-capped summits and snows of the neighboring mountains.

From a light coating of loose snow our course soon became obstructed by still deepening layers, covered with a thick crust, scarcely strong enough to bear our weight, but quite sufficient to wrench and jar us at every step, and make our advance threefold tiresome.

The cold was so intense, we were forced to walk to keep from freezing. Our difficulties thickened the farther we progressed. Night closed in upon us, and we could no longer distinguish our course. Yet we kept on, in hopes of reaching some creek or spring where we might await the coming day.

Slowly, onward, — plunge, plunge, at every step; — now prostrate at full length upon the hard crust, and then again staggering in resistless mimicry of drunken men.

The chill winds sweeping over the dreary expanse pierced us through at each whiff, and seemed to penetrate every nerve, and joint, and muscle, as if to transform our hearts' blood into icicles. But still it was plunge, plunge along; onward, plunge, fall; but yet onward! There is no stopping place here, — 'tis push on or die!

Thus, travelling for three or four hours, not knowing whither, we came finally to the leeward of a high hill. The agreeable change produced by the absence of wind, called forth a hearty response.

"Camp, ho," was echoed upon all sides. But here was no water for ourselves or our animals. We must yet go on. Still we lingered — loath to leave the favored spot. The Indian, who had been absent for a brief space, now came up, shouting:

"Mine, washtasta!" (Water, very good!)

"Tarkoo mine?" asked the trader. (What water?)

"Mine-loosa. Tunga warkpollo." (Running-water. A large creek.)

It proved *L'eau-qui-court*, the stream upon which we had intended to pass the night.

Pushing on, a few moments brought us to its banks, in a deep valley covered with snow. A fire was then promptly built from a small quantity of wood we had the precaution to take with us from Rawhide, and all hands were soon as comfortably conditioned as circumstances would admit.

A hearty supper served to appease the appetites so keenly sharpened by a toilsome journey of

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

thirty miles, occupying from sunrise till ten o'clock at night. This over, each one cleared for himself a place upon the frozen ground, and, spreading down his bed, quickly forgot his cares and sufferings in the welcome embrace of sleep.

L'eau-qui-court, or Running-water, heads in a small lake under the base of the first range of Black Hills, and, following an easterly course, empties into the Missouri, about one hundred and fifty or two hundred miles above Council Bluff. It derives its name from the rapidity of its current, which rolls over a pebbly bed with great velocity.

At this place it is narrow and deep, with steep banks, and not a stick of timber is to be found on it, above or below, for twenty miles. At the lake where it heads, there is an abundance of timber; large groves of cottonwood are also found at some distance below our present camp.

The intermediate country, from Rawhide, is a cold and cheerless expanse almost at all seasons of the year. From the commencement of fall to the very close of spring, it is subject to frost and snow; —for what cause, it is hard to conjecture. Its surface, though quite elevated, is not sufficiently so to make such marked difference in climate between it and adjoining sections.

The next day proved cloudy; we, however, resumed our course which led over a rough, tumulous country, covered with snow and darkened by occasional clusters of pines.

Early in the morning our Indians left us and took a nearer route to the village. Soon after we became bewildered in the obscurity of the atmosphere, and travelled till night unconscious whether right or wrong. Finally, coming to a deep ravine that obstructed further progress, we turned to a neighboring grove of pines, at the point of an eminence, and made camp. It was a bleak airy place, but by aid of a huge fire of dry pine we were quite comfortable, despite a heavy fall of snow during the night.

With the morning our perplexities were renewed. Directly in front lay a broad and impassable ravine, beyond which a high mountain range arose to view. Should we go up or down? After much debate we decided upon the latter, and, bearing northward during the day, struck the head of a stream which subsequently proved White river.

This stream traces its way through a broad valley, enclosed upon either side by high pine hills. Its banks are studded with thick groves of cottonwood, elm, ash, box-elder, and willow, —with nearly all the varieties of fruit-bearing shrubs and trees indigenous to the mountains. In the item of plums and cherries, it gave evidence of exuberant fecundity. The bushes, in many instances, yet bore the dried relics of their burthen, as if to tempt the beholder's taste, —while the tall grass and rosebuds,[13] every where attested the summer-verdure and beauty of the valley in which they grew.

The snow that had hitherto impeded our progress, now gradually became less as we advanced down the valley, and soon gave place to bare ground. Game appeared in great numbers, attracted from the adjoining hills to pass the winter in this inviting locality.

A journey of two days brought us to the site selected for houses, and, consequently to a halt, for the present.

The place was surrounded by wild and romantic scenery. Directly in front, upon the opposite side of the creek, arose a perpendicular wall of marl and half formed sandstone, towering, stratum above stratum, to a height of three or four hundred feet, and overlooking the valley above and below, — while further on, a steep hill-side, covered with tall, straight, and almost branchless pines, burst upon the view.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Rearward a gradual acclivity led to a high plateau, some two miles broad, coated with long, tall grass, when a ridge of abrupt pine hills introduced the more distant mountains, with their rugged sides and frowning summits, —and, higher up, an immense pile of earthy limestone, surmounting a wing of hills as it approached the river, presented a medley of curious and fantastic shapes, —objects alike of amusement and wonder.

One of the latter, denominated the “Devil’s Tea-pot,” exhibited externally an almost perfect facsimile of that kind of vessel. It was of gigantic proportions, —being one hundred feet high, and, occupying a conspicuous position, may be seen for a distance of many miles.

The Indians from a near village, immediately upon our arrival, came flocking around for the threefold purpose of begging, trading and stealing; and, from this forward, we rarely experienced an interval free from their annoyance.

Prompt arrangements were here commenced for building a store room and trading house; —but meanwhile, we were forced to keep strict guard both night and day.

Two braves were secured to “act soldier,” and assist in keeping the thieving propensities of their people in check. Yet, notwithstanding the united vigilance of all hands, the latter would frequently perpetrate their petit larcenies under our very eyes, without being detected in the act, — so adroit were they at the business. An instance of this kind happening to myself is perhaps worth relating.

Previously to the erection of houses, we were necessitated to sleep in the open air. Wearied by the lateness of the hour, one night I spread down my couch by the camp-fire, with the intention of retiring. The weather being very cold, I had scarcely turned to warm myself, when a backward glance revealed the sudden disappearance of my sleeping appendages — robes blankets and all! Informing the trader of my mishap, and catching a glimpse of the thief as he dodged past a knot of Indians at the further extremity of the camp, gun in hand, I started after the nimble lark; but the thick bushes and darkness soon shut him from view and left me in fruitless pursuit.

At length, relinquishing the hope of ever regaining the stolen articles, and vexed at the impious savage, who, instead of obeying the Scripture injunction of “take up thy bed and walk,” had snatched MY bed and RUN! I returned to camp. Here I was shown a robe, by the trader, that had been brought in scarcely a minute before and offered in barter for liquor; —it was one of the two I had lost.

The bearer was now promptly charged as being accessory to the theft. This he stoutly denied, alleging that the robe had been given him by an other Indian for the purpose he had offered it. Upon this the affair was referred to our soldiers, who, after much parleying and no little threatening, succeeded in causing him to return the missing articles. The fellow then demanded of me a cup of liquor as pay for bringing them back. Mustering to my aid a few words of Sioux, I replied: “Mea warche yau wechacha ceicha, opata-ne ha warktach-ne coga! —I neither like bad men, nor will I pay for doing bad.”

Marto-nazher, (Standing Bear,) one of our soldiers, on hearing my answer, arose and addressed the crowd in an earnest and impressive manner. He was grieved on account of the many depredations continually committed by his people upon the property of the whites. It is wrong—very wrong, said he, to conduct in this manner — if such wickedness is allowed, the whites will abandon the country. Whites do not steal from us. Something must be done — an example must be had — the perpetrators of these outrages must be punished.

“You, Schena-sarpah,” he continued, throwing his piercing glance full upon the chop-fallen

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

culprit, who hung his head for shame at being caught in a manner so little to his credit, "Aye, you Scena-sarpah do carry a bow and arrows; you call yourself a brave; and yet you steal from our friends, the pale-faces!

"Do brave men steal from their friends? No! Scena-sarpah should alone steal from his enemies, if he be a brave man and a soldier.

"Who are they that steal from their friends? Squaws and children, as Scena-sarpah well knows. Then he is no better than they! Why should he carry a bow? Why go to war, or follow the chase? Squaws and children do neither. None but brave men go to war — none but they should follow the chase.

"Scena-sarpa needs no bow. Let him go to his lodge. There let him make robes and moccasins for braves, and take care of children with squaws, — for such should be his occupation, and only such should be his companions!"

So saying, he approached the unresisting thief, and, taking from him his bow, arrows, and panther-skin quiver, resumed his seat. Then, breaking the arrows and shooting them away, one by one, among the trees, he snapped the bow across his knee and threw it into the fire. The bright flame from the burning bow had barely died away, when the quiver was consigned to the same fate. As the last fragments of the effeminate's weapons mouldered to ashes, a smile of satisfaction played upon the countenance of the Standing Bear, at the thought of having avenged the wrongs of the white man.

And truly, this was an infliction of summary punishment. The amount of property destroyed exceeded the value of a horse, and, in the estimation of an Indian, constitutes a man's chief wealth. The offender was thus not only left disarmed by the operation, but made poor, and reduced to a level with the squaws and children to whom he was set apart. He bemoaned his loss most piteously, and started for his lodge, bellowing like a motherless calf.

Another instance of theft occurred soon after, almost as remarkable. A robe was stolen from off one of our party, while he was asleep, and bartered for whiskey, without his knowing it!

Our Indian soldiers were of great service in conducting the trade. If any difficulty occurred, they were always at hand to assist in its adjustment, and preserve order and quiet so far as lay in their power. If any visitor became troublesome, they at once ordered him to his lodge, and enforced their commands in case of resistance.

Every trader is necessitated to employ one or more braves to assist him in his business at the villages. An Indian considers it a great honor thus to receive the confidence of a white man and "act soldier" for him, as he denominates it. Some of them have not unfrequently gone so far as to kill those of their people who proved guilty of misusing the traders by whom they were employed. They exercise a kind of supervisory office in the management of affairs which could not well be dispensed with, — and very often have the lives of traders been preserved by the judgment and discretion of these men.

Dec. 25th. Christmas finds us in our new residence, which, with the exception of a chimney; is now completed.

This great annual festival is observed with all the exhilarating hilarity and good cheer that circumstances will allow. Several little extras for the occasion have been procured from the Indians, which prove quite wholesome and pleasant-tasted. One of these, called washena, consists of dried meat pulverized and mixed with marrow; another is a preparation of cherries, preserved when

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

first picked by pounding and sun-drying them, (they are served by mixing them with bouillie, or the liquor of fresh-boiled meat, thus giving to it an agreeable winish taste;) a third is marrow-fat, an article in many respects superior to butter; and, lastly, we obtained a kind of flour made from the pomme blanc, (white apple,) answering very well as a substitute for that of grain.

The above assortment, with a small supply of sugar and coffee, as well as several other dainties variously prepared, affords an excellent dinner, — and, though different in kind, by no means inferior in quality to the generality of dinners for which the day is noted in more civilized communities.

The day following our turbulent neighbors were augmented in number by the accession of another village of Brulés, and Marto-cogershne, of whom I have spoken upon a former occasion, became with his family our constant annoyance.

Visiting us at one time, squaws and all — as was his daily custom — to beg liquor, (which, some way or other, he always obtained,) the brother of our tormentor demanded a quantity of that article to take with him to his lodge. This, after many sharp words, was offered; but, having no vessel for its conveyance, he extended his demands to a kettle, — which, of course, was refused; whereupon he threatened vengeance unless both were forthcoming upon the mocosco,[14] (prairie,) and required still farther the gift of a pair of moccasins

Our trader replied, “The liquor is for you, and here are the moccasins, (pulling off his own and passing them to him,) but the kettle you cannot have.”

The affair thus ended for the present, and the modest beggar retired to his lodge. The next morning, however, two of our horses were found pierced with arrows, and so badly, that they died soon after.

At another time, Marto-cogershne became so enraged at being refused a whole keg of liquor “on the prairie,” he rushed upon the trader with his butcher-knife to kill him. What would have been the result, it is hard to tell, had I not stayed the descending weapon by seizing the fellow’s arm. Here our soldiers interfered and put him out of the house, —closing the door upon him. The exasperated savage then commenced shooting upon us through the door; —two Indian boys passing in the interval also furnished marks for his gun, and not long subsequently a mule and an ox belonging to us fell to appease his insulted dignity.

However, the chef d’ouvre of his rascality was exhibited in stealing our whole cavallard,[15] consisting of ten head of horses and mules, which he drove into the mountains. We were compelled to give a quantity of liquor and ammunition, two blankets, and several other articles before we could secure their return.

From the movement of things, he was evidently instigated by the American Fur Company traders to do us all the mischief in his power. Certain it is, he was their regular “soldier,” and received from them numerous presents in consideration of his good conduct.

The employees of this company are frequently guilty of such disgraceful conduct. In connection with this conclusion I might cite instance upon instance, and string out a volume of proof, were it necessary.

Soon after Christmas we commenced erecting our chimney. The materials for it were procured from an adjoining bank. While engaged in quarrying them, the operator came to a crevice filled with a strange fleshy substance, coiled together like the folds of a huge rope. “Hallo!” cried he, with astonishment, “here’s the Devil, himself!”

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

The extraordinary announcement brought all hands to the spot to get a peep at “Old Nick,” and the Indians, also, witnessing—the unusual commotion, came hurrying up to learn its cause. The result proved, that, if not the Devil, it was his great prototype, —it was that “Old Serpent,” with all his progeny.

By means of a stick, thirty-six large snakes were exposed to view, some of them six feet in length. They were in a torpid state, the result of the severe cold of winter.

Having drawn them out, one by one, it was proposed to treat them to a warm bath. Accordingly, after placing them in a hole for the purpose, a kettle of scalding water was thrown upon them. The vivifying effects of this unwonted application restored them to a sudden animation, when, wriggling and twisting for a few moments in all the contortions of agony, they at last tacitly curled up and expired.

The Indians were much shocked on seeing this, and expressed their astonishment at our reckless presumption by their deeply accented “tula,” —turning away from the spot with evident emotions of terror.

On inquiring the cause, I learned in answer, that the various Indian tribes in the vicinity of the mountains are accustomed to regard the snake with a kind of superstitious veneration, and consider the act of killing it a sure harbinger of calamity. In the observance of this singular notion, they are scrupulously exact; —but, in despite of repeated inquiries, I have been unable to obtain the reasons upon which the whim is based.

These tribes cherish many religious tenets, rites, and customs, —some general and others peculiar only to individuals.

An Indian will never pronounce the name of the Big Medicine, or Great Spirit, other than in a reverential manner, nor upon trivial occasions.

This being is considered the Great Superintendent of all things, whose power sustains the universe, —causing day and night with the varying seasons, —making the grass to grow, the water to run, and the rains to fall, for the good of man and beast.

Some imagine He lives in the sun; others, in the air; others, in the ground; and others in the immensity of His works.

The animal or thing possessed of wonderful or extraordinary powers, such as their ignorance ascribes to be the attributes of the Supreme Being, they look upon as endowed with a greater or less share of His presence, and venerate it accordingly. Thus, the sun, fire, lightning, thunder, fountains of peculiar medicinal qualities, extraordinary localities, and various other things are alike objects of religious regard.

Although their theological sentiments are generally the same, the manner of showing their respect for this Overruling Providence differs with different tribes, families, and even persons. For instance, —some tribes shave their heads in token of their submission to Him. Others mark themselves for His own by some peculiar manner of cutting their ears for the reception of ornaments; —while others burn their thighs, tattoo their breasts, scar their arms, or flatten the heads of infants, for a like purpose.

The instrument, with which such ceremonies are performed, is invariably thrown away. In case of cutting the ears of an infant, the gift bestowed upon the operator is regarded as indicative of its success during life; parents have been known to give as high as ten horses on like occasions.

Some make indelible marks of a blue color upon their chins and foreheads, —or the figures of

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

lizards, snakes, arrows, or other objects upon their arms.

Some show their reverence in the peculiar manner of receiving the pipe and passing it to another; —others by certain ceremonies before smoking, — thus, pointing the pipe-stem to the zenith, then towards the ground, then horizontally upon either side, as if saying, “Oh thou, whose habitation is immensity, accept this as the willing tribute of homage from thy child.”

They will never allow a bone of any kind to be broken within their lodges, and express great consternation and alarm at such an occurrence. Some will not permit a stick of wood to be struck with a knife or other edged tool while burning, and others exhibit their devotion by some peculiarity in the structure of their lodges, or the mode of placing their medicine-bags, the length and shape of their arrows, their fashion of hairdressing, and various minutia of like character.

Others again will never eat unless they bestow the first mouthful as an offering to the prairie, — believing that, as the prairie affords water, grass, and game, for the good of the red man, it is the fullest embodiment of the Essence of Good; therefore, in the observance of this practice, they not only acknowledge their faith in the existence of the Great Spirit, but set apart the first of their substance as test of their piety.

Their ideas of the existence of a principle, or being, who is the author and prompter of evil, are crude and indefinite.

They are ready to acknowledge its reality, but seem to consider its person more manifest in man himself than any other creature or thing.

Their enemies they esteem as the more special incarnation of this principle, and next to them they regard a worthless, mean, and cowardly individual of their own people. They also look upon creatures of an injurious and hurtful nature, as the greater or less impersonation of evil.

Their notions of right and wrong are equally simple.

It is right to be brave, to do good to friends, to relieve the needy, to feed the hungry, and to worship the Great Spirit, —these are acts of general morality. There are various other duties taught by their code relative to intercourse with each other, —to children and parents, husbands and wives deference to age, chastity etc., the performance of which is essential to virtue.

The line of demarkation between virtue and vice is yet more simple and comprehensive; —every thing derelict of right is wrong.

I shall recur to several points, connected with the foregoing subjects, in another place.

CHAPTER IX.

Dangers connected with the liquor trade. Difficulty with Bull Eagle. Scenes of bloodshed and horror. Cheating in the fur trade. How the red man becomes tutored in vice. A chief's daughter offered in exchange for liquor. Indian mode of courtship and marriage. Squaws an article of traffic. Divorce. Plurality of wives.

THE difficulty and danger, not to say crime and bloodshed, connected with the illicit trade in alcohol, as conducted among our western Indians, is great and imminent. To illustrate this point, I need only to place before the reader a summary of facts which occurred, many of them under my own observation, during the winter of 1842.

Soon after our arrival at White river a man was sent to a neighboring village with a keg of diluted alcohol, for the purpose of barter. The Indians, feeling more disposed to drink than pay for it, de-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

manded the keg as a gift “on the prairie.” This was refused. They threatened —a fight ensued, (the soldiers and trader defending the keg and the Indians trying to take it.) Weapons were used, and the result was, both soldiers and trader were beaten off, —the latter, after being dragged through the lodgefire three or four times, narrowly escaped with his life.

A party of Indians under the excitement of strong drink, attacked and took a trading house of the American Fur Company, near by, —robbing it of both liquor and goods.

Two parties in the Fur Company’s employ, from different posts, met at a neighboring village, —one having goods and the other alcohol. The Indians, as usual, got drunk, and commenced a fight among themselves; because the goods-trader happened to be in the lodge of one of the weaker party, they attacked him. He was compelled to flee, and barely escaped with his life through the friendly interference of the squaws. His goods were all stolen; —while one of the Indians who defended him was brutally murdered, and several others wounded.

Not long afterwards, our trader was shot at, three or four times, while engaged in this dangerous traffic, and one of his soldiers severely wounded. About the same time, the trader of another company received a deep stab, while dealing out the vile trash, and would have been killed but for the energetic efforts of his soldiers.

Previously to the above, the Indians seized upon a trader and compelled him to stand over a hot fire until he was nearly roasted alive, —meanwhile, helping themselves to his stock in hand.

Soon after, two warriors came to trade for a blanket at our post, —one of whom was drunk. While being waited upon, the latter drew his knife and was in the very act of stabbing the unsuspecting clerk, as I caught his wrist and arrested the blow.

At another time, as our trader was standing surrounded by us all, he was shot at by a drunken Indian, who, by the merest accident, missed his object.

Again, one night a party of drunken Indians undertook to fire the house in order to consume us alive, but were providentially prevented, owing to its being constructed of green pine logs.

The most dangerous time I experienced during the winter was near the close of it. An Indian employed as our soldier, became crazed upon the drugged liquor of the American Fur Company, and made his appearance before us in a high state of excitement. This fellow had been denominated by his people the Bull Eagle, (Tahtunga-mobellu,) and was a chief, highly esteemed as a medicine-man, and regarded as the greatest brave in the Sioux nation. He was a tall, well-made, noble-looking person —and, —such eyes! I never saw the like planted beneath the brows of any other mortal. They glared like lightning, and, as they fell upon the individual to whom directed, seemed to penetrate the very soul and read the embryo thoughts of his heart.

Through the misrepresentations of those in the interest of the Fur Company, he fancied himself misused by our trader, and came determined on revenge. Arms in hand and stripped for the contest, accompanied by his wife and two or three friends, he confronted us, —his strange appearance told for what. In the fury of passion his every look gave evidence of the raging demon within.

Here, lest he should be misunderstood, he premised by a full statement of his grievances. They were many, but the chief of them was, that our trader had employed another to “act soldier” in his stead, while he was too drunk to perform the duties of that appointment. “I have been dressed[16] as a soldier,” said he, “to be laughed at, and now Peazeezet[17] must die!”

The room was full of Indians, and one of them, an old man, exclaimed “When Peazeezee dies, let

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

me go under[18], —I must live no longer!”

“Is this your love for the pale-face?” returned the infuriated chieftain. Then die you first!”

Upon this, seizing the defenceless old man, he drew his knife and made a heart-thrust. The intended victim, however, grasped the descending blade in his bare hand and arrested its course — but his fingers were nearly severed in so doing. Here the wife of Bull Eagle rushed up to her husband and seized him by both arms, while others interfered, and the scene of conflict was removed from the apartment to the space in front.

Now was a general fight. The women and children, crying for terror, ran about in the utmost confusion and dismay, —while raving combatants yelled and whooped, as knives, clubs, and tomahawks were busily dealing wounds and scattering blood.

Soon after, the parties retired to their village, and the melee ended with only six wounded.

In a brief interval the Bull Eagle again returned, accompanied by his wife, —the latter earnestly endeavoring to dissuade him from his purpose.

A shot was his first salute, on entering the door, which a timely thrust from the squaw averted from its object. The kind-hearted creature then grasped the bow. Relinquishing it in her hands, the madman made a pass at the trader with his tomahawk, —this blow was dodged, and the heroine, rushing between the two, prevented its repetition. Dropping his tomahawk, he then fell upon the object of his hatred, butcher-knife in hand.

But here he found himself in the firm grasp of several friendly Indians, by whom he was borne from the room.

This state of affairs was the signal for another engagement between Bull Eagle, at the head of his partisans, and the friends of the whites, more desperate and bloody than the former. With great difficulty we retained our arms from the forcible grasp of the contending factions. This, to us, was a moment fraught with extreme peril — not knowing friend from foe, and instantly apprehensive of the knives and arrows of the avengeful throng. It was, indeed, a moment when the agony of suspense quivered with thrilling intensity upon every nerve, and vibrated in every sinew. To fight, would have been a relief. But, whom should we fight? It might have been our best friends — for who could discriminate? The death of one connected with either party, at our hands, would have proved the signal for our instant slaughter. Both would have united to exterminate us, —and, beset as we were, upon all sides, prudence dictated a strict neutrality. Sometimes fifteen or twenty would be struggling for our arms at once, a strong temptation, as the reader may rest assured, for us to use them in self-defence.

Meanwhile the conflict continued with unabated fury. Several attempts were made upon the life of Bull Eagle, but without success. Two were killed and others wounded, when a final stop was put to the further effusion of blood by the withdrawal of the chieftains to his lodge.

In about an hour subsequent, he returned for the second time, —but reason had now resumed her sway, and he came to apologize for his bad conduct. Calling our trader his “very good, his best friend,” he cried for grief that he had attempted to kill him. He averred that liquor had made him a fool, and said he should never cease to regret the great wickedness he had thought of doing to his “best friend.” Ever after this affair, he remained our steadfast friend, and presented our trader with six superfine robes, in evidence of the sincerity of his repentance.

The foregoing results of this infamous traffic, are only a few of the many instances of like nature I might cite, in proof of its imminent danger to those engaged in its prosecution; —but this is not

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

the darkest part of the picture. There are yet scenes in reserve, more bloody and dreadful than those above recited, though not, perhaps, quite as perilous to the whites themselves. They all occurred in the winter of 1842, during the brief period of two months, and resulted immediately from the sale of liquor.

I shall not enter into details, but content myself by laying before the reader a mere synopsis of facts.

In November, the American Fur Company, from Fort John, sent a quantity of their drugged liquor to an Indian village, on Chugwater, as a gift, for the purpose of preventing the sale of that article by their competitors in trade. The consequence was, the poor creatures all got drunk, and a fight ensued, which ended in the death of two head chiefs, Bull Bear and Yellow Lodge, and six of their friends, —besides the wounding of fourteen others, who took part in the affray.

Soon after, an affair occurred from the same cause, resulting in the death of three.

About the same time, another of like nature took place in the Chyenne village, and three more were killed.

Several were also killed, in the interval, in the vicinity of the Chyenne and Missouri rivers, by their friends and companions, while under the maddening influence of intoxicating drink, —the precise number is not known.

The very last trade at the close of the season, produced its usual deeds of bloodshed and murder. Two Indians were killed, and the person who sold to them the vile article narrowly escaped with his life.

I might go on still further with the sickening sketch; but, as enough has already been said to shock the sensibilities of the reader, in endeavoring to afford him some idea of the enormities and untold horrors connected with this criminal traffic, I must forbear.

The liquor used in this business, is generally third or fourth proof whiskey, which, after being diluted by a mixture of three parts water, is sold to the Indians at the exorbitant rate of three cups per robe, —the cups usually holding about three gills each.

But, notwithstanding the above unconscionable price, a large share of the profits result from the ingenious roguery of those conducting the trade.

Sometimes the measuring-cup is not more than half full;—then, again the act of measuring is little other than mere feint, (the purchaser receiving not one fourth the quantity paid for.)

When he becomes so intoxicated as to be unable to distinguish the difference between water and liquor, (a thing not rare,) the former is passed off upon him as the genuine article.

Another mode of cheating is, by holding the cup in such a manner that the two front fingers occupy a place upon the inside, and thus save to the trader nearly a gill at each filling.

Some have two cups, (one of the usual size, and the other less,) which are so exchanged as to induce the purchaser to believe he is obtaining a third more than he actually receives; and others, yet more cunning, fill the measure half full of tallow and deal out the liquor from off it, —the witless dupe, not thinking to examine the bottom, supposes he receives the requisite quantity.

No wonder the Indian, with such examples before him, learns to hate the white man, and despise and abhor his boasted civilization. No wonder he looks with an eye of suspicion, alike upon his religion and his learning, and revolts at the thought of either, as the ingenious devices of scientific roguery. He is taught all the white man's vices before he learns any of his virtues. The emissaries of Satan, by their untiring efforts, effectually stop his ears, blind his eyes, and harden his heart, ere

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

yet the heralds of the Gospel set foot upon his soil, to tell him of the blessings of Christianity, and the way to happiness and to heaven.

If the Indian is bad, it is because the white man has made him so. Uncontaminated by intercourse with the offscourings of civilization, who come to cheat and despoil him of his property, and deprive him of his comforts, you find him quite a different being. You find him brave, generous, and hospitable, as well as possessed of many exemplary moral qualities. If he is a savage, he might, in many respects, prove a safe and worthy teacher to those who pride themselves upon a more enlightened education.

He has a heart instinctive of more genuine good feeling than his white neighbor—a soul of more firm integrity—a spirit of more unyielding independence. Place the white man in his condition, divested of all the restraints of law, and unacquainted with the learning and arts of civilized life—surrounded by all the associations of the savage state—and the Indian, by comparison, will then exhibit, in a more striking light, that innate superiority he in reality possesses.

No: The Indian should not be despised. He holds weighty claims upon our pity, our compassion, and our respect, but never should he be despised.

Old Bull Tail, of whom I had occasion to speak in a former chapter having forgotten the wholesome sentiments he advanced at the time referred to, took it into his head to have a spree. But, as he was not possessed of the means to obtain the wherewith, he adopted a somewhat novel substitute.

He had an only daughter,—and she was handsome—the pride of her family and the boast of her village. She was lovely, and all the high qualities of a princess were exhibited in her deportment. But, Bull Tail must drink; why not give his daughter to the Yellow-hair and receive from him a keg of liquor as a marriage present?

This thought was acted out, and one morning the old chief came to us, followed by his daughter, who, aware of her father's designs, gave vent to her grief in a flood of tears.

As he entered the door, our trader addressed him:

Trader. Bull Tail is welcome to the lodge of the Long-knife;—but, why is his daughter, the pride of his heart, bathed in tears? It pains me that one so beautiful should weep.

Bull Tail. Chintzille is a foolish girl. Her father loves her, and therefore she cries.

Trader. The contrary should prove a greater cause for grief!

Bull Tail. The Yellow-hair speaks well, and truth only falls from his lips.

Trader. How, then, can she sorrow? Bid her speak and tell me, that I may whisper in her ear words of comfort.

Bull Tail. Nay, pale-face; but I will tell thee. Bull Tail loves his daughter much—very much; he loves the Yellow-hair much!—he loves them both, very much. The Great Spirit has put the thought into his mind that both might be alike his children; then would his heart leap for joy at the twice-spoken name of father!

Trader. What do I hear? I know not the meaning of thy words.

Bull Tail. Sure, pale-face, thou art slow to understand! Bull Tail would give his daughter to the Yellow-hair,—for who like him is so worthy to take her to his lodge? Bull Tail has for a long time called the pale face his brother, and now he would claim the Yellow-hair as his son. Loves he not Chintzille?

Trader. Were I to deny my joy at the words of Bull Tail, my tongue would lie! The Yellow-hair has

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

no wife, and who, like the lovely Chintzille, is so worthy that he should take her to his bosom? How could he ever show his gratitude to her noble father!

Bull Tail. The gift is free, and Bull Tail will be honored in its acceptance, —his friends will all be glad with him. But, that they may bless the Yellow-hair, let him fill up the hollow-wood[19] with fire-water, and Bull Tail will take it to his lodge; —then the maiden shall be thine.

Trader. But, Chintzille grieves, —she loves not the Yellow-hair!

Bull Tail. Chintzille is foolish. Let the Yellow-hair measure the fire-water and she shall be thine!

Trader. Nay, but the Yellow-hair may not do this. Chintzille should never be the wife of him she loves not!

The old man continued to plead for some time, in order to bring to a successful issue the negotiation by which he hoped to “wet his whistle” and gain a son-in-law, —but all to no purpose. Our trader could not be persuaded to form an alliance so entangling upon any such terms, and the chieftain left with all the lineaments of disappointment and chagrin depicted upon his countenance.

The mode of marriage prevalent among the mountain and prairie tribes would seem rather strange and somewhat unfair to the better informed of civilized communities.

The lady has little to say or do in the business. When an Indian takes it into his head to get married and meets with the squaw suiting his fancy, he wastes no time in useless courtship, but hastens to her father and demands of him to know how much he loves his daughter and what gift of horses will make his heart rejoice in a son-in-law?

The father, after consulting with his daughter and her mother, states the terms. If these prove agreeable to the suitor, he immediately accepts them, and the twain “become one flesh” without further ceremony.

In case the woman has no father, her eldest brother fills his place, —and if she have neither father nor brother, her next nearest relative assumes the responsibility of bestowing her in marriage.

If she be the eldest daughter, and has unmarried sisters, the bridegroom becomes equally entitled to them, and is looked upon as their common husband.

The first year succeeding this new relation, the bride’s family consider all the horses and other valuables of the new-made husband as their own; the second year he is permitted to retain his personal property for the use of himself and wife; —but the third year he enjoys an equal right with his relatives to everything in their possession.

The decision of parents in the bestowment of a daughter in marriage is generally controlled by the largeness of the amount offered; thus showing that civilized life is not the only condition in which individuals are sometimes governed by sordid motives in pronouncing upon questions of such vital importance to the welfare of others.

The female is the only party upon whom the marriage contract is considered binding.

The man may sunder it at any time suiting his convenience or caprice. He has the power, even, to dispose of his wife to another, or, at a mere word, to absolve himself from all obligation to her. In case of the latter, the discarded one returns to her father’s lodge, —ready again to test the realities of this uncertain relationship, whenever an opportunity presents itself meeting with the approval of those who assume to make barter of her affections and person.

A woman, to be happy in this state of society, should never indulge in that fancied passion, pictured in such glowing colors by crack-brained poets and novel-writers, called love; —or, if she

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

has the assurance to do otherwise, it should be of that more versatile and accommodating order, so often exhibited in more refined circles, which may be reclaimed and transferred as interest or circumstances suggest. Her affections are not at her own disposal, and, to render life tolerable, she must learn to love only as she is loved, and to love herself above all others.

Next to horses, women constitute an Indian's chief wealth. This circumstance not unfrequently results in one individual appropriating to himself six or eight.

The squaw is compelled to dress robes and skins, make moccasins, cure and take care of meat, attend to the horses, procure fire-wood, and perform sundry other little drudgeries that an Indian will not do. Through her he becomes possessed of the means of procuring from the whites such articles as his necessities or fancy may require. A plurality of wives with him, therefore, is more a matter of economy than other wise.

CHAPTER X.

Tahtunga-egoniska. High gaming. Weur-sena Warkpollo, a strange story. The Death Song, a tale of love. Medicine-men. Extraordinary performance of Tahtunga-mobellu. Wonderful feats of jugglery.

AMONG our daily visitors was Tahtunga-egoniska, a head chief of the Brulé village.

Years had bleached his locks with their taming frosts and taught him self-government. Well disposed as a man, he never became a participant in those disgusting scenes of intoxication that almost continually transpired around us. He was a mere looker on — a moralizer; and, as he witnessed the blameworthy conduct of his people, an ill-suppressed sigh was frequently audible, and the inward workings of regret were plainly defined upon his countenance. Melancholy too had left her traces upon him, and, as he sat day by day in gloomy silence, he seemed the very impersonation of grief.

Whenever the throng dispersed for a few moments, he would improve the opportunity for conversation with us; for in the benevolence of his heart he loved the whites, and was greatly pained at the injuries and injustice it was so often their lot to endure.

But he had a story of his own to tell; it was a tale of affliction — a stab at the best feelings of a father's heart! And, by whom? By the very whites he loved! Aye, by the very men whose business it was to degrade his people and ruin them by the contaminating effects of an unhallowed intercourse!

Six months had scarcely yet passed since the old chief had been called to mourn his youthful hope, and the pride and joy of his declining years — his first-born son! And that son had fallen by the hand of the white man!

Still, the sorrow-stricken father harbored no thought of revenge; he sought nothing for himself save the locks of that son, that he might hang them within his lodge, and gaze upon them and weep!

His simple tale was so touching in its nature it served to enlist the deep sympathies of our hearts. We began to regard him with much deference, and felt quite at home in his company. He would frequently entertain us with his anecdotes as occasions suggested, and at such times he invariably proved both agreeable and communicative.

The history of his own life, too, was far from uninteresting. He was the only one of the Brulé

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

chiefs, then living, who had signed the first treaty with the whites, since which he had ever observed its stipulations with scrupulous exactness, and still carefully retained a silver medal bestowed upon him by the Government agent at that time.

Some of his stories were garbed with a strange romance, and though they may appear foreign to truth in many respects, I cannot resist the temptation of presenting a few of them to the reader. One day, several Indians had betted largely upon a "game of hand;"[20] this called forth from the old man the following story:

"When a young man I delighted in war, and seldom did a party of our people visit the enemy that included me not with its number. These scars tell where I stood when arrows flew thick—hastening to spill the blood of the brave.

"Rarely did we return empty-handed from the foeman's land—without horses to ride or scalps to dance. Yet, at times we came back like fools, and were ashamed to appear at the soldiers' feasts.

"One of these times I well recollect, and I will tell of it to my white children, that they also may remember it.

"We were proceeding against the Crows, and, like experienced warriors, had sent our spy in advance to look for the enemy. Hurrying on, in momentary expectation of a conflict, the stout hearts of our braves were appalled by his return without robe or arms, and scalpless—and with a face suffused in blood.

"This was his story: The enemy, aware of our approach, were awaiting us in great numbers. Encountering their scouts, he had been robbed and scalped, and left for dead. In this situation he lay till darkness shut down upon the mountain and the night-breeze gave him strength to meet us and advise our speedy return.

"Believing the strange tale, we hastened to revisit our lodges, and be laughed at.

"Three moons sped, and we again penetrated the land of the foemen. The scalpless warrior, far in advance of the main party, once more discharged the duties of a spy.

"This time a whoop of triumph announced the result of his mission, as he made his appearance with the scalps of two, waving from his spear.

"He tarried not to relate his adventure, but urged us instantly onward. Following him, we were led to the enemy; —we fought and were victorious.

"Among the slain was one whose scalp was wanting. Who has done this? asked the wondering braves. But none answered. Our spy, smiling, at length broke silence:

" 'Behind yon hill,' said he, 'a fountain chants melody fit for warriors' ears, —let's to it, that we may drink.'

"Following his direction, he led to a silvery spring overhung by crags and shaded by cottonwoods.

" 'Drink, warriors,' he exclaimed; when, withdrawing abruptly, he soon returned, and with the arms and robe which were his own in other days.

" 'Warriors,' resumed the spy: 'you wondered at my mishap, and amented my hard lot when last we visited the Crowman's country; —you wondered at the condition of one among the recent slain, and asked for a reason;—and, doubtless, you wonder still more that I now stand before you bearing the store of which I was deprived!—and fain you would know in what manner I obtained the hair of two.

" 'Three times has the night-queen turned her full face to smile upon the prowess of Lacota arms, since at this very spot I met an enemy. We rushed towards each other for the attack. 'Twas then he

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

cried:

“‘Are we not both braves? why should we fight? When our people meet in the fray, then may we join arms, —till then, a truce.’

“‘To this I replied,

“‘Says Crowman peace? — then, be there peace.’

“‘Thus said, we shook hands and sat down by the fountain.

“‘Willing to amuse the foe, I gathered a pebble and proposed a game of hand. The challenge was accepted, and we played, —first, arrow against arrow, then bow against bow, robe against robe, and scalp against scalp.

“‘I was unsuccessful and lost all, —arrow, bow, robe, and scalp. I gave up all, but with the extorted promise that we should here meet again for another trial of skill.

“‘True to the word, we did meet again. We played, and this time, the Good Spirit showed me kindness.

“‘Winning back arrows, bow and robe, I staked them all against the lost scalp. The game was a close one; but again the Good Spirit favored me, and I won.

“‘Crowman,’ said I, ‘scalp against scalp.’

“‘The banter was accepted, and the play continued. He lost, and I, with my winnings, arose to leave.

“‘Warrior,’ exclaimed the luckless player, ‘meet me in the fight, that we may try the game of arms.’

“‘Thy words please me,’ I answered. ‘Will the Crowman name the place?’

“‘A valley lies beyond this hill, —there my people await their enemies, and there let me hope to see you with them.’

“‘To that place I led you. We fought and conquered. My opponent at play was among the slain. Need I tell you who took his scalp?’ “

The old man seemed to take pleasure in acquainting us with the manners and customs of his people, and was ever ready to assign a reason for any of them, whenever such existed. He repeated to us the names of all the streams, mountains, and prominent localities of the country, and explained the causes of their several christenings.

Some thirty miles to the westward of us, flowed a large creek, called by the Indians, “ Weur-sena Warkpollo,” or Old Woman’s creek. This stream is an affluent of the Chyenne river, and takes its rise at the base of a mountain bearing the same name.

The mountain is an object of great veneration with the Sioux, who rarely enter into its neighborhood without bestowing upon it a present of meat. The old man entertained us with the following explanation of a custom so singular:

“My grandfather told me a tale he had received from the old men before him, and it is a strange one.

“Many ages past bring us back to the time when the Lacotas lived in a country far above the sun of winter.[21]

“Here, then, the Shoshone reared his white lodge, and scoured the prairies in pursuit of game; while, as yet, the whole country abounded with lakes and ponds of water, and only the highlands and mountains were left for the buffalo and deer.

“But years passed on, —the mountains and highlands continued to prey upon the waters, and the creeks and rivers gradually reduced the limits of their possessions.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

“Years again fled. The Shoshones, attracted by some better region, far away, or driven from their homes by the hostile encroachments of other tribes, gave place to the Scarred-arms.[22]

“In the course of generations, the Lacotas and the Scarred-arms war red with each other; they fought with varied success for many years.

“Once a party of the Lacotas penetrated into the heart of the enemy’s country; on their return, they fell into an ambuscade, and only six of them were left to tell the fate of their companions.

“Hotly pursued by the Scarred-arms, they sought refuge in a mountain. There an obscure passage led to a recess in the mountain’s side, which they entered, and were pleased to find within it a gravelly floor, and a pure fountain of sweet water.

“Tempted by the conveniences and security of the place, they thought to remain for a few days that they might recover their strength. A small fire was built accordingly, and the six braves seated themselves around it recounting to each other their perils and dangerous exploits, and planning some mode of extrication from their present difficulties.

“Thus busied, a rustling noise from a dark corner of the apartment startled them, —but still more were they aroused by the half-disclosed form of a person moving in the distance. Words gave place to silence, as the warriors, seizing their arms, awaited the feared assault. But the figure, on advancing nearer, proved that of a feeble old woman, who addressed the wondering group in their own language.

“ ‘Children,’ said she, ‘you have been against the Scarred-arms, —you have fought them, —and of a strong party, you alone survive. I know it all.

“ ‘You seek in my lodge a refuge from your pursuers, —and the sound of your voices with the heat of your council-fire has disturbed my rest and awoke me from a long, long trance.

“ ‘Your looks enquire my story.

“ ‘Many ages have gone, (for days, moons, seasons, and ages are painted before me as they pass,) since the Shoshones, who lived where now live the Scarred-arms, visited the lodges of the Lacotas, and bade the prairie drink the blood of slaughtered braves. I was their captive, and with the scalps of the slain I was taken from the graves of my people, many days travel.

“ ‘The Shoshone brought me to this country, when yet the buffalo grazed upon the hills and mountains, only; for the valleys and plains were the home of waters.

“ ‘Living with the Shoshone, I was not happy. I thought of my people, with all those dear to me, and prayed the Good Spirit that I might again behold them ere my passage to the death-land.

“ ‘I fled, hoping, to reach the home of my birth;—but age had enfeebled me, and being pursued, I sought refuge in this cave. — Here, having passed a night and a day in earnest communion with the Big Medicine, —a strange feeling came upon me. I slumbered, in a dreamy state of consciousness, from then till now.

“ ‘But your looks again ask, who are the Shoshones?—what became of them? And from whence were the Scarred-arms?’

“ ‘The Lacotas will soon know the Shoshones, and bring from their I lodges many scalps and medicine-dogs. Divided into two tribes, that nation long since sought home in other lands. One crossed the snowhills towards the sun-setting; —the Lacotas shall visit them, and avenge the blood and wrongs of ages. The other journeyed far away towards the sun of winter, and now live to the leftward of the places where the Hispanola builds his earth-lodge.[23]

“ ‘Then came the Scarred-arms from a far off country, a land of much snow and cold. Pleased with

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

the thickly tenanted hunting grounds that here met them, they stopped for the chase, and, by a possession through successive generations, have learned to consider these grounds as their own. But they are not theirs.

“The Great Spirit gives them to the Lacotas, and they shall inhabit the land of their daughter’s captivity.

“Why wait ye here? Go and avenge the blood of your comrades upon the Scarred-arms. They even now light their camp-fire by the stream at the mountain’s base. Fear not, —their scalps are yours! Then return ye to my people, that ye may come and receive your inheritance.

“‘Haste ye, that I may die. And, oh Warkantunga! inasmuch as thou hast answered the prayer of thine handmaid, and shown to me the faces of my people, take me from hence.’

“The awe-struck warriors withdrew. They found the enemy encamped at the foot of the mountain. They attacked him and were victorious; thirty-five scalps were the trophies of their success.

“On reaching their homes the strange adventure excited the astonishment of the whole nation. The Scarred-arms were attacked by our warriors, thus nerved with the hope of triumph, and were eventually driven from the country now possessed by the Locotas as their own.

“The grateful braves soon sought out the mountain, to do reverence to the medicine-woman who had told them so many good things. A niche in the mountain-side, from whence issued a sparkling streamlet, told their place of refuge; but the cave and the woman alike had disappeared.

‘Each successive season do our warriors visit the Shoshones for scalps and medicine-dogs —and each of our braves, as he passes the Old Woman’s mountain, fails not to bestow upon it his tribute of veneration, or quench his thirst from the creek that bears her name.’

A place on White river—where the stream pours its full force against the base of a lofty peak, and the powerful attrition of its waters has formed a rocky precipice of several hundred feet in height—is known as “The Death Song.” The singularity of this name led me to enquire the reasons which prompted its bestowment. Ever ready to answer questions of this nature, the old chief related the following story:

“Once, on a time, the Oglallas and Burnt-thighs held their encampment upon the river, opposite to the high point of which my son enquires. While there, a dog-soldier<sup>[24]</sup> of the Burnt-thighs received the offer of six horses from an Oglalla brave, for his only daughter —a sweet flower— such an one as oft pierces the warrior’s heart with her charms, when the arrows of enemies fall harmless at his feet. The offer was quickly accepted —for the dog-soldier was poor.

“When Chischille (for that was the name of the fair one) heard she was to become the wife of the Oglalla, she cried for grief, —and so costinate was her resistance, the marriage was deferred for several days on that account.

“But, why did Chischille grieve? She had looked upon a handsome warrior of her own village, and she loved him. She forgot her duty, as a daughter, to love only at her father’s bidding. Her heart had been playing truant and had lost itself in the labyrinths of girlish fancy. Bitter were the fruits of that presumption.

“Chischille, in the interval, contrived to meet the one of her choice, and the two fled towards a distant village, there to live in the undisturbed enjoyment of their youthful loves.

“But, alas, for them! They were pursued, and overtaken. The life of the young warrior atoned for his temerity, —while Chischille was cruelly beaten and brought back to her father’s lodge.

“The Oglalla had already paid the purchase price, and, ere the morrow’s sunset, was to receive his

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

fair prize at the hand of the dog-soldier.

“Chischille, arising with the dawn, fresh-plaited her hair, and arraying herself in her proudest attire, left the lodge. No one thought strange at seeing her thus gaily dressed for her wedding day, and, as she tripped along, many a warrior’s heart beat high and loud at the thought that a creature so lovely was to become the bride of another.

“Directing her course to the river, she crossed it and ascended the high peak upon the opposite side. There, seating herself upon the utmost verge of the precipice, she gazed calmly from its dizzy height.

“In her lofty station, with her raven locks streaming in the winds, and the matchless beauty of her person so enchantingly exposed to view she seemed more like a being of the Spirit-Land than aught human. The sweetest prairie-flower was ne’er halt’ so lovely.

“Her strange attitude arrested the eyes of all.

“‘Why sits she there? —she will fall and be dashed to pieces!’ was the general cry.’ But listen—she sings!’

“‘Why should I stay, —he is gone. Light of my eyes, —joy of my soul, —show me thy dwelling!—

‘Tis not here, —’tis far away in the Spirit Land. Thither he is gone. Why should I stay? Let me go!’

“‘Hear you that?’ said one.’ She sings her death song. She will throw herself from the cliff!’

“At this, a dozen warriors, headed by him who claimed her hand, started to rescue the sweet singer from intended self-destruction.

“Again she chants:

“‘Spirit of Death, set me free! Dreary is earth. Joyless is time. Heart, thou art desolate! Wed thee another? Nay. Death is thy husband! Farewell, oh sun! Vain is your light. Farewell, oh earth! Vain are your plains, your flowers, your grassy dales, your purling streams, and shady groves! I loved you once, —but now no longer love! Tasteless are your sweets, —cheerless your pleasures! Thee I woo, kind Death! Wahuspa calls me hence. In life we were one. We’ll bask together in the Spirit Land. Who shall sunder there? Short is my pass to thee. Wahuspa, I come!’

“Upon this she threw herself forward, as the warriors grasped at her; but, leaving her robe in their hands, she plunged headlong and was dashed to pieces among the rocks below![25]

“E’er since, the young warrior sighs as he beholds this peak, and thinks of the maiden’s death song.

“Conversing upon the subject of medicine-men, he was asked, why those individuals are so highly esteemed by his people? To this he replied:

“These men are regarded as the peculiar favorites of the Great Spirit, to whom is imparted a more than ordinary share of His power and wisdom. We respect them, therefore, in proportion to the abilities they receive, even as we reverence the Great Spirit.”

Here the question was proposed, how are their abilities above those of others?

“The Yellow-hair counts as his soldier Tahtunga-mobellu, — man of strong medicine. To him the Great Spirit has imparted the power of healing, by imbibing, at pleasure, the diseases of the sick, and discharging them from his eyes and nose in the form of live snakes.[26]

“On a time, years past, our young men went to the Pawnees and came back crying; for sixteen slain of their number were left to grace an enemy’s triumph.

“It was winter, and the moans of men and maidens mingled with the howling winds. Sorrow beclouded every brow, and brave looked upon brave as if to enquire, ‘Who shall wipe out this disgrace?’ Then it was a medicine-chief stood up, and his words were:

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

“Be it for me to consult the Good Spirit.’

“So saying, he entered his lodge alone, nor suffered any to come near during the long fast that followed. Darkness had closed four times upon the prairie, and the sun again hastened to hide behind the mountain peaks, when, calling the young men to him, the medicine-man said:

“Fetch me now meat and water, with a new robe, and bid my people come near, that they may know the words that I would speak.’

“The obedient braves made haste and did as bidden. Folding the robe, he sat upon it and partook of the refreshments placed before him. After eating he arose, and six large snakes, crawling from the robe one after another, sprang to his shoulder, and, whispering in his ear, vanished from sight. The last snake had just told his message when the chief began:

“‘The Good Spirit wills it, that we remove from hence. Three moons being dead, let three hundred warriors return, and their hearts shall be made glad with medicine-dogs and the scalps of enemies.’

“The village left, and, at the time appointed, the warriors returned. They met the enemy, —fought, and were victorious. Sixty-three scalps and one hundred medicine-dogs were the fruits of their success.”

Before dismissing the subject, many other particulars were cited in proof of the extraordinary abilities of different medicine-men, but the above being the most remarkable, I have thought proper to pass over the remainder in silence.

NOTE.— An account, still more wonderful than either of the foregoing, was subsequently narrated in my hearing, while among the Arapaho Indians; and, without vouching for the truth of all its particulars, I am unwilling to withhold it from the reader.

The performance alluded to is said to have occurred, some three years since, in the presence of the whole Arapaho village, incredible as it may seem. The actor was a Riccaree by nation, and is well known to the mountain traders.

In the centre of a large circle of men, women, and children, stood the subject of the appended sketch, stripped to the waist, as the gunner’s mark. A shot perforated his body with a bullet, which entered at the chest and emerged from the opposite side. He instantly fell, and the blood flowing in streams dyed the grass where he lay, and everything seemed to prefigure the reality of death.

While in this condition, his wife approached and besprinkled his face with water; soon after which he arose, as from a slumber —the blood still pouring from him. Bepastering his wound with mud before and behind, the blood ceased to flow, when he commenced yawning and stretching; in a few minutes the plaster was removed by a pass of the hand, and neither blood, nor wound, nor the sign of a scratch or scar appeared! There stood the self-restored medicine-man, before the wondering throng, alive and well, and in all the pride of his strength!

He then brought his naked son into the ring, a lad of some eight years, and, standing at a distance of several yards, bow in hand, he pierced him through and through, from diaphragm to vertebra, at three successive shots.

The boy fell dead, to every appearance, and the thick blood freely coursed from his wounds. The performer then clasped the body in his arms and bore it around the ring for the inspection of all, three times in succession. Upon this he breathed into his mouth and nostrils, and, after suffusing his face with water and covering his wounds with a mud plaster, he commenced brief manipulations upon his stomach, which soon ended in a complete recovery, nor left a single trace of injury

about him. Both of these feats, if performed as said, can scarcely admit the possibility of trick or slight of hand, and must stand as the most astonishing instances of jugglery on record.

CHAPTER XI.

Food for horses. Squaws and their performances. Dogs and dog-meat. Return to Fort. Starvation. Travel by guess. Death from drinking. Medicine-making. A Burial. Little Lodge and the French trader. A speech in council. Journey to White river. High winds and snow. Intense sufferings and painful results.

A LARGE grove of cottonwood near us, day after day was graced by groups of village squaws, armed with axes, for the procurement of horse food.

The bark of this tree is eaten freely by both horses and mules, and answers well as a substitute for corn or oats. Animals will thrive upon it in a remarkable manner, and even in the summer months they prefer it to grass. The bark of red elm is also used for the same purpose.

The operations of the squaws at such times contributed greatly to our amusement. Climbing fearlessly to the topmost branch of the highest tree, they would there lop off the surrounding boughs, with as much apparent ease as though footed upon terra firma.

And then, the enormous loads they would carry, lashed together with cords and slung to their backs, were enough to make a giant stagger. Dogs, harnessed to travées had their part to perform, and oftentimes were they a source of vexation to their mistresses.

A squaw, trudging along under a full donkey-load of cottonwood, and followed by a squad of half-naked children, presented a spectacle quite interesting; but this was rendered rather comical, withal, when two or three draught dogs with their heavy-laden travées reluctantly brought up the rear—every now and then lying down for weariness, or squatting to loll and gaze at their companions.

Now, she coaxes and caresses to urge them forward—they still delay. Then she turns briskly towards them with a stick—get out, dogs! — “Yierh! Warktashne ceicha,” cries the squaw, accompanying her denunciation with blows, and away go the yelping troop as fast as legs can carry them. Dogs are the necessary appendage of every Indian lodge, and generally form an equal portion of the village population. They present almost all the different varieties of the canine species, from the wolf to the spaniel, and from the spaniel to the hairless dog of Africa. The wolf, however, is predominant, and, taken together, they more assimilate a gang of wolves than anything else. Indeed, the different varieties of prairie wolves hold familiar intercourse with the village dogs, and associate with them on friendly terms.

The species used for draught, is a large, stout-built, wolfish-looking creature, of the Exquimaux breed. Trained to his duties in early life, he is generally both submissive and tractable. The drudgery of a squaw, which is at all times onerous, without his ready aid would prove past endurance. But these dogs are also useful in another respect. Their flesh furnishes an article highly esteemed for food, and which almost invariably graces the soldiers' feast and every other scene of conviviality. However much the squamishness of the reader may revolt at the suggestion, justice impels me to say, the flesh of a fat Indian dog, suitably cooked, is not inferior to fresh pork; and, by placing side by side select parts of the two, it would be no easy task even for a good judge to tell the difference, either by looks or taste, unless he were previously informed.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Towards the last of January, buffalo having left the vicinity, the Indians, as a necessary consequence, were compelled to move. A great scarcity of provisions prevailed among them, and we ourselves were scarcely better off than they.

Our stock in hand was nearly exhausted, and an abandonment of the post became absolutely necessary, — a thing, however, which could not be performed without a fresh supply of horses and cattle from Fort Platte. For this purpose, I volunteered my services, and, accompanied by two engagés, was promptly under way.

A few hours' ride brought us to the head of White river, where, consuming at a meal our scanty eatables, from that onward we were left entirely destitute.

This was the first occasion subjecting me to the pains of hunger for so long a time. The second day I experienced the greatest annoyance, and then it was I felt some of the realities of starvation. The third day, however, I awoke in the morning scarcely thinking of breakfast. In fact, my appetite seemed quite passive, and the only sensation I felt was a kind of weakness and lassitude, evincing the lack of proper nourishment.

The morning was cloudy and threatening. Soon after leaving camp, snow began to fall, thick and fast. The day proved so dark, objects were indiscernible at the distance of a hundred yards in advance. Travelling, as we were, over a trackless prairie, with nothing to guide us but the wind and the position of the grass, it was by the merest accident we reached our destination a few minutes before nightfall.

Our sudden appearance was the occasion of general surprise to the Fort hands, and, after a brief explanation, we began to make amends for previous abstinence.

At first, a few mouthfuls sufficed, — but soon I again felt hungry and could be satisfied only with a double quantity, — in an equally short time my stomach demanded a still further supply, and, by the next day, hunger became so keen it seemed almost insatiable. An interval of three or four weeks was requisite before it assumed its wonted tone.

During our stay here, an Indian family, occupying one of the Fort rooms, indulged themselves in a drunken spree.

Having procured a quantity of the American Fur Company's liquor, the effects of their lavish potations soon became manifest to all within hearing distance. But the din of drunken revelry ere long assumed the wail of mourning and sorrow.

Hearing the strange commotion, I entered the room to ascertain the cause. There lay, helpless upon the floor, and apparently at the point of death, a squaw of some eighteen years;— she, in her eagerness, had swallowed nearly a pint of the vile stuff, undiluted, and now experienced its dreadful consequences.

But most conspicuous in the throng was a large, obese, cross-eyed Indian, earnestly engaged in his medicine-performances for her recovery.

A breech-cloth was his sole garb, as, with eyes half strained from their sockets and volving in a strange unearthly manner, he stood, first upon one foot and then upon the other, alternately—then, stamping the floor as if to crush it through, and meanwhile, grunting, screeching, and bellowing, and beating his breast or the wall with his clenched fists, — then, with inhaled breath, swelling like a puff-ball, he would bend over his patient and apply sugescents to her mouth, throat and breast.

This done, sundry ejections of saliva prepared his mouth for the reception of an ample draught of

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

water, with which he bespatted her face and forehead.

But yet, all these extraordinary efforts failed to produce their designed effect. The poor squaw grew weaker, and her breathing became fainter and more difficult.

Some powerful restorative must be adopted, or she will soon be beyond the reach of medicine, —so thought the officiating doctor; or, at least, his succeeding antics indicated that such were the cogitations of his mind. Standing for a minute or two in the attitude of reflection, an idea stuck him. Ah, he has it now! This cannot fail.

Snatching a butcher-knife and hastening with it to the fire, he heats the point to redness upon the coals, —then balancing it between his teeth, at a toss he flings it vaulting above his head and backward upon the floor, then, re-catching it, he goes through the performance a second and a third time.

Thus premised, he addresses himself with threefold energy to the grotesque and uncouth manoeuvres before described. If he had stamped his feet, he now stamps them with a determination hitherto unknown;—if he had thumped his breast and beat the walls, he now thumps and beats as if each blow were intended to prostrate the object against which it was directed, — if he had grunted, screeched, and bellowed, he now grunts, screeches, bellows, and yells, till the very room quakes with the reverberations of demoniac noise;— if he had gagged, puffed, and swelled, he now gags, puffs, and swells, as if he would explode from the potency of his extraordinary inflations.

Then, with an air of confidence, he hies to his patient and commences a process of manipulation from her breast downwards, and reverse, —and then again he repeats his previous operations, with scrupulous exactness and unsparing effort, in all their varied minutiae.

But, alas for the medicine-man!—the squaw died, despite the omnipotence of his skill!

Then was enacted another such a scene of piteous wailing, as Indians alone have in requisition, as vent for their grief.

After the usual preliminaries, the corpse of the deceased was placed upon a scaffold beside that of Susu-ceicha, the old chief of whom I have spoken of in a former chapter. Each member of the bereaved family deposited a tuft of hair in the sack containing the meat and trinkets placed beneath her head. A smooth piece of cottonwood slab was then affixed to the scaffold, upon which were traced, in vermilion, certain quadrangular characters of unknown meaning, —answering well to the idea of an inscription of name and age.

A difficulty occurred about this time between a trader of the American Fur Company and an Oglalla chief, known as Little Lodge.

The latter had become crazed by liquor, and, being rather turbulent, was put out of the Fort. But, effecting a re-entrance, he again proved equally annoying. The trader then commenced quarrelling with him, and undertook to seize his arms. This the Indian resisted, when the trader discharged a pistol at him, but missed his object. Here was a deadly affront, that blood alone could wipe away.

With great difficulty, the Indian was finally disarmed and bound. He was thus secured till the next day, when he was liberated;—still, however, he muttered threats of revenge.

Two or three weeks subsequently, Little Lodge was present at a soldiers' feast, and the question of war with the Americans was a prominent subject of consideration.

Several speeches were made, both for and against it; and, though the prevailing sentiment seemed

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

to be of an adverse kind, it scarcely required a half dozen words to turn the scale upon either side. Little Lodge arose to address the council, and the friends of the whites, knowing the vengeful spirit that yet rankled in his bosom at the remembrance of his recent injuries, began to fear for the continuance of peace.

Contrary to the universal expectation, he contended for its maintenance. "But," said he, "Little Lodge has grievances of his own, and they call for redress.

"There is one among the pale-faces whose blood must wash away the foul blot that rests upon the name of Little Lodge. I know him well. He is not a Long-knife. The Long-knives are all the friends of Little Lodge. Let the Lacota take them by the hand whenever he meets them upon the prairie. It is good that he do so. They are very many and exceedingly rich. Their country is a large one, and far away towards the sunrising. They, too, are strong for war. They have big hearts and strong, and they are very good to the red man. They bring to him many good things; why, then, should the Lacota hate the Long-knife?

"Do my brothers ask who it is of the pale-faces the Little Lodge would remove from the light of day? Know, then, he is not of the Long-knives, — he is of the Warceichas, (Frenchmen.) The Warceichas are not Longknives!

"And, do my brothers ask, who are the Warceichas?

"Aye, who are they? Little Lodge cannot tell; — who of all the Lacotas can? Who ever heard of the country of these men? No one. They have no country, — they are no people. They are as the wandering dogs[27] that infest our hunting grounds and prey upon the game formed by the Good Spirit for the red man's sustenance. They steal into the land of the red man, and sneak around from place to place; — for they have no home; they have no country; they are no people!

"One of these it was who bade the medicine-iron speak its death-word to Little Lodge, and sought to spill the blood of a Lacota brave, after that he had made him a fool by means of his thickened[28] fire-water!

"Should Little Lodge fall by the hand of the Warceicha? He might fall by the hand of a Long-knife, and the nation would honor his memory, — but never, should the Warceicha bring him low!

"Then, is it not good that Little Lodge should be avenged upon this lost dog — this outcast of the world — that the whelps of a motherless breed may cease to insult and wrong the Lacotas? Which of all my brothers will say nay?"

The address was received in silence, — no one presuming to oppose an answer to its sentiments. Whether the speaker executed his threats of vengeance against the offending trader, I am yet unadvised.

Having remained two nights and a day at Fort Platte, we again started for White river, taking with us three yoke of oxen and several horses, one of which was laden with dried meat.

The snow greatly retarded our progress from the first, and so obscured the trail we were compelled to travel mostly by guess. The sun, too, was shut out by a tenebrous atmosphere, and we could judge of our proper course only by observing the movements of the clouds,[29] with the general range of the hills and ravines, or inclination of the grass.

The broad expanse of unbroken snow lying from Rawhide to Leau-qui court, brought a chill tremor with the thought of crossing it. Yet, go we must! It was no time to falter when the fate of others, perhaps, depended upon our prompt advance.

But the effort was no child's play. If we had experienced a tedious time during a former journey,

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

what could we expect now? The whole interval of thirty miles was covered with snow, that grew deeper and deeper as we proceeded. Every hollow and ravine was filled, and the route otherwise seriously impeded by huge drifts and embankments.

We were frequently compelled to break foot-paths for our animals, and ever and anon pull them by main strength from the deep pitfalls into which they would plunge and become almost lost to view. In this manner our progress was slow, —the average depth through which we waded being but little less than two feet.

The rising of a fierce head wind, piercing as the blasts of Nova Zembla, drove the snow into our faces with mad fury and added immeasurably to our sufferings.

In this manner night shut down upon us, while yet far distant from any camping-place. And, such a night! Oh, storms and deadly winter, foul and fierce! how swept ye “through the darkened sky,” and with your awful howlings rendered “the savage wilderness more wild!”

The creeping cold on every nerve played freely, in haste to sting our vitals, and lay us each “along the snows a stiffen’d corse, Stretch’d out and bleaching in the northern blast!”

The impress of this event can never be effaced from my mind. It was midnight ere we arrived at the timberless *L'eau-qui-court* and struck camp. Our animals needed water, but we had neither axe or tomahawk to cut through the thick ice with which the creek was coated. As a remedy for this lack, all three of us advanced upon it, and, by our united efforts at jumping, caused a lengthy fissure with gentle escarpments towards each shore, that left midway an ample pool.

Having driven the cattle to this, in their clumsy movements upon the ice, two of them fell, and, sliding down the inclined plain, lay struggling in the freezing water, unable to rise. Our only resort was to drag them to the shore by main strength; for, left in their then condition, they must have frozen to death in a very short time.

Here commenced a series of pulling and wrenching, that, in our chilled and exhausted state, we were ill-prepared to endure.

For awhile our efforts proved vain. A backward-slide succeeded each headway-pull, and vexed us with useless toil. Thus we worried for nearly three hours in water knee-deep!

At length, having procured a rope and fastened one end to their horns and the other around a pointed rock upon the shore, and gathering the slack at each successive thrust, we finally succeeded in placing them both, one after the other, upon dry land.

But, now we were in a thrice sorry plight. Not a stick of wood could be raised, far or near, of which to build a fire, and *bois de vache*, the great substitute of the prairies, was too deeply covered with snow for procurement. Our clothes, wet to the waist, were frozen upon us, and the merciless wind, with stinging keenness, pierced us through at every breath, and stood us forth as living monuments of ice!

Could men of iron endure such incomprehensible hardships, —such inexpressible sufferings? Yet we survived them all!

Spreading a few robes upon the snow, we lay down for sleep, dinnerless and supperless. I was now seized with a chill, which lasted for two hours or more; and so violent were its actions I could scarcely keep the covering upon me.

My companions, however, though not similarly afflicted, were worse off than myself. One had his hands and ears frozen, and the other his hands and feet, —the painful consequences of which, as the frost began to yield to the influence of generated warmth, were too apparent in their groans

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

and writhings.

Morning at length came, and the sun arose bright and clear. The winds had ceased their ragings, and a clement atmosphere seemed pouring upon us the balm of sympathy for miseries so recently endured.

But their direful effects were not thus easily eradicated. The feet of one poor fellow were so badly frozen, it was three months before he entirely recovered; while another lost a portion of one of his ears. As for myself, a severe cold settled in my teeth, producing an intensely painful ache and swollen face, that continued for eight or ten days.

It seems almost miraculous that we should have escaped so easily, and often, even after so long an interval, I shudder at the recollection of this anguishing scene.

Two days subsequently we reached our destination, and found all things pretty much in statu quo.

CHAPTER XII.

Another drunken spree. Horses devoured by wolves. An upset. A blowing up. Daring feat of wolves. A girl offered for liquor. Winter on the Platte. Boat building. Hunting expedition. Journey up the Platte. Island camp. Narrow escape. Snow storm. Warm Spring. Pass of the Platte into the prairies. A valley. Bitter Cottonwood. Indian forts. Wild fruit. Root-digging. Cherry tea and its uses. Geology of the country. Soils, grasses, herbs, plants, and purity of atmosphere. Horse-shoe creek. A panther. Prairie dogs and their peculiarities.

OUR intended evacuation of the post was postponed till the week following, and, meanwhile, the few customers, that still hung on, were careful to improve the passing opportunity of steeping their senses in liquor.

Another general drunken frolic was the consequence, ending as usual in a fight and still further attempts upon the life of our trader.

Soon after this, our catalogue of disasters was increased by the death of two horses, which fell a prey to wolves.

The case was an aggravated one, and provoking in the extreme. Both of them were "buffalo horses," and the fleetest and most valuable in our possession, —in fact, they were the only ones of which we ventured to boast. We had others of little worth, so poor and feeble they could oppose none resistance to magpies,[30] and much less to the rapacity of wolves.

But, no. These blood-thirsty depredators, desirous of a feast on fat things, were determined to have it, reckless of cost, —and, the encrimsoned tracks, coursing the snowy plain in every direction where passed the swift chargers ill vain effort to escape, proved that they won their supper at an enormous expense of leg-wear.

Feb. 4th. All things being in readiness, we bade farewell to winter quarters, and commenced our journey.

Crossing the river soon after, on ascending the opposite bank, a cart upset and deposited its contents in the water. The load, consisting of robes and powder, became thoroughly saturated, and we were employed a full hour in fishing it out. The stream being waist-deep and filled with floating ice, amid which we were forced to plunge, our task was far from a pleasant one.

The freight needed drying and we were detained two days for that purpose. Meanwhile the drenched powder was subjected to the experiments of one of our engagés. Having spread it to dry,

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

he was carelessly bending over it, when a spark from the camp-fire struck the ready ignitable; a sprightly flash, enveloping the luckless wight in a sheet of flame, told the instant result. Springing to his feet, he exclaimed:

“Bless my stars! That’s what I call regular blowing up!”

“Ave, aye, my lad,” says one. “You was always a bright youth, —but never before did you appear half so brilliant. ‘Tis a fact, or I’m a liar!”

Resuming our course, the second night following was passed at a pool of water between Leauqui-court and Rawhide. Here, having placed my shoes under my head for better security, I slept soundly till morning. Rising at an early hour, I turned for them, but one was missing, and, after searching far and near, it could not be found.

The mystery of its disappearance, however, was fully solved by the numerous wolf tracks that appeared on all sides;—some straggling marauder had stolen it during the night, and quietly deposited it in his empty stomach as the substitute for an early breakfast.

Our camp at Rawhide was beset with a throng of Indians from an adjoining village, who, as usual, were loudly clamorous and importunate for liquor. A beautiful young squaw was brought in, to exchange for that article. However, their solicitations were of no avail and their vitiated appetites went unappeased.

On the 12th of February we reached the Fort, and thus ended our disastrous and eventful expedition.

Winter in the neighborhood of the Platte had been remarkably mild, and at no time during the season had the snow remained upon the ground to exceed a day. Vegetation, even thus early, was beginning to put forth, and bring to view the beauty and loveliness of spring.

Preparations were already on foot for building a boat for the transportation of furs to the States by way of the river, and, at the solicitation of the company’s agent, I reluctantly consented to take charge of it during the voyage, —thus deferring, for the present, my design of visiting Oregon.

The timber used in its construction was procured from the neighboring pine hills, and prepared by a laborious process of hand, with the aid of a pit-saw. The ribs and other timber were obtained from an ash grove, a few miles above the Fort, and three men were busily engaged in putting all things in readiness for the expected spring rise—an event which seldom occurs before the 15th of May.

The winter’s trade having closed, an interval of nearly three months’ leisure followed, which resulted in a hunting expedition that included my self with six others.

Anxious to explore the mountains, we set our faces westward; but, owing to the reported closeness of game en route, very little provisions were taken with other necessaries.

Keeping the river bottom by a rocky ridge for some ten miles, our course led through several beautiful groves and broad stretches of rich alluvial soil, that presented an encouraging prospect to agriculturists. After a few hours’ ride we came to a point at which the stream sweeps round the ridge’s base, causing a vertical wall of lias and sandstone nearly one hundred and fifty feet high. Abandoning the river bottom at this place, we ascended to the high prairie on the left, where an interesting plateau greeted us, extending far away to the south and west, till it became lost in the neighboring mountains. Continuing on a short distance, we again struck the river, at a small opening between two hills, and made camp in a grove of willows.

Opposite this place is a large heavily wooded island, of a blueish loam, upon a substratum of fos-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

siliferous limestone.

Above and below are lofty walls of limestone and ferruginous rock, that, in many places, overhang the sweeping waters at their base, and form roofage beneath which swarms of prairie swallows are wont to raise their annual broods.

Consuming our scanty supply of provisions at a single meal, each soon disposed of himself for the night. A mild atmosphere invited to repose; and, enwrapped in a single robe, my troubles were speedily forgotten in a quiet slumber.

But during the succeeding interval, a change came over the spirit of my dream. I was suddenly aroused by the crash of a huge tree, that fell across my bed, and only a providential curve arching upwards, had saved me from instant death!

“Hurra, for me!” I exclaimed, as my startled campmates came clustering around, —” It’s better to be born lucky than RICH!”

The wind was now blowing a perfect hurricane, and the trees tottered around us, threatening every moment to fall. In an hour or so, however, the gale abating, we again addressed ourselves to sleep.

Towards morning, feeling a disagreeable warmth and superincumbent pressure, I was induced to uncover, and, looking out, the cause was explained by the presence of a dense snow that covered the ground to the depth of several inches. The fallen snow was melting fast, and that yet descending soon merged into rain.

A pretty-looking set of fellows were we, in a comparatively short time! —blankets, robes, clothes, and every article about us were wet—soaking wet—and covered with mud. It required an effort of several hours to kindle a fire, so thoroughly saturated was everything with water; —this done, we all gathered around it, and—such a group! —Oh, the beauties of mud and water! A painter might describe it, —I cannot.

If the reader imagines we felt in a superlative good humor while standing there, breakfastless, shivering, and wet, he has conjured up a strange illusion.

It having ceased raining about mid-day, in the course of the afternoon we enjoyed a beautiful sunshine for a couple of hours, which enabled us to assume a better travelling plight; and, favored by a mild atmosphere and clear sky, on the following morning, we again resumed our course.

Striking upon an Indian trail, we bore leftward from the river, and, in a short ride, came to a sand creek shut in by precipitous embankments of limestone, through which our road led by a narrow defile. A transparent spring gushes from the right bank with considerable noise, furnishing a beautiful streamlet to its hitherto high bed, which is known as the “Warm Spring.”

A short distance above the mouth of this creek, the Platte makes its final egress from the Black Hills through a tunnel-like pass, walled in upon either side by precipitous cliffs of red-sandstone and siliceous limestone, sometimes overhanging the stream at their base, and towering to a height of from three to five hundred feet. The high table lands constituting these immense walls, are surmounted with shrubs and occasional pines and cedars, that unite to present a wild romantic scenery.

Continuing on, and bearing still further leftward, we passed a beautiful valley, graced with several springs and a small grove of cottonwood, with cherry and plum bushes, near which rose a conical hill abundant in fossiliferous limestone of a snowy whiteness. A diminutive pond in the vicinity afforded several varieties of the testaceous order, both bivalves and univalves—a circumstance

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

quite rare among mountain waters. The soil of this locality appeared to be a compound of clay, sand, and marl, and well adapted to agriculture.

Passing this, our course led over a gently undulating prairie, bounded on either side by pine hills. The soil was generally of a reddish, sandy loam, intermixed with clay; and, judging from the long dry grass of the preceding year, it was both rich and productive.

Towards night we arrived at a large creek, bearing the name of Bitter Cottonwood, —so called from the abundance of that species of poplar in its valley.

These trees generally grow very tall and straight with expansive tops, — averaging from twenty-five to one hundred and fifty feet in height.

The creek occupies a wide, sandy bed, over which the water is dispersed in several shallow streams. The valley is broad and of a jetty, vegetable mould, variegated, at intervals, with layers of gravel deposited by aqueous currents, and is bounded on both sides by abrupt acclivities leading to the beautiful plateaux and lofty pine hills so abundant in the neighborhood.

The remains of three or four Indian forts were situated adjoining the place selected for our encampment. These were built of logs, arranged in a circular form, and enclosing an area, sufficient for the accommodation of twenty or thirty warriors. The walls were generally about six feet high, with single entrances, and apertures in various places for the use of their defenders in case of attack.

All Indian forts, meeting my observation in subsequent travels, with one or two exceptions, were of the same general description. Some, however are almost entirely roofed in by an arched covering, presenting a coniform appearance. The only exception to this mode of fortification was of a quadrangular form, and in a solitary instance the materials were of rock. The latter structure I shall take occasion to describe in due course.

The valley gave abundant indication of wild fruit at the proper season, such as plums, cherries, currants, goose and buffalo berries, (*shepherdia argentea*.) The signs of game were very plentiful, particularly elk; after camp two or three of us sallied out with our rifles in quest of these wary animals, while others were busily employed in digging for roots to appease the gnawing of appetite, which began to make itself most sensibly felt by all.

About sundown both parties came in, —the hunters quite dispirited, not having seen any thing in the shape of elk or other game, —but the root diggers had been more lucky and brought with them a small supply of nutritious aliments, which were divided equally among the company, and, through scarcely a half dozen mouthfuls were apportioned to each, they answered, to some extent, the designed object.

These roots consisted of two varieties, viz: pomme blanc, and commote.

The pomme blanc, or white apple, is a native of the prairies and mountains, oval shaped and about three and a half inches in circumference. It is encased in a thin fibrous tegument, which, when removed, exposes an interior of white pulpy substance, much like a turnip in taste. It generally grows at a depth of three or four inches, in the soil of hill-sides and plateaux, where is found a reddish clay loam abundant in fragmentary rocks and gravel. The stalk attains a height of about three inches, and in general description is quite like a well known article, common to the States, called "sheep-sorrel." At the proper season it bears a handsome white blossom, that would suffer no disparagement when placed in juxtaposition with many of the choicer specimens of our gardens.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

The commote[31] is a root much like the common radish in size and shape, while a brownish skin envelopes a substance of milky whiteness, soft and nutritious, and of an agreeable taste. It is found most abundant in river bottoms, and requires a rich alluvial soil, well mixed with sedimentary deposits and vegetable matter. It generally penetrates to a depth of about four inches. Its leaves resemble those of the carrot in shape and color, and seldom grow to exceed two inches from the ground, while a stalk equally unpretending, bears a blueish blossom, not without some just claim to beauty.

The pomme blanc and commote are equally good whether boiled or raw and are uniformly harmless, even with those unaccustomed to their use as an article of food.

Making way with our scanty supply, a fire was struck and a kettle of tea prepared from wild cherry bark, which proved quite wholesome.

This, as I ascertained, is a drink quite common among mountaineers and Indians in the spring season, and is used for purifying the blood and reducing it to suitable consistency for the temperature of summer. As the successful performer of the task assigned, I most cordially attest to its virtues, and recommend it as the most innocent and effective medicine, if medicine it may be called, that can be employed for a result so necessary to general health.

Early on the succeeding day we resumed our journey.

I now for the first time noticed a gradual change in the geological character of the country. The soil in many places appears to be sterile, and is generally of a red clayish nature, mixed with sand and fragmentary rock, and strongly impregnated with mineral salts, among which nitre forms a prominent component. Some spots, for a considerable extent, are entirely destitute of vegetation, and present a surface whitened by saline efflorescences, among which nitre and sulphate of soda form a predominant part.

The character of the various moulds (with the exception of the alluvion in the vicinity of the rivers and creeks) is almost entirely primitive, like numerous strata of rocks upon which they repose.

The grass, from the dry specimens of the previous summer's growth, appeared to be of a longer and a coarser kind, and more sparse and isolated. The short buffalo-grass of the grand prairie had almost entirely disappeared, — in some places a blueish salt grass (*herba salee*) showed itself in plats uncropped by game. *Artemisia*,[32] or rather greasewood of the mountaineers, became quite abundant, as did absinthe, or wild sage, together with several specimens of the cacti family, which are the common pest of the mountain prairies.

The purifying effects of saline exhalations, with the odor of the grease. wood and absinthe of the prairies, plateaux and table lands, and the balsam and cedar of the adjacent mountains, afforded an atmosphere, even at this unfavorable season, as aromatic as the air of Eden and as wholesome as the deathless clime of Elysium.

Eastward lay a broad expanse of prairie, bounded only by the horizon, while westward and upon either hand, the high summits of the Black Hills, with their pines and snows, told our ingress to other and wilder scenes.

Our course for some twenty or twenty-five miles led through a broad valley, though occasionally winding among rugged hills of red-sandstone and primitive rock, with denuded sides and level summits, covered with shrubs and dwarfish pines.

Towards night, on reaching a small stream, called Horse-shoe creek, we struck camp. One of the party having killed a buck deer, we were promptly on hand, and not at all backward in obeying

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

the calls of appetite, sharpened by a continuous abstinence of three days.

Deer-meat at this season of the year is very poor eating, —especially that of the buck, —it being both lean and tough; but, indifferent as it was, we were too hungry to be nice.

Previous to reaching camp I rode along the base of a small mountain, some distance to the right of the main party, in quest of game; there I caught glimpse of the first panther I had yet met with. Jumping from my horse, I thought to give him a passing shot, —but he, neither liking my looks nor the smell of gunpowder, made hasty retreat to his mountain home.

Passing leisurely on, my course led through a large village of prairiedogs, which reminds me of having heretofore neglected a description of these singular animals.

I am at a loss to imagine what it is in the habits or looks of the prairiedog that entitles him to that appellation.

In appearance and size he more approximates a large species of the sciurus family, commonly called the fox-squirrel, than anything I can name. His tail, however, is but an inch and a half long, while his ears and legs are also short;—as a whole, perhaps, he is a trifle larger and more corpulent than the fox-squirrel. His “bark” is precisely like the occasional chatterings of that animal, and his color is of a brownish red.

His habits are quite inoffensive and lead him to procure his food from roots and grass. Clumsy in his motions, he seldom ventures far from home — fearful of the numerous enemies that beset him on all sides, both from birds and beasts of prey.

These animals congregate together in large villages, and dig their burrows adjoining each other;—the dirt thrown from them often forming cone-like elevations three or four feet high, in whose tops are the entrances. The latter are nearly of a perpendicular descent for two feet, and then slope away to a great distance under ground.

These villagers locate without regard to the vicinity of water, and it is gravely doubted, by many persons, whether they make the same use of that fluid as other animals;—I have seen large settlements of them in high arid prairies, at a distance of fifteen or twenty miles from either stream or pool of water, and in regions subject to neither rain nor dews.

They are keen of sight and scent, and seemed governed by some code of federative regulations for mutual safety. Their guards are regularly posed at the suburbs of every village, whose duty it is to be continually on the alert and give timely warning of the approach of danger.

This the cautious sentinels discharge by standing erect at the slightest tainture of the air, or startling noise, or strange appearance; and, having ascertained by careful observations its nature and cause, they sound the sharp yelp and chatter of alarm, in a hurried manner, —then, betaking themselves to the watch-towers that protect the entrances to their burrows, from the verge of the steep parapets they again renew their warning notes, when the whilom busy populace, bescattered at brief distances for amusement or food, return with all possible despatch to their ready holes and disappear from view.

The faithful sentinels are last to retreat from their posts, and not unfrequently maintain their ground at the hazard of individual safety.

On the disappearance of the cause of alarm, they are the first to communicate the pleasing intelligence, and soon the reassured community again betake themselves to their business and sports.

The prairie-owl and rattlesnake maintain friendly relations with these inoffensive villagers, and not unfrequently the three heterogeneous associates occupy the same subterranean apart-

ROCKY MOUNTAIN LIFE

---

ments;—a strange companionship of birds, beasts, and reptiles! The prairie dog is extremely tenacious of life, and can seldom be killed with a rifle, unless by a brain-shot; and then, even, it is difficult to secure him, as his companions will immediately convey the carcass into their holes beyond reach.

The flesh of these animals is tender and quite palatable, and their oil superior in fineness, and absence from all grosser ingredients, to that of any other known animals; it is highly valued as a medicine in certain cases.

CHAPTER XIII.

The Creek valley. The Platte as a mountain stream. Cañon. Romantic prospect. Comical bear story. Perilous encounter with a wounded bull. Geological remarks. Division of party. Safety of spring travel. La Bonté's creek. Remarks by the way. Service-berry. Deer Creek. General observations. Moccasin making. Box-elder. Bear killed. Excellence of its flesh. Different kinds of bears in Oregon and the mountains. The grizzly bear, his nature and habits.

HORSE-SHOE creek is a stream of considerable size, that traces its way through a broad valley of rich alluvion, well timbered with cottonwood and box-elder, and affording all the usual varieties of mountain fruit. The grass of the preceding year's growth was quite rank and stout, giving evidence of a fertile soil.

Resuming our course, we again bore towards the river with the design of crossing, and, after a few hours' ride came to its banks, through a broad opening between two ridges of hills that communicated with it from the high prairies and table lands upon the left.

Here, however, fording was impracticable, the stream being too high and the current swift. The Platte of the mountains retains scarcely one characteristic of the river with which the reader has hitherto become so familiarized. It is now confined to a bed of rock and gravel, not exceeding two hundred yards in width, and is of unwonted clearness and transparency. Its banks are steep, and the attrition of high waters discloses a deep vegetable mould in their vicinity, favorable to the growth of grain or other produce. A small bottom of rich sandy loam upon the opposite side lay at the base of a high ridge of table lands, which presented its rugged sides of red sandstone, almost vertical in their position, and ornamented with an occasional stunted pine, or cedar, or shrub of the buffalo-berry, (*shepherdia argentsa*,) while at their base reposed, in huge masses, a profuse medley of fallen fragments, strown around in all the wild confusion of savage scenery.

A few hundred yards to the left, the Platte forces its way through a barrier of table lands, forming one of those striking peculiarities incident to mountain streams, called a "Cañon"[33].

Improving the opportunity afforded by a short stay, I ascended an eminence to enjoy a full view of the grand spectacle. The mountain through which the river finds passage, at this place, is from five to eight hundred feet high, opposing perpendicular walls upon each side, that at many points overhang the narrow stream which sweeps with its foaming waters among the rocks below.

This cañon is nearly two miles in length. About midway of the distance the whole stream is precipitated in an unbroken volume from a ledge of rocks, causing a cataract of some twenty or twenty-five feet descent.

Standing upon the dizzy verge of this frightful chasm, and gazing adown its dark abyss, the aspect is one of terrific sublimity, and such an one as will cause the beholder to shrink back with instinc-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

tive dread!

These walls are principally of red-sandstone, and ferruginous rock, the precise character of which I was unable to determine. Upon the summit noticed an abundance of silex, with some elegant specimens of crystalline quartz, that, reflecting the sun's rays, shone like gems in the crown of a mountain-god; a number of singular ligneous petrifications also met my observation, principally consisting of pine and cedar.

The surrounding country brought within the scope of vision an interesting and romantic scene. The lofty table land in front (with diversified surfaces of granitic rock and vegetable earth, affording a scanty nourishment for herbage and foothold for dwarfish cedars and pines) spread far away to the snow-clad mountains of the north, —while rearward at its base lay the broad valley through which passes the Oregon trail, shut in upon two sides by rugged hills; and farther on arise the snowy sides of the Laramie chain, with their cloud-capped summits. To the left, peak towering above peak, in gradual succession, point to the ridge dividing the waters of the Atlantic and Pacific; and, to the right, the lessening eminences, vallons, and plateaux, guide the eye to where the boundless prairie revels in wild beauty and owns itself the realm of eternal Solitude! How magnificent must be the scene when spring arrays the surrounding landscape in her own loveliness, and bedecks the wilderness with gaudy verdure!

Bearing again to the left, we continued— our course by a winding buffalo-path which soon brought us to a broad valley bordering upon the Platte.

Riding on, we soon came to a large sand creek; and, observing several bulls in the vicinity, we accepted the advantage offered by a small grove of cottonwoods and willows, with a clear spring, and struck camp.

During the day, the oddity of an old Franco-Canadian, who accompanied us, afforded me considerable amusement. Observing that he had carried his gun uncharged for several days past, a circumstance so singular in this country led me to enquire the cause. The old fellow, with the most laughable sang froid, answered as follows:

“Me carry fusee load? No, no! monsieur. No good, carry fusee load sur le printems. Certes, much bear come out—him dangereux. Me live long en le montagnes; oui, no remarque—duo, tree, great many year! Sacre dem bear, —vat you call him en la American?”

“Grizzly bear, I suppose you mean,” said I.

“Oui, oui, monsieur; much graces, monsieur! Oui, gizzle bear; me parler bon American, que no remarque gizzle bear! éntonner! Sacre dom gizzle bear, him come out une day, kill me de près.”

“Well,” continued I; “what has that to do with carrying your gun unloaded?”

“Oui, oui; pardonner, monsieur. Me parler tel une bon Amerian! Me reciter, sacre dem bear, —vat you call him, monsieur? Oh, gizzle bear! Sacre dem gizzle bear, me see him une day, en le printems; big, grand felleu. Shoot him fusee; make him much blood; no kill him. Sacre dem bear, gizzle bear, him jump for me. ‘Wa-r-r-h!’ he say, (imitating the bear.) Bon Dieu! me no stay dare; me bein fast run; me abandonner la fusee; me climb une leetil pine. Sacre dem bear—vat you call him? Ah, oui, gizzle bear. Certes, monsieur, me parler bon American, tel une naturel! Sacre dem bear, him come to tree; no climb him, —he too leetil. Look him all round, den; sacre dem bear, gizzle bear did. See fusee lie; pick him up; cock him fusee, sacre dem bear, gizzle bear did. Take him aim at me; snap him fusee tree time. Oh, mon Dieu! mon Dieu! Suppose him fusee been load! Tonnerre de bateme! Him shoot me; him kill me dead! sacre dem bear, dem gizzle bear

---

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

vould! Certes, monsieur; por le assuré, sacre dem gizzle bear, him kill me! en le vérité, monsieur, him kill me dead!”

“So,” resumed I, “your reason for not carrying your gun loaded is, you are fearful that a bear might chance to get hold of it and shoot you!”

“Certes, monsieur; en le verite! No carry gun load, sur le printermes. Sacre dem bear get ‘old of him, he shoot!”

Towards night, two of our party, who had gone in pursuit of buffalo, returned laden with meat, which, though poor, was far preferable to the lean venison we had fed upon for the last twenty-four hours.

The male buffalo, at this season of the year, is generally fatter than the female, unless it be one of the few barren cows that sometimes are found in large bands; but, neither is worth boasting of. After our long fasting and indifferent fare for six entire days, it is not marvellous that we improved, with quickened zest, the present opportunity of feasting.

The day following, two parties started in quest of game, —one of which killed three bulls, at as many shots, within half an hour after leaving camp.

The other party also killed two, but, in securing one of them, they met with an exciting adventure. Both animals were extended upon the ground, one entirely and the other apparently dead—the hunters, having butchered one of them, proceeded to the other, and were in the act of raising him to the right position for the commencement of operation. The old fellow, not relishing the like familiarity from new acquaintances, sprang to his feet, and made a plunge at the afrighted hunters, who only escaped the fatal charge by one of those admirable feats of quick dodging so often in requisition among mountaineers.

The bull, passing between them, fell head foremost against the ground, two or three feet beyond the spot they had occupied scarcely a second previous; —then rising, with glaring eyes and distended nostrils, and mouth foaming with blood and rage, he pursued one of them in hot chase, for a distance of several hundred yards. So close was the bull in a few leaps, that with a sweep of his horns he gored the hunter’s back, tearing away his pantaloons and coat, and prostrating him upon all-fours at the edge of a deep ravine, down which he tumbled;—the enraged beast followed, but the force of an unbroken headway landed him, with a tremendous shock, against the opposite bank, far beyond the hunter. Improving the advantage thus gained, the latter escaped through the windings of the ravine, and ascended the bank, without the reach of his pursuer.

Having procured his rifle, after nine more shots had riddled the lights of the bull’s carcase, the business of butchering was again commenced and terminated without further mishap.

Our stay at this camp was prolonged for three or four days.

The geological character of the vicinity corresponds very much with that previously remarked, and to describe it in full would seem too much like a repetition. I have, perhaps, said sufficient to give the reader a correct idea of the prominent characteristics of these parts, and hence, for the sake of brevity, shall hereafter forbear further notes upon this subject, unless some uniform change or striking peculiarity should call for a passing observation.

Prior to resuming our journey, a disagreement occurred between us relative to the proposed route.

Some were desirous of proceeding southward into the Plains of Laramie; thence, bearing eastward to Laramie river, following its valley to Fort Platte; —others were anxious to continue up the

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Platte to Sweet Water, or further, and from thence proceed as circumstances or inclination might suggest.

This difference finally resulted in a division of the party — four in favor of the western, and three of the southern route, —myself being included with the former.

Selecting two pack-mules for the conveyance of provisions and camp equipage, the day following we mounted our horses and were under way. With the exception of myself, the present party consisted of old and experienced mountaineers, well acquainted with the country and the nature of Indians. Though, in regard to the latter, little danger was apprehended at this season of the year, as the Sioux had not yet left their winter quarters, and they rarely traverse the vicinity of Sweet Water before the middle of May. Other tribes we might look upon as friendly. We, therefore, anticipated a safe and pleasant excursion.

During the day our course led over a rough undulating prairie, bounded on the right mostly by the river, and on the left by the mountains.

In the heads of valleys and ravines I noticed numerous withered stalks of the bread-root, (*psoralea esculenta*,) indicating its great abundance, and also an increased quantity of absinthe.

At night we encamped at the forks of a small stream called La Bonte's creek. Near the confluence of its waters with the Platte are the remains of a log cabin, occupied by a trading party several years since.

The creek is tolerably well timbered, and the valley, through which it winds its way, affords many beautiful bottoms of rich soil. The rock in the vicinity disclosed a furruginous character, especially the sandstone.

Among the usual fruit-bearing shrubs and bushes, I here noticed the "service berry."

This kind of fruit is very abundant in the mountainous parts of Oregon, where it attains a size but little inferior to the common plum, and is highly esteemed for its superior flavor.

Leaving La Bonte's creek, we travelled by easy stages, for three successive days, and struck camp at the mouth of Deer creek.

Our course led over several beautiful streams, most of them well timbered with cottonwood and box-elder, and occasionally skirted by rich bottoms. Previous to reaching this point we followed along the Platte valley, for a distance of some twenty or thirty miles, which presented several fine bottoms of rich sandy soil upon either bank, together with numerous groves of cottonwood.

The face of the country is generally a succession of ridges and hollows, intersected by ravines and small streams of water.

At Deer creek, and for some distance before reaching it, the mountain chain to our left approaches within four or five miles of the river rising abruptly to a height of from eight to fifteen hundred feet, with frowning brows and pine-clad summits.

Deer creek is one of the largest affluents of the Platte, from the south, between Sweet Water and Laramie. At this place it is about eight yards broad, with a smooth and transparent current that sweeps over a bed of rock and gravel. Its banks are well timbered with large cottonwoods, and present rich bottoms of alluvial soil, very luxuriant in grass.

Even this early in the season, the fresh grass of the vicinity affords tempting nourishment for our animals, and wishing to favor them as much as possible, we have concluded to remain a short time.

During the succeeding interval we were variously occupied in hunting, root-digging, and moc-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

casin-making. The latter is a business in which every mountaineer is necessarily a proficient, and rarely will he venture upon a long journey without the appurtenances of his profession.

The process of shoe-making with him is reduced to its most simple form. He merely takes two pieces of buffalo (or any other suitable) skin, each being a little longer and wider than his foot, particularly towards the heel; these he folds separately, and lays them together parallel with the turned edges; then, rounding and trimming the sides, to render them foot-shaped, with an awl and the sinew of buffalo or other animal, or small strips of thin deer-skin, ("whang,") he sews the vamps from end to end, —then after cutting a tongue-like appendage in the upper side, midway from heel to toe, and stitching together the posterior parts, his task is done.

Having obtained a quantity of sap from a grove of box-elders near camp, we found it a sweet and pleasant liquid, and not inferior to that of maple. Sugar might be manufactured from it, with little trouble.

The leaves of this tree, as well as the general appearance of its wood, greatly assimilate those of maple, and, independent of its bushy tops and stunted, winding growth, it would be hard to tell the difference at a first glance.

Game was plenty on every side, both buffalo, deer, and elk, with some few bear.

The second day after our arrival, one of the latter, attracted by the scent of fresh buffalo meat, ventured within gun-shot of camp. Instantly the balls of four rifles were buried in his carcase. Aroused by this feeling salute, he rushed towards us at the top of his speed, when our horses, affrighted at the strange appearance, broke snorting away over the neighboring hills, and we ourselves took to trees as fast as possible.

In the midst of this general consternation a pistol ball, fired by one of the party, buried itself in the brains of our troublesome visitor and laid him prostrate.

He was one of a species common to the mountains, called the red bear, and must have weighed four or five hundred pounds. The fat upon his back was full three inches thick His skin when stretched would have compared in size to that of a buffalo, and the claws of his feet were full three inches long.

At this season of the year, when these animals first leave their dens, they are much the fattest, —a singular circumstance, if we remember the fact of their remaining holed up for the entire winter, without eating!

After butchering the greasy victim, and bringing our erratic horses back to camp, we regaled ourselves with an ample feast of bear's liver, heart, and kidneys, basted with fat, —a dish that epicures might well covet. Then, filling a large camp-kettle with portions of the "fleece" and ribs, we allowed it to boil till the next morning, and thus prepared another delicious entertainment, such as is rarely met with in any country other than this.

Bear meat, to be tender and good, should be boiled at least ten hours. This is probably the most preferable mode of cooking it, though a roast of the article is far from bad.

There are four several varieties of bear found in the Rocky Mountains and countries adjacent, viz.: The grizzly bear, the black, the red, and the white.

Of these, the grizzly bear stands pre-eminent in ferocity and strength. He will almost invariably flee at the sight or scent of a man, and seldom attacks any one unless wounded. When shot, he generally runs at full speed towards the sound, and woe to the unfortunate hunter who then comes in his way, unless fully prepared for a deadly encounter!

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

This animal reigns prince of the mountains, and every other beast within his wide realm acknowledges his supremacy.

Wolves and panthers dare not approach him, or disturb aught savoring of his ownership. Even the carcase of his prey, covered with the earth and rock his cautious instinct teaches him to heap upon it for preservation, is unmolested, though hundreds of wolves and panthers might be starving around.

Buffalo dread his presence far more than the dangerous approach of the hunter, and will sooner bring into requisition their swiftest powers of flight on such occasions. With great difficulty a horse can be persuaded to go within any near distance of one of them, even when led, and then he will quail and tremble in every joint, from extreme terror.

In short, the grizzly bear stalks forth at pleasure, in his majesty and strength, lord of the wild solitudes in which he dwells, and none dares oppose him.

Some writers assert that bears will not prey upon dead carcasses, —this is contrary to fact. I have often known them take possession of the carcasses of animals, even when nearly putrid, and remain until they were devoured.

They frequently kill buffalo, horses, and cattle to gratify their taste for animal food, and, in such cases, always drag their prey to some convenient spot, and perform the task of burial by heaping upon it piles of rock or earth, to a depth of several feet, for protection against the voracity of other beasts of prey. It is not uncommon, even, that they drag the entire carcase of a full-grown bull a distance of several hundred yards, by the horns, for this purpose, so great is their strength and so acute their sagacity.

CHAPTER XIV.

Desperate encounter with a grizzly bear, and extraordinary instance of suffering. Close contest. A comical incident. Cross Platte. Cañon camp. Sage trees. Mountain sheep, and all about them. Independence Rock; why so called, and description of it. Devil's Gate. Landscape scenery.

THE adventure recorded in the preceding chapter called forth the rehearsal of many thrilling stories of frightful encounter with that proud monarch of the mountains, the grizzly bear. Two or three of these it may not be uninteresting to transcribe.

Several years since, an old trapper by the name of Glass, with his companion, while on an excursion, came upon a large grizzly bear.

Bruin, having received the salute of two rifles, as usual, rushed towards his uncivil assailants, who broke from him with all possible despatch. But Glass, stumbling, fell prostrate in his flight, and before he could recover his feet the infuriated beast was upon him.

Now commenced a death-struggle. The pistols of the hunter were both discharged in quick succession, —the ball of one entering the breast of his antagonist, and that of the other grazing his back.

Smarting and maddened by the pain of additional wounds, the bleeding monster continued the conflict with the fury of desperation, —tearing from the limbs and body of the unfortunate man large pieces of trembling flesh, and lacerating him with the deep thrusts of his teeth and claws. Meanwhile the sufferer maintained, with his butcher-knife, an obstinate defence, though with fast waning effort and strength. Finally, enfeebled by the loss of blood, and exhausted from the ex-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

traordinary exertions of a desperate and unequal contest, he was unable to oppose further resistance, and quietly resigned himself to his fate.

The bear, too, with the thick blood oozing from his numerous wounds, and faint from the many stabs among his veins and sinews, seemed equally in favor of a suspension of hostilities; and, extending himself across the hunter's back, he remained motionless for two hours or more.

But now another enemy commences an assault upon his vitals—that enemy is death. In vain is defensive effort. In vain are all his struggles. He falls by the hunter's side a lifeless corpse.

The setting sun had cast his lurid glare upon the ensanguined spot, as the comrade of the miserable Glass ventured near to ascertain the result of the fierce encounter.

There lay the body of his deserted friend, stretched out, apparently lifeless and half-torn to pieces; and, by its side, lay the carcase of that enemy, which had waged with it such murderous war, cold and stiffened in death!

Now, doubly terrified at his loneliness, but still governed by sordid motives, he stripped the former of his arms and every other valuable, then no longer needed (as he supposed) by their owner, and, mounting his horse, started immediately for the nearest trading post.

On his arrival he recounted the particulars of the fatal occurrence, carefully concealing, however, his own criminal conduct. The story was accredited, and the name of Glass found place upon the long catalogue of those who had fallen a prey to wild beasts and savage men.

Six weeks elapsed and no one thought of the subject of our sketch as among the living. The general surprise, therefore, may be readily imagined, on opening the fort-gates one morning, at finding before them the poor, emaciated form of a man, half-naked, and covered with wounds and running sores, and so torn the fleshless bones of his legs and thighs were exposed to view in places! and how this astonishment was heightened on recognizing the person of Glass in the illy-defined lineaments of his countenance—the very man so long regarded as the inhabitant of another world! A veritable ghost suddenly appearing upon the spot could not have occasioned greater wonder!

But, sensations of pity and commiseration quickly succeeded those of surprise, and the unhappy sufferer was conveyed within doors and received from the hands of friends that careful attention his situation so much required.

The story of his misfortunes was thrillingly interesting. When left by his companion for dead, he was in a state of unconsciousness, with scarcely the breath of life retained in his mangled body. But, the soft nightwind stanchd his wounds, and a slight sleep partially revived him from his death-like stupor.

With the morning, the slight sensations of hunger he began to experience were appeased from the raw flesh of the carcase at his side; and, thus strengthened, by a slow and tedious effort he was enabled to reach a near stream and quench his thirst. Still further revived, he again crawled to the carcase at the demands of appetite.

In this manner he continued for three days, when the putrescent corpse compelled him to abandon it.

Then it was he commenced his tedious return to the fort, (some seventy miles distant,) which he performed during an interval of forty successive days! The whole of this long stretch he crawled upon his hands and knees, —subsisting, for the meanwhile, only upon insects, such as chance threw in his way, but passing most of the time without one morsel with which to appease the

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

gnawings of hunger or renew his wasted strength.

Yet, great as were his sufferings and intolerable as they may seem, he survived them all, and, by the kind attention of friends, soon recovered.

He still lives in the town of Taos, New Mexico, and frequently repeats to wondering listeners the particulars of this terrific and painful adventure.

One of our party, whose right hand was much disabled from the effects of a wound, now told his story.

For several years succeeding his first arrival in the Rocky Mountains, he had permitted no opportunity of killing any one of the various species of bear, common to these regions, to pass unimproved. Never did he think of fearing them, and was always the last to retreat in case of a charge. When a bear appeared within any reasonable shooting distance of our hunter, it almost invariably fell a victim to his unerring aim. But, ere long, this spirit of bold-daring proved the source of lasting regret to its possessor.

On the occasion alluded to, having shot at one of these animals, contrary to his usual good luck, he only wounded it.

The bear in turn now became the assailant, but received the contents of two pistols before it had time to advance far. Our hunter at this crisis sprang to a neighboring pine, which he commenced climbing. His pursuer, gaining the tree almost as soon, likewise began its ascent.

Here occurred a struggle between them — the man to force his way upwards, and the bear to prevent him. The former, drawing his butcher-knife, thrust it at the eyes and nose of his antagonist. Not fancying such pointed hints upon a delicate subject, Mr. Bruin caught hold of the hunter's hard, and, as an earnest of deep sensitiveness, crushed it between his teeth, — nor even then relinquished the gripe. Transferred to the left hand, the knife continued its work, till the sickening beast commenced sliding downward—dragging the poor hunter also to the ground. Both struck at the same time; but, at that instant, the knife of the latter pierced the heart of his antagonist, and laid him dead at his feet.

The unfortunate man, however, lost two of his fingers in the affray, and his hand was otherwise so much injured he has never since recovered its use.

Another story related at the same time, though not possessing the deep and thrilling interest of the preceding ones, partakes a little of the ludicrous, and will doubtless amuse the reader.

The narrator a while since formed one of a trapping party, with which he proceeded to the Utah country. While there, on a certain occasion, having set his traps over night, he returned to examine them the next morning, in quest of beaver, and, to his surprise, one of them was missing. After cautiously examining the premises, under the impression that some lurking Indians had stolen his trap with its contents, he noticed the tracks of bears, near by, which served at once to unravel the whilom mystery of its disappearance.

He new began to muse upon his loss, as, without the missing trap, his set would be rendered incomplete, and, under present circumstances, the want of the thing was more than the worth of it. While thus ruminating, a slight noise, among neighboring cherry-bushes and cottonwood, caught his ear, which sounded like some one beating with two sticks.

This induced him to approach for the purpose of ascertaining the cause, when an opening revealed to view Mr. Bruin seated upon a log and holding to his face the missing trap, tightly clasped to his fore-paw.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

The bear appeared to be regarding the strange instrument with close attention, as if to study into the principles of its construction;—now gazing at it endwise, then bringing its side in close proximity to his eyes; then turning it over to examine the opposite one;—now, he would essay its strength, and lightly taps it upon the log. But this is a painful operation, he relinquishes it, and resumes his former grotesque movements.

Watching this curious performance, the trapper could scarcely retain his gravity, or master his fondness for the ludicrous sufficiently for the intended shot. He did, however, and the comedy was suddenly transformed to a tragedy, by leaving its actor struggling in death.

A light fall of snow during the last of our stay at Deer creek, rendered the ground quite muddy and soft; notwithstanding which we resumed our course early in the morning of the fourth day. Continuing on, a ride of thirty miles brought us to the place where the Oregon trail crosses the Platte; and, after fording the river, we encamped upon the opposite side.

The stream, at this point, is about three hundred yards from bank to bank, and, at the time of our crossing it, swimming deep for a small portion of the way.

In ordinary stages, the water is but little over three feet deep, and the ford perfectly safe and practicable. The partial melting of the mountain snows had increased the size and velocity of its current, and rendered our passage slightly dangerous and difficult. The bed appeared to be rocky, and in some places rough, —requiring much caution in crossing waggons, to prevent them from overturning.

On the third day following, we arrived at another remarkable cañon, after travelling a distance of thirty-five or forty miles. Here, finding large numbers of mountain sheep, we were induced to remain a short time.

Our course for most of this distance was confined to the valley of the Platte, on account of the greater supply of wood found upon its banks.

Towards noon of the first day, we passed a point, called the “Red Buttes,” at which the river cuts its way through a lofty ridge of hills. This passage left a considerable bank upon both sides, shut in by abrupt walls of red argillaceous sandstone, towering to the height of several hundred feet.

The soil was generally a mixture of clay and sand, and, in some places, afforded a reddish loam which appeared to be very rich.

A short ride from the “Red Buttes” took us across a beautiful stream, with a broad bottom, well timbered with cottonwood.

Large herds of buffalo were continually in sight upon the whole route.

Several miles previous to reaching the cañon, my notice was first attracted to the extraordinary size attained by the wild sage; it having merged its shrub-like appearance into that of trees varying from five to ten feet in height and from twenty to twenty-five inches in circumference at the root. The magnificent dimensions of this herb are retained for a large extent of territory to the south and west of this vicinity. It is frequently made use of for fire-wood, and the prairies, in many places, are covered with beautiful groves of it, —perfuming the atmosphere and revelling in perennial verdure.

The cañon before referred to, is caused by the river passing through a chain of hills, for a reach of nearly half a mile.

The current is here shut in by banks of perpendicular rock, four or five hundred feet high, which sometimes overhang it, and leave a narrow space of scarcely two hundred feet for its bed. These

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

consist principally of white cretaceous sandstone, soft and friable, and frequently present to view the appearance of regular mason-work.

During our stay we succeeded in killing five mountain sheep. Some of these were very large and quite fat.

The flesh of this animal is equal in flavor to that of buffalo. It is generally in good order, tender and sweet, and slightly assimilates our common mutton in taste.

The habits and appearance of mountain sheep resemble those of no other animal.

They select for their favorite habitation the rugged fastnesses of wild and inaccessible mountains. In the cold of winter, they descend to some of the numerous valleys that so beautifully diversify the scenery of these regions, where the verdure of spring so rarely fades; and, as the warm season advances, they commence their return towards the lofty snow-peaks, keeping even progress with spring and fresh flowers along the mountain-sides.

Theirs is a life of unbroken spring-beauty and grandeur are their dwelling place, —and, 'mid the awe-inspiring sublimity of nature's works, is their home. They gambol upon the fearful verge of the steep cliff, or climb its perpendicular sides, bidding defiance to all pursuers. There, secure from enemies, they rear their young, and teach them to leap from crag to crag in mirthful gaiety, or traverse the dizzy heights in quest of the varied sweets of changeful spring.

These animals are remarkably acute of sight, and quick of scent and hearing. The least noise or tainture of the air excites their attention and places them instantly upon the alert. Mounting upon some high rock, they will stand for hour's in the same posture, gazing in the direction of the fancied danger. If fully satisfied of its reality, they abandon their position for another and a safer one, high among more rugged peaks, and often beyond the possibility of offensive approach. Their hue is so akin to that of the rocks which grace their range, they are with difficulty identified when standing motionless, and the hunter is constantly liable to mistake the one for the other.

In size the mountain sheep is larger than the domestic animal of that name, and its general appearance is in every respect dissimilar—excepting the head and horns. The latter appendage, however, alike belongs to the male and female. The horns of the female are about six inches long, small, pointed, and somewhat flat, —but those of the male grow to an enormous size. I have frequently killed them having horns that measured two feet and a half or three feet in length, and from eighteen to nineteen inches in circumference at the base.

These ponderous members are of great service to their owner in descending the abrupt precipices, which his habits so often render necessary. In leaping from an elevation he uniformly strikes upon the curve of his horns and this saves himself from the shock of a sudden and violent concussion. The color of these animals varies from a yellowish white, to a dark brown, or even black. A strip of snowy whiteness extends from ham to ham, including the tail, which is short and tipped with black.

Instead of wool, they are covered with hair, which is shed annually. Their cry is much like that of domestic sheep, and the same natural odor is common to both.

It is extremely difficult to capture any of them alive, even while young, —and it is next to impossible to make them live and thrive in any other climate than their own. Hence, the mountain sheep has never yet found a place in our most extensive zoological collections.

Remaining three days at this place, we were again en route, and, bearing to the right, passed over a ridge of rough, rocky summits, and struck the valley of the Sweet Water. Continuing up the

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

latter, a short ride brought us to the vicinity of a noted landmark of the country, known as Independence Rock, where we encamped.

The soil of the river bottoms is good, but the adjoining prairies are sandy and somewhat sterile. The distance from this to the cañon is not far from twenty-three miles.

Independence Rock is a solid and isolated mass of naked granite, situated about three hundred yards from the right bank of the Sweet Water. It covers an area of four or five acres, and rises to a height of nearly three hundred feet. The general shape is oval, with the exception of a slight depression in its summit where a scanty soil supports a few shrubs and a solitary dwarf-pine.

It derives its name from a party of Americans on their way to Oregon, under the lead of one Tharp, who celebrated the fourth of July at this place, —they being the first company of whites that ever made the journey from the States, via South Pass.

The surface is covered with the names of travellers, traders, trappers, and emigrants, engraven upon it in almost every practicable part, for the distance of many feet above its base, —but most prominent among them all is the word “Independence,” inscribed by the patriotic band who first christened this lonely monument of nature in honor of Liberty’s birthday.

I went to the rock for the purpose of recording my name with the swollen catalogue of others traced upon its sides; but, having glanced over the strange medley, I became disgusted, and, turning away, resolved, “If there remains no other mode of immortalizing myself, I will be content to descend to the grave ‘unhonored and unsung.’”

The day following, a heavy fall of snow and sleet forced us to remain in camp, and the consequent muddiness of the route prolonged our stay still further.

The vicinity afforded an abundance of game and a sufficiency of dry fuel; it would, therefore, have been folly in us to care for wind or weather, detracting as did either so little from our comfort.

During this interval I rode into the prairie a short distance, in quest of game, and struck the river a few miles above camp, at a place where the stream cuts its way through a high ridge of hills, forming another cañon of three or four hundred yards in length and about forty broad, called the Devil’s Gate, as I afterwards ascertained.

Its walls arose perpendicularly to a height of between four and five hundred feet, and consisted of trap rock, sandstone, and granite.

Dismounting, I ascended to the summit, where a grand and picturesque scenery burst upon the view.

Above, the broad valley of the Sweet Water stretched far away to the westward, bounded—on either side by frowning mountains, that, towering to the height of fifteen hundred or two thousand feet, present their snowy summits in proud defiance of wind or storm, and laugh at the impotency of a summer’s sun;—on the south, shaking their piny tops in scornful derision; and, on the north, with denuded crests of broken granite, challenging the lightnings of heaven and wooing its loudest thunders;—while further along, the clouds played in humble sportiveness around the base of the great chain dividing the waters of two oceans, nor dared ascend its dizzy heights to range amid eternal snow.

Below, in silent grandeur, arose to view the granitic mass that responds to the day-dawn of a nation’s existence, surmounted by its lone pine, and bearing upon its broad register the sculptured names of the audacious disturbers of its solitude; and further yet, the parti-colored peaks of the Black Hills, now white with fresh-fallen snow, now darkened with clustering pines, seemed

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

musings in modest retirement; while far around, in every spot accessible to discriminating vision, dense herds of grazing buffalo covered the prairie with their pall-like mantle of countless numbers.

It was indeed a magnificent prospect, and needed only the garnishing hand of spring to render it as enchanting in loveliness as it was impressive in wild sublimity.

CHAPTER XV.

Return route. Oregon trail from Independence Rock through the South Pass. Cross the Sweet Water and Platte. Mountain Fowl. Journey up Medicine Bow. Dangerous country. A fight with the Sioux. The "Carcague." A surprise. Visit to the Crow village. Number and character of the Crow nation. Selling a prisoner for tobacco. Description of Laramie Plains.

PREVIOUSLY to leaving this place, considerable discussion arose relative to our future course. The proposition was to continue up the Sweet Water valley to the dividing ridge at the head of Green river, and return by the same route; — versus the suggestion to cross the Sweet Water and proceed up the Platte to the confluence of a large tributary from the south; thence, keeping by the valley of the latter stream as far as the Medicine Bow Mountains, return to the Fort by the way of Laramie river.

The fast melting of the snow, and anticipated difficulties, not to say dangers, consequent upon high water in the passage of creeks and rivers, influenced us to adopt the latter as the most advisable course.

Such was the final decision, and, the men with me being familiarly acquainted with every nook and corner of the adjacent country, I improved the opportunity to elicit from them all possible information relative to the Oregon route from this onward; and, never having personally travelled from Independence Rock to the head of Green river, it may not be out of place to lay before the reader a succinct statement of some of the items thus gleaned.

The distance from this point to the famous South Pass is but little over one hundred miles. The trail follows the Sweet Water to its source, keeping the river valley for most of the distance. This valley consists of an undulating prairie, (at intervals rough,) varying in width from the narrow limits of a few yards to the more ample dimensions of four or five miles.

Sometimes, the adjoining hills close in upon the river banks and force the trail among their rugged windings. In one place the road leads over a high stretch of table land for nearly a day's travel, when it again descends to the valley.

The stream, in places, is tolerably well timbered with cottonwood, oak, and aspen, and rolls over a rocky bed, with a clear and swift current.

The distance through the pass is about fifteen miles, and the ascent and descent are so gradual the traveller would scarcely notice the transition from the head of the Sweet Water to that of the Colorado. The hills at this point are low, and the face of the country rolling—but not rough, affording at all times a most excellent waggon road.

On the morning of the fourth day, we accordingly retraced our course, and, having traversed a rugged and hilly country for some ten or twelve miles, we camped in a small open prairie at the mouth of the Sweet Water.

During our ride we noticed several large bands of wild sheep, at intervals, gazing upon us from

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

huge masses of granite that towered with isolated summits to a frequent altitude of sixty or one hundred feet.

The next morning, we crossed the Sweet Water a little above its mouth.

The ford was quite feasible, the stream being some ten yards wide and three or four feet deep, with a bed of sand and pebbles.

From this point, travelling up the Platte for about ten miles or more, we arrived opposite the creek previously alluded to, and, crossing at a shoal place a short distance above, camped in a grove of cottonwood and willows, at the delta formed by the confluence of the two streams.

There are several bottoms of very rich soil in this vicinity; but back from the river the country is rough and hilly.

Westward the Sweet Water mountains, distant some ten miles, showed their craggy peaks, and to the north and east the piny crests of the Black Hills burst upon the sight; while southward, a succession of high, rolling prairies opened to view a variety of romantic and beautiful scenery.

We remained at this place the two following days, for the purpose of hunting. Game of all kinds appeared in great abundance, particularly elk. At several points among the willows near the river were noticed fresh signs of beaver, and among the hills the recent marks of bear in digging for roots.

A large bird called the mountain fowl, quite common to these parts, was the occasion of some little curiosity, being the first of its species I ever saw. This bird is rather larger than our domestic hen, and of a grayish brown color. Little accustomed to the presence of man, it easily falls a prey to the hunter. Its flesh is tender and most excellent in flavor.

Having obtained a fresh supply of meat, we resumed our course.

Continuing up the right bank of the creek (which I have named Medicine Bow, for lack of a better term) and travelling by easy stages four successive days, we arrived at its head, —a distance of more than fifty miles above its junction with the Platte.

Many beautiful bottoms skirted the banks of this stream, which were well timbered with cottonwood, aspen, birch, willow, box-elder, and some few pines. The soil is generally of a reddish loam, and the luxuriant size of the dead grass, together with the rank verdure of the present season, gave evidence of its richness and fecundity.

I was pleased to observe not a few wild flowers, of rare beauty, in full bloom, lending their fragrance to the breath of spring, and blushing at the admiration challenged by their loveliness.

On the right lay a broad expanse of undulating prairie, covered with stately clusters of absinthe, and disclosing every variety of soil, from the rude sterility of an African desert to the rich productiveness of a garden; — on the left, the mountains, increasing in altitude, jutted their craggy sides in close proximity to the creek—now disclosing immense piles of granite, with red argillaceous, grayish micaceous, dark ferruginous, and white calcareous sandstone, limestone, and coarse-grained conglomerates, naked and variegated with almost every diversity of color, —and now, surmounted by stunted pines and cedars, or towering balsam, hemlock and pinion; and in front, the lofty peaks of Medicine Bow, rearing their snowy heads beyond the clouds, opposed an eternal barrier to further prospect.

As we passed along, I noticed three or four small branches that emptied into the creek from the opposite side, and, just before reaching our present encampment, we crossed three others from the right, all of them well timbered and graced by rich valleys and prairillons.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

This section of country, being the great war-ground between the Sioux and Chyennes on the one side, and the Snakes and Crows on the other, is considered dangerous, particularly from May till November of each year. During that time it is extremely unsafe for a white man to venture within its confines, unless protected by a strong force.

A small creek at our right, became the scene of a bloody tragedy two months subsequent to our visit.

Three trappers, with whom I became acquainted upon my return to the Fort, tempted by the abundance of fur-bearing game common to the vicinity, came here for the purpose of making a summer hunt. While successfully pursuing their occupation, unsuspecting of immediate danger, they were suddenly surrounded, early one morning, by a war-party of Sioux, whose first salute was a discharge of fire-arms, accompanied by a shower of arrows and the sharp thunder of deafening yells.

Two of them fell dead. The remaining one retreated to a hollow tree, close at hand, into which he crawled; and, though severely wounded, maintained from it an obstinate resistance till near sundown, —keeping at bay the whole host of savage assailants, and thinning their numbers, one by one, with the deadly discharge of his unerring rifle.

Six warriors lay stiffened in death, and as many more had felt the burning smart of wounds, —one of the latter having had his tongue shot out, close to its roots! — and still he continued the unequal contest.

His triumph would have been complete had not the remorseless crew, as a last resort, set fire to the woods and burned him from the shell-like fortress from which they could not drive him. He fell with his companions, mingling his own blood with that of their murderers; and the scalps of the three were treasured among the horrid trophies of savage victory.

Of these unfortunate men, one, named Wheeler, was a Pennsylvanian; another, named Cross Eagle, was a Swede; and the third, name not remembered, was a native of France. They were men of noble hearts and much esteemed by all who knew them.

In the neighborhood I noticed many indications of coal, of which there appeared to be extensive beds, as well as iron and mineral salts.

Continuing on, a short ride brought us to the pass-trail, following which, after travelling a few miles by a road intercepted by frequent ravines between a defile of mountains, we were finally ushered into the broad prairie, opening eastward, known as the Plains of Laramie.

The mountains upon both sides were heavily coated with snow, which intruded to the trail, while groves of pine and aspen relieved the eye in scanning their rough escarpments.

The prevailing rock appeared to be a compact red granite, with occasional strata of sandstone.

While winding among the ravines and aspen groves, we obtained an indistinct view of a strange-looking, dark-colored animal, that my companions pronounced a “carcague.”

Of the character, or even the existence of such a creature, I cannot speak from positive knowledge—this, if one, not being sufficiently near for a scrutinizing observation, and no other of its kind ever came in my way; but, in answer to inquiries, I am enabled to give the following description, for the correctness of which, however, I will not vouch, though, for my own part, inclined to accredit it.

The “carcague” is a native of the Rocky Mountains, and of a family and species found in no other part of the world as yet known. He seems a distinct genus, partaking the mixed nature of the wolf

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

and bear, but is far more ferocious than either.

His color is a jet black, hair long and coarse, and body trim and slender. His head and neck are like those of a wolf, but his tail and feet assimilate the bear, and his body presents the marked qualities and appearance of both.

In size, he is considerably larger than the common cur-dog, and is more agile in his movements. Unlike the bear, he will not run from the presence or scent of man, and regards the "lord of creation" with neither fear nor favor. Hence he is looked upon as a creature much to be dreaded by all who are anywise conversant with his character and existence.

The representatives of his family are seldom met with, which affords the principal reason why so little, comparatively, is known of his nature and habits.

If the information contained in the above description, is correct, (aid that it is so, I have not the least doubt,) the "carcague" presents, either the extraordinary phenomenon of the creation of a new race of wild beasts, or, the living relics of an order now almost extinct; and, whether he be the one or the other, his existence is vested with deep interest to all lovers of the marvellous.

An old trapper related the following story, soon after the incident above noticed, which will serve to give some idea of this ferocious animal:

A party of hunters, at their night camp, were seated around a large fire, at whose side were fixed several pieces of meat, en appolas, for the purpose of roasting. All were waiting patiently the kind office of the fire in the preparation of their longed-for suppers, when, attracted by the fumes of the cooking viands, a "carcague" came bounding from the mountain-side, directly over their heads, and made for the roasts, with which he disappeared before even a shot could be fired in their defence.

Thus bold and daring is their nature, and so little is their regard for the presence of man.

Bearing southward, in the course of a few miles we came to a large creek, and camped early in the afternoon, near the base of a lofty mountain of the Medicine Bow range.

In this vicinity were the relics of three Indians forts. On the banks of the stream was an abundance of timber of various kinds; the bottoms were broad and of a rich soil, shut in by abrupt acclivities that lead to the arid plains through which the creek traces its way.

Game appeared in great abundance in all directions, and seemed more than usually tame and accessible.

Soon after camping, three of us went in quest of a fresh supply of eatables, and, towards night, returned with the choice portions of a buffalo and a black-tailed deer.

The valley also afforded large quantities of wild onions, which were shooting forth with singular luxuriance.

We passed the night in quiet slumber, neither of us dreaming of the possible existence of human beings, other than ourselves, within a less distance than one hundred miles.

In the morning, however, we were awakened by the wild yell of savages, and, on looking to ascertain the cause, saw a dense throng of painted monsters surrounding us, who were whooping, screeching, and dancing in a most terrific and fantastic manner. Seizing our guns, we levelled at the foremost of them, who immediately sheathed their bows and made the sign of friendship and their nation.

They were Crows, and, having discovered us the afternoon before, now came for a morning call. The chief of the band bore the name of Little Robber, and was a large, portly, well-made man, as,

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

in fact, were all his party. He was recognized by one of us as an old acquaintance, and was greeted as such, when several of his people came forward to shake hands, and we were soon on most friendly terms.

They informed us, by means of signs, that they were advancing against the Sioux and their village was encamped upon a neighboring creek, a little to the right, —after which they insisted upon our accompanying them to it.

Not waiting for further ceremony, they drove up our horses and commenced saddling them. Supposing it useless to resist, we yielded compliance to their wishes, and, in about an hour's ride, came to the village. Here we were inducted to the chief's lodge, where commenced a series of feastings peculiar to Indians on occasions like this.

The Crows are a nation living upon the waters of the Yellow-stone, at a distance of about four hundred miles west-northwest of Fort Platte. Their number embraces not far from four hundred and fifty or five hundred lodges, being something near four thousand men, women, and children. Ten or twelve years since they were enemies to the whites, but, more recently, have been on friendly terms.

They never kill or injure the white man who comes within their power, and rarely take from him anything without returning for it an equivalent. For instance, —they may take his robe, horse, or gun; but, in that case, they will return another robe, horse, or gun; acting upon the principle that “exchange is no robbery,” even though it be compulsory.

Less contaminated by intercourse with the whites than most mountain tribes, they will tolerate the importation of liquor among them upon no consideration, not even by traders for their own individual use. Whenever it is ascertained that any one in their vicinity, whether white man or Indian, is in possession of that article, they take it from him, if necessary, by force and pour it upon the ground.

Their bitter hatred of this vile stuff, is said to have resulted in the following strange manner:

The whites, as usual, came first among them bringing alcohol; and, at a feast given to the chiefs, soon after, several of the latter became intoxicated from too lavish potations of the new and curious drink.

In common with inebriates of civilized society, they acted very foolishly, and, on appearing before their people, the drunken chiefs became the subject of ridicule. This so shamed them, that, upon the return of sobriety, they could not be persuaded to taste another drop, and thereafter made use of their united influence to prevent its introduction and sale.

Ever since the above occurrence, alcohol has received, from the Crows, the appellation of “Fool's Water,” a term at once attesting their nice moral discernment and good sense.

Several years since, a missionary, on visiting them, began through an interpreter to rehearse the story how sin first came into the world, and how all men had become bad—whether white or red. Thus premised, he proceeded to explain the great truths of Christianity, and averred that he had come to do them good, and to tell them how to be happy; asserting that, unless they listened to him and worshipped the Good Spirit in the manner he pointed out, they could never, at death, reach that happy country into which good people alone find Admittance.

One of the chiefs upon this arose and made the following reply:

“My white brother is a stranger to us. He talks bad of us, and he talks bad of his own people.

“He does this because he is ignorant. He thinks my people, like his, are wicked. Thus far he is

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

wrong!

“Who were they that killed the very good man of whom he tells us? None of them were red men!

“The red man will die for good men, who are his friends;—he will not kill them!

“Let my pale-face brother talk to the white man—his own people—they are very bad. He says, he would do us good! He does no good to chide us and say we are very bad.

“True we are bad; and were we bad as the pale-faces it would become us to listen to him!

“Would my brother do as good? Then, let him tell us how to make powder and we will believe in the sincerity of his professions;—but let him not belie us by saying we are bad like the pale-faces!”

These Indians rarely kill the women and children of an enemy when in their power, and, in this particular, they show themselves unlike most of the wild tribes found on the American continent. They are a brave and noble people, prosecuting their endless hostilities against the Sioux and Blackfeet, (the only nations with whom they are at variance,) not so much to gratify an innate love for war, as from a just hatred of the meanness of those they war against.

In the summer of 1842, a war-party of some two hundred Crows invaded the Sioux country by way of Laramie pass, and penetrated as far as Fort Platte, and beyond, in pursuit of their enemy. A few miles above the Fort, having met with a lone French engagé, who was rather green in all that pertains to Indians as well as some other things, they began by signs to enquire of him the whereabouts of the Lacotas, (the sign for them being a transverse pass of the right front-finger cross the throat.)

The poor Frenchman, mistaking this for the avowed intention of cutting his throat, commenced bellowing a la calf, accompanying the music by an industrious appliance of crosses in double-quick time—not forgetting to make use of sundry most earnest invocations of the blessed Virgin to graciously vouchsafe to him deliverance from impending danger.

The Indians, perceiving his strange conduct to be the result of fear, felt disposed to have a little fun at his expense; so, mounting him upon a horse, they bound his hands and feet and guarded him to a post of the American Fur Company as a prisoner.

The Fort gates being closed against them, they demanded admittance on the plea of wishing to trade.

“What would you buy?” asked the commandant.

“Tobacco.”

“What have you brought to pay for it?”

“A white man.”

“A white man?” exclaimed the former; “at what price?”

“Oh, he is not worth much. A plug of tobacco is his full value!” continued the warriors.

The commandant now began to understand the joke; and, on recognizing the prisoner as an employee of the other Fort, he told them they might possibly find a market for him at the next post, but for his own part he was not disposed to purchase.

The Indians then paraded around the Fort, and, after saluting its in-mates with three deafening whoops, proceeded at full charge towards Fort Platte.

When arrived, having prostrated two scaffolds of dead Sioux by the way, they informed the person in charge, that they had brought back one of his men, and claimed from him a plug of tobacco for their trouble. The circumstances attending this request were of so comical a nature, the commandant felt disposed to humor the joke, and gave the tobacco, upon which they immediate-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

ly left in pursuit of their enemies.

Having remained prisoners to the hospitality of these Indians for two days and a half, we were at length permitted again to resume our journey.

Following the creek downwards for the two days next succeeding, and then bearing to the left, after a ride of some twelve miles, we struck Laramie river at a point which presented broad bottoms upon each side with an abundance of timber; here we remained encamped till the subsequent day. In journeying thus far, we passed over a sufficient extent of this broad expanse to give a general description of it, from personal observation coupled with information derived from others more experienced.

The Plains of Laramie are bounded north and east by the Black Hills, south by a ridge of naked elevations, (composed of soft, arenaceous rock and terrene limestone, embedded in marl and white clay, sterile and almost entirely destitute of vegetation,) and west by the Medicine Bow Mountains.

This section includes an area one hundred and sixty miles long by seventy broad.

The northern portion of it is a high plateau, almost destitute of springs or streams of water, having a mixed soil of clay and sand, producing the grass and other peculiarities incident to the grand prairies. Westerly, it is composed of red sand and gravel, tolerably fertile and abundant in rocky fragments. The southern portion is watered by a number of streams that rise in the Medicine Bow Mountains and flow eastward; some of them pouring their waters into Laramie river, and others losing themselves in the sand.

Towards the southwestern extremity, at the base of a lofty, isolated mountain, is a salt lake of considerable dimensions. Several other lakes are also found adjacent to the Medicine Bow Mountains, whose waters are strongly impregnated with mineral salts.

In numerous places the surface, for small distances, is entirely naked and whitened with saline efflorescences, that vie in their appearance with the unspotted purity of fresh-fallen snow.

The Laramie river<sup>[34]</sup> traces its way through the whole extent, —rising in the southern extremity of the Medicine Bow Mountains and in the desolate highlands that form the dividing ridge between its own and the waters of Cache a la Poudre, and, after flowing a distance of some three hundred miles, discharges itself into the Platte.

Upon this river and its branches are many beautiful bottoms of rich alluvial soil, well adapted to cultivation, varying from five to ten miles in length, and from two to five in breadth. These bottoms are to some extent well supplied with timber, consisting of ash, elm, cottonwood, box elder, and willow, while the adjacent mountains and hills afford pine, cedar, and balsam.

Of the various kinds of wild fruits and berries are found cherries, plums, currants, gooseberries, service-berries, buffalo-berries, and some few grapes; among its vegetables and roots are the bread-root, pomme blanc, onions, and commote.

Its prevailing rock is sandstone, (gray micaceous, brown argillaceous, red granitic, and ferruginous,) limestone, (siliceous, testaceous, fossiliferous, and terrene,) and red granite, with various conglomerates and heavy boulders of fragmentary and transition rock.

Among the mineral productions incident to this region are salt, sulphur, soda, magnesia, nitre, alum, coal, iron, copper, and gold, (the latter only in small quantities.) Among its game is embraced nearly every variety found in countries adjacent to the mountains.

The high prairies skirting the tributaries of the Laramie, though favored with many valleys of fer-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

tile soil, are fit only for grazing purposes, on account of their general aridity and scarcity of water; a fault, by the way, too common with a large proportion of that vast extent of territory from the neighborhood of our western frontiers almost to the very shores of the Pacific.

CHAPTER XVI.

Sibille's-hole. Novel bitters. Chugwater. Gold. Curiosity. Affairs at the Fort. Amusements. Gambling among squaws, and games played. Squaw dresses, and riding fashion. Items of interest to the curious, proving the intercourse of the ancient Romans with the people of this continent.

ON resuming our course, we soon after struck into a lodge-trail leading to the Platte by way of Sibille's creek; —following this we travelled over an undulating and sandy prairie for about ten miles, and came to a chain of rugged mountains, bearing from north to south, through which we passed, by a tedious and circuitous route, for a considerable distance, winding among rocks and narrow defiles of naked hills, till we were finally ushered into a beautiful opening facing the east, known as Sibille's-hole.

This valley is situated at the confluence of two small streams, heading in the adjoining mountains, that unite to form Sibille's creek.

It is shut in upon three sides by lofty ridges, many hundred feet high, consisting of immense piles of earthy limestone and marl, whose rough, naked sides, ornamented with occasional dwarf-pines, cedars, or fruit-bearing shrubs, present a wild and romantic scenery.

The valley is four or five miles in length and of variable width, with a strong, black soil, affording a goodly supply of timber.

The season was further advanced in this than in any other place we had yet visited. Several specimens of wild flowers were in full bloom, belading the soft air with their sweetest odors. The grass too had attained a height of some three inches, and furnished a most sumptuous entertainment for our jaded animals, which they were nowise backward to accept.

Wishing to afford them an opportunity to recruit their strength, we remained encamped the two following days.

During the interval we were successful in killing two very fat bulls, and were thus enabled to renew the series of feasting which had graced the greater part of our journey.

I here became for the first time acquainted with a kind of beverage very common among mountaineers. The article alluded to may with much propriety be termed "bitters," as the reader will readily acknowledge on learning the nature of its principal ingredient.

It is prepared by the following simple process, viz: with one pint of water mix one-fourth gill of buffalo-gall; and you will then have before you a wholesome and exhilarating drink.

To a stomach unaccustomed to its use it may at first create a slightly noisome sensation, like the inceptive effects of an emetic; and, to one strongly bilious, it might cause vomiting;— but, on the second or third trial, the stomach attains a taste for it, and receives it with no inconsiderable relish.

Upon the whole system its effects are beneficial. As a stimulant, it braces the nerves without producing a corresponding relaxation on the cessation of its influence; it also tends to restore an impaired appetite and invigorate the digestive powers.

As a sanative, it tends to make sound an irritated and ulcerated stomach, reclaiming it to a health-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

ful and lively tone, and thus striking an effective blow at that most prolific source of so large a majority of the diseases common to civilized life.

From what I have seen of its results, I consider it one of the most innocent and useful medicines in cases of dyspepsy, and will hazard the further opinion, that, were those laboring under the wasting influences of this disease to drink gall-bitters and confine themselves exclusively to the use of some one kind of diet, (animal food always preferable,) thousands who are now pining away by piecemeal, would be restored to perfect soundness, and snatched from the very threshold of a certain grave which yawns to receive them!

Resuming our course, we continued down Sibillis creek to its junction with the Laramie; then, following the course of that river, in the afternoon of the third day we arrived at Fort Platte, after an absence of nearly two months, —having travelled, in the interval, a distance of more than five hundred miles.

To give a general description of the country passed over during the concluding part of our journey, would seem too much like a recapitulation of previous remarks.

Our observations in reference to the river and creek bottoms, may be again correctly applied; as may, also, those relative to the timber, and the geological character of the adjoining prairies.

Several miles above the Fort we crossed the Chugwater, a large affluent of the Laramie, from the right. This creek takes its rise in a wild and desolate section of the Black Hills, near the head of Horse creek.

Thirty miles or more of its way is traced through a dreary wilderness of rock, sand, and clay, almost entirely devoid of vegetation.

This region, it is said, affords gold; and, indeed, I have received frequent assurances that that valuable metal has been procured, in small particles, from among the sand of the creek-bed.

This region also claims many natural curiosities, of which I may take occasion to speak more particularly hereafter; —one, however, situated upon Chugwater, here seems more appropriately to demand a passing notice.

It consists of a columnar elevation of sandstone and marl, towering aloft to the height of several hundred feet, like the lone chimney of some razed mansion, —standing as the melancholy monument of the ruins that surround it.

This singular pile of rock and earth is nearly of a quadrangular form, quite regular in its structure, and compares very nearly with the “Chimney” below Scot’s Bluff, in its general outlines. It stands within a short distance of the east bank of the Chugwater, and gives the creek its present name.

[35]

Our arrival at the Fort dated the 26th of April. The boat being completed, all things, save the spring rise, were in readiness for the intended voyage.

This craft was put together in regular ship-shape, and finished in a workman-like manner. She measured fifty feet keel by thirteen beam, and, without her lading, drew but an inch and a half of water. Her intended burthen was between two and three tons. While admiring her beauty and symmetry, little did I think of the sufferings in store for me with her hardy crew.

Several important changes had taken place during our absence. The Fort with its fixtures now claimed different owners, and was occupied by the men of two companies besides our own. This swelled the present number to some forty or fifty, and afforded quite a lively scene.

Now was an interval of leisure to all hands, and the time, unemployed in eating and sleeping, was

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

passed in story-telling, ball-playing, foot-racing, target-shooting, or other like amusements. Several, forming themselves into a club for forensic debate, secured a prolific source of entertainment, for the time being. A partner in one of the trading firms, whose men were now stationed at the Fort, made himself quite conspicuous as a participator in these discussions.

He was very self-important and conceited, and not a little ignorant withal, and with regard to temperance, being uniformly about "three sheets in the wind," and the other fluttering, his spoutings were an exhaustless fund of laughter.

At his request, in order to render the exercises more spirited, the merits of the arguments presented were decided upon by a committee of three, and the speakers decided against, sentenced to liquorize the club.

The treating, however, was always on one side; for, as the whole business was an affair of sport, the committee of arbitration generally had this primary object in view while pronouncing their decisions. When these were averse to our orator, he of course paid the forfeit as an affair of debt; and when favorable to him, he was equally prompt in proffering a common treat, exultatory upon his fancied success.

My own part in this performance was that of a mere looker-on, but it required of one more than my usual self-mastery, to retain his gravity under the potent influences of so ludicrous an exhibition.

Other matters of interest, however, occurred at this time, and, as they tend to throw some light upon Indian habits and customs, perhaps the reader will not look upon it as altogether out of place for me to notice them.

At the two Forts in this neighborhood were some ten or twelve squaws, married to the traders and engagés of the different fur companies. These ladies were in the habit of meeting, occasionally, for gambling purposes. In this they acted as systematically as the most experienced black legs of a Mississippi steamboat; if they failed to play as high, it was only for the lack of means.

Ball-playing was one of the games upon which heavy bets were made. The instrument used in this amusement consisted of two globular forms, about two inches each in diameter, which were attached by a short string. The play-ground was the open prairie in front of the Fort, and embraced an area of nearly a mile in extent.

As the initiatory step, each party, composed of equal numbers, selected an equal amount of valuables, consisting of beads, scarlet, vermilion, rings, awls, shells, &c., which were placed in two piles about half a mile apart, and equidistant between them was placed the ball. Each gamestress, armed with her club, then repaired to the spot, and the opposing parties arrayed themselves, the one facing the other with the ball between them. At a given signal they all strike — the one party striving to propel it towards its own valuables, and the other to force it in a contrary direction.

The party propelling it to its own pile, wins, and becomes entitled to both.

As success in this game depends more upon fleetness of foot than skill in striking, a large party of squaws, thus engaged, opens to the beholder a rich scene of amusement.

Another game is still more extensively practised among them. This is somewhat upon the principle of dice, though different in its details.

Six plum-stones, smoothly polished, and marked with various parallel, triangular, and transverse lines, are thrown loosely into a small, plate-like basket, around which the players are seated with their stores of trinkets. The leader then receives the basket in one hand, and, briskly moving it to

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

change the position of the dice, suddenly strikes it upon the ground, tossing the plum-stones from their places and catching them in their descent.

The amount won depends upon the number of triangular and transverse lines left uppermost. The loser, having paid the forfeit, next takes the basket and describes the same movements, receives her winnings in like manner, and returns it to her opponent, —and so on alternately. Much cheating and trickery are practised in this game.

The game of hand, for a description of which the reader is referred to a previous marginal note, is also a favorite play with squaws as well as men. Large parties of both sexes not unfrequently engage in this amusement, and many a poor Indian loses his all by the operation.

Speaking of squaws reminds me of not having previously described their dress and appearance. The dress of a squaw is scarcely less simple than that of an Indian. Two pieces of skin, sewed together in a bag-like form, (of sufficient size to envelope the body from neck to knee, leaving an aperture for the former with the arms,) constitute her gown, which is completed by two other pieces of skin sewed from neck to waist so as to fall loosely upon the arms as far as the elbow; then, with leggins of thin deer or antelope skin, garnished moccasins, and a painted robe, you have before you the full rig of a mountain squaw.

Some of the younger ones, however, flaunt dresses quite tastefully ornamented, with full capes and fringe-works, garnished with beads and porcupine-quills, that present a wild, fantastic appearance, not altogether estranged to beauty.

A squaw prides herself much upon the number of rings in her ears and upon her fingers, as well as the taste displayed in plaiting her hair and beautifying her face.

Women, in savage alike with civilized life, are vested with a good supply of pride and vanity in their composition, —all, fond of show and gaudy equipage. But the mountain squaw, next to ornaments, displays the most vanity in the gay caparison of her riding horse, and the splendid trappings of his saddle. Both of them are fancifully garnished with beads and paint, and bestrung with various trinkets, that impart a tinkling sound, as they strike each other at every movement, and fill the rider's ears with that wild and simple music so consonant to her feelings and thoughts. Men and women practise the same mode of riding, (astride,) and a squaw is as much at home on horseback as the most experienced cavalier.

This fashion is, properly considered unbecoming for ladies of civilized countries; yet, improper as it may seem, it is quite common with the ladies of New Mexico.

As my subsequent travels in the countries bordering upon the Rocky Mountains preclude the opportunity of speaking connectedly of the Sioux nation, I cannot forego the present occasion for presenting to the curious, some few items relative to the language of these Indians, that tend to shed no small amount of light upon the ancient history of the American continent.

There are several remarkable peculiarities in the Sioux language, that cannot fail to prove interesting and satisfactory, so far as they go, to all lovers of antiquarian research.

The first of these consists in the striking similarity observable in its general structure to that of the ancient Romans, when the two are carefully compared with each other.

In regard to the arrangement of words and the construction of sentences, they are both governed by the same fixed laws of euphony, irrespective of the relative position otherwise maintained by the different parts of speech. It will be observed that the leading purpose of the speaker of either language is, to avoid a harsh and inharmonious intermingling of words, such as would grate upon

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

the ear when pronounced in an abrupt connection; and, by so doing, to give a smooth and musical turn to the expression of his ideas.

The few brief sentences, hereto subjoined in the same order as they occur in the original, accompanied by the translation of each word as it appears, will serve to illustrate this matter more fully:

LATIN SIOUX

Invictum animi robur ostensit.

Invincible of mind strength he displayed.      Tepe nea tour toocta?

Lodge your own where is it?

Omnia deliciarum instrumenta e

All of delicacies the instruments from Mea warchee muzarka nea tour.

I want gun your own.

castris ejecit.

camp he cast.      Kokepa warneche wecharcha ha,

Afraid nothing the man is.

Non amo nimium diligentes.

Not I love overmuch the careful.      Minewarka appello warktashne ha

Medicine water I say not good is.

A mere glance at the foregoing will at once show the constructional similarity between the two; and, to illustrate the proposition still farther, I here subjoin yet other proofs of a more important relationship:

LATIN SIOUX

Appello, (pres. ind., 1st per. sing.; inf. appellare,) I declare, I proclaim.      Appello, I declare, I proclaim, I tell, I make known

Bestia, a wild beast.      Beta, a buffalo.

Coca, uncertain, ambiguous, confused, rash.      Ceicha, bad, disorderly, unsound.

Cogor, one who collects, brings together, compels, forces, or heaps up.      Cogor, a maker of anything, a manufacturer, one who produces a thing by an ingenious arrangement of materials.

Mea, (meus, a, urn,) of or belonging to me.      Mea, I, myself, me.

Mena, a narrow sharp fish.      Mena, a knife.

Ne, (this when affixed to a word or a sentence gives it a negative signification,) no, not.      Ne, (this word is used precisely the same as in Latin, and has a similar meaning,) not.

Papa, rare, excellent, wonderful.      Papa, meat, flesh used for food.

Pater, father.      Pater, fire.

Pes, the foot.      Pea, the foot.

Taurus, a bull.      Tau, (or tah,) a bull.

Tepor, warmth.      Tepe, a lodge.

Tuor, (tui, tutus sum,) to look, to see.      Tula, (astonishment,) look! see there!

I might pursue this comparison to a yet greater extent, were my knowledge of Sioux sufficiently full and critical for the task, (for I have a firm confidence that many other similarities might be pointed out, quite as glaring in their character as any of the above;) but, enough, I trust, has already been said to fortify the position so largely warranted by the premises, to wit: that in former ages the Romans maintained a foothold upon the American continent, and had intercourse with this nation, either by arms or by commerce.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

The argument drawn from the foregoing is still further strengthened, when we take into consideration the fact, that language is constantly varying in its form, and changing the meaning and pronunciation of its words, as time progresses. To exemplify this more clearly and forcibly, let the reader compare the works of standard English authors of the present day with those of the like not more than five hundred years since, and he will readily acknowledge the palpable indications of progressive change.

If so short an interval has produced a transformation so bold in a written language, what might we look for in one spoken only?

But, an interval of three times five hundred years has passed since the Romans and the Sioux held intercourse with each other, and we yet find the general structure of the two languages strikingly similar, and several of their words identical in meaning and pronunciation! And, though the latter observation fails in some cases, even this, so far from proving anything averse to the position before assumed, serves to strengthen it.

The word *pater*, for instance, pronounced alike in both languages, differs in signification; being used in the one to imply father, in the other fire. This apparent discrepancy of meaning may be explained in a few words. The Sioux are accustomed to venerate the sun as one of the more especial manifestations of the Divine Essence, who is regarded as the FATHER or creator of all things; and it, being the great source of light and heat, is naturally looked upon as an immense body of fire. Thus, in the course of ages, the term became perverted in its meaning and application, and, instead of being used to express the sun, or Great Spirit, the father of all, it now only implies the simple element of fire, an emanation from the sun.

So in relation to the Latin word *tepor*, warmth, and the Sioux word *tepe*, a lodge. The lodge is employed in winter to retain the heat within itself, and exclude the cold air; nor is it wonderful that, in the progress of years, the term *tepor*, or *tepe*, should become the only one by which a lodge is known.

The word *mena*, is also pronounced the same in both, though different in its signification; meaning, in Latin, a narrow sharp fish, and, in Sioux, a knife. In explanation of this, I would barely refer to the similarity of shape between a knife and a narrow sharp fish.

The relationship disclosed between these two languages is seemingly too close and significant to be attributed to mere chance or accident, and can be in no other way satisfactorily accounted for, than by admitting the correctness of the premises before quoted.

But this position, curious as it may seem to some readers, and impregnable as it must doubtless prove, has other weapons to protect it at command; and, ere dismissing the subject, I will briefly notice some of them.

It is by no means a conjecture of recent origin, that the ancient Romans did actually colonize portions of the American continent. The industrious researches of antiquarians have long since brought to light many items which prove and strengthen it, though none of them so tangible and obvious as those previously noticed.

Several obscure hints of the existence of extensive Roman colonies planted westward of the Pillars of Hercules, (doubtless alluding to the American continent,) have been detected in the writings of ancient authors yet extant; but still further proof is afforded in the relics of temples, cities, roads, and fortified camps, long since discovered in Peru, Mexico, and the United States, which strongly savor of Roman origin.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

The ancient works at Marietta, Ohio, have been regarded, by not a few, as the offspring of Roman industry and military science, —and various other remains, that signalize the Mississippi valley, point quite plainly to this nation for a parentage. But a proof; still more conclusive than any yet adduced, is afforded by the discovery of a genuine Roman coin, in the State of Missouri, several years since. Taking all these corroborative circumstances in connection, the fact that Roman colonies did exist, to some extent, upon this continent in past ages, must be regarded as placed beyond successful controversy.

CHAPTER XVII.

Singular exhibition of natural affection. Embark for the States. Scarcity of provisions and consequent hardship and suffering. Extraordinary daring of wolves. Difficulties of navigation. Novel diet. Fishing. A fish story, and another to match it. A bull story. Hard aground and dismal situation. Extreme exposure. Cold, hungry, and wet. Again afloat. Re-supply of provisions. Camp on fire. A picture of Platte navigation. Country north of river. Adventure with a bull. Indian benevolence. Summary of hardships and deprivations. Abandon voyage.

SOON after our return, one of the hunters came in from a short excursion followed by a buffalo calf, which appeared as tame and docile as if always accustomed to the presence of man.

This incident first brought to my knowledge a remarkable peculiarity in the nature of these animals, —viz: the strength of affection existing between the mother and her offspring.

The buffalo will never desert her calf, except in cases of imminent danger, and then, never for a long time;—she is certain to return promptly in search of it, even at the hazard of her own life.

The calf, on the other hand, exhibits an equal, or rather superior, love for its mother.

If she, to whom he owes his birth, falls a prey to the relentless hunter, he deserts her not, but lingers near her lifeless carcase, till the butcher-knife performs its office, and the reeking flesh belades the pack-horse;—nor then, even, does he leave her.

As the honored relics are borne away, he not unfrequently follows on, mournfully, regardless of aught else, as if saying, “Where thou goest let me go, and now thou art dead, I would live no longer.” There is something touchingly beautiful in such exhibitions of natural affection on the part of dumb brutes.

May 7th. Availing ourselves of a slight rise of water, we embarked on our meditated voyage to the States.

The boat was freighted with some sixty packs[36] of robes, and provisions for four weeks. A barge belonging to another company, also in readiness, started with us, and we all flattered ourselves with the hope of a speedy and pleasant trip.

The two boats numbered a united crew of eleven men, —mine consisting of five, and that of our consort counted six.

Slipping cable, we glided midway of the stream, and gave a parting salute to the friends who lined the shore, accompanied by a loud hurra and waving of hats, deeply responded to by them, —and even tears coursed their way a down the dusky visages of our voyageurs, when mindful of the fate separating them—perhaps forever!

The crews now struck up a merry song, while the dripping oars, as they spurned the crystal waters, responded their time in measured strokes.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

As we passed swiftly along and were fast receding from within hailing distance of the Fort, an old mountaineer, who stood gazing upon us, exclaimed, "Ah, boys; you can sing now, but your tune will be altered ere-long!"

This strange announcement, though a riddle at the time of its utterance, soon began to more than verify itself; and often did we repeat the remark, "Well, sure enough, our tune has changed."

Moving along prettily during the day—sometimes floating with the current then again plying oars, —we reached the mouth of Horse creek; and, passing on a short distance, lay to for the night.

The day following we again pushed off; but, after proceeding ten or twelve miles, the water became so shallow, we were compelled to lay by to await a further rise, and struck camp in a small grove of cottonwood upon the right bank of the Platte, a short distance above Scott's Bluff. Here we remained for some two weeks.

The crew of our consort being poorly supplied with provisions, we divided our own with them, and, at the expiration of a few days, were left entirely destitute.

From this on, we were dependent solely upon such game as chance threw in our way, —sometimes starving for two or three days, and then feasting for a like interval, upon the products of successful hunting.

To us was a tedious lot, —there being no game in the country, save perchance a few straggling bulls, and they rarely within less distance than ten or twelve miles. Our hunting excursions often led further than that, and when we were so fortunate as to kill, the proceeds were borne upon our backs to camp. We became so accustomed to packing, in this manner, it was thought no extra burthen for an individual to carry upwards of a hundred pounds of fresh meat at a single load, some ten or twelve successive miles, over an open, sandy prairie, and beneath the scorching rays of an almost vertical sun.

So far from regarding it a task, we esteemed it a pleasure, and were glad to appease the cravings of appetite even at so small a sacrifice of comfort and convenience.

The reason for the scarcity of all kinds of game in the vicinity of the river at this time, was the recent burning of the prairie upon both sides, for many miles back, leaving not even the vestige of vegetation for the subsistence of any graminivorous animals.

This we found to be the case nearly the entire distance to the forks.

During the latter part of our stay at this camp, it rained almost incessantly; we also encountered a severe snow storm.

The winds were usually high, and frequently blew with hurricane-violence.

A pack of hungry wolves, attracted by the scent of camp, were our regular nocturnal visitors, and proved a constant source of annoyance. On one occasion they carried off a bake-kettle to a distance of several hundred yards;—at another time, they took away a tin-pan, which we never afterwards recovered;—and, stranger yet, one night these piratical pests stole a fur cap from off my head while I was sleeping, and in the morning, after a diligent search, no trace of it could be found.

The river having slightly risen, we again loosed cable, and, after toiling all day, and tugging with might and main, by hand-spikes and levers, — twisting, screwing, and lifting, now in water up to our necks, and now on dry sand-bars, we succeeded in dragging, or rather carrying, our craft for a distance of about five miles, and again lay by for four succeeding days to await a still further rise.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Upon the opposite side of the river was a bald-eagle's nest, with two half-grown fledglings. One of our party, ascending the tree, captured the young ones, and we had a fine meal from their carcasses. A wood-duck's nest, containing some twelve eggs, near by, afforded a seasonable repast, and, in hunting for game, we came upon the nest of a wild goose, as well as those of numerous ravens among the neighboring cottonwoods and willows, which we subjected to such forced contributions as appetite demanded.

A portion of the interval was employed in fishing, but with poor success, the fish of the Platte being nearly all of them small, and not very plentiful even, at that.

An old Franco-Canadian, of our crew, here favored us with, perhaps, a little the biggest fish story of any told at the present day.

He had been down the Missouri on several occasions in boats connected with the fur trade.

On one of these voyages, while in the act of reaching over the boat-side for a drink of water, he dropped his cup, which immediately sank to the bottom of the river and was lost.

Three years afterwards he again passed the same place, with hooks and lines attached to the boat-stern for the purpose of catching fish as he glided along.

A large cat-fish, attracted by the tempting bait borne upon the hook, greedily swallowed it, and, in a trice, found himself translated to a new and strange element.

The creature was so heavy, it took two men to pull him into the boat, while his gigantic proportions astonished all beholders.

But the most surprising thing was revealed on opening him; — there, snugly stowed away in one corner of the monster's capacious maw, reposed the identical cup our voyageur had lost, three years before, with his name and the date marked upon it!

"Pooh! Gumbo," said an old sailor, "I can beat such stories as that, all day."

"Why, fellow, on my last trip from Liverpool to New York, a shark followed the ship for a long time, picking up such bits of bread and meat as were thrown into the sea.

"Our steward was a very careless fellow, and, in shaking the tablecloth, he would frequently drop overboard the knives and forks and spoons, and received from the captain several floggings on that account. He was even accused of stealing them, but strongly protested his innocence of the latter charge.

"Among our passengers was an old whaleman, who, being very expert in the use of the harpoon, took it into his head one day to victimize the shark. After several ineffectual attempts, he finally succeeded in forcing his instrument through the monster's vitals, and drew the lifeless carcass alongside.

"The piratical cruiser was so thundering big, it took eight men with tackles to raise it on board; — it must have weighed at least sixteen hundred pounds! The body of the greedy creature was then laid upon deck, and on opening it all were astonished! What do you think was found, Gumbo?"

"Sacre sharp! Certes me tink dey fine de spoon, de fork an de knife Him shark no follow de ship for nottin."

"Well, boys, what do you all suppose was found?"

"Indeed, we couldn't say."

"Guess,"

"The knives and spoons, of course."

"You are wrong, to a man."

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

“What, in the name of reason, could it have been? Do tell—we give it up.”

“Hang me, if you aint a bright set of fellows!—Can’t guess a thing so easy? Why, if I must tell you—’twas guts, —only guts— nothing in the world but guts!”

“Look here, Jack,” said one of the listeners, advancing towards him hat in hand, “you can take this. We’ll be quite likely to remember hereafter that fish generally carry their guts inside!”

The old Frenchman looked rather crest-fallen at the curious manner in which his extraordinary fish story had been matched, —but felt little disposed to yield his laurels without an effort to retrieve them, —so, calling to aid his recollections of the marvellous, he again commenced.

Several years ago, while in the employ of the American Fur Company, our hero and another man were sent expresses to a distant post. It was winter; and they travelled on foot, depending for daily subsistence upon such game as chance brought in their way. Their course lay through an open and cheerless prairie, covered with snow, and the journey occupied nearly a month.

Having been en route some five or six days, their ammunition began to fail in the item of lead, —and only two bullets were left. Their condition now became extremely desperate, as there was no way of procuring a re-supply, —and anticipated starvation stared them in the face.

Determined to eat as long as the means of subsistence remained, their last balls were shot away in killing a buffalo bull. After furnishing themselves from his carcase with a large supply of meat for present and future use, our hero proceeded to cut a few locks of hair from off the creature’s head, for the purpose of stuffing his moccasins.

“Bon Dieu! Vat you tink me fine? You no can tell all day! Me no ask you guess. Bon Dieu! c’être admirable. Me fine forty ballas, in he head. Me get’em out. Sacre tonnerre! den me had him sufficient la poudre and la ballas for de route! No go hungry une leetil bit!”

On the fifth day subsequent, we again launched forth into the stream, and after a series of most extraordinary exertions, (being obliged to lighten our boat several times, by carrying its loading on shore, and reloading as often, thus to enable us to lift it over sand-bars,) we succeeded in getting it some three miles, and finally became safely moored in the middle of the river, from which it was impossible to extricate ourselves either by going backwards, forwards, or sidewise—with or without a cargo.

Here we remained for three days, and experienced, during the interval, a continuous fall of rain and sleet, which rendered the weather dismal and our own situation disagreeable in the extreme. A cache of liquor having been made, fifteen or twenty miles distant, by a trader connected with our consort, a month or two previous, unforbidding as was the weather, the crew could not rest content until the hidden treasure was among them.

Improving the opportunity presented by a slight suspension of the storm, one morning two of them started to procure it. Soon after it commenced snowing and raining, accompanied by a fierce, cutting wind and all the withering bleakness of a winter’s blast.

Still keeping on, however, they obtained the cache, and returned with it towards the boat.

But night shut in upon them by the way, and a thrice dreary night it was. Being too drunk to navigate, they lost their course and were forced to camp in the open prairie, without wood or aught else of which to build a fire, or even a robe to cover or a rock to shelter them from the chill wind and peltings of the pitiless storm.

Half-frozen with cold and wet to the skin, they lay upon the muddy ground and passed the interval, not in sleep, but in a state of drunken stupor, produced by inordinate draughts upon the

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

contents of their keg.

On the next morning they reached the boat, —a beautiful looking couple, as might well be supposed! Covered with mud from head to foot, their clothes were wringing wet, and their faces bloated and swollen almost to twice their natural size. So complete was the transformation, they were scarcely recognizable as the same persons.

But, regardless of hardship and suffering, they stuck to the liquor-keg and brought it with them as proof of their triumph.

And now commenced a scene of drunken revelry, which, despite my efforts to prevent it, soon communicated itself to both crews, and continued without intermission till the stock on hand was exhausted.

The lack of a fire by which to warm ourselves, contributed materially to the misery of our present condition; there being no wood procurable for that purpose within five or six mikes of either shores and having none on board, we were compelled to endure the dreary interval as best we could.

But another evil came pressing upon our already heavy load through the entire exhaustion of provisions, and the last of our stay was made twice forlorn by cold and fasting.

The gloomy reality of this situation may be thus briefly summed up; We were fast aground in the middle of a river, three-fourths of a mile from either shore, confined to the narrow limits of a few feet, exposed to the merciless peltings of a chill storm of rain and sleet, with only a thin lodge skin to shelter us, without fire to warm or dry ourselves by, and, worse than all, destitute of the means of appeasing the gnawings of hunger.

But, forbidding as the picture may seem, it proved only the commencement of a long series of suffering and deprivation, more intensely dreadful in its nature, that was yet held in reserve for us. On the forenoon of the fourth day the storm abated, and, favored with a slight rise of water, by dint of extraordinary effort we finally succeeded in getting afloat, and gained the right shore after pulling our craft over sandbars for a distance of two miles.

All hands now turned out in search of game, one of whom returned, towards night with an antelope, providing us with a needful supply of food for the time being.

The next day, forcing our craft onward for six or eight miles, we brought to upon the left shore, where, after a short excursion among the hills, two other antelope were brought in, which furnished us with a further supply of provisions.

The day following we continued our voyage till towards noon, when a high wind compelled us again to lay by under the lee of a small island.

Here, towards night, having spread our robes near the camp fire, while all hands were busy at the boat, a sudden gust of wind bore the sparks among the dry grass, and in an instant the whole island was one sheet of flame! robes, blankets, and all, were almost entirely destroyed, notwithstanding our prompt efforts to save them.

Continuing on, the next morning we forced our boat, or rather carried it, down stream for about fifteen miles, —wading the river for nearly the whole distance.

Our mode of voyaging was pretty much the same, each day of its continuance. Sailing was out of the question.

Not unfrequently we were obliged to unload five or six times in the course of a few hours, in order to lift the boat over high sand-bars, carrying its cargo upon our backs through the water a half-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

mile or more, to some dry place of deposit for the mean time; then returning it in the like tire-some manner, —now in water up to our arm-pits, —then scarcely enough to cover the sand of the river bed.

As for a channel there was none, or rather, there were so many we were at a continual loss which to choose.

Now, gliding along merrily for a mile or two, we are brought to a halt by the water scattering over a broad bed, and find ourselves snugly “pocketed,” with no other means of extrication than by backing out; then, wading against a swift current, we retrace our steps for a like distance, and try another chute, perhaps with no better success; —then, again, conveying our landing to the nearest point of land, by means of hand-spikes and levers (requiring an exercise of the utmost strength,) we force our empty craft over the shoals, and again load it, perhaps, to re-act the same scene in a brief interval.

Sometimes we were obliged to travel (for such navigation as this was tenfold worse than traveling) four or five miles to make one mile headway. By crossing and re-crossing a river varying in width from one to two miles — first advancing, then retreating; now taking to the right, then to the left; now transverse, and then oblique, we wasted our time, strength, and patience, in labor to little or no purpose. No one, unless practically experienced, can have a correct idea of the beauties of such a voyage.

Towards night, attracted by the appearance of a couple of bulls among the sand-hills, we brought to upon the left shore, and succeeded in killing one of them.

A high wind the day following kept us encamped and afforded another opportunity for hunting. Improving the occasion to explore the country northward, and obtain, if possible, some correct conception of its general character, a jaunt of four or five miles, over the bottom of rich alluvial soil skirting the river, ushered me into a high rolling prairie, partaking of the mixed nature of the garden and desert.

The hills, in many places, were piles of sand or sun-baked clay, with scarcely a shrub or spire of grass to hide their nude deformity, while the space between them sported a rich soil and luxuriant vegetation, and was clothed in the verdure and loveliness of spring, and adorned with blushing wild-flowers in full bloom.

Further on were yet higher summits, surmounted by pines and cedars, raising their heads in stately grandeur far above the sweet valleys at their feet.

Taken together, the scenery was not only romantic and picturesque, but bewitching in its beauty and repulsive in its deformity.

The prevailing rock was a dark, ferruginous sandstone, and argillaceous limestone, interspersed with conglomerates of various kinds.

Proceeding to a distance of about fifteen miles from the river, in hopes of finding game, I encountered nothing save a solitary band of wild horses, that fled across the sand-hills with the fleetness of the wind on my appearance, after which I returned to the boat much fatigued from the excursion.

Our other hunters had also returned; but neither of them with better success than myself.

The subsequent morning we again renewed our voyage. Soon after, an old bull presenting himself upon the river bank, we landed, and one of the crew approached him from the water-edge.

The old fellow, unconscious of the danger which threatened, permitted the hunter to advance till

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

within three or four yards of him. The sharp crack of a rifle-shot first awoke him to a sense of his situation, when, reeling, he plunged headlong from the steep bank into the river. Our marksman, in an effort to dodge the falling beast, tumbled backwards into swimming water —lost his gun, and came very near being drowned.

The bull made halt at a sand-bar, near by, and received nineteen shots in his carcase before he could be dispatched.

When killed, his hams were found half eaten by wolves, and his whole body otherwise so badly mangled we left it unbutchered.

In the afternoon, having pursued our way eight or ten miles, we lay by for the night.

A high wind and rain during the three succeeding days prevented further progress, and in the interval our provisions became again exhausted.

While here, observing two Indians in the distance, running buffalo, I took three men and started to meet them. On coming up, we found an old Indian with his son engaged in butchering. Announcing the object of my visit to be the procurement of meat, they listened without a reply, but continued their operations, —laying the selections in two separate heaps.

When finished, the old man led up his horse, and, pointing to an assorted pile, told me it was mine, and the animal also should be at my service to convey it to camp.

His village, he remarked, was a long distance over the hills, on the watch for Pawnees, and though in a directly opposite course from us, he loved the white man and would give him meat and a horse to carry it.

Accepting the offer of the generous-hearted savage, I took the heavy-laden horse and returned to the boat, —the owner following to regain his beast. When arrived, he hinted at no remuneration for his kindness, and mounting his horse, would have left for his village.

Where will you find among civilized people men thus generous and obliging? Such cases are indeed rare. The savage here proved himself of more noble principles than nineteen-twentieths of his enlightened and Christianized brethren, whose religion teaches them to love their neighbor as themselves, and do to others as they would like to be done unto!

Unwilling that such disinterested kindness should go unrewarded, I made the old man some trifling presents, which he accepted with great pleasure, and, pressing his hand to his breast, exclaimed: "Chanta-ma warstaello!" (my heart is good!) and, shaking hands with the company, put whip to his horse and was soon out of sight.

It is useless to notice the particular progress of each day, or to state how many times we unloaded in the interim — how often we crossed the river, or how far we carried our boat by main strength; these things have been already laid before the reader sufficiently to give him some faint idea of the intolerable hardships and sufferings we were compelled to undergo. Each day was but a repetition of the toils and struggles of the preceding one.

Neither would it be interesting to state the especial half-day, day, or successive days we went without eating, meanwhile; suffice it to say, the morning of the 10th of June found us at the mouth of a small creek upon the right shore, about two hundred miles below the Fort, —having been thirty-five days en barquette, and without eating for full one third of that time! The expected spring rise had failed, and the river was very low and still falling, so that there was no possible chance of conveying our cargo to the States, as the most difficult part of the voyage lay yet before us. I accordingly abandoned all thoughts of the latter, and adopted such other arrangements as my

judgment suggested upon the premises.

CHAPTER XVIII.

Hunting excursion. Thirst more painful than hunger. Geological observations. Mournful casualty. Sad scene of sepulture. Melancholy night. Voyage in an empty boat. Ruins of a Pawnee village at Cedar Bluff. Plover creek. Cache Grove. Thousand Islands. Abandon boat. Exploring company. A horrible situation. Agony to torment. Pawnee village. Exemplary benevolence of an Indian chief. Miserable fourth of July. Four days' starvation. Arrival at Council Bluff. Proceed to Independence. FOR two days preceding we had been without eating, and our first effort was to procure a re-supply of provisions. Both crews started out with their rifles in pursuit of game, though not the footprint of any living creature appeared to excite even the faintest hope of success.

Still, however, we kept on, determined not to despair so long as the use of legs remained to us. Having travelled some fifteen miles, chance threw in our way a doe-elk with her fawn, which the unerring aim of a rifle speedily laid dead before us. Soon as opened, the liver disappeared at the demands of voracious appetites, and next to it the marrow bones and kidneys.

The process of cooking was then commenced over a fire of bois de vache, which was continued till each stomach was abundantly satisfied. But, here another enemy assumed the place of hunger, and one far more painful in its nature. There was not a drop of water to allay our thirst short of the river, fifteen miles distant, —over an open sand-prairie and beneath the scorching rays of a vertical sun.

I can endure hunger for many days in succession without experiencing any very painful sensations, —I can lie down and forget it in the sweet unconsciousness of sleep, or feast my imagination upon the rich-spread tables of dreams; — but not so with thirst. It cannot be forgotten, sleeping or waking, while existence is retained. It will make itself known and felt! It will parch your tongue and burn your throat, despite your utmost endeavors to thrust it from memory! Each one shouldering his burden from the carcase, we took up our line of march for the boat, where, arriving in four or five hours subsequently, we quenched our burning thirst in the water of the thrice welcome stream.

The country travelled over during this excursion, for the first ten or twelve miles, was a level plain, presenting a thin vegetable mould with a luxuriant growth of grass and herbage, upon a substratum of sand and gravel.

The remainder of our route led through a ridge of hills, many of them naked, others clothed with grass and ornamented with pines; — between the tumuli were many beautiful vallons, gorgeously decked with wild-flowers in full bloom, and arrayed in mantles of living green; while thick clusters of fruit-bearing trees and shrubs attested the general fecundity and lent their enchantment to the scene.

Beyond this a gentle acclivity, that led to the high prairies, spread before the beholder a wilderness of verdure, without one moving object to relieve its cheerless monotony.

The boats were unloaded on our return and their contents placed in a compact pile upon shore, over which were spread two thicknesses of lodgeskin, to protect it from the weather. Other necessary arrangements were soon completed. Two men being selected to remain with the robes, two were dispatched to the Fort, while the remainder with myself were to make our way to the States,

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

if possible, in an empty boat.

Everything was put in order for departure the next morning, and a gloomy feeling pervaded each mind as the hour approached that was to separate a band so closely united by mutual sufferings, toil, and deprivation.

Those selected to accompany me were congratulating themselves on the prospect of soon reaching the termination of their arduous and eventful expedition, among the friends and acquaintances of other days; and none were more happy in the anticipation of this hoped for finale, than was a lively French youth, named Prudom.

Notwithstanding the general tendency of circumstances was to produce feelings of melancholy, his voice rang loud in announcing the varied plans of amusement and pleasure, that were to be realized upon his arrival at home.

For this day, so far at least, he had been the petit garçon of the company; and, it was frequently remarked, as his quaint expressions and sallies of wit burst upon the ear, "What in the world is the matter with Prudom?"

His good nature and kindness of disposition had won the esteem of all acquainted with him, while his cheerfulness and fortitude at all times contributed much to render tolerable the dreariness of our forlorn condition.

A little before night, the company indulged in a general cleansing, accompanied by a shave and change of clothes. Prudom was among the number, for whom an intimate friend officiated as barber; — the operation finished, he jokingly remarked:

"Well, Tom, I suppose this is the last time you'll ever shave me!"

Little did the poor fellow think how soon his words were to be verified. Seizing his rifle he stepped on board the boat, and, stooping to lay it by, exclaimed, "Here's the game!"

The words were scarcely uttered, when the gun-lock, coming in sudden contact with the boat-side, discharged the piece and shot him through the heart! He staggered, faltering forth "Mon Dieu!" and fell dead at my feet!"

A thrill of horror struck every nerve on witnessing this tragical event. If we had previously felt melancholy, we now felt dismal and woe-begone. He, who five minutes since was the very soul of cheerfulness and mirth, now lay a lifeless corpse! How true it is, we "know not what a day or an hour may bring forth."

The sun was just setting as we commenced digging a grave in which to deposite all that remained of our friend and companion.

The task was a sad one, and as tedious as it was sorrowful. We had neither shovel nor pick-axe, and were compelled to dig it with our butcher knives and hands.

The pale-moon, new-risen, shed her sombre light over the dismal realms of Solitude, and an intervening cloud cast its pall-like shadow upon the scene of sepulture, as we laid low the corpse in mother dust. No shroud covered — no useless coffin enclosed it, — a grave was the only gift within the power of friendship to bestow! A thin coating of earth succeeded by a layer of stones and drift-wood, and that again by another earth-coat, was its covering, — then, the mournful task was done, a tear dropt to the memory of poor Prudom, and his body left to slumber in its narrow prison-house, till the sound of the last trump shall wake the dead to judgment.[37]

That night to us was a more painful one than any we had passed. A feeling of superstitious awe, mingled with thrilling sensations of grief and thoughts of our own miserable condition, occupied

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

each mind and usurped the soothing powers of sleep. The dolesome howlings of the prairie-wolf, and hootings of the midnight owl, borne upon the listening air, kept sad condolence with our musings, and gave increased momentum to the pressure that crushed our spirits. Who could sleep, amid such scenes and surrounded by such circumstances?

The rising sun of the morrow brought the hour of separation, and exhibited upon every face the same downcast look, prefiguring the inward-workings of a mind absorbed in the melancholy of its own thoughts.

My party consisted of six, some of whom were selected from the crew of our consort. We all embarked in one boat, taking with us a small quantity of robes, (our own individual property,) and a portion of the provisions at camp.

Our voyage for a few days succeeding, was performed without much difficulty, except in the article of food — for, from this onward, till we finally reached the settlements, (an interval of twenty-eight days,) we were without eating full one half of the time!

Proceeding some thirty miles, we overtook the American Fur Company's barges, three in number, the crews of which were struggling on in vain effort to reach the States. We glided past them with a loud huzza, and rallied the poor, toiling voyageurs, upon the futility of their exertions.

Five or six days subsequently, we were, in turn, overtaken by them; they, like ourselves, abandoning all hope of accomplishing the objects of their voyage, had left their freight at Ash creek, under guard — and, from that on, became our *compagnons de voyage*.

The only game previous to reaching the forks of the Platte — a distance some two hundred miles — was now and then an antelope, with a few straggling deer. Our subsistence, meanwhile, was principally upon "greens," and such roots as we had time and opportunity to gather.

The country was pretty much of a uniform character, with that previously described. The rich alluvion of the river bottom reposed upon varied substratum of sand, marl, gravel, and clay.

I noticed several varieties of clays in the river banks exposed by the attrition of the water—of these were the white, red, black, yellow, blue, and green.

The white clay is much used by the Indians in cleaning skins and robes; an operation performed by mixing it with water till the compound assumes the color and about four times the consistency of milk, when it is applied to the surface of the article in hand; the robe or skin thus washed, after being thoroughly dried in the sun, is rubbed until it becomes soft and pliable from friction, and the grosser particles of the preparation are loosened and removed.

By this simple process skins assume a milky whiteness, and every spot of grease or dirt is made to disappear.

All kinds of skin may be thus cleansed, and will readily attain an unsoiled purity, surpassing that originally possessed. Red, yellow, black, blue, or any other kind of clay, may be used for like purposes, and will readily impart to the cleansed articles their own color.

In case a single application is insufficient, repeat the process for two or three times, and there can be no possible failure in the result, provided the clay is pure and good.

Some twenty miles above the Forks, we passed a ridge of rocky hills exhibiting layers of limestone and sandstone in bold escarpments, that jutting into the river from the right, formed a high embankment covered with pines and cedars, known as Cedar Bluff.

At the upper side of this point stood the remains of an old Pawnee village, which had been deserted by its inhabitants immediately after the bloody battle between that nation and the Sioux, at the

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

mouth of Ash creek.

The bottom, for several miles above, is rarely excelled in fertility. The islands are generally timbered, but the river banks upon both sides are almost entirely destitute of trees of any kind. From Cedar Bluff, in about eight miles, we came to the mouth of a large and beautiful creek, forcing its way, with a clear and rapid current, from the high rolling prairies to the north. This presented the appearance of being skirted with broad and fertile bottoms, well supplied with timber among the hills. Though vested with some importance on account of its size and locality, it is as yet nameless — the abundance of plovers in its vicinity at the time of my passing, suggested the term “Plover creek” as a proper appellation.

Five or six miles further on, we came to a large grove of cottonwood upon the right shore. Here, some five years since, a company of traders, while descending the Platte in boats loaded with furs, made cache of one hundred and sixty packs of robes, which they were compelled to leave on account of the low stage of the water. The luckless party, after enduring great hardships, arrived in the States; but their cache was subsequently plundered by Pawnees.

The confluence of the North and South Forks made but little perceptible difference in the size of the river. From the junction, in five days' time we reached the vicinity of Grand Island, about two hundred and twenty miles from the nearest white settlements.

The high prairie upon the north shore, between the above points, is generally sandy. The river presents numerous clusters of islands, most of which are heavily timbered and clothed with luxuriant growths of vegetation. The soil is of a deep, sandy loam, and well adapted to cultivation, I noticed upon them several choice wild flowers of rare beauty.

We experienced great difficulty in forcing our boats through a large group, called the “Thousand Islands,” that thickly studded the river for some ten miles, and, before clearing them, found our passage completely blockaded.

Having consumed an entire day in vain effort to proceed, we were at length compelled to abandon the idea. The water was constantly falling, and our condition hourly becoming worse. This forced upon us the dernier resort of performing the remainder of our arduous journey on foot.

Accordingly, making cache of the personal property with us, we sunk our barges in a deep hole near by, threw all extra clothing into the river, and, each selecting a robe with as much meat as he could carry, we commenced our weary tramp.

The property thus disposed of was of the value of several hundred dollars. Among other articles left in cache, were arms and tools of various kinds.

No one would now carry a gun, — as we were to pass through a section of country destitute of game, and, being obliged to travel with all possible despatch to avoid starvation, good policy prompted us to dispense with every unnecessary encumbrance. For myself, however, I was unwilling to relinquish my rifle, and determined to take it with me.

There were fourteen of us, including the coups de barquette of the American Fur Company; and, as we trudged along at a pace enfeebled by a series of cruel hardships, fatigue, and starvation, —with provisions and beds bound in close bundles and strapped to our backs, —half-naked, long-bearded, careworn, and haggard, —we looked like the last remnants of hard times!

The 28th of June dated the commencement of this last stage of our tiresome pilgrimage.

Having travelled some ten or twelve miles, we espied a camp of whites a short distance in advance, and were observed by them almost at the same time. Our appearance created an evident

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

consternation, —their horses were driven in with great speed, and their guns stripped ready for action, while our or five men, mounted upon fleet chargers, rode out to reconnoitre.

On ascertaining the cause of their alarm to be only a handful of unarmed men, they ventured up, and were saluted with the cordiality of old acquaintances, so rejoiced were we at the sight of anything savoring of the endearments of home and civilization.

The company proved one in the employ of the United States Government, under the command Lieut. J. C. Fremont, of the Corps of Topographical Engineers, on an expedition for the exploration and survey of the country lying between the Missouri river and the mountains.

The commandant seemed a gentleman of urbanity and intelligence, and politely furnished us with all the passing news of the day preceding his departure from the States.

Our smokers and tobacco-chewers, who had been for sometime without the *sina qua non* of the mountaineer, now procured a re-supply for the indulgence of their filthy and unnatural taste.

Leaving our new-found friends, we continued on for a few miles, and halted a brief interval under the shade of a cottonwood grove. While thus reclining upon the green grass, what was our surprise at seeing three Indians, who appeared suddenly in our midst extending their hands to greet us!

They belonged to a war-party of Chyennes, —had been to the Pawnees, and were now on their return, with three horses captured from the enemy.

Continuing our course, towards sundown I began to find my rifle rather cumbersome, and, yielding to the advice of all hands, threw it away.

Having travelled till late at night, we laid ourselves down in the trail for repose;—the musquitoes, however, together with the heat, were so annoying, sleep was impossible.

I never in my life before was so tortured by these relentless persecutors. Their sting was far more tolerable to me than the unending hum of their music. To exterminate them was a hopeless task, for, at the death of one, fifty would come to its funeral, —and to submit quietly to their rapacity and be eaten up alive by such loving friends, was more than human flesh and blood could endure. For three hours I lay, sweltered by the heat and pierced by the hungry myriads that swarmed around, until my agony became so great it obtained the mastery of reason, and I was scarcely self-conscious whether a being of earth or an inhabitant of the realms of woe.

In the height of my phrenzy I fancied four demons had hold of the extremities of my robe, and were fiercely dragging me over a prairie of sharp rocks, that tore my flesh at every bound. The remainder of the party suffered equally with myself, and none of them were permitted to close their eyes that night.

June 29th. We started at early day, and pursued our journey till ten o'clock, which brought us to the foot of Grand Island, —a distance of sixty miles from the place of our adventure with the Indians during the previous afternoon. Here we indulged in a slight repast, and, reclining upon the grass, enjoyed a few hours' sleep, despite the continued annoyance of musquitoes.

On arousing to resume the painful march, our legs were found in a very unenviable plight, and almost refused to sustain the accustomed burthen. Our feet, also, (softened and made tender by the mollifying effects of the water, to which they had been so long familiar, and, unused to the offices now newly forced upon them,) were sore and swollen to a frightful size. From this on, our journey was most intensely painful.

But, notwithstanding all, we were compelled to keep moving, though our progress seemed more

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

like the passage of Mahomet's "bridge of swords" than aught else imaginable.

July 2d. This morning our stock of provisions was entirely exhausted, and yet a long distance intervened between us and the settlements.

Towards night, however, chance brought us in the way of a plentiful supper, by our encountering the Pawnee village on its way to the buffalo range. We were entertained by the head chief in a hospitable manner, who furnished us bountifully with boiled corn and mush; and we were also invited into several shantees with the same kind intention.

The Pawnee chief (Red Eagle, if my recollection serves me right) was a generous old fellow, aged some sixty years. His benevolence was truly exemplary, as his conduct well attested. My moccasins, being much worn by long usage, exposed to the ground the bottoms of my feet. This was no sooner discovered by the noble-hearted old man, than he pulled off his own (a pair of new ones) and gave them to me!

What white man would have done the like? And this was done by the poor Indian, not from the expectation of reward, but through the promptings of an innate benevolence! A small tin-cup, taken with me thus far, was the only return in my power to make.

Leaving the village a little before sundown, we encamped for the night near the houses recently occupied by these Indians, after having travelled seven or eight miles. Their buildings are coniform, and constructed of earth and timber, very similar to those of the Kansas tribe, described in a previous chapter.

Several years ago, the Pawnees were a numerous and powerful nation, possessing an extensive territory, and occupying five large towns, viz: one upon the Republican branch of the Kansas river, one at the forks of the Platte, one south of the Arkansas near the Cumanche country, one on Loup creek, and one some ninety miles above the mouth of the Platte. These several divisions were known by the terms of Pic, Mahah, Republican, Loup, and Grand Pawnees. The Riccarees, speaking the same language, may also be reckoned a fraction of this tribe. The five villages before named are now reduced to two, i.e. on Loup creek and above the mouth of the Platte.

The whole number of the Pawnee nation, exclusive of the Riccarees, probably does not exceed six thousand souls. All of the western tribes being at war with them, their numerical strength is continually diminishing.

Slight advances have been made towards improving the condition of this nation, but, as yet, with little apparent success. A farmer, blacksmith, and schoolmaster are provided them under the patronage of the U. S. Government, and a missionary is also stationed among them by the American Board of Foreign Missions.

They raise corn[38] and other vegetables, but their principal dependence for subsistence is upon the proceeds of hunting. Their general character is stamped with indolence, treachery and cowardice, for which they have become famous, not only among the whites, but also among their rude neighbors, —having thus attained the hatred of both.

July 3d. This morning we parted company, and each of us undertook to make his way to Council Bluff according to the best of his ability. Being entirely destitute of food, it became us to urge our course with all possible dispatch.

July 4th. Accompanied by two others, in an equally forlorn condition, the "glorious fourth" finds me plodding along, over an open prairie, beneath the scorching rays of a summer's sun, unarmed, halt-naked, with a shouldered pack, and not having had a morsel to eat for the past two days.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

It is now I think of the festal boards and scenes of good cheer so omni-present upon Freedom's birth-day in the land of my nativity! Mine is a mode of celebrating Independence, that I care not ever again to observe.

On the 6th we reached the Ottoe mission and obtained food, after an abstinence of four successive days.

Early in the morning of the 7th we arrived at Council Bluff on the Missouri, eight miles above the mouth of the Platte, and nearly four hundred above Fort Leavenworth. In the course of the day following our whole party came in, one after another — some of whom had become so weakened by hardship and deprivation they could scarcely move a dozen yards without stumbling!

Having remained a few days at Council Bluff to recruit our strength, we procured canoes and descended the Missouri. The 21st inst. found me at Independence, Mo., after an absence of nearly nine months, —having consumed seventy-five days upon my return voyage, and, in the meantime, experienced a series of suffering and misfortunes seldom equalled and rarely surpassed.

CHAPTER XIX.

The country between the Pawnee village and Bellevue, and from that to Fort Leavenworth. Leave Independence for the Mountains. Meet Pawnees. Indian hospitality. Journey up the South Fork Platte. Fort Grove. Beaver creek. Bijou. Chabonard's camp. Country described. Medicine Lodge. The Chyennes; their character and history. Arrive at Fort Lancaster. Different localities in its neighborhood. Fatal Duel. Ruins.

THE country travelled over from the Pawnee village to Council Bluff (or Bellevue, as more recently called) is generally possessed of a rich, clayey soil, which is well adapted to cultivation. Large quantities of timber skirt the streams, that include all the varieties found in the States. The landscape is beautifully undulating, and, at the time of our passing it, was covered with a luxuriant growth of vegetation, (the grass being frequently waist high,) and ornamented by rare specimens of wild flowers.

The Pawnees, Ottoes, and Omahas possess the whole extent of this territory, which embraces much valuable land within its limits. That north of the river and adjacent to Bellevue is owned by the Pottowatomies, who also claim to the boundary between Iowa and Missouri.

The Kickapoos, Iowas, Sacs, and Foxes occupy the country south of the Missouri, from the mouth of the Platte to Fort Leavenworth.

All of this interval possesses a fertile soil, is well watered and passably well timbered. A more particular description of it, however, does not properly come within the limits of this work.

Upon my arrival at Independence, affairs were in a rather confused state. Times were hard and all kinds of business at their lowest ebb. The company for which I had acted had become bankrupt, and left me a loser to no inconsiderable amount. But, notwithstanding this unfavorable aspect of things, I decided upon returning to the Mountains for the purpose of visiting the different regions adjacent to them.

Acting upon this resolution, I expended the means at my immediate command for the procurement of an outfit; — and the beginning of August saw me again en route, accompanied by two experienced mountaineers — all of us mounted upon hardy mules and well provided for the journey before us.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

The first four or five days subsequent, our progress was much impeded by successive rains, that rendered the road muddy and ourselves uncomfortable. We were necessitated to raft the Wakarousha, and the Kansas was so swollen it was forded with great difficulty, — the water frequently covering the backs of our animals.

From that onward we enjoyed pleasant weather and journeyed without further interruption; — nothing occurred worth note, till we reached the Pawnee range, near the head of Big Blue.

One morning, while travelling along unconcernedly and at our leisure, having as yet observed nothing to excite our apprehensions, a Pawnee suddenly made his appearance directly in front of us.

Such a customer had we been aware of his proximity, would have been most carefully avoided, in a place so dangerous as this; but, as he had first discovered us, it was now too late to give him the slip, and we accordingly permitted his approach, greeting him in a friendly manner.

He immediately informed us that the whole country was full of his people returning from their summer-hunt, and he invited us to accompany him to the village. This we declined, being unwilling to trust either him or his people.

Observing several other “shaved heads” hurrying towards us from over the adjoining hills, we struck camp and prepared for the expected rencounter. Upon coming near, however, they appeared friendly and were most of them unarmed. Again we were urged to visit the village.

After waiting an hour or more, we resumed our course, still followed by the unwelcome visitors. A ride of scarcely a half mile brought us to the top of a hill, and, to our surprise, placed us in the immediate precincts of the village, — too far advanced for a retreat.

The entire population was instantly in motion, and came crowding towards us upon every side. Pushing boldly forward, we were received by the same kind-hearted old chief of whom I had occasion to speak in the receding chapter. On recognizing me, I was welcomed with great cordiality, and we were forthwith conducted to his shantee and sumptuously entertained upon the choicest in his possession.

Our camp-equipage and other articles were all safely disposed of, and nothing conducive to our pleasure or comfort was left unattended to. During our entire stay, we were beset with invitations to feasts which were prepared expressly for us by these hospitable villagers, who appeared displeased whenever we declined their acceptance.

The old chief brought forward his little grandson to shake hands with us — remarking, that he would teach his children like himself to love the Americans.

A small sack filled with papers was then laid before me for perusal. They consisted of recommendations, speaking in very flattering terms of the bearer, Red Eagle, and belauding his kindness and liberality. Most willingly would I have complied with his request, and made “the paper talk” for him, but the means were not at hand.

The kind-hearted old man presented us each a pair of moccasins and urged our stay till the next morning, — adding: “Some of my men are bad, and my heart is sick for them. Should you go before sleep, they might follow and rob you. When the morrow’s sun has newly risen above the prairie, they will have left their foot-prints in the homeward trail, and my white brothers may pass unmolested. But, if you will not rest beneath the shade of the Red Eagle, wait till the day-king is low, then ride fast till the night is old, and thus may you avoid the evil ones who would injure you.”

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

This advice seemed so reasonable, we consented to remain till late in the afternoon, when, driving up our animals, we made preparations to start.

Every article belonging to us was faithfully returned by the old man, who ordered for us a present of buffalo meat. Several large pieces were accordingly brought by different individuals, of excellent quality, and in quantity more than we could well carry.

This was all a free gift, —no one even hinted at a compensation. Where will you find among civilized man generosity and hospitality equal to this?

Willing to reward such exemplary conduct, we presented the liberal donors with a small supply of sugar, coffee, and tobacco; and, to our host, we gave a knife and some other trifling articles, all of which he received with evident gratification.

Bidding the noble chieftain adieu, we pursued our course in accordance with his direction, —travelling nearly all night.

Early the next morning we struck the Platte, and, in the afternoon, reached the point at which myself and others had abandoned our boats.

On visiting the cache made at that time, not a thing remained;—it had been robbed by the Pawnees, in all probability, as the island was covered with the tracks of men and horses. But what afforded still more conclusive evidence, was the site of a recent Pawnee encampment within some four hundred yards of the place.

The next morning brought us to the buffalo range, and our fare was one of continued feasting from that onward.

Three days subsequently we came to the forks of the Platte, and continued up the south branch, with the design of proceeding to New Mexico by way of Fort Lancaster.

Here we entered a stretch of territory not as yet brought before the reader's notice.

Passing on, a ride of between fifty and sixty miles brought us to a large grove of willows at the mouth of a sand-creek, where we remained the day following.

The vicinity contained the relics of three or four Indian forts, constructed of logs, —one or two of which were in an almost entire state of preservation, and afforded a correct illustration of Indian military genius. Their forms were oval, and the roofage so complete, we were amply sheltered in one of them from a heavy shower which fell during our stay.

From this point (properly denominated Fort Grove) to the forks, the country is rather sterile and rolling, with the exception of the river bottoms, which, as usual, are possessed of a rich soil and vary in width from one to five miles. There is scarcely a tree, worth naming, upon either bank of the river for the whole extent.

The expanse lying to the northward is quite broken and hilly, with some few pines and cedars at the heads of ravines.

Previous to leaving Fort Grove I experienced an attack of the fever and ague, which recurred, at intervals of once in two days, until we reached Fort Lancaster.

Resuming our journey, a ride of some ten miles brought us to the mouth of Pole creek, a large affluent of the right shore. This is a clear and handsome stream, running through a rich valley of considerable width. Its entire course affords but very little timber, and the prairie upon either side is generally sandy and barren.

Journeying on about seventy-five miles further, we came to a large stream called la Fouchett aux Castors, or Beaver Fork.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

This creek heads in the highlands between the Platte and Arkansas, and traces its course through a sandy country, varied by diminutive hills of clayey soil, for a distance of nearly two hundred miles. — It presents many beautiful bottoms of a rich vegetable mould, with here and there small clusters of timber.

Some forty or fifty miles above Beaver creek, we crossed Bijou, another large affluent of the left shore. The water at the mouth of this stream was shallow, dispersing itself in several small channels, over a bed of gravel and quicksand, about four hundred yards wide, and enclosed by abrupt banks of clay and sand.

For several miles above its junction with the Platte no timber appears; but further on, many large groves relieve the eye, and invite the traveller to their shade, while broad meadows and rich bottoms, clothed with grass and flowers, cheer the beholder and delight his fancy.

Aug. 30th. A ride of ten or fifteen miles, from this point, brought us to a camp of whites, in the employ of Bent and St. Vrain, occupying a small island in the Platte. They were guarding a quantity of robes with which they had attempted to descend the river, but were unable to proceed further on account of low water.

I was much gratified at here meeting an old acquaintance, with whom I had passed a portion of the previous winter upon White river.

The camp was under the direction of a half-breed, named Chabonard, who proved to be a gentleman of superior information. He had acquired a classic education and could converse quite fluently in German, Spanish, French, and English, as well as several Indian languages. His mind, also, was well stored with choice reading, and enriched by extensive travel and observation. Having visited most of the important places, both in England, France, and Germany, he knew how to turn his experience to good advantage.

There was a quaint humor and shrewdness in his conversation, so garbed with intelligence and perspicuity, that he at once insinuated himself into the good graces of listeners, and commanded their admiration and respect.

The country, between Fort Grove and Cabonard's camp, with the exception of the river bottoms, (which were quite fertile and occupied an area, upon both banks, varying in width from one hundred yards to five miles,) is slightly undulating, and presents two uniform characteristics, —one, a thin clayish loam upon a substratum of sand and gravel, and the other a sandy surface, often entirely destitute of vegetation, save, perchance, a few scattering spires of coarse grass and a species of prickly burr.

Various specimens of cacti are found in every direction, and prove a frequent source of vexation to the traveller. The landscape discloses a scene of dreary sterility, —more to be accounted for by the dryness of the climate than any natural defect in the soil.

The river upon both sides is nearly destitute of timber, and we were frequently compelled to use bois de vache for cooking purposes. There is also a scarcity of rock, —though, in the neighborhood of Bijou, I observed a kind of grayish sandstone, exposed to view in the beds of ravines; and, directly opposite Chabonard's camp, the action of the waters had formed a steep wall, some thirty or forty feet high, which disclosed a large bed of sandstone and slate, with earthy limestone.

A few miles above Beaver Fork, we obtained a distinct view of the main ridge of the Rocky Mountains with the snowy summit of Long's Peak, distant some sixty or sixty-five miles. They appeared like a pile of dark clouds just rising from the verge of the horizon, and could be identified only by

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

their uniform and stationary position.

From the time of first entering the buffalo range till we reached Bijou creek, our entire course was beset with dense masses of those animals, which covered the river bottoms and prairies in all directions, far as the eye could reach. Our usual practice was to kill one every day, and select from its carcase the choice portions so well known and highly appreciated by mountaineers; and, calling to aid the varied modes of cooking peculiar to hunters, surely never did epicures fare better than we.

A few miles above Beaver creek we passed the site of a recent Indian encampment, where was yet standing the frame-work of a medicine lodge, erected by the Chyennes and Arapahos for the performance of their religious rites and ceremonies. This was made of light poles, describing an amphitheatre with a diameter of some fifty feet. In form it was much like the pavilion of a circus, and of sufficient dimensions to contain several hundred individuals.

I shall take occasion in subsequent pages to speak of medicine-making, and would refer the reader to that part for an explanation of the peculiar purposes for which the medicine lodge is constructed.

The river at Chabonard's camp is reduced fully one half in width, compared with its size at the forks. The current is also clearer and more rapid. Its banks and islands are much better timbered, and its general appearance indicates an approach to the mountains.

About noon we bade farewell to our new friends, by whom we had been kindly entertained, and resumed our journey, accompanied by my whilom companion and two others, —increasing our number to six.

Towards sundown, coming to a small village of Chyennes, we passed the night in the lodge of a chief, called the Tall Soldier. Our host treated us with much civility, but in this he appeared actuated only by selfish motives, and with the sole view of extorting a more than fourfold equivalent by way of presents.

We were also continually harassed by beggars from all quarters, and gladly availed ourselves of the first dawn of the ensuing morning to pass on, and thus escape their importunities.

The Chyennes at this time occupy a portion of the Arapaho lands, bordering upon the South Fork and its affluents.

Some six or eight years since, they inhabited the country in the vicinity of the Chvenne and White rivers and the North Fork of Platte, from whence they were driven by the hostile incursions of the Sioux, who now hold in quiet possession the whole of that territory.

This tribe, in general appearance, dress, and habits, assimilates most of the mountain and prairie Indians, with the single exception, perhaps, of being meaner than any other. They are certainly more saucy as beggars and impudent and daring as thieves, than any other I ever became acquainted with.

Formerly they were a much better people, but the contaminating effects of intercourse with the whites have made a disposition, naturally bad, immeasurably worse. Contrary to Indian character in general, they are treacherous and unworthy of trust, at all times and in all places.

Their history contains a small speck of romance, which may not prove altogether uninteresting to the curious.

The Chyennes, at the present time, number about four hundred lodges, and claim some eight hundred warriors. The tribe is composed of two divisions, viz: the Chyennes and Gros Ventres,

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

—both speaking the same language and practising the same designation of nationality, shown in sundry transverse scars upon the left arm.

Neither of these divisions know their origin, but tell the following curious story of their first intercourse with each other.

Many years since, the Chyennes, while travelling from a north country, discovered the Gros Ventres, who were also upon a journey. As usual among strange tribes, both parties rushed to the attack, and a bloody battle would undoubtedly have been the result, had it not been stayed by the mutual discovery of an identity of language. Upon this, hostility at once gave place to friendship, and the two parties negotiated an immediate union. Since then they have been considered as one nation.

What is most singular in this occurrence, neither the Gros Ventres nor Chyennes could trace any previous connection or intercourse with each other, or knowledge of their individual existence. This tribe has made no advances in civilization, and most probably will make none for many years to come. Their roving and unsettled habits prove an obstacle, almost insuperable, to any efforts that may be undertaken for their improvement.

They are generally accounted friendly to the whites, but friendship like this is essentially of a dangerous character.

Continuing our journey, the evening of Sept. 2d brought us to Fort Lancaster, after an interval of twenty-six days, during which we had travelled not far from seven hundred and twenty miles.

Our route from Chabonard's camp to this point, for the most part, led along the valley of the Platte, which resembled a garden in the splendor of its fields and the variety of its flowers.

A ride of four or five miles took us across the dry bed of a large sand-creek, four or five hundred yards wide, known as the Kuyawa. The banks of this arroyo are very steep and high, disclosing, now and then, spreads of beautiful bottom lands with occasional groves of cottonwood. At this season of the year its waters are lost in the quicksand and gravel.

We also passed the mouths of three large affluents of the right bank of Platte, severally known as Crow creek, Cache a la Poudre, and Thompson's Fork.

These creeks rise in the adjoining mountains, and, with the exception of Crow creek, trace their way with clear and rapid currents, from two to three feet deep and sixty feet wide, over beds of sand and pebbles. Their valleys are broad, rich, and for the most part well timbered.

Timber increases in quantity, upon the Platte and its affluents, as the traveller approaches the mountains, and the soil gradually loses that withering aridity so characteristic of the grand prairie.

Twelve miles below Fort Lancaster we passed Fort George, a large trading post kept up by Bent and St. Vrain. Its size rather exceeds that of Fort Platte, previously described; it is built, however, after the same fashion, —as, in fact, are all the regular trading posts in the country. At this time, fifteen or twenty men were stationed there, under the command of Mr. Marsalina St. Vrain.

Six miles further on, we came to a recently deserted post, which had been occupied the previous winter and summer by Messrs Lock and Randolph.

One of our party, a whilom engagé of this company, informed me of its principals' becoming bankrupt, through mismanagement and losses of various kinds;—he stated, that, in May last, their entire "cavalliard," consisting of forty-five head of horses and mules, had been stolen by the Sioux Indians; this, in connection with other bad luck — together with the depreciated value of furs and

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

peltries, the failure of a boat-load of robes to reach the states, the urgent demands of creditors, &c., had caused them to evacuate their post and quit the country.

A short distance above this, at a point of timber occupying a large bottom, had been the scene of a fatal duel the previous winter, between two whites by the names of Herring and Beer. On my first arrival in the country I had become acquainted with both of the actors, and felt much interested in the details of the bloody affair as related by one present at the time of its unfortunate occurrence. The difficulty between them related to a Mexican woman from Taos, —the wife of Herring. Backed by a number of personal friends, and anxious to obtain the lady from her husband, the former had provoked a quarrel and used very insulting language to his antagonist. This was received with little or no reply, but soon, however, resulted in a challenge which was promptly accepted.

The preliminaries were arranged in confident expectation of killing Herring, who was considered a poor marksman, especially at an off-hand shot. The weapons selected by Beer were rifles, the distance fifty yards, the manner off-hand, and the time of shooting between the word fire and three. The two met, attended by their friends, at the time and place agreed upon, at the word “fire,” the ball of Beer’s rifle was buried in a cottonwood a few inches above the head of his antagonist, —at the word “three” the contents of Herring’s rifle found lodgement in the body of Beer, who fell and expired in a few minutes.

Between this point and Fort Lancaster, I noticed the ruins of another trading post, much dilapidated in appearance, and nearly levelled with the ground.

Passing along, I could not refrain from musing upon the frequent deeds of mischief and iniquity that had originated within them, in connection with the infamous liquor traffic. Ah, thought I, were those bricks possessed of tongues; full many a tale of horror and guilt would they unfold, to stand the listener’s “hair on end,” and make his blood run cold! But, lost in silent unconsciousness, they refuse to speak the white man’s shame!

CHAPTER XX.

Old acquaintances. Indian murders. Mode of travelling in a dangerous country. Mexican traders. Summary way of teaching manners. Fort Lancaster and surrounding country. Resume journey. Cherry creek and connecting observations. Sketch of the Arapahos, their country, character, &c. Camp of free traders. Blackfoot camp. Daugherty’s creek. Observations relative to the Divide. Mexican cupidity. Strange visitors. The lone travellers. Arrive at the Arkansas. General remarks. Curious specimens of cacti. Fontaine qui Bouit, or Natural Soda fountain. Indian superstition. Enchanting scenery. Extraordinary wall of sandstone.

AT Fort Lancaster I was gratified by meeting with several acquaintances of the previous winter, two of whom had been comrades during a part of my unfortunate and adventurous voyage down the Platte.

My appearance created no little surprise and pleasure, on all sides. Queries of various kinds were industriously plied, relative to the latest news from the States, and also in reference to the miseries and hardships undergone during the interval of my absence. The dangers of our mode of travelling were freely expatiated upon, and numerous instances of recent Indian hostilities cited to prove our “fool daring.”

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Among the latter was an outrage perpetrated by the Chyennes, only two weeks previous, in the murder of three white men, —one of whom was the oldest trapper in the mountains, and had been for some time engaged in the fur trade.

The murderers had the impudence to ask a scalp-feast from the commandant of the Fort, according to custom in case of overcoming their enemies in battle! The hair, however, being recognized as that of a white man, no feast was given. When accused of the murder, they apologized by saying the poor fellow was suffering greatly at the time from recent wounds, and they had killed him out of pity!

In our mode of travelling, we always used due precaution to avoid surprise and attack. This is easily done, while among buffalo, by noticing their movements, —as these animals invariably flee across the wind upon the approach of man, and neither Indians nor whites can traverse their range without setting the whole country in motion.

We observed another plan of caution by frequently ascending some eminence, and scanning the wide expanse, far and near.

Our general practice was to travel till night, and camp without fire in the open prairie, thus precluding the possibility of being discovered, even though in the immediate vicinity of Indians. A party of three or four men can pass through a dangerous country and avoid coming in contact with enemies, provided they exercise a needful vigilance much more easily than one of larger numbers. With a large company too much dependence is reposed in each other, which soon results in individual carelessness and neglect. Added to this, they are apt to rely upon their numerical strength, and, forgetting this simple truism, that “caution is the parent of safety,” rush into danger when they are least aware of it. It thus occurs that large parties are more liable to surprise than smaller ones, and more frequently suffer losses from the depredations of prowling enemies. On the contrary, where but three or four individuals are travelling together, they trust exclusively to their own personal vigilance. Keenly alive to every suspicious appearance, they seldom fail to discover the presence of danger without exposing themselves, and may avoid it by a timely retreat or change of course. There is little risk in an open prairie, in case an enemy is first seen by the party wishing to shun his presence;—they have only to manoeuvre in such a manner as to elude observation, (a thing not often difficult,) and all is safe. In subsequent travels through dangerous countries I have always acted upon these suggestions, and never yet found them to fail.

Some twelve or fifteen Mexicans were at this time present at the Fort. They constituted a trading party from Taos, escorting a caravan of packhorses and mules, laden with flour, corn, bread, beans, onions, dried pumpkin, salt, and pepper, to barter for robes, skins, furs, meat, moccasins, bows and arrows, ammunition, guns, coffee, calico, cloth, tobacco, and old clothes, which were to compose their return freight.

A worse looking set was here presented than that previously described in the second chapter of this volume. Some of them were as black as veritable negroes, and needed only the curly hair, thick lips, and flattened nose, to define the genuine Congo in appearance. A more miserable looking gang of filthy half-naked, ragamuffins, I never before witnessed.

Their cargoes had already been disposed of at various prices, according to circumstances. Flour and meal were sold at from four to six dollars per fanega, (one hundred and twenty pounds,) and other articles at like prices. Their first asking price was at the rate of twenty dollars per fanega; but an affray which occurred with a small party of Americans, immediately upon their arrival, had

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

made these produce merchants much more reasonable in their demands.

The particulars of the affair were rather disgraceful to both parties. The Americans, anxious to purchase a quantity of flour, offered to take it at the asking price, provided the Mexicans would receive their pay in robes of a rather indifferent quality. This the latter refused and a dispute arose, when insulting language was used on both sides, coupled with threats of mutual injury.

The Mexicans retired a short distance and camped, —soon after the Americans, four in number, rushed among them and drove off their entire cavallard, containing twenty head of horses and mules. The Mexicans seized their arms for resistance, and the commandante advancing demanded of the nearest assailant:

“Que quiere, caballero?” (what do you want, sir?)

“Yo tenga lo caballardo, —porque dicirme esta?” (I have your horses, why do you ask?)

“Carraho, American.!” said the Mexican, levelling his gun at the speaker. In an instant a pistol-shot from the latter laid him prostrate, — the ball entering his chest near the heart. No further resistance was offered, and the assailants retired with their booty.

The next morning, however, they returned, and the two parties compromised the matter by certain conciliatory arrangements, which resulted in the Americans giving up the captured animals, on condition that the Mexicans should in future be less insolent and conduct their trade on more reasonable terms.

The wounded man recovered in three or four weeks, and was now ready to accompany his party on their homeward-bound journey.

A large number of Mexicans are employed at the different trading posts in this vicinity. They prove quite useful as horse-guards, and also in taking care of cattle and doing the drudgery connected with these establishments.

Their wages vary from four to ten dollars per month, which they receive in articles of traffic at an exorbitant price;—viz: calicoes, (indifferent quality,) from fifty cents to one dollar per yard; blue cloth, from five to ten dollars per do.; powder, two dollars per lb.; lead, one do. do.; coffee, one do. do.; tobacco, from two to three do. do.; second hand robes, two dollars apiece, —and everything else in proportion.

Their wages for a whole year, in actual value, bring them but a trifling and almost nameless consideration. Notwithstanding, these miserable creatures prefer travelling four hundred miles to hire for such diminutive wages, rather than to remain in their own country and work for less. They know of no better way to get a living, and are, therefore, happy in their ignorance, and contentedly drag out a wretched existence as best they may.

After a period of service they generally return home laden with the paltry proceeds of their toil, and, yielding to the impulses of custom, a single fandango is sufficient to leave them penniless like the squalid crowd with whom they mingle.

A week's stay at the Fort restored me to health and soundness from the debilitating effects of the fever and ague, without a resort to medicine. This disease (the first and only attack of which I ever experienced) had made fearful inroads upon my strength during the short interval of its continuance, and rendered me unfit for travelling;—but, a change of climate and the inhalation of the pure mountain air effected a permanent and speedy cure, in a much less time than I had reason to expect.

Fort Lancaster occupies a pleasant site upon the south bank of the Platte river, about nine hun-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

dred miles from its mouth, and seven hundred and twenty from Independence, in lat. 40° 12' 25" north, long. 105° 53' 11" west from Greenwich. The distance from this point to the dividing ridge of the Rocky Mountains is about thirty-five miles, and from Taos, in New Mexico, between three and four hundred miles.

Long's Peak with its eternal snow appears in distinct view to the westward, and imparts to the sunset scenery a beauty and grandeur rarely witnessed in any country. This peak is one of the highest of the mountain range, being upwards of 13,500 feet above the level of the Gulf of Mexico, and issues from its eastern side the waters of the Atlantic, and from its western the tributaries of the Pacific.

Between the mountains and the Fort, the prairie is generally level, though slightly undulating in places; — it is possessed of a tolerable soil, composed of clay and gravel, ever and anon spreading before the traveller rich valleys, decked with sweet flowers and lusty herbage.

The country eastward is rolling, sandy, and sterile; and, with few exceptions, presents little to attract the eye or please the fancy.

The Platte bottoms, above and below, are quite heavily timbered and afford an abundance of grass of various kinds. The soil is of a black, deep loam, very rich and well adapted to cultivation.

The business transacted at this post is chiefly with the Chyennes, but the Arapahos, Mexicans, and Soux also come in for a large share, and contribute to render it one of the most profitable trading establishments in the country.

Sept. 10th. Arrangements being completed for resuming my journeys I left Fort Lancaster in company with four others, intending to proceed as far as Taos in New Mexico. We were all mounted upon stout horses, and provided with two pack-mules for the conveyance of baggage and provisions.

Following the trail leading from the Platte to the Arkansas, or Rio Napeste, we continued our way some thirty-five miles, and halted with a camp of free traders and hunters, on Cherry creek.

This stream is an affluent of the Platte, from the southeast, heading in a broad ridge of pine hills and rocks, known as the "Divide." It pursues its course for nearly sixty miles, through a broad valley of rich soil, tolerably well timbered, and shut in for the most part by high plats of table land, — at intervals thickly studded with lateral pines, cedars, oaks, and shrubs of various kinds, — gradually expanding its banks as it proceeds, and exchanging a bed of rock and pebbles for one of quicksand and gravel, till it finally attains a width of nearly two hundred yards, and in places is almost lost in the sand. The stream derives its name from the abundance of cherry found upon it. The country passed over from the Fort to this place, is generally sandy, but yields quite a generous growth of grass. We passed, in our course, the dry beds of two transient creeks, one eight, and the other fifteen miles from the Fort.

Our route bore nearly due south for twenty miles, following the Platte bottom to the mouth of Cherry creek, thence southeast, continuing up the valley of the latter. The Platte presented heavy groves of timber upon both banks, as did also its islands, while its bottoms appeared fertile.

The mountains, some fifteen miles to our right, towering aloft with their snow-capped summits and dark frowning sides, looked like vast piles of clouds, big with storm and heaped upon the lap of earth; while the vapor scuds that flitted around them, seemed as the ministers of pent up wrath, in readiness to pour forth their torrents and deluge the surrounding plains, or let loose the fierce tornado and strew its path with desolation.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Three or four miles before reaching our present camp, we passed a village of the Arapahos on its way to the mountains, in pursuit of game. With this the reader is introduced to that nation for the first time, which affords me occasion to speak of them more particularly.

The Arapahos are a tribe of prairie Indians, inhabiting the country bordering upon the South Fork of the Platte and Arkansas rivers.

Their territory embraces an extent of about forty-five thousand square miles, a portion of which is well watered and interspersed with numerous fertile spots. Timber is rarely found, except in the creek bottoms and among the mountains. A large section of it, however, is dry, sandy, and sterile, and almost entirely timberless and destitute of water. The game of these regions includes all the varieties common to the mountains, which are quite abundant. The territory also possesses large mineral resources, and includes among its stores of hidden wealth, gold, silver, copper, lead, iron, coal, soda, nitre, salt, and sulphur, with vast beds of gypsum.

This nation boasts some five hundred and twenty-five lodges, numbering not far from four thousand souls. In appearance, as well as manners and customs, they assimilate the Sioux and Chyennes. Their insignia of nationality is a tattooed breast, by which they are distinguished from neighboring tribes. They afford to the observer the rare instance of increasing numbers in an Indian population.

The Arapahos since their first treaty with the whites, some fifteen years ago, have maintained terms of the strictest friendship on their part. They have never been known to kill or even injure a white man in the interval, and rarely to steal from him any article of value. They seem to take pleasure in the bestowment of kindness and hospitality upon such whenever in their power, but commonly in expectation of reward, and are exceedingly annoying as beggars.

These Indians, though brave, are less warlike than contiguous tribes, being at variance only with the Utahs and Pawnees, whose countries are severally invaded as occasion serves, and often with success.

They possess considerable taste for trafficking, and regularly meet the Sioux, Chyennes, Cumanches, and Kuyawas for that purpose, and many of them know how to drive as good a bargain as the most expert Yankee.

Notwithstanding the many good qualities possessed by them, they are inferior to their neighbors in morality. The Sioux and Chyennes are far more chaste, and never indulge in the low practices common with the Arapahos. Virtue with the former is guarded by the strictest vigilance and jealousy, while with the latter it is made the minister of lust and is prostituted for a paltry bribe.

As yet no effort has been made for their improvement, though I regard them as more susceptible of civilization than any other of the prairie tribes. They appear to be great admirers of the manners, customs, arts, and mode of living prevalent among the whites, and only lack the requisite instruction to become their successful imitators.

The camp at which we are at present located consists of four lodges, three of whites, and one of Blackfoot Indians.

Each of the whites has his squaw wife, and the usual accompaniment of ruddy faced children. In regard to the latter, I must say they were more beautiful, interesting, and intelligent than the same number of full-bloods, either of whites or Indians.

These men were living after the fashion of their new-found relatives, and seemed to enjoy themselves as well as circumstances would admit. They had a number of horses, with the requisite

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

supply of arms and ammunition, — the sure sources of wealth and comfort in a country abounding with game.

The Indian family were relatives by marriage, and were one of some fifteen lodges of Blackfeet among the Arapahos, who forsook their own nation, on account of its uncompromising hostility to the whites. Quite a number of these Indians have also joined the Sioux and Nesperces, for a like reason.

We were entertained very kindly by our new friends who spared no effort to render our stay agreeable. Among the delicacies set before us, was one deserving of notice, —it consisted of the fruit of prickly pears (cacti) boiled in water for some ten or twelve hours till it became perfectly soft, when it was compressed through a thin cloth into the fluid in which it had been boiled. This forms a delicious variety in mountain fare, and one highly stimulating and nutritious.

The immense quantities of cacti fruit found near the mountains, at the proper season, render the above an entertainment not uncommon.

Sept. 13th. Again under way; after a ride of fifteen miles, night finds us at Blackfoot-camp, snugly chambered in a spacious cave, to avoid the disagreeable effects of a snow-storm that comes upon the reluctant prairie with all the withering keenness of winter.

The cave affording us shelter is formed in an abrupt embankment of limestone, that marks the eastern limits of a beautiful valley through which a small affluent of Cherry creek traces its way. The floor is of dry gravel and rock, about fifty feet long by fifteen wide, while upon one side a crystal spring presents its tempting draughts. Thus chambered, a small fire soon rendered us comfortable and happy, notwithstanding the dreary weather without.

Our course during the day bore southward, and led from the valley of Cherry creek to an interesting plateau, furrowed at intervals by deep cañons, enclosing broad bottoms of rich alluvion, and ridged upon either hand by high hills of pine and ledges of naked rock.

The streams are generally timberless, —the soil of the highlands is of a red, clayey mould, and quite fertile. Instead of the aridity incident to the neighboring prairies, it is usually humid.

The country hereabouts, for an extent of upwards one thousand square miles, is much subject to storms of rain, hail, snow, and wind, —and it is rarely a person can pass through it without being caught by a storm of some kind. I can account for this in no other way than by supposing it has some connection with the vast quantities of minerals lying embedded in its hills and valleys.

Sept. 14th. Morning was ushered in with a pleasant sunshine, that soon caused the snow of the past night to yield beneath its melting influences.

When on the point of raising camp, an old grizzly bear made her appearance with three cubs. An effort to approach her proved futile, — she, having snuffed the closeness of danger with the breeze, made a hasty retreat with her offspring.

I allude to the above incident for this reason, that it is generally supposed the bear produces but two at a birth.

Continuing our journey till late at night, we reached an affluent of Fontaine qui Bouit, called Daugherty's creek, after travelling a distance of some thirty miles. Here we remained for three or four days, to procure a further supply of provisions.

The route from Blackfoot-camp, for the most part, led over a rough country, interspersed with high piny ridges and beautiful valleys, sustaining a luxuriant growth of vegetation, which is known as the Divide.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

This romantic region gives rise to several large tributaries both of the Platte and Arkansas, and furnishes the main branches of the Kansas. Its geological classifications consist of sandstone, limestone, granite, and cretaceous rock. Large quantities of silex are also found, together with many interesting specimens of petrification that principally consist of pine wood; these, in many cases, exhibit the tree in its perfect shape, with all the grains and pores that marked its growth.

A ride of three hours took us past the heads of Bijou and Kuyawa, whose clear and swift currents, confined to narrow beds, here presented a striking contrast to those remarked at their confluence with the Platte.

Continuing on a few miles, we reached Black Squirrel creek, an affluent of the Arkansas; and from thence, after a brisk trot for some fourteen miles over a nearly level prairie, we came to our present camp.

Our place of stay was in sweet little valley enclosed by piny ridges. The entrance leading to it is through a defile of hills from whose rugged sides protrude vast piles of rock, that afford a pass of only fifty or a hundred yards in width. An abundance of grass greets the eye, arrayed in the loveliness of summer's verdancy, and blooming wild-flowers nod to the breeze as enchantingly as when the fostering hand of spring first awoke them to life and to beauty.

The creek derives its name from Daugherty, a trader who was murdered upon it several years since. At the time he was on his way to the Arkansas with a quantity of goods, accompanied by a Mexican. The latter, anxious to procure a few yards of calico that constituted a part of the freight, shot him in cold blood, and hastened to Taos with his ill-gotten gains, where he unblushingly boasted of his inhuman achievement.

My excursions among the hills brought before me many interesting geological specimens, mostly such as characterize the Divide. I noticed two or three extensive beds of stone coal in the vicinity of the creek, with an abundance of nitre and other mineral salts.

Having killed three fine cows during the five days we remained at this place, the scent of fresh meat attracted an old bear and her cub, which, in the expectation of a choice repast, were induced to pay us a night visit.

We were quietly reposing at the time, nor dreamed of the ungainly monsters within camp, till their harsh growls grated upon our ears and raised us each to a speedy consciousness. Instantly every rifle was clenched and levelled at the unwelcome intruders, and two discharges bespoke their warm reception. The bears, not fancying this new test of friendship, quickly withdrew and permitted us to resume our slumbers.

Fitzpatrick and Van Dusen, two old mountaineers, passed our encampment, in the interim, on their way to the States. Having devoted a number of years to the business of trapping, few possess a more intimate knowledge of this country than they. The former of these gentlemen was on his return from Oregon with dispatches for the U. S. Government, and had acted as pilot for a party of emigrants to that territory during the previous summer. After conducting his charge to their place of destination, he and his companion had travelled thus far alone,[39]—a distance of more than one thousand miles.

Sept. 19th. Leaving Daugherty's creek we resumed our course, and reached the Arkansas the next day, about noon. Here we encamped in a small grove of cottonwood upon the right bank, a few miles above the mouth of Fontaine qui Bouit.

In gaining this point we travelled some forty-five miles, mostly over a sandy prairie, slightly un-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

dulating to the leftward, but, to the right, describing the waves of a tempest-tossed ocean. Its general character is sterility; the grass growing thinly and being of a coarse kind, with the exception of that of the creek bottoms, which affords several varieties of a lusty size, mingled with occasional spreads of *préle* — a choice article for the subsistence of horses and mules.

In passing along, I observed a new species of the cacti family, that grew in a shrub-like form to a height of five or six feet. Its stalk was round and fully an inch in diameter.

This made the fourth variety of cactus noticed during the past few days. Of these, two resemble the common “prickly pear” in their appearance. Another species, however, was egg-shaped, bearing a fruit much like the cranberry in color and form. At the proper season, it also produces a beautiful red flower, that emits a most agreeable perfume, in some measure atoning for its dreaded intrusion upon the path of the wayfarer.

Fontaine qui Bouit, or the Boiling Fountain, is the name bestowed upon a considerable stream that heads under Pike’s Peak, in lat. 38° 52’ 10” north, long. 105° 22’ 45” west from Greenwich, and pursues a southerly course till it unites with the Arkansas.

This name is derived from two singular springs, situated within a few yards of each other at the creek’s head, both of which emit water in the form of vapor, accompanied with a hissing noise—the one strongly impregnated with sulphur and the other with soda.[40]

The soda water is fully as good as any manufactured for especial use and sparkles and foams with equal effervescence. This spring, though at present cool, is said to have been formerly quite the reverse. Some twenty years since, the heat was sufficient to cook flesh in an half hour’s time, if submerged in its waters.

The Arapahos regard this phenomenon with awe, and venerate it as the manifestation of the immediate presence of the Great Spirit. They call it the Medicine Fountain, and seldom neglect to bestow their gifts upon it whenever an opportunity is presented.

These offerings generally consist of robes, blankets, arrows, bows, knives, beads, moccasins, &c., which they either throw into the water or hang upon the surrounding trees. Sometimes a whole village will visit the place for the purpose of paying their united regard to this sacred fountain.

The scenery of the vicinity is truly magnificent. A valley several yards in width heads at the springs, overlooking which from the west in almost perpendicular ascent tower the lofty summits of Pike’s Peak, piercing the clouds and revelling in eternal snow, at an altitude of 12,500 feet above the level of the sea.

This valley opens eastward, and is walled in upon the right and left, at the mountains’ base, by a stretch of high table land, surmounted by oaks and stately pines, with now and then an interval displaying a luxuriant coating of grass. The soil is a reddish loam, and very rich. The trees which skirt the creek as it traces its way from the fountain are generally free from under-brush, and show almost as much regularity of position as if planted by the hand of art. A lusty growth of vegetation is sustained among them to their very trunks, which is garnished by wild flowers, that, during the summer months, invest the whole scene with an enchantment peculiar to itself.

The climate too is far milder in this than in adjoining regions, even of a more southern latitude. ‘Tis here “summer first unfolds her robes, and here the longest tarries.” The grass, continuing green the entire winter, here first feels the genial touch of spring. Snow seldom remains upon the ground to exceed a single day, even in the severest weather, while the neighboring hills and prairies present their white mantlings for weeks in succession.

---

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

As the creek emerges from the mountains, it increases in size by the accession of several tributaries, and the valley also expands to a width of three or four miles, retaining for a considerable distance the distinguishing traits before described.

The vicinity affords an abundance of game, among which are deer, sheep, bear, antelope, elk, and buffalo, together with turkeys, geese, ducks, grouse, mountain-fowls, and rabbits.

Affording, as it does, such magnificent and delightful scenery; such rich stores for the supply of human wants, both to please the taste and enrapture the heart; so heaven-like in its appearance and character, it is no wonder the untaught savage reveres it as the place wherein the Good Spirit delights to dwell, and hastens with his free-will offerings to the strange fountain, in the full belief that its bubbling waters are the more immediate impersonation of Him whom he adores.

But, there are other scenes adjoining this, that demand a passing notice. A few miles above Fontaine qui Bouit, and running parallel with the eastern base of the mountain range, several hundred yards removed from it, a wall of coarse, red granite (quite friable and constantly abrading) towers to a varied height of from fifty to three hundred feet.

This wall is formed of immense strata, planted vertically and not exceeding eight feet in thickness, with frequent openings — so arranged as to describe a complete line.

The soil in which they appear is of a reddish loam, almost entirely destitute of other rock, even to their very base.

This mural tier is isolated, and occupies its prairie site in silent majesty, as if to guard the approaches to the stupendous monuments of nature's handiwork that form the back-ground, disclosing itself to the beholder for a distance of more than thirty miles.

CHAPTER XXI.

Vicinity of the Arkansas. Settlement. The Pueblo. Rio San Carlos, its valleys and scenery. Shooting by moonlight. Taos. Review of the country travelled over. Taos; its vicinity, scenery, and mines. Ranchos and Rancheros. Mexican houses; their domestic economy, and filth. Abject poverty and deplorable condition of the lower classes of Mexicans, with a general review of their character, and some of the causes contributing to their present degradation. The Pueblo Indians and their strange notions. Ancient temple. Character of the Pueblos. Journey to the Uintah river, and observations by the way. Taos Utahs, Pa-utahs, Uintah and Lake Utahs. The Diggers; misery of their situation, strange mode of lying, with a sketch of their character. The Navijos; their civilization, hostility to Spaniards, ludicrous barbarity, bravery, &c., with a sketch of their country, and why they are less favorable to the whites than formerly.

THE Arkansas at this point is a clear and beautiful stream, about one hundred and fifty yards wide. It flows over a bed of rock and pebbles, with a rapid current, averaging two feet in depth. Its southern bank is steep and inducts to a high sandy prairie, which present a somewhat sterile and denuded appearance. The northern shore affords a wide bottom of black loam, generally fertile, and timbered with occasional groves of cottonwood. Beyond this a high undulating prairie, presenting now and then a cluster of pines and cedars, leads off to the neighboring mountains.

The river above, for a distance of some forty miles, possesses many beautiful valleys, well timbered, and a rich soil, until the traveller arrives at the place where it makes its entree from the lofty mountain chain in which it heads.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

The land indicates a fitness for agricultural purposes, and holds out strong inducements to emigrants. A small settlement of whites and half-breeds, numbering fifteen or twenty families, has already been commenced about thirty miles above the mouth of Fontaine qui Bouit under quite favorable auspices. The only fears entertained for its success, are on account of the Indians. Many other localities in this vicinity are equally inviting were it not for the character and habits of the surrounding natives.

At the delta, formed by the junction of Fontaine qui Bouit with the Arkansas, a trading fort, called the Pueblo, was built during the summer of 1842. This post is owned by a company of independent traders, on the common property system; and, from its situation, can command a profitable trade with both Mexicans and Indians. Its occupants number ten or twelve Americans, most of whom are married to Mexican women, while everything about the establishment wears the aspect of neatness and comfort.

Sept. 22d. Crossing the Arkansas, I for the first time set foot upon Mexican soil.

Taking the Taos trail, we continued our way for ten or twelve miles and came to the Rio San Carlos. Here the abundance of deer and turkeys was too great a temptation to be resisted, and we remained several days to bestow upon them that attention our appetites demanded.

The country adjacent is very romantic and beautiful. The hills, enclosing the valley of the San Carlos upon both sides, are high and precipitous, —affording numerous groves of pine, pinion,[41] and cedar. Interspersed among them are frequent openings and prairillons of rich soil and luxuriant vegetation. The valley is narrow, but fertile and well timbered.

Near the head of the river is a broad area, known as Fisher's-hole, bounded upon all sides by rugged hills and mountains, inaccessible except by a circuitous pass leading into it from the south. The stream forces its egress through a ledge of dark-colored rock, several hundred feet in altitude, leaving vertical walls upon each side for a long distance, that frequently overhang the gurgling waters sweeping at their base.

This valley contains more than a thousand acres of choice land, well supplied with timber from the heavy pine forests surrounding it.

The prevailing rock is granite, sandstone, limestone, and lias, with occasional conglomerates of various kinds. I noticed strong indications of copper and other minerals; and the general appearance of the country led me to conclude it to be one possessed of vast stores of hidden wealth.

While here, we were quite successful in replenishing our stock of provisions.

My experiments in turkey-hunting made me a proficient shot by moonlight, a feat which adds materially to the sport. This is done by manoeuvring so as to have the turkey in a direct line between the marksman and the moon, causing its shadow to fall upon his face, —then, raising his rifle to a level from the ground upwards, the instant the sight becomes darkened he fires, and, if his piece be true, seldom fails to make a centre shot.

The most feasible mode of hunting turkeys is to watch their roosting places at night; and, after the moon attains the required position, they may be killed by dozens in the above manner. They rarely leave their roosts on account of the firing; but remain, half stupefied with affright, while they are picked off one after another by the practised hunter.

Sept. 25th. Again resuming our journey, we reached Taos on the 1st of October.

Our stay at this place was prolonged for several days, during which time we took boarding with a Mexican lady, the widow of an American trader.

---

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

The country travelled over en route, from the San Carlos to Taos is very rough and mountainous, but variegated by many fertile valleys skirting the numerous tributaries of the Arkansas and del Norte.

The trail crosses several of the latter streams, for the most part bearing an easterly course; among which are the Cornua Virda, Huaquetore, Timpa, Apache, and Pischepa.

These creeks frequently pass through deep cañons of sandstone and limestone for a distance of several miles together, —disclosing upon all sides a wild and romantic scenery. The great fault with the valleys is a lack of timber; the hills, however, are generally supplied with pine, pinion, and cedar, which, in a measure, atones for the above deficiency.

On leaving the Pischepa, a reach of little more than one jornada (day's travel) leads over the mountain range, separating the waters of the Arkansas and del Norte, at a point bearing a short distance to the left of two famous landmarks, called the Spanish Peaks.

Here the traveller is at once ushered into the valley of Taos; and, continuing on, in a brief interval finds himself surrounded by a clan of half-naked Mexicans.

Taos proper embraces several fertile lateral valleys bordering upon the del Norte, and three small affluents from the east and is supposed to contain a population of some ten thousand, including Indians, Moors, Half-breeds, Mulattoes, and Spaniards. It is divided into several precincts, or neighborhoods, within short distances of each other, among which Arroyo Hondo is the principal.

This section of country is very romantic, and affords many scenes to excite the admiration of beholders. It is shut in by lofty mountains, upon three sides, that tower to an altitude of several thousand feet, now presenting their pine-clad summits among the clouds, now with denuded crests defying the tempest; and then peering skyward to hold converse with the scathing blasts of unending winter.

The mountains are rich in minerals of various kinds. Gold is found in considerable quantities in their vicinity, and would doubtless yield a large profit to diggers, were they possessed of the requisite enterprise and capital. At present these valuable mines are almost entirely neglected, —the common people being too ignorant and poor to work them, and the rich too indolent and fond of ease.

The Mexicans possess large ranchos of sheep, horses, mules, and cattle among the mountains, which are kept there the entire year, by a degraded set of beings, following no business but that of herdsmen, or rancheros.

This class of people have no loftier aspirations than to throw the lasso with dexterity, and break wild mules and horses.

They have scarcely an idea of any other place than the little circle in which they move, nor dream of a more happy state of existence than their own. Half-naked and scantily fed, they are contented with the miserable pittance doled out to them by the proud lordlings they serve, while their wild songs merrily echo through the hills as they pursue their ceaseless vocations till death drops his dark curtain o'er the scene.

There are no people on the continent of America, whether civilized or uncivilized, with one or two exceptions, more miserable in condition or despicable in morals than the mongrel race inhabiting New Mexico. In saying this, I deal in generalities; but were I to particularize the observation would hold good in a large majority of cases.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Next to the squalid appearance of its inhabitants, the first thing that arrests the attention of the traveller on entering an Mexican settlement, is the uninviting mud walls that form the rude hovels which constitute its dwellings.

These are one story high and built of adobies, with small windows, (like the port-holes of a fortification,) generally without glass. The entrance is by an opening in the side, very low, and frequently unprotected by a door. The roof is a terrace of sod, reposing upon a layer of small logs, affording but poor protection from the weather.

The interior presents an aspect quite as forbidding;—the floors are simply the naked ground, —chairs and tables are articles rarely met with. In case of an extra room, it is partitioned off by a thin wall of mud, communicating with its neighbor through a small window-shaped aperture, and serves the double purpose of a chamber and store-house.

A few rags, tattered blankets, or old robes, furnish beds for its inmates, who, at nightfall, stow themselves away promiscuously upon the ground or in narrow bins, and snooze their rounds despite the swarms of noxious vermin that infest them, (companions from which they are seldom free, whether sleeping or waking, —and afford them, perhaps, in greater number and variety of species than any other known people.)

But before the picture is complete, we must be indulged in a brief sketch of their kitchen economy.

Knives, forks, spoons, and plates, seldom grace the board of a Mexican in common circumstances. A single pot of earth, a knife, two or three trenchers, and as many water-gourds, constitute almost the entire kitchen furniture of the lower classes;—a kind of gruel (*tolle*) made by stirring a few handfuls of flour into boiling water or milk, is their principal subsistence.

Meat finds no place upon their larder, —it being an article too costly for ordinary food, as the sheep and cattle of the country are owned by the wealthy, and by their exorbitant demands placed beyond the means of the commoner. Wood too, being two rials (25 cents) per mule-load, is seldom used in the large towns for other than culinary purposes.

During the winter months, these filthy wretches are seen, day after day, basking at the sunny side of their huts, and bestowing upon each other certain friendly offices connected with the head, wherein the swarming populace of the pericranium are had in alternate requisition. The entire business of the country is in the hands of the rich, upon whom the laboring classes are mainly dependant for support; and, as a natural consequence, the rich know no end to their treasures, nor the poor to their poverty.

The common laborer obtains only from four to six dollars per month, out of which he must feed and clothe himself. In case he runs in debt beyond his means, he is necessitated by law to serve for the required amount, at two dollars per month; —thus, once in debt, it is almost impossible ever to extricate himself.

But a thing adding still further to his load of misfortunes is the high price set upon the necessaries and comforts of life. This ranges as follows: coffee, from 37 1/2 to 50 cts. per lb.; sugar, from 18 to 25 cts. per do.; calico, from 25 cts. to \$1 per yd.; domestic, 25 to 50 cts.; broadcloths, from \$10 to \$20, and every thing else in proportion.

Under such circumstances, it is scarcely marvellous that we find the Mexican in his present low state of degradation.

Having faintly depicted the real condition of a large majority of the degenerate inhabitants of New

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Mexico, it will be expected of me to say something of their intelligence and morality; and here a still more revolting task awaits my effort.

Intelligence is confined almost exclusively to the higher classes, and the poor "palavro" comes in for a very diminutive share.

Education is entirely controlled by the priests, who make use of their utmost endeavors to entangle the minds of their pupils in the meshes of superstition and bigotry. The result of this may be plainly stated in a few words:

Superstition and bigotry are universal,— all, both old and young, being tied down to the disgusting formalities of a religion that manifests itself in little else than senseless parade and unmeaning ceremony, —while a large majority can neither read nor write.

These conservators of intelligence and morals are often as sadly deficient in either as those they assume to teach. Gambling, swearing, drinking, Sabbath-breaking, and sundry other vices, are the too frequent concomitants of their practice;— under such instructors, who can fail to foresee the attendant train of evils? The abject condition of the people favors the impress of unsound instruction and deteriorating example, reducing public morals to a very low ebb.

Property and life are alike unsafe, and a large proportion of the whole community are little other than thieves and robbers. Profanity is their common language. In their honesty, integrity, and good faith, as a general thing, no reliance should be placed. They are at all times ready to betray their trust whenever a sufficient inducement is presented.

With the present of a few dollars, witnesses may be readily obtained to swear to anything; and a like bonus placed in the hands of the Alcaldi will generally secure the required judgment, however much at variance with the true merits of the cause.

Thus, justice becomes a mere mockery, and crime stalks forth at noonday, unawed by fear of punishment, and unrebuked by public opinion and practice.

But fear, in most cases, exercises a far more controlling influence over them than either gratitude or favor. They may be ranked with the few exceptions in the family of man who cannot endure good treatment. To manage them successfully, they must needs be held in continual restraint, and kept in their place by force, if necessary, —else they will become haughty and insolent.

As servants, they are excellent, when properly trained, but are worse than useless if left to themselves.

In regard to the Mexican women, it would be unfair to include them in the preceding summary. The ladies present a striking contrast to their countryman in general character, other than morals. They are kind and affectionate in their disposition, mild and affable in their deportment, and ever ready to administer to the necessities of others. But, on the score of virtue and common chastity, they are sadly deficient; while ignorance and superstition are equally predominant.

One of the prime causes in producing this deplorable state of things may be attributed to that government policy which confines the circulating medium of the country within too narrow limits, and thus throws the entire business of the country into the hands of the capitalist.

A policy like this must ever give to the rich the moneyed power, while it drains from the pockets of the poor man and places him at the mercy of haughty lordlings, who, taking advantage of his necessity, grant him but the scanty pittance for his services they in tender compassion see fit to bestow.

The higher classes have thus attained the supreme control, and the commoners must continue

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

to cringe and bow to their will. In this manner the latter have, by degrees, lost all ambition and self-respect, —and, in degradation, are only equalled by their effeminacy.

Possessed of little moral restraint, and interested in nothing but the demands of present want, they abandon themselves to vice, and prey upon one another and those around them.

Acting upon the principle, that “necessity knows no law,” they know no law for necessity, and help themselves without compunction to whatever chance throws in their way.

To this we may also look for a reason why the entire country is so infested with banded robbers, that scour it continually in quest of plunder. Mankind are naturally vicious; and, when necessity drives them to wrong for the procurement of a bare subsistence, they are not slow to become adepts in the practice of evil.

A few miles to the southeast of Taos, is a large village of Pueblos, or civilized Indians. These are far superior to their neighbors in circumstances, morals, civil regulations, character, and all the other distinguishing traits of civilization.

This race are of the genuine Mexican stock, and retain many of their ancient customs, though nominally Catholic in their religion.

Cherishing a deep-rooted animosity towards their conquerors, they only wait a favorable opportunity to re-assert their liberty.

They live in houses built of stone and earth, and cultivate the ground for subsistence, —own large herds of cattle, horses, and sheep, —while their women spin and weave, with no small pretensions to skill.

Among their peculiarities is the belief, still entertained by many of them, that Montezuma, their former emperor, will yet return from the Spirit Land, and, placing himself at the head of his people, enable them to overcome the despoilers of his ancient dominions.

In this strange faith a fire was kept burning without intermission, from the death of Montezuma till within ten years past, (a period of nearly three centuries,) as a beacon-light to mark the place for his appearing.

This fire was sustained by an ancient order of priests ministering at a temple of unknown age, the ruins of which, it is said, are yet to be seen two miles back from St. Miguel, in a very good state of preservation. By verbal descriptions received from those who have visited them, I am led to infer that they afford many curious and interesting evidences of Mexican grandeur and tend to shed much light upon their former history and religion.

The sculpture is said to represent men and animals of different kinds, in many strange varieties of shape and posture; among them are beasts, birds, and reptiles, some of which are of unknown species.

The workmanship is rather rude and without much regard to uniformity or proportion of parts, yet possessing a wild beauty and harmony peculiar to itself alone, that at once strikes the beholder with feelings of pleasing wonder.

I had cherished the intention of visiting personally these strange relics of the past, but was induced to defer it for a more convenient opportunity than the present; and, finally, from my subsequent connection with the Texans, I abandoned it altogether.

The Pueblos number a population of several thousand, and are scattered over a considerable extent of territory. They bestow much attention to the inculcation of good morals in the minds of their children; and, in portraying the pernicious effects of evil-doing, frequently admonish them

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

in a quaint and expressive manner, —” If you do thus and so, you will become as bad as a Spaniard!”—This seems to constitute, in their opinion, the grand climax of everything vile and degrading.

They are represented as humane and brave, and strictly honest and upright in their dealings. Their women too are chaste and virtuous, and in this respect present a very favorable contrast to their fairer and more beautiful sisters of Spanish extraction.

A small party from a trading establishment on the waters of Green river, who had visited Taos for the procurement of a fresh supply of goods, were about to return, and I availed myself of the occasion to make one of their number.

On the 7th of October we were under way. Our party consisted of three Frenchmen and five Spaniards, under the direction of a man named Roubideau, formerly from St. Louis, Mo. Some eight pack-mules, laden at the rate of two hundred and fifty pounds each, conveyed a quantity of goods; these headed by a guide followed in Indian file, and the remainder of the company mounted on horseback brought up the rear.

Crossing the del Norte, we soon after struck into a large trail bearing a westerly course; following which, on the 13th inst. we crossed the main ridge of the Rocky Mountains by a feasible pass at the southern extremity of the Sierra de Anahuac range, and found ourselves upon the waters of the Pacific.

Six days subsequent, we reached Roubideau's Fort, at the forks of the Uintah, having passed several large streams in our course, as well as the two principal branches which unite to form the Colorado. This being the point of destination, our journey here came to a temporary close.

The intermediate country, from Taos to the Uintah, is generally very rough and diversified with rich valleys, beautiful plateaux, (tierras templadas,) arid prairies, sterile plains, (llanos,) and denuded mountains.

We usually found a sufficiency of timber upon the streams, as well as among the hills, where frequent groves of pinion, cedar, and pine lent an agreeable diversity to the scene. Game appeared in great abundance nearly the whole route, — especially antelope and deer.

The prevailing rock consisted of several specimens of sandstone, puddingstone, and granite, with limestone, (fossiliferous, bituminous and argillaceous,) and basalt.

This territory is owned by the Utahs and Navijo Indians.

The former of these tribes includes four or five divisions, and inhabits the country laying between the Rio del Norte, the Great Salt Lake, and the vast desert to the southward of it. These different fractions are known as the Taos, Pa-utah, Digger, and Lake Utahs, numbering in all a population of fifteen thousand or more, and exhibiting many peculiarities of character and habits distinct from each other.

The Taos Utahs are a brave and warlike people, located upon the del Norte a short distance to the northwest of Taos. These subsist principally by hunting, but raise large numbers of horses. They are generally treacherous and ill-disposed, making alike troublesome neighbors to the Spaniards and dangerous opponents to the whites, whenever an opportunity is presented.

The Pa-utahs and Lake Utahs occupy the territory lying south of the Snakes, and upon the waters of the Colorado of the west, and south of the Great Salt Lake.

These Indians are less warlike in their nature, and more friendly in their disposition, than the Taos Utahs. The persons and property of whites, visiting them for trade or other purposes, are

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

seldom molested; and all having dealings with them, so far as my information extends, unite to give them a good character.

They rarely go to war, and seem content to enjoy the blessings of peace, and follow the chase within the limits of their own hunting grounds.

The Diggers or rather a small portion of them, are a division of the Utah nation, inhabiting a considerable extent of the barren country directly southwest of the Great Salt Lake. They are represented as the most deplorably situated, perhaps, of the whole family of man, in all that pertains to the means of subsistence and the ordinary comforts of life.

The largest (and in fact, almost the only) game found within their territory, is a very small species of rabbit, whose skins sewed together constitute their entire clothing. The soil is too barren for cultivation, sparsely timbered, and but illy supplied with water. The consequence of these accumulated disadvantages is, that its unfortunate inhabitants are left to gather a miserable substitute for food from insects, roots, and the seeds of grass and herbs.

In the summer months they lay in large supplies against the approach of winter, —ants furnishing an important item in the strange collection.

These insects abound in great numbers, and are caught by spreading a dampened skin, or fresh-peeled bark, over their hills, which immediately attracts the inquisitive denizens to its surface; when filled, the lure is carefully removed and its adherents shaken into a tight sack, where they are confined till dead, —they are then thoroughly sun-dried, and laid away for use.

In this manner they are cured by the bushel. The common way of eating them is in an uncooked state. These degraded beings live in holes dug in the sand near some watercourse, or in rudely constructed lodges of absinthe, where they remain in a semi-dormant, inactive state the entire winter, —leaving their lowly retreats only, now and then, at the urgent calls of nature, or to warm their burrows by burning some of the few scanty combustibles which chance may afford around them.

In the spring they creep from their holes, not like bear-fattened from a long repose—but poor and emaciated, with barely flesh enough to hide their bones, and so enervated, from hard fare and frequent abstinence, that they can scarcely move.

So habituated are they to this mode of life from constant inurement, they appear to have no conception of a better one.

Their ideas and aspirations are as simple as their fare. Give them an occasional rabbit, with an abundance of ants, seeds, and roots, and they are content to abide in their desert home and burrow like the diminutive animal they hunt.

They entertain great dread of the whites, whose power to do them harm they have learned on several occasions by bitter experience. These painful lessons have generally been inculcated as follows: impelled by hunger, these miserable creatures have sometimes attempted to kill the animals of trapping parties; and the trappers, in order to prevent a repetition of such occurrences, have been accustomed to shoot down their rude assailants without mercy.

Since the practice of this summary mode of chastisement has obtained, those able to run will flee with the utmost consternation on the approach of a party of whites, —leaving the feeble and infirm in the rear, who employ their most piteous supplications and moving entreaties for mercy. These Indians possess a capacity for improvement, whenever circumstances favor them. I have seen several, both of men and women, taken from among them while young, who, under proper

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

instruction, had made rapid progress, and even disclosed a superiority of intellect, compared with like examples from other nations, — a fact contributing much to prove that mankind need only to be placed in like conditions by birth and education to stand upon the same common level.

Most of them are represented as inoffensive in their habits and character, — never going to war, and rarely molesting any one that passes through their country.

Their arms are clubs, with small bows and arrows made of reeds — affording but a poor show of resistance to rifles, and a dozen mountaineers are rendered equal to a full army of such soldiers.

The Navijos occupy the country between the del Norte and the Sierra Anahuac, situated upon the Rio Chama and Puerco, — from thence extending along the Sierra de los Mimbros, into the province of Sonora.

They are a division of the ancient Mexicans that have never yet fully succumbed to Spanish domination, and still maintain against the conquerors of their country an obstinate and uncompromising warfare.

Like their ancestors, they possess a civilization of their own. Most of them live in houses built of stone, and cultivate the ground, — raising vegetables and grain for a subsistence. They also grow large quantities of horses, cattle, and sheep — make butter and cheese, and spin and weave

The blankets manufactured by these Indians are superior in beauty of color, texture, and durability, to the fabrics of their Spanish neighbors. I have frequently seen them so closely woven as to be impervious to water, and even serve for its transportation.

The internal regulations of this tribe are represented, by those more intimately acquainted with them, as in strict accordance with the welfare of the whole community. Lewdness is punished by a public exposure of the culprit; dishonesty is held in check by suitable regulations; industry is encouraged by general consent, and hospitality by common practice.

In their warfare with the Spaniards, they frequently exhibit a strange mixture of humanity and ludicrous barbarity.

They never kill women or children when in their power, but retain them as prisoners. The men, however, are invariably dispatched.

But in the latter, a comedy not unfrequently precedes the tragedy which closes the scene. Taking their cue from the passionate fondness of the Spaniards for dancing, at times, when any one of these unfortunate wretches falls into their power, they form a ring around him, and provided with switches, compel him to dance until from exhaustion he can do so no longer, after which he is unfeelingly butchered. His cruel tormentors continue singing, as they force him to dance his own death dirge, and laugh at his faltering steps.

As warriors they are brave and daring, and make frequent and bold excursions into the Spanish settlements, driving off vast herds of cattle, horses, and sheep, and spreading terror and dismay on every side. As diplomatists, in imitation of their neighbors, they make and break treaties whenever interest or inclination prompts them.

The Navijo country is shut in by high mountains, inaccessible from without, except by limited passes, through narrow defiles well situated for defence on the approach of an invading foe.

Availing themselves of these natural advantages, they have continued to maintain their ground against fearful odds, nor have they ever suffered the Spaniards to set foot within their territory as permanent conquerors.

The valleys of the Chama and its tributaries are said to be unrivalled in beauty, and possessed of a

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

delightful climate, as well as an exuberant fertility of soil. In these valleys winter is comparatively unknown and vegetation attains an extraordinary size. The mountains abound with game, and are rich in all kinds of minerals. Some of the most valuable gold mines in Mexico are supposed to be held by the Navijos. I have conversed with several Americans who have travelled to considerable extent in the territory of these Indians, and all unite to speak of it in most flattering terms.

The Catholics maintain numerous missions among them, and have succeeded in propagating their peculiar religious notions to some extent, notwithstanding their continued hostilities with the Spaniards.

The Navijos are generally friendly to the Americans visiting them; but were formerly much more so than at present. This partial estrangement may be attributed to the depredations of a party of Americans, under the lead of one Kirker, who were employed by the governments of Santa Fe and Chihuahua, to oppose their incursions. This was done with great success — the mercenaries despoiling their property, butchering their warriors, and bearing off men, women, and children, as captives to be sold into slavery.

CHAPTER XXII.

Uintah trade. Snake Indians; their country and character. Description of Upper California. The Eastern Section. Great Salt Lake and circumjacent country. Desert. Digger country, and regions south. Fertility of soil. Prevailing rock and minerals. Abundance of wild fruit, grain, and game. Valley of the Colorado. Magnificent scenery. Valleys of the Uintah and other rivers. Vicinity of the Gila. Face of the country, soil &c. Sweet spots. Mildness of climate, and its healthiness. The natives. Sparsity of inhabitants. No government. All about the Colorado and Gila rivers. Abundance of fish. Trade in pearl oyster-shells. Practicable routes from the United States.

IN preceding remarks relative to regions coming under present observation, I have confined myself to generalities, for the reason, that less interest is felt by the American public, in a minute description of the rivers, mountains, valleys, etc., so far within the limits of Mexico, than in one connected with U. S. Territories; consequently the reader must rest contented with greater conciseness in subsequent pages, until he is again introduced to the interesting localities of his own country.

Roubideau's Fort is situated on the right bank of the Uintah, in lat. 40° 27' 45" north, long. 109° 56' 42" west. The trade of this post is conducted principally with the trapping parties frequenting the Big Bear, Green, Grand, and the Colorado rivers, with their numerous tributaries, in search of fur-bearing game.

A small business is also carried on with the Snake and Utah Indians, living in the neighborhood of this establishment. The common articles of dealing are horses, with beaver, otter, deer, sheep, and elk skins, in barter for ammunition, fire-arms, knives, tobacco, beads, awls, &c.

The Utahs and Snakes afford some of the largest and best finished sheep and deer skins I ever beheld — a single skin sometimes being amply sufficient for common sized pantaloons. These skins are dressed so neatly as frequently to attain a snowy whiteness, and possess the softness of velvet. They may be purchased for the trifling consideration of eight or ten charges of ammunition each, or two or three awls, or any other thing of proportional value. Skins are very abundant in these parts, as the natives, owing to the scarcity of buffalo, subsist entirely upon small game, which is

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

found in immense quantities. This trade is quite profitable. The articles procured so cheaply, when taken to Santa Fe and the neighboring towns, find a ready cash market at prices ranging from one to two dollars each.

The Snakes, or Shoshones, live in the eastern part of Oregon and in Upper California, upon the waters of the Great Snake and Bear rivers, and the two streams which unite to form the Colorado. They are friendly to the whites, and less disposed to appropriate to their own use everything they can lay hands on, than some other tribes. They seldom go to war, though by no means deficient in bravery, —frequently resisting with signal success the hostile encroachments of the Sioux and Chyennes. Rich in horses and game, they likewise include within their territory many interesting and beautiful localities, as well as some extraordinary natural curiosities.

One division of this tribe is identified with the Diggers in habits and mode of living, —the same causes operating in each case to produce the same results. Another division is identified with the Crows, and yet a third one with the Utahs, —numbering in all not far from twelve thousand. Being less migratory in their habits, and more tractable in their disposition than those of their eastern brethren demontés, they are far more susceptible of civilization and improvement; though, as yet, nothing has been done for their benefit. The missionary might here find an encouraging field for his philanthropic exertions.

With the passage of the mountain chain, noticed in the preceding chapter, the reader is inducted to the northeastern extremity of California. My intention of visiting the interior of this interesting province of the Mexican Republic was frustrated through the lack of a convenient opportunity for its prosecution; but, as the public mind, during the past few years, has been so much occupied with subjects connected with this country, I am unwilling to pass on without presenting a brief description of it, obtained from sources upon which full reliance may be placed.

The following sketch, coupled with my own observations, is carefully arranged from information derived from individuals encountered during my stay in this country, some of whom had travelled over most of it, and others had resided for years within its confines.

On referring to the map, a large extent of country will be noticed, bounded upon the north by Oregon, east by the Rocky Mountains, south by the Lower Province and Gulf of California, together with the Rio Gila which separates it from Sonora, and west by the Pacific, situated between parallels 32° and 42° north latitude, which is now known as Upper California.

This embraces an extent of nearly 450,000 square miles, and is walled in for the most part upon the north and east by lofty mountains, impassable except at certain points; while upon the west and south its vast stretch of seacoast, navigable rivers, and commodious harbors open it to the commercial intercourse of all nations.

The entire country is more or less broken by hills and mountains, many of them towering to a height of several thousand feet above the level of the sea, whose summits, clothed with eternal snow, overlook the valleys of perennial verdure that so frequently lie around them. The most noted of these is the California, or Cascade range, which, by intersecting the province from north to south, separates it into two grand natural divisions, properly denominated Eastern and Western California.

The above range, though higher than the principal chain of the Rocky Mountains, is passable at various points. It is situated inland from the Pacific at distances varying from one hundred and fifty to four hundred miles, tracing its way with diminished altitude adown the isthmus that forms

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

the Lower Province.

Owing to its locality, a description of the Eastern Division seems to come naturally the first in order.

This section is watered principally by the Colorado, Gila, and Bear rivers, with their numerous tributaries, and has also several lakes in various parts of it, prominent among which is the Great Salt Lake near the northern boundary.

This large body of water is nearly one hundred and fifty miles long by eighty broad; and, though the receptacle of several large rivers, has no visible outlet, and hence is supposed by many persons to hold subterranean connection with the Ocean. Its waters are so strongly impregnated with salt, incrustations of that mineral are frequently found upon its shores.

Towards the northern extremity an island makes its appearance, from whose centre a solitary mountain rises in proud majesty for nearly a thousand feet above the circumfluent waters; its craggy sides, naked and desolate, with whitened surface, now inspire the beholder with feelings of awe, while its bounding streamlets, skirted with verdant openings and diminutive trees, strike the eye pleasantly, as the sheen of their waters falls upon the vision and engenders commingled sensations of delight and admiration.

Viewed from the northern shore, this island seems not more than twelve miles distant; a deception caused by the extraordinary purity of the atmosphere. Several attempts to reach it, however, by means of canoes, have proved futile, owing to its great distance the dangerous state of navigation.

It is thought by many persons that still other islands of larger dimensions occupy the centre of the lake, and not without some show of reason; there is ample room for them, and, although this vast body of water has been circum-traversed per shore, it has never yet been otherwise explored by man.[42]

The largest of the rivers that find their discharge in this vast saline reservoir is the Big Bear, a stream which rises near the South Pass, and, following its meanderings, is about two hundred and fifty or three hundred miles in length. It rolls leisurely on with its deep sluggish volume of waters, measuring some two hundred yards wide at its mouth, and deposits its willing tribute into the bosom of this miniature ocean, while four or five other fresh water affluents from the east and south make a like debouche without increasing its size or diminishing its saltiness.

The valleys of these streams possess a very rich soil and are well timbered. The landscape adjacent to the lake is diversified with marshes, plains, highlands, and mountains, affording every variety of scenery. The soil is generally fertile and prolific in all kinds of vegetation as well as fruits indigenous to the country.

Timber also abounds in sufficient quantity for all necessary purposes Game too is found in great abundance, particularly deer and elk; and, taken as a whole, the vicinity of the Great Salt Lake holds out strong inducements to settlers, and is capable of sustaining, as it will no doubt ultimately possess, a dense population.

Forty or fifty miles west and south from this the traveller is inducted to the vast expanse of sand and gravel, lying between lat. 35° and 40° north, which is almost entirely destitute of both wood and water.

This reach is upwards of three hundred miles in length and nearly two hundred broad. It is impassable at all seasons of the year on account of its extreme dryness and lack of suitable nourish-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

ment for animals; and even a trip from Santa Fe to Western California, by the regular trail, is rarely undertaken except in the fall and spring months, at which time the ground is rendered moist by annual rains and the transient streams venture to emerge from their sandy hiding places.

The Digger country, of which I have taken occasion to speak in connection with its unfortunate inhabitants, lies upon the eastern and southern extremities of this desolate waste, and presents an aspect little less forbidding.

As a general thing the landscape is highly undulating and varied with conical hills, some of which are mere heaps of naked sand or sun-baked clay of a whitish hue; others, vast piles of granitic rock, alike destitute of vegetation or timber; while yet others are clothed with a scanty herbage and occasional clusters of stunted pines and cedars.

Now and then a diminutive vega intervenes in favorable contrast to the surrounding desolation, greeting the beholder with its rank grasses, mingled with blushing prairie-flowers. But such beauty-spots are by no means frequent.

The watercourses are mere beds of sand, skirted with sterile bottoms of stiff clay and gravel, and afford streams only at their heads, while, for nearly the entire year, both dew and rain are unknown. Vegetation, consequently, is sparse and unpromising, and the whole section of necessity remains depopulated of game.

It is needless to say such a country can never become inhabited by civilized man.

Between the Colorado river and the California mountains, south of the cheerless desert above described, the prospect is far more flattering. The hills are of varied altitude and are usually clothed with grass and timber; while comparatively few of them are denuded to any great extent. The landscape is highly picturesque and pleasingly diversified with mountains, hills, plains, and valleys, which afford every variety of climate and soil.

This section is principally watered by the Rio Virgen and lateral streams; and, though little or no rain falls in the summer months, the copiousness of nightly dews in some measure make up for this defect.

The superfiice of the valleys ranges from one to three feet in depth, and generally consists of sedimentary deposits and the debris of rocks, borne from the neighboring hills by aqueous attrition, which, mingled with a dark-colored loam compounded of clay and sand, and various organic and vegetable remains, unite to form a soil of admirable fecundity, rarely equal led by that of any other country.

The hills, however, are unfit for cultivation to any great extent, owing to their common sterility as well as the abundance of rock in many parts; yet they might serve a good purpose for grazing lands.

The prevailing rock is said to be sandstone, limestone, mica slate, trap, and basalt; the minerals, copper, iron, coal, salt, and sulphur.

Game exists in great abundance, among which are included antelope, deer, (black and white-tailed,) elk, bear, and immense quantities of waterfowls; large herds of wild horses and cattle, also, are not unfrequently met with.

Timber is usually a scarce article, which constitutes one grand fault in the entire section of Eastern California. This evil, however, is partially remedied by a mild climate, and only a comparatively small amount of wood is required for building, fencing, and fuel.

Fruits of all kinds indigenous to the country, particularly grapes, are found in great profusion, and

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

those native only to the torrid and temperate zones may also be successfully cultivated.

Among the grasses, grains, and vegetables growing spontaneously in some parts, are red-clover and oats, (which attain a most luxuriant bulk,) flax and onions; the latter not unfrequently equaling in size the proudest products of the far-farmed gardens of Wethersfield.

We are now naturally led back to the Colorado, and the country lying between it and the Sierra de los Mimbros range, on the east. This division embraces much choice land in its valleys, but the high grounds and hills present much of the dryness and sterility incident to the grand prairies. The valley of the Colorado averages from five to fifteen miles broad, for a distance of nearly two hundred miles above its mouth.

Further on, the passage of the river through high mountains and *tierras templadas* (table lands) presents an almost continuous gorge of vertical and overhanging rocks, that, closing in upon the subfluent stream at a varied height of from fifteen to six hundred or even a thousand feet, afford only an occasional diminutive opening to its waters.

This vast cañon is said to extend for five or six hundred miles, interrupting the river with numerous cataracts, cascades and rapids, and opposing to its swift current the sharp fragments of severed rocks thrown from the dizzy eminences, as breakers, by which to lash the gurgling waters and depict the more than tempest-tossed foam and maddened fury of old ocean!

In some places the impending rocks approach so near to each other from above, a person may almost step across the vast chasm opening to view the foaming river, half obscured in perpendicular distance and dimmed by the eternal shadows of thrice vertical walls.

This superbly magnificent scene continues nearly the entire extent, from the head of the Colorado valley to the boundary between Oregon and California.

The table lands and mountains on both sides, as a whole, disclose a dreary prospect. Now, the traveller meets with a wide reach of naked rock paving the surface to the exclusion of grass, shrubs, or tree, — now, a narrow fissure, filled with detritus and earth, sustains a few stunted pines, now, a spread of hard sun-baked clay refuses root to aught earth-growing, now, a small space of saline efflorescences obtrudes upon the vision its snowy incrustations, alike repulsive to vegetable life — then, comes a broad area clothed with thin coarse grass; an opening vallon next greets the eye in the generous growth of its herbage and the fertility of its soil; a beautiful grove of stately pines, cedars, and pinions, rises in the back ground; a still larger, more expansive, and thrice lovely valley, skirts the banks of some bounding stream, and delights the fancy with its smiling flowers and luxuriant verdure.

Here, a huge mountain rears itself in majesty—now, piling heaps upon heaps of naked granite, limestone, sandstone, and basalt, variegated and parti-colored, —now, thickly studded with lateral pines, cedars, pinions, and hemlocks, —then, again denuded, till at last its sharpened peaks pierce the clouds while storms and tempests in their wild orgies haste to do it reverence: There, a lesser, coniform elevation of the continuous chain, is mantled in living green; while perhaps by its side, another pains the eye with the well defined lineaments of desolation.

A country of this description occupies nearly the whole interval from the two main branches of the Colorado to the dividing ridge of mountains.

The valleys of the Uintah, and several other affluents within its limits, however, are broad, fertile and tolerably well timbered. Grass continues green nearly the entire winter, and game of all kinds common to the mountains, excepting buffalo, is abundant. The valley soils are well adapted to cul-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

tivation, and might sustain a large population.

We come now to the southeastern extremity of the province, bordering upon the Rio Gila which separates it from Sonora, and lying between the Colorado and the Sierra de los Mimbros range. This stretch, though less fertile as a general thing, partakes of much the same characteristics as that upon the opposite side of the Colorado, and upon Rio Virgen, south of the Digger country, which was so fully described upon a former page. The soil, however, is not generally so sandy, and the landscape is far more rough and broken. The bottoms of the Colorado and Gila, with their tributaries, are broad, rich, and well timbered. Everything in the shape of vegetation attains a lusty size, amply evincing the exuberant fecundity of the soil producing it.

There are many sweet spots in the vicinity of both these streams, well deserving the name of earthly Edens. Man here might fare sumptuously, with one continued feast spread before him by the spontaneous products of the earth, and revel in perennial spring or luxuriate amid unfading summer.

Yet, notwithstanding the other attractions held out, game is much less plentiful in this than in other parts, —probably owing to the warmth of the climate.

Winter is unknown, and the only thing that marks its presence from that of other seasons, is a continuation of rainy and damp weather for some two or three months. All the wild fruits and grains indigenous to the country are found here in profuse abundance.

The entire Eastern Division of Upper California possesses a uniformly salubrious and healthful atmosphere. Sickness, so far as my knowledge extends, is rarely known.

The natives, for the most part, may be considered friendly, or at least, not dangerous. Some of them, in the neighborhood of the Gila and the Gulf of California are partially advanced in civilization, and cultivate the ground, raising corn, melons, pumpkins, beans, potatoes, &c.

These live in fixed habitations, constructed of wood, and coated with earth, in a conical form, much like Pawnee huts.

The condition and character of these tribes present most flattering inducements for missionary enterprise; and, should efforts for their amelioration be put forth by zealous and devoted men, (and meet with no counteracting opposition from the united influence of the Mexican Government and the narrow minded bigotry of an intolerant clergy and priest-ridden people,) a glorious fruition of their most sanguine hopes might soon be expected.

There are no settlements of either whites or Mexicans, to my knowledge, throughout the whole extent of this territory. Indians may, therefore, be considered its only inhabitants, other than the strolling parties of trappers and traders that now and then travel it, or temporarily establish themselves within its limits. Of course then the Eastern Division of Upper California must be considered without a people or a government.

The Rio Colorado rises in the U. S. territory about lat. 42° 30' north, interlocking with the head waters of the Columbia, Missouri, Platte, and Arkansas, and empties into the Gulf of California near lat. 32° north. Following its windings it is some twelve or fifteen hundred miles in length. This stream with its numerous tributaries is the only river worth naming in Eastern California, and, to a great extent, serves to water that country. Owing to the rapidity of its current and its frequent falls and cascades, the navigation is entirely destroyed, till within about one hundred miles of its mouth, at the head of tide water; from this on no further interruption occurs, and the depth is sufficient for vessels bearing several hundred tons burthen.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

The Gila is properly a river of Sonora, though commonly regarded as the northern boundary of that province. It rises in the Sierra de los Mimbro, near lat.  $33^{\circ} 25'$  north, long.  $106^{\circ} 15'$  west from Greenwich, and pursues a west-southwesterly course till it discharges itself into the Bay of the Colorado, at lat.  $32^{\circ} 15'$  north, long.  $114^{\circ} 27'$  west.

Its whole length is about eight hundred miles, for most of which distance navigation is impracticable, with the exception of some forty miles or more at its mouth.

These two rivers are said to afford immense quantities of fish, especially near their confluence with the Gulf of California.

The Gulf also contains a large variety and exhaustless supplies of the finny tribe, together with several species of the crustaceous and testaceous order. Among the last named are lobsters, crabs, clams, and oysters.

Oysters are very numerous and of an excellent quality, including in variety the genuine mother pearl. A small trade in the shells of the pearl oyster is carried on with the Arapahos, Chyennes, and Sioux, by the Spaniards, which yields a very large profit, —a single shell frequently bringing from six to eight robes. These Indians make use of them for ear-ornaments, and exhibit no little taste in their shape and finish.

The eastern section of Upper California is accessible by land as well as sea from several feasible passes. through the mountain ranges forming its eastern boundary.

The best land routes for waggons from the United States is through the South Pass, —hence, to the Great Salt Lake by Bear river valley, —thence the emigrant can direct his course to any part of the country, as interest or inclination may suggest.

Another pass is afforded by way of the Santa Fe trail near lat.  $37^{\circ}$  north; this, however, is a very difficult one for waggons, and should only be travelled on horseback.

There are said to be one or two other passes further south, in reference to which I cannot speak with certainty, but am inclined to accredit their reported existence.

CHAPTER XXIII.

Minerals. Western California. The Sacramento and contiguous regions. Principal rivers. Fish. Commercial advantages. Bay of San Francisco. Other Bays and Harbors. Description of the country; territory northwest of the Sacramento; Tlamath Mountains; California range and its vicinity; southern parts; timber, river-bottoms; Valleys of Sacramento, del Plumas, and Tulare; their extent, fertility, timber, and fruit; wild grain and clover, spontaneous; wonderful fecundity of soil, and its products; the productions, climate, rains, and dews; geological and mineralogical character; face of the country; its water; its healthiness; game; superabundance of cattle, horses, and sheep, their prices, &c.; beasts of prey; the inhabitants, who; Indians, their character and condition; Capital of the Province, with other towns; advantages of San Francisco; inland settlements; foreigners and Mexicans; Government; its full military strength. Remarks.

IN the preceding chapter the reader must have acquired some tangible idea of the true condition of Eastern California, with all its varied beauties and deformities; its Edens and wastes of desolation; its enchantments, and scenes of awe and terrific grandeur.

To have treated the subject more in extenso, would have trespassed upon prescribed brevity; yet, doubtless, many will regret my having said so little relative to the mineralogical character and

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

resources of that country. The truth is, comparatively little is known upon this important matter. Were I to give ear to common report, I would say there are both gold and silver, with copper, lead, and iron. But such stories are not always to be credited unless they come in a credible shape. However, it is very probable these metals do exist in various parts; and certain it is that immense beds of coal and rock-salt are afforded, with large quantities of gypsum, the truth of which is placed beyond doubt by an accumulation of testimony. With these few remarks I turn from the subject, and bring before the reader another and more interesting topic.

Following the only practicable waggon route from the U. S. to Western California, via South Pass, —thence, after bearing northwest some forty miles, by a long sweep southward around the Sierra Nevada to the Rio Sacramento, —the emigrant is taken through a succession of mountains, hills, plains, and valleys, furrowed by frequent affluents from the north; — now, sterile wastes of intervening sand; now, pleasant spreads of arable prairies; now, rugged superficies of naked rock; then, beautiful valleys arrayed in all the loveliness of perennial verdure, and profuse in vegetation of extraordinary growth, intermixed with wild-flowers of unrivalled hues and lavish fragrance, till he finally reaches his destination.

The Sacramento and its tributaries water the greater part of Western California.

This river is formed by the confluence of two large streams which rise in the Cascade Mountains, properly termed the North and South Forks the former heading near lat. 41° 43' north, long. 114° 51' west. (The South Fork is the stream defining the waggon route from the U. States, via South Pass.)

The Sacramento, measured by its windings, is about eight hundred and fifty miles in length. It receives many important auxiliaries above the junction of its two forks, which greatly increase the volume and depth of its waters. From its mouth it is said to afford a good stage of navigation for crafts of tolerable burthen, as high up as three hundred miles, —tide water setting back for one hundred and fifty miles.

Three other rivers, flowing from the southeast, have their discharge in the Bay of San Francisco. These streams are severally called the Rio del Plumas, American Fork, and Tulare.

The former derives its name from the great abundance of water-fowls which congregate upon it at all seasons of the year, so numerous and tame that the natives not unfrequently kill large quantities of them with clubs or stones as they fly through the air.

The del Plumas is said to be navigable, for boats of a light draught, till within a hundred miles of its head, —its whole length is about two hundred and fifty miles. The American Fork, or the Rio de los Americanos, is a clear and beautiful stream about one hundred and fifty miles long, emptying into the Sacramento Bay below the del Plumas, and between it and the Tulare. Owing to frequent rapids, however, its navigation is destroyed.

The Tulare is said to be four hundred miles long, and navigable for one half that distance. It is represented as watering one of the most interesting sections of Western California, and hence is considered next in importance to the Sacramento. This stream affords some of the finest localities for settlements found in the whole country.

Below the Bay of San Francisco several other small streams find their way into the Pacific, but none of them are navigable to any great extent. The principal of these empty as follows: into the Bay of Monterey, into the Ocean near Point del Esteros, Point Arguello, St. Barbara Channel, San Pedro Bay, and opposite the island of St. Clement.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Above the Bay of San Francisco, Russian river is discharged into Bodega Bay; further on, Smith's river empties into Trinidad Bay; and two other small streams find their discharge near Point St. George, a few miles below the boundary line between Oregon and California.

Smith's river is the largest stream either above or below the Bay of San Francisco, and is about two hundred miles in length, though unnavigable.

All these various rivers and their affluents are stored with innumerable supplies of delicious fish, the principal of which are salmon and salmon-trout. The Ocean too affords an exhaustless quantity of the piscatorial family, including whales, cod, and haddock, with oysters, clams, lobsters, &c. So great is the abundance of fish at certain seasons, that, with a rude seine, the natives frequently take fifteen or twenty barrels full at a single draught; fish constituting their principal subsistence. There are few, if any, countries in the world possessed of superior commercial advantages to the western section of Upper California.

True, its inland navigation is limited; yet, with an extent of nearly eight hundred miles of sea-coast, accessible at almost any point, it includes some of the finest bays and harbors ever known. Of these, for commodiousness and safety at all times, the Bay of San Francisco stands pre-eminently conspicuous.

This bay is an arm of the sea extending some forty miles or more inland, shut in, for the most part, upon each side by precipitous banks of basalt and trap, that skirt a very broken and hilly country contiguous to it. The entrance from the ocean is by an opening, a mile or more in width, through rock-formed walls, between one and two hundred feet high. A recent traveller,[43] in describing this bay, says:

"From the points forming the entrance, the sea gradually expands to some eight or ten miles in extent, from north to south, and twelve from east to west. At the extreme eastern part of the vast basin thus formed, its shores again close in abruptly, contracting so as to leave a pass of about two miles in width, which forms the entrance to a second bay of still larger dimensions. From this gorge their high rocky banks again diverge for some ten miles, when they still again contract to the narrow space of one mile, and form the passage to a third. The latter is more spacious than either before mentioned, and, formed in like manner, extends twelve miles from east to west and fifteen from north to south, affording the safest and most commodious anchorage."

There is ample water at all times for the entrance of ships of the largest class, and it is asserted confidently, that these three united bays would afford perfect safety, secure anchorage, and ample room for the fleets and navies of all nations.

Several other bays and harbors are situated along the coast, all of which, to a greater or less extent, are favorably spoken of for general safety and good anchorage.

Among the above are mentioned the Bay of Monterey, San Pedro, St. Diego, Bodega, and Trinidad. Bodega, however, is represented as being, at times, very unsafe and even dangerous.

With such extraordinary facilities for commerce, it needs no prophetic eye to foresee the position Western California is destined to assume, before many years have passed, and, from her position and natural resources, will be enabled successfully to maintain among the foremost nations of the earth-provided, always, that some other people more enterprising and enlightened than the present inert, ignorant, stupid, and mongrel race infesting it with their presence, take possession of the country, develop its energies and bring to light the full beauty of its natural loveliness.

We are now led to speak of the peculiarities of soil, landscape, scenery, climate, productions, and

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

mineral resources of this interesting country, and in so doing, I would first draw a succinct view of the territory lying between the Rio Sacramento and Oregon.

Here we find the most forbidding aspect, with one exception, of any in Western California. The soil is generally very dry and barren, and the face of the country broken and hilly. The streams of water (as in the Eastern Division) frequently sink and become lost in the sand, or force themselves into the Ocean and parent streams by percolation or subterranean passages.

In many places is presented a surface of white sun-baked clay, entirely destitute of vegetation; and in others, wide spreads of sand, alike denuded; and yet again iron-bound superficies of igneous rock.

Now and then groves of pines or firs spread their broad branches as it were to cover the nakedness of nature; while here and there a valley of greater or less extent smiles amid the surrounding desolation.

All the various streams are skirted with bottoms of arable soil, oftentimes not only large but very fertile, though perhaps unadapted to cultivation, on account of their dryness, without a resort to irrigation.

Smith's river pursues its way, for forty or fifty miles, through a wide bottom of rich soil, most admirably suited for agricultural purposes were it not for its innate aridity;—however, during the summer season, it is, to a limited extent, watered from nightly dews, which enable it to sustain a luxuriant vegetation.

Not one fourth part of the northwestern portion of this section is fit for tillage. That part contiguous to the sea-coast is sandy and far less broken than those sections less interior.

The Tlameth Mountains, pursuing a west-southwest course from Oregon, strike the coast near lat. 41° north. This range has several lofty peaks covered with perpetual snow, and shoots its collateral eminences far into the adjacent prairies.

There is one feasible pass through this chain a few miles inland from the coast, that serves well for the purpose of intercommunication with Oregon.

The less elevated parts of these mountains are frequently covered with groves of small timber and openings of grass suitable for pasturage, while intermingled with them are occasional valleys and prairillons of diminutive space, favorable to the growth of grain and vegetables. The same may be said in reference to the California chain for its whole extent, especially in the vicinity of the prairie.

Following the course of this latter ridge from north to south, we find upon both sides a reach of very broken and highly tumulous landscape, some twenty or thirty miles broad.

Near the head-waters of the Sacramento, these lands are well watered and possess a general character for fertility, producing a variety of grass, with shrubs and a few scattering trees. Below, however, they are more sterile, owing to the deficiency of water; but yet they afford numerous inviting spots. A considerable extent of country, south of the South Fork of the river above named, is arid and sterile, and has but few streams of water. It sustains, however, among its hills and in its valleys, a sparse vegetation that might be turned to a favorable account for grazing purposes. Only about one fourth of this country is adapted to other uses than stock-raising.

Further south from the head-waters of the Tulare and del Plumas, ranging between the coast and the high rolling lands skirting the base of the California Mountains to the boundary of the Lower Province, a section of gently undulating prairie, now and then varied with high hills and some

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

times mountains, affords a rich soil, generally consisting of dark, sandy loam, between the hills and in the valleys; the highlands present a superface of clay and gravel, fertilized by decomposed vegetable matter, well adapted to grazing, and about one half of it susceptible of cultivation. Timber is rather scarce, except at intervals along the watercourses and occasional groves among the hills; but along the coast dense forests are frequently found claiming trees of an enormous size.

But, one grand defect exists in its general aridity, which renders necessary a resort to frequent irrigation in the raising of other than grain products. In some parts, the abundance of small streams would cause this task to become comparatively an easy one; and the profuseness of dews in sections contiguous to the rivers in some measure answers as a substitute for rain.

The bottoms are broad and extensive, yielding not only the most extraordinary crops of clover and other grasses, but incalculable quantities of wild oats and flax of spontaneous growth, with all the wild fruits natural to the climate.

In returning to the Sacramento and the rivers which find their discharges in the Bay of San Francisco, we have before us the most interesting and lovely part of Upper California.

The largest valley in the whole country is that skirting the Sacramento and lateral streams. This beautiful expanse leads inland from the Bay of San Francisco for nearly four hundred miles, almost to the base of the California Mountains, and averages between sixty and sixty-five miles in width.

The valleys of the del Plumas and American Fork are also very large, and that of the Tulare gives an area of two hundred and fifty miles long by thirty-five broad.

These valleys are comparatively well timbered with several varieties of wood, consisting principally of white-oak, live-oak, ash, cottonwood, cherry, and willow, while the adjacent hills afford occasional forests of pine, cedar, fir, pinion, and spruce.

The soil as well as the climate is well adapted to the cultivation of all kinds of grain and vegetables produced in the United States, and many of the varied fruits of the torrid and temperate zones can be successfully reared in one and the same latitude.

Among the grains, grasses, and fruits indigenous to the country are wheat, rye, oats, flax, and clover, (white and red,) with a great variety of grapes, all of which are said to grow spontaneously. Wild oats frequently cover immense spreads of bottom and prairie land, sometimes to an extent of several thousand acres, which resemble in appearance the species common to the United States. They usually grow to a height of between two and three feet, though they often reach a height of seven feet.

The wild clover of these valleys is much like the common red, and, in some places, is afforded in great abundance. It attains a usual height of two feet and a half, though it often measures twice that height—standing as thick as it can well grow.

Forty bushels per acre is said to be the average wheat crop, but sixty and even one hundred bushels have been grown upon a like spot of ground. This grain generally reaches its maturity in three or four months from the time of sowing.

Corn yields well, and affords an average of from fifty to sixty bushels per acre, without farther attention from the time of planting till picking. Potatoes, onions, beets, carrots, &c., may be produced in any quantity with very little trouble. Tobacco has also been raised by some of the inhabitants with most flattering success.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Perhaps, no country in the world is possessed of a richer or more fruitful soil, or one capable of yielding a greater variety of productions, than the valleys of the Sacramento and its tributaries. The articles previously noticed are more or less common to the bottoms and valleys of other sections. Grapes abound in the vicinity of most of the creeks, which afford generous wines and delicious raisins in immense quantities.

The climate is so mild that fires are needed at no season of the year for other than cooking purposes. By aid of irrigation, many kinds of vegetables are fresh-grown at any time, while two crops of some species of grain may be produced annually.

Flowers are not unfrequently in full bloom in mid winter, and all nature bears a like smiling aspect. In this, however, we of course refer only to the low-lands and valleys.

The traveller at any season of the year may visit at his option the frosts and snows of eternal winter, or feast his eyes upon the verdure and beauty of perennial spring, or glut his taste amid the luxuriant abundance and rich maturity of unending summer, or indulge his changeful fancy in the enjoyment of a magnificent variety of scenery as well as of climate, soil, and productions.

The only rains incident to this country fall during the months of December, January, February, and March, which constitute the winter; at other times rain is very rarely known to fall. Perhaps, for one third of the four months before named, the clouds pour down their torrents without intermission; the remaining two thirds afford clear and delightful weather.

During the wet season the ground in many parts becomes so thoroughly saturated with moisture, particularly in the valley of the Sacramento, that, by the aid of copious dews to which the country is subject, crops may be raised without the trouble of irrigation; though its general aridity constitutes the greatest objection to California.

Of its geological and mineralogical character little is yet known. The prevailing rock is said to be sandstone, mica slate, granite, trap, basalt, puddingstone, and limestone, with occasional beds of gypsum. Among its minerals as commonly reported, are found gold, silver, iron, coal, and a variety of salts. The mineral resources of the country have not been as yet fully investigated to any great extent, but the mountains in different parts, are supposed to be rich in hidden stores.

To speak of Western California as a whole, it may be pronounced hilly, if not mountainous, and about two thirds of it is probably fit for agricultural purposes.

The creeks are frequently immured by precipitous walls of several hundred feet in altitude, that, expanding here and there, give place to beautiful valleys of variable width, while most of the low-lands upon their banks are skirted by continuous and abrupt acclivities leading to the high prairies, table lands, and mountains contiguous to them. Their currents are generally clear and rapid, flowing over beds of sand, pebbles, and rock, and afford wholesome and delicious water.

The air is almost invariably pure and free from the noxious exhalations common to many countries, which contributes greatly to render the climate uniformly healthy—a character which it has hitherto sustained by common report.

Some travellers, however, speak of large Indian villages in different parts, deserted and in ruins, whose sites are bestrown with human bones and skulls, as if the entire population had been swept off by the frightful ravages of deadly pestilence, and so suddenly that not a soul was left to bury their dead; and hence they suppose the country occasionally subject to devastating sicknesses.

The above, however, may with equal propriety be charged to the account of war.

Game is quite plentiful in the Western Division of Upper California, and in many places extreme-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

ly abundant, especially in the mountains near the head-waters of the Tulare and Sacramento rivers.

Among the different varieties are enumerated deer, (black-tailed and white-tailed,) elk, antelope, goats, bear, (black, red, and grizzly,) beaver, geese, brants, ducks, and grouse, with wild horses and cattle; buffalo are unknown to the Province.

Never was a country better adapted to stock-raising than is this, and perhaps none, according to the number of its inhabitants, so abundantly supplied with horses, cattle, and sheep. The former of these abound in countless numbers, whenever a white man or a Spanio-Mexican makes it his residence. A single individual frequently owns from eight to ten thousand head of horses and mules; and, not rarely, even as high as fifteen or twenty thousand.

These animals are very hardy and trim-built, and only a trifle smaller than those common to the United States. I have seen many of them equally as large as the American breed, and, as a general thing, they are more durable under fatigue and hardship.

The choicest animals from a band of several thousand may be purchased for ten dollars, and the ordinary price for prime selections ranges from three to five dollars, while mares may be procured for two dollars per head.

Cattle are equally plenty, at prices varying from two to four dollars per head.

Stock is raised without trouble, as the abundance of grass affords pasturage the entire season, nor is necessary a resort to either hay or house. In fact, both cattle and horses not only thrive best but are fattest in the winter season, owing to the absence of flies and insects, as well as the partial freshness of vegetation.

The common method of stock-raising is by turning them loose into the bottoms and prairies, accompanied by a herdsman, or two, or more, a la Mexican, (according to the size of the band,) where they are left to increase, and no further care is bestowed upon them.

Sheep too are raised in vast numbers after the above manner. They increase with astonishing rapidity, and usually produce their young twice a year. Their wool, however, is much coarser than that grown in the United States. This latter fact is accounted for by their inferiority of breed, though their flesh is sweeter and better than the American mutton.

Wolves are said to be numerous and troublesome, and not unfrequently prove a source of great annoyance to the inhabitants by destroying their sheep, calves, colts, and even full-grown cattle and horses.

Among them are included the black, gray, and prairie wolf. The black wolf is the largest and most ferocious, equalling the size of our common cur-dog.

Foxes are also said to be numerous, but are of a diminutive size. The above are the only beasts of prey worth naming.

The foregoing summary leads us to notice the present state of the country, its inhabitants, government, and military strength.

Upper California at the present time is in the united possession of the Indians, Mexicans, English, and French; not as rulers, but as land-holders and inhabitants.

The Indians are supposed to number some thirty or forty thousand souls, and are scattered over the entire Province. Excepting the Diggers, the Utahs, the Snakes, and those residing in the vicinity of the Sierra Nevada and the Tlameth Mountains, they are quite similar in character and condition to those noticed as being residents of the Gila and adjacent regions.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

They are mild and timorous, and incapable of opposing any very serious impediment to the progress of settlements. Fifteen Americans, armed with good rifles, are equal to one or two hundred of such enemies in ordinary cases.

The Catholics have twenty or more missions among them, the effect of which has been not so much to advance their civilization, or convert them to the truths of Christianity, as to render them the slaves of a corrupt and vicious priesthood.

Monterey is the present capital of Upper California. It is beautifully situated upon a gently undulating plain, in full view of the Ocean and harbor, and contains about one thousand inhabitants. Its houses are constructed of adobies, after the Mexican fashion.

South of this town are several other places of considerable importance along the coast, viz: San Diego, San Gabriel, and San Barbara; all of which are well located for commercial purposes.

A town called the Pueblo is situated upon a small river that debouches between San Diego and San Gabriel. This town is a few miles removed from the coast, and is said to be the largest one in California. It contains a population of about fifteen hundred, and is the grand centripot of overland intercourse with New Mexico.

Above Monterey are two other towns, bearing the names of Sonoma and San Francisco.

The latter is situated upon the bay of that name, and, from its superior commercial advantages, is destined to become one of the largest and most important business cities upon the western coast of the American continent. Possessed of one of the finest and most commodious harbors in the world, (emphatically the harbor of harbors,) and located at the mouth of a large navigable river, that waters a vast expanse of country unsurpassed in fertility, what should hinder it from assuming that commanding position designed for it by nature?

It is built after the English manner, and its inhabitants, numbering about two hundred, are principally American, English, and French, with a few Mexicans and Indians.

There are also several settlements upon the Sacramento and other rivers, consisting mostly of foreigners.

The Catholic missions are generally the nucleus of small Mexican and Indian villages, and derive their support from agricultural pursuits.

Aside from these, the country is entirely devoid of population other than wild beasts and uncultivated savages. The white inhabitants are computed at one thousand or more, and are generally Americans; while between ten and twelve thousand Mexicans curse the country with their presence, and disgrace the Edens they possess.

The government of California has been, like all Mexican governments, very lax and inefficient. It was but little other than a despotism, or, rather, a complicated machine for the oppression of the people and the perversion of justice! and infinitely worse than none.

Whether the late revolution has produced a better order of things remains to be determined; but, one fact is worthy of notice — no permanent reformation can be effected so long as Mexicans exercise any controlling influence in the administration of the laws; and, to speak plainly, not until the government is placed in other and better hands.

The Mexicans occupy eight military stations at different points along the coast, garrisoned by about three hundred and fifty soldiers, and mounting some fifty pieces of artillery. The largest of these fortifications is at Monterey. This post is garrisoned by two hundred soldiers, and twelve pieces of canon — while the fort at New Helvetia, held by the Americans, mounts an equal num-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

ber.

In case of an emergency, it is supposed the whole Mexican force might possibly amount to between ten and eleven hundred men — in efficiency nearly equal to a party of one hundred and fifty well-armed Americans.

It will be seen at a mere glance, that Mexico cannot maintain her hold upon California for many years to come. Emigrants from the United States and other countries, attracted by its fertile soil and healthful climate, will continue to pour into it with increased ratio, until, by outnumbering the degraded race that at present bears sway, this delightful portion of the globe shall of necessity become either the dependency of some foreign power or assume a separate and distinct existence as an independent nation.

CHAPTER XXIV.

Visitors at Uintah — Adventures of a trapping party. The Munchies, or white Indians; some account of them. Amusements at rendezvous. Mysterious city, and attempts at its exploration, — speculation relative to its inhabitants. Leave for Fort Hall. Camp at Bear river. Boundary between the U. States and Mexico. Green valleys, &c. Country en route. Brown's-hole. Geological observations. Soda, Beer, and Steamboat springs; their peculiarities. Minerals. Valley of Bear river; its fertility, timber, and abundance of wild fruit. Buffalo berries. Superior advantages of this section. Mineral tar.

OUR stay at the Uintah was prolonged for some ten days. The gentleman in charge at this post spared no pains to render my visit agreeable, and, in answer to enquiries, cheerfully imparted all the information in his possession relative to the localities, geography, and condition of the surrounding country.

A trapping party from the Gila came in soon after our arrival, bringing with them a rich quantity of beaver, which they had caught during the preceding winter, spring, and summer upon the affluents of that river and the adjacent mountain streams. They had made a successful hunt, and gave a glowing description of the country visited, and the general friendliness of its inhabitants. The natives, in some parts of their range, had never before seen a white man, and, after the first surprise had subsided, treated them with great deference and respect. These simple and hospitable people supplied them with corn, beans, and melons, and seemed at all times well disposed.

The only difficulty encountered with them took place upon one of the northern tributaries of the Gila. Two or three butcher-knives and other little articles being missing from camp, the trappers at once accused the Indians of stealing, and demanded their prompt restoration. The latter they were either unable or unwilling to do, and thereupon a volley of riflery was discharged among the promiscuous throng, with fatal effect. Several were killed and others wounded, and the whole troop of timorous savages immediately took to their heels, nor dared to return again.

In narrating the events of their long excursion, an account was given of visiting the Munchies, a tribe of white Indians.

What added much to the interest I felt in this part of their story, was the recollection of an article which went the newspaper rounds several years since, stating the existence of such a tribe. I had disbelieved it at the time; but this, and subsequent corroborative evidence, has effectually removed from my mind all doubts upon the subject.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Our trappers had remained with the Munchies for four weeks, and spoke of them in high terms. In reference to their color they were represented as being of a much fairer complexion than Europeans generally, a thing easily explained if we remember this one fact, i.e., my informants must have spoken comparatively, taking themselves as the true representatives of that race, when in reality their own color, by constant exposure to the weather, had acquired a much darker hue than ordinary; then drawing their conclusions from a false standard, they were led to pronounce the fair natives much fairer, as a body, than the whites.

By information derived from various sources, I am enabled to present the following statement relative to this interesting people:

The Munchies are a nation of white aborigines, actually existing in a valley among the Sierra de los Mimbros chain, upon one of the affluents of the Gila, in the extreme northwestern part of the Province of Sonora.

Their number about eight hundred in all. Their country is surrounded by lofty mountains at nearly every point, and is well watered and very fertile, though of limited extent. Their dwellings are spacious apartments nicely excavated in the hill-sides, and are frequently cut in the solid rock. They subsist by agriculture, and raise cattle, horses, and sheep. Their features correspond with those of Europeans, though with a complexion, perhaps, somewhat fairer, and a form equally if not more graceful.

Among them are many of the arts and comforts of civilized life. They spin and weave, and manufacture butter and cheese, with many of the luxuries known to more enlightened nations.

Their political economy, though much after the patriarchal order, is purely republican in its character. The old men exercise the supreme control in the enactment and execution of laws. These laws are usually of the most simple form, and tend to promote the general welfare of the community. They are made by a concurrent majority of the seniors in council, —each male individual, over a specified age, being allowed a voice and a vote.

Questions of right and wrong are heard and adjudged by a committee selected from the council of seniors, who are likewise empowered to redress the injured and pass sentence upon the criminal. In morals they are represented as honest and virtuous. In religion they differ but little from other Indians.

They are strictly men of peace, and never go to war, nor even, as a common thing, oppose resistance to the hostile incursions of surrounding nations. On the appearance of an enemy, they immediately retreat, with their cattle, horses, sheep, and other valuables, to mountain caverns, fitted at all times for their reception, —where, by barricading the entrances, they are at once secure without a resort to arms.

In regard to their origin they have lost all knowledge or even tradition, (a thing not likely to have happened had they been the progeny of Europeans at any late period, —that is, since the time of Columbus;) neither do their characters, manners, customs, arts, or government savor of modern Europe.

Could a colony or party of Europeans in the short period of three centuries and a half lose all trace of their origin, religion, habits, arts, civilization, and government? Who, for a moment, would entertain an idea so estranged to probability?

And yet the Munchies cannot be real Indians, —they must be of European descent, though circumstances other than complexion afford no evidence of identity with either race. Where, then,

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

shall we place them? — from whence is there origin?

We are forced to admit the weight of circumstantial testimony as to their having settled upon this continent prior to its discovery by Columbus. Here we are led to inquire, are they not the remote descendants of some colony of ancient Romans?

That such colonies did here exist in former ages, there is good reason for believing. The great lapse of time and other operative causes combined, may have transformed the Munchies from the habits, customs, character, religion, arts, civilization, and language of the Romans, to the condition in which they are at present found.

Among the visitors at the Fort were several old trappers who had passed fifteen or twenty years in the Rocky Mountains and neighboring countries. They were what might, with propriety, be termed “hard cases.”

The interval of their stay was occupied in gambling, horse-racing, and other like amusements.

Bets were freely made upon everything involving the least doubt, —sometimes to the amount of five hundred or a thousand dollars — the stakes consisting of beaver, horses, traps, &c.

Not unfrequently the proceeds of months of toil, suffering, deprivation, and danger, were dissipated in a few hours, and the unfortunate gamester left without beaver, horse, trap, or even a gun. In such cases they bore their reverses without grumbling, and relinquished all to the winner, as unconcernedly as though these were affairs of every-day occurrence.

These veterans of the mountains were very communicative, and fond of relating their adventures, many of which were so vested with the marvelous as to involve in doubt their credibility.

Were it not for extending the limits of this work too far, I should be tempted to transcribe the choicest of them for the reader’s amusement; but, as it is, I cannot refuse place to one (here for the first time related in my hearing, which has subsequently reached me from other sources) relative to a subject deeply interesting to the curious.

Stevens, in his “Incidents of Travel in Yucatan,” admits it to be quite possible that cities like those in ruins at Uxmal and Palenque, may yet exist in the unexplored parts of the Mexican Republic, and be inhabited by a people in all respects similar to that once occupying the before named.

Those acquainted with the nature of the country embraced in the mountainous portions of Mexico, must admit the possibility of such a thing. With this premise I give, the story as I heard it.

Five or six years since, a party of trappers, in search for beaver, penetrated into an unfrequented part of the mountains forming the eastern boundary of Sonora.

During their excursion they ascended a lofty peak that overlooked an extensive valley, apparently enclosed upon all sides by impassable mountains. At a long distance down the valley, by aid of a spy-glass, they could plainly distinguish houses and people, with every indication of a populous city.

At the point from whence this discovery was made, the mountain-side facing the valley was a precipitous wall of vertical rock, several hundred feet to its base, rendering a descent impossible. After trying at other places, with like ill-success, they were at length compelled to relinquish the design of further investigation for the time being.

Subsequently, on visiting Arispie, a town of Sonora, several foreigners were induced to join them in a return expedition, and a company of some twenty or twenty-five repaired to the place for the purpose of prosecuting a research so interesting.

On arriving at the mountain from whence the object of their curiosity had been first seen, there

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

lay before them the valley and city with its domes and palaces, amid which a swarming population was distinctly observed, apparently engaged in the prosecution of their various avocations. There could be no doubt of its reality, but how to reach it was the next question.

A number of days were occupied in vain search for a pass into the valley. The creek upon which it lay was found to emerge from the vast enclosure, through the mountain, by a frightful chasm formed of vertical rocks upon each side, for hundreds and even thousands of feet in altitude. The current was rapid, and interrupted by frequent falls that precluded the possibility of a passage up its bed. They crossed it, and, finding a convenient slope, again ascended the mountain.

On reaching the summit, a counterscarp was observed, where, by dint of great exertion, a descent could be effected; but not with horses.

Arrangements were made accordingly, and one half of the party remained with the animals and baggage, while the others, continuing the exploration, finally succeeded in entering the valley. Meanwhile, the movements of the advancing party were viewed with great anxiety by those in reserve. In the course of the succeeding day they were seen to enter the city and mingle among its inhabitants; but, after that, they were never again seen or heard of.

Three weeks elapsed and no sign of them appeared. At length their companions were forced by hunger to leave the spot and abandon them to their fate.

Another attempt to explore this mysterious locality is reported to have been made by a company of Spaniards, some of whom penetrated the valley, but never returned.

The site of this city, if the story of its existence be true, is undoubtedly the bed of an ancient lake, whose waters have become gradually drained by a forced passage through the mountain, thus forming the chasm and creek above noticed.

The people inhabiting it are probably from the stock of original Mexicans[44], who sought this as a secure retreat from the terror of Spanish oppression in the time of Cortez; since which their posterity have lived here unknown to the rest of the world.

Taught by the bitter experience of past ages to hate and distrust the white man, and still cherishing their traditional animosity, they permit none of that race to return who visit them, and, from the peculiarity of their position and jealous caution, have successfully maintained an uninterrupted in cog.

Several trappers rendezvoused at the Uintah being about to leave for Fort Hall, on the head waters of the Columbia river, I improved the opportunity of bearing them company.

My necessary arrangements were completed simply by exchanging horses; and, on the morning of Oct. 29th, I bade farewell to my new acquaintances at the Fort, and joined the party en route, which, including myself and compagnons de voyage from Fort Lancaster, numbered eleven in all, well mounted and armed.

The weather proved delightful considering the lateness of the season, and our journey was rapid and uninterrupted.

On leaving the Uintah we continued northward, over a rough country, for some twenty-five miles, and passed the night at Ashley's Fork,[45] with a small village of Snake Indians.

Resuming our course through a mountainous region, diversified by beautiful little valleys, late in the afternoon of the third day we camped in the vicinity of Brown's-hole.

Bearing from thence a southwesterly course, two days afterwards we arrived at Bear river, and obtained, from an adjoining eminence, a distant view of the Great Salt Lake.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Continuing down the river a few miles, we struck camp, and remained some three days for the purpose of hunting.

Being unwilling to leave the vicinity without a more perfect observation of this vast inland sea, I improved the interval for that purpose, and, in a few hours' ride, came to a point which overlooked its briny waters and spread out before me an object of so much interest to all beholders. Its whilom waves now lay slumbering upon its bosom, for not a breath of air stirred to awake them from their transient repose, save that caused by the flutterings of countless water-fowls which beskimmed the crystal blue or rode upon its surface.

No sound disturbed the stillness of its solitude, save that of my own footsteps commingling with the incessant chatter of aquatic birds. In solemn grandeur it lay before the eye a desert of waters, bounded upon three sides by the curving horizon, while from the fourth a beautiful expanse of verdancy smiled upon its solitude.

The island with its lone mountain, of which I have spoken in a former chapter, arose in full view, apparently a short distance to the southwest. It was a grand and imposing spectacle, and I much regretted the impossibility of reaching it. Its giant piles of naked rock and sun-baked clay, seemed scanning the surrounding waves, to smile upon their soft blandishments or frown at their rudeness.

But the Island, the Lake, and the country contiguous, have been fully described in former pages, which of right precludes a further notice at this time.

On resuming our course we continued up Bear river to the famous mineral springs, — thence bearing a northwesterly direction, we arrived at Fort Hall late in the afternoon of Nov. 9th.

The route from Uintah to this point presents many interesting localities some of which call for more than a mere passing notice. That situate upon Green river, known as Brown's-hole,[46] coming first in order, seems to assert a merited precedence.

Descending by a steep, difficult pass from the west, fifty miles north of Ashley's Fork, the traveller is ushered into a beautiful valley, some fifteen miles long by ten broad, shut in upon all sides by impassable mountains that guard it from the world without.

The only feasible entrance is upon the east side through a remarkable cañon sixty yards wide, formed by craggy rocks six or eight hundred feet in altitude, succeeded by a still narrower and more precipitous one, towering to a height of twelve or fifteen hundred feet.

This valley is intersected by Green river, which, emerging from the lofty ridges above, and tracing its way through the narrow and frightful cañons below, here presents a broad, smooth stream, fifty or sixty yards wide, with sloping banks, and passably well timbered.

Here all the various wild fruits indigenous to the country are found in great abundance, with countless multitudes of deer, elk, and sheep.

The soil is of a dark loam, very fertile and admirably adapted to cultivation. Vegetation attains a rank growth and continues green the entire year.

Spring wedded to summer seems to have chosen this sequestered spot for her fixed habitation, where, when dying autumn woos the sere frost and snow, of winter she may withdraw to her flower-garnished retreat and smile and bloom forever.

The surrounding mountains are from fifteen hundred to two thousand feet high, and present several peaks where snow claims an unyielding dominion year after year, in awful contrast with the beauty and loveliness that lies below.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Few localities in the mountains are equal to this, in point of beautiful and romantic scenery. Every thing embraced in its confines tends to inspire the beholder with commingled feelings of awe and admiration.

Its long, narrow gate-way, walled in by huge impending rocks, for hundreds of feet in altitude, — the lofty peaks that surround it, clothed in eternal snow, — the bold stream traversing it, whose heaving bosom pours sweet music into the ears of listening solitude, — the verdant lawn, spreading far and wide, garnished with blushing wild-flowers and arrayed in the habiliments of perennial spring, — all, all combine to invest it with an enchantment as soul-expanding in its sublimity as it is fascinating in its loveliness.

The country contiguous to Bear river, back from the valleys, is generally rugged and sterile. Sometimes the surface for a considerable extent is entirely destitute of vegetation, and presents a dreary waste of rocks, or clay hardened to a stone-like consistency by the sun's rays. Now and then a few dwarfish pines and cedars meet the eye amid the surrounding desolation, and occasional clusters of coarse grass intervene at favoring depressions among the rocks.

The landscape, as a whole, possesses a savage wildness peculiar to itself, and bears strong indications of volcanic action. The mountains are not so high as those of other parts, but are far more forbidding in their aspect. The prevailing rock is lava, scoriated basalt, trap, bituminous limestone, and calcareous tufa.

The valley of Bear river affords a number of springs strongly impregnated with various mineral properties, which cannot fail to excite the curiosity and interest of the traveller. They are found upon the left bank of the stream, a short distance below a small affluent from the north.

Two of them are situated in a small grove of cedars, within a short distance of each other.

In passing their vicinity the attention of the traveller is at once arrested by the hissing noise they emit; and on approaching to ascertain the cause, he finds two circular-shaped openings in the surface, several feet in diameter, and filled with transparent fluid in a state of incessant effervescence, caused by the action of subterranean gases.

The water of the one he finds on tasting to be excellent natural soda, and that of the other, slightly acid and beer-like; — the draught will prove delicious and somewhat stimulating, but, if repeated too freely, it is said to produce a kind of giddiness like intoxication. These singular natural curiosities are known among the trappers as the Beer and Soda springs, names not altogether inappropriate.

A few hundred yards below these, is another remarkable curiosity, called the Steamboat spring.

This discharges a column of mineral water from a rock-formed orifice, accompanied with subterranean sounds like those produced by a high-pressure steamboat.

Besides the above-described, there are a number of others in this vicinity of equally mineral character, as well as several hot springs, varying in temperature from blood to that of extreme boiling heat.

Bear river valley contains many wide spreads of most excellent land, susceptible of a high state of cultivation. In fertility it is unsurpassed, and varies in width from one and a half to three miles.

The stream is not heavily timbered, but the scattering groves of pine and cedar among the adjoining mountains partially atone for any apparent deficiency.

Towards its head, the hills upon either side are less rugged and barren, and present more frequent intervals of verdancy.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

I noticed a large number of fruit-bearing shrubs and bushes, including cherry, service, goose, and buffalo-berries, (two kinds,) with currants.

The bushes of the buffalo-berry were not as yet entirely divested of their delicious burthen, and afforded a new variety of that fruit hitherto not having come under my observation.

This berry is about the size of and similar in shape to the common currant. There are three kinds, —the white, yellow, and red, (*shepherdia argentea*.)

The red is of a slightly tartish taste, but not unpleasant; the yellow is somewhat less acid, but otherwise similar to the red; the white, however, is most excellent tasted, and possesses a delicious sweetness which causes it to be highly relished.

This fruit has several small seeds in it, like those of the whortleberry, and grows upon a bush in shape and size quite like the common shrub-oak. It produces in such immense quantities, that the parent bush is not unfrequently flattened with its superincumbent weight.

The grizzly bear delights to revel among the thickets of this his favorite berry, and is almost certain to make from it his last autumn meal ere he retires to winter quarters and commences the long fast that follows.

The valley of Bear river presents to emigrants many advantages. Possessed not only of a rich soil, well adapted to cultivation, and vast mineral resources, with natural curiosities that must ever make it a central point of attraction, but situated in the immediate vicinity of the prospective population of the Great Salt Lake and upon the direct line of over-land intercourse between the United States, California, and Oregon, it must command for its future inhabitants a sure source of prosperity and wealth.

There is little doubt of its eventually becoming the most important section of Southeastern Oregon.

In descending upon the natural curiosities of this valley, the trappers accompanying me spoke of a spring further to the northward, which constantly emits a small stream of mineral tar, from the mountain-side, in no respect inferior to the manufactured article. However, I am not certain in regard to the locality of this interesting phenomenon.

CHAPTER XXV.

Fort Hall; its history, and locality. Information relative to Oregon. Boundaries and extent of the territory. Its rivers and lakes, with a concise description of them severally. Abundance and variety of fish and waterfowl. Harbors and islands. Oregon as a whole; its mountains and geographical divisions. Eastern Division; its wild scenery, valleys, soil, and timber; volcanic ravages; country between Clarke's river and the Columbia. North of the Columbia; its general character. Middle Division; its valleys, prairies, highlands, and forests. Western Division; a beautiful country; extensive valleys of extraordinary fertility; productive plains; abundance of timber, its astonishing size and variety. A brief summary of facts.

OUR journey from the Uintah to Fort Hall occupied twelve days, and took us a distance of about two hundred miles. Most of this time the weather continued mild and pleasant; the only interval of inclemency was a single bleak and cloudy day, succeeded by a slight fall of snow during the night, which the bright sunshine of the ensuing morning dissipated in a few moments.

Along the entire route we found an abundance of green grass at sheltered places in the valleys,

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

and also large quantities of game, especially blacktailed deer, bear, and elk. Bear are more numerous in this section than in any other I am acquainted with.

Fort Hall is located upon the left bank of Snake river, or Lewis' Fork of the Columbia, in a rich bottom near the delta formed by the confluence of the Portneuf with that stream, in lat. 43° 10' 30" north, long. 112° 20' 64" west.

In general structure it corresponds with most of the other trading establishments in the country. It was built by Capt. Wythe of Boston, in 1832, for the purpose of furnishing trappers with their needful supplies in exchange for beaver and other peltries, and also to command the trade with the Snakes. Subsequently it was transferred to the Hudson Bay Company in whose possession it has since remained.

Mr. Grant, a gentleman distinguished for his kindness and urbanity, is at present in charge, and has some sixty Canadians and half-breeds in his employ.

This post is in the immediate vicinity of the old war-ground between the Blackfoot, Snake, and Crow Indians, and was formerly considered a very dangerous locality on that account. Its early occupants were subject to frequent losses from the hostile incursions of the former of these tribes, and on two or three occasions came very near being burnt out[47] by their unsparing enemies. The country in the neighborhood of Fort Hall affords several extensive valleys upon the Snake river and its tributaries, which are rich, well timbered, and admirably adapted to the growth of grain and vegetables.

The adjoining prairies also, to some extent, possess a tolerable soil, and abound in a choice variety of grasses. Back from the valleys and plains, the landscape is extremely rugged and mountainous, poorly timbered, and bears the character of general sterility.

My stay at the Fort brought me in contact with gentlemen from various parts of Oregon; who kindly imparted to me all the information in their possession relative to the nature and true condition of this interesting and highly important section of our national domain. With the data thus obtained, assisted by subsequent personal observation and intelligence derived from other sources, I am enabled to arrange the following brief outlines of its geography, geology, climate, and soil, including a description of its productions, inhabitants, natural advantages, inducements to emigrants, &c., which the reader may rely upon as strictly correct in every essential particular.

With the northern extremity of Bear river valley, the traveller enters the southeastern limits of Oregon Territory. By referring to the map it will be seen that this country is bounded upon the north[48] by the British and Russian possessions, east by the Rocky Mountains, south by Upper California, and west by the Pacific. It is not my present purpose to argue, or endeavor to sustain, the claims of our Government to the whole area embraced in the above; but conceiving the matter now settled, I shall proceed to the task in hand without further preliminary.

Oregon, like California, is possessed of many important rivers and harbors, that, considering their intimate relation to the general interest of commerce, seem to demand our first attention. The Columbia and its branches water almost the entire territory, and open a highway from the ocean to the lofty mountain ranges which form its eastern boundary. This river heads in lat. 52° north, long. 119° west from Greenwich, and, after pursuing a serpentine course for fifteen hundred or two thousand miles, finds its discharge in the Pacific, at lat. 46° north.

One hundred and twenty miles of this distance are navigable for ships of the largest class, but the remainder of its course is interrupted by occasional rapids and falls, that render frequent portages

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

necessary.

The upper and lower "dalls" and "cascades," present the most serious impediments to navigation. The former of these, situated above Clarke's Fork, are caused by the passage of the Columbia through immense ledges, that leave huge vertical walls of basaltic rock upon either side, and compress its waters to a narrow, chasm-like channel. There, dashing and foaming in wild fury, the torrent rushes past its lateral dikes with frightful velocity.

The distance between these two "dalls" is some thirty miles.

The "cascades" lie at the base of a mountain range of the same name, one hundred and fifty miles from the Ocean. Near this place the whole stream is plunged over a precipice of fifty feet descent, forming a sublime and magnificent spectacle.

Between the dalls and cascades, a reach of high-lands, formed almost entirely of naked basalt, presents another barrier, through which the river forces itself by a tunnel-like pass for ten or fifteen miles, leaving vast mural piles upon the right and left, that attain an altitude of three hundred and fifty or four hundred feet.

A few miles above the junction of the southern and middle forks of the Columbia, two considerable lakes have been formed by the compressure of its waters among the adjoining mountains. The first of these is about twenty miles long and six broad, shut in by high, towering hills, covered with stately pine forests.

Emerging from this, the river urges its way through lofty embankments of volcanic rock for some five miles or more, when a second lake is formed in a similar manner, which is about twenty-five miles in length and six in width.

NOTE.— Capt. Fremont, in speaking of the Columbia, makes use of the following just observations:

"The Columbia is the only river which traverses the whole breadth of the country, breaking through all the ranges, and entering into the sea. Drawing its waters from a section of ten degrees of latitude in the Rocky Mountains, which are collected into one stream by three main forks (Lewis', Clarke's, and the North Fork) near the centre of the Oregon valley, this great river thence proceeds by a single channel into the sea, while its three forks lead each to a pass in the mountains, which opens the way into the interior of the continent.

"This fact, in reference to the rivers of this region, gives an immense value to the Columbia. Its mouth is the only inlet and outlet to and from the sea; its three forks lead to passes in the mountains; it is, therefore, the only line of communication between the Pacific and the interior of North America; and all operations of war or commerce, of national or social intercourse, must be conducted upon it."

There are also several other lakes, of greater or less extent, at different points along its course. Perhaps no river in the world, of the same length, affords such varied and picturesque scenery as does the Columbia.

Its lakes, tunnels, cascades, falls, mountains, rocky embankments, prairies, plains, bottoms, meadows, and islands, disclose an agreeable medley of wild romance, solemn grandeur, and pleasing beauty, far surpassing that of ally other country.

During its course it receives numerous tributaries, the most important of which are the Clarke, Flat-bow, Spokane, Okanagan, Snake, Yakama, Piscous, Entyatecoom, Umatilla, Quisnel, John Day, D'Chute, Cathlatates, Walla-walla, Wallammette, and Cawlitiz.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

The Clarke, Snake, and Wallamette rivers, seem to call for more than a bare allusion.

The former of these rises in the Rocky Mountains, near lat. 46° north, and following its windings, is about five hundred and fifty miles in length. A lake, some thirty miles long and eight broad, is also formed in its course, about one hundred miles above its mouth. During its windings it receives a large number of affluents, which unite to swell the volume of its waters to the full size of its parent stream.

The Snake, or Lewis' Fork, is equally important. It rises in lat. 42° north, and, pursuing a north-westerly direction for five hundred miles, is discharged into the Columbia, at lat. 46° north. This river also receives several tributaries, the largest of which are the Kooskooskie and Salmon.

The Wallamette heads in the Cascade Mountains, in Upper California, near lat. 41° north, and bears a northerly course for nearly three hundred and fifty miles. One hundred and twenty-five miles of this distance are navigable for boats of a light draught.

Several tributaries, both from the east and west, unite to increase its magnitude and enhance its importance.

The Umpqua, which is the next river worthy of notice below the Columbia, has its source in the Cascade Mountains, near lat. 43° north, and running westerly for almost three hundred miles, is finally discharged into the Pacific. Some forty or fifty miles of this distance are said to be navigable.

South of the Umpqua a stream of nearly equal size empties into the Pacific, called Rogue's river. This also rises in the Cascade Mountains, at lat. 42° north, and is said to be navigable for boats of a light draught, some seventy miles or more.

The Chilkeelis is the first river north of the Columbia, and rises in the mountains, near lat. 48° north. Pursuing a westerly course, it discharges itself into the Pacific at Gray's Harbor, after flowing a distance of about two hundred and fifty miles.

Fraser's river is the extreme northern one of Oregon. It heads in the Rocky Mountains, near lat. 54° north, and empties into the Gulf of Georgia, at lat. 49° north. In its course it receives several large tributaries, and pursues its way for a distance of about four hundred miles, eighty of which are navigable.

Besides those above named, there are several other streams, of less magnitude, emptying into the Pacific at various points along its coast, all of which, as the country becomes settled, will contribute to the facilities of commerce and manufactures.

The rivers of Oregon, in the abundance and quality of their fish, are unparalleled. At certain seasons of the year, their waters are completely alive with the countless myriads that swarm them to their very sources.

Even the small streams are not exempt from this thronging population. So great is their number they are frequently taken by the hand; and, with the aid of a net, several barrels may be caught at a single haul. It requires but little effort to obtain them, and large quantities are annually shipped to the Sandwich Islands and various other points.

Fish are undoubtedly destined to furnish an important item in the future commerce of Oregon. At the present time they supply the principal food of its inhabitants, both Indians and whites. Among the different varieties abounding in these streams, salmon and salmon trout claim the precedence, both in numbers and qualities.

These delicious fish attain a size seldom surpassed, and are found in every accessible river and

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

creek. The bays, harbors, and mouths of rivers are also thronged with cod, herring, sturgeon, and occasionally whales, while vast quantities of oysters, clams, lobsters, &c., may be obtained along the coast.

Next to fish, in connection with the rivers, the extraordinary number of aquatic birds arrests the attention. These consist of geese, brants, ducks (of three or four varieties,) swans, pelicans, and gulls.

At certain seasons, they throng the rivers, creeks, lakes, and ponds, at different parts, in innumerable multitudes, and not only keep the waters in constant turmoil from their nautic exercises and sports, but fill the air with the wild clamor of their incessant quackings. An expert sportsman may kill hundreds of them in a few hours.

So abundant are they that their feathers may be obtained of the Indians in any requisite quantity, for a trifling consideration—in all respects equal, for bedding, to those procured from domesticated geese and ducks.

In regard to harbors, the natural advantages of Oregon are not equal to those of California; though, as the country becomes settled, the ingenuity of man will speedily atone for these apparent deficiencies; and if she has not the matchless basin of the Bay of San Francisco, she has other localities upon her sea-board that, with a small expenditure of money and effort, may be made secure and adapted to all her commercial requirements.

It is much to be regretted, however, that the Columbia affords not an easy and secure entrance for ships from the Ocean, as this will undoubtedly become the most important point of the whole coast.

At present, the mouth of this river, between Points Adams and Hancock is partially blocked up by large sand-bars, deposited by the current, and maintained in their places through the repulsive action of the sea-waves.

How far these impediments may operate to the future detriment of commerce, remains to be seen. Unless some remedy should be adopted, the harbor of this great embryo depot of Western trade will continue to oppose a difficult entrance.

The estuaries of the Umpqua and Rogue rivers are more difficult of access than the Columbia. It is even said, that there is not a good harbor on the coast of Oregon below lat. 46° north. Above this parallel there are several, not only easy of access but secure of anchorage; the principal of which are those of the Straits of Juan de Fuca and the Gulf of Georgia. The islands of Vancouvre and Queen Charlotte[49] also possess a number of excellent harbors.

These islands are large, well timbered, and generally fertile. Though, like the mainland, quite broken and hilly, they embrace many beautiful plains and lovely valleys, abounding with game, and coursed by ample streams of fresh water. Vancouvre's Island is two hundred and sixty miles long by fifty in width, and Queen Charlotte's one hundred and forty by twenty-eight. In addition to the above named, there are a number of small islands near the Straits of Juan de Fuca — more important on account of their fisheries than the quality of their soil.

The whole extent of the sea-coast, connected with the territory, (i.e. from California to the Russian possessions,) is about one thousand miles, besides that of its various islands. Reckoning from the above data, the area included within its limits is not far from nine hundred and two thousand, two hundred and fifty square miles.

To speak of this vast country in toto, we could give no general character other in regard to its cli-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

mate, soil, or productions, possessed, as it is, of very diversity, from the piercing frosts of perpetual winter, to the smiling verdancy of unfading spring — from the dwarfish herbage of the arctic regions, to the generous fruits of warmer zones—and from the barren sterility of a Lybian desert, to the exuberant fecundity of earth's choicest garden-spots.

However, from the numerous peaks that rear their cloud-capped heads in almost every direction, and the continuous ridges intersecting it from side to side and from end to end, we might with safety pronounce it mountainous.

The Rocky Mountains, forming its eastern boundary, branch off westerly and northwesterly at various points, and, in connection with other ridges, beline the whole country. It is my present purpose merely to classify some of the more extensive of these ranges, and note their locality, as auxiliary to more accurate and comprehensive disposal of the leading subject before the reader. The Blue Mountain chain commences not far from 45° 30' north latitude, and bears a southerly course, till it passes into California and unites with the intersecting ridges of that province. It runs nearly parallel with the Rocky Mountains, at an interval varying from one hundred to one hundred and fifty miles, forming the Eastern Division of Oregon.

The Cascade chain (before noticed, in connection with California) commences in the Russian possessions, and pursues a southerly course through both countries, till it finally becomes lost in the sea-girt isthmus of the Lower province. It runs parallel with the coast, at a distance varying from one hundred to one hundred and fifty miles, and defines the Western and Middle Divisions of Oregon.

The country north of the Columbia is also traversed by numerous branches and spurs of the Rocky and Cascade Mountains, many of them presenting lofty peaks, covered with never-melting snow and ice.

The mountain ranges before described, have many summits towering far above the snow-line. They are generally less sterile than the main chain of the Rocky Mountains, and, amid their snow-clad tops and denuded eminences, present alternate spreads of high table land and rolling prairie, clothed with vegetation, and dense forests of pine, cedar, fir, and oak, or opening valleys arrayed in all the enchantment of vernal loveliness.

The Eastern, or Southeasterly Division of Oregon, partakes of a greater variety of wild and savage scenery, intermixed with beauty and desolation, than any other section in the whole territory. The valleys of Bear river and those parts contiguous to Fort Hall, have already been described on a preceding page, and all their varied attractions fully descanted upon. Besides these, there are other valleys in the neighborhood of the South Pass, upon Little and Big Sandy, and the New Forks of Green river, that claim a passing notice.

The valleys last referred to are of variable width and possess a fertile soil, adapted to either grazing or agricultural purposes, and assume an additional importance from their situation in reference to the grand routes from the United States to Oregon and California. They are capable of sustaining a small population with peculiar advantage, were it not for the troubles that might be anticipated from the hostile incursions of the Blackfeet and Sioux.

Below Fort Hall, the valleys of Snake, or Lewis' river, are somewhat limited, but very fertile, though enclosed for the most part by denuded and sterile mountains. In the vicinity of Fort Boise, on the bank of Lewis' Fork, are several rich and extensive plains and valleys, more or less adapted to cultivation.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

The Kooskooskie and Salmon rivers, also, present some fine bottoms. Another beautiful valley is situated upon Powder river, a considerable creek, about forty miles below Fort Boise. It is large and very fertile, but lacks a sufficiency of timber without a resort to the dense pine forests of the neighboring hills.

The next section that attracts the traveller's attention as he proceeds towards the Columbia, is a favored spot known as le Grand Rond, bounded on all sides by mountains, in the vicinity of the Blue range. This locality is nearly circular, and about one hundred and fifty miles in circumference, well watered and possesses a soil of matchless fertility.[50]

Timber of the best kind may be procured, in any quantity, from the adjoining mountains, and, to a limited extent, from the valley.

Trappers speak of the Grand Rond with an enthusiasm which is cordially responded to by all who have hitherto visited it. So far as soil and climate are concerned, a better section of country than this is rarely found.

Southeast from the place last described, sixty miles or more, lies a long stretch of desolate country which bears a strikingly volcanic appearance.

This region is thickly paved with vast piles of lava and igneous rock, strown about in confused fragments, as if the mountains had been rent asunder and dashed in horrid medley upon the adjoining plains, and earth, itself, had undergone all the indescribable contortions of more than agony, —now opening in frightful chasms, —now vibrating with unheard of violence, oversetting hills and rooting them from their foundations by the impetuosity of its motion, or elevating half vertically, the immense layers of subterranean rock forming the valves of distorted fissures, and depressing the opposing ones in frightful contrast, — in haste to complete the picture of destruction by an imposing array of wild and savage scenery.

Numerous boiling springs are also found among these wide-spread heaps of ruined nature whose waters are frequently so hot that meat may be cooked in a very few minutes by submersion in them.

Several streams trace their way through this region, affording occasional bottoms of fertile soil and luxuriant vegetation, that smile with bewitching enchantment upon the relentless havoc surrounding them.

Upon Clarke's river and its tributaries, as well as the numerous lakes adjacent to them, there are large quantities of excellent land, well adapted to agricultural and grazing purposes. The hills, too, are generally studded with dense forests of pine and fir, some of them of gigantic growth, while the intervening plateaux and high prairies present frequent intervals of lusty grasses.

The same may be said, though in a more restricted sense, of most of the country lying between Clarke's river and the Columbia.

The streams of water and lakes are most of them skirted with bottoms and valleys of greater or less extent, tolerably well timbered, while the neighboring hills afford frequent groves of heavy pines, diversified with openings of grass-clad prairies or of denuded barrenness.

Many interesting localities lie along the Columbia, above the confluence of Clarke's river, as well as upon the several tributaries finding their way into it. A tract of country circumjacent to the Lower Lake possesses a rich soil, with other advantages, which in due time will command the attention of emigrants.

The section lying still north of this is but little better than a barren waste of frost and snow, with

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

now and then choice spots of rank vegetation and rich floral beauty, shut up in their stern recesses, in wonderful contrast with the savage sublimity and wild disorder of the masses of naked rock that surround them.

Frasier's river has an extensive valley of excellent and well timbered land, skirting it in variable width, from mouth to source. The same may be said of many of its tributaries. The Chilkeelis, also, possesses many choice spots.

But, as a general thing, that portion of country north of the Columbia is the most worthless part of Oregon.

A vast share of it is mere naked rock or deserts of ice and snow, with now and then dense forests of pine, cedar, and fir. There are, comparatively, few arable prairies; and not more than one half of the whole extent can be turned to any useful purpose. Perhaps one sixth of it is susceptible of cultivation. In fact, the only localities worthy of mention are the valleys scattered among the Claset and Cascade Mountains, and along the different rivers and creeks.

The cause of this general sterility is more to be attributed to the severity of the climate, consequent upon a high northern latitude, combined with the broken and mountainous character of the country, than to any great natural deficiency of soil. Of course it can never become thickly populated.

Its timber, fisheries, and facilities for manufactures, stock-raising, and the growth of wool, embrace its greatest inducements to emigrants; though, in a commercial point of view, its extensive fur trade and commodious harbors, with other kindred advantages, should not be overlooked.

We now come to the Middle Division, or that section south of the Columbia, between the Blue and Cascade Mountains.

In this division of Oregon the face of the country is very much diversified. As a whole, it presents a continued series of conical hills, huge masses of rock, and undulating prairies, intermixed with lofty, cloud-capped peaks, shooting transversely from the ridges that form its eastern and western boundaries. These mountains are usually clothed with rank vegetation, and frequently present stately forests of valuable timber, particularly the Blue range.

It also contains many extensive valleys of great fertility, situated among its mountains and upon the John Day, Quisnell, Umatilla, D'Chute, and Wallawalla rivers, and their numerous affluents. The southern extremity likewise affords many fertile and extensive valleys, but it is rather sparsely timbered. In the immediate vicinity of the Columbia, the land is sandy and barren, though back from the river, the hills are tolerably rich and coated with heavy pine forests.

Nearly the whole of this section may be considered available for agriculture and stock-raising.

The Western Division next commands our attention. Below the Cascades, the country contiguous to the Columbia presents a vast extent of thickly timbered and extremely fertile bottom land, one hundred and twenty miles wide, interspersed with frequent openings of lusty vegetation.

The forests of this section afford some of the largest and most beautiful pine and fir trees in the world. Its valleys, plains, and hills are likewise possessed of a most excellent soil, adapted to every practicable use.

Above this, and bordering upon the Straits of Juan de Fuca are also large tracts of fine land, well watered, timbered, and fertile.

Southward, towards the confines of California, the Umpqua and Rogue rivers claim several very extensive and fertile valleys and bottom lands. Upon the former of these are said to be two, one of

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

which is forty miles in length by ten in width, and the other seventy by fifteen;—upon the latter, is one eighty miles long, and varying from fifteen to fifty in width.

Besides the above mentioned, there are numerous other valleys, all of which are well timbered and of unparalleled fertility.

No country in the world affords a better soil, or a more romantic scenery. The mountains bounding them rise in stately grandeur, oftentimes far above the clouds, to converse with the relentless snows of successive ages, now presenting their nude sides, paved with dark masses of frowning rocks, or proud forests of evergreen, verdant lawns, flowery dales, and sterile wastes, to overlook the perennial beauty and matchless fecundity at their feet, —while the lesser eminences with their deep ravines, o'ershanging cliffs, and shadowy recesses, tell the place where the storm-winds recruit their forces and the zephyrs creep in to die.

There are also large valleys, of equally fertile soil, upon the head waters of the Tlameth river, near the southern boundary, well worth the attention of emigrants.

The most interesting portion of the Western Division, however, is that bordering upon the Wallammette and its affluents. The valley of this river is one hundred and fifty miles long by thirty-five broad. The soil is a deep alluvion, of extraordinary fertility.

It is not only well watered, but well timbered, and produces all the vegetables, fruits, and grasses indigenous to the country, with astonishing profuseness. No region was ever better adapted to agricultural or grazing purposes.

The Fualitine Plains, adjoining this beautiful expanse of fertility upon the left, towards the Columbia, embrace an area of forty-five miles in length by fifteen in breadth, well watered and amply timbered, with a soil in all respects equal.

The Klackamus, Putin, Fualitine, Yamhill, and other rivers, are all of them skirted by beautiful and fertile valleys of greater or less extent, while the adjacent hills and prairies afford not only frequent forests of excellent timber, but generally a very good soil.

The landscape of this vicinity, though not, strictly speaking, hilly, is highly indulating, but quite productive in grass and herbage.

The Cawlitz river, which empties into the Columbia a short distance below the Wallammette, has several rich bottoms, and waters a large extent of country, admirably adapted to stock-raising and agriculture.

At the mouth of the Wallammette river is an island some fifteen miles in length by nearly the same distance in breadth, called Wappato; it is of a deep alluvial soil, formed from sedimentary deposits and decayed vegetable substances, and is very rich and densely timbered.

The country at the mouth of the Columbia and for some ten or fifteen miles interior, is sandy and sterile, —a fact much to be regretted, as from its peculiar locality this point must necessarily become the site of a vastly important commercial emporium, vying in population, splendor, and opulence, the time-grown cities of more eastern climes.

The stately forests of pine and fir, in the Western Division of Oregon, have for a long time challenged the admiration of the world, and it is strongly doubted whether the chosen veterans of foreign woods can produce a rival to some few specimens of the proud giants of its soil.

These not unfrequently tower to a height of two hundred feet, and even more, —leaving from one hundred and fifty to one hundred and seventy-five feet clear of limb, with scarcely a curve in the

entire length.

One of them, standing near Fort George on the Columbia river, is said to measure forty-seven feet in circumference, three hundred and fifty feet in altitude, and two hundred and sixty-five feet clear of limb; another, upon the Umpqua river, is reported even larger, and yet another, in the same vicinity, very nearly equals it in size.

Timber of this kind affords the choicest article for lumber, which bears a very high price at the Sandwich Islands and in various parts of Mexico, and will no doubt become a staple commodity in the commerce of Oregon; while the immense forests of pine, fir, and oak, rearing their stately heads in thick array, must prove a sure source of wealth to its future inhabitants.

The principal kinds of wood indigenous to the country are white-oak, live-oak, maple, ash, pine, fir, cedar, hemlock, spruce, cottonwood, aspen, and cherry.

Live-oak is found chiefly in the southern part, and, in quality, stands foremost among the denizens of the forest for ship-building. Several other species of oak are more or less abundant in various parts.

In review of the subjects occupying the preceding pages, we may present the following summary: Nearly one-fifth of the entire territory is timbered; three-eighths of it may be successfully cultivated, (embracing the richest lands in the Federal Domain.) and two-thirds of it may afford pasture for cattle, horses, and sheep.

It is generally better watered and much better timbered than California; and, though its harbors are inferior in regard to safety and ease of access, Oregon possesses other advantages, aside from soil and climate, compensating, in some measure, for these obvious deficiencies, and which combine to render it a most eligible point of emigration.

#### CHAPTER XXVI.

Climate of Oregon; its variableness; its rains; a southern climate in a northern latitude. Productiveness; grain, fruits, and flowers, wild and cultivated. Geological characteristics. Soils and prevailing rock. Minerals, &c. Variety of game. Wolves. Horses, and other domestic animals. Population, white and native; Indian tribes, their character and condition. Missionary stations, and their improvements. Present trade of Oregon. Posts of the Hudson Bay Company. Settlements. Oregon City, its situation and advantages; about Linnton; about Wallamette valley, Fualatine plains and Umpqua river; Vancouvre, and its superior advantages. Kindness of Hudson Bay Company to settlers.

THE next which seems to demand our notice, in due order, is the climate of this interesting country.

We need only bear in mind the geographical position and diversified character of Oregon, to satisfy ourselves of the true merits of the subject now before us. A mountainous country like this must necessarily embrace every variety of climate, from that of the ice-bound coasts and ever-scathing frosts of the polar regions, to the burning heat of the equator, from the mild atmosphere of Italian skies, to the genial temperature which paints the wild-flowers in their primeval beauty, while month succeeding month doles out the year, nor feels nor knows the chill-breath of winter.

A short jaunt at any time translates the traveller, at his own option, to regions of winter, spring,

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

summer, or fall, and spreads before him all the varied beauties and deformities of either.

As a general thing, however, the winters of Oregon are much more temperate than those of countries in the same latitude bordering upon the Atlantic—a fact which may be attributed to the usual prevalence of westerly winds at that season.

These winds, on passing the mountains and traversing the vast extent of snowy prairie and open land in their course, become vested with a chilling severity unknown to its incipiency, when, from the warm bosom of the broad Pacific, they first waft themselves o'er the blooming valleys, smiling plains, grass-clad hills, and mountains garbed in stately forests, commingled with stern desolation, to lavish upon all these varied scenes the soft blandishments of the Indies, and engender the interesting phenomenon of a southern climate in a high northern latitude.

The country contiguous to Frasier's river, and even below it for some distance, is usually visited with long and severe winters, and enjoys comparatively but a short interval of genial weather during the spring and summer months.

The valleys, however, not unfrequently afford exceptions to this remark, when favorably located in regard to the wind and sun. In this section it seldom rains, a circumstance causing an unproductive and arid soil.

The Eastern Division is, perhaps, more variable in regard to temperature than any other portion of Oregon. Its valleys are usually possessed of a mild and delightful climate, so much so that stock will subsist the entire winter without being fed or housed.

The plains and high prairies present a longer interval of inclement weather, and the snow continues on the ground for a much greater length of time, than in the low-lands.

Some particular localities are subject to very sudden changes, and not unfrequently experience the warm breath of summer with the chill blasts of fresh-born winter during the short lapse of a single day and night.

In reference to the high mountains, it is sufficient to remark, that with them winter is a season too congenial not to be felt in all its rigors, to the entire extent of its duration. The diversity of temperature in these parts depends mostly upon the altitude. The lower benches experiencing a mild atmosphere even in the severest weather, permit the snow to remain only for a short interval succeeding its fall, and woo the willing spring; while the higher ones treasure up each descending flake to nourish the scathing blasts that leap from the mountain-tops, fresh-cradled in the lap of winter.

Notwithstanding these apparent disadvantages, the Eastern Division may be regarded as universally healthy. The purity of the atmosphere, and its absence from noxious exhalations and disease-engendering effluvia, undoubtedly contribute the prime cause in producing a result so favorable.

Rains are not usual to this part in the summer months, nor even in the winter and spring are they common to any great extent. The snows of winter, together with the rains of that season and autumn, and the occasional dews of summer, in most cases, afford a sufficient moisture to the low-lands for agricultural purposes.

That section situated between the Blue and Cascade Mountains, known as the Middle Division, is said to possess, comparatively, a much milder and less variable climate.

The winters are usually open and of short duration, snow lying upon the ground, in the valleys, rarely exceeding four days in succession, and vegetation, in some instances, remains green the

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

entire season. The prairies, too, are generally covered only for a short time.

The heat of summer lacks that oppressiveness so common to most countries. In regard to the health of this section, we may correctly apply the observations made relative to the Eastern Division. A country situated like the one now forming the subject of our remarks, cannot be otherwise than healthy, as a general thing.

The snow of winter and the rains of spring and autumn, coupled with the light dews of summer, furnish all the moisture usual to the soil, which the moderate heat of the latter season renders sufficient for the growth of vegetation and the production of grain and other crops.

The Western Division possesses not only a soil but a climate more favorable to vegetation than any other portion of Oregon. In the southern part it seldom snows, and the weather is so mild, that the grass continues green and flourishing the entire year. Water never freezes, unless it be in some elevated pool or lake.

The absence of sufficient rains and dews, however, during the summer months at some points, renders an occasional resort to irrigation necessary for the production of corn, potatoes, and articles of a like nature.

Two crops of some kinds of produce may be raised with success in a single year.

In the vicinity of the Wallamette, the winters are only a trifle colder. Running water seldom freezes. Snow never falls to exceed the depth of a few inches, and disappears in a very short time succeeding.

Vegetation in the valleys, and even upon the plains, to some extent, remains green year in and year out. Of course no better climate could be selected for stock-raising.

These remarks may be applied with equal propriety to the other portions of the Western Division south of the Columbia and in its immediate vicinity. The country further north, for a considerable distance, possesses a climate almost as favorable. The snows of winter, however, are usually more frequent and less transitory in their continuance.

The cold season is confined almost exclusively to the three winter months. The heat of summer is moderate and agreeable, generally ranging at 62° Fahrenheit, above zero, in its mean temperature. The wet season of the Western Division usually occurs from October to March of each year, inclusive; at other times rain seldom falls. During this season it descends in gentle showers, or in the shape of mist, at intervals, for about one half of the time. The moisture received into the earth meanwhile; together with the nightly dews and other favorable agencies during the summer months, renders the soil adapted to cultivation.

Back from the valleys and bottoms, the atmosphere is quite wholesome and salubrious. Fevers are seldom known, and pulmonary complaints are equally rare.

In the vicinity of the Columbia, intermittent fevers are not uncommon, though by no means as bad as in some parts of our frontier States.

Next in the order before us come the various productions which may be, and are, successfully cultivated in the different sections of this part of our national domain.

The soil and climate of the Eastern Division have been sufficiently tested to know their capacity for producing nearly, if not quite, all the various grains, vegetables, and fruits usually grown in our Northern and Middle states. A great variety of wild fruits and vegetables grow spontaneously, in different parts, and in great abundance.

The soil and climate, as a whole, seem better adapted to the culture of fruits and grains, than

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

vegetables; and perhaps we might add, for the raising of cattle, horses, and sheep, than agriculture; though the latter observation is not to be so construed as to affirm that farming may not be successfully and profitably prosecuted in many parts.

The Northern Division, or that portion of Oregon lying on the headwaters of the Columbia, in the vicinity and south of Frasier's river, and upon the Chilkeelis, being much colder and more sterile, must necessarily be regarded in a less favorable light than the country referred to in the preceding paragraph. But, little is known as to its products or the capacities of its soil and climate; yet, it is said that some particular kinds of fruit are indigenous to this region, and it is generally supposed that wheat, barley, oats, buckwheat, flax, and other articles of like nature, might be raised within it. Of course, these remarks apply only to the valleys.

The Middle Division affords a finer soil and a more favorable climate than the Eastern; but, in regard to productions, it is much the same. All the northern fruits, grains, and vegetables, may be produced in great abundance, with the exception of corn — the land being generally too dry and too much subject to unseasonable frosts; corn, however, has been successfully cultivated on the Wallawalla.

There are several varieties of wild fruits found here, among which are included cherries, with larb, bufal, goose, and service berries, and currants, plums, and grapes, together with several other species not recollected, as well as vegetables and roots.

The Western Division not only maintains its pre-eminence in relation to soil and climate, but stands equally conspicuous in the variety and abundance of its productions. It is thought, and not without reason, that cotton, sugar-cane, and various other productions of a warm and even tropical climate might here be raised without difficulty.

When the ground is in a suitable condition, the average crop of wheat is from twenty to twenty-five bushels to the acre. Vast quantities of it are annually produced by settlers in different parts of the country. A surplus of one hundred thousand bushels is reported to have been grown, in the region adjoining the Wallamette, during the summer of 1844.

The Hudson Bay Company, at Fort Vancouver, have several very extensive farms under improvement, upon which they raise nearly every variety of grain and vegetables, with flattering success. In the garden of McLaughlin, the chief factor of this company, are found almost every species of fruits and flowers indigenous to this country and to foreign soils of the same latitude, with several varieties produced only in warm climates.

We barely allude to the above facts, in order to prove the adaptation of Western Oregon to agricultural pursuits. The data relative to its extraordinary facilities for rearing countless herds of cattle, horses, and sheep, have already been placed before the reader, and need not here a repetition. The components of the soils of Oregon are equally varied in character, according to their situation. The bottoms are usually of a deep, sandy alluvion, intermixed with vegetable and organic matter. The valleys are of a heavy loam, enriched by the debris and other fertilizing properties borne from the high grounds by the annual rains, together with the constant accumulation of decayed herbage and grass so lavishly bestowed at each returning season.

The prairies are possessed of either a light sandy surface, or a mixture of gravel and stiff clay. The superstratum of the hills and mountains varies from wastes of naked sand, sun-baked clay, and spreads of denuded rock, to a thin vegetable mould, and a light marly loam of greater or less fecundity.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

The rock of this territory also presents many different specimens; the prominent classifications, however, are volcanic, viz: basalt, (columnar and scoriated,) trap, lava, pumicestone, limestone (fossiliferous, bituminous, and earthy,) and mica slate, with sandstone, puddingstone, granular quartz, calcareous tufa, and agglomerated boulders of various kinds, particularly in the Eastern Division. The varieties of some parts present strong characteristics of the oolite formation. The hills contain many excellent quarries for the structure of buildings or other useful purposes. Hitherto but little investigation has been had relative to the mineral resources of Oregon; though sufficient is known to warrant the statement, that copper, lead, iron, coal, salt, soda, sulphur, nitre, and alum, are abundant in some parts; and, from the nature of the country, we may safely infer that yet more valuable metals are waiting to reward with their hidden treasures the researches of man.

Game, in the Eastern and Middle Divisions, is not generally plentiful; yet, in places, there are an abundance of deer, elk, antelope, bear, wolves, and foxes;— buffalo are also found occasionally in the vicinity of the Rocky Mountains. In the Northern Division, moose, deer, elk, bear, foxes, and wolves, are the varieties most common. Game is more abundant in the Western than in the other Divisions, and is nearly of the same kind.

Ducks, geese, brants, pheasants, partridges, &c., are common throughout the whole territory.

Wolves are very numerous in the neighborhood of the settlements, and prove a great source of annoyance to the inhabitants by preying upon their cattle and other stock. These wolves consist of three kinds, —the black, gray, and prairie wolf, of which, as in California, the black wolf is the largest and most ferocious.

As a grazing country, the available lands of the three divisions of Oregon, south of the Columbia and the one immediately north of that river, are little inferior, if, indeed, not fully equal, to the far-famed meadows and lawns of California.

Horses are reared in vast numbers by the Indians, among whom it is not uncommon to find a single individual owning three or four hundred head. Select horses may be bought at prices ranging from twelve to twenty dollars each.

These animals are generally stout and hardy, capable of enduring a vast amount of fatigue, and are but little inferior in point of size to our American nags.

Large herds of horses are also raised by the settlers, and at the Hudson Bay Company's establishments.

Latterly, cattle, hogs, and sheep, are beginning to receive the attention of the farming community, and, without doubt, soon will become immensely numerous. It needs only the operation of time to render Oregon as famous for its countless herds, as for the abundance and variety of its productions.

The entire population of the territory at this time, may be estimated at thirty-five thousand, of which about seven thousand are whites and half-breeds, and the balance Indians.

The Indians principally consist of the following tribes: the Snakes, Blackfeet, Flatheads, Nesperces, Bonarks, Cyuses, Wallawallas, Chinooks, Shatchets, Chalams, Killamucs, Squamishes, Clasets, Tonandos, Klackamus, Clatsup, Umpquas, Klackatats, Kallapuyas, Tlamaths, and Chilkeelis.

The Blackfeet, though included among the Oregon tribes, properly belong to that portion of the Rocky Mountains contiguous to the head waters of the Missouri. They make occasional irruptions into the country occupied by the Flatheads, Snakes, and Nesperces, and for this reason are includ-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

ed in the above list.

The Tlameths and two or three other inferior tribes in the neighborhood of California and north of the Columbia river may be considered troublesome and rather ill-disposed; but not dangerous, unless it be in cases where they have a very decided advantage.

The Indians of this country are less warlike than those east of the Rocky Mountains, and far less dangerous, even as enemies. They may be considered, on the whole, as friendly to the whites, and quite susceptible of civilization. They are tolerably industrious, and ready at all times to work for the settlers at a trifling compensation.

Many of them cultivate the ground and raise corn, potatoes, beans, and melons, —but fish, horses, and game, as a general thing, furnish their principal food. As an evidence of their quiet disposition, they rarely go to war, and are usually found at or near the several places claimed and occupied by them individually.

The Nesperces are, perhaps, farther advanced in civilization than any other tribe. Many of them (and some of other tribes) are beginning to live after the manner of the whites, and the philanthropic efforts of Christian missionaries in their behalf have been attended with great success. There are eight or more missionary stations in Oregon, belonging as follows: to the Presbyterians, the Methodists, and the Roman Catholics.

Four of these are situated between the Blue and Cascade Mountains, viz: one near the Dalls, one at Waiilatpu on the Wallawalla, one at Tshimakain, and one at Clear Water.

The mission at Waiilatpu is under the direction of Dr. Whitman, and has a flouring mill and a very considerable farm connected with it, upon which large quantities of grain and vegetables are annually raised, and also numerous herds of cattle and horses. The station near the Dalls, with the exception of a mill, is said to be but little behind that of Waiilatpu in point of prosperity.

The remaining four are in the Western Division.

The most important of these are situated as follows: one at the Wallammette Falls, about twenty-five miles below the Columbia, and the other in the Wallammette valley, some forty or fifty miles farther south.

Both of the above belong to the Methodists, and may be considered rich.

There are two large farms and a store connected with the station in the Wallammette valley, and also large herds of cattle, horses, and hogs;— it is said to drive quite a profitable trade with the Indians and settlers in the line of dry goods and groceries.

The station at the Wallammette Falls has also a store, and carries on a small business by way of merchandize.

The two other stations are south and west of the last named, but have, as yet, no very extensive improvements in connection with them.

The Methodists have a press at one of their stations in Oregon, which is employed in printing religious books for the benefit of the Indians.

In addition to the different stations above alluded to, the Catholics have several agents and teachers in this territory, who labor with great zeal and earnestness to make proselytes to their own peculiar notions. The number and locality of these agents I have not the necessary information to state. They were, not long since, under the superintendance of one Father De Smit, a Jesuit priest, and have exerted considerable influence among the Indian tribes.

Nearly the entire trade of Oregon, at the present time, is in the hands of the Hudson Bay Com-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

pany, from whom dry goods and groceries may be obtained by the settlers at less than the common price in the United States; this, as a necessary consequence, precludes all opposition. The principal exports (raised at the stations or received by way of barter) are flour, fish, butter, cheese, lumber, masts, spars, furs, and skins.

The Forts, or trading establishments, are eighteen in all, and have a large number of hands employed about them, in conducting the fur trade and laboring upon the farms and in the workshops and mills.

Each of these posts presents a miniature town by itself, whose busy populace pursue most of the varied avocations incident to the more densely inhabited localities of civilized countries.

We will not occupy the reader's time in an extended description of them severally, but rest content by simply giving their names. The first post belonging to this company, upon the route to the mouth of the Columbia, is Fort Hall; the next, Fort Wallawalla; then, Fort Vancouver, and Fort George.

The others are situated at different points, and are known as follows: Colville, Okanagan, Alexandria, Barbine, Klamloops, St. James, Chilcothin, Simpson, McLaughlin, Langley, Nisqually, Cawlit, and Umpqua; of which eight are located in or above lat. 49° north.

The principal settlements, disconnected from the trading establishments and different missionary stations, at present, are upon the Umpqua and Wallamette rivers, on the Fualitine Plains, and near Fort Vancouver. These settlements are represented as being in a very flourishing condition, and rapidly increasing in population and wealth.

At the Wallamette Falls, a town has been regularly laid out called Oregon City, which, in the year 1844, numbered a hundred or more houses; among them was a church, with several stores and mills.

At this place the temporary legislature, already instituted by the settlers for mutual benefit in the absence of all other legitimate jurisdiction, holds its regular sessions. A mayor was elected in the spring of 1845; and recently a printing press and materials have been procured from New York for the purpose of publishing the territorial laws, with such other documents and papers as the interests of the community may require.

This embryo city, situated as it is in a place so admirable in regard to agriculture, commerce, and manufactures, possesses many superior advantages in point of locality.

The falls of the Wallamette are thirty feet perpendicular, and afford abundant water privileges for mills and factories, — two important rivers, the Klackamus and Fualitine, find their discharge near it, while below is presented an uninterrupted navigation to the Ocean, and above it boats may ascend for a distance of one hundred miles or more. The country contiguous is unsurpassed in fertility, and will undoubtedly soon acquire a dense population.

Another town, called Linnton, has recently been commenced upon the south bank of the Columbia, near the mouth of the Wallamette river, and bids fair to become of some importance.

The settlements in the valley above, and at the Fualitine Plains, are scattered like those of the farming sections of our Western States;— the same observation may also be applied in reference to those upon the Umpqua river.

The settlement at Vancouver is more compact, and assumes the air of a flourishing village. It is near the falls of the Columbia, at the head of ship navigation, and is made the great commercial depot of the Hudson Bay Company for the articles required in their trade.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Connected with the Fort is an extensive flouring mill, and also a saw mill, which is said to do a very active and lucrative business.

The number of buildings at Vancouvre is not far from sixty. The site is a most admirable one for some future emporium of trade and manufactures. Its water privileges are almost without limits, while its other advantages are equally inviting.

The geographical condition of the country is such that, as it becomes settled, an enormous amount of commercial interest must necessarily concentrate here; and, doubtless, a more favorable locality for a city could not be selected upon the Columbia. It is destined to command almost the entire trade of Eastern and Middle Oregon.

The agents of the Hudson Bay Company at present are of great advantage to emigrants. They extend to them every reasonable assistance by selling goods and necessaries on credit at very low prices, and receiving their various products in payment upon most favorable terms. They furnish seed-corn, wheat, potatoes, and other articles of like nature, to the settlers, to be returned in kind at the end of the year, with a small additional amount by way of interest.

This company is equally accommodating in other respects. It affords employment to numbers at a fair compensation, and supplies them with cattle, hogs, horses, and implements of agriculture for their farms. Its agents and factors seem much disposed to encourage the influx of emigrants, and are never backward in evincing a friendly disposition by their acts.

CHAPTER XXVII.

The manufacturing facilities of Oregon. Commercial and agricultural advantages reviewed. Rail Road to the Pacific. Route, mode of travelling, and requisite equipment for emigrants. Importance of Oregon to the United States. Incident in the early history of Fort Hall. Why the Blackfeet are hostile, and bright spots in their character. Mild weather. Leave for the Platte. Journey to the Yampah, and sketch of the intermediate country. New Park. Head of Grand river. The landscape. Different routes to Fort Lancaster. Old Park.

PERHAPS no country is possessed of greater manufacturing facilities than Oregon. Its numberless watercourses, with their frequent falls and rapids, upon every side, point out the sites for mills and factories, while the adjoining forests and hills produce the timber for their construction, and the metal for their machinery; and the plains and valleys, the food for their operatives, and raw materials for their fabrics. The ships of all nations await as their carriers, and render accessible the best markets of the world.

A large portion of the sterile and otherwise valueless lands of the territory might be turned to good account in the growth of wool, and the valleys and bottoms would easily yield exhaustless supplies of flax and hemp. The southwest displays her cotton fields, and the plains and hills hold out their rich stores of timber and minerals; the busy operatives and thrice effective machinery of the flourishing establishments, as yet scarcely hidden from view by the thin veil of futurity, would achieve the transformation of these varied products into broadcloths, linens, calicoes, and other auxiliaries of comfort and utility; while California, with the other provinces of Mexico, the western Republics of South America, the islands of the Pacific, the Northwestern Coast, and the numerous Indian tribes of the interior, impatient to gaze upon the evidences of creative skill, even now stand their willing purchasers.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

With such advantages before her, who might not augur well for the future pre-eminence of Oregon.

But, in other respects, the prospect is still more flattering. Her extensive plains, valleys, and bottoms, need no long lapse of time to transform them into smiling fields; her prairies and hills will then become thronged with countless herds of cattle and flocks of sheep, and the beef, pork, and wool of the stock-grower, the butter and cheese of the dairyman, with all the surplus of the farmer, will find an inviting market at the populous manufacturing towns and commercial cities that will have sprung up close around him, nor need he look elsewhere for a more lucrative disposal. An interchange of commodities with China, Japan, South America, the East Indies, and the Polynesian and Australian islands, will pour the wealth of nations into her lap, and swell the opulence of her citizens.

A continuous rail-road, from the Mississippi and the great lakes across the Rocky Mountains to the falls of the Columbia, (a project quite practicable, and even now seriously contemplated,) will open a new channel for commerce, and then our merchantmen and whalers, instead of performing a dangerous homeward-bound voyage of twelve thousand miles, by doubling the southern extremity of Africa, or that of the American continent, will discharge their cargoes at the ports of Oregon for a re-shipment to every part of the Union, and thus unite their aid in the magic work of up-building the Great West.

It is then that the mighty resources of our national confederacy will begin more fully to develop themselves, and exhibit to an admiring world the giant strides of civilization and improvement, when liberty is their birthright, and freemen are their nursing fathers. It needs no prophetic eye to foresee all this, nor the effort of centuries to transform this rough sketch of fancy into a more than sober reality.

The over-land route, from Independence, Mo., to Fort Hall, affords a good waggon-road; but that from Fort Hall to Vancouvre is generally considered impassable for other than pack-animals. It is said, however, that a new route has recently been discovered, by which waggons may be taken, without much difficulty, the entire distance. Should this report prove true, the emigrant may convey everything needed for his comfort during the long journey before him.

Emigrants should never go in companies exceeding one hundred and fifty or two hundred persons. The reason for this is obvious, — they will proceed more harmoniously; there will be less difficulty in obtaining food for their animals; less delays en route; a better opportunity for the procurement of provisions by hunting, and the number is amply sufficient for mutual defence. From my own experience and observation, I would advise the use of pack-mules or horses altogether, instead of waggons. One pack-horse, suitably laden, would convey an ample supply of provisions and other necessaries for two individuals, if recruited by occasional levies upon the game that, in many cases, throng their course.

A company thus equipped, can travel with far greater expedition and even more comfortably. In case of sickness, a litter might easily be constructed for the conveyance of the invalid by affixing to a horse two light poles, some twelve or fifteen feet in length, like the shafts of a wagon, the smaller extremities being fastened to the saddle and the larger ones left to drag upon the ground, while two short pieces placed transversely upon them, astern the horse, present the framework for a bed in which the sufferer may repose or lie at his ease, with as much quiet as the tender object of a mother's care in its infantile cradle.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

A company acting upon the above suggestions (numbering say two hundred) should employ an efficient pilot, with a commandant and sixteen skilful hunters.

Strict regulations for its government must also be adopted and enforced. Each individual should be furnished with a good riding horse or a mule, a good percussion rifle, (bore thirty or thirty-five balls per lb.) ammunition sufficient for five hundred rounds, and a butcher-knife, with pistols and the requisites for procuring fire.

The company should be divided into messes of six each, and one hunter and his assistant should be assigned to every two messes. Each mess should be provided with three pack-mules, exclusively for the transportation of its baggage and provision, and at least one loose animal for extra service.

It should be further furnished with two camp-kettles, a tomahawk, a large tin mess-pan, and a tin-cup and plate for each of its number.

A light tent might also be taken if deemed necessary; though such an article is of little use. A robe and a blanket for bedding, four shirts and a single change of clothes are as much baggage as any individual should think of taking for his own use. By these means his movements will be free and unincumbered, while the whole company pursues its way with ease and rapidity.

On reaching his destination the emigrant may procure everything in the line of dry goods, groceries, and the implements of husbandry, at less prices than in the States; hence the folly of burthening himself with extra baggage for a long and tiresome journey.

The immense importance of Oregon to the United States is doubtless apparent to every one. The facts upon which this inference is based, may be briefly presented as follows:

First. By the occupation of this country we shall secure to our own citizens the best trade of the whole world.

Second. We shall preclude the dangerous supremacy of foreign powers upon our western frontier, and place our relations with the intermediate Indian tribes upon a safer and more permanent footing.

Third. We shall retain to the Union a vast territory, unexcelled in climate, rich in soil, and exhaustless in its various resources; and thus lay open for the general welfare new channels for commerce and fresh fields for enterprise.

Fourth. We shall (in the event of the proposed rail road) greatly enhance the prosperity and wealth of the Western States.

Fifth. We shall prevent the annual sacrifice of an immense amount of life and property in the navigation of a dangerous sea, for a distance of some twelve thousand miles.

Sixth. We shall afford to our whalers and ships engaged in the China and East India trade ports for supplies and repairs, and thus save to ourselves the yearly amounts now paid to foreign nations.

Seventh. We stand in actual need of some point upon the coast of the Pacific as a rendezvous for our navy.

There are many other weighty reasons that might be adduced in support of this inference, but why should we further review the subject? A candid perusal of the preceding pages will have suggested them to the reader's mind without greater amplification on our part.

In conclusion we need only to add, time will usher forth the embryo greatness and glory of Oregon; but whether that greatness shall increase the strength, or that glory commingle with the

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

glowing lustre of our Federal Union, while she figures as one in the proud family of States, or whether they, discarded by the fostering hand of maternal care, shall assume the energy of a giant's power and shine with the brightness of innate effulgence as a distinct nation, depends much on the prompt and judicious action of our government upon this momentous subject.

During our stay at Fort Hall an incident connected with its early history was narrated to me, which, as it tends much to illustrate the bold daring and spirit of inbred republicanism possessed by the mass of trapping parties frequenting the mountains, I am tempted to transcribe.

Soon after this post came into the possession of its present owners, several squads, on returning from their regular hunts, rendezvoused in its vicinity.

According to the custom of the Hudson Bay Company on such occasions, the British flag was hoisted in honor of the event. Thereupon the proud mountaineers took umbrage, and forthwith sent a deputation to solicit of the commandant its removal; and, in case he should prove unwilling to comply, politely requesting that, at least, the American flag might be permitted a place by its side. Both of which propositions were peremptorily refused.

Another deputation was then sent announcing that, unless the British flag should be taken down and the stars and stripes raised in its place within two hours, they would take it down by force, if necessary. To this was returned an answer of surly defiance.

At the expiration of the time named the resolute trappers, mustering en masse, appeared before the Fort, under arms, and demanded its immediate surrender.

The gates had already been closed, and the summons was answered by a shot from the bastion. Several shots were forthwith exchanged, but without much damage upon either side; the trappers directing their aim principally at the British flag, while the garrison, feeling ill-disposed to shoot down their own friends in honor of a few yards of parti-colored bunting, elevated their pieces and discharged them into the air.

The result was that the assailants soon forced an entrance, took down and tore in pieces the hated flag, and mounted that of their own country in its stead, amid deafening huzzas and successive rounds of riflery.

The commandant and his sub-cronies, retreating to a room, barricaded the entrance, when the trappers promptly demanded their surrender upon the following terms:

- 1st. The American flag shall occupy its proper place hereafter.
- 2d. The commandant shall treat his captors to the best liquors in his possession.
- 3d. Unless the offenders comply with these conditions, the captors will consider Fort Hall and its contents as lawful plunder and act accordingly.

After a short parley the besieged agreed to a capitulation. In compliance with the second article of the terms, a barrel of whiskey, with sugar to match, was rolled into the yard, where the head was knocked out, and the short but bloodless campaign ended in wild frolicking, as toast after toast was drunk in fancied honor of the American flag, and round after round of responsive cheers told who were they that stood ever ready to proudly hail it and rally beneath its broad folds.

At the time of our visit, there were some sixty men connected with this establishment. These consisted principally of half-breeds and Canadian French, among whom were several who had seen service in the unrelenting war between the whites and Blackfeet that had been so long prosecuted. Many a thrilling story was narrated in connection with the history of this war, none of which more interested me than the following explanation of its origin:

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

The Blackfeet at first were friendly to the whites, and a very considerable trade in guns and ammunition was carried on with them by the latter. Like most savages, they became great admirers of the potency and use of gunpowder, and were quite curious to ascertain the process by which it could be had independent of the whites. In answer to inquiries, they were informed it was the seed of a species of grain, and might be multiplied in like manner to any extent by cultivation. Accrediting the story and captivated with the idea of raising their own powder, a large quantity was purchased for that purpose, which was carefully planted, in full expectation of an abundant harvest.

Their disappointment at the result will be readily supposed. Denouncing the whites as liars and cheats, they were not slow to avow their meditated revenge.

It needed, however, yet another act of perfidy to work the more perfect transformation of friends into foes. This soon after was consummated as follows:

The Blackfeet and Flatheads met, at an appointed place, for the purpose of trade and the maintenance of friendly relations, as was their annual custom.

During this conference, the head chiefs of the two nations commenced descanting upon the merits and fleetness of their respective horses, which resulted in a banter, a bet, and a race.

The Flatheads, producing two of their fastest chargers, were backed by the Blackfeet in a like number; and, upon the success of the particular favorites, not only the honor of the two nations was staked, but a large amount of other valuables. The race was run, and, the result proving close, both parties claimed the wager.

Upon this a dispute ensued, and finally the whole matter was referred to three white men, by whose decision they agreed to abide. The arbitrators, through mere personal predilection, instead of pronouncing it a tie, as they should have done, awarded the palm to the Flatheads.

The Blackfeet gave in to the decision and relinquished the stakes, but from that day forth avowed themselves the eternal enemies of both whites and Flatheads. This occurrence dated the commencement of an unrelenting war of extermination on their part, nor have they permitted any suitable opportunity of wreaking their vengeance upon the offenders to pass unimproved.

Notwithstanding the bad character generally ascribed to the Blackfeet, they possess traits worthy of admiration. As enemies, they make no disguise of their hostile designs; and though they have been known to meet with parties of whites without coming in collision, and even to smoke with them; yet, on such occasions, they have uniformly declared the armistice a temporary one, and in force only for the time being.

Instances have been known of trappers penetrating into their villages unawares, who received the treatment of guests during their stay, and were allowed to depart unmolested upon expressing their wishes to that effect.

The bright spots in the character of these Indians are more fully developed in the following example:

Several years ago, two trappers, in their excursions for beaver, discovered a Blackfoot engaged in butchering. Thinking the present a favorable opportunity to reduce the number of their enemies, they cautiously approached the unsuspecting operator with the design of affording him a speedy transition to the Spirit Land.

Having advanced within gun-shot, they were almost in the very act of firing, when a casual glance revealed the dusky forms of savages who surrounded them at no great distance, and in such a

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

manner as to preclude all possibility of escape; but as yet, however, the intended victim was ignorant of their presence.

On observing the danger of their situation, they rushed up to him, and, seizing his hands, claimed his protection. The excitement of the moment having subsided, he replied:

“Your lives belong to me, — you might have taken mine; it must not be said that the Blackfoot is ungrateful. Come with me and you are safe.”

Upon this he led the way to the village near by, and made them the guests of his own family.

Everything that generous hospitality could devise for comfort and pleasure, was placed at their disposal. The villagers seemed to vie with each other in their attestation of friendship and good will, and repeatedly solicited them to remain and join the tribe.

However, on expressing a wish to leave, they were escorted for some distance en route, and left to choose their own course of travel, with the parting monition: “We are now friends. — When next we meet it will be as enemies!” [51]

Nov. 20th. Yielding to the solicitations of my comrades demontés, I am again journeying for the Platte. During the brief period of our stay at Fort Hall, we enjoyed mild and agreeable weather, as a general thing; only one inconsiderable fall of snow having occurred meanwhile, and the grass, even yet, in many places, is green and fresh.

Notwithstanding the lateness of the season, we anticipate but little difficulty in crossing the mountains, via New Park and Grand river pass, as the journey has been performed on several occasions in the dead of winter. But, a further stimulant to our hopes is the possession of good mules and horses, which are every way competent to the task before them; my two companions are, also, intimately acquainted with the mountains, and well know how to shape our course to advantage. For the first few days our progress was rapid and uninterrupted. Following the regular trail by way of Bear river, on the 24th we struck Black's fork, a considerable tributary of Green river, and one of several in its neighborhood, down which we continued to its confluence with the main stream; thence, crossing to the east bank, we kept its general course, sometimes by its valley, then again by long detours among the hills, owing to the rugged nature of the country, and in three days subsequent, reached the Yampah, or Little Snake, an affluent from the left.

The intermediate country from Fort Hall to the Yampah has been partially noticed in connection with Oregon and California, and for that reason it will not be expected of me to waste time in repetition.

I need only add, that among the hills we noticed much nude sterility, intermingled with frequent clusters of absinthe, aretmisia (or greasewood, as it is familiarly called,) and bunch-grass, with occasional groves of pine, cedar, and balsam.

In the valleys the grass was yet green, and indicated the presence of winter only by its withered tops. Snow was seen only upon the hills and mountains, and even there in no great quantity.

Game appeared plentiful for most of the distance, particularly black-tailed deer and sheep.

The section of country hereabouts is inhabited by the Snake Indians, from whom the river above referred to derives its name.

This stream heads in the New Park Mountains, and pursues a southwest course for about one hundred miles, receiving in that distance several large tributaries from the east, when it finally discharges itself into Green river, near lat. 41° North.

Crossing the Yampah, we soon struck the Elk Head, or Little Bear, a principal affluent from the

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

right, and continuing our course up its valley. After passing a small ridge, on the 30th Nov., we found ourselves upon the head waters of the Platte.

Proceeding by the valley of a creek tributary to the above river. the day following we came to a considerable branch from the south, and camped near its mouth, for the purpose of killing buffalo of which vast numbers thronged the vicinity.

The valleys of the Yampah and Little Bear were broad, in places, with a deep soil of dark, sandy loam, and tolerably well timbered.

The country contiguous to them was rugged and generally sterile; the soil, with the exception of the creek bottoms, being shallow and sandy, and infested with extensive fields of absinthe.

By the way we passed a fort, formerly occupied by a company of trappers under the command of Frapp, near which himself and four other whites were killed in an engagement with the Sioux some two years since. The Indians lost fifteen or twenty of their warriors in killed and wounded, but succeeded in driving off eighty head of horses as their booty.

Among the rocks of the hills I noticed frequent clusters of larb, richly laden with its deep red berry,[52] both tempting to the eye and pleasing to the taste.

On reaching the Platte we were ushered into a large and beautiful circular valley, known as the New Park.

This valley is thirty-five miles in width by thirty in breadth, and is shut in upon all sides by lofty mountains, whose summits tower far above the snow-line and sport their white-caps through each returning year. It is well watered by numerous streams that trace their course from the neighboring heights to commingle with the Platte.

The river makes its exit from this place by a forced passage through narrow defiles, between the Medicine Bow and New Park Mountains, forming a cañon several miles in length, defined by precipitous walls, varying in height from fifty to six hundred feet.

The New Park valley affords considerable timber of various kinds, and fertile soil, well adapted to cultivation. The superface is usually a thick mould, compounded of clay, sand, and gravel, with decomposed vegetable matter; while the bottoms disclose a rich alluvion of two or three feet depth. The entire country was crowded with game, in countless numbers, both of buffalo, elk, and deer. It seemed as though a general ingathering from mountain, hill, and plain, had taken place to winter in this chosen spot.

It is said the great abundance of game first suggested the christening of the locality as the New Park.

We remained in our encampment till the 5th of December, and improved the interval in procuring a choice supply of meat, and feasting upon those delicious viands which mountaineers so well know how to acquire and dispose of.

The day preceding our departure, a fall of snow covered the ground for several inches, but the lapse of a few hours served to disclose the bare vegetation of the valleys, and denuded spots upon the mountain sides.

Again en route, we continued up a large stream from the south and struck into a broad trail, which led through large openings and forests of aspen across the main mountain chain, to the waters of Grand river, into a beautiful valley known as the Old Park, where we remained encamped the two days subsequent.

Our nearest route to Fort Lancaster would have been by C ache a la Poudre, or Long's Peak; but,

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

accumulating snows admonished us to abandon the Atlantic side of the mountains for a more southern latitude.

The country in the vicinity of the Old Park is highly interesting. It embraces a large tract of fertile territory, well watered and timbered, but more or less undulating, and is hemmed in by high mountains, which are clothed with lateral forests of pine, cedar, and aspen.

This valley ranges from east to west; and, heading at the base of Long's Peak, finds its opposite extremity at the cañon by which Grand river merges through the opposing barriers of mountain spurs.

The Old Park also, like the New, receives its appellation from the great abundance of game for which it is celebrated.

CHAPTER XXVIII.

From Grand river to Bayou Salâde. Observations by the way. Description of the Bayou. Voracity of magpies. Journey to Cherry creek. Country en route. Crystal creek. Abundance of game. Antelope hunting. Remarkable sagacity of wolves. Snow storms and amusement. Ravens. Move camp. — Comfortable winter quarters. Animal food conducive to general health and longevity. A laughable instance of sound sleeping. Astonishing wolfine rapacity. Beaver lodges and all about beaver. Hunting excursion. Vasques' creek, its valleys, table lands, mountains, and prairies. Camp. Left alone. Sensations, and care to avoid danger. A nocturnal visitor. Thrilling adventure and narrow escape. A lofty specimen of "gettin down stairs." Geological statistics.

WHILE camped at the Old Park, I improved the opportunity for ranging among the adjacent mountains, whose stern recesses disclosed many smiling beauty-spots. The weather continued pleasant, though somewhat colder than usual; and, notwithstanding the snow in places lay quite deep, it had acquired great solidity and compactness.

On the 10th of December we were again under way.

Crossing Grand river and continuing up a southern tributary, through a narrow defile of mountains, to a large valley formed at the junction of three principal branches, known as La Bonté's hole, and choosing the middle one, we proceeded to its head, —thence, passing the dividing ridge by a well-beaten buffalo trail, to the right of Long's Peak, on the 16th we reached Bayou Salâde, another extensive valley at the head of the South Fork of the Platte. Here, selecting a good camping place in a beautiful grove of aspen, we remained till the 19th inst.

This last stage of our journey proved difficult and tedious. Although the passing throngs of buffalo had afforded a well-marked trail, our horses frequently became so mired in snow we were compelled to extricate them by main strength, —two or three storms, in the mean time, having increased the quantity to an average depth of twelve or fourteen inches.

The valleys and sunny hill-sides, however, were generally bare, and afforded some agreeable respites to the toil of travelling.

The prevailing rock appeared to be granite, mica slate, and sandstone. The soil of the valleys gave evidence of fertility, as did occasional spots upon the hill-sides.

The streams were most of them skirted with cottonwood, aspen, and box elder, while the hills and mountains presented frequent groves of pine and cedar.

Game, in all the different varieties common to the country, was seen in great abundance the entire

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

route.

Bayou Salâde is a valley some thirty-five miles long by fifteen wide, bounded upon all sides by lofty mountain chains, with the exception of the south, where a broad stretch of high, rugged hills and rolling prairies separates it from the Arkansas.

The Platte, on emerging from this place, makes its final entrance into the grand prairie by a narrow gorge in the mountain chain that extends to a distance of several miles. Upon the southeast, the frowning summits of Pike's Peak tower to a height of 12,500 feet above the level of the Gulf of Mexico, and upon the west the continuous chain of the Green Mountains, clothed in eternal snow, point skyward in solemn grandeur.

The numerous streams that find their sources in the neighborhood are well timbered, and present many interesting bottoms of rich alluvial soil.

The valley is densely thronged with buffalo, while vast quantities of deer, elk, and antelope unite to increase the number and variety of its game.

The weather at this time proved uncomfortably cold. Snow lying upon the ground to the depth of several inches, we were necessitated to feed our horses upon cottonwood bark during the interim. Bayou Salâde bears the name of being subject to severe winters, but whether correctly or not, I am unable to say. It is undoubtedly well adapted to stock-raising, and, were it not for unseasonable frosts, might be turned to good account for agricultural purposes.

The magpies were more troublesome and audacious in their depredations hereabouts, than in any place we had yet visited. Two mules, whose backs had become sore from continued service under the saddle, were severely annoyed by these relentless persecutors, which, despite opposing effort, would pierce the skinless flesh with their beaks and feast upon their agonizing victims.

To save the poor sufferers from being devoured alive, we were compelled to envelope them with thick coverings of buffalo robes, and even then the rapacious cormorants could scarcely be prevented from renewing their cruel repast.

Dec. 19th. Again resuming our journey, we continued in a southeast direction, over a low ridge of hills, and found ourselves in a very rough country, interspersed with frequent valleys which head several well timbered affluents of the Arkansas;—thence, passing around the southern extremity of a lofty mountain range, we struck *Fontaine qui Bouit* a few miles below the Soda spring.

Crossing this stream, we travelled north by west, following the mountain ridge at its base for some forty miles, which brought us to the Platte;—thence, keeping the river bottom, on the 28th we made camp at Cherry creek, a short distance above its mouth.

The interesting and romantic country in the vicinity of Pike's Peak and *Fontaine qui Bouit* has already been described in full, and needs but one passing remark in attestation of the mildness of its climate, viz: the ground was free from snow, and afforded occasional spots of green grass. Near this place we encountered a small hunting party of Arapaho Indians, and obtained from them a choice supply of fresh meat.

The interval from the Soda spring to the Platte, after passing the high, towering and isolated walls of red granitic sandstone to the northward, betrays a mixed character of wildness and beauty. The vast forests of stately pines, surmounting the long rolling hills to the right, which are relieved as the traveller advances by high table lands and quadrangular-shaped eminences that disclose their bare sides, ever and anon graced with lateral cedars and dwarf oaks; and then the heaven-scaling summits that, in continuous chain, oppose an impregnable wall upon the left, unite to define a

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

broad-spread of undulating prairie, some eight or ten miles wide, well watered and possessed of a good soil.

The prevailing rock of this section appeared to be sandstone and limestone, intermixed with conglomerates of various kinds.

I noticed two or three small ridges, several miles long, running parallel with the mountains at regular distances, in an uninterrupted course, presenting continued lines of thin strata planted vertically in their sharp crests, and reaching to an elevation of thirty or forty feet, that, with broken fragments encumbering their sides, looked like the half-fallen walls of some ancient fortification. Among several affluents of the Platte from the right, we crossed Crystal creek, a stream which derives its name from the existence of crystal in its sandy bed. This creek is tolerably well timbered and possesses a rich bottom of variable width, producing at the proper season a luxuriant growth of vegetation.

Our horses being quite enfeebled from the fatigue of travel, we gladly availed ourselves of the presence of buffalo to prolong our stay at Cherry creek some ten days, and meanwhile found no difficulty in procuring a continued feast of good things from the dense herds that thronged the country upon every side.

The severe weather and frequent snows of the past two months, had driven these animals from the open prairie into the creek bottoms and mountains, whose vicinities were completely blackened with their countless thousands.

The antelope, too, seemed to have congregated from all parts, and covered the country in one almost unbroken band. Their numbers exceeded any thing of the kind I ever witnessed before or since. We amused ourselves at times in shooting them merely for their skins, the latter being superior to those of deer or even sheep in its nicety of texture and silky softness.

One day, as was my custom, I left camp for the above purpose, and had proceeded but a short distance, when, happening upon a large band of antelope, a discharge from my piece brought down one of its number.

Before reaching it, however, my supposed victim had rejoined his companions, and the whole throng were lost to view almost with the speed of thought.

The profuseness of blood that marked its trail through the snow, induced me to follow it in expectation of soon obtaining the object of my pursuit; but in vain.

At length, after travelling four or five miles, I began to despair of success, and, feeling weary, sat down upon the point of a small hill that commanded a view of the surrounding prairie. While here an unusual stir among the wolves attracted my attention, and I amused myself by watching their movements.

Upon a neighboring eminence some fifty or a hundred of these insatiate marauders were congregated, as if for consultation. Adjoining this, two parallel lines of low hills led out from the river bottom into the prairie, for five or six miles, defining a narrow valley, at the extremity of which a large band of antelope were quietly grazing.

The chief topic of the wolfine conference seemed to have particular reference to this circumstance; for, in a very short time, the council dispersed, and its members betook to the hills skirting the valley before described, and, stationing themselves upon both lines at regular intervals, two of them commenced the attack by leisurely approaching their destined prey from opposite directions, in such a manner as to drive the whole band between the defile of hungry expectants.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

This done, the chase began without further preliminary.

Each wolf performed his part by pursuing the terrified antelope till relieved by his next companion, and he by the succeeding one; and so on, alternately; taking care to reverse their course at either extremity of the defile — again and again to run the death-race, until, exhausted by the incessant effort and crazed with terror, the agile animals, that were wont to bid defiance to the swiftest steed, and rival the storm-wind in fleetness, fell easy victims to the sagacity of their enemies. I watched the operation until several of them yielded their lifeless carcasses to appease the appetite of their rapacious pursuers, when I returned to camp with far more exalted ideas of the instinctive intelligence of wolves (savoring so strongly of reason and calculation) than I had previously entertained.

Two or three severe snow-storms occurred shortly after our arrival; but having constructed commodious shantees in regular mountain style, with large fires in front, we were both dry and comfortable.

These occasions, too, afforded their own amusement. Snugly stowed away in bed, with our rifles at hand, whenever a straggling wolf ventured within gun-shot, in fond hopes of a deserted camp, he was almost sure to fall a victim to his own temerity.

Bands of five or ten would frequently approach almost to the camp-fire, totally unsuspecting of danger till the sharp crack of a rifle told the fall of some one of their number.

A swarm of ravens, allured by the carcasses of these animals, peopled the grove near by. Having devoured the timely feast, still the poor birds remained, making the day dismal with their tireless croakings, as if in importunate supplication for a further boon.

Three of them soon became quite domesticated, and would approach fearlessly to the very verge of the camp-fire in quest of the offals of our culinary department.

One, however, by far exceeded his two companions in boldness, and would venture within a few feet of us at any time. So audacious was his conduct, and so insatiate his appetite, his comrades took occasion to bestow upon him frequent chastisements; but all to no purpose. At length, abandoning all hope of effecting the desired reformation, they set upon the offending bird, nor relinquished their purpose till the life of the luckless gormandizer had expiated the crime of his unravenlike conduct, and his executioners were left to enjoy their daily repasts without the annoyance of his presence.

Jan. 16th, 1843. Having received an accession of three men to our number, from Fort Lancaster, we removed some six or eight miles further down the Platte, and camped in a large grove of cottonwood upon the right bank.

At this place it was our daily practice to fell two or three small trees for our horses, as we now considered ourselves fully established in winter quarters. Game was plenty, and wood abundant; nothing, therefore, remained for us to do but to recruit our horses, eat of the best the prairie afforded, drink of the crystal waters that rolled by our side, and enjoy life in true mountain style; nor did we neglect the opportunity of so doing. In fact, had the world been searched over, it would have been hard to find a jollier set of fellows than we.

The effort of a few hours was sufficient to procure a month's supply of the choicest delicacies, nor is it marvelous that, to use a cant phrase of the country, we soon became "fat, ragged, and saucy." Perhaps nothing is more conducive to good health than animal food. In proof of this I need only to refer to the uniform good health of those subsisting entirely upon it.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Sickness of any kind is rarely known to the various Indian tribes confined exclusively to its use. These people almost invariably live to an extraordinary age, unless cut off by the ravages of war or some unforeseen event. Consumption, dyspepsy, colds, and fevers, are alike strangers to them. The same observation holds good in regard to the whites who reside in this country and subsist in a similar manner.

I have known confirmed cases both of consumption and dyspepsy cured by visiting these regions and submitting exclusively to this mode of living.

For my own part, I felt not the least indisposed during the entire period of my stay, nor did I even hear of an instance of death from natural causes in the mean time, and but rarely of a case of sickness, however slight. The same also has been repeatedly remarked in my hearing by persons who have resided here for ten or twelve years, and whose united experience corroborates my own.

A further fact, relative to the teeth, is worthy of note in connection with this subject. These never suffer by decay or aches, when employed only in the mastication of flesh; or, at least, I have never seen or heard of an instance of the kind.

I am, therefore, led to conclude from the foregoing facts, that animal food is in every respect the most wholesome and innocent diet which can be adopted.

A person in the enjoyment of good health and a quiet mind, generally sleeps sound. In proof that such was the case — with our party, I need only advert to a circumstance which here occurred.

Having awoke one moonshiny night, and observing an unusual number of wolves in the vicinity of camp, I seized my rifle and shot one of them; soon after I improved the opportunity to lay another prostrate, and in a few minutes subsequent a third fell in like manner; all at three several shots.

A continuation of the sport seemed likely to detract too much from the hours of sleep, and so, placing the victims in front of the camp-fire, I addressed myself to repose.

A light snow fell in the interval, and sunrise found us all in bed, patiently waiting to see who would have the courage to rise first. At length, one man jumped up and turned to renew the fire. On noticing the wolves before it he wheeled for his rifle, in his eagerness to secure which he fell sprawling at full length.

“Hello!” says one; “what’s the matter, my boy. Is that are a sample of the ups and downs of life?”

“Matter?” exclaimed our hero, gathering himself up in double-quick time, and rushing for his gun; “matter enough! The cursed wolves have grown so bold and saucy, that they come to the fire to warm themselves! Only look! A dozen or more of ‘em are there now, in broad day-light! Get up, quick! and let’s kill ‘em!”

Aroused by this extraordinary announcement, the whole posse were instantly on their feet to repel the audacious invaders; when, lo! the cause of alarm proved three dead carcasses.

But, where did they come from? When were they killed? Who placed them there? These were questions none were able to solve, and in regard to which all were profoundly ignorant. Finally, the circumstance occasioned quite an animated discussion, which was soon merged into angry dispute; and, after amusing myself awhile at their expense, I unravelled the mystery, to the surprise of all.

“Can it be possible!” was the general exclamation, — “can it be possible that we should have slept so sound as not to hear the report of a rifle fired three times in succession, and under our very ears, at that!”

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

“This reminds me,” said one, “of dreaming that somebody fired during the night. But it seemed so much like other dreams I had forgotten it till now.”

“Well,” retorted a second, “we are a pretty set of customers to live in a dangerous country! Why, a single Indian might have come into camp and killed the whole of us, one after another, with all the ease imaginable!”

The above incident induced the narration of a circumstance, happening to an individual of my acquaintance two or three weeks previous.

He had been into the mountains after deer, and was on his return to the Fort for a fresh supply of ammunition, and, having occasion to camp out at night, like a genuine mountaineer, he took his saddle for a pillow. This, being covered with raw hide, excited the cupidity of a marauding wolf. The hungry beast felt ill-disposed to let slip an opportunity thus favorable for appeasing his appetite with a dry morsel, and so, gently drawing it from beneath the head of the unconscious sleeper, he bore off his prize to devour it at his leisure.

In the morning our hero awoke minus saddle, and nothing save a number of wolf-tracks at his bead furnished clue to the mystery of its disappearance; and, after spending several hours in fruitless search, neither hide or hair of it could be found.

In the river bank near camp were two lodges of beaver, whose sagacious occupants gave frequent indications of their industrious habits by the magnitude of their performances. Several trees, ten or twelve inches in diameter, had been freshly felled by them to furnish their families with food. In such operations they exhibit an instinctive intelligence well-nigh approaching to reason. They uniformly select trees that stand above their lodges, in order to avail themselves of the current in conveying their timber to the destined place of deposit.

When a tree is thus chosen, the cautious little animal first carefully notices the point towards which its top inclines, and then sets himself to work at the opposite side. As his task approaches its completion, he frequently retires a short distance to observe the direction in which the tree is likely to fall, by watching its motions, and renews his labors with great caution. Upon the first indication of the finale, like an experienced woodsman, he instantly withdraws beyond the reach of danger, and leaves the tottering forest-monarch to announce his fallen greatness in the awful crash by which he is bespread upon the ground.

The process of chopping is then performed by severing the trunk into blocks, some three feet in length, suitable for transportation, which are severally taken to the “slide” and rolled into the stream, by the cunning animal — using his tail as a substitute for hands. As they fall one after another, he plunges in and guides them to their destination, where they are safely moored for future use.

The beaver possesses great strength in his tail, which is twelve or fifteen inches long, four broad, and a half inch thick. This part of the animal is highly esteemed by trappers, and assimilates a fish in taste, though it is far superior to any of the finny tribe.

His teeth are very sharp, (incisors,) two inches or more in length, perfectly round and of a uniform size, with the exception of the cutting extremities, which are gouge-like, about the eighth of an inch in diameter, and nearly in the shape of a semicircle.

Beaver lodges are commonly constructed in holes carefully excavated in the banks of streams, in such a manner that the entrances are entirely covered by water. It is very rarely they build in any other manner, notwithstanding most writers upon this subject assert the contrary.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

The female usually produces two, and sometimes three, at a birth, but seldom rears more than one; — first destroying the least likely, she bestows much attention upon her favorite offspring, and nurses it with great tenderness.

The character and habits of this curious animal, in other respects, have probably met the reader's eye through other sources, so that a more extended notice under this head would be unnecessary. Having procured a fresh supply of ammunition from Fort Lancaster, some two weeks succeeding our arrival at this place I visited the mountains on a hunting excursion, in company with a single voyageur.

Our course lead up Vasque's creek for fifteen or twenty miles, to a ridge of high table land, through which we passed, by a circuitous route, and were ushered into a broad and beautiful valley, bounded upon the east by the ridge before named, and on the west by a lofty mountain chain. Vasque's creek is well timbered, and has a rich bottom, averaging one mile in breadth, and is skirted by a slightly undulating prairie, quite productive in various kinds of grasses.

This creek is from eight to ten yards wide, and affords a body of water more than a foot in depth. It heads in the main chain of the mountains, where it claims a valley of considerable extent, enclosed upon all sides by lofty ridges that preclude the possibility of approach, except a two points marking an Indian pass to the waters of Grand river.

From thence it winds its way between long defiles of mountains, that close in abruptly upon its very water's edge, till it finally intersects the valley first spoken of, and forces itself through the high ridge of table land into the open prairie.

Finding an abundance of deer in the vicinity, we struck camp and made it our hunting-ground for the time being. Our efforts were very successful, and seldom a favorable day passed without giving us the skins and choice parts of two or more deer.

Nothing occurred to mar our enjoyment for the first two or three weeks, at which time my comrade, having unfortunately broken his gun-lock, was compelled to return to the Fort for repairs. I resolved, however, to remain solo, despite his entreaties to the contrary.

This was the first trial I ever made of hermit-life, and I must confess, that after the first sensations of repulsive loneliness had been overcome, I felt much attached to it, as subsequent pages will prove.

Yet there was something so forbidding in the idea of my real situation, I seldom reverted to it without experiencing feelings of gloomy apprehension. Nor need it be wondered at, removed as I was far away from friendly aid, and in a dangerous country, with a thousand terrific scenes awaiting me at every step.

Still, in a little time I learned to forget all this, and roamed as freely by day, and slept as soundly by night, as though surrounded by friends and guarded by hosts of armed men.

But the reader must not infer from these remarks that I had settled down in a state of careless security, for I took especial care at all times to avoid surprise, by close attention to certain indications which my own observation had taught me to regard as the general precursors of danger from a savage foe, in order, by a timely movement, to escape a contact so fraught with peril.

For several nights I had a constant visitor in the shape of a prairie-fox, a creature about twice the size of a large red squirrel. He came to appease his hunger from the small scraps of esculents that lay scattered about camp, — devouring them while seated composedly by the fire.

My stock of provisions was usually secured, at night, by substituting it for a pillow; but Mr. Rey-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

nard soon became so emboldened that he repeatedly took occasion to help himself, even at the risk of sundry cuffs it was my wont to bestow upon him whenever his eagerness led him to deal too roughly with my hair.

Two incidents of perilous adventure occurred during this interval, which are perhaps not unworthy of narration.

One day, having proceeded farther from camp than was my custom without finding game, towards night I came to the broad escarp of a mountain, covered with scattering pines, and ascended to its summit in hopes of encountering deer or sheep, as the place gave indications of both. Here I stood at the very verge of a vast precipice, some four or five hundred feet high, overlooking a narrow valley, counter-scarped by a rough mountain chain, where a large band of elk were quietly grazing. The sight appeared so tempting I was unwilling to forego the opportunity of giving them a passing shot.

But how to get at them was the question. To go around the hill would require a detour of some six miles, and consume too much time, as the day was fast closing. Unless some means could be found enabling me to descend the wall, it was evident I must abandon my design.

Accordingly, after a short search, having found a ravine-like pass, worn by the rains and falling rock, that apparently led to the valley below, I attempted a descent.

The breakage was steep and narrow, and the loose fragments and detritus from the crags above, rendered a foot-hold quite insecure. Yet I progressed without much difficulty, and began to congratulate myself on an anticipated speedy exit from seeming danger, when, coming suddenly to an abrupt precipice, of sixty or seventy feet perpendicular descent, and paved far around its base with sharp rocks presenting their keen edges like so many hatchets set on end, I was thrown all aback at the appalling spectacle.

In vain I tried to retrace my steps. The sides refused to sustain my weight, and the yielding surface, to which I clung with a death-like tenacity, threatened every moment to plunge me headlong from the frightful steep, to be dashed in pieces among the rocks below.

That moment was an awful one! Retreat was impossible, — advance was certain death, — the time for reflection was fast waning, for every instant brought me nearer and still nearer to the fatal verge!

It was then I bestowed a fleeting thought upon loved and absent friends, — one fleeting thought upon a far distant home and all the cherished endearments of childhood, — and, commending my soul to the Great Author of its existence in a brief prayer, I turned to gaze calmly upon the yawning jaws of fate that awaited my speedy destruction.

But here a ray of hope burst from the thick cloud which till now seemed just ready to merge the sun of existence into the density of its own darkness.

A tall pine grew at the base of the precipice, some fifty yards distant, two narrow shelves of protruding rock, six or seven feet apart, led towards the tree, affording a sufficient hold for hands and feet to a person standing at full length.

My decision was instantly formed. Carefully dropping my rifle from the steep, by dint of great exertion I gained the shelves, that seemed as if made expressly for an occasion like the present; — then, by moving laterally, inch by inch, along the dizzy side, in a short time I had progressed to the tree, whose topmost branch lay just within my reach. Grasping this firmly in one hand, and disengaging the other to be used as the emergency might require, I threw myself backward among

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

the surrounding boughs, and, lodging in safety, was left to descend at leisure the remaining distance.

Once more upon a sure footing, the occurrences of the day had proved a sufficient gorge to present ambition; so, seizing my rifle, (which had luckily fallen uninjured.) I bade farewell to the unconscious elk and returned to camp. There, with early night I found myself transported to the land of dreams in the drowsy car of sleep.

But, instead of wild beasts and prowling savages thirsting for blood, such as the danger of my lonely situation would naturally inspire, my mind was filled with visions of deep chasms, frightful precipices, and yawning steeps, that seemed to meet me at every turn, affording no possible way of escape; and thrice glad was I when wakeful morning chased these horrid phantoms far away, and revealed to me the welcome reality of conscious safety.

Soon after the adventure above related, another transpired of a somewhat similar nature.

The rugged mountain chain forming the western boundary of the valley, afforded numerous black-tailed deer and sheep. The skills of these animals being much larger than those of the common deer and antelope, I was induced to scour the vicinity, occasionally, in pursuit of them.

One day, having gone to a considerable distance on this errand, I was passing along upon the crest of a sharp peak, of great height and steep sides.

The ridge ranged from northwest to southeast, leaving upon its right side a vast spread of smooth snow, encrusting it from summit to base, and upon its left, a lateral vallon, entirely bare and graced with frequent spots of grass, as yet green and flourishing.

One of these niches was occupied by a band of wild sheep, which were so situated they could not be successfully approached, unless from the opposite side of the peak. Attempting this, I was proceeding slowly along, by means of steps implanted in the thick crust with the breech of my rifle, and had almost attained the point designed, when, losing foot-hold, I fell prostrate, and, after gliding the distance of a full mile, almost with the speed of thought, found myself immersed in a huge bank of loose snow, at the foot of the mountain.

It is all nonsense to talk of steam-boats and rail-road cars, in comparison with the velocity of such a lofty specimen of "gettin down stairs!" Few mortals, I may venture to say, ever got along in the world half so fast as did myself in this grand avalanche from the mountain-top.

The country contiguous to this valley is generally possessed of a very good soil, both in the prairies, table lands, and mountains. Bordering upon the watercourses, the surface discloses a deep mould of sand and gravel, exceedingly fertile, reposed upon a substratum of granite and micaceous sandstone; the prairies presented a mixed superface of sand, clay, and gravel, rather thin and light, and strongly impregnated with various salts, and the table lands, a compound of stiff clay, stone, and gravel, partially enriched by the fertilizing properties of vegetable and animal matter and the genial auxiliaries of disintegrated rock, with now and then a diminutive spot destitute of grass or herb and whitened by a thin coating of saline efflorescence.

The prevailing rock is sandstone, granite, gneiss, limestone, and large boulders of the primitive formation.

The only indication of minerals, so far as my observation extended, was that of iron, though doubtless due research would bring to light a rich supply of other valuable ores.

CHAPTER XXIX.

Return to the Fort. Texan recruiting officer. New plans. Volunteer. The Chance Shot; or Special Providence. Texan camp. Country contiguous to the Arkansas, from Fontaine qui Bouit to the Rio de las Animas. Things at rendezvous. A glance at the company. Disposal of force. March up the de las Animas. The country; Timpa valley, and its adjoining hills, to the de las Animas. The latter stream; its cañon, valley and enchanting scenery. Tedious egress. Unparalleled suffering from hunger, toil, and cold. Wolf flesh and buffalo hide. Painful consequences of eating cacti. A feast of mule meat after seven days' starvation. Camp at the Taos trail. The adjacent country. Strict guard. A chase. The meet reward for treason.

ON the 16th of Feb., my stock of ammunition having failed, I proceeded to Fort Lancaster for a fresh supply, where I encountered a Texan recruiting officer, sporting a Colonel's commission, that bore the signature of "Sam Houston," President of the Republic.

The object of this personage was to raise a company of volunteer riflemen, to act in conjunction with a large force said to be then on its way for the invasion of Santa Fe. The main design of the expedition was to annoy the Mexican frontier, intercept their trade, and force them, if possible, to some terms by which a peace might be secured between the two countries.

The proposed rifle-company was to be vested with discretionary powers, and perform the duties of a scouting party to the main army. Each of its members was to be regularly enlisted for the term of nine months, — armed with a good rifle and pistols, and mounted upon a stout, serviceable horse.

Great inducements, by way of promises, were also held out, to secure a prompt and ready enlistment; and, in fact, the whole affair was represented in a light so favorable, few possessed of the necessary means for equipping themselves refused to enter their names upon the muster-roll, and rally beneath the banner of the Lone Star.

One thing, however, served to awaken in the bosom of each the genuine martial spirit, more than all the eloquence of the fluent Colonel;— this was the unfurlment of the identical flag, bullet-pierced and tattered, that had stood as the genius of victory at the sanguinary battle of Corpus Christi, in the early days of the Texan revolution.

Who could refuse to respond favorably to a call backed by arguments so potent? — not I.

Soon after Colonel Warfield, for such was the officer's name, set out on his return to the scene of intended operations, accompanied by some twelve or fifteen men, having named for his rendezvous a point within the Mexican territory, near the confluence of the Rio de las Animas and the waters of the Arkansas. Circumstances were such at the time it was inconvenient for me to leave, and eight or ten days intervened before my departure to join the expedition.

Meanwhile, it stormed almost incessantly, and the prairies presented naught save one vast expanse of gloomy desolation covered with deep and trackless snow.

The distance to be travelled was not far from two hundred miles, through a country inhabited only by wild beasts and strolling savages. Yet, nothing daunted by the cheerless aspect of affairs, having completed my arrangements, I improved the first fair day to launch forth upon the drear waste.

Relying upon the great abundance of game usually encountered en route, I took but a small supply of provisions, as, fully equipped, with rifle, pistols, butcher-knife, and other requisites, I mounted my horse, and, solitary and alone, commenced the long journey before me.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Hurrying on as fast as the nature of the case would admit, in the afternoon of the second day, an object, several miles in advance, arrested my attention. Suspicious of danger, but anxious to know its character and extent, I cautiously approached and was gratified to find it, instead of the lurking savage my imagination had depicted, a white man, hastening with eagerness to greet me.

He was on foot, and looked way-worn and weary to a deplorable extent. His story was soon told. He was the bearer of dispatches from the Arkansas to Colonel Warfield, — and being compelled to abandon his mule by the way, on account of the depth of snow, had proceeded thus far on foot, and, for the last three days had been without eating, in the tedious performance of the duty committed to his trust.

Hearing this, I invited him to a creek near by, where I immediately struck camp, and laid before him my small stock of eatables, with the assurance it was at his disposal. The speedy disappearance of the scanty supply, attested the keenness of his appetite, and left us both in a state of utter want.

On learning that Colonel W. had left for the Arkansas several days since, and now most probably had reached his destination, my new acquaintance concluded to retrace his steps and bear me company.

The next morning we arose breakfastless and resumed our journey, trusting to a kind Providence and our rifles to meet the demands of nature. But the snow became deeper the farther we advanced, and prospect more and more gloomy at every step.

Not a living creature presented itself to view, nor even the least vestige of any thing possessing the breath of life. Before and around lay a vast spread of winter-bleached desolation, bounded upon our right by the distant mountains, whose towering summits pierced the blue heavens and laughed at the clouds and storms below, while in front, and rear, and on our left, the curving horizon alone gave limit to vision.

Still hope bade us advance, although difficulties continued to multiply in threefold ratio. The second and third day our progress did not exceed twelve miles, and yet we had gone so far retreat or advance seemed alike hopeless.

Starvation stared us in the face, and continued travel through snow oftentimes waist deep, reduced our strength and wasted our spirits.

On the fourth day, however, the weather having become more favorable, we were enabled to make further headway than the preceding one. We also saw a few ravens, but they, as if conscious of our desperate condition, cautiously avoided coming within gun-shot;— a big rabbit likewise showed itself in the distance, but; being at the top of its speed, disappeared almost as soon as seen;— thus we were again doomed to go supperless to bed and feast upon the well-furnished tables of dreams, which, though they please the fancy during their continuance, serve only to increase the appetite and stimulate its cravings.

On the morning, of the fifth day, as we arose to continue our journey, determined to hold out as long as possible, the haggard looks of my comrade excited my compassion, and wishing to cheer him, I observed,

“Well, what would you think were I to predict for us a good supper tonight?”

“Really,” said he, “I don’t know. But there’s a poor show for its fulfillment, any how.”

“We shall have one, I know it.”

“God send we may. But, pray, where is it to come from.”

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

“I am quite confident we shall find game. If so, as my rifle bears the name of Old Straightener, and it has never been known to fail in a case of emergency, I know she will maintain her ancient honor.”

“What if we don’t find game? Then how?”

“Why, here’s my horse. It will be of no service to me if I am to die from starvation. In case we find nothing, its carcase shall save our lives.”

“Horse meat or any thing else wouldn’t go bad, just at this time.”

Thus resolved, we continued our way, plodding along in gloomy silence, brooding over the sad realities of our deplorable situation, —ever and anon, scanning the vacant expanse, in the fast-waning hope of looked-for relief, — but as yet looked for in vain.

The day was fast verging to a close, and I was summoning a sufficiency of fortitude to submit to the sacrifice of my favorite beast, and ruminating upon the many difficulties and inconveniences that must result from such a step, volving and revolving all the pros and cons the case admitted of, when I was roused from my reverie by the shrill voice of my comrade, who joyfully exclaimed, “Look!—look! A buffalo!”—at the same time pointing in the direction it appeared.

I looked, and sure enough a venerable old bull presented himself a few hundred yards to the right. “Aye, aye, my hearty! There’s a chance for Old Straightener!” said I, as, lowering my rifle, I started towards the intended victim.

“ Don’t forget,” cried my comrade, “that all my hopes of salvation are centred in your rifle-ball.”

The animal was feeding quietly, and I was enabled to approach within some sixty yards of him, when levelling, I pulled trigger, —but the cap, being damp, burst without a discharge. The noise caught the quick ear of the buffalo, and caused him to look round;— however, seeing nothing to excite his alarm, he soon resumed an employment more agreeable to his taste than needless vigilance.

Having put fresh powder into the tube, and supplied it with another cap I was again raising to take aim, and had brought my piece nearly half shoulderward, when it unceremoniously discharged itself, burying its ball in the lights of the buffalo —the very spot I should have selected had it been optional with myself. The old fellow staggered a few steps and fell dead!

My companion coming up, we soon completed the process of butchering, and, after furnishing ourselves with an ample supply of choice beef, proceeded to a neighboring creek, where, finding a few sticks of drift-wood, a fire was quickly kindled, and we ended our fast of five successive days and nights with feasting and glad hearts.

I have always regarded this event as a special Providence, and ever revert to it with no ordinary feelings of gratitude. Had the ball, thus accidentally discharged, missed the animal, or had it only wounded him, in all human probability, becoming alarmed at the presence of danger, and prompted by the instinct common to the species, he would soon have been beyond the reach of pursuit, leaving me to the dernier resort of slaughtering my horse or perishing among the snows and chill blasts of the prairie.

Enfeebled as we were from continued toil and suffering, we could have scarcely held out a day longer, and even the partial relief afforded by a poor supply of horse flesh, left, as we would have been, to travel on foot and carry our beds, guns, and provisions, must have served only to prolong our miseries a brief space, finally to meet the inevitable fate that threatened us! as this solitary buffalo was the only living creature that met our view during the entire journey.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

I have never consented to dispose of the rough-looking piece long previously christened "Old Straightener," and, when asked the reason, have uniformly replied, "It is the only gun I ever saw or heard of that has killed game of its own accord!

The second day succeeding this occurrence, my companion left me to obtain his mule, and I completed the remainder of my journey alone, —arriving the appointed rendezvous late in the afternoon of the 20th of March.

The country travelled over, from the Platte to the Arkansas, near the mouth of Fontaine qui Bouit, has been fully described in former pages.

My route, from the mouth of this stream, followed the Arkansas for some forty miles. The landscape, back from the river-bottoms, was quite undulating, presenting upon the left a superface of gravel, clay, and sand, mixed with vegetable matter; and, upon the right, a light, sandy soil, somewhat sterile and unproductive.

Many rich spots of a deep bluish loam meet the eye of the traveller, interspersed with spreads of naked sand, or clay whitened by exuding salts, or clothed in dwarfish grass; among which numerous clusters of absinthe, frequently five or six feet high, are seen in almost every direction.

The country, as a general thing, is evidently ill-adapted to other than grazing purposes.

Two broad beds of sand-creeks are passed upon the left, a few miles below Fontaine qui Bouit, one of which is Black Squirrel creek, and the other is known as the Wolf's Den. Upon the right, the Rio San Carlos. Cornua Virida, Apache, and Huaquetorie, after tracing their serpentine courses from the Taos Mountains, commingle with the Arkansas.

Some six miles below the mouth of Fontaine qui Bouit are the ruins of an old fort, occupied several years since by one Capt. Grant as a trading post.

The last of my course, being upon the side of the river, was much impeded by mud; and, although the surface was generally bare, travelling was even more tedious than it had been at any time hitherto.

After a series of suffering and deprivation so continued and severe, right gladly did I hail the Lone Star banner upon the opposite shore, as their point of present termination.

Fording the Arkansas about a mile above the Texan encampment, I found it nearly swimming deep, with a swift and muddy current over a bed of quicksand and gravel.

My appearance created no little surprise among all present, as they had several days since numbered me with those who had volunteered with great readiness, so far as promises were concerned; but, when PERFORMANCES were required, "came up missing."

I must confess, however, to great disappointment in the diminutive force that here met my view, which consisted of only twenty-four men, including officers — all told. But several accessions were expected, sufficient to swell the number to fifty-five or sixty. A party of eighty volunteers from the States were to meet us at the "Crossing " of the Arkansas, on the Santa Fe trail, together with a detachment of two hundred and fifty from Texas; and, with these reinforcements, it was confidently asserted we would be equal to the combined force of all New Mexico.

I immediately reported myself to the commanding officer, and was kindly welcomed, with the remark,

"Well, sir, you are just in time. Another day and you would have been too late. We move camp to-morrow morning."

(A pity it was I had not been too late!)

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Withdrawing from the conference, the lapse of a few moments gave me an opportunity to look around and see among whom I had fallen.

It would have been hard to scare up a more motley group of humanity in any place this side of Mexico. Each individual presented a uniform as varied as the imagination could depict, though tallying well with the general appearance of the whole company—it was a uniform of rags!

Still from beneath the dusky visages, half obscured by beards to which the kindly operations of their razors had been for weeks and even months a stranger, I detected the frank expression indicating the generous-hearted mountaineer, and began to feel at home, notwithstanding the fast-rising feelings of regret that fortune had thrown me in their way.

Early in the morning of the following day we were drawn up in line and divided into two detachments, —one consisting of ten, and the other of fourteen men. The first of these, under the command of Colonel Warfield, were to proceed to the Crossing of the Arkansas, and await the arrival of the main army, or otherwise act as circumstances suggested, while the second, headed by a lieutenant, marched up the Rio de las Animas to the Taos trail, to perform the duties of a corps of observation until further orders.

It was my lot to accompany the latter, and we promptly commenced movement.

After riding a few miles we struck the Timpa, a small affluent of the Arkansas, up which we travelled till the next day about noon, when, coming to an Indian trail leading south-southwest to the de las Animas, we followed it and reached the latter stream on the 27th of March; continuing up the de las Animas, three days subsequently we arrived at our destination.

The country passed over at the commencement of our journey, for fifteen or twenty miles, was a slightly undulating prairie, of a sandy soil, with few indications of productiveness.

The Timpa is entirely destitute of timber, and its valley, though plentiful in absinthe, is scarcely superior to the surrounding prairie. Several miles previous to leaving it, our course lay between two ridges of forbidding and sterile hills, nearly destitute of vegetation, and affording only now and then a few scraggy cedars and shrubs. Indeed, but very little good land is found in this vicinity.

On diverging from the Timpa the trail crossed a high, arid prairie, which was furrowed by deep ravines, and ridged by long rolling hills, that were occasionally surmounted by cedars and pinions, until it struck the de las Animas.

The watercourses through this section are rare, and sparsely timbered, being for the most part shut in by high banks of earth or lofty walls of precipitous rock, varying in altitude, and presenting vast chasms, passable only at certain points. Their valleys are narrow, but possess a fertile soil which is to some extent susceptible of cultivation, while many parts of the adjacent prairies might answer for grazing purposes.

The prevailing rock, so far as my observation extended, was coarse-grained granite and limestone. I noticed at places along the creek valleys occasional spots of calcareous earth; and, in fact, their soils generally indicated the presence of calcium in their compound, to no inconsiderable extent. The valley of the Rio de las Animas was by far the most interesting and romantic section of country we had as yet entered upon in the Mexican, or, as it is now claimed, Texan territory. This stream, in English, bears the name of Purgatory creek; in French, it is known as the Piquet l'eau, or Water of Suffering; in Indian, it is called the Wild River, and in Spanish, it is christened by the term above used, which means the River of Souls.

---

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

It rises in the Taos Mountains by two separate heads, a little south of the Spanish Peaks, and emerges from its rugged birth-place into the plains, where the two branches trace their way for some fifty miles and then unite to form one stream. These forks are passably well timbered, and are skirted at intervals with rich bottoms; but the circumjacent country is dry rolling, and generally barren.

A short distance below their confluence the river cuts its way through an expanse of high, barren table lands, for sixty or sixty-five miles, leaving abrupt walls of rock and earth on both sides, piled to a varied height of from fifty to three or four hundred feet, surmounted by groves of cedar and pinion, interspersed with broad pavements of naked rock, nude wastes of stiff sun-baked clay, and occasional clusters of coarse grass.

These walls are often perpendicular, though they generally accline somewhat, and are ornamented with scattering shrubs and cedars, which in vain seek to hide the forbidding deformity of nature. They frequently intrude to the very water's edge, and pile at their feet and in the foaming current huge masses of rock, strown about in all the wild disorder of savage scenery; then, expanding at brief intervals, they picture many sweet, enchanting spots, that smile and bloom in unfading loveliness, where angels might recline, and, listening to the chime of their own voices, echoed from rock to rock and reverberated with unheard-of melody, might fancy themselves in heaven; then again closing, to open in like manner at some favored point, till they finally give place to a broad and beautiful valley, from one to three miles in width, of unsurpassed fertility, and abounding at the proper season in every variety of fruit and flower known to the country, which, mingling amid the scattering cottonwoods, (free from under-brush and mimicking in their arrangement the regularity of art,) seem to portray the fabled fields of Elysian bliss.

This valley extends from the mouth of the cañon to the junction of the de las Animas with the Arkansas — a distance of twenty-five or thirty miles; for ten or fifteen of which it is skirted with receding hills, that maintain their stern sublimity till they at length become swallowed up in the far-spreading prairie.

This is a favorite resort for deer, antelope, and turkey, which are found in great numbers, gambling amid its varied beauties, or winding along its narrow defiles and forbidden recesses.

We entered the cañon through a narrow and steep declivity, formed by a small stream, which was shut in by continuous cliffs, that increased in height as they approached their lofty counterparts immuring the angry river.

After winding a day and a half among the crags and confused masses, which constantly intervened to impede our way, in vain searching for an egress, we found it impossible to proceed further, and were forced to climb the almost vertical bank, at an ascent of five or six hundred feet, — frequently lifting our horses over the rocks by means of ropes attached to their bodies and drawn from the impending summit; — this tedious process occupied nearly a day in its completion, and left us upon the lateral table land exhausted in strength and worn down with fatigue.

We were eleven days en route, during which time we suffered greatly from the severity of the weather, hunger, toil, and watching.

The air was bleak, the winds cold and piercing, and the sky almost continually over-cast with clouds, while two or three snow storms contributed their mite to swell the catalogue of comfortless hours.

Our horses, too, had become so exhausted from hard fare and previous service, we were necessi-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

tated to travel on foot for most of the distance. But the grand climax of miseries was experienced through lack of food.

A scanty supply of buffalo meat, taken with us at the outset, was consumed at the next meal, and we were left without one morsel to appease the gnawings of appetite for the two days and three nights succeeding. A straggling wolf that chance threw in our way, at the expiration of this time, most luckily furnished us with a breakfast, though nothing further entered our mouths till the morning of the third day from this, when, coming to the site of a recent Indian encampment, we succeeded in gathering a few pieces of dry buffalo hide, that lay scattered about —so hard and tough the wolves had tried in vain to gnaw them; these, after being boiled some twelve or fourteen hours, afforded us a paltry substitute for something better, but of so glutinous a nature it almost cemented the teeth employed in its mastication.

The two days following we were again doomed to go hungry and began to talk seriously of the imminent danger of starving to death.

This interval had brought us into the cañon of de las Aminas, where, having struck camp, several of the men sought a temporary respite from the torments of hunger by eating roasted cacti;—the article at first tasted well, and from the recommendation of the essayists, several were induced to partake of it quite heartily.

But the lapse of a brief hour or two brought with it the “tug of war,” when the inherent properties of the cacti began to have their effect upon the enervated systems of the participants. The painful consequences of this strange diet at first were a weakness in the joints, succeeded by a severe trembling and a desire to vomit, accompanied with an almost insufferable pain in the stomach and bowels.

Three or four of the unfortunate sufferers were in such extreme pain they rolled upon the ground for agony, with countenances writhing in every imaginable shape of frightful distortion.

Hereupon it was decided to sacrifice one of our animals as a last resort, which was promptly done, and we ended our fast of nearly seven days' continuance with a feast of mule meat.

I had heretofore cherished a decided repugnance to this kind of food, but am in justice bound to say, it proved both sweet and tender, and scarcely inferior to beef. The supply thus obtained lasted till we came among buffalo, when ample amends were made for previous abstinence.

The only game encountered during the march was an occasional band of antelope or wild horses, whose extreme vigilance and caution set at defiance all attempts to approach them, and sported at the phrensy of our desperate efforts.

Our camp, at the termination of this arduous and eventful journey, was in a small grove of cottonwood, about eight hundred yards below the point at which the trail, from Bent's Fort to Taos, crosses the right hand fork of the de las Animas.

It was faced on the north by a broad sandy prairie, gently undulating, that, at intervals, disclosed a good soil, and led to a distant ridge of pine-clad hills; while from the west, at a distance of some twenty or thirty miles, the proud and isolated summits of the Spanish Peaks, or Huaquetories, arose to view, and from the southwest, the lofty and noble tierras templadas that skirt the heads of the Cimarrone and Colorado, whose broad tops showed themselves in beautiful contrast with the sharp, snow-clad mountain forming the eastern boundary to the valley of Taos; then, upon the south and east, a steep bank, twenty-five or thirty feet high, shut us from the contiguous plain.

While here, we kept strict and constant guard, in view of anticipated movements of the enemy, as,

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

from certain information previously obtained, we knew him to be quartered in full force at the nearest settlements.

Our daily and hourly expectation was to meet a detachment of the Mexican army, then out for the purpose of reconnoitering; and, weak as we were in point of numbers, we felt quite equal to a hundred such soldiers, and were anxious for a trial of arms.

Our stay was prolonged for three or four weeks, and the abundance of choice buffalo meat that continued to grace our larder, with the rank growth of fresh grass for the sustenance of our animals, imparted an air of cheerfulness and thrift both to man and beast.

Nothing occurred worthy of note during the interval, save the following incident. One day, late in the afternoon, our sentinels announced the appearance of a small party of Mexicans at the crossing, and immediate preparations were made for an attack. Before these could be completed, however, our expected enemy was reported as having raised camp and being likely to escape by a precipitate retreat towards the Arkansas. Six men, mounted upon fleet horses, were immediately detached in pursuit, —of whom I was one.

The chase continued for several miles, and terminated in our overhauling three persons, —but, instead of Mexicans, two of them were Americans, and the other an Englishman, on their way to the United States with two pack mules heavily laden with gold and silver.

On receiving from them information of the disposition and probable whereabouts of the Mexican forces, they were permitted to depart unmolested, —a circumstance not likely to have happened had we been the gang of “lawless desperadoes,” so hideously depicted in several of the public prints of the day, as I have since learned.

An item of the intelligence received through them, gave us mingled sensations of pain and pleasure.

An European Spaniard, —who had made one of the Texan army in its unfortunate expedition against Santa Fe, in the fall of 1842, and had been retained a prisoner of war for a number of months subsequent, having effected his escape to the Indian country, — on hearing of the recent movements of the Texans under Col. Warfield, had come and reported himself ready again to enlist.

On the strength of this assurance he was partially admitted to confidence, — a thing rarely to be reposed in any one of Spanish extraction. The result was, that, after gleaning all the information circumstances would admit of, he proceeded, post haste to Santa Fe, and laid the whole affair before Gen. Armijo, the Mexican Governor, in hopes of a handsome reward.

The old Governor, however, had received more exact intelligence, with the names and number of volunteers composing the party under Col. W., (furnished him through the medium of certain Americans, base enough in principle and sordid enough in motive, to act as his spies, for a paltry bribe in the shape of stipulated remissions of tariff duties on imported goods, etc.) and treated the traitor to his cause quite cavalierly, — not hesitating to tell him he lied, and even accuse him of being a Texan spy — threatening to try and execute him as such! Were this ever the reward of treason, how few would be TRAITORS!

CHAPTER XXX.

March down the Cimaron. Junction of the two divisions. Country between the de las Animas

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

and the Cimaron. Perilous descent. Cañon of the Cimaron. Soil and prevailing rock. A fort. Grandeur and sublimity of scenery. Beauty of rocks. Cimaron of the pain. Fruits and game. Wide spread desolation. A dreary country. Summer on the Desert. Remarks. Encounter with Indians. Nature's nobleman. Wild horses and different modes of catching them. Failure of expected reinforcements. March into the enemy's country. Ancient engravings upon a rock. Boy in the wolf's den. A man lost. Forced march. Torment of thirst. Remarks. The lost found. Expulsion for cowardice, —its effect.

SOON after the incident related at the close of the preceding chapter, an express arrived from the Col. commandant, with dispatches ordering our division to join him at a small creek near the Pilot Buttes, or "Rabbit Ears," two noted landmarks situated some forty miles above the Santa Fe trail, and nearly equidistant between the Arkansas and Cimaron.

We accordingly took up our line of march and proceeded nearly due south for two days and a half, to the Cimaron; thence, down the valley of the latter, five days' travel to the Santa Fe trail, and thence, west-north west, one day and a half to the place of rendezvous, which we found without difficulty after a journey of one hundred and seventy miles.

Between the de las Animas and Cimaron, we crossed a long reach of arid prairie, slightly undulating and generally barren, with the exception of small fertile spots among the hills, here and there, clothed with rank grasses.

In some parts, the cacti so completely covered the ground that it was impossible to step, for miles in succession, without treading upon their sharp thorns; in others, the thick clusters of absinthemonopolized the vicinity of creeks, nearly to the exclusion of all dissimilar vegetation; and yet in others, though of more brief space, naked sterility refused foot to aught save gravel and stiff clay, or saline efflorescences.

The water of most of the streams was so highly impregnated with mineral salts, it was often unfit to drink. The creeks afforded very little timber, and frequently none at all.

The section immediately at the base of the high table lands to the right, exposed some beautiful spreads of fertile prairie, well watered and suitably timbered. The soil, as a whole, presented all the prominent characteristics of like portions of country previously described.

The prevailing rock was limestone and sandstone, with various conglomerates, and extensive beds of gypsum. I noticed some very large specimens of mica, of great beauty and transparency, —one, in particular, was nearly a foot square, and two inches thick.

The only indication of minerals coming under my notice, was iron and salts; though gold has been found in the immediate vicinity of the Huaquetories, and silver in the neighborhood of the de las Animas, —some very rich specimens of the latter ore, said to have been procured in this region having met my observation.

Near the Cimaron the country is very rugged and mountainous. Upon the right a lofty expanse of table land, some eight hundred or a thousand feet high, leads far off till it becomes lost in the distance; while, upon the left, the more elevated *tierras templadas* of the Colorado, gently curving from south to east, mark the division between the Cimaron and the latter stream.

Every watercourse is immured by cañons of craggy rocks that often preclude all access to it for many successive miles. The side-hills and prairie ridges, to some extent, are clothed with pines, piñon and cedars; and the creeks, whenever the narrow space of their prison-walls will permit it, afford beautiful groves of cottonwood and thick clusters of fruit-bearing shrubs and underbrush.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Our course for a number of miles, previous to descending to the valley of the Cimaron, lay at the base of the table mountain on the right.

The entrance to this valley was by a narrow buffalo trail, leading down a perpendicular wall of clay and rock, sidelong in a shelf-like path, barely wide enough for a single horse or man to advance carefully, as the least misstep might plunge him down the abyss to be dashed in pieces upon the sharp fragments detached from the overhanging cliffs.

The wall thus descended was from eight hundred to a thousand feet in altitude, and faced by another of equal height at a distance of twenty-five or thirty yards.

The spectacle was grand and awful beyond description. A rock, that broke loose about midway as we descended the pass, fell thundering down the frightful steep with a tremendous crash, and made the welkin ring as it reverberated along the vast enclosure with almost deafening clamor. I have witnessed many romantic and picturesque scenes, but never one so magnificently grand, so awe-inspiring in its sublimity, as that faintly delineated in the preceding sketch.

Entering the cañon at this point, after wandering a short distance among the huge masses of broken rock thrown from its towering sides, the traveller is ushered into a valley nearly a mile broad, shut in by mural mountains that rise to a varied height of from eight to fifteen hundred or two thousand feet, gradually expanding as he proceeds till it attains a width of from two to four miles. This valley generally possesses a very rich soil, sometimes of a deep, gravelly mould, and almost of vermilion-like color, assimilating the famous redlands of Texas, and, in appearance, equally fertile, —then, a dark brown loam obtrudes to view, sustaining a dense vegetation of lusty growth, and, yet again, a light sandy superstratum, affording but small indications of productiveness; or diminutive spreads of stiff clay, frowning in their own nudity; or barren wastes, of less extent, that, in deep penitence for their utter worthlessness, exude their briny tears in unremitting succession, which, as the solar rays strike on them with kind intent to wipe away, spread o'er their parent surfaces bleached shrouds of shining salt.

The latter part of this description, so far as my observation has extended, will apply to nearly the entire valley of the Cimaron after it emerges from the cañon.

The place at which this romantic valley first attains its full width, is the confluence of a small tributary to the main creek, near an isolated summit, that protrudes far out from the mountain range and commands the approaches from either direction.

This peak is five or eight hundred feet high, and inaccessible, except from the back ground by a gradual acclivity scarcely wide enough for two persons to ascend abreast. The top presents a small area of level surface, securely defended by an enclosing wall of rock, five or six feet in height, raised at its brow evidently by the hand of art. A better position, in a military point of view, for a fortification, is rarely found. Fifty men, suitably provisioned and equipped, might successfully defend it against an army of thousands.

The rocks of this vicinity exhibit a more striking variety of color than any I ever before witnessed. Their predominant classification enumerates granite, sandstone (generally ferruginous,) limestone, and slate. These were disclosed in abrupt escarpments of several hundred feet altitude, or in isolated, quadrangular masses with vertical sides, assuming the appearance of gigantic fortifications, temples and palaces;— or in a more multiform aspect, now portraying vast walls with narrow basements, that, diverging from the mountains, intersect the valley at intervals from side to side, except, perchance, at a well-formed gateway, — now, towering monuments, spires, and

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

pyramids, and again sculptured statues of men and beasts.

All these magnificent representations are gorgeously decked with parti-colored strata lying tier above tier, in regular order, some white, others black, blue, brown, green, gray, yellow, red, purple, or orange, and so strangely intermingled that they cannot fail to excite the admiration of every beholder.

The Cimaronne rises in the range of table lands thirty-five or forty miles east-southeast of Taos, and, after following a serpentine course for nearly six hundred miles, empties into the Arkansas some distance above Fort Gibson. As it emerges from the mountains, (where it is a stream of considerable depth and a rapid current, confined to a narrow space between high clayey banks, with a bed of rock and pebbles,) it expands to a great width, and, in a short distance, its waters become brackish and unfit for use, till they finally disappear among the quicksands, and leave a dreary waste of worse than emptiness, to mark the course of the transient volumes produced by the melting snows of spring and the annual rains of autumn.

During its course through the Great American Desert, not a tree or shrub graces its banks. Its mountain valley, however, is ornamented with numerous and beautiful groves of cottonwood, that present among their underbrush a profuse abundance of plum, cherry, gooseberry, and currant bushes, with grape vines; while the adjoining hills afford oak, pine, pinion, and cedar.

Here also game abounds in great quantities, including, buffalo, wild horses, deer, antelope, elk, and turkeys.

We frequently encountered four or five hundred head of wild horses in a single band, and turkeys showed themselves in every direction.

The pleasant moonlight nights, that favored our journey through this delightful valley, were the source of great success in turkey-hunting, and afforded us no small sport. Nearly every large cottonwood tree was occupied as a roost, and the season as yet had not far enough advanced to hide its tenants amid the growing foliage. Each night, as the moon reached a suitable position, my practice was to seek out these perching-trees, from which I rarely failed to return heavily laden. One night myself and companion killed ten of these fowls — some of them having an inch thickness of pure fat upon the back. It is unnecessary to say that with such abundance, strown so lavishly on every side, the fare upon our march adown this thrice-enchanting valley was one continued scene of sumptuous entertainment.

But, loveliness gives place to arid sterility, and verdure to dreary desolation, as the traveller makes his exit from the mountains.

Almost the entire expanse, from the Arkansas nearly to the Gulf of Mexico, an interval ranging south-southeast, from fifty to two hundred miles in width, between longitudes 100° and 104° west from Greenwich, is said to be little else than a vast desert of barrenness, destitute of tree or shrub, or spire of grass relieve the aching eye, nor favoring stream with kindly flow to quench the fevered thirst.

The whole country is subject to high winds, that sweep over it at brief intervals in maddened fury, bearing in their course immense clouds of dust, and engendering amid the waste landscape a scene of frequent change. To-day the wayfarer may find his progress impeded by no inconsiderable hills of loose sand, and to-morrow he may pass in the same direction and find a level prairie, — a fact not unaptly expressed in the words of the Psalmist, “the mountains skipped like rams, and the little hills like lambs!”

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Between the Cimaron and the Arkansas, back from the watercourses, the prospect is but little better.

In the vicinity of the former are numerous spreads of rolling sand prairie, if not entirely naked, but scantily clothed with coarse, scattering grass, growing upon a surface so loose that a horse or mule will sink to his fetlocks at every step in passing over it; then come broad reaches of slightly undulating plains, mantled with sickly, dwarf vegetation, and sustained by a thin clayey soil, so baked and indurated by the sun as to become almost impervious to water.

The snows of spring and the rains of autumn, as before hinted, afford the only moisture ever known to these arid regions. Here dews, alike with transient showers, are entire strangers to the summer months, and eave the scorching heat of a vertical sun to snatch the fading beauties of spring and turn their loveliness into stubble.

The following lines, written upon the spot, as our little party were about to withdraw from this dreary solitude, but poorly portray some of the dismal realities then presented:

SUMMER ON THE GREAT AMERICAN DESERT.

Ye dreary plains, that round me lie,  
So parch'd with summer's heat,  
No more ye please my wand'ring eye,  
Or woo my weary feet.

Why hath the spring your beauty borne  
Into his hiding place,  
And left the widow'd winds to mourn  
The charms they would embrace?

Why should those flowers, whose honey'd breath  
With incense filled the breeze,  
Drooping and wither'd, lie in death,  
And now no longer please?

That grassy carpet, green and wide,  
Why turn'd to stubble now?  
Save 'chance along some streamlet's side,  
Where less'ning waters flow!

And why those gently murm'ring rills,  
Whose soft melodious strains  
Were wont to echo 'mong the hills,  
No longer reach the plains?

The lark no longer meets the morn,  
Nor linnet pours his throat,  
Nor feather'd warbler hails the dawn

ROCKY MOUNTAIN LIFE  
BY RUFUS B. SAGE

---

With his sweet, mellow note;

Nor even insect cheers the scene,  
Where Solitude alone,  
In wither'd garb, as Desert Queen,  
Rears her eternal throne!

These thirsty plains, with open mouth,  
Implore the gentle shower;  
But vainly plead, while summer's drouth  
In scorching heat doth pour!

Nor grateful shade, of spreading tree,  
Invites my feet to rest;  
Nor cooling stream, in melody,  
Attempts my quicken'd zest.

So dismal all! why should I stay  
And sicken by their view?  
Thrice gladly will I turn away,  
And bid these scenes adieu!

The only inhabitants of this vast region are strolling bands of buffalo and wild horses, with wolves, prairie dogs, and a few scattering antelope. The only human beings that visit it are Mexican traders and occasional war-parties of Pawnee, Apache, Kuyawa, Cumanche, and Arapaho Indians, and they only for the brief interval required in its hurried passage.

Who, then, so wild as to suppose for a moment that such a country can ever become inhabited by civilized man?— unless the time should literally be ushered in, when, to use the language of Scripture, “the desert shall bud and blossom as the rose!”

Late in the afternoon, towards the close of our journey, a little below the point at which the Santa Fe trail crosses the Cimarrone, we came upon two horses that appeared to have recently strayed from some travelling party. According to the custom of the country anything encountered in this manner is good and lawful prize to the finder, and we forthwith set about taking possession.

One of them, however, a two-year-old colt, proved so unmanageable we were obliged to kill it in order to secure the other. Being rather scantily supplied with provisions, the fresh-slaughtered animal (fine and fat as it was) presented an opportunity too tempting not to be improved in replenishing our stock, which induced us to encamp for that purpose.

Soon after a large party of horsemen made their appearance from over the neighboring hills, and, having devoted a few minutes to reconnoitering, advanced upon us at full charge. In an instant our little force was drawn up in readiness to repel the expected attack. But, instead of enemies, the objects of our apprehension proved a squad of Arapahos, and they were accordingly allowed to come into camp.

One of our visitors happened to be the owner of the two horses we had found, which, as he stated,

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

(having described them minutely,) had strayed from his village, some six miles distant; he then enquired of us if we had seen them. Here was a dilemma; should we deny the fact, and run the risk of being caught in a falsehood? or should we confess and abide the consequences? Our commandant decided upon the latter course; but, in so doing, had resort to an artful duplicity to bear upon the finer feelings of the Indian, and replied:

“My warriors had suffered long for lack of food. Three suns had sunk behind the mountain, and not one morsel had entered their mouths to give them strength for travel. In their distress they enquired of the Great Spirit, and He showed them the lost animals of my brother.

“My warriors were not slow to receive the welcome gift. The flesh of the younger one hath caused us to bless the Good Spirit; the other is with our own medicine-dogs, that my brother may search for it no longer.”

The owner, on hearing this, looked very sorrowful. The colt had been a favorite of his squaw and children. In a moment, however, he arose, and, extending his hand to the commandant, exclaimed:

“My heart is good. My white brother did well to receive the gift of the Good Spirit, that his warriors might eat.”

Commandant. But the young medicine-dog of my brother was the beloved of his wife and little ones. What will he that I give him so they sorrow not?

Indian. Now, my heart blesses the pale face. If he would bestow his gifts, what better could I receive at his hand than a small present of tobacco, that my pipe may be filled to the undying friendship of him and his people.

A few pieces of tobacco were accordingly given, and the good-hearted Indian, after shaking hands with each one of our party, took his horse and departed to his village.

Where, let me ask, do we find, in civilized countries an instance of noble generosity equal to that of the poor savage?

The Arapaho village, as we learned from our visitors, had been camped in the vicinity several days, for the twofold purpose of awaiting the Cumanches and catching wild horses. This, by the way, reminds me of not having as yet described the manner of performing the latter feat.

In taking wild horses, two methods are resorted to, alike displaying considerable tact and ingenuity. Of these the following is the most common:

A large party of Indians, mounted on their fleetest chargers, having discovered a band of these animals, carefully approach from the leeward, scattering themselves to a distance of eight or ten miles along the course their intended captives are expected to run. This done, the chase is started at a given signal, by the nearest Indian, who is relieved by the next in succession, and he by the next, and so on (taking their cue from the strategy of wolves in their capture of the antelope) until these proud rangers of the prairie, exhausted by their long-continued and vain efforts to escape, cease to assert their native liberty, and fall easy prey to the lasso of their pursuers.

Another plan frequently adopted is, to erect a stout fence from side to side, between two impassable walls of rock. The unsuspecting band are then so started as necessarily to be driven within the enclosure, when their ready pursuers, closing in upon the rear, take them without the trouble of a long chase.

Great numbers of wild horses are annually captured by these means, which become domesticated in a very short time. But, as a general thing, they are less adapted to hard service than those

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

reared in the ordinary way, and are far more disposed to re-assert their birthright of freedom at the first opportunity that occurs.

Our visitors communicated the important intelligence that a detachment of four hundred Mexicans had passed their village only two days previous, on its way to Arkansas; which statement was further corroborated by certain indications noticed in the trail. The enemy was evidently in pursuit of us, and, weak as we were numerically, none expressed any other feeling than that of a willingness to meet him.

From this camp, our course bore west-northwest for thirty or forty miles, during which distance we found no water, and suffered greatly from the agonizing effects of thirst. One of our pack-horses, also, took the "stampede," and ran off with his entire load, consisting principally of ammunition, and all our efforts to retake him proved abortive.

About noon the succeeding day, we reached our destination, where a junction was formed, not with the army we had hoped to find, but with the mere handful who had parted from us a few weeks since at the Arkansas.

Discouragement and discontent were depicted upon the countenance of every one, as the lateness of the season admonished us of the extreme uncertainty of the arrival of expected reinforcements. The dreaded approach of the Cumanches, those unsparing enemies of the Texans, of whom we had received reliable intelligence, far more than the proximity of four hundred Mexican troops, gave us just cause for apprehension. A council was held forthwith, to decide upon the course proper to be pursued. Prudence seemed to dictate an abandonment of our present position, — while the enemy were looking for us in another quarter, we might steal a march upon him in his own country.

These suggestions gave tone to subsequent movements, and early in the morning of the day following we were under way. For ten or fifteen miles, our course continued up the dry sand-creek that had marked our place of rendezvous, and the night following was passed with a few lodges of Arapahos, who were encamped at a small pool of water near a bluff bank of sandstone.

This rock exhibited many rude engravings upon its smooth side, representing men, women, and children, dogs, snakes, and lizards, with various other devices, — evidently the work of ancient artists in commemoration of some remarkable occurrence connected with the former history of the country.

I examined the sketch with deep interest, and felt as if glancing at the obscure records of the greatness and glory of some extinct nation, written in a language, like itself, now no longer known.

Our hunters, having accompanied the Indians to the chase, soon after returned with a choice supply of fresh meat, and four wolf pups. The latter had been taken by an Indian boy, three or four years old, who fearlessly entered the den, during the absence of the dam, and bore away her defenceless family in triumph.

The next day saw us again en route. One of our men, having obtained permission of the commanding officer, proceeded a short distance in advance of the main party for the purpose of hunting. Not paying strict attention to the course proposed, he mistook his way, and, despite our continued efforts to set him aright, could no longer be seen or heard of, and we were at length reluctantly forced to give him up.

Continuing up the creek some two days, we found it very difficult to procure water, and were

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

often compelled to dig for it in the sand to a depth of three or four feet.

From this point, we bore south-southwest, and after more than a day and night's hard travelling, over an arid sand-prairie, favored by neither tree, shrub, nor watercourse, we arrived at the head of a small affluent of the Cimaron, inducting us to the bewitching scenery of the thrice lovely valley that lay immured within its giant walls.

The fatigue of a forced march, combined with the sweltering heat of an almost torrid sun by day and scorching winds by night, in addition to the indescribable torments of burning thirst for nearly thirty hours, had rendered us almost frantic with agony.

What tongue can tell the sweetness of the draught that first greeted our parched lips, at the termination of this painful interval? What mind can conceive the inestimable value of water, until destitution unfolds its real merits?

Hunger, one may forget in the sweet unconsciousness of sleep, or glut his appetite, meanwhile, upon the tasteless feasts of fancy, —but thirst, withering thirst, can never be forgotten while it continues, —it will burn as it to scorch the vitals and dry up the heart's blood!

Before leaving the sand-creek above alluded to, we passed several diminutive bottoms and vallons that assumed an air of fertility. In these, I noticed an abundance of the bread-root, and in the creek banks, two or three places gave indication of coal. The prevailing rock was sandstone and limestone. The country adjacent, with the exception of its being more tumulous, is much like the llanos peculiar to this region.

On striking the Cimaron we continued our march up its valley for some three days, and camped for a short time, to make a cache of our surplus baggage for the purpose of travelling with greater expedition.

The day preceding, however, afforded two incidents worthy of note. One was the re-appearance of our lost man, who, having found his way to this point, and knowing we must necessarily make it in our line of march, had been awaiting us for the past two days. He was hailed as one risen from the dead, and welcomed back to our midst.

But the expulsion of three for cowardice almost immediately followed the re-accession of one.

Considerable dissatisfaction had existed for some time, in reference to our plan of operations. Several of the company had openly talked of desertion, and were using their earnest endeavors to persuade others to this course. As we approached the enemy's country, the spirit of insubordination showed itself with increased violence. The time and place, even, were pitched upon for raising the standard of rebellion against all orders and those who gave them. Affairs at length reached a crisis that loudly demanded a resort to some prompt measures to restore them to their proper equilibrium — an example must be had.

Accordingly the company was drawn up in line, when the articles subscribed to by each of its members were read. This done, the commanding officer addressed the male-contents in a few brief words, demanding which of those articles he had violated, — if neither, they were equally binding as at first;— then, alluding to the rumors that had reached his ears from various sources, he stated his readiness to release any one requesting it from further obligation, — but the discharge should be a dishonorable one, —a discharge for cowardice!

“Yes,” said he, “COWARDICE! We are on the eve of entering the enemy's country, and the hearts of some doubtless begin to fail them. Texas wants no cowards to fight her battles! None but brave men and true, are worthy of that honor! Now, I repeat it. if any timorous spirit, —any pusillani-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

mous heart, —any despicable poltroon, wishes his discharge, I stand ready to give it; let him step one pace in advance from the ranks and acknowledge himself a coward! His name shall be erased from the muster-roll.”

At this announcement, three men stepped forward, and their names were severally repeated, as they received their discharge, accompanied by the cutting words, — “reason-cowardice!”

After this the commanding officer again addressed them: “ You are now dishonorably discharged, and, as sentenced, before high heaven, I pronounce you cowards. If either of you considers this sentence unjust, let him shoulder his rifle and choose his own distance. I stand ready to give him any satisfaction he may demand in reparation of his wounded honor. But, you shall pocket the disgrace. To-night you may stay with us. — to-morrow you must and shall leave.

“And you, my brave comrades, who have chosen to abide by that flag which has graced the triumphs of by-gone days, may you never desert it in the hour of danger. Look up with hope, and as you gaze upon its bright star of lonely grandeur, consider it the harbinger of success, —the genius of victory.”

The next morning, the three faint-hearted volunteers accordingly left camp, reducing our little number to twenty-one;— a lean force, truly, for an expedition so hazardous. Yet none flinched at the thick array of anticipated dangers. All were ready and anxious for the encounter.

The above summary proceeding completely effected its designed object, at least for the present, and reduced the turbulent spirits to the wholesome restraints of discipline.

CHAPTER XXXI.

Mexican camp. Pursuit. Advance upon Mora. Enemy discovered. Country between the Rio de las Animas and Mora; its picturesque beauty. Admirable point of observation. Fortified position. Battle of the pass; order of attack, passage of the river, storming the enemy’s camp, and number of killed, wounded and prisoners. Council of war. Prisoners released. Message to Amijo. Return march. Mexican army. Attacked, and results of action. Mexican bravery. Retreat. Cross the Table Mountain. New species of wild onions. March down the de las Animas. Discouragements accumulate. Disband. Sketch of factions. Texan prisoners. Arrival of reinforcements. Battle of the Arroyo: killed, wounded, and prisoners. Retreat of Amijo. “Stampede.” Frightful encounter with the Cumanches and Kuyawas. Discharge of troops. Affair with Capt. Cook. Surrender to U. S. Dragoons, and failure of expedition. Return to Texas. Journey to the Platte. Country between the Arkansas and Beaver creek. Feasting at camp. Crows’ eggs. Lateness of season. Snow-storm in June. An Indian fort. Serio-comico adventure with a wolf. Indians. Song of the night-bird.

FROM C ache Camp we resumed our march, and, on the fourth day sub. sequent, struck the Taos trail at the crossing of the de las Animas; thence, continuing up the river about forty miles, we came to a place recently occupied by a detachment of Mexicans. After a careful examination, we became satisfied that it had been some sixty cavalry, who were then doubtless awaiting our advance at no great distance; and, from appearances, not more than three days had elapsed since its evacuation. Feeling ill-disposed to try the patience of our enemy by keeping him in too long a suspense, we immediately started in pursuit.

The route led by a rough pass over a spur of the Taos Mountains which heads the tierras templadas southwest of the Cimaron, into a prairie ranging from east to west, forty-five or fifty miles

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

long and thirty or more broad, and skirting the three principal streams that unite to form the Colorado. From this point it continued over another spur of the mountain chain into a valley some ten miles broad, ranging from north to south and intersected by the trail from Taos to the Santa Fe road, striking the latter near the Waggon Mound,[53] —thence, for about twenty-five miles, across a spread of high prairie, (quite rough and undulating, with frequent hills assuming a mountainous character,) to a considerable creek, four or five miles southeast of the town of Mora. At this point our scouts reported the enemy as occupying a fortified camp, which commanded the only feasible pass leading to the adjoining settlements. Upon the reception of this intelligence we withdrew to a deserted ranche and encamped for the night, in order to obtain, if possible, more certain information relative to his position and force.

The country between the de las Animas and this place, as a general thing, gave indications of a good soil, but was quite arid, particularly the prairie skirting the head branches of the Colorado. The hills and mountains were less sterile than those farther east. They also afforded an abundance of timber, consisting of pine, oak, cedar, and pinion. The creek bottoms embraced considerable quantities of excellent land, though but sparsely timbered.

The mountains to the right towered majestically to an altitude of ten or twelve thousand feet, opposing their snowy crests in stern defiance to the heat of a summer's sun.

Toward the close of our march, the landscape disclosed a scene of romantic beauty and grandeur. Mingled among the pleasing diversity of mountain, hill, dale, and lawn, vegas and llanos, forests and prairies, here and there a small lake mirrored forth its bright waters, swarming with innumerable water-fowl, decorated by broad flowery banks, and shut in by rugged highlands and rocky cliffs, that seemed like some fairy's home, where enchantment held Nature's self in spell-bound admiration. The creeks and valleys of this section were also enclosed by abrupt banks, that sometimes protruded their precipitous walls to the very water's edge, and then again expanded to give place to the grass, fruits, and flowers of mimic Edens.

The prevailing rock appeared to be gray granite, ferruginous sandstone, and limestone. Game was rather scarce, and consisted principally of buffalo, deer, and bear.

As a whole, this entire region may be considered as admirably adapted to grazing purposes, and, were it not for its aridity, might be cultivated to a considerable extent.

The men sent to reconnoitre returned about midnight, but had succeeded in obtaining no satisfactory information of the enemy's position, owing to the darkness and their ignorance of the topography of the country. However, they reported having discovered a point overlooking his camp, from which our whole force might watch his movements, screened from his observation by a dense thicket of pines, and recommended it for our occupancy the ensuing day. Accordingly, in the morning orders were given to that effect; and, after a march of four or five miles, covered by an unbroken forest of pine and cedar, we arrived at the place designated, and encamped almost within speaking distance of the enemy.

No point could be more admirably situated for our purpose. The gradual acclivity by which we had advanced, studded with pine, hemlock, and pinion, led to the summit of a high ridge, bounding a broad valley upon its opposite side with vast piles of perpendicular rock, several hundred feet in altitude. Through this valley a large creek traced its way, graced by occasional groves of cottonwood and willow. In one of these, appeared the Mexican encampment.

So matchless was our position, by aid of a spy-glass we could observe his every movement with-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

out incurring the risk of being ourselves discovered.

A mere glance revealed the true state of affairs. The hostile force, consisting of some sixty strong, completely commanded the only entrance into the valley from the east, and was otherwise so advantageously posted as to render an immediate attack extremely hazardous. We accordingly awaited the cover of night for further operations, and contented ourselves meanwhile with watching the unsuspecting foe.

Our plan was to storm the Mexican camp and force a passage into the adjoining town, where we expected to encounter another detachment, and, after defeating it, make good our retreat before a sufficient reinforcement could be rallied to oppose us.

Soon after sundown, arrangements being completed, we commenced our march. A detour of four or five miles led us to the head of a narrow and circuitous defile, marking the entrance to the valley; winding our way through which silently, in a few moments we were in the immediate vicinity of the enemy.

Here dismounting, the company was drawn into line, and the plan of attack communicated to each, as follows: three men, mounted upon fleet horses, were to dispose of themselves, if possible, in such a manner as to prevent an escape, while the remainder, in two divisions, (the one headed by the Col. commandant and the other by the first lieutenant,) commenced a simultaneous attack at different points. Orders were given to scale the enemy's breastwork, seize his arms, and demand his surrender, —but not to fire a shot, unless in case of resistance or an attempt to escape; and, even then, to avoid all unnecessary effusion of blood.

Thus disposed. we advanced to the charge;— but a new difficulty here arose. The creek which, from our high point of observation during the day, had appeared only a diminutive stream, now presented its broad surface, with a current of swift and deep water, while a steep bank upon the other side showed the enemy at its very verge. Nothing daunted we plunged in, and, almost as soon, gained the opposite shore. Ascending the bank we attracted the notice of the sentinels, and received the challenge:

Quienes veniren?" — who comes?

Que dijo? "— what do you say?

"Quienes veniren, carraho?"

At this a rush was made upon the challengers, who were almost instantly disarmed, and our whole party, leaping into camp, gave to the enemy the first intimation of its presence.

"Munchos Tajanos! " — exclaimed one, as the astonished Mexicans snatched their arms.

"Si, muchos Tajanos. —Quieron los scoupetas!"— was the reply, as we sprang to prevent them.

Here a smart struggle ensued, which resulted in the defeat of the enemy with a loss of five killed, four wounded, and eighteen prisoners, —the remainder having escaped despite our efforts to prevent it, — but all the camp equipage fell into our hands, with seventy-two head of horses and mules. Among the arms taken were two or three pieces that had belonged to the Texan Santa Fe expedition of the fall of '41.

A council was now held to decide upon the expediency of proceeding immediately to the neighboring town. A majority at first were favorable to the proposition;— but some objected, and urged the imprudence of weakening our force by a division, as we should either be necessitated to do, in that event, or relinquish the advantages already gained, — and, further, the enemy, being aware of our approach, was doubtless prepared to oppose a dangerous resistance, such as would be attend-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

ed with great risk of life on our part, without securing any possible benefit in its result. The latter reasons influenced the decision, and orders were accordingly given to withdraw from the scene of action.

In the interim the wounded had been carefully attended to, and, as we were about to leave, the prisoners were all set at liberty, with these words:

“You are now free. Bury your dead, and remember in future how vain it is to resist the arms of Texas. Tell Amijo, your General, the Texans are men, and not wild beasts. They never kill an unresisting enemy, they never kill a prisoner of war. He has done both, —but let him beware how he does it again, for the lives of ten Mexicans shall be the forfeit for each offence.”

All things being arranged for a retrograde movement, we were promptly under way upon our return march to the Cimarrone. The route led within ten or twelve miles of the Waggon Mound, at which point a large number of dark-looking objects appeared, but so indistinctly we were unable to determine their nature;—these, as we subsequently learned, were a body of Mexican troops, numbering seven hundred and fifty men.

Continuing our course, about noon we made camp at a gap in the mountain ridge, facing from the west the head branches of the Colorado.

The sentinels were cautiously posted, two upon the summit in the rear, and two with the horses in front, and express orders given to them not to leave their stations until relieved, and to give immediate notice of the appearance of any suspicious object. The remainder of the party were soon busily occupied, some in preparations for dinner, and others in making amends for a night of wakefulness.

In fact, each one conducted himself apparently with as little concern as though it were in, possible that a Mexican could be found this side of the halls of Montezuma. Participating in this general feeling of security, and anxious to enjoy the relaxations of camp, in a brief interval the sentinels deserted their posts and mingled among the loungers.

This remissness was first noticed by a private, who hurriedly enquired, “Where is the guard?” Scarcely were the words spoken, when another exclaimed, “There go our horses!”

The latter announcement aroused all hands — but only in time to witness our whole cavallard under full headway before a small party of Mexican cavalry, while at the same instant a brisk fire was opened upon us from the rear, and the dusky forms of the enemy appeared both right and left; thus we had the mortification to find our little band surrounded by a superior force.

Orders were given to dislodge the foe, and occupy his position in the rear. At the word “charge,” our dauntless partizans, with a shout, rushed up the steep hill-side and drove the panic-stricken Mexicans before them, who fled with the utmost precipitancy in all directions, throwing away their blankets, robes, arms, and even clothes, to aid them in their hurried escape. So great was their consternation, in less than fifteen minutes not one remained in sight, either far or near.

On examining the premises, we found fifteen or twenty saddles, with a mule, which they had likewise abandoned, —but only two half-jaded animals told the remnants of the noble cavallard of more than eighty head that had grazed around us scarcely thirty minutes before; a thing of itself equivalent of a defeat.

What could twenty-one footmen do in an open prairie opposed by hundreds of cavalry, able at any time to choose their own place and mode of attack? The issue was quite apparent, — we must

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

retreat. In an advantageous position, surrounded by game, and acquainted with the topography of the country, we might hold out against a force of thousands; but it would be presumption to think of either maintaining our present ground or advancing upon the foe.

Preparations were therefore immediately commenced for acting upon the only prudent alternative now left. Each man selected for himself a blanket, or robe, which, with such other necessaries as he could conveniently carry, was bound in the form of a knapsack and strapped to his shoulders; our animals were then heavily laden with provisions, and the remaining luggage (consisting of arms taken from the enemy, saddles, robes, blankets, knives, &c.) committed to the flames; the value of property thus destroyed, amounted to several thousand dollars. It was a melancholy thing to witness this wanton waste; yet such is the custom of war under like circumstances.

Toward sundown we took up our line of march, each one on foot with his shouldered pack, in every appearance illustrating the soldier's return "from the war!"

In the above manner we trudged along, bearing a course due east, till the evening of the third day, which brought us to the base of the table mountain at the head of the Cimaron, —having discovered the enemy's scouts hovering in the distance on two or three occasions during the interval.

The day following we crossed the mountain, upon whose summit was a beautiful plateau, some ten miles in width and of unknown length.

The soil gave every evidence of fertility, and was well watered. I noticed a number of strawberry vines—the first I had seen in the country, as well as a profuse array of floral loveliness. A considerable lake also appeared, whose banks were of perpendicular rock measuring a descent of fifteen or twenty feet; while on its shady side a pile of snow bade defiance to the heat of summer, and looked pleasingly strange amid the surrounding verdure.

After a lengthy search, we finally found a place of descent upon the opposite side of the mountain, which led us into the valley of the extreme left hand fork of the Rio de las Animas.

The bottom of this stream, as it emerged from the mountains, disclosed a soil of extraordinary fertility. Among its indigenous productions I noticed a spread of fifty acres or more, so densely covered with onions that hundreds of bushels might be gathered in a short time. This plant was of a different kind from any I ever before saw. Its color was white, size about equal to a pigeon's egg, and appearance much like that of the common onion; but it had flag-shaped stalks, and was much less offensive in taste and smell than is natural to this species of roots.

Continuing down the valley of this creek, we struck the de las Animas on the third day subsequent, and on the seventh, arrived at the egress of that stream from its frightful cañon, nearly opposite Bent's Fort on the Arkansas. From this place an express was sent to the latter point to obtain, if possible, some information relative to the expected reinforcement from Texas, and, also, in regard to the movements of the enemy.

The next day, however, the messenger returned with a report so far from encouraging, that it served still more to depress our fast-sinking hopes. A general despondency seemed to weigh like an incubus upon the minds of both officers and men. Our inability to hold out under existing circumstances was too apparent, as the sphere of operations embraced a circuit of five hundred miles or more, over deserts and mountains, that would waste us away with fatigue, watchings, hunger and thirst, by long and dreary marches to be performed on foot, through a country swarming with savage and half-civilized foes. A council was accordingly held, which resulted in the almost unanimous decision to disband.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Discharges previously made out, bearing date May 24th, were now presented to each one, absolving him from all further connection with the Texan army, and, on the morning of the 29th inst., our little band separated in three parties; one of these, consisting of four men, left for the cañon of the Cimarone; another, headed by Col. Warfield, started for Texas; and the remainder commenced their return journey toward the Platte river.

The story of the former of these fractions, so far as relates to the difficulties between Mexico and Texas, is briefly told. Our adventurers bearing for the Cimarone reached their hoped-for Elysium; but, soon after, having fallen into an ambuscade of one hundred and thirty Mexican troops, were taken prisoners, and, in a few days subsequent, found themselves in irons and snugly stowed away in the calaboose at Santa Fe; while there, one of them died from bad treatment, and the others would have been shot had not the dread of Texan vengeance prevented the deed. Succeeding events, however, effected their liberation.

The party accompanying Col. W. fell in with the expected reinforcements from Texas, near the Crossing of the Arkansas, and again submitted itself to the fortune of war. This force consisted of one hundred and eighty volunteers, under the command of Col. Snively, an old veteran of the Texas revolution.

Soon after, a detachment of forty Texans, headed by Col. Warfield, encountered the advance guard of the enemy, numbering one hundred picked men. The approach of the latter had been observed from an eminence, when the Texans were drawn up under cover of a small sand-bank, near a creek, (arroyo,) awaiting to intercept him. Ignorant of the presence of danger, the Mexicans were pressing on at a rapid rate, till brought to a sudden halt by an opposing force within half rifle-shot. "Quienes?" demanded the Texan officer.

"Mexicanas. Quienes sons uste?" replied the commandante.

"Tajanos," returned the Texan, through his interpreter. "We have come to fight, and shall fight unless you surrender. But, that you may know with whom you have to deal, we give you thirty minutes to decide whether to fight or surrender. If you choose the former, a signal from your sword will announce the answer."

A brief discussion ensued among them upon this summons. The Mexicans were disposed to surrender, but the Pueblo Indians, of whom fifty or more were included in the party, scornfully refused to accede to any such proposition, declaring that they had come to fight, and not to surrender like women upon the first appearance of an inferior enemy. At length, a chief ended the dispute by advancing to the front line and giving the prescribed signal.

The onset of the Texans was terrific beyond description. The enemy's line was instantly broken, and the cry of "misericordia!" (mercy) sounded upon all sides. The conflict lasted scarcely five minutes; but, though short, it was decisive and bloody.

Twenty-two of the enemy were killed, thirty wounded, and the remainder taken prisoners, with the exception of one who succeeded in affecting his escape. Not a Texan was hurt.

General Amijo, who at this time lay encamped at the Cimarone, forty or fifty miles distant, with an army of seven hundred Mexicans, on receiving intelligence of the defeat of the flower of his invincibles, like other examples equally illustrious, felt his courage "ooze out at his fingers' ends," and, not being disposed to encounter such dangerous enemies, ordered an immediate retreat and fell back on Santa Fe.

Col. Snively was on the point of marching in pursuit, when an incident occurred which altered

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

the whole aspect of affairs, and finally frustrated all the purposes of the expedition. This was effected by a war-party of eighty Kuyawa and Cumanche Indians, who succeeded in stampeding a large band of the army horses.

They were followed by eleven men under the command of Col. Warfield, and, after a running fight of two or three miles, an action was brought about. As they halted, Col. W. ordered his men to dismount and form a breastwork with their horses, which was promptly done; meanwhile the Indians, numbering sixty or more, had closed around, with whoops and yells, and other demonstrations of their expected triumph.

A discharge from the Texans brought four of their warriors to the ground, and wounded six more. This broadside was returned through a shower of arrows, and repeated by the intrepid eleven in a pistol-round, when three more of the assailants fell, and twice that number felt the effects of an unerring aim. Hereupon the Indians hastily retreated with their wounded, leaving seven of their number to grace the scene of action. Not one of the Texans was injured, and only one of their horses killed and three wounded. Further pursuit, however, was abandoned, and the captive horses were left to honor the service of their new masters.

A loss so inopportune caused the postponement of further operations for the present, and, in connection with other difficulties, created so much discontent in the minds of some, that one entire company declared its intention of returning to Texas, and requested its immediate discharge. An emergency of this kind, not having been provided for in the terms of enlistment, left the commanding officer no other alternative than to accede to a measure he had no power to prevent, and the demands of the disaffected were accordingly complied with.

The army was thus reduced to eighty effective men, which made it necessary to release the prisoners as yet retained in custody. These during their detention had been treated with great kindness, and their wounded carefully attended to by the company's surgeon; on their release twelve horses were allowed for their conveyance, while the other prisoners were furnished with four rifles and a quantity of ammunition, two running horses, and enough provisions to serve for several days. Thus provided, they were set at liberty with the pithy message: "Bid your countrymen learn, from this example, how to treat prisoners of war!"

Soon after the events above related, the army took up a position on the Arkansas river, a few miles below the Santa Fe road, for the purpose of procuring a supply of provisions from the vast quantities of buffalo afforded by that vicinity. While encamped here, hunting parties were allowed to cross into the United States territory in quest of game, —not in a national capacity, but as mere private individuals.

On one of these occasions the hunters were discovered and pursued by two companies of United States Dragoons, under Capt. Cook, on their way to escort the Santa Fe traders as far as the Crossing of the Arkansas.

The chase was continued to the river bank opposite the Texan camp. when a conference was requested, and the commanding officers of both armies met, as was supposed, for an interchange of mutual civilities; but such proved not to be the case.

Captain Cook, on the part of the Americans, contended that the Texans had invaded the United States territory, and that they even now occupied a position within its limits;— his duty was plain. He must demand, and, if necessary, enforce their immediate surrender. Thirty minutes only would be allowed for a decision.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Cols. Snively and Warfield urged many arguments to prove the injustice of his demand and the fallacy of the premises upon which it was based, but all to no purpose. The Captain was inflexible. Meanwhile, the American troops had crossed the river, and were drawn up in front of the Texans ready for action. It was vain for a force of eighty men to attempt holding out against one hundred and sixty United States Dragoons, backed by two field-pieces. Retreat, too, was impracticable, and they accordingly surrendered their arms, upon Texan territory, in compliance with the unjust demands of the American commander.

Forty of the prisoners were escorted to Fort Leavenworth, and the remainder set at liberty, and left with only twelve rifles to fight their way back to Texas, through the heart of the Cumanche country. They had, however, previously managed to secrete a quantity of arms and ammunition, and, in a few minutes subsequent to their release, were fully equipped and ready to meet a Mexican force of eight times their number.

Col. Warfield was elected commander of the newly organized company, who immediately set out in quest of the enemy.

But here a new obstacle presented itself;— the whole country was swarming with Cumanche and Kuyawa Indians; so much so that a further prosecution of the campaign must inevitably prove most disastrous. This circumstance led to the abandonment of the purposes of the expedition, and the scanty remnants of the army engaged in it took up their line of march for Texas, where they arrived during the month of July following, wasted by toil and suffering, as well as by repeated conflicts with a relentless savage foe.

Thus ended the second attempt to subjugate the province of Santa Fe to the government of the new-born Republic of Texas.

A few days preceding this grand finale, a small party, including myself, commenced its journey to the mountains adjoining the head waters of the Platte river. We were all on foot, and suffered greatly from fatigue and thirst during our dreary march over the plains of burning sand and withered stubble that impeded our progress for some distance.

Crossing the Arkansas at a point several miles below Bent's Fort, we proceeded up one of the numerous dry creeks finding their discharge into that stream from the north, and, on the fifth day subsequent, arrived at a grove of cottonwood, upon a watercourse near the eastern extremity of the "Divide," and in the immediate vicinity of several tributaries of both the Platte and Kansas rivers. Here the abundance of buffalo induced four of us to remain for a short time, while the others continued their course.

The intermediate country from the Arkansas to this place, presents an uninviting aspect, and, though not naturally sterile, is rendered repulsive from its extreme aridity. The creeks are most of them mere beds of sand, entirely destitute of water, except at brief intervals when their percolated currents are shown in brackish pools, soon again to insume themselves in the willing earth.

There is rarely a tree in the whole distance, which circumstance adds much to the cheerlessness of its solitude. A general scarcity of rock also prevails, and the only specimens I noticed were exhibited in the banks of watercourses, and consisted of slate and fossiliferous limestone (formed of an extinct species of shell-fish, principally bivalves.) The soil in many places might be called fertile, and, were it not for lack of moisture, could be turned to good account for agricultural purposes. The landscape is generally undulating, disclosing at the north and northeast broken ridges of hills, which were now and then surmounted by scattering pines.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

The buffalo having left the vicinity soon after our arrival, we again moved camp eight or ten miles, to Beaver creek, an affluent of the Platte, where we remained for fifteen or twenty days.

Our stay at this place was one continued series of feasting, as we lacked nothing of all the varied delicacies procurable in a country abounding with game. But one item in our entertainment was indeed a novelty, —viz. crows' eggs. Almost every tree and bush, skirting the creek at intervals for miles above and below, had been appropriated to the use of the countless swarms of crows that populated the surrounding prairie. Sometimes four or five nests of these birds might be seen upon a single tree. On two or three occasions I obtained from six to ten dozen of eggs in the course of an hour. These, whether boiled, roasted, or fried, were found quite an acceptable addition to our bill of daily fare.

The climate of this region is evidently less mild, and its warm season much shorter, than is common to other places in the same latitude.

It was now the middle of June, and yet the wild fruits, currants, cherries, and plums, were only in blossom, and all other kinds of vegetation assumed the appearance of recent spring. Indeed, the day succeeding our arrival, snow fell to a depth of three or four inches, and remained upon the ground for several hours. Whether such occurrences are common, I have not the necessary information to decide.

In our excursions after game, the remains of an Indian fort had been discovered in a small grove, a short distance below camp, which received the honor of our subsequent occupancy. A few hours devoted to repairs rendered it a complete shelter from either wind or rain; and, still farther to enhance its conveniences, we succeeded in digging a small well adjoining the entrance, thus securing a most welcome supply of cool water. Here revelling in the midst of plenty, with nothing to think of or care for but our own personal comforts, we had no mind to exchange our situation for the fatigues of war and the drudgery of camp-duty.

Several incidents also occurred in the interim to enliven the scene and relieve its otherwise dull monotony. On one occasion a strolling wolf, venturing too near camp, received the contents of my rifle and instantly fell. Supposing the shot to be a fatal one, I advanced and seized him by the tail with the design of taking his skin.

But the creature, having been only stunned by a neck wound, now revived in full strength, and, enraged at his rough treatment, called into exercise the utmost tension of his energies to afford a bitter sample of the fierceness of wolfine vengeance. Here was a quandary—to relinquish the hold would have been to invite a doubtful collision — to allow him an instant's time for turning upon me, must have proved equally perilous; the only resource was to retain my grasp with twofold energy, and run backwards as fast as possible, which I did, pulling the struggling beast after me, — now twisting this way, now that way, in vain effort to attack, and growling and snapping his teeth with all the ferocity of his savage nature.

What would have been the result of this strange adventure, it is hard to tell, were it not that one of my camp-mates hastened to the rescue, and with a club despatched his wolfship. At any rate I had no curiosity to submit the question to a further test.

With us the practice of early rising was remembered only as the whim of visionary theorists, and this important item in the routine of daily duties, was often postponed to an unreasonable hour. Once we came very near paying dearly for the indulgence. The sun had told more than two hours of his daily round, and only one of our number had doffed the drowsiness of sleep and betaken

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

himself to an eminence to scan the surrounding solitude. Here the first object that met his gaze was a war-party of mounted savages, advancing upon him at full charge.

He had scarcely time to reach camp and give the alarm, when the whole troop came pouring in upon all sides with the rapidity of a torrent, making the air resound with their terrific yells. Seizing my arms I was the first to meet the assailants, and, levelling at them, made signs that an advance would be at their peril. Upon this they recoiled, and shouted at the top of their voices, "Amigos! Arapahos!" accompanied with the signs of friendship and their nation.

Satisfied of the truth of these declarations, we permitted them to come up, and, in a few minutes, all were quietly seated, and the "pipe" performing its tireless rounds.

Our boldness in daring to offer a resistance greatly excited their surprise, and the more so, as we had only four rifles, while they had many arrows, and were more than ten times our number. An old chief, after listening to their remarks, replied:

"My people must not deceive themselves. The pale faces are brave and kill their enemies a long way off. Those" said he, pointing to a brace of pistols, "would have laid many of my warriors low, after the medicine-irons had spoken their death-words. The Great Spirit has taught the pale-face how to fight."

Our visitors had at first supposed us a war-party of Pawnees, and came with the full design of securing a scalp-dance. Had they caught us napping, without doubt our own lives would have been substituted for those of their enemies.

In a few hours the motley crew again resumed their course, and left us to the undisturbed enjoyment of our sequestered retreat, thankful indeed to be free from their presence.

In addition to the howling of wild beasts and the hooting of prairie-owls by night, the locality afforded other music to sooth the hours of slumber. A bird of unknown species had built her nest in the boughs of a cottonwood that expanded directly over our heads, and devoted her maternal care to the sustenance of her fledglings. But her unwearied industry by day less commanded our admiration than the sweet melody of her nocturnal warblings.

Soon as the "pointers" told the "noon of night," her song commenced in all its variations, like the soft breathings of an angel's lute, nor ceased till the gray of morning broke from the empurpled east. Often have I listened half dreamingly to the bewitching notes that mingled with the harsh discord of the wilderness around me, and fancied myself guarded by celestial spirits against the assaults of harm.

With such kindly thoughts, who might not mount in his slumbers on the wings of imagination, and step from star, as 'mid the changeless realms of bliss.

pass. Salt lakes. Astonishing scope of vision. The black-tailed deer. Peculiarity in horses. Remarkable natural fortification. Return. Travelling by guess.

ONE day, on leaving camp in quest of game, I carelessly travelled till near sundown, without success. The hills, hollows, and ravines which intersected my way and continually changed its bearings, so completely bewildered me, that, as night shut down upon the cheerless expanse, I found myself far away from any suitable camping-place, and alone amid the realms of loneliness. Thus conditioned, I was forced to submit to circumstances, and accordingly accepted of such lodgings as nature afforded.

My lonely and dangerous situation, with the thrilling sensations experienced during the interval, gave birth to the following lines, which, by aid of a rude pencil formed from a bullet, were next morning traced upon a small scrap of paper. I submit them to the reader, not that they possess any intrinsic merit, but because they will enable him to derive some faint idea of the terrific wildness and beauty of the surrounding scenes.

NIGHT ON THE PRAIRIE.

I.

The sable garb of darkness clothes the land,  
And twilight's sickly hue bids day farewell;  
The prairie's vast expanse on either hand  
Marks solitude's domain. O'er hill and dell,  
And wide-extended plain, I cast my eyes,  
To view, perchance, some grove or fav'ring stream,  
And hie me thitherward while yet the gleam  
Of day's fast-failing light bepaints the skies  
With tints scarce seen, —for there I'd seek repose,  
But for them look in vain; so here, alone,  
Wearied and worn, I sit me down and close  
My tiresome wanderings, —nor bate to own  
The chilling thrill of terror o'er me creeps,  
And from my mind all thoughts of slumber keeps!

II.

Oh, Solitude! First-born of Night! 'Tis here  
Thy reign is undisputed! Here no noise  
Of human feet doth greet thy list'ning ear,  
Save chance as mine, or savage want enjoys  
His arms at chase or rage at bloody war!  
Here haunts the beast of prey. The starved wolfs howl  
In ceaseless concert swells! The midnight owl  
Joins in his dolesome lay;—the raven's caw  
Loud mingles with the panther's yell, —and then  
The hoarse-toned bison grunts his bass, and makes  
Thy dismal realm more drear to lonely men.  
Æolus here his fresh-form'd wind awakes,

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

And marks its speed unchecked; whose whistling moan  
O'er thy domain makes loneliness more lone!

III.

My thoughts, now kindred to the scene, arise  
In hurried flight, whose hideous aspects wake,  
Full quick, imagination's sleepless eyes,  
That conjure up such frightful forms as shake  
The boldest hearts with dread. In every herb  
Of prouder growth, —whose prongs the sweeping blast  
Hath taught to move, —some foe of savage cast  
Appears and threatens ill, as if to curb  
The onward progress of the god of sleep:  
(For here man sees his fellow man, unknown,  
As foe; and, arm'd for fight, he minds to keep  
The strictest watch, lest, from advantage shown,  
He tempt unlucky war.) So hurriedly  
I snatch my arms to fight each form I see!

IV.

But, why thus fear? Give place, ye visions dread!  
Ye thoughts of boding danger, drearisome,  
Cease to oppress! Is not the path I tread  
So by Omniscience mark'd, that perils come  
Not near, to even hurt a single hair,  
Without His wise permit? Are not my days  
Securely meted out, and all my ways  
So guarded, too, that thronging dangers share  
No part in harm's advance or death's progress  
Till all are told? And can my vigilance,  
Father'd by childish fear, make more or less  
The given sum? Cheerly, draw courage thence,  
My cowering heart; feel safety here. Give room  
To other thoughts, and chase these clouds of gloom!

V.

Thus, banished fear, at reason's bid, I cast  
My willing gaze toward heaven. In every star  
That forms the sparkling crown of night, though fast  
In regions of unbounded space, so far  
As scarcely seen by mortal ken, —appears  
Some guardian angel, robed in light, to keep  
His ceaseless vigils o'er my couch of sleep,

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Lest in my slumbering moments danger near  
To cut the thread of life, and thus undo  
The purposes of God. The silver moon  
Sheds forth her radiance unconfined, and through  
The desert wild to flower and herb gives boon,  
And decks each blade with dewy pearls, and pours  
Them on the earth, to cheer my waking hours.

VI.

Nature's vast caravansera, above,  
Below, around, on either side, begirt  
With midnight's varied splendors, scenes I love,  
Becomes enchantment's self, while zephyrs sport  
The fragrance of the wild-flowers multiform,  
And greet my nostrils with their rich perfume,  
To please my senses. Thus my thoughts resume  
Their wonted course, and hush the passing storm  
Of fear. Alone! Not lonely I. For here  
E'en loneliness companion proves to me,  
And solitude is company.  
My ear Drinks music from these savage sounds; I see  
Amusements in these forms; my heart's as strong,  
And easy beats, as 'mid a city's throng!

VII.

To me thrice welcome then, ye prairies wild!  
Midnight, and gloom, and solitude, ye please  
My restless fancy! Welcome then your child!  
For here's my home. And so, with mind at ease,  
I will embrace my mother earth, and court  
The soothing power of sleep. The clear blue sky  
My canopy, the ground my bed, I lie  
Encurtain'd by the pale moon-beams, which sport  
Beside my lowly couch, and light the dew  
With mimic diamonds' glow—while flowers around  
My pillow'd head their willing incense strew,  
And the sweet dreaming bird anon doth sound  
Some isolated note of melody!  
Thus chamber'd here, may not kings envy me?

My return to camp the next day served to quiet the apprehensions that had been experienced on my account during the interim.

This excursion took me some fifteen miles eastward, to the head waters of the Kansas river. The

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

country in that neighborhood wore a barren aspect, and was generally sandy and undulating. I noticed a kind of mineral substance, of a jetty lustrous appearance, which I took to be black-lead. I also remarked certain indications of gold, but whether this metal actually exists here I am unable to say; yet true it is, the surface affords large quantities of "gold blossom," and it is said also, that gold has been found in these parts.

The region lying upon the head branches of the Kansas river is considered very dangerous, —it being the war-ground of the Pawnees, Caws, Chyennes, Sioux, and Arapahos, —and hence comparatively little is known of its character and resources. It is represented as quite sandy and sterile back from the watercourses, and in many other places but little better than a desert waste. The gold story alluded to in the preceding paragraph came to me from various sources, in the following shape:

Some twenty years since, while the Arapahos were at hostilities with the whites, a war-party of that tribe advanced against the Pawnees, led on by a noted chief, called "Whirlwind." Three only of them had guns, and they soon expended their stock of bullets in shooting small game, there being no buffalo upon the route. Finally, left without any thing to eat, they became discouraged, and a council was held to discuss the expediency of relinquishing the expedition.

Having seated themselves upon a small eminence, the question of return was debated with great earnestness, —a majority being in the affirmative. But the head chief, "Whirlwind," bringing all his eloquence to bear upon the opposite side, at last obtained their consent to proceed.

During the conference, several small pieces of a glittering yellow substance were discovered upon the surface, which proved soft and easily worked into any shape. From these a supply of bullets was procured, and, resuming their course, they soon after met the Pawnees, with whom they fought, and were victorious, —every bullet discharged killing an enemy.

This victory was so signal and complete, that the superstitious warriors attributed it solely to the medicine-doings of the yellow balls, —three or four of which were finally buried with the chief at his death. The only white man permitted to see them, describes them as having been precisely the color of brass, —very soft and heavy. Admitting that the story is true,[54] there are doubtless very rich mines of gold in this vicinity, that being the only metal assimilating brass in color.

Previous to our leaving Beaver creek, an incident occurred showing the remarkable tenacity of life peculiar to buffalo.

An old bull appeared in the distance, travelling at a rapid rate almost directly towards camp.

Being in want of a re-supply of fresh meat, I seized my rifle and advanced to intercept him. Owing to the unfavorable state of the wind, I was forced to make so long a shot that the ball fell some two feet below the mark, and struck near the knee-joint of the fore leg, shivering it to pieces.

Still, however, the animal kept on, with scarcely diminished speed, and held me a chase of three miles or more before I could overtake him to finish the work. At length he was dispatched; but, on butchering him, I was surprised to find a third bullet-wound, apparently three or four days old.

The ball was full one-half the size of my own, and, incredible as it may seem, had penetrated the butt of the buffalo's heart.

I could scarcely believe my own eyes, —yet such was the fact. The creature had survived a heart-shot for days, and then, with a broken leg, had held me a chase of three miles.

Our final adventure at this camp, was with a party of Indians. Having discovered the latter, early one morning, and supposing them Pawnees, we prepared for an encounter. The objects of our ap-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

prehension, mistaking us for the same, continued maneuvering upon the adjoining hills the entire day, in such a manner as to lead us to conclude the whole country was filled with Indians.

Toward sundown, after vainly endeavoring to procure an attendant, I armed myself and proceeded alone to the spot where they had been last seen, determined to discover, if possible, the nature and extent of the danger that awaited us. Here, a single warrior advanced to meet me, giving signs of friendship and of his nation. In answer to the inquiry, why his party had acted so strangely, he said they had thought us enemies, and were afraid.

He accompanied me to camp, and, soon after his companions came up, but, instead of the powerful war-party of Pawnees awaiting to slaughter us by night, as our imaginations had depicted, and their cunning movements led us to infer, they proved but three Arapaho warriors, three squaws and two children. Our surprise at this laughable denouement was only equalled by their own. They announced themselves in search of the Arapaho village, and expressed much pleasure at meeting with the whites. Our visitors having passed the night with us, the next morning we yielded to their solicitations, and set out with them to the village, some eighteen miles distant, in a northwest direction.

About noon we arrived at the place, and found six or seven hundred lodges of Arapahos, Chyennes, and Sioux, encamped in a large valley skirting a small affluent of Beaver creek.

The village, being prepared to move, in a few moments succeeding our arrival, was en route for the Platte river. The spectacle was novel and imposing. Lodge followed lodge in successive order, —forming vast processions for miles in length. Squaws, children, horses, and dogs, mingling in promiscuous throng, covered the landscape in every direction, and gave it the aspect of one dense mass of life and animation.

Here a troop of gorgeously dressed and gaily painted damsels, all radiant with smiles and flaunting in conscious beauty, bestriding richly caparisoned horses, excited the admiration and commanded the homage of gallantry; there a cavalcade of young warriors, bedaubed with fantastic colors — black, red, white, blue, or yellow, in strict accordance with savage taste — habited in their nicest attire, swept proudly along, chanting their war-deeds in measured accents to the deep-toned drum; and then another band of pompous horsemen scoured the spreading plain, in eager race to test the speed of their foaming chargers; and, yet again, a vast army of mounted squaws, armed with the implements for root-digging, spread far and wide in search of the varied products of the prairie; then, among the moving mass, passed slowly along the travées, conveying the aged, infirm, and helpless, screened from the heat of a summer's sun by awnings of skins, that beshaded their cradled occupants, —while immense trains of pack-animals, heavily laden with provisions and camp equipage, as they crowded amid the jogging multitudes, united to complete the picture of a travelling Indian village.

Yielding to the request of our new friends, we proceeded with them ten or twelve miles further and passed the night in their lodge.

Our route from Beaver creek led over a tumulous country, interspersed with valleys of a rich soil, and prolific in rank vegetation. The side-hills afforded large quantities of pomme blanc, and the prairies and bottoms a splendid array of choice floral beauties.

The creeks disclosed wide, sandy beds, often dry and skirted by broad valleys which were passably well timbered. The principal ridges were not high, but surmounted by dense pine forests, with pleasant openings, smiling in all the loveliness of spring.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Notwithstanding the scanty volumes of the streams, the country presents to the traveller the appearance of being well watered by frequent rains, while ever and anon a gurgling fountain strikes upon his ear with its soft music.

Stratified rock is usually rare; the only species noticed were limestone and sandstone. I remarked a great abundance of silex and hornblend, with some curious specimens of ligneous petrifications. The only indication of minerals observable, was that of iron and coal.

The entire section from Beaver to Cherry creek possesses nearly the same geological and mineralogical character. Its indigenous productions are such as are common to the mountain prairies, and are found in equal abundance;— a remark which will also apply to its game.

As a whole, perhaps two-thirds of it might be cultivated, to some extent, were it not for unseasonable frosts; and all of it might be turned to good account for stock-raising.

The next day we bade farewell to our Indian friends, (leaving behind us one of our number, who chose to accompany them to the Fort,) and again launched forth upon the broad expanse. Bearing a course west-northwest, about noon of the second day we struck Cherry creek, some thirty-five or forty miles above its mouth;— thence, crossing the lofty plateaux, on the west, with two or three intervening creeks, toward evening of the third day we reached the Platte river at its exit from the mountains.

Our intention was to enter the mountains and spend a few weeks in deer-hunting; but, the river proving impassable, on account of high water, we were compelled to forego that purpose for the present, and accordingly started for Fort Lancaster to procure a re-supply of ammunition.

Continuing down the Platte, on the third day we reached our destination, and were kindly received, though humorously rallied upon our way-worn and forlorn appearance. Nor were we backward to join the laugh, occasionally retorting, when the jocos current set too strong against us, "Well, what do you know about war?— You've never been to Texas!"

The 6th of July dated our arrival, —the glorious fourth having been spent in plodding over a broad prairie, on foot, with rifles upon our shoulders and packs upon our backs. By comparison, I concluded my fortune had slightly improved since July 4th of the preceding year, which found me in a cheerless prairie, on foot, packing my bed, almost naked, without knife or gun, or having had a mouthful to eat for two days previous.

Capt. Fremont, elsewhere spoken of, had just arrived from the States on an expedition to Oregon, ordered by the United States Government, and brought intelligence of an existing armistice between Mexico and Texas. Accompanying his party was one whom I recognized as an old acquaintance of other lands, the first and only one I had the pleasure of meeting with during my long sojourn in the country.

July 11th, witnessed the death of an old mountaineer at Fort Lancaster, who came to his end from the effects of a pistol wound received in a drunken frolic on the 4th. The ball entered the back about two inches below the heart, severely fracturing the vertebrae and nearly severing the spinal marrow. He lived just one week succeeding the occurrence, but meanwhile suffered more than the agonies of death. His body below the wound was entirely devoid of feeling or use from the first, and, as death preyed upon him by piecemeal, he would often implore us with most piteous and heart-melting appeals kindly to ease his miseries by hastening his end. The murderer was left at large, and in two or three weeks subsequent accompanied Capt. Fremont to Oregon.

The above is the most remarkable exhibition of human tenacity to life that ever came under my

---

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

personal observation; I have, however, heard of instances far more extraordinary. The case of Ex-Governor Boggs, of Mo., in '41, who recovered from the effects of a wound, that not only fractured his skull, but actually emitted particles of the brain, is doubtless well known; yet another of like nature, still more wonderful in its details, occurred to an old French trapper, named Augustine Clermont, with whom I am well acquainted.

Clermont, in an affray with a Spaniard, had been prostrated by a blow that fractured his skull in the occiput. His antagonist then fell upon him and thrust the point of a knife into the brain repeatedly, and finally left him for dead.

Soon after, he was found by his friends in this deplorable situation, who, on perceiving he yet breathed, kindly dressed his wounds, and bestowed upon him the attention his situation demanded, and in a short time he became perfectly sound and hearty.

July 13th. The Indian village before spoken of, on its way in quest of buffalo, visited the Fort, and, as is customary on such occasions, the squaws and children made themselves busy in appropriating to their own use such little articles as came within their reach. I was minus a blanket through their artfulness, and several other individuals suffered equally with myself.

Some six weeks afterward they returned, and again called at the Fort, when, recognizing my stolen blanket in the possession of a young warrior, I immediately took it from him. At first he stoutly resisted, and the more so as several hundred of his tribe were present, —but, all to no purpose; and he at length yielded, as he saw me on the point of enforcing my claims to it in a more feeling way, such as would doubtless have endangered his own personal safety.

I remained at Fort Lancaster for two months or more; and the several incidents which occurred in the interim may be thus briefly summed up:

The first in order was an outrage of the Chyennes, in cruelly murdering the young man with whom I had passed a portion of the preceding winter upon Vasques' creek

The next was the appearance of a small party of emigrants, on their return to the States, —having become displeased with the management of the company then en route for Oregon.

A third was the arrival of one of the four men who had left for the Cimaron at the first disbanding of the Texan volunteers, and were subsequently taken prisoners by the Mexicans.

After being incarcerated at Santa Fe for two or three weeks, they were finally liberated, with the exception of one, who had died in the interval. Toward the last of their imprisonment, they were treated kindly, owing to the exemplary conduct of the Texans, as spoken of elsewhere.

The fellow thus introduced, responding to the name of "Old Bob," made himself quite conspicuous by his subsequent conduct. The gentleman in charge at Fort Lancaster, pitying his deplorable condition, kindly afforded him employment at a liberal compensation, and Old Bob set to work faithfully. In the course of twelve or fifteen days, however, he improved the opportunity of stealing a rifle and ammunition, with which he absconded and set his face for the mountains.

All that he now lacked to complete his equipment was a good horse, which deficiency seemed luckily made up by the discovery of one recently strayed from the Indians. "I must have him," said Bob. So, carelessly dropping his rifle and pack, he commenced a fruitless effort to capture the erratic steed.

For a while his success seemed almost certain; but, after a tedious trial for several hours, he was finally obliged to relinquish the attempt, and turned to recover his rifle and pack. Alas, for Old Bob! here an unlooked-for calamity presented itself—they were not to be found!

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Vainly it was that he searched diligently for four successive days, enduring in the mean time all the pangs of hunger and the goadings of a guilty conscience — his scrutiny gave not the slightest indication of their whereabouts. “Truly, the way of transgressors is hard!” thought Bob, as with reluctance he abandoned all,[55] and despairingly set his face to go — he knew not whither! — half-starved and half-naked, with neither pistol, gun, nor butcher-knife, for his defence in a dangerous country; nor one morsel to renew his strength by day, nor even a solitary rag to screen him from the chill air of night!

The next place at which Old Bob showed himself was at an Indian lodge, thither driven by the impulse of hunger—having starved for more than five successive days. Here he procured a temporary supply from the compassionate inmates, who also kindly gave him a robe.

Nothing further was heard of him for eight or ten days, and the generally conceded opinion was, that he had either starved to death or had been killed by savages, when an express from the Arkansas brought intelligence of having encountered him by the way.

The luckless wight, after being without eating for five or six more days, had been robbed by the Apache Indians of everything about him except a pair of ragged pantaloons, and barely escaped from them with his life! The express furnished him with a quantity of provisions, a pistol, robe, and ammunition, when, bidding him farewell, the two resumed their respective courses.

From this date, his story is briefly told. Pursuing his way toward the Arkansas, he soon after met a small party of Mexican traders, and, creeping upon their encampment at night, helped himself to a couple of horses. “It’s a straight road that has no turns,” muttered Old Bob, as he mounted one of them and returned to the Platte, where he bartered the other for a rifle and ammunition.

For a brief interval he seemed to prosper in his iniquity, but ere long the tables were again turned upon him, and he experienced the literal fulfillment of that other declaration of holy writ which says, “The wicked shall not go unpunished.”

Elated by his recent success, he again started for the Arkansas, with the intent of renewing his depredations, accompanied by two other adventurers whom he had persuaded to become the partners of his criminal enterprise; but, before proceeding far, he fell in with the same company of Mexican traders from whom he had stolen the horses. They immediately recognized him and the animal he rode, and took possession of the latter. As for Old Bob, notwithstanding his protestations of innocence and stout resistance, they stripped him of gun, pistol, and ammunition —gave him a severe flogging, and again turned him adrift upon the prairie, destitute of everything except the baseness of his own heart!

“Well, Bob,” said one of his comrades; “this business appears not so profitable, after all; though you, doubtless, have become quite warmed in its pursuit. For my own part I shall quit it before I begin, and return to the States.”

“And I, too;” chimed in the other.

“The fact is,” replied Bob, “this country is getting rather too hot for me, and I’ll bear you company! What d’ye say to that?” “Just as you like,” responded his two companions; “that is, provided you wont attempt the grab game on us.”

“Come, boys; now that’s too bad! Oh, you may rest assured I will never repay a kindness with ingratitude, neither will I abuse the confidence of friends.”

Thus arranged, the three started on their way. Coming upon a camp of hunters, a few miles below Bent’s Fort, they concluded to remain a short time in order to procure a supply of meat for their

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

journey. Here our slippery customer borrowed a horse and rifle of his comrade, pretendedly for a buffalo hunt, and under a most solemn pledge of returning them; however, on finding himself again armed and mounted, he was not slow to improve the opportunity of bidding an abrupt farewell to the unsuspecting dupe, and resumed his course toward the States.

How he eventually succeeded through this last shift, I am unable to say; yet, the brief story of his adventures thus far is sufficient to prove, that iniquity sometimes, even in this life, receives a severe reward.

Toward the last of August the Arapahos and Chyennes held a grand convocation, in the vicinity of Fort Lancaster, for the purpose of medicine-making; or, in other words, paying their united devotions to the Great Spirit. The gathering might with propriety have been termed a "Protracted Meeting," as it continued for three successive days and nights, exclusive of the time occupied in preliminary arrangements.

Besides the two tribes above named, a large number of Sioux, Cumanches, Blackfeet, and Riccarees, were present, swelling the concourse to nearly a thousand lodges.

The regular participants in the ceremonies of the occasion had previously prepared themselves by a fast of three days, attended with frequent washings and purifications. A large lodge had been erected in the form of an amphitheatre, as described upon a former page, with a pole in its centre pointing to the zenith, near the top of which was affixed the head of a buffalo. Here the throng assembled, with up-turned eyes, encircling it around in solemn dance, accompanied by a low musical chant, as they addressed the "Big Medicine". This strange worship was maintained day and night, without intermission, —the devotees meanwhile neither eating nor drinking. So exhausted were they, that at times, they fell from effects of weakness and fatigue.

Some of their performances savored much of Hindoo origin. Those wishing to be thought particularly good, attested their piety by cutting themselves in various places, —and, yet others, by drawing after them the heads of buffalo fastened upon hooks inserted in their own flesh, As the exercises were about to close, an offering of blankets, robes, beads, tobacco, &c., was made to the Good Spirit, after which the crowd dispersed.

Their object appeared to be a threefold one, viz: to do penance for sin, to thank the Author of Good for past favors, and to implore a continuance of His beneficence for the future.

The head around which they danced was evidently not the object of their veneration, but was placed there simply to remind them that, as the buffalo constituted their principal sustenance, the Good Being should be more especially adored on its account.

A number of articles having disappeared from the Fort rather mysteriously, suspicion was fastened upon an Indian for appropriating them in the usual way. He was accordingly charged with the theft, but strongly affirmed his innocence, and, to place the matter beyond doubt, took an oath in attestation of his words. The ceremony observed was as follows:

Taking his bow, he selected the stoutest of his arrows, and, holding it in his right hand, pointed successively to the sky, the ground, and his own heart; then, kissing the bow, he again protested his innocence. This being considered satisfactory, he was honorably acquitted of the charge.

An Indian is rarely known either to violate his oath or to swear falsely, as in such a case he would be looked upon as being irrecoverably exposed to the immediate wrath of heaven and the vengeance of man. The import of this ceremony may be expressed in these words: "Thou who dwellest in the air and earth, receive from me this arrow, and with this bow plunge it to my heart, if I

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

do not speak the truth!" I leave the reader to judge in regard to the binding nature of its obligations.

Sept. 25th. Having purchased a horse for the purpose, I proceeded to the mountains on a hunting excursion, where, unattended by any one, I had a further opportunity of testing the varied sweets of solitude.

My course lay directly west some eight miles to Soublet's creek, a considerable affluent of the Platte, heading at the base of Long's Peak, thence continuing up its right hand branch, I penetrated into the mountains, on the second day, a distance of several miles and camped. One of the passes to Grand river, which is generally thought much the nearest route, leads up this branch. The interval from the 27th to the 30th was devoted to exploration, and I ascended the main chain of the mountains left of Long's Peak. The usual height of this ridge is about ten thousand feet, upon which the stern chambers of deathless winter are repeatedly exposed to the eye.

The mountains and creeks were well timbered, —the former with pine, cedar, and balsam, and the latter with cottonwood, aspen, and box-elder. Along the watercourses and intermingled with the rude array of hills and rocks, were many beautiful valleys, prairillons, and plateaux, all clothed with rank vegetation; and, indeed, the soil of the entire section appeared tolerably fertile.

The prevailing rock of this region is feldspathic granite, gneiss, micaceous sandstone, and slate. These different classifications (here strown about in confused piles, and there again towering in massive walls of immense altitude) presented an impressively grand appearance, and united to render the scenery one of varied sublimity and magnificence.

Sept. 30th. In the afternoon I raised camp and proceeded for ten or twelve miles, through a broad opening between two mountain ridges, bearing a northwesterly direction, to a large valley skirting a tributary of Thompson's creek, where, finding an abundance of deer, I passed the interval till my return to the Fort.

Upon all the principal streams were large quantities of cherries and plums, which proved quite acceptable. The cherry (*cerasus virginiana*) indigenous to this country is quite similar in appearance to our common wild cherry, though it is generally larger and more pleasantly tasted. It grows upon a small bush, and yields in lavish profusion.

Three different varieties of plums are common to these parts, but are so similar in most respects to the wild species of that fruit found in our Southern and Western States, that I shall not take the trouble to describe them.

The locality of my encampment presented numerous and varied attractions. It seemed, indeed, like a concentration of beautiful lateral valleys, intersected by meandering watercourses, ridged by lofty ledges of precipitous rock, and hemmed in upon the west by vast piles of mountains climbing beyond the clouds, and upon the north, south, and east, by sharp lines of hills that skirted the prairie; while occasional openings, like gateways, pointed to the far-spreading domains of silence and loneliness.

Easterly a wall of red sandstone and slate extended for miles northward and southward, whose counterscarp spread to view a broad and gentle declivity, decked with pines and luxuriant herbage, at the foot of which a lake of several miles in circumference occupies the centre of a basin-like valley, bounded in every direction by verdant hills, that smile upon the bright gem embosomed among them.

This valley is five or six miles in diameter, and possesses a soil well adapted to cultivation. It also

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

affords every variety of game, while the lake is completely crowded with geese, brants, ducks, and gulls, to an extent seldom witnessed. What a charming retreat for some one of the world-hating literati! He might here hold daily converse with himself, Nature, and his God, far removed from the annoyance of man.

Four miles further north the traveller is brought to one of the main branches of Thompson's creek, up which is another pass to the waters of Grand river.

This stream traces its way through a fertile valley, two or three miles broad, stretching from the prairie almost to the base of Long's Peak, —a distance of nearly thirty miles. The valley is well timbered and admirably adapted to stock-raising.

The hills and mountains, enclosing it upon each side are also studded with forests of pine and cedar, while the entire section is stored with all of the usual varieties of game known to contiguous regions, in addition to its rich treasures of fruits, flowers and grasses.

In surveying, from a commanding summit, the vast prairie skirting the mountain range upon the east, several small lakes are discernible at different points. The water of these is usually brackish, and their shores, whitened by constant saline efflorescence, glisten in the sun's rays, and present a striking contrast with the surrounding verdure.

The mind is perfectly astounded at the immense expanse thus brought within the scope of vision. In a clear day, objects favorably situated no larger than an ox or a horse, may be seen at a distance of twenty miles, and the timber of creeks even for sixty or seventy miles. Here the beholder may scale beyond the clouds far heavenward, and gaze upon a world at his feet!

My hunting was confined principally to black-tailed deer. These animals are much larger than others of the genus cervi, and their flesh is of a superior flavor. Their habits are similar to those of the wild sheep, leading them constantly to seek the regions of spring; in the winter, descending to the valleys, and in the summer, keeping pace with the melting snows upon the mountain-sides.

The extremity of their vertebræ is shorter than that of other species of the deer family, and has upon it a small cluster of coarse, jetty hair, from which the animal derives its name. Their hair is usually of a dark brown color, coarse and brittle, with the exception of a strip of dirty white upon the hams. Their ears are very large and long, —quite similar to those of a mule; in other respects, however, they conform to the peculiarities of the common deer.

I was quite successful with my rifle, and, by degrees, became much attached to the versatile life of lordly independence consociate with the loneliness of my situation. My horse, too, seemed to have forgotten all the allurements of former scenes, and presumed at no time to wander many yards from camp, —a peculiarity in this noble animal I have frequently had occasion to remark. When thus alone, a horse will substitute the society of man for that of his own species, and, as if conscious of surrounding danger, will seldom leave the vicinity of a camp for a long distance.

Oct. 29th, I started for the Fort. It had been my intention to visit a remarkable natural fortification upon one of the affluents of Crow creek, but, ammunition failing, I was reluctantly compelled to abandon it.

This fortress is said to be complete in nearly all its parts, and capable of garrisoning a thousand men, yet even one or two hundred might defend it from the repeated assaults of vast armies, and, with a small amount of labor, might render it impregnable.

Its walls are huge masses of solid rock, one or two hundred feet in height, —apparently strata planted on end, —enclosing an area of several acres, unenterable except at limited openings.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

According to the glowing descriptions of it given by hunters, it must be an object well worthy the attention of the curious.

At night, I encamped at the base of the mountains, upon the right hand fork of Soublet's creek, and the next day reached the Fort.

The last ten or twelve miles of the route (leading over an unbroken prairie) were travelled during a heavy fall of snow, which rendered the air so dark it was impossible to see a dozen yards in advance. But what added still more to the uncertainty of my course was the frequent variance of the wind, changing the position of the grass, and otherwise increasing the constant liability to misjudge. Notwithstanding these accumulated difficulties, I struck the Platte river only half a mile below the intended point.

THE different trading companies had just arrived from the States, bringing their winter stock of goods, and, what was still more acceptable to me, a bundle of newspapers. Every item of intelligence contained in the latter was greedily devoured, but what afforded me no little amusement was the palpable falsity and ignorance their editors exhibited in relation to matters of this country. For instance, in giving the particulars of the murder of Charvis, a Mexican trader, which occurred in March, 1843, the crime was represented as having been committed near the Little Arkansas, by a party of Texans on their way to join Col. Warfield, who was then encamped in that vicinity with forty men! whereas, at that time Col. Warfield had only nine men with him, and was at least three hundred miles from the Little Arkansas; and further, the murderers of Charvis were not Texans! Subsequently, an article in another paper came under my observation referring to a statement made to the National Institute, by an officer of the United States Dragoons, purporting to give a description of the buffalo grass common to the grand prairie. This grass was represented as growing six or eight inches high, and as being abundant in the mountains, particularly of New Mexico, where (if I rightly remember) it was said it remained green the entire winter. The truth of the matter is, buffalo grass very rarely exceeds two and never attains four inches in height, —is not found in the mountains at all, so far as my observation has extended, and is green only about one month in the year!

By the way, speaking of grass reminds me of a remarkable characteristic in some varieties indig-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

enous to this country, and which will afford matter of speculation to the inquiring mind. The blade, killed by the frost of winter, is resuscitated in the spring and gradually becomes green from the root up, without casting its stubble or emitting new shoots!

The skins obtained during my hunt found a ready sale, at prices ranging from one to three dollars each, according their to quality and condition. These articles were in great demand for the manufacture of clothing among the Fort hands, and are considered far preferable to cloth.

Nov. 10th. I again returned to the mountains, heading a small party that insisted upon bearing me company. Late in the afternoon of the second day we made camp in a valley, behind the first ridge of hills, upon the right hand fork of Soublet's creek.

An incident en route afforded some little amusement at the time. We had left the Fort without provisions, and I accordingly proceeded a short distance in advance for the purpose of killing antelope. Riding slowly on, I noticed a badger not far ahead, and dismounted to shoot him. But the creature becoming alarmed sprang for his hole, and I hastened to stop him. This I effected by tightly grasping his tail as he was in the very act of entering his burrow. In the chase my rifle had accidentally discharged itself, and here commenced a struggle between me and the badger, —I to retain my hold while I unbelted my pistol to dispatch him, and he to enforce his liberty. At length I succeeded, and a choice supper was made from his carcase, which, to all intents, was the fattest thing I ever saw.

We remained encamped at the place above named for some six weeks, and devoted the interval principally to hunting sheep, of which there were vast numbers in the neighborhood. In attestation of the monstrous horns borne by some of them, I need only mention the simple fact of my having killed three sheep while here whose horns measured nineteen inches in circumference, and nearly three feet in length.

One of our party encountered a strange looking animal in his excursions, which, from his description, must have been of the leopard family. This circumstance is the more remarkable, as leopards are rarely found except in southern latitudes. However, they are not unfrequently met with in some parts of the Cumanche country, and their skins furnish to the natives a favorite material for arrow-cases.

The only beast of prey other than wolves, encountered during the entire winter, was a solitary panther, whose extreme shyness defied all attempts to approach within shooting distance. My more lengthy rambles brought me to a large valley immured by lateral hills, that had been occupied a short time previous by a party of Indians, for the purpose of eagle-catching. As proof of their success, I counted the bodies of thirty-six eagles, lying in piles at their recent camp. These consisted of the only two varieties found in the mountains, viz: the American and bald eagle. The wing-feathers of these birds command a ready sale among the Indians, by whom they are highly prized for the empluming of arrows.

The usual mode of dressing skins, prevalent in this country among both Indians and whites, is very simple in its details and is easily practised.

It consists in removing all the fleshy particles from the pelt, and divesting it of a thin viscid substance upon the exterior, known as the "grain;" then, after permitting it to dry, it is thoroughly soaked in a liquid decoction formed from the brains of the animal and water, when it is stoutly rubbed with the hands in order to open its pores and admit the mollient properties of the fluid, —this done, the task is completed by alternate rubbings and distensions until it is completely dry

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

and soft.

In this manner a skin may be dressed in a very short time, and, on application of smoke, will not become hardened from any subsequent contact with water.

The winter-camp of a hunter of the Rocky Mountains would doubtless prove an object of interest to the unsophisticated. It is usually located in some spot sheltered by hills or rocks, for the double purpose of securing the full warmth of the sun's rays, and screening it from the notice of strolling Indians that may happen in its vicinity. Within a convenient proximity to it stands some grove, from which an abundance of dry fuel is procurable when needed; and equally close the ripplings of a watercourse salute the ear with their music.

His shantee faces a huge fire, and is formed of skins carefully extended over an arched frame-work of slender poles, which are bent in the form of a semicircle and kept to their places by inserting their extremities in the ground. Near this is his "graining block," planted aslope, for the ease of the operative in preparing his skins for the finishing process in the art of dressing; and not far removed is a stout frame, contrived from four pieces of timber, so tied together as to leave a square of sufficient dimensions for the required purpose, in which, perchance, a skin is stretched to its fullest extension, and the hardy mountaineer is busily engaged in rubbing it with a rough stone or "scraper," to fit it for the manufacture of clothing.

Facing his shantee upon the opposite side of the fire, a pole is reared upon crotches five or six feet high, across which reposes a choice selection of the dainties of his range, to wit: the "side ribs," shoulders, heads, and "rump-cuts" of deer and sheep, or the "dépouille" and "fleeces" of buffalo. The camp-fire finds busy employ in fitting for the demands of appetite such dainty bits of hissing roasts as en appolas may grace its sides, while, at brief intervals, the hearty attendant, enchaired upon the head of a mountain sheep, (whose huge horns furnish legs and arms for the convenience of sitting,) partakes of his tempting lunch.

Carefully hung in some fitting place, are seen his "riding" and "pack saddles," with his halters, "cavraces," "larrietts," "apishamores," and all the needful materiel for camp and travelling service; and, adjoining him at no great distance, his animals are allowed to graze, or, if suitable nourishment of other kind be lacking, are fed from the bark of cottonwood trees levelled for that propose; and, leaning close at hand, his rifle awaits his use, and by it his powder-horn, bullet-pouch, and tomahawk.

Thus conditioned are these lordly rangers in their mountain home, nor own that any creature of human kind can possibly enjoy life better than they.

The events of each day varied so little in their nature, that a minute notice of them would prove uninteresting to the general reader. Suffice it to say, we remained here till Jan. 1st, 1844, and then removed to Vasques creek, some thirty-five miles further south, where we encamped in the valley that formed my hunting ground of the previous winter.

The weather continued cold, and several falls of snow had occurred, covering the prairies to the depth of six or seven inches, and the mountains to the depth of many feet, though it rarely remained in the warm valleys and upon the sunny side-hills to exceed three successive hours.

Our camp, as a general thing, was quite favorably situated in regard to temperature; the day time frequently affording a spring-like warmth, though the nights were usually cold.

A peculiar species of grass among the hills retained its verdancy the entire season, as did also another variety in the valleys. Our horses and mules continued to thrive and even fatten upon the

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

nourishing herbage thus afforded by these secret chambers of spring.

Soon after our removal to Vasques' creek, three Indians, from a neighboring village, paid us a visit, who brought vague information of the proximity of the Sioux, which so excited the apprehension of my campmates relative to their own safety and that of their animals, that they were not satisfied to remain here any longer, and accordingly left for the Fort. Wishing to ascertain the true situation and locality of such suspicious neighbors, I proceeded to the Indian village for that purpose. The report proved unfounded; but yet my extra-prudential comrades were unwilling to compromise their own safety by a further hunt, and argued stoutly to persuade me to accompany them beyond the reach of danger.

In the morning, however, as all were ready to resume their journey, I mounted my horse, and, bidding them adieu, with my lead pack-animal returned to the mountains, resolved on a further test of the sweets of loneliness.

Remaining at our former camp for a week or more, I enjoying full scope for my trusty rifle among the vast quantities of deer which showed themselves in every direction; and, in one of my many excursions, penetrated to the head valley of Vasques' creek;— being belated on my return by killing a very fat deer, I was forced to pass the night among the mountains, without even a robe or a blanket to screen me from the severities of a pitiless snow-storm that fell in the mean time. Strange as it may seem, I experienced not the slightest ill effect in consequence.

On removing from my old hunting grounds, I halted at two or three different points still further south, upon small affluents of the Platte, and in the course of twenty-five days encamped a few miles below the exit of the main stream from the mountains, in an opening made by the forced passage of a large creek into the prairie through a sharp line of hills.

The scenery in the vicinity of this camp was romantic, wild, and beautiful. The ridge thus bisected was about four hundred feet in height, and opposed to the creek vast mural cliffs of limestone and sandstone that formed a gateway nearly three hundred yards wide. It ranged parallel with the mountains, two miles or more removed from them, presenting to the prairie a gentle escarpment ornamented with scattering pines and clothed at intervals with rank grasses of the preceding year's growth.

On ascending to its summit you stand at the verge of a steep precipice, two hundred or more feet in descent, —as if the earth, opened by internal convulsions, had forced the right valve of its fissure to an unnatural position, and thus formed the elevation beneath you.

This ridge extends for many miles, and overlooks a beautiful valley of remarkable fertility, fifteen miles in length by three in breadth, and intersected by numerous streams, more or less timbered, that find their way from the mountain side. The valley is divided by a continuous ridge that runs parallel with its length, which is much the same in character with, though more diminutive in size than the one previously described.

The huge masses of red granitic sandstone that tower to a surprising altitude, isolated and in almost every conceivable form and shape, add vastly to the wildness of the place. The rock is quite friable and constantly yielding to the action of the weather, while the soil of the valley is of a ruddy color and gravelly nature as will be readily inferred from the above fact.

This superface is fertilized, not only from the debris of its rocks, but by the immense beds of gypsum contained in its hill-sides, which are incessantly decomposing to enhance the general fecundity. Vegetation, of course, must attain a rank growth in such a soil, and, in favored spots, it

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

remains green the entire year.

All the different varieties of wild fruits and game indigenous to the mountains are found here in great abundance. Among the timber of the creek bottom, I noticed hazel-bushes, old acquaintances of the States, which looked like messengers from a far off country, and reminded me of other scenes.

There are few localities in the vicinity of the mountains better situated for a small settlement, or possessed of greater agricultural advantages than this.

The prairie at the base of the first range of hills is quite saline in its character; and several small lakes of brackish water, and well stocked with almost numberless water-fowl, are seen at different points, the incrustations upon whose shores assume a snowy whiteness. Notwithstanding this, it possesses a good soil and is admirably adapted to the growth of stock.

Feb. 26th. The fresh grass upon the hill-sides has assumed a thrifty appearance. Insects have begun to quit their winter retreats, and, commingling their shrill notes with the music of birds, hail the approaching spring. I was delighted to find in my rambles a cluster of wild-flowers in full bloom, shedding their fragrance to the breeze from a sweet, sunny spot among the hills, and I sat for a time to admire its new-born loveliness.

One of my horses, having been for some time wasting under the effects of a disease peculiar to those animals, died this afternoon, — a loss which subjects me to no little inconvenience. It was a noble beast, and cost me sixty dollars only four months since.

Feb. 28th. A light snow which fell yesterday night prevented me from leaving camp, but having shouldered my rifle early this morning, I ranged along the valley. The snow had entirely disappeared. Three buffalo bulls, alarmed at my approach, rushed down a steep hill-side, quartering towards me, at the height of their speed. Running to intercept them, I shot as they passed, prostrating one at the instant. So great was the impetuosity of his headway, the carcass was thrown to the very base of the descent, a distance of about three hundred yards!

The interest awakened by the picture of loveliness that greeted me two days previous, led again to the sweet spot among the rough hill-sides, — but, how changed! The cruel frost had done his death-work — the “flowers had withered and the beauty thereof had fallen away.” A tear to their memory, despite my efforts to restrain it, stole its way to the ground. Such was the fate of the first flower of spring! What a prolific theme for a melancholy fancy to brood upon, and, in its musings, catch the inspirations of poesy!

March 4th. The dull monotony of four days past has afforded nothing worthy of note. Spring is making rapid advances. To-day, however, an incident occurred, which, with suitable forethought, might have been turned to good account. Soon after leaving camp I encountered a band of sheep, and, despairing of a near approach, shot one of its number at a distance of nearly three hundred and fifty yards. The animal immediately fell, having been stunned by a neck wound, (“creased,”) but recovered as I reached it, barely affording me time to grasp one of its legs.

Here commenced a struggle, — the sheep to get free, and I to retain my hold. In the energy of its efforts I was dragged over the rocks for some two hundred yards, when, having caught its fore-leg, I succeeded in throwing it, and unthinkingly despatched it with my butcher-knife. I might have preserved it alive, as a rare and valuable addition to some zoological collection. My not having done so, I regretted the more, as it was a female and would have soon produced another of its species.

ROCKY MOUNTAIN LIFE

---

March 7th. Having discovered a large band of deer in the prairie towards the Platte, early this morning I started to approach them. Being within the required distance, I was preparing to shoot, when, on glancing to the left, a party of horsemen met my view, advancing at full gallop. Their bare heads and fluttering robes at once announced them Indians.

Here was a dilemma! My first thought was to retire to the creek and there await them, under cover of the trees, —but this would convey an impression of cowardice, a thing which uniformly receives ill treatment at the hands of Indians, while bravery commands their respect. I therefore resolved to stand my ground and fight it out, if necessary, let the consequences be what they would. So, after examining the condition of my firearms and making the suitable arrangements for an expected reencounter, I calmly awaited their approach. My design was to shoot the foremost when within proper distance, (first forbidding their advance,) then, having discharged my pistols at the two next, if not previously killed, to close in with the remainder, butcher-knife in hand. From hostile savages I expected no quarter, and was therefore determined to sell my life as dearly as possible.

A nearer approach, however, changed my gloomy apprehensions into a transport of pleasure, as I recognized two old hunters from Fort Lancaster at their head, —the first of human beings, white or Indian, that I had seen for two months. Their gratification scarcely surpassed my own, they having long since supposed me murdered by prowling savages.

Having camped the day previous about three miles distant with the party accompanying them, they were now in quest of buffalo. However, as it threatened to be unpleasant weather, an invitation to my camp was gladly accepted, where the choice stores my larder afforded, were discussed with epicurean gusto.

Yielding to their persuasions, in the afternoon I bid adieu to my lovely retreat and proceeded with them to their encampment upon the opposite side of the Platte, near the mouth of Crystal creek. Here a small party of whites from the Fort were occupied in building a boat, with which to descend the river. A Mexican woman, from Taos, the wife of an engagé, honored the scene with her presence, as did also three squaws and two Indians. Commodious shantees had been erected for the accommodation of the men, which, together with a huge fire and a proportionate pile of meat, imparted an air of comfort to everything.

Remaining here for a week or two, I then proceeded to the Fort, a distance of about forty miles. The different trading companies were already en route for the States, having left several days previous. The thoughts of other lands, and more congenial associations, were now revived in all their vividness. They filled my mind by day, and crowded my dreams by night. Eight years had already intervened since the view of a distant home and much-loved childhood scenes had last greeted me, nearly three of which had been passed amid the dangers and vicissitudes of prairie and mountain life. Yet, I was at a loss to decide what to do. The object of my excursion had not been satisfactorily accomplished. I wished to visit the Pacific and familiarize myself more perfectly with several parts of Oregon and California; this would yet require a year, or even more.

However, the subject now uppermost in my thoughts influenced the decision, and, bidding a present adieu to other plans, I made prompt arrangements for returning to the States. These were soon completed, and on the 17th of March I commenced my journey.

With the intermediate country from the Platte to Bent's Fort on the Arkansas the reader is already familiar; and, as few incidents worthy of note occurred between these two points, I shall content

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

myself with a mere passing notice and hasten with becoming brevity to a conclusion of the task in hand.

The fourth day succeeding my departure I overtook a division of the caravan of mountain traders, numbering ten men and three waggons, with which I proceeded to the Big Timber of the Arkansas, distant about two hundred miles southeast from Fort Lancaster.

The country at this place, in the immediate vicinity of the river, is fertile and well timbered, but the prairies are slightly undulating, arid, and generally unproductive. The prevailing rock is exhibited in abrupt cliffs and bold escarpments from the hill-sides and banks of watercourses, and consists of various conglomerates, with limestone and sandstone; the latter being very fine-grained and admirably suited to the preparing of edge tools. I noticed indications of coal in some parts, and the usual quantity of saline efflorescences, particularly upon the south side of the river.

On the 10th of April, the caravan being augmented by an accession of three other waggons and several men, we again resumed our journey, and, on the 28th inst., struck the Santa Fe trail near the Crossing of the Arkansas, one hundred and ten miles below the Big Timber.

The geological character of the prairie and the river bottoms is much the same as that previously described, with the exception of a general scarcity of rock; though to the southward it is very sterile in appearance, and a continuous chain of hills, that in some places are mere knobs of naked sand entirely destitute of every semblance of vegetation, plainly points out the cheerless llanos of the Great American Desert.

Below the Big Timber the rank growths of absinthe, which have been heretofore so prevalent, almost entirely disappear.

The river gradually expands to the width of nearly two miles, forming several small islands, and scatters its waters in numerous channels, over beds of quicksand, so shallow and variable as to preclude the possibility of successful navigation.

Timber becomes very scarce, —so much so, that in many places it is difficult to obtain a sufficiency even for the camp-fires of travellers. The bottoms are usually broad and fertile, but possess a highly saline character.

One of the above, known as the Big Salt Bottom, is some forty miles in length and four or five miles broad. It contains frequent streams and pools of brackish water, with spots in which vegetation entirely gives place to thick coatings of mineral salts.

Among the prairie hills I occasionally noticed extensive spreads completely covered with a singular species of blue flower in full bloom, which imparted to the otherwise forbidding prospect an air of loveliness and beauty; but, in glancing over the far-reaching landscape, I looked in vain for the floral attractions peculiar to mountain regions.

A few miles above the Crossing, an incident occurred which renewedly aroused my recollection of other lards. This was the appearance of a fine-looking coon, the first I had seen since leaving the States. These animals are strangers to the mountains, and were never before known to penetrate thus far westward.

In passing a village of Arapahos, near the Salt Bottom, we had considerable difficulty with them on account of ten or fifteen domesticated buffalo connected with the caravan. The Indians were highly exasperated, and accused the whites of stealing their buffalo. They even armed themselves to fight us, and were deterred from their purpose only by a large present of tobacco, but still threatened vengeance in case of a renewal of the offence.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Soon after this we were joined by a young Arapaho Indian, named Friday, who was desirous of visiting the States. He had formerly lived in St. Louis, where he had acquired a knowledge of the English language, and still maintains a reputation for honesty, intelligence, and sobriety. Hereafter I will have occasion to speak of him more particularly, in connection with his previous history. Resuming our course, we bore leftward from the river and struck into the high prairie. Late rains had rendered the ground muddy, and traveling consequently became slow and tedious.

The weather continued wet and disagreeable, in addition to which the unprecedented size and velocity of the streams caused us frequent detention.

The trail, for four or five days, led over a number of timberless water courses, known as "the coon creeks," which subjected us to great inconvenience in the item of fuel, as neither tree nor stick could be procured for cooking purposes, and bois de bache, the substitute of buffalo countries had become so thoroughly saturated with water it was almost impossible to ignite it.

On the 23d of April, having arrived at Pawnee Fork, we were obliged to remain some four weeks before a ford could be effected, —but the dense bands of buffalo that thronged the vicinity abated somewhat the annoyance of delay.

The country, between the "Crossing" and Pawnee Fork, varies but little in its general character from that previously described, and exhibits a favorable contrast to the forbidding wastes of naked sand upon the opposite side of the Arkansas. Although not absolutely sterile, it is not rich and suffers more from lack of moisture than any actual defect of soil. Its entire destitution of timber will prevent it from ever becoming inhabited to any great extent.

Rock of all kinds is very scarce, and almost the only specimens prevalent are found in the pebbles and diminutive fragments which lie scattered over the prairie.

During our stay we were joined by Messrs. Bent and St. Vrain, and three or four Spanish companies, which increased our caravan to fifty or more waggons and nearly one hundred men.

With the former of the companies was a Chyenne chief, (Slim Face,) on his way to Washington to solicit the U.S. Government to adopt some effectual means for the suppression of the sale of ardent spirits among his people. (A very laudable object, indeed.)

Three or four Mexican ladies and several children (being the family of one of the Spanish traders, from Chihuahua) were also included with the new accession; but the most noted personage among the whole was Old Spy Buck, the famous Shawnee war-chief, who had distinguished himself as the leader of a small band of his countrymen in connection with Kirker and the Americans employed by the governments of Santa Fe and Chihuahua to fight the Apache and Navijo Indians. The old chieftain was on his return home, venerable in age and covered with scars, which gave indubitable evidence of the place he had occupied in the hour of danger. The history of his exploits would fill a volume far more interesting in its details than those of the proudest heroes of fiction. Pawnee Fork afforded an inexhaustible supply of cat-fish, which were caught in great numbers by our party. I know of no other stream near, upon the Atlantic side of the mountains, where fish are found in any quantity or size worth naming.

This creek heads at the eastern extremity of the "Divide," in the vicinity of the Smoky Hill branch of the Kansas, and by pursuing a southern course for about one hundred and fifty miles, finds its discharge in the Arkansas. It is heavily timbered, and is known among the Indians as Otter creek, on account of the great number of those animals found upon it. The valley which skirts it is several miles broad, and very fertile, presenting a large extent of excellent land, well adapted to

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

cultivation.

While here, I became acquainted with the salutary properties of gunpowder in an interesting case. My horse, having been bitten by a rattlesnake, was cured by the following simple process: The wound being slightly creased immediately above and below, a small portion of powder was burnt upon it for four or five times in succession, which completely destroyed the effects of the poison. I am informed by those who have repeatedly tried this remedy, that it has never been known to fail when promptly applied.

On the 21st of May, we finally effected a crossing, and by the 24th had reached Walnut creek, twenty miles distant, where high water again opposed a present barrier to further progress. The bottoms were so completely flooded that we were forced to occupy an adjoining eminence for a camp.

This stream is heavily timbered, and derives its name from the abundance of black walnut found along its banks. Its valley is very similar to that of Pawnee Fork as regards size and fertility, while the country between the two is evidently possessed of a good soil.

About twelve miles below Walnut creek, near the trail, is a huge and isolated mass of coarse sandstone, known as the Pawnee Rocks. This is a noted landmark, and, like Independence Rock elsewhere spoken of, is covered with the names of passers by, en route to and from the mountains and Mexican States.

Here was a confused medley of cognomens, —English, French, Spanish, German, Irish, and Scotch, —all entered upon the register of fancied immortality; and here, too, as I glanced over the strange catalogue, a number of our company were busily engaged in carving their own; but remembering a former resolution, I declined the honor of imitating their example.

June 16th. More than three weeks have intervened since our arrival at Walnut creek, and still there is no present possibility of proceeding with the waggons. This continued delay is becoming extremely irksome, notwithstanding the countless thousands of buffalo which afford us an inexhaustible feast of “fat things.” Time is precious and I must go on; and there are several who would do likewise, but hesitate, —while frightful visions of Pawnees and Osages disturb their midnight dreams and fluster their waking thoughts. Friday, the Arapaho, asks to accompany me; our arrangements are completed, and to-morrow we leave.

June 17th. About noon, bidding adieu to vexatious hindrances, we started, and, after a short ride, forded the Arkansas above the mouth of Walnut creek, —thence, following the course of that river upon its opposite bank, we halted for the night in a broad sandy bottom, four or five miles below. The musquitoes here proved so troublesome to ourselves and animals, we were compelled to defend the former by means of a dense smoke and protect the latter with a close envelope of robes. The next morning we re-crossed the Arkansas, and, striking the waggon road soon after near Plum Butte, continued our way to Cow creek.

A few miles above this point the regular trail leaves the Arkansas upon the right, and, following a northwesterly course for about three hundred and fifty miles, strikes the States at Independence, Mo.

The interval between Walnut and Cow creeks is generally sandy and somewhat tumulous, but is different in many respects from any other section previously noticed. The hills, adjacent to the river and near the trail, are coniform and not unfrequently naked piles of dry sand, while the hollows and depressions among them afford a humid soil, coated with rank vegetation.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

Cow creek is a small stream with very steep, clayey banks, and is sparsely timbered. Its bottom is about four miles broad and of variable fertility, —doubtless susceptible of cultivation.

On resuming our course we leave the buffalo region, a transition for which we are now fully prepared. Aware that this must shortly occur, I had sent Friday in advance with my rifle, who very soon prostrated three fine bulls, affording us a stock of most excellent beef from which to make our selections.

Few Indians or whites can compete with Friday as a buffalo-hunter either in the use of the bow or rifle. I have seen him kill five of these animals at a single chase, and am informed that he has not unfrequently exceeded that number. Conscious skill, in this respect, is the occasion of some little pride to its possessor.

But it is not in hunting exploits alone that he excels; his deeds of war equally command the respect and admiration of his tribe, among whom he is known as the "Arapaho American." A brief sketch of his early life I have reserved for the succeeding chapter, which the reader may rely upon as strictly true.

CHAPTER XXXIV.

The Arapaho American, a sketch of real life. Tenets of the mountain Indians in reference to a future state of rewards and punishment. The "water bull." Country between Cow creek and Council Grove. Inviting locality for settlement. Sudden rise of water. Separate routes. Dangerous travelling. Osage village. Osages, and all about them. Arrival at Van Buren, Arkansas. Concluding remarks

EARLY in the year 1828, ere peace had been established between the whites and the Arapahos, a large village of that tribe made its temporary encampment upon the waters of the Cimarone, in the vicinity of the Santa Fe trail.

An opportunity so favorable for amusement was not suffered long to pass unimproved by the younger ones, and group after group of merry boys and girls were soon bescattered over the adjoining prairie, engaged in their innocent sports, —for of play all children possess an intuitive fondness, be they white, red, or black.

Each successive day yielded its tribute to the routine of pleasure, as, true to the teachings of childish philosophy, they seized the enjoyments of the present, nor thought or cared for the future, — and thus far, it may be said, some men are but overgrown boys.

Impelled by the restless spirit of their years, on an occasion, several frolicksome lads had wandered to an unusual distance from camp, and passed most of the day in a fruitless effort to catch prairie-dogs.

At length, wearied with a bootless task, they set their faces homeward. Scarcely had they started, however, when the village made its appearance, bearing directly towards them; whereupon the happy band, seating themselves at the point of an eminence, awaited its approach, and soon mingled with their relatives, one after another, as they were disclosed by the passing throng.

In a short time a little boy, some six years old, alone remained — watching with eager impatience the appearance of his father's lodge; but still it came not. The crowd had passed and a solitary old man brought up the rear. On seeing the lone stripling, he enquired the cause of his delay.

"My parents come not, and I await them," said the little fellow.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

“Haste you,” replied the man; “they have gone towards the sun-rising for a day’s travel. Run quick, that you may join them.”

The lad promptly followed the old man’s direction, and set off in pursuit. His route led over a long reach of dry sand-prairie, eastward of the Cimarone, which was entirely destitute of water, and soon after crossing the creek a heavy wind obscured the trail, in addition to which the thick clouds of dust, with fast-closing night and insufferable thirst, compelled him to turn again to the Cimarone.

Another attempt to reach the village the day following was unsuccessful, and each repeated effort proved equally unavailing.

At length, weakened by hunger and suffering, he laid himself down to die, in a grass plat by the creek side.

Seven days of continued fasting which followed, left him so debilitated he could scarcely stand. His mind began to wander; he thought himself a dweller of the Spirit Land and a ranger of the hunting ground of happy souls.

His bewildered vision pictured the joyous chase, bounding along the celestial plains. Strange voices greeted his ear, and sounds broke upon the stillness of solitude. He gazes around, and sights still stranger close in upon him, —not visionary, but real.

“It must be so,” said he. “Here are the horses for me to ride, and there is the game for me to chase. But, what singular buffalo! How long their horns, and how white!— What strange colors, too!— white, red, black, and mixed! And, who are they?— Ah! the pale-faces! They approach! What do they here?— I cannot escape them!” Thereupon he found himself in the firm grasp of two white men, who cut short his soliloquy by bearing him to their camp.

His fancy, though illusive in its inception, had ended in sober reality. The strange voices greeting his ear were those of his captors, who had just encamped near him; the horses and singular buffalo exciting his wonder, were the horses and cattle of a caravan of Santa Fe traders; and the pale-faces were two of the company, by the names of Fitzpatrick and Soublet, by whom he was taken.

They were on their return to the States, and, noticing a strange object in the vicinity of camp soon after their noon halt, approached to learn its character and found the little sufferer as above related.

He had never before seen the whites, and, knowing them only from the representations of his people, they were associated in his boyish fancy with all that was hateful and wicked. But, instead of the cruel death he had supposed would be his certain allotment at their hands, they administered to his wants and plied him with kindnesses. Everything about him was so strange, he could scarcely be convinced it was not a picture of the imagination — that he was not yet dreaming of the happy country, or actually initiated into its delightful mysteries.

From the date of this event he was ushered into a new state of existence, and soon acquired the language and habits of the whites. Taken to St. Louis, he remained there for some five years, and received a partial education during the interval. So complete was the transformation, he even forgot the name and language of his nation, and became an adept in the customs of civilized life. About the year 1832, Capt. Grant succeeded in effecting a treaty with the Arapahos, and pending its negotiation mention was made of a boy, said to have been lost upon the Cimarone several years previous, who was supposed to have fallen into the hands of a trading company, and for

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

whose ransom a large number of horses was offered.

It is needless to say our hero was the subject of this request, and, in order to conciliate their good will and place the new-formed treaty upon a permanent basis, word was forwarded to his benefactor, Fitzpatrick, informing him of the circumstance.

Friday, for this was the name by which the Indian youth had now become known, on hearing the proposal of his relatives, steadily refused compliance, declaring the whites to be his only relatives, and that with them he would live and die.

Subsequently, however, he was persuaded to accompany his guardian to the mountains, expecting shortly to revisit the States. Here his father and mother came forward to claim him as their long-lost son.

But the lapse of seven years had served to efface all the recollections of early childhood. Parents and friends were alike strangers to him; he refused to own them, and recoiled from their advances. Their language grated upon his ear in a confused jargon of unknown sounds. His mother wept from mingled emotions of grief and joy, while his father and brothers pressed their mouths in unfeigned astonishment. Still his obstinacy was unyielding, and the united entreaties of relatives failed to exert upon him the least influence.

At length, the arguments and advice of the fur traders induced him to visit the Arapahos village, where he was received with distinguished honor by his relatives and nation. Every one hastened to pay him respect, — while feast succeeded feast, and council succeeded council, to welcome his return, and the little boy, who, seven years before — lost amid the cheerless sands of the American Desert, and weakened by hunger and suffering had lain down to die upon the bank of the Cimarrone, now found himself suddenly made famous as the “Little Chief” of his tribe, — the “Arapaho American.”

Honor, whose potent spell exerts its influence upon older heads and more enlightened minds, gradually reconciled him to the rude mode of life his destiny seemed to mark out, and he again became identified with the associations of former years.

Still, however, he retains an undiminished attachment to the whites, and continues to merit and command their esteem. His character, for honesty, integrity, and sobriety, has as yet stood unimpeached. A chief by birth, he might assert a more prominent station among his people; but he declines it, with the noble resolve:— “ Until by my own achievements I have earned that honor, I shall never consent to become a chief; for certainly, then my people will listen to me!”

The hero of the above sketch is now on his way to visit his friends in St Louis for the second time, and is at present my only travelling companion. As such I find him agreeable and interesting. I am indebted to him for much valuable information relative to the habits and peculiarities of his own and various other Indian tribes, while his vast fund of ready anecdotes and amusing stories serves to beguile the weariness of camp hours.

The religious peculiarities of the mountain tribes furnished us a theme for frequent conversation, inasmuch as their sentiments with regard to a future existence are strangely interesting in detail. Most of them are firm believers in the immortality of the soul, as well as the condition of rewards and punishments after death — though some accredit the Hindoo notions of metamorphosis or metempsychosis, while yet a very few look for annihilation.

The majority, however, aver that the good, at death, after a long and tedious journey, reach a happy country, abundant in everything the heart can desire, or thought conceive of; where, free from

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

pain and sickness, and removed from every ill, they shall bask forever in the sunshine of perfect beatitude.

To aid in this long journey, horses are occasionally sacrificed for the feeble and decrepit, (more generally squaws and aged warriors,) that, by mounting their disembodied chargers, the spirits of the deceased may gain a speedy entrance within its confines and taste the joys of their eternal home.

Of those adhering to different opinions, some believe in the transmission of souls from body to body through successive ages; and others, that they become the spirits of either men or animals, according to the virtues or demerits of the departed.

With regard to the final allotment of the wicked, their general theology consigns them to an interminable wandering over a desert waste, without purpose or rest, or even one moment's respite from their miseries, and subject to all the bitter pangs of hunger, thirst, and nakedness; and tormented with the sudden and intolerable extremities of heat and cold. The Scripturian here will not fail to recognize an obscure delineation of the world of woe, as portrayed in the sacred writings.

The ideas of some few, on the other hand, transform these condemned spirits into wild beasts or reptiles, but more frequently into prairie-dogs, that, by penance and suffering through a long succession of years, they may atone for previous misdeeds.

Many incidents of adventure related by Friday would doubtless interest the general reader, but space precludes their insertion. However, I cannot refuse place to the following, as affording to the curious a more special matter of speculation.

“On my return from an expedition against the Utahs,” said he, “in crossing the mountain chain south of Long’s Peak, I went in advance of the main party.

“My course led over one of the highest points of the range, whose summit disclosed a level surface of considerable extent. While passing leisurely along, the crowing of a mountain fowl, a short distance to the right, caught my ear. (There are fowls in some parts of the mountains similar to those raised by the whites, —but they are very wild and shy.) Following the sound, I was led to the verge of a small lake, with steep banks of rock, and sat down by it, in hopes of discovering the object of my curiosity.

“While here, my attention was directed to a strange movement in the lake-waters, accompanied by a loud noise and turmoil; soon after which a large creature arose from the middle and swam to the shore, where he stood upon a rock in full view. His looks frightened me. In size he was equal to the largest buffalo, and much like one of those animals in form; he was black, with a singularly shaped head, and had tusks instead of horns, which curved downward.

“He looked so terrible I hurried away as quick as possible, and related my adventure on rejoining the party. The old men laughed at my expressions of wonder — asserting that they had before seen such creatures in the high mountain-lakes, and called them “water bulls.”

Resuming our course, we travelled by easy stages for five succeeding days, which brought us to Council Grove, a noted place of rendezvous for Santa Fe companies.

The intervening country from Cow creek exhibits an entire change in its geological character. The landscape is gently undulating, and furrowed by frequent watercourses. Timber is becoming more abundant. The soil appears humid, and presents an air of general fertility. The grasses also differ in their species and assume a lusty growth.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

The sand-hills which had before skirted the Arkansas, as the traveller advances, lose their naked deformity amid dense groves of timber, and finally disappear in the distance.

There is throughout a marked scarcity of game common to the grand prairies, and everything denotes an approach to the frontiers of civilization.

Council Grove is a stream of considerable magnitude, tributary to the Osage river, and, by the Santa Fe trail, is one hundred and forty-four miles west of Independence. Its bottoms are broad, fertile, and well timbered with heavy forests of oak, walnut maple, and most other varieties of wood indigenous to the States.

The country in its vicinity is highly interesting to the agriculturist, and presents a soil remarkable for its fertility, inviting the hand of industry to a rich reward.

Here, too, all the varied products of the farmer might find a ready cash market, from the numerous mountain and Spanish companies that constantly pass and re-pass, and, doubtlessly, at commanding prices. This locality, in fact, being situated upon the very verge of the grand prairie, affords a most eligible point for a settlement, and will doubtless soon acquire a merited importance as the place of general out-fit and supply for the western and southwestern trade.

Through the agency of Friday I became acquainted with the existence of a vegetable found in these parts, which is known as the prairie-potato. This attains a size almost equalling our common potato. It is of a rough, knotty appearance, somewhat oviform, and when cooked is dry and sweet tasted. It is found generally in the banks of watercourses, and produces a low ground-vine, not dissimilar to a species of that vegetable usual to warm climates.

We were detained here for five or six days, by a continuous rain which raised the creek to an extraordinary height, —overflowing its banks and completely flooding its extensive bottoms. So sudden was the rise that we were compelled to move camp three times in the course of an hour, and were finally driven to an adjoining hill.

Improving the first interval of fair weather presenting itself, I bade adieu to my Indian companion and renewed my journey alone, as our routes led in different directions, his for Independence, Mo., and mine for Van Buren, Ark. Following the course of the creek by its right bank for some twenty miles, I then struck over to the Neosho, and, continuing on the fourth day subsequent I reached the Osage village.

The country passed in travelling this distance, presented much excellent land. The creek valleys were broad and heavily timbered, and the adjoining prairies undulating and clothed with luxuriant vegetation. The streams were so swollen I was forced to swim most of them, which rendered my progress one continued scene of toilsome and perilous adventure.

My stay at the Osage village was prolonged for two days, during which time I was kindly entertained by a chief who served as my host.

The Osages number between four and five thousand souls, and inhabit the section of country bordering upon the Neosho river. Their territory is well timbered, abundantly watered, and remarkably fertile.

In dress and appearance these Indians assimilate the Pawnees and Caws; but their dwellings are neater and more spacious, being constructed of water-flags fastened to frame-works of poles, so ingeniously thatched and tightly interwoven as to prevent the ingress of either wind or rain.

This tribe are beginning to make advances in civilization, and devote some little attention to agriculture. A farmer and blacksmith are furnished them by the U.S. Government, while the

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

philanthropic efforts of the American Board of Missions are directed to their amelioration with considerable success.

On resuming my course, a branch of the Neosho which intercepted it proved unfordable, and its passage was otherwise rendered particularly dangerous on account of the swiftness of its current. However, my landlord, on seeing my determination to cross at all hazards, procured two large pieces of raw hide, which were firmly sewn together in boat shape and held to their proper position by slender boughs; these he conveyed to the stream, and desired me to put my baggage into them, remarking that there was "plenty room" for myself, too. Following his directions, the frail bark was soon launched and towed to the opposite shore by a son of the old man, who swam across for that purpose, while his brother, leading my mule after him, plunged into the current, and in a few moments everything was safely landed.

To reward this generous act I presented the old chief with a blanket, and bade him remember that "Good acts pay a sure tribute to a good heart, for they nourish its possessor with happy thoughts; very often, too, they yield a twofold return by the gratitude of the one upon whom such acts are bestowed; and then, again, sometimes the practiser is more than blessed by the acceptance of such presents as the grateful one may chance to offer. So, let my brother always do good, and the Good Spirit will own him as a subject well worthy of his special blessing."

Bidding the friendly natives adieu, I mounted my mule and hurried onward. My course led through the territory occupied by a division of the Shawnees, and that settled by the Quapaws and Cherokees. These tribes are partially civilized; but the Cherokees are farther advanced in refinement than any other Indian nation I am acquainted with. In fact, they are better educated, better livers, and a better people than their immediate white neighbors upon the frontiers of Arkansas and Missouri.

Late in the afternoon of July 4th I reached Van Buren, my point of destination, happy again to mingle amid scenes and associations from which I had been so long separated; and here I would take leave of the reader, provided I have been so honored as to command his interest and attention thus far. If the preceding pages have added aught to his stock of useful information, or served to while away a leisure hour agreeably, the object which primarily influenced their publication will have been accomplished, if contrariwise, it remains for me to beg pardon for the trespass I have undesignedly committed upon his time and patience.

---

[1] The black-tailed deer are larger than the common deer, and are found only in the snow-mountains. For a description of them the reader is referred to subsequent pages.

[2] By a recent treaty with the Kansas Indians, our government has become possessed of nearly the whole of this beautiful section.

[3] "Lave" appears to be a corruption of the Spanish word *levar*, to get up, or arouse, as from sleep. It is in common use among mountaineers.

[4] The great peril of our situation, and the pressing necessity of a hurried flight, may be readily inferred from the fact, that one waggon was freighted with a large quantity of gunpowder. None of us were quite so brave or present-minded as several Mexicans, in the employ of Messrs. Bent & St. Vrain, on an occasion somewhat similar. While journeying across the grand prairies, the pow-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

der-waggon accidentally caught fire, which was noticed immediately by the Mexican attendants, who hurriedly clasped it upon all sides, to prevent the vehicle from being blown to pieces while one of them proceeded deliberately to extinguish the flames! Neither could we stand comparison with a lieutenant of the Mexican army, at Santa Fe, who, on opening a keg of powder, made use of a RED-HOT IRON in lieu of an auger, for that purpose. It is needless to say, a tremendous explosion followed. Several of the bystanders were killed, but the lieutenant miraculously escaped. He soon after received a Captain's commission from the Commander-in-chief, in consideration of his indomitable COURAGE!

[5] The Sioux have bestowed the appellation of Duck river upon the North Fork of Platte.

[6] This term seems to call for a word of explanation. Our company was designated by the Indians as the Long-knife, or American company,-a term by which all Americans are known among them. The American Fur Company, employing almost exclusively Frenchmen, or individuals speaking the French language, receives the appellation of Wah-ceicha, or the Bad-medicine company, — a phrase universally applied to the French among the mountain tribes.

[7] This is the name applied, by the Indians, to Gen. Clarke, one of the leaders of the first party of whites that ever crossed the mountains. An allusion is here had to an expression made use of in his talk to the Sioux on that occasion.

[8] Silver. This phrase is the Sioux mode of expressing the act of paying money for any article.

[9] Formerly the "Chimney" was much higher than at present, and could be distinctly seen in a clear day as far as Ash creek. The wind and the rain are continually reducing it; and it is said to be full fifty feet less than it was nine years ago. Calculating from this datum, what must have been its altitude no longer remote than a couple of centuries!

[10] Obs. Lt. Fremont, in 1842. 96

[11] This is the interpretation of the Indian name which the French have supplied by the word Brulé.

[12] This word, in Indian signification, means any person or thing possessed of extraordinary or supernatural powers, as well as any act for conciliating the favor and obtaining the assistance of the Great Spirit. That medicine is the strongest which is the most efficient for its intended purposes.

[13] Rosebuds are found in great quantities in many places, throughout the mountains, during the winter, and attain a large size. They are highly esteemed by many as an article of food, and have not unfrequently been the means of preserving life in case of extreme hunger and lack of other eatables.

[14] This expression implies the bestowment of anything as a free gift. It is also used to denote a random way of speaking with regard to truth.

[15] This is a mountain phrase of Spanish origin, (cavellardo,) and means a band of horses or mules.

[16] Previously, he had been presented with a citizen's dress to secure him for the company's interest.

[17] Yellow-hair. The Indian name for our trader.

[18] This term implies death, or the act of dying.

[19] keg

[20] This is a common game with the mountain Indians. It is commenced by one of the players

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

who encloses a gravel-stone or a bullet in the curve of his two hands by placing the palms together, then, after sundry tosts and evolutions, suddenly parting them. If the opposing party is shrewd enough to guess in which hand the stone is obtained, he wins; if not not, he loses. Large amounts are often wagered upon the result of this play.

[21] The north

[22] Chyennes. The name owes its origin to the practice of scarring the left arm crosswise yet adhered to by the males of that nation.

[23] It is a singular fact, that the Cumanches and Snakes, (Shoshones,) though living - nearly a thousand miles distant from each other, with hostile tribes intervening, speak precisely the same language, and call themselves by the same general name They have lost all tradition, however, of having formed one nation, in any previous age.

[24] This is the title of those selected to superintend the civil affairs of a village.

[25] A tale which went the rounds of the public prints, several years since, entitled the "Maiden's Leap," affords a seeming coincidence in the mode of suicide; but, by comparing the two, the reader will observe a broad dissimilarity of detail. In penning the above I was guided solely by the leading incidents as related in my hearing.

[26] Tahttinga-mobellu receives the averment of all his villagers in proof of this strange feat.

[27] Chunka-monet, or travelling dogs, is the name applied by these Indians to wolves

[28] Allusion is here made to the drugged liquor supposed to have been palmed upon him by the trader.

[29] The idea of directing our course by the movements of the clouds is doubtless a novel suggestion to most readers; but its philosophy will be readily comprehended by a bare mention of the fact, that the winds of these regions almost invariably blow from a west-southwest point; and, as they are usually high, it is no very extraordinary performance to calculate the bearing of north or south, even in the most obscure weather.

[30] The magpie of the mountains is the torment of all sore-backed horses, particularly during the winter season. Despite opposition it will feed upon their skinless flesh, often to the very bone.

[31] I am ignorant of the meaning or derivation of this name.

[32] Lt. Fremont, in his report relative to the proceedings of the expedition of 1842, '3, and '4, has designated some three varieties of shrubs by the general term artemisie, among which are greasewood and prairie sage. Although the latter are of the same family, the difference in their appearance is so marked, I have thought it proper to observe a nominal distinction, and for that reason, they are called in subsequent pages by terms familiar to the mountaineers.

[33] The Spanish word "cañon" implies a narrow, tunnel-like passage between high and precipitous banks, formed by mountains or table lands. It is pronounced KANYON and is a familiar term in the vocabulary of a mountaineer.

[34] This river received its present name from one Joseph Laramie, a French trapper, who was killed near its mouth, several years since, by the Indians.

[35] The word "Chug" implies chimney; of the derivation of the term, however, I am ignorant.

[36] A pack of robes generally embraces ten skins, and weighs about eighty pounds.

[37] On my return the ensuing fall, I learned that the body of the unfortunate young -- had been disinterred by wolves and devoured.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

[38] I noticed one cornfield, near the village, that contained sixty acres or mores and in appearance savored much of civilized agriculture.

[39] Before reaching the States, however, he was robbed of everything in his possession by a war-party of Pawnees, whom he had imprudently suffered to obtain the advantage. He would, doubtless, have been killed had it not been for the determined courage of Van Dusen. The latter, seizing his rifle, levelled it at the foremost and thus deterred a further advance; then, by an adroit movement, breaking from them, set pursuit at defiance through his fleetness of foot. The Pawnees, now well aware that further outrages would be made known and become a subject of investigation by the U. S. Government, forbore their designs, and returned to Fitzpatrick his gun and one mule, with which he accomplished the remainder of his journey alone. Van Dusen, having succeeded in reaching Bent's Fort on the Arkansas, reported his companion as killed by them.

[40] Capt. Fremont, who visited Fontaine qui Bouit in the summer of '43, has furnish ad the following analysis of an incrustation with which the water of this spring has covered a piece of wood; and, though probably not a fair test, it will afford the reader some idea of its mineral properties:

Carbonate of lime - - -	92,25
Carbonate of magnesia -	1,21
Sulphate of lime	
Chloride of calcium - - -	
Chloride of magnesia	,23
Silica - -	1,50
Vegetable matter -	,26
Moisture end loss.. - -	4,61
100,00	

[41] This tree is a species of pine, quite common in New Mexico, California, and some parts of the mountains. It yields a kind of nut similar to that of the beech, which is esteemed as an article of food. Wild turkeys delight to frequent groves of this timber, and will thrive in an extraordinary manner upon pinion-nuts.

[42] Recently, however, Capt. Fremont reports his having succeeded in reaching the island nearest to the northern shore, but he was unfortunately prevented a further exploration. In his account of this he makes no mention of trees or streams of water upon the mountain. I have described it only as it appears when viewed from the main land.

[43] Hastings.

[44] \* Baron Humboldt and some other travellers speak of quite extensive ruins in the vicinity of the Gila, which are attributed to a different race of people from those now inhabiting that country, or even the ancient Mexicans. Some of them are represented as being in a tolerable state of preservation, particularly one, which is known as the "cassa grand." No reasonable conjecture as to their origin has yet been adduced. If they are not the ruined fabrics of ancient Mexican grandeur, to whom are we to look for their parentage?

The diversity of character between them and those of Uxmal, Paleiue, and other ruined cities of Central America, puzzles us still more; and, as the feeble ray of conjecture is the only source from whence light may be thrown upon this mysterious subject, we would prefer the suggestion, that the progenitors of the Munchies, or white Indians, might have been their builders; or, if the reported existence of the city of the mountains as stated in the text be true, might not the ances-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

tors of the people now inhabiting it have had some hand in their original construction? But, if the latter be the case, and these relics are not the product of Mexican civilization, the question yet remains unanswered, viz: who are the residents of that city and whence is their origin?

[45] This stream is named in memory of Gen. Ashley, of Mo., who, while engaged in the fur trade, attempted to descend the Colorado in boats, thinking thus to reach St. Louis by a direct water communication! However, he was compelled to relinquish his strange enterprise at the mouth of this creek, on account of the difficulty and danger attendant upon a further progress.

[46] This locality has received the soubriquet of Brown's-hole from the following circumstance: Some six or seven years since, a trapper, by the name of Brown, came to it in the fall season for the purpose of hunting in its vicinity. During his stay a fall of snow closed the passes so effectually, he was forced to remain till the succeeding spring before he could escape from his lonely prison.

It was formerly a favorite resort for the Snake Indians, on account of its exhaustless stores of game and wild fruits, as well as its security from the approach of enemies.

NOTE.... —Taking latitude 42 ° north as the northern boundary between Oregon and California, these interesting regions of country are embraced within the limits of the latter; but taking the head-waters of the Arkansas as the true point, and thence, by a line running due west to the Pacific, nearly the whole of it will be found within the United States.

The treaty with Spain in 1819, defining this boundary, which was subsequently confirmed by Mexico, after noting Red river as the northern boundary of its eastern provinces, to longitude 100 ° west from Greenwich, and thence north to the Arkansas, uses the following words:

“Thence, following the course of the south bank of the Arkansas TO ITS SOURCE in latitude 42 ° north, thence by that parallel of latitude to the South Sea.”

If the source of the Arkansas, by its south bank, is in lat. 42 ° north, then the matter of boundary admits of no question; but if it is not in that parallel of latitude, should the latter be regarded as the true boundary, when it is evident, from the words of the treaty that the source of the Arkansas by its south bank, was the intended FARTHEST northern extremity of Mexico, where the line between the two countries shall commence, and thence run due west to the Pacific?

But, instead of being in lat. 42 ° north, the source of the Arkansas is in lat. 39 ° north, as indisputably ascertained from recent explorations, and thus an interval of three degrees occurs between the two points named in the above treaty!

If the United States are obligated by this treaty to receive the 42d degree as their southern boundary, Mexico is equally obligated to receive the parallel from the source of the Arkansas due west to the Pacific, as her true northern limits; thus, a territory of eleven hundred and twenty-five miles from east to west, and nearly one hundred and forty from north to south, is left unowned by either party!

[47] A portion of the Fort was formerly constructed of wood;-it is now built of “adobies” like other trading establishments of the country.

[48] The treaty now in process of negotiation with Great Britain, relinquishes to that government all above the 49th deg., and consequently admits its claims to the entire northern boundary, to wit: from 49° to the Russian possessions.

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

[49] By the terms of the proposed treaty, the islands of Vancouvre and Queen Charlotte are transferred to Great Britain, leaving only a few diminutive and comparatively valueless ports in the Straits of Juan de Fuca and in islets south of Vaneouvre, within the limits of the U. S. territory.

[50] The following analysis of the soil of this valley, as furnished by Col. Fremont, will attest its superior quality:

Silicia	70,81
Alumnia	10,97
Lime and magnesia.	1,38
Oxade of iron	2,21
Vegetable matter partly decomposed	8,16
Water and looss	5,46
Phosphate of lime.	1,01
100, 00	

[51] The Blackfeet are generally accounted brave, though instances have been known of three or four whites defeating a large party of them. On one occasion, three trappers fell into an ambuscade of these Indians, and two of them were instantly shot from their horses, but the third was left untouched, and spurring his animal to the height of its speed, broke through the whole throng and was soon out of reach.

Four mounted Indians immediately started in pursuit, and gained rapidly upon him till they came within shooting distance, when the lone trapper turned upon them, and with his double-barreled rifle picked off two of their number, and again fled.

Confident of securing their intended victim, now that they supposed his fire-arms were uncharged, the remaining two hurried after him, and in a few moments were within range of pistol-shot. The trapper then again halted, and the discharge of a pistol brought the third to the ground.

Drawing forth a second from his belt, the work of slaughter would have been complete, had not the terrified savage, in his turn, fled with the utmost precipitancy. The trapper pursued, but was far in the rear when the Blackfoot regained his comrades, and hurriedly exclaimed:

“Haste, ye! flee! It was the Big Medicine we pursued, and at his word three of our warriors breathe not, and of our I only have escaped! His single medicine iron twice spoke the death-word, and at the same time; then with his pipe-stem he bade a third one go to the Spirit Land; and, as he drew forth his butcher-knife to shoot me, I had fled beyond reach, that I might tell you how to escape! Haste, ye! flee! It is the Big Medicine that comes from yon! Flee, lest he kill us all!”

Following his advice, the astonished savages immediately fled with the greatest consternation, fully persuaded it was their only mode of escaping from certain destruction at the hands of the BIG MEDICINE!

[52] The larb-berry is of a deep red color, and somewhat larger than the common currant. It is of a sweet spicy taste, and very pleasant. It grows upon a small ground vine of evergreen, with a leaf assimilating the winter-clover in shape, and is found only in mountainous regions.

[53] This mound is a singular natural elevation in the form of a covered waggon, near the road from the United States to Santa Fe, —about fifty miles south of Taos.

[54] The country adjacent to the head branches of the Kansas river is but little known to the whites, who seldom visit it on account of its dangerous nature. That valuable minerals are con-

ROCKY MOUNTAIN LIFE

BY RUFUS B. SAGE

---

tained in its soil is quite probable, and no doubt they will be brought to light upon due research. [55] Two weeks subsequently, while on a hunting excursion, the person to whom the stolen rifle belonged found it, with all the property of the thief;- a most remarkable circumstance, as the country had been filled with strolling Indians during the interval

Extract from Diary of Mrs. Eliza Spalding, June 15 - July 6, 1836

Covering the first crossing of the Rocky Mountains by white women

June 15th Fort Wm. We are camped near the Fort, and shall probably remain here several days, as the Co. are to leave their waggons at this post and make arrangements to transport their goods the remainder of the journey, on mules. It is very pleasant to fix my eyes, once more, upon a few buildings, several weeks have passed, since we have seen a building.

June 19th 1836 Fort Wm. Today is the sabbath, and the first we have spent in quietness and rest, since the 8th of May. This morning an elderly man (an Englishman) came to our camp, wishing to obtain a testament. Said he had seen but one, for four years-had once indulged a hope that he was a christian; but for several years had not enjoyed religious privileges - had been associated with ungodly men - neglected religious duties, and now feared he had no interest in the Saviour. I gave him a bible, which he received with great joy and thankfulness. Mr. S. in compliance with the request of the chief men of this expedition, met with the people under the shade of a few trees near our camp for religious service. A large assembly met, and were very attentive while Mr. S. made a few remarks upon the parable of the prodigal son.

Ft.Wm. June 21st This day we are to leave this post, and have no resting place in view till we reach Rendezvous 400 miles distant. We are now 2,800 miles from my dear parents dwelling, expecting in a few days to commence ascending the Rocky Mts. Only He who knows all things, knows whether this debilitated frame will survive the undertaking. His will, not mine, be done.

June 25 On the 22nd we left the platte. Our route since that time has been through a rugged barren region. Today we came to the Platte but do not find those beautiful plains we found before we came into the region of the Mts.

June 26 Sabbath noon. Camped on the Platte, and have the privilege of spending the remainder of this holy day in rest, but not in quiet, for the Co are busy in making preparation to cross on the morrow. They are under the necessity of constructing a boat, as the river is not fordable.

July 4th Crossed a ridge of land, today called the divide, which separates the waters that flow into the Atlantic from those that flow into the Pacific, and camped for the night on the head waters of the Colorado. A number of Nez Perce who have been waiting our arrival at the Rendezvous several days, on learning we were near came out to meet us, and have camped with us tonight. They appear to be gratified to see us actually on our way to their country. Mr. Spalding Doct W. & Mr G. are to have a talk with the chiefs this evening.

July 6th Arrived at the Rendezvous this evening. Were met by a large party of Nez Perces men women and children. The women were not satisfied, short of saluting Mrs. W and myself with a kiss. All appear happy to see us. If permitted to reach their country and locate among them, may our labors be blessed to their temporal and spiritual good.

From: The National Intelligencer, October 26, 1836

Also printed in: New York Evangelist, October 22, 1836

A Letter By Henry H. Spalding From The Rocky Mountains, 1836

Rendezvous, head quarters [sic] of Colorado,

Rocky Mountains, July 11, 1836.

Dear brother Leavitt — The readers of your valuable paper would doubtless be gratified to learn something of the expedition fitted out last spring for the Rocky Mountains. I will endeavor to give a brief history of our journey to this place, and the prospects before us:

Myself and wife left our friends in Oneida co., N. Y., the first day of Feb. last, traveled by land to Pittsburgh, 500 miles, which we reached first of March. We were joined at Cincinnati by Doct. Whitman and wife, from Ontario co., N. Y., and reached Liberty, Mo., the most western town on the Missouri river, 7th of April, where we were joined in a few days by brother Gray, of Utica, N. Y. From Pittsburgh to this place, 1500 miles, we came by water; had a pleasant journey; received many favors from kind friends — were especially favored by Captains Forsyth, Juden and Littleton, of the steam boats Arabian, Junius and Chariton, who treated us with great kindness and gave us nearly half our passage. From Liberty some of us started 27th of April, and the rest 1st of May, with two wagons, 17 head of cattle, and 19 horses and mules. At Cantonment Leavenworth, 30 miles from Liberty, we entered upon the great prairie, which ends only with the Pacific ocean, west, and extends north and south thousands of miles, and commenced our camps — since which time the ground has been our table, our chairs, and, with a few blankets, our bed. By the blessing of God, however, we have been comfortably sheltered from the cold and wet. We reached the Otoe village, mouth of the Platte river, 300 miles from Fort Leavenworth, 19th of May. Here Rev. Mr. Merrill, a Baptist missionary, and Mr. Case, are located, in whose family we were very kindly treated while we were crossing our effects. The Platte, as its name indicates, is very broad and shallow, about a mile in width. We crossed in skin canoes. When we left this place, the American Fur Company, under whose protection we expected to cross the mountains, were five days ahead of us. Their animals were fresh, as they started from Council Bluff, near this place; ours had already traveled 300 miles, by forced marches. But their being ahead was to our advantage. They made bridges and prepared roads; and by the blessing of God we overtook the company in four and a half days. We passed up the north side of the Platte to Fort William, foot of Black Hills, 600 miles from the mouth of the Platte, which we reached 13th of June. At Fort William we remained eight days. Started the 21st, traveled up the south side of the Platte 140 miles, crossed to the north again, and passed up its waters till we struck the water of the Colorado, 2d of July.

The waters of the Platte, Colorado, Columbia and Yellow Stone rise within a few miles of each other; those of the two former interlock, some 20 or 30 miles. When we left the waters of the Atlantic we struck those of the Pacific in six or seven miles, without passing any mountain. Our route from Fort William at the foot of the mountains, has been rough, of course, but nothing to what might be expected in crossing the Rocky Mountains. We frequently crossed hills in cutting off bends of rivers, or in passing from one river to another, but we seemed to descend as much as we ascended, till, 1st and 2d of July, we came to spots of snow, which convinced us we were very high. Since the 11th of June we have not been out of sight of snow, on the tops of the mountains around. We have succeeded in getting a wagon thus far, and hope we shall be able to get it through.

---

To Fort William our rout[e] lay through a dead level prairie, and plenty of grass. Since we left the Fort we have found but little grass — our animals have suffered much, and are now very poor. From this on we expect to find fuel and grass sufficient. Several days before we reached the Fort we saw nothing in the shape of timber; our fuel consisted of buffalo manure, which, when dry, makes a hot fire. Our bread, meat, and potatoes, since the 1st of June, have been nothing but buffalo flesh, and most of the time very poor.

We have all, however, by the blessing of God, enjoyed good health and endured the fare very well, except Mrs. Spalding [sic], whose health, which was better than usual when we came to Buffalo, has suffered some, either from the living or the toils of the journey. Our journey on will be still more difficult, on account of food. In a few days from this place, buffalo cease entirely, and no game is to be found in the country. To remedy the evil we have to dry and pack meat here for the journey. The waters on this side of the mountains are much better than those on the east, the sweetest and purest I ever drank.

The company with which we Journeyed consisted of about 90 men, and 260 animals, mostly mules, heavy loaded. At this camp we found about 300 men, and three times the number of animals, employed by the Fur Company in taking furs, and about 2000 Indians, Snakes, Bonnaks, Flatheads, and Nez Perces. Captain Steward, an English gentleman of great fortune, and Mr. Seileim, a German, traveled with us for discovery and pleasure, — The order of the camp was as follows: rise at half past 3, A. M. and turn out animals, march at 6, stop at 11, catch up and start at 1, P. M., camp at 6, catch up and picket animals at 8; a constant guard night and day. The intervals were completely taken up in taking care of animals, getting meals and seeing to our effects, so that we had no time for rest from the time we left one post till we reached another. When we reached this place, not only our animals but ourselves were nearly exhausted. Our females endured the fatigues of the march remarkably well. Your ladies who ride on horseback 10 or 12 miles over your smooth roads, and rest the remainder of the day and week, know nothing of the fatigues of riding on horseback from morning till night day after day for 15 or 20 days, at the rate of 25 and 30 miles a day, and at night have nothing to lie on but the hard ground. Truly we have reason to bless our God that our females are alive and enjoying comparatively good health. The Fur Company showed us the greatest kindness throughout the whole journey. We have wanted nothing which was in their power to furnish us.

We reached this place 6th of July, 16 days from Fort Green. We expect to start in four or five days, and by the blessing of our kind heavenly Father, reach Fort Wallawalla on the Columbia, 1st Sept. We shall either accompany the Nez Perces alone, or fall into Capt. McLeod's camp, a British fur trader, whom it would seem the Lord has sent up from Vancouver, on purpose to convey us down. From information received both from Indians and whites, we shall probably locate about 2 days east of Wallawalla, the nearest Nez Perces village. At Wallawalla, we learn from good authority that we can procure all the necessaries of life on reasonable terms. — Many cattle and some grain are raised at this place. At Vancouver, five days from Wallawalla, for boats down the river, and ten up, is a large establishment — a mill and several mechanical shops. They have 6 or 700 head of cattle and raise thousands of bushels of grain every year. Near this place the Lees, our Methodist brethren, are located and are doing well. We have now accomplished 820 miles of our journey, and have about 700 yet to make. No hand but that which has so wonderfully sustained and led us on thus far, can lead us through. Oh, may not our wicked hearts cause Him, who rules all things,

to withdraw that hand. Two days before we reached this camp, 12 or 15 Nez Perces met us and received us gladly. At night we had a talk with them, told them we had left our friends and home, and come many hundred miles to live with them, to teach them how good white men live, to teach them about God and to do them good. We spoke through four languages, English, Iroquois, Flat Head, and Nez Perces. They replied that they were happy that we had come. They knew now that Dr. Whitman spoke straight, as he had come according to promise. One brought a letter and some paper from Mr. Parker, and said that he accompanied Mr. Parker from this place last year to Wallawalla, from thence to Vancouver, where they wintered, that they returned in the spring to Wallawalla, tried to get an escort of Indians to this place to meet us, but failed, that Mr. Parker got down from his horse, wrote the letter, told him to fetch it to Dr. Whitman and conduct him to that place, about a day from Wallawalla, and that Mr. Parker was going home by sea. An old chief replied, that he did not hear Mr. Parker and Dr. Whitman last year, but was glad to hear our voices now, that he was old and had but few days to live, but was glad that we had come to instruct his children. As we approached the camp the Nez Perces met us in great numbers. When we arrived, we learned from all sources that when the Nez Perces camp heard that we were actually coming with the Fur Company, it was filled with rejoicing. As we came into camp they flocked around us by the hundreds. Our females found it quite difficult to get along for the multitudes that pressed around to shake them by the hand, both men and women. Some of their women would not be satisfied till they had saluted our's [sic] with a kiss, but they were very orderly. — Our females, of course, being the first that ever penetrated these wild regions, excited great curiosity. Our cattle, also, are much admired by the Indians.

Soon after we arrived we had another talk with the Indians. They replied, they had come for no other reason than to conduct us to their country, and they thanked God they saw our faces. The other day an old chief came to our camp and said, he was not in the habit of crowding people's houses, but stood off and looked on. He rejoiced we were coming to live in in [sic] his country, and said he would give us a horse as a present. At night he brought a fine horse. The Indians say, the place selected by Mr. Parker is not good for us, no timber, but about two days east from Wallawalla there is plenty of good timber and grass, but little snow, horses winter well. The Indians take great pains to teach us their language; many of them can speak English quite plain. They are truly a very interesting, pleasant race of Indians.

It is said they observe prayers night and morning, and keep the Sabbath, will not move camp on the Sabbath unless they are with white men, and are obliged to. They are styled by the northern men, Christian Indians. I hope we shall find these reports true, but we must not flatter ourselves, we must not forget that they are Indians. — I have just returned from a scene that convinces me that we shall have savages to deal with. However, one thing looks favorable, their anxiety for instruction, which commenced when they, in connection with the Flatheads, sent to St. Louis to get some information about our religion, still continues, though they have met with one or two disappointments that must necessarily operate against us for a time. The field indeed appears to be a promising one, but we must recollect that the heart of man in all ages, and among all people is desperately wicked, fully set against God and his government, that nothing but the grace of God can subdue, that our only hope of success is by faith, prayer, patience, and constant persevering labor. We may see such days as the missionaries of the South Sea Islands — but we hope our Christian brethren in our beloved land will remember us in their daily prayers, though we are

---

separated by thousands of miles.

Yours in the gospel of Christ,

H. H. SPALDING.

July 16th — We are now comfortably situated in the camp of Messrs. McLeod &c McCoy — find them very friendly, interesting gentlemen, disposed to favor us as far as in their power- will alter their route several days that we may pass with our wagon; will furnish us with all kinds of grain, fruit, farming utensils, clothing, &c. at Wallawalla or Vancouver, on very reasonable terms. Our friend[s] may rest assured that we shall want for nothing if God spares our lives to get through.

JOURNAL OF E. WILLARD SMITH WHILE WITH THE FUR TRADERS, VASQUEZ AND  
SUBLETTE, IN THE ROCKY MOUNTAIN REGION, 1839-1840

CONTRIBUTOR'S NOTE

Mr. E. Willard Smith was an architect and civil engineer. He was born at Albany, N. Y., in 1814, and died at Washington, D. C. He married Miss Charlotte Lansing, of Lansing, Mich. This interesting account of his expedition to the Rocky Mountain region was copied from a manuscript belonging to his daughter Margaret, who married Edwin Forest Norveil, son of Senator John Norvell of Michigan, and was obtained through the courtesy of her daughter, Mrs. E. Oliver Belt,

of Washington, D. C.

J. NEILSON BARRY, Barrycrest, Spokane.

INTRODUCTION

The journal printed below throws new light on the fur trading situation in the Rocky Mountains in its waning stages. It touches on the human, or possibly better designated in human, rather than on the economic aspects of the operations of those engaged in the business. Specifically it is a realistic account of the incidents experienced on one of the later expeditions setting out from St. Louis to the Rocky Mountain posts and rendezvous. Some eleven months were used in

making the trip out and back, from early August, 1839, to July 3, 1840.

The expedition was probably capitalized by one of the most distinguished of the Rocky Mountain fur traders, William L. Sublette. He was one of the young men in the employ of William H. Ashley when the Rocky Mountain Fur Company was organized in 1822. Among those who began their careers with Sublette were Jedediah S. Smith, David E. Jackson, Rob

JOURNAL OF E. WILLARD SMITH 251

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

ert Campbell, James Bridger and Thomas Fitzpatrick. William L. and his brother, Milton G. soon rose to prominence and took charge of independent enterprises. William's partner in this undertaking was Vasquez, who seems to have been more active in personally conducting the expedition which Sublette had probably the larger share in fitting out.

Their post was located on the upper South Fork of the Platte. Its site was about fifty miles north of that of the present city of Denver.

In the immediate neighborhood there were three other fur trading forts. Lupton's was above and St. Vrain's and the other were below. All were within a day's journey of Long's Peak.

Colonel H. M. Chittenden seems to have had no data at hand bearing upon the operations in this vicinity, while writing his "American Fur Trade in the Far West." He is aware only of the bare fact of the existence of these posts.

The expedition which E. Willard Smith, the author of this journal, accompanied had probably proceeded up the Missouri

River from St. Louis by boat to Independence. From that point it set out equipped, as the journal describes, following the Santa Fe Trail for some four hundred miles to the ford of the Arkansas, the Cimarron crossing; thence its route was along the mountain branch of the Santa Fe Trail, on the north bank of the Arkansas, to Bent's Fort. They of the Sublette and Vasquez party overtake and pass Lupton's company of a character similar to their own and having a destination separated only four or five miles from theirs. But Lupton's oxen were not as fleet as Vasquez's mules.

Bent's Fort marked a turning point in their course. They had traveled westward some 530 miles from Independence. A ten days' march northward was still ahead of them to reach their fort on the South Fork. Bent's Fort which they were passing was so situated as to be in touch both with the Santa Fe trade and with that of the mountains. Chittenden speaks of this post as "the great cross roads station of the South west. The north and south route between the Platte River

#### 252 JOURNAL OF E. WILLARD SMITH

country and Santa Fe, and the east and west route up the Arkansas and into the mountains, found this their most natural trading point."

Bent and St. Vrain, the firm owning Bent's Fort and St.

Vrain's to the north, is mentioned by Chittenden as the chief competitor of the American Fur Company at this time. But of Vasquez and Sublette's operations his sources seem to have afforded him no information as he is certain only of the mere fact of the existence of their fort.

Turning now to the contents of the journal, we are given a very clear picture of the face of the country traversed on this northward stretch and of the Indians encountered and game found. After tarrying only three days near the middle of September at the Vasquez and Sublette

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

fort the expedition

was on its way westward across the Rocky Mountains. Its route crossed the Cache a la Poudre and the upper North Fork of the Platte and traversed the new or North Park of the northwestern portion of the present state of Colorado and the

northeastern corner of Utah. The pass used is some two hundred miles southeast of South Pass.

The ultimate destination of the expedition and proposed winter quarters was Brown's Hole. This is an amphitheater

shaped basin where the Green River emerges from the Wind River Mountains. The "Snake River" mentioned is a small

tributary of the Green.

The narrative indicates that horse-stealing by both renegade

whites and by the Sioux Indians, and the retaliations, developed a veritable reign of terror in the early winter of 1839-40 in this Rocky Mountain fastness. At any rate the fear of attempted retaliation by the whole force of the Sioux nation caused a change of plans and the Vasquez-Sublette

party instead of remaining at Brown's Hole all winter essayed a mid-winter return across the mountains to its fort on the South Fork of the

Platte. After all but two of their horses had perished and they had been compelled to scaffold their collection of beaver skins, they reached the upper North Fork of the Platte, still

one hundred and fifty miles from the shelter of their fort and a

#### JOURNAL OF E. WILLARD SMITH 253

new outfit of horses. From this encampment Smith and two companions venture to penetrate the wintry wilderness ahead

to secure from the fort the necessary horses with which to convey the party and its collection of furs to the fort. In superable difficulties of travel and signs of proximity of large bands of Indians ahead of them bring dismay. They return to the encampment and a more successful venture is made by their leading trader, Biggs. Resupplied with horses, and their packs of beaver brought up, they were on their way to the South Fork about the middle of April. From their fort the trip to St. Louis was made in a "Mackinaw" boat.

There are interesting references to the I. R. Walker, who as assistant to Captain Bonneville had in 1833 penetrated from the Great Salt Lake to California. Smith mentions him as

commissioned to guide another party to California. It is said of him that he "requested the epitaph on his tombstone record

the fact that he discovered the Yosemite wonderland."

There are also interesting references to the natural won

ders that have since been included in the Yellowstone National Park.

#### JOURNAL

August 6th, 1839. Left Independence. The party at starting consisted of thirty-two persons under the command of Messrs. Vasquez and Sublette. There were four wagons loaded

with goods, to be used in the Indian trade, drawn by six mules each. The drivers accompanied the wagons, the rest of the party riding on mules. These men were French, American, Spanish and half breeds.

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

After leaving the boundary line of Missouri State we lost all traces of civilization. The soil appeared to be very fertile for about one hundred miles, being well watered by streams running south into the Arkansas. On the banks of these streams were many dense groves, while the intervening country consisted of prairies. The grove on the last stream we met with was called Council Grove, one hundred miles from the state

254 JOURNAL OF E. WILLARD SMITH

line, which place we reached on the 15th of August. It had formerly been a favorite place for the Indian council fires.

On the night of the 15th we had a very severe rain, which was a pleasant introduction to a life on the prairies. Our food consisted of bacon and bread baked in a frying pan. The two gentlemen who had command of the party were old Indian traders, having followed this mode of life for more than ten years, there were also with us Mr. Thompson who had a trading post on the western side of the mountains, and two half breeds employed as hunters. One of them was a son of Captain Clarke, the great Western traveler and companion of Lewis. He had received an education in Europe during seven years.

16th August. Today we saw several antelopes.

17th August. We came in sight of the Arkansas River, quite a large stream about two hundred yards wide. The banks were low and sandy, with a few scattered trees. We continued to travel along its banks for several days at a short distance from the stream. There were a large species of spider whose bite was mortal. We had several moonlight nights to cheer the guard.

21st. Some of the party killed two antelope, an old and a young one, which were prepared for dinner. We found them not very palatable, but still acceptable after having lived so long on bacon alone, our stock of flour being exhausted some days previous. The meat resembles venison somewhat, though not equal to it in flavor. This animal is smaller than the common deer, which it very much resembles in color and quality of hair, but its horns are different, being smaller and less branching. It is very fleet, even more so than a deer, and requires a very swift horse to overtake it. Their great watchfulness renders it difficult to approach them.

On this same day we saw seven buffaloes as we were preparing dinner. The sight of them quite enlivened the party, who were most of them strangers to a life in the prairies. Mr. Sublette gave chase to one of them, being mounted on a horse trained for the purpose, and fired several times without effect.

JOURNAL OF E. WILLARD SMITH 255

22nd. At noon we saw a large herd of two or three hundred buffalo cows. Some of the hunters

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

gave chase, but returned unsuccessful. Several of them were thrown from their horses, and severely injured, as they were riding over a village of prairie dogs, the horses' feet sinking into the holes. We suffered much today from want of water. Saw also the first village of prairie dogs, which was quite a curiosity. One of the dogs was killed and eaten. They look somewhat like a squirrel, being nearly the same size. Sometimes the same hole is occupied by an owl, rattlesnake and prairie dog.

Today

the grass begins to be short, and there is little dew. Before the dew has been so heavy as to wet us thoroughly during the night. No buffalo meat today. At evening two of the party went out to hunt and shot a bull, being much pleased with their success. They thought they heard the Indians whoop,

but it was nothing more than the howling of wolves. Bulls at this season are poor and unfit to eat. They are therefore rarely

killed when cows are to be obtained.

August 23rd. Today all the hunters started after buffalo,

and we anxiously awaited their return. Took breakfast this morning at day break, somewhat out of the usual course. We generally arose at break of day, traveled till ten or eleven, then encamped and cooked our breakfast. We then continued our journey till within an hour of sunset, when we encamp;ed

for the night, prepared our supper and picketed the horses. This is done by tying a rope, eighteen or twenty feet long, to a horse's neck, and attaching to it a stake driven into the ground, which allows them to feed, without permitting them to wander

off. We stand guard by turns at night, each one being on duty three hours. After the night arrangements were made

we spread our blankets and courted sleep which speedily came after the fatigues of the day. The canopy of heaven was our only covering. There was a severe storm during the night.

At noon of the 23rd the hunters returned with meat, having, killed three cows. All turned cooks, and ate! voraciously of the first buffalo meat we had tasted. I think with most others who have eaten it, that it is preferable to any other meat. We saw

#### 256 JOURNAL OF E. WILLARD SMITH

several thousand buffalo today, two or three herds containing about three hundred. All feel in good spirits although the water is extremely bad, indeed we have had good water but twice since we started. Towards evening we passed a great number of buffaloes, the prairie being actually alive with them. They extended probably about four miles, and numbered nearly two hundred thousand. We were amazed with a scene so new to us, so strange to one accustomed to cities and civilization.

24th. Today we saw nearly as many buffaloes as yesterday. So many are not generally met at this season so far East. We are now about three hundred miles from Independence. We had grown weary with the monotony of traveling till we met buffalo, but the excitement of hunting soon revived us.

26th. We have met with nothing very interesting today, but have seen a great many buffaloes, and at evening en camped on the banks of the Arkansas. The river here is pretty

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

wide, but not more than two or three feet deep. We shall now continue to travel along the Arkansas for ten or twelve days.

The river here is the boundary between Mexico and Missouri Territory.

26th. A pleasant day, but the evenings are becoming cool. We are not as much troubled with mosquitoes as for several

nights previously. This has been a long day's journey. We now live on buffalo meat altogether, which requires very little salt. Our party now consists of thirty-six persons, having been joined by four on the sixteenth.

27th. Another pleasant day. We are getting along rapidly, traveling about twenty-five miles a day. Our hunters go out again today for meat. There are two ways of hunting buffaloes.

One called approaching, the other running. When a hunter approaches he puts on a white blanket coat and a white cap, so as to resemble a white wolf as much as possible, and crawls on his hands and knees towards the buffalo, until he gets within one hundred and fifty yards, then sinks his knife in the ground,

lies prostrate, rests his gun on his knife, and fires at the animal. It generally requires more than one shot to kill a buffalo, even if he should be shot through the heart. The way of hunting

#### JOURNAL OF E. WILLARD SMITH 257

by running is on horseback. The man mounts a fleet horse trained for the purpose, rides full speed toward the herd, and fires a light fowling piece, which he carries in one hand, while he guides the horse with the other. The moment the hunter fires his piece, the horse springs out of the reach of the buffalo to escape injury from the infuriated animal. This is the most exciting method of hunting, but it is attended with considerable danger, the horse being liable to stumble over the rough

ground. The Indians prefer this mode of hunting, substituting the bow and arrow for the gun. This weapon they use with such dexterity as to shoot an arrow entirely through the animal, piercing the ground on the opposite side. It is very difficult for a bullet, at the regular shooting distance to pass

through the body. We saw ten antelopes today. Every night we have a grand concert of wolves, relieved occasionally by the bellowing of buffalo bulls.

During the last week we passed several places where men belonging to former parties had been killed by the Indians. The other day we passed a place where Mr. Vasquez had a narrow escape. He and one of his men started for his fort in advance of the party. The man being taken sick, he left him on an

island in the Arkansas. He then went back for medicine, having to travel a day and a half. While returning he was chased

by a party of Indians on foot, who overtook him while he stopped to drink, and were at his side before he could mount

his horse. He presented the muzzle of his gun, and the Indians stepped back, allowing him time to mount his horse, which taking fright, ran away with him. The Indians gave up the

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

pursuit. They were a party of Pawnees. The part of the road we are now traveling runs through the general war ground of the different tribes of Indians.

28th. Nothing very remarkable today. The weather still continues pleasant.

29th. Nothing interesting today. Buffalo have been very scarce for several days. The hunters went out this afternoon

and could get nothing but antelope meat, which afforded us a good meal as we were hungry.

258 JOURNAL OF E. WILLARD SMITH

30th. We still travel as usual. We had been expecting to overtake Mr. Lupton every day. He is a mountain trader, on his way to the trading post on the river Platte. We overtook him today about noon. His party had stopped to eat dinner and allow their animals to feed. He had six wagons drawn by oxen. They had started about twelve days before us. He mistook us for Indians as we approached, and was somewhat alarmed. We saw three deer today on an island, one of them a buck was very large.

31st. This is the last day of August and of summer. We saw six elk today, one of them being an old one, was quite large. Mr. Lupton encamped with us today as well as last night. He is trying to keep in company with us, but probably will not succeed, as our mules can travel much faster than his

oxen. We had a buffalo hunt today. Our men killed one. Mr. Lupton's men another. It is a fine sight to see them running a large herd. This is Saturday. It is difficult to mark the Sabbath as there are no church bells to remind us of it.

September 1st. Today we came in sight of what is called Big Timber, sixty miles from Bent's Fort on the Arkansas.

We had no fresh buffalo meat today, and there are no buffalo to be seen.

2nd. Today we left Big Timber at noon. The prairie here is more rolling and sandy than we have seen it before. We had a view of the mountains this afternoon, but they are still one hundred and fifty miles distant. We are enabled to see

this great distance on account of the clearness of the atmosphere. There is no dew at night, the atmosphere being very dry and clear. The weather is very warm. No fresh meat today. Buffalo is very scarce.

3rd. Today we passed Bent's Fort which looks quite like a military fortification. It is constructed of mud bricks after the Spanish fashion, and is quite durable. Mr. Bent had seventy horses stolen from the fort this summer by a party of the Comanche Indians, nine in number. There was a party of these Indians, consisting of three thousand lodges, a few miles distant.

JOURNAL OF E. WILLARD SMITH 259

4th. Today we passed a Spanish fort about two miles from Bent's. It is also built of mud, and inhabited by a few Spanish

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

and French. They procure flour from Towse [Taos], a town in Mexico, eight days' travel from this place. They raise a small quantity of corn for their own use. We still continue along the Arkansas River. Last night we saw the northern lights very plainly. Three of our party have now left to go in advance to the fort on the Platte.

5th. Today we came in sight of Pike's Peak, which can be seen at a very great distance. It has snow on its summit at present. We have had no fresh meat today. The soil along the river is very sandy. We still continue on its banks. The ground here is covered with prickly pears. There is a shrub growing here called grease wood. It is peculiar to this country. The Indians use it for making arrows. It is very heavy and stiff, and burns quickly. There is also here a plant called Spanish, soap plant. The Mexicans use the root as a substitute

for soap. We have been obliged to eat bacon today as the stock of buffalo meat is exhausted.

6th. Today our hunters killed two buck deer. They tasted very well. We still keep approaching the mountains, which have a very fine appearance. The Peak is very high, it was discovered by General Pike when in company with Major Long on his expedition to the mountains. Pike and his party were

taken prisoners at this mountain by the Mexicans. One of his companions was kept four years in prison.

7th. We have been going uphill all day and have reached some high ground, which gives us a splendid view of the plain below. We can see at least eighty miles in either direction except where the mountains bound our view at the distance of forty miles. We ate our dinner beside a stream called Fontaine qui bouille, boiling spring, called so on account of the manner in which it boils from the mountains. We found a great quantity of wild plums on the banks of this stream and saw signs of grizzly bears in this vicinity. This is a famous resort in the winter for the Arapahoos and Shian Indians. The traders have houses here for trading with them in the winter.

#### 260 JOURNAL OF E. WILLARD SMITH

8th. Today we saw a few scattering buffaloes, we had not seen any in some time, and, with the exception of a little venison, had been living on bacon. Towards evening the hunters came in with some bull's meat, which made our supper, although rather unpalatable. We had a very severe storm of wind and rain last night. The wind is always strong on these plains, like a gale at sea. It is almost impossible to travel here in winter.

9th. Today we met several large herds of buffalo, and the hunters succeeded in getting some good meat, which was quite an agreeable change. We all ate voraciously. It would astonish the inhabitants of the city to drop in upon us at some of our meals, after we had been on short allowance for two or three days. It is incredible what a large quantity of buffalo meat a man can eat without injury.

10th. Today and yesterday we passed through some strips of pine timber, the first I have seen in this part of the country. It is quite a relief after seeing noth-

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

ing but cottonwood along the prairie streams. As we were about encamping for the night we saw some Indians, who proved to be Arapahoos. One of them immediately galloped off to their village, as their large encampments are called which was about five miles distant, and informed the others that we were in the vicinity. At dusk twenty-two, most of them chiefs, came out to see us. They were all fine looking fellows, rather lighter colored than our Eastern Indians. Two or three squaws accompanied them, pretty good looking. The chiefs seated themselves around the fire, forming a ring with Mr. Vasquez, and commenced smoking their long pipes, which they passed around several times, every one smoking out of the same pipe. They were all well acquainted with Mr. Vasquez, and remained with him two or three hours. Before leaving we presented them with some tobacco and knives. Among their number was one Shi-an and one Blackfoot.

11th. Nothing new today. We expect to reach the fort soon. We are still eating bull's meat.

JOURNAL OF E. WILLARD SMITH 261

12th. Living nearly the same as yesterday and traveling pretty fast. Almost out of provisions. In the evening we arrived at the Platte river and encamped.

13th. Today about four o'clock we passed Mr. Lupton's Fort. A little after five we reached the fort of Messrs. Sub

lette and Vasquez, the place of our destination. Our arrival caused considerable stir among the inmates. A great many free trappers are here at present. The fort is quite a nice place, situated on the South Fork of the River Platte. It is built of adobies, or Spanish bricks, made of clay baked in the sun. This is the Mexican plan of building houses, and, as the atmosphere is very dry, and there is little rain, the buildings are quite durable. This fort is opposite Long's Peak, and about twenty miles distant. We slept all night at the fort

and supped on some very good meat. This is the first time I have slept under cover for thirty-seven days.

14th. Today I moved my quarters to Mr. Thompson's camp, a mile and a half from the fort, and shall remain with him till we start to cross the mountains, which will be in a few days.

There are a few lodges of the Shian Indians near us. We have smoked with and embraced two today.

15th. We are still at the camp. Nothing remarkable has happened. The men at the fort have been carousing, etc., having got drunk on alcohol. There are about twelve lodges of Shians encamped at the fort who have been trading with the whites. They had a scalp dance in the fort today, dancing by the music of an instrument resembling the tambourine. They were armed with short bows, about three feet long.

16th. Today we left our encampment, and started to cross

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

the mountains. Our party consisted of eight men, two squaws and three children. One of the squaws belonged to Mr. Thompson, the other to Mr. Craig. They are partners, and have a trading fort at Brown's Hole, a valley on the west of the mountains.

17th. One of our mules was nearly drowned today in crossing the stream, a branch of the River Platte. It was with great

262 JOURNAL OF E. WILLARD SMITH

difficulty that he was extricated from his perilous situation. The middle of the day is quite warm now, but the mornings and the evenings are cool.

18th. We encamped last night on a small stream cache la Poudre, called so because powder was hidden there some time since. Our camp was just at the foot of the mountain, in a very pleasant place. During the day we passed several pools and creeks, the water of which were impregnated with salt petre.

19th. Today we began to travel among the hills at the foot of the mountains. The change is very pleasant after the prairies in hot weather. One soon becomes tired of traveling over a prairie, all is so monotonous. The road we are traveling now is surrounded by hills piled on hills, with mountains in the back ground. The water in all the small streams is very good and cold.

20th. Today the road became more rough. We had some very high and steep hills to climb. One would scarcely think from their appearance that a horse could ascend them, but we crossed without any great difficulty. Messrs. Thompson and Craig went before us and killed three buffaloes. Before this we had plenty of fat venison. In the afternoon they killed three deer. At night it was quite cold and frosty.

21st. Today it is quite cold. We have been climbing more hills. At noon the hunters came to us, having killed six buffaloes and a calf. We saw a great many buffalo today. We are encamped in a beautiful valley. It is probably more than sixty miles long, as far as the eye can reach. The view from the surrounding mountains is grand. The valley is surrounded by high hills, with mountains in the back ground. Large herds of buffalo are scattered over it. There is a large stream flowing through it, called Laramie's Fork, tributary to the North Fork of the Platte. It has several small streams flowing into it. The timber on all these hills and mountains is yellow pine, some of it being quite large. In this plain there is a very large rock, composed of red sandstone and resembling a chimney. It is situated on a fork of the Laramie called Chimney Fork.

JOURNAL OF E. WILLARD SMITH 263

22nd. Nothing remarkable today except beautiful scenery. We travel more than twenty miles a

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

day. The weather is very pleasant, quite warm at noon while it freezes hard at night. 23d. This morning the road was very rough. At noon we entered a very large valley, called the Park, at the entrance of which we crossed the North Fork of the River Platte, a very fine stream. We saw a great number of buffalo today, probably about two thousand.

24th. Today we are still traveling in the park and surrounded by herds of buffalo. The weather is still pleasant and we have moonlight nights. It is so cold at night that the water freezes. A beaver was caught this morning in a trap set last night by one of the party.

25th. Today we have had a very rough road to travel over, and at evening encamped on a ridge called The Divide. It divides the water of the Atlantic from the Pacific, and extends a great distance north and south. On the west side of it are the head waters of the Columbia and the Colorado of the West, the former emptying into the Pacific, and the latter into the Gulf of California. On the east side are the head waters of the Missouri and its tributaries, and also the Arkansas. We had a slight shower in the evening. We have seen no buffalo today.

26th. Today we have traveled only fifteen miles. The scenery is very rough. We saw only a few bulls and no cows.

Nearly all the hills and valleys, since we came among the mountains, are covered with wild sage or wormwood, which grows in stiff bushes, seven or eight feet high. The stalks are as large as a man's arm. There are a great many black currants among the mountains, also plums and serviceberries and hawthorn berries.

27th. Today we have traveled about twenty miles. The weather still continues very pleasant. At evening just before we encamped for the night we passed a place where the Whites had encamped a few days previous, for the purpose of killing buffalo and drying the meat. From the signs around us, we thought they must have had a fight with the Indians, probably

#### 264 JOURNAL OF E. WILLARD SMITH

ably Sioux. We saw the skeletons of four horses killed in the fight. The Whites had thrown up a breastwork of logs for a defence. Tonight we put our horses in an old horse pen we found at our camping place, which is on Snake River, a tributary of the Colorado of the West.

28th. Today we had a good road and got along well. We are still on Snake River. No buffalo have been seen, but the hunters killed an elk out of a herd of about twelve. The meat resembles venison very much in taste, though not quite so tender.

29th. Today we left Snake River and about noon found Indian signs. We supposed there must have been about forty Indians, probably a war party of Sioux, that had passed but two or three hours previous to our coming. If they had seen us we must have had a fight.

30th. Yesterday afternoon my horse gave out and I was

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

obliged to lead him three miles. The day was quite warm and we suffered very much from want of water. We encamped at some sulphur springs. The hunters shot an old buffalo.

Today I was obliged to walk and let my horse run loose. I was afraid that he would be unable to travel all day, even in

this way. My boots were torn to pieces and I could procure no moccasins. I traveled forty miles in this way over a very rough road, covered with prickly pears. My feet were very much blistered. The day was very warm. After traveling

forty miles without water I lost sight of the party who were

in advance of me. As it was growing dark and my feet pained me very much, I concluded to stop for the night and encamp by myself on a stream called the Vermilion that we had just reached. I did so and remained there all night alone. I

have never suffered so much from thirst as I did this day. October 1st. I left my lonely camp early and walked rapid

ly over the gravel and prickly pears that lay in my path, not expecting to see my companions until I arrived at Brown's Hole, but after traveling two miles I discovered them encamped

by a small lake in a valley. My pleasure can be easily imagined. They were just eating breakfast of which I partook with de

#### JOURNAL OF E. WILLARD SMITH 265

light, having eaten nothing the day before. At evening we arrived at Brown's Hole, our place of destination. This is a valley on Green River in which is a fort.

October 2nd. Today I heard from Kit Carson the particulars of the fight at the breastworks at Snake River, referred to a few days since. It appears that the party was composed of seven whites and two squaws who had come there from Brown's Hole for the purpose of killing buffalo and drying

the meat. They had been there several days and had dried a large quantity of meat when they were attacked by a party of Sioux, about twenty in number. The attack was made toward morning while it was yet dark. The Indians fired principally

at one man, named Spillers, as he lay asleep outside of the horse-pen, and they pierced him with five balls without wounding anyone else. This awakened the rest of the men, and they began to strengthen a horse-pen they had made of logs, to form it into a breastwork. They dug some holes in the ground for the men to stand in, so as to protect them as much as possible. As soon as it became light, they commenced firing at the Indians, of whom they killed and wounded several.

After exchanging several shots the principal Indian chief rode up toward them and made offers of peace. One of the white men went out, and induced him with several others to come toward, them, when they were within shooting distance, he fell back behind some trees, and gave the signal to his companions, who fired and killed the head chief. The Indians kept up a firing for a short time and then retreated. When the chief was shot he jumped up and fell down, the others were very much excited, and raved and tore around. He was a distinguished chief.

October 3rd. Still at the fort which is situated in a small valley surrounded by mountains, on Green River, a tributary of the Colorado. This is quite a stream, about three hundred yards wide.

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

It runs through a narrow passage or canyon in the mountains, the rocks forming a perpendicular wall on each side five hundred feet high.

266 JOURNAL OF E. WILLARD SMITH

October 6th. We had a snow storm today. It fell about six inches deep. I had intended to go to Fort Hall, a fort belonging to the Hudson's Bay Company, situated at the head waters of the Columbia, but the party disappointed me.

10th. I have been at the fort since my first arrival, nothing of importance has occurred. The weather is still very pleasant. Today we started for a buffalo hunt, to make dried meat. There were about thirty in the party, about half of them being squaws, wives of the white trappers. We had sixty horses with us. We were ten days in reaching the buffalo herds, although we met a few scattered animals the second day. We made our first camp for drying meat on Snake River, at the mouth of a creek called Muddy. We had stormy weather for several days, and after remaining at this encampment for three days, we moved farther down the river where we remained several days. During the whole time we were out we killed one hundred buffalo and dried their meat. Some of the party had also killed six grizzly bears quite near the camp. The hunters gave me one of the skins of a beautiful grizzly brown color, and some of the meat very much like pork.

November 1st. We arrived at the fort the first of November, and remained there until the eighth. On the evening of the first there were one hundred and fifty head of horses stolen from the vicinity of the fort by a party of Sioux, as we afterwards learned. This was very unexpected as the trappers and Snake Indians had been in the habit of letting their horses run loose in this vicinity, unattended by a guard, as the place was unknown to any of the hostile Indians. This event caused considerable commotion at the fort, and they determined to fit out a war party to go in search of the stolen horses, but next morning this project was abandoned. A party of twelve men went over to Fort Hall, belonging to the Hudson's Bay Company, and stole several horses from that company, notwithstanding they had been very well treated by the man who had charge of the fort. On their return they stopped at a small encampment of Snake Indians, consisting of three lodges. One of them belonged to a very old man who invited them to

JOURNAL OF E. WILLARD SMITH 267

eat with him and treated them with great hospitality. At evening the whites proceeded on their journey taking with them all the old Indian's horses. On returning to Green River, the trappers remaining at the fort expressed their displeasure so strongly at this act of unparalleled meanness that they were obliged to leave the party and go to a trading post of the Eutaw Indians. The whites in the valley, fearing that the Snake Indians might retaliate upon them for the loss of their horses pursued the thieves and compelled them to restore the stolen property.

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

8th. We moved up the river a short distance to a log cabin, built by some young men, who had come to the mountains last spring, intending to remain there until the following spring.

December 17th. There are here now, and have been! for some time, about twenty lodges of Indians of the Snake tribe. They call themselves Shoshonies. We obtained a few skins from them in exchange for trinkets. They are very good looking Indians. The men are generally tall and slightly made, the women short and stout. There is a large salt lake in the mountains about four days travel from Brown's Hole. This lake is a hundred miles long from north to south and thirty

miles wide. There are islands in the midst of it which have never been explored. These islands have high hills and are well wooded. The water of the lake is very strongly impregnated with salt. Salt of the best quality is found crystallized along the shores in great abundance. There are several fresh water streams running into this lake, one of which is Great Bear River. The surrounding country is rocky and gravelly, and there is considerable timber around the lake.

There is also a salt creek near it, the water of which is very similar, where the Indians find beautiful salt. There are a great many salt springs in this vicinity.

Near the headwaters of the Missouri is a valley filled with mounds, emitting smoke and vapor, the ground composing this valley is very soft, so much so that a horse will sink to his girths in the ground.

#### 268 JOURNAL OF E. WILLARD SMITH

On the west side of the mountains, are streams that seem to ebb and flow like the tide. In the mornings their banks are overflowing, at noon they are perfectly dry, the next morning flowing again.

The country around the headwaters of the Yellowstone, a tributary of the Missouri, abounds in natural curiosities. There are volcanoes, volcanic productions and carbonated springs.

Mr. Vasquez told me that he went to the top of one of these volcanoes, the crater of which was filled with pure water, forming quite a large lake.

There is a story told by an Arapahoo chief of a petrified buffalo standing in the lake on the east side of the mountains. It was in a perfect state of preservation, and they worship it as a great medicine or charm. There are also moccasin and buffalo tracks in the solid rock along the shore of the lake.

Nothing would induce this Indian to tell where this sacred buffalo is to be found. Great presents were offered to him in vain.

There is a party, going in boats from this valley in the spring down Grand River, on the Colorado of the West, to California. They will be led by Mr. Walker who was with Bonnevill in the mountains. They intend trapping for beaver on the way.

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

The weather in this valley is extremely pleasant this winter, with scarcely any snow. It is as warm in the middle of the day as in June in New York, the latitude of the place is supposed to be forty-two degrees.

We intended to spend the winter in the valley of Brown's Hole, but soon had reason to fear an attack from the Sioux. The party before mentioned, who had lost their chief in an encounter with some whites had returned to their principal tribe and intended coming in numbers to attack us in the spring.

We therefore thought it unsafe to remain until then, but were fearful of crossing the mountains during the winter, a thing never before attempted. But some men arrived at our encampment from the fort on the South Fork and assured us that there was no snow in the mountain passes. Then we con

JOURNAL OF E. WILLARD SMITH 269

cluded to leave the valley immediately, and to re-cross the mountains, preferring the probability of the danger thus before us to the almost certain contest with the Indians.

We left the valley of Brown's Hole on the twenty-fourth of January, 1840, to return to the trading post on the South Fork of the Platte. The weather when we started, as for some time previous, was warm and pleasant. Our party consisted of

twenty persons, fourteen men, four squaws, wives of the trappers, and two children. There were two traders in the company, one, Mr. Biggs, who was a trader for Sublette and Vasques, the other, Mr. Baker, a trader for Bent and St. Vrain [St. Vrain]. There were also three free trappers. The

others were men hired to the two; traders.

On the 26th of January we met a party of Eutaw Indians who had been out hunting buffalo. These Indians are the best marksmen in the mountains, and are armed with good rifles.

On the 27th of January we arrived at Snake River and remained there four days. While there the snow fell two feet deep. We had three Indian lodges with us, in which we slept at night.

On the 2nd of February we encamped at a creek called Muddy. We found considerable difficulty in traveling through the snow during the day. Our hunters killed some buffalo today and provided us with fresh meat.

On the 4th the snow became very deep, and in a few days we found ourselves surrounded by snow six feet deep, and no

buffalo to be seen, our stock of provisions was nearly exhausted.

On the 17th of February we encamped on a high hill, and one of the horses gave out, being unable to carry the load any

farther. Here we encountered one of the most severe storms

I ever witnessed. Considerable snow fell, and the wind blew for two nights and a day. During the night one of the lodges blew down, and its occupants were obliged to remove to one

of the others to prevent being frozen. We started with thirty nine horses and mules, all in good order. Some of them were now dying daily for want of food and water. We traveled

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

270 JOURNAL OF E. WILLARD SMITH

but three or four miles a day, on account of the depth of snow. By this time many of us were on foot and were obliged to go before and break the way for the horses.

Our provisions were being exhausted, we were obliged to eat the horses as they died. In this way we lived fifteen days, eating a few dogs in the meantime. In a few days we were all on foot. We suffered greatly from want of wood. There was no timber to be seen on our route. We were obliged to burn a shrub, called sage, a species of wormwood, which one could only obtain in quantities sufficient to keep up a fire for an hour

in the evening. We obtained no water except by melting snow.

During this time we had some very severe storms of wind and snow. Often one or two of the lodges were thrown down

in the night. We were now obliged to make a scaffold of some trees which we found, and leave our beaver skins on it, with all the furs we had collected. It was made sufficiently

high to prevent the bears from reaching it. We were unable to carry them farther, as so few horses remained. All had died except two, and they were so weak as to be almost unable to drag the tents.

On the 23rd our hunters killed a buffalo which was very poor, the meat, however, was very pleasant to us, after having lived so long on poor horse meat.

On the 24th the hunters killed three fat buffalo, which was the first fat meat we had seen for twenty days. All ate a large quantity of the raw tallow, having been rendered voracious by our wretched food and near approach to starvation. On the afternoon of this day we encamped on the North Fork of the,

River Platte, which here runs through a small valley surrounded by mountains. At this place there was scarcely any snow to be seen, and the weather is quite warm. We were still one hundred and fifty miles from the trading fort. This valley was filled with herds of buffalo.

After remaining here four days, three of us started on the 29th of February to go to the fort for horses. We traveled until noon the first day without finding any snow. In the

JOURNAL OF E. WILLARD SMITH 271

afternoon we met pretty deep snow, and towards night it was two feet deep, covered with a very hard crust. We found it very

difficult traveling, but went, notwithstanding, fifteen miles that day. About dark we stopped on the summit of a hill which

was bare, the wind having blown the snow off. At this place we could find nothing with which to build a fire to warm our

selves. We were very wet, having traveled through the snow all day. We were obliged to lie down on the bare ground, with only a blanket apiece to cover us, and were unable to sleep from the

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

severe cold. Next morning we started by daylight and found the snow deeper than the day before, the crust

was hard but not sufficiently so to bear one, which made walking very fatiguing. Notwithstanding the difficulty we traveled fifteen miles that day. At sundown we came in sight of a stream, the banks of which were covered with timber. We

hoped to spend a comfortable night beside a large fire but were again disappointed. Before we had proceeded many steps we saw Indian tracks in the snow, which could have been made but a few hours previous. We judged from the number of

these tracks that there must have been a large party of Indians. One of my companions had traveled this same route before

with two others, and at this same place had been attacked by a large party of Sioux. One of his companions was killed, while the others were robbed of everything and obliged to walk a hundred and fifty miles to reach a trading post.

My companions being both afraid to proceed, we were

obliged to return to our party on the North Fork of the Platte. We concluded to return that same night, although very much

fatigued. We were near what was called Medicine Bow Butte, which takes its name from a stream running at its base, called Medicine Bow Creek. We traveled all night and stopped just

as daylight was appearing, made a fire and rested half an hour. The next night we found ourselves quite near the encampment

on the Platte.

Our party was very much disappointed to see us return.

Four days afterwards Mr. Biggs and a half breed started for the fort by another route, where there was very little snow, and

#### 272 JOURNAL OF E. WILLARD SMITH

no danger of meeting Indians. They took a horse with them to carry their blankets and provisions. In the meantime the party on the Platte were hunting daily, and supplied themselves abundantly with provisions.

After waiting thirty days for the return of Mr. Biggs with horses, we began to be fearful that he had been murdered by

the Indians, but on the forty-second day from the time of his starting, just as we had given up all hope of seeing him, he and Mr. Vasquez arrived, bringing with them horses sufficient to carry the furs, but not enough to furnish saddle-horses for all the party, consequently some were obliged to walk. They also brought some men with them, increasing our number to twenty-two.

Mr. Biggs immediately started to return for the beaver that had been left some distance back, and was absent five days.

When Mr. Biggs started for the fort in search of horses we built a fort of logs on the Platte to protect us from Indians.

We now left this fort on the 14th of April on our way to the fort on the South Fork.

On the 16th we ate dinner at the Medicine Bow Creek, and on the 19th arrived at Laramie Fork, a tributary of the Platte. At the junction of this stream with the North Fork of the

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

River Platte the American Fur Company have a large trading fort, called Fort Laramie. We saw a great many buffalo

every day as we passed along.

On the 22nd we met a small party of Arapahoo Indians

coming to visit their friends the Shoshonies, or Snake Indians. On the 24th of April, in the afternoon, we crossed the South Fork of the Platte with considerable difficulty, as the water was very high. After traveling six miles we arrived at the

Fort of Sublette and Vasquez. We remained at the fort nearly two days.

April 26th we started in a mackinaw boat, which had been made at the fort at the foot of the mountains. This boat was

thirty-six feet long and eight feet wide. We had seven hundred buffalo robes on board and four hundred buffalo tongues. There were seven of us in company. The water of this river,

#### JOURNAL OF E. WILLARD SMITH 273

the South Fork of the Platte, was very shallow and we proceeded with difficulty, getting on sand bars every few minutes.

We were obliged to wade and push the boat along most of the way for about three hundred miles, which we were forty

nine days traveling. We had to unload the boat several times a day when it was aground, which was very hard work.

May 8th. We saw the body of a Shoshonie squaw which had been placed on a scaffold in the top of a large tree on the bank of the river. This is the usual manner of disposing of the dead among these Indians.

On the 9th, 10th and 11th the wind blew violently, accom

panied with heavy rain. We were unable to proceed. On the eleventh three Shian Indians came to us. They belonged to a

party which had been out catching wild horses. They had succeeded in taking two hundred. One hundred of them had died

in a very severe storm a few days previous. The method adopt

ed by the Indians for catching them is as follows: An Indian mounts a fleet horse, having a rope twenty feet long, with a noose at the end, fastened to his saddle. He rides close to the animal he wishes to catch, and throws the noose, or lasso,

over its head. The horse finding the noose over his head, jumps, which chokes him and causes him to stop. As we found no buffalo, we had eaten all of the four hundred tongues

we had brought.

On the 12th we killed the first buffalo we had seen since we

left the fort.

On the 13th we arrived at the camp of the Shian Indians,

the party mentioned before. They consisted of twenty-five men and boys and one squaw. They were headed by a chief called the Yellow Wolf. His brother was of the party having a name which signified in the Indian language Many Crows. We gave them some spirits, in exchange for a little

meat, on

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

which they became very much intoxicated.

On the 14th and for many days after we saw a great many dead buffalo calves strewed along the banks of the river. They were about a week old and must have been killed by some dis

274 JOURNAL OF E. WILLARD SMITH

ease raging among them, as the wolves would not touch them, although here in great numbers. There were probably two thousands of these calves.

On the 18th it stormed all day and night. Toward evening we saw about three hundred wild horses, who came quite

near us. We have seen several large herds of buffalo for several days past.

June 12th. We arrived at the fork of the Platte. The water in the North Fork of the Platte was pretty high, and we were able to proceed quite rapidly. We sometimes traveled fifty miles a day. The main Platte is very wide, and has many

islands in it, which were covered with roses as we passed them. In one place this river is four miles wide. One of its islands is one hundred miles long. The country from the forks of the Platte to the Missouri is claimed principally by the Pawnee Indians.

June 14th. We met five buffalo, the last we saw, as we left the country in which they range.

18th. In the morning we arrived at a Pawnee village. It consists of a hundred and fifty lodges, made of poles covered

with mud. Each lodge contains three or four families. This village is situated on the south bank of the river. These Indians raise excellent corn. The squaws perform all the labor in the fields. We gave them some dried meat in exchange for corn. This was the first vegetable food we had eaten in eleven months.

19th. We were obliged to lay by on account of a violent wind. At night we were much annoyed by mosquitoes.

20th. We passed the Loup Fork and also Shell Creek. 21st. We passed Horse Creek, a large stream coming in

from the north, also Saline, a large stream from the south. The scenery here is very different from that farther up the

river. The banks of the Platte from the foot of the mountains to this place have been low and sandy, with scarcely any trees on the banks, but here the river has bluff banks thickly covered with timber. There is a village of Pawnees, called the Pawnee Loups, on the Loup Fork. The Pawnees have their heads

JOURNAL OF E. WILLARD SMITH 275

shaved closely, with the exception of the scalping tuft in the middle, which gives them a very savage appearance. The river

below the Loup Fork is much narrower than above. We are now in the country of the Otoe Indians.

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

On the evening of the 21st we arrived at a missionary station, about fifteen miles from the mouth of the River Platte. There are about twenty Otoe lodges near the missionary station.

These lodges are built of mud, in the same manner as the Pawnees. We went up to the missionary houses, expecting to find some whites, and were much disappointed at finding them deserted, the missionaries having removed to another place.

June 22nd. This morning we arrived at the mouth of the river Platte. The Missouri, where we entered it, is rather narrow. This is about eleven hundred miles from St. Louis.

In the afternoon we stopped at a log house on the bank of the river. Here we saw the first whites who had gladdened our eyes since leaving the mountains. They were at first afraid of us. At this place was a small encampment of Pottawattamie Indians. They had been drunk a few days before, and several

were killed in a fight. This is the part of the country to which they had been removed. The banks of the Missouri here are

quite hilly. Some of the shores are composed of limestone. 23rd. In the evening we arrived at a settlement, where we

procured some fresh meat, bread and coffee. This place was in the Iowa country and we saw several Indians of that tribe.

24th. We stopped at another settlement in the State of Missouri, in Buchanan county. On the south side of the river

is Missouri Territory, and on the north the state of Missouri. We saw some Sacks and Fox Indians today. We now traveled

rapidly, sometimes eighty miles a day.

July 3rd. We arrived at St. Louis, having come two thousand miles from the mountains in sixty-nine days.

When traveling down the River Platte in our mackinaw boat, as before stated, we often ran aground on sand bars,

and were obliged to unload the boat to lighten, push it off the bar, and then reload. This occurred several times in the course of each day, and of course kept us wading in the water most

#### 276 JOURNAL OF E. WILLARD SMITH

of the time. We seldom found it more than waist deep. One afternoon we tied up our boat about four o'clock, as was our custom, to hunt buffaloes, as we were in want of provisions.

This would give us time to kill, and get the meat to the boat before dark. It was usual for one of the party to remain with

the boat while the rest went to hunt. This afternoon it was my turn to remain, which I accordingly did, and the rest of

the party went off about three miles from the boat in search of game. This was rather a dangerous practice, as we were

in the Pawnee country, and very much exposed. The day was quite pleasant with a strong breeze, and I was lounging on

the piles of furs in the boat, with my coat off. Alongside of me lay a fine buffalo robe, that was

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

damp, exposed to the sun to dry. The wind blew it off into the river. I jumped off the boat into the stream, ran down some distance so as to get beyond the floating robe, which was rapidly going down the stream, and jumped into the river, which I supposed was not more than waist deep, but very much to my surprise, I found the water over my head. This was an awkward predicament, for I could not swim, but my presence of mind did not for sake me, I knew sufficient of the theory of swimming to keep perfectly still, conscious that if I did so, I would float, and the result proved that I was right. As I before stated, the current was quite swift, and I was carried down stream rapidly. Finding that I floated, I paddled with my hands, keeping them under water, and found that I could swim quite readily, I paddled out toward the robe, and secured it with some difficulty, as it had become partly soaked with water and was quite heavy. At last I succeeded in dragging it on shore, and crawled out of the water well saturated, and feeling most grateful for my deliverance. It was rather a lonely adventure, as all my companions were several miles distant. On their return they congratulated me on my narrow escape. As we were coming down the River Platte, and had nearly gotten out of the range of buffaloes, which they frequent, it occurred to me that, as I had not yet killed any, I should try what I could do. On my journey out across the plains, I had

JOURNAL OF E. WILLARD SMITH 277

broken my rifle, and had substituted a fusee, or short gun, from which we fire balls. This was a very rude specimen of fire arm, and of very little use for hunting, but useful in case of an attack from Indians.

This afternoon we had, as usual, tied up our boat and the hunter, Mr. Shabena, went out a short distance from the river bank to shoot a buffalo for his meat. At the time there were several large buffalo bulls near us. After killing one we assisted the hunters in butchering it, and in carrying portions of the meat to the boat. It was at this time that I concluded to try my luck, so taking up my gun, which was loaded, and slinging my powder horn and pouch on my shoulder, I started off toward the range of low hills running parallel to the shore and about a quarter of a mile distant. Several bulls were grazing quietly at the foot of these hills. I intended to walk up stealthily to within five hundred yards of one of the largest and then crawl up to within one hundred and twenty yards of him before I fired. For unless you approach as near as that to them your ball takes no effect. I had reached to within five hundred yards of him when he noticed me and becoming alarmed started, off up the hill on a run. It was a damper on my prospects, for they run quite fast, generally as fast as a horse can trot, but as he had to run up hill, I thought I would give chase, and I accordingly did so, and after running a short time I found that I gained upon him and felt, quite encouraged. After running him about a mile and a half I came to a valley where I found; several buffaloes grazing. The bull I

Journal of E. Willard Smith

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

was chasing finding these buffaloes quietly grazing, stopped also and began to eat grass. Finding him so quiet I also stopped to rest for a minute. I examined my gun and found the priming all right. I then approached cautiously to within fifty feet' of him, which I could not have done if he had not been very tired from the long chase up hill. I then kneeled down and resting my ramrod upon the ground to support the gun took deliberate aim at his heart and fired. He jumped

278 JOURNAL OF E. WILLARD SMITH

at me with great ferocity, but I sprang on one side and avoided him. The ball had evidently taken effect.

I loaded the second time and approached somewhat nearer, to within about forty feet of him and took deliberate aim in the same manner and fired. The second ball also took effect and seemed to weaken him. He jumped at me again with the same ferocity, and I avoided him in the same way. After loading my piece the third time I found that my powder was exhausted and that this must be my last shot.

I approached to within the same distance and took aim and fired in the same manner as before. Again he jumped at me ferociously and then laid down panting and apparently in great pain. Having no powder my gun was now useless. I did not like the idea of losing my game after all the trouble

I had had with him, I therefore determined to try my knife, which was a butcher knife six inches long, I crawled up

cautiously toward his hind legs and attempted to cut his ham strings with my knife thereby disabling him so that I could stab him. I had no sooner cut through the thick skin of his leg when smarting with pain the infuriated animal arose and

plunged at me and would probably have killed me if it had not been for the miraculous arrival of our bull dog Turk. I had left him at the boat asleep, but finding that I had gone he followed me and arrived at the spot just in time to take the bull by the nose and prevent his injuring me. I now despaired of being able to secure my game. I took my powder horn and shook it in desperation and succeeded in obtaining enough powder from it for half a charge, with this I loaded my gun, using grass for wadding around my bullet instead of patches,

as these as well as my stock of powder had become exhausted. The bull was now lying down with his head erect, and panting

violently. I walked up to him, and putting the muzzle of my gun to his mouth, I fired down his throat. This was too much for him and he rolled over in his last struggle. I jumped upon him and stabbed him several times in the heart.

It had now grown dark. A large circle of white wolves had formed around and were yelling iin a most hideous

JOURNAL OF E. WILLARD SMITH 279

manner, old Turk keeping them at bay. I cut out the tongue of the bull, and part of his meat and prepared to return to the boat, but on looking about I was at a loss which way to go, in the confusion and excitement I had forgotten from

while with the Fur Traders, Vasquez and Sublette, in the Rocky Mountain Region, 1839-1840

---

which direction I had come. I chose my direction and after a walk of about twenty minutes came to the river, much to my relief. I was again at a loss which way to go to find the boat, but finally walked down the stream, and in half an hour reached the boat, at which I was very much rejoiced. My companions had become very much alarmed at my absence, but knew not where I had gone. We were in the Pawnee country and I was liable to meet some of them at any time and I was without ammunition or any means of defending myself. Old Turk after fighting the wolves off until he could eat some of the bull, returned, and was ever after considered the Lion of the party. Thus ended my first and my last buffalo hunt.

Jedediah Smith's Journal - First Expedition to California

7 Aug 1826 - 3 Jul 1827

August 7th 1826 at our rendezvous at a place known as the bend of Bear River. My Partners Messrs Jackson & Sublette and myself came to the conclusion that in order to Prosecute our Business advantageously it was necessary that our company Should be divided. We had at that time in all \_ men. It was decided that Messrs Jackson & Sublette should go north on to the waters of Lewis River and the Missouri with \_ men and that I should take the remainder of the men and go to the South. Of the Country to the S & S W we knew comparatively little our travels having not extended more than 100 miles to the S and about the same distance to the South west. What that great and unexplored country might contain we knew not but hoped to find parts of the country as well stocked with Beaver as some the waters of the Missouri which was perhaps as much as we could reasonably expect. In taking the charge of our S western Expedition I followed the bent of my strong inclination to visit this unexplored country and unfold those hidden resources of wealth and bring to light those wonders which I readily imagined a country so extensive might contain. I must confess that I had at that time a full share of that ambition (and perhaps foolish ambition) which is common in a greater or less degree to all the active world. I wanted to be the first to view a country on which the eyes of a white man had never gazed and to follow the course of rivers that run through a new land.

Our arrangements being completed Messrs J & S moved on to the north and I struck of passing the Soda Spring and along the pumice stone valley to a small fork of the Port Neuff River Here I encamped for the purpose of drying meat as the Buffalo were quite plenty and in fine order. I was well aware that to the south as far as my acquaintance extended there was but little game and experience had learned me in many a severe lesson the necessity of providing a supply of provision for traveling in a gameless country. My Party consisted of 18 persons besides myself. Their names are as follows

Robeseau      half breed U Canada  
Nipisang      of Nipisang Ind & B America  
Marion        Umpquah Ind a slave  
John      a slave  
Manuel        native Mexican  
Harrison G. Rogers      a Virginian  
Martin McCoy      Kentuckian  
Peter Ranney      E Frenchman  
Arthur Black      Scotchman  
John Gaither      Kentucky  
John Hanna      Missouri  
Abraham Laplant      Indianna  
Emmanuel Lazarus      German  
Robert Evans      ould Ireland  
Silas Goble      Ohio  
John Wilson      Scotland  
Daniel Ferguson      Unknown  
James Reed      New York

I had 28 horses exclusive of those belonging to the free men. I remained on Portneuff three days during which time the Party had dried three horse loads of most excellent meat. I then started for cache or willow valley to which place I was under the necessity of going to procure some things from our cache and to make some repairs on our Guns for at that place we had a sett of Black smith tools. crossing Bear River and making several days at quick traveling I arrived at the Cache on the 15th of August. found every thing safe at the Cache had some coal Burned a forge erected and my work underway as fast a possible. took such things as I wanted from the Cache and on the 18th of August I struck over west on to the Big Salt Lake then south crossing webers fork to the outlet of the Uta Lake then up the outlet to the Lake.\* (\*No buffalo ever visit the Uta Lake in the vicinity are some Elk and deer.) On a creek in the vicinity found some Beaver Sign and near by some Indians of the Uta nation. Understanding by them that the principal Chief with his band was not far off I sent an Indian for him. I was anxious to see him and if possible persuade him to make a treaty with the snake Indians for they had been constantly at war. I likewise wished to procure some information as to the Country to the South. In two days the Indian returned. But the Chief could not be persuaded to come. He was afraid to leave his Band on account of the snakes who he was apprehensive might take the opportunity of his absence to make an attack. He sent word that if Beaver hunting was my object I had better pass his village as there were a good many beaver a short distance beyond where he then was. This I concluded to do and after three days travel from the Lake I arrived at his village on the 23d of August. The country through which we travelled was quite rough and mountainous. I found at that place about 35 lodges some of Skins and some of Brush. Each family has 4 or 5 horses. These Indians are constantly moving about like the snakes and at this time live almost entirely on Service Berries which are now ripe. I remained at this place Two days and concluded a treaty with these Indians by which the americans are allowed to hunt & trap in and pass through their country unmolested and the chief after mature deliberation declared he would go thus far towards making peace with the snakes that hostilities on his part should cease. I then told him that the Snakes had consented to an armistice until a meeting could be had between the two nations which on my return from my fall hunt I engaged to forward by every means in my power. I found these Indians more honest than any I had ever been with in the country. They appear to have verry little disposition to steal and ask for nothing unless it may be a little meat. As stealing and Begging are the most degrading features in the Indian character and as their prevalence is almost universal so to be exempt from then is no ordinary merit. The Uta's are cleanly quiet and active and make a nearer approach to civilized life than any Indians I have seen in the Interior. Their leggings and shirts which are made of the skins of the Deer Mt Sheep or Antelope are kept quite clean. As they sometimes visit the Buffalo Country they have robes. Their arms are like those of the Mountain Snakes Elk and Sheep horn Bows. Having some communication with the Spanish villages of Taos and Santa fee they have more guns than the snakes. At this place I saw a display of that savage disposition too prevalent among Indians. In camp were two Snake women just taken. One of them was brought by a party which came in with me. She was not more than 13 or fourteen years of age. Light complexion and tolerable good features. She was obliged to sleep with her master every night and carry his pack by day and as there was no game in the country she had to dig roots for his food. This barbarous treatment would have passed perhaps unnoticed (for it is common to all Barbarians) had it not been for the result which had the effect to fix it on my mind. As soon as we arrived at the village she was

---

delivered to the squaws in company with one brought in from another direction. I made them a handsome present having been directed to do so by Genl. Ashley who acted in the capacity of a sub agent. I purchased 3 horses for which I paid a high price. Of the country to the South no satisfactory information could be obtained But 20 or 30 miles to the East they told me there were some Beaver. I determined to move on E having been at this place 2 days The Indians moved on in the same direction and encamped with me the first night. The country extremely rough until ascending a considerable Mt we kept on the top of a ridge running Eastwardly. The next day I left the indians and proceeding onwards a few miles came to a valley and a Creek about 20 yds wide running North East. At that place were some Beaver, so I remained there trapping 2 or 3 days. At this place I saw some verry old Buffalo skulls and from their appearance I would suppose that it is many years since the Buffalo left this country. they are not found beyond this place. I then moved on South having a high range of Mountains on the West and crossing a good many small streams running East into a large valley the valley of the Colorado. But having learned that the valley was verry barren and Rocky I did not venture into it. The country is here extremely rough little appearance of Indians and game quite scarce a few Mt Sheep and Antelope. after traveling in this direction 2 days the country looked so unpromising that I determined to strike westward to a low place in the Mountain and cross over. In crossing this mountain just as we were encamping I found an old squaw. (there had been several families at the place but they had run off at our approach). I prevailed on her to come to camp and one of the men gave her a Badger which I supposed she would take home to cook and eat. But the moment it was presented she caught it in her hands and exclaimed we are all friends\* (\*These indians speak a language similar to the Uta's and as I had men in my party that spoke the Uta I was enabled to hold some conversation with them. They call themselves Sanpach.) and immediately tore it in pieces and laid it on the coals. When it was about half cooked she commenced eating making no nice distinction between hair pelts entrails and meet. When she had finished her meal I made her some trifling presents and told her to go and tell her people that we were all friends and that I should be glad to see some of them. She left us and in the evening some men came to the camp. I gave them some presents and by enquiry heard of a river to the west and engaged one of them as a guide. After traveling three days from the place where I turned westward I came to the River of which the indian had spoken it was about 60 yds wide muddy water and runs N W. This river I named Ashleys river in compliment to my friend the enterprising Genl. W H Ashley. Here I found some Beaver sign. The Indians at this place are rather above the midling size but in the mental scale lower than any I have yet seen. Their dress of Leggings and shirts is made of the skins of Deer Antelope and Mountain Sheep. In appearance and action they are strongly contrasted with the cleanliness of the Uta's. The inhabitants of this river are the two tribes of Pa-utch and Sam-pach. They appear to subsist entirely on Roots. The principal one is about the size of a parsnip with a leaf somewhat like the beat it grows on the richest upland. They prepare them by laying them on heated Stones and covering them first with grass and then with earth where they remain until they are sufficiently steamed. They are then mashed fine and made into small cakes. For their winter provision they are dried. The language of the Uta's Sampach and Pa utch is similar.

I had not as good Luck in taking beaver at this place as I had expected from the sign. After remaining a day or two I moved on two short days travel up the River nearly N W the valley being 6 or 8 miles wide and covered with Sedge and But little grass except along the river. A few ante-

---

lope but verry wild. Here I first saw the Black tailed hare. Darker colored and not quite as large as the common hare. The Indians of this river are not numerous and may well be called wild for we seldom get sight of them. They have a peculiar method of conveying intelligence of the approach of danger. Each family or set of families has a quantity of dry Sedge Bark and Brush piled up near the habitation and immediately on the approach of a Stranger they set fire to the pile and this being seen by their neighbor he does the same and the next the same so that the alarm flies over the hills in every direction with the greatest rapidity. As soon as they have apprised their neighbor of the approaching danger they take every thing they possess (which by the by is not much their provision being secreted) and throw it into a large Basket shaped like a sugar Loaf with a strap attached to the top which comes across the forehead and with the Basket on their back away they run to the hills for security --- As the Beaver were scarce and wild I determined to move on south again. Just above where I left the river a range of high hills cross the valley. I ascended a small creek coming in on the west side and at its head crossed a range of Mts and 3d short days travel Brought me into a low country on the west side of the Mt. some small streams flowing from the Mt which I had crossed and running West I followed down and was not a little surprised to find that they all sunk in the sand. As it was useless for me to look for Beaver where there was no water I retraced my steps to where there was water and grass and encamped. On the following morning I started early and as the country look lowest to the S W we moved in that direction about 20 miles and to my great Surprise instead of a River an immense sand plain was before me where the utmost view with my Glass could not embrace any appearance of water. The only exception to this interminable waste of sand was a few detached rocky hills that rose from the surrounding plain and the stunted sedge that was thinly scattered over its surface. As it would not be advisable for me to push into a country of this description I retraced my steps and at a late hour at night found water near where I had encamped the night before. Several of my horses gave out before encamping and were left. The next day I sent back for the horses that were left the party remaining in the same camp I started early on a good horse to take a view of the country travelling South. The range of mt which I had crossed in coming from Ashleys R extended South becoming in that direction somewhat higher. They may be considered the verge of the desert on the East other boundaries remaining as yet undefined. I went about 15 miles and from a high hill with my Glass could discover trees where I supposed there must be a stream running from the Mt W so I returned to camp. The horses had been brought in in the course of the day and two or three Antelope had been killed. The next day made an early start and after a long days travel arrived at the place where I had seen the timber. Here I found a creek 20 yds wide running West with some little Beaver sign. The smoke telegraph was seen on the hills during the day as usual. There had it appeared been a good many families in the vicinity but they had fled not desiring to become acquainted with us. Two Indians had remained behind to gratify their curiosity trusting to their speed perhaps for safety. But the poor fellows were quick undeceived when two men on swift horses pursued them. The probability is they had never seen or heard of horses before and of course were much frightened when they saw the men as it seemed to them sailing through the air. when overtaken nothing could be learned from them. They wanted no conversation with us personal safety was their only object. They feared they were about to pay for their curiosity with their lives but did not attempt to defend themselves and endeavored to express by a continued gabering and signs their desire that my men 'should go one way and they would go the other. finding it

impossible to persuade them to come to camp I gave them some small presents and granted what appeared to be their greatest and only desire permission to leave us. I trapped on this stream 2 or 3 days and moved down it some distance. But as there was no Beaver and the water began to fail and was apparently soon lost in the sand I ascended it again to the foot of the mountain and struck south again. The stream I had left I called Lost Creek. Leaving lost Creek I traveled over some verry rocky hills for ten miles I then entered a valley which run a little west of south varying from 3 to 7 miles in width and followed down this about 20 miles before we found water. It was late before the party all got up. Robeseau and Nipasang with their women and Boys left us today as they were anxious to go more East which I would not consent to do. At night Manuel one of my men ran off taking with him a horse Rifle and ammunition belonging to the Comp. The two snake women that I had purchased from the Utas to save them from the torture also ran off with him. This was undoubtedly by his instigation as he could talk with them which neither of my men could do he probably told them he would take them to their own country. A range of low mts still keeps on the E and on the W the country has the same unwelcome appearance the detached hills are somewhat higher. In the plains are a few antelope and in the Mt some Ibex our dried meat was now gone. In continuing South for 2 days a similar country to the last described. Small streams of water coming out of the Mt on the E are soon lost in the Plain on these creeks there is some grass and Brush. 2 or 3 antelopes killed. Came to a small Creek running S followed it a part of a day but the country becoming verry Rock and hilly I was obliged to turn off to the right where after traveling 8 or 10 miles through a rough country I came to a stream about 60 yds wide running S W and coming from the N E : consequently it must head with Ashleys River. This river I call Adam's River in honor of the present President. I proceded on down this river and as we found no game or Beaver we had nothing to eat. The grass of the river at this place was of those coarse tough kinds which we call Salt and Cane grass. On the day after I struck the river I passed a small spot of ground where corn had been raised 3 or 4 years since. Some of my men could hardly believe it possible that corn had ever been planted in this lonely country although the remains of the stalks were found. The hills being irregular convinced me that it was the work of Indians. The course of the River which is wide sandy and shallow continues S W and the country off from the River Rough Rocky & Red hills no timber or game. On the evening of the second day I had advanced a little ahead of the company to look for a place to encamp. near a small Creek coming in from the west and at the distance of 200 yards I observed an Indian on a hill and made signs for him to come to me but he presented his bow and arrows and in a moment I saw 15 or 20 appear. not considering it safe to remain here I hastened back to the party and then proceded on to the selected encampment. By this time 20 or 30 were seen skulking around among the Rocks. I therefore had every thing prepared for the worst and advancing alone before the camp by making signs and speaking in a friendly tone of voice I finally succeeded in persuading one of them to come to me. The poor fellow the bravest in the band advanced with evident signs of fear his limbs trembling and his voice faltering. holding out in his hand a hare or rabbit to offer as a token of friendship. I took it and carrassed him and he immediately set down. When the others saw that he was not hurt 10 or 12 of them came bringing in their hands an ear of corn as an emblem of peace - (a pleasing sight to starving men) they set down Began to talk and make signs. As provisions was our greatest present desire we were much pleased to hear that they had corn and pumpkins close at hand. I gave them some small presents among which I found that pieces of Iron were verry

---

acceptable and started some of them off for corn & pumpkins. they soon returned well loaded and indiferent as this may seem to him who never made his pillow of the sand of the plain or him who would consider it a hardship to go without his dinner yet to us weary and hungry in the solitary desert it was a feast a treat that made my party in their sudden hilarity and Glee present a lively contrast to the moody desponding silence of the night before. As both men and horses required rest I thought it advisable to remain here 2 or three days during which time I sent some men down to the river to see what the prospect was ahead and 2 men back on the trail for 2 horses that had been left behind. In the mean time I was trading for Corn in order to have a small stock of provision when I started again. My men from below returned and told me that the river about 10 m below entered the mountain which we could see from camp and that we could not follow the River through the Mt unless we traveled in the water as the Rocks rise from the water perpendicularly on both sides. The river being wide and shallow there is no chance for Beaver but there being a great many willows cut on the banks it appeared that they came here in high water and the Indians by signals told me that there were plenty below. The two men returned on the third day with the tired horses. The weather while here was verry warm the Mercury rising above blood heat. I visited some indian lodges a mile above our camp on the creek for the purpose of seeing how they farm. Their little corn patch is close on the bank of the creek for the convenience of water. The Creek is damed about and the water is conducted in a trunk to a place where it can be spread over the surface. For a hoe they use a piece of wood 3 in Broad and 4 feet Long. The pumpkins and Corn were not quite ripe. Their small Lodges are covered with weeds and cane grass the fires being on the out side. They kept their women and children secreted so that I did not see one while with them. They have some Crockery which is thiner than common Brown earthen colored yellow lead Color and like stone ware. I saw no Iron among them so that any piece that could be converted into a knife or an arrow point was a great acquisition. They have pipes made of fine clouded marble and a kind of Tobacco of their own like that which we in the Mountains call snake Tobacco. Each man smokes for himself not passing the pipe around the circle as is the custom among the Mt Indians. They care verry little about our Tobacco. A good many of these Indians were the scalp of an antelope or Mt sheep with the ears on for a hat. In actions and language these indians are like the Pa utch.\* (\* From the place where I struck Adams River to Corn Creek there was but a few places where there was any timber. What I saw was cotton wood and in places willows The grasses were Cane salt and wire grass. On Corn Creek was a considerable Cotton wood & willows. The country on the Adams River above where I struck it had a peculiarly wild and rugged appearance. I found two or three shrubs that were new to me. On growing in bundles like a currant bush with a bright red and polished bark. Another about three feet high green bark prickly surface and when striped of the bark is perforated it is hollow like a reed.) Having somewhat recruited both men and horses I moved on down the River to the foot of the Mt and then turned off to the right the course of the river still S W winding about among the rocks and ravines. I succeeded in gaining the Summit of the Mt composed of Ridges of Rock and gravel. But although I was so high that I could see the low ground beyond the mountain yet there was a deep ravine before me which I was obliged to cross the descent was extremely steep and as we had had no water since morning I was obliged to follow down the Ravine to the River & as it was then nearly night encamped without any grass for my horses. I killed an Ibex in good order and one of the men killed another. These relished verry well with men who had been for several days de-

prived of their accustomed rations of meat. Early the next morning we started down in the bed of the general shallowness of the water. By the meanderings of the stream it was about 12 m through the rocks rising perpendicularly from the waters edge in most places to the height of 3 or 400 feet. A good many hot springs but not as hot as some I have seen at the Salt Lake and on the Big horn. Some appearance of Iron ore. At one place I was obliged to unload and swim the horses. Moved about 3 miles after getting through the mountain to the bed of a stream coming in from the west on which there was some good sized cotton wood trees. There is very little appearance of Indians in this vicinity. The country is not so rough as on the other side of the mountain but extremely barren and the river continues wide and shoal. At this place I saw a new kind of quail some smaller than the atlantic quail. The male has three or four feathers an inch long rising from the top of the head. For four days traveling down the River nothing new or material occurred. After passing the Mt the River turns more south keeping nearly parallel with the mountain and at the distance of 5 miles. The grass has been somewhat plentier along the river, and in two or three places a few small cotton wood trees. No game since we left the Mt. On the evening of the fourth day from the Mt I saw an Indian at a distance called to him and after a little hesitation he came to me and understanding by his signals that there was some lodges near by we went on to the mouth of a creek from the SW small but apparently unfailing on the bank of which was several Lodges of Indians like those on corn Creek. They had corn (which was gathered) Pumpkins squashes and some small green Water Melons. I soon purchased some pumpkins and squashes and encamped. As I was weary of traveling in this barren country I of course made many enquiries of the Indians as to the country ahead. They told me there was a large river not far off and of course plenty of Beaver for it is a general characteristic of indians to answer your questions in the manner that they think will please you but without any regard to the truth. There are however some individuals of different tribes in the Mts on whose word you may depend. These Indians are Pa utch but not as wild as those above the Mt. their women and children did not run off. I saw at their Lodges a large cake of rock salt weighting 12 or 15 lbs and on enquiry found that they procured it a cave not far distant. I engaged an indian and sent one of my men to ascertain the truth. The men reported it as true. I saw Ochre among these Indians which was procured from the N E about 30 m. I thought I had some reason to believe these indians in relation to the beaver as they had mocasins made of the skins. It happened that there were two indians here from another tribe apparently for the purpose of trading for salt and ochre. They told me that a days travel below here this river entered another large River coming from the North East and several days journey Below the mouth of this river they resided where there is plenty of beaver and the indians have horses. I saw on these indians some blue yarn and a small piece or two of Iron from which I judged they had some intercourse with the Spanish provinces. I engaged these indians as guides for I might as well go on as undertake to return. Some of my horses had given out and were left and others were so poor as not to be able to carry a load. The prospect ahead was if the indians told me the truth that I might in this moderate Climate trap all winter and also purchase some horses. these considerations induced me to abandon the idea of returning to the mountains until I should have gone somewhat further in exploring the secrets of this thus far unpromising country. Having stayed at the mouth of \_\_ creek 2 days I started on down the river accompanied by my two guides when I was opposite the cave I turned off to the right across a level piece of ground about 1/2 mile to the foot of a hill which appears to be two or three mile long and 100 or 150 feet

high its course being about parallel with the River which is here running S E or E S E. Ascending from the foot of the hill 80 or 90 feet I arrived at the entrance of the cave which is about 15 feet high and the same width gradually close as I advanced to 4 feet in width and 10 feet in height where it was quite difficult of descent for a short distance perhaps ten feet where you arrive on a floor the room then opens to about 15 or 18 feet in width 25 or 30 feet in length and 20 feet in height. The Roof sides and floor of solid rock salt. I had brought an axe for the purpose of examining it and on breaking it found it generally pure But in places a few dark veins. after satisfying my curiosity I proceeded onwards a few miles and encamped.

The next day S E 15 m to the large river of which my guides had spoken. It was about 200 yards wide 73 deep and a strong current. Coming from the N N E and from this place running south it could be no other but the Colorado of the west which in the Mountains we call seetes-kee-der. Up the River the country presents a hilly Barren appearance and below and all around Barren Stony hills. In some places are a few small trees along the bank of the Colorado. The guides said it would be necessary to cross the river at this place. I there formed a raft of drift wood on which to carry over my goods. The horses were driven in and crossed over after crossing all over moved down the River a mile and enc. Where we crossed the river an Indian and his family were living. They had pumpkins squashes and Beans growing on a small spot of alluvial soil on the River bank. I purchased of the different kinds and he showed me where he had wheat sown or rather planted in the hills 20 or 30 grains in the hill. The River entering a low but rugged mountain below I found it would be necessary to turn off from it to the left and as my guides informed me that it was more than a days travel to the next accessible point on the river between which place and this no water could be found I determined to wait until the heat of the day was over and travel as much as possible in the night. At the proper time we moved on keeping a south East course up a wide gravelly ravine the course of which was nearly parallel with the obstructing range of Mt. At 11 or 12 o'clock at night we unpacked and hobbled our horses and slept until the first appearance of light when we prepared and moved on for three hours in the direction of yesterday the Mt. then becoming lower we turned through a low place S S W and after traveling 2 hours more over terrible rocks we arrived at the river where although we found water which we very much needed yet there was nothing for the hungry and weary horses to eat. The Indians had carried water in the bladder of an antelope which they divided with us yet it was nothing among so many. Just below camp the river again enters the rocks.

The next morning we started early leaving the river and traveling S E 4 or 5 miles up a ravine we got where the hills are fewer and more detached. The country of that same Barren and rough kind I have so often described. My guides had left me in the morning but I had been able to follow their tracks in the sand. The trail turning in toward the river through a range of rough hills by a narrow and deep ravin frequently obstructed by rocks I was apprehensive I would not be able to pass with my horses. As I was some distance ahead of the party and on foot I pushed on briskly to see the worst. I found some very difficulty places but seeing no other chance for proceeding after taking a drink from the River I returned to meet the company. They had been clamberring and winding among the rocks and were now about three miles from the river. Being now night and a place before us that would require some hours to pass I had the horses unpacked and left them as they could not go back on account of the steep places we had come down.

One of the men who was so lame that he could not walk was obliged to remain while the party

moved on to the river on foot. As soon as light the next day we returned and with cords lowered our goods down the precipice, where a mistep would have been in its consequences inevitable destruction.\* (\* It was at this place a party from Taos saw my trail.) But fortunately we passed in safety and packing up pushed on to the river where there was a little grass for our horses. The next day I moved 10 miles down the river the hills not so bad as they had been heretofore. In the course of the day some indians met us having some dried pumpkins, finding tolerable grass I remained two days. I killed a Mt sheep and we caught some pretty good fish with the hook and line. One of my men found a singular substance Some hard and transparent pieces of stone about twice as large as a large pea were firmly fixed in the side of a flat stone. Appearance of an abundance of Iron ore are seen here, and most certainly if a country produces minerals in proportion to its barrenness this must be rich in mineral productions.

I had lost a good many horses and some of those remaining were not able to carry any thing. I got the Indians to assist me in moving down to where there was several lodges. These Indians are quite a different nation from the Pa utch. They call themselves A-muc-ha-ba's and appeared quite friendly bringing me corn beans dried pumpkins &c which I paid them for in Beeds Rings vermilion &c. At this place there is considerable timber on the river and the soil might admit of making small farms. There was but 3 or 4 horses among them but I did not succeed in purchasing them, verry little beaver sign on the river. By enquiry I found that the principal part of this tribe were 30 or 40 miles down the river. I remained at this place 2 days during which time a number of Indians came up from the village below. Among these were one or two that could talk spanish and as I had a man that was able to speak the spanish I could hold some conversation with them. I then moved on down the River accompanied by the Indians who had come up from the settlements below. The distance was upwards of thirty miles and the country barren. On my arrival at the settlement I was treated with great kindness. Melons and roasted pumpkins were presented in great abundance - At this time it was low water yet the Colorado was 200 yards and in the shallowest place I could find 10 feet deep with a smooth current. The timber in this vicinity consisting of the Cottonwood and a small species of Honey Locust with some willow extends entirely along the river varying in width from 1/2 to 2 1/2 miles in width the river winding through woodland from one side to the other alternately. Leaving the woodland which has a tolerable soil the sandy region commences producing nothing but sedge and prickly pear. On the East and West at the distance of ten miles a chain of Rocky hills run parallel with the river and about thirty miles south the Rocky hills close in to the River. This settlement of the Amuchaba's extending about 30 miles along the River appeared quite numerous and paying some considerable attention to agriculture they do not live in villages but are rather scattered over the country generally wherever they find the most favorable situations. In person these Indians are tall and well formed complexion not dark. In abilities perhaps second to the Utas. They do not appear much inclined to steal but are quite fond of gambling. Their principal Game is conducted as follows. A piece of ground 30 or 40 feet long and 8 feet wide is made level and smooth. Each man has a pole ten feet long and one of them a hoop 4 inches in diameter. The hoop is set rolling from one end of the floor and at the instant both start and sliding their poles endeavor to intersect the hoop. The one that pierces the hoop or when hoop and poles stop is the nearest to the spot is the winner. The women also gamble by tossing small colored sticks in a dish somewhat like throwing dice. The women are generally very fleshy with tolerable features. The man when dressed at all have a Spanish Blanket thrown

over the left shoulder and passing under the right arm it is pinned on the breast with a wooden pin. They wear no head dress mocasins or leggings. The dress of the women is a peticoat made of a material like flax just Broken which is Banded with a plat on the upper edge like corn husks. It is fastened around the waist extending down to the knee and constitutes with whole of their clothing. They are in general much more cleanly than the Pautch.

They make a kind of earthen ware and in large crocks of this they boil their beans corn pumpkins &c. The men appear to work as much in the field as the women which is quite an unusual sight among Indians. But few of them have bows and arrows. The bows are 5 feet long and the arrows verry long and made of cane grass with a wooden splice 6 inches long for a head. It is fashion with these indians to fill the hair full of mud and wind it around the head until the top resembles in shap a tin pan. Their summer Lodges about 3 feet high are made of forks and poles covered with grass weeds and dirt flat on the top. The winter Lodges generally small are made in the woods but fronting to the south and where the trees are not sufficiently high to keep out the sun. As the rainy season approaches they throw dirt on the roof to give it a slope to carry off the water and also secure the sides with dirt leaving only a small aperture for a door. As they have not much clothing when the weather requires it they build a great many small fires sleeping in the intervals between them. When they become cold they draw the sand out from under fires and spread it where they sleep. In their Lodges I observed an abundance of Crocks and demijohns. Goards and small bins made of willow in which they put their corn, beans, wheat, garden seeds, and melons. The Honey Locust of this country bears a pod somewhat longer than a bean. The Indians gather these and pound both the pod and the bean it contains until it forms a coarse flour. they work it into loaves and Let it dry it is then fit for use. When they use it they rinse it with water to which it imparts a sweet and yet tartish taste by no means unpleasant. I frequently observed at a distance from their houses willow bins that would hold 20 to 100 Bushels filled with the Locust pods from which circumstances I judged them not much inclined to steal from each other. Their method of grinding their wheat is somewhat tedious. On a large flat stone a little concave it is pounded or rather rolled with another stone in the shape of a bakers rolling pin until it is sufficiently fine. The stone on which the grinding is done being placed in a sloping position gradually as the meal becomes fine it is permitted to slide off into a dish at the lower end. The bread which they form of this meal is baked in the sand or ashes under the fire without the covering of Bark or grass used by the Pawnees. When they would roast their Pumpkins or Squashes which is common method of cooking them, they take a plug from the side extract the seeds from the hole and replace the Plug by which means they may roast them as neatly as if they were entire.

I found in this vicinity no beaver worth trapping for but remained here for the purposes of recruiting my men and horses. From the Indians I ascertained that below the rocky hills that came into the river and nearly down to the mouth of the Gila the country was barren and not inhabited. they also told me that it was about ten days travel to the spanish settlements in California. I swaped my poorest horses with the indians and endeavored to purchase others but without success.\* (\* One morning an Indian came to me and said the Indians had killed one of my horses which on examination I found to be true. They had killed the horse to eat and took away every thing but the entrails. from this time I had my horses so carefully guarded that they had no chance to continue their depredations.) Believing it impossible to return to the deposit at this season and in my present situation I determined to prepare myself as well possible and push for-

---

ward to California where I supposed I might procure such supplies as would enable me to move on north. In that direction I expected to find beaver and in all probability some considerable river heading up in the vicinity of the Great Salt Lake By this route I could return to the deposite. In pursuance of my plan I endeavored by all means in my power to procure a guide but could not succeed. I therefore got the best instruction I could in regard to the route and collected a supply of Corn, Beans, Locust Bread, and a little Indian flour.

Having remained at this place about 8 days I made a raft and crossed the river and for the first day traveled nearly west passing through the Rocky hills by a deep ravine which brought me through to the plain then a little north of west 15 miles to another range of hills where I found water and cane grass and encamped. At night the most valuable horse I had was stolen for although I had a guard yet it was so dark that the horse was led out unperceived. The next day I travelled west through the range of hills to the plain where the trail could not be followed and where I was obliged to encamp without water. I had supposed that I should be able to follow the trail from the directions given by the indians which being found impracticable and a great scarcity of water becoming more apparent I rode and sent others to the high hills and deep ravines in every direction to Look for water and as none could be found the Idea came forcibly to mind that it was the policy of the Indians to send me into the desert to perish. In this situation I saw no alternative but to retrace my steps. on my way back I found an Indian and a boy following our trail for some purpose unknown to me. They had water with them which would convey the Idea that the country where I turned back was for some distance destitute of it. On seeing us one of them ran off I did not pursue him but kept the other with me until I got to the spring where I had before encamped. It will be readily imagined that by this time we were much in want of water. During the night the Indians ran off. The next day I moved to the river and found that the Indians had all gone from their Loges leaving everything the could not carry off.

It was now prudent to prepare for the worst which I did by making a pen for my horses and encamping under a bank of the River which would answer as a breastwork in the emergency which the singular conduct of the indians led me to expect. However the little renegade Francisco (that spoke spanish) came to the opposite bank of the river in the morning and after hallowing plunged in and swam over. I asked the reason of the singular behaviour of the Indians. He said the Indians that got away from me told them I was coming back to kill them all for stealing my horse. To this I answered that it was all folly to tell them to return and be friendly as usual. It was true I must have my horse but I would not think of punishing the whole of them for the fault of the single scoundrel that stole him. I also told him to tell the chiefs that they must get the horse and bring him to me in which event all would be well. Francisco left me and in the evening the Indians returned to their Lodges. The chiefs came to see me and said that the Indian that stole my horse had gone off some distance but that they would have him back as soon as possible and oblige him to deliver the horse. They wished me to recross the river and as the grass was poor at that place I complied with their request and after crossing moved down the river about ten miles where the settlement is also considerable and the country like that above with the exceptions that there are some small prairaes of tolerable good sandy soil producing Melons and corn and some ponds and slous in which portions of the river run in high water. The grass at this place was much better than at any place above and the productions the same as those mentioned before though perhaps in greater abundance than in the upper part of the settlement. Their wheat is planted in hills. As

---

they have no fences what few horses they have are kept constantly tied by a long halter and at this season are fed on Pumpkins and melons of which they appear verry fond. They ride without saddle or Bridle but by the help of a wide Circingle under which the slip their feet they are enabled to sit firmly. Melons were supplied in such numbers that I had frequently 3 or 400 piled up before my tent. A great many women and children were generally about us. Among the Amuchabas I did not find any verry influential chiefs.

He that has the most wives and consequently the most numerous connexion is the greatest man. There was one chief which we called Red Shirt from the circumstance of his wearing a shirt made out of a piece of red cloth which I had given him. He was about 40 years of age and appeared to be a great favorite among the women. He frequently stayed at my tent and slept with any of the women he chose. No indians I have seen pay so much deference to the women as these. Among indians in general they have not the privilege of speaking on a subject of any moment but here they harangue the Multitude the same as the men. While here Francisco came to me and requested I would go and see a man who was verry sick. I told him I was no Physician but these indians thinking a white man could do anything I was obliged to go to satisfy them. When I arrived at the spot 3 or 400 people were assembled but the man was dead. Seeing a large pile of wood I enquired of the interpreter the meaning he informed they were about to burn the corpse which was soon brought and laid on the pile, and also a small bag of net work containing his property. It appeared the man had died from the swelled neck a disorder I think quite common here as I observe many with their necks much scarified a remedy which appeared to have been applied to the case of the deceased as there was a good deal of Blood on his neck. Two or three women were crying and screaming and came to the pile apparently in the greatest agony embracing the corpse. They were pulled off and fire was put to the pile which was soon in flames. The mourners took some strips of Red cloth and whatever they thought most valuable and threw them in the flames. I left them but Francisco told me the deceased had two horses which were already killed and on them the people would now feast. It being a great object with me to procure a guide no means were left untried and finally I succeeded in engaging two Indians that lived in the vicinity of the Spanish Settlements. The stolen horse having been returned I moved to the proper point and crossed over the River for the purpose of making another attempt to cross the plain to California. Having remained at the Amuchabas several days. The first day I traveled the same course as on the preceding attempt and encamped at the same spring.

The next day on the same route till I came to the place where I had before lost the trail then traveling a little north of west and passing some detached hills on the right and left just before night we came to a hill of rocks and at its foot a small spring where I encamped.

In the vicinity was some gravelly hills on which there was a little grass where I turned my horses. The next day started early steering W N W crossing some ridges and passing some hills on our left. Just before night at the foot of a small hill we found a little spring or rather hole of water furnishing a verry inadequate supply for after taking out some to cook with I let the horses to it and they drank it all. As there was no grass I was under the necessity of tying my horses to keep them from running away. The next morning starting early a N W course about 1 O Clock I came to a little ravine in which was some grass and a spring here I encamped. The country since leaving the Colorado has been a dry rocky sandy Barren desert. As my guides informed me that we had a hard days travel to make I moved off early keeping west down the ravine 5 miles Then S W and W

---

S W till one O Clock when I came to border of a salt plain and at this place found some holes of Brackish water. After crossing the Salt Plain I found a place where there was water and some grass and encamped. The water was in holes dug about two feet deep and quite brackish making some new holes I found the water some better The Salt Plain I had passed during the day was about 15 miles long and from four to six miles wide, entirely Level and destitute of vegetation. Presenting a surface of sand the most beautiful Salt was found in many places and within two or three inches of the surface. I ascertained that although the salt was found in a Layer it did not extend throughout the plain. In passing the plain pieces of the salt were frequently throw out by the feet of the horses. The Layer was about  $\frac{3}{4}$  of an inch thick and when the sand was removed from it I found the salt pure white with a grain as fine as table salt.

The next day W S W 8 or 10 miles across a plain and entered the dry Bed of a River on each side high hills. Pursuing my course along the valley of this river 8 or 9 miles I encamped. In the channel of the river I occasionally found water. It runs from west to east alternately running on the surface and disappearing entirely in the sands of its bed leaving them for miles entirely dry. near the place where I entered its Bed it seemed to finally lose itself in the plain.\* (\* It is perhaps reasonable to suppose that the Salt Plain has been formed by the waters of this river overflowing the level country in its freshets and in the dry season sinking in the sand and Leaving a deposit of salt on the surface. The waters of the River at this place are sufficiently salt to justify this conclusion.) At this time my provision was nearly exhausted although I thought I had provided enough to last me 10 or 12 days. But men accustomed to living on meat and at the same time travelling hard will Eat a surprising quantity of corn and Beans which at this time constituted our principal subsistence. One of my guides said he knew where his people had a cache of some provision and the next day as I traveled on he went with one of the men to procure some at night they returned bringing something that resembled in appearance loaves of bread weighing each 8 or 10 pounds. It was so hard that an ax was required to break it and in taste resembled Sugar Candy. It was no doubt sugar but in that imperfect form in which it is found among nations to which the art of granulation is unknown. On enquiry I found it was made from the cane grass which I have before spoken of on adams River and the same of which the Amuchabas make their arrows. For three days nothing material occurred Our course was up the River which sometimes run in sight and then for miles disappeared in the sands. In places I found grass and the Sugar Cane and in some places small Cotton wood. I also saw the tracks of horses that had been here during the summer. My guides Belonged to a tribe of indians residing in the vicinity called the wanyumas. not numerous for this barren country could not support them. At this place was some sign of Antelope and Mt sheep Mr. Rogers killed an Antelope which tasted quite strong of wormwood. On the 4th night from the salt plain an Amuchaba indian that had come this far with me disappeared. I suppose he had become tired of the journey and returned. My guides had expected to find their families here but were disappointed.

The next day still following the course of the River which had a strong current in places 20 yds in width and in others entirely disappeared in the sands. After a long days travel I arrived late at a wan yu ma Lodge. close by were 2 or three families of the same tribe. Here I remained the following day and in the mean time was well treated by these indians. They gave us such food as they had consisting of a kind of mush made of acrons and pine nuts bread made of a small berry. This bread in appearance was like corn bread but in taste much sweeter. As there were in the neighbor-

hood a plenty of hares the Indians said they must give us a feast. Several went out for this purpose with a net 80 or 100 yards long. Arriving at a place where they knew them to be plenty the net was extended among the wormwood. then divided on each wing they moved in such direction as to force the frightened game to the net where they were taken while entangled in its meshes. Being out but a short time they brought in 2 or three doz a part of which they gave me. seeing some tracks of antelope Mr. Rogers and myself went out and killed 2. In this vicinity there are some groves of Cotton wood and in places Sugar Cane and grass. On the following day after making the indians some presents I moved on keeping a right hand fork my course nearly S W passing out at the head of this creek and over a ridge I entered a ravin running S W I proceeded down it nearly to where it entered some high hills which were apparently covered with pine. At this place I encamped. In the course of the days I passed hills covered with a scattering growth of Bastard Cedar and bushy Oak. Some antelopes were seen in the course of the day and the tracks of Bear and Black tailed Deer.

The next day following the valley of a creek alternately sinking and rising and passing through a range of Mt for 8 miles where I was obliged to travel in the bed of the creek as the hills on both sides which were thick covered with cedar came in close and rugged to the creek. About ten miles from camp I came out into a large valley having no timber except what was on the creeks coming from the Mountains. Here we found a plenty of grass and what was still more pleasing we began to see track of Horses and Cattle and shortly after saw some fine herds of Cattle in many directions. As those sure evidences of Civilization passed in sight they awakened many emotions in my mind and some of them not the most pleasant. It would perhaps be supposed that after numerous hardships endured in a savage and inhospitable desert I should hail the herds that were passing before me in the valley as harbingers of better times. But they reminded me that I was approaching a country inhabited by Spaniards. A people whose distinguishing characteristic has ever been jealousy a people of different religion from mine and possessing a full share of that bigotry and disregard of the rights of a Protestant that has at times stained the Catholic Religion.

They might perhaps consider me a spy imprison me persecute me for the sake of religion or detain me in prison to the ruin of my business I knew such things had been and might be again. Yet confiding in the rectitude of my intentions I endeavored to convince myself that I should be able to make it appear to them that I had come to their country as the only means by which I could extricate myself from my own embarrassing situation and that so far from being a spy my only wish was to procure such supplies as would enable me to proceed to my own country.

When we left the Mts our course was W S W Close on the right was a range of Mts out of which poured several beautiful streams watering a fertile valley extending many miles on the left. Having traveled about 18 miles I encamped. We had nothing to eat and knowing that it would take two days to reach the settlements I determined to help myself to one of the hundreds of fine cattle in view. In endeavoring to kill one I had to use all the precaution necessary in approaching Buffalo. Having succeeded I found the animal branded on the hip I therefore saved the skin to carry in to the owner. At this place I remained during the following day.

Again moving onward in two days travel I arrived at a farm house. The country through which we passed was strikingly contrasted with the Rocky and Sandy deserts through which we had so long been traveling. There we had passed many high mountains rocky and Barren Many plains whose sands drank up the waters of the river and spring where our need was the greatest. There

sometimes a solitary Antelope Bounded by to vex our hunger and the stunted useless sedge grew as in mockery of the surrounding sterility. There for many days we had traveled weary hungry and thirsty drinking from springs that increased our thirst and looking in vain for a boundary of the interminable waste of sands. But now the scene was changed and whether it was its own real Beauty or the contrast with what we had seen it certainly seemed to us enchantment. Our path was through a fertile and well watered valley and the herds of Cattle and the bands of wild horses as they sniffed the wind and rushed wildly across our way reminded me of the Plains of the Buffalo East of the mountains that seemed to me as a home or of the cattle of the more distant prairies of Missouri and Illinois.

Even in the Idea that we were approaching the abode of comparative civilization there was a pleasure not however entirely unmixed with dread for we knew not how we might be received. As we advanced the white Brant and Mallard were seen in great numbers it being now their season. and we passed a farm on a creek where a number of indians were at work. They gazed and gazed again considering us no doubt as strange objects in which they were not much in error. When it is considered that they were not accustomed to see white men walking with horses packed as mine were with Furs Traps Saddlebags Guns and Blankets and every thing so different from any thing they had ever seen and add to this our ragged and miserable appearance I should not have been surprised if they had run off at first sight for I have often been treated in that manner by savages. Arrived at the farm houses I was kindly received by an elderly man an indian who spoke spanish and immediately asked me if I would have a Bullock killed. I answered that I would and away rode two young Indians in a moment It being the custom in this country as I have since learned to keep a horse or horses constantly tied at the door Saddled and Bridled and of course ready to mount at a moments warning. In a short time the indians returned bringing a cow as fast as she could gallop. She was held between the two horsemen by ropes thrown over her horns and having the other end fast to the Pomel of the spanish Saddle one riding before and the other behind she was forced along without the power of resistance. They were anxious that I should shoot the cow which I did. Novel as the scenery of this country was to me It seemed that we ourselves were a still greater wonder to our semi-civilized friends. As I afterwards learned they wondered how indians could be so white having no Idea that civilized people lived in the direction from which we came. It was also a great wonder to them that we had guns and other articles and more than all that there should be with us one of the people of Reason this being the name by which they were learned to distinguish Spaniards from indians and which they readily applied to one of my men who spoke spanish.

The farm house consisted of Two Buildings each about 100 feet long 20 feet wide and 12 feet high placed so as to form two sides of a square. The walls are of unburnt brick about 2 feet thick and at intervals of 15 feet Loop holes are left for the admission of light. The roofs were Thatched. It should be premised that I had at this time but a vague idea of the peculiarities of the country in which my fortune had placed me. I therefore was in the dark as to the manner in which I should conduct myself and determined to be guided by circumstances as they should transpire. In pursuance of this plan when the old overseer asked me if I was not going to write to Father I told him I was and immediately set down and wrote a few lines briefly stating where I was from and the reason of my being there an Indian mounting one of the horses that are always in readiness took my note and was off in an instant. In about an hour the answer was returned by a man who

the overseer told me was the commandant but in fact a Corporal. He asked me how I did and congratulated me that I had escaped the Gentiles and got into a christian country and offering me some Segars made with paper according to the common custom of the country when I would take one he insisted that I should take the bunch. He then presented the note from the Father written in Latin and as I could not read his Latin nor he my english it seemed that we were not likely to become general correspondents. I however ascertained that he wished me to ride to the Mission so giving Mr. Rogers instructions how to proceed in my absence I took my interpreter and in Company with the corporal and a soldier moved on at the gate that appears quite common in this country a gallop passing large fields laid out on both sides of the road and fenced with Posts set in the ground with rails tied to them by means of strong pieces of raw hide there being also thousands of Cattle skulls in rows on each side of the road conveying the Idea that we were approaching an immense slaughter yard. Arrived in view of a Building of ancient and Castle-like appearance and not knowing why I was brought there or who I was to see the current of my thoughts ran so rapidly through my mind as to deprive me of the power of coming to any conclusion so that when we passed in front of the Building and the Corporal after pointing to an old man sitting in the portico and observing that there was the father immediately rode off I was left quite embarrassed hardly knowing how to introduce myself. Observing this I presume the father took me by hand and quite familiarly asked me to walk in making at the same time many enquiries. Soon some bread and cheese were brought in and some rum of which I drank to please the Father but much against my own taste. I then related to him as well as in my power the course of my being in that country but it was being to him a thing so entirely new and my interpreter perhaps not giving a correct translation of my words he was not able to comprehend the subject and told me there was an American residing in the vicinity for whom he would send as he spoke good Spanish and on his arrival we might have a good understanding. In the mean time he told me to make myself as contented as possible and consider myself at home. He ordered the steward to show me to a room about 20 feet square in which there was a bed taking possession of it I was left alone to reflect on my singular situation for about two hours when the bell ringing for Supper a boy came and invited me in. The Old Father invited me to pass up next to him. We were seated on a long bench with a back to it one of these occupying each side of the table. On The opposite side of the table sat a Spanish Gentlemen and a father from the neighboring village of the Angels and the steward of the mission. at my side sat my interpreter. As soon as we were seated the Father said Benediction and each one in the most hurried manner asked the blessing of heaven - and even while the last words were pronouncing the fathers were reaching for the different dishes. About a doz Indian boys were in attendance who passing the different dishes to the fathers they helping themselves and passing them to the next. Our knives and forks according to the common custom of the country were rolled up in a napkin and laid by the side of the plates. The supper consisted principally of meats. and an abundance of wine. Before the cloth was removed Cigars were passed around. I may be excused for being this particular in this table scene when it is recollected that It was a long time sinc I had had the pleasure of sitting at a table and never before in such company. November 28th 1826 My party arrived and I had my things put into the room which I occupied. The Corporal who was called Commandant came to me and after a few preparatory compliments observed that the best thing I could do with my guns would be to put them in his charge where they would be safe for said he strangers visiting you will be constantly handling them they being

a kind with which they are unacquainted. I thanked him for his kindness and gave him the arms though I knew he was influenced by a motive very different from the one assigned.

29th Just at sunrise Mr Rogers and myself were sent for showed forward to the table and served with tea Bread and Cheese. The father was not present for at that time he was at his devotions. It may perhaps be well for me in this place to give a view of some facts that were in part learned after this time anticipating my story that my ideas may be the more readily understood. California was first settled by missionaries of the order of St. Francis about 60 years since. These missions are scattered over the country and include in their several jurisdictions nearly all the natives of the country. The number of indians attached to each mission varies from 400 to 2000. These establishments with their dependencies include about 3/4ths of the Inhabitants of California. The place at which I was for the time located was the mission of St Gabriel. The situation of St. Gabriel is pleasant the prospect to the North embracing a considerable range of Mts at the distance of 12 miles on the south low hills and on the East and west a smooth country covered with grass. The soil in the vicinity of the mission has the appearance of great fertility presenting a gentle slope to the south East. The hills produce Pine of different kinds and at their feet Groves of Low Oak and small walnuts. The Streams are skirted with Cotton wood Ash willow small Buck Eye and wild Grape vines. Two thousand acres of land fenced in the manner I have before described and so situated as to be easily watered by a small creek that runs through it producing an abundance of Wheat Beans Peas and some Corn. An extensive vineyard and orchards of Apples Peach Pear and Olive trees some figs and a Beautiful grove of about 400 Orange trees render the Mission of St Gabriel a scene on which the eye cannot fail to rest with pleasure. On the beautiful lands of the neighborhood are grazing immense herds of Cattle and large bands of Horses. The buildings of the mission form a Hollow square. The Church on the S E and the Guard House on the S W corner the several sides being occupied by the Fathers Rooms office dinning Room apartments for Strangers. Store Houses Granaries Soap Factory Distillery Black Smith Carpenters and Cooper Shops The Shops for the Manufacture of Blankets and Lodging rooms for the unmarried women. at a short distance from the square the intermediate space being unfenced there is a street lined with small buildings on both sides these are occupied by the Indians of the Mission who have families. At 11 O Clock the Father came and invited us to dinner. We accompanied him to the office adjoining the dining room and after taking a glass of Gin and some bread and cheese we seated ourselves at the table which was furnished with Mutton Beef Chickens Potatoes Beans and Peas cooked in different ways. Wine in abundance made our reverend fathers appeared to me quite merry. an express had been forwarded by the Commandant to the Governor at San Diego.\* (\*My two indian guides were put in prison immediately on my arrival charged with being run-aways from the Mission. They were about 16 years of age and from what I saw of them I thought them fine honest and well disposed boys.)

30th November Sunday A wedding at church but I did not attend being a protestant. I thought it might not be agreeable to the Catholics. the new married couple dined with us the bride and her sister being the only females present two or three young men attended with the groom. Mr Rogers and myself in our unfashionable dress would have very willingly absented ourselves but no excuses would be received. Our dinner consisted of more than the usual number of dishes. Dried Grapes were served as a desert a Dozen Indians were playing on violins and the soldiers were firing their Musquets at the door. After dinner I spoke to the Commandant for another room for

my men which was readily provided. I also proposed that instead of furnishing my men with their provision ready cooked as had been the case heretofore they should receive the material and cook them to their own taste to this he assented but observed that they might as well as not have an Indian to assist them. Flour Meat Beans &c were provided in abundance.

From this time nothing material occurred for several days. Mr Chapman the american spoken of by the Father came from the village of the angels accompanied by Capt Anderson of the Brig Olive Branch and the supercargo Mr. Scott. Mr Scott being a good translator I was enabled to make my situation fully known. I soon ascertained that nothing could be done until the arrival of an answer from the Governor at San Diego. Besides the above named Gentlemen there came to St Gabriel at different times two others who spoke good English John Baptiste Bonnifacio a Portuguese residing at St Francisco and on his way to St. Diego the other Senor Martinas a native of S America and formerly in good circumstances. But being a Royalist lost his property and sought a retreat among the Fathers in California who are geny. secret friends of Ferdinand. Senor Martinas had lately been called to Mexico and was then on his way he appeared to be a man of science and business "You will find (says he.) it verry difficult to make the Governor Comprehend your business. He has been raised without knowing the hand that fed him as a Gentlemen and those Mexican Gentlemen know verry little of business of any kind and much less of yours. He may perhaps detain you here a long time he will not consider the expense of the wages of your men nor your anxiety to join your partners.

Improving the opportunity offered by my presence I learned from Father Sanchez that at the different farms belonging to the Mission (St Gabriel) there were 40,000 head of Cattle 2,000 horses 3 or 400 head of Sheep and a great many hogs of these last the make little use. There are but few white men at this place neither could it be expected there would be many in California for father Sanchez told me that no white woman had ever come there to live. There are attached to the Mission of St Gabriel about Indian Inhabitants who are kept in the strictest order being punished severly for the most trifling offence or neglect.

They are whipped like slaves the whip being used by an indian a soldier standing by with a sword to see that it is faithfully done. Having passed the age of puberty the two sexes if unmarried are kept separate being at night shut up in different apartments the work of the day having their tasks the ringing of the Bells in the morning which is quite early all the indians go to church and after prayers the overseers of the various branches of work receive their orders from the Principal Overseer and move off immediately to their several employments. An old man from the Angel village being at the mission invited me to visit him at his house and two or three days after sent his son with horses. I went taking with me my interpreter and was verry kindly received by my friend Francisco Abela. The Angel village in which my friend resided contained 70 or 80 Houses The walls of mud or unburnt Brick and the roofs of thatch or tile. They were general small and few of them cleaner than they should be. This village is about ten miles S W from St. Gabriel the inhabitants cultivate but little ground depending on their Cattle for subsistance. They are generally poor but a few families are rich in Cattle horses and Mules and among these Senor Francisco Abela and his Brother Don Ignatio are perhaps the richest. In California as in Spain the Siesta after dinner is fashionable. they generally sleep 2 or three hours. The Californians are excellent horsemen when on a swift horse they catch a wild steer or horse with the greatest ease. They are seldom seen on foot but mount a horse to go even 200 yards and always carry with them

---

a strong rope made from pieces of Ox hide braided which is called a Larse. It is 7 or 8 fathoms in Length with a Loop at the end for the purpose of forming a noose. The Spaniard mounted on a swift horse with his Larse in hand holding it so as to form the noose about 4 feet in diameter and swinging it around his head to keep it connected pursues the wild Cattle and horses of that country and arriving at the proper distance while both pursued and pursuer are at utmost speed throws his noose with such precision as to generally succeed in fastening it to the animal in the intended place while at the same time with his left hand he takes a turn around the Pomel of the saddle which is made high for that purpose with the end of the rope remaining in his hand. If the animal pursued is a horse he is caught around the neck and is soon choaked down. If a steer he is caught by the horns and generally by two persons one riding before the animal and one behind holding him between them by their respective Larses with the power of resistance. If it is the object to throw the animal down they throw for the feet and having caught and fastened the rope to the saddle giving the horse a start the animals feet are taken from under him at once. In this manner they can take almost any animal in the country without excepting even the Elk but the principal use of this daring and active exercise is the catching of the wild horse and wild Cattle that range the country in great numbers. I am also informed that when a Bear can be found in the open country they are taken in this manner. But they do not attempt this adventure singly. Of the truth of this I have some doubts. The only Bear found in this country are the Grizly Bear smaller than those of the Mountains yet notwithstanding a formidable animal and possessing sufficient strength as I think to take hold of the Larse when noosed around the neck and tear it from the Saddle or break it in an instant.

8th December 1826 At this time the Mercury ranges from 50 to 70. Today the Corporal received orders to forward me to San Diego to pay a visit to his excellency Hosea Maria De Acheondia. Capt Cunningham of the Ship Courier of Boston arrived about the same time from San Diego.

9th December 1826 Capt Cunningham had been trading on this coast since the preceding July exchanging Dry goods Groceries and hardware for hide and Specie. The population not admitting of a wholesale business the sales are made in Retail while passing along the coast from Acapulco to St Francisco. At that time he expected to be on the coast about a year longer. He spoke Spanish and manifested the most friendly disposition and a willingness to render me all the assistance in his power. It was therefore with great pleasure that I learned he was about to return to San Diego and that we could travel in Company. At 11 O Clock all preparations being made we started. My horses were furnished by government some being driven along for the purpose of having a change. A soldier was sent by the Commandant for a guide to take charge of the Loose horses and catch one if necessary. Just before starting the Comdt took care to tell me that he was instructed to send a good and careful Soldier. In this country horses are so plenty and cheap and the people have so little feeling for these noble animals (as I shall soon show) that they indulge freely in the common disposition for fast riding secure that when a horse is no longer able to travel another may be cheaply and easily procured. We therefore fell in with the spirit of the time and people and moved off at a gallop over a fine level country. Four miles from St Gabriel we crossed a stream 50 yards wide and shallow and sandy. On the right a country gently undulating extended to the Ocean a distance of 20 or 30 miles and on the left a range of high and rough hills. About 18 miles from the first mentioned creek we crossed another 80 yards wide in appearance like the first and

---

three miles further came to a farm. In this distance we had passed many herds of cattle belonging to the residents of the Angel village and some thousands of wild horses. The wild horses become so abundant at times as to eat the grass quite clean. My guide informed me that the inhabitants of the village and of the vicinity collect whenever they consider the country overstocked and build a large and strong pen with a small entrance and two wings extending from the entrance some distance to the right and left. Then mounting their swiftest horses they scour the country and surrounding large bands they drive them into the enclosure by hundreds. They will there perhaps Larse a few of the handsomest and take them out of the pack. A horse selected in this manner is immediately thrown down and altered blindfolded saddled and haltered (for the Californians always commenc with the halter). The horse is then allowed to get up and a man is mounted. when he is firmly fixed in his seat and the halter in his hand an assistant takes off the blind the several men on horseback with handkerchiefs to frighten and some with whips to whip raise the yell and away they go. The poor horse having been so severely punished and frightened does not think of flouncing but dashes off at no slow rate for a trial of his speed. After running until he is exhausted and finding he cannot get rid of his enemies he gives up. He is then kept tied for 2 or 3 days saddled and rode occasionally and if he proves docile he is tied by the neck to a tame horse until he becomes attached to the company and then turned Loose. But if a horse from the moment he is taken from the pen proves refractory they do not trouble themselves with him long but release him from his bondage by thrusting a knife to his heart. Cruel as this fate may seem it is a mercy compared to that of the hundreds left in the pack for they are shut up to die a death most lingering and most horrible, enclosed within a narrow space without the possibility of escape and without a morsel to eat they gradually loose their strength and sink to the ground making at time vain efforts to regain their feet and when at last all powerful hunger has left them but the strength to raise their heads from the dust with which they are soon to mingle their eyes that are becoming dim with the approach of death may catch a glimpse of green and wide spread pastures and winding streams while they are perishing from want. one by one they die and at length the last and most powerful sinks down among his companions to the plain. No man of feeling can think of such a scene without surprise indignation and pity. Pity for the noblest of animals dying from want in the midst of fertile fields. Indignation and surprise that men are so barbarous and unfeeling. A fact so disgraceful to the Californians was not credited from a single narrator but has since been corroborated.

But to return to this digression the farm of which I have before spoken belonged to Don Thomas (the remainder of his name I have forgotten). he was not at home but his wife invited us into a house of 2 or three rooms and informed us that her husband was soon expected. we therefore concluded to wait his arrival. I observed some sugar cane growing in the garden which appeared quite thrifty. It was not long before we were called to eat the attention of these people being in that respect truly proverbial. we sat down to a table where the Table cloth Napkins and plates were clean and the spoons of Silver but neither knives or forks were there for the common people of this country seldom have these articles. Our repast consisted of a hash highly seasoned with pepper. Tortioes (pan cakes) and wine. The blessing was asked by a boy 8 or 9 years old standing at the end of the table with his hands raised. not being pronounced in the usual hurried manner it had much more the appearance of devotion I then thought as now that some of the learned fathers might learn the air of devotion if not the substance from this little boy. Soon after we had finished

---

eating Don Thomas arrived having ascertained our wants he said as his horses were some distance off we could have to remain all night or if we were in a great hurry we could start at one or two O Clock in the morning by which time he could have the horses. At two O Clock we started on our journey and at 8 O Clock arrived at the Mission of San Juan a distance of about 25 miles. The first part of this distance being traveled in the night I could not so well form an Idea of its appearance. but it seemed much like that we had passed and judging from the noise the wild horses made in running when scared off by our approach or when taking the wind I would think them as numerous as in the country before described. As we approached the Ocean the country became much more hilly. The Mission of San Juan is about a mile from the Ocean in a country hilly and barren. The buildings are similar in construction and arrangement to those at St Gabriel. In the year 1811 the church of this mission was nearly destroyed by an earthquake since which time service has been performed in one of the smaller buildings. The number of Indians is not great at this Mission nor is it more than half as rich as that of St Gabriel. On our arrival at San Juan the people were at church as soon as service was over the Steward invited us to take a cup of Chocolate which is a beverage of which the Spaniards are very fond and of which the higher class make great use particularly in the morning. To Americans they generally offer tea as they have an idea that we are very fond of it. I have seen them grind tea as they would coffee which is an evidence that they do not make much use of it. My soldier presented his instructions to the Corporal at the Mission who soon supplied us with fresh horses and a new Soldier. we then pushed on: our way leading us for some miles directly along the beach of the Ocean. The country back rough and hilly. To an old and nearly deserted Mission there being but an overseer and a few Indians to occupy it. From this place our course was S E through hills covered with Bastard cedar till just at night when we arrived at the handsome Mission of San Louis Rey a distance from St Juan I think about 50 miles. This Mission is beautifully situated on a rising piece of ground between two small creeks. The buildings were similar to those at San Gabriel but appeared better from having been lately whitewashed. On the East Side a Portico extended the whole Length of the buildings. Remaining there during the night and in the morning making an exchange of soldiers and horses we proceeded on through a hilly country about 30 miles to San Diego. When we arrived at the Presidio I was taken to the office of the Lieutenant and on the arrival of an interpreter procured by Capt Cunningham I was informed that I could not see the Gov until the next day. Presently Capt Dana of the Ship Waverly from the Sandwich Islands came and invited me to his quarters. Having ascertained that I would be at Liberty to choose my residence I accompanied him to a private house about 1/4 of a mile from the Presidio where Capt Cunningham and himself always put up when on shore. Capt Dana was a Bostonian and a very friendly man. The following day I went to see the Gov or Genl (as he is known here by both of those titles although when at Mexico I am told he ranked as a Major). When I let him know my situation and my wants he told me it would be some days before he could give me an answer as it would be necessary to call a Council of officers &c. In the mean time he observed I should be furnished with a Room and every necessary with such clothing as I wanted for as I had on my leather Hunting shirt he readily supposed a change would be desirable. I thanked him for his kindness but told him as Capt Cunningham was my Countryman I would prefer remaining with him and being under obligations to him for any supplies I might want. He acquiesced and I accompanied Capt Cunningham on board his Ship Courier and was told to consider it my home. I there became ac-

quainted with Mr Shaw the super cargo Mr Theodore Cunningham 1st mate a brother of the Capt and Mr Blackder 2d Mate.

The Precidio \* (\* Precidio is a name applied to a town which is the residence of the Governor.) of San Diego is about three miles from the harbor in Latitude The buildings are in a square somewhat like the Missions but lower and much decayed. they are on a side hill sloping toward the Ocean. The residence of the Governor is on the East and his portico commands a fine view of the harbor and the Ocean. San Diego contains about 200 inhabitants exclusive of the Mission of the same name which is about 6 miles North East on a small stream which flows into the harbor. The general aspect of the country is hilly and barren with some Scrubby Oak and Pine on the hills but verry little grass.

The harbor of San Diego is formed by two Peninsula's one of which projects into the Ocean directly oposite the Precidio. The entrance is quite narrow but having a great depth of water and being entirely protected from winds this harbor is considered very safe. A Block house or fort on the Peninsula commands the entrance of the harbor.

Several days having passed I called again on his Excellency but could get no answer. He told me he did not know what to do he must see my journal and he likewise took a copy of my chart and License. He even asked me what business I had to make maps of their country. I told him my maps were made merely to assist me in traveling and must of necessity be verry incorrect as I was destitute of the means for making celestial observations - from this time I was detained day after day and week after week. Sometimes he told me I must wait until he could receive orders from Mexico and at other times he thought it desirable that I should go to Mexico and would then come to the conclusion that it was necessary to send myself and party to Mexico. Whilst my fate depended on the caprice of a man who appeared not to be certain of any thing or of the course his duty required him to pursue and only governed by the changing whims of the hour my feelings can only be duly appreciated by those who have been in the same situation. I knew the eager expectations with which my party at St Gabriel Looked for my return. I felt the ruinous effect which my detention had on my business and the gloomy apprehensions which my protracted absenc would cause to my partners in the distant Mountains. But these considerations never came within the sphere of his Excellency's comprehension and I was harrassed by numerous and contradictory expedient and ruinous delays until about the first of January when his Excellency informed me that if the Americans who were in the harbor of San Diego Masters of Vessels officers and Super-cargo would sign a paper certifying that what I gave as the reason of my coming to that country they believed to be substantially correct I might then have permission to trade for such things as I wanted and to return the same route which I had come in. I had applied for permission to travel directly north that I might arrive as soon as possible on the territory of the United States but this he would not grant Insisting that I should travel the same route by which I had come. The certificate was made out and signed by Capt Wm H. Cunningham Theodore Cunningham and Mr Shaw of the Ship Courier Capt Dana and Mr Robbins of the Waverly Capt Henderson and Mr. Scottie of the Brig \_\_\_ belonging to Bags & Company of Lima. The Governor then gave me a passport and License to purchase such supplies as I wanted. I was allowed the privilege of staying but 4 days after my arrival at St Gabriel and strictly forbid to make any more maps for said the Gov even our own Citizens can not make maps unless permission is obtained from Mexico. Although the Governor had obliged me to go to San Diego yet he would not furnish me with horses for my return.

---

But I felt this injustice the less as Capt Cunningham offered me a passage on board of his ship which would sail in a few days for point Pedro the nearest Anchorage to St Gabriel. I accepted this offer the more readily as it would enable me to have my supplies prepared during the passage for they were to be procured from Capt Cunningham. I had found the Governor to more than sustain the character given of him by Senor Martinas and it will be readily supposed that I left him without any other regret than what I felt for the time lost in doing business that might have been done in a few hours or might as well have been left undone. Every thing being ready we sailed and on the third day came to anchor on the East side of the Island of St Catalina. The Island of Santa Catalina is about 20 W S W from St Pedro. It is about 18 miles long and 8 broad having high hills covered with grass wild onions and some small timber. Capt Cunningham had a house on the Island for the purpose of salting hides. He was about to take some Cows Hogs and fowls for the use of the men there employed. after remaining at the Island 2 nights we sailed for St Pedro which is merely a good anchorage or road stead. several Cannon were fired as a Signal to a farmer that lived 8 or 10 Miles off who usually made it his business to come with horses to take people up to the Pueblo or to St Gabriel. As the expected horses did not come we started on foot and continued until we procured horses to take us to the Pueblo los Angelos or the Angels Village. We remained all night at the village and in the morning I called on my friend Sector Abella and made arrangements for the purchase of horses and then in Company with the Capt Mr. Chapman and Mr. Shaw I moved on to the Mission of St. Gabriel where I found my party all well. I must not omit the cordial welcome with which I was received by father Jose Sanches. He seemed to rejoice in my good fortune and well sustained the favorable opinion I had formed of him. You are now (says he) to pass again that miserable country and if you do not prepare yourself well for it it is your own fault. if there is any thing that you want and that I have let me know and it shall be at your service. I thanked him for his kindness and made every exertion to start as soon as possible. I called on the Commandant to ascertain whether I could stay longer than the 4 days allowed in my passport he told me a day or two would not make any difference. During my absence one of my Indian guides who had been imprisoned was released by death and the other was kept in the guard house at night and at hard labor during the day having the menial service of the guard house to perform. I took a convenient opportunity to speak to the Father in his behalf he told me he would do all in his power for his release. From his expression I took the idea that government had ordered their imprisonment. the fathers had given me some Iron and my Smith had made in the shop of the Mission as many horse shoes as I wanted. He had also given me some saddles and the leather for rigging them. It was on the 10th of January 1827 that I returned from St Diego. The next day I went down to the Courier got my supplies and returned to the Pueblo Los Angelos and put up with my friend F Abella commenced buying horses and in a short time had as many as I wanted. When I left the Courier I took leave of my friend Capt Cunningham. Should chance ever throw this in his way he will perhaps be gratified to find that I have not forgotten his name or his friendship. That I recollect with the most grateful feelings his kind offices in times that made them doubly valuable and in a country to which he had traveled by the unmarked and perilous paths of the Ocean while my way had been through an unknown Land over mountains and parched inhospitable plains. Meeting in a distant country by routes so different gave an instance of that restless enterprise that has lead and is now leading our countrymen to all parts of the world that has made them travellers on every ocean until it can now be said there is not a breeze of heaven

but spreads an american flag.

In this place I will give some Ideas in relation to this country of a general nature which may perhaps be interesting. California as I have before observed was settled by Missionaries of the order of St Francis about sixty years since. They established missions in various parts of the country and in civilizing the indians and in imparting to them the benefits of religion they found the opportunity to establish over them the most absolute power. The number of indians under the control of each mission varies from 300 to 2000, which are under the care and direction of a priest who is stiled the father and who sometimes has a subordinate or two. The indian has no individual right of Property although he is told that he has an interest in his labors and in the proceeds of the farms and herds of the Mission. He has not the right or at least the power to marry without the consent of the father. for the sexes are not allowed to Labor together during the day and at night they are shut up in separate apartments. And although since the revolution they are by express provision declared free and the fathers were ordered to inform them of the fact yet it does not appear that it has made any material change in their situation. It is not uncharitable perhaps to suppose that the fathers in making known to them their right to freedom have done it in such a way that it appeared to them from their ignorance a change not to be desired. They said to them - I am told - You live in a good country you have plenty to eat to drink and to wear your father takes care of you and will pray for you and show you the way to heaven. On the other hand if you go away from the Missions where will you find so good a country who will give you cloths or where will you find a father to feed you to take care of you and to pray for you. Such arguments as these coming from a source long respected and venerated and acting on the minds of ignorant and superstitious beings has had the effect to keep the indians in their real slavery without the desire of freedom. whatever the causes may be the fact is certain that verry few have availed themselves of the privilege of the revolution. The Missions setting aside their religious professions are in fact Large farming and grazing establishment conducted at the will of the father who is in a certain degree responsible to the President of his order residing in the Province. The immediate supervision of the different kinds of business is confided to Overseers who are generally half Breeds raised in a manner somewhat better than the common mass under the eye of the father from whom they sometimes receive a limited education and to whom in some instances they might with strict propriety apply the name of father -The indians are employed in the different kinds of work attendant uppon farming and herding of stock the manufacturing of Blankets of coarse wool which form their principle clothing the making of soap of Brick and in distilling. Their labor does not appear to be unreasonably hard. They are required to attend church regularly every morning after which they immediately move off under the direction of their respective overseers to the business of the day.

Left St Gabriel and moved on toward St Bernardino the most distant farm house belonging to the Mission being about 60 miles from St Gabriel and a few miles south of the route by which I had come in. In three days I arrived at St. Bernardino where I remained several days drying Beef and breaking my young horses as well as looking for some that had strayed away. On leaving father Sanches he directed me to kill Beef and as much as I could dry and to take meal Peas corn wheat or any thing I wanted and such quantities as I chose, in this case as in many others evincing the most benevolent regard for my welfare. Occupied in these preparations for continuing my journey I remained until the 1st day of february 1827 when I left Bernardino accompanied by 2 or

three Indians and moved on to the place where I had passed through the Mt and first came in sight of Cattle as I came in to the Beautiful valley of St Gabriel and there I encamped. the indians that came with me thus far killed a Beef. During the night it snowed and in the morning I again moved on nearly north crossing my old track and on the 3d day from Bernardino I had got on the E side of the Mt where there was no snow.\* (\* It was in this place I first saw a tree I have named the dirk Pear tree. It grows from 15 to 30 feet high 12 inches in diameter wood porous bark rough like the walnut. The leaf like the blade of a dirk is about 8 or ten inches long the point resembling that of a porcupine quill.) I was then obliged to turn my course N W for want of water having the low range of Mts on my left and the barren desert on my right. I encamped without water or grass my horses scattered over the country. I was then forced to look for water and grass and was three days employed in collecting my horses. In this country I had observed some track of the Grizzly Bear and the Black tailed deer but they were not numerous.

My horses being once more collected I resumed my N W course for Two short days travel the low Mt still on my left and Barren plains on my right when I fell in with some indians who I suppose were runaways from some mission as they had some horses. I ascertained by enquiry of them that there were some streams and lakes ahead. I engaged a guide to conduct me to them and after two days travel still continuing my N W direction I arrived at a Lake called by the Spaniards Too Larree or flag Lake. I arrived at the Lake quite late and found the bank so muddy that it was impossible for my horses to get any water yet I was obliged to encamp. From what I could learn of the Indians the Spaniards had named it from report but be that as it may the name was quite appropriate. Too Larre Lake is about 12 miles in circumference and is in a fine Large valley which commences about 12 miles South of it. Coming into the valley from the South East I had passed over a range of hills which in their cours a little East of North appeared to increase in height. On the declivity of these hills there was some Oak timber. I observed the trees had many holes made in their trunks in which an acorn was pressed so tight that it was difficult to get it out. By watching I found this to be the work of a bird of the woodpecker kind who takes this method to lay up his stock of provision for the winter. The bird is of a seal color and somewhat larger than the red head woodpecker. I called this bird the Provident woodpecker. The following day in moving along the bank of the Lake I surprised some indians who immediately pushed out into the lake in canoes or rather rafts made of flag. My guide succeeded in getting them to return to the shore. One of them could talk some Spanish and I engaged him for a guide. I watered my horses and got some fish from the indians (who I observed had some horses stolen no doubt from the Spaniards) and moved on about 3 miles along the Lake and then up an inlet about 10 miles crossed over and encamped. On this inlet was some timber Cotton wood and willow. where I crossed it was 8 or 10 yard wide rapid current a feet deep and comes from the East. Several Indians some of them having horses visited the encampment. The principal characters brought with them each a small sack of down and sprinkled me from head to foot. To this I submitted knowing it was a custom among them and wishing to avoid giving offence. They told me of a river to the north that had an animal which I supposed from their description to be the Beaver although they had no name for the animal by which it was known to me. These indians call themselves Wa-ya-la-ma. The indian that spoke spanish and the same I engaged at the flag Lake told me he would go on with me and my other guide returned. On the following day I moved Northwardly 15 miles across low hills which were spurs of the mountain on the East. This mountain had been gradually increas-

ing in elevation and had now attained a considerable height. The next day I moved nearly North West 30 miles over a level country the ground being so completely undermined by the paths of an animal like the Lizard that the horses were continually sinking in the Earth frequently up to the knees. I encamped on the bank of a Lake. Since leaving the wa ya la ma the country has been dry and destitute of water and grass. I found water in but one place in the bed of a stream which was nearly dry. East of my route at the foot of the Mt there was some timber and plenty of grass and water. The Lake on which I encamped was apparently large extending to the N W so far that the shore was not visible. But as I supposed it not more than 80 miles to the Ocean I did not think it of very great extent. It appeared shallow from the number of Boggy Islands seen in many parts of it.

Near where I encamped was an Indian village of two or three hundred inhabitants. Their Lodges were built of willows and Mats. the willows were placed in the ground in rows at the distance of ten feet apart and bent over and joined together at the top and then covered with the mats forming a Lodge in exterior appearance like a line of barracks and about 100 yards in length with a door at proper intervals for each family. My provision being nearly exhausted I visited the village for the purpose of trading for some provision. My interpreter having gone before to inform them of my approach when I arrived some mats were spread in front of the Lodges and I was invited to sit down. Grass seed was then brought and poured on my head until I was nearly covered. This seed which was gathered during the summer formed at this time the principal subsistence of these Indians. I gave them some presents and after some conversation with the chiefs made arrangement to have my grass seed formed into meal. At night I was invited to attend a dance and went to the Lodge at 8 O Clock and found a seat prepared for me. I was immediately treated with some roasted fish and a mush made of the grass seed. After supper the dancers came in 10 or 12 in number and seated themselves in a cluster. they were painted and some of them had head dresses made of feathers and a skin around the waist.

Having remained at this encampment two days I moved north along the beach of the Lake and again encamped, on a low spot of ground on the beach. during the night a high north west wind raised the water of the Lake and drove it into my encampment so that I was obliged to remove to higher ground. East of this encampment a level country with but little vegetation extends to the foot of the mountain a distance of about 20 miles. On the following day I left the Beach of the Lake as my guide said there was a stream putting in which I could not cross near its mouth I therefore traveled North Eastwardly and at 18 miles encamped on a small River 20 yds wide deep and Muddy with low Oak timber along its banks. During the day I saw several antelops and some Elk sign and passed a country like the last described\* (\*One of my men (John Willson) again manifesting that seditious disposition of which I had before had reason to complain and which could not be suffered consistently with the subordination necessary to the safety of my party I was forced to discharge him. I found two Indians who spoke spanish and engaged them to conduct him to the upper settlement of California which they said they could reach in 3 days.) The next day I crossed the stream carrying my goods over on a Log and swimming my horses and traveled North Eastwardly 12 miles crossing several small streams having oak timber and a plenty of grass on their banks. The soil was very fine and although somewhat wet yet it produced most excellent grass. The prairie and woodland was mingled in pleasing variety and my encampment was on a small stream in a fine little grove of timber. My guide informed me that in the neighborhood was

---

a plenty of Elk. I therefore sent some men hunting they killed 2 antelope and found Elk but killed none.

In company with my guide I visited some Indians that were up near the foot of the Mt and at the distance of about 15 miles. Their Lodges were built like those before described at the Chin-to-che Lake. The country appeared populous but the soil gravelly and not as rich as at the encampment. near the Mt there is a good deal of Oak timber the trees having large trunks but Low and spreading tops so that it is not of the most valuable kind for building or fencing. My guide saying he was unacquainted with the country further north I engaged another who told me that in one day I could travel to where I could find Beaver - Having remained two days at the last mentioned encampment I moved on N Westwardly 25 miles crossing in the course of the day 2 small streams and encamping near a large indian village on the bank of a river 80 yds wide where I found some Beaver sign. These Indians called themselves Wim-mil-che and this name I applied to the river which comes from E N E. In the vicinity was considerable timber (Oak) and a plenty of grass. The game of the country was principally Elk and Antelope. On the 28th of February I commenced trapping on the Wimmilche and during 10 days I moved up the river 25 or 30 miles. I was then near the foot of the Mt and finding no further inducement for trapping and the indians telling me of a river they called the Peticutry in which there was beaver I traveled north along near the foot of the Mt about 15 miles and encamped on the bank of the Peticutry \* (\* at the place where I first struck the Peticutry were a great number of small artificial mounds.) running at this place west and not quite as large as the Wim mil che. In this vicinity the plains are generally clothed with grass and were at that time covered with Blossoms. Along the river there is some timber. At the foot of the Mt the timber is Oak and far up the Mt Pine.

The Peticutry runs west 10 miles and then turns N N W. I continued trapping down this river about 35 miles after it turned N W. It there received a stream from the East 60 yards wide called the Noto. The Peticutry had received some small streams from the East above the bend the banks were high and the current rapid but below the river had ben divided into many small Slous and channels the banks low and the current sluggish. In many places Flags rushes and mud a mile in width made it impassible for horses. On the Noto was a good deal of timber Oak and some Ash. After passing the Noto ten miles Otter river comes in from the E. It is about 60 yds wide and much resembles the Noto. From the Wim-mil-che a range of hills has extended nearly parallel with my course. Leaving the valley from the foot of the Mt measureing west about 40 miles in width. Six miles beyond Otter river comes in another of the same size from the East which I called the Appelaminy. Since passing the Wimmilch there had been an abundance of Elk and some Antelope and on the West side of the Peticutry plenty of wild horses. Birds of the larger kinds were numerous and particularly birds of passage as this was their season. I saw wild Geese White and Grey Brant Blue and White Heron Cormorant many kinds of Ducks and common Buzzard. Hawks of all Colors. Magpyes. A kind of Pigeon resembling the tame Blue Pigeon 2 or Three kinds of Eagles and a verry larg Bird which I supposed to be the Vulture or the Condor. Small birds were quite scarce and I saw verry few snakes. The Peticutry would be navigable for large boats as far up as the bend near the Mt. The country Generally is a most excellent grazing country. On the Peticutry noto Otter and Appelaminy Rivers the soil is such as to admit of many fine farms. There might be in places a want of timber but the neighboring Mountain would afford an ample supply which could be easily floated down the streams almost to any desired

point Since I struck the Peticutry I had seen but few indians. The greater part of those that once resided here having (as I have sinc been told) gone in to the Missions of St Joseph and Santa Clara.

The Mountain on the East which I called St Joseph in honor of one of the best of men father Joseph Sances of St Gabriel had been gradually increasing in heighth from the place where I crossed its southern extremity near the Too Larree Lake and running north and nearly parallel with the General course of my travel had for some distance attained a most tremendous heighth. The summits could hardly ever be seen as they rose far into the region of perpetual snow and were generally enveloped in clouds. But when the clouds for a while passed away and brought the Peaks to view rising from their dark base covered with snow and gleaming in the sun they possessed an unsurpassed grandeur and Sublimity.

On leaving my partners in the Mountains to go into an unknown country It had been my intention to return at the expiration of my falls hunt or if this was found impracticable by the 1st of July of the following year 1827. Circumstances already related having rendered it impossible for me to join them at the first mentioned time and the second being rapidly approaching It became necessary that I should begin making arrangements for marching Eastward toward the Rendezvous in the Mountains which I then looked on as a home. I had several packs of Beaver and the month of April was nearly gone. Mt St Joseph on the East and between me and the rendezvous presented in its appearance an impassible Barrier. I determined I would leave the Peticutry and ascend the appelaminy to the Mountain and then proceed north along its base and endeavor to find a pass. Accordingly I ascended the appelaminy to the foot of the Mt a distance of about 35 miles and the course generally East. The country like the last described. I then traveled north at the base or among the spurs of the Mt about 20 miles where I struck a river about 30 yds wide rapid current and running N W. On this river which I called the Macal-lum-bry indians appeared quite numerous amounting to several hundred Lodges and residing in several different villages. their Lodges were small and built of dirt.

On the Appelaminy I had engaged a guide to come with thus far who spoke some spanish. I had a consultation with the chiefs and made them some presents and procured another guide who was like the most of those I had had befor a runaway from some Mission. I then moved down the Macallumbry 12 miles and turning from it to the North East in 15 miles I struck a stream 30 yds wide rocky and rapid running west. This stream I called Rock River. In crossing it I had a good deal of difficulty. One of my horses was swept down by its rapid current and the load consisting of 12 traps was lost. I was detained a day in searching for my traps but without sucess, and my guide ran away taking with him two of my horses. In the course of the day 8 or 10 Indians showed themselves on a high hill. They were apparently strangers and knew not what to think of us as I supposed by their actions. They were naked and had their Bows and arrows in their hands. I went to them alone and gave them some presents and they went off. The country since leaving the Appelaminy has been rough my course having been over the spurs of the Mt the timber Oak and rather scrubby plenty of grass and water a fine grazing country. Leaving Rock River I traveled N W down into the plain and passed several indian villages. Each village consisting of 30 or 40 small dirt Lodges the indians verry wild ran screaming into the woods.\* (\*These indians as well as some others may be called Grass eaters. they subsist to a certain extent on clover wild Pea vines and some other herbs which are prepared for eating by wilting them on hot stones.) The first six

---

miles of the days travel was in the spurs of the Mt. I then descended into the plain and traveled 9 miles alternately through groves of Oak Prairies and Meadows of Blue Clover watered by small streams. The game of this vicinity in the Mts is Blk tailed Deer and in the plains Antelope. In the course of the day when I saw the indians so wild I took a man with me and pursued a couple of females and overtook them my object being to convince them of our friendship. I gave them some awls and beads at the same time endeavoring to convince them that I did not wish to hurt them but our parley was broken off by a party of indians who rushed from their concealment close at hand and with intentions apparently not the most friendly made it necessary for us to rejoin the party without delay. At another time during this day I rode a short distance ahead of the Party and was waiting in a small grove for them to come up. At a small distance I saw an indian and beckoned to him to come to me. He advanced slowly chatting and making many signs to divert my attention. I was somewhat suspicious and kept a good look out and in a moment I found myself nearly surrounded by a considerable party I immediately gave my horse the spur and left my sociable friend to converse with those that could better understand him. On the following day I moved N W 12 miles across a prairie and encamped on a river 40 yds wide running S W. Some Oak timber and a considerable Beaver sign. My men went out to set traps and soon I heard the cry of the indians the men from below coming in at full speed and saying that two of them had been attack by the indians and narrowly escaped. Some men were above setting their traps. I immediately sent Arthur Black for them but before they got in they were closely pressed. I had the horses tied up and each man his saddle horse ready for mounting and a double guard. But the indians gave us no opportunity to punish them as they were all soon on the other side of the river which was not fordable. The next morning early I took six men and went for the traps that had been set before the alarm. I found some of them but a good many had been taken by the indians who showed themselves on the opposite side of the river. and one venturing within long shot was fired at by a Rifleman and killed. I moved up the River which I called indian River 3 miles and finding a ford crossed over and leaving the river traveled north about 12 miles when I struck another River Running W S W 100 yds wide rapid current and stony bottom. A considerable body of Oak timber along its banks Indians by hundreds but wilder than antelopes running and screaming in every direction. It appeared to me that the farther I traveled north the indians became more numerous. The River on which I encamped I called wild River. I determined to change my course and make a trail towards passing the mountain. I supposed that the snow had become sufficiently hard by that time to bear my horses. I therefore turned East and at first traveled up wild River and then took the divide between wild and Indian Rivers. for the first two days I found no snow the traveling not worse than might be expected. The timber thus far principally Oak and on the second day some very large cedar. Indians were numerous and I was frequently passing their little villages of 10 or 12 little circular Lodges made of old trees and bark. During these two days the indians collected in great numbers around me at two different times. I endeavored to convince them of my disposition to be friendly by every means in my power but to no purpose. They considered all my friendly signs caused by my own weakness. Of our guns they had never seen the effects and supposed them solid sticks which we could only use in close contest. Whatever may have been their views they pressed so closely and in such numbers on my party that I was obliged to look for an advantageous piece of ground on which to make a stand against the threatened danger. Having found a favorable position I again tried to convince them of my friendly

disposition but to no purpose. Their preparations were still going forward and their parties were occupying favorable points around me. Seeing what must be the inevitable consequence I determined to anticipate them in the commencement and wishing to them as little harm as possible and yet consistent with my own safety I ordered a men to fire (of course not the most uncertain marksmen). I preferred long shots that it might give them the idea that we could kill at any distance. At the report of the guns both men firing at once two indians fell. For a moment the indians stood still and silent as if a thunder bolt had fallen among them then a few words passed from party to party and in a moment they ran like Deer. The other fray was similar to the above described except that more guns were fired and more Indians were killed. I had been gradually rising as I advanced in the Mt and on the 3d day left the Oak timber and arrived among the Pine some of which was very large the hemlock and the snow. I found the snow so solid that my horses did not sink in it more than a foot. In the ascent of the mountain among the oak timber there was some Black Tailed deer but in the region of the snow no living animal was seen unless it might be the Mt Pheasant which made a lonely sound like that of Striking on a muffled drum at intervals of 2 seconds. My encampment of the third night was where the snow was about 3 feet deep. On the 4th I started early directly on the Divide and turning S E. Snow increasing in depth as we advanced and becoming less compact timber had disappeared except a little hemlock that grew in the deep ravine. Still in advancing the snow became deeper and less compact and when I had got about 12 miles from my encampment the horses began to sink so deep as to render the prospect of proceeding very doubtful. we were not yet at the highest part of the Mt and the distances across was unknown. This was our situation when news came up from the rear that some of the horses had given out being able to proceed no further. It was at once apparent that If I proceeded farther I should be obliged to leave my horses or at least the greater part of them and as we knew not how far the Mountain extended to the East it was more than probable that in attempting to cross it we might ourselves be lost. On the other hand should I retrace my steps I would be obliged to pass among indians highly exasperated against us who if not warlike were sufficiently numerous if acting in concert to surround our little party and kill us with clubs and should I be so fortunate as to return to the foot of the Mountain in safety what could I do. To travel north seemed useless for far as I could see with my glass the Mt seemed to increase in height offering no probability of a pass. To return around the Mountain South by the way of St Gabriel would take so much time that I could not possibly arrive at the Depo in season to meet my partners. These reflections were passing rapidly through my mind as I stood on a high Peak a mile in advance of my party having called a halt for the purpose of viewing the prospect before me. Far as the eye could see on every side high rugged Peaks arose covered with Eternal snow turning to the East the frozen waste extending rough and desolate beyond the boundaries of vision warned me to return. Below the deep Rocky ravines resounded with immense Cascades and waterfalls where the melting snow and ice was fast hastening to the fertile Plain. The sight in its extended range embraced no living being except it caught a transient glimpse of my little party awaiting my return in the snows below. It was indeed a freezing desolation and one which I thought should keep a man from wandering. I thought of home and all its neglected enjoyments of the cheerful fireside of my father house of the Plenteous harvest of my native land and visions of flowing fields of green and wide spread Prairies of joyous bustle and of busy life thronged in my mind to make me feel more strongly the utter desolateness of my situation. And is it possible

---

thought I that we are creatures of choice and that we follow fortune through such paths as these. Home with contented industry could give us all that is attainable and fortune could do no more. Surely of all lives the hunters is the most precarious, we endure all the extremes of heat and cold hunger and thirst our lives and property are always at hazard. when we lay down our guards must be placed our Rifles by our sides and our Pistols under our heads ready to spring up at once from our wakeful sleep. I did not indulge in these reflections longer than I have been employed in writing them and they are here as they existed in that hour of trying fortune and will be remembered as long as I live. But the recollection that my party were entirely depending on my movements broke my reverie and convinced me of the necessity of immediate and powerful exertion to extricate myself and party from surrounding difficulties. I suddenly came to the resolution that I would retrace my steps Back in to the valley and to the Appelamminy. by this time as the season was advancing the snow would become more compact\* (\*There may be some who are not aware of the fact that the snow on those mountains that are continually covered with it in mid summer becomes more solid and compact than in the depth of winter It is for this reason principally that the summer is the most favorable time to cross snowy mountains.) but as time would not allow me to go on with my whole party I would take 2 men and light horses leaving my property and the remainder of my party on the Appelamminy and make another attempt to cross the Mt and go to the Depo. Should I be so fortunate as to go through I would take a new supply of Men and Goods and return again to the Appelamminy and endeavor to learn something of this new and unfortunate country. This conclusion was quickly formed and I immediately descended from the Peak and returned to my party. I told my men of the dismal prospect ahead and of the necessity of turning back. We then immediately commenced our retrograde movement and encamped somewhat west of the place on which we had encamped the night before. On the north at a short distance was a considerable branch of wild river running in a tremendous gulph and beyond was a Peak that seemed to rise far above any other part of the Mt. Among many lofty Peaks it seemed the Giant of the scene. To this summit I had the vanity to attach my name. If an honor it was dearly won as those will admit whose fortune it may be hereafter to follow my steps. On the following day we continued back on the trail until we came to a place where there was some grass and there encamped. Having no provision we killed a horse to eat. remaining at this place two days for the purpose of recruiting my fatigued and starved horses I then moved on towards the plain but instead of keeping the route by which I had come up I turned south and traveled along indian River and in two days arrived in the valley. In the course of this time as I was riding ahead of the party I rose to the top of a small hill. An indian was carelessly walking at a short distance. he heard the sound of my horses feet. turning his head he saw me. he sprang ran a few steps. his bow and arrows flew from his hands he staggered and fell on his face. I went to him turned him over he was apparently lifeless but presently recovered so far as to open his eyes. I put a piece of Tobacco in his hand and left him without being able to make him stand or even sit up. After I had encamped several Indians and this one among the rest came and sit down on an adjoining hill. I went to them gave them some small and endeavored to make them understand that it was my wish to be friendly. They slept near camp all night but I would not allow them to come in although they appeared quite willing to do so. Shortly after this riding along close by the river in turning a short bend I came suddenly on a lodge of indians and took them by surprise some of them plunged into the river and swam away. two or three women more thoughtful than the rest concluded they

might save themselves and some of their property by the following expedient. they sent an old man to detain us by chat while they took such things as they could handily get hold off and slipped under cover of the Lodge to the river and swam over to a little island holding the dishes under the water. Without attempting to disturb them I let the old man know that I saw what was going on and also that we were hungry. He brought us some acorn mush \* (\*This is a common dish of this country. The acorns are hulled pounded into meal and made into mush. It is Boiled in dishes by the help of hot stones. If they have no dishes they make a hole in the ground and line its sides with clay. In many parts of this country acorns appear to be the principal subsistence. In my tour into the mountains I saw in places where there was not more than 5 or 6 Lodges 3 or 4 hundred Bushels cribed ready for use.) I gave him something in return and went to the Lodge. Those that had not yet ran off were skulking about like children playing hide and seek. After endeavoring to quiet their fears I left them & have no doubt but the departure was more pleasant to them than the arrival. On our arrival in the valley we were much fatigued and hungry having for six days had but little to eat except the colt and one Beaver. At night however we got some trap set. In my Promenade into the Mountain I had gone about 60 miles from the base lost 6 horses and learned one thing which I did not know before that I must be sometime turned back. In the morning we had caught several Beaver and of course had something good to eat much better than the flesh of the poor colt. Continuing to march down Indian River I crossed it in the place where I had before crossed as I traveled north in doing which the horse on which my ammuniton was packed stepping in the middle of the River and breaking loose from the leader was washed down below the ford drowned and sunk in the deep water. This was indeed a terrible blow for if our ammuniton was lost with it went our means of subsistence and we were at once deprived of what enabled us to travel among hostile bands feared and respected. But my thoughts I kept to myself knowing that a few words from me would discourage my men. I immediately set 2 men on the bank of the river to watch knowing this fact without knowing the reason that a horse unless kept down by a heavy load will rise to the surface in from 10 to 30 minutes. By the time the party had crossed over the men on the bank told me they thought they could see one of the horses feet the load keeping the animal from floating off. One of the men who was a good swimmer went in and fastening a cord the whole was pulled out together. Besides Lead there was 25 or 30 lbs of powder in the pack but as it was in a good leather sack but a part of it was damaged. Although this happened within three miles of the place where the indians had manifested their hostility by attacking my trappers and stealing my traps yet there was not an indian to be seen - On the following day I traveled South and encamped a short distance North of Rock River in the course of the day I killed an Elk. At Rock River I was detained a day having to make a raft and meeting with some difficulty in crossing. The next south to the McKalumbry and the following day to the Appelaminy passing a good many Elk and killing one fine fat doe. I then moved up the Appelaminy a few miles to a place where I found a suitable place and encamped with the intention of remaining several days in order to make the necessary preparations for my journey across the Mt to the Depo. The time was employed in pressing and cacheing my furs killing Game and drying meat shoeing some horses and making some hay to feed them in the Mt \* (\*while at this place the Mackalumbry chief brought one of the horses stolen from me on Rock River. I gave him some presents and he engaged to bring the other.)

I gave Mr Rodgers instructions to remain in the vicinity leaving a note at the cache with direc-

---

tions that would enable me to find him whenever I should return. If the 20th of September should arrive without my return he might then consider me dead. In that case he was to proceed to Bodega and get supplies and if possible make his way to the Depo. If this was found impracticable he was then to dispose of his property wait an opportunity to ship to the sandwich Islands and from thence to the United States. On the 20th of May 1827 my preparations being finished I took leave of my small but faithful party and started on an enterprise involved in great uncertainty. I took but two men with me Robert Evans and Silas Goble. I had six horses and two mules. I had about 60 lbs of meat and a part of my horses were packed with hay to feed them during the passage of the Mountains.\* (\*three men accompanied me with some extra horses.) Traveling east 12 miles I stoped at the foot of the Mt for dinner and then continued on N N E 13 miles through very rough traveling and encamped on the North side of the Appelminy. Some friendly indians were seen in the course of the day.

21st N E 30 miles following the river the traveling rough rugged and mountainous.

22nd 12 miles N E In the morning the three men that had come with me thus far returned and I struck out from the River. Saw no indians although we heard the yell of some on the opposite side of the river when we left camp.

23rd 20 miles N N E passed several indian lodges but as is the custom here the indians ran off yelling and shouting. I encamped on the divide between Rock River and the Appelaminy.

24th 15 miles N E following the divide at 8 miles from Camp I came to the snow which soon increased to 4 feet in debth but so solid that the horses did not sink in it more than 6 or 8 inches. at night I found a place where the ground was bare and a little grass growing on a southern slope of a Mt there I encamped.

25th 18 miles N E Keeping the divide and over the snow which soon increased to the debth of 8 feet at 3 O Clock it turned cold and commenced snowing. I was obliged to encamp found a few pines for shelter tied up my horses to keep them from running away and gave them some of the hay I had packed from the valley. During the night the storm increased in violence and the weather became extremely cold.

26th The Storm still continued with unabated violence. I was obliged to remain in camp. It was one of the most disagreeable days I ever passed. We were uncertain how far the Mountain extended to the East. The wind was continually changing and the snow drifting and flying in every direction. It was with great difficulty that we could get wood and we were but just able to keep our fire. Our poor animals felt a full share of the vengeanc of the storm and 2 horses and one mule froze to death before our eyes. Still the storm continued with unabated violence and it required an utmost exertion to avoid the fate of the poor animals that lay near but almost covered with the drifting snow. Night came and shut out the bleak desolation from our view but it did not still the howling winds that yet bellowed through the mountains bearing before them clouds of snow and beating against us cold and furious. It seemed that we were marked out for destruction and that the sun of another day might never rise to us. But He that rules the Storms willed it otherwise and the sun of the 27th rose clear uppon the gleaming peaks of the Mt St Joseph. I shall never forget the 26th of May 1827. Its incidents are engraven on my mind as well as the grateful feeling with which my heart was expanded when the storm was stilled.

On the 27th we resumed our journey N E 12 miles over the snow. The last fall of 15 inches in addition to what the horses sank in the old snow made the traveling verry fatiguing. Passing across

a deep ravine and ascending a high point I could discover the plain. Thence N 13 miles the snow decreasing gradually until going down a high and steep hill it entirely disappeared and I came into a valley where there was some good grass. A valuable horse gave out and was left in the snow. I also lost my Pistol.

28th As my horses were much fatigued I lay by. The general range of the Mountain at this place was about N W & S E. My encampment was about 100 yards from a high and steep bluff on the top of which at about 12 O Clock 10 or 12 indians showed themselves and raised the accustomed yell but not succeeding in scaring us off they collected a great many large rocks and being all ready at once sent them down the hill at the same time raising the yell. Finding that even this would not drive us away they went off.

29th N E 18 miles I left the water course on which I was encamped running N W & passing over some rocky hills came to and crossed a Creek coming from the South East about 50 yards and running N W and uniting about 6 miles below with the one on which I had encamped. I surprised two squaws and was so close to one of them that she could not well escape such an expression of fear I had never before seen exhibited. She ran towards me screaming and raising the stick with which she had been digging roots in her whole appearance realizing the Idea I had formed of a frantic mother rushing to scare away some beast that would devour her child. wishing not to hurt her I avoided her formidable weapon and endeavored to pacify her but all in vain for when she went off her screams were still heard until lost in the distance. In the course of the day I saw some Antelope sign.

30th 15 Miles East crossed some high hills and came to a Stream 50 yds wide running N E. Crossed over and encamped on the East side. In this vicinity I saw some horse sign. On the N N E & E were ranges of high hills.

31st 16 miles East and encamped on a shallow creek 30 yds wide\* (\* in the course of this days travel I saw Salt of beautiful appearance that had lost its savor and was entirely tasteless.) running north. Some Antelopes were seen but verry wild.

June 1st 22 Miles E S E crossing a high range of hills running north & south I came to a lake extending from S E to N W supposed about 20 miles although its northerly limit was unknown and apparently about 8 miles broad. As I was near the southern extremity of the Lake I went around in that direction in doing which I saw a considerable horse sign and seeing some indians at a Lodge I got close to them before they discovered that we were not indians they then immediately ran off. I took some fish that I found at the lodge and left some small presents in their rooms. I went on a little further where there was several families encamped. they were fishing with nets verry neatly made with fine meshes. I gave them some small presents they appeared verry friendly. I went 2 miles further and encamped near where three indians were fishing. I turned out my horses as usual and went to sleep. About ten O Clock at night I was awakened by the sound of horses feet. I started up and 20 or 30 horsemen rode by at full speed to where the fishermen were encamped. I awakened the men we collected our things together and made of them as good a breast work as we could and prepared ourselves for extremities. Presently 2 indians came as if to see if we were asleep. But finding we were awake they came close and sit down. I offered them some Tobacco but they would not take it. They returned to their companions and soon all came and surrounded us with their Bows strung and their arrows in their hands. They sat down and consulted with each other talking loud and harsh and frequently changing places some times all being on one side

---

and then on the other. To the one that seemed the principal character I offered some presents but he would take nothing turning from me with disdain. If my horses had been tied I should most certainly have fired on them but as they were loose and as there was a possibility that they might not commence I thought it prudent not to be the aggressor but to hold ourselves in readiness to beat them off or sell our lives as dear as possible. After about two hours they became peaceable and made a fire. I then offered them some tobacco they took it smoked and remained all night. It will be readily conjectured that I kept a very close watch during the remainder of the night. I do not know how to account for the singular conduct of the indians. They did not appear unanimous for the massacre and perhaps saw our intention of making our scalps bear a good price. we should not have fallen without some of them in company .

June 2d        In the morning they appeared friendly and told me that there was water to the East in the direction I wished to travel. I observed these indians had some Buffalo Robes knives and Spanish Blankets from which it appears they have some communication with the indians on Lewis's River and with the spanish indians. I moved on East about 20 miles and was obliged to encamp without water. The indians no doubt well knew there was no water and intended to deceive me and send me where I might perish for the want of it.

3d        28 miles E N E Having in that direction seen a snowy hill the day before I steered for it and just after night found water and encamped. In the course of the day a light shower of rain. Some Antelopes were seen but very wild. One of my horses gave out and was left three miles back on the trail.

4th I sent back for the tired horse and had him brought up and then moved on N E 3 miles to a range of high hills running N and S & encamped.

5th        N E 15 miles over high ranges of hills bearing N & S.

6th        E 12 miles then N E 6 miles and encamp on a creek running East.

7th        E 15 miles crossing a plain and at the foot of a hill found water where I stopped for dinner. then crossing the range of hills and following an indian trail N 10 miles found water and good grass and encamped. saw an indian to day.

8th        As my horses were much fatigued and the grass was tolerable good I concluded to rest. The general Character and appearance of the country I have passed is extremely Barren. High Rocky hills afford the only relief to the desolate waste for at the feet of these are found water and some vegetation While the intervals between are sand barren Plains.

9th        S S E 12 miles and finding it necessary to change my course to E N E I traveled 12 miles Leaving a high hill on the North and found a little spring in the plain by which I encamped. In the course of the day saw fresh sign of indians.

10th       28 miles E        at 10 O Clock found the water and grass in the plain & stopped for the horses to eat. I there found an Indian and 2 squaws who had no opportunity of running away. I endeavored to talk a little with them by signs but found them too stupid or wilful. They had a piece of a Buffalo robe and a Beaver skin which last I bought of them - at 11 O Clock I continued my course E. Our remaining horses had now become so weak that we were general obliged to walk. At 3 O Clock one of them gave out and was left in the plain. Having crossed two Ranges of hills just after dark I discovered a fire and steered towards it. and found an Indian Squaw and 2 children who were of course much frightened. They appeared to be travelers having with them some water which they divided with us. I then for the first time saw scorpions prepared to eat. I

went a short distance and encamped without water. During the night it rained which of course refreshed the horses.

11th E 20 miles across a valley. Soon after starting I found a little water in some holes collected from the last rain. I encamped in a range of high hills where I found water. At that time we were on allowance of 4 ounces of dried meat per day and hardly the possibility of killing anything.

12th 25 miles East Crossed over the range of hills on the top of which I found some Aspin and service Bushes. then crossing a valley I found a little water and encamped but without grass. In the course of the day I killed a hare. I mention this for in this country game is so scarce and wild that it is a most hopeless task to kill anything. An Antelope or Black tailed deer may sometimes be seen solitary and wild as the wind.

13th E 15 miles crossed a plain and another range of hills high and Rocky finding no water and observing a smoke to the North I traveled in that direction 15 miles and found water and grass and encamped. In the course of the day I saw several Antelopes but could not get a shot and in the evening an Indian but he ran off.

14th North 8 miles along a wet piece of ground on the E side of which I encamped. My horses were so much reduced that it was necessary to give them rest and for this reason I made a short days travel.

15th N E 10 miles and encamped at the head of the springs which forms the wet ravine on which I had made my last two encampments.

16th I lay by to rest. for 12 days I have been with my two men on an allowance of ounces of dried meat per day and the last of it was eat for supper last night. No possibility of killing any game. My horses extremely poor and one so lame in his hind feet as to be unable to travel. He was shod before but his hind feet were worn to the quick. As a last resource for provision I determined to kill this horse and dry some of the best of his meat. Accordingly in the morning I had him killed. It was bad eating but we were hungry enough to eat almost any thing.

17th E N E 30 miles crossing 2 ranges of Rocky hills and the intervening valleys and encamp in a 3d range of hills without water having seen none since morning.

18th E 10 miles starting early I crossed the chain on which I was encamped but seeing no prospect of water Eastwardly I turned N E and after traveling 10 miles I fell in with some indians 14 in number. we were then close to water which happened verry well for one of my men had stoped a short distance back being able to proceed no further. The Indians went with me to the spring and I sent one of them with a little kettle of water to the man that was left behind. After drinking he was sufficiently refreshed to come up. The Indians gave me two small ground squirrels which we found somewhat better than the horse meat. They likewise showed me a kind of water rush which they ate. I tasted of it and found it pleasant I had three horns for the purpose of carrying water. In these sandy plains we filled them at every opportunity But I seldom drank more than half a pint before they were exhausted for neither of my men could do as well without water as myself.

19th 15 miles N E as a high range of hills lay on the East I was obliged to travel N E to a low gape in the chain and then crossing over encamped on the East side we there found some onions which made the horse meat relish much better.

20th N E 20 miles along a valley sandy as usual and just at night found water. In this part of the plain almost all the high hills have snow on their tops. But for these snowy Peaks the country would be utterly impassible as they furnish almost the only grass or water of this un hospitable

land. They are to this plain like the islands of the Ocean. Rising but a short distance from the sandy base the snowy region commences which is an evidence of the great elevation of this plain. The re after encamping some Indians came to me. They appeared verry friendly. These as well as those last mentioned I supposed were somewhat acquainted with whites as I saw among them some Iron arrow points and some Beads. They gave me some squirrels and in return I gave them presents of such little things as I had after which they went to their camp and we our rest.

21st 25 miles North. Early this morning the Indians that were at the camp last night returned and with them several others. They seemed to have come out of mere curiosity and as I was ready for starting they accompanied me a short distance. Some of them I presume had never before seen a white man and as they were handling and examining almost every thing I fired off my gun as one of them was fingering about the double triggers. At the sound some fell flat on the ground and some sought safety in flight. The indian who had hold of the gun alone stood still although he appeared at first thunder struck yet on finding that he was not hurt he called out to his companions to return. I endeavored to learn from those indians by signs something in relation to the distance and course to the Salt Lake But from them I could get no satisfaction whatever for instead of answering my signs they would imitate them as nearly as possible. After vexing myself for some time with those children of nature I left them and continued on my way. All the indians I had seen since leaving the Lake had been the same unintelligent kind of beings. Nearly naked having at most a scanty robe formed from the skin of the hare peculiar to this plain which is cut into narrow strips and interwover with a kind of twine or cord made apparently from wild flax or hemp. They form a connecting link between the animal and intelectual creation and quite in keeping with the country in which they are located. In the course of the day I passed water several times. It came out from a range of hills on the west on the top of which was some snow. I encamp- ed on the bank of a Salt Lake. The water was verry salt and a good deal of salt was formed along the beach. In crossing a mirey place just before encamping one of my horses was mired. After some considerable exertion I found it impossible to get him out I therefore killed him and took a quarter of his flesh which was a seasonable replenishment for our stock of provision as the little I took of the horse I killed last was at that time exhausted.

North 25 Miles. My course was nearly parallel with a chain of hills in the west, on the tops of which was some snow and from which ran a creek to the north east. On this creek I encamped. The Country in the vicinity so much resembled that on the south side of the Salt Lake that for a while I was induced to believe that I was near that place. During the day I saw a good many Ante-lope, but could not kill any. I however, killed 2 hares which, when cooked at night we found much better than horse meat.

June 23d N E 35 Miles. Moving on in the morning I kept down the creek on which we had en- camped until it was lost in a small Lake. We then filled our horns and continued on our course, passing some brackish as well as some verry salt springs, and leaving on the north of the latter part of the days travel a considerable Salt Plain. Just before night I found water that was drink- able, but continued on in hopes of finding better and was obliged to encamp without any.

June 24th N E 40 Miles. I started verry early in hopes of soon finding water. But ascending a high point of a hill I could discover nothing but sandy plains or dry Rocky hills with the exception of a snowy mountain off to the N E at the distance of 50 or 60 Miles. When I came down I durst not tell my men of the desolate prospect ahead, but framed my story so as to discourage them as little

as possible. I told them I saw something black at a distance, near which no doubt we would find water.

While I had been up on the hill one of the horses gave out and had been left a short distance behind. I sent the men back to take the best of his flesh, for our supply was again nearly exhausted, whilst I would push forward in search of water.

I went on a shorter distance and waited until they came up. They were much discouraged with the gloomy prospect, but I said all I could to enliven their hopes and told them in all probability we would soon find water. But the view ahead was almost hopeless.

With our best exertion we pushed forward, walking as we had been for a long time, over the soft sand. That kind of traveling is very tiresome to men in good health who can eat when and what they choose, and drink as often as they desire, and to us, worn down with hunger and fatigue and burning with thirst increased by the blazing sands, it was almost insupportable.

At about 4 O Clock we were obliged to stop on the side of a sand hill under the shade of a small Cedar. We dug holes in the sand and laid down in them for the purpose of cooling our heated bodies. After resting about an hour we resumed our weary journey, and traveled until 10 O Clock at night, when we laid down to take a little repose. Previous to this and a short time after sun down, I saw several turtle doves, and as I did not recollect of ever having seen them more than 2 or 3 miles from water I spent more than an hour looking for water, but it was in vain. Our sleep was not repose, for tormented nature made us dream of things we had not and for the want of which it then seemed possible, and even probable, that we might perish in the desert unheard of and unpitied.

In those moments how trifling were all those things that hold such an absolute sway over the busy and the prosperous world. My dreams were not of Gold or ambitious honors, but of my distant, quiet home, of murmuring brooks, of Cooling Cascades. After a short rest we continued our march and traveled all night. The murmur of falling waters still sounding in our ears and the apprehension that we might never live to hear that sound in reality weighed heavily upon us.

June 25th.

When morning came it saw us in the same unhappy situation, pursuing our journey over the desolate waste, now gleaming in the sun and more insupportably tormenting than it had been during the night. at 10 O Clock Robert Evans laid down in the plain under the shade of a small cedar, being able to proceed no further.

The Mountain of which I have before spoken was apparently not far off, and we left him and proceeded onward in the hope of finding water in time to return with some in season to save his life. After traveling about three Miles we came to the foot of the Mt and there, to our inexpressible joy, we found water. Goble plunged into it at once, and I could hardly wait to bath my burning forehead before I was pouring it down regardless of the consequences.

Just before we arrived at the spring I saw two indians traveling in the direction in which Evans was left, and soon after the report of two guns was heard in quick succession. This considerably increased our apprehension for his safety, but shortly after a smoke was seen back on the trail and I took a small kettle of water and some meat and going back, found him safe. He had not seen the indians and had discharged his gun to direct me where he lay, and for the same purpose had raised a smoke.

He was indeed far gone, being scarcely able to speak. When I came the first question he asked me

was, have you any water? I told him I had plenty and handed him the kettle, which would hold 6 or 7 quarts, in which there was some meat mixed with the water. O says he, why did you bring the meat and putting the kettle to his mouth he did not take it away until he had drank all the water, of which there was at least 4 or 5 quarts, and then asked me why I had not brought more. This, however, revived him so much that he was able to go on to the spring.

I cut the horse meat and spread it out to dry, and determined to remain for the rest of the day that we might repose our wearied and emaciated bodies. I have at different times suffered the extremes of hunger and thirst. Hard as it is to bear for successive days the knawings of hunger, yet it is light in comparison to the agony of burning thirst and, on the other hand, I have observed that a man reduced by hunger is some days in recovering his strength. A man equally reduced by thirst seems renovated almost instantaneously. Hunger can be endured more than twice as long as thirst. To some it may appear surprising that a man who has been for several days without eating has a most incessant desire to drink, and although he can drink but little at a time, yet he wants it much oftener than in ordinary circumstances.

In the course of the day several indians showed themselves on the high points of the hills, but would not come to my camp.

26th June N 10 miles along a valley and encamped at some brackish water, having passed during the day several salt springs and one Indian lodge. The lodge was occupied by 2 indians, one squaw and 2 children. They were somewhat alarmed, but friendly, and when we made signs to them of being hungry they cheerfully divided with us some antelope meat. They spoke like the Snake Indians and by enquiry I found that they were Pahnakkee's from Lewis's River. They had some pieces of Buffalo Robes and told me that after a few days travel to the North East Buffalo were plenty. Although they knew the Shoshones I could not learn any thing from them in relation to the Salt Lake. In the evening I discovered from a high piece of ground what appeared to be a large body of water.

June 27th North 10 Miles along a valley in which were many salt springs. Coming to the point of the ridge which formed the eastern boundary of the valley I saw an expanse of water Extending far to the North and East. The Salt Lake, a joyful sight, was spread before us. Is it possible, said the companions of my sufferings, that we are so near the end of our troubles. For myself I durst scarcely believe that it was really the Big Salt Lake that I saw. It was indeed a most cheering view, for although we were some distance from the depo, yet we knew we would soon be in a country where we would find game and water, which were to us objects of the greatest importance and those which would contribute more than any others to our comfort and happiness.

Those who may chance to read this at a distance from the scene may perhaps be surprised that the sight of this lake surrounded by a wilderness of More than 2000 Miles diameter excited in me those feelings known to the traveler, who, after long and perilous journeying, comes again in view of his home. But so it was with me for I had traveled so much in the vicinity of the Salt Lake that it had become my home of the wilderness.

After coming in view of the lake I traveled East, keeping nearly paralel with the shore of the lake. At about 25 Miles from my last encampment I found a spring of fresh water and encamped. The water during the day had been generally Salt. I saw several antelope, but could not get a shot at them.

28th East 20 Miles, traveling nearly parallel with the shore of the Lake. When I got within a mile

of the outlet of the Uta Lake, which comes in from the south East, I found the ground, which is thick covered with flags and Bulrushes, overflowed to a considerable distance from the channel, and before I got to the current the water had increased to between 2 & 3 feet and the cain grass and Bulrushes were extremely thick.

The channel was deep and as the river was high was of course rapid and about 60 yards wide. As I would have to wade a long distance should I attempt to return before I would find dry land, I determined to make a raft, and for this purpose cut a quantity of Cain Grass, for of this material there was no want. The grass I tied into Bundles, and, attaching them together, soon formed a raft sufficiently strong to bear my things.

In the first place I swam and lead my horse over, the mule following, to the opposite bank, which was also overflowed. I then returned and, attaching a cord to the raft and holding the end in my mouth, I swam before the raft while the two men swam behind. Unfortunately neither of my men were good swimmers, and the current being strong, we were swept down a considerable distance, and it was with great difficulty that I was enabled to reach the shore, as I was verry much strangled.

When I got to the shore I put my things on the mule and horse and endeavored to go out to dry land, but the animals mired and I was obliged to leave my things in the water for the night and wade out to the dry land. We made a fire of sedge, and after eating a little horse flesh, we laid down to rest.

29th 15 Miles North Early in the morning I brought my things out from the water and spread them out to dry. We were verry weak and worn down with suffering and fatigue, but we thought ourselves near the termination of our troubles, for it was not more than four days travel to the place where we expected to find my partners.

At 10 O Clock we moved onward and after traveling 15 Miles encamped. Just before encamping I got a shot at a Bear and wounded him badly, but did not kill him. At supper we ate the last of our horse meat and talked a little of the probability of our suffering being soon at an end. I say we talked a little, for men suffering from hunger never talk much, but rather bear their sorrows in moody silence, which is much preferable to fruitless complaints.

30th North 15 Miles I started early and as Deer were tolerably plenty I went on ahead and about 8 O Clock got a shot at a Deer he ran off I followed him and found a good deal of blood and told the men to stop while I should look for him.

I soon found him laying in a thicket. As he appeared nearly dead, I went up to him, took hold of his horns, when he sprang up and ran off. I was vexed at myself for not shooting him again when it was in my power, and my men were quite discouraged. However, I followed on and in a short time found him again. I then made sure of him by cutting his ham strings. It was a fine, fat Buck, and it was not long before we struck up a fire and had some of his meat cooking. We then employed ourselves most pleasantly in eating for about two hours and for the time being forgot that we were not the happiest people in the world, or at least thought but of our feast that was eaten with a relish unknown to a palace.

So much do we make our estimation of happiness by a contrast with our situation that we were as much pleased with our fat venison on the bank of the Salt Lake as we would have been in the possession of all the Luxuries and enjoyments of a civilised life in other circumstances. These things may perhaps appear trifling to most readers, but let any one of them travel over the sand plain as

I did and they will consider the killing of a buck a great achievement and certainly a verry useful one. After finishing our repast the meat of the Deer was cut and dried over the fire.

July 1st 25 Miles North along the shore of the Lake. Nothing material occurred.

2nd 20 Miles North East Made our way to the Cache. But Just before arriving there I saw some indians on the opposite side of a creek. It was hardly worth while as I thought, to be any wise careful, so I went directly to them and found as near as I could judge by what I knew of the language to be a band of the Snakes. I learned from them that the Whites, as they term our parties, were all assembled at the little Lake, a distance of about 25 Miles. There was in this camp about 200 Lodges of indians and as they were on their way to the rendezvous I encamped with them.

3d I hired a horse and a guide and at three O Clock arrived at the rendezvous. My arrival caused a considerable bustle in camp, for myself and party had been given up as lost. A small Cannon brought up from St. Louis was loaded and fired for a salute.

Jedediah Smith's Journal - Second Expedition to California

13 Jul 1827 – 3 Jul 1828

My preparations being made I left the Depo on the 13th July 1827 with eighteen men and such supplies as I needed. My object was to relieve my party on the Appelaminy and then proceed further in examination of the country beyond Mt. St. Joseph and along the sea coast. I of course expected to find Beaver, which with us hunters is a primary object, but I was also led on by the love of novelty common to all, which is much increased by the pursuit of its gratification.

I had learned enough of the Sand Plain in my late journey across it to know that it would be impossible for a party with loaded horses and encumbered with baggage to ever cross it. Of the [nine] animals with which I left the Appelaminy but two got through to the Depo, and they were, like ourselves, mere skeletons. I therefore was obliged to take the More circuitous route down the Colorado, which, although much better than that across the [] Plain, was yet a journey presenting many serious obstacles.

Leaving the head of the Little Lake I moved in a South Eastern direction to Bear River, which, where I struck it, was about        yards wide. From Bear River I struck S W to Webers River and up the River Nearly South until I came to where it turned too much S E. I then turned S W across a divide and struck a small stream which ran S W. I followed it down to its mouth in the Uta Lake. Near the Lake I found a large Band of the Uta's encamped.

I[n] coming from the rendezvous to the Uta Lake I was employed about six days. The Uta Lake is....

I traded with the indians for the such things as I wanted, among which was two horses, and leaving the Lake I moved on south to Ashley's River and got on to my old track to Lost River. The Utas had told me of some men that came from this direction last Spring and passed through their country on their way to Taos. They said they were nearly starved to death. On Ashley's River I saw tracks of horses and mules which appeared to have passed in the spring when the ground was soft. These tracks were no doubt made by the party the indians spoke of.

In this time nothing worth relating occurred. At Lost River the indians who were so wild when I passed the year before came to me by dozens. Every little party told me by Signs and words so that I could understand them, of the party of White Men that had passed there the year before, having left a knife and other articles at the encampment when the indians had ran away. I made them some small Presents and; moved on to Adams River and down to Pauch Creek and to the indian Lodges on Corn Creek, where I first found corn; and pumpkins on my route of last year.

Not an indian was to be seen, neither was there any appearance of their having been there in the course of the summer their little Lodges were burned down. From this place, instead of taking the route I had before traveled through the Mountain by following in the channel of the river, I followed up Corn Creek about 25 Miles and then turning SW I crossed the Mountain without any difficulty, and crossing some low Ridges, struck a Ravine which I followed down to the bed of the dry River which I call Pautch Creek, which I followed down to [] Adam's River about 10 miles below the Moutn.

Since I struck Adams River I had seen but one Indian, and he kept as close to Rock as a Mountain Sheep. I could not account for the indians being so wild. I passed one place where there was a little corn, but it was just in the tassel. Along the Creek I saw several works for making making the sugar or Candy of which I have before spoken.

From the Mouth of Pautch Creek nothing material occurred until my arrival at [Bitter] Creek. I stoped at the Salt Cave and took some salt. On the left hand side of the Creek [] about three Miles below my camp and 1/4 of a mile from the Creek I happened to observe a perpendicular bluff of Salt facing the Creek and like the salt of the cave with the exception, perhaps, that it is not quite as pure. The indians still continued as wild as on Pautch Creek.

From [Bitter] Creek I moved on to the Mouth of Adams River, where I found the old Pautch farmer still on the east side of the Colorado. From this place to the first Amuchaba village my route was the same as when I passed before, with the exception that instead of taking the ravine in which I had so much difficulty I took another further south and passed in to the river without difficulty.

As there had been no indians to carry news of our approach, on our arrival at the village the indians all ran off, but finding an opportunity to talk with one of them, the[y] soon returned and seemed as friendly as when I was there before.

I remained a day to rest my fatigued animals and then moved down to the next settlement. The indians had heard of my approach and met me some distance above their village.

I went to the place where I intended to cross the Colorado and encamped in a situation where I found good grass, with the intention of giving my horses some rest. I exchanged some horses, Bought some Corn and Beans and made a present to the Chiefs. My interpreter, Francisco, who was still there, told me that since I had left there the last summer a party of Spaniards & Americans from the Province of Sonora, by the way of the Gila, had been there. He showed me some things they had got from them. He said the[y] had quarreled and separated, one party going up the Colorado and the other in another direction. This accounted for the tracks of horses and Mules I had seen on Ashley river and for the starved party which the Utas said had passed through their country.

[missing pages]

After weighing all the circumstances of my situation as calmly as possible, I concluded to again try the hospitality of the Californians. I had left with my party on the Appelaminy a quantity of Beaver furs, and if the Governor would permit me to trade, and I could find any person acquainted with the value of furs, I might procure such supplies as would enable me to continue my journey to the North.

But to return from this anticipation, I was yet on the sand bar in sight of My dead companions and not far off were some hundreds of indians who might in all probability close in upon us and with an Arrow or Club terminate all my measures for futurity. Such articles as would sink I threw in to the river and spread the rest out on the sand bar. I told the men what kind of Country we had to pass through and gave them permission to take such things as they chose from the bar. After making their selection, the rest was scattered over the ground, knowing that whilst the indians were quarreling about the division of the spoils we would be gaining time for our escape. We then moved on in the almost hopeless endeavor to travel over the desert Plain, where there was not the least probability of finding game for our subsistence. Our provision was all lost in the affray, with the exception of about 15 lbs of dried Meat.

We had not gone more than 1/2 Mile before the indians closed around us, apparently watching the proper moment to fall on us. I thought it most prudent to go in to the bank of the river while we had it in our power, and if the indians allowed us time, select the spot on which we might sell

---

our lives at the dearest rate. We were not molested and on arriving on the bank of the river we took our position in a cluster of small Cotton Wood trees, which were generally 2 or 3 inches in diameter and standing very close.

With our knives we lopped down the small trees in such a manner as to clear a place in which to stand, while the fallen poles formed a slight breast work. We then fastened our Butcher knives with cords to the end of light poles so as to form a tolerable lance, and thus poorly prepared we waited the approach of our unmerciful enemies.

On one side the river prevented them from approaching us, but in every other direction the indians were closing in upon us, and the time seemed fast approaching in which we were to come to that contest which must, in spite of courage, conduct and all that man could do, terminate in our destruction.

It was a fearful time. Eight men with but 5 guns were awaiting behind a defence made of brush the charge of four or five hundred indians whose hands were yet stained with the blood of their companions.

Some of the men asked me if I thought we would be able to defend ourselves. I told them I thought we would. But that was not my opinion. I directed that not more than three guns should be fired at a time and those only when the Shot would be certain of killing. Gradually the enemy was drawing near, but kept themselves covered from our fire.

Seeing a few indians who ventured out from their covering within long shot I directed two good marksmen to fire they did so and two indians fell and another was wounded. Upon this the indians ran off like frightened sheep and we were released from the apprehension of immediate death.

The indians did not press on us again, and just before dark we commenced our journey and traveled all night and the next morning got to the first spring. As we had no way of carrying water and the weather was very warm I remained at the spring during the heat of the day and in the evening moved on, traveling all night. In a low plain and in the night when I could not see the distant and detached hills I had no guide by which to travel and therefore lost my way. In the morning I ascended a hill, but could not ascertain on which side the trail lay.

Observing a high hill nearly in the direction in which I wished to travel I told the men which way to travel in case we did not come back soon, and taking a man with me who was a good walker, I pushed on in search of water and fortunately found some. I sent the man back to the other men and in the mean [time] laid down to take a little sleep, which from my incessant anxiety and fatigue had become quite necessary.

When the party arrived I left them at the little spring and mounting the highest hill I could see I was enabled to determine that we were about five miles on the right of the trail and nearly opposite a place where I had found water when I passed before. We remained at the spring until nearly night, and then bearing the spring on the trail to the left, I struck directly for the next spring on the old route, traveling and resting by intervals during the night and the following morning until ten O Clock, when we got to the spring.

We there remained during the remainder of the day and the following night, and in the morning early we started, but instead of following the old trail I turned to the left and struck directly for the Salt Plain. My guides had told me of that route when I was there before, but it was considered too stoney for horses.

The day was extremely warm and consequently we suffered much from thirst, my men more than myself, for they had not been accustomed to doing without water as much as I had. We found some relief from chewing slips of the Cabbage Pear, a singular plant which I think I have before described; very juicy although frequently found growing on the most parched and Barren ground. My men were much discouraged, but I cheered and urged them forward as much as possible and it seemed a happy providence that lead us to the little spring in the edge of the Salt Plain, for there was nothing to denote its place and the old trail was filled up with the drifting sand. Two of the men had been obliged to stop two or three miles before we got to the spring, and although it was just night two of the men took a small kettle of water and went back, found and brought them up. After dark we proceed[ed] on across the Salt Plain and stopt at the holes I had dug when I passed before and there remained for the rest of the night.

On the following day I moved on to Inconstant River. It was still dryer than when I passed the year before. I think it reasonable to suppose that the Salt of the Plain has been formed by a deposit at different times from the overflowing of Inconstant River. The water of the river is sufficiently brackish and the country near the place where it is finally lost in the sand is sufficiently level to justify the conclusion that in some seasons of the year, when the water is most abundant, it spreads over the Plain, and as the dry season approaches the water disappears and leaves a deposit of salt which has in the course of years produced the beautiful encrustation found in the Salt Plain.

About 8 miles up the river I found 2 horses and soon after 2 indian Lodges. I determined at once to secure the horses. And as the indians did not discover me until I had got close to them they had no chance to run off. I found them to be Pauch. With some cloth, knives, Beads &c., which we had brought along, I purchased their horses, some cane grass candy and some demi jons for carrying water.

I then proceeded on, nothing material occuring until I got near the head of Inconstant River there I fell in with a few lodges of the Wan-uma's indians. They had two horses which I purchased, and in continuing my journey, instead of traveling south East around the bend of the stream I struck directly across the Plain Nearly SSW to the Gape of the Mountain.

So soon as I had passed through the Mountain and near the place where I encamped the first night after leaving St. Bernardino on my first journey, I saw numbers of cattle. I immediately determined to kill some cattle and dry the meat to support us in our journey through the Barren country Between Bernardino and the Appelaminy. I therefore had three cows shot and the meat cut and dried.

As the distance to the Mission was considerable I would not go in, but send word to Bernardino of what I had done, but the overseer came out bringing with him such little Luxuries as he had, and as he appeared anxious that I should go in and stay with him a night at the farm house I did so and was verry well treated.

When the overseer came out, among other things he had brought a horse for me to ride in. On the following day he came with me and brought with him some horses which were purchased with things we had brought on our backs from the Amuchabas, which, with those we had before, made each of us a horse.

Two of my men I left at Bernardino, Thomas Virgin, who had been wounded by a club at the Amuchaba affray, and Isaac Galbraith, a free trapper who belonged to my party and preferred

remaining, to which I did not object.

The overseer told me that some of the Amuchaba chiefs had been in to the settlement and brought the news of their having defeated a party of Americans, which was no doubt the same of which Francisco spoke. But instead of quarreling among themselves the probability is that they were defeated by the indians, separated in two parties in the affray, and traveled different ways. In coming from the Amuchabas I had been 9 1/2 days. And remained at the camp 5 days. In the mean time among other things I procured some paper and wrote to father Sanches giving the reasons of my coming to the country and also the reasons that induced me to leave Mr. Virgin. It was my intention that Father Sanchez should advise the Governor of what I had communicated to him.

After having remained [] five days at the camp near Bernardino I moved off towards my party on the Appelaminy, directing Mr. Virgin, as soon as his health would permit, to come on directly to St. Francisco, for which purpose he was furnished with a good horse. With some small exception I traveled the same route I had passed before and arrived on the Appelaminy and found my party on the 18th of [] September.

They were becoming somewhat anxious for my return, as it was within two days of the latest time fixed for my return. I was there by the time appointed, but instead of Bringing [] them the expected supplies I brought them intelligence of my misfortunes and the consequent disappointment. I found them all well. They had passed what hunters call a pleasant Summer, not in the least interrupted by indians. The game consisted of some deer and Elk and Antelopes in abundance. They spoke in high terms of the climate. The air was extremely pleasant from the effect of a gentle North Western Breeze that rose and sank with the rising and setting of the sun.

The indians appeared to be very honest, having at no time manifested a disposition to steal, and entirely friendly. The old Macalumbry Chief (Te-mi), of whom I have before spoken, frequently visited them, bringing them grass seed meal, currents and raspberries &c, and they in return loaded him with meat, which appeared to the indians of this country a most acceptable present. Among other incidents It may not be amiss to mention that Te-Mi brought the stolen horse, as he had promised, a few days after I started for the Depo. He had also brought 7 or 8 of the traps lost in Rock River that had been broken in pieces by the indians, but the men had repaired them. A party of Spaniards had visited them in the summer, having received intelligence of their being in the country from some indians who had gone in to the Missions. They appeared satisfied with the reasons Mr. Rodgers gave for his being in the country.

I stayed two days with my party, arranged them for trapping, and taking 3 Men with me I started to go in to the Mission of St. Joseph, a distance of about 70 Miles S W. I took some indians with me for guides & on the 3d day arrived at St. Joseph.

I rode up in front of the Mission, dismounted and walked in. I was met by two reverend fathers. One father [Narciso Duran] belonging to the Mission of St. Joseph and the other father [Jose Viader] of the Mission of Santa Clara. The reverend fathers appeared somewhat confused by my sudden appearance and could not or would not understand me when I endeavored to explain the cause of my being in the country.

They did not appear disposed to hear me, and told me I could go no further and soon showed me the way to the guard house. My horses were [taken] away and for two days I could get no satisfaction whatever. They would neither put me in close confinement nor set me at liberty. No provision

---

whatever was made for my subsistence and I should have suffered much had it not been for the kindness of the old overseer, who invited me at each meal to partake with him. My men likewise ate at the same place.

After 2 days hearing of a man, an American by the name of [William] Welch, I sent for him. He had the kindness to come immediately. I then endeavored to have an interview with the Reverend father [Duran]. He condescended to let me know that an officer would soon be up from St. Francisco to enquire what business I had in their country. He asked me if I had anything to eat, thinking I suppose that two or three days was nothing for a heretic to go without eating, as this was the first time he had mentioned the subject, perhaps presuming that I lived on faith instead of food.

I lived in the same way for several days. Finally Lieut. Martinos came up from St. Francisco.

After a little conversation with him I found I was to be tried for an intruder and for claiming the country on the Peticutsy. I hardly knew what to say to this charge, but by enquiry I found that an indian had been over on the Peticutsy and returned with his own story of the views of my party.

In the presence of the father, the indian and my self were confronted, Lieut. Martinos sitting as judge. I put a few questions to him by which I ascertained that he had seen me just before my departure for the Depo and had once been with my party during my absence. But no circumstances could be proved against me and Lieut. Martinos instead of punishing me as the father desired Sentenced the indian to a severe flogging, which perhaps he did not deserve.

The father seemed much interested against me for what reason I know not unless perhaps It might be that he was apprehensive of danger to the true faith, for which reason he was anxious to stop my fishing around the country (for so he termed my traveling in their country).

I gave the Lieut to understand my situation and my wants and hinted at my desire to go directly to Monterrey, the present residence of the Governor, for I considered this the most expeditious way to get through with my business. He told me I would be obliged to remain at the Mission until an express could go to and return from Monterrey.

Endeavoring to impress him with an Idea of the importance of despatch I urged him to expedite the business as much as possible. He prevailed on the father to furnish me with a room.

After this my meals were sometimes brought to me in my room and sometimes I ate with the overseer as before.

Capt. [John Rogers ] Cooper, a Bostonian who had married and resided in Monterrey & Mr. [Thomas B. Park], supercargo of the Brig Harbinger from Boston, came up in company from Monterrey and remaining at St. Joseph a days much relieved the anxiety of mind attendant on the uncertainty of my situation. Capt. Cooper in particular seemed willing to afford me any assistance in his power.

I was detained at St. Joseph 12 or 14 days before I received a letter from the Gov. and at the same time a guard to accompany me to Monterey. During this interval I . . . .

[missing text]

On the receipt of the Governors letter I made all haste and started immediately for Monterey. The journey employed us [] three days until 11 O Clock at night before we arrived at the Presidio, where I was immediately introduced to the Guard house and closely watched until the next day. In the mean time Capt. Cooper came to see me, bringing some brekfast with him and endeavoring to console me in my unhappy situation.

At 11 O Clock I was informed that the Governor was ready to see me. He met me at the door,

shook hands with me and passed a few compliments in Spanish. We then walked through a hall into a Portico, and sit down.

He then commenced talking in Spanish when I immediately told him it would be necessary to have an interpreter. He assented and proposed having Mr. Hartwell, who he said was the only good interpreter in Monterey but who was absent and would not be at home until the evening. He asked me if I would have some breakfast and said he would have a room prepared for me. I thanked him and told him that if he had no objection after breakfast [] I would go to Capt. Coopers, to which he assented.

At Capt. Coopers I was received with a hearty and sincere well come and introduced to Mr. Hartwell. In the Evening I had an interview with the Governor and found him in Monterrey distinguished by the same traits as those that Marked his character when I saw him at San Diego: Nothing further could be concluded on than this. That I should be allowed the privilege of the town, Presidio and harbor. His Excellency appointed an afternoon for an interview at the house of Mr. Hartwell.

I saw at Monterrey Ferguson, the man who ran away from me at St. Gabriel, and Wilson, the man I had discharged at the Chintache lake. At the appointed time I went to Mr. Hartwells and met the Governor. He comenced the business of the interview by observing that what I had stated with regard to my business might be true but he could not believe it for said he, when you came to San Diego you represented the route by which you had come in to California as being a dry barren desert almost impassible, and now you have come by the same route again. It is a verry circuitous route and if, as you say, your only object was to strengthen and supply your Appelaminy party why did you not come directly across to them? And further, when you was defeated and came in so near St. Gabriel why did you not notify me of your arrival?

In answering him I told him it was verry true that when at San Diego I had represented the route by which I had come in as being verry bad, which was a fact, but that on trial I had found the direct route much worse in fact I considered it entirely impassible for a party with loaded horses at that season and perhaps at any other. Of two evils it was natural and politic to choose the least, in doing which I had taken my old route down the Colorado. In regard to the notification of which he spoke, I had made a communication to Father Sanches under the impression that it would be forwarded to him immediately.

He did not appear satisfied with my explanation, said it was altogether a misterious business, and that he must have time to consider the subject. From this time I called on him at intervals of a day or two, and after several days he came to the conclusion that I must go to Mexico.

I told him I was ready to go and the sooner he would send me the better. He told me I should go by the first opportunity. A few days after Capt [William G.] Dana of Monterrey, Master of an English Whaler, was ready to sail for Acapulco, the place of debarking for Mexico. I informed the Governor of the opportunity. And he merely said I might go. I soon found that he was not disposed to put himself to any trouble about it. I asked him if he intended that I should go to Mexico as a prisoner and at my own expense. He said most certainly, if I had the privilege of going in a foreign vessel, but if I would wait two or three months a Mexican Vessel would be going to Acapulco when he might perhaps as a favor from the Capt get a passage for me.

I [t] seemed that this man was placed in power to perplex me and those over whom he was called to govern. That a man should seriously talk of making a man take himself at his own expense to

---

prison. That he should talk to me of waiting 2 or 3 months for a passage to Acapulco. I plainly told him that on such conditions I would not go. Capt Cooper, knowing that I had no money, supposed that to be the reason why I refused to go and told me the want of money should not hinder me from going. I thanked him, but I told him I would not see Mexico on the terms proposed by his honor the Governor.

At another interview a few days afterwards Mr. Hartwell, who always appeared quite willing to assist me and whose opinion seemed to pass with the Governor for law, told him he had thought of a way by which I might be let off without his bringing the responsibility on himself. He said "the English Law allowed 4 Masters of vessels in a foreign port in cases of emergency to appoint an agent for the time being who would act as consular agent [for] until the government could be apprised of their proceeding, and perhaps said he the Americans have such a Law."

This seemed to please the governor and he said he would see what could be done. No sooner was the conference ended than I told Capt Cooper of what had passed and also the Masters of the several vessels in port. They were not perfectly satisfied of the legality of the proposition, but thought the urgency of the case would justify the proceeding.

Capt Cooper was appointed agent by the different Masters in port [... Having lost my journal of that date I am unable to give the names of but two of them, Capt. [Joseph] Steele of the Brig Harbinger and Capt. [Allen] Tilton of the Ship Omega.

Previous to this the Genl had requested me to write to my party to come in. I told him they were nearer St. Francisco than that place and he remarked that they might go in there.

I therefore wrote to Mr. Rodgers that it was the Governor [s] request that they should come in, and at the same time hinted at the treatment I had received. This I knew was sufficient for Mr. Rodgers, who from what had [] passed between us would go in to [] Bodega.

I carried the letter to the Genl unsealed. He had it translated and took a day or two to consider its contents, then sent for me and said he was afraid to [] send such a letter for I had not ordered Mr. Rodgers positively to come in and that I had discouraged him from coming in from the manner in which I had spoken of [] the usage I had received at the same time he observed he would be very sorry [] that his soldiers should have any difficulty with my party.

I told him I thought what I had written very reasonable but that if he would give me a copy I would write again. He said he could not do that. After getting the promise of the Governor that they should not be imprisoned and should be furnished with provision I wrote to Mr. Rodgers directing him to come in to San Francisco. The soldiers who carried the letter went by way of St. Joseph and one of my men accompanied them.

Notwithstanding what the Genl had said about his soldiers and the smallness of my party I think he did not wish to have my party try their rifles on his soldiers, for there was some terrible stories in circulation about the shooting of my men. It was said they were sure of their mark at any distance.

In the mean time news came in from the South that another party of Americans were near Too Larra Lake. I told him I was well convin[c]ed there were no Americans there, but as it was his request I would write to them.

After Capt Cooper was appointed agent the Genl wished him not only to become responsible for my good conduct until I left California but also to insure that I should [not] return again to the country on any pretense whatever. I would not agree to such a restriction and after a short contest

the Genl consented to drop it.

I received a letter from Mr. Rogers informing me of his arrival at St. Francisco. I got permission to write to Mr. Virgin and the Genl agreed to forward it to him.

November 7th 1827 I called on the Governor in company with Capt. Cooper who gave the Genl a written certificate stating the reasons which he thought had brought me to the country, which nearly accorded with what I had stated to the Governor. It also stated what I was in want of, in the mean time offering to become responsible for my conduct.

The Genl said on those conditions I could take my choice of three things either to wait until he could receive orders from Mexico. Or I might go there as an opportunity would offer in 8 or 12 days or I might go away with what men I had in the same direction by which I had come in. He insisted that I should travel the same route by which I arrived and in preventing me from hiring more men he calculated I would be afraid to travel with the number of men I had and consequently he would retain me in the country until he could receive orders from Mexico. But I told his excellency I would go if I had but 2 men. The Genl said he would make a memorandum of what Capt. Cooper must become responsible for and would then call on us.

The Ship Omega, Capt Tilton, departed and in the evening I received a letter from Mr. Rodgers stating that by the help of Capt Richardson of St. Francisco he had got permission to remove to a spring not far distant from the Precidio. This letter came by the hand of Charles Swift and further informed me that the party were well supplied with Beef Corn Beans &c.

9th November & 10th The Genl was sick so that no business could be done. A ship being in the harbor from Boston, [John] Bradshaw Capt, and [Rufus] Perkins Supercargo, I made a contract with the Capt selling him all my furs at \$2.50 per lb. On the 10th the Genl gave Capt. Cooper a Copy or pattern for a Bond which he with some little alterations agreed to sign. In the first place the Genl wished to obligate me to remain North of the 42nd parallel of Latitude. But he finally satisfied himself to [] make Capt Cooper [] guarantee that I should not hunt on the sea coast south of the 42nd parallel of latitude but within Land wherever my Government might permit. Before the Bond was signed the Genl again proposed sending me to Mexico but I told him as I had sold my furs and made arrangements for traveling homewards I could not well do otherwise, and he with some little hesitation assented. We were to have three [] copies of the original bond, one to send to Mexico one to be left with the Genl [] one for Capt Cooper and one for myself.

12th November The Bonds were all made and signed. The Genl then requested a list of such things as I wished to purchase which I gave him. He objected to none of the articles except Horses and Mules but after some difficulty he allowed me permission to purchase 100 Mules & 50 horses. 15th having got my passport I went on board of the Franklin, Capt. Bradshaws Vessel, and at 2 O Clock we sailed for St. Francisco. I was soon sea sick and a gale of wind that came on at 5 O Clock Made me much worse. At tea time a sudden lurch of the vessel threw the whole apparatus of the table into one of the lower births and Capt Bradshaw received the whole of the Tea but no other damage was done save the breaking of some dishes.

16th At night we were off the Bay of St. Francisco but the wind being contrary we stood off and on until the next day. 17th At 12 O Clock the wind being fair we entered the harbor there were 7 Sail in at the time. I called on Don Lewis the Commandant he seemed satisfied with my passports. I found my men all well but they had not been well supplied with provisions - Mr Viermont (a German) trading under the Mexican flag had been very Kind to them.

---

18th I had my furs taken on board the Franklin amounting to 1568 lbs of Beaver & 10 Otter Skins. Rainy weather. I was engaged until the

22nd in preparing my good [s] & going back and forth from the ship and party to the Precidio. I made arrangement to have some of my things sent in the Launch to St. Joseph and some put on shore at that place. In company with Capt Bradshaw I received an invitation to dine on Board the Sloop of War Blossom. But was detained so long by my business with Don Lewis that I could not attend.

23d My things were all ready to go on shore and I received an invitation to dine. The Company consisted of Capt. John Bradshaw of the Ship Franklin from Boston. Capt. Reuben Cresy of the Sophia from New Bedford, Capt. [John] Fo[r]ster of the Brig Tullum from Mexico, Capt Moses Harris of the Weymouth from Nantucket, Capt [Obed Swain] of the Enterprize from Nantucket, Capt [Benjamin A. Coleman] of the Eagle from Nantucket, and Mr. [Henry D. ] Fitch, supercargo of the Brig Tullum. After dinner the wind arose so that I could not go on shore, so we remained and supped and contrary to my wish sat up untill 3 O Clock to drink wine, after which we took a little sleep.

24th Early in the morning I went on shore and as I could not get my work done at St. Francisco I got permission from Don Lewis to remove to St. Joseph as that place would not be out of my way.

26th Since the party had been at St. Francisco the horses had been nearly starved but I got them up and moved off in the direction of St. Jose, about 20 miles, and put them up at the farm of Don Lewis, where I was politely treated at his expense.

27th I went ahead of the company as far as the Pueblo with Mr. Garnier, a man I had engaged to go to Monterrey with two men and two horse loads of Merchandize to pay for some horses I had purchased at that place. At the Pueblo I made application at the house of Mr. Welch for the payment of [a] draft of 200 Dollars on him from Mr. Perkins. But I was disappointed he was not at home and had [] left orders for me to send to the Mission of Santa Cruz. I hired a man, sent him there but got no money.

28th I continued on my way to St. Jose, Mr. Garnier being with me for an interpreter. I mad [e] an arrangement with the Priest by which I was to have the use of the Smith Shop for one week for the purpose of repairing my guns and a room for myself and two small rooms for my men. The party arrived at 5 O Clock having left some of their horses behind which had given out.

29th I sent two men down to the Pueblo to bring up any horses which Mr. Garnier might purchase there.

30th My two men returned with 3 horses and 3 Mules sent by Mr. Garnier. I spoke to Capt Bradshaw who had come up with some things for the Priest and for myself of the disappointment I had received in relation to the money from Welch. He told me if I would go down to the Ship he would pay it.

Dec. 1st I started to go down on the north side of the bay in Company with Capt Bradshaw having procured a guide from the Father and a horse from the Overseer. At 4 O Clock I arrived at the Farm of St. Pablo and procuring a Boat and men at 10 O Clock I embarked, leaving Capt Bradshaw. At this time it was flood tide and the wind being being verry high shortly after starting we was obliged to come to under the shelter of a small island for a short time when were enabled to proceed on again and at about 3 O Clock arrived on board the ship.

I procured some such things as I wanted and remained all day waiting for the arrival of Capt.

Bradshaw who did not arrive until 3 O Clock at night. In the morning I got my money and was ready to sta [r] t back, but the wind blew so hard I was obliged to remain until the following morning when I started early and immediately on my arrival at the farm of St. Pablo I mounted my horse and rode up to the Mission. In my absence Mr. Rodgers had driven up the horses to brand and found that five of them were lost.

December 5th My men were Busily engaged in Baleing up my goods for the journey.

6th Dec My men engaged as before. on having my horses driven up I found 6 of them were missing.

Isaac Galbraith, the man who had stayed at St. Bernardino with Mr. Virgin came but brought no news from him. I received Letters from Capt. Bradshaw, Capt. Cooper, Mr. Garnier and Mr. Perkins. But Mr. Perkins said not a word about the money I was to receive from Mr. Welch. I also recd one from father Louis of Santa Cruz stating that on the receipt of my letter he had sent me \$150, being all the Money he had at the Mission at the time, but that just after the Messenger started on his return to me he had received a letter from Mr. Welch which caused him to send after the Courier and detain the Money.

7th Palmer & Reed were at work on the Guns and the rest of the party employed as the day before. My horses were all found but 3. I wrote to Don Lewis and to Capt. Bradshaw.

8th Was a Saints day and of course little could be done.

9th Was Sunday. I attended Mass. The Music consisted of 12 or 15 violins 5 Base vials and one flute. The father spoke in Latin and in Spanish and a part of his discourse was then translated for the indians into their own tongue. Not only on Sunday but every day of the week the indians are called to prayers at an early hour in the church.

10th 11th & 12th My men were employed in the several kinds of preparation for the journey. As yet no word received from Mr. Garnier.

13th I had some of my men engaged in drying Meat and others at work in the Shop. In the course of the day Mr. Virgin arrived. He had been imprisoned for some time and frequently without anything to eat and strictly forbidden to speak to any one, [] and abused in almost every way. On the 5th the Genl on his way to St. Barbara saw him, released him and instructed the fathers to forward him on to St. Joseph. He was much rejoiced to see us and I am sure I was quite glad to see the old man again.

I am informed by good authority that my young indian of whom I spoke the first time I was in California and who was in prison when I went away was tried for his life charged with having piloted me into the country and sentenced to be shot. But father Sanches, influenced by his own good feelings and his promise to me, wrote to Mexico and procured his pardon. And further I have good reason to believe that the Amuchabas were instructed to kill all Americans coming in in that direction; but let that be as it may the fact that they punished an indian for being friendly to me would readily convey the idea that they would reward them if they were enemies.

15th Some of my men were engaged in cutting meat to dry, others at Blacksmithing and some Loo[k]ing for lost horses. I had spoken to Cap` [W. A.] Richardson of St. Francisco when on his way to Monterrey to speak to Mr. [Paul Shelikof] the Russian agent at Bodega who was at that time at Monterrey of the probability of my passing by Bodega on my way north and that I might want to repair my things or procure some supplies. I received a letter from Mr. [Shelikof] informing me that he should soon pass to the North himself and would give instructions to the agent at

Ross the Precidio of the Russian Settlement to provide me with whatever I stood in need of.

16th Sunday. I again attended Mass.

17th I had several of my men out hunting horses and one was found. No news as yet from Garnier. My preparations for a start are nearly complete.

18th Arthur Black came from Garnier with the intelligence that he [ ] had purchased 180 horses and mules and was in want of money. He was at Castros farm 20 Leagues from St. Joseph and from what Black told me I considered it absolutely necessary that I should be on the spot. I soon fixed for starting with 4 men and as my horses were inconvenient I bought some for the trip it rained and snowed considerably but that did not stop me and at 12 O Clock at night I arrived at Castros farm. Since Black had left there the horses had broken out of the pen and several I knew not how many were lost.

19th rainy but I had men out hunting for the lost horses and some of them were found and put in with the band at night carefully guarded for I find that notwithstanding the small value of horses they are frequently stolen.

20th I started with 2 Spaniards and 5 of my own men to drive the band of horses in to St. Jose in the mean time Mr. Garnier and one Spaniard remained behind to look for lost horses. I went on with the Band of horses about half way to St. Jose when I stopped them and pushed on ahead. On my way I hired a young man an Englishman who had been in [the] country about 2 years and was an excellent horseman, his name was Richard Leland.

21st I had my horses which were near St. Jose driven in and started to meet the band, in the mean time intending to [buy] some things of Mr. [John] Burton... in the Pueblo and some Blankets of Father Joseph at Santa Clara. I met the Band, did some of my business and returned to St. Jose. In the evening I went again to the Pueblo and as the rain increased I staid all night at Capt Burtons.

22nd I returned to St. Jose and got permission from the father to remove my Company to a sheep farm belonging to the Mission called St. Lorenzo, where there was a plenty of grass and a pen in which I could shut up my horses & Mules.

23d As it was rainy I did not move.

24th I started the Party off to the farm & taking Laplant with me I went as far as Lieut. Martinos on my way to St. Francisco. It was late when we arrived at that place and we remained all night.

25 After taking some of the Lieut's Honey we proceeded on and arriving at St. Francisco I found that nothing could be done on that day, one of Don Lewis's Children having died the night before. All my preparations being completed for moving of [f] to the North I was anxious to be off as soon as possible.

26th I had 2 interviews with Don Lewis. It was the instruction of the Genl to Don Lewis that I should cross the Buenaventura River near its entrance into the Bay of St. Francisco. Don Lewis was further ordered to send 10 Soldiers to see me safe out of their territories. The time which the Genl had given me to remain was nearly expired but I found it entirely impossible to procure a Launch to take me across the river without which it was impassible. The only Launch in the neighborhood belonging to Capt Richardson was unfit for service.

In this situation I made no doubt that Don Lewis would consent that I should go up the River until I could find a place where I could swim my horses and carry my goods over on a raft which could not be done at the mouth. But he would hear nothing of this proposition but insisted that I should cross at the particular place directed by the Genl. I then told him to furnish the boat and

I was ready to cross. This he could not do but said I must wait until the Genl could be advised of the situation of things and give further instructions. I apparently acquiesced but left him with a determination fixed to take my own course without waiting for their tardy Movements which the situation of my finances would not permit.

By riding until 12 at night I arrived at the Pueblo where I found Mr. Gamier. He had got but one of the lost horses. I settled with him and found that in the time he had been employed in Purchasing for me he had lost 19 horses and Mules. I sold them to him for 25 Dollars.

27 I went home to my company and as I am about ready to leave the Settlements of California It may perhaps be appropriate to insert in this place the remarks I have made on the country in the vicinity of the Bay of St. Francisco. The Bay of St. Francisco having been well described by Vancouver I will merely observe that it is universally considered the most safe harbor on the Western Coast of America. It is spacious and has sufficient depth of water for the largest vessels. The entrance is safe and about [2]miles wide and the surface of the Bay is protected from the violence of Western winds by a chain of hills that run through the two projecting points of land that form the neck of the Bay. The form of the Bay is somewhat triangular, one of the arms running to the S E and one to the NorthEast. That to the South East is the longest, extending for some considerable distance, perhaps 20 miles, into the rich valley of the Missions of St. Jose and Santa Clara. The N Eastern and shorter arm is that which Receives the Buenaventura River.

The Precidio of St. Francisco is on the narrow Point of land that forms the S Western Boundary of the Bay and about 1/2 miles from its entrance & immediately on the shore. There is but little good land in the vicinity of St. Francisco a chain of hills that run parallel with the coast of the Ocean and shore of the Bay come in Close to the Precidio leaving but a narrow strip of fertile soil along the Bay. The Buildings of the Precidio are according to the common custom of the Country built of unburnt brick. They are like Barracks and built in a square and were once capable of accommodating 20 families and 100 Soldiers but are now much decayed.

The entrance of the harbor is defended by a fort placed on the point about 1/2 mile from the Precidio in a situation admirably adapted for the purpose for which it was intended. It mounts 15 or 20 pieces of cannon but I am told is somewhat decayed. About 3 miles from the Precidio is the Mission of St. Francisco which is not as rich as some others in the vicinity.

Leaving St. Francisco [] and proceeding S. E. along the Shore of the Bay the Chain of hills on the S West on which are fine forest of cedar gradually retire and leave a fine country pleasingly varied by prairie and woodland. In this delightful country is the Mission of Santa Clara. Not far from the Southern extremity of the Bay and nearly opposite is the Mission of St. Jose.

There is a considerable Stream that enters the South Eastern Extremity of the Bay after winding through the fertile valley Laying Between two Chains of hills one of which ranges nearly North and South and terminates near the Mouth of the Buenaventura and the other of which I have before spoken ranging in a South Western direction from St. Francisco.

[] From the S. E. extremity of the bay extends a considerable Salt Marsh from which great quantities of salt are annually collected and the quantity might perhaps be much increased. It belongs to the Mission of St. Jose.

About one Mile from Santa Clara is the Pueblo which consists of about 100 houses built of the common material. Unburnt Brick. But few of these are any wise respectable in appearance - the remainder are merely huts. Along the east side of the Bay a fine country extends to the Mouth of

the Buenaventura River including several fine farms and among the rest that of Santa Ana near the Mouth of the River. On the North Side of the Bay a fine country is spread nearly to the Ocean where there is a chain of Rocky hills nearly on the coast.

The Mission of St. Raphael is about Two miles from the Bay and nearly opposite the Mouth of the river. It is a fine country which extends indefinitely from the Chain of hills near the coast along the shore of the Bay and up the Buenaventura River. The farm of Santa Anna extends along the shore of the Bay about three miles and back into the country about the same distance. There is very little land in cultivation and the amount of stock is small for that country, but the soil is excellent and the situation combining many advantages is at the same time Most delightful and pleasant.

The Best farming establishments in California are the Missions. At Each of these there are fine orchards and gardens. Individuals of this country are generally too indolent to make good farms they rather prefer the less laborious task of raising horses and cattle and in this business they are so forcibly assisted by the peculiar advantages of the country that the herds of Cattle have accumulated untill they are nearly as numerous as the Buffalo of the plains of the Missouri and the horses are in many places so plenty as to lead to that barbarous custom of which I have before spoken of shutting them up by hundreds in Parks to Starve. Because they eat the grass from the tame Bands.

I coul [d] not say much of the enterprize of these people. I have heard them speak of the chalk mountain of the east which is no other than Mt. St. Joseph they having never been sufficiently near to [] determine that what they thought to be [] Chalk was in reality nothing more nor less than Snow.

They have frequently spoken of a party of discovery that went out three or four years since under the direction of Don Lewis. They say they went a long distance up the principal Branch of the Buenaventura or Piscadore and that there was a man in company well acquainted with the Columbia who told them that this river was a Branch or rather Bayou of the Columbia & that [left it something like 600 Miles from the Bay of St. Francisco] they were in a short distance of that River.

This proves to me their enterprize for I well know that it is not over 250 m from San Francisco to the place where the river leaves the Mount St. Joseph. Among other things they described a singular hill in the plain which was near the place where they turned back. By the help of this I was enabled to fix the limits of this Memorable voyage of Discovery that left it doubtful whether the summits of Mt. St. Joseph were chalk or snow.

28th & 29th I had my men engaged in breaking mules for the loads. I wrote to the Genl and to Don Lewis informing them of what I intended to do and in the mean time settled off with the father under pretence of moving to better grass.

30th Rainy but I started and made 8 Miles N E and at night had my horses guarded by men on horseback. On the 31st it was Rainy and consequently Muddy but I moved 10 Miles North East. January 1st 1828 20 Miles East and encamped on Buenaventura River which sometimes is called by the Spaniards the Piscadore. One of my best mules which was tied broke loose and ran away and was lost.

2nd 4 Miles S E and encamped again on the bank of the river which I suppose to be the Peticutsy. I made rafts for crossing of poles and flags.

3d I made a pen on the bank of the river and driving my horses in by small bands into the pen and from the pen into the river I crossed them over without the loss of any, contrary to my expectations.

4th Some of my men were out hunting for Beaver sign and as the water was high the weather rainy and the banks of the river Low I thought it advisable to build some Skin Canoes which would assist us in trapping and in crossing streams in our course.

Having been so long absent from the business of trapping and so much perplexed and harrassed by the folly of men in power I returned again to the woods, the river, the prairie, the Camp & the Game with a feeling somewhat like that of a prisoner escaped from his dungeon and his chains.

7th Some of my men are engaged in hunting Elk for the sake of the skins to make canoes and a few were trapping but I could not do much at trapping for I had but 47 traps. 9 men were attending the traps and the rest of the party not hunting were taking care of the horses and camp keeping. In the course of the day I moved 8 miles down the river and encamped on a creek not far from the river. Nearly all the Lowlands along the river were inundated. At the camp from which I moved I left 4 men to finish two canoes which were nearly done and start down the river trapping. They were to join me again in a week.

10th It had been raining almost every day since I came to the river, and finding that very little could be done by horses when the rivers were so high I concluded to make another Skin Boat.

11th & 12th Good Weather. I had at that time taken 45 Beaver. I had the skins dried and started 2 men with another canoe. Some of the Appalamminy indians visited me; they were as usual friendly. My horses had eaten the grass so much at make it necessary for me to move my camp.

13th N Westerly 4 Miles and encamp on a creek which was dry when I was in the country the last summer but now had plenty of water. In the vicinity and at this season of the year it was impossible to go [to] the river with a horse for several miles above and below my camp in consequence of the low flaggy ground which was covered with water. Some of the Ponds have Beaver along their flaggy banks and three of my men who trap by land succeed [ed ] in taking some of them. My number of Beaver had increased to 61. The weather good.

14th I sent Mr. Rodgers with 2 men to hunt for Elk with instructions to remain out one or two nights as circumstances might require. My 4 Men who went with the first 2 Canoes came in at night bringing with them 33 Beaver. My Men in camp were engaged, some in stretching Beaver skins, one in saddle making and some in breaking Mules. Weather still pleasant.

16th Mr. Rodgers and the 2 men returned having killed 4 Elk. With them came 2 indians. One of them was the principal chief of the Machyma Band of indians that reside on the head of the Mackalumbry River. I was at his village the last spring. I made them some presents and told them I was going to Bodega and they agreed to go with me.

17th Reed & Pompare the 2 Trappers that went in a Canoe by themselves returned having caught 22 Beaver. The two chiefs left camp and said they would join me on Rock River in five days. 2 of the 4 Canoe trappers came in they had put ashore 6 Miles below the river at that place had overflowed its banks so that there was no chance for trapping. As there was now opportunity for trapping by water I directed the men to take horses, go on by land and join me at Rock River.

18th I started for Rock River. Reed & Pompare started in the canoe to join me in 8 days [] on Rock River. In 4 miles I came to the Mackalumbry River and in attempting to cross it I got my horses nearly all mired and was obliged to relinquish the idea of crossing at that place. After some

difficulty I got my horses out of the mire and encamped.

19th N E 10 Miles I moved on up the Machallumbry endeavoring to find a suitable [place] to cross. The traveling was verry miry and I continued on ten miles before I found a place that would answer the purpose. I then encamped. In the morning I saw a Grizzly Bear and shot at him but did not kill him

20th I [ t] took me all day to get my goods and property over the river. I fell trees across the water and carried the goods over. We then undertook to cross the horses by swimming them, but could not get them into the water until I had made a pen on the Bank for that purpose. Before they were all over the place where they came out on the opposite bank became so miry that I had to Bridge it. One of the men shot several times at a Bear but did not kill it.

21st 10 Miles North to Rock River Although the ground was rolling the horses sank at every step nearly to the nees. In the morning the 4 Canoe trappers joined me. They had follow ed up the Buenaventura to the mouth of Rock River and up it several miles but not finding me they struck across to the Mackalumbry and fell in with me just as I was starting. They had seen a great many indians but found them friendly. In the evening a good many indians were seen near our camp, but they all ran off.

22d I sent some men out early to hunt for deer as there was sign in the vicinity and we were destitute of provision. Several indians came to camp and I gave them some tobacco. They brought with them some fine salmon some of which would weigh 15 or 20 lbs. I bought three of them and one of the men killed a deer. In the mean time some of the men were up and some down the river searching for Beaver sign. They found but little and set but few traps. One of the Chiefs that had promised to meet me at this place and accompany me to Bodega came and told me that the other was sick which would prevent their going with me. It rained most of the day and all night.

23 It had been my intention to ford the river and go down on the other side. But the late rains had raised the river so much as to render this impracticable. I therefore remained in camp and although the rain continued the river commenced falling. Many indians visited the camp among the rest some of them who were so hostile to me the last spring. They were quite friendly and I gave them some Tobacco and Sugar. An indian which came the day before pretended he would go with me 2 or 3 days and as he was quite naked I lent him a Blanket. At night he ran off taking with him the borrowed Blanket. There was in camp several indians of the same band and among the rest one who called himself a Chief. I told him of the theft of the Blanket by signs which he understood. He remained at camp and after sending out twice brought in the Blanket. These indians are nearly naked and have less modesty than any I have ever been with.

24th I went down the River 2 Miles, found a ford and crossed over and went 7 Miles further down course nearly W N W. found some Beaver sign set traps and encamped.

25th As I had some Beaver skins which need drying I did not move camp. But took 4 men with me and went down the river as this was the day I was to meet Reed & Pompare. I went about 12 miles and supposed I was near the Main River. But could get no further on account of the miry Bottoms. I therefore left two notes for them. One on the bank of the River and one on the trail and returned in doing which I saw several indians who ran off.

26th I crossed over the river at an indian village of 50 lodges they made a flag canoe to assist me in crossing. I then got an indian who could speak a few words of Spanish and taking him and Laplant with me I went down Rock River 3 Miles further than I had gone the day before and in

view of the flags of the Buenaventura. But Rock River turning N W I supposed from the instructions I had given Reed & Pompare that they had passed above its mouth and were then on the main river. As the indian said I could not go up that way on account of the Mire I concluded to return again to the village and send some indians after the 2 men. So I returned and remained all night at the village where I was treated with great Kindness. In the morning I hired six Indians to go [in] search of the lost men & sent them off. I invited the Chief to visit me & returned to Camp. 27th I returned to my camp and soon after the chief with 20 or 30 indians came to see me and I gave them some small presents. These indians called themselves Machalunbrys. I saw among them a good many Spanish Blankets & Shirts. They did not manifest a disposition to steal which as I have before remarked is no small merit for an indian. The[y] have a kind of preparation resembling the Persimmon bread made by the indians on the Lower Mississippi but their principal living seems to be Acorn Mush. Their Lodges are stationary and made of grass and Mats. When the indians came to my camp they Brought a large Basket filled with Mush and asked me for some meat which they ate with their Mush.

28th The Indians I had sent for my 2 men returned without finding them. They said they had seen their tracks where they had been traveling towards Rock River. My horses caused me a considerable trouble and one of my horse guard in looking for horses not far from camp lost himself, Mired his horse and left him. I was absent and Mr. Rodgers sent some men to look for the horse but the[y] returned without finding him.

29th N W 9 Miles down Rock River. Some horses were missing but I did not wait for them. As soon as it was light I took 4 Men and started on the trail made by the Man who lost [his] horse when he went out. Traveling every point of the compass through Mud and for 7 or 8 Miles I found the horse not more than 3 Miles from camp. By ten O Clock I was back again to camp. 4 Men sent for lost horses returned they had found them but could not get them to camp.

30th I sent three men back after the lost horses. It rain [ed] considerably, but I had my packs put upon the horses & moved down the river & encamped where 4 of my men sent down to trap had encamped last night. In the evening the men sent for the horses returned with part of them, some were still left.

31st I sent two men over to the river to look for Reed and Pompare and I with one man went again down on the North side of Rock River for the same purpose. 2 men were sent for horses. At night all came in. The men from the Buenaventura saw no sign of the lost men. I went with difficulty as far as the Mouth of a stream coming in from the North which I supposed to be indian River. The country miry and the River high. No sign of the lost men. The [men] who went up the River found no horse.

Feb 1st 1828 I took 3 Men and went in search of the horse but did not find him. Two Men were sent down on the oposite side of the river in search of Reed and Pompare with instructions to go if possible to the mouth of Rock River. Four indians visited the camp and one who had been with us several days ran away taking with him a Blanket. My trappers took a few Beaver each day.

2d 3d & 4th remained at the same camp. The indians brought me word that they had seen my two men some distance above on the Buenaventura. I immediately started two men off in Company with some indians to see if they could be found.

5th I crossed over the River carrying my goods in two skin canoes I had lately made and swimming the horses and then went down the River 4 Miles and encamped.

6th I had another Skin Canoe made. In the course of the [day] 50 or 60 indians visited the Camp. They were from Elk Creek and Indian River and seemed to want nothing but meat which our luck in hunting enabled us to give them as Mr. Rodgers had killed 4 Elk and myself 5. The two men sent to look for Reed & Pompare returned. The indians had taken them in towards the Buenaventura but as it was constant wading they were obliged to return. I sent 6 Men in 3 Skin Canoes down Rock River for the purpose of trapping.

7th A good many indians stayed in camp the last night. The trappers sent down the river returned in consequence of hearing a good deal of shooting and observing some movements of the indians which the[y] did not like. I went down with them again and encamped with them.

8th I went down the River a few miles from the camp of the trappers to see if I could cross the River when ready to move on North, I found a suitable place and returned.

9th I went hunting for Elk but did not kill any. When I returned I found about 60 indians at camp. Ten indians who I had sent two days before in search of Reed and Pompare returned without hearing any thing from them. I then gave up all hopes of seeing them again. On examination I found they had taken nearly all their things with them, from which circumstance I Judged their absence was voluntary and that when they went away they had no intention to return.

10th I moved down the river to the place where I intended to cross. My men thought I could go no further but the indians said I could go on. There were at my camp several of the neighboring indians and I made them some small presents.

11th I went with one man across the river to examine the country on the opposite side. Considering it passible I sent a note back to Mr. Rodgers [] directing him to cross over and I continued out into the prairie pursuing Elk but did not kill any.

12th I moved N W 10 Miles across a flat muddy country sometimes in mud and water 2 or 3 feet deep and encamped on the East bank of the Buenaventura River. At that place the River was about 300 yards wide, a gentle current and apparently deep, the water somewhat muddy. The Banks generally low are timbered with Ash Cottonwood Elk Sycamore Willow and where the ground is sufficiently dry some Oak. The Timber on each side of the river is narrow and the boundary between the upland and river bottom is not marked by steep Bluffs, the inclination of the face of the country being on both sides gently sloping towards the river. In the bottoms are Lakes and flags which frequently extend 2 miles from the river. The soil of the country is generally good being frequently a rich chocolate colored loam.

The winter in this valley is the best season for grass and at the time of which I am now speaking the whole face of the country is a most beautiful green, resembling a flourishing wheat field. I have frequently had occasion to speak of the miry muddy traveling which so much obstructed my progress. This is much owing to the superabundance of rain during the winter which in addition to the vast volumes of water poured out of Mt. Joseph fills the streams to overflowing and completely saturates the light rich soil of the valley. I had by means of the residence of my party in the valley during the summer and by my own observation an opportunity to determine that the country was generally sufficiently dry for cultivation except during the rainy season. On [arriving at] the river I found verry little Beaver but plenty of Otter sign. On my first arrival at the river I was under the impression that it was Wild River But soon after I was undeceived.

13th N 12 Miles Some of the [Indians] which came with me as guides from Rock River continued on with me. The Country like the last described. Encamped just below a creek on which was con-

siderable beaver sign and the traps were set.

In the course of the day I passed an Indian village of 20 or 30 lodges made of flag mats and straw. The men were there themselves but had taken the precaution to send off their wives, children and goods. Our arrival caused a good deal of uneasiness but when my guide, the old chief, came up and spoke to them all was well again.

14th Only 6 Beaver were taken the last night. Some Raccoon and 2 Deer were killed but the deer were poor which is always the case in this valley although the grass is good.

15th Was rainy. I had my things all carried over the slou on a log and my horses swam over. The old chief, my guide, left me making signs that he would return. 2 Beaver taken.

16th A circuitous route of 10 Miles following a bend of the river to the west and then North, making a direct line of six Miles. Country dry along the river and flag Ponds back a short distance. Opposite camp the river was much smaller and as I could see about 2 miles below camp an arm of timber extending off North West I concluded that the main river ran in that direction. South East from camp the timber extended farther from the river and the land became dryer. In the course of the day I passed several indian villages built of flag Mats and straw. But the inhabitants had taken the alarm and fled. Much more Beaver sign than Below. The day was tolerably pleasant.

17th Remained at camp. After 9 O Clock it was Rainy. 14 Beaver taken.

18th Remain[ed] at same Camp. The rain that commenced the day before continued without intermission for 24 hours. This may be well termed the rainy season for we scarcely had more than one pleasant day at a time, 12 Beaver taken.

19th The rise of water interfered so much with trapping that but 6 Beaver were taken. One of my men, E. Lazarus, had a trap stolen by the indians and a number of them had him surrounded but he was relieved by some trappers coming from above who drove the indians off and would have punished them had it not been for some miry ground over which they retreated.

20th I went with the Trappers within a mile of the place where I struck the river on the last Apl. Above that there was no Beaver sign but considerable from the camp up to that place.

I saw some indians on the opposite side of the river but they ran off. The river was quite rapid and the rushing of the water brought fresh to my remembrance the cascades of Mt. Joseph and the unpleasant times I had passed there when surrounded by the snow which continued falling. My horses freezing, my men discouraged and our utmost exertion necessary to keep from freezing to death. I then thought of the vanity of riches and of all those objects that lead men in the perilous paths of adventure. It seems that in times like those men return to reason and make the true estimate of things. they throw by the gaudy baubles of ambition and embrace the solid comforts of domestic life. But a few days of rest makes the sailor forget the storm and embark again on the perilous Ocean and I suppose that like him I would soon become weary of rest.

21st Nothing material occurred the weather rainy. 9 Beaver were taken.

22nd I moved across the River. My goods were ferried over in a skin canoe, and the horses swam. The Skins of my 3 Canoes had been carried along for several days and were ready for us at any time by making a frame. After crossing the River I moved 3/4 of a mile and encamped on a slou of the River my camp being on an island. It was so late when I encamped that but few traps were set. The afternoon was rainy. One trap was lost, another broken and 11 taken by Reed & Pompare, leaving me but 32.

23d I took all the trappers and went down to the forks and up the Main River but soon found slous so deep as to be swimming. I then turned back and endeavored to head them but found it so Muddy that the horses could not travel. Found some indian Lodges deserted but on searching found two squaws, one too old to run away and the other blind. They were trembling with fear and made signs for us to go away. I gave them an awl and some pieces of flannel that I had in my Shot Bag at the same time I gave them some fish that the men found in one of the Lodges. This seemed to satisfy them and they altered their tone so much as to invite me to sit down.

All appearances for progress were unfavorable for as far as I could see up the Main River The flag Ponds & Lakes extended. I hardly knew what course to pursue, for it was impossible to travel North and useless to travel up Wild River on which I was encamped for there was no Beaver in that direction. At 1 O Clock the weather became clear with a north wind. I crossed over the slou by the means of my skin Canoes and a raft made of logs. My raft was formed of some logs that appeared to have been hewn many years since and used for the same purpose to which I applied them. In none of the indian lodges of the vicinity could I see any thing like axes.

24th I concluded I would move up Wild River. But did not go far as I was obliged to raft two slous in 40 yards.

25th E 3 miles up Wild River. Mr. Rodgers and myself went hunting and killed an antelope. We could go no distance from the River on account of the Mud which made the country quite impassable for horses. This was the more surprising as the country was timbered and the soil gravelly. In the evening some of the men found setting for their traps.

26th I went hunting and killed a goose and an Antelope. Two of my trappers, [Toussaint] Marshall and [John] Turner were up 3 or 4 miles from camp and seeing some Indians around their traps who would not come to them but attempted to run off they fired at them and Turner killed one and Mareshall wounded another. I was extremely sorry for the occurrence and reprimanded them severely for their impolitic conduct. To prevent the recurrence of such an act the only remedy in my power was to forbid them the privilege of setting traps, for I could not always have the trappers under my eye.

27th fine weather but still so muddy that I was afraid to try the country North. I went down the river a few miles in doing which I fell in with an indian who could not handily get away and coaxed him to camp. I made him a few presents and sent him off.

28th remained at the same camp.

29th As the only chance was to go down the river I moved down to my old camp and endeavored to go further but found it useless.

March 1st 1828 I went in company with the trappers down to the confluence of Wild River and the Buenaventura which was about 2 Miles from camp. The Buenaventura still continued about 300 yards wide and came from the North maintaining the appearance of which I have before spoken. The Mountain on each side about 30 Miles distant. In going down Wild River we came suddenly on an indian lodge. Its inhabitants immediately fl[e]d. Some plunged into the river and some took a raft while some squaws ran down the bank of the stream.

We galloped after them and overtook one who appered very much frightened and pacified her in the usual manner by making her some presents. I then went on to the place where I had seen one fall down. She was still laying there and apparently lifeless. She was 10 or 11 years old. I got down from my horse and found that she was in fact dead. Could it be possible, thought I, that we who

called ourselves Christians were such frightful objects as to scare poor savages to death. But I had little time for meditation for it was necessary that I should provide for the wants of my party and endeavor to extricate myself from the embarrassing situation in which I was placed. I therefore to convince the friends of the poor girl of my regret for what had been done covered her Body with a Blanket and left some trifles near by and in commemoration of the singular wildness of those indians and the novel occurrence that made it appear so forcibly I named the River on which it happened Wild River. To this River I had before that time applied a different name.

I found so many Ponds Lakes and Slous along the Buenaventura immediately above the mouth of Wild River that I thought the country impassible. On our return towards Camp in crossing a Slou which was swimming deep 2 horses were drowned. On one was six traps and on the other four. The stream was not more than 20 yards in width but a strong current and filled with trees. We went home with the intention of fixing one of the Skin Canoes and coming down the next day to search for them.

March 2nd I sent some of the men to look for the drowned horses and went myself to see if it was possible to kill a Deer. I killed one and wounded two others and on coming in the men let me know that they could [] find but one of the drowned horse which luckily was that on which was the six traps. I then went in search myself but was unsuccessful. The loss of traps in that country and in those times was much regreted as I had but verry few and there was no chance to procure more. During our stay at this encampment the trappers brought in 3 or 4 Beaver each day. But one meal of meat ahead.

March 3d N 12 Miles finding that the water had somewhat dried out of the ground I determined to make one more attempt to proceed. I found the mud verry deep but not as bad as I had expected. There was an indian trail leading through the most difficult part of the way which served as a guide. We passed 30 or 40 indian lodges but the indians as usual all ran off. I encamped at the head of a flag Lake and at some lodges which the owners left for our accomodation. After encg I saw a band of elk and taking with me 3 Men we killed two Barren does which were in good order for the season. The weather fine and warm. Muskitoes troublesome.

March 4th N 11 Miles and encamp on a creek 20 yards wide running SW. As it was verry Brushy I called it Brush Creek. found some Beaver sign and had traps set. Saw a good many Elk and passed on the bank of the Main river which continues to run North and South several indian lodges thatched with grass.

March 5th Mr. Rodgers went hunting and I went with the trappers. We crossed over the creek on a tree which had been felled for that purpose and went to the River but found that the main river had turned to the left some miles below. On this fork bearing NNE found some Beaver sign and had my traps all set. Mr. Rodgers saw a good many Elk but as the country was not favorable for approaching them he did not kill any.

March 6th I sent my trappers over to their traps and I moved on up the creek to find a place to cross. I threw a tree across but it would not answer the purpose and finding the banks high and some Slous I abandoned the idea of crossing at that place and returning to camp I had a skin canoe made with the intention of going down the creek to cross. My men who were off trapping came and encamped opposite.

7th March I moved down a mile and crossed by the help of the Skin Canoe the horses swimming. All got over safe but it was too late to move. I went down to where the trappers were and carried

them some Blankets. They had killed a large Brown Bear which was in good order and were of course feasting. Yes, I repeat it, feasting, for the hunter of the Buenaventura Valley at the distance of 2000 miles from his home may enjoy and be thankful for such Blessings as heaven may throw in his way.

8th N N E 7 Miles I was under the necessity of travelling verry crooked to avoid the mud encamped on the smaller River to which I had not at that time applied a name. Opposite to my camp was an indian village and not far below one or two more. Their Lodges were built like those of the Pawnees. After we had encamped several of them came and sat on the bank opposite talking but in a language which I did not understand. On this river I found a plenty of Beaver sign. 13 were caught the first setting. Mr. Rodgers killed a Brown Bear and wounded another.

March 9th Early in the Morning Mr. Rodgers went after the wounded Bear in company with John Hanna. In a short time Hanna came running in and said that they had found the Bear in a verry bad thicket. That he suddenly rose from his bed and rushed on them. Mr. Rodgers fired a moment before the Bear caught him. After biting him in several places he went off, but Hanna shot him again, when he returned, caught Mr. Rodgers and gave him several additional wounds. I went out with a horse to bring him in and found him verry badly wounded being severely cut in [ ] 10 or 12 different places. I washed his wounds and dressed them with plasters of soap and sugar.

The indians came as they had done the day before and sat on the bank of the River. I prevailed on several of them to come over and made them presents of Beads, pieces of Flannel and some Meat. They were entirely naked. The game of the Country was Bear Elk Black tailed Deer Antelope Large and small Wolves Beaver Otter and Raccoon. The Birds were Swan Geese Crane Heron Loons Brant Many kinds of Ducks Indian Hens. Some small birds but they were not plenty. The birds of Prey were Buzzards Crows Ravens Magpies &c. The trappers took 9 Beaver.

10th March Mr. Rodgers wounds were verry painful. I dressed them frequently with cold water and salve of Sugar and Soap. The indians came across the river again bringing me presents of several Bunches of feathers worn on the head. 11 Beaver were taken.

11th March. The indians came to the opposite bank of the River as they had before done. I invited them over and made them some presents. As I was intending to remain at that place for some time I concluded to go to their village. With this intention I took some small presents and was ferried over the river by the indians on their log rafts.

Arrived at the village I was seated on a mat in a vacancy apparently left for Public use and commenced business by giving my presents. The principal characters took them for distribution in doing which they were verry exact giving to some one and to others two or three Beads as their respective merits might claim. In making their division they did not speak loud but whispered among themselves.

After this business was finished they I suppose felt under obligation to make some presents in return and commenced bringing me fishing nets and dishes but I returned them expressing by signs my satisfaction and my desire to return. When I came away they endeavored to cry as a demonstration of their sorrow for my departure. The village consisted of about 50 Lodges. I saw nothing among them which had any appearance of having come from a civilized country. They were generally naked but a few of them had feather robes and dresses made of net work. The dress of the women consisted of a belt around the waist to which was attached two bunches of bark or flags one hanging down before and the other behind in the form of a fringe.

---

These indians smoke in wooden pipes and in common with the most of the indians of this valley they wear their hair not more than 5 or 6 inches in length. The entrance to their houses is by a low passage covered with dirt through which they are obliged to creep on their hands and knees. 20 Beaver were taken and as I had but 28 traps I considered it great trapping.

12th March The men were trapping several miles above camp towards the mountain. they told me that the river forked about a mile above camp and that the fork on which they were trapping was clear and had some rapids. In the course of the day some indians came to camp for meat as usual. 8 Beaver taken.

13th March Remained at the same camp. In the vicinity were a good many Black tailed Deer and I improved every opportunity to dry the best of the meat. I sent men up the river to the Mountain but they found verry little Beaver sign higher up than where the trappers had been setting. 13 Beaver taken.

14th March I made my calculations for crossing the fork which came from the East on the Morrow. To this river I gave the Indian name Hen-neet. The weather still continued fine and Mr. Rodgers wounds in such a situation as to make it impossible that I should move any great distance in the day.

15th March I went with the trappers across the Hen-neet and directed them to encamp near where the[y] would [] set their traps. I recrossed to camp. A considerable number of indians crossed the River a short distance below. 14 Beaver taken.

16th March Moved N E about 1 mile up the river and crossed over above the forks without any difficulty by the help of my skin canoe in which my goods were carried over, the horses swimming. The indians near my camp still continue friendly and were singing when I left them. 12 Beaver taken.

17th March I went with the trappers 8 or 10 Miles up the River which came from the North and united with the Hen-neet near my camp. To this River I gave the name Ya-loo which was the name I applied to the indians of the village last visited. We found but little Beaver sign as far as we went up the river. I passed two indian villages of 20 or 25 dirt lodges each the inhabitants were much alarmed at our approach but after some time I prevailed on them to come to me and take some presents.

During my absence there was a considerable alarm in camp by the appearance of several hundred indians on the opposite bank of the River but the alarm subsided when they passed on up the river and in a short time returned loaded with Acorns from some caches they had in that direction. 9 Beaver taken.

18th March I sent the trappers to remove their traps from the Yaloo to a branch of the Hen-neet on which they had found some Beaver sign. 9 Beaver taken.

19th March As there was no chance for trapping on the Yaloo and some little on the Henneet I moved N E 5 miles towards the foot of the Mountain. I was induced to do this more especially as Mr. Rodgers was not in a situation to make a great days travel which would be necessary in traveling up the Yaloo for it was in all probability some distance to Beaver in that direction. After encamping I went [] North 5 or 6 miles to a Creek 20 yards wide running west called from the Color of its bank Red Bank Creek. It was fordable but I found verry little beaver sign in it. The country generally as the dry season advanced became dry and firm and apparently fit for cultivation, presenting a verry different appearance from that of a month back when it was almost impossible to

---

travel in any direction.

In the course of the days travel I saw some Antelope and the sign of Elk and fell in with 2 indians and a squaw on the plain. I found they were attending [ ] some nets set for the purpose of catching Brant. From where they stood cords extended 2 or 300 yards to the nets and there we observed several Brant.

While I was making the indians presents of some Beads the men said they would creep up and kill some. They made several shots without success when I told them I thought they were deceived. They said not for they had seen them move and one said his gun must be crooked but that he would try them again. He did so and I was convinced that I was right in the supposition that they were decoys and on examination found them so complete that the deception could not be detected except in verry near approach. The nets were about 20 feet long and 6 feet wide and arranged much like the common pigeon net. There was three of them all to be sprung at once by the same line. 9 Beaver taken.

10th March On account of the wounds of Mr. Rodgers I was obliged to remain in the same camp. The weather still continued fine, 9 Beaver taken. Some indians came near camp I went to them and gave them some presents of Beads and some Meat with which they appeared much pleased.

21st March N W 7 Miles crossing the several channels of Red Bank Creek and encamp within 3 Miles of the Yaloo. After encamping I went with the trappers down to the river where they set their traps. The indians were numerous and in one place I came upon them before they had an opportunity to run off and gave them some Beads according to my common custom. The squaws had their baskets filled with young Pea vine and from what I could observe I think their principal supports consi[s]ts of Acorns, Grass, Pea vines, Roots and what few fish and water fowl they are able to take.

If Missionaries could be useful in Civilizing and Christianizing any indians in the World their efforts should be turned towards this valley. The indians are numerous honest and peaceable in their dispositions. They live in a country where the soil is good and the climate pleasant with the exception of 2 or 3 months in the winter when there is too much rain. There is seldom any frost and I have seen snow but once in the valley of the Buenaventura.

A great many of these indians appear to be the lowest intermediate link between man and the Brute creation. In the construction of houses they are either from indolence or from a deficiency of genius inferior to the Beaver and many of them live without any thing in the shape of a house and rise from their bed of earth in the morning like the animals around them and rove about in search of food. If they find it it is well if not they go hungry. But hunger does not teach them providence. Each day is left to take care of itself. ... degraded ignorant as these indians must be and miserable as the life appears which they lead it is made more apparent by a contrast with the country in which they are placed a country one would think rather calculated to expand than restrain the energies of man a country where the creator has scattered a more than ordinary Share of his bounties. [ ]

22nd March Lay by on account of the wounds of Mr. Rodgers. Some rain during the night. Nothing material occured. 12 Beaver taken.

23d N W 6 Miles and encamp on the Yaloo River. At 12 O Clock it commenced raining and continued until 3 when it cleared off with a west wind. The trappers who came directly up the River passed 3 indian villages. They found the river somewhat rapid and but little appearance of Beaver.

24th March The party remained in camp. I went with several of the men a North East course to the foot of the Mountain. Betwe[e] camp and the Mountain on the North side of the river were two indian villages and some Beaver. Some Indians visited camp in my absence and Mr. Rodgers gave them some Beads and some Meat. 17 Beaver taken.

25th March W N W 3 Miles to the place I had selected for crossing the river. 17 Beaver taken.

26th March The Ya loo at that place was about 100 yards wide and strong current but as I found good bars on both sides of the river I had no difficulty in swimming my horses and my goods were carried over in a Skin Canoe made for the purpose. The indians were close to camp on both sides of the river but I did not allow them to camp this being with me a general rule.

I went to them and gave them some presents and one of them was so bold as to venture into camp but soon left it at my request. But few traps were set. 10 Beaver taken.

27th March I had my horses caught early but one of them ran off and swam the river. I got an Indn raft which was a mile above and went over after him and drove him back. At 12 O Clock we moved off W N W 12 Miles over a level Prairae crossing some small muddy Creeks and encamp on a Creek 30 yds wide running SW Deep and Muddy with some timber on its banks but very little Beaver sign. I had a tree thrown across at a narrow place to form a foot Bridge that I might be in readiness to cross early in the morning as I was desirous of proceeding to the Buenaventura River which appeared about six Miles distant.

28th March 7 Miles W N W and encamp on the Buenaventura. In the course of the day I crossed two muddy Slous of the River. The Buenaventura at that place was about 200 yards wide Deep and forcible current. Its general course South and its banks fringed with timber principally Cotton wood and Sycamore and when the banks were somewhat higher Oak. Far off to the north verry high Peaks of the Mountain were seen covered with snow. The valley at that place was apparently about 50 Miles in width. The Mountain to the west on towards the coast not high but rugged and some snow. On the East the Mountain was high timbered and its upper region covered with snow. In the course of the day I saw some Elk and the trappers killed two they were in good order. There was not much Beaver sign about the river its banks were too sandy, But a short distance back were Lakes and ponds in which were found some Beaver.

29th March N 6 Miles and encamp on the river. I was obliged to cross many Slous of the River that were verry miry and passed great numbers of indians who were engaged in digging Roots. I succeeded in giving to them some presents. they were small in size and apparently verry poor and miserable. The most of them had little Rabit Skin Robes. 11 Beaver taken.

30th March The Party remained in camp and I went up the river with one man to examine the country. About 1 Mile above camp a creek came in 20 yards called Pen-min wide deep and Muddy. Along its banks were many dirt Lodges having the entrance at the top. As we passed along the little children reminded me of young wolves or Prairae dogs. They would sit and gaze at us until we approached near to them when they would drop down into their holes. Some of the indians appeared much frightened as we came in sight while others scarcely quit their Work (digging roots) to look at us.

At that place I saw a few indians who wore their hair long [] The women dressed like the last described except perhaps that the scanty apron was there sometimes made of Deer Skin instead of bark or flags. I came to one place where there was several lodges together the women cried and the men harranged me on my approach but I soon pacified them. On my return to camp I

got my horse mired and we were obliged to draw him through the mud for two hundred yards 3 of the indians assisting us. On my arrival at camp I found the indians had been there all day or as near as I allow them to come. The indians of this vicinity were all pleased to get the least morsel of meat.

31st March North 8 Miles. To make this distance my route was quite circuitous being obliged to travel much out of my way in order to find a suitable place to cross Pen-min Creek and the mud beyond. We passed many indians and some of them went with us to the place of encamping. Just before encamping I discovered 2 Bear and 3 of us approached them and killed both. They were neither large nor fat. 4 of the trappers did not come in to camp. 14 Beaver taken.

April 1st The trappers all came in one trap lost by Beaver.

In the evening several of us went out hunting for there was considerable sign of Bear Deer Elk and Antelope in the neighborhood. Mr. [ Martin ] McCoy and J [ oseph ] Palmer killed a large Grizzly Bear in tolerable order and on opening him found nearly in the center of the lights a stone Arrow head together with about 3 inches of the Shaft attached to it. The men brought that part of the lights containing the arrow into camp. The wound appeared perfectly healed and closed around the arrow. 3 indians who came with us to camp were busily employed on the share of Meat allotted to them and on the entrails of the Bear. They filled themselves so completely that they were puffed up like Bladders. One of those indians had a spear with a stone head like that of an Arrow but 5 or 6 times as large. The handle was about 6 feet Long.

2nd April At the same camp. Several indians visited me to whom I gave some small presents and some meat for these indians were well pleased whenever they could [get] the least morsel of meat. Two of the indians who came with us to camp still remained. 17 Beaver taken. For 4 Days past the Cranes and Brant had been on their passage North in great numbers. The Geese had principally gone before.

3d April Remained at the same camp. The weather warm and at night the Musquitoes troublesome. My two indians still with me. 13 Beaver taken.

4th April The trappers had been 4 or 5 miles up the river. Beaver plenty but the numerous Slous interfere much with trapping. The indians were verry numerous and friendly. 18 Beaver taken.

5th April W N W 7 Miles Turned out from the river and 5 miles from camp crossed a Creek 20 yards wide running West. Rapid but fordable. I called it Black Sand Creek. My encampment was on the River bank. Many indians came as near the camp as I would permit and sat down. I gave them some presents. They were naked but had not the miserable appearance of those below. They were under the impression that the horses could understand them and when they were passing they talked to them and made signs as to the men.

6th Remained at the same camp. At 8 O Clock about 100 indians visited us they were generally naked but a few of them had rabbit Skin Robes. They were about 5 feet 10 inches in heighth rather light complexion round featured, wide mouths, and short hair. They brought with them no weapons but had genly in their hands a bush of green leaves. I met them according to my usual custom about 80 yards from camp and invited them to sit down. One who seemed tolerably intelligent showed me the principal men. I gave them some cotton shirting Beads Awls, and Tobacco. They were apparently fond of smoking. Their pipes were long strait and made of wood. Those indians were frequently where my men were setting their traps But did no further damage than springing a few of them. A river about 70 yards in width entered the Buenaventura on the west side 12 Miles

---

below Camp. Its water had a verry Clay appearance. I called it Pom-che-le-ne. Beaver taken. 7th April W N W 8 Miles. At 2 Miles from camp crossed a creek 30 yards wide rapid and stoney Bottom running SW and having some Beaver sign. 3 Miles farther struck a creek same size and running S. W but so deep that I was obliged to follow it up 3 Miles to find a ford at which place I encamped. In the vicinity was considerable appearance of game and particularly bear. In the evening we shot several Bear and they ran into thickets that were convenient. Several of us followed one that was Badly wounded into a thicket. We went on foot because the thicket was too close to admit a Man on horse back.

As we advanced I saw one and shot him in the head when he immediately [] fell-Apparently dead. I went in to bring him out without loading my gun and when I arrived within 4 yards of the place where the Bear lay the man that was following me close behind spoke and said "He is alive". I told him in answer that he was certainly dead and was observing the one I had shot so intently that I did not see one that lay close by his side which was the one the man behind me had reference to. At that moment the Bear sprang towards us with open mouth and making no pleasant noise.

Fortunately the thicket was close on the bank of the creek and the second spring I plunged head foremost into the water. The Bear ran over the man next to me and made a furious rush on the third man Joseph Lapoint. But Lapoint had by good fortune a Bayonet fixed on his gun and as the Bear came in he gave him a severe wound in the neck which induced him to change his course and run into another thicket close at hand. We followed him there and found another in company with him. One of them we killed and the other went off Badly wounded.

I then went on horse Back with two men to look for another that was wounded. I rode up close to the thicket in which I supposed him to be and rode round it several times halloeing but without making any discovery. I rode up for a last look when the Bear sprang for the horse. He was so close that the horse could not be got underway before he caught him by the tail. The Horse being strong and much frightened exetered himself so powerfully that he gave the Bear no opportunity to close upon him and actually drew him 40 or 50 yards before he relinquished his hold.

The Bear did not continue the pursuit but went off and [I] was quite glad to get rid of his company on any terms and returned to camp to feast on the spoils and talk of the incidents of our eventful hunt. 16 Beaver taken.

8th April The party remained at the same camp. I [] went up the Creek which I called Grizly Bear Creek to the foot of the first small range of Mountain. The distance was but 1 1/2 Mile and the creek for that distance had a rapid current and stoney bottom. From the top of the mountain which appeared to be a spur of the main range breaking off from it a few miles south of my position I took a view of the country around. On the East Mt. Joseph appeared lower than it had before been having but little snow on such of its summits as were in view. The Main Mountain still ranged nearly North & South and a stream joined the Grizly Bear Creek on the north side. One Bear killed and ten Beaver taken.

9th April At the same camp. Rainy with a south wind. 10th April N W 6 miles. I moved on with the intention of traveling up the Buenaventura but soon found the rocky hills coming in so close to the river as to make it impossible to travel. I went on in advance of the party and ascending a high point took a view of the country and found the river coming from the N E and running apparently for 20 or 30 Miles through ragged rocky hills. The mountain beyond appeared too high

to cross at that season of the year or perhaps at any other.

Believing it impossible to travel up the river I turned Back into the valley and encamped on the river with the intention of crossing. For this purpose I set some men at work to make a skin canoe. My Camp seemed in a curve of the Mountain. Mt. Joseph gradually bending to the west appeared in conjunction with the low range on the west side of the river which in its course north joined it to encircle the sources of the Buenaventura. The distance from camp to the main range of Mt. Joseph on the East was about 20 Miles on the N E 30 on the N 25 and the low range on the West about 20 miles. The country East N East and North was hilly rocky and timbered with small Oak and Pine. 10 Beaver taken.

11th April The Canoe being finished I crossed my things over in it and swam the horses. All got over safe with the exception of a colt which was drowned. The trappers found setting for a few traps. 12 Beaver taken.

12th April at the same camp. I went with the trappers down the river to look for Beaver sign but found so little that I did not think it worth setting for. On my way I came suddenly on about 20 indians. The moment they saw me they sprang to their feet and commenced dancing in which they appeared to exert their best energies throwing their bodies into every imaginable position. I was much surprised at this singular reception and knew not how to consider it. Perhaps it was meant as a charm or a Medicine according to the meaning of the term when applied to indians or it may have been a mark of respect or the accustomed manner of saluting strangers. Be that as it may I soon made them quit and gave them some presents after which they accompanied me as near the camp as I would allow them to go and received some meat which they as well as all the indians of the valley appeared to eat with great relish. 5 Beaver taken.

13th April N W 8 Verry hilly and rough traveling the timber generally scrubby Oak. Some indians came to us on the route we gave them a part of an Antelope which Mr. Rodgers had killed and they left us. My route was in the direction of a Gap of the Mountain through which I intended to pass. I encamped about 12 O Clock to dry my things which were wet by the last rain and stretch some Beaver skins which I had on hand. One of the indians which came to me had some wampum and Beads. They were procured as I supposed from some trapping party of the Hudsons Bay Company which came in that direction from their establishment on the Columbia.

14th April W N W 6 Miles and encamped on a creek 20 yards wide running N E. Some indians who had encamped near me traveled in company. The hill country and some unbroke mules which I had packed prevented my travelling far.

15th April W N W 12 Miles. At 1 1/2 Mile from camp crossed a Creek 15 yards wide running N E. The country verry rough and hilly but fortunately a ridge or divide ran nearly in the direction in which I wished to travel on the top of which I was enabled to move on without much difficulty until nearly night when I turned a little N E and went down into a deep ravine to encamp on the bank of a rapid stream 20 yards wide running S E. I drove the horses under a steep bank next the Creek that I might have a convenient place to catch them.

While catching them I observed an arrow in the neck of a horse and immediately called to the men to tie the horses they had in their hands and spring to their Guns. This was quickly done and several men mounting their horses rode quickly to a point where 10 or 12 indians were throwing their arrows into camp. They ran off and were fired at and two fell but afterwards crawled off. I got a shot at one soon after but he went off leaving much blood behind. The indians were shouting

about until night but did not come again within gun shot. In the affray they wounded 9 horses and [] mules Some Badly and some slightly and in all probability paid for the damage they had done me by the sacrifice of two or three of their lives. In taking out the arrows [] some of the points were left in. The Creek on which we had encamped had some appearance of Beaver.

16th April West 12 Miles. On account of the roughness of the country I was obliged to turn West. The traveling was exceedingly bad and through a country timbered with some Oak and an abundance of Bastard Cedar. One of the mules and one of the horses both wounded were left behind being unable to travel. I encamped at the foot of the Mountain which was on the West and North West.

The indians had been following us all day and yelling from the high points and after encamping they came quite close to camp. I took several men with me and went within gun shot endeavoring by signs to persuade the indians to come to me being desirous to convince them of my disposition to be friendly. But they had their bows strung and their arrows in their hands and by the violence of their gestures, their constant yelling and their refusal [] to come to me left no doubt on my mind of their inclination to be hostile. I therefore in order to intimidate them and prevent them from doing me further injury fired on them. One fell at once and another shortly after and the indians ran off leaving some of their property on the ground. Lest they should return and shoot some of my horses I had a pen made to put them in and had them guarded as I had done the night before.

17th April W N W 10 Miles and then N W 6 Miles. At 1/2 Miles from camp I crossed a creek 15 yards wide running East. From that place the ascent of the Mountain for 10 Miles was in some places quite steep and timbered with Oak & Pine. Then crossing the ridge of the Mountain where there was some snow and high peaks on the right and left I came to waters that ran to the North West and in a few Miles came to a creek 15 yards wide on which I encamped after travelling down it a short distance. I was apprehensive from the appearance of the country that the stream on which I encamped turned back again into the valley of the Buenaventura.

18th April N 3 Miles. Whilst preparing my horses for starting I sent two men down the creek to see what chance there would be for passing in that direction. It was eleven O Clock before they returned and reported the pass practicable but verry rough. When I moved on I found it necessary to wind among high and steep hills and making but 3 miles encamped on the creek below the mouth of a small creek coming in from the East where there was good grass.

19th April North 6 Miles and West 4 Miles following down the river. The mountain came in close to the river but leaving a tolerable pass along its banks. I encamped where there was a small valley and a creek coming in from the south. At camp the River ran North West. A short distance above camp I saw an Indian lodge and went to it and found an old man a woman and child. The woman and child ran off but the old man staid and I gave him some Beads and tobacco. Soon after encamping some indians showed themselves on the opposite bank of the river and appeared to be creeping up to get a shot at the horses. I went close to them with Arthur Black made friendly signs and invited them to come to me. But they answered by prancing about and making preparations to throw their arrows. I therefore told Black to fire. He did so but without killing any and the indians ran off letting fly their arrows as they went. I shot as they ran but did not kill. 12 or 15 indians soon collected on the other side of the river at the distance of 400 yards and made a fire. Soon after some of them came close enough to throw some arrows near the horses. Some of my

---

men fired at them but without success. About sunset 6 or 8 came and made another fire a short distance from camp. I had 4 horses caught and 3 men and myself gave them a chase. 2 of them were killed and the rest escaped. After this they troubled us no more.

20th April. N N W 8 Miles following down the river I had to cross some high points of the mountain and travel along the side of the hills through thickets of Brush and over steep and [] rough masses of rock. The traveling extremely bad was made much more difficult and dangerous by the great number of horses which I had along. In a bad pass the horses all endeavored to avoid being crowded off themselves and therefore rushed against whatever opposed them.

In a struggle of this kind two of my horses were pushed from a precipice into the river and drowned. 5 traps and some of the mens things were lost. I was obliged to encamp where there was but verry little for my horses to eat.

21st April W N W 12 Miles Traveling same as yesterday. I found some grass on the side of the Mountain about 1 mile from the river and encamped. There appeared to be a small valley on the river which turned in its course nearly North and [] received a branch from the South. Several Smokes were in sight during the day and several of my horses were verry lame from the roughness of the traveling.

22d N W 3 Miles and encamped where there was good grass in a small valley on the ... Passed several indian Lodges the indians themselves were yelling on the hills and some appeared in sight of camp, but when I attempted to go to them they ran off. The river to which I had given the name Smiths river had been gradually increasing in size and at my camp was about 40 yards wide with a strong current and wide sand bars. Its course was N N W. The Mountains of the vicinity were covered with Pine timber and the summit covered with snow.

Just before sunset one of my horse guard came in and told me that there were some indians on the opposite side of the river close at hand. I went with one man to see what they wanted but before I got down they were throwing their arrows at the guard. They were at a distance of 150 yards but their arrows scarcely reached us. I called for some men and went down to the bank of the river and fired several guns wounding one or two of them but killed none dead on the ground. They then ran off yelling and troubled us no more that night. Among those troublesome indians I was obliged to put my horses in a pen every night and have them guarded the fore part of the night but as those indians had but little clothing and the weather in those mountains was cold there was no necessity for continuing the guard during the latter part of the night. Several of my horses were verry lame.

23d April I got under way quite early and went down the river about two miles but the mountain came in close to the river so that I was obliged to order the party back to camp as there was no possibility of proceeding without crossing the river. I went with two men to look for a pass. On examination I soon found the best course would be to cross the river and for that purpose found a ford and returned to camp. No indians were about in sight.

24th North 7 Miles. Early in the morning crossed the river without any material accident and continued down the river the mountain coming in quite close to the river with Brushy thickets and deep ravines. One point of the Mountain over which I was obliged to pass was so exceedingly Rocky and rough that I was four hours in moving one mile. The Rocky hills over which we had to clamber mangled the feet of the horses most terribly. At my camp [] the steep side hills were covered with Oak and Pine timber and the grass was tolerably good. I observed a kind of tree with

which I was before unacquainted. The largest were 1 1/2 feet in diameter and 60 feet high. The limbs smooth and the bark snuff colored. It was at that time in Bloom. Some Europeans who were of my party called it the Red Laurel.

25th My horses were so much fatigued that I remained in camp. Several of us went out to hunt and killed 3 Deer []. Some of the men found some nooses set to catch Deer. They make a fence of Brush leaving a small aperture over which a cord is extended with a noose sufficiently long to admit the head of a deer. It is of course set in some of the common passes.

26th 5 Miles N W About two Miles down the river and immediately below the mouth of a creek coming in from the West the Mountain closed in to the river which ran in a channel of cleft rocks. I therefore turned up the creek and encamped on the north side where it was 30 yards wide rapid and difficult fording. The traveling rough and rocky being along the abrupt sides of the mountain on which were some Oak Pine and Hemlock timber and tolerable grass. More of my horses and Mules were wounded by the rocks during the days march.

Any persons apprised of the character of the country through which I was traveling might form something of an Idea of the difficulty of traveling with a Band of three hundred horses. After encamping I sent two men to look for the best pass over the mountain which lay on the North. They returned at dark and told me it would not be difficult to ascend to the top of the Mountain but that they could not see far enough to judge of the traveling beyond.

27th As I was not satisfied as to the best route by which to continue my [] journey and as the grass about my camp was tolerably good I did not move the party but sent 3 men back for a horse that had been left and went myself with one man to view the country. The best traveling I could discover was to steer NW and keep on a range of hills [] the divide between the River and the creek which had its rise apparently nearly in the direction to which the river ran. The hunters killed 4 Deer and 2 Grizzly Bear. The men from horse hunting returned having found 2 instead of one.

28th N W 3 Miles ascending the steep side of the mountain and arrived at the top and turning N N W the ground a little descending for three fourths of a mile the snow was three or four feet deep. Leaving in that distance the snow and continuing the same course for 5 Miles over high ridges and through Deep ravines along the sides of abrupt hills and through dense thickets after working hard all day we made but 8 Miles and encamped where I was obliged to make a pen for the horses to keep them from s[t]rag[g]ling off as there was no grass for them. At night it was found that 5 were missing, two of that number being packed one with fur and one with some clothing belonging to the Men. By the help of a good Moon light two of them were found before I went to bed.

29th North 3 Miles As soon [as it was] light I sent the [company] forward and went myself with 3 Men to look for the lost horses. Found them in different places and safe the packs on the Mules having remained on during the night without turning. I got to camp about sunset and found good grass.

30th N [] 1 1/2 mile with the intention of going to the river but I found the deep ravines impassable and the river yet washing the base of high hills. I there [fore] retraced my steps to a place where I had seen good grass and encamped sending men off at the same time to see if there was any possibility of passing back from the river. When the[y] returned they told me they thought it passible although the traveling would be bad.

May 1st 1828 North West 3 Miles I went but little beyond where the men had gone the day before when I found the traveling so bad that I was obliged to encamp and send on again to search for a pass. At my camp there was very little grass. The men returned and reported the traveling extremely bad for about three Miles after which there was plenty of good grass. I went hunting with several men we killed [] one Deer which was quite in time for our dried meat was nearly exhausted. Rain with some snow during Most of the day and following night.

May 2nd North 2 Miles. The road most terrible down steep hills which were extremely Rocky and Brushy. On the side of the mountain were some remarkably handsome hemlocks, the largest I had ever seen. Beside Hemlock was Pine and some Oak. On the point of a ridge on which I encamped was some good grass. 4 Deer were killed.

May 3d 1 Mile North. I first made an attempt to move down towards the river but found it impracticable. I therefore returned to camp and moved north 1 Mile over traveling like that to which I had now become accustomed. I encamped a mile from the river on a ridge which produced plenty of grass and Oak timber. Opposite my camp a large stream entered Smiths River from the East. It appeared even larger than the stream on which I had been traveling. One Mule lost. After encamping the hunters went out and killed two deer.

May 4 I was obliged to lay by in consequence of the lameness of my horses. I had my Beaver skins dried and sent men back on the trail to look for horses. The hunters killed 8 Deer and the Meat was cut and dried.

5th May At the same camp, some of my horses being unable to travel. I had my horses brought up and counted and found that there was ten or twelve not to be accounted for. I therefore took one man and went back on the trail intending to go [] to the 4th encampment directing Mr. Rodgers that in case [] I did not return to start early on the following morning. I found two horses and got two miles on my way back.

May 6th When I got to the party in the morning they were 3 Miles on their way traveling north. For that distance the road was tolerable being near the river. The Mountain came in near the river but was not so abrupt as it had been nor so high, particularly on the west side of the river. Passed several indian lodges and encamped opposite to one. Their Lodges were built differently from any I had before seen. They were 10 or 12 feet square, the sides 3 feet high and the roof shaped like a house. They were [] built of split pine plank with 2 or 3 small holes to creep in at. About 1/2 Mile above camp a creek entered on the west side 20 yards wide. Rapid current.

After camping a canoe came down the river with a good many Deer skins on board. I made signs for them to come to [me] but they would not. 2 or 3 indians passed down on the opposite side of the river. I endeavored to persuade them to come over but did not succeed.

May 7th North 4 Miles then North West 5 Miles following the river as close as the traveling would permit. Passed through thickets and over two very high rocky hills from the last of which the country had a much more promising appearance. Lost several Mules and horses in the course of the day but found them all again. Several indians came to camp in my absence.

They appeared friendly and made signs that they wished to trade Deer Skins for Axes & knives. Indian trails were becoming large and lodges of the kind mentioned more plenty than in the country through which we had for some time been traveling. I saw several places in the course of the day where there had been axes used. Judging from the size of the river and the appearance of the country I suppose the river had in the course of the days travel received a tributary from the

---

East as large or larger than itself.

8th 2 Miles N W In the morning several indians came to camp different from the indians I had before seen in the country, particularly in their dress and in the length of their hair which was long while nearly all the indians of the Buenaventura valley and the country generally I have distinguished by the appellation of short haired indians. These indians were clothed in [ ] Deer Skins Dressed with the hair on. The lower part of the body was left naked. Some of them had Mockasins. Their lodges were tolerably numerous and they had a few good canoes.

Soon after starting a horse ran off and detained me so long that I did travel but two miles before encamping. Two of my horses were found dead when we caught up to move on, poisoned as I supposed by eating some poisonous weed.

9th N W 6 Miles Following the river 3 Miles but it turning more to the North and the indians informing me by signs that it was Rocky along the bank of the river. I turned N W following a ridge which was in that direction and encamped 2 or 3 Miles from the river on a creek. 3 horses lost. An abundance of Elk and some deer sign. One fine Elk killed.

10th N W 5 Miles. To make this distance I traveled as much as ten Miles first attempting to move in towards the River with the intention of traveling along its bank but this I found impracticable and turned back on to the ridge and moved N West untill night over hills rocky and steep and through thickets and deep ravines to a small creek where I encamped without any grass for my horses and was therefore obliged to make a pen for them. On examination I found several were missing, among the rest two that were packed.

May 11th N W 1 Mile. I went up a verry steep hill and finding grass encamped and sent 4 Men back to look for the lost horses and a gun which had been lost at the same time. The men returned in the evening having found 13 horses. There was three yet missing and the gun was not found. The hunters killed three Deer.

12th May I remained at the same camp and sent back two men to look for the lost horses. They found one but could not drive it to camp, therefore they were abandoned.

13th 4 Miles N W I had flattered myself that I was nearly over the bad traveling But I found this day of the old kind. The course of the river was N N W and I made an attempt to go down and travel along its banks but did not succeed and was obliged to wind about among the hills and mountains.

May 14th 2 Miles north. I made another attempt to get in to the river but the rocks obliged me to take to the hills again. Crossing a deep rocky ravine I found greater obstacles than I had before encountered in that rough country. I worked with all my men hard during the day and at night had made but two miles. Two of my horses were dashed in pieces from the precipices and many others terribly mangled. Some of my packs I was forced to leave in the ravine all night with two men to watch them.

May 15th I went back with several men to fetch in the packs and horses left in the ravine and worked hard until 3 O Clock before we got them all to camp. Some men out hunting killed 5 Deer.

May 16th My horses being verry lame I thought it most prudent to remain in camp for a time. I sent two men to examine the country ahead. Some indians came to visit us at camp bringing with them some Lamprey Eels and Roots for trade. I gave them some presents purchased their fish and a Beaver skin which one of them had. They had Beads Wampum & knives. I endeavored to make

them understand by signs the direction in which I wished to travel and to ascertain something of the character of the country but they could not understand me. They appeared very friendly and allowed them the privilege of camp. Some of their squaws was with them.

May 17th Remaining in camp at 9 O Clock the 2 Men sent out to reconnoiter returned. They told me that the country to the West was tolerable [and] that the Ocean was not more than 15 or 18 Miles distant. I determined therefore as traveling along the river was so bad to move towards the coast.

May 18th West 3 Miles along a ridge somewhat thickety and encamped in a small prairie of good grass. In the course of this short days travel two horses gave out. My men were almost as weak as the horses for the poor venison of the country contained verry little nourishment.

19th May West 6 Miles principally along a ridge brushy and timbered with Hemlock Pine & Cedar. Some of the Cedar's were the noblest trees I had ever seen being 12 or 15 feet in diameter tall [] straight & handsome. I encamped in a prairie with the Ocean in sight. 6 Elk were killed two of them in tolerable order. Counting my horses I found that three were missing. 4 indians that followed us on the trail came up and encamped with us.

May 20th I remained in camp to give my lame horses an opportunity to recruit and dry meat. I sent two men to look for lost horses and Mr. Rodgers & Mr. Virgin to examine the country towards the Coast. Several indians visited the camp in the course of the day. At night Mr. Rodgers and Mr. Virgin returned. They had found the traveling along the coast verry bad. The hills heavily timbered and brushy coming in close to a rocky shore. In their excursion Mr. Rodgers had left Mr. Virgin a short distance with the horses to get a shot at some Elk. Shortly after he was gone some indians raised the yell and at the same time let fly their arrows at Mr. Virgin and the horses. In return he shot one of them down and calling for Mr. Rodgers at the same time they ran off having wounded one of the horses verry badly but not to prevent bringing him in to camp. The two men horse hunting did not return.

21st May Rainy with a verry heavy fog. The horse hunters returned with one horse. No indians visited camp.

May 22d I had my horses caught up early but just as I was ready for starting it commenced raining and made it impossible to travel for the dense fogs quite common to this coast would prevent me from avoiding the deep ravines and precipices that everywhere came across my way. Among the animals I observed in the country was Elk, Black tailed Deer & Black Bear all of them plenty. Some Raccoons, Large and small wolves, Foxes, Wild Cats, Grey & striped squirrels. The Birds are Large & small Buzards, Crows, Ducks, Ravens, several kinds of hawks, Eagles and a few small birds among which are Robbins & Humming Birds.

23d May From the information I had obtained of the nature of the country on the coast I was convinced of the necessity of retracing my steps and making the attempt to cross Smiths River where I left it. I previously made another unsuccessful attempt to find a pasage along or near the coast and early in the morning taking a man with me I endeavored to find a ridge by which I might pass to the river without following the trail by which I had come out but my efforts were unavailing and I returned to the party and moved back on the trail and encamped at the same place as when I came out. during the past night a north wind cleared the sky from clouds and left the weather fine.

24th May Back to the river and down it [] 1 mile below my old encampment. Finding [] no grass

on the river I encamped about 1/4 of a mile from the west bank. A little below my camp and on the opposite side of the River was an indian village where there was some Canoes. I went down to the River and calling to the indians some of them came over and went with me to camp. I gave them some Beads and made them understand that it was my intention to cross the river the next day. One horse lost and two men sent back to find it. During most of the day a heavy fog. The men returned with the lost horse.

May [2] 5th I packed up early & went down to the river. The indians appeared suspicious that I had some evil intentions and made signs for me to go off. However after a long time I prevailed on one of them to come over with a Canoe. I soon convinced him that I only wished to cross the river and promised to pay him if he would bring 3 or 4 canoes and carry my things over. No sooner were the indians satisfied as to my designs than they brought over their canoes and soon my things were all taken across.

In swimming my horses some of them fell too far down and had hard work to get out and others returned and went out on the same side. I went across with some indians and two men although it was raining and soon found 12 horses & mules huddled together on the bank. We drove them in and they swam over. At the same time we found one horse drowned. When we were all over I sent two men down the river to view the country. during the afternoon the indians visited camp in considerable numbers. They brought with them a few Lamprey Eels & I got of them a piece of salmon, 2 Beaver & an Otter skin. They stole a trap. The explorers returned at night telling me that the country down the river was tolerably rough.

May 26th. North 6 Miles. I moved down the river 2 Miles and then struck east on to high range of hills winding along their summit for several miles and then turning west again in consequence of a creek that made a deep ravine. I encamped about 2 miles from the river having traveled about ten miles to make the six above mentioned. 3 Deer Killed 5 having been killed the day before.

27th May W N W 3 miles and encamped on a creek 30 yards wide running west. My camp was in a small bottom of grass just above the confluence of the Creek and river. The descent to the creek was down a hill long & steep & thick with brush. One horse left and five or 6 lost. I sent two men back for them. Several indians inoffensive in appearance and without arms visited camp.

May 28th North East 7 Miles In consequence of the hills which came in close and precipitous to the river I was obliged to ascend on to a range of hills and follow along their summits which was very difficult particularly as a dense fog rendered it almost impossible to select the best route. I encamped where there was very little grass and near where the Mountain made a rapid descent to the north rough & ragged with rocks. I went to the brink of the hill and when the fog cleared away for a moment I could see the country to the North extremely Mountainous along the shore of the Ocean those Mountains somewhat lower. From all appearances I came to the conclusion that I must move in again towards the coast.

May 29th. 1 Mile back on the trail. I attempted to move towards the river but the fog closed around me so thick that I could not see how to travel and finding myself among thickets & Deep ravines I was obliged to stop and send off men to search for a pass. About 2 O Clock it cleared off and I was enabled to see the country around me. The general course of the river was West as far as its entrance. In places are small prairies along the bank and in others the Mountain closes in to the water.

May 30th 2 1/2 Miles N. W. In the morning it was quite clear on the mountain while the river the

---

deep ravine and the Ocean were hid from view by a dense white Cloud. My route was down a steep hill in [to] the valley of a creek where I encamped in a small prairie of good grass 1/2 mile from the river. I [went] back with some men to look for some horses and one load that was lost in the descent of the hill and found 7 horses and the load with the exception of one trap. 2 Elk were killed. In the evening it became again foggy.

May 31st In the morning it commenced raining and continued during the day. I therefore did not move camp. In the vicinity I saw a bush resembling a common brier in appearance only somewhat larger. Its fruit was like a raspberry in taste and shape but larger. They were ripe at that time and some were yellow and others red. 2 indians came to camp remained all night and the rain still continued.

June 1st 1828 West 3 Miles and encamped 1/4 of a Mile from the river in a small prairie where there was some grass. In the course of the day we traveled through dense thickets and timber and up and down two steep hills made verry bad by the rain of the past day and night and its continuation during the day. Several horses with their loads were lost.

June 2nd Remained at the same camp. At 10 O Clock the sky became [clear?]. Several men sent off for the lost horses returned having found all that I had missed. Two harmless and inoffensive indians visited camp without any arms.

June 3d West 2 Miles. Moving along a ridge passing through a close thicket and down the point of the ridge into the river bottom. I encamped where I was stoped by swamps and muddy ground at the distance of half a mile from the river and where there was hardly any grass for my horses. The tide came up in the river opposite my encampment.

June 4th North 1 Mile. Whilst the party were preparing I went ahead looking [for] a route to pass around the swamp and found one passible by the assistance of axe men to clear the way along a side hill. In passing along my horses were so much fatigued that they would not drive well and many of them turned down into the swamp from which we extricated the most of them with considerable difficulty. Where I encamped there was no grass for my horses. I was therefore obliged to build a pen for them to keep them from strolling off. Some men sent in the morning for horses returned having found a part of them.

June 5th 1 1/2 Mile North West crossing 2 or 3 small creeks and encamped on a creek 20 yard wide running south west. 2 horses & one mule gave out and were left behind. We had no meat in camp since the morning of the day before and at night I gave out a ration of 1/2 pint of flour to each man. During the day we hunted hard but saw nothing to kill although there was some Bear & a little fresh Elk sign. At night therefore as we were quite hungry I gave another ration of 1/2 pint of flower per man and killed a dog the only one we had in camp. For a long time I had been traveling in [] a country where our utmost exertions would not enable us to travel more than 3 or miles per day at most where my horses were mangled by the craggy rocks of the mountains over which they passed and suffered so much from hunger that I found myself under the necessity of stopping a while to rest them or run the risk of losing many of them if I should proceed.

This situation was verry unpleasant because while my men were suffering from hunger and in a country where there was verry little game they were laying in camp and apparently without the power of supplying their wants the only alternative being patient endurance with a prospect ahead not verry flattering for although near the Ocean yet our intended route appeared equally rough with that over which we had passed. In the vicinity I saw some Beaver sign but the tide

setting up interfered with the design of trapping. An affray which happened the day before between one of my men and 2 indians and which I neglected to mention in the proper place was as [follows]:

Two indians following in the rear of our party in company with one of my men offered him some berries which he took and ate and made signs to them to come on to camp. But they did not understand him and insisted on being paid for the berries he had nothing to give them and they attempted to take some of his clothing by force on which he presented his gun and they ran off he firing as they ran. As he was not a good marksman I presume he did them no hurt. His account of the affair was somewhat different from this but I presume mine is near the truth.

June 6th Remained at the same camp and had some of my men engaged in pressing fur and others hunting. But the hunters after every exertion returned without killing anything. Two of them traveling North West found a pass to the Ocean. Saw some Elk and got a shot at a Bear. As no game could be killed I was obliged to kill a young horse which gave us quite a feast.

June 7th Remaining at the same camp I sent 2 men forward to hunt directing them to encamp where it was my intention to stay the first night after leaving that place. Others of my men were employed in pressing fur and looking for lost horses. 10 or 15 indians visited camp bringing with them a few Muscles & Lamprey Eels and some raspberries of the kind I have before mentioned. In the evening when they left us they stole a small Kettle.

June 8th North West 5 Miles and encamped on the shore of the Ocean at the mouth of a small creek where there was tolerable good grass. The high hills which came in close to the beach of the Ocean presenting a front nearly destitute of timber with bushes breaks and grass in some places. Verry little game for the hunters after the greatest exertion returned at night without having killed or even seen any thing to shoot at. Some of the hunters remained out all night.

June 9th There were several indian Lodges near my camp of whom I purchased a few muscles & small fish. At 11 O Clock the hunters all came in. For three or four days [] as many of us as considered ourselves good hunters had [] been employed [] in hunting. During that time nothing had been killed and but three animals had been shot at 2 Black Bear and one Deer which we wounded. This was what hunters call bad luck and what we felt to be hard times for we were weary and verry hungry.

Among other trifling things which the indians brought us to eat was some dried sea grass mixed with weeds and a few muscles. They were great speculators and never sold their things without dividing them into several small parcels asking more for each than the whole were worth. They also brought some Blubber not bad tasted but dear as gold dust. But all these things served but to agravate our hunger for we were constantly encountering the greatest fatigue and having been long accustomed to living on meat and eating it in no [] moderate quantities nothing else could satisfy our appeties.

In the afternoon I took my horse and rode out to make another effort to kill something to alleviate the sufferings of my faithful party and thanks to the great Benefactor I found a small band of Elk & killed three in a short time which were in good order. I returned to camp and directed several men to go with me with some pack horses without telling them what they had to do. When they came to the spot where the Elk lay their surprise and joy were tumultuous and in a short time their horses were loaded and they returned to camp to change it from the moody silence of hunger to the busy bustle of preparation for cooking and feasting. Little preparation however

was necessary when men could be seen in ev'ry part of the camp with meat raw and half roasted in their hands devouring it with the greatest alacrity while from their preparations and remarks you would suppose that nothing less than twenty four hours constant eating would satisfy their appetites.

June 10th Remained at the same camp. My men were employed in making salt and in cutting & drying Meat. Early in the morning the indians came offering to give the Beads I had before traded to them for Meat. I soon made them to understand that what I had to spare which was verry little would be freely given to them.

June 11th North 4 Miles. I packed up early and moved on but missing an ax and drawing knife I stoped the party and searched for them. Not finding them I concluded the indians had stolen them & went back to some indian lodges close at hand. They were all gone but an old man who pretended to know nothing about them. I then went to some Lodges above and when the indians saw us coming they all ran off. But after a while one of them came to me and I told him that I should keep him until the tools were found and at the same time sent the old man found at the other Lodges to tell the indians the reason why their friend was detained.

By searching we found the ax covered in the sand under their fire. The drawing knife could not be found and I took the hostage along tied. After keeping him several hours no indians appearing to relieve him I let him go. The traveling was verry bad and at 4 miles I came to a deep impassible ravine and encamped having to build a pen for my horses lost in the course of the day.

June 12th West 1 Mile. Early in the morning I packed up and moved down a ridge with considerable difficulty to the beach of the ocean where I encamped. I drove the horses across a small creek where there was some grass. The horses lost the day before were found and brought up. 3 of my men quite sick.

June 13th North N West along a ridge in places rough with thickets and rocks. At night descending to and encamping on the shore where there was but little grass. In the course of the day 3 Mules gave out and were left one load was lost and one [] horse was disabled by falling down a ledge of rocks.

June 14th North 1 Mile. It being low tide by passing around a point in the water I was enabled to travel along the shore and encamped in a prairie of about 100 acres of tolerable grass. In the vicinity was a plenty of Elk sign. The prospect ahead was somewhat flattering and I was in hope that we had passed all the mountains. Some men sent back for the purpose found the lost load and brought up the fatigued mules.

June 15th I lay by to recruit my horses. Several of us went hunting and Joseph Lapoint in the morning killed one of the largest [] Elk I had ever seen. He was not verry fat but [] tolerable [] good meat. His size induced me to weigh the meat which I found to weigh 695 lbs neat weight exclusive of the tongue and some other small pieces which would have made it above 700 lbs. In the evenings hunt Mr. Virgin and myself each killed an Elk not as large as the one before mentioned but one of them was good meat. In the course of the day several indians visited camp bringing some Clams small fish Raspberries strawberries and a Root which on the Columbia is called Commass. These indians traded like those last mentioned.

June 16th North 5 Miles. One mile along the beach north & then turning to the right I traveled 4 Miles across a prairie leaving a range of hills on the East running North not far distant and thickly covered with Hemlock & Cedar. The prairie was covered with brakes bushes & grass & had

many springs some of which were miry.

June 17th 1 Mile north at the end of which I came to the termination of the [ ] prairie. Then commenced thick timber and brush and swamps which so much obstructed my progress that I was obliged to retrace my steps and encamp. I then went with one man on the ridge and traveled north 4 or 5 miles when I found it impracticable to move in that direction on account of the thick brush. I returned to camp and sent two men towards the Ocean. When they came in they reported That there would no difficulty in moving to a prairie not more than a Mile distant. Its extent they had not time to ascertain. In their excursion they had killed an Elk dressed & hung it up. Other hunters out killed nothing.

June 18th Remained at the same camp. Sent some men to hunt and others to see which way it would be advisable to travel. The hunters were unsuccessful and [the men] that were looking for a road found it impracticable to travel near the Ocean. They observed a Lake of several Miles in extent along the shore of which it was impassible on account Thick brush and mire.

June 19th Remained at the same camp because I did not wish to move until I knew whether I could find grass for my horses. I took two men and struck East across the ridge following an indian trail 2 1/2 Miles when I struck a river 80 yards wide coming from ESE. I crossed Leaving the Men on the bank and found the river so rapid that my horse fell and, it was with great difficulty that I got him out. I went 1/2 Mile up the river & recrossed having the same difficulty as before. The bottoms along the river were brushy but there were some small prairies and the hills beyond were bare. On the river was some beaver sign. From the high ground I could easily see that what the men had taken for a Lake was a bay of the Ocean. From the breaking of the water without I supposed its entrance to be shallow.

June 20th East 2 1/2 Miles & encamped on the North bank of the river which I had discovered the day before. It was deep fording. My camp was in a small prairie of good grass. Several men sent hunting.

June 21st North N E 6 Miles. Leaving the river on account of the brush and traveling along a ridge stony and covered with small brush but verry little timber. As I advanced the country became rough and the high ridge on which I was traveling extremely rocky. I saw that it would not answer to move longer and therefore encamped. 3 Deer and a fine Buck Elk killed. Deer verry plenty in the vicinity.

June 22 N North West 5 Miles Being obliged to move again towards the coast I followed a descending ridge for 5 Miles and encamped in a prairie. The country was generally timbered during the days travel but from my camp towards the coast the prospect was generally prairie.

June 23d North West 8 Miles At 3 Miles I arrived on the shore and from thence I traveled along the shore and sometimes immediately on the beach for 5 miles and encamped after crossing a creek 20 yards wide. The hills came within 1/2 mile or a mile of the sea, and were generally bare of timber. The Low land along the shore and in the valleys covered with high breaks and has some Miry springs. Many indians visited camp in the evening bringing berries small fish and Roots for trade. [ ] In the course of the day one Mule gave out and another ran back on the trail.

June 24th West North West 3 miles and encamped at the mouth of a river 50 yards wide rapid at the mouth but as it was high tide I could not cross. The hills about the same distance from the coast as the day before and the low land thick covered with brakes scotch caps and grass. When starting in the morning I sent two men back for the Mules that had been left the day before. They

came in the evening without the mules and I immediately sent two men back but they soon returned as the indians at a village close at hand did not appear friendly.

Near my camp was a village of 10 or 12 Lodges but the indians had all ran off. Among the indians of this country I have seen a small kind of Tobacco which is pretty generally cultivated. These indians Catch Elk in Pits dug in places much frequented. They are 10 or 12 feet deep and much Larger at the [] bottom than [] top. They are completely covered over and some of my hunters with their horses fell into one and got out with considerable difficulty.

June 25th North N West Early in the morning as it was low tide I packed up and forded the river. During the principal part of the days travel the hill came in close to the rocky shore. I was therefore obliged to turn out into the hills which were nearly bare of timber but brushy and cut by some dark ravines. In the morning when my horses were brought up I found two of them wounded with arrows and in the evening one was missing which I supposed to have been killed. This day I traveled 12 Miles which was much the best march I had made for a long time. Deer plenty and some Elk.

June 26th N N West 8 miles. On leaving camp I struck out from the Ocean following a ridge on a circuitous route [] until It came into the Ocean again at the mouth of a creek 20 yds wide where I encamped. The place from which I started [] in the morning was covered with brakes & brush when I got out among the hills I found some timber & good grass & where I struck the [] a sandy soil short grass low Pines Sand Cherries and strawberries.

June 27th North 7 Miles. With the exception of two or three steep points which I was obliged to pass over I was able during the day to travel along the beach. I encamped on the south side of a bay and close to its entrance which was 150 yards wide. The Bay itself was 3 Miles long and 1 Mile wide. At low water I found it quite fresh, from which circumstance I infered that it received a considerable river. After encamping I made rafts that I might be ready to cross the bay early on the following morning. On each side of the Bay were several indian villages but the indians had all run off. On a creek which I crossed 3 miles back was some beaver sign and also some in the bay.

June 28th N N West 6 Miles. Early in the morning as it was low water I commenced crossing. And when I had finished I had lost 12 or 15 drowned in the middle of the water. I know not the reason of their drowning unless it might perhaps be ascribed to driving them to much in a body. In three days I had lost by various accidents 23 horses & mules.

June 29th N N West 5 Miles. The traveling for the last two days much alike alternately on the beach and over the hills which generally closed in to the shore near which the country was generally prairie with some thickets. Farther back from the coast the hills were high rough and covered with thickets & timber. This day I could have traveled farther had it not been high tide which prevented me from traveling on the beach and the hills were too rough to allow me to leave the shore. In the vicinity of my camp the country was clothed with fine grass and other herbage, a good grazing country though somewhat rough.

June 30th North 5 Miles. After traveling 2 Miles I was obliged to leave the coast and travel over the hills to my encampment which was a short distance from the shore where there was good grass. From a high hill I had an opportunity to view the country which Eastward was high rough hills and mountains generally timbered & north along the coast apparently Low with some prairie. In climbing a precipice on leaving the shore one of my pack Mules fell off and was killed.

July 1st 1828 North 9 Miles. At 5 Miles from camp crossed a creek the outlet of a small Lake on

which was some Beaver sign. At this place the hills recede from the shore leaving a bluff from 30 to 100 feet in height. Immediately on this bank is a narrow skirt of prairie and further back low Pine & brush. The soil thin and loose. Encamped on a river 60 yards wide on which was some beaver sign. I found the tide too high to cross. For the three past days but one deer had been killed but as we had dried meat we did not suffer from hunger. We saw appearances of Elk have been abundant in the vicinity when the grass was tender. For many days we had hardly got sight of an indian and but one had visited camp since my horses were killed. In the course of the days travel one of my horses was crowded off from a cliff and killed.

July 2nd 12 Miles North principally along the shore at 6 Miles from camp passing a small Lake. During the days travel the hills were generally 3 or 4 Miles from the shore the intermediate space being interspersed with grassy prairie brush, sand hills & low Pines.

July 3d 5 Miles N N West. At 2 Miles from camp I came to a river 200 yards wide which although the tide was low was deep and apparently a considerable River. On first arriving in sight I discovered [] some indians moving as fast as possible up the river in a canoe. I ran my horse to get above them in order to stop them. When I got opposite to them & they discovered they could not make their escape they put ashore and drawing their canoe up the bank they fell to work with all their might to split it in pieces.

Jedediah Smith Letter to Wm. Clark

---

Jedediah Smith Letter to Wm. Clark

July 12th, 1827

This letter is found in the Letterbook of the Superintendent at Indian Affairs for St. Louis, vol. 4, pg. 46-49. This letterbook is now held by the Kansas State Historical Society. The letter was reprinted in the Missouri Republican on October 11, 1827. It was also reprinted in:

- Dale, Harrison Clifford, The Ashley-Smith Explorations and the Discovery of a Central Route to the Pacific, 1822-1829, 1918, The Authur H. Clark Company, Cleveland
- Morgan, Dale, Jedediah Smith and the Opening of the West, Bobbs-Merrill, New York, 1953

Little Lake Of Bear River,

July 12th, 1827.

Genl. Wm. Clark,

Supt. of Indian affairs

Sir,

My situation in this country has enabled me to collect information respecting a section of the country which has hitherto been measurably veiled in obscurity to the citizens of the United States. I allude to the country S.W. of the Great Salt Lake west of the Rocky mountains.

I started about the 22d of August 1826, from the Great Salt Lake, with a party of fifteen men, for the purpose of exploring the country S.W. which was entirely unknown to me, and of which I could collect no satisfactory information from the Indians who inhabit this country on its N.E. borders.

My general course on leaving the Salt Lake was S.W. and W. Passing the Little Uta Lake and ascending Ashley's river, which empties into the Little Uta Lake. From this lake I found no more signs of buffalo; there are a few antelope and mountain sheep, and an abundance of black tailed hares. On Ashley's river, I found a nation of Indians who call themselves Sampatch they were friendly disposed towards us. I passed over a range of mountains running S.E. and N.W. and struck a river running S.W. which I called Adams River, in compliment to our president. The water is of a muddy cast, and is a little brackish. The country is mountainous to east; towards the west there are sandy plains and detached rocky hills.

Passing down this river some distance, I fell in with a nation of Indians who call themselves Pa-Ulches (those Indians as well as those last mentioned, wear rabbit skin robes) who raise some little corn and pumpkins. The country is nearly destitute of game of any description, except a few hares. Here (about ten days march down it) the river turns to the south east. On the S.W. side of the river there is a cave, the entrance of which is about 10 or 15 feet high, and 5 or 6 feet in width;— after descending about 15 feet, a room opens out from 25 to 30 in length and 15 to 20 feet in width; the roof, sides and floor are solid rock salt, a sample of which I send you, with some other articles which will be hereafter described. I here found a kind of plant of the prickly pear kind, which I called the cabbage pear, the largest of which grows about two feet and a half high and 1 ½ feet in diameter; upon examination I found it to be nearly of the substance of a turnip, altho' by no means palatable; its form was similar to that of an egg, being smaller at the ground and top than in the middle; it is covered with pricks similar to the prickly pear with which you are acquainted.

There are here also a number of shrubs and small trees with which I was not acquainted previous

to my route there, and which I cannot at present describe satisfactorily, as it would take more space than I can here allot.

The Pa Ulches have a number of marble pipes, one of which I obtained and send you, altho' it has been broken since I have had it in my possession; they told me there was a quantity of the same material in their country. I also obtained of them a knife of flint, which I send you, but it has likewise been broken by accident.

I followed Adams river two days further to where it empties into the Seedskeeder a south east course. I crossed the Seedskeeder, and went down it four days a south east course; I here found the country remarkably barren, rocky, and mountainous; there are a good many rapids in the river, but at this place a valley opens out about 5 to 15 miles in width, which on the river banks is timbered and fertile. I here found a nation of Indians who call themselves Ammuchabas they cultivate the soil, and raise corn, beans, pumpkins, watermelons and muskmelons in abundance, and also a little wheat and cotton. I was now nearly destitute of horses, and had learned what it was to do without food; I therefore remained there fifteen days and recruited my men, and I was enabled also to exchange my horses and purchase a few more of a few runaway Indians who stole some horses of the Spaniards. I here got information of the Spanish country (the Californias) and obtained two guides, recrossed the Seedskadeer, which I afterwards found emptied into the Gulf of California about 80 miles from this place by the name of the Collarado; many render the river Gild from the East.

I travelled a west course fifteen days over a country of complete barrens, generally travelling from morning until night without water. I crossed a salt plain about 20 miles long and 8 wide; on the surface was a crust of beautiful white salt, quite thin. Under this surface there is a layer of salt from a half to one and a half inches in depth; between this and the upper layer there is about four inches of yellowish sand.

On my arrival in the province of Upper California, I was looked upon with suspicion, and was compelled to appear in presence of the governor of the Californias residing at San Diego, where, by the assistance of some American gentlemen (especially Capt. W. H. Cunningham, of the ship Courier from Boston) I was enabled to obtain permission to return with my men the route I came, and purchased such supplies as I stood in want of. The governor would not allow me to trade up the sea coast towards Bodaga. I returned to my party and purchased such articles as were necessary, and went eastward of the Spanish settlements on the route I had come in. I then steered my course N.W. keeping from 150 miles to 200 miles from the sea coast. A very high range of mountains lay on the east. After travelling 300 miles in that direction through a country somewhat fertile, in which there was a great many Indians, mostly naked and destitute of arms, with the exception of a few bows and arrows and what is very singular amongst Indians, they cut their hair to the length of three inches; they proved to be friendly; their manner of living is on fish, roots, acorns and grass.

On my arrival at the river which I named the Wim-mul-che (named after a tribe of Indians which resides on it, of that name) I found a few beaver, and elk, deer, and antelope in abundance. I here made a small hunt, and attempted to take my party across- the mountains which I before mentioned, and which I called Mount Joseph, to come on and join my partners at the Great Salt Lake. I found the snow so deep on Mount Joseph that I could not cross my horses, five of which starved to death; I was compelled therefore to return to the valley which I had left, and there, leaving my

Jedediah Smith Letter to Wm. Clark

---

party, I started with two men, seven horses and two mules, which I loaded with hay for the horses and provisions for ourselves, and started on the 20th of May, and succeeded in crossing it in eight days, having lost only two horses and one mule. I found the snow on the top of this mountain from 4 to 8 feet deep, but it was so consolidated by the heat of the sun that my horses only sunk from half a foot to one foot deep.

After travelling twenty days from the east side of Mount Joseph, I struck the S.W. corner of the Great Salt Lake, travelling over a country completely barren and destitute of game. We frequently travelled without water sometimes for two days over sandy deserts, where there was no sign of vegetation and when we found water in some of the rocky hills, we most generally found some Indians who appeared the most miserable of the human race having nothing to subsist on (nor any clothing) except grass seed, grass-hoppers, &c. When we arrived at the Salt Lake, we had but one horse and one mule remaining, which were so feeble and poor that they could scarce carry the little camp equipage which I had along; the balance of my horses I was compelled to eat as they gave out.

The company are now starting, therefore must close my close my communication.

Yours respectfully,

(signed) JEDEDIAH S. SMITH

Smith, Jackson and Sublette.

Of a voyage from St. Louis, Louisiana, to the Mandan Village  
by Dr. Thomas, Surgeon to the party

---

JOURNAL

Of a voyage from St. Louis, Louisiana, to the Mandan Village, undertaken by the St. Louis Missouri Fur company, for the purpose of conducting Sheheken, the Mandan Chief to his nation, and to establish trading houses on the head waters of the Missouri;  
by Dr. Thomas, Surgeon to the party.

On the 17th of May last, we set out from St. Louis with 10 barges and 160 men, well equipped, amongst whom were a few Delawares and Shawnese employed for hunting. On the next day we passed the beautiful village of St. Charles, being 18 miles by land, and about 30 by water from St. Louis; ascending to the river Gasconade, the country is very thick settled, particularly in the spots called Boon's settlement, and near the little village called Charrette. I am informed that the territory of Louisiana is apportioned out to six districts; St. Charles is the uppermost, comprehending that immense tract of country, west of the Mississippi and north of the Missouri; the tide of emigration appears to direct itself to this highly favored spot, and indeed we are not surprised that the farmers of the United States bend their attention this way, as every advantage both of soil and climate, render it far preferable to Kentucky or Ohio.

From the Charrette village to the Osage river we experienced nothing extraordinary: having agreed to wait here for the party, we took advantage of the delay, to saunter over the country; this place is said to be about 40 miles from the frontiers, although there is a small village opposite its mouth, on the north side of the Missouri, in a beautiful rich prairie; the inhabitants consist of emigrants from below, principally French; these people raise a sufficiency of grain for the consumption of the settlement, and employ the rest of their time in hunting and trading with the surrounding Indians. The Osage river, situate on the south side, from its magnitude at the mouth forms an important appendage to this country; I was informed that boats ascended to the old Indian villages, about 100 miles up; its waters are pure, gentle, and well tasted; its banks discover to the naked eye the riches it possesses; iron ore of the best kind cover a great portion of its surface. Here the botanists could enjoy a feast; Savannas are filled with innumerable plants pregnant with all the sweets florists could desire; the lovers of hunting could not fail of finding on this river plenty of amusement, for I am sure no place I have yet seen, can equal it for fish and wild fowl.

Mine river empties itself into the Missouri, a few leagues above, is navigable for small crafts up to the salt works; there are two establishments here, I am informed that 200 kettles are continually employed in making salt; a gentleman who rode over the country where these salt licks abound, says that 10,000 kettles might be employed as strong water springs are numerous in every direction. On the 3rd of June we were visited by a hail storm, and to render the scene more disagreeable, one of the hunters, John Stout, had this thumb blown off and his hand much lacerated by the bursting of my gun.

On the 28th, all the boats having arrived we set out, and on the 8th of July arrived at Fort Osage, which we saluted by a discharge of several guns from our ordinance barges, and were politely answered by an equal number from the fort; here we experienced many civilities from the gentlemen of the garrison. This place appears to be the general rendezvous of all the Missouri Indians, whose continual jars keep the commandant on the alert. Osages, Ottas, Mahas, Ponnis, Cansas, Missouri, Souex, Sac, Fox, Ioway, all mingle together here, and serve to render this quarter a most discordant portion of the continent.

Of a voyage from St. Louis, Louisiana, to the Mandan Village  
by Dr. Thomas, Surgeon to the party

---

July 11th, we got all ready for embarkation, having laid on vegetables, &c. and bidding adieu to the face of civilized life pushed on our way. The face of the country on each side of the river, is so monotonous up the river Flat, that one day's journey would nearly give the history of every thing, worthy of notice. The banks in general are low, and an extreme rich dark brown loam covers the face of all its borders, except where the cliffs approach the water; in several places they put in on both sides, so as to compress the river to the breadth of 25 or 30 yards; to these bluffs vegetation is denied; having ascended many without being gratified with the sight of a plant; however our toils were often repaid by the discovery of various petrifications; the bones of the buffaloe, elk, goat, with the various kind of wood which grow in the neighbourhood, are found on the tops of these cliffs, completely petrified, yet few are to be found in the low land.

The Cansas river on the south side, so called from a nation of that name, who reside about 150 miles up this river, is about 40 miles from the garrison; this river is considerable, affording navigation for trading boats, up to the village. The Cansas have long been the terror of the neighbouring Indians, their temerity is hardly credible; a few weeks since a band of 100 warriors entered Paunie village, or what is more generally called the Paunies Republic, and killed the principal chief and his family consisting of 15 souls; they were immediately pursued and upwards of 40 of them cut to pieces; these people cannot be at peace with the white or red people; they rob, murder and destroy when opportunity offers; fortunately for their neighbours, they are few in number, and their daily outrages serve to lessen their number still more, their country abounds with game, particularly beaver, deer, buffaloe, elk, black bear, &c. &c. and afford the Cansas (hardly less savage) an abundance of food and raiment.

On the 29th of July, we arrived at Messrs. Cooks and M'Clelland's old hunting camp, we lodged in their house, these gentlemen had constructed comfortable quarters, the house having three rooms, when they occupied it, the Ottas and Paunies resorted to them in great numbers.

August 1st, arrived at the river Platte on the south side, met with Mr. M'Clelland, waiting for the Ottas, whom he expected in great numbers to trade.

Mr. M'Celland has weathered many storms in his life, and it appears that each day seems to throw something bitter in his cup; brave, generous and kind, he meets the untutored Indian with the smile of complacency; or if the temerity of the savage should exceed the bounds of honesty, or approach to menace, then M'Celland discovers exalted courage, surrounded with Indians, with his rifle, pistols, and sword, he bids defiance to whole nations; threatening or executing extermination to all who attempt to plunder him.

The river Platte is about half a mile wide at its mouth, it has almost as many mouths as the Mississippi, having numerous sand bars at its Junction with the Missouri; its waters have the muddy hue of the Missouri; its extreme rapidity and shoal water, prevent the traders ascending it; the Otta villages are about 40 miles from the mouth; the Paunies reside a considerable distance above, and extend to near the head waters of the Arkansa; these people living in the neighbourhood of the Spanish villages, near St. Fee, trade alternately with them and the American traders. These Parthians of the west ought to be cherished, as through them we may obtain an extensive trade with that portion of Mexico, most adjacent to the mines.

On leaving the Platte we take leave of the exuberance of vegetation; a broken country, a sandy soil, coarse short grass, a dirth of timber, and in fact nothing to console the view but what Providence has kindly given man, viz. Buffaloe, and Deer whose abundance feed and clothe the wretched

Of a voyage from St. Louis, Louisiana, to the Mandan Village

---

wanderers of these sterile regions.

From the river Platte to the Maha Village, about 250 miles, we experienced good weather; and on our way we passed the Ioway village, now deserted, and had a view of the Council Bluff. Here Lewis and Clark had a talk with the Paunies on their ascending the river. This hill or bluff is on the south side, about 50 feet high, without stone to support it from the daily washings, and undermining from the current below; from its top the river and surrounding country can be viewed as far as the eye can reach. A few miles from the bluff the river takes a northerly direction for several miles, and meanders abruptly to the south. Although we ascended twenty miles that day we were not more than 500 yards from the spot we had encamped the evening before. At the commencement of this bend, near the river, on the south side, we observed the hill on which the great Maha chief lies interred: the Mahas frequently visit his grave and pay him those honours only due to the Diety. His tomb is constantly covered with presents, believing his spirit to rest on the summit of the hill, empowered with the means of dispensing good to his people.

On the 11th of August we arrived at the Village of the last mentioned people. It is situate on a prairie on the south side, 4 miles from the river, resembling at a distance, the stack yard of an extensive farmer, having their huts in the form of a cone, about 15 feet high. Their council house is built in the centre, large enough to contain 300 men; the materials consists of split sticks and pieces of timber; covered with earth. Here we were served with the first dish of dog meat, it is esteemed delicate, and none partake of it but those they wish to honour. These people are very filthy in their dress and food: the former consists of skins, and the latter of the flesh of the animals of that country, with corn, pompions, &c. They had a skirmish with the Souex a few days before we arrived, in which they lost several of their warriors; this nation contains only 4 or 500 men able to bear arms, and are in danger of being exterminated by the Souex, who boast they are able to muster 15,000 men; and these latter people reside on the north side of the Missouri, extending from the neighbourhood of the Richarees to the Mississippi and the North Western Lakes. On our arrival, Shehekeh expressed a wish to visit the village, being invited by the principal chiefs. Having put on an elegant full dress suit of regimentals, with his horse covered with the most showey ornaments, he set out accompanied by thirty Maha chiefs on horse back, in their best dress. The whole nation were lost in astonishment at the plended figure of the Mandan, so much superior to any thing their chiefs could display. Before dinner a council was held with Mr. Chouteau for the purpose of requesting a trader to reside among them, and to beg presents, in which the Mandan preserved the dignity of the superior; indeed Shehekeh's manners would grace any circle; he took great pains to copy the manners of the first characters of the United States whom he was acquainted with.

On the 13th we left the village and a few miles up we met with 3 Souex, who informed us that a party of their nation were waiting for us about 80 miles up the river. Twelve miles further we passed Floyd's river, called after one of the followers of Lewis and Clark, who was buried on an eminence in its neighbourhood; the Indians had mounted a flag over his grave: on our way we passed several banks of coal with chalk.

On the 18th, we arrived at the Yantans, a branch of the Souex, contained 300 lodges. Their huts were placed on the north bank, and we were saluted in the following manner: 50 warriors arranged themselves on the shore, and discharged their pieces loaded with ball into the water at the

Of a voyage from St. Louis, Louisiana, to the Mandan Village  
by Dr. Thomas, Surgeon to the party

---

bows of our barges. Having brought to near the shore, the officers landed and were carried to the council, by six Indians in Buffaloe robes; in the council their demands were similar to the Ma-ha's. They were given to understand that no trader could be left with them, and they could have no presents. Menace took the place of supplication; the principal chief addressed the gentlemen in nearly the following words. "The Missouri has always ran muddy water, which occasions the white people's refusing our demands, but if it was made to run blood they would be adhered to." The commander of the expedition informed them that the goods did not belong to their great father; they were the sole property of those individuals who were present; that were as able to protect themselves as willing to cultivate the friendship of the Souex. The gentlemen conceiving it their interest, established a trading house here. During our stay the chiefs had stationed 6 men to guard the barges from pillage. These people subsist entirely on the Buffaloe, except sometimes a dog. They resemble the Arabs, having no place of residence, following the buffaloe as the seasons change, without any wish or desire to raise corn, or vegetables. They hunt on horse back, armed with bows and short guns. They have their nation parcelled out into tribes, viz. Yantans, Titons, Chians, Punkas, &c.. Whether they acknowledge these appellations I am not positive, but rather think they received them from those traders who have been in the habit of visiting them. They are the terror and in fact lordly masters of all their neighbours, claiming tribute (presents) from all other tribes. Their dress consists of the skins of the deer, elk, buffaloe and beaver, handsomely decorated with porcupine quills. As they remain but a short period in one place, they have very little baggage: a few kettles, their arms and clothing, are prepared in small bundles sufficiently large for a dog to drag along by a sled. These animals are of wolf breed, and know by instinct when the band is in motion: on stripping the huts which are covered with skins, they set up a most piteous howl, and endeavour to escape their intended labour by hiding from their owners. On the 20th we set out, and - the next day passed the Panka river on the north side. A band of the Souex called the Punkas, resort to this river to hunt. A few miles above, the Lukakon, or running water, puts in with the greatest velocity. This river is about 150 yards wide at its mouth, being navigable a considerable distance for small trading boats. Here we met with several bluffs of coal, chalk, pigments, slate, &c. and for the first time observed the goat, prairie dogs, and a number of magpies.

On the 26th we arrived at a camp of the Titons, another band of the Souex, amounting to 100 lodges, where the same transactions took place as at the Yantas, and we promised them a trader, who was left at fort, Loisel, on Cedar Island, a few days journey from the village, near White River, a gentle stream which puts in on the south side, about 150 yards wide at its confluence with the Missouri. A few miles farther we got into the Great Bend, which performs a circuit of 40 or 50 miles, and approaches within two miles of the commencement of the circle it forms. From this place to the Richaree villages we had a brisk wind from the right quarter, which enabled us to use the sails every day. We passed several rivers and brooks, which to us were nameless, except the Chien on the south side, on which a branch of the Souex called Chiens reside: it is upwards of 200 yards wide at the mouth.

On the 12th of Sept. we arrived at the villages of the Richarees, who appeared much alarmed, and refused to come to council on that day, or at all, unless hostages were exchanged.

Having agreed with the Rees for an exchange of hostages, their fears were somewhat allayed, and a friendly intercourse took place. In the council they were asked why they had attacked the

Of a voyage from St. Louis, Louisiana, to the Mandan Village  
by Dr. Thomas, Surgeon to the party

---

party on the former expedition under Lieut. Prior: they replied that they were informed by a Frenchman, who resides among them, that the goods and barges were sent to them by their great father the President of the U. States as presents; that Lieut. Prior only gave medals, which they at first accepted, but on discovering that the goods were retained, they stamped on the medals, and attacked the boats; these circumstances together with the solicitations of the aforesaid Frenchman to fire upon the white people, was the cause of the unhappy misunderstanding.

The commander of the expedition, Mr. Pierre Chouteau, demanded the Frenchman; he was informed that he lived with a tribe of their nation called Scions, about 50 miles south; that he was married, and had a family.

On Mr. Chouteau's insisting to have him delivered up, they agreed to send a party of their young men to accompany Mr. C's. detachment to the village: however, when the party was prepared to set out, they refused to send the escorts so the affair was abandoned for the present.

We found that the Richarees and Mandans were at peace. A party of the latter were on a visit at the village, and were much pleased to see their countryman (Sheheken) returned safe. In the council the Ree's demands were similar to the Souex. They expressed extreme sorrow at the recollection of their own differences with Lieut. Prior; and their profuse hospitality in given corn and meat, evinced their satisfaction at the return of friendly intercourse. Two of principal Souex chiefs, having accompanied us to the village, also made peace with the Rees. However the latter expressed their sentiments very freely of the Souex: they said they only came to beg presents and smoke for horses; that they would pay little attention to their engagements; that they would break the treaty when opportunity offered. Sheheken appeared perfectly at home. He handed the calumet round the council room with all the gravity of an aginal statesman and warrior.

The Richaree towns are built on a handsome prairie, on the south side, about 500 yards apart, having a small river between, which puts into the Missouri. Their lodges are built somewhat similar to the Mahas, with the addition of having a covered entrance of 8, 10, or 15 yards. They appear to live much more comfortable than any of the other tribes, having their huts divided into chambers, with a neatness in their construction, which we had not witnessed before. Their corn fields, which border the Missouri, are well fenced, and better cultivated than many farms on the frontiers of the United States. Corn, pumions, simlins, beans, peas, melons, and a variety of other vegetables, are raised in abundance. Tobacco is not forgotten. This plant is much attended to; so much so as to form a considerable article of their trade.

The Rees believe in the existence of a Supreme Being. They also believe in an evil spirit, whom they worship in order to be on good terms with him, as they conceive he has power to spoil their hunts, and destroy their corn and vegetables. Among the multitude of domestic deities shall mention two kinds. A number of buffaloe heads are fixed on poles, in close and regular order, fantastically painted and decorated with feathers. The other consists of a box filled with small bones, buttons, beads, burnt feathers, and a variety of other trash, which is generally in the possession of their conjuror and doctor. He visits the sick, performs a number of fantasies, such as swallowing knives and arrows, blowing on and rubbing the patient. While this is performing, the miraculous box is hung over the sick. Should these efforts fail in restoring the sick, he is carried to the margin of the river, in view of the Buffaloe heads, where stones are heated, and a place erected over them to lay the patient: he is then covered with buffaloe skins or blankets, and a steam is created by throwing water on the hot stones. A violent perspiration is soon produced, in which state he is

---

Of a voyage from St. Louis, Louisiana, to the Mandan Village  
by Dr. Thomas, Surgeon to the party

---

thrown into the river. This is the last trial, which if not efficacious, the tormenters cease, and the wretched being is left to his fate.

The women are rather handsome than otherwise. They are treated in the same manner as among the other tribes. All the labours of the field, preparing food, dressing skins and fur, and making clothes for their brutal masters, fall to their lot. The men buy their wives, and consider them as beasts of burden. The men occupy their time in hunting, smoking, and the care of their horses. The company left a small boat with goods to exchange for horses with these people.

On the 14th of September we left the Rees for the Mandan villages. Having a succession of charming weather, I went on shore in several places. The only appearance of fertility is confined to the low grounds along the banks of the river. 'On the hills, which in many places approach the shore, I observed in several places the remains of volcanic matter.' Pumice is found in abundance, generally of a purple and brown colour. About half way between the Rees and Mandans, the white bear is first seen. From information which I received of the hunters, he is double the size of the black bear, and extremely ferocious, being the despotic tyrant of the plains and forests.

On the 21st we arrived at the first Mandan Village. This tribe had separated from the nation, and had removed 30 miles down the river. Sheheken prevailed on them to return and become friends. Here we discovered that he was the only chief of the one village, were we next day arrived. On our approach a salute was fired from the barges, and answered by the village. On raising the American flag, the barges was soon crowded with natives and mutual congratulations took place.

The gentlemen being invited to dine by Sheheken's brother, we found a plentiful supply of provisions. The ladies had prepared a large stew of meat, corn, and vegetables, and our feast was seasoned by genuine hospitality. In the afternoon we prepared to visit the upper towns. An elegant horse was presented to their travelled chief, who had put on his full dress of uniform suit. His horse was not forgot: he displayed considerable taste in dressing him in scarlet and gold laced housings, with a highly mounted bridle and saddle. Thus equipped, we set out accompanied by 30 or 40 of the natives on horseback. The singularity of our reception is worthy of notice. Having rode to the centre of the village, we remained some time before we were invited to enter the house of the chief. I was informed it was the custom on all occasions to stand in the most public place, and wait the invitation of some of the chiefs; otherwise it would be considered a gross violation of etiquette to enter the dwelling house of any one of these people without a formal invitation.

Sheheken's conduct amused us very much. His splendid uniform and horse furniture, his fine figure, his anxiety to appear to advantage, with the contrast when compared with his brother chiefs, who appeared impatient for the presents which they expected to receive from him, were very striking objects. 'These articles Sheheken received from the American government, and they had rendered him, in his opinion, the greatest man in his country. It was expected by his people that he would be pretty liberal in the distribution of some of his valuables. However, their hopes were vain: Sheheken was as anxious to retain his property, as they were to receive it. Murmurs took the place of mirth, and on our departure from the village, his popularity was on the decline.

A few miles above the upper villages the principal trading house was built; and the hunting parties amounting in all to about 100 men, set out for the three forks of the Missouri.

Information was received here, that the Blackfoot Indians, who reside at the foot of the mountains, were hostile; that the British had factories all over the country, and had impelled them to cut off Mr. Manuel Lisa's party. One of the survivors, of the name of Coulter, who had accompa-

Of a voyage from St. Louis, Louisiana, to the Mandan Village  
by Dr. Thomas, Surgeon to the party

---

nied Lewis and Clark, says, that he, in company with another was fired on by these Indians; that his companion, who made resistance, was killed; that his canoe, cloathing, furs, traps and arms were taken from him, and when expecting to receive the same fate of his comrade, he was ordered to run off as fast as possible; which he coldly complied with. Observing one of their young men following at full speed, armed with a spear, he pushed on to some distance, endeavouring to save his life. In a few minutes the savage was near enough to pitch his spear, which he poisoned, and threw with such violence as to break the handle and miss the object. Coulter became the assailant, turned on the Indian and put him to death with the broken spear. Naked and tired he crept to the river, where he hid in a beaver dam from the band who had followed to revenge the death of their companion. Having observed the departure of the enemy, he left the river and came to the Gros Ventres, a tribe of the Mandans, a journey of nine days, without even mowkasons to protect him from the prickly pear, which covered the country, subsisting on such berries as providence threw in his way.

On our return to the Rees villages we found that the Souex had killed some of their people, which they unaccountably blamed us for; and being privately informed they intended us mischief, we set out in the night, ordering the men to sleep on board. Unfortunately two of the hands, one of the name of Aaron Whitney, a native of Massachusetts, went into the village, contrary to orders, and were left behind. We arrived at St. Louis in 40 days from the Company's trading-house above the Gros Ventres, without any other accident.

Townsend's Across the Rockies to the Columbia

---

CHAPTER I

Arrival at St. Louis - Preparations for the journey - Saque Indians - Their appearance, dress, and manners - Squaws - Commencement of a pedestrian tour - Sandhill cranes - Prairie settlers - Their hospitality - Wild pigeons, golden plovers and prairie hens - Mr. P. and his daughters - An abundant repast - Simplicity of the prairie maidens - A deer and turkey hunt - Loutre Lick hotel - Unwelcome bed-fellows - A colored Charon - Comfortable quarters - Young men of the west - Reflections on leaving home - Loquacity of the inhabitants - Gray squirrels - Boonville - Parroquets - Embarkation in a steamboat - Large catfish - Accident on board the boat - Arrival at Independence - Description of the town - Procure a supply of horses - Encampment of the Rocky Mountain company - Character of the men - Preparation for departure - Requisites of a leader - Backwoods familiarity - Milton Sublette and his band - Rev. Jason Lee, the missionary - A letter from home - Mormonites - Military discipline and its consequences.

On the evening of the 24th of March, 1834, Mr. NUTTALL and myself arrived at St. Louis, in the steamboat Boston, from Pittsburg.

On landing, we had the satisfaction to learn that Captain WYETH was already there, and on the afternoon of the next day we called upon him, and consulted him in reference to the outfit which it would be necessary to purchase for the journey. He accompanied us to a store in the town, and selected a number of articles for us, among which were several pairs of leathern pantaloons, enormous over-coats, made of green blankets, and white wool hats, with round crowns, fitting tightly to the head, brims five inches wide, and almost hard enough to resist a rifle ball.

The day following we saw about one hundred Indians of the Saque tribe, who had left their native forests for the purpose of treating for the sale of some land at the Jefferson barracks. They were dressed and decorated in the true primitive style; their heads shaved closely, and painted with alternate stripes of fiery red and deep black, leaving only the long scalping tuft, in which was interwoven a quantity of elk hair and eagle's feathers. Each man was furnished with a good blanket, and some had an under dress of calico, but the greater number were entirely naked to the waist. The faces and bodies of the men were, almost without an exception, fantastically painted, the predominant color being deep red, with occasionally a few stripes of dull clay white around the eyes and mouth. I observed one whose body was smeared with light colored clay, interspersed with black streaks. They were unarmed, with the exception of tomahawks and knives. The chief of the band, (who is said to be Black Hawk's father-in-law) was a large dignified looking man, of perhaps fifty-five years of age, distinguished from the rest, by his richer habiliments, a more profuse display of trinkets in his ears, (which were cut and gashed in a frightful manner to receive them,) and above all, by a huge necklace made of the claws of the grizzly bear. The squaws, of whom there were about twenty, were dressed very much like the men, and at a little distance could scarcely be distinguished from them. Among them was an old, superannuated crone, who, soon after her arrival, had been presented with a broken umbrella. The only use that she made of it was to wrench the plated ends from the whalebones, string them on a piece of wire, take her knife from her belt, with which she deliberately cut a slit of an inch in length along the upper rim of her ear, and insert them in it. I saw her soon after this operation had been performed; her cheeks were covered with blood, and she was standing with a vast deal of assumed dignity among her tawny sisters, who evidently envied her the possession of the worthless baubles.

---

28th.- Mr. N. and myself propose starting to-morrow on foot towards the upper settlements, a distance of about three hundred miles. We intend to pursue our journey leisurely, as we have plenty of time before us, and if we become tired, we can enter the stage which will probably overtake us.

29th.- This morning our Indians returned from the barracks, where I understand they transacted their business satisfactorily. I went on board the boat again to see them. I feel very much interested in them, as they are the first Indians I have ever seen who appear to be in a state of uncultivated nature, and who retain the savage garb and manners of their people. They had engaged the entire covered deck for their especial use, and were lolling about in groups, wrapped in their blankets. Some were occupied in conversation, others seemed more contemplative, and appeared to be thinking deeply, probably of the business which brought them amongst us. Here and there two might be seen playing a Spanish game with cards, and some were busily employed in rendering themselves more hideous with paint. To perform this operation, the dry paint is folded in a thin muslin or gauze cloth, tied tightly and beaten against the face, and a small looking-glass is held in the other hand to direct them where to apply it. Two middle aged squaws were frying beef, which they distributed around to the company in wooden bowls, and several half loaves of bread were circulating rapidly amongst them, by being tossed from one to another, each taking a huge bite of it. There were among the company, several younger females, but they were all so hard favored that I could not feel much sympathy with them, and was therefore not anxious to cultivate their acquaintance. There was another circumstance, too, that was not a very attractive one; I allude to the custom so universal amongst Indians, of seeking for vermin in each other's heads, and then eating them. The fair damsels were engaged in this way during most of the time that I remained on board, only suspending their delectable occupation to take their bites of bread as it passed them in rotation. The effect upon my person was what an Irishman would call the attraction of repulsion, as I found myself almost unconsciously edging away until I halted at a most respectable distance from the scene of slaughter.

At noon, Mr. N. and myself started on our pedestrian tour, Captain Wyeth offering to accompany us a few miles on the way. I was glad to get clear of St. Louis, as I felt uncomfortable in many respects while there, and the bustle and restraint of a town was any thing but agreeable to me. We proceeded over a road generally good, a low dry prairie, mostly heavily timbered, the soil underlaid with horizontal strata of limestone, abounding in organic remains, shells, corallines, &c., and arrived in the evening at Florissant, where we spent the night. The next day Captain Wyeth left us for St. Louis, and my companion and myself proceeded on our route. We observed great numbers of the brown, or sandhill crane, (*Grus canadensis*,) flying over us; some flocks were so high as to be entirely beyond the reach of vision, while their harsh, grating voices were very distinctly heard. We saw several flocks of the same cranes while ascending the Mississippi, several days since. At about noon, we crossed the river on a boat worked by horses, and stopped at a little town called St. Charles.

We find it necessary, both for our comfort and convenience, to travel very slowly, as our feet are already becoming tender, and that we may have an opportunity of observing the country, and collecting interesting specimens. Unfortunately for the pursuits of my companion, the plants (of which he finds a number that are rare and curious) are not yet in flower, and therefore of little use to him. The birds are in considerable numbers, among the principal of which is the large pileated

---

woodpecker, (*Picus pileatus*.)

Mr. N. and myself are both in high spirits. We travel slowly, and without much fatigue, and when we arrive at a house, stop and rest, take a drink of milk, and chat with those we see. We have been uniformly well treated; the living is good, and very cheap, and at any house at which we stop the inhabitants are sure to welcome us to their hospitality and good cheer. They live comfortably, and without much labor; possess a fruitful and easily tilled soil, for which they pay the trifling sum of one dollar and a quarter per acre; they raise an abundance of good Indian corn, potatoes, and other vegetables; have excellent beef and pork, and, in short, every thing necessary for good, wholesome living.

31st. The road to-day was muddy and slippery, rendered so by a heavy rain which fell last night. This morning, we observed large flocks of wild pigeons passing over, and on the bare prairies were thousands of golden plovers; the ground was often literally covered with them for acres. I killed a considerable number. They were very fat, and we made an excellent meal of them in the evening. The prairie hen, or pinnated grouse, is also very numerous, but in these situations is shy, and difficult to be procured.

Towards evening we were overtaken by a bluff, jolly looking man, on horseback, who, as is usual, stopped, and entered into conversation with us. I saw immediately that he was superior to those we had been accustomed to meet. He did not ply us with questions so eagerly as most, and when he heard that we were naturalists, and were travelling in that capacity, he seemed to take considerable interest in us. He invited us to stop at his house, which was only a mile beyond, and as night was almost upon us, we accepted the invitation with cheerfulness. Upon arriving at his mansion, our good host threw wide his hospitable doors, and then with a formal, and rather ultra-dignified politeness, making us a low bow, said, "Gentlemen, my name is P., and I am very happy of your company." We seated ourselves in a large, and well-furnished parlor. Mr. P. excused himself for a few minutes, and soon returned, bringing in three fine looking girls, whom he introduced as his daughters. I took a particular fancy to one of them from a strong resemblance which she bore to one of my female friends at home. These girls were certainly very superior to most that I had seen in Missouri, although somewhat touched with the awkward bashfulness and prudery which generally characterizes the prairie maidens. They had lost their mother when young, and having no companions out of the domestic circle, and consequently no opportunity of aping the manners of the world, were perfect children of nature. Their father, however, had given them a good, plain education, and they had made some proficiency in needle work, as was evinced by numerous neatly worked samplers hanging in wooden frames around the room. Anon, supper was brought in. It consisted of pork chops, ham, eggs, Indian bread and butter, tea, coffee, milk, potatoes, preserved ginger, and though last, certainly not least in value, an enormous tin dish of plovers, (the contents of my game-bag,) fricasseed. Here was certainly a most abundant repast, and we did ample justice to it.

I endeavored to do the agreeable to the fair ones in the evening, and Mr. N. was monopolized by the father, who took a great interest in plants, and was evidently much gratified by the information my companion gave him on the subject.

The next morning when we rose, it was raining, and much had evidently fallen during the night, making the roads wet and muddy, and therefore unpleasant for pedestrians. I confess I was not sorry for this, for I felt myself very comfortably situated, and had no wish to take to the road. Mr.

P. urged the propriety of our stopping at least another day, and the motion being seconded by his fair daughter, (my favorite,) it was irresistible. On the following morning the sun was shining brightly, the air was fresh and elastic, and the roads tolerably dry, so that there was no longer any excuse for tarrying, and we prepared for our departure. Our good host, grasping our hands, said that he had been much pleased with our visit, and hoped to see us again, and when I bid good bye to the pretty Miss P., I told her that if I ever visited Missouri again, I would go many miles out of my way to see her and her sisters. Her reply was unsophisticated enough. "Do come again, and come in May or June, for then there are plenty of prairie hens, and you can shoot as many as you want, and you must stay a long while with us, and we'll have nice times; good bye; I'm so sorry you're going."

April 4th. I rose this morning at daybreak, and left Mr. N. dreaming of weeds, in a little house at which we stopped last night, and in company with a long, lanky boy, (a son of the poor widow, our hostess,) set to moulding bullets in an old iron spoon, and preparing for deer hunting. The boy shouldered a rusty rifle, that looked almost antediluvian, and off we plodded to a thicket, two miles from the house. We soon saw about a dozen fine deer, and the boy, clapping his old firelock to his shoulder, brought down a beautiful doe at the distance of a full hundred yards. Away sprang the rest of the herd, and I crept round the thicket to meet them. They soon came up, and I fired my piece at a large buck, and wounded the poor creature in the leg; he went limping away, unable to overtake his companions; I felt very sorry, but consoled myself with the reflection that he would soon get well again.

We then gave up the pursuit, and turned our attention to the turkies, which were rather numerous in the thicket. They were shy, as usual, and, when started from their lurking places, ran away like deer, and hid themselves in the underwood. Occasionally, however, they would perch on the high limbs of the trees, and then we had some shots at them. In the course of an hour we killed four, and returned to the house, where, as I expected, Mr. N. was in a fever at my absence, and after a late, and very good breakfast, proceeded on our journey.

We find in this part of the country less timber in the same space than we have yet seen, and when a small belt appears, it is a great relief, as the monotony of a bare prairie becomes tiresome. Towards evening we arrived at Loutre Lick. Here there is a place called a Hotel. A Hotel, forsooth! a pig-stye would be a more appropriate name. Every thing about it was most exceedingly filthy and disagreeable, but no better lodging was to be had, for it might not be proper to apply for accommodation at a private house in the immediate vicinity of a public one. They gave us a wretched supper, not half so good as we had been accustomed to, and we were fain to spend the evening in a comfortless, unfurnished, nasty barroom, that smelt intolerably of rum and whiskey, to listen to the profane conversation of three or four uncouth individuals, (among whom were the host and his brother,) and to hear long and disagreeably minute discussions upon horse-racing, gambling, and other vices equally unpleasant to us.

The host's brother had been to the Rocky Mountains, and soon learning our destination, gave us much unsought for advice regarding our method of journeying; painted in strong colors the many dangers and difficulties which we must encounter, and concluded by advising us to give up the expedition. My fast ebbing patience was completely exhausted. I told him that nothing that he could say would discourage us, -- that we went to that house in order to seek repose, and it was unfair to intrude conversation upon us unasked. The ruffian made some grumbling reply, and

---

left us in quiet and undisturbed possession of our bench. We had a miserable time that night. The only spare bed in the house was so intolerably filthy that we dared not undress, and we had hardly closed our eyes before we were assailed by swarms of a vile insect, (the very name of which is offensive,) whose effluvia we had plainly perceived immediately as we entered the room. It is almost needless to say, that very early on the following morning, after paying our reckoning, and refusing the landlord's polite invitation to "liquorize," we marched from the house, shook the dust from our feet, and went elsewhere to seek a breakfast.

Soon after leaving, we came to a deep and wide creek, and strained our lungs for half an hour in vain endeavors to waken a negro boy who lived in a hut on the opposite bank, and who, we were told, would ferry us over. He came out of his den at last, half naked and rubbing his eyes to see who had disturbed his slumbers so early in the mornning. We told him to hurry over, or we'd endeavor to assist him, and he came at last, with a miserable leaky little skiff that wet our feet completely. We gave him a pickayune for his trouble, and went on. We soon came to a neat little secluded cottage in the very heart of a thick forest, where we found a fine looking young man, with an interesting wife, and a very pretty child about six months old. Upon being told that we wanted some breakfast, the woman tucked up her sleeves, gave the child to her husband, and went to work in good earnest. In a very short time a capital meal was smoking on the board, and while we were partaking of the good cheer, we found our vexation rapidly evaporating. We complimented the handsome young hostess, patted the chubby cheeks of the child, and were in a good humor with every body.

6th. Soon after we started this morning, we were overtaken by a stage which was going to Fulton, seven miles distant, and as the roads were somewhat heavy, we concluded to make use of this convenience. The only passengers were three young men from the far west, who had been to the eastward purchasing goods, and were then travelling homeward. Two of them evidently possessed a large share of what is called mother wit, and so we had jokes without number. Some of them were not very refined, and perhaps did not suit the day very well, (it being the Sabbath,) yet none of them were really offensive, but seemed to proceed entirely from an exuberance of animal spirits. In about an hour and a half we arrived at Fulton, a pretty little town, and saw the villagers in their holiday clothes parading along to church. The bell at that moment sounded, and the peal gave rise to many reflections. It might be long ere I should hear the sound of the "church-going bell" again. I was on to a far far country, and I did not know that I should ever be permitted to revisit my own. I felt that I was leaving the scenes of my childhood; the spot which had witnessed all the happiness I ever knew, the home where all my affections were centered. I was entering a land of strangers, and would be compelled hereafter to mingle with those who might look upon me with indifference, or treat me with neglect.

These reflections were soon checked, however. We took a light lunch at the tavern where we stopped. I shouldered my gun, Mr. N. his stick and bundle, and off we trudged again, westward, ho! We soon lost sight of the prairie entirely, and our way lay through a country thickly covered with heavy timber, the roads very rough and stony, and we had frequently to ford the creeks on our route, the late freshets having carried away the bridges.

Our accommodation at the farm houses has generally been good and comfortable, and the inhabitants obliging, and anxious to please. They are, however, exceedingly inquisitive, propounding question after question, in such quick succession as scarcely to allow you breathing time between

them. This kind of catechising was at first very annoying to us, but we have now become accustomed to it, and have hit upon an expedient to avoid it in a measure. The first question generally asked, is, "where do you come from, gentlemen?" We frame our answer somewhat in the style of Dr. Franklin. "We come from Pennsylvania; our names, Nuttall and Townsend; we are travelling to Independence on foot, for the purpose of seeing the country to advantage, and we intend to proceed from thence across the mountains to the Pacific. Have you any mules to sell?" The last clause generally changes the conversation, and saves us trouble. To a stranger, and one not accustomed to the manners of the western people, this kind of interrogating seems to imply a lack of modesty and common decency, but it is certainly not so intended, each one appearing to think himself entitled to gain as much intelligence regarding the private affairs of a stranger, as a very free use of his lingual organ can procure for him.

We found the common gray squirrel very abundant in some places, particularly in the low bottoms along water courses; in some situations we saw them skipping on almost every tree. On last Christmas day, at a squirrel hunt in this neighborhood, about thirty persons killed the astonishing number of twelve hundred, between the rising and setting of the sun.

This may seem like useless barbarity, but it is justified by the consideration that all the crops of corn in the country are frequently destroyed by these animals. This extensive extermination is carried on every year, and yet it is said that their numbers do not appear to be much diminished. About mid-day on the 7th, we passed through a small town called Columbia, and stopped in the evening at Rocheport, a little village on the Missouri river. We were anxious to find a steam-boat bound for Independence, as we feared we might linger too long upon the road to make the necessary preparations for our contemplated journey.

On the following day, we crossed the Missouri, opposite Rocheport, in a small skiff. The road here, for several miles, winds along the bank of the river, amid fine groves of sycamore and Athenian poplars, then stretches off for about three miles, and does not again approach it until you arrive at Boonville. It is by far the most hilly road that we have seen, and I was frequently reminded, while travelling on it, of our Chester county. We entered the town of Boonville early in the afternoon, and took lodgings in a very clean, and respectably kept hotel. I was much pleased with Boonville. It is the prettiest town I have seen in Missouri; situated on the bank of the river, on an elevated and beautiful spot, and overlooks a large extent of lovely country. The town contains two good hotels, (but no grog shops, properly so called,) several well-furnished stores, and five hundred inhabitants. It was laid out thirty years ago by the celebrated western pioneer, whose name it bears.

We saw here vast numbers of the beautiful parrot of this country, (the *Psittacus carolinensis*.) They flew around us in flocks, keeping a constant and loud screaming, as though they would chide us for invading their territory; and the splendid green and red of their plumage glancing in the sunshine, as they whirled and circled within a few feet of us, had a most magnificent appearance. They seem entirely unsuspecting of danger, and after being fired at, only huddle closer together, as if to obtain protection from each other, and as their companions are falling around them, they curve down their necks, and look at them fluttering upon the ground, as though perfectly at a loss to account for so unusual an occurrence. It is a most inglorious sort of shooting; down right, cold-blooded murder.

On the afternoon of the 9th, a steamboat arrived, on board of which we were surprised and

pleased to find Captain Wyeth, and our "plunder." We embarked immediately, and soon after, were puffing along the Missouri, at the rate of seven miles an hour. When we stopped in the afternoon to "wood," we were gratified by a sight of one of the enormous catfish of this river and the Mississippi, weighing full sixty pounds. It is said, however, that they are sometimes caught of at least double this weight. They are excellent eating, coarser, but quite as good as the common small catfish of our rivers. There is nothing in the scenery of the river banks to interest the traveler particularly. The country is generally level and sandy, relieved only by an occasional hill, and some small rocky acclivities.

A shocking accident happened on board during this trip. A fine looking black boy (a slave of one of the deck passengers) was standing on the platform near the fly-wheel. The steam had just been stopped off, and the wheel was moving slowly by the impetus it had acquired. The poor boy unwittingly thrust his head between the spokes; a portion of the steam was at that moment let on, and his head and shoulders were torn to fragments. We buried him on shore the same day; the poor woman, his mistress, weeping and lamenting over him as for her own child. She told me she had brought him up from an infant; he had been as an affectionate son to her, and for years her only support.

March 20th. - On the morning of the 14th, we arrived at Independence landing, and shortly afterwards, Mr. N. and myself walked to the town, three miles distant. The country here is very hilly and rocky, thickly covered with timber, and no prairie within several miles. The site of the town is beautiful, and very well selected, standing on a high point of land, and overlooking the surrounding country, but the town itself is very indifferent; the houses, (about fifty,) are very much scattered, composed of logs and clay, and are low and inconvenient. There are six or eight stores here, two taverns, and a few tipling houses. As we did not fancy the town, nor the society that we saw there, we concluded to take up our residence at the house on the landing until the time of starting on our journey. We were very much disappointed in not being able to purchase any mules here, all the salable ones having been bought by the Santa Fee traders, several weeks since. Horses, also, are rather scarce, and are sold at higher prices than we had been taught to expect, the demand for them at this time being greater than usual. Mr. N. and myself have, however, been so fortunate as to find five excellent animals amongst the hundreds of wretched ones offered for sale, and have also engaged a man to attend to packing our loads, and perform the various duties of our camp. The men of the party, to the number of about fifty, are encamped on the bank of the river, and their tents whiten the plain for the distance of half a mile. I have often enjoyed the view on a fine moonlight evening from the door of the house, or perched upon a high hill immediately over the spot. The beautiful white tents, with a light gleaming from each, the smouldering fires around them, the incessant hum of the men, and occasionally the lively notes of a bacchanalian song, softened and rendered sweeter by distance. I probably contemplate these and similar scenes with the more interest, as they exhibit the manner in which the next five months of my life are to be spent.

We have amongst our men, a great variety of dispositions. Some who have not been accustomed to the kind of life they are to lead in future, look forward to it with eager delight, and talk of stirring incidents and hair-breadth 'scapes. Others who are more experienced seem to be as easy and unconcerned about it as a citizen would be in contemplating a drive of a few miles into the country. Some have evidently been reared in the shade, and not accustomed to hardships, but the

majority are strong, able-bodied men, and many are almost as rough as the grizzly bears, of their feats upon which they are fond of boasting.

During the day the captain keeps all his men employed in arranging and packing a vast variety of goods for carriage. In addition to the necessary clothing for the company, arms, ammunition, &c., there are thousands of trinkets of various kinds, beads, paint, bells, rings, and such trumpery, intended as presents for the Indians, as well as objects of trade with them. The bales are usually made to weigh about eighty pounds, of which a horse carries two.

I am very much pleased with the manner in which Captain W. manages his men. He appears admirably calculated to gain the good will, and ensure the obedience of such a company, and adopts the only possible mode of accomplishing his end. They are men who have been accustomed to act independently; they possess a strong and indomitable spirit which will never succumb to authority, and will only be conciliated by kindness and familiarity. I confess I admire this spirit. It is noble; it is free and characteristic, but for myself, I have not been accustomed to seeing it exercised, and when a rough fellow comes up without warning, and slaps me on the shoulder, with, "stranger what for a gun is that you carry?" I start, and am on the point of making an angry reply, but I remember where I am, check the feeling instantly, and submit the weapon to his inspection. Captain W. may frequently be seen sitting on the ground, surrounded by a knot of his independents, consulting them as to his present arrangements and future movements, and paying the utmost deference to the opinion of the least among them.

We were joined here by Mr. Milton Sublette, a trader and trapper of some ten or twelve years' standing. It is his intention to travel with us to the mountains, and we are very glad of his company, both on account of his intimate acquaintance with the country, and the accession to our band of about twenty trained hunters, "true as the steel of their tried blades," who have more than once followed their brave and sagacious leader over the very track which we intend to pursue. He appears to be a man of strong sense and courteous manners, and his men are enthusiastically attached to him.

Five missionaries, who intend to travel under our escort, have also just arrived. The principal of these is a Mr. Jason Lee, (a tall and powerful man, who looks as though he were well calculated to buffet difficulties in a wild country,) his nephew, Mr. Daniel Lee, and three younger men of respectable standing in society, who have arrayed themselves under the missionary banner, chiefly for the gratification of seeing a new country, and participating in strange adventures.

My favorites, the birds, are very numerous in this vicinity, and I am therefore in my element. Parroquets are plentiful in the bottom lands, the two species of squirrel are abundant, and rabbits, turkies, and deer are often killed by our people.

I was truly rejoiced to receive yesterday a letter from my family. I went to the office immediately on my arrival here, confidently expecting to find one lying there for me; I was told there was none, and I could not believe it, or would not; I took all the letters in my hand, and examined each of them myself, and I suppose that during the process my expressions of disappointment were "loud and deep," as I observed the eyes of a number of persons in the store directed towards me with manifest curiosity and surprise. The obtuse creatures could not appreciate my feelings. I was most anxious to receive intelligence from home, as some of the members of the family were indisposed when I left, and in a few days more I should be traversing the uncultivated prairie and the dark forest, and perhaps, never hear from my home again. The letter came at last, however,

---

and was an inexpressible consolation to me.

The little town of Independence has within a few weeks been the scene of a brawl, which at one time threatened to be attended with serious consequences, but which was happily settled without bloodshed. It had been for a considerable time the stronghold of a sect of fanatics, called Mormons, or Mormonites, who, as their numbers increased, and they obtained power, showed an inclination to lord it over the less assuming inhabitants of the town. This was a source of irritation which they determined to rid themselves of in a summary manner, and accordingly the whole town rose, en masse, and the poor followers of the prophet were forcibly ejected from the community. They took refuge in the little town of Liberty, on the opposite side of the river, and the villagers here are now in a constant state of feverish alarm. Reports have been circulated that the Mormons are preparing to attack the town, and put the inhabitants to the sword, and they have therefore stationed sentries along the river for several miles, to prevent the landing of the enemy. The troops parade and study military tactics every day, and seem determined to repel, with spirit, the threatened invasion. The probability is, that the report respecting the attack, is, as John Bull says, "all humbug," and this training and marching has already been a source of no little annoyance to us, as the miserable little skeleton of a saddler who is engaged to work for our party, has neglected his business, and must go a soldiering in stead. A day or two ago, I tried to convince the little man that he was of no use to the army, for if a Mormon were to say pooh at him, it would blow him away beyond the reach of danger or of glory; but he thought not, and no doubt concluded that he was a "marvelous proper man," so we were put to great inconvenience waiting for our saddles.

Townsend's Across the Rockies to the Columbia

## CHAPTER II

Departure of the caravan - A storm on the prairie - Arrangement of the camp - The cook's desertion - Kansas Indians - Kansas river - Indian lodges - Passage of the river - Buffalo canoes - Kansas chief - Costume of the Indians - Upper Kaw village - Their wigwams - Catfish and ravens - Return of Mr. Sublette - Pawnee trace - Desertion of three men - Difficulties occasioned by losing the trail - Intelligence of Mr. Sublette's party - Escape of the band of horses - Visit of three Otto Indians - Anecdote of Richardson, the chief hunter - His appearance and character - White wolves and antelopes - Buffalo bones - Sublette's deserted camp - Lurking wolves.

On the 28th of April, at 10 o'clock in the morning, our caravan, consisting of seventy men, and two hundred and fifty horses, began its march; Captain Wyeth and Milton Sublette took the lead, Mr. N. and myself rode beside them; then the men in double file, each leading, with a line, two horses heavily laden, and Captain Thing (Captain W.'s assistant) brought up the rear. The band of missionaries, with their horned cattle, rode along the flanks.

I frequently sallied out from my station to look at and admire the appearance of the cavalcade, and as we rode out from the encampment, our horses prancing, and neighing, and pawing the ground, it was altogether so exciting that I could scarcely contain myself. Every man in the company seemed to feel a portion of the same kind of enthusiasm; uproarious bursts of merriment, and gay and lively songs, were constantly echoing along the line. We were certainly a most merry and happy company. What cared we for the future? We had reason to expect that ere long difficulties and dangers, in various shapes, would assail us, but no anticipation of reverses could check

the happy exuberance of our spirits.

Our road lay over a vast rolling prairie, with occasional small spots of timber at the distance of several miles apart, and this will no doubt be the complexion of the track for some weeks.

In the afternoon we crossed the Big Blue river at a shallow ford. Here we saw a number of beautiful yellow-headed troopials, (*Icterus zanthrocephalus*,) feeding upon the prairie in company with large flocks of black birds, and like these, they often alight upon the backs of our horses.

29th. A heavy rain fell all the morning, which had the effect of calming our transports in a great measure, and in the afternoon it was succeeded by a tremendous hail storm. During the rain, our party left the road, and proceeded about a hundred yards from it to a range of bushes, near a stream of water, for the purpose of encamping. We had just arrived here, and had not yet dismounted, when the hail storm commenced. It came on very suddenly, and the stones, as large as musket balls, dashing upon our horses, created such a panic among them, that they plunged, and kicked, and many of them threw their loads, and fled wildly over the plain. They were all overtaken, however, and as the storm was not of long duration, they were soon appeased, and staked for the night.

To stake or fasten a horse for the night, he is provided with a strong leathern halter, with an iron ring attached to the chin strap. To this ring, a rope of hemp or plaited leather, twenty-two feet in length, is attached, and the opposite end of the line made fast with several clove hitches around an oak or hickory pin, two and a half feet long. The top of this pin or stake is ringed with iron to prevent its being bruised, and it is then driven to the head in the ground.

For greater security, hobbles made of stout leather are buckled around the fore legs; and then, if the tackling is good, it is almost impossible for a horse to escape. Care is always taken to stake him in a spot where he may eat grass all night. The animals are placed sufficiently far apart to prevent them interfering with each other.

Camping out to-night is not so agreeable as it might be, in consequence of the ground being very wet and muddy, and our blankets (our only bedding) thoroughly soaked; but we expect to encounter greater difficulties than these ere long, and we do not murmur.

A description of the formation of our camp may, perhaps, not be amiss here. The party is divided into messes of eight men, and each mess is allowed a separate tent. The captain of a mess, (who is generally an "old hand," i.e. an experienced forester, hunter, or trapper,) receives each morning the rations of pork, flour, &c. for his people, and they choose one of their body as cook for the whole. Our camp now consists of nine messes, of which Captain W.'s forms one, although it only contains four persons besides the cook.

When we arrive in the evening at a suitable spot for an encampment, Captain W. rides round a space which he considers large enough to accommodate it, and directs where each mess shall pitch its tent. The men immediately unload their horses, and place their bales of goods in the direction indicated, and in such manner, as in case of need, to form a sort of fortification and defence. When all the messes are arranged in this way, the camp forms a hollow square, in the centre of which the horses are placed and staked firmly to the ground. The guard consists of from six to eight men, and is relieved three times each night, and so arranged that each gang may serve alternate nights. The captain of a guard (who is generally also the captain of a mess) collects his people at the appointed hour, and posts them around outside the camp in such situations that they may command a view of the environs, and be ready to give the alarm in case of danger.

The captain cries the hour regularly by a watch, and all's well, every fifteen minutes, and each man of the guard is required to repeat this call in rotation, which if any one should fail to do, it is fair to conclude that he is asleep, and he is then immediately visited and stirred up. In case of defecation of this kind, our laws adjudge to the delinquent the hard sentence of walking three days. As yet none of our poor fellows have incurred this penalty, and the probability is, that it would not at this time be enforced, as we are yet in a country where little molestation is to be apprehended; but in the course of another week's travel, when thieving and ill-designing Indians will be outlying on our trail, it will be necessary that the strictest watch be kept, and, for the preservation of our persons and property, that our laws shall be rigidly enforced.

May 1st. On rising this morning, and inquiring about our prospects of a breakfast, we discovered that the cook of our mess (a little, low-browed, ill-conditioned Yankee) had decamped in the night, and left our service to seek for a better. He probably thought the duties too hard for him, but as he was a miserable cook, we should not have much regretted his departure, had he not thought proper to take with him an excellent rifle, powder-horn, shot-pouch, and other matters that did not belong to him. It is only surprising that he did not select one of our best horses to carry him; but as he had the grace to take his departure on foot, and we have enough men without him, we can wish him God speed, and a fair run to the settlements.

We encamped this evening on a small branch of the Kansas river. As we approached our stopping place, we were joined by a band of Kansas Indians, (commonly called KawIndians.) They are encamped in a neighboring copse, where they have six lodges. This party is a small division of a portion of this tribe, who are constantly wandering; but although their journeys are sometimes pretty extensive, they seldom approach nearer to the settlements than they are at present. They are very friendly, are not so tawdrily decorated as those we saw below, and use little or no paint. This may, however, be accounted for by their not having the customary ornaments, &c., as their ears are filled with trinkets of various kinds, and are horribly gashed in the usual manner. The dress of most that we have seen, has consisted of ordinary woollen pantaloons received from the whites, and their only covering, from the waist up, is a blanket or buffalo robe. The head is shaved somewhat in the manner of the Sâques and Foxes, leaving the well known scalping tuft; but unlike the Indians just mentioned, the hair is allowed to grow upon the middle of the head, and extends backwards in a longitudinal ridge to the occiput. It is here gathered into a kind of queue, plaited, and suffered to hang down the back. There were amongst them several squaws, with young children tied to their backs, and a number of larger urchins ran about our camp wholly naked.

The whole of the following day we remained in camp, trading buffalo robes, apishemeaus, &c., of the Indians. These people became at length somewhat troublesome to us who were not traders, by a very free exercise of their begging propensities. They appear to be exceedingly poor and needy, and take the liberty of asking unhesitatingly, and without apparent fear of refusal, for any articles that happen to take their fancy.

I have observed, that among the Indians now with us, none but the chief uses the pipe. He smokes the article called *kanikanik*,-- a mixture of tobacco and the dried leaves of the poke plant, (*Phytolacca decandra*.) I was amused last evening by the old chief asking me in his impressive manner, (first by pointing with his finger towards the sunset, and then raising his hands high over his head,) if I was going to the mountains. On answering him in the affirmative, he depressed his hands, and passed them around his head in both directions, then turned quickly away from me,

with a very solemn and significant sigh! He meant, doubtless, that my brain was turned; in plain language, that I was a fool. This may be attributed to his horror of the Blackfoot Indians, with whom a portion of his tribe was formerly at war. The poor Kaws are said to have suffered dreadfully in these savage conflicts, and were finally forced to abandon the country to their hereditary foes.

We were on the move early the next morning, and at noon arrived at the Kansas river, a branch of the Missouri. This is a broad and not very deep stream, with the water dark and turbid, like that of the former. As we approached it, we saw a number of Indian lodges, made of saplings driven into the ground, bent over and tied at top, and covered with bark and buffalo skins. These lodges, or wigwams, are numerous on both sides of the river. As we passed them, the inhabitants, men, women, and children, flocked out to see us, and almost prevented our progress by their eager greetings. Our party stopped on the bank of the river, and the horses were unloaded and driven into the water. They swam beautifully, and with great regularity, and arrived safely on the opposite shore, where they were confined in a large lot, enclosed with a fence. After some difficulty, and considerable detention, we succeeded in procuring a large flat bottomed boat, embarked ourselves and goods in it, and landed on the opposite side near our horse pen, where we encamped. The lodges are numerous here, and there are also some good frame houses inhabited by a few white men and women, who subsist chiefly by raising cattle, which they drive to the settlements below. They, as well as the Indians, raise an abundance of good corn; potatoes and other vegetables are also plentiful, and they can therefore live sufficiently well.

The canoes used by the Indians are mostly made of buffalo skins, stretched, while recent, over a light frame work of wood, the seams sewed with sinews, and so closely, as to be wholly impervious to water. These light vessels are remarkably buoyant, and capable of sustaining very heavy burthens.

In the evening the principal Kansas chief paid us a visit in our tent. He is a young man about twenty-five years of age, straight as a poplar, and with a noble countenance and bearing, but he appeared to me to be marvelously deficient in most of the requisites which go to make the character of a real Indian chief, at least of such Indian chiefs as we read of in our popular books. I begin to suspect, in truth, that these lofty and dignified attributes are more apt to exist in the fertile brain of the novelist, than in reality. Be this as it may, our chief is a very lively, laughing, and rather playful personage; perhaps he may put on his dignity, like a glove, when it suits his convenience.

We remained in camp the whole of next day, and traded with the Indians for a considerable number of robes, apishemeaus, and halter ropes of hide. Our fat bacon and tobacco were in great demand for these useful commodities.

The Kaws living here appear to be much more wealthy than those who joined our camp on the prairie below. They are in better condition, more richly dressed, cleaner, and more comfortable than their wandering brothers. The men have generally fine countenances, but all the women that I have seen are homely. I cannot admire them. Their dress consists, universally of deer skin leggings, belted around the loins, and over the upper part of the body a buffalo robe or blanket.

On the 20th in the morning, we packed our horses and rode out of the Kaw settlement, leaving the river immediately, and making a N. W. by W. course and the next day came to another village of the same tribe, consisting of about thirty lodges, and situated in the midst of a beautiful level

---

prairie.

The Indians stopped our caravan almost by force, and evinced so much anxiety to trade with us, that we could not well avoid gratifying them. We remained with them about two hours, and bought corn, moccasins and leggings in abundance. The lodges here are constructed very differently from those of the lower village. They are made of large and strong timbers, a ridge pole runs along the top, and the different pieces are fastened together by leathern thongs. The roofs, -which are single, making but one angle, -are of stout poplar bark, and form an excellent defence, both against rain and the rays of the sun, which must be intense during midsummer in this region. These prairies are often visited by heavy gales of wind, which would probably demolish the huts, were they built of frail materials like those below. We encamped in the evening on a small stream called Little Vermillion creek, where we found an abundance of excellent catfish, exactly similar to those of the Schuylkill river. Our people caught them in great numbers. Here we first saw the large ravens, (*Corvus corax*.) They hopped about the ground all around our camp; and as we left it, they came in, pell-mell, croaking, fighting, and scrambling for the few fragments that remained. 8th.-This morning Mr. Sublette left us to return to the settlements. He has been suffering for a considerable time with a fungus in one of his legs, and it has become so much worse since we started, in consequence of irritation caused by riding, that he finds it impossible to proceed. His departure has thrown a gloom over the whole camp. We all admired him for his amiable qualities, and his kind and obliging disposition. For myself, I had become so much attached to him, that I feel quite melancholy about his leaving us.

The weather is now very warm, and there has been a dead calm all day, which renders travelling most uncomfortable. We have frequently been favored with fresh breezes, which make it very agreeable, but the moment these fail us we are almost suffocated with intense heat. Our rate of travelling is about twenty miles per day, which, in this warm weather, and with heavily packed horses, is as much as we can accomplish with comfort to ourselves and animals.

On the afternoon of the next day, we crossed a broad Indian trail, bearing northerly, supposed to be about five days old, and to have been made by a war party of Pawnees. We are now in the country traversed by these Indians, and are daily expecting to see them, but Captain W. seems very desirous to avoid them, on account of their well known thieving propensities and quarrelsome disposition. These Indians go every year to the plains of the Platte, where they spend some weeks in hunting the buffalo, jerking their meat, and preparing their skins for robes; they then push on to the Black Hills, and look out for the parties of Blackfeet, which are also bound to the Platte river plains. When the opposing parties come in collision, (which frequently happens,) the most cruel and sanguinary conflicts ensue. In the evening, three of our men deserted. Like our quondam cook, they all took rifles, &c., that did not belong to them, and one of these happened to be a favorite piece of Captain W's, which had done him good service in his journey across this country two years ago. He was very much attached to the gun, and in spite of his calm and cool philosophy in all vexatious matters, he cannot altogether conceal his chagrin.

The little streams of this part of the country are fringed with a thick growth of pretty trees and bushes, and the buds are now swelling, and the leaves expanding, to "welcome back the spring." The birds, too, sing joyously amongst them, grosbeaks, thrushes, and buntings, a merry and musical band. I am particularly fond of sallying out early in the morning, and strolling around the camp. The light breeze just bends the tall tops of the grass on the boundless prairie, the birds

are commencing their matin carollings, and all nature looks fresh and beautiful. The horses of the camp are lying comfortably on their sides, and seem, by the glances which they give me in passing, to know that their hour of toil is approaching, and the patient kine are ruminating in happy unconsciousness.

11th.-We encountered some rather serious difficulties today in fording several wide and deep creeks, having muddy and miry bottoms. Many of our horses, (and particularly those that were packed,) fell into the water, and it was with the greatest difficulty and labor that they were extricated. Some of the scenes presented were rather ludicrous to those who were not actors in them. The floundering, kicking, and falling of horses in the heavy slough, man and beast rolling over together, and squattering amongst the black mud, and the woebegone looks of horse, rider, and horse-furniture, often excited a smile, even while we pitied their begrimed and miserable plight. All these troubles are owing to our having lost the trail yesterday, and we have been travelling today as nearly in the proper course as our compass indicated, and hope soon to find it.

12th. - Our scouts came in this morning with the intelligence that they had found a large trail of white men, bearing N. W. We have no doubt that this is Wm. Sublette's party, and that it passed us last evening. They must have travelled very rapidly to overtake us so soon, and no doubt had men ahead watching our motions. It seems rather unfriendly, perhaps, to run by us in this furtive way, without even stopping to say good morning, but Sublette is attached to a rival company, and all stratagems are deemed allowable when interest is concerned. It is a matter of some moment to be the first at the mountain rendezvous, in order to obtain the furs brought every summer by the trappers.

Last night, while I was serving on guard, I observed an unusual commotion among our band of horses, a wild neighing, snorting, and plunging, for which I was unable to account. I directed several of my men to go in and appease them, and endeavor to ascertain the cause. They had scarcely started, however, when about half of the band broke their fastenings, snapped the hobbles on their legs, and went dashing right through the midst of the camp. Down went several of the tents, the rampart of goods was cleared in gallant style, and away went the frightened animals at full speed over the plain. The whole camp was instantly aroused. The horses that remained, were bridled as quickly as possible; we mounted them without saddles, and set off in hard pursuit after the fugitives. The night was pitch dark, but we needed no light to point out the way, as the clattering of hoofs ahead on the hard ground of the prairie, sounded like thunder. After riding half an hour, we overtook about forty of them, and surrounding them with difficulty, succeeded in driving them back, and securing them as before. Twenty men were then immediately despatched to scour the country, and bring in the remainder. This party was headed by Mr. Lee, our missionary, (who, with his usual promptitude, volunteered his services,) and they returned early this morning, bringing nearly sixty more. We find, however, upon counting the horses in our possession, that there are yet three missing.

While we were at breakfast, three Indians of the Otto tribe, came to our camp to see, and smoke with us. These were men of rather short stature, but strong and firmly built. Their countenances resemble in general expression those of the Kansas, and their dresses are very similar. We are all of opinion, that it is to these Indians we owe our difficulties of last night, and we have no doubt that the three missing horses are now in their possession, but as we cannot prove it upon them, and cannot even converse with them, (having no interpreters,) we are compelled to submit to our

---

loss in silence. Perhaps we should even be thankful that we have not lost more.

While these people were smoking the pipe of peace with us, after breakfast I observed that Richardson, our chief hunter, (an experienced man in this country, of a tall and iron frame, and almost child-like simplicity of character, in fact an exact counterpart of Hawk-eye in his younger days,) stood aloof, and refused to sit in the circle, in which it was always the custom of the old hands to join.

Feeling some curiosity to ascertain the cause of this unusual diffidence, I occasionally allowed my eyes to wander to the spot where our sturdy hunter stood looking moodily upon us, as the calumet passed from hand to hand around the circle, and I thought I perceived him now and then cast a furtive glance at one of the Indians who sat opposite to me, and sometimes his countenance would assume an expression almost demoniacal, as though the most fierce and deadly passions were raging in his bosom. I felt certain that hereby hung a tale, and I watched for a corresponding expression, or at least a look of consciousness, in the face of my opposite neighbor, but expression there was none. His large features were settled in a tranquillity which nothing could disturb, and as he puffed the smoke in huge volumes from his mouth, and the fragrant vapor wreathed and curled around his head, he seemed the embodied spirit of meekness and taciturnity. The camp moved soon after, and I lost no time in overhauling Richardson, and asking an explanation of his singular conduct.

"Why," said he, "that Injen that sat opposite to you, is my bitterest enemy. I was once going down alone from the rendezvous with letters for St. Louis, and when I arrived on the lower part of the Platte river, (just a short distance beyond us here,) I fell in with about a dozen Ottos. They were known to be a friendly tribe, and I therefore felt no fear of them. I dismounted from my horse and sat with them upon the ground. It was in the depth of winter; the ground was covered with snow, and the river was frozen solid. While I was thinking of nothing but my dinner, which I was then about preparing, four or five of the cowards jumped on me, mastered my rifle, and held my arms fast, while they took from me my knife and tomahawk, my flint and steel, and all my ammunition. They then loosed me, and told me to be off. I begged them, for the love of God, to give me my rifle and a few loads of ammunition, or I should starve before I could reach the settlements. No - I should have nothing, and if I did not start off immediately, they would throw me under the ice of the river. And," continued the excited hunter, - while he ground his teeth with bitter, and uncontrollable rage, - "that man that sat opposite to you was the chief of them. He recognised me, and knew very well the reason why I would not smoke with him. I tell you, sir, if ever I meet that man in any other situation than that in which I saw him this morning, I'll shoot him with as little hesitation as I would shoot a deer. Several years have passed since the perpetration of this outrage, but it is still as fresh in my memory as ever, and I again declare, that if ever an opportunity offers, I will kill that man." "But, Richardson, did they take your horse also?" "To be sure they did, and my blankets, and every thing I had, except my clothes." "But how did you subsist until you reached the settlements? You had a long journey before you." "Why, set to trappin' prairie squirrels with little nooses made out of the hairs of my head." I should remark that his hair was so long, that it fell in heavy masses on his shoulders. "But squirrels in winter, Richardson, I never heard of squirrels in winter." "Well but there was plenty of them, though; little white ones, that lived among the snow." "Well, really, this was an unpleasant sort of adventure enough, but let me suggest that you do very wrong to remember it with such blood-thirsty feelings." He shook his head with a dogged

---

and determined air, and rode off as if anxious to escape a lecture.

A little sketch of our hunter may perhaps not be uninteresting, as he will figure somewhat in the following pages, being one of the principal persons of the party, the chief hunter, and a man upon whose sagacity and knowledge of the country we all in a great measure depended.

In height he is several inches over six feet, of a spare but remarkably strong and vigorous frame, and a countenance of almost infantile simplicity and openness. In disposition he is mild and affable, but when roused to indignation, his keen eyes glitter and flash, the muscles of his large mouth work convulsively, and he looks the very impersonation of the spirit of evil. He is implacable in anger, and bitter in revenge; never forgetting a kindness, but remembering an injury with equal tenacity. Such is the character of our hunter, and none who have known him as I have, will accuse me of delineating from fancy. His native place is Connecticut, which he left about twelve years ago, and has ever since been engaged in roaming through the boundless plains and rugged mountains of the west, often enduring the extremity of famine and fatigue, exposed to dangers and vicissitudes of every kind, all for the paltry, and often uncertain pittance of a Rocky Mountain hunter. He says he is now tired of this wandering and precarious life, and when he shall be enabled to save enough from his earnings to buy a farm in Connecticut, he intends to settle down a quiet tiller of the soil, and enjoy the sweets of domestic felicity. But this day will probably never arrive. Even should he succeed in realizing a little fortune, and the farm should be taken, the monotony and tameness of the scene will weary his free spirit; he will often sigh for a habitation on the broad prairie, or a ramble over the dreary mountains where his lot has so long been cast.

15th. -- We saw to-day several large white wolves, and two herds of antelopes. The latter is one of the most beautiful animals I ever saw. When full grown, it is nearly as large as a deer. The horns are rather short, with a single prong near the top, and an abrupt backward curve at the summit like a hook. The ears are very delicate, almost as thin as paper, and hooked at the tip like the horns. The legs are remarkably light and beautifully formed, and as it bounds over the plain, it seems scarcely to touch the ground, so exceedingly light and agile are its motions. This animal is the *Antelope furcifer* of zoologists, and inhabits the western prairies of North America exclusively. The ground here is strewn with great quantities of buffalo bones; the skulls of many of them in great perfection. I often thought of my friend Doctor M. and his golgotha, while we were kicking these fine specimens about the ground. We are now travelling along the banks of the Blue river, a small fork of the Kansas. The grass is very luxuriant and good, and we have excellent and beautiful camps every night.

This morning a man was sent ahead to see W. Sublette's camp, and bear a message to him, who returned in the evening with the information that the company is only one day's journey beyond, and consists of about thirty-five men. We see his deserted camps every day, and, in some cases, the fires are not yet extinguished. It is sometimes amusing to see the wolves lurking like guilty things around these camps seeking for the fragments that may be left; as our party approaches, they sneak away with a mean, hang-dog air which often coaxes a whistling bullet out of the rifle of the wayfarer.

Townsend's Across the Rockies to the Columbia

### CHAPTER III

Arrival at the Platte river-Wolves and antelopes-Saline efflorescences - Anxiety of the men to

---

see buffalo - Visit of two spies from the Grand Pawnees - Forced march - A herd of buffalo - Elk - Singular conduct of the horses - Killing a buffalo - Indian mode of procuring buffalo - Great herd - Intention of the men to desert - Adventure with an Indian in the tent - Circumspection necessary - Indian feat with bow and arrow - Notice of the Pawnee tribes - Disappearance of the buffalo from the plains of the Platte - A hunting adventure - Killing a buffalo - Butchering of a bull - Shameful destruction of the game - Hunters' mode of quenching thirst.

On the 18th of May we arrived at the Platte river. It is from one and a half to two miles in width, very shoal; large sand flats, and small, verdant islands appearing in every part. Wolves and antelopes were in great abundance here, and the latter were frequently killed by our men. We saw, also, the sandhill crane, great heron, (*Ardea herodias*), and the longbilled curlew, stalking about through the shallow water, and searching for their aquatic food.

The prairie is here as level as a race course, not the slightest undulation appearing throughout the whole extent of vision, in a north and westerly direction; but to the eastward of the river, and about eight miles from it, is seen a range of high bluffs or sand banks, stretching away to the south-east until they are lost in the far distance.

The ground here is in many places encrusted with an impure salt, which by the taste appears to be a combination of the sulphate and muriate of soda; there are also a number of little pools, of only a few inches in depth, scattered over the plain, the water of which is so bitter and pungent, that it seems to penetrate into the tongue, and almost to produce decortication of the mouth.

We are now within about three days' journey of the usual haunts of the buffalo, and our men (particularly the uninitiated) look forward to our arrival amongst them with considerable anxiety. They have listened to the garrulous hunter's details of "approaching," and "running," and "quartering," until they fancy themselves the very actors in the scenes related, and are fretting and fuming with impatience to draw their maiden triggers upon the unoffending rangers of the plain.

The next morning, we perceived two men on horseback, at a great distance; and upon looking at them with our telescope, discovered them to be Indians, and that they were approaching us. When they arrived within three or four hundred yards, they halted, and appeared to wish to communicate with us, but feared to approach too nearly. Captain W. rode out alone and joined them, while the party proceeded slowly on its way. In about fifteen minutes he returned with the information that they were of the tribe called Grand Pawnees. They told him that a war party of their people, consisting of fifteen hundred warriors, was encamped about thirty miles below; and the captain inferred that these men had been sent to watch our motions, and ascertain our place of encampment; he was therefore careful to impress upon them that we intended to go but a few miles further, and pitch our tents upon a little stream near the main river. When we were satisfied that the messengers were out of sight of us, on their return to their camp, our whole caravan was urged into a brisk trot, and we determined to steal a march upon our neighbors. The little stream was soon passed, and we went on, and on, without slackening our pace, until 12 o'clock at night. We then called a halt on the bank of the river, made a hasty meal, threw ourselves down in our blankets, without pitching the tents, and slept soundly for three hours. We were then aroused, and off we went again, travelling steadily the whole day, making about thirty-five miles, and so got quite clear of the Grand Pawnees.

The antelopes are very numerous here. There is not half an hour during the day in which they are not seen, and they frequently permit the party to approach very near them. This afternoon, two

---

beautiful does came bounding after us, bleating precisely like sheep. The men imitated the call, and they came up to within fifty yards of us, and stood still; two of the hunters fired, and both the poor creatures fell dead. We can now procure as many of these animals as we wish, but their flesh is not equal to common venison, and is frequently rejected by our people. A number are, however, slaughtered every day, from mere wantonness and love of killing, the greenhorns glorying in the sport, like our striplings of the city, in their annual murdering of robins and sparrows.

20th.-This afternoon, we came in sight of a large gang of the long-coveted buffalo. They were grazing on the opposite side of the Platte, quietly as domestic cattle, but as we neared them, the foremost winded us, and started back, and the whole herd followed in the wildest confusion, and were soon out of sight. There must have been many thousands of them. Towards evening, a large band of elk came towards us at full gallop, and passed very near the party. The appearance of these animals produced a singular effect upon our horses, all of which became restive, and about half the loose ones broke away, and scoured over the plain in full chase after the elk. Captain W. and several of his men went immediately in pursuit of them, and returned late at night, bringing the greater number. Two have, however, been lost irrecoverably. Our observed latitude, yesterday, was 40 deg 31', and our computed distance from the Missouri settlements, about 360 miles.

The day following, we saw several small herds of buffalo on our side of the river. Two of our hunters started out after a huge bull that had separated himself from his companions, and gave him chase on fleet horses.

Away went the buffalo, and away went the men, hard as they could dash; now the hunters gained upon him, and pressed him hard; again the enormous creature had the advantage, plunging with all his might, his terrific horns often ploughing up the earth as he spurned it under him. Sometimes he would double, and rush so near the horses as almost to gore them with his horns, and in an instant would be off in a tangent, and throw his pursuers from the track. At length the poor animal came to bay, and made some unequivocal demonstrations of combat; raising and tossing his head furiously, and tearing up the ground with his feet. At this moment a shot was fired. The victim trembled like an aspen, and fell to his knees, but recovering himself in an instant, started again as fast as before. Again the determined hunters dashed after him, but the poor bull was nearly exhausted, he proceeded but a short distance and stopped again. The hunters approached, rode slowly by him, and shot two balls through his body with the most perfect coolness and precision. During the race, the whole of which occurred in full view of the party, the men seemed wild with the excitement which it occasioned; and when the animal fell, a shout rent the air, which startled the antelopes by dozens from the bluffs, and sent the wolves howling like demons from their lairs.

This is the most common mode of killing the buffalo, and is practised very generally by the travelling hunters; many are also destroyed by approaching them on foot, when, if the bushes are sufficiently dense, or the grass high enough to afford concealment, the hunter, by keeping carefully to leeward of his game, may sometimes approach so near as almost to touch the animal. If on a plain, without grass or bushes, it is necessary to be very circumspect; to approach so slowly as not to excite alarm, and, when observed by the animal, to imitate dexterously, the clumsy motions of a young bear, or assume the sneaking, prowling attitude of a wolf, in order to lull suspicion.

The Indians resort to another stratagem, which is, perhaps, even more successful. The skin of a calf is properly dressed, with the head and legs left attached to it. The Indian envelopes himself in

---

this, and with his short bow and a brace of arrows, ambles off into the very midst of a herd. When he has selected such an animal as suits his fancy, he comes close alongside of it, and without noise, passes an arrow through its heart. One arrow is always sufficient, and it is generally delivered with such force, that at least half the shaft appears through the opposite side. The creature totters, and is about to fall, when the Indian glides around, and draws the arrow from the wound lest it should be broken. A single Indian is said to kill a great number of buffaloes in this way, before any alarm is communicated to the herd.

Towards evening, on rising a hill, we were suddenly greeted by a sight which seemed to astonish even the oldest amongst us. The whole plain, as far as the eye could discern, was covered by one enormous mass of buffalo. Our vision, at the very least computation, would certainly extend ten miles, and in the whole of this great space, including about eight miles in width from the bluffs to the river bank, there was apparently no vista in the incalculable multitude. It was truly a sight that would have excited even the dullest mind to enthusiasm. Our party rode up to within a few hundred yards of the edge of the herd, before any alarm was communicated; then the bulls,-- which are always stationed around as sentinels,-- began pawing the ground, and throwing the earth over their heads; in a few moments they started in a slow, clumsy canter; but as we neared them, they quickened their pace to an astonishingly rapid gallop, and in a few minutes were entirely beyond the reach of our guns, but were still so near that their enormous horns, and long shaggy beards, were very distinctly seen. Shortly after we encamped, our hunters brought in the choice parts of five that they had killed. For the space of several days past, we have observed an inclination in five or six of our men to leave our service. Immediately as we encamp, we see them draw together in some secluded spot, and engage in close and earnest conversation. This has occurred several times, and as we are determined, if possible, to keep our horses, &c., for our own use, we have stationed a sentry near their tent, whose orders are peremptory to stop them at any hazard in case of an attempt on their part, to appropriate our horses. The men we are willing to lose, as they are of very little service, and we can do without them; but horses here are valuable, and we cannot afford to part with them without a sufficient compensation.

22d. On walking into our tent last night at eleven o'clock, after the expiration of the first watch, (in which I had served as supernumerary, to prevent the desertion of the men,) and stooping to lay my gun in its usual situation near the head of my pallet, I was startled by seeing a pair of eyes, wild and bright as those of a tiger, gleaming from a dark corner of the lodge, and evidently directed upon me. My first impression, was that a wolf had been lurking around the camp, and had entered the tent in the prospect of finding meat. My gun was at my shoulder instinctively, my aim was directed between the eyes, and my finger pressed the trigger. At that moment a tall Indian sprang before me with a loud wah! seized the gun, and elevated the muzzle above my head; in another instant, a second Indian was by my side, and I saw his keen knife glitter as it left the scabbard. I had not time for thought, and was struggling with all my might with the first savage for the recovery of my weapon, when Captain W., and the other inmates of the tent were aroused, and the whole matter was explained, and set at rest in a moment. The Indians were chiefs of the tribe of Pawnee Loups, who had come with their young men to shoot buffalo: they had paid an evening visit to the captain, and as an act of courtesy had been invited to sleep in the tent. I had not known of their arrival, nor did I even suspect that Indians were in our neighborhood, so could not control the alarm which their sudden appearance occasioned me.

---

As I laid myself down, and drew my blanket around me, Captain W. touched me lightly, with his finger, and pointed significantly to his own person, which I perceived by the fire light at the mouth of the tent, to be garnished with his knife and pistols; I observed also that the muzzle of his rifle laid across his breast, and that the breech was firmly grasped by one of his legs. I took the hint; tightened my belt, drew my gun closely to my side, and composed myself to sleep. But the excitement of the scene through which I had just passed, effectually banished repose. I frequently directed my eyes towards the dark corner, and in the midst of the shapeless mass which occupied it, I could occasionally see the glittering orbs of our guest shining amidst the surrounding obscurity. At length fatigue conquered watchfulness, and I sank to sleep, dreaming of Indians, guns, daggers, and buffalo.

Upon rising the next morning, all had left the tent: the men were busied in cooking their morning meal; kettles were hanging on the rude cranes, great ribs of meat were roasting before the fires, and loading the air with fragrance, and my dreams and midnight reveries, and apprehensions of evil, fled upon the wings of the bright morning, and nought remained but a feeling of surprise that the untoward events of the night should have disturbed my equanimity.

While these thoughts were passing in my mind, my eye suddenly encountered the two Indians. They were squatting upon the ground near one of the fires, and appeared to be surveying, with the keenness of morning appetite, the fine "hump ribs" which were roasting before them. The moment they perceived me, I received from them a quick glance of recognition: the taller one, my opponent of the previous night,--rose to his feet, walked towards me, and gave me his hand with great cordiality; then pointed into the tent, made the motions of raising a gun to his shoulder, taking aim, and in short repeated the entire pantomime with great fidelity, and no little humor, laughing the whole time as though he thought it a capital joke. Poor fellow! it was near proving a dear joke for him, and I almost trembled as I recollected the eager haste with which I sought to take the life of a fellow creature. The Indian evidently felt no ill will towards me, and as a proof of it, proposed an exchange of knives, to which I willingly acceded. He deposited mine,--which had my name engraved upon the handle, in the sheath at his side, and walked away to his hump ribs with the air of a man who is conscious of having done a good action. As he left me, one of our old trappers took occasion to say, that in consequence of this little act of savage courtesy, the Indian became my firm friend; and that if I ever met him again, I should be entitled to share his hospitality, or claim his protection.

While the men were packing the horses, after breakfast, I was again engaged with my Indian friend. I took his bow and arrows in my hand, and remarked that the latter were smeared with blood throughout: upon my expressing surprise at this he told me, by signs, that they had passed through the body of the buffalo. I assumed a look of incredulity; the countenance of the savage brightened, and his peculiar and strange eyes actually flashed with eagerness, as he pointed to a dead antelope lying upon the ground about forty feet from us, and which one of the guard had shot near the camp in the morning. The animal lay upon its side with the breast towards us: the bow was drawn slightly, without any apparent effort, and the arrow flew through the body of the antelope, and skimmed to a great distance over the plain.

These Indians were the finest looking of any I have seen. Their persons were tall, straight, and finely formed; their noses slightly aquiline, and the whole countenance expressive of high and daring intrepidity. The face of the taller one was particularly admirable; and Gall or Spurzheim, at

---

a single glance at his magnificent head, would have invested him with all the noblest qualities of the species. I know not what a physiognomist would have said of his eyes, but they were certainly the most wonderful eyes I ever looked into; glittering and scintillating constantly, like the mirror glasses in a lamp frame, and rolling and dancing in their orbits as though possessed of abstract volition.

The tribe to which these Indians belong, is a division of the great Pawnee nation. There are four of these divisions or tribes, known by the names of Grand Pawnees, Pawnee Loups, Pawnee Republicans, and Pawnee Picts. They are all independent of each other, governed exclusively by chiefs chosen from among their own people, and although they have always been on terms of intimacy and friendship, never intermarry, nor have other intercourse than that of trade, or a conjunction of their forces to attack the common enemy. In their dealings with the whites, they are arbitrary and overbearing, chaffering about the price of a horse, or a beaver skin, with true huckster-like eagerness and mendacity, and seizing with avidity every unfair advantage, which circumstances or their own craft may put in their power.

The buffalo still continue immensely numerous in every direction around, and our men kill great numbers, so that we are in truth living upon the fat of the land, and better feeding need no man wish. The savory buffalo hump has suffered no depreciation since the "man without a cross" vaunted of its good qualities to "the stranger;" and in this, as in many other particulars, we have realized the truth and fidelity of Cooper's admirable descriptions.

23d. When we rose this morning, not a single buffalo, of the many thousands that yesterday strewed the plain, was to be seen. It seemed like magic. Where could they have gone? I asked myself this question again and again, but in vain. At length I applied to Richardson, who stated that they had gone to the bluffs, but for what reason he could not tell; he, however, had observed their tracks bearing towards the bluffs, and was certain that they would be found there. He and Sandbury (another hunter) were then about starting on a hunt to supply the camp, and I concluded to accompany them; Mr. Lee, the missionary, also joined us, and we all rode off together. The party got under way about the same time, and proceeded along the bank of the river, while we struck off south to look for the buffalo. About one hour's brisk trotting carried us to the bluffs, and we entered amongst large conical hills of yellow clay, intermixed with strata of limestone, but without the slightest vegetation of any kind.

On the plains which we had left, the grass was in great luxuriance, but here not a blade of it was to be seen, and yet, as Richardson had predicted, here were the buffalo. We had not ridden a mile before we entered upon a plain of sand of great extent, and observed ahead vast clouds of dust rising and circling in the air as though a tornado or a whirlwind were sweeping over the earth. "Ha!" said Richardson, "there they are; now let us take the wind of them, and you shall see some sport." We accordingly went around to leeward, and, upon approaching nearer, saw the huge animals rolling over and over in the sand with astonishing agility enveloping themselves by the exercise in a perfect atmosphere of dust; occasionally two of the bulls would spring from the ground and attack each other with amazing address and fury, retreating for ten or twelve feet, and then rushing suddenly forward, and dashing their enormous fronts together with a shock that seemed annihilating. In these rencontres, one of the combatants was often thrown back upon his haunches, and tumbled sprawling upon the ground; in which case, the victor, with true prize-fighting generosity, refrained from persecuting his fallen adversary, contenting himself with

---

a hearty resumption of his rolling fit, and kicking up the dust with more than his former vigor, as if to celebrate his victory.

This appeared to be a good situation to approach and kill the buffalo, as, by reason of the plentiful distribution of the little clay hills, an opportunity would be afforded of successful concealment; we separated, therefore, each taking his own course. In a very few minutes I heard the crack of a rifle in the direction in which Richardson had gone, and immediately after saw the frightened animals flying from the spot. The sound reverberated among the hills, and as it died away the herd halted to watch and listen for its repetition. For myself, I strolled on for nearly an hour, leading my horse, and peering over every hill, in the hope of finding a buffalo within range, but not one could I see that was sufficiently near; and when I attempted the stealthy approach which I had seen Richardson practise with so much success, I felt compelled to acknowledge my utter insufficiency. I had determined to kill a buffalo, and as I had seen it several times done with so much apparent ease, I considered it a mere moonshine matter, and thought I could compass it without difficulty; but now I had attempted it, and was grievously mistaken in my estimate of the required skill. I had several times heard the guns of the hunters, and felt satisfied that we should not go to camp without meat, and was on the point of altering my course to join them, when, as I wound around the base of a little hill, I saw about twenty buffalo lying quietly on the ground within thirty yards of me. Now was my time. I took my picket from my saddle, and fastened my horse to the ground as quietly as possible, but with hands that almost failed to do their office, from my excessive eagerness and trembling anxiety. When this was completed, I crawled around the hill again, almost suspending my breath from fear of alarming my intended victims, until I came again in full view of the unsuspecting herd. There were so many fine animals that I was at a loss which to select; those nearest me appeared small and poor, and I therefore settled my aim upon a huge bull on the outside. Just then I was attacked with the "bull fever" so dreadfully, that for several minutes I could not shoot. At length, however, I became firm and steady, and pulled my trigger at exactly the right instant. Up sprang the herd like lightning, and away they scoured, and my bull with them. I was vexed, angry, and discontented; I concluded that I could never kill a buffalo, and was about to mount my horse and ride off in despair, when I observed that one of the animals had stopped in the midst of his career. I rode towards him, and sure enough, there was my great bull trembling and swaying from side to side, and the clotted gore hanging like icicles from his nostrils. In a few minutes after, he fell heavily upon his side, and I dismounted and surveyed the unwieldy brute, as he panted and struggled in the death agony.

When the first ebullition of my triumph had subsided, I perceived that my prize was so excessively lean as to be worth nothing, and while I was exerting my whole strength in a vain endeavor to raise the head from the ground for the purpose of removing the tongue, the two hunters joined me, and laughed heartily at my achievement. Like all inexperienced hunters, I had been particular to select the largest bull in the gang, supposing it to be the best, (and it proved, as usual, the poorest,) while more than a dozen fat cows were nearer me, either of which I might have killed with as little trouble.

As I had supposed, my companions had killed several animals, but they had taken the meat of only one, and we had, therefore, to be diligent, or the camp might suffer for provisions. It was now past mid-day; the weather was very warm, and the atmosphere was charged with minute particles of sand, which produced a dryness and stiffness of the mouth and tongue, that was exceedingly

---

painful and distressing. Water was now the desideratum, but where was it to be found? The and country in which we then were, produced none, and the Platte was twelve or fourteen miles from us, and no buffalo in that direction, so that we could not afford time for so trifling a matter. I found that Mr. Lee was suffering as much as myself, although he had not spoken of it, and I perceived that Richardson was masticating a leaden bullet, to excite the salivary glands. Soon afterwards, a bull was killed, and we all assembled around the carcass to assist in the manipulations. The animal was first raised from his side where he had lain, and supported upon his knees, with his hoofs turned under him; a longitudinal incision was then made from the nape, or anterior base of the hump, and continued backward to the loins, and a large portion of the skin from each side removed; these pieces of skin were placed upon the ground, with the under surface uppermost, and the fleeces, or masses of meat, taken from along the back, were laid upon them. These fleeces, from a large animal, will weigh, perhaps, a hundred pounds each, and comprise the whole of the hump on each side of the vertical processes, (commonly called the hump ribs,) which are attached to the vertebra. The fleeces are considered the choice parts of the buffalo, and here, where the game is so abundant, nothing else is taken, if we except the tongue, and an occasional marrow bone.

This; it must be confessed, appears like a useless and unwarrantable waste of the goods of Providence; but when are men economical, unless compelled to be so by necessity? Here are more than a thousand pounds of delicious and savory flesh, which would delight the eyes and gladden the heart of any epicure in Christendom, left neglected where it fell, to feed the ravenous maw of the wild prairie wolf, and minister to the excesses of the unclean birds of the wilderness. But I have seen worse waste and havoc than this, and I feel my indignation rise at the recollection. I have seen dozens of buffalo slaughtered merely for the tongues, or for practice with the rifle; and I have also lived to see the very perpetrators of these deeds, lean and lank with famine, when the meanest and most worthless parts of the poor animals they had so inhumanly slaughtered, would have been received and eaten with humble thankfulness.

But to return to ourselves. We were all suffering from excessive thirst, and so intolerable had it at length become, that Mr. Lee and myself proposed a gallop over to the Platte river, in order to appease it; but Richardson advised us not to go, as he had just thought of a means of relieving us, which he immediately proceeded to put in practice. He tumbled our mangled buffalo over upon his side, and with his knife opened the body, so as to expose to view the great stomach, and still crawling and twisting entrails. The good missionary and myself stood gaping with astonishment, and no little loathing, as we saw our hunter plunge his knife into the distended paunch, from which gushed the green and gelatinous juices, and then insinuate his tin pan into the opening, and by depressing its edge, strain off the water which was mingled with its contents.

Richardson always valued himself upon his politeness, and the cup was therefore first offered to Mr. Lee and myself, but it is almost needless to say that we declined the proffer, and our features probably expressed the strong disgust which we felt, for our companion laughed heartily before he applied the cup to his own mouth. He then drank it to the dregs, smacking his lips, and drawing a long breath after it, with the satisfaction of a man taking his wine after dinner. Sansbury, the other hunter, was not slow in following the example set before him, and we, the audience, turned our backs upon the actors.

Before we left the spot, however, Richardson induced me to taste the blood which was still fluid

in the heart, and immediately as it touched my lips, my burning thirst, aggravated by hunger, (for I had eaten nothing that day,) got the better of my abhorrence; I plunged my head into the reeking ventricles, and drank until forced to stop for breath. I felt somewhat ashamed of assimilating myself so nearly to the brutes, and turned my ensanguined countenance towards the missionary who stood by, but I saw no approval there: the good man was evidently attempting to control his risibility, and so I smiled to put him in countenance; the roar could no longer be restrained, and the missionary laughed until the tears rolled down his cheeks. I did not think, until afterwards, of the horrible ghastliness which must have characterized my smile at that particular moment. When we arrived at the camp in the evening, and I enjoyed the luxury of a hearty draft of water, the effect upon my stomach was that of a powerful emetic: the blood was violently ejected without nausea, and I felt heartily glad to be rid of the disgusting encumbrance. I never drank blood from that day.

Townsend's Across the Rockies to the Columbia

---

#### CHAPTER IV

Change in the face of the country - Unpleasant visitation - its effects - North fork of the Platte - A day's journey over the hills - Wormwood bushes, and poor pasture - Marmots - Rattlesnake and gopher - Naturalist's success and sacrifices - A sand storm - Wild horses - Killing of a doe antelope - Bluffs of the Platte - The chimney - "Zip Koon," the young antelope - Birds - Feelings and cogitations of a naturalist - Arrival at Laramie's fork - Departure of two "free trappers" on a summer "hunt" - Black Hills - Rough travelling - Red butes - Sweet-water river, and Rock Independence - Avocets - Wind river mountains - Rocky Mountain sheep - Adventure of one of the men with a grizzly bear - Rattlesnakes - Toilsome march, and arrival at Sandy river - Suffering of the horses - Anticipated delights of the rendezvous.

On the morning of the 24th of May we forded the Platte river, or rather its south fork, along which we had been travelling during the previous week. On the northern side, we found the country totally different in its aspect. Instead of the extensive and apparently interminable green plains, the monotony of which had become so wearisome to the eye, here was a great sandy waste, without a single green thing to vary and enliven the dreary scene. It was a change, however, and we were therefore enjoying it, and remarking to each other how particularly agreeable it was, when we were suddenly assailed by vast swarms of most ferocious little black gnats; the whole atmosphere seemed crowded with them, and they dashed into our faces, assaulted our eyes, ears, nostrils, and mouths, as though they were determined to bar our passage through their territory. These little creatures were so exceedingly minute that, singly, they were scarcely visible; and yet their sting caused such excessive pain, that for the rest of the day our men and horses were rendered almost frantic, the former bitterly imprecating, and the latter stamping, and kicking, and rolling in the sand, in tremendous, yet vain, efforts to rid themselves of their pertinacious little foes. It was rather amusing to see the whole company with their handkerchiefs, shirts, and coats, thrown over their heads, stemming the animated torrent, and to hear the greenhorns cursing their tormenters, the country, and themselves, for their foolhardiness in venturing on the journey. When we encamped in the evening, we built fires at the mouths of the tents, the smoke from which kept our enemies at a distance, and we passed a night of tolerable comfort, after a day of most peculiar misery.

The next morning I observed that the faces of all the men were more or less swollen, some of

them very severely, and poor Captain W. was totally blind for two days afterwards.

25th.- We made a noon camp to-day on the north branch or fork of the river, and in the afternoon travelled along the bank of the stream. In about an hour's march, we came to rocks, precipices, and cedar trees, and although we anticipated some difficulty and toil in the passage of the heights, we felt glad to exchange them for the vast and wearisome prairies we had left behind. Soon after we commenced the ascent, we struck into an Indian path very much worn, occasionally mounting over rugged masses of rock, and leaping wide fissures in the soil, and sometimes picking our way over the jutting crags, directly above the river. On the top of one of the stunted and broad spreading cedars, a bald eagle had built its enormous nest; and as we descended the mountain, we saw the callow young lying within it, while the anxious parents hovered over our heads, screaming their alarm.

In the evening we arrived upon the plain again; it was thickly covered with ragged and gnarled bushes of a species of wormwood, (*Artemisia*) which perfumed the air, and at first was rather agreeable. The soil was poor and sandy, and the straggling blades of grass which found their way to the surface were brown and withered. Here was a poor prospect for our horses; a sad contrast indeed to the rich and luxuriant prairies we had left. On the edges of the little streams, however, we found some tolerable pasture, and we frequently stopped during the day to bait our poor animals in these pleasant places.

We observed here several species of small marmots, (*Arctomys*) which burrowed in the sand, and were constantly skipping about the ground in front of our party. The short rattlesnake of the prairies was also abundant, and no doubt derived its chief subsistence from foraging among its playful little neighbors. Shortly before we halted this evening, being a considerable distance in advance of the caravan, I observed a dead gopher, (*Diplostoma*) - a small animal about the size of a rat, with large external cheek pouches, lying upon the ground; and near it a full grown rattlesnake, also dead. The gopher was yet warm and pliant, and had evidently been killed but a few minutes previously; the snake also gave evidence of very recent death, by a muscular twitching of the tail, which occurs in most serpents, soon after life is extinct. It was a matter of interest to me to ascertain the mode by which these animals were deprived of life. I therefore dismounted from my horse, and examined them carefully, but could perceive nothing to furnish even a clue. Neither of them had any external or perceptible wound. The snake had doubtless killed the quadruped, but what had killed the snake? There being no wound upon its body was sufficient proof that the gopher had not used his teeth, and in no other way could he cause death.

I was unable to solve the problem to my satisfaction, so I pocketed the animal to prepare its skin, and rode on to the camp.

The birds thus far have been very abundant. There is a considerable variety, and many of them have not before been seen by naturalists. As to the plants, there seems to be no end to them, and Mr. N. is finding dozens of new species daily. In the other branches of science, our success has not been so great, partly on account of the rapidity and steadiness with which we travel, but chiefly from the difficulty, and almost impossibility, of carrying the subjects. Already we have cast away all our useless and superfluous clothing, and have been content to mortify our natural pride, to make room for our specimens. Such things as spare waistcoats, shaving boxes, soap, and stockings, have been ejected from our trunks, and we are content to dress, as we live, in a style of primitive simplicity. In fact, the whole appearance of our party is sufficiently primitive; many of

---

the men are dressed entirely in deerskins, without a single article of civilized manufacture about them; the old trappers and hunters wear their hair flowing on their shoulders, and their large grizzled beards would scarcely disgrace a Bedouin of the desert.

The next morning the whole camp was suddenly aroused by the falling of all the tents. A tremendous blast swept as from a funnel over the sandy plain, and in an instant precipitated our frail habitations like webs of gossamer. The men crawled out from under the ruins, rubbing their eyes, and, as usual, muttering imprecations against the country and all that therein was; it was unusually early for a start, but we did not choose to pitch the tents again, and to sleep without them here was next to impossible; so we took our breakfast in the open air, devouring our well sanded provisions as quickly as possible, and immediately took to the road.

During the whole day a most terrific gale was blowing directly in our faces, clouds of sand were driving and hurtling by us, often with such violence as nearly to stop our progress; and when we halted in the evening, we could scarcely recognise each other's faces beneath their odious mask of dust and dirt.

There have been no buffalo upon the plain today, all the game that we have seen, being a few elk and antelopes; but these of course we did not attempt to kill, as our whole and undivided attention was required to assist our progress.

28th.-We fell in with a new species of game today; -a large band of wild horses. They were very shy, scarcely permitting us to approach within rifle distance, and yet they kept within sight of us for some hours. Several of us gave them chase, in the hope of at least being able to approach sufficiently near to examine them closely, but we might as well have pursued the wind; they scoured away from us with astonishing velocity, their long manes and tails standing out almost horizontally, as they sprang along before us. Occasionally they would pause in their career, turn and look at us as we approached them, and then, with a neigh that rang loud and high above the clattering of the hoofs, dart their light heels into the air, and fly from us as before. We soon abandoned this wild chase, and contented ourselves with admiring their sleek beauty at a distance.

In the afternoon, I committed an act of cruelty and wantonness, which distressed and troubled me beyond measure, and which I have ever since recollected with sorrow and compunction. A beautiful doe antelope came running and bleating after us, as though she wished to overtake the party; she continued following us for nearly an hour, at times approaching within thirty or forty yards, and standing to gaze at us as we moved slowly on our way. I several times raised my gun to fire at her, but my better nature as often gained the ascendancy, and I at last rode into the midst of the party to escape the temptation. Still the doe followed us, and I finally fell into the rear, but without intending it, and again looked at her as she trotted behind us. At that moment, my evil genius and love of sport triumphed; I slid down from my horse, aimed at the poor antelope, and shot a ball through her side. Under other circumstances, there would have been no cruelty in this; but here, where better meat was so abundant, and the camp was so plentifully supplied, it was unfeeling, heartless murder. It was under the influence of this too late impression, that I approached my poor victim. She was writhing in agony upon the ground, and exerting herself in vain efforts to draw her mangled body farther from her destroyer; and as I stood over her, and saw her cast her large, soft, black eyes upon me with an expression of the most touching sadness, while the great tears rolled over her face, I felt myself the meanest and most abhorrent thing in creation. But now a finishing blow would be mercy to her, and I threw my arm around her neck, averted my

---

face, and drove my long knife through her bosom to the heart. I did not trust myself to look upon her afterwards, but mounted my horse, and galloped off to the party, with feelings such as I hope never to experience again. For several days the poor antelope haunted me, and I shall never forget its last look of pain and upbraiding.

The bluffs on the southern shore of the Platte, are, at this point, exceedingly rugged, and often quite picturesque; the formation appears to be simple clay, intermixed, occasionally, with a stratum of limestone, and one part of the bluff bears a striking and almost startling resemblance to a dilapidated feudal castle. There is also a kind of obelisk, standing at a considerable distance from the bluffs, on a wide plain, towering to the height of about two hundred feet, and tapering to a small point at the top. This pillar is known to the hunters and trappers who traverse these regions, by the name of the "chimney." Here we diverged from the usual course, leaving the bank of the river, and entered a large and deep ravine between the enormous bluffs (These are Scott's Bluffs, so named after an unfortunate trader, who perished here from disease and hunger, many years ago. He was deserted by his companions; and the year following, his crumbling bones were found in this spot).

The road was very uneven and difficult, winding from amongst innumerable mounds six to eight feet in height, the space between them frequently so narrow as scarcely to admit our horses, and some of the men rode for upwards of a mile kneeling upon their saddles. These mounds were of hard yellow clay, without a particle of rock of any kind, and along their bases, and in the narrow passages, flowers of every hue were growing. It was a most enchanting sight; even the men noticed it, and more than one of our matter-of-fact people exclaimed, beautiful, beautiful!. Mr. N. was here in his glory. He rode on ahead of the company, and cleared the passages with a trembling and eager hand, looking anxiously back at the approaching party, as though he feared it would come ere he had finished, and tread his lovely prizes under foot.

The distance through the ravine is about three miles. We then crossed several beautiful grassy knolls, and descending to the plain, struck the Platte again, and travelled along its bank. Here one of our men caught a young antelope, which he brought to the camp upon his saddle. It was a beautiful and most delicate little creature, and in a few days became so tame as to remain with the camp without being tied, and to drink, from a tin cup, the milk which our good missionaries spared from their own scanty meals. The men christened it "Zip Coon," and it soon became familiar with its name, running to them when called, and exhibiting many evidences of affection and attachment. It became a great favorite with every one. A little pannier of willows was made for it, which was packed on the back of a mule, and when the camp moved in the mornings, little Zip ran to his station beside his long-eared hack, bleating with impatience until some one came to assist him in mounting.

On the afternoon of the 31st, we came to green trees and bushes again, and the sight of them was more cheering than can be conceived, except by persons who have travelled for weeks without beholding a green thing, save the grass under their feet. We encamped in the evening in a beautiful grove of cottonwood trees, along the edge of which ran the Platte, dotted as usual with numerous islands.

In the morning, Mr. N. and myself were up before the dawn, strolling through the umbrageous forest, inhaling the fresh, bracing air, and making the echoes ring with the report of our gun, as the lovely tenants of the grove flew by dozens before us. I think I never before saw so great a vari-

ety of birds within the same space. All were beautiful, and many of them quite new to me; and after we had spent an hour amongst them, and my game bag was teeming with its precious freight, I was still loath to leave the place, lest I should not have procured specimens of the whole.

None but a naturalist can appreciate a naturalist's feelings his delight amounting to ecstasy when a specimen such as he has never before seen, meets his eye, and the sorrow and grief which he feels when he is compelled to tear himself from a spot abounding with all that he has anxiously and unremittingly sought for.

This was peculiarly my case upon this occasion. We had been long travelling over a sterile and barren tract, where the lovely denizens of the forest could not exist, and I had been daily scanning the great "tent of the desert", for some little oasis such as I had now found; here was my wish at length gratified, and yet the caravan would not halt for me; I must turn my back upon the El Dorado of my fond anticipations, and hurry forward over the dreary wilderness which lay beyond.

What valuable and highly interesting accessions to science might not be made by a party, composed exclusively of naturalists, on a journey through this rich and unexplored region! The botanist, the geologist, the mamalogist, the ornithologist, and the entomologist, would find a rich and almost inexhaustible field for the prosecution of their inquiries, and the result of such an expedition would be to add most materially to our knowledge of the wealth and resources of our country, to furnish us with new and important facts relative to its structure, organization, and natural productions, and to complete the fine native collections in our already extensive museums.

On the 1st of June, we arrived at Laramie's fork of the Platte, and crossed it without much difficulty.

Here two of our "free trappers" left us for a summer "hunt" in the rugged Black Hills. These men joined our party at Independence, and have been travelling to this point with us for the benefit of our escort. Trading companies usually encourage these free trappers to join them, both for the strength which they add to the band, and that they may have the benefit of their generally good hunting qualities. Thus are both parties accommodated, and no obligation is felt on either side. I confess I felt somewhat sad when I reflected upon the possible fate of the two adventurous men who had left us in the midst of a savage wilderness, to depend entirely upon their unassisted strength and hardihood, to procure the means of subsistence and repel the aggression of the Indian.

Their expedition will be fraught with stirring scenes, with peril and with strange adventure; but they think not of this, and they care not for it. They are only two of the many scores who annually subject themselves to the same difficulties and dangers; they see their friends return unscathed, and laden with rich and valuable furs, and if one or two should have perished by Indian rapacity, or fallen victims to their own daring and fool-hardy spirit, they mourn the loss of their brethren who have not returned, and are only the more anxious to pursue the same track in order to avenge them.

On the 2d, we struck a range of high and stony mountains, called the Black Hills. The general aspect here, was dreary and forbidding; the soil was intersected by deep and craggy fissures; rock juttet over rock, and precipice frowned over precipice in frightful, and apparently endless, succession. Soon after we commenced the ascent, we experienced a change in the temperature of the air; and towards mid-day, when we had arrived near the summit, our large blanket capeaus, which in the morning had been discarded as uncomfortable, were drawn tightly around us, and every

man was shivering in his saddle as though he had an ague fit. The soil here is of a deep reddish or ferruginous hue, intermixed with green sand; and on the heights, pebbles of chalcedony and agate are abundant. We crossed, in the afternoon, the last and steepest spur of this chain, winding around rough and stony precipices, and along the extreme verges of tremendous ravines, so dangerous looking that we were compelled to dismount and lead our horses.

On descending to the plain, we saw again the north fork of the Platte, and were glad of an opportunity of encamping. Our march to-day has been an unusually wearisome one, and many of our loose horses are bruised and lame.

7th. -The country has now become more level, but the prairie is barren and inhospitable looking to the last degree. The twisted, aromatic wormwood covers and extracts the strength from the burnt and soil. The grass is dry and brown, and our horses are suffering extremely for want of food. Occasionally, however, a spot of lovely green appears, and here we allow our poor jaded friends to halt, and roam without their riders, and their satisfaction and pleasure is expressed by many a joyous neigh, and many a heart-felt roll upon the verdant sward.

In the afternoon, we arrived at the "Red Butes," two or three brown-red cliffs, about two thousand feet in height." This is a remarkable point in the mountain route. One of these cliffs terminates a long, lofty, wooded ridge, which has bounded our southern view for the past two days. The summits of the cliffs are covered with patches of snow, and the contrast of the dazzling white and brick-red produces a very pretty effect.

The next day, we left the Platte river, and crossed a wide, sandy desert, dry and desolate; and on the 9th, encamped at noon on the banks of the Sweet-water. Here we found a large rounded mass of granite, about fifty feet high, called Rock Independence. Like the Red Butes, this rock is also a rather remarkable point in the route. On its smooth, perpendicular sides, we see carved the names of most of the mountain bourgeois, with the dates of their arrival. We observed those of the two Sublette's, Captains Bonneville, Serre, Fontinelle, &c., and after leaving our own, and taking a hearty, but hasty lunch in the shade of a rock, and a draught from the pure and limpid stream at its base, we pursued our journey.

The river is here very narrow, often only twelve or fifteen feet wide, shallow, and winding so much, that during our march, to-day, we crossed it several times, in order to pursue a straight course. The banks of the stream are clothed with the most luxuriant pasture, and our invaluable dumb friends appear perfectly happy.

We saw here great numbers of a beautiful brown and white avocet, (the *Recurvirostra americana* of ornithologists.) These fine birds were so tame as to allow a very near approach, running slowly before our party, and scarcely taking wing at the report of a gun. They frequent the marshy plains in the neighborhood of the river, and breed here.

On the 10th, about ninety miles to the west, we had a striking view of the Wind-river mountains. They are almost wholly of a dazzling whiteness, being covered thickly with snow, and the lofty peaks seem to blend themselves with the dark clouds which hang over them. This chain gives rise to the sources of the Missouri, the Colorado of the west, and Lewis' river of the Columbia, and is the highest land on the continent of North America.

We saw, to-day, a small flock of the hairy sheep of the Rocky Mountains, the big horn of the hunters, (*Ovis montana*.) We exerted ourselves in vain to shoot them. They darted from us, and hid themselves amongst the inaccessible cliffs, so that none but a chamois hunter might pretend to

reach them. Richardson says that he has frequently killed them, but he admits that it is dangerous and wearisome sport; and when good beef is to be found upon the plains, men are not anxious to risk their necks for a meal of mutton.

In the afternoon, one of our men had a somewhat perilous adventure with a grizzly bear. He saw the animal crouching his huge frame in some willows which skirted the river, and approaching on horseback to within twenty yards, fired upon him. The bear was only slightly wounded by the shot, and with a fierce growl of angry malignity, rushed from his cover, and gave chase. The horse happened to be a slow one, and for the distance of half a mile, the race was hard contested; the bear frequently approaching so near the terrified animal as to snap at his heels, while the equally terrified rider, who had lost his hat at the start, used whip and spur with the most frantic diligence, frequently looking behind, from an influence which he could not resist, at his rugged and determined foe, and shrieking in an agony of fear, "shoot him, shoot him!" The man, who was one of the greenhorns, happened to be about a mile behind the main body, either from the indolence of his horse, or his own carelessness; but as he approached the party in his desperate flight, and his lugubrious cries reached the ears of the men in front, about a dozen of them rode to his assistance, and soon succeeded in diverting the attention of his pertinacious foe. After he had received the contents of all the guns, he fell, and was soon dispatched. The man rode in among his fellows, pale and haggard from overwrought feelings, and was probably effectually cured of a propensity for meddling with grizzly bears.

A small striped rattlesnake is abundant on these plains: - it is a different species from our common one at home, but is equally malignant and venomous. The horses are often startled by them, and dart aside with intuitive fear when their note of warning is sounded in the path.

12th.- The plains of the Sweet-water at this point,-- latitude 43 deg 6 min, longitude 110 deg 30 min, -- are covered with little salt pools, the edges of which are encrusted with alkaline efflorescences, looking like borders of snow. The rocks in the vicinity are a loose, fine-grained sandstone, the strata nearly horizontal, and no organic remains have been discovered. We have still a view of the lofty Wind-river mountains on our right hand, and they have for some days served as a guide to determine our course. On the plain, we passed several huge rhomboidal masses of rock, standing alone, and looking, at a little distance, like houses with chimneys. The freaks of nature, as they are called, have often astonished us since we have been journeying in the wilderness. We have seen, modeled without art, representations of almost all the most stupendous works of man; and how do the loftiest and most perfect creations of his wisdom and ingenuity sink into insignificance by the comparison. Noble castles, with turrets, embrasures, and loop holes, with the drawbridge in front, and the moat surrounding it: behind, the humble cottages of the subservient peasantry, and all the varied concomitants of such a scene, are so strikingly evident to the view, that it requires but little stretch of fancy to imagine that a race of antediluvian giants may here have swayed their iron sceptre, and left behind the crumbling palace and the tower, to tell of their departed glory.

On the 14th, we left the Sweet-water, and proceeded in a south-westerly direction to Sandy river, a branch of the Colorado of the west. We arrived here at about 9 o'clock in the evening, after a hard and most toilsome march for both man and beast. We found no water on the route, and not a single blade of grass for our horses. Many of the poor animals stopped before night, and resolutely refused to proceed; and others with the remarkable sagacity, peculiar to them, left the track

in defiance of those who drove and guided them, sought and found water, and spent the night in its vicinity. The band of missionaries, with their horses and horned cattle, halted by the way, and only about half the men of the party accompanied us to our encampment on Sandy. We were thus scattered along the route for several miles; and if a predatory band of Indians had then found us, we should have fallen an easy prey.

The next morning by about 10 o'clock all our men and horses had joined us, and, in spite of the fatigues of the previous day, we were all tolerably refreshed, and in good spirits. Towards noon we got under way, and proceeded seven or eight miles down the river to a spot where we found a little poor pasture for our horses. Here we remained until the next morning, to recruit. I found here a beautiful new species of mocking bird (This is a mountain mocking bird, (*Orpheus montanus*)), which I shot and prepared. Birds are, however, generally scarce, and there is here very little of interest in any department of natural history. We are also beginning to suffer somewhat for food: buffalo are rarely seen, the antelopes are unusually shy, and the life of our little favorite, "Zip," has been several times menaced. I believe, however, that his keeper, from sheer fondness, would witness much greater suffering in the camp, ere he would consent to the sacrifice of his playful little friend.

16th. -We observed a hoar frost and some thin ice, this morning at sunrise; but at mid-day, the thermometer stood at 82 deg. We halted at noon, after making about fifteen miles, and dined. Saw large herds of buffalo on the plains of Sandy river, grazing in every direction on the short and dry grass. Domestic cattle would certainly starve here, and yet the bison exists, and even becomes fat; a striking instance of the wonderful adaptation of Providence.

17th. -We had yesterday a cold rain, the first which has fallen in our track for several weeks. Our vicinity to the high mountains of Wind river will perhaps account for it. To-day at noon, the mercury stood at 92 deg in the shade, but there being a strong breeze, we did not suffer from heat. Our course was still down the Sandy river, and we are now looking forward with no little pleasure to a rest of two or more weeks at the mountain rendezvous on the Colorado. Here we expect to meet all the mountain companies who left the States last spring, and also the trappers who come in from various parts, with the furs collected by them during the previous year. All will be mirth and jollity, no doubt, but the grand desideratum with some of us, is to allow our horses to rest their tired limbs and exhausted strength on the rich and verdant plains of the Siskadee. At our camp this evening, our poor horses were compelled to fast as heretofore, there being absolutely nothing for them to eat. Some of the famished animals attempted to allay their insatiable cravings, by cropping the dry and bitter tops of the wormwood with which the plain is strewed. We look forward to brighter days for them ere long; soon shall they sport in the green pastures, and rest and plenty shall compensate for their toils and privations.

Townsend's Across the Rockies to the Columbia

#### CHAPTER V

Arrival at the Colorado - The author in difficulty - Loss of a journal, and advice to travelling tyros - The rendezvous - Motley groups infesting it - Rum drinking, swearing, and other accomplishments in vogue - Description of the camp - Trout and grayling - Abundance of game - Cock of the plains - Departure from the rendezvous - An accession to the band - A renegado Blackfoot chief - Captain Stewart and Mr. Ashworth - Muddy creek - More carousing - Abundance of trout

---

- Bear river - A hard day's march - Volcanic country - White clay pits and "Beer spring" - Rare birds and common birds - Mr. Thomas McKay - Rough and arid country - Meeting with Captain Bonneville's party - Captains Stewart and Wyeth's visit to the lodge of the "bald chief" - Blackfoot river - Adventure with a grizzly bear - Death of "Zip Koon" - Young grizzly bears and buffalo calves - A Blackfoot Indian - Dangerous experiment of McKay - the three "Tetons" - Large trout - Departure of our Indian companions - Shoshone river - Site of "Fort Hall" - Preparations for a buffalo hunt.

June 19th. We arrived to-day on the Green river, Siskadee or Colorado of the west, a beautiful, clear, deep, and rapid stream, which receives the waters of Sandy, and encamped upon its eastern bank. After making a hasty meal, as it was yet early in the day, I sallied forth with my gun, and roamed about the neighborhood for several hours in quest of birds. On returning, towards evening, I found that the whole company had left the spot, the place being occupied only by a few hungry wolves, ravens, and magpies, the invariable gleaners of a forsaken camp.

I could not at first understand the meaning of all I saw. I thought the desertion strange, and was preparing to make the best of it, when a quick and joyful neigh sounded in the bushes near me, and I recognized the voice of my favorite horse. I found him carefully tied, with the saddle, &c., lying near him. I had not the least idea where the company had gone, but I knew that on the rich, alluvial banks of the river, the trail of the horses would be distinct enough, and I determined to place my dependence, in a great measure, upon the sagacity of my excellent dumb friend, satisfied that he would take me the right course. I accordingly mounted, and off we went at a speed which I found some difficulty in restraining. About half an hour's hard riding brought us to the edge of a large branch of the stream, and I observed that the horses had here entered. I noticed other tracks lower down, but supposed them to have been made by the wanderings of the loose animals. Here then seemed the proper fording place, and with some little hesitation, I allowed my nag to enter the water; we had proceeded but a few yards, however, when down he went off a steep bank, far beyond his depth. This was somewhat disconcerting; but there was but one thing to be done, so I turned my horse's head against the swift current, and we went snorting and blowing for the opposite shore. We arrived at length, though in a sadly wet and damaged state, and in a few minutes after, came in view of the new camp.

Captain W. explained to me that he had heard of good pasture here, and had concluded to move immediately, on account of the horses; he informed me, also, that he had crossed the stream about fifty yards below the point where I had entered, and had found an excellent ford. I did not regret my adventure, however, and was congratulating myself upon my good fortune in arriving so seasonably, when, upon looking to my saddle, I discovered that my coat was missing. I had felt uncomfortably warm when I mounted, and had removed the coat and attached it carelessly to the saddle; the rapidity of the current had disengaged it, and it was lost forever. The coat itself was not of much consequence after the hard service it had seen, but it contained the second volume of my journal, a pocket compass, and other articles of essential value to me. I would gladly have relinquished every thing the garment held, if I could have recovered the book; and although I returned to the river, and searched assiduously until night, and offered large rewards to the men, it could not be found.

The journal commenced with our arrival at the Black Hills, and contained some observations upon the natural productions of the country, which to me, at least, were of some importance; as

---

well as descriptions of several new species of birds, and notes regarding their habits, &c., which cannot be replaced.

I would advise all tourists, who journey by land, never to carry their itineraries upon their persons; or if they do, let them be attached by a cord to the neck, and worn under the clothing. A convenient and safe plan would probably be, to have the book deposited in a close pocket of leather, made on the inner side of the saddle-wing; it would thus be always at hand, and if a deep stream were to be passed the trouble of drying the leaves would not be a very serious matter.

In consequence of remaining several hours in wet clothes, after being heated by exercise, I rose the next morning with so much pain, and stiffness of the joints, that I could scarcely move. But notwithstanding this, I was compelled to mount my horse with the others, and to ride steadily and rapidly for eight hours. I suffered intensely during this ride; every step of my horse seemed to increase it, and induced constant-sickness and retching.

When we halted, I was so completely exhausted, as to require assistance in dismounting, and shortly after, sank into a state of insensibility from which I did not recover for several hours. Then a violent fever commenced, alternating for two whole days, with sickness and pain. I think I never was more unwell in my life; and if I had been at home, lying on a feather bed instead of the cold ground, I should probably have fancied myself an invalid for weeks. (I am indebted to the kindness of my companion and friend, Professor Nuttall, for supplying, in great measure, the deficiency occasioned by the loss of my journal.)

22d. -- We are now lying at the rendezvous. W. Sublette, Captains Serre, Fitzpatrick, and other leaders, with their companies, are encamped about a mile from us, on the same plain, and our own camp is crowded with a heterogeneous assemblage of visitors. The principal of these are Indians, of the Nez Perce, Banneck and Shoshone tribes, who come with the furs and peltries which they have been collecting at the risk of their lives during the past winter and spring, to trade for ammunition, trinkets, and "fire water." There is, in addition to these, a great variety of personages amongst us; most of them calling themselves white men, French-Canadians, half-breeds, &c., their color nearly as dark, and their manners wholly as wild, as the Indians with whom they constantly associate. These people, with their obstreperous mirth, their whooping, and howling, and quarrelling, added to the mounted Indians, who are constantly dashing into and through our camp, yelling like fiends, the barking and baying of savage wolf-dogs, and the incessant cracking of rifles and carbines, render our camp a perfect bedlam. A more unpleasant situation for an invalid could scarcely be conceived. I am confined closely to the tent with illness, and am compelled all day to listen to the hiccoughing jargon of drunken traders, the sacré and foutre of Frenchmen run wild, and the swearing and screaming of our own men, who are scarcely less savage than the rest, being heated by the detestable liquor which circulates freely among them.

It is very much to be regretted that at times like the present, there should be a positive necessity to allow the men as much rum as they can drink, but this course has been sanctioned and practised by all leaders of parties who have hitherto visited these regions, and reform cannot be thought of now. The principal liquor in use here is alcohol diluted with water. It is sold to the men at three dollars the pint! Tobacco, of very inferior quality, such as could be purchased in Philadelphia at about ten cents per pound, here brings two dollars! and everything else in proportion. There is no coin in circulation, and these articles are therefore paid for by the independent mountain-men, in beaver skins, buffalo robes, &c.; and those who are hired to the companies, have them charged

against their wages.

I was somewhat amused to-day by observing one of our newly hired men enter the tent, and order, with the air of a man who knew he would not be refused, twenty dollars' worth of rum, and ten dollars worth of sugar, to treat two of his companions who were about leaving the rendezvous! 30th. Our camp here is a most lovely one in every respect, and as several days have elapsed since we came, and I am convalescent, I can roam about the country a little and enjoy it. The pasture is rich and very abundant, and it does our hearts good to witness the satisfaction and comfort of our poor jaded horses. Our tents are pitched in a pretty little valley or indentation in the plain, surrounded on all sides by low bluffs of yellow clay. Near us flows the clear deep water of the Siskadee, and beyond, on every side, is a wide and level prairie, interrupted only by some gigantic peaks of mountains and conical butes in the distance. The river, here, contains a great number of large trout, some grayling, and a small narrow-mouthed white fish, resembling a herring. They are all frequently taken with the hook, and, the trout particularly, afford excellent sport to the lovers of angling. Old Izaak Walton would be in his glory here, and the precautionary measures which he so strongly recommends in approaching a trout stream, he would not need to practise, as the fish is not shy, and bites quickly and eagerly at a grasshopper or minnow.

Buffalo, antelopes, and elk are abundant in the vicinity, and we are therefore living well. We have seen also another kind of game, a beautiful bird, the size of a half grown turkey, called the cock of the plains, (*Tetrao urophasianus*.) We first met with this noble bird on the plains, about two days' journey east of Green river, in flocks, or packs, of fifteen or twenty, and so exceedingly tame as to allow an approach to within a few feet, running before our horses like domestic fowls, and not unfrequently hopping under their bellies, while the men amused themselves by striking out their feathers with their riding whips. When we first saw them, the temptation to shoot was irresistible; the guns were cracking all around us, and the poor grouse falling in every direction; but what was our disappointment, when, upon roasting them nicely before the fire, we found them so strong and bitter as not to be eatable. From this time the cock of the plains was allowed to roam free and unmolested, and as he has failed to please our palates, we are content to admire the beauty of his plumage, and the grace and spirit of his attitudes.

July 2d.-We bade adieu to the rendezvous this morning; packed up our moveables, and journed along the bank of the river. Our horses are very much recruited by the long rest and good pasture which they have enjoyed, and, like their masters, are in excellent spirits.

During our stay at the rendezvous, many of us looked anxiously for letters from our families, which we expected by the later caravans, but we were all disappointed. For myself, I have received but one since I left my home, but this has been my solace through many a long and dreary journey. Many a time, while pacing my solitary round as night-guard in the wilderness, have I sat myself down, and stirring up the dying embers of the camp fire, taken the precious little memento from my bosom, undrawn the string of the leathern sack which contained it, and poured over the dear characters, till my eyes would swim with sweet, but sad recollections, then kissing the inanimate paper, return it to its sanctuary, tighten up my pistol belt, shoulder my gun, and with a quivering voice, swelling the "all's well" upon the night breeze, resume my slow and noiseless tramp around my sleeping companions.

Many of our men have left us, and joined the returning companies, but we have had an accession to our party of about thirty Indians; Flat-heads, Nez Percés, &c., with their wives, children, and

dogs. Without these our camp would be small; they will probably travel with us until we arrive on Snake river, and pass over the country where the most danger is to be apprehended from their enemies, the Black-feet.

Some of the women in this party, particularly those of the Nez Percé nation, are rather handsome, and their persons are decked off in truly savage taste. Their dresses of deer skin are profusely ornamented with beads and porcupine quills; huge strings of beads are hung around their necks, and their saddles are garnished with dozens of little hawk's bells, which jingle and make music for them as they travel along. Several of these women have little children tied to their backs, sewed up papoose fashion, only the head being seen; as they jolt along the road, we not unfrequently hear their voices ringing loud and shrill above the music of the bells. Other little fellows who have ceased to require the maternal contributions, are tied securely on other horses, and all their care seems to be to sleep, which they do most pertinaciously in spite of jolting, noise, and clamor. There is among this party, a Blackfoot chief; a renegado from his tribe, who sometime since killed the principal chief of his nation, and was in consequence under the necessity of absconding. He has now joined the party of his hereditary foes, and is prepared to fight against his own people and kindred. He is a fine, warlike looking fellow, and although he takes part in all the war-songs, and sham-battles of his adopted brothers, and whoops, and howls as loud as the best of them, yet it is plain to perceive that he is distrusted and disliked. All men, whether, civilized or savage, honorable, or otherwise, detest and scorn a traitor!

We were joined at the rendezvous by a Captain Stewart, an English gentleman of noble family, who is travelling for amusement, and in search of adventure. He has already been a year in the mountains, and is now desirous of visiting the lower country, from which he may probably take passage to England by sea. Another Englishman, a young man, named Ashworth, also attached himself to our party, for the same purpose.

Our course lay along the bank of Ham's fork, through a hilly and stony, but not a rocky country; the willow flourished on the margin of the stream, and occasionally the eye was relieved, on scanning the plain, by a pretty clump of cottonwood or poplar trees. The cock of the plains is very abundant here, and our pretty little summer yellow bird, (*Sylvia oestiva*,) one of our most common birds at home, is our constant companion. How natural sounds his little monotonous stave, and how it seems to carry us back to the dear scenes which we have exchanged for the wild and pathless wilderness!

4th. We left Ham's fork this morning, now diminished to a little purling brook, and passed across the hills in a north-westerly direction for about twenty miles, when we struck Muddy creek. This is a branch of Bear river, which empties into the Salt lake, or "lake Bonneville," as it has been lately named, for what reason I know not. Our camp here, is a beautiful and most delightful one. A large plain, like a meadow, of rich, waving grass, with a lovely little stream running through the midst, high hills, capped with shapely cedars on two sides, and on the others an immense plain, with snow clad mountains in the distance. This being a memorable day, the liquor kegs were opened, and the men allowed an abundance. We, therefore, soon had a renewal of the coarse and brutal scenes of the rendezvous. Some of the bacchanals called for a volley in honor of the day, and in obedience to the order, some twenty or thirty "happy" ones reeled into line with their muzzles directed to every point of the compass, and when the word "fire" was given, we who were not "happy" had to lie flat upon the ground to avoid the bullets which were careering through the

camp.

In this little stream, the trout are more abundant than we have yet seen them. One of our sober men took, this afternoon, upwards of thirty pounds. These fish would probably average fifteen or sixteen inches in length, and weigh three-quarters of a pound; occasionally, however, a much larger one is seen.

5th. -We travelled about twenty miles this day, over a country abounding in lofty hills, and early in the afternoon arrived on Bear river, and encamped. This is a fine stream of about one hundred and fifty feet in width, with a moveable sandy bottom. The grass is dry and poor, the willow abounds along the banks, and at a distance marks the course of the stream, which meanders through an alluvial plain of four to six miles in width. At the distance of about one hundred miles from this point, the Bear river enters the Salt lake, a large body of salt water, without outlet, in which there is so large an island as to afford streams of fresh water for goats and other animals living upon it.

On the next day we crossed the river, which we immediately left, to avoid a great bend, and passed over some lofty ranges of hills and through rugged and stony valleys between them; the wind was blowing a gale right ahead, and clouds of dust were flying in our faces, so that at the end of the day, our countenances were disguised as they were on the plains of the Platte. The march today has been a most laborious and fatiguing one both for man and beast; we have travelled steadily from morning till night, not stopping at noon; our poor horses' feet are becoming very much worn and sore, and when at length we struck Bear river again and encamped, the wearied animals refused to eat, stretching themselves upon the ground and falling asleep from very exhaustion. Trout, grayling, and a kind of char are very abundant here the first very large. The next day we travelled but twelve miles, it being impossible to urge our worn-out horses farther. Near our camp this evening we found some large gooseberries and currants, and made a hearty meal upon them. They were to us peculiarly delicious. We have lately been living entirely upon dried buffalo, without vegetables or bread; even this is now failing us, and we are upon short allowance. Game is very scarce, our hunters cannot find any, and our Indians have killed but two buffalo for several days. Of this small stock they would not spare us a mouthful, so it is probable we shall soon be hungry.

The alluvial plain here presents many unequivocal evidences of volcanic action, being thickly covered with masses of lava, and high walls and regular columns of basalt appear in many places. The surrounding country is composed, as usual, of high hills and narrow, stony valleys between them; the hills are thickly covered with a growth of small cedars, but on the plain, nothing flourishes but the everlasting wormwood, or sage as it is here called.

Our encampment on the 8th, was near what are called the "White-clay pits," still on Bear river. The soil is soft chalk, white and tenacious; and in the vicinity are several springs of strong supercarbonated water, which bubble up with all the activity of artificial fountains. The taste was very agreeable and refreshing, resembling Saratoga water, but not so saline. The whole plain to the hills, is covered with little mounds formed of calcareous sinter, having depressions on their summits, from which once issued streams of water. The extent of these eruptions, at some former period, must have been very great. At about half a mile distant, is an eruptive thermal spring of the temperature of 90 deg., and near this is an opening in the earth from which a stream of gas issues without water.

---

In a thicket of common red cedars, near our camp, I found, and procured several specimens of two beautiful and rare birds which I had never before seen -- the Lewis' woodpecker and Clark's crow, (*Picus torquatus* and *Corvus columbianus*.)

We remained the whole of the following day in camp to recruit our horses, and a good opportunity was thus afforded me of inspecting all the curiosities of this wonderful region, and of procuring some rare and valuable specimens of birds. Three of our hunters sallied forth in pursuit of several buffalo whose tracks had been observed by some of the men, and we were overjoyed to see them return in the evening loaded with the meat and marrow bones of two animals which they had killed.

We saw here the whooping crane, and white pelican, numerous; and in the small streams near the bases of the hills, the common canvass-back duck, shoveller, and black duck, (*Anas obscura*,) were feeding their young.

We were this evening visited by Mr. Thomas McKay, an Indian trader of some note in the mountains. (This is the son of Alexander McKay, who was massacred by the Indians of the N. W. Coast on board the ship "Tonquin", an account of which is given in Irving's "Astoria". I have often heard McKay speak of the tragic fate of his parent, and with the bitter animosity and love of revenge inherited from his Indian mother, I have heard him declare that he will yet be known on the coast as the avenger of blood.) He is a step-son of Dr. McLaughlin, the chief factor at Fort Vancouver, on the Columbia, and the leader of a party of Canadians and Indians, now on a hunt in the vicinity. This party is at present in our rear, and Mr. McKay has come ahead in order to join us, and keep us company until we reach Portneuf river, where we intend building a fort.

10th. We were moving early this morning: our horses were very much recruited, and seemed as eager as their masters to travel on. It is astonishing how soon a horse revives, and overcomes the lassitude consequent upon fatigue, when he is allowed a day's rest upon tolerable pasture. Towards noon, however, after encountering the rough lava-strewn plain for a few hours, they became sufficiently sobered to desist from all unnecessary curvetting and prancing, and settled down into a very matter-of-fact trudge, better suited to the country and to the work which they have yet to do. Soon after we left, we crossed one of the high and stony hills by which our late camp is surrounded; then making a gentle descent, we came to a beautiful and very fertile plain. This is, however, very different from the general face of the country; in a short time, after passing over the rich prairie, the same dry aridity and depauperation prevailed, which is almost universal west of the mountains. On the wide plain, we observed large sunken spots, some of them of great extent, surrounded by walls of lava, indicating the existence, at some very ancient date, of active craters. These eruptions have probably been antediluvian or have existed at a period long anterior to the present order of creation. On the side of the hills are high walls of lava and basaltic dykes, and many large and dark caves are formed by the juxtaposition of the enormous masses.

Early in the afternoon we passed a large party of white men, encamped on the lava plain near one of the small streams. Horses were tethered all around, and men were lolling about playing games of cards, and loitering through the camp, as though at a loss for employment. We soon ascertained it to be Captain Bonneville's company resting after the fatigues of a long march. Mr. Wyeth and Captain Stewart visited the lodge of the "bald chief," and our party proceeded on its march. The difficulties of the route seemed to increase as we progressed, until at length we found ourselves wedged in among huge blocks of lava and columns of basalt, and were forced, most reluc-

tantly, to retrace our steps for several miles, over the impediments which we had hoped we were leaving forever behind us. We had nearly reached Bonneville's camp again, when Captains Wyeth and Stewart joined us, and we struck into another path which proved more tolerable. Wyeth gave us a rather amusing account of his visit to the worthy captain. He and Captain Stewart were received very kindly by the veteran, and every delicacy that the lodge afforded was brought forth to do them honor. Among the rest, was some metheglen or diluted alcohol sweetened with honey, which the good host had concocted; this dainty beverage was set before them, and the thirsty guests were not slow in taking advantage of the invitation so obligingly given. Draught after draught of the precious liquor disappeared down the throats of the visitors, until the anxious, but still complaisant captain, began to grow uneasy.

"I beg you will help yourselves, gentlemen," said the host, with a smile which he intended to express the utmost urbanity, but which, in spite of himself, had a certain ghastliness about it.

"Thank you, sir, we will do so freely," replied the two worthies, and away went the metheglen as before.

Cup after cup was drained, until the hollow sound of the keg indicated that its contents were nearly exhausted, when the company rose, and thanking the kind host for his noble entertainment, were bowed out of the tent with all the polite formality which the accomplished captain knows so well how to assume.

Towards evening, we struck Blackfoot river, a small, sluggish, stagnant stream, heading with the waters of a rapid rivulet passed yesterday, which empties into the Bear river. This stream passes in a north-westerly direction through a valley of about six miles in width, covered with quagmires, through which we had great difficulty in making our way. As we approached our encampment, near a small grove of willows, on the margin of the river, a tremendous grizzly bear rushed out upon us. Our horses ran wildly in every direction, snorting with terror, and became nearly unmanageable. Several balls were instantly fired into him, but they only seemed to increase his fury. After spending a moment in rending each wound, (their invariable practice,) he selected the person who happened to be nearest, and darted after him, but before he proceeded far, he was sure to be stopped again by a ball from another quarter. In this way he was driven about amongst us for perhaps fifteen minutes, at times so near some of the horses, that he received several severe kicks from them. One of the pack horses was fairly fastened upon by the terrific claws of the brute, and in the terrified animal's efforts to escape the dreaded gripe, the pack and saddle were broken to pieces and disengaged. One of our mules also lent him a kick in the head while pursuing it up an adjacent hill, which sent him rolling to the bottom. Here he was finally brought to a stand.

The poor animal was so completely surrounded by enemies that he became bewildered. He raised himself upon his hind feet, standing almost erect, his mouth partly open, and from his protruding tongue the blood fell fast in drops. While in this position, he received about six more balls, each of which made him reel. At last, as in complete desperation, he dashed into the water, and swam several yards with astonishing strength and agility, the guns cracking at him constantly; but he was not to proceed far. Just then, Richardson, who had been absent, rode up, and fixing his deadly aim upon him, fired a ball into the back of his head, which killed him instantly. The strength of four men was required to drag the ferocious brute from the water, and upon examining his body, he was found completely riddled; there did not appear to be four inches of his shaggy person, from the hips upward, that had not received a ball. There must have been at least thirty

---

shots made at him, and probably few missed him; yet such was his tenacity of life, that I have no doubt he would have succeeded in crossing the river, but for the last shot in the brain. He would probably weigh, at the least, six hundred pounds, and was about the height of an ordinary steer. The spread of the foot, laterally, was ten inches, and the claws measured seven inches in length. This animal was remarkably lean; when in good condition, he would, doubtless, much exceed in weight the estimate I have given. Richardson, and two other hunters, in company, killed two in the course of the afternoon, and saw several others.

This evening, our pet antelope, poor little "Zip Koon," met with a serious accident. The mule on which he rode, got her feet fastened in some lava blocks, and, in the struggle to extricate herself, fell violently on the pointed fragments. One of the delicate legs of our favorite was broken, and he was otherwise so bruised and hurt, that, from sheer mercy, we ordered him killed. We had hoped to be able to take him to the fort which we intend building on the Portneuf river, where he could have been comfortably cared for. This is the only pet we have had in the camp, which continued with us for more than a few days. We have sometimes taken young grizzly bears, but these little fellows, even when not larger than puppies, are so cross and snappish, that it is dangerous to handle them, and we could never become attached to any animal so ungentle, and therefore young "Ephraim," (to give him his mountain cognomen,) generally meets with but little mercy from us when his evil genius throws him in our way. The young buffalo calf is also very often taken, and if removed from the mother, and out of sight of the herd, he will follow the camp as steadily as a dog; but his propensity for keeping close to the horse's heels often gets him into trouble, as he meets with more kicks than caresses from them. He is considered an interloper, and treated accordingly. The bull calf of a month or two old, is sometimes rather difficult to manage; he shows no inclination to follow the camp like the younger ones, and requires to be dragged along by main force. At such times, he watches for a good opportunity, and before his captor is aware of what is going on, he receives a butt from the clumsy head of the intractable little brute, which, in most cases, lays him sprawling upon the ground.

I had, an adventure of this sort a few days before we arrived at the rendezvous. I captured a large bull calf, and with considerable difficulty, managed to drag him into the camp, by means of a rope noosed around his neck, and made fast to the high pommel of my saddle. Here I attached him firmly by a cord to a stake driven into the ground, and considered him secure. In a few minutes, however, he succeeded in breaking his fastenings, and away he scoured out of the camp. I lost no time in giving chase, and although I fell flat into a ditch, and afforded no little amusement to our people thereby, I soon overtook him, and was about seizing the stranded rope, which was still around his neck, when, to my surprise, the little animal showed fight; he came at me with all his force, and dashing his head into my breast, bore me to the ground in a twinkling. I, however, finally succeeded in recapturing him, and led and pushed him back into the camp; but I could make nothing of him; his stubbornness would neither yield to severity or kindness, and the next morning I loosed him and let him go.

11th. On ascending a hill this morning, Captain Wyeth, who was at the head of the company, suddenly espied an Indian stealing cautiously along the summit, and evidently endeavoring to conceal himself. Captain W. directed the attention of McKay to the crouching figure, who, the moment he caught a glimpse of him, exclaimed, in tones of joyful astonishment, " a Blackfoot, by --- !" and clapping spurs to his horse, tore up the hill with the most frantic eagerness, with his rifle

---

poised in his hand ready for a shot. The Indian disappeared over the hill like a lightning flash, and in another second, McKay was also out of sight, and we could hear the rapid clatter of his horse's hoofs, in hot pursuit after the fugitive. Several of the men, with myself, followed after at a rapid gait, with, however, a very different object. Mine was simply curiosity, mingled with some anxiety, lest the wily Indian should lead our impetuous friend into an ambushment, and his life thus fall a sacrifice to his temerity. When we arrived at the hill-top, McKay was gone, but we saw the track of his horse passing down the side of it, and we traced him into a dense thicket about a quarter of a mile distant. Several of our hardy fellows entered this thicket, and beat about for some time in various directions, but nothing could they see either of McKay or the Indian. In the mean time, the party passed on, and my apprehensions were fast settling into a certainty that our bold companion had found the death he had so rashly courted, when I was inexpressibly relieved by hearing the crackling of the bushes near, which was immediately followed by the appearance of the missing man himself.

He was in an excessively bad humor, and grumbled audibly about the "Blackfoot rascal getting off in that cowardly fashion," without at all heeding the congratulations which I was showering upon him for his almost miraculous escape. He was evidently not aware of having been peculiarly exposed, and was regretting, like the hunter who loses his game by a sudden shift of wind, that his human prey had escaped him.

The appearance of this Indian is a proof that others are lurking near; and if the party happens to be large, they may give us some trouble. We are now in a part of the country which is almost constantly infested by the Blackfeet; we have seen for several mornings past, the tracks of moccasins around our camp, and not unfrequently the prints of unshod horses, so that we know we are narrowly watched; and the slumbering of one of the guard, or the slightest appearance of carelessness in the conduct of the camp, may bring the savages whooping upon us like demons.

Our encampment this evening is on one of the head branches of the Blackfoot river, from which we can see the three remarkable conic summits known by the name of the "Three Buttes" or "Tetons." Near these flows the Portneuf, or south branch of Snake or Lewis' river. Here is to be another place of rest, and we look forward to it with pleasure both on our own account and on that of our wearied horses.

12th. In the afternoon we made a camp on Ross's creek, a small branch of Snake river. The pasture is better than we have had for two weeks, and the stream contains an abundance of excellent trout. Some of these are enormous, and very fine eating. They bite eagerly at a grasshopper or minnow, but the largest fish are shy, and the sportsman requires to be carefully concealed in order to take them. We have here none of the fine tackle, jointed rods, reels, and silkworm gut of the accomplished city sportsman; we have only a piece of common cord, and a hook seized on with half-hitches, with a willow rod cut on the banks of the stream; but with this rough equipment we take as many trout as we wish, and who could do more, even with all the curious contrivances of old Izaak Walton or Christopher North?

The band of Indians which kept company with us from the rendezvous, left us yesterday, and fell back to join Captain Bonneville's party, which is travelling on behind. We do not regret their absence; for although they added strength to our band, and would have been useful in case of an attack from Blackfeet, yet they added very materially to our cares, and gave us some trouble by their noise, confusion, and singing at night.

On the 14th, we travelled but about six miles, when a halt was called, and we pitched our tents upon the banks of the noble Shoshone or Snake river. It seems now, as though we were really nearing the western extremity of our vast continent. We are now on a stream which pours its waters directly into the Columbia, and we can form some idea of the great Oregon river by the beauty and magnitude of its tributary. Soon after we stopped, Captain W., Richardson, and two others left us to seek for a suitable spot for building a fort, and in the evening they returned with the information that an excellent and convenient place had been pitched upon, about five miles from our present encampment. On their route, they killed a buffalo, which they left at the site of the fort, suitably protected from wolves, &c. This is very pleasing intelligence to us, as our stock of dried meat is almost exhausted, and for several days past we have been depending almost exclusively upon fish.

The next morning we moved early, and soon arrived at our destined camp. This is a fine large plain on the south side of the Portneuf, with an abundance of excellent grass and rich soil. The opposite side of the river is thickly covered with large timber of the cottonwood and willow, with a dense undergrowth of the same, intermixed with service-berry and currant bushes.

Most of the men were immediately put to work, felling trees, making horse-pens, and preparing the various requisite materials for the building, while others were ordered to get themselves in readiness for a start on the back track, in order to make a hunt, and procure meat for the camp. To this party I have attached myself, and all my leisure time to-day is employed in preparing for it. Our number will be twelve, and each man will lead a mule with a pack-saddle, in order to bring in the meat that we may kill. Richardson is the principal of this party, and Mr. Ashworth has also consented to join us, so that I hope we shall have an agreeable trip. There will be but little hard work to perform; our men are mostly of the best, and no rum or cards are allowed.

Townsend's Across the Rockies to the Columbia

#### CHAPTER VI

Departure of the hunting camp - A false alarm - Blackfeet Indians - their ferocity - Requisites of a mountain-man - Good fare, and good appetites - An experiment - Grizzly bears - Visit of a Nez Perce Indian - Adventure with a grizzly bear - Hunter's anecdotes - Homeward bound - Accident from gunpowder - Arrival at "Fort Hall" - A salute - Emaciation of some of the party from low diet - Mr. McKay's company - Buffalo lodges - Progress of the building - Effects of judicious training - Indian worship - A "Camp Meeting" - Mr. Jason Lee, a favorite - A fatal accident and a burial.

July 16th.- Our little hunting party of twelve men, rode out of the encampment this morning, at a brisk trot, which gait was continued until we arrived at our late encampment on Ross' creek, having gone about thirty miles, Here we came to a halt, and made a hearty meal on a buffalo which we had just killed. While we were eating, a little Welshman, whom we had stationed outside our camp to watch the horses, came running to us out of breath, crying in a terrified falsetto, "Indians, Indians!" In a moment every man was on his feet, and his gun in his hand; the horses were instantly surrounded, by Richardson's direction, and driven into the bushes, and we were preparing ourselves for the coming struggle, when our hunter, peering out of the thick copse to mark the approach of the enemy, burst at once into a loud laugh, and muttering something about a Welsh coward, stepped boldly from his place of concealment, and told us to follow him. When we had done so, we perceived the band approaching steadily, and it seemed warily, along the path
