Taking his advice, I started back to the boys, and when near them made signs for them to come on. Meeting me and learning the result of my mission, they could not help laughing at the way I had "battered the old fool," as they said. We steered our course for the cherry bushes, which we reached at sunset. The wind had changed to the north; it became again very cold, and to save our lives we could not get a fire out of those green bushes. There was not a stick of dry wood to be found, and a tremendous hard night we had. Sleep was out of the question, and it was too cold to stand a good guard; the result was that the two bucks, who had followed us thus far, disappeared with two of our best horses, one of which we called Father De Smet, because he had been brought from the Flatheads on that missionary's return from the Columbia. We were then nearly 50 miles from the fort, which distance would have taken us two days; but now, being short of horses, it would take us double that time. I found an Indian, whom I knew to be a good traveler, and asked him if he could go to the fort by sunset; he said he could, for he had already done it. I dispatched him with a letter to Mr. Culbertson to send me more horses, and also some dried meat, as we were starving. Dividing the loads as best we could, we got under way again, making but slow progress, with Wounded Leg, several other men, and some squaws in company. We again camped, as we all hoped for the last time; but where was supper to come from? We had not a thing to eat and were mighty hungry. I thought of trying rawhide cords, of which we had a few bundles left. I got a squaw to cut them up fine and boil them; besides which, as a great favor, I got an Indian dog killed and boiled. That I knew would be good; and as I could not obtain more than one dog, the cords, if the cooking proved successful, would help to fill up. I am sorry to say that I was defeated there, for the longer they boiled the harder they got, and they could not be brought into condition to swallow. So there was only the dog for supper. I had sent it to a squaw to cook for us, and when she gave it to us some of the boys cried, "Mad dog! mad dog!" Sure enough, he did look like a mad dog; for there was his head sticking partly out of the kettle, with a fine set of ivories, growling as it were, and the scum was frothing about his teeth. After the mirth had abated, and no one offered to dish out the "mad dog," I appointed Pitcher master of ceremonies, thinking a pitcher could pour out soup and hold some of it too. He commenced with great dignity, but some of the boys refused to partake, saying they would rather be excused, and could stand it until they got to the fort. This made the portions so much the larger for the balance of us; the biggest part of the thigh fell to my share, which I soon demolished, and I must say it sat very well on my stomach. But some of the boys began to say the "mad dog" was trying to run out the same way he went in; and some noises heard outside might have been taken to signify that the animal was escaping. It was no trouble to get all hands up next morning, but some of our worn-out horses had to be whipped up. When once loaded and warmed up by means of the whip, they could only be made to keep on their feet by the same cruel means, which we were obliged to use pretty lively all the morning. Between the hours of eleven and twelve o'clock we perceived the re-enforcement from the fort, at which a great cry of joy was heard throughout the company. The loads were soon rearranged; each man took a piece of dried buffalo meat in his hands to eat on the way; the march was resumed, all eating and whipping, as there was no time to spare to reach the fort that day. Owing to those double exertions, by sunset we were on the ridge, in sight of Union and of its fine large American flag. This had been hoisted on our return from an expedition which had caused much

uneasiness, from the many reports which had made it doubtful whether we could ever get back. We were also in sight of the Opposition, and I afterward heard that Mr. Cotton, on seeing us, said, "Well, Larpenteur was not badly robbed — see what a fine lot of robes he has!" In ten minutes after reaching the ridge we were safe in the fort.

Chief Wounded Leg, like the rest of us, met with a cordial welcome; and as a large trading party had just arrived, a keg of liquor was presented him, to drink with his friends. Among them was a certain Indian named The Hand, the greatest rascal in the tribe, it was believed, who had retaken two horses from some Assiniboines who had stolen them from the fort, and he had come to return them, in company with us. In some drunken spree he had killed an individual whose relations were in the trading party above mentioned. Fearing that he might be killed, I remarked to Mr. Culbertson that it would not be advisable to let him go out and drink with the other Indians — better let him have a little liquor in the fort, and if he got too troublesome we could tie him. This plan was adopted; and as I was much fatigued, I retired, telling Mr. Culbertson to awaken me in case they could not manage him without me. He got so drunk they could do nothing with him, and insisted on leaving; so the door was opened and the gentleman turned out. Early in the morning, I was again on duty. The doors were still shut; but, being tired of hearing a constant knocking, I went to see who was there. By the sound of the voice I knew who he was, and that he was all right; so I opened the small door. "Here," said the Indian, "I killed a dog last night. Take him in and shut the door." This dog was Mr. Hand, whose corpse had been wrapped up in his robe and bundled on a dog-travaille. So much for him, and we were not sorry, as he was a devil.

Shortly afterward we learned that another individual had killed his own father. I shall have occasion to mention him again. Some time before our return I learned that my interpreter had died about eight days after he reached the fort, complaining of headache. The vulgar said he died of the hollow horn; and others, of the hollow head. My good friend Pitcher, I was informed long afterward, struck for Virginia City, where I hope he became a pitcher full of gold.

#### Chapter 11

(1844-45)

#### CARNIVAL OF CRIME

Jim Bridger, being a great trapper, and having been told that there were many beaver on Milk River, thought of trying his luck in that direction. He left the mountains with a picked party of 30 men, all good trappers and Indian fighters. Nothing unusual transpired at Fort Union until about the month of November [1844] when Bridger and his men made their appearance, having come from Milk River with the intention of passing the winter with us. Mr. Laidlaw, who was in charge at the time, offered him all assistance he could afford, to make his winter quarters pleasant and comfortable, and so Bridger pitched his camp about half a mile from the fort. But he had been deceived by exaggerated reports of the quantity of beaver that could be had on Milk River, and his hunt had been a very poor one. The main substance of Bridger's conversation was his brave men, his fast horses, and his fights with Blackfeet, till we were induced to believe that, with such a party to defend us, there would be no danger for us in case of an attack by Sioux. At that time such affairs became quite frequent, and the Sioux generally came in large parties. Bridger soon had an opportunity to display the bravery of his men, whom he had cracked up so highly. A few days before Christmas [1844] a large war party made a raid on the band of horses belonging to the fort, running off six of them, and wounding one of the guard in the leg with buckshot. The alarm was

immediately given, and the braves were mounted to pursue the Sioux. Bridger's clerk, who had been left in camp, came running into the fort out of breath, scared to death. "Get up all the men you can! The Sioux are in camp — they are butchering us!" Mr. Denig and I, with a few men, all we could get, took our guns, and ran with all our might to render what assistance we could. Finding that this was a case in which we had to be cautious, we went along under the steep bank of the river till we thought ourselves about opposite the camp, where we stopped to listen for the cries of the reported butchering. Hearing nothing, we cautiously raised our heads over the bank, to see some of the performance. Neither seeing nor hearing anything, we came to the conclusion the murderous work had been done, and determined to go to the camp, expecting to find people cut to pieces and scalped. To our great surprise we saw nothing — not a sign that any Indians had been near the camp. Now assured that Bridger's brave clerk had lied, we returned to the fort laughing at his fright.

During our absence on this dangerous sortie, Mr. Laidlaw was left alone — that is, without a clerk. I had, in my hurry, taken the key of the store with me, and pressing demands were made for ammunition. Mr. Laidlaw, who was a fiery, quick-tempered old Scotchman, smashed in the window of the retail store. Seeing this, on our entrance, we could not imagine what could have been the matter. No word had been received from Bridger's army, but we expected them to return with the recaptured horses and with scalps flying. But soon, to our great disappointment, came the report that a man had been killed; that a mare belonging to Mr. Ellingsworth, the Opposition bookkeeper, had been shot through the hip, and that the Indians were daring the whites to fight. The Opposition, who had seen Bridger's men turn out to fight, had concluded to join them. Mr. Ellingsworth had bought this fine American mare of Mr. Laidlaw, who had brought her here in the fall. An old half-breed Creek was also well mounted, and they both very soon came up with Bridger's party, who had halted at the foot of the hills. When Ellingsworth and the old man approached they saw the cause of the halt; the Sioux were on a hill, making signs for them to come on and fight. By this time their party had been re-enforced, and Bridger's men, not accustomed to deal with such a large force, declined the invitation. The old half-breed, who was clear grit, put the whip to his horse, telling the balance to come on; but only Ellingsworth followed. The Sioux, who understood this kind of warfare, and expected the whites to accept the challenge, had left concealed in a ravine a small body of their party, ready to let fly in case the enemy attempted to come on. As the old Indian went by at full speed with Ellingsworth, the Indians fired a volley, which dropped the former dead off his horse, and wounded Ellingsworth's mare in the hip; but did not come so near killing her that Ellingsworth could not make his escape. The Indians, seeing this, commenced to yell, and renewed their defiance. But the brave party concluded to turn back, somewhat ashamed of themselves. Bridger was extremely mortified, and said he could not account for the cowardice of his men on this occasion. At the funeral of Gardepie — that being the name of the old man — these words were pronounced: "This burial is caused by the cowardice of Bridger's party." This expression, it was thought, would result in a fight with the Opposition; but the discontentment disappeared without any disturbance. In the meantime the Sioux went away, having killed one man, wounded another's mare, and taken six head of horses. Bridger became very much dissatisfied with his men, who dispersed in all directions, and he returned to the mountains.

Before I come to the story of the Blackfoot massacre, which is not yet known, I will explain the

manner in which trade was carried on this winter [1844-45]. Owing to the local laws which were put in force, we were not allowed to go into Indian camps to trade; the trade had to be done either at the fort, or at an outpost allowed by the agent. So we had to drum up Indians to get them into the fort, and be on the lookout for trading parties coming in. Being well supplied with horses, which we kept constantly in the fort, we had a great advantage over our opponents, who were deficient in that respect. As soon as our pickets, whom we always kept out, in every direction, made the signs agreed upon, we immediately mounted; and, according to signs understood by us, the required number of horses followed. With our pockets full of tobacco and vermilion, we galloped as fast as we could, in order to get ahead of the Opposition, and induce the Indians to consent to come to our fort. But frequently, whether yes or whether no, their robes were put on our horses, and taken to the fort. When the party was large, and some trouble was expected in bringing in the chiefs, a sled was brought out, having a small keg of liquor placed on it, to treat the gentlemen; and a band of music, bearing the flag, was also in attendance. The instruments consisted of a clarionette, a drum, a violin, and a triangle, besides the jingling bells on the sled, and it was almost impossible for Indians to refuse such an invitation. They laughed with delight at the display, and the Opposition could not "come it over them," as the saying is. Mr. Cotton found himself about as badly used up this winter as he had been last; he learned that he stood a poor show in opposing the American Fur Company, and that it would take Mr. Ebbitt, or any other man, a long time to get a footing in the country.

This winter [1844-45 ?] we learned that Mr. F. A. Chardon had had a fight with the Blood Indians, a band of Blackfeet bearing that name; but no particulars were known until the arrival of the returns, which generally came down the latter part of April or the first part of May. At that time I was well informed on the subject by Mr. Des Hôtel, one of the clerks, in whom full confidence could be placed.

Mr. Chardon, who, as has been stated, was the man who [in 1843] built the Blackfoot post at the mouth of Judith River, generally called Fort Chardon, happened to have a man killed by that band of Blood Indians last winter. This man was a negro by the name of Reese. Mr. Chardon, it appears, set great store by that negro and swore vengeance on the band. He communicated his designs to Alexander Harvey, who, wishing no better fun, agreed to take an important part. They also got old man Berger to join them. The plot was, when the band came to trade, to invite three of the head men into the fort, where Harvey was to have the cannon in the bastion which commanded the front door loaded with balls; when the Indians should be gathered thickly at the door, waiting for the trade to commence, at a given signal the three head men were to be massacred in the fort, and Harvey was to kill as many others as he could at one discharge; on which they expected the surviving Indians to run away, abandoning all their robes and horses, of which the three whites were to become the owners, share and share alike. But it did not happen quite to their satisfaction; for, through some means, the wicked plot was made known in time for the chiefs to run out of the office and escape by jumping over the pickets. Mr. Chardon was quick enough to shoot, and broke the thigh of the principal chief. Harvey touched off the cannon, but, as the Indians had commenced to scatter, he killed but three and wounded two. The rest quickly made their escape, leaving all their plunder; but saved nearly all their horses, most of which were at some distance from the fort. After firing the shot, Harvey came out of the bastion and finished the wounded Indians with his large dagy. I was told he then licked the blood off the dagy and afterward made the

---

squaws of the fort dance the scalp dance around the scalps, which he had raised himself. I will conclude this chapter with one more of Harvey's awful deeds. It happened that, while he was at old Fort McKenzie, some Indians, who had a spite against the fort, took it into their heads to kill some of the cattle. One day a party of five chased away some of the milch cows, one of which they shot when they had gone a short distance from the fort. On learning this, Harvey and some others got on their horses and went in pursuit. Harvey, who always kept a No. 1 horse, soon overtook the Indian who had shot the cow, and when he got within a few steps fired and broke his thigh; the Indian fell off his horse, and there he lay. Harvey came up to him, got off his horse, and took his seat near the wounded Indian, saying, "Now, comrade, I have got you. You must die. But, before you die, you must smoke a pipe with me." Having lighted his pipe and made the poor Indian smoke, he then said, "I am going to kill you, but I will give you a little time to take a good look at your country." The Indian begged for his life, saying, "Comrade, it is true I was a fool. I killed your cow; but now that you have broken my thigh, this ought to make us even — spare my life!" "No," said Harvey; "look well, for the last time, at all those nice hills — at all those paths which lead to the fort, where you came with your parents to trade, playing with your sweethearts — look at that, will you, for the last time." So saying, with his gun pointed at the head of his victim, he pulled the trigger and the Indian was no more.

Chapter 12

(1845-46)

#### POPLAR RIVER CAMP

The steamer made her appearance at the usual time, in June [1845], Mr. Honoré Picotte in charge. As it was customary for all the partners to meet in St. Louis in summer, I was left in charge of Fort Union until one of them returned in the fall. I asked Mr. Picotte what kind of men he had brought up; to which he replied, "First-rate men." "Will they not be apt to desert?" "No," said he, "not one." My fear of their desertion was based on their probably being unwilling to go to the Blackfoot post, on account of the massacre of last [?] winter. The steamer left the same day, in the evening. During the night I was made the father of a fine son. In the morning the artillery was playing, and, in consequence of this, something extra must be done. All hands had a holiday, with the promise of a big ball at night. Scrubbing, washing, and cooking went on all day, and at night the ball opened; it went off peaceably, which was rarely the case in this place. All hands retired in good time, and had a good night's sleep. Mr. Auguste Chouteau, who was clerk and had charge of the men, came to my room early in the morning, saying, "Mr. Larpenteur, twelve men left last night." Although I expected some desertions, I did not think any would occur until the men were notified to go to the Blackfeet; but they had been persuaded by some of the Opposition who came to the ball, and being afraid they would have to go, they thought best to disappear while they could get employment elsewhere. I had still many men left, went on preparing the outfit, and in a few days all was ready for their departure. James Lee had been sent for by Mr. Chardon, who had heard he was a bully and a bravo. Lee was to go up to the Blackfoot post, and it afterward appeared that he intended to chastise Harvey. During the outfitting we learned enough to induce us to believe that a plot had been made to pound Harvey on their arrival, but not to murder him. Mr. Chardon was then at Fort Clark, his old station. Mr. Culbertson was in charge of the Blackfoot outfit, with the understanding that he was to burn down Fort Chardon, and build farther up the Missouri.

---

I finally succeeded in getting the outfit all right, but with a frightened set of men. As they pushed off a large number of the Opposition men were on the shore, crying out to them, "You are going to the butcher-shop — good-by forever!" But the boys, who felt the effects of a good jigger to which they had just been treated, scoffed at this, and went off finely. After this I had the Crow outfit to start off; but there were plenty of men left for this, and for my own use at the fort. Early next morning Mr. Chouteau came to me again, saying, "Seven more men gone last night." This was rather a striker, but on counting the number left, I found that I could send up the Crow outfit, and went to work at the equipment. The following morning, however, three more had deserted, and others kept leaving, one by one, until I had to abandon the Crow outfit. Desertions continued until I was left with but four men all told. This number being too few to keep the fort in safety until the return of the gentlemen in the fall, I immediately dispatched Owen McKenzie, the son of Kenneth McKenzie, with letters to Fort Pierre, to be forwarded thence to St. Louis. Much were they astonished when the dispatch arrived. Men were immediately engaged and sent up by Mr. Denig, who had gone on a visit to his friends this summer. Having so few men with me, the Opposition men became very troublesome; so much so that I had to lock the door on them. Shortly after the return of McKenzie from Fort Pierre, a party of Sioux came to war on the Assiniboines, and had taken all the horses belonging to the Opposition when the alarm was given. We ascended the bastion to see the performance, but it was all over, and the Sioux made bold enough to sit on the hill, quietly smoking their pipes, in full view of both forts. McKenzie, who was very young, active, and brave, said to me, "Mr. Larpenteur, this is too bad; let us go and exchange shots, and see if we cannot get back some of those old plugs." As I agreed to this, we ran down at once, mounted the two swiftest horses in the fort, and off we went. Bullets were soon flying about us, but we succeeded in recapturing four head of horses, which we generously gave back to the Opposition, and our names went high up among the bucks and squaws who were singing and dancing around the fort.

After this times passed off somewhat more smoothly. Mr. Denig, who had been started up with a new supply of men, arrived early in October [1845], and things became quite lively again. Soon after his return, when we were sitting on the porch one evening, we saw Harvey walking up to the house with his rifle across his arm. At a little distance he stopped to ask, "Am I among friends or enemies here?" Being told that we did not think he was in any danger here, he entered and commenced his story with, "Boys, I came very near being killed." Being asked by whom, he replied, "By Malcolm Clark, Jim Lee, and old man Berger; but the d -d cowards could not do it." Then he pulled off his hat, showing the mark of Clark's tomahawk, with which his head had been broken; and his hand was injured where Lee had struck him with a pistol. Being then asked the particulars, he said that, on learning of the arrival of the boat, he got on his horse to meet it and learn the news, as is customary on such occasions. Having gone about 20 miles below the fort, he saw the boat, and beckoned them to land. As he had been left in charge of the fort, they could not well refuse to do so. As the boat landed he gave his horse in care of the man whom he had taken with him, and suspecting nothing, but glad to see the men, he jumped on board and entered the cabin where the three gentlemen were sitting. He offered his hand to Clark, who said, "I don't shake hands with such a d -d rascal as you," on which a blow of his tomahawk followed, and then a blow with the butt of a rifle from Berger. In spite of all this he would have succeeded in throwing Clark into the river, had it not been for Lee, who struck him such a severe blow on the hand with

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

a pistol that he had to let go his hold and make his escape. "I then got on my horse," he continued, "and when I arrived at the fort I told the men my story. They were much displeased, and as they did not like Clark, and had already learned Lee's character, they consented to protect me. I told them that I intended to hold the fort and not let a d-d one in."

To this the men agreed, and preparations were made for defense. When the boat arrived no one was allowed to enter, not even Mr. Culbertson. But after hard pleadings Mr. Culbertson, who had always proved a friend to Harvey, made him agree to give up the fort, on condition that Mr. Culbertson should give him a draft for all his wages, and a good recommendation. On receiving those papers, Harvey left in a small canoe with one man.

He remained but a couple of days at Union, and, on leaving, said, "Never mind! you will see old Harvey bobbing about here again; they think they have got me out of the country; but they are damnably mistaken. I'll come across Clark again."

Fort Pierre was then the headquarters of the trading posts on the Missouri; all drafts and papers had to be examined and signed there. The company owed Harvey \$5000, and he had to get his draft there for the whole amount. Mr. Picotte appeared somewhat slow and did not come to time until Harvey threatened to pound him, when the draft was made out.

It happened that, when Harvey arrived at Fort Pierre, the most important clerks of the post were dissatisfied with their treatment, and had made up a company in opposition to the American Fur Company. The members of this new organization were Harvey himself, Charles Primeau, Joseph Picotte (nephew of Honoré Picotte), and Bonise, the bookkeeper of Fort Pierre, under the firm name of Harvey, Primeau and Co. Under those agreements, which were not known at the time, Harvey immediately left for St. Louis. There he apprised Colonel Robert Campbell of the arrangements, and in the spring [1846] the company started operations, with a large outfit, sufficient to establish themselves at all the posts of the American Fur Company. Harvey came up to the mouth of the Yellowstone in the steamer, and went on to Benton in a Mackinaw with his outfit.

A short time after Harvey left us Mr. Kenneth McKenzie arrived to take charge of Fort Union. He had left the country six or seven years previously, but had reserved a share in the Company, on condition that in case of opposition he would return, should it be deemed necessary by the members of the Company, and on that understanding he now returned. This was about the commencement of the meat trade [of 1845]; on his arrival my charge ended, and I was reinstated in the liquor shop. Mr. McKenzie was pleased with my administration; he found everything to his satisfaction, and said I had done well, though I ought not to have left the fort, at a time when I had so few men, to fight Indians.

The American Fur Company, having always had more influence in this country than the Indian department, thought they would abolish the local law, and carry on trade on the old principle, which was camp trading. So when the robe trade commenced, traders were dispersed in all directions. But Mr. McKenzie, like Mr. Culbertson, kept me at the fort until the last. Finally my turn came, and I was sent with a good outfit into a large camp on Poplar River, about 60 miles by land above Union. As a matter of course I took plenty of liquor. I had four men and ten horses — more than I wanted — but the intention was for me to send them back loaded with meat for the fort. A certain Indian by the name of Iron-eyed Dog was known as the greatest rascal and ugliest Indian in the camp; his brother had been killed while camped at the fort by a war party of Sioux, who surprised them in the night. This brother was a chief, called the One who Guards the Whites — a

very good Indian for us to have. He was shot in the back, the ball passing through his breast. The Indians, knowing that the whites thought much of him, and believing their medicine might cure him, brought him to the fort from camp, which was not more than 300 yards off. That happened about midnight. Shortly after he was brought in his brother, the Iron-eyed Dog, came knocking at the door to be let in; but as many others had knocked, we paid no attention to him. This made him extremely angry, and he swore he would kill me on the first opportunity, for he knew I was the doorkeeper. Such was the character with whom I expected to have to deal in this camp, where I arrived on the third day out from Union.

After I had stored everything properly, I was invited into the lodges of the chiefs and leading men, to partake of a dish of pounded buffalo meat and marrow grease, as is their custom. In one of the lodges, where several Indians had assembled, I was informed that Iron-eyed Dog, whom they call in their language Shonkish-ta-man-zah, had gone to the fort, but was expected back that night, and would be apt to make much trouble, and very likely kill me; but they thought I might be able to reconcile him by talking to him and making him a little present, as usual on such occasions. Knowing the Dog of old, I invited the principal chief to my lodge and gave him what he thought was sufficient; he started off, saying that he, with the others, would do their utmost for me. This was some consolation, but did not go very far toward making me feel safe.

That night, when the liquor trade commenced, the very devil was raised in camp. Iron-eyed Dog, who had arrived, and all the other dogs, including my life preservers, soon got drunk. There was I, with only four other men, among about 300 drunken Indians, with no alternative but to trust to luck. One stout, fine-looking Indian whom I had never seen before, and who suspected something, took his seat by my side, holding a large war-club between his knees, and kept very quiet the whole time. At first I did not know what he was there for, but soon found out; things were as I suspected and feared. Suddenly in came Iron-eyed Dog in great fury, saying, "Here you are! Do you expect to live through this night — you who would not open the door for me when my brother was killed? Did I not say I would kill you?" He went on like this at a tremendous rate, and then rushed out again. But it seemed to me that he did not like the looks of the man with the war-club, who now and then pressed his hand on my knee, as much as to say, "Be not afraid." Then came two more drunken Indians; one of them named Cougher, and the other an individual who had killed his own father; both had plotted with others to murder me in the lodge and plunder my outfit. But it happened that I had a good old friend in camp, whose name was The Haranguer, and who made such a fine speech that they abandoned the idea. This is about as near as I can interpret it: "What is it that I hear? Brothers and kindred, do you think you will need your trader no longer, now that spring is come and trade is over? You have your fill of everything, and now talk of killing your trader. Where will you go? Go north and starve? Give away your hunts for nothing? Why kill this poor white man? What has he done to you? No, brothers! have pity upon him, upon me; spare his life." On his saying this, which they understood to be the conclusion of his speech, a young man got up and handed him his knife, as a sign of approval, and so the idea was given up. My war-club man all this time said never a word, but the repeated applications of his hand inspired a sense of safety in my badly frightened heart.

After that came the One Who Killed His Father, and Mr. The Cougher, when all the liquor was gone, wanting absolutely to get some more, saying, "If you have none, make some. You whites are strong medicine. You can make fire-water." Seeing, however, that I was not "medicine," they in-

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

sisted on my giving their squaws some trinkets, and off they went, saying that they would soon be back. Then in popped the Dog again, and came at me with his pipe, saying, "Smoke! smoke! Why don't you smoke? I'll make you smoke — you dog, you." This Indian knew I seldom smoked, and only during some of their ceremonies, so he kept running in and out in this manner, and never left the lodge without threatening to kill me.

At last this night, so long to me, wore away; when day came all was quiet in camp, and I felt as though I had been on board a vessel in a gale which had subsided in a perfect calm. After such a storm my appetite was not very sharp, but we had to get breakfast early, before any Indians came loafing in. A strong cup of coffee was soon ready; this revived me, but the dread of seeing the mad dog again was still heavy on my mind. My war-club man was gone, and I saw no one about me that would be likely to take my part. Iron-eyed Dog soon made his appearance with about 20 of his young men, all armed and painted, and I thought then surely I was gone up. The Dog was quite sober, and said to me, "It was a good thing for you that I got too drunk to come to your lodge once more last night, for I did intend to kill you. Now you must give each of my young men some ammunition, tobacco, and vermilion, a knife, and a looking glass; and give those," he continued — pointing to four or five — "a breech-cloth apiece." This being done, he ordered them to go away; "and now," said he, "give me my present." So I gave him 50 rounds of ammunition — the usual allowance for a big man — eight small plugs of tobacco, one knife, one palette of vermilion, and a breech-cloth. To his squaw who was present, I gave a cotillion of cloth, some beads, and other trinkets. He went off without saying another word and I never saw him again; but what became of him will be made known in the sequel.

The trading being nearly over, I sent to the fort for horses to bring in my returns, and five days afterward eight men arrived with 32 head of horses. Mr. McKenzie advised me by letter to be very cautious on my return, as a party of young men had gone up my way with the intention of stealing the horses; to stand strong guard each night, and, if possible, get some good Indians to come with me. I had all my returns ready to be loaded, and next day we got under march with 35 packs of robes, besides some small furs. The second night we reached Big Muddy River, about 30 miles from Union. This being a place which I thought dangerous, and likely to be my last camp, I stood the first guard, with one-half of my party. I had taken with me one of the first chiefs of the Indian camp, with three of his most reliable soldiers, which made our party rather strong. About eleven o'clock I discovered the gentlemanly horse thieves coming straight into camp; they shook hands, seemed glad to see us, and after smoking a while laid down to sleep. Seeing us so well on our guard, they gave up the idea of robbing us; early in the morning they took their leave, and glad we were to see them off. The morning was fine and warm, which enabled us to get an early start. We expected to encamp at the Little Muddy, ten miles above Union; but arriving there about two hours before sunset, and not liking the idea of another night's guard, we concluded to push on to the fort. After smoking a pipe we resumed our march, and entered the fort a little after dark. The fort was full of drunken Indians, as usual. Mr. McKenzie was extremely glad to see me back, and began to tell me how things had gone on during my absence, saying he was at a loss how to get through with all those drunken Indians, with the traders he had in that shop. Finally he said, "Larpenteur, I am forced to ask you to finish this trade, although I know you must be tired. I have been frequently tempted to go and trade myself, but you know that would never do." Finding the old gentleman in such trouble, although much fatigued I went into the shop after a good supper,

traded all that night, finished the business, and got the Indians off next day.

This [1845-46] winter's trade convinced the New York firm of Fox, Livingston and Co. that it was a losing game to oppose the American Fur Company; they came to the conclusion to sell out, and we were again left masters of the country.

Chapter 13

(1846-47)

#### FORT LOUIS AND THENCE TO ST. LOUIS

Early in the spring [of 1846] Mr. McKenzie left on a Mackinaw boat for St. Louis. Nothing of importance took place after his departure until the Company's steamer again arrived, at its usual time, Mr. Honor & Picotte in charge. Mr. Culbertson, who went up a previous summer [in 1844], had burned down Fort Chardon, and gone on with his outfit, according to understanding, to build another post. He had selected, for that purpose, a site five or six miles above Benton, on the south side of the Missouri, named it Fort Louis, and left Mr. Clark in charge. From what motive I cannot say, Mr. Picotte wanted him removed, and on that account arranged with me to go up with the outfit and take charge. I was then getting \$600 a year, which he increased to \$700. On the 8th of July [1846] I found myself on board a keel boat called the Bear, with 30 men on shore, the tow cord on their shoulders, going at the rate of about 1 1/2 mile an hour, with upward of 800 miles before us. On board were one steersman, two bowmen, two cooks, and one hunter, who had two men with him and three horses. The boat was well-rigged for sailing in case of fair wind, and supplied with sweeps and poles. Though we started at the rate I have said, few know what slow progress is made in such navigation. The banks of the Missouri are lined with thick rosebushes and bull-berry bushes, which are thorny, and sometimes attain the height of 12 feet. Such thickets being impenetrable, men must be sent ahead of the cordelle men, as those who tow the boat are called, to prepare a path for them. Besides this, snags and other incumbrances must be chopped down to clear the cordelle, poling is always slow work, and there are rapids to be overcome, of which I will speak when we reach them. It takes Canadian French boys to do all this, on meat alone, or only lyed corn, when meat cannot be obtained.

At this slow rate we finally reached a place called Amell's island, a little below the [Picotte's] rapids, where I stopped to make a Mackinaw boat to lighten up the rapids, and also to enable me to keep on to Fort Louis, as the river was very low. A few days after I commenced my boat two men on horseback appeared on the opposite shore. They were sent for and on landing informed us that Harvey had arrived at the mouth of the Yellowstone with a large steamer in opposition, and was making a Mackinaw boat to go up to trade with the Blackfeet. Those men had been sent with a letter to me, requesting me to send them on post-haste to Fort Louis with a letter to Mr. Clark to engage all such freemen as he thought might be of service to Harvey. They were dispatched immediately, and a few days afterward Mr. Clark unexpectedly made his appearance. As I had not sent his letters, he thought that I was coming to take the charge, and that he would have to serve under me; and after reading his letter from the Company, observed that he would not have served under me had he been ordered to remain, for the reason that he had been a long time with the Blackfeet and thought himself entitled to the charge during the absence of the owner. This Mr. Clark had been educated at West Point, and was extremely punctilious. The next day he started back to Fort Louis.

In about a week my boat was finished, we were under way again, and soon came to the rapids.

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

Our lightener did not avail us much, for the river was so low that both boats had to be completely unloaded, and the goods to be carried 400 or 500 yards over the rapids, on the men's backs. The boats were pried over by main force, after clearing the channel of rocks; but this was done with the intention of throwing those rocks back into the channel, so as not to let Harvey overtake us. Under such slow progress I reached Fort Louis 70 days after my departure from Union. But I must remark that I had great sport hunting. The points above Milk River being cleaner of rubbish than those below, I commenced my hunt from that river, and the boat was so slow that I had plenty of time. I killed 35 deer and 15 elk. On arrival at Fort Louis I met with Father De Smet, who was again on his return from the Columbia to the States. In about three days Clark left in a skiff with two men, and then I remained in full charge. The fort was a good one, well arranged for the time which had been spent on it. I was pleased, and getting along so finely that, had my family been with me, I should have been perfectly contented; but I had left them at Union.

One fine Indian summer day, about the last of October [1846], Mr. Clark unexpectedly made his reappearance, having received orders at Fort Pierre to return to Fort Louis, and take charge. I felt mortified at having my charge taken away from me, and not even receiving the scrape of a pen from any one. Feeling myself slighted and remembering what Clark had said to me in regard to his charge of forts, I remarked that I supposed he would be willing to admit that the rule should work both ways. "I am not willing to serve under you," I said; "I have been in this Company's service ten years longer than you have, and I think that ought to entitle me to a charge — or, at all events, to justify me in not serving under you. So I am going to Fort Union." Upon which he remarked that he had nothing to say in the matter, and if I made up my mind to go, he was willing to supply me with the means for my trip.

All the men were displeased with the way I had been treated, and angry to see Clark in charge; for they disliked him as much as they had Harvey. They proposed my remaining in charge, and assured me they would see me through all right, if I would say the word. But I thanked them, and the second day after Clark's arrival I left on horseback with a first-rate guide named Joseph Howard, one of the oldest hands. Our journey was a pleasant one, but with nothing worth mentioning, and on the 15th of November [1846] we reached Fort Union.

My reception by Mr. James Kipp, who was in charge at the time, was rather cool — "Well, Larpenteur, what brings you down here?" On my relating to him the circumstances, said he, "I am sorry for all that, but I have nothing to do with it. Mr. Picotte engaged you, this is all his doing, and you must see him about it. My arrangements are all made for this winter. I cannot give you employment." Thus finding that I should not be a pleasant subject in the fort this winter [1846-47], I made up my mind to leave, bag and baggage. So I immediately got some buffalo hides to make a bull-boat, and in two days after my arrival was under way for some lower post, hoping to be able to reach Fort Pierre. This was about the 20th of November [1846], altogether too late for such a journey; but the weather was fine and I thought I might reach some point where I could pass the winter, and thus keep out of Fort Union, where I did not think myself welcome. But the weather changed suddenly, and the next morning after leaving Union, full of ire at finding that I could not proceed any farther, I was obliged to return.

I must say that Mr. Kipp was fair enough with me. He furnished me with a room for myself and family, and provided my firewood and water, which had to be hauled from the river, all free of charge, and also allowed me to trade all the dried meat I wanted, charging myself what was thus

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

expended. This enabled me to pass a half-pleasant winter; but, doubting that I should ever be re-engaged, I made up my mind to leave the Company, and take my family to the Flathead Mission," of which Father de Smet had so favorably spoken to me. So I made arrangements with Mr. Kipp to build me a boat, in which I was to leave early enough to reach the States in time to get off with the Mormon emigration.

According to agreement the boat was ready, and on the 5th of April [1847] I left Fort Union with my family, consisting of six children, accompanied also by Mr. Latty, son-in-law of Mr. Laidlaw, who had come up in the fall for his health, and two men. We had a pleasant trip, excepting some high winds, which sometimes caused us to remain as much as three days camped in the willows, and one fright from a war party of Rees.

When we stopped at Fort Clark, Mr. Des Hôtel, who was in charge, told us that a party of 22 Rees had gone to war on the Sioux in 11 bull-boats, two in each boat; but remarked that there would be no danger for us, as the partisan was a young man friendly to the whites. "This partisan is the son of Old Star," said he, pointing to the old man, "and there is Old Star himself"; and a very fine looking fellow he was. The following morning we left, expecting to meet them on that or the following day, as they had started the day we arrived; but it was not till the second day, about noon, that we discovered the party. Although we had been well armed at the fort, and were not in much danger for ourselves, we could not feel entirely safe, on account of my family of Assiniboines, who were deadly enemies to the Rees; for I knew the latter to be worse than any others, in taking revenge on women. But we were soon discovered by them, and on we had to go. As soon as we came near they commenced to yell at a great rate, and in a moment our boat was surrounded. All those that could get hold grasped our boat; but this appeared to be done in good humor. As we thus drifted along with the current, they gave us some of their provisions, which were little balls made of pounded parched corn, mixed with marrow fat, and some boiled squashes; in exchange for which we gave them some fine fat buffalo meat. Ahead of us there was a boat which we afterward found contained the partisan, who, having given his orders, had gone on to find a suitable landing; and in a little while his party, who held us prisoners, landed us in his presence. He was a very fine-looking young man, and had his pipe ready for a smoke; but he understood so few words of Assiniboine that I could make out little of what he said, and was anxious to be out of the clutches of his party. I got out what tobacco I had, a good bundle of dried buffalo meat, and some sugar, of which I knew they were fond, and after this made a sign that I wanted to proceed on my journey; upon which he gave me the sign to go, charging me not to let any one at Fort Pierre know they were under way. Under such fair promises we took our leave of the gentlemen, having fared much better than we expected.

On we proceeded again, quite jovial, and praising the partisan, who we hoped might exchange his boats for horse-flesh, as that was what the party were after, and take some Sioux scalps, if these could be obtained. As we went along I began to think of what kind of a reception I should have from Mr. Picotte at Fort Pierre, which I somewhat dreaded to enter. But as I was a free man, who owed the Company nothing, I did not think there would be much danger in approaching him; and if he would not let me come into his fort, I could very well sleep outside, as I was used to it by this time.

At last we came in sight of the fort, and as ours was the first boat down this spring, many persons came to the landing to see who had arrived, and to learn the news. A little before landing, I saw

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

Mr. Picotte at the head of the crowd, who had made way for him to be the first to receive us. He looked very pleasant, and I supposed he was glad to see Mr. Latty, who handed him the mail; but I soon found him well disposed toward us all. He shook hands with me in a very friendly manner, and invited me up to the fort, saying, "Never mind your baggage; I will send the wagon for it, and for your family." This was rather a surprise to me, who expected anything else but such a kind reception. We walked up to the office, where he opened the letters, read several, and after a while said, "Larpenteur, come to my room." I could not think what this private invitation meant, and supposed it would end in a scolding; but as he had been so kind as to invite me into his fort, and send for my family, I did not think it would be a very serious one. There was no one else in his room, where he bade me be seated, and then asked abruptly, "What made you leave the Company?" I replied that I had not left the Company; that I had left Clark only. After I had related the particulars he smiled and said, "It is true, Larpenteur, that I ought to have written to you; yet you did wrong — you who have been so long in the Company should have overlooked that, knowing how much we thought of you; and it would have been better for you, if you did not want to serve under Mr. Clark, to have remained at Fort Louis until the arrival of Mr. Culbertson, who you knew was to be up in the fall." To which I remarked that probably that would have been better, but that it would have been very disagreeable for both of us. "Now then," he continued, "I am told that Mr. Kipp treated you badly last winter. Did you have any words with him?" I then told him such reports were false; that I had no complaint to make against Mr. Kipp. "Well, now, here is a draft of \$200 on your friend Johnson in St. Louis, in favor of the Company; what is that draft for?" "It is for provisions which I got during the winter," I replied. He then tore the draft to pieces and threw it into the fire. "Now," said he, "how much did you expect to save of your wages this year?" I told him that according to arrangements I had made with Mr. Denig, the clerk of Fort Union, I expected to save \$300, if not more. "Well," said he, "come to the office; I will get the bookkeeper to make you out a draft on the Company for \$300."

While the clerk was making out the draft supper was announced, and well was I prepared for that. After supper we all retired to the office, where most of the conversation was on the great discovery of gold in California, this being the first that we had heard of it; for the news had just reached Fort Pierre, and some could scarcely credit it. Mr. Picotte then said to me, "What are you going to do with your family? Are you going to settle below?" After telling him that my intention was to go on to the Flatheads, in company with the Mormon emigration, he said I should be too late for that; but, if I wished, he would give me a letter to Bordeaux, the person in charge of Fort John on the Platte, where I could remain all winter and proceed on my journey early in the following spring; or, better than that, I could engage with the Company for another year, make arrangements with them to take me up as far as Fort Benton, and go from there to the Flatheads. This was very kind of him. Being prepared to go either by the Platte or by the Missouri, and convinced that I stood fair in the estimation of the Company, I left Fort Pierre next morning in great glee, holding Mr. Picotte high in my esteem.

On reaching the settlements, I learned that the Mormon emigration had gone, and that I was too late. So I went down as far as St. Joseph, Mo., where I left my family, and immediately proceeded to St. Louis, where I arrived in time for the Company's steamer to the Yellowstone. I made arrangements to serve one season, and they were to bring up my small outfit for the Flatheads the following summer. Everything being thus arranged to my satisfaction, I took my family on board

at St. Joe, and after a pleasant trip of six weeks we reached Fort Union on the 27th of June [1847].

Chapter 14

(1847-49)

#### FORT BENTON AND ELSEWHERE

A few days after my return to Fort Union I was reinstated in my former department; but as some of the clerks had gone to the States, and were not to return till the fall, I had an addition to my duties, having the retail store and the men to command, besides the trade. All went on smoothly, excepting that a war party of Sioux attacked the men at the hay field, wounding one, and killing four oxen which had been hitched to the shafts of the carts, in Red River fashion. The men came running, out of breath, to report the attack, saying they thought the oxen were all killed. I then took two Spaniards, mounted the best horses in the fort, and went to see how matters stood. On our arrival at the spot, ten miles from the fort, we found three carts turned over, the animals dead in the shafts, and the fourth ox standing in a ravine with several arrows in him, mortally wounded.

The usual time for the fall express arrived, and on the 15th of October [1847] Mr. James Kipp and suite made their entrance into Union, including Mr. James Bruguière, his nephew, who had formerly charge of the retail store and command of the men. So I was relieved and had only to attend to the Indians. For some time after Iron-eyed Dog had so much troubled me, young men who called at the fort on their warpaths would ask me how I liked my comrade, the Iron-eyed Dog; to which I would very imprudently reply that I had made my medicine for him, that I thought would be as strong as theirs if not stronger, and that they would find it out before the summer were over. Should anything happen to him after I made such a declaration my chance to escape unhurt would be small. To my great astonishment, a party of Blackfeet happened to surprise the Assiniboines during the summer and shot the Dog through the back. This was a bad shot for me, although I must confess that I was not sorry to hear of it, but the scamp was not killed. This news kept me somewhat uneasy. Harvey's Opposition boat having been icebound 18 miles below Union, he concluded to winter there; so a trader had to be sent from Union to oppose him, and I was chosen, for Mr. Kipp did not like to send his own dear nephew. So, toward the last of October [1847], I was dispatched with an outfit to build in opposition to Mr. Husband, that being the name of the gentleman in charge. I dreaded going to this place, for we had learned before arrival of the Opposition that the Dog had been killed by the Rees. At this time a good strong peace had been made with the Assiniboines by the Gros Ventres, Mandans, and Rees, and in the fall they would visit and trade corn. Mr. the Iron-eyed Dog was a great gambler; he had won a large quantity of goods from the Rees, and was returning to his camp well packed, when a small party of Rees overtook and shot him. My medicine was strong! Now his brother was in the camp where I had to go and build, on the bank of the Missouri, and the Dog had been killed about three weeks before. If I had been uneasy before, imagine how I felt now.

On my arrival in camp I was invited by the chiefs and most of the leading men into their lodges, as usual. After accepting many invitations, I returned to my own lodge, which I found well lined with visitors. A little while after I had taken my seat, hoping that invitations were all over, a little Indian boy came in, saying, "He invites you." Indians do not like to mention each other's names, on which account there is often trouble to get at the right name. At last one said, "He is the brother of the one who was killed by the Rees — look out for him!" "Now," said I to myself, "here is

another scrape"; but knowing the Indian character, and understanding their language, I thought I could get out of it. So I followed the boy to the lodge. On entering, I saw a great six-footer, in full mourning — that is, daubed all over with white clay, legs full of blood, head full of mud, and hair cut short; indeed, he did look like a monster. On my entering, without shaking hands he bade me sit down, and then commenced to light the pipe without saying another word. During this time I did my best to assume a sad countenance, to correspond with his own. At last he got through with the preparation of his pipe, lighted it, and having handed it to me, said, "I suppose you have learned of the misfortune I have met with." I then answered, "Yes, we have, and on learning this sad news we were all very sorry. It is true your brother was troublesome when in liquor, but this we always overlooked, knowing it was not his fault, and, aside from liquor, he was a good man — a good robe-maker, whom the chief of the post thought a great deal of. I have heard my chief say that he thought the Dog would become the chief of the band of the One who Holds the Knife [Gauché]; and indeed I was of the same opinion." The poor fellow, or the villain, thinking by my talk that he had lost a greater brother than he had supposed, burst into a tremendous lamentation, which I did not know how to take; but it did not last long. During my confab a small wooden bowl was placed before me, filled with pounded buffalo meat and a few pieces of marrow fat; but I had already been to so many feasts that I could not partake of this. When I thought the mourning ceremony over, I told the monster my reason for not eating, said that I would take it to my family, and asked him to send his little boy with me for the pan. This is customary with them. The little boy followed me to my lodge. Having shaken hands with him, I gave the boy a large plug of tobacco, put some hawk-bells, some vermilion, a knife, and various small trinkets in his pan, and sent him back. My success was so great that I got all this man's trade during the winter, and he remained my best friend. So much for having buttered him so well!

During this winter [1847-48], myself and James Bruguière, who each had an Indian family, formed a partnership to open trade with the Flatheads. We sent down our requisition and were to go up in the keel boat to Benton, where we were to proceed to the Flatheads with a wagon and pack-horses. Mr. Culbertson had moved Fort Louis down the previous spring [of 1847], this being the season after Fort Benton was built.

The steamer, which never failed, arrived on time [in the summer of 1848], bringing up our requisition. Being put in charge of the keel boat I started on my second trip to the Blackfeet. Unfortunately for us the river was even lower this season than it was last and we were 90 days on our trip. The Flatheads had news that we were coming, and as they were at peace with the Blackfeet, a party had come to Fort Benton, thinking it was about time we arrived. They had been disappointed, but left word where we could find them, saying they would assist us over the mountains; but we were frustrated in this good thing.

A band of Blackfeet, called the Little Robes, after the name of their chief, instead of following the rest of the tribe north after trade was over, remained on the south side of the Missouri. Some of Little Robe's young men happened to have a fight with the Flatheads; some one of each party was killed and horses were stolen. So the peace was broken, and the Flatheads returned to their country as fast as they could. This was bad news for us, as the peace had been an inducement for us to undertake this trade.

Still, go we must, and horses must be had, which could not be procured without going to Little Robe's camp to trade them; and there was some risk in that. At this time Mr. Clark was in charge

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

of Benton, and I must say he did all he could for me. He lent me horses to go to the camp and also sent his interpreter with me; a very good one he was, and had he not been with me, it is doubtful whether I should have returned. The second day after we left the fort we came to the camp; it was yet early, and the horse trade soon commenced. This was going on finely, when an old rascal commenced a harangue, in which he said, "Why do you trade horses to that stranger? He wants them to take arms to trade with your enemies. You had better take what he has, and send him home," and a great deal of other bad talk, which at last induced them to take back their horses, for which, however, they returned to us very nearly the correct payment. All this was owing to my interpreter, for, had any other than him been with me, they never would have brought back anything, and most likely would have taken our pile. At last he said, "We had better pack up and leave; the longer we stay the worse it will be for us." Taking his advice, we packed up and went away, leaving the old scoundrel still at his harangue, and having been able to retain but two horses out of eight which we had traded. After this bad luck, we reached Fort Benton next day.

As the season was far advanced, we had no time to wait for the return of the Indians from the north, nor did we think it advisable to do so under the present circumstances. Through the kind efforts of Mr. Clark, we were furnished with two wagons, two carts, and eight pack-horses, besides the four horses to each wagon, and two to each cart; also, with ten men, and a good guide — at least, one who was thought good. It was about the end of October [1848] when we left Fort Benton again. As our horses were not well broken to harness, we had some trouble for the first few days, after which we went along about half right. On the fourth day out we reached Sun River early. My hunter had been in luck, having killed three grizzly bears, and he brought to camp the meat of the cubs, which, at this season, are very fat. It was but fun for this hunter to kill them. He came into the mountains at the same time I did, with Robert Campbell [in 1833], and had remained all this time in and about them; he had been hunter for Captain Stewart, who came out from England two seasons in succession to hunt in the Rocky Mountains.

While the fat cubs were boiling we dug the bank of Sun River to make a crossing place, mine being the first spade ever sunk in this ground by a white man, and my wagon the first to cross this stream, in the year 1848. After a good dinner we hitched up again; the river was fordable, with a good gravelly bottom, and our crossing was made without much trouble. We camped a short distance below the ford, where we had plenty of grass and wood. Our guide, who was a young Piegan Indian, had not been seen since breakfast, as he knew we were acquainted with this part of the country. We thought he might have gone in search of deer or bighorns, and were not uneasy about him till it became dark, when some began to think he had deserted us; at bedtime he had not made his appearance, and in the morning we found ourselves without a guide. Now what to do was the question. No one knew the way to the Flatheads, even by a foot path. I thought of my hunter, who was accustomed to travel through mountains, and proposed to take him with me, and try to find the Flatheads.

The next morning we started, thinking we had given our guide sufficient time to make his appearance. Expecting to find game, we took nothing with us but a little sugar and coffee; but we were mistaken in that, for when one gets in the mountains he is out of the range of game, as I found out afterward. On the fourth day, when on the summit of a mountain, there was a heavy snow, and we had eaten but one partridge and two ducks since the day after we left camp. After this fall of snow, having found no practicable wagon road, nor even any fit one for pack animals, we concluded to

turn back.

At this time we had already been three days without eating. Now the fine dreams of well-set tables commenced, with no conversation at noon or at night camp, and this lasted three days longer. On the morning of the sixth day of our starvation my hunter found a mare and colt. Having traveled about two hours, we perceived a party of warriors; but, fortunately for us, we saw them first, turned back a few steps, and then struck for the roughest part of the mountains to hide and select a good place for defense, in case we should be found. During this rambling I thought of a dried buffalo sinew which I had in my bullet pouch to mend moccasins. I pulled it out and cut it in two, offering my hunter a part of it, which he refused, saying, "Eat it all; I believe I can starve better than you." So, without asking him a second time, I soon demolished the sinew, which I found excellent, except that it was too small. We at last found a good hiding place among the rocks, where we remained concealed till near sunset, scared and mighty hungry. The mare was a fine, fat one, but she had gone lame in one of her hips. My hunter, being by this time perhaps as hungry as I was, went out of our hiding place, and very soon I heard a shot. He came back, saying, "We shall have plenty to eat now." "What have you killed?" I asked. "I have shot the old mare," he replied. We both got a piece of the liver and some ribs, went to a place where there was wood, near by, made a small fire, and began to cook. The liver we threw on the embers, but the coals of tamarack pine turned it so very black that, at first, I thought it impossible to eat any. On digging pretty well into it, I found some of it eatable; but this was laid aside when the fine fat ribs were roasted. The fat tasted excellent, but the lean part was rather insipid, and appeared to need a great deal of seasoning to make it palatable. As bad luck would have it, we had forgotten our salt at last night's camp; so I tried sugar, but that was worse than without. However, we made a fine supper, and grew a little more talkative. In the morning, having looked around as well as we could, to see if we could discover Indians, and found no signs of any, we made up our minds to get under way again, and did so, taking with us a good supply of mare meat. We now traveled without fear of starvation, though our great uneasiness regarding enemies rendered the journey very unpleasant; but we were so fortunate as to reach camp the next day, having seen nothing alarming. We found them all right in camp, but without much to eat, meat being all out. I offered them some of the meat I had, but when they found out what kind it was they declined, saying they thought they could hold out a while longer. As I did not have much left, and had got used to it by this time, I was not sorry for their refusal, now that I had pepper and salt. I can assure the reader that horse meat makes excellent steaks.

Finding no road, winter advancing, fear of war parties — all those things taken into consideration induced us to make up our minds to turn back and winter at Benton. This move, which was the best I could make under the circumstances, was anything but consoling to me. I knew that I was a ruined man. Aside from the danger apprehended on our return to Benton, my situation was an awful one; but there was no alternative. Next morning we got under way for Benton. On the following day, in the afternoon, we discovered Indians on the other side of the Missouri, yelling with all their might and making signs for us to come to them. This gave us a great fright, the women and children crying and going on at a great rate, knowing that we could not reach timber in time should the enemy rush on us. Yet nothing better could be done than to try to make the timber. Had it not been for the women and children, we would have stood our ground behind our wagons, but on their account we made for timber. In the meantime we saw the Indians going

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

up the Missouri, not appearing to want to cross; and, applying the whip pretty sharply, we finally reached the so-much-desired timber, where, losing no time, we forted the best we could, expecting an immediate attack. Night came without further alarm, and arrangements were made for a good strong guard. Just after we had retired a tremendous croaking and cawing of crows was heard, which brought all hands up again, much frightened. The women and children being as well secreted as we could, every man stood to his gun, awaiting the attack; but, when an hour or more passed and nothing happened the fright subsided, and all came out of their hiding places — I mean the women folks and children. Then the talk was that it was a bad omen to hear crows croak at night, and my Canadians had a long sitting up, relating their superstitious stories. I thought that the crows might have been frightened by Indians, who, seeing us thus put on our guard, had concluded to delay the attack until morning. So the same guard was continued, and after a little all was quiet again.

Morning came and all was right. My hunter, who had got up earlier than the others and gone to see what he could discover, soon returned, saying that he had found out why the crows made such a noise last night. The party of Indians we had seen had passed through the timber, where they had killed two elk, taken most of the meat, and gone on their way. The crows had feasted on part of it, when Mr. Bruin, coming for his share at night, had frightened the birds away from their repast. This was the whole cause of their alarming noise. Luckily for us there was more meat than the bear and all the crows could eat, and my hunter brought enough of their leavings to make us a good breakfast. We were soon hitched up and ready to start, hoping to reach Benton the next day, provided we met with no accident on the way. Our hopes being realized, we entered Benton, all safe and sound.

Upon arrival we were informed that the Indians we had seen were those who had killed the elk we had found. They were a party going to war on the Flatheads, and had left the fort shortly after we did, having been told that we were on our way to the Flatheads, and warned not to trouble us if they saw us. They were Piegans — good Indians, who promised not to harm us; and we afterward learned from a couple of them that they had seen us and made signs for us to come after meat; but, seeing that we were frightened, kept on their way.

At the time we returned to Benton, the Indians had commenced to arrive from the north. Among them was a small Indian named Sata, a half-breed Flathead and Blackfoot, who had guided Father De Smet and others from the Flathead Mission. He said he could find a wagon road, and if I wished would show me the way. Having been inspired with confidence in him by the people of the fort, and being anxious to see the Flatheads, wagon road or no wagon road, I determined to try that famous guide.

The third day after my return to Benton I was on the way again, taking one of my men who understood the Blackfoot language well. I was mounted on a fine stuball horse, much fancied by Indians, well dressed and well equipped; my man was also well arranged, and we felt sure this time of seeing the Flatheads. The first evening, about camping time, we fell in with a small camp of Blackfeet, who invited us to stay over night with them, and we willingly did so, saving ourselves the trouble of making camp. But it was not long before I repented of having accepted the invitation. I soon felt a crawling in my underclothes, and by morning it seemed as though I were being raised clear out of bed. I never before felt so miserable in my life, and in spite of all I could do, I could not get rid of the lice till I returned to Benton.

Our next encampment was at the Great Falls of the Missouri. The noise was so great that we could scarcely hear each other talk, but I could very well feel the graybacks hunting for their suppers in my shirt. Sata happened to kill a fine buck and we had a glorious supper. Having traveled for two days without any unusual occurrence, pretty much on the same kind of road as on my former trip, we reached the base of the mountains. Sata remarked that we had best try to get some meat, as game was scarce in the mountains, and now was the time to provide for ourselves. Thinking myself somewhat of a hunter I went a little ahead of the party next morning, and soon saw some objects crossing a small brook, at so great a distance that I was unable to distinguish whether they were men or game. Hoping they were deer, I slipped the cover off my double-barrel, and went after them. When in the act of shooting, I discovered on my left, behind a small hill, an object which I could not make out, but thought was probably a wolf. Sata and my man, who had come up by this time, asked me, "What have you seen?" I replied in Blackfoot, "Matahpey," meaning "people." On our advancing a few steps, fifteen naked Indians, with guns, bows, and arrows rose up before us, ready to shoot; but Sata cried out, "My brothers! my brothers! don't shoot! It is I." Hearing this they put down their arms, came up, and shook hands. They said, then, that they had discovered us, taken us for beaver trappers, and had made arrangements to kill us. As to myself, whom they took to be the chief, they had me killed already in imagination; one was to have my stuball horse, one my sky-blue coat, another my gun, and so on in the partition of my effects. The object I had taken to be a wolf was one of the Indians, who remarked himself that he had got a little nearer me than the balance of his party, and that I might be glad his gun was hard on the trigger; for he had aimed well at my breast, and I surely would have been a dead man, had he got his gun to go off. On learning where we were going, they told my guide that it was impossible for us to cross the mountains; that they had had great trouble to return, and that our animals could not get over. Thereupon, my Sata gave up the idea of going any farther, and concluded to turn back with them.

So there was another trip for nothing, except gathering an awful crop of graybacks, which I thought would devour me before my return to Benton. The Indians were delighted to see us turn back, immediately struck out on a hunt, and at the place agreed upon to encamp, came in with three fine deer, of which little was left in the morning. This was a party of young men, full of fun and mirth. I could not have been better treated than I was by them. On arriving in camp my place was prepared for me; the best spot was made as soft as it could be, by pulling and cutting small willows on which to spread my bedding. Then the best pieces of meat were cooked in various ways, and given to me first of all. There were roast and boiled meat, liver and guts broiled on the coals, blood pudding — in fact, all that was considered eatable of the animals. They kept this cooking going on almost all night — it is incredible what a quantity an Indian can eat. With the exception of such feasts nothing took place on our return worth mentioning, and on the fourth day after falling in with this party we entered Fort Benton again.

Although all my efforts had been in vain, I did not yet abandon the idea of the undertaking, which I intended to put through early in the spring. Eight or ten days after my return, I was taken with a pain in the breast, which I laid to my starvation and exposure, and the failure of my undertaking. I could not help taking my disappointment to heart, and this, I believe, was the cause of a great derangement of my nervous system, from which I never completely recovered. Mr. Culbertson, who had returned from the States, treated me extremely well, and I passed as pleasant a

---

---

winter [of 1848-49] as could be expected, situated as we were.

During this winter the whole tribe of the Blackfeet learned that our intentions were to proceed to the Flatheads in the spring, and remonstrated against it. The leading chiefs advised us not to go, saying that it would not be good for us, even if we succeeded in getting there safe; that we would not be safe when we got there; that there would be war parties constantly about the Missouri; and that the tribe would not go north as usual, but would remain south of the Missouri, with the intention of carrying on war with the Flatheads.

This information, from such sources, induced us to abandon the project. We sold out to the Company, and early in the spring [of 1849] went down to Fort Union with Mr. Culbertson. We left Benton in a large Mackinaw boat. Having started so early, we were sometimes ice-bound, and suffered a great deal from cold. The water was very low, and frequently we had to jump into the river to get the boat off sand bars, while there was ice running. I was generally one of the first in and last out of the water. Twenty days out from Benton we landed at Union.

On my arrival I was offered \$1000 a year to take charge of Fort Alexander, which, at that time, was considered the most dangerous post the Company had. But, wishing to take my family to some place where I could open a small farm, on which they could remain, should I return to the Indian country, and feeling sick besides, I refused the offer.

While at Union I learned that the Company wanted to sell Vermilion Post. So I concluded to go down and see what I could do in that line. I procured a small canoe, hired one man, and started for the States. There I was, again on the march, in a hollow log, for the distance of 1200 or 1500 miles. Luckily, this time I reached Trading Point without any accident, and remained there awaiting the arrival of the Company's steamer to return to Union. On my way down I stopped a few days at the Vermilion Post, but was not pleased with it, and abandoned the idea of making any arrangements there.

At last the steamer arrived. I went on board, where a letter was handed to me from my father, saying that he had sold his farm near Baltimore, and gone to St. Paul with my brother Eugene, to assist him to settle there, and also to see his grandson, A. L. Larpenteur. He was then to proceed to France, which he wanted to see once more before his death, and then to return and die in America with his children. He urged me strongly to leave the Indian country and settle near the rest of the family, where what property I might have, with what he could do for me, would enable me to live more comfortably than I could while wandering in the Indian country, exposing myself to the risk of losing my scalp.

Situated as I was, this news was well calculated to revive my hopes; but being born for bad luck, my agreeable expectations were not of long duration. Yet I had some pleasant moments, thinking that I should meet my old father again, whom I had not seen since 1838, and be united again with all the family after a separation of upward of 20 years; and I began to think that perhaps it was well for me not to have reached the Flatheads.

On reaching the Vermilion I was informed that a gentleman had just arrived from St. Paul, across the country, to take the census of the Santee half-breeds; and, at the same moment, the person himself came on board. After being introduced I asked him if he was acquainted with A. L. Larpenteur, to which he replied, "I know him very well." I then asked him if he knew whether Mr. Larpenteur's grandfather had come from Baltimore. He answered in the affirmative, but added that he had bad news for me; which was that the old gentleman had died the third day after arriv-

al at St. Paul, and that he, my informant, had attended the funeral.

I will leave the reader to imagine my feelings, and to sympathize with me, if there is any sympathy in him. The steamer is pushing off, and I must resume my journey, as well as my story.

During my short stay at the Vermilion, on my way down, Mr. Culbertson had overtaken me there, also on his way to meet the steamer; but, learning that there was cholera on board, he made up his mind to go no further, and to return to Fort Pierre. His reason for going to meet the boat was that they apprehended difficulty with the Indians at Crow Creek Agency, in case their annuities were not on board. So Mr. Culbertson told me, privately, of his writing to Mr. Sarpy, who was in charge, to tell him, in case the annuities were not on board, to send a dispatch to Fort Pierre, and he would come down and help to pass the boat; but, if they had the annuities, it would not be necessary for him to be there. At this time Major Hatting, their "father," a young man of about 26 or 27, was on board.

Five or six days after we left the Vermilion Post we arrived at Crow Creek, or as it was called, the Collins Campbell houses. After the boat landed, three barrels of hard-tack were put ashore, with some sugar and coffee, and given to the Indian soldiers; after which the men were sent to take in wood, which was all ready for the boat. In the meantime the Indians, who had not been invited on board, as was customary, took offense, and knocked the heads out of the barrels of hardtack, which they threw into the river; then they horsewhipped the men away from the woodpile, and placed a guard at the line; after which the chiefs, without invitation, came on board. After they had seated themselves one got up and said, "It is customary, when the boat arrives, to invite us on board, to shake hands, and tell us the news. What is the matter with you this year? Do you think that we have got the itch? Is that the reason you don't wish to shake hands?" Being told that their father was on board, they asked if their annuities were also on the boat. On being answered in the affirmative, they said, "Do you intend to take them to Fort Pierre?" Having been told that was the intention, the Indians remonstrated, saying they had been promised that the annuities were to be distributed at this place, and that they would have them left here; for they had nothing to do with the fort. The agent, giving no decided answer in this regard, went and sat down near the chiefs, who were all holding their heads in expectation of some reply from their father. Things were thus at a standstill for some time; but at last a tall, robust Indian got up, saying, "I am not a chief; but I am a soldier. I see that my chiefs all hang their heads down, as though they did not know what to say or do. But I know what to do." With that he struck a heavy blow with his tomahawk on the table, and then, addressing himself to the agent, said, "Hold up your head — when you speak with chiefs or soldiers, look them in the face. You are young, but we suppose you must have some sense, or our great father would not have sent you up here. My chiefs have spoken, but it seems that they have not been heard. I am a soldier; I tell you that those goods were promised us here, and they will not go any farther. I know that all the chiefs are not here yet; but we have sent for them. If you think that we want to distribute the goods during their absence you can put them in the store, and keep the key until they come; but we will not go to the fort. Do you hear that? That is what I have to say as a soldier."

The Indians were perfectly correct. I was on board the boat last season, when Major Matlock, at this very place, made them the promise and made up their requisition for the goods now on board; the Indians were then well pleased, and the major said he would throw in a box of sugar as the tail, which was 500 pounds.

During this great debate a cup of coffee and a hard tack had been presented to all who were in attendance, and as soon as the soldier and speaker was through, they all took leave. Upon consultation among the authorities it was agreed to unload the annuities — a very prudent forced move; and the following morning we were permitted to depart. Those Indians had been much displeased, the year before, with the behavior of the agent; they had shot at him while on board, but missed him, and killed one of the hands instead. We reached Union early in July [1849].

Chapter 15

(1849-55)

#### FORT VERMILION, LITTLE SIOUX, AND PONCA POST

With the intention to proceed to St. Paul I got all my family on board, and shipped for St. Louis, and thence for St. Paul. On examining affairs it was found that my father had not had time to accomplish his will properly. I went to Baltimore, applied to the Orphan Court, and had the will broken. All being arranged to my satisfaction I was ready to return. Being still sick, I applied to a physician, Dr. John Buckley, who said that a sea voyage might prove beneficial to me. So I embarked on a small merchant ship, and in 45 days landed in New Orleans. I put up at the St. Charles Hotel, where I remained a week; but the climate did not appear to agree with me, and I took a steamer for St. Louis.

About the latter end of February [1850] I arrived in St. Louis, where I had to remain until navigation opened to St. Paul. During my stay I made arrangements with the Company to take charge of the Vermilion Post, on condition that, if I chose, I could purchase it at a certain stipulated price. About the 15th of March I left for St. Paul. When the boat reached Galena it was learned that the ice on Lake Pepin was still too strong, and we had to remain a few days longer. At last the captain concluded to start. On arriving at the lake, it was impossible to get through, and as it appeared to the captain that we would be likely to be detained there long, he preferred to return to Galena. After waiting there a week we again started. The ice was still strong, but by main force, cutting the slushy ice like an old ram, the boat succeeded in getting through. I believe it was on the 8th of April that she landed at St. Paul, being the second boat up that season.

I remained in St. Paul until a St. Louis boat arrived, which was on the 15th of April. Next day I got all my family on board for St. Louis. On my arrival there, the Company's steamer was not yet ready to start; so I took my family up to St. Charles to await her arrival. On the 10th of May the steamer arrived, and I went on board, bound for the Vermilion Post.

About a week after we got under way cholera broke out among the men below, and grew so bad that we boxed up three and four in a night. The boat at last stopped. We put everything out, aired and limed the boat well, and about eight days afterward started again. The disease abated, though there were a few more cases, among which was my woman; but she recovered. Finally we reached the Vermilion Post, where I was deposited for one year, very glad to get out of that steamer.

The post, the country, all pleased me well enough, but I found there was nothing more to be made in the Indian trade, and the place was too much exposed to hostile Indians for me to remain there as a farmer. The Indians robbed me of all my corn, as well as all the half-breeds who were settled near the post; they were obliged to abandon their places and most of them went to settle at Sergeant's Bluffs. Had my health been good, I should have enjoyed myself well that winter [1850-51]. Trade was not bad, and there were good hunting grounds. One young Indian went out turkey hunting by moonlight, and returned in the morning with 14 fine large turkeys. I traded six of

him, among which one weighed 24 pounds.

Finding that the Vermilion Post would not suit me, and learning that there were good claims to be had cheap down about Little Sioux River, I sent my clerk to see how it looked there, and if possible to purchase for me a certain claim which, from the description given, I thought would be likely to suit me. The situation was about 85 miles from this place [Fort Vermilion]. On his return he said that the claim was a good one, but that it had not been represented correctly; for, in order to have it right, I must purchase a part of the neighboring claim, and that being the case, I had better go and see for myself. A few days afterward I went down, made the purchase to suit me, also arranged to have a ferryboat built, and then returned to my post. At the time I am speaking of there was no settlement between Sergeant's Bluffs and the place I bought — a distance of 50 miles.

About the 15th of May [1851], when Mr. Honoré Picotte came down from Fort Pierre in a Mackinaw, I embarked with him, bound for Sergeant's Bluffs, from which place I intended to go down to my claim by land. We had had a great deal of rain; the Missouri, as well as all other streams, had overflowed their banks, and the bottoms were all inundated. I had to remain about 15 days at Sergeant's Bluffs, waiting for the roads to become practicable. I purchased four Indian ponies, two French carts, and hired a guide, at \$2 a day, to pilot me through the water, for there was very little dry land to be seen between this and my place. About the last of May or first of June, my guide said he thought he could get me through; so we hitched up and started. The fourth day, after traveling through mud and water, we reached a place called Silver Lake. Our ponies were then nearly broken down, although they had not made over 35 miles during the four days. As this was the best part of the road, my guide said that it would be impossible for us to reach my place with the carts; that we still had 25 miles to make; "and," said he, "you have not seen anything yet; wait till we get near the ferry." He advised making horse travailles, which consist of two long poles, tied about three feet apart and extending eight or ten feet at the far ends, which drag on the ground, with crossbars fastened to them behind the horse, so as to make a kind of platform on which plunder is loaded.

The travailles being thus prepared, and the children loaded on them, we proceeded on our journey. Having made about 10 miles, we camped at Laidlaw's Grove, which was afterward called Ash-ton's Grove, and goes by that name still. We were then 16 miles from my place, which we had to reach next day or camp in the water, as there was no dry place to be found. We could have made that distance easily in a half day had the road been good. We rose early, and having placed the children to the best advantage on this kind of conveyance, got under march, not expecting to stop to lunch, as there was no fit place. On we went, my guide taking the lead; I behind him, leading a pony, and my woman behind me, also leading one. The nearer we came to the ferry, the deeper the water became, and the sun was already approaching the western horizon. Finally it came up to the armpit of my guide, and the children were dragged almost afloat on their travailles, crying and lamenting, saying, "Father, we will drown — we are going to die in this water — turn back." At times the ponies were swimming, but there was no use of turning back; the timber on dry land ahead was the nearest point; there was nothing to be seen behind us but a sheet of water, and the sun was nearly down. So on we pushed on, in spite of the distressing cries of the children, whom we landed safely on dry ground just at dark.

We had not eaten a bite since morning; but the children were so tired, and had been so frightened, that they laid down, and, in spite of the mosquitoes, which were tremendously bad, went to

sleep without asking for supper. This was certainly one of the most distressing days I had ever experienced; but we old folks felt like taking a good cup of coffee after such a day's work. A fire was immediately made, the coffee was soon served, and no time was lost in turning in for the night. Next morning we did not rise very early, but took our time, got up a good breakfast, and then called out for the boatman. Mr. Condit and Mr. Chase, the gentlemen of whom I had purchased the place, came to ferry us over, and in a little while I was in my log cabin, about 15 feet square. As I had left the carts and my effects at Silver Lake, I left the ponies on the other side, intending to return next day; but as it seemed impossible to bring my stuff through that deep water with my ponies and carts, I arranged with Mr. Chase to meet me with a yoke of cattle hitched to a large canoe. With that understanding, I started next morning with my guide; we pushed the march, and reached Silver Lake about ten at night. Then a tremendous dark cloud rose in the west, and just as we were going to take supper — about the hour of eleven — it blew a hurricane, or, rather, a whirlwind [cyclone], which took our lodge clear up in the air, and then blew the fire into the baggage. It was all we could do to save our plunder, and the lodge we did not find till next day. The latter was so suddenly taken up that we felt like two fools for a moment, not knowing what had become of it. Our supper, as you may say, was good as gone; but, fortunately for us, it was all wind. When we got up in the morning we found that a great many things were missing from our baggage, and much time was lost in searching for lost articles which had been blown so far off by the hurricane. Having succeeded in finding them, and made ready for a start, we saw a wagon coming from above with four yoke of cattle, and I found it was my old friend, Théophile Bruguière, an old Indian trader, and the first settler at the mouth of Big Sioux River. On his approach he cried out, "Hello, Larpenteur! what in the devil are you doing here? You're in a pretty fix, aint you?" "Yes," said I, "and I'm mighty glad to see you." "You are, hay? Well, put some of your stuff in my wagon — bet you I see you through." Bruguière was one of those plain, goodhearted sort of men, who would help anyone out of such a scrape. Having thus arranged matters, we got under way, and camped that night at Laidlaw's Grove. Early next morning we again got under way, and, being so well fixed, had little difficulty in reaching the ferry. I must not omit to say that we met Mr. Chase, who had been as good as his word, about four miles this side of the ferry, coming to meet me with his oxen and canoe; but we did not need his assistance, and left him to follow us empty. We reached the ferry in time to cross, and, all this trouble being over, I was soon safe in my cabin. We had as good a supper as our means could afford, and after much talk over the eight days out from Sergeant's Bluffs we retired for the night.

Although there were a few Mormons scattered in this part of the country, it might still be considered an Indian country. It was occupied, at the time, by Omahas, and frequent parties of Sioux went back and forth to war on the Omahas and Ottos. After I had arranged with Mr. Amos Chase to get me out logs for a house, and provided for my family, I started for St. Louis to raise what funds I had in the Company's hands, and also to procure some groceries. On my return I found most of my family down with the ague. Mr. Chase had gotten all the logs out, and I immediately began to build, but, as there were no mills, I had to hire a sawyer to work with a pit saw. About November [1851] I got into my house. But a short time afterward a small party of Omahas came to trade, who had the smallpox, unknown to me. In a couple of weeks my smallest child, a beautiful little boy, took the disease and died the third day. His mother fretted so that she never fairly got over it.

---

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

During the winter I made arrangements with Mr. Peter H. Sarpy to go up to Running Water, to take charge of his trading post for the Poncas. In the spring [of 1852] I rented my place, left my family on it, and early in April started for the Niobrara, or Running Water. The post, a very poor establishment, was situated immediately on the bank of that river, about a quarter of a mile from the Missouri. I had but three laboring men, and one cook. That summer I had no other pastime but that of fishing, and had to smoke away mosquitoes every evening.

In September [1852] the news came that all my children had died. I did not think this possible — some might have died, but not all. Not long afterward I received a letter from Mr. Sarpy, saying that I had lost two of my children. No end to bad luck for me!

The Poncas were a small tribe, who made but few robes. Having been accustomed to large tribes of Indians, and to big trades, I did not pay much attention to them, and have nothing to relate except one little incident which happened in the early part of the winter [of 1852-53]. After Indians have gone on their usual hunt, more or fewer loafers always remain about a post, instead of following the main camp, and become a great nuisance. Just such a set remained here — about six lodges in all. There were six able-bodied men among them; we were but five, all told, and as the laboring men had to be out, only myself and the cook remained at the post. The Indians became such beggars that I was obliged to refuse them a great many things; and they appeared so regularly at meal times that I became disgusted, and sometimes told the cook not to give them one mouthful to eat. One morning they came into my room, after my men had gone to their work. They took their seat on the floor, and I could perceive that there was some dissatisfaction in the assembly. I called to the cook to come in. This cook was a Frenchman from St. Louis, named Louis Menard, about six feet three, weighing about 130 pounds; but though he had no belly he looked as though he might swallow the biggest Indian of the lot. He was an old voyageur, who had been with Fremont on his trip to California. Just after he came in an old Indian, who had not appeared with the first ones, entered and bolted the door inside. I observed this, but said nothing. Several of those Poncas could speak Sioux, and one of them got up to make a speech, which, of course, was to find fault with my way of treating them. By the discourse I began to see that they intended to take advantage of there being none but us two in to force me to give them eatables. I had a small squaw ax under my bed, which I took out and handed to Louis. I then drew my pistol from under my pillow and placed my gun near at hand. Surprised to see these maneuvers, without saying another word they immediately rose and left the room, somewhat faster than they had entered it. This put an end to their begging and loafing, and I afterward gave them a cup of coffee only when I thought proper. Some days after this incident they came and made an apology, requesting me not to say anything about it to the chief when he returned from the hunt.

The Poncas, at that time, were divided into two bands, one led by a chief called The Whip, who kept on this side of the Running Water, and the other named The Drum, who remained on Ponca Creek. Those two chiefs were jealous of each other, and it was thought that they would become hostile.

This winter's trade was small, and we were now so close to settlements that it did not pay to keep up the post; so it was abandoned. I was thus the last person in charge of the Vermilion, and at the Ponca. I had great sport hunting deer at this place. The Indians being out on their winter hunt, I remained the only hunter at this place. We had a great deal of snow, which brought the deer into the wooded points along the river, where they were so plentiful that I killed five in one day with

small shot.

Early in the spring [1853] I returned to my farm. The individual to whom I had rented it died in the summer; but he had done well, and I had 40 acres well broken and fenced. During my absence the travel had greatly increased, and settlers were now coming in fast, so I rented my farm and devoted my attention entirely to the traveling community. Notwithstanding the increase of the settlements, the Omahas continued to hunt in their old grounds, and I always kept a few trinkets for their trade. All went on quite smoothly through the summer — good crops, plenty of travel. About midwinter a party of Sioux, who had gone to war on the Omahas, killed four of them, and stolen some ponies, passed my place on their return. The day they arrived being extremely cold, they concluded to camp on the river bank near my house. While camped there some of the young men went out hunting, and killed a deer in the timber below my field. They brought in a part of it, and one of them told my woman where he had hung the balance in a tree, a short distance from the house, saying that they did not want it, and if she chose to go after it, she was welcome to do so. Early next morning the party left; toward noon the weather moderated, and she remarked that she had a mind to go after that meat. I told her to do as she pleased about it, and she finally concluded to go. Wrapping up warm in her blanket, and taking her daughter along, she started in quest of the meat. As I was building a bridge at the time, I was left alone at home, my men being all out getting out timber. She had been gone but a little while when a party of six Omahas came in. From their daubed appearance I soon found out that they were in pursuit of the Sioux, and became alarmed about my woman; for, although they knew her well, and were aware that she was an Assiniboine, and therefore belonged among the deadly enemies of the Sioux, yet they looked upon her as a Sioux, as she spoke that language. I did the best I could to induce them to stay long enough to give my woman time to return, but they appeared in a great hurry, and soon started. Just as they were stepping off the entry I saw her coming home, about 300 yards from the house. When she saw them approaching she exclaimed to her daughter, “My daughter, we are lost!” She knew who they were, knew their customs, and rightly judged that her time had come. On meeting her they shook hands; but the next thing was the report of a gun, and she fell dead, shot through the heart. One among them then wanted to shoot her daughter, but he was not permitted to do so, being told, “We have killed her mother — that is sufficient.” This deed was done as quick as lightning; then, throwing away some of their little effects, they ran off as fast as their legs would carry them. The alarm was given, but to no purpose. My wife never said a word, having been instantly killed. She was also struck across the face with some kind of blunt weapon. Her daughter was about 18 years of age. One year afterward I married again.

Chapter 16  
(1855-61)

#### FORT STEWART AND THE POPLAR RIVER POST

All this time the travel increased fast, and as I built considerable, I found myself a little in debt in the crisis of 1857. Seeing no show of getting out of debt without making too great sacrifices, I concluded to engage to the firm of Clark, Primeau, and Co., to go and take charge of Fort Stewart, 35 miles above Fort Union. This fort was built during the time of the firm of Frost, Todd, and Co., who, having been too extravagant, were obliged to give it up.

On the 7th of June, 1859, I took passage at Sioux City on Captain Throckmorton's steamer, whose name I have forgotten. On the 24th of the same month I was landed at my post, and again among

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

the Assiniboines. I found this fort in a very bad condition, but in the course of the summer I got it in order, and had very comfortable quarters. I had not seen the Assiniboines during the last six years, and believe I was about as glad to meet them again as they were to see me. As I was now working for the Opposition, against the "big house," I had to use all my knowledge and experience to draw them to my side. In order to effect this I had to dress some of the big chiefs, and make presents to some of the leading men. On the first arrival of any Assiniboine I would make inquiries about such a one, and about that other one, whom I had known, saying that I had made up my mind to make these individuals some little presents. I knew this would flatter them, and at the same time, they must have the presents they expected or my inquiries would not have the desired effect. So they would come to me, in the best of humor, and, after some conversation, would say, "Is that so? I understood you have made inquiries about me." And I could observe that every Indian was delighted to find that I had asked after him. I proceeded in this way through the whole tribe, and soon had them bound to give me almost all their trade.

This [1859-60] was the pleasantest winter I ever spent with the Assiniboines. We had great dances and talks, which always ended with a treat of a large kettle of mush sweetened with molasses. Although my name was White Man Bear, in their language Mato Washejoe, the buffalo dance was my favorite, and we also sometimes danced the bear dance. What had brought me very high in their estimation was that, buffalo being very plentiful, during summer and winter they made surrounds, in which they killed plenty of meat within 300 yards of the fort. My trade this winter was very good, consisting of 300 robes, beside a great many other skins; but the firm, fearing the American Fur Company, consolidated, and as they needed but few clerks or traders, I was thrown out of employment. I was not very well pleased with Mr. Clark, who had promised to take care that I should have a good place. Those gentlemen, seeing that they had the country to themselves, reduced the number of their clerks, and the wages also; they even cut down on their men and Indians.

On my way down the Missouri I found, at Fort Berthold, Jefferson Smith, an old trader, who, like the balance, was out of employment, and who had about \$4000. There I also met a young man by the name of Boller, who said that he could raise \$2000 from his father in Philadelphia. I felt sure that I could obtain my share from Mr. Robert Campbell in St. Louis. Under such an understanding we agreed to meet in St. Louis. My plan for taking up our outfit was to go around by the way of St. Paul, thence on to Pembina, and through part of the British possessions, with the view to avoid the Sioux. This was a road which no one of us had traveled. As those men had to wait for the return of Mr. Chouteau, who had gone up to Fort Benton, it was not till the last of July [1860] that we met in St. Louis. I had arrived a few days before, and had informed Mr. Campbell of our project, of which he approved, and readily advanced me my portion of the outfit. I also informed Mr. Kenneth McKenzie, who knew something of that country; he said that my plan was a good one, and wished me success, adding that he was sure I would do well. One of Mr. Campbell's clerks by the name of Robert Lemon joined the company. A few days after the arrival of the other two partners we went into operation, Mr. Boller having obtained by telegraph the amount required. Our opposition move was soon reported to Mr. Chouteau, who said that it would prove an abortion; that we would never reach our intended points. I was to go to the Assiniboines, at the same place as last winter [1859-60]. Smith and Boller were to winter at Berthold. Our equipments were soon ready and shipped to St. Paul, where we were to purchase our cattle.

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

On the 5th of September [1860] we left St. Paul with eight wagons and eleven men. Our train, at this early time, attracted the attention of many as we went along; we were often asked where we were bound, and on telling our destination, the answer would be, "Why! you are going a round-about way to the Yellowstone! You will not get there this winter." We could have taken Governor Stevens' route, which would have been somewhat shorter, but this would have taken us among the Sioux, whom I wanted to avoid, as well as all other Indians, hostile or friendly, as I knew such meetings were always expensive and bothersome. We had some little trouble at the start, as our cattle were not well broken; but it did not last long. The weather being fine, we traveled well. We crossed the Red River of the North at Georgetown, and thence struck for Pembina. This part of the road was quite level, well watered, and sufficiently wooded. About the middle of October [1860] we reached Pembina. There we crossed on a very poor bridge near the mouth of Pembina River. Next day we proceeded 30 miles up this river to a small village called St. Joseph, at the base of Pembina Mountain, inhabited by Canadian French half-breeds. Many of my acquaintances who had been on the Missouri had settled at this place, where I almost felt myself at home and had no trouble in procuring such a guide as I wanted. I told him that I wished to avoid all Indians, if possible — my friends, the Assiniboines, as well as all others; and to find a good practicable route for my wagons, even if it took us out of the most direct road. Upon which he replied that he could take me exactly as I required, and that he knew all the camps we had to make from the start, for he had the map in his head. Being asked what his charge would be, he said that he should want two buffalo horses, meaning runners which can overtake buffalo. This price agreed upon, we left next day.

The weather was fine, the roads were good, and we traveled well till our cattle began to get tender-footed, when we had to go slow. When we reached Mouse [or Souris] River they got so lame that we had to shoe them in some manner or other; so we thought of the iron bands of our trunks, examined the thickest, and with these made shoes which

helped us considerably, though they wore out fast, and detained us much on our march. When we arrived on a little river called the Elk Head, Smith and Boller, with their four wagons, left for Berthold.

I kept on with my old guide and Mr. Lemon, with our four wagons, for the Missouri or Fort Stewart. At the last crossing of Mouse River our guide remarked that we had better take on all the dry firewood we could find, as we would not have any more till we should come near the Bad Lands of the Missouri. Having acted upon his advice, and done some more shoeing, we again got under way, driving at the rate of about ten miles a day. On leaving this point our spirits rose, and though we traveled slowly we still hoped to reach our destination in good time. According to the camps which our guide could count up, we should not be much over eight days. Although our guide knew the way well, he missed one camp. When we neared the Missouri one evening, the old man, who had gone ahead, returned to camp saying, "Good news! You need not spare your firewood; I have seen the Missouri." At this news a cry of joy burst through our little squad, who threw up their hats and jumped about like crazy men. Good fires were made, and in the morning the last stick was burned; we were glad of it, and left camp fully expecting to reach the Missouri early. But we were disappointed in that; we traveled the whole day without wood or water, and it was dark when we reached a small stream, nearly dry, and without wood, and we had to gather

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

buffalo chips to make fire. No Missouri having been seen, there was great discontentment in camp that night, for we knew not exactly where we were. The old guide was much put out; but, knowing that he had not been much mistaken, got up early, mounted his horse, and very soon returned, saying, "Those who believe that I have not seen the river can come with me, and I will make them see it." Thinking we were lost we had camped within ten miles of Fort Stewart, which we reached a little before sundown on the 9th of November, 1860, all safe and sound, having lost on the whole journey nothing but one ax, which we forgot in our camp on Mouse River.

Thus this great journey was performed, being the first ever made with such wagons. I had been informed that Fort Kipp, which was within 200 yards of Fort Stewart, had been burned down by the Indians, but was in hopes to find Fort Stewart still standing. In this I was disappointed; it had also been burned, and I found myself obliged to build. As all the chimneys of Fort Kipp were still standing, and this was a great item, I concluded to build on the same spot, and next day commenced operations.

On the following day two men and one Indian came up from Fort Union. They were much surprised to find me there, and said that Mr. Clark and the Indian agent were on their way up to Poplar River to invite the Crows, who were camped there, to trade at the fort; and that there would be no going out to camps this winter. From this man I learned some particulars of Fort Union. He observed that Clark thought himself a king, being a member of the American Fur Company, in charge of Union, with no opposition, and that he had made himself quite comfortable, but had reduced the men's rations, particularly their biscuits, which had become very small. For his part, he said he was mighty glad I had come, and added, "How glad they will be when they hear that at the fort!"

Clark and the agent, who had taken the ridge road, about two miles back of the fort, came on to our tracks. On examining them, finding that the wheels were iron-bound, they thought that the party could not have been half-breeds, but might have been whiskey peddlers; but as such would have been contrabands, they put spurs to their horses after us. On learning that the agent of the United States was Major Schoonover, whom I knew well, I hoisted a small American flag. On discovering this, they could not make out who we were, but very soon found out. Clark, on approaching me, turned as pale as a corpse, saying, "Larpenteur, I'm glad to see you, in one sense, but, in another, I'm d--d sorry." Thinking that we might not be acting according to law, he then remarked, "I presume you are well prepared to carry on trade?" I observed, "The major already possesses the necessary documents." "All right, all right!" was his answer. After which he asked in a light manner, "Would you not like to sell out?" I replied that I had come to sell to the Indians, not to the Company, and that I thought I could sell to them to as good advantage as I could to Mr. Chouteau. Finding that there was no chance to make a purchase, he observed that he would turn back immediately, and send men to build at Poplar River. Knowing that this river was a good place for Indians to winter, and that it would suit them better than if I stayed at Fort Kipp, I concluded to abandon this point, where I had not done much in the way of building.

My wagons being still loaded, we were under way again next morning. We had about 25 miles to make, which we accomplished early next day; and I don't believe that Lafayette was more cheerfully received in the United States than I was in that camp. Next day I selected a place for building, and began operations at once. I was favored by good weather, and succeeded in building quite a neat little establishment. In a short time Mr. Clark came here to build, intending to oppose me

himself the coming winter [of 1860-61]. I was not sorry for this, for I knew him to be very unpopular with both whites and Indians.

My equipment was not large, but well selected for the Indian trade. I made a small reduction in prices which satisfied the Indians, and I knew that if I sold out, even at this reduction, I would do well. This gave me the first run of the trade. Clark, in the meantime, had made great calculations on the number of robes the Indians already had in camp, besides the many more they would acquire before the season should be over. He did not think it worth while to make much effort, as he thought also that my four wagon loads could not last long. But he happened to be mistaken in his calculations. Out of my four wagon loads I traded upward of 2000 robes, besides a great many other skins and hides, and the consequence was that he found himself badly beaten in the spring. This winter was mild, and it would have been a very pleasant one to me, had it not been for Jeff Smith, who proved to be a sharp trader, and Boller a young blatherskite. They wrote letters to Mr. Lemon against me, even requesting him to keep an eye on me, saying that they believed it was my intention to take my robes around by St. Paul, and cheat them out of that trade, and much more to that effect. As Mr. Lemon was a new hand in the country, he did not know how to take such stuff, which made him look and act quite cross at times. I also received letters from the same parties, in which they used up Lemon about as badly as they did me. Thus matters stood until near spring [1861] when, one day, after a few sharp words, the secret cause of our ill feelings toward each other came out. We then compared letters, upon which everything was explained, the doings of my two partners found out, and harmony re-established between Lemon and myself. I thus found out that Smith had sent two men up to bring down the cattle, to prevent me from taking away the robes. The letter which those men had brought made that request, but I did not wish to risk cattle on that trip, to be stolen or killed by the Sioux, nor did I want to part with them. Besides putting up my little fort I got all the saw logs I needed to make a large Mackinaw boat, to take down the returns, and also a skiff for Mr. Lemon and Boller to go down as soon as navigation opened. They being the financiers, and myself and Smith the traders, we were to remain at our respective posts till the returns went down. Boller, who was not over 23, and had been but two years in the country, took it upon himself to write long letters from Berthold about what I was to do and not to do, and, above all, warned me not to be extravagant in building — as though I had just come into the country!

As I had not sent the cattle down, Smith concluded to send Boller up to see how matters stood. About the middle of March [1861] Boller arrived, and, as it was at night, he had to knock at the door of my extravagant improvements. His supper for himself and man was gotten up, and then it was so late that little was said. In the morning I showed him my store and warehouse, both full of robes, all my fine logs, timber to make the skiff, about which he had written to me so often, and also the cattle, which were in first-rate order for the time of the year, remarking at the same time, "They will do first-rate to take a trip to St. Paul." After I had showed him the establishment inside and out, at which I saw he was astonished and pleased, particularly at the sight of the pile of robes, I remarked, "Do you think I have been extravagant? I have scarcely room enough." To which he replied, "I am really surprised. You are well fixed here. We live more like hogs than like people with old Jeff Smith, and I have had a mighty disagreeable winter of it." I then asked, "What were all those letters written for — that one, in particular, about my taking the robes and peltries to St. Paul, to cheat you two gentlemen out of them? All you see here belongs to Robert Campbell

till we have a settlement with him; after which, if there is anything to divide among ourselves, each will get his share. Every hair of this goes to St. Louis, not to St. Paul." All his reply was, "Let us bury the hatchet."

The river was ready for navigation on the 3d of April [1861], and on the 5th the two great financiers departed for St. Louis. On their arrival at Berthold Mr. Smith, instead of remaining at his post like myself, got in the skiff and went to St. Louis. Mr. Campbell, astonished to see him, asked what brought him down. Not liking the reception he was given by Mr. Campbell, or from some other cause, he went to Mr. Chouteau. Mr. Lemon, who could not get a steamer with an outfit, as he had expected, was obliged to go up again, to assist in bringing down our returns. Not knowing that Smith had hired to Chouteau, Lemon looked for him in all such places as those where he generally kept himself, but Smith could not be found. He had gone up to some place on the river with the intention of returning to Berthold with Mr. Chouteau. Mr. Lemon made arrangements with Mr. Chouteau to take passage with him, and also to bring down our returns.

On the 19th of June, 1861, we learned by an Indian who came from Union that Mr. Chouteau had arrived there with two steamers, and, on making further inquiries, found that Mr. Lemon was on board one of them. The second day after that an individual by the name of Louis Dauphin — a renowned hunter — made his appearance, and from him I learned that Mr. Lemon was coming up on the Chippewa, that the other steamer, the Spread Eagle, had turned back from Union, and that the Chippewa would be up this far to-morrow or next day. On reaching Dauphin houses, about six miles below my place by

land, but double that distance by water, Mr. Lemon got off to come ahead of the boat to give me the news. After the greetings usual on such arrivals were passed, he remarked: "Larpenteur, I have bad news to give you. In the first place, I came up with Mr. Chouteau, having made arrangements with him to take down our returns, but the boat is burned up. I had been off her but a little while when I saw her all on fire, and immediately heard the report of the explosion. In the second place, war is declared; the United States are in a great revolution, and there is no sale for anything. In the third place, old Smith has deserted us, and won't let us have his robes. I have other news, but I hate to tell it to you." On my insisting, he said, "All your improvements are burned down. Your house caught fire in the middle of the night, and not even a stitch of clothing was saved." On saying this he paused, and I exclaimed, "Is there any more?" "Is that not enough?" said he. "Yes," I replied, "it is more than enough to lose my home at Little Sioux. But it is no use to cry over spilt milk, and it is under such circumstances that a man is tried."

It was a little before sunset when Lemon arrived, and just at dark we learned the particulars of the accident. The boat was set on fire by one of the hands, who had gone down into the hold to steal liquor. Some of it having run upon his clothes while he was drawing it, the candle came in contact with the wet parts and ignited them. He was burned badly, and then the boat took fire. Immediately upon the alarm being given the boat was landed, and she was abandoned as soon as all passengers and hands were ashore. Nothing could be saved for fear of an explosion of the magazine, in which there was a great quantity of powder. After being abandoned she drifted about two miles, and then exploded on the south side of the river. Owing to this accident we sold our cattle and wagons to very good advantage to some gentlemen who resided in Bitterroot Valley, one of them a merchant named Warren, and others going to the Columbia.

Not expecting any steamer to take down our returns I had pushed work on the boat so well that,

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

six days after Lemon's arrival, it was completed; she was 65 feet in length and 11 feet in breadth of beam, being thus large enough to take my returns and those of Smith. The bursting of the Chipewewa set my men almost crazy, thinking they would get a fortune out of the wreckage. They did not like the idea of rowing my boat down, although they were engaged to do so; and besides, they feared the draft, on account of the rebellion in the United States. I was therefore forced to give \$100 for the trip. I had engaged a pilot for \$300, but he at last refused to go. At last I succeeded in getting a crew, consisting of four to row and one pilot, and on the 2d of July, 1861, we left Poplar River. On the fourth day after our departure we reached Union. At the same time Mr. Rider came from Berthold with two of our wagons and four yoke of our cattle, Jeff Smith having made some arrangement with the company. This accounted for his having sent for the cattle I had; for he wanted to dispose of them to his own private interest. Mr. Lemon having demanded pay for the cattle, a check on Mr. Chouteau for the amount agreed upon was given, which was so much saved. Smith had no idea that we would fall in with the cattle where we did.

We remained at Union about two hours, and pushed off again. On the fourth day out from this place we landed at Berthold. We called on Smith for the robes, but failed, after all our efforts, having been able to get nothing more than the buffalo tongues. Without any accident we went on well, and a little below Nebraska City met the steamer Emilie, Captain Nicholas Wall, bound for Omaha. We made arrangements with him to take down our robes, and waited for his return. It was still considered dangerous to travel down the river, though not nearly so much so as it had been, and when the boat returned there was a company of soldiers on board from Omaha, bound for St. Louis; but no bushwhackers were seen, and on the 4th of August we reached the port of St. Louis, all safe.

Chapter 17

(1861-63)

FORT STEWART AGAIN: FORT GALPIN

As Mr. Lemon had reported, there was no sale for robes. The best part of our robes had been stolen. No longer had I a house to live in. Now what to do? Mr. Campbell, who saw what a plight we were in, said, "Gentlemen, I cannot sell your robes, except at a great sacrifice, which I see no necessity to make. If you wish to return I will furnish your outfit. Now make up your minds and let me know." Having consulted upon what to do we made up our minds to return. Smith, of course, was out; we allowed Boller a small share, but he was to remain out of the country.

Our outfit was soon ready and shipped again by St. Paul, where we bought our cattle. This time we adopted Burbank's way of freighting. We bought light wagons and put but one yoke to each. In this way one man can drive two wagons, and it is no trouble to get through swampy places, as each wagon takes only from 18 to 20 hundredweight.

We left St. Paul on the 14th of September [1861], with seven wagons and eight men, bound for Poplar River. We traveled well, but I was so sick most of the way that it was feared at one time I was going to leave my bones in the prairie. The weather was also very disagreeable. The previous trip I walked the whole way, nearly 900 miles, except two days; but this time I rode more than half the time. We went pretty nearly the same route; the only difference was that we struck direct for St. Joseph instead of Pembina. We had provided ourselves with ox shoes, and got our cattle shod on arriving there. I got another first-rate guide, by the name of Louison Vallée. This guide was one of the best hunters I ever saw for buffalo, as well as for small game; he was near fifty, about

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

six feet three, built in proportion, a very powerful man, and a tremendous walker. He made us live on ducks and geese at the start, and, when we got in among buffalo, on the fat of the land. His killing so many fine fat ducks I believe saved my life. In coming in with a load of ducks he would exclaim: "Monsieur Larpenteur, c'est bon pour la moustache," for he could not speak English. He was as good a guide as my first one; he took us farther north, but managed to get us through without seeing Indians, except the day previous to our arrival.

When we came near the Missouri he observed that he had never been up to Poplar River; he could put us on the Missouri, but not take us direct to the spot. That did not make much difference with us, as we had a man by the name of Joseph Ramsay, who had been the hunter for Fort Union for 20 years, and said he knew the country well. So the remainder of the journey was left to Ramsay. We did not, at the time, consider ourselves more than two days' travel from our destination. In the morning Ramsay took the lead, and the guide went ahead of the teams, in his own direction toward the Missouri, expecting to fall in with us from time to time. I remained with Ramsay, going ahead of the teams. After traveling about an hour I observed that I thought he was going too far north. "No," said he, "I am on the direct way. You see that big hill yonder, with that pile of rocks on it? From there you can see the Missouri." When we came near the hill, being anxious to see the Missouri, and, at the same time, thinking that my man was lost, I started ahead of him. But, when I reached the top of the hill, the Missouri was not to be seen, nor any sign of it. As Ramsay came up I asked him to show me the Missouri. He looked around, very much surprised, not knowing what to say, and I saw plainly that he was lost. I then pointed out a direction, went back to the wagons, and changed our course. We had gone but a little way when we saw an Indian coming after us at full gallop. On approaching us he asked: "Are you going to Woody Mountain?" Ramsay had taken quite a northerly direction.

This Indian was Broken Arm, the chief of the Canoe band of Assiniboines; he said that they had come across our tracks, and made sure whose they were. Many of his people wanted to follow him, but he did not allow them to do so, as he knew I would not like it. He then asked me where I was going to winter. I told him at my former place. He remarked that it was not so suitable as Fort Stewart, where all his band intended to winter; that I had better change my plans; that there were no Indians as yet on the Missouri, but they would all come to my place as soon as they should learn that I had arrived. This was all a lie, for I found out afterward that most of the Assiniboines were at Fort Charles, about 50 miles by land above Fort Stewart.

Owing to his report I consented to go to Fort Stewart; the Indian guided us, saying we would get there the next day. It was late at night when our guide Vallée came to the camp, quite angry with Ramsay. It snowed that night about four inches, and kept quite cold all the next forenoon, but moderated in the afternoon. A little before sunset we were at Fort Stewart, strange to say, again on the same date as last year — the 9th of November, 1861.

It was a glad set of men who put up the lodge, not to be taken down till comfortable quarters were made; and, after a bouncing supper, we turned in, with the pleasant idea that there would be no hitching up in the morning. Had Ramsay taken us in the right direction, we should have reached Poplar River the day the Indian overtook us, and found good quarters already built. My own had been burned down, but those of Clark were still up, and would have saved us a great deal of disagreeable labor.

On rising in the morning we found about five inches of snow on the ground, and it was still

snowing; but the wind soon changed and a cold northwester made it impossible to work. From this time until March [1862] extremely cold weather continued. Through the assistance of squaws whom I employed to heat water and daub the houses, we succeeded in getting ourselves comfortable quarters, but no stockade. I made use of the places we prepared the previous fall. Buffalo were so plentiful here last summer that they ate up all the grass; it looked as though fire had burned the prairies. In consequence of this and the hard winter [of 1861-62] I lost all my cattle — 20 head. Owing to the severity of this winter my trade was light, after that of the Assiniboines was over. I had but 1000 robes, a great many goods left on hand, and more trade must be made. I knew the Gros Ventres of the Prairie were at war with the Blackfeet — that is, with the Piegans; that they dared not go to Benton; that few traders had been in their camp; and, consequently, that they must have yet a great many robes.

Matters standing thus, I proposed to Lemon to go after the Gros Ventres. I had a man in view for this trip who knew the country, and intended to send him with Lemon. After a great deal of persuasion Lemon agreed to go. My man, whose name was Louis El, was ready. My instructions to Lemon were, in the first place, to do all he could to bring the Indians down with their robes; and, secondly, if he could not succeed in that, to get enough of them to come with what number of horses would be required to take all my goods up to Milk River at Dauphin's old fort, where I intended to remain during the summer, and where I would have a boat ready for him to go down with what returns I should have; but by all means to do his best to bring them down with robes. Under those instructions and conditions they started afoot, with their rifles on their shoulders and a dog to carry or drag their sugar and coffee, about the 10th of May [1862].

In the meantime I set to work on my boat, which went very slowly, as I was out of provisions and had neither horse nor mule to send after meat. I had traded a horse and a mule, but one Mr. Assiniboine had relieved me of both; and I had to send my men with the cart after meat, when it was not killed too far from the establishment, or to pack it on their backs.

Twelve days after Lemon's departure he returned with a trading party of Gros Ventres, having 450 robes. After this trade was over, I proposed to put my plan into execution; but Lemon objected, saying that the Indians would rob me of all my goods, and that we had better go down together. As he had been quite contrary all winter, and fretful at every little disappointment, I became dissatisfied with him, and determined to have nothing more to do with him. So I went on preparing to go down stream. On the 4th of June [1862], we were ready to start, with oars all shipped, when a steamer hove in sight. We awaited her arrival, and found she was the Shreveport, Captain John La Barge, who informed us that his brother Joseph was not far behind, coming up with the Emilie, and that he had letters for us from Robert Campbell, also some provisions. When we were ready to push off, he asked us if we had any ice. I told him that he would find some in a barrel. The ice had been so thick that a large cake of it, which we had covered in the sand, had kept until this time. The steamer resumed its way up, and we made our oars ply down stream. We learned by John La Barge that they had formed a company to oppose the American Fur Company, the firm being La Barge, Harkness, and Co. We met the Emilie about 20 miles below Big Muddy River. By the letter from Mr. Campbell we learned that robes and all furs and peltries had risen in price, and also that he had sent us groceries of all kinds, as Captain John La Barge had already informed us. I was sorry that Lemon had not consented to let me take my goods up to Milk River; had he done so, I should have found myself well supplied, and we would have done well in that country. But, as

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

a large company was now organized to oppose the American Fur Company, I did not think it advisable to return with the boat, though I could have done so at but little expense, and most likely would have done so, if Lemon had been the right kind of a man. Taking everything into consideration, I thought best to sell out.

So we sold out to Joseph La Barge. Mr. Lemon went on down to Berthold with the boat to deliver the goods, and await the return of the Emilie. I turned back with Captain La Barge, under a provisional understanding, to examine and select a point to build near the mouth of Milk River. Having examined that vicinity, I chose a situation at the head of Moose Point, about 10 miles above Milk River by land and 15 by the Missouri.

I remained there until the return of the Emilie from Benton, when I again got on board, bound for St. Louis. At Berthold we took on our robes and proceeded. At Fort Pierre we learned that Smith, who had gone down with his robes in a small Mackinaw, had returned with Mr. Chouteau, whom he had met a little below, and had left his robes at Fort Pierre, in charge of Mr. Charles Primeau. Mr. Lemon demanded them as our property. Mr. Primeau consented to give them up on our paying him \$50 for storage. We gave the required amount, and took them on board the Emilie. So we got out our robes at last, though, from what we learned afterward, we supposed Smith had sold them to Mr. Chouteau. They both felt very much surprised, on their return to Fort Pierre, to find the robes gone.

Early in July [1862] we reached St. Louis, where, after a final settlement, I found myself with \$1400, from our dividends. This was my all, after two years of hard work, trouble, and exposure. Having made arrangements with the firm of La Barge and Co., which was to give me one-fourth of the net proceeds of the Assiniboine and Gros Ventres of the Prairie trade, I left for my place at Little Sioux.

On arrival I found my family all well, but living in a very poor log house, which was standing about 40 steps from my main buildings, and had escaped the fire. All I could see of my improvements, which had cost me upward of \$3000, was a pile of ashes; and I had no insurance.

I went the rounds at once, settled all my debts, big and small, and eight days afterward was again under way for the upper country, having shipped at Sioux City, on the Shreveport, bound for Benton, with goods for the Indian trade.

Late in August [1862] we reached Milk River, when the Missouri became so low that the steamer could proceed no further. The next day, while we were taking the goods into Dauphin Fort, a large war party of Sioux gave us a few shots, and stole several head of horses from the Crows. The Shreveport left, and I remained in Dauphin until teams came from Benton to take up what goods the company had for that place, and also to move me up to the fort, which I called Galpin. On our way up we left Owen McKenzie about 150 miles below this point, to build a trading post for the Assiniboines.

Here I erected a handsome, good little fort, and might have had a pleasant time. But in consequence of the very mild winter we had no buffalo, and the Indians, who were starving as well as ourselves, became very unruly. At one time they threatened to pillage my stores, and for a while our case looked rather dark; but they contented themselves with stealing a few articles. I tried my men, but they refused to fight, saying they would rather let the Indians take all the goods than expose their own lives. I had a mean, cowardly set of men, many of whom had been hired by Captain John La Barge on his return from Benton, during his first trip. I knew them of old, and had I

had my own way about this, they should never have been in my employment.

In spite of all this my trade was tolerably fair this winter [1862-63]. McKenzie did little. Early in the fall he had a fight with the Sioux, in which one man was killed, besides one Assiniboine and several horses. This was a party of about 200 warriors, who attacked our men in their house. The latter immediately cut portholes, and defended themselves through them. Our man was killed in the house by a ball which penetrated the door. The Indians were bold enough to come and shoot through the portholes; but one of them remained there. The fight lasted all day; there were but four white men and six Assiniboines on our side. The next day three Sioux were found dead, and there were signs of several wounded ones, who had been taken away. This fight frightened the Assiniboines away from the post, and was the cause why McKenzie did but little trade — only 350 robes.

Toward spring [1863] we were in a starving condition, game of all kinds extremely scarce, and men afraid to go out for a hunt. For about six weeks I lived on nothing but jerked elk meat, having some salt but being entirely out of other groceries. There is little substance in elk meat. I became so weak that I could scarcely get up the river bank with a bucket of water; my knees felt like giving way. It was only by seeking for coffee in the warehouse, picking it up grain by grain out of the dirt, that I now and then got a cup of coffee, without sugar; but it was a great treat notwithstanding. On the 11th of June, 1863, Captain John La Barge landed at this place, bound again for Benton, or, rather, for Fort La Barge, which the firm had built in opposition to Benton. Having heard some great stories, all of which he or they believed, previous to seeing me, the firm had made up their minds to discharge me. In consequence of this they abandoned Owen McKenzie's post and brought him up to take charge of Fort Galpin. McKenzie was a great drunkard, not at all fit to be in charge of such an establishment; but, without any inquiries, my charge was made over to him. Captain La Barge, not satisfied with this, and being the meanest man I ever worked for, except his brother, told some of the men that I had given him a very bad account of their behavior. This set them against me; and now that I was no longer in charge, one gentleman among them — a bully nearly six feet six inches tall — took it into his head one fine day to give me a pounding. He would have done so had it not been for my son, who was about 20 years of age, and much of a man. He saw me in a quarrel, and, thinking that there would be a fight, went into the house, and got his rifle. By that time we were engaged in the fight. I received a severe blow, which stunned me; and when I recovered I saw my antagonist lying as if dead at my feet. I made sure it was none of my doing, and next saw my son in the act of giving him another blow, saying, "Let me kill the son of a b-h." McKenzie, who had come up, said, "Don't strike him again, Charles; you have killed him." During all this time the men were standing outside near their houses, not daring to approach, and when we left him they came and took him in for dead; but he recovered.

McKenzie now being in charge, my presence was no longer needed at this place. I got a canoe, and, taking my son and a young freeman named Keiser, went down to meet Captain Joseph La Barge, who was coming up with the steamer Robert Campbell, loaded mostly with the Blackfoot annuities. Instead of meeting the Robert Campbell, which we thought would be the first boat up, we met Mr. Chouteau, on the steamer Nellie Rogers, bound for Fort Benton. This was at Fort Kipp, where we got on board to return to Fort Galpin, as we had learned that the Robert Campbell was yet far below. About 50 miles below Fort Galpin we met the Shreveport, on her return from Benton. We boarded her and proceeded on our way down; but she was to turn back to assist

the Robert Campbell up with the annuities. At Heart River we met the Robert Campbell, and, as agreed upon, we turned back in her company.

The third day afterward we were fired upon by a party of Sioux, while wooding, but no one was hurt. We went on again to a place called the Tobacco Garden, about 100 miles below the mouth of the Yellowstone, where we saw a large war party of Sioux on the south side of the river. The two boats came within 100 yards of each other, and anchored in the middle of the river to see what those Indians were going to do. After the Sioux had all gathered up, they cried out for the boat, saying they wanted to have a talk, and were out of tobacco. There were two Indian agents on board, Major Latta for the Gros Ventres, Mandans, and Assiniboines, and Major Reed for the Blackfeet. I was at the time on the Shreveport. The captain and those gentlemen, not knowing much about Indians, thought best to send for the head men of the party, and in spite of all that could be done from our boat to make them abandon the idea, Captain Joseph La Barge would send out the yawl. The first crew ordered refused to go; the mate, not wishing to insist on sending another crew, without further orders, reported to the captain that the men had refused, and was sent back very roughly with orders to send another crew. So seven men were ordered out. One young man of this crew, already in the yawl, caught hold of the steamboat, saying, "I don't want to go — we'll all be killed." The mate threatened to break his fingers if he did not loosen his hold, and he was obliged to go with the crew — never to return. As soon as they started I took my double-barreled gun and ran up on the hurricane deck. When the Indians saw the yawl coming they jumped down the bank, and the moment the yawl landed, discharged a volley, killing three men and wounding another, who, it was thought, would not recover. From the steamboat we fired several volleys, but to no effect. A few shots were afterward fired from the willows by the Indians, also without effect, and about three o'clock in the afternoon we got under way.

The next day, at 10 a. m., we buried the three poor fellows in one grave; the young man Martin was one of them. Two days afterward we reached the mouth of the Yellowstone, where both boats stopped, it being impossible for them to proceed farther.

Although they were on bad terms with the American Fur Company they concluded to ask Mr. Hodgkiss, who was in charge, to let them store their goods in Fort Union. Knowing that Mr. Hodgkiss was very fond of liquor, they made sure of success, and certainly succeeded.

When we came to the fort we learned that Malcolm Clark had shot Owen McKenzie. Mr. Chouteau had not been able to ascend the Missouri farther than Milk River, where he had to put out all his freight, to be hauled up to Benton with wagons. While he was there McKenzie came down to the boat. McKenzie had disputed with Clark in regard to some settlements of the time of Frost, Todd, and Co. Clark had been in charge for that company, and McKenzie was not on good terms with him. So McKenzie got very drunk and commenced to quarrel with Clark, who, knowing him to be a dangerous man, took out his pistol and shot three balls through McKenzie, killing him instantly. Thus one of Captain La Barge's best kind of men gone, there was no one in charge of Fort Galpin. They put in charge Louis Dauphin, whom I knew to be a regular thief, and who did not know his a b c of the business. Finding themselves in a bad fix about Galpin, they had the brass to ask me how I would like to go there again; but I bade them to be so kind as to excuse me, as they could find plenty of better men than myself. Shortly after this Dauphin was killed by the Sioux. A young man named Antoine Primeau was shot by Jerry Potts, a half-breed. My cook, a nice young man, who wanted to display his bravery, was killed by some Sioux near the fort. James Windle

was killed by a bull-driver who came down from Benton. All this happened at Fort Galpin shortly after I left, and the goods which the La Barges had brought up were nearly all lost.

The annuities being all stored, we started for the States. A few miles below Sioux City the mate had a quarrel with his hands, in which he stabbed one of them, who died in fifteen minutes. The gentlemanly La Barges, having treated all their clerks about the same as they did me, drew out of the Indian trade. This was in 1863.

Chapter 18

(1864-66)

#### FORT UNION ONCE MORE: HOME AGAIN

In the spring of 1864 I made arrangements with Mr. Charles Chouteau to take charge of Fort Union. As he was not ready to leave St. Louis, I started ahead of him on the steamer Benton, in charge of 50 tons of commissary freight, having been appointed as commissary by General Alfred Sully of the U. S. Army. I was to be relieved on the arrival of his fleet, which was to be up during the summer. The main reason of my appointment was that we had 17 barrels of whiskey in this freight.

We left St. Louis on the 26th of March. On arriving at Fort Randall, we learned that 1500 lodges of Sioux were camped near Fort Berthold, determined to stop all navigation, and so placed that they could sink boats by rolling rocks down the bank. Those who knew neither the country nor the Indians believed all this rubbish, and some of the ladies who were on board, bound for Montana, expressed a desire to turn back. We kept on our voyage, which was very tedious, on account of low water.

On the 6th of May we reached Fort Sully with a part of our load, having been obliged to make a double trip. On our arrival Colonel Bartlett, in command of Sully, informed us that, owing to reports of hostile Indians being strongly fortified near Berthold, he had just received a dispatch from headquarters, ordering him to prevent any steamers from going farther up till a sufficient number arrived to justify him in sending an escort with them, which was left, in a great measure, to his own judgment. He said that he would let us know shortly what he would determine upon, and requested the captain to call again the next day. Being anxious to move on, and not putting much faith in any such stories as we had learned, we called on the commander. As I was a commissary, and had been for many years with the Indians, he would have me let him know what I thought about the matter. To which I replied that I thought all those reports, like many others, much exaggerated, and should not be at all surprised if we did not see a single Indian on our journey. For one thing there was no game on the river, and it was impossible for 1500 lodges to remain long in camp together; and as to any place where they could roll rocks down the bank and sink the boat, I knew of none such — at which he smiled. As to danger, I could not say there was none; we might be fired on and some persons might be killed, but as there were nearly 150 men on board, all well armed, I did not apprehend much danger. The greatest danger would be at night, but good care would be taken to always anchor on a sand bar in the middle of the river. Colonel Bartlett then asked the captain when he thought he would be ready to leave; the answer was, "In a couple of days." "Well," said he, "when you are ready, let me know; something more favorable may turn up in that time."

With the consent of the commander we resumed our journey on the 9th of May. The river being still very low, we made but slow progress. No Indians were seen until we came to the mouth of

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

Heart River, where, on the 24th, about 9 a. m. we discovered a few Indians in the broken banks of the Missouri, awaiting our arrival with the American flag hoisted. Being well prepared, we landed, and gave them some few provisions and a little tobacco. They were but 12 in all — a half-starved looking set. After proceeding about 10 miles, we saw three Indians, who desired us to land; we did so, and found that one of them was Black Catfish, chief of the Yanktonais, who showed his papers from General William S. Harney. Having given them a good cup of coffee on board, and a few presents, we again got under way; and those were the last Indians we saw.

We landed safe and sound at Union on the last day of May, being the first boat up this season. We arrived early in the morning and came in sight of the fort unobserved. The doors were all closed, and not a living object was stirring except some buffalo, pasturing about 300 yards from the fort. But the door was soon opened, the flag hoisted, and the artillery fired; to which salute the boat responded. We were informed that the Sioux had been, and were still, so bad that the men dared not keep the doors open. The Indians had at one time made a rush, and shot a squaw through the thigh just as she was entering the fort. The Benton left about 3 p.m., having discharged 50 tons of freight, which pleased the passengers very much.

I have omitted to say that, while at Berthold, I was informed of Mr. Hodgkiss' death; this news had not reached St. Louis when I left. Mr. I. C. Rolette was then in charge.

I was not to take charge of Union until the return of Mr. Chouteau from Benton. On the 13th of June Mr. Chouteau arrived with his steamer, the Yellowstone, bringing a company of soldiers for the protection of the fort, and of the Assiniboines; it was Company I, Wisconsin Volunteers, commanded by Captain Greer, and Major Wilkinson, the Indian agent, also arrived. The Yellowstone left for Benton the same day.

On the 2d day of July the Yellowstone returned from Benton, and, after all arrangements had been made, I took charge of Fort Union for the last year of the American Fur Company; but I still retained my position as commissary until the arrival of General Sully's fleet.

Now a few words in regard to that expedition. Previous to my leaving St. Louis General Sully, one day, while at Mr. Chouteau's office, took pains to tell me the route he was going to take to the mouth of the Big Horn. He showed me the map, observing that the route from Heart River, at which point he intended to leave the Missouri and strike for the Horn, was the shortest, and could be accomplished in little time. I had been on the Horn, and had also traveled some on the Little Missouri. I knew the latter to be very rough country, which, further up than I had been, was almost all Bad Lands. This made me observe that I thought he would have a great deal of trouble in getting through with his command; but with a map and some good brandy, in Chouteau's office, one can get through anywhere. I found him convinced that he would meet with little difficulty; but I was satisfied to the contrary. After this he went on with his talk, saying, "I have a fleet of five steamers, which are going up as far as Union. Among them I have two light ones, intended to bring up all the goods and implements to the mouth of the Horn, where I expect to meet them." This notion I knew would never be realized; he might get to the Horn with his command, but for a steamboat to ascend the Yellowstone that distance I knew to be impossible, and was much surprised at the idea.

Now we will return to Fort Union, and relate what took place until the arrival of the fleet. Captain Greer had not been long stationed in the fort when a war party of Sioux, early one morning, stole all the horses, not, more than 40 steps from one of the bastions. He started a detail of 20 men

in pursuit on foot; had the Indians been so disposed, they could have destroyed those men with all ease. Two weeks later another party made an attack. It happened that there were a few Gros Ventres of the Missouri, at the fort, who, with some soldiers, succeeded in overtaking one of the Sioux; they pretty soon returned with his scalp, ears, and nose, and a great scalp dance followed. After this everything went smoothly till the 20th of November [1864], when a party of 83 miners arrived on their return trip to the States on the Yellowstone; they had been frozen in about 20 miles from the mouth of that river and obliged to abandon their boats. Finding that they could not all be entertained comfortably in the fort, and some wishing to go to the States, half of the party made up their minds to take it afoot. Those remaining would have proved very troublesome, and more dangerous than the hostile or friendly Indians, had not Captain Greer, who was quartered in the fort, kept them quite civil. They were a rough set. Early in the spring [1865] I made them a large Mackinaw, on which they left two days after the ice broke on the 17th of April. Captain Greer went with them, to meet the steamer Yellowstone.

We were not troubled by the hostiles that winter [1864-65], and should have had a pleasant time, had not scurvy broken out toward the end of that season; three soldiers died. As we had seen no enemies all winter, when spring came the soldiers went out hunting in all directions, as though there was no danger, and became very careless. On the 26th of April [1865] two of them returned from a hunt, and said they had found the remains of an elk which had been wounded and died, and was partly eaten up by a grizzly bear. The orderly sergeant and those two men agreed to go early next morning to see if they could get a shot at Mr. Grizzly, and gave orders to the guard to awake them by daylight. The guard did as he had been ordered, and the three hunters went after the bear. When they had gone about three-quarters of a mile, and were passing through some thick bushes, they were fired upon by a party of concealed hostiles, about 40 in number, and one of them was shot down. Another of them shot and killed an Indian. The orderly sergeant, who had had the scurvy, could not run; the Indians rushed upon him, shot nine arrows into him, pounded him with their war-clubs, and then scalped him, not leaving a hair upon his head. The young man who fell at the first discharge was shot with one ball, above his left breast, and two in his leg. The bushes were thick where he was lying, and he saw them looking for him; but as the alarm had been given at the fort, by the guard, who had seen and heard the firing, they had no time to search, and ran away, leaving their own dead man. In the afternoon a party of soldiers went to the spot and hung him in some elm trees where he could be seen dangling from the Fort. Nothing worthy of note took place from this time till the arrival of the Yellowstone, on the 5th of June. Mr. Chouteau arrived this time in great distress; having been reported as a rebel he could not obtain a license, and was obliged to sell out all his trading-posts, except Benton; all other posts he sold to Hubble, Hawley and Co., of which A. B. Smith of Chicago was the head; it was called the North West Fur Company. This being the case, we immediately set to work taking the inventory. When the post was turned over to the N. W. Co. I made arrangements to take charge of it for this new firm. Captain Upton of the regulars, who arrived to relieve Captain Greer, had instructions to take possession of Fort Union for the United States, and turn all citizens out. So I had to turn out my men, and would have been obliged to leave myself, had not the captain suffered me to keep my own room and my cook. I thus found myself, as it were, under arrest, but this did not last long.

On the 14th of August Captain Upton was ordered away, and I was again in full possession of the

fort. Two days afterward Mr. Frederick D. Pease, a member of the Company, arrived to attend the sale of the commissary goods. He asked my opinion in regard to sending after the Crows, who, he thought, had still many robes. I remarked that I would not send; that they could not have much left to trade, as so many boats had been up the river; and, for another thing, that I knew Captain Greer, during the past winter, had created such a jealousy between them and the Assiniboines that if they met it was sure to be war. So I did not think advisable to send; it would be better to wait till the arrival of the agent. But, in spite of all I said or could do, he would send. After the sale he left, and I remained with six men in a place where a company of soldiers had once been thought required for safety.

On the 21st of August Mr. Pease and all the Government officers left Fort Union; I resumed full charge, being left with six working men, one clerk, and one loafer named Conklin, who Mr. Pease said he thought was a government spy, and who turned out to be a perfect blatherskite. After the departure of all the force which had been stationed here the men at times became quite unruly, and threatened to leave, which made it very disagreeable to me. During the night of September 10th the forerunners of the Crows arrived, with three white men who had been in their camps, reporting that these Indians would be in next day. There happened to be in the Fort a few young Assiniboines, who left that same night for their camp, about 20 miles distant. In the mean time the Crows arrived, with but little to trade, and camped close to the fort — about 200 in all, men and women. On their arrival the chief demanded the annuities, but, as I had not been instructed to give them, I declined, but promised that if the agent did not arrive within eight days, I would then do as he desired. He said that was a long time, but finally agreed to wait; but trade commenced, and all went on well.

On the 12th of September, 1865, a little before sunrise, I was awakened by my interpreter, saying, “Mr. Larpenteur — the Sioux! the Sioux! they have made a rush on the Crow horses, driven them all off, and are now fighting.” I immediately got up, and ran up on the gallery; by this time the Indians had got out of sight, but I could hear the firing. A little while afterward the report came that there were some Assiniboines among them. By another dispatch we learned that they were all Assiniboines, that the Crows had already killed two, and were still fighting. After the battle we learned that there were four Assiniboines killed, two Crows wounded, not dangerously; and that the latter had lost 45 head of horses. It was fortunate for us that no Crows were killed; for, had there been, we could not have saved the Assiniboines who were in the fort at the time; and it was only after a great deal of talk that we pacified the Crows. Then the chief, called Rotten Tail, came to me and said, “You must give me the annuities. You see that we cannot remain here any longer, the Assiniboines will have some more of our horses if we do.” The old chief was right; I could no longer refuse him his annuities, and granted his request. But a little while afterward he came in with his soldiers, requesting me to give him the Assiniboines’ annuities in payment for the 45 horses they had stolen, and also saying that the Crows must have ammunition. I saw plainly that they meant no good. I told the old Chief that I would give him his annuities, but that I had nothing else to give him, and that if he wanted pay for his horses he would have to wait till his father arrived on the steamer, which I expected would be up in a few days. Seeing that something was wrong, I had my men all well armed, and the cannon loaded. After a little more argument on the subject, the old fellow concluded to take his annuities. I then took him into the warehouse and showed him his pile, saying, “This is yours, just as it was sent up. Here are your papers, calling for

Forty years a fur trader on the upper Missouri: the personal narrative of  
Charles Larpenteur, 1833-1872

---

so many boxes, sacks, barrels, and bales. You can see that none of them have been opened. Now I will send them out to your camp. You can remain here, to see that they all go, and after that you can divide them to suit yourselves." He then remarked that he would rather have me divide them. I told him I would have nothing more to do with them; that Indians always accused the whites of stealing annuities, which was my reason for refusing to make any division. Then he asked if I would let my "little whites," as the laboring men are called, divide, or help divide. I told him that would be as they chose. Finally the goods were divided, and the next morning, when all were ready to leave, the old chief came to me in the best of humor, saying, "Well, I have come to take breakfast with you before I go, and see if you have any more documents for me to sign." I told him I had some breakfast for him to eat, but no documents to be signed. When the old man was ready to go he shook hands in a very friendly manner, saying, "I am well pleased, but sorry that my friends the Assiniboines have been fools. You can tell them, from me, that I am still their friend, and willing to smoke with them. The scalps which were taken were given to your interpreter to bury and were not allowed to be danced, as we do with those of our enemies." Upon which he put the whip to his horse, and it was good-by, Mr. Crow. This being the result of Mr. Pease's dispatch. On the 17th of September the Hattie May arrived, bringing Mr. A. B. Smith, the Chicago hypocrite, Mr. Hawley, and Mr. Pease. Having found myself slighted, and not liking the proceedings of this new firm, I requested my discharge of Mr. Pease last August; but he then said he could not do that, and I would have to await the arrival of the steamer. On her arrival I was discharged. The steamer on which I went left at noon next day, and was to wait for those gentlemen in the point below Union, where the captain would take on a little wood; but as they did not come at the appointed time, he went down to the Fort William landing, only 2 ½ miles by land, to wait for them there. While landed there I found that I had forgotten some documents, which I had left with Mr. Thomas Campbell, and wanted to go back to the fort for them. A great many ponies were seen, supposed to be those of Sioux, which had kept those gentlemen at the fort. But I knew that the Assiniboines were camped near by and that the ponies were those of this party, who, on hearing the cannon firing at the arrival of the boat, had come to the fort. Now that it was nearly dark, and those gentlemen had not arrived, the captain, who knew that I wanted to go to the fort, said, "Larpenteur, if you want to go you can; I will not leave to-night." I asked someone to accompany me, but none dared go, saying, "Those Indians may be Sioux"; so I started alone. The fort was locked up on my arrival, and, as my business was with Campbell, who was in a small cabin about 100 yards off, I passed by the fort. There I saw many of my old friends among the Assiniboines, who shook hands with me, saying they were sorry to see me go. Having been satisfied about the documents I started back to the boat. During my absence those gentlemen arrived in a skiff. Not knowing, as yet, that I had gone to the fort, they said that it was a good thing for me that I was not at the fort, for the Assiniboines would surely have killed me; then blaming me for that scrape with the Crows. At this the captain remarked, "Larpenteur has just gone to the fort." "Well," said they, "it is not good for him; we should not be surprised if he does not return." Not long after that I fired off my pistol and the yawl came for me. When the captain told me what had been said, I remarked that, if I had been obliged to leave the country whenever Indians threatened to kill me, I should, have been gone long ago.

We left next morning, and, without anything worthy of notice, reached Sioux City on the 4th of October. Having remained at Little Sioux River a week, I started for St. Louis, to have a settlement

with Mr. Chouteau. He received me like a gentleman, being pleased with the winding up of his affairs at Union. We settled up satisfactorily to both parties, and then I returned to pass the winter at my place.

Chapter 19

(1866-72)

#### ON AND AFTER THE PEACE COMMISSION

On the 29th of April, 1866, I received an appointment from Governor Edmond as interpreter with the Peace Commissioners for the Assiniboines. I started immediately for Yankton, went on to Randall by stage, and then by land to Sully, at which point I boarded the steamer *Sunset*, and reached Fort Union on the 11th of June.

On my arrival I found that the Assiniboines had been sent for; they soon came in, and I had everything arranged for the treaty on the arrival of the steamer *Ben Johnson*, on which the commissioners were coming. They were Governor Edmond of Dakota Territory, General Curtis of Iowa, Judge Gurnsey of Wisconsin, Elder W. Reed of anywhere, and Mr. M. K. Armstrong, secretary. The treaty, like many others which were never realized, was made for the purchase of all the Assiniboine lands on the south side of the Missouri, and 20 miles square on the north side, directly opposite the mouth of the Yellowstone River. In consideration of this they were to receive \$30,000 per annum, for the term of 20 years; and I, for my children, was to get a section of land wherever I chose to take it on the Assiniboine land; but nothing of this was realized.

The following summer General Sully was sent by the department to treat with the Assiniboines. At the council they asked him if he knew anything of the boat which was to fetch them money according to last summer's treaty. He told them he knew nothing about it. They said they thought it very singular, if he came from their great father's house, that he knew nothing about their boat. Then they told him he lied like all the others; that they had been filled with talk up to their throats, and did not want any more. A few annuities were sent them this year, but, as bad luck would have it, the steamer on which the goods were coming sunk, and their groceries were all lost.

General Sully's object was to find out something about the treaty of last summer, and to show them what could be done without an Indian's having Ely Samuel Parker as an example, and Father De Smet to inspire them with a conviction that the truth was spoken. I will say nothing of what remarks the Indians made. General Sully's commission was the most useless one I ever saw in the country, and the great Peace Commission was a complete failure.

On the 19th of July we left Union. On reaching the landing at Buford we learned that the Sioux had fired on the traders whom Mr. Gaben had sent from Union to them, after obtaining permission of the Peace Commissioners to do so. One was shot in the back with an arrow; and at least one ball glanced off the other, having struck the brass mounting of his belt. The fort was set on fire last night; but as many were moving about, it was discovered in time, and no injury was done. Having stolen many goods the Indians made their escape. The boat took on all that was left, and we proceeded down river.

As the treaty had not been made coming up, the Commission had to stop at Berthold, which we reached on the 21st of July. The council was held next day. As the interpreter, Pierre Garreau, could not speak good English, I was appointed to interpret from his French into English. As the Gros Ventres did not feel inclined to sell their lands — at least, the portion the Commissioners

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

wanted — the council lasted a long while. In some of their speeches the Commissioners remarked that they had treated with all the neighboring tribes, who would all be well off, and the Gros Ventres alone would remain poor; even some of the Sioux, who were considered hostile, had made peace, and now would listen to their words. The chief said: "I like to see you all. You look well — very nice-looking men indeed; but we think you lie, like all the others. One reason why we don't wish to sell you the land you want is that we have been much deceived. When we make treaties — for a long time, we get pretty well paid for a while; but it tapers off to a very small point, and then we see how completely we have been cheated. It is plain that you don't know what you are talking about when you say the Sioux are going to listen to your words; the Sioux are dogs — wolves — liars; and you will find it out ere long."

Not more than an hour after the Indian's speech the alarm of "Sioux! Sioux!" was given, and in less than half of a minute not a man was left in the council lodge — every Indian fled to his gun or bow and arrows, and was off in pursuit of the Sioux. About sunset they returned with five scalps, which they exhibited in front of the store to the gaze of the gentlemanly commissioners. Some of the Indians also had Sioux feet and hands tied around their horses' necks, while old squaws were dancing and jumping upon the scalps. They also took nine horses, but most of them died, having been overfed. "Now," said they, "here are your Sioux; see how well they listen to your words! They are the very same Sioux with whom you have just been making peace. We finished them with the fine new guns you gave them, and scalped them with your own knives. They are the very ones; and you will see some more of them at Fort Rice."

The treaty was finally concluded, resulting in the purchase of 15 miles square at Snake River, 16 miles below Fort Berthold, where Fort Stevenson is now standing.

On the 28th we left Berthold, and next day reached Rice, where we found, as the Indians had said, the partisan of the war party, who had been at Berthold; they were 22 in number. Further down we stopped at the Santee Agency, at Running Water [the Niobrara]. The commissioners had a long sitting with these Indians, who requested them to tell their Great Father to give them a better place, for they could not stand it here — no wood, and subject to overflow. They were afterward removed lower down. On the 5th of August we reached Sioux City, where ended the great Peace Commission, and whence all went to their respective homes.

On the 12th of September I lost my daughter — 25 years of age. On the 14th of February [1867] my son Charles died, 23 years of age. In the spring I went to St. Louis and made arrangements with the firm of Durfee and Peck to take charge of Union, in opposition to the North West Company. We reached that place on the 19th of June, 1867.

According to the request of the gentlemen of this Company, and contrary to my knowledge of the affairs of the concern, I erected an adobe store, 96 by 20 feet. During the summer Colonel Rankin, commander of Fort Buford, purchased Fort Union, to use the materials in building Buford. The North West Company then moved down and built at Buford. Finding that all the business of the country would finally be done at Buford, I abandoned my adobe store and erected one there of logs, 120 feet in length.

At this place I had to oppose the military sutler and the North West Company. In spite of this I traded 2000 buffalo robes, 900 elk hides, 1800 deerskins, and 1000 wolves', worth, in cash, \$5000; but, owing to some jealousies, malicious reports were made against me, and I was discharged on the arrival of the steamer, on the 18th of May [1868].

I immediately went to the States, got up an outfit for Indian trade and sutler business, and on the 18th of August I was at Buford again, on my own hook. Having made some reductions on all sutler goods, I acquired popularity among the soldiers, and did well, considering my small outfit. On the 3d of June [1869] I went down again and brought up another outfit the following August. All went on flourishing with me till the 1st of February, 1870, when I had the misfortune to break my thigh.

On the 7th of June [1870] I went down to Omaha, to settle with the firm of Richard Whitney and Co., with whom I was concerned. I bought them out, and returned to Buford. On this trip I was partly carried by some good folks, who would transport me from one car to the other, and in hobbling on crutches I suffered very much. Notwithstanding this great misfortune, I was getting along pretty well. I had a splendid establishment at Buford, where I was living with my family, having made it my home. But, being born for misfortune, I was ruined by the army bill, which passed Congress the previous July, allowing but one post sutler; this we did not learn till the following January [1871]. My daughter died on the following 14th of February. On the arrival of the new post sutler, Mr. Alvin C. Leighton, my store was closed, like that of the other sutlers. On the 14th of May, 1871, I left Buford, bag and baggage, for the States, and that was the last of the Indian country for me.

At the time those orders came from headquarters, I was a regular licensed trader, having been appointed sutler by General Hancock at St. Paul. Notwithstanding that it was in January, we were ordered forthwith off the reservation, which is only 30 miles square. Through the kindness of Colonel Gilbert, the commanding officer, we were permitted to remain on the reservation till spring, but our stores were closed. A month afterward we were allowed to open again and go on till the arrival of the regularly appointed sutler. On the 22d of June I took possession of my three forties which I had purchased of the railroad, and built a good house. On the 9th of December my little boy Louis, aged 12 years, died of inflammation of the lungs, after an illness of 48 hours.

Forty years ago was my first winter [1833-34] in the Indian country, at Fort William, when the stars appeared to fall. That my lucky star fell is plainly to be seen in this narrative. Whether there are any such stars may be a question, but there is no question of my being out of luck.

#### Chapter 20

#### INDIAN LAWS AND CUSTOMS

Among the Blackfeet the law in regard to adultery is death for the adulteress, and forfeiture of all the property of the adulterer. His lodge is cut into pieces, his horses are either killed or taken from him, and the woman must suffer death.

While I was at Benton an instance of this occurred in a very respectable family — for there are such among Indians. I should have said in two families. The woman was very young and handsome. Contrary to custom they had made it up, and the Indian could be seen with his wife as usual; but, being sensible that he had broken the law, he thought that he was looked upon as a weak-hearted man, and could not resist this tormenting idea. She was handsome; he loved her; he must either keep her or kill her. Tortured by reflections, which he could endure no longer, he took her out to walk, as he had been accustomed to do. They were sitting together, when he took her on his lap, combed her hair neatly — which is a mark of love with all Indians — vermilioned her face beautifully, and told her to sit by his side again. He then said, “My good wife, you have done wrong. I thought at one time I could overlook it, but I am scorned by my people. I cannot suffer

you to be the wife of another. I love you too much for that. You must die." So saying, he buried his tomahawk in her skull.

When an Indian sees that his wife makes too free with young men, the penalty for such an offense is a piece of the nose. I have seen several who have undergone that punishment, and awful did they look. After cutting off her nose the husband says, "Go now and see how fond the young men will be of talking to you."

Among the Assiniboines there is no particular law in regard to adultery. This is left at the disposition of the injured individual, who sometimes revenges himself; but, if the relatives of the adulterer are strong, he may be content with a payment. Some give the woman a flogging, and then either drive her away or keep her. Nothing will be said about it, but the woman then bears a bad name — in their language Wittico Weeon, which means a prostitute, but not one of the first degree. A regular prostitute has no husband, and goes about to "lend herself," as they term it, for pay. Such a woman is gone beyond redemption. There are three different degrees of prostitution, one of which is looked upon as legal. This is when she is loaned with the consent of her parents, and then the larger the payment the more honor it is for the woman. When little quarrels arise among mothers in regard to the characters of their daughters, they will say, "What have you to say against my daughter? What did yours get when you lent her? Look at mine — what she got! You are making a Wittico Weeon of your daughter."

The young man who is courting dresses himself in the best style he can afford. His hair, which is the main point of attraction, is generally well combed in front, taking care that his stiff topknot stands straight up, while a long braid of false hair hangs down to his heels. With large pieces of California shells [abalone-Haliotis] in his ears, his neck and breast covered with an immense necklace of beads, his face vermilioned, and a fine pair of moccasins on his feet, his dress is complete. His over garment is either a blanket or a robe. Attired in this style, he commences his courtship by standing quite still in a place where he thinks that she will be likely to see him. This may last for many days without saying a word to her. He then makes friends with her brothers, particularly the elder one, who has a great deal to say in regard to the marrying of his sister. Then he watches for her when she goes for wood or water, saying a few words to her, and giving her a finger ring. When he makes small presents to the mother, father, and brothers they discover what he is after; but he never enters the lodge of his sweetheart. At this stage of the proceedings, if the young couple get very much in love with each other, and the young man cannot obtain the means to buy her, they elope to another band of the same tribe. But if he be a young man of means, and has obtained the consent of the woman, he ties a horse at her lodge; if the horse is accepted, the girl goes that night to his lodge; if not, the horse remains tied at the lodge, and the young man sends for it in the morning. If he has other horses, and loves the girl enough, the following day he ties two; and sometimes four or five horses are thus tied — the more horses, the greater honor for all parties. An elopement may also take place when the old folks will not consent, after the girl has been given the refusal of a horse. She is never forced to marry. Sometimes the individual who wants to buy a girl has never asked her whether she would have him or not, but has made very inducing offers to her parents, who then do all they can to persuade her, saying, "Take pity on us, daughter! This man likes us. He has given us a great many things. We are poor; we stand much in need of horses. He is a good hunter; he will make you live well; you need not remain poor." Yet, if the girl does not consent, they will not force her.

After marriage the woman belongs to the man. No one else has any right to her; and if she be the eldest, and have two or three sisters, they are also considered his wives, and cannot be disposed of without his consent. It frequently happens that he will take them all. The son-in-law never speaks to or looks at either of his parents-in-law. When invited to a feast or council where his father-in-law is to be he is duly apprised of it, and he covers himself with his robe and turns his back upon the old gentleman. An Indian who has but one wife will always be poor; but one that has three to four wives may become rich — one of the leading men, if not a chief. The reason of this is that the more wives the more children, and children are a source of wealth, resulting in a large family connection, which gives him power; for “might makes right” with them. An Indian marries also in this light: When his family has increased with one wife till they find it impossible to get along without help, he buys a servant, as there is no such thing as hiring one; but she also becomes his wife, and is not looked upon as a servant. In all cases the old wife is always looked up to as the mistress of the whole. The son-in-law never keeps anything to himself until he gets a family; everything goes to his wife’s relations, and this may continue even after he has a considerable family. From such customs it is plainly to be seen that the more wives an Indian has the richer he is — contrary to what the case may be with the whites. Notwithstanding customs so strange to us, these Indians live as peaceably and contentedly as civilized people do. It is a fine sight to see one of those big men among the Blackfeet, who has two or three lodges, five or six wives, twenty or thirty children, and fifty to a hundred head of horses; for his trade amounts to upward of \$2000 a year, and I assure you such a man has a great deal of dignity about him.

The medicine lodge, which takes place once a year, in June, is conducted with the view to show how strong are Indians’ hearts, and to beg the Great Spirit to have mercy upon the tribe. This lodge is erected of a size suitable to hold whatever number of spectators may be in attendance. A very large pole is planted in the ground, and many smaller ones are set up against it, in the manner of an ordinary lodge. One half of the space inside is reserved for those who are to undergo the torture, of which there are three kinds. In this half of the lodge pews are made with green bushes about four feet high; those for the women being separated from the others. When all is ready for the services to commence, the supposed strong-hearted persons come in and take their stands. They are painted in all colors, looking like so many devils — men and women alike; the former are naked down to their waists, but the latter are dressed. Holding in their mouths a small whistle made of the bone of a crow or pelican, and looking straight up to the center post of the lodge, they keep whistling and jumping up and down for three days and three nights, without drinking or eating; during which time eight or ten musicians, all blackened over, beat drums the whole night and day.

The second torture is done by piercing a hole through the skin of each breast, just above the nipple, and tying to each a lariat, which is then fastened by the other end to the top of the lodge-pole. Bearing all the weight they can upon the lariat, they trot back and forth outside the lodge, the space allowed each being according to the number of performers. This kind of torture goes on with a piteous groaning and lamentation, and these devotees are also painted in all sorts of colors, like the dancers. The third medicine or torture is performed by piercing a hole in each shoulder, to which lariats are fastened as before, but the other ends are tied to three or four dry buffalo skulls, which the communicant drags over the prairie, sometimes even up high ridges, weeping and wailing. Such performances are a great sight to behold.

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

An Indian chief is looked upon by most civilized people as a powerful and almost absolute ruler of his tribe; but he is not. Every tribe, no matter how small, is divided into bands, each of which has its chief and roams in a different part of the territory belonging to the tribe. As everything must have a head, a chief is appointed to represent the band in councils with the whites, and be consulted in the way of governing. He is a man who has power to do a great deal of harm, but as a general thing does little good. The soldier is the one who governs the band, and rules the chief, too, with a kind of government which the civilians do not like; for when the soldier is established, they are under martial law. His lodge, pitched in the center of the camp, is organized with the view to keep order and regulate the camp; mostly to prevent anyone from going out alone on a hunt, so as not to raise the buffalo, but also for mutual protection against enemies. When anyone is caught outside his dogs are shot, his lodge is cut to pieces, and if he rebels he gets a pounding — the chief not excepted. Those soldiers have their head soldier, to whom each one applies to have his rights respected or enforced. If anything be stolen, the head soldier is apprised of the theft; he takes some of the soldiers to examine the lodges, and if the property is found it is given back to the owner, but nothing is done with the thief. This lodge is supported by the people, who have to find wood, water, and meat. Buffalo tongues go mostly to the soldiers' lodge, and, if there be more than can be eaten, they are sent to be traded for sugar, coffee, and flour to make a big feast. But the regular soldiers' feast is dog, and when they feel like having such, no poor old squaw's fine, fat, young dogs are spared. Take it on the whole, Indians are very glad when the lodge breaks up, and each one can go where he pleases. After that the chief will be left with eight or ten lodges, as they then go by those family connections which make leading men, some of whom actually have more influence than the chief himself — I mean with the people of the band.

All things considered, an educated man will see that their whole system of government amounts to nothing; that they are incapable of enforcing any laws like those of a civilized nation, and consequently not able to comply with treaties made with the United States. But such laws as they have answer their own purposes. As a nation they are kind and good to one another, and live in about as much peace and comfort as civilized people — that is, in their own way. One hears less complaint about hard times among them than among ourselves, except when they make a speech to a white man; then they are all very poor and pitiful, on the begging order. As a general thing the men are not quarrelsome. A fight will take place almost without a word. The women quarrel a good deal, and frequently fight with knives or clubs.

There are men and women doctors among them. They use some kinds of herbs and roots, but their greatest medical reliance is the magic of superstition. When the doctor is sent for, he comes with his drum, and a rattle, made of a gourd or dry hide filled with gravel. He sits beside the patient, and commences to beat the drum and shake the rattle at a great rate, singing a kind of song, or rather mumbling some awful noise. He always finds out what ails the patient. Sometimes it is a spell which has been thrown on him by some medicine man in camp, who had a spite against him. Such spells vary. Sometimes they are cords which have been passed through the limbs; at other times wolf hairs have been put between the skin and flesh, or bird claws of different kinds. But all of these he extracts by his magic, and shows the patient the hairs, claws, cords, or whatever may have been the spell. But some maladies are due to the devil, who has got into the sick person. In a case of that kind the doctor stations three or four boys with loaded guns outside the lodge at night; then he beats his drum at an awful rate, and at a certain sound, which is understood by

the boys, they fire off their guns at the ground, as though they were shooting at rats running out of the lodge. These are supposed to be the devils whom the doctor has driven out of his patient. Should he continue sick, the treatment is repeated until he is cured or given up. Indians spare nothing to have their families or themselves doctored; they will give their guns, lodges, horses — everything they possess — to a doctor who will cure them. I have seen some completely stripped of all they had to pay the doctor. When a child dies the parents give everything away to mourners; and if the family is rich there will be a great many mourners, particularly among the women, who come to shed a few tears for the sake of plunder. It is thought, “She cries; she loved my child; she must have something.” The mourning lasts for a year, unless some relation kills one of their enemies; then the family blacken their faces, which does away with the period of mourning. After this, someone will give a gun, another a horse, some other a lodge, and thus the Indian will get a start again.

Medicine men who are thought able to lay spells are much in danger, and sometimes lose their lives at the hands of the relations of one who dies by such magic. I myself saw a young man kill a fine-looking Indian for having, as he said, laid a spell on his father, who died of consumption. The young man shot him at night, about twenty steps from the fort. We went to see him in the morning; he was lying dead, the ball having penetrated his heart. The young man was there, laughing and whirling his tomahawk over him, saying, “That doctor will lay no more spells.”

Indians have no words for swearing or cursing, like whites, but they have a way to express wrath a great deal more scornfully than a white man can in words. This is done by gathering the four fingers against the thumb and letting them spring open, at the same time throwing out the arm, straight in one’s face, with the body and face half turned away, saying, “Warchtshnee,” which means, as nearly as I can interpret it, “You villain!”

The Indian idea of futurity and immortality of the soul is something about which I never could find out much. All Indians believe in a Great Spirit, the ruler of all they see and know, but of any future existence, in which the wicked are punished and the good rewarded, they know nothing. They believe in ghosts, who live again in an invisible form, thinking that their dead relations come to see them; and that the only way ghosts make themselves known is by whistling, mostly at night, but sometimes by day, in very lonesome places. In consequence of this belief, they make feasts for the ghosts, consisting principally of dried berries, which they would not for anything omit to gather. They boil these berries with meat, or pound a quantity of buffalo meat with marrow fat, with either of which they go to the place where the dead is deposited, say a few words to the departed, hold the eatables up for him or her to partake of, and then divide the feast among the living who are in attendance. Anyone is allowed to attend this ceremony. But whether the ghosts are in a state of happiness or not, they do not pretend to say, nor do they know what distinction may be made between the good and the wicked. To themselves it makes no difference; they feed both good and bad alike.

On being very hard pressed for a statement expressing their ideas regarding resurrection, most Indians would finally say that they thought once dead was the last of a person. In conversation with them I found much pleasure in hearing their stories, which they relate with great eloquence, using a great many figurative expressions. I had some books printed in their language, which I brought with me from St. Paul. These were religious books, gotten up by missionaries of Minnesota, containing Noah’s Ark, Jonah swallowed by the whale, and other miracles; at which they would

laugh heartily when I read to them, and then say, "Do the whites believe all this rubbish, or are they stories such as we make up to amuse ourselves on long winter nights?" They were very fond of having me read them such stories; that big boat tickled them, and how could Noah get all those animals into it was the question. Then they would say, "The white man can beat us in making up stories." Telling stories is a great pastime with Indians. There are many among them who are good at it; they are always glad to see such come into a company, saying, "Here is such a one; now we'll have some stories told."

The Indian is born, bred, and taught to be a warrior and a hunter; he aspires to nothing else. There is no regular habit of husbandry among them; they always live from hand to mouth. During the 40 years I was in their country I saw no disposition on their part to ameliorate their condition. They are still in the same state. They have no intellectual invention. In regard to their "medicine," one performance which has attracted my attention I do not attribute to magic but to skill. This is the way in which they bring a band of buffalo into their pens. Such a pen is constructed of poles, and bushes, and any other combustibles they can obtain to make a kind of fence, which is by no means sufficient to keep in the buffalo. This inclosure is made of different sizes, but is generally capable of containing 200 or 300 buffaloes. It is made round, and a pole is stuck up in the middle, with scarlet cloth, kettles, pans, and a great many other articles tied to the top. Those are sacrifices to the Great Spirit, made by the individual who is to go after the buffalo. When this pen is finished two wings are made extending a great distance from the entrance, like an immense quail net. These wings are made either of snow or of buffalo chips, gathered at intervals into small heaps sufficiently large to conceal a person. As the pen must be made where there is little wood, it frequently happens that the buffalo are discovered two or three days' march from the spot. When all is ready, the medicine man starts after the buffalo. When the people of the camp see him coming, they all surround the pen, except those who are stationed at intervals along the wings, each hidden behind a pile of snow or chips. The buffalo follow him, and when the last one has passed, the herd being completely within the wings, the people all rise from their places of concealment. The buffalo then rush into the pen. Then the people who surround the pen also rise up, and are joined by those who were behind the wings. The buffalo, being frightened, keep away from the sides of the pen, running around the pole in the middle; though it sometimes happens that, the pen being too small or too weak, they break through in spite of all the Indians can do. With their bows and arrows the Indians begin the work of destruction, and go on till all the buffalo are killed. It is a good sight to see that one Indian bring in a large band of buffalo, which has followed him for two or three days. He is considered a great medicine man.

#### Chapter 21

#### INDIAN AGENTS AND AGENCIES

Before offering some suggestions I wish to make in regard to future rules and regulations for Indians and their country, I will introduce all the Indian agents I have personally known on the Missouri.

In 1832 Major Sanford took from Union to Washington three chiefs — one Assiniboine, one Cree, and one Chippewa. The Assiniboine was the son of the chief of the Rock or Stone band, named Wan-hee-manza (the Iron Arrow-point). He was a fine-looking man about 30 years of age, named Lya janjan (the Shining Man). All the manners and other good things which he brought from Washington, to show his people what an advance he had made in civilization, was a white

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

towel, which he used to wipe his face and hands, and a house-bell, which he tied to the door of his lodge. His people said that all he had got from the whites was a gift of the gab. After his return he passed himself off for a great medicine man, and said that no ball could penetrate his skin. He had a strong connection, and was much feared. But the next summer a certain individual thought he would try the strength of his medicine, and shot a bullet through his head. The ball was harder than his head, and went through in spite of the strength of his medicine. He was brought to Fort Union, and buried after their own way in a tree. In the summer a requisition for Indian skulls was made by some physicians from St. Louis. His head was cut off and sent down in a sack with many others. Which of them came out first is hard to tell; but I don't think his did. This is the whole amount of good that chief did. As he went down during President Jackson's administration, his name, with the whites, was Jackson. The Cree chief never amounted to anything, nor did the Chippewa.

Major Sanford was very much of a gentleman, but cared more for the interests of the American Fur Company than for Indian affairs. He afterward married Mr. Pierre Chouteau's daughter, and one can judge in whose favor his reports would be likely to be made.

Major Ferguson, the greenest of all agents I ever saw, was paid \$1500 for a pleasure trip from St. Louis to Fort Union. He came up in the steamer, saw no Indians, and left what few annuities he had to be divided among them by the Company. What report could that agent make in regard to his Indians? None, of course. That was the last of him.

Major More was a great drunkard, who came up to Union in the steamer, remained 24 hours, and returned to Fort Pierre. It was reported by a person whom I believe, that the Indians there kicked his stern, taking him for a dog, when he was crawling out of the room where they had been sleeping, and laughingly said they were very sorry that they had kicked their father.

Major Matlock was a drunken gambler. The last I saw of him was at Trading Point, opposite Bellevue, where he was drinking and gambling, and kept several Mormon women. I was informed that he died, shortly afterward, in poverty.

Major Dripps was, I believe, a good, honest old beaver trapper. He was sent to examine the trading posts, to find out about the liquor trade. He sent his interpreter ahead to let us know he was coming. On his arrival he looked in all places except in the cellar, where there was upward of 30 barrels of alcohol. The major was afterward equipped by the American Fur Company, and went on the Platte, where he died.

Major Hatting was a young man about 27 or 28 years old, a drunkard and a gambler, almost gone up by the bad disorder. He was of no earthly account. I could say much more, but decency forbids.

Major Norwood, instead of being with his Indians, kept himself about Sergeant's Bluffs, attending balls and parties given by whites and half-breeds, and was finally killed by William Thompson, who knocked his brains out with the butt of a rifle. This was the last of the major.

Major Redfield went 50 miles up the Yellowstone, on his way to the Crows, was taken sick, and returned to the States in the fall; his goods were left to be divided by the Company. I knew nothing regarding his personal character.

Major Vaughan was a jovial old fellow, who had a very fine paunch for brandy, and, when he could not get brandy, would take almost anything which would make drunk come. He was one who remained most of his time with his Indians, but what accounts for that is the fact that, he had

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

a pretty young squaw for a wife; and as he received many favors from the Company, his reports must have been in their favor.

I have but little to say about Major Schoonover, who remained one winter at Union, powerless, like all others, being dependent on the American Fur Company.

Major Latta was a pretty fair kind of a man, but the less said of him the better. He came up to Union, put the annuities out on the bar, and next day was off.

Major Mahlon Wilkinson came as near doing the right thing as was in his power, but he was too lazy to do much of anything.

Major Clifford was a captain of the regular army, which rendered him unfit for such an office, not caring a fig about Indians. I could say a great deal more if I felt so disposed. From what I have been able to learn I fully believe that all the Indian agents were of the same material; and had those men been ever so well qualified to fill their office, they could not have done it under the existing rules and regulations. Once in the Indian country they came entirely under the influence of the American Fur Company, and could not help themselves.

Those gentlemen were appointed by the Indian Department not only as agents, but as fathers to the Indians; to remain with their children, and to make true reports to their Great Father at Washington of the behavior of the Indians and of all transactions in their country that come to the agent's notice, thus keeping the department well posted. The question is, Was that done? No; evidence shows the contrary. In consequence of this bad state of affairs, the department remained ignorant of the true condition of the country, and could never hold the proper kind of council with the Indians; and, finally, war broke out. Of all the councils I attended, I never saw one properly held, according to my knowledge of Indian character and customs.

I will mention one, which was the most absurd I ever heard of — though gotten up by men who should have known better. This is the Laramie treaty of 1851.

David D. Mitchell, who had been an Indian trader, was the superintendent of Indian Affairs at St. Louis. I suppose speculation, as in the case of all other treaties, was the cause of this one. It was gotten up with the intention of making a general peace between all the tribes on the Missouri and the Platte. For this purpose two or three chiefs of each tribe were invited to the treaty. Anyone who has the least knowledge of Indian character ought to know that they are not capable of keeping such a peace. Of course any Indian, for the sake of presents, will say "How" to any proposition made to him; but, after that, what assurance have you to rely upon that this Indian will comply with the stipulations of the treaty? None at all. You may say that, if he does not comply, he shall forfeit a part of his annuities. But if you make him forfeit his annuities it will be worse; for, although this will have been explained to him, he will think that he had a right to do as he did. He will say that his young men had no ears; that he did all in his power, but could not control them; and still think himself entitled to the annuities. He will surely find some excuse.

The result of the Laramie treaty was that the Indians fought before they got home; war was carried on among them the same as before, and afterward war with the whites. At the time of this treaty, did the Crows think the Sioux would be permitted by the Government, after all the promises made them, to drive away their traders from the Yellowstone, and that they themselves would then be driven out of their own country? Did Crazy Bear, chief of the Assiniboines, expect his people to be removed from their country into that of their enemies? "No," they said, "the whites have lied to us. They have taken our country. They say they bring soldiers to protect us; but, when

Forty years a fur trader on the upper Missouri: the personal narrative of Charles Larpenteur, 1833-1872

---

they come, they bring the Sioux with them. Loads of provisions come out of their garrisons for the Sioux, who are on our own lands, and we can get nothing. Do they give rations to the Sioux because they are afraid of them, or is it because the Sioux drive away their cattle and kill their soldiers? We cannot understand those whites. We had a good country, which we always thought they would save for us; they have given it to our enemies. Fort Union, the house built for our old fathers, — in the heart of our country, — the soldiers have pulled it down to build their Fort Buford, where we are scarcely permitted to enter.”

It is plainly to be seen that treaties made with Indians have never amounted to anything, and never will. The Government must manage them; but, to do so, must be well acquainted with their wants. They are called children, and must be treated as such. The father should know his children; but how can he know them if he is not with them? And if he be a worthless father, how can he bring up his children right? My suggestions will show the proper way to manage Indians. I think I have plainly shown errors in the Indian Department. Treaties, councils, and expeditions have not had the desired effect.

One not acquainted with Indians might say that the army has been the means of bringing them under some subjection. I know that the chief motive for yielding was not the sword, the bullet, or the bayonet, but hunger and the prospect of starvation. Had the Indians continued to possess the buffalo which were theirs 25 years ago, a different display of armed forces would have been made. Hunger has somewhat tamed them, much against their will. When I first came into the country few Indians liked coffee, and they looked at a white man's eating pork as we did an Indian's eating dog.

It must be borne in mind that the Indian is wild, and that any attempt to tame him is going entirely contrary to his nature. The question remains with me, can it be done? From what I have seen, and knowing him as I do, I would say it cannot be done; yet there is nothing like trying. The following suggestions are those I propose for the trial. In the first place, much of the Indian country is not capable of large settlements, on account of the insusceptibility of the soil for agriculture, and the scarcity of timber. I would divide the tribes into agencies according to their population, and establish regularly surveyed boundaries to each of those agencies. In all tribes in which there were more than one agent, I would have a superintendent, who should be called the governor of the tribe. All agents should be obliged to remain nine months in the year at their agencies. They should keep a regular diary of all transactions, and a regular list of chiefs and leading men of the tribe, stating their characters and giving all such other information as would tend to bring them to the acquaintance of his successor. In tribes where there was but one agency, this agent should be the governor of the entire tribe, and have the power to issue a license for trading with Indians or whites to any American citizen, without bonds. This agency should be the point where all business should be transacted. No traders or storekeepers should be allowed to establish themselves more than 500 yards from the agency, and under no consideration should they be permitted to go among the Indians to trade. Every trader and storekeeper should be provided with the rules and regulations of the agency, and, should he violate any of them, his store should be closed, and himself ordered out of the country, never to be allowed to trade again in any of the Indian countries. No white man should be allowed to live with a squaw for a wife, unless lawfully married; and such marriage should entitle him to the same privileges as an Indian. The agent should be allowed 25 laboring men, two carpenters, one wheelwright, one blacksmith, one engineer, and one sawyer.

---

All laborers should be enlisted for the term of two years, under military rules and regulations, but allowed to dress as they pleased. A laundress should be provided by the department for the benefit of the men, her wages to be \$30 per month. The amount of washing allowed at this rate to each man per week should be two shirts, one pair of drawers, two pair of socks, and two handkerchiefs; all fine linen shirts to be paid for extra. Laborers should receive \$30 per month, paid every two months. No house should be frame, but all built of sawed or hewn logs, roofed with earth, having pine floors, doors, and casings for windows and doors.

The agent or governor should have full control over the territory said to belong to his Indians. To give him power to enforce rules and regulations and to police his territory well, I would recommend a military post of one or more companies, according to the Indian population, to be established not over half a mile from the agency. The troops should be cavalry, as infantry avails naught in the Indian country. The commander of such a post should have nothing to do with Indians, being only stationed there to assist and protect the governor, and should never be permitted to act without the latter's consent.

This governor should be provided with all kinds of agricultural implements, to be distributed to his Indians. He should furnish them with timber to build and allow them each a certain sum in payment for every panel of fence any Indian might put up, besides furnishing him with material to make it; and so much an acre for breaking his land, let it be with the plow or hoe. All fences should be horse-high, bull-strong, and hog-tight. Hogs, cattle, and chickens should be distributed, and there should be an agricultural fair annually, as in the States. Every three months inspect the Indian houses, and give premiums to the first, second, and third best housekeeper. Hold monthly meetings with chiefs and leading men, and as many others as the house can hold. There are many other regulations I could suggest, but the above are the main ones. Agencies being established in this manner, the agent cannot fail to be well posted on the state of affairs in his territory, and can thus govern with due care.

In regard to schools and missions I think that the Indians are still too wild for any such establishments or institutions. They must first be turned to agriculture, be taught habits of industry and economy, and thus become gradually accustomed to the ways of the whites. It would be better, in my opinion, to postpone the institutions for a few years. Teach them the Ten Commandments, and try to make them obey them — which I leave for the governor to do if he can. There are two strong obstacles to success — the wild nature of the Indians, and the sterility of their soil.

To secure an agent or a governor fit for such an office would require a salary of at least \$3000 a year, instead of \$1500.

After all, whether agencies be established in this manner or not, I see no use of the military posts now on the Missouri. I do not propose to abolish them with the view of saving expense to the Government, but rather to apply the military to the work of ameliorating the condition of the Indian. Supposing agencies established as I have suggested, what would be the use of Randall, Sully, Rice, Stevenson, and Buford? To my knowledge they have never been of any use. They have reservations 30 miles square, upon which no one is allowed to remain but themselves, their sutler, and contractor; and that land is generally taken from the best part of the Indian country. Thus stationed, far apart, with infantry only, what good do they do? Whom have they to protect but themselves? From Berthold to Peck, a distance of at least 500 miles, there are no agencies, nor traders. Buford is situated about the middle of this distance, with three or four companies of

infantry. What are they there for but to do nothing on the best of the land at the greatest expense? Stevenson is perfectly useless. Rice is situated where no Indians go, 125 miles from Stevenson, and about the same distance from Grand River agency; of what use is it, with its four companies? None. Sully is in sight of the Cheyenne agency, with one or two companies, and all the organized agencies below. I pronounce it of no earthly use. Randall ditto. The country will not support such large garrisons. The scarcity of grass and fuel will not admit of such forts, which destroy the best locations on the river and displease the Indians to no purpose. Buford has one of the best locations, which would answer for a very extensive Indian reservation; there is not another such point on the river between Randall and Benton. It is now spoiling that fine country for the mere sake of living there.

On these large military reservations no licensed Indian traders are allowed; but the sutler is allowed to trade with Indians, and they are permitted to come on the reservation. If a licensed trader wishes to establish a post he cannot do so nearer than 15 miles from the garrison, much too far to receive any protection, and this gives the sutler the monopoly of the Indian trade. As the soldier trade is well secured, it is plainly to be seen that the military rule the Indian country. But my suggestions would put the control of the Indian and his country where it properly belongs. If the Indians should commit depredations requiring punishment, would those garrisons, organized as they are now, be able to pursue and chastise them? Surely not; and, if they had absolutely to be punished, the government would have to send a different force after them, and let the garrisons eat their pork and beans uselessly, as usual.

A few days after writing my remonstrance in regard to the garrisons on the Missouri, I saw in the Sioux City Journal a report made by a gentleman named A. D. Rodefer, in reference to the pastimes of the officers of Fort Rice. During his stay at the post he participated in a deer-hunt with the officers. There are sixteen hounds at the fort, and a number of experienced hunters; and what with the hunters and the hounds, the officers' tables are constantly supplied with game. The amusements at Rice are numerous and varied. Two nights in the week the post is entertained by amateur theatrical and minstrel troupes. One night is devoted to dancing, and the rest to epicurean parties, etc.

Such reports, I think, show the uselessness of these garrisons. Why do the soldiers not amuse themselves by running after this famous Sitting Bull, who, the same reporter says, is bound to take Fort Peck this winter? No; they would freeze. It is best for them to dance all winter, and let the United States send somebody else after Sitting Bull when the grass grows in the spring.

Ta-tang-ah-eeoting's or Sitting Bull's ideas in regard to the whites were expressed in my presence at Fort Union in 1867. He remarked: "I have killed, robbed, and injured too many white men to believe in a good peace. They are medicine, and I would eventually die a lingering death. I had rather die on the field of battle " — or, as he put it "have my

1812

Friday the 8th of May, I started from St. Louis to Bellefontaine 1 to meet the Boats bound up the Missouri River, arriving there at 1. o'clock P.M., took in Meal and Corn, arranged the Loading, and started at 3. o'clock, went about 4 Miles with a head wind.

Saturday the 9th head wind and strong Currents made very little way, at noon met Mr. Immel 2 with Boat coming from his winter quarters of the Sioux, this Morning Mr. Manuel Lisa came on Board at the Charbonnier 3 made about 5 miles distance.

Sunday the 10th, came too opposite 4 St. Charles 5 at noon Mr. Manuel Lisa crossed for some Men, rested all Day.

Monday the 11th Mr. Manuel Lisa & Choteau 6 came on Board at 9. o'clock A.M. took in some traps, and made the best of our way at 12. o'clock, having a head wind made very little distance.

Tuesday the 12th, head wind and strong Current, made not much Distance.

Wednesday the 13th, the same as yesterday.

Thursday the 14th, the same . . . .

Friday the 15th in the Morning about 8 o'clock - Mr. Majet 7, Patroon 8 of the large Boat fell over Board on account of a Log slamming against the Rudder, he saved himself by taking hold of the Rudder, and got on Board, both Rudder Irons broke and Lost, were detained to make a steering Oar, head wind all Day, sent some Irons on shore by Mr. Richardson 9, and camped at Burgois Creek 10.

Saturday the 16th, detained on Account of the Iron, which however came about 11 o'clock A.M., hard Rain and bad weather, fixed the Rudder and went about 2 Miles distance, Killed 1 Deer.

Sunday the 17th blowing very hard ahead and strong Current we had to stop for several hours, made sail, about 2 P.M., just at starting a Bear crossed the River towards us, Killed him close in shore, and found him very fat.

Monday 18th, still head wind the Rudder Irons of the little Boat broke, and had to lay by all Day. this Day Killed four Deer 2 Turkeys.

Tuesday 19th bad weather and head wind made about one mile all Day distance.

Wednesday 20, head wind and strong Current, made not much Distance.

Thursday, the 21. arrived at 11 o'clock A.M. at Cote sans Dessin 11, rested all Day. traded some Beaver, and took LaChapel 12 on Board.

Friday the 22d. started at 6 in the Morning with a favorable breeze, found the River more gentle, had fine weather. Killed two Deer and 1 Bear, made good head way.

Saturday, the 23d, fine weather & fair wind made about 25 miles distance. Killed 1 Deer.

Sunday, the 24th clear weather and fair wind made about 20 miles, and camped about 1 mile above the Widow Cole 13, Killed 1 Deer and 1 Bear.

Monday the 25th commenced with a thunder storm and hard Rain, cleared up about 11 A.M. with a fine fair wind, made about 27 Miles and Killed 1 Bear.

Tuesday the 26, hard Rain and squalls all Day made not much distance, killed 1 Bear 2 Turkeys.

Wednesday, the 27. bad weather and head wind again, killed two Deer, and not much distance.

---

Thursday, the 28, head wind and strong Current accompanied by heavy Squalls, LaChapel killed a fine female Bear, and 3 of her Cubs, and 1 Turkey, made only 5 miles this Day and camped at black snake Creek 14.

Friday the 29th departed at Day light, opposite the little Osage Island 15 we were obliged to stop on account of head wind and strong Current, arranged a new top Mast, went fishing with the Seine and caught 13 large fish 1 Turtle, the wind having somewhat abated we made way at 2 P.M. but still wind a heads, at the little Osage Prairie 16 we stopped for the little Boat which got around, met a shoal of Cat fish close in shore the Men who were Cordelling killed one with a stick which weighed after cleaning 40 lbs, went on a little way and found a small Run full of fish, the other Boat not having come up as yet we took our Seine and caught 161 Bass and other fish, which we salted, camped and killed 2 Deer.

Saturday, the 30th fine weather, but very hard water, swung 3 times at a point of a sandbar, the little Boat broke her Rudder Irons again, repaired at Dinner, Killed 2 Deer 1 Beaver 1 Pelican, made not much Distance.

Sunday the 31st fortune still ahead, strong currents and head winds were our Daily Companions, made no way. Killed 2 Deer and 1 Beaver.

Monday the 1st of June, hard wind a head with fine weather met 4 Batteaux going to St. Louis, a little above the Prairie du Feu 17 had to stop and make another top mast of Oak, the last one made of Hichberry was crooked and good for nothing, Killed 3 Deer 1 Bear.

Tuesday, the 2nd, the wind and weather the same as yesterday. Killed this Day 2 Deer and 1 fox, camped at fire Prairie Creek 18.

Wednesday the 3d fine weather and head wind and Current as usual at 10 A.M. arrived below fort Osage 19, saluted with 17 Guns which was politely returned by the Commander Capt Climson 20, on arrival were invited to Capt Climson, who treated us very handsomly, discharged our freight for this place and arranged our Cargoes, had a present made of Ice, which regaled us exceedingly.

Thursday the 4th started after breakfast, about 9 A.M. met several Perogues coming from their Winter quarters, Mess fr Robideau 21, La Jeuness 22 & others, Louis Bijou 23 embarked with us, as also two hunters embarked at fort Osage Greenwood 24 & Laurison 25 Immel went back to the fort for his dog and on his Return in formed of the party going to Santa fe 26 he met this Day at the fort. strong Current, made 9 Miles Distance.

Friday the 5th wind and Current as usual. fine weather made about 12 miles distance Killed 1 Deer.

Saturday 6th the same wind & Current, Killed 3 Bear the 3 Deer 1 Turkey camped opposite Can-sas River 27 distance 15 Miles.

Sunday the 7th a fine morning, in the afternoon cloudy and distant Thunder, Killed 2 Deer, made 16 Miles distance, camped 4 Miles above little Platte River 28.

Monday 8th fine weather, at 8 A.M. a fair Breeze sprung up though feeble, we made 18 Miles distance, Killed 3 Deer 3 Bear, caught 17 fish, camped 2 Miles below the old Canzas Village 29.

Tuesday 9th headwind again, strong Current, made only 9 Miles distance this Day, Killed 6 Deer.

Wednesday 10th, fine weather, had a small Breeze in our favor, Killed nothing today, distance made, 19 Miles.

Thursday the 11th fine weather head wind but still, all hunters out, passed the upper old Canzas Village, Killed 7 Deer, distance 15 Miles.

The Journal of a Fur-Trading Expedition on the Upper Missouri 1812-1813

By John C. Luttig

---

Friday the 12th, fine weather, made good way cordelling the wind all Day against us, distance 21 Miles camped on a large Sandbar where we found a quantity of turtle Eggs, this Day lost one of our Swivels when swinging round and run against the other Boat, Killed 3 Deer, 2 Turkeys.

Saturday the 13 the fine weather and head wind, this Day had bad luck, crossing for some of our Hunters we came in hard water, and cordelling on a Prairie encountered many Rafts, after having passed we dined 2 Miles above the Prairie 30. Mr. Manuel L. put our 2 Hogs in the River to wash but they swam off, we were obliged to turn about and followed them several Miles, after two Attempts we caught them, turning a rocky point we had hard work, the little Boat which was a head swung round and went off like lightning, the Cordells broke, and we were obliged to put the hands of both Boats to one to mount distance 12 Miles killed 5 Deer 1 Racoon,.

Sunday the 14th fine weather, but head wind, passed the Nabowa River 31 at noon, camped 8 Miles above made 16 Miles distance and had this Day 4 Deer Killed gathered about 100 turtle Eggs.

Monday 15th about one o'clock this Morning it began to blow furiously, were obliged to put out our fires, the wind blowing form all quarters, a clear Sky, finished our cooking in the Morning at 6 in the Morning went « miles but were stopt by hard head wind and Current crossed the River to find some Hickory for making an Axe handles and Ramrods, but were disappointed, crossed again and sopped till 5 P.M. started about 1 Mile took the Cordell the Boat swung and went down the River like the Wind in full speed, leaving all hands on shore, the few which were on Board landed the Boat opposite to our last nights Lodgings, our hands came on board made a new start, but night overtook us, got on a sandbar and were very near lost running against a Sawyer 32 had to cross again to the North Side, the other Boat came to close swept by the Current we unshipped our Rudder, run against a tree and broke her mast, this ended this dolefull Day camped at 11 o'clock at night distance 1 « Mile, left our hunters on the opposite side Killed 1 Deer, wind N.W. fresh Gales.

Tuesday the 16, hard wind from N.W., went about 1 Mile in the Morning when we had to stop, all hands went out to gather wood for Axe helms, Ramrods and a new Mast, and Game, the first was found but no meat, our hunters on the opposite Side had also been unsuccessful, and crossed the River on a Raft, facing wind and Current about 6 Miles swimming. Killed 1 Deer.

Wednesday 17th wind still a head, but abated, made this Day 16 Miles, Killed 3 Deer, when camped a fair breeze sprung up.

Thursday the 18th at 3 o'clock in the Morning a heavy Thunder storm, at starting we had a fair wind which however lasted not long, had to try oars. Poles & cordells all Day, pass the Nimohar River 33 at 11 A.M. dined at Wolf River 34, and camped on a Sand Bar, made 16 miles distance Killed 3 Deer.

Friday, the 19th During Night blew very hard until 6 in the morning, we stopped for some time having head wind and strong Current, the River high, made this Day about 15 Miles distance by hard work. Killed nothing, although 7 hunters out of Boats.

Saturday, 20th, hard Gales all night, in the Morning cloudy with some flaws of wind in our favor, about 8 A.M. the wind increased, and we sailed at intervals very fast, until 2 P.M. when Thunder storm attended with a hard rain arose. this Day at 10 A.M. passed Ichinipokins River 35 at the North Side, at 7 P.M. little Mahonir River 36 on the South Side, -- made about 20 Miles distance, Killed 2 Deer, Game scarce.

The Journal of a Fur-Trading Expedition on the Upper Missouri 1812-1813

By John C. Luttig

---

Sunday, the 21st fine weather with head wind and Currents, all hunters out, on the Island Beaux Soleil 37. Killed 2 Deer 3 Bear, 1 Turkey, 1 Rabbitt the hunters on the Prairies killed nothing, distance about 15 Miles, camped 1 Mile above the Island.

Monday, the 22d, cloudy had now and then some Sailing, the River still rising and strong Currents, at 4 P.M. a thunder storm arose which raged furiously, the hurricane swayed the trees every where luckily we got under some Willows and lay safe, were obliged to Camp, distance 10 Miles, Killed 1 Deer, 1 Turkey.

Tuesday the 23d started at Day light as usual, passed Le Cote grand Brule 38, opposite the head of, we had to stop to make a new top Mast for the other Boat. fine weather, Current very hard, River still rising, distance 14 Miles, Killed 3 Deer.

Wednesday, the 24th, St. John 39, started at 3 in the Morning with fair wind, but had not come 1/4 Mile when the Wind changed ahead, worked hard against the Current, very warm and clear, made only 9 Miles in 14 hours distance Killed 1 Deer 2 Turkey, 2 Racoons, found plenty fresh tracks of Elk.

Thursday, the 25th This Morning a fine breeze sprung up and we had sailing all Day, but by the Mismanagement of the Patron of the little Boat were detained several times we camped before Sunset to let the little Boat come up with us, about dark we heard a Gun, but she did not come to our Camp, the wind blew fresh all night made about 15 Miles distance.

Friday the 26th at 2 o'clock 25 Minutes in the Morning we turned about to look for the little Boat and found her safe 1 Mile below our Camp, we set sail, and went pretty well till Sunrise, when the Wind failed, very strong Current, and hard work to gain way, at 7 A.M. Baptiste Latouipe 40 of St. Louis, fell over Board and never seen again, the two Boats being close together, he could not rise, or was entangled by the Roots of a large tree, which he was going to strike with his Pole. -- made River Platte 41 at 11 A.M., dined and weather very hot, remained three hours, at 3 P.M. passed River Papillion 42 made 12 Miles distance, Killed 1 Deer.

Saturday, the 27th departed as usual and the Water not so strong as below, the River Platte, this Morning passed Mosquito River 43, distance 20 Miles, Killed 4 Deer 1 Goose.

Sunday the 28th, made pretty good way in the Morning but about 10 A.M. the Rudder stay broke of the little Boat we were obliged to cross the River to find a place to unload her, and make a steering Oar, which took up all Day. distance 6 Miles, Killed 1 Deer.

Monday the 29th This Day had at Intervals some sailing the River crooked as a zick zack, passed River Boje 44 at 9 A.M. point Jacques 45 at 2 P.M. and council Bluff 46 at 4 P.M. distance 20 Miles, Killed 1 Deer.

Tuesday, the 30th fine weather and sailing we pushed on very well, and would have made considerable way if it had not been for the other Boat, were obliged to stop to make another steering Oar for her, during which time our hunters killed 3 Deer, distance 27 Miles.

Wednesday, the 1 of July. fine weather and fine sailing at 3 P.M. passed Soldier River 47, Missouri very crooked, no hunters out, distance 34 Miles, saw some Elk.

Thursday the 2d fine weather head wind but good water made good way, cordelling all Day, camped at the Mouth of the little Sioux River 48, distance 23 Miles, Killed 4 Deer 1 Duck.

Friday. the 3d of July. fine weather and light favorable Winds in the forenoon., at 1 P.M. passed Coup Loysele 49, distance 18 Miles.

Saturday the 4th of July., we had ourselves prepared to salute the Day, which gave Birth to the

The Journal of a Fur-Trading Expedition on the Upper Missouri 1812-1813

By John C. Luttig

---

Independence of the United States, but a Salute from Heaven prevented us, a thunder storm arose at 2 in the Morning and the Bank of the River where we camped fell in upon us momentarily. Mr Manuel was nearly drowned in his Bed, and we had run off., rowing and poling all Day, about Sunset a favorable wind sprung up and carried us several Miles, were obliged to leave a large Buck and an Elk which our Hunters had Killed behind, camped at Black Birds Hill 50, distance 15 Miles.

Sunday the 5th fine weather at 8 A.M. came to a Channel which we entered, in hopes to go through, to cut off 6 -- Leagues of the River, but were disappointed, having ascended within 150 yards toward the head of it, the Water became so rapid as to endanger our Boat to sink, we returned with Difficulty, at a little Distance found another, which was also tried, but to our Sorrow found not Water enough at the head and returned took the old Route, and were stopped at 5 P.M. by a Thunderstorm, distance 15 Miles.

Monday the 6th rained very hard last night, cleared up and we made best of our way at 4 o'clock in the Morning had a few Squalls and rain, at 8 A.M. a fair wind arose and had fine sailing for several hours, the River very crooked had to row at times, at 2;30 P.M. passed Mohaw River 52, and opposite the Village at 4 P.M. 2 Men went to see if any Indians were there, they returned not being able to get to the Village on account of swamp and musquitos, camped on a Sand bar, distance 30 Miles.

Tuesday, 7th started at Day break, cloudy, head wind and rain, in the afternoon passed Floyds River 53, Sun River 54 and at dark Big Sioux River 55, distance 18 Miles.

Wednesday the 8, Head wind and Rain, hard work all day toward Evening had some sailing on a Sand bar 56, Musquitos in Clouds. distance 18 Miles, Killed 1 Deer.

Thursday the 9th departed early, took a Channel which we found shut up, and lost the Morning, at Dinner several Hunters went out to make fires to give Notice to the Indians of our approach, passed a small River named Iowa 57, in the afternoon had fine sailing, distance 24 Miles, Killed 1 Deer.

Friday the 10th Had wind and stronger Current all Day. the River very high, left 5 Hunters on shore, - distance 10 Miles Killed 1 Deer.

Saturday the 11, Rain & cloudy Morning, at 8 A.M. cleared up with a fair wind, took in our hunters, set sail, at noon waited one Hour for the little Boat passed Vermillion River 58 on the North side and at 5 P.M. the River Arck 59 on the South side waited for the little Boat and had to camp before Sunset to let her come up with us, lost some elegant sailing on her account distance 33 Miles.

Sunday, the 12th, set sail early in the Morning and by all appearances were to make a good Days Journey, but the other Boat not keeping up with us we were obliged to wait several hours for her, and lost considerable in making way, the wind changing at noon, at 8 A.M. passed River Jacques 60, Missouri still high, distance 18 Miles.

Monday the 13th, head wind and hard Current, rowed, poled and cordelled all Day, several hunters went out returned at 4 P.M., no game but had seen many fresh track of elk, waited 2 hours for the other Boat at 5 P.M. made Island of Bonhomme 61 and Ponca 62 Country we had flattered ourselves to meet some Indians of Buffaloe but were disappointed, by this time we had passed the Countries of the following Nations, Little and Big Osage 63, Mahas 64, Otoes 65, Yencions 66, & Kansas, this Morning Immel & Lorimier 67 went a head by land, all hunters went on the Island,

Killed but 1 Elk, two of them camped on the N. Side and Boats on the South Side of the Island, distance 18 Miles.

Tuesday, the 14th fine weather head wind and hard water at 7 A.M. took in our hunters they had killed 1 Elk 1 Deer. had to stop again at 9 A.M. to arrange another Mast for the other Boat and fix the old Rudder, crossed the River where we found some fine Cedar for the Purpose, stayed all day unloaded and loaded, put up the Mast and Rudder, camped and made this Day 4 Miles distance Killed 1 Deer.

Wednesday July 15th, made an early start and good way at 9 A.M. met the Company Boat coming from the Rees 68 with Peltries, Papin 69 and Men. Mr Manuel Lisa thought proper to take her back a gain having not sufficient Loading to defray the expense, passed River Luipere 70 and another small River 71, in the afternoon Squalls and Rain, camped 3 Miles below Liquicourt River 72, a distance 16 Miles.

Thursday 16 July, rained all night, and cleared up Sunrise at 8 A.M. passed Leauquicour River very high and full. Mess. Sanguinett 73 & Bijou went out to make fires as we expected the Indians soon to meet, camped opposite an Island 74 not far from Poca River, distance 18 Miles Killed 1 Deer.

Friday the 17, a fine Morning the Mackina Boat took 5 hunters to the Island and we continued our Route passed Ponca River 75, cordelling on the South Side along the Hills till Dinner; the Boat came up and brought 1 Deer 1 Beaver cordelled all Afternoon distance 17 Miles.

Saturday 18, cloudy about 8 A.M. a fine favorable wind took us and we had good sailing untill 2 o'clock P.M. when we discovered 3 Lodges of Sioux Indians 76 and found Mr. Immel & Lorimier, the Chief of them, LeNez 77 traded with us 32 Beaver 3 otter 2 Robes bufflao 3 Bladders of tallow and upwards of 300 lbs. of dried neat. camped 1 Mile above them, killed 1 Deer distance 24 Miles.

Sunday the 19th fine Morning about 7 A.M. we took in 2 Sioux who had been hunting, belonging to a band on white River 78, gave us a buffaloe tounge and stayed on Board all Day, our hunters went in search of Buffaloe but found none, passed Little Cedar Island 79 distance 18 Miles.

Monday the 20, set sail at 4 in the Morning with a fine wind the Indians left us, sailed till 10 A.M. when the wind changed and blew hard a head, at 4 P.M. met with Sioux Chief called the Sleeper 80 and 20 Soldier had some talk and camped with them, distance 15 Miles.

Tuesday the 21, departed at Sunrise as also the Indians we stopped at a small River 81 where 4 Sioux Chiefs came to us, the Black Sky, Black Buffaloe 82 Big Horse 83 and Crooked hand 84 we had Counsol and they informed Mr. Manuel Lisa, that at present they had nothing to trade, but would have plenty next fall Immel went with them to their Village, 3 Chiefs and 2 young Man remained to fix on a spot for a trading house they went with us across the River to the Northside 1 Mile below where we camped, laid out the house for Mr. Bijou 85 who was to remain to trade with the Yentonas, Tatons 86 Shaunee 87 Mr Manuel present presented the Chief with 10 Carrots of Tobacco and some Powder and Ball they were seemingly well contented, Killed 1 Buffaloe and the Indians brought also some fresh Meat.

Wednesday the 22d rose early, all hands except some lazy Rascals under pretence of being sick went to work. -- at 3 P.M. Mr. Immel returned with 2 young Indians, the Chief Black Sky had presented him a horse, he reported the Chiefs and warriors would be with us to morrow -- he found upwards of 400 Lodges and plenty of Buffaloe in the Morning when he started from there he saw several Buffaloe enter in the Village, this Day raised part of the house, Killed 1 Deer, caught sever-

al Catfish and 1 Beaver.

Thursday the 23, early to work, but unfortunately the house fell down when nearly raised, and had to go over the same work, caught 7 fine fish in the forenoon which provided a fine Dinner, at 5 P.M. a party of Indians came opposite which we crossed and found them to be all Boys about 30 in Number they came to give us a Dance, they were all neat and handsome clothed, more so then I saw the Sioux of the Mississippi, in the Evening they danced and we gave them some Biscuit hardtack and 1 Carrot Tobacco they bought plenty Meat with them and gave plenty to the Boats. Friday the 24th finished the house, in the afternoon sent Mr. Bijou, Equipment on shore, the Indians went over the River, and Mr. Manuel Lisa gave the Chief black Buffalo the present from Government as also for crooked hand which Chief had promised to come over but did not come, he left it with Mr. Bijou to be given to him whenever he would arrive there left 2 hunters and 3 Engagees with Bijou, discharged Bapt. Alar 88 a good for nothing fellow.

Saturday the 25, set sail at 4 in the Morning, fair wind took 6 Indians with us which we landed and stood under sail till 11 A.M. when we took the Cordell for about 1 hour dined, and set sail again, passed white River at 2 P.M. the slakening about 4 P.M. we took the Cordell again, Mr. Manuels Negro Boy Charles went out the Boat to get some grass or grasshoppers for a Prairie Dog which he had caught some days ago, he the Boy went upon the Hills unperceived, they are very high he fell down a precipice overhanging rock, precipice into the River, the Man who was steering the Mackina Boat saw it , and cried out to Mr. Lewis who was walking in the Rear of the Boats to save the Boy but Mr. Lewis 89 unfortunately did not understand the men however saw something struggling in the water, but thought the Boy was a swimming, when the Men came towards him, they went to find the Boy, alas he was gone, he must have been stunned by the fall or otherwise would have saved himself, the River was not 4 feet deep, he drowned at 5 o'clock P.M. we searched for him some time but the Current had swept him off, cordelled a little way, crossed to an Island, set out 3 hunters, at sunset the Wind fair, set sail, took in our hunters, camped on a Sand bar the wind blowing fresh all night distance 30 Miles.

Sunday the 26, set sail at 3 in the Morning, at 8 A.M. Immel & Queenville 90 went out to hunt and to visit his house were he lived last Winter 91, we came up with the house very fast stopped a few Minutes the wind fresh in our favor, took in Immel, Queenville had run after some Buffaloe, we pretty fast and were obliged to stop for Queenville, who was far behind we gave him signal, and embarked him, he had Killed 1 Buffaloe but we left the Meat, taking care of the wind at 1 P.M. made Big Bend 92, camped on the North Side. -- Distance 36 Miles.

Monday the 27th departed at 4 in the Morning a fresh wind sprung up and carried us out of the Bend, the wind slackening we had to take to our Oars, at 8 A.M. we set sail again and sailed till 11 A.M. after Dinner Immel Lorimier and Greenwood went out the Boat to go by Land to the Rees. cordelled all afternoon, and camped at the point of Cedar Island 93, distance 21 Miles. Killed 1 Deer.

Tuesday the 28, set sail with a favorable wind at 3:30 minutes in the Morning, but the wind falling had to take to cordelling, last night caught 3 Beavers, Killed Cabri 2 Elks, distance 18 Miles

Wednesday the 29th head wind and clear, cordelling all Day at 4 P.M. passed little Missouri River, Killed 1 Buffaloe 2 Deer 1 Badger, distance 21 Miles

Thursday the 30th fine weather but head wind, had to cordell all Day saw a band of about 50 to 60 Elk, 3 of them close to us in the River, but had no Luck to Kill the Mackina Boat was gone a head

with the hunters and did not come to our Camp that night, distance 18 Miles.

Friday the 31st departed early cloudy and head wind cordelled all Morning at 7 A.M. met the Mackina Boat they had Killed 2 Dear and 1 fawn, crossed the River after Breakfast the wind becoming very hard made very little way. Killed 1 Buffaloe 4 Deer, distance 12 Miles. This Morning we left our old she Cat at Camp, at breakfast I missed her, and Mr Manuel sent a Man for the Cat, he returned in the Evening with the Cat to our great satisfaction this Remark may seem rediculous, but an Animal of this kind, is more valuable the this Country than a fine Horse. Mice are in great Abundance and the Company have lost for want of Cats, several Thousand Dollars in Merchandie, which were destroyed at the Bigbellies station, there has not a night passed since our departure from Belefontaine where I got that Cat, that she has not caught from 4 to 10 Mice and brought them to her Kittens.

Saturday the 1st of August last night caught 2 young Beaver, cordelled all Morning, still and very little Current at 10:15 A.M. passed Chajenne River 96 very low at this time saw several Buffaloe, chased, but without Success, crossed the River, and cordelled along the Bluffs, at Dinner we stopped at some Bluffs above Chajenne River about 4 Miles, where I found plenty of Iron Ore, and somewhat higher up signs of Saltpeter. Distance 18 Miles Killed 2 Deer.

Sunday the 2d some Rain fell last night, cloudy in the Morning, 6 A.M. cordelling the little Boat joined us, they had meat of 3 Buffaloes, one Cow they found wounded with an Arrow, she came into their Camp. Distance 18 Miles Killed 1 Deer.

Monday the 3 at 2 A.M. a Canoe with Garrow 97, the Interpreter, 2 Engagees and Goshe 98 a Ree Chief came to us, they brought some Corn and a Letter from Immel at noon passing along a Bottom, we found a Mocassin tied to a tree in which we also found a Letter from Immel informing us they were well and would be at the Rees from thence in One Dat. Distance 21 Miles, Killed 5 Deer.

Tuesday the 4th headwind as usual, cordelling out Hunters went out this Morning and at dinner brought 3 Deer 1 Buffaloe 4 Ducks, passed Mauro River 99, in the afternoon Killed 1 very large Buck. at 5 P.M. a heavy storm arose and we had to lay by. at 6 P.M. 2 Skin Canoes met us, with Lorimier, Greenwood, Dougherty 100 and Weir 101, it continued raining and we were obliged to Camp. Distance 15 Miles.

Wednesday the 5th cleared up in the Morning and we went on Cordelling, but the good Luck they got fast 3 times, at Dinner our hunters brought 1 large Cabri and 2 Deer very fat, 1 Goose, pursued our Voyage and at 5 P.M. met 3 more hunters of the Company from the Rees, camped 3 miles below the Grand River 102. --

Thursday 6th at 6 A.M. passed Grand River, Mr. M. Lisa had intended to build a fort here, but finding the Situation not eligible for a Fort, moved on and camped about 12 Miles below the Rees. Distance 15 Miles.

Friday the 7th has a little Wind in favor set sail and at 12 o'clock M. arrived at fort 103, all Indians in Motion to a Number of about 1200 souls, Mr. Manuel L could not immediately go on shore, as he had his Leg strained this Morning when Jumping out of the Boat, and got very Lame, a horse was procured and he went to the Village and held Council with the Principal Chiefs did not come to Council and Jealousy reigned among them, about 2 P.M. the Women and Children who were about our Boats were called away to the Village, and in a few Minutes the Coast was clear, this was not a friendly Signal, and we prepared for the worst, after Dinner Mr M.L. -- resolved to go to the

Fort, he went with 10 armed Men and sent for the Chiefs to explain their Conduct. when it appeared that Goshe had received his presents and they not, and further complained on Account of the Merchandize to be taken away from them to trade Mr. M. L., came to an absolution and they gave up, they were satisfied to have a Fort built at their Village about 12 Miles distance 104. La Plume 105 the Chief of the 2d Village received his Present and harmonie was restored, they traded some in the afternoon loaded the Peltries ect... ect... and prepared for Morning, set a Volunteer Guard, though guarded, the Indians would pilfer every thing they could lay their hands on.

Saturday the 8th started early without trouble, several went by Land as also some Indians, Goshe and La Plume overtook us at noon, in order to stop us and not go too high from their Village 106, but the Place where we were did not answer for our purpose pursued our Route, the Chiefs went back seemingly displeased, camped 12 Miles above the Village, last night had our 2 Cats stolen.

Sunday the 9th of August started early and at 7 A.M. arrived at a beautiful Prairie Bluff with several Bottoms of fine timber around, made Arrangement for our Camp and in the afternoon discharged the Boats, every Men happy to have come thus far of our Voyage 107.

Monday the 10th sent out one Boat across the River with hands to cut timber for a Blacksmith Shop and Provision house all hands employed to fix a temporary Camp.

Tuesday the 11th, no news from the Village untill noon when our Interpreter Garrow and a Soldier arrived, every thing quiet, they reported that a Shuking Big Belly entered the Village at dark yesterday and Killed 1 Ree.

Wednesday the 12, were informed a war party had gone on, to fight the Bigbellies 108.

Thursday the 13th, Mr. M. Lisa had resolved to go up with a party to the Bigbellies to arrange Matters with them and bring down the Peltries, the Bigbellies having 2 hunters and stole 26 Company horses, as also detained the Trader they had with them, he accordingly went this Morning at 8 o'clock and 26 Men with him. At 10 P.M. 60 Rees composing a War party arrived they requested something to eat, our hunters had just come in with 3 Buffaloes and 1 Deer, we gave them some Meat, and ferried them across the River, this Day cut timber for different Buildings, at the same time the Rees were crossing the River 8 canoes move in sight coming down with Meat, the Men in the Canoes saw so many Indians crossing, took the terrors put their Canoes on shore and run off, both parties thinking they were Enemies, as soon as the war party arrived on the other they gave the Halloo and run in full Speed to the Canoes. finding nobody and seeing the Canoes belonging to their own Nation, they took some Meat and without searching for their friends went off, 2 hours afterwards 2 Indians appeared and ventured to come over to our side, on arrival we found them to be 2 Squaws the Men consisting of 2 Rees, 2 Panis 109, 2 Chayenne 110, had run off, and left every thing behind them.

Friday the 14th This Morning at one o'clock were alarmed by the firing of a Gun, and heard the Dashing of Oars when to our Surprize we saw Mr. Manuel & party returning he having been informed by one of those Cowards who had run off from the Canoes, that all the white men were Killed and that the Indians had crossed the River in our Boat to Kill them also, supposed by the Sioux, Mr. M.L. alarmed on this Account returned immediately to Camp, finding however to his great Satisfaction the History of the Indian false, he remained till breakfast and pursued his first Intentions, last night about 40 Indians camped with us they were gathering Cherries and other fruits about the Country finished the Blacksmith shop and Provisison house, caught 8 fine Cat fish.

Saturday the 15th This Morning cloudy, some hunters went out, no Meat at home, caught 8 Cat fish, Rain at intervals.

Sunday the 16th hard Rain last night, cleared up in the Morning and all hands went for timber, at 5 P.M. our hunters returned with Meat they had Killed 11 Buffaloe, caught 11 Cat fish, and Killed 11 Ducks.

Monday the 17th, clear, all hands cutting timber and making Hay, caught 15 fish, and Killed 15 Ducks.

Tuesday the 18th all hands employed as yesterday. 2 Hunters went out for Buffaloe, caught 4 fish.

Wednesday the 19. the hands employed in Work as yesterday at noon our hunters came in with Meat for 2 Cows. Killed 10 Ducks.

Thursday the 20, North wind & cold, cloudy in the forenoon hands at work as yesterday, fine afternoon Mr. Lewis caught a Prairie Dog, caught 4 fish, Killed 1 Pheasant.

Friday the 21st, clear and hard wind, still at work cutting timber and making hay. Killed 6 Ducks. Mr Lewis's Prairie Dog was nearly Killed by one of our Dog who broke the Chain and run off with him.

Saturday the 22d, clear and windy, the same Work going on. at noon Goehe and Nez Corbain 111 a Yentonas Chief arrived with four Sioux, at 6 P.M. our hunters came in with Meat of 5 Cows. This Day blew a very hard Gale from the South west. Killed 28 Plover and 4 Ducks.

Sunday the 23d, clear wind west N. west, the same work, at noon La Plume paid us a Visit, dried some Meat very warm.

Monday the 24th clear, wind west, 3 hunters went out being informed the Buffaloe was near by a party of Indians which had been hunting at 10 A.M. 12 Canoes arrived with meat they made a present of 18 Tongues and went off at noon caught 10 fish.

Tuesday the 25th cloudy and disagreeable, hands at work as usual.

Wednesday the 26, cloudy and cold, at 7 A.M. Mr. Manuel Lisa returned with part of the Men from his expedition, the Rest of the Men were coming by Land with the horses he traded and given up by the Bigbellies, the Chief Brone 112 refused to give up the stolen horses, Mr. Manuel cleared the trading of peltrie and Goods and took off the whites, at 11 P.M. Gray Eye 113 Ree Chief, arrived with 100 Men from a war tour, they had not Killed nor even seeing Enemy, in the Evening a larger Party passed by with two Scalps which they carried before then in triumph at dark some more arrived and camped with us.

Thursday 27, clear and fresh, the Big white 114 Mandan Chief arrived, with several of his Bravos and family, to pay a visit, he had a few Robes which he traded, and took some articles on Credit, at noon Nez Corbain came again to receive a Present from Mr. Manuel Lisa and as soon as received for the Village.

Friday the 28, clear and the house fur trade was commenced made 36 Packs 115 of different Peltries and prepared the Boat which had to go to St. Louis,

Saturday the 29th, clear, this Morning the Men which came by Land from the Bigbellies arrived with the horses, they had met with no Accident, they informed that the Mandan 116 had made a Hunt and Killed on One Day 450 Buffaloe, employed in -- setting Accounts and writing, at 5 P.M. out hunters brought in the Meat of 5 Cows.

Sunday the 30th clear, at 10 A.M. the Boat started for St. Louis 117 with 13 Men, several others went to the Ree Village to purchase Corn and Skins for covering of the Boat, in the evening they

returned and had only succeeded to buy two Bushels of Corn and 8 Hides, the Indians not being willing to trade.

Monday the 31st cloudy and hard wind from the S.W. -- made up an assortment to go to the Mandan and purchase Horses for the parties going up River.

Tuesday Sept. 1, cloudy and heavy Squalls, four Men went to the Men to buy horses, made a fish trap of willows, and caught 31 Cat fish, hunters went out this Morning, and returned in the Evening had Killed 11 Cow.

Sept. 2d Wednesday hard Gales from N.W. La Plume came to Camp, the wind abated about Sun set cloudy and cold.

Thursday Sept. 3. clear and warm, caught 6 fish very large.

Friday Sept. 4 nothing remarkable, cloudy and cold.

Saturday 5 the same " " " " .

Sunday 6 the same " " " " .

Monday 7 moved in the new house and begun to make Equipments for the Parties going up the Missouri.

Tuesday 8 finished Equipments, Killed 14 Ducks.

Wednesday 9 our hunter brought Meat of 9 Buffaloe, were informed the Sioux and Rees had fought a Battle 2 Sioux Killed 3 Rees wounded.

Thursday 10 clear and warm, the Gray Eye Chief and 3 Men arrived from a Scout.

Friday the 11th early rise, the parties prepared to start. Mr Sanguinette and 2 Men with 5 horses for the Spanish waters 118 Mr. Lorimier and four for the Wind River 119, Mr. Lewis, two engag-ees and the trappers for the little Horn 120 in all 18 Men, at noon a Sioux Chief arrived to have a talk with Mr. M. L. and 9 Men with him, cloudy & rain we traded some dry meat and 1 Robe.

Saturday the 12, the Sioux started this Morning, as also Mercier 121, LaChapel, and Carriere 122 for their fall hunt down the Missouri, Killed 14 Ducks.

Sunday the 13th fine weather, began to hawl stone for Chimneys our hunters went out, finished the Store caught 15 large fish.

Monday the 14 last Night a Ree Chief Legross 123, came to fore with his Wife he was lamenting the Death of one of his Children which had died 2 Days ago, Mr. Manuel covered the Dead Child, Legross being a good Indian, this morning had 22 fish fine warn weather, our hunters returned with 6 Cows and the pleasing news of plenty in the prairies.

Tuesday the 15, moved in the Store, took and Inventory caught 8 fish, warm and clear.

Wednesday the 16 fine weather nothing remarkable.

Thursday the 17 the Wind blew heavy from the N.W., about 6 A.M. the Men who went to get the Horses, came back and told the sad news that 5 Indians, supposing Grosventers had mounted the horses in their Sight and rode them off. 7 in Number, Charbonneau 124 who was on horse back came in full speed to the fort and cried out; TO ARMS, Lecomte 125 is Killed, the run off and left the poor fellow, that Indians spoke to Lecomte and they told him to go about his business he ask them what Nation they were, they answered Crows 126 if the Indians had an Idea to kill him they might easy have done it, 10 armed Men went immediatly after them but returned without Success they saw them no more, a cloudy Day and cold.

Friday the 18 disagreeable weather, the wife of Elie 127 a Snake Squaw died, made a Wolf trap and raised the Mens house.

Saturday the 19th Charbanneau and Jessaume departed for to go to the Bigbellies, to try to get the horses Bijou arrived from his Station with 10 Sioux, Saunie 128 to make peace with the Rees, as Mr. M. L. had proposed, at 2 P.M. our hunters brought in 3 Elk fine Evening.

Sunday the 20th a clear but cold Morning 2 Rees arrived in search of a Women which had run off, after Breakfast Immel had 4 Men went hunting, in the afternoon Goshe and 3 Men arrived he seemed not much pleased with the Sioux, they harangued much this Evening, and to Morrow was fixed to smoke and made Peace.

Monday 21st fine weather and warm, one of the Warriors of the Sioux after having talked a little mixed whisky, pretended to be drunk, and cut Capers about like a mad Man, which determined the Business with the Rees, it was resolved that the Sioux should de part in the Evening unseen by the other Indians which might hurt them, they spent the Day agreable together and at 8 o'clock in the Evening they crossed the River, accompanied by a few Presents. Bijou who was to go by water found the Canoes not good and remained.

Tuesday the 22d fine warm weather and clear Bijou loaded his Canoe and went down the River with Manegre 129, at 10 A.M. Goshe and party also started and Immel came home with 1 Elk and 2 Deer very fat he found no Buffaloes traded 2 horses, in the Evening a Ree and 2 Women to trade a horse.

Wednesday the 23 fine clear weather, set 2 hens with 22 Eggs, traded the horse in the Evening another arrived to trade a horse and also his Wife, a handsome Squaw he found trade for the horse but not for the Wife, a Mandan arrived, no news from above.

Thursday the 24th fine warm weather for the Season traded some Corn the Indians went to the Village, Immel and 3 men went hunting took 10 traps and 7 Horses with him, in the evening Nez Corbain and 50 Men of the Yentonas arrived.

Friday 25th, Rain and windy traded some Meat with the Indians, after dinner they brought in their Plunder for trade and we traded several Peltries, a large quantity of dry meat and tallow held a Council and made a Present of 10 lbs powder 15 lbs Ball, 1 Kegg of mixed Whisky.

Saturday the 26th, they were preparing to move, when we found they had stolen a foot Adze and a handsaw, by giving a Hand Kerchief to the Chief he promised to return them we got the Adge but not the Saw, when they were gone we found our table Knives and the Door of a ?large? ahd also departed at 2 P.M. our hunters came in with 4 Buffaloes, they had left Immel with one Man to trap Beaver.

Sunday the 27th nothing remarkable, Rain, blew a hard Gale and continued so all Night ---

Monday the 28 in the Morning when it cleared up our Hunters went out for Meat, and in the afternoon about 40 Sioux arrived to trade, in the Evening a hard thunder Storm --

Tuesday the 29th had cleared up, began to trade they had not much peltry, at 9 A.M. the Indians crossed again,

Wednesday the 30th clear and fresh at 2 P.M. our hunters came in with the Meat of 3 Cows 2 Deer, 2 Beaver and Beaver meat, Immel having caught 14 Beaver.

Thursday the 1st of October, at Sunrise we had to cross a band of Sioux, accompanied by Nez Corbain and another Chief called Boite about 40 in Number they traded and returned at noon satisfied, in the afternoon 7 Men started up the River with the Mackina Boat to hunt Buffalo, and Immel came home with 15 Beaver 1 Otter and 2 Muskrats, wind blew very hard from N.W. and the Boat returned.

Friday the 2d the Boat went again early in the Morning the wind arose from the same quarter they stopped at the first point above, four Rees came to fort.

Saturday the 3, clear and cold had white frost this Morning Majet and all hands employed to cut Picketts, at Sunset 2 Mandans arrived with the sad news of the Big white and Little Crow 130 being Killed by the Bigbellies and 3 Mandans wounded, the Bigbellies had 11 Men Killed and a Number wounded, at night Charbonneau, Jessaume returned and brought with them 3 of the horses which had been stolen by the Mandans and not Bigbellies as supposed a lesson to take care of our property, no matter friend or Enemy.

Sunday the 4th the Mandans went to the Rees accompanied by 3 Rees fine weather.

Monday the 5th Immel went to the Village with Mr. Manuel returned in the Evening they were informed the Sioux had stolen 3 horses from us in the night of the 3d instant and by examination we found one of the Company's, one of Goshe, and one of Charbonneau gone.

Tuesday the 6th last night the Dogs made alarm we went patrolling and some whistling of Men, but found in the Morning our horses safe, raised the right wing of the out houses and Kept our horses housed.

Wednesday the 7th fine warm weather all hands to cut Pickets a beautiful Day for the Season nothing remarkable ----

Thursday the 8th this Morning 2 horses were stolen in sight of the house, distance 150 steps the Men who had to take care of the horses went to his Breakfast and returned the horses were gone.

Friday the 9th clear and fine weather, in the afternoon 4 Rees arrived to give us Notice that their Corn was gathered and ready for trade. Charbonneau & Jessaume Keep us in Constant uproar with their Histories wild story telling and wish to make fear among the Engagees, these two Rascals ought to be hung for their perfidy, they do more harm than good to the American Government, stir up the Indians and pretend to be friends to the white People at the same time but we find them to be our Enemies.

Saturday the 10, fine weather, the Rees went home Garrows Wife a Ree Sister to the Chief Goshe, came to fort last night, this Morning she was going to shoot her husband, she came here with that Intention, some Rees arrived which were enraged against Charbonneau & Jessaume, having of their arrival from the Bigbellies they said that C. & J. were Lyars and not to be considered as good French men, and if Mr. Manuel Lisa would send them to the Grosventer with a pipe they would not consent such Credit have these Men amongst the Indians they find their Character gone and try every Scheme, to Keep themselves alive like a Man a Drowning, I shall leave them for a while, and go on with my Observations.

Sunday the 11th Immel and others went with the Boat to the Ree Village to take Corn, late last Evening the Boat and hunters arrived with a fine Canoe of Meat they had Killed 19 Cows and 4 Elk, but lost the meat of 7 Cows by the Wolves. There are incredible quantities of Wolves in these parts, they go in gangs of 3 to 400 and at Nights the Prairies echo with their howling by nothing of this Kind can prevent the Savage of his favorite walk, to Kill and steal at night, this Day finished our New Provision Store, and go on with the other houses, the Horses are Kept under Lock and we fear no Lurking Savage.

Monday the 12th we had frost last night, the Vessels full of Ice clear and cold Morning, but calm and warm in the afternoon cloudy evening.

Tuesday the 13, white frost, cloudy, this Morning our Cart man was attacked by 5 Wolves, but

cleared himself Immel returned, the Rees will not trade Corn with us.

Wednesday the 14th, fine clear weather, 4 Men went out to hunt, some Rees arrived to trade a little Corn and a Girl the first was traded, but the last not, she wanted to be the Wife of Frenchman, and not his concubine, --- Chastity, --- got this Day 21 Chickins.

Thursday the 15, This Morning Immel, Papin and Charbonneau started for the Grosventer, Mr. M. Lisa having engaged Charbonneau for some good Reasons at 8 A.M. a Band of Chajennes about 12 Lodges arrived their Chief named Lessaroco, they had plenty Women & Children and a great Number of Dogs, traded some Beaver, and about 50 Bushels of Corn.

Friday the 16th, clear and warm, the Chajennes went off they behaved very well. traded tranquil and in the afternoon 2 young Men brought our Hogs back which had followed them.

Saturday the 17, cloudy, Majet and hands crossed the River for Picketts, in the afternoon some Rees arrived, traded 6 Beaver and some Corn.

Sunday the 18, cloudy & cold, Boat went for Picketts again.

Monday the 19 the same as yesterday.

Tuesday the 20, snowstorm, at 3 P.M. Goshe arrived with 4 Chajennes of a large band, they came to inform themselves how we traded, and observe we had not Goods enough for their Peltries, we shall see when they come.

Wednesday the 21st cold and cloudy, this Morning the Chajennes went off and Goshe remained, at noon 2 of our hunters came in with Meat of 2 Cows.

Thursday the 22d clear and cold, the 2 hunters went out again, commenced the Stockade of the fort.

Friday the 23 clear and cold had 3 Kittens this Day.

Saturday the 24 clear and cold after Dinner our Heroes arrived from the Bigbellies, they brought a Pipe and 3 Bladder for the Rees, their Mission had been successful and all Differences existing between them and the whites settled at the same time our hunters arrived with Meat of 2 Cows. They had Killed 7 and caught 20 Beaver 1 Otter 2 Muskrats and Killed 2 Wolves.

Sunday the 25, clear and cold nothing to remark.

Monday the 26, the same. Mr. Manuel L. went accompanied by the 2 Interpreters, Papin and 3 Men to the Ree Village with the Pipe of the Bigbellies.

Tuesday the 27 clear and cold hunters went with 7 Horses but returned in the Evening, having seen some Lurking Savages. Mr. M. L. returned from the Village successful.

Wednesday the 28th clear and moderate warm, our hunter took an early start across the River with 6 Horses. At Evening 4 Rees and 1 Mandan came to the fort from the Mandans, they informed the brother of Legrand 131 had died of his wounds, received in the Battle with the Bigbellies.

Thursday the 29th clear and warm, finished writing and at 11 A.M. Lajoie 132 and Gogal 133 two Engagees set sail in a Canoe for St. Louis, with a few Peltries, ect., ect... cloudy Evening at 11 P.M. Goshe and Legross with 4 Warriors came to fort with a Pipe for the Bigbellies.

Friday the 30th Charbonneau and the 4 Warriors marched off to the Bigbellies, our hunters returned with Meat of 2 Cows, they had met plenty but very wild and could not Kill.

Saturday the 31st Snow this Morning, cleared up at noon and had fine weather, nothing to remark.

Sunday, November 1, frost last Night, cold and clear several Rees came to the fort, Woahl 134 and

Chaine 135 returned from trapping, they brought 53 Beaver 1 Otter 5 Muskrats 2 Wolves 2 Mink 20 Foxes 7 Elk Skins.

Monday the 2d, cloudy and hard Gales from West a hunting party was prepared to go up the River in the Boat, but blowing too hard were prevented.

Tuesday the 3d clear and cold the Boat started with 12 Men at 8 A.M. in the afternoon a Partizan / Camerad 136 of Mr. M. L. of the Sioux / Saunies / arrived with 19 Men, they wanted absolutely Mr. Manuel Lisa to go with them to their hunting ground and trade very hard Gales and cloudy Evening late in the Evening Gray head a Mandan Chief came to the fort with his family

Wednesday the 4th cloudy and Snow Squalls Mr. M. L. wished to follow the Boat by Land was prevented by the Sioux, they were not willing to go home in the Evening several Rees and 3 Mandans arrived

Thursday the 5th Snow storms all last night until 8 this Morning when it cleared up, cold weather

Friday the 6th clear and cold, much Ice in the River the Sioux went off this Morning across the River fearing to go on this Side of the Rees, Gray head, Rees and Mandan started also, and Garrow the Interpreter left the fort with his Wife, on Account of a quarrel between his Wife and Baptiste Provost 137.

Saturday the 7th Baptiste Provost was turned out the fort Immel went to hunt with 3 Men and 6 Horses, at 11 A.M. Langue de Buche a Ree Chief and his party arrived engaged Pierre Chaine to hunt for the fort in the place of Baptiste Provost, the River full of Ice, clear and cold.

Sunday the 8th Langue de Bache 138 and party went off to make his Camp for winter about 6 miles above the fort 139, at 2 P.M. Immel returned with Meat of 4 Buffaloe several Rees at the fort, clear and cold.

Monday the 9th, cloudy and moderate, snow fell in the afternoon nothing remarkable.

Tuesday the 10th, snowed all night, cleared up about 8 o'clock in the Morning, moderate, Immel went out again to hunt with the same Men, Buffalos in Sight some Rees arrived

Wednesday the 11 clear and moderate, nothing remarkable.

Thursday the 12, cloudy 3 Rees which had camped with us last night went away displeased getting not enough to eat and set the Prairie around us a fire, Immel returned with 5 Cows.

Friday the 13th Papin and 1 Man went to the Village, to try to get the Rees to make a great Hunt for us. Mr. Manuel promised 20 Loads Powder and Ball for each Cow the Buffaloe being very hard and plenty. Charbonneau returned in the afternoon from the Bigbellies and four of their head Men with him, the Chief Cheveux Loup and 3 others, some Rees and a Chajenne Chief Papilliar arrived in the Evening with the news the Chajenne were close by and came to trade, traded 2 Beaver.

Saturday the 14th, cloudy and cold, Papin returned with -- tidings that the Rees were preparing to make war on us. Baptiste Provost and Garrow had told them many Lies and roused the Chiefs and Nation against us, which proved to be fact, we found this that 6 of our Horses stolen, 2 Rees arrived to sound us if we were inclined for War, the Chajenne Chief went to the Village.

Sunday the 15th This Morning, Immel Papin and Charbonneau left this for the Village, with the Bigbellies and 3 Rees, to see into the Misconduct of those fellows and try to settle amicably, the Rees which remained at fort, seemed tranquil and content, we stopt all Work cleared the fort, and prepared for Defense in Case of Necessity, sent Pierre Chaine & Pointsabl 140 to the Camp Langue de Buche, to hear some news of the stolen horses.

Monday the 16, last Night Pierre Chaine returned and informed that the horses had been stolen by the Rees, by the Order of Garrow and were at the hunting Camp of Grey Eye, Langue de Buche arrived this Morning with 8 Men going to the Village he promised to deliver the horses in three Days, and requested Mr. M.L. to be tranquil, Matters would be settled, -- traded some Meat and 1 white Bear Skin of them -- at 4 P.M. our Deputies returned with the Bigbellies accompanied by Goshe and Plume d'aigle, Garrow and many other Rees, to arrange the Difficulties which had arisen, all was thrown on the Shoulders of Baptiste Provost.

Tuesday the 17th fine weather, clear and warm, held Council and finished with Peace, two of our horses were brought in this Morning, finished the Enclosure of the fort.

Wednesday the 18, fine weather, and tranquility restored the Bigbellies requested a trader and being promised one, left this for their Village, as also the Rees very well satisfied, another horse was brought in, Pierre Chaine and 2 Men went over the River hunting buffaloe and Elk in Sight.

Thursday the 19th clear and warm little Ice in the River at four o'clock in the after noon hung the great Door of the Entrance of the fort, which ceremony was saluted by 7 Guns and 3 rounds of Musketry, made the Tour -- around the Fort and Baptized the same FORT MANUEL. 141. In the Evening a good Supper and a cheerful glass of Whiskey was given to the Men, and a Dance at which all the Ladies then in the fort attended, concluded the Day, Garrow brought his family to fort again and traded of the Rees a horse which had been stolen of the Company last year by the Sioux.---

Friday the 20th, clear and cold, had a Deer Killed, nothing remarkable happened.

Saturday the 21, cloudy Morning, cleared up at noon Immel & Papin went to the hunting Camp of Gray Eye, to get if possible the Remainder of the stolen Horses. Legross came to the Fort with Baptist Provost to explain his Conduct and be taken in favor again. Provost was not permitted to enter, they blamed Garrow for all the Mischief which had been done, but went off without Success, Immel returned with only our Running Mare the other 2 horses they the Indians had sent to the Village loaded with Meat, the horses returned were all ruined and their Backs very soar, the Chajenne Chief returned from the Village.

Sunday the 22d Morning clear and moderate, the Chajenne Chief went to his Village, in the Evening out hunters came to fort, they had Killed only 1 Cow and 1 Deer and found very few Buffaloe, evening cold.

Monday the 23d Snow in the Morning, having been informed, the Saunie, Sioux had arrived with about 150 Lodges at the Rees, Charbonneau and Garrow set off for the Ree Village, to Know if they the Sioux had any thing to trade. Mr M. L., Immel and Chain went to a band of Chajennes which were camped about 5 Miles above 142 the fort, with the same intention but returned shortly afterwards, having met with one Chief and 2 Partizans coming to pay us a Visit, and in form themselves how we traded, cleared up at noon pretty cold, wind North, plenty Ice in the River, this Day crossed our horses to the other Side.

Tuesday the 24th clear and very cold, Garrow & Charbonneau returned from the Sioux, with News that they had nothing to trade but Meat; the Chajennes went to their Camp, and promised to come to trade with what they had, five Rees arrived at fort.

Wednesday the 25th hard frost last night, and cloudy. hauled the Boats out of the Ice, this Evening a Number of Rees came to the fort to camp.

Thursday the 26th, moderate and cloudy, the Rees went off, and our hunters started with 8 horses,

at noon the Chajennes arrived with 26 Lodges and made their camp at the Point above us, 5 of their Chiefs came to the fort. they have a vast quantity of horses and Dogs. Rain.

Friday the 27th Snow in the Morning and cold, plenty Chajenne in the fort, they invited Mr. Manuel to a feast, to which he and Immel went, Grey Eye brought the last stolen horses, traded some Beaver.

Saturday the 28th last Night the River closed, moderate and clear, plenty Visitors, but no trading.

--

Sunday the 29th cloudy and cold, traded some Beaver, Robes etc. ect..

Monday the 30th, cloudy and cold, traded again one of our hunters came in with the Meat of 2 Cows were informed by the Rees that Mercier, Lachapel and Carriere were Killed by the Sioux, these 3 Men were trapping about the Big Bend.

Thursday the 1st of December, cloudy and very cold. traded little, the Chajennes informed us that 2 very large Bands of their Nation where camped above them, which would also come to trade.

Wednesday the 2d several Mandans arrived and demanded a trader, Pierre Chaine brought in 1 Cow.

Thursday the 3d, cloudy and very cold, Immel and 3 Men went out hunting.

Friday the 4th, cloudy and cold, Pierre Chaine and 1 Man went out spying for Buffaloe, the Chajenne Chief (Medicine Man) brought us 1 Cow, round, the 5 Chiefs received a small present and were well satisfied with our treatment, I wished to Know their Name, but would only learn, besides the one named above one more, which was named the Poor Little Wolf. --

Saturday the 5th Pierre Chaine sent in this Morning for horses, he had Killed 4 Cows, fine clear and cold weather the Meat of Chaine and Immel with Meat of 2 Cows arrived in the Evening.

Sunday the 6th, clear and cold. Mr. Manuel L. went on a Hunting Party with the Chajennes, there being 1000 of Buffaloe opposite, returned at noon and had Killed 12 Woahl also brought in one Cow, Baptiste Provost came to the fort again, Mr. Manuel having pardoned him by information received, that it was not all together his fault, Goshe and many Rees arrived.

Monday the 7th cold and cloudy, nothing remarkable.

Tuesday the 8. the same as yesterday.

Wednesday the 9th clear and fine moderate weather Baptiste and 5 Men went out hunting, Goshe to his Village.

Thursday the 10th clear as yesterday, nothing remarkable.

Friday the 11th the same, the Chajennes left us to camp and hunt at the fourth Point above us, we had traded with them 75 Beaver, 2 Muskrats, 4 dressed Buff. Skins, 7 white Bear, 10 Robes, 5 Otter, 3 Foxes, 1 wildCat 450 pair of Moccassins a quantity of tongues and some Meat.

Saturday the 12, cloudy, opposite the fort the Prairie is covered with Buffaloe, Baptiste and Men arrived this Morning had Killed 4 Cows and 2 Bulls, in the afternoon, Baptiste, Antoine alias Machecou 144, arrived express from Mr. Lewis and brought the displeasing news, that the hunters which were equipped by the Company and which had been on the Spanish Waters trapping, had been robbed by the Crows, one of them Danis 145 was Killed by some Indian supposed Grosventres, the Day Messrs. Lewis & Lorinier arrived at the little Horn River, Machecou departed from the Little Horn River in Company with Duroche 146, but unfortunately separated 2 days in a Snow Storm, Duroche has the Letters of Messrs Lewis and Lorimier.

Sunday the 13th cloudy, some Rees of whom we have always plenty in the fort / went over the

River hunting in the afternoon.

Cadet Chevalier 147 arrived express from Me. Charles Sanguinette with a letter dated the 3d instant in the Prairie on his Return from the Arepaos 148, in which he confirmed the sad News of the hunters, he found none and was informed by the Areapos, that 3 of them were Killed by the Blackfeet, supposed Champlain 149 and 2 others, Lafargue 150 and 5 others had run off to the -- Spaniards, 8 of them had gone to the Crows which now are with Mr. Lewis, and 3 or 4 others they knew nothing at all, they the hunters had much Beaver some cached and the Remainder plundered with all other things. Mr. Sanguinette requested 2 Men to meet him to transport a parcel of horses, which he had traded with the Arepaos, the Rees brought in 2 Cows they had Killed 3 had to leave the Meat having no horses, more Rees arrived from the Village.

Monday the 14th Baptieste and some Men went out to hunt, plenty Buffaloe about, prepared an Equipment for Immel, who was to go to the Mandan for to trade at 2 P.M. Machecou, Cadet and Colla Glineau 151 went to Meet Mr. Sanguinette

Tuesday the 15th fine clear weather, Buffaloe constant in the Prairie, Immel and 3 Men went with 2 Sleighs on the River to the Mandans, had Informed that about 80 Lodges of Sioux had arrived with the Rees and still more expected. Garrow went to the Village to invite them again to a general hunting Party all Rees started only One Man remaining, no News of Duroche.

Wednesday the 16th at 1 in the Morning Garrow returned with the News that the Rees were willing to come if their critical situation with the Sioux would allow it they had quarreled together and expected to fight a Battle to Day, the Sioux wanted to force and go past the Rees, and Camp higher and nearer to us, which the Rees opposed on Account of the Buffaloe, the Rees came and told us a dreadful History which they had been informed by the Sioux, as they say, that the Sioux had Killed Bijou, and plundered the trading house and were singing the Chevalier 152 the French, and that they would come to our fort and do the same, if we would not come to their own terms trading, and in Regard to their Histories Mr. Manuel resolved immediately to write a Letter to Bijou and sent it express by a Sioux promising a horse if an answer should be brought to the Letter, at 11 A.M. Papin went off with the Letter. Bapteste sent in Meat of 8 Cows, and the Men returned to the hunting Camp, at Sunset Duroche made his Appearance with the Letters of Lewis & Lorimier which gave some Satisfaction from their quarters they had by hunting 12 Pack of Beaver in Store, and purchased ten for their Use. At 11 o'clock P.M. Papin returned, the Sioux had taken the Letter and promised to deliver an Answer, which our hopes that that the News of Bijou's Death was not true.

Thursday the 17th fine moderate weather, in the Evening a party of Rees arrived and camped in the fort.

Friday the 18th fine moderate weather, and indeed considering the Season so far advanced is like Spring; we have but very little snow and of late moderate so that any Work out of doors may be done, at 1 o'clock P.M. we received 2 horse Loads of Meat say 2 Cows, at 6 P.M. Goshe, Legross and several Rees came to fort, to make a hunting party Mr. Manuel having promised a horse to each Chief 4 in Number, when our horses would arrive.

Saturday the 19th fine clear weather, and hard wind all Day, no hunting party of Chajenne arrived from the upper Band with one Chief going to the Rees.

Sunday the 20th, clear and moderate, our hunters say Rees went out and Killed 20 Cows head and foot was received them Evening, purchased a fine Dog of the Chajennes, this Evening the Wife of

Charbonneau a Snake 153 Squaw 154, died of a putrid fever she was a good and best Woman in the fort, aged about 25 years she left a fine infant girl.

Monday the 21st, clear and moderate, paid off our Indian hunters, and they left fort together with the Chajennes for their Village in the Evening, several Rees came from the Mandans, and told us that Immel coming also from the Mandans had been robbed and whipped by the Band of Chajennes at the River Bullet 155.

Tuesday the 22d fine weather, Garrow and Papin went off early in the Morning to meet Immel, at 10 o'clock A.M. Immel arrived and the History of the Indians -- proved to be a lie, it was true that he had a quarrel with the Chajennes, by refusing them their Demands which he could not comply with, but they did forbear being only a few to do harm, seeing him on his Guard at noon the Sleigh arrived as also 15 Mandans with them, in the afternoon the three Men which were sent by Mr. M. L. to meet Sanguineete returned without finding him, they found a track of a party of Indians and were afraid to march forward.

Wednesday the 23d fine weather, the Mandans set off for the Rees several Rees arrived in the afternoon, all tranquil and happy in situation.

Thursday the 24th clear and hard wind but moderate the Rees went off again gave 30lb flour and 30lb Tallow to the Boys for regaling themselves tomorrow, in the afternoon the Chajennes Chief returned from the Village he had heard of the Affair of his Village with Immel, he was very sorry fired his Gun backward on entering the house and promised to see every thing arranged to our Satisfaction, this Evening the Boys had a treat of Whisky and made merry fired 3 Guns at Sunset in honor of the approaching night.

Friday the 25th fine moderate weather, indeed it looked more like Easter, than Christmas, were roused by a Salute last Night some Indians were lurking about the fort, and some Men stood guard in the Bastion they saw some thing in the Dark, fired and had Killed an Indian Dog, taking him to be an Indian the Chejennes were afraight to go to their Village and requested a guard, Six Volunteer offered immediately and escorted them untill out of Danger.

Saturday the 26th, at four o'clock in the Morning Messrs. M. Lisa, Immel and four Men went to the Sioux, to sound their Sentiments, in the afternoon a party of Mandans arrived at fort with several Rees, and at Sundown our party from the Sioux, they rejected our friendship and will trade as they please, or plunder, fine weather.

Sunday the 27th the weather continuing fine, the Mandans went to their Village, Mr. M. L. sent Jolla Glineau along with them, to carry some more Articles to our trader.

Monday the 28th fine weather, made up Equipment for Charbonneau and Woahl to go and trade with the Bigbellies, Baptiste went hunting Killed a Calf.

Tuesday the 29th Charbonneau and Woahl set off for their Station 2 Men and 4 horses, in the afternoon we had the pleasure to receive and Answer to the Letter sent to Bijou, to the greatest Satisfaction of Mr. M. L., Bijou having traded very well more than expected, Antoine Citoleux 156 had started with the Indian from below but would not Keep up walking with him the three which were reported to be Killed were with him, and proved another made History of the Rees.

Wednesday the 30, fine weather the Sioux went off with their pay a horse and 2 Carrots Tobacco.

Thursday the 31st Rain this Morning, nothing remarkable at Sunset saluted the exile year, the Boys and Whisky and a Dance, all Cares and troubles were forgotten and drowned in oblivion and so concluded again a year with, I may say, a cheerful night.

---1813---

January the 1st, The new year was ushered in by firing a Salute and paying the Complement of the Season, every One seemed rejoiced of having lived to see another year, fine moderate weather in the Evening several Rees arrived, they brought a Present for Mr. Manuel, but he would not accept it, I took it and paid pretty high.

Saturday the 2d fine weather and fresh, nothing to remark,

Sunday the 3d fine weather as yesterday, at noon Goshe and a party of Rees arrived, carrying a Pipe to the Chajennes, and came to Council with Mr. M. L. on that Subject.

Monday the 4th fine weather, Goshe went off Cadet Chevalier paid the Dept of Nature at noon he died of a putrid fever.

Tuesday the 5th fine weather and moderate, in the afternoon Antoine Citoleux arrived, in the Evening a Band of Rees headed by Plume D'aigle arrived, carrying a Pipe to Mandans.

Wednesday the 6th the same weather as yesterday the Rees left us and Directly after I found they had stolen our only he Cat TOM, Baptiste went hunting at noon Sanguinette, Latour 157 and Large 158 arrived they had left their horses 31 in Number at the little Chajenne fork 159, prepared for an Expedition to the little Horn. wrote Letters to Lewis & Lorimier, in the afternoon Baptiste brought in the Meat of 3 Cows, cloudy evening.

Thursday the 7th at 4 o'clock in the Morning, Duroche, Machesou and Fouche 160 left the fort with 3 horses loaded with Tobacco and Powder for to go to the little Horn to Mr. Lewis, cloudy and windy many Rees passed by, at 3 P.M. we saw to our Surprise the Men which had started this Morning for the little Horn, returning, they reported, they had seed something like Men and got scared, they would not go on, returned the Goods, but Kept their Equipments for the Voyage which made their tale doubtful, and it seemed they had had no Idea to go, and cheat the Company out of their Goods. Goshe returned from the Chajennes stayed at night.

Friday the 8, Immel went early this Morning with 6 Men after the horses which Sanguinette had left, the Indians Killed 6 Cows for us, and our hunter 2 Bulls and 1 Deer, the Meat of the Bulls is not good and it is only to have the Hides for covering, cloudy and cold.

Saturday the 9th hard wind from N.W. rain and Squally all Day, Cleared up in the Evening and cold.

Sunday the 10th fine cold weather, nothing to remark.

Monday the 11th fine and moderate, " " "

Tuesday the 12th, the same " " " "

Wednesday the 13 the same, the Indians Killed 3 Cows towards evening had a Bull chase on the Ice, the poor Animal when found he was pursued, fell several times, and at last tired could not get up, -- surrounded by many he awaited his fate patiently cold and cloudy.

Thursday the 14th cloudy and moderate, Indian Killed 1 Cow a party Mandans camped at fort.

Friday the 15th the Present I received the 1st instant I had to throw away to the Damage of 114 Dollars on my Side a Lesson I shall not soon forget, in Evening a party of Chajennes came to fort, carrying a Pipe to the Rees and Sioux, some snow fell, but moderate.

Saturday the 16, fine moderate weather, snow melted away, I took a Walk across the River where two of our Men are cutting firewood, I never saw a finer Spot for Cultivation, a fine timbered bottom and a beautiful Prairie late in the Evening two Rees stopped and told us that the Sioux had commenced war on them and had Killed a Young Man in their own Village.

Sunday 17th fine weather, plenty Indians passing by.

Monday the 18th fine moderate weather, in the afternoon the Chajennes returned, the Rees were preparing to war and summoned all Men which were absent from the Village, at Evening a large party of Women and Children took refuge in the fort, to sleep in Security they were lodged just above us in 5 Lodges, and the Men all absent.

Tuesday the 19th hard wind and cold, at 8 A.M. Immel & party Arrived with the Indians in the afternoon a party of Sioux with the Chief Crooked Hand Arrived with the American Standard flying before them they said they were going to the Chajennes to smoke which was a falsehood, when we first saw the Rees run to and fro, crying the Sioux come to Kill, and made a terrible noise, We traded 32 Robes, 20 Beaver, 5 Otter, they went off at their favorite time, at 9 o'clock at night, plenty Rees at the fort.

Wednesday the 20th hard wind & cloudy all the Rees went to their Village except 2 hunters and their families.

Thursday the 21st the wind and weather as yesterday Latour, Machecou, Duroche and Joseph Laderoute 161 were ordered out of the fort, they had made a ?compliant? against the adopted Principles of the Company Mr. Manuel tried every way to get them in Employment but they would neither engage nor hunt nor pay their Debts, Latour had brought 4 horses from the Arepaos Mr. Manuel wanted to buy them against his Debt, NO, he offered 300 Dollars wages per year to hunt for the forts or be otherwise employed, they refused, they only wanted to get the necessaries, and Equipments to squander away, and set by the fireside at ease eat our Provisions, take out of store when pleased and let the Company go Destruction, their Character is through-out vicious and Dangerous, the Company looses considerable by them, say about 4000 Dollars, Laderoute wanted to take a girl which Immel had given him, and Immel would not permit her to go in the Situation she was in, high pregnant, but Laderoute wanted to take her by force like a Brute without nourishment and cold Season, the dispute ended by both remaining, one of the Indian hunters got displeased, on Account we would give him no meat for his family, he sold us each Cow for 3 dollars and then wanted to eat the Meat, avaricious design, last night we saw plenty fires opposite side which included us to believe that the Sioux and fought with the Chajennes made up an Equipment for Mahas poncas ect.. ect..

Friday the 22d last Night Laderoute's Girl had a little Girl, cold and cloudy.

Saturday the 23d, cold and cloudy, our hunters went out returned with the Meat of 3 Cows, the news from this day was that a Sioux Chief was Killed by the Rees, and a Ree Woman by the Sioux.

Sunday the 24th snow and cold, this Day sent the 4 horses promised to Ree Chief for make a hunt.

Monday the 25th clear and cold, nothing to remark.

Tuesday the 26 cloudy and cold, this Evening the Men who guarded the horses found two missing supposed to be stolen by Langus de Buche.

Wednesday the 27th clear and cold Sanguinette and a party went hunting, Immel, Papin and another party went to Langue de Bache, which as suspected, had been the Case as were informed that his party had stolen the horses, they returned in afternoon in several parties, one party found and Indian who had stolen a horse this Day close to the fort of Colla Citoleux, and Immel seeing another Savage stealing the Way of him suspected some thing wrong, made up to him, and found the running Mare of Mr. M. L. thus were tow more horses rescued their report was that they had found no horses nor Langue de Buche he himself was gone to the Chajennes probably to trade

then away for Meat.

Thursday the 28th Mr Manuel L. and 12 Men went to the Camp of Langue de Buche, to demand the horses, on their arrival they took possession of the Indian fort and made some sham prisoners, they did not find the horses and were told they the horses were out hunting, the Indians began to make overtures and begged, promised to return the horses to fort. Mr. Manuel pitied them and left one Man to receive the horses, who returned in the Evening Mr. M & party arriving at noon with only one horse which belonged to Jessaume, the other not given up, this Day fine clear and cold weather.

Friday the 29th, cloudy in the Morning, cold and Snow Squalls, last night Laderoute and his girl deserted through one of the port holes in the Bastion Garrow went to the Village to see how the Rees were situated, he returned late at night and told the Goshe and his Band wished to come and live at the point above us if we would sent horses to carry their Luggage, Indians and hunters went out to Day but Killed nothing.

Saturday the 30th clear but very cold, the hunters went out again but returned the weather being too severe.

Sunday the 31st, moderate and clear, Immel, Sanguinette and four Men with 20 horses started for the Village, to bring the Rees this Day our hunters Killed 4 Cows.

Monday the 1st of Febry, clear and fine moderate weather, in the afternoon Immel and party with Goshe and 4 Lodges of his Band arrived, but instead of camping at point took their Lodgings in the fort, hunters were out again to Day and Killed 3 Cows and 2 deer. ---

Tuesday the 2d, fine weather, nothing remarkable.

Wednesday the 3d the same, the Rees went out hunting and in the absence of the Men the Women began to quarrel among themselves, and left the fort sack and pack, there being 5 Lodges of wood at the point they went there, but returned about 10 o'clock in the night, being afraid of the Sioux, three Indians came to fort with 4 Cows, the remaining camped out.

Thursday the 4th fine weather and warm, the 2 stolen horses were brought in, Goshe and his hunting party returned they had Killed 7 Cows. At 4 P.M. 12 Soldiers of the Band of Goshe arrived, thawed very much and plenty on the Ice.

Friday the 5th, clear and moderate, the Men which came yesterday belonging to Goeshe's Band went off again to the Village to bring their families, at noon became cloudy and heavy Squalls towards evening a young man of the Bigbellies of which we had two families in the fort went out hunting on foot for some deer or Elk, and about 8 o'clock P.M. we heard the Cry TO ARMS and two guns fired at the same time which proved to be out of the fort, opening the Door of the fort we found the above Young Man breathing his last, we found him shot in the Belly and Breast his hunt laid a little ways off, he had Killed and Elk and brought only the Calf, a favorite Dish with the Indians we expected a Return and Kept Guards, the Sioux were perpetrators of this Act, he died 1 hour after, blew a hard gale all night.

Saturday the 6th the wind continuing blowing very hard found 2 Arrows in the fort which had been thrown through the Crevices of the Pickets, the arrows found were of the Sioux Nation, and had been leveled perhaps at some of us, a singular Circumstance happened the Day before with the same young fellow who was killed, he quarrelled with a women the wife of a Mandan in the fort, and was going to Kill her, when her husband who was absent at the time of the quarrel, arrived and being informed what had passed, went to him if you want to fight, do it with the men

and not women come out and measure your Bow with mine but proved coward, next day he met his fate at 2 P.M. our hunters brought in 5 Cows 2 Calfs, a fine afternoon, late at Evening Le Gross arrived at the fort from the Chajennes, he reported they made plenty Robes, and would come to trade in the Spring.

Sunday the 7th disagreeable and snowing, Immel, Sanguinette, Gilneau and Lange went with 8 horses to the Mandans to fetch the Peltries traded with that Nation, Le Gross with all Bravos which were in the fort amounting to 26 to the Village, I made a Census of the Indians remaining in the fort and found 65 souls left most Women and Children -- -- in the afternoon 2 more Lodges, fine afternoon.

Monday the 8 fine clear weather nothing remarkable.

Tuesday the 9th the same.

Wednesday the 10 the same but hard wind Killed 1 Elk.

Thursday the 11th cloudy and hard winds, cleared up in the afternoon, at 9 o'clock in the Evening we heard several guns firing, and directly afterwards 3 Rees young men arrived, who had run away from a fray which they and with the Sioux, they reported that 4 of them were Killed, all Indians in the fort in uproar we watched all night, but nothing occurred.

Friday the 12, clear and cold, the refugees reported last evening that the Son of Goshe, with 2 young Men and 1 Woman was Killed, Goshe started, Mr Manuel L. gave him a Blanket and Vermillion and 30 Loads of Powder & Ball to cover the Corps as customary with the Indians, at 10 A.M. the party returned they had found but 2 Corps of Men and 1 Woman, a Child which the Woman had was taken prisoner and the son of Goshe had found blind as he is the way in the woods to hid himself, they found him laying among the Brushes, when he heard himself discovered, cried out who is there and finding his friends was rejoiced Goshe gave him the Blanket ect.. ect.. and sent him off in the afternoon 10 Chajenne Chiefs Arrived and about 150 Rees to go to the Chajennes for Meat.

Saturday the 13th the Chajenne Chief went away seemingly satisfied and the Rees with them Mr. Manuel Lisa gave 5 Carrots 4 Twist Tobacco 3 lbs Powder and 6 lbs Ball as a present, at 2 P.M. Immel and his party returned from the Mandans with Peltries at 4 P.M. about 15 or 60 Rees arrived from the Village with Plume D'aigle to bury as they said their slain brethren -- fine weather and moderate.

Sunday the 14th, cloudy and snow squalls, the Reed went off.

Monday the 15, cloudy and cold, the Rees returned from the Chajennes.

Tuesday the 16th clear and cold, all the Rees which had hitherto stayed in the fort went off to their Village being advised by the Chajennes to Leave the fort, only 5 Women and 2 Girls remaining, cloudy evening.

Wednesday, the 17 cloudy and hard winds nothing to remark.

Thursday the 18, clear and very cold, Killed 2 Deer.

Friday the 19 same as yesterday, nothing to remark.

Saturday the 20 cloudy and cold, in afternoon Snow Squalls our Sow brought 17 Dead Pigs, a great loss.

Sunday the 21 clear and cold, this day is the coldest we have had this Winter, at 12 o'clock this Day Charbonneau and 1 Engagee arrived from the Bigbellies, himself and Woahl had traded out of 492 Plus only 168, the Chief named Borne was thrown off by the Nation only 5 Lodges remained

with him, and had a separate Village, he persuaded Charbonneau to come with some Powder & ect... ect... to his Village to trade, he went and took 25 lbs of powder and 50 lbs of Ball of which he was robbed off when Charbonneau was informed by the Chief Chrveux De Loup who first Chief among them that 4 or 5 Days after his Arrival from hence in December last, 2 from the N.W. Company had been with them, they came under pretext to trade dressed Buffaloe Skins, and made some Presents to the Chiefs, and began to harangue against the American traders, told them we would give them nothing, but a little powder, and that they the N.W. Company would furnish them with every thing without Pay of they would go to war, and rob and Kill the Americans, this had the desired effect on Borne, and he made several Speeches to that purpose, but being disgraced and not liked he retired without Success, though himself fulfilled his promise to rob, but was afraid to Kill, thus are those Bloodhounds the British constantly employed and do every thing in their Power to annoy and destroy the Americans and their trade, they have nothing to fear on Account and in Respect of our Government, all though in our territories, and in fact our Government does not care to meddle with them, nor how many Citizens are sacrificed by the British influence with the Indians, if there was a fort at the River St. Peters 162 as was promised by Liet. Pike 163 and another in these Parts of the Missouri, it would do infinitely good to hunters and traders, and bring great wealth to the States, but this is out of question, they have a strong Garrison at Bellefontaine, and that is enough, the soldiers parade, eat and drink and spent their time in Idleness, is there any necessity to keep so many idle fellows in a settled Country, they do not even prevent and cannot protect out Settlers about 80 or 90 Miles above, and we have seen outrages committed by the Indians, horrid to relate, there was after the Sheep were destroyed by the Wolves, a small Garrison erected on Salt River 164, Mississippi which will do more good than all Bellefontaine, and if one was to be erected about 500 Leagues up the Missouri it would be very good to Keep the Indians in their Bounds, Provisions are plenty and the other necessaries could be sent by the traders, but it has been frequently the Case, and has been said our Citizens have no Business to go among the Indians to trade but the profits thereof are not considered, and this Branch of Business will never succeed if not protected by Government, to seat of the British Traders.

When Charbonneau passed the Chajennes which are above us about 4 Leagues 165, they warned him to be cautious and take care of his Life that they had discovered 27 Men lurking about, supposing to be the Saunies Sioux, he arrived however without accident.

Monday the 22d fine weather and cold some Buffaloes in Sight, 7 Men went across the River to hunt, and returned about noon, having Killed but 1 Cow, 2 Bulls the weather being to cold, to pursue the Buffaloe, at 1 o'clock 45 Min. P.M. we were alarmed by the Cry TO ARMS, Archambeau 166 is Killed, and by sorting found us surrounded by Indians on all sides, out the reach of our Guns, Archambeau was hauling hay with a Sleigh from the other Side, and just on coming on the River he was shot and Killed Immediately he was a very good Man and had been 6 years on the Missouri, we put ourselves immediately in Defense, and placed two swivels on the Bank of the River, but unfortunately of Balls did not reach across, and those on this Side Kept out of Reach of our fire, and dare not come to an open Attack, their Numbers was between 4 and 500, they took the Scalp and cut him nearly to pieces, they marched off about 4 o'clock, leaving us to lament the Death of a fellow citizen unrevenged, a party of our Men went across to Bring the Croups which they found terrible mangled, they brought 29 Arrows which were sticking in his body and a good

many more broken to pieces, his Head broken the Brains scattered about his nose and ears cut off his teeth Knocked out, and more terrible Deeds which I will not express with my Pen. We mustered in the Evening and found ourselves 26 Men strong, selected Guards for the night, divided in 5 Watches, 4 Men in each and 3 in each Bastion, gave the Boys a Draw and every one was in Readiness for defense to the last moment our situation in general is not very lasting at this time menaced by the Sioux, below, and we dare not trust too much the Chajennes above, they have made a vast quantity of Robes and wish to augment the trade we are told and they showed a Horn which they made which holds 40 Loads of Powder, instead of giving 20 Loads for a Plus 167, I hope we will have no Row with them as to the Rees we fear nothing, they are a sett of lying and good for nothing fellows.

Tuesday the 23d passed a quiet night, and our Guards saw nothing, after Breakfast Immel and four Men went out reconnoitering on swift horses, returned at noon and reported they had found the tracks of the war party and judged by the Size of the Road they had made to have about 400, the Road went right across the Hills and the party which was stationed above the fort say about 60 had met them at right angles, about 2 Miles west of the fort, we interred the Remains of our poor fellow Citizen Archambeau, and guarded in the afternoon saw some Buffaloe chased on the other Side, supposed by the same Party, we also saw Dogs on the Ice which returned to the Woods at the point above us, and made us certain there was some hid in the Woods, as also by a track which we found, descending the Coast on our Side 1 Mile below the fort, set guard for the Night had a fine Day but cold and cloudy evening.

Wednesday the 24th passed a tranquil night, but saw some running fires, the Signal of Indians after Battle, 3 Men went to Langue de Buche's Camp to hear of their Situation a fine Day but cold, set all our Dogs our of fort for guard.

Thursday the 25th passed a quiet night, I guarded till 4 o'clock in the morning the 3 Men went out yesterday did not Return, Dogs out guarding, dark and cloudy evening.

Friday the 26th snowed last night and this Morning we are constant watching in our careful Situation, we hear and see nobody from all around us, and are like Prisoners in Deserts to expect every moment our fate.

At 3 o'clock P.M. our 3 Men returned with Machecou, the whites and Indians who camp above us had heard nothing of the fracas which had happened, the Chajennes had the next Day after the affair, 24 horses stolen by the Sioux, undoubtedly the same party who attacked us there Scheme was to plunder the fort, expecting that we would divide and a party would run across the River to rescue the Man which was Killed, and then come between us and plunder and Kill those in the fort. cleared up towards evening and cold.

Saturday the 27th passed another tranquil Night cloudy at Sunrise, cleared up at 8 A.M. cold weather.

Sunday the 28th, Snowed last night and this Morning the most which has fell this Winter about 4 Inches deep, cleared up in the afternoon with cold weather. nothing remarkable these 2 Days past.

Monday the 1st of March, 1813 clear and cold, after dinner Charbonneau and Leclair 168 set off for their Stations at the Bigbellies took some Powder and Ball to complete his Equipment, they were escorted by 5 of our Men, untill he would be out of Danger, at Sunset it began to Snow.

Tuesday the 2d a vast deal of snow had fell last night, but was clear and cold in the Morning, cloudy afternoon, at 2 P.M. 7 Men and 2 Women of the Rees arrived at the fort, the first which

made their appearance since Goshe left us, 4 Men 1 Woman went to Langue de Buche the others remained.

Wednesday the 3d, clear and cold, the Indians which arrived yesterday said that the upper Village of the Rees would come this Day to trade, which however proved to be a lie, at noon 7 Rees arrived from above, as also our party which had escorted Charbonneau, with Latour, Machecou, Duroche, and Laderoute 2 Squaws and 3 Children, a party of Men went over the River to out firewood, had a fine warm Day and cloudy evening.

Thursday the 4th last night about 3 inches of snow had fell cloudy and cold Morning, in the afternoon 4 Mandans arrived from their Village on their way to the Rees, no news.

Friday the 5th Snowstorm last night and continued snowing all this Day the Mandans pursued their Route.

The Journal of a Fur-Trading Expedition  
on the Upper Missouri  
1812-1813

By John C. Luttig

Clerk of the Missouri Fur Company  
1812

Friday the 8th of May, I started from St. Louis to Bellefontaine 1 to meet the Boats bound up the Missouri River, arriving there at 1. o'clock P.M., took in Meal and Corn, arranged the Loading, and started at 3. o'clock, went about 4 Miles with a head wind.

Saturday the 9th head wind and strong Currents made very little way, at noon met Mr. Immel 2 with Boat coming from his winter quarters of the Sioux, this Morning Mr. Manuel Lisa came on Board at the Charbonnier 3 made about 5 miles distance.

Sunday the 10th, came too opposite 4 St. Charles 5 at noon Mr. Manuel Lisa crossed for some Men, rested all Day.

Monday the 11th Mr. Manuel Lisa & Choteau 6 came on Board at 9. o'clock A.M. took in some traps, and made the best of our way at 12. o'clock, having a head wind made very little distance.

Tuesday the 12th, head wind and strong Current, made not much Distance.

Wednesday the 13th, the same as yesterday.

Thursday the 14th, the same .. ..

Friday the 15th in the Morning about 8 o'clock - Mr. Majet 7, Patroon 8 of the large Boat fell over Board on account of a Log slamming against the Rudder, he saved himself by taking hold of the Rudder, and got on Board, both Rudder Irons broke and Lost, were detained to make a steering Oar, head wind all Day, sent some Irons on shore by Mr. Richardson 9, and camped at Burgois Creek 10.

Saturday the 16th, detained on Account of the Iron, which however came about 11 o'clock A.M., hard Rain and bad weather, fixed the Rudder and went about 2 Miles distance, Killed 1 Deer.

Sunday the 17th blowing very hard ahead and strong Current we had to stop for several hours, made sail, about 2 P.M., just at starting a Bear crossed the River towards us, Killed him close in shore, and found him very fat.

Monday 18th, still head wind the Rudder Irons of the little Boat broke, and had to lay by all Day. this Day Killed four Deer 2 Turkeys.

Tuesday 19th bad weather and head wind made about one mile all Day distance.

Wednesday 20, head wind and strong Current, made not much Distance.

Thursday, the 21. arrived at 11 o'clock A.M. at Cote sans Dessin 11, rested all Day. traded some Beaver, and took LaChapel 12 on Board.

Friday the 22d. started at 6 in the Morning with a favorable breeze, found the River more gentle, had fine weather. Killed two Deer and 1 Bear, made good head way.

Saturday, the 23d, fine weather & fair wind made about 25 miles distance. Killed 1 Deer.

Sunday, the 24th clear weather and fair wind made about 20 miles, and camped about 1 mile above the Widow Cole 13, Killed 1 Deer and 1 Bear.

Monday the 25th commenced with a thunder storm and hard Rain, cleared up about 11 A.M. with a fine fair wind, made about 27 Miles and Killed 1 Bear.

Tuesday the 26, hard Rain and squalls all Day made not much distance, killed 1 Bear 2 Turkeys.

Wednesday, the 27. bad weather and head wind again, killed two Deer, and not much distance.

Thursday, the 28, head wind and strong Current accompanied by heavy Squalls, LaChapel killed a fine female Bear, and 3 of her Cubs, and 1 Turkey, made only 5 miles this Day and camped at black snake Creek 14.

Friday the 29th departed at Day light, opposite the little Osage Island 15 we were obliged to stop on account of head wind and strong Current, arranged a new top Mast, went fishing with the Seine and caught 13 large fish 1 Turtle, the wind having somewhat abated we made way at 2 P.M. but still wind a heads, at the little Osage Prairie 16 we stopped for the little Boat which got around, met a shoal of Cat fish close in shore the Men who were Cordelling killed one with a stick which weighed after cleaning 40 lbs, went on a little way and found a small Run full of fish, the other Boat not having come up as yet we took our Seine and caught 161 Bass and other fish, which we salted, camped and killed 2 Deer.

Saturday, the 30th fine weather, but very hard water, swung 3 times at a point of a sandbar, the little Boat broke her Rudder Irons again, repaired at Dinner, Killed 2 Deer 1 Beaver 1 Pelican, made not much Distance.

Sunday the 31st fortune still ahead, strong currents and head winds were our Daily Companions, made no way. Killed 2 Deer and 1 Beaver.

Monday the 1st of June, hard wind a head with fine weather met 4 Batteaux going to St. Louis, a little above the Prairie du Feu 17 had to stop and make another top mast of Oak, the last one

---

made of Hichberry was crooked and good for nothing, Killed 3 Deer 1 Bear.

Tuesday, the 2nd, the wind and weather the same as yesterday. Killed this Day 2 Deer and 1 fox, camped at fire Prairie Creek 18.

Wednesday the 3d fine weather and head wind and Current as usual at 10 A.M. arrived below fort Osage 19, saluted with 17 Guns which was politely returned by the Commander Capt Climson 20, on arrival were invited to Capt Climson, who treated us very handsomly, discharged our freight for this place and arranged our Cargoes, had a present made of Ice, which regaled us exceedingly.

Thursday the 4th started after breakfast, about 9 A.M. met several Perogues coming from their Winter quarters, Mess fr Robideau 21, La Jeuness 22 & others, Louis Bijou 23 embarked with us, as also two hunters embarked at fort Osage Greenwood 24 & Laurison 25 Immel went back to the fort for his dog and on his Return in formed of the party going to Santa fe 26 he met this Day at the fort. strong Current, made 9 Miles Distance.

Friday the 5th wind and Current as usual. fine weather made about 12 miles distance Killed 1 Deer.

Saturday 6th the same wind & Current, Killed 3 Bear the 3 Deer 1 Turkey camped opposite Can-sas River 27 distance 15 Miles.

Sunday the 7th a fine morning, in the afternoon cloudy and distant Thunder, Killed 2 Deer, made 16 Miles distance, camped 4 Miles above little Platte River 28.

Monday 8th fine weather, at 8 A.M. a fair Breeze sprung up though feeble, we made 18 Miles distance, Killed 3 Deer 3 Bear, caught 17 fish, camped 2 Miles below the old Canzas Village 29.

Tuesday 9th headwind again, strong Current, made only 9 Miles distance this Day, Killed 6 Deer.

Wednesday 10th, fine weather, had a small Breeze in our favor, Killed nothing today, distance made, 19 Miles.

Thursday the 11th fine weather head wind but still, all hunters out, passed the upper old Canzas Village, Killed 7 Deer, distance 15 Miles.

Friday the 12th, fine weather, made good way cordelling the wind all Day against us, distance 21 Miles camped on a large Sandbar where we found a quantity of turtle Eggs, this Day lost one of our Swivels when swinging round and run against the other Boat, Killed 3 Deer, 2 Turkeys.

Saturday the 13 the fine weather and head wind, this Day had bad luck, crossing for some of our Hunters we came in hard water, and cordelling on a Prairie encountered many Rafts, after having passed we dined 2 Miles above the Prairie 30. Mr. Manuel L. put our 2 Hogs in the River to

By John C. Luttig

---

wash but they swam off, we were obliged to turn about and followed them several Miles, after two Attempts we caught them, turning a rocky point we had hard work, the little Boat which was a head swung round and went off like lightning, the Cordells broke, and we were obliged to put the hands of both Boats to one to mount distance 12 Miles killed 5 Deer 1 Racoon,.

Sunday the 14th fine weather, but head wind, passed the Nabowa River 31 at noon, camped 8 Miles above made 16 Miles distance and had this Day 4 Deer Killed gathered about 100 turtle Eggs.

Monday 15th about one o'clock this Morning it began to blow furiously, were obliged to put out our fires, the wind blowing form all quarters, a clear Sky, finished our cooking in the Morning at 6 in the Morning went « miles but were stopt by hard head wind and Current crossed the River to find some Hickory for making an Axe handles and Ramrods, but were disappointed, crossed again and sopped till 5 P.M. started about 1 Mile took the Cordell the Boat swung and went down the River like the Wind in full speed, leaving all hands on shore, the few which were on Board landed the Boat opposite to our last nights Lodgings, our hands came on board made a new start, but night overtook us, got on a sandbar and were very near lost running against a Sawyer 32 had to cross again to the North Side, the other Boat came to close swept by the Current we unshipped our Rudder, run against a tree and broke her mast, this ended this dolefull Day camped at 11 o'clock at night distance 1 « Mile, left our hunters on the opposite side Killed 1 Deer, wind N.W. fresh Gales.

Tuesday the 16, hard wind from N.W., went about 1 Mile in the Morning when we had to stop, all hands went out to gather wood for Axe helms, Ramrods and a new Mast, and Game, the first was found but no meat, our hunters on the opposite Side had also been unsuccessful, and crossed the River on a Raft, facing wind and Current about 6 Miles swimming. Killed 1 Deer.

Wednesday 17th wind still a head, but abated, made this Day 16 Miles, Killed 3 Deer, when camped a fair breeze sprung up.

Thursday the 18th at 3 o'clock in the Morning a heavy Thunder storm, at starting we had a fair wind which however lasted not long, had to try oars. Poles & cordells all Day, pass the Nimohar River 33 at 11 A.M. dined at Wolf River 34, and camped on a Sand Bar, made 16 miles distance Killed 3 Deer.

Friday, the 19th During Night blew very hard until 6 in the morning, we stopped for some time having head wind and strong Current, the River high, made this Day about 15 Miles distance by hard work. Killed nothing, allthough 7 hunters out of Boats.

Saturday, 20th, hard Gales all night, in the Morning cloudy with some flaws of wind in our favor, about 8 A.M. the wind increased, and we sailed at intervals very fast, until 2 P.M. when Thunder storm attended with a hard rain arose. this Day at 10 A.M. passed Ichinipokins River 35 at the North Side, at 7 P.M. little Mahonir River 36 on the South Side, -- made about 20 Miles distance,

## The Journal of a Fur-Trading Expedition on the Upper Missouri 1812-1813

By John C. Luttig

---

Killed 2 Deer, Game scarce.

Sunday, the 21st fine weather with head wind and Currents, all hunters out, on the Island Beaux Soleil 37. Killed 2 Deer 3 Bear, 1 Turkey, 1 Rabbitt the hunters on the Prairies killed nothing, distance about 15 Miles, camped 1 Mile above the Island.

Monday, the 22d, cloudy had now and then some Sailing, the River still rising and strong Currents, at 4 P.M. a thunder storm arose which raged furiously, the hurricane swayed the trees every where luckily we got under some Willows and lay safe, were obliged to Camp, distance 10 Miles, Killed 1 Deer, 1 Turkey.

Tuesday the 23d started at Day light as usual, passed Le Cote grand Brule 38, opposite the head of, we had to stop to make a new top Mast for the other Boat. fine weather, Current very hard, River still rising, distance 14 Miles, Killed 3 Deer.

Wednesday, the 24th, St. John 39, started at 3 in the Morning with fair wind, but had not come 1/4 Mile when the Wind changed ahead, worked hard against the Current, very warm and clear, made only 9 Miles in 14 hours distance Killed 1 Deer 2 Turkey, 2 Racoons, found plenty fresh tracks of Elk.

Thursday, the 25th This Morning a fine breeze sprung up and we had sailing all Day, but by the Mismanagement of the Patron of the little Boat were detained several times we camped before Sunset to let the little Boat come up with us, about dark we heard a Gun, but she did not come to our Camp, the wind blew fresh all night made about 15 Miles distance.

Friday the 26th at 2 o'clock 25 Minutes in the Morning we turned about to look for the little Boat and found her safe 1 Mile below our Camp, we set sail, and went pretty well till Sunrise, when the Wind failed, very strong Current, and hard work to gain way, at 7 A.M. Baptiste Latouipe 40 of St. Louis, fell over Board and never seen again, the two Boats being close together, he could not rise, or was entangled by the Roots of a large tree, which he was going to strike with his Pole. -- made River Platte 41 at 11 A.M., dined and weather very hot, remained three hours, at 3 P.M. passed River Papillion 42 made 12 Miles distance, Killed 1 Deer.

Saturday, the 27th departed as usual and the Water not so strong as below, the River Platte, this Morning passed Mosquito River 43, distance 20 Miles, Killed 4 Deer 1 Goose.

Sunday the 28th, made pretty good way in the Morning but about 10 A.M. the Rudder stay broke of the little Boat we were obliged to cross the River to find a place to unload her, and make a steering Oar, which took up all Day. distance 6 Miles, Killed 1 Deer.

Monday the 29th This Day had at Intervals some sailing the River crooked as a zick zack, passed River Boje 44 at 9 A.M. point Jacques 45 at 2 P.M. and council Bluff 46 at 4 P.M. distance 20 Miles, Killed 1 Deer.

## The Journal of a Fur-Trading Expedition on the Upper Missouri 1812-1813

By John C. Luttig

---

Tuesday, the 30th fine weather and sailing we pushed on very well, and would have made considerable way if it had not been for the other Boat, were obliged to stop to make another steering Oar for her, during which time our hunters killed 3 Deer, distance 27 Miles.

Wednesday, the 1 of July. fine weather and fine sailing at 3 P.M. passed Soldier River 47, Missouri very crooked, no hunters out, distance 34 Miles, saw some Elk.

Thursday the 2d fine weather head wind but good water made good way, cordelling all Day, camped at the Mouth of the little Sioux River 48, distance 23 Miles, Killed 4 Deer 1 Duck.

Friday. the 3d of July. fine weather and light favorable Winds in the forenoon., at 1 P.M. passed Coup Loysel 49, distance 18 Miles.

Saturday the 4th of July., we had ourselves prepared to salute the Day, which gave Birth to the Independence of the United States, but a Salute from Heaven prevented us, a thunder storm arose at 2 in the Morning and the Bank of the River where we camped fell in upon us momentarily. Mr Manuel was nearly drowned in his Bed, and we had run off., rowing and poling all Day, about Sunset a favorable wind sprung up and carried us several Miles, were obliged to leave a large Buck and an Elk which our Hunters had Killed behind, camped at Black Birds Hill 50, distance 15 Miles.

Sunday the 5th fine weather at 8 A.M. came to a Channel which we entered, in hopes to go through, to cut off 6 -- Leagues of the River, but were disappointed, having ascended within 150 yards toward the head of it, the Water became so rapid as to endanger our Boat to sink, we returned with Difficulty, at a little Distance found another, which was also tried, but to our Sorrow found not Water enough at the head and returned took the old Route, and were stopped at 5 P.M. by a Thunderstorm, distance 15 Miles.

Monday the 6th rained very hard last night, cleared up and we made best of our way at 4 o'clock in the Morning had a few Squalls and rain, at 8 A.M. a fair wind arose and had fine sailing for several hours, the River very crooked had to row at times, at 2;30 P.M. passed Mohaw River 52, and opposite the Village at 4 P.M. 2 Men went to see if any Indians were there, they returned not being able to get to the Village on account of swamp and musquitos, camped on a Sand bar, distance 30 Miles.

Tuesday, 7th started at Day break, cloudy, head wind and rain, in the afternoon passed Floyds River 53, Sun River 54 and at dark Big Sioux River 55, distance 18 Miles.

Wednesday the 8, Head wind and Rain, hard work all day toward Evening had some sailing on a Sand bar 56, Musquitos in Clouds. distance 18 Miles, Killed 1 Deer.

Thursday the 9th departed early, took a Channel which we found shut up, and lost the Morning,

---

By John C. Luttig

---

at Dinner several Hunters went out to make fires to give Notice to the Indians of our approach, passed a small River named Iowa 57, in the afternoon had fine sailing, distance 24 Miles, Killed 1 Deer.

Friday the 10th Had wind and stronger Current all Day. the River very high, left 5 Hunters on shore, - distance 10 Miles Killed 1 Deer.

Saturday the 11, Rain & cloudy Morning, at 8 A.M. cleared up with a fair wind, took in our hunters, set sail, at noon waited one Hour for the little Boat passed Vermillion River 58 on the North side and at 5 P.M. the River Arck 59 on the South side waited for the little Boat and had to camp before Sunset to let her come up with us, lost some elegant sailing on her account distance 33 Miles.

Sunday, the 12th, set sail early in the Morning and by all appearances were to make a good Days Journey, but the other Boat not keeping up with us we were obliged to wait several hours for her, and lost considerable in making way, the wind changing at noon, at 8 A.M. passed River Jacques 60, Missouri still high, distance 18 Miles.

Monday the 13th, head wind and hard Current, rowed, poled and cordelled all Day, several hunters went out returned at 4 P.M., no game but had seen many fresh track of elk, waited 2 hours for the other Boat at 5 P.M. made Island of Bonhomme 61 and Ponca 62 Country we had flattered ourselves to meet some Indians of Buffaloe but were dissappointed, by this time we had passed the Countries of the following Nations, Little and Big Osage 63, Mahas 64, Otoes 65, Yenctons 66, & Kansas, this Morning Immel & Lorimier 67 went a head by land, all hunters went on the Island, Killed but 1 Elk, two of them camped on the N. Side and Boats on the South Side of the Island, distance 18 Miles.

Tuesday, the 14th fine weather head wind and hard water at 7 A.M. took in our hunters they had killed 1 Elk 1 Deer. had to stop again at 9 A.M. to arrange another Mast for the other Boat and fix the old Rudder, crossed the River where we found some fine Cedar for the Purpose, stayed all day unloaded and loaded, put up the Mast and Rudder, camped and made this Day 4 Miles distance Killed 1 Deer.

Wednesday July 15th, made an early start and good way at 9 A.M. met the Company Boat coming from the Rees 68 with Peltries, Papin 69 and Men. Mr Manuel Lisa thought proper to take her back a gain having not sufficient Loading to defray the expense, passed River Luipere 70 and another small River 71, in the afternoon Squalls and Rain, camped 3 Miles below Liquicourt River 72, a distance 16 Miles.

Thursday 16 July, rained all night, and cleared up Sunrise at 8 A.M. passed Leauquicour River very high and full. Mess. Sanguinett 73 & Bijou went out to make fires as we expected the Indians soon to meet, camped opposite an Island 74 not far from Poca River, distance 18 Miles Killed 1 Deer.

## The Journal of a Fur-Trading Expedition on the Upper Missouri 1812-1813

By John C. Luttig

---

Friday the 17, a fine Morning the Mackina Boat took 5 hunters to the Island and we continued our Route passed Ponca River 75, cordelling on the South Side along the Hills till Dinner; the Boat came up and brought 1 Deer 1 Beaver cordelled all Afternoon distance 17 Miles.

Saturday 18, cloudy about 8 A.M. a fine favorable wind took us and we had good sailing untill 2 o'clock P.M. when we discovered 3 Lodges of Sioux Indians 76 and found Mr. Immel & Lorimier, the Chief of them, LeNez 77 traded with us 32 Beaver 3 otter 2 Robes bufflao 3 Bladders of tallow and upwards of 300 lbs. of dried neat. camped 1 Mile above them, killed 1 Deer distance 24 Miles.

Sunday the 19th fine Morning about 7 A.M. we took in 2 Sioux who had been hunting, belonging to a band on white River 78, gave us a buffaloe tounge and stayed on Board all Day, our hunters went in search of Buffaloe but found none, passed Little Cedar Island 79 distance 18 Miles.

Monday the 20, set sail at 4 in the Morning with a fine wind the Indians left us, sailed till 10 A.M. when the wind changed and blew hard a head, at 4 P.M. met with Sioux Chief called the Sleeper 80 and 20 Soldier had some talk and camped with them, distance 15 Miles.

Tuesday the 21, departed at Sunrise as also the Indians we stopped at a small River 81 where 4 Sioux Chiefs came to us, the Black Sky, Black Buffaloe 82 Big Horse 83 and Crooked hand 84 we had Counsol and they informed Mr. Manuel Lisa, that at present they had nothing to trade, but would have plenty next fall Immel went with them to their Village, 3 Chiefs and 2 young Man remained to fix on a spot for a trading house they went with us across the River to the Northside 1 Mile below where we camped, laid out the house for Mr. Bijou 85 who was to remain to trade with the Yentonas, Tatons 86 Shaunee 87 Mr Manuel present presented the Chief with 10 Carrots of Tobacco and some Powder and Ball they were seemingly well contented, Killed 1 Buffaloe and the Indians brought also some fresh Meat.

Wednesday the 22d rose early, all hands except some lazy Rascals under pretence of being sick went to work. -- at 3 P.M. Mr. Immel returned with 2 young Indians, the Chief Black Sky had presented him a horse, he reported the Chiefs and warriors would be with us to morrow -- he found upwards of 400 Lodges and plenty of Buffaloe in the Morning when he started from there he saw several Buffaloe enter in the Village, this Day raised part of the house, Killed 1 Deer, caught several Catfish and 1 Beaver.

Thursday the 23, early to work, but unfortunately the house fell down when nearly raised, and had to go over the same work, caught 7 fine fish in the forenoon which provided a fine Dinner, at 5 P.M. a party of Indians came opposite which we crossed and found them to be all Boys about 30 in Number they came to give us a Dance, they were all neat and handsome clothed, more so then I saw the Sioux of the Mississippi, in the Evening they danced and we gave them some Biscuit hardtack and 1 Carrot Tobacco they bought plenty Meat with them and gave plenty to the Boats.

Friday the 24th finished the house, in the afternoon sent Mr. Bijou, Equipment on shore, the

By John C. Luttig

---

Indians went over the River, and Mr. Manuel Lisa gave the Chief black Buffalo the present from Government as also for crooked hand which Chief had promised to come over but did not come, he left it with Mr. Bijou to be given to him whenever he would arrive there left 2 hunters and 3 Engagees with Bijou, discharged Bapt. Alar 88 a good for nothing fellow.

Saturday the 25, set sail at 4 in the Morning, fair wind took 6 Indians with us which we landed and stood under sail till 11 A.M. when we took the Cordell for about 1 hour dined, and set sail again, passed white River at 2 P.M. the slakening about 4 P.M. we took the Cordell again, Mr. Manuels Negro Boy Charles went out the Boat to get some grass or grasshoppers for a Prairie Dog which he had caught some days ago, he the Boy went upon the Hills unperceived, they are very high he fell down a precipe overhanging rock, precipice into the River, the Man who was steering the Mackina Boat saw it , and cried out to Mr. Lewis who was walking in the Rear of the Boats to save the Boy but Mr. Lewis 89 unfortunately did not understand the men however saw something struggling in the water, but thought the Boy was a swimming, when the Men came towards him, they went to find the Boy, alas he was gone, he must have been stunned by the fall or otherwise would have saved himself, the River was not 4 feet deep, he drowned at 5 o'clock P.M. we searched for him some time but the Current had swept him off, cordelled a little way, crossed to an Island, set out 3 hunters, at sunset the Wind fair, set sail, took in our hunters, camped on a Sand bar the wind blowing fresh all night distance 30 Miles.

Sunday the 26, set sail at 3 in the Morning, at 8 A.M. Immel & Queenville 90 went out to hunt and to visit his house were he lived last Winter 91, we came up with the house very fast stopped a few Minutes the wind fresh in our favor, took in Immel, Queenville had run after some Buffalo, we pretty fast and were obliged to stop for Queenville, who was far behind we gave him signal, and embarked him, he had Killed 1 Buffalo but we left the Meat, taking care of the wind at 1 P.M. made Big Bend 92, camped on the North Side. -- Distance 36 Miles.

Monday the 27th departed at 4 in the Morning a fresh wind sprung up and carried us out of the Bend, the wind slackening we had to take to our Oars, at 8 A.M. we set sail again and sailed till 11 A.M. after Dinner Immel Lorimier and Greenwood went out the Boat to go by Land to the Rees. cordelled all afternoon, and camped at the point of Cedar Island 93, distance 21 Miles. Killed 1 Deer.

Tuesday the 28, set sail with a favorable wind at 3:30 minutes in the Morning, but the wind falling had to take to cordelling, last night caught 3 Beavers, Killed Cabri 2 Elks, distance 18 Miles

Wednesday the 29th head wind and clear, cordelling all Day at 4 P.M. passed little Missouri River, Killed 1 Buffalo 2 Deer 1 Badger, distance 21 Miles

Thursday the 30th fine weather but head wind, had to cordell all Day saw a band of about 50 to 60 Elk, 3 of them close to us in the River, but had no Luck to Kill the Mackina Boat was gone a head with the hunters and did not come to our Camp that night, distance 18 Miles.

By John C. Luttig

---

Friday the 31st departed early cloudy and head wind cordelled all Morning at 7 A.M. met the Mackina Boat they had Killed 2 Dear and 1 fawn, crossed the River after Breakfast the wind becoming very hard made very little way. Killed 1 Buffaloe 4 Deer, distance 12 Miles. This Morning we left our old she Cat at Camp, at breakfast I missed her, and Mr Manuel sent a Man for the Cat, he returned in the Evening with the Cat to our great satisfaction this Remark may seem ridiculous, but an Animal of this kind, is more valuable the this Country than a fine Horse. Mice are in great Abundance and the Company have lost for want of Cats, several Thousand Dollars in Merchandie, which were destroyed at the Bigbellies station, there has not a night passed since our departure from Belefontaine where I got that Cat, that she has not caught from 4 to 10 Mice and brought them to her Kittens.

Saturday the 1st of August last night caught 2 young Beaver, cordelled all Morning, still and very little Current at 10:15 A.M. passed Chajenne River 96 very low at this time saw several Buffaloe, chased, but without Success, crossed the River, and cordelled along the Bluffs, at Dinner we stopped at some Bluffs above Chajenne River about 4 Miles, where I found plenty of Iron Ore, and somewhat higher up signs of Saltpeter. Distance 18 Miles Killed 2 Deer.

Sunday the 2d some Rain fell last night, cloudy in the Morning, 6 A.M. cordelling the little Boat joined us, they had meat of 3 Buffaloes, one Cow they found wounded with an Arrow, she came into their Camp. Distance 18 Miles Killed 1 Deer.

Monday the 3 at 2 A.M. a Canoe with Garrow 97, the Interpreter, 2 Engagees and Goshe 98 a Ree Chief came to us, they brought some Corn and a Letter from Immel at noon passing along a Bottom, we found a Mocassin tied to a tree in which we also found a Letter from Immel informing us they were well and would be at the Rees from thence in One Dat. Distance 21 Miles, Killed 5 Deer.

Tuesday the 4th headwind as usual, cordelling out Hunters went out this Morning and at dinner brought 3 Deer 1 Buffaloe 4 Ducks, passed Mauro River 99, in the afternoon Killed 1 very large Buck. at 5 P.M. a heavy storm arose and we had to lay by. at 6 P.M. 2 Skin Canoes met us, with Lorimier, Greenwood, Dougherty 100 and Weir 101, it continued raining and we were obliged to Camp. Distance 15 Miles.

Wednesday the 5th cleared up in the Morning and we went on Cordelling, but the good Luck they got fast 3 times, at Dinner our hunters brought 1 large Cabri and 2 Deer very fat, 1 Goose, pursued our Voyage and at 5 P.M. met 3 more hunters of the Company from the Rees, camped 3 miles below the Grand River 102. --

Thursday 6th at 6 A.M. passed Grand River, Mr. M. Lisa had intended to build a fort here, but finding the Situation not eligible for a Fort, moved on and camped about 12 Miles below the Rees. Distance 15 Miles.

Friday the 7th has a little Wind in favor set sail and at 12 o'clock M. arrived at fort 103, all Indians

By John C. Luttig

---

in Motion to a Number of about 1200 souls, Mr. Manuel L could not immediately go on shore, as he had his Leg strained this Morning when Jumping out of the Boat, and got very Lame, a horse was procured and he went to the Village and held Council with the Principal Chiefs did not come to Council and Jealousy reigned among them, about 2 P.M. the Women and Children who were about our Boats were called away to the Village, and in a few Minutes the Coast was clear, this was not a friendly Signal, and we prepared for the worst, after Dinner Mr M.L. -- resolved to go to the Fort, he went with 10 armed Men and sent for the Chiefs to explain their Conduct. when it appeared that Goshe had received his presents and they not, and further complained on Account of the Merchandize to be taken away from them to trade Mr. M. L., came to an absolution and they gave up, they were satisfied to have a Fort built at their Village about 12 Miles distance 104. La Plume 105 the Chief of the 2d Village received his Present and harmonie was restored, they traded some in the afternoon loaded the Peltries ect... ect... and prepared for Morning, set a Volunteer Guard, though guarded, the Indians would pilfer every thing they could lay their hands on.

Saturday the 8th started early without trouble, several went by Land as also some Indians, Goshe and La Plume overtook us at noon, in order to stop us and not go too high from their Village 106, but the Place where we were did not answer for our purpose pursued our Route, the Chiefs went back seemingly displeased, camped 12 Miles above the Village, last night had our 2 Cats stolen.

Sunday the 9th of August started early and at 7 A.M. arrived at a beautiful Prairie Bluff with several Bottoms of fine timber around, made Arrangement for our Camp and in the afternoon discharged the Boats, every Men happy to have come thus far of our Voyage 107.

Monday the 10th sent out one Boat across the River with hands to cut timber for a Blacksmith Shop and Provision house all hands employed to fix a temporary Camp.

Tuesday the 11th, no news from the Village until noon when our Interpreter Garrow and a Soldier arrived, every thing quiet, they reported that a Shuking Big Belly entered the Village at dark yesterday and Killed 1 Ree.

Wednesday the 12, were informed a war party had gone on, to fight the Bigbellies 108.

Thursday the 13th, Mr. M. Lisa had resolved to go up with a party to the Bigbellies to arrange Matters with them and bring down the Peltries, the Bigbellies having 2 hunters and stole 26 Company horses, as also detained the Trader they had with them, he accordingly went this Morning at 8 o'clock and 26 Men with him. At 10 P.M. 60 Rees composing a War party arrived they requested something to eat, our hunters had just come in with 3 Buffaloes and 1 Deer, we gave them some Meat, and ferried them across the River, this Day cut timber for different Buildings, at the same time the Rees were crossing the River 8 canoes move in sight coming down with Meat, the Men in the Canoes saw so many Indians crossing, took the terrors put their Canoes on shore and run off, both parties thinking they were Enemies, as soon as the war party arrived on the other they gave the Halloo and run in full Speed to the Canoes. finding nobody and seeing the Canoes belonging to their own Nation, they took some Meat and without searching for their friends went off, 2

By John C. Luttig

---

hours afterwards 2 Indians appeared and ventured to come over to our side, on arrival we found them to be 2 Squaws the Men consisting of 2 Rees, 2 Panis 109, 2 Chayenne 110, had run off, and left every thing behind them.

Friday the 14th This Morning at one o'clock were alarmed by the firing of a Gun, and heard the Dashing of Oars when to our Surprise we saw Mr. Manuel & party returning he having been informed by one of those Cowards who had run off from the Canoes, that all the white men were Killed and that the Indians had crossed the River in our Boat to Kill them also, supposed by the Sioux, Mr. M.L. alarmed on this Account returned immediately to Camp, finding however to his great Satisfaction the History of the Indian false, he remained till breakfast and pursued his first Intentions, last night about 40 Indians camped with us they were gathering Cherries and other fruits about the Country finished the Blacksmith shop and Provisison house, caught 8 fine Cat fish.

Saturday the 15th This Morning cloudy, some hunters went out, no Meat at home, caught 8 Cat fish, Rain at intervals.

Sunday the 16th hard Rain last night, cleared up in the Morning and all hands went for timber, at 5 P.M. our hunters returned with Meat they had Killed 11 Buffaloe, caught 11 Cat fish, and Killed 11 Ducks.

Monday the 17th, clear, all hands cutting timber and making Hay, caught 15 fish, and Killed 15 Ducks.

Tuesday the 18th all hands employed as yesterday. 2 Hunters went out for Buffaloe, caught 4 fish.

Wednesday the 19. the hands employed in Work as yesterday at noon our hunters came in with Meat for 2 Cows. Killed 10 Ducks.

Thursday the 20, North wind & cold, cloudy in the forenoon hands at work as yesterday, fine afternoon Mr. Lewis caught a Prairie Dog, caught 4 fish, Killed 1 Pheasant.

Friday the 21st, clear and hard wind, still at work cutting timber and making hay. Killed 6 Ducks. Mr Lewis's Prairie Dog was nearly Killed by one of our Dog who broke the Chain and run off with him.

Saturday the 22d, clear and windy, the same Work going on. at noon Goehe and Nez Corbain 111 a Yentonas Chief arrived with four Sioux, at 6 P.M. our hunters came in with Meat of 5 Cows. This Day blew a very hard Gale from the South west. Killed 28 Plover and 4 Ducks.

Sunday the 23d, clear wind west N. west, the same work, at noon La Plume paid us a Visit, dried some Meat very warm.

By John C. Luttig

---

Monday the 24th clear, wind west, 3 hunters went out being informed the Buffalo was near by a party of Indians which had been hunting at 10 A.M. 12 Canoes arrived with meat they made a present of 18 Tongues and went off at noon caught 10 fish.

Tuesday the 25th cloudy and disagreeable, hands at work as usual.

Wednesday the 26, cloudy and cold, at 7 A.M. Mr. Manuel Lisa returned with part of the Men from his expedition, the Rest of the Men were coming by Land with the horses he traded and given up by the Bigbellies, the Chief Brone 112 refused to give up the stolen horses, Mr. Manuel cleared the trading of peltrie and Goods and took off the whites, at 11 P.M. Gray Eye 113 Ree Chief, arrived with 100 Men from a war tour, they had not Killed nor even seeing Enemy, in the Evening a larger Party passed by with two Scalps which they carried before then in triumph at dark some more arrived and camped with us.

Thursday 27, clear and fresh, the Big white 114 Mandan Chief arrived, with several of his Bravos and family, to pay a visit, he had a few Robes which he traded, and took some articles on Credit, at noon Nez Corbain came again to receive a Present from Mr. Manuel Lisa and as soon as received for the Village.

Friday the 28, clear and the house fur trade was commenced made 36 Packs 115 of different Peltries and prepared the Boat which had to go to St. Louis,

Saturday the 29th, clear, this Morning the Men which came by Land from the Bigbellies arrived with the horses, they had met with no Accident, they informed that the Mandan 116 had made a Hunt and Killed on One Day 450 Buffalo, employed in -- setting Accounts and writing, at 5 P.M. out hunters brought in the Meat of 5 Cows.

Sunday the 30th clear, at 10 A.M. the Boat started for St. Louis 117 with 13 Men, several others went to the Ree Village to purchase Corn and Skins for covering of the Boat, in the evening they returned and had only succeeded to buy two Bushels of Corn and 8 Hides, the Indians not being willing to trade.

Monday the 31st cloudy and hard wind from the S.W. -- made up an assortment to go to the Mandan and purchase Horses for the parties going up River.

Tuesday Sept. 1, cloudy and heavy Squalls, four Men went to the Men to buy horses, made a fish trap of willows, and caught 31 Cat fish, hunters went out this Morning, and returned in the Evening had Killed 11 Cow.

Sept. 2d Wednesday hard Gales from N.W. La Plume came to Camp, the wind abated about Sun set cloudy and cold.

Thursday Sept. 3. clear and warm, caught 6 fish very large.

---

By John C. Luttig

---

Friday Sept. 4 nothing remarkable, cloudy and cold.

Saturday 5 the same " " " " .

Sunday 6 the same " " " " .

Monday 7 moved in the new house and begun to make Equipments for the Parties going up the Missouri.

Tuesday 8 finished Equipments, Killed 14 Ducks.

Wednesday 9 our hunter brought Meat of 9 Buffaloe, were informed the Sioux and Rees had fought a Battle 2 Sioux Killed 3 Rees wounded.

Thursday 10 clear and warm, the Gray Eye Chief and 3 Men arrived from a Scout.

Friday the 11th early rise, the parties prepared to start. Mr Sanguinette and 2 Men with 5 horses for the Spanish waters 118 Mr. Lorimier and four for the Wind River 119, Mr. Lewis, two engag-ees and the trappers for the little Horn 120 in all 18 Men, at noon a Sioux Chief arrived to have a talk with Mr. M. L. and 9 Men with him, cloudy & rain we traded some dry meat and 1 Robe.

Saturday the 12, the Sioux started this Morning, as also Mercier 121, LaChapel, and Carriere 122 for their fall hunt down the Missouri, Killed 14 Ducks.

Sunday the 13th fine weather, began to hawl stone for Chimneys our hunters went out, finished the Store caught 15 large fish.

Monday the 14 last Night a Ree Chief Legross 123, came to fore with his Wife he was lamenting the Death of one of his Children which had died 2 Days ago, Mr. Manuel covered the Dead Child, Legross being a good Indian, this morning had 22 fish fine warn weather, our hunters returned with 6 Cows and the pleasing news of plenty in the prairies.

Tuesday the 15, moved in the Store, took and Inventory caught 8 fish, warm and clear.

Wednesday the 16 fine weather nothing remarkable.

Thursday the 17 the Wind blew heavy from the N.W., about 6 A.M. the Men who went to get the Horses, came back and told the sad news that 5 Indians, supposing Grosventers had mounted the horses in their Sight and rode them off. 7 in Number, Charbonneau 124 who was on horse back came in full speed to the fort and cried out; TO ARMS, Lecomte 125 is Killed, the run off and left the poor fellow, that Indians spoke to Lecomte and they told him to go about his business he ask them what Nation they were, they answered Crows 126 if the Indians had an Idea to kill him they

---

might easy have done it, 10 armed Men went immediatly after them but returned without Success they saw them no more, a cloudy Day and cold.

Friday the 18 disagreeable weather, the wife of Elie 127 a Snake Squaw died, made a Wolf trap and raised the Mens house.

Saturday the 19th Charbanneau and Jessaume departed for to go to the Bigbellies, to try to get the horses Bijou arrived from his Station with 10 Sioux, Saunie 128 to make peace with the Rees, as Mr. M. L. had proposed, at 2 P.M. our hunters brought in 3 Elk fine Evening.

Sunday the 20th a clear but cold Morning 2 Rees arrived in search of a Women which had run off, after Breakfast Immel had 4 Men went hunting, in the afternoon Goshe and 3 Men arrived he seemed not much pleased with the Sioux, they harangued much this Evening, and to Morrow was fixed to smoke and made Peace.

Monday 21st fine weather and warm, one of the Warriors of the Sioux after having talked a little mixed whisky, pretended to be drunk, and cut Capers about like a mad Man, which determined the Business with the Rees, it was resolved that the Sioux should de part in the Evening unseen by the other Indians which might hurt them, they spent the Day agreable together and at 8 o'clock in the Evening they crossed the River, accompanied by a few Presents. Bijou who was to go by water found the Canoes not good and remained.

Tuesday the 22d fine warm weather and clear Bijou loaded his Canoe and went down the River with Manegre 129, at 10 A.M. Goshe and party also started and Immel came home with 1 Elk and 2 Deer very fat he found no Buffaloes traded 2 horses, in the Evening a Ree and 2 Women to trade a horse.

Wednesday the 23 fine clear weather, set 2 hens with 22 Eggs, traded the horse in the Evening another arrived to trade a horse and also his Wife, a handsome Squaw he found trade for the horse but not for the Wife, a Mandan arrived, no news from above.

Thursday the 24th fine warm weather for the Season traded some Corn the Indians went to the Village, Immel and 3 men went hunting took 10 traps and 7 Horses with him, in the evening Nez Corbain and 50 Men of the Yentonas arrived.

Friday 25th, Rain and windy traded some Meat with the Indians, after dinner they brought in their Plunder for trade and we traded several Peltries, a large quantity of dry meat and tallow held a Council and made a Present of 10 lbs powder 15 lbs Ball, 1 Kegg of mixed Whisky.

Saturday the 26th, they were preparing to move, when we found they had stolen a foot Adze and a handsaw, by giving a Hand Kerchief to the Chief he promised to return them we got the Adge but not the Saw, when they were gone we found our table Knives and the Door of a ?large? ahd also departed at 2 P.M. our hunters came in with 4 Buffaloes, they had left Immel with one Man to

## The Journal of a Fur-Trading Expedition on the Upper Missouri 1812-1813

By John C. Luttig

---

trap Beaver.

Sunday the 27th nothing remarkable, Rain, blew a hard Gale and continued so all Night till ---

Monday the 28 in the Morning when it cleared up our Hunters went out for Meat, and in the afternoon about 40 Sioux arrived to trade, in the Evening a hard thunder Storm --

Tuesday the 29th had cleared up, began to trade they had not much peltry, at 9 A.M. the Indians crossed again,

Wednesday the 30th clear and fresh at 2 P.M. our hunters came in with the Meat of 3 Cows 2 Deer, 2 Beaver and Beaver meat, Immel having caught 14 Beaver.

Thursday the 1st of October, at Sunrise we had to cross a band of Sioux, accompanied by Nez Corbain and another Chief called Boite about 40 in Number they traded and returned at noon satisfied, in the afternoon 7 Men started up the River with the Mackina Boat to hunt Buffaloe, and Immel came home with 15 Beaver 1 Otter and 2 Muskrats, wind blew very hard from N.W. and the Boat returned.

Friday the 2d the Boat went again early in the Morning the wind arose from the same quarter they stopped at the first point above, four Rees came to fort.

Saturday the 3, clear and cold had white frost this Morning Majet and all hands employed to cut Picketts, at Sunset 2 Mandans arrived with the sad news of the Big white and Little Crow 130 being Killed by the Bigbellies and 3 Mandans wounded, the Bigbellies had 11 Men Killed and a Number wounded, at night Charbonneau, Jessaume returned and brought with them 3 of the horses which had been stolen by the Mandans and not Bigbellies as supposed a lesson to take care of our property, no matter friend or Enemy.

Sunday the 4th the Mandans went to the Rees accompanied by 3 Rees fine weather.

Monday the 5th Immel went to the Village with Mr. Manuel returned in the Evening they were informed the Sioux had stolen 3 horses from us in the night of the 3d instant and by examination we found one of the Company's, one of Goshe, and one of Charbonneau gone.

Tuesday the 6th last night the Dogs made alarm we went patrolling and some whistling of Men, but found in the Morning our horses safe, raised the right wing of the out houses and Kept our horses housed.

Wednesday the 7th fine warm weather all hands to cut Pickets a beautiful Day for the Season nothing remarkable ----

Thursday the 8th this Morning 2 horses were stolen in sight of the house, distance 150 steps the

---

## The Journal of a Fur-Trading Expedition on the Upper Missouri 1812-1813

By John C. Luttig

---

Men who had to take care of the horses went to his Breakfast and returned the horses were gone.

Friday the 9th clear and fine weather, in the afternoon 4 Rees arrived to give us Notice that their Corn was gathered and ready for trade. Charbonneau & Jessaume Keep us in Constant uproar with their Histories wild story telling and wish to make fear among the Engagees, these two Rascals ought to be hung for their perfidy, they do more harm than good to the American Government, stir up the Indians and pretend to be friends to the white People at the same time but we find them to be our Enemies.

Saturday the 10, fine weather, the Rees went home Garrows Wife a Ree Sister to the Chief Goshe, came to fort last night, this Morning she was going to shoot her husband, she came here with that Intention, some Rees arrived which were enraged against Charbonneau & Jessaume, having of their arrival from the Bigbellies they said that C. & J. were Lyars and not to be considered as good French men, and if Mr. Manuel Lisa would send them to the Grosventer with a pipe they would not consent such Credit have these Men amongst the Indians they find their Character gone and try every Scheme, to Keep themselves alive like a Man a Drowning, I shall leave them for a while, and go on with my Observations.

Sunday the 11th Immel and others went with the Boat to the Ree Village to take Corn, late last Evening the Boat and hunters arrived with a fine Canoe of Meat they had Killed 19 Cows and 4 Elk, but lost the meat of 7 Cows by the Wolves. There are incredible quantities of Wolves in these parts, they go in gangs of 3 to 400 and at Nights the Prairies echo with their howling by nothing of this Kind can prevent the Savage of his favorite walk, to Kill and steal at night, this Day finished our New Provision Store, and go on with the other houses, the Horses are Kept under Lock and we fear no Lurking Savage.

Monday the 12th we had frost last night, the Vessels full of Ice clear and cold Morning, but calm and warm in the afternoon cloudy evening.

Tuesday the 13, white frost, cloudy, this Morning our Cart man was attacked by 5 Wolves, but cleared himself Immel returned, the Rees will not trade Corn with us.

Wednesday the 14th, fine clear weather, 4 Men went out to hunt, some Rees arrived to trade a little Corn and a Girl the first was traded, but the last not, she wanted to be the Wife of Frenchman, and not his concubine, --- Chastity, --- got this Day 21 Chickins.

Thursday the 15, This Morning Immel, Papin and Charbonneau started for the Grosventer, Mr. M. Lisa having engaged Charbonneau for some good Reasons at 8 A.M. a Band of Chajennes about 12 Lodges arrived their Chief named Lessaroco, they had plenty Women & Children and a great Number of Dogs, traded some Beaver, and about 50 Bushels of Corn.

Friday the 16th, clear and warm, the Chajennes went off they behaved very well. traded tranquil and in the afternoon 2 young Men brought our Hogs back which had followed them.

---

## The Journal of a Fur-Trading Expedition on the Upper Missouri 1812-1813

By John C. Luttig

---

Saturday the 17, cloudy, Majet and hands crossed the River for Picketts, in the afternoon some Rees arrived, traded 6 Beaver and some Corn.

Sunday the 18, cloudy & cold, Boat went for Picketts again.

Monday the 19 the same as yesterday.

Tuesday the 20, snowstorm, at 3 P.M. Goshe arrived with 4 Chajennes of a large band, they came to inform themselves how we traded, and observe we had not Goods enough for their Peltries, we shall see when they come.

Wednesday the 21st cold and cloudy, this Morning the Chajennes went off and Goshe remained, at noon 2 of our hunters came in with Meat of 2 Cows.

Thursday the 22d clear and cold, the 2 hunters went out again, commenced the Stockade of the fort.

Friday the 23 clear and cold had 3 Kittens this Day.

Saturday the 24 clear and cold after Dinner our Heroes arrived from the Bigbellies, they brought a Pipe and 3 Bladder for the Rees, their Mission had been successful and all Differences existing between them and the whites settled at the same time our hunters arrived with Meat of 2 Cows. They had Killed 7 and caught 20 Beaver 1 Otter 2 Muskrats and Killed 2 Wolves.

Sunday the 25, clear and cold nothing to remark.

Monday the 26, the same. Mr. Manuel L. went accompanied by the 2 Interpreters, Papin and 3 Men to the Ree Village with the Pipe of the Bigbellies.

Tuesday the 27 clear and cold hunters went with 7 Horses but returned in the Evening, having seen some Lurking Savages. Mr. M. L. returned from the Village successful.

Wednesday the 28th clear and moderate warm, our hunter took an early start across the River with 6 Horses. At Evening 4 Rees and 1 Mandan came to the fort from the Mandans, they informed the brother of Legrand 131 had died of his wounds, received in the Battle with the Bigbellies.

Thursday the 29th clear and warm, finished writing and at 11 A.M. Lajoie 132 and Gogal 133 two Engagees set sail in a Canoe for St. Louis, with a few Peltries, ect., ect... cloudy Evening at 11 P.M. Goshe and Legross with 4 Warriors came to fort with a Pipe for the Bigbellies.

Friday the 30th Charbonneau and the 4 Warriors marched off to the Bigbellies, our hunters re-

turned with Meat of 2 Cows, they had met plenty but very wild and could not Kill.

Saturday the 31st Snow this Morning, cleared up at noon and had fine weather, nothing to remark.

Sunday, November 1, frost last Night, cold and clear several Rees came to the fort, Woahl 134 and Chaine 135 returned from trapping, they brought 53 Beaver 1 Otter 5 Muskrats 2 Wolves 2 Mink 20 Foxes 7 Elk Skins.

Monday the 2d, cloudy and hard Gales from West a hunting party was prepared to go up the River in the Boat, but blowing to hard were prevented.

Tuesday the 3d clear and cold the Boat started with 12 Men at 8 A.M. in the afternoon a Partizan / Camerad 136 of Mr. M. L. of the Sioux / Saunies / arrived with 19 Men, they wanted absolutely Mr. Manuel Lisa to go with them to their hunting ground and trade very hard Gales and cloudy Evening late in the Evening Gray head a Mandan Chief came to the fort with his family

Wednesday the 4th cloudy and Snow Squalls Mr. M. L. wished to follow the Boat by Land was prevented by the Sioux, they were not willing to go home in the Evening several Rees and 3 Mandans arrived

Thursday the 5th Snow storms all last night until 8 this Morning when it cleared up, cold weather

Friday the 6th clear and cold, much Ice in the River the Sioux went off this Morning across the River fearing to go on this Side of the Rees, Gray head, Rees and Mandan started also, and Garrow the Interpreter left the fort with his Wife, on Account of a quarrel between his Wife and Baptiste Provost 137.

Saturday the 7th Baptiste Provost was turned out the fort Immel went to hunt with 3 Men and 6 Horses, at 11 A.M. Langue de Buche a Ree Chief and his party arrived engaged Pierre Chaine to hunt for the fort in the place of Baptiste Provost, the River full of Ice, clear and cold.

Sunday the 8th Langue de Bache 138 and party went off to make his Camp for winter about 6 miles above the fort 139, at 2 P.M. Immel returned with Meat of 4 Buffaloe several Rees at the fort, clear and cold.

Monday the 9th, cloudy and moderate, snow fell in the afternoon nothing remarkable.

Tuesday the 10th, snowed all night, cleared up about 8 oclock in the Morning, moderate, Immel went out again to hunt with the same Men, Buffalos in Sight some Rees arrived

Wednesday the 11 clear and moderate, nothing remarkable.

Thursday the 12, cloudy 3 Rees which had camped with us last night went away displeased getting not enough to eat and set the Prairie around us a fire, Immel returned with 5 Cows.

Friday the 13th Papin and 1 Man went to the Village, to try to get the Rees to make a great Hunt for us. Mr. Manuel promised 20 Loads Powder and Ball for each Cow the Buffaloe being very hear and plenty. Charbonneau returned in the afternoon from the Bigbellies and four of their head Men with him, the Chief Cheveux Loup and 3 others, some Rees and a Chajenne Chief Papilliar arrived in the Evening with the news the Chajenne were close be and came to trade, traded 2 Beaver.

Saturday the 14th, cloudy and cold, Papin returned with -- tidings that the Rees were preparing to make war on us. Baptiste Provost and Garrow had told them many Lies and roused the Chiefs and Nation against us, which proved to be fact, we found this that 6 of our Horses stolen, 2 Rees arrived to sound us if we were inclined for War, the Chajenne Chief went to the Village.

Sunday the 15th This Morning, Immel Papin and Charbonneau left this for the Village, with the Bigbellies and 3 Rees, to see into the Misconduct of those fellows and try to settle amicable, the Rees which remained at fort, seemed tranquil and content, we stopt all Work cleared the fort, and prepared for Defense in Case of Necessity, sent Pierre Chaine & Pointsabl 140 to the Camp Langue de Buche, to hear some news of the stolen horses.

Monday the 16, last Night Pierre Chaine returned and informed that the horses had been stolen by the Rees, by the Order of Garrow and were at the hunting Camp of Grey Eye, Langue de Buche arrived this Morning with 8 Men going to the Village he promised to deliver the horses in three Days, and requested Mr. M.L. to be tranquil, Matters would be settled, -- traded some Meat and 1 white Bear Skin of them -- at 4 P.M. our Deputies returned with the Bigbellies accompanied by Goshe and Plume d'aigle, Garrow and many other Rees, to arrange the Difficulties which had arisen, all was thrown on the Shoulders of Baptiste Provost.

Tuesday the 17th fine weather, clear and warm, held Council and finished with Peace, two of our horses were brought in this Morning, finished the Enclosure of the fort.

Wednesday the 18, fine weather, and tranquility restored the Bigbellies requested a trader and being promised one, left this for their Village, as also the Rees very well satisfied, another horse was brought in, Pierre Chaine and 2 Men went over the River hunting buffaloe and Elk in Sight.

Thursday the 19th clear and warm little Ice in the River at four o'clock in the after noon hung the great Door of the Entrance of the fort, which ceremony was saluted by 7 Guns and 3 rounds of Musketry, made the Tour -- around the Fort and Baptized the same FORT MANUEL. 141. In the Evening a good Supper and a cheerful glass of Whiskey was given to the Men, and a Dance at which all the Ladies then in the fort attended, concluded the Day, Garrow brought his family to fort again and traded of the Rees a horse which had been stolen of the Company last year by the Sioux.---

---

Friday the 20th, clear and cold, had a Deer Killed, nothing remarkable happened.

Saturday the 21, cloudy Morning, cleared up at noon Immel & Papin went to the hunting Camp of Gray Eye, to get if possible the Remainder of the stolen Horses. Legross came to the Fort with Baptist Provost to explain his Conduct and be taken in favor again. Provost was not permitted to enter, they blamed Garrow for all the Mischief which had been done, but went off without Success, Immel returned with only our Running Mare the other 2 horses they the Indians had sent to the Village loaded with Meat, the horses returned were all ruined and their Backs very soar, the Chajenne Chief returned from the Village.

Sunday the 22d Morning clear and moderate, the Chajenne Chief went to his Village, in the Evening out hunters came to fort, they had Killed only 1 Cow and 1 Deer and found very few Buffalo, evening cold.

Monday the 23d Snow in the Morning, having been informed, the Saunie, Sioux had arrived with about 150 Lodges at the Rees, Charbonneau and Garrow set off for the Ree Village, to Know if they the Sioux had any thing to trade. Mr M. L., Immel and Chain went to a band of Chajennes which were camped about 5 Miles above 142 the fort, with the same intention but returned shortly afterwards, having met with one Chief and 2 Partizans coming to pay us a Visit, and in form themselves how we traded, cleared up at noon pretty cold, wind North, plenty Ice in the River, this Day crossed our horses to the other Side.

Tuesday the 24th clear and very cold, Garrow & Charbonneau returned from the Sioux, with News that they had nothing to trade but Meat; the Chajennes went to their Camp, and promised to come to trade with what they had, five Rees arrived at fort.

Wednesday the 25th hard frost last night, and cloudy. hauled the Boats out of the Ice, this Evening a Number of Rees came to the fort to camp.

Thursday the 26th, moderate and cloudy, the Rees went off, and our hunters started with 8 horses, at noon the Chajennes arrived with 26 Lodges and made their camp at the Point above us, 5 of their Chiefs came to the fort. they have a vast quantity of horses and Dogs. Rain.

Friday the 27th Snow in the Morning and cold, plenty Chajenne in the fort, they invited Mr. Manuel to a feast, to which he and Immel went, Grey Eye brought the last stolen horses, traded some Beaver.

Saturday the 28th last Night the River closed, moderate and clear, plenty Visitors, but no trading.

--

Sunday the 29th cloudy and cold, traded some Beaver, Robes etc. ect..

## The Journal of a Fur-Trading Expedition on the Upper Missouri 1812-1813

By John C. Luttig

Monday the 30th, cloudy and cold, traded again one of our hunters came in with the Meat of 2 Cows were informed by the Rees that Mercier, Lachapel and Carriere were Killed by the Sioux, these 3 Men were trapping about the Big Bend.

Thursday the 1st of December, cloudy and very cold. traded little, the Chajennes informed us that 2 very large Bands of their Nation where camped above them, which would also come to trade.

Wednesday the 2d several Mandans arrived and demanded a trader, Pierre Chaine brought in 1 Cow.

Thursday the 3d, cloudy and very cold, Immel and 3 Men went out hunting.

Friday the 4th, cloudy and cold, Pierre Chaine and 1 Man went out spying for Buffaloe, the Chajenne Chief (Medicine Man) brought us 1 Cow, round, the 5 Chiefs received a small present and were well satisfied with our treatment, I wished to Know their Name, but would only learn, besides the one named above one more, which was named the Poor Little Wolf. --

Saturday the 5th Pierre Chaine sent in this Morning for horses, he had Killed 4 Cows, fine clear and cold weather the Meat of Chaine and Immel with Meat of 2 Cows arrived in the Evening.

Sunday the 6th, clear and cold. Mr. Manuel L. went on a Hunting Party with the Chajennes, there being 1000 of Buffaloe opposite, returned at noon and had Killed 12 Woahl also brought in one Cow, Baptiste Provost came to the fort again, Mr. Manuel having pardoned him by information received, that it was not all together his fault, Goshe and many Rees arrived.

Monday the 7th cold and cloudy, nothing remarkable.

Tuesday the 8. the same as yesterday.

Wednesday the 9th clear and fine moderate weather Baptiste and 5 Men went out hunting, Goshe to his Village.

Thursday the 10th clear as yesterday, nothing remarkable.

Friday the 11th the same, the Chajennes left us to camp and hunt at the fourth Point above us, we had traded with them 75 Beaver, 2 Muskrats, 4 dressed Buff. Skins, 7 white Bear, 10 Robes, 5 Otter, 3 Foxes, 1 wildCat 450 pair of Moccassins a quantity of tongues and some Meat.

Saturday the 12, cloudy, opposite the fort the Prairie is covered with Buffaloe, Baptiste and Men arrived this Morning had Killed 4 Cows and 2 Bulls, in the afternoon, Baptiste, Antoine alias Machecou 144, arrived express from Mr. Lewis and brought the displeasing news, that the hunters which were equipped by the Company and which had been on the Spanish Waters trapping, had been robbed by the Crows, one of them Danis 145 was Killed by some Indian supposed Grosven-

By John C. Luttig

---

tres, the Day Messrs. Lewis & Lorinier arrived at the little Horn River, Machecou departed from the Little Horn River in Company with Duroche 146, but unfortunately separated 2 days in a Snow Storm, Duroche has the Letters of Messrs Lewis and Lorimier.

Sunday the 13th cloudy, some Rees of whom we have always plenty in the fort / went over the River hunting in the afternoon.

Cadet Chevalier 147 arrived express from Me. Charles Sanguinette with a letter dated the 3d instant in the Prairie on his Return from the Arepaos 148, in which he confirmed the sad News of the hunters, he found none and was informed by the Areapos, that 3 of them were Killed by the Blackfeet, supposed Champlain 149 and 2 others, Lafargue 150 and 5 others had run off to the -- Spaniards, 8 of them had gone to the Crows which now are with mr. Lewis, and 3 or 4 others they knew nothing at all, they the hunters had much Beaver some cached and the Remainder plundered with all other things. Mr. Sanguinette requested 2 Men to meet him to transport a parcel of horses, which he had traded with the Arepaos, the Rees brought in 2 Cows they had Killed 3 had to leave the Meat having no horses, more Rees arrived from the Village.

Monday the 14th Baptieste and some Men went out to hunt, plenty Buffaloe about, prepared an Equipment for Immel, who was to go to the Mandan for to trade at 2 P.M. Machecou, Cadet and Colla Glineau 151 went to Meet Mr. Sanguinette

Tuesday the 15th fine clear weather, Buffaloe constant in the Prairie, Immel and 3 Men went with 2 Sleighs on the River to the Mandans, had Informed that about 80 Lodges of Sioux had arrived with the Rees and still more expected. Garrow went to the Village to invite them again to a general hunting Party all Rees started only One Man remaining, no News of Duroche.

Wednesday the 16th at 1 in the Morning Garrow returned with the News that the Rees were willing to come if their critical situation with the Sioux would allow it they had quarreled together and expected to fight a Battle to Day, the Sioux wanted to force and go past the Rees, and Camp higher and nearer to us, which the Rees opposed on Account of the Buffaloe, the Rees came and told us a dreadful History which they had been informed by the Sioux, as they say, that the Sioux had Killed Bijou, and plundered the trading house and were singing the Chevalier 152 the French, and that they would come to our fort and do the same, if we would not come to their own terms trading, and in Regard to their Histories Mr. Manuel resolved immediately to write a Letter to Bijou and sent it express by a Sioux promising a horse if an answer should be brought to the Letter, at 11 A.M. Papin went off with the Letter. Bapteste sent in Meat of 8 Cows, and the Men returned to the hunting Camp, at Sunset Duroche made his Appearance with the Letters of Lewis & Lorimier which gave some Satisfaction from their quarters they had by hunting 12 Pack of Beaver in Store, and purchased ten for their Use. At 11 o'clock P.M. Papin returned, the Sioux had taken the Letter and promised to deliver an Answer, which our hopes that that the News of Bijou's Death was not true.

Thursday the 17th fine moderate weather, in the Evening a party of Rees arrived and camped in

---

## The Journal of a Fur-Trading Expedition on the Upper Missouri 1812-1813

By John C. Luttig

---

the fort.

Friday the 18th fine moderate weather, and indeed considering the Season so far advanced is like Spring; we have but very little snow and of late moderate so that any Work out of doors may be done, at 1 o'clock P.M. we received 2 horse Loads of Meat say 2 Cows, at 6 P.M. Goshe, Legross and several Rees came to fort, to make a hunting party Mr. Manuel having promised a horse to each Chief 4 in Number, when our horses would arrive.

Saturday the 19th fine clear weather, and hard wind all Day, no hunting party of Chajenne arrived from the upper Band with one Chief going to the Rees.

Sunday the 20th, clear and moderate, our hunters say Rees went out and Killed 20 Cows head and foot was received them Evening, purchased a fine Dog of the Chajennes, this Evening the Wife of Charbonneau a Snake 153 Squaw 154, died of a putrid fever she was a good and best Woman in the fort, aged about 25 years she left a fine infant girl.

Monday the 21st, clear and moderate, paid off our Indian hunters, and they left fort together with the Chajennes for their Village in the Evening, several Rees came from the Mandans, and told us that Immel coming also from the Mandans had been robbed and whipped by the Band of Chajennes at the River Bullet 155.

Tuesday the 22d fine weather, Garrow and Papin went off early in the Morning to meet Immel, at 10 o'clock A.M. Immel arrived and the History of the Indians -- proved to be a lie, it was true that he had a quarrel with the Chajennes, by refusing them their Demands which he could not comply with, but they did forbear being only a few to do harm, seeing him on his Guard at noon the Sleigh arrived as also 15 Mandans with them, in the afternoon the three Men which were sent by Mr. M. L. to meet Sanguineete returned without finding him, they found a track of a party of Indians and were afraid to march forward.

Wednesday the 23d fine weather, the Mandans set off for the Rees several Rees arrived in the afternoon, all tranquil and happy in situation.

Thursday the 24th clear and hard wind but moderate the Rees went off again gave 30lb flour and 30lb Tallow to the Boys for regaling themselves tomorrow, in the afternoon the Chajennes Chief returned from the Village he had heard of the Affair of his Village with Immel, he was very sorry fired his Gun backward on entering the house and promised to see every thing arranged to our Satisfaction, this Evening the Boys had a treat of Whisky and made merry fired 3 Guns at Sunset in honor of the approaching night.

Friday the 25th fine moderate weather, indeed it looked more like Easter, than Christmas, were roused by a Salute last Night some Indians were lurking about the fort, and some Men stood guard in the Bastion they saw some thing in the Dark, fired and had Killed an Indian Dog, taking him to be an Indian the Chejennes were afraid to go to their Village and requested a guard, Six

By John C. Luttig

---

Volunteer offered immediately and escorted them until out of Danger.

Saturday the 26th, at four o'clock in the Morning Messrs. M. Lisa, Immel and four Men went to the Sioux, to sound their Sentiments, in the afternoon a party of Mandans arrived at fort with several Rees, and at Sundown our party from the Sioux, they rejected our friendship and will trade as they please, or plunder, fine weather.

Sunday the 27th the weather continuing fine, the Mandans went to their Village, Mr. M. L. sent Jolla Glineau along with them, to carry some more Articles to our trader.

Monday the 28th fine weather, made up Equipment for Charbonneau and Woahl to go and trade with the Bigbellies, Baptiste went hunting Killed a Calf.

Tuesday the 29th Charbonneau and Woahl set off for their Station 2 Men and 4 horses, in the afternoon we had the pleasure to receive and Answer to the Letter sent to Bijou, to the greatest Satisfaction of Mr. M. L., Bijou having traded very well more than expected, Antoine Citoleux 156 had started with the Indian from below but would not Keep up walking with him the three which were reported to be Killed were with him, and proved another made History of the Rees.

Wednesday the 30, fine weather the Sioux went off with their pay a horse and 2 Carrots Tobacco.

Thursday the 31st Rain this Morning, nothing remarkable at Sunset saluted the exile year, the Boys and Whisky and a Dance, all Cares and troubles were forgotten and drowned in oblivion and so concluded again a year with, I may say, a cheerful night.

---1813---

January the 1st, The new year was ushered in by firing a Salute and paying the Complement of the Season, every One seemed rejoiced of having lived to see another year, fine moderate weather in the Evening several Rees arrived, they brought a Present for Mr. Manuel, but he would not accept it, I took it and paid pretty high.

Saturday the 2d fine weather and fresh, nothing to remark,

Sunday the 3d fine weather as yesterday, at noon Goshe and a party of Rees arrived, carrying a Pipe to the Chajennes, and came to Council with Mr. M. L. on that Subject.

Monday the 4th fine weather, Goshe went off Cadet Chevalier paid the Dept of Nature at noon he died of a putrid fever.

Tuesday the 5th fine weather and moderate, in the afternoon Antoine Citoleux arrived, in the Evening a Band of Rees headed by Plume D'aigle arrived, carrying a Pipe to Mandans.

Wednesday the 6th the same weather as yesterday the Rees left us and Directly after I found they

---

had stolen our only he Cat TOM, Baptiste went hunting at noon Sanguinette, Latour 157 and Large 158 arrived they had left their horses 31 in Number at the little Chajenne fork 159, prepared for an Expedition to the little Horn. wrote Letters to Lewis & Lorimier, in the afternoon Baptiste brought in the Meat of 3 Cows, cloudy evening.

Thursday the 7th at 4 o'clock in the Morning, Duroche, Machesou and Fouche 160 left the fort with 3 horses loaded with Tobacco and Powder for to go to the little Horn to Mr. Lewis, cloudy and windy many Rees passed by, at 3 P.M. we saw to our Surprise the Men which had started this Morning for the little Horn, returning, they reported, they had seed something like Men and got scared, they would not go on, returned the Goods, but Kept their Equipments for the Voyage which made their tale doubtful, and it seemed they had had no Idea to go, and cheat the Compa-ny out of their Goods. Goshe returned from the Chajennes stayed at night.

Friday the 8, Immel went early this Morning with 6 Men after the horses which Sanguinette had left, the Indians Killed 6 Cows for us, and our hunter 2 Bulls and 1 Deer, the Meat of the Bulls is not good and it is only to have the Hides for covering, cloudy and cold.

Saturday the 9th hard wind from N.W. rain and Squally all Day, Cleared up in the Evening and cold.

Sunday the 10th fine cold weather, nothing to remark.

Monday the 11th fine and moderate, “ “ “

Tuesday the 12th, the same “ “ “

Wednesday the 13 the same, the Indians Killed 3 Cows towards evening had a Bull chase on the Ice, the poor Animal when found he was pursued, fell several times, and at last tired could not get up, -- surrounded by many he awaited his fate patiently cold and cloudy.

Thursday the 14th cloudy and moderate, Indian Killed 1 Cow a party Mandans camped at fort.

Friday the 15th the Present I received the 1st instant I had to throw away to the Damage of 114 Dollars on my Side a Lesson I shall not soon forget, in Evening a party of Chajennes came to fort, carrying a Pipe to the Rees and Sioux, some snow fell, but moderate.

Saturday the 16, fine moderate weather, snow melted away, I took a Walk across the River where two of our Men are cutting firewood, I never saw a finer Spot for Cultivation, a fine timbered bottom and a beautiful Prairie late in the Evening two Rees stopped and told us that the Sioux had commenced war on them and had Killed a Young Man in their own Village.

Sunday 17th fine weather, plenty Indians passing by.

## The Journal of a Fur-Trading Expedition on the Upper Missouri 1812-1813

By John C. Luttig

---

Monday the 18th fine moderate weather, in the afternoon the Chajennes returned, the Rees were preparing to war and summoned all Men which were absent from the Village, at Evening a large party of Women and Children took refuge in the fort, to sleep in Security they were lodged just above us in 5 Lodges, and the Men all absent.

Tuesday the 19th hard wind and cold, at 8 A.M. Immel & party Arrived with the Indians in the afternoon a party of Sioux with the Chief Crooked Hand Arrived with the American Standard flying before them they said they were going to the Chajennes to smoke which was a falsehood, when we first saw the Rees run to and fro, crying the Sioux come to Kill, and made a terrible noise, We traded 32 Robes, 20 Beaver, 5 Otter, they went off at their favorite time, at 9 o'clock at night, plenty Rees at the fort.

Wednesday the 20th hard wind & cloudy all the Rees went to their Village except 2 hunters and their families.

Thursday the 21st the wind and weather as yesterday Latour, Machecou, Duroche and Joseph Laderoute 161 were ordered out of the fort, they had made a ?compliant? against the adopted Principles of the Company Mr. Manuel tried every way to get them in Employment but they would neither engage nor hunt nor pay their Debts, Latour had brought 4 horses from the Arepaos Mr. Manuel wanted to buy them against his Debt, NO, he offered 300 Dollars wages per year to hunt for the forts or be otherwise employed, they refused, they only wanted to get the necessaries, and Equipments to squander away, and set by the fireside at ease eat our Provisions, take out of store when pleased and let the Company go Destruction, their Character is through-out vicious and Dangerous, the Company looses considerable by them, say about 4000 Dollars, Laderoute wanted to take a girl which Immel had given him, and Immel would not permit her to go in the Situation she was in, high pregnant, but Laderoute wanted to take her by force like a Brute without nourishment and cold Season, the dispute ended by both remaining, one of the Indian hunters got displeased, on Account we would give him no meat for his family, he sold us each Cow for 3 dollars and then wanted to eat the Meat, avaricious design, last night we saw plenty fires opposite side which included us to believe that the Sioux and fought with the Chajennes made up an Equipment for Mahas poncas ect.. ect..

Friday the 22d last Night Laderoute's Girl had a little Girl, cold and cloudy.

Saturday the 23d, cold and cloudy, our hunters went out returned with the Meat of 3 Cows, the news from this day was that a Sioux Chief was Killed by the Rees, and a Ree Woman by the Sioux.

Sunday the 24th snow and cold, this Day sent the 4 horses promised to Ree Chief for make a hunt.

Monday the 25th clear and cold, nothing to remark.

Tuesday the 26 cloudy and cold, this Evening the Men who guarded the horses found two missing supposed to be stolen by Langus de Buche.

## The Journal of a Fur-Trading Expedition on the Upper Missouri 1812-1813

By John C. Luttig

---

Wednesday the 27th clear and cold Sanguinette and a party went hunting, Immel, Papin and another party went to Langue de Bache, which as suspected, had been the Case as were informed that his party had stolen the horses, they returned in afternoon in several parties, one party found and Indian who had stolen a horse this Day close to the fort of Colla Citoleux, and Immel seeing another Savage stealing the Way of him suspected some thing wrong, made up to him, and found the running Mare of Mr. M. L. thus were tow more horses rescued their report was that they had found no horses nor Langue de Buche he himself was gone to the Chajennes probably to trade then away for Meat.

Thursday the 28th Mr Manuel L. and 12 Men went to the Camp of Langue de Buche, to demand the horses, on their arrival they took possession of the Indian fort and made some sham prisoners, they did not find the horses and were told they the horses were out hunting, the Indians began to make overtures and begged, promised to return the horses to fort. Mr. Manuel pitied them and left one Man to receive the horses, who returned in the Evening Mr. M & party arriving at noon with only one horse which belonged to Jessaume, the other not given up, this Day fine clear and cold weather.

Friday the 29th, cloudy in the Morning, cold and Snow Squalls, last night Laderoute and his girl deserted through one of the port holes in the Bastion Garrow went to the Village to see how the Rees were situated, he returned late at night and told the Goshe and his Band wished to come and live at the point above us if we would sent horses to carry their Luggage, Indians and hunters went out to Day but Killed nothing.

Saturday the 30th clear but very cold, the hunters went out again but returned the weather being too severe.

Sunday the 31st, moderate and clear, Immel, Sanguinette and four Men with 20 horses started for the Village, to bring the Rees this Day our hunters Killed 4 Cows.

Monday the 1st of Febry, clear and fine moderate weather, in the afternoon Immel and party with Goshe and 4 Lodges of his Band arrived, but instead of camping at point took their Lodgings in the fort, hunters were out again to Day and Killed 3 Cows and 2 deer. ---

Tuesday the 2d, fine weather, nothing remarkable.

Wednesday the 3d the same, the Rees went out hunting and in the absence of the Men the Women began to quarrel among themselves, and left the fort sack and pack, there being 5 Lodges of wood at the point they went there, but returned about 10 o'clock in the night, being afraid of the Sioux, three Indians came to fort with 4 Cows, the remaining camped out.

Thursday the 4th fine weather and warm, the 2 stolen horses were brought in, Goshe and his hunting party returned they had Killed 7 Cows. At 4 P.M. 12 Soldiers of the Band of Goshe ar-

By John C. Luttig

---

rived, thawed very much and plenty on the Ice.

Friday the 5th, clear and moderate, the Men which came yesterday belonging to Goeshe's Band went off again to the Village to bring their families, at noon became cloudy and heavy Squalls towards evening a young man of the Bigbellies of which we had two families in the fort went out hunting on foot for some deer or Elk, and about 8 o'clock P.M. we heard the Cry TO ARMS and two guns fired at the same time which proved to be out of the fort, opening the Door of the fort we found the above Young Man breathing his last, we found him shot in the Belly and Breast his hunt laid a little ways off, he had Killed an Elk and brought only the Calf, a favorite Dish with the Indians we expected a Return and Kept Guards, the Sioux were perpetrators of this Act, he died 1 hour after, blew a hard gale all night.

Saturday the 6th the wind continuing blowing very hard found 2 Arrows in the fort which had been thrown through the Crevices of the Pickets, the arrows found were of the Sioux Nation, and had been leveled perhaps at some of us, a singular Circumstance happened the Day before with the same young fellow who was killed, he quarrelled with a woman the wife of a Mandan in the fort, and was going to Kill her, when her husband who was absent at the time of the quarrel, arrived and being informed what had passed, went to him if you want to fight, do it with the men and not women come out and measure your Bow with mine but proved coward, next day he met his fate at 2 P.M. our hunters brought in 5 Cows 2 Calfs, a fine afternoon, late at Evening Le Gross arrived at the fort from the Chajennes, he reported they made plenty Robes, and would come to trade in the Spring.

Sunday the 7th disagreeable and snowing, Immel, Sanguinette, Gilneau and Lange went with 8 horses to the Mandans to fetch the Peltries traded with that Nation, Le Gross with all Bravos which were in the fort amounting to 26 to the Village, I made a Census of the Indians remaining in the fort and found 65 souls left most Women and Children -- -- in the afternoon 2 more Lodges, fine afternoon.

Monday the 8 fine clear weather nothing remarkable.

Tuesday the 9th the same.

Wednesday the 10 the same but hard wind Killed 1 Elk.

Thursday the 11th cloudy and hard winds, cleared up in the afternoon, at 9 o'clock in the Evening we heard several guns firing, and directly afterwards 3 Rees young men arrived, who had run away from a fray which they and with the Sioux, they reported that 4 of them were Killed, all Indians in the fort in uproar we watched all night, but nothing occurred.

Friday the 12, clear and cold, the refugees reported last evening that the Son of Goshe, with 2 young Men and 1 Woman was Killed, Goshe started, Mr Manuel L. gave him a Blanket and Vermillion and 30 Loads of Powder & Ball to cover the Corps as customary with the Indians, at

## The Journal of a Fur-Trading Expedition on the Upper Missouri 1812-1813

By John C. Luttig

---

10 A.M. the party returned they had found but 2 Corps of Men and 1 Woman, a Child which the Woman had was taken prisoner and the son of Goshe had found blind as he is the way in the woods to hid himself, they found him laying among the Brushes, when he heard himself discovered, cried out who is there and finding his friends was rejoiced Goshe gave him the Blanket ect.. ect.. and sent him off in the afternoon 10 Chajenne Chiefs Arrived and about 150 Rees to go to the Chajennes for Meat.

Saturday the 13th the Chajenne Chief went away seemingly satisfied and the Rees with them Mr. Manuel Lisa gave 5 Carrots 4 Twist Tobacco 3 lbs Powder and 6 lbs Ball as a present, at 2 P.M. Immel and his party returned form the Mandans with Peltries at 4 P.M. about 15 or 60 Rees arrived from the Village with Plume D'aigle to bury as they said their slain brethren -- fine weather and moderate.

Sunday the 14th, cloudy and snow squalls, the Reed went off.

Monday the 15, cloudy and cold, the Rees returned from the Chajennes.

Tuesday the 16th clear and cold, all the Rees which had hitherto stayed in the fort went off to their Village being advised by the Chajennes to Leave the fort, only 5 Women and 2 Girls remaining, cloudy evening.

Wednesday, the 17 cloudy and hard winds nothing to remark.

Thursday the 18, clear and very cold, Killed 2 Deer.

Friday the 19 same as yesterday, nothing to remark.

Saturday the 20 cloudy and cold, in afternoon Snow Squalls our Sow brought 17 Dead Pigs, a great loss.

Sunday the 21 clear and cold, this day is the coldest we have had this Winter, at 12 o'clock this Day Charbonneau and 1 Engagee arrived from the Bigbellies, himself and Woahl had traded out of 492 Plus only 168, the Chief named Borne was thrown off by the Nation only 5 Lodges remained with him, and had a separate Village, he persuaded Charbonneau to come with some Powder & ect... ect... to his Village to trade, he went and took 25 lbs of powder and 50 lbs of Ball of which he was robbed off when Charbonneau was informed by the Chief Chrveux De Loup who first Chief among them that 4 or 5 Days after his Arrival from hence in December last, 2 from the N.W. Company had been with them, they came under pretext to trade dressed Buffalo Skins, and made some Presents to the Chiefs, and began to harangue against the American traders, told them we would give them nothing, but a little powder, and that they the N.W. Company would furnish them with every thing without Pay of they would go to war, and rob and Kill the Americans, this had the desired effect on Borne, and he made several Speeches to that purpose, but being disgraced and not liked he retired without Success, though himself fulfilled his promise to

By John C. Luttig

---

rob, but was afraid to Kill, thus are those Bloodhounds the British constantly employed and do every thing in their Power to annoy and destroy the Americans and their trade, they have nothing to fear on Account and in Respect of our Government, all though in our territories, and in fact our Government does not care to meddle with them, nor how many Citizens are sacrificed by the British influence with the Indians, if there was a fort at the River St. Peters 162 as was promised by Liet. Pike 163 and another in these Parts of the Missouri, it would do infinitely good to hunters and traders, and bring great wealth to the States, but this is out of question, they have a strong Garrison at Bellefontaine, and that is enough, the soldiers parade, eat and drink and spent their time in Idleness, is there any necessity to keep so many idle fellows in a settled Country, they do not even prevent and cannot protect out Settlers about 80 or 90 Miles above, and we have seen outrages committed by the Indians, horrid to relate, there was after the Sheep were destroyed by the Wolves, a small Garrison erected on Salt River 164, Mississippi which will do more good than all Bellefontaine, and if one was to be erected about 500 Leagues up the Missouri it would be very good to Keep the Indians in their Bounds, Provisions are plenty and the other necessaries could be sent by the traders, but it has been frequently the Case, and has been said our Citizens have no Business to go among the Indians to trade but the profits thereof are not considered, and this Branch of Business will never succeed if not protected by Government, to seat of the British Traders.

When Charbonneau passed the Chajennes which are above us about 4 Leagues 165, they warned him to be cautious and take care of his Life that they had discovered 27 Men lurking about, supposing to be the Saunies Sioux, he arrived however without accident.

Monday the 22d fine weather and cold some Buffaloes in Sight, 7 Men went across the River to hunt, and returned about noon, having Killed but 1 Cow, 2 Bulls the weather being too cold, to pursue the Buffalo, at 1 o'clock 45 Min. P.M. we were alarmed by the Cry TO ARMS, Archambeau 166 is Killed, and by sorting found us surrounded by Indians on all sides, out the reach of our Guns, Archambeau was hauling hay with a Sleigh from the other Side, and just on coming on the River he was shot and Killed Immediately he was a very good Man and had been 6 years on the Missouri, we put ourselves immediately in Defense, and placed two swivels on the Bank of the River, but unfortunately of Balls did not reach across, and those on this Side Kept out of Reach of our fire, and dare not come to an open Attack, their Numbers was between 4 and 500, they took the Scalp and cut him nearly to pieces, they marched off about 4 o'clock, leaving us to lament the Death of a fellow citizen unrevenged, a party of our Men went across to Bring the Croups which they found terrible mangled, they brought 29 Arrows which were sticking in his body and a good many more broken to pieces, his Head broken the Brains scattered about his nose and ears cut off his teeth Knocked out, and more terrible Deeds which I will not express with my Pen. We mustered in the Evening and found ourselves 26 Men strong, selected Guards for the night, divided in 5 Watches, 4 Men in each and 3 in each Bastion, gave the Boys a Draw and every one was in Readiness for defense to the last moment our situation in general is not very lasting at this time menaced by the Sioux, below, and we dare not trust too much the Chajennes above, they have made a vast quantity of Robes and wish to augment the trade we are told and they showed a Horn which they made which holds 40 Loads of Powder, instead of giving 20 Loads for a Plus 167, I

## The Journal of a Fur-Trading Expedition on the Upper Missouri 1812-1813

By John C. Luttig

---

hope we will have no Row with them as to the Rees we fear nothing, they are a sett of lying and good for nothing fellows.

Tuesday the 23d passed a quiet night, and our Guards saw nothing, after Breakfast Immel and four Men went out reconnoitering on swift horses, returned at noon and reported they had found the tracks of the war party and judged by the Size of the Road they had made to have about 400, the Road went right across the Hills and the party which was stationed above the fort say about 60 had met them at right angles, about 2 Miles west of the fort, we interred the Remains of our poor fellow Citizen Archambeau, and guarded in the afternoon saw some Buffaloe chased on the other Side, supposed by the same Party, we also saw Dogs on the Ice which returned to the Woods at the point above us, and made us certain there was some hid in the Woods, as also by a track which we found, descending the Coast on our Side 1 Mile below the fort, set guard for the Night had a fine Day but cold and cloudy evening.

Wednesday the 24th passed a tranquil night, but saw some running fires, the Signal of Indians after Battle, 3 Men went to Langue de Buche's Camp to hear of their Situation a fine Day but cold, set all our Dogs our of fort for guard.

Thursday the 25th passed a quiet night, I guarded till 4 o'clock in the morning the 3 Men went out yesterday did not Return, Dogs out guarding, dark and cloudy evening.

Friday the 26th snowed last night and this Morning we are constant watching in our careful Situation, we hear and see nobody from all around us, and are like Prisoners in Deserts to expect every moment our fate.

At 3 o'clock P.M. our 3 Men returned with Machecou, the whites and Indians who camp above us had heard nothing of the fracas which had happened, the Chajennes had the next Day after the affair, 24 horses stolen by the Sioux, undoubtedly the same party who attacked us there Scheme was to plunder the fort, expecting that we would divide and a party would run across the River to rescue the Man which was Killed, and then come between us and plunder and Kill those in the fort. cleared up towards evening and cold.

Saturday the 27th passed another tranquil Night cloudy at Sunrise, cleared up at 8 A.M. cold weather.

Sunday the 28th, Snowed last night and this Morning the most which has fell this Winter about 4 Inches deep, cleared up in the afternoon with cold weather. nothing remarkable these 2 Days past.

Monday the 1st of March, 1813 clear and cold, after dinner Charbonneau and Leclair 168 set off for their Stations at the Bigbellies took some Powder and Ball to complete his Equipment, they were escorted by 5 of our Men, untill he would be out of Danger, at Sunset it began to Snow.

Tuesday the 2d a vast deal of snow had fell last night, but was clear and cold in the Morning,

The Journal of a Fur-Trading Expedition on the Upper Missouri 1812-1813

By John C. Luttig

---

cloudy afternoon, at 2 P.M. 7 Men and 2 Women of the Rees arrived at the fort, the first which made their appearance since Goshe left us, 4 Men 1 Woman went to Langue de Buche the others remained.

Wednesday the 3d, clear and cold, the Indians which arrived yesterday said that the upper Village of the Rees would come this Day to trade, which however proved to be a lie, at noon 7 Rees arrived from above, as also our party which had escorted Charbonneau, with Latour, Machecou, Duroche, and Laderoute 2 Squaws and 3 Children, a party of Men went over the River to out fire-wood, had a fine warm Day and cloudy evening.

Thursday the 4th last night about 3 inches of snow had fell cloudy and cold Morning, in the afternoon 4 Mandans arrived from their Village on their way to the Rees, no news.

Friday the 5th Snowstorm last night and continued snowing all this Day the Mandans pursued their Route.

END

The Autobiography of Stephen Hall Meek

I was born in Washington County Virginia, on the 4th of July, 1805, and am a relative of Pres. Polk. I attended the common schools of the day. When scarcely twenty years of age I became imbued with that restless spirit of adventure that has since been a marked characteristic of my life, and left my home for the then comparatively unknown West. St. Louis was at that time the center of the fur trade of the United States, and when I reached that city I engaged with the Rocky Mountain Fur Company, to work in their warehouses. I was placed in the cellar by the celebrated William Sublette with several other green hands to "rum the beaver," which operation consisted of spreading the skins out upon the cellar floor and sprinkling them with rum for preservation. Sublette left us with the remark "Don't you boys get tight now," at which idea we all laughed. Soon the fumes of the rum began to affect us and it was not long before we were reeling around the room apparently helplessly drunk. Sublette then put in an appearance, and pretended to be angry with us "Can't I leave you here alone for a few minutes, without your getting drunk? Do you think that this is the kind of men I want around me? Here!" said he "drink this?" and he drew a cup from the barrel. This had the effect of making us sober again and Sublette again left us with the remark "The next time you rum the beaver, just rum yourselves first."

In 1829, I went to Lexington, Missouri, and worked in a steam saw-mill erected by my brother, Hiram C. Meek, then a merchant of that place. In the spring of 1830, I joined a party being taken to the mountains by William Sublette and Robert Campell, and then commenced that wild life of adventure which I led so many years. The great annual meeting of the trappers that season was held at the favorite rendezvous on Green River, and four rival companies were then competing for the patronage of the Indians and free trappers, the Rocky Mountain Co., the American Co., the Hudson Bay Co. and an independent company. It was the custom to send trapping parties or brigades, in different directions to trap, all of them assembling the next summer at some rendezvous previously agreed upon.

I joined the brigade of Milton Sublette, and went to the Lewis fork of the Columbia River and wintered at Blackfoot Lake. In the fall of 1831 I was again with Milton Sublette and trapped in the Black Hills, near where Fort Larimie was afterwards built, on the head waters of the Platte. The winter was spent on Powder river, and in the spring we went to Wind river and trapped on that stream, the Yellowstone, Mussel Shell river, and back through Jackson's Hole to Wind river, the rendezvous being at the mouth of Tar, or Popyoisa, river, a tributary of that stream. In the fall of 1832 I went to the Blackfoot country with Bridger's brigade; crossed to Powder and Yellowstone, and then to the Missouri; went up that stream to Three Forks, and up the lefthand fork to the head of Big Gray Bull river, a tributary of the Yellowstone; then to Green River, and finally wintered on Snake River, where Fort Hall was afterwards built. In the spring we trapped Salmon, Snake and Point Neuf, and then went to Green River rendezvous. There I hired to Capt. B. L. E. Bonneville to accompany an expedition of 34 men, under Joseph Walker, to explore the Great Salt Lake. We got too far West, and finally started down the Mary's, or Humboldt, river for California, over a country entirely unknown to trappers.

We discovered Truckee, Carson and Walker rivers, Donner lake and Walker's pass, through which we went and pitched our camp for the winter on the shore of Tulare Lake, in December, 1833.

Walker, with a party of ten men, went to Monterey and returned in March, when they broke camp and retraced their steps to Humboldt river, thence south to the Colorado, thence up that stream,

thence north again, passing West of Great Salt Lake to Bear river, where we met Bonneville. In the fall of 1834 I went with Bonneville and 22 men and trapped Snake river and all its tributaries to Walla Walla; then up John Day river, over to Lake Harney; then to Malheur, Owyhee and Powder rivers, and wintered on Snake river. In the spring of 1835, I started for the Willamette valley, and when I reached Walla Walla engaged to the Hudson Bay Co., staying until the spring of 1836 at Vancouver. That spring I went with a party of men under the celebrated Tom McKay to California, trapping Scott river and the Sacramento. We went to Yerba Buena (San Francisco) and left our furs with the agent of the company, Mr. Ray, and then returned, trapping on the American, Yuba, Feather, Pit, McLeod and Shasta rivers, and then to Vancouver. In the spring of 1837, I went to the Rocky Mountains with a few companions, trapping on the way, selling pelts to Bridger at Green river. I then trapped in the Black Hills, on the Sweetwater and Platte, and wintered at Fort Laramie, which was just built by Wm. Sublette. In the spring of 1838 I went south to Pike's Peak; then to Taos, New Mexico; then to the Arkansas and to the north fork of the Platte, and wintered at the mouth of Cherry Creek, where Andrew Sublette built Fort Robert (Campbell), opposite the city of Denver. That winter I went to Independence on horseback, carrying the annual express. Having ten days to spare, I went to Lexington to see my brother and sister. While there I called on some young ladies, to whom I related many incidents of my mountain life, which so startled their worthy mother that she exclaimed:

"Law sakes! Mr. Meek, didn't you never get killed by none of them Indians and bears?"

"Oh, yes, madam," said I gravely, "I was frequently killed."

Going back to Laramie with the express, I made the spring hunt with Trapp's brigade, and in July went as wagon-master of the train of ox-teams, taking the furs to Independence. I spent the winter in St. Louis, and in the spring of 1840 engaged with McGoffin Bros. to take a train of wagons to Santa Fe and Chihuahua. I wintered in the latter place, and in the winter of 1841 joined a party of American mountaineers under James Kirke, engaged by the Governor of Chihuahua to fight the Apaches. Several battles were fought, but in the fall a new governor was appointed, who thought Mexican troops should fight Mexican battles, and the Americans were recalled. We came in with fifteen thousand head of captured stock, for which we received two and one-half dollars each, according to agreement. I again spent the winter there, and in March, 1842, returned to Independence, where I found seventeen families waiting to go to Oregon, who engaged me as a guide. I took them as far as Green river, where they were overtaken by Fitzpatrick's brigade on the way to Fort Hall, and several of the families cut up their wagons and made packsaddles, and packing their effects on their animals, went along with Fitzpatrick. The balance of the wagons I conducted safely to Fort Hall, and by going through a new route, known as "Meek's and Sublette's cut-off," I arrived there the same day the others did, much to their surprise.

The wagons were left there, and the goods were then packed upon the animals. They went down the Snake, and by Boise river, to its mouth, crossed Snake again, down to Brule or Burnt river, up to Powder and Grand Ronde, crossed the Blue Mountains at Jason Lee's encampment to the Umatilla, down the Columbia and to the Dalles, then by the Mount Hood trail to Oregon City, which was laid out that fall by L. W. Hastings, of this train, as agent of Dr. McLaughlin, I carrying the chain.

In the spring of 1843, I piloted a few of those who had become dissatisfied with Oregon, to California, over the Old Hudson Bay trail, meeting Capt. Joe Walker and others in Rogue River Valley,

The Autobiography of Stephen Hall Meek

---

with two thousand head of cattle, coming from California. I went to Sutter's fort and Monterey, where I spent the winter. Here I met Capt. Smith, with the trading vessel George and Henry, of Baltimore, who persuaded me to start on a voyage with him around the world.

When we reached Valparaiso, Smith received advices that called him at once to Baltimore, and he and I started in a packet for the Isthmus. We reached Guaquil, Colombia, where I nearly died with the yellow fever, then to Panama, where we took the vessel for New York. Arriving there in July, 1844, I went to Pittsburg with some Santa Fe traders, then to my old home in Virginia, where I found an absence of seventeen years had made me almost a stranger.

In March, 1845, I went to New Orleans and then up the river to St. Louis, where I got letters of recommendation from Fitzpatrick, Wm. Sublette and Rob. Campbell, which secured me the position as guide to the immense emigrant train of 480 wagons then preparing to go to Oregon. We started on the 11th of May, 1845, on which day I first saw Elizabeth Schoonover, whom I married a week later.

Arriving at Fort Hall, one-third of the train under Wm. B. Ide, of bear flag notoriety, went to California, guided by the old trapper, Greenwood. The remainder, I conducted safely to Oregon, the first large train of wagons ever taken there.

I lived in Linn City and Oregon City till the spring of 1848, when I went with my wife and child to San Francisco. In October of that year I went to the mines at Coloma, and in January, 1849, opened a butcher shop there. That summer my wife went to Oregon and in December, 1850, I followed.

In the spring of 1851, I started for Scott river, but stopped at Yreka and mined till October, when I returned with \$6000. In the spring I went by sea to San Francisco with my family and took a stock of goods to Coloma, which I sold and went to mining. The mine caved in and I sold out and went to Santa Cruz and opened a butcher shop. While here I paid \$3,400 for a Mexican grant near Watsonville, which the former owner's heirs got away from me again in the courts. Being now poor again, I went to Frazer river in the excitement of 1858, but returned poorer than before. In 1859 I went to Jackson, Amador County, and mined until the death of my wife in 1865. Taking my youngest child, George, then four years of age, I went in search of my wife's father, and found him at Humboldt Bay. In the spring of 1867 I took a train of twenty-two wagons, loaded with quartz machinery from Sacramento to South Boise, Idaho, and then went to the ranch of my brother, the well-known Joe Meek, near Portland, where I spent the winter. In 1868 I piloted a party of thirty men to Melheur river, where rumor had located the famous Blue Bucket diggings. This wild-goose chase being over, I engaged as wagon master for the government during the Bannock war, and soon became scout for Gen. Cook, finding in a few days the hiding place of the Indians, Sugar Loaf and Crater Hole which the troops had sought in vain all summer. The war being ended by the battle that took place there, I went to Silver City, Idaho, thence by stage to Winnemucca, and by rail to Sacramento. I spent the winter in Amador county, and the summer at Humboldt Bay, the next winter in Amador, and then lived in Truckee till the fall of 1871. Being now advanced in years and having lost all the money my good fortune and hard labor had brought me, I was compelled to take to the mountains to secure a livelihood. I went to Red Bluff, bought animals and traps and have ever since been trapping the waters of Sacramento, Pit, McLeod, Scott, Trinity and other rivers of northern California. I make the house of Josiah Doll, in Scott Valley, my headquarters, and from there range through the mountains with my son George, or as guide to hunting

(1) Letter to Pierre Chouteau, reprinted in: Chittenden, Hiram Martin, *The American Fur Trade of the Far West*, 1902, appendix A.

Three Forks of the Missouri,  
April 21, 1810

Mr. Pierre Chouteau, Esq.,

DEAR SIR and BROTHER IN-LAW: -- I had hoped to be able to write you more favorably than I am now able to do. The outlook before us was much more flattering ten days ago than it is today. A party of our hunters was defeated by the Blackfeet on the 12th inst. There were two men killed, all their beaver stolen, many of their traps lost, and the ammunition of several of them, and also seven of our horses. We set out in pursuit of the Indians but unfortunately could not overtake them. We have recovered forty-four traps and three horses, which we brought back here, and we hope to find a few more traps.

This unfortunate affair has quite discouraged our hunters, who are unwilling to hunt any more here. There will start out tomorrow, however, a party of thirty who are all gens a gage, fourteen loues and sixteen French. They go to the place where the others were defeated. I shall give them only three traps each, not deeming it prudent to risk more, especially since they are not to separate, and half are to remain in camp.

The party which was defeated consisted of eleven persons, and eight or nine of them were absent tending their traps when the savages pounced upon the camp. The two persons killed are James Cheeks, and one Ayres, an engage of Messrs. Crooks and McLellan whom Messrs. Silvester and Auguste (Chouteau) had equipped to hunt on shares. Besides these two, there are missing young Hull who was of the same camp, and Freeheartly and his man who were camped about two miles farther up. We have found four traps belonging to these men and the place where they were pursued by the savages, but we have not yet found the place where they were killed.

In the camp where the first two men were killed we found a Blackfoot who had also been killed, and upon following their trail we saw that another had been dangerously wounded. Both of them, if the wounded man dies, came to their death at the hand of Cheeks, for he alone defended himself.

This unhappy miscarriage causes us a considerable loss, but I do not propose on that account to lose heart. The resources of this country in beaver fur are immense. It is true that we shall accomplish nothing this spring, but I trust that we shall next Autumn. I hope between now and then to see the Snake and Flathead Indians. My plan is to induce them to stay here, if possible, and make war upon the Blackfeet so that we may take some prisoners and send back one with propositions of peace--which I think can easily be secured by leaving traders among them below the Falls of the Missouri. Unless we can have peace with these (ma--?) or unless they can be destroyed, it is idle to think of maintaining an establishment at this point.

Assure Madame Chouteau of my most sincere esteem as well as your dear children, and believe me always your devoted

Pierre Menard.

---

We are daily expecting to see the Blackfeet here and are desirous of meeting them.

---

(2) Interview With Pierre Menard, from Louisiana Gazette, Thursday July 26th, 1810. Reprinted in James, Thomas, Three years among the Indians and Mexicans, edited by Walter B. Douglas, St. Louis, Missouri Historical Society, 1916.

A few days ago Mr. Menard with some of the gentlemen attached to the Missouri Fur Company arrived here from their Fort at the head waters of the Missouri, by whom we learn that they had experienced considerable opposition from the Blackfoot Indians; this adverse feeling arose from the jealousy prevalent among all savage (and some civilized) nations of those who trade with their enemies. The Crows and Blackfeet are almost continually at war. The Company detached a party to trade with the latter, This gave offence to the Blackfeet who had not the same opportunity of procuring Arms, &c. The Hudson Bay Factory\* being several days journey from their hunting grounds, and with whom they cannot trade with equal advantage.

A hunting party which had been detached from the Fort to the Forks of Jefferson River were attacked in the neighborhood of their encampment on the 12th of April by a strong party of the Blackfeet, whom they kept at bay for sometime, but we are sorry to say unavailingly, as the Indians were too numerous; the party consisted of 14 or 15 of whom five were killed, say, Hull, Cheeks, Ayres, Rucker and Freehearty; Messrs Valle, Immel and companions escaped and carried the unpleasant tidings to the Fort, but with the loss of Tents, Arms, Traps, &c.

Early in May George Druillard accompanied by some Delawares, who were in the employ of the Company, went out to hunt, contrary to the wishes of the rest of the party who were confident the Indians were in motion around them, and that from a hostile disposition they had already shewn it would be attended with danger, their presages were too true, he had not proceeded more than two miles from the camp before he was attacked by a party in ambush by which himself and two of his men were literally cut to pieces. It appears from circumstances that Druillard made a most obstinate resistance as he made a kind of breastwork of his horse, whom he made to turn in order to receive the enemy's fire, his bulwark, of course, soon failed and he became the next victim of their fury. It is lamentable that although this happened within a short distance of relief, the fire was not heard so as to afford it, in consequence of a high wind which prevailed at the time.

Adding all those untoward circumstances the Fur Company have every prospect of success, although the majority of the season was occupied in distributing the hunting parties and exploring the foot of the mountains: although they have had upwards of \$12,000 worth of valuable furs consumed, yet they have been able to send down about fifty packs of Beaver, besides other Furs of a considerable amount and have taken measures to ensure more than double that quantity in the Spring.

\* The Hudson Bay Company have Factory's on the head waters of the Red River, on the same river the Mackinaw Com. have two trading houses; these houses are established for the purpose of procuring dried Buffalo and Venison from the Missouri Indians, the north country being destitute of that kind of food. Our hunters who visited the british factories say that they are mostly Scotsmen having European wives, and living in well built log houses, and in possession of as much comfort as any person can enjoy so near the Pole--they were informed that the north sea was about 1800 miles from their Forts calculating the meanderings of the Red river.

MEMORANDUM

of

Robert Newell's Travels in the Territory of Missouri

March 7, 1829. I left St Louis with Mr Wm Sublette who was the proprietor of our Camp on a hunting expediton for beever 55 men in all arived at the foot of the mountains on Sweet water the 17th of July whare we met his hunters or a part and crossed the mountain from the waters of the Missouri to the Columbia and on piers fork we fell in with Messers Smith & Jackson partners of Mr Subletts august 20th held Randezvous and Seperated for Beever hunting when all together about 175 men

It fell to my lot to go with Smith and Sublette we we went up henryes fork of Snake river on to Lewises fork crossed the mountain on to the waters of missourie took up winter quarters on the Bighorn and went to powder river and Remained untill Spring that winter Mr Sublette went to St Louis and Mr Smith in the Spring [24] went in Serch of beever from Powder to Tongue River little horn Clarks fork through priers gape to to the yellow Stone River Returned to wind river in July and about the last of July or the first of august met Mr Sublette with our equipment from St Louis and Mr Jackson from the snake Country with the ballance of forces

This Summer 1830 Messers Smith Jackson & Sublette Sold out and left the country their Successors ware Mr Fitzpatric M. Sublette Freab Gerva and J Bridger our Squad now consists of about 200 men our Randezvous over Freab & Garvie went to the Snake Country and hunters in different directions for Beever Mr fitzpatric and Sublette went to the Black foot Country with 81 men myself one of the number went to the three forks of Missouri Returned took up winter quarters on the yellow Stone

The Spring of 1831 Mr Fitzpatrick went to St Louis for Supplies Mr M. G Sublette and Bridger proceded from the yellow Stone River[25] South Came to Tongue River lost 57 head of animals by the Crows indians this is the first time I went to war on foot and probably will give my adventures at Some future time went from thare to powder River thare Bridger & Sublette Separated Sublette went to the Park on the Platte I being one of Bridgers number went with him to the head of Laramas fork met Sublette in the Park from thare to the Snake Country on Bear River near the Big lake took up Summer quarters to wait the arival of Mr Fitzpatrick with Supplies but in vain

left for fall hunt from Bear River to Greys fork of Snake River (a Scrimmge with Black feet) from thare to Snake River and on to Psalmon River a fork of the Columbia on to deer lodge River and on to the head of flat hed River at that time was called a fork of the River Missouri by our heds, Bridger and Sublette but Since[26] I travled to [k]now Better from thare we Returned to Psalmon River and met Mr Freab with Supplies from Mr Fitzpatrick and took up winter quarters with the flat heads and napercies

Spring of 1832 hunted from Psalmon River to hennrys fork to Lewises fort [fork] up Salt River Round to Piers hole Met all hunters of these parts Vanderberg Drips & Co with about 175 men William Sublette arived with Supplies for our Camp Mr fitzpatrick who was with Sublette left to come to us but was chased by the indians and Detained and Just escaped death [to] come to us. this is to be Remembered to be the largest party of whites ever Seen together north west or west of the yellow stones mouth or even thare except our American troops (aug 1832) up to the above date I think our number to exceed 350 but not much but in all whites and indians all sorts and

kinds of men about 600, (a [s]cimmage with the Black feet-)[27]

Into Rondezvous got our Supplies and Scatterd in the following courses to our profession Wm Sublette to the States with the Returns M. Sublette to the west down Snake River Mr Fitzpatrick to the north wone of that number from Piers hole to Psalmon River crossed the mountain to the 3 forks of Missouri (a scrimmage with Black feet) Up to the head of the galiton fork met craig and some of our hunters we parted with at the Rondezvous (met Some black feet 60 warriors made piece with them and the next day fought another party) Returned to Psalmon River and took up winter quarters.

The Spring of 1833 (I left Mr Fitzpatrick the 25 of Jany and Joined Capt Boniville) Broke up winter quarters and hunted on to green River whare all opposition Companies met I left Capt Boniville and engaged to Messers Fontinell and Drips Rondezvous held broke up I was Sent to fontinell & Drips to the flat heads to trade with 7 men after 31 Days travel I found them [28] on Bitter Root River (near a place called hellsgates) on a large fork of the Columbia I Returned to Snake River whare I joined my employer Mr Drips and took up winter a quarters

In the Spring of 1834 I was Sent again to the flat heads left in March the 20th and arived at the village by the way of the head of Missouri on account of Snow on Deer lodge River nears its mouth in April with 9 men (a Scrimmage with the black feet) went with the indians up deer lodge on to the head of Missouri then on to Psalmon River on to a fork of Snake River called Commerce Creek (a party of hundred Black feet c[h]arged on our village) left there for green River accompanied by 25 indians for Suplies met the company held Rondezvous at hams fork Returned with goods to the flat head indians after 51 days travel came to the Village on Bitter root river from thare up Deer loge River on to [29] the head of Missouri Bridger came to us on piers fork near horse prairie from thare to Snake River and wintered

In the Spring of 1835 went up lewises fork in to Greys hole (a Scrimmage with Black feet on lewises fork) from thare to Salt River on to bear River up it and on to green River whare we met our Supplies from St Louis Rondezvous over I Started from My home to go to St Louis as it appeared went to the Council Bluffs and to St Louis from thare to Kentuck and to Ohio Cincinnati my former Residence

Returned in the Spring of 1836 to St Lewis from thare independence brot me up Standing engaged to Messers Bent & St Vrain, lef thare for arkansas River on the 25 of may and arived at fort Wm Safe on the 11th of July left thare for the South fork of Platte with Wm Bent Arived and Returned the next morning was Sent [to] the arappahoes to Remain for the [30] winter found them on the fountain Caboie Remained thare untill the 8th of nov I was sent from thare to the South fork of the platte with 5 men and goods to trade with the Chiannes and Remained with them till Spring 1837.

In may I left the South fork platte returned to the arkansas fort with Bent & St vrain returned to the platte with animals delivered up my winters trade made preperations to leave for the mountans in a fuw days all was ready We left Sublette & Vasques fort on the 19th of may Our party now consists of three P Thompson myself and a man we engaged to assist us in packing our little bagage Subletts & Vasques fort is about 12 miles from the mountain near longs peak from thare through the Park by the way of laramas fork in the mountain over to the head of little Snake river found the Snake village four or five hundred lodges from thare to green river up the river above hams fork we found the whites engaged with the ponach indians fighting we

joined the sport and shortly afterwards give up the contest as they had been engaged for 2 Days and the indians ware fortified in the ground and [had] plenty of horses for their consuspion [31] We proceeded up green river to the mouth of hors creek whare all hunters ware wating the arival of the Supplies from St Louis we arived here on the 10th of June I engaged to Drips & fontinelle for one year for the perpose to trade with the crow indians I left with a small party of crows and 2 white men on the 22d of July from green river at the mouth of horse creek to Sweet water past the head of popo isha to the head of powder river to Tongue river on a north fork of tongue river we discovered a party of black feet they ran and concealed themselves in som brush our party in Searching for Some whips cords &c which they thought their enemy had left on ariving near the brush the black feet lay wait fired and killed one of our party after cutting of heads and hair we intered the body and on the next day we arived at the crow village on the little horn (a fork of Mo) the 17th august 1837-

As the crows had committed So many depradations on the whites heretofore by Killing and robings it was their intention to Send me with them a small Supply of goods to induce them to let the whites pass in peace. in a few days after I arived the news came that the Small pox was at Fort Vanburon on the yellow Stone river (a fork Mo) the crow trading post [32] the fear of that Complant Set them running from it So verry hard it wore out severel hundred horses before we stoped the retreat we went from the little horn to the head of powder river to the big horn up to wind river and to its head whare they stopped to recruit their animals.

I left thare five in numbers to go to another village on big horn the 20th of Oct but missing that village I went on to the Yellowstone to fine our camp according to promise but being disappointed I went down to fort Vanburon for Safety I met with a party of black feet at the mouth of the big horn but being fortunate to discover them first we had no intercourse &c to the great joy of our whole army of five men (thare is no more dangerous a Country than this at present in these parts or even in north america) Fort Vanburon is conducted by Samuel Tulloch for the American fur Company.

Four of our men has been robed and Striped by the crows Since I left the village and probably killed I arived at the fort on the 9th of Nov during my stay at this place indians came and took of horses severel times and I having good luck to Save mine though concluded they must go Soon I thought it best to hunt for our camp [33] and on the 13th Dec. I left with four men one woman and child I traveled at a good rate untill Sun down camped and next morning got up and to our great dissatisfaction found our horses ware gone our little goods and chattles we put under ground and returned to fort Vanburon on foot horeseless

On the day following Some men took dogs and went and brought our baggage: dogs is used here in the winter to pack hawl trai[l or n?]s in place of horses. Mr Tullock Sent a man on express to the crows as he has Stayed 20 Days over his time we think he is killed this is now the 21 of December and no news from our camp the wether extremngly cold buffalow in abundance

On the 22d of Dec I herd forom our camp on Powder river I went up and got my peltries I cashed one [on] my way from the crows in Nov found every thing Safe returned to fort vanburon on the 28th Dec much fatigued as we had to travle on foot and Snow bad our little party was Seven and like my Self a goode faged [a good deal fagged?] as we had to travle Day and Knight for Safety and now as I am making preparations to Start for Powder river about one hundred miles I will Stop writing till I get thare

---

The express Mr Tulloch Sent to the crows returned Safe

I left fort Vanburon on the 29th of December with five men 5 horses one woman and child for Powder river [34] went up rosebud two days travel (a fork of the yellowstone) over to tongue river up it a Small distance and on to powder River our Seventh day from the fort we found it cold and bad walking up powder river eight Days whare we found Mr Fontinells camp this was a hard trip as we had to perform it on foot Snow bad and extreme Cold weather I found our camp all well Mr fontinelle had gone with 25 men to the north fork of the platte for Suplies but has not yet returned. out Camp went through the black foot Country last fall without Seeing any indians we suppose many of them have died with the Small pox

We are now on powder river wating for Mr fontinelle our camp is eighty strong Coldwether and the 22d of January 1838 Mr orrick has opened trade with the crows and is much anoyed by them indians has repast too our camp and have made threts of hostility

4th of March A tremendous Storm we have lost Severel horses and mules by hard weather this winter Severel men left camp and Joined orrick our time is principally Spent in peeling cotton wood bark for our horses as that is their principal food on the north fork of the platte times is hard about five trading houses to eight hundred lodges of Soux we have news of Santa fee and tous [Taos] the Spaniards have rebeled and done all they could to put down their govoner by Killing all thir officers of peace and many rich forriners they cut off the head of the governor [35] and kicked it about the Streets burnt and destroyed many buildings of value this is on a count of high duties they put on american traders times is getting hard all over this part of the Country beever Scarce and low all peltries are on the decline

We left Powder river on the 29th of March in search of bever by the way of tongue river to the little horn met the crows on to the big horn to the yellow Stone this is beautiful Country Buffalow in abundance and Elk Deer Sheep and other game inhabit the mountains

We are at this time Lying at the mouth of 25 Yd River and our hunters out in Search of Beever May 15th 1838 Up 25 Yd River onto the Missouri the Galiton fork from thare to the Madison fork found the blackfoot trail about 5 or 6 hundred Lodges they Seperated and the largest part of them went over to the Jefferson fork of Missouri the ballance went up the Madison that being our route we overtook them in a few days a battle ensued the first Scrimage we Killed 7 wounded 15 as we was informed afterwards the following morning in attempting to pass up the river they made a second charge but had to give way for us to pass we past in sight of thir village Keeping up constant fire untill we had past

[36] Two Days afterwards on the head waters of Missouri we Discovered a Small village at henrys lake they Sewed [showed] all Sines of friend Ship we left them after a few hours met an man and his wife 1 child Spared this life from thare on to the watters of the Columbia Snake river found a small party of our camp lost all their horses one man wounded Henry Legon David White Stol horses from our camp and have likely made thir way to the Hudson bay Co this is a beautiful Country the largest mountains one [on] windriver and the Columbia mountains We are at this time on Snake River June 12th 1838 3 men left this morning for to hunt the flat head village 12th. the mishonaries taking indians out of their Country General Conduct of the men Bridger with the Camp. Black feet and Small pox

From piers hole to Jacksons hole Lewis fork June 17th No Buffalow warm and pleasant we went up the grovonters fork one encampment upit [I] left the party and went in search of the

St Louis out fit I went down green river at the mouth of horse creek I found whare Some of that party had been [37] that day in two days after I found them on a fork of green river they informed me the St Louis party was on their way to wind river whare they intended to hold randezvous I returned to our camp and found them on the head of green river we changed our Course went on to the head of wind river from thare down to the fork of po po isha whare we found Mr Drips with our Supplies Commenced Sales and men who had been in the company a long time commenced leaving owing to the Company being So hard Some run off Stole horses traps and other articles of value After a long and tedious time we left for hunting went up wind river in to Jacksons hole on to piers hole and on the 5th of august I left for the hudsons bay Co on Snake river with my woman and two little boys the Distance of 150 miles we arived thare Safe and found Mr Eramatinger in Charge and I was well received and treated by him and Mr McClain. times is hard and peltries low provisions scarce indians in a bundence going in all parts in Serch of Something to Stay their Stomachs

Mr J Walker went to the Snake Country with a part of Drips camp 30 or 40 men [38] Drips took with him 80 or 90 Some severel in other directions this Randezvous august or in July terminating in august 1838 [pencilled in, obviously of a later date but in Newell's handwriting: "at Riverton, Wyo on Wind River"]

After I went to the fort a party was fitted out for the hunt of buffalow 9 of us Started from fort hall up to Camance prarie had four horses Stole after 30 Days arived [back at Fort Hall] I then left fort hall and Joined Mr Drips in piers hole went from thare [to] the head of Green River commen[ced] winter quarters with 8 men and verry Cold Nov 20 1838

Capt Drips left in Dec for wind river with his camp Capt Walker remained on Green river with a Small party whare we are now Snow about 1 foot Jan 26 1839 buffalo Scarse I spent last Christmas in Jackson hole a large vally on lewis for[k] on a hunt of Buffalo Snow about 2 feet and game in a bundence After a serious trip of Sixteen days arived found all Safe encamped with the Bonacks and Snakes we Spent the ballance of the winter Down on Green River over to hams [39] fork

This Spring commenced to open first of march 1839 on to Blacks fork Green River one of the best of places for wintering in the Rocky mountains Except Game that Generly Scarse we arived there on the 10th of march and now the 21 our horses are mending fast but poor yet we had a verry hard winter lost Severel horses and mu[les] Snow 2 & 3 feet verry cold Tedious from Blacks fork out to Bear River left Walker on to hams fork to Green River met Drips with 4 Carts of Supplies from below held randezvous I left with Mr F Eramatinger to fort hall left on the 9 of July arived at fort hall on the 20 1839 Missionaries from the States Griffin and Monger with their Ladies Left fort hall on the 11 of august for Browns hole up Rosses creek on to portnef up bear river found the Snake village up on bear river above muddy on to blacks fork owens and Carson came to us on muddy [40] of Blacks fork 23 aug

1839 On to Browns hole 1st of September Baker arived for Bent & St vrain to trade 23d Biggs from Vasques 25th opposition high

I left for fort hall with Meek and one other man for goods arived thare Safe got my Supplies 45 horse loads and arived on green river mouth of Blacks fork 9th of november nothing to eat on to Browns hole found all Safe thare except about 100 head of horses that had been Stolen by the Shyanes and on account of that the whites a party from Browns hole heded by phillip

---

Thompson and michel [went] to fort hall and Stole 14 horses and on their Return Stole 30 from the Snakes the horse thieves about 10 or 15 are gone to California for the purpose of Robbing and Steeling Shuch thing never has been Known till late. I left Browns hole for fort hall on 7th February 1840 with 300 beaver after a long trip of 45 Days I arived snow verry bad and provi-sions Scarse

[41] This 3d of april fine wether plenty of indians all over the country no goods times hard &c &c the horse thieves or banditti consists of Phillip Thompson. Mo. William New. Eleven michel. Ohio. Richard owens. Oh. Kelly belcour Exevia Malona. St Louis, Mo.

Mr Eramatinger arivd 13th June

I went to the Amarican randezvous Mr Drips Feab & Bridger from St Louis with goods but times was certainly hard no beaver and everything dull some Missionaries came along with them for the Columbia Messers Clark Smith Littlejohn I engaged to pilot them over the moun-tains with their waggons and succeeded in crossing to fort hall thare I bought their waggons also of which I perchased and Sold them to the H Bay Co while at Rondezvous I had Some diffiquilty with a man by the name of Moses Harris I think he intended murder he Shot at me about 70 or 80 yards but done no damage only to [42] him self. I left the randezvous our little party consisted of 9 men and 3 woman in 17 days we arived at fort hall found all well and on the 27th of September 1840 with two waggons and my family I left fort hall for the Columbia and with Some little Difiquly I arived at walla walla thare I left one waggon and the other I had took down in a boat to vancouver and have it at this time on my farm about 25 miles from vancouver west. I arivd at the willamitte on the 15 of December 1840 and on the 25 of the Same month came to this place called the Folitine planes I likewise brought 2 american cows with me. this is to be remembered that I Robert Newell was the first who brought waggons across the rocky mountains and up to this 19th of April 1841

this year has been Spent in farming this country is not So good as Suposed as the climate is not So healthy I have had Some Sickess and also my family this country is under the influence of the hudson bay company and the [43] methodist Mission the farmers get all thir Supplies from the two places and also they are resorted to for advise in case of death to Settle their affairs the latter however I believe does the most of this as the Peoples choice Jason Lee is Supervisor of the M. Mission he has Severel Branches in this country also Several ministers of the gospel and I believe but for this mission that this little colony would do badly the Hudson B. company has encouraged Sebtlers here thare is also a Catholic mission here which influences the french or canadians who has been Servents of the H. B. Co. as yet we have no Shools here of note this has been a dry Season Small crops. I have herd from the mountains and thare has been some of my acquaintnces Kiled Since I left - Freab and others the H B Co is Still Supplying the mount[ains] with goods and on the east Side of the Rocky mountains as thare is no laws in this country we do the best we can. 1842 is past

William Kittson's Journal Covering  
Peter Skene Ogden's 1824-1825 Snake Country  
Expedition  
Kittson's Journal(5)  
April 26 - May 31, 1825

Tuesday 26.- Resumed our march early through a fine country and after making about 8 miles we fell on a large river which the Deceased Michel Bourdon(6) named Bear river from the great number of those animals on its borders. It comes from the east and runs due South for some distance. Followed it for about two miles and Encamped on its borders, which is lined with poplar and Pine. The water of it is white and thick. Some signs of our men ahead; and the Americans(7) have gone upwards and we are to follow it downward in order to find where it runs to. Course S.E. 10 miles S. 2. Fair weather.

Wednesday 27.- This morning we crossed the river a little above our encampment(8) and as the river took a bend to the S. W. we therefore cut a neck of land, made a South course. On our way we met with four trappers, three of whom had been absent since we left Pienoir river.(9) We continued our journey for about 9 miles, crossed Bear River and encamped on its borders.(10) Two more of the absent men have joined us. The beaver got this day amount to 133 and 1 otter. We have now completed our first thousand. Came through a fine level country and we are encamped in a beautiful green plain. Fair weather.

Thursday 28th.-Changed our encampment for about 1/2 a mile(11) for the purpose of feeding our poor horses. More of the freemen are ahead and no news of their stopping for us. It is also thought that eight trappers are behind hunting on Portneufs river. The bear river takes here a S. E. course for 1/2 a mile. 20 Beaver to day. Very warm weather.

Friday 29th.-Did not raise camp, resting the horses. No news from those behind, they left us on the 23rd Instant. More of the trappers left us to go ahead being vexed at the others not waiting us. Some Black Feet dogs seen near the camp loaded.(12) Strick watch on the horses. 16 Beavers to day. Fine weather.

Saturday 30th.-Raised camp, came through a plain along the river for about 3 miles, and as the main river took a S. E. course through cut rocks, we had to take a S. by W. route passing over a neck of land full of hills and ravines, for 3 more miles we fell on a small fork coming from S. W. here we put up.(13) 76 Beavers brought in. Some good signs of beaver on this small river. Course this day S. E. 3 & S. by W. 3. It rained in the evening.

Sunday 1st May.-Commenced our journey this morning by ascending a steep hill, then descended along the borders of a rivulet, crossed several others and encamped on account of rain on one of the many small streams we had crossed.(14) S. Course 4 miles. Paul, Laurent and Beauchamp are still ahead. 40 Beavers to day.

Monday 2nd.-Raised camp and made the following courses before we came to Bear river vizt, S. 2, S. W. 6 and S. 29 miles,(15) crossed the river and encamped a little below the crossing place.(16) The Country we came this day was barren as usual, but very uneven. Buffaloe and Antelope seen, none killed. The river is well furnished in Wild Fowls, such as Geese, Ducks and Pelicans, trout of a small kind is also found here.(17) 74 Beaver and a Pelican from the traps. Laurent and Beauchamp joined us this evening. Fine weather.

Tuesday 3rd.- Raised camp and took an eastern course leaving the river on our right. More Black Feet seen. Encamped on a small river well lined with willows, after making about 10 miles East. This stream is large and comes from the N.E. direction and steering a S. W. course to Bear river. (18) Grey left behind making a skin Canoe, in which he is to come down the Main Branche. In the afternoon 7 Snake Indians paid us a visit, they were very shy at first but soon got acquainted with us. They were well mounted and wore their war garments. They said that 25 Americans had wintered on this river last winter and had made many skins but left them en Cache in the Mountains.(19) Fair weather.

Wednesday 4th.- Last night we received 13 Beaver from the Traps. On account of bad weather this day we did not raise camp. Depot had a narrow escape from a Grizzly Bear, attacking him while setting his traps, he saved his life by diving into the river. We had rain, snow and hail during the day. 7 Beavers from the Traps.

Thursday 5th.-Raised camp and steered a S. W. Course to the Main River. On our road several bulls and calves were killed.(20) The eight men that were absent since the 23rd Ulto. came up to us as we were encamping. They report that for 4 days trapping on Portneufs river they had made 172 Beavers and Otters, a sign that many skins are still behind us. 17 Beaver in camp total 189. Weather cloudy most part of the day. Made only 4 miles this days journey.

Friday 6th.-Remained in camp. Payette, Paul and Annance have come up from ahead. left their beaver en Cache, 41 Beaver to day.(21) weather Bad.

Saturday 7th.-Raised camp towards the river of the 4th Instant a N. E. course from Bear river.(22) Crossed the American Branche and then took a Southern course for a mile put up on its borders which here makes a bend of N and S. Made about 5 miles. To day 31 Beaver.

Sunday 8th.-Began our march over a level plain, Course South for 6 miles crossed a small river coming from an eastern direction and running west. Put up on its borders.(23) The snakes numbering 4 Lodges came up and pitched near us.(24) Iroquois as usual commenced trade and bought a horse at an enormous price. Fair weather. 22 beavers brought in.

Monday 9th.- Resumed our journey over level country came to a fork after making about 9 miles on which we encamped. This fork is one that Michel Bourdon called Little Bear and it has three others falling into it before it enters the Bear River main Branch. The one here runs east and west. (25) Course today S-. The Cache of Payette Paul and Annance produced 110 Beaver, and 9 from

---

the Camp traps Total 119. Weather Cloudy with rain and hail.

Tuesday 10th.-Remained in camp in order to visit this fork, but our expectation in finding beaver failed. 25 Beaver to day.

Wednesday 11th.-We raised camp and took a S. E. course after crossing the fork we were upon, made about 5 miles and fell on another falling into the one we left. This fork is called Bourdon or middle Fork,(26) we put up on its borders, great signs of Beavers, but the Americans have trapped on it. 70 Beaver to day weather cloudy with a little rain.

Thursday 12th.-Remained in camp. McKay went on a high Mountain where he had a view of the Country round us. A large lake into which Bear River falls in, is not above 12 miles from this and bearing about S. W. from this spot.(27)  
18 Beavers brought in.

Friday 13th.-After crossing the middle Fork we took a S. W. course across the country, made about 6 miles and came to the South Fork which appears larger than the other two.(28) This fork enters the middle one, and the three join into one before they enter the Main Bear river. Near here the South Fork divides into three distinct branches, taking or coming from different courses, one N. E. the second S. and the third or right hand fork S. W. they are small and have been well furnished in beaver, but the Americans got the best of them. White Maple and Oak are to be found here.(29) The river or Fork is lined with poplar and aspin. 79 Beaver, meat of Buffaloe and Elk brought into camp. Completed our second thousand.

Saturday 14th.-Remained in Camp. Several trappers gone ahead and three are still behind us. 31 Beaver. Fair weather.

Sunday 15th.-Resumed our march, made 1 mile east and 4 miles South on the small right hand Fork on which we encamped. Soon after Annance cast up from ahead with the favourable news of plenty beaver, Several of the Trappers have gone there. 16 Beaver to day. It thundered and rained.

Monday 16th.-Raised camp early and took a South course over a rugged road, continuing on the right hand until its source then crossed over a high hill and fell on a river coming from the N. W. and running S. E. for some distance. Made about 7 miles South and 2 S. E. along the borders of new river and put up. We are now in a hole as I may say; as the place is surrounded by lofty mountains and hills. No signs of Americans having been here and the beaver are numerous. This place Mr. Ogden named new hole and the river bears the same name. It is lined with poplar and willows and about 6 yards in breadth. 52 Beavers brought into camp. Fine weather.

Tuesday 17th.-Raised camp and proceeded on a S. E. course leaving the new river on our right crossed over a small branche and came to the edge of another, then put up. This hole is but small not being above 50 miles in circumference, of an oblong shape. through the middle of which runs New River coming from the N.W. and taking a S. W. course near this place. It falls into the lake

already mentioned. Made about 9 miles. 244 Beaver from the traps.

Wednesday 18th and Thursday 19th.-Remained in camp. Traps sett last night produced this morning 109 Beaver. It rained last evening but fair and warm all day. 19th we got 68 beaver.

Friday 20th.-Raised camp and made about 2 miles S. E. course along the new hole, came to another small fork and put up. This fork comes from the N. E. and running westerly to new river into which it enters. 67 Beavers to day. Fair weather.

Saturday 21st.-Remained in Camp. Several men have left us with the intention of sleeping out. 23 Beaver to day. The men gone are 17 in number.

Sunday 22nd.-As we were raising camp two Deserters of the year 21 bravely paid us a visit. One of them promised to keep with us, but the other, refused, yet said he would pay his debt. Raised camp and left the new hole by taking a South course over a rugged hill and vallies and after making about 4 miles we fell on a small branch running N. and S. entering another, at 2 miles distance where we saw it, of a larger size and coming from the eastward, at the joining point of the two Branches, (where we encamped ) now in one they take a South course for about 1/2 a mile, then S. W. disappearing from our view through the mountains and falling into the Large Bear Lake already mentioned. Soon after we had put up the tents the two Deserters left us for theirs, and said they would return to our camp tomorrow. Here we are situated on the borders of the Utas lands, indians belonging to the Spaniards. They are, as we are told mostly all Christians, and three of them whom our men saw, bore the Cross to their necks made of Brass and Silver. Made about 6 miles South. 22 Beaver to day. 15 men are still absent. Fair and warm weather.

Monday 23rd.-Remained in camp in order to wait our men. In the Afternoon Jack McLoed and Lazard the two Deserters came up to us with their camp consisting of besides them, 3 Canadians, a Russian, and an old Spaniard. This party under the Command of one Provost. Soon after this, our absent men (excepting five), cast up bringing with them a Strong party of Americans bearing flags and under different heads. One of them (Gardner) proclaimed in the camp the freedom of the country they were on, being as he said American Territories, and that whomsoever wished to go with him they were welcome. No man would dare opposed the measures they would take, he and his party were ready to stand by, any that wished to Desert Mr. Ogden, Free or Engaged men were the same on this land of Liberty, and night coming on, no more was said. Strick watch set for the night. Fair weather.

Tuesday 23rd. [sic].-This morning Gardner paid a visit to our tent and had a long conversation with Mr. Ogden. The purport of which was as follows, knowing well how our party stood, he boldly asked Mr. Ogden, why he came on these Lands in order as he said to steal our money, by taking the Beaver and that if he Mr. O. knew what was good for himself and party he would return home. Mr. Ogden answered that as to the Country alluded to, he knew full well that it was still a disputed point between the two Governments and as he had received no orders from his Government to leave it, he was determined on making his best through it. here Gardner was

called out. Soon after Old Pierre Tevanitagon entered with two iroquois both Deserters of the year 21) he first began to state that the debts of these two villains were settled and paid to the Company by the remaining 11 Iroquois who kept true to the Concern. On his presenting notes made by himself, I interfere[d] pointed out the errors in the notes and they left us fully aware of Pierre's mistake. Mr. Ogden seeing Gardner going to an Iroquois Tent (John Grey) he followed, and learnt that mostly all the Freemen whites and all the Iroquois were going to leave him. I not being present cannot tell what conversation was held in the tent, however soon after perceived several tents coming down and Mr. Ogden busily employed in getting skins belonging to others who were absent. I immediately went to his assistance. A scuffle took place between Old Pierre and Mr. Ogden regarding the horses lent by that Gentleman to the old villain, who was supported by all the Americans and 13 of our scamps of Freemen. Mr. Ogden had me, McKay Quintal and Roy to his aid, few as we were we succeeded in getting one and the payment of the other. Soon after they left the camp together with the most part of their hunts leaving heavy debts behind them. Three of them however paid up their debts. The following names are those that left us this day vizt.

- 1 Alexander Carson Paid up his debt
- 2 Charles Duford not pd.
- 3 Martin Miaquin “
- 4 Pierre Tevaiitagon “
- 5 Jaques Osteaceroko “
- 6 Ignace Deohdiouwassere “
- 7 Ignace Hatchiorauquasha or Grey)
- 8 Laurent Karahouton not pd.
- 9 Baptise Sawenrego “
- 10 Lazard Kayenquaretcha “
- 11 Joseph Perreault “
- 12 Louis Kanota “

In the evening hearing that Carson had taken Annance's horse, McKay was sent to bring it back. he returned soon with the animal. The above man says that he was ill treated by Master Grey who wanted to fire at him, but on McKay's turning to face him he soon got quiet. More of the party are said to be preparing to leave us tomorrow. Every thing put into order of defence as we hear that the Americans and Iroquois are coming tomorrow to pillage us. Double watch set for the night. Orders to move back in the morning. Fair weather.

Wednesday 25th.-Early this morning on raising Mr. Montour, Antoine Clement, Annance, Prudhomme and Sansfacon began the same story of yesterday. Gardner with his gang of villains soon came to assist and debauch others to separate from us. Montour asked me for his account. I showed him the amount of Debt due by him to the Company, he then said to Mr. Ogden, I have about £289 in the Companys hands for which they seem not to give me Interest, let them now keep it altogether for my Debt and that of Prudhomme's. It was of no use in us to argue or point out their foolishness, go they must, Sansfacon being rather too slow in his determination, I told him to make haste as we wished to go, he then said I follow the Americans. On seeing Mr. Ogden

---

laying hold of the beaver, I order'd Sansfacon to call out that the beaver and horse belonged to the Company. Which he did, and we got them. Gardner immediately turns to me saying Sir I think you speak too bravely you better take care or I will soon settle your business. well says I you seem to look for Blood do your worse and make it a point of dispute between our two Governments. One thing I have to say is, that you had better begin the threats you so often make use of in order that we may know the worse of this shameful business. We are now ready to start though our party is now small still have a hope of its reaching the Point of Destination without danger, although we were again to loose men. Mr. Ogden called to me and we therefore separated without more ado leaving them at our camp and we retracing back our steps to Main Snake River. I kept behind all day through Mr. Ogdens orders, fearing that more would leave us on the road. Encamped at our place of the 16th Instant. Our party is now reduced to the number of 22 Freeman, 11 Engages and 6 Boys besides Mr. Ogden and I. Total 41. Fair weather.

Thursday 26th.-Late last night Fras. Sasanare and Ant. Crevaise (two of the five that were absent) arrived. They reported that they had seen a different band of Americans who pillaged them of their traps and furs and would have kept them prisoners if they had not made their escape during the night. All well told but I thought it lies. Raised camp and I kept all day behind watching the movements of several suspicious fellows who lurked in the rear of the party. In the evening we put up at our encamp. of the 14th Instant. 5 Beaver to day. Traps set for the night. Fine weather.

Friday 27th.-Resumed our march in the usual manner I and McKay keeping watch behind. Encamped in the evening at the same place of the 9th Instant. 1 Beaver to day.

Saturday 28th.-Continued our march early this morning. On our way three more villains were looking out for an opportunity to desert with their furs but were too well watched. All reached the encampment of the 2nd Instant. Here on arrival rafts were made of bulrushes for crossing the Property over Bear river. Strick orders given to the watch this night. Rained.

Sunday 29th.-This morning Two of the Canadian Freeman gave up their furs, Traps and a couple horses and said to Mr. Ogden they would go back to join the rest of the villains that left us, and as it was in vain for us to stop them, they seperated. One of them however was mortified at his Son not going with him. This man is Theery Goddin and the other J. Bte. Gervais. the latter paid up his debt and the former has still a balance against him. After crossing bear river we took a N. W. course leaving the above river and making towards the Snake waters. Made about 18 miles through a level country and came to a small creek crossing our road lined with willows on which we encamped. Another scamp left us on the road, it is not surprising he being an Iroquois by the Name of Fras. Sasanare. He took nothing with him but his riding horse. Left wife and furs behind. Fair weather. Plenty Buffaloes and many killed.

Monday 30th.-Raised camp, made about 20 miles N. W. and put up on a west Fork of Riviere Portneuf. Fair weather.

Tuesday 31st.-Resumed our march as usual descending the west fork and made about 16 miles

---

and put up on the borders of the same branch. From a few traps set last night we got this morning 7 Beavers. Fair weather. Bulls killed.

1. Dr. Miller is on the staff of the department of history at the University of Utah. He is a specialist in Utah and western United States history. A small grant from the University of Utah Research fund helped defray costs of the field work in connection with this article.
2. E. E. Rich, ed., *Peter Skene Ogden's Snake Country Journals, 1824-25 and 1825-26* (The Publications of the Hudson's Bay Record Society, XIII [London, 1950]). As soon as I had a chance to examine the published journals I realized that adequate field work had not been done in preparing them for publication - especially in the Utah area. (This statement should not be construed as a criticism of the editors who prepared the journals. I realize that they were working under war conditions that seriously curtailed travel for such activities and that the time allotted them was inadequate.) Believing that the value of the journals would be greatly increased by more thorough field work and editing, the Utah Historical Society sought permission from the Hudson's Bay Record Society to republish those parts of the journals dealing with Ogden's penetration into Utah. This request was graciously granted, and I was given the task of preparing the journals for publication - in the *Utah Historical Quarterly*, Ogden's journal appearing in the April, 1952 issue.
3. A copy of Kittson's map was published in connection with the Ogden journal. See David E. Miller, "Peter Skene Ogden's journal of His Expedition to Utah, 1825," *Utah Historical Quarterly*, XX (April, 1952), 165. Unfortunately, however, too much "art work" was done on it in preparing the cut for the press. The result was that the southernmost penetration of the Ogden expedition and the camp site on Weber River were omitted. This was a serious error. As then published the map indicated that Huntsville was the southernmost point of the Ogden trek. The map was, therefore, out of harmony with the facts, the original journals, and the original map. In republishing the map as part of Kittson's journal, proper correction has been made.
4. Dr. C. G. Crampton, Jesse Jameson and I did this field work in November, 1951.
5. For biographical material concerning William Kittson see Ogden's *Snake Country Journals*, Introduction. The Utah State Historical Society wishes to express sincere appreciation to the Hudson's Bay Record Society for granting permission to republish this portion of Kittson's journal and map. The journal is reproduced exactly as it appeared in the above-named publication - no attempt has been made to correct spelling or other punctuation.
6. For information concerning Michel Bourdon see Miller, *op. cit.*, 166n.
7. The Americans referred to here were Jedediah S. Smith and six companions who had shadowed the Ogden camp much of the time since December 29, 1824. The fact that the Americans headed upstream while Ogden and his party turned downstream is of significance in view of the fact that it virtually excludes Smith from any claim he may have (or numerous writers have claimed for him) to the honor of having discovered Great Salt Lake. Several men saw it before he could have arrived at its shores.
8. Kittson's accurate description of the geographical features helps materially in locating the actual

camp sites. This crossing is just about two miles south of Alexander, Idaho. It is the only place immediately below the great bend of Bear River where the stream could be reached and forded because of the high precipitous banks of lava rock.

9. Ogden usually had trappers out in front scouting and trapping; a few were sometimes left behind to finish working a stream.

10. Ogden's entry for his day gives the distance as 18 miles, which is about twice the actual distance. However, Kittson was not always more accurate than his superior officer, as will be seen in later journal entries. The route this day was southerly via Grace and Miter, Idaho. The river was probably crossed at Burton's Ford and camp established in a flat meadow on the west bank just a few miles below the Grace power plant.

11. Ogden says one mile.

12. The "Black Feet" were considered unfriendly, to say the least. Any indication of their presence resulted in extreme caution and heavy guards.

13. The route this day was down the west side of Bear River, through the present community of Thatcher. Just below the Thatcher school, Bear River has cut a narrow gorge through a lava bed, making it impossible to continue down the bank of the stream. Kittson's description of this is very accurate; his recorded distances are about right. Ogden's route was probably not far from the present highway. Camp was made that night on Cottonwood Creek, probably about a mile above its mouth.

14. Climbing out of Cottonwood Creek the party reached the headwaters of one of the tributaries of Battle Creek and camped after a short day's march.

15. Ogden gives the distance as 10 miles, which is more nearly correct.

16. The crossing was probably made not far from the present bridge on U.S. Highway 91 northwest of Preston. See Miller, *op. cit.*, 169n.

17. The mention of the numerous species of wild life in the region is of special interest. Ogden also mentions "crickets by millions."

18. This day the party crossed the level country through Preston and Whitney to the Cub River which they probably reached just a short distance above the present location of Franklin.

19. This is one of the most significant entries in the Kittson and Ogden journals for it definitely locates (for the first time) the camp of John Weber's party of Rocky Mountain trappers known to have been in the region that winter. (By guesswork the location has been placed in various spots in Cache Valley.) It was probably from this American camp near Franklin, Idaho, that Jim Bridger made his famous "bull boat voyage" down Bear River to discover Great Salt Lake--eittier in the fall of 1824 or the following winter.

The use of the term "en Cache" also is significant. This is the earliest recorded use of this term in this region, as far as I am aware.

20. The presence of large numbers of buffalo and elk from time to time is very interesting, especially to those interested in the biology of the Great Basin. Ogden makes mention of large numbers of seagulls in this same vicinity (the earliest mention of gulls in Utah), and speculates that there must be a large lake not too far away.

The company probably crossed the present Utah-Idaho line, entering Utah this day. See Miller, *op. cit.*, 171n.

21. These men had been as far south as Logan River. Their cache yielded 110 skins a few days

later.

22. Information from the trappers, who had come in from the south evidently induced the leaders of the expedition to leave Bear River and skirt the foothills along the base of the Wasatch, striking for the cache mentioned above. Kittson calls Cub River the "American Branche" because the Americans had wintered on it the previous winter.

23. This would be at the present location of Smithfield. Kittson's map indicates that camp was established on the south side of the stream.

24. Ogden says that these Snakes joined the British brigade. Four lodges would be about 20 persons.

25. This day's journey brought the brigade to Logan River which Kittson calls "Little Bear." Camp was pitched on the north bank. As the journals point out, three forks (present-day Logan River, Blacksmith's Fork and Little Bear River all join together before entering the main branch - Bear River.

It is very interesting to note and contemplate the statement that Michel Bourdon had evidently been that far south several years before - in 1819. As far as I know, this is the first indication that British trappers had penetrated that far south prior to the Ogden expedition.

26. This is Blacksmith's Fork. They camped in the flat meadowland on the north side of the stream, probably a half mile or more below the canyon mouth.

27. This is the most significant entry in this portion of Kittson's journal, for it is the earliest known eyewitness, written account of the discovery of Great Salt Lake. Charles McKay had been sent by Ogden to examine the upper waters of the stream (Blacksmith's Fork) to determine the extent of beaver to be taken there. While on this reconnaissance he had obviously ascended one of the high mountain peaks to the east from which point he could see over the mountain range between Hyrum and Brigham City and a distant view of Great Salt Lake. It is rather remarkable that Ogden's journal contains no mention of McKay's important discovery. It should be remembered, of course, that Bridger (and probably others) had seen the lake before this time. But this is the earliest written record of such discovery.

28. Raising camp on the morning of Friday 13, the party passed through what is now Hyrum, reached the Little Bear River and ascended it to a point just south of Paradise. Ogden indicates that some of his men crossed the divide into Ogden Valley on this day.

29. The mention of white maple and oak is of particular interest to botanists in their study of the migration of plants.

JOURNAL OF PETER SKENE OGDEN: SNAKE EXPEDITION, 1826-7.

(As copied by Miss Agnes C. Laut in 1905 from Original in Hudson's Bay Company House, London. England.)

Monday, 12th Sept. (1826). Took my departure (from Fort Vancouver) 2 boats 12 men bound for Snake Country and reached main Falls of Columbia 100 miles from Ft. Vancouver 4th day early. Found Mr. McKay and party with 100 odd horses waiting my arrival. The natives had already succeeded in stealing one prime horse. I sent back boats under La Framboise and 5 men and wrote Jno. McLoughlin. 17 and 18 employed giving horses to men with their loads. Sent off Mr. Black's(1) men with 1100 salmon as far as falls whence they will proceed in canoes to Nez Perces Ft.

19th. Gave call to collect horses and raise camp. 35 men in all assisted by Mr. McKay, who discovered an Indian stealing 2 (horses) which he secured. Followed banks of Columbia for 2 miles and bade it adieu. God grant we reach it again in safety. Course from Columbia S. E. 6 miles.(2) Many horses are wild and throw their loads. Indians are moving in all directions. Strict watch is kept day and night. The natives are already starving.

Tuesday, 20th. Raised camp early to avoid the heat of the day. S. W. distance 8 miles.(3)

Wednesday, 21st. Left our old tracks of last year for a fork of River of the Falls.(4) A fall 40 ft. high, 20 yds. wide. 2 wild horses made their escape into mountains and an Iroquois lost his with its load. Mr. McKay and 6 men are to go in search. 5 Indians visited us and returned a blanket stolen last year. Their numbers are few or they would not deal so fairly: distance 15 m. S. S. E.

Thursday, 22nd. The horse with his load was found neighing across the river last night; but not the two wild horses. Proceeded down River of the Falls to the Falls(5) where we found an Indian camp of 20 families. Finding a canoe also a bridge(6) made of slender wood we began crossing, 5 horses were lost thro' the bridge. I am informed the salmon do not ascend beyond these falls. Course N.W.

Friday 30. Gervais(7) and party of 8 men with horses and mules joins us.

Wednesday, 5th Oct. We had certainly a most providential escape. Last night the Indians crossed the river(8) and set fire to the grass within 10 yards of our camp. The watch perceived it and gave the alarm. Had there not been a bunch of willows to arrest it everything would have been lost; a gale blowing at the time. This morning every Indian had decamped. If ever Indians deserve to be punished these do. They were well treated and fed by us and in return attempted to destroy us. This is Indian gratitude.

Saturday, 8 Oct. At an early hour Mr. McKay with 25 trappers 2 horses each well loaded with traps started for the river discovered last summer by Sylville, 3 days from here. The different streams

here,(9) I am of opinion discharge in Day's River.

Tuesday, 11th Oct. Reached the river(10) and joined Mr. McKay. 18 beaver from the traps.

Sunday, 16 Oct. Having dried our lodges we followed the banks of the river till 1 p.m. when reaching 12 of our trappers we encamped. From this point 7 horses were stolen yesterday and two men wounded. Mr. McKay related the particulars. The night before last 3 Snake Indians stole 7 horses and crossing over a point of land to their surprise met Payette and Baptiste the Iroquois visiting traps. The latter pursued. The Indians offered no resistance and delivered up the horses. This did not satisfy the two men who demanded payment. The Indians offered 2 boats. This did not satisfy Baptiste who said "let us beat them well but not kill them" began with his whip handle. The Indians endured but becoming vexed one seized Bap. the other Payette. A scuffle ensued. One Indian was killed, both our men severely wounded, only saved themselves by flight leaving arms and horses. The Indians killed 4 of the stolen horses, then seeing a man coming made off with 3 horses, and guns and rifles of wounded men. The whole thing is disgraceful to us;(11) 65 beaver to-day; distance 10 miles.

Tuesday, 18 Oct. 134 beaver and 1 otter, a (Indian) woman missing from the camp. She is either lost or a victim to the Snakes--the men have gone in search of the missing woman, leaving their traps. Mr. McKay and party found the woman with her horses. Benighted, she had very prudently camped.

Saturday, 29 Oct. In the afternoon Mr. McKay and party arrived,(12) and reported--their Snake guide conducted them to a country of rivers and lakes, one of the latter the water is salt; its length they could not ascertain; it is a swampy country and the waters of this river as well as the other streams discharge into this lake. It must be low and deep to receive no less than 3 different streams without one discharging from it. Their traps they left from whence the party returned. As far as they could see, the country was level. The country is destitute of animals and we may prepare to starve altho' wild fowl seem to abound.

November, Tuesday 1st. At sunset we reached the lakes. A small ridge of land an acre in width divides the fresh water from the salt lakes. These two lakes(13) have no intercourse. The fresh water has an unpleasant taste 1 mile wide 9 long. In this (salt) lake discharge Sylvailles River and 2 small forks; but it has no discharge. Salt Lake at the south end is 3 miles wide. Its length at present unknown to us but appears to be a large body of saltish water. All hands gave it a trial but none could drink it. All the country is low and bare of wood except worm wood and brush. We had trouble finding wood to cook supper. The trappers did not see a vestige of beaver. Great stress was laid on the expedition visiting this quarter. Here we are now all ignorant of the country, traps in camp, provisions scarce prospects gloomy. Buffalo have been here and heads are to be seen. Fowl in abundance but very shy.

Wednesday 2nd. At an early hour Mr. McKay with a party started well loaded with traps following Salt Lake(14) west to ascertain its length; and if any rivers discharge into it. I await him here. The

rest of the men hunting fowls.

Thursday 3rd. From 4 a. m. snow has fallen. This will make it difficult for my 2 express men from Ft. Vancouver to find our tracks though every precaution was taken making marks at different camps, if only the Indians do not destroy these marks. It is incredible the number of Indians in this quarter. We cannot go 10 yds. without finding them. Huts generally of grass of a size to hold 6 or 8 persons. No Indian nation so numerous as these in all North America. I include both Upper and Lower Snakes, the latter as wild as deer, fit subjects for the missionary who could twist them in any form they pleased. What a fine field for the society; one equal to it not to be found. They lead a most wandering life. An old woman camped with us the other night; and her information I have found most correct. From the severe weather last year, her people were reduced for want of food to subsist on the bodies of relations and children. She herself had not killed any one but had fed on two of her own children who died thro' weakness. Unfortunate creatures what privations you are doomed to endure; what an example for us at present reduced to one meal a day, how loudly and grievously we complain; when I consider the Snake sufferings compared to our own! Many a day they pass without food and without a murmur. Had they arms and ammunition they might resort to buffalo; but without this region the war tribes would soon destroy them. This country is bare of beaver to enable them to procure arms. Indian traders cannot afford to supply them free. Before this happens a wonderful change must happen. One of Mr. McKay's party was sent back to request us to raise camp and follow his tracks. A chain of lakes was all they had seen, no game. Truly, gloomy are our prospects.

Friday, 4th Nov. Raised camp taking west course and soon reached the end of Salt Lake(15) not near so long as I expected, in some parts nearly 5 miles wide and deep, its borders flat and sandy. At evening, we camped near three small lakes. Swans numerous. Tho' 100 shots fired, not one killed. Nothing but worm wood this day. Salt ( ? ) Lake may be 10 miles in length. Mr. McKay and party arrived with the following accounts--no beaver, same level country a chain of lakes of fresh water. This adds to the general gloom prevailing in camp, with all in a starving condition, so that plots are forming (among) the Freemen to separate. Should we not find animals our horses will fall to the kettle. I am at a loss how to act.

Saturday, 5th Nov. Bad as prospects were yesterday they are worse to-day. It snowed all night and day. If this snow does not disappear our express men will never reach us. I hope they will not fall a prey to the Snakes. I intend to take the nearest route I can discover to the (16)Clammitte Country. My provisions and are fast decreasing. The hunters are discouraged. Day after day from morning to night in quest of animals; but not one track do they see.

Saturday, 12 Nov. 2 herds of antelope seen but the hunters did not get a shot. They were fortunate with a small black bear. This with 9 beaver and 1 otter infused general joy among all. Tracks of Indians seen not of old date. This gives hope of finding a river. Snow scarce for water. Tho' repeated attempts have been made to melt snow in skins, they will not drink. Two Indians give a hunter to understand, the river is still 3 days' march distant. Within the last 10 days we have had only 6 meals. It was now 2 mos. since we set out, and we have only 500 beaver.

Wednesday, 16th Nov. Ascended the divide(17) descended and had the pleasure of finding 2 lakes(18) one small the other large due west Salt Lake. These lakes are a God-send. It was a consolation to see our poor horses quench their thirst. Pines and hemlocks are the only trees. Numbers of bear tracks seen. This is the season bears seek winter lodgings and are fat. Our hunters came in without success.

Thursday, 17 Nov. Reached a river at sunset. It must discharge in the Clammitte Country or near the River of the Falls.

Friday, 18 Nov. Reached the River of the Falls so desired by us all. Thank God! The road to the Clammitte we all know.(19) 7 white tailed deer brought in.

November 25th, Friday. We had a view of the Umqua Mts. to-day, no snow on them.

Sunday, 27th Nov. We are to leave the River of the Falls and cross over to the waters of the Clammitte. One horse killed for food to-day. My provisions are nearly exhausted. The waters of the Clammitte do not discharge in the Columbia and must discharge in some river to the ocean. It is from this river I have hopes of beaver.

Wednesday, 30th Nov. Course south to Clammitt River(20) 25 miles from River of the Falls. Mr. McKay proceeded ahead to an Indian village distant 3 miles. It was composed of 20 tents built on the water surrounded by water approachable only by canoes, the tents built of large logs shaped like block houses the foundation stone or gravel made solid by piles sunk 6 ft. deep. Their tents are constantly guarded. They regretted we had opened a communication from the mountains. They said "The Nez Perces have made different attempts to reach our village but could not succeed. Even last summer we discovered a war party of Cayouse and Nez Perces in search of us; but they did not find us. Now they will have yr. road to follow. We have no fire arms. Still we fear them not."

They are well provided with bows and arrows. They have only one horse. Snow is so deep, horses perish for want of food. In winter, they live on roots. In summer on antelope and fish.

December 1st. 30 Clammite Indians paid us a visit; fine men in good condition, but wretchedly clad. They say the river to the ocean is far distant and beaver they do not know. They say the Indians become more numerous as we advance to the ocean.

Friday 2nd. Late last night I was overjoyed by the arrival of one of my express men. One of the men gone back in quest of horses discovered them, otherwise tho' the distance is only 4 miles, they would never have reached the camp. They could no longer walk or crawl. For 14 days they were without food; for 9 days without quenching thirst. Their horses were stolen on the River of the Falls by the Snakes. One mule escaped. On entering the lodge the man fell from weakness and could not rise. I immediately sent for the other man and about midnight they brought him in,

thank God, safe.

Saturday 3rd. 2 horses, killed for food; terrible storms of snow and sleet! What will become of us? Course S.

Tuesday 6th. Reached Indian village of five huts, hut large size square made of earth flat on top the door at the top a defence, against arrows but not balls. 200 of them collected about our camp and traded 4 days. The 2 chiefs delivered traps lost by Mr. McDonald last year with 8 beaver. This is much in favor of their honesty. On our march this day, we passed the camps from wh. Mr. McDonald turned back last year and are consequently strangers to the country in advance.

Thursday 8th. About 300 Indians around our camp. We advanced 6 miles south following the river south. I estimate the Clammitte nation 250 men.

Monday 12th. Reached the lake(21) 1 1/2 x 15 miles well wooded with maple and hazel; course S.

Sunday 25th, Christmas. I did not raise camp and we are reduced to one meal a day.

Saturday 31 Mr. McKay started in advance. Our hunters have no success. Discontent prevails. I gave rations to all. This closes the year; and my stock of provisions also. They have been measured out with a sparing hand. We have yet 3 mos. of winter. God grant them well over, and our horses escape the kettle! I have been the most unfortunate man; but the Lord's will be done!

1827, Sunday 1st. New Years commences with a mild day. The men paid me their respects. I gave each a dram and tobacco. Goat killed. Mr. McKay reports as far as he could see one chain of mountains and no water. Return we must to seek food.

Wednesday 18th. I am wretched! No beaver! The country trapped by Mr. Ross 3 years since(22) may yield a few beaver but will not give us big returns.

Sunday 22nd. Late last night two of my Iroquois came in with 7 deer. This news caused joy in camp.

Sunday 29th. We are indebted to the late American Fur Company for introducing rifles on the Columbia. From a gun of 10 shots, 1 only kills. There is waste of ammunition; course now N. N. W.

Friday, 10th Feb. The Indians here have a contemptible opinion of all traders. Of the numerous murders and thefts committed,(23) not one example has been made. Indians in general give us no credit for humanity, but attribute our not revenging murders to cowardice. When ever an opportunity offers of murder or theft, they allow it not to pass. I am of opinion if on first discovery of a strange tribe a dozen of them were shot, it would be the means of preserving many lives. Had this plan been adopted with the Snakes, they would not have been so daring and murdered 40 men.

The same is the case with all Indians. Scripture gives us the right to retaliate in kind on those who murder. If men have means of preventing, why not put the means in execution. Why allow ourselves to be butchered and property stolen by such vile wretches who are not deserving to be numbered among the living the sooner dead the better. Trappers would make hunts and traders become rich men. Here we are among the Sastise.(24) Course this day west. The stream(25) we are on has no connection with the Clammitte River; it flows south then west to a large river. These Indians know nothing of the ocean.

Mr. McKay roused me last night to say the Indians were on the point of attacking our camp. Our numbers amounting only to 8 men.

Sunday, 12 of February. The croaking of the frogs last night surprised me. This is certainly early. The weather has been cloudy. From appearances, we shall soon have rain. A number of Indians paid us a visit. There being 2 who understood the Clammitte language, that it(26) takes a western course. These forks have become a large river. The further we advance the more beaver will be found. These Indians eat beaver meat raw. Among the visitors was one who had only one arm. On questioning how he lost the other, he informed me he had been severely wounded in battle the wounds would not heal and were most painful, so he cut it off about 3 inches below the socket with his flint knife and an axe made of flint. It is 3 years since. He healed it with roots and is free from pain. He is about 30 years of age and of slender frame. 15 beaver to-day.

Monday 13 Mr. McKay roused me from sleep to say an Indian had arrived with word the Indians had assembled in numbers and were on the eve of attacking our camp. We were soon on the alert our number being only 8 men, the rest of camp afield, as half of my men had never fired shots, resistance would not last long. The night was very dark and blowing a gale. This morning our scalps and horses are safe. I am inclined to believe it was a false report, given to receive a reward. He will be disappointed. We all know Indians are treacherous, bloodthirsty. The sooner the exterminating system be introduced among them, the better. The rear party of trappers arrived tonight with 29 beaver.

Tuesday 14th. Wind blew a gale. If the ship destined for the Columbia be on the coast in this stormy weather, I should feel anxious for her. Having 40 beaver to skin and dress I did not raise camp. It is a pleasure to observe the ladys of the camp vieing who will produce on their return to Ft. Vancouver the cleanest and best dressed beaver. One of the trappers yesterday saw a domestic cat gone wild. It must have come from the coast. All the Indians persist in saying they know nothing of the sea. I have named this river Sastise(27) River. There is a mountain equal in height to Mount Hood or Vancouver, I have named Mt. Sastise. I have given these names from the tribes of Indians.(28)

Tuesday, 21st Feb. Late last night 7 of the 9 absent trappers made their appearance;(29) only 93 beaver and 9 otter. The Indians where they have been most numerous and friendly, villages built of planks, large enough for 30 families in each, fine large canoes resembling the Chinooks, have various trading articles from the American ships, they informed the men it was only 4 days to the

sea. The two missing men remained in the rear to trap.

Wednesday 22nd. We have this day 15 beaver, wh. completes our first 1000 and have 2 to begin our 2nd.

Thursday 23rd. The two absent men made their appearance with 14 beaver.

Saturday 25. Should we not find beaver soon, starvation will make its appearance. We have only 2 mos. more but they are the most to be dreaded in the mountains. I wish they were past and our horses escaped from the kettle. Some already complain of scarcity of food; but fortunately our camp contains many sick and while they remain so, will be the means of destroying less food. One woman is so ill she must be tied on a horse. Nor can we afford her any relief. A sick person in this country is not only a burden to himself but to all; and the Canadians are not overstocked with tender feelings.

Wednesday 29. I propose sending Mr. McKay to cross the Clammitte River,(30) and I shall proceed down this stream as far as we can go.

Thursday 1st Mar. Mr. McKay with 13 men separated from us. Payette, a steady man accompanied him. My party is 24. We left taking an east course to falls and cascades. Soon a village large enough to contain 100 families of Indians. On seeing us they ascended a hill with their women and children.

Friday 2nd. All are more or less without food. Traps set gave but 2 beaver. On an average we require 15 a day for food.

Monday 5th. Men killed 2 deer and report bears numerous. These gents will soon leave their winter quarters and ravage about in quest of food after 4 mos. of quiet.

Friday 9th. At early hour with aid of 2 small canoes crossed over Sasty River, all safe over by 4 P. M. Huts no sooner made than rain came in torrents. Our leather tents are in a rotten state and I can swear our blankets have not been dry for 20 days. I am afraid this rain will be snow in the Mtns.--and I apprehend for Mr. McKay. Indians troublesome and numerous. It is almost a sin to see the number of small beaver we destroy. Some of the females have no less than 5 young. This is the effect of traps. They spare neither male or female.

Sunday 11th. The trappers have come in with 72 beaver and 1 otter.

Tuesday, 13 Mar. We left the Sasty Forks in our rear taking W. N. W. 8 miles encamped by a lofty range of mountains. Had trouble to persuade our guide to ride nor would he till he made me promise to lead his horse. He had many falls and I was obliged to tie him on by ropes, wh. caused my men great diversion. All obliged to sleep out in pouring rain and without blankets. Not one complaint. This life makes a young man sixty in a few years. Wading in cold water all day, they

earn 10 shillings P. beaver. A convict at Botany Bay is a gentleman at care compared to my trappers. Still they are happy. A roving life suits them. They would regard it as a punishment to be sent to Canada. God grant some kind friend to succeed me, and I wd. steer my course from whence I came although I am a Canadian.

Thursday, 22 March. Reached a fine large river having crossed the mtns.(31) where we had to throw our horses over banks--storm of wind and rain saturated us--course W. Our guide went to visit the Indians and returned with the information the Umpqua chief with the trappers from Willamette has visited this region and taken all the beaver. These waters have no communication with Umpqua but discharge in Clammitte. Gervais with 4 men will trap the forks of this river, and open a way to Ft. Vancouver.

Monday, 26 March. The Indian guide saw a grizzly bear of large size, wh. the trappers fired at and wounded. The Indian requested the loan of a small axe with bow and arrows. Stripping himself naked, he rushed on the bear but paid dearly for his rashness. I do not suppose he will recover. He was injured in the head and lost one eye wh. was literally torn out. The bear remained in the bushes.

April 6. Retraced our crossing the Sasty River.

Sat. 7th April. We shall proceed slowly to Clammitte Lake and await Mr. McKay's party.

Sunday, 22nd April. Late this afternoon I was surprised by Mr. McKay's arrival. He left his party crossing over their furs. His success amounts to 735 beaver and otter taken on 2 small streams that discharged in Clammitte River. My returns now amount to 2230 beaver and otter. McKay's party were obliged to kill, their horses owing to their feet.

May 13th. Have sent Mr. McKay to explore the sources of the Willamette,(32) wh. to this day have not been discovered. This party with Gervais may collect some skins.

May 14. Mt. McKay will not go as I intended. We shall cross the mountains eastward.(33)

Wednesday, 23 May. I did not raise camp, but sent 6 men in different directions. One of the men hunting fowl saw an Indian on horse back on the opposite side of the river. He made signs to him to cross but the fellow disappeared. How vexing! Within the last 10 days, 3 horses have been killed for food.

Thursday 24. Two of the men report they found springs of fresh water ahead, south east. Of course I shall take that direction. Proceeded to the main stream of Salt Lake River. Crossed a stony point, reached the entrance of Salt Lake south of the lake level covered with worm wood. The men I sent in quest of Indians returned without success.

Friday, 25th May. Two fine mares dead from lack of water, the carcasses purchased by men for

food. Some of the men tried bathing in the lake but their limbs were as red as if pickled and I am without guides nor has a person in camp the slightest idea of where he is.

Sunday 27th. Our horses found scattered--all the men on the alert. They returned reporting 56 stolen. This was a blow I did not anticipate in this barren country nor could I credit it, and I gave orders to make strict search. At 9 all but 7 were found, the missing no doubt stolen as tracks have been discovered. Shd. the thieves be Snakes we may find a guide. Mr. McKay with 12 men pursued the tracks 5 of them were returned with word the thieves had gone east, then turned back on their tracks west taking stony ground to conceal their course. They followed to Upper Salt Lake River which they crossed tho' the water had risen 4 feet. Mr. McKay was the first to plunge in and 7 followed, the other 5 returned.

Monday, 28 May. At 8 A. M. 2 of McKay's men arrived with 2 of the stolen horses. The thieves from some high hill had seen the pursuit, and these horses being fatigued abandoned them. At 1 P. M. another man arrived with another horse. He left Mr. McKay at dawn of day with full hope of rescue.

Tuesday 29th. At 12 A. M. Mr. McKay and rest of his men arrived with 2 more of the horses. The thieves escaped with 2 only, and this owing to the cowardice of the 5 men who turned back, the thieves' camp consisted of 14 tents. I have done my duty examining this barren country, but our loss has been greater than our profit. The horses that pursued as well as those that were stolen can scarcely crawl.

Wednesday 30th. Proceeded along the border of Salt Lake east, then S. E. over a hilly country to a small fresh lake. The country appears to be a level plain covered with worm wood. The lake is 15 miles long, the south bank high and rocky, the east low and stony which lamed our horses so they can scarcely crawl. An Ibex killed to-day, and a young one taken alive. I shall feed it with mare's milk till we reach Ft. Vancouver.

Friday, June 1st. Rain all night; our course southeast over a level plain; I sent 3 men off in advance; they report no appearance of water; this is critical. I have no cause to complain of the conduct of the men, altho' obliged to subsist on horseflesh and scanty at that. Still the country must be explored as long as we find water or the means of advancing. Unfortunately this country has been too long neglected. We cannot advance till we find water. On the borders of these muddy lakes we found huts of Snakes, I suppose.

Saturday, June 2nd. At dawn of day I started 2 men to proceed S. E. to return tomorrow morning; as they have 2 meals, they will march all night and I wish them success. If we do not succeed in that direction, our starvation will be most distressing and in the extreme.

Sunday, 3rd of June. 8 A. M. The two men arrive and report so far as they have been, and the distance must be great, as they did not encamp, they only found water in a small lake at no distance from this, and the country they traveled over continued barren plains covered with worm

wood; no appearance of mountains and unfortunately for us, no river. No hope in that quarter. On receiving these tidings, I ordered the men off again in a northeast course, one to return this night or tomorrow if they found water, the other to proceed. At 9 A. M. they started. One-fourth of the party sick owing to the muddy, stagnant water. If I escape this year, I will not be doomed to endure another.

Monday 4th. At dawn of day the man arrived and reported he had found water and a high hill which he saw when we were here last fall.(34) On giving the call for our horses, two were found missing; their tracks seen; also Indians. At 9 A. M. we started northeast over a hilly and stony country; at 2 P. M. we reached a deep gully; finding water, encamped.

Tuesday, 5th June. 5 A. M. Advanced at a quick pace *saue qui peut*. At 3 P. M. we overtook our 2 absent men and camped, altho' water was scarce and muddy--over a dreary, desolate country, soil sandy and stony. Horses suffer from thirst.

Wednesday, 6th June. 6 A.M. N. N. E. over stony road. At 3 P.M. reached camp of last November, to the great joy of all, and now that we know where we are, we must look for beaver. To return to Ft. Vancouver with our present returns will be most galling.

Friday, 8 June. Did not camp until we reached the end of Salt Lake,(35) seen last fall. The water is very high. The waters of Sylvailles river and lakes discharge into it. The stench of the lake is terrible.

Tuesday 12. From illness unable to leave my bed and so continued to 22nd. During my illness the trappers have not been idle, collecting 74 beaver; but the Snakes are most numerous and daring, determined to steal Horses. The natives have destroyed in this region upwards of 60,000 [?] beaver, not one of which reached our forts.

Sunday, 24 June. Reached Sylvailles River and crossed; one horse stolen.

Tuesday, 26 June. Reached the source of River Malheur. Took 81 beaver, all in prime state, which I cannot explain except on account of moist climate.(36) The trappers have not averaged 100 beavers each this year.

Tuesday, 3rd July. Seven trappers left for upper part of Sandwich Island river.

Tuesday, July 10. Three of Payette's men back--seven men about 100 beaver; others are at Snake river, having crossed Frazer's [?] river. We have taken 300 beaver in the same time. The heat is terrible and all are short of food.

Monday, 16 July. Started at 6 A. M. and reached the Snake river below River Malheur.

Wednesday, 18 July. 5 A. M. Not wishing to lose any time at Ft. Nez Perce, I take my depar-

ture,(37) with 4 men to make necessary preparations, leaving Mr. McKay in charge of the party.

JOURNAL OF PETER SKENE OGDEN; SNAKE EXPEDITION, 1827-1828

(As copied by Miss Agnes C. Laut in 1905, from original in Hudson's Bay Company House, London, England)

August 24. Left Ft. Vancouver for the Snake Country with 28 trappers and hopes far from sanguine.

1st Sept. we reached Nez Perces,(2) on 5th Sept. set off.

Sept. 6, Friday. left Mr. Black and overtook the party encamped on W. Walow River 12 miles from fort.

Tuesday 10th. commenced crossing over the Blue Mtns; camped at 11 A. M. drenched in rain and fatigued from windfall. This is the best trail across the Blue Mtns. from the source of the Walla Walla.(3)

Friday 13th. All hands employed making poles for leather tents.

Saturday 14th. Reached Clay River(4) or River de Grande Ronde wh. discharges in s. branch of Columbia 2 days march from Nez Perces. A Cayouse reported a party of American trappers are on the way to Nez Perces Fort.

Tuesday 17th. Crossed over the Fork of Powder River and encamped on main branch.

Wednesday 19th. encamped on River Brule.(5)

Saturday 21st. Mr. McKay to explore sources of Sandwich Island River,(6) with 11 men.

Sunday 22nd. Camped opposite Wayer's (Wazer's)(7) River; commenced guarding our horses.

Wednesday 25th. Trappers report traps of strangers set along this river. Shortly after an American by name Johnson appeared and informed us he and 5 others were on this stream. Their party consists of 40 men with a band of Nez Perces working in the direction Mr. McKay has taken. My sanguine hopes of beaver here are blasted. I shall send Sylvaile with 5 men to Payette's River; and proceed to Burnt and Day's River. Encamped in company with the Americans. The trappers were in every direction in quest of beaver. The Americans will not part with one.(8)

Saturday 28th. Our traps gave but one otter. Before all were raised it was 10 A. M. Advanced south on the fork.(9) The Americans informed me it was their intention to follow me to the Columbia. I informed them I could not offer them better terms than my own men had. With this they were satisfied.

Sunday 6th Oct. Reached Reed's River.(10) I have little hope as the American trappers are every-

where.

Thursday 10th Oct. Only 9 beaver, consequently no longer necessary for us to remain. It was from Wazer's, Payette's and this river we expected our returns and they have produced only 140 beaver. I must now reach another quarter after junction with Mr. McKay. Course s. from Reed's River.

Sunday 13th Oct. reached Prairie de Camasse, a fine stream discharging in Reed's River; course south. It is from near this point the Snakes form into a body prior to their starting for buffalo; they collect camasse for the journey across the mountains. Their camp is 300 tents. In spring they scatter from this place for the salmon and horse thieving expeditions. Crossed streams that discharge in River au Malade. Sylvaile and party appeared with only 20 beaver.

Thursday, 17th Oct. Crossed Camasse plains and encamped at Sunset on fork of Malade River. (11) Here we found a camp of Americans, men of the same party who had joined us on Wazer's River.

Thursday Oct. 24. The Americans being in want of supplies, applied for trade. They consented to 1/4 less than Indian tariff. I obtained 13 large beaver, 19 small, 25 musquash; also received from Henry Goddin 35 large beaver in payment of his debt to the company. This man deserted 3 years ago.(12) Since the Americans have been with us they have taken only 13 beaver and are discouraged.

Sunday 27th Oct. The trappers had advanced with their traps but gone only half an hour when all returned having met a trapper who had been pursued by a party of Indians whether blackfeet or Snakes be could not tell. 6 absent since yesterday; I am uneasy. Course s. e.

November Thursday 1st. Reached the heights of land that separates Goddin's from Sickly (Malade) River, a steep ascent, most dangerous to man and beast, upwards of a foot of snow on top, the descent very gradual.

Friday 2nd November. Stormy weather prevented starting. It is my intent to amuse the American party now with us so that McKay's men may have time to trap the beaver where the Americans purpose going. As they are not aware of this, it is so much the more in our favor. Should McKay not appear at the appointed place Day's Defile there will grass for our horses and buffalo for our support.

Saturday 3rd. Followed down Goddin's River s. e. Ten buffalo killed this day. It is incredible the herds of antelope seen.

Wednesday 7 Nov. Reached the Fork of Salmon(13) River called by Mr. Rose Malade his men having been attacked with beaver illness here. S. E. 10 cows killed.

Saturday 10 Nov. Reached Day's River at the point where Mr. McKay was to come. There being no

buffalo nor a blade of grass I must push on. A camp of Snakes of upward Of 300 tents 1500 souls have been here 3000 horses. I must proceed to Snake River for food.

Sunday 11th. I left a note for Mr. McKay telling him what route to follow. Proceeded along Day's Defile following Day's River to Mr. McKenzie's(14) winter encampment. Hunters killed 5 cows.

Friday 16th Nov. Cold severe weather. At dawn we are in motion following Day's River over a barren plain till sunset when we reached the Great Barren Snake Plains in full view of Pilot Knob(15) also S. Knob in the centre of the plain, the former dividing the waters of Columbia from Missouri and Spanish River. The waters of Goddin's and Day's River disappear at the entrance of this plain and take a subterranean route to Snake River.

Sunday 18th. At three this morning all were in motion; 2 P. M. reached Goddin's River; see the tracks of a Snake camp. They have no doubt waited for the snow not daring to cross the plain without it. Course s. e.

Wednesday 21st. At 3 A. M. I gave the call.(16) At 6 A. M. started, At 7 P. M. all reached the fountain. found 7 of the Snake horses standing in the plain exhausted. This plain is not less than 50 miles across E. S. E.

Thursday 22nd. Reached Snake River at 11 A. M. crossed and camped on an island; 50 Snakes paid us a visit also 7 Nez Perce's lately with American trappers. If the Snakes are not too troublesome we shall remain some days.

Sunday 25th. The chief of the lower Snakes with 300 followers paid me a visit, by name The Horse. He carries an American flag. I made him the following presents, 1 calico shirt, 2 scalpers, 1 1/2 lb. ball, 1/2 powder, 1 looking glass, 1/4 lb. glass beads, 1 half axe, 2 awls, 3 flints. They departed but not without some petty thefts.

Wednesday 28. Encamped on Fork Portneuf River, which draws its waters from hot springs. We are now 3 miles from Blackfoot Hill,(17) 2 from Snake camp.

Friday 30th. This morning the Americans who have been in company with us since 18th Oct. started for Salt Lake.(18) The beaver we have traded from them exceed 100. During the time they have been with us, they have trapped only 26, so they lost more by meeting with than we have.

[US] Saturday, Dec. 1. The day and month have begun with a wild storm of wind and snow. 5 Snake tents have joined our camp. I had rather they kept at a distance as they answer as a screen for horse thieves. Our numbers are but 12 men; the Snakes exceed 1500. We are completely at their mercy. I am on good terms with the chiefs and will try to remain so. I feel most anxious in regard to McKay's party, also the man I left on Sickly River. Now 4 inches of snow on the plains which helps our horses' feet. No trapper can do justice to his traps unless he has 4 good horses. My party average this; but the horses too young to endure privations. One died today. Very severe

cold. The trappers came in covered with ice and nearly froze.

Tuesday 4 Dec. The Snake camp in motion towards Blackfoot Hill. A stolen trap restored to me today by the chief. It is the opinion of many that winters in the Snake country are mild; but the bareness of the plains causes us to feel the cold greater than it is. In my leather hut with only willows for fire I find it far from pleasant. We now number 900 beaver. We shall raise camp in quest of buffalo tomorrow.

Saturday 8 Dec. Followed down the fork to Portneuf River and this stream to its discharge on Snake River south and camped.(19) Have grass for our horses and wood for fires. It was my opinion that a trapper with his family could be fully equipped with a year's supplies for Snake country for L15, but I think now for blankets etc. it should be L25.

Friday, 14 Dec. It would relieve me to hear of Mr. McKay. Mr. S. McGillvray's party from the east side of the mtns.(20) if no accident has happened ought to be in the waters of Salmon River. If the same severe weather exists he will have to remain quiet till April and so lose the hunt. The hunters killed 12 buffalo, the greater part of the meat being left for the wolves and starving Snakes. The Snake camp 12 miles off laying up buffalo meat. Have never seen buffalo so numerous.

Thursday 20 Dec. At mid-day 2 Americans of a party of 7 arrived and informed me two days since they separated from Mr. McKay and party in Day's Defile with perhaps 500 beaver. He cannot cross the mts. owing to the snow and the weak state of his horses. These Americans traded 49 horses from the Nez Perces at an extravagant rate averaging \$50. They lost 19 crossing the plains from Day's Defile. They were obliged to eat 6. The Americans had 10 stolen by the Snakes; one American remained with Mr. McKay. They had commenced trapping Sandwich Island River when Mr. McKay joined them.

Friday 21st. The Americans left to join the camp at Blackfoot Hill.

Monday 24 Dec. Snow again last night. At an early hour, we were in motion ascending Snake River 2 miles and camped. The American party of 6 joined us, their leader a man named Tulloch(21) a decent fellow. He informed me his company would readily enter into an agreement regarding deserters. He informed me the conduct of Gardner's at our meeting 4 yrs.(22) since has not been approved. Tulloch speaks highly of the treatment he received from McKay. I shd. certainly be shocked if any man of principle approved of such conduct as Gardner's.

Tuesday 25 Dec. Arrival of one of our men from Sickly River relieves me of anxiety. He reports they have 100 beavers and are not far. Our total number of beaver exceeds my expectations.

1828 January 1. The men paid me their respects and were politely received. The Americans followed the example and received the same treatment. The Americans leave for Salt Lake. The hunters are now making snow shoes as the depth of snow keeps increasing. The others pass their time in gambling. No cards are sold to the men at Ft. Vancouver. Still they procure them.

Saturday 5th Jan. It has ceased snowing but continues to blow a gale from the North. One of the party who accompanied the Americans as far as the source of Portneuf River arrived this A. M. and reported snow not so deep in that quarter numerous herds of buffalo crossing and recrossing. They have hope of succeeding in reaching Salt Lake. If so we may see them again 15 days. It is more than probable one of the chief traders<sup>(23)</sup> of the company will return with them to arrange about deserters. This would be most desirable. Altho' our trappers have their goods on moderate terms, the price of their beaver is certainly low compared to Americans. With them, beaver large and small are averaged @ \$5 each; with us \$2 for large and \$1 for small. Here is a wide difference. All to their liberty to trade with the natives. It is optional with them to take furs to St. Louis where they obtain \$5 1/2. One third of the American trappers followed this plan. Goods are sold to them at least 150 Pc. dearer than we do but they have the advantage of receiving them in the waters of the Snake country. An American trapper from the short distance he has to travel is not obliged to transport provisions requires only 1/2 the number of horses and very moderate in his advances. For 3 years prior to the last ones, General Ashley transported supplies to this country and in that period has cleared \$80,000 and retired, selling the remainder of his goods in hand at an advance of 150 P cent, payable in 5-years in beaver @ \$5 P beaver, or in cash optional with the purchasers. Three young men Smith, Jackson and Subletz purchased them,<sup>(24)</sup> who have in this first year made \$20,000. It is to be observed, finding themselves alone, they sold their goods 1-3 dearer than Ashley did, but have held out a promise of a reduction in prices this year. What a contrast between these young men and myself. They have been only 6 yrs. in the country and without a doubt in as many more will be independent men. The state of uncertainty I am now in regarding the absent men and McKay's party and the gloomy prospects for a spring hunt make me wretched and unhappy.

Wednesday 16th. The Americans are anxious to procure snow shoes, and I am equally so they should not as I am of opinion they are anxious to bring over a party of trappers to this quarter. I have given orders to all not to make any for the Americans. This day they offered \$25 for one pair \$20 for another but failed. 5 men traded leather with the Snakes.

Friday 18 Jan. I proposed to one of the trappers to set off in quest of Mr. McKay and he consented without hesitation. The Americans continue offers for snow shoes but without success.

Sunday 20th. Early this morning, Portneuf started to find Mr. McKay. I have given him information of the country with a map of the different streams. If McKay be on Goddin's River or Salmon River, I am in hopes he will find him. He would not consent to any one accompanying him, apprehending loss of time and discovery by Blackfeet. He is well provided with blankets and ammunition. I forwarded a general letter to the Columbia by him asking Mr. McKay to forward it to the Flat Heads. Tullock, the American, who failed to get thro' the snow to Salt Lake tried to engage an Indian to carry letters to the American depot at Salt Lake. This I cannot prevent. It is impossible for me to bribe so many Indians with my party. I have succeeded in preventing them from procuring snow shoes. The Indian trade of the Columbia is one third less than it was. In Thompson River district not more than 200 skins were traded at the fort, and the returns not more than

2000. At present not one. These returns were procured by sending traders in every direction.

Tuesday 22 Jan. A Snake arrived and informed the American trader one of their caches had been stolen by the Plains Snakes. From the manner he describes the place, no doubt remains of its being stolen. In my mind this fellow is one of the thieves. Property in it valued at about \$600. How long will the Snakes be allowed to steal and murder I cannot say. The Americans are most willing to declare war against them and requested if they did in the spring would I assist them. To this I replied, if I found myself in company with them I would not stand idle. I am most willing to begin but not knowing the opinion of the Company it is a delicate point to decide. Acting for myself, I will not hesitate to say I would willingly sacrifice a year or two to exterminate the whole Snake tribe, women and children excepted. In so doing I could fully justify myself before God and man. Those who live at a distance are of a different opinion. My reply to them is: Come out and suffer and judge for yourselves if forbearance has not been carried beyond bounds ordained by Scripture and surely this is the only guide a Christian sh'd follow. A hunter today killed 22 antelope by driving them in a bank of snow and knifing them, not allowing one to escape. 200 of antelope have been killed wantonly in the last week, for not more than 1/4 of the meat has been brought to camp. No place is more suitable for a large party to winter than this.

Wednesday 23rd. The American is now very low spirited. He cannot hire a man to go to his cache nor snow shoes, nor does he suspect that I prevented. This day he offered 8 beaver and \$50 for a pair and a prime horse to anyone who would carry a letter to the American camp. In this also he failed. I have supplied the American with meat as they cannot procure it without snow shoes. The Americans are starving on Bear River according to report, no buffalo in that quarter, they are reduced to eat horses and dogs. We could not learn from Indians if the American traders had come up from St. Louis.

Friday 25th. Snow and storms continue, a terrible winter. A man who went in quest of lost traps arrived with reports of fearful distress of the Americans. Horses dead, caches rifled. I believe this as a trapper saw calico among the Snakes, traded from the Snakes of the Plains. The Americans are determined to proceed but find it is to no purpose these extravagant offers. They are making snow-shoes themselves wh. they ought to have done 2 wks. ago. I cannot ascertain the motive of their journey south. I dread their returning with liquor.<sup>(25)</sup> A small quantity would be most advantageous to them but the reverse to me. I know not their intentions but had I the same chance they have, long since I would have had a good stock of liquor here, and every beaver in the camp would be mine. If they succeed in reaching their camp they may bring 20 or 30 trappers here which would be most injurious to my spring hunt. As the party have now only 10 traps, no good can result to us if they succeed in reaching their depot and returning here. We have this in our favor; they have a mountain to cross, and before the snow melts can convey but little property from the depot as with horses they cannot reach here before April.

Saturday 26. The Snakes have now about 400 guns obtained in war excursions against Blackfeet and from trappers they have killed and stolen caches. In the plunder of Reid's Fort,<sup>(26)</sup> they secured 40. Still these villains are allowed to go unmolested In any other part of the world, the guilty

are punished in England a man is executed. Power gives the right. Here we have both power and right, but dare not punish the guilty. Were proper statements sent to England or to the Honorable Hudson's Bay Com. I am confident greater power would be granted to Indian traders; and surely they would not make an improper use of them. This is the plan the American gentlemen adopt with tribes on the Missouri; the Spanish also. The missionaries have done but little: and murders are no longer heard of among the Spaniards. Threats are of no avail among the Snakes.

Sunday 27th. The Americans expect to start tomorrow. Their snow shoes are poor make-shifts and will give them trouble. It will be a month before they can return. Meanwhile there will be no beaver skins left among the Snakes.

Monday 28. At midnight we were surprised to see Portneuf make his appearance. This man set out on the 20th to carry despatches to Mr. McKay and since his departure has only reached Goddin's River wh. distance with our weak horses we performed in 2 1/2 camps. On reaching the river he broke the cock of his rifle. Depth of snow, slow progress, sore eyes, he considered it wisest to return. This is a cruel blow to my prospects. I shall make another attempt by sending three men as soon as I can have snow-shoes made. Only 3 men here have ever seen Salmon River. One is next to blind, the other 2 lame. One of the latter must go. Two Americans this day started for Salt Lake. They are not sanguine; as the man I sent out has failed. They have an arduous task, wretched snow-shoes and this is the first time they ever used them. I sent men with them as far as the Indian village, as they intend sleeping there to-night (in case of stray beaver skin). The ice is very weak. One of the Americans had a narrow escape, a minute more and he would have gone. He made a noble struggle for his life.

Wednesday 30th I fear the man I sent with the Americans has gone off with them. I sent a messenger to the Indian village after him.

Thursday 31. The absent man arrived.

February 1. Men started with express in quest of McKay.

Monday 4th. The 2 Americans who left on 28th unexpectedly made their appearance. Most agreeable to me but a cruel disappointment to them. They could only reach the sources of Portneuf River, whence they returned.

Wednesday 6th. The Americans again making preparations to start for their depot. From precautions taken they may succeed and reach Salt Lake. This will be their third attempt, and they will have no time to lose if they are to return for the spring hunt.

Sunday 10. Men who started in quest of McKay arrived. Again have they failed. Their guide had to return on account of lameness. They reached Day's Defile. I am obliged to make another attempt. It is impossible to make spring arrangements without McKay's party. My men will start again. The 2 Americans again set out for their cache. It is laughable, so many attempts on both sides and no

success. Was it not I feared a strong American party here I shd undertake the journey myself and would succeed.

Tuesday 12th Feb. At dawn of day Payette and 2 men set out in quest of McKay. A war party of Blackfeet has taken the direction of Salt Lake. The Americans left here are alarmed at the news not only on account of the two men but for their camp in that quarter. The Americans have only 24 horses left, the rest dead from cold & of the 50 they brought I have no hope one horse can escape, though covered with robes each night. It will be difficult to reach Nez Perce's without them. The distance from this place to Burnt River is 400 miles, with the exception of 80 the navigation is good and with time we could pack our property over this distance.

Saturday 16th. The 2 Americans arrived this afternoon accompanied by one of their traders,(27) and 2 men they met on Portneuf River near the source. They report a fight with the Blackfeet and old Pierre the Iroquois who deserted from me 4 yrs. ago was killed and cut in pieces. Pierre owes a debt to the company but as we have a mortgage on his property in Canada we shall recover. Their traders from St. Louis did not arrive last fall owing to the severe weather in Salt Lake region. All except the freemen of the Flat Heads reached the depot safely. The loss in horses by Blackfeet has been 60. It was a novel sight in this part of the world to see a party arrive with dogs and sleds; for seldom are 2 in. of snow to be found here. They informed me His Royal Highness the Duke of York was dead, and of course the old story that we shall soon be obliged to leave the Columbia. At all events tho' they have later news than I have, the treaty(28) does not expire before November. Then we shall know what to expect.

Monday 18th. By the arrival of the Americans we have a new stock of cards in camp, eight packs. Some of the American trappers have already lost upwards of \$400 equal to 200 beavers, or to the Americans 800 beavers. Old Goddin who left me in the fall is in a fair way of going to St. Louis having sold his 8 horses and 10 traps for \$1500. He has his fall and spring hunt equal to 600 more wh. makes him an independent man. In the H. B. service with the strictest economy barring accidents in the course of 10 years he might collect that sum. it surprising men, give preference to the American service and pay extravagant prices for beavers?

Tuesday 19th. More rain. The Americans are making preparations to go to the Flat Heads. Their trader, Mr. Campbell, informed me 2 of their trappers Goodrich and Johnson who joined my camp last fall are heavily indebted to his concern. I replied I had no knowledge of the same and that it was his duty to secure his men and debts also. I said my conduct to them was far different from theirs to me four years since.(29) He said it was regretted; that there was no regular company otherwise I shd. have received compensation. It may be so. At all events, dependent on me, they cannot acknowledge less. I have acted honorable and shall continue so.

Wednesday 20th. The 2 trappers are to return to the Americans. 30 tents of Snakes are starving near us. Stormy weather prevents the Americans attempting to cross the Barren Plains.

Saturday 23rd. American party left for the Flat Heads and perhaps the Kootenays. They have a

long journey but are well provided, tho' very silent regarding the object of the journey. I believe they intend trapping the forks of the Missouri for which they are strong enough in numbers. Two of our horses dying a day from cold.

March 1828. Cloudy cold weather. Scarcely risen when Payette made his appearance with 2 of McKay's men. He found McKay camped on the forks of Salmon River. He had sent 3 times in quest of us, but without success. He reports beaver 350, loss of horses 8. They found snug winter quarters, buffalo numerous, only 6 inches of snow. The men arrived snow blind.

Monday 3rd March. Two Americans off for Salt Lake. They do not intend to return. The Indian who started last fall with my express for McKay, and did not reach him, and I concluded he is dead. I wish my letter could reach the Columbia before the spring express starts for York.

Monday 17. The Americans now 5 in number more or less starving do not attempt to take beaver but gamble from morning to night. May they continue. My trappers are not idle. One canoe is finished; preparations for 2 more. Will take beaver with our canoes.

Wednesday 26 March. Americans with us since December departed for Salt Lake. We separated on good terms.

Thursday 27. Two Americans arrived from Salt Lake surprised not to find their party here, whom they came to assist across the mountains. They intend going to the Utahs and started for Portneuf River. Two of McKay's men arrived with a letter. He cannot reach Day's Defile owing to the great depth of snow. He despairs of joining me. It will be impossible for us to go to Henry's Fork. Our numbers are too weak to face the war tribes. I have ordered McKay to try and join me.

Saturday 30th. Moved to Portneuf River opposite the American camp.

Tuesday 1st Ap. Encamped at Snake River.

8th Tuesday. I have appointed Sylvaille to trap Sickly River with 6 men to be at Nez Perces by end of July.

Tuesday 17 April. Encamped Snake River 100 yds. from Benoit's grave. I warned the trappers to on guard against the Blackfeet. I have doubled day and night guard owing to the Blackfeet across the river.

Wednesday 23rd. Encamped on Blackfoot Hills.

Thursday 24th. Have completed our 2nd M of beaver, independent of McKay's success. If no accident happens Sylvaille's part, I might reach Vancouver with 4000. I have only 16 men and dare not go to the source of these streams.

Friday 25th Ap. Fine weather at last, 2 of the trappers arrived having narrowly escaped the Blackfeet. I wish to God McKay's party would make their appearance, and relieve my anxiety. Shd. an accident happen us all is lost.

Sunday 27 Apr. Crossed Blackfoot Hills and camped opposite side Blackfoot River near to discharge in south branch. From the top of Blackfoot Hill I could see plainly the Barren Plains of Three Knobs and entrance of Day's Defile no appearance of snow. At a loss to account for McKay's delay.

Tuesday 6 May. Began retracing steps for Ft. Vancouver from entrance of Blackfoot River. Heard 5 shots across river, sent to reconnoitre and found 5 of McKay's men who reported that gentleman 5 miles distant. They have been detained by snow.

Thursday 8th. McKay and party arrived with 440 beaver. This strengthens us against the Blackfeet.

Saturday 10th May. Fine weather; saw the track of a large band of horses and suspect the Blackfeet have stolen them from the Americans. The day guard called to arms and at a distance we saw an armed party on horseback making for our camp. In a second we were in readiness and having secured horses advanced to

meet them but in lieu of Blackfeet they proved to be Plains Snakes returned from Henry Forks. They report 2 days since raiding a party of Blackfeet. In the loot were clothes, hunters hats shoes etc horses belonging to the Americans who wintered with us. The furs were left on the plains. A convincing proof the Americans have been murdered and pillaged, knowing how blood thirsty the Bl. are and how careless the Americans. The sight of this caused gloom in camp. We may be doomed to the same fate. God preserve us. The Snakes are on the way to Salt Lake to find Americans there and obtain reward for restoration of property.

Saturday 24. Again a stormy night of rain. Trappers started at an early hour and soon 2 arrived with the alarm Blkft! that Louis La Valle was killed within half a mile of camp. I gave orders to secure the horses and sent McKay with 12 men to rescue 4 trappers in the same direction fearing they were also killed. At mid day he returned with the body of the deceased wh. he found naked on the plains but not scalped. The absent trapper also came in with him. After the Blk. had killed La Valle they were discovered by the trappers, who hid. The war party 60 in number have come from Salt Lake. They had a bale wrapper with the Am. Co's name on it. I had the body interred-valuable smart loss. He leaves a wife and 3 children, destitute.

(The month of June spent in crossing back over the mountains.)

Tuesday 8 July. At dawn of day Mr. McKay left with a man preceding us to Sandwich Island River to find Sylvaille whom he found at the Indian Fish Pen. Two had gone to Nez Perces and they had been attacked by 150 Blkft. on May 20 one woman killed. one Blkft. killed all horses lost but 650 beaver concealed in a cache on Sickly River.

---

Monday 14 July. Left South Branch of Snake River and reached Burnt River; joined by 40 Indians on the way to the fort.

Thursday 17 July. Reached powder River were met by 20 men sent from Nez Perces by Mr. Black. The interior brigade,(30) has not yet reached Fort Nez Perces. Leaving the brigade in charge of F. Payette, I shall to-morrow leave for the fort.

Saturday 19th. Reached Nez Perces--all well.

Tuesday 22nd July. Brigade arrived safe. Mr. McKay's party will join us at Ft. Vancouver. So ends my 4th trip to the Snake Country and I have to regret the loss of lives. The returns far exceed my expectations.

Journal of Peter Skene Ogden; Snake Expedition, 1828-1829

(As copied by Miss Agnes C. Laut in 1905, from Original in Hudson's Bay Company House, London, England.)

September Monday 22nd. This day at 8 A. M. I took my departure from Fort Nez Perces once more for the Snake Country. at 3 P. M. I joined my party at the foot of the mountains(1) waiting my arrival. We are well provided regarding horses and traps but of indifferent quality. I am confident if we find beaver we shall always find ways of conveying them to Columbia River.

Tuesday 23rd. At sunrise horses were assembled two found missing as we have a long days march and hard roads, I gave orders to start, remaining in the rear to look for the strays, one of the men requested to return to the fort for medicine this I granted. At 10 we found the lost horses and I overtook camp in the middle of the mountain, 9 of our horses gave out.

Wednesday Ag. 24. Our horses were soon found. At 7 A. M. we started and reached the entrance of Grand Rondeau(2) at sunset all safe with the exception of 3/2 bg of pease lost by a horse taking fright.

Thursday 25th. Late in the night, the sick man arrived from the fort. He obtained some relief. I recd a few lines from Mr. Black. He has no complaint. We remained to make our tent poles(3) beyond this is no wood fit for the purpose. Two of the trappers started with traps. Hunters also started in pursuit of game but returned without success.

Friday 26th. Started at an early hour 6 A. M. and encamped on the Grand Ronde at 2 P. M. our horses fatigued, 8 in the rear -- wild horses are very unfit for a long journey. Two trappers joined us with 4 beaver.

Saturday 27th. Started at 7 A. M. crossed the Grand Ronde, ascended high stony hills advanced 6 miles, encamped on a small creek, 12 trappers started with their traps. They are to join us in 2 days.

Sunday Sept 28th. Reached the fork of Powder River. Trappers came in with 9 beaver.

Monday Sept 29. Encamped on Powder River; heat very great; 7 beaver.

Tuesday 30th Sept. Sent off 6 men with lodges to Burnt River from thence to go up River Malheur where we shall meet. Also sent off 5 men across country to rejoin us on the forks of Malheur. It is only by dividing that returns can be made. Encamped at the Fountain.(4) One trap gave us 11 beaver.

Wednesday 1st Oct. Encamped on fork of Burnt River.

Thursday 2nd Oct. Encamped half way down Burnt River, a hilly country; 10 beaver.

Sunday 5th. Appointed Payette and 7 trappers and 3 Indians to proceed to north and south branches. In case of seeing Americans I gave Payette a small trading assortment.

Monday 6th. did not reach unfortunate Malheur River till 4 P. M. At this point a Snake Indian was to assist as guide but so far no sign.

Thursday 9th Oct. One of the 5 men who started on the 20th arrived with word 8 of their horses were stolen 2 nights ago, and success in beaver is not great. In three days I shall join this party.

Saturday 11th Oct. At dusk reached a small fall of River Malheur a stony hilly road.

Friday 17 Oct. One of the party who separated from us on Powder River arrived. I shall proceed to Sandwich Island River. Our trip gave us 7 beaver.

Sunday 26th Oct. Started at day break. Advanced six miles. Reached a long lake,(5) not suspecting the water was salt we advanced, when discovering it, we were obliged to retrace our steps to a small brook and camped at 4 P. M. having travelled all day to little purpose. Course S. E.

Monday 27th. Started at 7 A. M. following the banks of Salt Lake 9 miles long 4 wide without a discharge. We passed a hot spring in a boiling state strong smell of sulphur, tracks and huts of Indians. All have fled.

Saturday 1st November. Started at 7 A. M. our tracks this day between mountains on both sides over a plain covered with worm wood. The men saw 2 Indians whom they secured and brought to camp. More stupid brutes I never saw nor could we make him understand our meaning. Gave him a looking glass and his liberty. In less than 10 minutes he was far from us.

Monday 3rd. Had not advanced 3 miles when we found 3 large lakes covered with wild fowl, The water's have the taste of Globular salts.

Tuesday 4th Nov. The three men in advance discovered 4 Indians one of whom directed them to follow the trail to a large river and he advanced some distance with them, then deserted. A cold night. Reached a bend of the river and camped. Indians are most numerous, their subsistence grass roots and wild fowl. They fly in all directions. We are the first whites they have seen and they think we have come with no good intentions.

Wednesday 5th Nov. Sent out 6 men to ascend the mountains in the highest parts and reconnoitre, followed the Indian back to the sources of the river. Passed the night without supper or sleep unable to come back to camp.

FridaY 7 Nov. At 7 A. M. we crossed over the river wh. from running thro' a number of lakes I have named River of the Lakes, although not a wide stream certainly a long one.

Saturday 8 Nov. Crossed a plain and reached a stream similar in size to the River of the Lakes. The banks of the river are lined with huts and the river has natives most numerous.

Sunday 9th Nov. One of the hunters in advance returned with word this river discharges into a lake no water or grass beyond only hills of sand. Reached the lake and camped. Surprised to find tho' the river discharges in the lake and takes a subterranean passage it appears again taking an easterly course. Had not advanced 4 miles when a large stream appeared lined with willows. So glad was I to see it that at the risk of my life, over swamps, hills and rocks, I made all speed to reach it and the first thing I saw was a beaver house well stocked.

Monday 10th Nov. Long before dawn of day every trap, trapper was in motion. As dawn came the camp was deserted, success to them. I gave orders for all to ascend the river as the season is now advanced we may expect the river to be frozen. Should this river flow to Sandwich Island River I trust we shall have full time to trap it.

Tuesday 11th. To ascertain if possible what course this river takes, I started at daylight and continued down the river till one P. M. As far as I could see, it must return from whence it came. Found trappers had arrived at night with 50 beavers.

Thursday 13th. Had a cold night. Half our trappers absent. Those that came in brought 30 beaver. 6 Indians paid us a visit and traded 3 beaver. On asking what they had done with other skins, they pointed to their shoes and examination showed them to be made of beaver. This accounts for beaver being so wild. They told us toward the sources we shall find beaver more numerous.

Monday 17th Nov. Started with the camp to find grass for the horses. Advanced 6 miles 6 of the trappers came in with 41 beaver. The river is scarce of wood.

Tuesday 18 Nov. At this season last year, we were surrounded by snow and ice. Weather is mild as September and the rattlesnakes have not yet gone. This gives us hope the winter will be mild.

Wednesday 19 Nov. At 8 A. M. we started following the stream advanced 10 miles and encamped as usual on the banks of the river lined with deserted Indian villages, no less than 50 tents. 150 Indians paid us a visit, miserable looking wretches, with scarcely any covering, the greater part without bows and arrows without any defence. They were fat and in good condition. Six trappers came in with 58 beaver, and 10 traded from the Indians make 68. They report the river lined with Indians. On our arrival, they took us for a war party but are now convinced we war only on the beaver. They annoy us and have stolen 2 traps. By following us they make the beaver very wild.

Thursday 20th Nov. Again 60 beaver to skin and dress. I wish the same cause may often detain us. Recovered one trap. 300 Indians around our camp: very peacable. This river takes a southern

course.

Saturday 22nd. 52 beaver; the river still fine; dead water and willows in abundance: gale of wind from the south and appearances of rain.

Sunday 23rd. Rain: three Snake Indians arrived and informed us they were from the Twin Falls(6) of the Snakes and that 2 mos. since 6 Americans had been killed there, by the Snake camp. I am confident it is not Payette's Party, as they were not to go in that direction. Course south, mountains visible in all directions. We need 200 to complete our 1st thousand beaver.

Tuesday 25th Nov. stormy night: 2 inches of snow. Bad weather and the arrival of one of the trappers late last night dangerously ill prevented us raising camp. This poor man stands but a slight chance of recovery.

Wednesday Aug 26th. The sick man dangerously ill. On requesting if we could raise camp he replied he could not move and requested us as an act of charity to end his sufferings by throwing him in the river. I am not of opinion he will recover. Yet he may linger for days.

Saturday 29th. Trappers started at dawn of day. I wish it was in my power to follow them but the sick man cannot stir.

Thursday 4 Dec. Cold, severe. Sick man no better. If the weather would moderate I would make an attempt to move. It is the general opinion he cannot survive. At all events by care and attention we shall not hasten his death, nor prevent recovery; but are in a critical situation, our horses starving, our provisions low. Granting it may hasten the death of our sick man, we have no alternative left. God forbid it should hasten his death. At the same time the interests of the others who are now becoming most anxious from the low ebb of provisions must be attended to. So long as they had food, there was no murmur. Now it is the reverse and I cannot blame them.

Saturday 6th Dec. With 2 men to assist the sick man, we raised camp, had a fire made and place cleared for his arrival. He did not suffer more than usual. One Snake tells us we shall soon reach buffalo.

Monday 8th. At 9 A. M. we started. I gave the sick man 2 men to assist him and lead his horse, taking every precaution to have him well covered with robes and blankets as from the cold and our having a long point of land to cross over, we had a hilly road, snow 2 ft. deep, camp 3 P. M. Shortly after one of the men in charge of the sick man arrived and reported the horse had become so fatigued they could not advance. I sent off 2 horses to their aid. About 7 P. M. they arrived. He does not complain of having suffered. Course S. E.

Tuesday 9th. From the sufferings of the man during the night, it was impossible to raise camp. Cold most severe. The river fast bound with ice. Provisions very low. Not a track of an animal to be seen.

Wednesday 10th. Cold. 2 men came forward this A. M. and volunteered to remain with the sick man as the latter requested I would consent to go on without him in quest of provisions and not apprehending danger from natives, I gave my consent. In fact there was no alternative. It is impossible for the whole party to remain here and feed on horse flesh for four months. 100 would scarcely suffice, and what would become of us afterwards? I secured an Indian to accompany us as guide, informing them of our intention to return and not to molest those I left behind, otherwise I would not only retaliate on them, but on the one who accompanied us. I gave the men a bag of pease and a 3 yr. old colt and strict orders of every precaution for their safety. At 10 A. M. we started along the banks of the River: crossed over on the ice and camped at sunset.

Thursday 18 Dec. At 9 A. M. we started. Travelled over a level country until 2 P. M. when we crossed over a large range of high hills and descended a very high hill where we reached a fine level plain with scarcely any snow. Here we found a small lake and encamped at dusk. Course east. Our guide informed us we were near the Uta Country not far distant from Salt Lake. I am fully aware we shall find nothing but salt water not palatable in our starving state.

Friday 19th Dec. 10 A. M. started north east over a barren plain covered with worm wood at a good pace till night when finding snow in abundance I camped. 2 horses killed for food. A gloomy barren country. Except for tracks of wolves no other animals seen.

Sunday 21st. Our guide informed me by starting at an early hour we would find water for camp, which our horses stand greatly in need of. Tho' we travelled as fast as our worn out horses could, it was night ere we crossed the plain and reached a small brook and piercing the ice found the water too salt to drink but by melting the ice it was tolerable. This day the (\_\_\_) killed an antelope. A large herd seen but very wild.

Monday 22nd. Our horses appeared to relish the salt water for we had difficulty driving them from it. At 2 P. M. fell on a large Indian track of not long since Snakes wh. appear to be travelling in the same direction as we, no doubt in pursuit of the same object.

Tuesday 23rd. It was fortunate we had a track. Otherwise from the fog we should have been obliged to remain in camp.

Wednesday 24th. Our guide quarrelled over horses and deserted.

Friday 26th. Had a distant view of great Salt Lake. heavy fogs around it. Country is covered with cedars. From the tracks, buffalo must be abundant. At present none. On the eve of camping we were surprised to see our guide come in with a cheerful countenance. He informed us he had seen an Indian who reported buffalo, not far off. I trust this is true, as we are wretched reduced to skin and bone. Hunters killed 3 antelope. This will assist, tho' poor food at this season, but far preferable to horse flesh that die of disease.

Sunday 28th. With my consent 8 men started in advance in quest of food, the party having been three days without food. Here we are at the end of Great Salt Lake having this season explored one half of the north side of it and can safely assert as the Americans have of the south side that it is a barren country destitute of everything. Continued over a barren plain. Seeing it was impossible to reach the mountains we encamped.

Monday 29th. Late ere our horses were found. Had not advanced more than half a mile when we found 2 springs of fresh water for our poor horses. We continued till 3 P. M. when we reached the mountains and camped. Here again disappointed, no water. One of our horses fell down so weak and reduced he could rise no more. I had him killed and the meat gave those most in want. To be reduced to food of diseased horses is not desirable.

Tuesday 30th. Descended into a level plain and found 2 camps of Snake Indians who can give little assistance in provisions. The men who started on the 28th succeeded in killing 2 buffalo. There was no appearance of any herd. Indians numerous but not troublesome.

1829 Thursday 1 Jan. One of the trappers left in charge of the sick man arrived with his horse fatigued and informed me that our sick man Joseph Paul died 8 days after we left suffering most severely, a young man only 29, steady and a first rate trapper. There remains now only one man of all the Snake men of 1829.(7)

All have been killed with the exception of 2 who died a natural death and are scattered over the Snake Country. It is incredible the number that have fallen in this country. I sent 2 horses back to assist the remaining man to camp.

Saturday 3rd. This day kept by all as a feast and I gave all a dram and a foot of tobacco per man. I purpose remaining to rest our horses. They would require a month to have their feet healed.

Sunday 4 Jan. Two men in the rear arrived but a woman two children and one pack of beaver 9 traps and 6 horses have been lost for 3 days. Among so many Indians I apprehend the worst and sent 4 men to the place she was last seen. Four Indians arrived well armed. Traps gave 11 beaver as good fur as in the Columbia.

Monday 5th Jan. Truly glad to see the lost women with all the property. She blames herself for having gone astray. Day after she lost our tracks she fell in with 2 Indians who behaved most kindly towards her, defended her property from other Indians who attempted to molest her and rendered her every assistance. It is strange there should be beaver here as the Americans have been in this country for 4 years. I cannot ascertain if this stream,(8) discharges in Salt Lake or in Bear River. 14 beaver. I omitted to assert that I sent 10 Indians to Snake River with a letter addressed to Mr. C. Grant intimating I could not form a union with him owing to the low state of my horses recommending him to the South Branch,(9) sending this letter by a Snake Chief, but they inform me there are no traders in that quarter. So I suppose the York Factory(10) Snake expedition has been retarded; and the accounts they give of the Americans corresponds with the traders here -- they had all gone towards the Flat Head Country probably to the Blackfeet; no

buffalo in the Snake River; but Blackfeet numerous.

Monday 12th. A stormy night. Crossed over the height of land and camped on the forks of Portneuf River. We must cross to the waters of Bear's River and if there be no Americans I expect to find buffalo. On the lower part of this river, the Snake camp is starving.

Thursday 15th. We have commenced our 2nd thousand of beaver. I do not despair of completing 2 more before reaching Nez Perces. From Payette's party no accounts have come.

Tuesday 17 Jan. The cold has not moderated for a month but on the increase: a sick man still complaining. I have given him all the purges I have and it is his duty to recover; for he can expect no more assistance from me.(11)

Monday 29th March. In sight of Salt Lake again. As there appears to be a defile for crossing the mountains, I proposed for our men to fish and follow by track of 1826. The Blackfeet and Snakes are now scattered in quest of fish and roots. I am in hopes the party will collect 400 beaver. This leaves me only 14 men and if I may judge from what I saw last fall an unknown River, we shall require to be on our guard against Indians. It being the first year we have had any intercourse with the Indians they are very shy. Since starting from Fort Nez Perces my party is divided into three. God prosper us all! To the separating party I gave directions to reach the Columbia by the 30th of July, gave the charge to Plante.

Tuesday 30th. This morning 12 men 24 horses and all our traps started for Unknown River. They will reach the river 8 days before me. I wish them success. All is now in motion. Reached Foggy Encampment,(12) the weather being clear had a good view of Salt Lake and Mountain Island(13) prom. point which from its snow must be very high. On both sides of the Salt Lake is high land surrounded by mountains. Beyond these mountains west tho' the lake has no discharge, there must be a large river in a barren country.

Thursday 8 Ap. At 11 A. M. we reached the forks of Unknown River, and found trappers awaiting with 43 beaver. Our trappers being at the upper part of the river and finding no beaver have gone down. Crossed over the river still very low and descended down the stream finding Indians fishing salmon trout.

Sunday 11 Ap. Reached the place where we left this river last fall. Three of the absent trappers arrived with 57 beaver.

Tuesday 13 Apr. Continued our course down the river to within a mile of Paul's Grave where we found the other trappers with 50 beaver. We shall steer our course in quest of Sandwich Island River 4 days travel from Unknown River. All the Indians say we shall find beaver there. Paul's grave examined. All safe.

Thursday 15 April: Crossed mtns. and plain and reached the junction of the forks of Sandwich

Island River. Trappers took 32 beaver.

Sunday 2nd May: Sandwich Island River has disappointed us in beaver. I must retrace our way to Unknown River.

Saturday 7th May: Before starting this day, I learned 2 Indians who accompanied us from the Columbia started last night on a horse thieving expedition. Hunting to-day they discovered tracks of horses and are gone in pursuit to rejoin us in 4 days. They stand a chance of losing their lives.

Sunday 8th. Followed down Unknown River. Keep most strict watch day and night on our horses. The Snakes on this river dress in beaver skin. Trappers brought in 41 beaver. We require 300 to complete our 2nd M. The horse thieving Indians have come back, having been pursued and compelled to abandon the 5 horses they stole. Country is level as far as the eye can see. I am at a loss to know where this river discharges.

Sunday 15th May: Started at dawn to escape the heat, the journey over beds of sand the horses sinking half leg deep, the country level tho' at distance hilly, course S. W. The Indians are not numerous in this quarter, but from the number of fires seen on the mountains are fully aware of our presence, and we must look out for our horses. 75 traps produced 37 beaver. This is tolerable; for we usually receive only a third. In no part have I found beaver so abundant. The total number of American trappers in this region at this time exceeds 80. I have only 28 trappers, 15 in 2 parties, and shall be well pleased if one of the 2 parties escapes. The trappers now average 125 beaver a man and are greatly pleased with their success.

Tuesday 17th May. large tracks of pelicans seen indicate a lake. If it prove salt; beaver will be at an end. Two Indians seen at a distance.

Thursday 21st May. Remained in camp to dry our beaver. One of the trappers in the rear visiting his traps had his horses stolen before he could come out of the bushes the Indian was nearly out of sight. Another trapper who had been to the lower part of the river to set traps was on his return when 4 Indians seized his gun and would have taken his life had he not escaped, 3 arrows being sent after him. This is a strong tribe of natives probably the same branch as in Pitts River very daring.(14) I have ordered the trappers to go out only in twos and to be strictly on their guard.

Friday 27th May. Encamped within a mile of a large lake.(15) The river is not half the size it was, no doubt spreading in the swamp we have passed. It is 2 1/2 ft. deep and only 10 yds. wide. We may now think of retracing our steps. It is too far on in the season to proceed on discovery. Course S. W.

Saturday 28th May. 3 of the trappers came in with word of more traps stolen. He pursued the thieves and punished them but could not recover the traps. A man who had gone to explore the lake at this moment dashed in and gave the alarm of the enemy. He had a most narrow escape, only the fleetness of his horse saved his life. When rounding a point within sight of the lake, 20

---

men on horse back gave the war cry. He fled. An Indian would have overtaken him, but he discharged his gun. He says the hills are covered with Indians. I gave orders to secure the horses, 10 men then started in advance to ascertain what the Indians were doing but not to risk a battle as we were too weak. They reported upwards of 200 Indians marching on our camp. They came on. Having signalled a spot for them about 500 yards from our camp, I desired them to be seated. This order was obeyed.(16) From their dress and drums and the fact only one elderly man was with them, I concluded it was a war party. If they had not been discovered, they had intended to attack us, weak as we were in guns -- only 12 -- they would have been successful. It was a narrow escape. They gave us the following information through the Snake interpreter: this river discharges in a lake which has no outlet. In 8 days, march (westward) there is a large river but no beaver, salmon abundant. There is also another river which must be Pitt's River. We saw rifles ammunition and arms among them and I think this must be the plunder of Smith's(17) party of 10, who were murdered here in the fall. They requested to be allowed to enter the camp. I refused. A more daring set I have not seen.

Sunday 29 May. The night dark and stormy, but this morning all safe. The Indians had fires all night. As I do not wish to infringe on McLeod's territory, I gave orders to raise camp and return. McLeod's territory is the water discharging in the ocean.(18) If Mr. McLeod has succeeded in reaching Bona Ventura he must have crossed this strewn. We have only 50 traps remaining and my party are too weak to advance. I told the Indians in three months they would see us again.(19)

Thursday 2nd of June. We are directing our course to Sylvaille's River Day's Defile and Snake River, Unknown River is known as Swampy River or Paul's River,(20) as he must remain here till the great trumpet shall sound.

Sunday 5th June: Left Unknown River in the rear.

Saturday 25th June: we are now across the Blue Mountains reaching a small fork of Day's River. Hope to reach Nez Perces in 12 days.

Tuesday 5 July: As the track to Nez Perces is now well known, and no danger to be apprehended, I shall to-morrow leave with 2 men for the fort. Thus ends my 5th trip to the Snake Country. We have no cause to complain of our returns.(21)

THE  
PERSONAL NARRATIVE  
OF  
JAMES O. PATTIE,  
OF  
KENTUCKY,  
DURING AN EXPEDITION FROM ST. LOUIS, THROUGH THE VAST REGIONS BETWEEN  
THAT PLACE AND THE PACIFIC OCEAN, AND THENCE BACK THROUGH THE CITY OF  
MEXICO TO VERA CRUZ, DURING JOURNEYINGS OF SIX YEARS; IN WHICH HE AND  
HIS FATHER, WHO ACCOMPANIED HIM, SUFFERED UNHEARD OF HARDSHIPS AND  
DANGERS, HAD VARIOUS CONFLICTS WITH THE INDIANS, AND WERE MADE CAP-  
TIVES, IN WHICH CAPTIVITY HIS FATHER DIED; TOGETHER WITH A DESCRIPTION  
OF THE COUNTRY, AND THE VARIOUS NATION THROUGH WHICH THEY PASSED.  
EDITED BY TIMOTHY FLINT.  
CINCINNATI:  
PRINTED AND PUBLISHED BY JOHN H. WOOD.  
1831.

---

DISTRICT OF OHIO, TO WIT:

BE it Remembered, that on the 18th day of Oct., Anno Domini 1831; John H. Wood, of the said District, hath deposited in this office, the title of a Book, the title of which is in the words following, to wit:

“The Personal Narrative of James O. Pattie, of Kentucky, during an expedition from St. Louis, through the vast regions between that place and the Pacific ocean, and thence back through the city of Mexico to Vera Cruz, during journeyings of six years; in which he and his father who accompanied him, suffered unheard of hardships and dangers; had various conflicts with the Indians, and were made captives, in which captivity his father died, together with a description of the country, and the various nations through which they passed.”

The right whereof he claims as proprietor, in conformity with an act of Congress, entitled “An act to amend the several acts respecting copyrights.”

Attest, WILLIAM MINER,  
Clerk of the District.

---

EDITOR'S PREFACE

IT has been my fortune to be known as a writer of works of the imagination. I am solicitous that this Journal should lose none of its intrinsic interest, from its being supposed that in preparing it for the press, I have drawn from the imagination, either in regard to the incidents or their coloring. For, in the literal truth of the facts, incredible as some of them may appear, my grounds of conviction are my acquaintance with the Author, the impossibility of inventing a narrative

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

like the following, the respectability of his relations, the standing which his father sustained, the confidence reposed in him by the Hon. J. S. Johnston, the very respectable senator in congress from Louisiana, who introduced him to me, the concurrent testimony of persons now in this city, who saw him at different points in New Mexico, and the reports, which reached the United States, during the expedition of many of the incidents here recorded.

When my family first arrived at St. Charles' in 1816, the fame of the exploits of his father, as an officer of the rangers, was fresh in the narratives of his associates and fellow soldiers. I have been on the ground, at Cap au Gris, where he was besieged by the Indians. I am not unacquainted with the scenery through which he passed on the Missouri, and I, too, for many years was a sojourner in the prairies.

These circumstances, along with a conviction of the truth of the narrative, tended to give me an interest in it, and to qualify me in some degree to judge of the internal evidences contained in the journal itself, of its entire authenticity. It will be perceived at once, that Mr. Pattie, with Mr. McDuffie, thinks more of action than literature, and is more competent to perform exploits, than blazon them in eloquent periods. My influence upon the narrative regards orthography, and punctuation [iv] and the occasional interposition of a topographical illustration, which my acquaintance with the accounts of travellers in New Mexico, and published views of the country have enabled me to furnish. The reader will award me the confidence of acting in good faith, in regard to drawing nothing from my own thoughts. I have found more call to suppress, than to add, to soften, than to show in stronger relief many of the incidents. Circumstances of suffering, which in many similar narratives have been given in downright plainness of detail, I have been impelled to leave to the reader's imagination, as too revolting to be recorded.

The very texture of the narrative precludes ornament and amplification. The simple record of events as they transpired, painted by the hungry, toil-worn hunter, in the midst of the desert, surrounded by sterility, espying the foot print of the savage, or discerning him couched behind the tree or hillock, or hearing the distant howl of wild beasts, will naturally bear characteristics of stern disregard of embellishment. To alter it, to attempt to embellish it, to divest it of the peculiar impress of the narrator and his circumstances, would be to take from it its keeping, the charm of its simplicity, and its internal marks of truth. In these respects I have been anxious to leave the narrative as I found it.

The journalist seems in these pages a legitimate descendant of those western pioneers, the hunters of Kentucky, a race passing unrecorded from history. The pencil of biography could seize upon no subjects of higher interest. With hearts keenly alive to the impulses of honor and patriotism, and the charities of kindred and friends; they possessed spirits impassible to fear, that no form of suffering or death could daunt; and frames for strength and endurance, as if ribbed with brass and sinewed with steel. For them to traverse wide deserts, climb mountains, swim rivers, grapple with the grizzly bear, and encounter the savage, in a sojourn in the wilderness of years, far from the abodes of civilized men, was but a spirit-stirring and holiday mode of life.

[v] To me, there is a kind of moral sublimity in the contemplation of the adventures and daring of such men. They read a lesson to shrinking and effeminate spirits, the men of soft hands and fashionable life, whose frames the winds of heaven are not allowed to visit too roughly. They tend to re-inspire something of that simplicity of manners, manly hardihood, and Spartan energy and force of character, which formed so conspicuous a part of the nature of the settlers of the western

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

wilderness.

Every one knows with what intense interest the community perused the adventures of Captain Riley, and other intrepid mariners shipwrecked and enslaved upon distant and barbarous shores. It is far from my thoughts to detract from the intrepidity of American mariners, which is known, wherever the winds blow, or the waves roll; or to depreciate the interest of the recorded narratives of their sufferings. A picture more calculated to arouse American sympathies cannot be presented, than that of a ship's crew, driven by the fierce winds and the mountain waves upon a rock bound shore, and escaping death in the sea, only to encounter captivity from the barbarians on the land. Yet much of the courage, required to encounter these emergencies is passive, counselling only the necessity of submission to events, from which there is no escape, and to which all resistance would be unavailing.

The courage requisite to be put forth in an expedition such as that in which Mr. Pattie and his associates were cast, must be both active and passive, energetic and ever vigilant, and never permitted to shrink, or intermit a moment for years. At one time it is assailed by hordes of yelling savages, and at another, menaced with the horrible death of hunger and thirst in interminable forests, or arid sands. Either position offers perils and sufferings sufficiently appalling. But fewer spirits, I apprehend, are formed to brave those of the field,

'Where wilds immeasurably spread,  
Seem lengthening as they go.'

than of the ocean, where the mariner either soon finds rest beneath its tumultuous bosom, or joyfully spreads his sails again to the breeze.

---

#### INTRODUCTION

THE grandfather of the author of this Journal, was born in Caroline county, Virginia, in 1750. Soon after he was turned of twenty-one, he moved to Kentucky, and became an associate with those fearless spirits who first settled in the western forests. To qualify him to meet the dangers and encounter the toils of his new position, he had served in the revolutionary war, and had been brought in hostile contact with the British in their attempt to ascend the river Potomac.

He arrived in Kentucky, in company with twenty emigrant families, in 1781, and settled on the south side of the Kentucky river. The new settlers were beginning to build houses with internal finishing. His pursuit, which was that of a house carpenter, procured him constant employment, but he sometimes diversified it by teaching school. Soon after his arrival, the commencing settlement experienced the severest and most destructive assaults from the Indians. In August, 1782, he was one of the party who marched to the assistance of Bryant's station, and shared in the glory of relieving that place by the memorable defeat of the savages.

Not long afterwards he was called upon by Col. Logan to join a party led by him against the Indians, who had gained a bloody victory over the Kentuckians at the Blue Licks. He was present on the spot, where the bodies of the slain lay unburied, and assisted in their interment. During his absence on this expedition, Sylvester Pattie, father of the author, was born, August 25, 1782.

In November of the same year, his grand-father was summoned to join a party commanded by Col. Logan, in an expedition against the Indians at the Shawnee towns, in the limits of the present state of Ohio. They crossed the Ohio just below [viii] the mouth of the Licking, opposite the site of what is now Cincinnati, which was at that time an unbroken forest, without the appearance of a

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

human habitation. They were here joined by Gen. Clark with his troops from the falls of the Ohio, or what is now Louisville. The united force marched to the Indian towns, which they burnt and destroyed.

Returning from this expedition, he resumed his former occupations, witnessing the rapid advance of the country from immigration. When the district, in which he resided, was constituted Bracken county, he was appointed one of the judges of the court of quarter sessions, which office he filled sixteen years, until his place was vacated by an act of the legislature reducing the court to a single judge.

Sylvester Pattie, the father of the author, as was common at that period in Kentucky, married early, having only reached nineteen. He settled near his father's house, and there remained until there began to be a prevalent disposition among the people to move to Missouri. March 14, 1812, he removed to that country, the author being then eight years old. Born and reared amidst the horrors of Indian assaults and incursions, and having lived to see Kentucky entirely free from these dangers, it may seem strange, that he should have chosen to remove a young family to that remote country, then enduring the same horrors of Indian warfare, as Kentucky had experienced twenty-five years before. It was in the midst of the late war with England, which, it is well known, operated to bring the fiercest assaults of savage incursion upon the remote frontiers of Illinois and Missouri.

To repel these incursions, these then territories, called out some companies of rangers, who marched against the Sac and Fox Indians, between the Mississippi and the lakes, who were at that time active in murdering women and children, and burning their habitations during the absence of the male heads of families. When Pattie was appointed lieutenant in one of these companies, he left his family at St. Charles' where he was then residing. It may be imagined, that the condition of his wife was sufficiently lonely, as this village contained but one American [ix] family besides her own, and she was unable to converse with its French inhabitants. His company had several skirmishes with the Indians, in each of which it came off successful.

The rangers left him in command of a detachment, in possession of the fort at Cap au Gris. Soon after the main body of the rangers had marched away, the fort was besieged by a body of English and Indians. The besiegers made several attempts to storm the fort, but were repelled by the garrison.— The foe continued the siege for a week, continually firing upon the garrison, who sometimes, though not often, for want of ammunition, returned the fire. Lieutenant Pattie, perceiving no disposition in the enemy to withdraw, and discovering that his ammunition was almost entirely exhausted, deemed it necessary to send a despatch to Bellefontaine, near the point of the junction of the Missouri and Mississippi, where was stationed a considerable American force. He proposed to his command, that a couple of men should make their way through the enemy, cross the Mississippi, and apprise the commander of Bellefontaine of their condition. No one was found willing to risk the attempt, as the besiegers were encamped entirely around them. Leaving Thomas McNair in command in his place, and putting on the uniform of one of the English soldiers, whom they had killed during one of the attempts to storm the fort, he passed by night safely through the camp of the enemy, and arrived at the point of his destination, a distance of over forty miles: 500 soldiers were immediately dispatched from Bellefontaine to the relief of the besieged at Cap au Gris. As soon as this force reached the fort, the British and Indians decamped, not, however, without leaving many of their lifeless companions behind them.

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

Lieutenant Pattie remained in command of Cap au Gris, being essentially instrumental in repressing the incursions of the Sacs and Foxes, and disposing them to a treaty of peace, until the close of the war. In 1813 he received his discharge, and returned to his family, with whom he enjoyed domestic happiness in privacy and repose for some years. St. Louis and St. Charles [x] were beginning rapidly to improve; American families were constantly immigrating to these towns. The timber in their vicinity is not of the best kind for building. Pine could no where be obtained in abundance, nearer than on the Gasconade, a stream that enters on the south side of the Missouri, about one hundred and fifty miles up that river. Mr. Pattie, possessing a wandering and adventurous spirit, meditated the idea of removing to this frontier and unpeopled river, to erect Mills upon it, and send down pine lumber in rafts to St. Louis, and the adjoining country. He carried his plan into operation, and erected a Saw and Grist Mill upon the Gasconade. It proved a very fortunate speculation, as there was an immediate demand at St. Louis and St. Charles for all the plank the mill could supply.

In this remote wilderness, Mr. Pattie lived in happiness and prosperity, until the mother of the author was attacked by consumption. Although her husband was, as has been said, strongly endowed with the wandering propensity, he was no less profoundly attached to his family; and in this wild region, the loss of a beloved wife was irreparable. She soon sunk under the disorder, leaving nine young children. Not long after, the youngest died, and was deposited by her side in this far land.

The house, which had been the scene of domestic quiet, cheerfulness and joy, and the hospitable home of the stranger, sojourning in these forests, became dreary and desolate. Mr. Pattie, who had been noted for the buoyancy of his gay spirit, was now silent, dejected, and even inattentive to his business; which, requiring great activity and constant attention, soon ran into disorder.

About this time, remote trapping and trading expeditions up the Missouri, and in the interior of New Mexico began to be much talked of. Mr. Pattie seemed to be interested in these expeditions, which offered much to stir the spirit and excite enterprise. To arouse him from his indolent melancholy, his friends advised him to sell his property, convert it into merchandize and equipments for trapping and hunting, and to join in such an undertaking. To a man born and reared under the circumstances [xi] of his early life — one to whom forests, and long rivers, adventures, and distant mountains, presented pictures of familiar and birth day scenes — one, who confided in his rifle, as a sure friend, and who withal, connected dejection and bereavement with his present desolate residence; little was necessary to tempt him to such an enterprise.

In a word, he adopted the project with that undoubting and unshrinking purpose, with which to will is to accomplish. Arrangements were soon made. The Children were provided for among his relations. The Author was at school; but inheriting the love of a rifle through so many generations, and nursed amid such scenes, he begged so earnestly of his father that he might be allowed to accompany the expedition, that he prevailed. The sad task remained for him to record the incidents of the expedition, and the sufferings and death of his father.

---

COMMENCEMENT OF THE EXPEDITION

I PASS by, as unimportant in this Journal, all the circumstances of our arrangements for setting out on our expedition; together with my father's sorrow and mine, at leaving the spot where his wife and my mother was buried, the place, which had once been so cheerful, and was now so

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

gloomy to us. We made our purchases at St. Louis. Our company consisted of five persons. We had ten horses packed with traps, trapping utensils, guns, ammunition, knives, tomahawks, provisions, blankets, and some surplus arms, as we anticipated that we should be able to gain some additions to our number by way of recruits, as we proceeded onward. But when the trial came, so formidable seemed the danger, fatigue, distance, and uncertainty of the expedition, that not an individual could be persuaded to share our enterprize.

June 20, 1824, we crossed the Missouri at a small town called Newport, and meandered the river as far as Pilcher's fort, without any incident worthy of record, except that one of our associates, who had become too unwell to travel, was left at Charaton, the remotest village on this frontier of any size. We arrived at Pilcher's fort, on the 13th day of July. There we remained, until the 28th, waiting the arrival of a keel boat from below, that was partly freighted with merchandize for us, with which we intended to trade with the Indians.

On the 28th, our number diminished to four, we set off for a trading establishment eight miles above us on the Missouri, belonging to Pratte, Choteau and Company. In this place centres most of the trade with the Indians on the upper Missouri. Here we met with Sylvester, son of Gen. Pratte, who was on his way [14] to New Mexico, with purposes similar to ours. His company had preceded him, and was on the river Platte waiting for him.

We left this trading establishment for the Council Bluffs, six miles above. When we arrived there, the commanding officer demanded to see our license for trading with the Indians. We informed him, that we neither had any, nor were aware that any was necessary. We were informed, that we could be allowed to ascend the river no higher without one. This dilemma brought our onward progress to a dead stand. We were prompt, however, in making new arrangements. We concluded to sell our surplus arms in exchange for merchandize, and change our direction from the upper Missouri, to New Mexico. One of our number was so much discouraged with our apparent ill success, and so little satisfied with this new project, that he came to the determination to leave our ranks. The remainder, though dispirited by the reduction of our number, determined not to abandon the undertaking. Our invalid having rejoined us, we still numbered four. We remained some time at this beautiful position, the Council Bluffs. I have seen much that is beautiful, interesting and commanding in the wild scenery of nature, but no prospect above, around, and below more so than from this spot. Our object and destination being the same as Mr. Pratte's, we concluded to join his company on the Platte.

We left the Bluffs, July 30th, and encamped the night after our departure on a small stream, called the Elkhorn. We reached it at a point thirty miles S. W. from the Bluffs. The Pawnee Indians sometimes resort upon the banks of this stream. The country is so open and bare of timber, that it was with difficulty we could find sufficient wood to cook with, even on the banks of the river, where wood is found, if at all, in the prairie country.

Early the next morning we commenced our march up the bottoms of the stream, which we continued to ascend, until almost night fall, when we concluded to cross it to a small grove of timber that we descried on the opposite shore, where we encamped [15] for the night, securing our horses with great care, through fear that they would be stolen by the Indians.

In the morning, as we were making arrangements to commence our march, we discovered a large body of Indians, running full speed towards us. When they had arrived within a hundred yards of us, we made signs, that they must halt, or that we should fire upon them. They halted, and

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

we inquired of them, as one of our number spoke their language, to what nation they belonged? They answered the Pawnee. Considering them friendly, we permitted them to approach us. It was on our way, to pass through their town, and we followed them thither. As soon as we arrived at their town, they conducted us to the lodge of their chief, who posted a number of his warriors at the door, and called the rest of his chiefs, accompanied by an interpreter. They formed a circle in the centre of the lodge. The elder chief then lighting a pipe, commenced smoking; the next chief holding the bowl of his pipe. This mode of smoking differed from that of any Indians we had yet seen. He filled his mouth with the smoke, then puffed it in our bosoms, then on his own, and then upward, as he said, toward the Great Spirit, that he would bestow upon us plenty of fat buffaloes, and all necessary aid on our way. He informed us, that he had two war parties abroad. He gave us a stick curiously painted with characters, I suppose something like hieroglyphics, bidding us, should we see any of his warriors, to give them that stick; in which case they would treat us kindly. The pipe was then passed round, and we each of us gave it two or three light whiffs. We were then treated with fat buffaloe meat, and after we had eaten, he gave us counsel in regard to our future course, particularly not to let our horses loose at night. His treatment was altogether paternal.

Next morning we left the village of this hospitable old chief, accompanied by a pilot, dispatched to conduct us to Mr. Pratte's company on the Platte. This is one of the three villages of the Republican Pawnees. It is situated on the little Platte River, in the centre of an extensive prairie plain; having near [16] it a small strip of wood extending from the village to the river. The houses are coneshaped, like a sugar loaf. The number of lodges may amount to six hundred.

The night after we left this village, we encamped on the banks of a small creek called the Mad Buffaloe. Here we could find no wood for cooking, and made our first experiment of the common resort in these wide prairies; that is, we were obliged to collect the dung of the buffaloe for that purpose. Having taken our supper, some of us stood guard through the night, while the others slept, according to the advice of the friendly chief. Next morning we commenced our march at early dawn, and by dint of hard travelling through the prairies, we arrived about sunset, on the main Platte, where we joined Mr. Pratte and his company. We felt, and expressed gratitude to the pilot, who, by his knowledge of the country, had conducted us by the shortest and easiest route. We did not forget the substantial expression of our good will, in paying him. He started for his own village the same evening, accompanying us here, and returning, on foot, although he could have had a horse for the journey.

At this encampment, on the banks of the Platte, we remained four days, during which time we killed some antelopes and deer, and dressed their skins to make us moccasins. Among our arrangements with Mr. Pratte, one was, that my father should take the command of this company, to which proposition my father and our associates consented. The honor of this confidence was probably bestowed upon him, in consequence of most of the company having served under him, as rangers, during the late war. Those who had not, had been acquainted with his services by general report.

In conformity with the general wish, my father immediately entered upon his command, by making out a list of the names of the whole company, and dividing it into four messes; each mess having to furnish two men, to stand guard by reliefs, during the night. The roll was called, and the company was found to be a hundred and sixteen. We had three hundred mules, and some [17]

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

horses. A hundred of them were packed with goods and baggage. The guard was posted as spies, and all the rest were ordered to commence the arrangements of packing for departure. The guard was detached, to keep at some distance from the camp, reconnoitre, and discover if any Indians were lurking in the vicinity. When on the march, the guards were ordered to move on within sight of our flank, and parallel to our line of march. If any Indians were descried, they were to make a signal by raising their hats; or if not in sight of us, to alarm us by a pistol shot. These arrangements gave us a chance always to have some little time to make ready for action.

It may be imagined, that such a caravan made no mean figure, or inconsiderable dust, in moving along the prairies. We started on the morning of the 6th of August, travelling up the main Platte, which at this point is more than a hundred yards wide, very shallow, with a clean sand bottom, and very high banks. It is skirted with a thin belt of cotton-wood and willow trees, from which beautiful prairie plains stretch out indefinitely on either side. We arrived in the evening at a village of the Pawnee Loups. It is larger than the village of the Republican Pawnees, which we had left behind us. The head chief of this village received us in the most affectionate and hospitable manner, supplying us with such provisions as we wanted. He had been all the way from these remote prairies, on a visit to the city of Washington. He informed us, that before he had taken the journey, he had supposed that the white people were a small tribe, like his own, and that he had found them as numberless as the spires of grass on his prairies. The spectacle, however, that had struck him with most astonishment, was bullets as large as his head, and guns of the size of a log of wood. His people cultivate corn, beans, pumpkins and watermelons.

Here we remained five days, during which time Mr. Pratte purchased six hundred Buffalo skins, and some horses. A Pawnee war party came in from an expedition against a hostile tribe of whom they had killed and scalped four, and taken twenty horses. We were affected at the sight of a little child, taken [18] captive, whose mother they had killed and scalped. They could not account for bringing in this child, as their warfare is an indiscriminate slaughter, of men, women and children.

A day or two after their arrival, they painted themselves for a celebration of their victory, with great labor and care. The chiefs were dressed in skins of wild animals, with the hair on.— These skins were principally those of the bear, wolf, panther and spotted or ring tailed panther. They wore necklaces of bear's and panther's claws. The braves, as a certain class of the warriors are called, in addition to the dress of the other chiefs, surmounted their heads with a particular feather from a species of eagle, that they call the war eagle. This feather is considered worth the price of ten ordinary horses. None but a brave is permitted to wear it as a badge. A brave, gains his name and reputation as much by cunning and dexterity in stealing and robbing, as by courage and success in murdering. When by long labor of the toilette, they had painted and dressed themselves to their liking, they marched forth in the array of their guns, bows, arrows and war clubs, with all the other appendages of their warfare. They then raised a tall pole, on the top of which were attached the scalps of the foes they had killed. It must be admitted, that they manifested no small degree of genius and inventiveness, in making themselves frightful and horrible. When they began their triumphal yelling, shouting, singing and cutting antic capers, it seemed to us, that a recruit of fiends from the infernal regions could hardly have transcended them in genuine diabolical display. They kept up this infernal din three days. During all this time, the poor little captive child, barely fed to sustain life, lay in sight, bound hand and foot. When their rage at length seemed sated, and

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

exhausted, they took down the pole, and gave the scalps to the women.

We now witnessed a new scene of yells and screams, and infuriated gestures; the actors kicking the scalps about, and throwing them from one to the other with strong expressions of rage and contempt. When they also ceased, in the apparent satisfaction of gratified revenge, the men directed their attention [19] to the little captive. It was removed to the medicine lodge, where the medicine men perform their incantations, and make their offerings to the Great Spirit. We perceived that they were making preparations to burn the child. Alike affected with pity and horror, our party appealed, as one man, to the presiding chief, to spare the child. Our first proposition was to purchase it. It was received by the chief with manifest displeasure. In reply to our strong remonstrances, he gravely asked us, if we, seeing a young rattlesnake in our path, would allow it to move off uninjured, merely because it was too small and feeble to bite? We undertook to point out the want of resemblance in the circumstances of the comparison, observing that the child, reared among them, would know no other people, and would imbibe their habits and enmities, and become as one of them. The chief replied, that he had made the experiment, and that the captive children, thus spared and raised, had only been instrumental, as soon as they were grown, of bringing them into difficulties. 'It is' said he, 'like taking the eggs of partridges and hatching them; you may raise them ever so carefully in a cage; but once turn them loose, and they show their nature, not only by flying away, but by bringing the wild partridges into your corn fields: eat the eggs, and you have not only the food, but save yourself future trouble.' We again urged that the child was too small to injure them, and of too little consequence to give them the pleasure of revenge in its destruction. To enforce our arguments, we showed him a roll of red broad cloth, the favorite color with the Indians. This dazzled and delighted him, and he eagerly asked us, how much we would give him. We insisted upon seeing the child, before we made him an offer. He led us to the lodge, where lay the poor little captive, bound so tight with thongs of raw hide, that the flesh had so swelled over the hard and dried leather, that the strings could no longer be perceived. It was almost famished, having scarcely tasted food for four days, and seemed rather dead than alive. With much difficulty we disengaged its limbs from the thongs, and perceiving that it seemed to revive, we offered him [20] ten yards, of the red cloth. Expatiating upon the trouble and danger of his warriors in the late expedition, he insisted, that the price was too little. Having the child in our possession, and beginning to be indignant at this union of avarice and cruelty, our company exchanged glances of intelligence. A deep flush suffused the countenance of my father. 'My boys,' said he, 'will you allow these unnatural devils to burn this poor child, or practice extortion upon us, as the price of its ransom?' The vehemence and energy, with which these questions were proposed, had an effect, that may be easily imagined, in kindling the spirits of the rest of us. We carried it by acclamation, to take the child, and let them seek their own redress.

My father again offered the chief ten yards of cloth, which was refused as before. Our remark then was, that we would carry off the child, with, or without ransom, at his choice.— Meanwhile the child was sent to our encampment, and our men ordered to have their arms in readiness, as we had reason to fear that the chief would let loose his warriors upon us, and take the child by force. The old chief looked my father full in the face, with an expression of apparent astonishment. 'Do you think' said he, 'you are strong enough to keep the child by force?' 'We will do it,' answered my father, 'or every man of us die in the attempt, in which case our countrymen will come, and gather up our bones, and avenge our death, by destroying your nation.' The chief replied with well dis-

JUNE, 20, 1824 -- AUGUST 30, 1830

---

sembled calmness, that he did not wish to incur the enmity of our people, as he well knew that we were more powerful than they; alledging, beside, that he had made a vow never to kill any more white men; and he added, that if we would give the cloth, and add to it a paper of vermilion, the child should be ours. To this we consented, and the contract was settled.

We immediately started for our encampment, where we were aware our men had been making arrangements for a battle. We had hardly expected, under these circumstances that the chief would have followed us alone into a camp, where every thing appeared hostile. But he went on with us unhesitatingly, [21] until he came to the very edge of it. Observing that our men had made a breast work of the baggage, and stood with their arms leaning against it ready for action, he paused a moment, as if faltering in his purpose to advance. With the peculiar Indian exclamation, he eagerly asked my father, if he had thought that he would fight his friends, the white people, for that little child? The reply was, that we only meant to be ready for them, if they had thought to do so. With a smiling countenance the chief advanced, and took my father's hand exclaiming, that they were good friends. 'Save your powder and lead,' he added, 'to kill buffaloes and your enemies.' So saying he left us for his own lodge.

This tribe is on terms of hostility with two or three of the tribes nearest their hunting grounds. They make their incursions on horseback, and often extend them to the distance of six or seven hundred miles. They chiefly engage on horseback, and their weapons, for the most part, consist of a bow and arrows, a lance and shield, though many of them at present have fire arms. Their commander stations himself in the rear of his warriors, seldom taking a part in the battle, unless he should be himself attacked, which is not often the case. They show no inconsiderable military stratagem in their marches, keeping spies before and behind, and on each flank, at the distance of a few days travel; so that in their open country, it is almost impossible to come upon them by surprise. The object of their expeditions is quite as often to plunder and steal horses, as to destroy their enemies. Each one is provided with the Spanish noose, to catch horses. They often extend these plundering expeditions as far as the interior of New Mexico. When they have reached the settled country, they lurk about in covert places, until an opportunity presents to seize on their prey. They fall upon the owner of a large establishment of cattle and horses, kill him during the night, or so alarm him as to cause him to fly, and leave his herds and family unprotected; in which case they drive off his horses, and secrete them in the mountains. In these fastnesses of nature they consider them safe; [22] aware that the Mexicans, partly through timidity, and partly through indolence, will not pursue them to any great distance.

We left this village on the 11th of August, taking with us two of its inhabitants, each having a trap to catch, and a hoe to dig the beavers from their burrows. During this day's march we traversed a wide plain, on which we saw no game but antelopes and white wolves. At five in the evening, our front guard gave the preconcerted alarm by firing their pistols, and falling back a few moments afterwards, upon the main body.— We shortly afterwards discovered a large body of Indians on horseback, approaching us at full speed. When they were within hailing distance, we made them a signal to halt: they immediately halted. Surveying us a moment, and discovering us to be whites, one of them came towards us. We showed him the painted stick given us by the Pawnee Republican chief. He seemed at once to comprehend all that it conveyed, and we were informed, that this was a band of the Republican Pawnee warriors. He carried the stick among them. It passed from hand to hand, and appeared at once to satisfy them in regard to our peaceable intentions, for they

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

continued their march without disturbing us. But our two associate Indians, hearing their yells, as they rode off, took them to be their enemies, from whom they had taken the child. They immediately disappeared, and rejoined us no more. We travelled a few miles further, and encamped for the night on a small stream, called Smoking river. It is a tributary stream of the main Platte. On this stream a famous treaty had been made between the Pawnees and Shienne; and from the friendly smoking of the calumet on this occasion it received its name.

Next morning we made an early start, and marched rapidly all day, in order to reach water at night. We halted at sunset to repose ourselves, and found water for our own drinking, but none for our mules and horses. As soon as the moon arose, we started again, travelling hard all night, and until ten the next morning. At this time we reached a most singular spring fountain, forming a basin four hundred yards in diameter, in the centre [23] of which the water boiled up five or six feet higher, than it was near the circumference. We encamped here, to rest, and feed our mules and horses, the remainder of the day, during which we killed some antelopes, that came here to drink.

Near this place was a high mound, from which the eye swept the whole horizon, as far as it could reach, and on this mound we stationed our guard.

Next morning we commenced the toil of our daily march, pursuing a S. W. course, over the naked plains, reaching a small and, as far as I know, a nameless stream at night, on the borders of which were a few sparse trees, and high grass. Here we encamped for the night. At twelve next day we halted in consequence of a pouring rain, and encamped for the remainder of the day. This was the first point, where we had the long and anxiously expected pleasure of seeing buffaloes. We killed one, after a most animating sport in shooting at it.

Next day we made an early start, as usual, and travelled hard all day over a wide plain, meeting with no other incidents, than the sight of buffaloes, which we did not molest. We saw, in this day's march, neither tree nor rising ground. The plains are covered with a short, fine grass, about four inches high, of such a kind, as to be very injurious to the hoofs of animals, that travel over it. It seems to me, that ours would not have received more injury from travelling over a naked surface of rock. In the evening we reached a small collection of water, beside which we encamped. We had to collect our customary inconvenient substitute for fuel, not only this evening, but the whole distance hence to the mountains.

On the morning of the 17th, we commenced, as usual, our early march, giving orders to our advance guard to kill a buffalo bull, and make moccasins for some of our horses, from the skin, their feet having become so tender from the irritation of the sharp grass, as to make them travel with difficulty. This was soon accomplished, furnishing the only incident of this day's travel. We continued the next day to make our way over the same wearying plain, without water or timber, having been obliged [24] to provide more of our horses with buffalo skin moccasins. This day we saw numerous herds of buffalo bulls. It is a singular fact, in the habits of these animals, that during one part of the year, the bulls all range in immense flocks without a cow among them, and all the cows equally without the bulls. The herd, which we now saw, showed an evident disposition to break into our caravan. They seemed to consider our horses and mules, as a herd of their cows. We prevented their doing it, by firing on them, and killing several.

This evening we arrived on one of the forks of the Osage, and encamped. Here we caught a beaver, the first I had ever seen. On the 20th, we started late, and made a short day's travel, encamping

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

by water. Next morning we discovered vast numbers of buffaloes, all running in one direction, as though they were flying from some sort of pursuit. We immediately detached men to reconnoitre and ascertain, whether they were not flying from the Indians. They soon discovered a large body of them in full chase of these animals, and shooting at them with arrows. As their course was directly towards our camp, they were soon distinctly in sight. At this moment one of our men rode towards them, and discharged his gun. This immediately turned their attention from the pursuit of the game, to us. The Indians halted a moment, as if in deliberation, and rode off in another direction with great speed. We regretted that we had taken no measures to ascertain, whether they were friendly or not. In the latter case we had sufficient ground to apprehend, that they would pursue us at a distance, and attack us in the night. We made our arrangements, and resumed our march in haste, travelling with great caution, and posting a strong guard at night.

The next day, in company with another, I kept guard on the right flank. We were both strictly enjoined not to fire on the buffaloes, while discharging this duty. Just before we encamped, which was at four in the afternoon, we discovered a herd of buffalo cows, the first we had seen, and gave notice on our arrival at the camp. Mr. Pratte insisted, that we had mistaken, and said, that we were not yet far enough advanced into the country, [25] to see cows, they generally herding in the most retired depths of the prairies. We were not disposed to contest the point with him, but proposed a bet of a suit of the finest cloth, and to settle the point by killing one of the herd, if the commander would permit us to fire upon it. The bet was accepted, and the permission given. My companion was armed with a musket, and I with a rifle. When we came in sight of the herd, it was approaching a little pond to drink. We concealed ourselves, as they approached, and my companion requested me to take the first fire, as the rifle was surer and closer than the musket. When they were within shooting distance, I levelled one; as soon as it fell, the herd, which consisted of a thousand or more, gathered in crowds around the fallen one. Between us we killed eleven, all proving, according to our word, to be cows. We put our mules in requisition to bring in our ample supply of meat. Mr. Pratte admitted, that the bet was lost, though we declined accepting it.

About ten at night it commenced raining; the rain probably caused us to intermit our caution; for shortly after it began, the Indians attacked our encampment, firing a shower of arrows upon us. We returned their fire at random, as they retreated: they killed two of our horses, and slightly wounded one of our men; we found four Indians killed by our fire, and one wounded. The wounded Indian informed our interpreter, that the Indians, who attacked us, were Arrickarees. We remained encamped here four days, attending our wounded man, and the wounded Indian, who died, however, the second day, and here we buried him.

We left this encampment on the 26th, and through the day met with continued herds of buffaloes and wild horses, which, however, we did not disturb. In the evening we reached a fork of the Platte, called Hyde Park. This stream, formerly noted for beavers, still sustains a few. Here we encamped, set our traps, and caught four beavers. In the morning we began to ascend this stream, and during our progress, we were obliged to keep men in advance, to affrighten the buffaloes and wild horses [26] from our path. They are here in such prodigious numbers, as literally to have eaten down the grass of the prairies.

Here we saw multitudes of prairie dogs. They have large village establishments of burrows, where they live in society. They are sprightly, bold and self important animals, of the size of a Norwegian rat. On the morning of the 28th, our wounded companion was again unable to travel, in conse-

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

quence of which we were detained at our encampment three days. Not wholly to lose the time, we killed during these three days 110 buffaloes, of which we saved only the tongues and hump ribs. On the morning of the 31st, our wounded associate being somewhat recovered, we resumed our march. Ascending the stream, in the course of the day we came upon the dead bodies of two men, so much mangled, and disfigured by the wild beasts, that we could only discover that they were white men. They had been shot by the Indians with arrows, the ground near them being stuck full of arrows. They had been scalped. Our feelings may be imagined, at seeing the mangled bodies of people of our own race in these remote and unpeopled prairies. We consoled ourselves with believing that they died like brave men. We had soon afterwards clear evidence of this fact, for, on surveying the vicinity at the distance of a few hundred yards, we found the bodies of five dead Indians. The ground all around was torn and trampled by horse and footmen. We collected the remains of the two white men, and buried them. We then ascended the stream a few miles, and encamped. Finding signs of Indians, who could have left the spot but a few hours before, we made no fire for fear of being discovered, and attacked in the night. Sometime after dark, ten of us started up the creek in search of their fires. About four miles from our encampment, we saw them a few hundred yards in advance. Twenty fires were distinctly visible. We counselled with each other, whether to fire on them or not. Our conclusion was, that the most prudent plan was to return, and apprise our companions of what we had seen. In consequence of our information, on our return, sixty men were chosen, headed by my father, who set off in order [27] to surround their camp before daylight. I was one of the number, as I should have little liked to have my father go into battle without me, when it was in my power to accompany him. The remainder were left in charge of our camp, horses, and mules. We had examined our arms and found them in good order. About midnight we came in sight of their fires, and before three o'clock were posted all around them, without having betrayed ourselves. We were commanded not to fire a gun, until the word was given. As it was still sometime before daylight, we became almost impatient for the command. As an Indian occasionally arose and stood for a moment before the fire, I involuntarily took aim at him with the thought, how easily I could destroy him, but my orders withheld me. Twilight at length came, and the Indians began to arise. They soon discovered two of our men, and instantly raising the war shout, came upon us with great fury. Our men stood firm, until they received the order which was soon given. A well directed and destructive fire now opened on them, which they received, and returned with some firmness. But when we closed in upon them they fled in confusion and dismay. The action lasted fifteen minutes. Thirty of their dead were left on the field, and we took ten prisoners, whom we compelled to bury the dead. One of our men was wounded, and died the next day. We took our prisoners to our encampment, where we questioned them with regard to the two white men, we had found, and buried the preceding day. They acknowledged, that their party killed them, and assigned as a reason for so doing, that when the white men were asked by the chief to divide their powder and balls with him, they refused. It was then determined by the chief, that they should be killed, and the whole taken. In carrying this purpose into effect, the Indians lost four of their best young men, and obtained but little powder and lead, as a compensation.

We then asked them to what nation they belonged? They answered the Crow. This nation is distinguished for bravery and skill in war. Their bows and arrows were then given them, and they were told, that we never killed defenceless prisoners, but [28] that they must tell their brothers of

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

us, and that we should not have killed any of their nation, had not they killed our white brothers; and if they did so in future, we should kill all we found of them, as we did not fear any number, they could bring against us. They were then allowed to go free, which delighted them, as they probably expected that we should kill them, it being their custom to put all their prisoners to death by the most shocking and cruel tortures. That they may not lose this diabolical pleasure by the escape of their prisoners, they guard them closely day and night. One of them, upon being released, gave my father an eagle's feather, saying, you are a good and brave man, I will never kill another white man.

We pursued our journey on the 1st of September. Our advance was made with great caution, as buffaloes were now seen in immense herds, and the danger from Indians was constant. Wandering tribes of these people subsist on the buffaloes, which traverse the interior of these plains, keeping them constantly in sight.

On the morning of the 2d, we started early. About ten o'clock we saw a large herd of buffaloes approaching us with great speed. We endeavored to prevent their running among our pack mules, but it was in vain. They scattered them in every direction over the plain; and although we rode in among the herd, firing on them, we were obliged to follow them an hour, before we could separate them sufficiently to regain our mules. After much labor we collected all, with the exception of one packed with dry goods, which the crowd drove before them. The remainder of the day, half our company were employed as a guard, to prevent a similar occurrence. When we encamped for the night, some time was spent in driving the buffaloes a considerable distance from our camp. But for this precaution, we should have been in danger of losing our horses and mules entirely.

The following morning, we took a S. S. W. course, which led us from the stream, during this day's journey. Nothing occurred worthy of mention, except that we saw a great number of [29] wolves, which had surrounded a small herd of buffalo cows and calves, and killed and eaten several. We dispersed them by firing on them. We judged, that there were at least a thousand. They were large and as white as sheep. Near this point we found water, and encamped for the night.

On the morning of the 4th, a party was sent out to kill some buffalo bulls, and get their skins to make moccasins for our horses, which detained us until ten o'clock. We then packed up and travelled six miles. Finding a lake, we encamped for the night. From this spot, we saw one of the most beautiful landscapes, that ever spread out to the eye. As far as the plain was visible in all directions, innumerable herds of wild horses, buffaloes, antelopes, deer, elk, and wolves, fed in their wild and fierce freedom. Here the sun rose, and set, as unobscured from the sight, as on the wastes of ocean. Here we used the last of our salt, and as for bread, we had seen none, since we had left the Pawnee village. I hardly need observe, that these are no small deprivations.

The next day we travelled until evening, nothing occurring, that deserves record. Our encampment was near a beautiful spring, called Bellefontaine, which is visited by the Indians, at some seasons of the year. Near it were some pumpkins, planted by the Indians. I cooked one, but did not find it very palatable: The next day we encamped without water. Late in the evening of the following day we reached a stream, and encamped. As we made our arrangements for the night, we came upon a small party of Indians. They ran off immediately, but we pursued them, caught four, and took them to the camp they had left, a little distant from ours. It contained between twenty and thirty women and children, beside three men. The women were frightened at our

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

approach, and attempted to run. The Indians in our possession said something to them in their own language, that induced them to stop; but it was sometime, before they were satisfied, that we intended them no harm. We returned to our camp, and were attending to our mules and horses. Our little Indian boy was playing about the camp, as usual. [30] Suddenly our attention was arrested by loud screams or cries; and looking up, we saw our little boy in the arms of an Indian, whose neck he was closely clasping, as the Indian pressed him to his bosom, kissing him, and crying at the same time. As we moved towards the spot, the Indian approached us, still holding the child in his arms; and falling on his knees, made us a long speech, which we understood only through his signs. During his speech, he would push the child from him, and then draw it back to him, and point to us. He was the father of this boy, whom we saved from being burnt by the Pawnees. He gave us to understand by his signs, that his child was carried off by his enemies. When the paroxysm of his joy was past, we explained, as well as we could, how we obtained the child. Upon hearing the name Pawnee, he sprang upon his feet, and rushed into his tent. He soon came out, bringing with him two Indian scalps, and his bow and arrows, and insisted, that we should look at the scalps, making signs to tell us, that they were Pawnee scalps, which he took at the time he lost his child. After he finished this explanation, he would lay the scalps a short distance from him, and shoot his arrows through them, to prove his great enmity to this nation. He then presented my father a pair of leggins and a pipe, both neatly decorated with porcupine quills; and accompanied by his child, withdrew to his tent, for the night. Just as the morning star became visible, we were aroused from our slumbers, by the crying and shouting of the Indians in their tent. We arose, and approached it, to ascertain the cause of the noise. Looking in, we saw the Indians all laying prostrate with their faces to the ground. We remained observing them, until the full light of day came upon them.—They then arose, and placed themselves around the fire. The next movement was to light a pipe, and begin to smoke. Seeing them blow the smoke first towards the point where the sun arose, and then towards heaven, our curiosity was aroused, to know the meaning of what we had seen. The old chief told us by signs, that they had been thanking the Great Spirit for allowing them to see another day. We then purchased a few beaver [31] skins of them, and left them. Our encampment for the evening of this day, was near a small spring, at the head of which we found a great natural curiosity. A rock sixteen yards in circumference, rises from eighty to ninety feet in height, according to our best judgment, from a surface upon which, in all directions, not the smallest particle of rock, not even a pebble can be found. We were unable to reach the top of it, although it was full of holes, in which the hawks and ravens built their nests. We gave the spring the name of Rock Castle spring. On the morning of the 9th, we left this spot, and at night reached the foot of a large dividing ridge, which separates the waters of the Platte from those of the Arkansas. After completing our arrangements for the night, some of us ascended to the top of the ridge, to look out for Indians; but we saw none.

The succeeding morning we crossed the ridge, and came to water in the evening, where we encamped. Here we killed a white bear, which occupied several of us at least an hour. It was constantly in chase of one or another of us, thus withholding us from shooting at it, through fear of wounding each other. This was the first, I had ever seen. His claws were four inches long, and very sharp. He had killed a buffaloe bull, eaten a part of it, and buried the remainder. When we came upon him, he was watching the spot, where he had buried it, to keep off the wolves, which literally surrounded him.

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

On the 11th, we travelled over some hilly ground. In the course of the day, we killed three white bears, the claws of which I saved, they being of considerable value among the Indians, who wear them around the neck, as the distinguishing mark of a brave. Those Indians, who wear this ornament, view those, who do not, as their inferiors. We came to water, and encamped early. I was one of the guard for the night, which was rather cloudy. About the middle of my guard, our horses became uneasy, and in a few moments more, a bear had gotten in among them, and sprung upon one of them, The others were so much alarmed, that they burst their fastenings, and darted off at full speed. Our camp was soon aroused, and [32] in arms, for defence, although much confused, from not knowing what the enemy was, nor from what direction to expect the attack. Some, however, immediately set off in pursuit of our horses. I still stood at my post, in no little alarm, as I did not know with the rest, if the Indians were around us or not. All around was again stillness, the noise of those in pursuit of the horses being lost in the distance. Suddenly my attention was arrested, as I gazed in the direction, from which the alarm came, by a noise like that of a struggle at no great distance from me. I espied a hulk, at which I immediately fired. It was the bear devouring a horse, still alive. My shot wounded him. The report of my gun, together with the noise made by the enraged bear, brought our men from the camp, where they awaited a second attack from the unknown enemy in perfect stillness.—Determined to avenge themselves, they now sallied forth, although it was so dark, that an object ten steps in advance could not be seen. The growls of the bear, as he tore up the ground around him with his claws, attracted all in his direction. Some of the men came so near, that the animal saw them, and made towards them. They all fired at him, but did not touch him. All now fled from the furious animal, as he seemed intent on destroying them. In this general flight one of the men was caught. As he screamed out in his agony, I, happening to have reloaded my gun, ran up to relieve him. Reaching the spot in an instant, I placed the muzzle of my gun against the bear, and discharging it, killed him. Our companion was literally torn in pieces. The flesh on his hip was torn off, leaving the sinews bare, by the teeth of the bear. His side was so wounded in three places, that his breath came through the openings; his head was dreadfully bruised, and his jaw broken. His breath came out from both sides of his windpipe, the animal in his fury having placed his teeth and claws in every part of his body. No one could have supposed, that there was the slightest possibility of his recovery, through any human means. We remained in our encampment three days, attending upon him, without seeing any change for the worse or better in his situation. [33] He had desired us from the first to leave him, as he considered his case as hopeless as ourselves did. We then concluded to move from our encampment, leaving two men with him, to each of whom we gave one dollar a day, for remaining to take care of him, until he should die, and to bury him decently.

On the 14th we set off, taking, as we believed, a final leave of our poor companion. Our feelings may be imagined, as we left this suffering man to die in this savage region, unfriended and unpitied. We travelled but a few miles before we came to a fine stream and some timber. Concluding that this would be a better place for our unfortunate companion, than the one where he was, we encamped with the intention of sending back for him. We despatched men for him, and began to prepare a shelter for him, should he arrive. This is a fork of Smoke Hill river, which empties into the Platte. We set traps, and caught eight beavers, during the night. Our companions with the wounded man on a litter, reached us about eight o'clock at night.

In the morning we had our painful task of leave taking to go through again. We promised to wait

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

for the two we left behind at the Arkansas river. We travelled all day up this stream.—I counted, in the course of the day, two hundred and twenty white bears. We killed eight, that made an attack upon us; the claws of which I saved. Leaving the stream in the evening we encamped on the plain. A guard of twenty was relieved through the night, to prevent the bears from coming in upon us. Two tried to do it and were killed.

In the morning we began our march as usual: returning to the stream, we travelled until we came to its head. The fountain, which is its source, boils up from the plain, forming a basin two hundred yards in circumference, as clear as crystal, about five feet in depth. Here we killed some wild geese and ducks. After advancing some distance farther we encamped for the night. Buffaloes were not so numerous, during this day's journey, as they had been some time previous, owing, we judged, to the great numbers of white bears.

[34] On the 17th we travelled until sunset, and encamped near water. On the 18th we found no water, but saw great numbers of wild horses and elk. The succeeding morning we set off before light, and encamped at 4 o'clock in the afternoon by a pond, the water of which was too brackish to drink. On the 20th we found water to encamp by. In the course of the day I killed two fat buffaloe cows. One of them had a calf, which I thought I would try to catch alive. In order to do so, I concluded it would be well to be free from any unnecessary incumbrances, and accordingly laid aside my shot-pouch, gun and pistols. I expected it would run, but instead of that, when I came within six or eight feet of it, it turned around, and ran upon me, butting me like a ram, until I was knocked flat upon my back. Every time I attempted to rise, it laid me down again. At last I caught by one of its legs, and stabbed it with my butcher knife, or I believe it would have butted me to death. I made up my mind, that I would never attempt to catch another buffaloe calf alive, and also, that I would not tell my companions what a capsizing I had had, although my side did not feel any better for the butting it had received. I packed on my horse as much meat as he could carry, and set out for the camp, which I reached a little after dark. My father was going in search of me, believing me either lost, or killed. He had fired several guns, to let me know the direction of the camp.

We travelled steadily on the 21st, and encamped at night on a small branch of the Arkansas. During the day, we had seen large droves of buffaloes running in the same direction, in which we travelled, as though they were pursued. We could, however, see nothing in pursuit. They appeared in the same confusion all night. On the 22d, we marched fast all day, the buffaloes still running before us. In the evening we reached the main Arkansas, and encamped. The sky indicating rain, we exerted ourselves, and succeeded in pitching our tents and kindling fires, before the rain began to fall. Our meat was beginning to roast, when we saw some Indians about half a mile distant, looking at us from a hill. We immediately tied our [35] mules and horses. A few minutes after, ten Indians approached us with their guns on their shoulders. This open, undisguised approach made us less suspicious of them, than we should otherwise have been. When they were within a proper distance, they stopped, and called out Amigo, Amigo. One of our number understood them, and answered Amigo, which is friend, when they came up to us. They were Comanches, and one of them was a chief. Our interpreter understood and spoke their language quite well. The chief seemed bold, and asked who was our captain? My father was pointed out to him. He then asked us to go and encamp with him, saying that his people and the whites were good friends. My father answered, that we had encamped before we knew where they were, and that if we moved now, we

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

feared that the goods would be wet. The chief said, this was very good; but that, as we now knew where his camp was, we must move to it. To this my father returned, that if it did not rain next morning, we would; but as before, that we did not wish to get the goods wet to night. The chief then said, in a surly manner, 'you don't intend then to move to my camp to night?' My father answered, 'No!' The chief said he should, or he would come upon us with his men, kill us, and take every thing we had. Upon this my father pushed the chief out of the tent, telling him to send his men as soon as he pleased; that we would kill them, as fast as they came. In reply the chief pointed his finger to the spot, where the sun would be at eight o'clock the next morning, and said, 'If you do not come to my camp, when the sun is there, I will set all my warriors upon you.' He then ran off through the rain to his own camp. We began, immediately, a kind of breastwork, made by chopping off logs, and putting them together. Confidently expecting an attack in the night, we tied our horses and mules in a sink hole between us and the river. It was now dark. I do not think an eye was closed in our camp that night; but the morning found us unmolested; nor did we see any Indians, before the sun was at the point spoken of. When it had reached it, an army of between six and eight hundred mounted [36] Indians, with their faces painted as black as though they had come from the infernal regions, armed with fuzees and spears and shields appeared before us. Every thing had been done by the Indians to render this show as intimidating as possible. We discharged a couple of guns at them to show that we were not afraid, and were ready to receive them. A part advanced towards us; but one alone, approaching at full speed, threw down his bow and arrows, and sprang in among us, saying in broken English 'Commanches no good, me Iotan, good man.' He gave us to understand, that the Iotan nation was close at hand, and would not let the Commanches hurt us, and then started back. The Commanches fired some shots at us, but from such a distance, that we did not return them. In less than half an hour, we heard a noise like distant thunder. It became more and more distinct, until a band of armed Indians, whom we conjectured to be Iotans, became visible in the distance. When they had drawn near, they reined up their horses for a moment, and then rushed in between us and Commanches, who charged upon the Iotans. The latter sustained the charge with firmness. The discharge of their fire arms and the clashing of their different weapons, together with their war-yell, and the shrieks of the wounded and dying were fit accompaniments to the savage actors and scene. I do not pretend to describe this deadly combat between two Indian nations; but, as far as I could judge, the contest lasted fifteen minutes. I was too deeply interested in watching the event, to note it particularly. We wished to assist the Iotans, but could not distinguish them from the mass, so closely were the parties engaged. We withheld our fire through fear of injuring the Iotans, whom we considered our friends. It was not long before we saw, to our great satisfaction, the Commanches dismounted, which was the signal of their entire defeat. The Iotans then left the Commanches, and returned to their women and children, whom they had left some distance behind. They brought them to our camp, and pitched their own tents all around us, except that of the chief, which was placed in the centre with ours. A guard of warriors was then posted around [37] the encampment, and an order given for the wounded Iotans to be brought into the tent of the chief. There were ten, two of whom died before night. A message was now sent to the chief of the Commanches, in obedience to which he came to the Iotan chief. A council then seemed to be held, and a peace was made, the terms of which were, that the Iotan chief should pay the Commanche chief two horses for every warrior, he had lost in the battle, over the number of Iotans killed. We gave the Iotan chief goods

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

to the amount of one hundred dollars, which pleased him exceedingly. He expressed himself perfectly satisfied with this recompense for the warriors he had lost in our defence. The knowledge, that a party as large as ours was traversing the country, had soon spread in all directions from the reports of Indians, who had met with us, and we became to these savage tribes a matter of interest, as a source of gain to be drawn from us by robbing, kindness or trade.—Our movements were observed. The Commanches determined to possess themselves of their object by force; and the Iotans interfered in our defence, that they might thus gain their point by extortion from friends. Not a single Commanche was allowed to enter our camp, as arrangements were making for the Iotans to trade with us. All, who had any beaver skins, or dressed deer skins, were sent for. A guard was placed around in a circle, inside of which the skins were thrown down. Each Indian then inquired for the article he wanted. In this way we exchanged with them butcher knives, paint, and powder and ball, for beaver and deer skins, to the amount of fifteen hundred dollars, allowing them what we considered the value of the skins.

The old Commanche chief came to the Iotan chief to ask permission to talk with us, but was forbidden; and we were told not to have any dealings with him. We did not. The Iotan chief then gave us the character of the Commanche chief. He seemed to be thinking some time before he began. 'I know,' said he, 'you must think it strange that I should fight with the Commanches, and then pay them for their warriors killed, over [38] our own number lost, and make peace with them. I will give you my reasons for doing so. Four years ago, this Commanche chief with his followers, went in company with my father, who was a chief, and a few of his followers, in search of buffaloes. After they had killed what they wanted, they divided the meat. The Commanche took all the best of it, leaving the remains for my father. The old man put up with it, and said nothing. On their return, close to this place they met a band of Nabahoes, a nation that had long been at war with ours, and killed a great number of our people. My father wanted to kill them, and began to fire upon them. The Commanches joined the Nabahoes, and together they killed my father and most of his men. He then paid for the lives he had taken, in horses, giving twenty for my father, and four for each warrior. I only give two horses for a warrior. I am now happy. I have killed three times as many of them, as they did of us, and paid less for it. I know they can never get the upper hand of me again. This Commanche chief is a mean man, for whenever he has power, he makes others do as he pleases, or he kills them, and takes all they have. He wanted to act in this way with you; but I do not think he could, for you know how to shoot better than he does; and you would not give up, as long as you had powder and ball and one man alive.' My father as commander, said, 'his men were all good soldiers, and knew how to get the advantage in fighting; and that we had plenty of ammunition and good guns, and were not in the least afraid of being beaten by them.' 'I think so,' replied the chief; 'But I thank the Great Spirit, that it happened as it did. I have taken revenge for the death of my father, and his people, and gained, I hope, at the same time the love of a good and brave people by defending them.' We assured him that he had, expressing our thanks for his aid, and regret for those who had been killed in our defence. 'Yes,' said the chief, 'they were brave men; but they loved my father, whom they have now gone to see, where they will have plenty to eat, and drink, without having to fight for it.' These were his thoughts, as near as I can express them.

The Commanche chief made a second application for permission to talk with us, which was now granted. His object in conversing [39] with us, was, as he said, to make friends with us, and in-

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

duce us to give him some powder and ball. We told him that we would willingly make peace with him; but not give him any thing, as we did not break the peace. He had threatened to kill us, and take our property without any provocation from us, and certainly, if any present was necessary, it must come from him. We did not, however, wish any present from him, and would make peace with him, provided he promised never to kill, or try to kill a white man. He answered, that he had neither done it, or intended to do it; that with regard to us, he only sought to frighten us, so that we should come to his camp, before the Iotans came up, whom he knew to be not far distant, in order that he might precede them in trading with us, adding that as he had been so disappointed, he thought we ought to give him a little powder and ball. Our answer was, that we had no more ammunition to spare; and that we could not depart from our resolution of not purchasing a treaty from him; but we would give him a letter of recommendation to the next company that came in this direction, by means of which he might trade with them, and obtain what he wanted of these articles. He consented to a treaty on these conditions, and lighting his pipes we smoked friends. He then asked us if we came through the Pawnee village? We answered in the affirmative. His next question was, had they plenty of ammunition? Our reply was again, yes. We were then given to understand, that he was then at war with them, and had been for a number of years, and that he should soon either make peace with them, or have a general engagement. He would prefer peace, as they were at war with the Spaniards, as well as himself. By uniting forces, they could beat the Spaniards, though in case of a treaty or not, he intended to go against the Spaniards, as soon as he should return from the country of the Pawnees. He added, 'I suppose you are friends with the Spaniards, and are now going to trade with them.' Our commander replied, that we were going to trade with them, but not to fight for them. That, said the chief, is [40] what I wanted to know. I do not want war with your people, and should we accidentally kill any of them, you must not declare war against us, as we will pay you for them in horses or beaver skins. We did not express our natural feeling, that the life of one man was worth more than all the horses or beaver skins, his nation could bring forth; but told him, that we would not injure his people, unless they did ours, on purpose. He returned, apparently satisfied, to his camp. We were detained here until the fourth of November by our promise of awaiting the arrival of the two men, we had left with our wounded companion. They came, and brought with them his gun and ammunition. He died the fifth day, after we had left him, and was buried as decently, as the circumstances would allow.

On the 5th of November we again set off in company with a party of Iotans. The Arkansas is here wide and shallow, like the Platte; and has wide but thinly timbered bottoms on both sides. Extending from the bottom ten or twelve miles on the south side, are low hills composed principally of sand. We found travelling upon them very fatiguing, particularly as we met with no water. Late in the evening we reached water, and encamped. The next morning we resumed our journey. We were exceedingly diverted, during the day, to see the Iotan Indians in company with us, chase the buffaloes on horseback. They killed them with their arrows. The force, with which they shoot these arrows, is astonishing. I saw one of them shoot an arrow through a buffalo bull, that had been driven close to our camp. We were again upon level plains, stretching off in all directions beyond the reach of the eye. The few high mounds scattered over them could not but powerfully arrest the curiosity. From the summit of one I again looked down upon innumerable droves of wild animals, dotting the surface, as they seemed to forget their savage natures, and fed, or reposed in peace. I indulged the thoughts natural to such a position and scene. The remembrance

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

of home, with its duties and pleasures, came upon my mind in strong contrast with my actual circumstances. [41] I was interrupted by the discharge of guns, and the screams and yells of Indians. The Iotans had found six Nabahoos a half a mile from us, and were killing them. Three were killed. The others, being well mounted, made their escape. The Iotans came to our camp with their scalps, leaving their bodies to be eaten by wild animals. My father sent men to bury them. The Iotans danced around these scalps all night, and in the morning took up the bodies, we had buried, and cut them in pieces. They then covered themselves with the skins of bears and panthers, and, taking the hearts of the dead men, cut them into pieces of the size of a mouthful, and laid them upon the ground, and kneeling put their hands on the ground, and crawled around the pieces of hearts, growling as though they were enraged bears, or panthers, ready to spring upon them, and eat them. This is their mode of showing hatred to their enemies. Not relishing such detestable conduct, we so manifested our feelings, that these Indians went to their own camps. We encamped the evening of the next day near water. Nothing worthy of record occurred during the journey of the four succeeding days, except that we came to a small creek called Simaronee. Here we encamped, and killed some buffaloes, and shod our horses. We travelled up this stream some distance, and left it on the 15th.

On the 16th we encamped on a creek, where we found four gentle mules, which we caught. I could not account for their being there. Nothing of importance occurred in the two last days. From the 17th to the 20th, we journeyed without interruption. The latter day we came in view of a mountain covered with snow, called Taos mountain. This object awakened in our minds singular but pleasant feelings. On the 23d we reached its foot. Here Mr. Pratte concealed a part of his goods by burying them in the ground. We were three days crossing this mountain.

On the evening of the 26th, we arrived at a small town in Taos, called St. Ferdinando, situated just at the foot of the mountain on the west side. The alcalde asked us for the invoice [42] of our goods, which we showed him, and paid the customary duties on them. This was a man of a swarthy complexion having the appearance of pride and haughtiness.

The door-way of the room, we were in, was crowded with men, women and children, who stared at us, as though they had never seen white men before, there being in fact, much to my surprize and disappointment, not one white person among them. I had expected to find no difference between these people and our own, but their language. I was never so mistaken. The men and women were not clothed in our fashion, the former having short pantaloons fastened below the waist with a red belt and buck skin leggins put on three or four times double. A Spanish knife is stuck in by the side of the leg, and a small sword worn by the side. A long jacket or blanket is thrown over, and worn upon the shoulders. They have few fire arms, generally using upon occasions which require them, a bow and spear, and never wear a hat, except when they ride. When on horse back, they face towards the right side of the animal. The saddle, which they use, looks as ours would, with something like an arm chair fastened upon it.

The women wear upon the upper part of the person a garment resembling a shirt, and a short petticoat fastened around the waist with a red or blue belt, and something of the scarf kind wound around their shoulders. Although appearing as poorly, as I have described, they are not destitute of hospitality; for they brought us food, and invited us into their houses to eat, as we walked through the streets.

The first time my father and myself walked through the town together, we were accosted by a

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

woman standing in her own door-way. She made signs for us to come in. When we had entered, she conducted us up a flight of steps into a room neatly whitewashed, and adorned with images of saints, and a crucifix of brass nailed to a wooden cross. She gave us wine, and set before us a dish composed of red pepper, ground and mixed with corn meal, stewed in fat and water. We could not eat it. She then brought forward some tortillas and milk. Tortillas [43] are a thin cake made of corn and wheat ground between two flat stones by the women. This cake is called in Spanish, metate. We remained with her until late in the evening, when the bells began to ring. She and her children knelt down to pray. We left her, and returned. On our way we met a bier with a man upon it, who had been stabbed to death, as he was drinking whiskey.

This town stands on a beautiful plain, surrounded on one side by the Rio del Norte, and on the other by the mountain, of which I have spoken, the summit being covered with perpetual snow. We set off for Santa Fe on the 1st of November. Our course for the first day led us over broken ground. We passed the night in a small town, called Callacia, built on a small stream, that empties into the del Norte. The country around this place presents but a small portion of level surface. The next day our path lay over a point of the mountain. We were the whole day crossing. We killed a grey bear, that was exceedingly fat. It had fattened on a nut of the shape and size of a bean, which grows on a tree resembling the pine, called by the Spanish, pinion. We took a great part of the meat with us. We passed the night again in a town called Albuquerque.

The following day we passed St. Thomas, a town situated on the bank of the del Norte, which is here a deep and muddy stream, with bottoms from five to six miles wide on both sides. These bottoms sustain numerous herds of cattle. The small huts of the shepherds, who attend to them, were visible here and there. We reached another town called Elgidonis, and stopped for the night. We kept guard around our horses all night, but in the morning four of our mules were gone. We hunted for them until ten o'clock, when two Spaniards came, and asked us, what we would give them, if they would find our mules? We told them to bring the mules, and we would pay them a dollar. They set off, two of our men following them without their knowledge and went into a thicket, where they had tied the mules, and returned with them to us. As may be supposed, we gave them both a good whipping. It seemed at first, that the whole [44] town would rise against us in consequence. But when we related the circumstances fairly to the people, the officer corresponding to our justice of the peace, said, we had done perfectly right, and had the men put in the stocks.

We recommenced our journey, and passed a mission of Indians under the control of an old priest. After crossing a point of the mountain, we reached Santa Fe, on the 5th. This town contains between four and five thousand inhabitants. It is situated on a large plain. A handsome stream runs through it, adding life and beauty to a scene striking and agreeable from the union of amenity and cultivation around, with the distant view of the snow clad mountains. It is pleasant to walk on the flat roofs of the houses in the evening, and look on the town and plain spread below. The houses are low, with flat roofs as I have mentioned. The churches are differently constructed from the other buildings and make a beautiful show. They have a great number of large bells, which, when disturbed, make a noise, that would almost seem sufficient to awaken the dead.

We asked the governor for permission to trap beaver in the river Helay. His reply was that, he did not know if he was allowed by the law to do so; but if upon examination it lay in his power, he would inform us on the morrow, if we would come to his office at 9 o'clock in the morning. According to this request, we went to the place appointed, the succeeding day, which was the

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

9th of November. We were told by the governor, that he had found nothing, that would justify him, in giving us the legal permission, we desired. We then proposed to him to give us liberty to trap, upon the condition, that we paid him five per cent on the beaver we might catch. He said, he would consider this proposition, and give us an answer the next day at the same hour. The thoughts of our hearts were not at all favorable to this person, as we left him.

About ten o'clock at night an express came from the river Pacus, on which the nobles have their country seats and large farming establishments, stating, that a large body of Indians had come upon several families, whom they had either robbed, or [45] murdered. Among the number two Americans had been killed, and the wife of one taken prisoner, in company with four Spanish women, one of whom was daughter of the former governor, displaced because he was an European. The drum and fife and French horn began to sound in a manner, that soon awakened, and alarmed the whole town. The frightened women, and the still more fear-stricken men, joining in a full chorus of screams and cries, ran some to where the drum was beating in the public square, and others to our quarters. Upon the first sound of alarm we had prepared to repel the enemy, whatever it might be, provided it troubled us. When this group came rushing towards us, the light of the moon enabled us to discern them with sufficient clearness to prevent our doing them any injury. We did not sleep any more that night, for the women, having got the wrong story, as most women do in a case of the kind, told us that the Comanches were in town, killing the people. We awaited an attack, without, however, hearing any sound of fire arms. Our conclusion was, that they were skulking around, dealing out death in darkness and silence with their arrows; and in the feelings, which were its natural result, the remainder of the night passed. The first light of morning showed us a body of four hundred men ready to mount their horses. At sunrise the governor came to us to ask, if we would aid in the attempt to recapture the prisoners taken by the Comanches, relating to us the real cause of the alarm of the preceding night. We complied readily with his request, as we were desirous of gaining the good will of the people. Our arrangements were soon made, and we set off in company with the troops I have mentioned.

The 12th was spent in travelling. We stopped for the night at St. John's, a small town. On the 13th we reached the spot, where the murders and robbery were committed. Here we took the course the Indians had marked in their retreat, stopping only for refreshments. We pressed on all night, as we found their fires still smoking. At eight on the morning of the 15th, the trail being fresh, we increased our speed, and at twelve came in sight of them, as they advanced toward a low gap in [46] the mountains. We now halted, and counselled together with regard to the next movements. The commander of the Spaniards proposed, that my father should direct the whole proceedings, promising obedience on his own part and that of his troops.

The gap in the mountains, of which I spoke, was made by a stream. The Indians were now entering it. My father formed a plan immediately, and submitted it to the Spanish commander, who promised to aid in carrying it into effect. In conformity to it, the Spaniards were directed to keep in rear of the Indians, without being seen by them. We took a circuitous route, screened from sight by the highland, that lay between us and the Indians, in order to gain unobserved a hollow in advance of them, in which we might remain concealed, until they approached within gunshot of us. Our main object was to surprize them, and not allow them time to kill their captives, should they be still alive. The party in the rear were to close in, upon hearing the report of our guns, and not allow them to return to the plain. Our plan seemed to assure us success. We succeeded

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

in reaching the hollow, in which we placed ourselves in the form of a half circle, extending from one side of it to the other, our horses being tied behind us. Every man was then ordered to prime, and pick his gun afresh. The right flank was to fire first, the left reserving theirs to give a running fire, that should enable the right to re-load. The Indians, surrounding the prisoners, were to be taken as the first aim, to prevent the immediate murder of them by their captors. My post was in the centre of the line. We waited an hour and a half behind our screens of rocks and trees, before our enemies made their appearance. The first object, that came in sight, were women without any clothing, driving a large drove of sheep and horses. These were immediately followed by Indians. When the latter were within thirty or forty yards of us, the order to fire was given. The women ran towards us the moment they heard the report of our guns. In doing this they encountered the Indians behind them, and three fell pierced by the spears of these savages. The cry among us now was, 'save the women!' Another young man and [47] myself sprang forward, to rescue the remaining two. My companion fell in the attempt. An Indian had raised his spear, to inflict death upon another of these unfortunate captives, when he received a shot from one of our men, that rendered him incapable of another act of cruelty. The captives, one of whom was a beautiful young lady, the daughter of the governor before spoken of, both reached me. The gratitude of such captives, so delivered, may be imagined. Fears, thanks and exclamations in Spanish were the natural expression of feeling in such a position. My companions aided me in wrapping blankets around them, for it was quite cold; and making the best arrangements in our power for their comfort and safety. This was all done in less time, than is required to relate it, and we returned to our post. The Indians stood the second fire, and then retreated. We pursued keeping up a quick fire, expecting every moment to hear the Spaniards in the rear following our example to check them in their retreat; but we could discover the entrance upon the plain, before we heard any thing from our Spanish muskets. The Indians then began to yell; but the Spaniards, after one discharge from their fire arms, fled. Being mounted on good horses the Indians did not pursue them, but satisfied as to our numbers, now that we were upon the plain, they rallied, and rushed upon us. Our commander now ordered us to retreat into the woods, and to find shelter behind trees, and take aim that every shot might tell, as it was of the utmost importance, not to waste ammunition, saying, 'stand resolute, my boys, and we make them repent, if they follow us, although those \*\* Spaniards have deserted us, when we came to fight for them. We are enough for these \*\* devils alone.' As they came near us, we gave them a scattering though destructive fire, which they returned bravely, still pressing towards us. It was a serious contest for about ten minutes, after they approached within pistol shot of us. From their yells, one would have thought that the infernal regions were open before them, and that they were about to be plunged in headlong. They finally began to retreat again, and we soon [48] put them completely to flight. The Spaniards, though keeping a safe distance, while this was going forward, saw the state of affairs, and joined us in the pursuit, still taking especial care not to come near enough to the Indians, to hurt them, or receive any injury themselves. After the Indians rallied, we lost ten men, and my father received a slight wound in the shoulder.

We removed our horses and the rescued captives into the plain, and encamped. The Spaniards had killed an Indian already wounded, and were riding over the dead bodies of those on the ground, spearing them and killing any, who still breathed. My father commanded them to desist, or he would fire upon them, and the Spanish officer added his order to the same effect. The

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

latter then demanded of us, the two women, whom we had rescued, with as much assurance, as though himself had been the cause of their deliverance. My father replied, by asking what authority or right he had, to make such a request, when his cowardice withheld him from aiding in their release? The officer became enraged, and said, that he was unable to rally his men, and that he did not consider the captives any safer in our hands than in those of the Indians, as we were not christians. This insult, coupled with such a lame apology, only made my father laugh, and reply, that if cowardice constituted a claim to christianity, himself and his men were prime and undoubted christians. He added further, that if the rescued women preferred to accompany him, rather than remain, until he should have buried his brave comrades, who fell in their defence, and accept his protection, he had nothing to say. The subjects of our discussion, being present while it took place, decided the point before they were appealed to. The youngest said, that nothing would induce her to leave her deliverers, and that when they were ready to go, she would accompany them, adding, that she should pray hourly for the salvation of those, who had resigned their lives in the preservation of hers. The other expressed herself willing to remain with her, and manifested the same confidence and gratitude. The enraged officer and his men set off on their return to Santa Fe.

[49] The sun was yet an hour from its setting. We availed ourselves of the remaining light to make a breastwork with the timber, that had drifted down the stream, that we might be prepared for the Indians, in case they should return. We finished it, and posted our sentinels by sunset. The governor's daughter now inquired for the individual, who first met her in her flight from the Indians, and so humanely and bravely conducted her out of danger, and provided for her comfort. I cannot describe the gratitude and loveliness, that appeared in her countenance, as she looked on me, when I was pointed out to her. Not attaching any merit to the act, I had performed, and considering it merely as a duty, I did not know how to meet her acknowledgments, and was embarrassed. On the morning of the 16th we buried our dead. My father's shoulder was a little stiff, and somewhat swollen. We saddled our horses, and began our return journey. I gave up my horse to one of the ladies, and made my way on foot. We drove the sheep, which escaped the balls, before us. Our last look at the ground of our late contest gave a view sufficiently painful to any one, who had a heart; horses and their riders lay side by side. The bodies of robbers surrounded by the objects of their plunder would probably remain, scattered as they were, unburied and exposed to the wild beasts.

We halted in the evening for the refreshment of ourselves and horses. This done, we again set off travelling all night. The sheep giving out, we were obliged to leave them. At twelve next day we reached Pacus. Here we met the father of the youngest of the two ladies accompanied by a great number of Spaniards. The old man was transported almost to frenzy, when he saw his daughter. We remained here for the day. On the morning of the 18th we all set off together, the old governor insisting, that my father and myself must ride in the carriage with him; but we excused ourselves, and rode by the side of it with the interpreter. The father caressed us exceedingly, and said a great many things about me in particular, which I did not think, I deserved.

[50] The next day at two in the afternoon, we arrived at Santa Fe. We were received with a salute, which we returned with our small arms. The governor came in the evening, and invited my father and the interpreter to sup with him. He ordered some fat beeves to be killed for the rest of us. The father of Jacova, for that was the name of the young lady, I had rescued, came, and invited us all

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

to go, and drink coffee at his son-in-law's, who kept a coffee-house. We went, and when we had finished our coffee, the father came, and took me by the hand, and led me up a flight of steps, and into a room, where were his two daughters. As soon as I entered the room, Jacova and her sister both came, and embraced me, this being the universal fashion of interchanging salutations between men and women among these people, even when there is nothing more, than a simple introduction between strangers. After I had been seated an hour, looking at them, as they made signs, and listening to their conversation, of which I did not understand a syllable, I arose with the intention of returning to my companions for the night. But Jacova, showing me a bed, prepared for me, placed herself between me and the door. I showed her that my clothes were not clean. She immediately brought me others belonging to her brother-in-law. I wished to be excused from making use of them, but she seemed so much hurt, that I finally took them, and reseated myself. She then brought me my leather hunting shirt, which I had taken off to aid in protecting her from the cold, and begged the interpreter who was now present, to tell me, that she intended to keep it, as long as she lived. She then put it on, to prove to me that she was not ashamed of it.

I went to bed early, and arose, and returned to my companions, before any of the family were visible. At eight the governor and my father came to our quarters, and invited us all to dine with him at two in the afternoon. Accordingly we all dressed in our best, and went at the appointed time. A band of musicians played during dinner. After it was finished, and the table removed, a fandango was begun. The ladies flocked in, in great numbers. The instruments, to which the dancers' moved, were [51] a guitar and violin. Six men and six women also added their voices. Their mode of dancing was a curiosity to me. The women stood erect, moving their feet slowly, without any spring or motion of the body, and the men half bent, moved their feet like drum sticks. This dance is called ahavave. I admired another so much, that I attempted to go through it. It was a waltz, danced to a slow and charming air. It produces a fine effect, when twenty or thirty perform it together. The dancing continued, until near morning, when we retired to rest.

At eight the following morning we received a license, allowing us to trap in different parts of the country. We were now divided into small parties. Mr. Pratte added three to our original number, they making the company, to which my father and myself belonged, seven. On the 22d, we set off. Our course lay down the del Norte to the Helay, a river never before explored by white people. We left our goods with a merchant, until we should return in the spring. Our whole day's journey lay over a handsome plain covered with herds of the different domestic animals. We reached Picacheh a small town in the evening. Jacova and her father overtook us here, on their way home, which was eighty miles distant from Santa Fe.

In the morning we began our journey, together. During the day we passed several small villages and stopped for the night in one called St. Philip, situated on the banks of the del Norte, surrounded by large vineyards. Jacova's father insisted upon our drinking plentifully of the wine made at this place.

The morning of the 24th saw us again on our journey. Our companion, the old governor, was much amused at seeing us kill wild geese and prairie wolves with our rifles, the latter being abundant in this country. In the evening we reached another small town, called St. Louis. All these inconsiderable villages contain a church. The succeeding day we traversed the same beautiful plain country, which had made our journey so far, delightful. The same multitude of domestic animals still grazed around our path.

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

[52] On the 27th, we arrived at the residence of Jacova and her father. It was a large and even magnificent building. We remained here until the 30th, receiving the utmost attention and kindness. At our departure, the kind old governor pressed a great many presents upon us; but we refused all, except a horse for each one of us, some flour and dried meat.

Seven hunters coming up with us, who were going in our direction, we concluded to travel with them, as our united strength would better enable us to contend with the hostile Indians, through whose country our course lay. We made our way slowly, descending the river bank, until we reached the last town or settlement in this part of the province, called Socoro. The population of the part of the country, through which we travelled was entirely confined to a chain of settlements along the bottoms of the del Norte, and those of some of the rivers, which empty into it. I did not see, during the whole of this journey, an enclosed field, and not even a garden.

After remaining one day here, in order to recruit our horses, we resumed our course down the river, Dec. 3d. The bottoms, through which we now passed, were thinly timbered, and the only growth was cotton-wood and willow. We saw great numbers of bears, deer and turkeys. A bear having chased one of our men into the camp, we killed it.

On the 7th we left the del Norte, and took a direct course for the Copper mines. We next travelled from the river over a very mountainous country four days, at the expiration of which time we reached this point of our destination. We were here but one night, and I had not leisure to examine the mode, in which the copper was manufactured. In the morning we hired two Spanish servants to accompany us; and taking a north-west course pursued our journey, until we reached the Helay on the 14th. We found the country the greater part of the two last days hilly and somewhat barren with a growth of pine, live oak, pinion, cedar and some small trees, of which I did not know the name. We caught thirty beavers, the first night we encamped on this river. The next morning, accompanied by another man, [53] I began to ascend the bank of the stream to explore, and ascertain if beaver were to be found still higher, leaving the remainder of the party to trap slowly up, until they should meet us on our return. We threw a pack over our shoulders, containing a part of the beavers, we had killed, as we made our way on foot. The first day we were fatigued by the difficulty of getting through the high grass, which covered the heavily timbered bottom. In the evening we arrived at the foot of mountains, that shut in the river on both sides, and encamped. We saw during the day several bears, but did not disturb them, as they showed no ill feeling towards us.

On the morning of the 13th we started early, and crossed the river, here a beautiful clear stream about thirty yards in width, running over a rocky bottom, and filled with fish. We made but little advance this day, as bluffs came in so close to the river, as to compel us to cross it thirty-six times. We were obliged to scramble along under the cliffs, sometimes upon our hands and knees, through a thick tangle of grape-vines and under-brush. Added to the unpleasantness of this mode of getting along in itself, we did not know, but the next moment would bring us face to face with a bear, which might accost us suddenly. We were rejoiced, when this rough ground gave place again to the level bottom. At night we reached a point, where the river forked, and encamped on the point between the forks. We found here a boiling spring so near the main stream, that the fish caught in the one might be thrown into the other without leaving the spot, where it was taken. In six minutes it would be thoroughly cooked.

The following morning my companion and myself separated, agreeing to meet after four days at

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

this spring. We were each to ascend a fork of the river. The banks of that which fell to my lot, were very brushy, and frequented by numbers of bears, of whom I felt fearful, as I had never before travelled alone in the woods. I walked on with caution until night, and encamped near a pile of drift wood, which I set on fire, thinking thus to frighten any animals that might approach during the night. [54] I placed a spit, with a turkey I had killed upon it, before the fire to roast. After I had eaten my supper I laid down by the side of a log with my gun by my side. I did not fall asleep for some time. I was aroused from slumber by a noise in the leaves, and raising my head saw a panther stretched on the log by which I was lying, within six feet of me. I raised my gun gently to my face, and shot it in the head. Then springing to my feet, I ran about ten steps, and stopped to reload my gun, not knowing if I had killed the panther or not. Before I had finished loading my gun, I heard the discharge of one on the other fork, as I concluded, the two running parallel with each other, separated only by a narrow ridge. A second discharge quickly followed the first, which led me to suppose, that my comrade was attacked by Indians.

I immediately set out and reached the hot spring by day break, where I found my associate also. The report of my gun had awakened him, when he saw a bear standing upon its hind feet within a few yards of him growling. He fired his gun, then his pistol, and retreated, thinking, with regard to me, as I had with regard to him, that I was attacked by Indians. Our conclusion now was, to ascend one of the forks in company, and then cross over, and descend the other. In consequence we resumed the course, I had taken the preceding day. We made two day's journey, without beaver enough to recompense us for our trouble, and then crossed to the east fork, trapping as we went, until we again reached the main stream. Some distance below this, we met those of our party we had left behind, with the exception of the seven, who joined us on the del Norte. They had deserted the expedition, and set off upon their return down the river. We now all hastened on to overtake them, but it was to no purpose. They still kept in advance, trapping clean as they went, so that we even found it difficult to catch enough to eat.

Finding it impossible to come up with them, we ceased to urge our poor horses, as they were much jaded, and tender footed beside, and travelled slowly, catching what beaver we [55] could, and killing some deer, although the latter were scarce, owing, probably to the season of the year. The river here was beautiful, running between banks covered with tall cotton-woods and willows. This bottom extended back a mile on each side. Beyond rose high and rather barren hills.

On the 20th we came to a point, where the river entered a cavern between two mountains. We were compelled to return upon our steps, until we found a low gap in the mountains. We were three day's crossing, and the travelling was both fatiguing and difficult. We found nothing to kill. On the 23d we came upon the river, where it emptied into a beautiful plain. We set our traps, but to no purpose, for the beavers were all caught, or alarmed. The river here pursues a west course. We travelled slowly, using every effort to kill something to eat, but without success.

On the morning of the 26th we concluded, that we must kill a horse, as we had eaten nothing for four day's and a half, except the small portion of a hare caught by my dogs, which fell to the lot of each of a party of seven. Before we obtained this, we had become weak in body and mind, complaining, and desponding of our success in search of beaver. Desirous of returning to some settlement, my father encouraged our party to eat some of the horses, and pursue our journey. We were all reluctant to begin to partake of the horse-flesh; and the actual thing without bread or salt was as bad as the anticipation of it. We were somewhat strengthened, however, and hastened on,

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

while our supply lasted, in the hope of either overtaking those in advance of us, or finding another stream yet undiscovered by trappers.

The latter desire was gratified the first of January, 1825. The stream, we discovered, carried as much water as the Helay, heading north. We called it the river St. Francisco. After travelling up its banks about four miles, we encamped, and set all our traps, and killed a couple of fat turkies. In the morning we examined our traps, and found in them 37 beavers! This success restored our spirits instantaneously. Exhilarating [56] prospects now opened before us, and we pushed on with animation. The banks of this river are for the most part incapable of cultivation being in many places formed of high and rugged mountains. Upon these we saw multitudes of mountain sheep. These animals are not found on level ground, being there slow of foot, but on these cliffs and rocks they are so nimble and expert in jumping from point to point, that no dog or wolf can overtake them. One of them that we killed had the largest horns, that I ever saw on animals of any description. One of them would hold a gallon of water. Their meat tastes like our mutton. Their hair is short like a deer's, though fine. The French call them the gros cornes, from the size of their horns which curl around their ears, like our domestic sheep. These animals are about the size of a large deer. We traced this river to its head, but not without great difficulty, as the cliffs in many places came so near the water's edge, that we were compelled to cross points of the mountain, which fatigued both ourselves and our horses exceedingly.

The right hand fork of this river, and the left of the Helay head in the same mountain, which is covered with snow, and divides its waters from those of Red river. We finished our trapping on this river, on the 14th. We had caught the very considerable number of 250 beavers, and had used and preserved most of the meat, we had killed. On the 19th we arrived on the river Helay, encamped, and buried our furs in a secure position, as we intended to return home by this route. On the 20th we began to descend the Helay, hoping to find in our descent another beaver stream emptying into it. We had abandoned the hope of rejoining the hunters, that had left us, and been the occasion of our being compelled to feed upon horse flesh. No better was to be expected of us, than that we should take leave to imprecate many a curse upon their heads; and that they might experience no better fate, than to fall into the hands of the savages, or be torn in pieces by the white bears. At the same time, so ready are the hearts of mountain hunters to relent, that I have not a doubt that each man of us would [57] have risked his life to save any one of them from the very fate, we imprecated upon them.

In fact, on the night of the 22d, four of them, actually half starved, arrived at our camp, declaring, that they had eaten nothing for five days. Notwithstanding our recent curses bestowed upon them, we received them as brothers. They related that the Indians had assaulted and defeated them, robbing them of all their horses, and killing one of their number. Next day the remaining two came in, one of them severely wounded in the head by an Indian arrow. They remained with us two days, during which we attempted to induce them to lead us against the Indians, who had robbed them, that we might assist them to recover what had been robbed from them. No persuasion would induce them to this course. They insisted at the same time, that if we attempted to go on by ourselves, we should share the same fate, which had befallen them.

On the morning of the 25th, we gave them three horses, and as much dried meat as would last them to the mines, distant about 150 miles. Fully impressed, that the Indians would massacre us, they took such a farewell of us, as if never expecting to see us again.

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

In the evening of the same day, although the weather threatened a storm, we packed up, and began to descend the river. We encamped this night in a huge cavern in the midst of the rocks. About night it began to blow a tempest, and to snow fast. Our horses became impatient under the pelting of the storm, broke their ropes, and disappeared. In the morning, the earth was covered with snow, four or five inches deep. One of our companions accompanied me to search for our horses. We soon came upon their trail, and followed it, until it crossed the river. We found it on the opposite side, and pursued it up a creek, that empties into the Helay on the north shore. We passed a cave at the foot of the cliffs. At its mouth I remarked, that the bushes were beaten down, as though some animal had been browsing upon them. I was aware, that a bear had entered the cave. We collected some pine knots, split them with our toma-hawks, and kindled torches, with which I proposed to [58] my companion, that we should enter the cave together, and shoot the bear. He gave me a decided refusal, notwithstanding I reminded him, that I had, more than once, stood by him in a similar adventure; and notwithstanding I made him sensible, that a bear in a den is by no means so formidable, as when ranging freely in the woods. Finding it impossible to prevail on him to accompany me, I lashed my torch to a stick, and placed it parallel with the gun barrel, so as that I could see the sights on it, and entered the cave. I advanced cautiously onward about twenty yards, seeing nothing. On a sudden the bear reared himself erect within seven feet of me, and began to growl, and gnash his teeth. I levelled my gun and shot him between the eyes, and began to retreat. Whatever light it may throw upon my courage, I admit, that I was in such a hurry, as to stumble, and extinguish my light. The growling and struggling of the bear did not at all contribute to allay my apprehensions. On the contrary, I was in such haste to get out of the dark place, thinking the bear just at my heels, that I fell several times on the rocks, by which I cut my limbs, and lost my gun. When I reached the light, my companion declared, and I can believe it, that I was as pale as a corpse. It was some time, before I could summon sufficient courage to re-enter the cavern for my gun. But having re-kindled my light, and borrowed my companion's gun, I entered the cavern again, advanced and listened. All was silent, and I advanced still further, and found my gun, near where I had shot the bear. Here again I paused and listened. I then advanced onward a few strides, where to my great joy I found the animal dead. I returned, and brought my companion in with me. We attempted to drag the carcass from the den, but so great was the size, that we found ourselves wholly unable. We went out, found our horses, and returned to camp for assistance. My father severely reprimanded me for venturing to attack such a dangerous animal in its den, when the failure to kill it outright by the first shot, would have been sure to be followed by my death.

Four of us were detached to the den. We were soon enabled [59] to drag the bear to the light, and by the aid of our beast to take it to camp. It was both the largest and whitest bear I ever saw. The best proof, I can give, of the size and fatness is, that we extracted ten gallons of oil from it. The meat we dried, and put the oil in a trough, which we secured in a deep crevice of a cliff, beyond the reach of animals of prey. We were sensible that it would prove a treasure to us on our return. On the 28th we resumed our journey, and pushed down the stream to reach a point on the river, where trapping had not been practised. On the 30th, we reached this point, and found the man, that the Indians had killed. They had cut him in quarters, after the fashion of butchers. His head, with the hat on, was stuck on a stake. It was full of the arrows, which they had probably discharged into it, as they had danced around it. We gathered up the parts of the body, and buried

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

them.

At this point we commenced setting our traps. We found the river skirted with very wide bottoms, thick-set with the musquito trees, which bear a pod in the shape of a bean, which is exceedingly sweet. It constitutes one of the chief articles of Indian subsistence; and they contrive to prepare from it a very palatable kind of bread, of which we all became very fond. The wild animals also feed upon this pod.

On the 31st we moved our camp ten miles. On the way we noted many fresh traces of Indians, and killed a bear, that attacked us. The river pursues a west course amidst high mountains on each side. We trapped slowly onward, still descending the river, and unmolested by the Indians. On the 8th of February, we reached the mouth of a small river entering the Helay on the north shore. Here we unexpectedly came upon a small party of Indians, that fled at the sight of us, in such consternation and hurry, as to leave all their effects, which consisted of a quantity of the bread mentioned above, and some robes made of rabbit skins. Still more; they left a small child. The child was old enough to distinguish us from its own people, for it opened its little throat, and screamed so lustily, that we feared it would have fits. The poor thing meanwhile made its [60] best efforts to fly from us. We neither plundered nor molested their little store. We bound the child in such a manner, that it could not stray away, and get lost, aware, that after they deemed us sufficiently far off, the parents would return, and take the child away. We thence ascended the small river about four miles, and encamped. For fear of surprize, and apprehending the return of the savages, that had fled from us, and perhaps in greater force, we secured our camp with a small breast-work.

We discovered very little encouragement in regard to our trapping pursuit, for we noted few signs of beavers on this stream. The night passed without bringing us any disturbance. In the morning two of us returned to the Indian camp. The Indians had re-visited it, and removed every thing of value, and what gave us great satisfaction, their child. In proof, that the feelings of human nature are the same every where, and that the language of kindness is a universal one; in token of their gratitude, as we understood it, they had suspended a package on a kind of stick, which they had stuck erect. Availing ourselves of their offer, we examined the present, and found it to contain a large dressed buck skin, an article, which we greatly needed for moccasins, of which some of us were in pressing want. On the same stick we tied a red handkerchief by way of some return.

We thence continued to travel up this stream four days in succession, with very little incident to diversify our march. We found the banks of this river plentifully timbered with trees of various species, and the land fine for cultivation. On the morning of the 13th, we returned to the Helay, and found on our way, that the Indians had taken the handkerchief, we had left, though none of them had shown any disposition, as we had hoped, to visit us. We named the stream we had left, the deserted fork, on account of having found it destitute of beavers. We thence resumed our course down the Helay, which continues to flow through a most beautiful country. Warned by the frequent traces of fresh Indian foot-prints, we every night adopted [61] the expedient of enclosing our horses in a pen, feeding them with cotton-wood bark, which we found much better for them than grass.

On the 16th, we advanced to a point, where the river runs between high mountains, in a ravine so narrow, as barely to afford it space to pass. We commenced exploring them to search for a gap, through which we might be able to pass. We continued our expedition, travelling north, until we discovered a branch, that made its way out of the mountains. Up its ravine we ascended to the

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

head of the branch. Its fountains were supplied by an immense snow bank, on the summit of the mountain. With great labor and fatigue we reached this summit, but could descry no plains within the limits of vision. On every side the peaks of ragged and frowning mountains rose above the clouds, affording a prospect of dreariness and desolation, to chill the heart. While we could hear the thunder burst, and see the lightning glare before us, we found an atmosphere so cold, that we were obliged to keep up severe and unremitting exercise, to escape freezing.

We commenced descending the western declivity of the mountains, amidst thick mists and dark clouds, with which they were enveloped. We pitied our horses and mules, that were continually sliding and falling, by which their limbs were strained, and their bodies bruised. To our great joy, we were not long, before we came upon the ravine of a branch, that wound its way through the vast masses of crags and mountains. We were disappointed, however, in our purpose to follow it to the Helay. Before it mingled with that stream, it engulfed itself so deep between the cliffs, that though we heard the dash of the waters in their narrow bed, we could hardly see them. We were obliged to thread our way, as we might, along the precipice, that constituted the banks of the creek. We were often obliged to unpack our mules and horses, and transport their loads by hand from one precipice to another. We continued wandering among the mountains in this way, until the 23d. Our provisions were at this time exhausted, and our horses and [62] mules so worn out, that they were utterly unable to proceed further. Thus we were absolutely obliged to lie by two days. During this time, Allen and myself commenced climbing towards the highest peak of the mountains in our vicinity. It was night-fall, before we gained it. But from it we could distinctly trace the winding path of the river in several places; and what was still more cheering, could see smokes arising from several Indian camps. To meet even enemies, was more tolerable, than thus miserably to perish with hunger and cold in the mountains. Our report on our return animated the despair of our companions. On the morning of the 25th we resumed our painful efforts to reach the river. On the 28th, to our great joy, we once more found ourselves on its banks. A party of Indians, encamped there, fled at our approach. But fortunately they left a little mush prepared from the seeds of grass. Without scruple we devoured it with appetites truly ravenous. In the morning we took ten beavers in our traps, and Allen was detached with me to clear away a path, through which the pack horses might pass. We were obliged to cross the river twelve times in the course of a single day. We still discovered the fresh footprints of Indians, who had deserted their camps, and fled before us. We were continually apprehensive, that they would fire their arrows upon us, or overwhelm us with rocks, let loose upon us from the summits of the high cliffs, directly under which we were obliged to pass. The third day, after we had left our company, I shot a wild goose in the river. The report of my gun raised the screams of women and children. Too much alarmed to stop for my game, I mounted my horse, and rode toward them, with a view to convince them, or in some way, to show them, that we intended them no harm. We discovered them ahead of us, climbing the mountains, the men in advance of the women, and all fleeing at the top of their speed. As soon as they saw us, they turned, and let fly a few arrows at us, one of which would have despatched my companion, had he not been infinitely dextrous in dodging. Hungry and fatigued and by no means in the best humor, my companion returned [63] them abundance of curses for their arrows. From words he was proceeding to deeds, and would undoubtedly have shot one of them, had I not caught his gun, and made him sensible of the madness of such a deed. It was clearly our wisdom to convince them, that we had no inclination to injure

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

them. Some of them were clad in robes of rabbit skins, part of which they shed, in their hurry to clamber over the rocks.

Finding ourselves unable to overtake them, we returned to their camp, to discover if they had left any thing that we could eat. At no great distance from their camp, we observed a mound of fresh earth, in appearance like one of our coal kilns. Considering it improbable, that the Indians would be engaged in burning coal, we opened the mound, and found it to contain a sort of vegetable that had the appearance of herbage, which seemed to be baking in the ground, to prepare it for eating. I afterwards ascertained, that it was a vegetable, called by the Spanish, *mascal*, (probably *maguey*.) The Indians prepare it in this way, so as to make a kind of whiskey of it, tasting like crab-apple cider. The vegetable grows in great abundance on these mountains.

Next day we came to the point, where the river discharges its waters from the mountains on to the plains. We thence returned, and rejoined our company, that had been making their way onward behind us. March 3d, we trapped along down a small stream, that empties into the Helay on the south side, having its head in a south west direction. It being very remarkable for the number of its beavers, we gave it the name of Beaver river. At this place we collected 200 skins; and on the 10th continued to descend the Helay, until the 20th, when we turned back with as much fur, as our beasts could pack. As yet we had experienced no molestation from the Indians, although they were frequently descried skulking after us, and gathering up the pieces of meat, we had thrown away. On the morning of the 20th we were all prepared for an early start, and my father, by way of precaution, bade us all discharge our guns at the word of command, and then re-load them afresh, [64] that we might, in case of emergency, be sure of our fire. We were directed to form in a line, take aim, and at the word, fire at a tree. We gave sufficient proofs, that we were no strangers to the rifle, for every ball had lodged close to the centre of our mark. But the report of our guns was answered by the yell of more than an hundred savages, above us on the mountains. We immediately marched out from under the mountains on to the plains, and beckoned them to come down, by every demonstration of friendship in our power. Nothing seemed to offer stronger enticement, than to hold out to them our red cloth. This we did, but without effect, for they either understood us not, or were reluctant to try our friendship. Leaving one of our number to watch their deportment, and to note if they followed us, we resumed our march. It would have been a great object to us to have been able to banish their suspicions, and make a treaty with them. But we could draw from them no demonstrations, but those of fear and surprize. On the 25th we returned to Beaver river, and dug up the furs that we had buried, or cashed, as the phrase is, and concluded to ascend it, trapping towards its head, whence we purposed to cross over to the Helay above the mountains, where we had suffered so much in crossing. About six miles up the stream, we stopped to set our traps, three being selected to remain behind in the camp to dry the skins, my father to make a pen for the horses, and I to guard them, while they were turned loose to feed in the grass. We had pitched our camp near the bank of the river, in a thick grove of timber, extending about a hundred yards in width. Behind the timber was a narrow plain of about the same width, and still further on was a high hill, to which I repaired, to watch my horses, and descry whatever might pass in the distance. Immediately back of the hill I discovered a small lake, by the noise made by the ducks and geese in it. Looking more attentively, I remarked what gave me much more satisfaction, that is to say, three beaver lodges. I returned, and made my father acquainted with my discovery. The party despatched to set traps had returned. My father informed [65] them of my

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

discovery, and told them to set traps in the little lake. As we passed towards the lake, we observed the horses and mules all crowded together. At first we concluded that they collected together in this way, because they had fed enough. We soon discovered, that it was owing to another cause. I had put down my gun, and stepped into the water, to prepare a bed for my trap, while the others were busy in preparing theirs. Instantly the Indians raised a yell, and the quick report of guns ensued. This noise was almost drowned in the fierce shouts that followed, succeeded by a shower of arrows falling among us like hail. As we ran for the camp leaving all the horses in their power, we saw six Indians stealthily following our trail, as though they were tracking a deer. They occasionally stopped, raised themselves, and surveyed every thing around them. We concealed ourselves behind a large cotton-wood tree, and waited until they came within a hundred yards of us. Each of us selected a separate Indian for a mark, and our signal to fire together was to be a whistle. The sign was given, and we fired together. My mark fell dead, and my companions' severely wounded. The other Indians seized their dead and wounded companions, and fled.

We now rejoined our company, who were busily occupied in dodging the arrows, that came in a shower from the summit of the hill, where I had stationed myself to watch our horses. Discovering that they were too far from us, to be reached by our bullets, we retreated to the timber, in hopes to draw them down to the plain. But they had had too ample proofs of our being marksmen, to think of returning down to our level, and were satisfied to remain yelling, and letting fly their arrows at random. We found cause both for regret and joy; regret, that our horses were in their power, and joy, that their unprovoked attack had been defeated with loss to themselves, and none to us.

At length they ceased yelling, and disappeared. We, on our part, set ourselves busily to work to fortify our camp for the night. Meanwhile our savage enemy devised a plan, which, but for the circumspection of my father, would have enabled [66] them to destroy us. They divided themselves into two parties, the one party mounted on horses, stolen from us, and so arranged as to induce the belief, that they constituted the whole party. They expected that we would pursue them, to recover our horses. As soon as we should be drawn out from behind our fortification, they had a reserve party, on foot, who were to rush in, between us and our camp, and thus, between two fires, cut us all off together. It so happened, that I had retired a little distance from the camp, in the direction of the ambush party on foot. I met them, and they raised a general yell. My father, supposing me surrounded, ran in the direction of the yell, to aid me. He, too, came in direct contact with the foot party, who let fly a shower of arrows at him, from which nothing but good providence preserved him. He returned the fire with his gun and pistols, by which he killed two of them, and the report of which immediately brought his companions to his side. The contest was a warm one for a few minutes, when the Indians fled. This affair commenced about three in the afternoon; and the Indians made their final retreat at five; and the succeeding night passed without further molestation from them.

In the morning of the 26th, we despatched two of our men to bring our traps and furs. We had no longer any way of conveying them with us, for the Indians had taken all our horses. We, however, in the late contest, had taken four of their's, left behind in the haste of their retreat. As our companions were returning to camp with the traps, which they had taken up to bury, they discovered the Indians, sliding along insidiously towards our camp. We were all engaged in eating our breakfast in entire confidence. Our men cried out to us, that the enemy was close upon us. We sprang

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

to our arms. The Indians instantly fled to the top of the hill, which we had named battlehill. In a few minutes they were all paraded on the horses and mules stolen from us. They instantly began to banter us in Spanish to come up to them. One of our number who could speak Spanish, asked them to what nation they belonged? They answered, Eiotaro. In return, they asked us, who we were? We answered Americans. Hearing this, they stood in apparent [67] surprise and astonishment for some moments. They then replied, that they had thought us too brave and too good marksmen, to be Spaniards; that they were sorry for what they had done, under the mistake of supposing us Spaniards. They declared themselves ready to make a treaty with us, provided that we would return the four horses, we had taken from them, and bring them up the hill, where they promised us they would restore us our own horses in exchange. We were at once impressed, that the proposal was a mere trick, to induce us to place ourselves in their power. We therefore answered their proposal by another, which was, that they should bring down our horses, and leave them by the pen, where they had taken them, and we in return would let their horses loose, and make friendship with them. They treated our proposal with laughter, which would have convinced us, had we doubted it before, that their only purpose had been to ensnare us. We accordingly faced them, and fired upon them, which induced them to clear themselves most expeditiously.

We proceeded to bury our furs; and having packed our four horses with provisions and two traps, we commenced our march. Having travelled about ten miles, we encamped in a thicket without kindling a fire, and kept a strict guard all night. Next morning we made an early march, still along the banks of the river. Its banks are still plentifully timbered with cotton-wood and willow. The bottoms on each side afford a fine soil for cultivation. From these bottoms the hills rise to an enormous height, and their summits are covered with perpetual snow. In these bottoms are great numbers of wild hogs, of a species entirely different from our domestic swine. They are fox-colored, with their navel on their back, towards the back part of their bodies. The hoof of their hind feet has but one dew-claw, and they yield an odor not less offensive than our polecat. Their figure and head are not unlike our swine, except that their tail resembles that of a bear. We measured one of their tusks, of a size so enormous, that I am afraid to commit my credibility, by giving the dimensions. They remain undisturbed [68] by man and other animals, whether through fear or on account of their offensive odor, I am unable to say. That they have no fear of man, and that they are exceedingly ferocious, I can bear testimony myself. I have many times been obliged to climb trees to escape their tusks. We killed a great many, but could never bring ourselves to eat them. The country presents the aspect of having been once settled at some remote period of the past. Great quantities of broken pottery are scattered over the ground, and there are distinct traces of ditches and stone walls, some of them as high as a man's breast, with very broad foundations. A species of tree, which I had never seen before, here arrested my attention. It grows to the height of forty or fifty feet. The top is cone shaped, and almost without foliage. The bark resembles that of the prickly pear; and the body is covered with thorns. I have seen some three feet in diameter at the root, and throwing up twelve distinct shafts.

On the 29th, we made our last encampment on this river, intending to return to it no more, except for our furs. We set our two traps for the last time, and caught a beaver in each.— We skinned the animals, and prepared the skins to hold water, through fear, that we might find none on our unknown route through the mountains to the Helay, from which we judged ourselves

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

distant two hundred miles. Our provisions were all spoiled. We had nothing to carry with us to satisfy hunger, but the bodies of the two beavers which we had caught, the night before. We had nothing to sustain us in this disconsolate march, but our trust in providence; for we could not but foresee hunger, fatigue and pain, as the inevitable attendants upon our journey. To increase the depression of our spirits, our moccasins were worn out, our feet sore and tender, and the route full of sharp rocks.

On the 31st, we reached the top of the mountain, and fed upon the last meat of our beavers. We met with no traces of game. What distressed me most of all was, to perceive my father, who had already passed the meridian of his days, sinking with fatigue and weakness. On the morning of the first of April, [69] we commenced descending the mountain, from the side of which we could discern a plain before us, which, however, it required two severe days travel to reach. During these two days we had nothing either to eat or drink. In descending from these icy mountains, we were surprised to find how warm it was on the plains. On reaching them I killed an antelope, of which we drank the warm blood; and however revolting the recital may be, to us it was refreshing, tasting like fresh milk. The meat we put upon our horses, and travelled on until twelve o'clock, before we found water.

Here we encamped the remainder of the day, to rest, and refresh ourselves. The signs of antelopes were abundant, and the appearances were, that they came to the water to drink; from which we inferred, that there was no other drinking place in the vicinity. Some of our hunters went out in pursuit of the antelopes. From the numbers of these animals, we called the place Antelope Plain. The land lies very handsomely, and is a rich, black soil, with heavily timbered groves in the vicinity.

On the morning of the 3d, though exceedingly stiff and sore, we resumed our march, and reaching the opposite side of the plain, encamped at a spring, that ran from the mountain. Next day we ascended this mountain to its summit, which we found covered with iron ore. At a distance we saw a smoke on our course. We were aware that it was the smoke of an Indian camp, and we pushed on towards it. In the evening we reached the smoke, but found it deserted of Indians. All this day's march was along a country abundant in minerals. In several places we saw lead and copper ore. I picked up a small parcel of ore, which I put in my shot-pouch, which was proved afterward to be an ore of silver. The misfortune of this region is, that there is no water near these mineral hills. We commenced our morning march half dead with thirst, and pushed on with the eagerness inspired by that tormenting appetite. Late in the evening we found a little water, for our own drinking, in the bottom of a rock. Not a drop remained for our four horses, that evidently showed a thirst no less devouring than ours. [70] Their feet were all bleeding, and the moment we paused to rest ourselves, the weary companions of our journey instantly laid down. It went still more to my heart, to see my two faithful dogs, which had followed me all the way from my father's house, where there was always bread enough and to spare, looking to me with an expression, which a hunter in the desert only can understand, as though begging food and water. Full gladly would I have explained to them, that the sterile wilderness gave me no means of supplying their wants.

We had scarcely commenced the next morning's march, when, at a little distance from our course, we saw a smoke. Supposing it an Indian camp, we immediately concluded to attack it. Adopting their own policy, we slipped onward in silence and concealment, until we were close by it. We

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

found the persons women and children. Having no disposition to harm them, we fired a gun over their heads, which caused them instantly to fly at the extent of their speed. Hunger knows no laws; and we availed ourselves of their provision, which proved to be mascal, and grass seed, of which we made mush. Scanty as this nutriment was, it was sufficient to sustain life.

We commenced an early march on the 6th, and were obliged to move slowly, as we were bare-footed, and the mountains rough and steep. We found them either wholly barren, or only covered with a stunted growth of pine and cedar, live oak and barbary bushes. On the 8th, our provisions were entirely exhausted, and so having nothing to eat, we felt the less need of water. Our destitute and forlorn condition goaded us on, so that we reached the Helay on the 12th. We immediately began to search for traces of beavers, where to set our traps, but found none. On the morning of the 13th, we killed a raven, which we cooked for seven men. It was unsavory flesh in itself, and would hardly have afforded a meal for one hungry man. The miserable condition of our company may be imagined, when seven hungry men, who had not eaten a full meal for ten days, were all obliged to breakfast on this nauseous bird. We were all weak and emaciated. But I was young [71] and able to bear hardships. My heart only ached for my poor father who was reduced to a mere skeleton. We moved on slowly and painfully, until evening, when we encamped. On my return from setting our two traps, I killed a buzzard, which, disagreeable as it was, we cooked for supper. In the morning of the 18th, I found one of the traps had caught an otter.

This served for breakfast and supper. It seemed the means of our present salvation, for my father had become so weak, that he could no longer travel. We therefore encamped early, and three of us went out to hunt deer among the hills. But in this sad emergency we could find none. When we returned, my father had prepared lots, that we should draw, to determine who of us should kill one of the dogs. I refused through fear that the lot would fall to me. These faithful companions of our sufferings were so dear to me, that I felt as though I could not allow them to be killed to save my own life; though to save my father, I was aware that it was a duty to allow it to be done.

We lay here until the 18th, my father finding the flesh of the dog both sweet, nutritive and strengthening. On the 18th, he was again able to travel; and on the 20th, we arrived at Bear creek, where we hid the bears oil, which we found unmolested. We lay here two days, during which time we killed four deer and some turkies. The venison we dried, and cased the skin of one of the deer, in which to carry our oil. We commenced an early march on the 23d, and on the 25th reached the river San Francisco, where we found our buried furs all safe. I suffered exceedingly from the soreness of my feet, giving me great pain and fever at night. We made from our raw deer skins a very tolerable substitute for shoes. The adoption of this important expedient enabled us to push on, so that we reached the Copper mines on the 29th.

The Spaniards seemed exceedingly rejoiced, and welcomed us home, as though we were of their own nation, religion and kindred. They assured us, that they had no expectation ever to see us again. The superintendent of the mines, especially, who appeared to me a gentleman of the highest order, received [72] us with particular kindness, and supplied all our pressing wants. Here we remained, to rest and recruit ourselves, until the 2d of May. My father then advised me to travel to Santa Fe, to get some of our goods, and purchase a new supply of horses, with which to return, and bring in our furs. I had a horse, which we had taken from the Indians, shod with copper shoes, and in company with four of my companions, and the superintendent of the mines, I started for Santa Fe. The superintendent assured us, that he would gladly have furnished us horses;

JUNE, 20, 1824 -- AUGUST 30, 1830

---

but the Appache Indians had recently made an incursion upon his establishment, stealing all his horses, and killing three men, that were herding them. This circumstance had suspended the working of the mines. Besides he was unable to procure the necessary coal, with which to work them, because the Appaches way-laid the colliers, and killed them, as often as they attempted to make coal.

We arrived at the house of the governor on the 12th. Jacova, his daughter, received us with the utmost affection; and shed tears on observing me so ill; as I was in fact reduced by starvation and fatigue, to skin and bone. Beings in a more wretched plight she could not often have an opportunity to see. My hair hung matted and uncombed. My head was surmounted with an old straw hat. My legs were fitted with leather leggins, and my body arrayed in a leather hunting shirt, and no want of dirt about any part of the whole. My companions did not shame me, in comparison, by being better clad. But all these repulsive circumstances notwithstanding, we were welcomed by the governor and Jacova, as kindly, as if we had been clad in a manner worthy of their establishment.

We rested ourselves here three days. I had left my more decent apparel in the care of Jacova, when we started from the house into the wilderness on our trapping expedition. She had had my clothes prepared in perfect order. I once more dressed myself decently, and spared to my companions all my clothes that fitted them. We all had our hair trimmed. All this had much improved our appearance. When we started [73] on the 15th, the old gentleman gave each of us a good horse, enabling us to travel at our ease.

On the 18th we arrived at Santa Fe, where we immediately met some of our former companions. It hardly need be added, that the joy of this recognition was great and mutual. We found Mr. Pratte ill in bed. He expressed himself delighted to see me, and was still more desirous to see my father. He informed me, that four of the company that he had detached to trap, had been defeated by the Indians, and the majority of them killed. He had, also, despaired of ever seeing us again. I took a part of my goods, and started back to the mines on the 21st. None of my companions were willing to accompany me on account of the great apprehended danger from the Indians between this place and the mines. In consequence, I hired a man to go with me, and having purchased what horses I wanted, we two travelled on in company. I would have preferred to have purchased my horses of the old governor. But I knew that his noble nature would impel him to give them to me, and felt reluctant to incur such an obligation. When I left his house, he insisted on my receiving a gold chain, in token of the perpetual remembrance of his daughter. I saw no pretext for refusing it, and as I received it, she assured me that she should always make mention of my father and me in her prayers.

I left this hospitable place on the 24th, taking all my clothes with me, except the hunting shirt, which I had worn in the battle with the Commanches. This she desired to retain, insisting, that she wished to preserve this memorial to the day of her death. We arrived at the mines the first day of June, having experienced no molestation from the Indians. We continued here, making arrangements for our expedition to bring in the furs, until the 6th. The good natured commander gave us provisions to last us to the point where our furs were buried, and back again. Still more, he armed ten of his laborers, and detached them to accompany us. The company consisted of four Americans, the man hired at Santa Fe, and the commander's ten men, fifteen in all.

[74] We left the mines on the 7th, and reached Battle-hill on Beaver river on the 22d. I need not

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

attempt to describe my feelings, for no description could paint them, when I found the furs all gone, and perceived that the Indians had discovered them and taken them away. All that, for which we had hazarded ourselves, and suffered every thing but death, was gone. The whole fruit of our long, toilsome and dangerous expedition was lost, and all my golden hopes of prosperity and comfort vanished like a dream. I tried to convince myself, that repining was of no use, and we started for the river San Francisco on the 29th. Here we found the small quantity buried there, our whole compensation for a year's toil, misery and danger. We met no Indians either going or returning.

We arrived at the mines the 8th of July, and after having rested two days proposed to start for Santa Fe. The commander, don Juan Unis, requested us to remain with him two or three months, to guard his workmen from the Indians, while pursuing their employment in the woods. He offered, as a compensation, a dollar a day. We consented to stay, though without accepting the wages. We should have considered ourselves ungrateful, after all the kindness, he had rendered us at the hour of our greatest need, either to have refused the request, or to have accepted a compensation. Consequently we made our arrangements to stay.

We passed our time most pleasantly in hunting deer and bears, of which there were great numbers in the vicinity. We had no other duties to perform, than to walk round in the vicinity of the workmen, or sit by and see them work. Most of my time was spent with don Juan, who kindly undertook to teach me to speak Spanish. Of him, having no other person with whom to converse, I learned the language easily, and rapidly. One month of our engagement passed off without any molestation from the Indians. But on the first day of August, while three of us were hunting deer, we discovered the trail of six Indians approaching the mines. We followed the trail, and within about a mile from the mines, we came up with them. [75] They fled, and we pursued close at their heels. Gaining upon them, one of them dodged us, into the head of a hollow. We surrounded him. As soon as he saw that we had discovered him, and that escape was impossible, he sprung on his feet, threw away his bow and arrows, and begged us most submissively not to shoot him. One of our men made up to him, while the other man and myself stood with our guns cocked, and raised to our faces, ready to shoot him, if he made the least motion towards his bow. But he remained perfectly still, crossing his hands, that we might tie them. Having done it, we drove him on before us. We had advanced about a hundred yards from the point where we took him, when he pointed out to us a hollow tree, intimating that there was another Indian concealed there. We bade him instruct his companion to make no resistance, and to surrender himself, or we would kill him. He explained our words to his companion in the tree. He immediately came forth from his concealment with his bow, and we tied his hands in the same way as the other's. We marched them before us to the mines, where we put them in prison. The Spaniards, exasperated with their recent cruelties and murders, would have killed them. We insisted that they should be spared, and they remained in prison until the next morning.

We then brought them out of prison, conversed with them, and showed them how closely we could fire. We instructed one of them to tell his chief to come in, accompanied by all his warriors, to make peace. We retained one of the prisoners as a hostage, assuring the other, that if his chief did not come in to make peace, we would put the hostage to death. In regard to the mode of making it, we engaged, that only four of our men should meet them at a hollow, half a mile from the mine. We enjoined it on him to bring them there within the term of four days. We readily discov-

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

ered by the tranquil countenance of our hostage, that he had no apprehensions that they would not come in.

Afterwards, by way of precaution, my father put in requisition all the arms he could find in the vicinity of the mines, with [76] which he armed thirty Spaniards. He then ordered a trench dug, at a hundred yard's distance from the point designated for the Indians to occupy. This trench was to be occupied by our armed men, during the time of the treaty, in case, that if the Indians should be insolent or menacing, these men might be at hand to overawe them, or aid us, according to circumstances.

On the 5th, we repaired to the place designated, and in a short time, the Indians to the number of 80, came in sight. We had prepared a pipe, tobacco, and a council fire, and had spread a blanket, on which the chief might sit down. As soon as they came near us, they threw down their arms. The four chiefs came up to us, and we all sat down on the blanket. We commenced discussing the subject, for which they were convened. We asked them, if they were ready to make a peace with us; and if not what were the objections? They replied, that they had no objections to a peace with the Americans, but would never make one with the Spaniards. When we asked their reasons, they answered that they had been long at war with the Spaniards, and that a great many murders had been mutually inflicted on either side. They admitted, that they had taken a great many horses from the Spaniards, but indignantly alleged, that a large party of their people had come in to make peace with the Spaniards, of which they pretended to be very desirous; that with such pretexts, they had decoyed the party within their walls, and then commenced butchering them like a flock of sheep. The very few who had escaped, had taken an unalterable resolution never to make peace with them. 'In pursuance,' they continued, 'of our purposes of revenge, great numbers of our nation went in among the Spaniards, and were baptized. There they remain faithful spies for us, informing us when and where there were favorable opportunities to kill, and plunder our enemies.'

We told them in reply, that if they really felt disposed to be at peace with the Americans, these mines were now working jointly by us and the Spaniards; that it was wrong in them to revenge the crimes of the guilty upon the innocent, and that [77] these Spaniards had taken no part in the cowardly and cruel butchery, of which they had spoken; and that if they would not be peaceable, and allow us to work the mines unmolested, the Americans would consider them at war, and would raise a sufficient body of men to pursue them to their lurking places in the mountains; that they had good evidence that our people could travel in the woods and among the mountains, as well as themselves; and that we could shoot a great deal better than either they or the Spaniards, and that we had no cowards among us, but true men, who had no fear and would keep their word. The chiefs answered, that if the mines belonged to the Americans, they would promise never to disturb the people that worked them. We left them, therefore, to infer that the mines belonged to us, and took them at their word. We then lit the pipe, and all the Indians gathered in a circle round the fire. The four chiefs, each in succession made a long speech, in which we could often distinguish the terms Americans, and Espanola. The men listened with profound attention, occasionally sanctioning what was said by a nod of the head. We then commenced smoking, and the pipe passed twice round the circle. They then dug a hole in the ground in the centre of the circle, and each one spat in it. They then filled it up with earth, danced round it, and stuck their arrows in the little mound. They then gathered a large pile of stones over it, and painted themselves red.

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

Such are their ceremonies of making peace. All the forms of the ceremony were familiar to us, except the pile of stones, and spitting in the hole they had dug, which are not practised by the Indians on the American frontiers. We asked them the meaning of the spitting. They said, that they did it in token of spitting out all their spite and revenge, and burying their anger under the ground.

It was two o'clock before all these ceremonies were finished. We then showed them our reserve force in the trench. They evinced great alarm to see their enemies the Spaniards so close to them, and all ready for action. We explained to them, that we intended to be in good faith, if they were; and that these [78] men were posted there, only in case they showed a disposition to violence. Their fears vanished and tranquility returned to their countenances. The chiefs laughed, and said to each other, these Americans know how to fight, and make peace too. But were they to fight us, they would have to get a company entirely of their own people; for that if they took any Spaniards into their company, they would be sure to desert them in the time of action.

We thence all marched to the mines, where we killed three beeves to feed the Indians. After they had eaten, and were in excellent humor, the head chief made a present to my father, of ten miles square of a tract of land lying on a river about three miles from the mines. It was very favorable for cultivation, and the Spaniards had several times attempted to make a crop of grain upon it; but the Indians had as often either killed the cultivators, or destroyed the grain. My father informed them, that though the land might be his, he should be obliged to employ Spaniards to cultivate it for him; and that, having made the land his, they must consider these cultivators his people, and not molest them. With a look of great firmness, the chief said 'that he was a man of truth, and had given his word, and that we should find that nothing belonging to the mines would be disturbed, for that he never would allow the treaty to be violated.' He went on to add, 'that he wanted to be at peace with us, because he had discovered, that the Americans never showed any disposition to kill, except in battle; that they had had a proof of this in our not killing the two prisoners we had taken; but had sent one of them to invite his people to come in, and make peace with us, and that he took pleasure in making known to us, that they were good people too, and had no wish to injure men that did not disturb or injure them.'

All this farce of bringing the Indians to terms of peace with this establishment was of infinite service to the Spaniards, though of none to us; for we neither had any interest in the mines, nor intended to stay there much longer. But we were glad to oblige don Juan who had been so great a benefactor [79] to us. He, on his part, was most thankful to us; for he could now work the mines without any risk of losing men or cattle. He could now raise his own grain, which he had hitherto been obliged to pack 200 miles, not without having many of those engaged in bringing it, either killed or robbed. The Indians now had so much changed their deportment as to bring in horses or cows, that they found astray from the mines. They regularly brought in deer and turkies to sell, which don Juan, to keep alive their friendship, purchased, whether he needed the articles or not. Every day more or less Indians came into the settlement to go and hunt deer and bears with us. They were astonished at the closeness of our shooting; and nothing seemed to delight them so much, as our telling them, we would learn them to shoot our guns. My father had the honor to be denominated in their language, the big Captain.

Don Juan, apprehending that the truce with the Indians would last no longer than while we staid, and that after our departure, the Indians would resume their former habits of robbery and mur-

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

der, was desirous to retain us as long as possible. We agreed to stay until December, when our plan was to commence another trapping expedition on the Helay, following it down to its mouth. With every disposition on the part of don Juan to render our stay agreeable, the time passed away pleasantly. On the 16th of September, the priest, to whose diocese the mines belonged, made a visit to the mines, to release the spirits of those who had died since his last visit, from purgatory, and to make Christians by baptising the little persons who had been born in the same time. This old priest, out of a reverend regard to his own person, had fled from this settlement at the commencement of the Indian disturbances; and had not returned until now, when the Indians had made peace. A body of Indians happened to be in, when the priest came. We were exceedingly amused with the interview between the priest and an Indian chief, who, from having had one of his hands bitten off by a bear, was called Mocho Mano. The priest asked the one handed chief, why [80] he did not offer himself for baptism? Mocho remained silent for some time, as if ruminating an answer. He then said, 'the Appache chief is a very big rogue now. Should he get his crown sprinkled with holy water, it would either do him no good at all, or if it had any effect, would make him a greater rogue; for that the priests, who made the water holy, and then went sprinkling it about among the people for money, were the biggest rogues of all.' This made the priest as angry as it made us merry.

When we had done laughing, Mocho asked us, how we baptised among our people? I answered that we had two ways of performing it; but that one way was, to plunge the baptised person under water. He replied promptly, 'now there is some sense in that;' adding that when a great quantity of rain fell from the clouds, it made the grass grow; but that it seemed to him that sprinkling a few drops of water amounted to nothing.

The priest, meanwhile, prophesied, that the peace between the Spaniards and Indians would be of very short duration. On the 18th, he left the mines, and returned to the place whence he had come. On the 20th, we started with some Indian guides to see a mountain of salt, that they assured us existed in their country. We travelled a northerly course through a heavily timbered country, the trees chiefly of pine and live oak. We killed a great number of bears and deer on the first day; and on account of their reverence for my father, they treated me as if I had been a prince. On the second we arrived at the salt hill, which is about one hundred miles north of the mines. The hill is about a quarter of a mile in length, and on the front side of it is the salt bluff, eight or ten feet in thickness. It has the appearance of a black rock, divided from the earthy matters, with which the salt is mixed. What was to me the most curious circumstance of the whole, was to see a fresh water spring boiling up within twenty feet from the salt bluff, which is a detached and solitary hill, rising out of a valley, which is of the richest and blackest soil, and heavily timbered [81] with oak, ash and black walnut. I remained here two days, during which I killed fifteen deer, that came to lick salt.

An Indian woman of our company dressed all my deer skins, and we loaded two mules with the salt, and started back to the mines, where we arrived the first of October. Nothing could have been more seasonable or acceptable to don Juan, than the salt we brought with us. Having mentioned these mines so often, perhaps it may not be amiss, to give a few details respecting them. Within the circumference of three miles, there is a mine of copper, gold and silver, and beside, a cliff of load stone. The silver mine is not worked, as not being so profitable, as either the copper or gold mines.

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

We remained here to the last of December, when the settlement was visited by a company of French trappers, who were bound for Red river. We immediately made preparations to return with them, which again revived the apprehensions of don Juan, that the Indians would break in upon the settlement as soon as we were gone, and again put an end to the working of the mines. To detain us effectually, he proposed to rent the mines to us for five years, at a thousand dollars a year. He was willing to furnish provisions for the first year gratis, and pay us for all the improvements we should make on the establishment. We could not but be aware, that this was an excellent offer. My father accepted it. The writings were drawn, and my father rented the establishment on his own account, selecting such partners as he chose.

I, meanwhile, felt within me an irresistible propensity to resume the employment of trapping. I had a desire, which I can hardly describe, to see more of this strange and new country. My father suffered greatly in the view of my parting with him, and attempted to dissuade me from it. He strongly painted the dangers of the route, and represented to me, that I should not find these Frenchmen like my own country people, for companions. All was unavailing to change my fixed purpose, and we left the mines, January 2d, 1826.

We travelled down the river Helay, of which I have formerly [82] given a description, as far as the point where we had left it for Battle-hill. Here, although we saw fresh Indian signs, we met with no Indians. Where we encamped for the night, there were arrows sticking in the ground. We made an early start on the 16th, and at evening came upon the self same party of Indians, that had robbed us of our horses, the year past. Some of them had on articles of my father's clothes, that he had left where we buried our furs. They had made our beaver skins into robes, which we now purchased of them. While this bargain was transacting, I observed one of the Indians mounted on the self same horse, on which my father had travelled from the States. My blood instantly boiled within me, and, presenting my gun at him, I ordered him instantly to dismount. He immediately did as I bade him, and at once a trepidation and alarm ran through the whole party. They were but twenty men, and they were encumbered with women and children. We were thirteen, well mounted and armed. The chief of the party came to me, and asked me, 'if I knew this horse?' I answered, that 'I did, and that it was mine.' He asked me again, 'if we were the party, whose horses and furs they had taken the year before?' I answered, that I was one of them, and that if he did not cause my furs and horses to be delivered up to me, we would kill them all on the spot. He immediately brought me 150 skins and three horses, observing, that they had been famished, and had eaten the rest, and that he hoped this would satisfy me, for that in the battle they had suffered more than we, he having lost ten men, and we having taken from them four horses with their saddles and bridles. I observed to him in reply, that he must remember that they were the aggressors, and had provoked the quarrel, in having robbed us of our horses, and attempting to kill us. He admitted that they were the aggressors, in beginning the quarrel, but added, by way of apology, that they had thought us Spaniards, not knowing that we were Americans; but that now, when he knew us, he was willing to make peace, and be in perpetual friendship. On this we lit the pipe of peace, and smoked friends. I gave him some red [83] cloth, with which he was delighted. I then asked him about the different nations, through which our route would lead us? He named four nations, with names, as he pronounced them, sufficiently barbarous. All these nations he described as bad, treacherous and quarrelsome.

Though it was late in the evening, we resumed our march, until we had reached the point where

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

the river runs between mountains, and where I had turned back the year before. There is here little timber, beside musqueto-wood, which stands thick. We passed through the country of the first two tribes, which the Indian chief had described to us, without meeting an individual of them. On the 25th, we arrived at an Indian village situated on the south bank of the river. Almost all the inhabitants of this village speak Spanish, for it is situated only three days journey from a Spanish fort in the province of Sonora, through which province this river runs. The Indians seemed disposed to be friendly to us. They are to a considerable degree cultivators, raising wheat, corn and cotton, which they manufacture into cloths. We left this village on the 25th, and on the 28th in the evening arrived at the Papawar village, the inhabitants of which came running to meet us, with their faces painted, and their bows and arrows in their hands. We were alarmed at these hostile appearances, and halted. We told them that we were friends, at which they threw down their arms, laughing the while, and showing by their countenances that they were aware that we were frightened. We entered the village, and the French began to manifest their uncontrollable curiosity, by strolling about in every direction. I noted several crowds of Indians, collected in gangs, and talking earnestly. I called the leader of my French companions, and informed him that I did not like these movements of the Indians, and was fearful that they were laying a plan to cut us all up. He laughed at my fears, telling me I was a coward. I replied, that I did not think that to be cautious, and on our guard, was to show cowardice, and that I still thought it best for us to start [84] off. At this he became angry, and told me that I might go when I pleased, and that he would go when he was ready.

I then spoke to a Frenchman of our number, that I had known for a long time in Missouri; I proposed to him to join me, and we would leave the village and encamp by ourselves. He consented, and we went out of the village to the distance of about 400 yards, under the pretext of going there to feed our horses. When the sun was about half an hour high, I observed the French captain coming out towards us, accompanied by a great number of Indians, all armed with bows and arrows. This confirmed me in my conviction that they intended us no good. Expressing my apprehensions to my French companion, he observed in his peculiar style of English, that the captain was too proud and headstrong, to allow him to receive instruction from any one, for that he thought nobody knew any thing but himself.

Agreeing that we had best take care of ourselves, we made us a fire, and commenced our arrangements for spending the night. We took care not to unsaddle our horses, but to be in readiness to be off at a moment's warning. Our French captain came and encamped within a hundred yards of us, accompanied by not less than a hundred Indians. They were all exceedingly officious in helping the party unpack their mules; and in persuading the captain, that there was no danger in turning them all loose, they promised that they would guard them with their own horses. This proposal delighted the lazy Frenchmen, who hated to go through the details of preparing for encampment, and had a particular dislike to standing guard in the night. The Indian chief then proposed to the captain to stack their arms against a tree, that stood close by. To this also, under a kind of spell of infatuation he consented. The Indian chief took a rope, and tied the arms fast to a tree.

As I saw this, I told the captain that it seemed to me no mark of their being friendly, for them to retain their own arms, and persuade us to putting ours out of our power, and that one, who had known Indians, ought to be better acquainted with their character, than to encamp with them,

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

without his men having [85] their own arms in their hand. On this he flew into a most violent passion, calling me, with a curse added to the epithet, a coward, wishing to God that he had never taken me with him, to dishearten his men, and render them insubordinate. Being remarkable neither for forbearance, or failing to pay a debt of hard words, I gave him as good as he sent, telling him, among other things no ways flattering, that he was a liar and a fool, for that none other than a fool would disarm his men, and go to sleep in the midst of armed savages in the woods. To this he replied, that he would not allow me to travel any longer in his company. I answered that I was not only willing, but desirous to leave him, for that I considered myself safer in my own single keeping, than under the escort of such a captain, and that I estimated him only to have sense enough to lead people to destruction.

He still continued to mutter harsh language in reply, as I returned to my own camp. It being now dusk, we prepared, and ate our supper. We had just finished it, when the head chief of the village came to invite us to take our supper with them, adding, by way of inducement, that they had brought some fine pumpkins to camp, and had cooked them for the white people. We told him, we had taken supper; and the more he insisted, the more resolutely we refused. Like the French captain, he began to abuse us, telling us we had bad hearts. We told him, that when with such people, we chose rather to trust to our heads than our hearts. He then asked us to let some of his warriors come and sleep with us, and share our blankets, alleging, as a reason for the request, that the nights were cold, and his warriors too poor to buy blankets. We told him, that he could easily see that we were poor also, and were no ways abundantly supplied with blankets, and that we should not allow them to sleep with us. He then marched off to the French camp, evidently sulky and in bad temper. While roundly rating us to the French captain, he gave as a reason why we ought not to sleep by ourselves, that we were in danger of being killed in the night by another tribe of Indians, with whom he was at war.

[86] The captain, apparently more calm, came to us, and told us, that our conduct was both imprudent and improper, in not conciliating the Indians by consenting to eat with them, or allowing them to sleep with us. My temper not having been at all sweetened by any thing that had occurred since we fell out, I told him, that if he had a fancy to eat, or sleep with these Indians, I had neither power nor the will to control him; but that, being determined, that neither he nor they should sleep with me, he had better go about his business, and not disturb me with useless importunity. At this he began again to abuse and revile me, to which I made no return. At length, having exhausted his stock of epithets, he returned to his camp.

As soon as we were by ourselves, we began to cut grass for our horses, not intending either to unsaddle, or let them loose for the night. My companion and myself were alike convinced, that some catastrophe was in reserve from the Indians, and seeing no chance of defending ourselves against an odds of more than twenty to one, we concluded, as soon as all should be silent in the camp, to fly. We packed our mules so as to leave none of our effects behind, and kept awake. We remained thus, until near midnight, when we heard a fierce whistle, which we instantly understood to be the signal for an attack on the French camp. But a moment ensued, before we heard the clashing of war clubs, followed by the shrieks and heavy groans of the dying French, mingled with the louder and more horrible yells of these treacherous and blood thirsty savages. A moment afterwards, we heard a party of them making towards us. To convince them that they could not butcher us in our defenceless sleep, we fired upon them. This caused them to retreat. Convinced

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

that we had no time to lose, we mounted our horses, and fled at the extent of our speed. We heard a single gun discharged in the Indian camp, which we supposed the act of an Indian, who had killed the owner. We took our direction towards a high mountain on the south side of the river, and pushed for it as fast as we thought our horses could endure to be driven. We reached the mountain at day break, [87] and made our way about three miles up a creek, that issued from the mountain. Here we stopped to refresh our horses, and let them feed, and take food ourselves. The passage of the creek was along a kind of crevice of the mountain, and we were strongly convinced that the Indians would not follow upon our trail further than the entrance to the mountain. One of us ascended a high ridge, to survey whatever might be within view. My companion, having passed nearly an hour in the survey, returned to me, and said he saw something on the plain approaching us. I ascended with him to the same place, and plainly perceived something black approaching us. Having watched it for some time, I thought it a bear. At length it reached a tree on the plain, and ascended it. We were then convinced, that it was no Indian, but a bear searching food. We could see the smokes arising from the Indian town, and had no doubt, that the savages were dancing at the moment around the scalps of the unfortunate Frenchmen, who had fallen the victims of their indolence and rash confidence in these faithless people. All anger for their abuse of me for my timely advice was swallowed up in pity for their fate. But yesterday these people were the merriest of the merry. What were they now? Waiting a few moments, we saw the supposed bear descend the tree, and advance directly to the branch on which we were encamped. We had observed that the water of this branch, almost immediately upon touching the plain, was lost in the sand, and gave no other evidence of its existence, than a few green trees. In a moment we saw buttons glitter on this object from the reflected glare of the sun's rays. We were undeceived in regard to our bear, and now supposed it an Indian, decorated with a coat of the unfortunate Frenchmen. We concluded to allow him to approach close enough to satisfy our doubts, before we fired upon him. We lay still, until he came within fair rifle distance, when to our astonishment, we discovered it to be the French captain! We instantly made ourselves known from our perch. He uttered an exclamation of joy, and fell prostrate on the earth. Fatigue and [88] thirst had brought him to death's door. We raised him, and carried him to our camp. He was wounded in the head and face with many and deep wounds, the swelling of which had given him fever. I happened to have with me some salve, which my father gave me when I left the mines. I dressed his wounds. Having taken food, and sated his thirst, hope returned to him. So great was his change in a few hours, that he was able to move off with us that evening. In his present miserable and forlorn condition, I exercised too much humanity and forbearance to think of adverting to our quarrel of the preceding evening. Probably estimating my forbearance aright, he himself led to the subject. He observed in a tone apparently of deep compunction, that if he had had the good sense and good temper to have listened to my apprehensions and cautions, both he and his people might have been now gaily riding over the prairies. Oppressed with mixed feelings, I hardly knew what reply to make, and only remarked, that it was too late now to lament over what was unchangeable, and that the will of God had been done. After a silence of some time, he resumed the conversation, and related all the particulars of the terrible disaster, that had come to his knowledge. His own escape he owed to retaining a pocket pistol, when the rest of their arms were stacked. This he fired at an Indian approaching him, who fell, and thus enabled him to fly; not, however, until he had received a number of severe wounds from their clubs. I had not the heart to hear him relate what

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

became of the rest of his comrades. I could easily divine that the treacherous savages had murdered every one. Feelings of deep and burning revenge arose in my bosom, and I longed for nothing so much as to meet with these monsters on any thing like terms of equality. About sunset we could distinctly discern the river bottom about five miles distant from us. When it became dark, we descried three fires close together, which we judged to be those of savages in pursuit of us. Like some white people, the Indians never forgive any persons that they have outraged and injured. We halted, and took counsel, what [89] was to be done. We concluded that my companion and myself should leave our wounded companion to take care of the horses, and go and reconnoitre the camp, in which were these fires, and discover the number of the Indians, and if it was great, to see how we could be most likely to pass them unobserved. When we had arrived close to the fires, we discovered a considerable number of horses tied, and only two men guarding them. We crawled still closer, to be able to discern their exact number and situation.

In this way we arrived within fifty yards of their camp, and could see no one, but the two, any where in the distance. We concluded, that all the rest of the company were asleep in some place out of our view. We presumed it would not be long before some of them would awake, it being now ten at night. Our intention was to take aim at them, as they should pass between us and their fire, and drop them both together. We could distinctly hear them speaking about their horses. At length one of them called to the other, in English, to go and wake their relief guards. Words would poorly express my feelings, at hearing these beloved sounds. I sprang from my couching posture, and ran towards them. They were just ready to shoot me, when I cried a friend, a friend ! One of them exclaimed, 'where in God's name did you spring from.' 'You seem to have come out of the earth.' The surprise and joy upon mutual recognition was great on both sides. I gave him a brief sketch of the recent catastrophe of our company, as we followed them to camp. The company was all roused and gathered round us, eagerly listening to the recital of our recent disaster. At hearing my sad story, they expressed the hearty sorrow of good and true men, and joined us in purposes of vengeance against the Indians.

We were now thirty-two in all. We fired twelve guns, a signal which the wounded captain heard and understood, for he immediately joined us. We waited impatiently for the morning. As soon as it was bright dawn, we all formed under a genuine American leader, who could be entirely relied upon. [90] His orders were, that twenty should march in front of the pack horses, and twelve behind. In the evening we encamped within five miles of the Indian village, and made no fires. In the morning of the 31st, we examined all our arms, and twenty-six of us started to attack the village. When we had arrived close to it, we discovered most fortunately, what we considered the dry bed of a creek, though we afterwards discovered it to be the old bed of the river, that had very high banks, and ran within a hundred yards of the village. In this bed we all formed ourselves securely and at our leisure, and marched quite near to the verge of the village without being discovered. Every man posted himself in readiness to fire. Two of our men were then ordered to show themselves on the top of the bank. They were immediately discovered by the Indians, who considered them, I imagine, a couple of the Frenchmen that they had failed to kill. They raised the yell, and ran towards the two persons, who instantly dropped down under the bank. There must have been at least 200 in pursuit. They were in a moment close on the bank. In order to prevent the escape of the two men, they spread into a kind of circle to surround them. This brought the whole body abreast of us. We allowed them to approach within twenty yards, when we gave them

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

our fire. They commenced a precipitate retreat, we loading and firing as fast as was in our power. They made no pause in their village, but ran off, men, women and children, towards a mountain distant 700 yards from their village. In less than ten minutes, the village was so completely evacuated, that not a human being was to be found, save one poor old blind and deaf Indian, who sat eating his mush as unconcernedly as if all had been tranquil in the village. We did not molest him. We appropriated to our own use whatever we found in the village that we judged would be of any service to us. We then set fire to their wigwams, and returned to our camp. They were paid a bloody price for their treachery, for 110 of them were slain. At twelve we returned to the village in a body, and retook all the horses of the Frenchmen, that they had killed. [91] We then undertook the sad duty of burying the remains of the unfortunate Frenchmen. A sight more horrible to behold, I have never seen. They were literally cut in pieces, and fragments of their bodies scattered in every direction, round which the monsters had danced, and yelled. We then descended the river about a mile below the village, to the point where it enters the Helay from the north. It affords as much water at this point as the Helay.

In the morning of the 1st of February, we began to ascend Black river. We found it to abound with beavers. It is a most beautiful stream, bounded on each side with high and rich bottoms. We travelled up this stream to the point where it forks in the mountains; that is to say, about 80 miles from its mouth. Here our company divided, a part ascending one fork, and a part the other. The left fork heads due north, and the right fork north east. It was my lot to ascend the latter. It heads in mountains covered with snow, near the head of the left hand fork of the San Francisco. On the 16th, we all met again at the junction of the forks. The other division found that their fork headed in snow covered mountains, as they supposed near the waters of Red river. They had also met a tribe of Indians, who called themselves Mokee. They found them no ways disposed to hostility. From their deportment it would seem as if they had never seen white people before. At the report of a gun they fell prostrate on the ground. They knew no other weapon of war than a sling, and with this they had so much dexterity and power, that they were able to bring down a deer at the distance of 100 yards.

We thence returned down the Helay, which is here about 200 yards wide, with heavily timbered bottoms. We trapped its whole course, from where we met it, to its junction with Red river. The point of junction is inhabited by a tribe of Indians called Umene. Here we encamped for the night. On the morning of the 26th, a great many of these Indians crossed the river to our camp, and brought us dried beans, for which we paid them with red cloth, with which they were delighted beyond [92] measure, tearing it into ribbands, and tying it round their arms and legs; for if the truth must be told, they were as naked as Adam and Eve in their birth day suit. They were the stoutest men, with the finest forms I ever saw, well proportioned, and as straight as an arrow. They contrive, however, to inflict upon their children an artificial deformity. They flatten their heads, by pressing a board upon their tender scalps, which they bind fast by a ligature. This board is so large and light, that I have seen women, when swimming the river with their children, towing them after them by a string, which they held in their mouth. The little things neither suffered nor complained, but floated behind their mothers like ducks.

At twelve we started up Red river, which is between two and three hundred yards wide, a deep, bold stream, and the water at this point entirely clear. The bottoms are a mile in general width, with exceedingly high, barren cliffs. The timber of the bottoms is very heavy, and the grass rank

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

and high. Near the river are many small lakes, which abound in beavers.

March 1st we came among a tribe of Indians, called Cocomarecopper. At sight of us they deserted their wigwams, one and all, and fled to the mountains, leaving all their effects at our discretion. Of course we did not meddle with any thing. Their corn was knee high. We took care not to let our horses injure it, but marched as fast as we could from their village, to deprive them of their homes [in] as little time as possible. About four miles above the town we encamped, and set our traps. About twelve next day it began to rain, and we pitched our tents.

We had scarce kindled our fires, when 100 Indians came to our camp, all painted red in token of amity. They asked fire, and when we had given it, they went about 20 yards from us, and as the rain had been heavy and the air cool, they made a great fire, round which they all huddled. We gave them the bodies of six large fat beavers, which they cooked by digging holes in the ground, at the bottom of which they kindled fires, and on the fires threw the beavers which they covered with dirt. This dainty, thus prepared they greedily devoured, entrails [93] and all. Next morning, fearful that our guns might have experienced inconvenience from the rain, we fired them off to load them afresh. They were amazed and alarmed, to see us make, what they called thunder and lightning. They were still more startled, to see the bullet holes in the tree, at which we had aimed. We made signs to them, that one ball would pass through the body of two men. Some of our men had brought with them some scalps of the Papawars, the name of the tribe where our French captain lost his company. They informed us that they were at war with that tribe, and begged some of the scalps to dance round. They were given them, and they began to cut their horrid anticks about it.

Our traps had taken thirty beavers the last night. We gave them the meat of twenty, with which present they were delighted, their gratitude inducing them to manifest affection to us. They ate and danced all day and most of the night. On the morning of the 3d, they left us, returning to their camps. We resumed our march, and on the 6th arrived at another village of Indians called Mohawa. When we approached their village, they were exceedingly alarmed. We marched directly through their village, the women and children screaming, and hiding themselves in their huts. We encamped about three miles above the village. We had scarcely made our arrangements for the night, when 100 of these Indians followed us. The chief was a dark and sulky looking savage, and he made signs that he wanted us to give him a horse. We made as prompt signs of refusal. He replied to this, by pointing first to the river, and then at the furs we had taken, intimating, that the river, with all it contained, belonged to him; and that we ought to pay him for what we had taken, by giving him a horse. When he was again refused, he raised himself erect, with a stem and fierce air, and discharged his arrow into the tree, at the same time raising his hand to his mouth, and making their peculiar yell. Our captain made no other reply, than by raising his gun and shooting the arrow, as it still stuck in the tree, in two. The chief seemed bewildered with this mark of close [94] marksmanship, and started off with his men. We had no small apprehensions of a night attack from these Indians. We erected a hasty fortification with logs and skins, but sufficiently high and thick, to arrest their arrows in case of attack. The night, contrary to our fears, passed without interruption from them. On the morning of the 7th, the chief returned on horse back, and in the same sulky tone again demanded a horse. The captain bade him be off, in a language and with a tone alike understood by all people. He started off on full gallop, and as he passed one of our horses, that was tied a few yards from the camp, he fired a spear through the animal. He had not

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

the pleasure to exult in his revenge for more than fifty yards, before he fell pierced by four bullets. We could not doubt, that the Indians would attempt to revenge the death of their chief. After due consideration, we saw no better place in which to await their attack, than the one we now occupied. On the rear we were defended by the river, and in front by an open prairie. We made a complete breastwork, and posted spies in the limbs of the tall trees, to descry the Indians, if any approached us, while still at a distance. No Indians approached us through the day, and at night a heavy rain commenced falling. We posted sentinels, and secured our horses under the river bank. We kindled no fires, and we passed the night without annoyance. But at day break, they let fly at us a shower of arrows. Of these we took no notice. Perhaps, thinking us intimidated, they then raised the war whoop, and made a charge upon us. At the distance of 150 yards we gave them a volley of rifle balls. This brought them to a halt, and a moment after to a retreat, more rapid than their advance had been. We sallied out after them, and gave them the second round, which induced all, that were not forever stopped, to fly at the top of their speed. We had killed sixteen of their number. We returned to our camp, packed, and started, having made a determination not to allow any more Indians to enter our camp. This affair happened on the 9th.

We pushed on as rapidly as possible, fearful that these red [95] children of the desert, who appear to inherit an equal hatred of all whites, would follow us, and attack us in the night. With timely warning we had no fear of them by day, but the affair of the destruction of the French company, proved that they might become formidable foes by night. To prevent, as far as might be, such accidents, we raised a fortification round our camp every night, until we considered ourselves out of their reach, which was on the evening of the 12th. This evening we erected no breast-work, placed no other guard than one person to watch our horses, and threw ourselves in careless security round our fires. We had taken very little rest for four nights, and being exceedingly drowsy, we had scarcely laid ourselves down, before we were sound asleep. The Indians had still followed us, too far off to be seen by day, but had probably surveyed our camp each night. At about 11 o'clock this night, they poured upon us a shower of arrows, by which they killed two men, and wounded two more; and what was most provoking, fled so rapidly that we could not even give them a round. One of the slain was in bed with me. My own hunting shirt had two arrows in it, and my blanket was pinned fast to the ground by arrows. There were sixteen arrows discharged into my bed. We extinguished our fires, and it may easily be imagined, slept no more that night.

In the morning, eighteen of us started in pursuit of them, leaving the rest of the company to keep camp and bury our dead. We soon came upon their trail, and reached them late in the evening. They were encamped, and making their supper from the body of a horse. They got sight of us before we were within shooting distance, and fled. We put spurs to our horses, and overtook them just as they were entering a thicket. Having every advantage, we killed a greater part of them, it being a division of the band that had attacked us. We suspended those that we had killed upon the trees, and left their bodies to dangle in terror to the rest, and as a proof, how we retaliated aggression. We then returned to our company, who had each received sufficient warning not to encamp in the territories [96] of hostile Indians without raising a breast-work round the camp. Red river at this point bears a north course, and affords an abundance of the finest lands. We killed plenty of mountain sheep and deer, though no bears. We continued our march until the 16th, without seeing any Indians. On that day we came upon a small party, of whom the men fled, leaving a single woman. Seeing herself in our power, she began to beat her breast, and cry Cowera, Cowera

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

; from which we gathered, that she belonged to that tribe. We treated her kindly, and travelled on. On the 23d, we came to a village of the Shuena Indians. As we approached it, they came out and began to fire arrows upon us. We gave them in return a round of rifle balls. In the excitement of an attack, we laughed heartily to see these sons of the desert dodge, and skulk away half bent, as though the heavens were falling upon them. From their manner we inferred, that they were in fact wholly unacquainted with white people, or at least they never before heard the report of a gun. The whole establishment dispersed to the mountains, and we marched through the village without seeing any inhabitants, except the bodies of those we had killed. We had received more than one lesson of caution, and we moved on with great circumspection. But so much of our time was taken up in defence and attacks, and fortifying our camps, that we had little leisure to trap. In order that our grand object should not be wholly defeated, we divided our men into two companies, the one to trap and the other to keep guard. This expedient at once rendered our trapping very productive. We discovered little change in the face of the country. The course of the river still north, flowing through a rich valley, skirted with high mountains, the summits of which were white with snow.

On the 25th we reached a small stream, emptying into Red river through the east bank, up which we detached three men, each carrying a trap, to discover if beavers abounded in that stream. They were to return the next day, while we were engaged in shoeing our horses. The next day elapsed, but none returned. We became anxious about their fate; and on the [97] 27th, started to see what had become of them. At mid-day we found their bodies cut in pieces, and spitted before a great fire, after the same fashion which is used in roasting beaver. The Indians who had murdered them, saw us as we came on, and fled to the mountains, so that we had no chance of avenging the death of our unfortunate companions. We gathered the fragments of their bodies together and buried them. With sadness in our hearts, and dejection on our countenances, we returned to our camp, struck our tents, and marched on. The temperature in this region is rather severe, and we were wretchedly clad to encounter the cold.

On the 28th, we reached a point of the river where the mountains shut in so close upon its shores, that we were compelled to climb a mountain, and travel along the acclivity, the river still in sight, and at an immense depth beneath us. — Through this whole distance, which we judged to be, as the river meanders, 100 leagues, we had snow from a foot to eighteen inches deep. The river bluffs on the opposite shore, were never more than a mile from us. It is perhaps, this very long and formidable range of mountains, which has caused, that this country of Red river, has not been more explored, at least by the American people. A march more gloomy and heart-wearing, to people hungry, poorly clad, and mourning the loss of their companions, cannot be imagined. Our horses had picked a little herbage, and had subsisted on the bark of shrubs. Our provisions were running low, and we expected every hour to see our horses entirely give out.

April 10th, we arrived where the river emerges from these horrid mountains, which so cage it up, as to deprive all human beings of the ability to descend to its banks, and make use of its waters. No mortal has the power of describing the pleasure I felt, when I could once more reach the banks of the river.— Our traps, by furnishing us beavers, soon enabled us to renew our stock of provisions. We likewise killed plenty of elk, and dressed their skins for clothing. On the 13th we reached another part of the river, emptying into the main river from the [98] north. Up this we all trapped two days. During this excursion we met a band of hostile Indians, who attacked us with

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

an unavailing discharge of arrows, of whom we killed four.

On the 15th, we returned to the banks of Red river, which is here a clear beautiful stream. We moved very slowly, for our beasts were too lean and worn down, to allow us to do otherwise. On the 16th we met with a large party of the Shoshonees, a tribe of Indians famous for the extent of their wanderings, and for the number of white people they had killed, by pretending friendship to them, until they found them disarmed, or asleep. One of our company could speak their language, from having been a prisoner among them for a year. They were warmly clad with buffaloe robes, and they had muskets, which we knew they must have taken from the white people. We demanded of them to give up the fire arms, which they refused. On this we gave them our fire, and they fled to the mountains, leaving their women and children in our power.— We had no disposition to molest them. We learned from these women, that they had recently destroyed a company of French hunters on the head waters of the Platte. We found six of their yet fresh scalps, which so exasperated us, that we hardly refrained from killing the women. We took from them all the beaver skins which they had taken from the slain French, and five of their mules, and added to our provisions their stock of dried buffaloe meat. We had killed eight of their men, and we mortified the women excessively, by compelling them to exchange the scalps of the unfortunate Frenchmen for those of their own people.

We resumed our march, and ascended the river to the point where it forked again, neither fork being more than from twenty-five to thirty yards wide. On the 19th, we began to ascend the right hand fork, which pursues a N. E. course. On the 23d, we arrived at the chief village of the Nabahoos, a tribe that we knew to be friendly to the whites. We enquired of them, if we could cross the Rocky Mountains best at the head of this fork or the other; and they informed us, that the mountains [99] were impassable, except by following the left hand fork. Knowing that they were at war with the Shoshonee, we let them know how many of them we had killed. With this they were delighted, and gave us eight horses, one for each man we had slain. They sent with us, moreover, ten Indians to point out to us the route, in which to cross the mountains.

On the 25th, we started up the left hand fork, and arrived on the 30th, in the country of the Pewee tribe, who are friendly to the Nabahoos. Their chief village is situated within two days' travel of the low gap, at which we were to cross the mountains, at which gap we arrived on the first of May. The crossing was a work, the difficulty of which may be imagined from the nature of the case and the character of the mountains.— The passage occupied six days, during which we had to pass along compact drifts of snow, higher than a man on horseback. The narrow path through these drifts is made by the frequent passing of buffaloes, of which we found many dead bodies in the way. We had to pack cotton-wood bark on the horses for their own eating, and the wood necessary to make fires for our cooking. Nothing is to be seen among these mountains, but bare peaks and perpetual snow. Every one knows, that these mountains divide between the Atlantic and Pacific Oceans. At the point where we crossed them, they run in a direction a little north of west, and south of east, further than the eye can reach.

On the 7th, we struck the south fork of the Platte, near Long's Peak, and descended it five days. We then struck across the plain to the main Platte, on which we arrived on the 16th. In descending it we found the beavers scarce, for all these rivers had been thoroughly trapped. The river is skirted with only a few small willows, and the country is open prairie, entirely destitute of trees. We saw immense droves of elk, buffaloes, and white bears, which haunt the buffaloe range to prey

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

upon those noble animals. We had the merriest sport imaginable, in chasing the buffaloes over these perfectly level plains, and shooting them with the arrows we had taken from the Indians [100] we had killed. I have killed myself, and seen others kill a buffalo, with a single shot of an arrow. The bows are made with ribs of buffaloes, and drive the arrows with prodigious force. On the 20th, we left this river and started for the Big Horn, a fork of the Yellow Stone, itself a considerable river of the Missouri. We reached the Big Horn on the 31st, and found but few beavers. June 2d, we struck over towards the main Yellow Stone, and on the 3d entered the country of the Flat Heads, who were entirely friendly. We purchased some furs of them. They are Indians of exceedingly handsome forms, were it not for the horrid deformity of their heads, which are transversely from ear to ear but a few inches in diameter, and in the other direction monstrous, giving them the appearance of wearing a military cap with all its plumage. This plumage is furnished by their matted tresses of hair, painted and skewered up to a high point. This monstrosity is occasioned by binding two pieces of board on each side of the head of the new-born infant, which is kept secure with bandages, until the child is three years old, at which time the head bones have acquired a firmness to retain their then shape during life.

On the 11th, we reached the Yellow Stone, and ascended it to its head; and thence crossed the ridges of the Rocky Mountains to Clarke's fork of the Columbia. But all these streams had been so much trapped, as to yield but few beavers. Clarke's fork is a hundred yards wide, a bold, clear, pleasant stream, remarkable for the number and excellence of its fish, and most beautiful country of fertile land on its shores. We ascended this river to its head, which is in Long's Peak, near the head waters of the Platte. We thence struck our course for the head waters of the Arkansas, on which we arrived July 1st. Here we met a band of the Grasshopper Indians, who derive their name from gathering grasshoppers, drying them, and pulverizing them, with the meal of which they make mush and bread; and this is their chief article of food. They are so little improved, as not even to have furnished themselves with [101] the means of killing buffaloes. At sight of us, these poor two-legged animals, dodged into the high grass like so many partridges.

We marched up this stream, trapping for the few beavers which it afforded. Its banks are scantily timbered, being only skirted with a few willows. On the 5th, we met a war party of the Black Foot Indians, all well mounted. As soon as they saw us, they came fiercely upon us, yelling as though the spirit of darkness had loaned them the voices of all his tenants. We dismounted, and as soon as they were within shooting distance, we gave them our fire, which they promptly returned. The contest was fierce for something more than 20 minutes, a part of the time not more than 50 yards apart. They then retreated, and we mounted our horses, and gave them chase, though unavailingly, for their horses were as fleet as the wind, compared with ours. We soon desisted from so useless a pursuit, and returned to the battle ground. We found sixteen Blackfeet dead, and with infinite anguish, counted four of our own companions weltering in their blood. We buried them with sorrowful hearts, and eyes full of tears. Ah! Among those who live at home, surrounded by numerous relations and friends, in the midst of repose, plenty and security, when one of the number droops, and dies with sickness or age, his removal leaves a chasm that is not filled for years. Think how we must have mourned these brave men, who had shared so many dangers, and on whose courage and aid we had every day relied for protection. Here on these remote plains, far from their friends, they had fallen by the bloody arrow or spear of these red, barbarous Ishmaelites of the desert, but neither unwept nor unrevenged. Having performed the sad task of deposit-

JUNE, 20, 1824 -- AUGUST 30, 1830

---

ing the bodies of these once warm hearted friends in the clay, we ascended to the head of this river, and crossed the mountain that separates its waters from those of the Rio del Norte, which river we struck on the 20th. We began to descend it, and on the 23d met a band of the Nabahoes, who accompanied us [102] quite to their chief village. It will be seen, that all these streams upon which we have been trapping, rise from sources which interlock with each other, and the same range of peaks at very short distances from each other. These form the heads of Red river of the east, and the Colorado of the west, Rio del Norte, Arkansas, Platte, Yellow Stone, Missouri and Columbia. The village of these Indians is distant 50 miles from the Rio del Norte. We remained at it two days, and rested our horses, and refreshed ourselves. This tribe some years since had been at war with the Spanish, during which they plundered them of great numbers of horses, mules and cattle, which caused that they had now large stocks of these animals, together with flocks of sheep. They raise a great abundance of grain, and manufacture their wool much better than the Spanish. On the first of August we arrived at Santa Fe, with a fine amount of furs. Here disaster awaited us. The Governor, on the pretext that we had trapped without a license from him, robbed us of all our furs. We were excessively provoked, and had it not been from a sense of duty to our own beloved country, we would have redressed our wrongs, and retaken our furs with our own arms. Here I remained until the 18th, disposing of a part of my goods, and reserving the remainder for a trip which I contemplated to the province of Sonora. I had the pleasure once more of receiving the affectionate greeting of Jacova, who gave me the most earnest counsels to quit this dangerous and rambling way of life, and settle myself down in a house of my own. I thanked her for her kindness and good counsel, and promised to follow it, after rambling another year in the wilderness.— Thence I went to the mines, where I had the inexpressible satisfaction again to embrace my dear father, whom I found in perfect health, and making money rapidly. I remained there three days, and, accompanied with one servant, arrived in Hanas on the first of September. This is a small town situated in the province of Biscay, between the province of Sonora and New Mexico, in a direction S. W. from the copper mines.

[103] The country is generally of that character, denominated in Kentucky, barren. The soil is level and black. These people raise a great quantity of stock, such as horses, cows, sheep and goats. Their farming implements are clumsy and indifferent. They use oxen entirely in their agriculture. Their ploughs are a straight piece of timber, five feet long and eight inches thick, mortised for two other pieces of timber, one to be fitted to the beam, by which the oxen draw, and another to the handle, by which the man holds the plough. The point that divides the soil, is of wood, and hewed sloping to such a point, that a hollow piece of iron is fastened on it at the end. This is one inch thick, and three inches broad at top, and slopes also to a point.

Their hoes, axes and other tools are equally indifferent; and they are precisely in such a predicament, as might be expected of a people who have no saw mills, no labor saving machinery, and do every thing by dint of hard labor, and are withal very indolent and unenterprising.

I amused myself at times with an old man, who daily fell in my way, who was at once rich and to the last degree a miser; and yet devotedly attached to the priests, who were alone able to get a little money out of him. He often spoke to me about the unsafeness of my religion. Instead of meeting his remarks with an argument, I generally affronted him at once, and then diverted myself with his ways of showing his anger. I told him that his priest treated him as the Spanish hostlers do their horses. He asked me to explain the comparison. I observed, 'you know how the hostler in

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

the first place throws his lasso over the mule's neck. That secures the body of the beast. Next the animal is blindfolded. That hinders his seeing where he is led. Next step he binds the saddle safe and fast. Then the holy father rigs his heels with spurs. Next come spur and lash, and the animal is now restive to no purpose. There is no shaking off the rider. On he goes, till the animal under him dies, and both go to hell together!' At this he flew into such a violent rage, as to run at me with his knife. I dodged out of his [104] way, and appeased him by convincing him that I was in jest. The rich, in their way of living, unite singular contrasts of magnificence and meanness. For instance, they have few of the useful articles of our dining and tea sets, but a great deal of massive silver plate, and each guest a silver fork and spoon. The dining room is contiguous to the kitchen. A window is thrown open, and the cook hands a large dish through the window to a servant, who bears it to the table. The entertainer helps himself first, and passes the dish round to all the guests. Then another and another is brought on, often to the number of sixteen. All are savored so strong with garlic and red pepper, that an American at first cannot eat them. The meat is boiled to such a consistency that a spoon manages it better than a knife. At the close of the dinner they bring in wine and cigars, and they sit and smoke and drink wine until drowsiness steals upon them, and they go to bed for their siesta. They sleep until three in the afternoon, at which time the church bell tolls. They rise, take a cup of chocolate, and handle the wine freely. This short affair over, they return and sit down on the shaded side of the house, and chatter like so many geese till night, when they divide, a part to mass, and a part to the card table, where I have seen the poor, betting their shirts, hats and shoes. The village contains 700 souls.

On the 6th, I departed from this town, travelling a west course through a most beautiful country, the plains of which were covered with domestic animals running wild. On the 8th I arrived at the foot of the mountain, that divides the province of Sonora from Biscay. I slept at a country seat, where they were making whiskey of a kind of plantain, of which I have spoken before, which they called Mascal (Maguey). Here were assembled great numbers of Spaniards and Indians. They were soon drunk, and as a matter of course, fighting with knives and clubs. In the morning, two Spaniards and one Indian were found dead. Late in the morning, a file of soldiers arrived, and took the suspected murderers to prison.

In the morning I commenced climbing the mountain before [105] me, and in the evening arrived at a small town in Sonoro, called Barbisca; situated on the bank of a most beautiful little stream, called Iago, which discharges itself into the Pacific ocean, near the harbor of Ymus. Its banks are not much timbered, nor is the soil uncommonly good. The morning of the 9th was a great religious festival, or famous Saint's day, which collected a vast crowd of people. After breakfast and mass, the image of the virgin Mary was paraded round the public square in solemn procession, during which there was a constant crash of cannon and small arms. Then an old priest headed a procession, bearing the image of Christ, nailed to a cross. After these images were returned to their church, they brought into a square enclosure, strongly fenced for that purpose, a wild bull, which they threw down, tied and sharpened its horns. The tops of the houses were all covered with people to see the spectacle that was performing. The bull was covered with red cloth, and two men entered the enclosure, each holding in the right hand a bundle of sky rockets, and in the left a red handkerchief. The rockets were lashed to a stick a foot long, in the end of which was a small nail, a half an inch long, with a beard at the end, like that of a fish hook. They then untied the fierce animal. No sooner was he on his feet, than he sprang at one of his assailants, who avoid-

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

ed his attack, by dextrously slipping aside, and as the animal darted by him, stuck in his neck two small rockets, one on each side. The other assailant then gave a sharp whistle to draw the infuriated animal upon him. The bull snorted and dashed at him. He dodged the animal in the same manner, as the other had done, and left sticking in his forehead, as he passed, a garland of artificial flowers, made of paper, beautifully cut and painted, and large enough to cover his whole forehead. In this way they kept alternately driving him this way and that, sticking rockets in him as he dashed by them, until he was covered with eight or ten, clinging to his neck and shoulders. They then touched the crackers with a lighted match. Words would not paint the bull's expressions of rage and terror, as he bounded round the enclosure, covered with fire, [106] and the rockets every moment discharging like fire arms. After this, a man entered with a small sword. The bull bel- lowed and darted at him. As the bull dropped his head to toss him, he set his feet upon the horns, and in a twinkling, thrust his sword between the shoulder blades, so as to touch the spinal mar- row. The animal dropped as dead as a stone. The drum and fife then struck up, as a signal for the horsemen to come and carry off the dead animal, and bring in a fresh one. All this was conducted with incredible dispatch. In this way seven bulls were successively tortured to death, by footmen. After this, four men entered on horseback, equipped with spears in the shape of a trowel, and a handle four feet long. With this spear in the one hand, and a noose in the other, they galloped round the bull. The bull immediately made at the horsemen passing him, who moved just at such a pace, as not to allow the bull to toss the horse. The horseman then couched his spear backwards, so as to lay it on the bull's neck. The bull instantly reared and tossed, and in the act forced the spear between his fore shoulders, so as to hit the spinal marrow. If the spear is laid rightly, and the animal makes his accustomed motions, he drops instantly dead. But to do this requires infinite dexterity and fearlessness. If the man be clumsy, or of weak-nerves, he is apt to fail in couching the spear right, in which case, as a matter of course, the horse is gored, and it is ten to one that the man is slain. In this way fourteen bulls were killed, and with them, five horses and one man, during this festival. At night commenced gambling and card playing, and both as fiercely pursued as the bull fighting. This great feast lasted three days, during which, as the people were in a very purchasable humor, I sold a number of hundred dollar's worth of my goods.

On the morning of the 12th, I left this place, and in the evening arrived at a small town called Vassarac, and remained there one day. The country in the vicinity is well timbered and very hilly. The woods are full of wild cattle and horses. On the 13th, I travelled through a fine rich country, abounding with cattle, and arrived in the evening at a town called Tepac, [107] situated on a small creek, near a mountain, in which there is a gold mine worked by the Iago Indians, a nation for- merly under the protection of an old priest. He attempted to practice some new imposition upon them, and they killed him some years ago. On this the Spaniards made war upon them, and the conflict was continued some years. They lost the best and bravest of their men, and the remnant were obliged to submit to such terms as the Spaniards saw fit to impose. They were either con- demned to the mines, or to raise food for those who wrought them.

I remained in this town three days, and purchased gold in bars and lumps of the Indians, at the rate of ten dollars per ounce. The diggings seldom exceed twenty feet in depth. Most of the gold is found on the surface after hard rains. Their mode of extracting the gold from the earth with which it is mixed, or the stone in which it is imbedded, is this. The stone is pulverised or ground, still keeping the matter wet. It is carefully mixed with mercury, and kneaded with the hands, until

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

the water is separated from the mass, and the mercury is perfectly incorporated with it. This process is repeated, until the water runs off perfectly clear. They then grind or triturate the mass anew until all the particles of earthy matter are washed away. The remaining matter is amalgam, of the color of silver, and the consistency of mush. They then put it into a wet deer skin, and strain the mercury by pressure through the pores of the skin. The gold is left, still retaining enough mercury to give it the color of silver. The coarse way of managing it afterwards, is to put it in the fire, and evaporate all the mercury from it, and it is then pure virgin gold. There is a more artificial way of managing it, by which the mercury is saved.

This province would be among the richest of the Mexican country, if it were inhabited by an enlightened, enterprising and industrious people. Nothing can exceed the indolence of the actual inhabitants. The only point, in which I ever saw them display any activity, is in throwing the lasso, and in horsemanship. In this I judge, they surpass all other people. Their great [108] business and common pursuit, is in noosing and taming wild horses and cattle.

On the 15th, I left this place and travelled through a country well timbered and watered, though the land is too broken to be cultivated, and in the evening arrived in a town called Varguacha. This is a place miserably poor, the people being both badly fed and clothed. But their indolence alone is in fault. The land in the immediate vicinity of the town is good, and the woods teem with wild cattle. But they are too lazy to provide more meat than will serve them from day to day. On the 17th I continued my course through a beautiful country, thinly settled by civilized Indians, who raise sugar cane and abundance of stock. They are obviously more enterprising and industrious than the Spaniards. Approaching the shore of the great Pacific, I found the country more level and better settled. Some rich and noble sugar farms lay in my view.

On the 22d I arrived in Patoka, which is a considerable town, and the capital of this province. It is two day's travel hence to Ymus. The people here seemed to me more enlightened, and to have a higher air of civilization than any I had seen in the whole country. It probably results from the intercourse they have with foreigners, from their vicinity to the Pacific. Most of them are dressed in the style of the American people. Their houses are much better furnished, and the farmers are supplied with superior farming utensils, compared with any thing I saw in the interior. The chief manufactures are soap and sugar, the latter of an inferior quality, I imagine, in consequence of the clumsy mode of manufacturing it. From the port of Ymus they also export considerable quantities of tallow and hides, for which the farmers are repaid in merchandize at an enormous advance. A great many horses and mules are driven from the interior to this port. Many also are taken to the American states. The price of mules in this province is from three to four dollars a head.

I remained here until I had disposed of all my goods. On the 26th, I left this town, and travelled on to port Ymus, at which [109] I arrived on the 28th, and first saw the waters of the vast Pacific. I spent a day here on board an American ship, the master of which was surprised at the account I gave of myself, and would hardly believe that I had travelled to this place from the United States. I was equally amazed at hearing him relate the disasters which had befallen him at sea. On the 29th, I left this port, and travelled a N. W. course, through a country full of inhabitants, and abounding in every species of fruit. Snow never falls, although the general temperature is not so warm but that woollen garments may be worn. To add to its advantages, it is very healthy. On the 7th of October, I arrived at a town called Oposard. The population amounts to about 8000 souls. I here became acquainted with one of my own countrymen, married to a Spanish woman. He

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

informed me, that he had been in this country thirty years, eight of which he had spent in prison. The sufferings he endured from the Spaniards were incredible; and I internally shuddered, as he related, lest I, in travelling through the country might fall into similar misfortunes. As some palliation of their cruelty, he observed, that he was made prisoner at the period when the revolution was just commencing in that country. At that time the Inquisition was still in force, and committed many a poor mortal to the flames, for his alleged heresy. He assured me, that he should have met the same fate, had he not become a member of their church. He afterwards married a lady, who had gained his affections by being kind to him in prison.

I remained with this man two days, and on the third resumed my journey, travelling an easterly course, and part of the time over a very rough country. I met no inhabitants, but Indians, who were uniformly friendly. On the 10th, I arrived at the mines of Carrocha, which were in the province of Chihuahua, situated between two mountains, and considered the richest silver mines in New Mexico. There are about 800 miners working this mine, and they have advanced under ground at least half a mile. On the 12th, I started for the capital, and reached it on the 16th, passing over great tracts of good and bad land, all [110] untilled, and most of it an uninhabited wilderness. This city is the next largest in New Mexico. It is the largest and handsomest town I had ever seen, though the buildings are not so neat and well arranged as in our country. The roofs are flat, the walls well painted, and the streets kept very clean. Here they smelt and manufacture copper and silver, and several other metals. They have also a mint. The terms of their currency are very different from ours. They count eight rials, or sixteen four pence half pennies, to the dollar. Their merchandize is packed from Ymus, or Mexico.

I have heard much talk about the Splendid churches in this city. It is for others, who think much of such immense buildings, wrung from the labors of the poor, to describe them. For my part, having said it is a large and clean town, I present a result of their institutions and manners, which I considered the more important sort of information. During a stay of only three days here, ten dead bodies were brought into town, of persons who had been murdered in the night. Part of the number were supposed to have been killed on account of having been known to carry a great deal of money with them, and part to have had a quarrel about some abandoned women. This last is a most common occasion of night murders, the people being still more addicted to jealousy, and under still less restraints of law, than in old Spain, in the cities of which, assassinations from this cause are notoriously frequent.

I asked my informant touching these matters, if there was no police in the city? He answered, that the forms of the law were complete, and that they had a numerous guard, and that it was quite as likely they committed the murders themselves, as not. I came to the same conclusion, for in a small and regular city like this, it was impossible that so many guards, parading the streets by night, should not be aware of the commission of such deeds, and acquainted with the perpetrators. No inquest of any sort was held over the bodies. They were, however, paraded through the streets to beg money to pay the priests for performing funeral rites at their burial. This excited in me [111] still more disgust, than the murders. I expressed myself in consequence, with so much freedom, in regard to this sort of miserable imposition, as to give great offence to my host, who, like most of the people, was rigidly devoted to the religion of the church. On the evening of 16th, I left this city, and travelled through a fine country, thickly inhabited by shepherds, who live in small towns, and possess a vast abundance of stock. It is well watered, but thinly timbered. The

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

most magnificent part of the spectacle is presented in the lofty snow covered mountains, that rise far in the distance, and have their summits lost in the clouds, glistening in indescribable brilliance in the rays of the rising and setting sun.

The road at this time was deemed to be full of robbers, and very dangerous. I was so fortunate as to meet with none. On the 18th, I arrived at a small town, called San Bueneventura, which is surrounded with a wall. In fact, most of the considerable villages are walled. They are called in Spanish, Presidio, the English of which is, a garrison. In the forenoon, I crossed a small river called Rio Grande, and travelled down this stream all day, the banks of which were thickly settled, and in high cultivation, with wheat, corn and barley. On the 22d, I arrived at a village called Casas Grandes, or the Great Houses? On the 23d, I pursued an east course towards Passo del Norte, situated on the banks of the Rio del Norte. I travelled over a very rough country with some high mountains, inhabited by a wandering tribe of the Apache Indians, that live by seizing their opportunities for robbery and murder among the Spaniards, riding off upon the stolen horses, to the obscure and almost inaccessible fastnesses of their mountains, where they subsist upon the stolen horseflesh.

I know not, whether to call the Passo del Norte, a settlement or a town. It is in fact a kind of continued village, extending eight miles on the river. Fronting this large group of houses, is a nursery of the fruit trees, of almost all countries and climes. It has a length of eight miles and a breadth of nearly three. I was struck with the magnificent vineyards of this place, from [112] which are made great quantities of delicious wine. The wheat fields were equally beautiful, and the wheat of a kind I never saw before, the stalks generally yielding two heads each. The land is exceedingly rich, and its fertility increased by irrigation.

On the 28th, I started for the Copper mines, wrought by my father. This day my course led me up the del Norte, the bottoms of which are exceedingly rich. At a very short distance from the Passo, I began to come in contact with grey bears, and other wild animals. At a very little distance on either side are high and ragged mountains, entirely sterile of all vegetation. I had no encounter with the bears, save in one instance. A bear exceedingly hungry, as I suppose, came upon my horses as I was resting them at mid-day, and made at one of them. I repaid him for his impudence by shooting him through the brain. I made a most delicious dinner of the choice parts of his flesh. My servant would not touch it, his repugnance being shared by great numbers in his condition. It is founded on the notion, that the bear is a sort of degenerated man, and especially, that the entrails are exactly like those of human beings.

On the 30th, I struck off from the del Norte, and took my course for the Copper mines directly over the mountains, among which we toiled onward, subsisting by what we packed with us, or the product of the rifle, until the 11th of November, when I had once more the satisfaction of embracing my father at the Copper mines. He was in perfect health, and delighted to see me again. He urged me so earnestly to remain with him, though a stationary life was not exactly to my taste, that I consented from a sense of filial duty, and to avoid importunity. I remained here until the first of December, amusing myself sometimes by hunting, and sometimes by working in the gold mine, an employment in which I took much pleasure.

In a hunting excursion with a companion who was an American, he one morning saw fit to start out of bed, and commence his hunt while I was yet asleep in bed. He had scarcely advanced a league, before he killed a deer on the top of a high ridge. He was so inadvertent, as to commence

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

skinning the animal, before [113] he had re-loaded his rifle. Thus engaged, he did not perceive a bear with her cubs, which had advanced within a few feet of him. As soon as he saw his approaching companion, without coveting any farther acquaintance, he left deer and rifle, and ran for his life. He stopped not, until he arrived at the mines. The bear fell to work for a meal upon the deer, and did not pursue him. We immediately started back to have the sport of hunting this animal. As we approached the ridge, where he had killed the deer, we discovered the bear descending the ridge towards us. We each of us chose a position, and his was behind a tree, which he could mount, in case he wounded, without killing her. This most ferocious and terrible animal, the grizzly or grey bear, does not climb at all. I chose my place opposite him, behind a large rock, which happened to be near a precipice, that I had not observed. Our agreement was to wait until she came within 30 yards, and then he was to give her the first fire. He fired, but the powder being damp, his gun made long fire, whence it happened that he shot her too low, the ball passing through the belly, and not a mortal part. She made at him in terrible rage. He sprang up his tree, the bear close at his heels. She commenced biting and scratching the tree, making, as a Kentuckian would phrase it, the lint fly. But finding that she could not bite the tree down, and being in an agony of pain, she turned the course of her attack, and came growling and tearing up the bushes before her, towards me. My companion bade me lie still, and my own purpose was to wait until I could get a close fire. So I waited until the horrible animal was within six feet of me. I took true aim at her head. My gun flashed in the pan. She gave one growl and sprang at me with her mouth open. At two strides I leapt down the unperceived precipice. My jaw bone was split on a sharp rock, on which my chin struck at the bottom. Here I lay senseless. When I regained recollection, I found my companion had bled me with the point of his butcher knife, and was sitting beside me with his hat full of water, bathing my head and face. It was perhaps an hour, before I gained full recollection, [114] so as to be able to walk. My companion had cut a considerable orifice in my arm with his knife, which I deemed rather supererogation; for I judged, that I had bled sufficiently at the chin.

When I had come entirely to myself, my companion proposed that we should finish the campaign with the bear. I, for my part, was satisfied with what had already been done, and proposed to retreat. He was importunate, however, and I consented. We ascended the ridge to where he had seen the bear lie down in the bushes. We fixed our guns so that we thought ourselves sure of their fire. We then climbed two trees, near where the bear was, and made a noise, that brought her out of her lair, and caused her to spring fiercely towards our trees. We fired together, and killed her dead. We then took after the cubs. They were three in number. My companion soon overtook them. They were of the size of the largest rackoons. These imps of the devil turned upon him and made fight. I was in too much pain and weakness to assist him. They put him to all he could do to clear himself of them. He at length got away from them, leaving them masters of the field, and having acquired no more laurels than I, from my combat with my buffaloe calf. His legs were deeply bit and scratched, and what was worse, such was the character of the affair, he only got ridicule for his assault of the cubs. I was several weeks in recovering, during which time, I ate neither meat nor bread, being able to swallow nothing but liquids.

The country abounds with these fierce and terrible animals, to a degree, that in some districts they are truly formidable. They get into the corn fields. The owners hear the noise, which they make among the corn, and supposing it occasioned by cows and horses that have broken into

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

the fields, they rise from their beds, and go to drive them out, when instead of finding retreating domestic animals, they are assailed by the grizzly bear. I have been acquainted with several fatal cases of that sort. One of them was a case, that intimately concerned me. Iago, my servant, went out with a man to get a load of [115] wood. A bear came upon this man and killed him and his ass in the team. A slight flight of snow had fallen. Some Spaniards, who had witnessed the miserable fate of their companion, begged some of us to go and aid them in killing the bear. Four of us joined them. We trailed the bear to its den, which was a crevice in the bluff. We came to the mouth and fired a gun. The animal, confident in his fierceness, came out, and we instantly killed it. This occurred in New Mexico.

This stationary and unruffled sort of life had become unendurable, and with fifteen Americans, we arranged a trapping expedition on the Pacos. My father viewed my rambling propensities with stern displeasure. He had taken in a Spanish superintendent, who acted as clerk. This person had lived in the United States from the age of 18 to 30, and spoke English, French and Spanish. This man arranged the calculations, and kept the accounts of my father's concerns, and had always acted with intelligence and fidelity. The concern was on the whole prosperous; and although I felt deep sorrow to leave my father against his wishes, I had at least the satisfaction to know, that I was of no other use to him, than giving him the pleasure of my society.

On the 7th, our company arrived on the del Norte, and crossed it in the evening to the eastern shore. On the evening of the 8th, we struck the Pacos about twenty miles above its junction with the del Norte. This day's travel was through a wild and precipitous country, inhabited by no human being. We killed plenty of bears and deer, and caught some beavers. On the 9th, we began to ascend the river through a rich and delightful plain, on which are to be seen abundance of deserted sheep folds, and horse pens, where the Spanish vachers once kept their stock. The constant incursions of the Indians compelled this peaceful people to desert these fair plains. Their deserted cottages inspired a melancholy feeling. This river runs from N. E. to S. W. and is a clear, beautiful stream, 20 yards wide, with high and dry bottoms of a black and rich soil. The mountains run almost parallel to the river, and at the distance of [116] eight or ten miles. They are thickly covered with noble pine forests, in which aspen trees are intermixed. From their foot gush out many beautiful clear springs. On the whole, this is one of the loveliest regions for farmers that I have ever seen, though no permanent settlements could be made there, until the murderous Indians, who live in the mountains, should be subdued.

We advanced slowly onward, until the 15th, without meeting any Indians. At day break of this day, our sentinels apprized us, that savages were at hand. We had just time to take shelter behind the trees, when they began to let their arrows fly at us. We returned them the compliment with balls, and at the first shot a number of them fell. They remained firm and continued to pour in their arrows from every side. We began to find it exceedingly difficult to dodge them, though we gave them some rounds before any one of our men was struck. At length one man was pierced, and they rushed forward to scalp him. I darted from behind my tree to prevent them. I was assailed by a perfect shower of arrows, which I dodged for a moment, and was then struck down by an arrow in the hip. Here I should have been instantly killed, had not my companions made a joint fire at the Indians, who were rushing upon me, by which a number of them were laid dead. But the agony of my pain was insupportable, for the arrow was still fast in my hip. A momentary cessation of their arrows enabled me to draw out the arrow from my hip, and to commence

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

re-loading my gun. I had partly accomplished this, when I received another arrow under my right breast, between the bone and the flesh. This gave me less pain than the other shot, and finding I could not by any effort extract the arrow, I snapped it off, and finished loading my gun. The Indian nearest me fell dead, and I hobbled off, glad to be once more sheltered by a tree. My companions were not slow in making their rifles crack, and in raising mutual cheers of encouragement. The Indians were vastly our superiors in numbers, and we found it convenient to slip under the river bank. We were now completely sheltered [117] from their arrows. After we had gained this security, they stood but a few shots more, before they fled, leaving their dead and wounded at our mercy. Truth is, we were too much exasperated to show mercy, and we cut off the heads of all, indiscriminately.

Our loss was one killed, and two wounded, another beside myself though neither of us dangerously. The Indians had 28 killed. Luckily our horses were on an island in the river, or we should have lost every one of them. Our only loss of property was a few blankets, which they took, as they fled by our camp. During the 20 minutes that the contest lasted, I had a fragment of an arrow fast in my breast, and the spike of the other in my hip. I suffered, it may be imagined, excruciating pain, and still severer pain during the operation of extraction. This operation, one of my companions undertook. He was some minutes in effecting it. The spike could not be entirely extracted from my hip, for being of flint, it had shivered against the bone.

The Indians that attacked us, were a tribe of the Muscallaros, a very warlike people, although they have no other arms except bows and arrows, which are, however, the most powerful weapons of the kind. They are made of an elastic and flexible wood, backed with the sinews of a buffalo or elk. Their arrows are made of a species of reed grass, and are very light, though easily broken. In the end is stuck a hard piece of wood, which is pointed by a spike of flint an inch in length, and a quarter of an inch in width, and ground to the sharpest point. The men, though not tall, are admirably formed, with fine features and a bright complexion inclining to yellow. Their dress is a buckskin belt about the loins, with a shirt and moccasins to match. Their long black hair hangs in imbraided masses over their shoulders, in some cases almost extending to the heels. They make a most formidable appearance, when completely painted, and prepared for battle.

On the 16th, having made our arrangements for departure, I applied my father's admirable salve to my two severe wounds, [118] and to my companion's slight wound in the arm, and we both felt able to join our companions in their march. We travelled all this day and the following night a west course, and the following day, without stopping longer than was necessary to take a little food. After this we stopped and rested ourselves and horses all night. I need not attempt to describe the bitter anguish I endured, during this long and uninterrupted ride. It will be only necessary to conceive my situation to form a right conception of it. Our grand object had been to avoid another contest with the Muscallaros. In the evening we fell in with a party of the Nabahoes, who were now out on an expedition against the Muscallaros, who had recently killed one of their people, and against whom they had sworn immediate revenge. We showed the manifest proof of the chastisement they had received from us. Never had I seen such frantic leaps and gestures of joy. The screams and yells of exultation were such as cannot be imagined. It seemed as though a whole bedlam had broke loose. When we told them that we had lost but one man, their screams became more frantic still. Their medicine man was then called, and he produced an emollient

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

poultice, the materials of which I did not know but the effect was that the anguish of our wounds was at once assuaged. By the application of this same remedy, my wounds were quite healed in a fortnight.

The scalps, which some of our number had taken from the Muscallaros, were soon erected on a pole by the Nabahoes. They immediately commenced the fiercest dancing and singing I had yet seen, which continued without interruption three days and nights. During all this time, we endured a sort of worship from them, particularly the women. They were constantly presenting us with their favorite dishes, served in different ways, with dried berries and sweet vegetables, some of which, to people in our condition, were really agreeable.

In size and complexion these people resemble the Muscallaros, and their bows and arrows are similar; though some of the latter have fire arms, and their dress is much superior.— [119] Part of their dress is of the same kind with that of the former, though the skins are dressed in a more workmanlike manner, and they have plenty of blankets of their own manufacturing, and constituting a much better article than that produced by the Spaniards. They dye the wool of different and bright colors, and stripe them with very neat figures. The women are much handsomer, and have lighter complexions than the men. They are rather small in stature, and modest and reserved in their behaviour. Their dress is chiefly composed of skins made up with no small share of taste; and showily corded at the bottom, forming a kind of belt of beads and porcupine quills.— They are altogether the handsomest women I have seen among the red people, and not inferior in appearance to many Spanish women. Their deportment to our people, was a mixture of kindness and respect.

On the 21st, we started back to the river, accompanied by the whole party of Nabahoes, who assured us that they would guard us during the remainder of our hunt. We returned to the river through a beautiful and level country, most of it well timbered and watered. On our return we killed several bears, the talons of which the Indians took for necklaces. On the 26th, we arrived at our battle ground. The view of the bodies of the slain, all torn in pieces by wild beasts, inexpressibly disgusting to us, was equally a spectacle of pleasure to our red friends. We pointed out the grave of our companion. They all walked in solemn procession round it, singing their funeral songs. As they left it, every one left a present on the grave; some an arrow, others meat, moccasins, tobacco, war-feathers, and the like, all articles of value to them. These simple people believe that the spirit of the deceased will have immediate use for them in the life to come. Viewing their offerings in this light, we could not but be affected with these testimonies of kind feeling to a dead stranger. They then gathered up the remains of their slaughtered enemies, threw them in a heap, and cut a great quantity of wood, which they piled over the remains. They then set fire to the wood. We struck our tents, [120] marched about five miles up the river, set our traps, and encamped for the night. But the Nabahoes danced and yelled through the night to so much effect, as to keep all the beavers shut up in their houses, for, having been recently trapped, they were exceedingly cautious.

On the morning of the 27th, we informed them why we had taken no beavers, and during the following night they were perfectly quiet. We marched onward slowly, trapping as we went, until we reached the Spanish settlements on this river. On New Year's eve, January 1st, 1827, the Spaniards of the place gave a fandango, or Spanish ball. All our company were invited to it, and went. We appeared before the Alcalde, clad not unlike our Indian friends; that is to say, we were dressed

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

in deer skin, with leggins, moccasins and hunting shirts, all of this article, with the addition of the customary Indian article of dress around the loins, and this was of red cloth, not an article of which had been washed since we left the Copper Mines. It may be imagined that we did not cut a particular dandy-like figure, among people, many of whom were rich, and would be considered well dressed any where. Notwithstanding this, it is a strong proof of their politeness, that we were civilly treated by the ladies, and had the pleasure of dancing with the handsomest and richest of them. When the ball broke up, it seemed to be expected of us, that we should each escort a lady home, in whose company we passed the night, and we none of us brought charges of severity against our fair companions.

The fandango room was about forty by eighteen or twenty feet, with a brick floor raised four or five feet above the earth. That part of the room in which the ladies sat, was carpetted with carpeting on the benches, for them to sit on. Simple benches were provided for the accommodation of the gentlemen. Four men sang to the music of a violin and guitar. All that chose to dance stood up on the floor, and at the striking up of a certain note of the music, they all commenced clapping their hands. The ladies then advanced, one by one, and stood facing their partners. The dance then changed to a waltz, each [121] man taking his lady rather unceremoniously, and they began to whirl round, keeping true, however, to the music, and increasing the swiftness of their whirling. Many of the movements and figures seemed very easy, though we found they required practise, for we must certainly have made a most laughable appearance in their eyes, in attempting to practise them. Be that as it may, we cut capers with the nimblest, and what we could not say, we managed by squeezes of the hand, and little signs of that sort, and passed the time to a charm. The village, in which was this ball, is called Perdido, or the lost town, probably from some circumstances in its history. It contains about 500 souls and one church. The bishop was present at this ball, and not only bestowed his worshipful countenance, but danced before the Lord, like David, with all his might. The more general custom of the ladies, as far as I observed, is to sit cross legged on the floor like a tailor. They are considerably addicted to the industry of spinning, but the mode has no resemblance to the spinning of our country. For a wheel, they have a straight stick about a foot long, rounded like the head of a spool. In the middle of the stick is a hole, through which the stick is fastened. Their mode of spinning with this very simple instrument reminded me strongly of the sport of my young days, spinning a top, for they give this spinning affair a twirl, and let it run on until it has lost its communicated motion to impart it anew. This shift for a spinning wheel they call necataro. They manufacture neither cotton nor wool into cloth, and depend altogether on foreign trade for their clothing. The greatest part of this supply comes over land from the United States. On the 2d, we started for San Tepec, through a country generally barren, though abounding in water. We saw plenty of bears, deer and antelope. Some of the first we killed, because we needed their flesh, and others we killed for the same reason that we were often obliged to kill Indians, that is, to mend their rude manners, in fiercely making at us, and to show them that we were not Spaniards, to give them the high sport of seeing us run. We arrived in the above named town [122] on the 5th, and sold our furs. Here I met again some of the companions who came with me in the first instance from the United States. I enquired about others, whom I held in kind remembrance. Some had died by lingering diseases, and others by the fatal ball or arrow, so that out of 116 men, who came from the United States in 1824, there were not more than sixteen alive. Most of the fallen were as true men, and as brave as ever poised a rifle, and yet in these

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

remote and foreign deserts found not even the benefit of a grave, but left their bodies to be torn by the wild beasts, or mangled by the Indians. When I heard the sad roll of the dead called over, and thought how often I had been in equal danger, I felt grateful to my Almighty Benefactor, that I was alive and in health. A strong perception of the danger of such courses as mine, as shown by the death of these men, came over my mind, and I made a kind of resolution, that I would return to my home, and never venture into the woods again. Among the number of my fallen companions, I ought not to forget the original leader of our company, Mr. Pratte, who died in his prime, of a lingering disease, in this place.

On the 10th, I commenced descending the Del Norte for the Copper Mines, in hopes once more to have the pleasure of embracing my father, and relate to him what I had suffered in body and mind, for neglecting to follow his wise and fatherly counsel. I now travelled slowly and by myself, and on the 12th, arrived at the house of my old friend the governor, who met me at his door, and gave me such an embrace, as to start the blood from my scarcely healed wound. I did not perceive at the moment, that his embrace had produced this effect, and entered the house, where I met Jacova, who received me with a partial embrace, and a manner of constrained politeness. She then sat down by me on the sofa, and began asking me many questions about my adventure since we had parted, often observing that I looked indisposed. At length she discovered the blood oozing through my waistcoat. She exclaimed, putting her hand on the wound, 'and good reason you have to look [123] so, for you are wounded to death.' The look that accompanied this remark, I may not describe, for I would not be thought vain, and the stern character of my adventures forbids the intermixture of any thing of an entirely different aspect. I was not long, however, in convincing her that my wound was not really dangerous, and that I owed its present bleeding to the friendship of her father, a cause too flattering to be matter of regret. This drew from me a narrative of the occasion of my wound, which I related in the same simple terms and brief manner in which it is recorded in my journal. A long conversation of questions and replies ensued, of a nature and on subjects not necessary to relate. On the 20th, imploring God that we might meet again, we parted, and I resumed my journey, travelling slowly for my father's residence at the Copper Mines. I paused to rest and amuse myself in several of the small towns on my way. On the 26th, I had the high satisfaction once more to hold the hand of my father, and to find him in health and prosperity, and apparently with nowise abated affection for me, though I had rejected his counsels. This affection seemed to receive a warmer glow, when he heard my determination not to take to the woods again. I then in return wished to make myself acquainted with the true state of his affairs. He had established a vacherie on the river Membry where he kept stock. He had also opened a farm on the land which the old Appache chief had given him, which enabled him to raise grain for the use of his own establishment at the mines. He had actually a supply of grain in advance for the next year. He had made similar improvements upon every thing appertaining to the mines. The result of the whole seemed to be, that he was making money rapidly.

He still retained the Spaniard, of whom I have spoken before, as clerk and superintendent, believing him to be a man of real stability and weight of character, and placing the most entire reliance both upon his capacity and integrity. I was less sanguine, and had my doubts, though having seen no decided facts, [124] upon which to ground them, I did not deem myself justified in honor to impart my doubts to my father.

On the 10th of February, my father requested me, on his account, to take a trip to Alopaz, to pur-

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

chase for his establishment some wine and whiskey, which articles sell at the mines at a dollar and a half a pint. I started with one servant and six pack mules, each having a couple of small barrels fastened over their saddles, after the manner of our panniers. On the 16th, I reached the place, and purchased my cargo, but the weather was so inclement, that I thought it best not to return until it softened. I became acquainted with an American, married in this place. He was by pursuit a gunsmith, and had been up the upper Missouri with Col. Henry, and an old and noted trader on that river. The mutual story of what we two had seen and suffered, would probably appear incredible, and beyond the common order of things, to most people, except those who have hunted and trapped in the western parts of this continent, among the mountains and savages, and has nothing upon which to depend, but his own firmness of heart, the defence of his rifle, and the protection of the all present God. To such persons, the incidents which we mutually related, would all seem natural.

I remained here until the 1st of April. Spring in its peculiar splendor and glory in this country, had now wakened the fields and forests into life, and was extending its empire of verdure and flowers higher and higher up the mountains towards their snowy peaks. On this day I commenced my journey of return to the mines, with my servant and my cargo bestowed on my mules. Though the face of the country was all life and beauty, the roads so recently thawed, were exceedingly muddy and heavy. One of my mules in consequence gave out the second day. My servant packed the load of the tired mule upon his riding one, and walked on foot the remainder of the day. During the day we discovered fresh bear tracks in the wood, and my servant advised me to have my gun loaded. At this remark I put my hand in my shot pouch, and found but a single ball, and [125] no lead with which to make more. At this discovery I saw at once the uselessness of self reproach of my own carelessness and neglect, though it will be easily imagined, what anxiety it created, aware that I had to travel through a long and dreary wilderness, replenished with grizzly bears and hostile Indians. Neither did I dare disclose a particle of what was passing in my mind to my servant, through fear that he would be discouraged, in which case, I knew his first step would be to turn back, and leave me to make the journey alone. It would have been impossible for me to do this, as we were both scarcely able to arrange the affairs of the journey. We advanced cautiously and were unmolested through the day. But I passed a most uncomfortable night through fear of the bears, which, thawed out, were emerging from their winter dens with appetites rendered ravenous by their long winter fast. We and our mules would have furnished them a delicious feast, after the hunger of months. No sleep visited my eyes that night.

At ten o'clock of the 3d, we met a Spaniard on horse back. I accosted him in the usual terms, and asked if he had met any Indians on his way? He answered that he had, and that there was a body of friendly Appaches encamped near the road, at a distance of a little more than a league. I was delighted with this information, for I supposed I should be able to purchase a horse of them, on which I might mount my servant. While I was reflecting on this thought, my servant proposed to purchase his horse, and offered him a blanket in exchange. He instantly dismounted, took the blanket, and handed over the horse. Happy to see the poor fellow once more comfortably mounted, we bade the easy Spaniard adieu, and gaily resumed our journey. In a short time, according to his information, we saw the Indian camp near the road, from which their smokes were visible. We were solicitous to pass them unobserved and pushed on towards a stopping place, which we might reach at twelve o'clock. Here we stopped to enable our horses to rest, and eat, for the grass

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

was fine. I ordered my servant to spancel the mules, and tether the horse to a shrub by a long rope. [126] My gun reclined upon the packs. We ate a little ourselves, and afterwards I spread my blanket on the grass, close by the horses, and lay down to repose myself, though not intending to go to sleep. But the bright beams of the sun fell upon me in the midst of the green solitude, and I was soon in a profound sleep. A large straw hat on the side of my face shaded my head from the sun.

While enjoying this profound sleep, four of the Appaches came in pursuit of us. It seems our Spaniard had stolen his horse from them, a few hours before. They came upon us in possession of the horse, and supposed me the thief. One of them rode close to me, and made a dart at me with his spear. The stroke was aimed at my neck, and passed through my hat, nailing it to the ground just back of my neck, which the cold steel barely touched. It awakened me, and I sprang to my feet. Four Indians on horse back were around me, and the spear, which had been darted at me, still nailed my hat to the ground. I immediately seized the spear and elevated it towards the Indian, who in turn made his horse spring out of my reach. I called my servant, who had seen the Indians approaching me, and had hidden himself in the bushes. I then sprang to my gun, at the distance of ten or fifteen paces. When I had reached and cocked it, I presented it at an Indian who was unsheathing his fusil. As soon as he discovered my piece elevated, he threw himself from his horse, fell on his knees, and called for mercy. What surprized me, and arrested my fire, was to hear him call me by my Christian name. I returned my rifle to my shoulder and asked him who he was? He asked me, if I did not know Targuarcha? He smote his breast as he asked the question. The name was familiar. The others dismounted, and gathered round. An understanding ensued. When they learned the manner in which we came by the horse, their countenances were expressive of real sorrow. They had supposed me a Spaniard, as they said, and the thief of their horse. They begged me not to be angry, with a laughable solicitude, offering me the horse as the price of friendship. Above all, they were [127] anxious that I should not relate the affair to my father. They seemed to have an awe of him, resembling that due to the Supreme Being. This awe he had maintained by his steady deportment, and keeping up in their minds the impression, that he always had a large army at command, and was able, and disposed at the first insult, or breach of the treaty on their part, to bring it upon them to their utter destruction.

To all their apologies and kind words and excuses, I answered that I knew them as well as any other man, and that they were not to expect to atone for a dastardly attempt to take my life, and coming within a hair's breadth of taking it, by offering me a present, that I believed that they knew who I was, and only wanted an opportunity, when they could steal upon me unarmed, and kill me, as they had probably committed many other similar murders; that were ready enough to cry pardon, as soon as they saw me handling my rifle, hoping to catch me asleep again, but that they would henceforward be sure to find me on my guard.

At this the Indian who had darted the spear at me, exclaimed that he loved me as a brother, and would at any occasion risk his life in my defence. I then distinctly recollected him, and that I had been two months with the band, to which he belonged, roving in the woods about the mines. Targuarcha had shown a singular kind of attachment to me, waiting upon me as if I had been his master. I was perfectly convinced that he had thrust his spear at me in absolute ignorance, that it was me. Still I thought it necessary to instil a lesson of caution into them, not to kill any one for an imagined enemy, until they were sure that he was guilty of the supposed wrong. Consequently

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

I dissembled distrust, and told him, that it looked very little like friendship, to dart a spear at the neck of a sleeping man, and that to tell the plain truth, I had as little confidence in him, as a white bear. At this charge of treachery, he came close to me, and looking affectionately in my face, exclaimed in Spanish, 'if you think me such a traitor, kill me. Here is my breast. Shoot.' At the same time he bared his breast with his hand, with such a [128] profound expression of sorrow in his countenance, as no one was ever yet able to dissemble. I was softened to pity, and told him that I sincerely forgave him, and that I would henceforward consider him my friend, and not inform my father what he had done. They all promised that they would never attempt to kill any one again, until they knew who it was, and were certain that he was guilty of the crime charged upon him. Here we all shook hands, and perfect confidence was restored.

I now called again for my servant, and after calling till I was hoarse, he at length crawled from behind the bushes, like a frightened turkey or deer, and looking wild with terror. He had the satisfaction of being heartily laughed at, as a person who had deserted his master in the moment of peril. They are not a people to spare the feelings of any one who proves himself a coward by deserting his place. They bestowed that term upon him without mercy. All his reply was, sullenly to set himself to packing his mules.

Now arose a friendly controversy about the horse, they insisting that I should take it, as the price of our renewed friendship, and I, that I would not take it, except on hire or purchase. They were obstinate in persisting that I should take the horse along with me, and finally promised if I would consent, that they would return to camp and bring their families, and escort me to the mines. To this I consented, though I had first taken the precaution to procure some rifle balls of them. We then resumed our journey, and travelled on without incident till the 5th, when they overtook us, and we travelled on very amicably together, until we reached the Membry, which runs a south course, and is lost in a wide arid plain, after winding its way through prodigious high, craggy mountains. It affords neither fish nor beavers, but has wide and rich bottoms, of which as I have mentioned, they gave my father as much as he chose to cultivate.

From the point where the road crosses this river to the mines, is reckoned 15 miles. Here we met the chief of this band of the Appaches, with a great number of his people. They were [129] all delighted to see us, and not the less so, when they discovered that we had spirituous liquors, of which they are fond to distraction. There was no evading the importunities of the chief to stay all night with him, he promising, if I would that he would go in next day with me to my father. I had scarcely arrived an hour, when I saw the Indian, that had darted his spear at me, come to the chief with shirt laid aside, and his back bare. He handed the chief a stout switch, asking him to whip him. The chief immediately flayed away about 50 lashes, the blood showing at every stroke. He then asked me, if the thing had been done to my satisfaction? I told him that I had no satisfaction to demand. The chief who had whipped him, was positively ignorant of the crime, for which he had suffered this infliction. But he said, when one of his men begged a flogging, he took it for granted, that it was not for the good deeds of the sufferer, and that he deserved it. When I learned that it was a voluntary penance for his offence to me on the road, I felt really sorry, and made him a present of a quart of whiskey, as an internal unction for the smart of his stripes, a medicine in high esteem among the Indians in such cases.

When we arrived at the mines, the old chief enquired what had been done to me on the road? As soon as he was informed, he sprang up, tore his hair, and seized a gun to shoot the poor culprit. I

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

interposed between them, and convinced him, that Taguarcha had not been really to blame in any thing but his haste, and that if I had really been the thief, he would have done right to kill me, and get back his horse, and that not even my father would have thought the worse of him, but that we should both now like him better, as well as his people, for what had happened.

On the 15th, my father proposed to give me a sum of money, with which to go into the United States to purchase goods for the mines. The laborers much preferred goods, at the customary rate, to money, and the profit at that rate was at least 200 per cent on the cost. I was reluctant to do this, for my thoughts still detained me in that country. It was then concluded to [130] send the before mentioned Spanish clerk on the commission, with sufficient money to pay for the goods, consigned to merchants in Santa Fe, to be purchased there, provided a sufficient quantity had recently arrived from the United States to furnish an assortment, and if not, he was recommended to merchants in St. Louis, to make the purchases there.

On the 18th, he started under these orders, under the additional one, that on his arriving at Santa Fe, and learning the state of things there, he should immediately write to the mines to that effect. In the customary order of things, this letter was to be expected in one month from the day he left the mines. After he was departed, he left none behind to doubt his truth and honor, nor was there the least suspicion of him, until the time had elapsed without a letter. A dim surmise began then to grow up, that he had run off with the money. We were still anxiously waiting for intelligence. During this interval I had occupied the place of clerk in his stead. It was now insisted that I should go in search of the villain, who had obtained a good start of a month ahead of us, and 30,000 dollars value in gold bullion to expedite his journey. On the 20th, I started in the search, which I confess seemed hopeless, for he was a man of infinite ingenuity, who could enact Spaniard, which he really was, or Russian, Frenchman or Englishman, as he spoke the languages of these people with fluency. Still I pushed on with full purpose to make diligent and unsparing search.

On the 30th, I arrived at Santa Fe. I made the most anxious and careful enquiry for him, and gave the most accurate descriptions of him there. But no one had seen or heard of such a person. I sorrowfully retraced my steps down the Rio del Norte, now without a doubt of his treachery, and bitterly reflecting on myself for my heedless regard of my father's request. Had I done it, we had both secured an affluence. Now I clearly foresaw poverty and misfortune opening before us in the future. For myself I felt little, as I was young and the world before me; and I felt secure about taking care of myself. [131] My grief was for my father and his companions, who had toiled night and day with unwearied assiduity, to accumulate something for their dear and helpless families, whom they had left in Missouri; and for the love of whom they had ventured into this rough and unsettled country, full of thieves and murderers. My father in particular, had left a large and motherless family, at a time of life to be wholly unable to take care of themselves, and altogether dependent on him for subsistence. There is no misery like self condemnation; and I suffered it in all its bitterness. The reflections that followed upon learning the full extent of the disaster, which I could but charge in some sense upon myself, came, as such reflections generally come, too late. I arrived at the Passo del Norte on the 10th of May, and repeated the same descriptions and enquiries to no purpose.— Not a trace remained of him here; and I almost concluded to abandon the search in despair. I could imagine but one more chance. The owner of the mines lived at Chihuahua. As a forlorn hope I concluded to proceed to that city, and inform the governor of our

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

misfortune. So I pushed to Chihuahua, where I arrived on the 23d.

I found the owner of the mines in too much anxiety and grief of mind on his own account, to be cool enough to listen [to] the concerns of others. The President of the Mexican republic had issued orders, that all Spaniards born in old Spain, should be expelled from the Mexican country, giving them but a month's notice, in which to settle their affairs and dispose of their property. He being one of that class, had enough to think of on his own account. However, when he heard of our misfortune, he appeared to be concerned. He then touched upon the critical state of his own affairs.

Among other things, he said he had all along hoped that my father was able and disposed to purchase those mines. He had, therefore, a motive personal to himself, to make him regret my father's loss and inability to make the purchase. He was now obliged to sell them at any sacrifice, and had but a very short time in which to settle his [132] affairs, and leave the country. He requested me to be ready to start the next day in company with him to the mines.

Early on the 24th, we started with relays of horses and mules. As we travelled very rapidly we arrived at the mines on the 30th, where I found my father and his companions in the utmost anxiety to learn something what had happened to me. When they discovered the owner of the mines, whose name was Don Francisco Pablo de Lagera, they came forth in a body with countenances full of joy. That joy was changed to sadness, as soon as Don Pablo informed them the object of his visit. They perceived in a moment, that nothing now remained for them but to settle their affairs, and search for other situations in the country, or return to the United States in a worse condition than when they left it. My father determined at once not to think of this. Nothing seemed so feasible, and conformable to his pursuits, as a trapping expedition. With the pittance that remained to him, after all demands against the firm were discharged, and the residue according to the articles of agreement divided, he purchased trapping equipments for four persons, himself included. The other three he intended to hire to trap for him.

On the 1st of July, all these matters had been arranged, and my father and myself started for Santa Fe, with a view to join the first company that should start on a trapping expedition from that place. On the 10th, we arrived at Santa Fe, where we remained until the 22d, when a company of thirty men were about to commence an expedition of that sort down Red river. My father joined this company, and in the name of the companions made application for license of safe transit through the province of Chihuahua, and Sonora, through which runs the Red river, on which we meant to trap. The governor gave us a passport in the following terms:

[133] Custom House of the frontier town of Santa Fe, in the territory of New Mexico.

Custom House Certificate.

Allow Sylvester Pattie, to pursue his journey with certain beasts, merchandize and money, in the direction of Chihuahua and Sonora; to enter in beasts and money an amount equal to this invoice, in whatsoever place he shall appear, according to the rules of the Custom House, on his passage; and finally let him return this permit to the government of this city in days. Do this under the established penalties.

Given at Santa Fe, in New Mexico.

RAMON ATTREN

September 22 d, 1827.

On the 23d, my father was chosen captain or commander of the company, and we started on our

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

expedition. We retraced our steps down the del Norte, and by the mines to the river Helay, on which we arrived on the 6th of October, and began to descend it, setting our traps as we went, near our camp, whenever we saw signs of beavers. But our stay on this stream was short, for it had been trapped so often, that there were but few beavers remaining, and those few were exceedingly shy. We therefore pushed on to some place where they might be more abundant, and less shy. We left this river on the 12th, and on the 15th reached Beaver river. Here we found them in considerable numbers, and we concluded to proceed in a south course, and trap the river in its downward course. But to prevent the disagreement and insubordination which are apt to spring up in these associations, my father drew articles of agreement, purporting that we should trap in partnership, and that the first one who should show an open purpose to separate from the company, or desert it, should be shot dead; and that if any one should disobey orders, he should be tried by a jury of our number, and if found guilty should be fined fifty dollars, to be paid in fur. To this instrument we all agreed, and signed our names.

[134] The necessity of some such compact had been abundantly discovered in the course of our experience. Men bound only by their own will and sense of right, to the duties of such a sort of partnership are certain to grow restless, and to form smaller clans, disposed to dislike and separate from each other, in parties of one by one to three by three. They thus expose themselves to be cut up in detail by the savages, who comprehend all their movements, and are ever watchful for an opportunity to show their hatred of the whites to be fixed and inextinguishable. The following are some of the more common causes of separation: Men of incompatible tempers and habits are brought together; and such expeditions call out innumerable occasions to try this disagreement of character. Men, hungry, naked, fatigued, and in constant jeopardy, are apt to be ill-tempered, especially when they arrive at camp, and instead of being allowed to throw themselves on the ground, and sleep, have hard duties of cooking, and keeping guard, and making breast-works assigned them. But the grand difficulty is the following. In a considerable company, half its numbers can catch as many beavers as all. But the half that keep guard, and cook, perform duties as necessary and important to the whole concern, as the others. It always happens too, in these expeditions, that there are some infinitely more dextrous and skilful in trapping and hunting than others. These capabilities are soon brought to light. The expert know each other, and feel a certain superiority over the inexpert. They know that three or four such, by themselves, will take as many beavers as a promiscuous company of thirty, and in fact, all that a stream affords. A perception of their own comparative importance, a keen sense of self interest, which sharpens in the desert, the mere love of roving in the wild license of the forest, and a capacity to become hardened by these scenes to a perfect callousness to all fear and sense of danger, until it actually comes; such passions are sufficient to thicken causes of separation among such companions in the events of every day.

Sad experience has made me acquainted with all these causes [135] of disunion and dissolution of such companies. I have learned them by wounds and sufferings, by toil and danger of every sort, by wandering about in the wild and desolate mountains, alone and half starved, merely because two or three bad men had divided our company, strong and sufficient to themselves in union, but miserable, and exposed to almost certain ruin in separation. Made painfully acquainted with all these facts by experience, my father adopted this expedient in the hope that it would be something like a remedy for them.

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

But notwithstanding this, and the prudence and energy of my father's character, disunion soon began to spring up in our small party. Almost on the outset of our expedition, we began to suffer greatly for want of provisions. We were first compelled to kill and eat our dogs, and then six of our horses. This to me was the most cruel task of all. To think of waiting for the night to kill and eat the poor horse that had borne us over deserts and mountains, as hungry as ourselves, and strongly and faithfully attached to us, was no easy task to the heart of a Kentucky hunter. One evening, after a hard day's travel, my saddle horse was selected by lot to be killed. The poor animal stood saddled and bridled before us, and it fell to my lot to kill it. I loved this horse, and he seemed to have an equal attachment for me. He was remarkably kind to travel, and easy to ride, and spirited too. When he stood tied in camp among the rest, if I came any where near him, he would fall neighing for me. When I held up the bridle towards him, I could see consent and good will in his eye. As I raised my gun to my face, all these recollections rushed to my thoughts. My pulses throbbed, and my eyes grew dim. The animal was gazing me, with a look of steady kindness, in the face. My head whirled, and was dizzy, and my gun fell. After a moment for recovery, I offered a beaver skin to any one who would shoot him down. One was soon found at this price, and my horse fell! It so happened that this was the last horse we killed. Well was it for us that we had these surplus horses. Had it been otherwise, we should all have perished with hunger.

[136] It was now the 15th of November, and while the horse flesh lasted, we built a canoe, so that we could trap on both sides of the river; for it is here too broad and deep to be fordable on horseback. One of our number had already been drowned, man and horse, in attempting to swim the river. A canoe is a great advantage, where the beavers are wild; as the trapper can thus set his traps along the shore without leaving his scent upon the ground about it.

On the 17th, our canoe was finished, and another person and myself took some traps in it, and floated down the river by water, while the rest of the company followed along the banks by land. In this way, what with the additional supply which the canoe enabled our traps to furnish, and a chance deer or wolf that Providence sometimes threw in our way, with caution and economy we were tolerably supplied with provisions; and the company travelled on with a good degree of union and prosperity, until the 26th.

Here the greater part of the company expressed disinclination to following our contemplated route any longer. That is, they conceived the route to the mouth of the Helay, and up Red river of California too long and tedious, and too much exposed to numerous and hostile Indians. They, therefore, determined to quit the Helay, and strike over to Red river by a direct route across the country. My father reminded them of their article. They assured him they did not consider themselves bound by it, and that they were a majority, against which nothing could be said. My father and myself still persevered in following the original plan. Two of the men had been hired on my father's account. He told them he was ready to pay them up to that time, and dismiss them, to go where they chose. They observed, that now that the company had commenced separating, they believed that in a short time, there would be no stronger party together than ours; that they had as good a disposition to risk their lives with us, as with any division of our number, and that they would stay by us to the [137] death. After this speech four others of the company volunteered to remain with us, and we took them in as partners.

On the 27th, we divided the hunt, and all expressing the same regret at the separation, and hearti-

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

ly wishing each other all manner of prosperity, we shook hands and parted! We were now reduced to eight in number. We made the most solemn pledges to stand by each other unto death, and adopted the severest caution, of which we had been too faithfully taught the necessity. We tied our horses every night, and encamped close by them, to prevent their being stolen by the Indians. Their foot-prints were thick and fresh in our course, and we could see their smokes at no great distance north of us. We were well aware that they were hostile, and watching their opportunity to pounce upon us, and we kept ourselves ready for action, equally day and night. We now took an ample abundance of beavers to supply us with meat, in consequence of our reduced numbers. Our horses also fared well, for we cut plenty of cotton-wood trees, the bark of which serves them for food nearly as well as corn. We thus travelled on prosperously, until we reached the junction of the Helay with Red river.—Here we found the tribe of Umeas, who had shown themselves very friendly to the company in which I had formerly passed them, which strongly inspired confidence in them at present. Some of them could speak the Spanish language. We made many inquiries of them, our object being to gain information of the distance of the Spanish settlements. We asked them where they obtained the cloth they wore around their loins? They answered, from the Christians on the coast of the California. We asked if there were any Christians living on Red river? They promptly answered, yes. This information afterwards proved a source of error and misfortune to us, though our motive for inquiry at this time was mere curiosity.

It was now the 1st of December; and at mid-day we began to see the imprudence of spending the remainder of the day and the ensuing night with such numbers of Indians, however friendly in appearance. We had a tolerable fund of experience, in [138] regard to the trust we might safely repose in the red skins; and knew that caution is the parent of security. So we packed up, and separated from them. Their town was on the opposite shore of Red river. At our encampment upwards of two hundred of them swam over the river and visited us, all apparently friendly. We allowed but a few of them to approach our camp at a time, and they were obliged to lay aside their arms. In the midst of these multitudes of fierce, naked, swarthy savages, eight of us seemed no more than a little patch of snow on the side of one of the black mountains. We were perfectly aware how critical was our position, and determined to intermit no prudence or caution.

To interpose as great a distance as possible between them and us, we marched that evening sixteen miles, and encamped on the banks of the river. The place of encampment was a prairie, and we drove stakes fast in the earth, to which we tied our horses in the midst of green grass, as high as a man's head, and within ten feet of our own fire. Unhappily we had arrived too late to make a pen for our horses, or a breast work for ourselves. The sky was gloomy. Night and storm were settling upon us, and it was too late to complete these important arrangements. In a short time the storm poured upon us, and the night became so dark that we could not see our hand before us. Apprehensive of an attempt to steal our horses, we posted two sentinels, and the remaining six lay down under our wet blankets, and the pelting of the sky, to such sleep as we might get, still preserving a little fire. We were scarcely asleep before we were aroused by the snorting of our horses and mules. We all sprang to our arms, and extinguished our little fire. We could not see a foot before us, and we groped about our camp feeling our way among the horses and mules. We could discover nothing; so concluding they might have been frightened by the approach of a bear or some other wild animal, some of us commenced rekindling our fires, and the rest went to sleep. But the Indians had crawled among our horses, and had cut or untied the rope by which

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

each one was [139] bound. The horses were then all loose. They then instantly raised in concert, their fiendish yell. As though heaven and earth were in concert against us, the rain began to pour again, accompanied with howling gusts of wind, and the fiercest gleams of lightning, and crashes of thunder. Terrified alike by the thunder and the Indians, our horses all took to flight, and the Indians repeating yell upon yell, were close at their heels. We sallied out after them, and fired at the noises, though we could see nothing. We pursued with the utmost of our speed to no purpose, for they soon reached the open prairie, where we concluded they were joined by other Indians on horseback, who pushed our horses still faster; and soon the clattering of their heels and the yells of their accursed pursuers began to fade, and become indistinct in our ears.

Our feelings and reflections as we returned to camp were of the gloomiest kind. We were one thousand miles from the point whence we started, and without a single beast to bear either our property or ourselves. The rain had past. We built us a large fire. As we stood round it we discussed our deplorable condition, and our future alternatives. Something was to be done. We all agreed to the proposition of my father, which was, early in the morning to pursue the trails of our beasts, and if we should overtake the thieves, to retake the horses, or die in the attempt; and that, failing in that, we should return, swim the river, attack their town, and kill as many of the inhabitants as we could; for that it was better to die by these Indians, after we had killed a good number of them, than to starve, or be killed by Indians who had not injured us, and when we could not defend ourselves.

Accordingly, early in the morning of the 2d, we started on the trail in pursuit of the thieves. We soon arrived at a point where the Indians, departing from the plain, had driven them up a chasm of the mountains. Here they had stopped, and caught them, divided them, and each taken a different route with his plundered horses. We saw in a moment that it was impossible to follow them farther to any purpose. We abandoned [140] the chase, and returned to our camp to execute the second part of our plan. When we arrived there, we stopped for a leisure meal of beaver meat. When we had bestowed ourselves to this dainty resort, a Dutchman with us broke the gloomy silence of our eating, by observing that we had better stuff ourselves to the utmost; for that it would probably, be the last chance we should have at beaver meat. We all acquiesced in this observation, which though made in jest, promised to be a sober truth, by eating as heartily as possible. When we had finished our meal, which looked so likely to be the last we should enjoy together, we made rafts to which we tied our guns, and pushing them onward before us, we thus swam the river. Having reached the opposite shore, we shouldered our rifles, and steered for the town at which we arrived about two in the afternoon. We marched up to the numerous assemblage of huts in a manner as reckless and undaunted as though we had nothing to apprehend. In fact, when we arrived at it, we found it to contain not a single living being, except one miserable, blind, deaf, and decrepid old man, not unlike one that I described in a hostile former visit to an Indian village. Our exasperation of despair inclined us to kill even him. My father forbade. He apparently heard nothing and cared for nothing, as he saw nothing. His head was white with age, and his eyes appeared to have been gouged out. He may have thought himself all the while in the midst of his own people. We discovered a plenty of their kind of food, which consisted chiefly of acorn mush. We then set fire to the village, burning every hut but that which contained the old man. Being built of flags and grass, they were not long in reducing to ashes. We then returned to our camp, re-swimming the river, and reaching the camp before dark.

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

We could with no certainty divine the cause of their having evacuated their town, though we attributed it to fear of us. The occurrences of the preceding day strengthened us in this impression. While they remained with us, one of our men happened to fire off his gun. As though they never had heard [141] such a noise before, they all fell prostrate on the earth, as though they had all been shot. When they arose, they would all have taken to flight, had we not detained them and quieted their fears.

Our conversation with these Indians of the day before, now recurred to our recollections, and we congratulated ourselves on having been so inquisitive as to obtain the now important information, that there were Spanish settlements on the river below us. Driven from the resource of our horses, we happily turned our thoughts to another. We had all the requisite tools to build canoes, and directly around us was suitable timber of which to make them. It was a pleasant scheme to soothe our dejection, and prevent our lying down to the sleep of despair. But this alternative determined upon, there remained another apprehension sufficient to prevent our enjoying quiet repose. Our fears were, that the unsheltered Indians, horse-stealers and all, would creep upon us in the night, and massacre us all. But the night passed without any disturbance from them.

On the morning of the 3d, the first business in which we engaged, was to build ourselves a little fort, sufficient for defence against the Indians. This finished, we cut down two trees suitable for canoes, and accomplished these important objects in one day. During this day we kept one man posted in the top of a tall tree, to descry if any Indians were approaching us in the distance. On the morning of the fourth we commenced digging out our canoes, and finished and launched two. These were found insufficient to carry our furs. We continued to prepare, and launch them, until we had eight in the water. By uniting them in pairs by a platform, we were able to embark with all our furs and traps, without any extra burden, except a man and the necessary traps for each canoe. We hid our saddles, hoping to purchase horses at the settlements, and return this way. We started on the 9th, floating with the current, which bore us downward at the rate of four miles an hour. In the evening we passed the burnt town, the ruins of which still threw up [142] smouldering smoke. We floated about 30 miles, and in the evening encamped in the midst of signs of beavers. We set 40 traps, and in the morning of the 10th caught 36 beavers, an excellent night's hunt. We concluded from this encouraging commencement, to travel slowly, and in hunters' phrase, trap the river clear; that is, take all that could be allured to come to the bait. The river, below its junction with the Helay, is from 2 to 300 yards wide, with high banks, that have dilapidated by falling in. Its course is west, and its timber chiefly cotton-wood, which in the bottoms is lofty and thick set. The bottoms are from six to ten miles wide. The soil is black, and mixed with sand, though the bottoms are subject to inundation in the flush waters of June. This inundation is occasioned by the melting of the snow on the mountains about its head waters. We now floated pleasantly downward at our leisure, having abundance of the meat of fat beavers. We began in this short prosperity, to forget the loss of our horses, and to consider ourselves quite secure from the Indians. But on the 12th, at mid-day, by mere accident, we happened, some way below us, to discover two Indians perched in a tree near the river bank, with their bows and arrows in readiness, waiting evidently until we should float close by them, to take off some of us with their arrows. We betrayed no signs of having seen them, but sat with our guns ready for a fair shot. When we had floated within a little short of a hundred yards, my father and another of the company gave them a salute, and brought them both tumbling down the branches, reminding us exactly of the

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

fall of a bear or a turkey. They made the earth sound when they struck it. Fearful that they might be part of an ambush, we pulled our canoes to the opposite shore, and some of us climbed trees, from which we could command a view of both shores. We became satisfied that these two were alone, and we crossed over to their bodies. We discovered that they were of the number that had stolen our horses, by the fact, that they were bound round the waist with some of the hemp ropes with which our horses had been tied. We hung the bodies of the thieves [143] from a tree, with the product of their own thefts. Our thoughts were much relieved by the discovery of this fact, for though none of us felt any particular forbearance towards Indians under any circumstances, it certainly would have pained us to have killed Indians that had never disturbed us. But there could be no compunction for having slain these two thieves, precisely at the moment that they were exulting in the hope of getting a good shot at us. Beside they alarmed our false security, and learned us a lesson to keep nearer the middle of the river.

We continued to float slowly downwards, trapping beavers on our way almost as fast as we could wish. We sometimes brought in 60 in a morning. The river at this point is remarkably circuitous, and has a great number of islands, on which we took beavers. Such was the rapid increase of our furs, that our present crafts in a few days were insufficient to carry them, and we were compelled to stop and make another canoe. We have advanced between 60 and 70 miles from the point where we built the other canoes. We find the timber larger, and not so thick. There are but few wild animals that belong to the country farther up, but some deer, panthers, foxes and wild-cats. Of birds there are great numbers, and many varieties, most of which I have never before seen. We killed some wild geese and pelicans, and likewise an animal not unlike the African leopard, which came into our camp, while we were at work upon the canoe. It was the first we had ever seen. We finished our canoe on the 17th, and started on the 20th. This day we saw ten Indians on a sand bar, who fled into the woods at the sight of us. We knew them to be different people from those who had stolen our horses, both by their size and their different manner of wearing their hair. The heads of these were shaved close, except a tuft, which they wore on the top of their head, and which they raised erect, as straight as an arrow. The Umeas are of gigantic stature from six to seven feet high. These only average five feet and a half. They go perfectly naked, and have dark complexions, which I imagine [144] is caused by the burning heat of the sun. The weather is as hot here at this time, as I ever experienced. We were all very desirous to have a talk with these Indians, and enquire of them, how near we were to the Spanish settlements; and whether they were immediately on the bank, for we began to be fearful that we had passed them.

Three days passed without our having any opportunity of conversation with them. But early on the morning of the 24th, we found some families yet asleep in their wigwams, near the water's edge. Our approach to them was so imperceptible and sudden, that they had no chance to flee. They were apparently frightened to insanity. They surrendered without making any further effort to escape. While they stared at us in terrified astonishment; we made them comprehend that we had no design to kill, or injure them. We offered them meat, and made signs that we wished to smoke with them. They readily comprehended us, and the ghastliness of terror began to pass from their countenances. The women and children were yet screaming as if going into convulsions. We made signs to the men to have them stop this annoying noise. This we did by putting our hands to our mouths. They immediately uttered something to the women and children which made them still. The pipe was then lit, and smoking commenced. They puffed the smoke towards the sky,

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

pointed thither, and uttered some words, of course unintelligible to us. They then struck themselves on the breast, and afterwards on the forehead. We understood this to be a sort of religious appeal to the Supreme Being, and it showed more like reverence to him, than any thing we had yet seen among the Indians; though I have seen none but what admit that there is a master of life, whom they call by a name to that import, or that of Great Spirit.

When the smoking was finished, we began to enquire of them by signs, how far we were from the Spanish settlement? This we effected by drawing an image of a cow and sheep in the sand and then imitating the noise of each kind of domestic animals, that we supposed the Spaniards would have. They appeared [145] to understand us, for they pointed west, and then at our clothes, and then at our naked skin. From this we inferred that they wished to say that farther to the west lived white people, as we were. And this was all we could draw from them on that subject. We then asked them, if they had ever seen white people before? This we effected by stretching open our eyes with our fingers, and pointing to them, and then looking vehemently in that direction, while we pointed west with our fingers. They shook their heads in the negative. Then stretching their own ears, as we had our eyes, striking themselves on the breast, and pointing down the river, they pronounced the word wechapa. This we afterwards understood implied, that their chief lived lower down the river, and that they had heard from him, that he had seen these people.

We gave the women some old shirts, and intimated to them as well as we could, that it was the fashion of the women to cover themselves in our country, for these were in a state of the most entire nudity. But they did not seem rightly to comprehend our wish. Many of the women were not over sixteen, and the most perfect figures I have ever seen, perfectly straight and symmetrical, and the hair of some hanging nearly to their heels. The men are exceedingly active, and have bright countenances, and quick apprehension. We gave them more meat, and then started. They followed our course along the bank, until night. As soon as we landed, they were very officious in gathering wood, and performing other offices for us. They showed eager curiosity in examining our arms, and appeared to understand their use. When my father struck fire with his pistol, they gave a start, evidencing a mixture of astonishment and terror, and then re-examined the pistol, apparently solicitous to discover how the fire was made. My father bade me take my rifle, and shoot a wild goose, that was sitting about in the middle of the river. He then showed them the goose, and pointed at me, as I was creeping to a point where I might take a fair shot. They all gazed with intense curiosity, first at me, and then at the goose, until I fired. At the moment of the report, [146] some fell flat on the ground, and the rest ran for the bushes, as though Satan was behind them. As soon as the fallen had recovered from their amazement, they also fled. Some of our company stopped them, by seizing some, and holding them, and showing them that the goose was dead, and the manner in which it had been killed. They gradually regained confidence and composure, and called to their companions in the bushes. They also came forth, one by one, and when the nature of the report of the gun had been explained to them, they immediately swam into the river and brought out the goose. When they carried it round and showed it to their companions, carefully pointing out the ball hole in the goose, it is impossible to show more expressive gestures, cries and movements of countenances indicative of wonder and astonishment, than they exhibited. The night which we passed with them, passed away pleasantly, and to the satisfaction of all parties. In the morning their attention and curiosity were again highly excited, when we brought in our beavers, which amounted in number to thirty-six. After we had finished

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

skinning them, we left the ample supply of food furnished by the bodies of the beavers, in token of our friendship, to these Indians, and floated on. On the 27th, we arrived at the residence of the chief. We perceived that they had made ready for our reception. They had prepared a feast for us by killing a number of fatted dogs. As soon as we landed, the chief came to us, accompanied by two subordinate chiefs. When arrived dose to us, he exclaimed, wechapa, striking himself on the breast, pointing to our company, and repeating the same phrase. We understood from this, that he wished to know who was our captain? We all pointed to my father, to whom the chief immediately advanced, and affectionately embracing him, invited us to enter his wigwam. We shouldered our rifles, and all followed this venerable looking man to his abode. There he had prepared several earthen dishes, in which the flesh of young and fat dogs was served up, but without salt or bread. We all sat down. The pipe was lit, and we, and the thirty Indians present began to smoke. While we were smoking, they used many gesticulations and signs, the [147] purport of which we could not make out, though, as they pointed often at us, we supposed we were the subjects of their gestures. The pipe was then taken away, and the chief arose, and stood in the centre of the circle which we formed by the manner in which we all sat around the fire. He then made a long harangue, and as we understood not a word, to us rather a tedious one. We took care to make as many gestures indicative of understanding it, as though we had comprehended every word. The oration finished, a large dish of the choice dog's flesh was set before us, and signs were made to us to eat. Having learned not to be delicate or disobliging to our savage host, we fell to work upon the ribs of the domestic barkers. When we had eaten to satisfaction, the chief arose, and puffing out his naked belly, and striking it with his hand, very significantly inquired by this sign, if we had eaten enough? When we had answered in the affirmative, by our mode of making signs, he then began to enquire of us, as we understood it, who we were, and from whence we came, and what was our business in that country? All this we interpreted, and replied to by signs as significant as we could imagine. He continued to enquire of us by signs, if we had met with no misfortunes on our journey, calling over the names of several Indian tribes in that part of the country, among which we distinctly recognized the name of the Umeas? When he mentioned this name, it was with such a lowering brow and fierce countenance as indicated clearly that he was at war with them. We responded to these marks of dislike by an equal show of detestation by making the gesture of seeming desirous to shoot at them, and with the bitterest look of anger that we could assume; making him understand that they had stolen our horses. He made signs of intelligence that he comprehended us, and made us sensible of his deep hatred, by giving us to understand that they had killed many of his people, and taken many more prisoners; and that he had retaliated by killing and taking as many Umeas. He pointed at the same time to two small children, and exclaimed Umea! We [148] pointed at them with our guns, and gave him to understand, that we had killed two of them. Some of our people had brought their scalps along. We gave them to him, and he, looking first towards us, and then fiercely at them, seemed to ask if these were the scalps of his enemies? To which we replied, yes.—He then seized the hair of the scalps with his teeth, and shook them, precisely as I have seen a dog any small game that it had killed. He then gave such a yell of delight, as collected all his people round him in a moment, and such rejoicing, yelling, and dancing ensued from both men and women, as I shall forbear to attempt to describe. Their deportment on this occasion was in fact much nearer bestial than human. They would leave the dance round the scalps in turn, to come and caress us, and then return and resume their dance.

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

The remainder of this day and the ensuing night passed in being in some sense compelled to witness this spectacle. In the morning of the 28th, when we brought in the contents of our traps, we found we had taken twenty-eight beavers. When my father enquired this morning anew for the direction of the Spanish settlements, and how far they were distant, we could make out from the signs of the chief no information more exact than this. He still pointed to the west, and then back at us.—He then made a very tolerable imitation of the rolling and breaking of the surf on the sea shore. Below he drew a cow and a sheep. From this we were satisfied that there were Spanish settlements west of us; and our conclusion was, that they could not be very distant.

At mid-day we bade these friendly Indians farewell, and resumed our slow progress of floating slowly down the stream, still setting our traps, whenever we found any indications of beavers. We met with no striking incident, and experienced no molestation until January 1st, 1828. On this day we once more received a shower of arrows from about fifty Indians of a tribe called Pipi, of whom we were cautioned to beware by the friendly Indians we had last left. I forgot at the time to mention the name of that people, when speaking of them, and [149] repeat it now. It is Cocopa. When the Pipi fired upon us, we were floating near the middle of the river. We immediately commenced pulling for the opposite shore, and were soon out of the reach of their arrows, without any individual having been wounded. As soon as our crafts touched the shore, we sprang upon the bank, took fair aim, and showed them the difference between their weapons and ours, by levelling six of them. The remainder fell flat, and began to dodge and skulk on all fours, as though the heavens had been loaded with thunder and mill stones, which were about to rain on them from the clouds.

We re-loaded our guns, and rowed over to the opposite, and now deserted shore. The fallen lay on the sand beach, some of them not yet dead. We found twenty three bows and the complement of arrows, most of them belonging to the fugitives. The bows are six feet in length, and made of a very tough and elastic kind of wood, which the Spaniards call Tarnio. They polish them down by rubbing them on a rough rock. The arrows are formed of a reed grass, and of the same length with their bows, with a foot of hard wood stuck in the end of the cavity of the reed, and a flint spike fitted on the end of it.—They have very large and erect forms, and black skins. Their long black hair floats in tresses down their backs, and to the termination of each tress is fastened a snail shell. In other respects their dress consists of their birth-day suit; in other words, they are perfectly naked. The river seems here to run upon a high ridge; for we can see from our crafts a great distance back into the country, which is thickly covered with musquito and other low and scrubby trees. The land is exceedingly marshy, and is the resort of numerous flocks of swans, and blue cranes. The raccoons are in such numbers, that they cause us to lose a great many beavers, by getting into our traps and being taken instead of the true game. They annoy us too by their squalling when they are taken.

From the junction of the two rivers to this place, I judge to be about a hundred miles. We find the climate exceedingly warm, [150] and the beaver fur, in accommodation to the climate, is becoming short. We conclude, in consequence, that our trapping is becoming of less importance, and that it is our interest to push on faster to reach the settlements. A great many times every day we bring our crafts to shore, and go out to see if we cannot discover the tracks of horses and cattle. On the 18th, we first perceived that we had arrived on the back water of the tide; or rather we first attributed the deadness of the current to the entrance of some inundated river, swollen by the

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

melting of the snow on the mountains. We puzzled our brains with some other theories, to account for the deadness of the current. This became so entirely still, that we began to rig our oars, concluding that instead of our hitherto easy progress of floating gently onward, we had henceforward to make our head-way down stream by dint of the machinery of our arms.

We soon were thoroughly enlightened in regard to the slackness of the water. It began to run down again, and with the rapidity of six miles an hour; that is, double the ordinary current of the stream. We were all much surprised, for though I had seen the water of the Pacific at Ymus, none of us had ever felt the influence of the tides, or been in a craft on the ocean waters before. People of the same tribe, upon which we had recently fired, stood upon the shore, and called loudly to us as we passed, to come to land, making signs to us, that the motion of the water would capsize our crafts. They showed a great desire that we might come to shore, we had no doubt, that they might rob and murder us. We preserved such a distance from them, as to be out of the reach of their arrows, and had no intention to fire upon them. Had we wished for a shot, they were quite within rifle distance. We floated on, having had a beautiful evening's run, and did not come to land, until late; we then pitched our camp on a low point of land, unconscious, from our inexperience of the fact, that the water would return, and run up stream again. We made our canoes fast to some small trees, and all lay down to sleep, except my father, who took the first watch. He soon aroused us, and called on us all [151] to prepare for a gust of wind, and a heavy rain, which he thought betokened by a rushing noise he heard.

We realized in a few moments, that it was the returning tide. Still, so strongly impressed were we, that a shower was approaching, that we made all the customary arrangements of preparation, by stretching our blankets to keep out the water from above. But our enemy assailed us from another quarter. Our camp was inundated from the river. We landsmen from the interior, and unaccustomed to such movements of the water, stood contemplating with astonishment the rush of the tide coming in from the sea, in conflict with the current of the river. At the point of conflict rose a high ridge of water, over which came the sea current, combing down like water over a mildam. We all sprang to our canoes, which the rush of the water had almost capsized, though we held the fasts with our hands. In twenty minutes the place where we lay asleep, and even our fire place was three feet under water, and our blankets were all afloat. We had some vague and general ideas of the nature of the tide, but its particular operations were as much unknown to us, as though we never had heard of it at all. In the consternation of our ignorance, we paddled our crafts, as well as we could, among the timber, not dreaming that in the course of a few hours, the water would fall again. As it was, we gathered up our floating blankets, got into our canoes, and held fast to the brushes, until the water fell again, leaving us and our canoes high and dry. We were now assailed by a new alarm, lest the Indians, taking advantage of this new position in which we were placed, would attack and murder us.

In such apprehensions we passed the night, until the morning shone upon us with a bright and beautiful sun, which enabled us to dry all our wet things, and re-animated us with the confidence which springs from the view of a bright firmament and a free and full survey of our case. When the tide returned we got into our crafts, and descended with it, still expecting to find Spanish settlements. We continued in this way to descend, when the tide ran out, until the 28th, when the surf came up the [152] river so strong that we saw in a moment, that our crafts could not live, if we floated them into this tumultuous commotion of the water.

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

Here we were placed in a new position, not the least disheartening or trying, among the painful predicaments, in which fortune had placed us. The fierce billows shut us in from below, the river current from above, and murderous savages upon either hand on the shore. We had a rich cargo of furs, a little independence for each one of us, could we have disposed of them, as we had hoped, among the Spanish people, whom we expected to have found here. There were no such settlements.—Every side on which we looked offered an array of danger, famine and death. In this predicament, what were furs to us? Our first thought was to commit our furs to the waters, and attempt to escape with our lives. Our second resolve was to ascend the river as far as we could, bury our furs, and start on foot for some settlement. We saw that the chances were greatly against us, that we should perish in the attempt; for the country yielded little to subsist on, and was full of Indians who are to the last degree savage and murderous, and whom nothing can subdue to kindness and friendship. We had no idea of ever putting ourselves in their power, as long as one of us could fire a pistol, or draw a knife.

We now began to ascend with the tide, when it served us, and lay by when it ran down, until we arrived at the point where it ceased to flow. We then applied our oars, and with the help of setting-poles, and at times the aid of a cordelle, we stemmed the current at the rate of one, and sometimes two miles an hour, until the tenth of February, when we met a great rise of the river, and found the current so strong, that we had no power to stem it in any way. So we concluded to abandon our canoes, come to shore, bury our furs, and make our way across the peninsula to the coast of California, which we thought from the information of the Indians, could not be very distant.

On the 16th, we completed the burying of our furs, and started on foot with our packs on our backs. The contents of these [153] packs were two blankets for each man, a considerable quantity of dried beaver meat, and a rifle with the ammunition. Our first day's journey was through a country to the last degree trying to our strength and patience. It was through the river bottom, which was thick set with low, scrubby brush, interwoven with tall grass, vines and creepers. The making our way through these was excessively slavish and fatiguing. We had a single alleviation. There was plenty of fresh water to drink. We were so fatigued at night, that sleep was irresistible. The weather was warm, and we kindled no fire, through fear of the savages. We started on the morning of the 18th, all complaining much of stiffness and soreness of our limbs. We had been unused to walking for a great length of time; and this commencement was a rude experiment of resuming the habit. At two in the afternoon, we reached the edge of a large salt plain, which runs parallel with the river. Here we struck a north west course, and travelled the remainder of this hot and fatiguing day without finding any water. We began to suffer severely from thirst. The earth, also, was so loose and sandy, that at every step we sank up to our ankles, the sun beaming down a fierce radiance the while; which made it seem as if the heavens and the earth were on fire. Our tongues became so parched, that not a particle of moisture flowed into our mouths. In this miserable and forlorn condition, abandoned by strength, courage and hope, we found some little alleviation of our misery, when the blaze of the sun was gone, and the cool night enabled us to throw down our weary and exhausted bodies under its dewy shade.

We made an early start in the morning, and pushed on as men, as thirsty as we were, naturally would, in the hope of finding water, until two in the afternoon. What a sight of joy! I have no words to express our delight at the sight of a little lake before us. We sprang greedily to it. The

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

water was salt, too salt to be drank! Not the slightest indication of any other water course, or any omen of fresh water was any where in view. Far in the distance a snowcovered mountain glittered in the [154] sun, and on the opposite shore of this salt lake, and at a distance of three or four miles from it, rose some hills of considerable height. We thought that from the summit of these hills we might possibly discover some water. We gathered dry flags, of which there was a great abundance about us, and made a kind of raft, on which each one of us put his pack, and swam the lake, pushing the little rafts that carried our packs, before us. The lake is about two hundred yards wide, and contains a great variety of fish. In length the lake stretches north and south, bounded on each shore with high, level and well timbered land, though apparently affording no fresh water.

When we reached the west shore of the lake, we saw fresh Indian foot-prints in the sand. This assured us, that there was water at no great distance. One of our company and myself started and ascended the highest peak of the hills in our view. We were not long in descriing a smoke in the south, at the distance of about ten miles. This sight gave us great courage and hope; for we felt assured that there must be water between us and the Indian camp. In a moment we started back with a vigorous step, to inform our companions, who were resting themselves under the shade of a tree. The information re-animated them, as it had us. We all shouldered our packs with a degree of alacrity, and pushed on toward the smoke.—We arrived about three in the afternoon on a small mound, within a quarter of a mile of the Indians. We could distinctly number them, and found them between forty and fifty in number, and their women and children were with them.

Here again was anxious ground of debate, what course we should pursue? should we attempt the long and uncertain course of conciliation, before the accomplishment of which we might perish with thirst? or should we rush among them, and buy the delicious element which we had full in view, at the hazard of our lives? Men as thirsty as we were, would be likely to fix upon the latter alternative, and we did so. We examined our arms to see that we were prepared to attack, or repel, according to circumstances, determined to fire upon them, if they [155] showed either a disposition for fight, or to keep us from the water.

We were within a hundred and fifty yards of them before they perceived us. As soon as they saw us they all fled to the bushes, men, women and children, as though satan was behind them. We had no disposition to arrest them, but rushed forward to the water, and began to slake our burning thirst. My father immediately cautioned us against drinking too much, pointing out at the same time the hurtful consequences. But men have always proved themselves slow to resist their appetites at the command of their reason. Most of us overloaded our empty stomachs with water, and soon became as sick as death. After vomiting, however, we were relieved. My father told us that we had better stand to our arms; for that the Indians had probably only fled to hide their women and children, and prepare themselves to return and fight us.

Scarcely had he finished these remarks, when we discovered them bearing down upon us, painted as black as a thunder cloud, and yelling like so many fiends. Some of them were armed with clubs, some with bows and arrows. We all arranged ourselves to receive them, behind the top of a large fallen tree. When they were within rifle shot, we made signs to them to halt, or that otherwise we should fire upon them. They comprehended us, halted and ceased yelling, as though they wished to hear what we had to say. We made signs that we were friendly. At this they gazed in apparent confusion of thought, and seemed to be questioning each other, touching the meaning of our signs. These signs we continued to repeat. At length one of them called aloud in Spanish,

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

and asked us who we were? How delightful were these sounds! We answered Americans. They repeated the name, asking us if we were friendly and Christians? To these questions we made a ready affirmative. They then proposed a treaty with us. Nothing could be more agreeable to us. At the same time we perceived that only eight of their people came to us, and the remainder of their company kept back. These eight that seemed to be their chief [156] men, advanced to us, while the rest, with extreme anxiety painted upon their countenances, stood ready for action. We all sat down on the ground, and commenced talking. They enquired with great precision, who we were, whence we came, how we arrived here, what was our object, and whether we had met with any misfortunes? We answered these questions to their satisfaction; and soon the pipe was lit, and we commenced smoking. They then dug a hole in the ground, in which they buried their war axe, and professed to deposite all ill feelings with it. The Indian of their number, who spoke the Spanish language, was a fugitive from the Mission of St. Catherine.— Threatened with the punishment of some misdemeanor, he had fled from the establishment.

After we had finished smoking, they asked us if the remainder of their number might not come and converse with us. This we objected to, unless they would bring their women and children with them. To this order they expressed great reluctance. This reluctance by no means tended to allay our previous jealousy of their pretended friendship. We asked them their reasons for being unwilling to bring their women and children? They answered promptly that they did not feel it safe to put their women and children in our power, until they were more acquainted with us. There seemed reason in this. We observed, that their men might come, provided they would leave their arms behind. To this they readily assented, and called out to their men to come on, leaving their arms behind. A part of them seemingly much delighted, threw down their arms and came on. The remainder equally dissatisfied, wheeled about, and walked moodily away.

The new comers sat down in a circle round us. The pipe was again lit and circled round. Again the terms of the treaty were repeated, and they all expressed their satisfaction with them. They observed, that their head chief was absent, at the distance of two day's journey to the south, that in three or four days he would come and see us, desiring us to remain with them until he should come. Nothing could be more opportune for [157] us, for we were all excessively fatigued, and needed a few days rest. After this they went and brought their women and children, who, like the other Indians we had seen, were all stark naked. At first they were excessively shy of us. This shyness wore off, and in the course of the day changed to an eager curiosity to examine us, and an admiration of our red flannel shirts, and the white skin under them; for little show of whiteness was to be seen in our faces. They soon ventured close to us, and with their own hands opened our bosoms, uttering exclamations of curiosity and admiration, especially on feeling the softness of our skins, in comparison of theirs. They certainly seemed to prefer our complexion to theirs, notwithstanding it had not the stamp of their fashion.

At length they made up to one of our companions, who was of a singularly light complexion, fair soft skin, and blue eyes. They wanted him to strip himself naked that they might explore him thoroughly, for they seemed to be doubtful of his being alike white in every part of his body. This, but as mildly as possible, he refused to do. They went off and brought a quantity of dried fish of excellent quality, and presented him. We persuaded him to oblige these curious and good natured women, by giving them a full view of his body. He was persuaded to strip to his skin. This delighted them, and they conversed and laughed among themselves, and they came one by

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

one and stood beside him; so as to compare their bodies with his. After this, as long as we staid, they were constantly occupied in bringing us cooked fish and the vegetables and roots on which they are accustomed to feed. On the 25th, the head chief came. He was a venerable looking man, whom I judged to be about fifty years old. His countenance was thoughtful and serious, and his hair a little gray. At his return his people greeted him with an acclamation of yells, that made the wild desert echo. The pipe was lit, and we all sat down by him and smoked again. He was a man of but few words, but of sound judgment. After the smoking was finished, he asked us the same questions which had been asked us before. We [158] made him similar answers, adding, that we wanted to travel to the Spanish settlements and purchase horses, upon which we might ride home to our own country, and that we would pay him well if he would send some of his men to guide us to those settlements. He asked us in reply, what we had to give him? We showed him our blankets, and he expressed himself delighted with them, observing at the same time, that he would have preferred to have had red cloth. On this we pulled off our red shirts and stripped them into small pieces like ribbons, and distributed them among the people. They tied the strips round their legs, arms and heads, and seemed as much overjoyed with these small tatters of worn red flannel, as we should have been, to have brought our furs to a good market among our own people. In giving away our red shirts, we gave away, what in this warm climate was to us wholly unnecessary. To carry our blankets on our backs was a useless burden. We gave two of them to the chief. The two guides that he was to send with us we were to pay after our arrival at the Spanish settlements. These points of contract between us were settled to the mutual satisfaction of all.

We started on the 26th, with our two guides, neither of whom could speak Spanish, and of course we had nothing to do but follow them in silence. We struck off a south west course, which led in the direction of the snow covered mountain, which still loomed up in its brightness before us. Our guides made signs that we should arrive at the foot about midnight, though the distance appeared to us to be too great to be travelled over in so short a time. We were yet to learn, that we should find no water, until we drank that of the melted snow. We perceived, however, that their travelling gait, worn as we were, was more rapid than ours. We pushed on as fast as we could a league further, when we were impeded by a high hill in our way, which was about another league to the summit, and very precipitous and steep. When we reached the top of it we were much exhausted, and began to be thirsty. We could then see the arid salt plain stretching all the way from the foot of this hill to the snow covered mountains.

[159] We thought it inexpedient to enquire of our guides, if there was no water to be found between us and the mountain. It appeared but too probable, that such was the fact. To know it to a certainty, would only tend to unnerve and dishearten us. If there was any, we were aware that we should reach it by travelling no more distance than as if we knew the fact. We found it best to encourage the little hope that remained, and hurried on through the drifted sand, in which we sank up to our ankles at every step. The cloudless sun poured such a blaze upon it, that by the scorching of our feet, it might have seemed almost hot enough to roast eggs in. What with the fierce sun and the scorching sand, and our extreme fatigue, the air seemed soon to have extracted every particle of moisture from our bodies. In this condition we marched on until nearly the middle of the day, without descrying any indication of water in any quarter. A small shrubby tree stood in our way, affording a tolerable shade. We laid ourselves down to get a few minutes rest. The Indians sternly beckoned us to be up and onward, now for the first time clearly explaining to us, that there

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

was no water until we reached the mountains in view. This unseasonable and yet necessary information, extinguished the last remainder of our hope, and we openly expressed our fears that we should none of us ever reach it.

We attempted to chew tobacco. It would raise no moisture. We took our bullets in our mouths, and moved them round to create a moisture, to relieve our parched throats. We had travelled but a little farther before our tongues had become so dry and swollen, that we could scarcely speak so as to be understood. In this extremity of nature, we should, perhaps, have sunk voluntarily, had not the relief been still in view on the sides of the snow covered mountains. We resorted to one expedient to moisten our lips, tongue and throat, disgusting to relate, and still more disgusting to adopt. In such predicaments it has been found, that nature disburdens people of all conditions of ceremony and disgust. Every thing bends to the devouring thirst, and the love of life. The application of this [160] hot and salt liquid seemed rather to enrage than appease the torturing appetite. Though it offered such a semblance of what would satisfy thirst, that we economized every particle. Our amiable Dutchman was of a sweetness of temper, that was never ruffled, and a calmness and patience that appeared proof against all events. At another time, what laughter would have circulated through our camp, to hear him make merry of this expedient! As it was, even in this horrible condition, a faint smile circulated through our company, as he discussed his substitute for drink. 'Vell, mine poys, dis vater of mein ish more hotter as hell, und as dick as boudden, und more zalter as de zeas. I can't drink him. For Cod's sake, gif me some of yours, dat is more tinner.' Having availed ourselves to the utmost of this terrible expedient, we marched on in company a few miles further. Two of our companions here gave out, and lay down under the shade of a bush. Their tongues were so swollen, and their eyes so sunk in their heads, that they were a spectacle to behold. We were scarcely able, from the condition of our own mouths, to bid them an articulate farewell. We never expected to see them again, and none of us had much hope of ever reaching the mountain, which still raised its white summit at a great distance from us. It was with difficulty that we were enabled to advance one foot before the other. Our limbs, our powers, even our very resolutions seemed palsied. A circumstance that added to our distress, was the excessive and dazzling brightness of the sun's rays, so reflected in our eyes from the white sand that we were scarcely able to see our way before us, or in what direction to follow our guides. They, accustomed to go naked, and to traverse these burning deserts, and be unaffected by such trials, appeared to stand the heat and drought, like camels on the Arabian sands. They, however, tried by their looks and gestures to encourage us, and induce us to quicken our pace. But it was to no purpose. However, we still kept moving onward, and had gained a few miles more, when night brought us shelter at least from the insupportable radiance of the sun, and something of coolness and moisture.

[161] But it was so dark, that neither we or our guides could discover the course. We stopped, and made a large fire, that our companions, if yet living, and able to move, might see where we were, and how to direct their own course to reach us. We also fired some guns, which, to our great relief and pleasure, they answered by firing off theirs. We still repeated firing guns at intervals, until they came up with us. They supposed that we had found water, which invigorated their spirits to such a degree, that it aroused them to the effort they had made. When they had arrived, and found that we had reached no water, they appeared to be angry, and to complain that we had disturbed their repose with false hopes, and had hindered their dying in peace. One of them in the recklessness of despair, drew from his package a small phial, half full of laudanum, and drank it

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

off, I suppose in the hope of sleeping himself quietly to death. We all expected it would have that effect. On the contrary, in a few moments he was exhilarated, like a man in a state of intoxication. He was full of talk, and laughter, and gaiety of heart. He observed, that he had taken it in hopes that it would put him to sleep, never to wake again, but that in fact, it had made him as well, and as fresh, as in the morning when he started; but that if he had imagined that it would prove such a sovereign remedy for thirst, he would cheerfully have shared it with us. We scraped down beneath the burning surface of the sand, until we reached the earth that was a little cool. We then stripped off all our clothing and lay down. Our two Indians, also lay down beside us, covering themselves with their blankets. My father bade me lay on the edge of one of their blankets, so that they could not get up without awakening me. He was fearful that they would arise, and fly from us in the night. I implicitly conformed to my father's wish, for had this event happened, we should all undoubtedly have perished. But the Indians appear to have meditated no such expedient, at any rate, they lay quiet until morning.

As soon as there was light enough to enable us to travel we started, much refreshed by the coolness of the night, and the [162] sleep we had taken. We began our morning march with renewed alacrity. At about ten in the forenoon we arrived at the foot of a sand hill about a half a mile in height, and very steep. The side was composed of loose sand, which gave way under our feet, so that our advancing foot steps would slide back to their former places. This soon exhausted our little remaining strength; though we still made many an unavailing effort to ascend. The sun was now so high, as to beam upon us with the same insufferable radiance of yesterday. The air which we inhaled, seemed to scald our lungs. We at length concluded to travel towards the north, to reach, if we might, some point where the hill was not so steep to ascend. At two in the afternoon we found a place that was neither so steep nor so high, and we determined here to attempt to cross the hill. With great exertions and infinite difficulty, a part of us gained the summit of the hill; but my father and another of our company, somewhat advanced in years, gave out below, though they made the most persevering efforts to reach the summit of the hill with the rest. Age had stiffened their joints, and laid his palsy hand upon their once active limbs, and vigorous frames. They could endure this dreadful journey no longer. They had become so exhausted by fruitless efforts to climb the hill, that they could no longer drag one foot after the other. They had each so completely abandoned the hope of ever reaching the water, or even gaining the summit of the hill, that they threw themselves on the ground, apparently convinced of their fate, and resigned to die. I instantly determined to remain with my father, be it for life or death. To this determination he would by no means consent, as he remarked it would bring my destruction, without its availing him. On the contrary, he insisted, that I should go on with the rest, and if I found any water near at hand, that I should return with my powder horn full. In this way he assured me, I might be instrumental in saving my own life, and saving him at the same time. To this I consented, and with much fatigue gained the summit of the hill, where my companions were seated waiting for us. They seemed undetermined, [163] whether to advance onward, or wait for my father, until I related his determination. My purpose was to proceed onward only so far, as that, if the Almighty should enable us to reach water, I might be able to return with a powder horn full to him and Mr. Slover, (for that was the name of the elderly companion that remained with him.) This resolution was agreed to by all, as a proper one. Being satisfied by our consciences as well as by the reasoning of my father and his companion, that we could render them no service by

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

remaining with them, except to increase their sufferings by a view of ours; and aware, that every moment was precious, we pushed on once more for the mountain. Having descended this hill, we ascended another of the same wearying ascent, and sandy character with the former. We toiled on to the top of it. The Eternal Power, who hears the ravens when they cry, and provideth springs in the wilderness, had had mercy upon us! Imagine my joy at seeing a clear, beautiful running stream of water, just below us at the foot of the hill! Such a blissful sight I had never seen before, and never expect to see again. We all ran down to it, and fell to drinking. In a few moments nothing was to be heard among us, but vomiting and groaning. Notwithstanding our mutual charges to be cautious, we had overcharged our parched stomachs with this cold snow water.

Notwithstanding I was sick myself, I emptied my powder horn of its contents, filled it with water, and accompanied by one companion, who had also filled his powder horn, I returned towards my father and Mr. Slover, his exhausted companion, with a quick step. We found them in the same position in which we had left them, that is, stretched on the sand at full length, under the unclouded blaze of the sun, and both fast asleep; a sleep from which, but for our relief, I believe they would neither of them ever have awakened. Their lips were black, and their parched mouths wide open.

Their unmoving posture and their sunken eyes so resembled death, that I ran in a fright to my father, thinking him, for a moment, really dead. But he easily awakened, and drank the refreshing water. My companion [164] at the same time bestowed his horn of water upon Mr. Slover. In the course of an hour they were both able to climb the hill, and some time before dark we rejoined the remainder of our company. They had kindled a large fire, and all seemed in high spirits. As for our two Indians, they were singing, and dancing, as it seemed to us, in a sort of worship of thankfulness to the Great Spirit, who had led them through so much peril and toil to these refreshing waters. We roasted some of our beaver meat, and took food for the first time in forty-eight hours, that is to say, from the time we left our Indian friends, until we reached this water. Our Dutchman insisted that the plain over which we passed, should be named the devil's plain, for he insisted, that it was more hotter as hell, and that none but teyvils could live upon it. In fact, it seemed a more fitting abode for fiends, than any living thing that belongs to our world. During our passage across it, we saw not a single bird, nor the track of any quadruped, or in fact any thing that had life, not even a sprig, weed or grass blade, except a single shrubby tree, under which we found a little shade. This shrub, though of some height, resembled a prickly pear, and was covered thick with thorns. The prickly pears were in such abundance, that we were often, dazzled as our eyes were with the sun's brightness, puzzled to find a path so as neither to torment our feet or our bodies with the thorns of these hated natives of the burning sands. This very extensive plain, the Sahara of California, runs north and south, and is bounded on each side by high barren mountains, some of which are covered with perpetual snow.

On the 28th, we travelled up this creek about three miles, and killed a deer, which much delighted our two Indian guides. At this point we encamped for the night. Here are abundance of palm trees and live oaks and considerable of mascal. We remained until the 3d of March, when we marched up this creek, which heads to the south, forming a low gap in the mountain. On the 7th, we arrived at the point, and found some of the Christian Indians from the Mission of St. Catharine. They were roasting mascal and the tender inside heads of the [165] palm trees for food, which,

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

when prepared and cooked after their fashion, becomes a very agreeable food. From these Indians we learned that we were within four days' travel of the mission mentioned above.

Here we concluded to discharge our guides, and travel into the settlement with the Christian Indians. We gave them each a blanket, and they started back to their own people on the morning of the 8th. At the same time we commenced our journey with our new guides, and began to climb the mountain. This is so exceedingly lofty, as to require two days' travel and a half to gain its summit. During this ascent, I severely bruised my heel. We none of us wore any thing to shield our feet from the bare and sharp rocks, which composed almost the whole surface of this ascent, but thin deer skin moccasins. Obligated to walk on tip toe, and in extreme anguish, the severe fatigue of scrambling up sharp stones was any thing, rather than agreeable. But I summoned patience and courage to push on until the 12th. My leg then became so swollen and inflamed that it was out of my power to travel farther. The pain was so severe as to create fever. I lay myself down on the side of a sharp rock, resigning myself to my fate, and determined to make no effort to travel further, until I felt relieved. My companions all joined with my father, in encouraging me to rise, and make an effort to reach the mission, which they represented to be but three miles distant. It was out of the question for me to think of it, and they concluded to go to the settlement, and obtain a horse, and send out for me. I kindled me a fire, for I suffered severe chills. The Indians gave me the strictest caution against allowing myself to go to sleep in their absence. The reason they assigned for their caution was a substantial one. The grizzly bear, they said, was common on these mountains, and would attack and devour me, unless I kept on my guard. I paid little attention to their remarks at the time. But when they were gone, and I was left alone, I examined the priming, and picked the flints of my gun and pistol. I then lay down and slept, until sometime in the early part of the night, when [166] two Indians came out from the settlement, and informed me that the corporal of the guards at St. Catharines wished me to come in. Being feverish, stiff, sore and withal testy, I gave them and their corporal no very civil words. They said that the corporal only wanted me to come in, because he was afraid the grizzly bears would kill me. I asked them why they did not bring a horse for me? They informed me, that the Mission had none at disposal at that time, but that they would carry me on their backs. So I was obliged to avail myself of this strange conveyance, and mounted the back of one of them while the other carried my arms. In this way they carried me in, where I found my companions in a guard house. I was ordered to enter with them by a swarthy looking fellow, who resembled a negro, rather than a white.

I cannot describe the indignation I felt at this revolting breach of humanity to people in suffering, who had thrown themselves on the kindness and protection of these Spaniards. We related the reasons why we had come in after this manner. We showed them our passport, which certified to them, that we were neither robbers, murderers, nor spies. To all this their only reply was, how should they know whether we had come clandestinely, and with improper views, or not? Against this question, proposed by such people, all reasonings were thrown away.— The cowardly and worthless are naturally cruel. We were thrown completely in their power; and instead of that circumstance exciting any generous desires to console and relieve us, their only study seemed to be to vex, degrade, and torment us.

Here we remained a week, living on corn mush, which we received once a day; when a guard of soldiers came to conduct us from this place. This mission is situated in a valley, surrounded by high mountains, with beautiful streams of water flowing from them. The natives raise sufficient

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

corn and wheat to serve for the subsistence of the mission. The mission establishment is built in a quadrangular form; all the houses forming the quadrangle contiguous to each other; and one of the angles is a large church, adjoining which are the habitations of [167] the priests; though at this time there happened to be none belonging to this at home. The number of Indians belonging to the mission at this time, was about five hundred. They were destitute of stock, on account of its having been plundered from them by the free, wild Indians of the desert. The air is very cool and temperate, and hard frosts are not uncommon. This cool temperature of the atmosphere I suppose to be owing to the immediate proximity of the snowy mountains.

On the 18th, we started under the conduct of a file of soldiers, who led us two days' travel, over very high mountains, a south west course, to another mission, called St. Sebastian, situated near the sea coast, in a delightful valley, surrounded, like the other, by lofty mountains, the sides of which present magnificent views of the ocean. This mission contains six hundred souls. This mission establishment, though much richer and neater than the other, is, however, built on a precisely similar plan. Here they have rich vineyards, and raise a great variety of the fruits of almost all climates. They also raise their own supplies of grain, and have a tolerable abundance of stock, both of the larger and smaller kinds.

A serjeant has the whole military command. We found him of a dark and swarthy complexion, though a man of tolerable information. He seemed disposed to conduct towards us with some courtesy and kindness. He saluted us with politeness, conducted us to the guard house, and begged us to content ourselves, as well as we could, until he could make some more satisfactory arrangements for our comfort and convenience. To put him to the proof of his professed kindness, we told him that we were very hungry. They soon had a poor steer killed, that reeled as it walked, and seemed sinking by natural decay. A part of the blue flesh was put boiling in one pot, and a parcel of corn in the other. The whole process reminded me strongly of the arrangements which we make in Kentucky, to prepare a mess for a diseased cow. When this famous feast was cooked, we were marched forth into the yard, in great ceremony, to eat it. All the men, women and children clustered round us, and [168] stood staring at us while we were eating, as though they had been at a menagerie to see some wild and unknown animals.— When we were fairly seated to our pots, and began to discuss the contents, disgusted alike with the food, with them, and their behaviour, we could not forbear asking them whether they really took us to be human beings, or considered us as brutes? They looked at each other a moment, as if to reflect and frame an answer, and then replied coolly enough, that not being Christians, they considered us little superior to brutes. To this we replied, with a suitable mixture of indignation and scorn, that we considered ourselves better Christians than they were, and that if they did not give us something to eat more befitting men, we would take our guns, live where we pleased, and eat venison and other good things, where we chose. This was not mere bravado, for, to our astonishment, we were still in possession of our arms. We had made no resistance to their treating us as prisoners, as we considered them nothing more than petty and ignorant officers, whom we supposed to have conducted improperly, from being unacquainted with their duty. We were all confident, that as soon as intelligence of our arrival should reach the commanding officer of this station, and how we had been detained, and treated as prisoners, we should not only be released from prison, but recompensed for our detention.

This determination of ours appeared to alarm them. The information of our menaces, no doubt

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

with their own comments, soon reached the serjeant. He immediately came to see us, while we were yet at our pots, and enquired of us, what was our ground of complaint and dissatisfaction? We pointed to the pots, and asked him if he thought such food becoming the laws of hospitality to such people? He stepped up to the pots, and turning over the contents, and examining them with his fingers, enquired in an angry tone, who had served up such food to us? He added, that it was not fit to give a dog, and that he would punish those who had procured it. He comforted us, by assuring us that we should have something fit to eat cooked for us. We immediately returned quietly to the guard house. But a [169] short time ensued before he sent us a good dish of fat mutton, and some tortillas. This was precisely the thing our appetites craved, and we were not long in making a hearty meal. After we had fed to our satisfaction, he came to visit us, and interrogated us in what manner, and with what views we had visited the country? We went into clear, full and satisfactory details of information in regard to every thing that could have any interest to him, as an officer; and told him that our object was to purchase horses, on which we might return to our own country; and that we wished him to intercede in our behalf with the commander in chief, that we might have permission to purchase horses and mules among them, for this purpose. He promised to do this, and returned to his apartment.

The amount of his promise was, that he would reflect upon the subject, and in the course of four days write to his commander, from whom he might expect an answer in a fortnight.— When we sounded him as to the probability of such a request being granted, he answered with apparent conviction, that he had no doubt that it would be in our favor. As our hopes were intensely fixed upon this issue, we awaited this answer with great anxiety. The commander at this time was at the port of San Diego. During this period of our suspense, we had full liberty to hunt deer in the woods, and gather honey from the blossoms of the Mascal, which grows plentifully on the sea shore. Every thing in this strange and charming country being new, we were continually contemplating curiosities of every sort, which quieted our solicitude, and kept alive the interest of our attention.

We used to station ourselves on the high pinnacles of the cliffs, on which this vast sea pours its tides, and the retreating or advancing tide showed us the strange sea monsters of that ocean, such as seals, sea otters, sea elephants, whales, sharks, sword fish, and various other unshapely sea dwellers. Then we walked on the beach, and examined the infinite variety of sea shells, all new and strange to us.

Thus we amused ourselves, and strove to kill the time until the 20th, when the answer of the commander arrived, which [170] explained itself at once, by a guard of soldiers, with orders to conduct us to the port of San Diego, where he then resided. We were ordered to be in immediate readiness to start for that port. This gave us unmingled satisfaction, for we had an undoubting confidence, that when we should really have attained the presence of an officer whom we supposed a gentleman, and acting independently of the authority of others, he would make no difficulty in granting a request so reasonable as ours. We started on the 2d, guarded by sixteen soldiers and a corporal. They were all on horseback, and allowed us occasionally to ride, when they saw us much fatigued. Our first day's journey was a north course, over very rough mountains, and yet, notwithstanding this, we made twenty-five miles distance on our way.

At night we arrived at another mission, situated like the former, on a charming plain. The mission is called St. Thomas. These wise and holy men mean to make sure of the rich and pleasant things

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

of the earth, as well as the kingdom of heaven. They have large plantations, with splendid orchards and vineyards. The priest who presides over this establishment, told me that he had a thousand Indians under his care. During every week in the year, they kill thirty beeves for the subsistence of the mission. The hides and tallow they sell to vessels that visit their coast, in exchange for such goods as they need.

On the following morning, we started early down this valley, which led us to the sea shore, along which we travelled the remainder of the day. This beautiful plain skirts the sea shore, and extends back from it about four miles. This was literally covered with horses and cattle belonging to the mission. The eye was lost beyond this handsome plain in contemplating an immeasurable range of mountains, which we were told thronged with wild horses and cattle, which often descend from their mountains to the plains, and entice away the domesticated cattle with them. The wild oats and clover grow spontaneously, and in great luxuriance, and were now knee high. In the evening we arrived at the port of Todos Santos, and there passed the night. Early on the 23d, we marched on. This day we [171] travelled over some tracts that were very rough, and arrived at a mission situated immediately on the sea board, called St. Michael. Like the rest, it was surrounded with splendid orchards, vineyards and fields; and was, for soil, climate and position, all that could be wished. The old superintending priest of the establishment showed himself very friendly, and equally inquisitive. He invited us to sup with him, an invitation we should not be very likely to refuse. We sat down to a large table, elegantly furnished with various dishes of the country, all as usual highly seasoned. Above all, the supply of wines was various and abundant. The priest said grace at the close, when fire and cigars were brought in by the attendants, and we began to smoke. We sat and smoked, and drank wine, until 12 o'clock. The priest informed us that the population of his mission was twelve hundred souls, and the weekly consumption, fifty beeves, and a corresponding amount of grain. The mission possessed three thousand head of domesticated and tamed horses and mules. From the droves which I saw in the plains, I should not think this an extravagant estimation. In the morning he presented my father a saddle mule, which he accepted, and we started.

This day's travel still carried us directly along the verge of the sea shore, and over a plain equally rich and beautiful with that of the preceding day. We amused ourselves with noting the spouting of the huge whales, which seemed playing near the strand for our especial amusement. We saw other marine animals and curiosities to keep our interest in the journey alive. In the evening we arrived at a Ranch, called Buenos Aguos, or Good Water, where we encamped for the night. We started early on the 25th, purchasing a sheep of a shepherd, for which we paid him a knife. At this Ranch they kept thirty thousand head of sheep, belonging to the mission which we had left. We crossed a point of the mountain that made into the water's edge. On the opposite side of this mountain was another Ranch, where we staid the night. This Ranch is for the purposes of herding horses and cattle, of which [172] they have vast numbers. On the 26th, our plain lay outstretched before us as beautiful as ever. In the evening we came in sight of San Diego, the place where we were bound. In this port was one merchant vessel, which we were told was from the United States, the ship Franklin, of Boston. We had then arrived within about a league of the port. The corporal who had charge of us here, came and requested us to give up our arms, informing us, it was the customary request to all strangers; and that it was expected that our arms would be deposited in the guard house before we could speak with the commander, or general. We replied, that we

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

were both able and disposed to carry our arms to the guard house ourselves, and deposite them there if such was our pleasure, at our own choice. He replied that we could not be allowed to do this, for that we were considered as prisoners, and under his charge; and that he should become responsible in his own person, if he should allow us to appear before the general, bearing our own arms. This he spoke with a countenance of seriousness, which induced us to think that he desired no more in this request than the performance of his duty. We therefore gave him up our rifles, not thinking that this was the last time we should have the pleasure of shouldering these trusty friends. Having unburdened ourselves of our defence, we marched on again, and arrived, much fatigued, at the town at 3 o'clock in the evening. Our arms were stacked on the side of the guard house, and we threw our fatigued bodies as near them as we could, on the ground.

An officer was dispatched to the general to inform him of our arrival, and to know whether we could have an immediate audience or not? In a short time the officer returned with an answer for us, that we must remain where we were until morning, when the general would give us a hearing. We were still sanguine in seeing only omens of good. We forgot our past troubles, opened our bosom to hope, and resigned ourselves to profound sleep. It is true, innumerable droves of fleas performed their evolutions, and bit all their pleasure upon our bodies.—[173] But so entire was our repose, that we scarcely turned for the night. No dreams of what was in reserve for us the following day floated across our minds; though in the morning my body was as spotted as though I had the measles, and my shirt specked with innumerable stains of blood, let by the ingenious lancets of these same Spanish fleas.

On the 27th, at eight A. M., we were ushered into the general's office, with our hats in our hands, and he began his string of interrogations. The first question was, who we were? We answered, Americans. He proceeded to ask us, how we came on the coast, what was our object, and had we a passport? In answer to these questions we again went over the story of our misfortunes. We then gave him the passport which we had received from the governor of Santa Fe. He examined this instrument, and with a sinister and malicious smile, observed, that he believed nothing of all this, but considered us worse than thieves and murderers; in fact, that he held us to be spies for the old Spaniards, and that our business was to lurk about the country, that we might inspect the weak and defenceless points of the frontiers, and point them out to the Spaniards, in order that they might introduce their troops into the country; but that he would utterly detect us, and prevent our designs.— This last remark he uttered with a look of vengeance; and then reperused the passport, which he tore in pieces, saying, it was no passport, but a vile forgery of our own contrivance. Though amazed and confounded at such an unexpected charge, we firmly asserted our innocence in regard to any of the charges brought against us. We informed him that we were born and bred thorough and full blooded republicans; and that there was not a man of us who would not prefer to die, rather than to be the spies and instruments of the Spanish king, or any other king; and that but a few years since, we had all been engaged in fighting the forces of a king, allied with savages, and sent against the country of our home; and that on this very expedition we had been engaged in a great many battles with the Indians, hostile to his people, redeeming their captives, [174] and punishing their robberies and murders. In distress, and in want of every thing from the robbery of these hostile Indians, we had taken refuge in his country, and claimed its protection. We told him we considered it an unworthy return for such general deportment, and such particular services to their country, that we should be viewed as spies, and treated as prisoners. He stopped us

JUNE, 20, 1824 -- AUGUST 30, 1830

---

in the midst of our plea, apparently through fear that representations, which must have carried conviction to his prejudiced mind, might tend to soften his obdurate heart, and unnerve his purpose towards us. He told us he did not wish to hear any more of our long speeches, which he considered no better than lies; for that if we had been true and bona fide citizens of the United States, we should not have left our country without a passport, and the certificate of our chief magistrate. We replied that the laws of our country did not require that honest, common citizens, should carry passports; that it did not interfere with the individual business and pursuits of private individuals; that such persons went abroad and returned unnoted by the government; and in all well regulated states, sufficiently protected by the proof that they were citizens of the United States; but that there were in our country two classes of people, for whom passports were necessary, slaves and soldiers; that for the slave it was necessary to have one, to certify that he was travelling with the knowledge and permission of his master; and for the soldier, to show that he was on furlough, or otherwise abroad with the permission of his officer. As we spoke this with emphasis, and firmness, he told us that he had had enough of our falsehoods, and begged us to be quiet. He ordered us to be remanded to our prison, and was immediately obeyed.

As we were driven out of his office, my father, who was exceedingly exasperated, observed, 'my boys, as soon as we arrive in the guard house, let us seize our arms and redress ourselves, or die in the attempt; for it seems to me that these scoundrels mean to murder us.' We all unanimously agreed to this advice, and walked back with a willing mind, and an alert step. [175] But our last hope of redressing ourselves, and obtaining our liberty was soon extinguished. On entering the guard house, our arms had been removed we knew not where. They had even the impudence to search our persons and to take from us even our pocket knives. The orderly sergeant then told us, that he was under the necessity of placing us in separate apartments. This last declaration seemed the death stroke to us all. Affliction and mutual suffering and danger had endeared us to each other, and this separation seemed like rending our hearts. Overcome by the suddenness of the blow, I threw my arms round the neck of my father, burst into tears, and exclaimed, 'that I foresaw, that the parting would be forever.' Though my father seemed subdued, and absorbed in meditation, he reproved this expression of my feelings, as weak and unmanly. The sergeant having observed my grief, asked me, pointing to him, if that was my father? When he learned that it was, he showed himself in some degree affected, and remarked, that it seemed cruel to separate father and child, and that he would go and explain the relationship to the general, and see if he could not obtain permission for us to remain together. On this he set off for the general's office, leaving me in the agony of suspense, and the rest gazing at each other in mute consternation and astonishment. The sergeant returned, informing me, that instead of being softened, the general had only been exasperated, and had in nothing relaxed his orders, which were, that we must immediately be put in separate confinement. He accordingly ordered some soldiers to assist in locking us up. We embraced each other, and followed our conductors to our separate prisons. I can affirm, that I had only wished to live, to sustain the increasing age and infirmities of my father. When I shook hands with him, and we were torn in sunder, I will say nothing of my feelings, for words would have no power to describe them. As I entered my desolate apartment, the sergeant seemed really affected, and assured me, that neither my companions nor myself should suffer any want of food or drink, as far as he could prevent it, for that he did not consider us guilty, nor worthy of such treatment. [176] My prison was a cell eight or ten feet square, with walls and floor of stone. A door with iron

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

bars an inch square crossed over each other, like the bars of window sashes, and it grated on its iron hinges, as it opened to receive me. Over the external front of this prison was inscribed in capital letters *Destinacion de la Cattivo*. Our blankets were given us to lie upon. My father had a small package of medicines which he gave in charge to the sergeant, binding him on his word of honor not to part with it to any one. My door was locked, and I was left to reflect upon our position and my past misfortunes; and to survey the dreary walls of my prison. Here, I thought, was my everlasting abode. Liberty is dear to every one, but doubly dear to one, who had been from infancy accustomed to free range, and to be guided by his own Will. Put a man, who has ranged the prairies, and exulted in the wilderness, as I have for years, in a prison, to let him have a full taste of the blessings of freedom, and the horror of shackles and confinement! I passed the remainder of the day in fierce walking backwards and forwards over my stone floor, with no object to contemplate, but my swarthy sentinel, through the grate. He seemed to be true to his office, and fitly selected for his business, for I thought I saw him look at me through the grate with the natural exultation and joy of a bad and malicious heart in the view of misery.

When the darkness of night came to this dreary place, it was the darkness of the grave. Every ray of light was extinct. I spread my blankets on the stone floor, in hopes at least to find, for a few hours, in the oblivion of sleep, some repose from the agitation of my thoughts. But in this hope I was disappointed. With every other friend and solace, sleep too, fled from me. My active mind ranged every where, and returned only to unavailing efforts to imagine the condition and feelings of my father and what would be our ultimate fate. I shut my eyes by an effort, but nature would have her way, and the eyelids would not close.

At length a glimmer of daylight, through my grate, relieved this long and painful effort to sleep. I arose, went to my grate, [177] and took all possible survey of what I could see. Directly in front of it was the door of the general's office, and he was standing in it. I gazed on him awhile. Ah! that I had had but my trusty rifle well charged to my face! Could I but have had the pleasure of that single shot, I think I would have been willing to have purchased it by my life. But wishes are not rifle balls, and will not kill.

The church bell told eight in the morning. The drum rolled. A soldier came, and handed me in something to eat. It proved to be dried beans and corn cooked with rancid tallow! The contents were about a pint. I took it up, and brought it within the reach of my nostrils, and sat it down in unconquerable loathing. When the soldier returned in the evening to bring me more, I handed him my morning ration untasted and just as it was. He asked me in a gruff tone why I had not eaten it? I told him the smell of it was enough, and that I could not eat it. He threw the contents of the dish in my face, muttering something which amounted to saying, that it was good enough for such a brute as I was. To this I answered, that if being a brute gave claims upon that dish, I thought he had best eat it himself. On this he flung away in a passion, and returned no more that night, for which I was not sorry. Had the food even been fit to eat, my thoughts were too dark and my mind too much agitated to allow me appetite. In fact, I felt myself becoming sick.

At night I was visited by the serjeant, who asked me about my health and spirits in a tone and manner, that indicated real kindness of feeling. I trusted in the reality of his sympathy, and told him, I was not well. He then questioned me, if I had eaten any thing? I told him no, and explained to him the double reason, why I had eaten nothing. He answered that he would remove one of the causes, by sending me something good. I then asked him if he had seen my father? He said he

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

had, though he had been unable to hold any conversation with him, for want of his understanding Spanish. I thanked him for this manifestation of friendship, and he left me. In a [178] short time he returned with two well cooked and seasoned dishes. I begged him to take it first to my father, and when he had eaten what he wished, he might bring the remainder to me, and I would share it among my companions. He assured me that my father was served with the same kind of food, and that my companions should not be forgotten in the distribution. While I was eating, he remained with me, and asked me, if I had a mother, and brothers, and sisters in my own country? My heart was full, as I answered him. He proceeded to question me, how long it had been since I had seen them or heard from them, and in what I had been occupied, during my long absence from my country? My misfortunes appeared to affect him. When I had finished eating, he enquired how I had passed the preceding night? In all his questions, he displayed true humanity and tenderness of heart. When he left me, he affectionately wished me good night. This night passed as sleepless and uncomfortable as the preceding one. Next day the kind serjeant brought my dinner again, though from anxiety and growing indisposition I was unable to eat. At night he came again with my supper, and to my surprise accompanied by his sister, a young lady of great personal beauty. Her first enquiry was that of a kind and affectionate nature, and concerned my father. She enquired about my age, and all the circumstances that induced me to leave my country? I took leave to intimate in my answer, my extreme anxiety to see my relatives, and return to my country, and in particular, that it was like depriving me of life, in this strange land, and in prison, to separate me from my old and infirm father. She assured me that she would pray for our salvation, and attempt to intercede with the general in our behalf, and that while we remained in prison, she would allow us to suffer nothing, which her power, means or influence could supply. She then wished me a good night, and departed. I know not what is the influence of the ministration of a kind spirit, like hers, but this night my sleep was sound and dreamless.

She frequently repeated these kind visits, and redeemed to the letter all her pledges of kindness. For I suffered for nothing [179] in regard to food or drink. A bed was provided for me, and even a change of clothing. This undeviating kindness greatly endeared her to me. About this time, Captain John Bradshaw, of the ship Franklin, and Rufus Perkins, his supercargo, asked leave of the general, to come and visit us. The general denied them. But Captain Bradshaw, like a true hearted American, disregarded the little brief authority of this miserable republican despot, and fearless of danger and the consequences, came to see me without leave. When I spoke to him about our buried furs, he asked me about the chances and the means we had to bring them in? And whether we were disposed to make the effort, and if we succeeded, to sell them to him? The prisoners, as he separately applied to them, one and an assured him, that nothing would give them more pleasure. He assured us, that he would leave nothing in his power undone, in making efforts to deliver us from our confinement. We thanked him for this proffered friendship, and he departed.

His first efforts in our favor were directed to gaining the friendship of the general, in order to soften his feelings in regard to us. But in this he entirely failed. He then adopted an innocent stratagem, which was more successful. He informed the general that he had business with a Spanish merchant in port, which he could not transact for want of some one who could speak the language fluently, who would interpret for him, that he understood that one of the American prisoners could speak the language perfectly well, and that if he would allow that prisoner to come and interpret for him a few hours, he would bind himself in a bond to any amount, that the prisoner

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

at the expiration of his services, would return voluntarily to his prison. To this the general gave his consent. Captain Bradshaw came to my prison, and I was permitted by the general's order to leave my prison.

When I went abroad, Captain Bradshaw conducted me to the office of an old captain, who had charge of the arms. We begged him to intercede with the general to obtain his permission, that we might go out and bring in our furs. We informed [180] him, that Captain Bradshaw and the supercargo, Rufus Perkins, would be our security in any amount, that the general was disposed to name, that we would return, and surrender ourselves to him, at the close of the expedition. He was at once satisfied of our honor and integrity, and that we were by no means those spies, whom the general took us for, and he promised to use all his influence with the general, to persuade him to dispatch us for our furs. We assured him, that in addition to our other proofs, that we were bonafide Americans, and true republicans, we had documents under the proper signature of the President of the United States, which we hoped, would be sufficient to satisfy him, and every one, who we were. He asked to see those papers, of which I spoke. I told him they were my father's commission of first lieutenant in the ranging service, during the late war with England, and an honorable discharge at the close of the war. He promised to communicate this information to the general, and departed, proposing to return in half an hour. During this interval, we walked to my father's cell, and I had the satisfaction of speaking with him through the grates. He asked me if I had been visited by a beautiful young lady? When I assented, he replied, that this charming young woman, as a ministering angel, had also visited his cell with every sort of kindness and relief, which she had extended to each one of our companions. I had the satisfaction afterwards, of speaking with each one of our companions. I need not add, how much delighted we were to speak with one another once more. From these visits I returned to the office of the captain of arms. We found him waiting with the most painful intelligence. Nothing could move the general, to allow us to go out and bring in our furs. He expressed a wish, notwithstanding, to see the commission of which I had spoken, and that I should return to my cell. I gave the papers to Captain Bradshaw, requesting him to return them to my father, after the general should have examined them. This he promised, and I took my leave of him, returning to my dreary prison, less buoyant and more completely desponding of my liberty than ever.

[181] In a few moments Captain Bradshaw and Perkins came again to my cell, and said that the general had no faith in our papers, and could not be softened by any entreaty, to give us our liberty. As he said this, the sentinel came up, and stopped him short in his conversation, and ordered them off affirming, that it was the general's express command, that he should not be allowed to see or speak with me again. They however pledged their honor as they left me, that whenever an occasion offered, they would yield us all the assistance in their power, and wishing me better fortune, they departed.

A fortnight elapsed in this miserable prison, during which I had no other consolation, than the visits of the young lady, and even these, such was the strictness of the general's orders, were like all angel visits, few and far between. At length a note was presented me by the serjeant, from my father. What a note! I appeal to the heart of every good son to understand what passed within me. This note was written on a piece of paste board torn from his hat. The characters were almost illegible, for they were written with a stick, and the ink was blood, drawn from his aged veins! He informed me that he was very ill, and without any hope of recovery, that he had but one wish on

---

JUNE, 20, 1824 -- AUGUST 30, 1830

---

this side the grave, and that was, to see me once more before he died. He begged me to spare no entreaties, that the general would grant me permission to come and see him a last time; but, that if this permission could not be obtained, to be assured, that he loved me, and remembered me affectionately, in death.

This letter pierced me to the heart. O, could I have flown through my prison walls! Had I possessed the strength of the giants, how soon would I have levelled them, even had I drawn down destruction on my own head in doing it. But I could own nothing in my favour, but a fierce and self devouring will. In hopes that the heart of the general was not all adamant, I entreated the serjeant to go and inform him of my father's illness, and his desire to see me once more, and to try to gain permission that I might have leave to attend upon him, or if that might not be, to visit him once more, according to his wish. He went [182] in compliance with my entreaties, and in a few minutes returned with a dejected countenance, from which I at once inferred what was the fate of my application. His voice faltered as he related that the general absolutely refused this request. Oh God! of what stuff are some hearts made! and this was a republican officer! What nameless tortures and miseries do not Americans suffer in foreign climes from those miserable despots who first injure and oppress, and then hate the victims of their oppression, as judging their hearts by their own, and thinking that their victims must be full of purposes of revenge.

The honest and kind hearted serjeant hesitated not to express manly and natural indignation, in view of this inhuman brutality of the general, in refusing a favor, called for by the simplest dictates of humanity, a favor too, in the granting which there could be neither difficulty nor danger. All he could do in the case he promised to do, which was to see that my father should want no sort of nourishment, or aid which he could render him. I tried to thank him, but my case was not of a kind to be alleviated by this sort of consolation. When I thought of our expectations of relief, when we threw ourselves in the power of these vile people, when I took into view our innocence of even the suspicion of a charge that could be brought against us, when I thought of their duplicity of disarming us, and their infamous oppression as soon as we were in their power, and more than all, when I thought of this last brutal cruelty and insult, my whole heart and nature rose in one mingled feeling of rage, wounded affection, and the indignation of despair. The image of my venerable father, suffering and dying unsolaced and unrelieved, and with not a person, who spoke his language, to close his eyes, and I so near him, was before me wherever I turned my eyes.

What a horrible night ensued at the close of this day! As the light was fading, the excellent young lady presented herself at my grate. She repeated all that her brother had related to me, in regard to the cruel refusal of the general. While she discussed this subject, the tears fell from her eyes, and I had the consolation to know, that one person at least felt real sympathy [183] for my distress. She added, in faltering tones, that she was well aware that in a case like this words were of but little avail, but that I might be assured of the kindest attention to all the wants of my father, that she could relieve; and that if it was the will of God, to take him out of this world of sorrow and change, that he should be buried decently and as if he were her own father. Judge what I must have felt towards this noble minded and kind hearted young lady! As she withdrew, my prayers at this time were hearty, if never before, that God would reward her a thousand fold in all good things, for her sympathy with our sufferings.

Thus passed away these days of agony and suspense. The young lady visited me as often as it was understood the general's orders would permit, that is, once in two or three days., bringing

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

me food and drink, of which in the present state of my thoughts, I had little need. In fact, I had become so emaciated and feeble that I could hardly travel across my prison floor. But no grief arrests the flight of time, and the twenty-fourth of April came, in which the serjeant visited me and in a manner of mingled kindness and firmness told me that my father was no more. At these tidings, simple truth calls on me to declare, my heart felt relieved. I am a hunter, and not a person to analyze the feelings of poor human nature. My father now was gone, gone where the voice of the oppressor is no more heard. Since the death of my mother, I have reason to think, that life had been to him one long burden. He had been set free from it all, and set free too, from the cruelty of this vile people, and the still viler general. I felt weak, and exhausted myself, and I expected to rejoin him in a few days, never to be separated from him. Life was a burden of which I longed to be relieved.

After I had given vent to natural feelings on this occasion, the serjeant asked me touching the manner in which we bury our dead in our country? I informed him. He then observed that the reason why he asked that question was, that his sister wished, that my father's body might be interred in a manner conformable to my wishes. I could only thank him for all this [184] kindness and humanity to me, as he left me. I passed the remainder of this day in the indulgence of such reflections as I have no wish to describe, even had I the power.

At night the serjeant's sister again visited my prison. She seemed neither able nor disposed to enter upon the subject before us, and reluctant to call up the circumstance of my father's death to my thoughts. At length she presented me with a complete suit of black, and begged that I would wear it on the following day at my father's funeral. I observed, in astonishment, that she could not doubt what a melancholy satisfaction it would be to me to follow the remains of my father to the grave, but that between me and that satisfaction were the walls of my prison, through which I could not break. She remarked, that by dint of importunity, she had prevailed on the general to allow me to attend the funeral. The fair young lady then undertook the duties of minister and philosopher, counselling me not to grieve for that, for which there is no remedy, proving to me that it was the will of God, that he should thus obtain deliverance from prison, and all the evils of this transitory life, and abundance of common place language of this sort, very similar to what is held in my own country on like occasions. Having finished her kindly intended chapter of consolations, she wished me a good night and left me to my own thoughts. The night I spent in walking the floor of my prison.

At eight in the morning, a file of six soldiers appeared at the door of my prison. It was opened, and I once more breathed the fresh air! The earth and the sky seemed a new region.— The glare of light dazzled my eyes, and dizzied my head. I reeled as I walked. A lieutenant conducted the ceremonies: and when I arrived at the grave he ordered the crowd to give way, that I might see the coffin let down, and the grave filled. I advanced to the edge of the grave, and caught a glimpse of the coffin that contained the remains of the brave hunter and ranger. The coffin was covered with black. No prayers were said. I had scarce time to draw a second breath, before the grave was half filled with earth. I was led back to my prison, [185] the young lady walking by my side in tears. I would gladly have found relief for my own oppressed heart in tears, if they would have flowed. But the sources were dried, and tears would not come to my relief. When I arrived at the prison, such a horrid revulsion came over me at the thoughts of entering that dreary place again, that I am sure I should have preferred to have been shot, rather than enter it again. But I recovered my-

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

self by reflecting that my health was rapidly declining, and that I should be able in a short time to escape from the oppressor and the prison walls, and rejoin my father, and be at rest.

This thought composed me, and I heard the key turn upon me with a calm and tranquilized mind. I lay down upon my bed, and passed many hours in the oblivion of sleep. The customary habit of sleep during the night returned to me; and my strength and appetite began to return with it. I felt an irresistible propensity to resume my former habit of smoking. I named my inclination to my friend the serjeant. He was kind enough to furnish me cigars. This was a new resource to aid me in killing the time. Apart from the soothing sensation of smoking, I amused myself for hours in watching the curling of my smoke from the cigar. Those who have always been free, cannot imagine the corroding torments of thoughts preying upon the bosom of the prisoner, who has neither friend to converse with, books to read, or occupation to fill his hours.

On the 27th of June, Captain Bradshaw's vessel was seized, on the charge of smuggling. There were other American vessels in this port at the same time, the names of the captains of which, as far as I can recollect, were Seth Rogers, Aaron W. Williams, and H. Cunningham. These gentlemen, jointly with their supercargoes, sent me five ounces of gold, advising me to keep this money secret from the knowledge of the Spaniards, and preserve it as a resource for my companions and myself, in case of emergencies.

About this time the general received several packages of letters in English, the contents of which, not understanding the [186] language, he could not make out. There was no regular translator at hand; and he sent orders to the serjeant to have me conducted to the office for that purpose. When I entered the office he asked me if I could read writing? When I told him yes, he procured a seat, and bade me sit down. He then presented me a letter in English, requesting me to translate it into Spanish. Though I put forth no claims on the score of scholarship, I perfectly comprehended the meaning of the words in both languages. I accomplished the translation in the best manner in my power; and he was pleased entirely to approve it. He proceeded to ask me a great many questions relative to my travels through the Mexican country; how long I had been absent from my own country, and what had been my occupation, during that absence? To all which questions I returned satisfactory answers. When he bade the guard return me to prison, he informed me that he should probably call for me again.

I returned to my prison somewhat cheered in spirits. I foresaw that he would often have occasion for my services as a translator, and if I showed an obliging disposition, and rendered myself useful, I hoped to obtain enlargement for myself and my companions. As I expected, I was summoned to his office for several days in succession. On my entering the office he began to assume the habit of saluting me kindly, giving me a seat, enquiring after my health, and showing me the other customary civilities. When I found him in his best humor, I generally took occasion remotely to hint at the case of our being detained as prisoners. I tried, gently and soothingly, to convince him of the oppression and injustice of treating the innocent citizens of a sister republic, as if they were spies. He generally showed a disposition to evade the subject; or alleged as a reason for what he had done, that he regretted exceedingly that circumstances on our part seemed so suspicious, that, obliged as he was, to execute the laws of his country, he felt himself compelled to act as he had done; that it was far from his disposition to desire to punish any one unjustly, and without cause; and that he would be glad if we could produce any substantial [187] evidence to acquit us

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

from the suspicion of being spies.

Though, as a true and honest man, I knew that every word he pronounced was a vile and deceitful lie, yet such is the power of the oppressor, I swallowed my rising words, and dissembled a sort of satisfaction. Waiving the further discussion of our imprisonment, I again recurred to the subject of permission to bring in our furs, persuading him, if he had any doubts about our good faith in returning to this place, to send soldiers to guard us; assuring him, that on obtaining our furs we would pay the soldiers, and indemnify him for any other expense he might incur on the occasion; and that, moreover, we would feel ourselves as grateful to him as if he had bestowed upon us the value of the furs in money. He heard me to the close, and listened with attention; and though he said he could not at present give his consent, he promised that he would deliberate upon the subject, and in the course of a week, let me know the result of his resolution. He then bade his soldiers remand me to prison. I begged him to allow me to communicate this conversation to my companions. This he refused, and I re-entered my prison.

From these repeated interviews, I began to acquaint myself with his interior character. I perceived, that, like most arbitrary and cruel men, he was fickle and infirm of purpose. I determined to take advantage of that weakness in his character by seeming submissive to his wishes, and striving to conform as far as I could to his capricious wishes; and more than all, to seize the right occasions to tease him with importunities for our liberty, and permission to bring in our furs. Four days elapsed before I had another opportunity of seeing him. During this time I had finished the translation of a number of letters, some of which were from Capt. Bradshaw, and related to the detention of his ship and cargo, and himself. When I had finished these translations, and was re-admitted to his presence, I asked him if he had come to any determination in regard to letting us go to bring in our furs? He answered in his surliest tone, no! How different were my reflections on returning to my prison from those with which I had left it! How earnestly I wished that [188] he and I had been together in the wild woods, and I armed with my rifle!

I formed a firm purpose to translate no more letters for him. I found that I had gained nothing by this sort of service; nor even by dissembling a general disposition to serve him. I was anxious for another request to translate, that I might have the pleasure of refusing him, and of telling him to his face that though I was his prisoner, I was not his slave. But it was three days before he sent for me again. At their expiration I was summoned to his office, and he offered me a seat, according to former custom. When I was seated, with a smiling countenance he handed me a packet of letters, and bade me translate them. I took one, opened it, and carelessly perused a few lines, and returning the packet back, rose from my seat, and told him I wished to return to my prison; and bowing, I moved towards the door. He darted a glance at me resembling that of an enraged wild beast; and in a voice, not unlike the growl of a wounded, grizzly bear, asked me why I did not put myself to the translation of the letters? Assuming a manner and tone as surly as his own, I told him my reasons were, that I did not choose to labor voluntarily for an oppressor and enemy; and that I had come to the determination to do it no longer. At this he struck me over the head such a blow with the flat of his sword, as well nigh dropped me on the floor; and ordered the soldiers to return me to prison, where he said I should lay and rot. The moment I recovered from the stunning effect of the blow I sprang toward him; but was immediately seized by the guards, and dragged to the door; he, the while, muttered abundance of the curses which his language supplies. In return, I begged him to consider how much it was like an officer and gentleman to beat an unarmed pris-

JUNE, 20, 1824 -- AUGUST 30, 1830

---

oner in his power, but that if I only had a sword to meet him upon equal terms, I could easily kill as many such dastards as he was, as could come at me. He bade me be silent, and the soldiers to take me off. They shoved me violently on before them to prison. When it closed upon me I never expected to see the sun rise and set again.

[189] Here I remained a week without seeing even the young lady, who was justly so dear to my heart. She was debarred by the general's orders not only from visiting me, but even sending me provisions! I was again reduced to the fare of corn boiled in spoiled tallow, which was brought me twice a day. At this juncture came on Capt. Bradshaw's trial. The declaration of the Captain, supercargo and crew was to be taken, and all the parties separately interrogated by a Spaniard. Not an individual of them could speak a word of Spanish, except the Captain, and he was not allowed to translate in his own case. The general supposed that by interrogating the parties separately, he should be able to gain some advantage from the contradictions of the testimony, and some positive proof of smuggling. Capt. Bradshaw being denied the privilege of interpreting for his crew, requested the general to procure some one who might be allowed to perform that office for him. The general told him that I was capable of the office, if I could be gained to the humor; but that he would as willingly deal with a devil, as with me, when out of humor. Capt. Bradshaw asked him if he might be allowed to converse with me on the subject? He consented, and Capt. B. came to my prison. In reference to the above information, he asked me what had taken place between me and the general which had so exasperated him against me? I related all the circumstances of our last interview. He laughed heartily at my defiance of the general. I was ready, of course, to render any service by which I could oblige Capt. B. He returned to the general, and informed him that I was ready to undertake to translate or interpret in his case.

In a short time my door was opened, and I was once more conducted to the office of the general. Capt. B. was sitting there in waiting. The general asked me if I had so far changed my mind, as to be willing to translate and interpret again? I told him I was always ready to perform that office for a gentleman. I placed such an emphasis on the word gentleman, as I purposed, should inform him, that I intended that appellation for the [190] Captain, and not for him. Whether he really misunderstood me, or dissembled the appearance of misunderstanding me, I know not. He only named an hour, in which he should call on me for that service, cautioning me to act in the business with truth and good faith. I told him that my countrymen in that respect, had greatly the disadvantage of his people; for that it was our weakness, not to know how to say any thing but the truth. At this he smiled, ordering me back to prison, until I should be called for next day.

At eight the next morning, I was again summoned to his office, where he proceeded, through me, to question Captain B. touching the different ports at which he had traded, and what was his cargo, when he left the U. S.? He added a great many other questions in relation to the voyage, irrelevant to the purposes of this journal. The clerk on this occasion was an Indian, and a quick and elegant writer. Capt. B. produced his bill of lading, and the other usual documents of clearing out a ship; all which I was obliged to translate. They being matters out of the line of my pursuits, and I making no pretensions to accurate acquaintance with either language, the translation, of course, occupied no inconsiderable time. It was nearly twelve, when he bade us withdraw, with orders to meet him again at his office at two in the afternoon. Capt. B. accompanied me to prison, and as we went on, requested me to make the testimonies of his crew as nearly correspond, and substantiate each other, as possible; for that some of them were angry with him, and would strive to give

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

testimony calculated to condemn him. I assured him that I would do any thing to serve him, that I could in honor. I entered my prison, and slept soundly, until the bells struck two.

I was then reconducted to the general's office; where he continued to interrogate Capt. B., until three. The Supercargo, Mr. R. Perkins, was then called upon to produce his manifesto, and cautioned to declare the truth, in relation to the subject in question. This manifesto differed in no essential respect from the account of the Captain. At sunset they were [191] dismissed, and I remanded to my prison. Day after day the same task was imposed, and the same labors devolved upon me. I at length summoned courage to resume the old question of permission to go out and bring in our furs. To my surprise he remarked, that as soon as he had finished taking all the evidence in relation to Capt. Bradshaw's ship and cargo, he would not only allow us to go, but would send soldiers to prevent the Indians from molesting us. I informed him, that his intended kindness would be unavailing to us, if he did not allow us to depart before the month of August; for that in that month the melting of the snow on the mountains at the sources of Red river caused it to overflow, and that our furs were buried in the bottom, so that the river, in overflowing, would spoil them. He replied, that it was out of his power to grant the consent at this time, which was the 19th of July.

On the 28th he had finished taking all the depositions, and I again asked him for permission to go and bring in our furs. He still started delays, alleging that he had made no arrangements for that purpose yet. Capt. B. was present, and asked him to allow me to stay with him on board his vessel, promising that he would be accountable for me. To my astonishment the general consented. I repaired to the house of the young lady, who had been so kind to me. She received me with open arms, and manifested the most unequivocal delight. She congratulated me on being once more free from my dismal prison, and asked me a thousand questions. The Captain and myself spent the evening with her; and at its close, I repaired with him on board his beautiful ship, the first sea vessel I had ever been on board. It may be imagined what a spectacle of interest and eager curiosity the interior of this ship, the rigging, masts, awning, in short, every thing appertaining to it, would be to a person raised as I had been, and of a mind naturally inquisitive. What a new set of people were the sailors! How amusing and strange their dialect! They heartily shook me by the hand, and commenced describing the several punishments they would inflict upon the general, if they had him in their [192] power. Among the different inflictions purposed, none seemed to please them better, than the idea of tarring and feathering him, all which I would gladly have seen him endure, but the worst of it was, after all, the general was not in their power.

I spent the greater part of the night with the captain and supercargo, conversing about the oppressions and cruelties of the general, and the death of my father, for, during the time of his sickness, Captain Bradshaw had sailed to Monte el Rey, and had not returned, until after his death. He intended, he said, if his vessel was condemned, to slip his anchors, and run out of the harbor, at the risk of being sunk, as he passed the fort. He promised me, if I would take passage with him, that I should fare as he did, and that, when we should arrive at Boston, he would obtain me some situation, in which I could procure a subsistence. I thanked him for his very kind offer, but remarked, that my companions had suffered a great deal with me, that we had had many trials together, and had hazarded our lives for each other, and that now I would suffer any thing rather than desert them, and leave them in prison, probably, to have their sufferings enhanced, in consequence of my desertion.

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

In the morning we all three went on shore together, and took breakfast at the house of my friend, the brother of the young lady. We passed from breakfast, to the office of the general. I asked leave of him to visit my companions in prison. His countenance became red with anger, and he ordered the guard to search me, and take me to prison. I perceived that he thought I had arms concealed about me, and assured him I had none. This did not hinder the guard from searching me, before they put me in prison.

I heard no more from him, and remained shut up in prison until the 28th of August. On that day the general ordered me again to be conducted to his office, where, according to his request, I translated some letters for him. When I had finished, he asked me if I still had an inclination to go for my furs? I replied, that I had reason to suppose that they had been covered [193] before this time, with the waters of Red river, and were all spoiled; but that nevertheless, I should be glad to be certain about it, and at least we should be able to bring in our traps. He asked me what adequate security I could give for our good behavior, and the certainty of our return, provided he should allow us the use of our arms for self defence? I replied, that I knew no one, who could give the security required, but that the soldiers he would send with us, would be his security for our return; but that it was out of the question to think of sending us on a trip, so dangerous under any circumstances, without allowing us to go armed. He remanded me to prison, saying, that he would reflect upon it, and let me know the result of his reflections in the morning. I reflected as I walked to prison, that I could have procured the security of Captain Bradshaw, merely for the asking. But I knew the character of my companions, and was so well aware, how they would feel when all should be once free again, and well armed, that I dared not bind any one in security for us. Such had been the extent of the injuries we had suffered, and so sweet is revenge, and so delightful liberty, when estimated by the bondage we had endured, that I was convinced that Mexico could not array force enough to bring us back alive. I foresaw that the general would send no more than ten or twelve soldiers with us. I knew that it would be no more than an amusement to rise upon them, take their horses for our own riding, flea some of them of their skins, to show them that we knew how to inflict torture, and send the rest back to the general on foot. Knowing that the temptation to some retaliation of this sort would be irresistible, I was determined that no one of my countrymen should be left amenable to the laws on our account. Such thoughts passed through my mind as I told the general, I could offer him no security.

Next morning, immediately after eight, I was allowed to walk to the general's office without being guarded. What a fond feeling came back to my heart with this small boon of liberty! How much I was exalted in my own thoughts, that I [194] could walk fifty yards entrusted with my own safe keeping! When I entered the general's office, he saluted me with ceremonious politeness. 'Buenas dias, don Santiago,' said he, and showed me to a seat. He proceeded to make known his pleasure, in respect to me and my companions. In the first place he told us, we were all to be allowed the use of our arms, in the next place, that he would send fifteen of his soldiers with us; and in the third place, that we should all be allowed a week, in which to exercise ourselves, before we set out on our expedition. All this good fortune delighted us, and was more almost, than we would have dared to wish. My companions, in an ecstasy of satisfaction, soon joined us from their prisons. We met with as much affection and gladness of heart, as if we had been brothers. They looked more like persons emancipated from the prison of the grave, than human beings; and I am perfectly aware, that my spectre like visage must have been equally a spectacle to them. We had the

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

privilege of walking in the vicinity of the port, accompanied by a guard of soldiers. Our only immediate restriction was the necessity of returning to our guard house to sleep at night. In this way our time passed pleasantly.

On the 3d of September, the general sent for me to his office. When I entered, he presented me a note, and bade me accompany a soldier to a mission at the distance of thirty miles, where he stated I was to deliver this note to a priest, and that he perhaps would be able to furnish us with horses and mules for our expedition to bring in our furs. I started with the soldier, each of us well mounted. The note was unsealed, and I read it of course. The contents were any thing, rather than encouraging. It contained no demand for the horses, as I had hoped. It simply stated to the priest, what sort of person the general supposed me to be, that we had furs buried on Red river, and wished horses on which to ride out and bring them in, and that if the priest felt disposed to hire his horses to us, he would send soldiers with us to bring us back.

[195] Discouraging as the note was, we pushed ahead with it, and arrived at the priest's mission some time before night. I handed the note to the old priest, who was a very grave looking personage. He read the note, and then asked me to come in and take some wine with him, of which they have great plenty. I followed him into a large parlor, richly adorned with paintings of saints, and several side boards, abundantly stored with wines, which I took it for granted, were not unacceptable to the holy man. The glass ware, the decorations of the parlor, and the arrangement of every thing showed me at a glance, that this priest was a man of taste and fashion. So I was on my guard not to let any of my hunting phrases and back-wood's dialect escape me. He asked me a great many questions about the circumstances of my passage across the continent, to all which I responded in as choice and studied words as I could command. He then asked me how many beasts we should want? I replied that there were seven of us, and that we should each need a pack mule, and a horse to ride upon, which would be fourteen in all. He then asked how many days it would require to go, and return? I answered, that this was a point upon which I could not pronounce with certainty, since I was unacquainted with the road, and accidents might change the issue. He then proposed to charge what was tantamount to 25 cents of our money a day for each mule, that carried a saddle, during the expedition, longer or shorter. To this I consented, and he drew an article of agreement to that effect. He then wrote a note to send by me to the general, in reply to his. By this time the sun was setting, and the church bells began to strike. On this he knelt, and commenced his prayers. He was repeating the Lord's prayer. According to the customs of his church, when he had commenced a member of a sentence, I finished it, by way of response. Such are their modes of repeating their prayers, when there are two or more in company. When we had finished, he turned to me, and asked me why I had prayed? I answered for the salvation of my soul. He said, that it had a christian appearance, but that he had been [196] informed, that the people of our country did not believe that man had a soul, or that there is a Saviour. I assured him, that he had been entirely misinformed, for that we had churches on every side through all the land, and that the people read the Scriptures, and believed all that was taught in the Gospel, according to their understanding of it. But he continued, 'your people do not believe in the immaculate conception of the Virgin Mary.' I replied, that what the general faith of the people upon this point was, I could not say, and that for myself, I did not pretend to have sufficiently studied the Scriptures, to decide upon such points. My assumed modesty soothed him, and he told me, that it was evident, I had not studied the Scriptures, for that if I had, I could not be in

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

doubt about such obvious articles of faith. I acquiesced in his supposition, that I had not studied the Scriptures, remarking, that I was aware that they contained many mysteries, about which the people in my country entertained various opinions. He said that he was truly sorry, that I was not more conversant with the Scriptures, for that if I had been, I could not have been led astray by the Protestants. His time, however, he added was now too limited to enlighten me, but he laughed, as he said he hoped to have the pleasure of baptising me on my return. To this I replied with a smile, for the truth was, I was fearful of disgusting him, and breaking off the bargain. Glad was I, when he dismissed this subject, and began to chat about other matters. We had an excellent supper, and I was shown to my bed.

In the morning I took leave of the old father, and arrived on the following evening at San Diego. My companions were delighted with the apparent complete success of my mission. The general informed us, that we should have permission to start on the 6th, and that our beasts would be ready for an early start on that day. On the evening of the 5th, he called us to his office, and asked us, how many days we thought the expedition would require? We informed him, as near as we could conjecture. He then said, that he could not spare any soldiers to accompany us. We answered, that it was a point of [197] indifference to us, whether he did or not. 'To insure your return however,' he rejoined, 'I shall retain one of you as a hostage for the return of the rest,' and pointing to me, he informed me, 'that I was the selected hostage,' and that I must remain in prison, during their absence, and that if they did not return, it would convince him, that we were spies, and that in consequence he would cause me to be executed.'

At this horrible sentence, breaking upon us in the sanguine rapture of confidence, we all gazed at each other in the consternation of despair. Some of our company remarked, that they had better abandon the expedition altogether, than leave me behind. Others stood in mute indecision. We had all in truth confidently anticipated never to return to this place again. My indignation, meanwhile, had mounted to such a pitch, as wholly to absorb all sense of personal danger, or care about myself. It seemed as if Providence had put the unrelenting seal of disappointment to every plan I attempted to devise. I told them to go, and not allow my detention to dishearten, or detain them, for that I had no fear of any thing, the general could inflict, that I had little left, but life to relinquish, and that their refusal to go, as things now were, would be taken for ample proofs, that we were spies, and would ensure our condemnation and the conviction, that we never had intended to return.

On this they all agreed to go, and began to pledge their honor and every thing sacred, that they would return, if life was spared them. I told them to follow their own inclinations, as to returning, for that I would as willingly be buried by the side of my father, as any one else; that, however, I did not believe the laws of the country would bear the general out, in putting me to death. The general now bade us arrange every thing to start early in the morning. I was again locked up in my prison, though my companions spent the greater part of the night in conversing with me. In the morning, when they were ready to start, they came and shook hands with me. When the Dutchman, as good hearted a fellow as ever lived, took my hand he burst into tears, and said, 'goot py Jim, if I ever does come [198] back, I will bring an army mit me, and take yours and your daddy's bones from dis tammed country, for it is worse as hell.' I should have laughed heartily at him, had not his tears prevented me, for I knew, that they came from his heart. Mounting their mules they now set off. Their only arms were old Spanish muskets, which, when fired, I would almost as soon

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

have stood before as behind. Under such circumstances, knowing, that they would be obliged to pass through numbers of hostile tribes of Indians, I was very doubtful of their return.

On the 8th, Captain Bradshaw came to my prison, and asked me, why I was in prison, and my companions at liberty? I told him the whole story. When he had heard it, he expressed doubts in regard to their returning. I replied to him, that I was not at all in doubt of their return, if they lived. He then told me, that he intended to go to the general, and demand his papers on the 11th, and if they were not given up to him, he would cut cable, and run out in spite of any one, adding his advice to me, which was, that I should write to the consul at Wahu and inform him of my imprisonment. He seemed to think, I might thus obtain my release. Mr. R. Perkins would undertake, he said, to place it in the hands of the consul, as he was acquainted with him. I answered, that I had neither ink nor paper. He said I should have some in a few minutes, and took leave of me. A soldier soon entered with writing materials, and I wrote my letter to Mr. Jones, for that was the name of the consul, stating every circumstance relative to our imprisonment, and the death of my father, giving the names of all our party, and begging him, if it was not in his power to obtain our freedom, that he would inform our government of our situation. I supposed it was in his power to grant my first request, placed as he was, in the midst of a foreign nation.

On the 11th, at the request of the general, I was conducted to his office, to serve as interpreter for the captain and Mr. P. The papers were now demanded by them. The general refused to comply with the demand, and told them, that both the vessel and cargo were condemned, but that if they would discharge [199] the cargo, and deliver it to him, he would allow them to clear the vessel, to go and seek redress, wherever they pleased. The captain's answer to this was, that it was not in his power to do so, and that the laws of his country would hang him, if he thus gave up his ship and cargo at the request of an individual. The general now became enraged, and repeating the words, at the request of an individual, added, the ship and cargo have both been lawfully condemned, and if they are not given up peaceably, I have soldiers enough to take the ship, and every thing belonging to it. In reply the captain remarked, that he came to trade on the coast, and not to fight, that, if he was disposed to seize the vessel or cargo, he had nothing to say farther, than that he should not aid, or advance in any shape the unlading of the vessel himself, and taking up his hat walked away. I asked permission of the general to go to Miss. Peaks, to get a change of clothing, which was granted. He, however, told me to be in haste. My principal business there was to give my letter to Mr. P., for I knew that captain B., would set sail with the first breeze, of which he could avail himself. I found both the gentlemen in the house, when I entered. I was assured by M. P., that he would give the letter to the consul, and endeavor to interest him in my behalf. I thanked him, and was upon the point of taking leave, when captain B. asked me to take a note from him to the general, and to tell him that he would like to have an answer, and would wait an hour for it. I took the note and went to the general's office, gave him the note and told him what the captain had said. He bade me sit down, after he had read the note, for a few minutes. I obeyed, and he passed into the adjoining room, and ordered his porter to call the ensign Ramirez. The porter hastened to execute his commission, and in a few minutes the ensign entered. The general and ensign then began to converse, drawing near the door, behind which I was seated. I heard distinctly the former tell the latter, that captain B., and Mr. P., were both at Peak's awaiting an answer from him, and that he would send me to tell them that he was engaged at [200] present, but at the expiration of an hour and a half they should have their answer through me. Meantime he, the ensign,

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

was to provide a guard of soldiers, with which to take them prisoners, and then the vessel and cargo would be sure. All this, as I have said, I heard distinctly. He then came in, and told me to go and inform them, as he told the ensign, he should direct me. I hastened to captain B., and told him what I had heard from the general concerning him. I advised him to go to the vessel immediately, for that the ensign and guard would soon be upon the spot. Both he and Mr. P. went directly to the vessel, and I returned to the general, to inform him that I had delivered his message. He then ordered me to return to prison. It was now three o'clock.

In a few hours the ensign returned from the pursuit of captain B., and as he passed the prison on his way to the general's office he shook his sword at me with vengeance in his face, saying, 'Oh! you traitor!' I inferred from this, that he supposed I had informed the captain of the projected attempt to take him prisoner. My situation now seemed to me desperate. I thought more of my comrades than myself, for I could not expect to live. Concluding that I should soon be executed, I feared, that when they returned, they would be put to death also. In a few minutes I was summoned to the general's office. I expected to hear my sentence. When I entered the general bade me stand by the door, near a large table, at which several of his clerks were seated writing, and he then gravely asked me if I had overheard the conversation which took place between himself and the ensign, after he had read the note brought by me to him from captain B? I replied that I did not see the ensign at that time, and furthermore could not say positively, whether he had held any conversation with the ensign, since my arrival on the coast or not. The general proceeded to question me, as to the fact of my having advised the captain to go on board his ship, and if I knew the motives, which induced him to do so, after saying that he would wait for an answer to his note. [201] He tried to extort an answer from me such as he wished, threatening me with death if I did not relate the truth. I regarded all this as no more than the threats of an old woman, and went on to state what was most likely to be favorable to my cause. I was now remanded to prison with the assurance, that if found guilty, death would be my doom.

A few days only elapsed before, the breeze serving, the Captain slipped anchor, and ran out of the port. He was compelled to perform this under a heavy shower of cannon balls poured forth from the fort, within two hundred yards of which he was obliged to pass. When he came opposite it, he hove to, and gave them a broadside in return, which frightened the poor engineers from their guns. His escape from the port was made without suffering any serious injury on his part. Their shots entered the hull of the vessel, and the sails were considerably cut by the grape. I was greatly rejoiced when I heard of their escape from these thieves. The General pretended great disgust at the cowardly conduct of the engineers, but, I believe, had he been there, he would have run too. I have no faith in the courage of these people, except where they have greatly the advantage, or can kill in the dark, without danger to themselves. This in my view is the amount of a Spaniard's bravery.

But to return to myself, I remained in prison, until a sufficient time had elapsed, as I thought, for the return of my companions. I still did not entirely despair of seeing them; but the Spaniards came daily and hourly to my prison with delighted countenances to tell me that my companions had deserted me, and that the General would soon have me executed. Some consoled me with the information, that at such an hour or day, I was to be taken out, and burnt alive; and others, that I was to be stationed at a certain distance, and shot at, like a target, or hung. These unfeeling wretches thus harrassed and tormented me, until the arrival of my companions on the 30th Sept.

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

put an end to their taunts, with regard to their desertion of me. They brought no fur however, it having been all spoiled [202] as I had expected, by an overflow of the river. Our traps which they did bring, were sold, and a part of the proceeds paid to the old priest for the hire of the mules. I have failed to remark, that my comrades had returned with the loss of two of their number, one of whom we learned, had married in New Mexico. When the party reached the river, these two concluded that rather than return to prison, they would run the risk of being killed by the Indians, or of being starved to death; and set forth on their perilous journey through the wilderness to New Mexico on foot. The probability of their reaching the point of their destination was very slight, it being a great distance and through great dangers. Happily for us, their not returning, did not appear to strengthen the General, in his opinion of our being spies. I had the pleasure of conversing with my companions an hour, or more, after which they were again disarmed, and all of us returned to our separate places of confinement. I had now no prospect before me, but that of lingering out a miserable and useless life in my present situation; as I was convinced, that the only inducement, which operated in the General's mind, to allow a part of us to go in search of our property was the hope of taking a quantity of furs and other valuables from us. I was thankful that he obtained nothing but the traps, which, as he knew no more how to use, than a blind horse, could be of no utility to him. This feeling may seem a poor gratification, but it was certainly a natural one.

In this condition we remained for months, never seeing the outside of our prison, deprived of the pleasure we had received from the visits of the charitable young lady, formerly allowed entrance to us, and the advantage we had derived from the generous nourishment she so kindly furnished us, and compelled by hunger to eat the food set before us by our jailors; and confined principally to dried beans, or corn boiled in water, and then fried in spoiled tallow.

At length the small pox began to rage on the upper part of the coast, carrying off the inhabitants by hundreds. Letters [203] from the distressed people were continually arriving, praying the general to devise some means to put a stop to the disease, which seemed to threaten the country with destruction. The general was thus beset by petitions for several weeks, before he could offer a shadow of relief for them. He was much alarmed, fearing that the disorder might extend its ravages to that part of the coast where he resided.

One day the soldiers, through mere inquisitiveness, asked the Dutchman if he knew any remedy for the complaint? He answered that he did; but that he had none of the article that constituted the remedy. He added, however, that he thought that my father had brought some of it with him, as he recollected his having vaccinated the people at the copper mines. This conversation was communicated to the general immediately, who sent a sergeant to me to inquire if I had any of the remedy spoken of by the Dutchman, as brought by my father? I answered in the affirmative; I then showed him where I had been vaccinated on the right arm, and assured him that it had effectually protected me from the small pox. Upon his demand whether I knew the method of applying it, I again answered in the affirmative; but when he asked me to show him the remedy, and let him have it to apply to his own arm, as he was fearful of losing his life from the spread of this dreadful disease, I told him I would not. This sergeant, who wished the matter, was my friend, and brother of the charitable young lady who had procured my father's burial, and for whom I would have sacrificed my life. But thinking this my only chance for regaining liberty, I refused it to him, saying, that I would neither show it to any one, nor apply it, unless my liberty and that

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

of my companions was rendered secure; and that in sustaining this resolution I would sacrifice my life. I also mentioned that I must be paid, over and above my liberty. My object in this, was to influence the fears of the general. If he acceded to my proposition, my friend and his sister would share the benefit in common with others. If I granted the request of the sergeant to inoculate him, I might lose my advantage; but my gratitude decided me [204] against allowing himself and his sister to be exposed to an imminent danger, which I could avert. I told him that if he would pledge himself, solemnly, for his own part, and that of his sister, that he would not communicate the matter to another individual, I would secretly vaccinate them. He replied that I need not fear his betraying me, as he would much rather aid me in my design, which he thought excellent, and likely to accomplish my wishes. He then left me to communicate the result of our conversation to the general.

This incident, so important in its influence upon my fortunes, occurred December 20th. The sergeant had not been absent more than a half hour, when he returned and told me that the general said he would give me a passport for a year, if I would vaccinate all the people on the coast; and furthermore, if I conducted properly during that period, that he would at the expiration of it, pay me for my services, and give me my liberty. His countenance was bright with delight, as he related this to me, not dreaming that I could refuse what seemed to him so good an offer. When I repeated, in reply, my resolution not to vaccinate any one, except on the conditions I had stated, and added that I would not agree to any terms without an audience from the general, his pleasure vanished, giving place to gloom as he told me he did not think the general would accede to the proposal to set my companions and myself at liberty upon parole for one year, for any consideration; but that, if I persisted in my refusal, he feared I should incur some violent punishment, and perhaps death. My answer was, that in my present situation I did not dread death. I then requested him to tell the general I wished to talk with him personally upon the subject.

He went, and in a few minutes returned with orders to conduct me to the General's office. Upon my arrival there, the General questioned me with regard to the efficacy of the remedy of which he had been much informed in the same manner as I have related in the conversation between the sergeant and myself; and he then repeated the same terms for the matter [205] and the application of it, that he had transmitted me through my friend, to which I replied as before. When I had finished, he asked me in a surly manner, what my own terms were? I told him, as I had done the sergeant, that I would vaccinate all the inhabitants on the coast, provided he would allow myself and companions to leave our prison on parole for one year, with liberty to travel up or down the coast, in order to find some occupation, by which we could obtain food and clothing. Upon hearing this his rage burst forth. He told me I was a devil; and that if I did not choose to take the offer he had made, he would compel me to perform its conditions, or put me to death. I replied, that he could take my life; but that it was beyond his power to compel me to execute his commands adding, that life or liberty would be no object to me, if my companions were denied the enjoyment of them with me. They had had the alternative in their power of leaving me in prison to suffer alone, or returning to share my captivity, and had chosen the latter; I concluded by saying, that rather than accept of liberty while they remained in prison, I would undergo all the torments his excellency could devise. He said he might as well let loose so many wolves to ravage his country, as give myself and companions the liberty I required; adding, that he gave me twenty-four hours to reflect on the alternative of his wrath, or my liberty upon the conditions he had proposed. I

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

was now remanded to prison. As I walked out, I remarked to the General, that my resolution was fixed beyond the possibility of change. He made no reply, and I proceeded to prison. The soldiers who accompanied me, tried to induce me to conform to the General's wishes, saying, that he was a terrible man when enraged. I made them no answer, and entered my prison, where I remained until 8 o'clock the next day; when I was again escorted to the office, and asked by the General, what security I would give for the good behaviour of myself and companions, if he let us out on parole for one year? I told him I would give none, for no one here knew me. He then ordered me back to prison, where he said I should lay and rot, calling me a carracho [206] picaro, and similar names, which I did not regard. I walked to my prison as undauntedly as I could. I now felt somewhat encouraged; for I perceived he was not inflexible in his resolutions, and by adhering firmly to mine, I hoped finally to conquer him.

In the course of the night he received a letter containing information of the death of one of his priests, and that great numbers were ill of the small pox. Early in the morning of the 23d I received a summons to attend him at the usual place. When I arrived, he said he wanted to see my papers, that is, those I had mentioned as being my father's commission and his discharge from the service of a ranger. I told him they were at Miss Peak's, which was the name of the young lady who had been so kind to me. He sent a soldier for them, who soon returned with them. I translated them to him. He said that was a sufficient proof of my being an American; and asked if my companions could produce proofs of their belonging to the same country? I replied that I did not know.

He sent orders for them to come to the office; and before their arrival, told me that all he now wanted, was proof that they were Americans, to let us go on a parole, as all Americans were tolerated in his country. My opinion with regard to his motive in the case was, that he was less unwilling to grant our liberty, as the payment for my services in spreading the vaccine disease, now that he knew we had no property for him to extort from us.

He talked, too, about rendering himself liable to suffer the rigor of the laws of his country, should he set us free, without our establishing the fact of our being Americans.

My companions entered: I was glad to see them. Their beards were long, and they were haggard and much reduced in flesh. I gave them to understand what was wanting, and they readily produced some old black papers, furnishing in themselves proof of any thing else, as much as of their owners being American citizens. I, however, so interpreted them, that they established the point with the General. I believe he [207] had as firmly credited this fact from the first hour he saw us, as now. He concluded to let us out a week upon trial, before he gave us freedom on parole, although he compelled me to engage to vaccinate all the people in the fort. He then directed us to endeavor to find some employment around the fort, which would procure us food, and to return every night to the guard house to sleep. The guard bell now tolled eight o'clock, and according to the permission given, we walked in the direction of our inclinations.

I went directly to Miss Peak's, who was much astonished, and apparently delighted to see me at liberty. She had expected, she said, every day to see me on my way to be shot, or hung. The manifestation of kindness and benevolence to us having been forbidden by our jailors, she now indemnified her humanity and good feeling by telling me how much she had regretted not being allowed to send me proper food, asking me if I was not hungry? and proceeding, before I could answer, to spread a table with every thing good, of which I partook plentifully; after which we had

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

a pleasant conversation together. My enjoyment of my fortunate change of situation was, however, mingled with uncertainty, as to the length of its duration. I felt that I was still in the lion's jaws, which might close upon me from the first impulse of petulance or anger.

I therefore, endeavoured to devise some way of availing myself of my momentary freedom, to place myself beyond the possibility of losing it again. That one which suggested itself to me, was to prevail upon the officer, who had our rifles in charge to allow us possession of them for a short time, to clean them. When we should once more have them in our hands, I hoped we would have resolution to retain them, until death rendered them useless to us. I went to my companions, and imparted my plan to them. They agreed with me upon all points. The only difficulty now was, to lay our hands upon our arms. I went directly to the apartment of the officer, in whose care they were, one of the best hearted Spaniards I have ever seen. I appealed to his goodness of heart in order to obtain my purpose, telling [208] him, that we only wanted the rifles a few minutes, in order to rub off the rust, and dirt, which must have accumulated upon them. I told him after this was done, they should be returned to him. He did not answer for some minutes; and then said, that if he complied with my request, and was discovered by the General to have done so, he should be punished. I replied that there was no danger of an act of this kind, a mere kindness of this sort being known by any, but those immediately concerned; concluding by slipping ten dollars in silver, which had been given me by Capt. B., into his hand. He then handed me the rifles, and all belonging to them, through a back door, cautioning me not to let my having them in possession be known. I answered, that I would be upon my guard. I was now joined by my companions. We found an old and unoccupied house, into which we entered, and soon put our guns in order, and charged them well, resolving never to give them into the hands of a Spaniard again. We had been so treacherously dealt with by these people, that we did not consider it any great breach of honour to fail in our promise of returning our arms, particularly as the officer had taken my money. We then concluded to conceal our rifles in a thicket near at hand, and to keep our pistols, which the officer had also given us as a part of our arms, concealed around our persons. At night we went to the guard house to sleep, as we had been commanded to do. The officer who gave me the rifles, came to me, and asked why I had not returned the arms according to promise? I told him that I had not finished cleaning them, and repeated, that the General should not know I had them. He charged me to fulfil my former promise of returning the arms on the succeeding morning. I satisfied him, thinking as before, that it made no great difference what is said to such persons, in a position like ours.

Early the next morning we met a countryman by the name of James Lang, who had come upon the coast to smuggle, and to kill sea otters for their skins, which are very valuable. He was now here secretly, to enquire if sea otters were to be found in [209] abundance higher up the coast; and to obtain information on some other points connected with his pursuits. He told us he had a boat distant eighty miles down the coast, with men in search of otters, and proposed that we should accompany him to it, offering to furnish every thing required for this species of hunting, and give us half of whatever we caught, adding, that when his brig returned from the Gallipagos islands, where it had gone in search of tortoise shell, he would give us a free passage to our own country. We all considered this an offer advantageous to us, as it held out the prospect of our being enabled to obtain something in the way of gain, after which a way would be open for our return to our homes, and we agreed to meet him on a certain day at Todos Santos, in English All Saints. This

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

took place on the 24th. Our new friend set off to rejoin his companions, and we fell to consultation upon the best method of conducting in our present circumstances. We did not wish to do any thing, that would render us amenable to the laws of the country, should we be detected in our attempt to escape. We were consequently precluded from relying on horses to aid us in hastening beyond the reach of pursuers. The night was chosen, as the time for our experiment; but in the course of an hour, after this determination was made, all my companions excepting one, receded from it, pronouncing the plan of running off without any cover for our intentions, not a good one. They proposed instead of it, that we should ask permission of the General to go a hunting, assigning as our reason for this request, that we were barefoot, and wanted to kill some deer in order to obtain their skins to dress, to make us moccasins. I consented to this plan, and to try its efficacy immediately, I went to the General's office. It was late, but I related my errand. He asked me, where I could get arms, to kill deer with? I replied, that if he would not allow us to use our own arms, we could borrow some. He refused the permission, I had asked of him.

On Christmas night, the one among my companions, whom I [210] have mentioned, as agreeing with me, in regard to the original plan for our escape, set off with me at 12 o'clock, while the people, who were all Catholics, were engaged in their devotions at church. We were obliged to leave our comrades, as they would not accompany us in our enterprise. We travelled entirely by night, and reached the before mentioned place of rendezvous on the 28th. We found Mr. Lang and his men in confinement, and his boat taken by the Spaniards. We gained this information in the night, without committing ourselves. We retreated to the woods, in which we remained concealed through the day. At night our necessities compelled us to enter a house, in order to obtain some food. It was occupied by a widow and her two daughters. They gave us bread, milk and cheese, treating us with great kindness. We spent a week passing the day in the woods, and going to this friendly house to get food in the night; in the hope of hearing of some vessel, by means of which we might escape from this hated coast. But no such good fortune awaited us.

We then concluded to return, and see our comrades, whom we supposed to be again in prison; although we were determined never again to be confined there ourselves alive, with our own consent. So we walked back to San Diego, killing some deer by the way, the skins of which we carried to the fort. To our great admiration and surprize, we found our companions at liberty. They informed us, that the General was exceedingly anxious for my return, and that our arms had not been demanded, although the officer, through whose means we obtained them, had been placed under guard.

I felt grieved by the latter part of this information, as I had deceived the unfortunate man, when he intended to do me a kindness, of the utmost importance to my interests, as I viewed it. He would probably, be severely punished. But I nevertheless was firm in my purpose to retain my arms. It was late in the day; but the companion of my flight and myself proceeded to present ourselves before the General, leaving our rifles concealed in a safe place. Our pistols we carried in our [211] bosoms, determined not to be taken to prison without offering resistance.

The General appeared much surprised to see us, and asked where we had been? I told him, that we had been out upon a hunting expedition; upon which he wished to know if we had killed any thing? We answered in the affirmative. He then looked serious, and demanded of me, if I was not aware that it was wrong to go off, without taking leave of him? My reply was, that I did; and that he refused it to me; and that then I concluded to go without permission, knowing it could not

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

be a crime. His next question was, how I obtained my arms? I told him the truth with regard to this point. The succeeding demand was, why I did not return them, according to my promise? To which I replied, that I did not intend to return them from the first; and I now declared that they should never be taken from me for the time to come, while I drew my breath. He smiled, and said he did not want them; but that I must begin to vaccinate the people of the garrison; for that he wished me to go up the coast soon to practice vaccination there.

On the 18th of January, 1829, I began to vaccinate; and by the 16th of February had vaccinated all the people belonging to the fort, and the Indian inhabitants of the mission of San Diego, three miles north of the former place. It is situated in a valley between two mountains. A stream runs through the valley, from which ships obtain fresh water. An abundance of grain is raised at this mission. Fruit of all kinds, growing in a temperate climate, is also plentiful. The climate is delightfully equal. The husbandman here does not think of his fields being moistened by the falling rain. He digs ditches around them, in which water is conveyed from a stream, sufficient to cover the ground, whenever the moisture is required. Rains seldom fall in the summer or autumn. The rainy season commences in October; and continues until the last of December, and sometimes even through January; by which time the grass, dover and wild oats are knee high. When the rain does come, it falls in torrents. The gullies made in the sides of the mountains by the rains are of an enormous size.

[212] But to return to my own affairs. Having completed my vaccinations in this quarter, and procured a sufficient quantity of the vaccine matter to answer my purpose, I declared myself in readiness to proceed further. I communicated the matter to one thousand Spaniards and Indians in San Diego.

February 28th, the General gave us each a legal form, granting us liberty on parole for one year, at the expiration of which period it was in his power to remand us to prison, if he did not incline to grant us our freedom. He likewise gave me a letter to the priests along the coast, containing the information that I was to vaccinate all the inhabitants upon the coast, and an order providing for me all necessary supplies of food and horses for my journey. These were to be furnished me by the people, among whom I found myself cast. They were, also, directed to treat me with respect, and indemnify me for my services, as far as they thought proper. The latter charge did not strike me agreeably; for I foresaw, that upon such conditions my services would not be worth one cent to me. However, the prospect of one whole year's liberty was so delightful, that I concluded to trust in Providence, and the generosity of the stranger, and think no more of the matter. With these feelings I set forth to the next mission, at which I had already been. It was called San Luis.

I reached it in the evening. I found an old priest, who seemed glad to see me. I gave him the General's letter. After he had read it, he said, with regard to that part of it which spoke of payment, that I had better take certificates from the priests of each mission, as I advanced up the coast, stating that I had vaccinated their inhabitants; and that when I arrived at the upper mission, where one of the high dignitaries of the church resided, I should receive my recompense for the whole. Seeing nothing at all singular in this advice, I concluded to adopt it.

In the morning I entered on the performance of my duty. My subjects were Indians, the missions being entirely composed of them, with the exception of the priests, who are the rulers. [213] The number of natives in this mission was three thousand, nine hundred and four. I took the old priest's certificate, as had been recommended by him, when I had completed my task. This is said

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

to be the largest, most flourishing, and every way the most important mission on the coast. For its consumption fifty beeves are killed weekly. The hides and tallow are sold to ships for goods, and other articles for the use of the Indians, who are better dressed in general, than the Spaniards. All the income of the mission is placed in the hands of the priests, who give out clothing and food, according as it is required. They are also self constituted guardians of the female part of the mission, shutting up under lock and key, one hour after supper, all those, whose husbands are absent, and all young women and girls above nine years of age. During the day, they are entrusted to the care of the matrons. Notwithstanding this, all the precautions taken by the vigilant fathers of the church are found insufficient. I saw women in irons for misconduct, and men in the stocks. The former are expected to remain a widow six months after the death of a husband, after which period they may marry again. The priests appoint officers to superintend the natives, while they are at work, from among themselves. They are called *alcaldes*, and are very rigid in exacting the performance of the allotted tasks, applying the rod to those who fall short of the portion of labor assigned them. They are taught in the different trades; some of them being blacksmiths, others carpenters and shoe-makers. Those, trained to the knowledge of music, both vocal and instrumental, are intended for the service of the church. The women and girls sew, knit, and spin wool upon a large wheel, which is woven into blankets by the men. The *alcaldes*, after finishing the business of the day, give an account of it to the priest, and then kiss his hand, before they withdraw to their wigwams, to pass the night. This mission is composed of parts of five different tribes, who speak different languages.

The greater part of these Indians were brought from their native mountains against their own inclinations, and by compulsion; [214] and then baptised; which act was as little voluntary on their part, as the former had been. After these preliminaries, they had been put to work, as converted Indians.

The next mission on my way was that, called St. John the Baptist. The mountains here approach so near the ocean, as to leave only room enough for the location of the mission. The waves dash upon the shore immediately in front of it. The priest, who presides over this mission, was in the habit of indulging his love of wine and stronger liquors to such a degree, as to be often intoxicated. The church had been shattered by an earthquake. Between twenty and thirty of the Indians, men, women and children, had been suddenly destroyed by the falling of the church bells upon them. After communicating the vaccine matter to 600 natives, I left this place, where mountains rose behind to shelter it; and the sea stretched out its boundless expanse before it.

Continuing my route I reached my next point of destination. This establishment was called the mission of St. Gabriel. Here I vaccinated 960 individuals. The course from the mission of St. John the Baptist to this place led me from the sea-shore, a distance of from eighteen to twenty miles. Those, who selected the position of this mission, followed the receding mountains. It extends from their foot, having in front a large tract of country showing small barren hills, and yet affording pasturage for herds of cattle so numerous, that their number is unknown even to the all surveying and systematic priests. In this species of riches St. Gabriel exceeds all the other establishments on the coast. The sides of the mountains here are covered with a growth of live oak and pine. The chain to which these mountains belong, extends along the whole length of the coast. The fort St. Peter stands on the sea coast, parallel to this mission.

My next advance was to a small town, inhabited by Spaniards, called the town of The Angels. The

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

houses have flat roofs, covered with bituminous pitch, brought from a place within four miles of the town, where this article boils up from the earth. As the liquid rises, hollow bubbles like a shell of a [215] large size, are formed. When they burst, the noise is heard distinctly in the town. The material is obtained by breaking off portions, that have become hard, with an axe, or something of the kind. The large pieces thus separated, are laid on the roof, previously covered with earth, through which the pitch cannot penetrate, when it is rendered liquid again by the heat of the sun. In this place I vaccinated 2,500 persons.

From this place I went to the mission of St. Ferdinand, where I communicated the matter to 967 subjects. St. Ferdinand is thirty miles east of the coast, and a fine place in point of position.

The mission of St. Buenaventura succeeded. Not long previous to my arrival here, two priests had eloped from the establishment, taking with them what gold and silver they could lay their hands upon. They chose an American vessel, in which to make their escape. I practised my new calling upon 1000 persons in this mission.

The next point I reached was the fort of St. Barbara. I found several vessels lying here. I went on board of them, and spent some pleasant evenings in company with the commanders. I enjoyed the contrast of such society with that of the priests and Indians, among whom I had lately been. This place has a garrison of fifty or sixty soldiers. The mission lies a half a mile N. W. of the fort. It is situated on the summit of a hill, and affords a fine view of the great deep. Many are the hours I passed during this long and lonely journey, through a country every way strange and foreign to me, in looking on the ceaseless motion of its waves. The great Leviathan too played therein. I have often watched him, as he threw spouts of water into the air, and moved his huge body through the liquid surface. My subjects here amounted to 2600. They were principally Indians.

The next mission on my route was that called St. Enos. I vaccinated 900 of its inhabitants, and proceeded to St. Cruz, where I operated upon 650. My next advance was to St. Luis Obispos. Here I found 800 subjects. The mission of St. Michael followed in order. In it I vaccinated 1850 persons. [216] My next theatre of operations was at St. John Bapistrano. 900 was the number that received vaccination here. Thence I went to La Solada, and vaccinated 1685, and then proceeded to St. Carlos, and communicated the matter to 800.

From the latter mission I passed on to the fort of Monte El Rey, where is a garrison of a hundred soldiers. I found here 500 persons to vaccinate. The name of this place in English signifies the King's mount or hill. Forests spread around Monte El Rey for miles in all directions, composed of thick clusters of pines and live oaks. Numberless grey bears find their home, and range in these deep woods. They are frequently known to attack men. The Spaniards take great numbers of them by stratagem, killing an old horse in the neighborhood of their places of resort. They erect a scaffold near the dead animal, upon which they place themselves during the night, armed with a gun or lance. When the bear approaches to eat, they either shoot it, or pierce it with the lance from their elevated position. Notwithstanding all their precautions, however, they are sometimes caught by the wounded animal; and after a man has once wrestled with a bear, he will not be likely to desire to make a second trial of the same gymnastic exercise. Such, at any rate, is the opinion I have heard those express, who have had the good fortune to come off alive from a contest of this kind. I do not speak for myself in this matter, as I never came so near as to take the close hug with one in my life; though to escape it, I once came near breaking my neck down a precipice.

From Monte El Rey I advanced to the mission of St. Anthony, which lies thirty miles E. from the

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

coast. In it I found one thousand persons to inoculate. I had now reached the region of small pox, several cases of it having occurred in this mission. The ruling priest of this establishment informed me, that he did not consider it either necessary or advisable for me to proceed farther for the purpose of inoculating the inhabitants of the country, as the small pox had prevailed universally through its whole remaining extent. As I had heard, while in [217] San Diego, great numbers had been carried off by it. I then told him that I wished to see the church officer who had been described to me by the first priest whom I had seen on my way up the coast. He furnished me a horse, and I set off for the port of San Francisco, vaccinating those whom I found on the way who had not had the small pox.

I reached the above mentioned place, on the twentieth of June, 1829. Finding the person of whom I was in search, I presented him all the certificates of the priests of the missions in which I had vaccinated, and the letter of the General. I had inoculated in all twenty-two thousand persons. After he had finished the perusal of these papers, he asked me, what I thought my services were worth? I replied, that I should leave that point entirely in his judgment and decision. He then remarked, that he must have some time to reflect upon the subject, and that I must spend a week or two with him. I consented willingly to this proposal, as I was desirous of crossing the bay of San Francisco to the Russian settlement, called the Bodego.

I proceeded to carry my wish into execution on the 23rd, accompanied by two Coriac Indians, whose occupation was the killing of sea otters for the Russians, who hire them into their service. Those who pursue this employment, have water crafts made of the sea lions' skins, in the shape of a canoe. Over this spreads a top, completely covered in such a manner as to preclude the possibility of the entrance of any water. An opening is left at the bow and stern, over which the person who has entered draws a covering of the same material with that of the boat, which fastens firmly over the aperture in such a manner, as to make this part entirely water proof, as any other portion of the boat. Two persons generally occupy it. No position can be more secure than theirs, from all the dangers of the sea. The waves dash over them harmless. The occupants are stationed, one at the bow, and the other at the stern; the latter guides the boat, while the other is provided with a [218] spear, which he darts into the otter whenever he comes within its reach. Great numbers are thus taken.

But to return to myself: We crossed the bay, which is about three miles in width. It is made by the entrance of a considerable river, called by the Spaniards Rio de San Francisco. After we reached the north shore, we travelled through a beautiful country, with a rich soil, well watered and timbered, and reached the Russian settlement in the night, having come a distance of thirty miles. As our journey had been made on foot, and we had eaten nothing, I was exceedingly fatigued and hungry. I accompanied my fellow travellers, who belonged here, to their wigwams, where I obtained some food, and a seal skin to sleep upon. Early in the morning I arose, and learning from one of my late companions where was the dwelling of the commander of the place, I proceeded towards it. I had become acquainted with this person while I was vaccinating the inhabitants of San Diego. He came there in a brig, and insisted upon my promising him that I would come and communicate the remedy to the people of his establishments, offering to recompense me for my services. I agreed to do what he wished, should it be in my power. Accordingly, finding that the Spaniard did not intend to keep a strict guard over my movements, I availed myself of this opportunity of fulfilling the expressed wish of Don Seraldo, for so was he called. I reached the place

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

pointed out to me by the friendly Indian, and was received by the above mentioned gentleman with the warmest expressions of kindness and friendship. He said that so long a time had elapsed since he saw me, he was afraid I had forgotten our conversation together, and that circumstances had rendered my coming to him impossible. He had suffered greatly from the fear that the small pox would spread among his people, before he should be enabled to prevent danger from it, through the means of the kine pox.

After breakfast, he circulated an order among the people, for all who wished to be provided with a safe guard against the terrible malady that had approached them so near, to come to [219] his door. In a few hours I began my operations; and continued to be constantly occupied for three days, vaccinating during this period fifteen hundred individuals. I reminded them all that they must return on the fourth day, provided no signs of the complaint appeared; and that they were not to rub, or roughly touch the spot, should the vaccine matter have proper effect.

This done, Don Seraldo offered to accompany me through the fort and around the settlement, in order to show me the position, and every thing which might be new and interesting to me. Its situation is one of the most beautiful that I ever beheld, or that the imagination can conceive. The fort stands on the brow of a handsome hill, about two hundred feet above the level of the sea. This hill is surrounded on all sides for two miles with a charming plain. A lofty mountain whose sides present the noblest depth of forest, raises a summit, glittering with perpetual ice and snow on one hand, and on the other the level surface is lost in the waves of the sea. Clear cold streams pour down the mountain, unceasingly from different points, and glide through the plain, imparting moisture and verdure. The same multitudes of domestic animals, that are every where seen in this country, graze around in the pastures. They find abundant pasturage in the wild oats, which grow spontaneously upon this coast. Very little attention is paid to cultivation, where so many advantages are united to favor it. The amount of produce of any kind raised is small, and the inhabitants depend for bread entirely upon the Spaniards.

I remained in this delightful place one week. At the expiration of this time Don Seraldo gave me one hundred dollars, as payment for my services, and then mounted me upon a horse and conducted me back to the bay himself, and remained on the shore, until he saw me safe upon the other side.

I soon saw myself again in the presence of the Spanish priest, from whom I was to receive my recompense for the services performed on my long tour. He was not aware where I had been, until I informed him. When I had told him, he asked [220] me what Don Seraldo had paid me? I stated this matter as it was. He then demanded of me, how I liked the coast of California? I answered, that I very much admired the appearance of the country. His next question was, how I would like the idea of living in it? It would be agreeable to me, I returned, were it subject to any other form of government. He proceeded to question me upon the ground of my objections to the present form of government? I was careful not to satisfy him on this point.

He then handed me a written piece of paper, the translation of which is as follows:

I certify, that James O. Pattie has vaccinated all the Indians and whites on this coast, and to recompense him for the same, I give the said James O. Pattie my obligation for one thousand head of cattle, and land to pasture them; that is, 500 cows and 500 mules. This he is to receive after he becomes a Catholic, and a subject of this government. Given in the mission of St. Francisco on the 8th of July, in the year 1829.

---

JOHN CABORTES

When I had read this, without making use of any figure of speech, I was struck dumb. My anger choked me. As I was well aware of the fact, that this man had it in his power to hang me if I insulted him, and that here there was no law to give me redress, and compel him to pay me justly for my services, I said nothing for some time, but stood looking him full in the face. I cannot judge whether he read my displeasure, and burning feelings in my countenance, as I thus eyed him, and would have sought to pacify me, or not; but before I made a movement of any kind, he spoke, saying, 'you look displeased, sir.' Prudential considerations were sufficient to withhold me no longer, and I answered in a short manner, that I felt at that moment as though I should rejoice to find myself once more in a country where I should be justly dealt by. He asked me, what I meant when I spoke of being justly dealt by? I told him [221] what my meaning was, and wished to be in my own country, where there are laws to compel a man to pay another what he justly owes him, without his having the power to attach to the debt, as a condition upon which the payment is to depend, the submission to, and gratification of, any of his whimsical desires. Upon this the priest's tone became loud and angry as he said, 'then you regard my proposing that you should become a Catholic, as the expression of an unjust and whimsical desire!' I told him 'yes, that I did; and that I would not change my present opinions for all the money his mission was worth; and moreover, that before I would consent to be adopted into the society and companionship of such a band of murderers and robbers, as I deemed were to be found along this coast, for the pitiful amount of one thousand head of cattle, I would suffer death.'

When I had thus given honest and plain utterance to the feelings, which swelled within me, the priest ordered me to leave his house. I walked out quickly, and possessed myself of my rifle, as I did not know, but some of his attendants at hand might be set upon me; for if the comparison be allowable the priests of this country have the people as much and entirely under their control and command, as the people of our own country have a good bidable dog. For fear they should come barking at me, I hastened away, and proceeded to a ranch, where I procured a horse for three dollars, which I mounted, and took the route for Monte El Rey. I did not stop, nor stay on my journey to this place. I found upon my arrival there, an American vessel in port, just ready to sail, and on the point of departure.

Meeting the Captain on shore, I made the necessary arrangements with him for accompanying him, and we went on board together. The anchor was now weighed, and we set sail. In the course of an hour, I was thoroughly sick, and so continued for one week. I do not know any word, that explains my feelings in this case so well as that of heart sickness. I ate nothing, or little all this time; but after I recovered, my appetite [222] returned in tenfold strength, and I never enjoyed better health in my life. We continued at sea for several months, sailing from one port to another, and finally returned to that of Monte El Rey, from which we had set sail.

It was now the 6th of January, 1830, and I felt anxious to hear something in relation to my companions, from whom I had so long been separated. I accordingly went on shore, where I met with a great number of acquaintances, both Americans and English. The latter informed me, that there was a revolution in the country, a part of the inhabitants having revolted against the constituted authorities. The revolted party seemed at present likely to gain the ascendancy. They had promised the English and Americans the same privileges, and liberty in regard to the trade on the coast, that belonged to the native citizens, upon the condition, that these people aided them in

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

their attempt to gain their freedom, by imparting advice and funds.

This information gladdened my very heart. I do not know, if the feeling be not wrong; but I instantly thought of the unspeakable pleasure I should enjoy at seeing the general, who had imprisoned me, and treated me so little like a man and a Christian, in fetters himself. Under the influence of these feelings, I readily and cheerfully appropriated a part of my little store to their use, I would fain have accompanied them in hopes to have one shot at the general with my rifle. But the persuasions of my countrymen to the contrary prevailed with me. They assigned, as reasons for their advice, that it was enough to give counsel and funds at first, and that the better plan would be, to see how they managed their own affairs, before we committed ourselves, by taking an active part in them, as they had been found to be a treacherous people to deal with.

On the 8th of the month, Gen. Joachim Solis placed himself at the head of one hundred and fifty soldiers well armed, and began his march from Monte El Rey to the fort of St. Francisco. He was accompanied by two cannon, which, he said, he should make thunder, if the fort was not quietly given up to him. Gen. Solis had been transferred from a command in the city of Mexico [223] to take command of the insurgents, as soon as they should have formed themselves into something like an organized party, and have come to a head. He had left Monte El Rey with such a force as circumstances enabled him to collect, recruiting upon his route, and inducing all to join him, whom he could influence by fair words and promises. As has been said, he threatened the fort of St. Francisco with a bloody contest, in case they resisted his wishes. He carried with him written addresses to the inhabitants, in which those, who would range themselves under his standard, were offered every thing that renders life desirable. They all flocked round him, giving in their adhesion. When he reached the fort, he sent in his propositions, which were acceded to, as soon as read by the majority. The minority were principally officers. They were all imprisoned by General Solis, as soon as he obtained possession of the place. He then proceeded to make laws, by which the inhabitants were to be governed, and placed the fort in the hands of those, upon whom, he thought he could depend.— These arrangements being all made, he began his return to Monte El Rey, highly delighted with his success.

There now seemed little doubt of his obtaining possession of the whole coast in the course of a few months. He remained at Monte El Rey increasing his force, and drilling the new recruits, until the 28th of March, when he again marched at the head of two hundred soldiers. The present object of attack was Santa Barbara, where the commander under the old regime was stationed. The latter was Gen. Echedio, my old acquaintance of San Diego, for whom I bore such good will. He was not in the least aware of the visit intended him by Gen. Solis; the latter having prevented any tidings upon the subject reaching him, by posting sentinels thickly for some distance upon the road, that lay between them, to intercept and stop any one passing up or down. The insurgent General had as yet succeeded in his plans; and was so elated with the prospect of surprising Gen. Echedio, and completely dispossessing him of his power, and consequently having all in his own hands, that he [224] did not consider it necessary any longer to conceal his real character. The professions of the kind purposes of the insurgent towards the English and Americans will be recollected; and also, that it was at a time when application was made by these Spaniards to them for aid. The tone was now changed. Threats were now made, with regard to the future treatment, which we, unfortunate foreigners, might expect, as soon as Gen. Solis became master of the coast. We learned this through a Mexican Spaniard, whose daughter Captain Cooper had married. This

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

old gentleman was told by the General, that he intended either to compel every American and Englishman to swear allegiance to the government, which should be established, or drive them from the country. This information was, however, not communicated to us, until the General had departed. We held a consultation upon the subject, to devise some means, which should render him incapable of carrying his good intentions towards us into effect. No other expedient suggested itself to us, but that of sending General Echedio information of the proposed attack, in time to enable him to be prepared for it. We agreed upon this, and a letter was written, stating what we deemed the points most necessary for him to know. The signatures of some of the principal men of the place were affixed to it; for those who think alike upon important points soon understand one another; and the character of Solis had not been unveiled to us alone. It was important, that General Echedio should attach consequence to our letter, and the information, it contained, would come upon him so entirely by surprize, that he might very naturally entertain doubts of its correctness. I added my name to those of the party to which I belonged. The object now was to have our document conveyed safely into the hands of Gen. Echedio. We sent a runner with two good horses and instructions, how to pass the army of Solis in the night undiscovered. All proceedings had been conducted with so much secrecy and caution, that the matter so far rested entirely with ourselves. We occasionally heard the citizens around [225] us express dislike towards the insurgent General; but as they did not seem inclined to carry their opinions into action, we concluded these were only remarks made to draw out our thoughts, and took no notice of them. From after circumstances I believe, that the number of his enemies exceeded that of his friends; and that the remarks, of which I have spoken, were made in truth and sincerity. Mean while we impatiently awaited some opportunity of operating to the disadvantage of the General, and to hear what had taken place between him and Gen. Echedio. A messenger arrived on the 12th of April with the information, that the commander of the insurgents had ranged his men for three days in succession before the fort upon the plain. A continual firing had been kept up on both sides, during the three days, at the expiration of which Gen. Solis, having expended his ammunition, and consumed his provisions, was compelled to withdraw, having sustained no loss, except that of one horse from a sustained action of three days! The spirit with which the contest was conducted may be inferred from a fact, related to me. The cannon balls discharged from the fort upon the enemy were discharged with so little force, that persons arrested them in their course, without sustaining any injury by so doing, at the point, where in the common order of things, they must have inflicted death.

Upon the reception of this news, we joined in the prevalent expression of opinion around us. The name and fame of Gen. Solis was exalted to the skies. All the florid comparisons, usual upon such occasions, were put in requisition, and all the changes were sung upon his various characteristics wit, honor and courage. The point was carried so far as to bring him within some degrees of relationship to a supernatural being. Then the unbounded skill he displayed in marshalling his force, and his extreme care to prevent the useless waste of his men's lives were expatiated upon, and placed in the strongest light. The climax of his excellence was his having retreated without the loss of a man. This was the burden of our theme to his friends, that is, the fifty soldiers, in whose charge he had left the command of the [226] fort. The Captain Cooper, of whom I have spoken, looked rather deeper into things, than those around him; and consequently knew the most effectual means of operating upon the inefficient machines, in the form of men, which it was

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

necessary for our present purpose, to remove out of the way for a time. Accordingly he rolled out a barrel of good old rum, inviting all the friends of the good and great Gen. Solis to come, and drink his health. The summons was readily obeyed by them. Being somewhat elevated in spirit by the proceedings of their noble general, previous to swallowing the genuine inspiration of joy, the feeling afterwards swelled to an extent, that burst all bounds, and finally left them prostrate and powerless. We, like good Christians, with the help of some of the inhabitants, conveyed them into some strong houses, which stood near, while they remained in their helpless condition, locking the doors safely, that no harm might come to them. In our pity and care for them, we proposed, that they should remain, until they felt that violent excitements are injurious, from the natural re-action of things. We now proceeded to circulate another set of views, and opinions among the inhabitants in the vicinity of the fort; and such was our success in the business of indoctrination, that we soon counted all their votes on our side.

General Solis was now pitched down the depths, as heartily as he had before been exalted to the heights. Huzza for Gen. Echedio and the Americans! was the prevailing cry.

The next movement was to make out a list of our names, and appoint officers. Our number including Scotch, Irish, English, Dutch and Americans, amounted to thirty-nine. The number of Americans, however, being the greatest, our party received the designation of American. Captain Cooper was our commanding officer. We now marched up to the castle, which is situated on the brink of a precipice, overlooking the sea, and found four brass field pieces, mounted on carriages. These we concluded to carry with us to the fort. The remainder placed so as to command a sweep of the surface of water below, and the surrounding ground, we spiked fearing, ff they fell into the [227] hands of Solis, that he might break down our walls with them. This done, we went to the magazine, and broke it open, taking what powder and ball we wanted. We then posted sentinels for miles along the road, to which we knew Solis was hastening in order to prevent news of our proceedings from reaching him, before it was convenient for us, that he should know them. We were aware of his intention to return here to recruit again, and it was our wish to surprize him by an unexpected reception, and thus obtain an advantage, which should counterbalance his superiority of numbers. In so doing, we only availed ourselves of the precedent, he had given us, in his management with regard to Gen. Echedio. He had not derived benefit from his plan, in consequence of his too great confidence of success, which led him to discover his real feelings towards our people.

We hoped to avail ourselves of what was wise in his plan, and profit by his mistakes. We shut up all the people, both men and women, in the fort at night, that it might be out of their power to attempt to make their way, under the cover of darkness, through our line of sentinels, to give information, should the inclination be felt. Our precautions were not taken through fear of him, should he even come upon us, prepared to encounter us as enemies: but from the wish to take both himself and army prisoners. Should they learn what we had done, we feared, they would pass on to St. Francisco, to recruit, and thus escape us.

Our designs were successful; for in a few days General Solis and his men appeared in sight of the first of our sentinels, who quickly transmitted this information to us. Our preparations for receiving him were soon made, with a proper regard to politeness. A regale of music from air instruments, called cannons, was in readiness to incline him to the right view of the scene before him, should he seem not likely to conform to our wish, which was, simply, that he should surrender to

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

us without making any difficulty.

Our fortification was in the form of a square, with only one entrance. From each side of this entrance a wall projected at [228] right angles from it fifty yards. The Spaniards call them wings; and it seems to me a significant and fitting name for them. We intended to allow the approaching party to advance between these walls, before we began our part. Our cannons were charged with grape and balls, and placed in a position to produce an effect between the walls. Every man was now at his post, and General Solis approaching within sight of the fort, a small cannon which accompanied him was discharged by way of salute. No answer was returned to him. The piece was reloaded, and his fife and drum began a lively air, and the whole body moved in a quick step towards the fort, entering the space between the wings, of which I have spoken. This was no sooner done than our matches were in readiness for instant operation. Captain Cooper commanded them to surrender. He was immediately obeyed by the soldiers, who threw down their arms, aware that death would be the penalty of their refusal. The General and six of his mounted officers fled, directing their course to St. Francisco. Six of our party were soon on horseback with our rifles, and in pursuit of them. I had been appointed orderly sergeant, and was one of the six. We carried orders from the principal Spanish civil officer, who was in the fort, and had taken an active part in all our proceedings, to bring the General back with us, either dead or alive. The commands of our military commander, Captain Cooper, spoke the same language.

I confess that I wanted to have a shot at the fugitive, and took pleasure in the pursuit. We went at full speed, for our horses were good and fresh. Those belonging to the party we were so desirous to overtake, would of course be somewhat weary, and jaded by their long journey. We had not galloped many miles, before we perceived them in advance of us. As soon as we were within hearing distance of each other, I called upon them to surrender. They replied by wheeling their horses and firing at us, and then striking their spurs into their horses' sides, to urge them onward. We followed, producing more effect with our spurs than they had done, and calling upon [229] them again to surrender, or we should fire, and give no quarter. They at length reined up, and six dismounted and laid down their arms. The seventh remained on horse back, and as we came up, fired, wounding one of our number slightly in the right arm. He then turned to resume his flight; but his horse had not made the second spring, before our guns brought the hero from his saddle. Four of our balls had passed through his body. The whole number being now assembled together, victors and vanquished, General Solis offered me his sword. I refused it, but told him, that himself and his officers must accompany me in my return to the fort. He consented to this with a countenance so expressive of dejection, that I pitied him, notwithstanding I knew him to be a bad man, and destitute of all principle.

The man who had lost his life through his obstinacy, was bound upon his horse, and the others having remounted theirs, we set out upon our return. Our captives were all disarmed except General Solis, who was allowed to retain his sword. We reached the fort three hours before sunset. The General and his men were dismounted, and irons put upon their legs, after which they were locked up with those who had forgotten themselves in their joy at the good fortune of their poor general.

These events occurred on the 18th of March. On the 20th the civil officer of whom I have before spoken, together with Captain Cooper, despatched a messenger to General Echedio, who was still in Santa Barbara with written intelligence of what we had accomplished. It was stated that the

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

Americans were the originators of the whole matter, and that their flag was waving in the breeze over Monte El Rey, where it would remain, until his excellency came himself to take charge of the place; and he was requested to hasten his departure, as they who had obtained possession were anxious to be relieved from the care and responsibility they found imposed upon them.

We were very well aware that he would receive our information with unmingled pleasure, as he expected Solis would return in a short time to Santa Barbara, to give him another battle. [230] It was said, that upon the reception of the letter he was as much rejoiced as though he had been requested to come and take charge of a kingdom. As soon as he could make the necessary arrangements he came to Monte El Rey, where he arrived on the 29th. We gave the command of the place up to him; but before he would suffer our flag to be taken down, he had thirty guns discharged in honor of it. He then requested a list of our names, saying, that if we would accept it, he would give each one of us the right of citizenship in his country. A splendid dinner was made by him for our party. On the night of the 29th a vessel arrived in the port. In the morning it was found to be a brig belonging to the American consul at Macho, John W. Jones, esq., who was on board of it. This was the same person to whom I wrote when in prison at San Diego by Mr. Perkins. I met with him, and had the melancholy pleasure of relating to him in person my sufferings and imprisonment, and every thing, in short, that had happened to me during my stay in this country. This took place in my first interview with him. He advised me to make out a correct statement of the value of the furs I had lost by the General's detention of me, and also of the length of time I had been imprisoned, and to take it with me to the city of Mexico, where the American minister resided, and place it in his hands. It was probable, the consul continued, that he would be able to compel the Mexican government to indemnify me for the loss of property I had sustained, and for the injustice of my imprisonment.

The probability of my success was not slight, provided I could establish the truth of my statement, by obtaining the testimony of those who were eye witnesses of the facts. I informed the consul that I had not means to enable me to reach the city of Mexico. A gentleman who was present during this conversation, after hearing my last remark, mentioned that he was then on his way to that place, and that if I would accompany him he would pay my expenses; and if circumstances should happen to induce me to think of returning thence to the United States, I should do so free of expense. I expressed my thanks [231] for this offer, and said that if I succeeded in recovering only a portion of what I had lost I would repay the money thus kindly expended in my behalf; but the obligation of gratitude imposed by such an act, it would be impossible for me to repay.

In conformity to Mr. Jones' advice and instruction, I sat myself down to make out an account for the inspection of the American minister. When I had completed it, I obtained the signatures, of some of the first among the inhabitants of Monte El Rey, and that of the civil officer before mentioned, testifying as to the truth of what I said, so far as the circumstances narrated had come under their observation. The General having received the list of our names, which he had requested, he now desired, that we might all come to his office, and receive the right of citizenship from his hand, as a reward for what we had done. I put my paper in my pocket, and proceeded with my companions and Mr. Jones to the indicated place. The General had been much surprized to find my name in the list furnished him; but as I entered the room, he arose hastily from his seat and shook my hand in a friendly manner, after which I introduced him to the consul. He seemed surprized as he heard the name of this gentleman, but said nothing. After pointing us to seats, he

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

walked out of the room, saying he should return in a few moments. I concluded, that he thought, I had brought the consul, or that he had accompanied me for the purpose of questioning him on the subject of my imprisonment and that of my companions. He returned, as soon as he had promised, having some papers in his hand. After he had seated himself, he began to interrogate me with regard to what had happened to me, during the long time that had elapsed since he had last seen me, adding, that he did not expect ever to have met me again; but was happy to see me a citizen of his country. My answer in reply to the last part of his remarks was short. I told him, he had not yet enjoyed any thing from that source, and with my consent never should.

He looked very serious upon this manifestation of firmness, or [232] whatever it may be called on my part, and requested to know my objections to being a citizen of the country?

I replied that it was simply having been reared in a country where I could pass from one town to another, without the protection of a passport, which instead of affording real protection, subjected me to the examination of every petty officer, near whom I passed, and that I should not willingly remain, where such was the order of things. Besides, I added, I was liable to be thrown into prison like a criminal, at the caprice of one clothed with a little authority, if I failed to show a passport, which I might either lose accidentally, or in some way, for which I might not have been in the least in fault.

The General, in reply, asked me if in my country a foreigner was permitted to travel to and fro, without first presenting to the properly constituted authorities of our government, proof from those among the officers of his own government appointed for that purpose, of his being a person of good character, who might safely be allowed to traverse the country? I told him I had once attempted to satisfy him on that head, and he very abruptly and decidedly contradicted my account; and that now I did not feel in the least compelled, or inclined to enter upon the matter a second time. All which I desired of him, and that I did not earnestly desire, was, that he would give me a passport to travel into my own country by the way of the city of Mexico. If I could once more place my foot upon its free soil, and enjoy the priceless blessings of its liberty, which my unfortunate father, of whom I could never cease to think, and who had died in his prison, assisted in maintaining, I should be satisfied.

While I thus spoke, he gazed steadily in my face. His swarthy complexion grew pale. He read in my countenance a strong expression of deep feeling, awakened by the nature of the remembrances associated with him. He felt that there was something fearful in the harvest of bitterness which the oppressor reaps in return for his injuries and cruelties. I thought, he [233] feared, if he did not grant my request for a pass, that I might carry into execution the purposes of vengeance; to which I used to give utterance in my burning indignation at his conduct at the time of my father's death. Whenever I saw him pass my prison I seized the opportunity to tell him, that if my time for redress ever came, he would find me as unflinching in my vengeance as he had been in his injuries. I only expressed the truth with regard to my feelings at the time, and even now I owe it to candor and honesty to acknowledge, that I could have seen him at the moment of this conversation suffer any infliction without pity.

He did not hesitate to give the pass I desired; but asked me what business led me out of my way to the United States around by the city of Mexico? My direct course, he remarked, lay in a straight direction through New Mexico. For reply, I drew out of my pocket the paper I had written before coming to his office, and read it to him, telling him that was the business which led me to the

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

city of Mexico. I then asked him if all the facts there stated were not true? His answer was in the affirmative; 'but,' added he, 'you will not be able to recover any thing, as I acted in conformity to the laws of my country. If you will remain in this country I will give you something handsome to begin with.' I assured him that I would not stay, but I wished him to show me the laws which allowed, or justified him in imprisoning myself and my companions for entering a country as we did, compelled by misfortunes such as ours. In return, he said he had no laws to show, but those which recommended him to take up and imprison those whom he deemed conspirators against his country. 'What marks of our being conspirators did you discover in us,' rejoined I, 'which warranted your imprisoning us? I am aware of none, unless it be the evidence furnished by our countenances and apparel, that we had undergone the extreme of misfortune and distress, which had come upon us without any agency on our part, and as inevitable evils to which every human being is liable. We were led by the hope of obtaining relief, to seek refuge in your protection. [234] In confirmation of our own relation, did not our papers prove that we were Americans, and that we had received legal permission from the very government under which we then were, to trade in the country? The printed declaration to this effect, given us by the governor of Santa Fe, which we showed you, you tore in pieces before us, declaring it was neither a license nor a passport.' The General replied, that he did tear up a paper given him by us, but that in fact it was neither a passport nor a license.

"Now sir," said I, "I am happy that it is in my power to prove, in the presence of the American consul, the truth of what I have said with regard to the license." I then produced another copy of the paper torn up by him, which had been given my father by the governor of Santa Fe, at the same time with the former. He looked at it, and said nothing more, except that I might go on, and try what I could do in the way of recovering what I had lost.

The consul and myself now left him, and returned to Capt. Cooper's. The consul laughed at me about my quarrel with the General. In a few moments the latter appeared among us, and the remainder of the day passed away cheerfully in drinking toasts. When the General rose to take leave of us, he requested the consul to call upon him at his office; as he wanted to converse with him upon business. The consul went, according to request, and the General contracted with him for the transportation of Gen. Solis, and sixteen other prisoners to San Blas, on board his vessel, whence they were to be carried to the city of Mexico. The 7th of May was fixed for the departure of the brig, as the General required some time for making necessary arrangements, and preparing documents to accompany the transmission of the prisoners. When I heard that this delay was unavoidable, I went to the General and returned my passport, telling him I should want another, when the vessel was ready to sail, as I intended to proceed in it as far as San Blas. He consented to give me one, and then joked with me about the [235] honor, I should enjoy, of accompanying Gen. Solis. I replied in the same strain, and left him.

Captain William H. Hinkley and myself went to the mission of San Carlos, where we spent three days. During the whole time, we did little beside express our astonishment at what we saw. We had fallen upon the festival days of some saint, and the services performed in his honor all passed under our eyes. They were not a few, nor wanting in variety, as this was a noted festival. Our admiration, however, was principally excited by the contest between grizzly bears and bulls, which constitutes one of the exhibitions of these people.

Five large grey bears had been caught, and fastened in a pen built for the purpose of confining the

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

bulls, during a bullbaiting. One of the latter animals, held by ropes, was brought to the spot by men on horseback, and thrown down. A bear was then drawn up to him, and they were fastened together by a rope about fifteen feet in length, in such a manner, that they could not separate from each other. One end of it is tied around one of the forefeet of the bull, and the other around one of the hind feet of the bear. The two were then left to spring upon their feet. As soon as this movement is made, the bull makes at the bear, very often deciding the fate of the ferocious animal in this first act. If the bull fails in goring the bear, the fierce animal seizes him and tears him to death. Fourteen of the latter lost their lives, before the five bears were destroyed. To Captain Hinkley this was a sight of novel and absorbing interest. It had less of novelty for me, as since I had been on the coast, I had often seen similar combats, and in fact worse, having been present when men entered the enclosure to encounter the powerful bull in his wild and untamed fierceness. These unfortunate persons are armed with a small sword, with which they sometimes succeed in saving their own lives at the expense of that of the animal.

I once saw the man fall in one of these horrible shows; they are conducted in the following manner: the man enters to the bull with the weapon, of which he avails himself, in the right [236] hand, and in the left a small red flag, fastened to a staff about three feet in length. He whistles, or makes some other noise, to attract the attention of the animal, upon hearing which the bull comes towards him with the speed of fury. The man stands firm, with the flag dangling before him, to receive this terrible onset. When the bull makes the last spring towards him, he dexterously evades it, by throwing his body from behind the flag to one side, at the same time thrusting his sword into the animal's side. If this blow is properly directed, blood gushes from the mouth and nostrils of the bull, and he falls dead. A second blow in this case is seldom required.

Another mode of killing these animals is by men on horseback, with a spear, which they dart into his neck, immediately behind the horns. The horse is often killed by the bull. When the animal chances to prefer running from the fight to engaging in it, he is killed by the horseman, by being thrown heels over head. This is accomplished by catching hold of the tail of the bull in the full speed of pursuit, and giving a turn around the head of the saddle, in such a manner, that they are enabled to throw the animal into any posture they choose.

After we returned to the fort, it took us some time to relate what we had seen, to the consul. Feeling it necessary to do something towards supporting myself, during the remaining time of my stay in this part of the country, I took my rifle, and joined a Portuguese in the attempt to kill otters along the coast. We hunted up and down the coast, a distance of forty miles, killing sixteen otters in ten days. We sold their skins, some as high as seventy-five dollars, and none under twenty-five. Three hundred dollars fell to my share from the avails of our trip. Captain Cooper was exceedingly desirous to purchase my rifle, now that I should not be likely to make use of it, as I was soon to proceed on my journey to the city of Mexico. I presented it to him, for I could not think of bartering for money, what I regarded, as a tried friend, that had afforded me the means of subsistence and protection for so long a time. My [237] conscience would have reproached me, as though I had been guilty of an act of ingratitude.

The period of my departure from this coast was now close at hand, and my thoughts naturally took a retrospect of the whole time, I had spent upon it. The misery and suffering of various kinds, that I had endured in some portions of it, had not been able to prevent me from feeling, and acknowledging, that this country is more calculated to charm the eye, than any one I have

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

ever seen. Those, who traverse it, if they have any capability whatever of perceiving, and admiring the beautiful and sublime in scenery, must be constantly excited to wonder and praise. It is no less remarkable for uniting the advantages of healthfulness, a good soil, a temperate climate, and yet one of exceeding mildness, a happy mixture of level and elevated ground, and vicinity to the sea. Its inhabitants are equally calculated to excite dislike, and even the stronger feelings of disgust and hatred. The priests are omnipotent, and all things are subject to their power. Two thirds of the population are native Indians under the immediate charge of these spiritual rulers in the numerous missions. It is a well known fact, that nothing is more entirely opposite to the nature of a savage, than labor. In order to keep them at their daily tasks, the most rigid and unremitting supervision is exercised. No bondage can be more complete, than that under which they live. The compulsion laid upon them has, however, led them at times to rebel, and endeavor to escape from their yoke. They have seized upon arms, murdered the priests, and destroyed the buildings of the missions, by pre-concerted stratagem, in several instances. When their work of destruction and retribution was accomplished, they fled to the mountains, and subsisted on the flesh of wild horses which are there found in innumerable droves. To prevent the recurrence of similar events, the priests have passed laws, prohibiting an Indian the use or possession of any weapon whatever, under the penalty of a severe punishment.

On the 25th I addressed the companions of my former journeyings and imprisonment in San Diego by letter. They had [238] remained in the town of Angels, during the months which had elapsed since my separation from them, after our receiving liberty upon parole. I had kept up a constant correspondence with them in this interval. My objects at present were to inform them of my proposed departure for my native country, and request them, if they should be called upon so to do, to state every thing relative to our imprisonment and loss of property, exactly as it took place. I closed, by telling them, they might expect a letter from me upon my arrival in the city of Mexico.

On the 8th of May I applied for my passport, which was readily given me, and taking leave of the General and my friends, I entered the vessel, in which I was to proceed to San Blas, at 8 o'clock in the morning. The sails of the brig, which was called the Volunteer, were soon set, and speeding us upon our way. The green water turned white, as it met the advance of our prow, and behind us we left a smooth belt of water, affording a singular contrast to the waves around. I watched the disappearance of this single smooth spot, as it was lost in the surrounding billows, when the influence of the movement of our vessel ceased, as a spectacle to be contemplated by a land's man with interest. But no feeling of gratification operated in the minds of the poor prisoners in the hold. They were ironed separately, and then all fastened to a long bar of iron. They were soon heard mingling prayers and groans, interrupted only by the violent vomiting produced by sea sickness. In addition to this misery, when fear found entrance into their thoughts during the intervals of the cessation of extreme sickness, it seemed to them, as if every surge the vessel made must be its last. In this miserable condition they remained, until the 19th, when we arrived at San Blas. The prisoners here were delivered into the charge of the commanding officer of the place. Captain Hinkley, his mate, Henry Vinal, and myself disembarked at this place, in order to commence our journey over land to Mexico. The necessary arrangements for our undertaking occupied us three days. We found the season warm on our arrival here. Watermelons were abundant, and also green [239] corn, and a great variety of ripe fruit. Two crops of corn and wheat are raised

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

in the year. A precipice was shown me, over which, I was told, the Mexicans threw three old priests at the commencement of the revolt against the king of Spain.— This port is the centre of considerable business in the seasons of spring and fall. During the summer, the inhabitants are compelled to leave it, as the air becomes infected by the exhalations, arising from the surrounding swamps. Myriads of musquitos and other small insects fill the air at the same time, uniting with the former cause to render the place uninhabitable.

Great quantities of salt are made upon the flats in the vicinity of San Blas. I did not inform myself accurately, with regard to the manner, in which it is made; but as I was passing by one day, where the preparation of it was carried on, I observed what struck me as being both curious and novel. The earth was laid off in square beds. Around their edges dirt was heaped up, as though the bed, which I have mentioned, was intended to be covered with water.

We began our journey well armed, as we had been informed that we should, in all probability, find abundant occasion to use our arms, as we advanced. Our progress was slow, as we conformed to the directions given us, and kept a constant look out for robbers, of whom there are said to be thousands upon this route.

On the 25th we reached a small town called Tipi, where we remained one day to rest from our fatigue, and then set off again for Guadalaxara, distant eight days' journey. Our path led us through a beautiful country, a great portion of which was under cultivation. Occasionally we passed through small villages. Beggars were to be seen standing at the corners of all the streets, and along the highways. They take a station by the road side, having a dog or child by them, to lead them into the road when they see a traveller approaching. They stand until the person reaches the spot upon which they are, when they ask alms for the sake of a saint, whose image is worn suspended around their neck, or tied around the wrist. [240] This circumstance of begging for the saint, and not for themselves, struck me as a new expedient in the art of begging. At first we gave a trifle to the poor saint. As we went on we found them so numerous that it became necessary for us to husband our alms, and we finally came to the conclusion that the large brotherhood of beggars could occasionally diversify their mode of life by a dexterous management of their fingers, and shut our purses to the demands of the saints. The country for some time before we drew near Guadalaxara, was rather barren, although its immediate vicinity is delightful.

We reached that city on the 2d of June, and spent three days in it. It is situated upon a fine plain, which is overspread by the same numbers of domestic animals that I had seen in New Mexico and California. The city is walled in, with gates at the different entrances. These gates are strongly guarded, and no one is allowed to enter them until they have been searched, in order to ascertain if they carry any smuggled goods about them. The same precaution is used when any one passes out of the city. A passport must be shown for the person, his horse, and arms, and a statement from the principal peace officer, of the number of trunks with which he set out upon his journey, and their contents. This caution is to prevent smuggling; but it does not effect the purpose, as there is more contraband trade here, than in any place I was ever in before. I was not able to ascertain the number of inhabitants of this city. The silver mines of Guanaxuato are near Guadalaxara. They are carried on at present by an English company. The evening before our departure we went to the theatre. The actresses appeared young and beautiful, and danced and sung charmingly.

The 5th day of June we resumed our journey to the city of Mexico. Again we travelled through a

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

charming country, tolerably thickly settled. On our way we fell in company with an officer belonging to the service of the country. He had ten soldiers with him. Upon his demanding to see our passports we showed them to him, though he had no authority to make [241] such a demand. After he had finished their perusal he returned them with such an indifferent air, that I could not resist an inclination to ask him some questions that might perhaps have seemed rude. I first asked him what post he filled in the army? He answered, with great civility, he was first lieutenant. I then requested to know, to what part of the country he was travelling? He said, still in a very civil manner, that he had had the command of some troops in Guanaxuato, but was now on his way to the city of Mexico, to take charge of the 6th regiment, which was ordered to the province of Texas, to find out among the Americans there, those who had refused obedience to the Mexican laws. He added, that when he succeeded in finding them, he would soon learn them to behave well. The last remark was made in rather a contemptuous tone of voice, and with something like an implied insult to me. This warmed my blood, and I replied in a tone not so gentle as prudence might have counselled a stranger in a foreign land to have adopted, that if himself and his men did not conduct themselves properly when they were among the Americans, the latter would soon despatch them to another country, which they had not yet seen; as the Americans were not Mexicans, to stand at the corner of a house, and hide their guns behind the side of it, while they looked another way, and pulled the trigger. At this he flew into a passion. I did not try to irritate him any further, and he rode on and left us. We pursued our way slowly, and stopped for the night at Aguabuena, a small town on the way. We put up at a house, a sort of posada, built for lodging travellers.— Twenty-five cents is the price for the use of a room for one night. It is seldom that any person is found about such an establishment to take charge of it but an old key bearer. Provisions must be sought elsewhere. It is not often necessary to go further than the street, where, at any hour in the day until ten o'clock at night, men and women are engaged in crying different kinds of eatables. We generally purchased our food of them. After we had finished our supper two English gentlemen entered, who were on their way to the city of Mexico. [242] We concluded to travel together, as our point of destination was the same, and we should be more able to resist any adversaries we might encounter; this country being, as I have before mentioned, infested with robbers and thieves, although we had not yet fallen in with any. These gentlemen informed us that the greatest catholic festival of the whole year was close at hand. If we could reach the city of Mexico before its celebration, we should see something that would repay us for hastening our journey. As we were desirous to lose the sight of nothing curious, we proceeded as fast as circumstances would permit, and reached the city on the 10th, late in the evening, and put up at an inn kept by an Englishman, although, as in the other towns in which we had been, we were obliged to seek food elsewhere, the only accommodation at the inn being beds to sleep in, and liquors to drink. We found supper in a coffee house. We were awakened early in the morning by the ringing of bells. As we stepped into the street we met three biers carried by some men guarded by soldiers. Blood was dropping from each bier. The bearers begged money to pay the expenses of burying the bodies. I afterwards learned that these persons were murdered on the night of our arrival, upon the Alameda, a promenade north of the city, in one of the suburbs. We visited this place, and found it covered with thousands of people, some walking, and others sitting on the seats placed around this public pleasure ground. Small parties are sheltered from view by thickets of a growth, like that in our country, used for

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

hedges. The open surface is surrounded by a hedge of the same shrub. These partially concealed parties are usually composed of men and women of the lowest orders, engaged in card playing. Such are to be seen at any hour of the day, occupied in a way which is most likely to terminate the meeting in an affray, and perhaps murder. Blood is frequently shed, and I judged from what I saw of the order of things, that the accounts of the numerous assassinations committed among this populace, were not exaggerated. One of the characteristics of this people [243] is jealousy. Notwithstanding the danger really to be apprehended from visiting this place after certain hours, my two companions and myself spent several evenings in it without being molested in the slightest degree. But one evening as we were returning to our lodgings, we were compelled to kneel with our white pantaloons upon the dirty street, while the host was passing. We took care afterwards to step into a house in time to avoid the troublesome necessity.

We attended a bull baiting, and some other exhibitions for the amusement of the people. Being one evening at the theatre, I had the misfortune to lose my watch from my pocket, without being aware when it was taken. It would have been useless for me to have thought of looking around for it, as I stood in the midst of such a crowd that it was almost an impossibility to move.

The accounts of this city which I had met with in books led me to expect to find it placed in the midst of a lake, or surrounded by a sheet of water. To satisfy myself with regard to the truth of this representation, I mounted a horse, and made the circuit of the city, visiting some villages that lay within a league of it. I found no lake; but the land is low and flat. A canal is cut through it, for the purpose of carrying off the water that descends from the mountains upon the level surface, which has the appearance of having been formerly covered with water. A mountain which is visible from the city, presents a circular summit, one part of which is covered with snow throughout the year: upon the other is the crater of a volcano, which is continually sending up proof of the existence of an unceasing fire within.

Early upon the first day of my arrival in this city, I waited upon Mr. Butler, the American charge d'affairs. After I had made myself known to him he showed me a communication from President Jackson to the President of this country, the purport of which was, to request the latter to set at liberty some Americans, imprisoned upon the coast of California. I then handed him the statement I had made according to the advice [244] of Mr. Jones. He asked me many questions relative to the losses I had sustained, which I answered, and then took my leave.

A number of coaches were to leave the city for Vera Cruz on the 18th of June. My companions and myself took places in one of them. On the 15th I again called upon Mr. Butler to obtain a passport to Vera Cruz, where I intended to embark for America. He took me to the palace of the President, in order that I might get my passport. This circumstance was agreeable to me, as I was desirous to see this person, of whom I had heard so much. Upon arriving at the palace I found it a splendid building, although much shattered by the balls discharged at it by the former President Guerero, who is now flying from one place to another with a few followers, spreading destruction to the extent of his power. A soldier led me into the presence of the President. He was walking to and fro when I entered the room, apparently in deep meditation. Several clerks were present, engaged in writing. He received me politely, bowing as I advanced, and bade me sit down. In answer to his inquiry what I wished of him? I told my errand. He then asked me from what direction I came? I replied, from California. California! said he, repeating the word with an air of interest. I answered again, that I left that part of the country when I began my present journey. You must

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

have been there then, rejoined he, when the late revolution took place, of which I have but a short time since received information. I remarked, that I was upon the spot where it occurred, and that I took my departure from the coast in the same vessel that brought sixteen of the captives taken in the course of its progress, and that I disembarked at St. Blas at the same time that they were taken from the vessel. He resumed the conversation by saying, you were probably one of the Americans who, I am told, assisted in subduing the revolted party. I told him, he was correct in his opinion; and by so doing I had had the good fortune to gain my liberty. His countenance expressed surprise at the conclusion of my remark; and he proceeded [245] to ask me, what meaning I had, in saying that I had thus regained my own liberty? I then related my story; upon which he said he had understood that General Echedio had acted contrary to the laws, in several instances, and that, in consequence, he had ordered him to Mexico to answer for his conduct. I was surprised at the condescension of the President in thus expressing to me any part of his intentions with regard to such a person. I accounted for it by supposing that he wished to have it generally understood, that he did not approve of the unjust and cruel treatment which the Americans had received. The president appeared to me to be a man of plain and gentlemanly manners, possessing great talent. In this I express no more than my individual opinion; to which I must add that I do not consider myself competent to judge of such points, only for myself. He gave me a passport, and I returned to Mr. Butler's office, who informed me that he wished me to take a very fine horse to Vera Cruz, for the American consul at that place. He said that I would find it pleasant to vary my mode of travelling, by occasionally riding the horse. I readily consented to his wish, requesting him to have the horse taken to the place from which the coach would set off, early in the morning, when I would take charge of it. I now took leave of Mr. Butler and proceeded to my lodgings.

I found both my companions busily engaged in packing, and arranging for departure. I immediately entered upon the same employment. I had two trunks; one I filled with such articles as I should require upon my journey; and in another I placed such as I should not be likely to use, and a great many curiosities which I had collected during my long wanderings. The latter trunk I did not calculate to open until I reached my native land.

At 8 o'clock on the morning of the 16th our coach left the city, in company with two others. We were eight in number, including the coachman. Three of the party were ladies. One was a Frenchwoman, a married lady travelling without her husband. Another was a Spanishwoman, who had married [246] a wealthy Irishman, and was accompanied by her husband. The third was the wife of a Mexican officer, also one of the eight. This gentleman was an inveterate enemy of the displaced President General Guero. We journeyed on very amicably together, without meeting with the slightest disturbance, until the second day, when, about three o'clock in the afternoon, we were met by a company of fifty men, all well mounted and armed. At first sight of them we had supposed them to be a party which had been sent from the city in search of some highwaymen who had committed murder and robbery upon the road on which we were travelling, a few days previous to our departure. A few minutes served to show us our mistake.— They surrounded the coaches, commanding the drivers to halt, and announcing themselves as followers of General Guero. They demanded money, of which they stated that they were in great need. The tone of this demand was, however, humble, such as beggars would use. While they addressed us in this manner, they contrived to place themselves among and around the persons of our party in such a way as to obtain entire command of us. The instant they had completed this purpose, they pre-

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

sented their spears and muskets, and demanded our arms. We resigned them without offering an objection, as we saw clearly, that opposition would be unavailing. They now proceeded to take from us what they thought proper. I was allowed to retain my trunk of clothing for my journey. The Mexican officer was sitting by his wife in the coach. Some of the soldiers seized him, and dragged him from his almost distracted wife out of the carriage. His fate was summarily decided, and he was hung upon a tree. When this dreadful business was terminated, we were ordered to drive on. We gladly hastened from such a scene of horror. But the agony of the unfortunate wife was an impressive memorial to remind us of the nature of the late occurrence, had we needed any other than our own remembrances. We left this afflicted lady at Xalapa, in the care of her relations. A great quantity of jalap, which is so much used in medicine, is obtained from this place. [247] After leaving Xalapa, we advanced through a beautiful country. We passed many small towns on this part of our route.

Our course had been a continued descent, after crossing the mountain sixteen miles from the city of Mexico. The road is excellent, being paved for the most part. It is cut through points of mountains in several places. This work must have been attended with immense labor and expense. We reached Vera Cruz on the 24th. On the 27th Captain Hinkley and his mate embarked for New York. I remained with the consul Mr. Stone, until the 18th of July. A vessel being in readiness to sail for New Orleans at this time, I was desirous to avail myself of the opportunity to return to the United States. Mr. Stone and some others presented me money sufficient to pay my passage to the point to which the vessel was bound. It was very painful to me to incur this debt of gratitude, as I could not even venture to hope that it would be in my power to repay it, either in money or benefits of any kind. The prospect, which the future offered me, was dark. It seemed as if misfortune had set her seal upon all that concerned my destiny. I accepted this offering of kindness and benevolence with thanks direct from my heart, and went on board the vessel.

It would be idle for me to attempt to describe the feelings that swelled my heart, as the sails filled to bear me from the shores of a country, where I had seen and suffered so much. My dreams of success in those points considered most important by my fellow men, were vanished forever. After all my endurance of toil, hunger, thirst and imprisonment, after encountering the fiercest wild beasts in their deserts, and fiercer men, after tracing streams before unmeasured and unvisited by any of my own race to their source, over rugged and pathless mountains, subject to every species of danger, want and misery for seven years, it seemed hard to be indebted to charity, however kind and considerate it might be, for the means of returning to my native land.

[248] As we sped on our way, I turned to look at the land I was leaving, and endeavored to withdraw my thoughts from the painful train into which they had fallen. Vera Cruz is the best fortified port I have ever seen. The town is walled in, and well guarded on every side with heavy cannon. The part of the wall extending along the water's edge, is surmounted by guns pointing so as completely to command the shipping in the harbour. A reef of rocks arises at the distance of half a mile from the shore opposite the city, and continues visible for several miles in a south direction, joining the main land seven or eight miles southwest of Vera Cruz. A fort stands upon that part of the reef which fronts the town. Ships in leaving or entering the harbour are obliged to pass between the fort and the town.

We reached New Orleans on the first of August, although the wind had not been entirely favorable. It blew a stiff breeze from a direction which compelled us to run within five points and a

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

half of the wind. As I approached the spot where my foot would again press its native soil, my imagination transported me over the long course of river which yet lay between me, and all I had left in the world to love. I cannot express the delight which thrilled and softened my heart, as I fancied myself entering my home; for it was the home I had known and loved when my mother lived, and we were happy that rose to my view. Fancy could not present another to me. There were my brothers and sisters, as I had been used to see them. The pleasant shade of the trees lay upon the turf before the door of our dwelling. The paths around were the same, over which I had so often bounded with the elastic step of childhood, enjoying a happy existence. Years and change have no place in such meditations. We landed, and I stood upon the shore. I was aroused by the approach of an Englishman, one of my fellow passengers, to a sense of my real position. He asked me if I had taken a passage in a steamboat for Louisville? I immediately answered in the negative. He then said he had bespoken one in the *Cora*; and as I had [249] not chosen any other, he would be glad if I would go on in the same one with him, and thus continue our companionship as long as possible. So saying he took me by the arm to lead me in the direction of the boat of which he spoke, that we might choose our births. As we advanced together, it occurred to me to ask the price of a passage to Louisville? I was answered, forty dollars. Upon hearing this I stopped, and told my companion I could not take a birth just then, at the same time putting my hand in my pocket to ascertain if the state of my funds would permit me to do so at all. The Englishman seeing my embarrassment, and conjecturing rightly its origin, instantly remarked, that the passage money was not to be paid until the boat arrived at Louisville. I was ashamed to own my poverty, and invented an excuse to hide it, telling him, that I had an engagement at that time, but would walk with him in the evening to see about the passage. He left me in consequence. I then discovered, that so far from being able to take a cabin passage I had not money enough to pay for one on the deck.

I re-entered the vessel in which I had arrived. As I approached the captain I saw him point me out to a person conversing with him, and heard him say, 'there is the young man I have been mentioning to you. He speaks Spanish, and will probably engage with you.' When I was near enough he introduced me to the stranger, whom he called Captain Vion. The latter addressed a few remarks to me, and then requested me to accompany him into his vessel.

I consented and followed him on board. He then told me, that he wished to engage a person to accompany him to Vera Cruz, and aid in disposing of his vessel and cargo; and asked if I was inclined to go with him for such a purpose? I said, in reply, that it would depend entirely upon the recompense he offered for the services to be performed. He remarked, that he would give a certain per cent upon the brig and cargo, in case it was sold. I partly agreed to his proposal, but told him that I could not decide finally upon it until I had considered the matter. He then requested [250] me to come to him the next day at 12 o'clock, when I would find him at dinner.

I left him, after promising to do so, and wandered about looking at the city until evening, when I met the Englishman from whom I had parted in the morning. He said he would now accompany me to the steam boat, that we might choose our births according to our engagement. I had no longer any excuse to offer, and was compelled to acknowledge that the contents of my purse were not sufficient to justify me in contracting a debt of forty dollars. I added, that I had an idea of returning to Vera Cruz. He replied, that in regard to the passage money I need have no uneasiness, nor hesitate to go on board, as he would defray my expenses as far as I chose to go. In respect to

---

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

my plan of returning to Vera Cruz, he said that it would be exceedingly unwise for me to carry it into execution; as the yellow fever would be raging by the time I reached the city, and that it was most likely I should fall a victim to it. I had, however, determined in my own mind that I would run the risk, rather than ask or receive aid from a person to whom I was comparatively unknown, and accordingly I refused his kindly proffered assistance, telling him at the same time, that I felt as grateful to him as though I had accepted his offered kindness, and that I would have availed myself of his benevolent intentions towards me, had he been a resident of my country; but as I knew him to be a traveller in a foreign land, who might need all his funds, he must excuse me. He then asked me if I had no acquaintance in New Orleans, of whom I could obtain the money as a loan? I replied, that I did not know an individual in the city; but if I carried my plan of returning to Vera Cruz into execution, I should probably be enabled to proceed to my friends without depending on any one. Upon this we separated, and each went to his lodging.

At ten the succeeding morning my English friend came to my boarding house, accompanied by Judge Johnston, who accosted me with a manner of paternal kindness, enquiring of me how long I had been absent from my country and relations? [151] I naturally enquired in turn, if he was in any way acquainted with them? He replied, that he was; and advised me to ascend the river, and visit them. I expressed to him how pleasant it would be to me to visit them, but assured him that it was out of my power to enjoy that pleasure at present. He enquired why? I avoided a direct answer, and remarked, that I proposed returning to Vera Cruz. He not only urged strong objections to this, but offered to pay my passage up the river. It may be easily imagined how I felt in view of such an offer from this generous and respectable stranger. I thankfully accepted it, only assuring him that I should repay him as soon as it was in my power. He replied that it was a matter of no consequence. He advised me to go on board the steam boat and choose my birth, alleging, that he had business in the city which would not allow him to accompany me on board.

My English friend seemed highly gratified by this good fortune of mine, and went with me on board the steam boat, where I chose a birth. The name of this gentleman was Perry, and he was one of the two whom I have already mentioned, who had travelled in company with me from the city of Guadalajara to Mexico. On the fourth, at nine in the morning, the starting bell rung on the steam boat, and Judge Johnston, Mr. Perry and myself went on board. This was the first steam boat on which I had ever been. Scarcely was the interior of the first ship I was ever on board at San Diego, a spectacle of more exciting interest. How much more delighted was I to see her stem the mighty current of the Mississippi.

As I remarked the plantations, bends and forests sinking in the distance behind me, I felt that I was rapidly nearing home; and at every advance my anxiety to see my relations once more, increased. To the many enquiries, made by Judge Johnston, touching the interior of the continent where I had been wandering, I am sure I must have given very unsatisfactory answers, much as I wished to oblige him. My thoughts dwelt with such constant and intense solicitude upon home, that I felt myself unable to frame answers to questions upon any other subjects. [252] Home did I say? I have none. My father and mother sleep — widely separated from each other. They left nine orphans without resources to breast this stormy and mutable world. I, who ought to supply the place of a parent to them, shall carry to them nothing but poverty, and the withering remembrances of an unhappy wanderer, upon whom misfortune seems to have stamped her inexorable seal.

PATTIE'S PERSONAL NARRATIVE OF A VOYAGE TO THE PACIFIC AND IN MEXICO  
JUNE, 20, 1824 -- AUGUST 30, 1830

---

I parted with Judge Johnston at Cincinnati, who gave me a line of introduction to Mr. Flint, for which I felt under renewed obligations to him, hoping it would be of service to me. I left Cincinnati; and on the 30th of August arrived at the end of my journey. I have had too much of real incident and affliction to be a dealer in romance; and yet I should do injustice to my feelings, if I closed this journal without a record of my sensations on reaching home. I have still before me, unchanged by all, that I have seen, and suffered, the picture of the abode of my infant days and juvenile remembrances. But the present reality is all as much changed, as my heart. I meet my neighbors, and school fellows, as I approach the home of my grandfather.— They neither recognize me, nor I them. I look for the deep grove, so faithfully remaining in my memory, and the stream that murmured through it. The woods are levelled by the axe. The stream, no longer protected by the deep shade, has almost run dry. A storm has swept away the noble trees, that had been spared for shade. The fruit trees are decayed.

I was first met by my grandmother. She is tottering under the burden and decline of old age, and the sight of me only recalls the painful remembrance of my father, worn out by the torture of his oppressors, and buried in the distant land of strangers and enemies. I could hardly have remembered my grandfather, the once vigorous and undaunted hunter. With a feeble and tremulous voice, he repeats enquiry upon enquiry, touching the fate of my father? I look round for the dear band of brothers and sisters. But one of the numerous group remains, and he too young to know me; though I see enough to remind me, how much he has stood in need of an efficient protector.— I hastily enquire for the rest. One is here, and another is there, and my head is confused, in listening to the names of the places of their residence. I left one sister, a child. She is married to a person I never knew; one, who, from the laws of our nature, can only regard me with the eye of a stranger. We call each other brother, but the affectionate word will not act as a key, to unlock the fountains of fraternal feeling.

They, however, kindly invite me to their home. I am impelled alike by poverty and affection, to remain with them for a time, till I can forget what has been, and weave a new web of hopes, and form a new series of plans for some pursuit in life. Alas! disappointments, such as I have encountered, are not the motives to impart vigor and firmness for new projects. The freshness, the visions, the hopes of my youthful days are all vanished, and can never return. If any one of my years has felt, that the fashion of this world passeth away, and that all below the sun is vanity, it is I. If there is a lesson from my wanderings, it is one, that inculcates upon children, remaining at the paternal home in peace and privacy; one that counsels the young against wandering far away, to see the habitations, and endure the inhospitality of strangers.

END OF THE NARRATIVE

Daniel Potts Letter 1

[Addressed to Thomas Cochlen]

Rocky Mountains, July 7, 1824

Dear and respected friend,

I take this as the only opportunity to write to you and beg to be excused for my bad spelling and writing. I have more news than I am able to communicate whereas I will give you the most important.

After leaving you I arrived in Illinois in July the same year and tarried there until mid winter and from thence to Masuri where I tarried until spring from there I embarked for the Rocky Mountains and the Columbia for the purpose of hunting and trapping and trading with the Indians in a company of about one hundred men. We hoisted our Sails on the third day of April 1822 at Saint Lewis and arrived at Cedar fort about the middle of July when we were reduced to the sad necessity of eating any thing we could catch as our provision was exhausted and no game to be had, being advanced five hundred miles above the frontiers, we were glad to get a Dog to eat and I have seen some gather the skins of Dogs up through the Camp sing and roast them and eat hearty this so discouraged me that I was determined to turn tail up stream and bear my course down in company with eight others and by the way lost from the others without gun ammunition provision or even cloths to my back of account being four hundred miles from any white people or even knowing where to find Indians; now my dear friend how must I have felt young Birds, frogs, and Snakes were exceptable food with me and not means of fire I in the course of a few days fortunately fell in with a party of Indians who treated me with great humanity and tarried with them four days and then fell in with a trader who conducted me within 350 miles of the frontiers he being able to give me but little aid I tarried but three days when I started with provision consisting of only 3/4 of a pound of Buffaloe suet and arrived at the frontiers in six days were by eating too much and starvation I was taken with a severe spell of sickness which all but took my life.

I here met with a second Boat and ascended the Masuri the second time and arrived at the mouth of Mussel Shell on the latter end of November where I wintered with thirteen others here was a remarkable escape of my scalp as two large parties of Indians wintered within twenty miles of us and our better enemies the blackfeet this place is in latitude 48. the River froze to the immense thickness of four feet and did not break up until the fourth of April and we embarked in Canoes on the 6th and on the 11th I was severely wounded by a wiping stick being shot through both knees which brought me to the ground this disabled me for the springs hunt and almost for ever- I shall now bid farewell and desire you to remember my best respects to all my enquiring friends particular J. Taylor J. McCalla, C. Morris, and J. Mather inform them I am in good health and spirits I remain with high respect  
your most particular friend &c.

Daniel T. Potts

Daniel Potts Letter 2

Rocky Mountains, July 16, 1826

Dear and Respected Brother,

After I left Philadelphia, I was taken with a severe spell of rheumatism which continued with me for about two months. I arrived in Illinois on the 1st of July in the same year, where I remained

---

until March following, when I took my deparure for Missouri, from thence immediately entered on an expedition of Henry and Ashly, bound for the Rocky Mountain and Columbia River. In this enterprize I consider it unnecessary to give you all the particulars appertaining to my travell I left St. Louis on April 3d, 1822, under command of Andrew Henry with a boat and one hundred men and arrived at Council Bluffs on May 1st; from thence we ascended the river to Cedar Fort, about five hundred miles. Here our provisions being exhausted, and no prospect of game near at hand, I concluded to make the best of my way back in company with eight others, and unfortunately was separated from them. By being too accessory in this misfortune, I was left in the Prarie without arms or any means of making fire, and half starved to death. Now taking into consideration my situation, about three hundred and fifty miles from my frontier Post, this would make the most cruel heart sympathise for me. The same day I met with three Indians, whom I hailed, and on my advancing they prepared for action by presenting their arms, though I approached them without hesitation, and gave them my hand. They conducted me to their village, where I was treated with the greatest humanity imaginable. There I remained four days, during which time they had many religious ceremonies too tedious to insert, after which I met with some traders who conducted me as far down as the ? Village - this being two hundred miles from the Post. I departed alone as before, with only about 1/4 lb. suet, and in six days reached the Post where I met with Gen. Ashley, on a second expedition, with whom I entered for the second time, and arrived at the mouth of Yellow Stone about the middle of October. This is one of the most beautiful situations I ever saw; from this I immediately embarked for the mouth of Muscle Shell, in company with twenty one others and shortly after our arrival, eight men returned to the former place. Here the game being very scarce, the prospect was very discouraging, though after a short time the Buffaloes flocked in in great abundance; likewise the Mountain Goats; the like I have never seen since. Twenty six of the latter were slain in the compass of 100 yards square, in the space of two hours. During the winter the Buffaloes came into our camp, one of which I was induced to charge upon by our company without fire arms, at first with a tomahawk only. After approaching very close, the Bull prepared for action with the most dismal look and sprang at me. When within one leap of me, I let fly the tomahawk, which caused him to retreat. After returning to our cabin, I was induced to make the second attempt, armed with tomahawk, knife and spear, accompanied by five or six others armed. After traveling a short distance, we discovered the Beast, and in a concealed manner I approached him within fifty yards, when he discovered me, and made a rapid retreat, though, there being much falling timber, I soon overtook him - finding there was no escape he made battle. On the first onset, I put out one eye with the spear; the second failed in the other eye; on the third I pierced him to the heart, and immediately despatched him. The winter set in early, and the ice on the river froze to the immense thickness of four feet and the snow of an ordinary depth. The river did not discharge itself until the 4th of April; on the 5th we were visited by a party of Indians, and on the 6th we embarked in canoes for the river Judith.

In about one day's travel we discovered where a party of Indians had wintered who were our enemies, but fortunately had not discovered us. On the 11th, I was severely wounded through both knees by an accidental discharge of a rifle; whereby I was obliged to be conducted to our establishment at the mouth of Yellow Stone; here I remained until September. We were favored by the arrival of Major Henry from the Ariccarees who had departed from this place with a small brigade for the relief of Gen. Ashley, who was defeated by that nation, with the loss of sixteen killed

---

and fourteen wounded, out of forty men. After Major Henry joined them and the troops from Council Bluffs, under command of Col Levingworth, they gave them battle; the loss of our enemy was from sixty to seventy. The number of the wounded not known, as they evacuated their village in the night. On our part there was only two wounded, but on his return he was fired upon by night by a party of Mannans wherein two was killed and as many wounded. Only two of our guns were fired which dispatched an Indian and they retreated. Shortly after his arrival we embarked for the big Horn on the Yellow Stone in the Crow Indian country, here I made a small hunt for Beaver. From this place we crossed the first range of Rocky Mountain into a large and beautiful valley adorned with many flowers and interspersed with many useful herbs. At the upper end of this valley on the Horn is the most beautiful scene of nature I have ever seen. It is a boiling spring at the foot of a small burnt mountain about two rods in diameter and depth not ascertained, discharging sufficient water for an overshot mill, and spreading itself to a considerable width forming a great number of basins of various shapes and sizes, of incrustation of sediment, running in this manner for the space of 200 feet, there falling over a precipice of about 30 feet perpendicular into the head of the horn or confluence of Wind River. From thence across the 2d range of mountains to Wind River Valley. In crossing this mountain I unfortunately froze my feet and was unable to travel from the loss of two toes. Here I am obliged to remark the humanity of the natives (the Indians) towards me, who conducted me to their village, into the lodge of their Chief, who regularly twice a day divested himself of all his clothing except his breech clout, and dressed my wounds, until I left them. Wind River is a beautiful transparent stream, with hard gravel bottom about 70 or 80 yards wide, rising in the main range of Rocky Mountains, running E.N.E, finally north through a picturesque small mountain bearing the name of the stream: after it discharges through this mountain it loses its name. The valleys near the head of this river and its tributary streams are tolerably timbered with cotton wood, willow, &c. The grass and herbage are good and plenty, of all the varieties common to this country. In this valley the snow rarely falls more than three to four inches deep and never remains more than three or four days, although it is surrounded by stupendous mountains. Those on S. W. and N. are covered with eternal snow. The mildness of the winter in this valley may readily be imputed to the immense number of Hot Springs which rise near the head of the river. I visited but one of those which rise to the south of the river in a level plain of prairie, and occupies about two acres; this is not so hot as many others but I suppose to be boiling as the outer verge was nearly scalding hot. There is also an Oil Spring in this valley, which discharges 60 or 70 gallons of pure oil per day. The oil has very much the appearance, taste and smell of British Oil. From this valley we proceeded by S. W. direction over a tolerable route to the heads of Sweet Water, a small stream which takes an eastern course and falls into the north fork of the Great Platt, 70 or 80 miles below. This stream rises and runs on the highest ground in all this country. The winters are extremely, and even the summers are disagreeably cold.

We past here about the middle of July last, the ice froze near half an inch in a kettle. Notwithstanding the intense cold this country is well covered with grass herbage and numberless Alpine plants. After crossing the above mentioned stream, we took a more westerly direction over high rolling Prairies to a small branch of a considerable river, known to us by the name of Seet Kadu, and to Spaniard, by Green River, and is supposed to discharge itself into the Bay of California. This river has a bold running current, 80 or 90 yards wide, & bears a S. E. direction. It falls from

the Rocky Mountains in many small rivulets, on which were considerable beaver. This valley, like all others I have seen in this country, is surrounded by mountains, those to S. W. and N. are covered with eternal snow, near the tops. Columbia Mountain, lying N. is the highest I ever saw, and perhaps the highest in North America. It stands rather detached and majestic, beginning abruptly towards the E. and terminating toward N. W. Its tops are the repository of eternal winter. In clear weather its appearance is truly sublime and reflects the brilliancy of the diamond in its various colours. This mountain gives rise to many streams, the principal are the Yellow Stone and Wind River.

The southern branches of the Missouri are Seets Kadu and Lewis river, and others of smaller note. After passing from this valley, in a S. W. direction we had very good travelling over an inconsiderable ridge, we fell on a considerable river, called Bear River, which rises to the S. in the Utaw Mountains, bears N. 80 or 90 miles, when it turns short to the S. W. and S. and after passing two mountains, discharges itself into the Great Salt Lake. On this river and its tributary streams, and adjacent country, we have taken beaver with great success. Since the autumn of 1824, you have no doubt heard, and will hear by the public prints, of the furs brought in by Gen. Ashley, which were the product of our toils. The first valley as you approach from the head of the river, is a small sweet lake, about 120 miles in circumference, with beautiful clear water, and when the wind blows has a splendid appearance. There is also to be found in this valley a considerable sour spring near the most northerly swing of the river. The valley is scantily supplied with timber, as is the case with most of the low grounds of this country. The second, or Willow Valley, is better supplied on this point - this valley has been our chief place of rendezvous and wintering ground. Numerous streams fill in through this valley, which, like the others, is surrounded by stupendous mountains which are unrivalled for beauty and serenity of scenery. You here have a view of all the varieties, plenty of ripe fruit, an abundance of grass just springing up, and buds beginning to shoot, while the higher parts of the mountains are covered with snow, all within 12 or 15 miles of this valley. The river passes through a small range of mountains, and enters the valley that borders on the Great Salt Lake. The G. S. Lake lies in a circular form from N. E. to N. W. the larger circle being to S. it is about 400 miles in circumference, and has no discharge or outlet, it is generally shallow near the beach, and has several islands, which rise like pyramids from its surface. The western part of the lake is so saturated with salt, as not to dissolve any more when thrown into it. The country on S. W. and N. W. is very barren, bearing but little more than wild sage, and short grass. The S. E. and E are fertile, especially near the outlet of the Utaw Lake and Weber's river. The former is about 30 yards wide at its mouth, the later from 50 to 60, and very deep. This river rises to the E. in the Utaw Mountains, and in its course passes through three mountains, to where it enters the lake. We expect to start in a short time to explore the country lying S. W. of the Great Lake, where we shall probably winter. This country has never yet been visited by any white person - from thence to what place I cannot say, but expect the next letter will be dated at the mouth of Columbia. My long absence has created a desire to hear from you, as well as the rest of my people, also my associates. I have been on the very eve of returning this summer, but owing to this unexplored country, which I have a great curiosity to see, I have concluded to remain one or two years. We celebrated the 4th of July, by firing three rounds of small arms, and partook of a most excellent dinner, after which a number of political toasts were drunk.

D.T.P.

Daniel Potts Letter 3

Sweet Lake July 8th 1827

Respectid Brother

A few dass since our trader arived by whom I received two letters one from Dr. Lukens the other from yourself under date of January 1827 which gives me great congratulation to hear that you are both happy wilst I am unhappy also to hear from my friends

shortly after writing to you last year I took my departure for the Black-foot Country much against my will as I could not make a party for any other rout. We took a northerly direction about fifty miles where we cross Snake river or the South fork of Columbia at the forks of Henrys & Lewis's forks at this place we was dayly harrassed by the Black-feet from thence up Henrys or North fork which bears North of East thirty miles and crossed a large ruged Mountain which sepparates the two forks from thence East up the other fork to its source which heads on the top of the great chain of Rocky Mountains which sepparates the water of the Atlantic from that of the Pacific. At or near this place heads the Luchkadee or Callifon Stinking fork Yellow-stone South fork of Masure and Henrys fork all those head at an angular point

that of the Yellow-stone has a large fresh water lake near its head on the verry top of the Mountain which is about one Hundrid by fourty miles in diameter and as clear as crystal on the south borders of this lake is a number of hot and boiling springs, some of water and others of most beautiful fine clay and resembles that of a mush pot and throws its particles to the immense height of from twenty to thirty feet in height. The clay is white and of a pink and water appear fathomless as the it appears to be entirely hollow under neath. There is also a number of places where the pure suphor is sent forth in abundance one of our men Visited one of those wilst taking his recreation there at an instan the earth began a tremendous trembling and he with dificulty made his escape when an explosion took place resembling that of thunder. During our stay in that quarter I heard it every day

From this place by a circuitous rout to the Nourth west we returned two others and myself pushed on in the advance for the purpose of accumulating a few more Bever and in the act of passing through a narrow confine in the Mountain we where met plumb in face by a large party of Black-foot Indians who not knowing our number fled into the mountain in confusion and we to a small grove of willows here we made every prepparation for battle after which finding our enemy as much allarmed as ourselves we mounted our Hourses which where heavily loaded we took the back retreat. The Indian raised a tremendous Yell and showered down from the Mountain top who had almost cut off our retreat we here put whip to our Horses and they pursued us in close quarters until we reached the plains when we left them behind. On this trip one man was closely fired on by a party Black-feet several others where closely pursued. On this trip I have lost one Horse by accident and the last spring two by the Utaws who killed them them for the purpose eattng one of which was a favourite Buffaloe Horse this loss cannot be computed at less than four hundred and fifty Dollars by this you may conclude keeps my nose cllose to the grind stone A few Days previous to my arival at this place a party of about 120 Black feet approachid the Camp and killed a Snake and his squaw the alarm was immediately given and the Snakes Utaws and Whites sallied forth for battle the enemy fled to the Mountain to a small concavity thickly groon with small timber surrounded by open ground In this engagement the squaws where busily engaged in throwing up batterys an draging off the dead there was only six whites engaged in this battle who

---

immediately advanced within pistol shot and you may be assured that almost every shot counted one the loss of the Snakes was three killed and the same same wounded that of the Whites one wounded and two narrowly made their his escape that of the Utaws was none though who gained great applause for their bravery the loss of the enemy is not known six where found dead on the ground besides a great number where carried off on Horses. Tomorrow I depart for the west we are all in good health and expect hope that this letter will find you in the same situation I wish you to remember my best respects to all enquiring friends particularly your wife

Remain yours most affectionately Vc

Danl. T Potts

I inform you I wrote Dr Lukens under the same date and wish you to write me immediately on the receipt of this after the former direction giving me the price of Bever

Daniel Potts Letter 4

[Addressed to Dr. Lukens]

Sweet Water Lake, July 8th 1827

Shortly after our arrival last fall in winter quarters, we made preparations to explore the country lying south west of the Great Salt Lake. Having but little or no winter weather, six of us took our departure about the middle of February, and proceeded by forced marches into the country by way of the Utaw Lake - which lies about 80 miles south of the Sweet Water Lake, is thirty miles long and ten broad. It is plentifully supplied with fish, which form the principal subsistence of the Utaw tribe of Indians. We passed through a large swamp of bullrushes, when suddenly the lake presented itself to our view. On its banks were a number of buildings constructed of bullrushes, and resembling muskrat houses. These we soon discovered to be wigwams, in which the Indians remained during the stay of the ice. As there is not a tree within three miles, their principal fuel is bullrushes.

This is a most beautiful country. It is intersected by a number of transparent streams. The grass is at this time from six to twelve inches in height, and in full bloom. The snow that falls, seldom remains more than a week. It assists the grass in its growth, and appears adapted to the climate. The Utaw lake lies on the west side of a large snowy mountain, which divides it from the Leichadu. From thence we proceeded due south about thirty miles to a small river heading in said mountain, and running from S. E. to S. W. To this I have given the name of Rabbit river, on account of the great number of large black tail rabbits or hares found in its vicinity. We descended this river about fifty miles to where it discharges into a salt lake, the size of which I was not able to ascertain, owing to the marshes which surround it, and which are impassable for man and beast. This lake is bounded on the south and west by low Cedar Mountains, which separate it from the plains of the Great Salt lake. On the south and east also, it is bounded by great plains.

The Indians informed us that the country lying southwest, was impassable for the horses owing to the earth being full of holes.

As well as we could understand from their description, it is an ancient volcanic region. This river is inhabited by a numerous tribe of miserable Indians. Their clothing consists of a breech-cloth of goat or deer skin, and a robe of rabbit skins, cut in strips, sewed together after the manner of rag carpets, with the bark of milk weed twisted into twine for the chain. These wretched creatures go out barefoot in the coldest days of winter. Their diet consists of roots, grass seeds, and grass, so you may judge they are not gross in their habit. They call themselves Pie-Utaws, and I suppose are

derived from the same stock.

From this place we took an east course, struck the river near its head, and ascended it to its source. From thence we went east across the snowy mountain above mentioned, to a small river which discharges into the Leichadu. Here the natives paid us a visit and stole one of our horses. Two nights afterwards they stole another, and shot their arrows into four horses two of which belonged to myself. We then started on our return, the Indians followed us, and were in the act of approaching our horses in open daylight, whilst feeding, when the horses took fright and ran to the camp. It was this that first alarmed us. We sallied forth and fired on the Indians, but they made their escape across the river.

We then paid a visit to the Utaws, who are almost as numerous as the Buffaloe on the prarie, and an exception to all human kind, for their honesty...

There is a poor prospect of making much here, owing to the evil disposition of the Indians and the exorbitant price of goods. For example,

Powder	\$2 50 per lb.
Lead	1 50
Coffee	2 00
Sugar	2 00
Tobacco	2 00
Vermilion	6 00
Beads	5 00
Pepper	6 00
Blankets (three point)	15 00
cotton stripe, per yard	2 50
Calico	do.
scarlet Cloth (coarse) do	10 00
Blue Cloth (coarse) do	8 00
Ribband, per Yd	0 75
Brass nails, per dozen	0 50

Horses cost from 150 dollars to 300, and some as high as 500.

To-morrow I start for the west, and shall not return under a year, when expect to start for St. Louis.

Daniel Potts Letter 5

[Addressed to Robert Montgomery Potts]

St. Louis, October 13, 1828

Respected Brother

with congratulation and a heart overflowed with joy to think that I can write to you from a place incompassed within the bounds of civilation I arrived at this place about a week since after a long and fatiguing journey of about seventy days after which my mind has become more tranquil. Directly after my arrival at this place I hastened to see genl Ashly to receive some tidings from you but to my sad disappointment, there was none this was rather a strange circumstance as I had wrote to you last July was a year also to Dr Lukens at the same time At that time I received yours & his letters of the 23rd & 24th of January 1827 both much interesting and very entertaining in my leisure moments since my arrival for the want of language I am scarcely able to converse with

---

any one of talents which occasion verry disagreeable feelings.  
now to affairs more interesting My adventures and escapes for the last year in the mountains far exceede all the remainder part of my stay in the mountains as I had risked every thing to make or die in the attempt in this fortune froune though preservation smiled through the Indians on one part and the hard winter of the other has been my sad ruin and have lost not less than one thousand dollars the first snow fell on the third of September when it snowed for three days without intermission the snow remained on the ground upwards of knee deep and I think must have felt fully waist deep this had not the least effect on any kind of vegetation as it appears addapted to the climate the winter remained gentle untill the first of December when the power vengence was poured out on us the N. E. winds and more particularly South accompanied with a continued snow untill the first of march when it somewhat abated the snow remained upwards of four feet deep on the level the sweet lake was bridged over on the 8 of may for twenty days in succession the great spirrit the sun refused to visit us the like has been known by the oldest livers which I suppose is not less than one hundred or upwards the horses which the winter did not destroy the early vissits of the Blackfeet swept away with from twelve to fifteen scalps of our hunters A party of about one hundred Black feet mounted attacked thtry odd of our hunters with their familys this engagement lasted for upwards of three hours when a couple of our men mounted two of their swiftest horses dashed through the ranks of the horrid tribe where the balls flew like hail and arrived with express at our camp in less than one hour A distance of more than sixteen miles in this we had one man killed & two wounded one child lost. that of the enemy six or eight killed and wounded I shall now discontinue any further particulars as it is growing late In a few days I shall leave this place in steam boat for New Orleans where I shall remain during the winter and spring if successful any thing like to my expectations I shall return but you may rest assured if I am by no means successful you may dispense of ever seeing me there, though contentment I possess not West of the Alleghany I find this place somewhat sickly though for my part never enjoyed better health my weight is one hundred and eight nine pounds five pounds more than ever before I have A small capital which I flatter myself will do pretty good bussiness I shall furthermore dispense of giving you so minute particulars and beg leave to be excused for the past though I feel somewhat delicate in writing lean it should not be exceptable if not Remember my best respects to all my friends particularly your wife, who from the little acquaintance I respects on the highest terms Remain your most affectionat Brother

Dan' T Potts

Direct your letters to New Orleans where I shall remain until New years wheras it is necessary for you to write in haste previous to leaving that place I shall inform you where I go and my business Since writing this letter I have received your and Weirs letters which alters the case amazing those letters wher mislaid. To morrow I embark

JOURNAL OF HARRISON G. ROGERS

JOURNAL OF HARRISON G. ROGERS

member of the company of J. S. Smith

Merchandise taken by Jedediah S. Smith for the Southwest expedition, august 15th, 1826.

4 dozen B. knives      10 lbs. lead  
1 paper tax. 2 lbs. beads      55 lbs. powder  
1 1/2 dozen looking glasses      55 lbs. tobacco  
2, 3pt. Am. blanketts      6 Frenchen chisaels  
3 2 1/2 pt. Am. blanketts      1 fuzie  
1 road shawl

Merchandise presented to the Eutaw Indians, by J. S. Smith, august 22nd, 1826.

3 yards red ribbon      1 brass handle knife  
10 awls 40 balls, arrow points  
1 razor. 1 dirk knife      1/2 lb. tobacco  
August 27th, 1826. Indian presents.  
1 tin kettle      2 dozen rings  
3 yards red stranding      1 dozen combs  
4 razors, 2 durk knives      4 hawk bells  
2 butcher knives      2 stretch needles  
50 balls, 1 lb. powder      2 doz. awls, buttons  
3 looking glasses      1 large green handle knife

---

Broad, handsomely stripped, the cattle differ from ours; they have large horns, long legs, and slim bodies; the beef similar to ours. The face of the country changes hourly, handsome bottoms covered with grass similar to ours. Blue grass; the mou. goes lower and clear of rock to what they have been heretofore.

27TH. We got ready as early as possible and started a W. course, and traveled 14 m. and enc. for the day, we passed innumerable herds of cattle, horses and some hundred of sheep; we passed 4 or 5 Ind. lodges, that their Inds. acts as herdsmen. There came an old Ind. to us that speaks good Spanish, and took us with him to his mansion, which consisted of 2 rows of large and lengthy buildings, after the Spanish mode, they remind me of the British barracks. So soon as we enc. there was plenty prepared to eat, a fine young cow killed, and a plenty of corn meal given us; pretty soon after the 2 commandants of the missionary establishment come to us and had the appearance of gentlemen. Mr. S. went with them to the mansion and I stay with the company, there was great feasting among the men as they were pretty hungry not having any good meat for some time.

28TH. Mr. S. wrote me a note in the morning, stating that he was received as a gentleman and treated as such, and that he wished me to go back and look for a pistol that was lost, and send the company on to the missionary establishment. I complied with his request, went back, and found the pistol, and arrived late in the evening, was received very politely, and showed into a room and my arms taken from me. About 10 o'clock at night supper was served, and Mr. S. and myself sent for. I was introduced to the 2 priests over a glass of good old whiskey and found them to be very joval friendly gentlemen, the supper consisted of a number of different dishes, served different from any table I ever was at. Plenty of good wine during supper, before the cloth was removed

sigars was introduced. Mr. S. has wrote to the governor, and I expect we shall remain here some days.

29TH. Still at the mansion. We was sent for about sunrise to drink a cup of tea, and eat some bread and cheese. They all appear friendly and treat us well, although they are Catholicks by profession, they allow us the liberty of conscience, and treat us as they do their own countrymen, or brethren.

About 11 o'clock, dinner was ready, and the priest come after us to go and dine; we were invited into the office, and invited to take a glass of gin and water and eat some bread and cheese; directly after we were seated at dinner, and every thing went on in style, both the priests being pretty merry, the clerk and one other gentleman, who speaks some English. They all appear to be gentlemen of the first class, both in manners and habits. The mansion, or mission, consist of 4 rows of houses forming a complete square, where there is all kinds of macanicks at work; the church faces the east and the guard house the west; the N. and S. line comprises the work shops. They have large vineyards, apple and peach orchards, and some orrange and some fig trees. They manufacture blankets, and sundry other articles; they distill whiskey and grind their own grain, having a water mill, of a tolerable quality; they have upwards of 1,000 persons employed, men, women, and children, Inds. of different nations. The situation is very handsome, pretty streams of water running through from all quarters, some thousands of acres of rich and fertile land as level as a die in view, and a part under cultivation, surrounded on the N. with a high and lofty mou., handsomely timbered with pine, and cedar, and on the S. with low mou, covered with grass. Cattle — this mission has upwards of 30,000 head of cattle, and horses, sheep, hogs, etc. in proportion. I intend visiting the iner apartments to-morrow if life is spared. I am quite unwell to-day but have been engaged in writing letters for the men and drawing a map of my travels for the priests. Mr. Smith, as well as myself, have been engaged in the same business. They slaughter at this place from 2 to 3,000 head of cattle at a time; the mission lives on the profits. Saint Gabriel is in north latitude 34 degrees and 30 minutes. It still continues warm; the thermometer stands at 65 and 70 degrees.

30TH. Still at Saint Gabriel; everything goes on well; only the men is on a scanty allowance, as yet. There was a wedding in this place today, and Mr. S. and myself invited; the bell was rang a little before sun rise, and the morning service performed; then the musick commenced serranading, the soldiers firing, etc., about 7 o'clock tea and bread served, and about 11, dinner and musick. The ceremony and dinner was held at the priests; they had an ellegant dinner, consisting of a number of dishes, boiled and roast meat and fowl, wine and brandy or ogagent, grapes brought as a dessert after dinner. Mr. S. and myself acted quite independent, knot understanding there language, nor they ours; we endeavored to appoligise, being very dirty and not in a situation to shift our clothing, but no excuse would be taken, we must be present, as we have been served at there table ever since we arrived at this place; they treat [us] as gentlemen in every sense of the word, although our apparel is so indifferent, and we not being in circumstances at this time to help ourselves, being about 800 m. on a direct line from the place of our deposit. Mr. S. spoke to the commandant this evening respecting the rations of his men; they were immediately removed into another apartment, and furnished with cooking utensils and plenty of provisions, they say, for 3 or 4 days. Our 2 Ind. guides were imprisoned in the guard house the 2nd. day after we arrived at the missionary establishment and remain confined as yet. Mr. S. has wrote to the commandant of the province, and we do not know the result as yet, or where we shall go from this place, but I ex-

---

JOURNAL OF HARRISON G. ROGERS

---

pect to the N.W. I intended visiting the inner apartments to-day, but have been engaged in assisting Mr. S. in making a map for the priest and attending the ceremonies of the wedding.

DECEMBER 1ST, 1826. We still remain at the mansion of St. Gabriel; things going on as usual; all friendship and peace. Mr. S. set his blacksmiths, James Reed and Silas Gobel, to work in the B.S. shop, to make a bear trap for the priest, agreeable to promise yesterday. Mr. S. and the interpreter went in the evening to the next mission, which is 9 m. distance from St. Gab. and called St. Pedro, a Spanish gentleman from that mission having sent his servant with horses for them. There came an Italian gentleman from Port Sandeago today by the name of John Battis Bonafast who speaks good English, and acts as interpreter for all the American and English vessels that arrives in ports on the coast, quite a smart and intelligent man. The men all appear satisfied since there was new regulations made about eating. Mr. S. informed me this morning that he had to give Read a little flogging yesterday evening, on account of some of his impertinence; he appeared more complasent to-day than usual. Our fare at table much the same as at first, a plenty of everything good to eat and drink.

2ND. Much the same to-day as yesterday, both being what the Catholicks call fast days; in the morning after sun rise, or about that time, you have tea, bread and cheese, at dinner fish and fowl, beans, peas, potatoes and other kinds of sauce, grapes as a desert, wine, gin and water plenty at dinner. I could see a great deal of satisfaction here if I could talk there language, but, as it is, I feel great diffidence in being among them knot knowing the topic of there conversation, still every attention is paid to me by all that is present, especially the old priest. I must say he is a very fine man and a very much of a gentleman. Mr. S. has not returned from the other mission as yet. This province is called the Province of New California; this mission ships to Europe annually from 20 to 25 thousand dollars worth of hides and tallow, and about 20 thousand dollars worth of soap. There vineyards are extensive; they make there own wine, and brandy; they have orranges and limes growing here. The Inds. appear to be much altered from the wild Indians in the mou. that we have passed. They are kept in great fear; for the least offense they are corrected; they are compleat slaves in every sense of the word. Mr. S. and Laplant returned late in the evening, and represents there treatment to be good at the other mission. Mr. S. tells me that Mr. Francisco, the Spanish gentleman that he went to visit, promises him as many horses and mules as he wants.

DECEMBER 3RD., SUNDAY. About 6 o'clock the bell rang for mass, and they poured into church from all quarters, men, women and children; there was none of us invited therefore we all remained at our lodgings. The fare to-day at table much as usual; there was an additional cup of tea in the afternoon. The Inds. play bandy with sticks, it being the only game I have seen as yet among them. They play before the priests door. I am told they dance, both Spanyards and Inds., in the course of the evening.

4TH. Still at St. Gabriel; things much as usual. The priest presented Mr. S. with two pieces of shirting containing 64 yards for to make the men shirts, all being nearly naked. Mr. Smith gives each man 3 1/2 yards and kept the same number for himself, each man getting enough to make a shirt. The weather still continues to be moderate, the thermometer stands at 60 and 63 in the day, and 50-53 in the night. The thermometer hangs within doors, etc.

5TH. We are still remaining at the mansion of St. Gabriel, waiting the result of the governor's answer to a letter that Mr. S. addressed him on the 27th of november. We expect the courier some time today with letters. It still continues moderate.

---

JOURNAL OF HARRISON G. ROGERS

---

6TH. Early this morning I presented the old priest with my buffalo robe and he brought me a very large blanket and presented me, in return, about 10 o'clock. Nothing new. Things going on as they have been heretofore; no answer from the governor as yet; we are waiting with patience to hear from the governor.

11TH [7TH]. No answer as yet from the governor of the province. Mr. S. and all hands getting impatient. There was a Spanish gentleman arrived yesterday evening named Francis Martinnis, a very intelligent man, who speaks pretty good English, and appears very friendly; he advises Mr. S. to go and see the governor in case he does not receive an answer in a few days. He is a man of business and is well aware that men on expenses and business of importance should be presservering; he appears anxious as respects our well fare. Mr. S. has some idea of going in company with him to Sandiego, the residence of the governor.

8TH. Nothing of importance has taken place today. Mr. S. was sent for to go to Sandiego to see the governor. Capt. Cunningham, commanding the ship Courier, now lying in port at Sandiego, arrived here late this evening. The captain is a Bostonian, and has been trading on the coast for hides and tallow since June last; he informs me that he is rather under the impression that he shall be obliged to remain until some time in the succeeding summer in consequence of so much opposition, as there is a number of vessels on the coast trading for the same kind of articles. He says that money is very scarce, amongst the most of the people. Mr. Martins tells me that there is between 16 and 17,000 natives that is converted over to the Catholic faith and under the control of the different missions, the white population he estimates at 6,000, making 22 or 23,000 souls in the province of New California.

9TH. Mr. Smith and one of the men, in company with Capt. Cunningham, left San Gabriel, this morning for Sandiego, the governor's place of residence. I expect he will be absent for eight or ten days. The weather still keeps moderate, things much the same, friendship and peace as yet.

10TH. SUNDAY. There was five Inds. brought to the mission by two other Inds, who act as constables, or overseers, and sentenced to be whipped for not going to work when ordered.

Each received from 12 to 14 lashes on their bare posteriors; they were all old men, say from 50 to 60 years of age, the commandant standing by with his sword to see that the Ind. who flogged them done his duty. Things in other respects similar to the last sabbath.

11TH. Nothing of consequence has taken place today more than usual, only the band of musick consisting of two small violins, one bass violin, a trumpet and triangle was played for 2 hours in the evening before the priests door by Inds. They made tolerable good music, the most in imitation to whites that [I] ever heard. Directly after the musick would cease, there was several rounds of cannon fired by the soldiers in commemoration of some great saints day or feast day. They keep at this place 4 small field pieces, 2 6-pounders and 2 2-pounders to protect them from the Inds. in case they should rebel, and, from the best information I can get from the soldiers, they appear at times some what alarmed, for fear the Inds. will rise and destroy the mission.

12TH. About sun rise, the bell rang and mass called; men women and children attended church; they discharged a number of small arms and some cannon while the morning service were performing. There main church is upwards of 200 feet in length and about 140 in breadth made of stone and brick, a number of different apartments in it. They hold meeting in the large church every sunday; the Spaniards first attend and then the Inds. They have a room in the inner apartment of the mission to hold church on their feast days. Their religion appears to be a form more than

JOURNAL OF HARRISON G. ROGERS

---

a reality. I am in hopes we shall be able to leave here in five or six days at most, as all hands appear to be anxious to move on to the north. Things in other respects much the same; the weather still continues to be good. In the evening there was kind of procession, amongst both Spaniards and Inds. I enquired the reason, I was told by a Mr. David Philips, an Englishman, that this day, a year ago, the Virgin Mary appeared to an Ind. and told him that the 12th day of december should always be kept as a feast day and likewise a holliday among them and both Spaniards and Inds. believe it.

13TH. I walked through the work shops; I saw some Inds. blacksmithing, some carpentering, others making the wood work of ploughs, others employed in making spinning wheels for the squaws to spin on. There is upwards 60 women employed in spinning yarn and others weaving. Things much the same, cloudy and some rain today. Our black smith[s] have been employed for several days making horse and nails for our own use when we leave here.

14TH. I was asked by the priest to let our black smiths make a large trap for him to set in his orange garden, to catch the Inds. in when they come up at night to rob his orchard. The weather clear and warm. Things in other respects much the same as they have been heretofore; friendship and peace prevail with us and the Spaniards. Our own men are contentious and quarrelsome amongst themselves and have been ever since we started the expedition. Last night at supper for the first time the priest questioned me as respected my religion. I very frankly informed him that I was brought up under the Calvinist doctrine, and did not believe that it was in the power of man to forgive sins. God only had that power, and when I was under the necessity of confessing my sins, I confessed them unto God in prayer and supplication, not to man; I further informed him that it was my opinion, that men ought to possess as well as profess religion to constitute the christian; he said that when he was in his church and his robe on, he then believed he was equal unto God, and had the power to forgive any sin, that man was guilty of, and openly confessed unto him, but when he was out of church and his common waring apparel on he was as other men, divested of all power of forgiving sins.

[DECEMBER] 15TH. I went out fowling with the commandant of the mission. I killed 7 brant and one duck, and the commandant killed 2 brants and a duck; the priest furnished me with shot. Two of our men went to work today, Arthur Black and John Gaiter; they are to get a horse a piece for 3 days work. Times much the same as they have been some time back; nothing new occurs.

16TH. Late this morning a Mr. Henry [Edwards?], owner of a brig now lying in port, arrived at the mission; he appears to be a very much of a gentleman, and quite intelligent. His business here is to buy hides, tallow and soap, from the priest. Nothing new has taken place. Things much the same about the mission; the priest administered the sacrament to a sick Indian today, and he thinks he will die.

17TH. The sick Indian that the priest administered the sacrament too yesterday, died last night, and was entered in there graveyard this evening; the proceedings in church similar to the last sabbath. Sunday appears to be the day that the most business is transacted at this mission; the priest plays at cards both sunday a[nd] weak a days, when he has company that can play pretty expert.

18TH. I received a letter from Mr. S. informing me that he rather was under the impression that he would be detained for some time yet, as the general did [not] like to take the responsibility on himself to let us pass until he received instructions from the general in Mexico; under those circumstances I am fearful we will have to remain here some time yet. Our men have been employed

JOURNAL OF HARRISON G. ROGERS

---

fitting out a cargo of hides, tallow, and soap for a Mr. Henry Edwards, a German by birth, and the most intelligent man that I have met with since I arrived at this place; he is what they term here a Mexican trader.

Mr. S. also wrote to me for eight beaver skins, to present to the Spanish officers to face there cloaks with; I complied with his request, and selected eight of the best and sent to him.

19TH. Still remaining at San Gabriel; things much the same. I went out with my gun to amuse myself, killed some black birds and ducks. The express left here this morning for Sandiego. I sent the eight beaver skins to Mr. Smith to present to the Spanish officers to face their cloaks, by him. The old father continues his friendship to me; it does not appear to abate in the least. I still eat at his table. This mission, if properly managed, would be equal to [a] mine of silver or gold; there farms is extensive; they raise from 3 to 4000 bushels of wheat annually, and sell to shippers for \$3. per bushel. There annual income, situated as it is and managed so badly by the Inds., is worth in hides, tallow, soap, wine, ogadent, wheat, and corn from 55 to 60,000 dollars.

20TH. Nothing new has taken place; all peace and friendship. I expect an answer from Mr. Smith in six or eight days if he does not get permission to pass on. My situation is a very delicate one, as I have to be amongst the grandees of the country every day. My clothes are [illegible] the clothing of blanketts [illegible] pantaloons, two shirts and [illegible] read cap. I make a very grotesque appearance when seated at table amongst the dandys with there ruffles, silks, and broad clothes, and I am

---

New Years address by Harrison G. Rogers to the Reverend Father of San Gabriel mission January 1st. 1827

REVEREND FATHER, Standing on the threshold of a New Year, I salute you with the most cordial congratulations and good wishes.

While the sustaining providence of God has given us another year of probation, every thing seems to remind me that is for probation.

Many, very many, during the past year have, doubtless, been called throughout the different parts of the tractless globe, to weep over friends now sleeping in their graves, many others have personally felt the visitations of sickness, and probably many more, ere another year ushers in, will be called from time into eternity.

While revolving seasons, while sickness, disappointment, and death raise their minatory voice, remember, reverend sir, that this world is not our home. It is a world of trial. It is the dawn of an immortal existence.

Therefore my advice is, to all the human family, to be faithful, be devoted to God, be kind, be benevolent to their fellow sufferers, to act well their part, live for eternity; for the everlasting destinies of their souls is suspended upon their probation, and this may close the present year.

Our Savior, sir, after having spent his life in untrying [untiring] benevolence, and before he ascended to his native heavens, probably in allusion to the twelve tribes of Israel, elected twelve apostles or missionaries.

To these, after having properly qualified and instructed them, he left a part of his legacy, a world to be converted.

He directed that "repentance and remission of sins should be preached in his name among all nations, beginning at Jerusalem" - Agreeably to his command the first church was founded at

Jerusalem.

But, reverend father, remember the whole world was missionary ground. Before the days of Christ Jesus, our Saviour, we never heard of missionaries to the heathen with a solitary exception.

The exception to which I allude is the case of Jonah, who was sent to preach to the heathen at Nineveh about 800 years before Christ.

It was not till several years after the ascension of our Saviour that a single gentile was converted. But now the door was opened. The apostles hesitated, delayed no longer. It is said by ancient history that the world was divided among them by lot.

Be this as it may, it is certain that they soon separated and went from village to village.

To this little number of missionaries we are informed that Paul was soon added.

With the exception of this man, the missionaries were not learned in the arts and sciences; were ignorant of books and of men, yet they went forth unsupported by human aid, friendless and opposed by prejudices, princes, laws, learning, reasonings of philosophy, passions and persecutions. And what was the result of their labors? We know but a little; we can trace only a few of their first steps. Yet we know enough to astonish us. We know by the labors of those missionaries there are mentioned in the New Testament, sixty-seven different places in which christian churches were established by them, several of which places contained several churches.

Paul informs us that in his time the gospel had been preached to every [race] which is under heaven. Justin Martyr tells us that in the year 106, "There was not a nation either Greek or barbarian or of any other name even of those who wander in tribes and live in tents, among whom prayers and thanksgivings are not offered to the Father and Creator of the universe, by the name of the Crucified Jesus." We know, assuredly, that at this time that there were churches in Germany, Spain, France, and Brittain. Besides the apostles, there were at least eighty-seven evangelists in this age, so that the whole number of active missionaries in the Apostolic age, was ninety-nine or one hundred. Of the apostles we have reasons to believe, nine at least suffered martyrdom. On the whole, then, we have no reason to doubt, on the testimony of history and tradition, that the last command of Christ was so obeyed, that in the Apostolic age, the gospel was preached in every part of the globe which was then known.

---

MONDAY, JANUARY 1ST, 1827. This morning church was held before day; men, women and children attended as usual; after church, musick played by the Inds. as on sunday; wine and some other articles of clothing given out to the Inds. The priest keeps a memorandum of all articles issued to them. The fare at the table the same as other days, if any difference, not so good. Some rain last night and to-day; weather warm; showers alternate through the day like may showers in the states, and equally as pleasant; things in other respects much the same; no news from Mr. S. and I am at a loss how to act in his absence with the company, as he left no special instructions with me when he left here.

TUESDAY 2ND. Still at the mission of San Gabriel; nothing new has taken place to-day; the men commenced work again this morning for the old padre; no news from Mr. S; friendship and peace still prevail. Mr. Joseph Chapman, a Bostonian by birth, who is married in this country and brought over to the Catholic faith, came here about 10 o'clock A.M. to superintend the burning of a coal pitt for the priest. He is getting wealthy, being what we term a Yanky; he is jack of all trades, and naturally a very ingenious man; under those circumstances, he gets many favours from the

JOURNAL OF HARRISON G. ROGERS

---

priest, by superintending the building of mills, black smithing, and many other branches of mechanicism.

W. 3RD. There was five or six Inds. brought to the mission and whiped, and one of them being stubborn and did not like to submit to the lash was knocked down by the commandant, tied and severely whiped, then chained by the leg to another Ind who had been guilty of a similar offence. I rec'd a letter from Mr. S. this morning informing me that he had got his passports signed by the governor, by the intercession of the gentlemen officers, and that he would join me in a few days; he intended embarking on board Capt. Cunningham's ship, and coming to St. Pedro, which is forty-five miles distant from San Gabriel.

THURS. 4TH. Still at the mission; nothing new; four of our men, Robert Evans, Manuel Lazarus, John Hannah, and John Wilson went with Mr. Joseph Chapman, to cut wood for the coal pitt, and assist him in erecting it, and burning the coal. Myself and Mr. McCoy went up in the mountains to see if we could find some deer; I saw two and wounded one, killed a wolf and two ducks; Mr. McCoy saw two deer, and got one shot but missed. We passed through a great abundance of oak timber, some trees heavy laden with acorns, the land, rich, and easy cultivated, some large springs, or lagoons, which offered a great quantity of water, which is brought in all directions through the mission farm as they have to water their orchards, gardens, and farms.

FRIDAY 5TH. Still remaining at the mission of San Gabriel, waiting the arrival of Mr. S. Five men went with Mr. Chapman, this morning, to cut cord wood for the coal pitt. I walked over the soap factory and find it more extensive than I had an idea; it consists of 4 large cisterns, or boilers, that will hold from 2000 to 2500 hundred gallons each; the cistern is built in the shape of an sugar loaf made of brick, stone, and lime; there is a large iron pott, or kittle, fixed in the bottom where the fire strikes them to set them boiling, lined around the mouth of the cisterns and the edge of the potts with sheat iron 8 or 10 inches wide; the potts, or kittles, will hold from 2 to 250 gallons each, and a great many small ones, fixed in like manner. Things in other respects much the same about the mission as usual, friendship and peace with us and the Spaniards.

6TH, SATURDAY. This being what is called Epiphany or old Christmas day, it is kept to celebrate the manifestation of Christ to the gentiles, or particularly the Magi or wise men from the East. Church held early as usual, men, women, and children attend; after church the ceremonies as on sundays. Wine issued abundantly to both Spaniards and Inds., musick played by the Ind. band. After the issue of the morning, our men, in company with some Spaniards, went and fired a salute, and the old padre give them wine, bread, and meat as a treat. Some of the men got drunk and two of them, James Reed and Daniel Ferguson, commenced fighting, and some of the Spaniards interfered and struck one of our men by the name of Black, which come very near terminating with bad consequence. So soon as I heard of the disturbance, I went among them, and passified our men by telling what trouble they were bringing upon themselves in case they did not desist, and the most of them, being men of reason, adheered to my advice.

Our black smith, James Reed, come very abruptly into the priests dining room while at dinner, and asked for argament; the priest ordered a plate of victuals to be handed to him; he eat a few mouthfuls, and set the plate on the table, and then took up the decanter of wine, and drank without invitation, and come very near braking the glass when he set it down; the padre, seeing he was in a state of inebriety, refrained from saying anything.

SUNDAY 7TH. Things carried on as on former sabbaths, since I have been at the mission, church

---

JOURNAL OF HARRISON G. ROGERS

---

services morning and evening, issues to the Inds. of wine and clothing; the priest in the evening threw oranges among the young squaws to see them scuffle for them, the activest and strongest would get the greatest share. Mr. Smith has not joined us yet.

MONDAY 8TH. Last night there was a great fandago or dance among the Spaniards; they kept it up till nearly day light from the noise. The women here are very unchaste; all that I have seen and heard speak appear very vulgar in their conversation and manners. They think it an honnour to ask a white man to sleep with them; one came to my lodgings last night and asked me to make her a blanco Pickanina, which, being interpreted, is to get her a white child, and I must say for the first time, I was ashamed, and did not gratify her or comply with her request, seeing her so forward, I had no propensity to tech her. Things about the mission much the same. No news of Mr. S., and I am very impatient, waiting his arrival.

9TH, TUESDAY. Business going on about the mission as usual. About 8 or ten boys employed gathering orranges overseed by the commandant and the steward of the mission, old Antonio, a man of 65 years of age, who is intrusted with the keys of all the stores belonging to the mission; he generally is served at the priests table, and, from appearance, is very saving and trusty. I went out in company with Mr. McCoy this evening with our guns to amuse ourselves; I killed one brant and Mr. McCoy killed nothing. Mr. S. still absent from the company.

WEDNESDAY, 10TH. About noon Mr. S., Capt. Cunningham, Mr. Shaw, and Thos. Dodges come to the mission from the ship Courier, and I was much rejoiced to see them as I have been waiting with anxiety to see him. Nothing new has taken place to-day; things much the same, about the mission. Mr. S. intends going back in the morning to the ship.

THURSDAY, 11TH. Mr. S. in company with Capt. Cunningham, Mr. Shaw, and Chapman, left the mission this morning for the sea shore. About noon, Capt. Cunningham returned to the mission, and informed me that Mr. S. wished me to go to the parbalo to buy horses, which is 8 miles distance from San Gabriel.

I complied with his request went, and met Mr. S. there, and purchase two horses for our trap, and Mr. S. made an agreement for 10 more, for which he is to give merchandise at the ship in exchange.

FRIDAY, 12TH. I got the two horses we bought last evening, from Mr. Francis St. Abbiso, and returned to the mission about the middle of the day; just as I arrived the priest from San whan arrived on a visit with his carriage, and Indian servants. He is a man about 50 years of age, upwards of six feet high, and well made in proportion, and, from his conduct, he appears to be a very good man, and a very much of a gentleman. I had a branding iron made by our blacksmith so soon as I returned, and branded the two horses that we bought, with J.S.; things in other respects at the mission much the same.

SATURDAY, 13TH. This morning I set the men to work to put the traps in order for packing; one of the horses I bought yesterday got loose last night and ran off, and I have not got him yet or heard anything of him. Today at dinner I was asked a great many questions by the priest who came here yesterday, respecting our rout and travels; I give him all the satisfaction I could and informed him as respects the situation of the country I have traveled through, also the United States, and their laws. Things about the mission much as usual.

SUNDAY, 14TH. As agreeable to promise I sent Arthur Black, John Gaiter, and Peter Ranne to the parbalo to meet Mr. Smith to get horses, which he is purchasing at that place. Time is passing off

JOURNAL OF HARRISON G. ROGERS

---

swiftly and we are not under way yet; but I am in hopes we shall be able to start in three or 4 days from here. Church as usual; wine issued, etc. In the evening, four Inds. who had been fighting and gambling was brought before the guard house door, and sentenced to be whipped; they received from 30 to 40 lashes each on their bare posteriors.

MONDAY [JANUARY] 15TH. About noon Capt. Cunningham and Mr. Chapman arrived at the mission from the ship. Mr. S. still remain in the parbalo, purchasing horses. Mr. Chapman informed me that there is a natural pitch mine north of the parbalo, 8 or 10 miles, where there is from 40 to 50 hogsheads of pitch throwed up from the bowels of the earth, daily; the citizens of the country make great use of it to pitch the roofs of their houses; he shew me a piece which have the smell of coal, more than any other thing I can describe. Business about the mission much the same as it has been heretofore. I went in their church to-day for the first time and saw their molten images; they have our Savior on the cross, his mother and Mary, the mother of James, and 4 of the apostles, all as large as life. They appropriate the room, where the images stand, to a sugar factory.

TUESDAY, 16TH. Mr. S. returned from the parbalo, with 41 head of horses, which he purchased at that place; he got 8 new saddles from the padra and set the men to work to fix them; nothing new has taken place about the mission; things much the same.

WEDNESDAY, 17TH. All hands are busily employed fixing their things ready to start tomorrow morning; the old father has given a great deal to Mr. Smith, and some of the men, and continues giving. I expect we shall be able to get off early in the morning. Things about the mission much the same.

THURSDAY, 18TH. All hands were up early this morning, and went to the farm, where we had our horses, 68 in number, and got them packed, and under way in pretty good season. After we got 1/2 mile off the mission, our unpacked horses, together with those that had packs on started to run 8 or 10 miles before we stoped them; one of the pack horses lossed 12 dressed skins, that Mr. Smith had got, from our old father of San Gabriel mission, Joseph Sances. We traveled a direct course N.E. about 4m. and we [arrived] at an Ind. farm house where we stayed on the 27th november, when we first reached the Spanish inhabitants. Mr. S. and myself intends returning to the mission, this evening.

FRIDAY, 19TH. Mr. S. and myself returned to the mission, late last evening and took supper with old Father Sancus, for the last time, and our farwell. The old father give each of us a blankett, and give me a cheese, and a gourd filled with ogadent. All hands being ready early in the morning, we started and travelled, and had an Ind. guide, a N.E. course about 25 m. and enc. at St. Ann, an Ind. farm house, for the night; our wild horses created us considerable trouble during the day.

SATURDAY, 20TH. Still at St. Ann; Mr. S. commands to lie by to-day, as there is five of our best horses missing, and hunt them, and brake some other horses; a number of the men are employed hunting horses and others haltering and brake more. The horse hunters returned without finding them; and he intends leaving them and proceeding on his journey early tomorrow morning.

SUNDAY, 21ST. All hands were up early and getting their horses packed; we were under way in pretty good season in the morning, and had an Ind. boy as a pilot; we started and travelled a N.E. and by east course, 25 or 30 m. and reached an Ind. farm house about 4 m. distant from San Bernardo, and enc. where we have an order from the governor, and our old Father Joseph Sanchus, at the mission of San Gabriel, for all the supplies we stand in need of. The country quite mountain-

JOURNAL OF HARRISON G. ROGERS

---

ous and stoney.

MONDAY, 22ND. Mr. S. and the interpreter started early this morning up to San Bernardano for to see the steward, and get supplys. We intend killing some beef here and drying meat. I expect we shall remain here two or three days. All hands get milk this morning. We have killed two beeves and cut the meat, and drying it. Mr. S. has got corn, peas, parched meal, and flour of wheat. Old Father Sanchus has been the greatest friend that I ever met with in all my travels, he is worthy of being called a christian, as he possesses charity in the highest degree, and a friend to the poor and distressed. I ever shall hold him as a man of God, taking us when in distress, feeding, and clothing us, and may God prosper him and all such men; when we left the mission he give Mr. S. an order to get everything he wanted for the use of his company, at San Bernardino. The steward complied with the order so soon as it was presented by Mr. S.

TUESDAY, 23RD. Still at the Ind. farm 3 m. from San Burnandeino; some of the men are employed in braking horses, and others makeing pack saddles and riggin them; Mr. S. sent a letter back this morning to old Father Sanchius concerning the horses, we lossed at Saint Ann, six in number; he will wait the result of his answer.

WEDNESDAY, 24TH. We are still remaining at the Ind. farm waiting the result of the priests answer, and drying meat, and repairing saddles for our journey. Some of the men are kept employed braking wild horses. Daniel Ferguson, one of our men, when leaving the mission on the 18th inst. hide himself, and we could not find him; the corporal who commands at the mission promised to find him, and send him on to us. But I expect we shall not see him again. The weather continues fine.

THURSDAY, 25TH. No answer from the priest this morning, and we are obliged to remain here another day. The men still keep at work, braking young horses. Mr. S. discharged one of the men, John Wilson, on the 17th inst., and he could not get permission to stay in the country, therefore we obliged to let him come back to us; he remains with the company but not under pay as yet; I expect he will go on with us. The weather still continues beautiful. Things about our camp much as usual. Inds. traveling back and forward from the mission steady. The Inds. here call themselves the Farrahoots.

FRIDAY, 26TH. Early this morning we collected our horses and counted them; and two was missing. Mr. S. sent a man in search of them; he returned with them about 10 o'clock. We are still at the Ind. farm house, waiting an answer from the priest at San Gabriel. I expected we shall remain here to-day, if the courier does not arrive. In the evening James Reed and myself concluded we would go into the cowpen and rope some cows and milk them, after the Ind. fashion, accordingly we made ready our rope, and haltered four cows, and tied their heads up to a steak, and made fast their hind feet and milked them, but did not get much milk on account of not letting their calves to them; so soon as we were done Capt. Smith and Silas Gobel followed our example. This country in many respects is the most desirable part of the world I ever was in, the climate so regular and beautiful; the thermomater stands daily from 65 to 70 degrees, and I am told it is about the same in summer.

Mr. S. swaped six of our old horses off for wild mares.

SATURDAY, 27TH. Still at the Ind. farm house waiting the answer from the priest. 20 of our horses missing this morning and four men sent in search of them. Mr. S., and Laplant is gone up to San Burnandeino to see the old steward on business.

Many men of many minds, and many kinds of many,  
Kinderate of God's creation.

When young in life and forced to guess my road,  
And not one friend to shield my bark from harm,  
The world received me in its vast abode,  
And honest toil procured its plaudits warm.

---

SATURDAY, MAY 10TH, 1828. We made an early start this morning, steering N.W. about 5 miles, thence W. 7 miles and encamped, on a small creek, and built a pen for our horses, as we could not get to grass for them. The travelling very bad, several very steep, rocky and brushy points of mountains to go up and down, with our band of horses, and a great many of them so lame and worn out that we can scarce force them along; 15 lossed on the way, in the brush, 2 of them with loads; the most of the men as much fatigued as the horses; one of the men, lossed his gun, and could not find it. We have had more trouble getting our horses on to-day, than we have had since we entered the mount. We crossed a creek close by the mouth 15 or 20 yards wide heading south, and emptying into the river east at an course, the current quite swift, and about belly deep to our horses. Some beavers sign discovered by the men. The day clear and warm. But one Ind. seen to-day; he was seen by Capt. Smith as he generally goes ahead, and I stay with the rear to see that things are kept in order.

SUNDAY, MAY 11, 1828. As our horses was without food last night, we was up early, and dispatched four men after those that was left back yesterday, and had the others packed and under way a little after sun rise, directing our course up a steep point of mountain, very rocky and brushy about 3/4 of a mile. The course N.W. 2 miles and struck into an open point of mountain where there was good grass and encamped, as the most of our horses was nearly down. We had a great deal of trouble getting them up the mountain with there loads on; a number would fall with their packs, and roll 20 or 30 feet down among the sharp rocks, several badly cut to pieces with the rocks.

The four men that was sent back returned late in the evening. They had got 12 of the horses that were missing, and among them the 2 that had loads; the man that lost his gun could not find it. Three deer killed in the evening, the meat poor.

MONDAY, MAY 12TH. We concluded to remain here to-day and let the horses rest; 2 men sent back after the other horses that are still missing; one left yesterday that could not be got along, that had entirely given out. The two men returned late, found one of the lost horses, but could not drive him to camp, consequently we shall loose them as Capt. Smith intends moving camp early to-morrow. The day clear and warm.

TUESDAY, MAY 13TH, 1828. All hands called early and ready for a start, directing our course N.W. over high ranges of rocky and brushy points of mountains, as usual, and travelled 6 m. and encamped on the side of a grassy mou., where there was an abundance of good grass for the horses, but little water for them. We had a great deal of difficulty to drive them on account of brush and the steepness of the points of mountain; two left that could not travel and a great many more very lame; the weather good.

WEDNESDAY, MAY 14TH. We made an early start, directing our course as yesterday N.W., and traveled 4 m. and enc. on the top of a high mountain, where there was but indifferent grass for our horses. The travelling amazing bad; we descended one point of brushy and rocky mountain, where it took us about 6 hours to get the horses down, some of them falling about 50 feet perpendicular down a steep place into a creek; one broke his neck; a number of packs left along the trail, as night was fast approaching, and we were obliged to leave them and get what horses we could collect at camp; a number more got badly hurt by the falls, but none killed but this one that broke his neck.

Saw some Inds. that crossed the river in a canoe and came to me; I give them some beads, as presents; they made signs that they wanted to trade for knives, but I told them that I had none; they give me a lamper eel dried, but I could not eat it.

They appear afraid of horses; they are very light coloured Inds., quite small and talkative. The weather still good.

THURSDAY, 15TH. MAY, 1828. The men was divided in parties this morning, some sent hunting, as we had no meat in camp, others sent back after horses and packs that was left back.

5 Inds. came to camp; I give them some beads; they appear quit friendly; shortly after fifteen or 20 came, and among them one squaw, a very good featured woman; she brought a dressed skin and 2 worked boles for sale; I bought them from her for beads. The hunters killed 5 deer. The balance of the horses and packs, was got to camp about 4 oc. in the evening; the men quit fatigued climbing up and down the hills. The weather still good. Some black bear seen by the hunters.

FRIDAY, MAY 16TH, 1828. We concluded that it was best to lie by today and send two men to look out a pass to travel, as the country looks awful a head, and let our poor horses rest, as there is pretty good grass about 1 mile off for them to feed on. 20 or 30 Inds. Visited our camp in the course of the day, bringing eels for trade and roots; the men bought the most of them giving awls and beads in exchange. Capt. Smith made them some small presents, and bought one B. skin from them; the women does the principal trading. Those Inds. are quite civil and friendly; the weather still good.

SATURDAY, MAY 17TH, 1828. The 2 men that were sent on discovery yesterday returned this morning and say that we are 15 or 20 miles of [f] the North Pacific ocean; they report game plenty, such as elk and deer; they report the traveling favourable to what it has been for 30 or 40 m. back. On there return, we concluded to remain here again to-day on account of our horses being so very lame and soar from the bruises they got on the 14th inst. The morning cloudy and rainy.

---

THE SECOND JOURNAL OF HARRISON G. ROGERS

---

The 2 men, Marishall and Turner, that were sent off yesterday, killed 3 deer, and Capt. Smith has dispatched 2 men after the meat, as the camp is almost destitute.

Mr. Virgin and Ransa quite unwell this morning. The day continues cloudy and rainy, and quite cold towards evening.

SUNDAY, MAY 18TH, 1828. As we intended moving camp, the horses were sent for early, and got to camp about 10 oc. A.M., packed and started, directing our course W. 3 miles and struck into a small hill pararie, where there was grass and water, and encamped, as the distance were too great to go to any other place of grass to-day for the horses, from what Turner and Marishall tell us about the route from here to the ocean. The morning being so thick with fogg, the men that was sent after the horses did not find them all; Capt. Smith took 2 men with him, and went back after those that could not be found in the morning, and I went on with the company, and encamped before he joined me with those that he went back after; he found nine that was left and brought eight to camp, one being so lame that he could not travel, and he was oblige to leave him; the weather clear and windy.

MONDAY, MAY 19TH, 1828. We made an early start this morning, steering our course as yesterday, 6 miles west, and encamped on the side of a mountain, where their was plenty of good grass and water for our horses. Just before we encamped, there was a small band of elk seen by Capt. Smith and those men that was in front with horses; they went after them and killed 6, two of which number were in good order. The travelling some better than it was back, although we have hills and brush to encounter yet; we encamped about 6 m. from the ocean, where we have a fair view of it.

4 Inds. came to camp in the evening and stay all night. Capt. Smith give them some small presents of beads and some elk meat; they eat a part and carried the balance off with them; they appear quit friendly as yet.

TUESDAY, MAY 20TH. As our horses was lame and tired, we concluded to remain here and let them rest, and kill and dry meat, as elk appeared to be plenty from the sign.

After breakfast, myself and Mr. Virgin started on horse back for the sea shore, following an Ind. trail that led immediately there; after proceeding about 5 m. west, we found we could not get any further on horse back along the Ind. trail, so we struck out from the creek that we had followed down, about 3 miles from where we first struck it; this creek being about 40 yards wide, heading into a mou. south and emptying into the ocean at a N.W. direction. After leaving the creek with considerable difficulty, we ascended a point of steep and brushy mountain, that runs along parallel with the sea shore, and followed that, until we could get no further for rocks and brush. We got within 80 or 100 yards of the beach, but, being pretty much fatigued and not able to ride down on account of rocks and brush, we did not proceed any further in that direction. Seeing that it was impossible to travel along where we had been with the company, we concluded to turn and travel across a point of mou. that run N.E., but we could not get along, the travelling so bad; we then concluded to stear for camp, as it was get[ting] on towards night. On our return we saw some elk; I went after them, and Mr. Virgin stay with the horses. I did not get to fire on them, and saw a black bare and made after him, and shot and wounded him very bad, and heard Mr. Virgin shoot and hollow in one minute after my gun were discharged, and tell me to come to him. I made all the haste I could in climbing the mou. to where Mr. Virgin was; he told me that some Inds. had attacked him in my absence, shoot a number of arrows at him and wounded the horses, and, he

---

supposed, killed them by that time, that he had shot one, and was waiting for me. I rested a few minutes and proceed on cautiously to the place where we had left our horses, and found an Ind. lying dead and his dog by him, and Mr. Virgin's horse with 2 or 3 arrows in him, and he laying down. We got him up and made camp a little before night, and there was 7 or 8 Inds. at camp when we got there, and I made signs to them that we were attacked by some of there band, shoot at, one of our horses wounded, and we had killed one; they packed up and put off very soon. The day very foggy at times; some little rain in the evening. Mr. Smith told me that he had sent two men back after the horses that were missing with instructions to stay and hunt them until tomorrow, if they did not find them to-day.

WEDNESDAY, MAY 21ST. Still at the same camp; those two men that was sent after the lossed horses still absent. A considerable quantity of rain fell last night; the morning continues to be showery and foggy. The men that were sent back after horses yesterday returned, late in the evening, without finding but one; they say they suppose the Inds. to have killed the rest. The timber in this part of this country is principally hemlock, pine, and white ceadar, the most of the ceadar trees from 5 to 15 feet in diameter and tall in proportion to the thickness, the under brush, hazle, oak, briars, currents, goose berry, and Scotch cap bushes, together with aldar, and sundry other shrubs too tedious to mention; the soil of the country rich and black, but very mountainous, which renders the travelling almost impassable with so many horses as we have got.

THURSDAY, MAY 22ND, 1828. All hands up early and preparing for a move, had the horses drove to camp and caught ready for packing up, and it commenced raining so fast that we concluded to remain here again to-day, as we could [not] see how to direct our course for fog along the mountains. We have not seen or heard any Inds. since the 20th that Mr. Virgin killed the one that shoot at his horse.

Oh! God, may it please thee, in thy divine providence, to still guide and protect us through this wilderness of doubt and fear, as thou hast done heretofore, and be with us in the hour of danger and difficulty, as all praise is due to thee and not to man, oh! do not forsake us Lord, but be with us and direct us through.

FRIDAY, MAY 23RD, 1828. The morning being clear, we were ready for a start early, directing our course east, back on the trail we travelled on the 19th inst, and made the same camp and stopped, it being 6 miles, and concluded to remain the balance of the day and let our meat and other wet articles get dry. We had but little difficulty getting along, as we had a good trail that were made by our horses passing along before; the day clear and pleasant.

SATURDAY, MAY 24TH. All hands up early and ready for a move about 8 oc. A.M., directing our course N.E., 4 miles, and encamped within 100 yards of Indian Scalp river, on the side of the mountain where there was plenty of good grass for our horses.

Capt. Smith went down to the river, where there is a large Indian village on the opposite side, and called to the Inds., and there were 4 crossed over, 2 men, 1 woman and a boy about 12 or 14 years of age, and came to camp with him; he made them a present of a few beads. The day cloudy and misty. There being some horses missing when we encamped, 2 men were sent immediately back in search of them and found them and got back a little after sun set. One mule killed this morning by haltering him and throwing him.

SUNDAY, MAY 25TH. As is usual when travelling, we was up and made an early start, directing our course N.E. about 1 mile and struck Ind. Scalp river opposite to an Ind. village, and got the

THE SECOND JOURNAL OF HARRISON G. ROGERS

---

Inds., with there canoes, to cross our plunder and selves. We drove in our horses, and they swam across, where they had to swim from 250 to 300 yards. We give those Inds. that assisted in crossing our goods, beads and razors for there trouble; there was a number visited our camp in the course of the day, men, women, and children; some brought lamprey eels for sale; the men bought them, giving beads in exchange. Those Inds. live in lodges built similar to our cabbins, with round holes about 18 inches in diameter for doors; they appear friendly and say nothing about the Ind. that Mr. Virgin killed on the 20th inst. About 10 oc. A.M., it commenced raining and continued to rain on pretty fast during the day.

We cannot find out what those Inds. call themselves; the most of them have wampum and pieces of knives. Some have arrow points of iron; they also have some few beaver and otter skins. Mr. Smith purchases all the beaver fur he can from them. The foundation of there lodges are built of stone with stone floors; the[y] appear quit affraid when we first reached the river and called to them, but, after coakesing, one came across with his canoe, and, showing him by signs what we wanted, he soon complied, and called to others who came with canoes and comm. x our goods. Deer killed to-day; the meat all poor.

MONDAY, MAY 26TH, 1828. We made an early start this morning, directing our course N.E., and ascended a very long and steep point of grassy mountain, and reached the divide, and kept in about 6 miles, the travilling good, and encamped on the side of the mountain where there was pretty good grass for our horses. I killed one fat buck to-day, and Mr. Virgin killed a small doe, but poor fat. We counted our horses, and find that three got drowned yesterday in crossing the river, we saw one of them floating down the river this morning. The day clear and pleasant; 2 Inds. started with us this morning, as pilots, but soon got tired and left us.

TUESDAY, MAY 27TH. Capt. Smith and Mr. Virgin started early this morning ahead to look out a road to travel; I stay and had the horses caught and packed, and started following the blazes through the woods, a N.W. course, descending a very steep and brushy point of mountain, about 3 miles, and struck a creek 25 or 30 yards in width, heading east, and running west into Ind. Scalp river, and enc. (for the day), as there was some horses missing, and sent 3 men back on the trail to look after them. There was 8 or 10 Inds. came to camp, soon after we stoped; Capt. Smith give them a few beads; they have a fishing establishment on the creek. The day pleasant and clear; one horse left to-day.

WEDNESDAY, MAY 28TH. We made an early start this morning, steering our course N.E. up a very steep and brushy point of the mountain, and got on the ridge, or divide, between the creek and river, and travelled about 7 miles on it, and enc. on the top of the mountain, where there was but little grass for horses. The day so foggy that we could scarce see how to get along on the ridge, at times; late in the evening, it cleared off, and we had a fair view of the ocean. It appeared to be about 15 or 20 miles distant.

THURSDAY, MAY 29TH. All hands up early and making ready for a move; about 10 oc A.M., our horses were collected together, and we got under way, following the trail that we came yesterday, about 2 miles, S.W., and found some water in a ravine and encamped, the day being so foggy that we could not see how to direct our course to the river, and sent 2 men to hunt a pass to travel; they returned in the evening without finding any route that we could get along with our band of horses. The timber of the country as usual pine and white ceadar.

FRIDAY, MAY 30TH, 1828. All hands up early this morning and out after horses, as they were

---

very much scattered, and got them collected about 10 o.c., and star[ted] down a steep and brushy ridge, a N.W. course, and travelled about 3 m., and struck a small creek, where there was a little bottom of good grass and clover, and encamped. The horses got so that it was almost impossible to drive them down the mou. amongst the brush; 8 or 10 left back in the brush, and six men sent back after them; they got them to camp just at dark; one lost entirely that the men could not find; the rear part of the compy, that stay with me, had a serious time running up and down the mountain after horses through the thickets of brush and briars. 2 elk killed to day by Mr. Virgin; the morning clear, and the evening foggy.

SATURDAY, MAY 31ST, 1828. Capt. Smith concluded we would stay here a part of the day and send 2 men to look out a pass to the river; they returned about 11 o.c.' and say that we will be obliged to climb the mountain again at this place, and go along the ridge for 2 or 3 miles, and then descend to the main river, as it is impossible to go along the creek with horses for cut rocks. As it had commenced raining when those men returned, we concluded to stay here to day, as there was plenty of good grass for our horses. Two Inds came to camp in the rain, and brought a few raspberries that are larger than any species of raspberries I ever saw; the bush also differ from those I have been acquainted with; the stock grow from 8 to 10 feet in height, covered with briars, and branches off with a great many boughs, the leaf is very similar to those vines I have been acquainted with heretofore. Capt. Smith give those Inds. some meat, and they say they will go with us from here to the ocean.

It rained fast from the time it commenced in the forenoon, untill night.

SUNDAY, JUNE 1ST, 1828. We got our horses about 10 o.c. A.M. and packed up and started in the rain, as it had not quit from the time it commenced yesterday, directing our course west, up a steep and brushy mountain, and travelled about 3 miles and enc. in a small bottom parairie, principally covered with ferns; the travelling amazing bad; we left several packs of fur on the road and lost several pack horses and some loose horses, the day being so rainy that it was almost impossible to get up and down the mountains; the road became quite mirery and slippery. Capt. Smith got kicked by a mule and hurt pretty bad. When I reached camp with the rear [rear], it was night, and all hands very wet and tired.

MONDAY, JUNE 2ND, 1828. Capt. Smith concluded to remain here and send some men back after the fur that was left, and to hunt horses; they returned about noon, bringing all the horses and packs that was left. Some men went hunting but killed nothing. Two Inds. came to camp and brought some raspberries; Mr. Smith give them a few beeds. The morning wet; about 1 o.c. P.M., it cleared off, and the balance of the day fair. Capt. Smith goes about although he was much hurt by the kick he received yesterday.

TUESDAY, MAY [JUNE] 3RD, 1828. We made an early start this morning, directing our course N.W. up a steep point of brushy mou., and travelled about 2 m., and enc. in the river bottom, where there was but little for our horses to eat; all hands working hard to get the horses on, as they have become so much worn out that it is almost impossible to drive through brush; we have two men every day that goes a head with axes to cut a road, and then it is with difficulty we can get along. The day clear and pleasant.

WEDNESDAY, MAY [JUNE] 4TH. As our horses were very much fatigued, we made an early start again, this morning, to get to grass, but, the road proving both brushy and mirery, we only made 1 1/2 miles, a N.W. course, during the day; the men almost as well as horses done out. We

were obliged to enc. again in the river bottom and build a pen for our horses, as there was no grass for them. 5 Inds. came to me and brought some raspberries, and give me; I give them a few beads and went on, and left a coloured man by the name of Ransa with them, and had not been absent but a few minutes before he called to me and said the Inds. wanted to rob him of his blanket, that they had rushed into the bushes and got there bows and arrows; he fired on them and they run off leaving 2 or 3 small fishes. The Inds. that have visited our camps some time back generally came without arms and appeared very friendly; those I left with Ransa had no arms at the time they came to me, which induced me to believe that he told me a lie, as I suppose he wanted to get some berries and fish without pay, and the Inds. wanted his knife and he made a false alarm, for which I give him a severe reprimand. The day clear and warm.

THURSDAY, JUNE 5TH, 1828. Our horses being without food again last night, we packed up and made an early start, sending some men a head to cut a road to where there was a small bottom of grass on a creek that comes into Ind. Scalp river, about 10 yards wide; the distance being about 2 miles, a N.W. course. We reached it about 11 o.c. A.M., and enc., one mule and 2 horses left to-day, that could not travel. No Inds. seen to-day; one man sent hunting but killed nothing, and we are entirely out of provision with the exception of a few pounds of flour and rice. Capt. Smith give each man a half pint a flour last night for their supper; we can find no game to kill although there is plenty of elk and bear sign. The day clear and pleasant. The most of the men went hunting after they had enc., but found nothing to kill; we killed the last dog we had along, and give out some more flour.

FRIDAY, JUNE 6TH, 1828. Myself and six men started early hunting, but killed nothing; 5 others started after we returned, as we intend staying at this camp for several days for the purpose of recruiting our horses. 8 Inds. ventured to camp and brought a few lamprey eels and some raspberries; they were soon purchased by Mr. Smith and the men for beads. The morning foggy and cloudy, the after part of the day clear and pleasant.

The hunters all returned without getting meat, and we were obliged to kill a horse for to eat.

SATURDAY, JUNE 7TH, 1828. At the same camp; some men pressing beaver fur, and 2 sent hunting, and 3 others sent back to look for loosed horses. The horses hunters returned without finding but one horse; they report 2 dead that was left back. 18 or 20 Inds. visited camp again to-day with berries, mussels, and lamprey eels for sale; those articles was soon purchased, with beads, by Capt. Smith and the men, and when the Inds. left camp, they stole a small kittle belonging to one of the men; they come with out arms and appear friendly but inclined to steal. The day clear and pleasant.

SUNDAY, JUNE 8TH, 1828. As we intend moving camp, we was up and ready for a start, early, steering our course N.W., about 3 1/2 miles over two small points of mou. and enc. on the sea shore, where there was a small bottom of grass for our horses. The travelling ruff, as we had several thickets to go through; it made it bad on account of driving horses, as they can scarce be forced through brush any more. There was several Ind. lodges on the beach and some Inds.; we got a few clams and some few dried fish from them. Some horses being left, I took four men with me and went back and stay all night in a small pararie.

MONDAY, JUNE 9TH. I was up early and started the men that stay with me all night after horses and to hunt at the same time for meat, as I had left the camp entirely destitute; we hunted hard until 9 or 10 o.c. A.M., but killed nothing. Gaiter wounded a black bear, but did not get him. 6

horses was found that was left, when all hands came in, we saddled up our horses and started for camp, and reached it about the middle of the day. All the men that was sent hunting in the morning from camp had come in without killing any thing. Some Inds. in camp with a few small fishes and clams; the men, being hungry, soon bought them and eat them. They also brought cakes made of sea grass and weeds and sold to the men for beads. Where we encamped, there was a small creek pulling into the ocean at a south direction. Capt. Smith started out again to try his luck and found a small band of elk and killed 3; he returned to camp and got some men and horses and brought all the meat in, which was a pleasing sight to a set of hungry men. The day clear and pleasant.

TUESDAY, JUNE 10TH. We concluded to stay here today, dry meat, make salt, and let our horses rest, as there is good grass and clover for them. A number of Inds. in camp with berrys, but do not find so good a market for them as they did yesterday. The morning cloudy and foggy, some rain towards evening. The men appear better satisfied than they do when in a state of starvation.

WEDNESDAY, JUNE 11TH. As we intended moving camp, the men was called early, and, preparing for a start, we were under way about 9 o.c. in the morning, directing our course N.W. up a steep point of mou. along the sea coast, and travelled about 2 m., and entered the timber and brush, and kept along a small divide between the sea shore and creek we left, and travelled 3 m. further and enc. in the woods, without grass for our horses, and built a pen and kept them in through the night. The travelling very bad on account of brush and fallen timber; several horses left with packs that got hid in the brush and was passed and not seen by the men. When we was ready for a start, our fellin axe and drawing knife was missing, and the Inds. had left the camp. Capt. Smith took 5 men with him and went to there lodges, and the Inds. fled to the mou. and rocks in the ocean; he caught one and tyed him, and we brought him on about 2 miles and released him. The axe was found where they had buryed it in the sand. The day cloudy and foggy.

THURSDAY, JUNE 12TH. All hands up early and ready for a start, directing our course W. about 2 miles and struck a small creek, where there was some grass on the mountain for our horses, and enc. for the day, the traveling very bad. The horses that was left yesterday, was found to-day, and brought to camp. The day clear; some fog in the morning.

FRIDAY, JUNE 13TH, 1828. We made an early start again this morning, steering N.W., about 6 m., and struck the ocean and enc. on the beach. Plenty of grass on the mountain for our horses, but very steep for them to climb after it. The traveling very mountainous; some brush as yesterday. 2 mules left today that give out and could not travel; one young horse fell down a point of mou. and killed himself. The day clear and pleasant.

SATURDAY, JUNE 14TH, 1828. We made an early start again this morning, directing our course along the sea shore N., about 1 mile, and struck a low neck of land running into the sea, where there was plenty of clover and grass for our horse, and enc. for the day. We travelled in the water of the ocean 3 or 4 hundred yards, when the swells some times would be as high as the horses backs. 2 men sent back after a load of fur that was lossed yesterday, and to look after horses. 2 hunters dispatched after elk as soon as we enc. One fat deer killed yesterday by J. Hanna. Seven or 8 Inds. came to camp; Capt. Smith give them some beads. The hunters returned without killing any game; saw plenty of elk sign. The day clear and windy.

SUNDAY, JUNE 15TH, 1828. Several men started hunting early, as we intended staying here to day and letting our horses rest. Joseph Lapoint killed a buck elk that weighed 695 lbs., neat

---

weight; the balance of the hunters came in without killing. A number of Inds. visited our camp again to day, bringing fish, clams, strawberrys, and a root that is well known by the traders west of the Rocky mountains by the name of commeser, for trade. All those articles was soon purchased. The day cloudy, windy, and foggy, some rain in the afternoon. Cap. Smith and Mr. Virgin went late in the evening to hunt a pass to travel and found a small band of elk and killed two.

MONDAY, JUNE 16TH. We made an early start this morning, directing our course N.N.W. across a neck of land projecting or running into the ocean, and travelled 4 m., and enc. in a pararie, where there was plenty of grass for our horses. We had considerable difficulty getting our horses across a small branch, that was a little mirery; we were obliged to make a pen on the bank to force them across, which detained us several hours. The day clear and warm.

TUESDAY, JUNE 17TH, 1828. We started early again this morning, steering our course, as yesterday, N.N.W., 2 miles, and found the travelling in the bottom so amazing brushy and mirery we concluded to go back a few hundred yards to the pararie and encamp, dry what meat we had on hand, and send some men to look out a pass to travel when we leave here. We also sent some hunters out. Joseph Lapoint killed a fine buck elk, and Mr. McCoy killed a fawn elk. The day clear and warm, plenty of muskeatoes, large horse flies, and small knats to bite us and pesterous early of mornings and late in the evenings. The timber along the bottom, ceador, hemlock of the largest size, under brush, hazle, briars, aldar, and sundry other srubs; the soil very rich and black.

WEDNESDAY, JUNE 18TH, 1828. We concluded to stay here to day, and dry meat, and do some work that could not well be dispensed with, and send some men off to hunt a road to travel to-morrow, as those that were sent yesterday did not reach the ocean. They say the traveling was tolerable as far as they went. Some more hunters sent out this morning; and men sent after the meat that was killed last evening. The day clear and very warm. Those men that was sent to hunt a road, returned late in the evening and say that we cannot travel along the bottom for swamps and lakes. The hunters returned without killing any game. A number of Inds. visited our camp with clams, fish, strawberrys, and some dressed skins for sale, also commerss roots, ready prepared for eating; they appear friendly but inclined to steal without watching; they differ from the Ind. Scalp river Inds. in speach a little.

THURSDAY, JUNE 19TH. As those men that was sent to hunt a road yesterday, returned without ascertaining what way we could travel from here, Capt. Smith concluded it was best for us to remain here again today, and that he would take two men with him and go to the N.E. across a ridge, and see what kind of travelling it would be in that direction. He started early in company with two of the men, and returned about 12 o.c., and says that he can pass on in a N.E. direction very well as far as he went; he discovered another small river heading in the mountain east of the ocean, and emptying into a bay west about 2 1/2 or 3 miles wide. 5 Inds. in camp today with strawberrys for sale; the day clear and warm.

FRIDAY, JUNE 20TH, 1828. Capt. Smith started early with one man to blaze the road and left me to bring on the compy. I was ready about 10 o.c. A.M., being detained collecting horses that was missing, and started and travelled along an Ind. trail, about 2 m. east, thence 1 mile N.E., on the blazed road, forded the river that Capt. Smith discovered yesterday, which was nearly swimming and from 60 to 70 yards wide, and enc. on the east side, in a bottom pararie that contained about 15 or 20 acres of good grass and clover. About 20 Inds. came to camp in their canoes, and brought lamprey eels for sale; the men bought a number from them for beeds. Several of us went hunting,

and I killed a fine black tail buck, that was fat. Marichall killed a small deer.

SATURDAY, JUNE 21ST, 1828. All hands up early and preparing for start. We was under way about 8 o.c. A.M., directing our course up a steep brushy point of mountain, about 1 1/2 m. E, and struck an open grassy ridge, or rather a small divide, and kept it about 4 1/2 miles N.E. and enc. The travelling along the divide pretty good and most of the way clear of brush; some rock. I saw an elk, while moving on, and approached it, and killed it; it happened to be a very large and fat buck, that would weight, I should say, nearly 600, from appearance, as I judge from one that we weighed that was killed by Lapoint. Several deer killed by the compy. The day clear and cold.

SUNDAY, JUNE 22. We made an early start again this morning, directing our course N.W., in towards the ocean, as the travilling over the hills E. began to grow very rocky and brushy, and travelled 5 m. and enc. in a bottom prairie on a small branch. The road, to-day, brushy and some what stoney. Timber, hemlock and cedar, of considerable size, and very thick on the ground; some trees from 10 to 15 feet in diamitar. The weather still remain good. We had some considerable trouble driving our horses through the brush.

MONDAY, JUNE 23RD. All hands up early and preparing for a start; we was under way about 9 o.c. A.M., directing our course as yesterday N.W., and traveled 8 m. and enc. 3 miles from camp we struck a creek 20 or 30 yards wide and crossed it, thence 5 M. further, keeping under the mountain along the bottom and sometimes along the beach of the ocean. When we enc., the hills come within 1/2 mile of the ocean prairie, covered with grass and brakes. A little before we enc., we discovered the mule that packed the amunition to be missing; four men was sent immediately back in search of it and found it, and brought to camp just at night. 1 mule that was lame give out and was left, and another run off from camp, and went back on the trail with a saddle and halter on. A number of Inds. visited our camp, bringing strawberrys and commass for sale; the men bought all they brought, giving beads in exchange. We passed a number of wigwams during the day. One fine doe elk killed. The day good.

TUESDAY, JUNE 24TH. We made an early start again this morning, directing our course N.N.W., and travelled 5 miles, and struck a creek about 60 or 70 yards wide, and, the tide being in, we could not cross, and were obliged to encamp on the beach of the ocean for the day. Sent two men back early after the mule that run off last night; they returned without finding it; and 2 more were immediately sent back in pursuit of it with orders to hunt all the afternoon and untill 10 or 11 o.c. tomorrow in case they could not find it this evening. The travelling pretty good yesterday and today; a great many little springs breaks out along under the mountain and makes it a little mirery in some of the branches. Enc. close by some Ind. lodges; they all had fled and left them; no visits from them as yet at this camp; 5 or six Inds. came to camp this morning, just before we started, and brought berries and fish for sale. Capt. Smith bought all they had and divided amongst the men. The day fair and pleasant.

WEDNESDAY, JUNE 25TH, 1828. On account of the tide being low, we were ready for a start a little after sun rise; started and crossed the creek with out difficulty, it being about belly deep to our horses, and directed our course again N.W., keeping along a cross the points of prairie near and on the beach of the ocean and travelled 12 m. and enc. on the N. side of a small branch at the mouth where it enters into the ocean, close by some Ind. lodges; they had run off as yesterday and left their lodges. The 2 men that was sent back to hunt the mule, returned to camp a little after night and say the Inds sallied out from their village with bows and arrows and made after

them, yelling and screaming, and tried to surround them; they retreated on horseback and swam a small creek, and the Inds. gave up the chase. When our horses was drove in this morning, we found 3 of them badly wounded with arrows, but could see no Inds. untill we started; we then discovered a canoe loaded with them some distance up the creek close by a thicket and did not pursue them, knowing it was in vain. One deer killed, and several more wounded, and one elk wounded to-day while travilling. Deer and elk quite plenty. 2 horses left to-day that give out and could not travel. The travelling tolerable when compared to former days when in the mou. among the brush; some steep ravines to cross, but not very mirery. The day clear cold and windy for the season.

THURSDAY, JUNE 26TH, 1828. We made an early start again this morning, steering, as yesterday, N.N.W. across several points of brushy and steep mou. and travelled 8 m. on a straight line, but to get to the place of enc., about 12 miles, and struck a creek about 30 yards wide at the entrance into the ocean, and, it being high water, we enc. for the day. 2 deer killed to-day. When we come to count our horses, we found one very valuable one missing that was killed, I suppose, by the Inds. on the 24 inst., when they wounded the other 3. We followed an Ind. trail from the time we started in the morning untill we enc.

FRIDAY, JUNE 27TH. All hands up early and under way a little after sun rise, and started along the beach of the ocean, crossed the creek at the mouth, where it was nearly belly deep to our horses, and purs[u]ed our route along the beach, it bearing N.N.W., and travelled about 7 miles and struck a river about 100 yards wide at the mouth and very deep, that makes a considerable bay and enc., and commenced getting timber for rafts. A number of Ind. lodges on both sides of the river; they had run off, as usual, and left their lodges and large baskets; we tore down one lodge to get the puncheons to make rafts, as timber was scarce along the beach. The weather clear and windy. The Inds. that run off raised smokes on the north side of the bay, I suppose, for signals to those that were absent, or some other villages, to let them know that we were close at hand. All the Inds. for several days past runs off and do not come to us any more.

SATURDAY, JUNE 28TH, 1828. All hands up early, some fixing the rafts for crossing the river and others sent after the horses. We had all our goods crossed by 9 o.c. A.M., and then proceeded to drive in the horses; there was 12 drowned in crossing, and I know not the reason without it was driving them in too much crowded one upon another. We have lossed 23 horses and mules within 3 days past. After crossing the river, we packed up and started along the sea shore, a N.N.W. course, and travelled about 6 miles and enc., sometimes on the beach and sometimes along the points of pararie hills that keeps in close to the ocean; the country back looks broken, and thickety, timbered with low scrubby pines and ceadars, the pararie hills covered with good grass and blue clover; the country has been similar as respects timber and soil for several days past, also grass and herbage. One deer killed to-day.

SUNDAY, JUNE 29TH, 1828. We made an early start again this morning, steering as yesterday N.N.W. along the beach and hills, and travelled 5M. and enc. on account of the water being high, which prevented us from getting along the shore, or we should have travelled a great deal further, as the point of the mou. was too ruff that come into the beach to get along. The travelling yesterday and to-day much alike. I killed one deer after we enc. The day clear and warm.

MONDAY, JUNE 30TH, 1828. We was up and under way in good season, directing our course N.N.W. along the beach 1 mile, then took a steep point of mountain, keeping the same course,

and travelled over it and along the beach 6 miles more, and encamped. Lossed one mule last night, that fell in a pitt that was made by Inds. for the purpose of catching elk, and smothered to death; one other fell down a point of mou. today and got killed by the fall. The day clear and pleasant.

TUESDAY, JULY 1ST, 1828. All hands up early and under way, steering as yesterday N. along the beach of the ocean and across the points of small hills and travelled 12 miles and enc. The day clear and warm; one Ind. in camp early this morning. The country for several days past well calculated for raising stock, both cattle and hogs, as it abounds in good grass and small lakes a little off from the beach where there is good roots grows for hogs. One horse killed again to-day by falling.

WEDNESDAY, JULY 2ND, 1828. We made a pretty early start again this morning, steering N., and travelled 12 miles, and enc. No accident has happened in regard to horses to-day. We travelled pretty much along the beach and over small sand hills; the timber, small pine; the grass not so plenty nor so good as it has been some days past. The country, for 3 days past, appears to leave the effects of earth quakes at some period past, as it is quite cut to pieces in places and very broken, although it affords such an abundance of good grass and clover. The weather still good. As the most of the mens times expired this evening, Capt. Smith called all hands and give them up there articles, and engaged the following men to go on with him, at one dollar per day, untill he reaches the place of deposit, viz;

John Gaiter     Abraham Laplant

Arthur Black     Charles Swift

John Hanna     Thos. Daws

Emanuel Lazarus     Tousaint Marishall

Daws time to commence when he gets well enough for duty.

Also Peter Ranne and Joseph Palmer, at the above named price, one dollar per day, and Martin McCoy, 200 dollars, from the time he left the Spanish country, untill he reaches the deposit.

THURSDAY, JULY 3RD, 1828. We made a pretty early start, steering N. along the pine flats close by the beach of the ocean, and travelled 2 m., and struck a river about 2 hundred yards wide, and crossed it in an Ind. canoe. Capt. Smith, being a head, saw the Inds. in the canoe, and they tryed to get off but he pursued them so closely that they run and left it. They tryed to split the canoe to pieces with thir poles, but he screamed at them, and they fled, and left it, which saved us of a great deal of hard labour making rafts. After crossing our goods, we drove in our horses, and they all swam over, but one; he drowned pretty near the shore. We packed up and started again, after crossing along the beach N., and travelled 5 miles more, and encamped. Saw some Inds. on a point close by the ocean; Marishall caught a boy about 10 years old and brought him to camp. I give him some beads and dryed meat; he appears well and satisfied, and makes signs that the Inds. have all fled in their canoes and left him. I killed one deer to-day. The country similar to yesterday; the day warm and pleasant.

FRIDAY, JULY 4TH. We made a start early, steering N.N.W. 9 m., and enc. The travelling pretty bad, as we were obliged to cross the low hills, as they came in close to the beach, and the beach being so bad that we could not get along, thicketty and timbered, and some very bad ravenes to cross. We enc. on a long point, where there was but little grass for the horses. Good deal of elk signs, and several hunters out but killed nothing, the weather still good.

---

SATURDAY, JULY 5TH, 1828. We travelled 1 1/2 miles to-day N. and, finding good grass, enc. as our horses was pretty tired. Two Inds., who speak Chinook, came to our camp; they tell us we are ten days travell from Catapos on the wel Hamett, which is pleasing news to us. Plenty of elk signs, and several hunters out, but killed nothing.

SUNDAY, JULY 6TH. N. 2 miles to-day and enc., the travelling very bad, mirery and brushy; several horses snagged very bad passing over fallen hemlock; after encamping, two elk killed.

MONDAY, JULY 7TH, 1828. We concluded to stay here to-day for the purpose of resting our horses and getting meat and clearing a road to the mouth of a large river that is in sight, about 2 miles distant that we cannot get too without. About 100 Inds. in camp, with fish and mussels for sale; Capt. Smith bought a sea otter skin from the chief; one of them have a fuzill, all have knives and tomahawks. One a blanket cappon, and a number have pieces of cloth. The weather for several days past good.

TUESDAY, JULY 8TH, 1828. We made an early start, directing our course N. along the beach and low hills; the travelling very bad on account of ravenes, fallen timber, and brush. We made 2 miles and struck the river and enc. The river at the mouth is about 1 m. wide, the Inds. very numerous, they call themselves the Ka Koosh. They commenced trading shell and scale fish, raspberries, strawberries, and 2 other kinds of bury that I am unacquainted with, also some fur skins. In the evening, we found they had been shooting arrows into 8 of our horses and mules; 3 mules and one horse died shortly after they were shot. The Inds. all left camp, but the 2 that acts as interpreters; they tell us that one Ind. got mad on account of a trade he made and killed the mules and horses. The weather still good. One horse left today that was ma[i]m[ed].

WEDNESDAY, JULY 9TH. We made an early start again this morning, and crossed the 1st fork of the river, which is 400 or 500 yards wide, and got all our things safe across about 9 o.c. A.M., then packed up and started along the beach along the river N., and travelled about 2 miles, and struck another river and enc. We crossed in Ind. canoes; a great many Inds. live along the river bank; there houses built after the fashion of a shed. A great many Inds. in camp with fish and berris for sale; the men bought them as fast as they brought them. We talked with the chiefs about those Inds. shooting our horses, but could get but little satisfaction as they say that they were not accessary to it, and we, finding them so numerous and the travelling being so bad, we thought it advisable to let it pass at present without notice. We bought a number of beaver, land, and sea otter skins from them in the course of the day.

THURSDAY, JULY 10TH, 1828. We commenced crossing the river early, as we had engaged canoes last night; we drove in our horses and they swam across; they had to swim about 600 yards. Our goods was all crossed about 9 o.c. A.M. and 2 horses that was wounded, and one was much, remained, that Capt. Smith and 5 men stay to cross; the 2 horses dyed of there wounds, and Capt. Smith swam the mule along side of the canoe. He was some what of opinion the Inds. had a mind to attact him from there behaviour, and he crossed over where the swells was running pretty high, and, there being good grass, we enc. for the day; the Inds. pretty shy.

The river we crossed to-day unites with the one we crossed yesterday and makes an extensive bay that runs back into the hills; it runs N. and S., or rather heads N.E. and enters the ocean S.W., at the entrance into the ocean its about 1 1/2 miles wide.

FRIDAY, JULY 11, 1828. All hands up early and under way, had an Ind. who speaks Chinook along as a guide. Our course was N. along the beach of the ocean, 15 miles, and struck [anoth-

THE SECOND JOURNAL OF HARRISON G. ROGERS

---

er] river that is about 300 yards wide at the mouth and enc., as it was not fordable. We crossed a small creek, 3 yards wide, 10 miles from camp. To-day we enc. where there was some Inds. living; a number of them speak Chinook; 70 or 80 in camp; they bring us fish and berris and appear friendly; we buy those articles from them at a pretty dear rate. Those Inds call themselves the Omp quch.

The day windy and cold. Several of the men worn out. Peter Ranne has been sick for 6 weeks, with a swelling in his legs. The country about 1/2 mile back from the ocean sand hills covered with small pine and brush, the sand beach, quit.

SATURDAY, JULY 12TH. We commenced crossing the river early and had our goods and horses over by 8 o.c., then packed up and started a N.E. course up the river and travelled 3 M. and enc. Had several Inds. along; one of the Ind. stole an ax and we were obliged to seize him for the purpose of tying him before we could scare him to make him give it up. Capt. Smith and one of them caught him and put a cord round his neck, and the rest of us stood with our guns ready in case they made any resistance, there was about 50 Inds. present but did not pretend to resist tying the other. The river at this place is about 300 yards wide and make a large bay that extends 4 or 5 miles up in the pine hills. The country similar to yesterday. We traded some land and sea otter and beaver fur in the course of the day. Those Inds. bring Pacific raspberries and other berries.

SUNDAY, JULY 13, 1828. We made a pretty good start this morning, directing our course along the bay, east and travelled 4 miles and enc. 50 or 60 Inds in camp again to-day (we traded 15 or 20 beaver skins from them, some elk meat and tallow, also some lamprey eels). The traveling quit mirery in places; we got a number of our pack horses mired, and had to bridge several places. A considerable thunder shower this morning, and rain at intervals through the day. Those Inds. tell us after we get up the river 15 or 20 miles we will have good travelling to the Wel Hammett or Multinomah, where the Callipoo Inds. live.

Many men of many minds, and many kinds of many,  
Kinderate of God's creation.

When young in life and forced to guess my road,  
And not one friend to shield my bark from harm,  
The world received me in its vast abode,  
And honest toil procured its plaudits warm.

---

SATURDAY, MAY 10TH, 1828. We made an early start this morning, steering N.W. about 5 miles, thence W. 7 miles and encamped, on a small creek, and built a pen for our horses, as we could not get to grass for them. The travelling very bad, several very steep, rocky and brushy points of mountains to go up and down, with our band of horses, and a great many of them so lame and worn out that we can scarce force them along; 15 lossed on the way, in the brush, 2 of them with loads; the most of the men as much fatigued as the horses; one of the men, lossed his gun, and could not find it. We have had more trouble getting our horses on to-day, than we have had since we entered the mount. We crossed a creek close by the mouth 15 or 20 yards wide heading south, and emptying into the river east at an course, the current quite swift, and about belly deep to our horses. Some beavers sign discovered by the men. The day clear and warm. But one Ind. seen to-day; he was seen by Capt. Smith as he generally goes ahead, and I stay with the rear to see that things are kept in order.

SUNDAY, MAY 11, 1828. As our horses was without food last night, we was up early, and dispatched four men after those that was left back yesterday, and had the others packed and under way a little after sun rise, directing our course up a steep point of mountain, very rocky and brushy about 3/4 of a mile. The course N.W. 2 miles and struck into an open point of mountain where there was good grass and encamped, as the most of our horses was nearly down. We had a great deal of trouble getting them up the mountain with there loads on; a number would fall with their packs, and roll 20 or 30 feet down among the sharp rocks, several badly cut to pieces with the rocks.

The four men that was sent back returned late in the evening. They had got 12 of the horses that were missing, and among them the 2 that had loads; the man that lost his gun could not find it. Three deer killed in the evening, the meat poor.

MONDAY, MAY 12TH. We concluded to remain here to-day and let the horses rest; 2 men sent back after the other horses that are still missing; one left yesterday that could not be got along, that had entirely given out. The two men returned late, found one of the lost horses, but could not drive him to camp, consequently we shall loose them as Capt. Smith intends moving camp early to-morrow. The day clear and warm.

TUESDAY, MAY 13TH, 1828. All hands called early and ready for a start, directing our course N.W. over high ranges of rocky and brushy points of mountains, as usual, and travelled 6 m. and encamped on the side of a grassy mou., where there was an abundance of good grass for the horses, but little water for them. We had a great deal of difficulty to drive them on account of brush and the steepness of the points of mountain; two left that could not travel and a great many more very lame; the weather good.

WEDNESDAY, MAY 14TH. We made an early start, directing our course as yesterday N.W., and traveled 4 m. and enc. on the top of a high mountain, where there was but indifferent grass for our horses. The travelling amazing bad; we descended one point of brushy and rocky mountain, where it took us about 6 hours to get the horses down, some of them falling about 50 feet perpendicular down a steep place into a creek; one broke his neck; a number of packs left along the trail, as night was fast approaching, and we were obliged to leave them and get what horses we could collect at camp; a number more got badly hurt by the falls, but none killed but this one that broke his neck.

Saw some Inds. that crossed the river in a canoe and came to me; I give them some beads, as presents; they made signs that they wanted to trade for knives, but I told them that I had none; they give me a lamper eel dried, but I could not eat it.

They appear afraid of horses; they are very light coloured Inds., quite small and talkative. The weather still good.

THURSDAY, 15TH. MAY, 1828. The men was divided in parties this morning, some sent hunting, as we had no meat in camp, others sent back after horses and packs that was left back.

5 Inds. came to camp; I give them some beads; they appear quit friendly; shortly after fifteen or 20 came, and among them one squaw, a very good featured woman; she brought a dressed skin and 2 worked boles for sale; I bought them from her for beads. The hunters killed 5 deer. The balance of the horses and packs, was got to camp about 4 oc. in the evening; the men quit fatigued climbing up and down the hills. The weather still good. Some black bear seen by the hunters.

FRIDAY, MAY 16TH, 1828. We concluded that it was best to lie by today and send two men to look out a pass to travel, as the country looks awful a head, and let our poor horses rest, as there is pretty good grass about 1 mile off for them to feed on. 20 or 30 Inds. Visited our camp in the course of the day, bringing eels for trade and roots; the men bought the most of them giving awls and beads in exchange. Capt. Smith made them some small presents, and bought one B. skin from them; the women does the principal trading. Those Inds. are quite civil and friendly; the weather still good.

SATURDAY, MAY 17TH, 1828. The 2 men that were sent on discovery yesterday returned this morning and say that we are 15 or 20 miles of [f] the North Pacific ocean; they report game plenty, such as elk and deer; they report the traveling favourable to what it has been for 30 or 40 m. back. On there return, we concluded to remain here again to-day on account of our horses being so very lame and soar from the bruises they got on the 14th inst. The morning cloudy and rainy.

---

The 2 men, Marishall and Turner, that were sent off yesterday, killed 3 deer, and Capt. Smith has dispatched 2 men after the meat, as the camp is almost destitute.

Mr. Virgin and Ransa quite unwell this morning. The day continues cloudy and rainy, and quite cold towards evening.

SUNDAY, MAY 18TH, 1828. As we intended moving camp, the horses were sent for early, and got to camp about 10 oc. A.M., packed and started, directing our course W. 3 miles and struck into a small hill pararie, where there was grass and water, and encamped, as the distance were too great to go to any other place of grass to-day for the horses, from what Turner and Marishall tell us about the route from here to the ocean. The morning being so thick with fogg, the men that was sent after the horses did not find them all; Capt. Smith took 2 men with him, and went back after those that could not be found in the morning, and I went on with the company, and encamped before he joined me with those that he went back after; he found nine that was left and brought eight to camp, one being so lame that he could not travel, and he was oblige to leave him; the weather clear and windy.

MONDAY, MAY 19TH, 1828. We made an early start this morning, steering our course as yesterday, 6 miles west, and encamped on the side of a mountain, where their was plenty of good grass and water for our horses. Just before we encamped, there was a small band of elk seen by Capt. Smith and those men that was in front with horses; they went after them and killed 6, two of which number were in good order. The travelling some better than it was back, although we have hills and brush to encounter yet; we encamped about 6 m. from the ocean, where we have a fair view of it.

4 Inds. came to camp in the evening and stay all night. Capt. Smith give them some small presents of beads and some elk meat; they eat a part and carried the balance off with them; they appear quit friendly as yet.

TUESDAY, MAY 20TH. As our horses was lame and tired, we concluded to remain here and let them rest, and kill and dry meat, as elk appeared to be plenty from the sign.

After breakfast, myself and Mr. Virgin started on horse back for the sea shore, following an Ind. trail that led immediately there; after proceeding about 5 m. west, we found we could not get any further on horse back along the Ind. trail, so we struck out from the creek that we had followed down, about 3 miles from where we first struck it; this creek being about 40 yards wide, heading into a mou. south and emptying into the ocean at a N.W. direction. After leaving the creek with considerable difficulty, we ascended a point of steep and brushy mountain, that runs along parallel with the sea shore, and followed that, until we could get no further for rocks and brush. We got within 80 or 100 yards of the beach, but, being pretty much fatigued and not able to ride down on account of rocks and brush, we did not proceed any further in that direction. Seeing that it was impossible to travel along where we had been with the company, we concluded to turn and travel across a point of mou. that run N.E., but we could not get along, the travelling so bad; we then concluded to stear for camp, as it was get[ting] on towards night. On our return we saw some elk; I went after them, and Mr. Virgin stay with the horses. I did not get to fire on them, and saw a black bare and made after him, and shot and wounded him very bad, and heard Mr. Virgin shoot and hollow in one minute after my gun were discharged, and tell me to come to him. I made all the haste I could in climbing the mou. to where Mr. Virgin was; he told me that some Inds. had attacked him in my absence, shoot a number of arrows at him and wounded the horses, and, he

---

supposed, killed them by that time, that he had shot one, and was waiting for me. I rested a few minutes and proceed on cautiously to the place where we had left our horses, and found an Ind. lying dead and his dog by him, and Mr. Virgin's horse with 2 or 3 arrows in him, and he laying down. We got him up and made camp a little before night, and there was 7 or 8 Inds. at camp when we got there, and I made signs to them that we were attacked by some of there band, shoot at, one of our horses wounded, and we had killed one; they packed up and put off very soon. The day very foggy at times; some little rain in the evening. Mr. Smith told me that he had sent two men back after the horses that were missing with instructions to stay and hunt them until tomorrow, if they did not find them to-day.

WEDNESDAY, MAY 21ST. Still at the same camp; those two men that was sent after the lossed horses still absent. A considerable quantity of rain fell last night; the morning continues to be showery and foggy. The men that were sent back after horses yesterday returned, late in the evening, without finding but one; they say they suppose the Inds. to have killed the rest. The timber in this part of this country is principally hemlock, pine, and white ceadar, the most of the ceadar trees from 5 to 15 feet in diameter and tall in proportion to the thickness, the under brush, hazle, oak, briars, currents, goose berry, and Scotch cap bushes, together with aldar, and sundry other shrubs too tedious to mention; the soil of the country rich and black, but very mountainous, which renders the travelling almost impassable with so many horses as we have got.

THURSDAY, MAY 22ND, 1828. All hands up early and preparing for a move, had the horses drove to camp and caught ready for packing up, and it commenced raining so fast that we concluded to remain here again to-day, as we could [not] see how to direct our course for fog along the mountains. We have not seen or heard any Inds. since the 20th that Mr. Virgin killed the one that shoot at his horse.

Oh! God, may it please thee, in thy divine providence, to still guide and protect us through this wilderness of doubt and fear, as thou hast done heretofore, and be with us in the hour of danger and difficulty, as all praise is due to thee and not to man, oh! do not forsake us Lord, but be with us and direct us through.

FRIDAY, MAY 23RD, 1828. The morning being clear, we were ready for a start early, directing our course east, back on the trail we travelled on the 19th inst, and made the same camp and stopped, it being 6 miles, and concluded to remain the balance of the day and let our meat and other wet articles get dry. We had but little difficulty getting along, as we had a good trail that were made by our horses passing along before; the day clear and pleasant.

SATURDAY, MAY 24TH. All hands up early and ready for a move about 8 oc. A.M., directing our course N.E., 4 miles, and encamped within 100 yards of Indian Scalp river, on the side of the mountain where there was plenty of good grass for our horses.

Capt. Smith went down to the river, where there is a large Indian village on the opposite side, and called to the Inds., and there were 4 crossed over, 2 men, 1 woman and a boy about 12 or 14 years of age, and came to camp with him; he made them a present of a few beeds. The day cloudy and misty. There being some horses missing when we encamped, 2 men were sent immediately back in search of them and found them and got back a little after sun set. One mule killed this morning by haltering him and throwing him.

SUNDAY, MAY 25TH. As is usual when travelling, we was up and made an early start, directing our course N.E. about 1 mile and struck Ind. Scalp river opposite to an Ind. village, and got the

Inds., with there canoes, to cross our plunder and selves. We drove in our horses, and they swam across, where they had to swim from 250 to 300 yards. We give those Inds. that assisted in crossing our goods, beads and razors for there trouble; there was a number visited our camp in the course of the day, men, women, and children; some brought lamprey eels for sale; the men bought them, giving beads in exchange. Those Inds. live in lodges built similar to our cabbins, with round holes about 18 inches in diameter for doors; they appear friendly and say nothing about the Ind. that Mr. Virgin killed on the 20th inst. About 10 oc. A.M., it commenced raining and continued to rain on pretty fast during the day.

We cannot find out what those Inds. call themselves; the most of them have wampum and pieces of knives. Some have arrow points of iron; they also have some few beaver and otter skins. Mr. Smith purchases all the beaver fur he can from them. The foundation of there lodges are built of stone with stone floors; the[y] appear quit affraid when we first reached the river and called to them, but, after coakesing, one came across with his canoe, and, showing him by signs what we wanted, he soon complied, and called to others who came with canoes and comm. x our goods. Deer killed to-day; the meat all poor.

MONDAY, MAY 26TH, 1828. We made an early start this morning, directing our course N.E., and ascended a very long and steep point of grassy mountain, and reached the divide, and kept in about 6 miles, the travilling good, and encamped on the side of the mountain where there was pretty good grass for our horses. I killed one fat buck to-day, and Mr. Virgin killed a small doe, but poor fat. We counted our horses, and find that three got drowned yesterday in crossing the river, we saw one of them floating down the river this morning. The day clear and pleasant; 2 Inds. started with us this morning, as pilots, but soon got tired and left us.

TUESDAY, MAY 27TH. Capt. Smith and Mr. Virgin started early this morning ahead to look out a road to travel; I stay and had the horses caught and packed, and started following the blazes through the woods, a N.W. course, descending a very steep and brushy point of mountain, about 3 miles, and struck a creek 25 or 30 yards in width, heading east, and running west into Ind. Scalp river, and enc. (for the day), as there was some horses missing, and sent 3 men back on the trail to look after them. There was 8 or 10 Inds. came to camp, soon after we stoped; Capt. Smith give them a few beads; they have a fishing establishment on the creek. The day pleasant and clear; one horse left to-day.

WEDNESDAY, MAY 28TH. We made an early start this morning, steering our course N.E. up a very steep and brushy point of the mountain, and got on the ridge, or divide, between the creek and river, and travelled about 7 miles on it, and enc. on the top of the mountain, where there was but little grass for horses. The day so foggy that we could scarce see how to get along on the ridge, at times; late in the evening, it cleared off, and we had a fair view of the ocean. It appeared to be about 15 or 20 miles distant.

THURSDAY, MAY 29TH. All hands up early and making ready for a move; about 10 oc A.M., our horses were collected together, and we got under way, following the trail that we came yesterday, about 2 miles, S.W., and found some water in a ravine and encamped, the day being so foggy that we could not see how to direct our course to the river, and sent 2 men to hunt a pass to travel; they returned in the evening without finding any route that we could get along with our band of horses. The timber of the country as usual pine and white ceadar.

FRIDAY, MAY 30TH, 1828. All hands up early this morning and out after horses, as they were

very much scattered, and got them collected about 10 o.c., and star[ted] down a steep and brushy ridge, a N.W. course, and travelled about 3 m., and struck a small creek, where there was a little bottom of good grass and clover, and encamped. The horses got so that it was almost impossible to drive them down the mou. amongst the brush; 8 or 10 left back in the brush, and six men sent back after them; they got them to camp just at dark; one lost entirely that the men could not find; the rear part of the compy, that stay with me, had a serious time running up and down the mountain after horses through the thickets of brush and briars. 2 elk killed to day by Mr. Virgin; the morning clear, and the evening foggy.

SATURDAY, MAY 31ST, 1828. Capt. Smith concluded we would stay here a part of the day and send 2 men to look out a pass to the river; they returned about 11 o.c.' and say that we will be obliged to climb the mountain again at this place, and go along the ridge for 2 or 3 miles, and then descend to the main river, as it is impossible to go along the creek with horses for cut rocks. As it had commenced raining when those men returned, we concluded to stay here to day, as there was plenty of good grass for our horses. Two Inds came to camp in the rain, and brought a few raspberries that are larger than any species of raspberries I ever saw; the bush also differ from those I have been acquainted with; the stock grow from 8 to 10 feet in height, covered with briars, and branches off with a great many boughs, the leaf is very similar to those vines I have been acquainted with heretofore. Capt. Smith give those Inds. some meat, and they say they will go with us from here to the ocean.

It rained fast from the time it commenced in the forenoon, untill night.

SUNDAY, JUNE 1ST, 1828. We got our horses about 10 o.c. A.M. and packed up and started in the rain, as it had not quit from the time it commenced yesterday, directing our course west, up a steep and brushy mountain, and travelled about 3 miles and enc. in a small bottom prairie, principally covered with ferns; the travelling amazing bad; we left several packs of fur on the road and lost several pack horses and some loose horses, the day being so rainy that it was almost impossible to get up and down the mountains; the road became quite miry and slippery. Capt. Smith got kicked by a mule and hurt pretty bad. When I reached camp with the rear [rear], it was night, and all hands very wet and tired.

MONDAY, JUNE 2ND, 1828. Capt. Smith concluded to remain here and send some men back after the fur that was left, and to hunt horses; they returned about noon, bringing all the horses and packs that was left. Some men went hunting but killed nothing. Two Inds. came to camp and brought some raspberries; Mr. Smith give them a few beeds. The morning wet; about 1 o.c. P.M., it cleared off, and the balance of the day fair. Capt. Smith goes about although he was much hurt by the kick he received yesterday.

TUESDAY, MAY [JUNE] 3RD, 1828. We made an early start this morning, directing our course N.W. up a steep point of brushy mou., and travelled about 2 m., and enc. in the river bottom, where there was but little for our horses to eat; all hands working hard to get the horses on, as they have become so much worn out that it is almost impossible to drive through brush; we have two men every day that goes a head with axes to cut a road, and then it is with difficulty we can get along. The day clear and pleasant.

WEDNESDAY, MAY [JUNE] 4TH. As our horses were very much fatigued, we made an early start again, this morning, to get to grass, but, the road proving both brushy and miry, we only made 1 1/2 miles, a N.W. course, during the day; the men almost as well as horses done out. We

were obliged to enc. again in the river bottom and build a pen for our horses, as there was no grass for them. 5 Inds. came to me and brought some raspberries, and give me; I give them a few beads and went on, and left a coloured man by the name of Ransa with them, and had not been absent but a few minutes before he called to me and said the Inds. wanted to rob him of his blanket, that they had rushed into the bushes and got there bows and arrows; he fired on them and they run off leaving 2 or 3 small fishes. The Inds. that have visited our camps some time back generally came without arms and appeared very friendly; those I left with Ransa had no arms at the time they came to me, which induced me to believe that he told me a lie, as I suppose he wanted to get some berries and fish without pay, and the Inds. wanted his knife and he made a false alarm, for which I give him a severe reprimand. The day clear and warm.

THURSDAY, JUNE 5TH, 1828. Our horses being without food again last night, we packed up and made an early start, sending some men a head to cut a road to where there was a small bottom of grass on a creek that comes into Ind. Scalp river, about 10 yards wide; the distance being about 2 miles, a N.W. course. We reached it about 11 o.c. A.M., and enc., one mule and 2 horses left to-day, that could not travel. No Inds. seen to-day; one man sent hunting but killed nothing, and we are entirely out of provision with the exception of a few pounds of flour and rice. Capt. Smith give each man a half pint a flour last night for their supper; we can find no game to kill although there is plenty of elk and bear sign. The day clear and pleasant. The most of the men went hunting after they had enc., but found nothing to kill; we killed the last dog we had along, and give out some more flour.

FRIDAY, JUNE 6TH, 1828. Myself and six men started early hunting, but killed nothing; 5 others started after we returned, as we intend staying at this camp for several days for the purpose of recruiting our horses. 8 Inds. ventured to camp and brought a few lamprey eels and some raspberries; they were soon purchased by Mr. Smith and the men for beads. The morning foggy and cloudy, the after part of the day clear and pleasant.

The hunters all returned without getting meat, and we were obliged to kill a horse for to eat.

SATURDAY, JUNE 7TH, 1828. At the same camp; some men pressing beaver fur, and 2 sent hunting, and 3 others sent back to look for loosed horses. The horses hunters returned without finding but one horse; they report 2 dead that was left back. 18 or 20 Inds. visited camp again to-day with berries, mussels, and lamprey eels for sale; those articles was soon purchased, with beads, by Capt. Smith and the men, and when the Inds. left camp, they stole a small kittle belonging to one of the men; they come with out arms and appear friendly but inclined to steal. The day clear and pleasant.

SUNDAY, JUNE 8TH, 1828. As we intend moving camp, we was up and ready for a start, early, steering our course N.W., about 3 1/2 miles over two small points of mou. and enc. on the sea shore, where there was a small bottom of grass for our horses. The travelling ruff, as we had several thickets to go through; it made it bad on account of driving horses, as they can scarce be forced through brush any more. There was several Ind. lodges on the beach and some Inds.; we got a few clams and some few dried fish from them. Some horses being left, I took four men with me and went back and stay all night in a small pararie.

MONDAY, JUNE 9TH. I was up early and started the men that stay with me all night after horses and to hunt at the same time for meat, as I had left the camp entirely destitute; we hunted hard until 9 or 10 o.c. A.M., but killed nothing. Gaiter wounded a black bear, but did not get him. 6

horses was found that was left, when all hands came in, we saddled up our horses and started for camp, and reached it about the middle of the day. All the men that was sent hunting in the morning from camp had come in without killing any thing. Some Inds. in camp with a few small fishes and clams; the men, being hungry, soon bought them and eat them. They also brought cakes made of sea grass and weeds and sold to the men for beads. Where we encamped, there was a small creek pulling into the ocean at a south direction. Capt. Smith started out again to try his luck and found a small band of elk and killed 3; he returned to camp and got some men and horses and brought all the meat in, which was a pleasing sight to a set of hungry men. The day clear and pleasant.

TUESDAY, JUNE 10TH. We concluded to stay here today, dry meat, make salt, and let our horses rest, as there is good grass and clover for them. A number of Inds. in camp with berrys, but do not find so good a market for them as they did yesterday. The morning cloudy and foggy, some rain towards evening. The men appear better satisfied than they do when in a state of starvation.

WEDNESDAY, JUNE 11TH. As we intended moving camp, the men was called early, and, preparing for a start, we were under way about 9 o.c. in the morning, directing our course N.W. up a steep point of mou. along the sea coast, and travelled about 2 m., and entered the timber and brush, and kept along a small divide between the sea shore and creek we left, and travelled 3 m. further and enc. in the woods, without grass for our horses, and built a pen and kept them in through the night. The travelling very bad on account of brush and fallen timber; several horses left with packs that got hid in the brush and was passed and not seen by the men. When we was ready for a start, our fellin axe and drawing knife was missing, and the Inds. had left the camp. Capt. Smith took 5 men with him and went to there lodges, and the Inds. fled to the mou. and rocks in the ocean; he caught one and tyed him, and we brought him on about 2 miles and released him. The axe was found where they had buryed it in the sand. The day cloudy and foggy.

THURSDAY, JUNE 12TH. All hands up early and ready for a start, directing our course W. about 2 miles and struck a small creek, where there was some grass on the mountain for our horses, and enc. for the day, the traveling very bad. The horses that was left yesterday, was found to-day, and brought to camp. The day clear; some fog in the morning.

FRIDAY, JUNE 13TH, 1828. We made an early start again this morning, steering N.W., about 6 m., and struck the ocean and enc. on the beach. Plenty of grass on the mountain for our horses, but very steep for them to climb after it. The traveling very mountainous; some brush as yesterday. 2 mules left today that give out and could not travel; one young horse fell down a point of mou. and killed himself. The day clear and pleasant.

SATURDAY, JUNE 14TH, 1828. We made an early start again this morning, directing our course along the sea shore N., about 1 mile, and struck a low neck of land running into the sea, where there was plenty of clover and grass for our horse, and enc. for the day. We travelled in the water of the ocean 3 or 4 hundred yards, when the swells some times would be as high as the horses backs. 2 men sent back after a load of fur that was lossed yesterday, and to look after horses. 2 hunters dispatched after elk as soon as we enc. One fat deer killed yesterday by J. Hanna. Seven or 8 Inds. came to camp; Capt. Smith give them some beads. The hunters returned without killing any game; saw plenty of elk sign. The day clear and windy.

SUNDAY, JUNE 15TH, 1828. Several men started hunting early, as we intended staying here to day and letting our horses rest. Joseph Lapoint killed a buck elk that weighed 695 lbs., neat

weight; the balance of the hunters came in without killing. A number of Inds. visited our camp again to day, bringing fish, clams, strawberrys, and a root that is well known by the traders west of the Rocky mountains by the name of commeser, for trade. All those articles was soon purchased. The day cloudy, windy, and foggy, some rain in the afternoon. Cap. Smith and Mr. Virgin went late in the evening to hunt a pass to travel and found a small band of elk and killed two.

MONDAY, JUNE 16TH. We made an early start this morning, directing our course N.N.W. across a neck of land projecting or running into the ocean, and travelled 4 m., and enc. in a pararie, where there was plenty of grass for our horses. We had considerable difficulty getting our horses across a small branch, that was a little mirery; we were obliged to make a pen on the bank to force them across, which detained us several hours. The day clear and warm.

TUESDAY, JUNE 17TH, 1828. We started early again this morning, steering our course, as yesterday, N.N.W., 2 miles, and found the travelling in the bottom so amazing brushy and mirery we concluded to go back a few hundred yards to the pararie and encamp, dry what meat we had on hand, and send some men to look out a pass to travel when we leave here. We also sent some hunters out. Joseph Lapoint killed a fine buck elk, and Mr. McCoy killed a fawn elk. The day clear and warm, plenty of muskeatoes, large horse flies, and small knats to bite us and pesterous early of mornings and late in the evenings. The timber along the bottom, ceador, hemlock of the largest size, under brush, hazle, briars, aldar, and sundry other srubs; the soil very rich and black.

WEDNESDAY, JUNE 18TH, 1828. We concluded to stay here to day, and dry meat, and do some work that could not well be dispensed with, and send some men off to hunt a road to travel to-morrow, as those that were sent yesterday did not reach the ocean. They say the traveling was tolerable as far as they went. Some more hunters sent out this morning; and men sent after the meat that was killed last evening. The day clear and very warm. Those men that was sent to hunt a road, returned late in the evening and say that we cannot travel along the bottom for swamps and lakes. The hunters returned without killing any game. A number of Inds. visited our camp with clams, fish, strawberrys, and some dressed skins for sale, also commerss roots, ready prepared for eating; they appear friendly but inclined to steal without watching; they differ from the Ind. Scalp river Inds. in speach a little.

THURSDAY, JUNE 19TH. As those men that was sent to hunt a road yesterday, returned without ascertaining what way we could travel from here, Capt. Smith concluded it was best for us to remain here again today, and that he would take two men with him and go to the N.E. across a ridge, and see what kind of travelling it would be in that direction. He started early in company with two of the men, and returned about 12 o.c., and says that he can pass on in a N.E. direction very well as far as he went; he discovered another small river heading in the mountain east of the ocean, and emptying into a bay west about 2 1/2 or 3 miles wide. 5 Inds. in camp today with strawberrys for sale; the day clear and warm.

FRIDAY, JUNE 20TH, 1828. Capt. Smith started early with one man to blaze the road and left me to bring on the compy. I was ready about 10 o.c. A.M., being detained collecting horses that was missing, and started and travelled along an Ind. trail, about 2 m. east, thence 1 mile N.E., on the blazed road, forded the river that Capt. Smith discovered yesterday, which was nearly swimming and from 60 to 70 yards wide, and enc. on the east side, in a bottom pararie that contained about 15 or 20 acres of good grass and clover. About 20 Inds. came to camp in their canoes, and brought lamprey eels for sale; the men bought a number from them for beeds. Several of us went hunting,

and I killed a fine black tail buck, that was fat. Marichall killed a small deer.

SATURDAY, JUNE 21ST, 1828. All hands up early and preparing for start. We was under way about 8 o.c. A.M., directing our course up a steep brushy point of mountain, about 1 1/2 m. E, and struck an open grassy ridge, or rather a small divide, and kept it about 4 1/2 miles N.E. and enc. The travelling along the divide pretty good and most of the way clear of brush; some rock. I saw an elk, while moving on, and approached it, and killed it; it happened to be a very large and fat buck, that would weight, I should say, nearly 600, from appearance, as I judge from one that we weighed that was killed by Lapoint. Several deer killed by the compy. The day clear and cold.

SUNDAY, JUNE 22. We made an early start again this morning, directing our course N.W., in towards the ocean, as the travilling over the hills E. began to grow very rocky and brushy, and travelled 5 m. and enc. in a bottom prairie on a small branch. The road, to-day, brushy and some what stoney. Timber, hemlock and cedar, of considerable size, and very thick on the ground; some trees from 10 to 15 feet in diamitar. The weather still remain good. We had some considerable trouble driving our horses through the brush.

MONDAY, JUNE 23RD. All hands up early and preparing for a start; we was under way about 9 o.c. A.M., directing our course as yesterday N.W., and traveled 8 m. and enc. 3 miles from camp we struck a creek 20 or 30 yards wide and crossed it, thence 5 M. further, keeping under the mountain along the bottom and sometimes along the beach of the ocean. When we enc., the hills come within 1/2 mile of the ocean prairie, covered with grass and brakes. A little before we enc., we discovered the mule that packed the amunition to be missing; four men was sent immediately back in search of it and found it, and brought to camp just at night. 1 mule that was lame give out and was left, and another run off from camp, and went back on the trail with a saddle and halter on. A number of Inds. visited our camp, bringing strawberrys and commass for sale; the men bought all they brought, giving beeds in exchange. We passed a number of wigwams during the day. One fine doe elk killed. The day good.

TUESDAY, JUNE 24TH. We made an early start again this morning, directing our course N.N.W., and travelled 5 miles, and struck a creek about 60 or 70 yards wide, and, the tide being in, we could not cross, and were obliged to encamp on the beach of the ocean for the day. Sent two men back early after the mule that run off last night; they returned without finding it; and 2 more were immediately sent back in pursuit of it with orders to hunt all the afternoon and untill 10 or 11 o.c. tomorrow in case they could not find it this evening. The travelling pretty good yesterday and today; a great many little springs breaks out along under the mountain and makes it a little mirery in some of the branches. Enc. close by some Ind. lodges; they all had fled and left them; no visits from them as yet at this camp; 5 or six Inds. came to camp this morning, just before we started, and brought berries and fish for sale. Capt. Smith bought all they had and divided amongst the men. The day fair and pleasant.

WEDNESDAY, JUNE 25TH, 1828. On account of the tide being low, we were ready for a start a little after sun rise; started and crossed the creek with out difficulty, it being about belly deep to our horses, and directed our course again N.W., keeping along a cross the points of prairie near and on the beach of the ocean and travelled 12 m. and enc. on the N. side of a small branch at the mouth where it enters into the ocean, close by some Ind. lodges; they had run off as yesterday and left their lodges. The 2 men that was sent back to hunt the mule, returned to camp a little after night and say the Inds sallied out from their village with bows and arrows and made after

them, yelling and screaming, and tried to surround them; they retreated on horseback and swam a small creek, and the Inds. gave up the chase. When our horses was drove in this morning, we found 3 of them badly wounded with arrows, but could see no Inds. untill we started; we then discovered a canoe loaded with them some distance up the creek close by a thicket and did not pursue them, knowing it was in vain. One deer killed, and several more wounded, and one elk wounded to-day while travilling. Deer and elk quite plenty. 2 horses left to-day that give out and could not travel. The travelling tolerable when compared to former days when in the mou. among the brush; some steep ravines to cross, but not very mirery. The day clear cold and windy for the season.

THURSDAY, JUNE 26TH, 1828. We made an early start again this morning, steering, as yesterday, N.N.W. across several points of brushy and steep mou. and travelled 8 m. on a straight line, but to get to the place of enc., about 12 miles, and struck a creek about 30 yards wide at the entrance into the ocean, and, it being high water, we enc. for the day. 2 deer killed to-day. When we come to count our horses, we found one very valuable one missing that was killed, I suppose, by the Inds. on the 24 inst., when they wounded the other 3. We followed an Ind. trail from the time we started in the morning untill we enc.

FRIDAY, JUNE 27TH. All hands up early and under way a little after sun rise, and started along the beach of the ocean, crossed the creek at the mouth, where it was nearly belly deep to our horses, and purs[u]ed our route along the beach, it bearing N.N.W., and travelled about 7 miles and struck a river about 100 yards wide at the mouth and very deep, that makes a considerable bay and enc., and commenced getting timber for rafts. A number of Ind. lodges on both sides of the river; they had run off, as usual, and left their lodges and large baskets; we tore down one lodge to get the puncheons to make rafts, as timber was scarce along the beach. The weather clear and windy. The Inds. that run off raised smokes on the north side of the bay, I suppose, for signals to those that were absent, or some other villages, to let them know that we were close at hand. All the Inds. for several days past runs off and do not come to us any more.

SATURDAY, JUNE 28TH, 1828. All hands up early, some fixing the rafts for crossing the river and others sent after the horses. We had all our goods crossed by 9 o.c. A.M., and then proceeded to drive in the horses; there was 12 drowned in crossing, and I know not the reason without it was driving them in too much crowded one upon another. We have lossed 23 horses and mules within 3 days past. After crossing the river, we packed up and started along the sea shore, a N.N.W. course, and travelled about 6 miles and enc., sometimes on the beach and sometimes along the points of pararie hills that keeps in close to the ocean; the country back looks broken, and thickety, timbered with low scrubby pines and ceadars, the pararie hills covered with good grass and blue clover; the country has been similar as respects timber and soil for several days past, also grass and herbage. One deer killed to-day.

SUNDAY, JUNE 29TH, 1828. We made an early start again this morning, steering as yesterday N.N.W. along the beach and hills, and travelled 5M. and enc. on account of the water being high, which prevented us from getting along the shore, or we should have travelled a great deal further, as the point of the mou. was too ruff that come into the beach to get along. The travelling yesterday and to-day much alike. I killed one deer after we enc. The day clear and warm.

MONDAY, JUNE 30TH, 1828. We was up and under way in good season, directing our course N.N.W. along the beach 1 mile, then took a steep point of mountain, keeping the same course,

and travelled over it and along the beach 6 miles more, and encamped. Lossed one mule last night, that fell in a pitt that was made by Inds. for the purpose of catching elk, and smothered to death; one other fell down a point of mou. today and got killed by the fall. The day clear and pleasant.

TUESDAY, JULY 1ST, 1828. All hands up early and under way, steering as yesterday N. along the beach of the ocean and across the points of small hills and travelled 12 miles and enc. The day clear and warm; one Ind. in camp early this morning. The country for several days past well calculated for raising stock, both cattle and hogs, as it abounds in good grass and small lakes a little off from the beach where there is good roots grows for hogs. One horse killed again to-day by falling.

WEDNESDAY, JULY 2ND, 1828. We made a pretty early start again this morning, steering N., and travelled 12 miles, and enc. No accident has happened in regard to horses to-day. We travelled pretty much along the beach and over small sand hills; the timber, small pine; the grass not so plenty nor so good as it has been some days past. The country, for 3 days past, appears to leave the effects of earth quakes at some period past, as it is quite cut to pieces in places and very broken, although it affords such an abundance of good grass and clover. The weather still good. As the most of the mens times expired this evening, Capt. Smith called all hands and give them up there articles, and engaged the following men to go on with him, at one dollar per day, untill he reaches the place of deposit, viz;

John Gaiter     Abraham Laplant

Arthur Black     Charles Swift

John Hanna     Thos. Daws

Emanuel Lazarus     Tousaint Marishall

Daws time to commence when he gets well enough for duty.

Also Peter Ranne and Joseph Palmer, at the above named price, one dollar per day, and Martin McCoy, 200 dollars, from the time he left the Spanish country, untill he reaches the deposit.

THURSDAY, JULY 3RD, 1828. We made a pretty early start, steering N. along the pine flats close by the beach of the ocean, and travelled 2 m., and struck a river about 2 hundred yards wide, and crossed it in an Ind. canoe. Capt. Smith, being a head, saw the Inds. in the canoe, and they tryed to get off but he pursued them so closely that they run and left it. They tryed to split the canoe to pieces with thir poles, but he screamed at them, and they fled, and left it, which saved us of a great deal of hard labour making rafts. After crossing our goods, we drove in our horses, and they all swam over, but one; he drowned pretty near the shore. We packed up and started again, after crossing along the beach N., and travelled 5 miles more, and encamped. Saw some Inds. on a point close by the ocean; Marishall caught a boy about 10 years old and brought him to camp. I give him some beads and dryed meat; he appears well and satisfied, and makes signs that the Inds. have all fled in their canoes and left him. I killed one deer to-day. The country similar to yesterday; the day warm and pleasant.

FRIDAY, JULY 4TH. We made a start early, steering N.N.W. 9 m., and enc. The travelling pretty bad, as we were obliged to cross the low hills, as they came in close to the beach, and the beach being so bad that we could not get along, thicketty and timbered, and some very bad ravenes to cross. We enc. on a long point, where there was but little grass for the horses. Good deal of elk signs, and several hunters out but killed nothing, the weather still good.

---

SATURDAY, JULY 5TH, 1828. We travelled 1 1/2 miles to-day N. and, finding good grass, enc. as our horses was pretty tired. Two Inds., who speak Chinook, came to our camp; they tell us we are ten days travell from Catapos on the wel Hamett, which is pleasing news to us. Plenty of elk signs, and several hunters out, but killed nothing.

SUNDAY, JULY 6TH. N. 2 miles to-day and enc., the travelling very bad, mirery and brushy; several horses snagged very bad passing over fallen hemlock; after encamping, two elk killed.

MONDAY, JULY 7TH, 1828. We concluded to stay here to-day for the purpose of resting our horses and getting meat and clearing a road to the mouth of a large river that is in sight, about 2 miles distant that we cannot get too without. About 100 Inds. in camp, with fish and mussels for sale; Capt. Smith bought a sea otter skin from the chief; one of them have a fuzill, all have knives and tommahawks. One a blanket cappon, and a number have pieces of cloth. The weather for several days past good.

TUESDAY, JULY 8TH, 1828. We made an early start, directing our course N. along the beach and low hills; the travelling very bad on account of ravenes, fallen timber, and brush. We made 2 miles and struck the river and enc. The river at the mouth is about 1 m. wide, the Inds. very numerous, they call themselves the Ka Koosh. They commenced trading shell and scale fish, raspberries, strawberries, and 2 other kinds of bury that I am unacquainted with, also some fur skins. In the evening, we found they had been shooting arrows into 8 of our horses and mules; 3 mules and one horse died shortly after they were shot. The Inds. all left camp, but the 2 that acts as interpreters; they tell us that one Ind. got mad on account of a trade he made and killed the mules and horses. The weather still good. One horse left today that was ma[i]m[ed].

WEDNESDAY, JULY 9TH. We made an early start again this morning, and crossed the 1st fork of the river, which is 400 or 500 yards wide, and got all our things safe across about 9 o.c. A.M., then packed up and started along the beach along the river N., and travelled about 2 miles, and struck another river and enc. We crossed in Ind. canoes; a great many Inds. live along the river bank; there houses built after the fashion of a shed. A great many Inds. in camp with fish and berris for sale; the men bought them as fast as they brought them. We talked with the chiefs about those Inds. shooting our horses, but could get but little satisfaction as they say that they were not accessary to it, and we, finding them so numerous and the travelling being so bad, we thought it advisable to let it pass at present without notice. We bought a number of beaver, land, and sea otter skins from them in the course of the day.

THURSDAY, JULY 10TH, 1828. We commenced crossing the river early, as we had engaged canoes last night; we drove in our horses and they swam across; they had to swim about 600 yards. Our goods was all crossed about 9 o.c. A.M. and 2 horses that was wounded, and one was much, remained, that Capt. Smith and 5 men stay to cross; the 2 horses dyed of there wounds, and Capt. Smith swam the mule along side of the canoe. He was some what of opinion the Inds. had a mind to attact him from there behaviour, and he crossed over where the swells was running pretty high, and, there being good grass, we enc. for the day; the Inds. pretty shy.

The river we crossed to-day unites with the one we crossed yesterday and makes an extensive bay that runs back into the hills; it runs N. and S., or rather heads N.E. and enters the ocean S.W., at the entrance into the ocean its about 1 1/2 miles wide.

FRIDAY, JULY 11, 1828. All hands up early and under way, had an Ind. who speaks Chinook along as a guide. Our course was N. along the beach of the ocean, 15 miles, and struck [anoth-

er] river that is about 300 yards wide at the mouth and enc., as it was not fordable. We crossed a small creek, 3 yards wide, 10 miles from camp. To-day we enc. where there was some Inds. living; a number of them speak Chinook; 70 or 80 in camp; they bring us fish and berris and appear friendly; we buy those articles from them at a pretty dear rate. Those Inds call themselves the Omp quch.

The day windy and cold. Several of the men worn out. Peter Ranne has been sick for 6 weeks, with a swelling in his legs. The country about 1/2 mile back from the ocean sand hills covered with small pine and brush, the sand beach, quit.

SATURDAY, JULY 12TH. We commenced crossing the river early and had our goods and horses over by 8 o.c., then packed up and started a N.E. course up the river and travelled 3 M. and enc. Had several Inds. along; one of the Ind. stole an ax and we were obliged to seize him for the purpose of tying him before we could scare him to make him give it up. Capt. Smith and one of them caught him and put a cord round his neck, and the rest of us stood with our guns ready in case they made any resistance, there was about 50 Inds. present but did not pretend to resist tying the other. The river at this place is about 300 yards wide and make a large bay that extends 4 or 5 miles up in the pine hills. The country similar to yesterday. We traded some land and sea otter and beaver fur in the course of the day. Those Inds. bring Pacific raspberries and other berries.

SUNDAY, JULY 13, 1828. We made a pretty good start this morning, directing our course along the bay, east and travelled 4 miles and enc. 50 or 60 Inds in camp again to-day (we traded 15 or 20 beaver skins from them, some elk meat and tallow, also some lamprey eels). The traveling quit mirery in places; we got a number of our pack horses mired, and had to bridge several places. A considerable thunder shower this morning, and rain at intervals through the day. Those Inds. tell us after we get up the river 15 or 20 miles we will have good travelling to the Wel Hammett or Multinomah, where the Callipoo Inds. live.

EDITORIAL NOTES By T. C. ELLIOTT

Alexander Ross, whose day-to-day experiences in 1824 appear in this journal, did service in many parts of the Old Oregon country. As a member of the Pacific Fur Company he arrived on the Columbia in March, 1811, and assisted in the building of Fort Astoria, and in the fall of the same year assisted in the building of the first Fort Okanogan., at which post he was stationed for several years; from there he made trips south to the Yakima country, west to the summit of the Cascades, north to Thompson river and beyond, and east to the Spokane country. Later, while staff clerk of the Northwest Company at Fort George, he ascended the Willamette, and in 1818 assisted Donald McKenzie in the building of Fort Nez Perce at the mouth of the Walla Walla river, of which fort he was in charge until 1823. That summer he started to cross the mountains and quit the service, the Hudson's Bay Company having succeeded the Northwest Company, but was stopped at Boat Encampment by a letter from Deputy Governor George Simpson, asking him to take charge of the Snake Country Expedition that fall. This appointment he accepted and returned to Spokane House and thence proceeded to the Flathead Post in what is now Montana, where this journal begins. Returning from this expedition he spent the winter at the Flathead Post and in April, 1825, joined Governor Simpson at the mouth of the Spokane river on the way east to the Red River settlements, where he resided until his death in 1856.

Mr. Ross is one of the four writers upon whom we depend for much that is known about the early exploration of and fur trade in this vast Columbia river basin. In 1849, more than twenty years after his active experiences here, he published a book entitled "Adventures of the First Settlers on the Oregon or Columbia River," and in 1855 he put out another book entitled, "Fur Hunters of the Far West." It is related that Mr. Ross first left his paternal home in Scotland in 1804, from which it may be estimated that he was more than sixty years of age when completing these books, which, from their context, evidently were based upon some journal or memoranda then at hand. There has been and probably always will be a question as to how closely he followed any such original memoranda and how much he drew from memory. The publication of this journal is therefore valuable to the extent that it assists in answering that question, and it should be read in immediate comparison with the first 160 pages of Vol. II. of "Fur Hunters of the Far West," Smith, Elder & Co., London, 1855. It may be noted also that the preface of Mr. Ross' first book was dated in 1846 and that pages 154-5 of Vol. II. of his "Fur Hunters," contains a footnote suggesting that at least a part of it had been written much earlier.

The original of this journal is to be found in the possession of the Hudson's Bay Company at their head office on Lime street, London, but this text has been carefully copied from an original copy belonging to the Ayers Collection in the Newberry Library at Chicago, Ill.; that original copy was made by Miss Agnes C. Laut in preparation for writing her "Conquest of the Great Northwest," and was by her transferred to the Newberry Library. To the writer of these notes, it seems possible that this is not the journal that Mr. Ross had when writing his books and that he had other papers than those formally turned over to the Hudson's Bay Company. This suggestion is based upon the

JOURNAL OF ALEXANDER ROSS - SNAKE COUNTRY EXPEDITION, 1824

---

fact that other personal journals have been found among the family archives of contemporaneous fur traders, also upon other deductions. The reader will regret that seemingly Miss Laut did not find it necessary to copy the entire text of the original in the H. B. Co. House at London.

Referring to the journal itself it will be found that from Eddy, in Montana, Mr. Ross' party followed very closely the present- route of the Northern Pacific Railway as far as Missoula, which is at the mouth of Hell Gate Canyon and River (Porte d'Infer, as the French half-breeds first named it) ; thence he proceeded south up the Bitter Root Valley, along the stream which is the original Clark's Fork of the Columbia named by Captain Lewis when at its source in 1805. On a small mountain prairie of the easterly fork of this stream he was snowbound for a month, and that prairie has very properly been known ever since as Ross' Hole. Finally he succeeded in forcing a way across the continental divide by what is now known as the Gibbon Pass (but which Olin D. Wheeler rightly says should be called Clark's Pass), over to Big Hole Prairie, where a monument now stands commemorating the battle between General Gibbon and Chief Joseph during that memorable Nez Perce retreat in 1877. Mr. Ross now crossed the various small source streams of the Big Hole or Wisdom river and passed over the low divide to the Beaverhead, which is another of the sources of Jefferson's Fork of the Missouri. Thence he again crossed the continental divide southwest into Idaho, using perhaps the same pass that Lewis and Clark had in 1805 and was upon the waters of the Lemhi river, and then spent the entire summer and early fall upon the mountain streams of central Idaho, including the Snake river from the Weiser southward a considerable distance. He returned by practically the same route and arrived at Flathead fort the last of November.

As the Lewis and Clark party in 1805-6 traveled over a part of this same route it is very interesting in this connection to compare with the careful and voluminous notes of Dr. Elliott Coues and Mr. Olin D. Wheeler, both of whom personally followed the path of those explorers through these mountains.

But the really beautiful as well as valuable portion of this journal is the brief and vivid picture of the grand assembly of the Indians at their customary council ground, Horse Plains, in December, 1824, and the ceremonial opening of the annual trading period at the Flathead Post, followed by the outfitting of the next Snake Expedition under Mr. Peter Skene Ogden, the brief mention of the holiday season at the fort, and of the closing up and departure of the trader in the spring. Here are facts and figures useful to the writers of poetry and romance, as well as to the historian.

Many of these people are too old for a long voyage and very indifferent trappers. Iroquois, though good trappers, are very unfit for a Snake voyage, being always at variance with the whites,. too fond of trafficking away their goods with the natives. More harm than good to our expedition.

1824, February, Wednesday 11th. All hands being assembled together and provisions scarce, we lost no time leaving Prairie de Cheveaux. Proceeded till we reached Prairie de Camas(3) and put up for the night. Several deer seen. Weather cold. Snow 15 inches, wind east. General course east by south, distance 12 miles.

Thursday 12th. Remained in camp on chance of killing deer - people badly off for provisions. Murmuring among the Iroquois, but I could not learn the cause. High wind, heavy snow, wind east.

Friday, 13th. Early this a.m. the Iroquois asked to see their accounts. I showed them article by article and showed them their amounts wh. Seemed to surprise them not a little. Some time after leaving camp I was told that the worthy Iroquois had remained behind. I therefore went back, and true enough, the whole black squad, Martin excepted, had resolved to leave us, old Pierre at their head! On being asked the cause Pierre spoke at length. The others grumbled, saying the price allowed for their furs was so small in proportion to the exorbitant advance on goods sold them, they were never able to pay their debts much less make money and would not risk their lives any more in the Snake Country. Old Pierre held out that Mr. Ogden last fall promised there would be no more N. W. currency; this they construed to be paying half for their goods. I told them whatever had been promised would be performed. Although I had balanced their accounts, they could be altered if required. It was at headquarters accounts would be settled. They grumbled and talked, and talked and grumbled and at last consented to proceed. Thinks I to myself-this is the beginning. Having gained the blacks, we followed and camped at the Traverse(4) plain covered with but 10 inches of snow, weather fine, course S. E. Distance 10.

Saturday 14th. Early on our journey except four lodges hunting deer. Proceeded to fork called Riviere aux Marons,(5) where many wild horses are said to be. Our Horses are lean. Seeing the Iroquois apart from the whites I suspected plotting and sent for Pierre and Martin. Gave them a

memo. importing that N. W. currency was done away with and their accounts would be settled with Quebec currency or sterling. This pleased. All is quiet. S. E.

Sunday 15th. Remained in camp on account of bad weather and for hunters who brought in four wild horses and seven deer. These horses are claimed by the Flathead tribes; those who kill them have to pay four skins Indian currency. Wind high.

Monday 16th. On our journey early. Delayed by a pour, rain, sleet, snow. Passed the Forks, left main branch Flathead, River followed up Jacques Fork(6) till we made a small rivulet on the south side which our people named Riviere Maron. Country is pleasant, animals small and lean. Traps produced nothing. Course S. E., distance nine miles.

Tuesday 17th. Left camp early, the people grumbling to remain. Passed three lodges of Tete Pletes. Francois Rivet(7) caught a beaver; but the wolves devoured, it, skin and all. Course S. SE., distance twelve miles.

Wednesday 18th. Remained in camp to hunt and refresh horses before entering the mountains. I appointed Vieux Pierre to head the Iroquois, Mr. Montour(8) the Ft. de Prairie(9) Half Breeds, and myself the remainder so the sentiments of the camp may be known by a council: among so many unruly, ill-tongued villains. Four elk and twenty-five small deer brought to camp. Louis killed nine with ten shots.

Friday 20th.(10) Detained in camp by sleet and rain.

Saturday 21st. Antoine Valle's boy died.

Monday 23rd. Passed the defile(11) of the mountains between Jacques and Courtine forks. End of defile had a view of noted place called Hell's Gate, so named from being frequented by war parties of young Blackfeet and, Piegans. We were met by eight Piegans and a drove of dogs in train with, provisions and robes to trade at the Flathead post. At Courtine's Fork, the country opens finely to view clumps of trees and level plains alternately. The freemen in spite of all we could say like a band of wolves seized on the Piegan's load:, one a robe, another a piece of fat, a third a cord, a fourth an appichinon, till nothing remained and, for a few articles of trash paid in ammunition treble the value. These people put no value on property. It would be better to turn these vagabonds adrift with the Indians and treat them as Indians.

Tuesday 24th. Remained in camp to hunt. Traded seven beaver from the Piegans. As they were going off we saluted them with the brass gun to show them that it at least makes a noise.

Wednesday 25th. Passed Piegan River(12) the war road to this quarter. Here the road divides to the Snake country, one following the Piegan River, the other Courtine's Fork(13) both to the Snakes S. E. We followed the latter, a continuation of S. fork of Flathead River. Elk and small deer in great plenty. Flocks of swans flying about. Was informed that two Iroquois, Laurent and Lazard, had deserted. Assembling a small party, I went in pursuit of the villains. After sixteen

miles we came up with them, partly by persuasion, partly by force, brought them along after dark. Old Pierre behaved well. Lazard had disposed of his new rifle and ammunition for a horse. Lazard had sold his lodge. Though encamped in a most dangerous place, not a freeman would guard the horses.

Thursday 26th. The general cry was for remaining to hunt. I assented. It may be asked why I did not command. I answer to command when we have power of enforcing the command does very well; otherwise, to command is one thing; to obey, another.

Friday 27th. Hunt yesterday, twenty-seven elk, six deer.

Sunday 28th. All this day in camp to wait those laggard freemen who arrived in the evening and camped on the opposite side of the river to show contrary.

Tuesday March(14). There fell seven inches of snow; south wind soon dispelled the gloom. This being a good place for horses, we resolved to pass the day to prepare for passing the mountains between the headwaters of the Flathead and Missouri Rivers. Killed eleven elk, four sheep, seven deer. They're very fat here.

Thursday 11th. Proceeding over slippery stony road, at every bend a romantic scene opens. The river alone prevents the hills embracing. Our road following the river crossing and recrossing. Here a curiosity called the Ram's Horn"(15) - out of a large pine five feet from root projects a ram's head, the horns of which are transfixd to the middle. The natives cannot tell when this took place but tradition says when the first hunters passed this way, he shot an arrow at a mountain ram and wounded him; the animal turned on his assailant who jumped behind a tree. The animal missing its aim pierced the tree with his horns and killed himself. The horns are crooked and very large. The tree appears to have grown round the horns. Proceeded over zigzag road.

Monday 15th(16). Early this morning thirty men, ten boys, fifty horses set off to beat the road through five feet of snow for twelve miles. Late in the evening all hands arrived well pleased with day's work having made three miles. The horses had to be swum through it, their plunges frequently disappearing altogether. Geese and swan seen in passage north today.

Thursday 18th. This morning sent off forty men with shovels and fifty horses to beat the road. Weather bad with snow and drift, they returned to camp. The crust is eight ( ? ) inches thick lying under two feet of snow. Owing to crust the horses made no headway. There are now eight miles of the road made, oft the prospect is gloomy, people undecided whether to continue or turn back.

Friday 19th. We did not resume our labors today owing to the drift. This country abounds with mountain Sheep weighing about seventy pounds. Late today John Grey, a turbulent leader among the Iroquois, came to my lodge as spokesman to inform me he and ten others had resolved to

abandon the party and turn back. I asked him why? He said they would lose the spring hunt by remaining here, were tired of so large a band, and did not engage to dig snow and make roads. It told him I was surprised to hear a good quiet honest fellow utter such language, God forgive me for saying so. I said by going back they would lose the whole year's hunt, and here a sudden change in weather would allow us to begin hunting. Danger required us to keep together for safety. John answered he was neither a soldier nor a slave; he was under the control of no man. I told him he was a freeman of good character and to be careful not to stain it. In, my heart I thought otherwise. I saw John in his true colors, a turbulent blackguard, a damned rascal. He said fair words were very good but back he would go. "You are no stronger than other men" said I, "stopped you will be! I will stop you," and he said he would like to see the man who could stop him. I said I would stop him. If his party walked off the expedition would fail. Vieux Pierre interrupted by coming in. John went off cursing the large band, the Snake country and the day he came to it! So another day ends.

Saturday 20th. Stormy. John as he swore, did not turn back nor any of his gang. I suspect he is plotting to raise a rebellion. If he succeeds, it will injure our prospects if not stop us altogether. In the evening the cry of "enemies, enemies, Blackfeet! Piegans" was vociferated in the camp. All hands rushed out when the enemies proved to be six friendly Nez Perces separated from their camp on the buffalo ground and in snow shoes made way to us across the mountains. They have been five days on this journey. They told us the Blackfeet and Piegans had stolen horses out of the Flathead and Nez Perces' camp nine different times and they were preaching up (!) peace and good fellowship. The Blackfeet had made a war excursion against the Snakes, killed eight, taken some slaves and many horses. That the buffalo were in great plenty but the snow very deep. The Piegans were seen in seven bands. Cannot these outlandish devils disturbing the peace be annihilated or reduced?

Sunday 21st. Finding John at the head of a party, I sent for the intriguing scamp and agreed with him to hunt me animals, whenever I should want any, from which source his debt of 4,000 livres is to be reduced 400 livres or about twenty beaver. To this he agreed. All quiet once more. It is impossible to proceed without these hunters.

Tuesday 23rd. Early this a.m. thirty persons went on snow shoes across the mountains to the buffalo. I feel anxious, very anxious, at our long delay here. The people grumble much. The sly deep dog Laurent who once already deserted left camp today and turned back. He was off before I had any knowledge of it and told his comrades he was going to the Nez Perces' camp to trade meat, but would come again. Our camp abounds with meat. The dog has no thought of returning unless the Indians cast him out as he deserves. A more discordant, headstrong, ill-designing set of rascals than form this camp God never permitted together in the fur trade.

Wednesday 24th. All quiet in camp today.

Thursday 25th. All the women went off to collect berries.

Sunday 28th. The buffalo hunters came back today, buffalo in plenty; thirty killed, six of the men brought over 140 pounds of dried meat but becoming snow blind could not secure ( ? ) the meat left behind. Grass began to appear through the snow.

Tuesday 30th. A meeting today to decide whether to make the rest of the road or not. It was agreed to wait seven or eight days, another party to go buffalo hunting.

Friday 2nd (April) Today I was surprised by the return of Laurent. He says he went as far as Hell's Gate but finding no beaver came back. The truth is, he saw the Piegans, got a fright and came back.

Monday 5th. Were visited by fifty Nez Perces just arrived from buffalo country loaded with provisions. Our people commenced a trade with them so brisk that hardly a ball was left among the freemen nor a mouthful of provisions amongst the Indians. When these people meet Indians, a frenzy siezes them. What madness in them, and what folly in the company to be furnishing such people with means. It was now we learned the truth of Laurent's trip back. He was sent by the Iroquois to get these Indians to trade with us. This visit has left our people almost naked and cost 100 balls to send our visitors off pleased.

Wednesday 7th. Nez Perces went off.

Friday 9th. After a pause of twenty-six days we shifted quarters two miles ahead.

Saturday 10th. This morning none of the freemen would work on the road except old Pierre, who alone went and alone worked. A novel trick brought about a change. Old Cadiac dit, Grandreau having made a drum and John Grey a fiddle, the people were entertained with a concert of music(17) Taking advantage of the good humor, I got all to consent to go to the road tomorrow.

Wednesday 14th. This morning on going to my lodge in camp, I could muster only seven persons with twenty horses to finish the last mile of the road. In the evening we raised camp and moved to the foot of the mountain at the source of Flathead River, 345 miles from its joining the Columbia. The river is navigable for 250 miles.

Thursday 15th. This day we passed the defile(18) of the mountains after a most laborious journey both for man and beast. Long before daylight, we were on the road, in order to profit by the hardness of the crust. From the bottom to the top of the mountain is about one and a half miles. Here is a small creek, the source of the Missouri, in this direction between which and the source of the Flathead River is scarce a mile distant. The creek runs a course nearly S. SE. following, the road through the mountain till it joins a principal branch of the Missouri beyond the Grand Prairie(19). For twelve miles, the road had been made through five feet deep snow but the wind had filled it up again. The last eight miles we had to force our way through snow gullies. At 4 p.m. we encamped on the other side of the defile without loss or accident. Distance today, eighteen miles. This high land is a horn of the Rocky Mountains, called the Blue Mountains. It is the dividing

ridge(20) between the Nez Perces and Snake Nations and terminates near the Columbia. The delay has cost loss of one month and to the freemen 1,000 beaver. Two men should winter here and keep the road open at all seasons.

Friday 16th. Encamped here to make lodge poles for the voyage.

Saturday 17th. Proceeded to the main fork(21) of Missouri hobbled our horses and set watch. It was on this flat prairie 400 Piegans came up with Mr. McDonald(22) last fall and a freeman named Thomas Anderson from the east side of the mountains was killed.

Monday 19th. As we are on dangerous ground, I have drawn up the following rules:

- (1) All hands to raise camp together and by call.
- (2) The camp to march as close as possible.
- (3) No person to run ahead.
- (4) No persons to set traps till all hands camp.
- (5) No person to sleep out of camp.

These rules which all agreed to were broken before night.

Wednesday 21st. Thirty beaver today. The freemen will keep no watch on their horses but to tie them and sleep fast.

Thursday 22nd. Thirty-five beaver taken, six feet left in the trap. Twenty-five traps missing. Boisterous weather today. The freemen left their horses to chance, nor did they collect them during the storm at night.

Discordant people fill up the cup  
Indifference and folly will soon drink it up  
But loss and misfortune must be the lot  
When care and attention are wholly forgot.

Friday 23rd. Bad weather keeps us in camp. That scamp the Salteux and worthless fellow his nephew threaten to leave because I found fault with them for breaking the rules. If they attempt it, I am determined to strip them naked.

Saturday 24th. Crossed beyond the boiling fountain(23), snow knee deep. We encamp in the spot where the Flathead and Nez Perces fought a battle four years ago. Herds of buffalo grazing here: sixteen killed. The camp is now under guard. Half the people snow blind from the sun glare.

Monday 26th. Crossed to Middle Forks(24) of the Missouri, smaller than the first fork with which it unites ten miles from here. A large herd of buffalo here; upwards of twenty killed, two young calves brought to camp alive. This is a Piegan trail where three years ago, the freemen had battle with the Piegans and a Nez Perces lad was shot

last year.

Tuesday 27th. After camping, We mounted the brass gun and shot it three times for practice.

Wednesday 28th. Forty-four beaver to camp today.

Thursday 29th. Leaving the Missouri, crossed over to the Nez Perces River called the Salmon River(25). It is a branch of the river on which Lewis and Clarke fell in leaving the Missouri for the Pacific. Followed tip the middle fork of Missouri to its source, then ascending a hill fell on the waters of the Salmon. Passed a deserted Piegan camp of thirty-six lodges. This place is rendered immemorial as being the place where about ten Piegans, murderers of our people, were burnt to death. The road in the defile we passed from the Missouri to this river is a Piegan and Blackfoot pass of most dangerous, sort for a lurking enemy; and yet all the freemen dispersed by twos and twos. The rules are totally neglected. Here birds are singing and spring smiles. All traps out for the first time since we left the fort.

Friday 30th. Only forty-two beaver. Remain in camp today. Three people slept out in spite of rules and I had to threaten not to give single ball to them if they did not abide by the rifles. All promised fair and all is quiet.

May, Saturday 1st. Fifty-five beaver today.

Thursday 6th. On a rough calculation all the beaver in camp amount to 600 skins, one-tenth of our expected returns.

Monday 10th(26). This morning I proposed that a small party should go on a trip of discovery for beaver across the range of mountains which bounds this river on the west in the hope of finding the headwaters of Reid's River which enters the main Snake River below the fall, on which a post was begun by Mr. McKenzie in 1819. I might say begun by Mr. Reid in 1813. For this trip, I could get only three men.

Tuesday 11th. Took fifty beaver and shifted camp.

Wednesday 12th. Caught fifty beaver. Went up to headwaters of the river. This is the defile where in 1819 died John Day(27); a little farther on the three knobs so conspicuous for being seen.

Monday 17th.(28) Resolved to make a cache here. Hiding furs in places frequented by Indians is a risky business.

Wednesday 19th. Got a drum made for the use of the camp. It is beat every evening regularly at the watch over the horses and to rouse all hands in the morning.

Wednesday 26th.(29) Again at Canoe Point on Salmon River.

Saturday 29th. Crossed over height of land which divides the waters of the Salmon and the Snake descended to Goddin's River(30) named in 1820 by the discoverer Thyery Goddin. The main south branch of the Columbia, the Nez Perces, the main Snake River and Lewis River, are one and the same differently named. I have determined to change my course and steer for the source of the Great Snake River near the Three Pilot Knobs (Three Tetons) a place which abounds both in beaver and Blackfeet. I told the people danger, or no danger, beaver was our object and a hunt we would make.

Monday 31st. Left eight to trap Goddin's River and raised camp for head of the Salmon.

Sunday 6th (June). The two men ( \_\_\_\_\_ ) and Beauchamp who went off yesterday were robbed by the Piegans, had a narrow escape with their lives and got back to camp a little after dark having traveled on foot forty miles. On their way to the place to meet our people they discovered a smoke and taking it to be our people advanced within pistol shot when behold it proved to be a camp of Piegans. Wheeling, they had hardly time to take shelter among a few willows when they were surrounded, fifteen armed men on horseback. Placing their horses between themselves and the enemy, our people squatted down to conceal themselves. The Piegans advanced within five paces, when our people raising their guns made them fall back. The Indians kept capering and yelling around them cock sure of their prey. The women had also collected on a small eminence to act a willing part, having on their arrow finders and armed with lances. During this time, the two men had crept among, the bushes, mud and water a little out of the way and night approaching made their escape leaving behind horses, saddles, traps. They saw the tracks of our people near the Piegan camp and that is all we know of them. We fear they have been discovered but little hope of their escaping as they lead little ammunition.

Coison said the Piegans were the rear guard of a large war party, from the great quantity of baggage, the men not exceeding twenty-five.

I called the camp together and proposed to start with twenty men to find our people and pay the Piegans a visit, the camp to remain till my return. The general opinion over ruled my wishes, thinking it safer to move camp more distant, than go for the men.

Monday 7th. At an early hour saddled our horses. The road proved short to Goddin's River S.W. After letting our horses eat a little, I fitted out a party of twenty men well armed to go in quest of our people. They set off at sunset, old Pierre in command, with orders to find our people and observe peace unless attacked.

Tuesday 8th. All hands in camp; a park enclosed from horses. The big gun mounted and loaded.

Wednesday 9th. Five of the twenty men back tired out; no news.

June 10th Thursday.(31) All arrived safe this afternoon. The Blackfeet taking to flight. Since they

separated from us, the eight trappers had taken fifty-two beaver. The party lost my spyglass.

Friday 11th June. Twelve men fitted out for Henry's Fork to meet at the fork on 25th Sept., our party go up Goddin's River.

Wednesday 16th June. Took twenty-five beaver, the first of our second thousand, low indeed at this advanced season. The signs for beaver are very fine; in one place I counted 148 trees large and small cut down by beaver in the space of 100 yards. Last night eight feet and seven toes left in the traps. Fifteen traps missing, making loss of thirty beaver.

Saturday 19th. Had a fright from the Piegans. This morning when almost all hands were at their traps scattered by ones and twos only ten men left in camp, the Blackfeet to the number of forty all mounted descended at full speed. The trappers were so divided, they could render each other no assistance so they took to their heels among the bushes throwing beaver one way, traps another. Others leaving beaver, horses and traps, took to the rocks for refuge. Two, Jacques and John Grey, were pursued in the open plain. Seeing their horses could not save them, like two heroes wheeled about and rode up to the enemy, who immediately surrounded them. The Piegan chief asked them to exchange guns; but they refused. He then seized Jacques' rifle but Jacques held fast and after a little scuffle jerked it from them saying "If you wish to kill us, kill us at once; but our guns you shall never get while we are alive." The Piegans smiled, shook hands, asked where the camp was and desired to be conducted to it. With pulses beating as if any moment would be their last, Jacques and John advanced with their unwelcome guests to the camp eight miles distant. A little before arriving, Jacques at full speed came in ahead whooping, and yelling "the Blackfeet! the Blackfeet!" but did not tell us they were on speaking terms. In an instant the camp was in an uproar. Of the ten men in camp, eight went to drive in the horses. Myself and the others instantly pointed the big gun lighted the match and sent the women away. By this time the party hove in sight but seeing John with them restrained me from firing and I made signs to them to stop. Our horses were secured I then received them coldly well recollecting the circumstances of the two men on the 6th and not doubting it was the same party. All our people except two came in and the camp was in a state of defense. I invited them to a smoke. Their story was: We left our lands in spring as all embassy of peace to the Snakes, but while smoking with them on terms of friendships they treacherously shot our chief; we resented the insult and killed two of them. We are now on the way to meet our friends the Flatheads." They said the camp was not far off and the party 100 strong. They denied any knowledge of the 6th inst. After dark they entertained us to music and dancing all of which we could have dispensed with. Our people threw away thirty-two beaver; twenty were brought in. A strong guard for the horses. All slept armed.

Sunday 20th. Again invited the Piegans to smoke; gave them presents; and told them to set off and play no tricks for we would follow them to their own land to punish them. They saddled horses and sneaked off one by one along the bushes for 400 yards then took to the mountains. The big gun commanded respect.

Monday 21st. Decamped. Found a fresh scalp; sixty-five beaver today.

---

Thursday 24th. This is the spot where Mr. McKenzie and party fell on this river in spring of 1820 on the way to Ft. Nez Perces.

Saturday 3rd July.(32) We left River Malade and proceeded to the head of Reid's River.(33) In 1813 during the Pacific Fur Company, Mr. Reid with a party of ten men chiefly trappers, wintered here; in spring, they were all cut off by the natives. After Mr. Reid this river was named. At its mouth an establishment was begun by Donald McKenzie in 1819. It was burned and two men killed. In spring 1820, four men more were destroyed by the natives. This river has already cost the whites sixteen men.

August 24th. Number of miles traversed to date, 1,050; number of horses lost, 18.

Saturday, Sept. 18th.(34) While our people were crossing the height of land, I left the front and taking one man with me ascended the top of a lofty peak situated between the sources of River Malade and Salmon River, whence I had a very extensive view of the surrounding country. Both rivers were distinctly seen. The chain of mountains which for 150 miles separates the waters of the Salmon River from those which enter the Great Snake lie nearly E. W.

Wednesday 6th Oct.(35) Our cache of May is safe. Length of Salmon River covered this year, 100 miles.

Oct. 7th. Beaver taken out of cache, counted and packed and carried along with us.

Tuesday, 12th Oct. This morning after an illness of twenty days during which we carried him on a stretcher died Jean Bat Boucher, aged 65, an honest man.

Thursday, 14th Oct. Today Pierre arrived pilaged and destitute. This conduct has been blamable since they left us. They passed the time with the indians and neglected their hunts, quarrelled with the indians at last, were then robbed and left naked on the plains. The loss of twelve out of twenty trappers is no small consideration. With these vagabonds arrived twenty American trappers from the Big Horn River but whom I rather take to be spies than trappers. Regarding our deserters of 1822 accounts do not agree. It is evident part of them have reached the American posts on the Yellowstone and Big Hole with much fur. I suspect these Americans have been on the lookout to decoy more. The scalp furs and horses carried last year to Fort des Prairies by the Blackfeet belonged to, this establishment. The quarter is swarming with trappers who next season are to penetrate the Snake country with a Major Henry(36) at their head, the same gentleman who fifteen years ago wintered on Snake River. The report of these men on the price of beaver has a very great influence on our trappers. The seven trappers have in two different caches 900 beaver. I made them several propositions but they would not accept lower than \$3 a pound. I did not consider myself authorized to arrange at such prices. The men accompanied us to the Flatheads. There is a leading person with them. They intend following us to the fort.

Saturday 16th. Sent our express, to Mr. Ogden at Spokane house.

November 1st, Monday. Got across the divide.

FLATHEAD POST, 1825

Alex. Ross

1824. November, Friday 26.(37)- From Prairie de Cheveaux myself and party arrived at this place in the afternoon , where terminated our voyage of 10 months to the Snakes. Mr. Ogden(38) and Mr. Dears(39) with people and outfit from Spokane reached this place only a few hours before us. Statement of people both voyages ( ?)

Engaged party with their families, including gentlemen, and 43 men, 8 women, 16 children. Free-men and trappers with families, 34 men, 8 lads, 22 women and 5 children. Total, 176 souls.

To accommodate people and property we use a row of huts 6 in number, low, linked together under one cover, having the appearance of deserted booths.

Saturday 27. All hands building. Mr. Ogden handed me a letter from the Governor appointing me in charge of this place for the winter. Mr. Ogden takes my place as chief of the Snake expedition.

Monday 29. Kootenais joined Flatheads at Prairie de Cheveaux. Indians are now as follows there:

	Lodges	Men & Lads	Guns	Women	Children
Flatheads	42	168	180	70	68
Pend' Orielles	34	108	40	68	71
Kouttannais	36	114	62	50	48
Nez Perces	12	28	20	15	23
Spokanes	4	12	6	7	11
	<hr/>	<hr/>	<hr/>	<hr/>	<hr/>
	128	430	308	210	221

and 1,850 horses.

We sent word to the camp to come and begin trade as follows: First, Flat.; 2d P. etc., as in order above.

Tuesday 30. About 10 o'clock the Flatheads in a body mounted, arrived, chanting the song of peace. At a little distance they halted and saluted the fort with discharges from their guns. We

returned the compliment with our brass pounder. The reverberating sound had a fine effect. The head chief advanced and made a fine speech welcoming the white man to these lands, apologizing for having but few beaver. The cavalcade then moved up. The chiefs were invited to the house to smoke. All the women arrived on horseback loaded with provisions and a brisk trade began which lasted till dark. The result was, 324 beaver, 154 bales of meat, 159 buffalo tongues, etc.

December, Wednesday 1. The Pend' Orielles arrived in the manner of those of yesterday and traded as follows: 198 beaver, 8 muskrat, etc.

Received 2000 of the Snake Freeman's(40) beaver today and sent off canoe to Spokane House.

Thursday 2d. Employed with Freeman and Indians all day. At night we had received 2000 more of Snake beaver.

Friday 3d. The Kootenais accompanied by 10 Piegans came up, with the same ceremony and traded as follows: 494 beaver, 509 muskrat, 2 red foxes, 3 mink, etc. The Kootenais do not belong here but are driven from fear of the Piegans and Blackfeet.

The trouble of this part is now over till spring as the Indians have gone home. In all we have traded 1183 beaver, 14 otter, 529 muskrat, 8 fishers, 3 minks, 1 martin, 2 foxes, 11,072 pounds dried meat, etc. (Buffalo meat.)

The trade hardly averages 3 skins per Indian.

Sunday, December 5. Began to equip the Freeman today. Mr. Ogden settling their accounts. Mr. Dears in the Indian shop with Interpreter Rivett, and myself with Mr. McKay(41) in the equipment shop.

Saturday, December 11. Finished equipping the Snake hunters. Mr. Kittson(42) from the Kootenais arrived..

Monday, 20th. Statement of men under Mr. Ogden to go to the Snake Country: 25 lodges, 2 gentlemen, 2 interpreters, 71 men and lads, 80 guns, 364 beaver traps, 372 horses.

This is the most formidable party that has ever set out for the Snakes. Snake expedition took its departure. Each beaver trap last year in the Snake country averaged 26 beaver. It is expected this hunt will net 14,100 beaver. Mr. Dears goes as far as Prairie de Cheveaux.

Wednesday, 22d. Statement of people at this fort: 2 gentlemen, 14 laborers, 4 women, 7 children. Set the people squaring timber to keep them from plotting mischief.

Saturday 25th. Considerable indians; the peace pipe kept in motion. All the people a dram.

Sunday 26th. No work today. Ordered the men to dress and keep the Sabbath.

January 1, 1825. At daybreak the men saluted with guns. They were treated to rum and cake, each a pint of rum and a half pound of tobacco.

March 1. Tuesday. The winter trade from December 4 has amounted to 71 beaver, 2 otter, 15 muskrat, 3 foxes, etc.

Saturday, 12 March(43) After breakfast embarked 4 canoes in sight of 1000 natives for Spokane House. 1644 large beaver, 378 small beaver, 29 otter, 775 muskrats, 9 foxes, 12 fishers, 1 martin, 8 mink, also leather and provisions.

(At Spokane House) Friday, 25th March.- Of all situations(44) chosen in the Indian country. -Spokane House is the most singular: far from water, far from Indians and out of the way. Spokane (Forks) on the west, Kettle Falls on the north Coeur d' Alene on the south, Pend' Oreille on the east would be better.

1. Flathead House or Fort or Post was then located almost exactly at the present railroad station of Eddy (Northern Pacific Ry.), on north bank of Clark Fork River, in Sanders, Montana; this was about ten miles southeast and further up the river from the site of David Thompson's "Salish House," which was established in 1809 and used by the Northwest Company traders while that company continued in business.

2. Horse Plains, now designated by the single word "Plains." a famous council ground of the Salish or Flathead Indians; the freemen were probably camped near the railroad station of Weeksville.

3. Camas Prairie. to the eastward from the Horse Plains; the Indian trail went across the hills by way of this prairie, instead of around by the river as the railroad now runs. This trail is clearly shown on map in Stevens' Report, Pac. Ry. Report, Vol. 12, Part 1, also an engraving showing this prairie.

4. At Perma station of the No. Pac. Ry., where the trail again struck the Flat head River and crossed it: known later as Rivet's Ferry because a son of old Francois Rivet settled there.

5. A small stream entering the Flathead from the south near McDonald station of the No. Pac. Ry.

6. The Jocko, which flows into the Flathead at Dixon, Montana; this stream so named after Jacques Raphael Finlay, an intelligent half-breed and one of David Thompson's men, in 1809.

7. Afterward a settler on French Prairie in the Willamette Valley.

8. Mr. Ross' clerk: doubtful whether the Nicholas Montour of David Thompson's time.

9. A general term meaning the prairie forts of the company on the Saskatchewan River.

10. See page 11 of "Fur Hunters."

11. Coriakan Defile through which the No. Pac. Ry. now passes; the view of Missoula and the Bitter Root Valley is as fine now as it was in 1824.

12. The Hell Gate or Missoula River.

13. The Bitter Root River of today. Our Clark Fork River was then called the Flathead River clear to Lake Pend d'Oreille, and below that even.

14. Now seem to be near the forks of the Bitter Root, 0 above the town of Darby, Ravalli County, Montana.

15. See pages 18 and 19 of "Fur Hunters", they follow the trail through the gorge of Ross Fork of the Bitter Root. This Rams Horn tree was a common sight to pioneers who traveled that trail in the fifties and sixties. It is yet known as the Medicine Tree, because so revered by the Indians. The trunk still stands in Sec. 22. TP. 30 N., R. 20 E., B. M.
16. He is now in Ross' Hole, his "The Valley of Troubles," as described on page 20 of "Fur Trappers" Lewis and Clark were here September 4, 1805 ; also consult Pac. Ry. Report, Vol. 12, Part 1, page 169, for description and engraving.
17. The first vaudeville performance in Ravalli County, Montana, of which we have record.
18. Gibbons pass across the continental divide.
19. Big Hole Prairie, Beaverhead County, Montana, well described and illustrated in Stevens' Pac Ry. Report already cited.
20. Very nearly correct. The Blue Mountain Range of Eastern Oregon and Washington really is a continuation of the mountain range that crosses Idaho and joins the continental divide at the head of the Bitter Root Valley of Montana.
21. Meaning the Big Hole or Wisdom River.
22. Finan McDonald, who led the Snake Expedition in 1823.
23. The warm springs near Jackson P.O., Beaverhead County, Montana.
24. That is he crossed the low divide to Grasshopper Creek near Bannock: the Beaverhead would be his Middle Fork of the Missouri.
25. He has crossed over to the Lemhi River, a branch of the Salmon River, which flows into the Snake, and is in Idaho. See page 53 of "The Fur Hunters."
26. The party is now probably at the junction of the Salmon and the Pahsimari Rivers in Custer County, Idaho; see page 59 of "The Fur Hunters."
27. Evidently the John Day of the Astor party, who became a Northwest Company trapper under Donald McKenzie. See page 62 of "Fur Hunters."
28. Now about to start on a profitless trip across the ridge of Salmon River Range directly west. See page 62 of "Fur Hunters."
29. The party has returned from the trip to the westward; see page 67 of "Fur Hunters."
30. According to Arrowsmith's map this would be Big Lost river, on present day maps. Ross seems to have ascended Pahsamari River to source and crossed the divide to Birch Creek, where he left his main party and himself made four days trip to Snake River near St. Anthony's. He is back again on the 6th. See pages 68,69,70 of "Fur Hunters."
31. See page 72 of "Fur Hunters," where Mr. Ross misnames the three buttes in the desert south-east of Lost River by calling them the Trois Tetons. He now proceeds up Goddins or Big Lost River to its source and crosses to the source of the Malade or Big Wood River near Ketchum, Idaho, where the next Indian scare occurs. See pages 75-80 of "Fur Hunters."
32. Descending the Malade (Big Wood River) to the mouth of Camas Creek. the party turns west across Camas Prairie and the divide to the head of the Boise River; see pages 80-89 of "Fur Hunters."
33. Consult Irving's "Astoria" for account of the death of Mr. Reed of the Pacific Fur Company.
34. This journal omits entirely all mention of Mr. Ross from the time he reached the Boise until he returns on September to the rough mountain pass dividing Blaine and Custer Counties, Idaho; for this interim see pages 90-118 of "The Fur Hunters." His lofty peak now mentioned may be Boul-

der Peak of today, but he named it Mt. Simpson.

35. The party is now back at Canoe Point, see previous note on May 10th. The party sent off on June 11th joins them a little further along on their way to the headwaters of the Missouri.

36. Major Andrew Henry, the first American trader to cross the continental divide (in fall of 1810) and at this time partner of General Wm. Ashley in the fur business. The desertions of the H.B.C. freeman to the Americans mentioned in this text took place before General Ashley personally ever came to the Rocky Mountains; see page 356 of Vol. 11 of Or. Hist. Quart. for discussion of this.

37. From the heading it would appear that Mr. Ross now begins a new part of the journal, covering his residence at Flathead Post or Fort.

38. Peter Skene Ogden, well known to Oregon pioneers; see Oregon first. Quar., Vol. 11 pp. 247-8.

39. This was Mr. Thomas Dears, who was a clerk of the H. B. Co. on the Columbia at this time

40. That is, that the skins taken for the free hunters that were a part of the expedition in distinction from the engaged men or employees of the company.

41. Probably Mr. Thos. McKay, son of Alex McKay of the Pac Fur Co., whose widow became the wife of Dr. John McLoughlin.

42. William Kittson, who was in charge of the trading post among the Kootenais for many years; he died at Fort Vancouver about 1841. His brother, Norman, was one of the early millionaires of St. Paul, Minn.

43. The trading post is now left in charge of some half-breed or entirely abandoned until fall, as the Indians spent their summer hunting buffalo.

44. Mr. Ross indulges in his usual disgust as to the site of Spokane House which feeling he elaborated at length in his "Fur Hunters." And this post was abandoned the following year for the new one at Kettle Falls, called Fort Colvile.

Nine Years Residence among the

Rocky Mountains

Between the years of 1834 and 1843

Comprising

A general description of the Country, Climate,

Rivers, Lakes, Mountains, etc The nature and habits

of Animals, Manners and Customs of Indians and a Complete

view of the life led by a Hunter in those regions

By

Osborne Russell

I envy no man that knows more than myself

and pity them that know less: Sir T. Brown.

Preface

Reader, if you are in search of the travels of a Classical and Scientific tourist, please to lay this Volume down, and pass on, for this simply informs you what a Trapper has seen and experienced. But if you wish to peruse a Hunter's rambles among the wild regions of the Rocky Mountains, please to read this, and forgive the authors foibles and imperfections, considering as you pass along that he has been chiefly educated in Nature's School under that rigid tutor experience, and you will also bear in mind the author does not hold himself responsible for the correctness of statements made otherwise than from observation.

THE AUTHOR.

JOURNAL OF A TRAPPER

During the years 1834 to 1843

At the town of Independence Missouri on the 4th of April 1834 I joined an expedition fitted out for the Rocky Mountains and Mouth of the Columbia River, by a Company formed in Boston under the name and style of the Columbia River Fishing and trading Company. The same firm has fitted out a Brig of two hundred tons burthen, freighted with the nessesary assortment of merchandise for the Salmon and Fur Trade, with orders to sail to the mouth of the Columbia River, whilst the land party, under the direction of Mr. Nathaniel J. Wyeth, should proceed across the Rocky Mountains and unite with the Brig's Company in establishing a Post on the Columbia near the Pacific. Our party consisted of forty men engaged in the service accompanied by Mess Nutall and Townsend, Botanists and Ornithologists with two attendants; likewise Rev's Jason and Daniel Lee Methodist Missionaries with four attendants on their way to establish a Mission in Oregon: which brot. our numbers (including six independent uppers) to fifty Eight men. From the 23 to the 27th of April we were engaged in arranging our packs and moving to a place about 4 Miles from Independence. On the morning of the 28th we were all equipped and mounted hunter like: about forty men leading two loaded horses each were marched out in double file with joyous hearts enlivened by anticipated prospects: led by Mr. Wyeth a persevering adventurer and lover of Enterprise whilst the remainder of the party with twenty head of extra horses and as many cattle to supply emergencies brot. up the rear under the direction of Capt. Joseph Thing an eminent navigator and fearless son of Neptune who had been employed by the Company in Boston to

---

accompany the party and measure the route across the Rocky Mountains by Astronomical observation.

We travelled slowly thru the beautiful verdant and widely extended prairie until about 2 o'clock P. M. and encamped at a small grove of timber near a spring. 29th We took up our march and travelled across a large and beautifully undulating prairie intersected by small streams skirted with timber intermingled with shrubbery until the 3rd of May when we arrived at the Kaw or Kansas River near the residence of the U S agent for those Indians.

The Kaw or Kansas Indians are the most filthy indolent and degraded set of human beings I ever saw. They live in small oval huts 4 or 5 feet high formed of willow branches and covered with Deer Elk or Buffalo skins. On the 4th of May we crossed the River and on the 5th resumed our march into the interior, travelling over beautiful rolling prairies and Encamping on small streams at night until the 10th when we arrived at the River Platte.

We followed up this River to the forks, then forded the South fork and travelled up the north until the 1st day of June when we arrived at Laramy's fork of Platte; where is the first perceptible commencement of the Rocky Mountains we crossed this fork and travelled up the main River until night and encamped. The next day we left the River and travelled across the Black hills nearly parallel with the general course of the Platte until the 9th of June when we came to the River again and crossed it at a place called the Red Buttes (high mountains of Red Rock from which the River issues). The next day we left the River on our left hand and traveled a northwest direction, and stopped at night on a small spring branch nearly destitute of wood or shrubbery. The next day we arrived at a stream running to the Platte called Sweet Water, this we ascended to a rocky mountainous country until the 15th of June then left it and crossed the divide between waters of the Atlantic and Pacific Oceans: and encamped on Sandy Creek a branch running into Green River which flows into the Colorado of the West. The next day moved down Sandy WNW direction and arrived at Green river on the 18th of June. Here we found some white Hunters who informed us that the grand rendezvous of Whites and Indians would be on a small western branch of the River about 20 miles distant, in a South West direction. Next day June 20th we arrived at the destined place. Here we met with two companies of trappers and Traders: One is a branch of the "American Fur Company," under the direction of Mess Dripps and Fonanell: The other is called the "Rocky Mountain Fur Company" The names of the partners are Thomas Fitzpatrick, Milton Sublett and James Bridger. The two companies consist of about six hundred men, including men engaged in the service, White, Half Breed and Indian Fur Trappers. This stream is called Ham's fork of Green River. The face of the adjacent country is very mountaneous and broken except in the small alluvial bottoms along the streams, it abounds with Buffalo, Antelope, Elk and Bear, and some few Deer along the Rivers. Here Mr Wyeth disposed of a part of his loads to the Rocky Mountain Fur Company and on the 2d of July we renewed our march towards the Columbia River. After leaving Ham's Fork we took across a high range of hills in a NW direction and fell on to a stream called Bear River which emptied to the Big Salt Lake. This is a beautiful country. the river which is about 20 yards wide runs through large fertile bottoms bordered by rolling ridges which gradually ascended on each side of the river to the high ranges of dark and lofty mountains upon whose tops the snow remains nearly the year round. We travelled down this river N West about 15 miles and camped opposite a Lake of fresh water about 60 miles in circumference which outlets into the river on the west side. Along the west border of this Lake the country is generally

---

Journal of a Trapper

By Osborne Russell

---

smooth ascending gradually into the interior and terminates in a high range of mountains which nearly surrounds the Lake approaching close to the shore on the East. The next day (the 7th) we travelled down this river and on the 8th encamped at a place called the Sheep Rock so called from a point of the mountain terminating at the river bank in a perpendicular high rock: the river curves around the foot of this rock and forms a half circle which brings its course to the S. W from whence it runs in the same direction to the Salt Lake about 80 miles distant. The Sheep occupy this prominent elevation (which overlooks the surrounding country to a great extent) at all seasons of the year.

On the right hand or East side of the river about 2 miles above the rock is 5 or 8 mineral Springs some of which have precisely the taste of soda water when taken up and drank immediately others have a sour, sulphurous taste: none of them have any outlet but boil and bubble in small holes a few inches from the surface of the ground. This place which now looks so lonely, visited only by the rambling Trapper or solitary Savage will doubtless at no distant day be a resort for thousands of the gay and fashionable world, as well as Invalids and spectators. The country immediately adjacent seems to have all undergone volcanic action at some remote period the evidences of which, however still remains in the deep and frightful chasms which may be found in the rocks, throughout this portion of country which could only have been formed by some terrible convulsion of nature. The ground about these springs is very strongly impregnated with Sal Soda There is also large beds of clay in the vicinity of a snowy whiteness which is much used by the Indians for cleansing their clothes and skins, it not being any inferior to soap for cleansing woollens or skins dressed after the Indian fashion. On the 11th (July) we left Bear river and crossed low ridges of broken country for about 15 miles in a N East direction and fell on to a stream which runs into Snake river called Black Foot. Here we met with Capt. B. L. Bonnenvill with a party of 10 or 12 men He was on his way to the Columbia and was employed killing and drying Buffaloe meat for the journey. The next day we travelled in a west direction over a rough mountaneous country about 25 miles and the day following after travelling about 20 miles in the same direction we emerged from the mountain into the great valley of Snake River on the 16th - We crossed the valley and reached the river in about 25 miles travel West. Here Mr. Wyeth concluded to stop build a Fort & deposit the remainder of his merchandise: leaving a few men to protect them and trade with the Snake and Bonnack Indians. On the 18th we commenced the Fort which was a stockade 80 ft square built of Cotton wood trees set on end sunk 2 1/2 feet in the ground and standing about 15 feet above with two bastions 8 ft square at the opposite angles. On the 4th of August the Fort was completed; And on the 5th the "Stars and Stripes" were unfurled to the breeze at Sunrise in the center of a savage and uncivilized country over an American trading Post.

The next day Mr Wyeth departed for the mouth of the Columbia River with all the party excepting twelve men (myself included) 10 who were stationed at the Fort. I now began to experience the difficulties attending a mountaineer we being all raw hands excepting the man who had charge of the Fort and a Mullattoe: the two latter having but very little experience in hunting game with the Rifle: and altho the country abounded with game still it wanted experience to kill it. On the 12th of August myself and 9 others (the Mullattoe included) started from the Fort to hunt Buffaloe. We proceeded up the stream running into Snake River near the Fort called Ross's fork in an East direction about 25 miles, crossed a low mountain in the same direction about 5 miles and fell on to a stream called Portneuf: here we found several large bands of Buffaloe

Journal of a Trapper

By Osborne Russell

---

we went to a small spring and encamped. I now prepared myself for the first time in my life to kill meat for my supper with a Rifle. I had an elegant one but had little experience in using it, I however approached the band of Buffaloe crawling on my hands and knees within about 80 yards of them then raised my body erect took aim and shot at a Bull: at the crack of the gun the Buffaloe all ran off excepting the Bull which I had wounded, I then reloaded and shot as fast as I could untill I had driven 25 bullets at, in and about him which was all that I had in my bullet pouch whilst the Bull still stood apparently riveted to the spot I watched him anxiously for half an hour in hopes of seeing him fall, but to no purpose, I was obliged to give it up as a bad job and retreat to our encampment without meat: but the Mullattoe had better luck he had killed a fat cow whilst shooting 15 bullets at the band. The next day we succeeded in killing another cow and two Bulls, we butchered them took the meat and returned to the Fort. On the 20th of August we started again to hunt meat: we left the Fort and travelled abot 6 miles when we discovered a Grizzly Bear digging and eating roots in a piece of marshy ground near a large bunch of willows. The Mullattoe approached within 100 yards and shot him thro. the left shoulder he gave a hideous growl and sprang into the thicket. The Mullattoe then said "let him go he is a dangerous varmint" but not being acquainted with the nature of these animals I determined on making another trial, and persuaded the Mullatto to assist me we walked round the bunch of willows where where the Bear lay keeping close together, with our Rifles ready cocked and presented towards the bushes untill near the place where he had entered, when we heard a sullen growl about 10 ft from us, which was instantly followed by a spring of the Bear toward us; his enormous jaws extended and eyes flashing fire. Oh Heavens! was ever anything so hideous? We could not retain sufficient presence of mind to shoot at him but took to our heels separating as we ran the Bear taking after me, finding I could out run him he left and turned to the other who wheeled about and discharged his Rifle covering the Bear with smoke and fire the ball however missing him he turned and bounding toward me - I could go no further without jumping into a large quagmire which hemmed me on three sides, I was obliged to turn about and face him he came within about 10 paces of me then suddenly stopped and raised his ponderous body erect, his mouth wide open, gazing at me with a beastly laugh at this moment I pulled trigger and I knew not what else to do and hardly knew that I did this but it accidentally happened that my Rifle was pointed towards the Bear when I pulled and the ball piercing his heart, he gave one bound from me uttered a deathly howl and fell dead: but I trembled as if I had an ague fit for half an hour after, we butchered him as he was very fat packed the meat and skin on our horses and returned to the Fort with the trophies of our bravery, but I secretly determined in my own mind never to molest another wounded Grizzly Bear in a marsh or thicket. On the 26th of Septr. our stock of provisions beginning to get short 4 men started again to hunt buffaloe; as I had been out several times in succession I concluded to stay in the Fort awhile and let others try it. This is the most lonely and dreary place I think I ever saw; not a human face to be seen excepting the men about the Fort. The country very smoky and the weather sultry and hot. On the 1st day of Octr. our hunters arrived with news which caused some little excitement among us. they had discovered a village of Indians on Blackfoot Creek about 25 miles from the Fort in a north East direction, consisting of about 60 Lodges. They had rode Green horn like into the village without any ceremony or knowledge of the friendly or hostile disposition of the Indians, neither could they inform us to what Nation they belonged. It happened however that they were Snake friendly to the Whites and treated our men in a hospitable manner - After

Journal of a Trapper

By Osborne Russell

---

remaining all night with them three of the Indians accompanied our hunters to the Fort: From these we gathered (thro. the Mullatto who could speak a little of their language) much desired information. The next day myself and the Mullatto started to the Village where we arrived about sun half an hour high we were conducted to the chiefs Lodge where we dismounted and cheerfully saluted by the chief who was called by the Whites "Iron wristbands" and by the Indians "Pah-da-her-wak-un-dah", or the hiding bear. Our horses were taken to grass and we followed him into his Lodge when he soon ordered supper to be prepared for us. He seemed very much pleased when we told him the Whites had built a trading post on Snake River.

He said the Village would go to the Fort in three or four days to trade. We left them next morning loaded with as much fat dried Buffaloe meat as our horses could carry which had been given as a gratuity: we were accompanied on our return to the Fort by six of the men. On the 10th the Village arrived and pitched their Lodges within about 200 yards of the Fort. I now commenced learning the Snake Language and progressed so far in a short time that I was able to understand most of their words employed in matters of trade. Octr 20th a Village of Bonnaks consisting of 250 Lodges arrived at the Fort from these we traded a considerable quantity of furs, a large supply of dried meat, Deer, Elk and Sheep skins etc. - In the meantime we were employed building small log houses and making other nessary preparations for the approaching winter

Novr. 5th Some White hunters arrived at the Fort who had been defeated by the Blackfeet Indians on Ham's Fork of Green River. One of them had his arm broken by a fusee ball but by the salutary relief which he obtained from the Fort he was soon enabled to return to his avocations. 16th Two more White men arrived and reported that Capt. Bonneville had returned from the lower country and was passing within 90 miles of the Fort on his way to Green River. 20th four White more arrived and reported that a party of the Rocky Mountain Fur Company consisting of 60 men under the direction of one of the Partners (Mr. Bridger) were at the forks of Snake River about 60 miles above the Fort where they intended to pass the winter. We were also informed that the two Fur Companies had formed a coalition. Decr. 15th The ground still bare but frozen and the weather very cold. 24th Capt. Thing arrived from the Mouth of the Columbia with 10 men fetching supplies for the Fort. Times now began to have a different appearance. the Whites and Indians were very numerous in the valley all came to pass the winter on Snake River. On the 20th of Jany 12 of Mr Bridger's men left his camp and came to the Fort to get employment They immediately made an engagement with Capt. Thing to form a party for hunting and trapping On the 15 of March the party was fitted out consisting of 10 trappers and 7 Camp keepers (myself being one of the latter) under the direction of Mr. Joseph Gale a native of the City of Washington. Mch. 25th we left the Fort and travelled about 6 miles N. E. and encamped on a stream running into the river about 12 Miles below the Fort, called Port neuf. The next day we followed up this stream in an Easterly direction about 15 miles here we found the snow very deep from this we took a south course in the direction of Bear River our animals being so poor and the traveling so bad we had to make short marches and reached Bear River on the 1st day of April. The place where we struck the River is called Cache Valley so called from its having been formerly a place of deposit for the Fur Traders. The country on the north and west side of the river is somewhat broken uneven and covered with wild Sage. The snow had disappeared only upon the South sides of the hills. On the South and East sides of the river lay the valley but it appeared very white and the river nearly overflowing its banks insomuch that it was very difficult crossing: and should we have been able

---

Journal of a Trapper

By Osborne Russell

---

to have crossed, the snow would have prevented us gaining the foot of the mountain on the East side of the valley. This place being entirely destitute of game we had to live chiefly upon roots for ten days. On the 11th of April we swam the river with our horses and baggage and pushed our way thru. the snow accross the Valley to the foot of the mountain: here we found the ground bare and dry. But we had to stay another night without supper. About 4 oclk the next day the meat of two fat Grizzly Bear was brought into Camp. Our Camp Kettles had not been greased for some time: as we were continually boiling thistle roots in them during the day: but now four of them containing about 9 gallons each were soon filled with fat bear meat cut in very small pieces and hung over a fire which all hands were employed in keeping up with the utmost impatience: An old experienced hand who stood six feet six and was never in a hurry about anything was selected by a unanimous vote to say when the stew (as we called it) was done but I thought with my comrades that it took a longer time to cook than any meal I ever saw prepared, and after repeated appeals to his long and hungry Stewardship by all hands he at length consented that it might be seasoned with salt and pepper and dished cut to cool. But it had not much time for cooling before we commenced operations: and all pronounced it the best meal they had ever eaten as a matter of course where men had been starving. The next morning I took a walk up a smooth spur of the mountain to look at the country. This valley commences about 90 miles below the Soda Springs the river running west of south enters the valley thro. a deep cut in the high hills: after winding its way thro. the North and West borders of the Valley: turns due West and runs thro. a deep Kanyon of perpendicular rocks on its way to the Salt Lake. The valley lies in a sort of semi circle or rather an oblong. On the South and East of about 20 miles in length by 5 in diameter and nearly surrounded by high and rugged mountains from which flow large numbers of small streams crossing the valley and emptying into the river. There are large quantities of Beaver and Otter living in these streams but the snow melting raises the water so high that our Trappers made but slow progress in catching them. We stopped in this valley until the 20th of April then moved to the South East extremity and made an attempt to cross the mountain. The next day we travelled up a stream called Rush Creek in an East direction thro. a deep gorge in the mountain for about 12 miles which then widened about a mile into a smooth and rolling country here we staid the following day we then took a N E course over the divide and travelled about 12 Miles thro. Snow two or three feet deep and in many places drifts to the depth of 6 or 8 ft. deep. At night we encamped on a small dry spot of ground on the South side of a steep mountain where there was little or no vegetation excepting wild sage. Sometime after we had stopped it was disclosed that one man was missing a young English Shoemaker from Bristol, we found he had been seen last dismounted and stopping to drink at a small branch at some distance before we entered snow. On the following morning I was ordered to go back in search of him. I started on the snow which was frozen hard enough to bear me and my horse. I went to the place where he was last seen and found his trail which I followed on to a high mountain when I lost it among the rocks. I then built a large fire shot my gun several times and after hunting till near sunset without hopes of finding him I gave it up and went to the edge of the snow and stopped for the night. The next morning I started at day light in a gallop on the snow traversing Mountain and Valley smoothed up with snow so hard frozen that a galloping horse scarcely left a foot print: About noon I arrived on a high ridge which over looked the Snake Lake and the Valley South West of it which had been apparently clear of snow for some length of time. At the Southern extremity of the Lake lay the

Journal of a Trapper

By Osborne Russell

---

Camp about 2 miles distant NE of me. I descended the Mountain and entered the Camp. On the 27th of April we travelled down the West side of the Lake to the outlet into Bear river. here we found about 300 Lodges of Snake Indians: we encamped at the village and staid 3 days, in the meantime our uppers were engaged hunting Beaver in the river and small streams We then crossed the river and ascended a branch called Thoma's Fork in a north direction about 10 Mls. the next day we started across the Mountain in a North direction and after travelling about 5 Mls. we discovered a large Grizzly Bear about 200 yards ahead of us: one of our hunters approached and shot him dead on the spot. We all rode up and dismounted to butcher him: he was an enormous animal a hideous brute a savage looking beast. On removing the skin we found the fat on his back measured six inches deep. He had probably not left his winter quarters more than 2 hours as we saw his tracks on the snow where he had just left the thick forest of pines on the side of the Mountain. We put the meat on our pack animals and travelled up the Mountain about 5 miles and encamped. The next morning we started about 2 hours before day and crossed the Mountain on the snow which was frozen hard enough to bear our animals and at 10 oclck AM we found ourselves travelling down a beautiful green vale which led us to the Valley on Salt River where we encamped about 2 oclck P.M

This river derives its name from the numerous salt springs found on its branches it runs thro. the middle of a smooth valley about 40 miles long and 10 wide emptying its waters into Lewis fork of Snake River its course being almost due North. This is a beautiful valley covered with green grass and herbage surrounded by towering mountains covered with snow spotted with groves of tall spruce pines which from their vast elevation resemble small twigs half imersed in the snow, whilst thousands of Buffaloe carelessly feeding feeding in the green vales contribut to the wild and romantic Splendor of the Surrounding Scenery. On the 10th of May we moved down the river about 12 miles to a stream running into it on the west side called Scotts Fork. Here are some fine Salt Springs the Salt forms on the pebbles by evaporation to the depth of 5 or 6 inch in a short time after the snow has dissappeared 11th May After gathering a Supply of Salt we travelled down the river about 15 miles and encamped near the mouth of a stream on the west side called Gardners Fork. Here we met with Mr. Bridger and his party who informed us that the country around and below was much infested with Blackfeet. they had had several skirmishes with them in which they had lost a number of horses and traps and one young man had been wounded in the shoulder by a ball from a fusee. Upon the receipt of this information our leader concluded to shape his course towards the Fort. On the 14th of May we ascended Gardners fork about 15 mls. thro. a deep gorge in the high craggy mountain May 15 travelled up this stream West abt. 10 Mls. when the country opened into a valley ten miles long and 2 wide. Here we left Gardners fork which turns almost due North into the high mountain with the bend of it just cutting the north end of this valley, we travelled South about 3 miles and encamped on Blackfoot which runs into Snake river after a course of about 100 mls. Here the snow was very deep over nearly the whole plain which was surrounded by high mountains. 16th we travelled down Blackfoot which runs South West accross the Valley then turns West and runs into a deep cut in the mountain upwards of a thousand feet above above the bed of the stream the entrance of which seems barely wide enough to admit its waters. We travelled thro this Kanyon for about 10 miles when it opened into a large plain extending to the Sheep Rock on Bear river which appeared to be about 40 mls distant to the South West. There Black foot makes a sweeping curve to the South West then gradually turning to

---

Journal of a Trapper

By Osborne Russell

---

the North enters a narrow gorge of basaltic rock thro. which it rushes with impetuosity for about 15 Mls. then emerges into the great plain of Snake River 17th we travelled down this stream about 15 Mls and stopped to kill and dry Buffaloe meat sufficient to load our loose horses. On the 22d We moved down 10 mls. where we found thousands of Buffaloe Bulls and killed a great number of them as the Cows were very poor at this season of the year. May 30th We travelled down to the Plains and on the day following arrived at the Fort after travelling about 30 Mls in a South W. direction. On arriving at the Fort we learned that Capt. Thing had started in April with 12 men for the purpose of establishing a trading post on a branch of Salmon River: but had been defeated by the Blackfeet with the total loss of his outfit excepting his men and horses.

On the 10th of June a small party belonging to the Hudsons Bay Company arrived from Fort Vancouver on the Columbia River under the direction of Mr F. Ermatinger accompanied by Capt. Wm. Stewart an English half pay Officer who had passed the winter at Vancouver and was on a tour of pleasure in the Rocky Mountains. On the 12th they left Fort Hall and started for the grand rendezvous on Green River. We now began to make preparations for what the Trappers termed the "Fall Hunt" and all being ready on the 15th we started. Our party (under our former leader) consisted of 24 men 14 Trappers and 10 Camp Keepers It was the intention of our leader to proceed to the Yellow Stone Lake and hunt the country which lay in the vicinity of our route: from thence proceed to the head waters of the Missouri and Snake Rivers on our return back to Fort Hall where it was intended we should arrive about the middle of Octr. next We travelled to the mouth of Blackfoot Creek about 10 mls. 18th Up Blackfoot abt. 15 Mls. 17th Followed up this stream abt. 10 mls. farther then left it to our right and took a N E cours thro. the dry plains covered with wild sage and sand hills about 15 mls. to the foot of the mountain and encamped at a small spring which sinks in the plain soon after leaving the mountain. Here we Killed a couple of fine Bulls and took some of the best meat. 18th We crossed a low Mountain in an East direction about 12 mls. and encamped on a stream called Gray's Creek, which empties into Snake River abt. 40 mls. above Fort Hall 19th Travelled East over a rough broken Mountaneous country about 12 mls. and encamped on a small branch of the same stream. This country affords no timber excepting the quaking Asp which grows in small scrubby groves in the nooks and ravines among the hills 20th we left the waters of Gray's Creek and crossed a low place in the mountain in an East direction fell on to a small stream running into Lewis' fork - distance 10 mls. 21st travelled East following this stream to the mouth about 15 which was about 90 mls. below the mouth of Salt River. Here we were obliged to cross Lewis fork which is about 300 yds. wide and might be forded at a low stage of water, but at present was almost overflowing its banks and running at the rate of about 6 mls per hour. We commenced making a boat by sewing two raw Bulls hides together which we stretched over a frame formed of green willow branches and then dried it gradually over a slow fire during the night 22d Our boat being completed we commenced crossing our equipage and while 5 of us were employed at this a young man by the name of Abram Patterson attempted to cross on horse back in spite of all the advice and entreaty of those present his wild and rash temper got the better of his reason and after a desperate struggle to reach the opposite bank he abandoned his horse made a few springs and sunk to rise no more - he was a native of Penna. about 23 years of age. We succeeded in crossing our baggage and encamped on the East side for the night. Lewis' fork at this place is timbered with large Cotton wood trees along the banks on both sides On the East lies a valley about 28 miles long and 3 or 4 wide in an oblong

---

Journal of a Trapper

By Osborne Russell

---

shape half enclosed by a range of towering mountains which approach the river at each extremity of the valley. 23d We crossed the North point of the valley and ascended a small stream about 15 mls. NE where we encamped among the mountains thickly covered with tall pines intermingled with fallen timber 24th Crossed the mountain 12 mls. East course and descended into the South W. extremity of a valley called Pierre's hole where we staid the next day. This valley lies north & South in an oblong form abt. 90 mls long and 10 wide surrounded except on the Nth. by wild and rugged Mountains: the East range resembles Mountains piled on Mountains and capped with three spiral peaks which pierce the cloud. These peaks bear the French name of Tetons or Teats - The Snake Indians call them the hoary headed Fathers. This is a beautiful valley consisting of a Smooth plain intersected by small streams and thickly clothed with grass and herbage and abounds with Buffaloe Elk Deer antelope etc 27th We travelled to the north end of the valley and encamped on one of the numerous branches which unite at the Northern extremity and forms a stream called Pierre's fork which discharges its waters into Henry's fork of Snake River. The stream on which we encamped Bows directly from the central Teton and is narrowly skirted with Cottonwood trees closely intermingled with underbrush, on both sides. We were encamped on the South Side in a place partially clear of brush under the shade of the large Cottonwoods 28th abt 9 oclk AM we were arouse by an alarm of "Indians" we ran to our horses, All was confusion - each one trying to catch his horses. We succeeded in driving them into Camp where we caught all but 6 which escaped into the prarie: in the meantime the Indians appeared before our camp to the number of 60 of which 15 or 20 were mounted on horse back & the remainder on foot - all being entirely naked armed with fusees, bows, arrows etc They immediately caught the horses which had escaped from us and commenced riding to and fro within gunshot of our Camp with all the speed their horses were capable of producing without shooting a single gun for about 20 minutes brandishing their war weapons and yelling at the top of their voices; Some had Scalps suspended on small poles which they waved in the air. Others had pieces of scarlet cloth with one end fastened round head while the other trailed after them. After Securing my horses I took my gun examined the priming set the breech on the ground and hand on the Muzzle with my arms folded gazing at the novelty of this scene for some minutes quite unconscious of danger until the whistling of balls about my ears gave me to understand that these were something more than mere pictures of imagination and gave me assurance that these living Centaurs were a little more dangerous than those I had been accustomed to see portrayed on canvass -

The first gun was fired by one of our party which was taken as a signal for attack on both sides but the well directed fire from our Rifles soon compelled them to retire from the front and take to the brush behind us: where they had the advantage until 7 or 8 of our men glided into the brush and concealing themselves until their left wing approached within about 30 ft of them before they shot a gun they then raised and attacked them in the flank the Indians did not stop to return the fire, but retreated thro. the brush as fast as possible dragging their wounded along with them and leaving their dead on the spot. In the meantime myself and the remainder of our party were closely engaged with the centre and right. I took the advantage of a large tree which stood near the edge of the brush between the Indians and our horses: They approached until the smoke of our guns met. I kept a large German horse pistol loaded by me in case they should make a charge when my gun was empty. When I first stationed myself at the tree I placed a hat on some twigs which grew at the foot of it and would put it in motion by Kicking the twig with my foot in order that

Journal of a Trapper

By Osborne Russell

---

they might shoot at the hat and give me a better chance at their heads but I soon found this sport was no joke for the poor horses behind me were killed and wounded by the balls intended for me. The Indians stood the fight for about 2 hours then retreated thro the brush with a dismal lamentation. We then began to look about to find what damage they had done us: One of our comrades was found under the side of an old root wounded by balls in 3 places in the right and one in the left leg below the knee no bones having been broken. another had received a slight wound in the groin. We lost 3 horses killed on the spot and several more wounded but not so bad as to be unable to travel.

Towards night some of our men followed down the stream about a mile and found the place where they had stopped and laid their wounded comrades on the ground in a circle the blood was still standing congealed in 9 places where they had apparently been dressing the wounds. 29th Staid at the same place fearing no further attempt by the same party of Indians 30th Travelled up the main branch abt. 10 mls. July 1st Travelled to the SE extremity of the valley and encamped for the night Our wounded comrade suffered very much in riding altho. everything was done which lay in our power to ease his sufferings: A pallet was made upon the best gaited horse belonging to the party for him to ride on and one man appointed to lead the animal 2d Crossed the Teton mountain in an east direction- about 15 mls. the ascent was very steep and rugged covered with tall pines but the descent was somewhat smoother. Here we again fell on to Lewis' fork which runs in a Southern direction thro. a valley about 80 mls long then turning to the west thro. a narrow cut in the mountain to the mouth of Salt River about 30 miles. This Valley is called "Jackson Hole" it is generally from 5 to 15 mls wide: the Southern part where the river enters the mountain is hilly and uneven but the Northern portion is wide smooth and comparatively even the whole being covered with wild sage and Surrounded by high and rugged mountains upon whose summits the snow remains during the hottest months in Summer. The alluvial bottoms along the river and streams inter sect it thro. the valley produce a luxuriant growth of vegetation among which wild flax and a species of onion are abundant. The great altitude of this place however connected with the cold descending from the mountains at night I think would be a serious obstruction to growth of most Kinds of cultivated grains. This valley like all other parts of the country abounds with game.

Here we again attempted to cross Lewis' fork with a Bull skin boat July 4th Our boat being completed we loaded it with baggage and crossed to the other side but on returning we ran it into some brush when it instantly filled and sunk but without further accident than the loss of the boat we had already forded half the distance across the river upon horse back and were now upon a other shore We now commenced making a raft of logs that had drifted on the Island on this when completed we put the remainder of our equipments about 2 oclk PM and 10 of us started with it for the other side but we no sooner reached the rapid current than our raft (which was constructed of large timber) became unmanageable and all efforts to reach either side were vaine and fearing lest We should run on to the dreadful rapids to which we were fast approaching we abandoned the raft and committed ourselves to the mercy of the current. We being all tolerable good swimmers excepting myself, I would fain have called for help but at this critical period every one had to Shift for himself fortunately I scrambled to the shore among the last swimmers. We were now on the side from whence we started without a single article of bedding except an old cloth tent whilst the rain poured incessantly. Fortunately we had built a large fire previous to our

Journal of a Trapper

By Osborne Russell

---

departure on the raft which was still burning

I now began to reflect on the miserable condition of myself and those around me, without clothing provisions or fire arms and drenched to the skin with the rain

I thought of those who were perhaps at this moment Celebrating the anniversary of our Independence in my Native Land or seated around tables loaded with the richest dainties that a rich independent and enlightened country could afford or perhaps collected in the gay Saloon relating the heroic deeds of our ancestors or joining in the nimble dance forgetful of cares and toils whilst here presented a group of human beings crouched round a fire which the rain was fast diminishing meditating on their deplorable condition not knowing at what moment we might be aroused by the shrill war cry of the hostile Savages with which the country was infested whilst not an article for defense excepting our butcher Knives remained in our possession -

The night at length came on and we lay down to await the events of the morrow day light appeared and we started down along the shore in hopes of finding something that might get loose from the raft and drift upon the beach - We had not gone a mile when we discovered the raft lodged on a gravel bar which projected from the Island where it had been driven by the current - we hastened thro. the water waist deep to the spot where to our great surprise and satisfaction we found everything safe upon the raft in the same manner we had left it. we also discovered that the river could with some difficulty be forded on horseback at this place. Accordingly we had our horses driven across to us packed them up mounted and crossed without further accident and the day being fair we spent the remainder of it in and the following day in drying our equipage

7th Left the river followed up a stream called the "Grosvent fork" in an East direction about 2 Mils this stream was very high and rapid in fording it we lost 2 Rifles 8th we followed the stream thro. the mountain east passing thro. narrow defiles over rocky precipices and deep gulches for 15 mls. 9th travelled up the stream about 10 Mls east then turned up a left hand fork about 8 Mls N E and encamped among the high rough mountains thickly covered with pine timber. There was not a man in the party who had ever been at this place or at the Yellow Stone Lake where we intended to go but our leader had received information respecting the route from some person at the Fort and had written the direction on a piece of paper which he carried with him They directed us to go from the place where now were due North but he said the directions must be wrong as he could discover no passage thro. the mountains to the North of us. 10th We took a narrow defile which led us in an East direction about 12 mls. on to a Stream running S. E. : This we followed down about six miles when the defile opened into a beautiful valley about 15 mls. in circumference thro. which the Stream ran in the direction above stated and entered the mountain on the East side. Here a dispute arose about the part of country we were in. Our Leader maintained that this was a branch of the Yellow Stone River but some of the Trappers had been in this valley before and knew it to be a branch of wind River pointed out their old encampments and the Beaver lodges where they had been trapping 2 years previous. But our man at the helm was inflexible, he commanded the party and had a right to call the streams by what names he pleased and as a matter of course this was called the Yellow Stone. Three of the party however called it Wind River and left us but not before one of them had given our Charge d'affairs a sound drubbing about some small matters of little importance to any one but themselves - 11th We left the stream and crossed the valley in a N E direction ascended a high point of mountain thickly covered with pines then descended over cliffs and crags crossing deep gulches among the dark

---

Journal of a Trapper

By Osborne Russell

---

forests of pines and logs until about noon when we came into a smooth grassy spot about a mile in circumference watered by a small rivulet which fell from the rocks above thro. the valley and fell into a chasm on the SE side among the pines. On the North and West were towering rocks several thousand feet high which seem to overhang this little vale - Thousands of mountain Sheep were scattered up and down feeding on the short grass which grew among the cliffs and crevices: some so high that it required a telescope to see them. Our wounded companion suffered severely by this day's travel and our director concluded to remain at this place the next day. He now began to think that these were not the waters of the Yellow Stone as all the branches ran SE. Finally he gave it up and openly declared he could form no distinct idea what part of the country we were in. 12th Myself and another had orders to mount 2 of the best mules and ascend the mountain to see if we could discover any pass to the N West of us. We left the camp and travelled in a North direction about 2 Mls. then turning to our left around a high point of perpendicular rock entered a narrow glen which led N West up the Mountain thro. this we directed our course ascending over the loose fragments of rock which had fallen from the dark threatening precipices that seemed suspended in the air above us on either side for about 5 Mls. when the ascent became so steep that we were obliged to dismount and lead our Mules After climbing about a mile further we came to large banks of snow 8 or 10 ft. deep and so hard that we were compelled to cut steps with our butcher knives to place our feet in whilst our Mules followed in the same track. These places were from 60 to 200 yards accross and so steep that we had to use both hands and feet Dog like in climbing over them We succeeded in reaching what we at first supposed to be the Summit when another peak appeared in view completely shrouded with Snow dotted here and there with a few dwarfish weather beaten Cedars. We now seated ourselves for a few minutes to rest our wearied limbs and gaze on surrounding objects near us on either hand the large bands of Mountain Sheep carelessly feeding upon the short grass and herbage which grew among the Craggs and Cliffs whilst Crowds of little lambs were nimbly Skipping and playing upon the banks of snow. After resting ourselves a short time we resumed our march over the snow leaving the Mules behind. We reached the highest Summit in about a miles travel. On the top of this elevation is a flat place of about a quarter of a mile in circumference. On the West and North of us one vast pile of huge mountains crowned with snow but none appeared so high as the one on which we stood. On the South and East nothing could be seen in the distance but the dense blue atmosphere. We did not prolong our [stay] at this place for the north wind blew keen and cold as the month of January in a Northern Climate. We hurried down to where we had left the mules in order to descend to a more temperate climate before the night came on. Our next object was to find a place to descend with our Mules it being impossible to retrace our steps without the greatest danger. After hunting around Sometime we at length found a place on the NE side where we concluded to try it. We drove our mules on to the snow which being hard and slippery their feet tripped and after sliding about 300 they arrived in a smooth green spot at the foot of the declivity. We then let ourselves down by cutting steps with our butcher knives and the breeches of our guns. After travelling down out of the snow we encamped on a smooth green spot and turned our mules loose to feed At Sunset we built a large fire, eat supper and laid down to sleep. The next morning at daybreak I arose and kindled a fire and seeing the mules grazing at a short distance I filled my tobacco pipe and sat down to Smoke, presently I cast my eyes down the mountain and discovered 2 Indians approaching within 200 yards of us I immediately aroused my companion

---

who was still sleeping, we grasped our guns and presented them upon the intruders upon our Solitude, they quickly accosted us in the Snake tongue saying they were Shoshonies and friends to the whites, I invited them to approach and sit down then gave them some meat and tobacco, they seemed astonished to find us here with Mules saying they knew of but one place where they thought mules or horses could ascend the mountain and that was in a NE direction. The small stream which was formed by the melting of the snow above us after running past where we sat rushed down a fearful chasm and was lost in spray. After our visitors had eaten and smoked we began to question them concerning their families and the country around them. They said their families were some distance below in a North Direction and that there was a large lake beyond all the snowy peaks in sight to the N. W. they also pointed out the place where we could descend the mountain and told us that this stream ran down thro. the mountain and united with a larger stream - which after running a long distance North turned toward the rising of the sun into a large plain where there was plenty of Buffaloe and Crow Indians. After getting this desired information we left these two sons of the wilderness to hunt their sheep and we to hunt our camp as we could. We travelled over a high point of rocks chiefly composed of Granite and coars Sand Stone. In many places we saw large quantities of petrification, nearly whole trees broken in pieces from one to three feet long completely petrified. We also saw imense pieces of rock on the top of the mountain composed of coarse sand pebbles and Sea Shells of various kinds and sizes. After crossing the Summit we fell into a defile which led a winding course down the mountain. Near the foot of this defile we found a stone jar which would contain 9 gallons neatly cut from a piece of granite well shaped and smooth After travelling all day over broken rocks fallen timber and rough country we arrived at the camp about dark 14th We raised Camp and travelled N NE over rough craggy spurs about 15 Mls. and encamped in a narrow Glen between two enormous peaks of rocks. As we were passing along over a spur of the mountain we came to a place from which the earth had slide at some previous period and left the steep inclined ledge bare and difficult to cross: our horses were obliged to place their feet in the small holes and fissures in the rock to keep themselves from sliding off an unfortunate pack horse however missed his footing and slid down the declivity to near the brink of a deep and frightful kanyon thro. which the Cataract madly dashed some hundred feet below fortunately his foot caught in some roots which projected from a crevice in rock and arrested his terrible cours until we could attach ropes to him and drag him from his perilous situation. 15th We followed the windings of the Glen East as far as we could ride and then all dismounted and walked except the wounded man who rode until the mountain became so steep his horse could carry him no longer we then assisted him from his horse and carried or pushed him to the top of the divide over the snow -

In the meantime it commenced snowing very hard - After gaining the Summit we unloaded our animals and rushed them on to the Snow on the other side which being hard they went helter skelter down to a warmer climate and were arrested by a smooth grassy spot. We then lowered the wounded man down by cords and put our saddles and baggage together on the Snow jumped on the top and started slowly at first but the velocity soon increased until we brought up tumbling heels over head on a grassy bench in a more moderate climate. Now we were down; but whether we could get out was a question yet to be Solved. Tremendous towering mountains of rocks Surrounded us excepting on the SE - where a small stream ran from the snow into a dismal chasm below. But for my part I was well contented for an eye could scarcely be cast in any direction

around above or below without seeing the fat sheep gazing at us with anxious curiosity or lazily feeding among the rocks and scrubby pines. The bench where we encamped contained about 500 acres nearly level. 16th We staid at this place as our wounded comrade had suffered severely the day before. Some went down the stream to hunt a passage while others went to hunt Sheep. Being in Camp about 10 ock I heard the faint report of a rifle overhead I looked up and saw a sheep tumbling down the rocks which stopped close to where I stood but the man who shot it had to travel 3 or 4 miles before he could descend with safety to the Camp. The Sheep were all very fat so that this could be called no other than high living both as regarded altitude of position and rich provisions. 17th Travelled down the stream thro. difficult and dangerous passage about 10 mls. where we struck another branch on the left This we ascended due North about 8 mls and encamped on another green Spot near the Snow at the head of the Glen 18th We ascended the Mountain at the head of this branch and crossed the divide and descended another branch (which ran in a North direction) about 8 mls. and encamped in an enormous gorge 19th Travelled about 15 mls. down stream and encamped in the edge of a plain 20th Travelled down to the two forks of this stream about 5 mls. and stopped for the night. Here some of the trappers knew the country. This stream is called Stinking River a branch of the Bighorn which after running about 40 mls thro. the big plain enters the above river about 15 mls. above the lower Bighorn Mountain. It takes its name from several hot Springs about 5 miles below the forks producing a sulphurous stench which is often carried by the wind to the distance of 5 or 6 Mls. Here are also large quarries of gypsum almost transparent of the finest quality and also appearances of Lead with large rich beds of Iron and bituminous coal We stopped at this place and rested our animals until the 23d By this time our wounded comrade had recovered so far as to be able to hobble about on crutches. 24th We took up the right hand fork in a NW direction about 15 mls thro. a rugged defile in the mountain. 25th Travelled about 18 mls in the same direction still following the stream which ran very rapid down thro. the dense piles of mountains which are formed of Granite Slate and Sand Stone covered with pines where there is sufficient soil to support them 26th followed the stream almost due Nth. about 8 mls. and encamped where we staid the next day 28th We crossed the mountain in a West direction thro. the thick pines and fallen timber about 12 mls and encamped in a small prairie about a mile in circumference Thro. this valley ran a small stream in a North direction which all agreed in believing to be a branch of the Yellow Stone. 28th We descended the stream about 15 mls thro. the dense forest and at length came to a beautiful valley about 8 Mls. long and 3 or 4 wide surrounded by dark and lofty mountains. The stream after running thro. the center in a NW direction rushed down a tremendous canyon of basaltic rock apparently just wide enough to admit its waters. The banks of the stream in the valley were low and skirted in many places with beautiful Cottonwood groves

Here we found a few Snake Indians comprising 6 men 7 women and 8 or 10 children who were the only Inhabitants of this lonely and secluded spot. They were all neatly clothed in dressed deer and Sheep skins of the best quality and seemed to be perfectly contented and happy. They were rather surprised at our approach and retreated to the heights where they might have a view of us without apprehending any danger, but having persuaded them of our pacific intentions we then succeeded getting them to encamp with us. Their personal property consisted of one old butcher Knife nearly worn to the back two old shattered fusees which had long since become useless for want of ammunition a Small Stone pot and about 30 dogs on which they carried their skins,

Journal of a Trapper

By Osborne Russell

---

clothing, provisions etc on their hunting excursions. They were well armed with bows and arrows pointed with obsidian The bows were beautifully wrought from Sheep, Buffalo and Elk horns secured with Deer and Elk sinews and ornamented with porcupine quills and generally about 3 feet long. We obtained a large number of Elk Deer and Sheep skins from them of the finest quality and three large neatly dressed Panther Skins in return for awls axes kettles tobacco ammunition etc. They would throw the skins at our feet and say "give us whatever you please for them and we are satisfied We can get plenty of Skins but we do not often see the Tibuboes" (or People of the Sun) They said there had been a great many beaver on the branches of this stream but they had killed nearly all of them and being ignorant of the value of fur had singed it off with fire in order to drip the meat more conveniently. They had seen some whites some years previous who had passed thro. the valley and left a horse behind but he had died during the first winter. They are never at a loss for fire which they produce by the friction of two pieces of wood which are rubbed together with a quick and steady motion One of them drew a map of the country around us on a white Elk Skin with a piece of Charcoal after which he explained the direction of the different passes, streams etc From them we discovered that it was about one days travel in a SW direction to the outlet or northern extremity of the Yellow Stone Lake, but the route from his description being difficult and Beaver comparatively scarce our leader gave out the idea of going to it this season as our horses were much jaded and their feet badly worn. Our Geographer also told us that this stream bed united with the Yellow Stone after leaving this Valley half a days travel in a west direction. The river then ran a long distance thro a tremendous cut in the mountain in the same direction and merged into a large plain the extent of which was beyond his geographical knowledge or conception 30th We stopped at this place and for my own part I almost wished I could spend the remainder of my days in a place like this where happiness and contentment seemed to reign in wild romantic splendor surrounded by majestic battlements which seemed to support the heavens and shut out all hostile intruders. 21st We left the valley and descended the stream by a narrow difficult path winding among the huge fragments of basaltic rock for about 12 Mls when the trail came to an end and the towering rocks seemed to overhang the river on either side forbidding further progress of man or beast and obliged us to halt for the night. About dark some of our trappers came to camp and reported one of their Comrades to be lost or met with some serious accident The next day we concluded to stop at this place for the lost man and four men went in search of him and returned at night without any tidings of him whatever It was then agreed that either his gun had bursted and killed him or his horse had fallen with him over some tremendous precipice. He was a man about 55 years of age and of 30 years experience as a hunter Our leader concluded that further search was useless in this rocky pathless and pine covered country Aug. 2d we forded the Yellow Stone with some difficulty to the South side. The river at this place is about 200 yds wide and nearly swimming to horses. a short distance below it rushes down a chasm with a dreadful roar echoing among the Mountains. After crossing we took up a steep and narrow defile in a South direction and on gaining the Summit in about 3 mls we found the country to open South and West of us into rolling prairie hills. We descended the mountain and encamped on a small stream running West 3d Travelled about 25 Mls. due West the route broken and uneven in the latter part of the day and some places thickly covered with pines. encamped at night in a valley called "Gardnr's hole" This Valley is about 40 mls in circumference surrounded except on the North and West by low piney Mountains On the West is a high narrow

Journal of a Trapper

---

range of mountains running North and South dividing the waters of the Yellow Stone from those of Gallatin fork of the Missouri. We stopped in this Valley until the 20th The Trappers being continually employed in hunting and trapping beaver. 21st we crossed the mountains thro. a defile in a west direction and fell on to a small branch of the Gallatin Here we encamped on a small clear spot and killed the fattest Elk I ever saw. It was a large Buck the fat on his rump measured seven inches thick he had 14 spikes or branches on the left horn and 12 on the right. 22d after we had started in the morning five of our party (4 Trappers and one Camp [Keeper]) secretly dropped behind with their pack and riding horses and took a different direction forming a party of their own, but they could not be much blamed for leaving - as our fractious leader was continually wrangling with the Trappers by endeavoring to exercise his authority tyrannically. we followed down this branch to the Gallatin about 10 mls. West encamped and staid the next day 24th Down the Gallatin N NW the river running between two high ranges of mountains skirted along its banks by a narrow valley. 25th left the defile and took up the Gallatin an East direction crossed the mountain and fell on to a stream running into the Yellow Stone and finding no beaver returned to the Gallatin the next day by the route we had come. 28th up the Gallatin to the place where we had struck it on the 22d 29th Took up the stream a South course about 10 mls. then left it to the left hand and proceeded about 4 mls South thro. a low pass and fell on to a branch of the Madison fork of the Missouri running south this we followed down about six miles further and encamped where we staid next day This pass is formed by the minor ranges of hills or spurs on the two high ranges of mountains on either side of us which approach towards each other and terminate in a low defile completely covered with pines except along the stream where small praries may be found thickly clothed with grass forming beautiful encampment 31st Travelled SW down the stream about 10 Mls. when we came to the "burnt hole" a prarie Valley about 80 mls in circumference surrounded by low spurs of pine covered mountains which are the sources of great number of streams which by uniting in this valley form the Madison fork Sepr 1st Travelled down the stream about 12 Mls NW and encamped during a heavy snow storm This stream after leaving the valley enters a gorge in the mountain in a NW direction. 2d We stopped in the entrance of this gorge until the 8th Travelled down about 15 mls. where the country opened into a large plain thro. which the stream turned in a sweeping curve due North 9th Crossed the Valley in a west direction travelled up a small branch and encamped about 3 miles from the river in a place with high bluffs on each side of us we had been encamped about an hour who fourteen white Trappers came to us in full gallop they were of Mr. Bridgers party who was encamped at Henry's Lake about 20 mls in a South direction and expected to arrive at the Madison the next day his party consisted of 60 white men and about 20 Flathead Indians. The trappers remained with us during the night telling Mountain "Yarns" and the news from the States. Early next morning 8 of them started down the stream to set Traps on the main Fork but returned in about an hour closely pursued by about 80 Blackfeet. We immediately secured our horses in a yard previously made for the purpose and prepared ourselves for battle. In the meantime the Indians had gained the bluffs and commenced shooting into the camp from both sides. The bluff on the East side was very steep and rocky covered with tall pines the foot approaching within 40 yds of us. On the west the bluffs were covered with thick groves of quaking asps: from these hights they poured fusee balls without mercy or even damage except killing our animals who were exposed to their fire. In the meantime we concealed ourselves in the thicket around the camp to await a

Journal of a Trapper

By Osborne Russell

---

nearer approach, but they were too much afraid of our rifles to come near enough for us [to] use Ammunition - we lay almost silently about 3 hours when finding they could not arouse us to action by their long shots they commenced Setting fire to the dry grass and rubbish with which we were surrounded: the wind blowing brisk from the South in a few moments the fire was converted into one circle of flame and smoke which united over our heads. This was the most horrid position I was ever placed in death seemed almost inevitable but we did not despair but all hands began immediately to remove the rubbish around the encampment and setting fire to it to act against the flames that were hovering over our heads: this plan proved successful beyond our expectations Scarce half an hour had elapsed when the fire had passed around us and driven our enemies from their position. At length we saw an Indian whom we supposed to be the Chief standing on a high point of rock and give the signal for retiring which was done by taking hold of the opposite corners of his robe lifting it up and striking it 3 times on the ground. The cracking of guns then ceased and the party moved off in silence. They had killed two horses and one mule on the spot and five more were badly wounded. It was about 4 oclk in the afternoon when the firing ceased. We then saddled and packed our remaining animals and started for Mr. Bridger's camp, which we found on the Madison at the place where we had left it. Our party was now so disabled from the previous desertion of Men and loss of animals that our leader concluded to travel with Mr Bridger until we should arrive at the forks of Snake river where the latter intended to pass the winter. On the 11th Myself with 5 others returned to the battle ground to get some traps which had been set for beaver on the stream above our encampment whilst the main camp was to travel down the river about 5 mls. and stop the remainder of the day to await our return We went for the traps and returned to the camp about [8] oclk. P.M. 12th At sunrise an alarm of "Blackfeet!" echoed thro. the Camp. In a moment all were under arms and enquiring "where are they" when 'twas replied "On the hills to the West": I cast a glance along the high range of hills which projected toward the river from the mountain and discovered them standing on a line on a ridge in their center stood a small pole and from it waved an American flag displaying a wish to make peace about 30 of us walked up within about 300 yards of their line when they made a signal for us to halt and send two men to meet the same number of theirs and treat for peace. Two of the whites who could speak the Blackfoot language were appointed to negotiate while the respective lines sat upon the ground to await the event. After talking and smoking for half an hour the negotiators separated and returned to their respective parties Our reported them to be a party of Pagans a small tribe of Blackfeet who desired to make peace with the whites and for that purpose had procured the flag from an American trading post on the Missouri they were 45 [in] number well armed and equipped. We gave them a general invitation to our Camp which they accepted with a great deal of reluctance when they were informed of the battle on the 10th but arriving at the camp and receiving friendly treatment their fears in a manner subsided. After Smoking several rounds of the big pipe the Chief began to relate his adventures. He said he had been in several battles with the whites and some of the party were at the battle in "Pierre's hole" on the 28th of June last in which there was four Indians killed on the spot and eight died of their wounds on the way to the village but he denied having any knowledge of the late battle but said there was several parties of the Blood Indians lurking about the mountains around us They stopped with us until nearly night and all left except one who concluded to remain. 13th We left the Madison Fork with Mr Bridger's Camp and ascended a small branch in a West direction

---

Journal of a Trapper

By Osborne Russell

---

through the mountains about 20 Mls. and encamped on the divide After we had encamped a Frenchman started down the mountain to set his traps for beaver contrary to the advice and persuasion of his companions he had gone but a few miles when he was fired upon by a party of Blackfeet killed and scalped. 14th Travelled down the mountain about 16 Mls NW. and encamped on a stream called "Stinking Creek" which runs into the Jefferson fork of the Missouri. After we had encamped some trappers ascended the stream but were driven back by the Blackfeet Others went below and shared the same fate from another party but escaped to the camp unhurt 15 Moved down this stream about 12 Mls Nth. This part of the country is comprised of high bald hills on either side of the stream which terminate in rough pine covered mountains. 16 Travelled down the stream NW about 8 Mls The Valley opened wider as we descended and large numbers of Buffaloe were scattered over the plains and among the hills 17th Down abt. 10 Mls NW. the mountain on the West descends to a sloping spur from thence to a plain 18 We did not raise camp and about noon some Flathead Indians arrived and told us their village was on a branch of the Jefferson called Beaver Head Creek about 30 mls in a west direction The next day we went to their village, which consisted of 180 lodges of Flatheads and Pend Oreilles (or hanging ears) Here we found a trading party belonging to the Hudsons Bay Co They were under the direction of Mr. Francis Ermatinger who was endeavoring to trade every Beaver skin as fast as they were taken from the water by the Indians. 20th the whole Cavalcade moved "en mass" up the stream about 12 Mls SW. and encamped with another Village of the same tribes consisting of 130 lodges. From this place is a large plain slightly undulating extending nearly to the junction of the three forks of the Missouri The Flatheads are a brave friendly generous and hospitable tribe strictly honest with a mixture of pride which exalts them far above the rude appellation of Savages when contrasted with the tribes around them. They boast of never injuring the whites and consider it a disgrace to their tribe if they are not treated like brothers whilst in company with them. Larceny, Fornication, and adultery are severely punished. Their Chiefs are obeyed with a reverence due to their station and rank. 23d We left the Village in company with Mr. Bridger and his party and travelled SE accross the plain about 8 Mls. to the foot of the hills and encamped at a spring. 24th Travelled about 18 mls SE over high rolling hills beautifully clothed with bunch grass - 25th Travelled in the same direction 12 Mls and encamped in a smooth valley about 80 Mls in circumference surrounded on the North & East by a high range of mountains at the NE extremity is a marshy lake about 12 Mls. in circumference from this flows the head stream of the Jefferson fork of the Missouri which curves to the SW thro. the valley and enters the low mountain on the west thro. a narrow cut still continuing the curve encircling a large portion of country previous to its arrival at the junction 26 Crossed the valley about 16 Mls. and encamped on the East side. This Valley as a Mountaineer would say was full of Buffaloe when we entered it and large numbers of which were killed by our hunters we repeatedly saw signs of Blackfeet about us to waylay the Trappers. 27th We stopped at this place to feast on fat Buffaloe 28th Crossed the Mountain SE about 12 Mls. and encamped on "Camas Creek" at the NW extremity of the great plain of Snake River Here the leader of our party desired me to go to Fort Hall and get some horses to assist them to the Fort as we were dependent on Mr Bridger for animals to move camp 30th After getting the nessary information from our leader I started contrary to the advice and remonstrances of Mr. Bridger and his men rather than be impeached of cowardice by our austocratical director. I travelled according to his directions South untill dark amid thousands of Buffaloe. The route was very

---

rocky and my horses feet (he not being shod) were worn nearly to the quick which caused him to limp very much. After travelling about 30 Mls. I lay down and slept soundly during the night. The next morning I arose and proceeded on my journey down the stream about 9 oclk I came to where it formed a lake where it sank in the dry sandy plain from this I took a SE course as directed towards a high Bute which stood in the almost barren plain by passing to the East of this Bute I was informed that it was about 25 Mls to Snake River

In this direction I travelled untill about two hours after dark my horse had been previously wounded by a ball in the loins and tho. nearly recovered before I started yet travelling over the rocks and gravel with tender feet and his wound together had nearly exhausted him. I turned him loose among the rocks and wild Sage and laid myself down to meditate on the follies of myself and others: In about two hours I fell asleep to dream of cool spring rich frosts and cool shades In the morning I arose and looked around me my horse was near by me picking the scanty blades of sunburned grass which grew among the sage. On surveying the place I found I could go no further in a South or East direction as there lay before me a range of broken basaltic rock which appeared to extend for 5 or 6 miles on either hand and 5 or 6 Mls wide thrown together promiscuously in such a manner that it was impossible for a horse to cross them. The Bute stood to the SW about 10 Mls. which I was informed was about half the distance from "Camas Lake" to Snake river. I now found that either from ignorance or some other motive less pure our Leader had given me directions entirely false and came to the conclusion to put no further confidence in what he had told me, but return to the Lake I had left as it was the nearest water I knew of this point being settled I saddled my horse and started on foot leading him by the bridle and travelled all day in the direction of the Lake over the hot sand and gravel. After daylight disappeared I took a star for my guide but it led me South of the Lake where I came on to several large bands of Buffalo who would start on my near approach and run in all directions It was near midnight when I laid down to rest I had plenty of provisions but could not eat Water! Water was the object of my wishes travelling for two long days in the hot burning sun without water is by no means a pleasant way of passing the time I soon fell asleep and dreamed again of bathing in the cool rivulets issuing from the snow topped Mountains. About an hour before day I was awakened by the howling of wolves who had formed a complete circle within 30 paces of me and my horse at the flashing of my pistol however they soon dispersed. At daylight I discovered some willows about 3 miles distant to the West where large numbers of Buffalo had assembled apparently for water In two hours I had dispersed the Brutes and lay by the water side. After drinking and bathing for half an hour I travelled up the stream about a mile and lay down among some willows to sleep in the shade whilst my horse was carelessly grazing among the bushes The next day being the 4th I lay all day and watched the Buffalo which were feeding in immense bands all about me 5th I arose in the morning at sunrise and looking to the SW I discovered the dust arising in a defile which led thro. the mountain about 4 Mls distant The Buffalo were carelessly feeding all over the plain as far as the eye could reach. I watched the motions of the dust for a few minutes when I saw a body of men on horse back pouring out of the defile among the Buffalo. In a few minutes the dust raised to the heavens The whole mass of became agitated producing a sound resembling distant thunder. At length an Indian pursued a Cow close to me alongside of her he let slip an arrow and she fell. I immediately recognized him to be a Bonnack with whom I was acquainted. On discovering myself he came to me and saluted me in Snake which I answered in the same tongue. He told me the

Village would come and encamp where I was. In the meantime he pulled off some of his Clothing and hung it on a Stick as a signal for the place where his squaw should set his lodge he then said he had killed three fat cows but would kill one more and So saying he wheeled his foaming charger and the next moment disappeared in the cloud of dust. In about a half an hour the Old Chief came up with the village and invited me to stop with him which I accepted. While the squaws were putting up and stretching their lodges I walked out with the Chief on to a small hillock to the view the field of slaughter the cloud of dust had passed away and the prairie was covered with the slain upwards of a Thousand Cows were killed without burning one single grain of gunpowder. The Village consisted off 332 lodges and averaged six persons young and old to each lodge They were just returned from the salmon fishing to feast on fat Buffaloe. After the lodges were pitched I returned [to] the village This Chief is called "Aiken-lo-ruckkup" (or the tongue cut with a flint) he is the brother of the celebrated horn chief who was killed in a battle with the Blackfeet some years ago: and it is related by the Bonnaks without the least scruple that he was killed by a piece of Antelope [horn] the only manner in which he could [be] taken as he was protected by a Supernatural power from all other harm. My worthy host spared no pains to make my situation as comfortable as his circumstances would permit. The next morning I took a walk thro. the Village and found there was fifteen lodges of Snakes with whom I had formed an acquaintance the year before. On my first entering the Village I was informed that two white Trappers belonging to Mr. Wyeths party had been lately killed by the Bonnaks in the lower country and that the two Indians who had killed or caused them to be killed were then in this village. The Old Chief had pointed them out to me as we walked thro. the village and asked me what the white men would do about it I told him they would hang them if they caught them at the Fort He said it was good that they deserved death for said he "I believe they have murdered the two white men to get their property and lost it all in gambling" for continued he "ill gained wealth often flies away and does the owner no good". "But" said he "you need not be under any apprehensions of danger whilst you stop with the village." The squaws were employed cutting and drying meat for two days at the end of which the ground on which the village stood seemed covered with meat scaffolds bending beneath their rich loads of fat Buffaloe meat 13th My horse being somewhat recruited I left the Village with a good supply of boiled Buffaloe tongues prepared by my land lady and the necessary directions and precautions from the Old Chief. I travelled due east about 25 Mls which brot. me to the forks of Snake River when approaching to the waters I discovered fresh human footprints. I immediately turned my horse and rode out from the river about a quarter of a mile intending to travel parrallel with the river in order to avoid any stragglng party of Blackfeet which might be secreted in the timber growing along the banks

I had not gone far when I discovered three Indians on horse back running a Bull towards me: I jumped my horse into a ravine out of sight and crawled up among [the] high Sage to watch their movements as they approached nearer to me I saw they were Snakes and showed myself to them. They left the Bull and galloped up to me after the usual salutation I followed them to their Village which was on the East bank of the river. The village consisted of 15 lodges under the direction of a chief called "Comb Daughter" by the Snakes and by the whites the "Lame Chief." He welcomed me to this lodge in the utmost good humor and jocular manner [I] had ever experienced among Indians and I was sufficiently acquainted with the Snake language to repay his jokes in his own coin without hesitation. I passed the time very agreeably for six days among those simple but

---

well fed and good humored Savages. On the 19th learning that Bridger was approaching the forks and the party of hunters to which I had belonged had passed down the river towards the Fort I mounted my horse - started down the river and arrived at the Fort next day about noon the distance being about 60 Mls S. S. W. When I arrived the party had given up all hopes of ever seeing me again and had already fancied my lifeless body lying on the plains after having been scalped by the savages. The time for which myself and all of Mr. Wythe's men were engaged had recently expired so that now I was independent of the world and no longer to be termed a "Greenhorn" At least I determined not to be so green as to bind myself to an arbitrary Rocky Mountain Chieftain to be kicked over hill and dale at his pleasure. Novr. 16th Capt. Thing arrived from the Columbia with supplies for the Fort. In the meantime the men about the Fort were doing nothing and I was lending them a hand until Mr. Wyeth should arrive and give us our discharge. Decr. 20th Mr. Wyeth arrived when I bid adieu to the "Columbia River Fishing and Trading Company" and started in company with 15 of my old Messmates to pass the winter at a place called "Mutton Hill" on Port Neuf, about 40 Mls. SE from Fort Hall. Mr Wyeth had brot. a new recruit of Sailors and Sandwich Islanders to supply our places at the Fort. We lived on fat mutton until the snow drove us from the Mountain in Feby. Our party then dispersing I joined Mr. Bridgers Company who were passing the winter on Blackfoot Creek about 15 Mls. from the Fort where we staid until the latter part of March. Mr. Bridger's men lived very poor and it was their own fault for the valley was crowded with fat Cows when they arrived in Novr. but instead of approaching and killing their meat for the winter they began to Kill by running on horse back which had driven the Buffaloe all over the Mountain to the head of the Missouri and the snow falling deep they could not return during the winter They killed plenty of Bulls but they were so poor that their meat was perfectly blue yet this was their only article of food as bread or vegetables were out of the question in the Rocky Mountains except a few kinds of roots of spontaneous growth which the Indians dig and prepare for food. It would doubtless be amusing to a disinter[est]ed spectator to witness the process of cooking poor Bull meat as practiced by this camp during the winter of 1835-6 On going thro. the camp at any time in the day heaps of ashes might be seen with the fire burning on the summit and an independent looking individual who is termed a Camp Keeper sitting with a "two year old club" in his hand watching the pile with as much seeming impatience as Philoctete did the burning of Hercules at length poking over the ashes with his club he rolls out a ponderous mass of Bull beef and hitting it a rap with his club it bounds 5 or 8 feet from the ground like a huge ball of gum elastic: this operation frequently repeated divests [it] of the ashes adhering to it and prepares it for carving He then drops his club and draws his butcher knife calling to his comrades "Come Major, Judge, Squire, Dollar Pike, Cotton, and Gabe wont you take a lunch of Simon?" each of whom acts according to the dictates of his appetite in accepting or refusing the invitation. I have often witnessed these Philosophical and independent dignitaries collected round a Bulls ham just torn from a pile of embers good humoredly observing as they hacked the hugh slices from the lean mass that this was tough eating but that it was tougher where there was none and consoling themselves with a promise to make the fat cows suffer before the year rolled round. The camp remained on Blackfoot untill the latter part of March, when the Winter broke up and we commenced travelling and hunting Beaver. We left winter quarters on the 28th and travelled along the foot of the mountain in a north direction to Lewis' fork and ascended it SE to the mouth of Muddy Creek where we arrived on the 7th of

April. Here Mr. Bridger ordered a party of 12 Trappers to branch off to the right and hunt the head waters of Grays and Blackfoot creeks. I was included in the number and felt anxious to try my skill in Trapping 10th We set off leaving the main camp to proceed leisurely to Salt [River] Valley and from thence to the mouth of Thomo's fork of Bear river where we were instructed to meet them. We ascended Muddy and crossed the Mountain on to Grays creek here we found the snow disappearing very fast and the streams so much swollen that we made but slow progress in taking Beaver We traversed the numerous branches of this stream to and fro setting traps when the water would permit until the 25th of April when we left the waters of Grays creek and travelled about 40 Mls in a SW direction from where we had struck it, crossed a low mountain about 8 Mls and fell on to Blackfoot This we ascended two days and hunted until the 5th of May when three of our party were waylaid and fired upon by a party of Blackfeet whilst ascending the stream thro. a Kanyon one of them was slightly wounded in the side by a fusee ball and all escaped to the Camp and reported the Indians to be about 25 in number 7th of May we left Blackfoot and crossed the Mountain SW thro. deep snow and thick pines [and] at night fell into the valley on Bear river and encamped about 25 Mls above the Soda springs 8th Travelled up Bear river to Thomos fork where we found the main Camp likewise Mr. A Dripps and his party, consisting of about 60 whites and nearly as many half breeds who were encamped with 400 lodges of Snakes and Bonnaks and 100 lodges of Nez Perces and flatheads 9th We all camped together in the beautiful plain on Bear River above the mouth of Smith's fork 11th The whole company of Indians and whites left Bear river and travelled to Ham's fork, excepting Mr Dripps and a small party who went round to Blacks fork of Green river to get some furs and other articles deposited there in the ground After reaching Ham's fork the Indians concluded to separate in different directions as we were in too large a body and had too many horses to thrive long together They were instructed to be at the mouth of horse creek on Green River about the 1st of July as we expected supplies from the U S about that time. We laid about on the branches of Green river until the 28th of June when we arrived at the destined place of Rendezvous On the 1st of July Mr. Wyeth arrived from the mouth of the Columbia on his way to the U S with a small party of men 3d The outfit arrived from St. Louis consisting of 40 men having 20 horse carts drawn by mules and loaded with supplies for the ensuing year They were accompanied by Dr Marcus Whitman and lady Mr H H Spaulding and lady and Mr. W H Gray Presbyterian missionaries on their way to the Columbia to establish a mission among the Indians in that quarter. The two ladies were gazed upon with wonder and astonishment by the rude Savages they being the first white women ever seen by these Indians and the first that had ever penetrated into these wild and rocky regions. We remained at the rendezvous until the 16 of July and then began to branch off into parties for the fall hunt in different directions. Mr Bridgers party were destined as usual for the Blackfoot country it contained most of the American trappers and amounted to 60 men. I started with a party of 15 Trappers and 2 Camp Keepers ordered by Mr Bridger to proceed to the Yellow Stone lake and there await his arrival with the remainder of his party. July 24th we set off and travelled up Green river 26 [miles] in a North direction 25th Up Green river 15 Mls in the same direction, then left it to our right and took up a small branch still keeping a Nth. course. The course of the river where we left it turns abruptly to the East and heads in a high craggy mountain covered with snow about 30 Mls distant. This mountain is a spur of the Wind river range and is commonly called the "Sweetwater Mountain" as that stream heads in its southern termination -

---

After leaving the river we travelled about 4 Mls to the head of the branch and encamped in a smooth grassy plain on the divide between Green and Snake Rivers which head within 200 paces of each other at this place 26th Travelled North about 15 Mls. descending a small stream thro. a rough mountaneous country covered with pine trees and underbrush and encamped on the Gros vent fork. 27th We descended the Gros vent fork to "Jacksons hole" about 20 Mls. general course West. 28th We followed Lewis' fork thro. the Valley crossing several large streams coming in from the East we then left the valley and followed the river about 6 Mls. thro. a piece of rough piney country and came to Jacksons Lake which is formed by the river. We encamped at the outlet at a small prarie about a mile in circumference. This lake is about 25 Mls long and 3 wide lying Nth & South bordered on the east by pine swamps and marshes extending from 1 to 2 Mls from the Lake to the spurs of the Mountain On the SW. stands the 3 Tetons whose dark frightful forms rising abruptly from the Lake and towering above the clouds casts a gloomy shade upon the waters beneath whilst the water rushes in torrents down the awful precipices from the snow by which they are crowned The high range of Mountains on the west after leaving the Tetons slope gradually to the Nth and spread into low piney mountains. This place like all other marshes and swamps among the mountains is infested with innumerable swarms of horse flies and musketoos to the great annoyance of man and beast during the day but the cold air descending from the mountains at night compells them to seek shelter among the leaves and grass at an early hour. Game is plenty and the river and lake abounds with fish. After hunting the streams and marshes about this lake we left it, on the 7th of August and travelled down Lewis' fork about 4 Mls to the second stream running into it on the east side below the Lake. This we ascended about 12 Mls East and encamped among the pines close to where it emerged from a deep kanyon in the mountain 8th We took accross a high spur thickly covered with pines intermingled with brush and fallen timber in a NE direction for about 12 Mls where we fell into a small valley on a left hand branch of the stream we had left 9th We took up this branch due North about 10 Mls. when it turning short to the right we left it and ascended a narrow Glen keeping a Nth course sometimes travelling thro. thick pines and then crossing small green spots thro. which little streams were running from the remaining banks of snow lying among the pines in the shade of the mountains for about 6 Mls when we came to a smooth prarie about 2 Mls long and half a Ml. wide lying east and west surrounded by pines. On the South side about midway of the prarie stands a high snowy peak from whence issues a Stream of water which after entering the plain it divides equally one half running West and the other East thus bidding adieu to each other one bound for the Pacific and the other for the Atlantic ocean. Here a trout of 12 inches in length may cross the mountains in safety. Poets have sung of the "meeting of the waters" and fish climbing cataracts but the "parting of the waters and fish crossing mountains" I believe remains unsung as yet by all except the solitary trapper who sits under the shade of a spreading pine whistling blank-verse and beating time to the tune with a whip on his trap sack whilst musing on the parting advice of these waters. 10th We took down the East branch and followed it about 8 Mls to the Yellow Stone river which is about 80 yds wide and at the shallowest place nearly swimming to our horses. To this place it comes from a deep gorge in the mountains enters a valley lying Nth & South about 15 Ms. long and 3 wide thro. which it winds its way slowly to the Nth. thro swamps and marshes and calmly reposes in the bosom of the Yellow Stone Lake. The South extremity of this valley is smooth and thickly clothed with high meadow grass surrounded by high craggy mountains topped with snow. We stopped at

Journal of a Trapper

By Osborne Russell

---

this place trapping until the 3d of August, when we travelled down the lake to the inlet or southern extremity. 16th Mr. Bridger came up with the remainder of the party 18th The whole camp moved down the East shore of the Lake thro. thick pines and fallen timber about 18 Mls. and encamped in a small prairie 19th continued down the shore to the Outlet about 20 Mls. and encamped in a beautiful plain which extends along the Northern extremity of the Lake. This valley is interspersed with scattering groves of tall pines forming shady retreats for the numerous Elk and Deer during the heat of the day. The Lake is about 100 Mls. in circumference bordered on the East by high ranges of Mountains whose spurs terminate at the shore and on the west by a low bed of piney mountains its greatest width is about 15 Mls lying in an oblong form south to north or rather in the shape of a crescent. Near where we encamped were several hot springs which boil perpetually. Near these was an opening in the ground about 8 inches in diameter from which hot steam issues continually with a noise similar to that made by the steam issuing from a safety valve of an engine and can be heard 5 or 6 Mls distant I should think the steam issued with sufficient force to work an engine of 30 horse power. We encamped about 3 ock. PM. and after resting our horses about an hour seven of us were ordered to go and hunt some streams running into the Yillow Stone some distance below the Lake. We startid from the Camp in an East direction crossed the plain and entered the pines and after travelling about an hour thro. dense forests we fell into a broken tract of country which seemed to be all on fire at some distance below the surface. It being very difficult to get around this place we concluded to follow an Elk Trail accross it for about half a mile the treading of our horses sounded like travelling on a plank platform covering an imense cavity in the earth whilst the hot water and steam were spouting and hissing around us in all directions. As we were walking and leading our horses accross this place the horse that was before me broke thro. the crust with one hind foot and the blue steam rushed forth from the hole. The whole place was covered with a crust of Limestone of a dazzling whiteness formed by the overflowing of the boiling water. Shortly after leaving this resemblance of the infernal regions we killed a fat buck Elk and camped at Sunset in a smooth grassy spot between two high shaggy ridges watered by a small stream which came tumbling down the gorge behind us. As we had passed the infernal regions we thought as a matter of course these must be a commencement of the Elysian fields and accordingly commenced preparing a feast. A large fire was soon blazing encircled with sides of Elk ribs and meat cut in slices supported on sticks down which the grease ran in torrents The repast being over the jovial tale goes round the circle the peals of loud laughter break upon the stillness of the night which after being mimicked in the echo from rock to rock it dies away in the solitary [gloom]. Every tale puts an auditor in mind of something similar to it but under different circumstances which being told the "laughing part" gives rise to increasing merriment and furnishes more subjects for good jokes and witty sayings such as Swift never dreamed of Thus the evening passed with eating drinking and stories enlivened with witty humor until near Midnight all being wrapped in their blankets lying around the fire gradually falling to sleep one by one until the last tale is "encored" by the snoring of the drowsy audience The Speaker takes the hint breaks off the sub- ject and wrapping his blanket more closely about him soon joins the snoring party - The light of the fire being superseded by that of the Moon just rising from behind the Eastern Mountain a sullen gloom is cast over the remaining fragments of the feast and all is silent except the occasional howling of the solitary wolf on the neighboring mountain whose senses are attracted by the flavors of roasted meat but fearing to

approach nearer he sits upon a rock and bewails his calamities in piteous moans which are re-echoed among the Mountains. Aug 20th Took over a high rugged mountain about 12 Mls NE and fell into the Secluded Valley of which I have described in my last years journal. Here we found some of those independent and happy Natives of whom I gave a description we traded some Beaver and dressed Skins from them and hunted the streams running into the valley for several days There is something in the wild romantic scenery of this valley which I cannot nor will I, attempt to describe but the impressions made upon my mind while gazing from a high eminence on the surrounding landscape one evening as the sun was gently gliding behind the western mountain and casting its gigantic shadows accross the vale were such as time can never efface from my memory but as I am neither Poet Painter or Romance writer I must content myself to be what I am a humble journalist and leave this beautiful Vale in obscurity until visited by some more skillful admirer of the beauties of nature who may chance to stroll this way at some future period 25th left the Valley and travelled down to the Yellow Stone and crossed it at the ford 26th Crossed the Mountain in a SW direction and fell on to Gardners fork. Here myself and another set some traps and stopped for the night whilst the remainder of the party went in different directions to hunt setting 27th Crossed the mountain SW to "Gardners hole" where we found the main camp. 28th Camp left "Gardners hole" and travelled North to the Yellow Stone about 20 Mls. 29th The whole party followed the river out of the mountain in to the great Yellow Stone plain distance about 12 Mls. The Trappers then scattered out in small parties of from 2 to 5 in number leaving Mr. Bridger with 25 Camp Keepers to travel slowly down the river. Myself and another travelled down the river about 40 Mls NE to a branch called "25 Yard river" This we ascended about 25 Mls in a Nth direction where we remained trapping several days The country lying on this stream is mostly comprised of high rolling ridges thickly clothed with grass and herbage and crowded with imense bands of Buffaloe intermingled with bands of antelope Sepr. 1st We returned to the Camp which we found at the mouth of this stream where we found also 10 Delaware Indians who had joined the camp in order to hunt Beaver with greater security. 2d Travelled down the Yellow Stone river about 20 Mls. This is a beautiful country the large plains widely extending on either side of the river intersected with streams and occasional low spurs of Mountains whilst thousands of Buffaloe may be seen in almost every direction and Deer Elk and Grizzly bear are abundant. The latter are more numerous than in any other part of the mountains. Owing to the vast quantities of cherries plums and other wild fruits which this section of country affords In going to visit my traps a distance of 3 or 4 mils early in the morning I have frequently seen 7 or 8 standing about the clumps of Cherry bushes on their hind legs gathering cherries with surprising dexterity not even deigning to turn their Grizzly heads to gaze at the passing trapper but merely casting a sidelong glance at him without altering their position 3d I left the camp on the Yellow Stone and started accross a low and somewhat broken tract of country in a SE direction to a stream called the Rosebud accompanied by another Trapper 5th The Camp came to us on the Rosebud and the next day passed on in the same direction. Whilst myself and comrade stopped behind to trap 7th We overtook the camp on a stream called Rocky fork, a branch of Clarks fork of the Yellow Stone when we arrived at camp we were told the sad news of the death of a french Trapper named Bodah, who had been waylaid and killed by a party of Blackfeet while setting his traps and one of the Delawares had been shot thro the hip by the rifle of one of his comrades going off accidentally and several war parties of Blackfeet had been seen scouting about

---

the country. We had been in camp but a few minutes when two trappers rode up whom we called "Major Meek" and "Dave Crow" The former was riding a white Indian pony, a tall Virginian who had been in the mountains some 12 years on dismounting some blood was discovered which had apparently been running down his horses neck and dried on the hair. He was immediately asked where he had been and what was the news? "News! exclaimed he "I have been, me and Dave over on to Priors fork to set our traps and found old Benj Johnson's boys there just walking up and down them are streams with their hands on their hips gathering plums, they gave me a tilt and turned me a somerset or two shot my horse "Too Shebit" in the neck and sent us heels over head in a pile together but we raised arunnin Gabe do you know where Prior leaves the cut bluffs going up it? Yes, replied Bridger. Well after you get out of the hills on the right hand fork there is scrubby box elders about 3 miles along the Creek up to where a little right hand spring branch puts in with lots and slivers of Plum trees about the mouth of it and some old beaver dams at the mouth on the main Creek? Well sir we went up there and set yesterday morning I set two traps right below the mouth of that little branch and in them old dams and Dave set his down the creek apiece, so after we had got our traps set we cruised round and eat plums a while, the best plums I ever saw is there" the trees are loaded and breaking down to the ground with the finest kind as large as Pheasants eggs and sweet as sugar the'l almost melt in yo mouth no wonder them rascally Savages like that place so well- Well sir after we had eat what plums we wanted me and Dave took down the creek and staid all night on a little branch in the hills and this morning started to our traps we came up to Dave's traps and in the first there was a 4 year old "spade" the next was false lickt went to the next and it had cut a foot and none of the rest disturbed, we then went up to mine to the mouth of the branch I rode on 5 or 6 steps ahead of Dave and just as I got opposite the first trap I heard a rustling in the bushes within about 5 steps of me I looked round and pop pop pop went the guns covering me with smoke so close that I could see the blanket wads coming out of the muzzles Well sir I wheeled and a ball struck Too shebit in the neck and just touched the bone and we pitched heels overhead but too shebit raised runnin and I on his back and the savages jist squattin and grabbin at me but I raised a fog for about half a mile till I overtook Dave" The foregoing story was corroborated by "Dave" a small inoffensive man who had come to the Rocky Mountains with Gen. Ashley some 15 years ago and remained ever since: an excellent hunter and a good trapper The next day we moved down the stream to its junction with Clarks fork within about 3 Mls of the Yellowstone On the following morning two men went to set traps down on the river and as they were hunting along the brushy banks for places to set a party of sixty Blackfeet surrounded them drove them into the river and shot after them as they were swimming accross on their horses One by the name of Howell, was shot by two fusee balls thro. the chest the other escaped unhurt. Howell rode within half a mile of camp fell and was brought in on a litter he lived about 20 hours and expired in the greatest agony imaginable - about an hour after he was brought in 20 Whites and Delawares went to scour the brush along the river and fight the Blackfeet Having found them they drove them on to an Island and fought them till dark. The loss on our side during the battle was a Nez percey Indian killed and one White slightly wounded in the shoulder. The Blackfeet who were fortified on the Island drew off in the night secreting their dead and carrying off their wounded The next day we interred the remains of poor Howell at the foot of a large Cottonwood tree and called the place "Howells encampment" as a compliment to his memory 11th We travelled on to Priors Fork and struck it where the Majors traps were

setting distance 25 Mls Couse SE- 12th Stopped at this place and gathered plums 13th Travelled East 12 Mls to the left hand fork of Prior. 14th The snow fell all day and on the 15th it was 15 inches deep 16th We returned to the west fork of Prior and stopped the next day 18th The snow being gone we returned to Clarks Fork 19th Seven of us left the Camp and travelled to Rock fork near the mountain distance about 25 Mls course SW. We all kept together and set our traps on Rocky fork near the Mountain. We had been here five days when a party of Crow Indians came to us consisting of 49 warriors. They were on their way to the Blackfoot village to steal horses, they staid with us two nights and then went to the camp which had come on to this stream about 20 Mls below us. 28th Another party of Crows came to us consisting of 110 warriors. We went with them to the Camp which we found about 10 mls below. They remained with the camp the next day and then left for the Blackfoot village which they said was at the three forks of the Missouri. 30th We travelled with the Camp west on to the Rosebud Octr 1st The trappers scattered out in every direction to hunt Beaver on the branches of the "Rosebud" and continued to the 10th when we followed the Camp down the Yellow Stone where Mr. Bridger had concluded to pass the winter. The small streams being frozen trapping was suspended and all collected to winters quarters where were Thousands of fat Buffaloe feeding in the plains and we had nothing to do but slay and eat Octr. 25 The weather becoming fine and warm some of the trappers started again to hunt Beaver Myself and another started to Priors fork and set our traps on the East branch where we staid six days We then crossed a broken piece of country about 12 Mls NE and fell on to a stream running NE into the Big horn called "Bovy's fork" Here we set traps and staid 10 dys. This section of country is very uneven and broken but abounds with Buffaloe Elk Deer and Bear. Among other spontaneous productions of this country are hops which grow in great abundance and of a superior quality. Thousands of acres along the small branches the trees and shrubbery are completely entangled in the vines 11th The weather commenced cold the streams froze over again and we started for Camp which we found on Clarks fork about a mile above "Howells encampment" The Camp stopped at this place until Christmas then moved down about 4 Mls onto the Yellowstone. The bottoms along these rivers are heavily timbered with sweet cottonwood and our horses and mules are very fond of the bark which we strip from the limbs and give them every night as the Buffaloe have entirely destroyed the grass throughout this part of the country We passed away the time very agreeably our only employment being to feed our horses kill Buffaloe and eat that is to say the Trappers The camp keepers' business in winter quarters is to guard the horses cook and keep fires. We all had snug lodges made of dressed Buffaloe skins in the center of which we built a fire and generally comprised about six men to the lodge The long winter evenings were passed away by collecting in some of the most spacious lodges and entering into debates arguments or spinning long yarns until midnight in perfect good humour and I for one will cheerfully confess that I have derived no little benefit from the frequent arguments and debates held in what we termed The Rocky Mountain College and I doubt not but some of my comrades who considered themselves Classical Scholars have had some little added to their wisdom in these assemblies however rude they might appear On the 28th of Jany myself and six more trappers concluded to take a cruise of 5 or 6 days after Buffaloe The snow was about inches deep and the weather clear and cold we took seven loose animals to pack meat and travelled up Clarks fork about 12 Mls killed a cow and encamped The next morning we started across towards Rock fork and had gone about 3 Mls over the smooth plain gradually ascending to a range of hills

which divides Clarks fork from Rock We were riding carelessly along with our rifles lying carelessly before us on our saddles when we came to a deep narrow gulch made by the water running from the hills in the Spring Season when behold! the earth seemed teeming with naked Savages A quick volley of fuses a shower of balls and a cloud of smoke clearly bespoke their nation tribe manners and customs and mode of warfare: A ball broke the right arm of one man and he dropped his rifle which a savage immediately caught up and shot after us as we wheeled and scampered away out of the reach of their guns. There was about 80 Indians who had secreted themselves until we rode within 15 feet of them They got a rifle clear gain and we had one man wounded and lost a Rifle so they had so much the advantage and we were obliged to go to Camp and study out some plan to get even as by the two or three last skirmishes we had fell in this rebt. A few days afterwards a party of 20 were discovered crossing the plain to the river about 6 Mls below us 20 men immediately mounted, and set off and arrived at the place just as they had entered the timber - they ran into some old rotten Indian forts formed of small poles in a conical shape The whites immediately surrounded and opened fire upon them which was kept up until darkness and the severity of the weather compelled them to retire We had one man wounded slightly thro. the hip and one Delaware was shot by a poisoned ball in the leg which lodged under the knee cap he lived four days and expired. On examining the battle ground next day we found that three or four at least had been killed and put under the Ice in the river seven or 8 had been badly wounded which they dragged away on trains to their village. We found that the old forts were not bullet proof in any place our rifle balls had whistled thro. them nearly every shot and blood and brains lay scattered about inside on the shattered fragments of rotten wood. Feby. 22d Mr Bridger according to his usual custom took his telescope & mounted a high bluff near the encampment to look out for "squalls" as he termed it about 1 ock PM he returned appearing somewhat alarmed and on being asked the cause, He said the great plain below was alive with savages who were coming accross the hills to the timber about 10 Mls below us. From this place the river runs in a NE direction bearing E. On the Nth and West side is a plain from 6 to 10 Mls wide bordered by rough broken hills and clay bluffs on the S and E the river runs along the foot of a high range of steep bluffs intersected by deep ravines and gulches. Along the river are large bottoms covered with large cottonwood timber and clear of underbrush. All hands commenced to build a breast work round the camp, which was constructed of Logs and brush piled horizontally 6 feet high around the camp enclosing about 250 feet square This being completed at dark a double guard was mounted and all remained quiet but it was a bitter Cold night. I mounted guard from 9 till 12 oclk the weather was clear the stars shone with an unusual lustre and the trees cracked like pistols about 10 oclk the northern lights commenced streaming up darting flashing rushing to and fro like the movements of an army at length the shooting and flashing died away and gradually turned to a deep blood red spreading over one half of the sky. This awful and sublime phenomenon (if I may be allowed to mingle such terms) lasted near two hours then gradually disappeared - and being relieved by the morning guard I went to bed and slept soundly till Sunrise. The next day we were engaged Strengthening the fortress by cutting timber from 12 to 18 inches in diameter standing them inside on end leaning them on the breastwork close to gether. This was completed about noon. About 2 oclk. Mr. Bridger and six men mounted and went to reconnoiter the enemy but returned soon after with the intelligence of their being encamped about 9 Miles below on the river and there was a multitude of them on foot.

24th The night passed without any disturbance and we began to fear we should not have a fight after after all our trouble. About sunrise one solitary Savage crept up behind the trees and shot about 200 yds at Mr Bridger's Cook as he was gathering wood outside the fort Then scampered off without doing any damage

A Spaniard was ordered on to the bluff to look out and found an Indian in the observatory built on the top who waited until the Spaniard approached the Indian then raised and the Spaniard wheeled and took to his heels the Indian shot and the ball struck him in the heel as he made a 50 foot leap down the bluff and slid down the snow to the bottom. In about half an hour the word was passed that they were coming on the Ice and presently they appeared coming round a bend of the river in close columns within about 400 yards They then turned off to the right into the plain and called a halt. The Chief who wore a white blanket came forward a few steps and gave us the signal that he should not fight but return to his village They then turned and took a NW Course accross the Plain toward the 3 forks of the Missouri. We came to a conclusion after numerous conjectures that the wonderful appearance of the heavens a few nights previous connected with our strong fortification had caused them to abandon the ground without an attack which is very probable as all Indians are very superstitious We supposed on examining their Camp next day that numbers must have been about eleven hundred who had started from their village with the determination of rubbing us from the face of the earth but that the Great spirit had shown them that their side of the heavens was bloody whilst ours was Clear and Serene. 28th Feby we left our winter quarters on the Yellow Stone and Started for the Big horn the snow being 6 inches deep on an average we travelled slowly and reached it in eight days at the mouth of "Bovy fork" about 15 Mls below the lower Big horn mountain and then began to Slay and eat but we slayed so much faster than we eat that our meat scaffolds groand under the weight of fat buffaloe meat We remained here amusing ourselves with playing ball hoping wrestling running foot races etc until the 14th of March when we discovered the Crow village moving down the Big horn toward us immediately all sports were ended Some mounted horses to meet them others fortified camp ready for battle in case there should be a misunderstanding between us The scouting party soon returned with some of the Chiefs accompanied by an American who was trading with them in the employ of the American Fur Company. The Chiefs after smoking and looking about some time returned to their village which had encamped about 3 mls above on the river. The next morning they came and encamped within 300 yds of us. Their Village contained 200 lodges and about 200 warriors. The Crows are a proud haughty insolent Tribe whenever their party is the strongest but if the case is reversed they are equally cowardly and submissive. This Village is called "Long hair's band" after their chief whose hair is eleven feet six inches long done up in an enormous queue about 18 inches long and six inches thick hanging down his back he is about 80 years of age and seems to be afflicted with the Dropsy the only case of the kind I have ever known among the Mountain Indians. The village staid with us until the 25 of March and then moved down the river about 6 mls. We left the Big horn on the 1st of April and started on the Spring hunt. On the 3d up Bovy's fork 20 mls. 4th Up the same 10 mls. After we had encamped four Delawares who were cruising about in the hills hunting buffaloe fell in with a party of 10 or 12 Blackfeet killed one on the spot and wounded several more. The Blackfeet then took to their heels and left the victorious Delawares without loss except one horse being slightly wounded in the neck 10th We arrived at "Howells encampment" at the mouth of Rocky fork. The whole country here was filled with Buffaloe

driven this way by the Crow Village 11th We raised a Cache of Beaver and other articles which had been deposited in the ground in Novr. last. 14 A party of 12 trappers and two Camp Keepers started to trap the "Muscle Shell" river which heads in the mountain near "25 Yard river" and runs into the Missouri on the South side above the mouth of the Yellow Stone. Myself and three others travelled up Rocky fork about 20 mls but found so much Snow and ice that we could not set our traps for Beaver. We found a large cave on the SE side of a perpendicular rock. in this we encamped six days during which we made great havoc among the Buffaloe On the 23d the camp moved up to our Cave and the next day I went up the stream about 12 mls and set my traps and saw signs of several war parties of Blackfeet who were scouting about the country 26th I was cruising with another trapper thro. the timber and brush above where we had set our traps when on a sudden we came within 10 steps of two Blackfoot Forts and saw the smoke ascending from the tops as we saw no individuals we entered and found the Indians had been gone about half an hour. 28th The party arrived from the Muscle Shell having been defeated and lost one Trapper and nearly all their horses and traps by the Blackfeet May 1st All being collected we left Rocky fork close to the Mountain and took round the foot in an east direction and encamped at a spring where we staid the next day, the Blackfeet still continued dogging at our heels to steal now and then a horse which might get loose in the night. There is a proverb among Mountaineers "That It is better to count ribs than tracks" That is to say it is better to fasten a horse at night untill you can count his ribs with poverty than turn him loose to fatten and count his tracks after an Indian has stolen him 3d Travelled on to Clarks fork 12 Mls SE and the next day up the same 15 mls South 5th Travelled to a small branch running into Stinking river, South direction 15 mls 6th we encamped on Stinking river about 15 mls below the forks distance about 12 mls course SE. 7th We travelled from the river about 20 mls in a South direction and encamped at a Spring 8th to the "Gray Bull fork" of the Big horn 9th to the Medicine lodge fork 12 mls South 10th to the middle fork of the "Medicine lodge" 8 mls 11th to the South fork of the Medicine lodge 8 mls South. Here we staid two days 14th Travelled SE to a small spring at the foot of the upper Big horn mountain distance 13 mls The 15 travelled to the top of the Big horn mountain and encamped on the divide The country over which we have travelled since we left "Stinking" [is] much broken by spurs of Mountains and deep gullies entirely destitute of timber except along the banks of the streams 16th Travelled down the Mountain on the South side and encamped on a small branch of Wind river This river loses its name whilst passing thro. the upper Big horn mountain From thence it takes the name of the Big horn derived from the vast numbers of Mountain Sheep or Big horn inhabiting the mountains thro. which it passes. 17th Over broken country South about 15 mls 18th Encamped on the river after a march of 10 ms. South. 19th The camp intending to stop here several days I started with a raw Son of Erin to hunt Beaver on the head branches of the river. We travelled up west about 25 Mls to what is called the "red rock" Killed a sheep and encamped for the night where several branches of the river united 20th We took up a large branch about 15 ms NW and found the water overflowing the banks of all the branches so much that it was impossible to catch Beaver We then altered our Course NE accross the country in order to examine the small branches on our right but finding all our efforts to trap useless and discovering that a war party consisting of 80 Blackfeet were in pursuit of us we returned to the camp by a different route on the 23 24th Travelled with the Camp to the north fork of "Popo azia" or "[?] river" one of the principal branches of Wind river distance 12 mls course South 25 to the middle fork of the same

Journal of a Trapper

By Osborne Russell

---

stream 8 mls distance 26th To the Oil Spring on the South fork of "Popo-azia" This spring produces about one Gallon per hour of pure Oil of Coal or rather Coal Tar the scent of which often carried on the wind 5 or 6 mls. The Oil issues from the ground within 30 feet of the stream and runs off slowly into the water Camp stopped here eight days We set fire to the spring when there was 2 or 3 Bbls. of oil on the ground about it, it burnt very quick and clear but produced a dense column of thick black smoke the oil above ground being consumed the fire soon went out. This is a beautiful country thickly clothed with grass intermingled with flowers of every hue. On the west rises the Wind River range of Mountains abruptly from the smooth rolling hills until crowned with Snow above the Clouds On the East stretches away the Great Wind River plain and terminates at a low range of Mountains rising between Wind and Powder Rivers

Buffaloe Elk and Sheep are abundant. Beds of Iron and Coal are frequently found in this part of the country June 5th We left the Oil Spring and took over a point of Mountain about 15 mls SW and encamped on a small spring branch 6th Crossed the Spurs of Mountains due west 12 mls and encamped on a branch of Sweet water 7th Travelled west about 15 mls and encamped on "little Sandy" a branch of Green River 8th Travelled North up the Valley about 18 mls. and encamped on a stream called the New fork of Green river where we staid the next day 10th Travelled west to the Main river about 25 mls and struck the river about 12 mls below the mouth of horse creek Here we found the hunting Parties all assembled waiting for the arrival of Supplies from the States. Here presented what might be termed a mixed multitude The whites were chiefly Americans and Canadian French with some Dutch, Scotch, Irish, English, halfbreed, and full blood Indians, of nearly every tribe in the Rocky Mountains. Some were gambling at Cards some playing the Indian game of hand and others horse racing while here and there could be seen small groups collected under shady trees relating the events of the past year all in good Spirits and health for Sickness is a Stranger seldom met with in these regions. Sheep Elk Deer Buffaloe and Bear Skins mostly supply the Mountaineers with clothing bedding and lodges while the meat of the same animals supplies them with food. They have not the misfortune to get any of the luxuries from the civilized world but once a year and then in such small quantities that they last but a few days. We had not remained in this quiet manner long before something new arose for our amusement The Bonnack Indians had for several years lived with the whites on terms partly hostile frequently stealing horses and traps and in one instance killed two White trappers. They had taken some horses and traps from a party of French trappers who were hunting Bear river in April last, and they were now impudent enough to come with the village of 60 lodges and encamp within 3 mls of us in order to trade with the whites as usual still having the stolen property in their possession and refusing to give it up On the 15 of June 4 or 5 whites and two Nez Percey Indians went to their Village and took the stolen horses (whilst the men were out hunting buffaloe) and returned with them to our camp. About 3 oclk PM of the same day 30 Bonnaks came riding at full gallop up to the Camp - armed with their war weapons. They rode into the midst and demanded the horses. which the Nez percey had taken, saying they did not wish to fight with the whites. But the Nez percey who were only Six in number gave the horses to the whites for protection which we were bound to do as they were numbered among our Trappers and far from their own tribe. Some of the Bonnacks on seeing this started to leave the Camp one of them as he passed me observed that he did not come to fight Whites but another a fierce looking Savage who still stopped behind called out to the others saying "we came to get horses or blood and let us do it" I was standing

---

Journal of a Trapper

By Osborne Russell

---

near the Speaker and understood what he said I immediately gave the whites warning to be in readiness for an attack nearly all the men in camp were under arms Mr. Bridger was holding one of the stolen horses by the bridle when one of the Bonnaks rushed thro. the crowd seized the bridle and attempted to drag it from Mr Bridger by force without heeding the cocked rifles that surrounded him any more than if they had been so many reeds in the hands of Children. He was a brave Indian but his bravery proved fatal to himself, for the moment he seized the bridle two rifle balls whistled thro. his body. the others wheeled to run but 12 of them were shot from their horses before they were out of the reach of Rifles. We then mounted horses and pursued them destroyed and plundered their village and followed and fought them three days when they begged us to let them go and promised to be good Indians in future. We granted their request and returned to our Camp satisfied that the best way to negotiate and settle disputes with hostile Indians is with the rifle: for that is the only pen that can write a treaty which they will not forget Two days after we left them three white trappers ignorant of what had taken place went into their village and were treated in the most friendly manner The Indians said however they had been fighting with the Blackfeet. July 5th a party arrived from the States with supplies The cavalcade consisting of 45 men and 20 Carts drawn by Mules under the direction of Mr. Thomas Fitzpatrick accompanied by Capt. Wm. Stewart on another tour to the Rocky Mountains. Joy now beamed in every countenance Some received letters from their friends and relations Some received the public papers and news of the day others consoled themselves with the idea of getting a blanket a Cotton Shirt or a few pints of Coffee and sugar to sweeten it just by way of a treat gratis that is to say by paying 2,000 percent on the first cost by way of accommodation for instance Sugar 2\$ pr pint Coffee the same Blankets 20\$ each Tobacco 2\$ pr pound alcohol 4\$ pr pint and Common Cotton Shirts 5\$ each etc And in return paid 4 or 5\$ pr pound for Beaver. In a few days the bustle began to subside. the furs were done up in packs ready for transportation to the States and parties were formed for hunting the ensuing year One party consisting of 110 men were destined for the Blackfoot Country under the direction of L B Fontanelle as commander and James Bridger Pilot I started with five others to hunt the head waters of the Yellowstone Missouri and Big horn rivers a portion of country I was particularly fond of hunting On the 20th of July we left the Rendezvous and travelled up Green River about 10 mls. 21st We travelled up green river till noon when we discovered a trail of 8 or 10 Blackfeet and a Buffaloe fresh killed and butchered with the meat tied up in small bundles on the ground which they had left on seeing us approach and run into the bushes, we supposing them to be a small scouting party tied their bundles of meat on to our saddles and still kept on our route but had not gone far before we discovered them secreted among some willows growing a long a branch which crossed our trail I was ahead leading the party when I discovered them we stopped and one of my comrades whose name was Allen began to arrange the load on his pack mule in the meantime I reined my horse to the left and rode onto a small hillock near by and casting a glance towards the bushes which were about 150 yds distant I saw two guns pointed at me I instantly wheeled my horse but to no purpose the two balls struck him one in the loins and the other in the shoulder which dropped him under me the Indians at the Sametime jumped out of the bushes 60 or 70 in number and ran toward us shooting and yelling I jumped on a horse behind one of My comrades and we scampered away towards the Rendezvous where we arrived at dark. 25th The parties started and we travelled with Mr Fontanelle's party up Green River 10 mls intending to keep in their company 5 or 6 days and then

branch off to our first intended route 26th We travelled 20 mls NW across a low range of hills and encamped in a valley lying on a branch of Lewis fork called "Jackson's little hole." 27th We travelled down this Stream 18 mls NW This stream runs thro. a tremendous mountain in a deep narrow Kanyon of rock." The trail runs along the Cliffs from 50 to 200 feet above its bed and is so narrow in many places that only one horse can pass at a time for several hundred yards and one false step would precipitate him into the Chasm into the Chasm below after leaving the Kanyon we encamped at a small spring in "Jacksons big hole" near the Southern extremity 28th travelled up the Valley North 15 mls. encamped killed some Buffaloe and Staid next day 30th I left the Camp in company with two trappers and one Camp Keeper we received instructions from Mr. Fontanele to meet the Camp at the mouth of Clarks fork of the Yellow Stone on the 15th of the ensuing Octr where they expected to pass the winter but he said if he should conclude to change his winter quarters he would cause a tree to be marked at Howells grave and bury a letter in the ground at the foot of it containing directions for finding the camp after bidding adieu to the Camp we travelled North till near sunset and encamped about 40 mls from the main party 31st We travelled to the fork 5 mls below Jacksons Lake and ascended it in the same direction I had done the year before and encamped about 15 mls from the Valley Aug. 1st we reached the dividing spring about 4 oclk P.M. and stopped for the night 2d We encamped at the inlet of the Yellowstone Lake 3d Travelled down the East Shore of the Lake and stopped for the night near the outlet at the steam spring 4th We took our course ENE and after travelling all day over rugged mountains thickly covered with pines and underbrush we encamped at night about 10 mls Nth of the secluded valley on the stream which runs thro it after we had encamped we Killed a Dear which came in good time as we had eaten the last of our provisions the night previous at the Yellowstone Lake and the flies and musketoos were so bad and the underbrush so thick that we had not killed anything during the day 5th We travelled up a left hand branch of this Stream NE 15 mls thro the thick pines and brush untill near the head where we encamped in a beautiful valley about 2 Mls in circumference almost encircled with huge Mountains whose tops were covered with snow from which small rivulets were issueing clear as Crystal and uniting in the smooth grassy vale formed the stream we had ascended. We concluded to spend the next day at this place as there was no flies or musktoos for tho warm and pleasant in the day the nights were too cold for them to survive. The next day after eating a light breakfast of roasted venison I shouldered my rifle and ascended the highest mountain on foot. I reached the snow in about an hour when seating myself upon a huge fragment of Granite and having full view of the country around Me in a few moments was almost lost in contemplation. This said I is not a place where heroes' deeds of Chivalry have been atchieved in days of yore neither is a place of which bards have sung until the world knows the precise posture of every tree rock and [?] or the winding turn of every streamlet. But on the contrary those stupendous rocks whose surface is formed into irregular benches rising one above another from the vale to the snow dotted here and there with low pines and covered with green herbage intermingled with flowers with the scattered flocks of Sheep and Elk carelessly feeding or thoughtlessly reposing beneath the shade having Providence for their founder and preserver and Nature for Shepherd Gardner and Historian. In viewing scenes like this the imagination of one unskilled in Science wanders to the days of the Patriarchs and after numerous conjecturings returns without any final decision wonder is put to the test but having no proof for its argument a doubt still remains but supposition steps forward and taking the place of Knowl-

edge in a few words solves the mysteries of ages Centuries and Eras after including in such a train of reflections for about two hours I descended to the camp where I found my companions had killed a fat Buck Elk during my absence and some of the choicest parts of it were supported on sticks around the fire. My ramble had sharpened my appetite and the delicious savor of roasted meat soon rid my brains of romantic ideas. My comrades were men who never troubled themselves about vain and frivolous notions as they called them with them every country was pretty when there was weather and as to beauty of nature or arts it was all a "humbug" as one of them (an Englishman) often expressed it. "Talk of a fine Country" said he "and beautiful places in these mountains if you want to see a beautiful place" said he "go to Hingland and see the Duke of Rutlands Castle" "Aye" says a son of Erin who sat opposite with an Elk rib in one hand and a butcher knife in the other while the sweat rolling from his face mingled in the channels of greas which ran from the corners of his mouth, "Aye an ye would see a pretty place gow to old Ireland and take a walk in Lord Farnhams domain" that is the place where ye can see "plisure" Arrah an I were upon that same ground this day Id fill my body wid good ould whisky "Yes" said the back woods hunter on my left, as he cast away his bone and smoothed down his long auburn hair with his greasy hand, "Yes you English and Irish are always talking about your fine Countries but if they are so mighty fine" (said he with an oath) "why do so many of you run off and leave them and come to America to get a living" from this the conversation turned to an argument in which the Hunter came off victorious driving his opponents from the field. 7th of Aug. we travelled up the mountain in a South direction and fell into a smooth grassy defile about 200 paces wide which led thro. between two high peaks of rocks. In this place we fell in with a large band of Sheep killed two Ewes packed the best meat on our horses and proceeded down the defile which led us on to the headwaters of "Stinking River" about 50 mls from where it enters the plain We travelled down this stream about 10 mls South and encamped where we saw some signs of Snake Indians who inhabited these wilds. The next morning I arose about day break and went in search of Our horses which had been turned loose to feed during the night I soon found all but 3 and after hunting sometime I discovered a trail made in the dew on the grass where an Indian had been crawling on his belly and soon found where he had caught the horses. Two of us then mounted mules and followed the trail in a west direction up a steep piney mountain until 10 ock when we lost the trail among the rocks and were obliged to give up the pursuit, we then returned to Camp. We then packed our remaining animals and travelled down the stream abot 10 miles 9th We left the main Stream and ascended a small branch in a SSW direction about 8 mls up a steep ascent and encamped in a smooth grassy spot near the head where we concluded to stop the next day and hunt Beaver Early the next morning a few of the "Mountain Snakes" came to our camp consisting of 3 men and 5 or 6 women and children One of them told me he Knew the Indians who had stolen our horses that they lived in the mountains between Stinking river and Clarks fork and said that he would go and try to get them After trading some Beaver and Sheep Skins from them talking smoking etc about an hour I mounted my Mule with 6 traps and my rifle and one of my comrades did the same and we started to hunt Beaver. We left the camp in a SW direction and travelled abot 8 mls over a high craggy mountain then desended into a small circular Valley about a mile in circumference which was completely covered with logs shattered fragments of trees and splinters 4 or 5 ft deep. There had been trees 2 and 3 feet in diameter broken off within 2 ft of the ground and shivered into pieces small enough for a kitchen fireplace This in all probability was the effect

By Osborne Russell

---

of an avalanche About 2 years previous as the tall pines had been completely cleared for the space of 400 yds wide and more than 2 Mls up the steep side of the mountain. Finding no Beaver on the branches of this stream we returned to Camp at Sunset Our Camp Keeper had prepared an elegant supper of Grizzly Bear meat and Mutton nicely stewed and seasoned with pepper and salt which as the mountain phrase goes "is not bad to take" upon an empty Stomach after a hard days riding and climbing over mountains & rocks Aug 11th We returned to the river and travelled up about 4 Mls. Then left it and travelled up a branch in a due west direction about 6 Mls. Killed a couple of fat Doe Elk and encamped. 12th Myself and Allen (which was the name of the backwoodsman) started to hunt the small streams in the mountains to the West of us leaving the Englishman (who was the other trapper) to set traps about the camp we hunted the branches of this stream then crossed the divide to the waters of the Yellowstone Lake where we found the whole country swarming with Elk we killed a fat Buck for supper and encamped for the night the next day Allen shot a Grizzly Bear and bursted the percussion tube of his rifle which obliged us to return to our comrades on the 13th and make another tube. The next day we returned to Stinking river and travelled up about 10 Mls above where we first struck it 15th It rained and snowed all day and we stopped in camp 16th Took a NE course up the Mountain and reached the divide about noon then descended in a direction nearly East and encamped in a valley on the head of Clarks fork This valley is a prairie about 30 Mls in circumference completely surrounded by high mountains The Stream after passing SE falls into a tremendous kanyon just wide enough to admit its waters between rocks from 3 to 500 ft perpendicular height extending about 12 Mls to the great plain 18th we moved up the stream to the head of the valley and encamped. Here the stream is formed of two forks nearly equal in size The right hand fork falls into the left from off a bench upwards of 700 feet high nearly perpendicular. The view of it at the distance of 8 or 10 Mls resembles a bank of snow. 19th travelled up the left branch about 10 Mls NW thro. thick pines and fallen timber then leaving the stream to our right turned into a defile which led us on to the waters of the Yellowstone in about 8 Mls. where we stopped set traps for beaver and staid next day. 21st We travelled down this stream (which runs west thro. a high range of mountains) about 25 Mls 22d Travelled down the stream 15 Mls West and encamped in the Secluded Valley where we staid two days 25th Travelled down the Valley to the Nth and crossed a low spur about 4 Mls Nth and fell on to a stream running into the one we had left he[re] we set traps and staid until the 2d of Septr. 3d Travelled over a high rugged mountain about 20 Mls NW and encamped in a beautiful Valley on a small stream running into the one we had left in the morning 4th Travelled 15 Mls NW over a high piney mountain and encamped on a stream running South into the Yellowstone where we staid and trapped until the 13th We then travelled up the stream NE about 8 Mls 14 Travelled up the Stream 12 Mls in the same direction 15 We crossed the divide of the main range North towards the Big plains. We found the snow belly deep to our horses after leaving the snow we travelled about 8 Mls north and encamped on the head branch of the Cross Creek running North into the Yellowstone about 12 Mls below the Mouth of "25 Yard" river Here a circumstance occurred which furnished the subject for a good joke upon our green Irish camp keeper The Englishman had stopped for the night on the mountain to hunt Sheep whilst we descended to the stream and encamped in a prairie about 2 Mls in circumference. It was the commencement of the rutting season with the Elk when the Bucks frequently utter a loud cry resembling a shrill whistle especially when they see anything of a strange appearance. We had

---

made our beds at night on a little bench between two small dry gullies. The weather was clear and the moon shone brightly about 10 at night when I supposed my comrades fast asleep an Elk blew his shrill whistle within about 100 yards of us. I took my gun slipped silently into the gully and crept towards the place where I heard the sound but I soon found he had been frightened by the horses and ran off up the Mountain. On turning back I met Allen who hearing the Elk had started to get a shot at him in the same manner I had done without speaking a word. We went back to Camp but our Camp keeper was no where to be found. We searched the bushes high and low ever and anon calling for "Conn" but no "Conn" answered at length Allen cruising thro the brush tumbled over a pile of rubbish when lo! Conn was beneath nearly frightened out of his wits "Arrah! an is it you Allen" Said he trembling as if an ague fit was shaking him "but I thought the whole world was full of the spalpeens of savages And where are they gone?" - It was near an hour before we could Satisfy him of his mistake and I dare say his slumbers were by no means soft or smooth during the remainder of the night 16th The Englishman arrived and we travelled down this stream about 10 Mls when we staid the next day as it snowed very hard 18 Travelled down about 20 Mls and on the 19 came to the plains in about 10 Mls Travel where we encamped Here we found the country filled with buffaloe as usual 20th We shaped our Course NE and travelled about 25 Mls across the Spurs of the mountain fell onto the Nth. fork of the "Rosebud" where we staid the next day as it rained 22d We travelled South along the foot of the Mountain 20 Mls keeping among the low Spurs which project into the plain in order to prevent being discovered by any straggling parties of Blackfeet which might chance to be lurking about the country, the plains below us were crowded with Buffaloe which we were careful not to disturb for fear of being discovered We stopped and Set our traps on the small branches of the "Rosebud" until the 11th of Octr. then travelled to Rocky fork and went up it into the Mountain and encamped. On the 13th Myself and Allen started to hunt Mr. Fontanells party leaving our Comrades in the Mountain to await our return We travelled down Rocky fork all day amid crowds of Buffaloe and encamped after dark near the mouth. The next morning we went to "Howells encampment" but found no tree marked neither had the earth been disturbed since we had closed it upon the remains of the unfortunate Howell We now sat down and consulted upon the best course to pursue As Winter was approaching we could not think of stopping in this country where parties of Blackfeet were ranging at all seasons of the year. After a few moments deliberation we came to the conclusion and I wrote a note enclosed it in a Buffaloe horn buried it at the foot of the tree and then marked the tree with my hatchet This being done we mounted our Mules and started back to the mountain Travelled about 6 Mls stopped and killed a cow. As we were lying within about 60 paces of the band which contained about 300 cows Allen made an observation which I shall never forget Said he I have been watching these cows some time and I can see but one that is poor enough to Kill" for said he it is a shame to kill one of those large fat Cows merely for two mens suppers" So saying he leveled his rifle on the poorest and brot. her down. She was a heifer about 3 years old and but an inch of fat on the back. After cooking and eating we proceeded on our journey until sometime after dark when we found ourselves on a sudden in the midst of an immense band of Buffaloe who getting the scent of us ran helter skelter around us in every direction rushing to and fro like the waves of the ocean, approaching sometimes within 10 ft. of us We stood still for we dare not retreat or advance until this storm of brutes took a general course and rolled away with a noise like distant thunder and then we hurried on thro. egyptian darkness a few 100 paces when we

---

found a bunch of willows where we concluded to stop for the night rather than risk our lives any further among such whirlwinds of beef 15 We reached the Camp about 10 oclck AM. We staid on Rocky fork and its branches trapping until the 27th of Octr. when we concluded to go to a small fork running into Wind river on the east side above the upper Big horn mountain and there pass the winter, unless we should hear from the main party 28th we travelled to Clarks fork and the next day to Stinking river ESE direction 30th we crossed Stinking and travelled in the same direction over a broken barren tract of country about 25 Mls whilst the rain poured all day in torrents. About sun an hour high we stopped and the weather cleared up We encamped for the night in a small ravine where was some watter standing in a puddle but no wood but a lone green Cottonwood tree which had supported a Bald Eagles nest probably more than half a century 31st We travelled over ground similar to that of the day before shaping our course more Easterly until night Novr. 1st After travelling about 10 Mls we reached Bighorn river and stopped and commenced setting traps. The river at this place is bordered with heavy Cottonwood timber with little or no under brush beneath. Towards night a party of Crow Indians came to us on foot armed as if going to war after smoking and eating they told us they were on their way to the Snaks to Steal horses and intended to stay all night with us and leave the next morning. They told us the village to which they belonged was nearly a days travel below on the river and that "Long hair's" village was on Wind river above the mountain but could give us no information of Mr. Fontanell or his party They were very insolent and saucy saying that we had no right in their country and intimat-ed they could take everything from us if they wished. The next morning after eating breakfast they said if we would give them some tobacco and ammunition they would leave us so we divided our little stock with them They then persisted in having all and when we refused telling them we could not spare it one of them seized the sack which contained it while another grasped the Englishmans rifle we immediately wrenched them out of their hands and told them if they got more they should fight for it. During the Scuffle they had all presented their arms but when we gained possession of the rifle and the sack they put down their arms and told us with an envious Savage laugh they were only joking but we were too well acquainted with the Crows to relish such capers as mere jokes and wished to get out of their power the easiest way possible as their Villages were on either side of us. We then packed up our horses and forded the river and travelled up about 6 Mls and encamped at the same time the Indians were mounted on our pack horses and riding animals [trailing] us and the remainder on foot except one who returned towards the Village crying. After we had stopped they made a sort of Shelter as it looked likely for rain and at night ordered us to go into it and sleep but we bluntly refused and removed our baggage about 30 paces from them. Sitting down reclining against it one of them had taken the only Blanket I possessed off my riding Saddle and put an old worn out coat in its place with a hint that exchanging was not robbing They laid down in their shelter and continued to sing their noisy and uncouth war songs until near midnight when they ceased and all became Silent The night was dark with a sprinkling rain we lay without hearing any disturbance until daybreak when we began to look around but could find neither Indians or horses tho. we soon found their trail going down the river we then set about burning our saddles robes etc and cacheing our Beaver in the ground intending after making a few deposits and bon fires to Shoulder our rifles and travel to Fort William at the mouth of Laramays fork of the Platte Our Saddles Epishemores ropes etc were scarcely consumed when we saw 5 or 6 Indians on horseback coming towards us at full gallop and

---

presently 15 or 20 more appeared following them They rode up alighted from their horses and asked for tobacco to smoke we gave them some they formed a circle and sat down I was not acquainted with any of them except the Chief who was called the "Little Soldier" he spoke to me in the Snake language and said he wished me to smoke with them but the manner in which they had formed the ring and placed their war weapons excited Suspicion and Allen immediately declined as he had lived with the Crows two winters he said he knew that thieving and treachery were two of the greatest virtues the Nation could boast of and we quickly resolved to leave them at all hazards So we shouldered our rifles and those who had blankets took them and began to travel The Indians looked at us with pretended astonishment and asked what was the matter. Allen told them that he was aware that they wanted to rob us and were laying a plan to do it with out danger to themselves but said he "if you follow or molest us we will besmear the ground with blood and guts of Crow Indians' and do not speak to me more" said he for I despise the odious jargon of your Nation So saying he wheeled around and we marched away in a South direction towards the mountain. We had not gone far before two of them came after us we stopped and turned around when one of them stopped within 300 paces of us while the other (who was the chief) advanced slowly unarmed When he came up he addressed me in the Snake language for knowing the disposition of Allen he did not wish to trifle with his own life so much as to begin a conversation with him in his own language taking me by the hand as he spoke he said my friends you are very foolish you do not know how bad my heart feels to think you have been robbed by men belonging to my village but they are not men they are Dogs who took your animals. The first I knew of your being in this country about midnight a young man came to the village crying and told me of their intention. I immediately mounted my horse and hastened to your assistance, but arrived too late but if you will go with me I will get your animals and give you some Saddles and robes and fit you out as well as I can you can then stay with me until the Blanket Chief comes (the name they gave Mr Bridger) I interpreted what he had said to my comrades, but they said tell him we will not go to the Crow Village we will not trust our lives among them. When I told him this he replied I am very sorry, what shall I say to the Blanket Chief? how can I hold up my head when I shall meet him? and what shall I do with the things you have left behind? I told him to give them to give them to the Blanket Chief he then turned and left us slowly and sadly but I am well aware that a Crow Indian can express great sorrow for me and at the same time be laying a plan to rob me or secretly take my life. After he had left us we travelled on toward the Mountain about 10 Mls. stopped killed a Cow and eat supper and then travelled until about Midnight when it being dark and cloudy we stopped and kindled a fire with Sage and weeds which we gathered about us and sat down to wait for daylight. Sleep was far from us our minds were so absorbed in the reflections on the past that few were the words that passed among us during the night A Short time after we stopped it commenced snowing very fast and we were obliged to hover over our little fire to keep it from being extinguished. The day at length appeared and we proceeded on our journey toward the mountain while it still continued to snow as we began to ascend the Mountain the snow grew deeper and about noon was up to our knees. We travelled on until Sun about an hour high and stopped at some scrubby cedars and willows which grew around a Spring. After scraping away the snow we built a fire broke some cedar boughs spread them on the ground and laid down weary and hungry but we had meat nough with us for supper. Three of us Myself Allen and Greenberry had been more or less inured to the hardships of a hunters life but our camp keeper John Conn

Journal of a Trapper

---

could not relish the manner in which he was treated in a country that boasted so much its freedom and independence and often wished himself back on the Shamrock Shore. Myself and Allen had one blanket between us the others had a blanket each. The wind blew cold and the snow drifted along the brow of the mountain around us when we arose in the morning our fire had gone out the snow was 3 inches deep on our covering and it still kept snowing. Allen killed a black tailed Deer close by and we concluded to stop all day at this place Novr 6th Sun rose clear and we started up the mountain keeping on the ridges where the wind had driven off the snow and arrived at the top about 10 oclk a.m. From this elevation we could see the Wind river plains which were dry and dusty whilst we were in snow up to the Middle. We killed some sheep which were in large numbers about us Cooked some of the best meat over a slow fire packed it on our backs and proceeded down the mountain South and slept on bare ground that night Novr. 7th We arose and found ourselves much refreshed by our nights rest. We travelled nearly E all day ascending a gradual smooth slope of country which lies between Wind and Powder Rivers and stopped at night on the divide where we found the snow about 2 inches deep and hard and the weather cold and windy whilst not a stick of wood or a drop of water were to be found within 10 Mls of us. We found a place washed out by the water in the Spring of the year as the only shelter we could find from the wind and digging down the dry earth scattered some branches of Sage upon it to lie upon. I then went in search of rock in order to heat it and melt snow in my hat but I could not find so much as a pebble so we kindled a little fire of sage and sat down with a piece of Mutton in one hand and a piece of snow in the other eating meat and snow in this manner made out our suppers and laid down to shake tremble and suffer with the cold till day light when we started and travelled as fast as our wearied limbs would permit in the same direction we had travelled the day before descending a gradual slope towards the head of powder river until near night when finding some water standing in a puddle with large quantities of dry sage about it we killed a Bull near by taking his skin for a bed and some of the best meat for supper passed the night very comfortable We were now in sight of the red Buttes on the river Platte which appeared about 40 ms distant SE The next morning we found the weather foggy with sleet and snow falling I tried to persuade my comrades to stop until it should clear away urging the probability of our steering a wrong course as we could not see more than 200 paces but they concluded we could travel by the wind and after making several objections to travelling by Such an uncertain guide to no purpose I gave up the argument and we started and travelled about ESE for 3 hours as we supposed then stopped a short time and built a fire of Sage while it still continued to snow and rain alternately. and seeing no signs of the weather clearing we started again and went on till near Night when the Sun coming out we found that instead of travelling ESE our course had been NNE and we were as far from the Platte as we were in the Morning with the Country around us very broken intersected with deep ravines and gullies We saw some Bulls 3 or 4 MIs ahead and Started for them After the Sun had set it clouded up and began to rain. We reached the Bulls about an hour after dark Allen crawled close to them shot and killed one took off the skin and some of the meat whilst myself and the others were groping around in the dark hunting a few bits of Sage and weeds to make a fire and after repeated unsuccessful exertions we at last kindled a blaze. We had plenty of water under over and all around us but could not find a stick for fuel bigger than a mans thumb. We sat down round the fire with each holding a piece of beef over it on a stick with one hand while the other was employed in keeping up the blaze by feeding it with wet sage and

By Osborne Russell

---

weeds until the meat was warmed thro. when it was devoured with an observation that "Bull Meat was dry eating when cooked too much." After supper (if I may be allowed to disgrace the term by applying it to such a Wolfish feast) we spread the Bull skin down in the mud in the dryest place we could find and laid down upon it. Our fire was immediately put out by the rain and all was Egyptian darkness. We lay tolerably comfortable whilst the skin retained its animal warmth and remained above the surface but the mud being soft the weight of our bodies sunk it by degrees below the water level which ran under us on the skin but we concluded it was best to lie still and keep the water warm that was about us for if we stirred we let in the cold water and if we removed our bed we were more likely to find a worse instead of a better place as it rained very hard all night. At daylight we arose bid adieu to our uncomfortable lodgings and left as fast as our legs would carry us thro. the mud and water and after travelling about 12 Mls South course we stopped killed a bull and took breakfast. After eating we travelled south until sunset The weather was clear and cold but we found plenty of dry sage to make a fire and dry weeds for a bed 11th the ground was frozen hard in the morning and the winds blew cold from the North. We travelled till about noon when we fell in with large bands of Buffalo and seeing the red Butes about 5 or 6 ms ahead we killed two fat cows and took as much of the Meat as we could conveniently carry and travelled to the Platte where we arrived about the middle of the afternoon weary and fatigued. Here we had plenty of wood water meat and dry grass to sleep on, and taking everything into consideration we thought ourselves comfortably situated - comfortably I say for mountaineers not for those who never repose on anything but a bed of down or sit or recline on anything harder than Silken cushions for such would spurn at the idea of a Hunter's talking about comfort and happiness but experience is the best Teacher hunger good Sauce and I really think to be acquainted with misery contributes to the enjoyment of happiness and to know ones self greatly facilitates the Knowledge of Mankind - One thing I often console myself with and that is the earth will lie as hard upon the Monarch as it will on a Hunter and I have no assurance that it will lie upon me at all, my bones may in a few years or perhaps days be bleaching on the plains in these regions like many of my occupation without a friend to turn even a turf upon them after a hungry wolf has finished his feast. 12th The sun rose clear and warm and we found ourselves much refreshed by our nights rest. We travelled down the river about 5 Mls waded across it and stopped the remainder of the day I had a severe attack of Rheumatism in my knees and ankles but this was no place to be sick so we jogged along over the Black hills having plenty of wood water and fresh Buffalo meat every night until the 18th when we reached fort William. When I entered this Fort I was met by two of my old messmates who invited me to their apartments. I now felt myself at home as Mr. Fontanell was one of the chief proprietors of the establishment and who had been partly and I may say wholly the cause of our misfortunes at night I lay down but the pains in my legs and feet drove sleep from me The next day I walked round the Fort as well as I could in order to get my joints limber. And on the 3d day after our arrival I felt quite recovered and at breakfast I asked my messmates where the man was who had charge of the Fort they replied in his house pointing across the square I inquired if he was sick for I had not seen him out [They] said he was unwell but not so as to confine him to his rooms I observed I must go and see him as I discover he was not coming to see me so saying myself and Allen started across the square and met him on his way from the Storehouse to his dwelling room. we bid him "good morning" which he coldly returned and was on the point of turning carelessly away when we told him we would like to get

---

some robes for bedding likewise a Shirt or two and some other nessary articles well said he as for Blankets shirts or coats I have none and Mr Fontanell has left no word when there will be any come up. If that is the case I replied you can let us have some Buffaloe robes and Epishemores yes said he I believe I can let you have an Epishemore or two. here John go up into yonder bastion and show these men those Epishemores that were put up there some time ago I dont think theres any there replied John but some old ones and them the rats have cut all to pieces - Oh I guess you can find some there that will do” he replied turning around and swinging a key on his thumb and forefinger as the insignia of his dignified station walked with a stiff stride to his apartments whilst we followed the Major Domo of this elevated quadruped to the bastion where I took the best Epishemore I could find which was composed of 9 pieces of Buffaloe skin sewed together but necessity compelled me to take it knowing at the same time there was more than 500 new robes in the warehouse which did not cost a pint of whisky each. But they were for people in the U S and not for trappers. This was the 21st day of Novr 1837 I never shall forget the time place nor circumstance but shall always pity the being who held the Imperial sway over a few sticks of wood with 5 or 6 men to guard them it was not his fault for how should he depart from the way in which he had been brought up? and what is more trappers have no right to meet with bad luck for it is nothing more or less than the result of bad management. This is the litteral reasoning of band box and counter hopping Philosophers consoling the unfortunate by enumerating and multiplying their faults which are always the occasions of their misfortunes and so clearly to be seen after the event has occurred. I would rather at any time take an emetic than to be compelled to listen to the advice of such predicting and [?] Counsellors. If I must be told of something I already know let it be that I have learned another lesson by experience and then give me advice for the future. I have often derived a good deal of information from a person who kept silent in the crowd - and it is well known that a certain class of individuals display the most wisdom when they say the least! On the 4th day after our arrival a large Sioux Indian arrayed in the costume of the whites with a Sword suspended by his side entered the lodging where I staid and looked around on the whites for some time without Speaking a word at length he gave me a signal to follow him and conducted me outside of the Fort to his lodge which I found had been prepared for the reception of a stranger. The Epishemores and robes had been arranged in the back part of the lodge I was invited to sit by my mute conductor who being the proprietor seated himself on my right The big pipe went round with the usual ceremonies and the necessary forms of Indian etiquette being complied with mine host commenced asking questions by signs without moving his lips and having acquired the knowledge of conversation by signs without uttering a word. It is impossible for a person not acquainted with the Customs of Indians to form a correct idea in which [way] a continuous conversation is held by hours between two individuals who cannot understand each others language but frequent practice renders it faultless and I have often seen two Americans conversing by signs by way of practice, but to return to my story my inquisitive host gathered in the course of an hour the minute details of my defeat by the Crows with my tedious journey to the Fort and in return gave me a brief history of his life and inter- course with the Whites since he had first seen them minutely describing the battles he had been in with the Crows the places where they were fought and their results particularly the rank of the Killed and wounded on both sides. After an hours dumb conversation a dish of roasted Buffaloe tongues was set before me accompanied by a large cake made of dried meat and fruit pounded together mixed up with

Journal of a Trapper

By Osborne Russell

---

Buffaloe marrow. It is considered an insult by an Indian for a Stranger whether White man or Indian to return any part of the food which is set before him to eat: If there is more than he wishes to eat at one time he must to avoid giving offense take the remainder with him when he leaves the lodge It is their general custom to set the Vituals their lodge affords before a stranger to eat. On the 22d Novr. a small trapping party arrived under the direction of Mr Thomas Biggs who intended to remain in the vicinity of the Fort until he receives further orders from Mr. Fontanell. On alighting from his horse he directed his course to our lodging Well boys said he on entering the door "The Crows found you did they?" and could not let you go without bestowing some of their National favors upon you?" Yes I observed and we have not mended the matter much by coming to this place and related what had passed between me and the Superintendent Well said he after I had done That is too ridiculous I thought before that Mr.----- had a soul but I am glad I have found you here I will see that you get such articles as you want if they can be had at this place and you must go with me. I shall go up about 15 Mls on the Plate and encamp - I have 200 lbs of lead and powder to shoot it and about 30 of the Company's horses which you well know were left after more than 200 were chosen out of the band to go into the Blackfoot country and I have not one which has not from one to three of his legs standing awry but such as they are you are welcome to them or anything there is in the Camp even to the half chew of tobacco. Nearly all of my Men are French and but little company for me and I want to see you slay the fat Cows and eat." So saying he turned and walked to the appartments of his wisdom, the overseer. Presently one of the Interpreters came and told us that Mr.----- wished us to come and get our things Oh said Allen he has got "things" has he? and has found out the Company is owing of us money? he is afraid of getting turned out of employment by his superior. Well let us go and get some of his things and yet inform Mr. Fontanell of his conduct" After getting our things we went to Mr. Bigg's camp as soon as possible. Then I felt a little more independent The rheumatism had left me and I felt as tho. I had rather walk than ride a poor horse. This section of Country which is called the "black hills" has always been celebrated for the game with which it abounds I passed most of my time hunting Black Tailed deer among the hills on foot, which has always been my favorite sport One day as myself and one of my fellow hunters were travelling thro. the hills coming toward us at full speed. [?] We stopped and they passed within 80 yds of us without making a halt we Shot the charges that were in our rifles loaded and Shot 2 more each before they had all passed by. As the hindmost were passing I could see the foremost passing over a ridge covered with snow more than 3 miles distant apparently at the same rate they had passed by us. They made a trail about 30 paces wide and went in as compact a body as they could consistently They consisted mostly of females. 20th Decr Mr Fontanell arrived at the Camp with 15 Men bringing the furs he had collected during the hunt for the purpose of depositing them at the Fort. he informed us he had left the main party on Powder river and expressed his sorrow that he had been the cause of our Misfortunes he had mistaken the day agreed on to meet at Clarks fork and sent two men to the place on the 18th of Novr. who found the Note I had left. But said he I have met with that Village of Crows and recovered all your property that could be identified. I told them when I heard the circumstance that if they did not produce your property forth with their heads would pay for it within 24 hours. On hearing this they immediately gave up as they repeatedly affirmed all except the Beaver skins which they had traded to a Portugese by the name of Antonio Montaro who had built some log cabins on Powder River for the purpose of trading with the Crows. I immediately

---

---

continued he went to the Cabins and asked Mr. Montaro what right he had to trade Beaver skins from Indians with white mens names marked upon them knowing them to be stolen or taken by force from the Whites?" and asked him to deliver them to me which he refused to do. I then ordered him to give me the key of his warehouse which he reluctantly did I then ordered my clerk to go in and take all the Beaver skins he could find with your names marked upon them and have them carried to my camp which was done without further ceremony. Here then was the sum and substance of the sorrows expressed by the Crow Chief whose feelings were so much hurt to think that we were robbed by men or dogs belonging to his village yet I have no doubt if we had gone to the Village with him we would have received our things and fared better than we did by the course we persued but we were like all Mortals of the present day destitute of foreknowledge On the 28th of Jany the party started for Powder river with supplies for the Main Camp leaving Mr. Fontanell at the Fort. The weather being cold we were compelled to travel on foot most of the time to keep ourselves from freezing. The snow was about 10 inches deep generally but driftet very much in many places. On the 7th of Feby we reached the encampment all in good health fine spirits and with full stomachs Here we found the Camp living on the fat of the land The bottoms along Powder river were crowded with Buffaloe insomuch that it was difficult keeping them from among the horses who were fed upon Sweet Cottonwood bark as the buffaloe had consumed everything in the shape of grass along the river We passed the remainder of the winter very agreeably until 25th of March when the winter began to break the Buffaloe to leave the stream and scatter among the hills and the trappers to prepare for the Spring hunt. After making the usual arrangements we started on the 29th down Powder river making short marches as our animals were very poor On the 3d of April we left the river and travelled accross the country which was generally comprised of rolling hills in a North Direction until the 18th when we reached the Little horn river and travelled down it to the forks This river empties into the Big horn about 40 Mls below the lower Mountain. April 21st we left the forks and travelled nearly west over a broken and uneven country about 18 Mls and encamped on a small spring branch After we had encamped the Trappers made preparations for starting the next day to hunt Beaver as we had set but few traps since we left winter quarters for the Crows had destroyed nearly all the Beaver in the part of country thro. which we had been travelling. Early next morning about 30 of us were armed equipped and mounted as circumstances required. A Trappers equipments in such cases is generally one Animal upon which is placed one or two Epishemores a riding Saddle and bridle a sack containing six Beaver traps a blanket with an extra pair of Mocasins his powder horn and bullet pouch with a belt to which is attached a butcher Knife a small wooden box containing bait for Beaver a Tobacco sack with a pipe and implements for making fire with sometimes a hatchet fastened to the Pommel of his saddle his personal dress is a flannel or cotton shirt (if he is fortunate enough to obtain one, if not Antelope skin answers the purpose of over and under shirt) a pair of leather breeches with Blanket or smoked Buffaloe skin, leggings, a coat made of Blanket or Buffaloe robe a hat or Cap of wool, Buffaloe or Otter skin his hose are pieces of Blanket lapped round his feet which are covered with a pair of Moccassins made of Dressed Deer Elk or Buffaloe skins with his long hair falling loosely over his shoulders complets his uniform. He then mounts and places his rifle before him on his Saddle. Such was the dress equipage of the party my- self included now ready to start. After getting the necessary information from Mr. Bridger concerning the route he intended to take with the Camp we all started in gallop in a West direction and

travelled to the Big horn and there commenced separating by two's and three's in different directions I crossed the river with the largest party still keeping a west course most of the time in a gallop until sun about an hour high at night when we Killed a Bull and each taking some of the meat for supper proceeded on our journey till Sunset when I found myself with only one Companion All had turned to the right or left without once hinting their intentions for it was not good policy for a Trapper to let too many know where he intends to set his traps particularly if his horse is not so fast as those of his companions. I am sure my remaining companion who was a Canadian Frenchman knew not where I intended to set until I stopped my horse at a Beaver dam between sunset and dark We set three traps each and went down the Stream 1/2 a Mile and encamped Sometime after dark. This day I travelled about 40 Mls with a poor horse over a rough and broken country intersected with deep ravines The next morning we set the remainder of our traps and started down the stream about a Mile where we found two more trappers we encamped with them hobbled our horses and turned them out to feed and before night our number had increased to 12 Men. The Camp came to us on the 26th of April and found us nearly all together we raised our traps and moved on with them to the west Fork of Priors River where we arrived on the 29th The next morning we made another start as formerly. My intentions were to set my traps on Rocky fork which we reached about 3 oclk P.M. our party having diminished to three men beside myself. In the meanwhile it began to rain and we Stopped to approach a band of Buffaloe and as myself and one of My comrades (a Canadian) were walking along half bent near some bushes secreting ourselves from the Buffaloe a large Grizzly Bear who probably had been awakened from his slum- bers by our approach sprang upon the Canadian who was 5 or 6 feet before me and placing one forepaw upon his head and the other on his left shoulder pushed him one side about 12 ft. with as little ceremony as if he had been a cat still keeping a direct course as tho. nothing had happened. I called to the Cannadian and soon found the fright exceeded the wound as he had received no injury except what this impudent stranger had done by tearing his coat but it was hard telling which was the most frightened the man or the Bear. We reached Rocky fork about Sunset and going along the edge of the timber saw another Bear lying with a Buffaloe Calf lying between his forepaws which he had already killed while the Mother was standing about 20 paces distant Moaning very pitifully for the loss of her young The bear on seeing us dropped the calf & took to his heels into the brush. The next day we travelled up Rocky fork till about 11 ock when I discovered there were trappers ahead of me I then altered my course leaving the stream at right Angles in a Westerly direction and travelled accross the Country paralell with the Mountain in company with a Cannadian for about 10 Mls set my traps on a stream called Bodairs fork (named after a Cannadian who was killed by the Blackfeet in 1836) after setting our traps travelled down the stream, encamped and before night our party consisted of 15 men who had set their traps and come to this place to spend the night without any previous arrangement whatever. But an old trapper can form some idea where his companions will encamp tho. they seldom tell before their traps are set. I stopped at this place until the 6th of May when learning that the Camp had arrived on Rocky fork below I left my traps setting and went to it to get a fresh horse On the 7th the Camp moved near to where my traps were set and the next day moved on to the right hand fork of "Rosebud" 9th I raised my traps and overtook them at the junction of the three forks of Rosebud. The next day I started with two more to trap the head streams of this river we travelled up the middle fork to the mountain where we found signs of 4 or 5 trappers being there

before us and to follow a fresh horse track in trapping time is neither wise nor profitable with such a number of trappers as our Camp contained on the 14th we started to the Camp which we found on the Yellowstone at the mouth of the Cross Creeks The next day the Camp crossed the Yellow Stone and moved up the Nth side to the Mouth of "25 yard river" There I stopped with the Camp till the 19th when I started again with 3 others Travelled up 25 yard river about 25 Mls in a North direction then left it and took over a low point of Mountain in a West direction and fell on to a branch of the Same river which forms a half circle from the north point of the mountain from where we first struck the river We found this part of the country had been recently trapped by the Blackfeet

The next morning May 20th 2 of my comrades returned to the Camp as it rained very hard. The other asked me which way I was going I replied to hunt Beaver and started off as I spoke he mounted his horse and followed me without further ceremony We left the stream and took up the mountain in a SW direction after travelling about 6 Mls. we fell into a defile running thro. the Mountains on to Cherry river a branch of the Gallatin. We travelled down this branch until near night and encamped The next day continued down the stream and reached the plains about 3 oclk PM within about 25 Mls. of the junction of the 3 forks of Missouri. We here left the stream we had descended and took up a small right hand fork of it in an East direction where we remained until the Camp arrived on the 25th. 27th We moved with the Camp to the Gallatin Fork the next day we crossed it with some difficulty but without accident except the loss of 3 Rifles the current ran so swift that several horses lost their footing and were washed down the stream which compelled their riders to abandon both horses and guns and swim ashore May 28th Travelled up this stream to the mountain about 15 Mls. and encamped. This Valley is the largest in the Rocky Mountains except the valley of the Snake River but far smoother than the latter and more fertile. May 30th Travelled up the Gallatin fork about 10 Mls into the mountain and encamped 31st We travelled up a small branch in a west direction about 25 Mls. June 1st We crossed the mountain in the same direction and camped in the Valley on the Madison fork which after leaving the valley runs thro. deep rocky kanyon into the plains below June 2 We crossed this fork and travelled up on the West side about 15 Mls on a trail made by a village of Blackfeet which had passed up 3 or 4 days previous. They were to all appearances occasionally dying of the Small Pox which has made terrible havoc among the Blackfeet during the last winter. To day we passed an Indian lodge standing in the prairie near the river which contained 9 dead bodies 3d Continued up the stream on their trail until 10 oclk a.m. when Mr. Bridger having Charge of the Camp tried to avoid them by taking into the mountain but the Majority of the men remonstrated so hard against trying to avoid a Village of Blackfeet which did not contain more than 3 times our numbers that he altered his course and turned back towards the Madison and encamped about two Ms from the river on a small spring branch This branch runs thro a ridge in a narrow passage in the rocks a hundred feet perpendicular on both sides about a quarter of a Ml. from the Madison. The next morning as we were passing over the ridge around this place we discovered the Village about 3 Mls above us on the river We immediately drove into this Kanyon with the Camp and prepared for battle Our leader was no military commander therefore no orders were given after the company property was secured about 15 men mounted horses and started for the Village in order to commence a skirmish. The Village was situated on the West bank of the river about 30 rods behind it arose a bench of land 100 ft high running parrallel with the river and gradually ascending to the west-

ward until it terminated in a high range of mountains about 2 Mls distant. While our men were approaching the Village I took a telescope and ascended the highest point of rock which overhung the camp to view the manoeuver. They rode within a short distance of the edge of the bench, then dismounted and crept to the edge and opened a fire on the Village which was the first the Indians knew of our being in the country. They fired 3 or 4 rounds each before the Indians had time to mount their horses and ascend the bluff one hundred and fifty yards above them. The whites then mounted their horses and retreated towards the Camp before about 5 times their numbers a running fire was kept up on both sides until our men reached the Camp when the Indians took possession of an elevated point formed of broken rocks about 300 paces distant on the South side of the Camp from which they kept shooting at intervals for about hours without doing any damage when one of them called to us in the flathead tongue and said that we were not men but women and had better dress ourselves as such for we had bantered them to fight and then crept into the rocks like women. An Old Iroquois trapper who had been an experienced warrior trained on the Shores of Lake Superior understanding this harangue turned to the Whites about him and made a speech in imperfect English nearly as follows My friend you see dat Ingun talk? He not talk good he talk berry bad He say you me all same like squaw, dat no good, spose you go wid me I make him no talk dat way” On saying this he stripped himself entirely naked throwing his powder horn and bullet pouch over his right shoulder and taking his rifle in his hand began to dance and utter the shrill war cry of his Nation. 20 of us who stood around and near him cheered the sound which had been the death warrant of so many whites during the old French war He started and we followed amid a shower of balls: the distance as I said before was about 300 yards up a smooth and gradual ascent to the rocks where the Blackfeet had secreted themselves to the number of 150. The object of our leader was to make an open charge and drive them from their position which we effected without loss under an incessant storm of fusee balls. When we reached the rocks we stopped to breath about half a minute not having as yet discharged a single gun. We then mounted over the piles of granite and attacked them muzzle to muzzle Altho 7 or 8 times our number they retreated from rock to rock like hunted rats among the ruins of an old building whilst we followed close at their heels loading and shooting until we drove them entirely into the plain where their horses were tied. They carried off their dead with the exception of two and threw them into the river They then placed their wounded on horses and started slowly towards their village with a mournful cry We then packed our animals and followed them with the Camp within a quarter of a Mile of their village where we stopped for the night. During the night they moved the Village up about 3 Mls further. Next morning we ascended the bench intending to pass with the camp by the Village we soon found however that they had formed a line of mounted warriors from the river to the thick pines which grew on the mountain about 30 of us concluded to try the bravery of those cavaliers on the field leaving the remainder of the camp to bring up the rear we rode into a thicket under cover of the Camp out of their sight and turned into a deep ravine which led us undiscovered within 20 or 30 paces of their line They in the meantime were watching the motions of the Camp intending to attack it while crossing this ravine we approached nearly to the top of the bank where we concluded to rest our horses a moment and then Charge their line in front near the left wing we were close enough to hear them talking as they pranced back and forward on the bench above us after tightening our girths and examining our arms we put each of us 4 or 5 bullets in our mouths and mounted without noise

- Our leader (the same old Iroquois) sallied forth with a horrid yell and we followed the Indians were so much surprised with such a sudden attack that they made no resistance whatever but wheeled and took toward the village as fast as their horses could carry them whilst we pursued close at their heels until within about 300 yards of their lodges where we made a halt and stopped until the Camp had passed then rode quietly away to our own party. After leaving them we travelled up the Madison about 8 Mls and encamped near the place where we had fought the Blackfeet in Sept. 1835. The Madison after leaving the mountains runs westerly to this place forms a curve and turning east of north in which direction it runs to the junction of the three forks. The next day (June 6th) we left the Madison and travelled in a South [direction over an] undulating plain about 15 Mls and encamped at Henry's Lake. This lake is about 30 Mls in circumference surrounded by forests of pine except on the SE side where there is a small prairie about one Mile wide and two long terminating almost to a point to the two extremities. Here we discovered another village of Blackfeet of about 15 lodges who were encamped on our route at the SE side of the Lake. The next morning we concluded to move camp to the village and smite it without leaving one to tell their fate - but when within about 2 miles of the village we met six of them coming to us unarmed who invited us in the most humble and submissive manner to their village to smoke and trade. This proceeding conquered the bravest in our camp. For we were ashamed to think of fighting a few poor Indians nearly dwindled to skeletons by the small Pox and approaching us without arms. We stopped however and traded with them for sometime and then started on our journey encamping at night in the edge of the pine woods June 8th We commenced our March thro. the pine woods by the lower track which runs South nearly parallel with the course of Henry's fork and on the 11th we emerged from the pine woods into the plains of Snake river where we stopped and trapped until the 14th From thence we went to Pierre's hole where we found a party of 10 Trappers who had left the Camp at the mouth of 25 yard river they had been defeated by the Blackfeet lost most of their horses and one man was wounded in the thigh by a fusee ball. June 18th we left Pierre's hole and crossed the mountain to Jackson's big hole. The next day myself and another trapper left the Camp crossed Lewis fork and travelled down the valley to the south end The next day we travelled in a SW direction over high and rugged spurs of Mountain and encamped on a small stream running into Gray's river which empties into Lewis fork above the mouth of Salt river 21st Travelled down the stream to Gray's river and set Traps We remained hunting the small streams which run into this river until the 28 of June then crossed the mountains in a SE direction and fell on to a stream running into Green River about 35 miles below the mouth of horse creek Called Lebares fork July 1st we travelled down this stream to the plains and steered our course towards "horse creek" where we expected to find the Rendezvous. The next day we arrived at the place but instead of finding the Camp we found a large band of buffaloe near the appointed place of meeting. We rode up to an old log building which was formerly used as a store house during the Rendezvous where I discovered a piece of paper fastened upon the wall which informed me that we should find the Whites at the forks of Wind river. This was unwelcome news to us as our animals were very much jaded. We then went down Green river crossed and encamped for the night The next day we travelled to Little Sandy 3d day - we camped on the point of the mountain on a branch of Sweetwater 4th We encamped at the Oil Spring on Po po azia and the next day we arrived at Camp. There we found Mr Dripps from St Louis with 20 horse carts loaded with Supplies and again met Capt. Stewart likewise several

Missionaries with their families on their way to the Columbia river On the 8th Mr. F. Ermatinger arrived with a small party from the Columbia accompanied by the Rev. Jason Lee who was on his way to the U S On the 20th of July the meeting broke up and the parties again dispersed for the fall hunt. I started with about 30 trappers up Wind river expecting the Camp to follow in a few days During our Stay at the Rendezvous it was rumored among the men that the Company intended to bring no more supplies to the Rocky Mountains and discontinue all further operations. This caused great deal of discontent among the Trappers and numbers left the party 21st We travelled up Wind river about 30 Mls and encamped 22d Continued up the river till noon then left it to our right travelled over a high ridge covered with pines in a west direction about 15 Mls and fell on to the Gros vent fork Next day we travelled about 20 Mls down the Gros vent fork. 24th Myself and another crossed the Mountain in a NW direction fell on to a stream running into Lewis fork about 10 Mls below Jacksons lake, here we staid and trapped until the 29th Then we started back to the Gros vent fork where we found the Camp consisting of about 60 men under the direction of Mr. Dripps James Bridger Pilot.

The next day the Camp followed down the Grosvent fork to Jacksons hole In the meantime myself and Comrade returned to our traps which we raised and took over the Mountain in a SW direction and overtook the Camp on Lewis fork. The whole company were starving fortunately I had killed a Deer in crossing the Mountain which made supper for the whole camp Aug 1st We crossed Lewis fork and encamped and staid the next day 4th Camp crossed the Mountain to Pierres hole and the day following I started with my former comrade to hunt beaver on the streams which run from the Tetons. about the middle of the afternoon as we were winding down a steep declivity which overhung a precipice of rocks nearly 200 ft perpendicular my horse slipped fell headlong down and was dashed to pieces 6th I returned to camp in Pierre's valley. On the next day made another start with the same Comrade. After leaving Camp we travelled in a SW direction across the valley then took over low hills covered with pines until sun about an hour high when we stopped and set our traps. On the 8th we travelled down the stream about 3 Mls and then ascended a left hand branch in a NE direction After travelling about 10 Mls we fell into a Valley surrounded by high mountains except on the S.W. Side This Valley is about 4 Mls long and one wide whilst the huge piles of rocks reaching above the clouds seemed almost to overhang the place on the North and East sides. We stopped here on the 9th and on the 10th returned to hunt the Camp when leaving the Valley we took up the valley in a west direction and from thence travelled a NW course thro. dense forests of pine about 15 Mls. when we struck the trail of the Camp going North we followed the track which still led us thro. the forest about 12 Mls when we came to a prairie about 5 Mls in circumference in which the Camp had stopped the night previous We stopped here a few minutes then resumed our journey on the trail and after winding about among the fallen trees and rocks about 6 Mls we fell on to the middle branch of Henrys fork which is called by hunters "The falling fork" from the numerous Cascades it forms whilst meandering thro. the forest previous to its junction with the main river. At the place where we struck the fork is one of the most beautiful cascades I ever saw The stream is about 60 yds wide and falls over the rock in a straight line about 30 ft perpendicular It is very deep and still above where it breaks and gradually shallows to the depth of 3 ft on the brink it is also very deep below and almost dead except the motion caused by the waters falling into the deep pond like stream and boiling from the bottom rolls off into small ripples and dies away into a calm smooth surface. We ascended

---

By Osborne Russell

---

this stream passing several beautiful cascades for about 12 Mls when the trail led us into a prairie seven or 8 miles in circumference in which we found the Camp just as the Sun was sitting.

The next morning Aug. 11th we bid adieu to the camp and started on the back track to trap the stream we had left the day previous We however took a nearer route and reached the little valley where we staid until the 25th This day we had a tremendous thunder storm which broke in peals against the towering rocks above us with such dreadful clashing that it seemed as if they would have been torn from their foundations and hurled into the Valley upon our heads Such storms are very frequent about these Mountains and often pass over without rain 27th We left the Valley and ascended the mountain S.W. and travelled about 15 Mls to a branch of Henry's fork. Here we staid until the 7th of Septr. and then started down Henry's fork SW. After travelling about 12 Mls we left the pines and travelled parrallele with the stream over rolling ridges among scattered groves of quaking aspens when we arrived at the edge of the plains in travelling about 8 Mls. Here we discovered a trail made by a war party of Blackfeet evidently the night previous. We then took a South course and travelled our horses in a trot all day and encamped an hour after dark on Lewis fork about 15 miles above the junction. The next day we Travelled to Blackfoot creek and the day following to Fort Hall we remained at the Fort until the 20th and then started down Snake River trapping with a party of 10 men besides ourselves 22d We arrived at a stream called Cozzu (or Raft River) This we ascended and hunted until the 5th of Octr. when finding the country had been recently hunted we returned to Fort Hall. From thence we started on the 18th with the Fort hunter and six men to kill and dry Buffaloe meat for winter We cruised about on Snake river and its waters until the 23d of Novr. when the weather becoming very cold and the snow about 15 inches deep we returned with our horses loaded with meat to Fort Hall where we stopped until the 1st of Jany 1839 when we began to be tired of dried meat and concluded to move up the river to where Lewis fork leaves the Mountain and there spend the remainder of the winter killing and eating Mountain Sheep We were Six in company and started on the 2d travelling slowly as the snow was deep and the weather cold and arrived at the destined place on the 20th Jany. We were followed by 7 lodges of Snake Indians. We found the snow shallow about the foot of the Mountain with a plenty of Sheep Elk and some few Bulls among the rocks and low Spurs 26th I started with two white men and several Indians thro the kanyon to hunt Elk after travelling about 4 Mls I left the party and took up the river on the north side whilst the remainder crossed the river on the Ice to follow the trail of some Bulls. I ascended the river travelling on the ice and land alternately about 4 Ms further and encamped for the night. This was a severe cold night but I was comfortably situated with one Blanket and two Epishemores and plenty of dry wood to make a fire, when I arose in the morning I discovered a band of Elk about half a mile up the mountain. I took my rifle and went to approach them thro the snow 3 ft deep and when within about 250 paces of them they took the wind of me and ran off leaving me to return to my encampment with the consolation that this was not the first time the wind had blown away my breakfast. When I arrived at my camp I found plenty of fresh Buffaloe meat hanging on the bushes near where I had slept. I immediately began to roast and eat as 24 hour's fasting would naturally dictate. Presently a Snake Indian arrived to whom the meat belonged. Near where I was encamped was a small stream which ran from a spring about a 100 paces distant and emptied into the river the water was a little more than blood warm. The Beaver had taken the advantage of the situation Damed it up at the Mouth and built a large lodge on the bank at sunrise I discovered three of them swimming and

Journal of a Trapper

By Osborne Russell

---

playing in the water.

The next day I killed a Bull and returned thro. the kanyon to our Camp On the 30th I started with my old comrade (Elbridge) back with our traps to try the Beaver the snow was about 2 ft deep on the level plain and it took us till near night to reach the place we encamped in a cave at the foot of the Mountain nearby and I set 4 traps The weather was extremely cold but I felt very comfortable whilst walking about in the warm water but on coming out and running as fast as I could to the Camp 40 rods distant my feet were both frozen. I soon drew out the frost however by stripping them and holding them in the cold snow - next morning I found 4 large fat Beaver in my traps and on the 2d of Feby. we returned to Camp with 12 Beaver. Feby 10th Moved with the camp up the river to where we had caught the Beaver and encamped. Lewis fork comes thro. this kanyon for about 12 Mls. where the rock rises 2 or 300 feet forms a bench and ascends gradually to the Mountain which approaches very close on the Nth side and on the South is about 3 or 4 Mls distant and an occasional ravine running from the mountain to the river thro the rocks on the Nth side forms convenient places for encamping as the bench and low Spurs are well clothed with bunch grass. Here we found imense numbers of Mountain Sheep which the deep snows drive down to the low points of rocks facing the South near the river We could see them nearly every morning from our lodges standing on the points of rock jutting out so high in the air that they appeared no larger than Weasels. It is in this position that hunter delights to approach them from behind and shoot whilst their eyes are fixed on some object below. It is an exercise which gives vigor health and appetite to a hunter to shoulder his rifle at day break on a clear cold morning and wind his way up a rugged mountain over rocks and crags at length killing a fat old Ewe and taking the meat to Camp on his back: this kind of exercise gives him an appetite for his breakfast. But hunting sheep is attended with great danger in many places especially when the rocks are covered with sleet and ice. I have often passed over places where I have had to cut steps in the ice with my butcher Knife to place my feet in directly over the most frightful precipices, but being excited in the pursuit of game I would think but little of danger until I had laid down to sleep at night, then it would make my blood run cold to meditate upon the scenes I had passed thro. during the day and often have I resolved never to risk myself again in such places and as often broken the resolution. The sight of danger is less hidious than the thought of it. On the 18th of March the winter commenced breaking up with a heavy rain and 4 of us started up the river to commence the spring hunt whilst the remainder of the party returned to the Fort. After travelling thro. the kanyon we found the ground bare in many places whilst it still continued to rain. On the 30th of Mch we travelled to the mouth of `Muddy` this we ascended and crossed the mountain with some difficulty as the snow was very deep on to the head waters of "Gray's Creek." There two of our party (who were Canadians) left us and struck off for themselves. Our Camp then consisted of myself and my old comrade Elbridge, I say old comrade because we had been sometime together but he was a young man, from Beverly Mass and being bred a sailor he was not much of a landsman, woodsman or hunter but a great easy good natured fellow standing 5 feet 10 - and weighing 200 lbs On the 2d of april we crossed a high ridge in a Nth direction and encamped on a stream that sinks in the plain soon after leaving the Mountain here we set our traps for Beaver but their dams were nearly all covered with ice excepting some few holes which they had made for the purpose of obtaining fresh provisions we stopped on this stream until the 25th of April and then travelled out by the same way which we came 26th we travelled a South direction about 25 Mls

Crossing several of the head branches of 'Grays Creek' On the 1st of May we travelled about 10 Mls East course and the next day went to the head of Grays Marsh about 20 Mls South course There we deposited the Furs we had taken and the next day [started] for Salt river to get a supply of salt we took an east direction about 6 Mls and fell on to Gardners fork which we descended to the Valley and on the 6th arrived at the Salt Springs on Scotts fork of Salt River Here we found 12 of our old Comrades who had come like our selves to gather salt We staid two nights together at this place when myself and Elbridge took leave of them and returned to Grays Marsh from there we started towards fort Hall travelling one day and laying by 5 or 6 to fatten our horses and arrived at the Fort on the 5th of June. This Post now belongs to the British Hudsons Bay Company who obtained it by purchase from Mr Wyeth in the year 1837 We stopped at the Fort until the 26th of June then made up a party of 4 for the purpose of trapping in the YellowStone and Wind river mountains and arrived at Salt river valley on the 28th 29 we crossed the Valley NE then left it ascending Grays river in an E. direction about 4 Mls into a narrow rugged pass encamped and killed a Sheep 30th We travelled up this stream 30 Mls East and encamped in a small Valley and Killed a bull and the next day we encamped in the South end of Jacksons big hole July 3d we travelled thro. the valley Nth. until night and the next day arrived at Jacksons Lake where we concluded to spend the 4th of July, at the outlet. July 4th I caught about 20 very fine salmon trout which together with fat mutton buffaloe beef and coffee and the manner in which it was served up constituted a dinner that ought to be considered independent even by Britons. July 5 we travelled north paralell with the Lake on the East side and the next day arrived at the inlet or northern extremity 7th We left the lake and followed up Lewis fork about 8 Mls in a NE direction and encamped. On the day following we travelled about 5 Mls when we came to the junction of two equal forks we took up the left hand, on the west sid thro the thick pines and in many places so much fallen timber that we frequently had to make circles of a quarter of a mile to gain a few rods ahead, but our general course was north and I suppose we travelled about 16 Mls in that direction at night we encamped at a lake about 15 Mls in circumference formed by the stream we had ascended July 9th we travelled round this lake to the inlet on the west Side and came to another lake about the same size This has a small prarie on the west side whilst the other is completely surrounded by thick pines. The next day we travelled along the border of the lake till we came to the NW. extremity and where we found about 50 springs of boiling hot water We stopped here some hours as one of my comrades had visited this spot the year previous he wished to show us some curiosities The first Spring we visited was about 10 feet in diameter which threw up mud with a noise similar to boiling soap close about this were numerous [others] similar to it throwing up the hot mud and water 5 or 6 feet high about 30 or 40 paces from these along the side of a small ridge the hot steam rushed forth from holes in the ground with a hissing noise which could be heard a mile distant. On a near approach we could hear the water bubbling under ground some distance from the surface. The sound of our footsteps over this place was like thumping over a hollow vessel of imense size in many places were peaks from 2 to 6 feet high formed of lime Stone, deposited by the boiling water, which appeared of snowy whiteness. The water when cold is perfectly sweet except having a fresh limestone taste. After surveying these natural wonders for sometime my comrade conducted me to what he called the "hour Spring" at that this spring the first thing that attracts the attention is a hole about 15 inches in diameter in which the water is boiling slowly about 4 inches below the surface at length it begins to boil and bubble violently and

Journal of a Trapper

By Osborne Russell

---

the water commences raising and shooting upwards until the column arises to the height of sixty feet from whence it falls to the ground in drops on a circle of about 30 feet in diameter being perfectly cold when it strikes the ground It continues shooting up in this manner five or 6 minutes and then sinks back to its former state of Slowly boiling for an hour and then shoots forth as before My Comrade Said he had watched the motions of this Spring for one whole day and part of the night the year previous and found no irregularity whatever in its movements After Surveying these wonders for a few hours we left the place and travelled north about 3 Mls over ascending ground then descended a steep and rugged mountain 4 mile in the same direction and fell on to the head branch of the Jefferson branch of the Missouri The whole country still thickly covered with pines except here and there a small prairie. We encamped and set some traps for Beaver and staid 4 dys. At this place there is also large numbers of hot Springs some of which have formed cones of limestone 20 feet high of a Snowy whiteness which make a splendid appearance standing among the ever green pines Some of the lower peaks are very serviceable to the hunter in preparing his dinner when hungry for here his kettle is always ready and boiling his meat being suspended in the water by a string is soon prepared for his meal without further trouble Some of these spiral cones are 20 ft in diameter at the base and not more than 12 inches at the top the whole being covered with small irregular semicircular ridges about the size of a mans finger having the appearance of carving in bass relieve formed I suppose by the waters running over it for ages unknown. I should think this place to be at least 3,000 ft lower than the Springs we left on the mountain Vast numbers of Black Tailed Deer are found in the vicinity of these springs and seem to be very familiar with hot waters and steam. The noise of which seems not to disturb their slumbers for a Buck may be found carelessly sleeping where the noise will exceed that of 3 or 4 engines in operation. Standing upon an eminence and superficially viewing these natural monuments one is half inclined to believe himself in the neighborhood of the ruins of some ancients City whose temples had been constructed of the whitest marble. July 15 we travelled down the stream NW. about 12 Mls passing on our route large numbers of hot Springs with their snow white monuments scattered among the groves of pines. At length we came to a boiling Lake about 300 ft in diameter forming nearly a complete circle as we approached on the South side The stream which arose from it was of three distinct Colors from the west side for one third of the diameter it was white, in the middle it was pale red, and the remaining third on the east light sky blue Whether it was something peculiar in the state of the atmosphere the day being cloudy or whether it was some Chemical properties contained in the water which produced this phenomenon I am unable to say and shall leave the explanation to some scientific tourist who may have the Curiosity to visit this place at some future period - The water was of deep indigo blue boiling like an immense cauldron running over the white rock which had formed [round] the edges to the height of 4 or 5 feet from the surface of the earth sloping gradually for 60 or 70 feet. What a field of speculation this presents for chemist and geologist. The next morning we crossed the stream travelled down the east side about 5 Mls then ascended another fork in an east direction about 10 mls. and encamped. From where we left the Main fork it runs in a NW direction about 40 Mls before reaching the Burnt hole July 17 we travelled to the head of this branch about 20 Mls East direction 18th After travelling in the same direction about 7 mls. over a low spur of mountain we came into a large plain on the Yellow Stone river about 8 Mls below the Lake we followed up the Yellow Stone to the outlet of the Lake and encamped and set our traps for beaver. We stopped

Journal of a Trapper

By Osborne Russell

---

here trapping until the 28th and from thence we travelled to the "Secluded Valley" where we staid one day. From thence we travelled East to the head of Clarks fork where we stopped and hunted the small branches until the 4th of Aug. and then returned to the Valley On the 9th we left the Valley and travelled two days ovr the mountain NW and fell on to a stream running South into the Yellowstone where we staid until the 16th and then crossed the mountain in a NW direction over the snow and fell on to a stream running into the Yellowstone plains and entering that river about 40 Mls above the mouth of 25 yard river. 18th We descended this stream within about a mile of the plains and set our traps. The next day my comrades started for the plains to Kill some Buffaloe Cows I remonstrated very hard against their going into the plains and disturbing the buffaloe in such a dangerous part of the country when we had a plenty of fat deer and mutton but to no purpose off they Started and returned at night with their animals loaded with cow meat. They told me they had seen where a village of 3 or 400 lodges of Blackfeet had left the Yellowstone in a NW direction but 3 or 4 days previous. Aug 22 we left this Stream and travelled along the foot of the mountain at the edge of the plain about 20 Mls west cours and encamped at a spring. The next day we crossed the Yellowstone river and travelled up it on the west side to the mouth of Gardners fork where we staid the next day 25th We travelled to "Gardners hole" then altered our course SE crossing the eastern point of the valley and encamping on a small branch among the pines 26 We encamped on the Yellowstone in the big plain below the lake The next day we went to the lake and set our traps on a branch running into it near the outlet on the NE side 28th after visiting my traps I returned to the Camp where after stopping about an hour or two I took my rifle and sauntered down the shore of the Lake among the [scattered] groves of tall pines until tired of walking about (the day being very warm) I took a bath in the lake for probably half an hour and returned to camp about 4 ockk PM Two of my comrades observed "let us take a walk among the pines and kill an Elk" and started off whilst the other was laying asleep - Sometime after they were gone I went to a bale of dried meat which had been spread in the Sun 30 or 40 feet from the place where we slept here I pulled off my powder horn and bullet pouch laid them on a log drew my butcher knife and began to cut We were encamped about a half a mile from the Lake on a stream turning into it in a S.W. direction thro. a prarie bottom about a quarter of a mile wide On each side of this valley arose a bench of land about 20 ft high running paralell with the stream and covered with pines On this bench we were encamped on the SE side of the stream The pines immediately behind us was thickly intermingled with logs and fallen trees - After eating a few [minutes] I arose and kindled a fire filled my tobacco pipe and sat down to smoke My comrade whose name was White was still sleeping. Presently I cast my eyes towards the horses which were feeding in the Valley and discovered the heads of some Indians who were gliding round under the bench within 30 steps of me I jumped to my rifle and aroused White and looking towards my powder horn and bullet pouch it was already in the hands of an Indian and we were completely surrounded We cocked our rifles and started thro. their ranks into the woods which seemed to be completely filled with Blackfeet who rent the air with their horrid yells. on presenting our rifles they opened a space about 20 ft. wide thro. which we plunged about the fourth jump an arrow struck White on the right hip joint I hastily told him to pull it out and I spoke another arrow struck me in the same place but they did not retard our progress At length another arrow striking thro. my right leg above the knee benumbed the flesh so that I fell with my breast accross a log. The Indian who shot me was within 8 ft and made a Spring towards me with his uplifted battle

axe: I made a leap and avoided the blow and kept hopping from log to log thro. a shower of arrows which flew around us like hail, lodging in the pines and logs. After we had passed them about 10 paces we wheeled about and took [aim] at them They then began to dodge behind the trees and shoot their guns we then ran and hopped about 50 yards further in the logs and bushes and made a stand - I was very faint from the loss of blood and we set down among the logs determined to kill the two foremost when they came up and then die like men we rested our rifles accross a log White aiming at the foremost and Myself at the second I whispered to him that when they turned their eyes toward us to pull trigger. About 20 of them passed by us within 15 feet without casting a glance towards us another file came round on the [opposite] side within 20 or 30 paces closing with the first a few rods beyond us and all turning to the right the next minute were out of our sight among the bushes They were all well armed with fusees, bows & battle axes We sat still until the rustling among the bushes had died away then arose and after looking carefully around us White asked in a whisper how far it was to the lake I replied pointing to the SE about a quarter of a mile. I was nearly fainting from the loss of blood and the want of water We hobbled along 40 or 50 rods and I was obliged to sit down a few minutes then go a little further and rest again. we managed in this way until we reached the bank of the lake Our next object was to obtain some of the water as the bank was very steep and high. White had been perfectly calm and deliberate until now his conversation became wild hurried and despairing he observed "I cannot go down to that water for I am wounded all over I shall die" I told him to sit down while I crawled down and brought some in my hat. This I effected with a great deal of difficulty. We then hobbled along the border of the Lake for a mile and a half when it grew dark and we stopped. We could still hear the shouting of the Savages over their booty. We stopped under a large pine near the lake and I told White I could go no further "Oh said he let us go up into the pines and find a spring" I replied there was no spring within a Mile of us which I knew to be a fact. "Well said he if you stop here I shall make a fire" Make as much as you please I replied angrily This is a poor time now to undertake to frighten me into measurs. I then started to the water crawling on my hands and one knee and returned in about an hour with some in my hat. While I was at this he had kindled a small fire and taking a draught of water from the hat he exclaimed Oh dear we shall die here, we shall never get out of these mountains, Well said I if you presist in thinking so you will die but I can crawl from this place upon my hands and one knee and Kill 2 or 3 Elk and make a shelter of the skins dry the meat until we get able to travel. In this manner I persuaded him that we were not in half so bad a Situation as we might be altho. he was not in half so bad a situation as I expected for on examining I found only a slight wound from an arrow on his hip bone but he was not so much to blame as he was a young man who had been brot up in Missouri the pet of the family and had never done or learned much of anything but horseracing and gambling whilst under the care of his parents (if care it can be called). I pulled off an old piece of a coat made of Blanket (as he was entirely without clothing except his hat and shirt) Set myself in a leaning position against a tree ever and anon gathering such leaves and rubbish as I could reach without altering the position of My body to keep up a little fire in this manner miserably spent the night. The next morning Aug 29th I could not arise without assistance When White procured me a couple of sticks for crutches by the help of which I hobbled to a small grove of pines about 60 yds distant. We had scarcely entered the grove when we heard a dog barking and Indians singing and talking. The sound seemed to be approaching us. They at length came near to where we were to

Journal of a Trapper

---

the number of 60 Then commenced shooting at a large bank of elk that was swimming in the lake killed 4 of them dragged them to shore and butchered them which occupied about 3 hours. They then packed the meat in small bundles on their backs and travelled up along the rocky shore about a mile and encamped. We then left our hiding place crept into the thick pines about 50 yds distant and started in the direction of our encampment in the hope of finding our comrades My leg was very much swelled and painful but I managed to get along slowly on my crutches by Whites carrying my rifle when we were within about 60 rods of the encampment we discovered the Canadian hunting round among the trees as tho he was looking for a trail we approached him within 30 ft before he saw us and he was so much agitated by fear that he knew not whether to run or stand still. On being asked where Elbridge was he said they came to the Camp the night before at sunset the Indians pursued them into the woods where they seperated and he saw him no more. At the encampment I found a sack of salt - everything else the Indians had carried away or cut to pieces They had built 7 large Conical forts near the spot from which we supposed their number to have been 70 or 80 part of whom had returned to their Village with the horses and plunder. We left the place heaping curses on the head of the Blackfoot nation which neither injured them or alleviated our distress We followed down the shores of the lake and stopped for the night My companions threw some logs and rubbish to gether forming a kind of shelter from the night breeze but in the night it took fire (the logs being pitch pine) the blaze ran to the tops of the trees we removed a short distance built another fire and laid by it until Morning We then made a raft of dry poles and crossed the outlet upon it. We then went to a small grove of pines nearby and made a fire where we stopped the remainder of the day in hopes that Elbridge would see our signals and come to us for we left directions on a tree at the encampment which route we would take. In the meantime the Cannadian went to hunt something to eat but without success. I had bathed my wounds in Salt water and made a salve of Beavers Oil and Castoreum which I applied to them This had eased the pain and drawn out the swelling in a great measure. The next morning I felt very stiff and sore but we were obliged to travel or starve as we had eaten nothing since our defeat and game was very scarce on the West side of the Lake and morover the Cannadian had got such a fright we could not prevail on him to go out of our sight to hunt So on we truged slowly and after getting warm I could bear half my weight on my lame leg but it was bent considerably and swelled so much that my Knee joint was stiff. About 10 oclk the Cannadian killed a couple of small Ducks which served us for breakfast. after eating them we pursued our journey. At 12 oclk it began to rain but we still kept on until the Sun was 2 hours high in the evening when the weather clearing away we encamped at some hot springs and killed a couple of geese. Whilst we were eating them a Deer came swimming along in the lake within about 100 yards of the shore we fired several shots at him but the water glancing the balls he remained unhurt and apparently unalarmed but still Kept swimming to and fro in the Lake in front of us for an hour and then started along up close to the shore. The hunter went to watch it in order to kill it when it should come ashore but as he was lying in wait for the Deer a Doe Elk came to the water to Drink and he killed her but the Deer was still out in the lake swimming to and fro till dark. Now we had a plenty of meat and drink but [were] almost destitute of clothing I had on a par of trowsers and a cotton shirt which were completely drenched with the rain. We made a sort of shelter from the wind of pine branches and built a large fire of pitch Knots in front of it, so that we were burning on one side and freezing on the other alternately all night. The next morning we cut

---

some of the Elk meat in thin slices and cooked it slowly over a fire then packed it in bundles strung them on our backs and started by this time I could carry my own rifle and limp along half as fast as a man could walk but when my foot touched against the logs or brush the pain in my leg was very severe We left the lake at the hot springs and travelled thro. the thick pines over a low ridge of land thro. the snow and rain together but we travelled by the wind about 8 Mls in a SW direction when we came to a Lake about 12 Mls in circumference which is the head spring of the right branch of Lewis fork. Here we found a dry spot near a number of hot springs under some thick pines our hunter had Killed a Deer on the way and I took the skin wrapped it around me and felt prouder of my Mantle than a Monarch with his imperial robes. This night I slept more than 4 hours which was more than I had slept at any one time since I was wounded and arose the next morning much refreshed These Springs are similar to those on the Madison and among these as well as those Sulphur is found in its purity in large quantities on the surface of the ground. We travelled along the Shore on the south side about 5 Mls in an East direction fell in with a large band of Elk killed two fat Does and took some of the meat. We then left the lake and travelled due South over a rough broken country covered with thick pines for about 12 Mls when we came to the fork again which ran thro. a narrow prairie bottom followed down it about six miles and encamped at the forks We had passed up the left hand fork on the 9th of July on horse back in good health and spirits and came down on the right on the 31st of Aug. on foot with weary limbs and sorrowful countenances. We built a fire and laid down to rest, but I could not sleep more than 15 or 20 minutes at a time the night was so very cold. We had plenty of Meat however and made Mocasins of raw Elk hide The next day we crossed the stream and travelled down near to Jacksons Lake on the West side then took up a small branch in a West direction to the head. We then had the Teton mountain to cross which looked like a laborious undertaking as it was steep and the top covered with snow. We arrived at the summit however with a great deal of difficulty before sunset and after resting a few moments travelled down about a mile on the other side and stopped for the night. After spending another cold and tedious night we were descending the Mountain thro. the pines at day light and the next night reached the forks of Henrys fork of Snake river. This day was very warm but the wind blew cold at night we made a fire and gathered some dry grass to sleep on and then sat down and eat the remainder of our provisions. It was now 90 Mls to Fort Hall and we expected to see little or no game on the route but we determined to travel it in 3 days we lay down and shivered with the cold till daylight then arose and again pursued our journey towards the fork of Snake river where we arrived sun about an hour high forded the river which was nearly swimming and encamped The weather being very cold and fording the river so late at night caused me much suffering during the night Sept 4th we were on our way at day break and travelled all day thro. the high Sage and sand down Snake river We stopped at dark nearly worn out with fatigue hunger and want of sleep as we had now travelled 65 Mls in two days without eating. We sat and hovered over a small fire until another day appeared then set out as usual and travelled to within about 10 Ms of the Fort when I was seized with a cramp in my wounded leg which compelled me to stop and sit down ever 30 or 40 rods at length we discovered a half breed encamped in the Valley who furnished us with horses and went with us to the fort where we arrived about sun an hour high being naked hungry wounded sleepy and fatigued. Here again I entered a trading post after being defeated by the Indians but the treatment was quite different from that which I had received at Larameys fork in 1837 when I had been defeated by

the Crows

The Fort was in charge of Mr. Courtney M. Walker who had been lately employed by the Hudsons Bay Company for that purpose He invited us into a room and ordered supper to be prepared immediately. Likewise such articles of clothing and Blankets as we called for. After dressin ourselves and giving a brief history of our defeat and sufferings supper was brot. in consisting of tea Cakes butter milk dried meat etc I eat very sparingly as I had been three days fasting but drank so much strong tea that it kept me awake till after midnight. I continued to bathe my leg in warm salt water and applied a salve which healed it in a very short time so that in 10 days I was again setting traps for Beaver On the 13th of Sptr. Elbridge arrived safe at the Fort he had wandered about among the Mountains several days without having any correct knowledge, but at length accidentally falling onto the trail which we had made in the Summer it enabled him to reach the plains and from thence he had travelled to the Fort by his own Knowledge 20th of Octr. we started to hunt Buffaloe and make meat for the winter. The party consisted of 15 men. We travelled to the head of the Jefferson fork of the Missouri where we Killed and dried our meat from there we proceeded over the mountain thro. "Cammass prarie" to the forks of Snake river where most of the party concluded to spend the winter 4 of us however (who were the only Americans in the party) returned to Fort Hall on the 10th of Decr. We encamped near the Fort and turned our horses among the springs and timber to hunt their living during the winter whilst ourselves were snugly arranged in our Skin lodge which was pitched among the large Cotton wood trees and in it provisions to serve us till the Month of April. There were 4 of us in the mess One was from Missouri one from Mass. one from Vermont and myself from Maine We passed an agreeable winter We had nothing to do but to eat attend to the horses and procure fire wood We had some few Books to read such as Byrons Shakespeares and Scotts works the Bible and Clarks Commentary on it and other small works on Geology Chemistry and Philosophy - The winter was very mild and the ground was bare in the Valley until the 15 of Jany. when the snow fell about 8 inches deep but disappeared again in a few days. This was the deepest snow and of the longest duration of any we had during the winter On the 10th of March I started again with my old companion Elbridge We travelled from the Fort on to the Blackfoot near the foot of the Mountain where the ice being broke up we set some traps for Beaver On the 15th we tried to cross the mountain to Grays Valley but were compelled to turn back for the snow On the 20th made another trial and succeeded and encamped at the Forks of `Gray's creek' here the ground was bare along the stream and some [on] the South sides of the hills but very deep on the high plains I killed two Bulls which came in good time after living upon Dried meat all winter Mch 19 we travelled up Grays creek about 10 Mls. There we found the snow very deep and hard enough to bear our horses in the morning. On the 22d we travelled on the snow up this stream about 5 Mls and encamped on a bare spot of ground where we staid three days Then started on the snow as usual and went about 8 Mls to the Valley about Grays Marsh where we found a bare spot about 40 rods square on the South side of a ridge and encamped The snow in the Valley was about 3 feet deep on a level Mch 28th We started on foot in the morning on the snow to hunt Buffaloe after going about 2 Mls we found 11 Bulls aproached and killed 10 of them on the spot we then butchered some of them and took out the tongues of the others buried the meat about 3 ft. deep in a snow drift laid some stones on the snow over it and burned gun powder upon them to keep away the wolves. We then took meat enough for our suppers and started for the Camp by this time the snow was thawed so much that

---

By Osborne Russell

---

we broke thro. nearly every step. Early next morning the snow being frozen we took two horses and went for our meat but when we reached the place where we had buried it we found the wolves had dug it up and taken the best of its notwithstanding our precautions. The Carcasses of the Bulls yet remained untouched by them and from these we loaded our horses and returned to camp. About noon the rays of the sun shining up on the Snow and reflecting upwards began to affect our eyes in somuch that towards night we could scarcely look abroad We lay down to sleep but it was useless for our eyes felt as if they were filled with coarse Sand after suffering 4 days severely with what the trappers call snow blindness we began to recover our eye sight by degrees altho we had not been at any time totally blind yet we had been the whole time very near it. We staid here until the 10th of April when finding the snow did not abate we returned to the forks of Grays Creek where we remained until the 20th We then travelled to the fork which sinks in the plain on Lewis fork where we set our traps and staid until the 1st of May On the 2d we arrived again at the Marsh on Grays creek where we found the ground mostly bare but the streams overflowing their banks. On the 5 crossed the mountain in an East direction fell on to a stream running into Lewis fork 10 Ms below the mouth of Salt River we travelled down this stream which runs thro a narrow cut in the mountain for about 15 Mls and then forms a small valley where we stopped and set our traps and staid until the 20th when Elbridge observed he thought we had better leave our traps setting turn and go to Salt river Valley spend a few days killing bulls and then return I remonstrated against the proposal as our horses were very poor the streams high and the ground very muddy but I told him if he wished to go to take his traps with him and not be at the trouble of coming back after them. The next morning he packed his horses and left me My two horses were now my only companions with the exception of some books which I brot from the Fort. I staid here trapping until the 28th Then travelled up a branch about 15 Mls. crossed the Mountain in a NW direction fell on to the head of Muddy Creek where I killed a Bull and stopped for the night. The next day I stopped at this place and dried some meat 30th went on to the Right fork of Muddy and set some traps, here I staid 6 days and then went to Gray's marsh intending to kill and dry some meat and go to the Fort but finding no Buffaloe here I crossed on to Salt River and finding no Buffaloe there I ascended Gardners fork crossed the Mountain and fell on to Blackfoot creek where I killed a fat Bull dried the meat and started for fort Hall where I arrived on the 10th of June. June 14th Mr. Ermatinger arrived at the fort with 80 horse loads of goods to supply the post the ensuing year. On the 15 Elbridge arrived having fallen in with a party of hunters soon after leaving me in the Mountains after having lost his traps in crossing Grays river. A few days after he arrived he expressed a wish that I would go with him and two others to make a hunt in the Yellow Stone mountains I replied I had seen enough of the Yellow Stone Mountains and moreover I intended to trap in future with a party who would not leave me in a 'pinch.' On the 22d of June I started with two horses six traps and some few books intending to hunt on the waters of Snake river in the vicinity of Fort Hall. I went to Grays hole set my traps and staid 5 days. From there I went on to Milk fork where I staid until the 15 of July From thence I took a north direction thro the Mountains and fell on to a stream running into Lewis Fork near the mouth of Salt River where I staid 12 days and then returned to Grays Marsh and staid until the 3d of August I then travelled thro. the mountains SE on to the head streams of Gardners fork where I spent the time hunting the small branches until the 15th - From there I started towards the Fort hunting the streams which were on the route and arrived on the 22d - After stopping

Journal of a Trapper

---

here a few days I started in Company with 3 trappers one of whom was 'Major Meek' and travelled to the forks of Snake river From there we ascended Henry's fork about 15 Mls and then took up a stream in a SW direction into the Mountain but finding no Beaver we crossed the mountain and struck Lewis fork in the kanyon where after trapping some days we went on to Grays creek where after staying some days we killed a fat Grizzly Bear and some antelope loaded the meat on our horses and started to the Fort where we arrived on the 22 of Septr. On the first of Octr. I again left the Fort with a Frenchman who had an Indian wife and two children and was going on to Green river to pass the winter there. We travelled up Portneuf about 15 Mls where we stopped the next day and hunted antelope and the day following we travelled up the stream about 20 Mls when after staying 10 dys we went to the Soda Springs on Bear river here we concluded to spend a month on Bar river travelling slowly hunting Beaver and Antelope as the latter is the only game in this part of the country. Beaver also were getting very scarce. On the 15th of Novr. the snow began to fall and my comrade started with his family accross the mountain to Green river and I returned towards the fort On my way down bear river I met thousands of antelope travelling towards their winter quarters which is generally in Green river Valley I followed Bear River down to Cache Valley where I found 20 lodges of Snake Indians and staid with them several days They had a considerable number of Beaver Skins but I had nothing to trade for them. They told me if I would go to the Fort and get some goods return and spend the winter with them they would trade their Furs with me. I started for the Fort with one of them whom I engaged to assist me with my horses. I arrived at the Fort on the 23rd of Novr. when after getting such articles for trade as I wished and my personal supplies for the winter I returned to Cache Valley accompanied by a halfbreed On arriving at the Village I found several Frenchmen and half breed trappers encamped with the Snakes One Frenchman having an Indian wife and child invited me to pass the winter in his lodge and as he had a small family and large lodge I accepted the invitation. And had my baggage taken into his lodge and neatly arranged by his wife who was a flathead but the neat manner in which her lodge and furniture was kept would have done honor to a large portion of the "pale faced" fair sex in the civilized world. We staid in this valley until the 15th of Decr. when it was unanimously agreed on to go to the Salt lake and there spend the remainder of the winter The next day we travelled accross the Valley in a SW direction Then took into a narrow defile which led us thro. the mountain in to the valley on the East borders of the lake. The day following we moved along the Valley in a South direction and encamped on a small branch close by the foot of the mountain. The ground was still bare and the Autumnal growth of grass was the best I ever saw at this season of the year 18th I arose about an hour before daylight took my rifle and ascended the Mountain on foot to hunt sheep The weather was clear and cold but the Mountain being steep and tugged and my rifle heavy the exercise Soon put me in a perspiration. After Climbing about half a mile I sat down on a rock to wait for daylight and when it came I discovered a band of about 100 rams within about 80 yds of me I shot and killed one the others ran about 50 yds further and stopped. Whilst I was reloading my rifle one of them ascended a high pinnacle of rock which jutted over a precipice there were others nearer to me but I wished to fetch this proud animal from his elevated position. I brought my rifle to my face the [ball] whistled thro. his heart and he fell headlong over the precipice I followed the band at some distance among the crags and killed two more butched them then returned and butchered the two I had first killed and returned to camp - and sent some men with horses to get the Meat. 20th Decr. we moved along the borders

of the Lake about 10 Mls. and encamped on a considerable stream running into it called "Weaver's river" At this place the Valley is about 10 Mls wide intersected with numerous Springs of salt and fresh hot and cold water which rise at the foot of the Mountain and run thro. the Valley into the river and Lake - Weavers river is well timbered along its banks principally with Cottonwood and box elder - there are also large groves of sugar maple pine and some oak growing in the ravines about the Mountain - We also found large numbers of Elk which had left the Mountain to winter among the thickets of wood and brush along the river. Decr. 25th It was agreed on by the party to prepare a Christmas dinner but I shall first endeavor to describe the party and then the dinner. I have already said the man who was the proprietor of the lodge in which I staid was a French man with a flat head wife and one child The inmates of the next lodge was a half breed Iowa a Nez percey wife and two children his wifes brother and another half breed next lodge was a half breed Cree his wife a Nez percey 2 children and a Snake Indian The inmates of the 3d lodge was a half breed Snake his wife (a Nez percey and two children). The remainder was 15 lodges of Snake Indians Three of the party spoke English but very broken therefore that language was made but little use of as I was familiar with the Canadian French and Indian tongue. About 1 oclk we sat down to dinner in the lodge where I staid which was the most spacious being about 36 ft. in circumference at the base with a fire built in the center around this sat on clean Epishemores all who claimed kin to the white man (or to use their own expression all that were gens d'esprit) with their legs crossed in true Turkish style - and now for the dinner The first dish that came on was a large tin pan 18 inches in diameter rounding full of Stewed Elk meat The next dish was similar to the first heaped up with boiled Deer meat (or as the whites would call it Venison a term not used in the Mountains) The 3d and 4th dishes were equal in size to the first containing a boiled flour pudding prepared with dried fruit accompanied by 4 quarts of sauce made of the juice of sour berries and sugar Then came the cakes followed by about six gallons of strong Coffee already sweetened with tin cups and pans to drink out of large chips or pieces of Bark Supplying the places of plates. on being ready the butcher knives were drawn and the eating commenced at the word given by the landlady as all dinners are accompanied with conversation this was not deficient in that respect The principal topic which was discussed was the political affairs of the Rocky Mountains The state of governments among the different tribes, the personal characters of the most distinguished warriors Chiefs etc One remarked that the Snake Chief Pah da-hewak um da was becoming very unpopular and it was the opinion of the Snakes in general that Moh woom hah his brother would be at the head of affairs before 12 mos as his village already amounted to more than 300 lodges and moreover he was supported by the bravest men in the Nation among whom were Ink a tush e poh Fibe bo un to wat su and Who sha kik who were the pillars of the Nation and at whose names the Blackfeet quaked with fear. In like manner were the characters of the principal Chiefs of the Bonnak Nez percey Flathead and Crow Nations and the policy of their respective governments commented upon by these descendants of Shem and Japhet with as much affected dignity as if they could have read their own names when written or distinguish the letter B from a Bulls foot. Dinner being over the tobacco pipes were filled and lighted while the Squaws and children cleared away the remains of the feast to one side of the lodge where they held a Sociable tite a tite over the fragments. After the pipes were extinguished all agreed to have a frolic shooting at a mark which occupied the remainder of the day. Jany. 1st The ground was still bare but the weather cold and the fresh water streams shut up with ice On the 3d we moved Camp up

Journal of a Trapper

---

the stream to the foot of the mountain where the stream forks The right is called Weavers fork and the left Ogden's both coming thro. the mountain in a deep narrow cut The mountain is very high steep and rugged which rises abruptly from the plain about the foot of it are small rolling hills abounding with springs of fresh water. The land bordering on the river and along the Stream is a rich black alluvial deposit but the high land is gravelly and covered with wild sage with here and there a grove of scubby oaks and red cedars On the 10th I started to hunt Elk by myself intending to stop out 2 or 3 nights I travelled up Weavers fork in a SE direction thro the mountains The route was very difficult and in many places difficult travelling over high points of rocks and around huge precipices on a trail just wide enough for a single horse to walk in, in about 10 Mls I came into a smooth plain 5 or 6 Mls in circumference just as the Sun was setting here I stopped for the night the snow being about 5 inches deep and the weather cold I made a large fire - As I had not Killed any game during the day I had no supper at night but I had a blanket horse to ride and a good rifle with a plenty of Amunition I was not in much danger of Suffering by hunger cold or fatigue So I wrapped myself in my blanket and laid down on some dry grass I had collected before the fire. About an hour after dark it clouded up and began to snow but as I was under some large trees it did not trouble me much and I soon fell asleep at daylight it was still snowing very fast and had [?] about 8 inches during the night - I saddled my horse and started in a North direction over high rolling hills covered with Scrubby oaks quaking asp and maples for about 10 Mls where I came into a smooth valley about 20 Mls in circumference called "Ogdens hole" with the fork of the same name running thro. it. Here the snow was about 15 inches deep on a level. Towards night the weather cleared up and I discovered a band of about 100 Elk on the hill among the Shrubbery. I approached and killed a very fat old doe which I butcherd and packed the meat and skin on my horse to an open spring about a quarter of a mile distant where I found plenty of dry wood and stopped for the night. I had now a good appetite for supper which after eating I scraped away the Snow on one side of the fire spread down the raw Elk hide and laid down covering myself with my blanket. In the morning when I awoke it was still snowing and after eating breakfast I packed the Meat on my horse and started on foot leading him by the bridle Knowing it was impossible to follow down this Stream with a horse to the plains I kept along the foot of the Mountain in a Nth. direction for about 2 Mls then turning to the left into a steep ravine began to ascend winding my way up thro. the snow which grew deeper as I ascended I reached the Summit in about 3 hours in many places I was obliged to break a trail for my horse to walk in I descended the mountain West to the plains with comparative ease and reached the Camp about dark On arriving at the lodge I entered and sat down before a large blazing fire My landlady soon unloaded my horse and turned him loose and then prepared supper with a good dish of Coffee whilst I as a matter of course related the particulars of the hunt. We staid at this place during the remainder of January The weather was very cold and the snow about 12 inches deep but I passed the time very agreeably hunting Elk among the timber in fair weather and amusing myself with books in foul The 3d day of Feby. I took a trip up the mountain to hunt Sheep I ascended a spur with my horse sometimes riding and then walking until near the top where I found a level bench where the wind had blown the snow off. I fastened my horse with a long cord and took along the side of the mountain among the broken crags to see what the chance was for supper just as the sun was sinking below the dark green waters of the Salt Lake I had not rambled far before I discovered 3 rams about 300 ft perpendicular below me I shot and killed one

of them but it being so late and the precipice so bad I concluded to sleep without supper rather than to go after it I returned to my horse and built a large fire with fragments of dry sugar maple which I found scattered about on the Mountain having for a shelter from the wind a huge piece of Coarse Sandstone of which the mountain was composed the air was calm serene and cold and the stars shone with an uncommon brightness after sleeping till about Midnight I arose and renewed the fire My horse was continually walking backwards and forwards to keep from freezing I was upwards of 6,000 ft above the level of the lake, below me was a dark abyss silent as the night of Death I set and smoked my pipe for about an hour and then laid down and slept until near daylight - My Chief object in Sleeping at this place was to take a view of the lake when the Sun arose in the Morning. This range of mountains lies nearly Nth & South and approaches the Lake irregularly within from 3 to 10 Mls. About 8 Mls from the SE shore stands an Island about 25 Mls long and six wide having the appearance of a low Mountain extending Nth & South and rising 3 or 400 ft Above the water To the Nth [W] of this about 8 Mls. rises another Island apparently half the size of the first. Nth of these about six Mls. and about half way between rises another about 6 Mls. in circumference which appears to be a mass of basaltic rock with a few scrubby Cedars Standing about in the Cliffs the others appear to be clothed with grass and wild Sage but no wood except a few bushes near to the western horizon arose a small white peak just appearing above the water. which I supposed to be the mountain near the west Shore. On the Nth. side a high Promontory about Six Mls wide and 10 long projects into the lake covered with grass and scattering Cedars On the South Shore rises a vast pile of huge rough mountains; which I could faintly discern thro. the dense blue atmosphere The water of the lake is too much impregnated with Salt to freeze any even about the shores. About sun an hour high I commenced hunting among the rocks in search of Sheep but did not get a chance to shoot at any till middle of the afternoon when crawling cautiously over some shelving cliffs I discovered 10 or 12 Ewes feeding some distance below me I shot and wounded one reloaded my rifle and crept down to the place where I last saw her when I discovered two standing on the side of a precipice Shot one thro the head and she fell dead on the cliff where she stood. I then went above and fastened a cord (which I carried for the purpose) to some bushes which overhung the rocks by this means I descended and rolled her off the cliff where she had caught when she fell upwards of 100 ft. I then pulled myself up by the cord and went round the rock down to where she fell butcherd her hung the meat on a tree then pursued and killed the other After butchering the last I took some of the [meat] for my supper and started up the mountain and arrived at the place where I had slept about an hour after dark I soon had a fire blazing and a side of ribs roasting and procured water by heating Stones and melting snow in a piece of skin by the time supper was over it was late in the night And I lay down and slept till morning At sun rise I started on foot to get my meat and left my rifle about half way down the Mountain when I came to where the first sheep had been hung in a tree I discovered a large Wolverine sitting at the foot of it I then regretted leaving my rifle but it was too late he saw me and took to his heels as well he might for he had left nothing behind worth stopping for All the traces I could find of the sheep were some tufts of hair scattered about on the snow. I hunted around for sometime but to no purpose. In the meantime the cautious thief was sitting on the snow at some distance watching my movements as if he was confident I had no gun and could not find his meat. and wished to agravate me by his antic gestures he had made roads in every direction from the root of the tree dug holes in a 100 places in the snow apparently to decieve me but I

soon got over my ill humour and gave it up that a Wolverine had fooled a Yankee. I went to the other Sheep and found all safe carried the meat to my horse mounted and went to Camp. Feby 15 the weather began to moderate and rain and on the 23d the ground was bare about the Mountain Feby 24th I left the Camp with a determination to go to the Eutaw Village at the SE extremity of the Lake to trade furs I travelled along the foot of the Mountain about 10 Mls when I stopped and deposited in the ground such articles as I did not wish to take with me The next day I travelled along the foot of the Mountain South about 30 Mls and encamped on a small spring branch which runs in a distance of 4 Mls from the mountain to the lake. This is a beautiful and fertile Valley intersected by large numbers of fine springs which flow from the mountain to the Lake and could with little labour and expense [be] made to irrigate the whole Valley. The following day I travelled about 15 Mls along the lake when a valley opened to my view stretching to the SE about 40 Mls and upwards of 15 Mls wide At the farther extremity of this valley lies Trimpannah or Eutaw lake composed of fresh water about 60 Mls in circumference The outlet of it is a stream about 30 Yds wide which, after cutting this valley thro the middle empties into the Salt Lake. I left the Lake and travelled up this Valley over smooth ground which the snow had long since deserted and the green grass and herbage were fast supplying its place After crossing several small streams which intersected this vale I arrived at the Village rode up to a lodge and asked of a young Indian who met me where Want a Sheep's lodge was but before he could reply a tall Indian very dark complected with a thin visage and a keen piercing eye having his Buffaloe robe thrown carelessly over his left shoulder gathered in folds around his waist and loosely held by his left hand stepped forth and answered in the Snake tongue "I am Want a Sheep", follow me' at the same time turning round and directing his course to a large white lodge. I rode to the door dismounted and followed him in he immediately ordered my horses to be unsaddled and turned loose to feed whilst their loads were carefully arranged in the lodge After the big pipe had gone round several times in silence he then began the conversation - I was asked the news, where travelling for what whom and how I replied to these several inquiries in the Snake tongue which was understood by all in the lodge. He then gave me an extract of all he had seen heard and done for 10 years past He had two Sons and one daughter grown to man and womanhood and the same number of less size his oldest son was married to a Snake Squaw and his daughter to a man of the Same nation The others yet remained single. After supper was over the females retired from the lodge and the principal men assembled to smoke and hear the news which occupied the time till near midnight when the assembly broke up the men retiring to their respective lodges and the women returned. I passed the time as pleasantly at this place as ever I did among Indians in the daytime I rode about the Valley hunting water fowl who rend the air at this season of the year with their cries and at night the Old Chief would amuse me with traditionary tales mixed with the grossest superstition some of which were not unlike the manners of Ancient Israelites. There seems to be a happiness in ignorance which knowledge and Science destroys here is a nation of people contented and happy they have fine horses and lodges and are very partial to the rifles of the white man If a Eutaw has 8 or 10 good horses a rifle and ammunition he is contented if he fetches a deer at night from the hunt joy beams in the faces of his wife and children and if he returns empty a frown is not seen in the countenances of his companions. The Buffaloe have long since left the shores of these Lakes and the hostile blackfeet have not left a footprint here for many years. During my stay with these Indians I tried to gain some information respecting the southern limits of the Salt Lake

Journal of a Trapper

By Osborne Russell

---

but all that I could learn was that it was a sterile barren mountainous Country inhabited by a race of depraved and hostile savages who poisoned their arrows and hindered the exploring of the country. The Chiefs son informed me he had come from the largest Island in the lake a few days previous having passed the winter upon it with his family which he had conveyed backwards and forth on a raft of bulrushes about 12 ft square. He said there was large numbers of antelope on the Island and as there was no wood he had used wild Sage for fuel. The Old Chief told me he could recollect the time when the Buffaloe passed from the main land to the island without swimming and that the depth of the waters was yearly increasing. After obtaining all the furs I could from the Eutaws I started towards Fort Hall on the 27th of March and travelled along the borders of the Lake about 25 Mls. The fire had run over this part of the country the previous autumn and consumed the dry grass The new had sprung up to the height of 6 inches intermingled with various kinds of flowers in full Bloom. The shore of the Lake was swarming with waterfowls of every species that inhabits inland lakes. The next day I went on to Weavers river April 1st I left Wavers river and travelled along the [shore] to the NE extremity of the lake about 25 Mls. The next day I went on to Bear river and struck it about 15 Mls below Cache Valley and twelve Mls from the mouth There I found my winter Comrades and staid one night and then pursued my journey towards Fort Hall where I arrived on the 7th of April I hunted Beaver round the country near the Fort until the 15 of June when the party arrived from the Columbia river accompanied by a Presbyterian Missionary with his wife and one child on their way to the States. I left the Fort with them and conducted them to Green river where we arrived on the 5th of July when learning that no party was going to the States they concluded to return to the Columbia River and we retraced our steps to Fort Hall where we arrived on the 8th dy of August. I remained at the Fort until the 15 Sepr. and then started with Elbridge and my old Comrade from Vermont to hunt a few more Beaver we went to the head waters of Blackfoot where we staid 10 dys. and then crossed the mountain in a SW direction on to Bear river which we struck about 25 Mls below the Snake Lake. We continued huntin Beaver and Antelope between this place and the Soda Springs until the 10th of Octr. We then travelled down Bear river to Cache valley where we stopped until the 21st thence we followed down the river near where it empties into the Salt Lake. Along the bank of this stream for about 10 Mls from the Lake extends a barren clay flat destitute of Vegetation excepting a few willows along the banks of the river and scattering spots of Salt grass and Sage in one place there was about 4 or 5 acres covered about 4 inches deep with the most beautiful salt I ever saw. two crusts had formed one at the bottom and the other on the top which had protected it from being the least soiled between those crusts the salt was Completely dry loose and composed of very small grains of a snowy whiteness. We stopped about this place until the 5 of Novr. and then returned to Fort Hall where after remaining a few days we concluded to go on to the head streams of Port Neuf and stop until the waters froze up. We travelled up about 40 Mls and arranged an encampment in a beautiful valley as the weather began to grow cold - In the year 1836 large bands of Buffaloe could be seen in almost every little Valley on the small branches of this Stream at this time the only traces which could be seen of them were the scattered bones of those that had been killed. Their trails which had been made in former years deeply indented in the earth were over grown with grass and weeds The trappers often remarked to each other as they rode over these lonely plains that it was time for the White man to leave the mountains as Beaver and game had nearly disappeared On the 15th of Novr I started up a high mountain in search of sheep after

Journal of a Trapper

By Osborne Russell

---

hunting and scrambling over the rocks for half the day without seeing any traces of them I sat down upon a rock which overlooked the country below me at length casting a glance along the South side of the Mountain I discovered a large Grizzly bear sitting at the mouth of its den I approached within about 180 paces shot and missed it. he looked round and crept slowly into his den I reloaded my rifle went up to the hole and threw down a stone weighing 5 or 6 lbs which soon rattled to the bottom and I heard no more I then rolled a stone weighing 3 or 400 lbs into the den stepped back two or three steps and prepared myself for the out come. The Stone had scarcely reached the bottom when the Bear came rushing out with his mouth wide open and was on the point of making a spring at me when I pulled trigger and Shot him thro. the left shoulder which sent him rolling down the Mountain It being near night I butchered him and left the Meat lying and returned to Camp. The next day I took the meat to camp where we salted and smoked it ready for winters use. We stopped about on these streams untill the 15th Decr. then returned to Fort Hall where we staid until the 24th Mrch. The winter was unusually Severe. The snow was 15 inches deep over the valley after settling and becoming hard, we had no thawing weather until the 18th of Mrch. when it began to rain and continued 4 dys and nights which drove the snow nearly all from the plains. Mch. 25 I started in company with Alfred Shutes my old Comrade from Vermont to go to the Salt Lake and pass the Spring hunting water fowls eggs and Beaver. We left the Fort and travelled in a South direction to the mountain about 30 Mls. The next day we travelled South about 15 Mls thro. a low defile and the day following we crossed the divide and fell onto a stream called "Malade" or Sick river which empties into Bear river about 10 Mls from the mouth. This stream takes its name from the Beaver which inhabit it living on poison roots. Those who eat their meat in a few hours become sick at the stomach and the whole system is filled with cramps and severe pains but I have never known or heard of a persons dying with this disease We arrived at the mouth of Bear river on the 2d of April. Here we found the ground dry the grass green and myriads of Swans, Geese Brants and Ducks which kept up a continual hum day and night assisted by the uncouth notes of the Sand hill Cranes. The geese Ducks and Swans are very fat at this season of the year We caught some few Beaver and feasted on Fowls and Eggs, until the 20th May and returned to the Fort where we stopped until the 20th June when a small party arrived from the Mouth of the Columbia river on their way to the United States and my comrade made up his mind once more to visit his native Green Mountains after an absence of 16 years whilst I determined on going to the Mouth of the Columbia and settle myself in the Willamette or Multnoma Valley I accompanied my comrade up Ross's fork about 25 Mls on his journey and the next morning after taking an affectionate leave of each other. I started to the mountain for the purpose of killing Elk and drying meat for my journey to the Willamette Valley. I ascended to the top of Rosses mountain (on which the snows remain till the latter part of Aug.) Sat down under a pine and took a last farewell view of a country over which I had travelled so often under such a variety of circumstances The recollections of the past connected with the scenery now spread out before me put me somewhat in a Poetical humour and for the first time I attempted to frame my thoughts into rhyme but if Poets will forgive me for this intrusion I shall be cautious about trespassing on their grounds in future. In the evening I killed an Elk and on the following day cured the meat for packing from thence I returned to the fort where I staid till the 22d Aug In the meantime there arrived at the Fort a party of Emigrants from the States on their way to Oregon Territory among whom was Dr. E White U S sub agent for the Oregon Indians. 23d I started with

Journal of a Trapper

By Osborne Russell

---

them and arrived at the Falls of the Willamette river on the 26 day of Septr. 1842. It would be natural for me to suppose that after escaping all the danger attendant for upon nearly nine years residence in a wild inhospitable region like the Rocky Mountains where I was daily and a great part of the time hourly anticipating danger from hostile Savages and other sources, I should on arriving in a civilized and enlightened community live in comparative security free from the harassing intrigues of Dames Fortunes Eldest daughter but I found it was all a delusion for danger is not always the greatest when most apparent as will appear in the sequel. On arriving at the Falls of the Willamette I found a number of Methodist Missionaries and American Farmers had formed themselves into a Company for the purpose of Erecting Mills and a Sawmill was then building on an Island standing on the brink of the Falls which went into operation in about 2 months after I arrived In the meantime Dr John McLoughlin a chief Factor of the Hudson Bay Co. who contemplated leaving the service of the Company and permanently settling with his family and Fortune in the Willamette Valley laid off a town (the present Oregon City) on the east side of the falls and began erecting a sawmill on a site he had prepared some years previous by cutting a race thro. the rock to let the water on to his works when they should be constructed. The following Spring the American Co commenced building a flour Mill and I was employed to assist in its construction. On the 6th day of June I was engaged with the contractor in blasting off some points of rock in order to sink the water sill to its proper place when a blast exploded accidentally by the concussion of small particles of rock near the Powder a piece of rock weighing about 60 lbs. struck me on the right side of the face and knocked me senseless 6 feet backwards

I recovered my senses in a few minutes and was assisted to walk to my lodgings. Nine particles of rock of the size of wild goose shot Each, had penetrated my right eye and destroyed it forever. the Contractor escaped with the loss of two fingers of his left hand

APPENDIX

It has been my design whilst Keeping a journal to note down the principal circumstances which came under my immediate observation as I passed along and I have mostly deferred giving a general description of Indians and animals that inhabit the Rocky Mountains until the latter end in order that I might be able to put the information I have collected in a more compact form. I have been very careful in gathering information from the most intelligent Indians and experienced White hunters but have excluded from this journal such parts (with few exceptions) as I have not proved true by experience. I am fully aware of the numerous statements which have been given to travellers in a jocular manner by the hunters and traders among the Rocky Mountains merely to hear themselves talk or accoring to the Mountaineers expression give them a long yarn or `Fish Story` to put in their journals. and I have frequently seen those `Fish Stories` published with the original very much enlarged which had not at first the slightest ground for truth to rest upon It is utterly impossible for a person who is merely travelling thro. or even residing one or two years in the Rock Mountains to give an accurate description of the Country or its Inhabitants

I have never known but one Rocky Mountain[eer] to keep a regular journal, and he could not have visited the Northern part of them as I am confident his Compiler (Mr. Flint) would not knowingly be led into such errors as occur in James O`Patties Journal, both in regard to the location of the country and Indians inhabiting the northern section of it. He says the `Flathead nation of Indians flattened their heads and lived between the Platte and Yellow Stone rivers` which is not nor ever was the case in either instance, he also says that Lewi`s river and the Arkansas head

Journal of a Trapper

By Osborne Russell

---

near each other in Long's Peak. I never was at Long's Peak or the head of the Arkansas river but am fully confident can [not] be within 300 Mls. of the source of Lewi's river. These are among the numerous errors which I discovered in reading James O Pattie's Journal Embellished by Mr. Flint of Cincinnati These are among the reasons for which I offer this to public view hoping that it not only may be of interest to myself but the means of correcting some erroneous statements which have gone forth to the world unintentionally perhaps by their authors.

THE WOLVERINE, CARCAJOU OR GLUTTON

This Species of animals is very numerous in the Rocky Mountains and very mischievous and annoying to the Hunters They often get into the traps setting for Beaver or searching out the deposits of meat which the weary hunter has made during a toilsome days hunt among mountains too rugged and remote for him to bear the reward of his labors to the place of Encampment, and when finding these deposits the Carcajou carries off all or as much of the contents as he is able secreting it in different places among the snow rocks or bushes in such a manner that it is very difficult for man or beast to find it. The avaricious disposition of this animal has given rise to the name of Glutton by Naturalists who suppose that it devours so much at a time as to render it stupid and incapable of moving or running about but I have never seen an instance of this Kind on the contrary I have seen them quite expert and nimble immediately after having carreyd away 4 or 5 times their weight in meat. I have good reason to believe that the Carcajou's appetite is easily satisfied upon meat freshly killed but after it becomes putrid it may become more Voracious but I never saw one myself or a person who had seen one in a stupid dormant state caused by Gluttony altho I have often wished it were the case The body is thick and long the legs short, the feet and Claws are longer in proportion than those of the Black bear which it very much resembles. with the exception of its tail which is 12 inches long and bushy. Its body is about 3 ft long and stands fifteen inches high its colour is black except along the sides which are of a dirty white or light brown -

Its movements are somewhat quicker than those of the Bear and it climbs trees with ease. I have never known either by experience or information the Carcajou to prey upon animals of its own killing larger than very young fawns or lambs altho. it has been described by Naturalists and generally believed that it climbs trees and leaps down upon Elk Deer and other large animals and clings to their back till it kills them in spite of their efforts to get rid of it by speed or resistance but we need go no further than the formation of the animal to prove those statements erroneous. Its body legs feet and mouth are shaped similarly to the Black Bear as has been already stated but its claws are somewhat longer and straighter in proportion and like the Bear its claws are somewhat blunted at the points which would render it impossible for them to cling to the back of an Elk or Deer while running. I do not pretend to say however what may be its habits in other countries I only write from Experience. They do not den up like the Bear in winter but ramble about the streams among the high mountains where they find springs open - its hair is 3 inches long and in the Summer is coarse like the Bear but in winter it is near as fine as that of the Red Fox The female brings forth its young in April and generally brings two at a birth

THE WOLF

Of this Species of animals there are several kinds as the Buffaloe Wolf the Big Prarie Wolf and the small prarie or Medicine Wolf. The Buffaloe wolf is from 2 to 3 ft high and from 4 to 5 ft long from the tip of the nose to the insertion of the tail its hair is long coarse and shaggy Its color

Journal of a Trapper

By Osborne Russell

---

varies from a dark gray to a snowy whiteness. They are not ferocious towards man and will run at sight of him. The big Prarie wolf is 2 ft high and 3 1/2 ft long; its hair is long and shaggy: its color is a dirty grey often inclining to a brown or brindle. The least kind is little Prarie or Medicine Wolf: its size is somewhat larger than the red fox: its color is brownish grey and its species something between the Big Wolf and the Fox. The Indians are very superstitious about this animal when it comes near a Village and barks they say there is people near Some pretend to distinguish between its warning the approach of friends and enemies and in the latter case I have often seen them secure their horses and prepare themselves to fight. I have often seen this prophecy tolerably accurately fulfilled and again I have as often seen it fail but a supperstitious Indian will always account for the failure The habits of these three kinds of wolves are similar Their rutting season is in March, the female brings forth from 2 to 6 at a birth

THE PANTHER

This animal is rarely seen in the plains but confines itself to the more woody and mountainous districts its color is light brown on the back and the belly is a sort of ash color: its length is 5 ft from the tip of the nose to the insertion of the tail which is about 1/2 the length of the body it is very destructive on Sheep and other animals that live on high mountains but will run at the sight of a man and has a great antipathy to fire -

THE MARMOT

This animal inhabits the rocks and precipices of the highest mountains its color is a dark brown its size less than the smallest rabbit: its ears are shaped like those of the rat and its cry resembles that of the bleating of the young lamb during the summer it collects large quantities of hay and moss with which it secures its habitation from the cold during the winter. On my first acquaintance with this animal I was led to suppose that the hay which they accumulated in Summer was calculated to supply them with food during the winter but this I found to be erroneous by visiting their habitation in the early part of Spring and finding their stock in nowise diminished. I have good reason to suppose that they lie dormant during the winter.

THE PORCUPINE

This species of animals are too well known to need a minute description in this place they are however very numerous and their flesh is much esteemed by some of the Indian tribes for food and their quills are held in the highest estimation by all for embroidering their dresses and other [furniture] which is done with peculiar elegance and uncommon skill it subsists chiefly on the bark of trees and other Vegetables.

THE BADGER

This species of animals are numerous in the Rocky Mountains their skins are much used by the Snake and Bonnak Indians for clothing as well as their flesh for food. They make their habitation in the ground in the most extensive plains and are found 10 Mls from water -

THE GROUND HOG

These animals are also very numerous and their skins much used by the Indians for clothing in sections of country where Deer and Buffaloe are not to be found they are not so large as the ground hog of the N States but are in all respects the same species. They live among the rocks near streams and feed upon grass and other vegetables. The shrill cry with which their sentinels give warning danger resembles that of the U States

THE GRIZZLY BEAR

Journal of a Trapper

By Osborne Russell

---

Much has been said by travellers in regard to this animal yet while giving a description of animals that inhabit the Rocky Mountains I do not feel justified in silently passing over in silence the most ferocious species without endeavoring to contribute some little information respecting it which altho it may not be important I hope some of it at least will be new It lives chiefly upon roots and berries being of too slow a nature to live much upon game of its own killing and from May to Septr. it never tastes flesh. The rutting season is in Novr. and the Female brings forth from 1 to 3 at a birth I have not been able to ascertain the precise time that the female goes with young but I suppose from experience and enquiry it is about 14 weeks. The young are untameable and manifest a savage ferocity when scarcely old enough to crawl Several experiments have been tried in the Rocky Mountains for taming them but to no effect. They are possessed with great muscular strength I have seen a female which was wounded by a rifle ball in the loins so as to disable her kill her young with one stroke of the fore paw as fast as they approached her. If a young Cub is wounded an commences making a noise the mother immediately springs upon it and kills it when grown they never make a noise except a fearful growl they get to be fatter than any other animals in the Rocky Mts. during the season when wild fruit is abundant. The flesh of the Grizzly Bear is preferable to Pork - It likes in winter in caves in the Rocks or holes dug in the ground on high Ridges It loses no flesh while confined to its den in the winter but is equally as fat in the Spring when it leaves the den as when it enters it at the beginning of the winter. There is seldom to be found more than one in a den excepting the female and her young. I have seen them measure seven feet from the tip of the nose to the insertion of the tail. It will generally run from the scent of a man but when it does not get the scent it will often let him approach close enough to spring upon him and when wounded it is a dangerous animal to trifle with. Its speed is comparatively slow down hill but much greater in ascending it never climbs trees as its claws are too straight for that purpose.

THE BLACK BEAR

The Black Bear of the Mountains are much the same species of those in the States. In comparison with the Grizzly it is entirely harmless. It is seldom found in the plains but inhabits the Timbered and mountainous districts They are not very numerous and their habits are too well known to need a detailed description here

THE MOUNTAIN SHEEP OR BIG HORN

These animals answer somewhat to the description given by Naturalists of the Musmon or wild sheep which are natives of Greece Corsica and Tartary. The male and female very much resemble the domestic ram and Ewe but are much larger The horns of the males are much larger in proportion to the body than the domestic rams but those of the females are about in the same proportion to the domestic Ewe. In the Month of May after they have shed their old coat and the new one appears their color is dark blue or mouse color except the extremity of the rump and hinder parts of the thighs which are white. As the season advances and the hair grows long it gradually turns or fades to a dirty brown In the Mo. of Decr its hair is about 3 inches long thickly matted together rendering it impenetrable to the cold. Its hair is similar in texture to that of the Deer and like the latter it is short and smooth upon its forehead and legs. They inhabit the highest and most craggy mountains and never descend to the plains unless compelled by necessity. In the winter season the snow drives them down to the low craggy mountains facing the South but in the spring as the snow begin to recede they follow it, keeping close to where the grass is short and

---

Journal of a Trapper

By Osborne Russell

---

tender - Its speed on the smooth ground is slower than the Deer - but in climbing steep rocks or precipices it is almost incredible insomuch that the wolf lynx and panther give up the Chase when ever the sheep reach the rugged crags

The fearful height from which it jumps and the small points on which it alights without slipping or missing its footing is astonishing to its pursuers whether man or beast its hooves are very hard and pointed and it reposes upon the most bleak points of rocks both in summer & winter. The male is a noble looking animal as he stands upon an elevated point with his large horns curling around his ears like the coils of a serpent and his head held proudly erect disdaining the lower region and its inhabitants its flesh has a similar taste to Mutton but its flavor is more agreeable and the meat more juicy Their rutting season is in Novr. when the rams have furious battles with each other in the same manner as the domestic rams - The victor often Knocks his opponent over a high precipice when he is dashed to pieces in the fall. The sound of their heads coming in contact is often heard a mile distant - The Female produces from one to 3 at a birth the lambs are of a whitish color very innocent and playful. Hunting Sheep is often attended with great danger especially in the winter season when the rocks and precipices are covered with snow and ice but the excitement created by hunting them often enables the hunter to surmount obstacles which at other times would seem impossible The skins when dressed are finer softer and far superior to those of the Deer for clothing It is of them that the Squaws make their dresses which they embroider with beads and Porcupine quills dyed with various colors which are wrought into figures displaying a tolerable degree of taste and ingenuity

THE GAZELLE OR MOUNTAIN ANTELOPE

This animal for beauty and fleetness surpasses all the ruminating animals of the Rocky Mountains: its body is rather smaller than the common Deer: its color on the back and upper part of the sides is light brown the hinder part of the thighs and belly are white the latter having a yellowish east. The under part of the neck is white with several black stripes running across the throat down to the breast: its legs are very slim neat and small; its ears are black on the inside and around the edges with the remainder brown its horns are also black and flattened. the horns of the males are much longer than those of the females but formed in the same manner they project up about 8 inches on the males and then divide into 2 branches the one inclining backwards and the other forward with sometimes an additional branch coming out near the head inclining inward the two upper branches are 6 inches long the hindermost forming a kind of hook the nose is black and a strip of the same color runs round under the eyes and terminates under the ears: it runs remarkably smooth and in the summer season the fleetest horses but rarely overtake it. Its natural walk is stately and elegant but it is very timid and fearful and can see to a great distance but with all its timidity and swiftness of foot its curiosity often leads it to destruction if it discovers anything of a strange appearance (particularly anything red) it goes directly to it and will often approach within 30 paces they are very numerous in the plains but seldom found among timber, their flesh is similar to venison the female produces two at a birth and the young are suckled until a month old - They are easily domesticated

THE BLACK TAILED DEER

This animal is somewhat larger than the common Deer of the US: its ears are very long from which it has derived the appellation of Mule Deer: its color in summer is red but in the latter part of Aug. its hair turns to a deep blue ground with about half an inch of white on each hair

---

Journal of a Trapper

By Osborne Russell

---

one fourth of an inch from the outer ends which presents a beautiful grey color: it lives among the mountains and seldom descends among the plains: its flesh is similar in every respect to the common Deer. the tail is about 6 inches long and the hair's upon it smooth except upon the end where there is a small tuft of black. The female goes six months with young and generally produces two at a birth the young is brot forth in April and remains in an almost helpless state for one month during its state of inability the mother secrets it in some secure Place in the long grass and weeds where it remains contented while she often wanders half a mile from it in search of food. The color of the fawn is red intermingled with white spots, and it is generally believed by Indians that so long as those spots remain (which is about 2 1/2 months) that no beast of prey can scent them - This I am inclined to believe as I have often seen wolves pass very near the place where fawns were laying without stopping or altering their course and were it not for some secret provision of nature the total anihilation of this species of animal would be inevitable in those countries invested by wolves and other beasts of prey as in the Rocky Mts - This safeguard is given by the Great Founder of nature not only to the Black Tailed Deer but all of the species including Elk and Antelope whose young are spotted at their birth I do not consider that the mere white spots are a remedy against the Scent of wild beasts. but they mark the period of inability for when those disappear the little animals are capable of eluding their pursuers by flight; the male like the common Deer drops its horns in Feby. it then cannot be distinguished from the female except by its larger size

#### THE RABBIT

This species of animals is very numerous and various in their sizes and colors. The large Hares of the plains are very numerous, the common sized rabbit are equally or more numerous than the others and there is also the small brown rabbit which does not change its color during the winter as do the others, but the most singular kind is the black rabbit it is a native of mountaneous forests its color is Coal black excepting two small white spots which are on the throat and lower part of the belly In winter its color is milk white: its body is about the size of the common rabbit with the exception of its ears which are much longer Another kind is the Black tailed Rabbit of the plains it is rather larger than the common rabbit and derives its name from the color of its tail which never changes its color

#### THE ELK

This animal is Eight feet long from the tip of the nose to the insertion of the tail and stands 4 1/2 ft. high its proportions are similar to those of the Deer except the tail which is 4 inches long and composed of a black gummy substance intermingled with fibres around the bone, the whole being clothed with skin and covered with hair like the body. Its color in summer is red but in winter is a browish grey except the throat and belly the former being dark brown and the latter white inclining to yellow extending to the hind part of the thighs as far as the insertion of the tail - They are very timid and harmless even when so disabled as to render escape impossible its speed is very swift when running single but when running in large bands they soon become wearied by continual collision with each other and if they are closely pursued by the hunter on horse back they soon commence dropping down flat on the ground to elude their pursuers and will suffer themselves to be killed with a knife in this position: when the band is first located the hunters keep at some distance behind to avoid dispersing them and to frighten them the more a continual noise is kept up by hallooging and shooting over them which causes immediate confusion and collision of

Journal of a Trapper

By Osborne Russell

---

the band and the weakest Elk soon begin to drop on the ground exhausted: their rutting time is in Sepr. when they collect in immense bands among the timber along the streams and among the Mts. It has been stated by Naturalists that the male is a very formidable and dangerous animal when pursued but I never saw it act on the offensive neither have I ever known one to offer resistance in defense of itself against man otherwise than by involuntary motions of its head or feet when too much disabled to raise from the ground. I have often seen the female come about the hunter who has found where her young is secreted uttering the most pitiful and persuasive moans and pleading in the most earnest manner that a dumb brute is capable of for the life of her young This mode of persuasion would I think excite in the sympathy breast of any human that was not entirely destitute of the passion - The fawn has a peculiar cry after it is able to run which resembles the faint scream of a child by which it answers the Dam who calls it by a note similar to the scream of a woman in distress

In the month of Sepr. the males have a peculiar shrill call which commences in a piercing whistle and ends in a coarse gurgling in the throat by this they call the females to assemble and each other to the combat in which by their long antlers they are rendered formidable to each other the hair stands erect and the head is lowered to give or receive the attack but the Victor seldom pursues the vanquished

#### THE BUFFALOE OR BISON

This animal has been so minutely described by travellers that I have considered it of little importance to enter into the details of its shape and size, and shall therefore omit those descriptions with which I suppose the public to be already acquainted, and try to convey some idea of its peculiarities which probably are not so well known. The vast numbers of these animals which once traversed such an extensive region in Nth. America are fast diminishing. The continual increasing demand for robes in the civilised world has already and is still contributing in no small degree to their destruction, whilst on the other hand the continual increase of wolves and other 4 footed enemies far exceeds that of the Buffaloe when these combined efforts for its destruction is taken into consideration, it will not be doubted for a moment that this noble race of animals, so useful in supplying the wants of man, will at no far distant period become extinct in North America. The Buffaloe is already a stranger, altho so numerous 10 years ago, in that part of the country which is drained by the sources of the Colorado, Bear and Snake Rivers and occupied by the Snake and Bonnack Indians. The flesh of the Buffaloe Cow is considered far superior to that of the domestic Beef and it is so much impregnated with salt that it requires but little seasoning when cooked. All the time, trouble and care bestowed by man upon improving the breed and food of meat cattle seems to be entirely thrown away when we compare those animals in their original state which are reared upon the food supplied them by Nature with the same species when domesticated and fed on cultivated grasses and grains and the fact seems to justify the opinion that Nature will not allow herself to be outdone by art for it is fairly proved to this enlightened age that the rude and untaught savage feasts on better beef and Mutton than the most learned and experienced Agriculturists now if every effect is produced by a cause perhaps I may stumble upon the cause which produces the effect in this instance at any rate I shall attempt it - In the first place, the rutting season of the Buffaloe is regular commencing about the 15th of July when the males and females are fat, and ends about the 15 of Aug. Consequently the females bring forth their young in the latter part of April and the first of May when the grass is most luxuriant and thereby en-

Journal of a Trapper

By Osborne Russell

---

ables the cow to afford the most nourishment for her calf and enables the young to quit the natural nourishment of its dam and feed upon the tender herbage sooner than it would at any other season of the year. Another proof is that when the rutting season commences the strongest healthiest and most vigorous Bulls drive the weaker ones from the cows hence the calves are from the best breed which is thereby kept upon a regular basis. In summer season they generally go to water and drink once in 24 hours but in the winter they seldom get water at all. The cows are fattest in Octr and the Bulls in July The cows retain their flesh in a great measure throughout the winter until the Spring opens and they get at water from whence they become poor in a short time So much for the regularity of their habits and the next point is the food on which they subsist The grass on which the Buffaloe generally feeds is short, firm and of the most nutritious kind. The salts with which the mountain regions is much impregnated are imbibed in a great degree by the vegetation and as there is very little rain in Summer Autumn or winter the grass arrives at maturity and dries in the sun without being wet it is made like hay; in this state it remains throughout the winter and while the spring rains are divesting the old growth of its nutritious qualities they are in the meantime pushing forward the new - The Buffaloe are very particular in their choice of grass always preferring the short of the uplands to that of the luxuriant growth of the fertile alluvial bottoms. Thus they are taught by nature to choose such food as is most palatable and she has also provided that such as is most palatable is the best suited to their condition and that condition the best calculated to supply the wants and necessities of her rude untutored children for whom they were prepared. Thus nature looks with a smile of derision upon the magnified efforts of art to excel her works by a continual breach of her laws The most general mode practiced by the Indians for killing Buffaloe is running upon horseback and shooting them with arrows but it requires a degree of experience for both man and horse to kill them in this manner with any degree of safety particularly in places where the ground is rocky and uneven. The horse that is well trained for this purpose not only watches the ground over which he is running and avoids the holes ditches and rocks by shortening or extending his leaps but also the animal which he is pursuing in order to prevent being `horned' when tis brot suddenly to bay which is done instantaneously and if the Buffaloe wheel to the right the horse passes as quick as thought to the left behind it and thereby avoids its horns but if the horse in close pursuit wheels on the same side with the Buffaloe he comes directly in contact with its horns and with one stroke the horses entrails are often torn out and his rider thrown headlong to the ground After the Buffaloe is brought to bay the trained horse will immediately commence describing a circle about 10 paces from the animal in which he moves continually in a slow gallop or trot which prevents the raging animal from making a direct bound at him by keeping it continually turning round until it is killed by the rider with arrows or bullets. If a hunter discovers a band of Buffaloe in a place too rough and broken for his horse to run with safety and there is smooth ground nearby he secretly rides on the leward side as near as he can without being discovered he then starts up suddenly without apparently noticing the Buffaloe and gallops in the direction he wishes the band to run the Buffaloe on seeing him run to the plain start in the same direction in order to prevent themselves from being headed and kept from the smooth ground The same course would be pursued if he wished to take them to any particular place in the mountains - One of the hunters first instructions to an inexperienced hand is "run towards the place where you wish the Buffaloe to run but do not close on them behind until they get to that place" for instance if the hunter is to the right

Journal of a Trapper

By Osborne Russell

---

the leading Buffalo keep inclining to the right and if he should fall in behind and crowd upon the rear they would separate in different directions and it would be a mere chance if any took the direction he wished them - When he gets to the plain he gives his horse the rein and darts thro the band selects his victim reins his horse up along side and shoots and if he considers the wound mortal he pulls up the rein the horse knowing his business keeps along galloping with the band until the rider has reloaded when he darts forward upon another Buffalo as at first A Cow seldom stops at bay before she is wounded and therefore is not so dangerous as a Bull who wheels soon after he is pushed from the band and becomes fatigued whether he is wounded or not. When running over ground where there is rocks holes or gullies the horse must be reined up gradually if he is reined at all there is more accidents happens in running Buffaloes by the riders getting frightened and suddenly checking their horses than any other way. If they come upon a Gully over which the horse can leap by an extra exertion the best plan is to give him the rein and the whip or spur at the same time and fear not for any ditch that a Buffalo can leap can be cleared with safety by a horse and one too wide for a Buffalo to clear an experienced rider will generally see in time to check his horse gradually before he gets to it - And now as I have finished my description of the Buffalo and the manner of killing them I will put a simple question for the reader's solution -

If Kings Princes Nobles and Gentlemen can derive so much sport and Pleasure as they boast of in chasing a fox or simple hare all day? which when they have caught is of little or no benefit to them what pleasure can the Rocky Mountain hunter be expected to derive in running with a well trained horse such a noble and stately animal as the Bison? which when killed is of some service to him. There are men of noble birth noble Estate and noble minds who have attained to a tolerable degree of perfection in fox hunting in Europe and Buffalo hunting in the Rocky Mountains, and I have heard some of them decide that the points would not bear a comparison if the word Fashion could be stricken from the English language It also requires a considerable degree of practice to approach on foot and kill Buffalo with a Rifle A person must be well acquainted with the shape and make of the animal and the manner which it is standing in order to direct his aim with certainty - And it also requires experience to enable him choose a fat animal the best looking Buffalo is not always the fattest and a hunter by constant practice may lay down rules for selecting the fattest when on foot which would be no guide to him when running upon horseback for he is then placed in a different position and one which requires different rules for choosing.

#### THE SNAKE INDIANS

The appellation by which this nation is distinguished is derived from the Crows but from what reason I have never been able to determine They call themselves Sho-sho-nies but during an acquaintance of nine years during which time I made further progress in their language than any white man had done before me I never saw one of the nation who could give me either the derivation or definition of the word Sho sho nie - Their country comprises all the regions drained by the head branches of Green and Bear rivers and the East and Southern head branches of Snake River They are kind and hospitable to whites thankful for favors indignant at injuries and but little addicted to theft in their large villages I have seldom heard them accused of inhospitality on the contrary I have found it to be a general feature of their character to divide the last morsel of food with the hungry stranger let their means be what it might for obtaining the next meal The Snakes and in fact most of the Rocky Mountain Indians believe in a supreme Deity who resides

Journal of a Trapper

By Osborne Russell

---

in the Sun and in infernal Deities residing in the Moon and Stars but all subject to the Supreme control of the one residing in the Sun - They believe that the Spirits of the departed are permitted to watch over the actions of the living and every warrior is protected by a peculiar guardian Angel in all his actions so long as he obeys his rules a violation of which subjects the offender to misfortunes and disasters during the displeasure of the offended Deity. Their Prophets Jugglers or Medicine Men are supposed to be guided by Dieties differing from the others insomuch as he is continually attended upon the devotee from birth gradually instilling into his mind the mysteries of his profession which cannot be transmitted from one mortal to another. The prophet or juggler converses freely with his supernatural director who guides him up from childhood in his manner of eating drinking and smoking particularly the latter for every Prophet has a different mode of handling filling lighting and smoking the big Pipe - Such as profound silence in the circle whilst the pipe is lighting the pipe turned round three times in the direction of the sun by the next person on the right previous to giving it to him or smoking with the feet uncovered Some cannot smoke in the presence of a female or a dog and a hundred other movements equally vague and superstitious which would be too tedious to mention here. A plurality of wives is very common among the Snakes and the marriage contract is dissolved only by the consent of the husband after which the wife is at liberty to marry again Prostitution among the women is very rare and fornication whilst living with the husband is punished with the utmost severity The women perform all the labor about the lodge except the care of the horses. They are cheerful and affectionate to their husbands remarkably fond and careful of their children

The Government is a Democracy deeds of valor promotes the Chief to the highest points attainable from which he is at any time liable to fall for misdemeanor in office: their population amts. to between 5 and 6,000 about half of which live in large Villages and range among the Buffaloe: the remainder live in small detached companies comprising of from 2 to 10 families who subsist upon roots fish seeds and berries They have but few horses and are much addicted to thieving from their manner of living they have received the appellation of "Root Diggers -they rove about in the mountains in order to seclude themselves from their warlike enemies the Blackfeet - their arrows are pointed with quartz or obsideon which they dip in poison extracted from the fangs of the rattle snake and prepared with antelopes liver these they use in hunting and war and however slight the wound may be that is inflicted by one of them - death is almost inevitable but the flesh of animals killed by these arrows is not injured for eating - The Snakes who live upon Buffaloe and live in large villages seldom use poison upon their arrows either in hunting or war - They are well armed with fusees and well supplied with horses they seldom stop more than 8 or 10 dys in one place which prevents the accumulation of filth which is so common among Indians that are Stationary. their lodges are spacious neatly made of dressed Buffaloe skins, sewed to gether and set upon 11 or 13 long smooth poles to each lodge which are dragged along for that purpose. In the winter of 1842 the principal Chief of the Snakes died in an appoplectic fit and on the following year his brother died but from what disease I could not learn. These being the two principal pillars that upheld the nation the loss of them was and is to this day deeply deplored - immediately after the death of the latter the tribe scattered in smaller villages over the country in consequence of having no chief who could control and keep them together - their ancient warlike spirit seemed to be buried with their leaders and they are fast falling into degradation, without a head the body is of little use

### THE CROW INDIANS

This once formidable tribe once lived on the North side of the Missouri East of the mouth of the Yellow Stone about the year 1790 they crossed the Missouri and took the region of country which they now inhabit, by conquest from the Snakes It is bounded on the East and South by a low range of Mountains called the "Black Hills" on the West by the Wind river Mountains and on the North by the Yellow Stone river The face of the country presents a diversity of rolling hills and Valleys and includes several plains admirably adapted for grazing. the whole country abounds with Coal and Iron in great abundance and signs of Lead and Copper are not infrequently seen and gypsum exists in immense quarries. timber is scarce except along the streams and on the mountains wild fruit such as cherries service berries currants gooseberries and plums resembling the pomgranate are abundant - The latter grow on small trees generally 6 or 8 feet high varying in color and flavor from the most acute acid to the mildest sweetness - Hops grow spontaneously and in great abundance along the streams. When the Crows first conquered this country their numbers amounted to about 8,000 persons but the ravages of war and small pox combined has reduced their numbers to about 2,000. of which upwards of 1200 are females They are proud treacherous thievish insolent and brave when they are possessed with a superior advantage but when placed in the opposite situation they are equally humble submissive and cowardly Like the other tribes of Indians residing in the Rocky Mts. they believe in a Supreme Deity who resides in the Sun and lesser deities residing in the Moon and Stars. Their government is a kind of Democracy The Chief who can enumerate the greatest number of valiant exploits is unanimously considered the Supreme ruler All the greatest warriors below him and above a certain grade are Counsellors and take their seats in the council according to their respective ranks. the voice of the lowest rank having but little weight in discussing matters of importance. When a measure is adopted by the council and approved by the head Chief it is immediately put in force by the order of the military commander who is appointed by the Council to serve for an indefinite period A standing Company of soldiers is kept up continually for the purpose of maintaining order in the Village. The Captain can order any young man in the Village to serve as a soldier in turn and the council only can increase or diminish the number of soldiers at pleasure. The greatest Chiefs cannot violate the orders which the Capt. receives from the Council - No office or station is hereditary neither does wealth constitute dignity. The greatest Chief may fall below the meanest citizen for misdemeanor in office and the lowest citizen may rise to the most exalted station by the performance of valiant deeds - The Crows both male and female are tall well proportioned handsomely featured with very light copper coloured skins. Prostitution of their wives is very common but sexual intercourse between near relatives is [strictly] prohibited - when a young man is married he never after speaks to his mother in law nor the wife to the father in law altho they may all live in the same lodge If the husband wishes to say anything to the mother in law he speaks to the wife who conveys it to the mother and in the same way communication is conveyed between the wife and father in law - This custom is peculiar to the Crows They never intermarry with other nations but a stranger if he wishes can always be accommodated with a wife while he stops with the Village but cannot take her from it when he leaves - Their laws for killing Buffalo are most rigidly enforced. No person is allowed to hunt Buffalo in the vicinity where the village is stationed without first obtaining leave of the council - for the first offense the offenders hunting apparatus are broken and destroyed for second his horses are killed his property destroyed and he beaten with rods the third is punished by death

Journal of a Trapper

By Osborne Russell

---

by shooting - When a decree is given by the council it is published by the head Chief who rides to and fro thro. the village like a herald and proclaims it aloud to all - They generally kill their meat by surrounding a band of Buffalo and when once enclosed but few escape - The first persons who arrive at a dead Buffalo is entitled to one third of the meat and if the person who killed it is the fourth one on the spot he only gets the hide and tongue but in no wise can he get more than one third of the meat if a second and third person appears before It is placed on the horses designed for packing. A person whether male or female poor or rich gets the 2d or 3d division according to the time of arrival each one knowing what parts they are allowed - This is also a custom peculiar to the Crows which has been handed down from time immemorial - Their language is clear distinct and not intermingled with guttural sounds which renders it remarkably easy for a stranger to learn It is a high crime for a father or mother to inflict corporeal punishment on their male children and if a Warrior is struck by a stranger he is irretrievably disgraced unless he can kill the offender immediately Taking prisoners of war is never practiced with the exception of subjecting them to servile employments - Adult males are never retained as prisoners but generally killed on the spot but young Males are taken to the Village and trained up in their mode of warfare until they imbibe the Crow Customs and language when they are eligible to the highest station their deeds of valor will permit. The Crows are remarkably fond of gaudy and glittering ornaments. The Eye teeth of the Elk are used in connexion with [?] are used as a circulating medium and are valued according to their size - There exists among them many customs similar to those of the ancient Israelites A woman after being delivered of a male child cannot approach the lodge of her husband under 40 dys and for a female 50 is required - and 7 dys seperation for every natural menses. The distinction between clean and unclean beasts bears a great degree of similarity to the Jewish law. They are remarkable for their cleanliness and variety of cookery which exceeds that of any other tribe in the Rocky Mts. They seldom use salt but often season their cookery with herbs of various kinds and flavors.

Sickness is seldom found amongst them and they naturally live to a great age. There is no possibility of ascertaining the precise age of any Mountain Indians but an inference may be drawn with tolerable correctness from their outward appearance and such indefinite information from their own faint recollections of dates as may be collected by an intimate acquaintance with their habits customs traditions and manner of living I have never known a Mountain [Indian] to be troubled with the tooth ache or decayed teeth nither have I ever known a case of insanity except from known and direct causes. I was upon one particular occasion invited to smoke in a circle comprising thirteen aged Crow warriors the youngest of whom appeared to have seen upwards of 100 winters and yet they were all in good health and fine spirits - they had long since left the battle ground and council room to young aspirants of 60 and under it is really diverting to hear those hoary headed veterans when they are collected together conversing upon the good old times of their forefathers and condemning the fashions of the present age - They have a tradition among them that their most powerful Chief (who died sometime since) commanded the Sun and Moon to stand still two days and nights in the valley of Wind River whilst they conquered the Snakes and that they obeyed him. They point out the place where the same chief changed the wild sage of the prairie into a band of Antelope when the Village was in starving condition I have also been shown a spring on the west side of the Big horn river below the upper Mountain which they say was once bitter but thro. the medicine of this great Chief the waters were made sweet. They have

a great aversion to distilled spirits of any kind terming it the 'White mans fool water' and say if a Crow drink it he ceases to be a Crow and becomes a foolish animal so long as he senses are absorbed by its influence

THE BEAVER

The Beaver as almost every one knows is an amphibious animal but the instinct with which it is possessed surpasses the reason of a no small portion of the human race. Its average size is about 2 1/2 feet long from the point of the nose to the insertion of the tail, which is from 10 to 15 inches long and from 5 to 9 broad flat in the shape of a spade rounded at the corners covered with a thick rough skin resembling scales. the tail serves the double purpose of steering and assisting it thro. the water by a quick up and down motion The hind feet are webbed and the toe next the outside on each has a double nail which serves the purpose of a toothpick to extract the splinters of wood from their teeth as they are the only animals that cut large trees for subsistence they are also the only animals known to be furnished with nails so peculiarly adapted to the purpose for which they are used. Its color is of a light brown generally but I have seen them of a jet black frequently and in one instance I saw one of a light cream color having the feet and tail white The hair is of two sorts the one longer and coarser the other fine short and silky Their teeth are like those of the rat but are longer and stronger in proportion to the size of the animals. To a superficial observer they have but one vent for their excrements and urine but upon a closer examination without dissection seperate openings will be seen likewise 4 glands opening forward of the arms two containing oil with which they oil their coats the others containing the castorum a collection of gummy substance of a yellow color which is extracted from the food of the animal and conveyed thro. small vessels into the glands. it is this deposit which causes the destruction of the Beaver by the hunters - When a Beaver Male or female leaves the lodge to swim about their pond they go to the bottom and fetch up some mud between their forepaws and breast carry it on to the bank and emit upon it a small quantity of castorum - another Beaver passing the place does the same and should a hundred Beaver pass within the scent of the place they would each throw up mud covering up the old castorum and emit new upon that which they had thrown up. The Trapper extracts this substance from the gland and carries it in a wooden box he sets his trap in the water near the bank about 6 inches below the Surface throws a handful of mud on the bank about one foot from it and puts a small portion of the castorum thereon after night the Beaver comes out of his lodge smells the fatal bait 2 or 300 yds. distant and steers his course directly for it he hastens to ascend the bank but the traps grasps his foot and soon drowns him in the struggle to escape for the Beaver though termed an amphibious animal cannot respire beneath the water. The female brings forth her young in April and produces from 2 to 6 at a birth but what is most singular she seldom raises but 2 a male and a female. This peculiarity of the Beaver has often been a matter of discussion among the most experienced hunters whether the dam or father kills the young but I have come to the conclusion that it is the mother for the following reasons 1st The Male is seldom found about the lodge for 10 or 15 days after the female brings forth. 2dly there is always a male and female saved alive 3dly I have seen the dead kittens floating in the ponds freshly killed and at the same times have caught the male where he was living more than 1/2 a mile from the Lodge. I have found where beaver are confined to a limited space they kill nearly all the kittens which is supposed to be done to keep them from becoming too numerous and destroying the timber and undergrowth too fast - I have caught 50 full grown Beaver in a valley surrounded by mountains

---

Journal of a Trapper

---

and cascades where they had not been disturbed for 4 yrs and with this number there were but 5 or 8 kittens and yearlings. The young ones pair off generally at 3 yrs. of age to set up for themselves and proceed up or down a stream as instinct may suggest until they find the best place for wood and undergrowth connected with the most convenient place for building a dam which is constructed by cutting small trees and brush dragging them into the water on both sides of the stream and attaching one end to each bank while the other extends into the stream inclining upwards against the current then mud small stones and rubbish are dragged or pushed on to it to sink it to the bottom they proceed in this manner until the two ends meet in the middle of the stream the whole forming a sort of curved line across but the water raising often forces the dam down the stream until it becomes nearly strait - In the meantime they have selected a spot for the lodge either upon the bank or upon a small Island formed by the rising water - but it is generally constructed on an island in the middle of the pond with sticks and mud in such a manner that when the water is raised sufficiently high which is generally from 4 to 7 ft. it has the appearance of a potash kettle turned on the surface bottom upwards standing from 4 to 6 ft above the water there is no opening above the water but generally two below. The floor on which they sleep and have their beds of straw or grass is about 12 inches above the water level the room is arched over and kept neat and clean When the leaves begin to fall the Beavers commence laying in their winter store. They often cut down trees from 12 to 18 inches in diameter and cut off the branches covered with smooth bark into pieces from two to six feet long these they drag into the water float them to the lodge sink them to the bottom of the pond and there fasten them in this manner they proceed till they have procured about 1/2 a cord of wood solid measure for each Beavers winters supply - by this time the dam freezes over and all is shut up with ice. The Beaver has nothing to do but leap into the water thro. the subterranean passage and bring up a stick of wood which is to furnish him his meal this he drags by one end into the lodge eats off the bark to a certain distance then cuts off the part he has stripped and throws it into the water thro. another passage and so proceeds until he has finished his meal. When the Ice and snow disappears in the spring they clear their pond of the stripped wood and stop the leaks which the frosts have occasioned in their dam. Their manner of enlarging their lodge is by cutting out the inside and adding more to the out - the covering of the lodge is generally about 18 inches thick formed by sticks and mud intermingled in such a manner that it is very difficult for Man beast or cold to penetrate through it

THE HUNTER'S FAREWELL

Adieu ye hoary icy mantled towers  
That oftentimes pierce the onward fleeting mists  
Whose feet are washed by gentle summer showers  
While Phoebus' rays play on your sparkling crests  
The smooth green vales you seem prepared to guard  
Beset with groves of ever verdant pine  
Would furnish themes for Albions noble bards  
Far 'bove a hunters rude unvarnish'd rhymes  
Adieu ye flocks that skirt the mountains brow  
And sport on banks of everliving snow  
Ye timid lambs and simple harmless Ewes  
Who fearless view the dread abyss below-

Journal of a Trapper

Oft have I watched your seeming mad career  
While lightly tripping o'er those dismal heights  
Or cliffs o'erhanging yawning caverns drear  
Where none else treads save fowls of airy flight  
Oft have I climbed those rough stupendous rocks  
In search of food 'mong Nature's well fed herds  
Untill I've gained the rugged mountain's top  
Where Boreas reigned or feathered Monarchs soar'd  
On some rude cragg projecting from the ground  
I've sat a while my wearied limbs to rest  
And scann'd the unsuspecting flock around  
With anxious care selecting out the best  
The prize obtained with slow and heavy step  
Pac'd down the steep and narrow winding path  
To some smooth vale where chrystal streamlets met  
And skillful hands prepared a rich repast  
Then hunters jokes and merry humor'd sport  
Beguiled the time enlivened every face  
The hours flew fast and seemed like moments short  
'Til twinkling planets told of midnights pace  
But now those scenes of cheerful mirth are done  
The horned [herds] are dwindling very fast  
The numerous trails so deep by Bisons worn  
Now teem with weeds or over grown with grass  
A few gaunt Wolves now scattered or the place  
Where herds since time unknown to man have fed  
With lonely howls and sluggish onward pace  
Tell their sad fate and where their bones are laid  
Ye rugged mounts ye vales ye streams and trees  
To you a hunter bids his last farewell  
I'm bound for shores of distant western seas  
To view far famed Multnomahs fertile vale  
I'll leave these regions once famed hunting grounds  
Which I perhaps again shall see no more  
And follow down led by the setting sun  
Or distant sound of proud Columbia's roar

WILD LIFE IN THE ROCKY MOUNTAINS

Bibliographical Information

This work is a portion of a book originally published as:

Adventures in Mexico and the Rocky Mountains by George F. Ruxton, Esq. London: John Murray, Albemarle Street. 1847. Reprinted in 1849, 1861.

The book was published in the United States, under the same title, by Harper & Brothers, New York, 1848. It was reprinted in 1849, 1855, 1858, 1860.

Early in the 20th century, the Macmillan Company republished this book as two volumes in its "Outing Adventure Library" series, ed. by Horace Kephart. The first volume consisting of the initial chapters of the original book, was titled *Adventures in Mexico*, and was published in 1915. A second volume, titled *Wild Life in the Rocky Mountains*, included the remaining chapters covering Ruxton's travels in the Rocky Mountains, and was published in 1916. This volume was reprinted at least twice, in 1924 and 1937.

This digital edition is based on the latter volume:

Ruxton, George F. *Wild Life in the Rocky Mountains*. New York: The MacMillan Company, copyright 1916.

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

CHAPTER I

OUT OF OLD MEXICO

ON the 10th of November [1846] I left Chihuahua, bound for the capital of New Mexico. Passing the Rancho del Sacramento, where a few months after the Missourians slaughtered a host of Mexicans, we entered a large plain well covered with grass, on which were immense flocks of sheep. A coyote lazily crossed the road, and, stopping within a few yards, sat down upon its haunches, and coolly regarded us as we passed. Panchito had had a four days' rest, and was in fine condition and spirits, and I determined to try the mettle of the wolf; the level plain, with its springy turf, offering a fine field for a course.

Cantering gently at first, the coyote allowed me to approach within a hundred yards before he loped lazily away; but finding I was on his traces, he looked round, and, gathering himself up, bowled away at full speed. Then I gave Panchito the spur, and, answering it with a bound, we were soon at the stern of the wolf. Then, for the first time, the animal saw we were in earnest, and, with a sweep of his bushy tail, pushed for his life across the plain.

At the distance of two or three miles a rocky ridge was in sight, where he evidently thought to secure a retreat, but Panchito bounded along like the wind itself, and soon proved to the wolf that his race was run. After trying in vain to double, he made one desperate rush, upon which, lifting Panchito with rein and leg, came up and passed the panting beast, when, seeing that escape was impossible, he lay down, and with sullen and cowardly resignation, curled up for the expected blow, as, pistol in hand, I reined up Panchito at his side. However, I was merciful, and allowed the animal to escape.

At ten at night I arrived at the hacienda of El Sauz, belonging to the Governor of Chihuahua, Don Angel Trias. It was enclosed with a high wall, as a protection from the Indians, who, a short time before, had destroyed the cattle of the hacienda, filling a well in the middle of the corral with the carcasses of slaughtered sheep and oxen. It was still bricked up.

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

The next day we proceeded to another hacienda, likewise called after the willows, Los Sauzillos. Passing a large plain, in the midst of which stood a lone poplar, wolves were continually crossing the road, both the coyote and the large grey variety. I was this day mounted upon the alazan [roan] which I had purchased, at Guajoquilla. We were within sight of our halting-place for the night, when the horse, which had carried me all day without my having had recourse to whip or spur, suddenly began to flag, and I noticed that a profuse perspiration had broken out on its ears and neck. I instantly dismounted, and perceived a quivering in the flank and a swelling of the belly. Before I could remove the saddle the poor beast fell down, and, although I opened a vein and made every attempt to relieve it, it once more rose to its legs, and, spinning round in the greatest apparent agony, fell dead to the ground.

The cause of its death was, that my servant, contrary to my orders, had given the animals young corn the night before, which food is often fatal to horses not accustomed to feed on grain.

This rancho is situated on the margin of a lake of brackish water, and we found the people actual prisoners within its walls, the gates being closed, and a man stationed on the azotea with a large wall-piece, looking out for Indians. At night a large fire was kindled on the roof, the blaze of which illuminated the country far and near. Not a soul would venture after sunset outside the gate, which the majordomo, a Gachupin, refused to open to allow my servant to procure some wood for a fire to cook my supper, and we had to content ourselves with one of corncobs, which lay scattered about the corral.

On the 12th, passing Encinillas, a large hacienda belonging to Don Angel Trias, we encamped on the banks of an arroyo, running through the middle of a plain, walled by sierras, where the Apaches had several villages. This being very dangerous ground, we put out the fire at sunset, and took all precautions against surprise. The animals fared badly, the grass being thin and burned up by the sun, and what little there was being of bad quality.

The next day we reached the small village of El Carmen, and, camping by a little thread of a rivulet outside of the town, were surrounded by all the loafers of the village. The night was very cold, and our fire, the fuel for which we purchased, was completely surrounded by these idle vagabonds. At last, my temper being frozen out of me, I went up to the fire, and said, "Senores, allow me to present you with three rials, which will enable you to purchase wood for two fires; this fire I will be obliged to you if you will allow myself and fellow-travellers to warm ourselves by, as we are very cold; and also, with your kind permission, wish to cook our suppers by it." This was enough for them: a Mexican, like a Spaniard, is very sensitive, and the hint went through them. They immediately dispersed, and I saw no more of them the remainder of the evening.

Near El Carmen is a pretty little stream, fringed with alamos, which runs through a wild and broken country of sierras. The plains, generally about ten to twenty miles in length, are divided from each other by an elevated ridge, but there is no perceptible difference in the elevation of them from Chihuahua to El Paso. The road is level excepting in crossing these ridges, and hard everywhere except on the marshy plain of Encinillas, which is often inundated. This lake has no outlet, and is fed by numerous small streams from the sierras; its length is ten miles, by three in breadth. The marshy ground around the lake is covered with an alkaline efflorescence called tezquite, a substance of considerable value. The water, impregnated with salts, is brackish and unpleasant to the taste, but in the rainy season loses its disagreeable properties.

On the 14th we travelled sixty miles, and camped on a bare plain without wood or water, the

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

night being so dark that we were unable to reach Carrizal, although it was but a few miles distant from our encampment. The next morning we reached the village, where I stopped the whole day, during an extraordinary hurricane of wind, which rendered travelling impossible. We had been on short commons for two days, as the hungry escort had devoured my provisions, but here I resolved to have a feast, and, setting all hands to forage, on return we found our combined efforts had produced an imposing pile of several yards of beef (for here the meat is cut into long strips and dried), onions, chiles, frijoles, sweet corn, eggs, &c. An enormous olla [earthen pot] was procured, and everything was bundled pell-mell into it, seasoned with pepper and salt and chile. To protect the fire from the hurricane that was blowing, all the packs and saddles were piled round it, and my servant and the soldiers relieved each other in their vigilant watch of the precious compound, myself superintending the process of cooking. Our appetites, ravenous with a fast of twenty-four hours, were in first-rate order, but we determined that the pot should be left on the fire until the savory mess was perfectly cooked. It was within an hour or two of sunset, and we had not yet broken our fast. The olla simmered, and a savory steam pervaded the air. The dragoons licked their lips, and their eyes watered-never had they had such a feast in perspective; for myself, I never removed my eyes from the pot, and had just resolved that, when the puro in my mouth was smoked out, the puchero would have attained perfection. At length the moment arrived: my mozo, with a blazing smile, approached the fire, and with guarded hands seized the top of the olla, and lifted it from the ashes.

“Ave Maria Purissima! Santissima Virgen!” broke from the lips of the dragoons; “Mil carajos!” burst from the heart of the mozo; and I sank almost senseless to the ground. On lifting the pot the bottom fell out, and splash went everything into the blazing fire. Valgame Dios! what a moment was that! Stupefied, and hardly crediting our senses, we gazed at the burning, frizzling, hissing remnants, as they were consuming before our eyes. Nothing was rescued, and our elaborate feast was simplified into a supper of frijoles and chile colorado, which, after some difficulty, we procured from the village.

The next morning we started before daylight, and at sunrise watered our animals at the little lake called Laguna de Patos, from the ducks which frequent it; and at midday we halted at another spring, the Ojo de la Estrella -star spring-where we again watered them, as we should be obliged to camp that night without water. We chose a camping-ground in a large plain covered with mezquit, which afforded us a little fuel-now become very necessary, as the nights were piercingly cold. As we had been unable to procure provisions in Carrizal, we went to bed supperless, which was now a very usual occurrence. My animals suffered from the cold, which, coming as they did from the tierra caliente, they felt excessively, particularly a little blood horse with an exceedingly fine coat. I was obliged to share my blankets with this poor animal, or I believe it would have died in the night.

Just at daybreak the next morning I was riding in advance of the party, when I met a cavalcade of horsemen whose wild costume, painted faces, and arms consisting of bows and arrows, made me think at first that they were Indians. On their part, they evidently did not know what to make of me, and halted while two of them rode forward to reconnoitre. I quickly slipped the cover off my rifle, and advanced. Seeing my escort following, they saw we were amigos; but the nearer they approached me, the more certain was I that they were Apaches for they were all in Indian dress, and frightfully painted. I was as nearly as possible shooting the foremost, when he exclaimed in

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

Spanish, "Adios, amigo! que novedades hay?" and I then saw a number of mules, packed with bales and barrels, behind him. They were Pasefios, on their way to Chihuahua, with aguardiente, raisins, and fruit; and shortly after passing them, I found on the road a large bag of pazas or raisins, which I pounced upon as a great prize, and, waiting until the escort came up, we dismounted, and, sitting at the roadside, devoured the fruit with great gusto, as this was our second day of banyan. This bag lasted for many days. I found the raisins a great improvement to stews, &c., and we popped a handful or two into every dish.

At ten o'clock we reached a muddy hole of water, entirely frozen - my animals refusing to drink, being afraid of the ice after we had broken it. The water was as thick as pea-soup; nevertheless we filled our huages with it, as we should probably meet with none so good that day. Towards sunset we passed a most extraordinary mountain of loose shifting sand, three miles in breadth, and, according to the Pasenos, sixty in length. The huge rolling mass of sand, is nearly destitute of vegetation, save here and there a bunch of greasewood half-buried in the sand. Road there is none, but a track across is marked by the skeletons and dead bodies of oxen, and of mules and horses, which everywhere meet the eye. On one ridge the upper half of a human skeleton protruded from the sand, and bones of animals and carcasses in every stage of decay. The sand is knee-deep, and constantly shifting, and pack-animals have great difficulty in passing.

After sunset we reached a dirty, stagnant Pool, known as the Ojo de Malayuca; but, as there was not a blade of grass in the vicinity, we were compelled to turn out of the road and search over the arid plain for a patch to camp in. At last we succeeded in finding a spot and encamped, without wood, water, or supper being the second day's fast. The next day, passing a broken country, perfectly barren, we struck into the valley of El Paso, and for the first time I saw the well-timbered bottom of the Rio Bravo del Norte. Descending a ridge covered with greasewood and mezquit, we entered the little village Of El Paso, with its vineyards and orchards and well-cultivated gardens lying along the right bank of the river. On entering the plaza I was immediately surrounded by a crowd, for my escort had ridden before me and mystified them with wonderful accounts of my importance. However, as I did not choose to enlighten them as to my destination or the object of my journey, they were fain to rest satisfied with the egregious lies of the dragones. In the plaza was a little guardhouse, where a ferocious captain was in command of a dirty dozen or two of soldados. This worthy, to show his importance, sent a sergeant to order my instant attendance at the guard-room. In as many words I told the astonished messenger to tell his officer "to go to the devil;" to his horror, and the delight of the surrounding crowd. The answer was delivered word for word, but I heard no more from the military hero. My next visitor was the prefecto, who is an important personage in a small place. That worthy, with a dignified air, asked in a determined tone, as much as to say to the crowd "See how soon I will learn his business"

"Por onde pasa usted, caballero?-Where are you bound?"

"Por Santa Fe y Nuevo Mejico," I answered.

"No, senor," he immediately rejoined, "this cannot be permitted: by the order of the Governor no one is allowed to go to the north; and I must request, moreover, that you exhibit your passport and other documentos."

"Hi lo tiene usted -here you have it"-I answered, producing a credential which at once caused the hat to fly from his head, and an offer of himself, "su casa, y todo lo que tiene, a mi disposicion - his house, and all in it, at my disposal." However, all his munificent offers were declined, as I had

letters to the cura, a young priest named Ortiz, whose unbounded hospitality I enjoyed during my stay.

CHAPTER II

THE JOURNEY OF THE DEAD

EL PASO DEL NORTE, so called from the ford of that river, which is here first struck and crossed on the way to New Mexico, is the oldest settlement in Northern Mexico, a mission having been established there by el Padre Fray Augustine Ruiz, one of the Franciscan monks who first visited New Mexico, as early as the close of the sixteenth century (about the year 1585). Fray Ruiz, in company with two others, named Venabides and Marcos, discovering in the natives a laudable disposition to receive the word of God and embrace "la santa fe Catolica," remained here a considerable time, preaching by signs to the Indians, and making many miraculous conversions. Eventually, Venabides having returned to Spain and given a glowing account of the riches of the country, and the Muy buen indoles - the very proper disposition of the aborigines - Don Juan Offate was despatched to conquer, take possession of, and govern the remote colony, and on his way to Santa Fe established a permanent settlement at El Paso. Twelve families from Old Castile accompanied Offate to Nuevo Mejico to form a colony, and their descendants still remain scattered over the province.

Several years after, when the Spanish colonists were driven out of New Mexico, they retreated to El Paso, where they erected a fortification, and maintained themselves until the arrival of reinforcements from Mexico. The present settlement is scattered for about fifteen miles along the right bank of the Del Norte, and contains five or six thousand inhabitants. The plaza, or village, of El Paso, is situated at the head of the valley, and at the other extremity is the presidio of San Eleazario. Between the two is a continued line of adobe houses, with their plots of garden and vineyard.

The farms seldom contain more than twenty acres, each family having a separate house and plot of land.

The Del Norte is dammed about a mile above the ford, and water is conveyed by an acequia madre - main canal - to irrigate the valley. From this acequia, other smaller ones branch out in every direction, until the land is intersected in every part with dykes, and is thus rendered fertile and productive.

The soil produces wheat, maize, and other grains, and is admirably adapted to the growth of the vine, which is cultivated here, and yields abundantly; and a wine of excellent flavor is made from the grapes. Brandy of a tolerable quality is also manufactured, and, under the name of aguardiente del Paso, is highly esteemed in Durango and Chihuahua. Under proper management wine-making here might become a very profitable branch of trade, as the interior of Mexico is now supplied with French wines, the cost of which, owing to the long land-carriage from the seaports, is enormous, and wine might be made from the Paso grape equal to the best growths of France or Spain. Fruits of all kinds, common to temperate regions, and vegetables, are abundant and of good quality.

The river bottom is timbered with cottonwoods, which extend a few hundred yards on each side the banks. The river itself is here a small turbid stream, with water of a muddy red, but in the season of the rains it is swollen to six times its present breadth, and frequently overflows the banks. It is of fordable depth in almost any part; but, from the constantly shifting quicksands and bars, is

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

always difficult, and often dangerous, to cross with loaded wagons. It abounds with fish and eels of large size. The houses of the Pasenos are built of the adobe, and are small but clean and neatly kept. Here, as everywhere else in Northern Mexico, the people are in constant fear of Indian attacks, and, from the frequent devastations of the Apaches, the valley has been almost swept of horses, mules, and cattle. The New Mexicans too, disguised as Indians, often plunder these settlements (as occurred during my visit, when two were captured), and frequently accompany the Apaches in their raids on the state of Chihuahua. - Cosas de Mejico!

At this time the Pasenos had enrolled themselves into a body of troops termed auxiliares, 700 strong; but in spite of them the Apaches attacked a mulada at the outskirts of the town, and, but for the bravery of two negroes, runaway slaves from the Cherokee nation, would have succeeded in carrying off the whole herd; this was during my stay in this part of the country. One of the herders was killed, but the negroes, when the animals were already in the hands of the Indians, seized their rifles and came to the rescue, succeeding in recapturing the mulada.

At El Paso I found four Americans, prisoners at large. They had arrived here on their way to California, with a mountain trapper as their guide, who, from some disagreement respecting the amount of pay he was to receive, thought proper to revenge himself by denouncing them as spies, and they were consequently thrown into prison. It being subsequently discovered that the informer had committed the most barefaced perjury, these men were released, and the denouncer confined in their stead--quite an un-Mexican act of justice. However, as they had arrived unprovided with passports, they were detained as prisoners, although permitted to go at large about the place, living, or rather existing, on charity. Their baggage had been taken from them, their animals sold, and they were left to shift for themselves. I endeavored to procure their liberty, by offering to take them with me, and guarantee their good conduct while in the country, and also that they would not take up arms against the Mexicans; but this having no effect, and as the poor fellows were in a wretched condition, I advised them to run for it, promising to pick them up on the road and supply them with the necessary provision, and cautioning them at the same time to conceal themselves in the daytime, travelling at night, and on no account to enter the settlements. They disappeared from El Paso the same night, and what became of them will be presently shown. On the 19th I left the Paso with an escort of fifteen auxiliares, a ragged troop, with whom to have marched through Coventry would have broken the heart of Sir John Falstaff. Armed with bows and arrows, lances, and old rusty escopetas [muskets] and mounted on miserable horses, their appearance was anything but warlike, and far from formidable. I did my best to escape the honor, knowing that they would only be in my way, and of not the slightest use in case of Indian attack; but all my protestations were attributed to modesty, and were overruled, and I was fain to put myself at the head of the band of valiant Pasenos, who were to escort me to the borders of the state of Chihuahua. One of them, a very old man, with a long lance which he carried across his saddlebow, and an old rusty bell-mouthed escopeta, attached himself particularly to me, riding by my side, and pointing out the bad points--the mal puntos--whence the Apaches usually made their attacks. He had, he told me, served all through the War of Independence, "y por el Rey - for the king" -he added, reverently doffing his hat at the mention of the king. He was a loyalist heart and soul. "Ojala por los dias felices del reyno!-alas for the happy time when Mexico was ruled by a king!"-was his constant sighing exclamation. A doblon, with the head of Carlos Tercero, hung round his neck, and was ever in his hand, being reverently kissed every few miles. He was, he said,

---

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

“medio tonto -half-crazy” -and made verses, very sorry ones, but he would repeat them to me when we arrived in camp.

Leaving El Paso, we travelled along the rugged precipitous bank of the river, crossing it about three miles above the village, and, striking into a wild barren-looking country, again made the river about sunset, and encamped in the bottom, under some very large cottonwoods, at a point called Los Alamitos - the little poplars - although they are enormous trees. We had here a very picturesque camp. Several fires gleamed under the trees, and round them lay the savage-looking Pasenos, whilst the animals were picketed round about. Several deer jumped out of the bottom when we entered, and on the banks of the river I saw some fresh beaver “sign.”

The next day, halting an hour at the Brazitos, an encamping-ground so called, and a short time afterwards passing the battle-ground where Doniphan’s Missourians routed the Mexicans, we saw Indian sign on the banks of the river, where a considerable body had just crossed. A little farther on we met a party of seven soldiers returning from a successful hunt after the Americans who had escaped from the Paso. These unfortunates were sitting quietly behind their captors, who had overtaken them at the little settlement of Donana, which they foolishly entered to obtain provisions.

Donana is a very recent settlement of ten or fifteen families, who, tempted by the richness of the soil, abandoned their farms in the valley of El Paso, and have here attempted to cultivate a small tract in the very midst of the Apaches, who have already paid them several visits and carried off or destroyed their stock of cattle. The huts are built of logs and mud, and situated on the top of a tabular bluff which looks down upon the river-bottom.

The soil along this bottom, from El Paso to the settlements of New Mexico, is amazingly rich, and admirably adapted for the growth of all kinds of grain. The timber upon it is cottonwood, dwarf oak, and mezquit, under which is a thick undergrowth of bushes. Several attempts have been made to settle this productive tract, but have all of them failed from the hostility of the Apaches. Should this department fall into the hands of the Americans, it will soon become, a thriving settlement; for the hardy backwoodsman, with his axe on one shoulder and rifle on the other, will not be deterred by the savage, like the present pusillanimous owners of the soil, from turning it to account.

The next day we encamped at San Diego, the point where the traveller leaves the river and enters upon the dreaded Jornada del Muerto - the journey of the dead man. All the camping and watering places on the river are named, but there are no settlements, with the exception of Donana, between El Paso and Socorro, the first settlement, in New Mexico, a distance of 250 miles.

At San Diego we saw more Indian signs, the consequence of which was, that my escort reported their horses to be exhausted and unable to proceed; so, nothing loth, I gave them their conge, and the next morning they retraced their steps to El Paso, leaving me with my two servants to pass the jornada. I was now at the edge of this formidable desert, where along the road the bleaching bones of mules and horses testify to the dangers to be apprehended from the want of water and pasture, and many human bones likewise tell their tale of Indian slaughter and assault.

I remained in camp until noon, when for the last time we led the animals to the water and allowed them to drink their fill: we then mounted, and at a sharp pace struck at once into the jornada. The road is perfectly level and hard, and over plains bounded by sierras. Palmillas and bushes of sage (artemisia) are scattered here and there, but the mezquit is now becoming scarce, the tornilla or

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

screwwood taking its place; farther on this wood ceases, and there is then no fuel to be met with of any description. Large herds of antelope bounded past, and coyotes skulked along on their trail, and prairie-dog towns were met every few miles, but their inmates were snug in their winter-quarters, and only made their appearance to bask in the meridian sun.

Shortly after leaving San Diego we found water in a little hole called El Perillo (the little dog), but our animals, having so lately drunk, would not profit by the discovery, and we hurried on, keeping the pack-animals in a sharp trot. Near the Perillo is a point of rocks which abuts upon the road, and from which a large body of Apaches a few years since pounced upon a band of American trappers and entirely defeated them, killing several and carrying off all their animals. Behind these rocks they frequently lie in ambush, shooting down the unwary traveller, whose first intimation of their presence is the puff of smoke from the rocks, or the whiz of an arrow through the air. One of my mozos, who was a New Mexican and knew the country well, warned me of the dangers of this spot, and before passing it, I halted the mules and rode on to reconnoitre; but no Apache lurked behind it, and we passed unmolested.

About midnight we stopped at the Laguna del Muerto - the dead man's lake-a depression in the plain, which in the rainy season is covered with water, but was now hard and dry. We rested the animals here for half an hour, and, collecting a few armfuls of artemisia, attempted to make a fire, for we were all benumbed with cold; but the dry twigs blazed brightly for a minute, and were instantly consumed. By the temporary light it afforded us we discovered that a large party of Indians had passed the very spot but a few hours, and were probably not far off at that moment, and, if so, they would certainly be attracted by our fire, so we desisted in our attempts. The mules and horses, which had travelled at a very quick pace, were suffering, even thus early, from want of water, and my horse bit off the neck of a huage, or gourd, which I had placed on the ground, and which the poor beast by his nose knew to contain water. However, as there was not a vestige of grass on the spot, after a halt of half an hour, we again mounted and proceeded on our journey, continuing at a rapid pace all night. At sunrise we halted for a couple of hours on a patch of grass which afforded a bite to the tired animals, and about three in the afternoon had the satisfaction of reaching the river at the watering-place called Fray Cristoval, having performed the whole distance of the jornada, of ninety-five, or, as some say, one hundred miles, in little more than twenty hours. The plain through which the dead man's journey passes is one of a system, or series, which stretch along the table-land between the Sierra Madre, or main chain of the Cordillera, on the West, and the small mountain-chain of the Sierra Blanca and the Organos, which form the dividing ridge between the waters of the Del Norte and the Rio Pecos. Through this valley, fed by but few streams, runs the Del Norte. Its water, from the constant abrasion of the banks of alluvial soil, is very muddy and discolored, but nevertheless of excellent quality, and has the reputation at El Paso of possessing chemical properties which prevent diseases of the kidneys, stone, &c. &c.

The White Mountain and the Organos are singularly destitute of streams, but on the latter is said to be a small lake, in the waters of which may be seen the phenomenon of a daily rise and fall similar to a tide. They are also reported to abound in minerals, but, from the fact of these sierras being the hiding-places of Apaches, they are never visited excepting during a hostile expedition against these Indians, and consequently in these excursions but little opportunity is afforded for an examination of the country. The sierras are also celebrated for medicinal herbs of great value, which the Apaches, when at peace with the Pasenos, sometimes bring in for sale.

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

Indeed, from the accounts which I received from the people of these mountains, I should judge them to be well worthy of a visit, which however would be extremely hazardous on account of the hostility of the Indians and the scarcity of water. Their formation is apparently volcanic, and, judging from the nature of the plains, which in many places are strewn with volcanic substances, and exhibit the bluffs of tabular form, composed of basaltic lava, known by the name of mesas (tables), the valley must at one time have been subjected to volcanic agency.

Staying at Fray Cristoval but one night, I pushed on to the ruins of Valverde, a long-deserted rancheria, a few miles beyond which was the advanced post of the American troops. Here, encamped on the banks of the river in the heavy timber, I found a great portion of the caravan which I have before mentioned as being en route to Chihuahua, and also a surveying party under the command of Lieut. Abert, of the United States Topographical Engineers.

Being entirely out of provisions, and my camp hungry, the next morning I mounted my hunting-mule, and crossed the river, which was partially frozen, to look for deer in the bottom. Thanks to my mule, as I was passing through a thicket I saw her prick her ears and look on one side, and, following her gaze, descried three deer standing under a tree with their heads turned towards me. My rifle was quickly up to my shoulder, and a fine large doe dropped to the report, shot through the heart. Being in a hurry, I did not wait to cut it up, but threw it on to my mule, which I drove before me to the river. Large blocks of ice were floating down, which rendered the passage difficult, but mounted behind the deer and pushed the mule into the stream. Just as we had got into the middle of the current a large piece of ice struck her, and, to prevent herself being carried down the stream, she threw herself on her haunches, and I slipped over the tail, and head over ears into the water. Rid of the extra load, the mule carried the deer safely over and trotted off to camp, where she quietly stood to be unpacked, leaving me, drenched to the skin, to follow after her.

The traders had been lying here many weeks, and the bottom where they were encamped presented quite a picturesque appearance. The timber extends half a mile from the river, and the cottonwood trees are of large size, without any undergrowth of bushes. Amongst the trees, in open spaces, were drawn up the wagons, formed into a corral or square, and close together, so that the whole made a most formidable fort, and, when filled with some hundred rifles, could defy the attacks of Indians or Mexicans. Scattered about were tents and shanties of logs and branches of every conceivable form, round which lounged wild-looking Missourians, some cooking at the camp-fires, some cleaning their rifles or firing at targets-blazes cut in the trees, with a bull's-eye made with wet powder on the white bark. From morning till night the camp resounded with the popping of rifles, firing at marks for prizes of tobacco, or at any living creature which presented itself.

The oxen, horses, and mules were sent out at daylight to pasture on the grass of the prairie, and at sunset made their appearance, driven in by the Mexican herders, and were secured for the night in the corrals. My own animals roamed at will, but every evening came to the river to drink, and made their way to my camp, where they would frequently stay round the fire all night. They never required herding, for they made their appearance as regularly as the day closed, and would come to my whistle whenever I required my hunting-mule. The poor beasts were getting very poor, not having had corn since leaving El Paso, and having subsisted during the journey from that place on very little of the coarsest kind of grass. They felt it the more as they were all accustomed to be

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

fed on grain; and the severe cold was very trying to them, coming, as they did, from a tropical climate. My favorite horse, Panchito, had lost all his good looks; his once full and arched neck was now a perfect "ewe," and his ribs and hipbones were almost protruding through the skin; but he was as game as ever, and had never once flinched in his work.

Provisions of all kinds were very scarce in the camp, and the game, being constantly hunted, soon disappeared. Having been invited to join the hospitable mess of the officers of the Engineers, I fortunately did not suffer, although even they were living on their rations, and on the produce of our guns. The traders, mostly young men from the eastern cities, were fine hearty fellows, who employ their capital in this trade because it combines pleasure with profit, and the excitement and danger of the journey through the Indian country are more agreeable than the monotonous life of a city merchant. The volunteers' camp was some three miles up the river on the other side. Colonel Doniphan, who commanded, had just returned from an expedition into the Navajo country for the purpose of making a treaty with the chiefs of that nation, who have hitherto been bitter enemies of the New Mexicans. From appearances no one would have imagined this to be a military encampment. The tents were in a line, but there all uniformity ceased. There were no regulations in force with regard to cleanliness. The camp was strewn with the bones and offal of the cattle slaughtered for its supply, and not the slightest attention was paid to keeping it clear from other accumulations of filth.

The men, unwashed and unshaven, were ragged and dirty, without uniforms, and dressed as, and how, they pleased. They wandered about, listless and sickly-looking, or were sitting in groups playing at cards, and swearing and cursing, even at the officers if they interfered to stop it (as I witnessed). The greatest irregularities constantly took place. Sentries, or a guard, although in an enemy's country, were voted unnecessary; and one fine day, during the time I was here, three Navajo Indians ran off with a flock of eight hundred sheep belonging to the camp, killing the two volunteers in charge of them, and reaching the mountains in safety with their booty. Their mules and horses were straying over the country; in fact, the most total want of discipline was apparent in everything. These very men, however, were as full of fight as game cocks, and shortly after defeated four times their number of Mexicans at Sacramento, near Chihuahua.

The American can never be made a soldier; his constitution will not bear the restraint of discipline, neither will his very mistaken notions about liberty allow him to subject himself to its necessary control. In a country abounding with all the necessaries of life, and where any one of physical ability is at no loss for profitable employment—moreover, where, from the nature of the country, the lower classes lead a life free from all the restraint of society, and almost its conventional laws - it is easy to conceive that it would require great inducements for a man to enter the army and subject himself to discipline for the sake of the trifling remuneration, when so many other sources of profitable employment are open to him. For these reasons the service is unpopular, and only resorted to by men who are either too indolent to work, or whose bad characters prevent them seeking other employment.

The volunteering service on the other hand is eagerly sought, on occasions such as the present war with Mexico affords, by young men even of the most respectable classes, as, in this, discipline exists but in name, and they have privileges and rights, such as electing their own officers, &c., which they consider to be more consonant to their ideas of liberty and equality. The system is palpably bad, as they have sufficiently proved in this war. The election of officers is made entirely

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

a political question, and quite irrespective of their military qualities, and, knowing the footing on which they stand with the men, they, if even they know how, are afraid to exact of them either order or discipline. Of drill or maneuvering the volunteers have little or no idea. "Every man on his own hook" is their system in action; and trusting to, and confident in, their undeniable bravery, they "go ahead," and overcome all obstacles. No people know better the advantages of discipline than do the officers of the regular service; and it is greatly to their credit that they can keep the standing army in the state it is. As it is mostly composed of foreigners - Germans, English, and Irish, and deserters from the British army - they might be brought to as perfect a state of discipline as any of the armies of Europe; but the feeling of the people will not permit it; the public would at once cry out against it as contrary to republican notions and the liberty of the citizen. There is a vast disparity between the officers of the regular army and the men they command. Receiving at West Point (an admirable institution) a military education by which they acquire a practical as well as theoretical knowledge of the science of war, as a class they are probably more distinguished for military knowledge than the officers of any European army. Uniting with this a high chivalrous feeling and most conspicuous gallantry, they have all the essentials of the officer and soldier. Notwithstanding this, they have been hitherto an unpopular class in the United States, being accused of having a tendency to aristocratic feeling; but rather, I do believe, from the marked distinction in education and character which divides them from the mass, than any other reason. However, the late operations in Mexico have sufficiently proved that to their regular officers alone, and more particularly to those who have been educated at the much-decried West Point, are to be attributed the successes which have everywhere attended the American arms; and it is notorious that on more than one occasion the steadiness of the small regular force, and particularly of the artillery, under their command, has saved the army from most serious disasters. I remained at Valverde encampment several days in order to recruit my animals before proceeding farther to the north, passing the time in hunting; game, although driven from the vicinity of the camp, being still plentiful at a little distance. Besides deer and antelope, turkeys were very abundant in the river bottom; and, of lesser game, hares, rabbits, and quail were met with on the plain, and geese and ducks in the river.

One day I got a shot at a panther (painter), but did not kill it, as my old mule was so disturbed at the sight of the beast, that she refused to remain quiet. The prairie between the Del Norte and the mountain, a distance of twelve or fourteen miles, is broken into gulleys and ravines, which intersect it in every direction. At the bottom of these is a thick growth of coarse grass and grease-bushes, where the deer love to resort in the middle of the day. I was riding slowly up one of these cañons, with my rifle across the saddle-bow, and the reins thrown on the mule's neck, being at that moment engaged in lighting my pipe, when the mule pricked her ears and turned her head to one side very suddenly, giving a cant round at the same time. I looked to the right, and saw a large panther, with his tail sweeping the ground, trotting leisurely up the side of the ravine, which rose abruptly from the dry bed of a watercourse, up which I was proceeding. The animal, when it had reached the top, turned round and looked at me, its tiger-like ears erect, and its tail quivering with anger. The mule snorted and backed, but, fearing to dismount, lest the animal should run off, I raised my rifle and fired both barrels at the beast, which, giving a hissing growl, bounded away unhurt.

It was, however, dangerous to go far from the camp, as Apaches and Navajos were continually

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

prowling round, and, as I have mentioned, had killed two of the volunteers, and stolen 800 sheep. One day, while hunting, I came upon a fire which they had just left, and, as several oxen were lost that night, this party, which, from the tracks, consisted of a man, woman, and boy, had doubtless run them off. I was that day hunting in company with a French Canadian and an American, both trappers and old mountain-men, when, at sundown, just as we had built a fire and were cooking our suppers under some trees near the river, we heard the gobble-gobble of an old turkey-cock, as he called his flock to roost. Lying motionless on the ground, we watched the whole flock, one after another, fly up to the trees over our heads, to the number of upwards of thirty. There was still light enough to shoot, and the whole flock was within reach of our rifles, but, as we judged that we could not hope for more than one shot apiece, which would only give three birds, we agreed to wait until the moon rose, when we might bag the whole family.

Hardly daring to move, we remained quiet for several hours, as the moon rose late, consoling ourselves with our anticipations of a triumphal entry into camp, on the morrow, with twenty or thirty fine turkeys for a Christmas feast.

At length the moon rose, but unfortunately clouded: nevertheless we thought there was sufficient light for our purpose, and, rifle in hand, approached the trees where the unconscious birds were roosting. Creeping close along the ground, we stopped under the first tree we came to, and, looking up, on one of the topmost naked limbs was a round black object. The pas was given to me, and, raising my rifle, I endeavored to obtain a sight, but the light was too obscure to draw "a bead," although there appeared no difficulty in getting a level. I fired, expecting to hear the crash of the falling bird follow the report, but the black object on the tree never moved. My companions chuckled, and I fired my second barrel with similar result, the bird still remaining perfectly quiet. The Canadian then stepped forth, and, taking a deliberate aim, bang he went.

"Sacre enfant de Garce!" he exclaimed, finding he too had missed the bird;" I aim straight, mais light tres bad, sacre!"

Bang went the other's rifle, and bang-bang went my two barrels immediately after, cutting the branch in two on which the bird was sitting, who, thinking this a hint to be off, and that he had sufficiently amused us, flew screaming away. The same compliments were paid to every individual, one bird standing nine shots before it flew off: and, to end the story, we fired away every ball in our pouches without as much as touching a feather; the fact of the matter that the light was not sufficient to see an through the fine sight of the rifles.

At Valverde my Mexican servant deserted, why or wherefore I could not understand, as he did not even wait for his pay, and carried off no equivalent. I also left here the Mexico-Irishman who had accompanied me from Mapimi. He was already suffering from the severities of the climate, and, being very delicate, I did not think him able to stand a winter journey over the Rocky Mountains. He therefore returned to Chihuahua with one of the traders. From this point to my winter quarters in the mountains I was entirely on my own resources, being unable to hire a servant in whom I could place the least confidence, and preferring to shift for myself, rather than be harassed with being always on the watch to prevent my fidus Achates from robbing or murdering me. My animals gave me little or no trouble, and I had now reduced my requa to five, having left at El Paso the tierra caliente [lowland] horse, another having died on the road, and a mule having been lost or strayed on the Del Norte. In travelling I had no difficulty with the pack and loose mules. I rode in front on Panchito, and the mules followed like dogs, never giving me occasion even to

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

turn round to see if they were there; for if, by any accident, they lost sight of the horse, and other animals were near, they would gallop about smelling at each, and often, starting off to horses or mules feeding at a distance, would return at full gallop, crying with terror until they found their old friend. Panchito, on his part, showed equal signs of perturbation if they remained too far behind, as sometimes they would stop for a mouthful of grass, and, turning his head, would recall them by a loud neigh, which invariably had the effect of bringing them up at a hand-gallop.

The greatest difficulty I experienced was in packing the mules, which operation, when on an aparejo, or Mexican pack-saddle, is the work of two men, and I may as well describe the process.

The equipment of a pack-mule--mula de carga -consists first and foremost of the aparejo, which is a square pad of stuffed leather. An idea of the shape may be formed by taking a book and placing it saddle-fashion on any object, the leaves being equally divided, and each half forming a flap of the saddle. This is placed on the mule's back on a xerga, or saddlecloth, which had under it a salea, raw sheepskin softened by the hand, which prevents the saddle chafing the back. The aparejo is then secured by a broad grass-band, which is drawn so tight, that the animal appears cut in two, and groans and grunts most awfully under the operation, which to a greenhorn seems most unnecessary and cruel. It is in this, however, that the secret of packing a mule consists; the firmer the pack-saddle, the more comfortably the mule travels, and with less risk of being "matada," literally killed, but meaning chafed and cut.

The carga is then placed on the top, if a single pack; or if two of equal size and weight one on each side, being coupled together by a rope, which balances them on the mule's back: a stout pack-rope is then thrown over all, drawn as tight as possible under the belly, and laced round the packs, securing the load firmly in its place. A square piece of matting - petate - is then thrown over the pack to protect it from rain, the tapojos is removed from the mule's eyes, and the operation is complete. The tapojos - blinker - is a piece of thin embroidered leather, which is placed over the mule's eyes before being packed, and, thus blinded, the animal remains perfectly quiet. The cargador [packer] stands on the near side of the pack, his assistant on the other, hauling on the slack of the rope, with his knee against the side of the mule for a purchase; when the rope is taut, he cries "Adios!" and the packer, rejoining "Vaya!" makes fast the rope on the top of the carga, sings out "Anda!" and the mule trots off to her companions, who feed round until all the mules of the atajo are packed.

Muleteering is the natural occupation of the Mexican. He is in all his glory when travelling as one of the mozos of a large atajo--a caravan of pack mules; but the height of his ambition is to attain the rank of mayor-domo or capitán -(the brigadero of Castile). The atajos, numbering from fifty to two hundred Mules, travel a daily distance--jornada -- of twelve or fifteen miles, each mule carrying a pack weighing from two to four hundred pounds. To a large atajo eight or ten muleteers are attached, and the dexterity and quickness with which they will saddle and pack an atajo of a hundred mules is surprising. The animals being driven to the spot, the lasso, whirled round the head of the muleteer, and falls over the head of a particular mule. The tapojos is placed over the eyes, the heavy aparejo adjusted, and the pack secured, in three minutes. On reaching the place where they purpose to encamp, the pack saddles are all ranged in regular order, with the packs between, and covered with the petates, a trench being cut round them in wet weather to carry off the rain. One mule is always packed with the metate-the stone block upon which the maize is ground to make tortillas, and the office of cook is undertaken in turn by each of the muleteers.

Frijoles and chile colorado comprise their daily bill of fare, with a drink of pulque when passing through the land of the maguey.

CHAPTER III

TRAVELLING WITH THE ENGINEERS

ON the 14th of December the camp was broken up, the traders proceeding to Fray Cristoval, at the entrance of the jornada, to wait the arrival of the troops, which, were about to advance on Chihuahua; and myself, in company with Lieutenant Abert's party, en route to Santa Fe. Crossing the Del Norte, we proceeded on its right bank ten or twelve miles, encamping in the bottom near the new settlement of San Antonio, a little hamlet of ten or twelve log-huts, inhabited by pastores and vaqueros-shepherds and cattleherders. The river is but thinly timbered here, the soil being and and sterile; on the bluffs, however, the grass is very good, being the gramma or feather-grass, and numerous flocks of sheep are sent hither to pasture from the settlements higher up the stream.

The next day we passed through Socorro, a small, wretched place, the first settlement of New Mexico on the river. The houses are all of adobe, inside and out, one story high, and with the usual azotea or flat roof. They have generally a small window, with thin sheets of tale (which here abounds) as a substitute for glass. They are, however, kept clean inside, the mud-floors being watered and swept many times during the day. The faces of the women were all stained with the fiery red juice of a plant called alegria, from the forehead to the chin. This is for the purpose of protecting their skin from the effects of the sun, and preserving them in untanned beauty to be exposed in the fandangos. Of all people in the world the Mexicans have the greatest antipathy to water, hot or cold, for ablutionary purposes. The men never touch their faces with that element, except in their bi-monthly shave; and the women besmear themselves with fresh coats of alegria when their faces become dirty: thus their countenances are covered with alternate strata of paint and dirt, caked, and cracked in fissures. My first impressions of New Mexico were anything but favorable, either to the country or the people. The population of Socorro was wretched looking, and every countenance seemed marked by vice and debauchery. The men appear to have no other employment than smoking and basking in the sun, wrapped in their sarapes; the women in dancing and intrigue. The appearance of Socorro is that of a dilapidated brick-kiln, or a prairie-dog town; indeed, from these animals the New Mexicans appear to have derived their style of architecture. In every village we entered, the women flocked round us begging for tobacco or money, the men loafing about, pilfering everything they could lay their hands on. As in other parts of Mexico, the women wore the enagua, or red petticoat, and reboso, and were all bare-legged. The men were some of them clad in buckskin shirts, made by the Indians. Near Socorro is a mining sierra, where gold and silver have been extracted in small quantities. All along the road we met straggling parties of the volunteers, on horse or mule-back, and on foot. In every camp they usually lost some of their animals, one or two of which our party secured. The five hundred men who were on the march covered an extent of road of more than a hundred miles - the ammunition and provision wagons travelling through an enemy's country without escort!

On the 16th we passed through Limitar, another wretched village, and a sandy, desert country, quite uninhabited, camping again on the Del Norte; and next day, stopping an hour or two at Sabanal, we reached Bosque Redondo, the hacienda of one of the Chaves family, and one of the ricos (rich) of New Mexico.

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

The churches in the villages of New Mexico are quaint little buildings, looking, with their adobe-walls, like turf-stacks. At each corner of the facade half a dozen bricks are erected in the form of a tower, and a centre ornament of the same kind supports a wooden cross. They are really the most extraordinary and primitive specimens of architecture I ever met with, and the decorations of the interior are equal to the promises held out by the imposing outside.

The houses are entered by doors which barely admit a full-grown man; and the largest of New Mexican windows is but little bigger than the ventilator of a summer hat. However, in his rabbit-burrow, and with his tortillas and his chile, his ponche and cigar of hoja, the New Mexican is content; and with an occasional traveller to pilfer, or the excitement of a stray Texan or two to massacre now and then, is tolerably happy; his only care being, that the river rise high enough to fill his acequia, or irrigating ditch, that sufficient maize may grow to furnish him tortillas for the winter, and shucks for his half-starved horse or mule, which the Navajos have left, out of charity, after killing half his sons and daughters, and bearing into captivity the wife of his bosom.

We encamped behind the house at Bosque Redondo, for which privilege I asked permission of the proprietor; who doled us out six-penny worth of wood for our fires, never inviting us into his house, or offering the slightest civility. Cosas de Mejico!

On the 17th we reached Albuquerque, next to Santa Fe the most important town in the province, and the residence of the ex-Governor Armijo. We found here a squadron of the 1st United States dragoons, the remainder of the regiment having accompanied General Kearney to California. We encamped near a large building where the men were quartered; and in the evening a number of them came round the fire, asking the news from the lower country. I saw that some of them had once worn a different colored uniform from the sky-blue of the United States army; and in the evening, as I was walking with some of the officers of the regiment, I was accosted by one, whom I immediately recognized as a man named Herbert, a deserter from the regiment to which I had once belonged. He had imagined that, as several years had elapsed since I had seen him, his face would not have been familiar to me, and inquired for a brother of his who was still in the regiment, denying at first that he had been in the British service.

The settled portion of the province of New Mexico is divided into two sections, which, from their being situated on the Rio del Norte, are designated Rio Arriba and Rio Abajo, or up the river and down the river. Albuquerque is the chief town of the latter, as Santa Fe is of the former as well as the capital of the province.

The town and the estates in the neighbourhood belong to the Armijo family; and the General of that name and ex-Governor, has here a palacio; and has also built a barrack, in which to accommodate the numerous escort which always attends him in his progresses to and from his country-seat.

The families of Armijo, Chaves, Perea, and Ortiz are par excellence the ricos of New Mexico -indeed, all the wealth of the province is concentrated in their hands; and a more grasping set of people, and more hard-hearted oppressors of the poor, it would be difficult to find in any other part of Mexico, where the rights or condition of the lower classes are no more considered, than in civilized countries is the welfare of dogs and pigs.

I had letters to the Senora Armijo, the wife of the runaway Governor; but, as it was late at night when we arrived, and as I intended to leave the next morning, I did not think it worth while to present them, merely delivering to the mayor-domo some private letters which had been intrust-

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

ed to my care from Chihuahua. However, as I passed the windows of the sala, I had a good view of the lady, who was once celebrated as the belle of New Mexico. She is now a fat, comely dame of forty, with the remains of considerable beauty, but quite passee.

Our halting-place next day was at Bernalillo, a more miserable place than usual; but as I had brought letters to a wealthy haciendado, one Julian Perea, I anticipated an unusual degree of hospitality. On presenting the letter, everything Don Julian possessed was instantly thrown at my feet; but out of the magnificent gift, I only selected an armful of wood, from a large yardful, for our fire, and for which he charged me three rials, as well as three more for the use of an empty corral for the animals; we ourselves encamping outside his gate on the damp thawing snow, without receiving the ghost of an invitation to enter his house.

We this day got a first glimpse of one of the spurs of the Rocky Mountains, appearing, far in the distance, white with snow.

On the 20th we encamped in a pretty valley on the Rio Grande, under a high tabular bluff which overhangs the river on the western bank; and on the summit of which are the ruins of an old Indian village. About two miles from our camp was the Pueblo of San Felipe, a village of the tribe of Indians known as Pueblos, or Indios Manzos - half-civilized Indians.

During the night our mulada, which was grazing at large in the prairie, was stampeded by the Indians. I was lying out some distance from the fire, when the noise of their thundering tread roused me, and, as they passed the fire at full gallop, I at once divined the cause.

Luckily for me, Panchito, my horse, wheeled out of the crowd, and, followed by his mules, galloped up to the fire, and came to me when I whistled; the remainder of the mulada continuing their flight. The next morning, two fine horses and three mules were missing, and, of course, were not recovered.

The next day we encamped on Galisteo, a small stream coming from the mountains. We had now entered a wild broken country, covered with pine and cedar. A curious ridge runs from east to west, broken here and there by abrupt chasms, which exhibit its formation in alternate strata of shale and old red sandstone. There are here indications of coal, which are met along the whole of this ridge. We encamped on a bleak bluff, without timber or grass, which overlooked the stream. Late in the evening we heard the creaking of a wagon's wheels, and the "wo-ha" of the driver, as he urged his oxen up the sandy bluff. A wagon drawn by six yoke of oxen soon made its appearance, under the charge of a tall rawboned Yankee. As soon as he had unyoked his cattle, he approached our fire, and, seating himself almost in the blaze, stretching his long legs at the same time into the ashes, he broke out with, "Cuss sich a darned country, I say! Wall, strangers, an ugly camp this, I swar; and what my cattle ull do I don't know, for they have not eat since we put out of Santa Fe, and are darned near giv out, that's a fact; and thar's nothin' here for 'em to eat, surely. Wall, they must just hold on till to-morrow, for I have only got a pint of corn apiece for 'em to-night anyhow, so there's no two ways about that. Strangers, I guess now you'll have a skillet among ye; if yer a mind to trade, I'll just have it right off; anyhow, I'll just borrow it to-night to bake my bread, and, if yer wish to trade, name your price. Cuss sich a darned country, say I! Jist look at them oxen, wull ye!-they've nigh upon two hundred miles to go; for I'm bound to catch up the sogers afore they reach the Pass, and there's not a go in 'em."

"Well, "I ventured to put in, feeling for the poor beasts, which were still yoked and standing in the river completely done up, "would it not be as well for you to feed them at once and let them rest?"

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

“Wall, I guess if you’ll some of you lend me a hand, I’ll fix ‘em right off; tho’, darn em’ they’ve giv me a pretty darned lot of trouble, they have, darn em! but the critters will have to eat, I b’lieve.” I willingly lent him the aid he required, and also added to their rations some corn which my animals, already full, were turning up their noses at, and which the oxen greedily devoured. This done he returned to the fire and baked his cake, fried his bacon, and made his coffee, his tongue all the while keeping up an incessant clack. This man was by himself, having a journey of two hundred miles before him, and twelve oxen and his wagon to look after: but dollars, dollars, dollars was all he thought of. Everything he saw lying about he instantly seized, wondered what it cost, what it was worth, offered to trade for it or anything else by which he might turn a penny, never waiting for an answer, and rattling on, eating, drinking, and talking without intermission; and at last, gathering himself up, said, ‘Wall, I guess I’ll turn into my wagon now, and some of you will, may be, give a look round at the cattle every now and then, and I’ll thank you:’ and saying this, with a hop, step, and a jump, was inside his wagon and snoring in a couple of minutes. We broke up our camp at daybreak, leaving our friend “wo-ha-ing” his cattle through the sandy bottom, and “cussing the darned country” at every step. We crossed several ridges clothed with cedars, but destitute of grass or other vegetation; and passing over a dismal plain descended into a hollow, where lay, at the bottom of a pine-covered mountain, the miserable mud-built Santa Fe; and shortly after, way-worn and travel-stained, and my poor animals in a condition which plainly showed that they had seen some hard service, we entered the city, after a journey of not much less than two thousand miles.

CHAPTER IV

LAND OF THE PUEBLOS

SANTA FE, the capital of the province of Nuevo Mejico, contains about three thousand inhabitants, and is situated about fourteen miles from the left bank of the Del Norte, at the foot of a mountain forming one of the eastern chain of the Rocky Mountains. The town is a wretched collection of mud-houses, without a single building of stone, although it boasts a palacio - as the adobe residence of the Governor is called - a long low building, taking up the greater part of one side of the plaza or public square, round which runs a portal or colonnade supported by pillars of rough pine. The appearance of the town defies description, and I can compare it to nothing but a dilapidated brick-kiln or a prairie-dog town. The inhabitants are worthy of their city, and a more miserable, vicious-looking population it would be impossible to imagine. Neither was the town improved, at the time of my visit, by the addition to the population of some three thousand Americans, the dirtiest, rowdiest crew I have ever seen collected together.

Crowds of drunken volunteers filled the streets, brawling and boasting, but never fighting; Mexicans, wrapped in sarape, scowled upon them as they passed; donkey-loads of hoja -corn-shucks-were hawking about for sale; and Pueblo Indians and priests jostled the rude crowds of brawlers at every step. Under the portales were numerous monte-tables, surrounded by Mexicans and Americans. Every other house was a grocery, as they call a gin or whisky shop, continually disgorging reeling drunken men, and everywhere filth and dirt reigned triumphant.

The extent of the province of New Mexico is difficult to define, as the survey of the northern sections of the republic has never been undertaken, (Lieutenant Abert, of the U. S. T. Engineers, surveyed the greater portion of New Mexico in 1846.) and a great portion of the country is still in the hands of the aborigines, who are at constant war with the Mexicans. It has been roughly estimated

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

at 6,000 square miles, with a population of 70,000, including the three castes of descendants of the original settlers, Mestizos, and Indios, Manzanos or Pueblos; the Mestizos, as is the case throughout the country, bearing a large proportion to the Mexico-Spanish portion of the population-in this case as 50 to 1.

The Pueblos, who are the original inhabitants of New Mexico, and, living in villages, are partially civilized, are the most industrious portion of the population, and cultivate the soil in a higher degree than the New Mexicans themselves. In these Indians, in their dwellings, their manners, customs, and physical character, may be traced a striking analogy to the Aztecs or ancient Mexicans. Their houses and villages are constructed in the same manner as, from existing ruins, we may infer that the Aztecs constructed theirs. These buildings are of two, three, and even five stories, without doors or any external communication, the entrance being at the top by means of ladders through a trapdoor in the azotea or flat roof. The population of the different Pueblos scattered along the Del Norte and to the westward of it is estimated at 12,000, without including the Moquis, who have preserved their independence since the year 1680.

The general character of the department is extreme aridity of soil, and the consequent deficiency of water, which must ever prevent its being thickly settled. The valley of the Del Norte is fertile, but of very limited extent; and other portions of the province are utterly valueless in an agricultural point of view, and their metallic wealth is greatly exaggerated. From association with the hardy trappers and Pioneers of the far west, the New Mexicans have in some degree imbibed a portion of their enterprise and hardihood; for settlements have been pushed far into the Rocky Mountains, whose inhabitants are many of them expert buffalo-hunters and successful trappers of beaver. The most northern of these is on the Rio Colorado, or Red River Creek, an affluent of the Del Norte, rising in the eastern chain of the Rocky Mountains, one hundred miles north of Santa Fe.

Of the many so-called gold-mines in New Mexico there is but one which has in any degree repaid the labor of working. This is El Real de Dolores, more commonly known as El Placer, situated eight leagues from Santa Fe, on the ridge of the Sierra Obscura. The gold is mostly found in what is technically called "dust," in very small quantities and with considerable labor. It has perhaps produced, since its discovery in 1828, 200,000 dollars, but it is very doubtful if any of these placers would repay the working on a large scale.

It is a favorite idea with the New Mexicans that the Pueblo Indians are acquainted with the existence and localities of some prodigiously rich mines, which in the early times of the conquest were worked by the Spaniards, at the expense of infinite toil and slavery on the part of the Indians; and that, fearing that such tyranny would be repeated if they were to disclose their secret, they have ever since steadily refused to point them out.

It is remarkable that, although existing, from the earliest times of the colonization of New Mexico, a period of two centuries, in a state of continual hostility with the numerous savage tribes of Indians who surround their territory, and in constant insecurity of life and property from their attacks-being also far removed from the enervating influences of large cities, and, in their isolated situation, entirely dependent upon their own resources-the inhabitants are totally destitute of those qualities which, for the above reasons, we might naturally have expected to distinguish them, and are as deficient in energy of character and physical courage, as they are in all the moral and intellectual qualities. In their social state but one degree removed from the veriest savag-

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

es, they might take a lesson even from these in morality and the conventional decencies of life. Imposing no restraint on their passions, a shameless and universal concubinage exists, and a total disregard of moral laws, to which it would be impossible to find a parallel in any country calling itself civilized. A want of honorable principle, and consummate duplicity and treachery, characterize all their dealings. Liars by nature, they are treacherous and faithless to their friends, cowardly and cringing to their enemies; cruel as all cowards are, they unite savage ferocity with their want of animal courage; as an example of which, their recent massacre of Governor Bent and other Americans may be given - one of a hundred instances.

I have before observed that a portion of the population of New Mexico consists of Indians, called Pueblos, from the fact of their living in towns, who are in a semi-civilized state, and in whose condition may be traced an analogy to the much exaggerated. civilization of the ancient Mexicans. It is well known that, in the traditions of that people, the Aztecs migrated from the north, from regions beyond the Gila, where they made the first of their three great halts; but it is generally supposed that no traces of their course, or former habitation, existed to the northward of this river. In the country of the Navajos, as well as in the territories of the independent Moqui, are still discoverable traces of their residence, and, as I have before remarked, the Pueblo Indians construct and inhabit houses and villages of the same form and material as the *casas grandes* [great houses] of the ancient Mexicans; retain many of their customs and domestic arts, as they have been handed down to us, and numerous traces of a common origin.

Amongst many of the religious forms still retained by these people, perhaps the most interesting is the perpetuation of the holy fire, by the side of which the Aztecs kept a continual watch for the return to earth of Quetzalcoatl - the god of air--who, according to their tradition, visited the earth, and instructed the inhabitants in agriculture and other useful arts. During his sojourn he caused the earth to yield tenfold productions, without the necessity of human labor: everywhere corn, fruit and flowers delighted the eye; the cotton-plant produced its woof already dyed by nature with various hues; aromatic odors pervaded the air; and on all sides resounded the melodious notes of singing-birds. The lazy Mexican naturally looks back to this period as the "golden age"; and as this popular and beneficent deity, on his departure from earth, promised faithfully to return and revisit the people he loved so well, this event is confidently expected to the present day. Quetzalcoatl embarked, in his boat of rattlesnake-skins, on the Gulf of Mexico; and as he was seen to steer to the eastward, his arrival is consequently looked for from that quarter, When the Spaniards arrived from the east, as they resembled the god in the color of their skin, they were at first generally supposed to be messengers from, or descendants of, the god of air.

This tradition is common to the nations even of the far-off north, and in New Mexico the belief is still clung to by the Pueblo Indians, who in a solitary cave of the mountains have for centuries continued their patient vigils by the undying fire; and its dim light may still be seen by the wandering hunter glimmering from the recesses of a cave, when, led by the chase, he passes in the vicinity of this humble and lonely temple.

Far to the north, in the country of the Moquis, the hunters have passed, wonderingly, ruins of large cities, and towns inhabited by Indians, of the same construction as those of the Pueblos, and identical with the *casas grandes* on the Gila and elsewhere.

In the absence of any evidence, traditionary or otherwise, on which to found an hypothesis as to the probable cause of the migration of the Mexicans from the north, I have surmised that it is just

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

possible that they may have abandoned that region on account of the violent volcanic convulsions which, from the testimony of people who have visited these regions, I have no doubt have at a comparatively recent period agitated that portion of the country; and from my own knowledge the volcanic formations become gradually more recent as they advance to the north along the whole table-land from Mexico to Santa Fe. These disturbances may have led to their frequent changes of residence, and ultimate arrival in the south. If their object was to fly from such constantly recurring commotions, their course would naturally be to the south, where they might expect a genial soil and climate, in a direction in which they might also avoid the numerous and warlike nations who inhabited the regions south of their abandoned country. Thus we find the remains of the towns built in the course of their migration, generally in insulated spots of fertility, oases in the vast and barren tracts they were obliged to traverse, which spread from the shores of the great salt-lake of the north towards the valley of the Gila, and still southward along the ridges of the Cordillera, which, a continuation of the Andes chain, stretch far away to the southern portion of the country.

The Indians of Northern Mexico, including the Pueblos, belong to the same family—the Apache; from which branch the Navajos, Apaches, Coyoters, Mescaleros, Moquis, Yubipias, Maricopas, Chiricauis, Chemeguabas, Yumayas (the last two tribes of the Moqui), and the Nijoras, a small tribe on the Gila. All these speak dialects of the same language, more or less approximating to the Apache, and of all of which the idiomatic structure is the same. They likewise all understand each other's tongue. What relation this language bears to the Mexican is unknown, but my impression is that it will be found to assimilate greatly, if not to be identical.

The Pueblo Indians of Taos, Pecuris, and Acoma speak a language of which a dialect is used by those of the Rio Abajo, including the Pueblos of San Felipe, Sandia, Ysleta, and Xemez. They are eminently distinguished from the New Mexicans in their social and moral character, being industrious, sober, honest, brave, and at the same time peaceably inclined if their rights are not infringed. Although the Pueblos are nominally Cristianos, and have embraced the outward forms of la santa fe Catolica, they yet, in fact, still cling to the belief of their fathers, and celebrate in secret the ancient rites of their religion. The aged and devout of both sexes may still be often seen on their flat house-tops; with their faces turned to the rising sun, and their gaze fixed in that direction from whence they expect, sooner or later, the god of air will make his appearance. They are careful, however, not to practise any of their rites before strangers, and ostensibly conform to the ceremonies of the Roman Church.

In the country of the Moquis are the remains of five cities of considerable extent, the foundations and some of the walls of which (of stone) are still standing, and on the sites of some they still inhabit villages, the houses of which are frequently built of the materials found amongst the ruins. A great quantity of broken pottery is found wherever these remains exist, the same in form and material as the relics of the same kind preserved in the city of Mexico. The ruins on the Gila, in particular, abound in these remains, and I have been assured that for many miles the plain is strewn with them. There are also remains of acequias, or irrigating canals, of great length and depth.

The five pueblos in the Moqui are Orayxa, Masanais, Jongoapi, Gualpi, and another, the name of which is not known. This tribe is, curiously enough, known to the trappers and hunters of the mountains as the Welsh Indians. They are, they say, much fairer in complexion than other tribes,

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

and have several individuals amongst them perfectly white, with light hair. The latter circumstance is accounted for by the frequent occurrence amongst the Navajos, and probably the Moquis also, of albinos, with the Indian feature, but light complexions, eyes, and hair.

In connection with this, I may mention a curious circumstance which happened to me, and tends to show that there is some little foundation for the belief of the trappers, that the Moqui Indians are descendants of the followers of Prince Madoc.

I happened on my arrival at the frontier of the United States (at Fort Leavenworth) to enter the log hut of an old negro woman, being at the time in my mountain attire of buckskins, over which was thrown a Moqui or Navajo blanket, as it was wet weather. The old dame's attention was called to it by its varied and gaudy colors, and, examining it carefully for some time, she exclaimed, "That's a Welsh blanket; I know it by the woof!" She had, she told me, in her youth, lived for many years in a Welsh family and in a Welsh settlement in Virginia, or one of the southern States, and had learned their method of working, which was the same as that displayed in my blanket. The blankets and tilmas manufactured by the Navajos, Moquis, and the Pueblos are of excellent quality, and dyed in durable and bright colors: the warp is of cotton filled with wool, the texture close and impervious to rain. Their pottery is, as I have before remarked, the same as that manufactured by the Aztecs, painted in bright patterns by colored earths and the juice of several plants. The dress of the Pueblos is a mixture of their ancient costume with that introduced by the Spaniards. A tilma, or small blanket without sleeves, is worn over the shoulder, and their legs and feet are protected by moccasins and leggings of deerskin or woollen stuff. Their heads are uncovered, and their hair long and unconfined, save the centre or scalp lock, which is usually bound with gay-colored ribbon. The women's dress is the same as that of the squaws of the wild Indians of the prairies, generally covered with a bright-colored blanket, or a mantle of cloth.

The Pueblo Indians have been more than once the chief actors in the many insurrections which have disturbed this remote province. In 1837 they overturned the government, killing the incapable man at the head of it, as they had done his predecessor, and placing one of their own party at the head of affairs. Recently they rose upon the Americans, who have taken possession of the country, and, in conjunction with the Mexicans, massacred Governor Bent and many others. They were defeated by the American troops in a pitched battle at La Canada, but defended most gallantly their chief pueblo (of Taos), which was taken and destroyed after a desperate resistance. Although I had determined to remain some time in Santa Fe to recruit my animals, I was so disgusted with the filth of the town, and the disreputable society a stranger was forced into, that in a very few days I once more packed my mules, and proceeded to the north, through the valley of Taos.

It was a cold, snowy day on which I left Santa Fe and the mountain, although here of inconsiderable elevation, was difficult to cross on account of the drifts. My mules, too, were for the first time introduced to snow on a large scale, and, by their careful, mincing steps and cautious movements, testified their doubts as to the security of such a road. The mountain is covered with pine and cedar, and the road winds through the bed of an arroyo, between high banks now buried in the snow. Not a living thing was visible, but once a large grey wolf was surprised on our turning a corner of rock, and in his hurry to escape plunged into a snowdrift, where I could easily have despatched the animal with a pistol, but Panchito was in such a state of affright that nothing would induce him to stand still or approach the spot.

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

Over ridges and through mountain-gorges we passed into a small valley, where the pueblo of Ohuaqui afforded me shelter for the night, and a warm stable with plenty of corn for my animals, a luxury they had long been unaccustomed to.

I was here made welcome by the Indian family, who prepared my supper of frijoles and atole, the last the dish of New Mexico. It is made of the Indian meal, mixed with water into a thick gruel, and thus eaten-an insipid compound. Far more agreeable is the pinole of the tierra afuera [countryside], which is the meal of parched maize, mixed with sugar and spices, and of which a handful in a pint of water makes a most cooling and agreeable drink, and is the great standby of the arrieros and road-travellers in that starving country.

The patrona of the family seemed rather shy of me at first, until, in the course of conversation, she discovered that I was an Englishman. "Gracias a Dios," she exclaimed, "a Christian will sleep with us to-night, and not an American!"

I found over all New Mexico that the most bitter feeling and most determined hostility existed against the Americans, who certainly in Santa Fe and elsewhere have not been very anxious to conciliate the people, but by their bullying and overbearing demeanor towards them, have in a great measure been the cause of this hatred, which shortly after broke out in an organized rising of the northern part of the province, and occasioned great loss of life to both parties.

After supper the women of the family spread the floor with blankets, and every one, myself included, cigar in mouth, lay down-to the number of fifteen-in a space of less than that number of square feet; men, women, and children, all smoking and chattering. Just over my head were roosting several fowls; and one venerable cock every five minutes saluted us with a shrill crow, to the infinite satisfaction of the old Indian, who at every fresh one exclaimed, "Ay, como canta mi gallo, tan claro! - how clear sings my cock, the fine fellow!" "Valgame Dios! que paxarito tan hermoso - what a lovely little bird is this!"

The next day, passing the miserable village of La Canada, and the Indian pueblo of San Juan, both situated in a wretched, sterile-looking country, we reached El Embudo-the funnel-where I put up in the house of an old Canadian trapper, who had taken to himself a Mexican wife, and was ending his days as a quiet ranchero. He appeared to have forgotten the plenty of the mountains, for his pretty daughter set before us for supper a plate containing six small pieces of fat pork, like dice, floating in a sea of grease, hot and red with chile colorado.

We crossed, next day, a range of mountains covered with pine and cedar: on the latter grew great quantities of mistletoe, and the contrast of its bright green and the sombre hue of the cedars was very striking. The snow was melting on the ascent, which was exposed to the sun, and made the road exceedingly slippery and tiring to the animals. On reaching the summit a fine prospect presented itself: The Rocky Mountains, stretching away on each side of me, here divided into several branches, whose isolated peaks stood out in bold relief against the clear, cold sky. Valleys and plains lay between them, through which the river wound its way in deep cañons. In the distance was the snowy summit of the Sierra Nevada, bright with the rays of the setting sun, and at my feet lay the smiling vale of Taos, with its numerous villages and the curiously constructed pueblos of the Indians. Snow-covered mountains surrounded it, whose ridges were flooded with light, while the valley was almost shrouded in gloom and darkness.

On descending I was obliged to dismount and lead my horse, whose feet, balled with snow, were continually slipping from under him. After sunset the cold was intense, and, wading through

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

the snow, my moccasins became frozen, so that I was obliged to travel quickly to prevent my feet from being frost-bitten. it was quite dark when I reached the plain, and the night was so obscure that the track was perfectly hidden, and my only guide was the distant lights of the villages. Coming to a frozen brook, the mules refused to cross the ice, and I spent an hour in fruitless attempts to induce them. I could find nothing at hand with which to break the ice, and at length, half frozen, was obliged to turn back and retrace my steps to a rancho, which the Indian boy who was my guide said was about a mile distant. This I at length reached, though not before one of my feet was frost-bitten, and my hands so completely numbed by the excessive cold that I was unable to unpack the mules when I got in. To protect the poor animals from the cold, as there was no stable to place them in, I devoted the whole of my bedding to cover them, reserving to myself only a sarape, which, however, by the side of a blazing wood fire, was sufficient to keep me warm. The good lady of the house sent me a huge bowl of atole as I was engaged in clothing the animals, which I offered to Panchito as soon as the messenger's back was turned, and he swallowed it, boiling hot as it was, with great gusto.

The next morning, with the assistance of some rancheros, I crossed the stream, and arrived at Fernandez, which is the most considerable village in the valley.

CHAPTER V

MEXICAN GRATITUDE

EL VALLE DE TAOS is situated about eighty miles to the northward of Santa Fe on the eastern side of the Del Norte. It contains several villages or rancherias, the largest of which are Fernandez and El Rancho. The population of the valley may be estimated at eight thousand, including the Pueblo Indians. The soil is exceedingly fertile, and produces excellent wheat and other grain. The climate being rigorous, and the summers short, fruit does not ripen to perfection, but vegetables of all kinds are good and abundant, onions in particular growing to great size and of excellent flavor. The climate is colder than at Santa Fe the thermometer sometimes falling to zero in winter, and seldom rising above 75 in summer; the nights in summer being delightfully cool, but in winter piercingly cold. Although generally healthy, infectious disorders are sometimes prevalent and fatal; and periodical epidemics have on several occasions nearly decimated the inhabitants.

In all maps the valley of Taos is confounded with a city which under that name appears in them, but which does not exist, Fernandez being the chief town of the valley, and no such town as Taos to be found. The valley derives its name from the Taoses, a tribe of Indians who once inhabited it, and the remains of which inhabit a pueblo under the mountain about seven miles from Fernandez. Humboldt mentions Taos as a city containing 8,900 inhabitants. Its latitude is about 36 30', longitude between 105 30' and 106' west of Greenwich, but its exact position has never been accurately determined. The extent of the valley from El Rancho to Arroyo Hondo is seventeen miles, the breadth from the Del Norte to the mountains about the same.

Several distilleries are worked both at Fernandez and El Rancho, the latter better known to Americans as The Ranch. Most of them belong to Americans, who are generally trappers and hunters, who having married Taos women have settled here. The Taos whisky, a raw fiery spirit which they manufacture, has a ready market in the mountains amongst the trappers and hunters, and the Indian traders, who find the "fire-water" the most profitable article of trade with the aborigines, who exchange for it their buffalo robes and other peltries at a "tremendous sacrifice."

In Fernandez I was hospitably entertained in the house of an American named Lee, who had for

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

many years traded and trapped in the mountains, but who now, having married a Mexican woman, had set up a distillery and was amassing a considerable fortune. He gave me a pressing invitation to stop the winter with him, which I was well inclined to accept, if I could have obtained good pasture for my animals; that, however, was not to be had, and I continued my journey. A few days after my departure, Lee's house was attacked by the Mexicans, at the time when they massacred Governor Bent in the same village, and himself killed, with every foreigner in the place excepting the brother of Lee, who was protected by the priest and saved by him from the savage fury of the mob.

Bent, as well as Lee, had resided many years in New Mexico, both having wives and children in the country, and were supposed to have been much esteemed by the people. The former was an old trader amongst the Indians, and the owner of Bent's Fort, or Fort William, a trading-post on the Arkansa, well known for its hospitality to travellers in the far west. From his knowledge of the country and the Mexican character, Mr. Bent had been appointed Governor of New Mexico by General Kearney, and it was during a temporary visit to his family at Fernandez that he was killed in their presence, and scalped and mutilated, by a mob of Pueblos and the people of Taos.

William Bent was one of those hardy sons of enterprise with whom America abounds, who from love of dangerous adventure, forsake the quiet monotonous life of the civilized world for the excitement of a sojourn in the far west. For many years he traded with Indians on the Platte and Arkansa, winning golden opinions from the poor Indians for his honesty and fair dealing, and the greatest popularity from the hardy trappers and mountaineers for his firmness of character and personal bravery.

Notwithstanding the advice I received not to attempt such a journey at this season, I determined to cross the mountains and winter on the other side, either at the head of Arkansa or Platte, or in some of the mountain valleys, which are the wintering places of many of the trappers and mountain-men. I therefore hired a half-breed Pueblo as a guide, who, by the by, was one of the most rascally-looking of rascally Mexicans, and on the 1st of January was once more on my way.

I left Fernandez late in the day, as I intended to proceed only twelve miles to Arroyo Hondo, and there remain for the night. After proceeding a mile or two we came to a stream about thirty feet in breadth and completely frozen. Here the mules came to a stop, and nothing would induce them to attempt to cross. Even the last resource, that of crossing myself on Panchito, and pretending to ride away with their favorite, entirely failed, although they ran up and down the bank bellowing with affright, smelling the ice, feeling it with their fore feet and, throwing up their heads, would gallop to another point, and up and down, in great commotion. At length I had to take a pole, which was opportunely lying near, and break the ice away, having to remove the broken blocks entirely before they would attempt it. With all this, however, my old hunting-mule still refused; but, as I knew she would not be left behind, I proceeded on with the rest. At this she became frantic, galloped away from the river, returned, bellowed and cried, and at last, driven to desperation, she made a jump right into the air, but not near the broken place, and came down like a lump of lead on the top of the ice, which, of course, smashed under her weight, and down she went into a deep hole, her head just appearing out of the water, which was "mush" with ice. In this "fix" she remained perfectly still, apparently conscious that her own exertions would be unavailing; and I therefore had to return, and, up to my middle in water, break her out of the ice, expecting every moment to see her drop frozen to death. At last, and with great labor, I extricated her, when she at

---

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

once ran up to the horse and whinnied her delight at the meeting.

By this time it was pitchy dark, and the cold had become intense; my moccasins and deerskin leggings were frozen hard and stiff, and my feet and legs in a fair way of becoming in the same state. There was no road or track, the snow everywhere covering the country, and my guide bad evidently lost his way. However, I asked him in which direction he thought Arroyo Hondo to be, and pushed straight on for it, floundering through the snow, and falling into holes and ravines, and at length was brought to a dead halt, my horse throwing himself on his haunches, and just saving his master and himself a fall down a precipice some 500 feet in depth, which formed one side of the Arroyo Hondo.

The lights of the rancho to which we were bound twinkled at the bottom, but to attempt to reach it, without knowing the road down the ravine, was like jumping from the top of the Monument. However, as I felt I was on the point of freezing to death, I became desperate and charged the precipice, intending to roll down with Panchito, if we could not do better; but the horse refused to move, and presently, starting to one side as I spurred him, fell headlong into a snow-drift some twenty feet in depth, where I lay under him; and, satisfied in my mind that I was "in extremis," wished myself further from Arroyo Hondo and deplored my evil destiny. Panchito, however, managed to kick himself out; and I, half smothered and with one of my ribs disabled, soon followed his example, and again mounted. We presently came to a little adobe house, and a man, hearing our cries to each other in the dark, came out with a light. To my request, for a night's lodging he replied, "No se puede, no habia mas que un quartito"-that there was no room, but one little chamber, but that at the rancho I would be well accommodated. With this hint I moved on, freezing in my saddle, and again attempted to descend, but the darkness was pitchy, and the road a wall. Whilst attempting the descent once more, a light appeared on the bank above us, and a female voice cried out, "Veulvase amigo, por Dios! que no se baja - return, friend, for God's sake! and don't attempt to go down." "Que vengan, pobrecitos, para calentarse - come, poor fellows, and warm yourselves." "Por hi se sube, por hi-this way, this is the way up"-she cried to us, holding up the light to direct our steps. "Ay de mi, como suffren los pobres viajeros! -alas, what poor travelers suffer!"-she exclaimed, eyeing our frozen appearance, and clothes white with snow; and, still holding up the light, she led the way to her house, where now, lectured by his wife for his inhospitality, the man who had sent us away from his door bestirred himself to unpack the mules, which, with our numbed hands, it was impossible for us to do.

A little shed full of corn-shucks (the leaf of the maize, of which animals are very fond) provided a warm shelter for the shivering beasts; and having attended to their wants, and piled before them enough hoja for a regiment of cavalry, I entered the house, where half a dozen women were soon rubbing life into my hands and feet, which were badly frost-bitten, whilst others were busy preparing atole and chile, and making tortillas on the hearth.

A white stone marks this day of my journey, when, for the first time, I met with native hospitality on Arroyo Hondo. In this family, which consisted of about fifteen souls, six were on their beds, suffering from sarampion-the measles-which was at the time of my journey carrying off many victims in Santa Fe and Taos Valley. An old crone was busy decocting simples in a large olla over the fire. She asked me to taste it, giving it the name of aceite de vivoras--rattlesnake-oil; and as I expressed my disgust by word and deed at the intimation, which just saved my taking a gulp, the old lady was convulsed with laughter, giving me to understand that it was not really viper-oil, but

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

was so called-no mas. This pot, when cooked, was set on one side, and all the patients, one after the other, crawled from their blankets and imbibed the decoction from a gourd. One of the sick was the mother of the family, who had run after us to bring us back when her husband had told her of our situation-one instance of the many which I have met of the kindness of heart of Mexican women.

The next morning we descended into the Arroyo. Even in daylight the track down was exceedingly dangerous, and to have attempted it in the dark would have been an act of no little temerity. On the other bank of the stream was situated a mill and distillery belonging to an American by the name of Turley, who had quite a thriving establishment. Sheep and goats, and innumerable hogs, ran about the corral; his barns were filled with grain of all kinds, his mill with flour, and his cellars with whisky "in galore." Everything about the place betokened prosperity. Rosy children, uniting the fair, complexions of the Anglo-Saxon with the dark tint of the Mexican, gambolled before the door. The Mexicans and Indians at work in the yard were stout, well-fed fellows, looking happy and contented; as well they might, for no one in the country paid so well, and fed so well, as Turley, who bore the reputation, far and near, of being as generous and kind-hearted as he was reported to be rich. In times of scarcity no Mexican ever besought his assistance and went away empty-handed. His granaries were always open to the hungry, and his purse to the poor.

Three days after I was there they attacked his house, burned his mill, destroyed his grain and his live stock, and inhumanly butchered himself and the foreigners with him, after a gallant defence of twenty-four hours - nine men against five hundred. Such is Mexican gratitude.

I here laid in a small supply of provisions, flour and dried buffalo-meat, and got besides a good breakfast-rather a memorable occurrence. Just as I arrived, a party of Mormons, who had left Colonel Cooke's command on their way to California, and were now about to cross the mountains to join a large body of their people who were wintering on the Arkansa, intending to proceed to California in the ensuing spring, were on the point of starting. There were some twelve or fifteen of them, raw-boned fanatics, with four or five pack-mules carrying their provisions, themselves on foot. They started several hours before me; but I overtook them before they crossed the mountain, straggling along, some seated on the top of the mules' packs, some sitting down every few hundred yards, and all looking tired and miserable. One of the party was an Englishman, from Biddenden, in Kent, and an old Peninsular soldier. I asked what could have induced him to have undertaken such an expedition. He looked at me, and, without answering the question, said, "Dang it, if I only once get hoam I"

Arroyo Hondo runs along the base of a ridge of mountain of moderate elevation, which divides the valley of Taos from that of Rio Colorado, or Red River, both running into the Del Norte. The trail from one to the other runs through and over the mountain, a distance of about twelve miles. It is covered with pine and cedar and a species of dwarf oak; and numerous small streamlets run through the cañons and gorges. Near these grows plentifully a shrub which produces a fruit called by the mountaineers service-berry, of a dark blue, the size of a small grape, and of very pleasant flavor.

My animals, unused to mountain travelling, proceeded very slowly. Every little stream of frozen water was the cause of delay. The mules, on reaching the brink, always held a council of war, smelt and tried it with their fore feet, and bellowed forth their dislike of the slippery bridge. Coronela, my hunting-mule, since her mishap at Fernandez, was always the first to cross, but I had first to

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

strew the ice with branches, or throw a blanket over it, before I could induce them to pass; and at last, tired of the delays thus occasioned, I passed with the horse, and left the mules to use their own discretion, although not unfrequently half an hour or more would elapse before they overtook me.

All this day I marched on foot through the snow, as Panchito made sad work of ascending and descending the mountain, and it was several hours after sunset when I arrived at Rio Colorado, with one of my feet badly frozen. In the settlement, which boasted about twenty houses, on inquiry as to where I could procure a corral and hoja for the animals, I was directed to the house of a French Canadian-an old trapper named Laforey-one of the many who are found in these remote settlements, with Mexican wives, and passing the close of their adventurous lives in what to them is a state of ease and plenty; that is, they grow sufficient maize to support them, their faithful and well-tried rifles furnishing them with meat in abundance, to be had in all the mountains for the labor of hunting.

I was obliged to remain here two days, for my foot was so badly frozen that I was quite unable to put it to the ground. In this place I found that the Americans were in bad odor; and as I was equipped as a mountaineer, I came in for a tolerable share of abuse whenever I limped through the village. As my lameness prevented me from pursuing my tormentors, they were unusually daring, saluting me, every time I passed to the shed where my animals were corralled, with cries of "Burro, burro, vena comer hoja - Jackass, jackass, come here and eat shucks ... .. Anda coxo, a ver los burros, sus hermanos - Hallo, game-leg, go and see your brothers, the donkeys;" and at last, words not being found heavy enough, pieces of adobe rattled at my ears. This, however, was a joke rather too practical to be pleasant; so, the next time I limped to the stable, I carried my rifle on my shoulder, which was a hint never to be mistaken by a Mexican, and hereafter I passed with impunity. However, I was obliged to watch my animals day and night, for, as soon as I fed them, either the corn was bodily stolen, or a herd of hogs was driven in to feed at my expense. The latter aggression I put a stop to by administering to one persevering porker a pill from my rifle, and promised the threatening crowd that I would have as little compunction in letting the same amount of daylight into them if I caught them thieving the provender; and they seemed to think me in earnest, for I missed no more corn or shucks. I saw plainly enough, however, that my remaining here, with such a perfectly lawless and ruffianly crew, was likely to lead me into some trouble, if, indeed, my life was not in absolute danger, which, from what occurred shortly after, I have now no doubt it was; and therefore I only waited until my foot was sufficiently recovered to enable me to resume my journey across the mountains.

The fare in Laforey's house was what might be expected in a hunter's establishment: venison, antelope, and the meat of the carnero cimarron - the Rocky Mountain sheep - furnished his larder; and such meat (poor and tough at this season of the year), with cakes of Indian meal, either tortillas or gorditas, (The tortilla is a round flat pancake, made of the Indian cornmeal; the gordita is of the same material, but thicker) furnished the daily bill of fare. The absence of coffee he made the theme of regret at every meal, bewailing his misfortune in not having at that particular moment a supply of this article, which he never before was without, and which I may here observe, amongst the hunters and trappers, when in camp or rendezvous, is considered as an indispensable necessary. Coffee, being very cheap in the States, is the universal beverage of the western people, and finds its way to the mountains in the packs of the Indian traders, who retail it to the moun-

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

tain-men at the moderate price of from two to six dollars the half-pint cup. However, my friend Laforey was never known to possess any, and his lamentations were only intended to soften my heart, as he thought (erroneously) that I must certainly carry a supply with me.

“Sacre enfant de Garce,” he would exclaim, mixing English, French, and Spanish into a puchero-like jumble, “voyez-vous dat I vas nevere tan pauvre as dis time; mais before I vas siempre avec plenty cafe, plenty sucre; mais now, God dam, I not go a Santa Fe” God dam, and mountain-men dey come aqui from autre cote, drink all my cafe. Sacre enfant de Garce, nevere I vas tan pauvre as dis time, God dam. I not care comer meat, ni frijole, ni corn, mais widout cafe I no live. I hunt may be two, three day, may be one week, mais I eat notin’; mais sin cafe, enfant de Garce, I no live, parce-que me not sacre Espagnol, mais one Frenchman.”

Rio Colorado is the last and most northern settlement of Mexico, and is distant from Vera Cruz 2000 miles. It contains perhaps fifteen families, or a population of fifty souls, including one or two Yuta Indians, by sufferance of whom the New Mexicans have settled this valley, thus ensuring to the politic savages a supply of corn or cattle without the necessity of undertaking a raid on Taos or Santa Fe whenever they require a remount. This was the reason given me by a Yuta for allowing the encroachment on their territory.

The soil of the valley is fertile, the little strip of land which comprises it yielding grain in abundance, and being easily irrigated from the stream, the banks of which are low. The plain abounds with alegria, the plant from which the juice is extracted with which the belles of Nuevo Mejico, cosmetically preserve their complexions. The neighboring mountains afford plenty of large game-deer, bears, mountain-sheep, and elk; and the plains are covered with countless herds of antelope, which, in the winter, hang about the foot of the sierras, which shield them from the icy winds.

No state of society can be more wretched or degrading than the social and moral condition of the inhabitants of New Mexico: but in this remote settlement, anything I had formerly imagined to be the ne plus ultra of misery, fell far short of the reality --such is the degradation of the people of the Rio Colorado. Growing a bare sufficiency for their own support, they hold the little land they cultivate, and their wretched hovels on sufferance from the barbarous Yutas, who actually tolerate their presence in their country for the sole purpose of having at their command a stock of grain and a herd of mules and horses, which they make no scruple of helping themselves to, whenever they require a remount or a supply of farinaceous food. Moreover, when a war expedition against a hostile tribe has failed, and no scalps have been secured to ensure the returning warriors a welcome to their village, the Rio Colorado is a kind of game-preserve, where the Yutas have a certainty of filling their bag if their other covers draw blank. Here they can always depend upon procuring a few brace of Mexican, scalps, when such trophies are required for a war-dance or other festivity, without danger to themselves, and merely for the trouble of fetching them.

Thus, half the year, the settlers fear to leave their houses, and their corn and grain often remain uncut, the Indians being near: thus the valiant Mexicans refuse to leave the shelter of their burrows even to secure their only food. At these times their sufferings are extreme, they being reduced to the verge of starvation; and the old Canadian hunter told me that he and his son entirely supported the people on several occasions by the produce of their rifles, while the maize was lying rotting in the fields. There are sufficient men in the settlement to exterminate the Yutas, were they not entirely devoid of courage; but, as it is, they allow themselves to be bullied and ill-treated with the most perfect impunity.

---

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

Against these same Indians a party of a dozen Shawnee and Delaware trappers waged a long and most destructive war, until at last the Yutas were fain to beg for peace, after losing many, of their most famous warriors and chiefs. The cowardly Mexicans, however, have seldom summoned courage to strike a blow in their own defence, and their savage enemies so thoroughly despise them that they never scruple to attack them, however large the party, or in spite of the greatest disparity in numbers between them.

On the third day, the inflammation in my frost-bitten foot having in some measure subsided, I again packed my mules, and, under a fusillade of very hard names from the pelados, turned my back on Mexico and the Mexicans.

Laforey escorted me out of the settlement to point out the trail (for roads now had long ceased), and bemoaning his hard fate in not having "plenty cafe, avec Sucre, God dam," with a concluding enfant de Garce, he bid me good bye, and recommended me to mind my hair - in other words, look out for my scalp. Cresting a bluff which rose from the valley, I turned in my saddle, took a last look of the adobes, and, without one regret, cried "Adios, Mejico!"

I had now turned my back on the last settlement, and felt a thrill of pleasure as I looked at the wild expanse of snow which lay before me, and the towering mountains which frowned on all sides, and knew that now I had seen the last (for some time at least) of civilized man under the garb of a Mexican sarape.

CHAPTER VI

INTO THE MOUNTAINS

OUR course on leaving Red River was due north, my object being to strike the Arkansa near its head-waters on the other side of the Rocky Mountains, and follow as near as possible the Yuta trail, which these Indians use in passing from the Del Norte to the Bayou Salado, on their annual buffalo-hunts to that elevated valley.

Skirting a low range of mountains, the trail passes a valley upwards of fifty miles in length, intersected by numerous streams (called creeks by the mountain-men), which rise in the neighboring highlands, and fall into the Del Norte, near its upper waters. Our first day's journey, of about twenty-five miles, led through the uplands at the southern extremity of the valley. These are covered with pine and cedar, and the more open plains with bushes of wild sage, which is the characteristic plant in all the elevated plains of the Rocky Mountains. On emerging from the uplands, we entered a level prairie, covered with innumerable herds of antelope.

These graceful animals, in bands containing several thousands, trotted up to us, and, with pointed ears and their beautiful eyes staring with eager curiosity, accompanied us for miles, running parallel to our trail within fifty or sixty yards.

The cold of these regions is more intense than I ever remember to have experienced, not excepting even in Lower Canada; and when a northerly wind sweeps over the bleak and barren plains, charged as it is with its icy reinforcements from the snow-clad mountains, it assails the unfortunate traveller, exposed to all its violence, with blood-freezing blasts, piercing to his very heart and bones.

Such was the state of congelation I was in, on this day, that even the shot-tempting antelope bounded past unscathed. My hands, with fingers of stone, refused even to hold the reins of my horse, who travelled as he pleased, sometimes slueing round his stern to wind, which was "dead ahead." Mattias, the half-breed who was my guide, enveloped from head to foot in blanket, occa-

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

sionally cast a longing glance from out its folds at the provoking venison as it galloped past, muttering at intervals, "Jesus, Jesus, que carne - what meat we're losing!" At length, as a band of some three thousand almost ran over us, human nature, although at freezing-point, could no longer stand it. I jumped off Panchito, and, kneeling down, sent a ball from my rifle right into the "thick" of the band. At the report two antelopes sprang into the air, their forms being distinct against the horizon above the backs of the rest; and when the herd had passed, they were lying kicking in the dust, one shot in the neck, through which the ball had passed into the body of another.

We packed a mule with the choice pieces of the meat, which was a great addition to our slender stock of dried provisions. As I was butchering the antelope, half a dozen wolves hung round the spot, attracted by the smell of blood; they were so tame, and hungry at the same time, that I thought they would actually have torn the meat from under my knife. Two of them loped round and round, gradually decreasing their distance, occasionally squatting on their haunches and licking their impatient lips, in anxious expectation of a coming feast. I threw a large piece of meat towards them, when the whole gang jumped upon it, fighting and growling, and tearing each other in the furious melee. I am sure I might have approached near enough to have seized one by the tail, so entirely regardless of my vicinity did they appear. They were doubtless rendered more ravenous than usual by the uncommon severity of the weather, and, from the fact of the antelope congregating in large bands, were unable to prey upon these animals, which are their favorite food. Although rarely attacking a man, yet in such seasons as the present I have no doubt that they would not hesitate to charge upon a solitary traveller in the night, particularly as in winter they congregate in troops of from ten to fifty. They are so abundant in the mountains, that the hunter takes no notice of them, and seldom throws away upon the skulking beasts a charge of powder and lead.

This night we camped on Rib Creek, the Costilla of the New-Mexican hunters, where there was no grass for our poor animals, and the creek was frozen to such a depth, that, after the greatest exertions in breaking a hole through the ice, which was nearly a foot thick, they were unable to reach the water.

It is a singular fact that during intense cold horses and mules suffer more from want of water than in the hottest weather, and often perish in the mountains when unable to procure it for two or three days in the frozen creeks. Although they made every attempt to drink, the mules actually kneeling in their endeavors to reach the water, I was obliged to give it them, one after the other, from a small tin cup which held half a pint, and from which the thirsty animals greedily drank. This tedious process occupied me more than an hour, after which there was another hour's work in hunting for wood, and packing it on our backs into camp. Before we had a fire going it was late in the night, and almost midnight before we had found a little grass and picketed the animals; all of which duties at last being effected, We cooked our collops of antelope-meat, smoked a pipe, and rolled ourselves in our blankets before the fire. All night long the camp was surrounded by wolves, which approached within a few feet of the fire, and their eyes shone like coals as they hovered in the bushes, attracted by the savory smell of the roasting venison.

The next day we struck La Culebra, or Snake Creek, where we saw that the party of Mormons had encamped, and apparently halted a day, for more than ordinary pains had been taken to make their camp comfortable, and several piles of twigs, of the sage-bush and rushes, remained, of which they had made beds. However, we were obliged to go farther down the creek, as there was

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

no firewood near the point where the trail crosses it, and there found a sheltered place with tolerable grass, and near an air-hole in the ice where the animals could drink. I remarked that in the vicinity of the Mormon camp no watering-place had been made for their animals, and, as we had seen no holes broken in the ice of the creeks we had passed, I concluded that these people had allowed their animals to shift for themselves, the consequences of which negligence were soon apparent in our farther advance.

The cold was so intense that I blanketed all my animals, and even then expected that some of the mules would have perished; for it snowed heavily during the night, and the storm ended in a watery sleet, which froze as soon as it fell, and in the morning the animals were covered with a sheet of ice. We ourselves suffered extremely, turning constantly, and rolling almost into the embers of the scanty fire; and towards daybreak I really thought I should have frozen bodily. My bedding consisted of two blankets -one of them a very thin one, which was all I had between my body and the snow; and the other, first soaked with the sleet and afterwards frozen stiff and hard, was more like a board than a blanket, and was in that state no protection against the cold. It is well known that the coldest period of the twenty-four hours is that immediately preceding the dawn of day. At this time one is generally awakened by the sensation of death-like chill, which penetrates into the very bones; and as the fire is by this time usually extinguished, or merely smouldering in the ashes, the duty of replenishing is a very trying process. To creep out of the blanket and face the cutting blast requires no little resolution; and, if there be more than one person in the camp, the horrible moment is put off by the first roused, in hopes that someone else will awaken and perform the duty. However, should the coughs and hems succeed in rousing all, it is ten to one but that all, with a blank look at the cheerless prospect, cover their heads with the blanket, and with a groan, cuddling into a ball, resettle themselves to sleep, leaving the most chilly victim to perform the office.

The half-frozen animals, standing over their picket-pins and collapsed with cold, seem almost drawn within themselves, and occasionally approach the fire as close as their lariats will allow, bending down their noses to the feeble warmth, the breath in steaming volumes of cloud issuing from their nostrils, whilst their bodies are thickly clad with a coat of frozen snow or sleet.

Our next camp was on La Trinchera, or Bowl Creek. The country was barren and desolate, covered with sage, and with here and there a prairie with tolerable pasture. Antelope were abundant, and deer and turkeys were to be seen on the creeks. The trail passed, to the westward, a lofty peak, resembling in outline that one known as James's or Pike's Peak, which is some two hundred and fifty miles to the north. The former is not laid down in any of the maps, although it is a well-known landmark to the Indians.

The creeks are timbered with cottonwoods, quaking-asp, dwarf-oak, cedar, and wild cherry, all of small growth and stunted, while the uplands are covered with a dwarfish growth of pines. From Rio Colorado we had been constantly followed by a large grey wolf. Every evening, as soon as we got into camp, he made his appearance, squatting quietly down at a little distance, and after we had turned in for the night helping himself to anything lying about. Our first acquaintance commenced on the prairie where I had killed the two antelope, and the excellent dinner he then made, on the remains of the two carcasses, had evidently attached him to our society. In the morning, as soon as we left the camp, he took possession, and quickly ate up the remnants of our supper and some little extras I always took care to leave for him. Shortly after he would trot after us, and, if we

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

halted for a short time to adjust the mule-packs or water the animals, he sat down quietly until we resumed our march. But when I killed an antelope, and was in the act of butchering it, he gravely looked on, or loped round and round, licking his jaws, and in a state of evident self-gratulation. I had him twenty times a day within reach of my rifle, but he became such an old friend that I never dreamed of molesting him.

Our day's travel was usually from twenty to thirty miles, for the days were very short, and we were obliged to be in camp an hour before sunset, in order to procure wood, and water the animals before dark. Before arriving at the creek where we purposed to camp, I rode ahead, and selected a spot where was good grass and convenient water. We then unpacked the mules and horses, and immediately watered them, after which we allowed them to feed at large until dark. In the mean time we hunted for fire-wood, having sometimes to go half a mile from camp, packing it on our shoulders to the spot we intended for our fire, the mule-packs and saddles, &c., being placed to windward of it as a protection from the cold blasts. We then cooked supper, and at dark picketed the animals round the camp, their lariats (or skin-ropes) being attached to pegs driven in the ground. After a smoke, we spread our blankets before the fire and turned in, rising once or twice in the night to see that all was safe, and remove the animals to fresh grass when they had cleared the circle round their pickets. Guard or watch we kept none, for after a long day's travel it was too much for two of us to take alternate sentry, thus having but half the night for sleep.

We were now approaching a part of the journey much dreaded by the Indians and New Mexican buffalo-hunters, and which is quite another "Jornada del Muerto," or dead man's journey. A creek called Sangre Cristo - blood of Christ - winds through a deep cañon, which opens out at one point into a small circular basin called El Vallecito-the little valley. It is quite embosomed in the mountains; and down their rugged sides, and through the deep gorges, the wind rushes with tremendous fury, filling the valley with drifted snow, and depositing it in the numerous hollows with which it is intersected. This renders the passage of the Vallecito exceedingly difficult and dangerous, as animals are frequently buried in the snow, which is sometimes fifteen or twenty feet deep in the hollows, and four or five on the level.

This valley is also called by the mountaineers the "Wind-trap;" a very appropriate name, as the wind seems to be caught and pent up here the year round, and, mad with the confinement, blows round and round, seeking for an escape.

Wishing to have my animals fresh for the passage of this dreaded spot, I this day made a short journey of fifteen miles, and camped in the cañon about three miles from the mouth of the Wind-trap. The cañon was so precipitous that the only place I could find for our camp was on the side of the mountain, where was tolerably good gramma-grass, but a wretched place for ourselves; and we had to burrow out a level spot in the snow before we could place the pack in a position where they would not roll down the hill. The cedars were few and far between, and the snow covered everything in the shape of wood; and as in our last camp my tomahawk had been lost in the snow, I was unable to procure a log, and was fain to set fire to a cedar near which we had laid our packs. The flame, licking the stringy and dry bark, quickly ran up the tree, blazed along the branches in a roar of fire, illuminating the rugged mountain, and throwing its light upon the thread of timber skirting the creek which wound along the bottom far beneath.

All night long the wind roared through the cañon, and at times swept the blankets from our chilled bodies with the force of a giant. The mules and horses after dark refused to feed, and, as

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

there was no spot near where we could picket them, the poor beasts sought shelter from the cruel blasts in the belt of dwarf oak which fringed the creek.

We passed a miserable night, perched upon the mountain-side in our lonely camp, and without a fire, for the tree was soon consumed. Our old friend the wolf, however, was still a companion, and sat all night within sight of the fire, howling piteously from cold and hunger. The next morning I allowed the animals a couple of hours after sunrise to feed and fill themselves; and then, descending from our camp, we entered at once the pass into the dreaded Vallecito. A few hundred yards from the entrance lay a frozen mule, half-buried in the snow; and a little farther on another, close to the creek where the Mormons had evidently encamped not two days before.

The Vallecito was covered with snow to the depth of three feet, to all appearance perfectly level, but in fact full of hollows, with fifteen or twenty feet of snow in them. With the greatest difficulty and labor we succeeded in crossing, having to dismount and beat a path through the drifts with our bodies. The pack-mules were continually falling, and were always obliged to be unpacked before they could rise. As this happened every score yards, more than half the day was consumed in traversing the valley, which cannot exceed four miles in length.

The mountain rises directly from the north end of the Vallecito, and is the dividing ridge between the waters of the Del Norte and the Arkansa or Rio Napeste of the Mexicans. The ascent to the summit, from the western side, is short, but very steep; and the snow was of such a depth that the mules could hardly make their way to the top. Leading my horse by the bridle, I led the way, and at length, numbed with cold, I reached the summit, where is a level plateau of about a hundred square yards. Attaining this, and exposed to the full sweep of the wind, a blast struck me, carrying with it a perfect avalanche of snow and sleet, full in my front, and knocked me as clean off my legs as I could have been floored by a twenty-four pound shot.

The view from this point was wild and dismal in the extreme. Looking back, the whole country was covered with a thick carpet of snow, but eastward it was seen in patches only here and there. Before me lay the main chain of the Rocky Mountains, Pike's Peak lifting its snowy head far above the rest; and to the southeast the Spanish Peaks (Cumbres Espanolas) towered like twin giants over the plains. Beneath the mountain on which I stood was a narrow valley, through which ran a streamlet bordered with dwarf oak and pine, and looking like a thread of silver as it wound through the plain. Rugged peaks and ridges, snow-clad and covered with pine, and deep gorges filled with broken rocks, everywhere met the eye. To the eastward the mountains gradually smoothed away into detached spurs and broken ground, until they met the vast prairies, which stretched far as the eye could reach, and hundreds of miles beyond—a sea of seeming barrenness, vast and dismal. A hurricane of wind was blowing at the time, and clouds of dust swept along the sandy prairies, like the smoke of a million bonfires. On the mountain-top it roared and raved through the pines, filling the air with snow and broken branches, and piling it in huge drifts against the trees.

The perfect solitude of this vast wildness was almost appalling. From my position on the summit of the dividing ridge I had a bird's-eye view, as it were, over the rugged and chaotic masses of the stupendous chain of the Rocky Mountains, and the vast deserts which stretched away from their eastern bases; while, on all sides of me, broken ridges, and chasms and ravines, with masses of piled-up rocks and uprooted trees, with clouds of drifting snow flying through the air, and the hurricane's roar battling through the forest at my feet, added to the wildness of the scene, which

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

was unrelieved by the slightest vestige of animal or human life. Not a sound either of bird or beast was heard -- indeed, the hoarse and stunning rattle of the wind would have drowned them, so loud it roared and raved through the trees.

The animals strove in vain to face the storm, and, turning their sterns to the wind, shrank into themselves, trembling with cold. Panchito, whom I was leading by the bridle, followed me to the edge of the plateau, but drew back, trembling, from the dismal scene which lay stretched below. With a neigh of fear he laid his cold nose against my cheek, seeming to say, "Come back, master: what can take you to such a wretched place as that, where not even a blade of grass meets the eye?"

The descent on the eastern side is steep and sudden, and through a thick forest of pines, to the valley beneath. Trail there was none to direct us, and my half-breed knew nothing of the road, having passed but once before, and many years ago, but said it went somewhere down the pines. The evening was fast closing round us, and to remain where we were was certain death to our animals, if not to ourselves: I therefore determined to push for the valley, and accordingly struck at once down the pines.

Once amongst the trees there was nothing to do but reach the bottom as fast as possible, as it was nearly dark, and nothing was to be seen at the distance of a dozen yards, so dense was the forest. Before we had proceeded as many paces from the edge of the plateau, and almost before I knew where I was, horses, mules, &c., were rolling down the mountain all together, and were at last brought up in a snow-drift some twelve feet deep. There they all lay in a heap, the half-breed under one of the pack-mules, and his swarthy face just peering out of the snow. Before a mule would stir every pack had to be removed; and this, with a temperature some ten degrees below zero, was trying to the fingers, as may be imagined. As it was impossible to reach the bottom from this point, we struggled once more to the top through six feet of snow and an almost perpendicular ascent. I had to beat a road for the animals, by throwing myself bodily on the snow, and pounding it down with all my weight. We were nearly frozen by this time, and my hands were perfectly useless--so much so that, when a large bird of the grouse species (called by the hunters *le coq des bois*. It resembles the Scotch capercaillie.) flew up into a pine above my head, I was unable to cock my rifle to shoot at it. The mules were plunging into the snow at every step, and their packs were hanging under their bellies, but to attempt to adjust them was out of the question. It was nearly dark too, which made our situation anything but pleasant, and the mules were quite exhausted. At last, however, we reached the top and struck down the mountain at another point, but it was with the greatest toil and difficulty that we reached the bottom long after dark, and camped shortly after near the creek which wound through the valley, or rather in its very bed. One of the mules had slipped its pack completely under the belly, and, the girth pinching her, she started off just before reaching the creek at full gallop, kicking everything the pack contained to the four winds of heaven. This pack happened to contain all the provisions, and, as the search for them in the dark would have been useless, we this night had no supper. To shelter ourselves from the wind we camped in the bed of the creek, which was without water, but the wind howled down it as if it were a funnel, scattering our fire in every direction as soon as it was lighted, and tearing the blankets from our very bodies. The animals never moved from the spot where they had been unpacked; even if there had been grass, they were too exhausted to feed, but stood shivering in the wind, collapsed with cold, and almost dead. Such a night I never passed, and hope never to pass

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

again. The hurricane never lulled for a single instant; all our efforts to build a fire were unavailing; and it was with no small delight that I hailed the break of day, when we immediately packed the mules and started on our journey.

The trail now led along the creek and through small broken prairies, with bluffs exhibiting a very curious formation of shale and sandstone. At one point the cañon opens out into a pretty open glade or park, in the middle of which is a large rock resembling a ruined castle: the little prairie is covered with fine grass, and a large herd of black-tailed deer were feeding in it. A little farther on we descried the timber on the Huerfano or Orphan Creek, so called from a remarkable isolated rock of sandstone which stands in a small prairie on its left bank, and is a well-known landmark to the Indians. We camped on the Huerfano under some high cottonwoods, the wind blowing with unabated violence. The next morning all the animals were missing, and, following their trail, we found them on the other side of the creek, five or six miles from the camp, in a little prairie full of buffalo-grass. As it was late in the day when we returned to camp, we did not leave till next morning, when we crossed on to the Cuernaverde or Greenhorn Creek.

On a bluff overlooking the stream I had the satisfaction of seeing two or three Indian lodges and one adobe hovel of a more aspiring order. As we crossed the creek, a mountaineer on an active horse galloped up to us, his rifle over the horn of the saddle, and clad in hunting-shirt and pantaloons of deer-skin, with long fringes hanging down the arms and legs. As this was the first soul we had met since leaving Red River, we were as delighted to meet a white man (and him an American) as he was to learn the news from the Mexican settlements. We found here two or three hunters, French Canadians with their Assiniboin and Sioux squaws, who have made the Greenhorn their head-quarters; and game being abundant and the rich soil of the valley affording them a sufficiency of Indian corn, they lead a tolerably easy life, and certainly a lazy one, with no cares whatever to annoy them. This valley will, I have no doubt, become one day a thriving settlement, the soil being exceedingly rich and admirably adapted to the growth of all kinds of grain. The prairies afford abundant pasture of excellent quality, and stock might be raised upon them in any numbers.

The depreciation in the value of beaver-skins has thrown the great body of trappers out of employment, and there is a general tendency amongst the mountain-men to settle in the fruitful valleys of the Rocky Mountains. Already the plough has turned up the soil within sight of Pike's Peak, and a hardy pioneer, an Englishman, has led the way to the Great Salt Lake, where a settlement of mountaineers has even now been formed, a thousand miles from the frontier of the United States.

From the Greenhorn an easy day's travel brought us to the banks of the San Carlos, which, receiving the former creek, falls into the Arkansa about two hundred and fifty miles from its source. The San Carlos is well timbered with cottonwood, cherry, quaking-asp, box-alder, and many varieties of shrubs, and many spots in the valley are admirably adapted for cultivation, with a rich loamy soil, and so situated as to be irrigated with great facility from the creek. Irrigation is indispensable over the whole of this region, rain seldom falling in the spring and summer, which is one of the greatest drawbacks to the settlement of this country, the labor of irrigation being very great. The San Carlos heads in a lofty range of mountains about forty miles from its junction with the Arkansa. Near its upper waters is a circular valley enclosed by rugged highlands, through which the stream forces its way in a cañon whose precipitous sides overhang it to the height of three

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

hundred feet. The face of the rock (of a dark limestone) is in many places perfectly vertical, and rises from the water's edge to a great elevation, pinons and small cedars growing out of crevices in the sides.

After leaving this creek we passed a barren rolling prairie with scanty herbage and covered with the palmilla or soap-plant. (The palmilla or soap-plant is a species of cactus, the fibrous root of which the New Mexicans use as a substitute for soap. An abundant lather is obtained from it.) A few antelope were its only tenants, and these so shy that I was unable to approach them. Fourteen miles from the San Carlos we struck the Arkansa at the little Indian trading-fort of the "Pueblo," which is situated on the left bank, a few hundred yards above the mouth of the Fontaine-qui-bouille, or Boiling Spring River, so called from two springs of mineral water near its headwaters under Pike's Peak, about sixty miles from its mouth. Here I was hospitably entertained in the lodge of one John Hawkens, an ex-trapper and well-known mountaineer. I turned my animals loose, and allowed them to seek for themselves the best pastures, as in the vicinity of the fort the prairies were perfectly bare of grass, and it was only near the mountain that any of a good quality was to be found.

CHAPTER VII

BLIZZARD IN SOUTH PARK

THE Arkansa is here a clear, rapid river about a hundred yards in width. The bottom, which is enclosed on each side by high bluffs, is about a quarter of a mile across, and timbered with a heavy growth of cottonwood, some of the trees being of great size. On each side vast rolling prairies stretch away for hundreds of miles, gradually ascending on the side towards the mountains, and the highlands are there sparsely covered with pinon and cedar. The high banks through which the river occasionally passes are of shale and sandstone, and rise precipitously from the water. Ascending the river the country is wild and broken until it enters the mountains, when the scenery is grand and imposing; but the prairies around it are arid and sterile, producing but little vegetation, and the grass, though of good quality, is thin and scarce.

The Pueblo is a small square fort of adobe with circular bastions at the corners, no part of the walls being more than eight feet high, and round the inside of the yard or corral are built some half-dozen little rooms inhabited by as many Indian traders, coureurs des bois, and mountain-men. They live entirely upon game, and the greater part of the year without even bread, since but little maize is cultivated. As soon as their supply of meat is exhausted they start to the mountains with two or three pack-animals, and bring them back in two or three days loaded with buffalo or venison. In the immediate vicinity of the fort game is very scarce, and the buffalo have within a few years deserted the neighboring prairies, but they are always found in the mountain-valleys, particularly in one called Bayou Salado, which abounds in every species of game, including elk, bears, deer, bighorn or Rocky Mountain sheep, buffalo, antelope, &c.

Hunting in the mountains round the head of Fontaine-qui-bouille and Bayou Salado, I remained for the rest of the winter, which was unusually severe - so much so, that the hunters were not unfrequently afraid to venture with their animals into the mountains. Shortly after my arrival on Arkansa, and during a spell of fine sunny weather, I started with a Pueblo hunter for a load or two of buffalo-meat, intending to hunt on the waters of the Platte and the Bayou, where bulls remain in good condition during the winter months, feeding on the rich grass of the mountain valleys. I took with me my horse and three pack-mules, as it was our intention to return with a good supply

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

of meat.

Our course lay up the Fontaine-qui-bouille, and on the third day we entered the pine-covered uplands at the foot of the mountain. Here we found deer so abundant that we determined to hunt here, rather than proceed across the ridge on to the waters of the Platte. We camped on a little mountain stream running into the creek an hour or two before sunset, and, as we had no provisions, we sallied out to hunt as soon as we had unpacked the mules. We killed two deer almost immediately, and, returning to camp, made a good supper off some of the tidbits.

The next morning at daybreak, as soon as I had risen from my blanket, I saw a herd of deer feeding within a few hundred yards of camp, and seizing my rifle I immediately took advantage of some broken ground to approach them. Before, however, I could get within shot they ascended the bluffs and moved across a prairie, feeding as they went. I took a long circuit to get the wind of them, and, following a ravine, at length brought my rifle to bear, and knocked over a fine buck, the others running two or three hundred yards and then stopping to look round for their missing comrade. As I ran up to the dead one, and took out my knife to cut the throat, another deer, ran past and stopped between me and the herd, and, taking a long shot, I dropped the animal, which, however, rose again and limped slowly away. Leaving the dead one and my ramrod on its body, I followed the wounded deer, and, about half a mile from where I fired, found it lying dead. The process of butchering occupied about twenty minutes, and, packing the hams and shoulders on my back, I trudged back to my first victim. As I was crossing a ravine and ascending the opposite bluff, I saw the figure of a man crawling along the bottom, evidently with the intention of approaching me. A close inspection assured me that it was an Indian; and as none but Arapahos were likely to be in the vicinity, and as these are the Indians most hostile to the white hunters, killing them whenever an opportunity offers, I made up my mind that a war-party was about, and that I and my companion stood a very good chance of "losing our hair." As the Indian cautiously advanced, I perceived another was running round the prairie to cut me off from camp, and consequently I determined to make good my ground where I was, throwing down the meat and getting my rifle in readiness for work.

The only tribes of Indians who frequent this part of the mountains are the Yutas (or Utahs) and the Arapahos, who are hereditary enemies, and constantly at deadly war with each other. A large band of the Yutas had been wintering in the Bayou Salado, to which one trail leads by the Boiling Spring River (where I was hunting), and another by the Arkansa. The former is the trail followed by the Arapaho war-parties when on an expedition against the Yutas in the Bayou, and therefore I felt certain that none but the former Indians would be met with in this vicinity. However, as the Yutas are a very friendly tribe, I was loth to be the first to commence hostilities in case my antagonist might prove to belong to that nation, and therefore I awaited his approach, which he made stealthily, until he saw that I had discovered him, when, throwing himself erect, and gun in hand, he made directly towards me. With rifle cocked I watched his eye until he came within fifty yards, when suddenly, seeing my hostile appearance, he stopped, and, striking his hand thrice on his brawny chest, exclaimed, in a loud voice "Arapaho, Arapaho!" and stood erect and still. This announcement was very near being fatal to him, for, on hearing him proclaim himself one of that hostile nation, my rifle was up to my shoulder in an instant, and covering his heart. As my finger was on the trigger, it flashed across my mind that I had heard that two Arapahos were amongst the hunters on the Arkansas their sister being married to a mountaineer, and that probably the

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

dusky gentleman at the end of my rifle was one of these, as indeed he proved to be. I accordingly made signals of peace, and he approached and shook me by the hand. That his intentions were not altogether honest I have no doubt, but, finding me prepared, he thought it more advisable to remain en paz - at peace. What strengthened me in this belief was the fact, which I shortly after discovered, that a war-party of his nation were at that moment camped within a few hundred yards of us, whose vicinity he never apprised me of, and who, if they had seen us, would not have hesitated an instant to secure our scalps and animals.

When I returned to the spot where I had, left the first deer, not a particle was visible except some hair scattered on the ground, but a few hundred yards from the spot a dozen wolves were engaged in dining off a lump of something, which, on approach, I found to be the remains of my deer, leaving behind them, when dispersed, a handful of hair.

The sagacity of wolves is almost incredible. They will remain round a hunting-camp and follow the hunters the whole day, in bands of three and four, at less than a hundred yards distance, stopping when they stop, and sitting down quietly when game is killed, rushing to devour the offal when the hunter retires, and then following until another feed is offered them. If a deer or antelope is wounded, they immediately pursue it, and not unfrequently pull the animal down in time for the hunter to come up and secure it from their ravenous clutches. However, they appear to know at once the nature of the wound, for if but slightly touched they never exert themselves to follow a deer, chasing those only which have received a mortal blow.

I one day killed an old buck which was so poor that I left the carcass on the ground untouched. Six coyotes, or small prairie wolves, were my attendants that day, and of course, before I had left the deer twenty paces, had commenced their work of destruction. Certainly not ten minutes after I looked back and saw the same six loping after me, one of them not twenty yards behind me, with his nose and face all besmeared with blood, and his belly swelled almost to bursting. Thinking it scarcely possible that they could have devoured the whole deer in so short a space, I had the curiosity to return, and, to my astonishment, found actually nothing left but a pile of bones and hair, the flesh being stripped from them as clean as if scraped with a knife. Half an hour after I killed a large black-tail deer, and, as it was also in miserable condition, I took merely the fleeces (as the meat on the back and ribs is called), leaving four-fifths of the animal untouched. I then retired a short distance, and, sitting down on a rock, lighted my pipe, and watched the operations of the wolves. They sat perfectly still until I had withdrawn some three-score yards, when they scampered, with a flourish of their tails, straight to the deer. Then commenced such a tugging and snarling and biting, all squeaking and swallowing at the same moment. A skirmish of tails and flying hair was seen for five minutes, when the last of them, with slouching tail and evidently ashamed of himself, withdrew, and nothing remained on the ground but a well-picked skeleton. By sunset, when I returned to camp, they had swallowed as much as three entire deer.

We remained hunting in the mountains some days, and left the Boiling Spring River with our mules loaded with meat, having, almost by a miracle, been unmolested by the Arapaho war-party, some of whom I saw hunting nearly every day, without being myself discovered. Nothing occurred on our return until the night of the second day, when we camped on the creek in a spot destitute of grass, and our animals took themselves off in search of food during the night, where we knew not.

The next morning my companion, thinking to find them close at hand, left me in camp cooking

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

the breakfast while he went to bring in the animals, but presently returned, saying that he could find neither them nor their track, but had discovered fresh Indian sign in the bottom, where several Indians had been but a few hours before, and that, doubtless, they had made "a raise." I instantly seized my rifle, and, taking a circuit round the camp, came presently upon the track of horses and mules, and struck at once after them, thinking that, of course, they were those made by our animals, as they tallied with the number, being two horses and three mules. I had followed up the track for ten miles, when, in crossing a piece of hard prairie which scarcely yielded to the impression of the hoofs, I, for the first time, observed that not one of the animals I was following was shod, and, knowing that most of my own were so, I began to think, and soon satisfied myself of the fact, that they were not those I was in search of. As soon as I had made up my mind to this I retraced my steps to camp, and immediately started again with my companion in another direction. This time we came upon the right track, and found that it took an easterly direction and that the animals were not in the possession of the Indians, as their ropes still dragged along the ground, making abroad trail. Finding this, we returned to camp and "cached" our meat and packs in the forks of a cottonwood tree, out of reach of wolves; and without thinking of cooking anything, so anxious were we to find our animals, we started off at once in pursuit, carrying a lariat and saddle-blanket to ride back on in case we found the mules.

We followed the trail until midnight, by which time I felt not a little tired, as I had been on my legs since daybreak, and had not broken my fast since the preceding day. We therefore turned into the bottom, floundering through the bushes, and impaling ourselves at every step on the prickly pears which covered the ground, and made a fire near the stream, in a thicket which in some degree sheltered us from the cold. We had scarcely however lighted the fire when a gale of wind burst upon us, and, scattering the burning brands in every direction, quickly set fire to the dry grass and bushes to leeward of the fire. All our efforts to prevent this were unavailing, and we were necessitated to put out our fire to prevent the whole bottom from being burned. As the cold was intense, and I had no covering but a paltry saddle-blanket about four feet square, sleep was out of the question if I wished to keep unfrozen, so that, after an hour or two's rest and a good smoke, we again turned out, and by the light of the moon pursued the trail. As it passed over prairies entirely destitute of grass, the animals had never once stopped, but continued a straight course, without turning to the right or left, in search of pasture. We travelled on all night, and, halting for an hour's rest in the morning, about noon, looking ahead, I descried four-objects feeding in the plain. I called out to my companion, who was a little in rear, that there they were. "Elk," he answered, after a long look, "or Injuns. They're no mules, I'll lay a dollar: Arapahos, or I never see a redskin."

However, at that distance I recognized my mules, and, pushing on, I found them quietly feeding with Panchito, my companion's horse being alone missing, and they suffered me to catch them without difficulty. As we were now within twenty miles of the fort, Morgan, who had had enough of it, determined to return, and I agreed to go back with the animals to the cache, and bring in the meat and packs. I accordingly tied the blanket on a mule's back, and, leading the horse, trotted back at once to the grove of cottonwoods where we had before encamped. The sky had been gradually overcast with leaden-colored clouds, until, when near sunset, it was one huge inky mass or rolling darkness: the wind had suddenly lulled and an unnatural calm, which so surely heralds a storm in these tempestuous regions, succeeded. The ravens were winging their way towards the

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

shelter of the timber, and the coyote was seen trotting quickly to cover, conscious of the coming storm.

The black threatening clouds seemed gradually to descend until they kissed the earth, and already the distant mountains were bidden to their very bases. A hollow murmuring swept through the bottom, but as yet not a branch was stirred by wind; and the huge cottonwoods, with their leafless limbs, loomed like a line of ghosts through the heavy gloom. Knowing but too well what was coming, I turned my animals towards the timber, which was about two miles distant. With pointed ears, and actually trembling with fright, they were as eager as myself to reach the shelter; but, before we had proceeded a third of the distance, with a deafening roar the tempest broke upon us. The clouds opened and drove right in our faces a storm of freezing sleet, which froze upon us as it fell. The first squall of wind carried away my cap, and the enormous hailstones, beating on my unprotected head and face, almost stunned me. In an instant my hunting-shirt was soaked, and as instantly frozen hard; and my horse was a mass of icicles. Jumping off my mule-for to ride was impossible - I tore off the saddle-blanket and covered my head. The animals, blinded with the sleet, and their eyes actually coated with ice, turned their sterns to the storm, and, blown before it, made for the open prairie. All my exertions to drive them to the shelter of the timber was useless. It was impossible to face the hurricane, which now brought with it clouds of driving snow; and perfect darkness soon set in.

Still the animals kept on, and I determined not to leave them, following, or rather being blown after them. My blanket, frozen stiff like a board, required all the strength of my numbed fingers to prevent it being blown away, and, although it was no protection against the intense cold, I knew it would in some degree shelter me at night from the snow. In half an hour the ground was covered on the bare prairie to the depth of two feet, and through this I floundered for a long time before the animals stopped. The prairie was as bare as a lake; but one little tuft of greasewood bushes presented itself, and here, turning from the storm, they suddenly stopped and remained perfectly still. In vain I again attempted to turn them towards the direction of the timber; huddled together, they would not move an inch; and, exhausted myself, and seeing nothing before me but, as I thought, certain death, I sank down immediately behind them, and, covering my head with the blanket, crouched like a ball in the snow.

I would have started myself for the timber, but it was pitchy dark, the wind drove clouds of frozen snow into my face, and the animals had so turned about in the prairie that it was impossible to know the direction to take; and although I had a compass with me, my hands were so frozen that I was perfectly unable, after repeated attempts, to unscrew the box and consult it. Even had I reached the timber, my situation would have been scarcely improved, for the trees were scattered wide about over a narrow space, and, consequently, afforded but little shelter; and if even I had succeeded in getting firewood-by no means an easy matter at any time, and still more difficult now that the ground was covered with three feet of snow -I was utterly unable to use my flint and steel to procure a light, since my fingers were like pieces of stone, and entirely without feeling. The way the wind roared over the prairie that night-how the snow drove before it, covering me and the poor animals partly-and how I lay there, feeling the very blood freezing in my veins, and my bones petrifying with the icy blasts which seemed to penetrate them-how for hours I remained with my head on my knees, and the snow pressing it down like a weight of lead, expecting every instant to drop into a sleep from which I knew it was impossible I should ever awake--how

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

every now and then the mules would groan aloud and fall down upon the snow, and then again struggle on their legs-how all night long the piercing howl of wolves was borne upon the wind, which never for an instant abated its violence during the night,-I would not attempt to describe. I have passed many nights alone in the wilderness, and in a solitary camp have listened to the roarings of the wind and the howling of wolves, and felt the rain or snow beating upon me, with perfect unconcern: but this night threw all my former experiences into the shade, and is marked with the blackest of stones in the memoranda of my journeyings.

Once, late in the night, by keeping my hands buried in the breast of my hunting-shirt, I succeeded in restoring sufficient feeling into them to enable me to strike a light. Luckily my pipe, which was made out of a huge piece of cottonwood bark, and capable of containing at least twelve ordinary pipefuls, was filled with tobacco to the brim; and this I do believe kept me alive during the night, for I smoked and smoked until the pipe itself caught fire, and burned completely to the stem.

I was just sinking into a dreamy stupor, when the mules began to shake themselves, and sneeze and snort; which hailing as a good sign, and that they were still alive, I attempted to lift my head and take a view of the weather. When with great difficulty I raised my head, all appeared dark as pitch, and it did not at first occur to me that I was buried deep in snow; but when I thrust my arm above me, a hole was thus made, through which I saw the stars shining in the sky and the clouds fast clearing away. Making a sudden attempt to straighten my almost petrified back and limbs, I rose, but, unable to stand, fell forward in the snow, frightening the animals, which immediately started away. When I gained my legs I found that day was just breaking, a long grey line of light appearing over the belt of timber on the creek, and the clouds gradually rising from the east, and allowing the stars to peep from patches of blue sky. Following the animals as soon as I gained the use of my limbs, and taking a last look at the perfect cave from which I had just risen, I found them in the timber, and, singular enough, under the very tree where we had cached our meat. However, I was unable to ascend the tree in my present state, and my frost-bitten fingers refused to perform their offices; so that I jumped upon my horse, and, followed by the mules, galloped back to the Arkansa, which I reached in the evening, half dead with hunger and cold.

The hunters had given me up for lost, as such a night even the "oldest inhabitant" had never witnessed. My late companion had reached the Arkansa, and was safely housed before it broke, blessing his lucky stars that he had not gone back with me. The next morning he returned and brought in the meat; while I spent two days in nursing my frozen fingers and feet, and making up, in feasting mountain fashion, for the banyans I had suffered.

The morning after my arrival on Arkansa, two men, named Harwood and Markhead - the latter one of the most daring and successful trappers that ever followed this adventurous mountain life, and whom I had intended to have hired as a guide to the valley of the Columbia the ensuing spring-started off to the settlement of New Mexico, with some packs of peltries, intending to bring back Taos whisky (a very profitable article of trade amongst the mountain-men) and some bags of flour and Indian meal.

I found on returning from my hunt that a man named John Albert had brought intelligence that the New Mexicans and Pueblo Indians had risen in the Valley of Taos, and, as I have before mentioned, massacred Governor Bent and other Americans, and had also attacked and destroyed Turley's ranch on the Arroyo Hondo, killing him and most of his men. Albert had escaped from the house, and, charging through the assailants, made for the mountains, and, travelling night and

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

day, and without food, had reached the Greenhorn with the news, and after recruiting for a couple of days had come on to the Arkansa with the intelligence, which threw the fierce mountaineers into a perfect frenzy.

As Markhead and Harwood would have arrived in the settlements about the time of the rising, little doubt remained as to their fate, but it was not until nearly two months after that any intelligence was brought concerning them. It seemed that they arrived at the Rio Colorado, the first New Mexican settlement, on the seventh or eighth day, when the people had just received news of the massacre in Taos. These savages, after stripping them of their goods, and securing, by treachery, their arms, made them mount their mules under the pretence of conducting them to Taos, there to be given up to the chief of the insurrection. They had hardly, however, left the village when a Mexican, riding behind Harwood, discharged his gun into his back: Harwood, calling to Markhead that he was "finished," fell dead to the ground. Markhead, seeing that his own fate was sealed, made no struggle, and was likewise shot in the back by several balls. They were then stripped and scalped and shockingly mutilated, and their bodies thrown into the bush by the side of the creek to be devoured by the wolves. They were both remarkably fine young men.

Markhead was celebrated in the mountains for his courage and reckless daring, having had many almost miraculous escapes when in the very hands of hostile Indians. He had a few years ago accompanied Sir W. Drummond Stewart in one of his expeditions across the mountains. It happened that a half-breed of the company absconded one night with some animals belonging to Sir William, who, being annoyed at the circumstance, said hastily, and never dreaming that his offer would be taken up, that he would give five hundred dollars for the scalp of the thief. The next day Markhead rode into camp with the scalp of the unfortunate horse-thief hanging at the end of his rifle, and I believe received the reward, at least so he himself declared to me, for this act of mountain law. On one occasion, whilst trapping on the waters of the Yellowstone, in the midst of the Blackfoot country, he came suddenly upon two or three lodges, from which the Indians happened to be absent. There was no doubt, from signs which he had previously discovered, that they were lying in wait for him somewhere on the stream to attack him when examining his traps, the Blackfeet, moreover, being most bitterly hostile to the white trappers, and killing them without mercy whenever an occasion offered. Notwithstanding the almost certainty that some of the Indians were close at hand, probably gone out for a supply of wood and would very soon return, Markhead resolved to visit the lodges and help himself to anything worth taking that he might find there. The fire was burning, and meat was actually cooking in a pot over it. To this he did ample justice, emptying the pot in a very satisfactory manner, after which he tied all the blankets, dressed skins, moccasins, &c., into a bundle, and, mounting his horse, got safely off with his prize. It was not always, however, that he escaped scatheless, for his body was riddled with balls received in many a bloody affray with Blackfeet and other Indians.

Laforey, the old Canadian trapper, with whom I stayed at Red River, was accused of having possessed himself of the property found on the two mountaineers, and afterwards of having instigated the Mexicans to the barbarous murder. The hunters on Arkansa vowed vengeance against him, and swore to have his hair some day, as well as similar love-locks from the people of Red River. A war-expedition was also talked of to that settlement, to avenge the murder of their comrades, and ease the Mexicans of their mules and horses.

The massacre of Turley and his people, and the destruction of his mill, were not consummated

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

without considerable loss to the barbarous and cowardly assailants. There were in the house, at the time of the attack, eight white men, including Americans, French Canadians, and one or two Englishmen, with plenty of arms and ammunition. Turley had been warned of the intended insurrection, but had treated the report with indifference and neglect, until one morning a man named Otterbees, in the employ of Turley, and who had been despatched to Sante Fe with several mule-loads of whisky a few days before, made his appearance at the gate on horseback, and, hastily informing the inmates of the mill that the New Mexicans had risen and massacred Governor Bent and other Americans, galloped off. Even then, Turley felt assured that he would not be molested, but, at the solicitations of his men, agreed to close the gate of the yard round which were the buildings of a mill and distillery, and make preparations for defence.

A few hours after a large crowd of Mexicans and Pueblo Indians made their appearance, all armed with guns and bows and arrows, and, advancing with a white flag, summoned Turley to surrender his house and the Americans in it, guaranteeing that his own life should be saved, but that every other American in the valley of Taos had to be destroyed; that the Governor and all the Americans at Fernandez and the rancho had been killed, and that not one was to be left alive in all New Mexico.

To this summons Turley answered that he would never surrender his house nor his men, and that, if they wanted it or them, "they must take them."

The enemy then drew off, and, after a short consultation commenced the attack. The first day they numbered about five hundred, but the crowd was hourly augmented by the arrival of parties of Indians from the more distant pueblos, and of New Mexicans from Fernandez, La Canada, and other places.

The building, lay at the foot of a gradual slope in the sierra, which was covered with cedar-bushes. In front ran the stream of the Arroyo Hondo, about twenty yards from one side of the square, and on the other side was broken ground, which rose abruptly and formed the bank of the ravine. In rear, and behind the still-house, was some garden-ground enclosed by a small fence, and into which a small wicket-gate opened from the corral.

As soon as the attack was determined upon, the assailants broke, and, scattering, concealed themselves under the cover of the rocks and bushes which surrounded the house.

From these they kept up an incessant fire upon every exposed portion of the building where they saw the Americans preparing for defence.

They, on their part, were not idle; not a man but was an old mountaineer, and each had his trusty rifle, with good store of ammunition. Wherever one of the assailants exposed a hand's-breadth of his person, there whistled a ball from an unerring barrel. The windows had been blockaded, loopholes being left to fire through, and through these a lively fire was maintained. Already several of the enemy had bitten the dust, and parties were constantly seen bearing off the wounded up the banks of the Canada. Darkness came on, and during the night a continual fire was kept up on the mill, whilst its defenders, reserving their ammunition, kept their posts with stern and silent determination. The night was spent in running balls, cutting patches, and completing the defences of the building. In the morning the fight was renewed, and it was found that the Mexicans had effected a lodgment in a part of the stables, which were separated from the other portions of the building, and between which was an open space of a few feet. The assailants, during the night, had sought to break down the wall, and thus enter the main building, but the strength of the adobes

---

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

and logs of which it was composed resisted effectually all their attempts.

Those in the stable seemed anxious to regain the outside, for their position was unavailable as a means of annoyance to the besieged, and several had darted across the narrow space which divided it from the other part of the building, and which slightly projected, and behind which they were out of the line of fire. As soon, however, as the attention of the defenders was called to this point, the first man who attempted to cross, and who happened to be a Pueblo chief, was dropped on the instant, and fell dead in the centre of the intervening space. It appeared an object to recover the body, for an Indian immediately dashed out to the fallen chief, and attempted to drag him within the cover of the wall. The rifle which covered the spot again poured forth its deadly contents, and the Indian springing into the air, fell over the body of his chief, struck to the heart. Another and another met with a similar fate, and at last three rushed at once to the spot, and, seizing the body by the legs and head, had already lifted it from the ground, when three puffs of smoke blew from the barricaded window, followed by the sharp cracks of as many rifles, and the three daring Indians added their number to the pile of corpses which now covered the body of the dead chief.

As yet the besieged had met with no casualties; but after the fall of the seven Indians, in the manner above described, the whole body of assailants, with a shout of rage, poured in a rattling volley, and two of the defenders of the mill fell mortally wounded. One, shot through the loins, suffered great agony, and was removed to the still-house, where he was laid upon a large pile of grain, as being the softest bed to be found.

In the middle of the day the assailants renewed the attack more fiercely than before, their baffled attempts adding to their furious rage. The little garrison bravely stood to the defence of the mill, never throwing away a shot, but firing coolly, and only when a fair mark was presented to their unerring aim. Their ammunition, however, was fast failing, and, to add to the danger of their situation, the enemy set fire to the mill, which blazed fiercely, and threatened destruction to the whole building. Twice they succeeded in overcoming the flames, and, taking advantage of their being thus occupied, the Mexicans and Indians charged into the corral, which was full of hogs and sheep, and vented their cowardly rage upon the animals, spearing and shooting all that came in their way. No sooner, however, were the flames extinguished in one place, than they broke out more fiercely in another; and as a successful defence was perfectly hopeless, and the numbers of the assailants increased every moment, a council of war was held by the survivors of the little garrison, when it was determined, as soon as night approached, that every one should attempt to escape as best he might, and in the mean time the defence of the mill was to be continued.

Just at dusk, Albert and another man ran to the wicket-gate which opened into a kind of enclosed space, and in which was a number of armed Mexicans. They both rushed out at the same moment, discharging their rifles full in the faces of the crowd. Albert, in the confusion, threw himself under the fence, whence he saw his companion shot down immediately, and heard his cries for mercy, mingled with shrieks of pain and anguish, as the cowards pierced him with knives and lances. Lying without motion under the fence, as soon as it was quite dark he crept over the logs and ran up the mountain, travelled day and night, and, scarcely stopping or resting, reached the Greenhorn, almost dead with hunger and fatigue. Turley himself succeeded in escaping from the mill and in reaching the mountain unseen. Here he met a Mexican, mounted on a horse, who had been a most intimate friend of the unfortunate man for many years. To this man Turley offered

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

his watch (which was treble the value) for the use of his horse, but was refused. The inhuman wretch, however, affected pity and commiseration for the fugitive, and advised him to go to a certain place, where he would bring or send him assistance; but on reaching the mill, which was now a mass of fire, he immediately informed the Mexicans of his place of concealment, whither a large party instantly proceeded and shot him to death.

Two others escaped and reached Santa Fe in safety. The mill and Turley's house were sacked and gutted, and all his hard-earned savings, which were considerable, and concealed in gold about the house, were discovered, and of course seized upon, by the victorious Mexicans.

The Indians, however, met a few days after with a severe retribution. The troops marched out of Santa Fe attacked their pueblo, and levelled it to the ground, killing many hundreds of its defenders, and taking many prisoners, most of whom were hanged.

CHAPTER VIII

THE BEAVER AND HIS TRAPPER

BEAVER has so depreciated in value within the last few years, that trapping has been almost abandoned; the price paid for the skin of this valuable animal having fallen from six and eight dollars per pound to one dollar, which hardly pays the expenses of traps, animals, and equipment for the hunt, and is certainly no adequate remuneration for the incredible hardships, toil, and danger, which are undergone by the hardy trappers in the course of their adventurous expeditions. The cause of the great decrease in value of beaver fur is the substitute which has been found for it in the skins of the fur-seal and nutria - the improved preparation of other skins of little value, such as the hare and rabbit - and, more than all, in the use of silk in the manufacture of hats, which has in a great measure superseded that of beaver. Thus the curse of the trapper is levelled against all the new-fashioned materials of Paris hats; and the light and (h)airy gossamer of twelve-and-six is anathematized in the mountains in a way which would be highly distressing to the feelings of Messrs. Jupp and Johnson, and other artists in the ventilating-gossamer line. Thanks to the innovation, however, a little breathing-time has been allowed the persecuted castor; and this valuable fur-bearing animal, which otherwise would, in the course of a few years, have become extinct, has now a chance of multiplying, and will in a short time again become abundant; for, although not a very prolific animal, the beaver has perhaps fewer natural enemies than any other of the feroe naturae, and being at the same time a wise and careful one, provides against all contingencies of cold and hunger, which in northern climates carry off so large a proportion of his brother beasts.

The beaver was once found in every part of North America from Canada to the Gulf of Mexico, but has now gradually retired from the encroachments and the persecutions of civilized man, and is met with only in the far, far west, on the tributaries of the great rivers, and the streams which water the mountain valleys in the great chain of the Rocky Mountains. On the waters of the Platte and Arkansa they are still numerous, and within the last two years have increased considerably in numbers; but the best trapping-ground now is on the streams running through the Bayou Salado, and the Old and New Parks, all of which are elevated mountain valleys.

The habits of the beaver present quite a study to the naturalist, and they are certainly the most sagaciously instinctive of all quadrupeds. Their dams afford a lesson to the engineer, their houses a study to the architect of comfortable abodes, while their unremitting labor and indefatigable industry are models to be followed by the working-man. The lodge of the beaver is generally exca-

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

vated in the bank of the stream, the entrance being invariably under water; but not unfrequently, where the banks are flat, the animals construct lodges in the stream itself, of a conical form, of limbs and branches of trees woven together and cemented with mud. For the purpose of forming dams, for the necessary timber for their lodges, or for the bark which they store for their winter's supply of food, the beaver often fells a tree eight or ten inches in diameter, throwing it, with the skill of an expert woodsman, in any direction he pleases, always selecting a tree above the stream, in order that the logs may be carried down with it to their destination. The log is then chopped into small lengths, and, pushing them into the water, the beaver steers them to the lodge or dam. These trees are as cleanly cut as they could be by a sharp axe, the gouging furrows made by the animal's strong teeth cutting into the very centre of the trunk, the notch being smooth as sawed wood.

With his broad tail, which is twelve or fourteen inches long, and about four in breadth, and covered with a thick scaly skin, the beaver plasters his lodge, thus making it perform all the offices of a hand. They say that, when the beaver's tail becomes dry, the animal dies, but, whether this is the case or not, I have myself seen the beaver when at work return to the water and plunge his tail into the stream, and then resume his labor with renewed vigor; and I have also seen them, with their bodies on the bank, thumping the water with their tails with a most comical perseverance. The female seldom produces more than three kittens at a birth, but I know an instance where one was killed with young, having no less than eleven in her. They live to a considerable age, and I once ate the tail of an old "man" beaver whose head was perfectly grey with age, and his beard was of the same venerable hue, notwithstanding which his tail was tender as a young raccoon. The kittens are as playful as their namesakes of the feline race, and it is highly amusing to see an old one with grotesque gravity inciting her young to gambol about her, whilst she herself is engaged about some household work.

The nutrias of Mexico are identical with the beavers of the more northern parts of America; but in South America, and on some parts of the western coast of North America, a species of seal, or, as I have heard it described, a hybrid between the seal and the beaver, is called nutria - quite a distinct animal, however, from the Mexican nutria.

The trappers of the Rocky Mountains belong to a "genus" more approximating to the primitive savage than perhaps any other class of civilized man. Their lives being spent in the remote wilderness of the mountains, with no other companion than Nature herself, their habits and character assume a most singular cast of simplicity mingled with ferocity, appearing to take their coloring from the scenes and objects which surround them. Knowing no wants save those of nature, their sole care is to procure sufficient food to support life, and the necessary clothing to protect them from the rigorous climate. This with the assistance of their trusty rifles, they are generally able to effect, but sometimes at the expense of great peril and hardship. When engaged in their avocation, the natural instinct of primitive man is ever alive, for the purpose of guarding against danger and the provision of necessary food.

Keen observers of nature, they rival the beasts of prey in discovering the haunts and habits of game, and in their skill and cunning in capturing it. Constantly exposed to perils of all kinds, they become callous to any feeling of danger, and destroy human as well as animal life with as little scruple and as freely as they expose their own. Of laws, human or divine, they neither know nor care to know. Their wish is their law, and to attain it they do not scruple as to ways and means.

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

Firm friends and bitter enemies, with them it is "a word and a blow," and the blow often first. They may have good qualities, but they are those of the animal; and people fond of giving hard names call them revengeful, bloodthirsty, drunkards (when the wherewithal is to be had), gamblers, regardless of the laws of meum and tuum - in fact, "White Indians."

However, there are exceptions, and I have met honest mountain men. Their animal qualities, however, are undeniable. Strong, active, hardy as bears, daring, expert in the use of their weapons, they are just what uncivilized white man might be supposed to be in a brute state, depending upon his instinct for the support of life. Not a hole or corner in the vast wilderness of the "Far West" but has been ransacked by these hardy men. From the Mississippi to the mouth of the Colorado of the West, from the frozen regions of the North to the Gila in Mexico, the beaver-hunter has set his traps in every creek and stream. All this vast country, but for the daring enterprise of these men, would be even now a terra incognita to geographers, as indeed a great portion still is; but there is not an acre that has not been passed and repassed by the trappers in their perilous excursions. The mountains and streams still retain the names assigned to them by the rude hunters; and these alone are the hardy pioneers who have paved the way for the settlement of the western country.

Trappers are of two kinds, the "hired hand" and the "free trapper:" the former hired for the hunt by the fur companies; the latter, supplied with animals and traps by the company, is paid a certain price for his furs and peltries.

There is also the trapper "on his own hook;" but this class is very small. He has his own animals and traps, hunts where he chooses, and sells his peltries to whom he pleases.

On starting for a hunt, the trapper fits himself out with the necessary equipment, either from the Indian trading-forts, or from some of the petty traders -- *coureurs des bois* -- who frequent the western country. This equipment consists usually of two or three horses or mules - one for saddle, the others for packs - and six traps, which are carried in a bag of leather called a trap-sack. Ammunition, a few pounds of tobacco, dressed deer-skins for moccasins, &c., are carried in a wallet of dressed buffalo-skin called a possible-sack. His "possibles" and "trap-sack" are generally carried on the saddle-mule when hunting, the others being packed with the furs. The costume of the trapper is a hunting-shirt of dressed buckskin, ornamented with long fringes; pantaloons of the same material, and decorated with porcupine-quills and long fringes down the outside of the leg, a flexible felt hat and moccasins clothe his extremities. Over his left shoulder and under his right arm hang his powder-horn and bullet-pouch, in which he carries his balls, flint and steel, and odds and ends of all kinds. Round the waist is a belt, in which is stuck a large butcher-knife in a sheath of buffalo-hide, made fast to the belt by a chain or guard of steel; which also supports a little buckskin case containing a whetstone. A tomahawk is also often added; and, of course, a long heavy rifle is part and parcel of his equipment. I had nearly forgotten the pipe-holder, which hangs round his neck, and is generally a gage d'amour, and a triumph of squaw workmanship, in shape of a heart, garnished with beads and porcupine-quills. Thus provided, and having determined the locality of his trapping-ground, he starts to the mountains, sometimes alone, sometimes with three or four in company, as soon as the breaking up of the ice allows him to commence operations. Arrived on his hunting-grounds, he follows the creeks and streams, keeping a sharp look-out for "sign." If he sees a prostrate cottonwood tree, he examines it to discover if it be the work of beaver-whether "thrown" for the purpose of food, or to dam the stream. The track of

---

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

the beaver on the mud or sand under the bank is also examined; and if the "sign" be fresh, he sets his trap in the run of the animal, hiding it under water, and attaching it by a stout chain to a pick-et driven in the bank, or to a bush or tree. A "float-stick" is made fast to the trap by a cord a few feet long, which, if the animal carry away the trap, floats on the water and points out its position. The trap is baited with the "medicine," an oily substance obtained from a gland in the scrotum of the beaver, but distinct from the testes. A stick is dipped into this and planted over the trap; and the beaver, attracted by the smell, and wishing a close inspection, very foolishly, puts his leg into the trap, and is a "gone beaver."

When a lodge is discovered, the trap is set at the edge of the dam, at the point where the animal passes from deep to shoal water, and always under water. Early in the morning the hunter mounts his mule and examines the traps. The captured animals are skinned, and the tails, which are a great dainty, carefully packed into camp. The skin is then stretched over a hoop or framework of osier-twigs, and is allowed to dry, the flesh and fatty substance being carefully scraped (grained). When dry, it is folded into a square sheet, the fur turned inwards, and the bundle, containing about ten to twenty skins, tightly pressed and corded, and is ready for transportation.

During the hunt, regardless of Indian vicinity, the fearless trapper wanders far and near in search of "sign." His nerves must ever be in a state of tension, and his mind ever present at his call. His eagle eye sweeps round the country, and in an instant detects any foreign appearance. A turned leaf, a blade of grass pressed down, the uneasiness of the wild animals, the flight of birds, are all paragraphs to him written in nature's legible hand and plainest language. All the wits of the subtle savage are called into play to gain an advantage over the wily woodsman; but with the natural instinct of primitive man, the white hunter has the advantages of a civilized mind, and, thus provided, seldom fails to outwit, under equal advantages, the cunning savage.

Sometimes, following on his trail, the Indian watches him set his traps on a shrub-belted stream, and, passing up the bed, like Bruce of Old, so that he may leave no track, he lies in wait in the bushes until the hunter comes to examine his carefully-set traps. Then, waiting until he approaches his ambushment within a few feet, whiz flies the home-drawn arrow, never failing at such close quarters to bring the victim to the ground. For one white scalp, however, that dangles in the smoke of an Indian's lodge, a dozen red ones, at the end of the hunt, ornament the camp-fires of the rendezvous.

At a certain time, when the hunt is over, or they have loaded their pack-animals, the trappers proceed to the "rendezvous," the locality of which has been previously agreed upon; and here the traders and agents of the fur companies await them, with such assortment of goods as their hardy customers may require, including generally a fair supply of alcohol. The trappers drop in singly and in small bands, bringing their packs of beaver to this mountain market, not unfrequently to the value of a thousand dollars each, the produce of one hunt. The dissipation of the rendezvous, however, soon turns the trapper's pocket inside out. The goods brought by the traders, although of the most inferior quality, are sold at enormous prices.-Coffee, twenty and thirty shillings a pint-cup, which is the usual measure; tobacco fetches ten and fifteen shillings a plug; alcohol, from twenty to fifty shillings a pint; gunpowder, sixteen shillings a pint-cup; and all other articles at proportionally exorbitant prices.

The "beaver" is purchased at from two to eight dollars per pound; the Hudson's Bay Company alone buying it by the pluie, or "plew," that is, the whole skin, giving a certain price for skins,

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

whether of old beaver or “kittens.”

The rendezvous is one continued scene of drunkenness, gambling, and brawling and fighting, as long as the money and credit of the trappers last. Seated, Indian fashion, round the fires, with a blanket spread before them, groups are seen with their decks of cards, playing at euchre, poker, and seven-up, the regular mountain-games. The stakes are “beaver,” which here is current coin; and when the fur is gone, their horses, mules, rifles, and shirts, hunting-packs, and breeches, are staked.

Daring gamblers make the rounds of the camp, challenging each other to play for the trapper’s highest stake, - his horse, his squaw, (if he have one) and, as once happened, his scalp. “There goes hoss and beaver!” is the mountain expression when any great loss is sustained; and, sooner or later, “hoss and beaver” invariably find their way into the insatiable pockets of the traders. A trapper often squanders the produce of his hunt, amounting to hundreds of dollars, in a couple of hours; and, supplied on credit with another equipment, leaves the rendezvous for another expedition, which has the same result time after time; although one tolerably successful hunt would enable him to return to the settlements and civilized life, with an ample sum to purchase and stock a farm, and enjoy himself in ease and comfort the remainder of his days.

An old trapper, a French Canadian, assured me that he had received fifteen thousand dollars for beaver during a sojourn of twenty years in the mountains. Every year he resolved in his mind to return to Canada, and, with this object, always converted his fur into cash; but a fortnight at the “rendezvous” always cleaned him out, and, at the end of twenty years, he had not even credit sufficient to buy a pound of powder.

These annual gatherings are often the scene of bloody duels, for over their cups and cards no men are more quarrelsome than your mountaineers. Rifles, at twenty paces, settle all differences, and, as may be imagined, the fall of one or other of the combatants is certain, or, as sometimes happens, both fall to the word “fire.”

A day or two after my return from the mountain, I was out in search of my animals along the river-bottom, when I met a war-party of Arapahos loping along on foot in Indian file. It was the same party who had been in the vicinity of our camp on Fontaine-qui-bouille, and was led by a chief called Coxo, “the Game Leg.” They were all painted and armed for war, carrying bows and well-filled quivers, war-clubs and lances, and some had guns in deerskin covers. They were all naked to the waist, a single buffalo robe being thrown over them, and from his belt each one had a lariat or rope of hide to secure the animals stolen in the expedition. They were returning without a scalp, having found the Yutas “not at home;” and this was considered a sign by the hunters that they would not be scrupulous in “raising some hair,” if they caught a straggler far from camp. However their present visit was for the purpose of procuring some meat, of which they stood in need, as to reach their village they had to cross a country destitute of game. They were all remarkably fine young men, and perfectly cleanly in their persons; indeed, when on the war-path, more than ordinary care is taken to adorn the body, and the process of painting occupies considerable time and attention. The Arapahos do not shave their heads, as do the Pawnees, Caws, and Osages, merely braiding the center or scalp lock, and decorating it with a gay ribbon or feather of the war-eagle.

This war-party was twenty-one in number, the oldest, with the exception of the chief, being under thirty, and not one of them was less than five feet eight inches in height. In this they differ from

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

their neighbors the Yutas and Comanches, who are of small stature; the latter especially, when off their horses, presenting small ungainly figures, with legs crooked by constant riding, and limbs exhibiting but little muscular development. Not one of this Arapaho band but could have sat as a model for an Apollo. During their stay the animals were all collected and corralled, as their penchant for horse-flesh, it was thought likely, might lead some of the young men to appropriate a horse or mule.

Each tribe of Prairie Indians has a different method of making moccasins, so that any one, acquainted with the various fashions, is at no loss to know the nation to which any particular one belongs whom he may happen to meet. The Arapahos and Cheyennes use a "shoe" moccasin, that is, one which reaches no higher than the instep, and wants the upper sideflaps which moccasins usually have. I always used Chippewa moccasins, which differ from those of the Prairie make, by the seam being made up the center of the foot to the leg, and puckered into plaits. This, which is the true fashion of the "Forest Indian," (who, by the by, is as distinct in character and appearance from him of the "plains" as a bear from a blue-bottle) attracted the attention of the Arapaho warriors, and caused a lively discussion amongst themselves, owing to the novelty of the manufacture. They all surrounded me, and each examined and felt carefully the unusual chaussure.

Ti-yah! was the universal exclamation of astonishment. The old chief was the last to approach, and, after a minute examination, he drew himself up, and explained to them, as I perfectly understood by his gestures, that the people who made those moccasins lived far, far away from the sun, where the snow lay deep on the ground, and where the night was illuminated by the mystery fire (the aurora borealis), which he had seen, years ago, far to the north.

The vicinity of the "pueblo" affording no pasture, my cavallada had undertaken a voyage of discovery in search of grass, and had found a small valley up the bed of a dry creek, in which grew an abundance of bunch-grass. As, however, the river was fast frozen, they were unable to find a watering-place themselves, and one day made their appearance in camp, evidently for the purpose of being conducted to water; I therefore led them to the river and broke a large hole, which they invariably resorted to every morning and evening at the same hour, although it was three or four miles from their feeding-place. This enabled me to catch them whenever I required, for at a certain time I had only to go to this hole, and I never failed to see them approaching leisurely, the mules following the horse in Indian file, and always along the same trail which they had made in the snow.

The grass, although to all appearance perfectly withered, still retained considerable nourishment, and the mules improved fast in flesh. Panchito, however, fell off in condition as the others improved, more, I think, from the severity of the winter than the scarcity of grass. When they had cleared the valley they sought a pasture still farther off, and, after losing sight of them for fifteen days, I found them fifteen miles from the river, at the foot of the mountain, in a prairie in which was a pool of water (which prevented their having recourse to the waterhole I had made for them), and where was plenty of buffalo-grass.

It was now always a day's work for me to catch my hunting-mule, and the animals were becoming so wild that I often returned without effecting the capture at all, my only chance being to chase them on horseback and lasso the horse, when they all followed as quiet as lambs, never caring to forsake their old companion.

The weather in January, February, and March [1847] was exceedingly severe. Storms of sleet and

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

snow, invariably accompanied by hurricanes of wind, were of daily occurrence, but the snow rarely remained more than thirty hours on the ground, an hour or two of the meridian sun being sufficient to cause it to disappear. On the 17th of March the ice in the Arkansa "moved" for the first time, and the next day it was entirely broken up, and the arrival of spring-weather was confidently expected. However, it froze once more in a few days as firm as ever, and the weather became colder than before, with heavy snow-storms and hard gales of wind. After this succeeded a spell of fine weather, and about the 24th the ice moved bodily away, and the river was clear from that date, the edges of the water only being frozen in the morning. Geese now made their appearance in considerable numbers, and afforded an agreeable variety to our perpetual venison and tough bull-meat, as well as good sport in shooting them with rifles. The "blue bird" followed the goose; and when the first robin was seen, the hunters pronounced the winter at an end.

When the river was clear of ice I tried my luck with the fish, and in ten minutes pulled out as many trout, hickory shad, and suckers, but from that time never succeeded in getting a nibble.

The hunters accounted for this by saying that the fish migrate up the stream as soon as the ice breaks, seeking the deep holes and bends of its upper waters, and that my first piscatory attempt was in the very nick of time, when a shoal was passing up for the first time after the thaw.

Towards the latter end of March I removed my animals from their pasture, which was getting dry and rotten, and took them up Fontaine-qui-bouille into the mountains, where the grass is of better quality and more abundant. On the Arkansa and the neighboring prairies not a vestige of spring vegetation yet presented itself, but nearer the mountains the grass was beginning to shoot. It is a curious fact that the young blade of the buffalo and bunch grass pierces its way through the old one, which completely envelops and protects the tender blade from the nipping frosts of spring, and thus also the weakening effects of feeding on the young grass are rendered less injurious to horses and mules, since they are obliged to eat the old together with the young shoots.

The farther I advanced up the creek, and the nearer the mountains, the more forward was the vegetation, although even here in its earliest stage. The bunch-grass was getting green at the roots, and the absinthe and greasewood were throwing out their buds. As yet, however, the cottonwoods and the larger trees in the bottom showed no signs of leaf, and the currant and cherry bushes still looked dry and sapless. The thickets, however, were filled with birds, and resounded with their songs, and the plains were alive with the prairie-dogs, busy in repairing their houses and barking lustily as I rode through their towns. Turkeys, too, were calling in the timber, and the boom of the prairie-fowl, at rise and set of sun, was heard on every side. The snow had entirely disappeared from the plains, but Pike's Peak and the mountains were still clad in white; the latter, being sometimes clear of snow and looking dark and sombre, would for an hour or two be hidden by a curtain of clouds, which rising displayed the mountains, before black and furrowed, now white and smooth with their snowy mantle.

On my way I met a band of hunters who had been driven in by a war-party of Arapahos, who were encamped on the eastern fork of the Fontaine-qui-bouille. They strongly urged me to return, as, being alone, I could not fail to be robbed of my animals, if not killed myself. However, in pursuance of my fixed rule, never to stop on account of Indians, I proceeded up the river, and about fifty miles from the mouth encamped on the first fork, where was an abundance of deer and antelope. In the timber on the banks of the creek I erected a little shanty, covering it with the bark of the prostrate trees which strewed the ground, and picketing my animals at night in a little

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

prairie within sight, where they luxuriated on plenty of buffalo-grass. Here I remained for a day or two hunting in the mountain, leaving my cavallada to take care of themselves, and at the mercy of the Arapahos should they discover them. At night I returned to camp, made a fire, and cooked an appola of antelope-meat, and enjoyed my solitary pipe after supper with as much relish as if I was in a divan, and lay down on my blanket, serenaded by packs of hungry wolves, and sleeping as soundly as if there were no such people in existence as Arapahoes, merely waking now and then and raising my hand to the top of my head, to assure myself that my top-knot was in its place.

The next day I moved up the main fork, on which I had been directed by the hunters to proceed, in order to visit the far-famed springs from which the creek takes its name. The valley of the upper waters is very picturesque: many mountain-streams course through it, a narrow line of timber skirting their banks. On the western side the rugged mountains frown overhead, and rugged canons filled with pine and cedar gape into the plain. At the head of the valley, the ground is much broken up into gullies and ravines where it enters the mountain-spurs, with topes [groves] of pine and cedar scattered here and there, and masses of rock tossed about in wild confusion. On entering the broken ground the creek turns more to the westward, and passes by two remarkable buttes of a red conglomerate, which appear at a distance like tablets cut in the mountain-side. The eastern fork skirts the base of the range, coming from the ridge called "The Divide," which separates the waters of the Platte and Arkansa; and between the main stream and this branch, running north and south, is a limestone ledge which forms the western wall of the lateral valley running at right angles from that of the Fontaine-qui-bouille. The uplands are clothed with cedar and dwarf oak, the bottoms of the river with cottonwood, quaking-asp, oak, ash, and box-alder, and a thick undergrowth of cherry and currant bushes.

I followed a very good lodge pole-trail, which struck the creek before entering the broken ground, being that used by the Yutas and Arapahos on their way to the Bayou Salado. Here the valley narrowed considerably, and, turning an angle with the creek, I was at once shut in by mountains and elevated ridges, which rose on each side the stream. This was now a rapid torrent, tumbling over rocks and stones, and fringed with oak and a shrubbery of brush. A few miles on, the cañon opened out into a little shelving glade; and on the right bank of the stream, and raised several feet above it, was a flat white rock in which was a round hole, where one of the celebrated springs hissed and bubbled with its escaping gas. I had been cautioned against drinking this, being directed to follow the stream a few yards to another, which is the true soda-spring.

Before doing this, however, I unpacked the mule and took the saddle from Panchito, piling my saddle and meat on the rock. The animals, as soon as I left them free, smelt the white rock, and instantly commenced licking and scraping with their teeth with the greatest eagerness. At last the horse approached the spring, and, burying his nose deep in the clear water, drank greedily. The mules appeared at first to fear the bubbling of the gas, and smelt and retreated two or three times before they mustered courage to take a draught; but when they had once tasted the water I thought they would have burst themselves. For hours they paid no attention to the grass, continuing to lick the rock and constantly returning to the spring to drink. For myself, I had not only abstained from drinking that day, but, with the aid of a handful of salt which I had brought with me for the purpose, had so highly seasoned my breakfast of venison, that I was in a most satisfactory state of thirst. I therefore at once proceeded to the other spring, and found it about forty yards from the first, but immediately above the river, issuing from a little basin in the flat white rock,

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

and trickling over the edge into the stream. The escape of gas in this was much stronger than in the other, and was similar to water boiling smartly.

I had provided myself with a tin cup holding about a pint; but, before dipping it in, I divested myself of my pouch and belt, and sat down in order to enjoy the draught at my leisure. I was half dead with thirst; and, tucking up the sleeves of my hunting-shirt, I dipped the cup into the midst of the bubbles, and raised it hissing and sparkling to my lips. Such a draught! Three times, without drawing a breath, was it replenished and emptied, almost blowing up the roof of my mouth with its effervescence. It was equal to the very best soda-water, but possesses that fresh, natural flavor, which manufactured water cannot impart.

CHAPTER IX

AMONG THE SPRINGS

THE Indians regard with awe the "medicine" waters of these fountains, as being the abode of a spirit who breathes through the transparent water, and thus, by his exhalations, causes the perturbation of its surface. The Arapahos, especially, attribute to this water-god the power of ordaining the success or miscarriage of their war-expeditions; and as their braves pass often by the mysterious springs, when in search of their hereditary enemies the Yutas, in the "Valley of Salt," they never fail to bestow their votive offerings upon the water-sprite, in order to propitiate the "Manitou" of the fountain, and ensure a fortunate issue to their "path of war."

Thus at the time of my visit the basin of the spring was filled with beads and wampum, and pieces of red cloth and knives, whilst the surrounding trees were hung with strips of deerskin, cloth, and mocassins, to which, had they been serviceable, I would most sacrilegiously have helped myself. The "sign," too, round the spring, plainly showed that here a war-dance had been executed by the braves; and I was not a little pleased to find that they had already been here, and were not likely to return the same way; but in this supposition I was quite astray.

This country was once possessed by the Shos-shone or Snake Indians, of whom the Comanches of the plains are a branch; and although many hundred miles now divide their hunting-grounds, they were once, if not the same people, tribes of the same grand nation. They still, however, retain a common language; and there is great analogy in many of their religious rites and legendary tales, which proves that at least a very close alliance must at one period have bound the two tribes together. They are even now the two most powerful nations, in point of numbers, of all the tribes of western Indians; the Comanche ruling supreme on the eastern plains, as the Shos-shones are the dominant power in the country west of the Rocky Mountains, and in the mountains themselves. A branch of the latter is the tribe of Tlamath Indians, the most warlike of the western tribes; as also the Yutas, who may be said to connect them with the nation of Comanche.

Numerically, the Snakes are supposed to be the most powerful of any Indian nation in existence. The Snakes, who, in common with all Indians, possess hereditary legends to account for all natural phenomena, or any extraordinary occurrences which are beyond their ken or comprehension, have of course their legendary version of the causes which created, in the midst of their hunting-grounds, these two springs of sweet and bitter water; which are also intimately connected with the cause of separation between the tribes of "Comanche" and the "Snake." Thus runs the legend.

Many hundreds of winters ago, when the cottonwoods on the Big River were no higher than an arrow, and the red men, who hunted the buffalo on the plains, all spoke the same language, and

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

the pipe of peace breathed its social cloud of kinnik-kinnek whenever two parties of hunters met on the boundless plains, when, with hunting-grounds and game of every kind in the greatest abundance, no nation dug up the hatchet with another because one of its hunters followed the game into their bounds, but, on the contrary, loaded for him his back with choice and fattest meat, and ever proffered the soothing pipe before the stranger, with well-filled belly, left the village, - it happened that two hunters of different nations met one day on a small rivulet, where both had repaired to quench their thirst. A little stream of water, rising from a spring on a rock within a few feet of the bank, trickled over it, and fell splashing into the river. To this the hunters repaired; and whilst one sought the spring itself, where the water, cold and clear, reflected on its surface the image of the surrounding scenery, the other, tired by his exertions in the chase, threw himself at once to the ground, and plunged his face into the running stream.

The latter had been unsuccessful in the chase, and perhaps his bad fortune, and the sight of the fat deer which the other hunter threw from his back before he drank at the crystal spring, caused a feeling of jealousy and ill-humor to take possession of his mind. The other, on the contrary, before he satisfied his thirst, raised in the hollow of his hand a portion of the water, and, lifting it towards the sun, reversed his hand, and allowed it to fall upon the ground,-a libation to the Great Spirit who had vouchsafed him a successful hunt, and the blessing of the refreshing water with which he was about to quench his thirst.

Seeing this, and being reminded that he had neglected the usual offering, only increased the feeling of envy and annoyance which the unsuccessful hunter permitted to get the mastery of his heart; and the Evil Spirit at that moment entering his body, his temper fairly flew away, and he sought some pretence by which to provoke a quarrel with the stranger Indian at the spring.

"Why does a stranger," he asked, rising from the stream at the same time, "drink at the spring-head, when one to whom the fountain belongs contents himself with the water that runs from it?"

"The Great Spirit places the cool water at the spring," answered the other hunter, "that his children may drink it pure and undefiled. The running water is for the beasts which scour the plains. Au-sa-qua is a chief of the Shos-shone: he drinks at the head-water."

"The Shos-shone is but a tribe of the Comanche," returned the other: "Waco-mish leads the grand nation. Why does a Shos-shone dare to drink above him?"

"He has said it. The Shos-shone drinks at the spring-head; other nations of the stream which runs into the fields. Au-sa-qua is chief of his nation. The Comanche are brothers. Let them both drink of the same water."

"The Shos-shone pays tribute to the Comanche. Waco-mish leads that nation to war. Waco-mish is chief of the Shos-shone, as he is of his own people."

"Waco-mish lies; his tongue is forked like the rattlesnake's; his heart is black as the Misho-tunga (bad spirit). When the Manitou made his children, whether Shos-shone or Comanche, Arapaho, Shi-an, or Pa-ne, he gave them buffalo to eat, and the pure water of the fountain to quench their thirst. He said not to one, Drink here, and to another, Drink there; but gave the crystal spring to all, that all might drink."

Waco-mish almost burst with rage as the other spoke; but his coward heart alone prevented him from provoking an encounter with the calm Shos-shone. He, made thirsty by the words he had spoken-for the red man is ever sparing of his tongue-again stooped down to the spring to quench his thirst, when the subtle warrior of the Comanche suddenly threw himself upon the kneeling

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

hunter, and, forcing his head into the bubbling water, held him down with all his strength, until his victim no longer struggled, his stiffened limbs relaxed, and he fell forward over the spring, drowned and dead.

Over the body stood the murderer, and no sooner was the deed of blood consummated than bitter remorse took possession of his mind, where before had reigned the fiercest passion and vindictive hate. With hands clasped to his forehead, he stood transfixed with horror, intently gazing on his victim, whose head still remained immersed in the fountain. Mechanically he dragged the body a few paces from the water, which, as soon as the head of the dead Indian was withdrawn, the Comanche saw suddenly and strangely disturbed. Bubbles sprang up from the bottom, and, rising to the surface, escaped in hissing gas. A thin vapory cloud arose, and, gradually dissolving, displayed to the eyes of the trembling murderer the figure of an aged Indian, whose long snowy hair and venerable beard, blown aside by a gentle air from his breast, discovered the well-known totem of the great Wan-kan-aga, the father of the Comanche and Sho-shone nation, whom the tradition of the tribe, handed down by skilfull hieroglyphics, almost deified for the good actions and deeds of bravery this famous warrior had performed when on earth.

Stretching out a war-club towards the affrighted murderer, the figure thus addressed him: "Accursed of my tribe! this day thou hast severed the link between the mightiest nations of the world, while the blood of the brave Shos-shone cries to the Manitou for vengeance. May the water of thy tribe be rank and bitter in their throats!" Thus saying, and swinging his ponderous war-club (made from the elk's horn) round his head, he dashed out the brains of the Comanche, who fell headlong into the spring, which, from that day to the present moment, remains rank and nauseous, so that not even when half dead with thirst, can one drink the foul water of that spring. The good Wan-kan-aga, however, to perpetuate the memory of the Shos-shone warrior, who was renowned in his tribe for valor and nobleness of heart, struck with the same avenging club a hard flat rock, which overhung the rivulet, just out of sight of this scene of blood; and forthwith the rock opened into a round clear basin, which instantly filled with bubbling sparkling water, than which no thirsty hunter ever drank a sweeter or a cooler draught.

Thus the two springs remain, an everlasting memento of the foul murder of the brave Shos-shone, and the stern justice of the good Wan-kan-aga; and from that day the two mighty tribes of the Shos-shone and Comanche have remained severed and apart; although a long and bloody war followed the treacherous murder of the Shos-shone chief, and many a scalp torn from the head of the Comanche paid the penalty of his death.

The American and Canadian trappers assert that the numerous springs which, under the head of Beer, Soda, Steam-boat springs, &c., abound in the Rocky Mountains, are the spots where his satanic majesty comes up from his kitchen to breathe the sweet fresh air, which must doubtless be refreshing to his worship after a few hours spent in superintending the culinary process going on below.

Never was there such a paradise for hunters as this lone and solitary spot. The shelving prairie, at the bottom of which the springs are situated, is entirely surrounded by rugged mountains, and, containing perhaps two or three acres of excellent grass, affords a safe pasture to their animals, which would hardly care to wander from such feeding and the salitrose rocks they love so well to lick. Immediately overhead Pike's Peak, at an elevation of 12,000 feet above the level of the sea, towers high into the clouds; whilst from the fountain, like a granitic amphitheatre, ridge after

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

ridge, clothed with pine and cedar, rises and meets the stupendous mass of mountains, well called "Rocky," which stretches far away north and southward, their gigantic peaks being visible above the strata of clouds which hide their rugged bases.

This first day the sun shone out bright and warm, and not a breath of wind ruffled the evergreen foliage of the cedar-groves. Gay-plumaged birds were twittering in the shrubs, and ravens and magpies were chattering overhead, attracted by the meat I had hung upon a tree; the mules, having quickly filled themselves, were lying round the spring, basking lazily in the sun; and myself, seated on a pack, and pipe in mouth, with rifle ready at my side, indolently enjoyed the rays which, reflected from the white rock on which I was lying, were deliciously warm and soothing. A piece of rock, detached from the mountain-side and tumbling noisily down, caused me to look up in the direction whence it came. Half a dozen big-horns, or Rocky Mountain sheep, perched on the pinnacle of a rock, were gazing wonderingly upon the prairie, where the mules were rolling enveloped in clouds of dust. The enormous horns of the mountain sheep appeared so disproportionately heavy, that I every moment expected to see them lose their balance and topple over the giddy height. My motions frightened them, and, jumping from rock to rock, they quickly disappeared up the steepest part of the mountain. At the same moment a herd of black-tail deer crossed the corner of the glade within rifle-shot of me, but, fearing the vicinity of Indians, I refrained from firing before I had reconnoitred the vicinity for signs of their recent presence. Immediately over me, on the left bank of the stream, and high above the springs, was a small plateau, one of many which are seen on the mountain-sides. Three buffalo-bulls were here quietly feeding, and remained the whole afternoon undisturbed. I saw from the sign that they had very recently drunk at the springs, and that the little prairie where my animals were feeding was a frequent resort of solitary bulls.

Perceiving that the game, which was in sight on every side of me, was unwarily tame, I judged from this fact that no Indians were in the immediate vicinity, and therefore I resolved to camp where I was. Ascending a bluff where had been an old Indian camp, I found a number of old lodge-poles, and packed them down to the springs, near which I made my fire, but out of arrow-shot of the shrubbery which lines the stream. Instead of permitting the animals to run loose, I picketed them close to and round the camp, in order that they might act as sentinels during the night, for no man or dog can so soon discover the presence or approach of an Indian as a mule. The organ and sense of smelling in these animals are so acute that they at once detect the scent peculiar to the natives, and, snorting loud with fear, and by turning their heads with ears pointed to the spot whence the danger is approaching, wake, and warn at the same moment, their sleeping masters of the impending peril.

However, this night I was undisturbed, and slept soundly until the chattering of a magpie overhead awoke me, just as Pike's Peak was being tinged with the first grey streak of dawn.

Daybreak in this wild spot was beautiful in the extreme. While the deep gorge in which I lay was still buried in perfect gloom, the mountain-tops loomed grey and indistinct from out the morning mist. A faint glow of light broke over the ridge which shut out the valley from the east, and, spreading over the sky, first displayed the snow-covered peak, a wreath of vapory mist encircling it, which gradually rose and disappeared. Suddenly the dull white of its summit glowed with light like burnished silver; and at the same moment the whole eastern sky blazed, as it were, in gold, and ridge and peak, catching the refulgence, glittered with the beams of the rising sun, which at

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

length, peeping over the crest, flooded at once the valley with its dazzling light.

Blowing the ashes of the slumbering fire, I placed upon it the little pot containing a piece of venison for my breakfast, and, relieving my four-footed sentries from their picket-guard, sallied down to the stream, the edges of which were still thickly crusted with ice, for the purpose of taking a luxuriously cold bath; and cold enough it was in all conscience. After my frugal- breakfast, unseasoned by bread or salt, or by any other beverage than the refreshing soda-water, I took my rifle and sallied up the mountain to hunt, consigning my faithful animals to the protection of the Dryad of the fountain, offering to that potent sprite the never-failing "medicine" of the first whiff of my pipe before starting from the spot.

Climbing up the mountain-side, I reached a level plateau, interspersed with clumps of pine and cedar. where a herd of black-tail deer were quietly feeding. As I had the "wind" I approached under cover of a cedar whose branches feathered to the ground, and, resting my rifle in a forked limb, I selected the plumpest-looking of the band, a young buck, and "let him have it," as the hunters say. Struck through the heart, the deer for an instant stretched out its limbs convulsively, and then bounded away with the band, but in a zig-zag course; and unlike the rest, whose tails were lifted high, his black tufted appendage was fast "shut up." Whilst I, certain of his speedy fall, reloaded my rifle, the band, seeing their comrade staggering behind, suddenly stopped. The wounded animal with outstretched neck ran round and round for a few seconds in a giddy circle, and dropped dead within sixty yards of where I stood. The others, like sheep, walked slowly up to the dead animal, and again my rifle gave out its sharp crack from the screen of branches, and another of the band, jumping high in air, bit the dust. They were both miserably poor, so much so that I left all but the hind quarters and fleece, and hanging them upon a tree I returned to camp for a mule to pack in the meat.

The mountains are full of grizzly bears, but, whether they had not yet left their winter-quarters thus early in the season, I saw but one or two tracks, one of which I followed unsuccessfully for many miles over the wildest part of the mountains, into the Bayou Salado. Whilst intent upon the trail, a clattering as of a regiment of cavalry immediately behind me made me bring my rifle to the ready, thinking that a whole nation of mounted Indians were upon me; but, looking back, a band of upwards of a hundred elk were dashing past, looking like a herd of mules, and in their passage down the mountain carrying with them a perfect avalanche of rocks and stones. I killed another deer on my return close to camp, which I reached, packing in the meat on my back, long after dark, and found the animals, which received me with loud neighs of recognition and welcome, with well-filled bellies, taking their evening drink at the springs.

I spent here a very pleasant time, and my animals began soon to improve upon the mountain-grass. Game was very abundant; indeed, I had far more meat than I possibly required; but the surplus I hung up to jerk, as now the sun was getting powerful enough for that process.

I explored all the valleys and cañons of the mountains, and even meditated an expedition to the summit of Pike's Peak, where mortal foot has never yet trod. No dread of Indians crossed my mind, probably because I had remained so long unmolested; and I was so perfectly contented that I had even selected a camping-ground where I intended to remain two or three months, and probably should be at the present moment, if I had not got into a "scrape."

The bears latterly began to move, and their tracks became more frequent. One day I was hunting just at the foot of the Peak, when a large she-bear jumped out of a patch of cedars where she had

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

been lying, and with a loud grunt charged up the mountain, and, dodging amongst the rocks, prevented my getting a crack at her. She was very old, and the grizzliest of the grizzly. She was within a few feet of me when I first saw her. It was unluckily nearly dark, or I should have followed and probably killed her, for they seldom run far, particularly at this season, when they are lank and weak.

One day as I was following a band of deer over the broken ground to the eastward of the mountain, I came suddenly upon an Indian camp, with the fire still smouldering, and dried meat hanging on the trees. Robinson Crusoe could not have been more thoroughly disgusted at the sight of the "footprint in the sand," than was I at this inopportune discovery. I had anticipated a month or two's undisturbed hunting in this remote spot, and now it was out of the question to imagine that the Indians would leave me unmolested. I presently saw two Indians, carrying a deer between them, emerge from the timber bordering the creek, whom I knew at once by their dress to be Arapahos. As, however, my camp was several miles distant, I still hoped that they had not yet discovered its locality, and continued my hunt that day, returning late in the evening to my solitary encampment.

The next morning I removed the animals and packs to a prairie a little lower down the stream, which, although nearer the Indian camp, was almost hidden from view, being enclosed by pine-ridges and ragged buttes, and entered by a narrow gap filled with a dense growth of brush. When I had placed them in security, and taken the precaution to fasten them all to strong picket-pins, with a sufficient length of rope to enable them to feed at ease, and at the same time prevent them straying back to the springs, I again sallied out to hunt.

A little before sunrise I descended the mountain to the springs, and, being very tired, after taking a refreshing draught of the cold water I lay down on the rock by the side of the water and fell fast asleep. When I awoke the sun had already set; but although darkness was fast gathering over the mountain, I was surprised to see a bright light flickering against its sides. A glance assured me that the mountain was on fire, and, starting up, I saw at once the danger of my position. The bottom had been fired about a mile below the springs, and but a short distance from where I had secured my animals. A dense cloud of smoke was hanging over the gorge, and presently, a light air springing up from the east, a mass of flame shot up into the sky and rolled fiercely up the stream, the belt of dry brush on its banks catching fire and burning like tinder. The mountain was already invaded by the devouring element, and two wings of flame spread out from the main stream, which roaring along the bottom with the speed of a racehorse, licked the mountain-side, extending its long line as it advanced. The dry pines and cedars hissed and cracked, as the flame, reaching them, ran up their trunks, and spread amongst the limbs, whilst the long waving grass underneath was a sea of fire. From the rapidity with which the fire advanced I feared that it would already have reached my animals, and hurried at once to the spot as fast as I could run. The prairie itself was as yet untouched, but the surrounding, ridges were clothed in fire, and the mules, with stretched ropes, were trembling with fear. Throwing the saddle on my horse, and the pack on the steadiest mule, I quickly mounted, leaving on the ground a pile of meat, which I had not time to carry with me.

The fire had already gained the prairie, and its long, dry grass was soon a sheet of flame, but, worse than all, the gap through which I had to retreat was burning. Setting spurs into Panchito's sides, I dashed him at the burning bush, and, though his mane and tail were singed in the attempt,

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

he gallantly charged through it. Looking back, I saw the mules huddled together on the other side, and evidently fearing to pass the blazing barrier. As, however, to stop would have been fatal, I dashed on, but before I had proceeded twenty yards my old hunting mule, singed and smoking, was at my side, and the others close behind her.

On all sides I was surrounded by fire. The whole scenery was illuminated, the peaks and distant ridges being as plainly visible as at noonday. The bottom was a roaring mass of flame, but on the other side, the prairie being more bare of cedar-bushes, the fire was less fierce and presented the only way of escape. To reach it, however, the creek had to be crossed, and the bushes on the banks were burning fiercely, which rendered it no easy matter; moreover, the edges were coated above the water with thick ice, which rendered it still more difficult. I succeeded in pushing Panchito into the stream, but, in attempting to climb the opposite bank, a blaze of fire was puffed into his face, which caused him to rear on end, and, his hind feet flying away from him at the same moment on the ice, he fell backwards into the middle of the stream, and rolled over me in the deepest water. Panchito rose on his legs and stood trembling with affright in the middle of the stream, whilst I dived and groped for my rifle, which had slipped from my hands, and of course had sunk to the bottom. After a search of some minutes I found it, and, again mounting, made another attempt to cross a little farther down, in which I succeeded, and, followed by the mules, dashed through the fire and got safely through the line of blazing brush.

Once in safety, I turned in my saddle and had leisure to survey the magnificent spectacle. The fire had extended at least three miles on each side the stream, and the mountain was one sheet of flame. A comparatively thin line marked the progress of the devouring element, which, as there was no wind to direct its course, burned on all sides, actually roaring as it went.

I had from the first no doubt but that the fire was caused by the Indians, who had probably discovered my animals, but, thinking that a large party of hunters might be out, had taken advantage of a favorable wind to set fire to the bottom, hoping to secure the horse and mules in the confusion, without the risk of attacking the camp. Once or twice I felt sure that I saw dark figures running about near where I had seen the Indian camp the previous day, and just as I had charged through the gap I heard a loud yell, which was answered by another at a little distance.

Singularly enough, just as I had got through the blazing line, a breeze sprang up from the westward and drove the fire after me, and I had again to beat a hasty retreat before it. (This fire extended into the prairie, towards the waters of the Platte, upwards of forty miles, and for fourteen days its glare was visible on the Arkansa, fifty miles distant.)

I encamped six or seven miles from the springs, and, whilst proceeding down the creek, deer and antelope continually crossed and re-crossed the trail, some in their affright running back into the very jaws of the fire. As soon as I had secured the animals, I endeavored to get my rifle into shooting order, but the water had so thoroughly penetrated and swelled the patching round the balls, that it was a long time before I succeeded in cleaning one barrel, the other defying all my attempts. This was a serious accident, as I could not but anticipate a visit from the Indians if they discovered the camp.

All this time the fire was spreading out into the prairies, and, creeping up the "divide," was already advancing upon me. It extended at least five miles on the left bank of the creek, and on the right was more slowly creeping up the mountain-side; while the brush and timber in the bottom was one body of flame. Besides the long sweeping line of the advancing flame, the plateaus on the

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

mountain-side, and within the line, were burning in every direction, as the squalls and eddies down the gullies drove the fire to all points.

The mountains themselves being invisible, the air, from the low ground where I then was, appeared a mass of fire, and huge crescents of flame danced as it were in the very sky, until a mass of timber blazing at once exhibited the sombre background of the stupendous mountains.

I had scarcely slept an hour when huge clouds of smoke rolling down the bottom frightened the animals, whose loud whinnying awoke me, and, half suffocated by the dense smoke which hung heavily in the atmosphere, I again retreated before the fire, which was rapidly advancing: and this time I did not stop until I had placed thirty or forty miles between me and the enemy. I then encamped in a thickly-timbered bottom on the Fontaine-qui-bouille, where the ground, which had been burned by the hunters in the winter, was studded like a wheat-field with green grass. On this the animals fared sumptuously for several days - better, indeed, than I did myself, for game was very scarce, and in such poor condition as to be almost uneatable. While encamped on this stream, the wolves infested the camp to that degree, that I could scarcely leave my saddles for a few minutes on the ground without finding the straps of rawhide gnawed to pieces; and one night the hungry brutes ate up all the ropes which were tied on the necks of the animals and trailed along the ground: they were actually devoured to within a yard of the mules' throats.

One evening a wolf came into camp as I was engaged cleaning my rifle, one barrel of which was still unserviceable, and a long hickory wiping-stick in it at the time. As I was hidden by a tree, the wolf approached the fire within a few feet, and was soon tugging away at an apishamore or saddle-cloth of buffalo calfskin which lay on the ground. Without dreaming that the rifle would go off, I put a cap on the useless barrel, and, holding it out across my knee in a line with the wolf, snap-ph-i-zz-bang went the charge of damp powder, much to my astonishment, igniting the stick which remained in the barrel, and driving it like a fiery comet against the ribs of the beast, who, yelling with pain, darted into the prairie at the top of his speed, his singed hair smoking as he ran.

CHAPTER X

PASSING OF THE BUFFALO

IT is a singular fact that within the last two years the prairies, extending from the mountains to a hundred miles or more down the Arkansa, have been entirely abandoned by the buffalo. Indeed, in crossing from the settlements of New Mexico, the boundary of their former range is marked by skulls and bones, which appear fresher as the traveller advances westward and towards the waters of the Platte. As the skulls are said to last only three years on the surface of the ground, that period has consequently seen the gradual disappearance of the buffalo from their former haunts.

With the exception of the Bayou Salado, one of their favorite pastures, they are now rarely met with in large bands on the upper waters of the Arkansa; but straggling bulls pass occasionally the foot of the mountain, seeking wintering-places on the elevated plateaus, which are generally more free from snow than the lowland prairies, by reason of the high winds. The bulls separate from the cows about the month of September, and scatter over the prairies and into the mountains, where they recruit themselves during the winter. A few males, however, always accompany the cows, to act as guides and defenders of the herd, on the outskirts of which they are always stationed. The countless bands which are seen together at all seasons are generally composed of cows alone; the bulls congregating in smaller herds, and on the flanks of the main body.

The meat of the cow is infinitely preferable to that of the male buffalo; but that of the bull, partic-

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

ularly if killed in the mountains, is in better condition during the winter months. From the end of June to September bull-meat is rank and tough, and almost uneatable; while the cows are in perfection, and as fat as stall-fed oxen, the depouille, or fleece, exhibiting frequently four inches and more of solid fat.

Whether it is that the meat itself (which, by the way, is certainly the most delicious of flesh) is most easy of digestion, or whether the digestive organs of hunters are "ostrichified" by the severity of exercise, and the bracing, wholesome climate of the mountains and plains, it is a fact that most prodigious quantities of "fat cow" may be swallowed with the greatest impunity, and not the slightest inconvenience ever follows the mammoth feasts of the gourmands of the far west. The powers of the Canadian voyageurs and hunters in the consumption of meat strike the greenhorn with wonder and astonishment; and are only equalled by the gastronomical capabilities exhibited by Indian dogs, both following the same plan in their epicurean gorgings.

On slaughtering a fat cow, the hunter carefully lays by, as a tit-bit for himself, the boudins and medullary intestine, which are prepared by being inverted and partially cleaned (this, however, is not thought indispensable). The depouille or fleece, the short and delicious hump-rib and tenderloin, are then carefully stowed away, and with these the rough edge of the appetite is removed. But the course is, par excellence, the sundry yards of boudin, which, lightly browned over the embers of the fire, slide down the well-lubricated throat of the hungry mountaineer, yard after yard disappearing in quick succession.

No animal requires so much killing as a buffalo. Unless shot through the lungs or spine, they invariably escape; and, even when thus mortally wounded, or even struck through the very heart, they will frequently run a considerable distance before falling to the ground, particularly if they see the hunter after the wound is given. If, however, he keeps himself concealed after firing, the animal will remain still, if it does not immediately fall. It is a most painful sight to witness the dying struggles of the huge beast. The buffalo invariably evinces the greatest repugnance to lie down when mortally wounded, apparently conscious that, when once touching mother earth, there is no hope left him. A bull, shot through the heart or lungs, with blood streaming from his mouth, and protruding tongue, his eyes rolling, bloodshot, and glazed with death, braces himself on his legs, swaying from side to side, stamps impatiently at his growing weakness, or lifts his rugged and matted head and helplessly bellows out his conscious impotence. To the last, however, he endeavors to stand upright, and plants his limbs farther apart, but to no purpose. As the body rolls like a ship at sea, his head slowly turns from side to side, looking about, as it were, for the unseen and treacherous enemy who has brought him, the lord of the plains, to such a pass. Gouts of purple blood spurt from his mouth and nostrils, and gradually the failing limbs refuse longer to support the ponderous carcass; more heavily rolls the body from side to side, until suddenly, for a brief instant, it becomes rigid and still; a convulsive tremor seizes it, and, with a low sobbing gasp, the huge animal falls over on his side, the limbs extended stark and stiff, and the mountain of flesh without life or motion.

The first attempts of a "greenhorn" to kill a buffalo are invariably unsuccessful. He sees before him a mass of flesh, nearly five feet in depth from the top of the hump to the brisket, and consequently imagines that, by planting his ball midway between these points, it must surely reach the vitals. Nothing, however, is more erroneous than the impression; for to "throw a buffalo in his tracks," which is the phrase for making a clean shot, he must be struck but a few inches above the brisket.,

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

behind the shoulder, where alone, unless the spine be divided, a death-shot will reach the vitals. I once shot a bull, the ball passing, directly through the very centre of the heart and tearing a hole sufficiently large to insert the finger, which ran upwards of half a mile before it fell, and yet the ball had passed completely through the animal, cutting its heart almost in two. I also saw eighteen shots, the half of them muskets, deliberately fired into an old bull, at six paces, and some of them passing through the body, the poor animal standing the whole time, and making feeble attempts to charge. The nineteenth shot, with the muzzle touching his body, brought him to the ground. The head of the buffalo-bull is so thickly covered with coarse matted hair, that a ball fired at half a dozen paces will not penetrate the skull through the shaggy frontlock. I have frequently attempted this with a rifle carrying twenty-five balls to the pound, but never once succeeded.

Notwithstanding the great and wanton destruction of the buffalo, many years must elapse before this lordly animal becomes extinct. In spite of their numerous enemies, they still exist in countless numbers, and, could any steps be taken to protect them, as is done in respect of other game, they would ever remain the life and ornament of the boundless prairies, and afford ample and never-failing provision to the travellers over these otherwise desert plains. Some idea of the prodigious slaughter of these animals may be formed, by mentioning the fact that upwards of one hundred thousand buffalo robes find their way annually into the United States and Canada; and these are the skins of cows alone, the bull's hide being so thick that it is never dressed. Besides this, the Indians kill a certain number for their own use, exclusive of those whose meat they require; and the reckless slaughter of buffalo by parties of white men, emigrants to the Columbia, California, and elsewhere, leaving, as they proceed on their journey, thousands of untouched carcasses on the trail, swells the aggregate of this wholesale destruction to an enormous amount.

CHAPTER XI

BIG GAME OF THE MOUNTAINS

THE grizzly bear is the fiercest of the *ferae naturae* of the mountains. His great strength and wonderful tenacity of life render an encounter with him anything but desirable, and therefore it is a rule with the Indians and white hunters never to attack him unless backed by a strong party. Although, like every other wild animal, he usually flees from man, yet at certain seasons, when maddened by love or hunger, he not unfrequently charges at first sight of a foe; when, unless killed dead, a hug at close quarters is anything but a pleasant embrace, his strong hooked claws stripping the flesh from the bones as easily as a cook peels an onion. Many are the tales of bloody encounters with these animals which the trappers delight to recount to the "greenhorn," to enforce their caution as to the fool-hardiness of ever attacking the grizzly bear.

Some years ago a trapping party was on their way to the mountains, led, I believe, by old Sublette, a well-known captain of the West. Amongst the band was one John Glass, a trapper who had been all his life in the mountains, and had seen, probably, more exciting adventures, and had had more wonderful and hairbreadth escapes, than any of the rough and hardy fellows who make the West their home, and whose lives are spent in a succession of perils and privations. On one of the streams running from the "Black Hills," a range of mountains northward of the Platte, Glass and a companion were one day setting their traps, when, on passing through a cherry-thicket which skirted the stream, the former, who was in advance, descried a large grizzly bear quietly turning up the turf with his nose, searching for yampa-roots or pig-nuts, which there abounded. Glass immediately called his companion, and both, proceeding cautiously, crept to the skirt of the thick-

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

et, and, taking steady aim at the animal, whose broadside was fairly exposed at the distance of twenty yards, discharged their rifles at the same instant, both balls taking effect, but not inflicting a mortal wound. The bear, giving a groan of pain, jumped with all four legs from the ground, and, seeing the wreaths of smoke hanging at the edge of the brush, charged at once in that direction, snorting with pain and fury.

“Hurraw, Bill!” roared out Glass, as he saw the animal rushing towards them, “we’ll be made ‘meat’ of as sure as shootin’!” and, leaving the tree behind which he had concealed himself, he bolted through the thicket, followed closely by his companion. The brush was so thick, that they could scarcely make their way through, whereas the weight and strength of the bear carried him through all obstructions, and he was soon close upon them.

About a hundred yards from the thicket was a steep bluff, and between these points was a level piece of prairie; Glass saw that his only chance was to reach this bluff, and, shouting to his companion to make for it, they both broke from the cover and flew like lightning across the open space. When more than half way across, the bear being about fifty yards behind them, Glass, who was leading, tripped over a stone, and fell to the ground, and just as he rose to his feet, the beast, rising on his hind feet, confronted him. As he closed, Glass, never losing his presence of mind, cried to his companion to load up quickly, and discharged his pistol full into the body of the animal, at the same moment that the bear, with blood streaming from its nose and mouth, knocked the pistol from his hand with one blow of its paw, and, fixing its claws deep into his flesh, rolled with him to the ground.

The hunter, notwithstanding his hopeless situation, struggled manfully, drawing his knife and plunging it several times into the body of the beast, which, furious with pain, tore with tooth and claw the body of the wretched victim, actually baring the ribs of flesh, and exposing the very bones. Weak with loss of blood, and with eyes blinded with the blood which streamed from his lacerated scalp, the knife at length fell from his hand, and Glass sank down insensible, and to all appearance dead.

His companion, who, up to this moment, had watched the conflict, which, however, lasted but a few seconds, thinking that his turn would come next, and not having had presence of mind even to load his rifle, fled with might and main back to camp, where he narrated the miserable fate of poor Glass. The captain of the band of trappers, however, despatched the man with a companion back to the spot where he lay, with instructions to remain by him if still alive, or to bury him if, as all supposed he was, defunct, promising them at the same time a sum of money for so doing.

On reaching the spot, which was red with blood, they found Glass still breathing, and the bear, dead and stiff, actually lying upon his body. Poor Glass presented a horrifying spectacle: the flesh was torn in strips from his chest and limbs, and large flaps strewed the ground; his scalp hung bleeding over his face, which was also lacerated in a shocking manner.

The bear, besides the three bullets which had pierced its body, bore the marks of the fierce nature of Glass’s final struggle, no less than twenty gaping wounds in the breast and belly testifying to the gallant defence of the mountaineer.

Imagining that, if not already dead, the poor fellow could not possibly survive more than a few moments, the men collected his arms, stripped him even of his hunting-shirt and moccasins, and, merely putting the dead bear off the body, mounted their horses, and slowly followed the remainder of the party, saying, when they reached it, that Glass was dead, as probably they thought, and

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

that they had buried him.

In a few days the gloom which pervaded the trappers' camp, occasioned by the loss of a favorite companion, disappeared, and Glass's misfortune, although frequently mentioned over the camp-fire, at length was almost entirely forgotten in the excitement of the hunt and Indian perils which surrounded them.

Months elapsed, the hunt was over, and the party of trappers were on their way to the trading-fort with their packs of beaver. It was nearly sundown, and the round adobe bastions of the mud-built fort were just in sight, when a horseman was seen slowly approaching them along the banks of the river. When near enough to discern his figure, they saw a lank cadaverous form with a face so scarred and disfigured that scarcely a feature was discernible. Approaching the leading horsemen, one of whom happened to be the companion of the defunct Glass in his memorable bear scrape, the stranger, in a hollow voice, reining in his horse before them, exclaimed, "Hurraw, Bill, my boy! you thought I was 'gone under' that time, did you? but hand me over my horse and gun, my lad; I ain't dead yet by a dam sight!"

What was the astonishment of the whole party, and the genuine horror of Bill and his worthy companion in the burial story, to hear the well-known, though now much altered, voice of John Glass, who had been killed by a grizzly bear months before, and comfortably interred, as the two men had reported, and all had believed!

There he was, however, and no mistake about it; and all crowded round to hear from his lips, how, after the lapse of he knew not how long, he had gradually recovered, and being without arms, or even a butcher-knife, he had fed upon the almost putrid carcase of the bear for several days, until he had regained sufficient strength to crawl, when, tearing off as much of the bear's meat as he could carry in his enfeebled state, he crept down the river; and suffering excessive torture from his wounds and hunger, and cold, he made the best of his way to the fort, which was some eighty or ninety miles from the place of his encounter with the bear, and, living the greater part of the way upon roots and berries, he after many, many days, arrived in a pitiable state, from which he had now recovered, and was, to use his own expression, "as slick as a peeled onion."

A trapper on Arkansa, named Valentine Herring, but better known as "Old Rube," told me that once, when visiting his traps one morning on a stream beyond the mountains, he found one missing, at the same time that he discovered fresh bear "sign" about the banks. Proceeding down the river in search of the lost trap, he heard the noise of some large body breaking through the thicket of plum bushes which belted the stream. Ensnouncing himself behind a rock, he presently observed a huge grizzly bear emerge from the bush and limp on three legs to a flat rock, which he mounted, and then, quietly seating himself, he raised one of his fore paws, on which Rube, to his amazement, discovered his trap tight and fast.

The bear, lifting his iron-gloved foot close to his face, gravely examined it, turning his paw round and round, and quaintly bending his head from side to side, looking at the trap from the comers of his eyes, and with an air of mystery and puzzled curiosity, for he evidently could not make out what the novel and painful appendage could be; and every now and then smelt it and tapped it lightly on the rock. This, however, only paining the animal the more, he would lick the trap, as if deprecating its anger, and wishing to conciliate it.

After watching these curious antics for some time, as the bear seemed inclined to resume his travels, Rube, to regain his trap, was necessitated to bring the bear's cogitations to a close, and, level-

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

ling his rifle, shot him dead, cutting off his paw and returning with it to camp, where the trappers were highly amused at the idea of "trapping a bar."

Near the same spot where Glass encountered his "scrape," some score of Sioux squaws were one day engaged in gathering cherries in a thicket near their village, and had already nearly filled their baskets, when a bear suddenly appeared in the midst, and, with a savage growl, charged amongst them. Away ran the terrified squaws, yelling and shrieking, out of the shrubbery, nor stopped until safely ensconced within their lodges. Bruin, however, preferring fruit to meat, albeit of tender squaws, after routing the petticoats, betook himself to the baskets, which he quickly emptied, and then quietly retired.

Bears are exceedingly fond of plums and cherries, and a thicket of this fruit in the vicinity of the mountains is, at the season when they are ripe, a sure "find" for Mr. Bruin. When they can get fruit they prefer such food to meat, but are, nevertheless, carnivorous animals.

The game, par excellence of the Rocky Mountains, and that which takes precedence in a comestible point of view, is the carnero cimmaron of the Mexicans, the Bighorn or Mountain sheep of the Canadian hunters. This animal, which partakes of the nature of both the deer and the goat, resembles the latter more particularly in its habits, and its characteristic liking for lofty, inaccessible points of the mountains, whence it seldom descends to the upland valleys excepting in very severe weather. In size the mountain-sheep is between the domestic animal and the common red deer of America, but more strongly made than the latter. Its color is a brownish dun (the hair being tipped with a darker tinge as the animal's age increases), with a whitish streak on the hind quarters, the tail being shorter than a deer's, and tipped with black. The horns of the male are enormous, curved backwards, and often three feet in length with a circumference of twenty inches near the head. The hunters assert that, in descending the precipitous sides of the mountains, the sheep frequently leap from a height of twenty or thirty feet, invariably alighting on their horns, and thereby saving their bones from certain dislocation.

They are even more acute in the organs of sight and smell than the deer; and as they love to resort to the highest and most inaccessible spots, whence a view can readily be had of approaching danger, and particularly as one of the band is always stationed on the most commanding pinnacle of rock as sentinel, whilst the others are feeding, it is no easy matter to get within rifle-shot of the cautious animals. When alarmed they ascend still higher up the mountain: halting now and then on some overhanging crag, and looking down at the object which may have frightened them, they again commence their ascent, leaping from point to point, and throwing down an avalanche of rocks and stones as they bound up the steep sides of the mountain. They are generally very abundant in all parts of the main chain of the Rocky Mountains, but particularly so in the vicinity of the "Parks" and the Bayou Salado, as well as in the range between the upper waters of the Del Norte and Arkansa, called the "Wet Mountain" by the trappers. On the Sierra Madre, or Cordillera of New Mexico and Chihuahua, they are also numerous.

The first mountain-sheep I killed, I got within shot of in rather a curious manner. I had undertaken several unsuccessful hunts for the purpose of procuring a pair of horns of this animal, as well as some skins, which are of excellent quality when dressed, but had almost given up any hope of approaching them, when one day, having killed and butchered a blacktail deer in the mountains, I sat down with my back to a small rock and fell asleep. On awakening, feeling inclined for a smoke, I drew from my pouch a pipe, and flint and steel, and began leisurely to cut a charge of tobacco.

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

Whilst thus engaged I became sensible of a peculiar odor which was wafted right into my face by the breeze, and which, on snuffing it once or twice, I immediately recognized as that which emanates from sheep and goats. Still I never thought that one of the former animal could be in the neighborhood, for my mule was picketed on the little plateau where I sat, and was leisurely cropping the buffalo-grass which thickly covered it.

Looking up carelessly from my work, as a whiff stronger than before reached my nose, what was my astonishment at seeing five mountain-sheep within ten paces, and regarding me with a curious and astonished gaze! Without drawing a breath, I put out my hand and grasped the rifle, which was lying within reach; but the motion, slight as it was, sufficed to alarm them, and with a loud bleat the old ram bounded up the mountain, followed by the band and at so rapid a pace that all my attempts to "draw a bead" upon them were ineffectual. When, however, they reached a little plateau about one hundred and fifty yards from where I stood, they suddenly stopped, and, approaching the edge, looked down at me, shaking their heads, and bleating their displeasure at the intrusion. No sooner did I see them stop than my rifle was at my shoulder, and covering the broad side of the one nearest to me. An instant after and I pulled the trigger, and at the report the sheep jumped convulsively from the rock, and made one attempt to follow its flying companions; but its strength failed, and, circling round once or twice at the edge of the plateau, it fell over on its side, and, rolling down the steep rock, tumbled dead very near me. My prize proved a very fine young male, but had not a large pair of horns. It was, however, "seal" fat, and afforded me a choice supply of meat, which was certainly the best I had eaten in the mountains, being fat and juicy, and in flavor somewhat partaking both of the domestic sheep and buffalo.

Several attempts have been made to secure the young of these animals and transport them to the States; and, for this purpose, an old mountaineer, one Billy Williams, took with him a troop of milch-goats, by which to bring up the young sheep; but although he managed to take several fine lambs, I believe that he did not succeed in reaching the frontier with one living specimen out of some half-score. The hunters frequently rear them in the mountains; and they become greatly attached to their masters, enlivening the camp with their merry gambols.

The elk, in point of size, ranks next to the buffalo. It is found in all parts of the mountains, and descends not unfrequently far down into the plains in the vicinity of the larger streams. A full-grown elk is as large as a mule, with rather a heavy neck and body, and stout limbs, its feet leaving a track as large as that of a two-year-old steer. They are dull, sluggish animals, at least in comparison with others of the deer tribe, and are easily approached and killed. In winter they congregate in large herds, often numbering several hundreds; and at that season are fond of travelling, their track through the snow having the appearance of a broad beaten road. The elk requires less killing than any other of the deer tribe (whose tenacity of life is remarkable); a shot anywhere in the fore-part of the animal brings it to the ground. On one occasion I killed two with one ball, which passed through the neck of the first, and struck the second, which was standing a few paces distant, through the heart: both fell dead. A deer, on the contrary, often runs a considerable distance, strike it where you will. The meat of the elk is strong flavored, and more like "poor bull" than venison: it is only eatable when the animal is fat and in good condition; at other times it is strong tasted and stringy.

The antelope, the smallest of the deer tribe, affords the hunter a sweet and nutritious meat, when that of nearly every other description of game, from the poorness and scarcity of the grass during

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

the winter, is barely eatable. They are seldom seen now in very large bands on the grand prairies, having been driven from their old pastures by the Indians and white hunters. The former, by means of "surrounds," an enclosed space formed in one of the passes used by these animals, very often drive into the toils an entire band of antelope of several hundreds, when not one escapes slaughter.

I have seen them on the western sides of the mountains, and in the mountain valleys, in herds of several thousands. They are exceedingly timid animals, but at the same time wonderfully curious; and their curiosity very often proves their death, for the hunter, taking advantage of this weakness, plants his wiping-stick in the ground, with a cap or red handkerchief on the point, and, concealing himself in the long grass, waits, rifle in hand, the approach of the inquisitive antelope, who, seeing an unusual object in the plain, trots up to it, and, coming within range of the deadly tube, pays dearly for his temerity. An antelope, when alone, is one of the stupidest of beasts, and becomes so confused and frightened at sight of a travelling party, that it frequently runs right into the midst of the danger it seeks to avoid.

I had heard most wonderful accounts from the trappers of an animal, the existence of which was beyond all doubt, which, although exceedingly rare, was occasionally met with in the mountains, but, from its supposed dangerous ferocity, and the fact of its being a cross between the devil and a bear, was never molested by the Indians or white hunters, and a wide berth given whenever the animal made its dreaded appearance. Most wonderful stories were told of its audacity and fearlessness; how it sometimes jumps from an overhanging rock on a deer or buffalo, and, fastening on its neck, soon brings it to the ground; how it has been known to leap upon a hunter when passing near its place of concealment, and devour him in a twinkling -- often charging furiously into a camp and playing all sorts of pranks on the goods and chattels of the mountaineers. The general belief was that the animal owes its paternity to the Old Gentleman himself; but the most reasonable declare it to be a cross between the bear and wolf.

Hunting one day with an old Canadian trapper, he told me that, in a part of the mountains which we were about to visit on the morrow, he once had a battle with a "carcagieu", which lasted upwards of two hours, during which he fired a pouchful of balls into the animal's body, which spat them out as fast as they were shot in. To the truth of this probable story he called all the saints to bear witness.

Two days after, as we were toiling up a steep ridge after a band of mountain-sheep, my companion, who was in advance, suddenly threw himself flat behind a rock, and exclaimed in a smothered tone, signalling me with his hand to keep down and conceal myself, "Sacre' enfant de Garce, mais here's von dam carcagieu!"

I immediately cocked my rifle, and, advancing to the rock, and peeping over it, saw an animal, about the size of a large badger, engaged in scraping up the earth about a dozen paces from where we were concealed. Its color was dark, almost black; its body long, and apparently tailless; and I at once recognized the mysterious beast to be a "glutton." After I had sufficiently examined the animal, I raised my rifle to shoot, when a louder than common "Enfant de Garce" from my companion alarmed the animal, and it immediately ran off, when I stood up and fired both barrels after it, but without effect; the attempt exciting a derisive laugh from the Canadian, who exclaimed, "Pe gar, may be you got fifty balls; vel, shoot 'em, all at de dam carcagieu, and he not care a dam!"

The skins of these animals are considered "great medicine" by the Indians, and will fetch almost

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

any price. They are very rarely met with on the plains, preferring the upland valleys and broken ground of the mountains, which afford them a better field for their method of securing game, which is by lying in wait behind a rock, or on the steep bank of a ravine, concealed by a tree or shrub, until a deer or antelope passes underneath, when they spring upon the animal's back, and, holding on with their strong and sharp claws, which they bury in the flesh, soon bring it bleeding to the ground. The Indians say they are purely carnivorous; but I imagine that, like the bear, they not unfrequently eat fruit and roots, when animal food is not to be had.

I have said that the mountain wolves, and, still more so, the coyote of the plains, are less frightened at the sight of man than any other beast. One night, when encamped on an affluent of the Platte, a heavy snow-storm falling at the time, I lay down in my blanket, after first heaping on the fire a vast pile of wood, to burn till morning. In the middle of the night I was awakened by the excessive cold, and, turning towards the fire, which was burning bright and cheerfully, what was my astonishment to see a large grey wolf sitting quietly before it, his eyes closed, and his head nodding in sheer drowsiness! Although I had frequently seen wolves evince their disregard to fires, by coming within a few feet of them to seize upon any scraps of meat which might be left exposed, I had never seen or heard of one approaching so close as to warm his body, and for that purpose alone. However, I looked at him for some moments without disturbing the beast, and closed my eyes and went to sleep, leaving him to the quiet enjoyment of the blaze. This is not very wonderful when I mention that it is a very common thing for these animals to gnaw the straps of a saddle on which your head is reposing for a pillow.

When I turned my horse's head from Pike's Peak I quite regretted the abandonment of my mountain life, solitary as it was, and more than once thought of again taking the trail to the Bayou Salado, where I had enjoyed such good sport.

Apart from the feeling of loneliness which any one in my situation must naturally have experienced, surrounded by stupendous works of nature, which in all their solitary grandeur frowned upon me, and sinking into utter insignificance the miserable mortal who crept beneath their shadow; still there was something inexpressibly exhilarating in the sensation of positive freedom from all worldly care, and a consequent expansion of the sinews, as it were, of mind and body, which made me feel elastic as a ball of Indian rubber, and in a state of such perfect insouciance that no more dread of scalping Indians entered my mind than if I had been sitting in Broadway, in one of the windows of Astor House. A citizen of the world, I never found any difficulty in investing my resting-place, wherever it might be, with all the attributes of a home; and hailed, with delight equal to that which the artificial comforts of a civilized home would have caused, the, to me, domestic appearance of my hobbled animals, as they grazed around the camp, when I returned after a hard day's hunt. By the way, I may here remark that my sporting feelings underwent a great change when I was necessitated to follow and kill game for the support of life, and as a means of subsistence; and the slaughter of deer and buffalo no longer became sport when the object was to fill the larder, and the excitement of the hunt was occasioned by the alternative of a plentiful feast or a banyan; and, although ranking under the head of the most red-hot of sportsmen, I can safely acquit myself of ever wantonly destroying a deer or buffalo unless I was in need of meat; and such consideration for the *ferae naturae* is common to all the mountaineers who look to game alone for their support.

Although liable to an accusation of barbarism, I must confess that the very happiest moments

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

of my life have been spent in the wilderness of the Far West; and I never recall but with pleasure the remembrance of my solitary camp in the Bayou Salado, with no friend near me more faithful than my rifle, and no companions more sociable than my good horse and mules, or the attendant coyote which nightly serenaded us. With a plentiful supply of dry pine-logs on the fire, and its cheerful blaze streaming fax up into the sky, illuminating the valley far and near, and exhibiting the animals, with well-filled bellies, standing contentedly at rest over their picket-pins, I would sit cross-legged enjoying the genial warmth, and, pipe in mouth, watch the blue smoke as it curled upwards, building castles in its vapory wreaths, and, in the fantastic shapes it assumed, peopling the solitude with figures of those far away. Scarcely however, did I ever wish to change such hours of freedom for all the luxuries of civilized life, and, unnatural and extraordinary as it may appear, yet such is the fascination of the life of the mountain hunter, that I believe not one instance could be adduced of even the most polished and civilized of men, who had once tasted the sweets of its attendant liberty and freedom from every worldly care, not regretting the moment when he exchanged it for the monotonous life of the settlements, nor sighing, and sighing again, once more to partake of its pleasures and allurements.

Nothing can be more social and cheering than the welcome blaze of the camp fire on a cold winter's night, and nothing more amusing or entertaining, if not instructive, than the rough conversation of the single-minded mountaineers, whose simple daily talk is all of exciting adventure, since their whole existence is spent in scenes of peril and privation; and consequently the narration of their every-day life is a tale of thrilling accidents and hair-breadth 'scapes, which, though simple matter-of-fact to them, appear a startling romance to those who are not acquainted with the nature of the lives led by these men, who, with the sky for a roof and their rifles to supply them with food and clothing, call no man lord or master, and are free as the game they follow.

A hunter's camp in the Rocky Mountains is quite a picture. He does not always take the trouble to build any shelter unless it is in the snow season, when a couple of deerskins stretched over a willow frame shelter him from the storm. At other seasons he is content with a mere breakwind. Near at hand are two upright poles, with another supported on the top of these, on which is displayed, out of reach of hungry wolf or coyote, meat of every variety the mountains afford. Buffalo depouilles, hams of deer and mountain-sheep, beaver-tails, &c., stock the larder. Under the shelter of the skins hang his powder-horn and bullet-pouch; while his rifle, carefully defended from the damp, is always within reach of his arm. Round the blazing fire the hunters congregate at night, and whilst cleaning their rifles, making or mending mocassins, or running bullets, spin long yams of their hunting exploits, &c.

Some hunters, who have married Indian squaws, carry about with them the Indian lodge of buffalo-skins, which are stretched in a conical form round a frame of poles. Near the camp is always seen the "graining-block," a log of wood with the bark stripped and perfectly smooth, which is planted obliquely in the ground, and on which the hair is removed from the skins to prepare them for being dressed. There are also "stretching-frames," on which the skins are placed to undergo the process of dubbing, which is the removal of the flesh and fatty particles adhering to the skin, by means of the "dubber," an instrument made of the stock of an elk's horn. The last process is the "smoking," which is effected by digging a round hole in the ground and lighting in it an armful of rotten wood or punk. Three sticks are then planted round the hole, and their tops brought together and tied. The skin is then placed on this frame, and all the holes by which the smoke might

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

escape carefully stopped: in ten or twelve hours the skin is thoroughly smoked and ready for immediate use.

The camp is invariably made in a picturesque locality, for like the Indian, the white hunter has ever an eye to the beautiful. The broken ground of the mountains, with their numerous tumbling and babbling rivulets, and groves and thickets of shrubs and timber, always afford shelter from the boisterous winds of winter, and abundance of fuel and water. Facing the rising sun the hunter invariably erects his shanty, with a wall of precipitous rock in rear to defend it from the gusts which often sweep down the gorges of the mountains. Round the camp his animals, well hobbled at night, feed within sight, for nothing does a hunter dread more than a visit from the horse-stealing Indians; and to be "afoot" is the acme of his misery.

CHAPTER XII

BIRDS OF PASSAGE AT BENT'S FORT

WHEN I returned to the Arkansa I found a small party were making preparations to cross the grand prairie to the United States, intending to start on the 1st of May, before which time there would not be a sufficiency of grass to support the animals on the way. With these men I determined to travel, and in the mean time employed myself in hunting on the "Wet Mountain," and Fisher's Hole, a valley at the head of St. Charles, as well as up the Arkansa itself. I observed in these excursions that vegetation was in a much more forward state in the mountain valleys and the prairies contiguous to their bases than on the open plains, and that in the vicinity of the "pueblo" it was still more backward than in any other spot; on the 15th of April not a blade of green grass having as yet made its appearance round the fort. This was not from the effects of drought, for several refreshing showers had fallen since the disappearance of the snow; neither was there any apparent difference in the soil, which is a rich loam, and in the river-bottom, an equally rich vegetable mould. At this time, when the young grass had not yet appeared here, it was several inches high on the mountains and upland prairies, and the cherry and currant bushes on the creeks were bursting into leaf.

Amongst the wives of the mountaineers in the fort was one Mexican woman from the state of Durango, who had been carried off by the Comanches in one of their raids into that department. Remaining with them several years, she eventually accompanied a party of Kioways (allies of the Comanche) to Bent's Fort on the Arkansa. Here she was purchased from them and became the wife of Hawkens, who afterwards removed from Bent's and took up his abode at the "pueblo," and was my hospitable host while on the Arkansa. It appeared that her Mexican husband, by some means or another, heard that she had reached Bent's Fort, and, impelled by affection, undertook the long journey of upwards of fifteen hundred miles to recover his lost wife. In the meantime, however, she had borne her American husband a daughter, and when her first spouse claimed her as his own, and wished her to accompany him back to her own country, she only consented on condition that she might carry with her the child, from which she steadily refused to be separated. The father, however, turned a deaf ear to this request, and eventually the poor Durangueno returned to his home alone, his spouse preferring to share the buffalo-rib and venison with her mountaineer before the frijole and chile colorado of the bereaved ranchero.

Three or four Taos women, and as many squaws of every nation, comprised the "female society" on the Upper Arkansa, giving good promise of peopling the river with a sturdy race of half-breeds, if all the little dusky buffalo-fed urchins who played about the corral of the fort arrived

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

scathless at maturity.

Amongst the hunters on the Upper Arkansa were four Delaware Indians, the remnant of a band who had been trapping for several years in the mountains, and many of whom had been killed by hostile Indians, or in warfare with the Apaches while in the employ of the states of New Mexico and Chihuahua. Their names were Jim Dicky, Jim Swannick, Little Beaver, and Big Nigger. The last had married a squaw from the Taos pueblo, and, happening to be in New Mexico with his spouse at the time of the late rising against the Americans, he very naturally took part with the people by whom he had been adopted.

In the attack on the Indian pueblo it was said that Big Nigger particularly distinguished himself, calling by name to several of the mountain-men who were amongst the attacking party, and inviting them to come near enough for him, the Big Nigger, to "throw them in their tracks." And this feat he effected more than once, to the cost of the assailants, for it was said that the Delaware killed nearly all who fell on the side of the Americans, his squaw loading his rifle and encouraging him in the fight.

By some means or another he escaped after the capture of the pueblo, and made his way to the mountains on the Arkansa; but as it was reported that a price was put upon his head, he retired in company with the other Delawares to the mountains, where they all lay perdu for a time; and it was pretty well understood that any one feeling inclined to reap the reward by the capture of Big Nigger, would be under the necessity of "taking him," and with every probability of catching a Tartar at the same time, the three other Delawares having taken the delinquent under the protection of their rifles. Although companions of the American and Canadian hunters for many years, anything but an entente cordiale existed towards their white confreres on the part of the Delawares, who knew very well that anything in the shape of Indian blood is looked upon with distrust and contempt by the white hunters.

Tharpe, an Indian trader, who had just returned from the Cheyenne village at the "Big Timber" on the Arkansa, had purchased from some Kioways two prisoners, a Mexican and an American negro. The former had been carried off by the Comanches from Durango when about seven years old, had almost entirely forgotten his own tongue, and neither knew his own age nor what length of time he had been a captive amongst the Indians. The degraded and miserable existence led by this poor creature had almost obliterated all traces of humanity from his character and appearance. Probably not more than twenty-five years of age, he was already wrinkled and haggard in his face, which was that of a man of threescore years. Wrapped in a dirty blanket, with his long hair streaming over his shoulders, he skulked, like some savage animal, in holes and corners of the fort, seeming to shun his fellow-men, in a consciousness of his abject and degraded condition. At night he would be seen with his face close to the rough doors of the rooms, peering through the cracks, and envying the (to him) unusual luxury within. When he observed anyone approach the door, he instantly withdrew and concealed himself in the darkness until he passed. A present of tobacco, now and then, won for me the confidence of the poor fellow, and I gathered from him, in broken Spanish mixed with Indian, an account of his miseries.

I sat with him one night on a log in the corral, as he strove to make me understand that once, long, long ago, he had been "muy rico - very rich"; that he lived in a house where was always a fire like that burning within, and where he used to sit on his mother's lap; and this fact he repeated over and over again, thinking that to show that once affectionate regard had been bestowed

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

upon him, was to prove that he had been at one time an important personage. "Me quiso mucho, mucho," he said, speaking of his mother-"she loved me very, very much; and I had good clothes and plenty to eat; but that was many, many moons ago."

"Mire," he continued, "from this size," putting his hand out about three feet from the ground-"ni padre, ni madre, ni amigos he tenido yo,"-neither father, mother, nor friends have I had; "pero patadas, bastante - but plenty of kicks," y poca carne - and very little meat."

I asked him if he had no wish to return to his own country. His haggard face lighted up for an instant, as the dim memory of his childhood's home returned to his callous mind. "Ay, Dios mio!" he exclaimed, "si fuera posible -Ali., my God, if it were possible!" "But no," he continued after a pause, "estoy ahora muy bruto, y asi no me quadrara a ver mi madre - I am now no more than a brute, and in this state would not like to see my mother. Y de mas - and moreover - my compadre," as he called the man who had purchased him, "is going to give me a shirt and a sombrero; what can I want more? Vaya, es mejor asi - it is better as it is." One night he accosted me in the corral in an unusual degree of excitement.

"Mire!" he exclaimed, seizing me by the arm, "look here! estoy boracho - I am drunk! Me dio mi compadre un pedazo de aguardiente - my godfather has given me a bit of brandy. Y estoy tan feliz, y ligero! como paxaro, Como pa-x-ar-o" -he hiccuped-"and I am as happy and as light as a bird. Me vuelo -I am flying. Me dicen que estoy boracho: ay que palabra bonita! -they tell me I am drunk: drunk - what a beautiful word is this! En mi vida, nunca he sentido como ahora -never in my life have I felt as I do now." And the poor wretch covered his head with a blanket, and laughed long and loud at the trick he had played his old friend misery.

The negro, on the contrary, was a characteristic specimen of his race, always laughing, singing, and dancing, and cutting uncouth capers. He had been a slave in the semi-civilized Cherokee nation, and had been captured by the Comanches, as he himself declared, but most probably had run away from his master, and joined them voluntarily. He was a musician, and of course could play the fiddle; and having discovered an old weather-beaten instrument in the fort, Lucy Neal, Old Dan Tucker, and Buffalo Gals, were heard at all hours of the day and night; and he was, moreover, installed into the Weippert of the fandangos which frequently took place in the fort, when the hunters with their squaws were at the rendezvous.

Towards the latter end of April green grass began to show itself in the bottoms, and -myself and two others, who had been wintering in the mountains for the benefit of their health, made preparations for our departure to the United States. Pack-saddles were inspected and repaired, apishamores made, lariats and lassos greased and stretched, mules and horses collected from their feeding-grounds, and their fore feet shod. A small supply of meat was "made" (i. e. cut into thin flaps and dried in the sun), to last until we reached the buffalo-range; rifles put in order, and balls run; hobbles cut out of rawhide, parfleche moccasins cobbled up, deerskin hunting-shirts and pantaloons patched, and all our very primitive "kit" overhauled to render it serviceable for the journey across the grand prairies, while the "possible-sack" was lightened of all superfluities -- an easy task by the way. When everything was ready I was delayed several days in hunting up my animals. The Indian traders having arrived, bringing with them large herds of mules and horses, my mules had become separated from the horse and from one another, and it was with no small difficulty that I succeeded in finding and securing them. Having once tasted the green grass, they became so wild, that, at my appearance, lasso in hand, the cunning animals, knowing full well

---

by George Frederick Ruxton

---

what was in store for them, threw up their heels and scampered away, defying for a long time all my efforts to catch them.

My two companions had left the United States the preceding year, having been recommended to try the effect of change of climate on a severe pulmonary disease under which both labored. Indeed, they were both apparently in a rapid consumption, and their medical advisers had given up any hope of seeing them restored to health. They had remained in the mountains during one of the severest winters ever known, had lived upon game, and frequently suffered the privations attendant upon a mountain life, and now were returning perfectly restored, and in robust health and spirits.

It is an extraordinary fact that the air of the mountains has a wonderfully restorative effect upon constitutions enfeebled by pulmonary disease; and of my own knowledge I could mention a hundred instances where persons, whose cases have been pronounced by eminent practitioners as perfectly hopeless, have been restored to comparatively sound health by a sojourn in the pure and bracing air of the Rocky Mountains, and are now alive to testify to the effects of the revigorating climate.

That the lungs are most powerfully acted upon by the rarified air of these elevated regions, I myself, in common with the acclimated, hunters, who experience the same effects, can bear witness, as it is almost impossible to take violent exercise on foot, the lungs feeling as if they were bursting in the act of breathing, and consequently the hunters invariably follow game on horseback, although, from being inured to the climate, they might be supposed to experience these symptoms in a lesser degree.

Whatever may be urged against such a climate, the fact nevertheless remains, that the lungs are thus powerfully affected and that the violent action has a most beneficial effect upon these organs when in a highly diseased state.

The elevation above the level of the sea, of the plains at the foot of the mountains, is about four thousand feet, while the mountain valley of the Bayou Salado must reach an elevation of at least eight or nine thousand, and Pike's Peak has been estimated to exceed twelve thousand.

CHAPTER XIII

HEADING FOR HOME

ON the 30th of April [1847], having the day before succeeded in collecting my truant mulada, I proceeded alone to the forks of the Arkansa and St. Charles, where I had observed, when hunting, that the grass was in better condition than near the pueblo, and here I remained two or three days, the animals faring well on the young grass, waiting for my two companions, who were to proceed with me across the grand prairies. As, however, the trail was infested by the Pawnees and Comanche, who had attacked every party which had attempted to cross from Santa Fe during the last six months, and carried off all their animals, it was deemed prudent to wait for the escort of Tharpe, the Indian trader, who was about to proceed to St. Louis with the peltries, the produce of his winter trade; and as he would be accompanied by a large escort of mountain-men, we resolved to remain and accompany his party for the security it afforded.

The night I encamped on the St. Charles the rain poured down in torrents, accompanied by a storm of thunder and lightning, and the next morning I was comfortably lying in a pool of water, having been exposed to the full force of the storm. This was, however, merely a breaking in for a continuation of wet weather, which lasted fifteen days without intermission, and at short inter-

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

vals followed us to the Missouri, during which time I had the pleasure of diurnal and nocturnal shower-baths, and was for thirty days undergoing a natural hydropathic course of wet clothes and blankets, my bed being the bare prairie, and nothing between me and the reservoir above but a single sarape.

On the 2nd of May my two fellow-travellers arrived with the intelligence that Tharpe could not leave until a trading-party from the north fork of the Platte came in to Arkansa, and consequently we started the next day alone. I may here mention that Tharpe started two days after us, and was killed on Walnut Creek by the Pawnees, while hunting buffalo at a little distance from camp. He was scalped and horribly mutilated.

The night before our departure the wolves ate up all the riatas by which our mules and horses were picketed; and in the morning all the animals had disappeared but one. We saw by the tracks that they had been stampeded; and, as a very suspicious moccasin-track was discovered near the river, we feared that the Arapahos had paid a visit to the mulada. One of my mules, however, was picketed very near the camp, and was safe; and, mounting her, I followed the track of the others across the river, and had the good fortune to find them all quietly feeding in the prairie, with the ropes eaten off to their very throats. This day we proceeded about twenty-five miles down the river, camping in the bottom in a tope of cottonwoods, the rain pouring upon us all night.

The next day we still followed the stream, and encamped about four miles above Bent's Fort, which we reached the next morning, and most opportunely, as a company of wagons belonging to the United States commissariat were at the very moment getting under way for the Missouri. They had brought out provisions for the troops forming the Santa Fe division of the army of invasion, and were now on their return, empty, to Fort Leavenworth, under the charge of Captain -, of the Quartermaster-General's department, who at once gave us permission to join his company, which consisted of twenty wagons, and as many teamsters, well armed. A government train of wagons had been attacked, on their way to Santa Fe, the preceding winter, by the Pawnees, and the whole party -- men, mules, and wagons -- captured; the men, however, being allowed to continue their journey, without wagons or animals. They had likewise lately attacked a party under Kit Carson, the celebrated mountaineer who was carrying despatches from Colonel Fremont, in California, to the government of the United States, and in fact every party who had passed the plains; therefore, as a large number of loose stock was also to be carried in with the wagons, an attack was more than probable during the journey to the frontier.

Bent's Fort is a square building of adobe, flanked by circular bastions loopholed for musketry, and entered by a large gateway leading into the corral or yard. Round this are the rooms inhabited by the people engaged in the Indian trade; but at this time the Messrs. Bent themselves were absent in Santa Fe, the eldest brother, as I have before mentioned, having been killed in Taos during the insurrection of the Pueblo Indians. We here procured a small supply of dried buffalo-meat, which would suffice until we came to the buffalo-range, when sufficient meat might be procured to carry us into the States.

We started about noon, proceeding the first day about ten miles, and camped at sundown opposite the mouth of the Purgatoire -- the Pickatwaire of the mountaineers, and Las Animas of the New Mexicans -- an affluent of the Arkansa, rising in the mountains in the vicinity of the Spanish Peaks. The timber on the Arkansa becomes scarcer as we proceed down the river, the cottonwood groves being scattered wide apart at some distance from each other; and the stream itself wid-

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

ens out into sandy shallows, dotted with small islands covered with brush. At this camp we were joined by six or seven of Fremont's men, who had accompanied Kit Carson from California; but, their animals "giving out" here, they had remained behind to recruit them. They were all fine, hardy-looking young fellows, with their faces browned by two years constant exposure to the sun and wind, and were fine specimens of mountaineers. They were accompanied by a Californian Indian, a young centaur, who handled his lasso with a dexterity which threw all the Mexican exploits I had previously seen into the shade, and was the means of bereaving several cows of their calves when we were in the buffalo-range.

Our next camping-place was the "Big Timber," a large grove of cottonwoods on the left bank of the river, and a favorite wintering-place of the Cheyennes. Their camp was now broken up, and the village had removed to the Platte for their summer hunt. The debris of their fires and lodges were plentifully scattered about, and some stray horses were running about the bottom. On the 5th and 6th we moved leisurely down the river, camping at Sandy Creek, and in the "Salt Bottom," a large plain covered with salitrose efflorescences. Here we proceeded more cautiously, as we were now in the outskirts of the Pawnee and Comanche country. The wagons at night were drawn up into a square, and the mules enclosed after sunset within the corral. Mine, however, took their chance outside, being always picketed near my sleeping-place, which I invariably selected in the middle of a good patch of grass, in order that they might feed well during the night. A guard was also placed over the corral, and everyone slept with his rifle at his side.

Near the Salt Bottom, but on the opposite side of the river, I this day saw seven bulls, the advance party of the innumerable bands of buffalo we shortly passed through.

On the 7th, as I rode two or three miles in advance of the party, followed by my mules, I came upon fresh Indian sign, where a village had just passed, with their lodge-poles trailing on the ground; and presently, in a level bottom on the river, the white conical lodges of the village presented themselves a short distance on the right of the trail. I at once struck off and entered it, and was soon surrounded by the idlers of the place. It was a Cheyenne village; and the young men were out, an old chief informed me, after buffalo, and that they would return an hour before sunset, measuring the hour with his hand on the western horizon. He also pointed out a place a little below for the wagons to encamp, where he said was plenty of wood and grass. The lodges, about fifty in number, were all regularly planted in rows of ten; the chief's lodge being in the centre, and the skins of it being dyed a conspicuous red. Before the lodges of each of the principal chiefs and warriors was a stack of spears, from which hung his shield and arms; whilst the skins of the lodge itself were covered with devices and hieroglyphics, describing his warlike achievements. Before one was a painted pole supporting several smoke-dried scalps, which dangled in the wind, rattling against the pole like bags of peas.

The language of signs is so perfectly understood in the western country, and the Indians themselves are such admirable pantomimists, that, after a little use, no difficulty whatever exists in carrying on a conversation by such a channel; and there are few mountain-men who are at a loss in thoroughly understanding and making themselves intelligible by signs alone, although they neither speak nor understand a word of the Indian tongue.

The wagons shortly after coming up, we proceeded to the spot indicated by the chief, which is a camping-place well known to the Santa Fe traders by the name of the Pretty Encampment. Here we were soon surrounded by men, women, and children from the village, who arrived in horse-

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

loads of five or six mounted on the same animal, and, begging and stealing everything they could lay their hands upon, soon became a perfect nuisance. An hour before sundown the hunting party came in, their animals tottering under heavy loads of buffalo-meat. Twenty-one had gone out, and in the chase had killed twenty-one bulls, which were portioned out, half the animal to each lodge. During the night a huge cottonwood, which had been thoughtlessly set on fire, fell, a towering mass of flame, to the ground, and nearly into the midst of my animals, who, frightened by the thundering crash, and the showers of sparks and fire, broke their ropes and ran off. In the morning, however, they returned to camp at daybreak, and allowed me to catch them without difficulty. The next night we encamped on a bare prairie without wood, having recourse to the bois de vaches, or buffalo-chips, which strewed the ground, to make a fire. This fuel was so wet, that nothing but a stifling smoke rewarded our attempts. During the day an invalid died in one of the wagons, in which upwards of twenty poor wretches were being conveyed, all suffering from most malignant scurvy. The first wagon which arrived in camp sent a man to dig a hole in the prairie; and on the wagon containing the dead man coming up, it stopped a minute to throw the body into the hole, where, lightly covered with earth, it was left, without a prayer, to the mercies of the wolves and birds of prey.

Bent's Fort had been made a depot of provisions for the supply of the government trains passing the grand prairies on their way to New Mexico, and the wagons now returning were filled with sick men suffering from attacks of scurvy (called "Black Leg" in Missouri.) The want of fresh provisions and neglect of personal cleanliness, together with the effects of the rigorous climate, and the intemperate and indolent habits of the men, rendered them proper subjects for this horrible scourge. In Santa Fe, and wherever the volunteer troops were congregated, the disease made rapid progress, and proved fatal in an extraordinary number of cases.

As I was riding with some of the Californians in advance of the train, a large white wolf limped out of the bottom, and, giving chase, we soon came up to the beast, which on our approach crouched to the ground and awaited its death-stroke with cowardly sullenness. It was miserably poor, with its bones a most protruding from the skin, and one of its forelegs had been broken, probably by a buffalo, and trailed along the ground as it ran snarling and chopping its jaws with its sharp teeth.

On the 9th, as I rode along ahead, I perceived some dark objects in the prairie, which, refracted by the sun striking the sandy ground, appeared enormous masses, without form, moving slowly along. Riding towards them on my mule, I soon made them out to be buffalo, seventeen bulls, which were coming towards me. Jumping off the mule, I thrust the picket at the end of her lariat into the ground, and, advancing cautiously a few paces, as the prairie was entirely bare, and afforded not even the cover of a prairie-dog mound to approach under, I lay down on the ground to await their coming. As they drew near, the huge beasts, unconscious of danger, picked a bunch of grass here and there, sometimes kicking up the dust with their fore feet, and, moving at the slowest walk, seemed in no hurry to offer me a shot. Just however as they were within a hundred paces, and I was already squinting along the barrel of my rifle, a greenhorn from the wagons, who had caught a glimpse of the game, galloped headlong down the bluff, and before the wind. He was a quarter of a mile off when the leading bull, raising his head, snuffed the tainted air, and with tail erect scampered off with his companions, leaving me showering imprecations on the head of the "muff" who had spoiled my sport, and supper.

---

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

Whilst I was lying on the ground three wolves, which were following the buffalo, caught sight of me, and seemed instantly to divine my intentions, for they drew near, and, sitting within a few yards of me, anxiously gazed upon me and the approaching bulls, thinking, no doubt, that their persevering attendance upon them was now about to be rewarded. They were doubtless disgusted when, as soon as I perceived the bulls disappear, I turned my rifle upon one cur which sat licking his chops, and knocked him over, giving the others the benefit of the remaining barrel as they scampered away from their fallen comrade. I now rode on far ahead, determined not to be disturbed; and by the time the wagons came into camp I had already arrived there with the choice portions of two bulls which I killed near the river. We encamped on the 9th at Chouteau's Island, called after an Indian trader named Chouteau, who was here beleaguered by the Pawnees for several weeks, but eventually made his escape in safety. Every mile we advanced the buffalo became more plentiful, and the camp was soon overflowing with fresh meat.

The country was literally black with immense herds, and they were continually crossing and re-crossing the trail during the day, giving us great trouble to prevent the loose animals from breaking away and following the bands.

On the 12th a man was found dead in one of the wagons on arriving in camp, and was buried in the same unceremonious style as the other.

In the evening I left the camp for a load of meat, and approached an immense herd of buffalo under cover of a prairie-dog town, much to the indignation of the villagers, who resented the intrusion with an incessant chattering. The buffalo passed right through the town, and at one time I am sure that I could have touched many with the end of my rifle, and thousands were passing almost over me; but, as I lay perfectly still, they only looked at me from under their shaggy brows, and passed on. One huge bull, and the most ferocious-looking animal I ever encountered, came to a dead stop within a yard of my head, and steadily examined me with his glaring eyes, snorting loudly his ignorance of what the curious object could be which riveted his attention. Once he approached so close that I actually felt his breath on my face, and, smelling me, he retreated a pace or two, and dashed up the sand furiously with his feet, lashing his tail at the same time about his dun sides with the noise of a carter's whip, throwing down his ponderous head, and shaking his horns angrily at me. This old fellow was shedding his hair, and his sleek skin, now bare as one's hand in many parts, was here and there dotted with tufts of his long winter-coat. From the shoulder backwards the body was, with these exceptions, perfectly smooth, but his head, neck, and breast were covered with long shaggy hair, his glowing eyes being almost hidden in a matted mass, while his coal-black beard swept his knees. His whole appearance reminded me strongly of a lion, and the motion of the buffalo when running exactly resembles the canter of the king of beasts. At last my friend began to work himself up into such a fury that I began to feel rather uncomfortable at my position, and, as he backed himself and bent his head for a rush, I cocked my rifle, and rose partly from the ground to take a surer aim, when the cowardly old rascal, with a roar of affright, took to his heels, followed by the whole band; but as one sleek, well-conditioned bull passed me within half a dozen yards, I took a flying shot, and rolled him over and over in a cloud of dust, levelling to the ground, as he fell, a well-built dog-house.

No animals in these western regions interested me so much as the prairie dogs. These lively little fellows select for the site of their towns a level piece of prairie with a sandy or gravelly soil, out of which they can excavate their dwellings with great facility. Being of a merry, sociable disposition,

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

they, unlike the bear or wolf, choose to live in a large community, where laws exist for the public good, and there is less danger to be apprehended from the attacks of their numerous and crafty enemies. Their towns equal in extent and population the largest cities of Europe, some extending many miles in length, with considerable regularity in their streets, and the houses of a uniform style of architecture. Although their form of government may be styled republican, yet great respect is paid to their chief magistrate, who, generally a dog of large dimensions and imposing appearance, resides in a house conspicuous for size in the centre of the town, where he may always be seen on his housetop, regarding with dignified complacency the various occupations of the busy population—some industriously bearing to the granaries the winter supply of roots, others building or repairing their houses; while many, their work being over, sit chatting on their housetops, watching the gambols of the juveniles as they play around them. Their hospitality to strangers is unbounded. The owl, who on the bare prairie is unable to find a tree or rock in which to build her nest, is provided with a comfortable lodging, where she may in security rear her round-eyed progeny; and the rattlesnake, in spite of his bad character, is likewise entertained with similar hospitality although it is very doubtful if it is not sometimes grossly abused; and many a childless dog may perhaps justly attribute his calamity to the partiality of the epicurean snake for the tender meat of the delicate prairie-pup. However, it is certain that the snake is a constant guest; and, whether admitted into the domestic circle of the dog family, or living in separate apartments, or in co-partnership with the owl is an acknowledged member of the community at large.

The prairie-dog (a species of marmot) is somewhat longer than a guinea-pig, of a light brown or sandy color, and with a head resembling that of a young terrier pup. It is also furnished with a little stumpy tail, which, when its owner is excited, is in a perpetual jerk and flutter. Frequently, when hunting, I have amused myself for hours in watching their frolicsome motions, lying concealed behind one of their conical houses. These are raised in the form of a cone, two or three feet above the ground, and at the apex is a hole, vertical to the depth of three feet, and then descending obliquely into the interior. Of course, on the first approach of such a monster as man, all the dogs which have been scattered over the town scamper to their holes as fast as their little legs will admit, and, concealing all but their heads and tails, bark lustily their displeasure at the intrusion. When they have sufficiently exhibited their daring, every dog dives into his burrow, but two or three who remain as sentinels, chattering in high dudgeon, until the enemy is within a few paces of them, when they take the usual somersault, and the town is silent and deserted. Lying perfectly still for several minutes, I could observe an old fellow raise his head cautiously above his hole, and reconnoitre; and if satisfied that the coast was clear, he would commence a short bark. This bark, by the way, from its resemblance to that of a dog, has given that name to this little animal, but it is more like that of a wooden toy-dog, which is made to bark by raising and depressing the bellows under the figure. When this warning has been given, others are soon seen to emerge from their houses, and, assured of their security, play and frisk about.

After a longer delay, rattlesnakes issue from the holes, and coil themselves on the sunny side of the hillock, erecting their treacherous heads, and rattling an angry note of warning if, in his play, a thoughtless pup approaches too near; and, lastly, a sober owl appears, and, if the sun be low, hops through the town, picking up the lizards and chameleons which everywhere abound. At the first intimation of danger given by the sentinels, all the stragglers hasten to their holes, tumbling over

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

owls and rattlesnakes, who hiss and rattle angrily at being disturbed. Everyone scrambles off to his own domicile, and if, in his hurry, he should mistake his dwelling, or rush for safety into any other than his own, he is quickly made sensible of his error, and, without ceremony, ejected. Then, every house occupied, commences such a volley of barking, and such a twinkling of little heads and tails, which alone appear above the holes, as to defy description. The lazy snakes, regardless of danger, remain coiled up, and only evince their consciousness by an occasional rattle; while the owls, in the hurry and confusion, betake themselves, with sluggish wing to wherever a bush of sage or grease wood affords them temporary concealment.

The prairie-dog leads a life of constant alarm, and numerous enemies are ever on the watch to surprise him. The hawk and the eagle, hovering high in air, watch their towns, and pounce suddenly upon them, never failing to carry off in their cruel talons some unhappy member of the community. The coyote, too, an hereditary foe, lurks behind a hillock, watching patiently for hours until an unlucky straggler approaches within reach of his murderous spring. In the winter, when the prairie-dog, snug in his subterranean abode, and with granaries well filled, never cares to expose his little nose to the icy blasts which sweep across the plains, but, between eating and sleeping, passes merrily the long, frozen winter, he is often roused from his warm bed, and almost congealed with terror, by hearing the snorting yelp of the half-famished wolf, who, mad with hunger, assaults, with tooth and claw, the frost-bound roof of his house, and, with almost super-lupine strength, hurls down the well-cemented walls, tears up the passages, plunges his cold nose into the very chambers, snorting into them with his earth-stuffed nose, in ravenous anxiety, and drives the poor little trembling inmate into the most remote corners, too often to be dragged forth, and unhesitatingly devoured. The rattlesnake, too, I fear, is not the welcome guest he reports himself to be; for often I have slain the wily serpent, with a belly too much protuberant to be either healthy or natural, and bearing, in its outline, a very strong resemblance to the figure of a prairie-dog.

A few miles beyond a point on the river known as the caches, and so called from the fact that a party of traders, having lost their animals, had here cached, or concealed, their packs, we passed a little log fort, built by the government employees, for the purpose of erecting here a forge to repair the commissariat wagons on their way to Santa Fe. We found the fort beleaguered by the Pawnees, who killed every one who showed his nose outside the gate. They had carried off all their stock of mules and oxen, and in the vicinity had, two or three days before, attacked a company under an officer of the United States Engineers, running off with all the mules belonging to it. We were now, day after day, passing through countless herds of buffalo. I could scarcely form an estimate of the numbers within the range of sight at the same instant, but some idea may be formed of them by mentioning, that one day, passing along a ridge of upland prairie at least thirty miles in length, and from which a view extended about eight miles on each side of a slightly rolling plain, not a patch of grass ten yards square - could be seen, so dense was the living mass that covered the country in every direction.

On leaving the Caches, the trail, to avoid a bend in the Arkansa, strikes to the north-east over a tract of rolling prairie, intersected by many ravines, full of water at certain seasons, known as the Coon Creeks. On this route there is no other fuel than bois de vaches, and the camps are made on naked bluffs, exposed, without the slightest shelter, to the chilling winds that sweep continually over the bare plains. I scarcely remember to have suffered more from cold than in passing these

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

abominable Coon Creeks. With hunting-shirt saturated with the rain, the icy blast penetrated to my very bones, and, night after night, lying on the wet ground and in wet clothes, after successive days of pouring rain I felt my very blood running cold in my veins, and as if I never could again imbibe heat sufficient to warm me thoroughly.

One night, while standing guard round the camp, which was about two miles from the river, I heard an inexplicable noise, like distant thunder, but too continuous to proceed from that source, which gradually increased, and drew nearer to the camp. Placing my ear to the ground, I distinguished the roaring tramp of buffalo thundering on the plain; and as the moon for a moment burst from a cloud, I saw the prairie was covered by a dark mass, which undulated, in the uncertain light, like the waves of the sea. I at once became sensible of the imminent danger we were in; for when thousands and hundreds of thousands of these animals are pouring in a resistless torrent over the plains, it is almost impossible to change their course, particularly at night, the myriads in the rear pushing on those in front, who, spite of themselves, continue on their course, trampling down all opposition to their advance. Even if we ourselves were not crushed by the mass of beasts, our animals would most certainly be borne away bodily with the herd, and irrecoverably lost. I at once alarmed the camp, and all bands turned out, and, advancing towards the buffalo, which were coming straight upon us, by shouting and continued firing of guns we succeeded in turning them, the wind being, luckily, in our favor; and the main body branching in two, one division made off into the prairie, while the other crossed the river, where for hours we heard their splashing, sounding like the noise of a thousand cataracts. In the daytime even our cavallada was in continual danger, for immense bands of buffalo dashed repeatedly through the wagons, scarcely giving us time to secure the animals before they were upon us; and on one occasion, when I very foolishly dismounted from Panchito to fire at a band passing within a few yards, the horse, becoming alarmed, started off into the herd, and, followed by the mules, was soon lost to sight amongst the buffalo, and it was some time before I succeeded in recovering them.

As might be inferred, such gigantic sporting soon degenerates into mere butchery. Indeed, setting aside the excitement of a chase on horseback, buffalo-hunting is too wholesale a business to afford much sport—that is, on the prairies; but in the mountains, where they are met with in small bands, and require no little trouble and expertness to find and kill, and where one may hunt for days without discovering more than one band of half a dozen, it is then an exciting and noble sport. There are two methods of hunting buffalo -- one on horseback, by chasing them at full speed and shooting when alongside; the other by “still hunting,” that is, approaching, or stalking, by taking advantage of the wind and any cover the ground affords, and crawling to within distance of the feeding herd. The latter method exhibits in a higher degree the qualities of the hunter, the former those of the horseman. The buffalo’s head is so thickly thatched with long shaggy hair that the animal is almost precluded from seeing an object directly in its front; and if the wind be against the hunter he can approach, with a little caution, a buffalo feeding on a prairie as level and bare as a billiard-table. Their sense of smelling, however, is so acute, that it is impossible to get within shot when to windward, as, at the distance of nearly half a mile, the animal will be seen to snuff the tainted air, and quickly satisfy himself of the vicinity of danger. At any other than the season of gallantry, when the males are, like all other animals, disposed to be pugnacious, the buffalo is a quiet, harmless animal, and will never attack unless goaded to madness by wounds, or, if a cow, in sometimes defending its calf when pursued by a horseman; but even then it is seldom that they

---

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

make any strong effort to protect their young.

When gorged with water, after a long fast, they become so lethargic that they sometimes are too careless to run and avoid danger. One evening, just before camping, I was, as usual, in advance of the train, when I saw three bulls come out of the river and walk leisurely across the trail, stopping occasionally, and one, more indolent than the rest, lying down whenever the others halted. Being on my hunting-mule, I rode slowly after them, the lazy one stopping behind the others, and allowing me to ride within a dozen paces, when he would slowly follow the rest. Wishing to see how near I could get, I dismounted, and, rifle in hand, approached the bull, who at last stopped short, and never even looked round, so that I walked up to the animal and placed my hand on his quarter. Taking no notice of me, the huge beast lay down, and while on the ground I shot him dead.

On butchering the carcass I found the stomach so greatly distended, that (it seemed) another pint would have burst it. In other respects the animal was perfectly healthy and in good condition.

One of the greatest enemies to the buffalo is the white wolf. These persevering brutes follow the herds from pasture to pasture, preying upon the bulls enfeebled by wounds, the cows when weak at the time of calving, and the young calves whenever they straggle from the mothers. In bands of twenty and thirty they attack a wounded bull, separate him from the herd, and worry the poor animal until, weak with loss of blood and the ceaseless assaults of his active foes, he falls hamstrung, a victim to their ravenous hunger.

On one of the Coon Creeks I was witness to an attack of this kind by three wolves on a cow and calf, or rather on the latter alone, which by some accident had got separated from the herd. My attention was first called to the extraordinary motions of the cow (for I could neither see the calf nor the wolves on account of the high grass), which was running here and there, jumping high in air and bellowing lustily. On approaching the spot I saw that she was accompanied by a calf about a month old, and all the efforts of three wolves were directed to get between it and the cow, who, on her part, used all her generalship to prevent it. Whilst one executed a diversion in the shape of a false attack on the cow, the others ran at the calf, which sought shelter under the very belly of its mother. She, poor animal! regardless of the wounds inflicted on herself, sought only to face the more open attack; and the wolf in rear, taking advantage of this, made a bolder onslaught, and fastened upon her hams, getting however for his pains such a well-delivered kick in his stomach as threw him a somersault in the air. The poor cow was getting the worst of it; and the calf would certainly have fallen a victim to the ravenous beasts, if I had not most opportunely come to the rescue; and, waiting until the battle rolled near the place of my concealment, I took advantage of a temporary pause in the combat, when two of the wolves were sitting in a line, with their tongues out and panting for breath, to level my rifle at them, knocking over one dead as a stone, and giving the other a pill to be carried with him to the day of his death, which, if I am any judge of gunshot wounds, would not be very distant. The third took the hint and scampered off, a ball from my second barrel whistling after him as he ran; and I had the satisfaction of seeing the cow cross the river with her calf, and join in safety the herd, which was feeding on the other side.

CHAPTER XIV

A BUFFALO LANDSCAPE

WE reached Pawnee Fork of the Arkansa without any novedad [accident], but found this creek so swollen with the rains that we feared we should experience no little trouble in crossing. We here met a train of wagons detained by the above cause on their way to Santa Fé and we learned from

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

them that a party of Mexican traders had been attacked by the Pawnees at this very spot a few days before, losing one hundred and fifty mules, one Indian having been killed in the fight, whose well-picked skeleton lay a few yards from our camp. Pawnee Fork being considered the most dangerous spot on the trail, extraordinary precautions were taken in guarding against surprise, and the animals belonging to the train were safely corralled before sundown, and a strong guard posted round them. Mine, however, were picketed as usual round my sleeping-place, which was on a bare prairie at some distance from the timber of the creek.

Such a storm as poured upon our devoted heads that night I have seldom had the misfortune to be exposed to. The rain, in bucketsful, Niagara'd down as if a twenty-years' supply was being emptied from the heavens on that one night; vivid forked lightning, in continuous flashes, lit up the flooded prairie with its glare; and the thunder, which on these plains is thunder indeed, kept up an incessant and mammoth cannonade. My frightened mules crept as near my bed as their lariats would allow them, and, with water streaming from every extremity, trembled with the chilling rain.

In the early part of the night, when the storm was at its height, I was attracted to a fire at the edge of the encampment by the sound of a man's voice perpetrating a song. Drawing near, I found a fire, or rather a few embers and an extinguished log, over which cowered a man sitting cross-legged in Indian fashion, holding his attenuated hands over the expiring ashes. His features, pinched with the cold, and lank and thin with disease, wore a comically serious expression, as the lightning lit them up, the rain streaming off his nose and prominent chin, and his hunting-shirt hanging about him in a flabby and soaking embrace. He was quite alone, and sat watching a little pot, doubtless containing his supper, which refused to boil on the miserable fire. Spite of such a situation, which could be termed anything but cheering, he, like Mark Tapley, evidently thought that now was the very moment to be jolly, and was rapping out at the top of his voice a ditty, the chorus of which was, - and which he gave with peculiar emphasis,

“How happy am I!  
From care I'm free:  
Oh, why are not all  
Contented like me?”

not for an instant intending it as a satire upon himself, but singing away with perfect seriousness, raising his voice at the third line, “Oh, why are not all,” particularly at the “Oh,” in a most serio-comical manner. During the night I occasionally shook the water out of my blanket, and raised my head to assure myself that the animals were safe, lying down to sleep again, perfectly satisfied that not even a Pawnee would face such a storm, even to steal horses. But I did that celebrated thieving nation gross injustice; for they, on that very night, carried off several mules belonging to the other train of wagons, notwithstanding that a strict guard was kept up all the night. The next day, as there was no probability of the creek subsiding, it was determined to cross the wagons at any risk; and they were accordingly, one after the other, let down the steep bank of the stream, and, several yokes of oxen (which had first been swum over) being attached were hauled bodily through the water, some swimming, and others, if heavily laden, diving across. I myself crossed on Panchito, whose natatory attempt, probably his first, was anything but first-rate; for on plunging in, and at once, into deep water, instead of settling himself down to a quiet swim, he jumped up into the air, and, sinking to the bottom, and thus gaining a fresh impetus, away he

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

went again, carrying me, rifle, and ammunition under water at every plunge, as I held on by his neck like grim death. All my kit was contained in a pair of mule-packs, which I had had made of waterproof material. Unfortunately one had a hole in the top, which had escaped my notice. This admitted the water, which remained in the pack, several inches deep, for a fortnight. This pack contained all my papers, notes, and several manuscripts and documents relative to the history of New Mexico and its Indian tribes, which I had collected with considerable trouble and expense. On opening the trunk, I found all the papers completely destroyed, and the old manuscripts, written on bad paper, and with worse ink, reduced to a pulpy mass; every scrap of writing being perfectly illegible.

At length, all the wagons were got safely over, with the exception of having everything well soaked; and as the process had occupied the whole day, we camped on the other side of the creek. Every day we found greater difficulty in procuring fuel; for, as we were now on the regular Santa Fé trail, the creeks had been almost entirely stripped of firewood, and it was the work of hours to collect a sufficiency of brush to make a small fire to boil a pot of water. On arriving at camp, and having unpacked the mules, the first thing was to sally forth in quest of wood; an expedition of no little danger, for it was always more than probable that Indians were lurking in the neighborhood, and therefore the rifle always accompanied the fuel-hunter.

Between Pawnee Fork and Cow Creek all our former experiences of buffalo-seeing were thrown into the shade, for here they literally formed the whole scenery, and nothing but dense masses of these animals was to be seen in every direction, covering valley and bluff, and actually blocking up the trail. Nothing was heard along the line of march but pop-bang-pop-bang every minute; and the Californian Indian lassoed the calves and brought them in in such numbers, that many were again set free. I had hitherto refrained from "chasing," in order to save my poor horse; but this day, a fine band of cows crossing the trail on a splendid piece of level prairie, I determined to try Panchito's mettle. Cantering up to the herd, I singled out a wiry-looking cow (which sex is the fleetest), and, dashing at her, soon succeeded in separating her from the rest. As I steered Panchito right into the midst of a thousand of these animals, he became half mad with terror, plunging and snorting and kicking right and left; but he soon became tamer and more reconciled when the chase was a trial of speed between him and the flying cow, and he then was as much excited as his rider. The cow held her ground wonderfully well, and for a quarter of a mile kept us a couple of lengths astern, which distance my horse seemed hardly to wish to decrease. As he became warm, however, I pushed him up to her just as she entered a large band, where she doubtless thought to have found refuge; but, running through it, she again made for the open prairie and here, after a burst of a few hundred yards, I again came up with her; but Panchito refused to lay me alongside, darting wildly on one side if I attempted to pass the animal. At last, pushing him with spur and leg, I brought him to the top of his speed, and, shooting past the flying cow in his stride, and with too much headway on him to swerve, I brushed the ribs of the buffalo with my moccasin, and, edging off a little to avoid her horns, discharged my rifle into her side, behind the shoulder. Carried forward a few paces in her onward course, she fell headlong to the ground, burying her horns deep into the soil, and, turning over on her side, was dead. She was so poor that I contented myself with the tongue, leaving the remainder of the carcass to the wolves and ravens.

We continued to find the buffalo in similar abundance as far as Cow Creek; a little beyond which we saw the last band; and on Turkey Creek the last straggler, an old grizzly bull, which I killed for

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

a last supply of meat.

After passing the Little Arkansa, the prairie began to change its character; the surface became more broken, the streams more frequent, and fringed with better timber, and of a greater variety; the eternal cottonwood now giving place to aspen, walnut, and hickory, and the short curly buffalo-grass to a more luxuriant growth of a coarser quality, interspersed with numerous plants and gay flowers. The dog-towns, too, disappeared; and, in lieu of these little animals, the prairie-hen boomed at rise and set of sun, and, running through the high grass, furnished ample work for the rifle. Large game was becoming scarcer; and but few antelope were now to be seen, and still fewer deer.

No scenery in nature is more dreary and monotonous than the aspect of the "grand prairies" through which we had been passing. Nothing meets the eye but a vast undulating expanse of and waste; for the buffalo-grass, although excellent in quality, never grows higher than two or three inches, and is seldom green in color; and, being but thinly planted, the prairie never looks green and turf-like. Not a tree or shrub is to be seen, except on the creeks, where a narrow strip of unpicturesque cottonwood only occasionally relieves the eye with its verdant foliage. The sky, too, is generally overcast, and storms sweep incessantly over the bare plains during all seasons of the year; boisterous winds prevailing at all times, carrying with them a chilling sleet or clouds of driving snow. It was therefore a great relief to look upon the long green waving grass, and the pretty groves on the streams; although our animals soon exhibited the consequences of the change of diet, between the rich and fattening buffalo-grass, and the rank, although more luxuriant, herbage they now fed upon.

On approaching Council Grove the scenery became very picturesque; the prairie lost its flat and monotonous character, and was broken into hills and valleys, with well-timbered knolls scattered here and there, intersected by clear and babbling streams, and covered with gaudy flowers, whose bright colors contrasted with the vivid green of the luxuriant grass. My eye, so long accustomed to the burnt and withered vegetation of the mountains, revelled in this refreshing scenery, and never tired of gazing upon the novel view. Council Grove is one of the most beautiful spots in the western country. A clear rapid stream runs through the valley, bordered by a broad belt of timber, which embraces all the varieties of forest-trees common to the west. Oak, beech, elm, maple, hickory, ash, walnut, &c., here presented themselves like old friends; squirrels jumped from branch to branch, the hum of the honeybee sounded sweet and homelike, the well-known chatter of the blue jay and catbird resounded through the grove; and in the evening the whip-poor-will serenaded us with its familiar tongue, and the drumming of the ruffed grouse boomed through the grove. The delight of the teamsters on first hearing these well-known sounds knew no bounds whatever. They danced, and sang, and hurraed, as, one after the other, some familiar note caught their ear. Poor fellows! they had been suffering a severe time of it, and many hardships and privations, and doubtless snuffed in the air the johnny-cakes and hominy of their Missouri homes.

"Wagh!" exclaimed one raw-boned young giant, as a bee flew past; "this feels like the old 'ooman, and mush and molasses at that! If it don't, I'll be dog-gone!"

"Hurroo for old Missouri!" roared another; "h'yar's a hoss as will knock the hind sights off the corn-doin's. Darn my old heart if thar arn't a reg'lar-built hickory -- makes my eyes sweat to look at it! This child will have no more 'mountains;' hurroo for old Missouri! Wagh!"

A trader amongst the Caw Indians had erected himself a log house at the grove, which appeared

---

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

to us a magnificent palace. Himself, his cows and horses, looked so fat and sleek, that we really thought them unnaturally so; and so long had I been used to see the rawboned animals of Mexico and the mountains, that I gravely asked him what he gave them, and why he made them so unwieldy. When he told me that his stock were all very poor, and nothing to what they were when they left the States' a month before, I thought the man was taking a "rise" out of me; and when I showed him my travel-worn animals, and bragged of their, to me, plump condition, he told me that where he came from it would be thought cruel to work such starved-looking beasts. There was one lodge of Caw Indians at the grove, the big village being out on the prairie, hunting buffalo. On the opposite side of the stream was a party of Americans from Louisiana, who had been out for the purpose of catching calves; and round their camp some thirty were feeding, all they had been able to keep alive out of upwards of a hundred.

From Council Grove to Caw, or Kansas, River, the country increases in beauty, and presents many most admirable spots for a settlement; but as it is guaranteed by treaty to the Caw and Osage Indians, no white man is allowed by the United States government to settle on their lands.

The night before reaching Caw River we encamped on a bare prairie, through which ran a small creek, fringed with timber. At sundown the wind, which had blown smartly the whole day, suddenly fell, and one of those unnatural calms succeeded, which so surely herald a storm in these regions. The sky became overcast with heavy inky clouds, and an intolerably sultry and oppressive heat pervaded the atmosphere. Myriads of fire-flies darted about, and legions of bugs and beetles, and invading hosts of sand-flies and mosquitos droned and hummed in the air, swooping like charging Cossacks on my unfortunate body. Beetles and bugs of easy squeezability, brobdignag proportions, and intolerable odor, darted into my mouth as I gasped for breath; while sand-flies with their atomic stings probed my nose and ears, and mosquitoes thrust their poisoned lances into every part of my body.

Hoping for the coming storm, I lay without covering, exposed to all their attacks; but the agony of this merciless persecution was nothing to the thrill of horror which pervaded my very bones when a cold clammy rattlesnake crawled over my naked ankles; a flash of lightning at the moment revealing to me the reptile, as with raised head it dragged its scaly belly across my skin, during which time, to me an age, I feared to draw breath lest the snake should strike me. Presently the storm broke upon us; a hurricane of wind squalled over the prairie, a flash of vivid lightning, followed by a clap of deafening thunder, and then down came the rain in torrents. I actually revelled in the shower-bath; for away on the instant were washed bugs and beetles; mosquitos were drowned in millions; and the rattlesnakes I knew would now retire to their holes, and leave me in peace and quiet for the remainder of the night.

We now passed through a fine country, partially cultivated by the Caw Indians, whose log shanties were seen scattered amongst the timbered knolls. Caw River itself is the headquarters of the nation, and we halted that night in the village, where, in the house of a white farmer, I ate the first civilized meal I had tasted for many months, and enjoyed the unusual luxury of eating at a table with knife and fork; moreover sitting on a chair, which however I would gladly have dispensed with, for I had so long been accustomed to sit Indian fashion on the ground that a chair was at first both unpleasant and awkward. The meal consisted of hot cakes and honey, delicious butter, and lettuce and radishes. My animals fared well too, on Indian corn, and oats in the straw; and the whole expense, eleven horses and mules having been fed the better part of a day and one night,

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

amounted to one dollar and a half, or six shillings sterling.

A troop of dragoons from St. Louis to Fort Leavenworth met us on the road on their way to the latter station, from whence they were about to escort a train of wagons, containing specie, to Santa Fé. They were superbly mounted: the horses, uniting plenty of blood with bone, so great a desideratum for cavalry, were about fifteen hands high, and in excellent condition. The dragoons themselves were all recruits, and soldierlike neither in dress or appearance.

CHAPTER XV

AT THE END OF THE TRAIL

WE passed the Kansas or Caw River by a ferry worked by Indians, and, striking into a most picturesque country of hill and dale, well timbered and watered, entered the valley of the great Missouri. A short distance from the river, on the left of the trail, is a tabular bluff of most extraordinary formation, being the exact and accurately outlined figure of a large fortification, with escarpments, counterscarps, glacis, and all details, perfectly delineated.

A little farther on we came in sight of the garrison of Fort Leavenworth, the most western military station of the United States, and situated on the right bank of the Missouri in the Indian territory. The fort is built on an eminence overhanging the river, but, although called a fort, has no pretensions to be a military work, the only defence to the garrison being four wooden block-houses, loopholed for musketry, placed at each corner of the square of buildings. The barracks, stables, and officers' quarters surrounded this square, which is planted with trees and covered with luxuriant grass. The accommodation for the men and officers is excellent; the houses of the latter being large and commodious, and quite unlike the dirty pigsties which are thought good enough for the accommodation of British officers. The soldiers' barrack-rooms are large and airy, but no attention appears to be paid to cleanliness, and the floors, walls, and windows were dirty in the extreme. The beds are all double, or rather the bedsteads, for the bedding is separate, but in close contact. What struck me more than anything was the admirable condition of the horses, and their serviceable appearance: I did not see a single troop-horse in the squadron which would not have sold in England for eighty guineas; the price paid for them here, that is, the government contract price, being from fifty to eighty dollars, or from ten to sixteen pounds.

The garrison constitutes the whole population of the place. With the exception of the sutler's store for the use of the soldiers, there are neither shops, taverns, nor private buildings of any description; and I should have fared but badly if it had not been for the hospitality of Captain Enos, of the quartermaster-general's department, who most kindly assigned to me a room in his own quarters in the garrison, and made me a member of his mess.

The officers of the dragoons, who may be said to be buried for life in this wilderness, are mostly married, and their families constitute the only society the place affords. I remember to have been not a little struck at the first sight of many very pretty well-dressed ladies, who, after my long sojourn amongst the dusky squaws, appeared to me like the hours of paradise; and I have no doubt that I myself came in for a share of staring, for I was dressed in complete mountain costume, with my mahogany-colored face shaded by a crimson turban a la Indien, and in all the pride of fringed deerskin and porcupine-quills; and I was paid the compliment of being more than once mistaken for an Indian chief; and on one occasion I was appealed to by two of the dragoons to decide a bet as to whether I was a white man or a redskin. One day I was passing through the dragoons' stables when the men were cleaning their horses, and my appearance created no little difference of opin-

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

ion amongst the troopers as to what tribe of Indians I belonged to.

“That’s a Pottowatomie,” said one, “by his red turban.”

“How long have you been in the west,” cried another, “not to know a Kickapoo when you see him?”

“Pshaw!” exclaimed a third; “that’s a white trapper from the mountains. A regular mountain-boy that, I’ll bet a dollar!”

One smart-looking dragoon, however, looked into my face, and, turning round to his comrades, said, “Well, boys, I’ll just bet you a dollar all round that that Injun’s no other than a British officer. Wagh! And what’s more, I can tell you his name.” - And, sure enough, my acquaintance proved to be one of the many deserters from the British army belonging to the dragoons, and one who had known me when in the service myself.

After a few day’s stay at Fort Leavenworth, I made preparations for my departure to St. Louis, getting rid of my mountain-traps, and, what caused me no little sorrow, parting with my faithful animals, who had been my companions in a long and wearisome journey of more than three thousand miles, during the greater part of which they had been almost my only friends and companions. I had, however, the satisfaction of knowing that whilst with me they had never experienced a blow or an angry word from me, and had always fared of the very best - when procurable; and many a mile I had trudged on foot to save them the labor of carrying me. For Panchito I found a kind master, exacting, in return for the present, a promise that he should not be worked for the next three months; and, before leaving, I had the satisfaction of knowing that, in company with three old acquaintances who had pastured with him in the mountains, he was enjoying himself in veritable “clover,” and corn unlimited, where, I doubt not, he soon regained his quondam beauty and condition.

The disposal of the mules gave me greater anxiety, as there was such a demand for these animals at the moment to send with the government trains to New Mexico, that I knew to give them away would only be to put their value in the pocket of a stranger, and the animals themselves into the first wagon which crossed the plains. I therefore sold them to the commissary at the fort, and paid them daily visits in the government stables, where they revelled in the good things of this life, and had, moreover, a kind-hearted master in the shape of the Missourian teamster who had the charge of them, and who, on my giving him a history of their adventures, and a good and true account of their dispositions and qualities, promised to take every care of the poor beasts; and, indeed, was quite proud of having under his charge such a travelled team. The parting between Panchito and the mules was heartrending, and for two or three days they all refused to eat and be comforted; but at the end of that time their violent grief softened down into a chastened melancholy, which gradually merged into a steady appetite for the “corn-doin’s” of the liberal master of the mules; and before leaving I felt assured, from their sleek and well-filled appearance, that they were quite able to start on another expedition across the plains.

A steamboat touching at the fort, bound for the Mississippi and St. Louis, I availed myself of the opportunity, and secured myself a berth for the latter city. After running upon sandbars every half-hour, about thirty miles below Independence we at last stuck hard and fast, and, spite of the panting efforts of the engine, there we remained during the night, and until noon the next day. A steamboat then made its appearance, bound, like ourselves, down the river, and, coming up alongside, the two captains held a consultation, which ended in our’s recommending his passen-

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

gers to "make tracks" into the other boat, as he did not expect to get off; which interchange being effected, and our fares paid to the other boat, a hawser was attached to the one aground, and she was readily hauled off—we, the passengers, having been done pretty considerably brown in the transaction. However, such rascalities as these, on the western waters, are considered no more than "smart," and are taken quite as a matter of course by the free and enlightened citizens of the model republic.

I must say that since a former visit to the States, made three years ago, I perceived a decided improvement, thanks to the Trollope and Boz castigations, in the manners and conduct of steam-boat travellers, and in the accommodations of the boats themselves. With the exception of the expectorating nuisance, which still flourishes in all its disgusting "monstrosity," a stranger's sense of decency and decorum is not more shocked than it would be in travelling down the Thames in a Gravesend or Herne Bay steamer. There is even quite an arbitrary censorship established on the subject of dress and dirty linen, which is, since it is passively submitted to by the citizens, an unmistakable sign of the times. As a proof Of this, one evening, as I sat outside the cabin, reading, a young man, slightly "corned," or overtaken in his drink, accosted me abruptly - "Stranger, you haven't ary clean shirt to part with, have you? The darned [hiccup] capen says I must go ashore bekase my 'tarnal shirt ain't clean."

And this I found to be the fact, for the man was actually ejected from the saloon at dinnertime, on his attempting to take his seat at the table in a shirt which bore the stains of julep and cocktail. The miserable scenery of the muddy Missouri has been too often described to require any additional remarks. The steamboat touched occasionally at a wood-pile, to take in fuel; and sallow, aguish faces peered from the log shanties as we passed. We had the usual amount of groundings on sand-bars, and thumping against snags and sawyers; passed the muddy line of demarcation between the waters of the Missouri and the "Father of Streams," and, in due course, on the fourth day ran alongside the outer edge of three tiers of huge steamboats which lined the wharf at St. Louis.

We had but one exciting episode during the voyage, in the shape of a combat between one of the "hands" of the boat (a diabolical-looking Mexican) and the mate. The latter, at a wooding station, thinking that the man was not sufficiently "spry," administered a palthogue, which not meeting the approbation of the Mejicano, that worthy immediately drew his knife and challenged the aggressor. The mate, seizing a log from the pile, advanced towards him, and the Mexican, likewise, dropping his knife, took up a similar weapon, and rushed to the attack. After a return of blows they came to close quarters, hugged, and fell, the Yankee uppermost, whose every energy was now directed to gouge out the eye of his prostrate foe, while he on his part, seizing the eye-scooper by his long hair, tugged, with might and main, to pull him to the ground. With a commendable spirit of fair play, the other "hands" danced round the combatants, administering well-directed kicks on the unfortunate Mexican's head and body, in all the excitement of unrestrainable valor. The captain, however, interfered, and secured a fair field for the gallant pair; but at length, tired of the bungling attempts of his mate to screw his antagonist's eye out of its socket, pulled him off, and, giving the Mexican a friendly kick in the ribs, desired him to get up. That worthy rose undismayed, and, ramming the end of his thumb into his eye, to drive that organ into its proper place, exclaimed, "Que carajo es este, qui no sabe pelear!-what a cur is this, who does not know how to fight!" and, shaking himself, sat upon a log, and proceeded coolly to make himself a shuck-cigar.

---

WILD LIFE IN THE ROCKY MOUNTAINS

by George Frederick Ruxton

---

A negro came up to me at Fort Leavenworth, and asked me to allow him to accompany me down to St. Louis. On my saying that I did not require a servant for so short a distance, he told me that, although himself a free negro, yet no black was allowed to travel without a master, and that if he attempted it he would, in all probability, be seized and imprisoned as a runaway slave.

This reminded me that I was in that transcendently free country, ever boasting of its liberty and equality, which possesses, in a population of some eighteen millions, upwards of three millions of fellow-men in most abject yet lawful slavery;--a foul blot upon humanity, which has every appearance of being perpetuated until the evil grows to such a height as will end in curing itself.

This subject, which necessarily forces itself upon the mind of all travellers in the Slave States, is one which, having received the attention of the most enlightened philanthropists of both hemispheres, it would scarcely become me to dilate upon, or even notice, did I not feel that every one, however humble, should raise his voice in condemnation of that disgraceful and inhuman INSTITUTION, which, in a civilized country and an enlightened age, condemns to a social death, and degrades (by law) to the level of the beasts of the field, our fellow-men; subjecting them to a moral as well as physical slavery, and removing from them every possible advantage of intellectual culture or education, by which they might attain any position a grade higher than they now possess--the human beasts of burden of inhuman masters.
