directly in our front. Richardson said something to them in an unknown tongue, which immediately brought several of the strangers towards us at full gallop. One of these was a Canadian, as his peculiar physiognomy, scarlet sash, and hat ribbons of gaudy colors, clearly proved, and the two who accompanied him, were Indians. These people greeted us with great cordiality, the more so, perhaps, as they had supposed, on seeing the smoke from our fire, that we were a band of Blackfeet, and that, therefore, there was no alternative for them but to fight. While we were conversing, the whole party, of about thirty, came up, and it needed but a glance at the motley group of tawdrily dressed hybrid boys, and blanketed Indians, to convince us that this was McKay's company travelling on to join him at Fort Hall.

They inquired anxiously about their leader, and seemed pleased on being informed that he was so near; the prospect of a few days' rest at the fort, and the regale by which their arrival was sure to be commemorated, acted upon the spirits of the mercurial young half-breeds, like the potent liquor which they expected soon to quaff in company with the kindred souls who were waiting to receive them.

They all seemed hungry, and none required a second invitation to join us at our half finished meal. The huge masses of savoury fleece meat, hump-ribs, and side-ribs disappeared, and were polished with wonderful dispatch; the Canadians ate like half famished wolves, and the sombre Indians, although slower and more sedate in their movements, were very little behind their companions in the agreeable process of mastication.

The next day we rode thirty-four miles, and encamped on a pretty little stream, fringed with willows, running through the midst of a large plain. Within a few miles, we saw a small herd of buffalo, and six of our company left the camp for a hunt. In an hour two of them returned, bringing the meat of one animal. We all commenced work immediately, cutting it in thin slices, and hanging it on the bushes to dry. By sundown, our work was finished, and soon after dark, the remaining hunters came in, bringing the best parts of three more. This will give us abundance of work for to-morrow, when the hunters will go out again.

Richardson and Sansbury mention having seen several Blackfeet Indians to-day, who, on observing them, ran rapidly away, and, as usual, concealed themselves in the bushes. We are now certain that our worst enemies are around us, and that they are only waiting for a favorable time and opportunity to make an attack. They are not here for nothing, and have probably been dogging us, and reconnoitering our outposts, so that the greatest caution and watchfulness will be required to prevent a surprise. We are but a small company, and there may be at this very moment hundreds within hearing of our voices.

The Blackfoot is a sworn and determined foe to all white men, and he has often been heard to declare that he would rather hang the scalp of a "pale face" to his girdle, than kill a buffalo to prevent his starving. The hostility of this dreaded tribe is, and has for years been, proverbial. They are, perhaps, the only Indians who do not fear the power, and who refuse to acknowledge the superiority of the white man; and though so often beaten in conflicts with them, even by their own mode of warfare, and generally with numbers vastly inferior, their indomitable courage and perseverance still urges them on to renewed attempts; and if a single scalp is taken, it is considered equal to a great victory, and is hailed as a presage of future and more extensive triumphs. It must be acknowledged, however, that this determined hostility does not originate solely in savage malignity, or an abstract thirst for the blood of white men; it is formented and kept alive

---

from year to year by incessant provocatives on the part of white hunters, trappers, and traders, who are at best but intruders on the rightful domains of the red man of the wilderness. Many a night have I sat at the camp-fire, and listened to the recital of bloody and ferocious scenes, in which the narrators were the actors, and the poor Indians the victims, and I have felt my blood tingle with shame, and boil with indignation, to hear the diabolical acts applauded by those for whose amusement they were related. Many a precious villain, and merciless marauder, was made by these midnight tales of rapine, murder, and robbery; many a stripling, in whose tender mind the seeds of virtue and honesty had never germinated, burned for an opportunity of loading his packhorse with the beaver skins of some solitary Blackfoot trapper, who was to be murdered and despoiled of the property he had acquired by weeks, and perhaps months, of toil and danger. Acts of this kind are by no means unfrequent, and the subjects of this sort of atrocity are not always the poor and despised Indians: white men themselves often fall by the hands of their companions, when by good fortune and industry they have succeeded in loading their horses with fur. The fortunate trapper is treacherously murdered by one who has eaten from the same dish and drank from the same cup, and the homicide returns triumphantly to his camp with his ill gotten property. If his companion be inquired for, the answer is that some days ago they parted company, and he will probably soon join them.

The poor man never returns - no one goes to search for him - he is soon forgotten, or is only remembered by one more steadfast than the rest, who seizes with avidity the first opportunity which is afforded, of murdering an unoffending Indian in revenge for the death of his friend. On the 20th, we moved our camp to a spot about twelve miles distant, where Richardson, with two other hunters, stopped yesterday and spent the night. They had killed several buffalo here, and were busily engaged in preparing the meat when we joined them. They gave us a meal of excellent cow's flesh, and I thought I never had eaten anything so delicious. Hitherto we have had only the bulls which are at this season poor and rather unsavory, but now we are feasting upon the best food in the world.

It is true we have nothing but meat and good cold water, but this is all we desire: we have excellent appetites, no dyspepsia, clear heads, sharp ears, and high spirits, and what more does a man require to make him happy?

We rise in the morning with the sun, stir up our fires, and roast our breakfast, eating usually from one to two pounds of meat at a morning meal. At ten o'clock we lunch, dine at two, sup at five, and lunch at eight, and during the night-watch commonly provide ourselves with two or three "hump-ribs" and a marrow bone, to furnish employment and keep the drowsy god at a distance. Our present camp is a beautiful one. A rich and open plain of luxuriant grass, dotted with buffalo in all directions, a high picturesque hill in front, and a lovely stream of cold mountain water flowing at our feet. On the borders of this stream, as usual, is a dense belt of willows, and under the shade of these we sit and work by day, and sleep soundly at night. Our meat is now dried upon scaffolds constructed of old timber which we find in great abundance upon the neighboring hill. We keep a fire going constantly, and when the meat is sufficiently dried, it is piled on the ground, preparatory to being baled.

21st. The buffalo appear even more numerous than when we came, and much less suspicious than common. The bulls frequently pass slowly along within a hundred yards of us, and toss their shaggy and frightful looking heads as though to warn us against attacking or approaching them.

Towards evening, to-day, I walked out with my gun, in the direction of one of these prowling monsters, and the ground in his vicinity being covered densely with bushes, I determined to approach as near him as possible, in order to try the efficacy of a ball planted directly in the centre of the forehead. I had heard of this experiment having been tried without success and I wished to ascertain the truth for myself.

“Taking the wind “ of the animal, as it is called, (that is, keeping to leeward, so that my approach could not be perceived by communicating a taint to the air,) I crawled on my hands and knees with the utmost caution towards my victim. The unwieldy brute was quietly and unsuspectingly cropping the herbage, and I had arrived to within feet of him, when a sudden flashing of the eye, and an impatient motion, told me that I was observed. He raised his enormous head, and looked around him, and so truly terrible and grand did he appear, that I must confess, (in your ear,) I felt awed, almost frightened, at the task I had undertaken. But I had gone too far to retreat; so, raising my gun, I took deliberate aim at the bushy centre of the forehead, and fired. The monster shook his head, pawed up the earth with his hoofs, and making a sudden spring, accompanied by a terrific roar, turned to make his escape. At that instant, the ball from the second barrel penetrated his vitals, and he measured his huge length upon the ground. In a few seconds he was dead. Upon examining the head, and cutting away the enormous mass of matted hair and skin which enveloped the skull, my large bullet of twenty to the pound, was found completely flattened against the bone, having carried with it, through the interposing integument, a considerable portion of the coarse hair, but without producing the smallest fracture. I was satisfied; and taking the tongue, (the hunter's perquisite,) I returned to my companions.

This evening the roaring of the bulls in the gang near us is terrific, and these sounds are mingled with the howling of large packs of wolves, which regularly attend upon them, and the hoarse screaming of hundreds of ravens flying over head. The dreaded grizzly bear is also quite common in this neighborhood; two have just been seen in some bushes near, and they visit our camp almost every night, attracted by the piles of meat which are heaped all around us. The first intimation we have of his approach is a great grunt or snort, unlike any sound I ever heard, but much more querulous than fierce; then we hear the scraping and tramping of his huge feet, and the snuffing of his nostrils, as the savory scent of the meat is wafted to them. He approaches nearer and nearer, with a stealthy and fearful pace, but just as he is about to accomplish the object of his visit, he suddenly stops short; the snuffing is repeated at long and trembling intervals, and if the slightest motion is then made by one of the party, away goes “Ephraim,” like a cowardly burglar as he is, and we hear no more of him that night.

On the 23d a Nez Perce Indian, belonging to Mr. McKay's company visited us. He is one of several hundred who have been sent from the fort on the same errand as ourselves. This was a middle aged man, with a countenance in which shrewdness or cunning, and complaisance, appeared singularly blended. But his person was a perfect wonder, and would have served admirably for the study of a sculptor. The form was perfection itself. The lower limbs were entirely naked, and the upper part of the person was only covered by a short checked shirt. His blanket lay by his side as he sat with us, and was used only while moving. I could not but admire the ease with which the man squatted on his haunches immediately as he alighted, and the position both of body and limbs was one that, probably, no white man unaccustomed to it, could have endured for many minutes together. The attitude, and indeed the whole figure was graceful and easy in the extreme;

---

and on criticising his person, one was forcibly reminded of the Apollo Belvidere of Canova. His only weapons were a short bow and half a dozen arrows, a scalping knife and tomahawk; with these, however, weak and inefficient as they seemed, he had done good service, every arrow being smeared with blood to the feathers. He told Richardson that he and his three or four companions had killed about sixty buffalo, and that now, having meat enough, they intended to return to their camp to-morrow.

This afternoon I observed a large flock of wild geese passing over; and upon watching them, perceived that they alighted about a mile and a half from us, where I knew there was a lake. Concluding that a little change of diet might be agreeable, I sallied forth with my gun across the plain in quest of the birds. I soon arrived at a thick copse of willow and currant bushes, which skirted the water, and was about entering, when I heard a sort of angry growl or grunt directly before me and instantly after, saw a grizzly bear of the largest kind erect himself upon his hind feet within a dozen yards of me, his savage eyes glaring with horrible malignity, his mouth wide open, and his tremendous paws raised as though ready to descend upon me. For a moment, I thought my hour had come, and that I was fated to die an inglorious death away from my friends and my kindred; but after waiting a moment in agonizing suspense, and the bear showing no inclination to advance, my lagging courage returned, and cocking both barrels of my gun, and presenting it as steadily as my nerves would allow, full at the shaggy breast of the creature, I retreated slowly backwards. Bruin evidently had no notion of braving gunpowder, but I did not know whether, like a dog, if the enemy retreated he would not yet give me a chase; so when I had placed about a hundred yards between us, I wheeled about and flew, rather than ran, across the plain towards the camp. Several times during this run for life, (as I considered it,) did I fancy that I heard the bear at my heels; and not daring to look over my shoulder to ascertain the fact, I only increased my speed, until the camp was nearly gained, when, from sheer exhaustion I relaxed my efforts, fell flat upon the ground, and looked behind me. The whole space between me and the copse was untenanted, and I was forced to acknowledge, with a feeling strongly allied to shame, that my fears alone had represented the bear in chase of me.

When I arrived in camp, and told my break-neck adventure to the men, our young companion, Mr. Ashworth, expressed a wish to go and kill the bear, and requested the loan of my double-barrelled gun for this purpose. This I at first peremptorily refused, and the men, several of whom were experienced hunters, joined me in urging him not to attempt the rash adventure. At length, however, finding him determined on going, and that rather than remain, he would trust to his own single gun, I was finally induced to offer him mine, with a request, (which I had hoped would check his daring spirit,) that he would leave the weapon in a situation where I could readily find it; for after he had made one shot, he would never use a gun again.

He seemed to heed our caution and advice but little, and, with a dogged and determined air, took the way across the plain to the bushes, which we could see in the distance. I watched him for some time, until I saw him enter them, and then, with a sigh that one so young and talented should be lost from amongst us, and a regret that we did not forcibly prevent his going, I sat myself down, distressed and melancholy. We all listened anxiously to hear the report of the gun; but no sound reaching our ears, we began to hope that he had failed in finding the animal, and in about fifteen minutes, to my inexpressible relief, we saw him emerge from the copse, and bend his steps slowly towards us. When he came in, he seemed disappointed, and somewhat angry. He

said he had searched the bushes in every direction, and although he had found numerous foot-prints, no bear was to be seen. It is probable that when I commenced my retreat in one direction, bruin made off in the other, and that although he was willing to dispute the ground with me, and prevent my passing his lair, he was equally willing to back out of an engagement in which his fears suggested that he might come off the loser.

This evening, as we sat around the camp fire, cozily wrapped in our blankets, some of our old hunters became garrulous, and we had several good "yarns," as a sailor would say. One told of his having been shot by a Blackfoot Indian, who was disguised in the skin of an elk, and exhibited, with some little pride, a great cicatrix which disfigured his neck. Another gave us an interesting account of an attack made by the Comanche Indians upon a party of Santa-Fee traders, to which he had been attached. The white men, as is usual in general engagements with Indians, gained a signal victory, not, however, without the loss of several of their best hunters; and the old man who told the story, "uncle John," as he was usually called, shed tears at the recollection of the death of his friends; and during that part of his narrative, was several times so much affected as to be unable to speak. [I have repeatedly observed these exhibitions of feeling in some of our people upon particular occasions, and I have been pleased with them, as they seemed to furnish an evidence, that amid all the mental sterility, and absence of moral rectitude, which is so deplorably prevalent, there yet lingers some kindness of heart, some sentiments which are not wholly depraved.]

The best story, however, was one told by Richardson, of a meeting he once had with three Black-foot Indians. He had been out alone hunting buffalo, and towards the end of the day was returning to the camp with his meat, when he heard the clattering of hoofs in the rear, and, upon looking back, observed three Indians in hot pursuit of him. He immediately discharged his cargo of meat to lighten his horse, and then urged the animal to his utmost speed, in an attempt to distance his pursuers. He soon discovered, however, that the enemy was rapidly gaining upon him, and that in a few minutes more, he would be completely at their mercy, when he hit upon an expedient, as singular as it was bold and courageous. Drawing his long scalping knife from the sheath at his side, he plunged the keen weapon through his horse's neck, and severed the spine. The animal dropped instantly dead, and the determined hunter, throwing himself behind the fallen carcass, waited calmly the approach of his sanguinary pursuers. In a few moments, one Indian was within range of the fatal rifle, and at its report, his horse galloped riderless over the plain. The remaining two then thought to take him at advantage by approaching simultaneously on both sides of his rampart; but one of them, happening to venture too near in order to be sure of his aim, was shot to the heart by the long pistol of the white man, at the very instant that the ball from the Indian's gun whistled harmlessly by. The third savage, being wearied of the dangerous game, applied the whip vigorously to the flanks of his horse, and was soon out of sight, while Richardson set about collecting the trophies of his singular victory.

He caught the two Indians' horses; mounted one, and loaded the other with the meat which he had discarded, and returned to his camp with two spare rifles, and a good stock of ammunition. On the morning of the 25th, we commenced baling up our meat in buffalo skins dried for the purpose. Each bale contains about a hundred pounds, of which a mule carries two; and when we had finished, our twelve longeared friends were loaded. Our limited term of absence is now nearly expired, and we are anxious to return to the fort in order to prepare for the journey to the lower country.

---

At about 10 o'clock, we left our pleasant encampment, and bade adieu to the cold spring, the fat buffalo, and grizzly bears, and urging our mules into their fastest walk, we jolted along with our provant towards the fort.

In about an hour after, an unpleasant accident happened to one of our men, named McCarey. He had been running a buffalo, and was about reloading the gun, which he had just discharged, when the powder in his horn was ignited by a burning wad remaining in the barrel; the horn was burst to fragments, the poor man dashed from his horse, and his face, neck, and hands, burnt in a shocking manner. We applied, immediately, the simple remedies which our situation and the place afforded, and in the course of an hour he was somewhat relieved, and travelled on with us, though in considerable suffering. His eyes were entirely closed, the lids very much swollen, and his long, flowing hair, patriarchal beard and eye-brows, had all vanished in smoke. It will be long ere he gets another such crop.

The weather here is generally uncomfortably warm, so much so, that we discard, while travelling, all such encumbrances as coats, neckcloths, &c., but the nights are excessively cold, ice often forming in the camp kettles, of the thickness of half an inch, or more. My custom has generally been to roll myself in my blanket at night, and use my large coat as a pillow; but here the coat must be worn, and my saddle has to serve the purpose to which the coat is usually applied.

We travelled, this day, thirty miles, and the next afternoon, at 4 o'clock, arrived at the fort. On the route we met three hunters, whom Captain W. had sent to kill game for the camp. They informed us that all hands have been for several days on short allowance, and were very anxious for our return.

When we came in sight of the fort, we gave them a mountain salute, each man firing his gun in quick succession. They did not expect us until to-morrow, and the firing aroused them instantly. In a very few minutes, a score of men were armed and mounted, and dashing out to give battle to the advancing Indians, as they thought us. The general supposition was, that their little hunting party had been attacked by a band of roving Blackfeet, and they made themselves ready for the rescue in a space of time that did them great credit.

It was perhaps "bad medicine," (to use the mountain phrase,) to fire a salute at all, inasmuch as it excited some unnecessary alarm, but it had the good effect to remind them that danger might be near when they least expected it, and afforded them an opportunity of showing the promptness and alacrity with which they could meet and brave it.

Our people were all delighted to see us arrive, and I could perceive many a longing and eager gaze cast upon the well filled bales, as our mules swung their little bodies through the camp. My companion, Mr. N., had become so exceedingly thin that I should scarcely have known him; and upon my expressing surprise at the great change in his appearance, he heaved a sigh of inanity, and remarked that I "would have been as thin as he if I had lived on old Ephraim for two weeks, and short allowance of that." I found, in truth, that the whole camp had been subsisting, during our absence, on little else than two or three grizzly bears which had been killed in the neighborhood; and with a complacent glance at my own rotund and cow-fed person, I wished my poor friend better luck for the future.

We found Mr. McKay's company encamped on the bank of the river within a few hundred yards of our tents. It consists of thirty men, thirteen of whom are Indians, Nez Perces, Chinooks and Kayouses with a few squaws. The remainder are French-Canadians, and half-breeds. Their lodg-

es, of which there are several, are of a conical form, composed of ten long poles, the lower ends of which are pointed and driven into the ground; the upper blunt, and drawn together at the top by thongs. Around these poles, several dressed buffalo skins, sewed together, are stretched, a hole being left on one side for entrance.

These are the kind of lodges universally used by the mountain Indians while travelling: they are very comfortable and commodious, and a squaw accustomed to it, will erect and prepare one for the reception of her husband, while he is removing the trapping from his horse. I have seen an expert Indian woman stretch a lodge in half the time that was required by four white men to perform the same operation with another in the neighborhood.

At the fort, affairs look prosperous: the stockade is finished; two bastions have been erected, and the work is singularly good, considering the scarcity of proper building tools. The house will now soon be habitable, and the structure can then be completed at leisure by men who will be left here in charge, while the party travels on to its destination, the Columbia.

On the evening of the 26th, Captain W., Mr. Nuttall and myself supped with Mr. McKay in his lodge. I am much pleased with this gentleman: he unites the free, frank and open manners of the mountain man, with the grace and affability of the Frenchman. But above all, I admire the order, decorum, and strict subordination which exists among his men, so different from what I have been accustomed to see in parties composed of Americans. Mr. McKay assures me that he had considerable difficulty in bringing his men to the state in which they now are. The free and fearless Indian was particularly difficult to subdue; but steady, determined perseverance, and bold measures, aided by a rigid self-example, made them as clay in his hand, and has finally reduced them to their present admirable condition. If they misbehaved, a commensurate punishment is sure to follow: in extreme cases, flagellation is resorted to, but it is inflicted only by the hand of the Captain; were any other appointed to perform this office on an Indian, the indignity would be deemed so great, that nothing less than the blood of the individual could appease the wounded feelings of the savage.

After supper was concluded, we sat ourselves down on a buffalo robe at the entrance of the lodge, to see the Indians at their devotions. The whole thirteen were soon collected at the call of one whom they had chosen for their chief, and seated with sober, sedate countenances around a large fire. After remaining in perfect silence for perhaps fifteen minutes, the chief commenced an harangue in a solemn and impressive tone; reminding them of the object for which they were thus assembled, that of worshipping the "Great Spirit who made the light and the darkness, the fire and the water," and assured them that if they offered up their prayers to him with but "one tongue," they would certainly be accepted. He then rose from his squatting position to his knees, and his example was followed by all the others. In this situation he commenced a prayer, consisting of short sentences uttered rapidly but with great apparent fervor, his hands clasped upon his breast, and his eyes cast upwards with a beseeching look towards heaven. At the conclusion of each sentence, a choral response of a few words was made, accompanied frequently by low moaning. The prayer lasted about twenty minutes. After its conclusion, the chief, still maintaining the same position of his body and hands, but with his head bent to his breast, commenced a kind of psalm or sacred song, in which the whole company presently joined. The song was a simple expression of a few sounds, no intelligible words being uttered. It resembled the words, Ho-ha-ho-ha-ho-ha-ha-a, commencing in a low tone, and gradually swelling to a full, round, and beautifully modu-

---

lated chorus. During the song, the clasped hands of the worshippers were moved rapidly across the breast, and their bodies swung with great energy to the time of the music. The chief ended the song that he had commenced, by a kind of swelling groan, which was echoed in chorus. It was then taken up by another, and the same routine was gone through. The whole ceremony occupied perhaps one and a half hours; a short silence then succeeded, after which each Indian rose from the ground, and disappeared in the darkness with a step noiseless as that of a spectre.

I think I never was more gratified by any exhibition in my life. The humble, subdued, and beseeching looks of the poor untutored beings who were calling upon their heavenly father to forgive their sins, and continue his mercies to them, and the evident and heart-felt sincerity which characterized the whole scene, was truly affecting, and very impressive.

The next day being the Sabbath, our good missionary, Mr. Jason Lee, was requested to hold a meeting, with which he obligingly complied. A convenient, shady spot was selected in the forest adjacent, and the greater part of our men, as well as the whole of Mr. McKay's company, including the Indians, attended. The usual forms of the Methodist service, (to which Mr. L. is attached,) were gone through, and were followed by a brief, but excellent and appropriate exhortation by that gentleman, The people were remarkably quiet and attentive, and the Indians sat upon the ground like statues. Although not one of them could understand a word that was said, they nevertheless maintained the most strict and decorous silence, kneeling when the preacher kneeled, and rising when he rose, evidently with a view of paying him and us a suitable respect, however much their own notions as to the proper and most acceptable forms of worship, might have been opposed to ours.

A meeting for worship in the Rocky mountains is almost as unusual as the appearance of a herd of buffalo in the settlements. A sermon was perhaps never preached here before; but for myself, I really enjoyed the whole scene; it possessed the charm of novelty, to say nothing of the salutary effect which I sincerely hope it may produce.

Mr. Lee is a great favorite with the men, deservedly so, and there are probably few persons to whose preaching they would have listened with so much complaisance. I have often been amused and pleased by Mr. L.'s manner of reproofing them for the coarseness and profanity of expression which is so universal amongst them. The reproof, although decided, clear, and strong, is always characterized by the mildness and affectionate manner peculiar to the man; and although the good effect of the advice may not be discernible, yet it is always treated with respect, and its utility acknowledged.

In the evening, a fatal accident happened to a Canadian belonging to Mr. McKay's party. He was running his horse, in company with another, when the animals were met in full career by a third rider, and horses and men were thrown with great force to the ground. The Canadian was taken up completely senseless, and brought to Mr. McKay's lodge, where we were all taking supper. I perceived at once that there was little chance of his life being saved. He had received an injury of the head which had evidently caused concussion of the brain. He was bled copiously, and various local remedies were applied, but without success; the poor man died early next morning.

He was about forty years of age, healthy, active, and shrewd, and very much valued by Mr. McKay as a leader in his absence, and as an interpreter among the Indians of the Columbia.

At noon the body was interred. It was wrapped in a piece of coarse linen, over which was sewed a buffalo robe. The spot selected, was about a hundred yards south of the fort, and the funeral was

attended by the greater part of the men of both camps. Mr. Lee officiate in performing the ordinary church ceremony, after which a hymn for the repose of the soul of the departed, was sung by the Canadians present. The grave is surrounded by a neat palisade of willows, with a black cross erected at the head, on which is carved the name "Casseau."

Townsend's Across the Rockies to the Columbia

---

## CHAPTER VII

Departure of Mr. McKay's party, Captain Stewart, and the missionaries - Debauch at the fort - Departure of the company - Poor provision - Blackfeet hunting ground - A toilsome journey, and sufferings from thirst - Goddin's creek - Antoine Goddin, the trapper - Scarcity of game - A buffalo - Rugged mountains - Comforting reflections of the traveller - More game - Unusual economy - Habits of the white wolf - "Thornburg's pass" - Difficult travelling - The captain in jeopardy among the snow - A countermarch - Deserted Banneck camp - Toilsome and dangerous passage of the mountain - Mallade river - Beaver dams, and beaver - A party of Snake Indians - Scarcity of pasture - Another Banneck camp - "Kamas prairie" - Indian mode of preparing the kamas - Racine blanc, or biscuit root - Travelling over the hills - Loss of horses by fatigue - Boisee or Bigwood river - Salmon - Choke-cherries, &c.

On the 30th of July, Mr. McKay and his party left us for Fort Vancouver, Captain Stewart and our band of missionaries accompanying them. The object of the latter in leaving us, is, that they may have an opportunity of travelling more slowly than we should do, on account, and for the benefit of the horned cattle which they are driving to the lower country. We feel quite sad in the prospect of parting from those with whom we have endured some toil and danger, and who have been to some of us as brothers, throughout our tedious journey; but, if no unforeseen accident occurs, we hope to meet them all again at Walla-Walla, the upper fort on the Columbia. As the party rode off, we fired three rounds, which were promptly answered, and three times three cheers wished the travellers success.

August 5th. At sunrise this morning, the "star-spangled banner" was raised on the flag-staff at the fort, and a salute fired by the men, who, according to orders, assembled around it. All in camp were then allowed the free and uncontrolled use of liquor, and, as usual, the consequence was a scene of rioting, noise, and fighting, during the whole day; some became so drunk that their senses fled them entirely, and they were therefore harmless; but by far the greater number were just sufficiently under the influence of the vile trash, to render them in their conduct disgusting and tiger-like. We had "gouging," biting, fisticuffing, and "stamping" in the most "scientific" perfection; some even fired guns and pistols at each other, but these weapons were mostly harmless in the unsteady hands which employed them. Such scenes I hope never to witness again; they are absolutely sickening, and cause us to look upon our species with abhorrence and loathing. Night at last came, and cast her mantle over our besotted camp; the revel was over, and the men retired to their pallets peaceably, but not a few of them will bear palpable evidence of the debauch of the 5th of August.

The next morning we commenced packing, and at 11 o'clock bade adieu to "Fort Hall." Our company now consists of but thirty men, several Indian women, and one hundred and sixteen horses. We crossed the main Snake or Shoshone river, at a point about three miles from the fort. It is here as wide as the Missouri at Independence, but, beyond comparison, clearer and more beautiful.

---

Immediately on crossing the river, we entered upon a wide, sandy plain, thickly covered with wormwood, and early in the afternoon, encamped at the head of a delightful spring, about ten miles from our starting place.

On the route, our hunters killed a young grizzly bear, which, with a few grouse, made us an excellent dinner. Fresh meat is now very grateful to our palates, as we have been living for weeks past on nothing but poor, dried buffalo, the better, and far the larger part, having been deposited in the fort for the subsistence of the men who remain. We have no flour, nor vegetables of any kind, and our meat may be aptly compared to dry chips, breaking short off in our fingers; and when boiled to soften it a little, and render it fit for mastication, not a star appears in the pot. It seems astonishing that life can be sustained upon such miserable fare, and yet our men (except when under the influence of liquor) have never murmured, but have always eaten their crusty meal, and drunk their cold water with light and excellent spirits. We hope soon to fall in with the buffalo, and we shall then endeavor to prepare some good provision to serve until we reach the salmon region. We shall now, for about ten days, be travelling through the most dangerous country west of the mountains, the regular hunting ground of the Blackfeet Indians, who are said to be often seen here in parties of hundreds, or even thousands, scouring the plains in pursuit of the buffalo. Traders, therefore, seldom travel this route without meeting them, and being compelled to prove their valor upon them; the white men are, however, generally the victors, although their numbers are always vastly inferior.

7th. We were moving this morning with the dawn, and travelled steadily the whole day, over one of the most arid plains we have seen, covered thickly with jagged masses of lava, and twisted wormwood bushes. Both horses and men were jaded to the last degree; the former from the rough, and at times almost impassable nature of the track, and the latter from excessive heat and parching thirst. We saw not a drop of water during the day, and our only food was the dried meat before spoken of, which we carried and chewed like biscuits as we travelled. There are two reasons by which the extreme thirst which the way-farer suffers in these regions, may be accounted for; first, the intense heat of the sun upon the open and exposed plains; and secondly, the desiccation to which every thing here is subject. The air feels like the breath of a sirocco, the tongue becomes parched and horny, and the mouth, nose, and eyes are incessantly assailed by the fine pulverized lava, which rises from the ground with the least breath of air. Bullets, pebbles of chalcedony, and pieces of smooth obsidian, were in great requisition to-day; almost every man was mumbling some of these substances, in an endeavor to assuage his burning thirst. The camp trailed along in a lagging and desponding line over the plain for a mile or more, the poor horses' heads hanging low, their tongues protruding to their utmost extent, and their riders scarcely less drooping and spiritless. We were a sad and most forlorn looking company, certainly; not a man of us had any thing to say, and none cared to be interrupted in his blissful dream of cool rivers and streams. Occasionally we would pass a ravine or gorge in the hills, by which one side of the plain was bounded, and up this some of the men would steer, leaping over blocks of lava, and breaking a path through the dense bushes; but the poor searcher soon returned, disheartened and woebegone, and those who had waited anxiously to hear his cheering call, announcing success, passed onward without a word. One of our men, a mulatto, after failing in a forage of this sort, cast himself resolutely from his horse to the ground, and declared that he would lie there till he died; "there was no water in the cursed country and he might as well die here as go farther." Some of us tried to infuse

---

a little courage into him, but it proved of no avail, and each was too much occupied with his own particular grief to use his tongue much in persuasion; so we left him to his fate.

Soon after nightfall, some signs of water were seen in a small valley to our left, and, upon ascending it, the foremost of the party found a delightful little cold spring; but they soon exhausted it, and then commenced, with axes and knives, to dig it out and enlarge it. By the time that Mr. N., and myself arrived, they had excavated a large space which was filled to overflowing with muddy water. We did not wait for it to settle, however, but throwing ourselves flat upon the ground, drank until we were ready to burst. The tales which I had read of suffering travellers in the Arabian deserts, then recurred with some force to my recollection, and I thought I could, though in a very small measure, appreciate their sufferings by deprivation, and their unmingled delight and satisfaction in the opportunity of assuaging them.

Poor Jim, the mulatto man, was found by one of the people, who went back in search of him, lying where he had first fallen, and either in a real or pretended swoon, still obstinate about dying, and scarcely heeding the assurances of the other that water was within a mile of him. He was, however, at length dragged and carried into camp, and soused head foremost into the mud puddle, where he guzzled and guzzled until his eyes seemed ready to burst from his head, and he was lifted out and laid dripping and flaccid upon the ground.

The next morning we made an early start towards a range of willows which we could distinctly see, at the distance of fifteen or twenty miles, and which we knew indicated Goddin's creek, so called from a Canadian of that name who was killed in this vicinity by the Blackfeet. Goddin's son, a half-breed, is now with us as a trapper; he is a fine sturdy fellow, and of such strength of limb and wind, that he is said to be able to run down a buffalo on foot, and kill him with arrows. Goddin's creek was at length gained, and after travelling a few miles along its bank we encamped in some excellent pasture. Our poor horses seemed inclined to make up for lost time here, as yesterday their only food was the straggling blades of a little dry and parched grass growing among the wormwood on the hills.

We have been considerably disappointed in not seeing any buffalo to-day, and their absence here has occasioned some fear that we may not meet with them on our route. Should this be the case, we shall have to depend upon such small game, hares, grouse, &c., as may happen to lie in our path. In a short time, however, even this resource will fail; and if we do not happen to see Indians on the upper waters of the Columbia, from whom we can purchase dried salmon, we shall be under the necessity of killing our horses for food.

We perhaps derive one advantage, however, from the absence of game here, that of there being less probability of lurking Blackfeet in the vicinity; but this circumstance, convenient as it is, does not compensate for empty stomachs, and I believe the men would rather fight for the privilege of obtaining food, than live without it.

The next morning we left Goddin's creek, and travelled for ten miles over a plain, covered as usual with wormwood bushes and lava. Early in the day, the welcome cry of "a buffalo! a buffalo!" was heard from the head of the company, and was echoed joyfully along the whole line. At the moment, a fine large bull was seen to bound from the bushes in our front, and tear off with all his speed over the plain. Several hunters gave him chase immediately, and in a few minutes we heard the guns that proclaimed his death. The killing of this animal is a most fortunate circumstance for us: his meat will probably sustain us for three or four days, and by that time we are sanguine of

---

procuring other provision. The appearance of this buffalo is not considered indicative of the vicinity of others: he is probably a straggler from a travelling band, and has been unable to proceed with it, in consequence of sickness or wounds.

On leaving the plain this morning, we struck into a defile between some of the highest mountains we have yet seen. In a short time we commenced ascending, and continued passing over them, until late in the afternoon, when we reached a plain about a mile in width, covered with excellent grass, and a delightful cool stream flowing through the middle of it. Here we encamped, having travelled twenty-seven miles.

Our journey, to-day, has been particularly laborious. We were engaged for several hours, constantly in ascending and descending enormous rocky hills, with scarcely the sign of a valley between them; and some of them so steep, that our horses were frequently in great danger of falling, by making a mis-step on the loose, rolling stones. I thought the Black Hills, on the Platte, rugged and difficult of passage, but they sink into insignificance when compared with these.

We observed, on these mountains, large masses of greenstone, and beautiful pebbles of chalcedony and fine agate; the summits of the highest are covered with snow. In the mountain passes, we found an abundance of large, yellow currants, rather acid, but exceedingly palatable to men who have been long living on animal food exclusively. We all ate heartily of them; indeed, some of our people became so much attached to the bushes, that we had considerable difficulty to induce them to travel again.

10th. We commenced our march at seven this morning, proceeding up a narrow valley, bordering our encampment in a north-easterly direction. The ravine soon widened, until it became a broad, level plain, covered by the eternal "sage" bushes, but was much less stony than usual. About mid-day, we left the plain, and shaped our course over a spur of one of the large mountains; then taking a ravine, in about an hour we came to the level land, and struck Goddin's creek again, late in the afternoon.

Our provision was exhausted at breakfast, this morning, (most of our bull meat having been given to a band of ten trappers, who left us yesterday,) we had seen no game on our route, and we were therefore preparing ourselves to retire supperless to our pallets, when Richardson and Sansbury were descried approaching the camp and, to our great comfort, we observed that they had meat on their saddles. When they arrived, however, we were somewhat disappointed to find that they had only killed a calf, but they had brought the entire little animal with them, the time for picking and choosing of choice pieces having passed with us; and after making a hearty meal, we wrapped ourselves in our blankets and slept soundly. Although but a scant breakfast was left for us in the morning, and we knew not if any dinner would fall in our way, yet "none of these things moved us;" we lived altogether upon the present, and heeded not the future. We had always been provided for; often, when we had despaired of procuring sustenance, and when the pangs of hunger had soured our temper, and made us quarrelsome, when we thought there was no prospect before us but to sacrifice our valuable horses, or die of starvation, have the means been provided for our relief. A buffalo, an elk, or an antelope, has appeared like the goat provided for the faithful Abraham, to save a more valuable life, and I hope that some of us have been willing, reverently to acknowledge from whom these benefits and blessings have been received.

On the day following, Richardson killed two buffalo, and brought his horse heavily laden with meat to the camp. Our good hunter walked himself, that the animal might be able to bear the

greater burthen. After depositing the meat in the camp, he took a fresh horse, and accompanied by three men, returned to the spot where the game had been killed, (about four miles distant,) and in the evening, brought in every pound of it, leaving only the heavier bones. The wolves will be disappointed this evening; they are accustomed to dainty picking when they glean after the hunters, but we have now abandoned the "wasty ways" which so disgraced us when game was abundant; the despised leg bone, which was wont to be thrown aside with such contempt, is now polished of every tendon of its covering, and the savory hump is used as a kind of dessert after a meal of coarser meat.

Speaking of wolves, I have often been surprised at the perseverance and tenacity with which these animals will sometimes follow the hunter for a whole day, to feed upon the carcass he may leave behind him. When an animal is killed, they seem to mark the operation, and stand still at a most respectful distance, with drooping tail and ears, as though perfectly indifferent to the matter in progress. Thus will they stand until the game is butchered, the meat placed upon the saddle, and the hunter is mounted and on his way; then, if he glances behind him, he will see the wily forager stealthily crawling and prowling along towards the smoking remains, and pouncing upon it, and tearing it with tooth and nail, immediately as he gets out of reach.

During the day, the wolves are shy, and rarely permit an approach to within gun-shot; but at night, (where game is abundant,) they are so fearless as to come quite within the purlieu of the camp, and there sit, a dozen together, and howl hideously for hours. This kind of serenading, it may be supposed, is not the most agreeable; and many a time when on guard, have I observed the unquiet tossing of the bundles of blankets near me, and heard issue from them, the low, husky voice of some disturbed sleeper, denouncing heavy anathemas on the unseasonable music.

12th. We shaped our course, this morning, towards what appeared to us a gap in a high and rugged mountain, about twenty miles ahead. After proceeding eight or ten miles, the character of the country underwent a remarkable and sudden change. Instead of the luxuriant sage bushes, by which the whole plains have hitherto been covered, and the compact and dense growth of willows which has uniformly fringed every stream and rivulet, the ground was completely denuded; not a single shrub was to be seen, nor the smallest appearance of vegetation, except in small patches near the water. The mountains, also, which had generally been rocky, and covered with low, tangled bushes, here abound in beautiful and shapely pine trees. Some of the higher peaks are, however, completely bare, and capped with enormous masses of snow.

After we had travelled about twelve miles, we entered a defile between the mountains, about five hundred yards wide, covered, like the surrounding country, with pines; and, as we proceeded, the timber grew so closely, added to a thick undergrowth of bushes, that it appeared almost impossible to proceed with our horses. The farther we advanced, the more our difficulties seemed to increase; obstacles of various kinds impeded our progress; fallen trees, their branches tangled and matted together, large rocks and deep ravines, holes in the ground, into which our animals would be precipitated without the possibility of avoiding them, and an hundred other difficulties which beggar description.

We travelled for six miles through such a region as I have attempted to describe, and at 2 o'clock encamped in a clear spot of ground, where we found excellent grass, and a cold, rapid stream. Soon after we stopped, Captain W. and Richardson left us, to look for a pass through the mountains, or for a spot where it would be possible to cross them. Strange as it may appear, yet in this

desolate and almost impassable region we have observed, to-day, the tracks of a buffalo which must have passed here last night, or this morning; at least so our hunters say, and they are rarely deceived in such matters.

Captain W. and Richardson returned early next morning, with the mortifying intelligence that no practicable pass through the mountain could be found. They ascended to the very summit of one of the highest peaks, above the snow and the reach of vegetation, and the only prospect which they had beyond, was a confused mass of huge angular rocks, over which even a wild goat could scarcely have made his way. Although they utterly failed in the object of their exploration, yet they were so fortunate as to kill a buffalo, (the buffalo,) the meat of which they brought on their horses. Wyeth told us of a narrow escape he had while travelling on foot near the summit of one of the peaks. He was walking on a ridge which sloped from the top at an angle of about forty degrees, and terminated, at its lower part, in a perpendicular precipice of a thousand or twelve hundred feet. He was moving along in the snow cautiously, near the lower edge, in order to attain a more level spot beyond, when his feet slipped and he fell. Before he could attempt to fix himself firmly, he slid down the declivity till within a few feet of the frightful precipice. At the instant of his fall, he had the presence of mind to plant the rifle which he held in one hand, and his knife which he drew from the scabbard with the other, into the snow, and as he almost tottered on the verge, he succeeded in checking himself, and holding his body perfectly still. He then gradually moved, first the rifle and then the knife, backward up the slanting hill behind him, and fixing them firmly, drew up his body parallel to them. In this way he moved slowly and surely until he had gained his former station, when, without further difficulty, he succeeded in reaching the more level land.

After a good breakfast, we packed our horses, and struck back on our trail of yesterday, in order to try another valley which we observed bearing parallel with this, at about three miles distant, and which we conclude must of course furnish a path through the mountain. Although our difficulties in returning by the same wretched route were very considerable, yet they were somewhat diminished by the road having been partially broken, and we were enabled also to avoid many of the sloughs and pitfalls which had before so much incommoded us. We have named this rugged valley, "Thornburg's pass," after one of our men of this name, (a tailor,) whom we have to thank for leading us into all these troubles. Thornburg crossed this mountain two years ago, and might therefore be expected to know something of the route, and as he was the only man in the company who had been here, Captain W. acted by his advice, in opposition to his own judgment, which had suggested the other valley as affording a more probable chance of success. As we are probably the only white men who have ever penetrated into this most vile and abominable region, we conclude that the name we have given it must stand, from priority.

In the bushes, along the stream in this valley, the blacktailed deer (*Cervus macrourus*) is abundant. The beautiful creatures frequently bounded from their cover within a few yards of us, and trotted on before us like domestic animals; "they are so unacquainted with man" and his cruel arts, that they seem not to fear him.

We at length arrived on the open plain again, and in our route towards the other valley, we came to a large, recent Indian encampment, probably of Bannecks, who are travelling down to the fisheries on Snake river. [We afterwards learned, that only three days before our arrival, a hard contested, and most sanguinary battle, had been fought on this spot, between the Bannecks and Blackfeet, in which the former gained a signal and most complete victory, killing upwards of forty

of their adversaries, and taking about three dozen scalps. The Blackfeet, although the much larger party, were on foot, but the Bannecks, being all well mounted, had a very decided advantage; and the contest occurred on an open plain, where there was no chance of cover, the Blackfeet were run down with horses, and, without being able to load their guns, were trampled to death, or killed with salmon spears and axes. This was not the first time that we narrowly escaped a contest with this savage and most dreaded tribe. If we had passed there but a few days earlier, there is every probability to suppose that we should have been attacked, as our party at that time consisted of but twenty-six men.] We here took their trail which led up the valley to which we had been steering. The entrance was very similar in appearance to that of Thornburg's pass, and it is therefore not very surprising that our guide should have been deceived. We travelled rapidly along the level land at the base of the mountain, for about three miles; we then began to ascend, and our progress was necessarily slow and tedious. The commencement of the Alpine path was, however, far better than we had expected, and we entertained the hope that the passage could be made without difficulty or much toil, but the farther we progressed, the more laborious the travelling became. Sometimes we mounted steep banks of intermingled flinty rock, and friable slate, where our horses could scarcely obtain a footing, frequently sliding down several feet on the looser broken stones: again we passed along the extreme verge of tremendous precipices at a giddy height, whereat almost every step the stones and earth would roll from under our horses' feet, and we could hear them strike with a dull, leaden sound on the craggy rocks below. The whole journey, to-day, from the time we arrived at the heights, until we had crossed the mountain, has been a most fearful one. For myself, I might have diminished the danger very considerably, by adopting the plan pursued by the rest of the company, that of walking, and leading my horse over the most dangerous places, but I have been suffering for several days with a lame foot, and am wholly incapable of such exertion. I soon discovered that an attempt to guide my horse over the most rugged and steepest ranges was worse than useless, so I dropped the rein upon the animal's neck, and allowed him to take his own course, closing my eyes and keeping as quiet as possible in the saddle. But I could not forbear starting occasionally, when the feet of my horse would slip on a stone, and one side of him would slide rapidly towards the edge of the precipice, but I always recovered myself by a desperate effort, and it was fortunate for me that I did so.

Late in the afternoon, we completed the passage across the mountain, and with thankful hearts, again trod the level land. We entered here a fine rich valley or plain, of about half a mile in width, between two ranges of the mountain. It was profusely covered with willow, and through the middle of it, ran a rapid and turbulent mountain torrent, called Mallade river. It contains a great abundance of beaver, their recent dams being seen in great numbers, and in the night, when all was quiet, we could hear the playful animals at their gambols, diving from the shore into the water, and striking the surface with their broad tails. The sound, altogether, was not unlike that of children at play, and the animated description of a somewhat similar scene, in the "Mohicans," recurred to my recollection, where the single-minded Gamut is contemplating with feelings of strong reprobation, the wayward freaks of what he supposes to be a bevy of young savages.

14th. - We travelled down the Mallade river, and followed the Indian trail through the valley. The path frequently passed along near the base of the mountain, and then wound its way a considerable distance up it, to avoid rocky impediments and thick tangled bushes below, so that we had some climbing to do; but the difficulties and perils of the route of yesterday are still so fresh in our

memory, that all minor things are disregarded, at least by us. Our poor horses, however, no doubt feel differently, as they are very tired and foot sore.

The next day we came to a close and almost impenetrable thicket of tangled willows, through which we had great difficulty in urging our horses. The breadth of the thicket was about one hundred yards, and a full hour was consumed in passing through it. We then entered immediately a rich and beautiful valley, covered profusely with a splendid blue Lupin. The mountains on either side are of much less height than those we have passed, and entirely bare, the pine trees which generally cover and ornament them, having disappeared. During the morning, we ascended and descended several high and stony hills, and early in the afternoon, emerged upon a large, level prairie, and struck a branch of Mallade river, where we encamped.

While we were unloading, we observed a number of Indians ahead, and not being aware of their character, stood with our horses saddled, while Captain W. and Richardson rode out to reconnoitre. In about half an hour they returned, and informed us that they were Snakes who were returning from the fisheries, and travelling towards the buffalo on the "big river," (Shoshone.) We therefore unsaddled our poor jaded horses and turned them out to feed upon the luxuriant pasture around the camp, while we, almost equally jaded, threw ourselves down in our blankets to seek a little repose and quiet after the toils and fatigues of a long day's march.

Soon after we encamped, the Snake chief and two of his young men visited us. We formed a circle around our lodge and smoked the pipe of peace with them, after which we made them each a present of a yard of scarlet cloth for leggings, some balls and powder, a knife, and a looking glass. Captain W. then asked them a number of questions, through an interpreter, relative to the route, the fishery, &c. &c., and finally bought of them a small quantity of dried salmon, and a little fermented kamas or quamash root. The Indians remained with us until dark, and then left us quietly for their own camp. There are two lodges of them, in all about twenty persons, but none of them presumed to come near us, with the exception of the three men, two squaws, and a few children. The chief is a man about fifty years of age, tall, and dignified looking, with large, strong aqualine features. His manners were cordial and agreeable, perhaps remarkably so, and he exhibited very little of that stoical indifference to surrounding objects which is so characteristic of an Indian. His dress consisted of plain leggings of deer skin, fringed at the sides, unembroidered moccasins, and a marro or waist-covering of antelope skin dressed without removing the hair. The upper part of his person was simply covered with a small blanket, and his ears were profusely ornamented with brass rings and beads. The men and squaws who accompanied him, were entirely naked, except that the latter had marro's of deer skin covering the loins.

The next morning we steered west across the wide prairie, crossing within every mile or two, a branch of the tortuous Mallade, near each of which good pasture was seen; but on the main prairie scarcely a blade of grass could be found, it having lately been fired by the Indians to improve the crops of next year. We have seen to-day some lava and basalt again on the sides of the hills, and on the mounds in the plain, but the level land was entirely free from it.

At noon on the 17th, we passed a deserted Indian camp, probably of the same people whose trail we have been following. There were many evident signs of the Indians having but recently left it, among which was that of several white wolves lurking around in the hope of finding remnants of meat, but, as a Scotchman would say, "I doubt they were mistaken," for meat is scarce here, and the frugal Indians rarely leave enough behind them to excite even the famished stomach of the

lank and hungry wolf. The encampment here has been but a temporary one, occupying a little valley densely overgrown with willows, the tops of which have been bent over, and tied so as to form a sort of lodge; over these, they have probably stretched deer skins or blankets, to exclude the rays of the sun. Of these lodges there are about forty in the valley, so that the party must have been a large one.

In the afternoon we arrived at "Kamas prairie," so called from a vast abundance of this esculent root which it produces, (the *Kamassa esculenta*, of Nuttall.) The plain is a beautiful level one of about a mile over, hemmed in by low, rocky hills, and in spring, the pretty blue flowers of the Kamas are said to give it a peculiar, and very pleasing appearance. At this season, the flowers do not appear, the vegetable being indicated only by little dry stems which protrude all over the ground among the grass.

We encamped here, near a small branch of Mallade river; and soon after, all hands took their kettles and scattered over the prairie to dig a mess of kamas. We were, of course, eminently successful, and were furnished thereby with an excellent and wholesome meal. When boiled, this little root is palatable, and somewhat resembles the taste of the common potato; the Indian mode of preparing it, is, however, the best that of fermenting it in pits under ground, into which hot stones have been placed. It is suffered to remain in these pits for several days; and when removed, is of a dark brown color, about the consistence of softened glue, and sweet, like molasses. It is then often made into large cakes, by being mashed, and pressed together, and slightly baked in the sun. There are several other kinds of bulbous and tuberous roots, growing in these plains, which are eaten by the Indians, after undergoing a certain process of fermentation or baking. Among these, that which is most esteemed, is the white or biscuit root, the *Racine blanc* of the Canadians, (*Eulophus ambiguus*, of Nuttall.) This is dried, pulverized with stones, and after being moistened with water, is made into cakes and baked in the sun. The taste is not unlike that of a stale biscuit, and to a hungry man, or one who has long subsisted without vegetables of any kind, is rather palatable. On the morning of the 18th, we commenced ascending the hills again, and had a laborious and toilsome day's march. One of our poor wearied horses gave up, and stopped; kicking, and cuffing, and beating had no effect to make him move; the poor animal laid himself down with his load, and after this was detached and shifted to the back of another, we left him where he fell, to recruit, and fall into the hands of the Indians, or die among the and hills. This is the first horse we have lost in this manner; but we have great fears that many others will soon fail, as their riders and drivers are compelled to use the whip constantly, to make them walk at the slowest gait. We comfort ourselves, however, by supposing that we have now nearly passed the most rugged country on the route, and hope, before many days, to reach the valley of the Shoshone, where the country will be level, and the pasture good. We are anxious, also, to fall in with the Snake Indians, in order to get a supply of salmon, as we have been living for several days on a short allowance of wretched, dry meat, and this poor pittance is now almost exhausted.

19th.-This morning was cold, the thermometer stood at 28 deg, and a thick skim of ice was in the camp kettles at sunrise. Another hard day's travel over the hills, during which we lost two of our largest and stoutest horses. Towards evening, we descended to a fine large plain, and struck Boisee, or Big Wood river, on the borders of which we encamped. This is a beautiful stream, about one hundred yards in width, clear as crystal, and, in some parts, probably twenty feet deep. It is literally crowded with salmon, which are springing from the water almost constantly. Our mouths

---

are watering most abundantly for some of them, but we are not provided with suitable implements for taking any, and must therefore depend for a supply on the Indians, whom we hope soon to meet.

We found, in the mountain passes, to-day, a considerable quantity of a small fruit called the choke-cherry, a species of prunus, growing on low bushes. When ripe, they are tolerable eating, somewhat astringent, however, producing upon the mouth the same effect, though in a less degree, as the unripe persimmon. They are now generally green, or we should feast luxuriantly upon them, and render more tolerable our miserable provision. We have seen, also, large patches of service bushes, but no fruit. It seems to have failed this year, although ordinarily so abundant that it constitutes a large portion of the vegetable food of both Indians and white trappers who visit these regions.

Townsend's Across the Rockies to the Columbia

#### CHAPTER VIII

A substitute for game, and a luxurious breakfast - Expectations of a repast, and a disappointment - Visit of a Snake chief - his abhorrence of horse meat - A band of Snake Indians - their chief - Trade with Indians for salmon - Mr. Ashworth's adventure - An Indian horse-thief - Visit to the Snake camp - its filthiness - A Banneck camp - Supercilious conduct of the Indians - Arrival at Snake river - Equipment of a trapping party - Indian mode of catching salmon - Loss of a favorite horse - Powder river - Cut rocks - Recovery of the lost trail - Grand Ronde - Captain Bonneville - his fondness for a roving life - Kayouse and Nez Perce Indians - their appearance - An Indian Beauty - Blue mountains - A feline visit.

August 20th.- At about daylight this morning, having charge of the last guard of the night, I observed a beautiful, sleek little colt, of about four months old, trot into the camp, whinnying with great apparent pleasure, and dancing and curvetting gaily amongst our sober and sedate band. I had no doubt that he had strayed from Indians, who were probably in the neighborhood; but as here, every animal that comes near us is fair game, and as we were hungry, not having eaten any thing of consequence since yesterday morning, I thought the little stranger would make a good breakfast for us. Concluding, however, that it would be best to act advisedly in the matter, I put my head into Captain W's tent, and telling him the news, made the proposition which had occurred to me. The captain's reply was encouraging enough, - "Down with him, if you please, Mr. T., it is the Lord's doing; let us have him for breakfast." In five minutes afterwards, a bullet sealed the fate of the unfortunate visitor, and my men were set to work making fires, and rummaging out the long-neglected stew-pans, while I engaged myself in flaying the little animal, and cutting up his body in readiness for the pots.

When the camp was aroused, about an hour after, the savory steam of the cookery was rising and saluting the nostrils of our hungry people with its fragrance, who, rubbing their hands with delight, sat themselves down upon the ground, waiting with what patience they might, for the unexpected repast which was preparing for them.

It was to me almost equal to a good breakfast, to witness the pleasure and satisfaction which I had been the means of diffusing through the camp.

The repast was ready at length, and we did full justice to it; every man ate until he was filled, and all pronounced it one of the most delicious meals they had ever assisted in demolishing. When our breakfast was concluded, but little of the colt remained; that little was, however, carefully

packed up, and deposited on one of the horses, to furnish, at least, a portion of another meal. The route, this morning, lay along Boisee. For an hour, the travelling was toilsome and difficult, the Indian trail, leading along the high bank of the river, steep and rocky, making our progress very slow and laborious. We then came to a wide plain, interrupted only by occasional high banks of earth, some of them of considerable extent, across which ran the path. Towards mid-day, we lost sight of these banks, the whole country appearing level, with the exception of some distant hills in the south-west, which we suppose indicate the vicinity of some part of Snake river. We have all been disappointed in the distance to this river, and the length of time required to reach it. Not a man in our camp has ever travelled this route before, and all we have known about it has been the general course.

In the afternoon, we observed a number of Indians on the opposite side of the river, engaged in fishing for salmon. Captain W. and two men immediately crossed over to them, carrying with them a few small articles to exchange for fish. We congratulated ourselves upon our good fortune in seeing these Indians, and were anticipating a plentiful meal, when Captain W. and his companions returned, bringing only three small salmon. The Indians had been unsuccessful in fishing, not having caught enough for themselves, and even the offer of exorbitant sums was not sufficient to induce them to part with more.

In the afternoon, a grouse and a beaver were killed, which, added to the remains of the colt, and our three little salmon, made us a tolerable supper. While we were eating, we were visited by a Snake chief, a large and powerful man, of a peculiarly dignified aspect and manner. He was naked, with the exception of a small blanket which covered his shoulders, and descended to the middle of the back, being fastened around the neck with a silver skewer. As it was pudding time with us, our visitor was of course invited to sit and eat; and he, nothing loath, deposited himself at once upon the ground, and made a remarkably vigorous assault upon the mixed contents of the dish. He had not eaten long, however, before we perceived a sudden and inexplicable change in his countenance, which was instantly followed by a violent ejection of a huge mouthful of our luxurious fare. The man rose slowly, and with great dignity, to his feet, and pronouncing the single word "shehum," (horse,) in a tone of mingled anger and disgust, stalked rapidly out of the camp, not even wishing us a good evening. It struck me as a singular instance of accuracy and discrimination in the organs of taste. We had been eating of the multifarious compound without being able to recognize, by the taste, a single ingredient which it contained; a stranger came amongst us, who did not know, when he commenced eating, that the dish was formed of more than one item and yet in less than five minutes he discovered one of the very least of its component parts.

It would seem from this circumstance that the Indians, or it may be the particular tribe to which this man belongs, are opposed to the eating of horse flesh, and yet, the natural supposition would be, that in the gameless country inhabited by them they would often be reduced to such shifts, and thus readily conquer any natural reluctance which they might feel to partake of such food. I did not think until after he left us, that if the chief knew how the horse meat he so much detested was procured, and where, he might probably have expressed even more indignation, for it is not at all unlikely that the colt had strayed from his own band.

21st. - The timber along the river banks is plentiful, and often attains a large size. It is chiefly of the species called balsam poplar, (*Populus balsamifera*.)

Towards noon to-day, we observed ahead several groups of Indians, perhaps twenty in each, and

---

on the appearance of our cavalcade, they manifested their joy at seeing us, by the most extravagant and grotesque gestures, dancing and capering most ludicrously. Every individual of them was perfectly naked, with the exception of a small thong around the waist, to which was attached a square piece of flannel, skin, or canvass, depending half way to the knees. Their stature was rather below the middle height, but they were strongly built and very muscular. Each man carried his salmon spear, and these, with the knives stuck in their girdles, appeared to be their only weapons, not one of them having a gun. As we neared them, the first group ran towards us, crying "Shoshone, Shoshone," and caused some delay by their eagerness to grasp our hands and examine our garments. After one group had become satisfied with fingering us, we rode on and suffered the same process by the next, and so on until we had passed the whole, every Indian crying with a loud voice, "Tabiboo sant, tabiboo sant!" (white man is good, white man is good.)

In a short time the chief joined us, and our party stopped for an hour, and had a "talk" with him. He told us, in answer to our questions, that his people had fish, and would give them for our goods if we would sleep one night near their camp, and smoke with them. No trade, of consequence, can ever be effected with Indians, unless the pipe be first smoked, and the matter calmly and seriously deliberated upon. An Indian chief would think his dignity seriously compromised if he were expected to do any thing in a hurry, much less so serious a matter as a salmon or beaver trade; and if we had refused his offered terms, he would probably have allowed us to pass on, and denied himself the darling rings, bells, and paint, rather than infringe a custom so long religiously practiced by his people. We were therefore inclined to humor our Snake friend, and accordingly came to a halt, on the bank of the river.

The chief and several of his favored young braves sat with us on the bank, and we smoked with them, the other Indians forming a large circle around.

The chief is a man rather above the ordinary height, with a fine, noble countenance, and remarkably large, prominent eyes. His person, instead of being naked, as is usual, is clothed in a robe made of the skin of the mountain sheep; a broad band made of large blue beads, is fastened to the top of his head, and hangs over on his cheeks, and around his neck is suspended the foot of a huge grizzly bear. The possession of this uncouth ornament is considered among them, a great honor, since none but those whose prowess has enabled them to kill the animal, are allowed to wear it, and with their weak and inefficient weapons, the destruction of so fierce and terrible a brute, is a feat that may well entitle them to some distinction.

We remained two hours at the spot where we halted, and then passed on about four miles, accompanied by the chief and his people, to their camp, where we pitched our tents for the night. In a short time the Indians came to us in great numbers, with bundles of dried salmon in their arms, and a few recent ones. We commenced our trading immediately, giving them in exchange, fish-hooks, beads, knives, paint, &c., and before evening, had procured sufficient provision for the consumption of our party until we arrive at the falls of Snake river, where we are told we shall meet the Bannecks, from whom we can doubtless trade a supply, which will serve us until we reach Walla-walla.

While we were pursuing our trade, Richardson and Mr. Ashworth rode into the camp, and I observed by the countenance of the latter, that something unusual had occurred. I felt very certain that no ordinary matter would be capable of ruffling this calm, intrepid, and almost fool-hardy young man; so it was with no little interest that I drew near, to listen to the tale which he told

Captain W. with a face flushed with unusual anger, while his whole person seemed to swell with pride and disdain.

He said that while riding about five miles behind the party, (not being able to keep up with it on account of his having a worn out horse,) he was attacked by about fifty of the Indians whom we passed earlier in the day, dragged forcibly from his horse and thrown upon the ground. Here, some held their knives to his throat to prevent his rising, and others robbed him of his saddle bags, and all that they contained. While he was yet in this unpleasant situation, Richardson came suddenly upon them, and the cowardly Indians released their captive instantly, throwing the saddle bags and every thing else upon the ground and flying like frightened antelopes over the plain. The only real damage that Mr. Ashworth sustained, was the total loss of his saddle bags, which were cut to pieces by the knives of the Indians, in order to abstract the contents. These, however, we think he deserves to lose, inasmuch, as with all our persuasion, we have never been able to induce him to carry a gun since we left the country infested by the Blackfeet; and to-day, the very show of such a weapon would undoubtedly have prevented the attack of which he complains. Richardson gives an amusing account of the deportment of our young English friend while he was lying under the knives of his captors. The heavy whip of buffalo hide, which was his only weapon, was applied with great energy to the naked backs and shoulders of the Indians, who winced and stamped under the infliction, but still feared to use their knives, except to prevent his rising. Richardson, says, that until he approached closely, the blows were descending in rapid succession, and our hunter was in some danger of losing his characteristic dignity in his efforts to repress a loud and hearty laugh at the extreme ludicrousness of the whole scene.

Captain W., when the circumstances of the assault were stated to him, gave an immediate order for the suspension of business, and calling the chief to him, told him seriously, that if an attempt were again made to interrupt any of his party on their march, the offenders should be tied to a tree and whipped severely. He enforced his language by gestures so expressive that none could misunderstand him, and he was answered by a low groan from the Indians present, and a submissive bowing of their heads. The chief appeared very much troubled, and harangued his people for considerable time on the subject, repeating what the captain had said, with some additional remarks of his own, implying that even a worse fate than whipping would be the lot of future delinquents.

22nd.-Last night during the second guard, while on my walk around the camp, I observed one of my men squatted on the ground, intently surveying some object which appeared to be moving among the horses. At his request, I stooped also, and could distinctly perceive something near us which was certainly not a horse, and yet was as certainly a living object. I supposed it to be either a bear or a wolf, and at the earnest solicitation of the man, I gave the word "fire." The trigger was instantly pulled, the sparks flew from the flint, but the rifle was not exploded. At the sound, an Indian sprang from the grass where he had been crouching, and darted away towards the Snake camp. His object certainly was to appropriate one of our horses, and very fortunate for him was it that the gun missed fire, for the man was an unerring marksman. This little warning will probably check other similar attempts by these people.

Early in the morning I strolled into the Snake camp. It consists of about thirty lodges or wigwams, formed generally of branches of trees tied together in a conic summit, and covered with buffalo, deer, or elk skins. Men and little children were lolling about the ground all around the wigwams,

together with a heterogeneous assemblance of dogs, cats, some tamed prairie wolves, and other "varmints." The dogs growled and snapped when I approached, the wolves cowered and looked cross, and the cats ran away and hid themselves in dark corners. They had not been accustomed to the face of a white man, and all the quadrupeds seemed to regard me as some monstrous production, more to be feared than loved or courted. This dislike, however, did not appear to extend to the bipeds, for many of every age and sex gathered around me, and seemed to be examining me critically in all directions. The men looked complacently at me, the women, the dear creatures, smiled upon me, and the little naked, pot-bellied children crawled around my feet, examining the fashion of my hard shoes, and playing with the long fringes of my leathern inexpressibles. But I scarcely know how to commence a description of the tout en semble of the camp, or to frame a sentence which will give an adequate idea of the extreme filth, and most horrific nastiness of the whole vicinity. I shall therefore but transiently glance at it, omitting many of the most disgusting and abominable features.

Immediately as I entered the village, my olfactories were assailed by the most vile and mephitic odors, which I found to proceed chiefly from great piles of salmon entrails and garbage which were lying festering and rotting in the sun, around the very doors of the habitations. Fish, recent and half dried, were scattered all over the ground, under the feet of the dogs, wolves and Indian children; and others which had been split, were hanging on rude platforms erected within the precincts of the camp. Some of the women were making their breakfast of the great red salmon eggs as large as peas, and using a wooden spoon to convey them to their mouths. Occasionally, also, by way of varying the repast, they would take a huge pinch of a drying fish which was lying on the ground near them. Many of the children were similarly employed, and the little imps would also have hard contests with the dogs for a favorite morsel, the former roaring and blubbering, the latter yelping and snarling, and both rolling over and over together upon the savory soil. The whole economy of the lodges, and the inside and outside appearance, was of a piece with every thing else about them - filthy beyond description - the very skins which covered the wigwams were black and stiff with rancid salmon fat, and the dresses (if dresses they may be called) of the women, were of the same color and consistence, from the same cause. These dresses are little square pieces of deer skin, fastened with a thong around the loins, and reaching about half way to the knees; the rest of the person is entirely naked. Some of the women had little children clinging like bullfrogs to their backs, without being fastened, and in that situation extracting their lactiferous sustenance from the breast, which was thrown over the shoulders.

It is almost needless to say, that I did not remain long in the Snake camp; for although I had been a considerable time estranged from the abodes of luxury, and had become somewhat accustomed to, at least, a partial assimilation to a state of nature, yet I was not prepared for what I saw here. I never had fancied any thing so utterly abominable, and was glad to escape to a purer and more wholesome atmosphere.

When I returned to our camp, the trading was going on as briskly as yesterday. A large number of Indians were assembled around, all of whom had bundles of fish, which they were anxious to dispose of. The price of a dried salmon is a straight awl, and a small fish hook, value about one cent; ten fish are given for a common butcher knife that costs eight cents. Some, however, will prefer beads, paint, &c., and of these articles, about an equal amount in value is given. A beaver skin can be had for a variety of little matters, which cost about twelve and a half cents; value, in Boston,

from eight to ten dollars!

Early in the afternoon, we repacked our bales of goods and rode out of the encampment, the Indians yelling an adieu to us as we passed them. We observed that one had wrapped a buffalo robe around him, taken a bow and arrows in his hand, and joined us as we went off. Although we travelled rapidly during the afternoon, the man kept with us without apparent over-exertion or fatigue, trotting along constantly for miles together. He is probably on a visit to a village of his people who are encamped on the "Big river."

23d.-Towards noon, to-day, we fell in with a village, consisting of thirty willow lodges of Ban-necks. The Indians flocked out to us by hundreds, leaving their fishing, and every other employment, to visit the strangers. The chief soon made himself known to us, and gave us a pressing invitation to stop a short time with them, for the purpose of trade. Although we had a good supply of fish on hand, and did not expect soon to suffer from want, yet we knew not but we might be disappointed in procuring provision lower in the country, and concluded, therefore, to halt for half an hour, and make a small increase to our stock. We were in some haste, and anxious to travel on as quickly as possible, to Snake river. Captain W., therefore, urged the chief to have the fish brought immediately, as he intended soon to leave them. The only reply he could obtain to this request, was "te sant," (it is good,) accompanied by signs, that he wished to smoke. A pipe was provided, and he, with about a dozen of his young men, formed a circle near, and continued smoking, with great tranquillity, for half an hour.

Our patience became almost exhausted, and they were told that if their fish were not soon produced, we should leave them empty as we came; to this, the only answer of the chief was a sign to us to remain still, while he deliberated yet farther upon the subject.

We sat a short time longer in silent expectation, and were then preparing to mount our horses and be off, when several squaws were despatched to one of the lodges. They returned in a few minutes, bringing about a dozen dried fish. These were laid in small piles on the ground, and when the usual price was offered for them, they refused it scornfully, making the most exorbitant demands. As our articles of trade were running low, and we were not in immediate want, we purchased only a sufficiency for one day, and prepared for our departure, leaving the ground strewn with the neglected salmon. The Indians were evidently very much irritated, as we could perceive by their angry countenances, and loud words of menace. Some loosed the bows from their shoulders, and shook them at us with violent gestures of rage, and a boy, of seventeen or eighteen years of age, who stood near me, struck my horse on the head with a stick, which he held in his hand. This provoked me not a little; and spurring the animal a few steps forward, I brought my heavy whip several times over his naked shoulders, and sent him screeching into the midst of his people. Several bows were drawn at me for this act, and glad would the savages have been to have had me for a short time at their mercy, but as it was, they feared to let slip their arrows, and soon dropped their points, contenting themselves with vapping away in all the impotence of childish rage. As we rode off, they greeted us, not with the usual gay yell, but with a scornful, taunting laugh, that sounded like the rejoicings of an infernal jubilee. Had these people been provided with efficient arms, and the requisite amount of courage to use them, they might have given us some inconvenience.

Towards evening, we arrived on Snake river, crossed it at a ford, and encamped near a number of lodges along the shore. Shortly afterwards, Captain W., with three men, visited the Indians, carry-

ing with them some small articles, to trade for fish. In about half an hour they returned, bringing only about ten salmon. They observed, among the Indians, the same disinclination to traffic that the others had manifested; or rather, like the first, they placed a higher value than usual upon the commodity, and wanted, in exchange, articles which we were not willing to spare them. They treated Captain W. with the same insolence and contempt which was so irritating from those of the other village.

This kind of conduct is said to be unusual among this tribe, but it is probably now occasioned by their having recently purchased a supply of small articles from Captain Bonneville, who, they inform us, has visited them within a few days.

Being desirous to escape from the immediate vicinity of the village, we moved our camp about four miles further, and stopped for the night.

24th.-The sudden and entire change from flesh exclusively, to fish, ditto, has affected us all more or less, with diarrhoea and pain in the abdomen; several of the men have been so extremely sick, as scarcely to be able to travel; we shall, however, no doubt, become accustomed to it in a few days.

We passed, this morning, over a flat country, very similar to that along the Platte, abounding in wormwood bushes, the pulpy-leaved thorn, and others, and deep with sand, and at noon stopped on a small stream called Malheur's creek.

Here a party of nine men was equipped, and despatched up the river, and across the country, on a trapping expedition, with orders to join us early in the ensuing winter, at the fort on the Columbia. Richardson was the chief of this party, and when I grasped the hand of our worthy hunter, and bade him farewell, I felt as though I were taking leave of a friend. I had become particularly attached to him, from the great simplicity and kindness of his heart, and his universally correct and proper deportment. I had been accustomed to depend upon his knowledge and sagacity in every thing connected with the wild and roving life which I had led for some months past, and I felt that his absence would be a real loss, as well to myself, as to the whole camp, which had profited so much by his dexterity and skill.

Our party will now consist of only seventeen men, but the number is amply sufficient, as we have passed over the country where danger is to be apprehended from Indians. We followed the course of the creek during the afternoon, and in the evening encamped on Snake river, into which Malheur empties. The river is here nearly a mile wide, but deep and clear, and for a considerable distance, perfectly navigable for steamboats, or even larger craft, and it would seem not improbable, that at some distant day, these facilities, added to the excellence of the alluvial soil, should induce the stout and hardy adventurers of our country to make permanent settlements here.

I have not observed that the Indians often attempt fishing in the "big river," where it is wide and deep; they generally prefer the slues, creeks, &c. Across these, a net of closely woven willows is stretched, placed vertically, and extending from the bottom to several feet above the surface. A number of Indians enter the water about a hundred yards above the net, and, walking closely, drive the fish in a body against the wicker work. Here they frequently become entangled, and are always checked; the spear is then used dexterously, and they are thrown out, one by one, upon the shore. With industry, a vast number of salmon might be taken in this manner; but the Indians are generally so indolent and careless of the future, that it is rare to find an individual with provision enough to supply his lodge for a week.

---

25th.-Early in the day the country assumed a more hilly aspect. The rich plains were gone. Instead of a dense growth of willow and the balsam poplar, low bushes of wormwood, &c., predominated, intermixed with the tall, rank prairie grass.

Towards noon, we fell in with about ten lodges of Indians, (Snakes and Bannecks,) from whom we purchased eighty salmon. This has put us in excellent spirits. We feared that we had lost sight of the natives, and as we had not reserved half the requisite quantity of provisions for our support to the Columbia, (most of our stock having been given to Richardson's trapping party,) the prospect of several days abstinence seemed very clear before us.

In the afternoon, we deviated a little from our general course, to cut off a bend in the river, and crossed a short, high hill, a part of an extensive range which we have seen for two days ahead, and which we suppose to be in the vicinity of Powder river, and in the evening encamped in a narrow valley, on the borders of the Shoshone.

26th.-Last night I had the misfortune to lose my favorite, and latterly my only riding horse, the other having been left at Fort Hall, in consequence of a sudden lameness, with which he became afflicted only the night before our departure. [ I afterwards ascertained that this lameness of my "buffalo horse," was intentionally caused by one of the hopeful gentry left in charge of the fort, for the purpose of rendering the animal unable to travel, and as a consequence, confining him to the fort at the time of our departure. The good qualities of the horse as a buffalo racer, were universally known and appreciated, and I had repeatedly refused large sums for him, from those who desired him for this purpose.] The animal was turned out as usual, with the others, in the evening, and as I have never known him to stray in a single instance, I conclude that some lurking Indian has stolen him. It was the fattest and handsomest horse in the band, and was no doubt carefully selected, as there was probably but a single Indian, who was unable to take more, for fear of alarming the guard. This is the most serious loss I have met with. The animal was particularly valuable to me, and no consideration would have induced me to part with it here. It is, however, a kind of accident that we are always more or less liable to in this country, and as a search would certainly be fruitless, must be submitted to with as good a grace as possible. Captain W. has kindly offered me the use of horses until we arrive at Columbia.

We commenced our march early, travelling up a broad, rich valley, in which we encamped last night, and at the head of it, on a creek called Brule, we found one family, consisting of five Snake Indians, one man, two women, and two children. They had evidently but very recently arrived, probably only last night, and as they must certainly have passed our camp, we feel little hesitation in believing that my lost horse is in their possession. It is, however, impossible to prove the theft upon them in any way, and time is not allowed us to search the premises. We cannot even question them concerning it, as our interpreter, McCarey, left us with the trapping party.

We bought, of this family, a considerable quantity of dried choke-cherries, these being the only article of commerce which they possessed. This fruit they prepare by pounding it with stones, and drying it in masses in the sun. It is then good tasted, and somewhat nutritive, and it loses, by the process, the whole of the astringency which is so disagreeable in the recent fruit.

Leaving the valley, we proceeded over some high and stony hills, keeping pretty nearly the course of the creek. The travelling was, as usual in such places, difficult and laborious, and our progress necessarily slow and tedious. Throughout the day, there was no change in the character of the country, and the consequence was, that three of our poor horses gave up and stopped.

27th.-This morning, two men were left at the camp, for the purpose of collecting and bringing on, moderately, the horses left yesterday, and others that may hereafter fail. We were obliged to leave with them a stock of provision greater in proportion than our own rather limited allowance, and have thus somewhat diminished our chance of performing the remainder of the journey with satisfied appetites, but there is some small game to be found on the route, grouse, ducks, &c., and occasionally a beaver may be taken, if our necessities are pressing. We made a noon camp on Brule, and stopped at night in a narrow valley, between the hills.

28th.-Towards noon to-day, we lost the trail among the hills, and although considerable search was made, we were not able to find it again. We then directed our course due north, and at 2 o'clock struck Powder river, a narrow and shallow stream, plentifully fringed with willows. We passed down this river for about five miles and encamped. Captain W. immediately left us to look for the lost trail, and returned in about two hours, with the information that no trace of it could be found. He therefore concludes that it is up stream, and to-morrow we travel back to search for it in that direction. Our men killed, in the afternoon, an antelope and a deer fawn, which were particularly acceptable to us; we had been on an allowance of one dried salmon per day, and we had begun to fear that even this poor pittance would fail before we could obtain other provision. Game has been exceedingly scarce, with the exception of a few grouse, pigeons, &c. We have not seen a deer, antelope, or any other quadruped larger than a hare, since we left the confines of the buffalo country. Early this morning, one of our men, named Hubbard, left us to hunt, and as he has not joined us this evening, we fear he is lost, and feel some anxiety about him, as he has not been accustomed to finding his way through the pathless wilds. He is a good marksman, however, and will not suffer much for food; and as he knows the general course, he will probably join us at Wallawalla, if we should not see him earlier.

29th.-We commenced our march early this morning, following the river to a point about six miles above where we struck it yesterday. We then took to the hills, steering N. N. W.,-it being impossible, from the broken state of the country, to keep the river bank.

Soon after we commenced the ascent, we met with difficulties in the shape of high, steep, banks, and deep ravines, the ground being thickly strewed with sharp, angular masses of lava and basalt. As we proceeded, these difficulties increased to such a degree, as to occasion a fear that our horses could never proceed. The hills at length became like a consolidated mass of irregular rock, and the small strips of earthy matter that occasionally appeared, were burst into wide fissures by the desiccation to which the country at this season is subject. Sometimes, as we approached the verges of the cliffs, we could see the river winding its devious course many hundred feet below, rushing and foaming in eddies and whirlpools, and fretting against the steep sides of the rocks, which hemmed it in. These are what are called the cut-rocks, the sides of which are in many places as smooth and regular as though they had been worked with the chisel, and the opening between them, through which the river flows, is frequently so narrow that a biscuit might be thrown across it.

We travelled over these rocks until 1 o'clock in the day, when we stopped to rest in a small ravine, where we found a little water, and pasture for our horses. At 3, we were again on the move, making across the hills towards the river, and after a long, circuitous march, we arrived on its banks, considerably wearied, and every horse in our band lamed and completely exhausted. We have not yet found any clue to the trail for which we have been searching so anxiously; indeed it would be

impossible for a distinguishable trace to be left over these rugged, stony hills, and the difficulty of finding it, or determining its direction is not a little increased by a dense fog which constantly envelopes these regions, obscuring the sun, and rendering it impossible to see an object many hundred yards in advance.

The next day we were still travelling over the high and steep hills, which, fortunately for our poor horses, were far less stony than hitherto. At about noon we descended to the plain, and struck the river in the midst of a large level prairie. We proceeded up stream for an hour, and to our great joy suddenly came in sight of a broad, open trail stretching away to the S. W. We felt, in some degree, the pleasure of a sailor who has found the port of which he has been long and anxiously in search. We made a noon camp here, at which we remained two hours, and then travelled on in fine spirits over a beautiful, level, and unobstructed country. Our horses seemed to participate in our feelings, and trotted on briskly, as though they too rejoiced in the opportunity of escaping the dreaded hills and rocks. Towards evening we crossed a single range of low hills and came to a small round prairie, with good water and excellent pasture. Here we found a family of Kayouse Indians, and encamped within sight of them. Two squaws from this family, visited us soon after, bringing some large kamas cakes and fermented roots, which we purchased of them.

31st.-Our route this morning, was over a country generally level and free from rocks; we crossed, however, one short, and very steep mountain range, thickly covered with tall and heavy pine trees, and came to a large and beautiful prairie, called the Grand ronde. Here we found Captain Bonneville's company, which has been lying here several days, waiting the arrival of its trapping parties. We made a noon camp near it, and were visited by Captain Bonneville. This was the first time I had seen this gentleman. His manners were affable and pleasing, and he seemed possessed of a large share of bold, adventurous, and to a certain extent, romantic spirit, without which no man can expect to thrive as a mountain leader. He stated that he preferred the "free and easy" life of a mountain hunter and trapper, to the comfortable and luxurious indolence of a dweller in civilized lands, and would not exchange his homely, but wholesome mountain fare, and his buffalo lodge, for the most piquant dishes of the French artiste, and the finest palace in the land. This came well from him, and I was pleased with it, although I could not altogether agree with him in sentiment, for I confess I had become somewhat weary of rough travelling and rough fare, and looked forward with no little pleasure to a long rest under a Christian roof, and a general participation in Christian living.

With the captain, came a whole troop of Indians, Kayouse, Nez Perces, &c. They were very friendly towards us, each of the chiefs taking us by the hand with great cordiality, appearing pleased to see us, and anxious to point out to us the easiest and most expeditious route to the lower country. These Indians are, almost universally, fine looking, robust men, with strong aqualine features, and a much more cheerful cast of countenance than is usual amongst the race. Some of the women might almost be called beautiful, and none that I have seen are homely. Their dresses are generally of thin deer or antelope skin, with occasionally a bodice of some linen stuffs, purchased from the whites, and their whole appearance is neat and cleanly, forming a very striking contrast to the greasy, filthy, and disgusting Snake females. I observed one young and very pretty looking woman, dressed in a great superabundance of finery, glittering with rings and beads, and flaunting in broad bands of scarlet cloth. She was mounted astride, -Indian fashion, -upon a fine bay horse, whose head and tail were decorated with scarlet and blue ribbons, and the saddle, upon which

---

the fair one sat, was ornamented all over with beads and little hawk's bells. This damsel did not do us the honor to dismount, but seemed to keep warily aloof, as though she feared that some of us might be inordinately fascinated by her fine person and splendid equipments, and her whole deportment proved to us, pretty satisfactorily, that she was no common beauty, but the favored companion of one high in office, who was jealous of her slightest movement.

After making a hasty meal, and bidding adieu to the captain, and our friendly Indian visitors, we mounted our horses, and rode off. About half an hour's brisk trotting brought us to the foot of a steep and high mountain, called the Blue. This is said to be the most extensive chain west of the dividing ridge, and, with one exception perhaps the most difficult of passage. The whole mountain is densely covered with tall pine trees, with an undergrowth of service bushes and other shrubs, and the path is strewn, to a very inconvenient degree, with volcanic rocks. In some of the ravines we find small springs of water; they are, however, rather rare, and the grass has been lately consumed, and many of the trees blasted by the ravaging fires of the Indians. These fires are yet smouldering, and the smoke from them effectually prevents our viewing the surrounding country, and completely obscures the beams of the sun. We travelled this evening until after dark, and encamped on a small stream in a gorge, where we found a plot of grass that had escaped the burning.

September 1st.-Last evening, as we were about retiring to our beds, we heard, distinctly, as we thought, a loud halloo, several times repeated, and in a tone like that of a man in great distress. Supposing it to be a person who had lost his way in the darkness, and was searching for us, we fired several guns at regular intervals, but as they elicited no reply, after waiting a considerable time, we built a large fire, as a guide, and lay down to sleep.

Early this morning, a large panther was seen prowling around our camp, and the hallooing of last night was explained. It was the dismal, distressing yell by which this animal entices its prey, until pity or curiosity induces it to approach to its destruction. The panther is said to inhabit these forests in considerable numbers, and has not unfrequently been known to kill the horses of a camp. He has seldom the temerity to attack a man, unless sorely pressed by hunger, or infuriated by wounds.

Townsend's Across the Rockies to the Columbia

#### CHAPTER IX

Passage of the Blue Mountains - Sufferings from thirst - Utalla river - A transformation - A novel meal - Walla-walla river - Columbia river and Fort Walla-walla - A dinner with the missionaries - Anecdote of Mr. Lee - A noble repast - Brief notice of the Fort - Departure of the missionaries - Notice of the Walla-walla Indians - Departure for Fort Vancouver - Wild ducks - Indian graves - Indian horses - Visits from Indians - Ophthalmia, a prevalent disease - Rough travelling - A company of Chinook Indians - The Dalles - The party joined by Captain Wyeth - Embarkation in canoes - A heavy gale - Dangerous navigation - Pusillanimous conduct of an Indian helmsman - A zealous botanist - Departure of Captain Wyeth with five men - Cascades - A portage - Meeting with the missionaries - Loss of a canoe - A toilsome duty - Arrival at Fort Vancouver - reflections suggested by it - Dr. John McLoughlin, the chief factor - Domiciliation of the travellers at Fort Vancouver.

September 1st. The path through the valley, in which we encamped last night, was level and

---

smooth for about a mile; we then mounted a short, steep hill, and began immediately to descend. The road down the mountain wound constantly, and we travelled in short, zig-zag lines, in order to avoid the extremely abrupt declivities; but occasionally, we were compelled to descend in places that made us pause before making the attempt: they were, some of them, almost perpendicular, and our horses would frequently slide several yards, before they could recover. To this must be added enormous jagged masses of rock, obstructing the road in many places, and pine trees projecting their horizontal branches across the path.

The road continued, as I have described it, to the valley in the plain, and a full hour was consumed before we reached it. The country then became comparatively level again to the next range, where a mountain was to be ascended of the same height as the last. Here we dismounted and led our horses, it being impracticable, in their present state, to ride them. It was the most toilsome march I ever made, and we were all so much fatigued, when we arrived at the summit, that rest was as indispensable to us as to our poor jaded horses. Here we made a noon camp, with a handful of grass and no water. This last article appears very scarce, the ravines affording none, and our dried salmon and kamas bread were eaten unmoistened. The route, in the afternoon, was over the top of the mountain, the road tolerably level, but crowded with stones. Towards evening, we commenced descending again, and in every ravine and gulley we cast our anxious eyes in search of water; we even explored several of them, where there appeared to exist any probability of success, but not one drop did we find. Night at length came on, dark and pitchy, without a moon or a single star to give us a ray of light; but still we proceeded, depending solely upon the vision and sagacity of our horses to keep the track. We travelled steadily until 9 o'clock, when we saw ahead the dark outline of a high mountain, and soon after heard the men who rode in front, cry out, joyously, at the top of their voices, "water! water!" It was truly a cheering sound, and the words were echoed loudly by every man in the company. We had not tasted water since morning, and both horses and men have been suffering considerably for the want of it.

2d. - Captain W. and two men, left us early this morning for Walla-walla, where they expect to arrive this evening, and send us some provision, of which we shall be in need, to-morrow.

Our camp moved soon after, under the direction of Captain Thing, and in about four miles reached Utalla river, where it stopped, and remained until 12 o'clock.

As we were approaching so near the abode of those in whose eyes we wished to appear like fellow Christians, we concluded that there would be a propriety in attempting to remove at least one of the heathenish badges which we had worn throughout the journey; so Mr. N.'s razor was fished out from its hiding place in the bottom of his trunk, and in a few minutes our encumbered chins lost their long cherished ornaments; we performed our ablutions in the river, arrayed ourselves in clean linen, trimmed our long hair, and then arranged our toilet before a mirror, with great self-complacence and satisfaction. I admired my own appearance considerably, (and this is, probably, an acknowledgement that few would make,) but I could not refrain from laughing at the strange, party-colored appearance of my physiognomy, the lower portion being fair, like a woman's, and the upper, brown and swarthy as an Indian.

Having nothing prepared for dinner to-day, I strolled along the stream above the camp, and made a meal on rose buds, of which I collected an abundance; and on returning, I was surprised to find Mr. N. and Captain T. picking the last bones of a bird which they had cooked. Upon inquiry, I ascertained that the subject was an unfortunate owl which I had killed in the morning, and had

intended to preserve, as a specimen. The temptation was too great to be resisted by the hungry Captain and naturalist, and the bird of wisdom lost the immortality which he might otherwise have acquired.

In the afternoon, soon after leaving the Utalla, we ascended a high and very steep hill, and came immediately in view of a beautiful, and regularly undulating country of great extent. We have now probably done with high, rugged mountains; the sun shines clear, the air is bracing and elastic, and we are all in fine spirits.

The next day, the road being generally level, and tolerably free from stones, we were enabled to keep our horses at the swiftest gait to which we dare urge them. We have been somewhat disappointed in not receiving the expected supplies from Walla-walla, but have not suffered for provision, as the grouse and hares are very abundant here, and we have shot as many as we wished. At about noon we struck the Walla-walla river, a very pretty stream of fifty or sixty yards in width, fringed with tall willows, and containing a number of salmon, which we can see frequently leaping from the water. The pasture here, being good, we allowed our horses an hour's rest to feed, and then travelled on over the plain, until near dark, when, on rising a sandy hill, the noble Columbia burst at once upon our view. I could scarcely repress a loud exclamation of delight and pleasure, as I gazed upon the magnificent river, flowing silently and majestically on, and reflected that I had actually crossed the vast American continent, and now stood upon a stream that poured its waters directly into the Pacific. This, then, was the great Oregon, the first appearance of which gave Lewis and Clark so many emotions of joy and pleasure, and on this stream our indefatigable countrymen wintered, after the toils and privations of a long, and protracted journey through the wilderness. My reverie was suddenly interrupted by one of the men exclaiming from his position in advance, "there is the fort" We had, in truth approached very near, without being conscious of it. There stood the fort on the bank of the river; horses and horned cattle were roaming about the vicinity, and on the borders of the little Walla-walla, we recognized the white tent of our long lost missionaries. These we soon joined, and were met and received by them like brethren. Mr. N. and myself were invited to sup with them upon a dish of stewed hares which they had just prepared, and it is almost needless to say that we did full justice to the good men's cookery. They told us that they had travelled comfortably from Fort Hall, without any unusual fatigue, and like ourselves, had no particularly stirring adventures. Their route, although somewhat longer, was a much less toilsome and difficult one, and they suffered but little for food, being well provided with dried buffalo meat, which had been prepared near Fort Hall.

Mr. Walker, (a young gentleman attached to the band,) related an anecdote of Mr. Lee, the principal, which I thought eminently characteristic. The missionaries were, on one occasion, at a considerable distance behind the main body, and had stopped for a few moments to regale themselves on a cup of milk from a cow which they were driving. Mr. L. had unstrapped the tin pan from his saddle, and was about applying himself to the task, when a band of a dozen Indians was descried at a distance, approaching the little party at full gallop. There was but little time for consideration. The rifles were looked to, the horses were mounted in eager haste, and all were ready for a long run, except Mr. Lee himself, who declared that nothing should deprive him of his cup of milk, and that he meant to "lighten the old cow before he moved." He accordingly proceeded coolly to fill his tin pan, and, after a hearty drink, grasped his rifle, and mounted his horse, at the very moment that the Indians had arrived to within speaking distance. To the great relief of most

of the party, these proved to be of the friendly Nez Perce tribe, and after a cordial greeting, they travelled on together.

The missionaries informed us that they had engaged a large barge to convey themselves and baggage to Fort Vancouver, and that Captain Stewart and Mr. Ashworth were to be of the party. Mr. N. and myself were very anxious to take a seat with them, but to our disappointment, were told that the boat would scarcely accommodate those already engaged. We had therefore to relinquish it, and prepare for a journey on horseback to the Dalles, about eighty miles below, to which place Captain W. would precede us in the barge, and engage canoes to convey us to the lower fort.

This evening, we purchased a large bag of Indian meal, of which we made a kettle of mush, and mixed with it a considerable quantity of horse tallow and salt. This was, I think, one of the best meals I ever made. We all ate heartily of it, and pronounced it princely food. We had been long without bread stuff of any kind, and the coarsest farinaceous substance, with a proper allowance of grease, would have been highly prized.

The next morning, we visited Walla-walla Fort, and were introduced, by Captain W., to Lieutenant Pierre S. Pambrun, the superintendent. Wyeth and Mr. Pambrun had met before, and were well acquainted; they had, therefore, many reminiscences of by-gone days to recount, and long conversations, relative to the variety of incidents which had occurred to each, since last they parted.

The fort is built of drift logs, and surrounded by a stoccade of the same, with two bastions, and a gallery around the inside. It stands about a hundred yards from the river, on the south bank, in a bleak and unprotected situation, surrounded on every side by a great, sandy plain, which supports little vegetation, except the wormwood and thorn-bushes. On the banks of the little river, however, there are narrow strips of rich soil, and here Mr. Pambrun raises the few garden vegetables necessary for the support of his family. Potatoes, turnips, carrots, &c., thrive well, and Indian corn produces eighty bushels to the acre.

At about 10 o'clock, the barge got under way, and soon after, our company with its baggage, crossed the river in canoes, and encamped on the opposite shore.

There is a considerable number of Indians resident here, Kayouse's and a collateral band of the same tribe, called Walla-wallas. They live along the bank of the river, in shantys or wigwams of drift wood, covered with buffalo or deer skins. They are a miserable, squalid looking people, are constantly lolling around and in the fort, and annoy visitors by the importunate manner in which they endeavor to force them into some petty trade for a pipe, a hare, or a grouse. All the industrious and enterprising men of this tribe are away trading salmon, kamas root, &c. to the mountain companies.

Notwithstanding the truly wretched plight in which these poor people live, and the privations which they must necessarily have to suffer, they are said to be remarkably honest and upright in their dealings, and generally correct in their moral deportment. Although they doubtless have the acquisitive qualities so characteristic of the race, they are rarely known to violate the principles of common honesty. A man may leave his tent unguarded, and richly stored with every thing which ordinarily excites the cupidity of the Indian, yet, on returning after a long absence, he may find all safe. What a commentary is this on the habits and conduct of our Christian communities!

The river is here about three-fourths of a mile in width, a clear, deep, and rapid stream, the current being generally from three to four miles an hour. It is the noblest looking river I have seen since leaving our Delaware. The banks are in many places high and rocky, occasionally inter-

rupted by broad, level sandy beaches. The only vegetation along the margin, is the wormwood, and other low, arid plants, but some of the bottoms are covered with heavy, rank grass, affording excellent pasture for horses.

5th. This morning we commenced our march down the Columbia. We have no provision with us except flour and horse tallow, but we have little doubt of meeting Indians daily, with whom we can trade for fish. Our road will now be a rather monotonous one along the bank of the river, tolerably level, but often rocky, so that very rapid travelling is inadmissible. The mallard duck, the widgeon, and the green-winged teal are tolerably abundant in the little estuaries of the river. Our men have killed several, but they are poor, and not good.

6th. We have observed to-day several high, conical stacks of drift-wood near the river. These are the graves of the Indians. Some of these cemeteries are of considerable extent, and probably contain a great number of bodies. I had the curiosity to peep into several of them, and even to remove some of the coverings, but found nothing to compensate for the trouble.

We bought some salmon from Indians whom we met to-day, which, with our flour and tallow, enable us to live very comfortably.

7th. We frequently fall in with large bands of Indian horses. There are among them some very beautiful animals, but they are generally almost as wild as deer, seldom permitting an approach to within a hundred yards or more. They generally have owners, as we observe upon many of them strange hieroglyphic looking characters, but there are no doubt some that have never known the bit, and will probably always roam the prairie uncontrolled. When the Indians wish to catch a horse from one of these bands, they adopt the same plan pursued by the South Americans for taking the wild animal.

8th. Our road to-day has been less monotonous, and much more hilly than hitherto. Along the bank of the river, are high mountains, composed of basaltic rock and sand, and along their bases enormous drifts of the latter material. Large, rocky promontories connected with these mountains extend into the river to considerable distances, and numerous islands of the same dot its surface. We are visited frequently as we travel along, by Indians of the Walla-walla and other tribes, whose wigwams we see on the opposite side of the river. As we approach these rude huts, the inhabitants are seen to come forth in a body; a canoe is immediately launched, the light bark skims the water like a bird, and in an incredibly short time its inmates are with us. Sometimes a few salmon are brought to barter for our tobacco, paint, &c., but more frequently they seem impelled to the visit by mere curiosity. To-day a considerable number have visited us, and among them some very handsome young girls. I could not but admire the gaiety and cheerfulness which seemed to animate them. They were in high spirits, and evidently very much pleased with the unusual privilege which they were enjoying.

At our camp in the evening, eight Walla-walla's came to see us. The chief was a remarkably fine looking man, but he, as well as several of his party, was suffering from a severe purulent ophthalmia which had almost deprived him of sight. He pointed to his eyes, and contorting his features to indicate the pain he suffered, asked me by signs to give him medicine to cure him. I was very sorry that my small stock of simples did not contain anything suited to his complaint, and I endeavored to tell him so. I have observed that this disease is rather prevalent among the Indians residing on the river, and I understood from the chief's signs that most of the Indians towards the lower country were similarly affected.

9th. The character of the country has changed considerably since we left Walla-walla. The river has become gradually more narrow, until it is now but about two hundred yards in width, and completely hemmed in by enormous rocks on both sides. Many of these extend for considerable distances into the stream in perpendicular columns, and the water dashes and breaks against them until all around is foam. The current is here very swift, probably six or seven miles to the hour; and the Indian canoes in passing down, seem literally to fly along its surface. The road to-day has been rugged to the very last degree. We have passed over continuous masses of sharp rock for hours together, sometimes picking our way along the very edge of the river, several hundred feet above it; again, gaining the back land, by passing through any casual chasm or opening in the rocks, where we were compelled to dismount, and lead our horses.

This evening, we are surrounded by a large company of Chinook Indians, of both sexes, whose temporary wigwams are on the bank of the river. Many of the squaws have young children sewed up in the usual Indian fashion, wrapped in a skin, and tied firmly to a board, so that nothing but the head of the little individual is seen.

These Indians are very peaceable and friendly. They have no weapons except bows, and these are used more for amusement and exercise, than as a means of procuring them sustenance, their sole dependence being fish and beaver, with perhaps a few hares and grouse, which are taken in traps. We traded with these people for a few fish and beaver skins, and some roots, and before we retired for the night, arranged the men in a circle, and gave them a smoke in token of our friendship.

10th. This afternoon we reached the Dalles. The entire water of the river here flows through channels of about fifteen feet in width, and between high, perpendicular rocks; there are several of these channels at distances of from half a mile to a mile apart, and the water foams and boils through them like an enormous cauldron.

On the opposite side of the river there is a large Indian village, belonging to a chief named Tilki, and containing probably five hundred wigwams. As we approached, the natives swarmed like bees to the shore, launched their canoes, and joined us in a few minutes. We were disappointed in not seeing Captain W. here, as this was the spot where we expected to meet him; the chief, however, told us that we should find him about twelve miles below, at the next village. We were accordingly soon on the move again, and urging our horses to their fastest gait, we arrived about sunset. The captain, the chief of the village, and several other Indians, came out to meet us and make us welcome. Captain W. has been here two days, and we were pleased to learn that he had completed all the necessary arrangements for transporting ourselves and baggage to Vancouver in canoes. The route by land is said to be a very tedious and difficult one, and, in some places, almost impassable, but even were it otherwise, I believe we should all much prefer the water conveyance, as we have become very tired of riding.

Since leaving the upper village this afternoon, we have been followed by scores of Indians on foot and on horseback; some of the animals carrying three at a time; and although we travelled rapidly, the pedestrians were seldom far behind us.

We have concluded to leave our horses here, in charge of the chief of the village, who has promised to attend to them during the winter, and deliver them to our order in the spring. Captain W. having been acquainted with this man before, is willing to trust him.

11th. Early this morning, we launched our three canoes, and each being provided with an Indian, as helmsman, we applied ourselves to our paddles, and were soon moving briskly down the river.

In about an hour after, the wind came out dead ahead, and although the current was in favor, our progress was sensibly checked. As we proceeded, the wind rose to a heavy gale, and the waves ran to a prodigious height. At one moment our frail bark danced upon the crest of a wave, and at the next, fell with a surge into the trough of the sea, and as we looked at the swell before us, it seemed that in an instant we must inevitably be engulfed. At such times, the canoe ahead of us was entirely hidden from view, but she was observed to rise again like a seagull, and hurry on into the same danger. The Indian in my canoe soon became completely frightened; he frequently hid his face with his hands, and sang, in a low melancholy voice, a prayer which we had often heard from his people, while at their evening devotions. As our dangers were every moment increasing, the man became at length absolutely childish, and with all our persuasion and threats, we could not induce him to lay his paddle into the water. We were all soon compelled to put in shore, which we did without sustaining any damage; the boats were hauled up high and dry, and we concluded to remain in our quarters until to-morrow, or until there was a cessation of wind. In about an hour it lulled a little, and Captain W. ordered the boats to be again launched, in the hope of being able to weather a point about five miles below, before the gale again commenced, where we could lie by until it should be safe to proceed. The calm proved, as some of us had suspected, a treacherous one; in a very few minutes after we got under way, we were contending with the same difficulties as before, and again our cowardly helmsman laid by his paddle and began mumbling his prayer. It was too irritating to be borne. Our canoe had swung round broad side to the surge, and was shipping gallons of water at every dash.

At this time it was absolutely necessary that every man on board should exert himself to the utmost to head up the canoe and make the shore as soon as possible. Our Indian, however, still sat with his eyes covered, the most abject and contemptible looking thing I ever saw. We took him by the shoulders and threatened to throw him overboard, if he did not immediately lend his assistance: we might as well have spoken to a stone. He was finally aroused, however, by our presenting a loaded gun at his breast; he dashed the muzzle away, seized his paddle again, and worked with a kind of desperate and wild energy, until he sank back in the canoe completely exhausted. In the mean time the boat had become half full of water, shipping a part of every surf that struck her, and as we gained the shallows every man sprang overboard, breast deep, and began hauling the canoe to shore. This was even a more difficult task than that of propelling her with the oars; the water still broke over her, and the bottom was a deep kind of quicksand, in which we sank almost to the knees at every step, the surf at the same time dashing against us with such violence as to throw us repeatedly upon our faces. We at length reached the shore, and hauled the canoe up out of reach of the breakers. She was then unloaded as soon as possible, and turned bottom upwards. The goods had suffered considerably by the wetting; they were all unbaled and dried by a large fire, which we built on the shore.

We were soon visited by several men from the other boats, which were ahead, and learned that their situation had been almost precisely similar to our own, except that their Indians had not evinced, to so great a degree, the same unmanly terror which had rendered ours so inefficient and useless. They were, however, considerably frightened, much more so than the white men. It would seem strange that Indians, who have been born, and have lived during their whole lives, upon the edge of the water, who have been accustomed, from infancy, to the management of a canoe, and in whose childish sports and manly pastimes these frail barks have always been employed, should

exhibit, on occasions like this, such craven and womanly fears; but the probability is, as their business is seldom of a very urgent nature, that they refrain from making excursions of any considerable extent in situations known to be dangerous, except during calm weather; it is possible, also, that such gales may be rare, and they have not been accustomed to them. Immediately after we landed, our redoubtable helmsman broke away from us, and ran at full speed back towards the village. We have doubtless lost him entirely, but we do not much regret his departure, as he proved himself so entirely unequal to the task he had undertaken.

12th. The gale continues with the same violence as yesterday, and we do not therefore think it expedient to leave our camp. Mr. N.'s large and beautiful collection of new and rare plants was considerably injured by the wetting it received; he has been constantly engaged since we landed yesterday, in opening and drying them. In this task he exhibits a degree of patience and perseverance which is truly astonishing; sitting on the ground, and steaming over the enormous fire, for hours together, drying the papers, and re-arranging the whole collection, specimen by specimen, while the great drops of perspiration roll unheeded from his brow. Throughout the whole of our long journey, I have had constantly to admire the ardor and perfect indefatigability with which he has devoted himself to the grand object of his tour. No difficulty, no danger, no fatigue has ever daunted him, and he finds his rich reward in the addition of nearly a thousand new species of American plants, which he has been enabled to make to the already teeming flora of our vast continent. My bale of birds, which was equally exposed to the action of the water, escaped without any material injury.

In the afternoon, the gale not having abated, Captain W. became impatient to proceed, as he feared his business at Vancouver would suffer by delay; he accordingly proposed taking one canoe, and braving the fury of the elements, saying that he wished five men, who were not afraid of water, to accompany him. A dozen of our fearless fellows volunteered in a moment, and the captain selecting such as he thought would best suit his purpose, lost no time in launching his canoe, and away she went over the foaming waters, dashing the spray from her bows, and laboring through the heavy swells until she was lost to our view. The more sedate amongst us did not much approve of this somewhat hasty measure of our principal; it appeared like a useless and daring exposure of human life, not warranted by the exigencies of the case. Mr. N. remarked that he would rather lose all his plants than venture his life in that canoe.

On the 13th the wind shifted to due north, and was blowing somewhat less furiously than on the previous day. At about noon we loaded our canoes, and embarked; our progress, however, during the afternoon, was slow; the current was not rapid, and the wind was setting up stream so strongly that we could not make much headway against it; we had, also, as before, to contend with turbulent waves, but we found we could weather them with much less difficulty, since the change of the wind.

14th. Before sunrise, a light rain commenced, which increased towards mid-day to a heavy shower, and continued steadily during the afternoon and night. There was, in the morning, a dead calm, the water was perfectly smooth, and disturbed only by the light rain pattering upon its surface. We made an early start, and proceeded on very expeditiously until about noon, when we arrived at the "cascades," and came to a halt above them, near a small Indian village. These cascades, or cataracts are formed by a collection of large rocks, in the bed of the river, which extend, for perhaps half a mile. The current for a short distance above them, is exceedingly rapid, and there is

said to be a gradual fall, or declivity of the river, of about twenty feet in the mile. Over these rocks, and across the whole river, the water dashes and foams most furiously, and with a roar which we heard distinctly at the distance of several miles.

It is wholly impossible for any craft to make its way through these difficulties, and our light canoes would not live an instant in them. It is, therefore, necessary to make a portage, either by carrying the canoes over land to the opposite side of the cataracts, or by wading in the water near the shore, where the surges are lightest, and dragging the unloaded boat through them by a cable. Our people chose the latter method, as the canoes felt very heavy and cumbersome, being saturated with the rain which was still falling rapidly. They were accordingly immediately unloaded, the baggage placed on the shore, and the men entered the water to their necks, headed by Captain Thing, and addressed themselves to the troublesome and laborious task. In the meantime, Mr. N., and myself were sent ahead to take the best care of ourselves that our situation and the surrounding circumstances permitted. We found a small Indian trail on the river bank, which we followed in all its devious windings, up and down hills, over enormous piles of rough flinty rocks, through brier bushes, and pools of water, &c. &c., for about a mile, and descending near the edge of the river, we observed a number of white men who had just succeeded in forcing a large barge through the torrent, and were then warping her into still water near the shore.

Upon approaching them more closely, we recognised, to our astonishment, our old friend Captain Stewart, with the good missionaries, and all the rest who left us at Walla-walla on the 4th. Poor fellows! Every man of them had been over breast deep in water, and the rain, which was still falling in torrents, was more than sufficient to drench what the waves did not cover, so that they were most abundantly soaked and bedraggled. I felt sadly inclined to laugh heartily at them, but a single glance at the sorry appearance of myself and my companion was sufficient to check the feeling. We joined them, and aided in kindling a fire to warm and dry ourselves a little, as there was not a dry rag on us, and we were all in an ague with cold. After a very considerable time, we succeeded in igniting the wet timber, and had a tolerably large fire. We all seated ourselves on the ground around it, and related our adventures. They had, like ourselves, suffered somewhat from the head-wind and heavy swells, but unlike us they had a craft that would weather it easily; even they, however, shipped some water, and made very little progress for the last two days. They informed us that Captain W's canoe had been dashed to pieces on the rocks above, and that he and all his crew were thrown into the water, and forced to swim for their lives. They all escaped, and proceeded down the river, this morning, in a canoe, hired of the Indians here, one of whom accompanied them, as pilot.

After a hasty meal of fish, purchased on the spot, our friends reloaded their boat and got under way, hoping to reach Vancouver by next morning. Mr. N. and myself remained some time longer here, expecting intelligence from our people behind; we had begun to feel a little uneasy about them, and thought of returning to look into their situation, when Captain T. came in haste towards us, with the mortifying intelligence that one canoe had been stove upon the rocks, and the other so badly split, that he feared she would not float; the latter was, however, brought on by the men, and moored where we had stopped. A man was then despatched to an Indian village, about five miles below, to endeavor to procure one or two canoes and a pilot. In the mean time, we had all to walk back along the circuitous and almost impassable Indian trail, and carry our wet and heavy baggage from the spot where the boats had been unloaded. The distance, as I have stated,

---

was a full mile, and the road so rough and encumbered as to be scarcely passable. In walking over many of the large and steep rocks, it was often necessary that the hands should be used to raise and support the body; this, with a load, was inconvenient. Again, in ascending and descending the steep and slippery hills, a single mis-step was certain to throw us in the mud, and bruise us upon the sharp rocks which were planted all around. This accident occurred several times with us all.

Over this most miserable of all roads, with the cold rain dashing and pelting upon us during the whole time, until we felt as though we were frozen to the very marrow, did we all have to travel and return four separate times, before our baggage was properly deposited. It was by far the most fatiguing, cheerless, and uncomfortable business in which I was ever engaged, and truly glad was I to lie down at night on the cold, wet ground, wrapped in my blankets, out of which I had just wrung the water, and I think I never slept more soundly or comfortably than that night. [ I could not but recollect at that time, the last injunction of my dear old grandmother, not to sleep in damp beds!]

I arose the next morning rested and refreshed, though somewhat sore from sundry bruises received on the hills to which I have alluded.

15th. The rain still continued falling, but lightly, the weather calm and cool. The water immediately below the cascades foams and boils in a thousand eddies, forming little whirlpools, which, however insignificant they may appear, are exceedingly dangerous for light canoes, whirling their bows around to the current, and capsizing them in an instant. Near the shore, at the foot of the cataract, there is a strong backward tow, through which it is necessary to drag the canoe, by a line, for the distance of a hundred yards; here it feels the force of the opposite current, and is carried on at the rate of seven or eight miles to the hour.

The man whom we sent yesterday to the village, returned this morning; he stated that one canoe only could be had, but that three Indians, accustomed to the navigation, would accompany us; that they would soon be with us, and endeavor to repair our damaged boat. In an hour they came, and after the necessary clamping and caulking of our leaky vessel, we loaded, and were soon moving rapidly down the river. The rain ceased about noon, but the sun did not appear during the day.

16th. The day was a delightful one; the sky was robed in a large flaky cumulus, the glorious sun occasionally bursting through among the clouds, with dazzling splendor. We rose in the morning in fine spirits, our Indians assuring us that " King George," as they called the fort, was but a short distance from us. At about 11 o'clock, we arrived, and stepped on shore at the end of our journey. It is now three days over six months since I left my beloved home. I, as well as the rest, have been in some situations of danger, of trial, and of difficulty, but I have passed through them all unharmed, with a constitution strengthened, and invigorated by healthful exercise, and a heart which I trust can feel deeply, sincerely thankful to that kind and overruling Providence who has watched over and protected me.

We have passed for months through a country swarming with Indians who thirsted for our blood, and whose greatest pride and glory consisted in securing the scalp of a white man. Enemies, sworn, determined enemies to all, both white and red, who intrude upon his hunting grounds, the Blackfoot roams the prairie like a wolf seeking his prey, and springing upon it when unprepared, and at the moment when it supposes itself most secure. To those who have always enjoyed the comforts and security of civilized life, it may seem strange that persons who know themselves

---

to be constantly exposed to such dangers who never lie down at night without the weapons of death firmly grasped in their hands, and who are in hourly expectation of hearing the terrific war whoop of the savage, should yet sleep soundly and refreshingly, and feel themselves at ease; such however is the fact. I never in my life enjoyed rest more than when travelling through the country of which I speak. I had become accustomed to it: I felt constant apprehension certainly, but not to such an extent as to deprive me of any of the few comforts which I could command in such an uncomfortable country. The guard might pass our tent, and cry "all's well," in his loudest key, without disturbing my slumbers: but if the slightest unusual noise occurred, I was awake in an instant, and listening painfully for a repetition of it.

On the beach in front of the fort, we were met by Mr. Lee, the missionary, and Dr. John McLoughlin, the chief factor, and Governor of the Hudson's Bay posts in this vicinity. The Dr. is a large, dignified and very noble looking man, with a fine expressive countenance, and remarkably bland and pleasing manners. The missionary introduced Mr. N. and myself in due form, and we were greeted and received with a frank and unassuming politeness which was most peculiarly grateful to our feelings. He requested us to consider his house our home, provided a separate room for our use, a servant to wait upon us, and furnished us with every convenience which we could possibly wish for. I shall never cease to feel grateful to him for his disinterested kindness to the poor houseless and travel-worn strangers.

Townsend's Across the Rockies to the Columbia

#### CHAPTER X

Fort Vancouver - Agricultural and other improvements - Vancouver "camp" - Approach of the rainy season - Expedition to the Wallamet - The falls - A village of Klikatat Indians - Manner of flattening the head - A Flathead infant - Brig "May Dacre" - Preparations for a settlement - Success of the naturalists - Chinook Indians - their appearance and costume - Ague and fever - Superstitious dread of the Indians - Desertion of the Sandwich Islanders from Captain Wyeth's party - Embarkation for a trip to the Islands - George, the Indian pilot - Mount Coffin - A visit to the tombs - Superstition - Visit to an Indian house - Fort George - Site of Astoria - A blind Indian boy - Cruel and unfeeling conduct of the savages - their moral character - Baker's Bay - Cape Disappointment - Dangerous bar at the entrance of the river - The sea beach - Visit of Mr. Ogden - Passage across the bar.

FORT VANCOUVER is situated on the north bank of the Columbia on a large level plain, about a quarter of a mile from the shore. The space comprised within the stoccade is an oblong square, of about one hundred, by two hundred and fifty feet. The houses built of logs and frame-work, to the number of ten or twelve, are ranged around in a quadrangular form, the one occupied by the doctor being in the middle. In front, and enclosed on three sides by the buildings, is a large open space, where all the in-door work of the establishment is done. Here the Indians assemble with their multifarious articles of trade, beaver, otter, venison, and various other game, and here, once a week, several scores of Canadians are employed, beating the furs which have been collected, in order to free them from dust and vermin.

Mr. N. and myself walked over the farm with the doctor, to inspect the various improvements which he has made. He has already several hundred acres fenced in, and under cultivation, and like our own western prairie land, it produces abundant crops, particularly of grain, without

---

requiring any manure. Wheat thrives astonishingly; I never saw better in any country, and the various culinary vegetables, potatoes, carrots, parsnips, &c., are in great profusion, and of the first quality. Indian corn does not flourish so well as at Walla-walla, the soil not being so well adapted to it; melons are well flavored but small; the greatest curiosity, however, is the apples, which grow on small trees, the branches of which would be broken without the support of props. So profuse is the quantity of fruit that the limbs are covered with it and it is actually packed together precisely in the same manner that onions are attached to ropes when they are exposed for sale in our markets.

On the farm is a grist mill, a threshing mill, and a saw mill, the two first, by horse, and the last, by water power; besides many minor improvements in agricultural and other matters, which cannot but astonish the stranger from a civilized land, and which reflect great credit upon the liberal and enlightened chief factor.

In the propagation of domestic cattle, the doctor has been particularly successful. Ten years ago a few head of neat cattle were brought to the fort by some fur traders from California; these have now increased to near seven hundred. They are a large framed, long horned breed, inferior in their milch qualities to those of the United States, but the beef is excellent, and in consequence of the mildness of the climate, it is never necessary to provide them with fodder during the winter, an abundant supply of excellent pasture being always found.

On the farm, in the vicinity of the fort, are thirty or forty log huts, which are occupied by the Canadians, and others attached to the establishment. These huts are placed in rows, with broad lanes or streets between them, and the whole looks like a very neat and beautiful village. The most fastidious cleanliness appears to be observed; the women may be seen sweeping the streets and scrubbing the door-sills as regularly as in our own proverbially cleanly city. [I have given this notice of the suburbs of the fort, as I find it in my journal written at the time; I had reason, subsequently, to change my opinion with regard to the scrupulous cleanliness of the Canadians' Indian wives, and particularly after inspecting the internal economy of the dwellings. What at first struck me as neat and clean, by an involuntary comparison of it with the extreme filthiness to which I had been accustomed amongst the Indians, soon revealed itself in its proper light, and I can freely confess that my first estimate was too high.]

Sunday, September 25th. - Divine service was performed in the fort this morning by Mr. Jason Lee. This gentleman and his nephew had been absent some days in search of a suitable place to establish themselves, in order to fulfil the object of their mission. They returned yesterday, and intend leaving us to-morrow with their suite for the station selected, which is upon the Wallamet river, about sixty miles south of the fort.

In the evening we were gratified by the arrival of Captain Wyeth from below, who informed us that the brig from Boston, which was sent out by the company to which Wyeth is attached, had entered the river, and was anchored about twenty miles below, at a spot called Warrior's point, near the western entrance of the Wallamet.

Captain W. mentioned his intention to visit the Wallamet country, and seek out a convenient location for a fort which he wishes to establish without delay, and Mr. N. and myself accepted an invitation to accompany him in the morning. He has brought with him one of the brig's boats, and eight oarsmen, five of whom are Sandwich Islanders.

We have experienced for several days past, gloomy, lowering, and showery weather; indeed the

---

sun has scarcely been seen for a week past. This is said to indicate the near approach of the rainy season, which usually sets in about the middle of October, or even earlier. After this time, until December, there is very little clear weather, showers or heavy clouds almost constantly prevailing. On the 29th, Captain Wyeth, Mr. N., and myself, embarked in the ship's boat for our exploring excursion. We had a good crew of fine robust sailors, and the copper-colored islanders, - or Kanakas, as they are called, - did their duty with great alacrity and good will.

At about five miles below the fort, we entered the upper mouth of the Wallamet. This river is here about half the width of the Columbia, a clear and beautiful stream, and navigable for large vessels to the distance of twenty-five miles. It is covered with numerous islands, the largest of which is that called Wappatoo Island, about twenty miles in length. The vegetation on the main land is good, the timber generally pine and post oak, and the river is margined in many places with a beautiful species of willow with large ob-lanceolate leaves like those of the peach, and white on their under surface. The timber on the islands is chiefly oak, no pine growing there. At about 10 o'clock we overtook three men whom Captain W. had sent ahead in a canoe and we all landed soon after on the beach and dined on a mess of salmon and peas which we had provided. We were under way again in the afternoon, and encamped at about sunset. We have as yet seen no suitable place for an establishment, and to-morrow we proceed to the falls of the river, about fifteen miles further. Almost all the land in the vicinity is excellent and well calculated for cultivation, and several spots which we have visited, would be admirably adapted to the captain's views, but that there is not a sufficient extent unincumbered, or which could be fitted for the purposes of tillage in a space of time short enough to be serviceable; others are at some seasons inundated, which is an insurmountable objection.

We embarked early the next morning, and at 11 o'clock arrived at the falls, after encountering some difficulties from rapids, through which we had to warp our boat. There are here three falls on a line of rocks extending across the river, which forms the bed of the upper channel. The water is precipitated through deep abraded gorges, and falls perhaps forty feet at an angle of about twenty degrees. It was a beautiful sight when viewed from a distance, but it became grand and almost sublime as we approached it nearer. I mounted the rocks and stood over the highest fall, and although the roar of the cataract was almost deafening, and the rays of the bright sun reflected from the white and glittering foam threatened to deprive me of sight, yet I became so absorbed in the contemplation of the scene, and the reflections which were involuntarily excited, as to forget every thing else for the time, and was only aroused by Captain W. tapping me on the shoulder, and telling me that every thing was arranged for our return. While I visited the falls, the captain and his men had found what they sought for; and the object of our voyage being accomplished, we got on board immediately and shaped our course down the river with a fair wind, and the current in favor.

About two miles below the cataract is a small village of Klikatat Indians. Their situation does not appear different from what we have been accustomed to see in the neighborhood of the fort. They live in the same sort of miserable loose hovels, and are the same wretched, squalid looking people. Although enjoying far more advantages, and having in a much greater degree the means of rendering themselves comfortable, yet their mode of living, their garments, their wigwams, and every thing connected with them, is not much better than the Snakes and Bannecks, and very far inferior to that fine, noble-looking race, the Kayouse, whom we met on the Grand ronde.

---

A custom prevalent, and almost universal amongst these Indians, is that of flattening, or mashing in the whole front of the skull, from the superciliary ridge to the crown. The appearance produced by this unnatural operation is almost hideous, and one would suppose that the intellect would be materially affected by it. This, however, does not appear to be the case, as I have never seen, (with a single exception, the Kayouse,) a race of people who appeared more shrewd and intelligent. I had a conversation on this subject, a few days since, with a chief who speaks the English language. He said that he had exerted himself to abolish the practice in his own tribe, but although his people would listen patiently to his talk on most subjects, their ears were firmly closed when this was mentioned; "they would leave the council fire, one by one, until none but a few squaws and children were left to drink in the words of the chief." It is even considered among them a degradation to possess a round head, and one whose caput has happened to be neglected in his infancy, can never become even a subordinate chief in his tribe, and is treated with indifference and disdain, as one who is unworthy a place amongst them.

The flattening of the head is practiced by at least ten or twelve distinct tribes of the lower country, the Klikatats, Kalapooyahs, and Multnomahs, of the Wallammet, and its vicinity; the Chinooks, Klatsaps, Klatstonis, Kowalitsks, Katlammets, Killemooks, and Chekalis of the lower Columbia and its tributaries, and probably by others both north and south. The tribe called Flatheads, or Salish, who reside near the sources of the Oregon, have long since abolished this custom.

The mode by which the flattening is effected, varies considerably with the different tribes. The Wallammet Indians place the infant, soon after birth, upon a board, to the edges of which are attached little loops of hempen cord or leather, and other similar cords are passed across and back, in a zig-zag manner, through these loops, enclosing the child, and binding it firmly down. To the upper edge of this board, in which is a depression to receive the back part of the head, another smaller one is attached by hinges of leather, and made to lie obliquely upon the forehead, the force of the pressure being regulated by several strings attached to its edge, which are passed through holes in the board upon which the infant is lying, and secured there.

The mode of the Chinooks, and others near the sea, differs widely from that of the upper Indians, and appears somewhat less barbarous and cruel. A sort of cradle is formed by excavating a pine log to the depth of eight or ten inches. The child is placed in it on a bed of little grass mats, and bound down in the manner above described. A little boss of tightly plaited and woven grass is then applied to the forehead, and secured by a cord to the loops at the side. The infant is thus suffered to remain from four to eight months, or until the sutures of the skull have in some measure united, and the bone become solid and firm. It is seldom or never taken from the cradle, except in case of severe illness, until the flattening process is completed.

I saw, to-day, a young child from whose head the board had just been removed. It was, without exception, the most frightful and disgusting looking object that I ever beheld. The whole front of the head was completely flattened, and the mass of brain being forced back, caused an enormous projection there. The poor little creature's eyes protruded to the distance of half an inch, and looked inflamed and discolored, as did all the surrounding parts. Although I felt a kind of chill creep over me from the contemplation of such dire deformity, yet there was something so stark-staring, and absolutely queer in the physiognomy, that I could not repress a smile; and when the mother amused the little object and made it laugh, it looked so irresistibly, so terribly ludicrous, that I and those who were with me, burst into a simultaneous roar, which frightened it and

---

made it cry, in which predicament it looked much less horrible than before.

On the 1st of November we arrived at the brig. She was moored, head and stern, to a large rock near the lower mouth of the Wallamet. Captain Lambert with his ship's company, and our own mountain men, were all actively engaged at various employments; carpenters, smiths, coopers, and other artisans were busy in their several vocations; domestic animals, pigs, sheep, goats, poultry, &c., were roaming about as if perfectly at home, and the whole scene looked so like the entrance to a country village, that it was difficult to fancy oneself in a howling wilderness inhabited only by the wild and improvident Indian, and his scarcely more free and fearless neighbors, the bear and the wolf. An excellent temporary storehouse of twigs, thatched with grass, has been erected, in which has been deposited the extensive assortment of goods necessary for the settlement, as well as a number of smaller ones, in which the men reside. It is intended as soon as practicable, to build a large and permanent dwelling of logs, which will also include the store and trading establishment, and form the groundwork for an American fort on the river Columbia.

5th. - Mr. N. and myself are now residing on board the brig, and pursuing with considerable success our scientific researches through the neighborhood. I have shot and prepared here several new species of birds, and two or three undescribed quadrupeds, besides procuring a considerable number, which, though known to naturalists, are rare, and therefore valuable. My companion is of course in his element; the forest, the plain, the rocky hill, and the mossy bank yield him a rich and most abundant supply.

We are visited daily by considerable numbers of Chinook and Klikatat Indians, many of whom bring us provisions of various kinds, salmon, deer, ducks, &c., and receive in return, powder and shot, knives, paint, and Indian rum, i. e. rum and water in the proportion of one part of the former to two of the latter. Some of these Indians would be handsome were it not for the abominable practice, which, as I have said, is almost universal amongst them, of destroying the form of the head. The features of many are regular though often devoid of expression, and the persons of the men generally are rather symmetrical; their stature is low, with light sinewy limbs, and remarkably small delicate hands. The women are usually more rotund, and, in some instances, even approach obesity. The principal clothing worn by them is a sort of short petticoat made of strands of pine bark or twisted hempen strings, tied around the loins like a marro. This article they call a kalaquarte; and is often their only dress; some, however, cover the shoulders with a blanket, or robe made of muskrat or hare skins sewed together.

A disease of a very fatal character is prevalent among these Indians; many of them have died of it; even some of those in the neighborhood of the fort, where medical assistance was always at hand. The symptoms are a general coldness, soreness and stiffness of the limbs and body, with violent tertian ague. Its fatal termination is attributable to its tendency to attack the liver, which is generally affected in a few days after the first symptoms are developed. Several of the white people attached to the fort have been ill with it, but no deaths have occurred amongst them, the disease in their case having yielded to the simple tonic remedies usually employed at home. This I have no doubt would be equally the case with the Indians, were they willing to submit to proper restrictions during the time of administering medicine.

Captain Lambert informs me that on his first landing here the Indians studiously avoided his vessel, and all kind of intercourse with his crew, from the supposition, (which they have since acknowledged) that the malady which they dread so much was thus conveyed. As in a short time it

became desirable, on account of procuring supplies of provision, to remove this impression, some pains were taken to convince the Indians of their error, and they soon visited the ship without fear.

Mr. N. and myself have been anxious to escape the wet and disagreeable winter of this region, and visit some other portion of the country, where the inclemency of the season will not interfere with the prosecution of our respective pursuits. After some reflection and consultation, we concluded to take passage in the brig, which will sail in a few weeks for the Sandwich Islands. We shall remain there about three months, and return to the river in time to commence our peregrinations in the spring.

23d. - At Fort Vancouver. A letter was received yesterday by Dr. McLoughlin, from Captain Wyeth, dated Walla-walla, stating that the twelve Sandwich Islanders whom he took with him a week since for a journey to Fort Hall, had deserted, each taking a horse. They had no doubt heard from some of their countrymen, whom they met at the fort, of the difficulties of the route before them, which were probably very much exaggerated. Captain W. is on the alert to find them, and is sending men on their trail in every direction, but it is more than probable that they will not be overtaken, and the consequence will then be, that the expedition must be abandoned, and the captain return to the fort to spend the winter.

December 3d. - Yesterday Mr. N. and myself went down the river to the brig, and this morning early the vessel left her moorings, and with her sails unloosed stood out into the channel way. The weather was overcast, and we had but little wind, so that our progress during the morning was necessarily slow. In the afternoon we ran aground in one and a half fathoms water, but as the tide was low, we were enabled to get her clear in the evening. The navigation of this river is particularly difficult in consequence of numerous shoals and sand bars, and good pilots are scarce, the Indians alone officiating in that capacity. Towards noon the next day, a Kowalitsk Indian with but one eye, who said his name was George, boarded us, and showed a letter which he carried, written by Captain McNeill, in the Hudson's Bay service, recommending said George as a capable and experienced pilot. We accepted his services gladly, and made a bargain with him to take us into Baker's bay near the cape, for four bottles of rum; with the understanding, however, that every time the brig ran aground, one bottle of the precious liquor was to be forfeited. George agreed to the terms, and taking his station at the bow, gave his orders to the man at the wheel like one having authority, pointing with his finger when he wished a deviation from the common course, and pronouncing in a loud voice the single word ookook, (here.)

On the afternoon of the 4th, we passed along a bold precipitous shore, near which we observed a large isolated rock, and on it a great number of canoes, deposited above the reach of the tides. This spot is called Mount Coffin, and the canoes contain the dead bodies of Indians. They are carefully wrapped in blankets, and all the personal property of the deceased, bows and arrows, guns, salmon spears, ornaments, &c., are placed within, and around his canoe. The vicinity of this, and all other cemeteries, is held so sacred by the Indians, that they never approach it, except to make similar deposits; they will often even travel a considerable distance out of their course, in order to avoid intruding upon the sanctuary of their dead.

We came to anchor near this rock in the evening, and Captain Lambert Mr. N. and myself visited the tombs. We were especially careful not to touch or disarrange any of the fabrics, and it was well we were so, for as we turned to leave the place, we found that we had been narrowly watched by

---

about twenty Indians, whom we had not seen when we landed from our boat. After we embarked, we observed an old withered crone with a long stick or wand in her hand, who approached, and walked over the ground which we had defiled with our sacrilegious tread, waving her enchanted rod over the mouldering bones, as if to purify the atmosphere around, and exorcise the evil spirits which we had called up.

I have been very anxious to procure the skulls of some of these Indians, and should have been willing, so far as I alone was concerned, to encounter some risk to effect my object, but I have refrained on account of the difficulty in which the ship and crew would be involved, if the sacrilege should be discovered; a prejudice might thus be excited against our little colony which would not soon be overcome, and might prove a serious injury.

6th. - The weather is almost constantly rainy and squally, making it unpleasant to be on deck; we are therefore confined closely to the cabin, and are anxious to get out to sea as soon as possible, if only to escape this.

In the afternoon, the captain and myself went ashore in the long-boat, and visited several Indian houses upon the beach. These are built of roughly hewn boards and logs, usually covered with pine bark, or matting of their own manufacture, and open at the top, to allow the smoke to escape. In one of these houses we found men, women, and children, to the number of fifty-two, seated as usual, upon the ground, around numerous fires, the smoke from which filled every cranny of the building, and to us was almost stifling, although the Indians did not appear to suffer any inconvenience from it. Although living in a state of the most abject poverty, deprived of most of the absolute necessaries of life, and frequently enduring the pangs of protracted starvation, yet these poor people appear happy and contented. They are scarcely qualified to enjoy the common comforts of life, even if their indolence did not prevent the attempt to procure them.

On the afternoon of the 8th, we anchored off Fort George, as it is called, although perhaps it scarcely deserves the name of a fort, being composed of but one principal house of hewn boards, and a number of small Indian huts surrounding it, presenting the appearance, from a distance, of an ordinary small farm house with its appropriate outbuildings. There is but one white man residing here, the superintendent of the fort; but there is probably no necessity for more, as the business done is not very considerable, most of the furs being taken by the Indians to Vancouver. The establishment is, however, of importance, independent of its utility as a trading post, as it is situated within view of the dangerous cape, and intelligence of the arrival of vessels can be communicated to the authorities at Vancouver in time for them to render adequate assistance to such vessels by supplying them with pilots, &c. This is the spot where once stood the fort established by the direction of our honored countryman, John Jacob Astor. One of the chimneys of old Fort Astoria is still standing, a melancholy monument of American enterprise and domestic misrule. The spot where once the fine parterre overlooked the river, and the bold stoccade enclosed the neat and substantial fort, is now overgrown with weeds and bushes, and can scarce be distinguished from the primeval forest which surrounds it on every side.

Captain Lambert, Mr. N. and myself visited the Indian houses in the neighborhood. In one of them we saw a poor little boy about three years of age who had been blind from his birth. He was sitting on the ground near the fire, surrounded by a quantity of fish bones which he had been picking. Our sympathy was very much excited for the poor little unfortunate, particularly as he was made a subject for the taunting jibes and laughter of a number of men and women, squatting

around, and his mother sat by with the most cruel apathy and unconcern, and only smiled at the commiseration which we expressed for her innocent and peculiarly unhappy offspring. It seems difficult to believe that those who possess the form and countenance of human creatures, should so debase the natural good feelings which God has implanted in them: but these ignorant and gross wretches seemed to take credit to themselves in rendering this afflicted being unhappy, and smiled and looked at each other when we endeavored to infuse a little pity into them. The child had evidently been very much neglected, and almost starved, and the little articles which we presented it, (in the hope, that the Indians on seeing us manifest an interest in it, would treat it more tenderly,) it put to its mouth eagerly, but finding them not eatable, threw them aside in disgust. Oh! how I wished at that moment for a morsel of bread to give this little famished and neglected creature. We soon left the place, and returned to the brig, but I could think of nothing during the remainder of the evening but the little blind child, and at night I dreamed I saw it, and it raised its dim and sightless orbs, and stretched out its little emaciated arms towards me, as if begging for a crumb to prevent its starving.

These people, as I have already said, do not appear to possess a particle of natural good feeling, and in their moral character, they are little better than brutes. In the case of the blind boy, they seemed to take pride in tormenting it, and rendering it miserable, and vied with each other in the skill and dexterity with which they applied to it the most degrading and insulting epithets. These circumstances, with others, in regard to their moral character, which I shall not even mention, have tended very considerably to lower the estimation in which I have always held the red man of the forest, and serve to strengthen the opinion which I had long since formed, that nothing but the introduction of civilization, with its good and wholesome laws, can ever render the Indian of service to himself, or raise him from the state of wretchedness which has so long characterized his expiring race.

The next morning, we ran down into Baker's bay, and anchored within gunshot of the cape, when Captain Lambert and myself went on shore in the boat, to examine the channel, and decide upon the prospect of getting out to sea. This passage is a very dangerous one, and is with reason dreaded by mariners. A wide bar of sand extends from Cape Disappointment to the opposite shore, - called Point Adams, - and with the exception of a space, comprehending about half a mile, the sea at all times breaks furiously, the surges dashing to the height of the mast head of a ship, and with the most terrific roaring. Sometimes the water in the channel is agitated equally with that which covers the whole length of the bar, and it is then a matter of imminent risk to attempt a passage. Vessels have occasionally been compelled to lie in under the cape for several weeks, in momentary expectation of the subsidence of the dangerous breakers, and they have not unfrequently been required to stand off shore, from without, until the crews have suffered extremely for food and water. This circumstance must ever form a barrier to a permanent settlement here; the sands, which compose the bar, are constantly shifting, and changing the course and depth of the channel, so that none but the small coasting vessels in the service of the company can, with much safety, pass back and forth.

Mr. N. and myself visited the sea beach, outside the cape, in the hope of finding peculiar marine shells, but although we searched assiduously during the morning, we had but little success. We saw several deer in the thick forest on the side of the cape, and a great number of black shags, or cormorants, flying over the breakers, and resting upon the surf-washed rocks.

On the morning of the 11th, Mr. Hanson, the mate, returned from the shore, and reported that the channel was smooth; it was therefore deemed safe to attempt the passage immediately. While we were weighing our anchor, we descried a brig steering towards us, which soon crossed the bar, and ran up to within speaking distance. It was one of the Hudson's Bay Company's coasters, and, as we were getting under way, a boat put off from her, and we were boarded by Mr. Ogden, a chief factor from one of the Company's forts on the coast. He informed us that the brig left Naas about the first of October, but had been delayed by contrary winds, and rough, boisterous weather. Thus the voyage which usually requires but about eight days for its performance, occupied upwards of two months. They had been on an allowance of a pint of water per day, and had suffered considerably for fresh provision. Mr. Ogden remained with us but a short time, and we stood out past the cape.

When we entered the channel, the water which had before been so smooth, became suddenly very much agitated, swelling, and roaring, and foaming around us, as if the surges were upheaved from the very bottom, and as [if] our vessel would fall in the trough of the sea, pitching down like a huge leviathan seeking its native depths, I could not but feel positive, that the enormous wave, which hung like a judgment over our heads, would inevitably engulf us; but the good ship, like a creature instinct with life, as though she knew her danger, gallantly rose upon it, and but dipped her bows into its crest, as if in scorn of its mighty and irresistible power. This is my first sea voyage, and every thing upon the great deep is of course novel and interesting to me. During the scene which I have just described, although I was aware of our imminent peril, and the tales that I had frequently heard of vessels perishing in this very spot, and in precisely such a sea, recurred to my mind with some force, yet I could not but feel a kind of secret and wild joy at finding myself in a situation of such awful and magnificent grandeur. I thought of the lines of Shelley, and repeated them to myself in a kind of ecstasy.

“And see'st thou, and hear'st thou,  
And fear'st thou, and fear'st thou,  
And ride we not free  
O'er the terrible sea,  
I and thou ?”

In about twenty minutes we had escaped all the danger, and found ourselves riding easily in a beautiful placid sea. We set the sails, which had been shortened on the bar, and the gallant vessel feeling the impulse of the wind, rushed ahead as if exulting in the victory she had achieved.

Townsend's Across the Rockies to the Columbia

---

Chapter XI and part of XII omitted - they deal with voyage to Sandwich Islands. Resume narrative on April 15, 1835.

---

## CHAPTER XII

. . . Arrival at the Columbia.

On the 15th, the wind, which had for several days been light, began steadily to increase, until we were running ten knots by the log. In the afternoon, the atmosphere became thick and hazy, indicating our approach to the shores of the continent. In a short time, a number of the small Auks, - of which we saw a few immediately after leaving the Columbia, - were observed sporting in the

---

waves, close under our bows; then several gulls of the species common on the river, and soon after large flocks of geese and canvass-back ducks.

The sea gradually lost its legitimate deep blue color, and assumed a dirty, green appearance, indicating soundings. Upon heaving the lead here, we got only eleven fathoms, and found that we had approached nearer than was prudent, having been misled by the haze. Wore ship immediately, and soon saw land, bearing east, which we ascertained to be south of Cape Disappointment. Stood off during the night, and the next morning at 4 o'clock, the wind favoring us, we bore up for the cape, and at 7 crossed the dangerous bar safely, a Townsend's Across the Rockies to the Columbia

---

### CHAPTER XIII

Passage up the Columbia - Birds - A trip to the Wallammet - Methodist missionaries - their prospects - Fort William - Band-tail pigeons - Wretched condition of the Indians at the falls - A Kallapooyah village - Indian cemetery - Superstitions - Treatment of diseases - Method of steaming - "Making medicine" - Indian sorcerers - An interruption of festivities - Death of Thornburg - An inquest - Verdict of the jury - Inordinate appetite for ardent spirits - Misfortunes of the American Company - Eight men drowned - Murder of two trappers by the Banneck Indians - Arrival of Captain Thing - His meeting and skirmish with the Blackfeet Indians - Massacre - A narrow escape.

On the 16th, we anchored abreast of Oak point. Our decks were almost immediately crowded with Indians to welcome us, and among them we recognised many faces with which we were familiar. Chinamus, the Chinook chief, was the principal of these, who, with his wife, Aillapust, or Sally, as she is called at the fort, paid us an early visit, and brought us red deer and sturgeon to regale upon after our voyage.

On the afternoon of the next day, we ran up to Warrior's Point. the brig's old mooring ground. The people here had been anxious to see us; extensive preparations had been made to prosecute the salmon fishery, and the coopers have been engaged the whole winter in making barrels to accommodate them. Mr. Walker, the missionaries' quondam associate, was in charge of the post, and he informed us that Captain Wyeth had returned only a few weeks since from the upper country, where he had been spending the winter, engaged in the arduous business of trapping, in the prosecution of which he had endured great and various hardships.

May 12th. ' The rainy season is not yet over; we have had almost constant showers since we arrived, but now the weather appears settled. Birds are numerous, particularly the warblers, (*Sylvia*.) Many of these are migratory, remaining but a few weeks: others breed here, and reside during the greater part of the summer. I have already procured several new species.

20th. ' Mr. Wyeth, came down from Walla-walla yesterday, and this morning I embarked with him in a large canoe, manned by Kanakas, for a trip to the Wallammet falls in order to procure salmon. We visited fort William, (Wyeth's new settlement upon Wappatoo island,) which is about fifteen miles from the lower mouth of the Wallammet. We found here the missionaries, Messrs. Lee and Edwards, who arrived to-day from their station, sixty miles above. They give flattering accounts of their prospects here; they are surrounded by a considerable number of Indians who are friendly to the introduction of civilization and religious light, and who treat them with the greatest hospitality and kindness. They have built several comfortable log houses, and the soil in their

---

vicinity they represent as unusually rich and productive. They have, I think, a good prospect of being serviceable to this miserable and degraded people; and if they commence their operations judiciously and pursue a steady, unwavering course, the Indians in this section of country may yet be redeemed from the thralldom of vice, superstition, and indolence, to which they have so long submitted, and above which their energies have not enabled them to rise.

The spot chosen by Captain W. for his fort is on a high piece of land, which will probably not be overflowed by the periodical freshets, and the soil is the rich black loam so plentifully distributed through this section of country. The men now live in tents and temporary huts, but several log houses are constructing which, when finished, will vie in durability and comfort with Vancouver itself.

21st. The large band-tail pigeon (*Colomba fasciata*) is very abundant near the river, found in flocks of from fifty to sixty, and perching upon the dead trees along the margin of the stream. They are feeding upon the buds of the balsam poplar; are very fat, and excellent eating. In the course of the morning, and without leaving the canoe, I killed enough to supply our people with provision for two days.

24th. We visited the falls to-day, and while Captain W. was inspecting the vicinity to decide upon the practicability of drawing his seine here, I strolled into the Indian lodges on the bank of the river. The poor creatures were all living miserably, and some appeared to be suffering absolute want. Those who were the best supplied, had nothing more than the fragments of a few sturgeons and lamprey eels, kamas bread, &c. To the roofs of the lodges were hung a number of crooked bladders, filled with rancid seal oil, used as a sort of condiment with the dry and unsavory sturgeon.

On the Klakamas river, about a mile below, we found a few lodges belonging to Indians of the Kalapooyah tribe. We addressed them in Chinook, (the language spoken by all those inhabiting the Columbia below the cascades,) but they evidently did not comprehend a word, answering in a peculiarly harsh and guttural language, with which we were entirely unacquainted. However, we easily made them understand by signs that we wanted salmon, and being assured in the same significant manner that they had none to sell, we decamped as soon as possible, to escape the fleas and other vermin with which the interior of their wretched habitations were plentifully supplied. We saw here a large Indian cemetery. The bodies had been buried under the ground, and each tomb had a board at its head, upon which was rudely painted some strange, uncouth figure. The pans, kettles, clothing, &c., of the deceased, were all suspended upon sticks, driven into the ground near the head board.

June 6th. The Indians frequently bring us salmon, and we observe that, invariably, before they part with them, they are careful to remove the hearts. This superstition, is religiously adhered to by all the Chinook tribe. Before the fish is split and prepared for eating, a small hole is made in the breast, the heart taken out, roasted, and eaten in silence, and with great gravity. This practice is continued only during the first month in which the salmon make their appearance, and is intended as a kind of propitiation to the particular deity or spirit who presides over the finny tribes. Superstition in all its absurd and most revolting aspects is rife among this people. They believe in "black spirits, and white, blue spirits, and grey," and to each grizzly monster some peculiar virtue or ghastly terror is attributed. When a chief goes on a hunting or fishing excursion, he puts himself under the care of one of these good spirits, and if his expedition is unsuccessful,

he affirms that the antagonist evil principle has gained the victory; but this belief does not prevent his making another, and another attempt, in the hope, each time, that his guardian genius will have the ascendancy.

In their treatment of diseases, they employ but few remedies, and these are generally simple and inefficacious. Wounds are treated with an application of green leaves, and bound with strips of pine bark, and in some febrile cases, a sweat is administered. This is effected by digging a hole two or three feet deep in the ground, and placing within it some hemlock or spruce boughs moistened with water; hot stones are then thrown in, and a frame work of twigs is erected over the opening, and covered closely with blankets to prevent the escape of the steam. Under this contrivance, the patient is placed; and after remaining fifteen or twenty minutes, he is removed, and plunged into cold water.

Their mode of "making medicine," to use their own term, is, however, very different from this. The sick man is laid upon a bed of mats and blankets, elevated from the ground, and surrounded by a raised frame work of hewn boards. Upon this frame two "medicine men" (sorcerers) place themselves, and commence chaunting, in a low voice, a kind of long drawn, sighing song. Each holds a stout stick, of about four feet long, in his hand, with which he beats upon the frame work, and keeps accurate time with the music. After a few minutes, the song begins to increase in loudness and quickness, (a corresponding force and celerity being given to the stick,) until in a short time the noise becomes almost deafening, and may well serve, in many instances, to accelerate the exit of him whom it is their intention to benefit.

During the administration of the medicine, the relations and friends of the patient are often employed in their usual avocations in the same house with him, and by his bedside; the women making mats, moccasins, baskets, &c., and the men lolling around, smoking or conversing upon general subjects. No appearance of sorrow or concern is manifested for the brother, husband, or father, expiring beside them, and but for the presence and ear-astounding din of the medicine men, you would not know that anything unusual had occurred to disturb the tranquillity of the family circle.

These medicine men are, of course, all impostors, their object being simply the acquisition of property; and in case of the recovery of the patient, they make the most exorbitant demands of his relations; but when the sick man dies, they are often compelled to fly, in order to escape the vengeance of the survivors, who generally attribute the fatal termination to the evil influence of the practitioner.

July 4th. ' This morning was ushered in by the firing of cannon on board our brig, and we had made preparations for spending the day in festivity, when, at about 9 o'clock, a letter was received from Mr. Walker, who has charge of the fort on Wappatoo island, stating that the tailor, Thornburg, had been killed this morning by Hubbard, the gunsmith, and requesting our presence immediately, to investigate the case, and direct him how to act.

Our boat was manned without loss of time, and Captain L. and myself repaired to the fort, where we found every thing in confusion. Poor Thornburg, whom I had seen but two days previously, full of health and vigor, was now a lifeless corpse; and Hubbard, who was more to be pitied, was walking up and down the beach, with a countenance pale and haggard, from the feelings at war within.

We held an inquest over the body, and examined all the men of the fort severally, for the purpose

---

of eliciting the facts of the case, and, if warranted by the evidence, to exculpate Hubbard from blame in the commission of the act. It appeared that, several weeks since, a dispute arose between Hubbard and Thornburg, and the latter menaced the life of the former, and had since been frequently heard to declare that he would carry the threat into effect on the first favorable opportunity. This morning, before daylight, he entered the apartment of Hubbard, armed with a loaded gun, and a large knife, and after making the most deliberate preparations for an instant departure from the room, as soon as the deed should be committed, cocked his gun, and prepared to shoot at his victim. Hubbard, who was awakened by the noise of Thornburg's entrance, and was therefore on the alert, waited quietly until this crisis, when cocking his pistol, without noise, he took deliberate aim at the assassin, and fired. Thornburg staggered back, his gun fell from his grasp, and the two combatants struggled hand to hand. The tailor, being wounded, was easily overcome, and was thrown violently out of the house, when he fell to the ground, and died in a few minutes. Upon examining the body, we found that the two balls from the pistol had entered the arm below the shoulder, and escaping the bone, had passed into the cavity of the chest. The verdict of the jury was "justifiable homicide," and a properly attested certificate, containing a full account of the proceedings, was given to Hubbard, as well for his satisfaction, as to prevent future difficulty, if the subject should ever be investigated by a judicial tribunal.

This Thornburg was an unusually bold and determined man, fruitful in inventing mischief, as he was reckless and daring in its prosecution. His appetite for ardent spirits was of the most inordinate kind. During the journey across the country, I constantly carried a large two-gallon bottle of whiskey, in which I deposited various kinds of lizards and serpents and when we arrived at the Columbia the vessel was almost full of these crawling creatures. I left the bottle on board the brig when I paid my first visit to the Wallamet falls, and on my return found that Thornburg had decanted the liquor from the precious reptiles which I had destined for immortality, and he and one of his pot companions had been "happy" upon it for a whole day. This appeared to me almost as bad as the "tapping of the Admiral," practiced with such success by the British seamen; but unlike their commander, I did not discover the theft until too late to save my specimens, which were in consequence all destroyed.

11th. ' Mr. Nuttall, who has just returned from the dalles, where he has been spending some weeks, brings distressing intelligence from above. It really seems that the "Columbia River Fishing and Trading Company" is devoted to destruction; disasters meet them at every turn, and as yet none of their schemes have prospered. This has not been for want of energy or exertion. Captain W. has pursued the plans which seemed to him best adapted for insuring success, with the most indefatigable perseverance and industry, and has endured hardships without murmuring, which would have prostrated many a more robust man; nevertheless, he has not succeeded in making the business of fishing and trapping productive, and as we cannot divine the cause, we must attribute it to the Providence that rules the destinies of men and controls all human enterprises.

Two evenings since, eight Sandwich Islanders, a white man and an Indian woman, left the cascades in a large canoe laden with salmon, for the brig. The river was as usual rough and tempestuous, the wind blew a heavy gale, the canoe was capsized, and eight out of the ten sank to rise no more. The two who escaped, islanders, have taken refuge among the Indians at the village below, and will probably join us in a few days.

Intelligence has also been received of the murder of one of Wyeth's principal trappers, named

Abbot, and another white man who accompanied him, by the Banneck Indians. The two men were on their way to the Columbia with a large load of beaver, and had stopped at the lodge of the Banneck chief, by whom they had been hospitably entertained. After they left, the chief, with several of his young men, concealed themselves in a thicket, near which the unsuspecting trappers passed, and shot and scalped them both.

These Indians have been heretofore harmless, and have always appeared to wish to cultivate the friendship of the white people. The only reason that can be conceived for this change in their sentiments, is that some of their number may lately have received injury from the white traders, and, with true Indian animosity, they determined to wreak their vengeance upon the whole race. Thus it is always unsafe to travel among Indians, as no one knows at what moment a tribe which has always been friendly, may receive ill treatment from thoughtless, or evil-designing men, and the innocent suffer for the deeds of the guilty.

August 19th. ' This morning, Captain Thing (Wyeth's partner) arrived from the interior. Poor man! he looks very much worn by fatigue and hardships, and seven years older than when I last saw him. He passed through the Snake country from Fort Hall, without knowing of the hostile disposition of the Bannecks, but, luckily for him, only met small parties of them, who feared to attack his camp. He remarked symptoms of distrust and coolness in their manner, for which he was, at the time, unable to account. As I have yet been only an hour in his company, and as a large portion of this time was consumed in his business affairs, I have not been able to obtain a very particular account of his meeting and skirmish with the Blackfeet last spring, a rumor of which we heard several weeks since. From what I have been enabled to gather, amid the hurry and bustle consequent upon his arrival, the circumstances appear to be briefly these. He had made a camp on Salmon river, and, as usual, piled up his goods in front of it, and put his horses in a pen erected temporarily for the purpose, when, at about daybreak, one of his sentries heard a gun discharged near. He went immediately to Captain T.'s tent to inform him of it, and at that instant a yell sounded from an adjacent thicket, and about five hundred Indians, ' three hundred horse and two hundred foot, ' rushed out into the open space in front. The mounted savages were dashing to and fro across the line of the camp, discharging their pieces with frightful rapidity, while those who had not horses, crawled around to take them in the rear.

Notwithstanding the galling fire which the Indians were constantly pouring into them, Captain T. succeeded in driving his horses into the thicket behind, and securing them there, placing over them a guard of three men as a check to the savages who were approaching from that quarter. He then threw himself with the remainder of his little band, behind the bales of goods, and returned the fire of the enemy. He states that occasionally he was gratified by the sight of an Indian tumbling from his horse, and at such times a dismal, savage yell was uttered by the rest, who then always fell back a little, but returned immediately to the charge with more than their former fury. At length the Indians, apparently wearied by their unsuccessful attempts to dislodge the white men, changed their mode of attack and rode upon the slight fortification, rapidly and steadily. Although they lost a man or two by this (for them) unusually bold proceeding, yet they succeeded in driving the brave little band of whites to the cover of the bushes. They then took possession of the goods, &c., which had been used as a defence, and retired to a considerable distance, where they were soon joined by their comrades on foot, who had utterly failed in their attempt to obtain the horses. In a short time, a man was seen advancing from the main body of Indians towards

---

the scene of combat, holding up his hand as a sign of amity, and an intimation of the suspension of hostilities, and requested a "talk" with the white people. Captain T., with difficulty repressing his inclination to shoot the savage herald down, was induced, in consideration of the safety of his party, to dispatch an interpreter towards him. The only information that the Blackfeet wished to communicate was, that having obtained all the goods of the white people, they were now willing that they should continue their journey in peace, and that they should not again be molested. The Indians then departed, and the white men struck back on their trail, towards Fort Hall. Captain Thing lost every thing he had with him, all his clothing, papers, journals, &c. But he should probably be thankful that he escaped with his life, for it is known to be very unusual for these hostile Indians to spare the lives of white men, when in their power, the acquisition of property being generally with them only a secondary consideration.

Captain T. had two men severely, but not mortally, wounded. The Indians had seven killed, and a considerable number wounded.

20th. 'Several days since a poor man came here in a most deplorable condition, having been gashed, stabbed, and bruised in a manner truly frightful. He had been travelling on foot constantly for fifteen days, exposed to the broiling sun, with nothing to eat during the whole of this time, except the very few roots which he had been able to find. He was immediately put in the hospital here, and furnished with every thing necessary for his comfort, as well as surgical attendance. He states that he left Monterey, in California, in the spring, in company with seven men, for the purpose of coming to the Wallammet to join Mr. Young, an American, who is now settled in that country. They met with no accident until they arrived at a village of Potameos Indians [Called by the inhabitants of this country, the "rascally Indians," from their uniformly evil disposition, and hostility to white people], about ten days journey south of this. Not knowing the character of these Indians, they were not on their guard, allowing them to enter their camp, and finally to obtain possession of their weapons. The Indians then fell upon the defenceless little band with their tomahawks and knives, (having no fire arms themselves, and not knowing the use of those they had taken,) and, ere the white men had recovered from the panic which the sudden and unexpected attack occasioned killed four of them. The remaining four fought with their knives as long as they were able, but were finally overpowered, and this poor fellow left upon the ground, covered with wounds, and in a state of insensibility. How long he remained in this situation, he has no means of ascertaining; but upon recovering, the place was vacated by all the actors in the bloody scene, except his three dead companions, who were lying stark and stiff where they fell. By considerable exertion, he was enabled to drag himself into a thicket near, for the purpose of concealment, as he rightly conjectured that their captors would soon return to secure the trophies of their treacherous victory, and bury the corpses. This happened almost immediately after; the scalps were torn from the heads of the slain, and the mangled bodies removed for interment. After the most dreadful and excruciating sufferings, as we can well believe, the poor man arrived here, and is doing well under the excellent and skilful care of Doctor Gairdner. I examined most of his wounds yesterday. He is literally covered with them, but one upon the lower part of his face is the most frightful. It was made by a single blow of a tomahawk, the point of which entered the upper lip, just below the nose, cutting entirely through both the upper and lower jaws and chin, and passing deep into the side of the neck, narrowly missing the large jugular vein. He says he perfectly recollects receiving this wound. It was inflicted by a powerful savage, who at the same

---

time tripped him with his foot, accelerating his fall. He also remembers distinctly feeling the Indian's long knife pass five separate times into his body; of what occurred after this he knows nothing. This is certainly by far the most horrible looking wound I ever saw, rendered so, however, by injudicious treatment and entire want of care in the proper apposition of the sundered parts; he simply bound it up as well as he could with his handkerchief, and his extreme anguish caused him to forget the necessity of accuracy in this respect. The consequence is, that the lower part of his face is dreadfully contorted, one side being considerably lower than the other. A union by the first intention has been formed, and the ill-arranged parts are uniting.

This case has produced considerable excitement in our little circle. The Potameos have more than once been guilty of acts of this kind, and some of the gentlemen of the fort have proposed fitting out an expedition to destroy the whole nation, but this scheme will probably not be carried into effect.

and ran direct for the river.

Townsend's Across the Rockies to the Columbia

---

#### CHAPTER XIV

Indians of the Columbia - their melancholy condition - Departure of Mr. Nuttall and Dr. Gairdner - A new vocation - Arrival of the Rev. Samuel Parker - his object - Departure of the American brig - Swans - Indian mode of taking them - A large wolf - An Indian mummy - A night adventure - A discovery, and restoration of stolen property - Fraternal tenderness of an Indian - Indian vengeance - Death of Waskema, the Indian girl - "Busybody," the little chief - A village of Kowalitsk Indians - Ceremony of "making medicine" - Exposure of an impostor - Success of legitimate medicines - Departure from Fort Vancouver for a visit to the interior - Arrival of a stranger - "Cape Horn" - Tilki, the Indian chief - Indian villages - Arrival at Fort Walla-walla - Sharptailed grouse - Commencement of a journey to the Blue mountains.

The Indians of the Columbia were once a numerous and powerful people; the shore of the river, for scores of miles, was lined with their villages; the council fire was frequently lighted, the pipe passed round, and the destinies of the nation deliberated upon. War was declared against neighboring tribes; the deadly tomahawk was lifted, and not buried until it was red with the blood of the savage; the bounding deer was hunted, killed, and his antlers ornamented the wigwam of the red man; the scalps of his enemies hung drying in the smoke of his lodge, and the Indian was happy. Now, alas! where is he? - gone; - gathered to his fathers and to his happy hunting grounds; his place knows him no more. The spot where once stood the thickly peopled village, the smoke curling and wreathing above the closely packed lodges, the lively children playing in the front, and their indolent parents lounging on their mats, is now only indicated by a heap of undistinguishable ruins. The depopulation here has been truly fearful. A gentleman told me, that only four years ago, as he wandered near what had formerly been a thickly peopled village, he counted no less than sixteen dead, men and women, lying unburied and festering in the sun in front of their habitations. Within the houses all were sick; not one had escaped the contagion; upwards of a hundred individuals, men, women, and children, were writhing in agony on the floors of the houses, with no one to render them any assistance. Some were in the dying struggle, and clenching with the convulsive grasp of death their disease-worn companions, shrieked and howled in the last sharp agony.

---

Probably there does not now exist one, where, five years ago, there were a hundred Indians; and in sailing up the river, from the cape to the cascades, the only evidence of the existence of the Indian, is an occasional miserable wigwam, with a few wretched, half-starved occupants. In some other places they are rather more numerous; but the thoughtful observer cannot avoid perceiving that in a very few years the race must, in the nature of things, become extinct; and the time is probably not far distant, when the little trinkets and toys of this people will be picked up by the curious, and valued as mementoes of a nation passed away for ever from the face of the earth. The aspect of things is very melancholy. It seems as if the fiat of the Creator had gone forth, that these poor denizens of the forest and the stream should go hence, and be seen of men no more.

In former years, when the Indians were numerous, long after the establishment of this fort, it was not safe for the white men attached to it to venture beyond the protection of its guns without being fully armed. Such was the jealousy of the natives towards them, that various deep laid schemes were practiced to obtain possession of the post, and massacre all whom it had harbored; now, however, they are as submissive as children. Some have even entered into the services of the whites, and when once the natural and persevering indolence of the man is worn off, he will work well and make himself useful.

About two hundred miles southward, the Indians are said to be in a much more flourishing condition, and their hostility to the white people to be most deadly. They believe that we brought with us the fatal fever which has ravaged this portion of the country, and the consequence is, that they kill without mercy every white man who trusts himself amongst them.

October 1st. - Doctor Gairdner, the surgeon of Fort Vancouver, took passage a few days ago to the Sandwich Islands, in one of the Company's vessels. He has been suffering for several months, with a pulmonary affection, and is anxious to escape to a milder and more salubrious climate. In his absence, the charge of the hospital will devolve on me, and my time will thus be employed through the coming winter. There are at present but few cases of sickness, mostly ague and fever, so prevalent at this season. My companion, Mr. Nuttall, was also a passenger in the same vessel. From the islands, he will probably visit California, and either return to the Columbia by the next ship, and take the route across the mountains, or double Cape Horn to reach his home.

16th. Several days since, the Rev. Samuel Parker, of Ithaca, N. York, arrived at the fort. He left his home last May, travelled to the rendezvous on the Colorado, with the fur company of Mr. Fontinelle, and performed the remainder of the journey with the Nez Perce or Cheaptin Indians. His object is to examine the country in respect to its agricultural and other facilities, with a view to the establishment of missions among the Indians. He will probably return to the States next spring, and report the result of his observations to the board of commissioners, by whose advice his pioneer journey has been undertaken. [Mr. Parker has since published an account of this tour, to which the reader is referred, for much valuable information, relative to the condition of the Indians on our western frontier. - TOWNSEND.]

On the 17th, I embarked with this gentleman in a canoe, for a visit to the lower part of the river. We arrived at the American brig in the afternoon, on board of which we quartered for the night, and the next morning early, the vessel cast off from the shore. She has her cargo of furs and salmon on board, and is bound to Boston, via the Sandwich and Society Islands. Mr. Parker took passage in her to Fort George, and in the afternoon I returned in my canoe to Vancouver.

December 1st. - The weather is now unusually fine. Instead of the drenching rains which general-

---

ly prevail during the winter months, it has been for some weeks clear and cool, the thermometer ranging from 35deg to 45deg.

The ducks and geese, which have swarmed throughout the country during the latter part of the autumn, are leaving us, and the swans are arriving in great numbers. These are here, as in all other places, very shy; it is difficult to approach them without cover; but the Indians have adopted a mode of killing them which is very successful; that of drifting upon the flocks at night, in a canoe, in the bow of which a large fire of pitch pine has been kindled. The swans are dazzled, and apparently stupefied by the bright light, and fall easy victims to the craft of the sportsman.

20th. 'Yesterday one of the Canadians took an enormous wolf in a beaver-trap. It is probably a distinct species from the common one, (lupus,) much larger and stronger, and of a yellowish cinereous color. The man states that he found considerable difficulty in capturing him, even after the trap had been fastened on his foot. Unlike the lupus, (which is cowardly and cringing when made prisoner,) he showed fight, and seizing the pole in his teeth, with which the man attempted to despatch him, with one backward jerk, threw his assailant to the ground, and darted at him, until checked by the trap chain. He was finally shot, and I obtained his skin, which I have preserved. I have just had a visit from an old and intelligent Indian chief, who lives near. It is now almost midnight, but for the last hour I have heard the old man wandering about like an unquiet spirit, in the neighborhood of my little mansion, and singing snatches of the wild, but sweetly musical songs of his tribe. It is a bitter night, and supposing the old man might be cold, I invited him to a seat by my comfortable fire.

He says, "eighty snows have chilled the earth since Maniquon was born." Maniquon has been a great warrior; he has himself taken twenty scalps between the rising and setting of the sun. Like most old people, he is garrulous, and, like all Indians, fond of boasting of his warlike deeds. I can sit for hours and hear old Maniquon relate the particulars of his numerous campaigns, his ambushes, and his "scrimmages," as old Hawk-eye would say. When he once gets into the spirit of it, he springs upon his feet, his old, sunken eyes sparkle like diamonds set in bronze, and he whirls his shrunken and naked arm around his head, as though it still held the deadly tomahawk. But in the midst of his excitement, seeming suddenly to recollect his fallen state, he sinks into his chair. "Maniquon is not a warrior now - he will never raise his axe again - his young men have deserted his lodge - his sons will go down to their graves, and the squaws will not sing of their great deeds." I have several times heard him speak the substance of these words in his own language, and in one instance he concluded thus:

"And who made my people what they are?" This question was put in a low voice, almost a whisper, and was accompanied by a look so savage and malignant, that I almost quailed before the imbecile old creature. I, however, answered quickly, without giving him time to reply to his own question.

"The Great Spirit, Maniquon," pointing with my finger impressively upwards.

"Yes, yes ' it was the Great Spirit; it was not the white man," I could have been almost angry with the old Indian for the look of deadly hostility with which he uttered these last words, but that I sympathized with his wounded pride, and pitied his sorrows too much to harbor any other feeling than commiseration for his manifold wrongs.

February 3d, 1836. ' During a visit to Fort William, last week, I saw, as I wandered through the forest, about three miles from the house, a canoe, deposited, as is usual, in the branches of a tree,

some fourteen feet from the ground. Knowing that it contained the body of an Indian, I ascended to it for the purpose of abstracting the skull; but upon examination, what was my surprise to find a perfect, embalmed body of a young female, in a state of preservation equal to any which I had seen from the catacombs of Thebes. I determined to obtain possession of it, but as this was not the proper time to carry it away, I returned to the fort, and said nothing of the discovery which I had made.

That night, at the witching hour of twelve, I furnished myself with a rope, and launched a small canoe, which I paddled up against the current to a point opposite the mummy tree. Here I ran my canoe ashore, and removing my shoes and stockings, proceeded to the tree, which was about a hundred yards from the river. I ascended, and making the rope fast around the body, lowered it gently to the ground; then arranging the fabric which had been displaced, as neatly as the darkness allowed, I descended, and taking the body upon my shoulders, bore it to my canoe, and pushed off into the stream. On arriving at the fort, I deposited my prize in the store house, and sewed around it a large Indian mat, to give it the appearance of a bale of guns. Being on a visit to the fort, with Indians whom I had engaged to paddle my canoe, I thought it unsafe to take the mummy on board when I returned to Vancouver the next day, but left directions with Mr. Walker to stow it away under the hatches of a little schooner, which was running twice a week between the two forts.

On the arrival of this vessel, several days after, I received, instead of the body, a note from Mr. Walker, stating that an Indian had called at the fort, and demanded the corpse. He was the brother of the deceased, and had been in the habit of visiting the tomb of his sister every year. He had now come for that purpose, from his residence near the "tum-water," (cascades,) and his keen eye had detected the intrusion of a stranger on the spot hallowed to him by many successive pilgrimages. The canoe of his sister was tenantless, and he knew the spoiler to have been a white man, by the tracks upon the beach, which did not incline inward like those of an Indian.

The case was so clearly made out, that Mr. W. could not deny the fact of the body being in the house, and it was accordingly delivered to him, with a present of several blankets, to prevent the circumstance from operating upon his mind to the prejudice of the white people. The poor Indian took the body of his sister upon his shoulders, and as he walked away, grief got the better of his stoicism, and the sound of his weeping was heard long after he had entered the forest.

25th. Several weeks ago the only son of Ke-ez-a-no, the principal chief of the Chinooks, died. The father was almost distracted with grief, and during the first paroxysm attempted to take the life of the boy's mother, supposing that she had exerted an evil influence over him which had caused his death. She was compelled to fly in consequence, and put herself under the protection of Dr. McLoughlin, who found means to send her to her people below. Disappointed in this scheme of vengeance, the chief determined to sacrifice all whom he thought had ever wronged his son, or treated him with indignity; and the first victim whom he selected was a very pretty and accomplished Chinook girl, named Waskema, who was remarkable for the exceeding beauty of her long black hair. Waskema had been solicited by the boy in marriage, but had refused him, and the matter had been long forgotten, until it was revived in the recollection of the father by the death of his son. Ke-ez-a-no despatched two of his slaves to Fort William, (where the girl was at that time engaged in making moccasins for Mr. W. and where I had seen her a short time previously,) who hid themselves in the neighborhood until the poor creature had embarked in her canoe alone to

---

return to her people, when they suddenly rushed upon her from the forest which skirted the river, and shot two balls through her bosom. The body was then thrown into the water, and the canoe broken to pieces on the beach.

Tapeo the brother of Waskema delivered to me a letter from Mr. W. detailing these circumstances, and amid an abundance of tears which he shed for the loss of his only and beloved sister, he denounced the heaviest vengeance upon her murderer. These threats, however, I did not regard, as I knew the man would never dare to raise his hand against his chief, but as expression relieves the overcharged heart, I did not check his bursts of grief and indignation.

A few days after this, Ke-ez-a-no himself stalked into my room. After sitting a short time in silence, he asked if I believed him guilty of the murder of Waskema. I replied that I did, and that if the deed had been committed in my country, he would be hanged. He denied all agency in the matter, and placing one hand upon his bosom, and pointing upwards with the other, called God to witness that he was innocent. For the moment I almost believed his asseverations; but calling to mind the strong and undeniable evidence against him, with a feeling of horror and repugnance, I opened the door and bowed him out of the house.

March 1st. - There is an amusing little Indian living in this neighborhood, who calls himself "tanas tie," (little chief,) and he is so probably in every sense of the term. In person, he stands about four feet six, in his moccasins; but no exquisite in the fashionable world, no tinselled dandy in high life, can strut and stamp, and fume with more dignity and self consequence. His name, he says, is Qualaskin; but in the fort, he is known by the cognomen of "busy body," from his restless anxiety to pry into every body's business, and his curiosity to know the English name of every article he sees; ikata ookook? ikata ookook? (what is this? what is this?) kahtah pasiooks yahhalle? (what is its English name?) are expressions which he is dinning in your ears, whenever he enters a room in the fort. If you answer him, he attempts the pronunciation after you, and it is often not a little ludicrous. He is evidently proud of the name the white people have given him, not understanding its import, but supposing it to be a title of great honor and dignity. If he is asked his Indian name, he answers very modestly, Qualaskin, (muddy river,) but if his pasiooks yahhalle is required, he puffs up his little person to its utmost dimensions, and tells you with a simper of pride and self complacency, that it is "mizzy moddy."

16th. ' Doctor W. F. Tolmie, one of the surgeons of the Hudson's Bay Company, has just arrived from Fort Langley, on the coast, and has relieved me of the charge of the hospital, which will afford me the opportunity of peregrinating again in pursuit of specimens. The spring is just opening, the birds are arriving, the plants are starting from the ground, and in a few weeks, the wide prairies of the Columbia will appear like the richest flower gardens.

May 13th. ' Two days ago I left the fort, and am now encamped on a plain below Warrior's point. Near me are several large lodges of Kowalitsk Indians; in all probably one hundred persons. As usual, they give me some trouble by coming around and lolling about my tent, and importuning me for the various little articles that they see. My camp-keeper, however, (a Klikatat,) is an excellent fellow, and has no great love for Kowalitsk Indians, so that the moment he sees them becoming troublesome, he clears the coast, sans ceremonie. There is in one of the lodges a very pretty little girl, sick with intermittent fever; and to-day the "medicine man" has been exercising his functions upon the poor little patient; pressing upon its stomach with his brawny hands until it shrieked with the pain, singing and muttering his incantations, whispering in its ears, and ex-

---

horting the evil spirit to pass out by the door, &c. These exhibitions would be laughable did they not involve such serious consequences, and for myself I always feel so much indignation against the unfeeling impostor who operates, and pity for the deluded creatures who submit to it, that any emotions but those of risibility are excited.

I had a serious conversation with the father of this child, in which I attempted to prove to him, and to some twenty or thirty Indians who were squatted about the ground near, that the "medicine man" was a vile impostor, that he was a fool and a liar, and that his manipulations were calculated to increase the sufferings of the patient instead of relieving them. They all listened in silence, and with great attention to my remarks, and the wily conjurer himself had the full benefit of them: he stood by during the whole time, assuming an expression of callous indifference which not even my warmest vituperations could affect. Finally I offered to exhibit the strongest proof of the truth of what I had been saying, by pledging myself to cure the child in three days, provided the "medicine man" was dismissed without delay. This, the father told me, required some consideration and consultation with his people, and I immediately left the lodge and took the way to my camp, to allow them an opportunity of discussing the matter alone.

Early next morning the Indian visited me, with the information that the "medicine man" had departed, and he was now anxious that I should make trial of my skill. I immediately administered to the child an active cathartic, followed by sulphate of quinine, which checked the disease, and in two days the patient was perfectly restored.

In consequence of my success in this case, I had an application to administer medicine to two other children similarly affected. My stock of quinine being exhausted, I determined to substitute an extract of the bark of the dogwood, (*Corpus Nuttalli*.) and taking one of the parents into the wood with his blanket, I soon chipped off a plentiful supply, returned, boiled it in his own kettle, and completed the preparation in his lodge, with most of the Indians standing by, and staring at me, to comprehend the process.

This was exactly what I wished; and as I proceeded, I took some pains to explain the whole matter to them, in order that they might at a future time be enabled to make use of a really valuable medicine, which grows abundantly every where throughout the country. I have often thought it strange that the sagacity of the Indians should not long ago have made them acquainted with this remedy; and I believe, if they had used it, they would not have had to mourn the loss of hundreds, or even thousands of their people who have been swept away by the demon of ague and fever.

I administered to each of the children about a scruple of the extract per day. The second day they escaped the paroxysm, and on the third were entirely well.

June 26th. 'I left Vancouver yesterday, with the summer brigade, for a visit to Walla-walla, and its vicinity. The gentlemen of the party are, Peter Ogden, Esq., chief factor, bound to New Caledonia, Archibald McDonald, Esq., for Colville, and Samuel Black, Esq., for Thompson's river, and the brigade consists of sixty men, with nine boats.

27th. 'We arrived yesterday at the upper cascades, and made in the course of the day three portages. As is usual in this place, it rained almost constantly, and the poor men engaged in carrying the goods, were completely drenched. A considerable number of Indians are employed here in fishing, and they supply us with an abundance of salmon. Among them I recognise many of my old friends from below.

28th. 'This morning the Indian wife of one of the men gave birth to a little girl. The tent in which

she was lying was within a few feet of the one which I occupied, and we had no intimation of the matter being in progress until we heard the crying of the infant. It is truly astonishing with what ease the parturition of these women is performed; they generally require no assistance in delivery, being fully competent to manage the whole paraphernalia themselves. In about half an hour after this event we got under way, and the woman walked to the boat, carrying her new born infant on her back, embarked, laughed, and talked as usual, and appeared in every respect as well as if nothing had happened.

This woman is a most noble specimen of bone and muscle, and so masculine in appearance, that were she to cast the petticoat, and don the breeches, the cheat would never be discovered, and but few of the lords of the creation would be willing to face the Amazon. She is particularly useful to her husband. As he is becoming rather infirm, she can protect him most admirably. If he wishes to cross a stream in travelling without horses or boats, she plunges in without hesitation, takes him upon her back, and lands him safely and expeditiously upon the opposite bank. She can also kill and dress an elk, run down and shoot a buffalo, or spear a salmon for her husband's breakfast in the morning, as well as any man-servant he could employ. Added to all this, she has, in several instances, saved his life in skirmishes with Indians, at the imminent risk of her own, so that he has some reason to be proud of her.

In the afternoon, we passed the bold, basaltic point, known to the voyageurs by the name of "Cape Horn." The wind here blew a perfect hurricane, and but for the consummate skill of those who managed our boats, we must have had no little difficulty.

30th.' We were engaged almost the whole of this day in making portages, and I had, in consequence, some opportunity of prosecuting my researches on the land. We have now passed the range of vegetation; there are no trees or even shrubs; nothing but huge, jagged rocks of basalt, and interminable sand heaps. I found here a large and beautiful species of marmot, (the *Arctomys Richardsonii*,) several of which I shot. Encamped in the evening at the village of the Indian chief, Tilki. I had often heard of this man, but I now saw him for the first time. His person is rather below the middle size, but his features are good, with a Roman cast, and his eye is deep black, and unusually fine. He appears to be remarkably intelligent, and half a century before the generality of his people in civilization.

July 3d.' This morning we came to the open prairies, covered with wormwood bushes. The appearance, and strong odor of these, forcibly remind me of my journey across the mountains, when we frequently saw no vegetation for weeks, except this dry and barren looking shrub.

The Indians here are numerous, and are now engaged in catching salmon, lamprey eels, &c. They take thousands of the latter, and they are seen hanging in great numbers in their lodges to dry in the smoke. As soon as the Indians see us approach, they leave their wigwams, and run out towards us, frequently wading to their breasts in the water, to get near the boats. Their constant cry is pi-pi, pi-pi, (tobacco, tobacco,) and they bring a great variety of matters to trade for this desirable article; fish, living birds of various kinds, young wolves, foxes, minks, &c.

On the evening of the 6th, we arrived at Walla-walla or Nez Perces fort, where I was kindly received by Mr. Pambrun, the superintendent.

The next day the brigade left us for the interior, and I shouldered my gun for an excursion through the neighborhood. On the west side of the little Walla-walla river, I saw, during a walk of two miles, at least thirty rattlesnakes, and killed five that would not get out of my way; They

all seemed willing to dispute the ground with me, shaking their rattles, coiling and darting at me with great fury. I returned to the fort in the afternoon with twenty-two sharp-tailed grouse, (*Tetrao phasianellus*,) the product of my day's shooting.

25th. I mounted my horse this morning for a journey to the Blue mountains. I am accompanied by a young half breed named Baptiste Dorion, [This is the son of old Pierre Dorion, who makes such a conspicuous figure in Irving's "Astoria." ' TOWNSEND.] who acts as guide, groom, interpreter, &c., and I have a pack horse to carry my little nick-nackeries. We shaped our course about N. E. over the sandy prairie, and in the evening encamped on the Morro river, having made about thirty miles.

On our way, we met two Walla-walla Indians driving down a large band of horses. They inform us that the Snakes have crossed the mountain to commence their annual thieving of horses, and they are taking them away to have them secure. I shall need to keep a good look out to my own small caravan, or I shall be under the necessity of turning pedestrian.

Townsend's Across the Rockies to the Columbia

---

#### CHAPTER XV

A village of Kayouse Indians - their occupation - appearance and dresses of the women - family worship - its good effects - Visit to the Blue mountains - Dusky grouse - Return to Walla-walla - Arrival of Mr. McLeod, and the missionaries - Letters from home - Death of Antoine Goddin, the trapper - A renegado white man - Assault by the Walla-walla Indians - Missionary duties - Passage down the Columbia - Rapids - A dog for supper - Prairies on fire - A nocturnal visit - Fishing Indians - Their romantic appearance - Salmon huts - The shoots - Dangerous navigation - Death of Tilki - Seals - Indian stoicism and contempt of pain - Skookoom, the strong chief - his death - Maiming, an evidence of grief - Arrival at Fort Vancouver - A visit to Fort George - Indian cemeteries - Lewis and Clarke's house - A medal - Visit to Chinook - Hospitality of the Indians - Chinamus' house - The idol - Canine inmates.

July 26th.- At noon, to-day, we arrived at the Utalla, or Emmitilly river, where we found a large village of Kayouse Indians, engaged in preparing kamas. Large quantities of this root were strewed about on mats and buffalo robes; some in a crude state, and a vast quantity pounded, to be made into cakes for winter store. There are of the Indians, about twelve or fifteen lodges. A very large one, about sixty feet long by fifteen broad, is occupied by the chief, and his immediate family. This man I saw when I arrived at Walla-walla, and I have accepted an invitation to make my home in his lodge while I remain here. The house is really a very comfortable one; the rays of the sun are completely excluded, and the ground is covered with buffalo robes. There are in the chief's lodge about twenty women, all busy as usual; some pounding kamas, others making leathern dresses, moccasins, &c. Several of the younger of these are very good looking, I might almost say handsome. Their heads are of the natural form, not flattened and contorted in the horrible manner of the Chinooks; their faces are inclining to oval, and their eyes have a peculiarly sleepy and languishing appearance. They seem as if naturally inclined to lasciviousness, but if this feeling exists, it is effectually checked by their self-enacted laws, which are very severe in this respect, and in every instance rigidly enforced. The dresses of the women, (unlike the Chinooks, they all have dresses,) are of deer or antelope skin, more or less ornamented with beads and hyquas. [A long white shell, of the genus *Dentalium*, found on the coast. ' TOWNSEND.] It consists of one piece, but the part covering the bust, projects over the lower portion of the garment, and its edges are

---

cut into strings, to which a quantity of blue beads are generally attached.

In the evening all the Indians belonging to the village assembled in our lodge, and, with the chief for minister, performed divine service, or family worship. This, I learn, is their invariable practice twice every twenty-four hours, at sunrise in the morning, and after supper in the evening. When all the people had gathered, our large lodge was filled. On entering, every person squatted on the ground, and the clerk (a sort of sub-chief) gave notice that the Deity would now be addressed. Immediately the whole audience rose to their knees, and the chief supplicated for about ten minutes in a very solemn, but low tone of voice, at the conclusion of which an amen was pronounced by the whole company, in a loud, swelling sort of groan. Three hymns were then sung, several of the individuals present leading in rotation, and at the conclusion of each, another amen. The chief then pronounced a short exhortation, occupying about fifteen minutes, which was repeated by the clerk at his elbow in a voice loud enough to be heard by the whole assembly. At the conclusion of this, each person rose, and walked to one of the doors of the lodge, where, making a low inclination of his body, and pronouncing the words "tots sekan," (good night,) to the chief, he departed to his home.

I shall hear this ceremony every night and morning while I remain, and so far from being irksome, it is agreeable to me. It is pleasant to see these poor degraded creatures performing a religious service; for to say nothing of the good influence which it will exert in improving their present condition, it will probably soften and harmonize their feelings, and render them fitter subjects for the properly qualified religious instruction which it is desirable they may some day receive.

The next morning, my friend the chief furnished me with fresh horses, and I and my attendant, with two Indian guides, started for a trip to the mountain. We passed up one of the narrow valleys or gorges which here run at right angles from the alpine land, and as we ascended, the scenery became more and more wild, and the ground rough and difficult of passage, but I had under me one of the finest horses I ever rode; he seemed perfectly acquainted with the country; I had but to give him his head, and not attempt to direct him, and he carried me triumphantly through every difficulty. Immediately as we reached the upper land, and the pine trees, we saw large flocks of the dusky grouse, (*Tetrao obscurus*,) a number of which we killed. Other birds were, however, very scarce. I am at least two months too late, and I cannot too much regret the circumstance. Here is a rich field for the ornithologist at the proper season. We returned to our lodge in the evening loaded with grouse, but with very few specimens to increase my collection.

29th. Early this morning our Indians struck their lodges, and commenced making all their numerous movables into bales for packing on the horses. I admired the facility and despatch with which this was done; the women alone worked at it, the men lolling around, smoking and talking, and not even once directing their fair partners in their task. The whole camp travelled with me to Walla-walla, where we arrived the next day.

Sept. 1st. - Mr. John M'Leod, a chief trader of the Hudson's Bay Company, arrived this morning from the rendezvous, with a small trading party. I had been anxiously expecting this gentleman for several weeks, as I intended to return with him to Vancouver. He is accompanied by several Presbyterian missionaries, the Rev. Mr. Spalding and Doctor Whitman, with their wives, and Mr. Gray, teacher. Doctor Whitman presented me with a large packet of letters from my beloved friends at home. I need not speak of the emotions excited by their reception, nor of the trembling anxiety with which I tore open the envelope and devoured the contents. This is the first intelli-

---

gence which I have received from them since I left the state of Missouri, and was as unexpected as it was delightful.

Mr. M'Leod informed me of the murder of Antoine Goddin, the half-breed trapper, by the Black-foot Indians, at Fort Hall. - A band of these Indians appeared on the shore of the Portneuf river, opposite the fort, headed by a white man named Bird. - This man requested Goddin, whom he saw on the opposite side of the river, to cross to him with a canoe, as he had beaver which he wished to trade. The poor man accordingly embarked alone, and landing near the Indians, joined the circle which they had made, and smoked the pipe of peace with them. While Goddin was smoking in his turn, Bird gave a sign to the Indians, and a volley was fired into his back. While he was yet living, Bird himself tore the scalp from the poor fellow's head, and deliberately cut Captain Wyeth's initials, N. J. W. in large letters upon his forehead. He then hallooed to the fort people, telling them to bury the carcass if they wished, and immediately went off with his party. This Bird was formerly attached to the Hudson's Bay Company, and was made prisoner by the Blackfeet, in a skirmish several years ago. He has since remained with them, and has become a great chief, and leader of their war parties. He is said to be a man of good education, and to possess the most unbounded influence over the savage people among whom he dwells. He was known to be a personal enemy of Goddin, whom he had sworn to destroy on the first opportunity.

We also hear, that three of Captain Wyeth's men who lately visited us, had been assaulted on their way to Fort Hall, by a band of Walla-walla Indians, who, after beating them severely, took from them all their horses, traps, ammunition, and clothing. They were, however, finally induced to return them each a horse and gun, in order that they might proceed to the interior, to get fresh supplies. This was a matter of policy on the part of the Indians, for if the white men had been compelled to travel on foot, they would have come immediately here to procure fresh horses, &c., and thus exposed the plunderers. Mr. Pambrun is acquainted with the ringleader of this band of marauders, and intends to take the first opportunity of inflicting upon him due punishment, as well as to compel him to make ample restitution for the stolen property, and broken heads of the unoffending trappers.

I have had this evening, some interesting conversation with our guests, the missionaries. They appear admirably qualified for the arduous duty to which they have devoted themselves, their minds being fully alive to the mortifications and trials incident to a residence among wild Indians; but they do not shrink from the task, believing it to be their religious duty to engage in this work. The ladies have borne the journey astonishingly; they look robust and healthy.

3d. Mr. M'Leod and myself embarked in a large batteau, with six men, and bidding farewell to Mr. Pambrun and the missionaries, were soon gliding down the river. We ran, to-day, several rapids, and in the evening encamped about fifteen miles below the mouth of the Utalla river.

This running of rapids appears rather a dangerous business to those unaccustomed to it, and it is in reality sufficiently hazardous, except when performed by old and skilful hands. Every thing depends upon the men who manage the bow and stern of the boat. The moment she enters the rapid, the two guides lay aside their oars taking in their stead paddles, such as are used in the management of a canoe. The middle-men ply their oars; the guides brace themselves against the gunwale of the boat, placing their paddles edge-wise down her sides, and away she goes over the curling, foaming, and hissing waters, like a race horse.

---

We passed to-day several large lodges of Indians, from whom we wished to have purchased fish, but they had none, or were not willing to spare any, so that we were compelled to purchase a dog for supper. I have said we, but I beg leave to correct myself, as I was utterly averse to the proceeding; not, however, from any particular dislike to the quality of the food, (I have eaten it repeatedly, and relished it,) but I am always unwilling, unless when suffering absolute want, to take the life of so noble and faithful an animal. Our hungry oarsmen, however, appeared to have no such scruples. The Indian called his dog, and he came to him, wagging his tail! He sold his companion for ten balls and powder! One of our men approached the poor animal with an axe. I turned away my head to avoid the sight, but I heard the dull, sodden sound of the blow. The tried friend and faithful companion lay quivering in the agonies of death at its master's feet.

We are enjoying a most magnificent sight at our camp this evening. On the opposite side of the river, the Indians have fired the prairie, and the whole country for miles around is most brilliantly illuminated. Here am I sitting crosslegged on the ground, scribbling by the light of the vast conflagration with as much ease as if I had a ton of oil burning by my side; but my eyes are every moment involuntarily wandering from the paper before me, to contemplate and admire the grandeur of the distant scene. The very heavens themselves appear ignited, and the fragments of ashes and burning grass-blades, ascending and careering about through the glowing firmament, look like brilliant and glorious birds let loose to roam and revel amid this splendid scene. It is past midnight: every one in the camp is asleep, and I am this moment visited by half a dozen Indian fishermen, who are peering over my shoulders, and soliciting a smoke, so that I shall have to stop, and fill my calamet.

5th. The Indians are numerous along the river, and all engaged in fishing; as we pass along, we frequently see them posted upon the rocks overhanging the water, surveying the boiling and roaring flood below, for the passing salmon. In most instances, an Indian is seen entirely alone in these situations, often standing for half an hour perfectly still, his eyes rivetted upon the torrent, and his long fish spear poised above his head. The appearance of a solitary and naked savage thus perched like an eagle upon a cliff, is sometimes, 'when taken in connexion with the wild and rugged river scenery,' very picturesque. The spear is a pole about twelve feet in length, at the end of which a long wooden fork is made fast, and between the tines is fixed a barbed iron point. They also, in some situations, use a hand scoopnet, and stand upon scaffolds ingeniously constructed over the rapid water. Their winter store of dried fish is stowed away in little huts of mats and branches, closely interlaced, and also in caches under ground. It is often amusing to see the hungry ravens tearing and tugging at the strong twigs of the houses, in a vain attempt to reach the savory food within.

In the afternoon, we passed John Day's river, and encamped about sunset at the "shoots." Here is a very large village of Indians, (the same that I noticed in my journal, on the passage down,) and we are this evening surrounded by some scores of them.

6th. We made the portage of the shoots this morning by carrying our boat and baggage across the land, and in half an hour, arrived at one of the upper dalles. Here Mr. M'Leod and myself debarked, and the men ran the dall. We walked on ahead to the most dangerous part, and stood upon the rocks about a hundred feet above to observe them. It really seemed exceedingly dangerous to see the boat dashing ahead like lightning through the foaming and roaring waters, sometimes raised high above the enormous swells, and dashed down again as if she were seeking the

bottom with her bows, and at others whirled around and nearly sucked under by the whirlpools constantly forming around her. But she stemmed every thing gallantly, under the direction of our experienced guides, and we soon embarked again, and proceeded to the lower dalles. Here it is utterly impossible, in the present state of the water, to pass, so that the boat and baggage had to be carried across the whole portage. This occupied the remainder of the day, and we encamped in the evening at a short distance from the lower villages. The Indians told us with sorrowful faces of the recent death of their principal chief, Tilki. Well, thought I, the white man has lost a friend, and long will it be before we see his like again! The poor fellow was unwell when I last saw him, with a complaint of his breast, which I suspected to be pulmonary. I gave him a few simple medicines, and told him I should soon see him again. Well do I remember the look of despondency with which he bade me farewell, and begged me to return soon and give him more medicine. About two weeks since he ruptured a blood vessel, and died in a short time.

We see great numbers of seals as we pass along. Immediately below the Dalles they are particularly abundant, being attracted thither by the vast shoals of salmon which seek the turbulent water of the river. We occasionally shoot one of them as he raises his dog-like head above the surface, but we make no use of them; they are only valuable for the large quantity of oil which they yield.

We observe on the breasts and bellies of many of the Indians here, a number of large red marks, mostly of an oval form, sometimes twenty or thirty grouped together. These are wounds made by their own hands, to display to their people the unwavering and stoical resolution with which they can endure pain. A large fold of the skin is taken up with the fingers, and sliced off with a knife; the surrounding fibre then retreats, and a large and ghastly looking wound remains. Many that I saw to-day are yet scarcely cicatrized. There is a chief here who obtained the dignity which he now enjoys, solely by his numerous and hardy feats of this kind. He was originally a common man, and possessed but one wife; he has now six, and any of the tribe would think themselves honored by his alliance. He is a most gigantic fellow, about six feet four inches in height, and remarkably stout and powerful. The whole front of his person is covered with the red marks of which I have spoken, and he displays with considerable pride the two scars of a bullet, which entered the left breast, and passed out below the shoulder blade. This wound he also made with his own hand, by placing the muzzle of his gun against his breast, and pressing the trigger with his toe; and by this last, and most daring act, he was raised to the chief command of all the Indians on the north side of the river. Now that Tilki is no more, he will probably be chosen chief of all the country from the cascades to Walla-walla. I asked him if he felt no fear of death from the wound in his chest, at the time it was inflicted. He said, no; that his heart was strong, and that a bullet could never kill him. He told me that he was entirely well in a week after this occurrence, but that for two days he vomited blood constantly. He is named by the Indians "Skookoom," (the strong.)

About six weeks after, Mr. M'Leod, who again returned from a visit to Walla-walla, informed me that the strong chief was dead. A bullet, (or rather two of them,) killed him at last, in spite of his supposed invulnerability. He was shot by one of his people in a fit of jealousy. Skookoom had assisted Mr. M'Leod with his boats across the portage, and, being a chief, he of course received more for the service than a common man. This wretch, who was but a serf in the tribe, chose to be offended by it, and vented his rage by murdering his superior. He fired a ball from his own gun into his breast, which brought him to the ground, and then despatched him with a second, which he seized from another. So poor Skookoom has passed away, and such is the frail tenure

---

upon which an Indian chief holds his authority and his life. The murderer will no doubt soon die by the hand of some friend or relative of the deceased; he in his turn will be killed by another, and as usual, the bloody business will go on indefinitely, and may even tend to produce an open war between the rival parties.

I saw an old man here, apparently eighty years of age, who had given himself three enormous longitudinal gashes in his leg, to evince his grief for the loss of Tilki. From the sluggishness of the circulation in the body of the poor old creature, combined with a morbid habit, these wounds show no disposition to heal. I dressed his limb, and gave him a strict charge to have it kept clean, but knowing the universal carelessness of Indians in this respect, I fear my directions will not be attended to, and the consequence will probably be, that the old man will die miserably. I spoke to him of the folly of such inflictions, and took this opportunity of delivering a short lecture upon the same subject to the others assembled in his lodge.

At 11 o'clock next day we arrived at the cascades, where we made the long portage, and at nine in the evening encamped in an ash grove, six miles above Prairie de The.

On the 8th, reached Vancouver, where we found two vessels which had just arrived from England. On the 24th, I embarked in a canoe with Indians for Fort George, and arrived in two days. Here I was kindly received by the superintendent, Mr. James Birnie, and promised every assistance in forwarding my views.

30th. I visited to-day some cemeteries in the neighborhood of the fort, and obtained the skulls of four Indians. Some of the bodies were simply deposited in canoes, raised five or six feet from the ground, either in the forks of trees, or supported on stakes driven into the earth. In these instances it was not difficult to procure the skulls without disarranging the fabric; but more frequently, they were nailed in boxes, or covered by a small canoe, which was turned bottom upwards, and placed in a larger one, and the whole covered by strips of bark, carefully arranged over them. It was then necessary to use the utmost caution in removing the covering, and also to be careful to leave every thing in the same state in which it was found. I thought several times to-day, as I have often done in similar situations before: 'Now suppose an Indian were to step in here, and see me groping among the bones of his fathers, and laying unhallowed hands upon the mouldering remains of his people, what should I say?' I know well what the Indian would do. He would instantly shoot me, unless I took the most effectual measures to prevent it; but could I have time allowed me to temporize a little, I could easily disarm his hostility and ensure his silence, by the offer of a shirt or a blanket; but the difficulty in most cases would be, that in a paroxysm of rage he would put a bullet through your head, and then good bye to temporizing. Luckily for my pursuits in this way, there are at present but few Indians here, and I do not therefore incur much risk; were it otherwise, there would be no little danger in these aggressions.

The corpses of the several different tribes which are buried here, are known by the difference in the structure of their canoes; and the sarcophagi of the chiefs from those of the common people, by the greater care which has been manifested in the arrangement of the tomb.

October 14th. I walked to-day around the beach to the foot of Young's bay, a distance of about ten miles, to see the remains of the house in which Lewis and Clark's party resided during the winter which they spent here. The logs of which it is composed, are still perfect, but the roof of bark has disappeared, and the whole vicinity is overgrown with thorn and wild currant bushes.

One of Mr. Birnie's children found, a few days since, a large silver medal, which had been brought

here by Lewis and Clark, and had probably been presented to some chief, who lost it. On one side was a head, with the name "Th. Jefferson, President of the United States, 1801.," On the other, two hands interlocked, surmounted by a pipe and tomahawk; and above the words, "Peace and Friendship."

15th. ' This afternoon I embarked in a canoe with Chinamus, and went with him to his residence at Chinook. The chief welcomed me to his house in a style which would do no discredit to a more civilized person. His two wives were ordered to make a bed for me, which they did by piling up about a dozen of their soft mats, and placing my blankets upon them, and a better bed I should never wish for. I was regaled, before I retired, with sturgeon, salmon, wappatoos, cranberries, and every thing else that the mansion afforded, and was requested to ask for any thing I wanted, and it should be furnished me. Whatever may be said derogatory to these people, I can testify that inhospitality is not among the number of their failings. I never went into the house of an Indian in my life, in any part of the country, without being most cordially received and welcomed.

The chief's house is built in the usual way, of logs and hewn boards, with a roof of cedar bark, and lined inside with mats. The floor is boarded and matted, and there is a depression in the ground about a foot in depth and four feet in width, extending the whole length of the building in the middle, where the fires are made.

In this, as in almost every house, there is a large figure, or idol, rudely carved and painted upon a board, and occupying a conspicuous place. To this figure many of the Indians ascribe supernatural powers. Chinamus says that if he is in any kind of danger, and particularly, if he is under the influence of an evil spell, he has only to place himself against the image, and the difficulty, of whatever kind, vanishes at once. This certainly savors of idolatry, although I believe they never address the uncouth figure as a deity. Like all other Indians, they acknowledge a great and invisible spirit, who governs and controls, and to whom all adoration is due.

Attached to this establishment, are three other houses, similarly constructed, inhabited by about thirty Indians, and at least that number of dogs. These, although very useful animals in their place, are here a great nuisance. They are of no possible service to the Indians, except to eat their provisions, and fill their houses with fleas, and a stranger approaching the lodges, is in constant danger of being throttled by a legion of fierce brutes, who are not half as hospitable as their masters.

I remained here several days, making excursions through the neighborhood, and each time when I returned to the lodge, the dogs growled and darted at me. I had no notion of being bitten, so I gave the Indians warning, that unless the snarling beasts were tied up when I came near, I would shoot every one of them. The threat had the effect desired, and after this, whenever I approached the lodges, there was a universal stir among the people, and the words, "iskam kahmooks, iskam kahmooks, kalak'alah tie chahko," (take up your dogs, take up your dogs, the bird chief is coming,) echoed through the little village, and was followed by the yelping and snarling of dozens of wolf-dogs, and "curs of low degree," all of which were gathered in haste to the cover and protection of one of the houses.

#### CHAPTER XVI

Northern excursion - Large shoals of salmon - Indian mode of catching them - House near the beach - Flathead children - A storm on the bay - Loss of provision - Pintail ducks - Simple mode

---

of killing salmon - Return to Chinook - Indian garrulity - Return to Fort George - Preparations for a second trip to the Sandwich Islands - Detention within the cape.

October 17th.- I left Chinook this morning in a canoe with Chinamus, his two wives, and a slave, to procure shell-fish, which are said to be found in great abundance towards the north. We passed through a number of narrow slues which connect the numerous bays in this part of the country, and at noon debarked, left our canoe, took our blankets on our shoulders and struck through the midst of a deep pine forest. After walking about two miles, we came to another branch, where we found a canoe which had been left there for us yesterday, and embarking in this, we arrived in the evening at an Indian house, near the seaside, where we spent the night.

In our passage through some of the narrow channels today, we saw vast shoals of salmon, which were leaping and curvetting about in every direction, and not unfrequently dashing their noses against our canoe, in their headlong course. We met here a number of Indians engaged in fishing. Their mode of taking the salmon is a very simple one. The whole of the tackle consists of a pole about twelve feet long, with a large iron hook attached to the end. This machine they keep constantly trailing in the water, and when the fish approaches the surface, by a quick and dexterous jerk, they fasten the iron into his side, and shake him off into the canoe. They say they take so many fish that it is necessary for them to land about three times a day to deposit them.

The house in which we sleep to-night is not near so comfortable as the one we have left. It stinks intolerably of salmon, which are hanging by scores to the roof, to dry in the smoke, and our bed being on the dead level, we shall probably suffer somewhat from fleas, not to mention another unmentionable insect which is apt to inhabit these dormitories in considerable profusion. There are here several young children; beautiful, flat-headed, broad-faced, little individuals. One of the little dears has taken something of a fancy to me, and is now hanging over me, and staring at my book with its great goggle eyes. It is somewhat strange, perhaps, but I have become so accustomed to this universal deformity, that I now scarcely notice it. I have often been evilly disposed enough to wish, that if in the course of events one of these little beings should die, I could get possession of it. I should like to plump the small carcass into a keg of spirits, and send it home for the observation of the curious.

18th. ' Last night the wind rose to a gale, and this morning it is blowing most furiously, making the usually calm water of these bays so turbulent as to be dangerous for our light craft. Notwithstanding this disadvantage, the Indians were in favor of starting for the sea, which we accordingly did at an early hour. Soon after we left, in crossing one of the bays, about three-quarters of a mile in width, the water suddenly became so agitated as at first nearly to upset our canoe. A perfect hurricane was blowing right ahead, cold as ice, and the water was dashing over us, and into our little bark, in a manner to frighten even the experienced chief who was acting as helmsman. In a few minutes we were sitting nearly up to our waistbands in water, although one of the women and myself were constantly bailing it out, employing for the purpose the only two hats belonging to the party, my own and that of the chief. We arrived at the shore at length in safety, although there was scarcely a dry thread on us, and built a tremendous fire with the drift-wood which we found on the beach. We then dried our clothes and blankets as well as we could, cooked some ducks that we killed yesterday, and made a hearty breakfast. My stock of bread, sugar, and tea, is completely spoiled by the salt water, so that until I return to Fort George, I must live simply; but I think this no hardship: what has been done once can be done again.

In the afternoon the women collected for me a considerable number of shells, several species of *Cardium*, *Citherea*, *Ostrea*, &c., all edible, and the last very good, though small.

The common pintail duck, (*Anas acuta*,) is found here in vast flocks. The chief and myself killed twenty-six to-day, by a simultaneous discharge of our guns. They are exceedingly fat and most excellent eating; indeed all the game of this lower country is far superior to that found in the neighborhood of Vancouver. The ducks feed upon a small submerged vegetable which grows in great abundance upon the reedy islands in this vicinity.

The next day we embarked early, to return to Chinook. The wind was still blowing a gale, but by running along close to the shore of the stormy bay, we were enabled, by adding greatly to our distance, to escape the difficulties against which we contended yesterday, and regained the slues with tolerably dry garments.

At about 10 o'clock, we arrived at the portage, and struck into the wood, shouldering our baggage as before. We soon came to a beautiful little stream of fresh water, where we halted, and prepared our breakfast. In this stream, (not exceeding nine feet at the widest part,) I was surprised to observe a great number of large salmon. Beautiful fellows, of from fifteen to twenty-five pounds weight, darting and playing about in the crystal water, and often exposing three-fourths of their bodies in making their way through the shallows. I had before no idea that these noble fish were ever found in such insignificant streams, but the Indians say that they always come into the rivulets at this season, and return to the sea on the approach of winter. Our slave killed seven of these beautiful fish, while we made our hasty breakfast, his only weapon being a light cedar paddle.

We reached Chinook in the evening, and as we sat around the fires in the lodge, I was amused by the vivid description given to the attentive inhabitants by Chinamus and his wives, of the perils of our passage across the stormy bay. They all spoke at once, and described most minutely every circumstance that occurred, the auditors continually evincing their attention to the relation by a pithy and sympathizing hugh. They often appealed to me for the truth of what they were saying, and, as in duty bound, I gave an assenting nod, although at times I fancied they were yielding to a propensity, not uncommon among those of Christian lands, and which is known by the phrase, "drawing a long bow."

21st. 'The wind yesterday was so high, that I did not consider it safe to attempt the passage to Fort George. This morning it was more calm, and we put off in a large canoe at sunrise. When we had reached the middle of Young's bay, the wind again rose, and the water was dashing over us in fine style, so that we were compelled to make for the shore and wait until it subsided. We lay by about an hour, when, the water becoming more smooth, we again got under way, and arrived at Fort George about noon.

On the 5th of November, I returned to Vancouver, and immediately commenced packing my baggage, collection, &c., for a passage to the Sandwich Islands, in the barque *Columbia*, which is now preparing to sail for England. This is a fine vessel, of three hundred tons, commanded by Captain Royal; we shall have eight passengers in the cabin; Captain Darby, formerly of this vessel, R. Cowie, chief trader, and others.

On the 21st, we dropped down the river, and in two days anchored off the cape. We have but little prospect of being able to cross the bar; the sea breaks over the channel with a roar like thunder, and the surf dashes and frets against the rocky cape and drives its foam far up into the bay.

I long to see blue water again. I am fond of the sea; it suits both my disposition and constitution;

and then the reflection, that now every foot I advance will carry me nearer to my beloved home, is in itself a most powerful inducement to urge me on. But much as I desire again to see home, much as I long to embrace those to whom I am attached by the strongest ties, I have nevertheless felt something very like regret at leaving Vancouver and its kind and agreeable residents. I took leave of Doctor McLoughlin with feelings akin to those with which I should bid adieu to an affectionate parent; and to his fervent, "God bless you, sir, and may you have a happy meeting with your friends," I could only reply by a look of the sincerest gratitude. Words are inadequate to express my deep sense of the obligations which I feel under to this truly generous and excellent man, and I fear I can only repay them by the sincerity with which I shall always cherish the recollection of his kindness, and the ardent prayers I shall breathe for his prosperity and happiness.

30th.' At daylight this morning, the wind being fair, and the bar more smooth, we weighed anchor and stood out. At about 9 o'clock we crossed the bar, and in a few minutes were hurrying along on the open sea before a six-knot breeze. We are now out, and so good bye to Cape Disappointment and the Columbia, and now for home, dear home again!

## INTRODUCTION.

When the author of this book has been absorbed in the elegant narratives of Washington Irving, reading and musing over Astoria and Bonneville, in the cozy quiet of a New York study, no prescient motion of the mind ever gave prophetic indication of that personal acquaintance which has since been formed with the scenes, and even with some of the characters which figure in the works just referred to. Yet so have events shaped themselves that to me Astoria is familiar ground; Forts Vancouver and Walla-Walla pictured forever in my memory; while such journeys as I have been enabled to make into the country east of the last named fort, have given me a fair insight into the characteristic features of its mountains and its plains.

To-day, a railroad traverses the level stretch between the Missouri River and the Rocky Mountains, along which, thirty years ago, the fur-traders had worn a trail by their annual excursions with men, pack-horses, and sometimes wagons, destined to the Rocky Mountains. Then, they had to guard against the attacks of the Savages; and in this respect civilization is behind the railroad, for now, as then, it is not safe to travel without a sufficient escort. To-day, also, we have new Territories called by several names cut out of the identical hunting-grounds of the fur-traders of thirty years ago; and steamboats plying the rivers where the mountain-men came to set their traps for beaver; or cities growing up like mushrooms from a soil made quick by gold, where the hardy mountain-hunter pursued the buffalo herds in search of his winter's supply of food.

The wonderful romance which once gave enchantment to stories of hardship and of daring deeds, suffered and done in these then distant wilds, is fast being dissipated by the rapid settlement of the new Territories, and by the familiarity of the public mind with tales of stirring adventure encountered in the search for glittering ores. It was, then, not without an emotion of pleased surprise that I first encountered in the fertile plains of Western Oregon the subject of this biography, a man fifty-eight years of age, of fine appearance and buoyant temper, full of anecdote, and with a memory well stored with personal recollections of all the men of note who have formerly visited the old Oregon Territory, when it comprised the whole country west of the Rocky Mountains lying north of California and south of the forty-ninth parallel. This man is Joseph L. Meek, to whose stories of mountain-life I have listened for days together; and who, after having figured conspicuously, and not without considerable fame, in the early history of Oregon, still prides himself most of all on having been a "mountain-man."

Most persons are familiar with the popular, celebrated Indian pictures of the artist Stanley; and it cannot fail to interest the reader to learn that in one of these Meek is represented as firing his last shot at the pursuing Savages. He was also the hero of another picture, painted by an English artist. The latter picture represents him in a contest with a grizzly bear, and has been copied in wax for the benefit of a St. Louis Museum, where it has been repeatedly recognized by Western men.

It has frequently been suggested to Mr. Meek, who has now come to be known by the familiar title of "Uncle Joe" to all Oregon, that a history of his varied adventures would make a readable book, and some of his neighbors have even undertaken to become his historian, yet with so little well-directed efforts that the task after all has fallen to a comparative stranger. I confess to having taken hold of it with some doubts as to my claims to the office; and the best recommendation I can give my work is the interest I myself felt in the subject of it; and the only apology I can offer for anything incredible in the narrative which it may contain, is that I "tell the tale as 'twas told to me," and that I have no occasion to doubt the truth of it.

Mr. Meek has not attempted to disguise the fact that he, as a mountain-man, "did those things which he ought not to have done, and left undone those things which he ought to have done." It will be seen, by referring to Mr. Irving's account of this class of men, as given him by Capt. Bonnevillle, that he in no wise differed from the majority of them in his practical rendering of the moral code, and his indifference to some of the commandments. Yet, no one seeing Uncle Joe in

his present aspect of a good-humored, quiet, and not undignified citizen of the "Plains," would be likely to attribute to him any very bad or dangerous qualities. It is only when recalling the scenes of his early exploits in mountain life, that the smouldering fire of his still fine eyes brightens up with something suggestive of the dare-devil spirit which characterized those exploits, and made him famous even among his compeers, when they were such men as Kit Carson, Peg-Leg Smith, and others of that doughty band of bear-fighters.

Seeing that the incidents I had to record embraced a period of a score and a half of years, and that they extended over those years most interesting in Oregon history, as well as of the history of the Fur Trade in the West, I have concluded to preface Mr. Meek's adventures with a sketch of the latter, believing that the information thus conveyed to the reader will give an additional degree of interest to their narration. The impression made upon my own mind as I gained a knowledge of the facts which I shall record in this book relating to the early occupation of Oregon, was that they were not only profoundly romantic, but decidedly unique.

In giving Mr. Meek's personal adventures I should have preferred always to have clothed them in his own peculiar language could my memory have served me, and above all I should have wished to convey to the reader some impression of the tones of his voice, both rich and soft, and deep, too; or suddenly changing, with a versatile power quite remarkable, as he gave with natural dramatic ability the perfect imitation of another's voice and manner. But these fine touches of narrative are beyond the author's skill, and the reader must perforce be content with words, aided only by his own powers of imagination in conjuring up such tones and subtle inflexions of voice as seem to him to suit the subject.

Mr. Meek's pronunciation is Southern. He says "thar," and "whar," and "bar," like a true Virginian as he is, being a blood relation of one of our Presidents from that State, as well as cousin to other one-time inmates of the White House. Like the children of many other slave-holding planters he received little attention, and was allowed to frequent the negro quarters, while the alphabet was neglected. At the age of sixteen he could not read. He had been sent to a school in the neighborhood, where he had the alphabet set for him on a wooden "Paddle;" but not liking this method of instruction he one day "hit the teacher over the head with it, and ran home," where he was suffered to disport himself among his black associates, clad like themselves in a tow frock, and guiltless of shoes and stockings. This sort of training was not without its advantages to the physical man; on the contrary, it produced, in this instance, as in many others, a tall, broad-shouldered, powerful and handsome man, with plenty of animal courage and spirit, though somewhat at the expense of the inner furnishing which is supposed to be necessary to a perfect development. In this instance, however, Nature had been more than usually kind, and distinguished her favorite with a sort of inborn grace and courtesy which, in some phases of his eventful life, served him well.

Mr. Meek was born in Washington Co., Virginia, in 1810, one year before the settlement of Astoria, and at a period when Congress was much interested in the question of our Western possessions and their boundary. "Manifest destiny" seemed to have raised him up, together with many

others, bold, hardy, and fearless men, to become sentinels on the outposts of civilization, securing to the United States with comparative ease a vast extent of territory, for which, without them, a long struggle with England would have taken place, delaying the settlement of the Pacific Coast for many years, if not losing it to us altogether. It is not without a feeling of genuine self-congratulation, that I am able to bear testimony to the services, hitherto hardly recognized, of the "mountain-men" who have settled in Oregon. Whenever there shall arise a studious and faithful historian, their names shall not be excluded from honorable mention, nor least illustrious will appear that of Joseph L. Meek, the Rocky Mountain Hunter and Trapper.

---

#### Prefatory Chapter

An account of the Hudson's Bay Company's intercourse with the Indians of the North-west coast; with a sketch of the different American Fur Companies, and their Dealings with the tribes of the Rocky Mountains.

In the year 1818, Mr. Prevost acting for the United States, received Astoria back from the British, who had taken possession, as narrated by Mr. Irving, four years previous. The restoration took place in conformity with the treaty of Ghent, by which those places captured during the war were restored to their original possessors. Mr. Astor stood ready at that time to renew his enterprise on the Columbia River, had Congress been disposed to grant him the necessary protection which the undertaking required. Failing to secure this, when the United States sloop of war Ontario sailed away from Astoria, after having taken formal possession of that place for our Government, the country was left to the occupancy, (scarcely a joint-occupancy, since then were then no Americans here) of the British traders. After the war, and while negotiations going on between Great Britain and the United States, the fort at Astoria remained in possession of the North-West Company, as their principal establishment west of the mountains. It had been considerably enlarged since it had come into their possession, and was furnished with artillery enough to have frightened into friendship a much more warlike people than the subjects of old king Comcomly; who, it will be remembered, was not at first very well disposed towards the "King George men" having learned to look upon the "Boston men" as his friends in his earliest intercourse with the whites. At this time Astoria, or Fort George, as the British traders called it, contained sixty-five inmates, twenty-three of whom were whites, and the remainder Canadian halfbreeds and Sandwich Islanders. Besides this number of men, there were a few women, the native wives of the men, and their halfbreed offspring. The situation of Astoria, however, was not favorable, being near the sea coast, and not surrounded with good farming lands such as were required for the furnishing of provisions to the fort. Therefore, when in 1821 it was destroyed by fire, it was only in part rebuilt, but a better and more convenient location for the headquarters of the North-West Company was sought for in the interior.

About this time a quarrel of long standing between the Hudson's Bay, and North-West Companies culminated in a battle between their men in the Red River country, resulting in a considerable

---

loss of life and property. This affair drew the attention of the Government at home; the rights of the rival companies were examined into, the mediation of the Ministry secured, and a compromise effected, by which the North-West Company, which had succeeded in dispossessing the Pacific Fur Company under Mr. Astor, was merged into the Hudson's Bay Company, whose name and fame are so familiar to all the early settlers of Oregon.

At the same time, Parliament passed an act by which the hands of the consolidated company were much strengthened, and the peace and security of all persons greatly insured; but which became subsequently, in the joint occupancy of the country, a cause of offence to the American citizens, as we shall see hereafter. This act allowed the commissioning of Justices of the Peace in all the territories not belonging to the United States, nor already subject to grant. These justices were to execute and enforce the laws and decisions of the courts of Upper Canada; to take evidence, and commit and send to Canada for trial the guilty; and even in some cases, to hold courts themselves for the trial of criminal offenses and misdemeanors not punishable with death, or of civil causes in which the amount at issue should not exceed two hundred pounds.

Thus in 1824, the North-West Company, whose perfidy had occasioned such loss and mortification to the enterprising New York merchant became itself a thing of the past and a new rule began in the region west of the Rocky Mountains. The old fort at Astoria having been only so far rebuilt as to answer the needs of the hour, after due consideration, a site for head-quarters was selected about one hundred miles from the sea, near the mouth of the Wallamet River, though opposite to it. Three considerations went to make up the eligibility of the point selected. First, it was desirable, even necessary, to settle upon good agricultural lands, where the Company's provisions could be raised by the Company's servants. Second, it was important that the spot chosen should be upon waters navigable for the Company's vessels, or upon tide-water. Lastly, and not leastly, the Company had an eye to the boundary question between Great Britain and the United States; and believing that the end of the controversy would probably be to make the Columbia River the northern limit of the United states territory, a spot on the northern bank of that river was considered a good point for their fort and possible future city.

The site chosen by the North-West Company in 1821, for their new fort, combined all these advantages, and the further one of having been already commenced and named. Fort Vancouver became at once on the accession of the Hudson's Bay Company, the metropolis of the northwest coast, the center Of the fur trade, and the seat of government for that immense territory, over which roamed the hunters and trappers in the employ of that powerful corporation. This post was situated on the edge of a beautiful sloping plain on the northern bank of the Columbia, about six miles above the upper mouth of the Wallamet. At this point the Columbia spreads to a great width, and is divided on the south side into bayous by long sandy islands, covered with oak, ash and cotton-wood trees, making the noble river more attractive still by adding the charm of curiosity concerning its actual breadth to its natural and ordinary magnificence. Back of the fort the land rose gently, covered with forests of fir; and away to the east swelled the foot-hills of the Cascade range, then the mountains themselves, draped in filmy azure, and overtopped five thousand feet by the snowy cone of Mt. Hood.

The River of the West

---

In this lonely situation grew up, with the dispatch which characterized the acts of the Company, a fort in most respects similar to the original one at Astoria. It was not, however, thought necessary to make so great a display of artillery as had served to keep in order the subjects of Comcomly. A stockade enclosed a space about eight hundred feet long by five hundred broad, having a bastion at one corner, where were mounted three guns, while two eighteen pounders and two swivels were planted in front of the residence of the Governor and chief factors. These commanded the main entrance to the fort, besides which there were two other gates in front, and another in the rear. Military precision was observed in the precautions taken against surprises, as well as in all the rules of the place. The gates were opened and closed at certain hours, and were always guarded. No large number of Indians were permitted within the enclosure at the same time, and every employee at the fort knew and performed his duty with punctuality.

The buildings within the stockade were the Governor's and chief factors' residences, stores, offices, work-shops, magazines, warehouses, &c.

Year by year, up to 1835 or '40, improvements continued to go on in and about the fort the chief of which was the cultivation of the large farm and garden outside the enclosure, and the erection of a hospital building, large barns, servants houses, and a boat-house, all outside of the fort; so that at the period when the Columbia River was a romance and a mystery to the people of the United States, quite a flourishing and beautiful village adorned its northern shore, and that too erected and sustained by the enemies of American enterprise on soil commonly believed to belong to the United States: fair foes the author firmly believes them to have been in those days, yet foes nevertheless.

The system on which the Hudson's Bay Company conducted its business was the result of long experience, and was admirable for its method and its justice also. When a young man entered its service as a clerk, his wages were small for several years increasing only as his ability and good conduct entitled him to advancement. When his salary had reached one hundred pounds sterling he became eligible to a chief-tradership as a partner in the concern, from which position he was promoted to the rank of a chief factor. No important business was ever intrusted to an inexperienced person, a policy which almost certainly prevented any serious errors. A regular tariff was established on the Company's goods, comprising all the articles used in their trade with the Indians; nor was the quality of their goods ever allowed to deteriorate. A price was also fixed upon furs according to their market value, and an Indian knowing this, knew exactly what he could purchase. No bartering was allowed. When skins were offered for sale at the fort they were handed to the clerk through a window like a post-office delivery-window, and their value in the article desired, returned through the same aperture. All these regulations were of the highest importance to the good order, safety, and profit of the Company. The confidence of the Indians was sure to be gained by the constancy and good faith always observed toward them and the Company obtained thereby numerous and powerful allies in nearly all the tribes.

As soon as it was possible to make the change, the Indians were denied the use of intoxicating

drinks, the appetite for which had early been introduced among them by coasting vessels, and even continued by the Pacific Fur Company at Astoria. It would have been dangerous to have suddenly deprived them of the coveted stimulus; therefore the practice must be discontinued by many wise arts and devices. A public notice was given that the sale of it would be stopped, and the reasons for this prohibition explained to the Indians. Still, not to come into direct conflict with their appetites, a little was sold to the chiefs, now and then, by the clerks, who affected to be running the greatest risks in violating the order of the company. The strictest secrecy was enjoined on the lucky chief who, by the friendship of some under-clerk, was enabled to smuggle off a bottle under his blanket. But the cunning clerk had generally managed to get his "good friend" into a state so cleverly between drunk and sober before he entrusted him with the precious bottles that he was sure to betray himself. Leaving the shop with a mein even more erect than usual, with a gait affected in its majesty, and his blanket tightened around him to conceal his secret treasure, the chuckling chief would start to cross the grounds within the fort. If he was a new customer he was once or twice permitted to play his little game with the obliging clerk whose particular friend he was, and to escape detection.

But by-and-by, when the officers had seen the offence repeated more than once from their purposely contrived posts of observation, one of them would skillfully chance to intercept the guilty chief at whose comical endeavors to appear sober he was inwardly laughing, and change him with being intoxicated. Wrestling away the tightened blanket, the bottle appeared as evidence that could not be controverted, of the duplicity of the Indian and the unfaithfulness of the clerk whose name was instantly demanded that he might be properly punished. When the chief again visited the fort, his particular friend met him with a sorrowful countenance, reproaching him for having been the cause of his disgrace and loss. This reproach was the surest means of preventing another demand for rum, the Indian being too magnanimous, probably, to wish to get his friend into trouble; while the clerk affected to fear the consequences too much to be induced to take the risk another time. Thus by kind and careful means the traffic in liquors was at length broken up, which otherwise would have ruined both Indian and trader.

To the company's servants liquor was sold or allowed at certain times: to those on the sea-board, one half-pint two or three times a year, to be used as medicine,-- not that it was always needed or used for this purpose, but too strict inquiry into its use was wisely avoided, -- and for this the company demanded pay. To their servants in the interior no liquor was sold but they were furnished as a gratuity with one pint on leaving rendezvous, and another on arriving at winter quarters. By this management it became impossible for them to dispose of drink to the Indians; their small allowance being always immediately consumed in a meeting or parting carouse.

The arrival of men from the interior at Fort Vancouver usually took place in the month of June, when the Columbia was high, and a stirring scene it was. The chief traders generally contrived their march through the upper country, their camps, and their rendezvous, so as to meet the Express which annually came to Vancouver from Canada and the Red River settlements. They then descended the Columbia together, and arrived in force at the Fort. This annual fleet went by the name of Brigade - a name which suggested a military spirit in the crews that their appear-

The River of the West

---

ance failed to vindicate. Yet, though there was nothing warlike in the scene, there was much that was exciting, picturesque, and even brilliant; for these couriers de bois, or wood-rangers, and the voyageurs, or boatmen, were the most foppish of mortals when they came to rendezvous. Then, too, there was an exaltation of spirits on their safe arrival at headquarters, after their year's toil and danger in wildernesses, among Indians and wild beasts, exposed to famine and accident, that almost deprived them of what is called "common sense" and compelled them to the most fantastic excesses.

Their well-understood peculiarities did not make them the less welcome at Vancouver. When the cry was given - "the Brigade! the Brigade!" - there was a general rush to the river's bank to witness the spectacle. In advance came the chief-trader's barge, with the company's flag at the bow, and the cross of St. George at the stem: the fleet as many abreast as the turnings of the river allowed. With strong and skillful strokes the boatmen governed their richly laden boats, keeping them in line, and at the same time singing in chorus loud and not unmusical hunting or boating song. The gay ribbons and feathers with which the singers were bedecked took nothing from the picturesque-ness of their appearance. The broad, fall river, sparkling in the sunlight, gemmed with emerald islands, and bordered with a rich growth of flowering shrubbery; the smiling plain surrounding the Fort; the distant mountains, where glittered the sentinel Mt. Hood, all came gracefully into the picture, and seemed to furnish a fitting back-ground and middle distance for the bright bit of coloring given by the moving life in the scene. As with a skillful sweep the brigade touched the bank, and the traders and men sprang on shore, the first cheer which had welcomed their appearance was heartily repeated, while a gay clamor of questions and answers followed.

After the business immediately incident to their arrival had been dispatched, then took place the regale of pork, flour, and spirits, which was sure to end in a carouse, during which blackened eyes and broken noses were not at all un-common; but though blood was made to flow, life was never put seriously in peril, and the belligerent parties were the beat of friends when the fracas was ended.

The business of exchange being completed in three or four weeks -- the rich stores of peltries consigned to their places in the warehouse, and the boats reladen with goods for the next year's trade with the Indians in the upper country, a parting carouse took place, and with another parade of feathers, ribbons and other finery, the brigade departed with songs and cheers as it had come, but with probably heavier hearts.

It would be a stern morality indeed which could look upon the excesses of this peculiar class as it would upon the same excesses committed by men in the enjoyment of all the comforts and pleasures of civilized life. For them, during most of the year, was only an out-door life of toil, watchfulness, peril, and isolation. When they arrived at the rendezvous, for the brief period of their stay they were allowed perfect license because nothing else would content them. Although at head-quarters they were still in the wilderness, thousands of miles from civilization, with no chance of such recreations as men in the continual enjoyment of life's sweetest pleasures would naturally seek. For them there was only one method of seeking and finding temporary oblivion of

the accustomed hardship; and whatever may be the strict rendering of man's duty as an immortal being, we cannot help being somewhat lenient at times to his errors as a mortal.

After the departure of the boats, there was another arrival at the Fort, of trappers from the Snake River county. Previous to 1832, such were the dangers of the fur trade in this region, that only the most experienced traders were suffered to conduct a party through it; and even they were frequently attacked, and sometimes sustained serious losses of men and animals. Subsequently, however, the Hudson's Bay Company obtained such an influence over even these hostile tribes as to make it safe for a party of no more than two of their men to travel through this much dreaded region.

There was another important arrival at Fort Vancouver, usually in midsummer. This was the Company's supply ship from London. In the possible event of a vessel being lost, one cargo was always kept on store at Vancouver; but for which wise regulation much trouble and disaster might have resulted, especially in the early days of the establishment. Occasionally a vessel foundered at sea or was lost on the bar of the Columbia; but these losses did not interrupt the regular transaction of business. The arrival of a ship from London was the occasion of great bustle and excitement also. She brought not only goods for the posts throughout the district of the Columbia, but letters, papers, private parcels, and all that seemed of so much value to the little isolated world at the Fort.

A company conducting its business with such method and regularity as has been described, was certain of success. Yet some credit also must attach to certain individuals in its service, whose faithfulness, zeal and ability in carrying out its designs, contributed largely to its welfare. Such a man was at the head of the Hudson's Bay Company's affairs in the large and important district west of the Rocky Mountains. The Company never had in its service a more efficient man than Gov. John McLaughlin, more commonly called Dr. McLaughlin.

To the discipline, at once severe and just, which Dr. McLaughlin maintained in his district, was due the safety and prosperity of the company he served, and the servants of that company generally; as well as, at a later period, of the emigration which followed the hunter and trapper into the wilds of Oregon. Careful as were all the officers of the Hudson's Bay Company, they could not always avoid conflicts with the Indians; nor was their kindness and justice always sufficiently appreciated to prevent the outbreak of savage instincts. Fort Vancouver had been threatened in an early day; a vessel or two had been lost in which the Indians were suspected to have been implicated; at long intervals a trader was murdered in the interior; or more frequently, Indian insolence put to the test both the wisdom and courage of the officers to prevent an outbreak.

When murders and robberies were committed, it was the custom at Fort Vancouver to send a strong party to demand the offenders from their tribe; Such was the well known power and influence of the Company, and such the wholesome fear of the "King George men," that this demand was never resisted, and if the murderer could be found he was given up to be hung according to "King George" laws. They were almost equally impelled to good conduct by the state of depen-

dence on the company into which they had been brought. Once they had subsisted and clothed themselves from the spoils of the rivers and forest; since they had tasted of the tree of knowledge of good and evil, they could no more return to skins for raiment, nor to game alone for food. Blankets and flour, beads, guns, and ammunition had become dear to their hearts: for all these things they must love and obey the Hudson's Bay Company. Another fine stroke of policy in the Company was to destroy the chieftain-ships in the various tribes; thus weakening them by dividing them and preventing dangerous coalitions of the leading spirits : for in savage as well as civilized life, the many are governed by the few.

It may not be uninteresting in this place to give a few anecdotes of the manner in which conflicts with the Indians were prevented, or offences punished by the Hudson's Bay Company. In the year 1828 the ship William and Ann was cast away just inside the bar of the Columbia, under circumstances which seemed to direct suspicion to the Indians in that vicinity. Whether or not they had attacked the ship, not a soul was saved from the wreck to tell how she was lost. On hearing that the ship had gone to pieces, and that the Indians had appropriated a portion of her cargo, Dr. McLaughlin sent a message to the chiefs, demanding restitution of the stolen goods. Nothing was returned by the messenger except one or two worthless articles. Immediately an armed force was sent to the scene of the robbery with a fresh demand for the goods, which the chiefs, in view of their spoils, thought proper to resist by firing upon the reclaiming party. But they were not unprepared; and a swivel was discharged to let the savages know what they might expect in the way of firearms. The argument was conclusive, the Indians fleeing into the woods. While making search for the goods, a portion of which were found, a chief was observed skulking near, and cocking his gun; on which motion one of the men fired, and he fell. This prompt action, the justice of which the Indians well understood, and the intimidating power of the swivel, put an end to the incipient war. Care was then taken to impress upon their minds that they must not expect to profit by the disasters of vessels, nor be tempted to murder white men for the sake of plunder. The William and Ann was supposed to have got aground, when the savages seeing her situation, boarded her and murdered the crew for the cargo which they know her to contain. Yet as there were no positive proof only such measures were taken as would deter them from a similar attempt in future. That the lesson was not lost was proven two years later, when the Isabella, from London, struck on the bar, her crew deserting her. In this instance no attempt was made to meddle with the vessel's cargo; and as the crew made their way to Vancouver, the goods were nearly all saved. In a former voyage of the William and Ann to the Columbia River, she had been sent on an exploring expedition to the Gulf of Georgia to discover the mouth of Frazier's River, having on board a crew of forty men. Whenever the ship came to anchor, two sentries were kept constantly on deck to guard against any surprise or misconduct on the part of the Indians; so adroit, however, were they in the light-fingered art, that every one of the eight cannon with which the ship was armed was robbed of its ammunition, as was discovered on leaving the river! Such incidents as these served to impress the minds of the Company's officers and servants with the necessity of vigilance in their dealings with the savages.

Not all their vigilance could at all times avail to prevent mischief. When Sir George Simpson, Governor of the Hudson's Bay Company, was on a visit to Vancouver in 1829, he was made aware

---

of this truism. The Governor was on his return to Canada by way of the Red River Settlement, and had reached the Dalles of the Columbia with his party. In making the portage at this place, all the party except Dr. Tod gave their guns into the charge of two men to prevent their being stolen by the Indians, who crowded about, and whose well-known bad character made great care needful. All went well, no attempt to seize either guns or other property being made until at the end of the portage the boats had been reloaded. As the party were about to re-embark, a simultaneous rush was made by the Indians who had dogged their steps, to get possession of the boats. Dr. Tod raised his gun immediately, aiming at the head chief, who, not liking the prospect of so speedy dissolution, ordered his followers to desist, and the party were suffered to escape. It was soon after discovered that every gun belonging to the party in the boat had been wet, excepting the one carried by Dr. Tod; and to the fact that the Doctor did carry his gun, all the others owed their lives.

The great desire of the Indians for guns and ammunition led to many stratagems which were dangerous to the possessors of the coveted articles. Much more dangerous would it have been to have allowed them a free supply of these things; nor could an Indian purchase from the Company more than a stated supply, which was to be used, not for the purposes of war, but to keep himself in game. Dr. McLaughlin was himself once quite near falling into a trap of the Indians, so cunningly laid as to puzzle even him. This was a report brought to him by a deputation of Columbia River Indians, stating the startling fact that the fort at Nesqually had been attacked, and every inmate slaughtered. To this horrible story, told with every appearance of truth, the Doctor listened with incredulity mingled with apprehension. The Indians were closely questioned and cross-questioned, but did not conflict in their testimony. The matter assumed a very painful aspect. Not to be deceived, the Doctor had the unwelcome messengers committed to custody while he could bring other witnesses from their tribe. But they were prepared for this, and the whole tribe was as positive as those who brought the tale. Confounded by this cloud of witnesses, Dr. McLaughlin had almost determined upon sending an armed force to Nesqually to inquire into the matter, and if necessary, punish the Indians, when a detachment of men arrived from that post, and the plot was exposed! The design of the Indians had been simply to cause a division of the force at Vancouver, after which they believed they might succeed in capturing and plundering the fort. Had they truly been successful in this undertaking, every other trading-post in the country would have been destroyed. But so long as the head-quarters of the Company remained secure and powerful, the other stations were comparatively safe.

An incident which has been several times related, occurred at fort Walla Walla, and shows how narrow escapes the interior traders sometimes made. The hero of this anecdote was Mr. McKinlay, one of the most estimable of the Hudson's Bay Company's officers, in charge of the fort just named. An Indian was one day lounging about the fort, and seeing some timbers lying in a heap had been squared for pack saddles, helped himself to one and commenced cutting it down into a whip handle for his own use. To this procedure Mr. McKinlay's clerk demurred, first telling the Indian its use, and then ordering him to resign the piece of timber. The Indian insolently replied that the timber was his, and he should take it. At this the clerk, with more temper than prudence, struck the offender, knocking him over, soon after which the savage left the fort with sullen looks boding vengeance. The next day, Mr. McKinlay, not being informed of what had taken place, was

in a room of the fort with his clerk when a considerable party of Indians began dropping quietly in until there were fifteen or twenty of them inside the building. The first intimation of anything wrong McKinlay received was when he observed the clerk pointed out in a particular manner by one of the party. He instantly comprehended the purpose of his visitors, and with that quickness of thought which is habitual to student of savage nature, he rushed into the store room and returned with a powder keg, flint and steel. By this time the unlucky clerk was struggling for his life with his vindictive foes. Putting down the powder in their midst and knocking out the head of the keg with a blow, McKinlay stood over it to strike fire with his flint and steel. The savages paused aghast. They knew the nature of the "perilous stuff," and also understood the trader's purpose. "Come," said he with a clear, determined voice, "you are twenty against us two: now touch him if you dare, and see who dies first". In a moment the fort was cleared, and McKinlay was left to inquire the cause of what had so nearly been a tragedy. It is hardly a subject of doubt whether or not his clerk got a scolding. Soon after, such was the powerful influence exerted by these gentlemen, the chief of the tribe dogged the pilfering Indian for the offence, and McKinlay became a great brave, a "big heart" for his courage.

It was indeed necessary to have courage, patience, and prudence in dealing with the Indians. These the Hudson's Bay officers generally possessed. Perhaps the most irascible of them all in the Columbia District, was their chief, Dr. McLaughlin; but such was his goodness and justice that even the savages recognized it, and he was hyas tyee, or great chief, in all respects to them. Being on one occasion very much annoyed by the pertinacity of an Indian who was continually demanding pay for some stones with which the Doctor was having a vessel ballasted, he seized one of some size, and thrusting it in the Indian's mouth, cried out in a furious manner, "pay, pay ! if the stones are yours, take them and eat them, you rascal ! Pay, pay ! the devil ! the devil !" upon which explosion of wrath, the native owner of the soil thought it prudent to withdraw his immediate claims.

There was more, however, in the Doctor's, action than mere indulgence of wrath. He understood perfectly that the savage values only what he can eat and wear, and that as he could not put the stones to either of these uses, his demand for pay was an impudent one.

Enough has been said to give the reader an insight into Indian character, to prepare his mind for events which are to follow, to convey an idea of the influence of the Hudson's Bay Company, and to show on what it was founded. The American Fur Companies will now be sketched, and their mode of dealing with the Indians contrasted with that of the British Company. The comparison will not be favorable; but should any unfairness be suspected, a reference to Mr. Irving's Bonneville, will show that the worthy Captain was forced to witness against his own countrymen in his narrative of his hunting and trading adventures in the Rocky Mountains.

The dissolution of the Pacific Fur Company, the refusal of the United States Government to protect Mr. Astor in a second attempt to carry on a commerce with the Indians west of the Rocky Mountains, and the occupation of that country by British traders, had the effect to deter individual enterprise from again attempting to establish commerce on the Pacific coast. The people waited

---

for the Government to take some steps toward the encouragement of a trans-continental trade; the Government beholding the lion (British) in the way, waited for the expiration of the convention of 1818, in the Macabre-like hope that something would "turn up" to settle the question of territorial sovereignty. The war of 1812 had been begun on the part of Great Britain, to secure the great western territories to herself for the profits of the fur trade, almost solely. Failing in this, she had been compelled, by the treaty of Ghent, to restore to the United States all the places and forts captured during that war. Yet the forts and trading posts in the west remained practically in the possession of Great Britain; for her traders and fur companies still roamed the country, excluding American trade, and inciting (so the frontiers-men believed), the Indians to acts of blood and horror.

Congress being importuned by the people of the West, finally, in 1815, passed an act expelling British traders from American territory east of the Rocky Mountains. Following the passage of this act the hunters and trappers of the old North American Company, at the head of which Mr. Astor still remained, began to range the country about the head waters of the Mississippi and the upper Missouri. Also a few American traders had ventured into the northern provinces of Mexico, previous to the overthrow of the Spanish Government; and after that event, a thriving trade grew up between St. Louis and Santa Fe. At length, in 1823, Mr. W. H. Ashley, of St. Louis, a merchant for a long time engaged in the fur trade on the Missouri and its tributaries, determined to push a trading party up to or beyond the Rocky Mountains. Following up the Platte River, Mr. Ashley proceeded at the head of a large party with horses and merchandise, as far as the northern branch of the Platte, called the Sweetwater. This he explored to its source, situated in that remarkable depression in the Rocky Mountains, known as the South Pass -- the same which Fremont discovered twenty years later, during which twenty years it was annually traveled by trading parties, and just prior to Fremont's discovery, by missionaries and emigrants destined to Oregon. To Mr. Ashley also belongs the credit of having first explored the head-waters of the Colorado, called the Green River, afterwards a favorite rendezvous of the American Fur Companies. The country about the South Pass proved to be an entirely new hunting ground, and very rich in furs, as here many rivers take their rise, whose head-waters furnished abundant beaver. Here Mr. Ashley spent the summer, returning to St. Louis in the fall with a valuable collection of skins.

In 1824, Mr. Ashley repeated the expedition, extending it this time beyond Green River as far as Great Salt Lake, near which to the South he discovered another smaller lake, which he named Lake Ashley, after himself. On the shores of this lake he built a fort for trading with the Indians, and leaving in it about one hundred men, returned to St. Louis the second time with a large amount of furs. During the time the fort was occupied by Mr. Ashley's men, a period of three years, more than one hundred and eighty thousand dollars worth of furs were collected and sent to St. Louis. In 1827, the fort, and all Mr. Ashley's interest in the business, was sold to the Rocky Mountain Fur Company, at the head of which were Jedediah Smith, William Sublette, and David Jackson, Sublette being the leading spirit in the Company.

The custom of these enterprising traders, who had been in the mountains since 1824, was to divide their force, each taking his command to a good hunting ground, and returning at stat-

The River of the West

---

ed times to rendezvous, generally appointed on the head-waters of Green River. Frequently the other fur companies, (for there were other companies formed on the heels of Ashley's enterprise,) learning of the place appointed for the yearly rendezvous, brought their goods to the same resort, when an intense rivalry was exhibited by the several traders as to which company should soonest dispose of its goods, getting, of course, the largest amount of furs from the trappers and Indians. So great was the competition in the years between 1826 and 1829, when there were about six hundred American trappers in and about the Rocky Mountains, besides those of the Hudson's Bay Company, that it was death for a man of one company to dispose of his furs to a rival association. Even a "free trapper" - that is, one not indentured, but hunting upon certain terms of agreement concerning the price of his furs and the cost of his outfit, only, dared not sell to any other company than the one he had agreed with.

Jedediah Smith, of the Rocky Mountain Fur Company, during their first year in the mountains, took a party of five trappers into Oregon, being the first American, trader or other, to cross into that country since the breaking up of Mr. Astor's establishment. He trapped on the head-waters of the Snake River until autumn, when he fell in with a party of Hudson's Bay trappers, and going with them to their post in the Flathead country, wintered there.

Again, in 1826, Smith, Sublette, and Jackson, brought out a large number of men to trap in the Snake River country, and entered into direct competition with the Hudson's Bay Company, whom they opposed with hardly a degree more of zeal than they competed with rival American traders: this one extra degree being inspired by a "spirit of '76" toward anything British.

After the Rocky Mountain Fur Company had extended its business by the purchase of Mr. Ashley's interest, the partners determined to push their enterprise to the Pacific coast, regardless of the opposition they were likely to encounter from the Hudson's Bay traders. Accordingly, in the spring of 1827, the Company was divided up into three parts, to be led separately, by different routes, into the Indian Territory, nearer the ocean.

Smith's route was from the Platte River, southwards to Santa Fe, thence to the bay of San Francisco, and thence along the coast to the Columbia River. His party were successful, and had arrived in the autumn of the following year at the Umpqua River, about two hundred miles South of the Columbia, in safety. Here one of those sudden reverses to which the "mountain-man" is liable at any moment, overtook him. His party at this time consisted of thirteen men, with their horses, and a collection of furs valued at twenty thousand dollars. Arrived at the Umpqua, they encamped for the night on its southern bank, unaware that the natives in this vicinity (the Shastas) were more fierce and treacherous than the indolent tribes of California, for whom, probably, they had a great contempt. All went well until the following morning, the Indians hanging about the camp, but apparently friendly. Smith had just breakfasted, and was occupied in looking for a ford-ing-place for the animals, being on a raft, and having with him a little Englishman and one Indian. When they were in the middle of the river the Indian snatched Smith's gun and jumped into the water. At the same instant a yell from the camp, which was in sight, proclaimed that it was attacked. Quick as thought Smith snatched the Englishman's gun, and shot dead the Indian in the

river.

To return to the camp was certain death. Ahead, several of his men had fallen; overpowered by numbers he could not hope that any would escape, and nothing was left him but flight. He succeeded in getting to the opposite shore with his raft before he could be intercepted, and fled with his companion, on foot and with only one gun, and no provisions, to the mountains that border the river. With great good fortune they were enabled to pass through the remaining two hundred miles of their journey without accident, though not without suffering, and reach Fort Vancouver in a destitute condition, where they were kindly cared for.

Of the men left in camp, only two escaped. One man named Black defended himself until he saw an opportunity for flight, when he escaped to the cover of the woods, and finally to a friendly tribe farther north, near the coast, who piloted him to Vancouver. The remaining man was one Turner, of a very powerful frame, who was doing camp duty as cook on this eventful morning. When the Indians rushed upon him he defended himself with a huge firebrand, or half-burnt poplar stick, with which he laid about him like Sampson, killing four red-skins before he saw a chance of escape. Singularly, for one in his extremity, he did escape, and also arrived at Vancouver that winter.

Dr. McLaughlin received the unlucky trader and his three surviving men with every mark and expression of kindness, and entertained them through the winter. Not only this, but he dispatched a strong, armed party to the scene of the disaster to punish the Indians and recover the stolen goods; all of which was done at his own expense, both as an act of friendship toward his American rivals, and as necessary to the discipline which they everywhere maintained among the Indians. Should this offence go unpunished, the next attack might be upon one of his own parties going annually down into California. Sir George Simpson, the Governor of the Hudson's Bay Company, chanced to be spending the winter at Vancouver. He offered to send Smith to London the following summer, in the Company's vessel, where he might dispose of his furs to advantage; but Smith declined this offer, and finally sold his furs to Dr. McLaughlin, and returned in the spring to the Rocky Mountains.

On Sublette's return from St. Louis, in the summer of 1829, with men and merchandise for the year's trade, he became uneasy on account of Smith's protracted absence. According to a previous plan, he took a large party into the Snake River country to hunt. Among the recruits from St. Louis was Joseph L. Meek, the subject of the narrative following this chapter. Sublette not meeting with Smith's party on its way from the Columbia, as he still hoped, at length detailed a party to look for him on the head-waters of the Snake. Meek was one of the men sent to look for the missing partner, whom he discovered at length in Pierre's Hole, a deep valley in the mountains, from which issues the Snake River in many living streams. Smith returned with the men to camp, where the tale of his disasters was received after the manner of mountain-men, simply declaring with a momentarily sobered countenance, that their comrade has not been "in luck;" with which brief and equivocal expression of sympathy the subject is dismissed. To dwell on the dangers incident to their calling would be to half disarm themselves of their necessary courage; and it is

The River of the West

---

only when they are gathered about the fire in their winter camp, that they indulge in tales of wild adventure and "hair-breadth 'scapes," or make sorrowful reference to a comrade lost.

Influenced by the hospitable treatment which Smith had received at the hands of the Hudson's Bay Company, the partners now determined to withdraw from competition with them in the Snake country, and to trap upon the waters of the Colorado, in the neighborhood of their fort. But "luck," the mountain-man's Providence, seemed to have deserted Smith. In crossing the Colorado River with a considerable collection of skins, he was again attacked by Indians, and only escaped by losing all his property. He then went to St. Louis for a supply of merchandise, and fitted out a trading party for Santa Fe; but on his way to that place was killed in an encounter with the savages.

Turner, the man who so valiantly wielded the firebrand on the Umpqua River, several years later met with a similar adventure on the Rogue River, in Southern Oregon, and was the means of saving the lives of his party by his courage, strength, and alertness. He finally, when trapping had become unprofitable, retired upon a farm in the Wallamet Valley, as did many other mountain-men who survived the dangers of their perilous trade.

After the death of Smith, the Rocky Mountain Fur Company continued its operations under the command of Bridger, Fitzpatrick, and Milton Sublette, brother of William. In the spring of 1830 they received about two hundred recruits, and with little variation kept up their number of three or four hundred men for a period of eight or ten years longer, or until the beaver were hunted out of every nook and corner of the Rocky Mountains.

Previous to 1835, there were in and about the Rocky Mountains, beside the "American" and "Rocky Mountain" companies, the St. Louis Company, and eight or ten "lone traders." Among these latter were William Sublette, Robert Campbell, J. O. Pattie, Mr. Pilcher, Col. Charles Bent, St. Vrain, William Bent, Mr. Gant, and Mr. Blackwell. All these companies and traders more or less frequently penetrated into the countries of New Mexico, Old Mexico, Sonora, and California; returning sometimes through the mountain regions of the latter State, by the Humboldt River to the head-waters of the Colorado. Seldom, in all their journeys, did they intrude on that portion of the Indian Territory lying within three hundred miles of Fort Vancouver, or which forms the area of the present State of Oregon.

Up to 1832, the fur trade in the West had been chiefly conducted by merchants from the frontier cities, especially by those of St. Louis. The old "North American" was the only exception. But in the spring of this year, Captain Bonneville, an United States officer on furlough, led a company of a hundred men, with a train of wagons, horses and mules, with merchandise, into the trapping grounds of the Rocky Mountains. His wagons were the first that had ever crossed the summit of these mountains, though William Sublette had, two or three years previous, brought wagons as far as the valley of the Wind River, on the east side of the range. Captain Bonneville remained nearly three years in the hunting and trapping grounds, taking parties of men into the Colorado, Humboldt and Sacramento valleys; but he realized no profits from his expedition, being opposed and

competed with by both British and American traders of larger experience.

But Captain Bonneville's venture was a fortunate one compared with that of Mr. Nathaniel Wyeth of Massachusetts, who also crossed the continent in 1832, with the view of establishing a trade on the Columbia River. Mr. Wyeth brought with him a small party of men, all inexperienced in frontier or mountain life, and destined for a salmon fishery on the Columbia. He had reached Independence, Missouri, the last station before plunging into the wilderness, and found himself somewhat at a loss how to proceed, until, at this juncture, he was overtaken by the party of William Sublette, from St. Louis to the Rocky Mountains, with whom he travelled in company to the rendezvous at Pierre's Hole.

When Wyeth arrived at the Columbia River, after tarrying until he had acquired some mountain experiences, he found that his vessel, which was loaded with merchandise for the Columbia River trade, had not arrived. He remained at Vancouver through the winter, the guest of the Hudson's Bay Company, and either having learned or surmised that his vessel was wrecked, returned to the United States in the following year. Not discouraged, however, he made another venture in 1834, despatching the ship *May Dacre*, Captain Lambert, for the Columbia River, with another cargo of Indian goods, traveling himself overland with a party of two hundred men, and a considerable quantity of merchandise which he expected to sell to the Rocky Mountain Fur Company. In this expectation he was defeated by William Sublette, who had also brought out a large assortment of goods for the Indian trade, and had sold out, supplying the market, before Mr. Wyeth arrived.

Wyeth then built a post, named Fort Hall, on Snake River, at the junction of the Portneuf, where he stored his goods and having detached most of his men in trapping parties, proceeded to the Columbia River to meet the *May Dacre*. He reached the Columbia about the same time with his vessel, and proceeded at once to erect a salmon fishery. To forward this purpose he built a post, called Fort William, on the lower end of Wappatoo (now known as Sauvie's) Island, near where the Lower Wallamet falls into the Columbia. But for various reasons he found the business on which he had entered unprofitable. He had much trouble with the Indians, his men were killed or drowned, so that by the time he had half a cargo of fish, he was ready to abandon the effort to establish a commerce with the Oregon Indians, and was satisfied that no enterprise less stupendous and powerful than that of the Hudson's Bay Company could be long sustained in that country.

Much complaint was subsequently made by Americans, chiefly Missionaries, of the conduct of that company in not allowing Mr. Wyeth to purchase beaver skins of the Indians, but Mr. Wyeth himself made no such complaint. Personally, he was treated with unvarying kindness, courtesy, and hospitality. As a trader, they would not permit him to undersell them. In truth, they no doubt wished him away; because competition would soon ruin the business of either, and they liked not to have the Indians taught to expect more than their furs were worth, nor to have the Indians' confidence in themselves destroyed or tampered with.

The Hudson's Bay Company were hardly so unfriendly to him as the American companies; since to the former he was enabled to sell his goods and fort on the Snake River, before he returned to

the United States, which he did in 1835.

The sale of Fort Hall to the Hudson's Bay Company was a finishing blow at the American fur trade in the Rocky Mountains, which after two or three years of constantly declining profits, was entirely abandoned.

Something of the dangers incident to the life of the hunter and trapper may be gathered from the following statements, made by various parties who have been engaged in it. In 1808, a Missouri Company engaged in fur hunting on the three forks of the river Missouri, were attacked by Blackfeet, losing twenty seven men, and being compelled to abandon the country. In 1823, Mr. Ashley was attacked on the same river by the Arickaras, and had twenty-six men killed. About the same time the Missouri company lost seven men, and fifteen thousand dollars worth of merchandise on the Yellowstone River. A few years previous, Major Henry lost, on the Missouri River, six men and fifty horses. In the sketch given of Smith's trading adventures is shown how uncertain were life and property at a later period. Of the two hundred men whom Wyeth led into the Indian country, only about forty were alive at the end of three years. There was, indeed, a constant state of warfare between the Indians and the whites, wherever the American Companies hunted, in which great numbers of both lost their lives. Add to this cause of decimation the perils from wild beasts, famine, cold, and all manner of accidents, and the trapper's chance of life was about one in three.

Of the causes which have produced the enmity of the Indians, there are, about as many. It was found to be the case almost universally, that on the first visit of the whites the natives were friendly, after their natural fears had been allayed. But by degrees their cupidity was excited to possess themselves of the much coveted dress, arms, and goods of their visitors. As they had little or nothing to offer in exchange, which the white man considered an equivalent, they took the only method remaining of gratifying their desire of possession, and stole the coveted articles which they could not purchase. When they learned that the white men punished theft, they murdered to prevent the punishment. Often, also, they had wrongs of their own to avenge. White men did not always regard their property-rights. They were guilty of infamous conduct toward Indian women. What one party of whites told them was true, another plainly contradicted, leaving the lie between them. They were overbearing toward the Indians on their own soil, exciting to irrepressible hostility the natural jealousy of the inferior toward the superior race, where both are free, which characterizes all people. In short, the Indians were not without their grievances; and from barbarous ignorance and wrong on one side, and intelligent wrong-doing on the other, together with the misunderstandings likely to arise between two entirely distinct races, grew constantly a thousand abuses, which resulted in a deadly enmity between the two.

For several reasons this evil existed to a greater degree among the American traders and trappers than among the British. The American trapper was not, like the Hudson's Bay employees, bred to the business. Oftener than any other way he was some wild youth who, after an escapade in the society of his native place, sought safety from reproach or punishment in the wilderness. Or he was some disappointed man who, with feelings embittered towards his fellows, preferred the seclusion of the forest and mountain. Many were of a clan disreputable everywhere, who gladly

embraced a life not subject to social laws. A few were brave, independent and hardy spirits, who delighted in the hardships and wild adventures their calling made necessary. All these men, the best with the worst, were subject to no will but their own; and all experience goes to prove that a life of perfect liberty is apt to degenerate into a life of license. Even their own lives, and those of their companions, when it depended upon their own prudence, were but lightly considered. The constant presence of danger made them reckless. It is easy to conceive how, under these circumstances, the natives and the foreigners grew to hate each other, in the Indian country; especially after the Americans came to the determination to "shoot an Indian at sight," unless he belonged to some tribe with whom they had intermarried, after the manner of the trappers.

On the other hand, the employees of the Hudson's Bay Company were many of them half-breeds or full-blooded Indians of the Iroquois nation, towards whom nearly all the tribes were kindly disposed. Even the Frenchmen who trapped for this company were well liked by the Indians on account of their suavity of manner, and the ease with which they adapted themselves to savage life. Besides most of them had native wives and half-breed children, and, were regarded as relatives. They were trained to the life of a trapper, were subject to the will of the Company, and were generally just and equitable in their dealings with the Indians, according, to that company's will, and the dictates of prudence. Here was a wide difference.

Notwithstanding this, there were many dangers to be encountered. The hostility of some of the tribes could never be overcome; nor has it ever abated. Such were the Crows, the Blackfeet, the Cheyennes, the Apaches, the Camanches. Only a superior force could compel the friendly offices of these tribes for any white man, and then their treachery was as dangerous as their open hostility.

It happened, therefore, that although the Hudson's Bay Company lost comparatively few men by the hands of the Indians, they sometimes found them implacable foes in common with the American trappers; and frequently one party was very glad of the others' assistance. Altogether, as has before been stated, the loss of life was immense in proportion to the number employed.

Very few of those who had spent years in the Rocky Mountains ever returned to the United States. With their Indian wives and half-breed children, they scattered themselves throughout Oregon, until when, a number of years after the abandonment of the fur trade, Congress donated large tracts of land to actual settlers, they laid claim, each to his selected portion, and became active citizens of their adopted state.

As has been stated in the Introduction, Joseph L. Meek was a native of Washington Co., Va. Born in the early part of the present century, and brought up on a plantation where the utmost liberty was accorded to the "young massa;" preferring out-door sports with the youthful bondsmen of

his father, to study with the bald-headed schoolmaster who furnished him the alphabet on a paddle; possessing an exhaustless fund of waggish humor, united to a spirit of adventure and remarkable personal strength, he unwittingly furnished in himself the very material of which the heroes of the wilderness were made. Virginia, "the mother of Presidents," has furnished many such men, who, in the early days of the now populous Western States, became the hardy frontiers-men, or the fearless Indian fighters who were the bone and sinew of the land.

When young Joe was about eighteen years of age, he wearied of the monotony of plantation life, and jumping into the wagon of a neighbor who was going to Louisville, Ky., started out in life for himself. He "reckoned they did not grieve for him at home;" at which conclusion others besides Joe naturally arrive on hearing of his heedless disposition, and utter contempt for the ordinary and useful employments to which other men apply themselves. This truly Virginian and chivalric contempt for "honest labor" has continued to distinguish him throughout his eventful career, even while performing the most arduous duties of the life he had chosen.

Joe probably believed that should his father grieve for him, his step-mother would be able to console him; this step-mother, though a pious and good woman, not being one of the lad's favorites, as might easily be conjectured. It was such thoughts as these that kept up his resolution to seek the far west. In the autumn of 1828 he arrived in St. Louis, and the following spring he fell in with Mr. Wm. Sublette, of the Rocky Mountain Fur Company, who was making his annual visit to that frontier town to purchase merchandise for the Indian country, and pick up recruits for the fur-hunting service. To this experienced leader he offered himself.

"How old are you?" asked Sublette.

"A little past eighteen."

"And you want to go to the Rocky Mountains?"

"Yes."

"You don't know what you are talking about, boy. You'll be killed before you get half way there."

"If I do, I reckon I can die!" said Joe, with a flash of his full dark eyes, and throwing back his shoulders to show their breadth.

"Come," exclaimed the trader, eyeing the youthful candidate with admiration, and perhaps a touch of pity also; "that is the game spirit. I think you'll do, after all. Only be prudent, and keep your wits about you."

"Where else should they be?" laughed Joe, as he marched off, feeling an inch or two taller than before.

Then commenced the business of preparing for the journey--making acquaintance with the other recruits enjoying the novelty of owning an outfit, being initiated into the mysteries of camp duty by the few old hunters who were to accompany the expedition, and learning some thing of their swagger and disregard of civilized observances.

On the 17th of March, 1829, the company, numbering about sixty men, left St. Louis, and proceeded on horses and mules, with pack-horses for the goods, up through the state of Missouri. Camp-life commenced at the start; and this being the season of the year when the weather is most disagreeable, its romance rapidly melted away with the snow and sleet which varied the sharp

The River of the West

---

spring wind and the frequent cold rains. The recruits went through all the little mishaps incident to the business and to their inexperience, such as involuntary somersaults over the heads of their mules, bloody noses, bruises, dusty faces, bad colds, accidents in fording streams,--yet withal no very serious hurts or hindrances. Rough weather and severe exercise gave them wolfish appetites, which sweetened the coarse camp-fare and amateur cooking.

Getting up at four o'clock of a March morning to kindle fires and attend to the animals was not the most delectable duty that our labor-despising young recruit could have chosen; but if he repented of the venture he had made nobody was the wiser. Sleeping of stormy nights in corn-cribs or under sheds, could not be by any stretch of imagination converted into a highly romantic or heroic mode of lodging one's self. The squalid manner of living of the few inhabitants of Missouri at this period, gave a forlorn aspect to the country which is lacking in the wilderness itself;--a thought which sometimes occurred to Joe like a hope for the future. Mountain-fare he began to think must be better than the boiled corn and pork of the Missourians. Antelope and buffalo meat were more suitable viands for a hunter than coon and opossum. Thus those very duties which seemed undignified, and those hardships without danger or glory, which marked the beginning of his career made him ambitious of a more free and hazardous life on the plains and in the mountains.

Among the recruits was a young man not far from Joe's own age, named Robert Newell, from Ohio. One morning, when the company was encamped near Boonville, the two young men were out looking for their mules, when they encountered an elderly woman returning from the milking yard with a gourd of milk. Newell made some remark on the style of vessel she carried, when she broke out in a sharp voice,--

"Young chap, I'll bet you run off from your mother ! Who'll mend them holes in the elbow of your coat? You're a purty looking chap to go to the mountains, among them Injuns! They'll kill you. You'd better go back home !"

Considering that these frontier people knew what Indian fighting was, this was no doubt sound and disinterested advice, notwithstanding it was given somewhat sharply. And so the young men felt it to be; but it was not in the nature of either of them to turn back from a course because there was danger in it. The thought of home, and somebody to mend their coats, was, however, for the time strongly presented. But the company moved on, with undiminished numbers, stared at by the few inhabitants, and having their own little adventures, until they came to Independence, the last station before committing themselves to the wilderness.

At this place, which contained a dwelling-house, cottongin, and grocery, the camp tarried for a few days to adjust the packs, and prepare for a final start across the plains. On Sunday the settlers got together for a shooting-match, in which some of the travelers joined, without winning many laurels. coon-skins, deer-skins, and bees-wax changed hands freely among the settlers, whose skill with the rifle was greater than their hoard of silver dollars. This was the last vestige of civilization which the company could hope to behold for years; and rude as it was, yet won from them many a

parting look as they finally took their way across the plains toward the Arkansas River.

Often on this part of the march a dead silence fell upon the party, which remained unbroken for miles of the way. Many no doubt were regretting homes by them abandoned, or wondering dreamily how many and whom of that company would ever see the Missouri country again. Many indeed went the way the woman of the gourd had prophesied; but not the hero of this story, nor his comrade Newell.

The route of Captain Sublette led across the country from near the mouth of the Kansas River to the River Arkansas; thence to the South Fork of the Platte; thence on to the North Fork of that River, to where Ft. Laramie now stands; thence up the North Fork to the Sweetwater, and thence across in a still northwesterly direction to the head of Wind River.

The manner of camp-travel is now so well known through the writings of Irving, and still more from the great numbers which have crossed the plains since Astoria and Bonneville were written, that it would be superfluous here to enter upon a particular description of a train on that journey. A strict half-military discipline had to be maintained, regular duties assigned to each person, precautions taken against the loss of animals either by straying or Indian stampeding, etc. Some of the men were appointed as camp-keepers, who had all these things to look after, besides standing guard. A few were selected as hunters, and these were free to come and go, as their calling required. None but the most experienced were chosen for hunters, on a march; therefore our recruit could not aspire to that dignity yet.

The first adventure the company met with worthy of mention after leaving Independence, was in crossing the country between the Arkansas and the Platte. Here the camp was surprised one morning by a band of Indians a thousand strong, that came sweeping down upon them in such warlike style that even Captain Sublette was fain to believe it his last battle. Upon the open prairie there is no such thing as flight, nor any cover under which to conceal a party even for a few moments. It is always fight or die, if the assailants are in the humor for war.

Happily on this occasion the band proved to be more peaceably disposed than their appearance indicated, being the warriors of several tribes--the Sioux, Arapahoes, Kiowas, and Cheyennes, who had been holding a council to consider probably what mischief they could do to some other tribes. The spectacle they presented as they came at full speed on horseback, armed, painted, brandishing their weapons, and yelling in first rate Indian style, was one which might well strike with a palsy the stoutest heart and arm. What were a band of sixty men against a thousand armed warriors in full fighting trim, with spears, shields, bows, battle-axes, and not a few guns?

But it is the rule of the mountain-men to fight - and that there is a chance for life until the breath is out of the body; therefore Captain Sublette had his little force drawn up in line of battle. On came the savages, whooping and swinging their weapons above their heads. Sublette turned to his men. "When you hear my shot, then fire." Still they came on, until within about fifty paces of the line of waiting men. Sublette turned his head, and saw his command with their guns all up to

The River of the West

---

their faces ready to fire, then raised his own gun. Just at this moment the principal chief sprang off his horse and laid his weapon on the ground, making signs of peace. Then followed a talk, and after the giving of a considerable present, Sublette was allowed to depart. This he did with all dispatch, the company putting as much distance as possible between themselves and their visitors before making their next camp. Considering the warlike character of these tribes and their superior numbers, it was as narrow an escape on the part of the company as it was an exceptional freak of generosity on the part of the savages to allow it. But Indians have all a great respect for a man who shows no fear; and it was most probably the warlike movement of Captain Sublette and his party which inspired a willingness on the part of the chief to accept a present, when he had the power to have taken the whole train. Besides, according to Indian logic, the present cost him nothing, and it might cost him many warriors to capture the train. Had there been the least wavering on Sublette's part, or fear in the countenances of his men, the end of the affair would have been different. This adventure was a grand initiation of the raw recruits, giving them both an insight into savage modes of attack, and an opportunity to test their own nerve.

The company proceeded without accident, and arrived, about the first of July, at the rendezvous, which was appointed for this year on the Popo Agie, one of the streams which form the headwaters of Bighorn River.

Now, indeed, young Joe had an opportunity of seeing something of the life upon which he had entered. As customary, when the traveling partner arrived at rendezvous with the year's merchandise, there was a meeting of all the partners, if they were within reach of the appointed place. On this occasion Smith was absent on his tour through California and Western Oregon, as has been related in the prefatory chapter. Jackson, the resident partner, and commander for the previous year, was not yet in; and Sublette had just arrived with the goods from St. Louis.

All the different hunting and trapping parties and Indian allies were gathered together, so that the camp contained several hundred men, with their riding and packhorses. Nor were Indian women and children wanting to give variety and an appearance of domesticity to the scene.

The Summer rendezvous was always chosen in some valley where there was grass for the animals, and game for the camp. The plains along the Popo Agie, besides furnishing these necessary bounties, were bordered by picturesque mountain ranges, whose naked bluffs of red sandstone glowed in the morning and evening sun with a mellowness of coloring charming to the eye of the Virginia recruit. The waving grass of the plain, variegated with wild flowers; the clear summer heavens flecked with white clouds that threw soft shadows in passing; the grazing animals scattered about the meadows; the lodges of the Booshways,<sup>(1)</sup> around which clustered the camp in motley garb and brilliant coloring; gay laughter, and the murmur of soft Indian voices, all made up a most spirited and enchanting picture, in which the eye of an artist could not fail to delight.

But as the goods were opened the scene grew livelier. All were eager to purchase, most of the trappers to the full amount of their year's wages; and some of them, generally free trappers, went in debt to the company to a very considerable amount, after spending the value of a year's labor, privation, and danger, at the rate of several hundred dollars in a single day.

The difference between a hired and a free trapper was greatly in favor of the latter. The hired trapper was regularly indentured, and bound not only to hunt and trap for his employers, but also to perform any duty required of him in camp. The Boosway, or the trader, or the partisan, (leader of the detachment,) had him under his command, to make him take charge of, load and unload the horses, stand guard, cook, hunt fuel, or, in short, do any and every duty. In return for this toilsome service he received an outfit of traps, arms and ammunition, horses, and whatever his service required. Besides his outfit, he received no more than three or four hundred dollars a year as wages.

There was also a class of free trappers, who were furnished with their outfit by the company they trapped for, and who were obliged to agree to a certain stipulated price for their furs before the hunt commenced. But the genuine free trapper regarded himself as greatly the superior of either of the foregoing classes. He had his own horses and accoutrements, arms and ammunition. He took what route he thought fit, hunted and trapped when and where he chose; traded with the Indians; sold his furs to whoever offered highest for them; dressed flauntingly, and generally had an Indian wife and half-breed children. They prided themselves on their hardihood and courage; even on their recklessness and profligacy. Each claimed to own the best horse; to have had the wildest adventures; to have made the most narrow escapes; to have killed the greatest number of bears and Indians; to be the greatest favorite with the Indian belles, the greatest consumer of alcohol, and to have the most money to spend, i.e. the largest credit on the books of the company. If his hearers did not believe him, he was ready to run a race with him, to beat him at "old sledge," or to fight, if fighting was preferred,--ready to prove what he affirmed in any manner the company pleased.

If the free trapper had a wife, she moved with the camp to which he attached himself, being furnished with a fine horse, caparisoned in the gayest and costliest manner. Her dress was of the finest goods the market afforded, and was suitably ornamented with beads, ribbons, fringes, and feathers. Her rank, too, as a free trapper's wife, gave her consequence not only in her own eyes, but in those of her tribe, and protected her from that slavish drudgery to which as the wife of an Indian hunter or warrior she would have been subject. The only authority which the free trapper acknowledged was that of his Indian spouse, who generally ruled in the lodge, however her lord blustered outside.

One of the free trapper's special delights was to take in hand the raw recruits, to gorge their wonder with his boastful tales, and to amuse himself with shocking his pupil's civilized notions of propriety. Joe Meek did not escape this sort of "breaking in;" and if it should appear in the course of this narrative that he proved an apt scholar, it will but illustrate a truth--that high spirits and fine talents tempt the tempter to win them over to his ranks. But Joe was not won over all at once. He beheld the beautiful spectacle of the encampment as it has been described, giving life and enchantment to the summer landscape, changed into a scene of the wildest carousal, going from bad to worse, until from harmless noise and bluster it came to fighting and loss of life. At this first rendezvous he was shocked to behold the revolting exhibition of four trappers playing at a game

The River of the West

---

of cards with the dead body of a comrade for a card-table! Such was the indifference to all the natural and ordinary emotions which these veterans of the wilderness cultivated in themselves, and inculcated in those who came under their influence. Scenes like this at first had the effect to bring feelings of home-sickness, while it inspired by contrast a sort of penitential and religious feeling also. According to Meek's account of those early days in the mountains, he said some secret prayers, and shed some secret tears. But this did not last long. The force of example, and especially the force of ridicule, is very potent with the young; nor are we quite free from their influence later in life.

If the gambling, swearing, drinking, and fighting at first astonished and alarmed the unsophisticated Joe, he found at the same time something to admire, and that he felt to be congenial with his own disposition, in the fearlessness, the contempt of sordid gain, the hearty merriment and frolicsome abandon of the better portion of the men about him. A spirit of emulation arose in him to become as brave as the bravest, as hardy as the hardiest, and as gay as the gayest, even while his feelings still revolted at many things which his heroic models wore openly guilty of. If at any time in the future course of this narrative, Joe is discovered to have taken leave of his early scruples, the reader will considerably remember the associations by which he was surrounded for years, until the memory of the pious teachings of his childhood was nearly, if not quite, obliterated. To "nothing extenuate, nor set down aught in malice," should be the frame of mind in which both the writer and reader of Joe's adventures should strive to maintain himself.

Before our hero is ushered upon the active scenes of a trapper's life, it may be well to present to the reader a sort of guide to camp life, in order that he may be able to understand some of its technicalities, as they may be casually mentioned hereafter.

When the large camp is on the march, it has a leader, generally one of the Booshways, who rides in advance, or at the head of the column. Near him is a led mule, chosen for its qualities of speed and trustworthiness, on which are packed two small trunks that balance each other like panniers, and which contain the company's books, papers, and articles of agreement with the men. Then follow the pack animals, each one bearing three packs--one on each side, and one on top--so nicely adjusted as not to slip in traveling. These are in charge of certain men called camp-keepers, who have each three of these to look after. The trappers and hunters have two horses, or mules, one to ride, and one to pack their traps. If there are women and children in the train, all are mounted. Where the country is safe, the caravan moves in single file, often stretching out for half or three-quarters of a mile. At the end of the column rides the second man, or "little Booshway," as the men call him; usually a hired officer, whose business it is to look after the order and condition of the whole camp.

On arriving at a suitable spot to make the night camp, the leader stops, dismounts in the particular space which is to be devoted to himself in its midst. The others, as they come up, form a circle; the "second man" bringing up the rear, to be sure all are there. He then proceeds to appoint every man a place in the circle, and to examine the horses backs to see if any are sore. The horses are then turned out, under a guard, to graze; but before darkness comes on are placed inside the ring, and picketed by a stake driven in the earth, or with two feet so tied together as to prevent easy or

The River of the West

---

free locomotion. The men are divided into messes: so many trappers and so many camp-keepers to a mess. The business of eating is not a very elaborate one, where the sole article of diet is meat, either dried or roasted. By a certain hour all is quiet in camp, and only the guard is awake. At times during the night, the leader, or the officer of the guard, gives the guard a challenge "all's well!" which is answered by "all's well!"

In the morning at daylight, or sometimes not till sunrise, according to the safe or dangerous locality, the second man comes forth from his lodge and cries in French, "leve, leve, leve, leve, leve!" fifteen or twenty times, which is the command to rise. In about five minutes more he cries out again, in French, "leche lego, leche lego!" or turn out, turn out; at which command all come out from the lodges, and the horses are turned loose to feed; but not before a horseman has galloped all round the camp at some distance, and discovered every thing to be safe in the neighborhood. Again, when the horses have been sufficiently fed, under the eye of a guard, they are driven up, the packs replaced, the train mounted, and once more it moves off, in the order before mentioned.

In a settled camp, as in winter, there are other regulations. The leader and the second man occupy the same relative positions; but other minor regulations are observed. The duty of a trapper, for instance, in the trapping season, is only to trap, and take care of his own horses. When he comes in at night, he takes his beaver to the clerk, and the number is counted off, and placed to his credit. Not he, but the camp-keepers, take off the skins and dry them. In the winter camp there are six persons to a lodge: four trappers and two camp-keepers; therefore the trappers are well waited upon, their only duty being to hunt, in turns, for the camp. When a piece of game is brought in,--a deer, an antelope, or buffalo meat,--it is thrown down on the heap which accumulates in front of the Boosway's lodge; and the second man stands by and cuts it up, or has it cut up for him. The first man who chances to come along, is ordered to stand still and turn his back to the pile of game, while the "little Boosway" lays hold of a piece that has been cut off, and asks in a loud voice--"who will have this?"--and the man answering for him, says, "the Boosway," or perhaps "number six," or "number twenty"--meaning certain messes; and the number is called to come and take their meat. In this blind way the meat is portioned off; strongly reminding one of the game of "button, button, who has the button?" In this chance game of the meat, the Boosway fares no better than his men; unless, in rare instances, the little Boosway should indicate to the man who calls off, that a certain choice piece is designed for the mess of the leader or the second man.

A gun is never allowed to be fired in camp under any provocation, short of an Indian raid; but the guns are frequently inspected, to see if they are in order; and woe to the careless camp-keeper who neglects this or any other duty. When the second man comes around, and finds a piece of work imperfectly done, whether it be cleaning the firearms, making a hair rope, or a skin lodge, or washing a horse's back, he does not threaten the offender with personal chastisement, but calls up another man and asks him,

"Can you do this properly?"

"Yes, sir."

"I will give you ten dollars to do it;" and the ten dollars is set down to the account of the inefficient campkeeper. But he does not risk forfeiting another ten dollars in the same manner.

In the spring, when the camp breaks up, the skins which have been used all winter for lodges are cut up to make moccasins: because from their having been thoroughly smoked by the lodge fires they do not shrink in wetting, like raw skins. This is an important quality in a moccasin, as a trapper is almost constantly in the water, and should not his moccasins be smoked they will close upon his feet, in drying, like a vice. Sometimes after trapping all day, the tired and soaked trapper lies down in his blankets at night, still wet. But by-and-by he is wakened by the pinching of his moccasins, and is obliged to rise and seek the water again to relieve himself of the pain. For the same reason, when spring comes, the trapper is forced to cut off the lower half of his buckskin breeches, and piece them down with blanket legging, which he wears all through the trapping season.

Such were a few of the peculiarities, and the hardships also, of a life in the Rocky Mountains. If the camp discipline, and the dangers and hardships to which a raw recruit was exposed, failed to harden him to the service in one year, he was rejected as a "trifling fellow," and sent back to the settlement the next year. It was not probable, therefore, that the mountain-man often was detected in complaining at his lot. If he was miserable, he was laughed at; and he soon learned to laugh at his own miseries, as well as to laugh back at his comrades.

1. Leaders or chiefs--corrupted from the French of Bourgeois, and borrowed from the Canadians.

---

The River of the West  
Chapter II.

The business of the rendezvous occupied about a month. In this period the men, Indian allies, and other Indian parties who usually visited the camp at this time, were all supplied with goods. The remaining merchandise was adjusted for the convenience of the different traders who should be sent out through all the country traversed by the company. Sublette then decided upon their routes, dividing up his forces into camps, which took each its appointed course, detaching as it proceeded small parties of trappers to all the hunting grounds in the neighborhood. These smaller camps were ordered to meet at certain times and places, to report progress, collect and cache their furs, and "count noses." If certain parties failed to arrive, others were sent out in search for them.

This year, in the absence of Smith and Jackson, a considerable party was dispatched, under Milton Sublette, brother of the Captain, and two other free trappers and traders, Frapp and Jervais, to traverse the country down along the Bighorn River. Captain Sublette took a large party, among whom was Joe Meek, across the mountains to trap on the Snake River, in opposition to the Hudson's Bay Company. The Rocky Mountain Fur Company had hitherto avoided this country, except when Smith had once crossed to the head-waters of the Snake with a small party of five trappers. But Smith and Sublette had determined to oppose themselves to the British traders who occupied so large an extent of territory presumed to be American; and it had been agreed between them to

---

The River of the West

---

meet this year on Snake River on Sublette's return from St. Louis, and Smith's from his California tour. What befel Smith's party before reaching the Columbia, has already been related; also his reception by the Hudson's Bay Company, and his departure from Vancouver.

Sublette led his company up the valley of the Wind River, across the mountains, and on to the very head-waters of the Lewis or Snake River. Here he fell in with Jackson, in the valley of Lewis Lake, called Jackson's Hole, and remained on the borders of this lake for some time, waiting for Smith, whose non-appearance began to create a good deal of uneasiness. At length runners were dispatched in all directions looking for the lost Booshway.

The detachment to which Meek was assigned had the pleasure and honor of discovering the hiding place of the missing partner, which was in Pierre's Hole, a mountain valley about thirty miles long and of half that width, which subsequently. was much frequented by the camps of the various fur companies. He was found trapping and exploring, in company with four men only, one of whom was Black, who with him escaped from the Umpqua Indians, as before related.

Notwithstanding the excitement and elation attendant upon the success of his party, Meek found time to admire the magnificent scenery of the valley, which is bounded on two sides by broken and picturesque ranges, and overlooked by that magnificent group of mountains, called the Three Tetons, towering to a height of fourteen thousand feet. This emerald cup set in its rim of amethystine mountains, was so pleasant a sight to the mountain-men that camp was moved to it without delay, where it remained until some time in September, recruiting its animals and preparing for the fall hunt.

Here again the trappers indulged in their noisy sports and rejoicing, ostensibly on account of the return of the long-absent Booshway. There was little said of the men who had perished in that unfortunate expedition. "Poor fellow! out of luck; " was the usual burial rite which the memory of a dead comrade received. So much and no more. They could indulge in noisy rejoicings over a lost comrade restored; but the dead one was not mentioned. Nor was this apparently heartless and heedless manner so irrational or unfeeling as it seemed. Everybody understood one thing in the mountains -- that he must keep his life by his own courage and valor, or at the least by his own prudence. Unseen dangers always lay in wait for him. The arrow or tomahawk of the Indian, the blow of the grizzly bear, the mix-step on the dizzy or slippery height, the rush of boiling and foaming floods, freezing cold, famine--these were the most common forms of peril, yet did not embrace even then all the forms in which Death sought his victims in the wilderness. The avoidance of painful reminders, such as the loss of a party of men, was a natural instinct, involving also a principle of self defence--since to have weak hearts would be the surest road to defeat in the next dangerous encounter. To keep their hearts "big," they must be gay, they must not remember the miserable fate of many of their one-time comrades. Think of that, stern moralist and martinet in propriety! Your fur collar hangs in the gas-lighted hall. In your luxurious dressing gown and slippers, by the warmth of a glowing grate, you muse upon the depravity of your fellow men. But imagine yourself, if you can, in the heart of an interminable wilderness. Let the snow be three or four feet deep, game scarce, Indians on your track: escaped from these dangers, once more be-

The River of the West

---

side a camp fire, with a roast of buffalo meat on a stick before it, and several of your companions similarly escaped, and destined for the same chances to-morrow, around you. Do you fancy you should give much time to lamenting the less lucky fellows who were left behind frozen, starved, or scalped? Not you. You would be fortifying yourself against to-morrow, when the same terrors might lay in wait for you. Jedediah Smith was a pious man; one of the few that ever resided in the Rocky Mountains, and led a band of reckless trappers; but he did not turn back to his camp when he saw it attacked on the Umpqua, nor stop to lament his murdered men. The law of self preservation is strong in the wilderness. "Keep up your heart to-day, for to-morrow you may die," is the motto of the trapper.

In the conference which took place between Smith and Sublette, the former insisted that on account of the kind services of the Hudson's Bay Company toward himself and the three other survivors of his party, they should withdraw their trappers and traders from the western side of the mountains for the present, so as not to have them come in conflict with those of that company. To this proposition Sublette reluctantly consented, and orders were issued for moving once more to the east, before going into winter camp, which was appointed for the Wind River Valley.

In the meantime Joe Meek was sent out with a party to take his first hunt for beaver as a hired trapper. The detachment to which he belonged traveled down Pierre's fork, the stream which watered the valley of Pierre's Hole, to its junction with Lewis' and Henry's forks where they unite to form the great Snake River. While trapping in this locality the party became aware of the vicinity of a roving band of Blackfeet, and in consequence, redoubled their usual precautions while on the march.

The Blackfeet were the tribe most dreaded in the Rocky Mountains, and went by the name of "Bugs Boys," which rendered into good English, meant "the devil's own." They are now so well known that to mention their characteristics seems like repeating a "twice-told tale; " but as they will appear so often in this narrative, Irving's account of them as he had it from Bonneville when he was fresh from the mountains, will, after all, not be out of place. "These savages," he says, "are the most dangerous banditti of the mountains, and the inveterate foe of the trapper. They are Ishmaelites of the first order, always with weapon in hand, ready for action. The young braves of the tribe, who are destitute of property, go to war for booty; to gain horses, and acquire the means of setting up a lodge, supporting a family, and entitling themselves to a seat in the public councils. The veteran warriors fight merely for the love of the thing, and the consequence which success gives them among their people. They are capital horsemen, and are generally well mounted on short, stout horses, similar to the prairie ponies, to be met with in St. Louis. When on a war party, however, they go on foot, to enable them to skulk through the country with greater secrecy; to keep in thickets and ravines, and use more adroit subterfuges and stratagems. Their mode of warfare is entirely by ambush, surprise, and sudden assaults in the night time. If they succeed in causing a panic, they dash forward with headlong fury; if the enemy is on the alert, and shows no signs of fear, they become wary and deliberate in their movements.

Some of them are armed in the primitive style, with bows and arrows; the greater part have American fuseses, made after the fashion of those of the Hudson's Bay Company. These they procure at

The River of the West

---

the trading post of the American Fur Company, on Maria's River, where they traffic their peltries for arms, ammunition, clothing, and trinkets. They are extremely fond of spirituous liquors and tobacco, for which nuisances they are ready to exchange, not merely their guns and horses, but even their wives and daughters. As they are a treacherous race, and have cherished a lurking hostility to the whites, ever since one of their tribe was killed by Mr. Lewis, the associate of General Clarke, in his exploring expedition across the Rocky Mountains, the American Fur Company is obliged constantly to keep at their post a garrison of sixty or seventy men."

"Under the general name of Blackfeet are comprehended several tribes, such as the Surcies, the Peagans, the Blood Indians, and the Gros Ventres of the Prairies, who roam about the Southern branches of the Yellowstone and Missouri Rivers, together with some other tribes further north. The bands infesting the Wind River Mountains, and the country adjacent, at the time of which we are treating, were Gros Ventres of the Prairies, which are not to be confounded with the Gros Ventres of the Missouri, who keep about the lower part of that river, and are friendly to the white men."

"This hostile band keeps about the head-waters of the Missouri, and numbers about nine hundred fighting men. Once in the course of two or three years they abandon their usual abodes and make a visit to the Arapahoes of the Arkansas. Their route lies either through the Crow country, and the Black Hills, or through the lands of the Nez Perces, Flatheads, Bannacks, and Shoshonies. As they enjoy their favorite state of hostility with all these tribes, their expeditions are prone to be conducted in the most lawless and predatory style; nor do they hesitate to extend their maraudings to any party of white men they meet with, following their trail, hovering about their camps, waylaying and dogging the caravans of the free traders. and murdering the solitary trapper. The consequences are frequent and desperate fights between them and the mountaineers, in the wild defiles and fastnesses of the Rocky Mountains." Such were the Blackfeet at the period of which we are writing; nor has their character changed at this day, as many of the Montana miners know to their cost.

---

The River of the West  
Chapter III.

1830. Sublette's camp commenced moving back to the east side of the Rocky Mountains in October. Its course was up Henry's fork of the Snake River, through the North Pass to Missouri Lake, in which rises the Madison fork of the Missouri River. The beaver were very plenty on Henry's fork, and our young trapper had great success in making up his packs; having learned the art of setting his traps very readily. The manner in which the trapper takes his game is as follows:--

He has an ordinary steel trap weighing five pounds, attached to a chain five feet long, with a swivel and ring at the end, which plays round what is called the float, a dry stick of wood, about six feet long. The trapper wades out into the stream, which is shallow, and cuts with his knife a

The River of the West

---

bed for the trap, five or six inches under water. He then takes the float out the whole length of the chain in the direction of the centre of the stream, and drives it into the mud, so fast that the beaver cannot draw it out; at the same time tying the other end by a thong to the bank. A small stick or twig, dipped in musk or castor, serves for bait, and is placed so as to hang directly above the trap, which is now set. The trapper then throws water plentifully over the adjacent bank to conceal any foot prints or scent by which the beaver would be alarmed, and going to some distance wades out of the stream.

In setting a trap, several things are to be observed with care:--first, that the trap is firmly fixed, and the proper distance from the bank--for if the beaver can get on shore with the trap, he will cut off his foot to escape: secondly, that the float is of dry wood, for should it not be, the little animal will cut it off at a stroke, and swimming with the trap to the middle of the dam, be drowned by its weight. In the latter case, when the hunter visits his traps in the morning, he is under the necessity of plunging into the water and swimming out to dive for the missing trap, and his game. Should the morning be frosty and chill, as it very frequently is in the mountains, diving for traps is not the pleasantest exercise. In placing the bait, care must be taken to fix it just where the beaver in reaching it will spring the trap. If the bait-stick be placed high, the hind foot of the beaver will be caught: if low, his fore foot.

The manner in which the beavers make their dam, and construct their lodge, has long been reckoned among the wonders of the animal creation; and while some observers have claimed for the little creature more sagacity than it really possesses, its instinct is still sufficiently wonderful. It is certainly true that it knows how to keep the water of a stream to a certain level, by means of an obstruction; and that it cuts down trees for the purpose of backing up the water by a dam. It is not true, however, that it can always fell a tree in the direction required for this purpose. The timber about a beaver dam is felled in all directions; but as trees that grow near the water, generally lean towards it, the tree, when cut, takes the proper direction by gravitation alone. The beaver then proceeds to cut up the fallen timber into lengths of about three feet, and to convey them to the spot where the dam is to be situated, securing them in their places by means of mud and stones. The work is commenced when the water is low, and carried on as it rises, until it has attained the desired height. And not only is it made of the requisite height and strength, but its shape is suited exactly to the nature of the stream in which it is built. If the water is sluggish the dam is straight; if rapid and turbulent, the barrier is constructed of a convex form, the better to resist the action of the water.

When the beavers have once commenced a dam, its extent and thickness are continually augmented, not only by their labors, but by accidental accumulations; thus accommodating itself to the size of the growing community. At length after a lapse of many years, the water being spread over a considerable tract, and filled up by yearly accumulations of drift-wood and earth, seeds take root in the new made ground, and the old beaver-dams become green meadows, or thickets of cotton-wood and willow.

The food on which the beaver subsists, is the bark of the young trees in its neighborhood; and when laying up a winter store, the whole community join in the labor of selecting, cutting up, and

carrying the strips to their store houses under water. They do not, as some writers have affirmed, when cutting wood for a dam strip off the bark and store it in their lodges for winter consumption; but only carry under water the stick with the bark on.

“ The beaver has two incisors and eight molars in each jaw; and empty hollows where the canine teeth might be. The upper pair of cutting teeth extend far into the jaw, with a curve of rather more than a semicircle; and the lower pair of incisors form rather less than a semicircle. Sometimes, one of these teeth gets broken and then the opposite tooth continues growing until it forms a nearly complete circle. The chewing muscle of the beaver is strengthened by tendons in such a way as to give it great power. But more is needed to enable the beaver to eat wood. The insalivation of the dry food is provided for by the extraordinary size of the salivary glands.

“ Now, every part of these instruments is of vital importance to the beavers. The loss of an incisor involves the formation of an obstructive circular tooth; deficiency of saliva renders the food indigestible; and when old age comes and the enamel is worn down faster than it is renewed, the beaver is not longer able to cut branches for its support. Old, feeble and poor, unable to borrow, and ashamed to beg, he steals cuttings, and subjects himself to the penalty assigned to theft. Aged beavers are often found dead with gashes in their bodies, showing that they have been killed by their mates. In the fall of 1864, a very aged beaver was caught in one of the dams of the Esconawba River, and this was the reflection of a great authority on the occasion, one Ah-she-goes, an Ojibwa trapper: ‘Had he escaped the trap he would have been killed before the winter was over, by other beavers, for stealing cuttings.’

When the beavers are about two or three years old, their teeth are in their best condition for cutting. On the Upper Missouri, they cut the cotton tree and the willow bush; around Hudson’s Bay and Lake Superior, in addition to the willow they cut the poplar and maple, hemlock, spruce and pine. The cutting is round and round, and deepest upon the side on which they wish the tree to fall. Indians and trappers have seen beavers cutting trees. The felling of a tree is a family affair. No more than a single pair with two or three young ones are engaged at a time. The adults take the cutting in turns, one gnawing and the other watching; and occasionally a youngster trying his incisors. The beaver whilst gnawing sits on his plantigrade hind legs, which keep him conveniently upright. When the tree begins to crackle the beavers work cautiously, and when it crashes down they plunge into the pond, fearful lest the noise should attract an enemy to the spot. After the tree-fall, comes the lopping of the branches. A single tree may be winter provision for a family. Branches five or six inches thick have to be cut into proper lengths for transport, and are then taken home.”

The lodge of a beaver is generally about six feet in diameter, on the inside, and about half as high. They are rounded or dome-shaped on the outside, with very thick walls, and communicate with the land by subterranean passages, below the depth at which the water freezes in winter. Each lodge is made to accommodate several inmates, who have their beds ranged round the walls, much as the Indian does in his tent. They are very cleanly, too, and after eating, carry out the sticks that have been stripped, and either use them in repairing their dam, or throw them into the

stream below.

During the summer months the beavers abandon their lodges, and disport themselves about the streams, sometimes going on long journeys; or if any remain at home, they are the mothers of young families. About the last of August the community returns to its home, and begins preparations for the domestic cares of the long winter months.

An exception to this rule is that of certain individuals who have no families, make no dam, and never live in lodges, but burrow in subterranean tunnels. They are always found to be males, whom the French trappers call "les parasiteux," or idlers; and the American trappers "bachelors." Several of them are sometimes found in one abode, which the trappers facetiously denominate "bachelor's hall." Being taken with less difficulty than the more domestic beaver, the trapper is always glad to come upon their habitations.

The trapping season is usually in the spring and autumn. But should the hunters find it necessary to continue their work in winter, they capture the beaver by sounding on the ice until an aperture is discovered, when the ice is cut away and the opening closed up. Returning to the bank, they search for the subterranean passage, tracing its connection with the lodge; and by patient watching succeed in catching the beaver on some of its journeys between the water and the land. This, however, is not often resorted to when the hunt in the fall has been successful; or when not urged by famine to take the beaver for food.

"Occasionally it happens," says Captain Bonneville, "that several members of a beaver family are trapped in succession. The survivors then become extremely shy, and can scarcely be "brought to medicine," to use the trappers' phrase for "taking the bait." In such case, the trapper gives up the use of the bait, and conceals his traps in the usual paths and crossing places of the household. The beaver being now completely "up to trap," approaches them cautiously, and springs them, ingeniously, with a stick. At other times, he turns the traps bottom upwards, by the same means, and occasionally even drags them to the barrier, and conceals them in the mud. The trapper now gives up the contest of ingenuity, and shouldering his traps, marches off, admitting that he is not yet "up to beaver."

Before the camp moved from the forks of the Snake River, the haunting Blackfeet made their appearance openly. It was here that Meek had his first battle with that nation, with whom he subsequently had many a savage contest. They attacked the camp early in the morning, just as the call to turn out had sounded. But they had miscalculated their opportunity: the design having evidently been to stampede the horses and mules, at the hour and moment of their being turned loose to graze. They had been too hasty by a few minutes, so that when they charged on the camp pell-mell, firing a hundred guns at once, to frighten both horses and men, it happened that only a few of the animals had been turned out, and they had not yet got far off. The noise of the charge only turned them back to camp.

In an instant's time, Fitzpatrick was mounted, and commanding the men to follow, he galloped at headlong speed round and round the camp, to drive back such of the horses as were straying,

The River of the West

---

or had been frightened from their pickets. In this race, two horses were shot under him; but he escaped and the camp-horses were saved. The battle now was to punish the thieves. They took their position, as usual with Indian fighters, in a narrow ravine; from whence the camp was forced to dislodge them, at a great disadvantage. This they did do, at last, after six hours of hard fighting, in which a few men were wounded, but none killed. The thieves skulked off, through the canyon, when they found themselves defeated, and were seen no more until the camp came to the woods which cover the western slope of the Rocky Mountains.

But as the camp moved eastward, or rather in a northeasterly direction, through the pine forests between Pierre's Hole and the head-waters of the Missouri, it was continually harrassed by Black-Foot, and required a strong guard at night, when these marauders delighted to make an attack. The weather by this time was very cold in the mountains, and chilled the marrow of our young Virginian. The travel was hard, too, and the recruits pretty well worn out.

One cold night, Meek was put on guard on the further side of the camp, with a veteran named Reese. But neither the veteran nor the youngster could resist the approaches of "tired Nature's sweet restorer," and went to sleep at their post of duty. When, during the night, Sublette came out of his tent and gave the challenge-- "All's well!" there was no reply. To quote Meek's own language, "Sublette came round the horse-pen swearing and snorting. He was powerful mad. Before he got to where Reese was, he made so much noise that he waked him; and Reese, in a loud whisper, called to him, 'Down, Billy! Indians!' Sublette got down on his belly mighty quick. 'Whar? whar?' he asked.

"They were right there when you hollered so," said Reese.

"Where is Meek?" whispered Sublette.

"He is trying to shoot one," answered Reese, still in a whisper.

"Reese then crawled over to whar I war, and told me what had been said, and informed me what to do. In a few minutes I crept cautiously over to Reese's post, when Sublette asked me how many Indians had been thar, and I told him I couldn't make out their number. In the morning a pair of Indian moccasins war found whar Reese saw the Indians, which I had taken care to leave there; and thus confirmed, our story got us the credit of vigilance, instead of our receiving our just dues for neglect of duty."

It was sometime during the fall hunt in the Pine Woods, on the west side of the Rocky Mountains, that Meek had one of his earliest adventures with a bear. Two comrades, Craig and Nelson, and himself, while out trapping, left their horses, and traveled up a creek on foot, in search of beaver. They had not proceeded any great distance, before they came suddenly face to face with a red bear; so suddenly, indeed, that the men made a spring for the nearest trees. Craig and Meek ascended a large pine, which chanced to be nearest, and having many limbs, was easy to climb. Nelson happened to take to one of two small trees that grew close together; and the bear, fixing upon

The River of the West

---

him for a victim, undertook to climb after him. With his back against one of these small trees, and his feet against the other, his bearship succeeded in reaching a point not far below Nelson's perch, when the trees opened with his weight, and down he went, with a shock that fairly shook the ground. But this bad luck only seemed to infuriate the beast, and up he went again, with the same result, each time almost reaching his enemy. With the second tumble he was not the least discouraged; but started up the third time, only to be dashed once more to the ground when he had attained a certain height. At the third fall, however, he became thoroughly disgusted with his want of success, and turned and ran at full speed into the woods.

“ Then,” says Meek, “ Craig began to sing, and I began to laugh; but Nelson took to swearing. ‘O yes, you can laugh and sing now,’ says Nelson; ‘but you war quiet enough when the bear was around.’ ‘ Why, Nelson,’ I answered, ‘you wouldn’t have us noisy before that distinguished guest of yours?’ But Nelson damned the wild beast; and Craig and I laughed, and said he didn’t seem wild a bit. That’s the way we hector each other in the mountains. If a man gets into trouble he is only laughed at: ‘let him keep out; let him have better luck.’ is what we say.”

The country traversed by Sublette in the fall of 1829, was unknown at that period, even to the fur companies, they having kept either farther to the south or to the north. Few, if any, white men had passed through it since Lewis and Clarke discovered the head-waters of the Missouri and the Snake Rivers, which flow from the opposite sides of the same mountain peaks. Even the toils and hardships of passing over mountains at this season of the year, did not deprive the trapper of the enjoyment of the magnificent scenery the region afforded. Splendid views, however, could not long beguile men who had little to eat, and who had yet a long journey to accomplish in cold, and surrounded by dangers, before reaching the wintering ground.

In November the camp left Missouri Lake on the east side of the mountains, and crossed over, still northeasterly, on to the Gallatin fork of the Missouri River, passing over a very rough and broken country. They were, in fact, still in the midst of mountains, being spurs of the great Rocky range, and equally high and rugged. A particularly high mountain lay between them and the main Yellowstone River. This they had just crossed, with great fatigue and difficulty, and were resting the camp and horses for a few days on the river's bank, when the Blackfeet once more attacked them in considerable numbers. Two men were killed in this fight, and the camp thrown into confusion by the suddenness of the alarm. Capt. Sublette, however, got off, with most of his men, still pursued by the Indians.

Not so our Joe, who this time was not in luck, but was cut off from camp, alone, and had to flee to the high mountains overlooking the Yellowstone. Here was a situation for a nineteen-year-old raw recruit! Knowing that the Blackfeet were on the trail of the camp, it was death to proceed in that direction. Some other route must be taken to come up with them; the country was entirely unknown to him; the cold severe; his mule, blanket, and gun, his only earthly possessions. On the latter he depended for food, but game was scarce; and besides, he thought the sound of his gun would frighten himself, so alone in the wilderness, swarming with stealthy foes.

The River of the West

---

Hiding his mule in a thicket, he ascended to the mountain top to take a view of the country, and decide upon his course. And what a scene was that for the miserable boy, whose chance of meeting with his comrades again was small indeed! At his feet rolled the Yellowstone River, coursing away through the great plain to the eastward. To the north his eye follows the windings of the Missouri, as upon a map, but playing at hide-and-seek in amongst the mountains. Looking back, he saw the River Snake stretching its serpentine length through lava plains, far away, to its junction with the Columbia. To the north, and to the south, one white mountain rose above another as far as the eye could reach. What a mighty and magnificent world it seemed, to be alone in! Poor Joe succumbed to the influence of the thought, and wept.

Having indulged in this sole remaining luxury of life, Joe picked up his resolution, and decided upon his course. To the southeast lay the Crow country, a land of plenty --as the mountain-man regards plenty,--and there he could at least live; provided the Crows permitted him to do so. Besides, he had some hopes of falling in with one of the camps, by taking that course.

Descending the mountain to the hiding-place of his mule, by which time it was dark night, hungry and freezing, Joe still could not light a fire, for fear of revealing his whereabouts to the Indians; nor could he remain to perish with cold. Travel he must, and travel he did, going he scarcely knew whither. Looking back upon the terrors and discomforts of that night, the veteran mountaineer yet regards it as about the most miserable one of his life. When day at length broke, he had made, as well as he could estimate the distance, about thirty miles. Traveling on toward the southeast, he had crossed the Yellowstone River, and still among the mountains, was obliged to abandon his mule and accoutrements, retaining only one blanket and his gun. Neither the mule nor himself had broken fast in the last two days. Keeping a southerly course for twenty miles more, over a rough and elevated country, he came, on the evening of the third day, upon a band of mountain sheep. With what eagerness did he hasten to kill, cook, and eat ! Three days of fasting was, for a novice, quite sufficient to provide him with an appetite.

Having eaten voraciously, and being quite overcome with fatigue, Joe fell asleep in his blanket, and slumbered quite deeply until morning. With the morning came biting blasts from the north, that made motion necessary if not pleasant. Refreshed by sleep and food, our traveler hastened on upon his solitary way, taking with him what sheep-meat he could carry, traversing the same rough and mountainous country as before. No incidents nor alarms varied the horrible and monotonous solitude of the wilderness. The very absence of anything to alarm was awful; for the bravest man is wretchedly nervous in the solitary presence of sublime Nature. Even the veteran hunter of the mountains can never entirely divest himself of this feeling of awe, when his single soul comes face to face with God's wonderful and beautiful handiwork.

At the close of the fourth day, Joe made his lonely camp in a deep defile of the mountains, where a little fire and some roasted mutton again comforted his inner and outer man, and another night's sleep still farther refreshed his wearied frame. On the following morning, a very bleak and windy one, having breakfasted on his remaining piece of mutton, being desirous to learn something of the progress he had made, he ascended a low mountain in the neighborhood of his camp--and

The River of the West

---

behold! the whole country beyond was smoking with the vapor from boiling springs, and burning with gasses, issuing from small craters, each of which was emitting a sharp whistling sound.

When the first surprise of this astonishing scene had passed, Joe began to admire its effect in an artistic point of view. The morning being clear, with a sharp frost, he thought himself reminded of the city of Pittsburg, as he had beheld it on a winter morning, a couple of years before. This, however, related only to the rising smoke and vapor; for the extent of the volcanic region was immense, reaching far out of sight. The general face of the country was smooth and rolling, being a level plain, dotted with cone-shaped mounds. On the summits of these mounds were small craters from four to eight feet in diameter. Interspersed among these, on the level plain, were larger craters, some of them from four to six miles across. Out of these craters issued blue flames and molten brimstone.

For some minutes Joe gazed and wondered. Curious thoughts came into his head, about hell and the day of doom. With that natural tendency to reckless gayety and humorous absurdities which some temperaments are sensible of in times of great excitement, he began to soliloquize. Said he, to himself, "I have been told the sun would be blown out, and the earth burnt up. If this infernal wind keeps up, I shouldn't be surprised if the sun war blown out. If the earth is not burning up over thar, then it is that place the old Methodist preacher used to threaten me with. Any way it suits me to go and see what it's like."

On descending to the plain described, the earth was found to have a hollow sound, and seemed threatening to break through. But Joe found the warmth of the place most delightful, after the freezing cold of the mountains, and remarked to himself again, that "if it war hell, it war a more agreeable climate than he had been in for some time."

He had thought the country entirely desolate, as not a living creature had been seen in the vicinity; but while he stood gazing about him in curious amazement, he was startled by the report of two guns, followed by the Indian yell. While making rapid preparations for defence and flight, if either or both should be necessary, a familiar voice greeted him with the exclamation, "It's old Joe!" When the adjective "old" is applied to one of Meek's age at that time, it is generally understood to be a term of endearment. "My feelings you may imagine," says the "old Uncle Joe" of the present time, in recalling the adventure.

Being joined by these two associates, who had been looking for him, our traveler, no longer simply a raw recruit, but a hero of wonderful adventures, as well as the rest of the men, proceeded with them to camp, which they overtook the third day, attempting to cross the high mountains between the Yellowstone and the Bighorn Rivers. If Meek had seen hard times in the mountains alone, he did not find them much improved in camp. The snow was so deep that the men had to keep in advance, and break the road for the animals; and to make their condition still more trying, there were no provisions in camp, nor any prospect of plenty, for men or animals, until they should reach the buffalo country beyond the mountains.

The River of the West

---

During this scarcity of provisions, some of those amusing incidents took place with which the mountaineer will contrive to lighten his own and his comrades' spirits, even in periods of the greatest suffering. One which we have permission to relate, has reference to what Joe Meek calls the "meanest act of his life."

While the men were starving, a negro boy, belonging to Jedediah Smith, by some means was so fortunate as to have caught a porcupine, which he was roasting before the fire. Happening to turn his back for a moment, to observe something in camp, Meek and Reese snatched the tempting vi- and and made off with it, before the darkey discovered his loss. But when it was discovered, what a wail went up for the embezzled porcupine! Suspicion fixed upon the guilty parties, but as no one would 'peach on white men to save a "nigger's" rights, the poor, disappointed boy could do nothing but lament in vain, to the great amusement of the men, who upon the principle that "misery loves company," rather chuckled over than condemned Meek's "mean act."

There was a sequel, however, to this little story. So much did the negro dwell upon the event, and the heartlessness of the men towards him, that in the following summer, when Smith was in St. Louis, he gave the boy his freedom and two hundred dollars, and left him in that city; so that it became a saying in the mountains, that "the nigger got his freedom for a porcupine."

During this same march, a similar joke was played upon one of the men named Craig. He had caught a rabbit and put it up to roast before the fire--a tempting looking morsel to starving mountaineers. Some of his associates determined to see how it tasted, and Craig was told that the Booshways wished to speak with him at their lodge. While he obeyed this supposed command, the rabbit was spirited away, never more to be seen by mortal man. When Craig returned to the camp-fire, and beheld the place vacant where a rabbit so late was nicely roasting, his passion knew no bounds, and he declared his intention of cutting it out of the stomach that contained it. But as finding the identical stomach which contained it involved the cutting open of many that probably did not, in the search, he was fain to relinquish that mode of vengeance, together with his hopes of a supper. As Craig is still living, and is tormented by the belief that he knows the man who stole his rabbit, Mr. Meek takes this opportunity of assuring him, upon the word of a gentleman, that he is not the man.

While on the march over these mountains, owing to the depth of the snow, the company lost a hundred head of horses and mules, which sank in the yet unfrozen drifts, and could not be extricated. In despair at their situation, Jedediah Smith one day sent a man named Harris to the top of a high peak to take a view of the country, and ascertain their position. After a toilsome scramble the scout returned.

"Well, what did you see, Harris?" asked Smith anxiously.

"I saw the city of St. Louis, and one fellow taking a drink!" replied Harris; prefacing the assertion with a shocking oath.

Smith asked no more questions. He understood by the man's answer that he had made no pleas-

ing discoveries; and knew that they had still a weary way before them to reach the plains below. Besides, Smith was a religious man, and the coarse profanity of the mountaineers was very distasteful to him. "A very mild man, and a christian; and there were very few of them in the mountains," is the account given of him by the mountaineers themselves.

The camp finally arrived without loss of life, except to the animals, on the plains of the Bighorn River, and came upon the waters of the Stinking Fork, a branch of this river, which derives its unfortunate appellation from the fact that it flows through a volcanic tract similar to the one discovered by Meek on the Yellowstone plains. This place afforded as much food for wonder to the whole camp, as the former one had to Joe; and the men unanimously pronounced it the "back door to that country which divines preach about." As this volcanic district had previously been seen by one of Lewis and Clarke's men, named Colter, while on a solitary hunt, and by him also denominated "hell," there must certainly have been something very suggestive in its appearance. If the mountains had proven barren, and inhospitably cold, this hot and sulphurous country offered no greater hospitality. In fact, the fumes which pervaded the air rendered it exceedingly noxious to every living thing, and the camp was fain to push on to the main stream of the Bighorn River. Here signs of trappers became apparent, and spies having been sent out discovered a camp of about forty men, under Milton Sublette, brother of Captain William Sublette, the same that had been detached the previous summer to hunt in that country. Smith and Sublette then cached their furs, and moving up the river joined the camp of M. Sublette.

The manner of caching furs is this: A pit is dug to a depth of five or six feet in which to stand. The men then drift from this under a bank of solid earth, and excavate a room of considerable dimensions, in which the furs are deposited, and the apartment closed up. The pit is then filled up with earth, and the traces of digging obliterated or concealed. These caches are the only storehouses of the wilderness.

While the men were recruiting themselves in the joint camp, the alarm of "Indians!" was given, and hurried cries of "shoot! shoot!" were uttered on the instant. Captain Sublette, however, checked this precipitation, and ordering the men to hold, allowed the Indians to approach, making signs of peace. They proved to be a war party of Crows, who after smoking the pipe of peace with the Captain, received from him a present of some tobacco, and departed.

As soon as the camp was sufficiently recruited for traveling, the united companies set out again toward the south, and crossed the Horn mountains once more into Wind River Valley; having had altogether, a successful fall hunt, and made some important explorations, notwithstanding the severity of the weather and the difficulty of mountain traveling. It was about Christmas when the camp arrived on Wind River, and the cold intense. While the men celebrated Christmas, as best they might under the circumstances, Capt. Sublette started to St. Louis with one man, Harris, called among mountain-men Black Harris, on snowshoes, with a train of pack-dogs. Such was the indomitable energy and courage of this famous leader!

Chapter IV.

1830. The furs collected by Jackson's company were cached on the Wind River; and the cold still being very severe, and game scarce, the two remaining leaders, Smith and Jackson, set out on the first of January with the whole camp, for the buffalo country, on the Powder River, a distance of about one hundred and fifty miles. "Times were hard in camp," when mountains had to be crossed in the depth of winter.

The animals had to be subsisted on the bark of the sweet cotton-wood, which grows along the streams and in the valleys on the east side of the Rocky Mountains, but is nowhere to be found west of that range. This way of providing for his horses and mules involved no trifling amount of labor, when each man had to furnish food for several of them. To collect this bark, the men carried the smooth limbs of the cotton-wood to camp, where, beside the camp-fire, they shaved off the sweet, green bark with a hunting-knife transformed into a drawing-knife by fastening a piece of wood to its point; or, in case the cotton-wood was not convenient, the bark was peeled off, and carried to camp in a blanket. So nutritious is it, that animals fatten upon it quite as well as upon oats.

In the large cotton-wood bottoms on the Yellowstone River, it sometimes became necessary to station a double guard to keep the buffalo out of camp, so numerous were they, when the severity of the cold drove them from the prairies to these cotton-wood thickets for subsistence. It was, therefore, of double importance to make the winter camp where the cotton-wood was plenty; since not only did it furnish the animals of the camp with food, but by attracting buffalo, made game plenty for the men. To such a hunter's paradise on Powder River, the camp was now traveling, and arrived, after a hard, cold march, about the middle of January, when the whole encampment went into winter quarters, to remain until the opening of spring.

This was the occasion when the mountain-man "lived fat" and enjoyed life: a season of plenty, of relaxation, of amusement, of acquaintanceship with all the company, of gayety, and of "busy idleness." Through the day, hunting parties were coming and going, men were cooking, drying meat, making moccasins, cleaning their arms, wrestling, playing games, and, in short, everything that an isolated community of hardy men could resort to for occupation, was resorted to by these mountaineers. Nor was there wanting, in the appearance of the camp, the variety, and that picturesque air imparted by a mingling of the native element; for what with their Indian allies, their native wives, and numerous children, the mountaineers camp was a motley assemblage; and the trappers themselves, with their affectation of Indian coxcombry, not the least picturesque individuals.

The change wrought in a wilderness landscape by the arrival of the grand camp was wonderful indeed. Instead of Nature's superb silence and majestic loneliness, there was the sound of men's voices in boisterous laughter, or the busy hum of conversation; the loud-resounding stroke of the axe; the sharp report of the rifle; the neighing of horses, and braying of mules; the Indian whoop and yell; and all that not unpleasing confusion of sound which accompanies the movements of the creature man. Over the plain, only dotted until now with shadows of clouds, or the transitory passage of the deer, the antelope, or the bear, were scattered hundreds of lodges and immense herds of grazing animals. Even the atmosphere itself seemed changed from its original purity, and

became clouded with the smoke from many camp-fires. And all this change might go as quickly as it came. The tent struck and the march resumed, solitude reigned once more, and only the cloud dotted the silent landscape.

If the day was busy and gleesome, the night had its charms as well. Gathered about the shining fires, groups of men in fantastic costumes told tales of marvelous adventures, or sung some old-remembered song, or were absorbed in games of chance. Some of the better educated men, who had once known and loved books, but whom some mishap in life had banished to the wilderness, recalled their favorite authors, and recited passages once treasured, now growing unfamiliar; or whispered to some chosen confrere the saddened history of his earlier years, and charged him thus and thus, should ever-ready death surprise himself in the next spring's hunt. It will not be thought discreditable to our young trapper, Joe, that he learned to read by the light of the campfire. Becoming sensible, even in the wilderness, of the deficiencies of his early education, he found a teacher in a comrade, named Green, and soon acquired sufficient knowledge to enjoy an old copy of Shakspeare, which, with a Bible, was carried about with the property of the camp.

In this life of careless gayety and plenty, the whole company was allowed to remain without interruption, until the first of April, when it was divided, and once more started on the march. Jackson, or "Davey," as he was called by the men, with about half the company, left for the Snake country. The remainder, among whom was Meek, started north, with Smith for commander, and James Bridger as pilot.

Crossing the mountains, ranges of which divide the tributary streams of the Yellowstone from each other, the first halt was made on Tongue River. From thence the camp proceeded to the Bighorn River. Through all this country game was in abundance,--buffalo, elk, and bear, and beaver also plenty. In mountain phrase, "times were good on this hunt: " beaver packs increased in number, and both men and animals were in excellent condition.

A large party usually hunted out the beaver and frightened away the game in a few weeks, or days, from any one locality. When this happened the camp moved on; or, should not game be plenty, it kept constantly on the move, the hunters and trappers seldom remaining out more than a day or two. Should the country be considered dangerous on account of Indians, it was the habit of the men to return every night to the encampment.

It was the design of Smith to take his command into the Blackfoot country, a region abounding in the riches which he sought, could they only be secured without coming into too frequent conflict with the natives: always a doubtful question concerning these savages. He had proceeded in this direction as far as Bovey's Fork of the Bighorn, when the camp was overtaken by a heavy fall of snow, which made traveling extremely difficult, and which, when melted, caused a sudden great rise in the mountain streams. In attempting to cross Bovey's Fork during the high water, he had thirty horses swept away, with three hundred traps: a serious loss in the business of hunting beaver.

In the manner described, pushing on through an unknown country, hunting and trapping as they moved, the company proceeded, passing another low chain of mountains, through a pass called Pryor's Gap, to Clark's Fork of the Yellowstone, thence to Rose-Bud River, and finally to the main Yellowstone River, where it makes a great bend to the east, enclosing a large plain covered with grass, and having also extensive cotton-wood bottoms, which subsequently became a favorite

wintering ground of the fur companies.

It was while trapping up in this country, on the RoseBud River, that an amusing adventure befel our trapper Joe. Being out with two other trappers, at some distance from the great camp, they had killed and supped off a fat buffalo cow. The night was snowy, and their camp was made in a grove of young aspens. Having feasted themselves, the remaining store of choice pieces was divided between, and placed, hunter fashion, under the heads of the party, on their betaking themselves to their blanket couches for the night. Neither Indian nor wild beast disturbed their repose, as they slept, with their guns beside them, filled with comfort and plenty. But who ever dreams of the presence of a foe under such circumstances? Certainly not our young trapper, who was only awakened about day-break by something very large and heavy walking over him, and snuffing about him with a most insulting freedom. It did not need Yankee powers of guessing to make out who the intruder in camp might be: in truth, it was only too disagreeably certain that it was a full sized grizzly bear, whose keenness of smell had revealed to him the presence of fat cow-meat in that neighborhood.

“ You may be sure,” says Joe, “ that I kept very quiet, while that bar helped himself to some of my buffalo meat, and went a little way off to eat it. But Mark Head, one of the men, raised up, and back came the bar. Down went our heads under the blankets, and I kept mine covered pretty snug, while the beast took another walk over the bed, but finally went off again to a little distance. Mitchel then wanted to shoot; but I said, ‘no, no; hold on, or the brute will kill us, sure.’ When the bar heard our voices, back he run again, and jumped on the bed as before. I’d have been happy to have felt myself sinking ten feet under ground, while that bar promenade over and around us! However, he couldn’t quite make out our style, and finally took fright, and ran off down the mountain. Wanting to be revenged for his impudence, I went after him, and seeing a good chance, shot him dead. Then I took my turn at running over him awhile! “

Such are the not infrequent incidents of the trapper’s life, which furnish him with material, needing little embellishment to convert it into those wild tales with which the nights are whiled away around the winter camp-fire.

Arrived at the Yellowstone with his company, Smith found it necessary, on account of the high water, to construct Bull-boats for the crossing. These are made by stitching together buffalo hides, stretching them over light frames, and paying the seams with elk tallow and ashes. In these light wherries the goods and people were ferried over, while the horses and mules were crossed by swimming.

The mode usually adopted in crossing large rivers, was to spread the lodges on the ground, throwing on them the light articles, saddles, etc. A rope was then run through the pin-holes around the edge of each, when it could be drawn up like a reticule. It was then filled with the heavier camp goods, and being tightly drawn up, formed a perfect ball. A rope being tied to it, it was launched on the water, the children of the camp on top, and the women swimming after and clinging to it, while a man, who had the rope in his hand, swam ahead holding on to his horse’s mane. In this way, dancing like a cork on the waves, the lodge was piloted across; and passengers as well as freight consigned, undamaged, to the opposite shore. A large camp of three hundred men, and one hundred women and children were frequently thus crossed in one hour’s time.

The camp was now in the excellent but inhospitable country of the Blackfeet, and the commander redoubled his precautions, moving on all the while to the Mussel Shell, and thence to the Judith

---

The River of the West

---

River. Beaver were plenty and game abundant; but the vicinity of the large village of the Blackfeet made trapping impracticable. Their war upon the trappers was ceaseless; their thefts of traps and horses ever recurring: and Smith, finding that to remain was to be involved in incessant warfare, without hope of victory or gain, at length gave the command to turn back, which was cheerfully obeyed: for the trappers had been very successful on the spring hunt, and thinking discretion some part at least of valor, were glad to get safe out of the Blackfoot country with their rich harvest of beaver skins.

The return march was by the way of Pryor's Gap, and up the Bighorn, to Wind River, where the cache was made in the previous December. The furs were now taken out and pressed, ready for transportation across the plains. A party was also dispatched, under Mr. Tullock, to raise the cache on the Bighorn River. Among this party was Meek, and a Frenchman named Ponto. While digging to come at the fur, the bank above caved in, falling upon Meek and Ponto, killing the latter almost instantly. Meek, though severely hurt, was taken out alive: while poor Ponto was "rolled in a blanket, and pitched into the river." So rude were the burial services of the trapper of the Rocky Mountains.

Meek was packed back to camp, along with the furs, where he soon recovered. Sublette arrived from St. Louis with fourteen wagons loaded with merchandise, and two hundred additional men for the service. Jackson also arrived from the Snake country with plenty of beaver, and the business of the yearly rendezvous began. Then the scenes previously described were re-enacted. Beaver, the currency of the mountains, was plenty that year, and goods were high accordingly. A thousand dollars a day was not too much for some of the most reckless to spend on their squaws, horses, alcohol, and themselves. For "alcohol" was the beverage of the mountaineers. Liquors could not be furnished to the men in that country. Pure alcohol was what they "got tight on;" and a desperate tight it was, to be sure!

An important change took place in the affairs of the Rocky Mountain Company at this rendezvous. The three partners, Smith, Sublette, and Jackson, sold out to a new firm, consisting of Milton Sublette, James Bridger, Fitzpatrick, Frapp, and Jervais; the new company retaining the same name and style as the old.

The old partners left for St. Louis, with a company of seventy men, to convoy the furs. Two of them never returned to the Rocky Mountains; one of them, Smith, being killed the following year, as will hereafter be related; and Jackson remaining in St. Louis, where, like a true mountain-man, he dissipated his large and hard-earned fortune in a few years. Captain Sublette, however, continued to make his annual trips to and from the mountains for a number of years; and until the consolidation of another wealthy company with the Rocky Mountain Company, continued to furnish goods to the latter, at a profit on St. Louis prices; his capital and experience enabling him to keep the new firm under his control to a large degree.

The River of the West

Chapter V

1830. The whole country lying upon the Yellowstone and its tributaries, and about the headwaters of the Missouri, at the time of which we are writing, abounded not only in beaver, but in buffalo, bear, elk, antelope, and many smaller kinds of game. Indeed the buffalo used then to cross

---

The River of the West

---

the mountains into the valleys about the head-waters of the Snake and Colorado Rivers, in such numbers that at certain seasons of the year, the plains and river bottoms swarmed with them. Since that day they have quite disappeared from the western slope of the Rocky Mountains, and are no longer seen in the same numbers on the eastern side.

Bear, although they did not go in herds, were rather uncomfortably numerous, and sometimes put the trapper to considerable trouble, and fright also; for very few were brave enough to willingly encounter the formidable grizzly, one blow of whose terrible paw, aimed generally at the hunter's head, if not arrested, lays him senseless and torn, an easy victim to the wrathful monster. A gunshot wound, if not directed with certainty to some vulnerable point, has only the effect to infuriate the beast, and make him trebly dangerous. From the fact that the bear always bites his wound, and commences to run with his head thus brought in the direction from which the ball comes, he is pretty likely to make a straight wake towards his enemy, whether voluntarily or not; and woe be to the hunter who is not prepared for him, with a shot for his eye, or the spot just behind the ear, where certain death enters.

In the frequent encounters of the mountain-men with these huge beasts, many acts of wonderful bravery were performed, while some tragedies, and not a few comedies were enacted.

From something humorous in Joe Meek's organization, or some wonderful "luck" to which he was born, or both, the greater part of his adventures with bears, as with men, were of a humorous complexion; enabling him not only to have a story to tell, but one at which his companions were bound to laugh. One of these which happened during the fall hunt of 1830, we will let him tell for himself:

"The first fall on the Yellowstone, Hawkins and myself were coming up the river in search of camp, when we discovered a very large bar on the opposite bank. We shot across, and thought we had killed him, for he laid quite still. As we wanted to take some trophy of our victory to camp, we tied our mules and left our guns, clothes, and everything except our knives and belts, and swam over to whar the bar war. But instead of being dead, as we expected, he sprung up as we come near him, and took after us. Then you ought to have seen two naked men run! It war a race for life, and a close one, too. But we made the river first. The bank war about fifteen feet high above the water, and the river ten or twelve feet deep; but we didn't halt. Overboard we went, the bar after us, and in the stream about as quick as we war. The current war very strong, and the bar war about half way between Hawkins and me. Hawkins was trying to swim down stream faster than the current war carrying the bar, and I war a trying to hold back. You can reckon that I swam! Every moment I felt myself being washed into the yawning jaws of the mighty beast, whose head war up the stream, and his eyes on me. But the current war too strong for him, and swept him along as fast as it did me. All this time, not a long one, we war looking for some place to land where the bar could not overtake us. Hawkins war the first to make the shore, unknown to the bar, whose head war still up stream; and he set up such a whooping and yelling that the bar landed too, but on the opposite side. I made haste to follow Hawkins, who had landed on the side

The River of the West

---

of the river we started from, either by design or good luck, and then we traveled back a mile and more to whar our mules war left--a bar on one side of the river, and too bares on the other! “

Notwithstanding that a necessary discipline was observed and maintained in the fur traders' camp, there was at the same time a freedom of manner between the Booshways and the men, both hired and free, which could not obtain in a purely military organization, nor even in the higher walks of civilized life in cities. In the mountain community, motley as it was, as in other communities more refined, were some men who enjoyed almost unlimited freedom of speech and action, and others who were the butt of everybody's ridicule or censure. The leaders themselves did not escape the critical judgment of the men; and the estimation in which they were held could be inferred from the manner in which they designated them. Captain Sublette, whose energy, courage, and kindness entitled him to the admiration of the mountaineers, went by the name of Billy; his partner Jackson, was called Davey; Bridger, old Gabe, and so on. In the same manner the men distinguished favorites or oddities amongst themselves, and to have the adjective old prefixed to a man's name signified nothing concerning his age, but rather that he was an object of distinction; though it did not always indicate, except by the tone in which it was pronounced, whether that distinction were an enviable one or not.

Whenever a trapper could get hold of any sort of story reflecting on the courage of a leader, he was sure at some time to make him aware of it, and these anecdotes were sometimes sharp answers in the mouths of careless campkeepers. Bridger was once waylaid by Blackfeet, who shot at him, hitting his horse in several places. The wounds caused the animal to rear and pitch, by reason of which violent movements Bridger dropped his gun, and the Indians snatched it up; after which there was nothing to do except to run, which Bridger accordingly did. Not long after this, as was customary, the leader was making a circuit of the camp examining the camp-keeper's guns, to see if they were in order, and found that of one Maloney, an Irishman, in a very dirty condition.

“ What would you do,” asked Bridger, “with a gun like that, if the Indians were to charge on the camp ? “

“ Be Jasus, I would throw it to them, and run the way ye did,” answered Maloney, quickly. It was sometime after this incident before Bridger again examined Maloney's gun.

A laughable story in this way went the rounds of the camp in this fall of 1830. Milton Sublette was out on a hunt with Meek after buffalo, and they were just approaching the band on foot, at a distance apart of about fifty yards, when a large grizzly bear came out of a thicket and made after Sublette, who, when he perceived the creature, ran for the nearest cotton-wood tree. Meek in the meantime, seeing that Sublette was not likely to escape, had taken sure aim, and fired at the bear, fortunately killing him. On running up to the spot where it laid, Sublette was discovered sitting at the foot of a cotton-wood, with his legs and arms clasped tightly around it.

“Do you always climb a tree in that way ? “ asked Meek.

"I reckon you took the wrong end of it, that time, Milton!"

"I'll be d--d, Meek, if I didn't think I was twenty feet up that tree when you shot; " answered the frightened Boosway; and from that time the men never tired of alluding to Milton's manner of climbing a tree.

These were some of the mirthful incidents which gave occasion for a gayety which had to be substituted for happiness, in the checkered life of the trapper; and there were like to be many such, where there were two hundred men, each almost daily in the way of adventures by flood or field.

On the change in the management of the Company which occurred at the rendezvous this year, three of the new partners, Fitzpatrick, Sublette, and Bridger, conducted a large party, numbering over two hundred, from the Wind River to the Yellowstone; crossing thence to Smith's River, the Falls of the Missouri, three forks of the Missouri, and to the Big Blackfoot River. The hunt proved very successful; beaver were plentiful; and the Blackfeet shy of so large a traveling party. Although so long in their country, there were only four men killed out of the whole company during this autumn.

From the Blackfoot River the company proceeded down the west side of the mountains to the forks of the Snake River, and after trapping for a short time in this locality, continued their march southward as far as Ogden's Hole, a small valley among the Bear River Mountains.

At this place they fell in with a trading and trapping party, under Mr. Peter Skeen Ogden, of the Hudson's Bay Company. And now commenced that irritating and reprehensible style of rivalry with which the different companies were accustomed to annoy one another. Accompanying Mr. Ogden's trading party were a party of Rockway Indians, who were from the North, and who were employed by the Hudson's Bay Company, as the Iroquois and Crows were, to trap for them. Fitzpatrick and associates camped in the neighborhood of Ogden's company, and immediately set about endeavoring to purchase from the Rockways and others, the furs collected for Mr. Ogden. Not succeeding by fair means, if the means to such an end could be called fair,--they opened a keg of whiskey, which, when the Indians had got a taste, soon drew them away from the Hudson's Bay trader, the regulations of whose company forbade the selling or giving of liquors to the Indians. Under its influence, the furs were disposed of to the Rocky Mountain Company, who in this manner obtained nearly the whole product of their year's hunt. This course of conduct was naturally exceedingly disagreeable to Mr. Ogden, as well as unprofitable also; and a feeling of hostility grew up and increased between the two camps.

While matters were in this position, a stampede one day occurred among the horses in Ogden's camp, and two or three of the animals ran away, and ran into the camp of the rival company. Among them was the horse of Mr. Ogden's Indian wife, which had escaped, with her babe hanging to the saddle.

Not many minutes elapsed, before the mother, following her child and horse, entered the camp,

The River of the West

---

passing right through it, and catching the now halting steed by the bridle. At the same moment she espied one of her company's pack-horses, loaded with beaver, which had also run into the enemy's camp. The men had already begun to exult over the circumstance, considering this chance load of beaver as theirs, by the laws of war. But not so the Indian woman. Mounting her own horse, she fearlessly seized the pack-horse by the halter, and led it out of camp with its costly burden.

At this undaunted action, some of the baser sort of men cried out "shoot her, shoot her!" but a majority interfered with opposing cries of "let her go; let her alone; she's a brave woman: I glory in her pluck;" and other like admiring expressions. While the clamor continued, the wife of Ogden had galloped away, with her baby and her pack-horse.

As the season advanced, Fitzpatrick, with his other partners, returned to the east side of the mountains, and went into winter quarters on Powder river. In this trapper's "land of Canaan" they remained between two and three months. The other two partners, Frapp and Jervais, who were trapping far to the south, did not return until the following year.

While wintering it became necessary to send a dispatch to St. Louis on the company's business. Meek and a Frenchman named Legarde, were chosen for this service which was one of trust and peril also. They proceeded without accident, however, until the Pawnee villages were reached, when Legarde was taken prisoner. Meek, more cautious, escaped, and proceeded alone a few days' travel beyond, when he fell in with an express on its way to St. Louis, to whom he delivered his dispatches, and returned to camp, accompanied only by a Frenchman named Cabeneau; thus proving, himself an efficient mountaineer at twenty years of age.

1831. As soon as the spring opened, sometime in March, the whole company started north again, for the Blackfoot country. But on the night of the third day out, they fell unawares into the neighborhood of a party of Crow Indians, whose spies discovered the company's horses feeding on the dry grass of a little bottom, and succeeded in driving off about three hundred head. Here was a dilemma to be in, in the heart of an enemy's country! To send the remaining horses after these, might be "sending the axe after the helve;" besides most of them belonged to the free trappers, and could not be pressed into the service.

The only course remaining was to select the best men and dispatch them on foot, to overtake and retake the stolen horses. Accordingly one hundred trappers were ordered on this expedition, among whom were Meek, Newell, and Antoine Godin, a half-breed and brave fellow, who was to lead the party. Following the trail of the Crows for two hundred miles, traveling day and night, on the third day they came up with them on a branch of the Bighorn river. The trappers advanced cautiously, and being on the opposite side of the stream, on a wooded bluff, were enabled to approach close enough to look into their fort, and count the unsuspecting thieves. There were sixty of them, fine young braves, who believed that now they had made a start in life. Alas, for the vanity of human, and especially of Crow expectations! Even then, while they were grouped around their fires, congratulating themselves on the sudden wealth which had descended upon them, as it

The River of the West

---

were from the skies, an envious fate, in the shape of several roguish white trappers, was laughing at them and their hopes, from the overhanging bluff opposite them. And by and by, when they were wrapped in a satisfied slumber, two of these laughing rogues, Robert Newell, and Antoine Godin, stole under the very walls of their fort, and setting the horses free, drove them across the creek.

The Indians were awakened by the noise of the trampling horses, and sprang to arms. But Meek and his fellow trappers on the bluff fired into the fort with such effect that the Crows were appalled. Having delivered their first volley, they did not wait for the savages to recover from their recoil. Mounting in hot haste, the cavalcade of bare-back riders, and their drove of horses, were soon far away from the Crow fort, leaving the ambitious braves to finish their excursion on foot. It was afterwards ascertained that the Crows lost seven men by that one volley of the trappers.

Flushed with success, the trappers yet found the backward journey more toilsome than the outward; for what with sleeplessness and fatigue, and bad traveling in melted snow, they were pretty well exhausted when they reached camp. Fearing, however, another raid from the thieving Crows, the camp got in motion again with as little delay as possible. They had not gone far, when Fitzpatrick turned back, with only one man, to go to St. Louis for supplies.

After the departure of Fitzpatrick, Bridger and Sublette completed their spring and summer campaign without any material loss in men or animals, and with considerable gain in beaver skins. Having once more visited the Yellowstone, they turned to the south again, crossing the mountains into Pierre's Hole, on to Snake river; thence to Salt river; thence to Bear river; and thence to Green river to rendezvous.

It was expected that Fitzpatrick would have arrived from St. Louis with the usual annual recruits and supplies of merchandise, in time for the summer rendezvous; but after waiting for some time in vain, Bridger and Sublette determined to send out a small party to look for him. The large number of men now employed, had exhausted the stock of goods on hand. The camp was without blankets and without ammunition; knives were not to be had; traps were scarce; but worse than all, the tobacco had given out, and alcohol was not! In such a case as this, what could a mountain-man do?

To seek the missing Boosway became not only a duty, but a necessity; and not only a necessity of the physical man, but in an equal degree a need of the moral and spiritual man, which was rusting with the tedium of waiting. In the state of uncertainty in which the minds of the company were involved, it occurred to that of Frapp to consult a great "medicine-man" of the Crows, one of those recruits filched from Mr. Ogden's party by whiskey the previous year.

Like all eminent professional men, the Crow chief required a generous fee, of the value of a horse or two, before he would begin to make "medicine." This peculiar ceremony is pretty much alike among all the different tribes. It is observed first in the making of a medicine man, i. e., qualifying him for his profession; and afterwards is practiced to enable him to heal the sick, to prophecy,

and to dream dreams, or even to give victory to his people. To a medicine-man was imputed great power, not only to cure, but to kill; and if, as it sometimes happened, the relatives of a sick man suspected the medicine-man of having caused his death, by the exercise of evil powers, one of them, or all of them, pursued him to the death. Therefore, although it might be honorable, it was not always safe to be a great "medicine."

The Indians placed a sort of religious value upon the practice of fasting; a somewhat curious fact, when it is remembered how many compulsory fasts they are obliged to endure, which must train them to think lightly of the deprivation of food. Those, however, who could endure voluntary abstinence long enough, were enabled to become very wise and very brave. The manner of making a "medicine" among some of the interior tribes, is in certain respects similar to the practice gone through with by some preachers, in making a convert. A sort of camp meeting is held, for several nights, generally about five, during which various dances are performed, with cries, and incantations, bodily exercises, singing, and nervous excitement; enough to make many patients, instead of one doctor. But the native's constitution is a strong one, and he holds out well. At last, however, one or more are overcome with the mysterious power which enters into them at that time; making, instead of a saint, only a superstitious Indian doctor.

The same sort of exercises which had made the Cree man a doctor were now resorted to, in order that he might obtain a more than natural sight, enabling him to see visions of the air, or at the least to endow him with prophetic dreams. After several nights of singing, dancing, hopping, screeching, beating of drums, and other more violent exercises and contortions, the exhausted medicine man fell off to sleep, and when he awoke he announced to Frapp that Fitzpatrick was not dead. He was on the road; some road; but not the right one; etc., etc.

Thus encouraged, Frapp determined to take a party, and go in search of him. Accordingly Meek, Reese, Ebarts, and Nelson, volunteered to accompany him. This party set out, first in the direction of Wind River; but not discovering any signs of the lost Booshoway in that quarter, crossed over to the Sweetwater, and kept along down to the North Fork of the Platte, and thence to the Black Hills, where they found a beautiful country full of game; but not the hoped-for train, with supplies. After waiting for a short time at the Black Hills, Frapp's party returned to the North Fork of the Platte, and were rejoiced to meet at last, the long absent partner, with his pack train. Urged by Frapp, Fitzpatrick hastened forward, and came into camp on Powder River after winter had set in.

Fitzpatrick had a tale to tell the other partners, in explanation of his unexpected delay. When he had started for St. Louis in the month of March previous, he had hoped to have met the old partners, Capt. Sublette and Jedediah Smith, and to have obtained the necessary supplies from them, to furnish the Summer rendezvous with plenty. But these gentlemen, when he fell in with them, used certain arguments which induced him to turn back, and accompany them to Santa Fe, where they promised to furnish him goods, as he desired, and to procure for him an escort at that place. The journey had proven tedious, and unfortunate. They had several times been attacked by Indians, and Smith had been killed. While they were camped on a small tributary of the Simmaron River, Smith had gone a short distance from camp to procure water, and while at the stream was

The River of the West

---

surprised by an ambush, and murdered on the spot, his murderers escaping unpunished. Sublette, now left alone in the business, finally furnished him; and he had at last made his way back to his Rocky Mountain camp.

But Fitzpatrick's content at being once more with his company was poisoned by the disagreeable proximity of a rival company. If he had annoyed Mr. Ogden of the Hudson's Bay Company, in the previous autumn, Major Vanderburg and Mr. Dripps, of the American Company, in their turn annoyed him. This company had been on their heels, from the Platte River, and now were camped in the same neighborhood, using the Rocky Mountain Company as pilots to show them the country. As this was just what it was not for their interest to do, the Rocky Mountain Company raised camp, and fairly ran away from them; crossing the mountains to the Forks of the Snake River, where they wintered among the Nez Perces and Flathead Indians.

Some time during this winter, Meek and Legarde, who had escaped from the Pawnees, made another expedition together; traveling three hundred miles on snowshoes, to the Bitter Root River, to look for a party of free trappers, whose beaver the company wished to secure. They were absent two months and a half, on this errand, and were entirely successful, passing a Blackfoot village in the night, but having no adventures worth recounting.

The River of the West

Chapter VI

1832. In the following spring, the Rocky Mountain Fur Company commenced its march, first up Lewis' Fork, then on to Salt River, thence to Gray's River, and thence to Bear River. They fell in with the North American Fur Company on the latter river, with a large lot of goods, but no beaver. The American Company's resident partners were ignorant of the country, and were greatly at a loss where to look for the good trapping grounds. These gentlemen, Vanderburg and Dripps, were therefore inclined to keep an eye on the movements of the Rocky Mountain Company, whose leaders were acquainted with the whole region lying along the mountains, from the head-waters of the Colorado to the northern branches of the Missouri. On the other hand, the Rocky Mountain Company were anxious to "shake the dust from off their feet," which was trodden by the American Company, and to avoid the evils of competition in an Indian country. But they found the effort quite useless; the rival company had a habit of turning up in the most unexpected places, and taking advantage of the hard-earned experience of the Rocky Mountain Company's leaders. They tampered with the trappers, and ferreted out the secret of their next rendezvous; they followed on their trail, making them pilots to the trapping grounds; they sold goods to the Indians, and what was worse, to the hired trappers. In this way grew up that fierce conflict of interests, which made it "as much as his life was worth" for a trapper to suffer himself to be inveigled into the service of a rival company, which about this time or a little later, was at its highest, and which finally ruined the fur-trade for the American companies in the Rocky Mountains.

Finding their rivals in possession of the ground, Bridger and Milton Sublette resolved to spend

---

The River of the West

---

but a few days in that country. But so far as Sublette was concerned, circumstances ordered differently. A Rockway Chief, named Gray, and seven of his people, had accompanied the camp from Ogden's Hole, in the capacity of trappers. But during the sojourn on Bear River, there was a quarrel in camp on account of some indignity, real or fancied, which had been offered to the chief's daughter, and in the affray Gray stabbed Sublette so severely that it was thought he must die.

It thus fell out that Sublette had to be left behind; and Meek who was his favorite, was left to take care of him while he lived, and bury him if he died; which trouble Sublette saved him, however, by getting well. But they had forty lonesome days to themselves after the camps had moved off,--one on the heels of the other, to the great vexation of Bridger. Time passed slowly in Sublette's lodge, while waiting for his wound to heal. Day passed after day, so entirely like each other that the monotony alone seemed sufficient to invite death to an easy conquest. But the mountain-man's blood, like the Indians, is strong and pure, and his flesh heals readily, therefore, since death would not have him, the wounded man was forced to accept of life in just this monotonous form. To him Joe Meek was everything,--hands, feet, physician, guard, caterer, hunter, cook, companion, friend. What long talks they had, when Sublette grew better: what stories they told; what little glimpses of a secret chamber in their hearts, and a better than the every-day spirit, in their bosoms, was revealed,--as men will reveal such things in the isolation of sea-voyages, or the solitary presence of majestic Nature.

To the veteran mountaineer there must have been something soothing in the care and friendship of the youth of twenty-two, with his daring disposition, his frankness, his cheerful humor, and his good looks;--for our Joe was growing to be a maturely handsome man--tall, broad shouldered, straight, with plenty of dash, and none too much of it; a Southerner's olive complexion; frank, dark eyes, and a classical nose and chin. What though in the matter of dress he was ignorant of the latest styles?-- grace imparts elegance even to the trapper's beaver-skin cap and blanket capote.

At the end of forty days, as many as it took to drown a world, Sublette found himself well enough to ride; and the two set out on their search for camp. But now other adventures awaited them. On a fork of Green River, they came suddenly upon a band of Snake Indians feeding their horses. As soon as the Snakes discovered the white men, they set up a yell, and made an instinctive rush for their horses. Now was the critical moment. One word passed between the travelers, and they made a dash past the savages, right into the village, and never slacked rein until they threw themselves from their horses at the door of the Medicine lodge. This is a large and fancifully decorated lodge, which stands in the centre of a village, and like the churches of Christians, is sacred. Once inside of this, the strangers were safe for the present; their blood could not be shed there.

The warriors of the village soon followed Sublette and Meek into their strange house of refuge. In half an hour it was filled. Not a word was addressed to the strangers; nor by them to the Indians, who talked among themselves with a solemn eagerness, while they smoked the medicine pipe, as inspiration in their councils. Great was the excitement in the minds of the listeners, who understood the Snake tongue, as the question of their life or death was gravely discussed; yet in their countenances appeared only the utmost serenity. To show fear, is to whet an Indian's appetite for

blood: coolness confounds and awes him when anything will.

If Sublette had longed for excitement, while an invalid in his lonely lodge on Bear River, he longed equally now for that blissful seclusion. Listening for, and hearing one's death-warrant from a band of blood-thirsty savages, could only prove with bitter sharpness how sweet was life, even the most uneventful. For hours the council continued, and the majority favored the death-sentence. But one old chief, called the good Gotia, argued long for an acquittal: he did not see the necessity of murdering two harmless travelers of the white race. Nothing availed, however, and just at sunset their doom was fixed.

The only hope of escape was, that, favored by darkness, they might elude the vigilance of their jailers; and night, although so near, seemed ages away, even at sundown. Death being decreed, the warriors left the lodge one by one to attend to the preparation of the preliminary ceremonies. Gotia, the good, was the last to depart. As he left the Medicine lodge he made signs to the captives to remain quiet until he should return; pointing upwards to signify that there was a chance of life; and downwards to show that possibly they must die.

What an age of anxiety was that hour of waiting! Not a word had been exchanged between the prisoners since the Indians entered the lodge, until now; and now very little was said, for speech would draw upon them the vigilance of their enemy, by whom they desired most ardently to be forgotten.

About dusk there was a great noise, and confusion, and clouds of dust, in the south end of the village. Something was going wrong among the Indian horses. Immediately all the village ran to the scene of the disorder, and at the same moment Gotia, the good, appeared at the door of the Medicine lodge, beckoning the prisoners to follow him. With alacrity they sprang up and after him, and were led across the stream, to a thicket on the opposite side, where their horses stood, ready to mount, in the charge of a young Indian girl. They did not stop for compliments, though had time been less precious, they might well have bestowed some moments of it in admiration of Umentucken Tukutsey Undewatsey, the Mountain Lamb. Soon after, the beautiful Snake girl became the wife of Milton Sublette; and after his return to the States, of the subject of this narrative; from which circumstance the incident above related takes on something of the rosy hue of romance.

As each released captive received his bridle from the delicate hand of the Mountain Lamb, he sprang to the saddle. By this time the chief had discovered that the strangers understood the Snake dialect. "Ride, if you wish to live," said he: "ride without stopping, all night: and to-morrow linger not." With hurried thanks our mountain-men replied to this advice, and striking into a gallop, were soon far away from the Snake village. The next day at noon found them a hundred and fifty miles on their way to camp. Proceeding without further accident, they crossed the Teton Mountains, and joined the company at Pierre's Hole, after an absence of nearly four months.

Here they found the ubiquitous if not omnipresent American Fur Company encamped at the rendezvous of the Rocky Mountain Company. The partners being anxious to be freed from this sort of espionage, and obstinate competition on their own ground, made a proposition to Van-

derburg and Dripps to divide the country with them, each company to keep on its own territory. This proposition was refused by the American Company; perhaps because they feared having the poorer portion set off to themselves by their more experienced rivals. On this refusal, the Rocky Mountain Company determined to send an express to meet Capt. William Sublette, who was on his way out with a heavy stock of merchandise, and hurry him forward, lest the American Company should have the opportunity of disposing of its goods, when the usual gathering to rendezvous began. On this decision being formed, Fitzpatrick determined to go on this errand himself; which he accordingly did, falling in with Sublette, and Campbell, his associate, somewhere near the Black Hills. To them he imparted his wishes and designs, and receiving the assurance of an early arrival at rendezvous, parted from them at the Sweetwater, and hastened back, alone, as he came, to prepare for business.

Captain Sublette hurried forward with his train, which consisted of sixty men with pack-horses, three to a man. In company with him, was Mr. Nathaniel Wyeth, a history of whose fur-trading and salmon-fishing adventures has already been given. Captain Sublette had fallen in with Mr. Wyeth at Independence, Missouri; and finding him ignorant of the undertaking on which he was launched, offered to become pilot and traveling companion, an offer which was gratefully accepted.

The caravan had reached the foot-hills of the Wind River Mountains, when the raw recruits belonging to both these parties were treated to a slight foretaste of what Indian fighting would be, should they ever have to encounter it. Their camp was suddenly aroused at midnight by the simultaneous discharge of guns and arrows, and the frightful whoops and yells with which the savages make an attack. Nobody was wounded, however; but on springing to arms, the Indians fled, taking with them a few horses which their yells had frightened from their pickets. These marauders were Blackfeet, as Captain Sublette explained to Mr. Wyeth, their moccasin tracks having betrayed them; for as each tribe has a peculiar way of making or shaping the moccasin, the expert in Indian habits can detect the nationality of an Indian thief by his foot-print. After this episode of the night assault, the leaders redoubled their watchfulness, and reached their destination in Pierre's hole about the first of July.

When Sublette arrived in camp, it was found that Fitzpatrick was missing. If the other partners had believed him to be with the Captain, the Captain expected to find him with them; but since neither could account to the other for his non-appearance, much anxiety was felt, and Sublette remembered with apprehension the visit he had received from Blackfeet. However, before anything had been determined upon with regard to him, he made his appearance in camp, in company with two Iroquois half-breeds, belonging to the camp, who had been out on a hunt.

Fitzpatrick had met with an adventure, as had been conjectured. While coming up the Green river valley, he descried a small party of mounted men, whom he mistook for a company of trappers, and stopped to reconnoiter; but almost at the same moment the supposed trappers, perceiving him, set up a yell that quickly undeceived him, and compelled him to flight. Abandoning his pack-horse, he put the other to its topmost speed, and succeeded in gaining the mountains, where

The River of the West

---

in a deep and dark defile he secreted himself until he judged the Indians had left that part of the valley. In this he was deceived, for no sooner did he emerge again into the open country, than he was once more pursued, and had to abandon his horse, to take refuge among the cliffs of the mountains. Here he remained for several days, without blankets or provisions, and with only one charge of ammunition, which was in his rifle, and kept for self-defense. At length, however, by frequent reconnoitering, he managed to elude his enemies, traveling by night, until he fortunately met with the two hunters from camp, and was conveyed by them to the rendezvous.

All the parties were now safely in. The lonely mountain valley was populous with the different camps. The Rocky Mountain and American companies had their separate camps; Wyeth had his; a company of free trappers, fifteen in number, led by a man named Sinclair, from Arkansas, had the fourth; the Nez Perces and Flatheads, the allies of the Rocky Mountain company, and the friends of the whites, had their lodges along all the streams; so that altogether there could not have been less than one thousand souls, and two or three thousand horses and mules gathered in this place.

“When the pie was opened then the birds began to sing.” When Captain Sublette’s goods were opened and distributed among the trappers and Indians, then began the usual gay carousel; and the “fast young men” of the mountains outvied each other in all manner of mad pranks. In the beginning of their spree many feats of horsemanship and personal strength were exhibited, which were regarded with admiring wonder by the sober and inexperienced New Englanders under Mr. Wyeth’s command. And as nothing stimulated the vanity of the mountainmen like an audience of this sort, the feats they performed were apt to astonish themselves. In exhibitions of the kind, the free trappers took the lead, and usually carried off the palm, like the privileged class that they were.

But the horse-racing, fine riding, wrestling, and all the manlier sports, soon degenerated into the baser exhibitions of a “crazy drunk” condition. The vessel in which the trapper received and carried about his supply of alcohol was one of the small camp kettles. “Passing round” this clumsy goblet very freely, it was not long before a goodly number were in the condition just named, and ready for any mad freak whatever. It is reported by several of the mountain-men that on the occasion of one of these “frolics,” one of their number seized a kettle of alcohol, and poured it over the head of a tall, lank, redheaded fellow, repeating as he did so the baptismal ceremony. No sooner had he concluded, than another man with a lighted stick, touched him with the blaze, when in an instant he was enveloped in flames. Luckily some of the company had sense enough left to perceive his danger, and began beating him with pack-saddles to put out the blaze. But between the burning and the beating, the unhappy wretch nearly lost his life, and never recovered from the effects of his baptism by fire.

Beaver being plenty in camp, business was correspondingly lively, there being a great demand for goods. When this demand was supplied, as it was in the course of about three weeks, the different brigades were set in motion. One of the earliest to move was a small party under Milton Sublette, including his constant companion, Meek. With this company, no more than thirty in number,

The River of the West

---

Sublette intended to explore the country to the south-west, then unknown to the fur companies, and to proceed as far as the Humboldt river in that direction.

On the 17th of July they set out toward the south end of the valley, and having made but about eight miles the first day, camped that night near a pass in the mountains. Wyeth's party of raw New Englanders, and Sinclair's free trappers, had joined themselves to the company of Milton Sublette, and swelled the number in camp to about sixty men, many of them new to the business of mountain life.

Just as the men were raising camp for a start the next morning, a caravan was observed moving down the mountain pass into the valley. No alarm was at first felt, as an arrival was daily expected of one of the American company's partisans, Mr. Fontenelle, and his company. But on reconnoitering with a glass, Sublette discovered them to be a large party of Blackfeet, consisting of a few mounted men, and many more, men, women, and children, on foot. At the instant they were discovered, they set up the usual yell of defiance, and rushed down like a mountain torrent into the valley, flourishing their weapons, and fluttering their gay blankets and feathers in the wind. There was no doubt as to the warlike intentions of the Blackfeet in general, nor was it for a moment to be supposed that any peaceable overture on their part meant anything more than that they were not prepared to fight at that particular juncture; therefore let not the reader judge too harshly of an act which under ordinary circumstances would have been infamous. In Indian fighting, every man is his own leader, and the bravest take the front rank. On this occasion there were two of Sublette's men, one a half-breed Iroquois, the other a Flathead Indian, who had wrongs of their own to avenge, and they never let slip a chance of killing a Blackfoot. These two men rode forth alone to meet the enemy, as if to hold a "talk" with the principal chief, who advanced to meet them, bearing the pipe of peace. When the chief extended his hand, Antonio Godin, the half-breed, took it, but at the same moment he ordered the Flathead to fire, and the chief fell dead. The two trappers galloped back to camp, Antoine bearing for a trophy the scarlet blanket of his enemy.

This action made it impossible to postpone the battle, as the dead chief had meant to do by peaceful overtures, until the warriors of his nation came up. The Blackfeet immediately betook themselves to a swamp formed by an old beaver dam, and thickly overgrown with cotton-wood and willow, matted together with tough vines. On the edge of this dismal covert the warriors skulked, and shot with their guns and arrows, while in its very midst the women employed themselves in digging a trench and throwing up a breastwork of logs, and whatever came to hand. Such a defence as the thicket afforded was one not easy to attack; its unseen but certain dangers being sufficient to appal the stoutest heart.

Meantime, an express had been sent off to inform Captain Sublette of the battle, and summon assistance. Sinclair and his free trappers, with Milton Sublette's small company, were the only fighting men at hand. Mr. Wyeth, knowing the inefficiency of his men in an Indian fight, had them entrenched behind their packs, and there left them to take care of themselves, but charged them not to appear in open field. As for the fighting men, they stationed themselves in a ravine, where they could occasionally pick off a Blackfoot, and waited for reinforcements.

---

Great was the astonishment of the Blackfeet, who believed they had only Milton Sublette's camp to fight, when they beheld first one party of white men and then another; and not only whites, but Nez Perces and Flatheads came galloping up the valley. If before it had been a battle to destroy the whites, it was now a battle to defend themselves. Previous to the arrival of Captain Sublette, the opposing forces had kept up only a scattering fire, in which nobody on the side of the trappers had been either killed or wounded. But when the impetuous captain arrived on the battle-field, he prepared for less guarded warfare. Stripped as if for the prize-ring, and armed cap-a-pie, he hastened to the scene of action, accompanied by his intimate friend and associate in business, Robert Campbell.

At sight of the reinforcements, and their vigorous movements, the Indians at the edge of the swamp fell back within their fort. To dislodge them was a dangerous undertaking, but Captain Sublette was determined to make the effort. Finding the trappers generally disinclined to enter the thicket, he set the example, together with Campbell, and thus induced some of the free trappers, with their leader, Sinclair, to emulate his action. However, the others took courage at this, and advanced near the swamp, firing at random at their invisible foe, who, having the advantage of being able to see them, inflicted some wounds on the party.

The few white "braves" who had resolved to enter the swamp, made their wills as they went, feeling that they were upon perilous business. Sublette, Campbell, and Sinclair succeeded in penetrating the thicket without alarming the enemy, and came at length to a more open space from whence they could get a view of the fort. From this they learned that the women and children had retired to the mountains, and that the fort was a slight affair, covered with buffalo robes and blankets to keep out prying eyes. Moving slowly on, some slight accident betrayed their vicinity, and the next moment a shot struck Sinclair, wounding him mortally. He spoke to Campbell, requesting to be taken to his brother. By this time some of the men had come up, and he was given in charge to

be taken back to camp. Sublette then pressed forward, and seeing an Indian looking through an aperture, aimed at him with fatal effect. No sooner had he done so, and pointed out the opening to Campbell, than he was struck with a ball in the shoulder, which nearly prostrated him, and turned him so faint that Campbell took him in his arms and carried him, assisted by Meek, out of the swamp. At the same time one of the men received a wound in the head. The battle was now carried on with spirit, although from the difficulty of approaching the fort, the firing was very irregular.

The mountaineers who followed Sublette, took up their station in the woods on one side of the fort, and the Nez Perces, under Wyeth, on the opposite side, which accidental arrangement, though it was fatal to many of the Blackfeet in the fort, was also the occasion of loss to themselves by the cross-fire. The whites being constantly reinforced by fresh arrivals from the rendezvous, were soon able to silence the guns of the enemy, but they were not able to drive them from their fort, where they remained silent and sullen after their ammunition was exhausted.

The River of the West

---

Seeing that the women of the Nez Perces and Flatheads were gathering up sticks to set fire to their breastwork of logs, an old chief proclaimed in a loud voice from within, the startling intelligence that there were four hundred lodges of his people close at hand, who would soon be there to avenge their deaths, should the whites choose to reduce them to ashes. This harangue, delivered in the usual high-flown style of Indian oratory, either was not clearly understood, or was wrongly interpreted, and the impression got abroad that an attack was being made on the great encampment. This intelligence occasioned a diversion, and a division of forces; for while a small party was left to watch the fort, the rest galloped in hot haste to the rescue of the main camp. When they arrived, they found it had been a false alarm, but it was too late to return that night, and the several camps remained where they were until the next day.

Meantime the trappers left to guard the fort remained stationed within the wood all night, firmly believing they had their enemy "corraled," as the horsemen of the plains would say. On the return, in the morning, of their comrades from the main camp, they advanced cautiously up to the breastwork of logs, and behold! not a buffalo skin nor red blanket was to be seen! Through the crevices among the logs was seen an empty fort. On making this discovery there was much chagrin among the white trappers, and much lamentation among the Indian allies, who had abandoned the burning of the fort expressly to save for themselves the fine blankets and other goods of their hereditary foes.

From the reluctance displayed by the trappers, in the beginning of the battle, to engage with the Indians while under cover of the woods, it must not be inferred that they were lacking in courage. They were too well informed in Indian modes of warfare to venture recklessly into the den of death, which a savage ambush was quite sure to be. The very result which attended the impetuosity of their leaders, in the death of Sinclair and the wounding of Captain Sublette, proved them not over cautious.

On entering the fort, the dead bodies of ten Blackfeet were found, besides others dead outside the fort, and over thirty horses, some of which were recognized as those stolen from Sublette's night camp on the other side of the mountains, besides those abandoned by Fitzpatrick. Doubtless the rascals had followed his trail to Pierre's

Hole, not thinking, however, to come upon so large a camp as they found at last. The savage garrison which had so cunningly contrived to elude the guard set upon them, carried off some of their wounded, and, perhaps, also some of their dead; for they acknowledged afterwards a much larger loss than appeared at the time. Besides Sinclair, there were five other white men killed, one half-breed, and seven Nez Perces. About the same number of whites and their Indian allies were wounded.

An instance of female devotion is recorded by Bonneville's historian as having occurred at this battle. On the morning following it, as the whites were exploring the thickets about the fort, they discovered a Blackfoot woman leaning silent and motionless against a tree. According to Mr. Irving, whose fine feeling for the sex would incline him to put faith in this bit of romance, "their surprise at her lingering here alone, to fall into the hands of her enemies, was dispelled when they saw the corpse of a warrior at her feet. Either she was so lost in grief as not to perceive their

The River of the West

---

approach, or a proud spirit kept her silent and motionless. The Indians set up a yell on discovering her, and before the trappers could interfere, her mangled body fell upon the corpse which she had refused to abandon." This version is true in the main incidents, but untrue in the sentiment. The woman's leg had been broken by a ball, and she was unable to move from the spot where she leaned. When the trappers approached her, she stretched out her hands supplicatingly, crying out in a wailing voice, "kill me! kill me! O white men, kill me! "--but this the trappers had no disposition to do. While she was entreating them, and they refusing, a ball from some vengeful Nez Perce or Flathead put an end to her sufferings.

Still remembering the threats of the Blackfoot chief, that four hundred lodges of his brethren were advancing on the valley, all the companies returned to rendezvous, and remained for several days, to see whether an attack should take place. But if there had ever been any such intention on the part of the Blackfoot nation, the timely lesson bestowed on their advance guard had warned them to quit the neighborhood of the whites.

Captain Sublette's wound was dressed by Mr. Wyeth's physician, and although it hindered his departure for St. Louis for some time, it did not prevent his making his usual journey later in the season. It was as well, perhaps, that he did not set out earlier, for of a party of seven who started for St. Louis a few days after the battle, three were killed in Jackson's Hole, where they fell in with the four hundred warriors with whom the Blackfoot chief threatened the whites at the battle of Pierre's Hole. From the story of the four survivors who escaped and returned to camp, there could no longer be any doubt that the big village of the Blackfeet had actually been upon the trail of Capt. Sublette, expecting an easy victory when they should overtake him. How they were disappointed by the reception met with by the advance camp, has already been related.

The River of the West

Chapter VII

1832. On the 23d of July, Milton Sublette's brigade and the company of Mr. Wyeth again set out for the southwest, and met no more serious interruptions while they traveled in company. On the head-waters of the Humboldt River they separated, Wyeth proceeding north to the Columbia, and Sublette continuing on into a country hitherto untraversed by American trappers.

It was the custom of a camp on the move to depend chiefly on the men employed as hunters to supply them with game, the sole support of the mountaineers. When this failed, the stock on hand was soon exhausted, and the men reduced to famine. This was what happened to Sublette's company in the country where they now found themselves, between the Owyhee and Humboldt Rivers. Owing to the arid and barren nature of these plains, the largest game to be found was the beaver, whose flesh proved to be poisonous, from the creature having eaten of the wild parsnip in the absence of its favorite food. The men were made ill by eating of beaver flesh, and the horses were greatly reduced from the scarcity of grass and the entire absence of the cotton-wood.

The River of the West

---

In this plight Sublette found himself, and finally resolved to turn north, in the hope of coming upon some better and more hospitable country. The sufferings of the men now became terrible, both from hunger and thirst. In the effort to appease the former, everything was eaten that could be eaten, and many things at which the well-fed man would sicken with disgust. "I have," says Joe Meek, "held my hands in an ant-hill until they were covered with the ants, then greedily licked them off. I have taken the soles off my moccasins, crisped them in the fire, and eaten them. In our extremity, the large black crickets which are found in this country were considered game. We used to take a kettle of hot water, catch the crickets and throw them in, and when they stopped kicking, eat them. That was not what we called cant tickup ko hanch, (good meat, my friend), but it kept us alive."

Equally abhorrent expedients were resorted to in order to quench thirst, some of which would not bear mention. In this condition, and exposed to the burning suns and the dry air of the desert, the men now so nearly exhausted began to prey upon their almost equally exhausted animals. At night when they made their camp, by mutual consent a mule was bled, and a soup made from its blood. About a pint was usually taken, when two or three would mess together upon this reviving, but scanty and not very palatable dish. But this mode of subsistence could not be long depended on, as the poor mules could ill afford to lose blood in their famishing state; nor could the men afford to lose their mules where there was a chance of life: therefore hungry as they were, the men were cautious in this matter; and it generally caused a quarrel when a man's mule was selected for bleeding by the others.

A few times a mule had been sacrificed to obtain meat; and in this case the poorest one was always selected, so as to economise the chances for life for the whole band. In this extremity, after four days of almost total abstinence and several weeks of famine, the company reached the Snake River, about fifty miles above the fishing falls, where it boils and dashes over the rocks, forming very strong rapids. Here the company camped, rejoiced at the sight of the pure mountain water, but still in want of food. During the march a horse's back had become sore from some cause; probably, his rider thought, because the saddle did not set well; and, although that particular animal was selected to be sacrificed on the morrow, as one that could best be spared, he set about taking the stuffing out of his saddle and re-arranging the padding. While engaged in this considerate labor, he uttered a cry of delight and held up to view a large brass pin, which had accidentally got into the stuffing, when the saddle was made, and had been the cause of all the mischief to his horse.

The same thought struck all who saw the pin: it was soon converted into a fish-hook, a line was spun from horsehair, and in a short time there were trout enough caught to furnish them a hearty and a most delicious repast. "In the morning," says Meek, "we went on our way rejoicing;" each man with the "five fishes" tied to his saddle, if without any "loaves." This was the end of their severest suffering, as they had now reached a country where absolute starvation was not the normal condition of the inhabitants; and which was growing more and more bountiful, as they neared the Rocky Mountains, where they at length joined camp, not having made a very profitable expedition.

The River of the West

---

It may seem incredible to the reader that any country so poor as that in which our trappers starved could have native inhabitants. Yet such was the fact; and the people who lived in and who still inhabit this barren waste, were called Diggers, from their mode of obtaining their food--a few edible roots growing in low grounds, or marshy places. When these fail them they subsist as did our trappers, by hunting crickets and field mice.

Nothing can be more abject than the appearance of the Digger Indian, in the fall, as he roams about, without food and without weapons, save perhaps a bow and arrows, with his eyes fixed upon the ground, looking for crickets! So despicable is he, that he has neither enemies nor friends; and the neighboring tribes do not condescend to notice his existence, unless indeed he should come in their way, when they would not think it more than a mirthful act to put an end to his miserable existence. And so it must be confessed the trappers regarded him. When Sublette's party first struck the Humboldt, Wyeth's being still with them, Joe Meek one day shot a Digger who was prowling about a stream where his traps were set.

"Why did you shoot him?" asked Wyeth.

"To keep him from stealing traps."

"Had he stolen any?"

"No: but he looked as if he was going to!"

This recklessness of life very properly distressed the just minded New Englander. Yet it was hard for the trappers to draw lines of distinction so nice as his. If a tribe was not known to be friendly, it was a rule of necessity to consider it unfriendly. The abjectness and cowardice of the Diggers was the fruit of their own helpless condition. That they had the savage instinct, held in check only by circumstances, was demonstrated about the same time that Meek shot one, by his being pursued by four of them when out trapping alone, and only escaping at last by the assistance of one of his comrades who came to the rescue. They could not fight, like the Crows and Blackfeet, but they could steal and murder, when they had a safe opportunity.

It would be an interesting study, no doubt, to the philanthropist, to ascertain in how great a degree the habits, manners, and morals of a people are governed by their resources, especially by the quality and quantity of their diet. But when diet and climate are both taken into consideration, the result is striking.

The character of the Blackfeet who inhabited the good hunting grounds on the eastern side of the Rocky Mountains, is already pretty well given. They were tall sinewy, well-made fellows; good horsemen, and good fighters, though inclined to marauding and murdering. They dressed comfortably and even handsomely, as dress goes amongst savages, and altogether were more to be feared than despised.

The Crows resembled the Blackfeet, whose enemies they were, in all the before-mentioned traits, but were if possible, even more predatory in their habits. Unlike the Blackfeet, however, they were not the enemies of all mankind; and even were disposed to cultivate some friendliness with the white traders and trappers, in order, as they acknowledged, to strengthen their own hands against

The River of the West

---

the Blackfeet. They too inhabited a good country, full of game, and had horses in abundance. These were the mountain tribes.

Comparing these with the coast tribes, there was a striking difference. The natives of the Columbia were not a tall and robust people, like those east of the Rocky Mountains, who lived by hunting. Their height rarely exceeded five feet six inches; their forms were good, rather inclining to fatness, their faces round, features coarse, but complexion light, and their eyes large and intelligent. The custom of flattening their heads in infancy gave them a grotesque and unnatural appearance, otherwise they could not be called ill-looking. On the first advent of white men among them, they were accustomed to go entirely naked, except in winter, when a panther skin, or a mantle of other skins sewed together, served to protect them from the cold: or if the weather was rainy, as it generally was in that milder climate, a long mantle of rush mats, like the toga of the ancient Romans, took the place of that made of skins. To this was added a conical hat woven of fibrous roots, and gaily painted.

For defensive armor they were provided with a tunic of elk skin double, descending to the ankles, with holes in it for the arms, and quite impenetrable to arrows. A helmet of similar material covered the head, rendering them like Achilles, invulnerable except in the heels. In this secure dress they went to battle in their canoes, notice being first given to the enemy of the intended attack. Their battles might therefore be termed compound duels, in which each party observed great punctiliousness and decorum. Painted and armor-encased, the warriors in two flotillas of canoes were rowed to the battle ground by their women, when the battle raged furiously for some time; not, however, doing any great harm to either side. If any one chanced to be killed, that side considered itself beaten, and retired from the conflict to mourn over and bury the estimable and departed brave. If the case was a stubborn one, requiring several days fighting, the opponents encamped near each other, keeping up a confusion of cries, taunts, menaces, and raillery, during the whole night; after which they resumed the conflict, and continued it until one was beaten. If a village was to be attacked, notice being received, the women and children were removed; and if the village was beaten they made presents to their conquerors. Such were the decorous habits of the warriors of the lower Columbia.

These were the people who lived almost exclusively by fishing, and whose climate was a mild and moist one. Fishing, in which both sexes engaged about equally, was an important accomplishment, since it was by fish they lived in this world; and by being good fishermen that they had hopes of the next one.

The houses in which they lived, instead of being lodges made of buffalo skins, were of a large size and very well constructed, being made out of cedar planks. An excavation was first made in the earth two or three feet deep, probably to secure greater warmth in winter. A double row of cedar posts was then planted firmly all round the excavation, and between these the planks were laid, or, sometimes cedar bark, so overlapped as to exclude the rain and wind. The ridge-pole of the roof was supported on a row of taller posts, passing through the centre of the building, and notched to receive it. The rafters were then covered with planks or bark, fastened down with ropes made of

The River of the West

---

the fibre of the cedar bark. A house made in this manner, and often a hundred feet long by thirty or forty wide, accommodated several families, who each had their separate entrance and fireplace; the entrance being by a low oval-shaped door, and a flight of steps.

The canoes of these people were each cut out of a single log of cedar; and were often thirty feet long and five wide at midships. They were gaily painted, and their shape was handsome, with a very long bow so constructed as to cut the surf in landing with the greatest ease, or the more readily to go through a rough sea. The oars were about five feet long, and bent in the shape of a crescent; which shape enabled them to draw them edgewise through the water with little or no noise--this noiselessness being an important quality in hunting the sea otter, which is always caught sleeping on the rocks.

The single instrument which sufficed to build canoes and houses was the chisel; generally being a piece of old iron obtained from some vessel and fixed in a wooden handle. A stone mallet aided them in using the chisel; and with this simple "kit" of tools they contrived to manufacture plates, bowls, carved oars, and many ornamental things. Like the men of all savage nations, they made slaves of their captives, and their women. The dress of the latter consisted merely of a short petticoat, manufactured from the fibre of the cedar bark, previously soaked and prepared. This material was worked into a fringe, attached to a girdle, and only long enough to reach the middle of the thigh. When the season required it, they added a mantle of skins. Their bodies were anointed with fish-oil, and sometimes painted with red ochre in imitation of the men. For ornaments they wore strings of glass beads and also of a white shell found on the northern coast, called haiqua. Such were the Chinooks, who lived upon the coast.

Farther up the river, on the eastern side of the Cascade range of mountains, a people lived, the same, yet different from the Chinooks. They resembled them in form, features, and manner of getting a living. But they were more warlike and more enterprising: they even had some notions of commerce, being traders between the coast Indians and those to the east of them. They too were great fishermen, but used the net instead of fishing in boats. Great scaffoldings were erected every year at the narrows of the Columbia, known as the Dalles, where, as the salmon passed up the river in the spring, in incredible numbers, they were caught and dried. After drying, the fish were then pounded fine between two stones, pressed tightly into packages or bales of about a hundred pounds, covered with matting, and corded up for transportation. The bales were then placed in storehouses built to receive them, where they awaited customers.

By and by there came from the coast other Indians, with different varieties of fish, to exchange for the salmon in the Wish-ram warehouses. And by and by there came from the plains to the eastward, others who had horses, camas-root, bear-grass, fur robes, and whatever constituted the wealth of the mountains and plains, to exchange for the rich and nutritious salmon of the Columbia. These Wish-ram Indians were sharp traders, and usually made something by their exchanges; so that they grew rich and insolent, and it was dangerous for the unwary stranger to pass their way. Of all the tribes of the Columbia, they perpetrated the most outrages upon their neighbors, the passing traveler, and the stranger within their gates.

---

The River of the West

---

Still farther to the east, on the great grassy plains, watered by beautiful streams, coming down from the mountains, lived the Cayuses, Yakimas, Nez Perces, Wallah Wallahs, and Flatheads; as different in their appearance and habits as their different modes of living would naturally make them. Instead of having many canoes, they had many horses; and in place of drawing the fishing net, or trolling lazily along with hook and line, or spearing fish from a canoe, they rode pell-mell to the chase, or sallied out to battle with the hostile Blackfeet, whose country lay between them and the good hunting-grounds, where the great herds of buffalo were. Being Nimrods by nature, they were dressed in complete suits of skins, instead of going naked, like their brethren in the lower country. Being wandering and pastoral in their habits, they lived in lodges, which could be planted every night and raised every morning.

Their women, too, were good riders, and comfortably clad in dressed skins, kept white with chalk. So wealthy were some of the chiefs that they could count their fifteen hundred head of horses grazing on their grassy uplands. Horse-racing was their delight, and betting on them their besetting vice. For bridles they used horse-hair cords, attached around the animal's mouth. This was sufficient to check him, and by laying a hand on this side or that of the horse's neck, the rider could wheel him in either direction. The simple and easy-fitting saddle was a stuffed deer-skin, with stirrups of wood, resembling in shape those used by the Mexicans, and covered with deer-skin sewed on wet, so as to tighten in drying. The saddles of the women were furnished with a pair of deer's antlers for the pommel.

In many things their customs and accoutrements resembled those of the Mexicans, from whom, no doubt, they were borrowed. Like the Mexican, they threw the lasso to catch the wild horse. Their horses, too, were of Mexican stock, and many of them bore the brand of that country, having been obtained in some of their not infrequent journeys into California and New Mexico.

As all the wild horses of America are said to have sprung from a small band, turned loose upon the plains by Cortez, it would be interesting to know at what time they came to be used by the northern Indians, or whether the horse and the Indian did not emigrate together. If the horse came to the Indian, great must have been the change effected by the advent of this new element in the savage's life. It is impossible to conceive, however, that the Indian ever could have lived on these immense plains, barren of everything but wild grass, without his horse. With him he does well enough, for he not only "lives on horseback," by which means he can quickly reach a country abounding in game, but he literally lives on horse-flesh, when other game is scarce. Curious as the fact may seem, the Indians at the mouth of the Columbia and those of New Mexico speak languages similar in construction to that of the Aztecs; and from this fact, and the others before mentioned, it may be very fairly inferred that difference of circumstances and localities have made of the different tribes what they are.

As to the Indian's moral nature, that is pretty much alike everywhere; and with some rare exceptions, the rarest of which is, perhaps, the Flathead and Nez Perces nations, all are cruel, thieving, and treacherous. The Indian gospel is literally the "gospel of blood"; an "eye for an eye, and a tooth for a tooth." Vengeance is as much a commandment to him as any part of the decalogue is to the

Christian. But we have digressed far from our narrative; and as it will be necessary to refer to the subject of the moral code of savages further on in our narrative, we leave it for the present.

After the incident of the pin and the fishes, Sublette's party kept on to the north, coursing along up Payette's River to Payette Lake, where he camped, and the men went out trapping. A party of four, consisting of Meek, Antoine Godin, Louis Leaugar, and Small, proceeded to the north as far as the Salmon river and beyond, to the head of one of its tributaries, where the present city of Florence is located. While camped in this region, three of the men went out one day to look for their horses, which had strayed away, or been stolen by the Indians. During their absence, Meek, who remained in camp, had killed a fine fat deer, and was cooking a portion of it, when he saw a band of about a hundred Indians approaching, and so near were they that flight was almost certainly useless; yet as a hundred against one was very great odds, and running away from them would not increase their number, while it gave him something to do in his own defence, he took to his heels and ran as only a mountain-man can run. Instead, however, of pursuing him, the practical-minded braves set about finishing his cooking for him, and soon had the whole deer roasting before the fire.

This procedure provoked the gastronomic ire of our trapper, and after watching them for some time from his hiding-place, he determined to return and share the feast. On reaching camp again, and introducing himself to his not over-scrupulous visitors, he found they were from the Nez Perces tribe inhabiting that region, who, having been so rude as to devour his stock of provisions, invited him to accompany them to their village, not a great way off, where they would make some return for his involuntary hospitality. This he did, and there found his three comrades and all their horses. While still visiting at the Nez Perces village, they were joined by the remaining portion of Sublette's command, when the whole company started south again. Passing Payette's lake to the east, traversing the Boise Basin, going to the head-waters of that river, thence to the Malade, thence to Godin's river, and finally to the forks of the Salmon, where they found the main camp. Captain Bonneville, of whose three years wanderings in the wilderness Mr. Irving has given a full and interesting account, was encamped in the same neighborhood, and had built there a small fort or trading-house, and finally wintered in the neighborhood.

An exchange of men now took place, and Meek went east of the mountains under Fitzpatrick and Bridger. When these famous leaders had first set out for the summer hunt, after the battle of Pierre's Hole, their course had been to the head-waters of the Missouri, to the Yellowstone lake, and the forks of the Missouri, some of the best beaver grounds known to them. But finding their steps dogged by the American Fur Company, and not wishing to be made use of as pilots by their rivals, they had flitted about for a time like an Arab camp, in the endeavor to blind them, and finally returned to the west side of the mountains, where Meek fell in with them.

Exasperated by the perseverance of the American Company, they had come to the determination of leading them a march which should tire them of the practice of keeping at their heels. They therefore planned an expedition, from which they expected no other profit than that of shaking off their rivals. Taking no pains to conceal their expedition, they rather held out the bait to the

American Company, who, unsuspecting of their purpose, took it readily enough. They led them along across the mountains, and on to the head-waters of the Missouri. Here, packing up their traps, they tarried not for beaver, nor even tried to avoid the Blackfeet, but pushed right ahead, into the very heart of their country, keeping away from any part of it where beaver might be found, and going away on beyond, to the elevated plains, quite destitute of that small but desirable game, but followed through it by their rivals.

However justifiable on the part of trade this movement of the Rocky Mountain Company might have been, it was a cruel device as concerned the inexperienced leaders of the other company, one of whom lost his life in consequence. Not knowing of their danger, they only discovered their situation in the midst of Blackfeet, after discovering the ruse that had been played upon them. They then halted, and being determined to find beaver, divided their forces and set out in opposite directions for that purpose. Unhappily, Major Vanderburg took the worst possible direction for a small party to take, and had not traveled far when his scouts came upon the still smoking campfires of a band of Indians who were returning from a buffalo hunt. From the "signs" left behind them, the scout judged that they had become aware of the near neighborhood of white men, and from their having stolen off, he judged that they were only gone for others of their nation, or to prepare for war.

But Vanderburg, with the fool-hardiness of one not "up to Blackfeet," determined to ascertain for himself what there was to fear; and taking with him half a score of his followers, put himself upon their trail, galloping hard after them, until, in his rashness, he found himself being led through a dark and deep defile, rendered darker and gloomier by overhanging trees. In the midst of this dismal place, just where an ambush might have been expected, he was attacked by a horde of savages, who rushed upon his little party with whoops and frantic gestures, intended not only to appal the riders, but to frighten their horses, and thus make surer their bloody butchery. It was but the work of a few minutes to consummate their demoniac purpose. Vanderburg's horse was shot down at once, falling on his rider, whom the Indians quickly dispatched. One or two of the men were instantly tomahawked, and the others wounded while making their escape to camp. The remainder of Vanderburg's company, on learning the fate of their leader, whose place there was no one to fill, immediately raised camp and fled with all haste to the encampment of the Pends Oreille Indians for assistance. Here they waited, while those Indians, a friendly tribe, made an effort to recover the body of their unfortunate leader; but the remains were never recovered probably having first been fiendishly mutilated, and then left to the wolves.

Fitzpatrick and Bridger, finding they were no longer pursued by their rivals, as the season advanced began to retrace their steps toward the good trapping grounds. Being used to Indian wiles and Blackfeet maraudings and ambushes, they traveled in close columns, and never camped or turned out their horses to feed, without the greatest caution. Morning and evening scouts were sent out to beat up every thicket or ravine that seemed to offer concealment to a foe, and the horizon was searched

in every direction for signs of an Indian attack. The complete safety of the camp being settled almost beyond a peradventure, the horses were turned loose, though never left unguarded.

It was not likely, however, that the camp should pass through the Blackfoot country without any encounters with that nation. When it had reached the head-waters of the Missouri, on the return march, a party of trappers, including Meek, discovered a small band of Indians in a bend of the lake, and thinking the opportunity for sport a good one, commenced firing on them. The Indians, who were without guns, took to the lake for refuge, while the trappers entertained themselves with the rare amusement of keeping them in the water, by shooting at them occasionally. But it chanced that these were only a few stragglers from the main Blackfoot camp, which soon came up and put an end to the sport by putting the trappers to flight in their turn. The trappers fled to camp, the Indians pursuing, until the latter discovered that they had been led almost into the large camp of the whites. This occasioned a halt, the Blackfeet not caring to engage with superior numbers.

In the pause which ensued, one of the chiefs came out into the open space, bearing the peace pipe, and Bridger also advanced to meet him, but carrying his gun across the pommel of his saddle. He was accompanied by a young Blackfoot woman, wife of a Mexican in his service, as interpreter. The chief extended his hand in token of amity; but at that moment Bridger saw a movement of the chiefs, which he took to mean treachery, and cocked his rifle. But the lock had no sooner clicked than the chief, a large and powerful man, seized the gun and turned the muzzle downward, when the contents were discharged into the earth. With another dexterous movement he wrested it from Bridger's hand, and struck him with it, felling him to the ground. In an instant all was confusion. The noise of whoops, yells, of fire-arms, and of running hither and thither, gathered like a tempest. At the first burst of this demoniac blast, the horse of the interpreter became frightened, and by a sudden movement, unhorsed her, wheeling and running back to camp. In the melee which now ensued, the woman was carried off by the Blackfeet, and Bridger was wounded twice in the back with arrows. A chance medley fight now ensued, continuing until night put a period to the contest. So well matched were the opposing forces, that each fought with caution firing from the cover of thickets and from behind rocks, neither side doing much execution. The loss on the part of the Blackfeet was nine warriors, and on that of the whites, three men and six horses.

As for the young Blackfoot woman, whose people retained her a prisoner, her lamentations and struggles to escape and return to her husband and child so wrought upon the young Mexican, who was the pained witness of her grief, that he took the babe in his arms, and galloped with it into the heart of the Blackfoot camp, to place it in the arms of the distracted mother. This daring act, which all who witnessed believed would cause his death, so excited the admiration of the Blackfoot chief, that he gave him permission to return, unharmed, to his own camp. Encouraged by this clemency, Loretta begged to have his wife restored to him, relating how he had rescued her, a prisoner, from the Crows, who would certainly have tortured her to death. The wife added her entreaties to his, but the chief sternly bade him depart, and as sternly reminded the Blackfoot girl that she belonged to his tribe, and could not go with his enemies. Loretta was therefore compelled to abandon his wife and child, and return to camp. It is, however, gratifying to know that so true an instance of affection in savage life was finally rewarded; and that when the two rival fur companies united, as they did in the following year, Loretta was permitted to go to the American

The River of the West

---

Company's fort on the Missouri, in the Blackfoot country, where he was employed as interpreter, assisted by his Blackfoot wife.

Such were some of the incidents that signaled this campaign in the wilderness, where two equally persistent rivals were trying to outwit one another. Subsequently, when several years of rivalry had somewhat exhausted both, the Rocky Mountain and American companies consolidated, using all their strategy thereafter against the Hudson's Bay Company, and any new rival that chanced to enter their hunting grounds.

After the fight above described, the Blackfeet drew off in the night, showing no disposition to try their skill next day against such experienced Indian fighters as Bridger's brigade had shown themselves. The company continued in the Missouri country, trapping and taking many beaver, until it reached the Beaver Head Valley, on the headwaters of the Jefferson fork of the Missouri. Here the lateness of the season compelled a return to winter-quarters, and by Christmas all the wanderers were gathered into camp at the forks of the Snake River.

1833. In the latter part of January it became necessary to move to the junction of the Portneuf to subsist the animals. The main body of the camp had gone on in advance, while some few, with pack horses, or women with children, were scattered along the trail. Meek, with five others, had been left behind to gather up some horses that had strayed. When about a half day's journey from camp, he overtook Umentucken, the Mountain Lamb, now the wife of Milton Sublette, with her child, on horseback. The weather was terribly cold, and seeming to grow colder. The naked plains afforded no shelter from the piercing winds, and the air fairly glittered with frost. Poor Umentucken was freezing, but more troubled about her babe than herself. The camp was far ahead, with all the extra blankets, and the prospect was imminent that they would perish. Our gallant trapper had thought himself very cold until this moment, but what were his sufferings compared to those of the Mountain Lamb and her little Lambkin? Without an instant's hesitation, he divested himself of his blanket capote, which he wrapped round the mother and child, and urged her to hasten to camp. For himself, he could not hasten, as he had the horses in charge, but all that fearful afternoon rode naked above the waist, exposed to the wind, and the fine, dry, icy hail, which filled the air as with diamond needles, to pierce the skin; and, probably, to the fact that the hail was so stinging, was owing the fact that his blood did not congeal.

"O what a day was that!" said Meek to the writer

"why, the air was thick with fine, sharp hail, and the sun shining, too! not one sun only, but three suns--there were three suns! And when night came on, the northern lights blazed up the sky! It was the most beautiful sight I ever saw. That is the country for northern lights!"

When some surprise was expressed that he should have been obliged to expose his naked skin to the weather, in order to save Umentucken--"In the mountains," he answered, "we do not have many garments. Buckskin breeches, a blanket capote, and a beaver skin cap makes up our rig.

"You do not need a laundress, then? But with such clothing how could you keep free of vermin?"

“

“We didn’t always do that. Do you want to know how we got rid of lice in the mountains? We just took off our clothes and laid them on an ant-hill, and you ought to see how the ants would carry off the lice! “

But to return to our hero, frozen, or nearly so. When he reached camp at night, so desperate was his condition that the men had to roll him and rub him in the snow for some time before allowing him to approach the fire. But Umentucken was saved, and he became heroic in her eyes. Whether it was the glory acquired by the gallant act just recorded, or whether our hero had now arrived at an age when the tender passion has strongest sway, the writer is unprepared to affirm: for your mountain-man is shy of revealing his past gallantries; but from this time on, there are evidences of considerable susceptibility to the charms of the dusky beauties of the mountains and the plains.

The cold of this winter was very severe, insomuch that men and mules were frozen to death. “The frost” says Meek, “used to hang from the roofs of our lodges in the morning, on first waking, in skeins two feet long, and our blankets and whiskers were white with it. But we trappers laid still, and called the camp-keepers to make a fire, and in our close lodges it was soon warm enough.

“The Indians suffered very much. Fuel was scarce on the Snake River, and but little fire could be afforded-- just sufficient for the children and their mothers to get warm by, for the fire was fed only with buffalo fat torn in strips, which blazed up quickly and did not last long. Many a time I have stood off, looking at the fire, but not venturing to approach, when a chief would say, ‘Are you cold, my friend? come to the fire’--so kind are these Nez Perces and Flatheads.”

The cold was not the only enemy in camp that winter, but famine threatened them. The buffalo had been early driven east of the mountains, and other game was scarce. Sometimes a party of hunters were absent for days, even weeks, without finding more game than would subsist themselves. As the trappers were all hunters in the winter, it frequently happened that Meek and one or more of his associates went on a hunt in company, for the benefit of the camp, which was very hungry at times.

On one of these hunting expeditions that winter, the party consisting of Meek, Hawkins, Doughty, and Antoine Claymore, they had been out nearly a fortnight without killing anything of consequence, and had clambered up the side of the mountains on the frozen snow, in hopes of finding some mountain sheep. As they traveled along under a projecting ledge of rocks, they came to a place where there were the impressions in the snow of enormous grizzly bear feet. Close by was an opening in the rocks, revealing a cavern, and to this the tracks in the snow conducted. Evidently the creature had come out of its winter den, and made just one circuit back again. At these signs of game the hunters hesitated--certain it was there, but doubtful how to obtain it.

At length Doughty proposed to get up on the rocks above the mouth of the cavern and shoot the bear as he came out, if somebody would go in and dislodge him.

"I'm your man," answered Meek.

"And I too," said Claymore.

"I'll be d\_d if we are not as brave as you are," said Hawkins, as he prepared to follow.

On entering the cave, which was sixteen or twenty feet square, and high enough to stand erect in, instead of one, three bears were discovered. They were standing, the largest one in the middle, with their eyes staring at the entrance, but quite quiet, greeting the hunters only with a low growl. Finding that there was a bear apiece to be disposed of, the hunters kept close to the wall, and out of the stream of light from the entrance, while they advanced a little way, cautiously, towards their game, which, however, seemed to take no notice of them. After maneuvering a few minutes to get nearer, Meek finally struck the large bear on the head with his wiping-stick, when it immediately moved off and ran out of the cave. As it came out, Doughty shot, but only wounded it, and it came rushing back, snorting, and running around in a circle, till the well directed shots from all three killed it on the spot. Two more bears now remained to be disposed of!

The successful shot put Hawkins in high spirits. He began to hello and laugh, dancing around, and with the others striking the next largest bear to make him run out, which he soon did, and was shot by Doughty. By this time their guns were reloaded, the men growing more and more elated, and Hawkins declaring they were "all Daniels in the lions' den, and no mistake." This, and similar expressions, he constantly vociferated, while they drove out the third and smallest bear. As it reached the cave's mouth, three simultaneous shots put an end to the last one, when Hawkins' excitement knew no bounds. "Daniel was a humbug," said he. "Daniel in the lions' den! Of course it was winter, and the lions were sucking their paws! Tell me no more of Daniel's exploits. We are as good Daniels as he ever dared to be. Hurrah for these Daniels! " With these expressions, and playing many antics by way of rejoicing, the delighted Hawkins finally danced himself out of his "lion's den," and set to work with the others to prepare for a return to camp.

Sleds were soon constructed out of the branches of the mountain willow, and on these light vehicles the fortunate find of bear meat was soon conveyed to the hungry camp in the plain below. And ever after this singular exploit of the party, Hawkins continued to aver, in language more strong than elegant, that the Scripture Daniel was a humbug compared to himself, and Meek, and Claymore.

The River of the West

Chapter VIII

1833. In the spring the camp was visited by a party of twenty Blackfeet, who drove off most of the horses; and among the stolen ones, Bridger's favorite race-horse, Grohean, a Camanche steed of great speed and endurance. To retake the horses, and if possible punish the thieves, a company of the gamest trappers, thirty in number, including Meek, and Kit Carson, who not long before had joined the Rocky Mountain Company, was dispatched on their trail. They had not traveled long before they came up with the Blackfeet, but the horses were nowhere to be seen, having been

The River of the West

---

secreted, after the manner of these thieves, in some defile of the mountains, until the skirmish was over which they knew well enough to anticipate. Accordingly when the trappers came up, the wily savages were prepared for them. Their numbers were inferior to that of the whites; accordingly they assumed an innocent and peace-desiring air, while their head man advanced with the inevitable peace-pipe, to have a "talk." But as their talk was a tissue of lies, the trappers soon lost patience, and a quarrel quickly arose. The Indians betook themselves to the defences which were selected beforehand, and a fight began, which without giving to either party the victory of arms, ended in the killing of two or three of the Blackfeet, and the wounding very severely of Kit Carson. The firing ceased with nightfall; and when morning came, as usual the Blackfeet were gone, and the trappers returned to camp without their horses.

The lost animals were soon replaced by purchase from the Nez Percés, and the company divided up into brigades, some destined for the country east of the mountains, and others for the south and west. In this year Meek rose a grade above the hired trapper, and became one of the order denominated skin trappers. These, like the hired trappers, depend upon the company to furnish them an outfit; but do not receive regular wages, as do the others. They trap for themselves, only agreeing to sell their beaver to the company which furnishes the outfit, and to no other. In this capacity, our Joe, and a few associates, hunted this spring, in the Snake River and Salt Lake countries; returning as usual to the annual rendezvous, which was appointed this summer to meet on Green River. Here were the Rocky Mountain and American Companies; the St. Louis Company, under Capt. Wm. Sublette and his friend Campbell; the usual camp of Indian allies; and, a few miles distant, that of Captain Bonneville. In addition to all these, was a small company belonging to Capt. Stuart, an Englishman of noble family, who was traveling in the far west only to gratify his own love of wild adventure, and admiration of all that is grand and magnificent in nature. With him was an artist named Miller, and several servants; but he usually traveled in company with one or another of the fur companies; thus enjoying their protection, and at the same time gaining a knowledge of the habits of mountain life.

The rendezvous, at this time, furnished him a striking example of some of the ways of mountain-men, least to their honorable fame; and we fear we must confess that our friend Joe Meek, who had been gathering laurels as a valiant hunter and trapper during the three or four years of his apprenticeship, was also becoming fitted, by frequent practice, to graduate in some of the vices of camp life, especially the one of conviviality during rendezvous. Had he not given his permission, we should not perhaps have said what he says of himself, that he was at such times often very "powerful drunk."

During the indulgence of these excesses, while at this rendezvous, there occurred one of those incidents of wilderness life which make the blood creep with horror. Twelve of the men were bitten by a mad wolf, which hung about the camp for two or three nights. Two of these were seized with madness in camp, sometime afterwards, and ran off into the mountains, where they perished. One was attacked by the paroxysm while on a hunt; when, throwing himself off his horse, he struggled and foamed at the mouth, gnashing his teeth, and barking like a wolf. Yet he retained

The River of the West

---

consciousness enough to warn away his companions, who hastened in search of assistance; but when they returned he was nowhere to be found. It was thought that he was seen a day or two afterwards, but no one could come up with him, and of course, he too, perished. Another died on his journey to St. Louis; and several died at different times within the next two years.

At the time, however, immediately following the visit of the wolf to camp, Captain Stuart was admonishing Meek on the folly of his ways, telling him that the wolf might easily have bitten him, he was so drunk.

“It would have killed him,--sure, if it hadn't cured him! “ said Meek,--alluding to the belief that alcohol is a remedy for the poison of hydrophobia.

When sobriety returned, and work was once more to be resumed, Meek returned with three or four associates to the Salt Lake country, to trap on the numerous streams that flow down from the mountains to the east of Salt Lake. He had not been long in this region when he fell in on Bear River with a company of Bonneville's men, one hundred and eighteen in number, under Jo Walker, who had been sent to explore the Great Salt Lake, and the adjacent country; to make charts, keep a journal, and, in short, make a thorough discovery of all that region. Great expectations were cherished by the Captain concerning this favorite expedition, which were, however, utterly blighted, as his historian has recorded. The disappointment and loss which Bonneville suffered from it, gave a tinge of prejudice to his delineations of the trapper's character. It was true that they did not explore Salt Lake; and that they made a long and expensive journey, collecting but few peltries. It is true also, that they caroused in true mountain style, while among the Californians: but that the expedition was unprofitable was due chiefly to the difficulties attending the exploration of a new country, a large portion of which was desert and mountain.

But let us not anticipate. When Meek and his companions fell in with Jo Walker and his company, they resolved to accompany the expedition; for it was “a feather in a man's cap,” and made his services doubly valuable to have become acquainted with a new country, and fitted himself for a pilot.

On leaving Bear River, where the hunters took the precaution to lay in a store of dried meat, the company passed down on the west side of Salt Lake, and found themselves in the Salt Lake desert, where their store, insufficiently large, soon became reduced to almost nothing. Here was experienced again the sufferings to which Meek had once before been subjected in the Digger country, which, in fact, bounded this desert on the northwest. “There was,” says Bonneville, “neither tree, nor herbage, nor spring, nor pool, nor running stream; nothing but parched wastes of sand, where horse and rider were in danger of perishing.” Many an emigrant has since confirmed the truth of this account.

It could not be expected that men would continue on in such a country, in that direction which offered no change for the better. Discerning at last a snowy range to the northwest, they traveled in that direction; pinched with famine, and with tongues swollen out of their mouths with thirst.

The River of the West

---

They came at last to a small stream, into which both men and animals plunged to quench their raging thirst.

The instinct of a mule on these desert journeys is something wonderful. We have heard it related by others besides the mountain-men, that they will detect the neighborhood of water long before their riders have discovered a sign; and setting up a gallop, when before they could hardly walk, will dash into the water up to their necks, drinking in the life-saving moisture through every pore of the skin, while they prudently refrain from swallowing much of it. If one of a company has been off on a hunt for water, and on finding it has let his mule drink, when he returns to camp, the other animals will gather about it, and snuff its breath, and even its body, betraying the liveliest interest and envy. It is easy to imagine that in the case of Jo Walker's company, not only the animals but the men were eager to steep themselves in the reviving waters of the first stream which they found on the border of this weary desert.

It proved to be a tributary of Mary's or Ogden's River, along which the company pursued their way, trapping as they went, and living upon the flesh of the beaver. They had now entered upon the same country inhabited by Digger Indians, in which Milton Sublette's brigade had so nearly perished with famine the previous year. It was unexplored, and the natives were as curious about the movements of their white visitors, as Indians always are on the first appearance of civilized men.

They hung about the camps, offering no offences by day, but contriving to do a great deal of thieving during the night-time. Each day, for several days, their numbers increased, until the army which dogged the trappers by day, and filched from them at night, numbered nearly a thousand. They had no guns; but carried clubs, and some bows and arrows. The trappers at length became uneasy at this accumulation of force, even though they had no fire-arms, for was it not this very style of people, armed with clubs, that attacked Smith's party on the Umpqua, and killed all but four ?

"We must kill a lot of them, boys," said Jo Walker. " It will never do to let that crowd get into camp." Accordingly, as the Indians crowded round at a ford of Mary's River, always a favorite time of attack with the savages, Walker gave the order to fire, and the whole company poured a volley into the jostling crowd. The effect was terrible. Seventy-five Diggers bit the dust; while the others, seized with terror and horror at this new and instantaneous mode of death, fled howling away, the trappers pursuing them until satisfied that they were too much frightened to return. This seemed to Captain Bonneville, when he came to hear of it, like an unnecessary and ferocious act. But Bonneville was not an experienced Indian fighter. His views of their character were much governed by his knowledge of the Flatheads and Nez Perces; and also by the immunity from harm he enjoyed among the Shoshonies on the Snake River, where the Hudson's Bay Company had brought them into subjection, and where even two men might travel in safety at the time of his residence in that country.

Walker's company continued on down to the main or Humboldt River, trapping as they went,

---

The River of the West

---

both for the furs, and for something to eat; and expecting to find that the river whose course they were following through these barren plains, would lead them to some more important river, or to some large lake or inland sea. This was a country entirely unknown, even to the adventurous traders and trappers of the fur companies, who avoided it because it was out of the buffalo range; and because the borders of it, along which they sometimes skirted, were found to be wanting in water-courses in which beaver might be looked for. Walker's company therefore, now determined to prosecute their explorations until they came to some new and profitable beaver grounds.

But after a long march through an inhospitable country they came at last to where the Humboldt sinks itself in a great swampy lake, in the midst of deserts of sage-brush. Here was the end of their great expectations. To the west of them, however, and not far off, rose the lofty summits of the Sierra Nevada range, some of whose peaks were covered with eternal snows. Since they had already made an unprofitable business of their expedition, and failed in its principal aim, that of exploring Salt Lake, they resolved upon crossing the mountains into California, and seeking new fields of adventure on the western side of the Nevada mountains.

Accordingly, although it was already late in the autumn, the party pushed on toward the west, until they came to Pyramid Lake, another of those swampy lakes which are frequently met with near the eastern base of these Sierras. Into this flowed a stream similar to the Humboldt, which came from the south, and, they believed, had its rise in the mountains. As it was important to find a good pass, they took their course along this stream, which they named Trucker's River, and continued along it to its head-waters in the Sierras.

And now began the arduous labor of crossing an unknown range of lofty mountains. Mountaineers as they were, they found it a difficult undertaking, and one attended with considerable peril. For a period of more than three weeks they were struggling with these dangers; hunting paths for their mules and horses, traveling around canyons thousands of feet deep; sometimes sinking in new fallen snow; always hungry, and often in peril from starvation. Sometimes they scrambled up almost smooth declivities of granite, that offered no foothold save the occasional seams in the rock; at others they traveled through pine forests made nearly impassable by snow; and at other times on a ridge which wind and sun made bare for them. All around rose rocky peaks and pinnacles fretted by ages of denudation to very spears and needles of a burnt looking, red colored rock. Below, were spread out immense fields, or rather oceans, of granite that seemed once to have been a molten sea, whose waves were suddenly congealed. From the fissures between these billows grew stunted pines, which had found a scanty soil far down in the crevices of the rock for their hardy roots. Following the course of any stream flowing in the right direction for their purpose, they came not infrequently to some small fertile valley, set in amidst the rocks like a cup, and often containing in its depth a bright little lake. These are the oases in the mountain deserts. But the lateness of the season made it necessary to avoid the high valleys on account of the snow, which in winter accumulates to a depth of twenty feet.

Great was the exultation of the mountaineers when they emerged from the toils and dangers, safe

---

into the bright and sunny plains of California; having explored almost the identical route since fixed upon for the Union Pacific Railroad.

They proceeded down the Sacramento valley, toward the coast, after recruiting their horses on the ripe wild oats, and the freshly springing grass which the December rains had started into life, and themselves on the plentiful game of the foot-hills. Something of the stimulus of the Californian climate seemed to be imparted to the ever buoyant blood of these hardy and danger-despising men. They were mad with delight on finding themselves, after crossing the stern Sierras, in a land of sunshine and plenty; of verdant hills and tawny plains; of streams winding between rows of alder and willow, and valleys dotted with picturesque groves of the evergreen oak. Instead of the wild blasts which they were used to encounter in December, they experienced here only those dainty and wooing airs which poets have ascribed to spring, but which seldom come even with the last May days in an eastern climate.

In the San Jose valley they encountered a party of one hundred soldiers, which the Spanish government at Monterey had sent out to take a party of Indians accused of stealing cattle. The soldiers were native Californians, descendants of the mixed blood of Spain and Mexico, a wild, jaunty looking set of fellows, who at first were inclined to take Walker's party for a band of cattle thieves, and to march them off to Monterey. But the Rocky Mountain trapper was not likely to be taken prisoner by any such brigade as the dashing cabelleros of Monterey.

After astonishing them with a series of whoops and yells, and trying to astonish them with feats of horsemanship, they began to discover that when it came to the latter accomplishment, even mountain-men could learn something from a native Californian. In this latter frame of mind they consented to be conducted to Monterey as prisoners or not, just as the Spanish government should hereafter be pleased to decree; and they had confidence in themselves that they should be able to bend that high and mighty authority to their own purposes thereafter.

Nor were they mistaken in their calculations. Their fearless, free and easy style, united to their complete furnishing of arms, their numbers, and their superior ability to stand up under the demoralizing effect of the favorite aguadiente, soon so far influenced the soldiery at least, that the trappers were allowed perfect freedom under the very eyes of the jealous Spanish government, and were treated with all hospitality.

The month which the trappers spent at Monterey was their "red letter day" for a long time after. The habits of the Californians accorded with their own, with just difference enough to furnish them with novelties and excitements such as gave a zest to their intercourse. The Californian, and the mountain-men, were alike centaurs. Horses were their necessity, and their delight; and the plains swarmed with them, as also with wild cattle, descendants of those imported by the Jesuit Fathers in the early days of the Missions. These horses and cattle were placed at the will and pleasure of the trappers. They feasted on one, and bestrode the other as it suited them. They attended bull-fights, ran races, threw the lasso, and played monte, with a relish that delighted the inhabitants of Monterey.

The partial civilization of the Californians accorded with every feeling to which the mountain-men could be brought to confess. To them the refinements of cities would have been oppressive. The adobe houses of Monterey were not so restraining in their elegance as to trouble the sensations of men used to the heavens for a roof in summer, and a skin lodge for shelter in winter. Some fruits and vegetables, articles not tasted for years, they obtained at the missions, where the priests received them courteously and hospitably, as they had done Jedediah Smith and his company, five years before, when on their long and disastrous journey they found themselves almost destitute of the necessaries of life, upon their arrival in California. There was something too, in the dress of the people, both men and women, which agreed with, while differing from, the dress of the mountaineers and their now absent Indian dulcineas.

The men wore garments of many colors, consisting of blue velveteen breeches and jacket, the jacket having a scarlet collar and cuffs, and the breeches being open at the knee to display the stocking of white. Beneath these were displayed high buskins made of deer skin, fringed down the outside of the ankle, and laced with a cord and tassels. On the head was worn a broad brimmed sombrero; and over the shoulders the jaunty Mexican sarape. When they rode, the Californians wore enormous spurs, fastened on by jingling chains. Their saddles were so shaped that it was difficult to dislodge the rider, being high before and behind; and the indispensable lasso hung coiled from the pommel. Their stirrups were of wood, broad on the bottom, with a guard of leather that protected the fancy buskin of the horseman from injury. Thus accoutred, and mounted on a wild horse, the Californian was a suitable comrade, in appearance, at least, for the buckskin clad trapper, with his high beaver-skin cap, his gay scarf, and moccasins, and profusion of arms.

The dress of the women was a gown of gaudy calico or silk, and a bright colored shawl, which served for mantilla and bonnet together. They were well formed, with languishing eyes and soft voices; and doubtless appeared charming in the eyes of our band of trappers, with whom they associated freely at fandangoes, bull-fights, or bearbaitings. In such company, what wonder that Bonneville's men lingered for a whole month! What wonder that the California expedition was a favorite theme by camp-fires, for a long time subsequent ?

1834. In February the trappers bethought themselves of returning to the mountains. The route fixed upon was one which should take them through Southern California, and New Mexico, along the course of all the principal rivers. Crossing the coast mountains, into the valley of the San Joaquin, they followed its windings until they came to its rise in the Lulare Lake. Thence turning in a southeasterly course, they came to the Colorado, at the Mohave villages, where they traded with the natives, whom they found friendly. Keeping on down the Colorado, to the mouth of the Gila, they turned back from that river, and ascended the Colorado once more, to Williams' Fork, and up the latter stream to some distance, when they fell in with a company of sixty men under Frapp and Jervais, two of the partners in the Rocky Mountain Company. The meeting was joyful on all sides; but particularly so between Meek and some of his old comrades, with whom he had fought Indians and grizzly bears, or set beaver traps on some lonely stream in the Blackfoot country. A lively exchange of questions and answers took place, while gaiety and good feeling reigned.

---

Frapp had been out quite as long as the Monterey party. It was seldom that the brigade which traversed the southern country, on the Colorado, and its large tributaries, returned to winter quarters; for in the region where they trapped winter was unknown, and the journey to the northern country a long and hazardous one. But the reunited trappers had each their own experiences to relate.

The two companies united made a party nearly two hundred strong. Keeping with Frapp, they crossed over from Williams' Fork to the Colorado Chiquito river, at the Moquis village, where some of the men disgraced themselves far more than did Jo Walker's party at the crossing of Mary's River. For the Moquis were a half-civilized nation, who had houses and gardens, and conducted themselves kindly, or at the worst peaceably, toward properly behaved strangers. These trappers, instead of approaching them with offers of purchase, lawlessly entered their gardens, rifling them of whatever fruit or melons were ripe, and not hesitating to destroy that which was not ripe. To this, as might be expected, the Moquises objected; and were shot down for so doing. In this truly infamous affair fifteen or twenty of them were killed.

"I didn't belong to that crowd," says Joe Meek, "I sat on the fence and saw it, though. It was a shameful thing."

From the Moquis village, the joint companies crossed the country in a northeasterly direction, crossing several branches of the Colorado at their head-waters, which course finally brought them to the head-waters of the Rio Grande. The journey from the mouth of the Gila, though long, extended over a country comparatively safe. Either farther to the south or east, the caravan would have been in danger of a raid from the most dangerous tribes on the continent.

The River of the West

Chapter IX

1834. But Joe Meek was not destined to return to the Rocky Mountains without having had an Indian fight. If adventures did not come in his way he was the man to put himself in the way of adventures.

While the camp was on its way from the neighborhood of Grande River to the New Park, Meek, Kit Carson, and Mitchell, with three Delaware Indians, named Tom Hill, Manhead, and Jonas, went on a hunt across to the east of Grande River, in the country lying between the Arkansas and Cimarron, where numerous small branches of these rivers head together, or within a small extent of country.

They were about one hundred and fifty miles from camp, and traveling across the open plain between the streams, one beautiful May morning, when about five miles off they descried a large band of Indians mounted, and galloping toward them. As they were in the Camanche country,

The River of the West

---

they knew what to expect if they allowed themselves to be taken prisoners. They gave but a moment to the observation of their foes, but that one moment revealed a spirited scene. Fully two hundred Camanches, their warriors in front, large and well formed men, mounted on fleet and powerful horses, armed with spears and battle axes, racing like the wind over the prairie, their feather head-dresses bending to the breeze, that swept past them in the race with double force; all distinctly seen in the clear air of the prairie, and giving the beholder a thrill of fear mingled with admiration.

The first moment given to this spectacle, the second one was employed to devise some means of escape. To run was useless. The swift Camanche steeds would soon overtake them; and then their horrible doom was fixed. No covert was at hand, neither thicket nor ravine, as in the mountains there might have been. Carson and Meek exchanged two or three sentences. At last, "we must kill our mules!" said they.

That seems a strange device to the uninitiated reader, who no doubt believes that in such a case their mules must be their salvation. And so they were intended to be. In this plight a dead mule was far more useful than a live one. To the ground sprang every man; and placing their mules, seven in number, in a ring, they in an instant cut their throats with their hunting knives, and held on to the bridles until each animal fell dead in its appointed place. Then hastily scooping up what earth they could with knives, they made themselves a fort--a hole to stand in for each man, and a dead mule for a breastwork.

In less than half an hour the Camanches charged on them; the medicine-man in advance shouting, gesticulating, and making a desperate clatter with a rattle which he carried and shook violently. The yelling, the whooping, the rattling, the force of the charge were appalling. But the little garrison in the mule fort did not waver. The Camanche horses did. They could not be made to charge upon the bloody carcasses of the mules, nor near enough for their riders to throw a spear into the fort.

This was what the trappers had relied upon. They were cool and determined, while terribly excited and wrought up by their situation. It was agreed that no more than three should fire at a time, the other three reserving their fire while the empty guns could be reloaded. They were to pick their men, and kill one at every shot.

They acted up to their regulations. At the charge the Camanche horses recoiled and could not be urged upon the fort of slaughtered mules. The three whites fired first, and the medicine-man and two other Camanches fell. When a medicine-man is killed, the others retire to hold a council and appoint another, for without their "medicine" they could not expect success in battle. This was time gained. The warriors retired, while their women came up and carried off the dead.

After devoting a little time to bewailing the departed, another chief was appointed to the head place, and another furious charge was made with the same results as before. Three more warriors bit the dust; while the spears of their brethren, attached to long hair ropes by which they could be withdrawn, fell short of reaching the men in the fort. Again and again the Camanches made a

The River of the West

---

fruitless charge, losing, as often as they repeated it, three warriors, either dead or wounded. Three times that day the head chief or medicine-man was killed; and when that happened, the heroes in the fort got a little time to breathe. While the warriors held a council, the women took care of the wounded and slain.

As the women approached the fort to carry off the fallen warriors, they mocked and reviled the little band of trappers, calling them "women," for fighting in a fort, and resorting to the usual Indian ridicule and gasconade. Occasionally, also, a warrior raced at full speed past the fort apparently to take observations. Thus the battle continued through the entire day.

It was terrible work for the trappers. The burning sun of the plains shone on them, scorching them to faintness. Their faces were begrimed with powder and dust; their throats parched, and tongues swollen with thirst, and their whole frames aching from their cramped positions, as well as the excitement and fatigue of the battle. But they dared not relax their vigilance for a moment. They were fighting for their lives, and they meant to win.

At length the sun set on that bloody and wearisome day. Forty-two Camanches were killed, and several more wounded, for the charge had been repeated fifteen or twenty times. The Indians drew off at nightfall to mourn over their dead, and hold a council. Probably they had lost faith in their medicines, or believed that the trappers possessed one far greater than any of theirs. Under the friendly cover of the night, the six heroes who had fought successfully more than a hundred Camanches took each his blanket and his gun, and bidding a brief adieu to dead mules and beaver packs, set out to return to camp.

When a mountain-man had a journey to perform on foot, to travel express, or to escape from an enemy, he fell into what is called a dog trot, and ran in that manner, sometimes, all day. On the present occasion, the six, escaping for life, ran all night, and found no water for seventy-five mile. When they did at last come to a clear running stream, their thankfulness was equal to their necessity, "for," says Meek, "thirst is the greatest suffering I ever experienced. It is far worse than hunger or pain."

Having rested and refreshed themselves at the stream, they kept on without much delay until they reached camp in that beautiful valley of the Rocky Mountains called the New, or the South Park.

While they remained in the South Park, Mr. Guthrie, one of the Rocky Mountain Company's traders, was killed by lightning. A number of persons were collected in the lodge of the Boosh-way, Frapp, to avoid the rising tempest, when Guthrie, who was leaning against the lodge pole, was struck by a flash of the electric current, and fell dead instantly. Frapp rushed out of the lodge, partly bewildered himself by the shock, and under the impression that Guthrie had been shot. Frapp was a German, and spoke English somewhat imperfectly. In the excitement of the moment he shouted out, "Py Gott, who did shoot Guttery!"

"G--a' mighty, I expect: He's a firing into camp;" drawled out Hawkins, whose ready wit was very

disregardful of sacred names and subjects.

The mountaineers were familiar with the most awful aspects of nature; and if their familiarity had not bred contempt, it had at least hardened them to those solemn impressions which other men would have felt under their influence.

From New Park, Meek traveled north with the main camp, passing first to the Old Park; thence to the Little Snake, a branch of Bear River; thence to Pilot Butte; and finally to Green River to rendezvous; having traveled in the past year about three thousand miles, on horseback, through new and often dangerous countries. It is easy to believe that the Monterey expedition was the popular theme in camp during rendezvous. It had been difficult to get volunteers for Bonneville's Salt Lake Exploration: but such was the wild adventure to which it led, that volunteering for a trip to Monterey would have been exceedingly popular immediately thereafter.

On Bear River, Bonneville's men fell in with their commander, Captain Bonneville, whose disappointment and indignation at the failure of his plans was exceedingly great. In this indignation there was considerable justice; yet much of his disappointment was owing to causes which a more experienced trader would have avoided. The only conclusion which can be arrived at by an impartial observer of the events of 1832-35, is, that none but certain men of long experience and liberal means, could succeed in the business of the fur-trade. There were too many chances of loss; too many wild elements to be mingled in amity; and too powerful opposition from the old established companies. Captain Bonneville's experience was no different from Mr. Wyeth's. In both cases there was much effort, outlay, and loss. Nor was their failure owing to any action of the Hudson's Bay Company, different from, or more tyrannical, than the action of the American companies, as has frequently been represented. It was the American companies in the Rocky Mountains that drove both Bonneville and Wyeth out of the field. Their inexperience could not cope with the thorough knowledge of the business, and the country, which their older rivals possessed. Raw recruits were no match, in trapping or fighting, for old mountaineers: and those veterans who had served long under certain leaders could not be inveigled from their service except upon the most extravagant offers; and these extravagant wages, which if one paid, the other must, would not allow a profit to either of the rivals.

"How much does your company pay you?" asked Bonneville of Meek, to whom he was complaining of the conduct of his men on the Monterey expedition.

"Fifteen hundred dollars," answered Meek.

"Yes: and I will give it to you," said Bonneville with bitterness.

It was quite true. Such was the competition aroused by the Captain's efforts to secure good men and pilots, that rather than lose them to a rival company, the Rocky Mountain Company paid a few of their best men the wages above named.

Chapter X

1834. The gossip at rendezvous was this year of an unusually exciting character. Of the brigades which left for different parts of the country the previous summer, the Monterey travelers were not the only ones who had met with adventures. Fitzpatrick, who had led a party into the Crow country that autumn, had met with a characteristic reception from that nation of cunning vagabonds.

Being with his party on Lougue River, in the early part of September, he discovered that he was being dogged by a considerable band of Crows, and endeavored to elude their spying; but all to no purpose. The Crow chief kept in his neighborhood, and finally expressed a desire to bring his camp alongside that of Fitzpatrick, pretending to the most friendly and honorable sentiments toward his white neighbors. But not feeling any confidence in Crow friendship, Fitzpatrick declined, and moved camp a few miles away. Not, however, wishing to offend the dignity of the apparently friendly chief, he took a small escort, and went to pay a visit to his Crow neighbors, that they might see that he was not afraid to trust them. Alas, vain subterfuge!

While he was exchanging civilities with the Crow chief, a party of the young braves stole out of camp, and taking advantage of the leader's absence, made an attack on his camp, so sudden and successful that not a horse, nor any thing else which they could make booty of was left. Even Captain Stuart, who was traveling with Fitzpatrick, and who was an active officer, was powerless to resist the attack, and had to consent to see the camp rifled of everything valuable.

In the meantime Fitzpatrick, after concluding his visit in the most amicable manner, was returning to camp, when he was met by the exultant braves, who added insult to injury by robbing him of his horse, gun, and nearly all his clothes, leaving him to return to his party in a deplorable condition, to the great amusement of the trappers, and his own chagrin.

However, the next day a talk was held with the head chief of the Crows, to whom Fitzpatrick represented the infamy of such treacherous conduct in a very strong light. In answer to this reproof, the chief disowned all knowledge of the affair; saying that he could not always control the conduct of the young men, who would be a little wild now and then, in spite of the best Crow precepts: but that he would do what he could to have the property restored. Accordingly, after more talk, and much eloquence on the part of Fitzpatrick, the chief part of the plunder was returned to him, including the horses and rifles of the men, together with a little ammunition, and a few beaver traps. Fitzpatrick understood the meaning of this apparent fairness, and hastened to get out of the Crow country before another raid by the mischievous young braves, at a time when their chief was not "honor bound," should deprive him of the recovered property. That his conjecture was well founded, was proven by the numerous petty thefts which were committed, and by the loss of several horses and mules, before he could remove them beyond the limits of the Crow territory.

While the trappers exchanged accounts of their individual experiences, the leaders had more

---

important matters to gossip over. The rivalry between the several fur companies was now at its climax. Through the energy and ability of Captain Sublette of the St. Louis Company, and the experience and industry of the Rocky Mountain Company, which Captain Sublette still continued to control in a measure, the power still remained with them. The American Company had never been able to cope with them in the Rocky Mountains; and the St. Louis Company were already invading their territory on the Missouri River, by carrying goods up that river in boats, to trade with the Indians under the very walls of the American Company's forts.

In August of the previous year, when Mr. Nathaniel Wyeth had started on his return to the states, he was accompanied as far as the mouth of the Yellowstone by Milton Sublette; and had engaged with that gentleman to furnish him with goods the following year, as he believed he could do, cheaper than the St. Louis Company, who purchased their goods in St. Louis at a great advance on Boston prices. But Milton Sublette fell in with his brother the Captain, at the mouth of the Yellowstone, with a keel-boat loaded with merchandise; and while Wyeth pursued his way eastward to purchase the Indian goods which were intended to supply the wants of the fur-traders in the Rocky Mountains, at a profit to him, and an advantage to them, the Captain was persuading his brother not to encourage any interlopers in the Indian trade; but to continue to buy goods from himself, as formerly. So potent were his arguments, that Milton yielded to them, in spite of his engagement with Wyeth. Thus during the autumn of 1833, while Bonneville was being wronged and robbed, as he afterwards became convinced, by his men under Walker, and anticipated in the hunting ground selected for himself, in the Crow country, by Fitzpatrick, as he had previously been in the Snake country by Milton Sublette, Wyeth was proceeding to Boston in good faith, to execute what proved to be a fool's errand. Bonneville also had gone on another, when after the trapping season was over he left his camp to winter on the Snake River, and started with a small escort to visit the Columbia, and select a spot for a trading-post on the lower portion of that river. On arriving at Wallah-Wallah, after a hard journey over the Blue Mountains in the winter, the agent at that post had refused to supply him with provisions to prosecute his journey, and given him to understand that the Hudson's Bay Company might be polite and hospitable to Captain Bonneville as the gentleman, but that it was against their regulations to encourage the advent of other traders who would interfere with their business, and unsettle the minds of the Indians in that region.

This reply so annoyed the Captain, that he refused the well meant advice of Mr. Pambrun that he should not undertake to recross the Blue Mountains in March snows, but travel under the escort of Mr. Payette, one of the Hudson's Bay Company's leaders, who was about starting for the Nez Perce country by a safer if more circuitous route. He therefore set out to return by the route he came, and only arrived at camp in May, 1831, after many dangers and difficulties. From the Portneuf River, he then proceeded with his camp to explore the Little Snake River, and Snake Lake; and it was while so doing that he fell in with his men just returned from Monterey.

Such was the relative position of the several fur companies in the Rocky Mountains in 1834; and it was of such matters that the leaders talked in the lodge of the Booshways, at rendezvous. In the meantime Wyeth arrived in the mountains with his goods, as he had contracted with Milton Sub-

lette in the previous year. But on his heels came Captain Sublette, also with goods, and the Rocky Mountain Company violated their contract with Wyeth, and purchased of their old leader.

Thus was Wyeth left, with his goods on his hands, in a country where it was impossible to sell them, and useless to undertake an opposition to the already established fur traders and trappers. His indignation was great, and certainly was just. In his interview with the Rocky Mountain Company, in reply to their excuses for, and vindication of their conduct, his answer was:

“Gentlemen, I will roll a stone into your garden that you will never be able to get out.”

And he kept his promise; for that same autumn he moved on to the Snake River, and built Fort Hall, storing his goods therein. The next year he sold out goods and fort to the Hudson’s Bay Company; and the stone was in the garden of the Rocky Mountain Fur Company that they were never able to dislodge. When Wyeth had built his fort and left it in charge of an agent, he dispatched a party of trappers to hunt in the Big Blackfoot country, under Joseph Gale, who had previously been in the service of the Rocky Mountain Company, and of whom we shall learn more hereafter, while he set out for the Columbia to meet his vessel, and establish a salmon fishery. The fate of that enterprise has already been recorded.

As for Bonneville, he made one more effort to reach the lower Columbia; failing, however, a second time, for the same reason as before--he could not subsist himself and company in a country where even every Indian refused to sell to him either furs or provisions. After being reduced to horse-flesh, and finding no encouragement that his condition would be improved farther down the river, he turned back once more from about Wallah-Wallah, and returned to the mountains, and from there to the east in the following year. A company of his trappers, however, continued to hunt for him east of the mountains for two or three years longer.

The rivalry between the Rocky Mountain and American Companies was this year diminished by their mutually agreeing to confine themselves to certain parts of the country, which treaty continued for two years, when they united in one company. They were then, with the exception of a few lone traders, the only competitors of the Hudson’s Bay Company, for the fur-trade of the West.

The River of the West

Chapter XI

1834. The Rocky Mountain Company now confined themselves to the country lying east of the mountains, and upon the head-waters and tributaries of the Missouri, a country very productive in furs, and furnishing abundance of game. But it was also the most dangerous of all the northern fur-hunting territory, as it was the home of those two nations of desperadoes, the Crows and Blackfeet. During the two years in which the company may have been said almost to reside there, desperate encounters and hair-breadth escapes were incidents of daily occurrence to some of the numerous trapping parties.

The camp had reached the Blackfoot country in the autumn of this year, and the trappers were out in all directions, hunting beaver in the numerous small streams that flow into the Missouri. On a small branch of the Gallatin Fork, some of the trappers fell in with a party of Wyeth's men, under Joseph Gale. When their neighborhood became known to the Rocky Mountain camp, Meek and a party of sixteen of his associates immediately resolved to pay them a visit, and inquire into their experience since leaving rendezvous. These visits between different camps are usually seasons of great interest and general rejoicing. But glad as Gale and his men were to meet with old friends, when the first burst of hearty greeting was over, they had but a sorry experience to relate. They had been out a long time. The Blackfeet had used them badly--several men had been killed.

Their guns were out of order, their ammunition all but exhausted; they were destitute, or nearly so, of traps, blankets, knives, everything. They were what the Indian and the mountain-man call "very poor."

Half the night was spent in recounting all that had passed in both companies since the fall hunt began. Little sympathy did Wyeth's men receive for their forlorn condition, for sympathy is repudiated by your true mountaineer for himself, nor will he furnish it to others. The absurd and humorous, or the daring and reckless, side of a story is the only one which is dwelt upon in narrating his adventures. The laugh which is raised at his expense when he has a tale of woes to communicate, is a better tonic to his dejected spirits than the gentlest pity would be. Thus lashed into courage again, he is ready to declare that all his troubles were only so much pastime.

It was this sort of cheer which the trapping party conveyed to Wyeth's men on this visit, and it was gratefully received, as being of the true kind.

In the morning the party set out to return to camp, Meek and Liggitt starting in advance of the others. They had not proceeded far when they were fired on by a large band of Blackfeet, who came upon them quite suddenly, and thinking these two trappers easy game, set up a yell and dashed at them. As Meek and Liggitt turned back and ran to Gale's camp, the Indians in full chase charged on them, and rushed pell-mell into the midst of camp, almost before they had time to discover that they had surprised so large a party of whites. So sudden was their advent, that they had almost taken the camp before the whites could recover from the confusion of the charge.

It was but a momentary shock, however. In another instant the roar of twenty guns reverberated from the mountains that rose high on either side of camp. The Blackfeet were taken in a snare; but they rallied and fell back beyond the grove in which the camp was situated, setting on fire the dry grass as they went. The fire quickly spread to the grove, and shot up the pine trees in splendid columns of flame, that seemed to lick the face of heaven. The Indians kept close behind the fire, shooting into camp whenever they could approach near enough, the trappers replying by frequent volleys. The yells of the savages, the noise of the flames roaring in the trees, the bellowing of the guns, whose echoes rolled among the hills, and the excitement of a battle for life, made the scene one long to be remembered with distinctness.

Both sides fought with desperation. The Blackfoot blood was up--the trapper blood no less. Gale's men, from having no ammunition, nor guns that were in order, could do little more than take charge of the horses, which they led out into the bottom land to escape the fire, fight the flames, and look after the camp goods. The few whose guns were available, showed the game spirit, and the fight became interesting as an exhibition of what mountain white men could do in a contest of one to ten, with the crack warriors of the red race. It was, at any time, a game party, consisting of Meek, Carson, Hawkins, Gale, Liggitt, Rider, Robinson, Anderson, Russel, Larison, Ward, Parmaley, Wade, Michael Head, and a few others whose names have been forgotten.

The trappers being driven out of the grove by the fire, were forced to take to the open ground. The Indians, following the fire, had the advantage of the shelter afforded by the trees, and their shots made havoc among the horses, most of which were killed because they could not be taken. As for the trappers, they used the horses for defence, making rifle-pits behind them, when no other covert could be found. In this manner the battle was sustained until three o'clock in the afternoon, without loss of life to the whites, though several men were wounded.

At three in the afternoon, the Blackfoot chief ordered a retreat, calling out to the trappers that they would fight no more. Though their loss had been heavy, they still greatly outnumbered the whites; nor would the condition of the arms and the small amount of ammunition left permit the trappers to pursue them. The Indians were severely beaten, and no longer in a condition to fight, all of which was highly satisfactory to the victors. The only regret was, that Bridger's camp, which had become aware during the day that a battle was going on in the neighborhood, did not arrive early enough to exterminate the whole band. As it was, the big camp only came up in time to assist in taking care of the wounded. The destruction of their horses put an end to the independent existence of Gale's brigade, which joined itself and its fortunes to Bridger's command for the remainder of the year. Had it not been for the fortunate visit of the trappers to Gale's camp, without doubt every man in it would have perished at the hands of the Blackfeet: a piece of bad fortune not unaccordant with that which seemed to pursue the enterprises set on foot by the active but unlucky New England trader.

Not long after this battle with the Blackfeet, Meek and a trapper named Crow, with two Shawnees, went over into the Crow Country to trap on Pryor's River, a branch of the Yellowstone. On coming to the pass in the mountains between the Gallatin Fork of the Missouri and the great bend in the Yellowstone, called Pryor's Gap, Meek rode forward, with the mad-cap spirit strong in him, to "have a little fun with the boys", and advancing a short distance into the pass, wheeled suddenly, and came racing back, whooping and yelling, to make his comrades think he had discovered Indians. And lo! as if his yells had invoked them from the rocks and trees, a war party suddenly emerged from the pass, on the heels of the jester, and what had been sport speedily became earnest, as the trappers turned their horses' heads and made off in the direction of camp. They had a fine race of it, and heard other yells and war-whoops besides their own; but they contrived to elude their pursuers, returning safe to camp.

The River of the West

---

This freak of Meek's was, after all, a fortunate inspiration, for had the four trappers entered the pass and come upon the war party of Crows, they would never have escaped alive.

A few days after, the same party set out again, and succeeded in reaching Pryor's River unmolested, and setting their traps. They remained some time in this neighborhood trapping, but the season had become pretty well advanced, and they were thinking of returning to camp for the winter. The Shawnees set out in one direction to take up their traps, Meek and Crow in another. The stream where their traps were set was bordered by thickets of willow, wild cherry, and plum trees, and the bank was about ten feet above the water at this season of the year.

Meek had his traps set in the stream about midway between two thickets. As he approached the river he observed with the quick eye of an experienced mountain-man, certain signs which gave him little satisfaction. The buffalo were moving off as if disturbed; a bear ran suddenly out of its covert among the willows.

"I told Crow," said Meek, "that I didn't like to go in there. He laughed at me, and called me a coward. 'All the same,' I said; I had no fancy for the place just then --I didn't like the indications. But he kept jeering me, and at last I got mad and started in. Just as I got to my traps, I discovered that two red devils war a watching me from the shelter of the thicket to my left, about two rods off. When they saw that they war discovered they raised their guns and fired. I turned my horse's head at the same instant, and one ball passed through his neck, under the neck bone, and the other through his withers, just forward of my saddle.

"Seeing that they had not hit me, one of them ran up with a spear to spear me. My horse war rearing and pitching from the pain of his wounds, so that I could with difficulty govern him; but I had my gun laid across my arm, and when I fired I killed the rascal with the spear. Up to that moment I had supposed that them two war all I had to deal with. But as I got my horse turned round, with my arm raised to fire at the other red devil, I encountered the main party, forty-nine of them, who war in the bed of the stream, and had been covered by the bank. They fired a volley at me. Eleven balls passed through my blanket, under my arm, which war raised. I thought it time to run, and run I did. Crow war about two hundred yards off. So quick had all this happened, that he had not stirred from the spot whar I left him. When I came up to him I called out that I must get on behind him, for my horse war sick and staggering.

"'Try him again,' said Crow, who war as anxious to be off as I war. I did try him agin, and sure enough, he got up a gallop, and away we went, the Blackfeet after us. But being mounted, we had the advantage, and soon distanced them. Before we had run a mile, I had to dismount and breathe my horse. We war in a narrow pass whar it war impossible to hide, so when the Indians came up with us, as they did, while I war dismounted we took sure aim and killed the two foremost ones. Before the others could get close enough to fire we war off agin. It didn't take much urging to make my horse go then, for the yells of them Blackfeet spurred him on.

"When we had run another mile I dismounted agin, for fear that my horse would give out, and

The River of the West

---

again we were overtaken. The Blackfeet are powerful runners--no better than us mountain-men, though. This time we served them just as we did before. We picked off two of the foremost, and then went on, the rest whooping after us. We were overtaken a third time in the same manner; and the third time two Blackfeet fell dead in advance. At this, they took the hint. Six warriors already gone for two white scalps and two horses; they didn't know how many more would go in the same way. And I reckon they had run about all they wanted to, anyway."

It is only necessary to add that Meek and Crow arrived safely at camp; and that the Shawnees came in after a day or two all right. Soon after the whole command under Bridger moved on to the Yellowstone, and went into winter camp in the great bend of that river, where buffalo were plenty, and cotton-wood was in abundance.

1835. Towards spring, however, the game had nearly all disappeared from the neighborhood of the camp; and the hunters were forced to follow the buffalo in their migration eastward. On one of these expeditions a party of six trappers, including Meek, and a man named Rose, made their camp on Clarke's fork of the Yellowstone. The first night in camp Rose had a dream with which he was very much impressed. He dreamed of shaking hands with a large white bear, which insisted on taking his right hand for that friendly ceremony. He had not given it very willingly, for he knew too much about bears in general to desire to be on very intimate terms with them.

Seeing that the dream troubled Rose, who was superstitiously inclined, Meek resorted to that "certain medicine for minds diseased" which was in use in the mountains, and added to the distress of Rose his interpretation, in the spirit of ridicule, telling him that he was an adept in the matter of dreams, and that unless he, Rose, was very mindful of himself that day, he would shake hands with Beelzebub before he slept again.

With this comforting assurance, Rose set out with the remainder of the party to hunt buffalo. They had proceeded about three miles from camp, Rose riding in advance, when they suddenly encountered a company of Blackfeet, nine in number, spies from a war party of one hundred and fifty, that was prowling and marauding through the country on the lookout for small parties from the camp of Bridger. The Blackfeet fired on the party as it came up, from their place of concealment, a ball striking Rose's right arm, and breaking it at the elbow. This caused his gun to fall, and an Indian sprang forward and raised it up quickly, aiming it at Meek. The ball passed through his cap without doing any other harm. By this time the trappers were made aware of an ambuscade; but how numerous the enemy was they could not determine. However, as the rest, who were well mounted, turned to fly, Meek, who was riding an old mule that had to be beaten over the head to make it go, seeing that he was going to be left behind, called out lustily, "hold on, boys! There's not many of them. Let's stop and fight 'em;" at the same time pounding the mule over the head, but without effect. The Indians saw the predicament, and ran up to seize the mule by the bridle, but the moment the mule got wind of the savages, away he went, racing like a thoroughbred, jumping impediments, and running right over a ravine, which was fortunately filled with snow. This movement brought Meek out ahead.

The River of the West

---

The other men then began to call out to Meek to stop and fight. "Run for your lives, boys," roared Meek back at them, "there's ten thousand of them; they'll kill every one of you!"

The mule had got his head, and there was no more stopping him than there had been starting him. On he went in the direction of the Yellowstone, while the others made for Clarke's Fork. On arriving at the former river, Meek found that some of the pack horses had followed him, and others the rest of the party. This had divided the Indians, three or four of whom were on his trail. Springing off his mule, he threw his blankets down on the ice, and by moving them alternately soon crossed the mule over to the opposite side, just in time to avoid a bullet that came whistling after him. As the Indians could not follow, he pursued his way to camp in safety, arriving late that evening. The main party were already in and expecting him. Soon after, the buffalo hunters returned to the big camp, minus some pack horses, but with a good story to tell, at the expense of Meek, and which he enjoys telling of himself to this day.

The River of the West

Chapter XII

1835. Owing to the high rate of pay which Meek was now able to command, he began to think of imitating the example of that distinguished order, the free trappers, to which he now belonged, and setting up a lodge to himself as a family man. The writer of this veracious history has never been able to obtain a full and particular account of our hero's earliest love adventures. This is a subject on which, in common with most mountain-men, he observes a becoming reticence. But of one thing we feel quite well assured: that from the time when the young Shoshonie beauty assisted in the rescue of himself and Sublette from the execution of the death sentence at the hands of her people, Meek had always cherished a rather more than friendly regard for the "Mountain Lamb."

But Sublette, with wealth and power, and the privileges of a Booshway, had hastened to secure her for himself; and Meek had to look and long from afar off, until, in the year of which we are writing, Milton Sublette was forced to leave the mountains and repair to an eastern city for surgical aid; having received a very troublesome wound in the leg, which was only cured at last by amputation.

Whether it was the act of a gay Lothario, or whether the law of divorce is even more easy in the mountains than in Indiana, we have always judiciously refrained from inquiring; but this we do know, upon the word of Meek himself, no sooner was Milton's back turned, than his friend so insinuated himself into the good graces of his Isabel, as Sublette was wont to name the lovely Umen-tucken, that she consented to join her fortunes to those of the handsome young trapper without even the ceremony of serving a notice on her former lord. As their season of bliss only extended over one brief year, this chapter shall be entirely devoted to recording such facts as have been imparted to us concerning this free trapper's wife.

The River of the West

---

“She was the most beautiful Indian woman I ever saw,” says Meek: “and when she was mounted on her dapple gray horse, which cost me three hundred dollars, she made a fine show. She wore a skirt of beautiful blue broadcloth, and a bodice and leggins of scarlet cloth, of the very finest make. Her hair was braided and fell over her shoulders, a scarlet silk handkerchief, tied on hood fashion, covered her head; and the finest embroidered moccasins her feet. She rode like all the Indian women, astride, and carried on one side of the saddle the tomahawk for war, and on the other the pipe of peace.

“The name of her horse was “ All Fours.” His accoutrements were as fine as his rider’s. The saddle, crupper, and bust girths cost one hundred and fifty dollars; the bridle fifty dollars; and the musk-a-moots fifty dollars more. All these articles were ornamented with fine cut glass beads, porcupine quills, and hawk’s bells, that tinkled at every step. Her blankets were of scarlet and blue, and of the finest quality. Such was the outfit of the trapper’s wife, Umentucken, Tukutey Udenwatsy, the Lamb of the Mountains.”

Although Umentucken was beautiful, and had a name signifying gentleness, she was not without a will and a spirit of her own, when the occasion demanded it. While the camp was on the Yellowstone River, in the summer of 1835, a party of women left it to go in search of berries, which were often dried and stored for winter use by the Indian women. Umentucken accompanied this party, which was attacked by a band of Blackfeet, some of the squaws being taken prisoners. But Umentucken saved herself by fight, and by swimming the Yellowstone while a hundred guns were leveled on her, the bullets whistling about her ears.

At another time she distinguished herself in camp by a quarrel with one of the trappers, in which she came off with flying colors. The trapper was a big, bullying Irish man named O’Fallen, who had purchased two prisoners from the Snake Indians, to be kept in a state of slavery, after the manner of the savages. The prisoners were Utes, or Utahs, who soon contrived to escape. O’Fallen, imagining that Umentucken had liberated them, threatened to whip her, and armed himself with a horsewhip for that purpose. On hearing of these threats Umentucken repaired to her lodge, and also armed herself, but with a pistol. When O’Fallen approached, the whole camp looking on to see the event, Umentucken slipped out at the back of the lodge and coming around confronted him before he could enter.

“Coward !” she cried. “ You would whip the wife of Meek. He is not here to defend me; not here to kill you. But I shall do that for myself;” and with that she presented the pistol to his head. O’Fallen taken by surprise, and having every reason to believe she would keep her word, and kill him on the spot, was obliged not only to apologize, but to beg to have his life spared. This Umentucken consented to do on condition of his sufficiently humbling himself, which he did in a very shamefaced manner; and a shout then went up from the whole camp--”hurrah for the Mountain Lamb !” for nothing more delights a mountaineer than a show of pluck, especially in an unlooked for quarter.

The Indian wives of the trappers were often in great peril, as well as their lords. Whenever it was convenient they followed them on their long marches through dangerous countries. But if the

---

trapper was only going out for a few days, or if the march before him was more than usually dangerous, the wife remained with the main camp.

During this year of which we are writing, a considerable party had been out on Powder River hunting buffalo, taking their wives along with them. When on the return, just before reaching camp, Umentucken was missed from the cavalcade. She had fallen behind, and been taken prisoner by a party of twelve Crow Indians. As soon as she was missed, a volunteer party mounted their buffalo horses in such haste that they waited not for saddle or bridle, but snatched only a halter, and started back in pursuit. They had not run a very long distance when they discovered poor Umentucken in the midst of her jubilant captors, who were delighting their eyes with gazing at her fine feathers, and promising themselves very soon to pluck the gay bird, and appropriate her trinkets to their own use.

Their delight was premature. Swift on their heels came an avenging, as well as a saving spirit. Meek, at the head of his six comrades, no sooner espied the drooping, form of the Lamb, than he urged his horse to the top of its speed. The horse was a spirited creature, that seeing something wrong in all these hasty maneuvers, took fright and adding terror to good will, ran with the speed of madness right in amongst the startled Crows, who doubtless regarded as a great "medicine" so fearless a warrior. It was now too late to be prudent, and Meek began the battle by yelling and firing, taking care to hit his Indian. The other trappers, emulating the bold example of their leader, dashed into the melee and a chance medley fight was carried on, in which Umentucken escaped, and another Crow bit the dust. Finding that they were getting the worst of the fight, the Indians at length took to flight, and the trappers returned to camp rejoicing, and complimenting Meek on his gallantry in attacking the Crows single-handed.

"I took their compliments quite naturally," says Meek, "nor did I think it war worth while to explain to them that I couldn't hold my horse."

The Indians are lordly and tyrannical in their treatment of women, thinking it no shame to beat them cruelly; even taking the liberty of striking other women than those belonging to their own families. While the camp was traveling through the Crow country in the spring of 1836, a party of that nation paid a visit to Bridger, bringing skins to trade for blankets and ammunition. The bargaining went on quite pleasantly for some time; but one of the braves who was promenading about camp inspecting whatever came in his way, chanced to strike Umentucken with a whip he carried in his hand, by way of displaying his superiority to squaws in general, and trappers' wives in particular. It was an unlucky blow for the brave, for in another instant he rolled on the ground, shot dead by a bullet from Meek's gun.

At this rash act the camp was in confusion. Yells from the Crows, who took the act as a signal for war; hasty questions, and cries of command; arming and shooting. It was some time before the case could be explained or understood. The Crows had two or three of their party shot; the whites also lost a man. After the unpremeditated fight was over, and the Crows departed not thoroughly satisfied with the explanation, Bridger went round to Meek's lodge.

“Well, you raised a hell of a row in camp; “ said the commander, rolling out his deep bass voice in the slow monotonous tones which mountain men very quickly acquire from the Indians.

“Very sorry, Bridger; but couldn’t help it. No devil of an Indian shall strike Meek’s wife.”

“But you got a man killed.”

“Sorry for the man; couldn’t help it, though, Bridger.”

And in truth it was too late to mend the matter. Fearing, however, that the Crows would attempt to avenge themselves for the losses they had sustained, Bridger hurried his camp forward, and got out of their neighborhood as quickly as possible.

So much for the female element in the camp of the Rocky Mountain trapper. Woman, it is said, has held the apple of discord, from mother Eve to Umentucken, and in consonance with this theory, Bridger, doubtless, considered the latter as the primal cause of the unfortunate “ row in camp,” rather than the brutality of the Crow, or the imprudence of Meek.

But Umentucken’s career was nearly run. In the following summer she met her death by a Ban-nack arrow; dying like a warrior, although living she was only a woman.

The River of the West

Chapter XIII

1835. The rendezvous of the Rocky Mountain Company seldom took place without combining with its many wild elements, some other more civilized and refined. Artists, botanists, travelers, and hunters, from the busy world outside the wilderness, frequently claimed the companionship, if not the hospitality of the fur companies, in their wanderings over prairies and among mountains. Up to the year 1835, these visitors had been of the classes just named; men traveling either for the love of adventure, to prosecute discoveries in science, or to add to art the treasure of new scenes and subjects.

But in this year there appeared at rendezvous two gentlemen, who had accompanied the St. Louis Company in its outward trip to the mountains, whose object was not the procurement of pleasure, or the improvement of science. They had come to found missions among the Indians; the Rev. Samuel Parker and Rev. Dr. Marcus Whitman; the first a scholarly and fastidious man, and the other possessing all the boldness, energy, and contempt of fastidiousness, which would have made him as good a mountain leader, as he was an energetic servant of the American Board of Foreign Missions.

The cause which had brought these gentlemen to the wilderness was a little incident connected

with the fur trade. Four Flathead Indians, in the year 1832, having heard enough of the Christian religion, from the few devout men connected with the fur companies, to desire to know more, performed a winter journey to St. Louis, and there made inquiry about the white man's religion. This incident, which to any one acquainted with Indian character, would appear a very natural one, when it became known to Christian churches in the United States, excited a very lively interest, and seemed to call upon them like a voice out of heaven, to fly to the rescue of perishing heathen souls. The Methodist Church was the first to respond. When Wyeth returned to the mountains in 1834, four missionaries accompanied him, destined for the valley of the Willamette River in Oregon. In the following year, the Presbyterian Church sent out its agents, the two gentlemen above mentioned; one of whom, Dr. Whitman, subsequently located near Fort Walla-Walla.

The account given by Capt. Bonneville of the Flatheads and Nez Perces, as he found them in 1832, before missionary labor had been among them, throws some light on the incident of the journey to St. Louis, which so touched the Christian heart in the United States. After relating his surprise at finding that the Nez Perces observed certain sacred days, he continues: "A few days afterwards, four of them signified that they were about to hunt. 'What!' exclaimed the captain, 'without guns or arrows; and with only one old spear? What do you expect to kill?' They smiled among themselves, but made no answer. Preparatory to the chase, they performed some religious rights, and offered up to the Great Spirit a few short prayers for safety and success; then having received the blessing of their wives, they leaped upon their horses and departed, leaving the whole party of Christian spectators amazed and rebuked by this lesson of faith and dependence on a supreme and benevolent Being. Accustomed as I had heretofore been to find the wretched Indian reveling in blood, and stained by every vice which can degrade human nature, I could scarcely realize the scene which I had witnessed. Wonder at such unaffected tenderness and piety, where it was least to have been sought, contended in all our bosoms with shame and confusion, at receiving such pure and wholesome instructions from creatures so far below us in all the arts and comforts of life.

"Simply to call these people religious," continued Bonneville, "would convey but a faint idea of the deep hue of piety and devotion which pervades their whole conduct. Their honesty is immaculate, and their purity of purpose, and their observance of the rites of their religion, are most uniform and remarkable. They are certainly more like a nation of saints than a horde of savages."

This was a very enthusiastic view to take of the Nez Perce character, which appeared all the brighter to the Captain, by contrast with the savage life which he had witnessed in other places, and even by contrast with the conduct of the white trappers. But the Nez Perces and Flatheads were, intellectually and morally, an exception to all the Indian tribes west of the Missouri River. Lewis and Clarke found them different from any others; the fur traders and the missionaries found them different; and they remain at this day an honorable example, for probity and piety, to both savage and civilized peoples.

To account for this superiority is indeed difficult. The only clue to the cause is in the following statement of Bonneville's. "It would appear," he says, "that they had imbibed some notions of the

The River of the West

---

Christian faith from Catholic missionaries and traders who had been among them. They even had a rude calendar of the fasts and festivals of the Romish Church, and some traces of its ceremonies. These have become blended with their own wild rites, and present a strange medley, civilized and barbarous.”

Finding that these people among whom he was thrown exhibited such remarkable traits of character, Captain Bonneville exerted himself to make them acquainted with the history and spirit of Christianity. To these explanations they listened with great eagerness. “Many a time,” he says, “was my little lodge thronged, or rather piled with hearers, for they lay on the ground, one leaning over the other, until there was no further room, all listening with greedy ears to the wonders which the Great Spirit had revealed to the white man. No other subject gave them half the satisfaction, or commanded half the attention; and but few scenes of my life remain so freshly on my memory, or are so pleasurably recalled to my contemplation, as these hours of intercourse with a distant and benighted race in the midst of the desert.”

It was the interest awakened by these discourses of Captain Bonneville, and possibly by Smith, and other traders who happened to fall in with the Nez Perces and Flatheads, that stimulated those four Flatheads to undertake the journey to St. Louis in search of information; and this it was which resulted in the establishment of missions, both in western Oregon, and among the tribes inhabiting the country between the two great branches of the Columbia.

The trait of Indian character which Bonneville, in his pleased surprise at the apparent piety of the Nez Perces and Flatheads, failed to observe, and which the missionaries themselves for a long time remained oblivious to, was the material nature of their religious views. The Indian judges of all things by the material results. If he is possessed of a good natural intelligence and powers of observation, he soon discovers that the God of the Indian is but a feeble deity; for does he not permit the Indian to be defeated in war; to starve, and to freeze? Do not the Indian medicine men often fail to save life, to win battles, to curse their enemies? The Indian's God, he argues, must be a good deal of a humbug. He sees the white men faring much better. They have guns, ammunition, blankets, knives, everything in plenty; and they are successful in war; are skillful in a thousand things the Indian knows nothing of. To be so blest implies a very wise and powerful Deity. To gain all these things they are eager to learn about the white man's God; are willing to do whatever is necessary to please and propitiate Him. Hence the attentiveness to the white man's discourse about his religion. Naturally enough they were struck with wonder at the doctrine of peace and good will; a doctrine so different from the law of blood by which the Indian, in his natural state, lives. Yet if it is good for the white men, it must be good for him; at all events he is anxious to try it.

That is the course of reasoning by which an Indian is led to inquire into Christianity. It is a desire to better his physical, rather than his spiritual condition; for of the latter he has but a very faint conception. He was accustomed to desire a material Heaven, such a world beyond the grave, as he could only imagine from his earthly experience. Heaven was happiness, and happiness was plenty; therefore the most a good Indian could desire was to go where there should forevermore be plenty.

Such was the Indian's view of religion, and it could be no other. Until the wants of the body have been supplied by civilization, the wants of the soul do not develop themselves: and until then the savage is not prepared to understand Christianity. This is the law of Nature and of God. Primeval man was a savage; and it was little by little, through thousands of years, that Christ was revealed. Every child born, even now, is a savage, and has to be taught civilization year after year, until he arrives at the possibility of comprehending spiritual religion. So every full grown barbarian is a child in moral development; and to expect him to comprehend those mysteries over which the world has agonized for centuries, is to commit the gravest error. Into this error fell all the missionaries who came to the wilds that lay beyond the Rocky Mountains. They undertook to teach religion first, and more simple matters afterward--building their edifice like the Irishman's chimney, by holding up the top brick, and putting the others under it. Failure was the result of such a process, as the record of the Oregon Missions sufficiently proves.

The reader will pardon this digression--made necessary by the part which one of the gentlemen present at this year's rendezvous, was destined to take in the history which we are writing. Shortly after the arrival of Messrs Parker and Whitman, rendezvous broke up. A party, to which Meek was attached, moved in the direction of the Snake River head-waters, the missionaries accompanying them, and after making two camps, came on Saturday eve to Jackson's Little Hole, a small mountain valley near the larger one commonly known as Jackson's Hole.

On the following day religious services were held in the Rocky Mountain Camp. A scene more unusual could hardly have transpired than that of a company of trappers listening to the preaching of the Word of God. Very little pious reverence marked the countenances of that wild and motley congregation. Curiosity, incredulity, sarcasm, or a mocking levity, were more plainly perceptible in the expression of the men's faces, than either devotion or the longing expectancy of men habitually deprived of what they once highly valued. The Indians alone showed by their eager listening that they desired to become acquainted with the mystery of the "Unknown God."

The Rev. Samuel Parker preached, and the men were as politely attentive as it was in their reckless natures to be, until, in the midst of the discourse, a band of buffalo appeared in the valley, when the congregation incontinently broke up, without staying for a benediction, and every man made haste after his horse, gun, and rope, leaving Mr. Parker to discourse to vacant ground.

The run was both exciting and successful. About twenty fine buffaloes were killed, and the choice pieces brought to camp, cooked and eaten, amidst the merriment, mixed with something coarser, of the hunters. On this noisy rejoicing Mr. Parker looked with a sober aspect: and following the dictates of his religious feeling, he rebuked the sabbath-breakers quite severely. Better for his influence among the men, if he had not done so, or had not eaten so heartily of the tender-loin afterwards, a circumstance which his irreverent critics did not fail to remark, to his prejudice; and upon the principle that the "partaker is as bad as the thief;" they set down his lecture on sabbath-breaking as nothing better than pious humbug.

The River of the West

---

Dr. Marcus Whitman was another style of man. Whatever he thought of the wild ways of the mountain-men he discreetly kept to himself, preferring to teach by example rather than precept; and showing no fastidious contempt for any sort of rough duty he might be called upon to perform. So aptly indeed had he turned his hand to all manner of camp service on the journey to the mountains, that this abrogation of clerical dignity had become a source of solicitude, not to say disapproval and displeasure on the part of his colleague; and it was agreed between them that the Doctor should return to the states with the St. Louis Company, to procure recruits for the promising field of labor which they saw before them, while Mr. Parker continued his journey to the Columbia to decide upon the location of the missionary stations. The difference of character of the two men was clearly illustrated by the results of this understanding. Parker went to Vancouver, where he was hospitably entertained, and where he could inquire into the workings of the missionary system as pursued by the Methodist missionaries. His investigations not proving the labor to his taste, he sailed the following summer for the Sandwich Islands, and thence to New York; leaving only a brief note for Doctor Whitman, when he, with indefatigable exertions, arrived that season among the Nez Perces with a missionary company, eager for the work which they hoped to make as great as they believed it to be good.

The River of the West

Chapter XIV

From the mountains about the head-waters of the Snake River, Meek returned, with Bridger's brigade to the Yellowstone country, where he fell into the hands of the Crows. The story as he relates it, is as follows:

"I war trapping on the Rocky Fork of the Yellowstone. I had been out from camp five days; and war solitary and alone, when I war discovered by a war party of Crows. They had the prairie, and I war forced to run for the Creek bottom; but the beaver had thronged the water out and made dams, so that my mule mired down. While I war struggling in the marsh, the Indians came after me, with tremendous yells; firing a random shot now and then, as they closed in on me.

"When they war within about two rods of me, I brought old Sally, that is my gun, to my face, ready to fire, and then die; for I knew it war death this time, unless Providence interfered to save me: and I didn't think Providence would do it. But the head chief, when he saw the warlike looks of Sally, called out to me to put down my gun, and I should live.

"Well, I liked to live,--being then in the prime of life; and though it hurt me powerful, I resolved to part with Sally. I laid her down. As I did so, the chief picked her up, and one of the braves sprang at me with a spear, and would have run me through, but the chief knocked him down with the butt of my gun. Then they led me forth to the high plain on the south side of the stream. There they called a halt, and I was given in charge of three women, while the warriors formed a ring to smoke and consult. This gave me an opportunity to count them: they numbered one hundred and eighty-seven men, nine boys, and three women.

“After a smoke of three long hours, the chief, who war named ‘The Bold,’ called me in the ring, and said:

“ ‘I have known the whites for a long time, and I know them to be great liars, deserving death; but if you will tell the truth, you shall live.’

“Then I thought to myself, they will fetch the truth out of me, if thar is any in me. But his highness continued:

“ ‘Tell me whar are the whites you belong to; and what is your captain’s name.’

“I said ‘Bridger is my captain’s name; or, in the Crow tongue, Casapy,’ the ‘Blanket chief.’ At this answer the chief seemed lost in thought. At last he asked me--

“ ‘How many men has he ?’

“I thought about telling the truth and living; but I said ‘forty,’ which war a tremendous lie; for thar war two hundred and forty. At this answer The Bold laughed:

“‘We will make them poor,’ said he; ‘and you shall live, but they shall die.’

“I thought to myself, ‘hardly ;’ but I said nothing. He then asked me whar I war to meet the camp, and I told him:--and then how many days before the camp would be thar; which I answered truly, for I wanted them to find the camp.

“It war now late in the afternoon, and thar war a great bustle, getting ready for the march to meet Bridger. Two big Indians mounted my mule, but the women made me pack moccasins. The spies started first, and after awhile the main party. Seventy warriors traveled ahead of me: I war placed with the women and boys; and after us the balance of the braves. As we traveled along, the women would prod me with sticks, and laugh, and say ‘Masta Sheela,’ (which means white man,) ‘Masta sheela very poor now.’ The fair sex war very much amused.

“We traveled that way till midnight, the two big bucks riding my mule, and I packing moccasins. Then we camped; the Indians in a ring, with me in the centre, to keep me safe. I didn’t sleep very well that night. I’d a heap rather been in some other place.

“The next morning we started on in the same order as before: and the squaws making fun of me all day; but I kept mighty quiet. When we stopped to cook that evening, I war set to work, and war head cook, and head waiter too. The third and the fourth day it war the same. I felt pretty bad when we struck camp on the last day: for I knew we must be coming near to Bridger, and that if any thing should go wrong, my life would pay the forfeit.

“On the afternoon of the fourth day, the spies, who war in advance, looking out from a high hill,

---

The River of the West

---

made a sign to the main party. In a moment all sat down. Directly they got another sign, and then they got up and moved on. I war as well up in Indian signs as they war; and I knew they had discovered white men. What war worse, I knew they would soon discover that I had been lying to them. All I had to do then war to trust to luck. Soon we came to the top of the hill, which overlooked the Yellowstone, from which I could see the plains below extending as far as the eye could reach, and about three miles off, the camp of my friends. My heart beat double quick about that time; and I once in a while put my hand to my head, to feel if my scalp war thar.

“While I war watching our camp, I discovered that the horse guard had seen us, for I knew the sign he would make if he discovered Indians. I thought the camp a splendid sight that evening. It made a powerful show to me, who did not expect ever to see it after that day. And it war a fine sight any how, from the hill whar I stood. About two hundred and fifty men, and women and children in great numbers, and about a thousand horses and mules. Then the beautiful plain, and the sinking sun; and the herds of buffalo that could not be numbered; and the cedar hills, covered with elk,--I never saw so fine a sight as all that looked to me then!

“When I turned my eyes on that savage Crow band, and saw the chief standing with his hand on his mouth, lost in amazement; and beheld the warriors’ tomahawks and spears glittering in the sun, my heart war very little. Directly the chief turned to me with a horrible scowl. Said he:

“I promised that you should live if you told the truth; but you have told me a great lie.’

“Then the warriors gathered around, with their tomahawks in their hands; but I war showing off very brave, and kept my eyes fixed on the horse-guard who war approaching the hill to drive in the horses. This drew the attention of the chief, and the warriors too. Seeing that the guard war within about two hundred yards of us, the chief turned to me and ordered me to tell him to come up. I pretended to do what he said; but instead of that I howled out to him to stay off, or he would be killed; and to tell Bridger to try to treat with them, and get me away.

“As quick as he could he ran to camp, and in a few minutes Bridger appeared, on his large white horse. He came up to within three hundred yards of us, and called out to me, asking who the Indians war. I answered ‘Crows.’ He then told me to say to the chief he wished him to send one of his sub-chiefs to smoke with him.

“All this time my heart beat terribly hard. I don’t know now why they didn’t kill me at once; but the head chief seemed overcome with surprise. When I repeated to him what Bridger said, he reflected a moment, and then ordered the second chief, called Little-Gun, to go and smoke with Bridger. But they kept on preparing for war; getting on their paint and feathers, arranging their scalp locks, selecting their arrows, and getting their ammunition ready.

“While this war going on, Little-Gun had approached to within about a hundred yards of Bridger; when, according to the Crow laws of war, each war forced to strip himself, and proceed the remaining distance in a state of nudity, and kiss and embrace. While this interesting ceremony

The River of the West

---

war being performed, five of Bridger's men had followed him, keeping in a ravine until they got within shooting distance, when they showed themselves, and cut off the return of Little-Gun, thus making a prisoner of him.

"If you think my heart did not jump up when I saw that, you think wrong. I knew it war kill or cure, now. Every Indian snatched a weapon, and fierce threats war howled against me. But all at once about a hundred of our trappers appeared on the scene. At the same time Bridger called to me, to tell me to propose to the chief to exchange me for Little-Gun. I explained to The Bold what Bridger wanted to do, and he sullenly consented: for, he said, he could not afford to give a chief for one white dog's scalp. I war then allowed to go towards my camp, and Little-Gun towards his; and the rescue I hardly hoped for war accomplished.

"In the evening the chief, with forty of his braves, visited Bridger and made a treaty of three months. They said they war formerly at war with the whites; but that they desired to be friendly with them now, so that together they might fight the Blackfeet, who war everybody's enemies. As for me, they returned me my mule, gun, and beaver packs, and said my name should be Shiam Shaspusia, for I could out-lie the Crows."

In December, Bridger's command went into winter quarters in the bend of the Yellowstone. Buffalo, elk and bear were in great abundance, all that fall and winter. Before they went to camp, Meek, Kit Carson, Hawkins; and Doughty were trapping together on the Yellowstone, about sixty miles below. They had made their temporary camp in the ruins of an old fort, the walls of which were about six feet high. One evening, after coming in from setting their traps, they discovered three large grizzly bears in the river bottom, not more than half a mile off and Hawkins went out to shoot one. He was successful in killing one at the first shot, when the other two, taking fright, ran towards the fort. As they came near enough to show that they were likely to invade camp, Meek and Carson, not caring to have a bear fight, clambered up a cotton-wood tree close by, at the same time advising Doughty to do the same. But Doughty was tired, and lazy besides, and concluded to take his chances where he was; so he rolled himself in his blanket and laid quite still. The bears, on making the fort, reared up on their hind legs and looked in as if meditating taking it for a defence.

The sight of Doughty lying rolled in his blanket, and the monster grizzlies inspecting the fort, caused the two trappers who were safely perched in the cotton-wood to make merry at Doughty's expense; saying all the mirth provoking things they could, and then advising him not to laugh, for fear the bears should seize him. Poor Doughty, agonizing between suppressed laughter and growing fear, contrived to lie still however, while the bears gazed upward at the speakers in wonder, and alternately at the suspicious looking bundle inside the fort. Not being able to make out the meaning of either, they gave at last a grunt of dissatisfaction, and ran off into a thicket to consult over these strange appearances; leaving the trappers to enjoy the incident as a very good joke. For a long time after, Doughty was reminded how close to the ground he laid, when the grizzlies paid their compliments to him. Such were the every-day incidents which the mountain-men contrived to derive their rude jests, and laughter-provoking reminiscences.

The River of the West

---

A few days after this incident, while the same party were trapping a few miles farther down the river, on their way to camp, they fell in with some Delaware Indians, who said they had discovered signs of Blackfeet, and wanted to borrow some horses to decoy them. To this the trappers very willingly agreed, and they were furnished with two horses. The Delawares then went to the spot where signs had been discovered, and tying the horses, laid flat down on the ground near them, concealed by the grass or willows. They had not long to wait before a Blackfoot was seen stealthily advancing through the thicket, confident in the belief that he should gain a couple of horses while their supposed owners were busy with their traps.

But just as he laid his hand on the bridle of the first one, crack went the rifles of the Delawares, and there was one less Blackfoot thief on the scent after trappers. As soon as they could, after this, the party mounted and rode to camp, not stopping by the way, lest the main body of Blackfeet should discover the deed and seek for vengeance. Truly indeed, was the Blackfoot the Ishmael of the wilderness, whose hand was against every man, and every man's hand against him.

The Rocky Mountain Company passed the first part of the winter in peace and plenty in the Yellowstone camp, unannoyed either by enemies or rivals. Hunting buffalo, feeding their horses, playing games, and telling stories, occupied the entire leisure of these months of repose. Not only did the mountain-men recount their own adventures, but when these were exhausted, those whose memories served them rehearsed the tales they had read in their youth. Robinson Crusoe and the Arabian Nights Entertainment, were read over again by the light of memory; and even Bunyan's Pilgrim's Progress was made to recite like a sensation novel, and was quite as well enjoyed.

1836. In January, however, this repose was broken in upon by a visit from the Blackfeet. As their visitations were never of a friendly character, so then they were not bent upon pacific rites and ceremonies, such as all the rest of the world find pleasure in, but came in full battle array to try their fortunes in war against the big camp of the whites. They had evidently made great preparation. Their warriors numbered eleven hundred, got up in the top of the Blackfoot fashions, and armed with all manner of savage and some civilized weapons. But Bridger was prepared for them, although their numbers were so overwhelming. He built a fort, had the animals corraled, and put himself on the defensive in a prompt and thorough manner. This made the Blackfeet cautious; they too built forts of cotton-wood in the shape of lodges, ten men to each fort, and carried on a skirmishing fight for two days, when finding there was nothing to be gained, they departed, neither side having sustained much loss; the whites losing only two men by this grand Blackfoot army.

Soon after this attack Bridger broke camp, and traveled up the Yellowstone, through the Crow country. It was while on this march that Umentucken was struck by a Crow, and Meek put the whole camp in peril, by shooting him. They passed on to the Big Horn and Little Horn rivers, down through the Wind River valley and through the South Pass to Green River.

While in that country, there occurred the fight with the Bannacks in which Umentucken was

---

killed. A small party of Nez Perces had lost their horses by the thieving of the Bannacks. They came into camp and complained to the whites, who promised them their protection, should they be able to recover their horses. Accordingly the Nez Perces started after the thieves, and by dogging their camp, succeeded in re-capturing their horses and getting back to Bridger's camp with them. In order to divert the vengeance of the Bannacks from themselves, they presented their horses to the whites, and a very fine one to Bridger.

All went well for a time. The Bannacks went on their way to hunt buffalo; but they treasured up their wrath against the supposed white thieves who had stolen the horses which they had come by so honestly. On their return from the hunt, having learned by spies that the horses were in the camp of the whites, they prepared for war. Early one morning they made their appearance mounted and armed, and making a dash at the camp, rode through it with the usual yells and frantic gestures. The attack was entirely unexpected. Bridger stood in front of his lodge, holding his horse by a lasso, and the head chief rode over it, jerking it out of his hand. At this unprecedented insult to his master, a negro named Jim, cook to the Booshways, seized a rifle and shot the chief dead. At the same time, an arrow shot at random struck Umentucken in the breast, and the joys and sorrows of the Mountain Lamb were over forevermore.

The killing of a head chief always throws an Indian war party into confusion, and negro Jim was greatly elated at this signal feat of his. The trappers, who were as much surprised at the suddenness of the assault as it is in the mountain-man's nature to be, quickly recovered themselves. In a few moments the men were mounted and in motion, and the disordered Bannacks were obliged to fly towards their village, Bridger's company pursuing them.

All the rest of that day the trappers fought the Bannacks, driving them out of their village and plundering it, and forcing them to take refuge on an island in the river. Even there they were not safe, the guns of the mountain-men picking them off, from their stations on the river banks. Umentucken was well avenged that day.

All night the Indians remained on the island, where sounds of wailing were heard continually; and when morning came one of their old women appeared bearing the pipe of peace. "You have killed all our warriors," she said; "do you now want to kill the women? If you wish to smoke with women, I have the pipe."

Not caring either to fight or to smoke with so feeble a representative of the Bannacks, the trappers withdrew. But it was the last war party that nation ever sent against the mountain-men; though in later times they have by their atrocities avenged the losses of that day.

While awaiting, in the Green River valley, the arrival of the St. Louis Company, the Rocky Mountain and North American companies united; after which Captain Sublette and his brother returned no more to the mountains. The new firm was known only as the American Fur Company, the other having dropped its title altogether. The object of their consolidation was by combining their capital and experience to strengthen their hands

against the Hudson's Bay Company, which now had an establishment at Fort Hall, on the Snake River. By this new arrangement, Bridger and Fontenelle commanded; and Dripps was to be the traveling partner who was to go to St. Louis for goods.

After the conclusion of this agreement, Dripps, with the restlessness of the true mountain-man, decided to set out, with a small party of equally restless trappers, always eager to volunteer for any undertaking promising either danger or diversion, to look for the St. Louis Company which was presumed to be somewhere between the Black Hills and Green River. According to this determination Dripps, Meek, Carson, Newell, a Flathead chief named Victor, and one or two others, set out on the search for the expected company.

It happened, however, that a war party of a hundred Crows were out on the trail before them, looking perhaps for the same party, and the trappers had not made more than one or two camps before they discovered signs which satisfied them of the neighborhood of an enemy. At their next camp on the Sandy, Meek and Carson, with the caution and vigilance peculiar to them, kept their saddles on their horses, and the horses tied to themselves by a long rope, so that on the least unusual motion of the animals they should be readily informed of the disturbance. Their precaution was not lost. Just after midnight had given place to the first faint kindling of dawn, their ears were stunned by the simultaneous discharge of a hundred guns, and the usual furious din of the war-whoop and yell. A stampede immediately took place of all the horses excepting those of Meek and Carson. "Every man for himself and God for us all," is the motto of the mountain-man in case of an Indian attack; nor did our trappers forget it on this occasion. Quickly mounting, they put their horses to their speed, which was not checked until they had left the Sandy far behind them. Continuing on in the direction of the proposed meeting with the St. Louis Company, they made their first camp on the Sweetwater, where they fell in with Victor, the Flathead chief, who had made his way on foot to this place. One or two others came into camp that night, and the following day this portion of the party traveled on in company until within about five miles of Independence Rock, when they were once more charged on by the Indians, who surrounded them in such a manner that they were obliged to turn back to escape.

Again Meek and Carson made off, leaving their dismounted comrades to their own best devices. Finding that with so many Indians on the trail, and only two horses, there was little hope of being able to accomplish their journey, these two lucky ones made all haste back to camp. On Horse Creek, a few hours travel from rendezvous, they came up with Newell, who after losing his horse had fled in the direction of the main camp, but becoming bewildered had been roaming about until he was quite tired out, and on the point of giving up. But as if the Creek where he was found meant to justify itself for having so inharmonious a name, one of their own horses, which had escaped from the Crows was found quietly grazing on its banks, and the worn out fugitive at once remounted. Strange as it may appear, not one of the party was killed, the others returning to camp two days later than Meek and Carson, the worse for their expedition only by the loss of their horses, and rather an unusually fatigued and forlorn aspect.

The River of the West

Chapter XV

---

1836. While the resident partners of the consolidated company waited at the rendezvous for the arrival of the supply trains from St. Louis, word came by a messenger sent forward, that the American Company under Fitzpatrick, had reached Independence Rock, and was pressing forward. The messenger also brought the intelligence that two other parties were traveling in company with the fur company; that of Captain Stuart, who had been to New Orleans to winter, and that of Doctor Whitman, one of the missionaries who had visited the mountains the year previous. In this latter party, it was asserted, there were two white ladies.

This exhilarating news immediately inspired some of the trappers, foremost among whom was Meek, with a desire to be the first to meet and greet the on-coming caravan; and especially to salute the two white women who were bold enough to invade a mountain camp. In a very short time Meek, with half-a-dozen comrades, and ten or a dozen Nez Perces, were mounted and away, on their self-imposed errand of welcome; the trappers because they were "spoiling" for a fresh excitement; and the Nez Perces because the missionaries were bringing them information concerning the powerful and beneficent Deity of the white men. These latter also were charged with a letter to Doctor Whitman from his former associate, Mr. Parker.

On the Sweetwater about two days' travel from camp the caravan of the advancing company was discovered, and the trappers prepared to give them a characteristic greeting. To prevent mistakes in recognizing them, a white flag was hoisted on one of their guns, and the word was given to start. Then over the brow of a hill they made their appearance, riding with that mad speed only an Indian or a trapper can ride, yelling, whooping, dashing forward with frantic and threatening gestures; their dress, noises, and motions, all so completely savage that the white men could not have been distinguished from the red.

The first effect of their onset was what they probably intended. The uninitiated travelers, including the missionaries, believing they were about to be attacked by Indians, prepared for defence, nor could be persuaded that the preparation was unnecessary until the guide pointed out to them the white flag in advance. At the assurance that the flag betokened friends, apprehension was changed to curiosity and intense interest. Every movement of the wild brigade became fascinating. On they came, riding faster and faster, yelling louder and louder, and gesticulating more and more madly, until, as they met and passed the caravan, they discharged their guns in one volley over the heads of the company, as a last finishing feu de joie; and suddenly wheeling rode back to the front as wildly as they had come. Nor could this first brief display content tile crazy cavalcade. After reaching the front, they rode back and forth, and around and around the caravan which had returned their salute, showing off their feats of horsemanship, and the knowing tricks of their horses together; hardly stopping to exchange questions and answers, but seeming really intoxicated with delight at the meeting. What strange emotions filled the breasts of the lady missionaries, when they beheld among whom their lot was cast, may now be faintly outlined by a vivid imagination, but have never been, perhaps never could be put into words.

The caravan on leaving the settlements had consisted of nineteen laden carts, each drawn by two mules driven tandem, and one light wagon, belonging to the American Company; two wagons with two mules to each, belonging to Capt. Stuart; and one light two-horse wagon, and one four horse freight wagon, belonging to the missionaries. However, all the wagons had been left behind at Fort Laramie, except those of the missionaries, and one of Capt. Stuart's; so that the three that remained in the train when it reached the Sweetwater were alone in the enjoyment of the Nez Perces' curiosity concerning them; a curiosity which they divided between them and the domesticated cows and calves belonging to the missionaries: another proof, as they considered it, of the superior power of the white man's God, who could give to the whites the ability to tame wild animals to their uses.

But it was towards the two missionary ladies, Mrs. Whitman and Mrs. Spalding, that the chief interest was directed; an interest that was founded in the Indian mind upon wonder, admiration, and awe; and in the minds of the trappers upon the powerful recollections awakened by seeing in their midst two refined Christian women, with the complexion and dress of their own mothers and sisters. United to this startling effect of memory, was respect for the religious devotion which had inspired them to undertake the long and dangerous journey to the Rocky Mountains, and also a sentiment of pity for what they knew only too well yet remained to be encountered by those delicate women in the prosecution of their duty.

Mrs. Whitman, who was in fine health, rode the greater part of the journey on horseback. She was a large, stately, fair-skinned woman, with blue eyes and light auburn, almost golden hair. Her manners were at once dignified and gracious. She was, both by nature and education a lady; and had a lady's appreciation of all that was courteous and refined; yet not without an element of romance and heroism in her disposition strong enough to have impelled her to undertake a missionary's life in the wilderness.

Mrs. Spalding was a different type of woman. Talented and refined in her nature, she was less pleasing in exterior, and less attached to that which was superficially pleasing in others. But an indifference to outside appearances was in her case only a sign of her absorption in the work she had taken in hand. She possessed the true missionary spirit, and the talent to make it useful in an eminent degree; never thinking of herself, or the impression she made upon others; yet withal very firm and capable of command. Her health, which was always rather delicate, had suffered much from the fatigue of the journey, and the constant diet of fresh meat, and meat only, so that she was compelled at last to abandon horseback exercise, and to keep almost entirely to the light wagon of the missionaries.

As might be expected, the trappers turned from the contemplation of the pale, dark-haired occupant of the wagon, with all her humility and gentleness, to observe and admire the more striking figure, and more affably attractive manners of Mrs. Whitman. Meek, who never lost an opportunity to see and be seen, was seen riding alongside Mrs. Whitman, answering her curious inquiries, and entertaining her with stories of Blackfeet battles, and encounters with grizzly bears.

The River of the West

---

Poor lady! could she have looked into the future about which she was then so curious, she would have turned back appalled, and have fled with frantic fear to the home of her grieving parents. How could she then behold in the gay and boastful mountaineer, whose peculiarities of dress and speech so much diverted her, the very messenger who was to bear to the home of her girlhood the sickening tale of her bloody sacrifice to savage superstition and revenge? Yet so had fate decreed it.

When the trappers and Nez Perces had slaked their thirst for excitement by a few hours' travel in company with the Fur Company's and Missionary's caravan, they gave at length a parting display of horsemanship, and dashed off on the return trail to carry to camp the earliest news. It was on their arrival in camp that the Nez Perce and Flathead village, which had its encampment at the rendezvous ground on Green River, began to make preparations for the reception of the missionaries. It was then that Indian finery was in requisition! Then the Indian women combed and braided their long black hair, tying the plaits with gay-colored ribbons, and the Indian braves tied anew their streaming scalp-locks, sticking them full of flaunting eagle's plumes, and not despising a bit of ribbon either. Paint was in demand both for the rider and his horse. Gay blankets, red and blue, buckskin fringed shirts, worked with beads and porcupine quills, and handsomely embroidered moccasins, were eagerly sought after. Guns were cleaned and burnished, and drums and fifes put in tune.

After a day of toilsome preparation all was ready for the grand reception in the camp of the Nez Perces. Word was at length given that the caravan was in sight. There was a rush for horses, and in a few moments the Indians were mounted and in line, ready to charge on the advancing caravan. When the command of the chiefs was given to start, a simultaneous chorus of yells and whoops burst forth, accompanied by the deafening din of the war-drum, the discharge of fire-arms, and the clatter of the whole cavalcade, which was at once in a mad gallop toward the on-coming train. Nor did the yelling, whooping, drumming, and firing cease until within a few yards of the train.

All this demoniac hub-bub was highly complimentary toward those for whom it was intended; but an unfortunate ignorance of Indian customs caused the missionaries to fail in appreciating the honor intended them. Instead of trying to reciprocate the noise by an attempt at imitating it, the missionary camp was alarmed at the first burst and at once began to drive in their cattle and prepare for an attack. As the missionary party was in the rear of the train they succeeded in getting together their loose stock before the Nez Perces had an opportunity of making themselves known, so that the leaders of the Fur Company, and Captain Stuart, had the pleasure of a hearty laugh at their expense, for the fright they had received.

A general shaking of hands followed the abatement of the first surprise, the Indian women saluting Mrs. Whitman and Mrs. Spalding with a kiss, and the missionaries were escorted to their camping ground near the Nez Perce encampment. Here the whole village again formed in line, and a more formal introduction of the missionaries took place, after which they were permitted to go into camp.

The River of the West

---

When the intention of the Indians became known, Dr. Whitman, who was the leader of the missionary party, was boyishly delighted with the reception which had been given him. His frank, hearty, hopeful nature augured much good from the enthusiasm of the Indians. If his estimation of the native virtues of the savages was much too high, he suffered with those whom he caused to suffer for his belief, in the years which followed. Peace to the ashes of a good man! And honor to his associates, whose hearts were in the cause they had undertaken of Christianizing the Indians. Two of them still live--one of whom, Mr. Spalding, has conscientiously labored and deeply suffered for the faith. Mr. Gray, who was an unmarried man, returned the following year to the States, for a wife, and settled for a time among the Indians, but finally abandoned the missionary service, and removed to the Wallamet valley. These five persons constituted the entire force of teachers who could be induced at that time to devote their lives to the instruction of the savages in the neighborhood of the Rocky Mountains.

The trappers, and gentlemen of the Fur Company and Captain Stuart, had been passive but interested spectators of the scene between the Indians and the missionaries. When the excitement had somewhat subsided, and the various camps had become settled in their places, the tents of the white ladies were besieged with visitors, both civilized and savage. These ladies, who were making an endeavor to acquire a knowledge of the Nez Perce tongue in order to commence their instructions in the language of the natives, could have made very little progress, had their purpose been less strong than it was. Mrs. Spalding perhaps succeeded better than Mrs. Whitman in the difficult study of the Indian dialect. She seemed to attract the natives about her by the ease and kindness of her manner, especially the native women, who, seeing she was an invalid, clung to her rather than to her more lofty and self-asserting associate.

On the contrary, the leaders of the American Fur Company, Captain Wyeth and Captain Stuart, paid Mrs. Whitman the most marked and courteous attentions. She shone the bright particular star of that Rocky Mountain encampment, softening the hearts and the manners of all who came within her womanly influence. Not a gentleman among them but felt her silent command upon him to be his better self while she remained in his vicinity; not a trapper or camp-keeper but respected the presence of womanhood and piety. But while the leaders paid court to her, the bashful trappers contented themselves with promenading before her tent. Should they succeed in catching her eye, they never failed to touch their beaver skin caps in their most studiously graceful manner, though that should prove so dubious as to bring a mischievous smile to the blue eyes of the observant lady.

But our friend Joe Meek did not belong by nature to the bashful brigade. He was not content with disporting himself in his best trapper's toggery in front of a lady's tent. He became a not infrequent visitor, and amused Mrs. Whitman with the best of his mountain adventures, related in his soft, slow, yet smooth and firm utterance, and with many a merry twinkle of his mirthful dark eyes. In more serious moments he spoke to her of the future, and of his determination, sometime, to "settle down." When she inquired if he had fixed upon any spot which in his imagination he could regard as "home" he replied that he could not content himself to return to civilized life, but thought that when he gave up "bar fighting and Injun fighting" he should go down to the Walla-

The River of the West

---

met valley and see what sort of life he could make of it there. How he lived up to this determination will be seen hereafter.

The missionaries remained at the rendezvous long enough to recruit their own strength and that of their stock, and to restore to something like health the invalid Mrs. Spalding, who, on changing her diet to dried meat, which the resident partners were able to supply her, commenced rapidly to improve. Letters were written and given to Capt. Wyeth to carry home to the States. The Captain had completed his sale of Fort Hall and the goods it contained to the Hudson's Bay Company only a short time previous, and was now about to abandon the effort to establish any enterprise either on the Columbia or in the Rocky Mountains. He had, however, executed his threat of the year previous, and punished the bad faith of the Rocky Mountain Company by placing them in direct competition with the Hudson's Bay Company.

The missionaries now prepared for their journey to the Columbia River. According to the advice of the mountain-men the heaviest wagon was left at the rendezvous, together with every heavy article that could be dispensed with. But Dr. Whitman refused to leave the light wagon, although assured he would never be able to get it to the Columbia, nor even to the Snake River. The good Doctor had an immense fund of determination when there was an object to be gained or a principle involved. The only persons who did not oppose wagon transportation were the Indians. They sympathised with his determination, and gave him their assistance. The evidences of a different and higher civilization than they had ever seen were held in great reverence by them. The wagons, the domestic cattle, especially the cows and calves, were always objects of great interest with them. Therefore they freely gave their assistance, and a sufficient number remained behind to help the Doctor, while the main party of both missionaries and Indians, having bidden the Fur Company and others farewell, proceeded to join the camp of two Hudson's Bay traders a few miles on their way.

The two traders, whose camp they now joined, were named McLeod and McKay. The latter, Thomas McKay, was the half-breed son of that unfortunate McKay in Mr. Astor's service, who perished on board the *Tonquin*, as related in Irving's *ASTORIA*. He was one of the bravest and most skillful partisans in the employ of the Hudson's Bay Company. McLeod had met the missionaries at the American rendezvous and invited them to travel in his company; an offer which they were glad to accept, as it secured them ample protection and other more trifling benefits, besides some society other than the Indians.

By dint of great perseverance, Doctor Whitman contrived to keep up with the camp day after day, though often coming in very late and very weary, until the party arrived at Fort Hall. At the fort the baggage was again reduced as much as possible; and Doctor Whitman was compelled by the desertion of his teamster to take off two wheels of his wagon and transform it into a cart which could be more easily propelled in difficult places. With this he proceeded as far as the Boise River where the Hudson's Bay Company had a small fort or trading-post; but here again he was so strongly urged to relinquish the idea of taking his wagon to the Columbia, that after much discussion he consented to leave it at Fort Boise until some future time when unencumbered by goods

or passengers he might return for it.

Arrived at the crossing of the Snake River, Mrs. Whitman and Mrs. Spalding were treated to a new mode of ferriage, which even in their varied experience they had never before met with. This new ferry was nothing more or less than a raft made of bulrushes woven together by grass ropes. Upon this frail flat-boat the passengers were obliged to stretch themselves at length while an Indian swam across and drew it after him by a rope. As the waters of the Snake River are rapid and often "dancing mad," it is easy to conjecture that the ladies were ill at ease on their bulrush ferry.

On went the party from the Snake River through the Grand Ronde to the Blue Mountains. The crossing here was somewhat difficult but accomplished in safety.

The descent from the Blue Mountains on the west side gave the missionaries their first view of the country they had come to possess, and to civilize and Christianize. That view was beautiful and grand--as goodly a prospect as longing eyes ever beheld this side of Canaan. Before them lay a country spread out like a map, with the windings of its rivers marked by fringes of trees, and its boundaries fixed by mountain ranges above which towered the snowy peaks of Mt. Hood, Mt. Adams, and Mt. Rainier. Far away could be traced the course of the Columbia; and over all the magnificent scene glowed the red rays of sunset, tinging the distant blue of the mountains until they seemed shrouded in a veil of violet mist. It were not strange that with the reception given them by the Indians, and with this bird's-eye view of their adopted country, the hearts of the missionaries beat high with hope.

The descent from the Blue Mountains brought the party out on the Umatilla River, where they camped, Mr. McLeod parting company with them at this place to hasten forward to Fort Walla-Walla, and prepare for their reception. After two more days of slow and toilsome travel with cattle whose feet were cut and sore from the sharp rocks of the mountains, the company arrived safely at Walla-Walla fort, on the third of September. Here they found Mr. McLeod, and Mr. Panbram who had charge of that post.

Mr. Panbram received the missionary party with every token of respect, and of pleasure at seeing ladies among them. The kindest attentions were lavished upon them from the first moment of their arrival, when the ladies were lifted from their horses, to the time of their departure; the apartments belonging to the fort being assigned to them, and all that the place afforded of comfortable living placed at their disposal. Here, for the first time in several months, they enjoyed the luxury of bread--a favor for which the suffering Mrs. Spalding was especially grateful.

At Walla-Walla the missionaries were informed that they were expected to visit Vancouver, the head-quarters of the Hudson's Bay Company on the Lower Columbia. After resting for two days, it was determined to make this visit before selecting places for mission work among the Indians. Accordingly the party embarked in the company's boats, for the voyage down the Columbia, which occupied six days, owing to strong head winds which were encountered at a point on the Lower Columbia, called Cape Horn. They arrived safely on the eleventh of September, at Van-

couver, where they were again received with the warmest hospitality by the Governor, Dr. John McLaughlin, and his associates. The change from the privations of wilderness life to the luxuries of Fort Vancouver was very great indeed, and two weeks passed rapidly away in the enjoyment of refined society, and all the other elegancies of the highest civilization.

At the end of two weeks, Dr. Whitman, Mr. Spalding, and Mr. Gray returned to the Upper Columbia, leaving the ladies at Fort Vancouver while they determined upon their several locations in the Indian country. After an absence of several weeks they returned, having made their selections, and on the third day of November the ladies once more embarked to ascend the Columbia, to take up their residence in Indian wigwams while their husbands prepared rude dwellings by the assistance of the natives. The spot fixed upon by Dr. Whitman for his mission was on the Walla-Walla River about thirty miles from the fort of that name. It was called Waiilatpu; and the tribe chosen for his pupils were the Cayuses, a hardy, active, intelligent race, rich in horses and pasture lands.

Mr. Spalding selected a home on the Clearwater River, among the Nez Perces, of whom we already know so much. His mission was called Lapwai. Mr. Gray went among the Flatheads, an equally friendly tribe; and here we shall leave the missionaries, to return to the Rocky Mountains and the life of the hunter and trapper. At a future date we shall fall in once more with these devoted people and learn what success attended their efforts to Christianize the Indians.

The River of the West

Chapter XVI

1836. The company of men who went north this year under Bridger and Fontenelle, numbered nearly three hundred. Rendezvous with all its varied excitements being over, this important brigade commenced its march. According to custom, the trappers commenced business on the head-waters of various rivers, following them down as the early frosts of the mountains forced them to do until finally they wintered in the plains, at the most favored spots they could find in which to subsist themselves and animals.

From Green River, Meek proceeded with Bridger's command to Lewis River, Salt River, and other tributaries of the Snake, and camped with them in Pierre's Hole, that favorite mountain valley which every year was visited by the different fur companies.

Pierre's Hole, notwithstanding its beauties, had some repulsive features, or rather perhaps one repulsive feature, which was, its great numbers of rattlesnakes. Meek relates that being once caught in a very violent thunder storm, he dismounted, and holding his horse, a fine one, by the bridle, himself took shelter under a narrow shelf of rock projecting from a precipitous bluff. Directly he observed an enormous rattlesnake hastening close by him to its den in the mountain. Congratulating himself on his snakeship's haste to get out of the storm and his vicinity, he had only time to have one rejoicing thought when two or three others followed the trail of the first one. They were

The River of the West

---

seeking the same rocky den, of whose proximity Meek now felt uncomfortably assured. Before these were out of sight, there came instead of twos and threes, tens and twenties, and then hundreds, and finally Meek believes thousands, the ground being literally alive with them. Not daring to stir after he discovered the nature of his situation, he was obliged to remain and endure the disgusting and frightful scene, while he exerted himself to keep his horse quiet, lest the reptiles should attack him. By and by, when there were no more to come, but all were safe in their holes in the rock, Meek hastily mounted and galloped in the face of the tempest in preference to remaining longer in so unpleasant a neighborhood.

There was an old Frenchman among the trappers who used to charm rattlesnakes, and handling them freely, place them in his bosom, or allow them to wind about his arms, several at a time, their flat heads extending in all directions, and their bodies waving in the air, in the most snaky and nerve-shaking manner, to the infinite disgust of all the camp, and of Hawkins and Meek in particular. Hawkins often became so nervous that he threatened to shoot the Frenchman on the instant, if he did not desist; and great was the dislike he entertained for what he termed the “d - - d infernal old wizard.”

It was often the case in the mountains and on the plains that the camp was troubled with rattlesnakes, so that each man on laying down to sleep found it necessary to encircle his bed with a hair rope, thus effectually fencing out the reptiles, which are too fastidious and sensitive of touch to crawl over a hair rope. But for this precaution, the trapper must often have shared his blanket couch with this foe to the “seed of the woman,” who being asleep would have neglected to “crush his head,” receiving instead the serpent’s fang in “his heel,” if not in some nobler portion of his body.

There is a common belief abroad that the prairie dog harbors the rattlesnake, and the owl also, in his subterranean house, in a more or less friendly manner. Meek, however, who has had many opportunities of observing the habits of these three ill-assorted denizens of a common abode, gives it as his opinion that the prairie dog consents to the invasion of his premises alone through his inability to prevent it. As these prairie dog villages are always found on the naked prairies, where there is neither rocky den for the rattlesnake, nor shade for the blinking eyes of the owl, these two idle and impudent foreigners, availing themselves of the labors of the industrious little animal which builds itself a cool shelter from the sun, and a safe one from the storm, whenever their own necessities drive them to seek refuge from either sun or storm, enter uninvited and take possession. It is probable also, that so far from being a welcome guest, the rattlesnake occasionally gorges himself with a young prairie-dog, when other game is not conveniently nigh, or that the owl lies in wait at the door of its borrowed-without-leave domicile, and succeeds in nabbing a careless field-mouse more easily than it could catch the same game by seeking it as an honest owl should do. The owl and the rattlesnake are like the Sioux: when they go on a visit to the Omahas--the visit being always timed so as to be identical in date with that of the Government Agents who are distributing food and clothing. They are very good friends for the nonce, the poor Omahas not daring to be otherwise for fear of the ready vengeance on the next summer’s buffalo hunt; therefore they conceal their grimaces and let the Sioux eat them up; and when summer comes get

massacred on their buffalo hunt, all the same.

But to return to our brigade. About the last of October Bridger's company moved down on to the Yellowstone by a circuitous route through the North Pass, now known as Hell Gate Pass, to Judith River, Mussel Shell River, Cross Creeks of the Yellowstone, Three Forks of Missouri, Missouri Lake, Beaver Head country, Big Horn River, and thence east again, and north again to the wintering ground in the great bend of the Yellowstone.

The company had not proceeded far in the Blackfeet country, between Hell Gate Pass and the Yellowstone, before they were attacked by the Blackfeet. On arriving at the Yellowstone they discovered a considerable encampment of the enemy on an island or bar in the river, and proceeded to open hostilities before the Indians should have discovered them. Making little forts of sticks or bushes, each man advanced cautiously to the bank overlooking the island, pushing his leafy fort before him as he crept silently nearer, until a position was reached whence firing could commence with effect. The first intimation the luckless savages had of the neighborhood of the whites was a volley of shots discharged into their camp, killing several of their number. But as this was their own mode of attack, no reflections were likely to be wasted upon the unfairness of the assault; quickly springing to their arms the firing was returned, and for several hours was kept up on both sides. At night the Indians stole off, having lost nearly thirty killed; nor did the trappers escape quite unhurt, three being killed and a few others wounded.

Since men were of such value to the fur companies, it would seem strange that they should deliberately enter upon an Indian fight before being attacked. But unfortunate as these encounters really were, they knew of no other policy to be pursued. They, (the American Companies,) were not resident, with a long acquaintance, and settled policy, such as rendered the Hudson's Bay Company so secure amongst the savages. They knew that among these unfriendly Indians, not to attack was to be attacked, and consequently little time was ever given for an Indian to discover his vicinity to a trapper. The trapper's shot informed him of that, and afterwards the race was to the swift, and the battle to the strong. Besides this acknowledged necessity for fighting whenever and wherever Indians were met with in the Blackfeet and Crow countries, almost every trapper had some private injury to avenge--some theft, or wound, or imprisonment, or at the very least, some terrible fright sustained at the hands of the universal foe. Therefore there was no reluctance to shoot into an Indian camp, provided the position of the man shooting was a safe one, or more defensible than that of the man shot at. Add to this that there was no law in the mountains, only license, it is easy to conjecture that might would have prevailed over right with far less incentive to the exercise of savage practices than actually did exist. Many a trapper undoubtedly shot his Indian "for the fun of it," feeling that it was much better to do so than run the risk of being shot at for no better reason. Of this class of reasoners, it must be admitted, Meek was one. Indian-fighting, like bear-fighting, had come to be a sort of pastime, in which he was proud to be known as highly accomplished. Having so many opportunities for the display of game qualities in encounters with these two by-no-means-to-be despised foes of the trapper, it was not often that they quarreled among themselves after the grand frolic of the rendezvous was over.

The River of the West

---

It happened, however, during this autumn, that while the main camp was in the valley of the Yellowstone, a party of eight trappers, including Meek and a comrade named Stanberry, were trapping together on the Mussel Shell, when the question as to which was the bravest man got started between them, and at length, in the heat of controversy, assumed such importance that it was agreed to settle the matter on the following day according to the Virginia code of honor, i. e., by fighting a duel, and shooting at each other with guns, which hitherto had only done execution on bears and Indians.

But some listening spirit of the woods determined to avert the danger from these two equally brave trappers, and save their ammunition for its legitimate use, by giving them occasion to prove their courage almost on the instant. While sitting around the camp-fire discussing the coming event of the duel at thirty paces, a huge bear, already wounded by a shot from the gun of their hunter who was out looking for game, came running furiously into camp, giving each man there a challenge to fight or fly.

“Now,” spoke up one of the men quickly, “let Meek and Stanberry prove which is bravest, by fighting the bear!” “Agreed,” cried the two as quickly, and both sprang with guns and wiping-sticks in hand, charging upon the infuriated beast as it reached the spot where they were awaiting it. Stanberry was a small man, and Meek a large one. Perhaps it was owing to this difference of stature that Meek was first to reach the bear as it advanced. Running up with reckless bravado Meek struck the creature two or three times over the head with his wiping-stick before aiming to fire, which however he did so quickly and so surely that the beast fell dead at his feet. This act settled the vexed question. Nobody was disposed to dispute the point of courage with a man who would stop to strike a grizzly before shooting him: therefore Meek was proclaimed by the common voice to be “cock of the walk “ in that camp. The pipe of peace was solemnly smoked by himself and Stanberry, and the tomahawk buried never more to be resurrected between them, while a fat supper of bear meat celebrated the compact of everlasting amity.

It was not an unfrequent occurrence for a grizzly bear to be run into camp by the hunters, in the Yellowstone country where this creature abounded. An amusing incident occurred not long after that just related, when the whole camp was at the Cross Creeks of the Yellowstone, on the south side of that river. The hunters were out, and had come upon two or three bears in a thicket. As these animals sometimes will do, they started off in a great fright, running toward camp, the hunters after them, yelling, frightening them still more. A runaway bear, like a runaway horse, appears not to see where it is going, but keeps right on its course no matter what dangers lie in advance. So one of these animals having got headed for the middle of the encampment, saw nothing of what lay in its way, but ran on and on, apparently taking note of nothing but the yells in pursuit. So sudden and unexpected was the charge which he made upon camp, that the Indian women, who were sitting on the ground engaged in some ornamental work, had no time to escape out of the way. One of them was thrown down and run over, and another was struck with such violence that she was thrown twenty feet from the spot where she was hastily attempting to rise. Other objects in camp were upset and thrown out of the way, but without causing so much merriment as the mishaps of the two women who were so rudely treated by the monster.

It was also while the camp was at the Cross Creeks of the Yellowstone that Meek had one of his best fought battles with a grizzly bear. He was out with two companions, one Gardiner, and Mark Head, a Shawnee Indian. Seeing a very large bear digging roots in the creek bottom, Meek proposed to attack it, if the others would hold his horse ready to mount if he failed to kill the creature. This being agreed to he advanced to within about forty paces of his game, when he raised his gun and attempted to fire, but the cap bursting he only roused the beast, which turned on him with a terrific noise between a snarl and a growl, showing some fearful looking teeth. Meek turned to run for his horse, at the same time trying to put a cap on his gun; but when he had almost reached his comrades, their horses and his own took fright at the bear now close on his heels, and ran, leaving him alone with the now fully infuriated beast. Just at the moment he succeeded in getting a cap on his gun, the teeth of the bear closed on his blanket capote which was belted around the waist, the suddenness and force of the seizure turning him around, as the skirt of his capote yielded to the strain and tore off at the belt. Being now nearly face to face with his foe, the intrepid trapper thrust his gun into the creature's mouth and attempted again to fire, but the gun being double triggered and not set, it failed to go off. Perceiving the difficulty he managed to set the triggers with the gun still in the bear's mouth, yet no sooner was this done than the bear succeeded in knocking it out, and firing as it slipped out, it hit her too low down to inflict a fatal wound and only served to irritate her still farther.

In this desperate situation when Meek's brain was rapidly working on the problem of live Meek or live bear, two fresh actors appeared on the scene in the persons of two cubs, who seeing their mother in difficulty seemed desirous of doing something to assist her. Their appearance seemed to excite the bear to new exertions, for she made one desperate blow at Meek's empty gun with which he was defending himself, and knocked it out of his hands, and far down the bank or sloping hillside where the struggle was now going on. Then being partially blinded by rage, she seized one of her cubs and began to box it about in a most unmotherly fashion. This diversion gave Meek a chance to draw his knife from the scabbard, with which he endeavored to stab the bear behind the ear: but she was too quick for him, and with a blow struck it out of his hand, as she had the gun, nearly severing his forefinger.

At this critical juncture the second cub interfered, and got a boxing from the old bear, as the first one had done. This too, gave Meek time to make a movement, and loosening his tomahawk from his belt, he made one tremendous effort, taking deadly aim, and struck her just behind the ear, the tomahawk sinking into the brain, and his powerful antagonist lay dead before him. When the blow was struck he stood with his back against a little bluff of rock, beyond which it was impossible to retreat. It was his last chance, and his usual good fortune stood by him. When the struggle was over the weary victor mounted the rock behind him and looked down upon his enemy slain; and "came to the conclusion that he was satisfied with bar-fighting."

But renown had sought him out even here, alone with his lifeless antagonist. Capt. Stuart with his artist, Mr. Miller, chanced upon this very spot, while yet the conqueror contemplated his slain enemy, and taking possession at once of the bear, whose skin was afterward preserved and stuffed,

The River of the West

---

made a portrait of the "satisfied" slayer. A picture was subsequently painted by Miller of this scene, and was copied in wax for a museum in St. Louis, where it probably remains to this day, a monument of Meek's best bear fight. As for Meek's runaway horse and runaway comrades, they returned to the scene of action too late to be of the least service, except to furnish our hero with transportation to camp, which, considering the weight of his newly gathered laurels, was no light service after all.

In November Bridger's camp arrived at the Bighorn River, expecting to winter; but finding the buffalo all gone, were obliged to cross the mountains lying between the Bighorn and Powder rivers to reach the buffalo country on the latter stream. The snow having already fallen quite deep on these mountains the crossing was attended with great difficulty; and many horses and mules were lost by sinking in the snow, or falling down precipices made slippery by the melting. and freezing of the snow on the narrow ridges and rocky benches along which they were forced to travel.

About Christmas all the company went into winter-quarters on Powder River, in the neighborhood of a company of Bonneville's men, left under the command of Antoine Montero, who had established a trading-post and fort at this place, hoping, no doubt, that here they should be comparatively safe from the injurious competition of the older companies. The appearance of three hundred men, who had the winter before them in which to do mischief, was therefore as unpleasant as it was unexpected; and the result proved that even Montero, who was Bonneville's experienced trader, could not hold his own against so numerous and expert a band of marauders as Bridger's men, assisted by the Crows, proved themselves to be; for by the return of spring Montero had very little remaining of the property belonging to the fort, nor anything to show for it. This mischievous war upon Bonneville was prompted partly by the usual desire to cripple a rival trader, which the leaders encouraged in their men; but in some individual instances far more by the desire for revenge upon Bonneville personally, on account of his censures passed upon the members of the Monterey expedition, and on the ways of mountain-men generally.

About the first of January, Fontenelle, with four men, and Captain Stuart's party, left camp to go to St. Louis for supplies. At Fort Laramie Fontenelle committed suicide, in a fit of mania a potu, and his men returned to camp with the news.

The River of the West

Chapter XVII

1837. The fate of Fontenelle should have served as a warning to his associates and fellows. 'Should have done,' however, are often idle words, and as sad as they are idle; they match the poets 'might have been,' in their regretful impotency. Perhaps there never was a winter camp in the mountains more thoroughly demoralized than that of Bridger during the months of January and February. Added to the whites, who were reckless enough, were a considerable party of Delaware and Shawnee Indians, excellent allies, and skillful hunters and trappers, but having the Indian's love of strong drink. "Times were pretty good in the mountains," according to the mountain-man's notion of good times; that is to say, beaver was plenty, camp large, and alcohol abundant, if dear.

The River of the West

---

Under these favorable circumstance much alcohol was consumed, and its influence was felt in the manners not only of the trappers, white and red, but also upon the neighboring Indians.

The Crows, who had for two years been on terms of a sort of semi-amity with the whites, found it to their interest to conciliate so powerful an enemy as the American Fur Company was now become, and made frequent visits to the camp, on which occasion they usually succeeded in obtaining a taste of the fire-water of which they were inordinately fond. Occasionally a trader was permitted to sell liquor to the whole village, when a scene took place whose peculiar horrors were wholly indescribable, from the inability of language to convey an adequate idea of its hellish degradation. When a trader sold alcohol to a village it was understood both by himself and the Indians what was to follow. And to secure the trader against injury a certain number of warriors were selected out of the village to act as a police force, and to guard the trader during the 'drunk' from the insane passions of his customers. To the police not a drop was to be given.

This being arranged, and the village disarmed, the carousal began. Every individual, man, woman, and child, was permitted to become intoxicated. Every form of drunkenness, from the simple stupid to the silly, the heroic, the insane, the beastly, the murderous, displayed itself. The scenes which were then enacted beggared description, as they shocked the senses of even the hard-drinking, license-loving trappers who witnessed them. That they did not "point a moral" for these men, is the strangest part of the whole transaction.

When everybody, police excepted, was drunk as drunk could be, the trader began to dilute his alcohol with water, until finally his keg contained water only, slightly flavored by the washings of the keg, and as they continued to drink of it without detecting its weak quality, they finally drank themselves sober, and were able at last to sum up the cost of their intoxication. This was generally nothing less than the whole property of the village, added to which were not a few personal injuries, and usually a few murders. The village now being poor, the Indians were correspondingly humble; and were forced to begin a system of reprisal by stealing and making war, a course for which the traders were prepared, and which they avoided by leaving that neighborhood. Such were some of the sins and sorrows for which the American fur companies were answerable, and which detracted seriously from the respect that the courage, and other good qualities of the mountain-men freely commanded.

By the first of March these scenes of wrong and riot were over, for that season at least, and camp commenced moving back toward the Blackfoot country. After re-crossing the mountains, passing the Bighorn, Clarke's, and Rosebud rivers, they came upon a Blackfoot village on the Yellowstone, which as usual they attacked, and a battle ensued, in which Manhead, captain of the Delawares was killed, another Delaware named Tom Hill succeeding him in command. The fight did not result in any great loss or gain to either party. The camp of Bridger fought its way past the village, which was what they must do, in order to proceed.

Meek, however, was not quite satisfied with the punishment the Blackfeet had received for the

killing of Manhead, who had been in the fight with him when the Camanches attacked them on the plains. Desirous of doing something on his own account, he induced a comrade named LeBlas, to accompany him to the village, after night had closed over the scene of the late contest. Stealing into the village with a noiselessness equal to that of one of Fennimore Cooper's Indian scouts, these two daring trappers crept so near that they could look into the lodges, and see the Indians at their favorite game of Hand. Inferring from this that the savages did not feel their losses very severely, they determined to leave some sign of their visit, and wound their enemy in his most sensitive part, the horse. Accordingly they cut the halters of a number of the animals, fastened in the customary manner to a stake, and succeeded in getting off with nine of them, which property they proceeded to appropriate to their own use.

As the spring and summer advanced, Bridger's brigade advanced into the mountains, passing the Cross Creek of the Yellowstone, Twenty-five-Yard River, Cherry River, and coming on to the head-waters of the Missouri spent the early part of the summer in that locality. Between Gallatin and Madison forks the camp struck the great trail of the Blackfeet. Meek and Mark Head had fallen four or five days behind camp, and being on this trail felt a good deal of uneasiness. This feeling was not lessened by seeing, on coming to Madison Fork, the skeletons of two men tied to or suspended from trees, the flesh eaten off their bones. Concluding discretion to be the safest part of valor in this country, they concealed themselves by day and traveled by night, until camp was finally reached near Henry's Lake. On this march they forded a flooded river, on the back of the same mule, their traps placed on the other, and escaped from pursuit of a dozen yelling savages, who gazed after them in astonishment; "taking their mule," said Mark Head, "to be a beaver, and themselves great medicine men. " That," said Meek, "is what I call 'cooning' a river."

From this point Meek set out with a party of thirty or forty trappers to travel up the river to head-waters, accompanied by the famous Indian painter Stanley, whose party was met with, this spring, traveling among the mountains. The party of trappers were a day or two ahead of the main camp when they found themselves following close after the big Blackfoot village which had recently passed over the trail, as could be seen by the usual signs; and also by the dead bodies strewn along the trail, victims of that horrible scourge, the small pox. The village was evidently fleeing to the mountains, hoping to rid itself of the plague in their colder and more salubrious air.

Not long after coming upon these evidences of proximity to an enemy, a party of a hundred and fifty of their warriors were discovered encamped in a defile or narrow bottom enclosed by high bluffs, through which the trappers would have to pass. Seeing that in order to pass this war party, and the village, which was about half a mile in advance, there would have to be some fighting done, the trappers resolved to begin the battle at once by attacking their enemy, who was as yet ignorant of their neighborhood. In pursuance of this determination, Meek, Newell, Mansfield, and Le Blas, commenced hostilities. Leaving their horses in camp, they crawled along on the edge of the overhanging bluff until opposite to the encampment of Blackfeet, firing on them from the shelter of some bushes which grew among the rocks. But the Blackfeet, though ignorant of the number of their enemy, were not to be dislodged so easily, and after an hour or two of random shooting, contrived to scale the bluff at a point higher up, and to get upon a ridge of ground still

higher than that occupied by the four trappers. This movement dislodged the latter, and they hastily retreated through the bushes and returned to camp.

The next day, the main camp having come up, the fight was renewed. While the greater body of the company, with the pack-horses, were passing along the high bluff overhanging them, the party of the day before, and forty or fifty others, undertook to drive the Indians out of the bottom, and by keeping them engaged allow the train to pass in safety. The trappers rode to the fight on this occasion, and charged the Blackfeet furiously, they having joined the village a little farther on. A general skirmish now took place. Meek, who was mounted on a fine horse, was in the thickest of the fight. He had at one time a side to side race with an Indian who strung his bow so hard that the arrow dropped, just as Meek, who had loaded his gun running, was ready to fire, and the Indian dropped after his arrow.

Newell too had a desperate conflict with a half-dead warrior, who having fallen from a wound, he thought dead and was trying to scalp. Springing from his horse he seized the Indian's long thick hair in one hand, and with his knife held in the other made a pass at the scalp, when the savage roused up knife in hand, and a struggle took place in which it was for a time doubtful which of the combatants would part with the coveted scalp-lock. Newell might have been glad to resign the trophy, and leave the fallen warrior his tuft of hair, but his fingers were in some way caught by some gun-screws with which the savage had ornamented his coiffure, and would not part company. In this dilemma there was no other alternative but fight. The miserable savage was dragged a rod or two in the struggle, and finally dispatched.

Mansfield also got into such close quarters, surrounded by the enemy, that he gave himself up for lost, and called out to his comrades: "Tell old Gabe, (Bridger,) that old Cotton (his own sobriquet) is gone." He lived, however to deliver his own farewell message, for at this critical juncture the trappers were re-inforced, and relieved. Still the fight went on, the trappers gradually working their way to the upper end of the enclosed part of the valley, past the point of danger.

Just before getting clear of this entanglement Meek became the subject of another picture, by Stanley, who was viewing the battle from the heights above the valley. The picture which is well known as "The Trapper's Last Shot," represents him as he turned upon his horse, a fine and spirited animal, to discharge his last shot at an Indian pursuing, while in the bottom, at a little distance away, other Indians are seen skulking in the tall reedy grass.

The last shot having been discharged with fatal effect, our trapper, so persistently lionized by painters, put his horse to his utmost speed and soon after overtook the camp, which had now passed the strait of danger. But the Blackfeet were still unsatisfied with the result of the contest. They followed after, reinforced from the village, and attacked the camp. In the fight which followed a Blackfoot woman's horse was shot down, and Meek tried to take her prisoner: but two or three of her people coming to the rescue, engaged his attention; and the woman was saved by seizing hold of the tail of her husband's horse, which setting off at a run, carried her out of danger.

The Blackfeet found the camp of Bridger too strong for them. They were severely beaten and compelled to retire to their village, leaving Bridger free to move on. The following day the camp reached the village of Little Robe, a chief of the Peagans, who held a talk with Bridger, complaining that his nation were all perishing from the small-pox which had been given to them by the whites. Bridger was able to explain to Little-Robe his error; inasmuch as although the disease might have originated among the whites, it was communicated to the Blackfeet by Jim Beckwith, a negro, and principal chief of their enemies the Crows. This unscrupulous wretch had caused two infected articles to be taken from a Mackinaw boat, up from St. Louis, and disposed of to the Blackfeet-- whence the horrible scourge under which they were suffering.

This matter being explained, Little-Robe consented to trade horses and skins; and the two camps parted amicably. The next day after this friendly talk, Bridger being encamped on the trail in advance of the Blackfeet, an Indian came riding into camp, with his wife and daughter, pack-horse and lodge-pole, and all his worldly goods, unaware until he got there of the snare into which he had fallen. The French trappers, generally, decreed to kill the man and take possession of the woman. But Meek, Kit Carson, and others of the American trappers of the better sort, interfered to prevent this truly savage act. Meek took the woman's horse by the head, Carson the man's, the daughter following, and led them out of camp. Few of the Frenchmen cared to interrupt either of these two men, and they were suffered to depart in peace. When at a safe distance, Meek stopped, and demanded as some return for having saved the man's life, a present of tobacco, a luxury which, from the Indian's pipe, he suspected him to possess. About enough for two chews was the result of this demand, complied with rather grudgingly, the Indian vieing with the trapper in his devotion to the weed. Just at this time, owing to the death of Fontenelle, and a consequent delay in receiving supplies, tobacco was scarce among the mountaineers.

Bridger's brigade of trappers met with no other serious interruptions on their summer's march. They proceeded to Henry's Lake, and crossing the Rocky Mountains, traveled through the Pine Woods, always a favorite region, to Lewis' Lake on Lewis' Fork of the Snake River; and finally up the Grovant Fork, re-crossing the mountains to Wind River, where the rendezvous for this year was appointed.

Here, once more, the camp was visited by a last years' acquaintance. This was none other than Mr. Gray, of the Flathead Mission, who was returning to the States on business connected with the missionary enterprise, and to provide himself with a helpmeet for life,--a co-laborer and sufferer in the contemplated toil of teaching savages the rudiments of a religion difficult even to the comprehension of an old civilization.

Mr. Gray was accompanied by two young men (whites) who wished to return to the States, and also by a son of one of the Flathead chiefs. Two other Flathead Indians, and one Iroquois and one Snake Indian, were induced to accompany Mr. Gray. The undertaking was not without danger, and so the leaders of the Fur Company assured him. But Mr. Gray was inclined to make light of the danger, having traveled with entire safety when under the protection of the Fur Companies

the year before. He proceeded without interruption until he reached Ash Hollow, in the neighborhood of Fort Laramie, when his party was attacked by a large band of Sioux, and compelled to accept battle. The five Indians, with the whites, fought bravely, killing fifteen of the Sioux, before a parley was obtained by the intervention of a French trader who chanced to be among the Sioux. When Mr. Gray was able to hold a 'talk' with the attacking party he was assured that his life and that of his two white associates would be spared, but that they wanted to kill the strange Indians and take their fine horses. It is not at all probable that Mr. Gray consented to this sacrifice; though he has been accused of doing so.

No doubt the Sioux took advantage of some hesitation on his part, and rushed upon his Indian allies in an unguarded moment. However that may be, his allies were killed and he was allowed to escape, after giving up the property belonging to them, and a portion of his own.

This affair was the occasion of much ill-feeling toward Mr. Gray, when, in the following year, he returned to the mountains with the tale of massacre of his friends and his own escape. The mountain-men, although they used their influence to restrain the vengeful feelings of the Flathead tribe, whispered amongst themselves that Gray had preferred his own life to that of his friends. The old Flathead chief too, who had lost a son by the massacre, was hardly able to check his impulsive desire for revenge; for he held Mr. Gray responsible for his son's life. Nothing more serious, however, grew out of this unhappy tragedy than a disaffection among the tribe toward Mr. Gray, which made his labors useless, and finally determined him to remove to the Wallamet Valley.

There were no outsiders besides Gray's party at the rendezvous of this year, except Captain Stuart, and he was almost as good a mountaineer as any. This doughty English traveler had the bad fortune together with that experienced leader Fitzpatrick, of being robbed by the Crows in the course of the fall hunt, in the Crow country. These expert horse thieves had succeeded in stealing nearly all the horses belonging to the joint camp, and had so disabled the company that it could not proceed. In this emergency, Newell, who had long been a sub-trader and was wise in Indian arts and wiles, was sent to hold a talk with the thieves. The talk was held, according to custom, in the Medicine lodge, and the usual amount of smoking, of long silences, and grave looks, had to be participated in, before the subject on hand could be considered. Then the chiefs complained as usual of wrongs at the hands of the white men; of their fear of small-pox, from which some of their tribe had suffered; of friends killed in battle with the whites, and all the list of ills that Crow flesh is heir to at the will of their white enemies. The women too had their complaints to proffer, and the number of widows and orphans in the tribe was pathetically set forth. The chiefs also made a strong point of this latter complaint; and on it the wily Newell hung his hopes of recovering the stolen property.

"It is true," said he to the chiefs, "that you have sustained heavy losses. But that is not the fault of the Blanket chief (Bridger.) If your young men have been killed, they were killed when attempting to rob or kill our Captain's men. If you have lost horses, your young men have stolen five to our one. If you are poor in skins and other property, it is because you sold it all for drink which did you no good. Neither is Bridger to blame that you have had the small-pox. Your own chief, in

trying to kill your enemies the Blackfeet, brought that disease into the country.

“But it is true that you have many widows and orphans to support, and that is bad. I pity the orphans, and will help you to support them, if you will restore to my captain the property stolen from his camp. Otherwise Bridger will bring more horses. and plenty of ammunition, and there will be more widows and orphans among the Crows than ever before.”

This was a kind of logic easy to understand and quick to convince among savages. The bribe, backed by a threat, settled the question of the restoration of the horses, which were returned without further delay, and a present of blankets and trinkets was given, ostensibly to the bereaved women, really to the covetous chiefs.

The River of the West

Chapter XVIII

1837. The decline of the business of hunting furs began to be quite obvious about this time. Besides the American and St. Louis Companies, and the Hudson's Bay Company, there were numerous lone traders with whom the ground was divided. The autumn of this year was spent by the American Company, as formerly, in trapping beaver on the streams issuing from the eastern side of the Rocky Mountains. When the cold weather finally drove the Fur Company to the plains, they went into winter quarters once more in the neighborhood of the Crows on Powder River. Here were re-enacted the wild scenes of the previous winter, both trappers and Indians being given up to excesses.

On the return of spring, Bridger again led his brigade all through the Yellowstone country, to the streams on the north side of the Missouri, to the head-waters of that river; and finally rendezvoused on the north fork of the Yellowstone, near Yellowstone Lake. Though the amount of furs taken on the spring hunt was considerable, it was by no means equal to former years. The fact was becoming apparent that the beaver was being rapidly exterminated.

However there was beaver enough in camp to furnish the means for the usual profligacy. Horse-racing, betting, gambling, drinking, were freely indulged in. In the midst of this “fun,” there appeared at the rendezvous Mr. Gray, now accompanied by Mrs. Gray and six other missionary ladies and gentlemen. Here also were two gentlemen from the Methodist mission on the Wallamet, who were returning to the States. Captain Stuart was still traveling with the Fur Company, and was also present with his party; besides which a Hudson's Bay trader named Ematinger was encamped near by. As if actuated to extraordinary displays by the unusual number of visitors, especially the four ladies, both trappers and Indians conducted themselves like the mad-caps they were. The Shawnees and Delawares danced their great war-dance before the tents of the missionaries; and Joe Meek, not to be outdone, arrayed himself in a suit of armor belonging to Captain Stuart and strutted about the encampment; then mounting his horse played the part of an ancient knight, with a good deal of eclat.

Meek had not abstained from the alcohol kettle, but had offered it and partaken of it rather more freely than usual; so that when rendezvous was broken up, the St. Louis Company gone to the Popo Agie, and the American Company going to Wind River, he found that his wife, a Nez Perce who had succeeded Umentucken in his affections, had taken offence, or a fit of homesickness, which was synonymous, and departed with the party of Ematinger and the missionaries, intending to visit her people at Walla-Walla. This desertion wounded Meek's feelings; for he prided himself on his courtesy to the sex, and did not like to think that he had not behaved handsomely. All the more was he vexed with himself because his spouse had carried with her a pretty and sprightly baby-daughter, of whom the father was fond and proud, and who had been christened Helen Mar, after one of the heroines of Miss Porter's *Scottish Chiefs* --a book much admired in the mountains, as it has been elsewhere.

Therefore at the first camp of the American Company, Meek resolved to turn his back on the company, and go after the mother and daughter. Obtaining a fresh kettle of alcohol, to keep up his spirits, he left camp, returning toward the scene of the late rendezvous. But in the effort to keep up his spirits he had drunk too much alcohol, and the result was that on the next morning he found himself alone on the Wind River Mountain, with his horses and pack mules, and very sick indeed. Taking a little more alcohol to brace up his nerves, he started on again, passing around the mountain on to the Sweetwater; thence to the Sandy, and thence across a country without water for seventy-five miles, to Green River, where the camp of Ematinger was overtaken.

The heat was excessive; and the absence of water made the journey across the arid plain between Sandy and Green Rivers one of great suffering to the traveler and his animals; and the more so as the frequent references to the alcohol kettle only increased the thirst-fever instead of allaying it. But Meek was not alone in suffering. About half way across the scorching plain he discovered a solitary woman's figure standing in the trail, and two riding horses near her, whose drooping heads expressed their dejection. On coming up with this strange group, Meek found the woman to be one of the missionary ladies, a Mrs. Smith, and that her husband was lying on the ground, dying, as the poor sufferer believed himself, for water.

Mrs. Smith made a weeping appeal to Meek for water for her dying husband; and truly the poor woman's situation was a pitiable one. Behind camp, with no protection from the perils of the desert and wilderness--only a terrible care instead--the necessity of trying to save her husband's life. As no water was to be had, alcohol was offered to the famishing man, who, however, could not be aroused from his stupor of wretchedness. Seeing that death really awaited the unlucky missionary unless something could be done to cause him to exert himself, Meek commenced at once, and with unction, to abuse the man for his unmanliness. His style, though not very refined, was certainly very vigorous.

"You're a d-d pretty fellow to be lying on the ground here, lolling your tongue out of your mouth, and trying to die. Die, if you want to, and to h--l with you; You'll never be missed. Here's your wife, who you are keeping standing here in the hot sun; why don't she die? She's got more pluck than a white-livered chap like you. But I'm not going to leave her waiting here for you to die.

The River of the West

---

There's a band of Indians behind on the trail, and I've been riding like hell to keep out of their way. If you want to stay here and be scalped, you can stay; Mrs. Smith is going with me. Come, madam," continued Meek, leading up her horse, "let me help you to mount, for we must get out of this cursed country as fast as possible."

Poor Mrs. Smith did not wish to leave her husband; nor did she relish the notion of staying to be scalped. Despair tugged at her heart-strings. She would have sunk to the ground in a passion of tears, but Meek was too much in earnest to permit precious time to be thus wasted. "Get on your horse," said he rather roughly. "You can't save your husband by staying here, crying. It is better that one should die than two; and he seems to be a worthless dog anyway. Let the Indians have him."

Almost lifting her upon the horse, Meek tore the distracted woman away from her husband, who had yet strength enough to gasp out an entreaty not to be left.

"You can follow us if you choose," said the apparently merciless trapper, "or you can stay where you are. Mrs. Smith can find plenty of better men than you. Come, madam!" and he gave the horse a stroke with his riding whip which started him into a rapid pace.

The unhappy wife, whose conscience reproached her for leaving her husband to die alone, looked back, and saw him raising his head to gaze after them. Her grief broke out afresh, and she would have gone back even then to remain with him: but Meek was firm, and again started up her horse. Before they were quite out of sight, Meek turned in his saddle, and beheld the dying man sitting up. "Hurrah," said he: "he's all right. He will overtake us in a little while: " and as he predicted, in little over an hour Smith came riding up, not more than half dead by this time. The party got into camp on Green River, about eleven o'clock that night, and Mrs. Smith having told the story of her adventures with the unknown trapper who had so nearly kidnaped her, the laugh and the cheer went round among the company. "That's Meek," said Ematinger, "you may rely on that. He's just the one to kidnap a woman in that way." When Mrs. Smith fully realized the service rendered, she was abundantly grateful, and profuse were the thanks which our trapper received, even from the much-abused husband, who was now thoroughly alive again. Meek failed to persuade his wife to return with him. She was homesick for her people, and would go to them. But instead of turning back, he kept on with Ematinger's camp as far as Fort Hall, which post was then in charge of Courtenay Walker.

While the camp was at Soda Springs, Meek observed the missionary ladies baking bread in a tin reflector before a fire. Bread was a luxury unknown to the mountainman,--and as a sudden recollection of his boyhood, and the days of bread-and-butter came over him, his mouth began to water. Almost against his will he continued to hang round the missionary camp, thinking about the bread. At length one of the Nez Perces, named James, whom the missionary had taught to sing, at their request struck up a hymn, which he sang in a very creditable manner. As a reward of his pious proficiency, one of the ladies gave James a biscuit. A bright thought struck our longing hero's brain. "Go back," said he to James, "and sing another hymn; and when the ladies give you another biscuit, bring it to me." And in this manner, he obtained a taste of the coveted luxury,

bread--of which, during nine years in the mountains he had not eaten.

At Fort Hall, Meek parted company with the missionaries, and with his wife and child. As the little black-eyed daughter took her departure in company with this new element in savage life--the missionary society--her father could have had no premonition of the fate to which the admixture of the savage and the religious elements was step by step consigning her.

After remaining a few days at the fort, Meek, who found some of his old comrades at this place, went trapping with them up the Portneuf, and soon made up a pack of one hundred and fifty beaver-skins. These, on returning to the fort, he delivered to Jo. Walker, one of the American Company's traders at that time, and took Walker's receipt for them. He then, with Mansfield and Wilkins, set out about the first of September for the Flathead country, where Wilkins had a wife. In their company was an old Flathead woman, who wished to return to her people, and took this opportunity.

The weather was still extremely warm. It had been a season of great drought, and the streams were nearly all entirely dried up. The first night out, the horses, eight in number, strayed off in search of water, and were lost. Now commenced a day of fearful sufferings. No water had been found since leaving the fort. The loss of the horses made it necessary for the company to separate to look for them; Mansfield and Wilkins going in one direction, Meek and the old Flathead woman in another. The little coolness and moisture which night had imparted to the atmosphere was quickly dissipated by the unchecked rays of the pitiless sun shining on a dry and barren plain, with not a vestige of verdure anywhere in sight. On and on went the old Flathead woman, keeping always in the advance, and on and on followed Meek, anxiously scanning the horizon for a chance sight of the horses. Higher and higher mounted the sun, the temperature increasing in intensity until the great plain palpitated with radiated heat, and the horizon flickered almost like a flame where the burning heavens met the burning earth. Meek had been drinking a good deal of rum at the fort, which circumstance did not lessen the terrible consuming thirst that was torturing him.

Noon came, and passed, arid still the heat and the suffering increased, the fever and craving of hunger being now added to that of thirst. On and on, through the whole of that long scorching afternoon, trotted the old Flathead woman in the peculiar traveling gait of the Indian and the mountaineer, Meek following at a little distance, and going mad, as he thought, for a little water. And mad he probably was, as famine sometimes makes its victims. When night at last closed in, he laid down to die, as the missionary Smith had done before. But he did not remember Smith: he only thought of water, and heard it running, and fancied the old woman was lapping it like a wolf. Then he rose to follow her and find it; it was always just ahead, and the woman was howling to him to show him the trail.

Thus the night passed, and in the cool of the early morning he experienced a little relief. He was really following his guide, who as on the day before was trotting on ahead. Then the thought possessed him to overtake and kill her, hoping from her shriveled body to obtain a morsel of food, and drop of moisture. But his strength was failing, and his guide so far ahead that he gave up the

thought as involving too great exertion, continuing to follow her in a helpless and hopeless kind of way.

At last! There was no mistake this time: he heard running water, and the old woman was lapping it like a wolf. With a shriek of joy he ran and fell on his face in the water, which was not more than one foot in depth, nor the stream more than fifteen feet wide. But it had a white pebbly bottom; and the water was clear, if not very cool. It was something to thank God for, which the none too religious trapper acknowledged by a fervent "Thank God!"

For a long time he lay in the water, swallowing it, and by thrusting his finger down his throat vomiting it up again, to prevent surfeit, his whole body taking in the welcome moisture at all its million pores. The fever abated, a feeling of health returned, and the late perishing man was restored to life and comparative happiness. The stream proved to be Godin's Fork, and here Meek and his faithful old guide rested until evening, in the shade of some willows, where their good fortune was completed by the appearance of Mansfield and Wilkins with the horses. The following morning the men found and killed a fat buffalo cow, whereby all their wants were supplied, and good feeling restored in the little camp.

From Godin's Fork they crossed over to Salmon River, and presently struck the Nez Perce trail which leads from that river over into the Beaver-head country, on the Beaver-head or Jefferson Fork of the Missouri, where there was a Flathead and Nez Perce village, on or about the present site of Virginia City, in Montana.

Not stopping long here, Meek and his companions went on to the Madison Fork with the Indian village, and to the shores of Missouri Lake, joining in the fall hunt for buffalo.

The River of the West

Chapter XIX

"Tell me all about a buffalo hunt," said the writer to Joe Meek, as we sat at a window overlooking the Columbia River, where it has a beautiful stretch of broad waters and curving wooded shores, and talking about mountain life, "tell me how you used to hunt buffalo."

"Waal, there is a good deal of sport in runnin' buffalo. When the camp discovered a band, then every man that wanted to run, made haste to catch his buffalo horse. We sometimes went out thirty or forty strong; sometimes two or three, and at other times a large party started on the hunt; the more the merrier. We always had great bantering about our horses, each man, according to his own account, having the best one.

"When we first start we ride slow, so as not to alarm the buffalo. The nearer we come to the band the greater our excitement. The horses seem to feel it too, and are worrying to be off. When we come so near that the band starts, then the word is given, our horses' mettle is up, and away we

go!

“Thar may be ten thousand in a band. Directly we crowd them so close that nothing can be seen but dust, nor anything heard but the roar of their trampling and bellowing. The hunter now keeps close on their heels to escape being blinded by the dust, which does not rise as high as a man on horseback, for thirty yards behind the animals. As soon as we are close enough the firing begins, and the band is on the run; and a herd of buffalo can run about as fast as a good race-horse. How they do thunder along! They give us a pretty sharp race. Take care! Down goes a rider, and away goes his horse with the band. Do you think we stopped to look after the fallen man? Not we. We rather thought that war fun, and if he got killed, why, ‘ he war unlucky, that war all. Plenty more men: couldn’t bother about him.’

“Thar’s a fat cow ahead. I force my way through the band to come up with her. The buffalo crowd around so that I have to put my foot on them, now on one side, now the other, to keep them off my horse. It is lively work, I can tell you. A man has to look sharp not to be run down by the band pressing him on; buffalo and horse at the top of their speed.

“Look out; thar’s a ravine ahead, as you can see by the plunge which the band makes. Hold up! or somebody goes to the d--l now. If the band is large it fills the ravine full to the brim, and the hind-most of the herd pass over on top of the foremost. It requires horsemanship not to be carried over without our own consent; but then we mountain-men are all good horsemen. Over the ravine we go; but we do it our own way.

“We keep up the chase for about four miles, selecting our game as we run, and killing a number of fat cows to each man; some more and some less. When our horses are tired we slacken up, and turn back. We meet the camp keepers with pack-horses. They soon butcher, pack up the meat, and we all return to camp, whar we laugh at each other’s mishaps, and eat fat meat: and this constitutes the glory of mountain life.”

“But you were going to tell me about the buffalo hunt at Missouri Lake?”

“Thar isn’t much to tell. It war pretty much like other buffalo hunts. Thar war a lot of us trappers happened to be at a Nez Perce and Flathead village in the fall of ‘38, when they war agoin’ to kill winter meat; and as their hunt lay in the direction we war going, we joined in. The old Nez Perce chief, Kow-e-so-te had command of the village, and we trappers had to obey him, too.

“We started off slow; nobody war allowed to go ahead of camp. In this manner we caused the buffalo to move on before us, but not to be alarmed. We war eight or ten days traveling from the Beaver-head to Missouri Lake, and by the time we got thar, the whole plain around the lake war crowded with buffalo, and it war a splendid sight!

“In the morning the old chief harangued the men of his village, and ordered us all to get ready for the surround. About nine o’clock every man war mounted, and we began to move.

The River of the West

---

“That war a sight to make a man’s blood warm! A thousand men, all trained hunters, on horse-back, carrying their guns, and with their horses painted in the height of Indians’ fashion. We advanced until within about half a mile of the herd; then the chief ordered us to deploy to the right and left, until the wings of the column extended a long way, and advance again.

“By this time the buffalo war all moving, and we had come to within a hundred yards of them. Kow-e-so-te then gave us the word, and away we went, pell-mell. Heavens, what a charge! What a rushing and roaring--men shooting, buffalo bellowing and trampling until the earth shook under them!

“It war the work of half an hour to slay two thousand or may be three thousand animals. When the work was over, we took a view of the field. Here and there and everywhere, laid the slain buffalo. Occasionally a horse with a broken leg war seen; or a man with a broken arm; or maybe he had fared worse, and had a broken head.

“Now came out the women of the village to help us butcher and pack up the meat. It war a big job; but we war not long about it. By night the camp war full of meat, and everybody merry. Bridger’s camp, which war passing that way, traded with the village for fifteen hundred buffalo tongues--the tongue being reckoned a choice part of the animal. And that’s the way we helped the Nez Perces hunt buffalo.”

“But when you were hunting for your own subsistence in camp, you sometimes went out in small parties?”

“Oh yes, it war the same thing on a smaller scale. One time Kit Carson and myself, and a little Frenchman, named Marteau, went to run buffalo on Powder River. When we came in sight of the band it war agreed that Kit and the Frenchman should do the running, and I should stay with the pack animals. The weather war very cold and I didn’t like my part of the duty much.

“The Frenchman’s horse couldn’t run; so I lent him mine. Kit rode his own; not a good buffalo horse either. In running, my horse fell with the Frenchman, and nearly killed him. Kit, who couldn’t make his horse catch, jumped off, and caught mine, and tried it again. This time he came up with the band, and killed four fat cows.

“When I came up with the pack-animals, I asked Kit how he came by my horse. He explained, and wanted to know if I had seen anything of Marteau: said my horse had fallen with him, and he thought killed him. ‘You go over the other side of yon hill, and see,’ said Kit.

“What’ll I do with him if he is dead?” said I.

“Can’t you pack him to camp?”

“Pack h--l” said I; “ I should rather pack a load of meat. “

“Waal,” said Kit, “ I’ll butcher, if you’ll go over and see, anyhow.”

“So I went over, and found the dead man leaning his head on his hand, and groaning; for he war pretty bad hurt. I got him on his horse, though, after a while, and took him back to whar Kit war at work. We soon finished the butchering job, and started back to camp with our wounded Frenchman, and three loads of fat meat.”

“You were not very compassionate toward each other, in the mountains?”

“That war not our business. We had no time for such things. Besides, live men war what we wanted; dead ones war of no account.”

The River of the West

Chapter XX

1838. From Missouri Lake, Meek started alone for the Gallatin Fork of the Missouri, trapping in a mountain basin called Gardiner’s Hole. Beaver were plenty here, but it was getting late in the season, and the weather was cold in the mountains. On his return, in another basin called the Burnt Hole, he found a buffalo skull; and knowing that Bridger’s camp would soon pass that way, wrote on it the number of beaver he had taken, and also his intention to go to Fort Hall to sell them.

In a few days the camp passing found the skull, which grinned its threat at the angry Booshways, as the chuckling trapper had calculated that it would. To prevent its execution runners were sent after him, who, however, failed to find him, and nothing was known of the supposed renegade for some time. But as Bridger passed through Pierre’s Hole, on his way to Green river to winter, he was surprised at Meek’s appearance in camp. He was soon invited to the lodge of the Booshways, and called to account for his supposed apostacy.

Meek, for a time, would neither deny nor confess, but put on his free trapper airs, and laughed in the face of the Booshways. Bridger, who half suspected some trick, took the matter lightly, but Dripps was very much annoyed, and made some threats, at which Meek only laughed the more. Finally the certificate from their own trader, Jo. Walker, was produced, the new pack of furs surrendered, and Dripps’ wrath turned into smiles of approval.

Here again Meek parted company with the main camp, and went on an expedition with seven other trappers, under John Larison, to the Salmon River: but found the cold very severe on this journey, and the grass scarce and poor, so that the company lost most of their horses.

On arriving at the Nez Perce village in the Forks of the Salmon, Meek found the old chief Kow-e-so-te full of the story of the missionaries and their religion, and anxious to hear preaching. Re-

ports were continually arriving by the Indians, of the wonderful things which were being taught by Mr. and Mrs. Spalding at Lapwai, on the Clearwater, and at Waiilatpu, on the Walla-Walla River. It was now nearly two years since these missions had been founded, and the number of converts among the Nez Perces and Flatheads was already considerable.

Here was an opening for a theological student, such as Joe Meek was! After some little assumption of modesty Meek intimated that he thought himself capable of giving instruction on religious subjects; and being pressed by the chief, finally consented to preach to Kow-e-so-te's people. Taking care first to hold a private council with his associates, and binding them not to betray him, Meek preached his first sermon that evening, going regularly through with the ordinary services of a "meeting."

These services were repeated whenever the Indians seemed to desire it, until Christmas. Then, the village being about to start upon a hunt, the preacher took occasion to intimate to the chief that a wife would be an agreeable present. To this, however, Kow-e-so-te demurred, saying that Spalding's religion did not permit men to have two wives: that the Nez Perces had many of them given up their wives on this account; and that therefore, since Meek already had one wife among the Nez Perces, he could not have another without being false to the religion he professed.

To this perfectly clear argument Meek replied, that among white men, if a man's wife left him without his consent, as his had done, he could procure a divorce, and take another wife. Besides, he could tell him how the Bible related many stories of its best men having several wives. But Kow-e-so-te was not easily convinced. He could not see how, if the Bible approved of polygamy, Spalding should insist on the Indians putting away all but one of their wives. "However," says Meek, "after about two weeks' explanation of the doings of Solomon and David, I succeeded in getting the chief to give me a young girl, whom I called Virginia;--my present wife, and the mother of seven children."

After accompanying the Indians on their hunt to the Beaver-head country, where they found plenty of buffalo, Meek remained with the Nez Perce village until about the first of March, when he again intimated to the chief that it was the custom of white men to pay their preachers. Accordingly the people were notified, and the winter's salary began to arrive. It amounted altogether to thirteen horses, and many packs of beaver, beside sheep-skins and buffalo-ropes; so that he "considered that with his young wife, he had made a pretty good winter's work of it."

In March he set out trapping again, in company with one of his comrades named Allen, a man to whom he was much attached. They traveled along up and down the Salmon, to Godin's River, Henry's Fork of the Snake, to Pierre's Fork, and Lewis' Fork, and the Muddy, and finally set their traps on a little stream that runs out of the pass which leads to Pierre's Hole.

Leaving their camp one morning to take up their traps they were discovered and attacked by a party of Blackfeet just as they came near the trapping ground. The only refuge at hand was a thicket of willows on the opposite side of the creek, and towards this the trappers directed their

flight. Meek, who was in advance, succeeded in gaining the thicket without being seen; but Allen stumbled and fell in crossing the stream, and wet his gun. He quickly recovered his footing and crossed over; but the Blackfeet had seen him enter the thicket, and came up to within a short distance, yet not approaching too near the place where they knew he was concealed. Unfortunately Allen, in his anxiety to be ready for defense, commenced snapping caps on his gun to dry it. The quick ears of the savages caught the sound, and understood the meaning of it. Knowing him to be defenceless, they plunged into the thicket after him, shooting him almost immediately and dragging him out still breathing to a small prairie about two rods away.

And now commenced a scene which Meek was compelled to witness, and which he declares nearly made him insane through sympathy, fear, horror, and suspense as to his own fate. Those devils incarnate deliberately cut up their still palpitating victim into a hundred pieces, each taking a piece; accompanying the horrible and inhuman butchery with every conceivable gesture of contempt for the victim, and of hellish delight in their own acts.

Meek, who was only concealed by the small patch of willows, and a pit in the sand hastily scooped out with his knife until it was deep enough to lie in, was in a state of the most fearful excitement. All day long he had to endure the horrors of his position. Every moment seemed an hour, every hour a day, until when night came, and the Indians left the place, he was in a high state of fever.

About nine o'clock that night he ventured to creep to the edge of the little prairie, where he lay and listened a long time, without hearing anything but the squirrels running over the dry leaves; but which he constantly feared was the stealthy approach of the enemy. At last, however, he summoned courage to crawl out on to the open ground, and gradually to work his way to a wooded bluff not far distant. The next day he found two of his horses, and with these set out alone for Green River, where the American Company was to rendezvous. After twenty-six days of solitary and cautious travel he reached the appointed place in safety, having suffered fearfully from the recollection of the tragic scene he had witnessed in the death of his friend, and also from solitude and want of food.

The rendezvous of this year was at Bonneville's old fort on Green River, and was the last one held in the mountains by the American Fur Company. Beaver was growing scarce, and competition was strong. On the disbanding of the company, some went to Santa Fe, some to California, others to the Lower Columbia, and a few remained in the mountains trapping, and selling their furs to the Hudson's Bay Company at Fort Hall. As to the leaders, some of them continued for a few years longer to trade with the Indians, and others returned to the States, to lose their fortunes more easily far than they made them.

Of the men who remained in the mountains trapping, that year, Meek was one. Leaving his wife at Fort Hall, he set out in company with a Shawnee, named Big Jim, to take beaver on Salt River, a tributary of the Snake. The two trappers had each his riding and his pack horse, and at night generally picketed them all; but one night Big Jim allowed one of his to remain loose to graze. This horse, after eating for some hours, came back and laid down behind the other horses, and every

The River of the West

---

now and then raised up his head; which slight movement at length aroused Big Jim's attention, and his suspicions also.

"My friend," said he in a whisper to Meek, "Indian steal our horses."

"Jump up and shoot," was the brief answer.

Jim shot, and ran out to see the result. Directly he came back saying: "My friend, I shoot my horse; break him neck;" and Big Jim became disconsolate over what his white comrade considered a very good joke.

The hunt was short and not very remunerative in furs. Meek soon returned to Fort Hall; and when he did so, found his new wife had left that post in company with a party under Newell, to go to Fort Crockett, on Green River,--Newell's wife being a sister of Virginia's,--on learning which he started on again alone, to join that party. On Bear River, he fell in with a portion of that Quixotic band, under Farnham, which was looking for paradise and perfection, something on the Fourier plan, somewhere in this western wilderness. They had already made the discovery in crossing the continent, that perfect disinterestedness was lacking among themselves; and that the nearer they got to their western paradise the farther off it seemed in their own minds.

Continuing his journey alone, soon after parting from Farnham, he lost the hammer of his gun, which accident deprived him of the means of subsisting himself, and he had no dried meat, nor provisions of any kind. The weather, too, was very cold, increasing the necessity for food to support animal heat. However, the deprivation of food was one of the accidents to which mountain-men were constantly liable, and one from which he had often suffered severely; therefore he pushed on, without feeling any unusual alarm, and had arrived within fifteen miles of the fort before he yielded to the feeling of exhaustion, and laid down beside the trail to rest. Whether he would ever have finished the journey alone he could not tell; but fortunately for him, he was discovered by Jo. Walker, and Gordon, another acquaintance, who chanced to pass that way toward the fort.

Meek answered their hail, and inquired if they had anything to eat. Walker replied in the affirmative, and getting down from his horse, produced some dried buffalo meat which he gave to the famishing trapper. But seeing the ravenous manner in which he began to eat, Walker inquired how long it had been since he had eaten anything.

"Five days since I had a bite."

"Then, my man, you can't have any more just now," said Walker, seizing the meat in alarm lest Meek should kill himself.

"It was hard to see that meat packed away again," says Meek in relating his sufferings, "I told Walker that if my gun had a hammer I'd shoot and eat him. But he talked very kindly, and helped

me on my horse, and we all went on to the Fort.”

At Fort Crockett were Newell and his party, the remainder of Farnham's party, a trading party under St. Clair, who owned the fort, Kit Carson, and a number of Meek's former associates, including Craig and Wilkins. Most of these men, Othello-like, had lost their occupation since the disbanding of the American Fur Company, and were much at a loss concerning the future. It was agreed between Newell and Meek to take what beaver they had to Fort Hall, to trade for goods, and return to Fort Crockett, where they would commence business on their own account with the Indians.

Accordingly they set out, with one other man belonging to Farnham's former adherents. They traveled to Henry's Fork, to Black Fork, where Fort Bridger now is, to Bear River, to Soda Springs, and finally to Fort Hall, suffering much from cold, and finding very little to eat by the way. At Fort Hall, which was still in charge of Courtenay Walker, Meek and Newell remained a week, when, having purchased their goods and horses to pack them, they once more set out on the long, cold journey to Fort Crockett. They had fifteen horses to take care of and only one assistant, a Snake Indian called Al. The return proved an arduous and difficult undertaking. The cold was very severe; they had not been able to lay in a sufficient stock of provisions at Fort Hall, and game there was none, on the route. By the time they arrived at Ham's Fork the only atom of food they had left was a small piece of bacon which they had been carefully saving to eat with any poor meat they might chance to find.

The next morning after camping on Ham's Fork was stormy and cold, the snow filling the air; yet Snake Al, with a promptitude by no means characteristic of him, rose early and went out to look after the horses.

“By that same token,” said Meek to Newell, “Al has eaten the bacon.” And so it proved, on investigation. Al's uneasy conscience having acted as a goad to stir him up to begin his duties in season. On finding his conjecture confirmed, Meek declared his intention, should no game be found before next day night, of killing and eating Al, to get back the stolen bacon. But Providence interfered to save Al's bacon. On the following afternoon the little party fell in with another still smaller but better supplied party of travelers, comprising a Frenchman and his wife. These had plenty of fat antelope meat, which they freely parted with to the needy ones, whom also they accompanied to Fort Crockett.

It was now Christmas; and the festivities which took place at the Fort were attended with a good deal of rum drinking, in which Meek, according to his custom, joined, and as a considerable portion of their stock in trade consisted of this article, it may fairly be presumed that the home consumption of these two “lone traders” amounted to the larger half of what they had with so much trouble transported from Fort Hall. In fact, “times were bad enough” among the men so suddenly thrown upon their own resources among the mountains, at a time when that little creature, which had made mountain life tolerable, or possible, was fast being exterminated.

The River of the West

---

To make matters more serious, some of the worst of the now unemployed trappers had taken to a life of thieving and mischief which made enemies of the friendly Indians, and was likely to prevent the better disposed from enjoying security among any of the tribes. A party of these renegades, under a man named Thompson, went over to Snake River to steal horses from the Nez Percés. Not succeeding in this, they robbed the Snake Indians of about forty animals, and ran them off to the Uintee, the Indians following and complaining to the whites at Fort Crockett that their people had been robbed by white trappers, and demanding restitution.

According to Indian law, when one of a tribe offends, the whole tribe is responsible. Therefore if whites stole their horses they might take vengeance on any whites they met, unless the property was restored. In compliance with this well understood requisition of Indian law, a party was made up at Fort Crockett to go and retake the horses, and restore them to their rightful owners. This party consisted of Meek, Craig, Newell, Carson, and twenty-five others, under the command of Jo Walker.

The horses were found on an island in Green River, the robbers having domiciled themselves in an old fort at the mouth of the Uintee. In order to avoid having a fight with the renegades, whose white blood the trappers were not anxious to spill, Walker made an effort to get the horses off the island undiscovered. But while horses and men were crossing the river on the ice, the ice sinking with them until the water was knee-deep, the robbers discovered the escape of their booty, and charging on the trappers tried to recover the horses. In this effort they were not successful; while Walker made a masterly flank movement and getting in Thompson's rear, ran the horses into the fort, where he stationed his men, and succeeded in keeping the robbers on the outside. Thompson then commenced giving the horses away to a village of Utes in the neighborhood of the fort, on condition that they should assist in retaking them. On his side, Walker threatened the Utes with dire vengeance if they dared interfere. The Utes who had a wholesome fear not only of the trappers, but of their foes the Snakes, declined to enter into the quarrel. After a day of strategy, and of threats alternated with arguments, strengthened by a warlike display, the trappers marched out of the fort before the faces of the discomfitted thieves, taking their booty with them, which was duly restored to the Snakes on their return to Fort Crockett, and peace secured once more with that people.

Still times continued bad. The men not knowing what else to do, went out in small parties in all directions seeking adventures, which generally were not far to find. On one of these excursions Meek went with a party down the canyon of Green River, on the ice. For nearly a hundred miles they traveled down this awful canyon without finding but one place where they could have come out; and left it at last at the mouth of the Uintee.

This passed the time until March. Then the company of Newell and Meek was joined by Antoine Rubideau, who had brought goods from Sante Fe to trade with the Indians. Setting out in company, they traded along up Green River to the mouth of Ham's fork, and camped. The snow was still deep in the mountains, and the trappers found great sport in running antelope. On one occasion a large herd, numbering several hundreds, were run on to the ice, on Green River, where they were crowded into an air hole, and large numbers slaughtered only for the cruel sport which they

afforded.

But killing antelope needlessly was not by any means the worst of amusements practiced in Rubideau's camp. That foolish trader occupied himself so often and so long in playing Hand, (an Indian game,) that before he parted with his new associates he had gambled away his goods, his horses, and even his wife; so that he returned to Santa Fe much poorer than nothing--since he was in debt.

On the departure of Rubideau, Meek went to Fort Hall, and remained in that neighborhood, trapping and trading for the Hudson's Bay Company, until about the last of June, when he started for the old rendezvous places of the American Companies, hoping to find some divisions of them at least, on the familiar camping ground. But his journey was in vain. Neither on Green River or Wind River, where for ten years he had been accustomed to meet the leaders and their men, his old comrades in danger, did he find a wandering brigade even. The glory of the American companies was departed, and he found himself solitary among his long familiar haunts.

With many melancholy reflections, the man of twenty eight years of age recalled how, a mere boy, he had fallen half unawares into the kind of life he had ever since led amongst the mountains, with only other men equally the victims of circumstance, and the degraded savages, for his companions. The best that could be made of it, such life had been and must be constantly deteriorating to the minds and souls of himself and his associates. Away from all laws, and refined habits of living; away from the society of religious, modest, and accomplished women; always surrounded by savage scenes, and forced to cultivate a taste for barbarous things--what had this life made of him ? what was he to do with himself in the future ?

Sick of trapping and hunting, with brief intervals of carousing, he felt himself to be. And then, even if he were not, the trade was no longer profitable enough to support him. What could he do ? where could he go ? He remembered his talk with Mrs. Whitman, that fair, tall, courteous, and dignified lady who had stirred in him longings to return to the civilized life of his native state. But he felt unfit for the society of such as she. Would he ever, could he ever attain to it now ? He had promised her he might go over into Oregon and settle down. But could he settle down ? Should he not starve at trying to do what other men, mechanics and farmers, do? And as to learning, he had none of it; there was no hope then of "living by his wits," as some men did--missionaries and artists and school teachers, some of whom he had met at the rendezvous. Heigho! to be check-mated in life at twenty-eight, that would never do.

At Fort Hall, on his return, he met two more missionaries and their wives going to Oregon, but these four did not affect him pleasantly; he had no mind to go with them. Instead, he set out on what proved to be his last trapping expedition, with a Frenchman, named Mattileau.

They visited the old trapping grounds on Pierre's Fork, Lewis' Lake, Jackson's River, Jackson's Hole; Lewis River and Salt River: but beaver were scarce; and it was with a feeling of relief that, on returning by way of Bear River, Meek heard from a Frenchman whom he met there, that he was

wanted at Fort Hall, by his friend Newell, who had something to propose to him.

The River of the West

Chapter XXI

1840. When Meek arrived at Fort Hall, where Newell was awaiting him, he found that the latter had there the two wagons which Dr. Whitman had left at the points on the journey where further transportation by their means had been pronounced impossible. The Doctor's idea of finding a passable wagon-road over the lava plains and the heavily timbered mountains lying between Fort Hall and the Columbia River, seemed to Newell not so wild a one as it was generally pronounced to be in the mountains. At all events, he was prepared to undertake the Journey. The wagons were put in traveling order, and horses and mules purchased for the expedition.

"Come," said Newell to Meek, "we are done with this life in the mountains--done with wading in beaver-dams, and freezing or starving alternately--done with Indian trading and Indian fighting. The fur trade is dead in the Rocky Mountains, and it is no place for us now, if ever it was. We are young yet, and have life before us. We cannot waste it here; we cannot or will not return to the States. Let us go down to the Wallamet and take farms. There is already quite a settlement there made by the Methodist Mission and the Hudson's Bay Company's retired servants.

"I have had some talk with the Americans who have gone down there, and the talk is that the country is going to be settled up by our people, and that the Hudson's Bay Company are not going to rule this country much longer. What do you say, Meek? Shall we turn American settlers?"

"I'll go where you do, Newell. What suits you suits me."

"I thought you'd say so, and that's why I sent for you, Meek. In my way of thinking, a white man is a little better than a Canadian Frenchman. I'll be d - - d if I'll hang 'round a post of the Hudson's Bay Company. So you'll go?"

"I reckon I will! What have you got for me to do? I haven't got anything to begin with but a wife and baby!"

"Well, you can drive one of the wagons, and take your family and traps along. Nicholas will drive the other, and I'll play leader, and look after the train. Craig will go also, so we shall be quite a party, with what strays we shall be sure to pick up."

Thus it was settled. Thus Oregon began to receive her first real emigrants, who were neither fur-traders nor missionaries, but true frontiersmen--border-men. The training which the mountain-men had received in the service of the fur companies admirably fitted them to be, what afterwards they became, a valuable and indispensable element in the society of that country in whose peculiar history they played an important part. But we must not anticipate their acts before we have witnessed their gradual transformation from lawless rangers of the wilderness, to law-abiding and even law-making and law-executing citizens of an isolated territory.

Letters and Journal of Mrs. Narcissa Prentiss Whitman, 1836

Platte River just above the Forks June 3rd 1836

Dear Sister Harriet and Brother Edward.

Friday eve 6 o'clock. We have just encamped for the night near the bluffs over against the river the bottoms are a soft wet plain and we were obliged to leave the river yesterday morning for the bluffs. The face of the country yesterday afternoon and today has been rolling sand bluffs mostly barren quite unlike what our eyes have been satiated with for weeks past No timber nearer than the Platte, and the water tonight is very bad, got from a small ravine we have usually had good water previous to this. Our fuel for cooking since we left timber (no timber except on rivers) has been dried Buffalo dung. We now find plenty of it and it answers a very good purpose smaller to the kind of coal used in Pennsylvania (I suppose now Harriet will make up a face at this, but if she was here she would be glad to have her supper cooked at any rate, in this scarce timber country) The present time in our journey is a very important one the hunter brought us buffalo meat Yesterday for the first that has been seen today to have been taken. We have some for supper tonight. Husband is cooking it no one of our company professes the art but himself. I expect it will be very good. stop I have so much to say to you children, that I do not know in what part of my story to begin, (I have very little time to write) I will first tell you what our company consists off we are ten in number five missionaries, three Indian boys and two young men employed to assist in packing animals.

Sab 4 Good Morn H & E I wrote last night till supper, after that it was so dark I could not see. I told you how many bipeds there was in our company last night now for the quadrupeds - 14 horses and six mules and fifteen head of Cattle. we milk four cows we started with seventeen but we have killed one calf and the Fur Company being out of provision have taken one of our cows for beaf it is usually pinching times with the company before they reach the buffalo, we have had a plenty because we made ample provision -- at Liberty we purchased a barrell of flour and baked enough to last us with killing a calf or two untill we reach the buffalo. The fur Com is large this year, we are really a moving village, nearly four hundred animals with ours mostly mules, and seventy men the fur Com have seven wagons and one cart, drawn by six mules each, heavily loaded, the cart drawn by two mules carries a lame man one of the proprietors of the com. we have two waggons in our com. Mr & Mrs S and Husband and myself ride on one Mr Gray and the baggage in the other our Indian boys drive the cows and Dulin the horses. Young Miles leads our forward horses-four in each team. Now E if you wish to see the camp in motion look away ahead and see first the pilot and the Captain Fitzpatrick just before him - next the pack animals, all mules loaded with great packs soon after you will see the waggons and in the rear our company we all cover quite a space. The pack mules always string along one after the other just like Indians. There are several gentlemen in the Com who are going over the Mountains for pleasure, Capt Stewart - Mr Lee speaks of him in his journal he went over when he did and returned he is an Englishman - Mr. Celan. We had a few of them to tea with us last Monday eve, Capts Fitzpatrick Stewart Maj Harris and Celam. I wish I could discribe to you how we live so that you can realize it. Our manner of living is far prefferable to any in the States I never was so contented and happy before. Neither have I enjoyed such health for years. In the Morn as soon as the day breaks the first that we bear is the word --- arise, arise, then the mules set up such noise as you never heard which puts the whole camp in motion. We encamp in a large ring, baggage and men tents and waggons

---

on the outside and all the animals except the cows are fastened to pickets within the circle. This arrangement is to accommodate the guard who stand regularly every night and day also when we are not in motion, to protect our animals from the approach of Indians who would steal them. as I said the mules noise brings every man on his feet to loose them and turn them out to feed. Now H & E you must think it very hard to have to get up so early after sleeping on the soft ground, when you find it hard work to open your eyes at seven o'clock just think of me every morn at the word arise we all spring. While the horses are feeding we get our breakfast in a hurry and eat it by this time the word catch up--catch up rings throu' the camp for moveing we are ready to start usually at six travel till eleven encamp rest and feed start again about two travel untill six or before if we come to a good tavern, then encamp for the night.

Since we have been in the prairie we have done all our cooking when we left Liberty we expected to take bread to last us part: of the way but could not get enough to carry us any distance we found it awkward work to bake at first out of doors but we have become so accustomed to now we do it very easy. Tell Mother I am a very good housekeeper in the prairie I wish she could just take a peap at us while we are sitting at our meals, our table is the ground our table cloth is an India rubber cloth and when it rains as a cloak our dishes are made of tin, tin basen for tea cups, iron spoons and plates each of us and several pans for milk and to put our meat in when we wish to set it on the table --- each one carries his own knife in his scabbard and it is always ready for use when the table things spread after makeing our forks of sticks and helping our selves to Chairs we gather arround the table Husband always provides my seat and in a way that you, would laugh to see us it is the fashion of all this country to imitate the Turks Mr Dunbar and Allis have supped with us and they do the same. We take a blanket and lay down by the table and those whose joints will let them follow the fashion, others take out some of the baggage (I suppose you know that there is no [stone] in this country not 2 stone have I seen of any size on the prairie) for my part I fix myself as gracefully as I can some times on a blanket some times on a box just as it is convenient let me assure you of this we relish our food none the less for siting on the ground while eating. We have tea and a plenty of milk which is a luxury in this country our milk has assisted us very much in making our bread since we have been journeying while the fur company has felt the want of food our milk has been of great service to us, but was considerable work for us to supply ten persons with bread three times a day Now we done using it now what little flour we have left we shall reserve for thickening our broth which is excelent I never saw anything like buffalo meat to satisfy hunger we do not want anything else with it I have eat three meals of it and it realishes well Supper and breakfast we eat in our tent we do not pitch it at noon, have worship immediately after sup & breakfast

Noon. The face of the country today has been like that of yesterday. We are now about 30 miles above the forks and leaving the bluffs for the river. We have seen wonders this forenoon herds of buffalo have hove in sight one, a bull, crossed our trail and ran upon the bluffs near the rear of the camp We took the trouble to chase him so as to have a near view Sister Spaulding and myself got out of the waggon and ran up on the bluff to see him. Husband was quite willing to ratify our curiosity seeing it was the first. Several have been killed this forenoon. The company keep a man out all the time to hunt for the camps.

Edward if I write much more in this way I do not know as you can read it without great difficulty. I could tell you much more but we are all ready to move again so fare well for the present I wish

you were all here with us going to the dear Indians I have become very much attached to Richard Tak ah too ah tis, the one you saw at our weding he call me mother I love to teach him to take care of him and hear them talk. there is five Nez Perces in the company and when they are together they chatter freely. Samuel Temone the oldest one has just come in to the camp with the skin and a some of the meat of a buffalo which he has killed himself he started this forenoon of his own accord it is what they like dearly to hunt buffalo so long as we have him with us we shall be supplied with meat

I am now writing backwards. Monday Morn I begun to say something here that I could not finish Now the man from the mountains has come who will take this to the office. I have commenced one to Bro & Sister Hull which I should like to send this time if I could finish it We have just met him and we have stoped our waggons to write a little Give my love to all

I have not told you half I want to we are all in health this morn and makeing rappid progress in our journey by the fourth of July our Cap intends to be at the place where Mr Parker and husband parted last fall. We are a month earlier passing here than they were last spring husband has begun a letter to pa and ma and since he has cut his finger so that it troubles him to write to the rest this is done in a hurry I no not know as you can read it Tell mother if I had looked the world over I could not have found one more careful and better quallified to transport a female such a distance. farewell all

NARCISSA PRENTISS

Husband says stop.

---

Platte River, South Side, six days above the Fort Laramie Fork, near the foot of the Rocky Mountains, June 27, 1836.

Dear Brother and Sister Whitman: - We were in perplexity when we left Liberty, but it has been overruled for good. I wrote Mother Loomis from the Otoe Agency. We were in still greater perplexity there, while crossing our baggage. Husband became so completely exhausted with swimming the river on Thursday, May 9th, that it was with difficulty he made the shore the last time. Mr. Spaulding was sick, our two hired men were good for nothing; we could not obtain much assistance from the Otoes, for they were away from the village; we had but one canoe, made of skins, and that partly eaten by the dogs the night before. We got everything over by Friday night. We did not get ready to start until Saturday afternoon. By this time the company had four and a half days the advance of us. It seemed scarcely possible for us to overtake them, we having two more difficult streams to pass, before they would pass the Pawnee villages. Beyond there we dare not venture more than one day. We were at a stand; but with the advise of brethren Merrill and Dunbar after a concert of prayer on the subject, we decided to start and go as far as it would be prudent for us. Brother Dunbar kindly consented to become our pilot, until we could get another. He started with us and came as far as the Elkhorn river, then the man Major Dougherty sent for, for us, came Up, and Mr. Dunbar returned. We had passed the river on Monday morning and taken down the rope, when our pilot and his Indian came up. It was with difficulty we crossed him and returned Mr. Dunbar. While on the opposite shore, just ready to leave us, he called to us to receive his parting advice, with a word of caution which will never be forgotten. Our visit with him and Brother Merrill's family was indeed refreshing to our thirsty spirits - kindred spirits rejoicing in the self denials and labors of missionary life.

---

The next day, in the morning, we met a large party of Pawnees going to the fort to receive their annuities. They seemed to be very much surprised and pleased to see white females, many of them had never seen any before. They are a noble Indian-large, athletic forms, dignified countenances, bespeaking an immortal existence within. When we had said what we wished to them, we hurried on, and arrived at the Elkhorn in time to cross all our effects.

Here I must tell you how much good Richard, John and Samuel did us. They do the most of driving the cattle and loose horses. Occasionally husband and myself would ride with them as company and encouragement. They came up to the river before us, and seeing a skin canoe on the opposite side, they stripped themselves, wound their shirts around their heads, and swam over and back again with the canoe by the time we came up. We stretched a rope across the river and pulled the goods over in the canoe without much difficulty.

Monday and Tuesday we made hard drives - Tuesday especially. We attempted to reach the Loup Fork that night, and a part of us succeeded. Those in the wagons drove there by 11 o'clock, but it was too much for the cattle. There was no water or feed short of this. We rode with Richard and John until 9 o'clock, and were all very much fatigued. Richard proposed to us to go on and he and John would stay on the prairie with the cattle, and drive them in in the morning. We did not like to leave them, and so we concluded to stay. Husband had a cup tied to his saddle, in which he milked what we wanted to drink; this was our supper. Our saddle blankets, with our India rubber cloaks, were our beds. Having offered up our thanksgiving for the blessings of the day and seeking protection for the night, we committed ourselves to rest. We awoke in the morning much refreshed and rode into camp before breakfast-five miles. The Fur Company was on the opposite side of the river, which we forded, and, without unloading our wagon much, were ready to move again about noon. We wished to be with the company when they passed the Pawnee village. This obliged us to make a day's drive to the camp in half a day, which was too bad for our horses. We did not reach them until 1 o'clock at night.

The next day we passed all their villages. We, especially, were visited by them both at noon and at night; we ladies were such a curiosity to them. They would come and stand around our tent, peep in, and grin in their astonishment to see such looking objects.

Since we came up with the camp, I rode in the wagons most of the way to the Black Hills. It is astonishing how well we get along with our wagons where there are no roads. I think I may say it is easier traveling here than on any turnpike in the States.

On the way to the buffalo country we had to bake bread for ten persons. It was difficult at first, as we did not understand working out-doors; but we became accustomed to it, so that it became quite easy. June found us ready to receive our first taste of buffalo. Since that time I have had but little to do with cooking. Not one in our number relishes buffalo meat as well as my husband and I. He has a different way for cooking every piece of meat. I believe Mother Loomis would give up to him if she were here. We have had no bread since. We have meat and tea in the morn, and tea and meat at noon. All our variety consists of the different ways of cooking. I relish it well and it agrees with me. My health is excellent. So long as I have buffalo meat I do not wish anything else. Sister Spaulding is affected by it considerably - has been quite sick.

We feel that the Lord has blessed us beyond our most sanguine expectations. We wish our friends at borne to unite with us in thanksgiving and praise for His great mercies to us. We are a month earlier this year than husband was last, and the company wish to be at Rendezvous by the 4th of

July. We have just crossed the river and shall leave here to-morrow morning.

Now, Sister Julia, between you and me, I just want to tell you how much trouble I have had with Marcus, two or three weeks past. He was under the impression that we had too much baggage, and could not think of anything so easy to be dispensed with as his own wearing apparel - those shirts the ladies made him just before he left home, his black suit and overcoat - these were the condemned articles. Sell them he must, as soon as he gets to the fort. But first I would not believe him in earnest. All the reasons I could bring were of no avail - he still said he must get rid of them. I told him to sell all of mine, too; I could do without them better than he could. Indeed, I did not wish to dress unless he could. I finally said that I would write and get Sister Julia to plead for me, for I knew you would not like to have him sell them, better than I should. This was enough; he knew it would not do to act contrary to her wishes, and said no more about it.

July 15th When I wrote this letter I expected an opportunity to send it immediately but we did not meet the party we expected and have had no opportunity since. We are now West of the Rocky Mountains at the encampment Messrs. McLeod & McCay expecting to leave here on Monday for Walla Walla. It seems a special favour of Providence that that company has come to Rendezvous this season for we . . . to have gone with the Indians a difficult rou [te and] slow that we should have been late at Walla Walla and [not have had] the time we wanted for making preparations for winter. Hus [band has] written the particulars concerning our arrival, meeting the Indians, & c-to Brother Henry.

One particular I will mention which he did not. As soon as I alighted from my horse I was met by a company of matron women. One after another shaking hands and saluting me with a most hearty kiss. This was unexpected and affected me very much. They gave Sister Spaulding the same salutation. After we had been seated awhile in the midst of the gazing throng, one of the chiefs whom we had seen before came with his wife and very politely introduced her to us. They say they all like us very much and thank God that they have seen us, and that we have come to live with them.

It was truly pleasing to see the meeting of Richard and John with their friends. Richard was affected to tears, his father is not here but several of his . . . and Brothers. When they met each took off his hat and shook hands as respectful as in civilized life. Richard does not give up the idea of seeing again Rushville. I must close for want of room. Please give my love to Deborah and Harriet and all other friends. I hope you will all write us now as husband has given directions how to send. Remember me affectionately Sister Alice. Tell her to write us immediately. We want to hear from you all.

Your affectionate sister, NARCISSA WHITMAN.

---

Rendezvous Beyond the R. Mountains July 15th, 1836.

Dear Brothers and Sisters.

Last week I filled a letter for father and mother stating particulars up to that time. I said but little about the future. It was undetermined what we should do. We soon heard however that there was a Company from the Columbia river near at hand. Monday the 11th they came within ten miles of us & encamped. On Tuesday Mr. McLeod one of the principle traders in the N West Fur Co. came into our camp & gave us very satisfactory intelligence concerning Mr. Parker. Also a letter from him advising us to go to Walla Walla in company with them in preference to the Indians.

---

Mr. Parker went with them alone last year after he left here. They took a very difficult route on account of finding Buffalo & traveled very slow so that it made his arrival at Vancouver quite late. He came on his way to meet us at Rendezvous to Cooscoosky river little this side of Wallah Wallah with a party of Nez Perces early in May. When there they would not consent to come by Bear river but wished to make the same difficult route they did last fall for the same reason to make meat.

Mr. Parker thought that he would have to encounter considerable snow it was so early & having heard that our Company would be at Rendezvous by the first of July feared he should not arrive in season to go over with them accepted an offer of the H.B. Co. to take passage on board of one of their ships to England. He returned immediately to Wallah Wallah. But before he leaves intended to make another exploring tour up what is called Clarks river between 200 and 300 miles in company with some men of the H.B. Co. He will not leave for home until September quite probable we shall see him before he leaves For Mr. McLeod's Co. will have to make returns before the ship sails. Mr. Parker will have to visit England for the ship will not enter any of our eastern ports. We highly approve of this plan although we are very much disappointed in not seeing him here It will be much easier for him after having endured the fatigue of a tour over the country After considering the subject we concluded to follow the advice of Mr. Parker & put ourselves under the protection of N.W.Co. Mr. McLeod kindly invited us to return to his camp as soon as practicable Accordingly yesterday we took leave of the Eastern Company who had shown us every kindness possible and removed together with the Nez Perces and Flat Head to his camp On our arrival Mr McL came to meet us led us to his tent & gave us a supper which consisted of steak (Antelope) broiled ham biscuit & butter tea and loaf sugar brot from Wallah Wallah This we relished very much as we had not seen anything of the bread kind since the last of May Especially sister Spalding who has found it quite difficult to eat meat some time

We learn from Mr. McLeod much that is interesting about our future home

Mr. Parker has been very much pleased with his situation at Vancouver during the winter he has been as comfortably situated as if he had been at home.

He told us we should not want for supplies at Wallah Wallah. The Company have a very large [farm] at Vancouver which produced three thousands bushels of wheat last year and other crops in proportion.

They have apples pears peaches & grapes in abundance & every kind of vegetables necessary for comfort which we find in our own beloved land. When we arrive at Wallah Wallah we are assured of a treat of ripe watermelons & mushmelons. They have a farm at Caldwell [Colville] also which is on the north branch of the Columbia five days ride above Wallah Wallah where they raise an abundance grain and have a flouring mill. From this post Wallah Wallah is supplied with flour by water. Vancouver is 130 miles from the ocean & Walla Walla 250 above Vancouver.

We are recommended to a situation on the Coos Coosky river at it junction with the Lewis about three days ride from Walla Walla.

At Fort Hall about fifteen days ride from here they have green peas This establishment belongs to a man formally from Boston.

It will take us 35 days at least to go from here to Walla Walla if not longer

We have succeeded in bringing our waggon so far but with considerable difficulty for the last few days. Whether we shall succeed in getting it through is doubtful. We intend to try and go with it

as far as we can. We want to take it on for the benefit it will be to us when we get there While passing the Mountains we came over some verry frightful looking places & the Hill were so steep that it was difficult riding them. The steepest point of Mount pleasant in Prattsburgh would be verry easy decending compared with some of these rugged places. And in crossing rivers we find it not difficult to ford them The Green river is the deepest we have forded on horseback. Mr. McLeod say the Messrs Lees are doing verry well one of them has been verry much out of health & was advised to take a journey to Oahu He went there last October and is expected to return this fall

Vessels sail from Oahu to Vancouver frequently during the year & we shall have an opportunity of hearing from home through that channel. Letters sent to Mr. Green Boston post paid directed to Columbia river near Walla Walla by the way Oahu & Vancouver We should get them regularly & oftener than any other way, There will be no security in sending them over the Mountains by the fur Company possibly we might get them but not oftener than once a year. We have not known what directions to give about our letters Now our friends can write us when they please and send to Boston & in the mean time we shall get them as easy as the sandwich islande missionaries do theirs. For ships come from Oahu to Vancouver every two months during the year. My Dearest friends if you want to do us good write to us often You cannot know the comfort it will give us unless placed in like circumstances.

We have improved every opportunity of writing and sending notwithstanding the excessive fatigue of our journey.

July 17th Remember me affectionately to all the Brethren and Sisters in Christ with whom I have laboured in the Gospell long to hear of your faith & labours of love for His sake who has died for us - Is there no more in that church yea in my own dear family that can come & do these benighted souls good Oh that you were all here Father Mother & all.

This is a cause worth living for - Wherever we go we find oppertunities of doing good-If we had packed one or two animals with bibles & testaments we should have had abundant oppertunity of disposing of them to the traders & trappers of the mountain who would have received them greatfully Many have come to us for tracts & bibles which we could not supply. We have given away all we have to spare. When they return from hunting they have leisure for reflection and reading if they have the means, which might result in the salvation of their souls. A missionary might do good in this field one who would be willing to come & live as they do

Oh how many missionaries are wanted who wilt go into the highways & hedges & compel sinners to come in to the feast

Before this reaches you we shall probably be at Walls Walla. We shall write by Mr Parker but it will be some time before it reaches you. We expect to leave here tomorrow for Walla Walla Brother Judson Husband said when he received your letter that he should write you, but he has not found time yet His hands are full continually The responsibility of every movement rests upon him & besides he has many calls for medical attention He unites with me in sending love to yourself & wife Father Mother Brothers Sisters & friends trust you will not forget to pray for us for we feel that we need your prayers now as ever Sisters Jane Clarissa & Harriet want to know what you are doing How does the Moral Reform cause get along at home the Anti Slavery &c Keep the numbers of the Advocate & send to Boston as you do your letters . . .

Your sister NARCISSA

---

July 19th

Dear Mother. I have filled this sheet for sending once but since I closed I have heard so much about the West that I thought it best to write another and enclose [with] this. When we get to Walla Walla we shall feel as though we were in England. Most of men of the North West Company are from that country. They are expecting a Clergyman & his Lady from E. to settle at Vancouver. She refused to come by water around Cape Horn but chose to come to NY then to Montreal and join an expedition of the Company to cross the Mountains much to the north of this then down Clarks river to Walla Walla. There is one lady at Vancouver who came from E. in the last voyage of the Com ship.

Mother may rest easy about our wanting for the necessary of life. We have not suffered yet & judging from the hospitality of the Com. we are now with have no reason to think we shall. I am verry well and in great spirits. Pray for your absent daughter

NARCISSA.

Written upon the waggon.

Whether we ever see each others faces again in this world again is uncertain. I often think of my Dear Parents but do not regret coming.

As it will be a long time before you will hear from me again after we leave this place I bid you all My Beloved Parents, Brothers Sisters & Friends an affectionate farewell.

CHAPTER ONE - A GEOGRAPHICAL AND HISTORICAL SURVEY

THE whole territory of the United States of North America from the Atlantic to the Pacific ocean is divisible into two great sections, the eastern and the western. The eastern, which we may also call the cultivated part of the United States, is bounded on the east by the Atlantic ocean, on the south by the Gulf of Mexico, on the north by the British Possessions in North America, and on the west by a line coinciding with civilization's ceaseless westward progress, stretching out from year to year, a line which I would call the boundary of civilization of the United States. This line now about corresponds with the western boundary of the territories, Wisconsin and Iowa, and of the states, Missouri, Arkansas and Louisiana. The other, the western section of the United States,

---

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

extends from this boundary of civilization to the coasts of the Pacific. On the south, merely to give general indications, it is separated from Texas by the Sabine River, and from Mexico by a line running along the south bank of the Arkansas in its upper course to its source in latitude 42° , and with that parallel westward to the Pacific ocean. Toward the north this section bounds on the British Possessions. But the northern boundary has been fixed by the treaties of 1818 with England, only so far as concerns the part east of the Rocky Mountains, as running on the 49th parallel from the Lake of the Woods westwardly to the Rockies. Beyond these mountains to the Pacific Ocean the United States claim to the Russian Possessions in latitude 54° 10' north by reason of discoveries and ancient treaties. By provisional arrangement, England shares with us the possession of this region, leaving the dispute unsettled. The western portion of the United States, which alone concerns us here, is divided into territories: on this side of the Rockies we have the Northwest Territory, Missouri Territory, Arkansas Territory; while all beyond to the Pacific Ocean is covered by the general name of Oregon Territory. Only along the border of this western section, which in circumference and area is equal to the eastern section, if not greater than it, has civilization struck any roots. That is to say, along the boundary of civilization live various peaceful Indian tribes that have in part accommodated themselves to agriculture, and on the other side, on the Columbia River, near the Pacific Ocean, several, as yet quite unimportant settlements have been made by Americans and Englishmen. The area between these extremes as yet no plow has touched; no homely roof of the settler invites the traveler to rest. The roving Indian alone here puts up his portable tent, and moves daily on with his faithful companion, the buffalo, who, like himself, retreats before the "pale faces." The character of the country favors the hunter's life of these savage bands, and interposes great obstacles to the advance of the settler. For this enormous stretch of country is really only one huge prairie, rolling on in wave-like hills and broad plateaus, plentifully traversed, it is true, by brooks and rivers, but so scantily provided with wood, that even the mere traveler cannot always find the necessary firewood, but must take dried buffalo dung as an inadequate substitute. From north to south this prairie is crossed by the lofty mountain chain which traverses all western America in the direction just mentioned, bearing various names in the different countries it crosses, but known in North America under the general name of Rocky Mountains, and in South America as the Andes. Out of these mountains, whose peaks are covered with everlasting ice and snow, issue the streams which traverse this wilderness, and send their waters to either ocean, the Atlantic and the Pacific. So, in the northeast of this region arises the Missouri with its tributaries, the Yellowstone and the Platte; in the southeast the Green River (Colorado of the West), which empties into the Gulf of California. Toward the west the Columbia has its source, discharging itself into the Pacific Ocean, affording incalculable advantages for commerce. This short geographical survey makes evident the importance of the region in commercial aspects. If we further consider that the country abounds in beavers, and that trading with the Indians is a source of great profit, it need not surprise us that in spite of all obstacles which ignorance of the country, hostile Indians, difficulties of transportation, hunger and thirst oppose to a journey into this region, an enterprising people, such as are the Americans, have turned their attention from an early date in this direction, and have known how to conquer all difficulties with persevering courage.

The first trips of discovery to this Far West are so closely connected with the history of the North American fur trade, that it becomes necessary to refer to it briefly. Even in former centuries, when

---

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

the eastern coast of North America first began to be peopled, and when the country beyond the Alleghenies abounded in Indians and buffalo, fur trading and bartering with the Indians proved a veritable gold mine. The Canadians, at that time under French rule, especially distinguished themselves in this kind of commerce. The Canadian fur traders boldly pushed into and penetrated a wilderness into which no European had theretofore set foot. Their buoyant French temperament enabled them to make themselves popular even among wild Indian tribes; and so they became pioneers of civilization. Among the trading companies organized for this purpose two are especially prominent, their history running down to our day, namely: the Hudson's Bay Company, chartered by Charles II in 1670, whose headquarters were then in New York, and the North West Company, established at Montreal in 1783. These two rival companies carried on their trade chiefly on the Great Lakes, and later descended from there into the Mississippi Valley. The country further west was as yet unknown. The first fragmentary information about this country we find in the travels of Jonathan Carver of Connecticut, who, about the year 1763, was among the Indians on the Upper Mississippi. He mentions a River Oregon or the River of the West (Columbia). This information he probably received through Indians. The word "Oregon" seems to date from this, its first mention. The first traveler who reached the Pacific Coast by going westward was Sir Alexander Mackenzie, a former British officer. He crossed the Rocky Mountains for the first time in 1793, at 52° 20' 48" north latitude, and reached the Pacific Ocean in what is now Caledonia, between latitude 52° and 55° , and consequently north of the Columbia River. Soon thereafter the North West Company erected, on the Pacific Coast, in the region mentioned, two trading posts. In the year 1803 the Government of the United States, recognizing the importance of these western possessions, sent an expedition under Lewis and Clark across the Rocky Mountains to explore this country, and to take possession thereof in the name of the United States. Lewis and Clark ascended the Missouri to its sources; then, battling with many hardships, crossed the Rocky Mountains; reached on the other side the sources of the Columbia, and finally-following that river-the Pacific. With the change in political affairs in North America, the two chief trading companies, the Hudson's Bay Company and the North West Company, had passed into the hands of the English, and steadily maintained their preponderance. But formidable opposition against them arose in 1810 at New York in the Pacific Fur Company, whose financial and intellectual head was John Jacob Astor, a German by birth. A detailed account of this undertaking, so tremendous for a private citizen, is found in Washington Irving's classic, "Astoria." For present purposes it is enough to know that the undertaking consisted of two contemporaneous expeditions, one by sea and one by land. The latter was entrusted to Wilson P. Hunt of New Jersey (now postmaster at St. Louis) . Hunt ascended the Missouri to the village of the Arickaras, and thence continued overland in southwesterly direction. He reached the Rockies at the northwest corner of the Wind River Mountains, crossed the principal range, found on the further side the southern main source of the Columbia, the Snake River, and after incredible sufferings, to which several of the party succumbed, reached the Columbia and the Pacific Ocean. At the same time a ship had been sent around Cape Horn to the Columbia River. It had arrived there, and a trading fort (Astoria) had been built near the mouth of the Columbia River. So far, the undertaking was crowned with success. But several mishaps, especially the faithlessness of one agent, wrecked everything. In 1812 the fort was treacherously sold by the agent to the North West Company, and shortly after, the English, then at war with the United States, took military possession. In 1818 the fort was formally surrendered to

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

the United States, but the North West Company remained in the actual occupation of the country. Its only rival now was the Hudson's Bay Company. For a time these two companies maintained a bloody feud, till finally, in 1821, they amalgamated into one trading company under the valuable franchises of the Hudson's Bay Company. The new company has now drawn to itself all the trade on the Columbia and has actually expelled the United States from this part of its territory.

Such results were not encouraging for the people of the United States; but their spirit of enterprise soon showed itself afresh. In 1820 a new expedition, under Major Long, was sent by the Government of the United States up the Missouri River to explore the country. Private undertakings also were soon organized. So in 1822, General Ashley of Missouri and Mr. Henry established a trading post on the Yellowstone, and made trips through the country on this side of the Rocky Mountains to the Green River. Beaver trapping promised most profit. A peculiar class of men, the trappers, who traversed the country in all directions, were developed by this business. Out of this school arose leaders for subsequent enterprises, such as Smith, Fitzpatrick, Bridger, Robert Campbell, William Sublette, etc., names well known to every mountaineer.

In 1830 two companies organized in St. Louis became active: the American Fur Company, which had been organized as far back as 1809 but had become dormant, and the Rocky Mountain Fur Company, founded by Sublette and Campbell. In 1832, two new rivals entered the field, viz.:

Captain Bonneville, on behalf of a company in New York, and Captain Wyeth, from Boston. These four parties crossed the country on either side of the Rocky Mountains in every direction, save that the all-powerful Hudson's Bay Company successfully excluded them from the Columbia River. Washington Irving has faithfully described in his "Rocky Mountains" the manner in which competition was carried on by these jealous rivals. Captains Wyeth and Bonneville disappeared from the scene after a few years, because their companies had sustained losses in the enterprise. The American and the Rocky Mountain Companies first came to a friendly agreement, whereunder each occupied a certain district for trading and trapping, and afterwards they amalgamated into a single company, which was carried on under the firm name of Chouteau, Pratte & Co. Several small companies were formed still later, which erected trading forts on the Missouri, on the North and South Platte, on the Arkansas and on the Green River; but none of them attained any marked preponderance.

While the knowledge of the country in general was much enlarged by the trading trips above described, much was also done in a scientific direction by men who had joined such expeditions on account of devotion to the natural sciences. So the well known naturalist, Nuttall, and the botanist, Bradbury, accompanied Hunt's Expedition to the point where it left the Missouri. In Long's Expedition there was Say, who has rendered such services to zoology. The Prince of Neuwied, too, so favorably known for his zeal for the natural sciences, undertook about this time a scientific trip up the Missouri. Finally, Captain Wyeth was accompanied by Nuttall and Townshend. Though these men accomplished much, often at great sacrifices, very much more remains to be done; for the country is rich in treasures for every branch of the natural sciences, and the difficulties and dangers of the journey alone have as yet prevented their exploitation.

---

CHAPTER TWO - THE DEPARTURE-THE CARAVAN

SOME human beings, like birds of passage, are ill at ease when kept for a considerable length of time under the same sky. They consider all Nature one great family; the whole world their home.

---

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

I will not decide whether or not I belong to this class; but I do know that from time to time an irresistible fever for wandering seizes me, and that I find no better remedy against the moods and crochets of hum-drum daily life than change of place and of air.

Chained for several years to an exacting medical practice, in which I had tasted to the full the sorrows and pleasures of the active physician, I felt the need of mental and physical recreation. An excursion to the cultivated part of the United States, through the greater part of which I had already traveled, suited neither my means nor my inclinations. The far West, with its wilderness and its aboriginals, was far more to my liking. Apart from the selfish purpose of personal enjoyment, I had another in view; perhaps I might contribute something, in proportion to my limited knowledge in natural sciences and my narrow means, toward a better understanding of this region, where as yet our information in many respects partakes of the fabulous.

About the middle of April, 1839, I left St. Louis with this purpose. I went up the Missouri on the steamboat St. Peters to Chouteau's Landing. Our trip lasted six days, because the water was at a very low stage; and offered nothing of special interest. The border village, West Port, is six miles distant from Chouteau's Landing. There I intended to await the departure of this year's annual caravan. The village has perhaps thirty or forty houses, and is only a mile from the western border of the State of Missouri. It is the usual rendezvous for travelers to the Rocky Mountains, as is Independence, twelve miles distant, for those journeying to Santa Fe. I bought a horse and a mule, the former to ride, the latter for my baggage; and made other preparations necessary for my journey. On May 4th the different parties who were to join the expedition met for their first night camp at Sapling Grove, about eight miles from West Port. The way thitherward goes through the land of the Shawnees, peaceable Indians who have settled here. Some of them own valuable farms. Their manner of life shows a close approach to that of the white man. Some of them speak English. My first day's journey began under evil auspices, for I had not yet learned to pack my mule. The usual way of doing it is this: The baggage is divided into two equal parts, each part firmly bound up, and hung by loops on either side of the yoke-shaped pack saddle. The whole is further fastened by the so-called "lash rope," of stout buffalo leather, which is first wound around the barrel of the animal, and then in diamond shaped turns as firmly as possible around the pack. My baggage weighed 150 to 200 pounds, a quite ordinary load for a mule; but I had not divided the burden properly, so that I had to repack repeatedly on the road. It was well toward evening when I reached the camp, where the others already had arrived. Our caravan was small. It consisted of only twenty-seven persons. Nine of them were in the service of the Fur Company of St. Louis (Chouteau, Pratte & Co.), and were to bring the merchandise to the yearly rendezvous on the Green River. Their leader was Mr. Harris, a mountaineer without special education, but with five sound senses, that he well knew how to use. All the rest joined the expedition as individuals. Among them were three missionaries, two of them accompanied by their wives, whom a Christian zeal for converting the heathen urged to the Columbia. Some others spoke of a permanent settlement on the Columbia; again, others intended to go to California, and so on. Almost all, however, were actuated by some commercial motive. The majority of the party were Americans; the rest consisted of French Canadians, a few Germans, and a Dane. The Fur Company transported its goods on two-wheeled carts, of which there were four, each drawn by two mules, and loaded with 800 to 900 pounds. The rest put their packs on mules or horses, of which there were fifty to sixty in the caravan. Our first camp, Sapling Grove, was in a little hickory wood, with fresh spring water. Our animals we

---

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

turned loose to graze in the vicinity. To prevent them from straying far, either the two fore feet, or the forefoot and hindfoot of one side are bound together with so-called "hobbles." In order that they may easily be caught, they drag a long rope of buffalo leather (trail-rope). At night stakes (pickets) are driven into the earth at some distance from each other, and the animals are fastened to them by ropes. After we had attended to our animals, and had eaten our supper, we sprawled around a fire, and whiled away the evening with chatting and smoking; then wrapped ourselves in our woolen blankets,-the only bed one takes with one-and slept for the first time under our little tents, of which we had seven. At dawn, the leader rouses the camp with an inharmonious: "Get up! Get up! Get up!" Every one rises. The first care is for the animals. They are loosed from their pickets and allowed an hour for grazing. Meanwhile we prepare our breakfast, strike our tents, and prepare for the start. The animals are driven in again, packed and saddled. We move off in corpore. We proceed at a moderate pace, in front the leader with his carts, behind him in line long drawn out the mingled riders and pack animals. In the early days of the journey we are apt to lead the pack animals by rope; later on, we leave them free, and drive them before us. At first packing causes novices much trouble on the way. Here the towering pack leans to one side; there it topples under the animal's belly. At one time the beast stands stock still with its swaying load; at another it rushes madly off, kicking out till it is free of its burden. But pauseless, like an army over its fallen, the train moves on. With bottled-up wrath the older men, with raging and swearing the younger ones, gather up their belongings, load the beasts afresh, and trot after the column. Toward noon a rest of an hour or two is made, if a suitable camp can be found, the chief requisites being fresh water, good grass, and sufficient wood. We unload the beasts to let them graze, and prepare a mid-day meal. Then we start off again, and march on till toward sunset. We set up the tents, prepare our meal, lie around the fire, and then, wrapped in our woolen blankets, commit ourselves to our fate till the next morning. In this way twenty to twenty-five miles are covered daily. The only food the animals get is grass. For ourselves, we take with us for the first week some provisions, such as ham, ship-biscuit, tea and coffee. Afterwards, we depend on hunting. Such are the daily doings of the caravan.

---

CHAPTER THREE - JOURNEY TO THE KANZAS RIVER - THE KANZAS INDIANS

IN the first days our journey was straight west. The first day we marched over the broad Santa Fe road, beaten out by the caravans. Then leaving it to our left we took a narrow wagon road, established by former journeys to the Rocky Mountains, but often so indistinctly traced, that our leader at times lost it, and simply followed the general direction. Our way led through prairie with many undulating hills of good soil. The region is watered with a few brooks and rivulets, along whose banks there is usually a narrow strip of deciduous timber. On the prairie itself there is no wood. Several times we had to content ourselves with muddy standing water; but usually we found pleasant, even romantic camping places on clear brooks. We saw no large game as yet. A few prairie chicken was all that we shot. However, a weather-worn buffalo skull and the antlers of an elk, which we found, reminded us of the time when these denizens of the wilderness had dwelt here.

On the fifth day after our start we reached the Kansas, or, as it is commonly called, Ka River, not deep, but rather broad and swift. Its course is from west to east, and it empties close by the border of the State of Missouri into the river of the same name. We were about a hundred miles above its

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

mouth. To cross us over a canoe had been sent up the river from its mouth, but it had not as yet arrived. So we camped in the meanwhile on an elevation near the river. Some miles from us, on the same side of the river, was a village of the Kas, or Kansas Indians; across the river, somewhat farther off, were two villages of the same tribe. Near the first village there is a trading house, a smithy, and a Methodist mission. The Kas formerly lived forty miles to the west; but in 1826, in pursuance of treaties, the United States Government assigned them the district which they now inhabit; and has set apart for them for twenty years the annual sum of \$3,500.00, which is given them principally in kind. The whole tribe is said to number at present 1,500 souls. The attempt to civilize the Kas and lead them to agriculture as yet has had little success. The Government has sent them some mechanics, has established a sort of model farm, and furnishes them yearly a number of cattle and swine. But they usually burn the fencing of the farm in winter and slaughter the animals. In other respects, they live, like the rest of the Indians, from hunting; and as their country, though containing some deer, and elk, has no buffalo, they go twice a year some hundreds of miles away on a buffalo hunt, and bring the dried meat back with them. A tendency toward civilization, on the other hand, is indicated by their permanent residence in villages. While all wild Indian tribes know no other shelter than their lodges, the Kas have already built villages of permanent houses, in which they spend a great part of the year. They thus form a transition from the agricultural Indians dwelling along the border of the United States and the untamed hunting hordes of the Far West.

We had scarcely arrived at the Ka River when the Indians came to our camp; but only a few, for most of them were off on a buffalo hunt. Their clothing was such as is customary with Indians. Some of them had only an apron around the loins; but most also wrapped themselves in a buffalo robe or woolen blanket. Some in addition wore leather leggings. Almost all wore moccasins. The chief garment of the women is a leather overshirt reaching from breast to knee, in addition to which they usually wear drawers and mocassins, with a woolen blanket, preferably of gaudy colors. Like all Indians, they are fond of painting themselves with vermilion. A red ring around the eyes is considered particularly becoming. To the dressing of the hair the men give more care than the women. While the latter simply part their raven black straight hair, push it back of the ears, and let it hang down behind, the men seek to train theirs in all possible ways. Sometimes they shave away all the hair save a long lock on top; again, they let it grow long, and plait it into a braid; sometimes they shave the hair on either side, and leave in the middle a helmet-shaped comb. The last named style seems especially in fashion with the Kas. Both sexes also adorn themselves with all possible ornaments of beads, coral, brassware, feathers, ribbons, gaudy rags, etc. When lacking ornaments, they often daub the head with clay. The Kas who came to our camp behaved very peaceably. They brought some hides, especially tanned deer hides, for sale, and bartered them for knives and other trifles. Some of them wanted money, and offered the hides for a dollar a piece. But they cared most for flour and bacon, for they were starved out. At night, we set guards for the first time, for although the Ka Indians have committed of late no hostilities against the whites, they do not scruple to steal horses from them when they can do it unpunished. The night was divided into three watches. Two or three men were always on watch together. As the canoe had not arrived the next morning, I made a side trip to the nearest village. The village is on the right of the river, on an elevation from which one can enjoy a pleasant and wide view. From a distance it is not unlike a mass of great mole hills. In the village itself no living being was to be found. The

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

greater part of the inhabitants were hunting buffalo. The rest had gone to our camp. As the houses have neither lock nor bar, I could survey them, inside and out, at leisure. The whole village consists of fifty to sixty huts, built, all in one style, in four somewhat irregular rows. The structure is very simple. On a round, arched frame of poles and bark, earth is placed with grass or reeds; at the top, in the middle, an opening is left for light and smoke; in front, at the ground, a similar opening as an entrance; and the shanty is finished. At the open door there is usually a reed-covered passage, extending a few steps into the street. There are about twelve cut braces inside the house; the fireplace is under the opening in the roof; at the side are some bunks of plaited strips of wood. The whole is rather spacious.

The canoe arrived the same day. The wind had been adverse. The next morning we crossed the river. All our baggage was brought over in the canoe; the carts were driven over empty; the animals were driven or ridden through. Everything went smoothly but for the breaking of an axle that had to be mended. The Indians visited us again, and received some presents, especially tobacco, for which they were very eager. Without further interruption we continued our journey.

---

CHAPTER FOUR - JOURNEY FROM THE KANZAS TO THE PLATTE - THE ELK - THE ANTELOPE

WE turned from the Ka River on our left, and took a more northwesterly direction. We passed two more villages of the Kas, built in the same way, and deserted, as were the others. The weather heretofore had been very favorable, but from now on we had frequent thunderstorms, alternating with a keen north wind. Our baggage was often so soaked that we had to sleep in wet blankets, and get up in the morning as from a cold bath. Nevertheless, we all continued in health. The country through which we go is still the same rolling, treeless prairie, wearying to the beholder's eye. Now that we are penetrating deeper into the country, we observe more caution than hitherto. At evening we form our camp in a square; at night we tie our animals in its midst; and regularly mount guard. On May 14th we came to the Rush River; on the 19th to the Blue River. Both are rapid streamlets, uniting somewhat farther down as the Big Blue River, which empties into the Kansas. Game becomes more plentiful. At times we saw deer, and also some wolves. At Rush River one of our hunters (we have two hunters in our company who daily go out hunting) shot an elk cow. As this noble animal, which was formerly at home in the greater part of the United States, is known to the younger generation only by description, it may not be amiss to devote some words to it.

The elk (*Cervus Canadensis*) bears resemblance to the European deer. It attains the size of a mule or small horse. The antlers, borne only by the male, grow to a height of four or five feet, and often have twenty to thirty tines. The antlers are shed from February to August. The hair is bluish gray in the fall, dark gray during the winter, and reddish brown in spring and summer. The elk is very skittish and has a keen sense of smell; but is also very curious. He must see the object of his fears, and often runs directly toward the hunter whom he has only scented. But as soon as he sees him, he stares at him a moment; then, with antlers thrown back and head held high, he rushes away like an arrow. In August and September, the pairing season, there are fierce encounters between the bucks. It is then most inadvisable to approach an elk that is merely wounded; for he will defend himself to the bitter end with antler and hoof, and even assume the offensive. In May and June the cow brings forth one or two young. The elks live on both sides of the Rocky Mountains,

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

usually in herds of twenty or thirty, but also of hundreds, and even thousands. Their meat has in taste most resemblance to beef; but is inferior to buffalo meat.

On our way to the Blue River we came across another not less interesting inhabitant of the wilderness, the fleet antelope (*Antelope Americana*, Ord - Prong-horned Antelope, Sab.-wild goat.) This beautiful swift animal is of the size of our German domestic goat, but of more slender and elegant build. Its heavy, thick, smooth hair is yellowish-brown on neck, back and feet. On the flanks it shades to whitish. The belly and breast are entirely white. The hair at the back of the head is somewhat longer and blackish. The tail is short and white on its underside, as is the deer's. The bucks have roundish horns, turning backward and inward, with only one short tine. These horns are often a foot long. The females have shorter horns, and instead of the tine, several knobs. The fleetness of the antelope excels the speed of a race horse. They have excellent vision and keen scent, and are very skittish. With such characteristics it would seem almost impossible to get at them; but they have another quality, which commonly seals their fate - boundless curiosity. It is hard to stalk them. At first sight they run away; but if the hunter lies quietly down, elevating a hat, a bright colored cloth, or even an arm or leg, curiosity will bring them back. They approach, run away again, and repeat the performance till they come within range. For this reason hunters for antelope prefer red shirts. Loud colors stimulate their curiosity. Antelopes are fond of elevations from which they have a wide view. On the plains the Indians hunt them at times in a sort of round-up; or else drive them into a fencing made of bushes, wide at first but gradually contracting, till it leads to a swamp or some sort of enclosure, where they can easily be killed. Under all circumstances hunting antelope requires more than ordinary skill and care. Antelopes usually live together in small herds of from ten to thirty. On this side of the Rocky Mountains they are much more common than beyond them. The meat is rather tender, but lean and dry.

We marched two days along the Blue River without following its windings. We now repeatedly crossed plateaus. They can be compared with nothing more fittingly than with the sea. Round about, to the horizon, one sees nothing but grass and sky; no bush, no creek relieves the eye from the wearying prospect. Only an antelope at times flits by. Any other moving body causes suspicion rather than pleasure. On May 21st, we saw in the distance such suspicious figures. Our spy-glasses were put in requisition; but the objects were too far off for us definitely to decide whether they were elk, horses or mounted men. Some hours later the point was settled. They were five Delawares returning from beaver trapping on the Missouri. The Delawares are a tribe friendly to the whites. They live on the western border of the State of Missouri, and in part practice agriculture, but often make excursions into the country of their red brethren, and are there feared for their fearlessness and their superior armament with guns. These Delawares had shot an elk, which they shared with us, receiving some flour in return.

The next day we crossed the so-called "Pawnee trails," a broad road made by the Pawnees, a quite hostile Indian tribe, in whose vicinity we now are. Indian roads are usually recognizable by the marks of their tent poles, fastened at one end on either side of their pack horses, and trailing on the ground with the other. On either side of the Pawnee trails there were vestiges of a great summer encampment. For in the summer the Indians find it often too cumbersome to carry their tents of skins with them, and so make at every place where they camp so-called summer tents. For this the squaws cut tree branches and wands, put them into the ground in semi-circle, and cover this little natural tent with a blanket or a hide. Several hundred such tents were here in the

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

vicinity. At evening we camped for the last time near the Blue River. We had had a north wind all day long, but at evening the wind changed to the west, and a terrible storm arose. The gale upset all our tents, and the rain poured down in torrents. All we could oppose to the elements was stoic equanimity. We wrapped ourselves in our blankets till the storm passed, and then stretched out around a fire. The next morning was pleasant. We were still twenty-five miles from the Platte. The road thither again went over a plateau on which no water could be found; but the rain, which had yesterday so incommoded us, had left some puddles behind, which today refreshed us and our animals. In the afternoon we reached a chain of small hills, from which we enjoyed a view of the Platte. At evening we camped on that stream.

---

CHAPTER FIVE - JOURNEY ALONG THE PLATTE TO THE SOUTH FORK

THE Platte has its sources on the eastern slope of the Rocky Mountains, and has two main branches (North and South Fork), which, on their union, flow in an easterly direction toward the Missouri. A short distance below the meeting point the river divides afresh, and forms a great long island. At this island we reached the Platte. The river, of which we saw but a small part, is not broad at this point, with sparse borders of cottonwood (*Populus Canadensis*). The river valley is a mile or two broad on either side, and bounded by small hills (bluffs). The river is shallow, but carries so much sand that one may sink in the quicksands. The very valley is covered with pure river sand. Vegetation seemed here not to have advanced as far as in the prairie; but even at this point can be found the buffalo grass (*Sessleria Dactyloides*), a very short, delicate grass, growing in isolated bunches, preferred by the buffalo to every other kind, and also much appreciated by our animals. It grows only in sandy soil. We ascended the right bank of the river for six days. On the second day a lot of Indians encamped opposite us across the river. We thought them Pawnees, and expected a nocturnal visit from them, as they are notorious horse thieves, but were spared the infliction, probably because they thought the river too dangerous, or else because we were too watchful. The next morning they had disappeared. We now saw game daily, especially antelope, of which our hunters shot one. Many water birds were also about. The birds we had seen hitherto consisted chiefly of prairie chicken, lark, snipe, and a small kind of starling that was continuously swarming around us, and was so tame that it would at times sit on our pack animals while on the march. Here we got sight chiefly of water birds, such as ducks, geese, cranes, pelicans, gulls, and some very large kinds of snipe. We saw daily more marks of buffalo. Especially we saw many buffalo skulls, whose horns are always carefully turned by the Indians toward the west. The Indians believe that they thereby secure good luck on the buffalo hunt, and call it "Medicine," with which they designate everything great or wonderful to which they attribute secret influences. Dried buffalo dung, which we now find quite frequently, we now use occasionally for fuel, when absolutely no wood can be found. It burns tolerably well, but makes rather a glowing than flaming fire, adequate for cooking, but small comfort in severe cold - and the weather seems to be no more favorable than formerly. We have penetrating cold and thunderstorms in alternation. On the fifth day we came to a burial place where two Americans are interred - one, while drunk, shot the other and then himself. The incident happened several years ago; a simple stake marks the sad spot. On the seventh day we reached the junction of the north and south arms of the Platte. The bluffs, like the wings of a stage, on either side, had now become more interesting. I climbed one of the highest points to enjoy the view. The sandy hills are cut by many gulches, and so irregularly

---

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

thrown together that in comparison to the prairie they may be even deemed romantic. Arriving at the top I found considerable strong "medicine." Thirty buffalo skulls, adorned with all kinds of gewgaws, lay before me in a magic circle, as cunningly arranged as "Caspar" in the "Freischuetz" could have done it. I felt no kind of call to break the charm, but took out my spy-glass to enjoy the view. Before me lay a great part of the river valley we had come over. I traced out the island along which we had passed, and the shallow, but broad and rapid, stream, whose northern and southern branches here unite at an acute angle. Opposite me were other bluffs; behind me the boundless prairie.

After I had enjoyed the fine sight to the full, I hurried back to my party. We now ascended the right bank of the South Fork, over which we were soon to cross. On the same day-it was the twenty-sixth of our journey-we saw the first herd of buffalo. The rejoicing was general. The voyager at sea cannot long more for land than the traveler in that region for the buffalo; for only in the land of the buffalo is there comfort and superfluity. Anxiously the days are counted till one may expect the first buffalo. Every sign is investigated by which one may gauge their vicinity. Weight is attached even to dreams. Our first enthusiasm brought ruin to the careless herd; for twelve of them were immediately shot, and of most of them the tongue only was taken. The juicy, nourishing buffalo meat we all found more palatable than the lean flesh of the antelope. The next morning we went up river only ten miles, and camped there, preparatory to crossing the South Fork. As special boats, covered with buffalo hides, are constructed for that purpose, two parties were forthwith sent out to hunt, to procure the requisite buffalo hides. I joined one of these parties. But before we go on the hunt, let us consider more closely the noble game about to be hunted.

---

CHAPTER SIX - THE BUFFALO

THE buffalo (Buffaloe, Bison, *Bos Americanus*) is of the size of an ordinary ox, though his ungainly shape and long shaggy hair make him seem larger. The hair is yellowish brown; on the head and at the extremities, blackish. The fore part of the body to back of the shoulder blades is covered with thick long tufts. On the forehead the hair is curled, and so thick that a bullet glances off. Two short, thick, black horns project from the tangle; below, half hidden by the tufts of hair, roll two black gleaming eyes. The face is curved somewhat convexly. The upper lip is very broad below. From the underlip to the knees hangs down a long terrible beard. The head is very large and heavy; the neck thick and strong. On the back rises a considerable hump, formed of the prolonged spinal processes, and the muscles and ligaments thereto attached. The prolongation of the spinal processes increases from the rear to the front. The front ones are often twenty to twenty-four inches long. They are commonly called hump ribs. The rear part of the body is covered with shorter hair, which is like satin in summer. The tail is short and bare, with a bunch of hair at its lower end. Differences in hair are quite rare; but it is claimed that at times white buffalo, or buffaloes with white spots have been seen. The cow differs from the bull in being of smaller size and in having shorter hair and weaker horns. The whole appearance of the buffalo is ungainly, and at first sight terrifying. His step is heavy; nevertheless he trots, gallops and runs to match a horse. His sense of smell is very keen. He scents man at a mile. It seems, too, that the smell of the white man alarms him more than that of the Indian. The pairing season of the buffalo lasts from the end of July to the beginning of September. At this time the bulls and cows form one herd. Later on, they separate. The cows graze together in separate more compact herds, while the bulls

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

are more scattered. In April, the cows bring forth their calves, which usually run with them for a year. As to numbers, buffalo herds vary greatly. One finds herds of fifty to a hundred head, but also of a thousand, and of several thousands. Often many herds graze side by side and cover the country to such an extent that they are estimated not by the number of herds, but only by the miles they occupy. It is a grand sight when one of these bands suddenly gets the wind of some enemy, and, with an old bull in the lead, runs off at a lumbering gallop. The first band throws itself on the second, carrying it along with it; this again on a third, and so on, till the whole herd, which was quietly grazing only a few moments before, rushes off in wild flight, seeming one great black mass in whirling clouds of dust. A fleeing band is irresistible. It blindly follows its leader; with him it hurls itself over precipices; it swims rivers after him; and even charges through the travelers' caravans, so that they must be shot in self defense, to keep them from the train. After some miles, if they are not pursued, they usually halt, and begin again to graze. As I said before, they prefer the short tender buffalo grass. It grows on loamy sandy soil, usually saturated with salts. Where a buffalo herd has grazed for some time the ground is absolutely bare; for what they do not eat is trampled with their ungainly feet. Their bellowing can often be heard for miles. It is deeper and more muffled than that of our cattle, and at a distance not unlike the grunting of a great herd of swine. To their watering places they form narrow paths, over which they leisurely move on, one behind the other. A buffalo region is crossed by such paths in every direction. Formerly the buffalo roamed over the greater part of the United States. Civilization has gradually driven them back. Their real home now is the immense prairie between the boundary of the States and the Rocky Mountains. In the mountains themselves, and beyond them, they are much rarer. But here, in spite of the fact that many thousands are yearly killed by whites and Indians, their numbers are still incalculable. Should it, however, ever come to the extermination of these animals, then the whole of this country must necessarily assume some other shape; for to the inhabitant here the buffalo is more important than is his camel to the Arab. It supplies his prime necessities: food, dwelling and clothing.

The hunt for buffalo is one of the grandest and most interesting of which I know. The hunting is done either afoot by stalking, or on horseback by running. In both cases one must seek to be on the windward, to get as near as possible. For stalking, a hilly country is most favorable; but it is possible to get within shooting distance on the plain, if one does not find it too troublesome to creep on hands and knees, often for a mile. Even if the buffaloes see the hunter at this unusual locomotion, they often let him get near enough to shoot, provided his motion is quiet and regular. At the first shot they usually run away; but at times, when they do not see the hunter, they simply become restless, and permit him several shots. A wounded buffalo attacks the hunter only when he approaches too close; but then he uses his horns as a terrible weapon. The best place to give a buffalo a deadly wound is behind the shoulder blades, where the thick coat of hair stops. Shots back of that through the body trouble him little. A bullet on the head either glances off from the thick hair and firm skull, or at best does not penetrate far. Rarely does a buffalo collapse at the first shot. Usually they drag themselves along and remain standing on their feet to the last breath. In this respect the bulls show greater vitality than the cows. If the wound is near the backbone, they often fall down on the spot; but recover after a while and escape, often with the loss of the tongue or of some other piece of flesh that has been already cut out of them. Much more interesting than stalking is the hunt on horseback. This requires a skillful rider and a quick,

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

well-trained horse. A good buffalo hunter prefers to ride without a saddle. He sticks one pistol in his belt, holds the other in his right hand, and starts off at top speed. He rushes into the midst of the fleeing herd, and for some minutes buffaloes and rider disappear in a thick cloud of dust. But suddenly he reappears at one side close behind a buffalo which he has picked for his prey and separated from the herd. The hunted animal exerts all its strength to escape its pursuer; but the emulous horse races with him, following all his turnings, almost without guidance by the bridle. Now he has overtaken him; he is racing close to his left side; but the buffalo turns sharply and the horse shoots past him. The race begins afresh. Again, the horse overtakes the buffalo; again they are running parallel, and the rider discharges his pistol point-blank in the buffalo's flank. He now gallops slowly after the exhausted animal, and, if necessary, gives him a second shot. Often the wounded animal turns upon the rider, who must then rely on the swiftness of his horse for safety. The cows are more agile than the bulls; swifter horses are therefore required in hunting them. The Indians usually hunt the buffalo on horseback in the way just described, with the difference that instead of firearms they commonly use bow and arrow. In full career they discharge their arrows with such accuracy and force that occasionally the arrow pierces the animal and wounds another one. When the Indians hunt buffalo in mass, as they do in winter for the hide, they use devices such as I have mentioned before with reference to hunting the antelope. Among other things, they sometimes drive them over steep cliffs, whereby whole herds are killed.

Buffalo meat tastes much better than beef. The meat of the cows is usually tenderer and fatter than that of the bulls, and particularly deserves the preference in summer, when the bulls are lean and unpalatable. From the slain buffalo only the best pieces are taken, namely, the tongue, the ribs, the humpribs, the meat on either side of the backbone, and the marrow bones, with at times also the liver and kidney. Buffalo tongues are celebrated; in dried condition they are sent by thousands to the States; but the ribs, especially the hump ribs of a fat cow, are much finer. They are usually roasted on the spit, while other parts are better suited for boiling. The thigh-bones, or so-called marrow-bones, are thrown into the fire until they are roasted, and then cracked open, yielding the finest marrow that ever tickled a gourmand's palate. Considering the absence of bread, and the traveler's life in the open air and daily exercise, it is not remarkable that the appetite makes unusual demands, and that people, who formerly were accustomed to eat scarcely a pound of meat daily, can consume eight and ten times as much of fresh buffalo meat, without being gluttons on that account. With the abundance of buffalo such a healthy appetite can be satisfied without trouble. Only so much is shot daily as will last for a few days. But if the journey goes through a region where neither buffalo nor other game is to be found, the buffalo meat is dried as follows: The meat is cut in strips as thin as possible, and hung upon poles or scaffolds, and there allowed to dry in the sun. If time is limited, a little fire is at first maintained under it; but it tastes better without the fire. When it is dried, it is beaten with a stone or hammer to make it more tender. It is then eatable, either dry or cooked, and can be kept for years, if protected against moisture and insects. The so-called toro is still more suitable for preservation. For its preparation this dried meat is beaten with a stone into a coarse grained powder, and mixed with as much melted buffalo fat and tallow as it will hold. The paste thus formed is pressed as compactly as possible into a bag of buffalo skin, which is then firmly sewed up.

The whites use the buffalo chiefly for food. The green skins are too heavy, and their preparation too difficult to justify the trouble of carrying them off. The Indians, on the other hand, tan the

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

hides and use them partly for their own dwelling and clothing, partly in barter with the whites. Tanning is the business of the Indian women solely, and is carried on as follows: They first stretch the fresh hide with pegs on the ground, clean it with sharp stones of all flesh, fat and skinny parts, and finally rub in fresh buffalo brains. This latter gives the hides great pliancy, but is not a real tanning process. The hides thus prepared can therefore stand little moisture, and the hair falls out easily. The inner side of the hide thus prepared is usually adorned with all kinds of gaily-colored figures. Hides that are to be tanned on both sides are boiled in a solution of brain. When the hair is removed, brain is again rubbed in; and finally the hides are smoked, which makes them very suitable for tents and clothing. In addition to the hide, the Indians never forget to take the strong sinews from the neck and back of the buffalo. They dry them, and use them, torn into threads, with aid of an awl, for sewing.

With these manifold uses which the Indian makes of the buffalo, it will not seem strange to us, that this animal is the beginning and end of all their religious ceremonies; that great buffalo hunts can only be begun with mysterious rites; that the brave Indian dies in the belief that he is going to a land full of buffalo; and that one chief ground of the hatred of the Indians for the whites consists in their dread that the buffalo herds will be driven away and destroyed. The Indian and the buffalo are Siamese twins; both live and thrive only on one ground, that of the wilderness. Both will perish together.

---

CHAPTER SEVEN - THE SIOUX - PASSAGE OF THE SOUTH FORK

OUR hunting party consisted of only three men. We had ridden but a few miles, when we saw Indians in the distance, who had probably seen us long before. One of them galloped toward us. He had no clothing except an apron about the loins; and no arms except bow and arrows. We halted. The Indian gave us his hand in sign of friendship, and let us understand that a great Indian encampment was in the vicinity. Though the news was unwelcome, especially as we did not know to what tribe these Indians belonged, we continued our hunt. We soon saw buffalo, but they had been put into such turmoil by the Indians, who were hunting them, that it was a long time before we got a shot. From a hill I could survey the hunting of the Indians, and admire their skill as riders and as marksmen. Most of them were armed only with bow and arrow, though a few had guns. After we had ridden perhaps ten miles, we were lucky enough to kill three head. The last one was a cow. For a while she looked on as we flayed a bull, but forfeited her life by her curiosity. She had a calf with her that took to flight. The cow's udder was full of milk. We sucked out the milk, and found it refreshing and palatable. Laden with the hides, we returned at evening to the camp, where in our absence the Indians had also arrived. We now learned that there was on the other side of the river about five miles up stream a camp or village of several tribes of Sioux (Shiennes, Brules, Tetons, and Arapahoes) and of the Ogallallas. The Ogallallas and Sioux had formerly been at war; but had made peace shortly before this, and had united. The Indians who visited our camp had received small presents, especially tobacco; and, as the fur company still had some flour, had been regaled with sweetened mush, which was so much to their taste that, after satiating themselves to the full, they had taken the remainder with them. They also requested powder and whiskey, which was refused them on the pretext that we had no superfluity of the former, and nothing at all of the latter. Our leader, Harris, thoroughly realized that these unwelcome guests would further trouble us, and that just now was a most inadvisable time for crossing the river. So

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

at night, after all the Indians had left, he caused the few barrels of spirits which he had with him to be buried, and enjoined on all of us the greatest vigilance. The night passed quietly. The next morning about sixty Indians on horseback appeared on a little rise in the neighborhood of our camp. They rode in a line up to our camp, giving a salute in our honor out of as many guns as they could muster, and sat down with us in a semi-circle. All appeared in gala attire, decked as far as possible with ornaments and bright rags, and with their faces freshly painted. One of them wore a red English uniform, on which he prided himself not a little. They had three leaders with them. One of them delivered an address, which may have been very eloquent, but of which none of us understood a word. To judge by his gestures, however, he had taken the pale faces to his heart, and expected in return evidences of our appreciation thereof. The pipe of peace was of course not forgotten, but went around the circle several times. The Indians received tobacco, which was divided out among the warriors by these leaders, and were again regaled with sweetened mush. In the afternoon, a second party of Indians arrived afoot, with two divers colored flags, on one of which a star was embroidered, and on the other a cock. The Indian who bore the former was painted red in the face; he who bore the other, wholly black. Speeches and smoking, presents and feeding were repeated. Toward evening our guests left us, seemingly satisfied with their reception. While this was going on in our camp the rest of the Indians had broken up their own camp, and had established themselves across the river just opposite to us. The whole shore became alive. The tents were erected in several rows for about a mile along the river, and formed an interesting, though hardly agreeable, sight. The high, conical, leather tents with the projecting tent poles looked from a distance not unlike a sea-port. By our estimate there might be seven or eight hundred tents; later on, we heard that there were about a thousand. As each of them contained at least one family, we estimated the whole number at five to six thousand. Our situation was critical. Separated from such a crowd, eager for robbing and plundering, and so superior to us in numbers, merely by a river, whose passage offered no special difficulties, there remained for us, should it come to hostilities, nothing but quietly to allow ourselves to be robbed, perhaps even scalped, or else to defend ourselves to the utmost without any hope for success. True, the Indians who had visited our camp today had behaved pretty decently; but every Indian has sufficient self-control to conceal his real plans. Besides, the Sioux have repeatedly shown themselves treacherous. All we could do for the time was to shun all cause for hostilities, and quietly delay the crossing of the river until the Indians should leave us. For they had given out that they were going the next day from here to the North Fork.

Morning appeared, but the Indian camp had not budged. On the other hand, we received abundant visits in ours. The river was about a quarter of a mile broad; quite rapid to be sure, but generally not very deep, so that one could cross a-foot or on horseback without much swimming. Besides, the Indians had made a little canoe out of buffalo hides, on which they crossed. Many squaws paid us their respects today. As none of us understood the Indian language, we had to communicate by signs, wherein the Indians have great skill. We obtained by barter with them several articles, such as tanned skins, mocassins, buffalo hides and the like. For a piece of chewing tobacco as big as a hand one could get a fine buffalo hide. Some Indians would sell everything they had on. But all showed immense curiosity.

They were continuously about us in our tents; all objects that were new to them they stared at and handled, not failing to appropriate some when unobserved. The two wives of the Missionaries

---

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

were special objects of their curiosity. Among the guests who visited us today there was a leader of the Ogallallas, Bullbear by name. He is rather aged and of squat, thick figure. He had one of his seven wives with him. Our leader knew him from former days as a friend of the whites, and so invited him to stay with his wife over night. Bullbear gave us to understand that he could answer for his tribe, but not for the others; and readily accepted. The other Indians toward evening went back over the river.

Mrs. Bullbear is not ugly, and knows how to accept the presents made to her with much grace. Her leather shirt is richly adorned with beads and embroidery. All night through matters were lively in the Indian camp. Dreadfully piercing notes came to us over the water; and then a chorus of some thousand dogs howled such night music as I have never yet heard. The next morning we saw with pleasure how the Indians struck their tents, packed their horses and dogs, and gradually set themselves in motion toward the North Fork. We watched the march with our spy-glasses. The North Fork was only about three miles from us. The Indians crossed it, and set up their camp on the further shore. They also seemed to watch us, for they directed little mirrors toward us. Glad to be rid of our guests, we set in earnest about finishing the canoe at which we had hitherto worked but slowly. These canoes are made in the following manner: Small trunks of some wood that bends easily are split; out of these a boat-shaped frame-work is made with some cross-pieces inside; this is firmly bound with thongs of buffalo leather and willow bark, and all gaps are stopped with withes; and buffalo hides, sewed together, with the hair inside, are stretched as taut as can be over the whole. Then it is dried in the air, and the outside daubed over with a mixture of buffalo tallow and ashes. Our canoe was covered with three buffalo hides, and was about fifteen feet long by a width in the middle of five to six feet. It was finished toward evening, but we still spent the night here, to dig up the buried barrels of spirits. The next morning our canoe was put into the water. Though everything seemed quiet in the Indian camp, our leader preferred to cross the river somewhat further up. He detailed four men to draw up the canoe along the shore. The rest of us marched about ten miles and camped again on the river. The canoe arrived too late for crossing that same day; but on the next day we finally accomplished our passage. The river was rather broad and swift, but deep in only few places. As far as walking was possible, the four men pulled the boat through the water; then paddles and poles are used, during which time we were often carried far down stream. Each passage to and fro took over an hour. First, all the baggage and the empty carts were carried over in the canoe; then the passengers; finally the horses and mules were driven through the water. Apart from some few mishaps, arousing more laughter than sympathy, all went well. In addition, we made ten miles that same day, going up the stream, and camping on it.

---

CHAPTER EIGHT - JOURNEY UP THE NORTH FORK - THE PRAIRIE DOG - FORT LARAMIE

THE left bank of the southern Platte, which we are now ascending, is very sandy; the vegetation is scant. The bluffs close at hand are also of sandstone. A tower-like column of pure river sand rises in noticeable prominence. For some days we went up the river. We observed very many bitter herbs, especially wormwood; also Pomme Blanche (*Psoralea esculenta*), whose knobby root contains much starch, has a pleasant taste, and is gathered by the Indians. Long garlands of blooming wild roses frequently extended along the river. We saw no buffalo, but our hunters shot

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

on the bluffs several antelope, so that we suffered no want. On the third day (June 6th) we left the river, going across a plateau in a northwesterly direction toward the North Fork. On this plateau we saw for the first time wild horses. They were very skittish. Their sense of smell is said to be very keen. We also got sight of the European rabbit, which is not found in the eastern part of the United States. The day was very sultry. We covered eighteen miles before we found some water in a puddle. In the afternoon, while we were again on the march, we were overtaken by a terrible hailstorm. Some of the hailstones were as big as pigeon eggs. The horses on which we rode could hardly be held in check; but the pack animals ran away as if under the lash. The hailstorm lasted, with short interruptions, about half an hour. We then gathered up our pack animals, which had run miles in the meantime, and camped near Ash Creek, which empties into the North Fork. The next morning we reached the North Fork, but it was noon before we could find a passage for our carts. The North Fork with its surroundings is just like the South Fork-much sand, little wood, no buffalo. We are now to go up the right side of the river about one hundred and sixty miles to Fort Laramie. The next day we saw four Indians on the further bank. They swam over. They were Shiennes. They gave us to understand that their tribe had parted from the Sioux and would be here in a few days to go up the river with us. They urged us, therefore, to wait. Our leader acted as if he did not understand them, gave them some tobacco, and went on. The next day we received a second embassy, but with no better result. The bluffs of our side, on which I now saw for the first time some cedars, gradually diminished until they were lost in the prairie. But behind them reddish cliffs arose, steeper and more imposing than we had yet seen. The sand formation prevails in them also. Several such rows of cliffs are crowded together en echelon, with a grassy embankment in front of each, flattening down at the end of the chain. Each chain consists of more or less broken down (weather worn) rocks, often presenting the strangest of shapes. So the first cliff in the first chain, perhaps eight miles from the river, presented quite the appearance of an old castle or citadel. More remarkable still is the last cliff of the same chain. Its tower-like top is seen from a distance of thirty or forty miles, for which reason it has been called the chimney. It is only a mile from the river. The cone-shaped base constitutes about three-fourths of its height, the pyramidal top one-quarter of it. The foundation is limestone; above it is crumbling sandstone. The height of the whole is given as 525 feet; that of the top part as 125 feet.

Heavy down-pourings of rain often interrupted our journey. Almost daily we had thunderstorms, for which the Platte is notorious. One time we had to stay in camp almost all day on account of the rain; but by way of compensation we found a quantity of pine wood and cedar wood, washed down from the rocks on which it grows sparsely; and beside the blazing fire we laughed at the weather and forgot all discomfort. The next day the sky cleared. We traveled somewhat away from the river, toward the left, and enjoyed a picturesque landscape. All about were rocks piled up by Nature in merry mood, giving full scope to fancy in the variety of their shapes. Some were perfect cones; others flat round tops; others, owing to their crenulated projections, resembled fortress-es; others old castles, porticos, etc. Most of them were sparsely covered with pine and cedar. The scenery has obvious resemblance to several places in Saxon Switzerland.

At noon we halted in a little valley where rocks from either side confronted each other at a distance of half a mile. A fresh spring meanders through the valley. We encamped on the hill from which the spring flows. The place had something romantic about it. All around grew pine and cedars, wild roses, gooseberries and currants; from the top of the hill one enjoyed a wide prospect.

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

On the one side the Chimney and the whole chain of rocks we had passed showed themselves; on the other side, fresh hills. Before us lay the Platte. The magnificent surroundings, the clear sky and fresh antelope meat put us all in good humor. But increasing sultriness reminded us soon that we had not yet received our daily allowance of thunder showers. We traveled twelve miles in the rain that afternoon, and camped by the stream, at whose spring we had our noon rest. It was so swollen by the rains that we had to postpone crossing till the next day. The next morning we crossed it, as well as Horse Creek, only a few hundred steps further on, and then turned, over a long uninteresting hill, again toward the river. From the top of the hill we saw in the western distance the Black Hills, a chain of mountains we must cross later on.

Near the Platte I saw on this occasion for the first time a so-called prairie-dog village. Single dwellings of this strange animal we had already observed on the South Fork; but here we had a whole colony before us, and also got a look at some of the shy inhabitants. The prairie dog (prairie marmot, *Arctomys Ludovicianus*, Ord), resembles the hamster of Europe, and belongs to the same genus. He is sixteen inches long; the hair yellowish-brownish-reddish; the head broad; the ears short; the body stout, the hairy tail about two inches long. The five toes on each foot are of very unequal length. This animal digs itself holes underground. The earth thrown out forms toward the exterior a firm round wall. The funnel-shaped entrance is one or two hands broad. For a foot it runs perpendicularly down; then obliquely inward and downward. Such dwellings, at moderate space from each other, can be seen spread over an area of several acres, or even miles. That is called a village. Hundreds, even thousands of these animals live in this way neighborly together. In fair weather they come out of their holes to sun themselves; squat quaintly on their hind legs, and utter a sharp, twittering sound. At man's approach they raise a fiercer cry, wagging their short tails withal, as if prepared for serious combat. If one comes nearer, however, they withdraw into their holes, at most peeping out. Even if one shoots them, they fall back into their holes, and are not easily got out. In each hole several live together. Often six or eight can be seen retiring into one hole. The prairie dog lives on the seeds of several kinds of grass; but his dwelling is usually found in sandy regions, where grass grows scantily. He is found rather plentifully on either side of the Rocky Mountains. He sleeps through the winter, and so stuffs up the opening of his hole in the fall with grass. One often sees different animals creep into these holes, especially rattlesnakes, which are numberless in these regions, lizards, turtles, and a small kind of owl (*Stryx hypogaea*, Bonap). This quodlibet of animals cannot possibly constitute a friendly family; but Pike assures us that he has repeatedly seen a prairie dog, a horned frog and a turtle withdraw into the same hole. The owls and rattlesnakes seem to do most damage to the prairie dogs.

The North Platte, which we were now ascending, was here better supplied with wood than below, especially with cottonwood. We spent the night on its banks, in the neighborhood of an old winter camp. A number of cottonwood trees were lying about, which had been used partly for fencing, partly as fodder for the horses. (In winter the horses are fed with the bark of the tree.)

The next morning (June 14th), we left camp in good humor, for the crotchety master of human crotchets, I mean the weather, smiled on us; and the vicinity of Fort Laramie, but sixteen miles distant, promised us a speedy meeting with human beings. Before we reached the fort, we encountered the first "pale faces" we had seen since our departure from Missouri. They were French Canadians, clad half Indian fashion in leather, and scurrying along on their ponies, bedight with bells and gay ribbons, as if intent to storm some battery. Old acquaintances greeted each other,

---

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

question piled on question; and each briefly told, in Canadian patois, the adventures he had been through. Meanwhile we came in view of the fort.

At a distance it resembles a great blockhouse; and lies in a narrow valley, enclosed by grassy hills, near by the left bank of the Laramie, which empties into the North Platte about a mile below.

Toward the west a fine background is formed by the Black Hills, a dark chain of mountains covered with evergreen trees. We crossed the Laramie toward noon, and encamped outside the fort. The fort itself first attracted my attention. It lies on a slight elevation, and is built in a rectangle of about eighty by a hundred feet. The outside is made of cottonwood logs, about fifteen feet high, hewed off, and wedged closely together. On three sides there are little towers on the wall that seem designed for watch and defense. In the middle a strong gate, built of blocks, constitutes the entrance. Within, little buildings with flat roofs are plastered all around against the wall, like swallows' nests. One is the store house; another the smithy; the others are dwellings not unlike monks' off cells. A special portion of the court yard is occupied by the so-called horse-pen, in which the horses are confined at night. The middle space is free, with a tall tree in it, on which the flag is raised on occasions of state. The whole garrison of the fort consists of only five men; four Frenchmen and a German. Some of them were married to Indian women, whose cleanliness and neat attire formed an agreeable contrast to the daughters of the wilderness whom we had hitherto seen. In this connection, let me call attention to a mistaken idea often entertained as to these forts.

They are often thought of as military forts, occupied by regular troops, and under military rule, whereas they are mere trading forts, built by single trading companies, and occupied by a handful of hired men to have a safe point for storing their goods, from which barter may be carried on with the Indians. Such forts exist on both sides of the Rocky Mountains, established by American and English companies; but nowhere is there a military fort erected by the government of either country. The simple construction, as above described, protects them adequately against any attack on the part of the Indians. Out of abundant caution some of them have a little cannon on the wall. As far as I know, there is no fort on the North Platte save Fort Laramie; but several American trading companies have built forts along the South Platte, the Arkansas, the Green River, and the Missouri. Beyond the Rocky Mountains are only English forts.

Fort Laramie was built in 1835 by Robert Campbell, and was then called Fort William. Later, it passed into other control, and was rechristened Fort Laramie after one Laramie, who was killed here by the Indians. The custom of perpetuating the memory of departed friends by transferring their names to the place where they fell, is so habitual in the Rocky Mountains, and the occasions giving rise to it are unfortunately so frequent, that at least half the names owe their origin to such events. The fort is at present in possession of Piggit, Papin and Jaudron. In many respects it has a very favorable location. There is sufficient wood in the vicinity and good pasture. A few days' journey further there is abundance of buffalo and other game, and the Platte from this point is navigable for small boats; at least Campbell has already gone down from here to the Missouri in buffalo boats. Then, too, it is a very suitable center for trade with important Indian tribes, especially the Sioux and Crows. The last named Indians had recently levied a small contribution from the fort, in that they had driven off sixteen horses grazing in the vicinity in full daylight and in view of two guards. Luckily the fort had a superfluity of horses, so that the loss was not serious. In addition to horses, the fort owns property that is of very great value in this region; that is, several cows. No attention is paid to agriculture, although the ground seems suitable for it. Hunting is

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

the sole reliance for food. All we found in stock at that time was dried buffalo meat, of which we took a supply with us. As we stayed there the rest of the day, several races took place between our horses and those of the fort; and of course there was betting and swapping of horses. I swapped my horse, which was somewhat run down by the journey and thin, for a swift, well fed Indian horse trained to hunt buffalo. The Indian horses are said to have come originally from Mexico. They are of a small breed, and seldom can be called handsome; but they are very swift and hardy, and as they know no food save grass, are much more suitable for such a journey than American horses, which usually grow lean on mere grass. Still American horses, because they are larger and handsomer, are much sought after by whites and Indians, and, when once they are acclimated, are superior.

The distance from the boundary of Missouri to Fort Laramie, according to our daily reckoning, amounts to 755 miles, and was made by us in six weeks. All distances here can of course only be approximated. For this purpose we repeatedly counted the steps made in a given time, and found our average rate to be three miles an hour.

---

CHAPTER NINE - JOURNEY OVER THE BLACK HILLS - CROSSING THE NORTH FORK

THE next morning (June 15th), we left Fort Laramie to journey again in westerly direction through the wilderness. Our way led over the Black Hills above mentioned, leaving the Laramie River to our left, and ascending the North Fork at a moderate distance from it. The North Fork winds here through rocky walls so steep that the river is seldom in view, and there is no traveling on its banks. The hills consisted of sand and limestone, and show here and there a pine or cedar. To the left another high mountain chain is in view, the Platte Mountains, where, as we afterward learned, the North Platte has its source. On the top of the highest mountain of this chain snow was still lying. For four days we camped on little streams that flow into the North Fork, and found at times very pleasant camping grounds, for instance, at Horse Shoe Creek, where we rested on the second day. The water was cool and clear, the grass tall and luxuriant, and a thick fringe of cottonwood and sugar maples wound along the banks. Moreover, our hunters again brought fresh buffalo meat, no small spur in arousing lively appreciation of romantic surroundings. The road was growing daily more difficult. Steep ascents and deep clefts and ravines often made it necessary to lower the carts with ropes and pull them up again, or else make a wide circuit. We were visibly ascending. Had we not been already convinced by the violent current of the Platte of our rapid ascent, the thinner, purer air, the broad sweep of our view and the change in vegetation would have called it to our attention. In regard to the latter we noticed especially two companions of our journey that were no more to leave us, namely, cacti, in several species, and wild sage or wild wormwood (*Artemisia Columbiensis*). This *Artemisia* is found on both sides of the Rocky Mountains, in sandy soil, where the grass grows sparsely or not at all. It is of varying size. Sometimes it is stunted, and scarce a foot or two high; but at times it attains the height of a man, and then its stem is as thick as an arm. The wood consists, like that of the vine, of many twisted fibres, is of no use to the carpenter, but makes a good fire, and holds its glow very long. The foliage is characterized by its bitterness. If any of it gets into our food, it is scarce eatable. So, if fresh meat bound to the saddle has been brushed by it in passing, the best thing to do is to throw the meat away. A bird that feeds on this plant, the so-called sage cock or cock of the plains (*Tetrao Uripasianus*), has

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

precisely the same taste. The bird is somewhat larger than a prairie chicken, to which its resemblance is closest, and retains the repellent bitter taste of this plant in whatever way it be prepared for eating.

Our fourth night camp was our first on the North Platte since leaving Laramie. The river here was not very broad. Several of us bathed, but the water was so swift that, though we were all good swimmers, we could scarcely reach the opposite shore. The next day we traveled along the river over steep hills, with little grass or wood. Toward noon, just as we were about to set up our camp, I saw that terror of hunters, the grizzly bear. It was a splendid animal, but it ran away at full speed, and our horses were too tired to make chase. We camped that night again by the river on dirty loamy ground. The next morning we were not a little surprised to see opposite us, across the river, a dozen Indians, who had camped there all night. They swam across. They were Shiennes, who gave us to understand that they were on a horse-stealing foray against the Crows. They themselves were afoot, as is customary with Indians on such raids, and we had not the least reason to doubt their statements. Nevertheless we were keenly on guard to prevent any chance mistake of our horses for those of the Crows. For two more days we went along the river. Although we ourselves saw no buffalo herds, our hunters regularly brought fresh meat into camp. One evening an old bull strayed near our camp. A couple of novices started after him, but he fell only at the twentieth shot. The wolves followed promptly after the hunters, and howled for us all night long. Such nocturnal music is so common in this wilderness, especially in the buffalo country, that I finally regretted missing it, and found a sort of enjoyment in the long-drawn wails of these beasts, which run through all the minor chords. Say distinguishes four kinds of wolves in America, namely: 1. The common wolf (*Canis lupus*). 2. The barking wolf (*Canis latrans*). 3. The dark wolf (*Canis Nubilus*); and 4. the black wolf (*Canis Lycaon*). The last named I have not seen on this trip; the second is common. This wolf is smaller than the others, and is remarkable for his peculiar howl. He begins with two or three barks, about like a dachs, and follows it immediately with the howl. As he generally keeps near buffalo, and is therefore a good omen for hunting, he is also called the Medicine Wolf. Although wolves are seen daily, they are very wary. I never heard that they had attacked men; but at night they become impudent; they often sneak into the midst of the camp, and steal meat or leather goods. If one has shot buffalo or other game, they are sure to be lurking in the distance; they approach cautiously as soon as one goes away and reduce the animal to a skeleton with marvelous speed. They count so securely on this tribute, that they often follow the caravans for days.

Our road along the river now became somewhat smoother. The ground was sandy, and covered with many ant hills, composed of sand and pebbles. We saw some elk. I found, too, a nest of young magpies, which I had not hitherto seen in the United States. On the 21st Of June we halted at the river, in order to cross. The North Platte at this point is not as broad as the South Platte, but just as swift. A canoe of buffalo hides was soon constructed, and the very next day we crossed over without any special mishap.

---

CHAPTER TEN - JOURNEY ALONG THE SWEET WATERS - THE WIND RIVER MOUNTAINS

WE WENT further up the left bank of the North Platte, about fifteen miles. The road led over

---

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

sandy rolling country. From one hill we enjoyed a magnificent wide prospect. Southwestwardly, on our left, are stretched out the Platte Mountains, out of which the river here comes forth, and toward the northwest, at a distance of about one hundred miles, a foggy streak, in which our older traveling companions recognized the snow peaks of the Big Horn Mountains. In the vicinity live the Crows, a treacherous hostile Indian tribe, equally proficient in stealing and scalping. They often rove through the country along the Platte and the Sweet Waters, which are considered by the Indians as a common war ground. The ground over which we went this day was highly permeated with salts. We had seen this on several occasions before, near the Platte, and some days back had crossed a brook where water tasted quite like Epsom salts. But here it was very marked. We passed along several salt lakes in the prairie, all along whose shores there lay crystallized Epsom salt. At noon we camped on the river for the last time. A herd of buffalo were grazing comfortably on the opposite shore, and were not disturbed by our arrival, for the wind was favorable to us. The river twists here in a southwesterly direction toward the Platte Mountains, from which it issues. Where it issues from the mountains some reddish rocks arise, called the red buttes or hills. Here we left the river, to go more northwesterly toward the Sweet Waters. Moving over monotonous sand hills, we reached at evening a little brook, whose sandy bed had absorbed all the water; but by digging some feet we collected clear water in adequate quantity. During the day we had had thunder storms; at night there came a cold rain mingled with snow; the next morning it was unpleasantly cold. The country continued hilly, sandy, poor as to grass, but so much the richer in sage bush. Buffalo became more and more common. In the sandy soil of this region I found a new strange animal, the so-called horn-frog (*Phrynosoma cornuta*). It is a kind of lizard with thick head and body and short tail. It is of grayish color. Its whole length amounts to three or four inches. The whole back from head to tail is covered with horny spines. Down the middle of the back runs a horny white comb. On the back of the head are six great spines arranged in semi-circle. This thorny armor makes the little beast resemble an alligator in miniature. It runs very swiftly; is found only on sandy soil, and appears to live on insects. Another smaller kind of lizard, slenderer and exceedingly swift, erroneously called here chameleon, usually occurs in the neighborhood of the horned frog. Near the Sweet Waters the country again becomes more level. Some weatherworn bare rocks alone arise in the midst of the prairie. The ground is covered with decomposed salt tasting of alkali, and with some salt lakes. The buffalo seem specially fond of this region. We drove many herds before us. On the evening of June 25th, we reached the Sweet Waters, a little stream that forms the northern source of the North Platte, and which has probably received its name in contrast to the salty waters round about. We pitched our camp hard by an isolated rock, perhaps one thousand feet long, one hundred feet broad and fifty to sixty feet high, consisting of intermingled granite. It is known by the name of Rock Independence, and is said to have been so christened by a party of Americans who celebrated the Fourth of July here. It is regarded as a Rocky Mountain album, as it were. Many travelers write or cut their names upon it. All round about us, near and afar, rocks and mountains arise. The Platte Mountains are on our left. The Platte itself is said to be twelve miles off. The next morning we crossed the Sweet Waters. For six days we ascended the river in westerly direction, following it more or less closely and crossing it several times to cut off its meanders. Our road at first was level and passed through a valley, rather narrow at the entrance, but gradually widening, which was bounded on both sides by the Sweet Waters Mountains. The rocks of these mountains are partly bare, partly pine-clad.

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

On their summit it is said there live many mountain sheep (big horn, argali, *Ovis ammon* L), an animal resembling the deer in outward appearance, only somewhat larger, but provided instead of antlers with curved horns like a ram, of which one sometimes weighs about thirty pounds. The Indians make their best bows out of these horns. The mountain sheep climb with ease the steepest rock where they can be followed only with difficulty. To my vexation we did not get sight of a single one. We ran across several buffalo. I could not resist the temptation to try my newly acquired horse at buffalo hunting. I singled out an old bull. My horse soon caught up with him, and fearlessly galloped at his left side, permitting me to put the pistol almost on its breast. At the second shot the bull suddenly turned upon me; but my swift horse carried me promptly out of the vicinity; and, exhausted by loss of blood, the animal at the fourth shot fell to the ground. It was very lean, so I only took the tongue.

On the third day (June 28th), a white streak appeared in the west. As we rose higher, it assumed more definite shape. Some of its shining points changed gradually to higher and higher steep cliffs with heads of ice and robes of snow; in a word, snow peaks of the Rocky Mountains arose before us. It was the chain of the Wind River Mountains, one of the steepest in this mighty mountain system. These mountains extend in a northwesterly direction with a length of eighty miles by a breadth of twenty to thirty. It is said that one of these peaks was measured geometrically and barometrically on behalf of the Hudson's Bay Company, and that it is 25,000 feet high. As one approaches the mountains on a plateau, to which one gradually mounts through a journey of a thousand miles, and so is at a considerable elevation, it may well be that they do not seem to the eye as high as they actually are; yet such an assumption as to their height, which would put them in a class with the Himalayas, can scarcely be correct. Be that as it may, it is certainly a lofty and imposing chain of mountains, though I miss the romantic surroundings of the Swiss Alps, with their crystal lakes and blooming valleys which group themselves so picturesquely around the eternal glaciers. As we had to go around the southeastern point of the Wind River Mountains, we now took a more southwestern direction. The plain on which we had hitherto traveled changed gradually to a hilly country, covered with sandy soil and little grass, but the more sage brush, and quantities of buffalo. The geological character is very different, since we are on the Sweet Waters. Pure granite, basalt, quartz and feldspar are now matters of daily observation. Primitive mountains begin. We ascended continuously. The species of cactus become rarer, the mosses more frequent. Some plants occur here only in stunted form. On the sixth day (July 1st) we left the Sweet Waters to our right near their source on the eastern declivity of the Wind River Mountains. Those are the last waters we pass which flow into the Atlantic Ocean. That same day toward evening we reached a little fresh spring that flows toward the Pacific. The divide between these two water systems is formed by an undulating sandy prairie. The spring at which we pitched our night camp issues from under a rock formed of quartz and spar. In the vicinity grew willows, cedars and some birches (quickenasp). Where the water comes out from under the rock the thermometer placed in it sank to 43.5 degrees Fahrenheit, while it stood in the air at 48 degrees.

As supplement, I note the averages of the thermometrical record of our journey, so far of two months' duration, from the borders of Missouri to the divide between the eastern and western waters:

Thermometrical Average According to F.

At Sunrise.      Toward Noon. At Sunset.

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

In May.... 53 72 62.3

In June.... 49 72.5 56.8

During all this time we had only very few pleasant days, but rain and storm almost daily. The region of rain now is behind us; and-to use the words of our leader-the country where the wind reigns is before us.

---

CHAPTER ELEVEN - THE YEARLY RENDEZVOUS

OUR NEXT objective point was the upper Green River valley, which is thrust like a bay of prairie between the main chain of the Rockies and the projecting Wind River Mountains. Our direction was northeast. The road thither leads over sandy hills and plateaus. The Wind River Mountains lay to our right, permitting a closer view of the precipitous, weather-beaten granite formations cut by deep ravines. As intervening bulwark, there were foothills, dark with evergreens, but void of snow. To our left new snow peaks came into view, the Grand River Mountains. We crossed several streams, first the Little Sandy and the Big Sandy, then the New Fork; all having their sources in the Wind River Mountains and flowing into the Green River. The water is clear and cool, the river bed pebbly. The shores are usually fringed with willows. In these little rivers there are, furthermore, denizens characteristic of western waters. For, while the Platte has few fish, and little beside catfish are found in the other streams, many trout are found on this side. On the second day we found traces of whites and Indians, that had journeyed ahead of us through this region a short time before, probably to the rendezvous, which takes place yearly about this time in the neighborhood of the Green River. As our destination was the same, though our leader did not know precisely what place had been chosen for it this year, some of our men were sent out for information. They returned the next day while we were camping on the New Fork, with two agents of the fur company, Trips and Walker. These agents were accompanied by their Indian wives and a lot of dogs. The two squaws, quite passable as to their features, appeared in highest state. Their red blankets, with the silk kerchiefs on their heads, and their gaudy embroideries, gave them quite an Oriental appearance. Like themselves, their horses were bedight with embroideries, beads, corals, ribbons and little bells. The bells were hung about in such number that when riding in their neighborhood, one might think one's self in the midst of Turkish music. The squaws, however, behaved most properly. They took care of the horses, pitched a tent, and were alert for every word of their wedded lords. From the agents we learned that this year's meeting place had been fixed on the right bank of the Green River at the angle formed by its junction with Horse Creek. We were now about a day's journey from the place. Starting off in company in the afternoon, we covered, at a more rapid pace than usual, about twelve miles, and then camped on a branch of the New Fork, whose shores were framed with fine pines. It was the Fourth of July, the great holiday of the United States. Our camp, however, presented its humdrum daily appearance. We stretched out around the fires, smoked and, in expectation of what the morrow would bring, went quietly asleep. The next morning we started early, and reached toward noon the Green River, so long desired. The Green River (Colorado of the West) rises in the northwestern slope of the Wind River Mountains, flows in southwestern direction, and empties into the Gulf of California. Where we first saw it, it is a clear, rippling streamlet, abounding in trout; neither very broad, nor very deep; but later on it becomes a broad, rushing stream. Its navigation is said to present enormous difficulties. We

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

crossed the river, and were then in the acute angle formed by it and the Horse Creek (a brook coming from the northwest and emptying here into the Green River). The space between is level; the ground a loamy sand. The camping place was about two miles above the Horse Creek, along the right bank of the Green River. The plain between the two streams is here about three miles broad. The rendezvous has repeatedly been held here. According to observations formerly made, the place is in longitude 107 degrees 12 minutes west, and between 44 and 45 degrees north latitude. So we were about four degrees north of St. Louis. The journey which we had made from the border of Missouri, according to our rough calculation, was near 1,200 miles.

We reached the camping place. What first struck our eye was several long rows of Indian tents (lodges), extending along the Green River for at least a mile. Indians and whites were mingled here in varied groups. Of the Indians there had come chiefly Snakes, Flatheads and Nezperces, peaceful tribes, living beyond the Rocky Mountains. Of whites the agents of the different trading companies and a quantity of trappers had found their way here, visiting this fair of the wilderness to buy and to sell, to renew old contracts and to make new ones, to make arrangements for future meetings, to meet old friends, to tell of adventures they had been through, and to spend for once a jolly day. These trappers, the "Knights without fear and without reproach," are such a peculiar set of people that it is necessary to say a little about them. The name in itself indicates their occupation. They either receive their outfit, consisting of horses, beaver traps, a gun, powder and lead, from trading companies, and trap for small wages, or else they act on their own account, and are then called freemen. The latter is more often the case. In small parties they roam through all the mountain passes. No rock is too steep for them; no stream too swift. Withal, they are in constant danger from hostile Indians, whose delight it is to ambush such small parties, and plunder them, and scalp them. Such victims fall every year. One of our fellow travelers, who had gone to the mountains for the first time nine years ago with about one hundred men, estimated that by this time half the number had fallen victims to the tomahawks of the Indians. But this daily danger seems to exercise a magic attraction over most of them. Only with reluctance does a trapper abandon his dangerous craft; and a sort of serious home-sickness seizes him when he retires from his mountain life to civilization. In manners and customs, the trappers have borrowed much from the Indians. Many of them, too, have taken Indian women as wives. Their dress is generally of leather. The hair of the head is usually allowed to grow long. In place of money, they use beaver skins, for which they can satisfy all their needs at the forts by way of trade. A pound of beaver skins is usually paid for with four dollars worth of goods; but the goods themselves are sold at enormous prices, so-called mountain prices. A pint of meal, for instance, costs from half a dollar to a dollar; a pint of coffee-beans, cocoa beans or sugar, two dollars each; a pint of diluted alcohol (the only spiritous liquor to be had), four dollars; a piece of chewing tobacco of the commonest sort, which is usually smoked, Indian fashion, mixed with herbs, one to two dollars. Guns and ammunition, bear traps, blankets, kerchiefs, and gaudy finery for the squaws, are also sold at enormous profit. At the yearly rendezvous the trappers seek to indemnify themselves for the sufferings and privations of a year spent in the wilderness. With their hairy bank notes, the beaver skins, they can obtain all the luxuries of the mountains, and live for a few days like lords. Coffee and chocolate is cooked; the pipe is kept aglow day and night; the spirits circulate; and whatever is not spent in such ways the squaws coax out of them, or else it is squandered at cards. Formerly single trappers on such occasions have often wasted a thousand dollars. But the days of their glory seem to be

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

past, for constant hunting has very much reduced the number of beavers. This diminution in the beaver catch made itself noticeable at this year's rendezvous in the quieter behavior of the trappers. There was little drinking of spirits, and almost no gambling. Another decade perhaps and the original trapper will have disappeared from the mountains.

The Indians who had come to the meeting were no less interesting than the trappers. There must have been some thousands of them. Their tents are made of buffalo hides, tanned on both sides and sewed together, stretched in cone shape over a dozen poles, that are leaned against each other, their tops crossing. In front and on top this leather can be thrown back, to form door and chimney. The tents are about twelve feet high and twenty feet in circumference at the ground, and give sufficient protection in any kind of weather. I visited many tents, partly out of curiosity, partly to barter for trifles, and sought to make myself intelligible in the language of signs as far as possible. An army of Indian dogs very much resembling the wolf, usually beset the entrance. From some tents comes the sound of music. A virtuoso beats a sort of kettle drum with bells around with all his might, and the chorus accompanies him with strange monotone untrained sounds that showed strong tendency to the minor chords. A similar heart-rending song drew me to a troop of squaws that were engrossed in the game of "the hand", so popular with the Indians. Some small object, a bit of wood, for instance, is passed from hand to hand among the players seated in a circle; and it is some one's part to guess in whose hands the object is. During the game the chorus steadily sings some song as monotonous as those to which bears dance. But the real object is to gamble in this way for some designated prize. It is a game of hazard. In this case, for example, a pile of beads and corals, which lay in the midst of the circle, was the object in question. Men and women are so carried away by the game, that they often spend a whole day and night at it. Other groups of whites and Indians were engaged in barter. The Indians had for the trade chiefly tanned skins, moccasins, thongs of buffalo leather or braided buffalo hair, and fresh or dried buffalo meat. They have no beaver skins. The articles that attracted them most in exchange were powder and lead, knives, tobacco, cinnabar, gaily colored kerchiefs, pocket mirrors and all sorts of ornaments. Before the Indian begins to trade he demands sight of everything that may be offered by the other party to the trade. If there is something there that attracts him, he, too, will produce his wares, but discovers very quickly how much or how little they are coveted. If he himself is not willed to dispose of some particular thing, he obstinately adheres to his refusal, though ten times the value be offered him. The peltry bought from the Indians must be carefully beaten and aired, at peril of having objectionable troops billeted on you. The Indians, accustomed to every kind of uncleanness, seem to have a special predilection for a certain kind of domestic animal, and even to consider it a delicacy. So, for instance, I have repeatedly seen an old granddam summering before the tent with her gray-haired spouse, and busily picking the "heavy cavalry" from his head. But the fingers that deftly caught the prisoner with equal deftness carried him to the mouth, where the unhappy creature was buried alive. Cha- cun a son gout!

The rendezvous usually lasts a week. Then the different parties move off to their destinations and the plain that today resounded with barbarous music, that was thronged with people of both races, with horses and dogs, returns to its old quiet, interrupted only now and then by the muffled roar of the buffalo and the howl of the wolf. As yet I had had indefinite plans as to how far I should extend my trip. The fur company which we had joined intended resting in the vicinity for some weeks, and then returning with a cargo of furs to the borders of Missouri on the same road

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

---

by which we had come up here. The greater part of the rest of our company planned to go to the Columbia River; some, too, from there to California. The latter scheme attracted me particularly. I thought of getting to the Columbia in some months, going to California in the fall, spending the winter there, and returning in the spring by way of Santa Fe to the United States. I therefore joined that party. Of late the temperature had been pretty high at noon; the nights, on the other hand, cool. For the first time I felt somewhat unwell, but not enough so to prevent a further journey. The most difficult part of our trip, the crossing of the main chain of the mountains, still lay before us. Capt. Bonneville had already penetrated to the Green River valley with wagons; but, as far as I know, no attempt has as yet been made to go over the mountains themselves with them, but horses and mules alone are used for transportation of baggage.

---

CHAPTER TWELVE - THE CROSSING OF THE MOUNTAINS -THE GRIZZLY BEAR

ON JULY 10th we left the Green River and the rendezvous. Our party consisted of the former traveling companions, of Captain Armedinger, the agent of the Hudson's Bay Company at Fort Hall on the Snake River, who had visited the rendezvous with about a dozen of his men, of some trappers going back again to their craft, and of several hundred Indians, chiefly Flatheads, on their return to their home across the mountains. The mixed procession presented indeed an original appearance. The inhabitants of a great city would give much to see such a caravan passing through their streets. In motley confusion whites and Indians, squaws and children, scurried past each other. The men let their eyes rove about in search of game, and as soon as a shy antelope came in view, a great bloodthirsting gang rushed after it, to return after some time generally without any success. The squaws, who must attend to the packing, rattled past us with their long tent poles. Anon they would stop to rearrange the pack, to gather herbs and roots, or to quiet the babies. The position of the latter can hardly be called very pleasant. The Indian women carry their nurslings in a case of buffalo hide consisting of a long leather piece with a projection below as foot rest. On this back piece the youngster is laid flat. In front is an arched piece of leather fastened to both sides of the back of the case, enclosing the whole body from the neck to the feet. Only the uncovered head is free, protruding from this little box. The sight inevitably calls to mind the figure of Egyptian mummies. In walking, this little papoose case with its contents is thrown over the back and held with a strap over the forehead or chest of the mother. But in riding it is bound to one side of the saddle, and the little head nods in time to the trot or gallop of the horse. As soon as the child can sit alone, it is freed from its prison house and is fastened to the horse, wrapped in buffalo hide. The first thing for which it learns to grasp is the bridle or the whip. So it is no wonder that the Indians are all born riders and that the squaws have usually a better seat a-horseback than white men. The direction we took to cross the mountains was at first southwest, and afterwards northwest. The chain in front of us, which we have to cross, is much lower than the Wind River Mountains. No more snow peaks tower out of it; only patches of snow can be seen here and there, which probably wholly melt away later in the summer. The naked, jagged forms of rock have also disappeared; and in their stead we have an even, continuous, thickly wooded mountain chain, with narrow valleys and ravines, from which cool mountain streams gush forth. This chain stretches in a rather straight line from north to south, and then, forming an acute angle at the southern end, extends northwestwardly between the Bear River and the Snake River. On

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

the eastern slope of these mountains several brooks arise which all pour into the Green River; from the northwestern slope come the waters which flow toward the Bear River. We descended about eighty miles in Southwestern course along the eastern slope, and crossed the acute angle above mentioned to reach the northwestern slope. On the first day we made only eight miles. We crossed Horse Creek and camped on Lead Creek. The road led over plateaus toward the mountains. The next morning we were still in similar country, but at noon we reached a little meadow, enclosed by steep heights, through which meanders a rippling brook with cool water. From now on we had to wind our way through wooded hills. We generally followed the course of brooks through narrow ravines, on whose steep sides the animals had to climb in single file in a long line. On both sides were acclivities, often very steep, overgrown with heavy pine and cottonwood. At times we had to clamber over the mountains themselves through thick pine timber to get from one ravine to another. The geological formation was primitive throughout. There was particularly much basalt. Here and there, too, one finds traces of that same lava which we later found spread over great areas. The vegetation was rather luxuriant. A quantity of wild flax particularly struck us. The scenery was generally wild and romantic, but I was unable to enjoy its beauties, for I had felt somewhat unwell even at the Green River. With the hope that traveling would soon restore me, I had forborne as yet to make use of the medicines I had with me. But the symptoms became worse. I feared that I was getting a severe bilious fever, and felt myself obliged to make up for my omission. On the fourth day I felt so weak that during the afternoon I could hardly keep my seat on the horse. So I let the whole train pass me, tied my horse and threw myself on the ground, indifferent as to what might become of me. Complete listlessness possessed me. The whole nation of Blackfeet might have swarmed around me; I would not have stirred from the spot. I soon fell into a feverish sleep. My faithful dog (I had a young German hunting dog with me), having missed me in the caravan, had in the meanwhile returned to me. When I woke the sun was setting. My mule had torn himself loose, and thrown off his pack, but was still close by. I felt a little stronger, packed up once more and followed the trail of the caravan. I had ridden some miles, when one of my traveling companions, who in the meanwhile had pitched their night camp and then missed me for the first time, came to meet me. The camp was about three miles away. We reached it that evening, having seen on the way a grizzly bear that ran away from us. The camp was on Smith's Fork, the first water on the northwestern slope, which direction we followed from now on. The character of the country remained substantially the same. We had constantly dense pine forests about us; but the cottonwoods had disappeared. On the fifth day we reached Thomas Fork, on whose banks great quantities of pure, good-tasting common salt were lying. Most of us took along a supply. Such deposits of salt are said to occur at several other places in the mountains; so this most precious of condiments is not very dear there. At noon next day we reached Tullick's Fork. On the road a grizzly bear was shot. As this dreaded animal will cut a figure several times in the adventures of our journey, I will here add some remarks about it.

The grizzly bear (*Ursus horribilis*, Ord.) is distinguished from other members of the bear family by the almost straight profile of his face and by his longer claws. The hair, short on the forehead and long and thick on the rest of the body, shows a peculiar mixture of white, brown and black, with many shadings. The ears are short and rounded; the forehead somewhat convex. The eyes are very small. The short tail is hidden in the shaggy hair. The curved claws are three to five inches long. The whole length of the full grown bear is about ten feet; his height, three to four feet; his

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

weight, seven hundred to eight hundred pounds. He cannot climb trees like the black bear, but has fearful strength and dexterity. He often drags a whole buffalo for some distance, and runs almost as fast as a horse. He lives partly on meat, partly on fruits and roots. He is found oftener on the eastern than on the western side of the Rocky Mountains. When he is hungry or has been irritated he attacks whatever comes in his way. One blow of his paw is enough to knock a man down. But under other circumstances he runs away from man, and defends himself only when pursued. With such qualities it is no wonder that he is the dread of hunters. A bullet through brain or heart will end him, but in all other parts of the body he survives numerous wounds. A good hunter therefore, does not shoot until he is within ten or twenty feet of him. When the females are with young they live very retired, so that I have never heard of a hunter that shot a pregnant grizzly she bear. The meat of the grizzly is very palatable. Along the back there is solid white fat, a hand thick. The grizzly we found on this occasion was still young. The dogs of the Indians discovered him in a thicket, but he wouldn't budge from it. The Indians surrounded him on horseback, and shot at him. Whenever he assumed a threatening attitude, they all ran away. The dogs, however, seemed to check his anger. He would not leave his hiding place. Finally one of our hunters approached within ten feet of him, and laid him low with a single bullet.

From Tullick's Fork we entered upon more open country. The western slope of the Rocky Mountains has no more deep valleys than the eastern, but passes imperceptibly into broad plateaus. In the afternoon we crossed over a treeless, rather level prairie to the Bear River, and encamped there. The Bear River rises in the Eastern Mountains, a chain toward the south, goes in a semi-circle first northward, then down northwestwardly and empties into the Great Salt Lake (also called Lake Bonneville). It is a clear stream, not very wide or deep. Mostly willows grow on its banks. My illness was by this time pretty well subdued, though I felt very weak for some weeks. Several of our company also were unwell, the cause for which could probably be found in the hot days and cool nights, the drinking of cold mountain water, and the eating of dried meat, which we had to eat for want of fresh. An emetic or purgative, promptly administered, usually brought speedy relief.

On the seventh day we went up the right shore of the Bear River by a fairly level and open road and encamped that evening on its banks. Our night camp was at too attractive a place to be merely mentioned; for we were at one of the most remarkable spots in the whole mountain country—at the Beer Spring, so well known to every mountain traveler.

---

CHAPTER THIRTEEN - THE BEER SPRING - JOURNEY TO FORT HALL

AS THERE are persons whose expression fascinates and wins us through something that we keenly feel but cannot clearly understand, so is it also true of some natural scenes. Such an impression took possession of me at first view of the so-called Beer Spring. I have looked on finer and more majestic scenes, but never found a more home-like place than this valley, produced out of the wrecks of prior geological revolutions, or one on which Nature had bestowed more of everlasting peace. Surrounded by banks of lava, numberless mineral springs bubble forth out of the calcined ground; a charming cedar grove invites the weary wanderer to its shades and the clear babbling Bear River rolls its ripples through the valley of peace.

We approached the valley from the east on the seventh day after leaving Green River (on July

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

16th). The way thither was sprinkled with scattered pieces of lava, and satisfied us that we were on the edge of the so-called great lava plain which is said to stretch in northwesterly direction about one hundred miles across the Snake River.

This lava consists of grayish black, porous, very heavy and hard pieces, varying much in size, sometimes covering the ground in flat layers, sometimes however in walls ten or fifteen feet high and several hundred feet in length, going down vertically on one side and running back to the level on the other in one connected mass. Nowhere in this region could I find anything like craters to whose extinct volcanic activity in prior ages these results could be ascribed. They seemed rather to have originated in so-called earth fires. The neighborhood of Beer Spring forms a center of this land of slags. At least I have not seen elsewhere these scoriae, lying flat as well as built in walls, more frequent or more characteristic of the country. About Beer Spring the lava bed is covered with a very white potter's clay. Out of a hill formed of this clay, the white clay hill, arises a clear fresh brook that flows into the Bear River. About half a mile off is the bottom of this valley abounding in springs. It lies in 44° north latitude and 109° west longitude, on the eastern bank of Bear River. It is shaped like an amphitheater. On the south it is bounded by the Bear River, running from east to west, and by hills beyond the river, covered with pine; on the three other sides it is enclosed by a chain of low sandy, cone-shaped hills, in part bare, in part crowned with pine and cedar. The valley thus enclosed is half a mile to a mile in diameter, and covered as to the greater part with a cedar grove. This evergreen cedar (*Juniperus Virginiana*) is the same which is also found in the eastern parts of the United States. It is only found in sandy soil on low mountains or the slopes of higher ones. It tends rather to thickness and breadth than to height, and is never crowded, though forming little woods. Unfortunately travelers have cut down and burned many trees of this grove. Its total destruction could rob the valley of one of its most precious ornaments. I fixed my camp under an old cedar, near one of the springs, that here bubble up from the ground. Exhausted by the burden and heat of the day, we all refreshed ourselves with this delicious draught. It was a cool, sparkling water, slightly chalybeate to the taste, with cheering and invigorating effect on the nervous system. So far as I could determine without chemical analysis, it is some acid of iron with abundant carbonic acid and slight admixture of salts. Addition of a little sugar and tartaric acid made it effervesce rapidly; in quiet condition, the carbonic acid escaped in little pearly bubbles. This pearling and effervescing has given the water the prosaic name of Beer Spring, since the term beer is in general use for all effervescing liquids. These springs appear either singly in perpendicularly walled openings out of the earth, about a foot in circumference and several feet deep; or else several of them form a common basin.

The water seems to be the same in all of them. On the margin of these springs there is usually a deposit of a red-brown oxide of iron, and various limestone formations with petrefactions are in the vicinity. The bottom of the spring is a soft mud. The water level seems to be the same in all of them. They have no outlet, although they are obviously in subterranean connection with each other, as well as with the Bear River, close by. For even in the river itself a number of such springs are seen to bubble up, and the stones on the shore, that are washed by these little fountains, are also coated with a red-brown crust. Several of these springs, shaded from the sun, which I tested with the thermometer, showed, all of them, a temperature of 54° F., while the air in the shade stood at 76° . A warm spring, some thousands of feet lower down the river, and close by it, deserves special mention. The spring issues from a block of lime, which it formed itself, in all prob-

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

ability, in the course of time. The stream, as thick as an arm, spouts out in abrupt pulsations, and runs into the river over the rock which is coated with oxide of iron and white crystals of salt. With the air at a temperature of 76° F., this water showed 84°. Its taste was like that of the cold springs, only weaker. About six feet off are two smaller openings, one of which is obstructed, while the other is still open. From the latter there issues with puffing noise, also in spurts, which are not timed, however, with those of the water, a gas mingled with vapor. This gas has a somewhat pungent and benumbing odor. Some of my companions thought it weak sulphurated hydrogen; to me it seemed merely carbonic acid gas. The puffing noise deceptively resembles the well-known sound of an engine, for which reason is also known by the name "Steamboat."

Gladly would I have spent some time in this most interesting valley, but my companions, less enthusiastic than I, insisted on pushing on; and so we left it the next morning. On our seven-day journey from the Green River to the Beer Spring we had covered almost two hundred miles. Many Indians, for whom we traveled too rapidly, had remained behind. Here our company divided again. The greater part of them went northwestwardly to Fort Hall on the Snake River, about fifty or sixty miles distant: while about a dozen others traveled northwardly to hunt, and then also go, with fresh provisions of meat, to Fort Hall. The latter party consisted of my old traveling companions that intended to go to the Columbia River. I joined them. In the mountains themselves we had seen no game save some grizzly bears; and so had lived on the dried meat which we had bought of the Indians at the rendezvous. The projected trip to the Columbia, however, on which we would have to cross a wide, barren, sandy plateau, made fresh meat supplies a necessity, which determined us to make this side trip. The neighborhood of the Beer Spring does not abound in game; further north, however, toward the Snake River, we hoped to find more of it. The leader of our little party was Mr. Richardson, an experienced mountaineer, who had been with us from the beginning of our Journey. On July 17th we left the Beer Spring. Between Snake River and Bear River there is an unimportant chain of mountains, a continuation of the one down whose northwestern slope we had traveled. Two little streams, Gray Creek and Blackfoot Creek, have their sources in these mountains, and flow into the Snake River in a northwesterly course. We crossed these mountains, and zigzagged northeastwardly and northwestwardly in the angle formed by the three streams last mentioned.

On the first day we only saw some shy antelope; on the second day we saw two buffalo, and killed one of them. The country was broken, the ground sandy, and game was scarce. For three days we remained on a little brook, while some of us were sent out to hunt. In all this time only three buffalo, a buffalo calf and a grizzly bear were shot. If ever a sojourn was tedious to me, it was this one. The surroundings were depressingly desolate. Only hungry ravens croaked around, as if in mockery of us; and as the Blackfeet frequently roam through the country, we had to keep as quiet as possible. No one was permitted to fire a gun or go hunting, save the hunters regularly chosen for the purpose. On the seventh day we finally started off again. I felt a load off my heart as I mounted once more, and turned my back on this uncanny country. On the same day we saw in the distance the so-called Three Buttes, three steep snow peaks, across the Snake River, visible from afar. The sandy valley of the Snake River was spread out before us. On the eighth day we crossed the Blackfoot Creek, followed its course for a time, and finally on the ninth day camped near the Snake River, about eight miles below Fort Hall. The next day, July 26th, I rode with some others to the fort.

---

CHAPTER FOURTEEN - THE COLUMBIA RIVER - THE HUDSON'S BAY COMPANY

FORT HALL lies on the left bank of the Snake River, between the mouths of the Blackfoot and Portneuf Creeks. It was built by Capt. Wyeth, and sold by him some years later, when he left the mountains, to the Hudson's Bay Company, in whose possession it has remained up to the present. It is the most southern fort which this English company has pushed into the Oregon Territory of the United States. The fort lies hard by the river, and is built in a square of about eighty by eighty feet, suggestive of barracks. The style is essentially that of Fort Laramie, except that the outer walls, ten to twelve feet high, are constructed in this case out of partly baked brick instead of wood. A small cannon is in the courtyard. The fort owns many horses and six cows. The whole garrison consisted of six men; among them two Sandwich Islanders and a German. The clerks of the fort were Mr. Armedinger and Mr. Walker. We had learned to know the former as a jovial companion at the rendezvous. Both showed themselves very obliging to us, and furnished in this respect an agreeable contrast to the often brusque behavior of agents at American forts. The day of our arrival we were invited to a supper in the fort, which would be deemed quite frugal in civilized life, but which, in this wilderness, consisted of the most delicious dishes which we had tasted since we started, namely, bread, butter, milk, dried buffalo meat and tea with rum. No Paris meal composed with all a gourmand's art ever tasted better to me, than the luxuries (for that country) of this feast on the sand steppes of the Snake River. As we intended to stay here at least eight days to allow our animals to recuperate and to prepare ourselves for the trying journey to the Columbia, I employed the time in making inquiries about the Hudson's Bay Company and the country about the Columbia River, and here give the result:

The Snake River (Lewis River) has its source on the western slope of the main chain of the Rockies, and flows in northwesterly direction about eight hundred miles, when it unites with the Clarke River, coming from the northeast, to form the Columbia River, which, after a western course of only two hundred miles, empties into the Pacific Ocean. The Snake River flows through a sandy plateau, in which there can be found almost no game and very little food for the animals. About one hundred miles from the Columbia, the Snake River pierces a spur of the Rockies, the Blue Mountains. The river has a very rapid current, and is broken up by numerous falls, of which the first begin a little below Fort Hall, and has banks of basalt, so steep that one must often go along them for quite a while before finding a place to get water. Below the falls, near the Columbia River, it is full of salmon, which the Indians kill by thousands with the spear, dry and keep in store. Until one comes to that region one must be provided with an ample supply of dried meat, if one does not wish to risk encountering such hardships as Mr. Hunt experienced on his memorable journey thitherward. The broad Snake River valley is in the main sterile country. The climate there is moderately warm. The summers are remarkable for great dryness; for whole months there is neither dew nor rain. The winters are rather cold. Snow is often several feet deep. Westwardly from the Snake River there are several steep mountain chains with many glaciers, dividing this country from California and the Pacific Ocean. The direct road to California is very difficult on account of these mountains. Even unloaded mules can cross them only with great effort. For this reason it is thought preferable for those going to upper California to make a detour via the Columbia River. The distance from Fort Hall to the Columbia is estimated at about six hundred

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

miles. A second fort belonging to the Hudson's Bay Company lies at the junction of the Boisse with the Snake River. The first English fort on the Columbia is Walla Walla, about nine miles below the Snake River. But the main fort of the Hudson's Bay Company is Vancouver, on the right bank of the Columbia, about ninety miles from its mouth. Furthermore, there is a fort on the Clarke River, Fort Colleville, and several others of less importance on various small rivers that flow into the Columbia. These forts are built like the American ones, meant simply for defense against the Indians, and without military garrisons. Fort George, the Astoria of the past, consists simply of a blockhouse occupied by only three or four men, whose duty it is to note the arrival of vessels and pilot them. The Columbia River seems to have been known to Spanish seamen. The honor of its first authentic discovery belongs to Captain Robert Gray of Boston, who, sailing under the flag of the United States, discovered it in May, 1792, ascended it for fifteen miles, and gave it the name of his own vessel, Columbia. Two promontories form the entrance to the Columbia River: on the north, Cape Disappointment; on the south, Cape Adams. A sand bank running from north to south for two miles, with, at places, only four and a half fathoms, makes the entrance difficult; but there is on one side a channel of adequate depth, though narrow. For the first ten miles the Columbia is about four miles broad; higher up, to Vancouver, it has an average width of a mile. It is a deep river, carrying much water. Vessels with not more than fourteen feet draught can ascend it for about one hundred and twenty-five miles; but above that a succession of falls begin, impassable for vessels of every kind, forming obstacles whose removal would be disproportionately expensive.

The land along the Columbia has been described in most recent times as a western paradise. The truth of the matter is that the ground is indeed very fruitful, and well suited for the cultivation of wheat, barley, oats, rice, beans, potatoes, apples, tobacco and the like; but just as good tracts of land can be found in Illinois and Missouri. Besides, the Columbia River itself has only small valleys, which are subject to overflow; and so the valleys of the smaller streams that flow into the Columbia from the north and south are even better. One of the most fertile tracts is the land along the Wallamette, which flows from south to north into the Columbia. Immediately on the seacoast the land is the worst. The chief kinds of wood are white oak and long-leaf pine. Game is scarce, but there is superfluity of fish, especially salmon. The climate in summer is about the same as in the central part of the United States. The summer is distinguished by its dryness; for which reason maize succeeds indifferently. In winter, there is seldom frost or snow; but from October to April there is almost continuous rain, which refreshes the dried grass and makes it green. The fields are usually sown as early as January. These mild winters make this country one of the most suitable for cattle raising. No part of the United States is thought to excel it therein. Horses, cattle, and sheep - hogs in a less degree - thrive here exceptionally, and multiply with amazing rapidity. The country on the Wallamette is also distinguished in this particular. The settlement at Vancouver is up to now the largest on the Columbia River. The fort is a square building, two or three hundred feet long and broad. In its midst are the various workshops; but the workmen live chiefly outside of the fort in little block houses. The people in the employ of the Hudson's Bay Company, mostly Canadians, amount to about two hundred, and as for the greater part they have married Indian women, the whole number of inhabitants may be estimated at from seven to eight hundred. The fort has laid out a farm in its vicinity. In 1837, about three thousand acres were in cultivation. The produce was: 8,000 bushels of wheat, 5,500, bushels of barley, 6,000 bushels of oats, 9,000

---

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

bushels of peas, and 4,000 bushels of potatoes. Of animals they had in the same year about one thousand head of cattle, seven hundred hogs, two hundred sheep, five hundred horses and forty yoke of draught oxen. In addition they have a great threshing machine, a distillery, and a grist mill. A saw mill, cutting 3,000 feet a day, and served by twenty-eight men and ten yoke of oxen, lies six miles from Vancouver on a little river that flows into the Columbia. The surplus products, chiefly flour and boards, the Hudson's Bay Company exports to the Sandwich Islands and to California. For one thousand feet of boards they get in the Sandwich Islands \$60.00 to \$100.00. In California, they generally exchange for cattle at \$3.00 a head. The company conducts this trade with its own vessels. It owns at present one ship, one brig, one schooner, one sloop and one steamboat. The inner organization of the Hudson's Bay Company is based on strict subordination. The company consists of one hundred shareholders, who are such, however, only for life. Headquarters are in London. The general agents, who live in America (partners), receive one-eighth of the profit on one share, which amounts annually to \$4,000 to \$5,000; chief traders receive one-sixteenth; clerks receive yearly £100; and laborers £15 to £17 with fixed rations of potatoes, salmon, beans and salt in addition. The company engages its men for five years, and sends them back to their homes if they do not wish to serve longer. Old employees it permits to stay in the country on leave of absence, assigning them land to cultivate. During the time they receive no salary, but can be called into service at any moment. Promotions are made on a system based on rank and age. A yearly meeting of the partners and chief traders is held at York Factory on Hudson's Bay, which meeting has jurisdiction over all employees of the Hudson's Bay Company, and issues its orders from there. Constant communication is maintained between Vancouver and York Factory by land through express messengers. In addition a ship comes yearly from London to the Columbia River to bring fresh merchandise, and to carry back to England the furs which the company acquires from Indians and trappers in coast and inland trade. Beaver skins are the most profitable part of the cargo. Shipment of salmon has been abandoned. The company receives all its goods from England free of duty, and sells them much cheaper than the American companies. In this way the Hudson's Bay Company is in position to hold all competitors in check, and to maintain an undisputed overlordship over all the regions beyond the Rocky Mountains. The Indians on the Columbia River, already greatly diminished in numbers through disease and excesses, are committed to it so unconditionally that they scarce dare to trade with Americans. As yet, all attempts ventured by Americans against this company have gone to pieces. The Hudson's Bay Company has the advantages of connection by sea, internal union and the protection of the English government. The only settlement made by citizens of the United States is now on the Wallamette. This small stream, flowing from the south to the Columbia, is about one hundred and fifty miles long, and navigable for ships of twelve feet draught for about twenty miles. Some New York Methodist missionaries have recently settled here and gathered around them a little colony of Americans, Canadians and Indians. As they do not trade, but devote themselves only to, agriculture and cattle raising, the Hudson's Bay Company has put no obstacles in their way, but, on the contrary, encourages them and takes supplies from them at fixed prices. For a bushel of wheat, for instance, the company usually gives fifty cents in goods, while it receives on its part one dollar and a half in money from the Russians in California.

The Americans, whose claims to the territory of the Columbia River are much better founded than those of the English, are now merely tolerated by the Hudson's Bay Company. Had the Gov-

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

ernment of the United States given the slightest support to Astor's enterprise, the Americans in all probability would still be in possession of the country; but, as it is, the United States has done nothing to protect its claims through treaties. As far back as 1818 a treaty was made between the United States and England, whereunder both powers were allowed free access to the Columbia, without abandoning their respective claims. In 1826, the United States proposed to England to draw the line beyond the Rocky Mountains to the Pacific Ocean in prolongation of the boundary on this side of the mountains, that is to say, on the forty-ninth parallel, whereunder the Columbia River would have fallen wholly in the territory of the United States; but the proposal was rejected and the former treaty was renewed for an indefinite period determinable by one year's notice. This provisional arrangement, during which the English, by means of the Hudson's Bay Company, have acquired the actual control of the country, is still in force. The country is too valuable to ever be surrendered voluntarily by the English. While the Columbia is navigable for only a short distance, and its tributaries, on account of the numerous falls, are not suited for navigation, there is the better opportunity for mills and power plants; and better communications could easily be secured through the construction of canals. Moreover, the country is very suitable for agriculture and cattle raising. The interior trade and the coast trade with the Indians is very profitable. The intercourse with the Sandwich Islands, California, Russian America and Asia grows from year to year; and the trading vessels and whalers on the Pacific Ocean find here a safe base for action. In short, if any place on the western shore of North America seems designed by nature to be a western New York on the Pacific Ocean, it is this. The Straits of Juan de Fuca, somewhat further north, form a much better harbor. It is said that a whole fleet could anchor there in safety. These straits also lie south of the forty-ninth parallel. The Hudson's Bay Company seems to have secret assurances from the English government that at the worst the course of the Columbia River would be made the boundary, and its right bank retained; at least all the chief settlements of the company are made on that side, and buildings begun on the left shore have been abandoned. But the United States will not submit to such an infraction of its rights, and again the problem of the Gordian Knot will not be solved without the sword.

---

CHAPTER FIFTEEN - BEGINNING THE RETURN JOURNEY - THE BEAVER

I REMAINED eight days at Fort Hall. We camped outside of the fort. Various parties of Indians and trappers arrived during this time, and camped by us. The trappers were mostly French-Canadians, preparing for a fresh campaign against the beavers. The Indians, chiefly Flatheads, led a life that suited them perfectly. They gambled and sang all night long, and slept during the day. Near the fort were some graves. In one of them rested Antoine Godin, an adventurous mountaineer and a bitter foe of the Blackfeet. It was he who brought on in 1832 the bloody fight with the Blackfeet at Pierre's Hole, related in W. Irving's "Rocky Mountains," by treacherously grasping the hand of their leader, while another shot him. The Blackfeet after that harbored the bitterest enmity for him. Some years later a band of Blackfeet appeared near Fort Hall, on the right bank of the Snake River. Through signs they made it known that they were peaceably disposed and wished to trade with the fort. Some white men-among them Godin, who chanced to be there-crossed the river, and smoked the pipe of peace with them. While they were thus employed, a Blackfoot shot Godin from behind, and so avenged the death of their leader through similar treachery. Such occur-

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

---

es are here, unfortunately, not uncommon; and the first provocation is given ordinarily by the whites rather than by the Indians.

The days of rest which I spent at Fort Hall restored full vigor to my body, which had been debilitated by my previous illness and hardships; and the leisure I had to reflect on my program for further travel, determined me to change it; and, instead of going to the Columbia River to return to the United States. Several reasons brought me to this conclusion. In our party, composed of very heterogeneous elements, many dissensions had of late developed, so that a regular separation occurred, our party, small as it was, splitting into three or four smaller ones. Although I took no part in these petty quarrels, I was ill at ease the while, and missed a great comfort on such trips, that is, good company. Moreover, I would in all probability have had to spend the winter on the Columbia, for the journey from there to California by land is very fatiguing and dangerous. Caravans go there but seldom, and then my limited means would not permit me a prolonged stay on the Columbia and a scientific exploration of the country.

Under these circumstances I thought it most advisable to return in the fall to the United States by another road than that by which we had come up. Two of my former traveling companions came to the same resolution. But as we were all novices in mountain life, and wished to cross the country in various directions, we looked about for an experienced and reliable guide, and found him in Mr. Richardson, who had accompanied our journey up as hunter. So there were only four of us to begin the return trip. Our plan was to cross the Rocky Mountains in a more southern direction; to gradually draw toward the Mexican border and to reach the boundary of Missouri by the great Santa Fe road. Our undertaking was not without danger. Our little party, in case of an encounter with hostile Indians, had little chance of success. On the other hand, we had the advantage of attracting less notice and of being able to travel faster.

We left Fort Hall in high spirits on August 10th. We proceeded on a southeasterly course directly to the Beer Spring, sixty miles off. The road thither was hilly and even somewhat mountainous. Pine, cedar and cottonwood were the prevailing trees. At a little brook I had the pleasure of seeing for the first time an old beaver dam. Unfortunately I did not get sight of a single beaver on the whole journey; for they are very wary and from June to August, during which time I was in beaver regions, beaver trapping is usually suspended. So I can give the natural history of this remarkable animal only on the basis of reliable reports.

The beaver (*Castor Fiber*) is about two feet long, has a thick heavy body, compressed head with short elliptical ears, and somewhat oval, but rather broad tail, about ten inches long and covered with scales. The whole body is covered with a dense fur, consisting of longer reddish brown and shorter silvery hair. The skill of these animals in constructing their dwellings is well known. They prefer living on brooks and streamlets whose shores are overgrown with willows. In order to have deep water continually, they build a dam through the water, sometimes diagonally, sometimes in a convex bow. At this dam all the colony of beavers living together work jointly. Their only tools for this building are their teeth, their claws and their tail. In the water thus dammed up, each beaver family builds for itself out of the same material little square dwellings. In addition to these dwellings the beavers usually have side caverns in the bank of the stream (caches), where they retire when their dwellings are destroyed. When the state of the water makes it unnecessary, or when they are often disturbed, they build neither dam nor dwellings, but content themselves with these side caverns. Their dwellings, which they frequently repair, become in time so firm that they can

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

only be broken with tools. The greater part of these dwellings is under water; but there is under the roof a space without water, as the beavers cannot remain long under water without breathing. The conical roof is often four to six feet thick. The interior of their dwellings they keep very neat. Every dwelling has, deep down in the water, on the side furthest removed from the shore, an opening for the entrance and exit of its inmates. Beavers work only at night. By day they do not leave their dams, and swim, when going from one cone to another, so far under water that one cannot notice them.

The beaver feeds on the roots of various water plants; for instance, a nuphar luteum, but chiefly on the bark of various trees, especially willow, cottonwood and birch. Only in sore need does he gnaw the pines. With this object, beavers fell trees whose trunks are even six to eight inches in diameter, solely by gnawing them with their sharp teeth, leaving a conical stump. They like to cut the trees on the shore side and then float them down on the water to their dwellings. If the locality does not admit of floating the trees they drag them overland for long distances. They gather in summer provisions for the winter, which they keep in front of the entrances to their dwellings. The females bring forth yearly two to five young. The young beavers are very droll creatures. Their cry deceptively resembles that of little children. The beavers are usually caught in iron traps, whose two springs can be pressed apart. The bait which is put on it is a mixture of beaver secretions (castoreum) with various spices and some whiskey. A stick or twig is smeared with this, and set upon the trap. The bait must project over the water. The trap itself is in the water, and fastened to the shore by a chain. In summer, the beavers are lean, and their fur is poor, for which reason they are usually not caught at this time. But in winter they get fat and have thicker hair. Their meat is very palatable. The tails, which are fat all through, are especially regarded as delicacies. Besides the fur, the castoreum found in two pouches on the belly, is very valuable for its use in medicine. A persistent enemy of the beaver is the wolverine (*Gulo Luseus*), a sort of glutton who attacks not only the winter supplies of the beavers, but often the beavers themselves. Their most dangerous enemy, however, is the tireless trapper. The beaver formerly spread over the greater part of the United States. From the cultivated portions he has disappeared long ago; and in his present home, in the Rocky Mountains, he is beginning to become scarcer. Hundreds of thousands of them have been trapped there in the last decades, and a war of extermination has been waged against the race. The consequence is that they are now found only singly in regions that were formerly well known for their abundance of beavers. It is only in the lands of hostile Indians, the Blackfeet, for instance, that they still exist in greater numbers, because the Indians do not specially occupy themselves with beaver trapping. The furs of beavers caught in the spring are best. However, many trappers catch them in every season. The green skins are first cleaned, then stretched out, dried and folded. A dry beaver pelt weighs usually from one to two pounds; but there are some of three pounds weight. About sixty beaver skins are bound together in a pack. Two such packs make an ordinary load for a mule. The Hudson's Bay Company has established more system in beaver trapping within its territories. It allows trapping only at certain seasons, and when beavers get scarce in any neighborhood, trapping is strictly forbidden there for some years. In regions, however, on whose permanent possession the company does not count, it allows the trappers to do as they please. But if trapping is carried on in this ruthless fashion, in fifty years all the beavers there will have disappeared, as have those in the east, and the country will thereby lose a productive branch of commerce.

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

On the third day after leaving Fort Hall we came again to the Beer Spring. The day was hot; so much the more refreshing the water. In front of us several smoke wreaths arose. We had also discovered other signs of Indians that were ahead of us. Nevertheless, we slept without sense of danger. Our party was too small to permit of a night watch. Exertion by day and by night would have exhausted us too much. The only precaution we took was to tie our animals at night close by; for the rest we relied on good fortune. That we kept our guns in prime condition is a matter of course. On such journeys one gets habituated to his rifle as to a trusty traveling companion. During the march the gun lies across the saddle; when one rests it is always close at hand.

One never leaves camp without taking it as a cane; and at night it is wrapped in the blanket with the sleeper, to be ready for use at the first alarm. As disquieting as such conditions would be in civilized life, here one becomes so habituated to them that I do not remember to have ever slept more peacefully in my life. We no longer used tents, but slept quite unprotected in the open air. The weather, too, had of late become so genial as to leave nothing to be desired. During all the time that we were on the west side of the Rocky Mountains we had very steady weather. In the morning the thermometer was usually between 30° and 40° Fahrenheit; at noon about 80° ; at evening about 60° . With this the sky was clear and the west wind cool. When clouds occasionally gathered, the west wind, putting forth more force, scattered the approaching storm, sometimes with thunder and lightning, but generally without rain.

---

CHAPTER SIXTEEN - THE JOURNEY FROM BEER SPRING TO FORT CROCKET

WE left the Beer Spring on the morning of August 14th. I drank some cups of the sparkling water, and bade adieu to the place so endeared to me as to an old friend that one does not expect to see again for a long time. Our direction was southeastwardly. We ascended the right bank of the Bear River for four days, following almost the same road which we had taken through the Bear River Valley about a month before, after we had crossed the Rocky Mountains; but this time we generally kept closer to the river. On the first day we were crossing great stretches that had been burnt over, and round about us clouds of smoke were still ascending from the mountains, as to the meaning of which we could not entirely agree. The Indians usually light such fires as signals, when they wish to collect the scattered bands. So they are often regarded as indications that enemies are in the vicinity, or are making an excursion. The region through which we traveled belonged, it is true, to a friendly Indian tribe, the Snakes; but they are ravaged occasionally by these implacable foes of both white and red men, the Blackfeet. We were therefore on our guard so far as the small number of our party permitted.

The same day we came across a party of trappers, whom we had already met at Fort Hall. There were eight of them, chiefly Canadians, going after beaver. Some of them had their squaws with them. They were bound for Ham's Fork, a mountain stream emptying into the Green River, and, though our road was not the most direct for them, they chose, for company's sake, to travel some days with us. Most of them were old mountaineers of great experience, and they met us with the geniality characteristic of the Canadian. We extended reciprocal hospitalities. There was no fresh meat in camp, but sufficient of dried; also toro, coffee, cocoa and peppermint tea. One of the trappers was a Fleming. He had a squaw with him, of the tribe of the Eutaws, whom he had bought at one time for \$500.00, but was disposed to sell for half the purchase price. She was a little, unshap-

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

en bundle of fat; but otherwise seemed to have very good qualities, for he recommended her to us in the following terms, characteristic of the cardinal virtues of a squaw: "She is young, gentle, easy, and in first rate order." The trappers seem, unfortunately, to have adopted from the Indians the habit of looking on their Indian wives as chattels, not persons; and the squaws themselves seem to desire no other position. On the second day we started together, and crossed the Thulick Fork, a streamlet flowing into the Bear River from the north. Under way we met a band of Snake Indians. The first who saw us, took to flight before us, but when we had convinced them that we were friendly disposed, they came in crowds to our noonday camp. The Snakes are a peaceable tribe. Their country is not rich in game, so they gather in the fall divers roots and berries for the winter. They had lighted the fires which we had seen these last days, but only to call their people together for a great hunting party. The Snakes had five horses with them. A race of several miles for a wager was immediately arranged between one of their horses and an American horse. The latter won. In the afternoon, making a rather steep ascent, which afforded us a view of Little Snake Lake, lying to the south, we went along the Bear River on which we camped at night near the mouth of Thomas Fork. The third day we stopped at noon at Smith's Fork, emptying into the Bear River from the northeast. Near by, there was a rock from which the Blackfeet several years ago had shot into Bonneville's camp, killing, however, only a mule. Smith's Fork was the first stream coming from the western mountain slope which we had touched on our former passage through the mountains. From here on we took a direction differing from that of our former trip. Instead of returning northeastwardly over the mountains, we now turned southeastwardly, in order to reach the Green River some hundreds of miles further down. I have already mentioned, in speaking of our passage over the mountains, that the chain we then crossed runs out to a southern point. At this point, as it seems, the chain is pierced by the great eastern prairie for a distance of forty or fifty miles, not that it is an open plain, but it is certainly much more open, uniform and level than the mountains to the north and south, and does not offer such unsurmountable obstacles as they do to the passage of teams. This, as it were, pierced part of the mountains, is bounded on the south by the snow peaks of the Eutaw Mountains, on the west by the Bear River, and on the east by the Green River. The southeastern direction, which we took from Smith's Fork, carried us right through this region, which is perhaps the most convenient pass over the mountains. Going from there in northeasterly direction, one reaches again, by a rather open road, the Green River and the Sweet Waters; but we preferred to go southeastwardly, and to keep entirely off from our former route. The trappers left us at Smith's Fork. One of them, however, a native of French Switzerland, resolved to go with us. Swiss (so we usually called him) had roamed through the mountains for eleven full years, and suddenly took a notion to try civilization again, and to come with us to St. Louis. He was an experienced mountaineer and good hunter. On his accession, our party numbered five men. On August 9th, we left Smith's Fork and went still up the Bear River, though at some distance from it, over sandy, rather level ground, to the Muddy, which empties into the Bear River. Here we finally left the Bear River and went southeastwardly toward Black Fork, which has its source in the Eutaw Mountains and flows toward the Green River. The snow peaks of the Eutaw Mountains were on our right. They are not so imposing as those of the Wind River Mountains. The grass in this region as a rule was very poor, the game very scarce. We had not yet seen buffalo on our return trip, and the few antelopes we came across were usually wild. But our leader was fortunate enough to kill one of them on the way to the Black Fork. The nearer we got to Black

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

Fork the more uninteresting we found the country. The ground was a loamy sand. Only cedar groves throve here in which black-tailed deer occur singly. This species is as large as the European deer, with long ears and a black point at the tail. But we did not get a shot at any of them. The Black Fork itself is a clear rushing brook, overgrown with cottonwood, willows and wild currants. Our animals found also splendid grass. From here the country becomes more hilly. Many steep, conical, naked sand hills alternated now and then with little cedar groves. From there we reached Henry's Fork, a small stream flowing into the Green River south of the Black Fork. On the shores grew pine, cottonwood and willows. The grass was good. We followed the streamlet to its mouth. We had warm days, and suffered so much from mosquitoes at night, that we often could not get one hour's rest.

On August 15th, we crossed the Green River, which winds its way among precipitous mountains, and at this point can still be easily forded, going slantingly down stream for two more days. The road was generally steep, and led through forests of pine and cedar. The river valley at first was narrow, but widened further on. The geological formation was still the primitive. On August 17th we reached Fort Crocket. It is situated close by the Green River on its left bank. The river valley here is broad, and has good pasturage and sufficient wood. The fort itself is the worst thing of the kind that we have seen on our journey. It is a low one-story building, constructed of wood and clay, with three connecting wings, and no enclosure. Instead of cows the fort had only some goats. In short, the whole establishment appeared somewhat poverty-stricken, for which reason it is also known to the trappers by the name of Fort Misery (Fort de Misere). The fort belongs to three Americans: Thompson, Gray and Sinclair. The latter was at the fort, and received us very kindly but regretted his inability to offer us any supplies. For our store of meat was exhausted, and we had hoped to supply ourselves here with new provisions. But the people at the fort seemed to be worse off than we were. The day before they had bought a lean dog from the Indians for five dollars, and considered its meat a delicacy. I, too, tried some of it, and found its taste not so bad. In addition to some trappers and Indians, we found five Americans here, who had started in the spring with a larger party from Peoria, Illinois, to make a settlement on the Columbia River. They had arrived in Westport after our departure, and had journeyed first by the Santa Fe road, then up the Arkansas. But through several quarrels and mishaps, the company, consisting mainly of novices, was split up into several smaller groups. The party we here met had made most progress, and had not yet abandoned the plan of going to the Columbia. But the most difficult part of their journey lay before them. So two of them, Mr. Ogley and Mr. Wood, thought it best to avail themselves of the opportunity to return now offered them, and to join our party. Our party was thereby increased to seven. Among the people of the fort I had expected to meet an old friend of University days who had been roving through the mountains these six years, and who was supposed to be at this time at the fort. To note the metamorphosis from a jovial student at Jena into a trapper would be interesting enough in itself. The presence of S. would have afforded me a pleasure far beyond this, as we had not seen each other for ten years. Unfortunately, I learned that he had gone beaver-trapping and would not return before fall. So we left the fort the next day.

---

CHAPTER SEVENTEEN - JOURNEY FROM FORT CROCKET TO THE SOUTH FORK

ON August 18th we started from Fort Crocket. Our next objective point was the North Fork of

---

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

the Platte; so our direction was generally east. We went down the Green River for some miles more, and through a ravine six or eight miles long, Brown's Hole, where steep rocks of sandstone and porphyry rose abruptly on either side, at a distance of from one hundred to two hundred feet. At the end of this gorge we pitched our camp for the night. The next morning we scraped together the last morsels in our meat bags and ate them in hopes of soon getting fresh meat. But our way led over a desert sand plain with little grass and no game. In the morning we had crossed the Vermillion, a little brook with reddish water, which flows into the Green River, but at evening we did not even find water. We marched on till late at night, and finally laid ourselves down, hungry and thirsty, on the sandy soil. The next morning we reached the Snake River, and rested up a little. I still found in my food bag a little rice, whereof we cooked ourselves a thin soup. The other empty spaces in our stomachs we filled with wild currants and bullberries that grew along the shores. The latter, also called rabbit berries, are the fruit of the *Shephardia argentea*, a large bush, whose leaves are shiny white on the under side. The red berries in appearance and taste resemble currants, but were still quite unripe. Nevertheless they tasted famously. In the afternoon we got sight of some antelope, but they did not come within range. Our leader and Swiss usually rode on either side to hunt, while we marched slowly forward. As we reached towards evening a creek, where we intended to camp, we suddenly heard the growl of a grizzly bear quite close by. My companions had no ambition to meddle with it; but I could not resist the temptation, and made toward the place whence the sound came. All around was high grass and thick bush, so, that I could not see the bear. Of a sudden the beast started up only a few feet in front of me. I quickly raised my gun; the bear stopped short, and instantly disappeared in the tall grass. All this was the matter of a few seconds. I followed the track through the brush as far as my horse could press through, and tried to persuade my companions to beat the bush together on foot; but they showed no disposition that way. Meanwhile, the bear escaped across the river. When our leader rejoined us, we finally went into the thicket, but found only the tracks of a she-grizzly and two cubs without seeing the animals themselves. So, instead of roast bear we had to content ourselves this evening again with bullberries.

On the next day we did not find even berries. On the fifth day we started off with empty stomachs, but in good spirits. A thick mist covered the country, so that one could see only a few feet ahead. Our leader, who was riding ahead, suddenly sprang from his horse, and only then did we see a great black lump that was moving before us. It was three portly bears that saw us at the same moment, and ran away. We immediately chased after them in different directions, but the fog prevented us from following their tracks. The fog lifted soon after. Before us was a little stream with many cottonwood trees, called the big timber. There we hoped to find game. So Richardson and Swiss took the direct road toward it, while the rest of us went toward a point where we were to meet at noon. We came across some antelope, but they seemed to know of our ravenous hunger and to make sport of us. We kept pretty close to the river and had covered about ten miles, when suddenly one of us, who had lagged somewhat behind, galloped up in hot haste, and shouted to us to make for the timber as fast as we could. Although we ourselves could discover nothing, we could only take the call to mean that enemies were at hand. Without much questioning, we rushed for the timber, only a few hundred steps off, and looked for a position suitable for defense. Our informant assured us now that he had seen a whole band of mounted Indians, one or two miles off, coming toward us in full career. We surmised that they were Blackfeet and prepared for

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

---

a serious encounter. Our animals we tied to trees close by. For ourselves we looked to our weapons, firmly resolved that we would at least sell our scalps dearly. All this took but a few minutes. Then there was an expectant pause. Nothing stirred as yet. One of us crept the while to the edge of the timber to reconnoiter. "There they come," he suddenly cried, "Come here quick!" We hurried to him, and saw with astonishment a whole troop-not of Blackfeet, to be sure, but-of elk rushing toward us. They had not yet seen us, because we were hid behind bushes; but they scented us, and, with their customary curiosity, ran up to us. All at once our rifles cracked. Several tumbled, and one lay dead in its tracks. With exultation we fell upon the coveted victim. It was a fat elk cow. To live in plenty after several days of fasting, to be sure is pleasanter than being scalped by Blackfeet; still our informant had to bear many a joke on account of his defective vision. Such mistakes, however, are not uncommon in mountain life. At a distance an elk, especially if he throws back his head, looks very much like a horseman. Meanwhile our two hunters joined us, and helped us carve.

Quite systematically we now began to arrange our bill of fare. First soup appeared on the table, then cooked meat, then various roasts, and finally sausages stuffed with liver, and marrow bones. Pauses were made between the courses. Our appetite was all that could be desired. Whoever had seen us in civilized life give such substantial demonstrations of appetite as we did, would have set us down for a band of hungry wolves or gluttons. But here the whole thing seemed quite natural. After we had feasted and rested for about four hours, we moved on again, to promote digestion, and covered about eight miles, going along the river. "Indians!" suddenly exclaimed our leader. We listened, and heard to one side Indian speech. We approached carefully, and found a little party, consisting of Captain Walker, whom we had met at the rendezvous, and some trappers and Indians, who had come here some days ago to get dried meat. Captain Walker is an original among mountain loafers. He has roamed through the mountains, chiefly on his own hook, in all directions, and has made a side trip to California. He has taken such a fancy to this life that it is unlikely that he ever returns to civilization. We found him with pipe in mouth, and clad with nothing but a blanket, for which he excused himself to us, because his shirt was in the wash. He had sufficient fresh buffalo meat, and invited us to the rib of a fat cow. We heard, too, that great numbers of buffalo herds were before us, and that we would suffer no further want. The next morning we left the Captain's party and went over hilly prairie to Savory's Fork, a branch of the Little Snake River. On the way we saw many single buffalo, and small herds; and Swiss, who, is unrivaled in running down buffalo, killed a cow for us. The buffalo herds now became more and more frequent, and almost every day we shot a fat cow, of which we took only the best pieces. On the evening of August 25th we reached again the left shore of the North Fork of the Platte, at a point we had not touched on our journey up, and in bee line perhaps one hundred miles distant from Fort Laramie. The river here was broad, but shallow, and we crossed it with ease. But we left it immediately, to go in southeastern direction to the South Fork. We reached it in about eight days. On the first we crossed with moderate ascensions the mountains belonging to the North Platte; on the fifth day, a second chain, the watershed between the North Fork and South Fork, over which there is also a convenient pass. The geological formations were again sand and lime stone. Chiefly pine grew on the mountains. On the seventh day we reached Powder Cache Creek, a stream flowing into the South Fork; and on the ninth day the South Fork itself. The country between the North Fork and the South Fork is mainly a broad plateau with sandy soil, sparse

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

---

grass, and a few birch groves like oases in the midst of the prairie. Buffalo abounded, and we lived in plenty, for almost daily we shot a cow. We also encountered several bears. Once, when we had pitched our evening camp near a little grove, a great grizzly bear approached unobserved within twenty feet of our camp. At the first alarm, before we had a chance to shoot, he was back in the woods, and it was too dark to follow him there. Another time, just as we were cresting a hill, we saw three grizzlies - a she bear and her two cubs - cozily at play. Richardson and Swiss, who were ahead, immediately wounded two of them without killing them, and followed them on horseback. My horse had been so lame for some days past that I could take no part in the hunt. Our hunters raced after the bears, and were soon out of sight. The rest of us went slowly forward. After a time Richardson came, back with the skin of one of the bears, but Swiss stayed out all night. Only during the next morning did he rejoin us, and told us how first he had chased the bear, and then the bear him. His solitary pistol missed fire, and only by repeated snapping of the flint lock could he keep the enraged beast at bay, until he could get time to pour fresh powder on the pan and lay his pursuer low.

On September 3rd we came quite unexpectedly to the left bank of the South Fork and crossed the river. On the right bank there are here three forts, only some miles apart. Penn's [Bent's] and St. Vrain's fort, Vasquez and Sublett's and Lobdon's fort. The construction is the customary one; the outer walls are of half-baked brick. There is much rivalry and enmity between the three forts. In the first fort we found part of the scattered Columbia party from Peoria. In the second I met the well-known Fitzpatrick, who has passed through many an adventure during his life in the mountains. He has a spare, bony figure, a face full of expression, and white hair; his whole demeanor reveals strong passions. We remained in the neighborhood of the forts for about three days. In the meanwhile I had my horse shod. For want of shoes it had become quite lame. Among the news of the day which we heard in the forts we were most interested in the account of a recent battle between the Pawnees and the Sioux, wherein only one of the latter was killed, while about eighty Pawnees lost their scalps. The victorious Sioux were still roving about the South Fork, and were very much embittered against all whites, because the man they lost was thought to have been killed by a white man who was with the Pawnees. We were therefore advised to abandon our plan of further following the South Fork and to strike out for the Arkansas. The evening before our departure, several owners of the forts arrived, bringing a new cargo of goods from the United States. Goods are usually transported to this place in great ox teams, and the same road is taken which we are about to follow to the boundary of Missouri.

---

CHAPTER EIGHTEEN - RETURN TO THE BOUNDARY OF MISSOURI

ON September 7th we left the forts on the South Fork to go southeastwardly to the Arkansas. We went up the South Fork for only half a day. Southwestwardly, beyond the left bank of the Platte, a high mountain chain arose, whose more distant peaks were in part covered with snow, forming a beautiful background for the Platte with its fringe of cottonwood, and for the wide plain that stretched along its right bank. On the fourth day we crossed the divide between the waters of the South Fork and of the Arkansas. The ground was somewhat hilly, with scattered pine groves. In the wide prairie stretching from there toward the Arkansas we saw again our first herds of buffalo. We met here two lodges of Arapahoes, who had just shot a cow, and gave us a hospitable invita-

---

tion. The squaws were still cutting it up. We smoked the while, and, in the absence of wood, collected buffalo chips whereon to roast the ribs. After our meal we started off in company. The squaws packed their animals with admirable economy. One squaw not only loaded a horse with about three hundred pounds of baggage, but seated herself with some children on the same animal, maintaining the equilibrium with motions of her own body. A dog, too, had to carry about fifty pounds. At evening we camped together on a sandy creek. The Indians were also on their way to the Arkansas; but they traveled too slow for us, so we parted from them on the next morning, and reached in two days the left bank of the Arkansas. The Arkansas with its surroundings bears much resemblance to the Platte. It arises west of the same mountain chain as the Platte, and flows in eastwardly direction toward the Mississippi. Its shores at times are bare, at times have a growth of cotton trees. On either side stretches out a rolling prairie. The water is swift, but shallow, and is here navigable only for small boats. Many catfish are in it. We went down the left bank of the river about sixty miles to Penn's [Bent's] Fort. This country presents little variety. Along the shore we found at times wild grapes. They were larger than I had ever seen them in the United States, and tasted deliciously to us, though they were still quite sour. So also we found the red fruit of a species of cactus with a sweet mucous taste. The grass became constantly drier, only along the water did we find some fresh patches. Whenever set afire the tall parched grass burned like tinder. Through carelessness of one of the company the grass near our camp was once set afire and we could save our baggage only with difficulty. Buffalo became more and more scarce. On September 15th we reached Penn's Fort. It lies on the left bank of the Arkansas, close by the river, and is the finest and largest fort which we have seen on this journey. The outer wall is built of imperfectly burnt brick; on two sides arise two little towers with loop holes. In the ample courtyard were many barn-yard fowl. In addition, they have cattle, sheep and goats, and three buffalo calves that peacefully graze with the rest of the herd. At the time they had no superfluity of horses at the fort, because only a short time before a band of Indians with incredible audacity had driven away a hundred head of horses. The fort is about one hundred and fifty miles from Taos in Mexico, and about three hundred from Santa Fe. Little expeditions go frequently to the former city, to barter for flour, bread, beans, sugar, etc. Then, too, much merchandise is annually transported by ox-teams to this point from the boundary of Missouri, which is only six hundred miles distant. Four miles above, there is a second smaller fort, Peebles' Fort, occupied chiefly by French and Mexicans. We bought here some Spanish flour, which rather deserved to be called bran; but as our appetite was none too squeamish, we enjoyed it immensely. On the 17th we started off again. The many wagons which go each year from Missouri to the forts on the Arkansas have made a tolerably plain road, generally following the river, and uniting about one hundred and fifty miles below with the Santa Fe trail. This was the road we followed. The region was the same monotonous, hilly, treeless, sandy prairie as before. On the second day we reached the so-called big timber, a spot on the Arkansas, some miles in extent, plentifully covered with trees. So much the scantier is the wood lower down. The Comanches, who play in the south a part similar to that of the Blackfeet in the north, are said to rove freely in this vicinity; but we had the pleasure to be spared making their acquaintance. On the fifth day we again came across herds of buffalo. On the sixth we reached the Santa Fe road. This broad road, almost a highway, has been gradually made by the trading expeditions which annually leave Missouri's border with many ox-teams for the Mexican city. The distance from Independence to Santa Fe is estimated at nine hundred miles. The road

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

runs southwestwardly over the prairie. It crosses the Arkansas a little short of half way to Santa Fe. The river at that point is rather shallow, and the crossing is said to be not very difficult. At this ford we came upon the Santa Fe road, and followed it to the boundary of Missouri. The road from here on turned gradually from the river toward little streams that flow from the north into the Arkansas. The first days we went over a wide plateau, where we found countless buffalo, but little water. On September 26th we reached Pawnee Fork; the next day, Ash Creek, near which there is a solitary rock in the prairie, which is accounted as half way between the boundary of Missouri and Penn's Fort, and on which some travelers have marked their names. On the 28th we passed Walnut Creek. An unlucky accident separated me here from my companions. My horse had broken down a good deal of late, and so I had to walk more than was to my liking. As the party were late about starting the next morning, I took my horse by the bridle and started ahead, in the expectation that the mounted party would soon overtake me. Later on I tried to drive my animals before me, but they often ran to one side and probably in this way brought me on a wrong road, which became less marked after a few miles, and finally totally ran out. It was foggy, and I could discover nothing of my companions. So, in order not to lose time unnecessarily, I determined to push on in an eastern direction, hoping in this way to reach the road before long. After I had gone some miles further, I saw a great swamp lying before me. Toward north and south I could see no end to it, but it seemed to extend only a few miles toward the east. The water was not very deep and the ground pretty firm. So I resolved to try at every risk to get through in an eastern direction. I rode my horse forward at the slowest pace, but it often slid down on grass and reeds. My pack animal I led after me with a rope. All sorts of water birds swarmed around from all sides. Never have I seen together such quantities of swans, cranes, pelicans, geese and ducks, as were here. The swamp was fairly covered with them, and they seemed to feel themselves so safe that I could have killed hundreds of them with the shot barrel of my double-barreled weapon. Just at that time, however, I was less interested in hunting than in getting out of the confounded swamp, for my horse was visibly becoming exhausted, and I was making barely a mile an hour. With trouble and difficulty I finally reached what I had thought from a distance to be trees; but it turned out to be only tall reeds, and the second half of the swamp still lay before me. My horse now would not budge for either whip or spur; so I dismounted and dragged it after me by the bridle. The water sometimes reached to my chest. With slow and measured step I moved onward; my dog swam usually in the rear of our stately procession. The sun was sinking when I finally reached the other side of the swamp. Before me lay a little chain of hills and on my side of them was a little creek with some timber. To this I managed to drive my exhausted animals. The solitude in which I was so suddenly placed, would have much disquieted me at the beginning of the journey; but now it had a certain charm for me. I made a fire in a somewhat hidden place, and dried myself out. The next morning, just as I was eating breakfast, a herd of deer visited me. They came quite close to me and gazed at me for quite, a while; but I did not care to take a shot at them, partly because I still had dried meat on hand, and partly because the neighborhood is at times frequented by the Pawnees.

True to my resolution, I continued going on in an eastern direction. The grass in the prairie was often as tall as a man, and made walking very troublesome. Nowhere could a sign of a road be seen. It seemed as if no human being had ever set foot in this country. I passed several brooks, seemingly insignificant, but with such muddy bottoms that my animals sank into them, and I had

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

to unpack my mule on several occasions. In the afternoon I reached a larger creek with much timber, probably Cow Creek, and camped there. My animals were too much fatigued, so I spent also the following day there; dried my baggage; and made reflections upon solitude. The next morning I started early. On the road I saw the last buffaloes of the trip, got mired a few times in little creeks, and camped at night on the Little Arkansas, a creek with terribly steep banks. Only after long search did I find a place to water my animals. The next morning I couldn't find my animals in the high grass. Only on climbing a tree did I discover them at a mile's distance. With a load, it was impossible to get my mule over the creek; so I carried my baggage myself to the other shore, and then drove my animals over. After I had continued some hours steadily in an eastern direction through the prairie, I came suddenly and quite unexpectedly upon the Santa Fe road. My animals were no less pleased than was I. I found traces of my traveling companions. That same day I camped, for want of better water, at a puddle, inhabited by countless frogs. The next morning (it was the sixth since I had been separated from my party), I went twenty-five miles on a stretch to Cottonwood Creek, a wooded stream, that arches at this point into a pleasant semi-circle. I was looking about for a camping place, when I heard a shot in a hollow close by me. Cocking my rifle I rode closer, and found my traveling companions again, who told me that they had waited for me a day at the Little Arkansas, and had finally concluded that I had gone on ahead.

From here on, it was about two hundred miles to the border. United again, we started the next day (October 5) and covered thirty miles before reaching water. My horse was now so exhausted that I could hardly bring it into camp. On the second day we reached Council Grove. That is the name of a dense grove of deciduous trees, extending for some miles along a creek of the same name. The Santa Fe caravans usually stop here to elect their leaders and to organize: hence the name. It is about one hundred and fifty miles from the border. In these woods deer, turkeys and squirrels are found. It rained continuously; so we stayed there several days. We started again on October 9th. On the 11th we reached the Osage, a stream that was almost dried up, with wood in plenty. It was impossible to get my horse to stir from here. He grazed greedily, but from sheer fatigue would not move from the spot. "The horse has stopped," is the technical expression of the mountaineers for this condition. When left to itself the animal usually recovers after a while, but I could not wait for that. I had to abandon this worthy animal which had carried me some thousands of miles. Some weeks before we had abandoned two other horses in the same way. However, one of my companions lent me another horse. The country gradually became more familiar to us. On October 13th we rested at noon at the same place as after our departure from Sapling Grove. Toward night we camped in the vicinity of Sapling Grove. As yet we had seen neither farms nor human beings, but the cow-bells which we heard at evening near us, made sweetest music for us. The next morning we again passed the farms of the Shawnees to our starting point, Westport. Before entering the village we fired a salute from all our guns, which immediately brought out our old acquaintances. We had passed nearly six months in the wilderness. In that time we had covered under daily hardships about three thousand miles, had slept on the bare ground in all kinds of weather, and had lived almost exclusively on meat. Nevertheless, we all fairly overflowed with health, while the many sallow fever faces we here met sufficiently informed us that the summer had been very sickly. In Westport, we rested for a while. All, even the commonest, pleasures of civilized life had a double charm for us. After eight days I rode with three more of my traveling companions three hundred miles further, to St. Louis, where we made our return on the last day of October.

---

---

CHAPTER NINETEEN - THE INDIANS

WHEN a nation has perished, it arouses the interest of posterity, and historians and antiquarians exhaust themselves in researches as to the character of such a race. But the existence of a people that is merely near extinction, however characteristic its life may be, and however instructive its history as bearing on the study of the development of the human race, does not seem to call forth similar interest. This may be one of the reasons why we have not as yet, so far as I know, any adequate history of this race of man, once spread so far, which had the whole continent of America in its possession, until the advancing Caucasian race crowded them back. I do not deny the difficulties besetting such an undertaking, on account of our want of knowledge of many Indian languages, their own ignorance concerning their origin and history, the continuing hostility of many tribes toward all whites, and the hardships involved in traveling and living among them; but it is certainly true that on more thorough study of this people a more satisfactory history could be written now than in, say, a hundred years, when mere shadows of this perished race will be moving among us. The United States owe it to themselves and to this expelled race, to collect as soon as may be all that is worthy of preservation as to this people, and transmit it as a *momento mori* to posterity.

The Indians differ in so many bodily qualities from the rest of human kind, that they have been assigned a place among the five human races into which naturalists have divided the mammalian family, man. Here is not the place to consider whether these five races are aboriginal, or whether we are descended from a common stock, from which the five races were gradually developed.

As little can I decide whether, in the former case, the Indians are to be considered really aboriginal, or descendents of the Mongolian race, emigrating from Northern Asia to America. Passing this by, the characteristic differences, on account of which they are designated as a separate race, the American, are as follows: The skin of the Indian is brown-red, generally tan color, cinnamon brown, or dark copper red, but sometimes bronze colored. His hair black, straight and coarse.

The face is broad, but not flattened. The features are strongly marked. The eyes are deep-seated and rather horizontal. The forehead is not high, but compressed from the sides. The facial angle is about eighty degrees. The nose is rather broad and prominent, usually straight, but sometimes with the Roman bend. The cheek bones are very high and prominent, the chin almost square. The beard is thin, the chief reason for which may be their habit of plucking it out early.

There has been much fabulous talk about the Indian character. Some pose them as Roman heroes and unspoiled sons of Nature; others as cowards and the scum of humanity. The truth is between these extremes. First of all, we must differentiate between the Indians with some of the varnish of civilization and the cruder but freer tribes of the Far West. The former have no longer a marked character. The pursuit of agriculture, forced on them by necessity, has eradicated the virile traits of their old hunter's life, without inoculating them with the mild poison of civilization. To get a correct conception of the character of the freer North American Indian tribes, let us consider somewhat more closely the mode of life and customs common to them all.

The Indians inhabiting the western territories of the United States are split into numerous separate tribes, that consider themselves entirely independent of each other. They all live by hunting, especially buffalo hunting; and each tribe claims a wide territory with very vague boundaries as

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

its own. In addition they recognize certain districts, where buffalo usually abound, as common hunting and war ground, where various tribes roam at will, subjecting their conflicting rights to the test of strength. Between the tribes there is perpetual warfare. Each tribe must have an hereditary enemy, whose wrong must be avenged in blood. Their warfare is rarely carried on by open attack or battle; but they stalk each other till one party succeeds in surprising and massacring the other. When attacking, they raise a fearsome shrilling cry, the so-called war whoop. The slain are scalped, that is, the scalp is circularly incised in the hairy part of the head and torn from the skull. The scalp of an enemy is the highest triumph of the Indian. The more scalps an Indian can show, the higher does he stand in the esteem of his tribe. Sometimes, when the animosity is not very fierce, they simply make prisoners of their enemies, and treat them then as slaves. Such is usually the fate of women. The chief weapon of the Indian is the bow and arrow. Through trade with the whites many of them have now obtained firearms, the use of which they have well learned. However, all trading companies sell them only short, poorly-made carbines, and no rifles. Another weapon, peculiar to the Indian, is the tomahawk, a small hatchet which they use in close fight, and likewise purchase at the forts. In former times they made them themselves of pointed stones. Often the tomahawk is made so as to serve also as a pipe for smoking. But commonly they use for this purpose special long pipes, which they esteem as great articles of luxury, and from which the owners will part at no price. The bowl of such pipes is made of a red clay which is found on the Upper Missouri, and which forms an article of commerce between eastern and western tribes. Smoking is a conventional ceremonial of salutation. He who has been admitted to smoke the so-called pipe of peace is in no danger. Ordinarily the Indians smoke only chewing tobacco mixed with various herbs; but if no tobacco is to be had, they smoke sumach and other stupifying herbs. Every Indian tribe has a chief, which honor is hereditary in his family; but for a warlike expedition they often choose special leaders. In all important matters the chief must consult with the warriors of the tribe; but otherwise can act quite arbitrarily, especially if distinguished for bravery. The religious ceremonials are in every tribe under the guidance of a so-called medicine man, who knows how to impose on the people through all kinds of hocus-pocus. The religious ideas of the Indians are still quite crude. Like all people in an immature state, they believe in a good and bad principle, and continued existence after death, in which the brave have unalloyed enjoyment of all the good things of this life. Various wild dances and songs are an important element in their religious ceremonies.

Every Indian tribe has its own speech. All these languages seem derived from a common origin; but owing to the segregation of the tribes and the want of any writing, resemblances may often be well nigh obliterated. The Indian's style of speech is a mixture of laconic brevity and picturesque imagery. Their comparisons are taken from surrounding nature, and are generally very appropriate.

Concerning the daily life of the Indians we have often had occasion to make remarks in prior sketches. Most tribes live only in tents and lead a wandering hunter's existence. One family usually lives in every tent. Polygamy is sanctioned in all tribes, but only the wealthier can put it in practice. The squaws as a rule are anything but handsome, but their uncleanliness may serve to hide their charms. The squaws are treated not much better than slaves. There is no appeal from the will of the lord and master. War and the hunt are the only occupations for a man; everything else is for the squaws. The squaw must attend to the horses, set up the tent and take it down,

A JOURNEY TO THE ROCKY MOUNTAINS IN 1839

By F. A. Wislizenus, M.D

---

must care for the baggage, must cut up the game, attend to the kitchen, tan leather, make clothes and moccasins, etc. In spite of these multifarious demands on their activity, they are generally indefatigable and good-natured and bear the ill-temper of their masters, oft manifesting itself by blows, with Indian fortitude. Children are soon left to themselves. I have never seen that they were beaten. They usually learn riding before walking; but in the latter, too, they develop great speed and endurance. Although their muscles do not appear especially prominent, they seem to have a degree of toughness which qualifies them for extraordinary exertions. The women are no less hardened than the men, but with them the full development of the body is hampered by too early marriage, often at the age of ten and eleven. These hardy children of nature suffer little from sickness, though contagious diseases, like the small-pox, at times destroy great numbers of them. Their medicines consist simply in herbs. They also have great confidence in steam baths, which they take in so-called sweat lodges, in which water is poured on hot stones.

The wealth of an Indian consists chiefly in horses. Their horses come from Mexico, and are of as hardy stock as the Indians themselves. Whoever owns no horses tries to steal some. All stealing is permissible among the Indians, but horse-stealing is honorable. Such bands of horse thieves will often follow another tribe or a caravan of whites for weeks and months, till they find an opportunity to drive off the whole herd. In addition to horses every Indian usually owns a great number of dogs, useful partly to carry loads, partly, in absence of other meat, for food. In their form and character they are closely related to the wolf, from whom they are probably derived.

The clothing of the Indians usually consists of leathern leggings and a blanket or buffalo robe, to which is added in the case of the women, a garment, also of leather, reaching from the breast to the knee. Their light leather shoes, the so-called moccasins, the squaws make with great skill, using no other tool than the awl and the thread obtained from the sinews of the buffalo. Both sexes have the head uncovered. Vanity and love of finery is more deep-seated with these children of nature - if indeed such a thing is possible - than with the children of civilization. But one can note a vast range from the savage often wholly naked, to the complete Indian dandy, who, with his face painted with cinnabar, his hair decked with feathers, and his body adorned with beads and brass wire, will gaze for hours in a broken bit of mirror, admiring the masterpiece of all creation.

What, then, are the special characteristics of the Indians? Physically they consist, in addition to the racial marks above given, of admirable strength, skill and endurance, together with keenness of senses in highest development. An Indian sees his enemy before the white man discovers him with his spy-glass. His ear upon the ground, he interprets suspicious sounds at great distances. His keen sense of smell scents smoke and traces of the enemy, before the white man has any suspicion thereof. Among the characteristics of the man within this body, we are first struck by the pride with which he looks down upon his surroundings, especially upon the pale face. "The proudest thing in the world is an Indian," an old mountaineer once said to me; and whoever has seen a free Indian going through the streets of a populous city, which he is perhaps seeing for the first time, with firm, self-reliant step and military bearing, gazing straight ahead and seemingly indifferent to all around him, will admit that the opinion just quoted is not without foundation. This pride seems to me nothing more than a consciousness of his self-reliant independence. The Indian, born and nurtured in the broad prairie or in the mountains, familiar from childhood with the dangers of the wild life of the hunter and warrior, choosing his country wherever he can maintain himself by force of arms, and his shelter where the sky arches over him, must natural-

By F. A. Wislizenus, M.D

---

ly have a sense of self-reliance vastly differing from that of the effeminate civilized being, born, nurtured and buried amid a thousand conditions of dependence. The Indian feels himself free, his wants are few, his resources lie within himself. This consciousness fills him with such pride and with such contempt for all civilization. But his indifference is often seeming rather than real, and is based on a marked Indian characteristic, self-control. The passions of the Indian are as stormy, as eager to blaze out as they can be with any human being, but by extraordinary self-control he maintains all the outward appearance of calmness. An Indian will often endure, without the slightest manifestation of pain, the most torturing modes of death, simply to defy his enemy. The Indian who seeks to conceal his feelings or his plans will not let his left hand know what his right hand does; neither kindness nor threats can cause him to break silence. On the other hand, this self-control often serves as a cloak for guile and treachery. But it must be confessed that many acts of treachery toward Indians can be charged against the whites; so much so as to often seem to afford justification for the cruelties of the former. Acquaintance with the whites seems also to have diminished the high esteem in which hospitality was held among them. Still even now it is custom in most tribes that if even an hereditary enemy seeks refuge in the tent of the chief, not a hair of his head is hurt; though, to be sure, if he is found next day in the prairie or on the mountain his scalp is infallibly lost. The question has often been asked whether the Indian has real courage or, is cowardly by nature. Whoever knows the Indian's mode of life must concede if courage is by any means capable of development in a human being, such a life is calculated to inspire a man with fearlessness and contempt of death. That the Indians usually succumb to the weapons of civilization, and the fact that a few determined whites repel their attacks even in greatly superior numbers, is not proof against their courage, often verging on fool-hardiness. Their system of waging war, moreover, often causes us to regard that as cowardice which is really plan and calculation. They consider it, for instance, folly to advance toward the enemy in open battle array; and Black Hawk, the renowned chief of the Sacs and Foxes, when present at a great maneuver in New York, during which several batteries were stormed, could not wonder enough at the idiocy of sacrificing hundreds of warriors in this way, since the batteries might be taken at night by surprise without loss of a man.

The Indian tribes which now rove through the great Missouri territory are chiefly the Kansas, the Sioux, and the Pawnees. In and about the Rocky Mountains and beyond them, in Oregon, live the Crows, the Blackfeet, the Eutaws, the Snakes, the Nez Percés, the Flatheads, the Parmacks, etc. Of these tribes some are friendly to the whites; with others the friendship is dubious; while still others are at open enmity with them. The last is especially true of the Blackfeet, the terror of trappers and travelers. The Blackfeet rove about the headwaters of the Missouri on either side of the Rocky Mountains, and are the sworn foes not only of the whites, but also of all other Indians. They consider themselves the lords of creation, and wage war with all who will not submit to them. Their boldness and audacity causes them to be feared far and near. Most of the whites who perish in the Rocky Mountains are brained by their tomahawks. Small parties of trappers are pursued by them relentlessly; but they also often attack larger groups, and engage them in skirmishes. When on their expeditions they unexpectedly encounter a party they either attack or take to flight, for all whom they meet are sure to be enemies. Through this unrelenting hate toward all who are not of their tribe, which they put in practice to its utmost consequences, the Blackfeet have become a word of terror among the mountaineers; not unlike that which the grizzly bear in the animal

---

kingdom has won for himself. However, through ceaseless warfare, and still more through disease, especially small-pox, which ran its course among them some years ago, the tribe has been much reduced, and has become less formidable.

The ultimate destiny of these wild tribes, now hunting unrestrained through the Far West of the United States, can be foretold almost to a certainty, from the fate, already accomplished, of the eastern Indian tribes, where in the contact of races, true civilization collides with crude forces of nature, the latter must succumb. Civilization, steadily pressing forward toward the West, has driven the Indians step by step before it. Where war with the whites and with each other was not enough to reduce their numbers, the result was brought about by disease and ardent spirits. Whole tribes, that formerly dwelt in States where civilization is now permanently established, whose names perhaps were then as terrifying to the pioneers of the West as is now the word Blackfeet to the mountaineer, have entirely disappeared, leaving scarce a trace of their name behind. Some few have accommodated themselves to agriculture, and still live among us, the shadows of a vanished race. The western tribes still have, as yet, a bulwark against the advance of civilization in the boundless, generally sandy prairie, which extends for about a thousand miles from the boundary of the State of Missouri to the foot of the Rocky Mountains, in those mountains themselves, and in the broad sandy plains beyond them. But those obstacles are not insurmountable. At least half of the great prairie is capable of cultivation; and the want of wood, attributable less to the nature of the soil than to the frequent prairie fires and to the quantities of game, especially the herds of buffalo, will be less sensibly felt with the gradual progress of civilization. Illinois in former days had many treeless tracts that became wooded by natural means as the soil was cultivated. But the greatest danger threatens the Indians from the West; from the settlements on the Columbia. Along the Columbia River various Indian tribes have already perished; the rest live in entire dependence on the whites.

So the waves of civilization will draw nearer and nearer from the East and from the West, till they cover the sandy plains, and cast their spray on the feet of the Rockies. The few fierce tribes who may have maintained themselves until that time in the mountains, may offer some resistance to the progress of the waves, but the swelling flood will rise higher and higher, till at last they are buried beneath it. The buffalo and the antelope will be buried with them; and the bloody tomahawk will be buried too. But for all that there will be no smoking of the pipe of peace; for the new generation with the virtues of civilization will bring also its vices. It will ransack the bowels of the mountains to bring to light the most precious of all metals, which, when brought to the light, will arouse strife and envy and all ignoble passions, and the sons of civilization will be no happier than their red brethren who have perished.

---

POSTSCRIPT.

In the foregoing sketches I submit to the public some off-hand observations on a journey that was made off-hand. I make no claim to a scientific treatment of my subject. Neither my time, nor my means, nor my knowledge in the natural sciences, of which I never made a specific study, would permit of this. My purpose in writing these sketches was solely to give the reader an appreciable picture of the unknown west of the United States with the peculiarities of the country and the still greater peculiarities of its inhabitants, and to present in suitable groups, as it were through a pan-

---

orama, those objects which passed one by one before my eyes, with often fatiguing slowness. With romantic trimmings the picture might perhaps have been made more attractive to some readers, but I have preferred to copy nature and life as faithfully as possible, and to give due heed to the shades as well as the lights. If I have accomplished this purpose, however imperfectly, I shall feel adequately compensated for the fatigues and dangers of such a trip.

As an aid for following the geography I have appended a little map of my journey, in which are indicated the trend of the Rocky Mountains and of the streams arising in them, filled in with more detail at the point where I crossed the Rockies. As there are no maps of these parts of the United States based on accurate measurements, I of course cannot vouch for the geographical correctness of my plat. Still it may serve the purpose of giving a better idea of the country. By the way, in all probability we shall have in a few years a geographically correct map of the, Missouri Territory and the Oregon Territory of the United States, since the Congress of the United States by a resolution only recently adopted has authorized the President to cause a scientific exploration of that region, and to take measures adequate for securing the country. It is reported that in consequence of this resolution three military forts are to be erected between Missouri and the foot of the Rocky Mountains, and that a scientific expedition, calculated for several years' stay, is to be sent out there. Such measures will soon afford travelers in these regions greater security, will increase our knowledge of the country, and will thus open a road for civilization.

A transformation of this remarkable country seems then at hand. It is perhaps only a few years until the plow upturns the virgin soil, which is now only touched by the lightfooted Indian or the hoof of wild animals. Every decade will change the character of the country materially, and in a hundred years perhaps the present narratives of mountain life

John Work's Journal

Oct 18 - Nov 17, 1824

Monday, [October] 18, [1824]. Arrived at the forks in the afternoon. It was foggy in the morning and we lost a good deal of time searching the horses which had strayed, three of which we could not find. Sent an Indian to seek them in the afternoon.

Tuesday, 19. The Indian arrived with the horses in the morning.

Wednesday, 20. Mr. Ogden arrived with the boats in the morning, 21 days from Fort George, which is reckoned an expeditious journey with loaded boats. The after part of the day was occupied with arranging the property for horseback.

Thursday, 21. The property and all the Spokane men but 2 were sent off to Spokane in charge of Mr. McDonald. Mr. Ogden remained with me and the remainder of the extra men to wait for the express.

Wednesday, 27. The express arrived in the afternoon, 2 boats with Governor Simpson, Dr. McLoughlin, Mr. McMillan and Mr. Dears and Mr. McKay.

Thursday, 28. The governor, Dr. McLoughlin, Messrs. McMillan, Ogden and McKay went off to Spokane. I was left with the men. The governor informed me that I am to go to the sea.

Saturday, 30. The gentlemen returned from Spoken. The boats are ordered to be gummed in the evening, so that everything may be ready to-morrow.

Sunday, 31. Embarked about 10 o'clock with the governor and Mr. McMillan in one boat, and Dr. McLaughlin and Mr. McKay in another, for Fort George. A third boat went ahead a few days ago to Okanagan. Mr. Ogden and the people for Spokane remain to proceed to their destination. In the evening we encamped below the San Poil River.

Monday, [November] 1, [1824]. Embarked at daylight, and arrived at Okanagan in time for breakfast. Here a halted was made, the remainder of the day preparing despatches for Mr. McLeod.

Tuesday, 2. Continued on our journey early, and encamped in the evening just above Stoney Island.

Wednesday, 3. Proceeded on our journey early in the morning and stopped in the evening some distance below the Priest's Rapid.

Thursday, 4. After supper last night we pursued our voyage and continued all night and arrived at Walla Walla a little after sunrising, where we remained for the day.

Friday, 5. We took our departure from Walla Walla after breakfast, and encamped in the evening a little below the Big Island. We were considerably retarded the greater part of the day by a strong head wind.

Saturday, 6. Embarked before daylight and came to near halfway between the Dalls and Cascades. Everything was carried at the Shoots, but we ran both the big and little Dalls. We saw a good many Indians yesterday, only about a hundred at the Shoots.

Sunday, 7. Embarked in the night, passed the portage at the Cascades and encamped in the evening opposite the upper branch of the Willamat. We had a sails wind part of the day below the Cascades.

Monday, 8. After supper last night continued our journey and arrived at Fort George in the evening. The wind was favorable and assisted us a good deal. The rainy season has not yet commenced.

Saturday, 13. Since Monday the weather has been dry and cold, with a thick frost in the morning.

Sunday, 14. Weighty rain in the night and all day. The rainy season may be considered as commenced.

Wednesday, 17. The weather has been showery since Sunday last. Preparations have been made for some days to send off an expedition to the northward, for the purpose of ascertaining the situation of the entrance of Frasers River and the possibility of navigating the coast in small boats. Frasers River and about its entrance are also to be examined, if it can be accomplished. It is understood from a report that these are the principal objects of the undertaking. The party are to consist of Mr. James McMillan, who commands the expedition, Mr. Thomas McKay, Mr. F. N. Annance and myself and 35 men. The journey is to be performed in small boats, 3 in number. Everything is now prepared to start tomorrow.

From Washington Historical Quarterly III (1912)

Journal of John Work, November and December, 1824.

Deputy Governor George Simpson (afterward knighted, and more generally designated Sir George Simpson), at the head of the affairs of the Hudson's Bay Company in British North America for nearly 40 years, was a very forceful and thorough man. He had been chosen to the position at the time of the coalition with the Northwest Company in 1821, and the last District to be visited and reorganized by him was the Columbia District, for the management of which Dr. John McLoughlin had been selected as resident Chief Factor. This was the occasion for the presence of Gov. Simpson at Ft. George at the mouth of the Columbia river in November, 1824; along with Dr. McLoughlin and others he had just arrived from across the mountains.

The expedition covered by the Journal herewith (which is now published in full for the first

---

time) had been planned several months previous; this we know from correspondence with John McLeod at Thompson River (Kamloops), instructing him to detach Mr. Annamour, a clerk, to become one of the party. Mr. McLeod had been instructed to obtain all possible information as to an outlet to the Coast by way of Fraser river or any other stream of New Caledonia; and to explore personally in the interior. It was not until after 1828, when Gov. Simpson personally made the trip up Peace River and down the Fraser, that he gave up the immediate search for such an outlet; even later he was hoping to find one further north. So immediately after his arrival at Ft. George this expedition was outfitted and sent off. It is evident that the report from Mr. McMillan was desired before a permanent location should be selected further up the Columbia for the District Headquarters. Fort Vancouver then did not yet exist except by anticipation.

The personnel of the expedition is interesting. Mr. Jas. McMillan was a man of experience on the Columbia, the same who was associated on its upper waters with David Thompson fifteen years earlier; he afterward built Ft. Langley on the Fraser river and remained in charge until succeeded there by Mr. Archibald MacDonald in 1828. The ubiquitous and brave Thos. McKay, now a son-in-law of Dr. McLoughlin, but previously a member of the first Astoria party on the Tonquin, had returned to the Columbia with the present party; he of course wanted to be present when any chance for a scrap with the Indians might occur, for he had a family score to wipe out. He was in charge of the hunting and expected to keep the party supplied with fresh meat. Mr. Annamour was a clerk in rank who did not rise to special prominence in later years; Mr. Work, the writer of this Journal, was the other clerk. Mr. John Work was of Irish descent, his name is properly spelled Wark, but less often appears so written. He became a prominent man among the H. B. Co. officials of the District. His daughter, widow of the late Edward Huggins of Tacoma, has only recently died in that city; another daughter was the wife of the late Dr. Wm. Fraser Tolmie, whose last years were spent in Victoria, B. C., and whose children possess the original Journal from which this copy has been kindly allowed. This is the Journal from which Hubert Howe Bancroft personally drew his account of this same expedition as appears on pp. 464-8 of his History of the Northwest Coast, Vol. 2. It has not before been printed in full.

Briefly stated, the expedition portaged from the Columbia river at Ilwaco across to Shoalwater Bay and from that Bay portaged again along the beach to Grays Harbor; thence followed the meanderings of the Chehalis and Black river to a source in Black Lake, from which a portage was made to either Eld or Budd Inlet of Puget Sound; thence followed the Easterly channels and bays of the Sound to a stream beyond the 49th parallel that empties into Boundary Bay and up that stream to a portage across to another stream flowing into the Fraser river at the site chosen for Fort Langley a little more than a year later, and up the Fraser river for two days, a full month being consumed to the date of turning back. Returning they paddled and sailed out of the mouth of the Fraser, rounded Point Roberts and spent a night at Birch Bay and then followed practically the same route they had come as far back as Black River south of Olympia, Washington; there the party divided, Mr. McMillan, Mr. Work and a few others proceeding by the more traveled and direct route of the Cowlitz to the Columbia and Ft. George, and Mr. McKay, in charge of the remainder of the party, taking the boats back by the route first traveled. The return was made in twelve days by Mr. McMillan. To follow this course closely with the aid of charts published by the

John Work's Journal

---

U. S. and Dominion Governments and county maps showing careful details will be of much interest to residents of the counties bordering upon the Coast (who will appreciate what was meant by a "weighty rain") and Puget Sound and the Fraser. The journal is also of value as showing the carrying capacity of the light batteaus used by the fur traders, and the variety of food carried for their sustenance, and the manual labor and exposure common to their expeditions.

No opportunity has been available to compare with the original journal and check some uncertainties in copying.

T. C. ELLIOTT.

\*After Mr. Elliott had prepared this paper for the Washington Historical Quarterly it was learned that Mr. E. O. S. Scholefield of the Provincial Library of British Columbia had arranged to publish the Work Journal with other materials in a bulletin. Notwithstanding this fact, the Journal is here published for the benefit of readers who might not receive the proposed bulletin and also because of the fact that the record bears directly upon the field of this Quarterly.

-[Editor.]

Journal of John Work

Nov., 1824-Governor Simpson having determined to send an expedition to the Northward for the purpose of discovering the entrance of Fraser's River, and ascertaining the possibility of navigating that River with boats, and also of examining the coast between Fort George and Fraser's River as far as practicable. James McMillan, Esq., was appointed to command the expedition, which consisted of:

Thos. McKay, F. N. Annamour, John Work, clerks; Michael Laframbois, interpreter; 1, Pierre L'Etang; 2, Jas. Portneuf Abanaker; 3, Alexis Aubuchou; 4, Pierre Villandri; 5, J. B. Proveau; 6, Peter Wagner; 7, F. H. Condon; 8, Pierre Karogarajab, Ir.; 9, Louis Shatakorata Ir.; 10, Wm. Johnston, Englishman; 11, Segwin Le Deranti; 12, Cawano: Ir.; 13, Louis Anawano, Ir.; 14, Pierre Karaguana, Ir.; 15, Chas. Jaundeau; 16, Louis Diomilea; 17, Andre Lonctoin; 18, Chas. Rondeau; 19, Pierre Patvin; 20, Ettuni Oniager, Ir.; 21, Louis Hanatiohe, Ir.; 22, Louis Vivet; 23, Peo Beau, Islander; 24, Thos. Tojanel, Islander; 25, Thos. Zatwaiton, Islander; 26, Jos. Loui Abanaker; 27, Andre Le Chappel; 28, J. B. Dubian; 29, Joseph Delpard; 30, Leo Depuis; 31, Jacques Patvin; 32, Louis Shorakorta, Islander; 33, Joseph Grey, Islander; 34, Bazil Pioner; 35, Momonta, Islander; 36, Cannon, American.

Besides the above group, an Iroquoy Freehunter and his slave also accompanied the party on account of his being acquainted with the coast part of the way. The voyage to be performed in three boats, the only loading of which consists of . . . kegs pease, . . . kegs oatmeal, . . . bags flour, . . . kegs pork, . . . kegs grease, . . . kegs rum, . . . keg butter, . . . kegs, sugar, . . . bags biscuit, . . . bags pemmican. In all . . . days' provisions.

John Work's Journal

---

THURSDAY, 18 (NOVEMBER)

Everything being in readiness, the expedition left Fort George at a quarter past one o'clock and in 2 hours and 10 minutes reached the portage 1 in Bakers Bay, a distance of not less than 14 miles. This portage is about . . . miles to the Northward of Cape Disappointment. This portage is made to avoid doubling the Cape, which is not practicable with our boats. Though the wind did not blow very strong, there was a heavy swell in the middle of the River. Mr. Kennedy accompanied in a boat to Bakers Bay and stopped with us for the night. It was drizzling rain in the after part of the day, with some showers.

FRIDAY, 19 Nov., 1824

Weighty rain all day and blowing fresh in the afternoon from the Eastward.

Commenced carrying the boats and cargoes across the portage of 1060 yards, to a small lake 2 about half a mile long. The portage was wet and dirty, but in dry weather it would be a fine road. From this little lake part of the people carried part of the cargo, while the remainder of the people with the boats and the rest of the property proceeded down a small creek 3 that receives its waters from the lake. This creek is so narrow that the boats could scarcely be got dragged through it, and all the property had to be carried the greater part of the way. The road along this little creek, which runs through a little swampy plain, is very soft and wet. We have got only about 2-3 of the way across the portage. The distance we have made from the little lake is 4,200 paces in a direction nearly N. by E.

Mr. Kennedy, who came to see us across the river, took leave of us at the little lake.

Abundance of geese and ducks are along this little river and swamp. McKay killed three and Mr. Annamour 1 goose. Some parts of the road there were a good many cranberries.

SATURDAY, 20

Blew a storm in the night with weighty showers of rain. Fine weather in the morning, but very weighty rain afterwards, wind S. E. The people resumed transporting the property and boats to where the tide came up the little river, a distance of 1,218 yards, here all the property was embarked, and at 440 yards farther down the passengers also embarked. Here the creek began to widen and a strong flood tide made it sufficiently deep for the boats. About two miles farther we came to the entrance of Grey's Bay, 4 down which we proceeded about 9 miles and encamped about 2 o'clock P. M. at the entrance of a little river on the west side of the bay. 5 Our reasons for stopping so early was its being too late to cross the bay and there being no possibility of getting water farther on. The wind being favorable, the sails were hoisted about an hour. The little valley through which we passed yesterday and today is here and there clothed with willows, which some places nearly choke up the river, in some parts it is clear and clothed with verdure, in several places it is very swampy on account of the heavy rain and the tide flowing over its lower end. The part of the Bay which we have passed through seems to be from 4 to 6 or 7 miles wide. On the W. side the shores are flat and covered with woods, principally a kind of pine, to the water's edge, wood of

John Work's Journal

---

the same description also extends to the water's edge on the E. side, but the shores in some places appear steep and seem to be compounded of a reddish clay. Our general course all day was nearly due North.

Here there is a small village of Chenooks consisting of 5 inhabited and 1 uninhabited house.

SUNDAY, 21

Fair weather, a fine gentle breeze of wind from the S. E., some weighty rain in the night. As it would have been too long to wait for the tide rising sufficiently high, the boats and property were carried about 1/4 of a mile, and we were on the water at 8 o'clock. Our courses were as follows: N. E. 5 miles, which was across to the East side of the Bay, then along the East side of it; N. W. 6 miles; W. N. W. 4 miles; N. N. W. 5 miles; and W. N. W. 8 miles, which brought us to a point which forms the entrance of the bay on the East side at 1 o'clock. This is a low point about 2 miles across and has such a heavy surf breaking upon it, particularly that from the ocean on its north side, that it is impossible to take boats round with any degree of safety; the cargoes were therefore, carried nearly across the point, a distance of 3,300 yards. The labour of carrying will not end here, as the sea is breaking with such violence on the shore, that that business (will) likely have to be continued a good while. Notwithstanding this breach of the sea on the beach, the wind is off the land and not blowing strong. The road in this portage is very good, the ground is sound, dry, with some fir, pines and willows growing upon it. Grey's Bay widens greatly towards its entrance, it is in some parts not less than 15 miles. The E. shore appears still flat near the water, the bank on the W. side is a little higher and in some places would be difficult to land, as they are so steep. In crossing the entrance to two bays before we came to the portage, the tide ran very high, the waves were very high, but as they did not break we shipped no water

Monday, 22ND

Stormy with very weighty rain in the night and blowing fresh with some showers during the day. Wind southerly.

All hands were at work at an early hour, past carrying the property 3,870 yards N. N. W. farther on the portage, and part clearing a road along a little river, so that the boats might be got through that way in preference to attempting the sea shore. About all the people were sent for the boats, which they brought with great labour a distance of about 3 miles, the greater part of which they had to be dragged through places almost entirely dry or little better than swamps. Tomorrow it is intended to carry them to the sea shore and try to get them along as the Indians do their canoes, which is to conduct them along between the beach and the shore, while thus employed the waves often break over both them and their canoes. The road through which the goods were carried today is very good and lies along the edge of the woods which is about 1/4 to 1/2 miles from the shore. Geese are plentiful, 20 were killed, they are mostly the small grey geese and very lean, however, provided a kettle for the men. Vandit and little Louis are lame.

Tuesday, 23

---

John Work's Journal

---

Light clouds, fine fair weather, light wind from the S. E. At daylight all the people were employed carrying the boats from the woods where they were left yesterday to the sea shore, afterwards part of the men, 6 and boat, conducted them along shore in the inside of the breakers, where they had just water enough to float them to the other end of the portage. One of the boats was left some distance on this side of the others. In performing this business part of the men stopped in the boats with poles to keep her right and to watch the waves, while the rest dragged her along with a line; the swells were often nearly upsetting her. The surges often flowed in about the men at the line until they were up to the middle. The remainder of the people were employed carrying the property a distance of 4,620 yards N. N. W. The road still continues very good.

Mr. Annamour went to seek elk, but saw no appearance of any. He represents the country as bare and swampy and unfit for the residence of elk. 5 geese were killed, the same kind as yesterday and equally lean.

One of the men, Vanditt Potvin, who got lame yesterday, was so ill that he had to be carried today. Yesterday morning a small spot on the upper part of his foot became painful and suddenly swelled very large and is now so painful that he cannot put it to the ground. This (is) an unfortunate circumstance in our present situation.

Wednesday, 24

Overcast, fair weather except some showers in the afternoon, wind S. E.

As soon as it was daylight, all hands were at work and carried the property along shore 3,20 yards N. N. W.,<sup>9</sup> and then struck along the woods to a branch of the Chihalis Bay<sup>10</sup> a distance of 2,364 yards N. E., where the goods were all brought by 1 o'clock. The road along the sea shore was the same as yesterday, but that across the woods is very bad. It lies through thick woods and is almost one continuation of swamps where the men with their loads were often on their knees in water and mud. By taking this road a great deal of labour is saved, as it is 3 miles shorter than the road along the shore and across the other end of the point. As soon as the goods were got across the half of the people were sent to take round the boat which was left yesterday and to bring it and the other two up to this place; they have not yet arrived.

A goose and 2 ducks were killed, great numbers of ducks are in this small branch of the bay, but they are very shy and difficult to get at.

Vandit Patvin is getting worse, the swelling is extending up his leg and several black spots are appearing on his foot, he had to be carried all the way we came today.

The whole length of this portage which we have just got across is little more than 15 miles.

Thursday, 25

Overcast with drizzling rain and weighty showers. Wind S. E. blowing pretty fresh. Rained hard in the night.

---

At an early hour the men who remained at the camp were sent off to assist the others with the boats with which they arrived at noon, and at  $\frac{1}{2}$  past 1 o'clock we embarked and proceeded up the Chihalis Bay. Our courses were N. 5 miles, N. N. E. 4 miles and N. E. 5 miles along the E. side of the Bay. On account of the haziness of the weather the form of the Bay or the appearance of the country about it could not be clearly discerned, but the Bay appears to be about 6 miles wide at its entrance immediately after which it widens to from 10 to 12 miles and then narrows gradually as we advance to from 3 to 4 miles. The shores are thickly clothed with wood, chiefly pine, to the water's edge, and near the water are rather flat. It is sometimes difficult to find a dry place to encamp on account of the rising tides, fresh water is also sometimes a scarce article, and that which we got being obtained from the swamps is of a bad quality and sometimes brackish.

The Iroquoy George<sup>11</sup> had been stationary near this bay sometime past hunting sea otter, he has now sent all his slaves to the Fort but one with whom he accompanies us.

A canoe with 10 Chihalis Indians passed us on their way to the Chenooks.

Friday, 26

Weighty rain in the night and with the exception of a few short intervals in the afternoon, pouring down rain all day. Blowing fresh from the E. forenoon. The men were completely drenched, and it was with difficulty a fire was got made when we put ashore for breakfast.

Embarked at daylight and proceeded to the bottom of the bay,<sup>12</sup> a distance of about 6 miles N. E. to S. E., the course in general may be considered E. The part of the bay through which we passed in the morning narrows from 2 miles to about  $\frac{1}{2}$  mile in breadth, the shores of the North side are pretty high and those on the S. side are low and swampy near the water. The Bay from S. W. to N. E. may be about 23 or 24 miles in length. The Chihailis River is about 300 yards wide at its entrance and narrows as we advance till about 100 yds. where we are now encamped. The banks in some places are high and steep, but often low and flat and thickly wooded to the water's edge, principally pine on the high banks and oak and alder on the low points, and all along so thickly (covered) with underwood, bush and long grass, that it would be difficult to penetrate any distance into the woods; the shores are wet and muddy. The navigation for so far is very good, the river is deep and the current slack, the tide ascends this far. In the course of the day we passed several islands. Passed 4 villages of the Chihalis Nation, 2 houses in the first, 5 in the second, 2 in the third, and 3 in the fourth, opposite which we encamped. Though these people are well accustomed to the Whites and have been still on friendly terms with them, we were surprised to find them all under arms on our approach, and at some of the villages assuming threatening attitudes, shouting from behind the trees and presenting their arms, particularly their bows and arrows, as if in the act of discharging them. On inquiring into the cause of this unexpected conduct, we learned that Cumcumilus Son Cassica had sprad a report among these people that the Whites were coming to attack them and they were too credulous as to disbelieve it, but they were soon undeceived and a present of tobacco to some of the chief men dismissed all appearances of hostility.

Patvin, the lame man, is getting no better, the swelling is rather increasing than decreasing.

These peoples' houses and appearances, etc., are in every respect similar to the Chenooks, they have a good many fine arms among them.

We can only form a conjecture as to their number, from the first 3 houses we passed a canoe followed us with 14 men whom we supposed were all that belonged to those two houses, which was 7 house, supposing each house to contain 7 men fit to bear arms, as we passed 12 houses the number of men would be 84 which is probably correct, perhaps under the thing.

These peoples' houses are constructed of planks set on end and neatly fastened at the top, those in the ends lengthening towards the middle to form the proper pitch, the roofs are cased in with plank, the seams between which are filled with moss, a space is left open all the way along the ridge which answers the double purpose of letting out the smoke and admitting the light. About their habitations there is a complete bank of filth and nastiness. At this wet season it is a complete mess mixed with the offal of fish and dirt of every kind renders it surprising that human beings can reside among it.

Saturday, 27

Poured down rain all night, blowing fresh from the S. E. It rained incessantly with very little wind till 2 o'clock in the afternoon, when it ceased and a fair evening succeeded. Every person and every thing was completely drenched, our means of keeping them dry being ineffectual.

In order to save time and avoid the difficulty of getting a fire, we breakfasted before we left our encampment, and embarked at 8 o'clock and continued our course up the river to 4 o'clock in the afternoon where we encamped both wet and uncomfortable, but the evening being fine a good fire was soon made and all hands were soon employed warming themselves and drying their clothes. The distance made today we reckon from 20 to 24 miles through a very winding course, the river was so crooked that we were steering to every part at times, but our general course was East. The current was very strong and the people had often to use their poles. The general appearance of the river is much the same as yesterday except that the banks are high and not so soft and muddy as when the tide ebbs and flows. The breadth of the river this day might be from 60 to 80 yards. The continual rain is causing the river to rise very fast and, of course, increases the strength of the current. We passed 10 houses, first 1, next six and last 3 all of the Chihailis nation. The inhabitants did not appear in arms nor did they appear alarmed as those we passed yesterday. They were likely appeased by some of their friends who proceeded us, that they had no reason to be alarmed. At the large village I counted 47 men on the bank and saw some in the houses besides, the whole of which were upwards of 50, but some of those we saw yesterday were among them.

The filth about these houses exceeded that we saw yesterday. About and even in the houses were literally alive with maggots which had generated in the off all of fish and the stench was most offensive. Canoes of these people accompanied us from one village to another, many of them were

John Work's Journal

---

quite naked regardless of the rain. Several tracks of elk were seen today. But not a single appearance of beaver have we seen yet in the river.

Patvin is getting worse, his foot and leg has broke in different places.

Sunday, 28

Raining the most part of the night. Short intervals of fair weather in the morning and constant rain afterwards. Wind S. E.

Embarked a little after 8 o'clock and pursued our course up the river a distance of about 10 miles S. E. to where it receives a little river called the Black River from the Northward, up which we proceeded about 10 miles in about a N. E. direction. The part of the Chihailis River which we passed today is much the same in appearance as that described yesterday. The current continues very strong, the water had risen considerably in the night. The Black River<sup>13</sup> so named from the colour of its water, is from 20 to 30 yards wide, towards its lower end the navigation is very good, the water is deep and the current not strong, but about 5 or 6 miles up it the navigation gets troublesome as the current becomes strong and in many places so shallow that the boats could scarcely be dragged through it.

The river was also in two places blocked up with driftwood, at one of which a portage was made, a passage was cut through the other, a great deal of driftwood is piled on the shore at many places along the river. The banks of this river are in some places elevated and in some places low, the high banks are generally clothed with lofty pine and the low ones with poplar, ash, alder, etc., and the low points with thick willows. Where we are encamped is on the edge of a little plain. This river would not be passable for such craft as ours in the dry season. A great many dead salmon are in the river and many that are just alive and barely able to move through the water. Pased on Indian house belonging to the Holloweena nation, I counted 12 persons at it, probably some more were in the house.

MONDAY, 29

Wind S. E. Rain in the night and a continual succession of weighty showers all day.

Embarked at 1/2 past 8 o'clock and proceeded about 9 miles up the river in a N. E. course. In places the river was very shallow and our progress was sometimes obstructed by driftwood. In other parts the navigation was good as the water was deep and the current slack. The appearance of the country is changing considerably as we advance. The low points are covered with willows and small poplars, plane and some oak trees, while the higher banks have pine, and some distance appear hills thickly clothed with pine, between these hills and the river there are in some places fine plains. Saw several marks of beaver.-

Encamped at noon, the cause of stopping so soon was to wait for Mr. Annamour who had been sent to the principal Holloweena village a few miles off, for a trader Pierre Charles who has been with the Indians for some time. It is thought that he would be an acquisition to our party, but he could not be found.

Some of the people were sent off to hunt but returned unsuccessful though they saw both elk and deer. This is reckoned a good part of the country for those animals.

Passed two houses of the Halloweena Nation at which I counted 10 men and as many women besides children, probably some more were in the houses. Saw some more Indians some of whom had horses.

Tuesday, 30

Rain in the night and weighty rain the greater part of the day with strong gusts of wind from the S. E. We did not decamp today. Patvin's foot and leg has got so ill that there is no prospect of his recovery on the voyage, and this being the last place from which there is any chance of getting him sent back to the Fort, an agreement was made with an Indian, a principal man of the Chihailis Nation whom we met, to take him home to the Fort, for which he was to be paid handsomely on his arrival. Several of the men were, therefore sent off with the sick man to meet the Indian at the Halloweena Village where he was to proceed by the sea coast in a canoe. Eawania an Islander was sent with them to take care of him, but the men returned in the evening and reported that the Indian had made some difficulties and wanted payment before he went off. It not being considered prudent to send the sick man with the Indian, a bargain was made with another a Halloweena to take him by the Cowlitch, by which route he was expected to make the Fort sooner.

Pierre Charles, the man who was wanted yesterday, joined our party.

Several of the people went to hunt and Mr. Annamour and Little Pierre killed each a deer. Some of the others saw both elk and deer but killed none, the heavy rain was unfavourable for hunting.

Wednesday, 1st Dec

Showery weather, wind S. E. There has been more fair weather last night and today than for several days past.

In consequence of having to send the Interpreter Laframbois to finish the arrangements with the Indian and get him sent off with the sick man, we did not move camp today, until the Interpreter returned in the evening having effected his mission satisfactorily. The Indian who was engaged for the purpose had set out with the sick man by the Cowlitch. Part of the journey had to be performed on horse back. The poor man is furnished with a supply of provisions, medicines and the means of procuring provisions as the means possessed of would admit.

Several of the people were sent off to hunt, they are to proceed to a portage a short way ahead and there meet us.

Since we have been here several of the Halloweena Indians from the neighbouring village have visited us. Their mode of life, manners, language, etc., differ little from the Chihailis, indeed, they may be considered as a detached part of that tribe.

John Work's Journal

---

Thursday, 2nd

Mild fair weather, wind Easterly.

Embarked at half past 7 o'clock and proceeded about 5 miles up the river nearly N. Here the river becomes so narrow and nearly choked up with willows and trees that it was found necessary to make a portage and the goods were carried a distance of 2,980 yards. The boats were brought up by water which was such a tedious business, a road having to be cut for them in many places through the bushes, that it was night when they reached the upper end of the portage. The part of the river through which we passed today is pretty deep and the current not strong except at some points till we reach the portage. The shores are complete thickets of willows and different kinds of deciduous trees, mostly ash. The portage is a fine road through a handsome plain. Saw several marks of beaver by their cuttings they seem to be fonder of the ash than other trees.

Friday, 3rd

Wind Northerly, fair mild weather except a little drizzling rain in the morning.

Embarked at 1/4 past 7 o'clock and proceeded up the river and nearly to the head of a lake<sup>14</sup> where it has its source, a distance of about 8 miles N. to a Portage where boats and all have to be carried across land to Puget's Sound. On our arrival at the portage at 10 o'clock the business of carrying was immediately commenced and the boats and goods carried 3,140 yards N. W., the men had a hard day's work.

The river widened a little above the portage we left in the morning, but was in many places nearly choked up with willows, but on account of the recent rain there was plenty of water. Pine trees lined the shores which are low at some distance from the water, the intervening space is covered with thick willows and small trees of different kinds. The lake is about 3 to 4 miles long and from 1 to 1/2 miles wide, and appears on every side thickly wooded with, chiefly pine. In the part of the portage which we passed today the road is very good running through a small plain with ash trees scattered here and there through it and afterwards through thick woods of lofty trees of different kind, some of which are very large, and a good deal of underwood. The road is very good for carrying the pieces as it has been a good deal frequented by Indians, but it is too narrow to carry the boats through, and requires a good deal of labour to widen it, as some of the trees to be removed are pretty large, six men were employd clearing it all day.

The hunters who left us two days ago met us here. Mr. Annamour killed a deer which was the only success the party had.

Saturday, 4th Dec., 1824

Fair mild weather, wind Northerly.

At daylight the people resumed their labour on the portage, part to clear a road for the boats and

John Work's Journal

---

part to carry the baggage. The property was carried to the end of the portage, a distance of 4,950 yards N. W., by 11 o'clock after which all hands were employed carrying the boats a part of the way. This labour is attended with a great deal of difficulty, as we advance the road gets worse, it is in many places wet and miry, the trees are of a very large size many of them fallen, and the ground among them so thickly covered with underwood, particularly an evergreen shrub called by the Chenooks Lallall, that cutting a road through them for the boats is a tedious and laborious task. The track is also intersected by thin little rivers or creeks.

The portage is 8,090 yards long, and except a little plain at its commencement, thickly wooded with different kinds of trees, pine, maple, cedar, ash and wild cherry. Some of the pine trees are very large. I measured some of them, one of the largest was upwards of 5 fathoms in circumference, another 28 feet around, the soil seems to be very rich.

Pierre Charles was sent to hunt and returned in the evening having killed two elk.

Sunday, 5th

Overcast mild fair weather, wind North.

At an early hour part of the men was sent off for the meat that was killed yesterday, and the rest continued their labour at the boats which are yet a considerable distance from the end of the portage, though the people wrought at the road and carrying them all day. A good allowance of the fresh meat was served out to all hands which is a very acceptable change to them after the pease on which they have been living chiefly for some time.

Where we are now encamped is a small bay 15 of Puget's Sound. Notwithstanding that the tide rises about 6 feet yet the water is not very salt; it can only be called brackish. As the little river that falls into it here is inconsiderable, probably several little rivers discharge themselves into the bay at no great distance.

Two Indian houses of the Halloweena tribe are close by, their inhabitants are living on salmon which comes up this little bay.

Monday, 6th

Overcast, rain, cold weather, wind Northerly. Foggy in the morning.

At daylight the people went off to the boats which they brought to the end of the portage and at 9 o'clock we embarked and proceeded down the bay about 25 miles in the following courses: 4 miles N. N. W., 4 N. E., 3 N., 2 N. N. E., 2 N., 2 E. by S., 3 N E. by E., 3 E., and 2 N. N. E., mostly along the S. E. shore, through narrow channels formed by islands or points. Passed three deep bays or narrows formed by islands on the West side and on the S. E. side. In the evening passed the Nisqually River which falls in from the E. into a pretty large bay. The shores are steep and bold compounded of clay, a gravel and covered with wood, principally pine, to the water's edge. In several places the wood appears pretty clear and not much chocked with underwood. Put ashore a short time at noon to join the boats. Here we found plenty of musels, which were the only shellfish

---

John Work's Journal

---

we found although the shells of several other kinds such as oysters and different kinds of cockles were along the shores in plenty, another kind of fish in a curious shape was also in plenty, this is a shapeless animal with long toes joined together in the middle, it seems to be in a torpid state and scarcely to move, it is covered with a crust or hard skin of reddish colour.

Passed a house of the Halloweena tribe, also saw two Indians in a canoe.

Encamped in the evening near 4 o'clock on a sandy point; very little fresh water.

Tuesday, 7th

Wind Easterly. Overcast cold weather, foggy in the morning.

Embarked at 1/2 past 7 o'clock and proceeded 3 miles N. E., 6 E and 26 North, in all 35 miles. Encamped at 4 o'clock in the evening. Our course lay through narrow channels about 1/2 mile wide and some wide openings formed by traversing bays and channels formed by some islands and points. Passed a channel and two bays on the W. side and two bays and a channel on the E. side, the last of the bays receives the Qualax16 River. Stopped at another little river where there was a village17 of the Nisqually

Nation consisting of six houses, these are miserable habitations constructed of poles covered with mats, we were detained 1 1/2 hours at this village, getting two men and a woman, wife to one of them, to act as interpreters and guides for us. The men are both of the Sanahomis tribe18 and are not intelligible to any of our party, neither do they well understand us but they, at least one of them, understands the language of the Coweechins which is the name of the tribe at the entrance of what is supposed to be Fraser's River. The woman speaks and understands the Chenook language pretty well and is to interpret to the men. Two canoe with 8 Indians passed our encampment in the evening, and when it was dark the Indians visited our camp, these people are from the Interior and belong to the.....

The Nisqually Indians speak a language different from any we have seen yet.

Where we are encamped is an island,19 where we see the marks of some horses which the Indians have on it.

The appearance of the shores is much the same as yesterday, still bold and high, composed of clay and generally wooded to the water's edge. Where we encamped last night we found abundance of mussels at low water.

Wednesday, 8TH

Some rain in the afternoon, wind Easterly.

We were on the water at 7 o'clock and made according to estimation a distance of 36 miles, N. 5 miles, W. 3, N. E. 5 and N. 23. We were 7 3/4 hours on the water, 3 3/4 of which we both sailed

and paddled with mild breeze, we concluded that we made at least 5 miles per hour. We this day proceeded through a fine channel formed, as the others, by the main land and an island. Passed an opening on the E. side in the morning and on the same side a bay 20 into which the Linananimis River (flows). On the West side we came through the Soquamis Bay from which there is a small opening to the Westward. Where we are now encamped opposite to a wider channel or opening<sup>21</sup> which runs to the Westward (?) it is very deep with a number of islands in its north side and through its entrance. The channels through which we passed may be 3 or 4 miles wide, the shores appear the same as yesterday. We stopped at the Soquamis village situated in the bay 22 of the same name, it consists of 4 houses, we saw only 8 or ten men, but understand several of the inhabitants were off fishing. Our object in stopping here was to get the chief to accompany us as an interpreter, but he was not at home. The houses are build of boards covered with mats.

The country in general appearance the same as that through which we have already passed, the banks generally very high composed of clay or gravel and wooded generally to the water's edge, the timber seems not to be of a large growth. A ridge of high mountains covered with snow appeared some distance inland on the Eastern shore, two high mountains 23 were also seen covered with snow to the S. and S. E., another high one was also seen to the S. W.<sup>24</sup>

Thursday, 9TH

Foggy in the morning. Wind Northerly, rain, cold weather.

Resumed our voyage at 1/2 past 7 o'clock and proceeded about 28 miles through a fine channel from 3 to 5 miles wide, formed by an island on the W. side and the main land and islands on the E. side. Our courses were as follows: N. N. E. 15 miles, W. N. W. 10 and N. N. W. 3. Passed the Sinnahamis 25 Bay which receives a river of the same name on the E. side, and on the same side the entrance of a bay or channel, here was also a small island on the same side in the entrance of the Sannihamis Bay. On the W. side of the channel we passed the entrance of a bay or channel and a small island in the entrance of Sannihamis Bay. Where we are now encamped 26 is near a village of the Skaadchet 27 tribe, the smoke of two other villages of the same tribe appear at other situations around the Bay. During the forepart of the day the appearance of the country is much the same as yesterday, but towards evening it began to change considerably. The banks are still high but not so abrupt as before, the woods are getting in several places much thinner and sometimes plains were seen stretching down to the water's edge. A high ridge of snow topped mountains were still seen extending from nearly south to N. along the Eastern shore and some distant islands All the country hereabouts is represented by the Indians to abound with elk and deer.

In the afternoon passed a large house belonging to some of the Sannihamis tribe on the E. side of the channel, the inhabitants on our approach fled to the woods, but our interpreter called to some who were in a canoe and they brought back their friends. We went to this house and were treated by them with shell fish. All these tribes appear much alarmed on our approach and appear aimed to dispatch on landing, if they do not fly to the woods till they are informed of our friendly intentions. All strangers are considered by these as parties of neighboring tribes coming on war excursions. These people got some trifling presents.

---

One of our interpreters, being afraid to proceed any farther remained at this house where some of his friends resided. This man since he has been with us frequently boasted of his bravery and showed us how he would kill the Coweechins, the tribe who inhabit the entrance of the river of which we are in quest, and who are represented as a barbarous and wicked people. They are so wicked that the most of the Indians are unwilling to trust themselves among them even under our protection. However, the other interpreter and his wife are still bold enough to proceed.

A canoe with 10 men and a woman of the Scaadchet tribe met us in the evening and being assured of their safety by our guide, returned to where we encamped and are remaining with us all night.

Friday, 10TH

Foggy in the morning and foggy with rain all the after part of the day. Wind northerly.

Embarked at 1/4 past 7 o'clock and proceeded 3 miles N. N. W., 5 N. by W., 5 N. N. W., 2 N. W., 10 N. N. W., and 11 N. W., in all 36 miles. Our course lay first round a point to one of the Scaadchet villages,<sup>28</sup> then across a deep bay<sup>29</sup> and through a narrow winding channel<sup>30</sup> to another larger bay,<sup>31</sup> down which we proceeded to an island<sup>32</sup> at its entrance where we encamped at 1/2 past 4 o'clock. This was the only place within our reach where water could be found according to our guides. The appearance of the country is very much changed, the shores are much bolder and of rock, the islands are also rocky with apparently very little earth and clothed with trees of a stunted growth.

Last night a young man, son to the Scaadchet Chief, was engaged to accompany the party as a guide and interpreter, and principally for the purpose of introducing us to strangers whom we may pass. He accordingly embarked with us, and shortly after we were met by some people in canoes who informed him that a war party from a neighboring tribe had surprised one of the villages and slain one of his friends in the night. A kind of howling was set up and we proceeded to the village which was on our way where a short stay was made till our guide got some things for his wife, when we continued across the bay, in the meantime the Indians had collected from the different villages and followed us in five canoes to the number of 55 men armed with bows and arrows, spears, bludgeons and a few guns. Not knowing what their intentions might be our party placed their arms beside them in readiness, however, the Indians said they were going to get news of the murder which turned out to be a false report. A present of a knife and a looking glass was made to each of their principal chiefs with which they seemed well satisfied. Two of the chiefs, the father of the young man already mentioned, and another volunteered to accompany us and their offer was accepted and they embarked, all the others returned.

The Scaadchet are fine looking Indians. They are not so flat headed as the Chenooks. They go quite naked except a blanket about their shoulders, many use in lieu of blankets little cloaks made of feathers or hair. The bay in which they reside is a handsome place. Passed 12 houses belonging to these people on the E. side of our road, not far separated, and in the opposite side of the bay I

John Work's Journal

---

counted at least 12 houses in a village, besides which at a great distance, the smoke of two other villages appeared.

A ridge of mountains 33 covered with snow extended from S. E. to N. W. at some distance from the Eastern shore, the intervening space seemed to be a flat country well wooded. In the after part of the day approached considerably nearer the shore and the country became much more hilly, even every island of any size rose to a little hill in its centre. The Indians represent this country as abounding in elk, even the islands are said in to be well stocked with these animals. The main land appears well for beaver and the Indians say they are numerous.

Saturday, 11TH

Overcast showery weather, wind Easterly.

Proceeded on our voyage at 1/2 past 7 o'clock and continued to 1/2 past 12 where we encamped in consequence of having a very wide traverse to make which it was deemed unsafe to attempt as the weather appeared unsettled and the sea appeared to be running high in the middle of the traverse. The distance made was 15 miles N. W. by W. and 7 miles N. W. along the main shore. The wind being favorable we sailed most of the time with a fine breeze. Passed several islands 34 to the Westward but at a great distance, there was also what appeared to be a chain of hills to the Westward farther off than the islands but on account of the haziness of the weather we could not well distinguish whether they were hills or other islands. Saw two large channels, one 35 running to the S. W. and the other 36 to the West. On the East passed a small island in the morning, then two points 37 and a small bay close 38 to where we encamped which is in the entrance of another bay. The appearance of the country has again changed, the shore still continues high and steep but instead of rocks are composed of clay and wooded to the water's edge, and the woods seem not to be much chocked up with underwood.

Immediately when we put ashore Pierre Charles went to hunt and shortly returned having killed 3 elk and a deer.

Sunday, 12TH

Overcast stormy weather in the morning and moderate in the after part of the day, sleet and weighty rain in the night.

The weather being too rough to attempt the traverse this morning, and part of the people having to be sent for the meat which was killed yesterday, we did not decamp today.

The people who were sent for the meat arrived with it in the afternoon. The great number of tracks seen by the hunters indicated that elk are-very numerous about this place.

Monday, 13TH

Overcast, wind N. Easterly, a little wind in the forepart of the day but nearly calm afterward.

---

John Work's Journal

---

Embarked at half past 7 o'clock and set out with the intention of crossing the traverse, but had gone but a short way when it was thought too rough to proceed, though there was not much wind. The course was, therefore changed and the boats crossed the entrance of the little bay in which we had been encamped and continued along the main shore to another bay 39 down which they proceeded to the entrance of a small river 40 up which they continued about 7 or 8 miles, in a very winding course which was in general N. Easterly. Encamped at 1/2 past 3 o'clock.

The point above mentioned 41 to which it was intended to cross in the morning is represented by the Indians to form the entrance of Coweechan River (which is supposed to be the same with Fraser's), on the S. E. side it projects far out to sea and appears like an island but seems to be joined to the mainland which is very low by a sandy ridge which probably may be covered at high water, immense flocks of plover were observed flying about the sand. The distance to this point might be about 10 miles. Sand appears at a distance beyond the point.

The reason for proceeding up the little river was the Indians representing that by making a portage there was a road this way into the Coweechin River, but they said it was very bad and seemed most desirous to go by the point. The navigation of the little river is very bad, after getting a short distance up it was often barred up with driftwood which impeded our progress, the Indians had cut roads through it for their canoes yet they were too narrow for our boats. Farther up it is nearly closed up with willows so uncommonly thick that it was both laborious and tedious to get the boats dragged through them. It is yet some distance to the portage. The appearance of the country round the bay from which we started this morning round to the point, appears low and flat, the bay appears to be shallow. In the river nothing but thick willows are seen for some distance from the water, where the banks though low are well wooded with pine, cedar, alder and some other trees. There are the appearance of beaver being prtty numerous in this river. Where we are now encamped is a pretty little plain. Two Indian boys were found in a lodge a little above our encampment, they were treatedly kindly and allowed to depart. No information of any importance was got from them. Our Indian and they understand each other, but our interpreter so imperfectly understood the Indians who accompanied us that the information required on the most important points is very unsatisfactorily obtained.

TUESDAY, 14TH

Overcast, very weighty rain in the after part of the day.

It being found that the boats could proceed no farther up the river, carrying was commenced in the morning and the boats and baggage carried 3,970 yards which is a little more than half of the portage. This portage which is to another little river which falls into Coweechin River, lies through a plain 42 which with the weighty rain is become so soft and miry. that in several places it resembles a swamp. The road is very miry and every hollow is a pool of water. The soil here appears to be very rich, is a black mould, the remains of a luxurious crop of fern and grass lies on the ground. The country about here seems low, the trees are of different kinds, pine, birch, poplar, alder, etc., some of the pine of a very large size. Some of the men who were hunting visited the upper part of the little river and report that they saw the appearance of plenty of beaver. Elk have

John Work's Journal

---

been very numerous here some time ago but the hunters suppose that since this rainy season they have gone to the high ground.

WEDNESDAY, 15TH

Raining all day with the exception of some short intervals of fair weather.

The people resumed their labour at an early hour and by the evening had the boats and baggage at the end of the portage, a distance of 3,930 yards which makes the whole length of the portage 7,910 yards N. N. E. The appearance of the country the same as described yesterday.

In the evening as we got to the end of the portage a herd of elk was seen on the edge of the plain. Several of the people set after them but only one was killed which was by Mr. McKay. There were too many hunters and though the elk were not wild they were not approached with sufficient caution, they were followed into the woods by some of the people who have not yet returned.

These Indians came to us in the afternoon. They are of the Cahoutetts Nation. They differ little in appearance from the Indians who accompany us, their blankets are of their own manufacture and made of hair or coarse wool on which they wear a kind of short cloak made of the bark of the cedar tree, it has a hole in the middle through which the head passes, it extends to below the shoulders and breast and has an opening left on each side to leave the arms unconfined. The only arms observed with these were bows and arrows. Their language differs from that of our Indians but they understand each other. The only information obtained from them was that their tribe was in detached parties in their winter quarters in the little river, that the large river was not far off.

THURSDAY, 16TH

Rain in the night and except some short intervals, raining all day. Calm.

We were detained waiting for A. Aubutu, Thos. Taranton and Louis who went after the elk yesterday and did not return till late this morning, till 11 o'clock when we embarked and proceeded down the little river 43 from the portage through a very winding course, generally North, for a distance of about 8 miles to its discharge into the Coweechin 44 River, up which we proceeded about 2 miles E. and encamped at 2 o'clock.

The navigation of the little river is pretty good in some places it is rather shallow, the tide runs a little way up it. The country through which it runs is flat and clayey. In some parts near the portage the woods approach to the water's edge, but farther down the woods are at some distance and the river runs through a fine meadow which is covered with the withered remains of a fine crop of hay. The marks of a great many beaver and numerous tracks of elk some quite fresh are to be seen all the way along the river.

We entered the Coweechin River at 1 o'clock. At this place 45 it is a fine looking river at least as wide as the Columbia at Oak Point, 1,000 yards wide. Where we come into it is opposite to an island 46 we are uncertain which what distance it may be to its entrance. The banks of the N. shore

John Work's Journal

---

are low and those on the South shore are pretty high, both well wooded to the water's edge. The trees are pine, cedar, alder, birch and some others. Some high hills appear to the Eastward at no great distance, topped with snow.

From the size and appearance of the river there is no doubt in our minds that it is Fraser's.

The men who went after elk yesterday evening killed 2 but brought very little of the meat home and it was thought that too much time would be lost by sending for it.

FRIDAY, 17TH

Overcast, wind Northerly, sharp, cold weather.

Embarked at 8 o'clock and proceeded up the river 4 miles E. N. E. to an island 47, which divides it into two channels, then up the N. channel 1 mile E. N. E. and 1 mile E. to the head of the island, 4 miles E. S. E. here the river is again divided into 2 channels by an island 48 1 mile E. through a channel between two small islands 48 situated in the N. channel, 1 1/2 miles E. N. E. and 1 1/2 E. to the head of the island, then 3 miles N. N. E. and 1 mile E. to the entrance of a small river, 49 North where we encamped. The river still keeps its breadth, the shores in the forepart of the day had a moderate ascent and thickly wooded to the water's edge, farther on the banks were lower and wooded in some places principally with poplar, behind these the land rises in hills which appear to be chiefly clothed with pine and cedar. The banks were in many places composed with clay that has been deposited by the water. A high mountain 50 covered with snow appeared to the S. W. in the morning and shortly after a ridge also topped with snow was extending from N. W. to N. E. Two peaks 51 in this ridge are very high, as we are approaching these mountains the country is getting hilly, some of the hills are high and close to the shore.

In the forepart of the day we saw an Indian lodge in a little bay on the N. side of the river. Our Indians were sent ahead to apprise the inhabitants of our approach and good intentions which prevented them from being alarmed. This was a miserable habitation formed of plank, both sides and roof, the usual appendages of Indian houses filth and nastiness were here in abundance, and the smell of the remains of decayed salmon was very offensive. In number 22, 7 men, 7 women and 8 children. Nevertheless, the inhabitants appeared healthy and seemed to have plenty of dried salmon provided. Our Indians were understood by these people, yet we got very little information from them. We learned that they got some fine European articles in traffic from tribes above whom obtained them from White people. The Indians got a few presents when we left them at 2 and 2 of them accompanied us in a canoe.

A village is a short way up the river where we are encamped. An Indian went to it where (one) of them remained all night, the other returned when it was dark with 3 of the Indians who stayed a short time and went off with the Intention, as we understood, of paying a formal visit tomorrow.

At the house below there was an instrument resembling in shape a salmon spear, but what purpose it is used for, its size leaves me at a loss to determine, it was 2 poles about 5 inches in cir-

John Work's Journal

---

cumference fitted in such a manner that they were intended to be spliced together, one of the was 42 feet long and the other 29, in all about 71 feet, it was of cedar neatly dressed, a fork made of 2 pieces of wood different from the pole and not barked nor made very sharp was fixed to the end of the pole, no cordage any other tackling was about it.

SATURDAY, 18th

Rained without intermission all night and all day, very little wind from the N. E.

About 9 o'clock 47 men 3 women and 1 boy of the Cahantitt Indians (which is the name of the tribe that inhabit the village above where we were encamped) visited us in a friendly manner. Some presents were given them consisting of a fish hook to each of the common men and a looking glass and a little vermilion to each of 3 or 4 chiefs. A few beaver skins were also purchased from one of these chiefs for a couple of axes and a few beads. These Indians, though of the same tribe, are much more intelligent than those we saw yesterday.

A new blanket, two guns, a pair of trousers and a few other European articles, some of them very old and worn out, were in the possession of these people. These articles we understood were received in battle from tribes farther up the river and that they had passed from white people through several tribes before that. A good deal of information was received from these people respecting the river. A little boy presented to the chief to forward to Thompson's River, he mentioned not fewer than 15 tribes, 8 on the south and 7 on the North side of the river, through whose hands it must pass before it reached the Forks. He named the Suswhaps and some other tribes whose names we know.

The chief of this tribe is a fine tall good looking man, but his people are of low stature. The men have generally bierds, all their heads are a little flatted. Their clothes consisted of blankets of their own manufacture, some white and some grey or of black with variegated beads of different colours mostly red and white. They wore mats to keep off the rain and conical hats.

On account of our short stay we could observe nothing respecting their manners or mode of living of these people. They offered some roasted sturgeon for sale which shows that those fish were in the river, but of their mode of taking them we know nothing. Our Indian guide understood them and was understood also. The language they speak has some little resemblance to the Okanagan.

On the arrival of the Indians at our camp this morning we learned that the Scaadchet chief who went to visit them yesterday had deserted in the night.

Mr. McMillan having determined to retire deeming it unnecessary to proceed farther up the river, we embarked past noon and retired to the camp which we left yesterday.

SUNDAY, 19TH

Cloudy fair weather, wind S. E. blowing fresh in the evening. Poured

---

John Work's Journal

---

down rain all night. Embarked at 7 o'clock and proceeded town the river about 27 miles, viz., W. 4 miles down the N. channel formed by the island opposite where we entered the river on the 16th. Another small island is at the lower end of this one, then W. N. W. 2 miles, S. W. by W. 2 miles, W. by N. 2 miles, along the N. side of an island 52 4 miles W. by S. At the lower end of this course there is a bay with an island 53 its entrance. On the N. side of the river W. S. W. 3 miles, a small island is in the N. side of the river just below the bay. S. by W. 3 miles 54 about the middle of this course there is a bay and an island on the W. side of the river and immediately below the river is divided into two channels by an island 55 proceeded down the E. one. 1 mile S. W. by S. and 4 miles W. S. W. During the day the river maintained its wideness till towards evening when its breadth considerably increased. Some places the banks are elevated at the water's edge but in general they are low and the land rising into hills a short distance from the shore, towards evening the shores on both side of the river became low and swampy. The trees observed on the shores are pine, cedar, plane, alder and some others, the alder principally occupies the low ground. Where we are now encamped 56 is not far from the entrance of the river, the country is so very swampy and liable to be overflowed with the tide that we had to turn back some distance to our present situation which, though the site of an old village, is a quagmire.

Four canoes containing 17 Indians of the Cahotitt tribe met us, among them was the principal chief of the tribe and a second chief named . We put ashore and had some conversation with them by the help of our interpreters, they were informed of the motive of our visit and seemed highly pleased. A chief's clothing was presented to the old man and a corn. coat to the young one, besides a few other trifling articles. Some beaver skins were also traded from them. These people are of low stature their heads are a little flattened and the old men generally have beards. The old chief seems to be marked with the small pox, and is a smart looking little man though pretty old. The young one is much stouter and a good looking man. This village was at some distance up a river which falls into the bay.

We saw another canoe with three Indians in it but they would not approach us.

A pair of old blankets and an old knife were the only European articles observed among these people, they seemed to have no arms, their clothing was blankets of their own manufacture.

Though we saw but very few Indians yet they must be very numerous about this river at particular seasons of the year. We passed the site of several old villages, the one where we are now encamped extends at least  $\frac{3}{4}$  of a mile along the shore, while passing it I counted 54 houses but on coming near they are found to be so situated that not more than the  $\frac{1}{2}$  of them were counted.

MONDAY, 20TH

Overcast mild weather with fog and slight showers of rain forenoon, cleared up afterwards and became a fine sunshining day. Light wind from the E. and N. E.

Embarked at 1/4 before 7 o'clock and continued our course down the river S. by W. 6 miles and W. by S. 5 miles through one of the principal channels which is at least yards wide to

---

John Work's Journal

---

its discharge into the sea. There were two other channels on the south side and a large and one supposed to be on the N. side. The channel through which we came was sounded in several places towards its discharge and found to be from 7 to 3 ½ fathoms about high water. The land about the entrance of the river is very low and swampy with some few scattered pines of a small size and bushes. A ridge of pretty high land appears at some distance on the N. side of the river, that on the N. E. side is a low narrow strip which divides the river from the sea. The sea on each side of the entrance of this River appears to be shallow.

From the entrance of the river the boats proceeded along the outside of the low strip of land S. E. by S. 2 miles, S. E. by E. 5 miles to near a point of high land along which we continued 4 miles S. S. E., 1 S. S. E., 3 E. N. E. and 1 N. E. to its outward extremity, then across the open sea to the E. side of a bay on the northern shore E. by N. 6 miles, E. S. E. 4 and E. 4. The point above mentioned is Vancouver's Pt. Roberts, part of the shore along which we passed is low clothed with grass and bushes and has a pleasing appearance. Towards the outer end the shore is bold and composed of clay with some rocks along the water's edge, at the very lower end is a low point of considerably extent entirely covered with an old Indian village. Where we are now encamped is the Birch Bay of Vancouver.

Vancouver's Island and the islands in the E. channel between it and the main shore appeared quite plain and in many places rises into high hills. Also along the main shore to the Northward, the land could be seen distinctly a strip of low flat ground extends some distance from the shore and is surrounded by a ridge of high mountains covered with snow. extending as far as the eye can reach along the coast both to the S. E. and to the N. W. Some of the peaks are very high, some pretty high hills are also to be seen which are green and have no snow on them.

Saw a canoe with six Indians near the entrance of the river, on being called to by our Indian they approached to within a short distance of the boats but could not be prevailed upon to come nearer. On some further conversation with our Indian they pulled ashore to bring their chief who had landed, but the boats pushed on and did not wait for them. These people are of the Coweechin tribe and had just crossed from Vancouver's Island where they now live. They did not approach near enough for us to distinguish anything of their dress or appearance, they were armed with long spears.

On the low land at the entrance of the River geese particularly white ones, were very numerous and were by no means shy, they allowed themselves to be approached easily. Mr. McKay killed 3 of them.

TUESDAY, 21ST

Clear stormy weather in the night with a slight frost. Cloudy sunshining weather during the day. Light wind from the N. W.

Embarked at 6 o'clock and encamped at 2. Our course was back along the same track through which we passed on the 10th and 11th inst., viz. 12 miles S. E. by E., 5 miles S. E. by E., 9 miles S.

John Work's Journal

---

E. by S., 5 miles S. E., and 3 miles S. E. to the entrance<sup>57</sup> of the narrow channel. The wind was favourable and the sails were up part of the day, but it was so light that they were of little service.

WEDNESDAY, 22ND

Showery weather, wind S. Easterly.

Embarked at 4 o'clock and after getting out of the little channel which was S. E. 6 or 7 miles, proceeded E. S. E. across a bay about 10 miles to the entrance of a narrow shallow channel,<sup>58</sup> through which we proceeded 2 miles S. S. E. into a fine bay<sup>59</sup> up which we continued S. S. E. 12 miles to the head of an island on the right hand, it was down the E. side of this island<sup>60</sup> we passed on the 9th inst. From this island our course was S. by E. The entrance of bay to the Westward and the channel to Scaadchet Bay to the Westward, then S. by E. 10 miles to a point in the main shore<sup>61</sup> on Eastern side of channel opposite a wide channe<sup>162</sup> that falls in from the Westward. In the morning passed a lodge of Scaadchet Indians, here I counted about the house and in the door 17 persons. From these people we learned that the chiefs who deserted from us on the inst. have not yet arrived. Afterwards we passed a village of the Sannihamis tribe of 3 houses on island. A canoe with 4 men came off to us. They were presented with 3 brass rings each and a knife and pin of tobacco sent to one of their chief men.

The road we have pursued the after part of the day is through the same track we passed on the \_\_\_ inst.

Where we are now encamped is at a little brook and though it is scarcely large enough to get a kettle of water drawn from it, yet there are the marks of beaver in it, their cuttings are carried down by the current.

THURSDAY, 23RD

Stormy with weighty showers of rain in the night. Stormy with almost continual heavy rain all day. Wind S. E.

It being too stormy in the morning, we did not embark till 11 o'clock when it became a little moderate. Our course was along the Eastern shore S. by E. 12 to 15 miles to 2 o'clock when we put ashore <sup>63</sup> it being too rough to proceed.

Two canoes of the Soquamis tribe which were proceeding to the Northward along the opposite shore crossed over to us. One of them accompanied us a short way but the others could not get across in time. They soon both pursued their journey under sail. These crafts seem adapted to stand more sea than our boats.

FRIDAY, 24TH

Stormy and weighty rain in the night and cold cloudy fair weather afterpart of the day.

Embarked a little after 4 o'clock in the morning and encamped at 2 o'clock in the afternoon at

John Work's Journal

---

Sinoughtons, our guides' village which is called Chilacoom.<sup>64</sup> It was stormy in the morning but pretty moderate afterwards. Our course all day was about S. by E. 44 miles, we are now resting in the same track we pursued on our way going.

SATURDAY, 25TH

Showery in the night and weighty rain the greater part of the day. Wind S. E. Embarked at 4 o'clock and reached the portage at 10 where the people immediately commenced carrying and had the boats and baggage more than half across the portage at night. On account of the heavy rain the road is much more wet and miry than we passed last, yet we got on more expeditiously as the road is cleared.

One of our boats was left at Sinoughtons village baggage embarked in the other two.

Last night Sinoughton was paid for his services and seemed well satisfied.

SUNDAY, 26TH

Wind South Easterly. Very weighty rain in the night and raining the most of the day. At daylight the business of carrying was resumed and by 11 o'clock we were embarked on the Scaadchet Lake <sup>65</sup> and pursued back the same road which we went on the      to 4 o'clock where we encamped on a plain on the      side of the river opposite the Halloweena village.

Passed two Indian houses on the S. E. side of the Scaadchet Lake of the Halloweena Nation.

MONDAY, 27TH

Sharp frost in the night. Fair weather with fog. Wind Southerly.

Our party divided.<sup>66</sup> Mr. McMillan, I. Michel, the Interpreter and 6 men to proceed across land to the Cowlitch River and thence to the Fort by water. Messrs. McKay, Annamour and the rest of the people to go with the boats the same way we came. A man went ahead yesterday to procure horses from the Indians. It was noon today when he returned with the information that they were to be had. The boats then proceeded on their route down the River and we crossed a fine plain <sup>67</sup> about 6 miles to the Halloweena Village, but the Indians not being able to get the horses collected, we had to encamp close by for the night.

The plain on which this village is situated has a very pleasing appearance, it is of considerable extent bounded on every side by woods, principally pine, with here and there oak trees thinly scattered over the plain. The soil is composed of gravel mixed with a small quantity of rich black mould. The surface is covered with a scanty crop of short grass and fern.

TUESDAY, 28TH

Sharp frost in the night and foggy during the day.

Having procured the horses and got everything ready, started on our journey at 8 o'clock and

---

John Work's Journal

---

encamped at 4 in the evening. The people found such difficulty in dividing up the loaded horses that it was quite dark before some of them reached the camp, the men got so tired with one of the horses that they left him and carried his load themselves.

Our course was nearly S. E. about 25 miles. The road lay through plain and points of woods alternately. In the morning the road through the plains was very good but in the woods it was very bad and ran over two pretty high hills, it is very wet and miry and so slippery in places that the horses can scarcely keep their feet, and though it is a common Indian road they are so lazy that they will not remove the branches and fallen trees out of the way, which is often nearly obstructed by them, and the miserable horses with difficulty climb over the trees. The road was crossed by two pretty large rivers and several small streams some of which are now pretty much being swelled with the heavy rain, all these streams run to the S. W. As we advance the plains are of a small size, they are wetter than the large ones and the soil seems better having a greater proportion of black earth mixed with the gravel, the crop of grass and fern seems to have been more luxurious. In the woods the trees are pine of different kinds, some of a large size, cedar, plane, alder and some others, besides several bushes of willows and a kind of crab tree. The soil in the woods seems to be richer than that in the plains.

Passed an Indian house of the Halloweena Nation.

WEDNESDAY, 29TH

Frost in the night. Cloudy fair weather during the day.

Proceeded on our journey at 7 o'clock and by 11 arrived at the Cowlitch River, it was 12 before all the people arrived. The course was still about S. E. 10 or 12 miles and lay through alternate plains and woods the same as yesterday. 68 Some small streams crossed the road, the Nisqually and Cowlitch mountains appeared in the morning, the former to the N. E. and the latter to the E.

A canoe was hired from the Indians to carry us to the Fort, but when we had embarked it was found too small and another had to be hired and at 1/2 past 12 we pushed off and fell down the river and reached the Columbia near 7 o'clock. The Cowlitch is in general from 40 to 50 yds. wide, the current very strong above but slack as it discharges into the Columbia. The banks are in some places bold and high at other places not so elevated, the high bank is in general clothed with pine of different kinds and cedar, and the lower ones with alder, ash and other desiduous in this trees. The general course of the River, which is very winding, appears to be about S. W. A large branch falls in from the Southward, besides several small streams from both sides. The upper part of the river is very populous, I counted 30 houses to the Forks, all built of planks.

THURSDAY, 30TH

Frost in the night. Blowing fresh the forepart of the day with of the weighty rain in the afternoons.

Put ashore to sup at 8 o'clock last night and after supping embarked and continued under way

---

John Work's Journal

---

all night and arrived at the Fort at 10 o'clock in the morning. The wind being pretty fresh in the night caused a swell George that was just enough for our canoes to pass through with safety, the swell increasing about Teague Point we took in a good deal of water before we got ashore at the portage, but the wind being then off the land we got safely to the Fort. The little canoe had to put ashore in the night and did not arrive till the afternoon.

Notes

- 1 Present town of Ilwaco.
- 2 Whealdon's Pond, vulgarly called Black Lake.
- 3 Tarlett Slough and Cranberry Marshes.
- 4 Mouth of Slough at Shoalwater Bay.
- 5 Near present town of Oysterville.
- 6 Bay Center and Goose Point.
- 7 Toke Point
- 8 North Cove on Willapa Harbor.
- 9 Near to Westport.
- 10 Gray's Harbor.
- 11 The Freehunter already mentioned
- 12 Near Aberdeen.
- 13 This name still sticks; evidently there before 1824
- 14 Black Lake of today. See note on Dec. 26th ultra.
- 15 Eld Inlet. If Budd Inlet why no mention of the Chutes or Falls that have made Olympia famous?
- 16 Puyallup River.
- 17 Steilacoom; camped here again on return.
- 18 Snohomish.

- 67 Probably Grand Mound Prairie.
- 68 The trail this and the preceding day follows closely the present line of Northern Pacific Railroad through Centralia, Chehalis and to point on Cowlitz River near Toledo, where later the Cowlitz Farm of H. B. Co. was located.

John Work's Journal, March 21 - May 14, 1825

March 1824, Monday 21. At noon left Fort Vancouver in the otter with four Owyhees for Fort George. The wind was favorable & we ran down the river under sail, till midnight when we brought up a little above the Cowlitz so that we might not pass the new Scow in the night. Showery weather.

John Work's Journal

---

Tuesday 22. Clear fine warm weather contd our course at daylight, and shortly after met the new scow opposite the Cowlitz, she was making very slow progress, & we could render her no assistance. Gave Casmus 8 books, 1 yd Tobacco, & 10 Ball & Powder to buy provisions. Passed the old scow below Oak Point village, manned by four Owyhees, three nights from the fort. The wind blew so strong ahead that we were stopped near four hours in the evening. during this time the men were employed mending the sail. Continued our course after sunset, when it became calm, and did not bring up till near 1 O'clock in the morning, when the tide was setting against us.

Weddy 23. At daylight contd our course under sail but the men mistook the channel and ran the boat aground at 7 O'clock and all efforts could not get her Off, & we had to wait till two o'clock for the tide, when we got afloat & reached the fort at 7 in the evening. It was fine weather. An Indian of the fort Tete Plume, was badly wounded by one Casserned Slaves, who is supported by his master, The poor man is in the fort and is not expected to live.

Thursday 24. Fine weather in the morning, but heavy rain in the afternoon. Busy all the forenoon loading the otter and sent her off in the evening, with an additional man B. Poirier who is in charge of her. I am to go up in 2 canoe with Indians, but have to remain till tomorrow morning, as the stores are to be examined and an estimate formed of the number of trips that will be yet required to take up the remainder of the property. Some writings are also to be finished. The wounded Indian died in the afternoon.

Friday 25. Heavy rain & blowing strong from the Eastward the greater part of the day. Embarked in a canoe manned by four of the freemen's Indian Slaves, the wind being ahead & such heavy rain we made but slow progress & only got to opposite McKenzies encampment. We were completely soaked with wet. Having only two mats to make a shelter for myself in the night, my lodging is not very comfortable. [Passed the otter at 2 o'clock. She was aground waiting for the tide a little below campment Verd.]

Satdy 26. Fine weather. embarked at daylight, and encamped near the lower end of deers Island in the evening. All the threatening and encouragement I can make use of I cannot get the slaves to go on as quick as I wish. Shot 4 bitterns.

Sunday 27. Fine pleasant weather - contd our journey at an early hour, and arrived at the new scow at the lower branch of the Wallamet and the old one a good piece farther up.

Monday 28. Showery weather - remained at the fort.

Tuesday 29. Do Do

Weddy 30. Heavy rain the forepart of the day.

Thursday 31. Rained hard all day very weighty in the afternoon. Late last night the Otter arrived & was unloaded this morning. At noon I embarked in her for fort George. The wind was favourable and we continued under sail till 11 O'clock when it became calm and the tide being against us

we brought up near the Cowlitz.

Apl. 1 Mild fair weather except some light Showers in the morning. Got under way at 2 O'clock in the morning and arrived at Fort George at 12 at night. It was calm and we made but little way when pulling against the flood tide. We were four hours getting from Tongue Point to the fort. Met the old Scow going off at the Tongue point, on her way up.

Satdy 2. Showery in the morning & very heavy rain afterwards. The men employed packing the furs, Some things in the other stores were also examined & prepared for packing. The freemen were off to the new fort at an early hour before I was aware, but wishing to inform Mr McLaughlin how affairs stood here, Mr McKenzie sent a canoe after them with letters, but it returned in the evening not being able to come up with them.

Sunday 3. Showery weather. This being Easter Sunday & it not being customary for the Canadians to work they were not employed. But Mr McKenzie & I were busy packing all day. A Boat with four men arrived from the new fort, another boat is behind.

Monday 4. Showery forenoon very heavy rain afterwards. All hands were busy packing &c. up all day. The other boat arrived this morning - with a letter from Mr McLaughlin requesting that 7 boats would be forewith be got ready besides the otter, four to be manned with two men each, white men and owyhees, and the other three with Indn Slaves, part of the men were employed preparing oars &c, but the day was so wet that nothing could be done at gumming the boats. Some of them are so old and crazy that it is feared they will not be got in order fit to go up with any cargo without damaging it, especially as they are to be so weakly manned.

Tuesday 5. Cloudy fair weather forepart of the day Showery afterwards, Wind Westerly, blew fresh in the night and part of the day. The most of the men busy employed gumming the boats, the rain in the afternoon interrupted them We were employed with the rest of the people packing up and preparing the cargoes.

Weddy 6. Some heavy showers of hail and rain. Wind S. W. blew strong in the night & morning. Busy employed loading the otter and sending her off in the evening under the charge of Mr Cartier & 4 men - And getting their cargoes for the other boats in readiness to load them and be off tomorrow.

Thursdy 7th. Heavy rain the greater part of the day. Squalls of wind from S. E. Busy all day loading 7 boats, with the intention of getting off with the afternoon tide,- When they were loaded one of them a very old one got a hole broke in her bow by touching against the wharf. On hauling her up to be repaired she was found so rotten that she was considered unfit for the voyage, some heavy casks were therefore taken out and the remainder of the cargo distributed among the other boats, this caused so much delay that we had to defer starting till the night tide everything is therefore in readiness for that purpose - A man sleeps in each boat to take care of her for the night. A ship was seen entering the river at 4 O'clock in the afternoon, the weather was thick and

John Work's Journal

---

hazy, so that it could not be distinguished exactly what kind of a vessel it was, perhaps it was a deception. On account of leaving the old boat, we were enabled by hiring some more slaves, to put three hands in each boat. Not knowing whether the ship may be a friend or enemy, we wish to get off with the furs as expeditiously as possible.

Friday 8. Stormy from the S. E. with constant heavy rain in the night & almost all day. In order to be ready to go off with the night tide I staid up all night, but it being stormy, such a pour of rain and very dark, I considered it unsafe to attempt doubling Tongue point & deferred starting till morning tide and went off at 9 O'clock. It was stormy doubling Tongue point. Just as we were getting round one of the slaves who was hired from George the freeman, dropped down dead in the boat. No cause could be assigned for his sudden death, he was not complaining of ill health before hand. Such sudden deaths are very common among the Indians. We encamped about 4 miles above Tongue point at 3 O'clock and buried him.

Saturday 9. Squalls of wind from the S. E. with almost constant rain sometimes very heavy. I Embarked at 2 O'clock in the morning with the flood tide and encamped late in the evening a little below Oak Point village, the unfavorable weather retarded us a good deal. Bought 8 small sturgeon for the people.

Sunday 10. Stormy from the S. E. with incessant heavy rain in the night & with some short intervals, heavy rain all day. In order to take care of the boats which are kept at anchor in the night, I sleep in one of them myself and make a man sleep in each of the others We were completely drenched in the night, the mats which cover the property in the boats are quite wet, and with them it is impossible to keep the property dry with them. Embarked at 4 O'clock with the flood tide and encamped late in the evening a little above the Cowlitch, we were detained more than two hours waiting for the boats with Owyhees which fell behind. Came up with Cartier & the Otter.

Monday 11. Stormy with excessive heavy rain in the night & morning. The weather was so rough that we were detained two hours in the morning. very heavy showers during the day. encamped in the evening a little below Caismoir - Indians passed us in the evening, with letters intimating the ship had arrived.

Tuesday 12. Stormy in the night & heavy rain, very weighty showers of rain & hail during the day. Embarked at daylight, and reached to a little below the fort in the evening. We would have got to the fort had we not been obliged to wait for the Owyhees.

Wedny 13. Rained very little in the night, but very heavy rain in the morning, & occasionally during the day. Came up to the fort early in the morning and had the boats immediately unloaded, Carting the property up to the fort occupied the most of the day. The whole of the things were found very wet, particularly the furs. They were opened & set about to be dried directly.

Thursday 14. Showery weather. The Otter arrived in the evening.

---

John Work's Journal

---

Friday 15. Fair fine mild weather, busy getting the furs &c dry. In the night men arrived from the fort George with letters relating to the arrival of the Ship, in consequence of which Mr McLaughlin found it necessary to go below in a boat manned principally by slaves. The Otter went off also. The Scow arrived in the evening.

Satdy 16. Clear fine weather. Busy drying the wet property. The Scow was unloaded and sent off in the afternoon.

Sunday 17. Cloudy mild weather. Showers.

May Wedy 11. Cloudy fair Weather Wind Westerly. Left Fort Vancouver with 5 boats 3 men each for Fort George at 10 Oclock. It blew fresh part of the day & the wind being ahead we made but little way, in the evening we put ashore to sup opposite the Cowlitch. bought 22 small salmon from the Indn Tetiltih . Met the Old Scow a little below the Fort. Mr Douglas & Dr Scouller accompanies me.

Thursdy 12. Fair pleasant weather Wind Westerly blowing fresh part of the day. Embarked after supper last night & drove down the river, passed Oak Pt village early in the morning, and arrived at Ft Geo in the evening. We were greatly kept back by a head wind.

Friday 13. Fair pleasant weather. Wind Westerly. Loaded the Otter (which has been here two days) & sent her off under the charge of J. Desland & 3 Iroquois. The men were employed part of the afternoon getting 2 spars for yards to the vessel. The boats were gummed & ready to be loaded tomorrow morning.

Satdy 14. Heavy rain the greater part of the day, Wind S. E. & S. Had the men at work at daylight loading the boats but it came on to rain so hard that we had to stop and defer going off till tomorrow. The powder would have been injured by taking it out in the rain. However it faired up a little in the evening when we got the boats all loaded except the pigs which will be embarked in the morning.

From Washington Historical Quarterly, Vol. 5 No. 2 (1914), pp. 83-115

Journal of John Work, June 21 - Sept. 6, 1825

Introduction and Annotations by T. C. Elliott.

Readers of the Washington Historical Quarterly have already become acquainted with Mr. John Work, an officer of the Hudson's Bay Company, through his previous journal-with introductory note- published in Volume III, pp. 198-228, recording the details of the journey of an expedition from Fort George on the Columbia river to the Fraser river and back in November-December, 1824, (in which he remarked among other things about the "weighty rain" common to the Coast and Puget Sound localities). Mr. Work's particular duties during January-May, 1825, we do not

John Work's Journal

---

know; this was the period during which Governor Simpson and Chief Factor John McLoughlin selected the site for Fort Vancouver and the headquarters were removed from Fort George (Astoria) to the new location, which was on the high ground east of the present city of Vancouver, Washington, where the buildings of the Washington (State) Asylum for the Blind and Deaf now stand. Governor Simpson returned up the Columbia river in March, 1825, with the Express bound for York Factory on Hudson's Bay, but events indicate that he already had learned to place much confidence in the young clerk John Work. In June, Mr. Work finds himself assigned to duty in the interior and accompanies the "brigade" of officers and voyagers under Mr. John McLeod returning up the river with goods for the trade at the various interior forts. Mr. McLeod was then stationed at Thompson River (Kamloops) but had been given leave to return across the mountains to Hudson's Bay the following spring. Readers of the "three synoptical writers of Astoria," as Dr. Elliott Coues designates Gabriel Franchere, Alexander Ross and Ross Cox, have had occasion perhaps to tire of the narratives of successive journeys up and down the Columbia river with the constant encounters with the Indians at the Cascades and Dalles portages. In this journal we have another account of the same journey and discover that with the education of the Indians of the Columbia to the fixed and just policy of the Northwest and Hudson's Bay Companies in their trade relations, the hatred and distrust and armed resistance of these Indians has already ceased to a great extent and that only the natural disposition to pilfer has to be taken much into account.

Between June 21st and November 1st, 1825, the period covered by part of this journal, Mr. Work journeys many miles and introduces us to the regular lines of travel of the fur traders between their forts in Washington, Northern Idaho and Montana and to some of the routine life of the forts. He visits the Nez Perces at their trading ground where the city of Lewiston, Idaho, now stands, the Flatheads at the spot where the large power plant is now being erected below Thompson Falls, Montana, and the then active Fort Okanogan, Washington, at the mouth of that river where now there is only barren waste; but his headquarters were at Spokane House, then as now the trade center for all the "Inland Empire." He also tells of the very beginning of building and planting at Kettle Falls, where the most important of the interior trading posts, Fort Colville, was just being started. Only the first part of the entire journal is given in this issue and the remainder is to be presented in a later number of the Quarterly, and then to be followed by a second journal of the same writer. For brief mention of Mr. Work's career the reader is referred to the earlier number of this Quarterly-already cited, and page 464 of Volume II of H. H. Bancroft's History of the Northwest Coast. It is sufficient to say here that Mr. Work was of Irish descent, the name being properly spelled Wark, and that he remained in the service of the Hudson's Bay Company continuously up to the time of his death at Victoria, B. C. in 1861. This journal comes to us through his descendants and is now deposited as a part of the archives of British Columbia, and Mr. Scholefield, the Provincial Archivist, has kindly compared this copy for publication. The journal has never before been published and does not appear to have been examined or used by Hubert Howe Bancroft, who had access to others of the Work journals in the preparation of his series of histories.

The parenthetical marks are used to designate words that are doubtful by reason of the original manuscripts being blurred or faded.

T. C. ELLIOTT.

JOURNAL.

June 21, 1825.

Drizzling rain with some weighty showers. Very little wind. At 10 o'clock the Interior brigade, consisting of five boats carrying pieces and manned by 32 men, left Fort Vancouver under the charge of Mr. McLeod 1, A sixth boat and 12 men under the charge of Mr. McKay 2 accompanied the Brigade as a convoy to above the Chutes 3. The water is very high and the current strong. Encamped at 4 o'clock opposite Quick Sand River 4. We stopped at this early hour to get some of the boats which were badly gummed. Some of the pieces were put in Mr. McKay's boat to lighten the others. Being ordered to proceed to Spokane in charge of the outfit for that place, I accompany the brigade.

Wed. 22 Drizzling rain forenoon. Wind W. Embarked at 3 o'clock and reached the Cascades at 1, had to carry at the New Portage 5, everything was got half way across the Portage by 5 o'clock when the men were employed gumming the boats. There were a good many Indians, but they were very quiet, 60 to 70 salmon were purchased from them, principally for Tobacco, at an inch per salmon.

Thursday 23 Dry weather, blowing fresh from the N. W. Resumed carrying at 3 o'clock and by 6 everything was embarked at the upper end of the portage where we proceeded up the river under sail with a fine strong wind till 12 o'clock when we put ashore a little below Cape Horn 6. Mr. McLeod considering it too rough to proceed.

Friday 24 Dry weather a fine breeze from the N. W. Continued our journey at a little past 3 o'clock with a nice sail wind and reached the lower end of the Dalles about two and got boats & foods about half way across the portage. We were detained more than two hours at breakfast below the portage, as Mr. McKay left his boat with two men, and the pieces had to be put in the other boats. On approaching the Dalls the current was very strong and the boats being deep laden it was difficult getting them up. My boat was caught in a whirlpool and very near sunk, she was wheeled around three times before the men got her out. There are a good many Indians on the portage we reckon from 400 to 500, however they were very peaceable. Gave them a little Tobacco to smoke and bought as much salmon as we required at equally as low a price as at the Cascades

Sat. 25 Clear very warm weather a little wind up the river in the morning but calm afterwards. Recommenced carrying at « past 2 o'clock, had everything across the portage 7 & embarked at 6, and were across the Chutes by 11. The portage at the Chutes was short on account of the high water. Encamped at 6 in the evening a little below Day's River 8, to gum the boats. We lost nearly 2 hours at breakfast below the Chutes. We reckoned 150 to 200 Indians at the Chutes, they were very quiet. Gave them to smoke and also about an inch of Tobacco each when we were coming

John Work's Journal

---

off. Mr. McKay & Mr. Douglas 9 , with the convoy men left us at the upper end of the Chutes to return to Fort Vancouver.

Sunday 26 Clear weather little breeze of wind from the N. W. in the morning and evening, but calm and very warm in the middle of the day. Continued our journey a little past 3 o'clock and encamped at 7 in the evening. Were detained 2 hours gumming the boats- had the sails up while the wind lasted in the morning and evening. A good many Indians along the river.

Monday 27 Clear. a fine breeze up the River in the morning but calm and insufferably warm afterwards. Embarked a little before 3 o'clock, passed the lower end of the Big Island 10 at 1/2 past 4 and encamped at 6 to gum one of the boats, we were also detained 1 1/2 hours in the day gumming.

Tuesday 28 Clear very warm weather, a little breeze of wind down the river which prevented the heat from being so oppressive as yesterday. Continued our route before 3 o'clock and encamped late a little above the Grand Rapid 11 In ascending a piece of strong current doubling a point in the evening, two of the boats got aground and sustained some injury, one of them put ashore & gummed, the other went on to the encampment, & had not time to repair. Traded some beaver from the Indians along the river.

Wed. 29 Clear weather and not withstanding there was a nice breeze down the river the heat was oppressive.

We were detained gumming the boat till near 5 o'clock when we embarked and proceeded to Fort Nez Percés 12 where we remained at 12 o'clock and had boats immediately unloaded, and the cargoes examined. These were landed here from the five boats independent of the gentlemen and mens private baggage 262 pieces, viz. (Laments) boat Mr. McLeod passenger 47 pieces, -Ignace's boat J. Work passenger 52 pieces. -P. La (Course's ?) boat, Mr. Dease passenger 53 pieces. -Grosse (Chalon's ?) boat 55 pieces and Thomas Tagouche's boat 55 pieces.

Thursday 30th Not withstanding it blew strong from the N. W. the heat was oppressive, the sand, and wood about the fort were absolutely burning. In the evening there was a great deal of thunder and lightening with heavy squalls of wind and a few drops of rain, the wind sometimes quite hot. Mr. McLeod occupied the greater part of this day separating the pieces belonging to the different posts.

July 1825

Friday 1 Blowing strong from the N. W. A party having to make a trip up the South branch 13 to trade horses, (150 if possible,) the forenoon was occupied in making up an assortment of goods for that purpose and a 1/2 past 1 o'clock Mr. Dease accompanied by Mr. Dears 14 , myself and 28 men, embarked in two boats and proceeded to a little up the South branch where we encamped for the night. -Several Indians were about the entrance of the river, purchased a few salmon from

John Work's Journal

---

them, mostly small ones at about 2 inches of tobacco each. Our boats are very light laden, and the men well armed. Mr. McLeod & 10 men remain at the Fort.

Sat. 2 Clear, and notwithstanding a pleasant breeze from the N. W., very warm. Embarked at 3 o'clock and pursued our journey up the river till past 6 when we encamped for the night. Made a good days march, as the men worked constant and very hard.-The current was uniformly very strong. and the water high, though it has fallen at least 1 1/2 or 2 feet from its- greatest height this season.-The shores are generally high, some places steep rocks, at others undulating hills, the vegetation on which seems to be burnt up with the heat and has a barren appearance. Here and there along the river, bushes and grass appear green, having not been deprived of moisture. Passed several Indian lodges and traded 42 fresh and 9 dry salmon for 1 1/2 yards of Tobacco. The salmon are all of a small size.

Sun. 3 Clear excessive warm weather though there was a little breeze of wind from the N. W. the heat was oppressive. Continued our journey at 3 o'clock and encamped at the Flag River 15 at 2. There are a few lodges of Indians here who have some horses two of which were purchased from them at 15 skins each. these are the first horses we have seen in this river. The general appearance of the river the same as yesterday, the shores high and clearer. The general course of the river from its entrance to this place may be about N. E. a little above its entrance it takes a considerable turn to the Eastward and thus bends back to the Westward a little below the Flag River.-From this place to Spokane 16 is about 1 1/2 days march on horseback. Nez Perces is about the same distance

Mon. 4 Clear very warm weather, the heat was suffocating. Expecting that the Indians would bring some more horses to trade we delayed embarking till 8 o'clock when we proceeded up the river a short distance where we put ashore at an Indian lodge and bought a horse, which detained us a considerable time.-Two men rode the horses along shore-made but a short days march. The heat and plenty of musquitos which were very troublesome, allowed us to have but little sleep last night. Encamped past 6 o'clock. The current still very strong, the general course of the river from a little above Flag River a little more to the Eastward. Not many Indians on the river and but few horses to be seen.

Tues. 5 Clear a good breeze of wind up the river which made the heat more supportable than these days past. The current very strong, course of the river nearly E. the shores high with some times a low point, all parched up with the excessive heat, here there some bushes that are green are to be seen along the shores and in the little valleys or creeks. Embarked at 3 o'clock and encamped a little below the La Monte. Made a very short days march as we delayed a good deal along the river at Indian lodges, bought 3 young horses at 18 skins each.

The Indians inform us that a large party went off to Spokane yesterday, and that the Flat Heads and (Pendius ?) 17 have been with the Indians above and bought a number of horses from them.

Wed. 6 Stormy in the night and blowing fresh all day, Wind N. W. In order to get some salmon

John Work's Journal

---

from the Indians. delayed embarking till 8 o'clock when we proceeded up the river, to La Monte 18 where we encamped at 10- This is a place of rendezvous for the Indians but only one lodge is here at present, the others are all off in the plains digging camas. Some Indians were sent off with Tobacco for the Natives to smoke & to apprise them that we were here & would remain a few days to purchase horses from them, and that we would then proceed to the Forks 19 so that such of the Indians as are in that neighborhood may be there to meet us.

Thur. 7 Cloudy blowing fresh from the N. W.-pleasant cool weather. Several Indians of different tribes arrived at our camp from whom ten horses were traded, 15 to 18 skins each. The most of these horses are young not more than 3 years old and some of them very small. It would have been desirable to get ones of larger size, but the great number required renders it necessary to take such as can be got and not be too choise.

Fri. 8 Weather as yesterday. Trade going on very slowly. A few Indians visited the camp, but only 6 horses were traded one of which was a wild one and was immediately killed for the people. The Natives seem not eager to part with their horses. Generally young small ones are offered for sale, yet some of those purchased today are good stout horses. The articles generally paid for a horse are a blanket, 3 pt, 6 skins, 4 or 5 skins, 1 yd. each of green beads, a few skins of ammunition, a skin of Tobacco, a knife, and sometimes. Buttons and Rings a skin or two.

Sat. 9 Cloudy Warm weather, Wind variable, not blowing so much as these days past. A few more Indians visited us but only 4 horses were traded & two of these are young ones not broke in. We learn from the Indians that the natives above are collecting on the River to meet us. The Indians at our camp occupy the most of their time gambling. The River is falling very fast, the water is lowered four to 5 feet perpendicular since it has been at its height this season.

Sun. 10 Though a fresh breeze from the Eastward the weather was very warm and sultry. In expectation that the Indians would trade some more horses we delayed embarking till one o'clock when we proceeded up the River seeing that nothing further was to be done. Stopped at the Indian lodges as we passed and bought two unbroken in young horses one of which a beautiful animal, lept so when he was haltered & the man not managing him properly that he tumbled on his head & broke his neck. The current continues very strong the course of the river from E. to S. E. The appearance of the country continues much the same, the bank very high & mostly rocky, the smooth summits & sides of the hills clothed with dry grass, burnt up with the heat, here and there along the water edge and in some of the deep valleys or coves tufts of willow and poplars, and a few bushes of other kinds. Though the hills and valleys, except on the faces of the steep rocks are well clothed with vegetation nearly dried up, the country has altogether a barren appearance. The Indians live (in) sort of houses or lodges constructed of drift wood split & set on end, they are generally high and very large and inhabited by a great many Indians, I counted upwards of fifty at one house the dimensions of which were 40 yards long and 10 wide. These houses are generally high and flat roofed, the one side is occupied by the inhabitants who sit and sleep on the ground, and the other side is appropriated for drying fish which are hung up generally in two tiers the one above the other lower ones so near the ground that one has to stoop to get under them.-

John Work's Journal

---

The air has a free circulation through these habitations from the openness of their walls, which makes them cool & comfortable when there is the least air of wind, but in case of rain, from the openness of the roof, very little would be excluded. However, this is an article that seldom troubles them. The Natives along the River now are generally employed curing salmon and collecting camass.

Mon. 11 Cloudy but occasionally very warm Wind Easterly. Waiting till the Indians would bring us some horses to trade deterred us from embarking till 8 clock when seeing that only one horse could be traded, we proceeded up the river and as usual stopped to smoke at the most of the lodges which we passed which made our progress very slow, however only one horse was purchased till we encamped in the evening when four more were traded, making in all six today.

The appearance of the River and country much the same as yesterday. The course from E. to S. E. The hills along shore appear less elevated towards evening. The Indians near whom we are encamped offered a sturgeon for sale, which shows that these fish ascend this high.

Tues. 12 Cloudy blowing fresh from the Westward. The Indians traded two more Horses which detained us till after breakfast when we proceeded up the River till 11 oclock when we encamped a little below the Forks at the lodge of an Ind. 20 called Charly where a good many Indians are expected to assemble. About 70 men collected to smoke in the course of the afternoon. Two horses were traded from them. Which makes 4 today. Charly is considered to have a good deal of influence among the natives. A present was therefore made him and he afterward harangued the Indians from which good effects are expected tomorrow.

Wed. 13 Though cloudy part of the day, the weather was very warm and sultry. A brisk trade of horses commenced in the morning and 15 were purchased during the day, the greater part of which were bought before breakfast. They are much finer horses and the prices rather lower than those procured below. Horses are more numerous and much better here than in the lower part of the river. There were not so many Indians with us today as yesterday, but they had more horses. The Indians who visit us are of four different tribes, Chapoples 21 or Nezperces, Pelooshis 22, Carooris and Wallawallas. They are very peaceable but a good deal of Tobacco is required to keep them smoking They amuse themselves gambling in the evening they had a horse race. In the course of the day a message was received from some Indians further up the river, requesting us to go to their place, and more horses would be procured. It seems a kind of jealousy exists among the natives and the one party does not wish to sell their horses at the camp of the other, or that they wish to have the honour of being visited at their own camp.

Thur. 14 Very little Wind. excessively warm, where we are encamped on the stony sandy beach we are literally next to be roasted. The trade did not go on so briskly as yesterday, only 8 horses were bought, one of which was an unbroken in lame mare to kill, as she was fit for nothing else.

Fri. 15 Sometimes a little breeze of wind from the S. E. yet it was clear and so sultry that the heat was oppressive.

Embarked at half past 5 o'clock proceeded up the river and in 2 hours arrived at the Forks 23 and encamped on the E. side of the North branch where a few Indians are encamped shortly after we arrived about 40 of them with the old chief Cut Nose at their head visited us in form, smoked, and were presented with about 3 inches of tobacco each. A trade of horses was immediately commenced and 8 very good ones were soon bought from them, though these people have plenty of horses yet they say they have none, they mean probably that they can spare. This is not Cut Nose's camp, it is farther up this branch. In the afternoon a party of upwards of 100 men and a good many women on horseback with the son of broken or cut arm, as chief at their head, arrived down the S. branch. the Chief immediately on his arrival presented a horse to Mr. Dease, and received a gun, 6 yds. of Beads & Tobacco and ammunition 27 skins as a present in return. After smoking and getting about 3 inches of Tobacco for each of his people, a trade for horses was opened and 5 very good ones were soon bought which with the one presented and the eight bought in the forenoon make 14 that have been procured to day. These are the best horses we have got yet, they are 18 to 20 skins each. There is a little short of 200 Indians about our camp now, several of those from below accompany us as we advance up, and those encamped here with the band that arrived from the S. branch make about the above number. they are very quiet and peaceable for so far.

The country about the Forks is flatter and the hills not so abrupt as farther down. The South branch 24 falls in from the Southward, and the North one from the S. E. the waters of these latter are quite clear. while those of the other are white and muddy the North branch seems not so large as the other, nor does not discharge such a body of water. It may be about 250 to 300 yards wide. Charlie the chief who accompanied us from our last encampment crossed the river with a horse, and in swimming back either was seized or pretended to be seized with a cramp & called out for assistance. Some of the Indians brought him ashore, where he became very ill and got little better, though at his own request he got 2 or 3 drams, until evening when he thought he would be the better of an airing and got the men to paddle him in a boat up and down the river and sing at the same time, which must considerably contribute, no doubt, to the recovery of his health. This man may have some influence among the Indians at least to do injury, but he is undoubtedly an artful knave.

Sat. 16 Cloudy, a storm of thunder, with squalls of wind from the Westward and a little rain in the afternoon, last night there was a violent storm of thunder & a great deal of lightening, with squalls of wind and some rain. A brisk trade commenced in the morning and 19 horses were bought during the day, they are generally good ones and cost mostly 20 skins each. At noon (Tawerishea) arrived at the head of a troupe of 64 men and several women with plenty of horses from up the North branch. After smoking and each of his people being presented with a piece of Tobacco he presented a fine horse to Mr. Dease and received a present of different articles to the amount of 32 skins in return. -The other chief now here seems not to be fond of this man on account of his being a doctor or medicine chief. On account of our articles of trade falling short we will not be able to answer these people's expectations in the way of trade.

John Work's Journal

---

Sun. 17 Cloudy, gusts of wind from the Westward. A heavy thunder storm with strong wind and some rain in the afternoon. Commenced trading after breakfast & bought horses during the day, four horses were presented during the day by principal men of (Tawerishewa's) band, but they were dearer than if they had been traded on account of the quantity of articles that had to be presented in return. The most of the horses purchased today are very fine ones and cost mostly 20 skins each. Our articles of trade got short or we would have got more horses. Green Beads, Tobacco and blankets are entirely gone, several blankets were borrowed from the men. The last band of Indians that arrived were considerably disappointed by these articles being nearly gone when they came. There are about our camp near 250 or 300 Indians. they are very quiet and give us very little trouble, they occasionally get a little tobacco to smoke. They pass the greater part of their time gambling, horseracing & foot racing. We have traded 112 horses, 5 of which have been killed. A fine young white one was drowned crossing the river today.

Mon. 18 Cloudy pleasant weather not too warm. Wind Westerly. Our trade being finished and everything ready, we took leave of our friendly Indians and I and six men and an Indian Charlie as a guide, set out with 106 horses across land to Spokane at 1/2 past 8 o'clock. Two of the horses which were traded had got lame and were not able to start. We were detained two hours waiting for Charlie who delayed after us to make some arrangements with his family. On account of this delay and not being able to drive quick as one of the finest horses in the band (Mr. Dease's) being lame which I did not perceive till after we were off, we made but a short day's march. We passed through a fine country the course from N. to N. W. On leaving the river ranges of high hills had to be ascended 25 , the country then was not level but a continual succession of little rising hills or hummocks and valleys destitute of trees or bushes except along the margins of little brooks, but pretty well clothed with grass and other plants though rather dried and parched, in some of the valleys along little rivers there are a few trees and bushes besides different plants of an uncommonly luxuriant growth. A ridge 26 of high land runs along at a short distance to the Eastward, thinly wooded, close to a point of this wooded land is a beautiful situation at a Title spring of water. we encamped in the evening at about five o'clock having to wait for one of the men who remained behind with the lame horse.-Though the country was dry yet water as to be found at short intervals the most of the day. Five Indians with 8 horses also on the way to Spokane joined us in the day & kept company with us. In the evening we passed a party of women with a number of horses going off to the plains to collect horses. My object in accompanying the horses besides seeing them taken care of principally is to Visit Spokane, see how affairs stand there and consult with Mr. Birnie as to the practicability of getting all the property, etc., removed at once to the Kettle Falls so that the whole may be there by the time the boats arrive, by which means the trading parties to the Flat Heads and Kootenais could be sent off immediately and meet the Indians at a proper season or at least as early as possible, while the remainder of the people, when two establishments are not to be kept up, could be advantageously employed at the building of the new establishment. This is the only plan which will enable us to accomplish the objects of removing to the new Fort and attending their trading excursions at this advanced season without material injury to the trade. In order to enable us to put the above plan in execution I got Mr. Dease prevailed upon to supply Spokane with 11 pack horses which are certainly very few considering that there are only eight at Spokane, and there is little prospect of being able to hire any from the Indi-

John Work's Journal

---

ans as removing the Fort is likely to be disagreeable to them. I have also brought two men intended to be left at Spokane to assist. I also wished much that Mr. Dears should accompany me for the same purpose, so that he might proceed to the Kettle Falls & remain in charge of the property with one man while the transportation of the property was going on, but Mr. Dease would not consent to his coming lest Mr. McLeod would not be satisfied, as he would not have any one to assist him in taking up the boats from Walla Walla to Okanogan. He certainly needed no assistance to conduct these boats well manned, when little danger is to be apprehended from the Indians. I represented these things to Mr. Deise but it had no effect. I also pointed out the inadequacy of the number of horses, but as he had orders to procure a certain number for New Caledonia and Thompson's River, and no mention made of any to Spokane, 11 besides 2 saddle horses were all he could give, after completing the numbers for the other places, and depending on his own Fort for 60 for the Snake Country. In case the above plans are found to be practicable I intend to proceed on to Okanogan to receive the Spokane and Rocky Mountain, outfits and accompany the boats to the Kettle Falls. One or two more men were also requested but they could not be granted lest Mr. McLeod would have too few to take up three boats, though there are 23 for that purpose, of which number 2 certainly might have been spared.

Tues 19 Cloudy pleasant weather, Wind Westerly. Proceeded on our journey at an early hour but in consequence of having to delay & drive generally very slow waiting for the lame horse, we made but a short days march and encamped late in the evening at a small River or rather sort of swamp. In the morning we crossed the Flag River. -The lame horse gave up in the afternoon and with reluctance I was obliged to leave him at a spring in a little valley with plenty of grass about it. he seems to be otherwise diseased besides the lameness, his near foreleg is swelled, the outerfilm of the skin and hair is come off his breast in the shape of a horses foot, where probably he has received a blow before leaving him Charlie scarified his foot, he will be sent for if possible. The country through which we passed today has much the same appearance as that passed yesterday and the course nearly the same. Though the horses have not been driven hard yet some of them are getting fatigued. Many of them are getting very lean. Last night as the night before the horses were watched all night by 3 men at a time.

Wed. 20 Weather cloudy, but sultry and oppressively warm by turns. These two nights past were very cold which is a great change from the excessive heat experienced some time back. This is probably owing to our being in the vicinity of the high land. Set out on our journey early in the morning and got out of the plains into the woods about 1/2 past 7 o'clock. At 4 o'clock I left 4 of the men (C. Gregoire,) (A. Laparde,) (I. Levant) and (J. Maria) at the fork 27 of the road that branches off to Okanogan, and proceeded to Spokane with 2 men and 16 horses, 12 for this post and 4 with which I am to go to Okanogan. One of them knocked up by the way & had to be left to be sent for tomorrow. As the horses were fatigued I ordered the men to encamp and allow the horses the evening to rest and to march at a very slow rate for the future.

I left them with 89 horses but one of them was so much jaded that it could not be expected to be able to march. I therefore ordered it to be left and it would be sent for tomorrow. Arrived at Spokane 28 at 7 o'clock and found Mr. Birnie and his people all well. The country through which we

John Work's Journal

---

passed today as we advanced towards the woods and in the woods was in places very stony which was not often the case these past days. Water was also scarcer than hitherto.

Thurs. 21 Clear very warm weather. Employed this day examining the property to be transported to the Kettle Falls and find that the whole amounts to 254 pieces including trading goods, provisions, stores & sundries. Mr. Birnie has been actively & diligently employed during the summer, & has almost the whole tied up and ready to put on horseback.-Had Mr. Dears been permitted to accompany me I could have returned to Okanogan with an Indian, and the transportation of the property might have commenced immediately as Mr. Dears with one man could have remained in charge of the property at Kettle falls. But now as the horses which I brought with me must be returned to Okanogan and it being necessary that I should be at that place to receive the goods and to accompany the boats up, and no one being here to spare to take charge of the goods at the Kettle falls, and leave enough to remain here with Mr. Birnie and attend to the horses on the voyage, the conveying the property must be deferred until Mr. Dease and some men can be sent from Okanogan and the first trip will be at the Kettle Falls by the time the boats arrive. From the dislike the Indians have to the removal of the Fort, of which they have heard some vague reports, which they seem unwilling to believe, there is reason to apprehend that no assistance will be received from them In the horse way which will very much retard our business, as the number of horses which we have, about 34, will be a long time of conveying all these pieces. Mr. Birnie for so far has been pretty successful in the trade of provisions, appichimens & saddles, and about a dozen of horses the latter at a much cheaper rate than those purchased in the Nezperces River. But the returns in furs are far short of those of last year at this season the Indians from different places have done very little. The garden looks remarkably well, the potatoes are bigger than eggs. Six kegs which were sowed at the Kettle Falls also looked well the last time people were there they have been hoed twice. Paid the Indian Charlie who accompanied us with the horses 20 skins which he was promised more than he received at the Forks, and also made him a present of a Buffalo Robe, he has promised to bring the horse to the Fort. In case any other Indian trapper (should happen) to take him off he is the only one that would be likely to recover him. I intended to have sent a man & an Indian for this horse immediately but Mr. Birnie doubts that it would not be safe as a good many straggling Nezperces Indians are going & coming who might probably pillage them.

On my arrival last night Mr. Birnie handed me a note from Governor Simpson of which the following is a copy.

Columbia Lake 16th Apl. 1825.

Dear Sir

The Dr. will no doubt have informed you of the reasons that induced me to alter your destination for this season and I trust the change will be agreeable to you. I have lined out the site of a new establishments 29 at the Kettle Falls and wish you to commence building and transporting the property from Spokane as early as possible. Mr. Birnie has been directed to plant about 5 kegs of potatoes. You will be so good as (to) take great care of them the produce to be reserved for seed,

John Work's Journal

---

not eat, as next spring I expect that from 30 to 40 Bushels will be planted.-Pray let every possible exertion be used to buy up an abundant stock of Fish and other Provisions country Produce, as no imported provisions can in future be forwarded from the coast. If you can dispense with the service of Mr. Dears in the course of the summer I wish him to be sent with a couple of Indians to examine tire Flat Heads River 30 as far as the Ponderoy Camps at the Camass plain and if Navigable you will be so good as (to) forward the outfit of that Post by water instead of land carriage which will save a great expense in horse hire, etc.-The Cantany River 31 we know to be navigable; it is not, therefore, necessary to examine it, but you will likewise forward the outfit for the Post of that name by water. A few long Portages must not interfere with this plan as the benefits to be derived from the change will more than counterbalance the additional trouble and personal labour it may give our people. I have not the smallest doubt we shall be perfectly independent of the Indians in regard to horses, which will be a great saving of property, and thereby we shall also avoid the chance of quarrels with the natives in regard to horse thieving as we shall have few or none to tempt them. Mr. Dears appears to be a self-sufficient forward young man, he must not, however question or dispute your authority, if he does let me know it, in the meantime show him this paragraph if necessary.-With Mr. Birnie you will have no difficulty, he is unassuming active and interested.-Pray use every exertion to trade horses for Thompson's River and let them be sent in the fall so as to be forwarded from Okanogan to New Caledonia with all the pack saddles and appichimens that can be collected. The cedar canoes brought down this season from Spokane will be the proper craft for the Cootanies & Flat Head Rivers. The Spokans will not be pleased at the removal of the Fort but you must ( ? ) the chiefs with a few presents besides fair words.

Do me the favour to collect 32 all the seeds plants Birds and quadrupids & mice & rats you can and let them be forwarded by the ship of next season to N. (Gosny) Esqur. care of Wm. Smith Esqur. Secty. H. B. Cmy., London. Wishing a pleasant & prosperous season,

I remain

Dear Sir

Your most obd. servant,

(Signed) Geo. Simpson

Fri. 22nd Cloudy, but sultry warm weather. I deferred setting out for Okanogan, as I intended, in order to allow the horses which are fatigued another days' rest, and there still being plenty of time to reach that place before the boats from the Wallawalla something more could also be done here. In the course of the day the business of removing the Fort was broached to the Chiefs and notice given them that they would be requested to lend some assistance in horses. They gave no decisive answer on the subject but seemed to take it better than was expected. It was intimated that the Fort would be left in their charge and that probably instructions might be received in the fall for some people to reside at Spokane with them still. They seem to swallow this notwithstanding its improbability. Very few of them are now about the Fort the most of them being a short distance below it at a fishing barrier where they are taking 7 or 800 salmon per day.

Sat. 23 Cloudy blowing strong from the Westward. At 1/2 past 9 o'clock set out from Spokane for

John Work's Journal

---

Okanogan accompanied by a man and an Indian as a guide with seven horses, that is the 4 that belong to Okanogan, & 3 to return to Spokane with some people. At 12 o'clock we got clear of the woods & into the plains, except a short time that we stopped to allow the horses to feed. We drove on at a round pace all day and encamped at 1\2 past 7 o'clock at a little pool of bad water, some distance from the key encampment. The clouds of dust raised by the wind which was right ahead made riding very disagreeable as we were like to be choaked & blinded. Our guide did not keep the road but cut from place to place through the plains. Our course might be from N. W. to W. Ridges of mountains or highlands run along at no great distance to the Northward, thinly clothed with wood, the country through which we passed though not (even) could not be called hilly but swelling into little knolls, covered with a thin coat of dry vegetables and generally of a barren & scorched appearance, except some little valleys where some few bushes & green vegetables are produced in consequence of there being water in the place or some moisture in the ground.-The road was in some places good, but in others very stony. Nothing to be seen to the S.E. but extensive plains bounded by the horizon.

Sun. 24 Weather as yesterday. Continued our route at 4 o'clock and arrived 33 on the opposite side of the River at Okanogan at 1/2 past 7 after a smart days ride, and our horses much fatigued, some of them nearly knocked up, this was owing to their being allowed to drink too much water. if indulged in water while on the route they ought never to be allowed to take more than a mouthful or two. The appearance of the country course etc were much the same as yesterday except that we passed through a point of woods, in the morning we passed along the banks of the Columbia at the Lampolle 34 River, and before noon crossed the Grand Coolley, some of the mountains to the Northward were topped with snow. The men whom I left to proceed with the horses on the 20th arrived here about noon with the whole band but one which they lost a little more than a days march from this place.-It is a small horse 2 yrs. old, and does not seem well.

Mon. 25 Cloudy blowing fresh from the Northward. Went with the men for the purpose of bringing the horses across the River, but as it was blowing fresh and several of the horses very lean it was deemed advisable to let them remain until another occasion.

Tues. 26 Clear warm weather. Brought the horses 35 across from the other side of the River all safe. A little past noon an Indian arrived from Spokane with a note from Mr. Birnic and a packet which had recently reached that place from Mr. Ogden 36 dated East branch of the Missouri 10th July. In consequence of the former coming out at the Flat Heads, the Snake business would be so much involved with that of Spokane that I deemed it my duty to open the dispatch which I am sorry to find contains intelligence of a disagreeable nature. A series of misfortunes have attended the party from shortly after their departure on the 24th may they fell in with a party of Americans when 23 of the former deserted, two of this party were killed one by the Indians and one by accident and the remainder Of the party are now coming out by the Flat Heads.

This occurrence will entirely change all our plans at Spokane, respecting moving the Fort, as all our time will be occupied in transporting the Snake outfit from Fort Nezperces to Spokane if the Snake country business is carried on.-It is indispensably necessary that these despatches should

John Work's Journal

---

be sent to Fort Vancouver as soon as possible, they must be sent either direct to Fort Nezperces from this place or round by Spokane, by the former rout they will reach Nezperces in four days, by the latter they will require six.-I shall wait for Mr. McLeod's arrival when I expect he will furnish a man to accompany Mr. Dears whom I intend to send for the more safe conveyance of the packet, and who can return accompanied by an Indian direct from Walla Walla to Spokane, with all the despatches remaining at that place for Mr. Ogden, by this route he will reach Spokane as soon as I will with the boats and the papers can be forwarded by the Trading party to the Flat Heads & thence to Mr. Ogden by his men who are to come in with their furs. Mr. McLeods man LaPrade 37 who passed in the spring and who knows the road from this place to Nez perces can return accompanied by an Indian and be back at Okanogan in 8 days, or if deemed safe he could come round by Spokane which would occupy 2 or 3 days longer. If this plan meets Mr. McLeod's approbation it will be the most expeditious. The route by Spokane will answer equally well, but it will occupy at least 2 or three days longer to reach Nezperces.

Wed. 27 Warm sultry weather. Sent off two of the men E. Gregoire and J. Moreau to seek the horse which they lost by the way coming.-La Prade is retained at the Fort to accompany Mr. Dears to Nezperces, in case Mr. McLeod allows him to go.

Thurs. 28 Cloudy sultry weather. Mr McLeod arrived with the boats 3 in number at 9 oclock in 8 days or rather on the 8th day from Nezperces, the day was occupied separating the cargoes, when I made out an a/c of the pieces which are to be taken to Spokane Forks. 38 Some pieces belonging to Nezperces and the Snake expedition, it is thought advisable to take to Spokane, for the Nezperces pieces Mr. Dease is to take an equal number of the same description from the Snake outfit at his place. By taking these pieces to Spokane it will save the carriage across land from Nezperces.

Fri. 29 Sultry warm weather. This day was employed preparing despatches for the sea which are to accompany Mr. Ogdens letters which are to be sent off tomorrow; expected that Mr McLeod would have spared a man to accompany Mr Dears to Wallawalla, but he cannot. I therefore thought he would have had to go round by Spokane, but on consulting Robbie Doo 39 the Indian who came with me, he engages to take him from here to Wallawalla though he never was that road, this will save the horses, and two or three days time. Mr Dears is to return straight to Spokane where I expect he will arrive as soon as men with the boats, & have all Mr. Ogdens (documents) with him. Though we have not more than full cargoes for two boats and 18 men to work them to the Forks, wet as the road is very (bad) and Mr. McLeod's and Mr. Ross's 40 families to accompany us it is the guide's opinion that we will get on safer and more expeditiously by taking three boats, 6 men per boat. Three are therefore to be taken.

Sat.d.y. 30

Clear warm weather.

Left Okanogan with 3 boats at 8 oclock and encamped at 6 in the evening to gum one of the boats which was leaking though she had been gummed at the fort. The road was tolerable though the

John Work's Journal

---

current was very strong till afternoon, they got on without the poles but afterwards the boats had to be towed the greater part of the way with lines, sometimes the united strength of the two crews was required to take up one boat. The water is high though it has fallen greatly.

Mr. Dears & the Indian also set out in the morning for Wallawalla. The Indian who brought Mr. Ogdens letters from Spokane, also returned to that place, with a letter to Mr. Birnie requesting him to send horses to meet me at the Forks to take the property up to Spokane, as we know not whether the Fort can be removed this year untill answers are received from the sea 41 to our letters.

Sunday 31st.

Clear warm weather.

Embarked before 4 oclock this morning and reached the lower end of the dalls 42 at 9 oclock and got over there at 1, and encamped at half past 6 in the evening, having made a better days march than the common. In the evening we got on a little with the poles, but all the rest of the day the tow line had to be used, at the dalls it was very bad, the men had to pass the line over high projecting rocks where had they missed a foot they would have been killed. At the upper end of the dalls the boat had to be lightened and the one half of their cargoes carried a piece, as the boats could not b dragged up with the cargo all in.

August, 1825.

Monday. 1

Clear very warm.

Embarked at 3 oclock and put ashore at 5 to wait for Mr. McLeod who was to come across land with his family to embark for the mountains, and with some papers which he had not finished when he left the Fort, and were delayed till 3 oclock, when we proceeded on our journey and encamped at ½ past 6.

Tuesday 2nd.

Cloudy mild weather.

Continued our route at 3 oclock and put ashore near 7 having made a very good days work.-

Wed.y 3

Cloudy weather.

---

John Work's Journal

---

Embarked at 3 o'clock passed the (Lampoile) River at 9 where we breakfasted and traded a few pieces of dry salmon from the Indians, and encamped past 6 o'clock. A good days march. Tho' our boats are only a little more than 2/3 loaded yet they are a good deal embarrassed, as we have four women and ten children passengers.

Thursday 4

Cloudy and very warm afternoon, a great deal of thunder & lightening and some rain in the night.

Embarked past 3 o'clock and arrived at Spokane Forks at 8. The road this morning was very bad being continual rapids. These two days past, it was not so bad as the tow line had only to be used at some strong points. The boats were immediately discharged, at 10 o'clock 3 men arrived with the horses from Spokane with a letter from Mr. Birnie. It appears that they had some trouble at Spokane with the Indians. The scoundrel Charlie with some others was making a disturbance, about removing the Fort.

Busily employed the after part of the day, distributing the property among the men who are divided into two pairs and are to take a brigade of horses each two, and also laying out the goods for Rocky Mountain that are to go to Kettle falls, and some boxes of tools for the building at Kettle Falls.-The two boats that are to remain are also laid up and some guns, 26 pieces, which was sent from Spokane, buried in the sand, till it be sent below in the fall.-

Sent a little Tobacco to the old chief at the Sampoile bourne and a message that some salmon were wanted for the people, he brought twenty fresh ones in the afternoon, which was abundance for the people, Some dry ones were also traded.

Frid.y 5.

At an early hour, had the horses assembled and divided into brigades, loaded and set off by 8 o'clock and encamped at 1 at the bottom of the big hill which is a good days march. We have altogether 35 horses loaded, including baggage, etc. Left the guide P. L. Etang preparing to start with the boat and cargo destined for the R Mountains, to the Kettle Falls, where he is to remain until the 20th of next month, he has 7 men with him, who are to be employed preparing timber, and if they have time, building a store as a beginning to the new establishment, 43, tools are sent with him for the purpose.-Intend sending Mr. Dears who I expect is arrived nearly at Spokane by this time, to Superintend the people, and L. La Bentie who is a carpenter to assist & direct in the building. As there is a great demand for provisions, the salmon can be loaded at the same time, for which purpose and to feed the people, an assortment of goods is sent up.

Saturday 6

Cloudy, blowing fresh from the Westward.

John Work's Journal

---

Proceeded on our journey at 4 o'clock and halted to let the horses rest & feed at 10 and again resumed our journey at three and encamped for the night before 6 at camp at Cariboo (?) having made a long days march, the horses are tired.

The cords which fastened a load of traps gave way and the cases fell, the horse took fright and ran off with the load hanging to him, and so lamed one of his shoulders and leg that that he is disabled from carrying his load & scarcely fit to walk.-An Oil cloth which one of the men Gros Carlo had in charge was also lost through negligence. This is a serious loss as there is none to replace it and all we had were required. I sent notice among the Indians to seek it & if found to bring it to the Fort & they would be paid for their trouble.

Sunday 7

Mild warm weather.

Resumed our journey at a little past 4 o'clock and by 10 all the brigades had arrived at the Spokane Fort and delivered in the cargoes. The horses were immediately sent across the River to graze and a man to take care of them.-

Mr. Birnie was like to have some trouble with some of the Indians shortly after my departure to Okanagan. Charlie, according to intelligence received by Mr. B., with a few other Nezperces had laid a plan to cut off the fort, but as this is grounded on report and as the Inds are very prone to belie each other, there is no knowing what degree of reliance to place on it. Charlie is doubtly a notorious scoundrel, when he heard of the Fort going to be abandoned he was much displeased and declared among the Indians that had he known of it not a horse would have been got into the Nezperces River if in his power to prevent it.-The trade of furs has been a little better last month than the preceding ones, but the whole returns are far short of this time last year.-In provisions the trade is still increasing, there are now between 4 and 5000 pieces of salmon in the store, besides roots. Saving so much provisions is a fortunate circumstance as unfortunately almost the whole of the dry meat is found to be so completely spoiled and damaged that it is useless.-

Mr. Dears contrary to my expectations is not yet arrived, 9 days are now elapsed since he left Okanagan for Wallawalla, which is a day than I had calculated on his being able to reach this place. Probably something may have occurred to prevent him from arriving on the day expected.

Monday 8

Cloudy warm weather

Employed opening & examining the outfit-and making preparations by packing up the outfit for the Flatheads.

Mr. Dears and the Indians arrived at noon from Wallawalla with despatches from that place, they

---

John Work's Journal

---

were five days coming and had been four days going from Okanagan to Wallawalla. However he got through safe.-

Tuesday 9th

Cloudy warm weather.

At 10 oclock sent off 11 men with 10 horses loaded with an assortment of trading articles for the Flat Heads and a supply of some articles required by Mr. Ogden. I intend following them tomorrow accompanied by the Flat Head chief who has passed the summer here & is now going to his friends, and another Indian who is to bring back the horses. I was prevented from accompanying the people today by having some papers to arrange. After the people had been off some time one of them returned for another horse in stead of one that had thrown his load and ran off from them.

Wed.y. 10

Clear fine weather.

At 9 oclock I set out after the people accompanied by the old Flat Head chief and another Indian. Near 6 oclock we came up with the party encamped at the little Lake 44 in the woods.-Mr McDonald's 45 horse which the old chief rode had been unwell before he left the fort though we did not know it, and was so knocked up that we had to leave him at the little River at this end of the Coer de Alan plains where we arrived before 3 oclock which (is) a little more than 6 hours though we stopped to smoke by the way & seldom went past a trot.

Left Mr Dears preparing to go off to the Kettle Falls with L. La Bontie to to go on with the buildings at that place.

Thursday 11

Showery in the morning, fair afterwards with strong Westerly Wind.

Set out at 4 oclock and arrived at the Flat Head River 46 at noon & immediately commenced gumming the canoes which occupied the whole afternoon and is not yet entirely completed. One of the canoes was taken across the River by the Indians & we had to send across for it. The Indians had also taken nearly all the poles and paddles which will cause us a loss of time and labour to replace them with others. We are very scarce of gum.

An Indian handed the men who crossed for the canoe, a note from Mr Kittson 47, he has been at the Chutes 48 since the 31st of July, with the Indians waiting to trade

Friday 12

---

Cloudy pleasant weather.

Notwithstanding I had the men at work by daylight, they were so long getting paddles, poles & ready that it was 11 o'clock before we started & then lost nearly an hour crossing (a freeman, the Soteaux & his baggage.) So that it was noon when we got off. We got on pretty well and encamped past 6 o'clock in the Lake 49 below the traverse to the island. One of the canoes had only 2 men & as they found poles & paddles ready, they went off in the morning & are yet ahead. Two of the canoes are still very leaky notwithstanding the time that was taken to gum them.

Sent off the Indians in the morning to the Fort with the horses, and the appichimens, at the same time I wrote to Mr. Birnie & Mr Dears & desired the latter if he could to prevail on the Kettle falls Indians to get a quantity of cedar bark to cover the store. I doubt the season is too far advanced to raise the bark.

Saturday 13

Cold in the morning blowing fresh from the Southward. Lightening, & some thunder & rain in the night.

Had the men up at 3 o'clock but it was blowing too fresh to attempt crossing the Lak & nearly 2 hours were lost waiting, still it was rough making the haven, afterwards we got on very well and encamped near 7 o'clock below Isle de Pierre.<sup>50</sup> Came up with the two men in the canoe that was ahead of us, in the afternoon.

Passed a good many Indians at the upper end of the Lake, gave them a little tobacco to smok, bought a little cammass from them, & then proceeded.-

Sunday 14

Cold foggy weather in the morning but very warm afterwards.

Proceeded on our journey before 4 o'clock and encamped before 6 a good piece above the Barrier River.-We had to stop early to gum the canoes which were very leaky.

Passed a few Indians, two accompanied us all day in a canoe.

Monday 15.

Showry in the morning, fine afterwards.

Embarked at 4 o'clock and reached the Indian camp at the Chutes, 51 at 11 o'clock, where I found Mr. Kittson and two men from Mr Ogdens party with 38 packs & 6 (Parto .... ) braves. The Indian

John Work's Journal

---

chiefs (with) Snake furs soon visited us and on being asked whether they wished to trade immediately or wait till tomorrow they preferred the latter. Some tobacco was given them for all hands to smooke.- And in the afternoon Mr. Kittson and I visited their principle lodge where the whole of the Indians soon assembled, when we gave them all the news from the different quarters of the country when they were enjoying the pipe & gave us what news they had in return.-The chiefs sent us some provisions immediately on our arrival.

Tuesday 16

Cold in the morning, very warm afterwards.

At an early hour the Indians began to arrive & a brisk trade was immediately commenced and by noon nearly the whole trade was finished, some lodges & trifling things were brought for sale during the afternoon.-

In the afternoon the men were off in the woods collecting pitch for the canoes, we applied to the Indians but a sufficiency could not be obtained from them and the canoes much in want of it as they will be very deep laden.

Wed.y. 17

Cloudy mild weather.

The men were employed the whole day gumming the canoes & had not the Indians favored us with the lend of their kettles to boil pitch it would have taken another day to finish their business.

All the Indians, except one chief who remained with us, took a most friendly leave of us and departed during the day, there might be altogether about Indians of four different nations, Flat Heads. Kootanies, Ponderus and Piegans, of the latter there are but very few. A considerable number, 30 tents, were coming, but from some cause turned back. It was from the Flat Heads and Kootenais that the trade was principally obtained. these are remarkably fine Indians and easily dealt with. After the trade was over made each of the chiefs a trifling present of a little ammuni- tion & Tobacco, a looking glass & a little beads.-

Joachin Hubert accompanied the Indians with the horses that brought the Snake furs and a small supply of articles for Mr. Ogden to whom I wrote and forwarded a number of letters and des- patches addressed to him. The packet was put in charge of Grosplied one of the F. Head chiefs, as being more safe. It was not till I was perfectly satisfied by Mr Kittson that there was no danger of these documents falling into improper hands, that I would trust them. The chiefs are directed to give them to no one but Mr Ogden and in case of any accident having befallen him to bring them back. It was Mr. Ogden's directions to Mr Kittson that only one man should be sent back to him.

Our trade amounts to 374 large & 99 small beaver and 1 otter large, 76 bales meat, 44 Robes, 122

John Work's Journal

---

appechimans 16 dressed skins & 11 (chevereaux) and 5 lodges and 1 horse, 29 saddles and cords. etc. Beaver and dressed skins are far short of last year, the deficiency in beaver is owing to a great many of the Kootanies having gone off to their own lands before our arrival, the scarcity of leather may be attributed to the same cause and to their having been at the Buffalo this season. Every encouragement was given for leather, it being so much wanted, and very high prices offered and articles given which is not customary to give for it. A trip will yet have to be made to the Kootany country to endeavour to get some leather and what beaver they may have.

Thursday 18

Foggy in the morning, fine weather afterwards.

Having everything ready, commenced loading at daylight and fell down the river and encamped in the evening a little above the Heron rapid. The canoes are very full and deep laden, it was so much as we could do to get the whole into them, they are in fact heaped up in the middle. We came down the first rapid with half cargo, the other rapids were run with four men in each canoe, so that having to take only two canoes down at a time detained us. Two of the canoes were broke by striking on stones & some time was lost in repairing them, the cargoes fortunately sustained very little damage as they got ashore before they had time to be wet.

The old chief La Brash, who remained with us all night, took his leave and went off in the morning.

Friday 19

Cloudy fine weather.

Continued our rout at daylight, and encamped in the evening at the lower side of the wide traverse in the lake.<sup>52</sup> We were detained sometime repairing one of the canoes that was brok, also two hours at the Lake which was too rough to cross with our canoes so deep laden, tho there was no wind.-Some of the bales of meat were a little wet in the canoe that was broke.-

Satd.y. 20

Rain in the morning dry afterwards.

Continued our course at daylight and reached the Portage 53 at noon where three men were immediately sent off to the Fort 54 for horses. the men that remained employed drying the bales that were wet, and preparing places to lay up the canoes.

Sunday 21

Foggy in the morning, warm afterwards.

---

The men laid up the canoes & arranged part of the baggage to be in readiness when the horses arrive.

Monday 22.

Clear fine weather.

Had all the pieces tied and distributed among them who are divided into twos, saddles, appichimans & cords were also divided among the men.

Three Indians visited us In the evening from whom we got four ducks and a little bears meat.

Three bags of balls, & 9 half & 6 small axes which we had over & above our trade was hid in the woods in the horse pond in the night as it will save the carriage to the Fort and back in the Fall, and these are articles that will not injure by being burried under ground a short time.

Tuesday 23

Cloudy mild weather.

Before noon the men arrived from the Fort with all the Company's horses and what Mr Birnie could collect from the Indians which was still seven short of the number required. However an Indian arrived with these in the evening. The Indians at the Fort it seems are mostly off collecting roots which renders it difficult to procure horses.-As the horses require time to feed & as there would not have been time to get out to the plains where they can be kept without danger of losing them we deferred starting till this morning-

Wed.y- 24

Some rain in the night, and wet disagreeable weather morning.

The weather being unfavourable we were detained some time in the morning, but it clearing up afterwards, the horses were loaded and we set out & encamped in the evening at the little River at the edge of the woods. Some of the horses are very weak, and scarcely able to manage their loads.

Thursday 25

Showery in the night, but fair weather during the day, blowing fresh from the Westward.

Proceeded on our journey at 6 oclock and halted at Campment Bindash 55 at 11, where, as some of the horses are weak, I left the people, to go to the Fort tomorrow, & proceeded with Mr. Kittson to the house where we arrived at 4 oclock. I found two of Mr Dease's men who had arrive with

John Work's Journal

---

despatches from the sea a few hours before they also brought 26 horses for the use of the Snake country expedition.

By a letter of instructions to me I am directed to bring half or such part of the Snake outfit as Mr. Kittson may suppose sufficient, from Nezperces. Now as it is uncertain whether Mr. Ogden may equip his men at the Flat Heads or take them to Nezperces, I am at a loss how to act, if Mr. Ogden takes his peoples to Nezperces it would be lost labour to bring goods from Nezperces and just have to take them back again, it is therefore determined to defer sending for any part of the outfit till the beginning of October, by which time we will have heard from Mr. Ogden & perhaps from the sea and will be able to act according to the instructions received. -I am apprehensive we will not be able to remove to the Kettle Falls this fall as we are uncertain what assistance we may have to give the Snake people. by remaining the trade will be little affected, where as by removing we run a great risk of having the property, particularly the provisions injured as a store will not be ready to receive it, the horses would also be so completely knocked up transporting the property, that they would be of little service to Mr. Ogden in case he requires them, & probably not able to bring his outfit from Wallawalla.

F 'day 26th Augt. 1825.

Clear fine weather.

The men arrived with the horses before noon when the furs, provisions &c were all delivered in safe. -In the afternoon the Indians were settled with for their horses which we hired for the trip.

In the evening I was employed writing letters to Fort Vancouver.

Saturday 27

Clear fine weather.

Sent off Mr Dease's men with despatches to Nezperces to be for- forwarded to the sea.

A young Indian was engaged to carry the despatches to Mr Ogden in the Snake country he is to have a horse for his trip, and promises to make the most expeditious he can. Nothing material has occurred since

I have been absent. Trade in furs still slack but a little doing in provisions.

Sunday 28

Weather as yesterday.

Sent off the Indian with the express to Mr. Ogden he expects to reach him in about 8 to 10 days.

John Work's Journal

---

We are living now entirely on dry provisions as nothing fresh is to be got, not a salmon to be caught in the river.

Monday 29th

Clear fine pleasant weather.

Mr Kittson (&) two men with 6 horses set out for the Kootany country 56 with an assortment of Goods on a Trading excursion.

Sent off 9 men with some tools etc to the Kettle falls to assist with the buildings. I intend following them tomorrow or next day, to see how the business is going on. Getting the store completed is the first object.

Had the Flat head Furs opened and counted, they are in good order. the meat which was opened on Saturday is also in fine condition and weighs about 5500 lbs. The blacksmith Philip made 2 large axes, on Saturday he made 5 & did not begin early. we have now axes for all the people.-

A fire kindled about the Ind camp & spread about our garden & then burnt the greater part of the fence which was composed of thorn bushes.-

Tuesday 30

Fine pleasant weather.

Several Indians of the Pendant Oreill tribe arrived and traded, some beaver & roots & berries.

Seventy salmon were taken in our barrier which are the first that have been caught for some time The Indians took 100 in this.

Wed.y. 31

Pleasant weather.

Set out from Spokane accompanied by an Indian with 3 horses & some articles, required for building and trade, to the Kettle falls at 8 o'clock and encamped at an old burn on a little River in the evening at 5 o'clock. The road lies on the hills & through valleys. some plains thickly wooded & some places clear & here, & there a plain in the valleys.

Sept. Thursd'y. 1

Warm weather.

---

John Work's Journal

---

Resumed our journey at 4 o'clock and arrived at the New Establishment at noon.-The road was much the same today as yesterday, it lay a considerable distance through a plain along side of a little river 57, the plain is covered with very long grass and reeds in some places higher than the horse. The course from Spokane is nearly North, perhaps a little to the E of it.

The men who were sent off from Spokane on Monday arrived yesterday and are at work.

The men who were here before have made but very little progress in the work.-7 men of them have been employed since the 13th of Augt. and have only squared 4 logs 70 feet long, 4-25 feet long, 16-12 feet long & 13 joists 25 feet long. Mr Dears says he could not get them to go quicker, as some of them were almost always sick.-Two of them are at present ill with the venereal and fit to do very little, one of them does nothing. A pretty good stock of provisions is traded, dry fish & berries sufficient to serve all the people here now 18 days. Very few fresh fish are now to be got the water is fallen so much that the salmon do not leap into the baskets which the Indians set for them.

Friday 2nd

Very warm in the middle of the day.

The men were at work at an early hour and finished squaring the logs mentioned yesterday, the pitt saw was also put in order and a pit made to commence sawing tomorrow. A carriage with two wheels and horse harness were also furnished that carting the timber to the house may be begun tomorrow.-

The fort is to be situated in a little nick just above the falls on the South side of the River. This little nick or valley, is of a horse shoe form. about 2 miles along the River side and about 2 1/2 or 3 miles in depth surrounded by steep hills on both sides, a ridge of hills runs along the opposite side of the River. The Fort is to be situated on a sandy ridge about 600 yards from the river side. There is not a sufficiency of wood about it to build the store, that is now under way there the nearest wood is 1400 yards off on one side, 1500 or 1200 yards. on the other, where a little river is to be crossed.-

I took a ride along the river, through a point where there is some fine timber. The most expeditious mode of getting the dwelling house and other houses built will be to have the timber squared a few miles from the fort and rafted down the river. There seems to be some fine timber on the opposite shore about the same distance off.

The potatoes look well, but the moles are destroying some of them. the ground they occupy may be about 35 yards square.-

Saturday 3

---

Fine pleasant weather.

The men were differently employed, four preparing the frame for the store. some sawing, some squaring & one carting. there are now fifteen men fit for duty at work I expect as they are now properly set agoing they will get on well, and be able to have the store so far completed that the property can be deposited in it if we can effect a removal from Spokane this fall. This must in a great measure depend on what assistance we can give the Snake people.

Two Indians, the old chief's sons, were spoken to and having agreed to accompany a gentleman up the Pendent Oreille River in case he can be spared to go, to examine the lower part of it.

An Indian was also engaged to accompany me to Spokane & bring a supply of some articles of trade & toll that are wanted.

Sunday 4

Pleasant cool weather.

Set out from Kettle Falls at 1/4 past 6 oclock and arrived at Spokane at 7 in the evening, which was a hard days riding, I was accompanied by two Indians who were driving ten horses to the (Buffer de Chideu) where I left them in the evening as some of the horses were giving up. The Indians changed horses frequently, but I changed only once the one I rode in the afternoon came from where I left the men In 11/2 hours.

Monday 5

Clear fine warm weather.

Three of the freemen belonging to Mr Ogdens Party arrived here two days ago for supplies & say they were permitted to leave the party to proceed across the mountains to the S. side. But as they had no writings with them but notes specifying the state of their a/c which we did not consider sufficient authority to give them any advances and deeming it necessary to send them back to Mr Ogden, so that he might keep his party as strong as possible, they were refused any advances but a little ammuniton to take them back to where they would likely meet Mr. Ogden. These men are (A. Valle), A. (Curvais) and (Wetacass), they have brought some beaver, & have all money coming to them. Mr Ogden's notes are dated on the 15 Augt. when all the freemen but 6 had parted from him,58 his party then was only 15 strong, and he was going through a dangerous country, they had been successful in their hunting since Mr Kittson left them.-All the freemen but these three and another, turned back with the Flat Heads.-These men met the Indians who went off on Sunday week with the despatches to Mr Ogden, he was getting on well.-

The Indians whom I left Yesterday evening arrived with the horses, some of them are much fa-

tigued.

Nothing material has occurred here since I have been absent.

Tuesday 6

Fine weather.

Mr. Kittson arrived from the Kootenais and has made a pretty good trade, 99 beaver, 62 deer & 34 elk skins & 2 horses, he changed some of his horses which were jaded for others. The Kootanians desire a Post 59 to be in their country this season, though some of those we saw at the Flat Heads said it would not be necessary.

Notes

1 John McLeod, Senior, stationed at Thompson river or Kamloops. Consult "Peace River," by Archibald McDonald, for his career.

2 Probably Charles McKay, son of Alex McKay who was blown up with the Tonquin, and step-son of Dr. John McLoughlin.

3 Celilo, or the Falls of the Columbia, above The Dalles.

4 The Sandy River, Multnomah County, Oregon; camp being near Washougal on the opposite shore.

5 Portage around the Cascades on north bank, where railroad portage was built in later years.

6 The Upper Cape Horn, below Klickitat river; see Wilkes' map of Oregon.

7 This was the long portage of about 4 1/2 miles from Big Eddy to the upper end of Ten Mile Rapids. From here they used their boats to the Falls, or Chutes, where again carried boats and goods a short distance. Here was the "Wishram" village of Washington Irving. See "Astoria"

8 John Day River, Oregon side.

9 David Douglas, the English botanist, who was then on the Columbia. Consult Oregon Historical Quarterly, Vol 5, pp. 218 and 245-6-7.

10 Now known as Blalock Island but more often referred to by the fur traders as the Long Island; opposite Cayote station of O. -W. R. & N. Ry.

11 The Umatilla rapids, above mouth of Umatilla River, Oregon side.

12 Also called Fort Walla Walla, built in July-Aug., 1818, by Donald McKenzie & Alex Ross ; consult "Fur Hunters of the Far West," chapters 6 & 7 and frontpiece for picture of the Fort. Location 1-1/2 miles west of Wallula, of present day.

13 South branch of the Columbia, that is the Snake River.

14 Mr. Thos. Dears, a clerk of the H.B. Co., but not attached to any special Post. Mr. J.W. Dease, a Chief Trader, was then in charge of Fort Nez Perces.

15 The Palouse river of today; the Drewyer's river of Lewis and Clark, and known to the fur traders also as Pavion and Pavilion river.

16 Spokane House, about 100 miles northward; see Ross Cox' "Adventures" etc for an account of this trail to the Spokane River.

17 Meaning the Pend d'Oreille Indians

18 Almota Whitman county, Wash., always a favorite Indian camping place, and meaning the hilly or mountainous stream or place. Lewis and Clark camped here Oct. 11th, 1805 and mention the Indian houses described by John Work a little further on in this text.

19 That is, the junction of the Snake and Clearwater Rivers.

20 Red Wolf crossing of the Snake River, at mouth of Alpowa creek Garfield county, Washington. Col. E. J. Stepto's expedition crossed here in the year 1858 on its disastrous expedition.

21 John Work's corruption of the Indian family name Shahaptin

22 The Palouse and the Cayuse tribes. Not unlike Lewis and Clark, Mr. Work was "something of a speller."

23 Where Lewiston, Idaho, now stands. See page 128 of Vol. 2 of "Trail of Lewis and Clark" (Wheeler) for photo and description of this site.

24 That is, the Snake Eiver proper but designated by Lewis and Clark as the Kimooenim while the Clearwater from the S.E. was the Kooskooske.

25 A very correct description of "Lewiston Hill" and of the famous Palouse country beyond. Travelers by stage over that road all remember it. Mr. Dease evidently returned direct to Fort Walla Walla by the river.

26 The regular Indian trail northward followed the line between Washington and Idaho, generally

speaking: consult Manring's "Conquest of Coeur D'Alene, Spokane & Palouse Indians" for this.

27 Probably near Phileo Lake between Spangle and Cheney, Spokane county, Washington

28 Spokane House, at junction of main with the Little Spokane River, nine miles N.W. of City of Spokane, first established by Finan McDonald in 1810: Mr James Birnie in charge. Mr. Birnie afterward settled at Astoria and Cathlamet near the mouth of the Columbia.

29 This is, and previous entries, give us the actual plans for removal of this trading post to Kettle Falls on the Columbia, as had evidently been agreed upon during the winter at Fort George. Consult "Fur Hunters of the Far West" (Ross) Vol. 2, p 162 as to this. Also Gov. Stevens large map in Vol. 12 of Pac. Ry. Reports.

30 The Pend d'Orielle river, from its mouth to the Calispel river and flats near Cusick, Washington.

31 The Kootenay River.

32 Evidently Gov. Simpson was not without some gift of humor; he was preparing Mr. Work for David Douglas' expected visit to the interior to collect botanical specimens.

33 After at least 150 miles across the best farming lands of Spokane, Lincoln and part of Douglas counties, Washington. Fort Okanogan was then on the Columbia river side of the plateau at mouth of Okanogan river.

34 The San Poil river, from the north.

35 These horses were for use in transporting goods to the Thompson river and New Caledonia Districts, which were now on to deliver furs and get goods at Fort Vancouver on the Columbia. Up to this time they had shipped everything to and from York Factory to Hudson Bay, using the Tete Jaune Pass across from the Rocky Mts.

36 Peter Skene Ogden, who was in charge of the Snake Country trappers that season. Consult Oregon Historical Quarterly Vol. 10 p.p. 229-278.

37 A half breed named LaPrate, who afterward was for many years resident at Fort Okanogan.

38 The mouth of the Spokane river.

39 This name should be Robideaux, another half breed.

40 Alexander Ross, who had proceeded to Red River with Gov. Simpson this same Spring and whose family now follows; and Mr. McLeod sends his family preparatory to himself leaving the Columbia river district the following spring.

41 Meaning Fort Vancouver.

42 That is Whirlpool Rapids at the foot of Nespalem Canyon. Consult Lieut. Thos. W. Symon's Report of Examination of Upper Columbia River for this journey from Okanogan to mouth of Spokane river.

43 The trading post to be known as Fort Colville just above Kettle Falls.

44 Probably Spirit Lake Northeast of Spokane, and the little river mentioned a little further on was probably Rathdrum creek.

45 Mr. Finan McDonald, who built Spokane House in 1810 and had but recently left there.

46 Pend D'Oreille river at Sinecateen crossing, the north end of David Thompson's "Skeetshoo Road": later known as Markham's Ferry, Kootenay County, Idaho.

47 William Kittson; see "Fur Hunters of Far West" Vol. 1, p. 207.

48 Thompson Falls, Montana.

49 Lake Pend d'Oreille.

50 Probably the Cabinet Rapids in Clark's Fork river. Barrier river next mentioned is probably Trout Creek of today and maps.

51 Thompson Falls, Montana, where the Indians would be gathered for the summer trade and to fish. Mr. Ogden's party was either on head waters of Jefferson's Fork of the Missouri in Montana, or on the Snake or Salmon rivers in Idaho.

52 This wide traverse or crossing of Lake Pend d'Oreille was from near Hope, Idaho westward across the Lake.

53 That is at Sinecateen again. During mining days this was the principal crossing of the Pend d'Oreille river and is well known to all early settlers of Idaho and Montana and the Kootenay country.

54 Spokane House.

55 Probably they had camped for the night at the Hoodoo lake and this Bindash Campment at Spirit Lake, but impossible to locate certainly.

56 Mr. Kittson goes as far as Bonners Ferry, Idaho, near which David Thompson's "Lake Indian

House" had been, for a summer trade with Kootenays there.

57 The Colville river and valley, and we now get a glimpse of the beginnings of actual settlement and trade in that valley. The "little nick" mentioned further on is Marcus Flat, just above Kettle Falls, where Fort Colvile (so named after one of the H. B. Co. officials) was maintained until about 1872.

58 This refers to the desertions of the H. B. Co. Free-hunters under inducement from the American traders, concerning which there has been some reflection cast upon Gen. W. H. Ashley, but without real evidence to support it.

59 Probably meaning the rebuilding of the Post or Fort near Bonners Ferry: a regular Post had been maintained further up the Kootenay river about opposite Jennings, Montana. See Ross Cox "Adventures," p. 233.

From Washington Historical Quarterly, Vol. 5 No. 4 (1914), pp. 258-287

Journal of John Work, Dec. 15th, 1825, to June 12th, 1826

Introduction and Annotations by T. C. Elliott.

The publication of this journal was begun in Vol. 5. No. 2 (April, 1914) of this Quarterly and has been completed in three parts instead of two as first intended; the introductory statements in the previous numbers will be of assistance to readers. For the sake of those who may not see the earlier numbers some of the annotations are repeated. The journal ends rather abruptly just before the arrival of Mr. Work at Fort Vancouver in June, 1826, almost an even year after it began with his departure from that same Fort.

This third part of the journal begins with Mr. Work in charge of the winter trade, 1825-6, at Flathead Fort or House located near the present Eddy Station of the Northern Pacific Railway in Sanders County, Montana. He remains there until February and returns to Spokane House and is on duty there with Mr. Dease, the chief trader, during the dismantling of that establishment in the spring of 1826. He then proceeded to Fort Okanogan for a short time and joins the annual "brigade" going down the Columbia river to Fort Vancouver, in June, 1826.

I have been asked to explain the meaning of the term "gummed," which is used quite often in these traders' journals. It means the smearing of the seams of the canoes or boats with pitch or gum gathered from the forest trees.

Reference has been made (note 2, p. 85) to C. McKay, as a son of Alex. McKay of the Astor party, but there appears to be doubt as to that relationship; quite likely C. McKay belonged to another family. There is also a question as to when the furs from the New Caledonia district began to come down over the Okanogan trail for shipment to Fort Vancouver; that trade route was probably opened earlier. The Thompson river (Kamloops) furs had come that way from the very begin-

ning, in 1812.

Research as to the identity of the actual builder of the trading post called Spokane House has progressed a little farther since the beginning of this publication; meaning the original Northwest Company post and not that of the Pacific Fur Company. There are reasons to believe that Mr. Jacques Finlay built it rather than Finan McDonald, as stated in notes No. 28 and 45.

This journal furnishes the source of our information for the beginning of occupation of the trading post on Marcus Flat. above Kettle Falls, and it is well to emphasize the correct spelling of the name of that post. namely Fort Colvile; not Colville as corrupted. It took the name from one of the directors of the Hudson's Bay Company, Mr. E. Colvile.

December 1825. Thursday 15 Stormy with sharp frost in the night. Mild pleasant weather during the day. Had the men employed with Mr. Kittson opening and examining the Snake (112) furs, they are generally in good order but of a very inferior quality. they also do not answer the description given of them as many small beaver have been called large, the num's are as follows; 744 Large & 298 Small beaver and 15 otters.

Friday 16th Mild soft weather. The Kootenasy Chief paid us another visit and after trading a lodge and some Deer skins, got a small present and in the evening took his final departure for the winter. He is going with his people to hunt in their own lands not far from the fort (113) on their own river, where they intend to live on deer and endeavour to get a few beaver. On account of the snow they are apprehensive that they will not be able to go sufficiently far off to make a great hunt.-

In different conversations with the Kootanias since their arrival they express a particular wish to have a fort in their own country, and represent the communication by water much less difficult than the Indians whom Mr. Kittson saw stated it to be,(114) and say that the part which Mr. Kittson saw is the worst of it. They were told that they might depend on having an Establishment on their lands next season either by land or by water. Every means should be adopted to keep them on their own lands as they make much better hunt there than elsewhere. Their unprecedented trade this fall is to be mainly attributed to their hunting in the summer & fall on the upper waters of their own river and the Columbia.

It is out of our power to send people & supplies with them at present for want of horses, the six we have here, some of them from the Snake Country are so lean that they are totally unfit for the journey.-

Old LaBuche the F. Head chief paid us another visit.-

Saturday 17th Heavy rain in the night & the greater part of the day. The Flat Head Indians to the number of 60 to 70 arrived headed by three chiefs, they were all on horseback and came singing and firing guns with a flag flying. (115) We answered their fire with a volley of Muskets. The

John Work's Journal

---

Chiefs & some of the principle men smoked in the gentlemens' house, & all the others in the Indian House. The weather is so very bad that we cannot well put them out and they will have to sleep through the houses the best way they can. It is too late to trade today. After dark the men arrived from below bringing letters from Mr. Dease (116) dated on the 4th & 10th inst. and five guns & 4 doz. gun worms which we requested, but no Tobacco is sent which is unfortunate as it is an article which is in great demand and of which I am apprehensive we will be short. Mr. Dease informs us that we will require to be down in time to meet the Express at the Forks about the 5th of April. Without injuring the trade we cannot reach Spokane so early as our Indians will not have arrived with their spring hunts.

Sunday 18 Sharp frost in the morning. Commenced trading with the Flat Heads and by noon had traded all the articles they had for sale when a present of 20 Ball & Powder & 2 feet of Tobacco was made to each of the Chiefs and a remuneration made two of them at the request of Mr. Ogden, per note, for services rendered the Snake Expedition & assisting in bringing home the Snake furs.-Some others of the principal men got also a present of a few balls & Powder and in the afternoon they all went off apparently well pleased. On account of the bad road and weakness of the horses the greater part of the Flat Heads are not going to (hunt) the Buffalo this winter but are going to pass the winter hunting beaver. This will probably occasion a small quantity of Provisions being procured in spring than usual, but I expect it will be the means of an increase in the more valuable articles of furs.

I have not yet been able to ascertain the amount of the Trade.

Monday 19th Overcast mild weather. Had the men busily employed packing the Snake furs and also those traded here, in order to send off two canoes to the Coeur de Alan Portage (117) as soon as possible, so that the men may get the canoes back before the ice takes. Examined yesterdays trade and find it to amount to 222 Large and 107 small beaver. 1 Otter. 4 Robes, 72 Appichimons, 1 Elk Skin, 18 pack saddles. 113 fath. cords. 4 Hair Bridles, 52 Bales, 3122 lbs. dry meat, 119 fresh Tongues. 23 dry Tongues, 2 bosses & 10 « lb. castorum, which is much less than we expected. The greater part of the summer was occupied in pursuit of Buffaloes, which prevented them from hunting beaver, and as they are not going back to the Buffalo at present, they kept a considerable part of their meat to subsist on during the winter.

Some freemen paid us a visit, they were told to come tomorrow with the furs and get some supplies.-

Tuesday 20th Soft mild weather. The freemen A. Paget, C. (Loye), C. Gras Louis, J. Beauchamp & J. B. Gadwa delivered in their furs & received a little advance to enable them to pass the winter. These men would not accompany Mr. Ogden and were not to have received any supplies. but Mr. Dease directed them to get a little in case they delivered in the furs. Paget & Cadwa were unfortunate in losing a cache of 100 beaver which was stolen by the Indians. Cadwa was ordered to be sent to Spokane. He denies that his engagement was only to be free (118) as long as the Company thought proper and seemed unwilling to go, but on being told that he must comply he submitted,

John Work's Journal

---

but with reluctance. The Indians traded a few appichimans. The men employed finishing out the packs.

Wed. 21 Cloudy cold weather. The men employed gumming & repairing the canoes. We had no gum till the Indians were employed to gather it, or the canoes would have been repaired yesterday. The Kootany chief & 6 of his men visited us, and after smoking traded a horse & a few saddles and appichimans.

Thursday 22nd Some snow in the night, cloudy cold weather. Wind N. W.

Sent off 2 canoes 5 men each to the Schachoo (119) Portage laded with the following articles for Spokane viz 27 packages containing 762 Large and 376 Small beaver, 11 Martens, 10 Mink. 1385 Rats, 8 Elk Skins. 12 deer Skins, 70 Appichimans, 22 Saddles & 90 Salt tongues, of the F. Heads and Kootenay returns, and 21 Pieces containing 881 Large & 381 Small beaver, 16 Otters, 2 Rats & 7 1/2 lbs. Castrum, Snake Returns, besides 1 Bale private property, rivits and 5 bales meat 60 lbs. each for the peoples voyage down and back. The above part of the Snake returns is all that was brought here by C. McKay & delivered in by the Freeman.

I wrote to Mr. Dease informing him of the state of affairs of this place and requesting 1/2 Roll Tobacco and a few awls for the trade.-I wrote for the Tobacco the last time the Canoes went down but was refused it on the plea that it was more required below. I have now urged the necessity of its being sent here where it will be much required in the Spring.-The Men are directed to make all the expedition in their power so that they may get back before they are stopped by the ice, no danger is apprehended of ice stopping them before they reach the portage. Three Men Ignace. Martin & Gadwa are ordered to start for the Fort with the letters immediately on their arrival at the portage.

Friday 23rd Cloudy cold weather. The Indians are encamping about the Fort where there are now 21 Lodges. Some are going off to the Buffalo. The Pendent Orellies are blamed for stealing some of the Kootany horses. It is reported likewise that the Piegans have stolen 7 of the best horses from the Pendent Orellies that went first off to the Buffalo. Two Beaver Skins, the carcass of 2 deer & a few appichimans (120) were traded. One of the old Freeman, Paget, father-in-law to Cadwa, who was sent to Spokane, has come & encamped at the Fort he is an old man & having only Gadwa to depend on, he did not go off with the others. He is a very old servant and always bore a good character. After what little provisions he has will be done, he will probably become a burden on the Fort.-

Saturday 24 Cloudy cold weather. Wind N.W Some ice along the edge of the River. The Indians traded a few Appichimans and Saddles, to obtain a little ammuniton as some of them are going off.

Sunday 25th Cloudy. Raw cold weather. Masses of ice running pretty thick down the River.-

John Work's Journal

---

This being Christmas Day the two men here had a dram, and we served out extra each a ration of fresh meat, a tongue, & a quart of Flour. For the old freeman Bastang the same.

Five Kootany Indians of the Au platte tribe (121) arrived and traded 14 Large and 4 Small beaver, 1 Otter, 17 dressed Deer Skins and 3 (parrefliches), principally for ammunition & Knives & a little Tobacco. Two Pendent Oreilles traded the carcasses of 2 sheep. females, the one weighed 62 & the other 60 lbs.

Monday 26 Overcast mild weather. the river clear of ice, except some patches along its edge. The men employed cutting firewood.

Tuesday 27 th Overcast stormy weather. Wind Northerly- The men employed assorting and bailing up meat. The Indians are still trading a few appichimans, saddles, & few furs.-

Wed 28th Cloudy cold weather. Ice running pretty thick in the River. The Men finished assorting and baling up the meat. We have now in store 67 Bales. 84 lbs. net each, viz 36 of lean, 19 Back Fat & 12 Inside Fat, or 3024 lbs. Lean Meat 1596 lbs. Back fats & 1008 lbs. Inside fats, in all 5628 lbs. Some of the Indians moving a little further down the River. but as some others are coming up in their place the number of lodges still keeps about 20. Those Indians that remain here employ the most of their time gambling.

Thursday 29th Overcast, snowed thick the afterpart of the day. Ice running in the river.

The River below will probably freeze over with this weather and prevent the Canoes from getting up.

Friday 30th Overcast mild weather, some snow. Ice running in the river but not so much as yesterday. Nothing doing in the way of trade except a chance appichiman, (parrefliches) etc. The Indians occupy the greater part of their time gambling, even where it is snowing they are playing out of doors and a group sitting about the parties engaged watching the progress of the game.

Saturday 31st Snowed thick in the night and the forepart of the day. The snow lies nearly 6 inches thick on the ground. Very little ice running in the River. The men who were sent off to Spokane on the 22nd arrived in the evening with letters from Mr. Dease and 1/2 Roll of Tobacco & 1/2 gross of awls. The men had to leave the canoes yesterday below the Chutes as the Navigation was stopped by ice. They have made a very expeditious voyage.-

Mr. Dease in one of his letters expresses a wish that Mr. Kittson or I would pay him a visit.-Nothing material has occurred at Spokane since we heard from it last.

Jan. 1826. Sunday 1 - Stormy with heavy rain the greater part of the day, the snow has nearly all disappeared. This being the first day of the new year, according to custom, each of the men got an extra ration of 6 lb. fresh venison, 2 lbs. back fat. 1 Buffalo tongue, 1 pint of Flour and 1 pint of

John Work's Journal

---

Rum.-At daylight they ushered in the new year with a volley of musketry when they were treated with 4 glasses each of Rum cakes & a pipe of Tobacco. With this and the pint given to each of them, they soon contrived to get nearly all pretty drunk. They appeared to pass the day comfortably enjoying themselves.

An Indian brought us a female (Chiveaux), Round, Skin and all.

Monday 2nd Wind N.W. and stormy during the night and all day, but not cold, the snow has all disappeared except on the mountains. No ice driving in the River. The men doing little today. The Indians women were sent off to gather gum to repair one of the canoes to make another trip below if the weather continues favorable.-

Tuesday 3 rd Blew a perfect storm in the night, but calm overcast mild soft weather during the day.

Had part of the men repairing and gumming a canoe & making paddles, the others packing up Appechimons, dressed leather, Robes, Saddles & making in all 18 pieces or about 2/3 a canoe load, which is all in readiness to start tomorrow for the Coeur de Alene portage. I intend going myself, with 6 men, to proceed to Spokane. I expect we will reach the portage before the River freezes but we will probably have to walk back. I am induced to take this trip in consequence of Mr. Dease expressing a wish that either Mr. Kittson or I would visit him.-Mr. Kittson remains in charge of the place.-

Wed. 4 th Some frost in the night. Cloudy fine weather during the day. Left F. Head haven 20 Minutes before 8 oclock in a canoe with 8 Men, Iroquoys, reached the Chutes (122) 20 minutes past 10, Making the portage. which is 1380 yds. long, took more than 2 hours.-At 2 oclock we reached the canoes the men left a few days ago and encamped to change our canoe for a better one, the men were employed till it was dark gumming the canoes we are going to take. The canoe though not deep laden is a good deal lumbered. the saddles & appechimons take up a good deal of room. There is not much snow, a little ice along the edge of the River & on the banks. The ice that stopped the men going up is all gone.

Two parrefliches & a little meat which the men left in cache is stolen by the Indians.

Thursday 5 th Overcast soft weather. Proceeded on our journey at 1/2 past 6 oclock, reached Stony island portage at 10 & 1/2 past 10 got across it, the canoe taken down by water, by one oclock we reached the Heron Rapid, (123) the portage here also occupied half an hour, the canoe & part of the baggage got down by water. At 1/2 past 3 encamped near the Lake. A good days work. The snow is deep at the portage we passed, and also where we are encamped but it is soft and thawing.-It is difficult making the portage as the track is through rough stones & the hollows being filled up with the snow, the men with the loads tumble into the holes before they are aware.

Friday 6 th Stormy weather with heavy rain, rained hard in the night. Embarked at day light and

John Work's Journal

---

in an hour reached the Lake (124) where we encamped and had to remain all day it being it being too rough to attempt crossing it.

Saturday 7 Stormy with rain in the night. Moderate mild weather with some rain during the clay.

Embarked at 8 oclock and reached the portage (125) at 3 in the afternoon when the goods were laid up & covered, but it being too late deferred starting for the Fort till tomorrow. Killed a small deer crossing the River.

Sunday 8 Soft weather with disagreeable sleet & snow showers. Set out an hour before day light with 4 men to cross the portage on foot for the Fort and encamped at sun setting at the little River (126) at the edge of the plains after a hard days walking. Two of the mens feet got sore and I sent them back from Rat Lake. (127) Part of the road in the middle of the woods the snow is deep & ? with the thaw but not sufficiently hard to bear ones weight, and walking through it is very fatiguing on the other parts of the road there is little snow.-Met two Indians in the afternoon & got a horse from them but having no saddle & he being very poor it was a most fatiguing job to ride any distance. We rode turn about.

Monday 9 th Soft weather Snow showers. Resumed our journey before 3 oclock in the morning and reached Spokane (128) at 1 in the afternoon, and received a cordial reception from Mr. Dease who with his people were found well. There is little snow on the ground during this day's march.

Tuesday 10 th Snowed thick the forepart of the day but soft weather & rain in the evening so that the most of the snow had disappeared by night.-

Wed 11 Overcast mild weather some light snow.

Thursday 12 th Weather as yesterday. some light snow and rain showers.

Friday 13. Sharp frost in the night but cloudy mild weather during the day. Have made preparation to return to F. Heads tomorrow.-

Sat. 14 th Snowing and raining all day. Having every thing ready left Spokane at 10 oclock for the F. Heads accompanied by my own two men, & La Bonte & an Indian with 9 horses for the baggage that I left at the other end of the Portage. On account of the very bad weather and having to go round by the Chutes (129) where we were detained some time in the plains catching two of the Inds horses, we only reached the Fountain (130) in the plain where we encamped for the night. Every one of us completely drenched to the skin.-There is very little snow on the plains.

Sunday 15 th Overcast mild weather some light snow & rain showers. Some of the horses strayed off in the night, & it was 8 oclock before they were all collected, when we proceeded on our journey and only reached the W end of Rat Lake. The snow in the woods takes the horses up over their knees so that they were able to make very little way through it. Where we are encamped, the

---

poor horses can eat but very little. Saw the tracks of several deer and some martens.

Monday 16 th Overcast mild foggy weather. Three of the horses strayed off in the night owing to the Indian having neglected to hobble them. I sent a man & the Indian after them, while I with the other men & horses proceeded to the portage (131) where we arrived before noon, the man and Indian with the other horses did not arrive till sun setting. Had all the pieces arranged & ready to send off the horses in the morning & at the same time set out myself with the canoe. The snow is not so deep at this end of the portage as yesterday.

Tuesday 17 th Except a short Interval in the afternoon, rained without intermission all day and blowing fresh part of the day. Had the horses collected at day light and the man and Indian commenced loading them. At the same time I embarked & we proceeded up the River, and encamped a little above the lake, a good days march considering the very bad weather. Very little more wind would have prevented us from crossing the Lake. The snow has in several places disappeared but on the hills and along the shores it is still thick.

Wed. 18 th Overcast fair mild weather. Proceeded on our journey at daylight and encamped late above the Stony Island Portage. (132) The snow along the shore and particularly at the portages, was very deep.-

Thursday 19 th Weather as yesterday but colder. Continued our rout at an early hour, and encamped below the Chutes in the evening. About noon we passed the Crooked rapid after which there was very little snow to be seen. Found some Indians at the Barrier River (133) & traded some Venison from them which made us a good supper.

Friday 20 th Snowing and raining all day, very disagreeable weather. Embarked before sunrising and reached the F. Head House near dark. We were delayed some time at the Chutes gumming the canoes. Found Mr. Kittson and the people all well. Nothing material has occurred since I went off. Little done in the way of trade except of fresh provisions, some Inds. from above arrived with 14 deer which has served the people & saved dry provisions for some time back on account of the mild soft weather it is difficult to keep it from spoiling. The men have been employed getting wood for a canoe, milking troughs to (beat) meat & make pimmican, cutting cords & putting an upper flooring in the house, etc.-

Sat. 21 st Cloudy fine pleasant weather, thawing. An Indian brought the carcass of a deer.

Sunday 22 nd Mild pleasant weather.

Monday 23 rd Cloudy cold weather sharp frost in the night. Six men with some horses were sent off for canoe timber with which they returned in the evening. The road was very bad as they had to ascend the mountains.-It is difficult to procure wood for canoes here now.

Tuesday 24 th Overcast soft weather. C. McKay and six men were sent up the river in a canoe to

---

John Work's Journal

---

an Indian camp in expectation that they will be able to trade some fresh provisions. It is supposed they will be two days reaching the camp. (134) If we be able to procure some venison it will save the dry provisions.-

The Old freeman Paget and a man Pierre, were sent down to Thompson's Plain with the horses where the grass is better.

Wed. 25 th Overcast soft mild weather. Two men employed dressing canoe wood, the others cutting wood.

Thursday 26 th Weather as yesterday, some light snow. The men employed as yesterday. Two Kootany Indians arrived and traded Deer skins principally for ammunition.

Friday 27 th Disagreeable cold weather blowing fresh from the Northward. The men bent the timbers for the canoe.

Sat. 28 th Soft weather some snow. Had the provisions examined, a little of it was moldy, put 5 bales on the loft to dry to beat for pimican.

Sunday 29 th Raw cold overcast weather. C. McKay and the men who went off on Tuesday returned. The River is so shallow above that they could not get the canoe to the Indians camp but two men were sent. The Indians have had no provisions and the people were starving when they got a little. Only about two animals are brought home. They brought home the skin of a ram, horns and all, for stuffing.

Monday 30 th Snowed in the night and snowing thick the greater part of the day. Men differently employed.

Tuesday 31. Snowing part of the day. but soft weather & thawing. There is now nearly a foot deep of snow. The men employed cutting and melting down tallow.

Wed. 1 Feb. 1826 Overcast soft weather. Some sleet and rain showers. Part of the men employed cutting and melting Tallow, & part, pounding meat to make pimican.-

Thursday 2. Sharp frost in the night, and cloudy cold weather during the day. The men employed as yesterday.

Friday 3. Frost in the night. Overcast soft weather thawing during the day. Blowing strong in the evening. The men employed as yesterday except those that were pounding the meat, who are making a trough as the one already made is broken. Some Indians arrived from above & traded the carcasses of 2 deer & the skin of a (bison). The meat is a seasonable supply as our stock of fresh meat was nearly out.

Saturday 4. Some snow in the night but clear mild weather during the day.

Had the men employed melting down fat. Yesterday evening. I gave one of the men Togonche, a boxing for making too free with my wife (135) but being in a passion he got out of my hands before he got enough & to avoid getting another which I promised him he ran off to the woods.

Sunday 5. Clear mild weather.

Monday 6 th Snowed hard in the night and snowing part of the day. Part of the men employed pounding meat and part, dressing canoe timber.

Tuesday 7 th Stormy in the night with very heavy rain, rain & snow the greater part of the day. Part of the men employed melting fat the others at the canoe timber.

T. Toganche came to the fort in the night and took away his things, and the other provisions, the others deny that they knew of his going off or where he is gone too. I believe they are telling lies.

Wed. 8 th Rain in the night & rain & snow during the day. The men employed as yesterday. Nothing doing in the way of trade except a little gum.-

Thursday 9 th Rain & very stormy in the night, mild weather during the day.-The snow is disappearing very fast, there is no very little on the ground.

The men employed at the canoe, the wood is all dressed.

Monday 13 th Sharp frost in the night. Cloudy cold weather during the day. Four men employed at the canoe & two pounding meat. An Indian arrived from Spokane, with letters dated on the 3rd Inst. Mr. Dease sends me orders to proceed to Spokane to make out the a/c & leave Mr. Kittson in charge of this place. As I have a particular wish to see the years transactions of this Post finished so that I might be able to make some observations on it, that perhaps might have been useful, I certainly do not like the trip, and think Mr. Dease (136) might have made more Judicious arrangements, especially when It is only to make out the Accounts.

Tuesday 14 th Sharp frost in the night & very cold all day. The men employed as yesterday, finished pounding the meat and are now ready to make it into Pimican to take below to Spokane.

Wed. 15 th Keen frost in the night, and cold freezing weather all day. The river driving full of ice, which is an unusual thing at this season of the year. Two of the men employed repairing a canoe to below to the Le Portage if the River keeps open. Five more men making Pimmican. They made 14 bags 80 Is. each.

Five of the Au Platte Indians arrived late last night, & today traded 2 Otter, about 500 Rats, and some dressed leather and (Parrefliches). (137)

Thursday. 16 Cold frosty weather but milder than yesterday. A good deal of ice driving in the River.

Two men employed repairing a canoe to go below.-The others at the Pimican, Made 6 more bags & filled 2 bags of Tallow 90 lb. each.

A Flat Head Indian arrived for a little tobacco for his tribe who are now on their way coming in, but still far off. Several are daily arriving from different quarters principally from the Fd. H. Lake and encamping about the fort, they bring nothing except a little dry Venison.-

Friday 17 Overcast freezing weather. Some ice still driving in the River & ice fast along its edges. The water is rising considerably some days past.

Three men employed repairing the canoe.-The others tying up the Pimican & making packs of cords, to go below & doing other jobs about the fort.-

The Flat Head Indian that arrived yesterday went off. He got a little Tobacco for each of the principle men. He made us to understand that his tribe were still in pursuit of buffalo but would soon come off for the fort. They were likely to have a good deal of provisions but he could not say what success they had in the fur way. A band of 13 Kootanies principally Auplattes arrived in the evening with some furs.-It was too late to trade.

Saturday 18 Cloudy mild weather, frost in the night. Ice still driving in the River.

The Kootanies that arrived last night, traded 19 Beaver large & small, 1 Otter, 5 martens & 1 fish, 210 Rats, 4 Elk skins, 114 dressed & 5 parchment Deerskins and some (parrefliches), principally for ammunition.-

Part of the men employed at the new canoe, and three finishing repairing the one they were at these two days past. It is now ready and I intended to start tomorrow for Spokane with a load of provisions but the people arriving from the horse guard (138) informed me that part of the River there is frozen over and of course, impassable. A piece of the River above the fort has also been fast some days. In order to ascertain exactly the state of the River below so that we might be able to ascertain whether a passage is practicable or when it is likely to be so, C. McKay & Canotte, who is a good judge of the River, were dispatched to take a view of the water below at different places from which they will be able to judge of the state of the River farther down, they are to be back tomorrow, so that I must defer starting for another day. As Mr. Dease wants two men down also by taking a canoe & cargo down at present is the only means by which they can be spared.

The canoe is also the most expeditious mode of conveyance. We cannot attempt taking down the horses as Mr. Dease suggests, without running the risk of making a very tedious journey and perhaps losing some of the horses, on account of the great depth of the snow along parts of the

John Work's Journal

---

road.-The journey on foot must also be, tedious.-Performing the journey, in the canoe is decidedly preferable, as it can be done much quicker, & the cargo can be taken down at once & probably, not more than three canoes will require to be taken down in the Spring. So that the men wanted below can now be spared which they otherwise could not.

Sunday 19<sup>th</sup> Cloudy mild weather. Some ice still driving in the River. C. McKay & Conotte returned & reported that the River is frozen in 4 places where, Portages will have to be made, not very long ones, & that only one place farther down is likely to be frozen at the Cobias. I therefore have determined on starting tomorrow, it will require longer time but it is the only means we now have of performing the journey. From all that we can learn there is too much snow for the horses to be sent down with safety.

Monday 20 Left the Flat Heads early, in a canoe with 7 men & an Indian and 22 pieces Pimican & fat. 1 box candles & my baggage, besides provisions for the voyage, in all about 27 pieces. A little below the Fort we were stopped by ice & had to make a portage at least 3/4 of a mile, after which we proceeded to the Chutes, made the Portage & a little farther down the River was again frozen over & we had to make another portage about the same length as the last, but over a much worse road. The ice is too weak to carry upon it & it is difficult to get ashore and a bad road along shore. If we find obstructions of this kind tomorrow the canoe will probably have to be sent back & I will have to proceed on foot, as it would occupy a long time to carry over some of the portages below.-Very disagreeable weather. Snow & sleet heavy in the evening so that it wets everything.

Tuesday 21 Cloudy overcast weather. drizzling rain, sleet & snow the greater part of the day.

Proceeded down the river at an early hour & again soon found our road barred with ice in two places of considerable length, it was, however, so soft that we got our way broken through it with a great deal of labor & damage to our canoe. We crossed the Stony island portage & encamped below it at a late hour. In the forepart of the day there (was) little snow along the River but towards evening it was very deep. At our camp it is not less than three feet. In the morning when I was away with the foreman examining the ice one of the men (Bonufont) deserted and ran off with my old gun and Powder horn. The others said they thought I had sent him for them, This man is almost out of his senses about our peril at the F. Heads which is probably the cause of his running off-I had no idea that he ran off entirely or I certainly would have pursued him with the people & caught him although it would be difficult to find him as there is little snow in the woods and we had no time to spare.-He will probably go no farther that the fort where Mr. Kittson will stop him.

Wed. 22 Snow & rain the most of the day. We were detained some time in the morning gumming the canoe after which we continued our route & encamped in the evening near the lower end of Pendent Oreilles Lake. We just got across the lake in good time as it began to blow immediately afterwards. We met no more obstructions from the ice, but in several places it had very recently broke up.

Thursday 23<sup>rd</sup> Very disagreeable cold weather, thick snow & sleet all day. Embarked at an ear-

---

John Work's Journal

---

ly hour & reached the portage at noon, where we got the property all safely laid up & the canoe gummed for me to return with her tomorrow morning while I start with one man & an Indian to the fort & leave one man to take care of the property, till people & horses come for it. -I am afraid the horses will have a bad job of it as the snow here is very deep. The ice in different parts of the river has not been long broke up. Passed two Indian camps and lodges and loaded 3 pr. of small snow shoes from them. -The badness of the weather prevented me from setting out for the fort immediately.

Friday 24<sup>th</sup> Overcast, Cloudy weather, snow showers. At daylight set out for Spokane accompanied by an Iroquoy & an Indian, and encamped at 4 oclock in the afternoon between the big hill and the Lake. The snow on the portage is generally from 3 to 4 feet deep and very soft and on account of the smallness and badness of our snowshoes walking through it is very fatiguing, when we encamped we were very tired, & had no water, however, by melting snow on a piece of bark at the fire we soon obtained a sufficiency. -We stopped early having only a small axe to cut firewood.

I am afraid, there is so much snow, it will be a bad job getting the property across.

Saturday 25 Overcast, snow and sleet the greater part of the day. Proceeded on our route at daylight and reached the plain at 11 oclock and encamped at sunseting at Campment de Bindash, with J. Finlay's (139) sons who were hunting fortunately we fell in with them or we would have had little fire during the night.

The snow continued the same depth to near the edge of the woods where it was not so deep. There was not much snow on the plains and on the South end we walked without snowshoes. -

Sunday 26 Clear cold weather in the night and mild weather during the day.

Continued our journey at 3 oclock in the morning and arrived at Spokane at 11. Not much snow in the woods & it was so hard that we walked the most of the way without snowshoes. We were well tired. There were some horses on the opposite side of (Schuihoo) (140) plain but we thought it too far to go for them yesterday evening. Found Mr. Dease & his people all well.

Monday 27 Snowed in the night and the greater part of the day.

It being deemed impracticable to get the property across the portage at present on account of the depth of the snow, without, the risk of losing some of the horses, Mr. Dease had determined to let it remain some time till the snow thaws. -But a man (Chilifaux) was sent off to give the man who was left behind instructions & leave an Indian with him and at the same time to bring home some of my things, particularly the box containing the papers. -The Indians would not trust their horses to cross the portage. -

Tuesday 28 Cloudy mild weather, some snow. A good deal of the snow that fell yesterday thawed.

Text from Journals and Books of the Western Fur Trade

John Work's Journal

---

Wed. 1 Overcast mild weather. The snow thawing Mr. Birnie (141) I & the men busy packing beaver these two days.

Thursday 2 Overcast cold weather. The people still employed packing furs.

Friday 3<sup>rd</sup> Overcast cold weather, the snow thawing a little about the Fort but diminishing very little in the woods.

Saturday 4 Weather as yesterday. Keen frost in the night.

Sunday 5 Cloudy mild weather in the middle of the day, but cold in the night morning & evening. Snow diminishing very slowly. The men finished packing the furs. I am employed arranging the accounts.

Monday 6<sup>th</sup> (Monday, Sunday & Tuesday here given in exact order of original M. S. )

Keen frost in the night. Cloudy cold weather during the day. The Chiefs we spoke to about horses to carry off part of the furs and property to the Forks, (142) they engaged to furnish 80 horses.

Sunday 7 Clear fine weather but cold & the snow wasting very little.

Tuesday 7<sup>th</sup> Cloudy cold weather keen frost in the night.

The men busy tying up the pieces & preparing to go off tomorrow. The Indians collecting the horses.-

Mr. Birnie with 3 men, 13 Indians and 80 loaded horses set out for the forks the first trip. Mr. B. is to remain in charge of the furs & property. Only 4 or 6 pieces of this is private property.

Tuesday 7<sup>th</sup> In the evening Cholefaux arrived with my trunk & blankets about 100 lb.-The other things he left.-The snow on the Portage is now very deep, more so than when I passed it is now not less than 4 feet. There is no knowing when horses may be able to pass through it.

The night before Cholefaux arrived at the other end of the Portage some Inds slept there with the man who was left in charge of the goods, & stole a small bag 25 lb. fine pimican.-

Wed 8 Cloudy cold weather, sharp frost in the night. Chalifaux was sent off to the Forks to remain with Mr. Birnie.

Thursday 9<sup>th</sup> Sharp frost in the night. Cold bleak weather during the day.-The snow wasting very little to be this season of the year.-

Friday 10 Keen frost in the night. Raw cold weather. Snow in the afterpart of the day.

---

The men, employed with two Indians pressing the fur packs, but had to give it up on account of the snow.

Saturday 11 th Froze keen in the night. Light clouds fine weather though cold during the day.

The People above mentioned employed Pressing the furs which was finished in the evening having done 36 packs in the day. In the evening an Indian with part of the horses that went off to the Forks on Tuesday, arrived. The whole reached their destination safe, & the property all in good order, having had dry weather.

Sunday 12 Frost in the night, cloudy cold weather during day. All the rest of the horses & Indians & men returned from the Forks.

Monday 13 Keen frost in the night. The men employed tying up and arranging the pieces for the next trip. Busy all day paying the Indians for their horses for their last trip.

Tuesday 14 Frost in the night, light. cloudy, cold weather during the day.

The snow is disappearing about the Fort, but going off very slowly.

Wed 15 Cloudy cold weather. The men employed cutting firewood.

Thursday 16 Heavy rain in the night some time In the morning, which has diminished the snow considerably, the valley round the fort is nearly all bare except patches here and there but in the woods and higher ground snow still lies pretty thick & is wasting very tardily. Mild, soft foggy weather, & the first spring like day we have had this season. The men employed cutting firewood in the forepart of the day, afterwards arranging and separating the furs & property to be sent off to the forks on Saturday, in all 60 loads. The Indians were engaged to furnish sixty horses on that day, for the trip.

Pere de Joile Fille was also engaged to cross the (Schuihoo) portage for the property that remains there, he is to go as soon as the road is passable through the snow, which he expects will be in two or three days.

Friday 17 Raw cold weather in the morning, mild afterwards. Had provisions &c., tied up for the party going off tomorrow. The Indians collecting their horses.-

Saturday 18 th Cloudy, snow & sleet the forepart of the day, snowed in the night. the snow in the morning was nearly 2 inches deep, but it had nearly all disappeared during the day, on the low ground, but on the high ground that faces the north, the snow still remains.

On account of the bad weather the departure of the horses with the property was deferred until

tomorrow.

The water in the river has risen considerably, these few days past.

Sunday 19 Frost in the night & fine weather in the forepart of the day but disagreeable weather with rain and sleet afterwards.

Three men and ten Indians, with the Interpreter Rivit, (143) were sent off to the Forks with 62 horses loaded with Furs, Provisions & Sundries. The after part of the day turned out very unfavorable which was not expected in the morning as the weather was fine. There is very little property of any kind now remaining. (144) -The women and children also went off today.-

Monday 20 Overcast fair weather in the morning some light showers during the day.

Tuesday 21 Rain and sleet in the night, but fair weather during the day. The River continues much the same, the water is rising very little.

The Blacksmith & cook, the only two men we have now here, employed collecting all the iron about the place, stripping hinges off doors (145) &c. The Indians much regret our going off.. and frequently complain that they will be pitiful when the whites leave them.

The Indians are getting a few trout and suckers in their barrier, a part of which they give us.

Wed. 22 Light showers. The men employed as yesterday.

Thursday 23. Sleet & rain showers, rained hard in the night. The greater part of the Men and Indians that went to the Forks on Sunday last, returned. Not withstanding the bad weather their property got down safe.

Friday 24 Showery weather and cold, notwithstanding the advanced season the snow still lies on the North side of the hills and banks. The rest of the people arrived from the Forks. Late last night two Indians arrived from Coeur de Alan Portage with letters from Mr. Kittson dated F. Head 9<sup>th</sup> Inst. The trade was then completed and preparations making to start. The provision trade has been excellent but the returns in furs less than was expected.-War has broken out between the F. Heads and (Piegans.)C McKay is at the other end of the Portage with the horses that were at the F. Heads, he had a bad journey down on account of the depth of the snow, the horses were five nights without eating. The snow on the portage is still near 3 feet deep.-Mr. Kittson was to have proceeded to the Pendent Oreilles Bay but as it is supposed from accounts that that portage is impassable with the depth of the snow, a man was sent off immediately with letters to Mr. Kittson to stop him at the Coeur de Alan portage.-

Some people were sent off to fetch home our horses from the Coeur de Alan plain to be ready to start for the F. Head property. Le Course caulking his boats.-Paid off part of the Indians for their

trip to the Forks.-

Saturday 25 Raining the greater part of the day. The horses were brought to (Birnie's) (146) plains. of the Indians for their horses.

Sunday 26 th Rain in the night and the most of the day. The water in the River rising considerably these few days.-Some snow still lies on the banks and hills that face the North.

Monday 27 Overcast weather. Martin arrived from Coeur 'de Alan Portage, in place of Charles who went off on the 23 rd who was so fatigued that he could not come back. Martin can also scarcely walk, though he came part of the way on horseback. Mr. Kittson had not arrived at the Portage 2 days ago. By Indian report he had started from the F. Heads but was detained at Thomp-sons plains, seeking after one of his men (Benifont) who had deserted. There is still a great deal of snow on the Portage. Some places it is said to be 3 feet deep. The horses were brought home. & the Indians engaged to furnish some more, to go off for the F. Head property tomorrow, as Mr. Kittson is expected to have arrived by the time they reach the Portage. Tuesday 28 Overcast mild weather. Rovit, 2 men & some Indians went off to meet Mr. Kittson with about 70 horses.

Wed. 29th. Fine weather, sharp frost in the night. Old Philip was sent off to the Forks to send home Chalifaux who is there.-

Thursday 30 th Fine weather, but keen frost in the night. La Course busily employed caulking and gumming the boats.

Friday 31 st Frost in the night, Overcast mild weather during the day. Not withstanding the weather is rather cold, Vegetation is making considerable progress. The ground about the fort is getting quite green, and the bushes are putting forth their leaves and some small plants flowering. The snow, nevertheless still keeps possession of the banks that Front the north.-The River has risen considerably for some days past. The Indians are hungry as they have little to depend upon but moss. They have for some time past got a good many trout from the Barrier but last night it was broken by the height of the water, & they will not be able to repair it.

April 1826

Sat. 1 Heavy rain the greater part of the day. The men employed gumming the boats.

Sunday 2 Overcast mild, soft weather. Mr. Kittson arrived from the F. Heads. he left his people yesterday. One of the men (Bonenfant) who deserted from me on the 21 st Feb but was afterwards secured, ran off a second time, when Mr. Kittson sent two men in pursuit of him. One of these Ignace (Astaryan), also stayed away & is supposed to have deserted also. Bonenfant made his escape from an Indian lodge before the men got up. Three of the canoes were broke, two of the them sunk, & though none of the property was lost a great deal of it was wet, & though pains were taken to dry it, it is feared from the witness of the weather that a deal of the meat will be much

damaged.-

Monday 3<sup>rd</sup> Overcast fair weather. C. McKay & Canotte arrived & left Rivit and the Men this morning. they are to stop the most of the day opening and airing the provisions.

Tuesday 4 Overcast, weather drizzling rain. The men employed tying up some things that were loose in the Store.

Wed. 5 Overcast fair weather. The people with horses loaded with Flat head returns arrived. The men immediately employed opening and examining the provisions. A good deal of it is wet & getting moldy. Some of the bales of leather were also wet, indeed scarcely anything in the canoes missed. Busy the after part of the day settling with the Indians for their horses.

Thursday 6<sup>th</sup> Fine weather. Busy settling with the Indians & paid them up for all their horse hire & services for so far. Mr. Kittson & the men drying and packing up the meat.

Friday 7<sup>th</sup> Fair weather. Had the Indians & Company's horses collected and the property taken to below the Forks, (147) in the boat. the river being too high to cross it on the horses. At past noon I set out with 59 loaded horses and encamped late at the Kettle encampment. (148) Our loads are principally provisions, a few packs of furs & leather. All Indians but one white man that are with the horses, they are very careful of the property.

Saturday 8<sup>th</sup> Clear pleasant weather. It was some time in the morning before the horses were all collected after which they were all loaded and proceeded on the rout. Mr. Dease and Mr. Kittson shortly come up with us. I accompanied them & we proceeded on ahead and arrived at the Forks in the evening. We had some difficulty crossing a small river (149) that was swelled by the snow melting in the mountains, the current was very strong & the water deep. My horse was carried a considerable distance down the stream. I was completely wet up to the middle it was with difficulty I kept his back as he was different times nearly upsetting by getting on branches or trees.

Sunday 9<sup>th</sup> Clear fine weather. The boats, three (150) in number, which left Spokane yesterday arrived at the Forks this evening, they loaded the cargoes above the little Dalles & the light boats were run down. La Courses boat struck a stone near the mouth of the Spokane river in a dangerous rapid and was broken. She was very nearly upset, had she done so everyone on board would have perished. Yesterday the boats fell in with the horses & transported all the property past the little river.

Monday 10 Cloudy weather, sun shining occasionally. The horses and property all arrived at the Forks safe in the morning where the loads were received. The Bales of meat were opened to be aired. several of them were a little wet.-Busily employed in the afterpart of the day paying off the Indians for the lend of their horses and their own labour coming to the Forks.-

Tuesday 11 Cloudy weather. The meat was again all opened & spread out to air. The Express

---

Text from Journals and Books of the Western Fur Trade

John Work's Journal

---

arrived in the evening, Messrs. McLeod (151) , Ermatinger & Douglas.-They brought 3 pigs & 3 young cows for Fort, Colvile. (152)

Wed. 12 Mr. A. McDonald (153) arrived from Okanagan by land.

Thurs. 13. Two boats sent off to Okanagan landed with furs.-And afterwards 20 of the Spokane horses for the same place to go on to Kamloops to meet the New Caledona people.-Rivit, Old Philip & old Paget & Pierre with a number of women and children & all the horses & the young cows, were sent off to Kettle falls. They have a quantity of seed potatoes with them & tools to commence farming immediately. (154)

Friday 14 th Nothing particular, all busy finishing the account.

Sunday 16. The Express for the Mountains. Mr. McLeod & Mr. Birnie, set off in the evening.-One boat 8 men.

Monday 17 A cargo was prepared for a boat to Okanagan.

Tuesday 18 A boat loaded with Packs of furs, appichimons, leather &c. Messrs. McDonald, Ermatinger & myself passengers, Set out in the morning for Okanagan.-

Wed. 19 th Arrived at Okanagan in the morning with all safe. Met the man that left the forks on the 12th returning yesterday morning. They would reach the forks in the course of the day.-

Thursday 20 Overcast mild weather. Messrs. A McDonald. E. Ermatinger and Annance, (155) 12 Men and 2 Indians took their departure for Nezperces & thence to Fort Vancouver in a boat, with 12 Packs furs, 15 bales salmon, 4 Bales Appichimons, 1 bale Saddles, 1 Bale leather, 1 Bale Cords & 3 (caffetes). They are to proceed from Walla Walla by land with horses.

I remain in charge of Okanagan till the Brigade goes down. Five men remain with me, two of whom are shortly to go off to Kamloops with horses to meet the N. Caledonia people, and two of them are invalids.-

(No journal kept from Apr. 21 to May 31 inclusive, unless in separate book.)

June 1826

Thur. 1 st Cloudy fair weather. The men employed gumming the boats.-Yesterday I gave up the charge of the store &c. to Mr. F. Ermatinger (156) who is to remain at this place during summer.-

Friday 2 nd Fair weather. Men employed as yesterday. Mr. Connolly (157) arrived about 5 o'clock in the evening. He left his people this morning, they are expected to arrive with the horses tomorrow.

---

John Work's Journal

---

Sat 3 Cloudy, Showery weather. Mr. Connolly's people under the charge of Messrs. Pambin (158) & Douglas (159) arrived late in the evening, 60 loaded horses 85 packs furs & 6 Kegs Castorum. They have been 25 days from Alexander 10 of which were from Kamloops to Okanagan.

Sunday 4 th Cloudy mild weather. An Indian traded a salmon.

Monday 5 th Cloudy, Showery weather.

Tuesday 6 th Sultry warm weather, some showers. Mr. Connolly being very anxious for the arrival of Mr. Dease's people, and apprehensive that letters which he sent some time ago had not reached their destination. An Indian and a man were dispatched with letters to Fort Colville. About 1 o'clock 2 boats & 11 men with Mr. Douglas (160) & Kittson arrived from Ft. Colville, with some appichimons, cords, provisions, &c.-The sending off in the morning is unnecessary. Everything made ready to start tomorrow.

Wed. 7 th Cloudy Sultry weather. Departed from Okanagan with 6 boats, men loaded with pack furs & other baggage. (161) All under the charge of Mr. Connolly, Messrs. J. Douglas, Pambin., Kittson, D. Douglas, & myself passengers. Started at 8 o'clock & encamped to gum the boats at 6 a little above Priests Rapid. Saw but few Indians on the River, traded some roasted salmon.-The current is very strong & the water high.

Thursday 8 th Cloudy, showery weather. Continued our journey at 3 o'clock and arrived at Nez Perces (162) at 7 in the afternoon. A few Indians along the river. Traded 6 fresh salmon.-

Friday 9 th Cloudy weather, excessively warm in the middle of the day. In consequence of the rain yesterday evening, the boat and additional cargoes to be taken from Nez Perces could not be arranged. Some time was, therefore, occupied doing that business this morning. Near noon the boats all started 8 in number with 45 packs furs in addition to those brought from Ok: and some other property. Messrs. D. Douglas & Kittson remained.-Our party now consists of 8 boats. 51 men, & 1. C. F. & 3 clerks.-We got on well during the day.-Shortly after leaving Nez Perces at Grand Rapid (163) we met an Indian with dispatches from Ft. Vancouver dated 3rd Inst., announcing the Arrival of the Ship. Encamped in the evening below J. Day's River. A good many Indians along the river. Mr. Black gave the people a horse to eat.

Sat. 10 Cloudy fine weather, very warm though there was a little breeze of wind. Proceeded on our journey at daylight. Passed the portage at the Chutes (164) and to near the lower end of the Dalles where we encamped to get the boats gummed.-The men had a hard days labor carrying across the two portages.-There were about 100 Indians at the Chutes, & from 200 to 300 at the Dalles. They are very peaceable. Traded salmon from them to serve the people 2 days.-

Sunday 11 Cloudy, Blowing fresh part of the day. All hands were in motion at daylight, and after proceeding down a small channel & making a portage at its lower end, (165) continued our rout,

but it blew so fresh that we had to put ashore before noon and could not proceed during the day. The Indians were very quiet during the night, but before they could be all sent off from the camp they made a hole in the sand under the edge of one of the boats & stole a capot from under one of the mens heads when he was sleeping. There was some trouble getting through the rapids and whirlpools below the Dalles. Traded some more salmon.-

Monday 12 Continued blowing fresh all night and all day. Storming in the afternoon. It being a little moderate we embarked at daylight, but had proceeded only a few hours when the wind reversed so that we had to put ashore & remain all day a little below Cape Heron. (166) Some Indians visited us from whom part of a sturgeon was purchased & some other little things. A canoe of Indians on their way from the fort below visited us. Two Indians who had solicited a passage from the Dalles to Fort Vancouver returned in the afternoon. One of them had the misfortune to lose his gun. It was lying in the oil cloth which being blown up by the wind tossed the gun overboard.

Notes

112. That is, the furs sent from the Snake river country where Peter Skene Ogden's party had been trapping during the winter and summer of 1825.

113. The trading post known as Fort Kootenay had been located nearly opposite the present town of Jennings, Montana, but was not being maintained this year.

114. This refers to attempt of Mr. Kittson to ascend the Kootenay river from the Columbia in a batteau , mentioned on pages 178-9 of this quarterly.

115. See note 108 on page 189.

116. Mr. John Warren Dease, Chief Trader, in charge at Spokane House during this winter.

117. The Portage mentioned in note 86, page 179 of this quarterly.

118. Free trappers nominally their horses, guns, traps , and lodges, but were usually in debt to the Company for everything and obliged to turn in their furs to pay the indebtedness. The regularly employed servants were called the engages.

119. The same as the Coeur d' Alene portage mentioned in note 117, this being Mr. Work's spelling of "Skeetshoo," the name given by David Thompson to the Coeur d' Alene lake and river Indians.

120. Saddle Blankets, made of skins.

121. The Indians residing along the lower Kootenay river; see note 104 on page 187.

122. Thompson Falls, Clark's Fork River, Montana.

123. The name still remains and is said to have its origin from numerous small fish resembling herring that were common there.

124. Pend d'Oreille lake

125. North end of Skeetshoo Road and in later years called Sineacateen Crossing.

126. Rathdrum creek, probably.

127. Hoodoo lake, Kootenay County, Idaho.

128. Spokane House at forks of Little Spokane and Spokane rivers.

129. Spokane Falls

130. Some large spring on Spokane prairie where Antoine Plante afterward lived.

131. Sinacateen again

132. Previously mentioned as Isle d'Pierre and impossible to locate with certainty; possibly Cabinet rapids, Clark Fork river.

133. Possibly the Trout creek, Montana; on main line of No. Pac. Ry.

134. The large camp of the Flatheads near the lake of that name.

135. Mrs. Work was of Spokane blood and a very intelligent woman.

136. Mr. Dease was suffering from some chronic disease from which he died a few years after at Fort Colville

137. Saddle Bags

138. Herders at Thompson's Prairie, where the horses were pastured.

139. Jacques Finlay, clerk of David Thompson, who was in charge of Spokane House in 1811, and after whom Jocko creek, Missoula County, Montana is named.

140. Another attempt to spell the word Skeetshoo.

141. See note 79, page 176. Mr. Birnie came to the Columbia in about 1820.

John Work's Journal

---

142. The mouth of the Spokane river where the boats were loaded to proceed either up or down the Columbia.

143. See note 68, page 167.

144. Mr. Work and Mr. Dease remain until the arrival of Mr. Kittson with the furs and provisions from the Flathead trading post.

145. This marks the end of Spokane House as a trading post. For glimpse of this place in July, 1826, consult David Douglas' account in Oregon Hist. Quarterly, Vol. 5

146. Evidently some prairie near the house, possibly the Five Mile Prairie of present day.

147. Meaning of the Forks of Spokane and Little Spokane rivers about three-fourths mile below the house, where the ford usually was. See map in Pacific Railway Reports, Volume 12.

148. Uncertain but probably where the main trail Walla Walla to Kettle Falls crosses the Spokane river.

149. One of several creeks entering Spokane river from the south. The road from Spokane House to the Forks evidently followed the south side of Spokane river very closely.

150. The boats had been built at Spokane House during the winter; the Little Dalles are the gorge at Miles, Lincoln County, Wash.

151. John McCleod, a chief trader, on his way to cross the Rocky Mts. Francis Ermatinger, a clerk, and Douglas, the botanist from England. For contemporaneous mention of this meeting, consult pp. 334-5 of Vol. 5 of Oregon Hist. Quarterly, being Journal of David Douglas.

152. This marks the beginning of the pork, beef, and dairy business in Steven's county, Washington, in particular, and all the Inland Empire in general.

153. Archibald McDonald, then a clerk; the father of Ranald McDonald.

154. These people are to become the first residents at Fort Colvile then being completed on Marcus Flat above Kettle Falls.

155. Mr. Annance, Chief Trader, had been in charge of Fort Okanogan that winter and Mr. Edward Ermatinger had probably been at Thompson river.

156. See note page 176

157. Chief Factor William Connolly from Fort St. James in New Caledonia en route for Ft Van-

couver to exchange his furs for trading goods.

158. Pierre Chrysologue Pambrun, a clerk under Mr. Connolly, afterward in charge of Fort Walla Walla consult Irving Capt. Bonneville.

159. James Douglas, clerk under Mr. Connolly, whose daughter he married, and afterward Sir James Douglas, Chief Factor and Governor of British Columbia.

160. David Douglas, the botanist, again.

161. Constituting what was known as a fur brigade.

162. Fort Nez Perce or Walla Walla; Mr. Samuel Black then in charge.

163. Umatilla rapids.

164. Celilio Falls and the Upper and Lower Dalles, now charted as Ten and Five Mile Rapids.

165. Three Mile Rapids.

166. Upper Cape Horn. See note 6.

From Washington Historical Quarterly Vol. VI (1915), pp. 26-49

The Journal of John Work

July 5- September 15, 1826

(Introduction and annotations by T. C. Elliott.)

This is a chronological resumption of the journal published in the last number of this Quarterly and which stopped abruptly just before Mr. Work arrived at Fort Vancouver on the 12th of June, 1826. The "brigade" now returns up the Columbia and the initial entry in the journal tells us very clearly what the word "brigade" as used by the fur traders actually meant. The various chief factors, chief traders and clerks have spent a very enjoyable three weeks together at the original Fort Vancouver, situated on the higher land northeast of the later stockade and buildings which were known to the pioneers of Oregon. This second Fort was built in 1828.

It is rather an interesting company of which Mr. Work becomes the chronicler. William Connolly is bound for Fort St. James on Lake Stuart in the northern interior of what is now British Columbia, but was then called New Caledonia; he is already a chief factor and is in charge of that District. It was over the rich estate left by Mr. Connolly after his death that a certain famous contest took place in the courts of Montreal or Quebec which established finally the legal status of the common law marriage of the fur traders with native Indians when residing in the Indian Country. James Douglas, clerk, who married a daughter of William Connolly and afterward became a

John Work's Journal

---

chief factor at this same Fort Vancouver and still later the governor of Vancouver Island, was also en route for Fort St. James. Archibald MacDonald, clerk, had probably been upon a brief visit to his son Ronald, then a little more than two years of age and in the care of the grandfather, Chief Comcomly of the Chinook tribe residing opposite to Astoria or Fort George, and was returning to either Kamloops or Alexandria. Mr. F. Annance, another clerk, was also bound for one of the New Caledonia posts. Doctor McLoughlin and Thom. McKay were sending their children across the Rocky Mountains to be educated. Finan MacDonald's Kootenay or Spokane wife was starting to meet her husband further up the river and with him to cross the Rocky Mountains for permanent residence.

The route followed by Mr. Work takes him over practically the same line of travel he covered in the previous year and described by him in the journal published in Vol. V. of this Quarterly, except that his destination was the newly occupied trading post above Kettle Falls named Fort Colvile. The route includes The Dalles, Old Fort Walla Walla, the site of Lewiston in Idaho and of the present city of Spokane. At Celilo Falls the botanist, David Douglas, joins the party for the rest of the journey.

This journal furnishes the record of the first grain crops raised in what is now Stevens County, Washington, and of the first litter of pigs born there. No opportunity has been afforded to compare this text with the original journal, which is among the archives at Victoria, British Columbia.

T. C. ELLIOTT.

THE JOURNAL

July 1826

Tuesday, July 5th, 1826.(1) Overcast. showery weather. At about 1 o'clock the Brigade for the interior under the command of Mr. Connelly, consisting of 9 boats six men pr boat, left Fort Vancouver. Messrs A. McDonald, J. Douglas, F. Annance, J. Cortin and J. Work passengers, also their women, and 9 children, viz.- Dr. McLaughlin's family, Mr. F. McDonald's family, and 2 children of Mr. McKay. The cargoes consist of 72 pieces for Ft. Colville, 52 for Thompsons Riv, 60 for Nez Perce, 106 for N. Caledonia, and 1 for York Factory, including private orders. Besides 57 pieces of provisions, 36 of corn, 9 of pease. 9 Ind meal. 3 of grease, for the men, and 12 1/2 pieces for the gentlemen for the voyage. Besides the families' baggage and 4 cases muskets and a trading chest. In the evening encamped on an island,(2) a little below Sand River. The water is very high and the current very strong. Mr. McDonald's boat struck against the end of a tree which went through fortunately the injury was at low water.

Wednesday, 6th. Showery, raw cold weather. Resumed our journey at daylight, and encamped a little below the cascades. Lost a little time repairing the boat that was broken yesterday. Bought a

---

sufficiency of salmon in the evening to serve all (hands) for a day.

Thursday, 7th. Overcast weather some showers. The people were at work at an early hour and proceeded to New Portage(3) with half cargo and (sent) the canoe back for the remainder. The boats and cargoes were carried across the portage and the boats with half cargoes taken to the cascades where we encamped four of the gentlemen stoped with the remainder of the property at the portage. Notwithstanding the height of the water we got up better than we expected. Bought a sufficiency of fine salmon to serve the people two days and very cheap. The Indians are taking a great many salmon. A good many Indians are about the place, but they are very quiet. Kept watch.

Friday, 8 Showery in the morning. In the morning the boats were taken down to New Portage for the remainder of the cargoes and the boats and property afterwards carried across the cascades portage(4) which we left towards evening with a sail wind which continued till we encamped. Some time was occupied in the morning gumming the boats. The portage at the cascades was not so long as when the water was low. Traded enough of fine salmon to serve the people two days. We have enough now to last us till we reach the Dalles.

One of Mr. McDonald's men, J. Cortin, got his feet lamed by which he is hardly able to walk. An Indian slave was employed to go in the boat.

Saturday 9 Fair weather. Continued our journey at an early hour, and encamped a little below the Dalles(5) early in the evening. Had a fine sail wind all day, were detained some time repairing Mr. McDonald's boat which sustained damage by striking a stone. Some Indians visited our camp in the evening.

Sunday 10 Fair pleasant weather. Got underway before sunrise and soon reached the Dalles, and by carrying, lightening and dragging up the boats by the line, got about half way across,(6) where we encamped for the night. There are a great many Indians but a square is formed with the boats round the property. Traded a great many salmon in the evening very cheap.

In the evening Messrs. F. McDonald T. McKy, T. Dears arrived at the other end of the portage with two boats and 18 men and part of the Snake expedition furs from Wallawalla, on the way to Ft. Vancouver, Mr. Ogden(7) and part of the men are gone by the Willamut mountains with horses. The Snake returns will be but indifferent. Mr D. Douglas(8) also came with the party to meet us.

Monday. July 11 Pleasant weather. The boats and property were carried across the portage in the morning (when we) took breakfast - and the chutes(9) which we also crossed, having to make only a short portage on account of the high water and proceeded to the little river(10) above the chutes where we encamped for the night. The Snake party also proceeded on to Fort Vancouver. Messrs Douglas and F. McDonald return with us. J. Confin who got hurt at the cascades was sent back to the Fort. - Some time was taken repairing the boats in the evening. A dog, with a pistol and an axe and some other things were stole yesterday, the pistol and the axe were recovered. There are several Indians about the Dales and about the chutes. I wrote to Mr McLaughlin re-

John Work's Journal

---

questing that he would send one of the Snake men Michel Laporte, to Spokane to act as interpreter for the Kootanians.

Tuesday 12 Warm sultry weather. Continued our route before sunrise and encamped early in the evening about 15 miles above Day's River(11) to gum the boats The current is very strong and there being no wind we made but a short days march. There are a good many Indians along the river, but owing to the height of the water they are not getting any salmon. Bought about 20 at one camp.

The water has fallen about 4 feet since it was at its height. The water appears from drift trees on the shore, to have been much higher some years (ago) than they are.

Wed.y. 12th Fine weather, fresh breeze from the Westward. Embarked before sunrise and had a nice sail wind all day. Encamped in the evening a little below Big Island.(12) A good many Indians along the river, but not many salmon.

Thursday 13 Sultry warm weather. Continued our journey early and had a sail wind part of the day. Encamped in the evening a little above Grand Rapid.(13) Bought a few salmon, to serve the gentlemen. Few are to be got.

Friday 14 Embarked early and arrived at Ft. Nezperces,(14) about 1 o'clock. Sail wind part of the day. The weather very warm. The cargoes are separated, and that of Nezperces delivered.

Satd.y. 15 The weather very warm, though stormy. It was expected that a number of horses that are required could be procured from the Indians at Nezperces, but after different councils, and consultations and speeches on both sides it turned out that a promise had been made to the Nezperces Indians to go and trade on their lands which if not fulfilled would disoblige them and make them less inclined to trade.

Sunday 16th Stormy but warm weather. The forepart of the day occupied with more councils and making presents to the Indians as return for some horses which they had presented before. 7 or 8 horses were afterwards traded,- It appeared however that the number required could not be got in time, and the trading trip up Nezperces River was determined on.

(Learned) that the F. Head trade would not suffer but as little as possible by the late arrival of the boats at Colville, Mr. Kittson(15) with the Colville and Mountain boats is to proceed at once to Colville while I am to accompany the trading party and after completing the trade to accompany the party across land and proceed to Colville where I expect to arrive as soon as the boats. By this method no time will be lost whereas had all the Colville men gone to the horse trade the Flat Head summer trade would have been lost as it is it will be too late but it cannot be helped.

Monday 17 Stormy in the night and blowing fresh during the day but nevertheless warm. The outfit for the horse trade was packed up in the morning and about 3 o'clock in the afternoon the

John Work's Journal

---

party consisting of Mr A. McDonald, J. Douglas, F. Annance and myself, an interpreter and 28 men and the Indian chief Charlie embarked in two boats and proceeded till a short way up the Nezperces River(16) where we encamped for the night. Bought two or three pieces of salmon from the Indians.- I am directed if possible to purchase at least 60-70 horses, more if possible, 20 of them are for Ft. Colville, the others to go to Okanogan. Mr. D. Douglas(17) accompanies us to make collections of plants.

Tuesday 18 Weather warm but fine breezes. Continued our journey before sunrise, and had a good sail wind all day. Camped at night a considerable distance below Flag River.(18) The current very strong and the water high, though it has fallen about 8 feet since its greatest height this season. Several Indian lodges along the river brought a few pieces of fish and half dry salmon. Salmon are very dear here. The Indians have few to spare.

Wed 19th Very warm sultry weather no wind. Embarked early, passed the Flag River about 3 o'clock and encamped late in the evening a good way above it. - Got very few salmon though we saw a good many Indians. Salmon is very scarce, Traded a small sturgeon.-were detained some time by the Indians offering horses for sale but they would not accept the prices offered. A party of them accompany us on horse back along shore.

Thursday 20 Clear very warm weather very little wind. Proceeded on our journey early in the morning and encamped early in the evening at a camp of the Pelushes, Colatouche chief, in expectation of buying some horses, two were offered for sale, but the prices asked were far too high indeed the Indians appear not to be very fond of parting with them. - Salmon are also very (dear) we got a few pieces of dry and half dry. Since we left the Fort we have not got in one day a sufficiency for a day's rations for the people. however what little we do get still saves a little corn.

Friday 21. Very warm sultry weather. At noon the thermometer in the shade was 94 degrees, and 95 degrees shortly afterwards. We were detained waiting for the Indians who were seeking some horses to trade, but when they arrived with them, only one small paltry thing was offered and the price demanded could not be given, so after losing all our morning we continued our route not in the best humor. Passed several lodges and purchased a sufficiency of fresh salmon for nearly a days (living) for the people, besides some dry ones to serve the party going overland with the horses.- Encamped in the evening a little above Le Monte(19) (which we passed about 4 o'clock.) at an Indian camp where some horses (we) expected will be got, but we will probably be detained part of the day tomorrow. - Numbers of the Indians some of whom refused the prices offered them below are accompanying us along shore with their horses.

Satd.y. 22 Light clouds, very warm, though a little breeze of wind. Did not move camp today. They were off in the forepart of the day collecting their horses, but they would not trade till the afternoon, when 8 horses were purchased from them at from 14 to 19 skins each They were all young horses two of them just \* but not well broke in. They are to trade three more horses tomorrow morning. Traded 13 fresh salmon which made\* a days rations for the people. - The tardiness of the Indians trading their horses is really vexing, they are not keen about trading.

---

Sunday 23 Oppressively warm weather. Thermometer 100 degrees in the shade at noon. We were detained till near evening for the Indians who were off seeking their horses, when they returned they were traded, and we struck our tents and proceeded up the river, and stoped at another lodge for a considerable time and traded a good horse, another was offered but he was too small and we would not take him. We then continued up the river and encamped at another lodge where the Indians promise to sell us some horses tomorrow. - The Indians seem very indifferent about trading their horses, it is really provoking to be detained so long with them. - especially when so little time is to spare.- We have now 12 horses 8 yesterday and 4 today, 11 of which we traded from the Dartry band.

Monday 24 Sultry warm weather. Did not move untill afternoon as we waited till the Indians collected their horses when we bought four one of which a small unbroke-in one was killed. - In the evening proceeded up the river to another Indian camp and stopped for the night as some horses are expected in the morning.

Tuesday 25. A breeze of wind the weather cooler than these days past. Bought two horses from the Indians in the morning and started after breakfast and stopped at different lodges as we passed and bought four more horses, making 6 today, all pretty good at 18 to 19 skins each. The Indians have a good many horses but they are not eager to part with them. - Salmon very scarce, we hardly get what fresh ones serve the mess.

Wedy 26 Weather pleasant. Continued our rout after breakfast, and arrived at Charlie's lodge a little before the forks in the evening. Traded two horses during the day.-

Thursday 27 A little breeze of wind pleasant weather. Traded 8 horses at Charlie's lodge and in the evening came to the Forks(20)

where we found upwards of 200 Indians (men), and two principal chiefs Alunn and Towishpat. Gave the chiefs and some of the principal men a dram of mixed liquor and a smok in the hut the others got a smok and a little tobacco out of doors. Towishpal and another principal man cut noses both presented two horses immediately on our arrival. We are under the necessity of accepting their presents in order to please the chiefs though we have to give a present in return which makes the horses much dearer in general than were we to trade them. - The Indians have been assembled for some days and are now rather short of provisions.

Friday 28 Warm weather, a little wind afterward. No trade was made untill after breakfast, when the Indians began to come with horses and some chiefs presented more horses which were paid for at a dearer rate than usual in order to encourage the others, a brisk trade was commenced about 10 o'clock and continued untill 4 o'clock. 37 horses were traded one of which was killed. The price was generally 19 or 20 skins few exceeding 20. They were mostly fine horses. Our blankets and beads are getting short, which was the cause of the trade getting slack towards evening. Blue cloth does not take well with them.

Saturday 29 Pretty cool pleasant weather a shower in the night. Not having the proper articles blankets and beads in plenty the trade went on but slowly, only six horses were traded, the Indians are doubtless debarred from trading a little by a dance which is stirred up by a Schulas(21) chief who arrived yesterday with (?). However we are promised a few horses tomorrow, when we shall complete our trade and be ready to start the day following. -

Sunday 30 Warm weather rather sultry. Early this morning a quarrel took place between the Interpreter and the Indian chief Charlie. It appears that an Indian woman who passed for a medical character, had been looking at one of the mens hands which was sore and although she exercised none of her skill either in the application or otherwise yet she came to demand payment and applied to the Interpreter who refused her. Charlie interfered when some words took place and the Interpreter was called a dog, he applied the same epithet to Charlie who took up his gun and gave the other a blow, a scuffle ensued, and the noise was the first intelligence I had of the affray, when I ran out and found them wrestling in the other tent and the Indian getting the better, they were separated and the Indian again flew to his gun which was taken from him several Indians had collected by this time, Charlie was now asked was this conduct a return for all the kindness and attention that had been shown him, he replied that he had been called a dog, and that he could not bear the insult, he remained sulky and took up another gun which was also taken from him, an Indian then took him away, Shortly a message came for a yard of tobacco for the Indians to smok and that their hearts would be good. Shortly after another message came for 2 fathoms more and 20 balls and powder, this was refused and word sent to the chief that we wished to have an interview with them Toupe came, but Charlie came accompanied by the whole of the Indians several of them armed and took his station a short distance from the tent where they formed a circle round us. He was black with rage. We immediately went up to him and asked what he meant, and was he not ashamed to begin a quarrel in such a manner about an old woman. After some time sulky silence he replied that his heart was bad towards nobody but Toupie, and that he blamed him for not getting a better price for their horses, he was immediately informed that the accusation was false, that Toupe did nothing but what we desired him, they were also made to understand that, it was to trade horses and not to fight that we came there, but that if no better would do we would fight also and that as Toupe was under our protection and in fact one of ourselves any insult offered him would be offered to us and would be resented. - A demand was again made for the tobacco and that then all would be well and that the horse trade would immediately commence. As we were situated, with very little ammunition, ourselves on one side of the river and the horses with part of the men on the opposite side, two of the horses astray among those of the Indians, and two others already paid for not received, and also the great risk we ran of having the others stolen, it was considered advisable to comply with their request except the ammunition, rather than get into a quarrel as we had much to lose and little to gain, The tobacco was accordingly delivered the whole of the Indians smoked and then dispersed.- Charlie is certainly a notorious scoundrel and I consider the original of this quarrel as only a pretext. He sold a horse yesterday and was paid the price agreed upon, but he afterwards asked a blanket more which was refused, this I conceive was in a great measure the cause of the dispute, and the poor Interpreter was the only one he would venture to begin with, he has however been very useful to us since the

---

John Work's Journal

---

trade commenced harranguing the Indians to trade their horses, and ever since the dispute he has been again telling them to trade more.-The other chiefs and principal men except (Touispel) evidently wished to make the most of the affair and get as much as they could by it, Old Alumie and his men are particular. however they were disappointed as they got only 3 yds. tobacco and a few small pieces more besides the yard first sent them. and even this was given with reluctance, but we could not well do otherwise. Traded five more horses which finished our goods, found the two that were astray and received the two we had paid the Indians for and crossed the river to where the horses are in the afternoon - Our whole trade amounts to 79 horses, two of which have been killed.

The Indian chiefs crossed to pay us a visit in the evening, and smoked. They seem to regret what has taken place, Charlie himself is ashamed that he should have quarreled about such a trifle. During the dispute, the Indians were all threatening to take back the horses.

A few young men arrived in the evening from the buffalo, from them it was heard that the F Heads are now on their way to meet us to trade. Peace is again made between them and the Pee-gans.

Monday 31st. Pleasant cool weather. Having everything in readiness, the horses that are for the different places pointed out, after an early breakfast Messrs F McDonald. J. Douglas and myself accompanied by six men set out overland with the horses 79 in number including 2 bought a few days ago from W. Walla by Mr F. McDonald, we encamped in the evening a short distance 15 or 20 miles from flag(22) River. Mr. D. Douglas accompanied us on his botanical pursuits. - Mr A. McDonald took his departure for W. Walla with the two boats and the rest of the men at the same time we came of - The Indians and us were good friends when we parted.

Augt. 1826. Tuesday 1st. Cool pleasant weather. Some rain with thunder and lightening in the night. Kept a guard three men at a time on the horses all night. The horses took fright in the night and started but they were stopped and remained quiet till the morning, when after allowing them to feed a short time we proceeded on our journey, and stopped again a considerable time at noon to allow them to feed and rest, and encamped in the evening pretty late, near where we encamped last year.- The horses are generally driven slow.

Wid.y. 2nd. Weather pleasant but warmer than yesterday. Proceeded on our journey and ( ? ) the Spokane woods before breakfast, but missed our way crossing to the plain where we separated last year and fell on the Spokane River below the Chutes(23) later in the evening where we encamped for the night. The greater part of the day the road was stony and bad for the horses feet. On entering the woods we kept too far to the Eastward and missed the plain. The horses were allowed to feed and rest in the middle of the day.

Thursday 3rd Pleasant weather. Continued our route at an early hour and arrived, through a bad piece of road along the river, at the old Fort(24) at Spokane before breakfast time. We had separated the horses and took those for Fort Colville across the river and after breakfasting and trading

John Work's Journal

---

some salmon from old Finlay(25) Mr. Douglas proceeded on his journey to Okanagan with the 59 horses allotted for that place and N. Caledonia, and we pursued our route with 20 horses for Ft Colville, and encamped at a little river(26) in the woods late in the evening. Had we not missed the way Mr. Douglas would have parted with us yesterday, his coming to Spokane will cause the loss of about half a day however it is perhaps as well as the men know the road from Spokane and are not sure of it the other way. Mr. D. has four men with him.

Friday 4th Warm but pleasant weather, cold in the morning. Proceeded on our journey at an early hour and arrived at Ft Colville before sunset, part of the road was very bad. Mr Dease(27) was happy to see us, he and his people all well. One of the horses was jaded and a man was left with him to bring him home in the morning.

Saturday 5 Pleasant mild weather cool in the morning. Early in the morning the man who remained behind yesterday arrived with the two horses. The crops(28) at Fort Colville do not appear to realize the expectations that were entertained for them. The potatoes appear pretty well, barley midling, no wheat at all came up and only a few stocks of Indian corn green pease but indifferent. The kitchen garden stuffs turnips cabbages etc only so so. The soil appears to be too dry.- The moles are destroying the potatoes. The horses cattle and pigs very fat, but the grass is getting dry.

Sunday 6th Pleasant weather. Visited the falls(29) today, where the Indians are fishing. They are now taking about 1000 salmon daily. They have a kind of basket about 10 ft long 3 wide and 4 deep of a square form suspended at a cascade in the fall where the water rushes over a rock. the salmon in attempting to ascend the fall leap into the basket, they appear to leap 10 or 12 feet high. when the basket is full the fish are taken out. - A few are also taken with scoop net and speared.

Monday 7th Weather as yesterday Mr. Kittson arrived at the lower end of(30) the Portage with their (three) boats and the outfit for Colville and passengers and their baggage. He has been ten days from Walla Walla to Okanogan and ten from Okanogan to this place in all 20 days. Horses were sent off and part of the property brought to the fort.

Tuesday 8. Pleasant mild weather. The remainder of the boats cargoes brought to the Fort, the outfit examined and found all correct and in good order. No certain intelligence of the F. Heads as yet, we are now waiting for them, the sooner we hear of them now the better

Wedy 9th Heavy rain with thunder and lightning in the night and all day.-

Sunday 13. Three Pendant Oreille Indians arrived from Pendant Oreille River and report that a young man had arrived from the Plain(31) who says that a few of the F Heads have arrived at or near the Chutes, that the others are in the plains farther off accompanied by a party of Americans, that they are indifferent whether we go to trade with them or not, that they have very little to dispose of, having traded with the Americans. As this thing is second hand and the Indians do not agree among themselves little reliance can be placed upon it, particularly as a young man a F.

John Work's Journal

---

Head, who had left his tribe in the plains some time ago, was at the Fort two days since, and told us that his people were on the way to meet us but made no mention of having seen any Americans.

Monday 14th. Cloudy mild weather. Six men and a boy were sent off to make a road across the portage to the Pendant O'relle River(32), through which we had to pass on our way to the Flat Heads.

Made up an outfit for the F Heads and Kootany summer trade for the purpose of starting tomorrow though we are not certain whether the Indians are arrived, if they should not we will probably be short of provisions.

Tuesday 15th. Pleasant mild weather Supposing that the men did not have the road cut through the woods we deferred starting till tomorrow. Some Indians arrived and told us they had made but slow progress yesterday.

Wedy 16th. Warm sultry weather Set out accompanied by Mr. Kittson, and 7 men which with the 6 ahead making the road makes 13, to mak the summer trade at the F. Heads and Kootanies, We have 9 horses loaded with the articles of trade, provisions, gum etc - to repair the canoes.- Mr. Kittson and I with 12 men are to proceed to the F. Heads and make the trade there, and a man is to cross into the Kootenay country to tell them to come and meet us to trade at the Lake(33) on our return.

Did not make a long days march. encamped in the afternoon at a small river,(34) where there was a little place for the horses to feed. The distance made today was about 15 to 20 miles. The course from the fort till we struck off the Spokane road(35) nearly South 8 to ten miles. The remainder of the day it was about S. E. by E 10 to 12 miles. The road was in general good and lay through clear woods and small plains, except a piece near the fort called the Cedar, where the woods are very thicketty and the ground swampy and boggy and a deep gully of a river to cross. There is a small lake(36) close by our encampment.

Thursday 17th Warm weather. Proceeded on our journey before sunrise and not finding a place that we could stop, though it was hard on the horses, did not encamp till near sunset, when we stopped at a little river(37) on the edge of a large plain a short way from the Pendant Oreille River. The horses are much fatigued. The road for a short distance in the morning was pretty good, but afterwards it was very indifferent. The woods very thicketty, often fallen trees across the road, (though the men had removed a good many). The country very rugged a continual succession of hills some of them steep, and the road intersected by a number of small brooks and deep gullies some places the ground boggy, Though there is not much water in the little brooks at present yet from the height of the rubbish on the bushes along their banks they are totally impassable for horses during the high water not long since. It would be needless to attempt this portage in the spring when the snow is on the ground as it would be impracticable with horses. During this days march even at this season there is no place to encamp where more than a very few horses could

John Work's Journal

---

feed without the risk of their being lost in the woods. The distance made today I judge to be from 40 to 45 miles, in about a S. E. by E. course.

Friday 18 Cold with a thick fog in the morning, but clear pleasant weather afterwards. Had the horses loaded and started at sunrise, made the ascent of the plain, and arrived at the Pendant Orile camp(38) on the bank of the river near where the canoe sent down in the Spring was deposited. Here we found the men who had been making the road. The remainder of the day was occupied repairing the canoe, as the whole of the people are too much to embark in the canoes 5 men were sent on first to where the other canoes were deposited in the Ceur d Alen portage. Traded 32 beaver, 3 (appichimous) and some berries and roots from the Indians.

This plain is all inundated in the season of high water. where we slept last night the water had been more than 2 feet deep in the high part of the plain and from the bank of the little river at present the water has fallen at least 16 feet. This extensive plain is now clothed with a fine crop of grass.

The Indian who arrived some time ago from the Flat Heads, is now at Spokane. All we can hear from the others is that the old chief Le (Brute) and party of F Heads and Pendant Oreill are waiting us near the Chutes.-(39) that the rest of the tribes are in different parties farther off wintering their horses, that they had seen a party of Americans during the summer, said to be loaded with trading goods and that they were going to build in the fall on the upper waters of the Missouri at a place called the Grand (T-) No intelligence as to whether any of the ( ? ) or freeman were with them. It is said that the Indians have been unsuccessful and have few horses and little meat. A fine Sotiax who came from there is off a few days ago to the fort with his (hunt).

Satd.y. 19 Warm pleasant weather Embarked and proceeded up the River before sunrise and near dark arrived at the (Ceur de Alan) portage.(40) The men who started yesterday are at the portage before us. The current was very slack all day in the afternoon we passed a place called the island portage(41) where everything had to be carried over a small rock 15 or 20 yards. Two rocks divide the river here into 3 narrow channels down which the water rushes with great violence at low water the middle channel is dry.

The distance made today may be about 45 to 50 miles. For the first 25 miles or to near the Portage des Isle, the course South, afterwards it changed to the S. E.

The River is in general about 7 to 900 yds wide from the marks in the bank the water has fallen 10 to 12 feet. The country hilly, but many points of fine meadow ground along them.

Before we started in the morning sent off an Indian (Bascrorhy) who accompanied us for the purpose, and Ribets boy (Francis), to the Fort with the horses. Sent letters by them to the fort.- Left the saddles and (appichimans) in charge of the little chief till our return.

Sunday 20 Light clouds warm weather. By daylight the men were at work, brought out the canoes

John Work's Journal

---

and by 1 or 2 o'clock had given them a temporary repair when we embarked and encamped in the evening at the lower end(42) of the lake. The canoes had been very badly laid up in the Spring, one of them was entirely unserviceable and the other two much ( ? ) by the supports giving away. The paddles could not be found.

Monday 21 Weather as yesterday. Embarked at daylight and encamped in the evening below the Heron Rapid.(43) The canoes had to be gummed, some time was also lost in the day by having to stop to gum one of the canoes. Saw some Indians at the upper end of the lake, among whom were two Nezperces lately arrived from the F. Head camps from these we learned that the F Heads are all at the Horse plains and that a lodge of Americans are with them, that our ( ? ) ( ? ) are there also that the American is trading but that he has only tobacco. The Nezperces camp is a little farther off at the camass plains and that they have a few beaver, they report that the Indians have very little provisions.

In the morning sent Mortin Kanauswapu, the only man who knew the road across the Au-platte(44) portage with some tobacco to the Kootenay chiefs and to desire them to come and meet us at the lake six days hence to trade. In the event of Mortin's not finding the Indians he is directed to wait for us unless he gets short of provisions in which case he is to leave a mark indicating that the Indians could not be found and that he is gone to the fort. - He is supplied with a gun and ammunition and some little things to buy provisions.

Tuesday, 22 Cloudy but warm weather. Embarked at daylight, and encamped in the evening late above the cascades. We were delayed guming the canoes and taking up ball shot and some wire work that were hidden below Isle of Pine in the Spring, The water had been over the place, and one of the bags of ball was found scattered among the sand and gravel. The other bag which was entirely rotten and the box containing the (wire) ( ? ) ( ? ). Got the ball picked up as well as we could, and brought it with us, and hid the wire in another place.

Wedy 23rd Cloudy lowering weather, showery all day. Embarked early and arrived at the Chutes(45) near sunset, and had the baggage all arranged and the canoes taken up. - No Indians nor any appearance of any having been here this season.-

Thursday 24 Cold weather with fog in the morning showery afterwards. Set out in the morning accompanied by two men, Chalifoux and Dechamp to find the Indians and apprise them of our arrival, though we expected to find some encamped at Thompson's plains, we did not we any lodges till near the big rock(46) below the F. Head fort where we learned that the Indians were encamped at the Horse plains. here I sent back Dechamp and borrowed two horses for Chalifoux and myself and proceeded to the camp where we arrived in the afternoon and found about 50 lodges Heads and Pendant Oreille, and four chiefs. LeBrute, Gras Pied, Grand Visage and Bourge Pendant Oreille. I stopped at Le Brute's lodge, The old man was glad to see me and immediately gave me to eat. - The other chiefs and the principal Indians soon assembled and smoked, during which we were employed giving and receiving all the news on both sides. The old chief said he much regretted that this year his people had been unfortunate having been able to procure but a

John Work's Journal

---

small quantity of provisions and very few furs. That the cause of the scarcity of provisions was owing to the place being full of other Indians who disturb the buffalo. They have had no war except some horse stealing skirmishes in which they killed one Indian and lost one of their own men. - A party of the F. Heads had fallen in with some of the Snake deserters and some Americans, two of the deserters, J. Guy and Jacques accompanied them to some of the camps and Guy presented the two chiefs Gras Pied and Grand Visage with some tobacco and a little scarlet as from the chief of the American party Ashly,(47) whom they said wished to see the Indians, and that he was (then) off for a large quantity of supplies. - A few F Heads, Nezperces and 2 Snakes in all 22 have gone off to see them. - A considerable party of the natives under (Grune) and Red Feather(48) are at (Revine) de Mere, but the others say they have nothing to trade and that their horses are very lean, that prevented them from coming in.

A former deserter, Jacques, states that the Americans last Spring took out(49) 200 horse loads of beaver, that they are to return with 150 horse loads of goods and that another company is coming in with a quantity equally as large, and that they were told that 3 and afterwards 5 ships were to come to the Columbia or near the river. This report was also circulated among the Indians, but we undeceived them.-

Friday 25 Thick fog in the morning clear fine weather afterwards. The chiefs issued orders last night and again early this morning for all those that had anything to trade to be ready to start for our camp at an early hour, but though the horses were all assembled at the tents last night and a guard set upon them (as Blackfeet Indians are known to be in the neighborhood) yet they had strayed off through the plain, and on account of the fog could not be collected till about 9 o'clock when the whole was soon loaded and underway. One of the chiefs accompanied us ahead and we arrived at our camp(50) some time before the others, who reached it in the afternoon, and after smoking and some conversation, trade commenced and continued till it was getting dark. - The Indians from whom I borrowed the horses had fresh ones to change them with when I came back to the lodges. - The men have been busy employed at the canoes and have nearly completed repairing them

Satd.y. 26 Cold in the morning clear fine weather afterwards. Trade was resumed at an early hour and the whole finished by breakfast time, when the men were set to to tie up the things, and a little past noon we embarked and encamped in the evening a little above the Isle de Pine rapid.

Had a long conversation, with the principle Indians, and made arrangements about the time they would be coming to meet us in the fall which they said would be the usual time. Each of the chiefs got a present of 40 balls and powder and a little tobacco, a small present was also sent to the absent chiefs, and they were strongly recommended to exert themselves hunting beaver and also to bring in provisions. They are all well pleased.

A report has been spread among the Indians that this was the last time we are to trade with them. they say they were told by a young man from below who heard it from some white men. The Americans it was added were now to get the country. This they were told was false. We applied to

---

them to bring in our deserters who are with them.

The trade is inferior to that of last year in everything. There were only 221 beaver, 90 ( ? ) bales of meat, 66 appichimens, very little dressed leather, and some cords, and 5 lodges.

Sunday 27 Light clouds fine pleasant weather. Embarked before sunrise and reached the Kootenay portage(51) at the lower end of the Lake in the evening, where we found Morton and the Kootany chief with 12 or 13 of his people, the evening was employed smoking and giving and receiving the news. They are not satisfied because the whites did not go to their lands to trade as usual. They say messages were sent from the fort for them to go and trade there. - They had a good many beaver. They passed the summer in the upper waters of their own river.

Monday 28 Clear pleasant weather. Commenced trading before sunrise, and by breakfast time had purchased all the disposable articles. The trade is good, better by far than last year, and amounts to 382 beaver & 12 damaged do. 220 Rats, 20 dressed skins & 25 Deer skins besides some cords etc. They have a good many rats and dressed skins at their lodges which they say on account of the leanness of their horses they could not bring with them. It was there fore deemed advisable that Mr. Kittson should accompany them with a supply of trading articles and purchase the whole, they are to lend him horses to go & return three men accompany him & Pierre L. Etang & a man waits for him with a canoe till he returns, while I with the other two canoes full loaded proceed to the Pendant Oreille portage,(52) and send of for the horses, by this means the trade can be finished without loss of time as the remaining canoe will will be still at the portage by the time the horses arrive from the fort. - Mr. Kittson will probably proceed down the Kootenay to examine(53) it and send back the men to the canoe, perhaps one man an Indian will accompany him, he is to be guided by circumstances, he will still reach the fort before us. - Accordingly about 2 o'clock we both took our departure and encamped with the canoes a little below the Cour de Alan Portage.

Tuesday Clear fine weather. Embarked before daylight and arrived at the Portage a little past noon, and immediately sent off the men to the fort(54) for horses. The Indians visited us to smoke and get the news. Traded a few beaver skins. No news from the fort. Had the baggage all stored away and covered and the canoes put bye in the evening.

Cloudy cool weather. Had all the meat(55) opened out, and assorted and packed up in bales of 90 to 100 lb. each for the horses. The meat is in general in fine order, only a few pieces we found a little wet and damaged. Cords were also cut, and something done to arranging the saddles, etc., and putting them in order. Several of the Indians revisited us some of them got a little ammunition. The chiefs and a party are going off to the buffaloes. The Indians are wishing to trade camass, but having no bags to put it in and as we would have to hire horses to take it to the fort which would make it very dear I declined trading any. The Indians have horses themselves but are too lazy to go to the fort.

Thursday 31 Cloudy, fine weather. The men employed arranging the saddles &c., & preparing the pieces to be in readiness when the horses arrive. A few Indians visited us during the day, but had nothing to trade.

Sept. 1826 Friday 1 Thick fog in the morning, clear fine weather afterwards. The men employed us yesterday. Traded a few appichimens, some dressed skins and a robe from the Indians. The men arrived with the horses late in the evening. Little news from the fort.

Satdy. 2nd Thick fog in the morning, clear fine weather afterwards. After breakfast the canoe which was left at the Kootenay Portage arrived. Mr. Kittson made a pretty good trade in leather, & as was intended has gone down the Kootenay River to examine it. The men were immediately set to to arrange the pieces brought in the canoe, and application made to the Indians for the number of horses required in addition to those brought from the fort, but it was found that it would be too late before everything could be arranged and the Indian horses collected to start, therefore we deferred moving till tomorrow. The horses sent from the fort are short 2 of the number mentioned by Mr. (McDonald.)(56) The men say all they brought from the fort are here, as there is no list of the horses I can't tell the ones that are missing.

Sunday 3rd. Thick fog in the morning clear fine weather afterwards. On account of the thick fog the Indians were some time of collecting their horses and it was late before they arrived with them, it was 10 o'clock when we started and we encamped about 2 at the foot of a hill, good feeding in a fine meadow for the horses. We made but a short day's journey, but we had to put up or it would have been too much for the horses to cross the hill to another place to encamp. The road was pretty good mostly through plains but a piece of thick woods. Some places the road is boggy.

Monday 4 Cloudy and foggy in the morning clear afterwards. The people collected the horses at daylight, but before they were loaded it was about 7 o'clock, where we entered the woods and commenced ascending the hill, the top of which we did not reach till past noon, and it was near sunset when we encamped on the Kettle Fall little river.(57) In mounting the hill the woods are generally thick, the road pretty good but in many places very steep and very laborious for the horses to ascend, gullies in many places cross the road. In descending on the West side it is also pretty steep and the road in some places stony. At two or three places in crossing the hill a little off the road there is water and a little herbage for the horses, but it would be difficult to keep a (large band) for the night. The summer and fall is the only season that this road is practicable with horses. The horses are a good deal fatigued.

Tuesday 5 Foggy in the morning fine weather afterwards. Had the horses collected at an early hour and started a little past sunrise, and encamped a little past noon. It would have been too much for the horses to go to the fort after the hard day they had yesterday. Had two bales of leather that got wet by a horse falling in a swamp yesterday evening, opened and dried, and in the evening I left the men, and arrived at the fort after sunset, the men are to follow in the morning.

John Work's Journal

---

Wedy 6th. Clear fine weather. The people with the horses and property arrived in the forenoon, where the loads were received and all opened and examined and in good order. The trade stands as follows.

Flat Heads. Kootanians.

213 large beaver 297 Large Beaver

54 small "95 Small "

21 pap "6 Large Damaged Beaver

6 lb. (Coston)6 Small ""

71 Appichimans 4 lb. (Coston)

71 ( ? )

1 Lodge

22 Pow. flasks

7 Garnished shirts

3 Plain"

4 Pr. Leggins

2 (Gowns)

Cords, etc.

Thursday 7 Cloudy mild weather. The people employed at the building.(58) Settled with the Indians who lent us the horses at Pendant Oreille River, had 72 skins to pay, 17 horses and one Indian 4 skins each.

Satdy 9 These two days past Mr. Kittson and I busy taking the inventory. Preparations are making for the express boat to the mountains starting tomorrow. Mr. Dease means to accompany it with his family, and to send them across if he understands there is a likelihood of himself following them.

Sunday 10 Clear fine weather. The express boat(59) started in the evening deeply loaded with passengers, baggage and provisions. There are in all 20 passengers, and 23 pieces of provisions, corn, grease and dry meat. - Mr. McDonald(60) and family, Mr. Dease and family, Dr. McLaughlin's family, (J Cahn,) (F McKye) 2 boys & old (A Popt) passengers -

Monday 11 Clear fine weather, but cold in the night. The men employed at the building. I was arranging the papers.

Tuesday 12 Weather as yesterday. Employed as yesterday. Rivet went off to Pendant Oreille to hunt roots.

Weddy 13 Fine weather. The boat which started on Sunday returned with Mr. Dease and his family, he left by mistake a bundle of letters and papers of importance for which he had to return, and finding that the boat was too much submerged he brought back his family. He went off again immediately. Two pieces of provisions were brought back.

Thursday 14. Cloudy fair weather. Had two men employed repairing a canoe to go off to examine the Pendant Oreille River.

Friday 15th. The men employed as yesterday. two Indians with the two men are to accompany me, but one of them is off today and will not be back till tomorrow so that we will have to defer starting till the day following. It is reported among the Indians that a woman is killed at a small river on the opposite side of the Columbia, it seems she was gathering, nuts, and an Indian who was hunting took her for a bear crawling among the bushes, and shot her. One of the sows had five young pigs(61)

last night.

1. An evident error, as July 5 fell on Wednesday in 1826. This was overcome by Mr. Work later by

giving two days to July 12.- E. S. M.

2. Probably Lady's Island below Washougal; called Diamond Island by Lewis and Clark.
3. Probably means that at this high stage of the water they followed a channel behind Hamilton or Strawberry Island and carried goods and canoes across the Island to avoid the Garrison Rapids.
4. The regular portage beginning just below Sheridan's Point and ending at the cove or bend above the Cascades; practically where the railroad is built today.
5. Probably where the City of The Dalles now stands.
6. This portage was on the Oregon side from Big Eddy to the head of Ten Mile Rapids, nearly six miles. Here stood the village of Wishram of which Washington Irving wrote in his "Astoria."
7. Consult page 364 of Vol. 10 of the Oregon Historical Quarterly as to this. Peter Skene Ogden, with Finan McDonald Thos. McKay and Thos. Dears, had been trapping and trading in Southern Idaho.
8. David Douglas, the botanist. Consult his own account at page 356 of Vol. V of the Oregon Historical Quarterly.
9. Celilo Falls.
10. The Deschutes river.
11. John Day river in Oregon.
12. Blalock Island, also known as Long Island to the fur traders; this camp probably at "Canoe Encampment Rapids," so known to this day.
13. Umatilla Rapids.
14. Fort Walla Walla, at mouth of river of same name.
15. William Kittson, who came to the Columbia district in 1818 and died at Fort Vancouver during the early forties. His brother was Norman Kittson, the millionaire of St. Paul, Minn., and financial associate of J. J. Hill.
16. Snake river
17. For Mr. Douglas' own account of this journey consult pages 357-61 of Vol. 5 of the Oregon Historical Quarterly.

18. The Palouse River; known to the traders also as Pavion River.
19. Almota, Whitman County, Washington; an Indian crossing place; see note on page 89 of Vol. V. of this Quarterly.
20. Junction of Snake and Clearwater rivers; their camp probably on north side of Clearwater opposite present site of Lewiston, Idaho.
21. Cayuse?
22. Camp probably near Uniontown, Whitman County, Wash.
23. They reach the Spokane River at mouth of Latah Creek below the Falls.
24. They followed the south side of Spokane River until opposite the abandoned buildings of Spokane House. Consult note 145, page 279, of Vol. 5 of this Quarterly.
25. Jacques Raphael Finlay, who had built or helped to build this trading post in 1810.
26. Probably Chimakime Creek.
27. Mr. John Warren Dease, then in charge of Fort Colville.
28. A crop of potatoes had been raised here in 1825; this is the record of the first yield of grain on Marcus Flat in Stevens County, Wash.
29. Kettle Falls; the method of fishing here described was carried on within the memory of present residents of that locality, with marvelous success.
30. The trail used by the fur traders at this portage can still be seen; it is on the East bank.
31. Thompson's Prairie, Montana.
32. The trail or road for pack horses from Fort Colville across the Calispell Mountains to the Pend d'Oreille river at point near Cusick, Washington. Consult pages 147-8 of Vol. 1 of Simpson's Journey Around the World for a description of this trail. The fur traders had not used it before this time.
33. Pend d'Oreille Lake.
34. The Little Pend d'Oreille River.

35. The road leading to Spokane House, which crossed the Colville river just above Meyers Falls; this trail continued eastward through present site of city of Colville.
36. Probably a pond on section 3, township 34 north, range 40, E. W. M.
37. Probably a stream now mapped as Tacoma Creek, which empties into the Pend d'Oreille River.
38. Near the mouth of the Calispell river, where the Indians gathered to dig camas.
39. Thompson Falls, Montana.
40. The Sinecateen crossing of mining days, where the trail from Spokane to the Kootenay country and the Clarks Fork country crossed the river; nearly opposite Laclede station of the Great Northern Railroad of today.
41. Albeni Falls, just above Newport, Wash.
42. Sandpoint, Idaho.
43. Heron, Montana; see note 123, page 265, Vol. V., this Quarterly.
44. The portage from Pend d'Oreille Lake to the Kootenay river at Bonners Ferry.
45. Thompson Falls, Montana
46. Bad Rock, just below Eddy, Montana.
47. Gen. Wm. H. Ashley; see page 247 et seq. of Vol. 1. of History of the American Fur Trade by H. M. Chittenden for sketch of his career.
48. This chief was one of Peter Skene Ogden's heroes; see chapter 2 of the book, "Traits of American Indian Life and Character," by a Fur Trader.
49. That is, to St. Louis.
50. At Thompson Falls
51. Near Kootenay Landing, Pend d'Oreille Lake.
52. Mouth of Calispell River again, near Cusick, Wash.
53. For previous attempt to examine the Kootenay River consult this Quarterly, Vol V., p. 177-8.

54. Fort Colville.

55. Dried buffalo meat purchased from the Flatheads.

56. Finan McDonald, then at Fort Colvile.

57. The Colville River.

58. Fort Colvile was staked out by Governor Simpson in April, 1825, the timbers framed during the summer of 1825, and actually built in spring and summer of 1826

59. The express boat bound for Boat Encampment at Canoe River, there to meet the officer returning from the annual meeting of the officers of the Hudson's Bay Company at York Factory or elsewhere, bringing the mail and orders for the Columbia District for the next year.

60. This is our last mention of Finan McDonald in the Columbia District; he is returning across the Rocky Mountains with his family. He came to the Columbia with David Thompson in 1807 and had been here continually since then.

61. This mother was brought from Fort Vancouver by canoe route in a crate in March and April of this year, 1826; in her company was a heifer. See page 284, Vol. V., of this Quarterly.

From Washington Historical Quarterly, XI, 1920

#### JOURNAL OF A TRIP FROM FORT COLVILLE TO FORT VANCOUVER AND RETURN IN 1828

The following document by John Work is a reproduction of a copy (of the original) now on file at the Bancroft library, being pages 222 to 240 of Pacific Mss., C30, which the assistant librarian, Mr. Herbert Ingram Priestly, has kindly furnished.

The manuscript, as evidenced by the copy, appears to have suffered from the ravages of time, and several portions are either missing altogether or too illegible to be deciphered with certainty. In such cases the editors have supplied corrections or additions thereto which they have enclosed with brackets and placed in the body thereof.

Attention is also invited to the announcement that other portions of the Work journal will shortly appear: one covering a trip southward in 1834 in the Oregon Historical Society Quarterly; another describing a journey to the headwaters of the Missouri in 1831-32, by the department of history of the University of Montana.

William S. Lewis.

Jacob A. Meyers.

[May, 1828.]

[Page 222.]

Tuesday 20th. Between 3 or [and] 4 o'clock in the afternoon left Colville with six boats for Okanagan, and encamped in the evening one pipe [from] the grand rapid.(1) We were detained some time at the rapid, repairing two of the boats that were broken. The cargo got wet; all the other boats were lightened and half the cargo carried, and the boats ran down at two trips.

We have only twenty men for the six boats, four men each for two of the boats, and three each for the other four, which certainly weak crews for such a dangerous part of the river, but instead of paddles the people use oars by which they do more work with less labor. Our lading consists of 70 packs of furs, 2 kegs [castorium], 12 bales of leather, 8 bales of [barley meal from the crop of 1827] 2 do [corn meal] 10 do saddles, 1 cage 3 young pigs for N [new] Calidonia, 1 do cask [cage] for Nez Perces, 6 Indian lodges, provisions for the voyage, and which with the other baggage makes 24 pieces per boat, and myself and La Bontes(2) wife, & two children passengers. Everything was ready to start at an early hour, but Chatefau's(3) boat, which was not finished [page 223] gumming, till the afternoon. Cloudy mild weather.

May 21. Embarked at daylight this morning, and continued our route without any delay whatever, except a short [stop] for breakfast, till a little before sunset, when we encamped below the big [stone](4) a little above the little Dalls, [Makhim Rapids] which is a [good] days work for so few men. The current is very strong, and sent us along at a rapid rate, but the water is not so high as last year; it is now in a good state, and none of the rapids dangerous. Notwithstanding the (long) time that were [was] taken gumming the boats, some of them are leaky, and two of them had to be gummed. Yesterday evening some of the people were employ[ed at that.]

May 22nd. Cloudy cool weather in the morning, very warm afterwards. Resumed our route at daylight,(5) and arrived at Okanage [Ft. Okanogan] before breakfast, and found some of the people still not up. The Dalls were found good, and the boats shot down them without stopping. Received and examined the cargos, all in good order, and had them stand [stood] bye:-[Page 224.] and as the men had worked hard, gave them the remainder of the day, to rest, previous to commencing gumming the boats.

No news as yet of Mr. Conolly(6) and his people, and had appointed the 24th as the date on which he was to reach Okanage. We expected that being so weakly [manned] it would have taken us also to that date to reach this - where as, we were only a day & a half. We arrived early, and came to find the people from Colville [hungry.]

Finding some salmon in store, it was served out to the people, and the barley and corn used, till Mr. Conolly's people arrived.

May 23rd.- Very warm in the middle of the day, stormy in the afternoon. Had three of the men employed making oars; all the others gumming their boats. Soon the N[ew]. C[aledonia] people

John Work's Journal

---

arrived. One of the boats was in the water, and does not want much repairs, but the other two, being exposed to the sun, the gum was melted off them. The seams opened, so that it takes a considerable deal of labor, to put them in order. There are two other boats, which are so old and out of order, and so much decayed that [225] it is considered impossible to repair them so that they could be brought up the river again with any safety. Two of the men, Chatifaux & Pin,(7) are both bad with sore eyes.

May 24th. Stormy weather warm in the middle of the day. The men finished gumming the boats, and had them in the water before breakfast. About noon Mr. Ermatage [Ermatinger](8) and a man arrived from above. Mr. Connolly & party are expected in two days.

May 25th. A storm of wind with a great deal of dust.(9)

May 26th. Fine weather, some gusts of wind. Mr. Conolly arrived at noon, his people are close too.

May 27th. Fine warm weather. Mr. Conolly's men arrived with Mr. Dear's(10) in the forenoon, and the cargoes of the boats, 9 in number, made out, and everything arranged to start tomorrow. Two horses were killed, and given to the people with some barley for a treat.

May 28th. Fine weather, blowing fresh part of the day. Some time was spent in the morning gumming two boats that were a little leaky; that detained us till between 7 & 8 o'clock when the bag-gage [brigade] started. Nine boats, with Mr. Dear's [Page 226.] Mr. Ermat[inger] & myself, under the charge of Mr. Conolly. The cargoes amounted to 33 pgs per boat, via 228 [fur packs] (11) 7 bales of leather 6 do (castorium) 8 dit Saddles, 1 dit pamphlets, [book] 16 of gum, 6 lodges, with baggage. The men used oars in preference to paddles, and had as many as could work in each boat. The wind some time detained us, and the current was very strong. In the evening we encamped a little above the Rapids. The oars were far superior to paddles; the men do more work with greater ease.

May 29th. Overcast in the morning, and raining afterwards. Resumed our route at daylight, or a little before it, and put ashore near the lower end of the Rapids to wait for one of the boats, Leas Prim(12) who had followed behind; and in the meantime breakfasted. After which P. L. Etange(13) the guide, who was in Mr. Conolly's boat embarked with Prim, when all proceeded, and ran down the rest of the Rapid, and continued their course. But Prim's boat, which remained behind, as the place was not dangerous, and the guide ahead [copy missing], and the boats did not stop till they reached Nupims [Nez Perces] in the afternoon, when (the furs, goods and provisions) [Page 227.] received and distributed among the boats, and everything arranged to continue our journey tomorrow morning. Late in the evening L. Etange [Lelange] their guide, arrived with another man, in an Indian canoe, with this unexpected intelligence, that when coming down the lower part of the Prists Rapids in the morning just after the other boats, when they struck upon a stone, broke their boat, and three of the seven men that were in her, Prim [Primeau] J. F. Laurent the [Bouthe] foreman, [and] Plussy (Joseph Plouff) the Sacrant [Ducant] were drowned, and the others very narrowly escaped. Some of the Indians assisted the survivors in getting some of the

John Work's Journal

---

packs ashore, but how many would be saved, cannot yet be ascertained. Lacnant [Laurent](14) had been sick, and was very weak. The Guide [stated that] a gust of wind, and the people not pulling fast enough, is the cause of them not being able to clear the rock. Mr Cumatage and Mr Dear's were immediately sent off with two boats and 22 men to endeavor to move the bodies and to that may be saved from the water. I am to start early tomorrow morning on horse-back with two men, for the same purpose, by crossing to [Page 228.] the [north] side of the river, and straight across the plains. It is expected we will arrive before the boats, and prevent the Indians from carrying off any of the packs, if they be so inclined.

May 30th. Blowing a storm the fore part of the day. The weather was so stormy, and the river so rough, that it was impossible to cross the horses without drowning them, and I could not start as was intended, for the Prist's Rapids(15) where the accident happened. Yesterday we had the horses [ready to swim] across in the evening, I could not have got them before then; and to get them after, would be of no use. The [packs] were all carried from the water's side into the fort. An Indian arrived from Spoken (old Spokane House) with letters from Mr. Kettra [Kittson](16) of the 25th Inst, announcing the death of Jac Finlay(17) about 10 days ago. Nothing has happened at Coville lately, the crops are coming on well.

May 31st. Stormy in the morning, calm afterwards, a little rain in the evening. The furs all well covered with oil cloth.

June 1st. Dark cloudy weather. Mr Cumatinge & Dear arrived with the party at noon, they found all the furs, Oky [a keg] of customs, [castorium, parflsh] [Page 229.] a bale of leather, and 3 pins [skins] of gum. Nothing was seen of the bodies of the three unfortunate men that were drowned. The old prist(18) and his people behaved well. One of the old mans son came to the fort, and received in remuneration for his good conduct in the assistance given in saving the furs.

The after part of the day was employed drying the furs, repairing the boats, and getting everything ready to start early tomorrow morning. The brown [beaver] skins seem not to be much injured, but the small furs will be a good deal the worse of this wetting; fortunately there were not many.

Monday 2nd. Cloudy most of the day. Left Walla Walla at sunrise, this brigade consists of 9 boats, provisions and baggage. We were nearly three hours ashore drying the wet furs, that were not sufficiently dry yesterday. Some time was also lost going ashore to trade provisions. The wind also considerably retarded our progress; nevertheless, we encamped in the evening, a little above Day's River. A horse, some salmon and boats [roots] were traded from the Indians during the day. Mr. Black(19) is of such [Page 230.] a disposition that he would not give them a horse after a great deal of coaxing he offered them a colt but it was so small that it would not (suffice) for the people, and would not be accepted. However, he gave us, the bags of corn and a little [barley]

Tuesday 3rd. It was a little calm in the morning, and we embarked, but a little after sunrise, we had to put ashore at Day's River(20) with the wind, where we remained all day. A few Indians encamped here, from whom a few salmon were got, but nothing worth while, to give the people,

---

to [save] the provisions.

June 4th. Blowing a storm all day, so we could not stir.

June 5th. Blowing all night, but calm a little after sunrise- when we embarked, but were again stopped by the wind. We breakfasted; after a little while it became calm, and we proceeded and made the and afterward proceeded to the Dalls and made the portage to the rocks with boats. Here we encamped early, and there would not have been time to get to another convenient encampment. Traded enough salmon to serve the people for nearly two days. There are not many [Page 231.] Indians about the Dalls now; the most of them are out on the plains collecting roots.

June 6th. Embarked early this morning, made the lower Portage of the Dalls, had to put ashore to gum one of the boats, afterwards proceeded down the river. Reached the Cascades in the afternoon, made the portage with all the goods, and got the boats halfway across. Part way they were towed, and part carried. When the men left the boats they pulled up on the beach. We could get few salmon from the Indians, because the fort has entirely spoiled the trade, none can be got now at any kind of a reasonable price.

June 7th. Had the boats brought to the lower end of the portage, which detained the people a considerable part of the morning. In order to save time, we breakfasted before we started; we then proceeded, and reached Vancouver, where we arrived in the evening. It was however too late to get the packs carried up the Fort.

June 8th. Fair weather. All the packs carted up to the Fort, and the rest of the cargo remained.

June 9th. Cloudy in the morning, fair weather afterward. Employed a party to examine the furs; we were not able to finish the whole of them, as few of them were a little wet, but had sustained no damage.

June 10th. Busy at the furs, but we had to stop on account of the rain. Some of the New Caledonia ones are not yet opened.

June 11th. The weather prevented us from doing much to the furs today.

July 23rd. This morning the Ireland [Inland] brigade left Fort Vancouver, and encamped a little below the Cascades. We had a sail wind a while in the afternoon. The brigade consists of 9 boats 54 men including two Indians. These are passengers Mr. Conolly who commands the party, Messrs [Francis] Cumtage, [J. M.] Yale, [Thomas) Deace, and myself [John Work]. The boats are heavily laden, besides provisions. The cargoes were delivered and the boats loaded and moved up to the upper end of the place yesterday evening, when the men got their provisions for the voyage, which consists of corn,(21) fish, and grease.

July 24th. Cloudy weather, with fine breeze. Continued our route early in the morning, and were

---

John Work's Journal

---

employed the whole day, getting to [Page 233.] just a little above the Cascades. The water is very low, and it was very difficult dragging the boats. The line broke, and one of the rudders; so considerable time was lost fixing them. Part of the cargo had to be carried, both at the New Portage, and at another place below the Cascades. The Indians at the Cascades are taking plenty of salmon, but would give us none - a superstitious idea, that if our people, who had been at war, would eat of the salmon, they would catch no more. Had we been in want of provisions, we would have [kept] ourselves without caring; but that not being the case, we did not take any; though we told the Indians we would do so if we chose.

July 25th. Embarked at daylight, and had a fine sail wind all day, and early this evening reached the lower end of the Dalls, when we encamped, it being too late to reach the Portage. The Indians here are taking plenty of Salmon, and gave us a few for the people, making no objections about the men having been at war.

[July] 26th. The whole day was getting the goods across the portage, and the boats only part of the way. The weather part (Page 234.) of the day was very warm. In the morning we were met by Morgen [Ogden](22) who with his party is on his way to Fort Vancouver. The rest of his party are off with Mr. McKay for some furs that were hidden in the plains. Mr C[Ogden] remained with us all day, and stayed over night. Three of our men are sick, disabled, and unfit for duty. Got plenty of salmon in the evening for the people.

July 27th. It employed the men before breakfast carrying the boats across the portage; we got them loaded, and after breakfast took our leave of Mr. Ogden, and proceeded under sail to the Chutes, when boats and cargo had to be carried. We got to the upper end of the Portage late in the evening; loaded the boats, and encamped for the night. It was very warm during the day, though it blew a storm, and the people were nearly blinded with driving sand. The Indians here had a few fresh Salmon, but we got some dried ones from them. One Indian lodge took afire and was burnt; and though it was on an island, and apart from where we were working, they came and demanded payment for the property destroyed, and in case of [Page 235] refusal, they would take it by force. We threatened them with severe punishment for their conduct, when they became quiet. However, as a boat had to return from above, it was deemed advisable to give them a little tobacco.

[July] 28th. Clear warm weather. Embarked at daylight, and were employed all day with the poles. In the evening we encamped a little above Day's River. Two Indians, which were employed at the Dalls to work in place of the disabled men, left us this morning; they were not worth taking with us. Traded a few fish, and some dried Salmon, from some Indians, where we stopped for breakfast. An Indian was dispatched to Fort Nespus [Nez Perces or Walla Walla] with a letter.

(July) 29th. Continued our journey with the poles. Had a light wind, and got up the sail a short time in the evening; but the wind was too weak to be of much service. We encamped in the evening a good way below the Island. Passed some camps of Indians during the day they had very few fish, and report that Salmon are scarce above.

John Work's Journal

---

[July] 30th. Embarked at daylight. After breakfast a fine breeze sprung up, when the sails were hoisted, and we had a splendid run the remainder of the day. Encamped late [Page 236.] in the evening a good piece above Grand Rapid. One of the sick men is again better, and able to do his duty, but the other two are still unable to work. Some other of the men are bad with severe colds, while some of them have sore hands from poling.

July 31st. A fine wind again, we proceeded under sail, and arrived at Nespuses at 8 o'clock. The Nespuses outfit was delivered, and the remainder of the property distributed among 8 boats, as one is to be left. Mr McKay has arrived, he left his men yesterday. I found P[ambrum's] boys here, they are going off to Colville in two days; by them I wrote to Mr Kitter [Kittson] and sent six sickles so that he may be able to get on with the harvest. I also sent 22 [Ms. illegible.] as I understand he is short of that article. From his letter I understand that provisions are scarce - few salmon to be got, but the crops have a fine appearance. One of Mr Black's men, Dubans, [Dubois](23) was drowned a few days ago.

Aug. 1st. Left Nespurs at 7 o'clock, and encamped in the evening above the Yakaman River. The men worked with the poles all day, the weather very calm and warm. The river is unusually low for this season of the year. We have 8 boats, as deep laden, as when we left Vancouver, but as two more of the men are disabled, it will take 30(24) hours to Okanagan.

[Aug.] 2nd. The weather very warm and sultry. Proceeded on our journey, and encamped in the evening at the White banks. From an Indian's information, part of the bones of one of our unfortunate men that were drowned in the Spring was found. We had them collected and buried. Mr. Conolly read the funeral service. There are few Indians on the river, and these are starving; they are taking no salmon.

[Aug.] 3rd. Continued our journey at an early hour, and encamped in the evening at the lower end of the Prist's Rapid. The current during the day was strong. The water is very low. We found a lodge of Indians, from whom a few dried Salmon were obtained, they seem very scarce in the river.

[Aug.] 4th. Cool pleasant weather in the morning, but very warm afterwards. It took a considerable portion of the day to get up the Prist Rapid. Some time was spent gumming the boats, when we again proceeded, and encamped in the evening a little above the Rapid. Messrs Cumatage [Ermatinger] and Yale who were expected would be at [Page 238.] Okanagan, are nearly so with their horses by this time, and now encamped on the opposite side of the River.

Aug. 5th. Very warm weather, it is really hot passing over the burning sands. Lost some time this morning crossing the horses - in the evening encamped in the evening, a little below Roscal Rapid.(25)

Aug. 6th. Continued our journey, and encamped early, and got the boats just above Stony [Rock] Island, the boats are lighted, and the cargoes carried, to Rend Rapids.(26) The weather very warm,

---

John Work's Journal

---

though occasionally blowing a little. Very few Indians in the River, and Salmon very scarce. Another man left work with a sore hand.

Aug. 7th. Warm sultry weather. Passed Pirtanhouse(27) River in the afternoon. We were detained some time mending one of the boats that were broken; had sail wind a little in the evening. Traded some Salmon from the Indians.

Aug. 8th. Had a good breeze, and sailed most of the day. The wind though warm was a great relief from the scorching heat we experienced three days past. Encamped in the evening a little above Clear Water River.(28) A man from Okanagan met us in the evening, with two horses from there.

Aug. 9th. Cloudy, but very warm weather. In the morning, Mr. Conolly and I left the boats, and proceeded on horseback to Okanagan, where we arrived about nine o'clock in the morning. Four of the boats arrived late in the evening, the others are a little behind.

Aug. 10th. Arrived early in the morning, when the boats were unloaded, and the different outfits separated. When I distributed the Colville goods, amounting to 123 furs [bales] besides provisions and baggage. Besides the above cargo, we had a dozen or more passengers with their baggage. Six men per boat, some of them are from Okanagan. One of the men was sent to Colville, being unable to work, he sent another man in his place.

Aug. 11th. Went to boats(29) early this morning, but it was near 8 o'clock before they got through gumming, when we proceeded up the river, and encamped for the night a little above the Dalls. The current is very strong, nevertheless we got on well.

Aug. 12th. Continued our route, this morning passed the Dalls, and encamped in the evening a little below the Big Stone.(30) We lost some time gumming Charlie's boat [Page 240.] The boat had to be lighted at a place near the Dalls.

Aug. 13th. Continued our route early, and encamped a little above Spellium River.(31) Some more time was lost gumming. Met a family of Indians going down the river, but they had no Salmon worth mentioning.

Aug. 14th. Continued of journey early, and encamped a little below Semapoilish(32) River. One of the men not able to work with a sore hand. Chatfaux is also complaining of his hand, but does not give up working yet.

Aug. 15th. Embarked early, and went ashore a little above Stony Island(33) so to gum two boats. We had to carry part of the cargo to one of the portages below the Island. Chatfaux is from work with his hand, and walking along like a gentleman. Met Robinson(34) our housekeeper [horse-keeper](35) it is some time since he left the Columbia, and has little news.

1. Thompson's Rapids, now Rickey Rapids.

---

2. LaBonte was an Astorian. See Irving's Astoria, Chap. xxxvii. His name appears as numbers 989, 820 and 623, respectively, on the lists of employees of the Hudson's Bay Company in America for the years 1821-1823, inclusive.
3. Probably J. B. Chalifaux number 657 on the list for 1821; Andre Chalifaux appears as numbers 634, 505 and 407 for the years 1821-23.
4. Equilibrium Rock. See also the entry for August 12.
5. About 3:30 A. M. The distance to Okanogan is about thirty-three miles.
6. Chief Trader William Connolly stationed at Fort St. James in New Caledonia. His name appears as numbers 45, 7, 7, on the lists for the years 1821-23.
7. Joseph Pin, whose name appears as numbers 1138, 748 and 1029 on the lists for the years 1821-23
8. Frank Ermatinger, the well-known Colombian, often in the Spokane Country. He became chief trader in 1842.
9. See Ross Cox, vol. ii, p. 86.
10. Thomas Dears, a clerk, whose name appears as numbers 720, 582 and 82 on the lists for 1821-23. He was much about Spokane and Colville, having actual charge of the erection of the first buildings there 1825-26. He was placed in charge of Fort Connolly, New Caledonia, in 1831. Retiring, he settled at Ft. Thomas, Upper Canada.
11. These fur packs weighed 90 to 100 lbs each, say 1 1/2 tons. The crate of pigs, 2 kegs of grain or meal, 5 bales of leather, and 4 saddles have been left at Ft. Okanogan for the New Caledonia District, and 156 packs of far, with some additional provisions and baggage have been added; 8 days provisions for the 22 men as well as subsistence for the Colville men there, have been consumed by the time Mr. Work leaves Ft. Okanogan.
12. Lewis Primeau, whose name appears as numbers 1205 and 1000 on the lists for 1821 and 1822.
13. Pierre Letange, whose name appears as numbers 990 and 804 on the lists for 1821 and 1822.
14. The name J. F. Laurent appears as No. 1085 on the list for 1821.
15. 15 Priest's Rapids, so named by John Stuart of the Astor party and his party, who passed this point in 1811, from seeing an Indian priest performing some religious ceremony there. See

Franchere's Narrative, pp. 276-277.

16. William Kittson's name appears as numbers 933, 754 and 551 on the lists for 1821-23. He was an adopted son of George Kittson, and served with the Canadian chasseurs in the War of 1812-13. He entered the employ of the North-West Co. in 1819 as an apprentice clerk under Alex. Ross. See *Fur Hunters*, vol i. p. 207. He was assigned to the Flatheads in 1830, and died about 1843, probably at Victoria, B. C.

17. Jacques Raphael Finlay who established Spokane House, the first white settlement in the state of Washington, in 1810. See sketch of his life by Mr. Meyers, vol. x of this Quarterly, pp. 163-167, July, 1919.

18. Probably the identical old Indian priest mentioned in note 15, supra.

19. Samuel Black, an old North-West Co. clerk made chief trader under the Deed Poll of 1821; stationed at Spokane 1825; Nez Perce 1828-30; made a chief factor in 1838; and killed near Kamloops by Wanquille in 1841.

20. The John Day River of today.

21. Apparently flour from the Colville and Vancouver mills was not yet in use.

22. Peter Skene Ogden, the well-known Columbian, noted for his expeditions in Utah where Ogden City and Ogden River bear his name.

23. Andre Dubois appears as number 619 on the list of 1823-24; Francis Dubois appears as No. 569 for the same year.

24. It took nearer 100 hours, as the journal later shows.

25. Qualque Rapids.

26. Cabinet Rapids.

27. Piscouse of Wenatchee River.

28. Chelan River.

29. This was some distance from Fort Okanogan, see Ross Cox's N. W. Co. fort on the Okanogan River in 1816.

30. See the entry for May 21, 1828; see also Symond's Columbia River (1883). The stone is now known as Equilibrium Rock.

31. Nespelim River of today.

32. Sanpoil River.

33. Hell Gate.

34. Robidoux, numbered 1082 and 1084 on the lists of 1822-23.

35. Horsekeeper. The horsekeeper had probably had orders to come down to the mouth of the Spokane River, and there await Mr. Work's arrival. Work probably proceeded to Colvile on horseback and so finished this journal.

From Quarterly of the Oregon Historical Society, Volume X, Number 3, September 1909.

#### JOURNAL OF JOHN WORK

April 30th to May 31st, 1830.

Edited by T. C. Elliott.

#### Editor's Introduction

John Work, the writer of this journal, was one of the tireless and forceful "gentlemen" in the Hudson's Bay Company's employ west of the Rocky Mountains, and more particularly along the Columbia River and its tributaries, beginning with the year 1823.

In the course of serving his time as a clerk, he was sent from York Factory on Hudson's Bay in July, 1823, with the annual express, in charge of Peter Skene Ogden, to Fort George (Astoria). This was one year prior to the coming of Dr. John McLoughlin to assume charge of the business of the Company west of the mountains.

From 1823 to 1830, John Work's field of employment was principally at the Posts or Forts of the upper Columbia; Spokane House, Colvile, Flathead and Kootenai, and it was he who superintended the building of Fort Colvile, just above Chaudiere or Kettle, Falls (Ilth-Koy-Ape, according to David Thompson) in 1825-6, and the abandonment of Spokane House in 1826. In 1830, he was promoted to Chief Trader and appointed to succeed Mr. Ogden in charge of the Snake River Brigade, leaving in the fall of that year.

We very little appreciate or understand at the present day the constant and extensive demand for horses in the fur trade, primarily as beasts of burden, but very often as necessary articles of food; and the difficulty of obtaining them.

Among the descendants of John Work are his grand-children, comprising the family of the honored Dr. Wm. Fraser Tolmie, deceased, once a member of the legislature of the Provisional Government of Oregon and a scholar as well as a gentleman and man of affairs. The original journal is

John Work's Journal

---

in the possession of these grandchildren and through the courtesy of Mr. R. E. Gosnell, Archivist for the Province of British Columbia, has been copied for this, its first publication.

To definitely designate the route from day to day is not possible, but the more important stopping places will be readily recognized. The party followed from Fort Colville at Kettle Falls the more direct Indian trail up the valley of Colville (as now spelled), or Mill River to its source and then across the divide to the wide ridges along Tsimakane (or Chimakine) creek, flowing into the Spokane River, crossing that river considerably below the site of Spokane House, and thence south to the Snake River at the mouth of the Palouse. This afterward became the regular wagon road between Colville and Walla Walla, and is very clearly shown on the map published with John Mullan's Military Road Report. Governor Stevens followed this route very closely in the fall of 1853.

By the Hudson's Bay men, Snake River as far up as the Clearwater was often called the Nez Perces River, and Fort Walla Walla was commonly designated as Fort Nez Perces. It would appear from the journal that at that point the party crossed the Columbia to the west or north side, but at John Day River they are clearly on the south bank again and from there to The Dalles. The usual crossing place afterward was ten miles below at Lyle, the mouth of the Klickitat River, but they recrossed above The Dalles and from there to Vancouver kept to the higher trails along the ridges and prairies back from the Columbia through a very rugged country of course, as the time consumed plainly indicates.

Mountains Hood, St. Helens, Rainier and Baker are all familiar names to Mr. Work, indicating that a set of "Vancouver's Voyages" was then in the library at Fort Vancouver, and whether the first or second edition does not matter.

Friday, April 30th, 1830.

Left Colville near 6 o'clock in the evening, accompanied by five men - F. Payette, A. Baidijain, J. Pierre, Edward Besland, and C. Quesnelle, with 35 horses for Walla Walla, and then to Fort Vancouver. Encamped a few miles from the Fort. The whole day was occupied getting the horses collected and separated, which was the cause of our being so late in starting. I would have been off some days sooner, but a considerable number of the horses were lately traded, and being very lean, required some time to recruit before taking the journey; some of them will have enough to do to perform it yet.

Saturday, May 1st.

Heavy rain nearly all day. Started at an early hour, and encamped near sunset at the swampy plain. [Chewelah?] We stopped an hour and a half to breakfast. The small rivers are very deep, and the road in many places soft and miry. The horses had to swim across two of the rivers, and the luggage to be taken across a temporary bridge of trees thrown across them. All hands were soaked with wet, and both men and horses much fatigued in the evening.

Sunday, May 2d.

---

John Work's Journal

---

Heavy rain part of the day. Proceeded on our journey a little past sunrise, and reached Spokane River in the afternoon. It was near sunset by the time the horses and baggage were got across the river, though the Indians lent us a canoe to cross with. We put up here for the night. The road to-day was in several places deep and miry, but much better than yesterday, nevertheless, the horses were a good deal jaded. The Indians came and smoked with us in the evening. The people are always glad to see whites coming among them.

Monday, May 3rd.

Fair weather. The men were on the move by daylight collecting the horses. One of them were missing and, although all hands were employed seeking him till 11 o'clock, he could not be found, and was supposed to be gone off on the N. P. [Nez Perces] road, and so far off from the distance he was followed that it would have taken all day to come up with him, even were we sure he had gone that way, and as by waiting in the same encampment we were likely to lose more we moved on, and left word with the Spokane chief to seek the horse and bring him to Colville, which he promised to do. Camped in the evening at a place called the Fortress, on the edge of a plain. The road this day was pretty good.

Tuesday, May 4th.

Stormy during the day, heavy rain towards the evening. Four of the horses had strayed in the morning and, although all hands were in pursuit of them, they were not found till 3 o'clock in the afternoon, when it was considered too late to move, besides I wish to stop and send for the horse lost at Spokane, which, I hear from an Indian lad that was passing, is found by the Indians. We had no thought any of the horses would stray off so far.

Wednesday, May 5th.

Very heavy rain in the night, fair weather during the day. Sent two men back for the stray horse that remained at Spokane, which they found, and came up with us at noon. Landed to wait for the men who were late in starting, and again stopped a good while at breakfast. We encamped in the evening at 5 o'clock, having marched seven hours during the day, which, though little, is enough for some of the horses. Set a guard on the horses last night, which is intended to be continued during the journey to prevent the horses from straying or being stolen by the Indians.

Thursday, May 6th.

Showers of rain towards evening. Continued our route at an early hour, and fell upon the Nez Perces [Snake] River, near 6 o'clock in the evening, where we put up for the night. Allowed the horses 3 hours to feed and repose in the middle of the day, and marched altogether 8 hours. Part of the road was very stony and bad for the horses' feet.

John Work's Journal

---

Friday, May 7th.

Heavy rain in the night and the greater part of the day, particularly in the afternoon. Proceed on our journey, and after passing Grand Point [Fish-hook Bend] again fell upon the river opposite an Indian lodge, and crossed our baggage. The horses were allowed to rest before crossing there; from the bad weather they were so afraid of taking the water that all the men's efforts assisted by the Indians could not put more than 16 of them across, the others were obliged to be left on the opposite shore for the night. The men were completely drenched with wet and benumbed with cold in consequence of which, and the continued rain, keeping guard will be dispensed with tonight.

Saturday, May 8th.

Incessant rain all day. Another attempt, without success, was made to cross the remaining horses in the morning, but towards evening they were all got across but one, which ran off and could not be caught; the most of them had to be crossed by the cord. One was missing in the morning and cannot be found; we cannot tell whether he strayed or attempted to cross the river in the night, and was drowned; it is not likely that he was stolen. The men were again soaked with wet and cold. The poor Indian rendered us all the assistance in his power.

Sunday, May 9th.

Sent across the river for the horse that could not be found yesterday and to seek for the one that is missing; no marks of the latter could be found. We then loaded the horses, when two men were again sent off in quest of the stray horse, and the others moved on to Nez Perces, [Fort Walla Walla at mouth of Walla Walla River] where we arrived about 1 o'clock. The other two men arrived towards evening without seeing any trace of the horse.

Monday, May 10th.

Heavy rain in the night and forepart of the day, and stormy. We intended to have crossed the horses to the opposite side of the river this evening and have started tomorrow, but the wind raised such a swell in the river that swimming the horses across was impracticable without a great risk of drowning them.

Tuesday, May 11th.

Fair weather, but blowing strong all day. On account of the roughness of the weather and the swell in the river, crossing the horses could not be attempted, which has delayed us another day. This I regret as this cool weather is favorable for marching, and not so fatiguing for the horses as when the heat is great.

Wednesday, May 12th.

---

John Work's Journal

---

Stormy in the morning, but calm, fine weather afternoon. After the weather moderated, received 16 horses from Mr. Black, [Samuel Black, afterward murdered at Kamloops, but then at Fort Walla Walla] making our whole number 50, and got them across the river safe. It was late by the time the baggage and everything was across the river. [Probably the Walla Walla River, then in flood] I received another man, J. Baker, here and changed one of my men, Pierre, for J. Guy, to accompany us as guide. We also received 15 quarts of corn, 35 pieces of salmon and a little horse meat in addition to our provisions, also some ammunition and tobacco to procure an Indian guide below. Baker is a man from Vancouver, and has been waiting here for us since the express passed.

Tuesday, May 13th.

Some heavy showers during the day. The men were on the river by daylight collecting the horses, one of them was missing, and although all hands were seeking him in every direction till four o'clock, no marks of him could be discovered. We then gave up hopes of finding him, and started with the rest, but some time after, met an Indian who had also been seeking him. It was said that he had been got from an Indian below, and was going back to where his master usually resided. From the distance he went I suspect he was taken the lend of by some Indian who prefers riding to walking. On account of the delay, we made but a short day's journey, only across the point where the road falls on the river, and it was late when we reached the plain. But indifferent feeding for the horses.

Wednesday, May 14th.

Some heavy showers in the night and during the day. Kept guard over the horses during the night, and got under way by 6 o'clock. Came on at a brisk rate and encamped in the evening a good piece below Big Island, [Near Castle Rock] stopped in the middle of the day to feed and repose. The road was generally good. Passed some lodges of Indians from whom we received a little salmon. There are not many Indians on the river, and what little fish they get is barely sufficient for themselves. From their miserably lean appearance it may be supposed they have not known what a plentitude of food is for some time past.

Thursday, May 15th.

Heavy showers in the night, fair weather during the day. Continued our journey before 6 o'clock, and encamped before 5 in the evening at a little lake on the hill, a little above Day's River. We stopped thus early on account of it being a good feeding place for the horses; and that probably another such is not to be found before we would be obliged to camp where the road we mean to follow strikes into the country from the river. Some of the horses were also a good deal fatigued, and need a little repose. The road during this day's journey was frequently, but indifferent, being in many places stony and again sandy, which made the marching heavy and fatiguing for the horses.

John Work's Journal

---

Passed several lodges of Indians, from whom we obtained enough of salmon for breakfast. Stopped 3 1-2 hours in the middle of the day to rest and feed the horses.

Friday, May 16th.

Very warm, sultry weather. Resumed our journey past 5 o'clock. Left the river and struck into the country, and again fell on the Columbia at the little river, below the Dalles at 6 o'clock in the evening, where we encamped. The object of taking this route was to avoid the Dalles and chutes, where numbers of Indians are collected at this season, and likewise for a better road, as that along the river is very hilly and stony.[The immigrants did the same in later years] The road we took was very hilly and stony in places on leaving the river. Afterwards the road lay through a plain, and is good till nearly falling on the river, where it is for a considerable distance woody and some very steep hills. On account of the heat, the horses are a good deal jaded.

Saturday, May 17th.

Weather warm and sultry. The Columbia is so high it is impracticable to cross the horses at the entrance of the little river, the usual crossing place; we had, therefore, to seek another place which we found a few miles up the river, and, with a good deal of trouble got the horses across by 11 o'clock, when we moved on about 3 hours, when we encamped in consequence of engaging a guide to take us by another road, as that on the banks of the river, on account of the height of the water, is considered very difficult, if not impassable in places. The road we were to pursue by the interior is said not to occupy more than four days. This, however, I much doubt, if we get done in six days it will be very well. The road is said to be good enough except a mountain that is to cross and where there is likely to be some snow yet. Our interpreter, J. Guy, does not fully understand the Indians. I have heard it said that formerly some freemen came from Vancouver to opposite The Dalles on horse by this route in three days. This used to be a grand war road of the Kyauses and Nez Perces to go down to Kersinous village. We delayed the aft part of the day till our guide would get ready to accompany us, however.

Sunday, May 18th.

Clear, very warm weather. Our Indian guide was not ready to accompany us till 7 o'clock, when we proceeded on our journey, and encamped at past 6 o'clock in the evening at a place at the foot of Mt. St. Helens,[Mt. Adams] which is north of us, on the great Kyauses road which we are to pursue across the mountains. On leaving the river, we ascended hills of considerable height, and, but thinly wooded, but on reaching the summit we found the country thickly wooded, which mostly continued so to our encampment. The road lay over hills, some of them very steep, and steep valleys. We crossed some small rivers, but the water is not high, having recently fallen a great deal, which leads us to infer that there is but little snow on the mountains - a great deal of snow to obstruct our passage gave us some concern. Though we marched all day, except about 3 hours we stopped for the horses to feed; we have not made a long day's journey; owing to the hilliness of the roads, sometimes we had an Indian road, and sometimes we had none. We were in

John Work's Journal

---

expectation every hill we ascended of seeing the fine plain the Indians said the road lay through, but there was none till the one we are now at. Had we had a guide, we might have come in a much shorter time from Walla Walla to this place through the plains, or in fact from any part of the Columbia above the chutes. The road that way must be good, as it lies through the plains with little wood and few hills. Though we were told we would be only three nights of getting to the Fort, our guide now tells us that we will be 8 or 10, and represents the road as being difficult, independent of the snow. As we are now close to the mountain, which is the worst part of it, it is determined to try it, and should it be found impassable to turn back and gain the Columbia again. Our guide's brother also accompanied him in order to be with him coming back. Another lad also started to accompany us on foot, so that there are three of them with us. We did not expect to see an Indian here yet they made their appearance shortly after we encamped.

Monday, May 19th.

Fine, warm weather forepart of the day, but towards evening it became stormy with a great deal of thunder and very heavy rain. Continued our journey before 6 o'clock, and encamped at 4 o'clock at a little plain. We had gone a little farther into the woods to gain the foot of the mountains which we were to pass, but we intend to return to this place that the horses might have some feeding. The road today was good; it lies through rather clear woods not often thicketty and but few hills. In the morning we crossed the river [The White Salmon] that empties itself into the Columbia, between The Dalles and Cascades. It runs its waters to the northwest of Mt. St. Helen [Mt. Adams] where we forded, it is a considerable stream and the current very strong, but the waters appear to have fallen greatly lately. During the forepart of the day the ground among the trees was clothed with verdure and flowers, but afterwards several patches of snow was seen in the woods, and the rest of the ground seemed to be freed of it, not long since, and vegetation has yet made but small progress. From where we are encamped, there are two roads to cross the mountains; that to the right is represented to be the best road, but at the same time likely to have more snow in it than the other. Our guide has decided, therefore, to take the latter. Payette, accompanied by the Indian, went a good piece into the wood with the intention of proceeding to foot of the mountain to examine it, but the Indian got tired and returned. So far as they went, the road is not bad, and the snow, which is only in patches, not deep. The Indian says it is all the same way to the mountains, and that though the snow is deeper that in a day he expects he will get over the whole of it.

Tuesday, May 20th.

Stormy. Showers in the morning, and drizzling rain the most of the day. In order to allow the horses to feed and have their bellies full, lest we might be a night on the mountains without food, we did not move camp today; the grass is not good, but the horses got a little.

Wednesday, May 21st.

Fine, fair weather. At an early hour we were on the move and crossed the dreaded moun-

John Work's Journal

---

tains[Wind River Mts.] by midday, but one of the horses stepping off the road in a thicket of woods was left and had to be sent back for, which prevented us from proceeding in the afternoon. We are here on the side of a nearly bare hill, which yields tolerable good feeding for the horses. The road across the mountains is not bad nor is the mountain itself very high. In some spots the snow is pretty deep, but not as much so as to retard our progress. From the top of the hill where we are now encamped there is an extensive view and nothing to be seen but mountains and deep valleys as far as the eye can reach, Mt. St. Helen [Mt. Adams] is but a short distance to the north-east, and Mt. Rainier [St. Helens] bears north, at still a shorter distance. Mt. Baker, [Mt. Rainier] I suppose, is seen at a great distance between the two. We are still but a short way from the Columbia, immediately beyond it is seen Mt. Hood, and further off another high, snowy mountain, Mt. Jefferson. Several of the lower mountains are thickly covered with snow and many patches extending low in the valleys. None of these mountains seem to be continued ridges, but scattered about in every direction. The country through which we have to pass tomorrow has a bad appearance, all burnt woods.

Thursday, May 22nd.

Fine, warm weather. Recommenced our journey at past 5 o'clock, and by noon fell upon the road which we left on the other side of the mountain. The country we passed through this forenoon is dreadfully bad, a considerable portion of it burnt woods, immense trees fallen in every direction, and several deep ravines to cross, very steep for the horses to ascend and descend. Besides the woods are thickety, and large fallen trees are so numerous that we could scarcely get any way found through it. There is no way through this space. The road by which we crossed the mountain went in another direction and was lost. In the afternoon the road lay also through burnt woods, but being ..... was pretty good except frequently barred with large fallen trees. We encamped at 5 o'clock in a place where there is scarcely a mouthful of grass for the horses, and, what is worse, we will be two nights more without anything for them to eat. This was an exceedingly harassing day, both for men and horses; the latter on account of the heat of the day, and the difficulty of the road, particularly jumping over the large trees and ascending the steep hills, are completely jaded; one of them stopped on the road, but was got up to the camp in the evening. The ridge, our road lay in this afternoon, is divided from the foot of Mt. Rainier, [Mt. St. Helens] by a deep valley and river along which our road lay.

Friday, May 23rd.

Proceeded on our journey about 5 o'clock, and in less than 3 hours descended a steep hill and fell upon the river. During this distance, the road was the same, and through the same sort of country as yesterday. There is a pretty broad and very rapid river, its banks covered with thick woods, at this place burnt. Here a river falls in from the southward, which has now but little water. The main river seems to run towards the W. N. W. Our road here lies on the north shore of it. After some search, we found a fordable place, and with some trouble, got across a little past noon, and continued our journey. The woods were burnt and the road barred with immense large fallen trees through which we made our way with a great deal of difficulty, and much labor, both to men and

John Work's Journal

---

horses, particularly the latter; indeed, it is surprising they don't break their legs. We encamped at past 6 o'clock. No grass for the horses.

Saturday, May 24th.

Fine weather till towards evening, when there was some heavy rain. Continued our journey before 6 o'clock, and had proceeded but a short distance till we came to where the road used to pass along some beaches in the river, but the water is now so high that it is impassable; the luggage we had had to be carried along the side of a steep hill by the men, where they were in danger of tumbling into the river, and the horses taken up by the hill, a very steep and difficult road which fatigued them greatly; indeed, both men and horses were exhausted in the evening though the distance we made is not more than 5 or 6 miles. To avoid losing the horses we used to guard them in the night, but, as there is not grass and only leaves for them to eat, we let them loose tonight so that they may pick up what they can, as it is to be apprehended they will get so weak with hunger that they will not be able to march. Two Indians came to us in the evening, and have agreed to accompany us to the crossing place, and point out the best road to us as they are better acquainted with the country than our guide.

Sunday, May 25th.

Rained constantly almost all day. Started early, and with our new guide got on pretty well. The road through thick woods and over several steep hills; the road less difficult than these days past. One of our horses gave up, and we could not delay to let him rest; and as he would have been lost, he was killed and the meat, bad as it is, brought in to serve us till we got to the Fort. Our provisions are getting short. All hands were wet to the skin. The horses have very little grass among the bushes this evening.

Monday, May 26th.

Fair weather, but the bushes still hang with wet. Continued our journey early and arrived at a small plain not far from the crossing place at 5 o'clock, where we encamped. The road lay through thick woods and over some steep hills. Found a small plain at noon where we stopped to let the horses feed 3 hours. Where we are encamped is a good feeding place, and much need they have of it. One of the horses, so jaded that he stopped and could not be got on with the others. Sent a man and an Indian to bring him on after he rests a little. We mean to remain here tomorrow to allow the horses to repose and feed, of which they are in much need.

Thursday, May 27th.

Fine weather till towards evening, when it rained a little. Did not move camp today, but remained to allow the horses to feed and repose.

Friday, May 28th.

---

John Work's Journal

---

Fair weather in the morning, heavy rain towards evening. We moved camp at an early hour, reached the river [Washougal] at 10 o'clock and got across it with all the luggage, horses, etc., by noon, and by 5 in the evening encamped at a plain where there is good feeding for the horses for the night. Our road to the traverse was as difficult as usual, and after crossing the river, we had a very steep hill to mount, which took us nearly 3 hours to ascend, and was very fatiguing, both for horses and men, though the road is pretty good. The road afterward was better than usual. There are some Indians encamped not far from us, but they fled to the hills on our appearance, supposing we were enemies.

Saturday, May 29th.

Heavy rain all day. Proceeded on our journey at 6 o'clock, and encamped in a swamp at 5, which is the only place we saw to stop at during the day. Part of the road today was pretty good, being through clean pine woods, but a great deal of it was very difficult. Crossed a pretty broad river, which was a branch of the one we left yesterday, and on leaving it had a long hill to ascend with a bad road. Several more of our horses getting very weak, notwithstanding the slow rate at which we march. The Indians tell us that we will be only another night in getting to the Fort, and that the road is better. This we have been frequently told, and, found it not to be so.

Sunday, May 30th.

Rained part of the day, fair towards evening. Continued our journey at 6 o'clock, and encamped in another swamp, the only stopping place we saw during the day, at 3 o'clock in the afternoon on account of some of the weak horses not being able to come up. We had few hills today; the road was, nevertheless, full as difficult. As usual, a great deal of burnt fallen wood which was very ill to get through as it repeatedly barred up the road; there was also several boggy places which were very hard upon the weak horses. Our custom has been to keep the weak horses behind, so that they might have the advantage of a little road after the others all passing through the bad places of fallen woods, thickets, etc. Hamdijna was behind today with four, one of which, a very weak one, stuck in a bog and he was not able to get him out. He came up with us, and Payette and a man went back to aid him and get the horse out of the bog, but he was so weak that he could not rise, and it is expected he will be dead before morning. During that time another of the weak ones, a white mare, strayed and could not be found. The old man became confused in his difficulties and cannot tell exactly about where they lost him, but he is confident he had him at another bog, a little farther off where he had some difficulty getting another of the horses out. I marched ahead with the guide, myself and \* \* \* brings up the rear, but today he came on with one of the middle brigades or probably none of the horses would have been missing, as he is an excellent hand with the horses in the woods.

The men were completely drenched with rain all day yesterday and most of today, for though it did not rain today, the bushes are so charged with wet that a continual shower was falling as we passed through them. The road, exceedingly harassing all day, and men and horses much fatigued. It was past sunset when the men arrived, that were seeking the stray mare, and taking the

John Work's Journal

---

horses out of the bog. Had it not been for the delay caused by their misfortunes, we meant to have gone on a little further to a fine plain which our guides represent to be ahead a little way.

Monday, May 31st.

The horse which was dragged out of the bog yesterday evening was dead this morning. The other that was missing and another which had also strayed were not found till 11 o'clock, when we started, and arrived at Fort Vancouver at 7 o'clock in the evening with 48 of our 50 horses, several of them nearly worn out \* \* \* The road for some distance in the morning was as bad as usual until we got into a pretty boggy place which is so overflowed with water at this season that it may be called a swamp, where, though the road is soft, it is infinitely superior to the thickets we have been passing for some time back. After passing this plain we had another part of woods, through which the road is good, then a fine dry plain, and another part of woods where the road is good, when we fell upon the plain on which the Fort stands, all the low parts of which is now under water, the Columbia being unusually high at this season. We are glad our difficult and troublesome journey is finished.

From Quarterly of the Oregon Historical Society, Vol. XIII. (1912) pp. 363-371

Journal of John Work, Covering Snake Country Expedition of 1830-31  
(Printed from copy made by Miss Agnes C. Laut in 1905 from the original in the Hudson's Bay Company's House, London. England)

Editorial Notes by T. C. Elliott.

Introduction

Readers of the Quarterly will recall the publication of the journals of Peter Skene Ogden in Volumes 10 and 11, recording the explorations and fur trapping experiences of that energetic H. B. Co. fur trader in Oregon, Idaho, Utah and Nevada between the Cascade Mountains and the main range of the Rockies during the years 1825 to 1829 inclusive.

There is abundant indirect evidence that in the late summer of 1829, Mr. Ogden led his company of trappers to the southward from Fort Walla Walla, through Eastern Oregon and along the eastern side of the Sierra Nevada Range and into Southern California, and that merely a detached party visited the Snake Country of Southern Idaho. But there is no record available and it is necessary to pass by the experiences of that year's journey with the hope that the original journal will be found at some future time. Upon the return of Mr. Ogden in the early summer of 1830 it was found that by orders from Gov. Simpson he had been transferred to the trade along the Coast in company with Mr. Finlayson, and the command of the Snake Country Brigade had been assigned to Mr. John Work, a very worthy successor. Mr. Work was of Irish descent and his name is properly spelled Wark. In this Quarterly (Vol. 10, page 296 et seq.), has already appeared an account of a journey made by him in the spring of 1830 from Fort Colville to Fort Vancouver and a brief mention of his career. Mr. Work's journals for at least two expeditions are available for use in this

John Work's Journal

---

Quarterly, and that for only the first part of the expedition of 1830-31 is now given. This is another of the transcripts made by Miss Agnes C. Laut from the original in the Hudson's Bay Company's House in London; it (the transcript) is now a part of the Ayers Collection in the Newberry Library of Chicago, and through the courtesy of that Library this copy has been obtained.

The track of Mr. Work's party in 1830 follows very closely that of Mr. Ogden in the Fall of 1827, for which compare with Vol. 11, page 355 et seq., of this Quarterly. From Fort Walla Walla, at the mouth of the Walla Walla River, across the Blue Mountain range and through the valleys of the Grand Ronde, Powder and Burnt Rivers to the Snake River at Huntington and on to the mouth of the Payette River it follows very nearly the scientifically recorded journey of John C. Fremont in 1843. Thence Mr. Work followed up the Payette River for two days, crossed over to the Boise River and from the sources of one of the forks of that river over to the Camas Plains and the waters of the Malade River in Southern Idaho. He then visited in turn the branches of that river and of the Lost River and proceeded across the lava bed plateau to the Blackfoot and the Portneuf Rivers. Evidently the intent was to trap pretty thoroughly the very sources of the various streams already named. It is of interest to recall that the year 1830 found in the camps of the American trappers in the Snake country some of the "mountain men" who afterward took an active part in the early government of Oregon, namely, Joseph L. Meek, Doc. Robt. Newell, Joseph Gale and others.

August 1830.

Sunday 22.- On the 15th the Snake Trappers whom I am appointed to take charge of reached Fort Nez Percés(1) from Fort Vancouver with their supplies. The following days were occupied arranging about horses. On the 20th they moved off from the fort. I remained two days to arrange papers and accounts to write letters and this morning followed and came up with camp near the foot of the Blue Mountains on a branch(2) of the Walla Walla. I reckon the distance 24 miles E. S. E. The party consists of 37 men, 4 hired servants, a slave,(3) 2 youths, in all 40 able to bear arms and armed, and 29 women and 45 children (22 boys, 23 girls), a total of 114 souls. These are provided with 21 lodges to shelter them, 272 horses and mules, 337 traps. The horses are pretty well loaded with provisions, as the journey lies through a country where animals are scarce. In the above party are 26 Canadians, 2 Americans, 6 half-breeds from east of the mountains, 2 Iroquois, 1 Nippesing.

Monday, 23 Aug. - Sultry weather. Moved 8 miles E. S. E. to the foot of the mountains, where we encamped(4) on a small branch of the Walla Walla. Our journey is to last a twelve-month, and we must take care of our horses at the beginning.

Tuesday, 24 Aug. - Early on the move and camped in 5 hours east of the summit of the mountains. Four Cayuse Indians going to the buffalo hunt joined us. They have no women, but one of them has a slave girl who followed him and was sent back twice; but today again came up. On her refusing to return, he shot her -, the ball wounding 3 places, but not mortally. This is the way of treating disobedience. I made him to understand that the whites did not suffer such occurrences among them.

---

Thursday 26th. Encamped at entrance(5) of Grand Ronde River. All hands employed getting lodge poles to pass the plains.

Monday 30th. Proceeded to Powder River through a fine valley.

Thursday, 2 Sept. Proceeded to Burnt River. Kanota killed 2 antelope. Dupard and Prichett took 5 beaver.

Sunday, 5 Sept. Proceeded to Snake River,(6) here about 200 yards wide.

Tuesday, 7 Sept. Alex Carson who is to take charge of 5 men, Depat, Cloustine, Sanders, Turner & Jean Ba'tiste, crossed the river northward to hunt the Wazer(7) and Payette's Rivers and cross the waters to some of the branches of Salmon River. A party was sent last year but too late to cross the waters they did not do well. These are to be at Nez Percés (Fort) the 10th of July (next). This reduces us 6 men, 4 women, 30 horses. We are still strong enough to oppose the Blackfeet.

Thursday 9th. Reached the discharge of Payette's River up which we proceeded. Payette found a horse here among the Snakes stolen 3 years ago. The Indian pleaded he had traded it, but got from Payette only a knife.

Saturday 11th. Marched S. E, from Payette's River to Reid's River(8) to the south flat, to the north mountains.

Monday, 13 Sept. Cut across to Sickly River:(9) here we encamped.

Thursday 16th. Pritchett's wife in labor we did not move camp. Kanota & Etang returned with 7 beaver. The woman delivered of a boy.

Sunday 19. Reached Little Camas Plain.(10)

Saturday, 25 Sept, Fine weather: encamped near the mountains. The people all out in different directions hunting. At 8 p.m., about an hour and a half after we encamped, one of the men, Thomas Taanateau, came running to the camp afoot almost out of his senses with fear and related that as he P. L, Etang, Baptiste Tyagnainto & L. Kanote's slave were going to their traps on the upper part of the stream in the mountain, they were set upon by a war party of Blackfeet and his three companions killed on the spot, that he barely escaped.

Five of my men were in camp. Some soon arrived & we put ourselves in a state of defence and made pens for our horses. The men scanned the hills in vain for the enemy. Three Cayuse Indians with us found poor L'Etang and the slave murdered, stripped and the latter scalped. Baptiste was still alive. They brought him to camp through the dark. He is wounded but not dangerously and gives the following account of the melancholy occurrence. The four were ascending a steep hill

afoot leading their horses and not paying attention to the sides of the road when Indians started up from the long grass and fired then rushed and seized him but not before he discharged his gun and killed one. He called on the slave to fire when the Indians rushed upon the latter and killed him. In the interim Baptiste ran to cover in a tuft of willows where he hid till the Cayuse found him, gun powder horn and shot pouch were torn from him. L'Etang made no defence. The slave killed one when he fired and it was his struggle enabled B to escape. Thomas was not wounded. His pursuers were near taking him but heard Kanota's rifle fired at a deer. The Indians made off without taking time to mangle the bodies as they are wont to do - scalping only the slave. The enemy consisted of 20 men - their motive to get horses and arms. Another man, F. Champaign had a narrow escape. They stole 3 of his traps. These men risked ( ? ) themselves but the Snakes being ahead, it was thought the Blackft would hang on the rear. Payette and 12 men interred our unfortunate companions. 4 men arrived from Reid's River with 27 beaver; 42 beaver this day from our own river. Sold L'Etang's property by auction .

Tuesday 28. Encamped on Sickly River where it received the Camas Plain River.(11) Country rugged and barren. Blackfeet tracks are observed prowling about camp.

Saturday, 2 Oct. Marched N by E to Muskeg Swamp where the N. fork of Sickly River has its source.(12) A party of Snakes 11 years ago took 300 beaver in 2 encampments here. Few beaver are here now driven by fire & destroyed by some sickness for there is no sign of recent hunting here. Little but reeds growing. The beaver feed on the roots. Whether this causes the sickening quality of the flesh or the roots, several of the people are sick from eating the beaver. Hemlock is also found the roots of which cause the flesh to be poisonous.(13)

Sunday, 10 Oct. One of the men who went up the river brought back news he had met a party of 20 American hunters just arrived from Snake River across the plains. They had been 2 days without water. One of them an Iroquois called Pierre,(14) who deserted from us came to our camp; but little news was obtained from him. Americans are encamped within a short distance of us.

Tuesday, 12 Oct. Left Sickly River and struck across the plain to a small rivulet that bears Bevens' name. Eastward lie the plains(15) towards Snake River. Our object is to search Salmon River. There are 2 roads of the same length - the north branch of Sickly River and the one we take by Goddin's River,(16) preferable because level and leading sooner to the buffalo for provisions, the people being out of food. Moreover the Americans may not follow us by this road not knowing our route. Their horses are (s)low but they have no families or lodges and little baggage to embarrass them wh. gives them an advantage over us. The Americans raised camp before us and proceeded up the river, but on seeing us strike across the plain they left the river and followed along the foot of the mountains and encamped behind where Payette and party were defeated by the Blackfeet 2 yrs. ago. I did not see a Mr. Rabides who is at the head of the party but it appears they are 200 men, 100 hunters. Crooks & Co. are the outfitters. A Mr. Fontenelle(17) who manages this business is now at Snake River with 50 men, They have great quantity of goods en cache. They have been hunting on the Upper Snake. They were set upon by the Blackfeet on Yellowstone River and 18 men killed. They had intended to go to the Flatheads this fall but were deterred by the

advanced season.

Thursday, 14 Oct. A. (?) Plante, M. Plante, P. Findlay, & Payette killed each a buffalo. Are now in a barren country covered with wormwood.

Wednsy. 20. Reach what is called the fountain & a swamp where Goddin's River has its source. A road here thro' the mountains to Days' Defile: A road also from the south. Buffalo are numerous but the Banock Snakes have driven off the elk.

Saturday 23rd. The women availed themselves of the hot springs to wash their clothes.

Tuesday, 2nd Nov. Camped near head of Day's River. Three years ago a party of freemen wintered here with Mr. McKay(18) we met 2 Flatheads. Their camp is 6 days' march off, very strong, Flat-heads, Pendant D'Oreilles and Spokanes with Nez Percés being together.

Saturday, 6 Nov. The two Flatheads left today. I wrote by them to Mr. C. F. McLoughlin apprising him of our route.

Tuesday, 23rd Nov. A party of Freemen under Mr. Ogden passed the winter here some years ago. There was neither ice nor snow in the valley then.

Sunday, 28 Nov. Stormy cold weather snow showers ( ?) and drifting. Crossed the height of land 12 miles S. E. The snow 2 ft. deep. The horses are jaded. People are fatigued. Large herds of buffalo are about.

Wednesday, Dec. 1. Proceeded to the entrance of Day's Defile.(19) Six of the men, August Finlay at the head of the party, O. Finlay, M. Finlay, A. Hoole ( ?). A. Plante and Bte Gardipie separated from camp and took the road round the end of the mountain. These men are all half Indians. The two roads meet at the end of a few day's march, the road thro the pass is hilly, and uneven (depth) of snow 2 ft. Horses gave out on the way. Excellent feeding at camp half way. Herds of buffalo observed in the valley.

Dec. 9, Thursday. Crossed plains to a dry branch of Goddin's River.

Friday 17th. Arrived(?) of Snake River lower end of Blackfoot Hill. Found good feeding for horses and a great many Snakes are encamped around. Loss of horses altogether crossing plains 26. Cold caused the loss. The Americans hunted this Quarter summer and fall. Lately a party of them crossed the mountains to White River to winter. We found poor L'Etang's rifle among the Snakes, picked up in bushes where Blackfeet had camped.

Tuesday, 21 Dec. Clear and cold. Large party of Snakes paid us a visit on horseback as a mark of friendship passed 3 times round our camp firing volleys. They were well armed and wore the scalps and mangled remains of the 2 Bckft whom they killed 2 days ago suspended from their

horses' bridles.

January, 1831. New Year's day. None of the people went hunting. They endeavored to regale themselves. Each man was treated with a dram of rum and some cakes.

2nd Sunday. Foggy late last night 16 Flatheads and Nez P came from the American camp(20) at White River on the E. side of the waters. They are afoot. Have been 10 days on the journey. They sold their horses to the Americans at high prices and now wear blankets of blue green and white besides having guns, rifles and beads. The Americans are to come this way in spring to form a post among the Flatheads. The Americans have 2 parties 6 chiefs and a great many men.

March, Thursday 17. Cloudy rain cold. The Snakes are moving off down the river. The chief of the Horn(21) and a few old men paid us a visit.

Friday 18. Moved camp across the plain to Portneuf (?) River.

1. Fort Nez Perce is the original Northwest Company's name for the trading post erected by them in the summer of 1818 and later known as Fort Walla Walla; for description of the building of the Fort, consult Alex. Ross's "Fur Hunters of the Far West."

2. This branch stream was probably Pine Creek, which empties into the Walla Walla River at the town of Touchet, sixteen miles east of Fort Walla Walla; the horses belonging to the Hudson's Bay Company were herded on what is still known as the Hudson's Bay ranch on this creek.

3. Not a "gentleman of color" from the South, but a captive from some other tribe and usually designated as such by leaving his hair cut short. This slave gave a good account of himself before his death soon after, as will be seen a little further on.

4. Probably near either Blue Mountain Station on Dry Creek or the town of Weston on Pine Creek, both in Umatilla County, Oregon; from this place they crossed the Blue Mountain divide the following day.

5. This was at Summerville, Union County, Oregon, formerly known as Indian Valley; after four days here, they passed through the Grande Ronde Valley and over the divide to Powder River.

6. Huntington, Oregon, having come by way of Powder River and Burnt River.

7. The Weiser River in Idaho; called the Wazer by Arrowsmith.

8. The Boise River, known as Reed's River after John Reed of the Astor party who started a trading post at its mouth.

9. The Malade, or Wood River of present maps; but the party can hardly have reached it yet.

10. Not far northeast but across the ridge from Mountain Home on the Oregon Short Line Ry.
11. At the host springs about eight miles west of Stanton in Blaine County, Idaho; present site of Magic Reservoir of U.S. Reclamation Service.
12. The North Fork of the Malade would be Little Wood River of today.
13. The Malade was so named by Donald Mackenzie because his men were made sick by eating beaver there; Alex. Ross reports a similar experience and now John Work adds his testimony and explanation.
14. Evidently the same Pierre who gave Alex. Ross so much trouble in 1825 in the Bitter Root Valley.
15. The dry lava bed plateau of central southern Idaho, beneath which the mountain streams flow to Snake River.
16. Arrowsmith shows this name of the Big Lost River and Day's River or Day's defile would be the Little Lost River of today.
17. Consult Chittendon's Hist. of Amer. Fur Trade. A trapper named Robidoux is mentioned; also Lucien Fontenelle. Both were with the American Fur Company of the Missouri River, with which Ramsay Crooks of Astor Company fame was connected.
18. Consult Mr. Ogden's journal for winter of 1828 when he was so anxious about this Thos. McKay party; the latter was son-in-law of Chief Factor John McLoughlin at Fort Vancouver.
19. Where the river canyon opens upon the plain, which they crossed a few days later in about the line of branch line of Oregon Short Line of today to the Blackfoot Mountains east of the Snake River and City of Blackfoot.
20. Probably this refers to the vicinity of Ft. Bridger on a branch of Green River and to the trappers of the Rocky Mountain Fur Company, the partnership of Fitzpatrick, Jackson, and Sublette. This was the company with which Meek, Newell and Gale were associated. Arrowsmith shows a white Mud River, which would be our Bear River.
21. Probably the same chief named The Horse in Mr. Ogden's journal.

From Quarterly of the Oregon Historical Society, Vol. XIV. (1913) pp. 280- 314

JOURNAL OF JOHN WORK'S SNAKE COUNTRY

---

EXPEDITION OF 1830-31

SECOND HALF

Editorial Notes by T. C. Elliott

This Quarterly printed in Vol. XIII., No. 4 the first installment of the journal of John Work, a trader of the Hudson's Bay Company, covering his trapping expedition to the Snake Country in the year 1830-31, with an editor's introduction; the second and final installment is now presented. The original of the first part of this journal was found in London but curiously enough this latter half comes from quite another source, namely from the family papers of the late William Fraser Tolmie of Victoria, B. C.; Dr. Tolmie married one of the daughters of John Work. No opportunity has been afforded for the writer of these notes to compare his copy with the original but some few apparent errors, chiefly in proper names, cannot affect its general reliability.

We left Mr. Work with his large party of trappers and their families on the 18th of March, 1831, at the Portneuf river in Southern Idaho, probably not far east of the present city of Pocatello; we now resume our acquaintance with him April 21st, a month later, on the upper waters of the Bannock river, south of the Portneuf. After very successful trapping here he follows down Snake river past American Falls to Raft river (Mr. Work designates this stream both as Raft and as Roche-Rock river, but evidently it was the former), and ascending that river to one of its sources he crosses the divide to the plain at the north end of Great Salt Lake. He was then not far from Kelton, Utah, a place which held prominence for a time after the completion of the Central Pacific Railway as the eastern terminus of the stage lines from Walla Walla, which was one of the regular lines of travel for people going East from Oregon and Washington. This stage line crosses the Snake river below Salmon Falls.

Mr. Work then proceeds westward across the divide to the waters of the Humboldt river (called by him Ogden's river) and for more than a month is upon the waters of the Humboldt flowing west and south and of the Bruneau and Owyhee flowing north, in northern Nevada. Late in June he turns north across Eastern Oregon by way of Malheur lake, Silvies river and the John Day river to his starting point at Fort Nez Perce at the mouth of the Walla Walla river. But little attempt will be made at long range to trace the itinerary closely. On this his first expedition into this region Mr. Work followed closely the track of his worthy predecessor, Peter Skene Ogden, in 1828-29, whose journals published in volumes X and XI of this Quarterly are now the more intelligible.

Thursday, April 21st, 1831. Stormy, raw, cold weather. Moved camp, and marched 10 miles S. E. up the river. [Bannock River] The river here is a narrow deep stream with steep clayey banks which have some willows growing upon them, and appear well adapted for beaver, a good many marks of which are to be seen. This little stream is not known ever to have been hunted by whites. Just above our last encampment it spreads into a kind of swamp which was probably taken by the hunters to be its source. The valley through which the river runs here is pretty wide, and seems to have been but a very short time free of snow, the mountains on each side of it have still a considerable depth upon them, and banks of it remain in sundry places along the shores of the river. The valley seems to produce little else but wormwood. There is a little coarse, dry grass in some points along the river. Owing to the unusual lateness of the spring the young grass is barely beginning to shoot up so that our horses, lean as they are, can gather very little to eat, which is much against

---

them and also retards our progress as it is out of power to make such day's journeys as we would wish. Some of the people went in pursuit of buffalo but with little success. Nearly all the people set their traps, only two beaver were taken. Two of the men, A. Findlay and A. Hoole, who went after buffalo towards the mountains discovered a party of 14 Blackfoot with 8 or 10 horses. The Indians immediately fled, and the men foolishly pursued them some distance before they returned to the camp. On their arrival a party immediately went in pursuit of them but could not overtake them. They had got across the mountain notwithstanding the depth of the snow. F. Payette and 4 or 5 of the half breeds ascended the mountains after them but it was too late to continue the pursuit and they returned. A mare and colt which they left in their hurry was brought to the camp. There were the tracks of some women and children with the party. It is conjectured that the horses were stolen from the Snakes and that the women and children were also of that nation and made slaves of by the Blackfeet. They threw away several cords in their haste. A. Letender, who was up the river setting his traps, saw three Blackfeet with a horse, they immediately went off. P. Brinn and L. Kanottan saw and pursued another party of 5 men, two of them in their haste to escape them threw away their robes and cords. It is to be regretted that the two men who saw the party with the horses did not come to apprise us at the camp immediately and the whole party with their horses would probably have been taken.

Friday, April 22nd. Cloudy, cold weather, some heavy rain and sleet in the night and fore part of the day. Did not move camp. The people visited their traps and set some more. Twenty-five beaver and one otter were taken. There is the appearance of a good many beaver.

Saturday, April 23rd. Stormy, cold weather. Moved camp 5 miles farther up the river in order to find some feeding for the horses, and even here the grass is very indifferent and scarcely any of it. Though there are few buffalo to be seen now they have been very numerous here a short time ago and eat up the most of what little grass was. The men visited their traps and took 33 beaver. The river here divides into two forks and falls in from the other rivers and the Costen from the south. The former is that which the Indians represented to be richest in beaver. We are mortified to find that as far as the men proceeded up it it is choked up with snow except in small spots here and there, and the valleys through which it runs, though of considerable extent, still covered with snow to a considerable depth in places 3 to 4 feet deep and farther up probably much deeper. The men who went farther up the south branch 15 and 20 miles suppose they have reached its head, a kind of swamp; here though the valley is larger than in the other branch yet the snow lies equally deep, and farther on through a fine valley appears still deep. The wormwood is covered with the snow. In this state of the snow we can neither trap these little rivers in the mountains nor attempt to cross the mountains without the risk of losing some of our horses from the depth of snow and want of food. The only step we can take now is to abandon this road and seek another pass more practicable. It would take too much time to wait till the snow melts. Thus are the prospects of the little hunt which we expected to make of 600 or 700 beaver in this quarter blasted. The unprecedented lateness of the spring is greatly against our operations. The oldest hands even in the severest winters never witnessed the season so late. The men saw some buffalo on the verge of the snow, probably they had been driven there by the Blackfeet Indians whom we found here. The people killed some of the buffalo but they were so lean that they were scarcely eatable. Three of the men drew a herd of bulls into a bank of snow yesterday and killed 16 of them.

---

Sunday, April 24th. Frost in the morning, clear, cold weather for the season during the day. The men visited their traps, 14 beaver were taken. The water is rising, which is against the trappers. Two of the men saw 6 Blackfeet Indians high up the river yesterday, they made to the mountains. Some were prowling about our camp last night the tracks of two who passed close to in the night were observed this morning.

Monday, April 25th. Cloudy, cold weather. Returned down the river to near our encampment of the 20th. The people visited the traps but only one beaver was taken. The water in this little river rose several feet in the night. Though only a day's journey from our encampment of this morning there is a material difference in the appearance of the country. Vegetation has here made considerable progress, and we found pretty good feeding for our horses.

Tuesday, April 26th. Rained the greater part of the day, bright in the morning but heavy towards evening. Moved camp and marched 10 miles S. W. across a point to Snake river. Here we had the satisfaction to find excellent feeding for our horses. One beaver was taken in the morning. The men were out in different directions setting their traps. Some buffalo were seen and two or three of them were killed in the plains, they are still very lean. The hunters observed the fresh tracks of some parties of Blackfeet, and thought they saw one on horseback. One of the party had a few horses with them which they had probably stolen from the Snakes.

Wednesday, April 27th. Heavy rain in the night, and stormy with rain all day. The unfavorable weather deterred us from raising camp. The people revisited their traps, and set some more. Twenty beaver were taken, 16 of them in a small rivulet towards the foot of the mountains, which appear never to have been trapped nor even known notwithstanding parties of trappers having so frequently passed this road. C. Plant, M. Plant, Bt. Dubrille and J. Desland found it yesterday.

Thursday, April 28th. Cloudy, fair weather. Moved camp and proceeded 6 miles down Snake river to near the American falls, here we had good feeding for the horses. All hands out visiting and setting their traps. Twenty-two beaver and two otter were taken, 11 of the beaver from the little creek in the plains. Below the rapids there is some little appearance of beaver notwithstanding the Americans passed this way last fall. Some of our hunters had trapped big river down to near the falls early in the spring.

Friday, April 29th. Stormy weather, very heavy rain mixed with hail and sleet. The unfavorable weather deterred us from moving camp but it did not prevent the people from visiting their traps and setting several more. 19 beaver were taken.

Saturday, April 30th. Heavy overcast weather with some rain in the morning. Cloudy, fine weather afternoon. The unfavorable appearance of the weather in the morning prevented us from raising camp. The men visited their traps and took 50 beaver in a small creek called the big storm river. This little stream appears to have been hunted by the Americans last fall, yet there are marks of beaver being still pretty numerous. Several of the people's horses became jaded and gave up by the

John Work's Journal

---

way, some had to be left behind, and it was dark by the time others reached the encampment. The poor horses are still so lean and weak that they are unable to bear any kind of a hard day's work. They are in much want of a week's repose and good feeding, but the lateness of the season will not admit of our allowing them so much.

Sunday, May 1st, 1831. Heavy, cloudy weather, some showers in the afternoon. Moved camp and proceeded 12 miles S. by W. across a point to the little creek [Rock Creek] where the people have their traps set near the mountains, the road, though a little hilly, was good, considerable patches of snow occupying the north side of the little hills and the bottoms of the deep gullies. This little river is a narrow deep stream resembling the river Bannock, running between steep clayey banks. Where we are encamped is at the entrance of the mountains, the valley is not wide and no wood but some willows on the banks of the river. There is pretty good feeding here for the horses, but farther up the valley, where the snow has but lately disappeared, the men represent the grass as very indifferent, in many places scarcely any. All hands visited their traps, 65 beaver and 1 otter were brought to the camp, but the greater part of them were taken yesterday and left in cache. The traps this morning did not yield according to expectation.

Monday, May 2nd. Cloudy, fine weather, some showers in the afternoon. Did not move camp in order to allow the horses to feed, pretty good grass being at this place, and to allow the men time to take up their traps before we descend again to the Snake river. Some of the people have been up this river as far as there is any wood or beaver. 11 beaver were taken. Some of the men set their traps in the big river.

Tuesday, May 3rd. Cloudy, fine, warm weather forenoon; stormy with thunder and some rain towards evening. Moved camps, and proceeded 10 miles S. W. to the Snake river, where we encamped among hills on the small crawfish river. The road very hilly and fatiguing on the horses, many of whom were much fatigued on making the encampment. They were recompensed by excellent grazing. The men were on ahead setting their traps. 12 beaver and 1 otter were taken.

Wednesday, May 4th. Cloudy, stormy weather. Marched 10 miles W. S. W. to Raft river which we fell upon 10 or 15 miles from its junction with Snake river. The road good but very hilly the forepart of the journey. Raft river is now very high and muddy owing to the melting of the snow. There are some appearance of beaver in it though this part of it was hunted by the Americans last fall. The men visited and changed their traps. 11 beaver were taken. Some tracks of buffalo were seen on the opposite side of Snake river, and the tracks of some herds ascending the river. We have, if possible, to procure a stock of provisions as we have a long way to march through a country nearly destitute of animals of any kind, and this is the last place where we are likely to find any buffalo.

Thursday, May 5th. Cloudy, stormy weather, thunder and some very heavy rain towards morning. Marched 5 miles south up the river, when we encamped, and sent the most of the people after a large herd of buffalo which was discovered feeding in the mountain. Our horses have improved a little and are now able to catch them. The buffalo are beginning to get a little older, and though

scarcely the appearance of fat is to be found on the meat, is tolerably palatable. The people visited their traps in the morning, 14 beaver were taken. Gave orders for the people not to go ahead lest they would disturb the buffalo and drive them farther off.

Friday, May 6th. Cloudy, fine weather. Did not move camp in order to allow the people to dry the meat which was killed yesterday. The buffalo are so lean now that they scarcely yield as much dry meat, and of an inferior quality, as one would do in the fall or early part of the winter. 5 beaver were taken.

Saturday, May 7th. Cloudy, fine weather. Marched 12 miles south up the river. The road good, but very indifferent feeding for the horses. A number of the people went after a herd of buffalo which was grazing on the opposite side of the river, and killed several, the meat of which the women are now busy drying. It is fortunate we find buffalo here as it saves us the trouble of going a long day's march to the Eastward, to a place out into the plains called the Fountain where buffalo are always said to be found. It would lose at least three days going to this plain. I had some trouble in preventing some of the men from running ahead of the camp with their traps and raising the animals. Some of them want no provisions themselves and are indifferent whether others have it in their power to get any or not. By missing the opportunity of collecting a little provisions now the people would be obliged to eat several of their horses before reaching the Fort, [Fort Nez Perce] as animals of any kind are uncertain. (?) beaver were taken.

Sunday, May 8th. Cloudy, fine weather. Marched 12 miles south up the river. The road still good, but grass for the horses very indifferent. A number of the people went in pursuit of a large herd of buffalo which was feeding on the opposite shore of the river, and killed a number of them, the meat of which is now being dried. Blackfeet are still following our camp. Two of the young men, who went out into the plain yesterday to discover buffalo, saw them, but were not sure, on account of the haze, whether it was men or antelopes. Two of the men who went back this morning for some traps which they had (left) behind saw the Indians coming to our camp after all the people had left it some time. (?) beaver were taken.

Monday, May 9th. Fine weather. Did not move camp in order to give the people time to kill some more buffalo. Some large herds were found at the foot of the mountains on this side of the river, a number of whom were killed. The most of the people have now nearly enough provisions, what little a few of the people still want we expect to find as we advance up the river. Some marks of Blackfeet were seen near the camp this morning. In the morning the buffalo were observed flying from the mountains to the eastward, and it is conjectured they were disturbed by a band of those marauders.

Tuesday, May 10th. Unpleasant, stormy weather. Raised camp, and proceeded 10 miles south up the river, the Roche, [Must refer to branch of Raft, not Rock river] where it becomes confined in a narrow valley. Here we found good feeding for the horses. No buffalo to be seen today until towards evening when a small band were observed in the mountain. Some of the people went after them, but only one was killed. One of the men, M. Plante, who went after the buffaloes was

behind the others when returning and discovered a Blackfoot Indian on horseback and fired upon him but missed. The Indian made off towards the mountain, when five other Blackfeet were observed afoot. These scamps are still following us seeking an opportunity to steal.

Wednesday, May 11th. Cloudy, rather cold weather. Marched 10 miles S. S. W. up the river, the road good. We deviated a little from our straight road today in order to send off a party of our men to hunt in another direction tomorrow. The people visited some traps which were set yesterday and took 6 beaver. No buffalo nor the marks of any to be seen today.

Thursday, May 12th. Fine weather in the morning, but heavy rain and snow and very cold afterwards. Raised camp and marched 10 miles across the mountains, and encamped on a small rivulet of snow water. The head of Raft river appears in a deep valley to the west of us. The road on the mountains hilly and rugged and some places stony, and in places very boggy. The snow still lies in banks of considerable depth, and appears but very recently to have disappeared off most of the ground. The grass is barely beginning to spring up except on small spots exposed to the south, which has been some time clear of snow, where vegetation has made some progress. From the very ruggedness of the road and the badness of tile weather this was a harassing day both on horses and people. For want of water we could not encamp sooner. In order that we may make a better I separated a party this morning and sent 8 men, viz. C. Plante (who is in charge of the party), J. Deslard, F. Champagne, L. Rondeau, L. Quenstall, A. Dumarais, Bt. Dubrielle and A. Longtin to hunt to the Westward on the heads of small rivers which run into Snake river and on the Eastern fork of Sandwich Island River, [Owyhee river] while I with the remainder of the party proceed to the southward to Ogden's river, and then to the head of Sandwich Island river. Plante was directed to push on and make a good encampment today so that he might get out of the reach of the Blackfeet who are still following our track, but instead of doing so some of the people who went in pursuit of a horse that followed the party found the encampment only a few miles from our last night's station. If they push on they will in a short time be out of the reach of the Blackfeet.

Friday, May 13th. Raw, cold weather, froze keen in the night. Marched 15 miles S. E. to the entrance to the plain [Near to Kelton, Utah] of Great Salt Lake. The road very hilly and rugged, numerous gullies to pass, several of which are still full of snow, through which the horses sometimes with difficulty dragged themselves. Nearly all this day's journey through the mountains the snow has but recently disappeared even in patches, and the grass is still so imbedded with water that the horses nearly bog in it. Except a few spots here and there the grass is barely beginning to shoot up, and in many places vegetation is not yet commenced. Where we are encamped there is a little grass for the horses. This was a fatiguing day on both men and horses, many of the latter with difficulty reached the encampment.

Saturday, May 14th. Cloudy, cold weather. Marched 12 miles S. along the foot of the mountains, and encamped on a small river on Mr. Ogden's usual road to Odgen's river. The road today was good and pretty level though intersected by several gullies, some of which are still full of snow. The mountains to the West are still partially covered with snow, and appear very rugged. To the eastward lies the great plain thickly studded with clumps of hills. About this neighborhood we

expected to find some buffalo, and that such of the people as are short of provisions would furnish themselves with some more, but not the mark of a buffalo is to be seen. There are a good many antelopes in the plains and some black-tail chevereau.

Sunday, May 15th. Cloudy, fine weather. The air rather cool in the neighborhood of the snow-clad mountains. Proceeded on our journey 8 miles south, when we encamped on a small rivulet which barely yields sufficient water for the horses. No water being found near was the cause of our putting up so early at this place. The road lay along the foot of the mountains, and though hilly was good. It was intersected by several gullies, some of which are still full of snow. Large hills and points of mountains lay below us and the plains than yesterday. Found an old Snake Indian woman who said her people were encamped near some of the people: also found three men of the same nation with horses. These people seldom venture from the mountains, they are now employed collecting roots, none of them have yet ventured to our camp.

Monday, May 16th. Cloudy, cool weather in the morning, fine weather afterwards. Continued our route 13 miles south to what is called the Fountain, which is a small spring of indifferent brackish water in the plain where the soil is mixed with saline matter. Not only water is scarce here but there is very little grass for our horses. The road though hilly is pretty good, it lay down a deep gully and over several hills before we reached the plain. Ranges of mountains covered with snow ran to the westward, besides the plain is studded with detached hills, several of which are still covered with snow. On reaching the plain it appears to be eastward like an immense lake with black, rocky hills, here and there like islands large tracts of the plain appear perfectly white and destitute of any kind of vegetation it is said to be composed of white clay. A small lake appears in it at some distance. To the South E. is the Utah lake and river, to the southward the ( ? ) is said to be destitute of water for a long way, yet snow-capped mountains appear in that direction. We found a few Snake Indians encamped here, and a party of 20 men visited us from farther out in the plain. Some leather and other trifles were traded from them by the people.

Tuesday, May 17th. Fine weather. Continued our march 10 miles W. S. W. to small rivulet of indifferent brackish water which winds through a salt, marshy valley. There is pretty good feeding for the horses. The road pretty good and level though there are detached hills on each side of us. The rivulet is lost in the plain a little below our encampment.

Wednesday, May 18th. Fine, warm weather. Proceeded 7 miles W. S. W. up the little rivulet, which continues of the same appearance and about the same size. We encamped early on account of no water being to be found farther on. Tomorrow we have a very long encampment to make.

Thursday, May 19th. Cloudy, fine, warm weather. Continued our journey at an early hour and marched 25 miles S. S. W. to a range of mountains which we crossed, and then across a plain to a small rivulet which we found unexpectedly in the middle of it. The road good but hilly crossing the mountains. Not a drop of water to be had all the way. We found water near two hours march sooner than we expected, yet several of the horses were much jaded, some of them nearly giving up. That and the dirt were more oppressive upon them than the distance they came. The

John Work's Journal

---

mountains round this valley [Grouse Creek Valley] and plain are not very high, yet in places still covered with snow. The track of elk, black-tail deer are seen in the mountains but could not be approached. Cabins (?) are seen in the plains, but all very shy. The hunters saw some Indians; the naked wretches fled to the mountains. None of them visited our camp.

Friday, May 20th. Fine, warm weather. Continued our course 12 miles S. S. W. across the plain where we encamped on a small stream of brackish water which runs through salt marsh, and in a short distance is lost in the plain.

Saturday, May 21st. Fine weather, a thunder storm and a little rain. Proceeded on our journey 16 miles W. S. W. over a rough, stony though not high mountain, and then across a plain to a lake, where we had the satisfaction to find good water. The road over the mountains stony and rugged, but across the plain very good. A range of high mountains covered with snow appear ahead of us. Some antelopes are seen in the plains, but no appearance of any other animals.

Sunday, May 22nd. Sultry, warm weather. Marched 20 miles W. N. W. to the W. end of a steep snowy mountain, there we encamped in a small creek which rises from the mountain, the waters of which are lost in the plains below. This morning we left Mr. Ogden's track to Ogden's river in hopes to reach the river sooner and fall upon it a few day's march higher up than the usual route. Our road good, lay through an extensive plain. From the heat of the day and the distance marched the horses were much jaded and the people fatigued on nearing the encampment. However, we have good water and excellent feeding for the horses. Several naked starved looking Indians visited the camp. We have been seeing the tracks of these people every day, but seldom any of them venture to approach us.

Monday, May 23rd. Warm weather. Continued our journey at an early hour and marched 16 miles W. N. W. through a small defile across the end of the mountain and down a plain to the E. fork of Ogden's [Humboldt] river. This branch river runs through a low part of the plain which is now a swamp owing to the height of the water, the river having overflowed its banks. Several of the people were ahead both up and down the river with their traps. No vestiges of beaver are to be seen on the fork where we are encamped, though some of the people ascended it to near the mountains. In the middle or principal fork the water is so high that the river can only be approached in places the banks being overflowed and the low ground in its neighborhood inundated it is difficult to discern any marks of beaver, nevertheless, several traps were set at a venture.

Tuesday, May 24th. Warm, sultry weather. Marched 15 miles W. N. W. across the plain to the middle fork of the river. We had some difficulty crossing the E. fork, several of the horses bogged in its swampy banks. The road across the plain pretty good; the low ground through which the river runs is nearly all flooded. The river here has a good deal of willows on its banks. Only three beaver were taken. The people begin to apprehend there are but few beaver in the river, and from the height of the water these few cannot be taken. This part of the river was hunted two years ago by a party of hunters which Mr. Ogden sent this way, they found a good many beaver and supposed the river was not clean trapped.

Wednesday, May 25th. Overcast, thunder and heavy rain afternoon. Proceeded 10 miles up the river which here runs from N. to S., the road good, the banks of the river everywhere overflowed. Four beaver and 1 otter were taken. The part of the river we passed today is well-wooded with willows, and appears well-adapted for beaver, yet few appear to be in it. A party of Indians visited our camp this morning and exchanged two horses with the people. Some of the people were out hunting. F. Payette and L. Kanotti killed each an antelope. These are the only animals to be seen here, and they are so shy that it is difficult to kill any of them. Several of the people are getting short of provisions, and not finding beaver here as was expected is discouraging the people.

Thursday, May 26th. Overcast weather, blowing fresh. Did not raise camp in order to allow our horse to feed and repose a little, of which they are in much want, they having been nearly 16 days without one day's rest, they are all very lean and many of them much jaded. I was still expecting to find some beaver that we might allow the horses to recruit a little and hunt at the same time, and was induced to push on even to the injury to some of the horses. The people visited their traps but only four beaver were taken. Those who went farther up the river bring no better accounts of the appearance of beaver. The water is falling a little above. A party of Snake Indians visited us. They informed us that there are a few small streams in the mountains where there are a few beaver.

Friday, May 27th. Cloudy, fine weather. Continued our journey 12 miles up the river to a small branch which falls in from the north, the main stream running here from the west. The head of this small fork is close to the head of the Big Stone [probably Salmon river] river which falls into Snake river. The road pretty good till we reached the fork, where, on account of the water, it is a perfect bog and we had much difficulty in crossing it, several of the horses bogged and some of the things were wet. 4 beaver were taken. No better signs of beaver. Some of the people were hunting antelopes, which are the only animals to be seen here, but only one was killed.

Saturday, May 28th. Stormy, cold weather. Proceeded on our journey 16 miles up the river west to above where it is enclosed between steep, rocky hills. The road part of the way very hilly and rugged and so stony that the horses ran much risk of breaking their legs. Here we found a place where the river is fordable. The water has subsided a little within these few days. During this day's march the river is well wooded with poplar and willows, yet there is very little appearance of beaver, only three were taken today. Four of the young men who left the camp on the 25th arrived in the evening. They struck across the country to the W. fork of the river which they ascend to the mountains, and did not find a mark of a beaver to induce them to put a trap in the wet. That branch, like the one we are on, has overflowed its banks. The young men on the way here passed two small streams which run towards Snake river.

Sunday, May 20th. Stormy, raw, cold weather. Crossed the river in the morning and proceeded across the mountains 10 miles S. S. W. to a small stream which falls into Bruneau river. The road hilly and rugged and very swampy on the banks of the little river which we crossed. There is still a good deal of snow in large banks in the mountains, it appears not to have been long since it disappeared in the valleys as the grass is still very short and vegetation but little advanced. A few of the people who imagined the river was not fordable above remained at a narrow part in the rocks yes-

---

terday evening and made a bridge by felling trees so that they fell across the river over which they carried their baggage but in crossing their horses, one belonging to G. R. Rocque was drowned.

Monday, May 30th. Mild weather in the morning, which was succeeded by a violent thunder storm which continued a considerable time. Stormy, cold weather during the remainder of the day. The unfavorable weather deterred us from raising camp.

Thursday, May 31st. Stormy, cold weather, some showers in the morning, and a heavy snow storm in the evening, keen frost last night. Continued our journey 13 miles across the mountains to a small stream which we suppose falls into Sandwich Island river. The road very hilly and rugged, being over a number of deep gullies. There is also a good deal of snow on the mountains, some bars of which we had to cross. The country has a bare appearance. Not an animal except a chance antelope to be seen.

Friday, June 1st. Keen frost in the night, stormy, cold weather during the day. Continued our route 12 miles W. across the mountains and down into the valley where a number of small branches fell in from the mountains and formed the head of the E. fork of Sandwich Island river. This little valley is about 20 miles long and 15 wide. A small fork falls in from the S., 2 from the eastward, one from the W., all of which form one stream which runs to the N. W. through a narrow channel bordered by steep, impassable rocks. The different forks in the valley have some willows on the banks and seem well adapted for beaver, yet the men who have been out in every direction setting the traps complain that the marks of beaver are scarce. The water has been lately very high and all the plain overflowed, though this valley has not been known ever to have been hunted, but is now subsiding. To the southward there is a small height of land which separates the waters of this river from a fork of Ogden's river, to the westward there is a high rugged mountain covered with snow. Our road today was very rugged and hilly, and in many places boggy, the snow having but very recently gone off the ground, indeed, we passed over several banks of it.

Saturday, June 1st. Fine weather. We are like to be devoured by mosquitoes. Did not raise camp that we might see what beaver might be taken. The people visited and changed their traps. Only 12 beaver were taken, which is nothing for the number of traps, 150, which were in the water, and what is worse the men complain there is little signs of any more worth while being got. Several of the people were out hunting, but with little success, which I regret as provisions are getting pretty scarce in the camp. Not an animal to be seen but antelopes and but few of them, and even these are so shy that it is difficult to approach them. There are some cranes in the valley but almost as difficult to be got at as the antelopes. The hunters observe the tracks of some sheep in the mountains, but they appear to have been driven off by some straggling Indians whose tracks are seen. Altogether this is a very poor country. Owing to the lateness of the Spring the Indians who frequent these parts to collect roots have not yet assembled so that even a few roots, bad as they are, are not to be got to assist those who are scarce of food.

Sunday, June 3rd. Cloudy, fine weather. Continued our journey 12 miles S. S. W. to a branch of Ogden's river where it issues from a steep, snow covered mountain. This stream is well wood-

ed with poplar and willows, and appears well adapted for beaver, yet the people found only one solitary lodge in it and scarcely a mark of beaver either old or new, though they examined it for a considerable distance. One man set a few traps. Seven of the men: A. Findlay, P. Findlay, M. Findlay, M. Plante. A. Plante, Bt. Gardipie and Soteatix St. Germain, separated from the party this morning in order to proceed down the river, if practicable and thence by the usual road to the fort by Snake river, and endeavor to pick up a few beaver by the way, but principally to procure some animals to subsist on. These men are all half Indians, some of them with large families, and placing too much reliance on their capacity as hunters did not take so much precaution as the other men to provide a stock of food previous to leaving the buffalo, they are, therefore, now entirely out of provisions, and it is expected they will have a little chance of killing antelopes and cheveau when only a few than when the camp is all together. 7 beaver were taken this morning, making 19 in all in this valley where we expected to make a good hunt.

Monday, June 4th. Very stormy, cold weather. Crossed the mountains a distance of 18 miles S. S. W. to a small stream which falls into the W. branch of Sandwich Island river. The road very hilly and rugged and in places stony: we had several banks of snow to pass. The road was in places nearly barred with burnt fallen wood. The little fork, where we are encamped, is well wooded with poplar and willows, yet only in two places are the marks of beaver to be seen. Some of them men have proceeded on to the main branch and set 22 traps where they saw the appearance of some beaver.

Tuesday, June 5th. Stormy, cold weather. Continued our route 9 miles S. S. W. to the main branch of the river, road hilly and rugged. Crossed a small stream with a number of hot springs on its banks, some of them near a boiling temperature. The river here has been lately very high, and overflowed its banks, but the waters are subsiding, and river about 10 yards wide. Have fallen a good deal. The traps which were set yesterday produced only 6 beaver. This seems to be a miserably poor country, not even an antelope to be seen on the plains. The tracks of some sheep are to be seen on the mountains, but they are so shy there is no approaching them. Some Indians visited our camp this morning and traded a few roots, but the quantity was very small.

Wednesday, June 6th. Stormy, cold weather. Did not raise camp. The men went out in different directions with their traps. Those which were in the water yesterday, provided 14 beaver. The men begin to have a little more expectations. The Indians stole two traps in the night, one from Kanota and one from A. Hoole. There is no means of pursuing or finding out the thief as they ran to the mountains. There is no doubt they came to attempt stealing the horses, but not finding an opportunity they fell in with and carried off the traps.

Thursday, June 7th. Still raw, cold weather, blowing fresh. Some of the people went with the traps to some small streams which fell in from the eastward which was not hunted by Mr. Ogden's people when they hunted here two years ago. They saw the appearance of a few beaver.

Friday, June 8th. Weather mild these three days past. Moved a few miles down the river to a better situation for the horses and where we will be a little nearer the people with their traps. 17 beaver

---

John Work's Journal

---

were taken. Some of the people moved their traps a little farther down the river. The road is very hilly, rugged and stony. Some Indians visited our camp this morning with a few roots.

Saturday, June 9th. Did not raise camp. The people visited and changed their traps. 7 beaver were taken. Some of the men have not returned from the traps.

Sunday, June 10th. Cloudy, cold weather. Did not move camp. 18 beaver were taken. 2 traps stolen from Pichetto. The men who went farthest down the river returned and report that there are but small signs of beaver. Those from the forks to the eastward say there are a few there. Some Indians visited us with a few roots to trade. Miserably poor as these wretches are and the small quantity of roots they bring yet it provides several people with a meal occasionally which is very acceptable to them as provisions previous to the late supply of beaver was becoming very scarce among us.

Monday, June 11th. Warm, fine weather. Did not move camp. Several beaver were taken. There is still a chance beaver in the little forks to the eastward and down the river towards the rocks where the river bears so rapidly that no beaver are to be found, but not enough to employ all the people or worth while to delay for the season being so far advanced. We, therefore, intend to move up the river tomorrow and hunt the head of it.

Tuesday, June 12th. Cloudy, sultry weather in the morning, which was succeeded by thunder and heavy rain and hail, raw, cold weather afternoon. Raised camp and moved 7 miles up the river, where we had to encamp with the bad weather. 6 beaver were taken, two traps stolen from Pichette and 1 from Royer.

Wednesday, June 13th. Overcast, blowing fresh towards evening. Proceeded up the river [Head of Owyhee river] 11 miles S. S. W. to opposite a branch which falls in from the eastward. Here the trappers with Mr. Ogden crossed the mountains from Ogden's river to this plain two years ago. I meant to have taken the same road but have altered the plan by its being represented to me that several days will be saved and some bad stony road avoided by crossing the mountains farther to the southward, and falling upon Ogden river farther down. In this part of the river we will miss the few beaver to be expected. Some of the men visited the head of the river to the mountain, and two forks that fall in from the eastward to near the same, and though they are well-wooded and apparently well adapted for beaver, yet scarcely a mark of them is to be seen.

Thursday, June 14th. Fair weather. Continued our journey 18 miles across the mountains, viz.: S. W. 9 miles to the top of the mountains and S. 9 miles down the S. side of the mountains, the road hilly and uneven and in places stony. The mountains, though not high, have still patches of snow here and there upon them. Some of the people are out hunting but without success. A chance antelope is the only animal to be seen, and these are so shy that it is very difficult to approach them. The hunters saw three Indians, and the men who were on discovery yesterday saw some more, and their tracks are to be seen in every direction, yet none of them visit our camp.

Friday, June 15th. Fine, warm weather. Did not raise camp on account of one of the women being

---

brought to bed. Some of the people were out hunting but without success.

Saturday, June 16th. Fine weather. Continued our route 12 miles, S. over a number of hills and valleys to a small river where we encamped for the night. The road good, but here and there stony and generally gravelly and hard, which much wears down the horses' hoofs and renders their feet sore. These nights past we have had sharp frost, but here the weather is sultry, and we are annoyed with mosquitoes, which will neither give ourselves peace nor allow the poor horses to feed.

Sunday, June 17th. Fine, warm weather. Marched 21 miles S. S. W. along the side of an extensive plain to near Ogden's river. The plain here is partially overflowed and become a swamp, we can scarcely find a spot to encamp. Among the lodges the horses are nearly bogging, and to mend the matter we are like to be devoured by innumerable swarms of mosquitoes which do not allow us a moment's tranquillity, and so torment the horses that notwithstanding their long day's march they cannot feed. All hands are ahead of the camp with their traps, but found the river so high, having overflowed its banks, that they could not approach it except in chance places. Three of the men set 9 traps, which were all that could be put in the water. I much regret finding the river so high that it cannot be hunted as the people's last reliance was upon the few beaver which they expected to take in it in order to make up the hunt, but, more particularly, for food. The most of them are becoming very scarce of provisions, and they have now no other recourse but to kill horses. Some of the people nearly devoured their horses crossing the swamp on their way to the camp. They saw a small herd of antelopes in the plain, but they could not be approached. A few wild fowl were killed, of which there a good many in the swamp.

Monday, June 16th. Cloudy, warm, sultry weather. Pursued our journey 14 miles S. S. W. and 7 miles W. down the river. Marched longer today than intended not being able to find a place to encamp in consequence of the swamping of the banks of the river, which are almost everywhere overflowed. The men were sent along the river with their traps, but not one could be set. Only one beaver was taken in the 9 which were set yesterday. It is the opinion of the more experienced hunters that there are a few beaver still in this part of the river, but owing to the height of the water they cannot be taken. People passed twice this way about this season of the year before but never saw the water so high as at present. We expected to have found some Indians here and obtained some eatables from them, either roots or anything or another, but none are to be seen in consequence of the height of the water; they cannot remain on the river but are off to the mountains.

Tuesday, June 19th. Clear, very warm weather. Continued our journey 16 miles down the river which here runs to the N. W. The river is still full to the banks and all the low plains overflowed. The men again visited the river but could not put a trap in the water. Both people and horses are like to be devoured by innumerable swarms of mosquitoes and sand flies. The horses cannot feed they are so much annoyed by them, the banks of the river are so swampy that they bog when they approach to drink.

Wednesday, June 20. Overcast, thunder and very heavy rain afternoon. Continued our journey 19

John Work's Journal

---

miles to the N. W. along the river and then to the foot of the mountains, where we found a little water and some grass for the horses. These three days the river runs through an extensive plain, the mountains approach close to it. The farther we descend the river it becomes more difficult to approach on account of its banks being overflowed. Two of the men, J. Troupe and G. Rocque, killed a horse having nothing to eat, the provisions being all gone. On leaving the buffalo the people calculated on getting a few beaver and did not lay in such a stock of provisions as they otherwise would have done. This is really a miserable, poor country, not even an antelope to be seen.

Thursday, June 21. Cloudy, fine weather, blowing fresh in the morning. Proceeded across the mountain, and then across an extensive plain 20 miles W. to a small fork which falls into Ogden's river. By this route we saved two days' journey besides going round by the river. To our great disappointment and contrary to our expectations we found the little river had overflowed its banks and the plain in its neighborhood in a swamp so that we could not approach it; it is to be apprehended we will have much trouble crossing it. The different parties which formerly passed this way found this little creek with very little water in it. Several of the people were out hunting but did not see an animal. They expected to find some antelopes in the hills.

Friday, June 22nd. Warm, sultry weather. Proceeded up the river three miles N. N. W. and succeeded in crossing it by means of a bridge of willows. The river here is narrower but very deep with clayey banks so steep and soft that the horses could not get out of it were they thrown in to swim across. Too, near this plain its banks were so overflowed that it could not be approached. This was a hard day's work both on people and horses. The horses, as well as people, are like to be devoured by swarms of mosquitoes and gadflies. The river here is well flooded, and seems remarkably well adapted for beaver, yet there is not the least mark of any to be seen in it.

Saturday, June 23rd. Fine, warm weather. Continued our journey 15 miles W. N. W. across the plain to the foot of the mountains. We crossed two other forks of the same river we left in the morning, one of them much larger than it, but we found a good ford. Some Indians were seen along the mountains, but they fled on our approach.

Sunday, June 24th. Clear, fine weather. Crossed the mountain 19 miles W. N. W. Road very hilly and stony. From the steepness and highness of the mountain and the badness of the road this was a most harassing and fatiguing day on both men and horses. We find tracks of Indians but none of them approach us. The best hunters of the party were out in the mountains, which have still a good deal of snow on them, in in quest of sheep, but without success. They saw the tracks of some, but could not find them.

Monday, June 25th. Clear, warm weather. Marched seven miles N. N. E. along the foot of the mountain, and 15 miles across the plain to a little river which runs to the southward, and which we found impassable, its banks having been lately overflowed, and remain still like a quagmire. The best hunters are out, but as usual did not see a single animal of any sort. One of the men, P. O'Brien ( ? ), was under the necessity of killing one of his horses to eat. Thus are the people in this miserable country obliged to kill and feed upon these useful animals, the companions of their

John Work's Journal

---

labors. We passed a small Indian camp, but the poor, frightened wretches fled on our appearance and concealed themselves among the wormwood. Only two men who were on ahead saw any of them.

Tuesday, June 26th. Very warm, sultry weather. Marched five miles N. up the river to a place where we crossed one of its forks with little trouble, but the other which was close, too, was very difficult, the men had to wade across it with the baggage, its banks are like a morass, and several of the horses bogged so that they had to be dragged out. Crossed a plain five miles N. N. W. to another fork, which we crossed without further difficulty than bogging a few of the horses. This was a most harassing and fatiguing day both on men and horses.

Wednesday, June 27th. Blowing fresh, yet very warm weather. Continued our march 15 miles N. W. along the foot of the mountains to a small rivulet which falls into the river we passed yesterday. The road good but in places stony and embarrassed with wormwood. The hunters were out today but without success. Two antelopes were seen yesterday, which was a novelty.

Thursday, June 28th. Very warm weather, though blowing fresh the after part of the day. Proceeded on our journey 23 miles N. W. along the foot of the mountains, crossed the head of the river we left two days ago, and over the hill to a small rivulet, which is said to be a fork of the Owhyhee river. The road good, but in places stony. The hunters were out. F. Payette had the good fortune to kill a male antelope. One of the men saw four sheep on the plain, but did not kill any of them.

Friday, June 29th. Blowing fresh, which rendered the weather a little cool and pleasant. Marched 28 miles N. N. W. first across a plain and salt swamp and over a range of hills and across another valley, part of which has the appearance of the bed of a lake, but is quite dry and hard, and encamped near the foot of a mountain covered with snow. The road in some places stony, and from the length of the encampments very fatiguing both on horses and people, neither of which have a moment's quietness either to feed or repose, they are so annoyed with immense swarms of mosquitoes. The hunters were out, but without success. They saw the tracks of some antelopes and sheep. Some Indian tracks were seen, but none of them approach us, some of them had horses.

Saturday, June 30th. Warm and very sultry in the morning, a breeze of wind afterwards. Continued our journey along the foot of the mountains [Stein's Mountains] 18 miles N. by W., the road good. Passed two small lakes, in one of which the people found a good many eggs. S. Kanota killed an antelope, and F. Payette a young one. A. Letendre had to kill one of his horses to eat.

Sunday, July 1st. Fine weather. Our road lay along the foot of the mountains 12 miles N. W. Part of the road very hilly and very stony. The stony road and continual mounting wearing out the horses' hoofs and rendering them lame. Though the mountains in our neighborhood have still patches of snow on them, the little creek where we are encamped barely affords sufficient water for the horses to drink. The hunters killed nothing today. J. Despard killed one of his horses.

Monday, July 2nd. Fine weather. Continued our journey N. W. 19 miles to Sylvalle's Lake. [Mal-

John Work's Journal

---

heur Lake] The road part of the day stony. and the water brackish and so very bad that it is like a vomit to drink it. The hunters were out but without success. There are a number of wild fowl in the lake, but they are so shy that they cannot be approached.

Tuesday, July 3d. Warm, sultry weather, a thunder storm in the evening. Our road lay along the lake and across a point to Sylvalle's River [Silvies' River] in rather a circuitous road, nearly W. N. W. 20 miles. The road good. Some of the men set a few traps, they saw the appearance of a chance beaver.

Wednesday, July 4th. Very warm, but blowing fresh afternoon. Continued our journey up the river is miles N. N. W. to the first rocks. The horses like to be devoured by gadflies. F. Payette went to hunt yesterday and returned today with two antelopes. L. Kanota also killed two. The traps which were set yesterday produced four beaver.

Thursday, July 5th. Very warm weather. Did not raise camp in order to allow the horses to repose, of which they are in much need, they having marched 19 days successively without stopping a day to rest. They have been becoming lean for some time back and their hoofs are so much worn that some of them are becoming lame. The most of the people set their traps yesterday, 13 beaver were taken. The hunters were out. A. Houle killed a chevereau and the boy, Prevost, an antelope. Four Indians paid us a visit; they had nothing with them to trade; they received a few trifles, and promised to return with some roots to trade.

Friday, July 6th. Fine weather. Marched about 18 miles N. N. W. across a point, and fell again upon the river, by this road it is shorter than by following all the turns of the river. The people out with the traps, five beaver and one otter taken. In the morning one of the men arrived with a load of young herons, he found a place where they were very numerous. Some more of the people who are short of food immediately went to get a supply. These birds are very fat. Some of the people say they are very good, others say that they are scarcely eatable. Some of the people went off to hunt and have not yet returned. Fine weather.

Saturday, July 7th. Continued our journey 20 miles up the river N. N. W. Road stony, hilly and uneven. Five beaver were taken. The hunters arrived. A. Houle killed one elk and three black-tailed chevereau, and the boy, Prevost, one young elk. The men with the camp caught a wounded deer out of the river.

Sunday, July 8th. Fine weather. Proceeded up the river 15 miles N. N. W. to the head of the second valley. Three beaver were taken. Some antelopes seen crossing the valley, but none taken.

Monday, July 9th. Fine, warm weather, blowing fresh afternoon. Left the river which is enclosed by steep hills, and struck across the hills and fell upon the river at the head of the upper valley at the foot of the mountains, a distance of 13 miles N. W. The road good. The hills we passed in the morning well timbered with lofty pines, the valley is clear of wood except some willows along the different forks of the river. Two hunters were out. A. Hoole killed an antelope, and T. Senatoen a

chiveau.

Tuesday, July 10th. Very warm weather, still a breeze of wind in the afterpart of the day. Crossed the mountains to Day's River [John Day river] a distance of 22 miles N.W. The road very hilly and steep, particularly the N. side of the mountain. The mountain is thickly wooded with tall pine timber. Both people and horses much fatigued on nearing the camp, part of the road stony. Day's River is well wooded with poplar and willows. Two Indians visited our camp this morning and traded five beaver.

Wednesday, July 11th. Very warm sultry weather. Proceeded down the river 16 miles W. Parts of the road hilly and stony and very fatiguing on the horses, several of whom gave up on the way and with difficulty reached the camp. Some of the men set a few traps yesterday and took two beaver this morning.

Thursday, July 12th. Very warm weather. Continued our route down the river, which still runs to the westward 11 miles, when we stopped near a camp of Snake Indians who have the river barred across for the purpose of catching salmon. We, with difficulty, obtained a few salmon from them perhaps enough to give all hands a meal. They are taking very few salmon, and are complaining of being hungry themselves. No roots can be obtained from them, but some of the men traded two or three dogs, but even the few of these animals they have are very lean, a sure sign of a scarcity of food among Indians. We found two horses with these people who were stolen from the men which I left on Snake River in September last. They gave up the horses without hesitation, and said they had received them from another band that are in the mountains with some more horses which were stolen at the same time. It appears from the account that early in the spring some Snakes stole 13 horses from these men at the same time, and immediately made their way to this quarter with them. The uncertainty of finding the Indians with the rest of the horses in the mountains, the fatigued state of our horses, the advanced state of the Season, and above all the scarcity of food among the people deters me from sending some men in search of those horses. I have offered the Indians a reward if they will go and bring them. I also offered them a little remuneration for the two they had here. Part of the way today the road lay over rugged rocks on the banks of the river, and was very hard on the already wounded feet of the horses. Five beaver were taken in the morning.

Friday, July 13th. Fine weather. Did not raise camp in order to repose the horses for a little. Only three or four salmon could be obtained from the Indians. They complain of being starving themselves. One beaver was taken.

Saturday, July 14th. Cool, pleasant weather. Continued our journey down the river 25 miles W. The road very hilly and stony. The horses jaded and the people exhausted on reaching the encampment. Only three or four salmon could be obtained from the Indians in the morning before we started.

Sunday, July 15th. Fine, cool, pleasant weather. Continued our course W. eight miles down the

John Work's Journal

---

river to another fork [North fork of John Day river] equally as large, which falls in from the N., up which we proceeded seven miles. The road continued hilly and stony. These two days the people found great quantities of currants along the banks of the river.

Monday, July 16th. Fine weather. Proceeded eight miles N. E. up the river, then we took a northern direction for eleven miles across the mountains, which was here thickly wooded, the road in places very stony and very hilly and uneven, and very fatiguing both on men and horses. The hunters were out, but without success except one deer which F. Payette killed. Unfortunately we have but very indifferent feeding for the horses after the hard day's work.

Tuesday, July 17th. Fine weather. Continued our journey across the mountains 25 miles N. W. The country the same in appearance as yesterday until we got out of the woods in the after part of the day, when the road lay over a number of naked stony hills. [Southwest of Pendleton] The length of the day's journey and the badness of the road rendered this a harrassing day both on men and horses. Some fresh tracks of red deer were seen in the course of the day, but they could not be come up with.

Wednesday, July 18th. Cool in the morning but very sultry, warm weather afterwards. Proceeded ahead of the camp early in the morning accompanied by seven men and arrived at Fort Nezperces in the afternoon. Mainly through there being soft sand during the heat of the day was excessively oppressive on the horses as well as the riders.

Thursday, July 19th. Stormy but warm weather. The different parties who separated from the camp have arrived, Plante and party yesterday, the others some time ago. The party whom I left in September had the misfortune to lose the whole of the horses, nearly 30 in number, early in the spring. They imprudently allowed them to stray a short distance from the camp where there were a few Indians in the evening about sunset. The loss was the result of a great degree of negligence on the part of the men. They also put what few skins they had with, other articles in cache which the Indians found and carried off, from a pack to a pack and a half of the few beaver they had. The half breeds lost two of the horses by theft, and made but very few skins. Plant and party also found very few beaver, but they lost no horses.

Friday, July 20th. Fine weather. The people whom I left two days ago arrived safe. Since our spring journey commenced we have traveled upward of 1000 miles, and from the height of the water and scarcity of beaver we have very little for the labor and trouble which we experienced. Previous to taking up our winter quarters last fall we traveled upwards of 980 miles, which, with the different moves made during the winter makes better than 2000 miles traveled during our voyage.

Total loss of horses during the voyage, 82, viz.: Stolen by the Blackfeet when P. L. Clay was killed, 3; stolen by the Snake Indians from A. Case and party, 22; stolen by the Snake Indians from my party during winter, 3; stolen by the Snake Indians from the half-breeds in summer after leaving me, 2; died or gave up on the way previous to reaching the three hill plains in the fall, 1 by Toupin, 1 by Dumas, and 3 by the half breeds when they left the party on Salmon River, 5; died or

John Work's Journal

---

left crossing the plain in the fall, 26; died during the winter, 11; killed for food by A. Carson and party, 3; killed for food by my party during summer, 5; killed for food by C. Plante's party during summer, 1; drowned crossing a river by Royer, 1 ; total, 82.

John Work's Journey from Fort Vancouver to Umpqua River, and Return, in 1834

Introduction and Comments by Leslie M. Scott

Introduction

John Work was an extensive traveler and trader and a chief factor of the Hudson's Bay Company. He came to the Pacific Coast from York factory, on Hudson's Bay, in 1823, with Peter Skene Ogden, who had charge of the annual express that year, and served in the fur-trading posts of the Upper Columbia River. He established a farm at Fort Colville in 1823, the first in the Old Oregon Country, and built Fort Colville in 1825-26. In 1830 he succeeded Peter Skene Ogden in charge of the Snake River brigade. Fort Simpson was in his charge in 1835-49, and in the latter year he was stationed at Victoria as a chief factor. For many years he was a member of the legislative council of Vancouver Island. He was born in 1791 and died December 22, 1861. For his biography, see Howay's and Scholefield's History of British Columbia, IV, 1178; Oregon Historical Society Quarterly, X, 296-7. For journals of his travels, see Washington Historical Quarterly, 111, 198-228 (1824) ; V, 83-115, 163-91, 258-87 (1825) ; VI, 26-49 (1826), all by T. C. Elliott; XI, 104-14 (1828), by William S. Lewis and Jacob A. Meyers; Oregon Historical Society Quarterly, X, 296-31:1 (1828) ; 331-65 (1825-26) ; XIII, 363-70; XIV, 280-31.1 (1830-31), all by T. C. Elliott. A narrative and journal of Work's Snake River expedition (1831-32), edited by William S. Lewis, of Spokane, and Professor Paul C. Phillips, of the University of Montana, is soon to be published by the Arthur H. Clark Company, Cleveland, Ohio. The John Work journal of the expedition of 1834 from Fort Vancouver to Umpqua River, and return, is herewith presented as copied from the original, and has not been edited or otherwise altered. The bracketed numbers represent the pages of the H. H. Bancroft copy of the Journal. The writer of the subjoined comments is indebted to William S. Lewis, of Spokane, Washington; T. C. Elliott, of Walla Walla, Washington, and F. G. Young, of Eugene, Oregon, for many details of information.

This copy of the John Work journal of 1834 was made from the H. H. Bancroft copy of the original, under direction of Dr. Herbert I. Priestly, librarian of the Bancroft Library, University of California, Berkeley, California. The original journal is in the Provincial Library at Victoria, British Columbia.

Journal of a Trip to The Southward in 1834

Date	Work's Entry	Comments
------	--------------	----------

1834. May 22.	Very heavy rain the greater part of the day. Left Vancouver on a Trading & Trapping Trip to the Southward with 12 men. We embarked at 2 p.m. & reached the traverse	
---------------	---	--

---

in the little channel of the Willamet at just 6 oclock whence we are to proceed on horseback. It rained so hard that the people were completely soaked and the baggage also a good deal wet. And where we had to encamp is among wet grass which is very unpleasant, besides there plenty of mosquitoes & very little wood to make fire. The "traverse," where the boat route joined the mountain trail, was on Willamette Slough (Multnomah Channel), called by John Work "little channel," probably one or two miles northwest of the railroad station named Holbrook. This is some twelve miles from Fort Vancouver and five miles south of the present town Scappoose. At or near this "traverse," the Hudson's Bay Company had a dairy on Wapato (now Sauvie) Island. The mountain trail led across hills of between 1100 and 1200 feet elevation to McKay Creek, tributary of Tualatin River. John Work's bateaux probably crossed the upper end of Sauvie Island, which was then inundated by the spring freshet of Columbia River. See map of Charles Wilkes in "Narrative of the United States Exploring Expedition", 1838-42. The distance across the mountains is estimated by John Work at ten miles, but the later winding road (1923) is about eight miles. It may be of interest to note that John Work gives the "i" instead of the "a" vowel in the first syllable of Willamette. This vowel difference has been the subject of controversy.

Saturday, May 23. Heavy rain. Sent part of the men across the mountain to Faladin Plain for the horses with which they arrived in the evening, all completely soaked with water. "Faladin" or Tualatin Plain was near North Plains, Washington County, Oregon, probably one mile or more northeast of that place. The Indian name "Titalatin" has had many variations. The meaning is unknown. The horses were probably those of Thomas McKay, who probably sent them there for grazing from his farm near Scappoose. This grazing ground is described by John Work in his entry of May 24 (see following). For John Work's description of McKay's place, see his entry under July 8, following. For details, see also Lee and Frost's "Ten Years In Oregon", XI, 124-26; also printed journal of Wyeth's second expedition (1835), p. 251, published by University of Oregon, 1899; diary of Jason Lee (1834), "Quarterly of Oregon Historical Society", XVII, 297, 399, 400, 401.

24. Showery. After getting everything ready raised camp & proceeded across the mountain to the beaver ground at Faladin Plain. In the afternoon gave out the people their horses & selected those to accompany the party, the remainder to be sent tomorrow to Mr. McKay's place. We were 3 ½ hours crossing the mountains which may be perhaps 10 miles across about S. West. [184] The road is in many places steep & rugged particularly on the N side of the hill. The unfavorable weather & being encumbered in places with fallen timber rendered it worse than it otherwise might be. The soil is composed of a thick strata of dark vegetable mould perhaps not over 6 or 8 inches deep, over a bed of reddish tile (?) No stone or gravel worth mentioning. It is not thickly wooded with timber but overgrown with underwood. The trees principally pine & cedar and of a pretty large size. On reaching the plains some oak of a middling size fringe the edges of the woods. There are also some ash & other trees. The country on getting out of the woods has a beautiful appearance. It is a continuation of plains which commence here and continue on to the Southward, separated by narrow strips of timber, bounded to the east by the strip of woodland which occupy the banks of the Willamet; and to the westward by the woods which occupy the base of the Killymaux Mountain.

The soil is a rich blackish mould covered (but not with a close [185] thick sward) with grass & other plants, among which are considerable quantities of strawberry plants, now well furnished

---

with fine fruit. Not a stone & scarcely a shrub to interrupt the progress of the plough which might be employed in many places with little more difficulty than in a stubble field.

The country here though termed Plain from being clear of wood, is not a dead flat but composed of portions of level land with gently rising grounds. Portions of the flat lands are springey. Here the soil inclines to be clayey. The vegetation is not rank, yet it yields a great deal of pasture. This first plain may be about three times the size of the clear ground about Fort Vancouver, and about 170 horses have been feeding upon it for the two last months, and there would still be grass enough for them for the rest of the summer. This Plain is never overflowed; the most Northern fork of the Faldin is a little distance further on to the Southward. It is not far but through a woody country, to the banks of the Columbia in a N. N. W. direction.

The open country here is of an irregular form, as points of woods [186] jut out into the plains from both sides. There can be no doubt but abundant crops of every kind of grain would amply reward the labor of the husbandman, besides its being so well adapted for pasture both of cattle & sheep. The open ground here may be about 3 or 4 miles wide from E. S. E. to W. N. W.

The horses to be sent to "Mr. McKay's place," apparently, were to return by the same mountain route to the "traverse" of May 22, and thence to go north to McKay's home near Scappoose. Thomas McKay was the son of Alexander McKay who was lost on the "Tonquin" in 1811. Wilkes' "Narrative", 1841, page 221, mentions McKay's gristmill near Champoeg and describes him as "St a man of middle age, tall, well-made and of muscular frame, with an expression of energy and daring, and a deep-set, piercing black eye, beneath a full projecting eye brow." The gristmill was built in 1836. "Killymaux" Mountain, to the west, is John Work's variation of "Tillamook", which has had many diverse forms and is supposed to have been originally the designation of an Indian tribe. The camping place was east of the present village North Plains, Washington County, probably four or five miles north and east of the site of Hillsboro. "The most northern fork of the Faladin" probably was Dairy Creek, some four miles southwest. The distance to the Columbia River, north, given by John Work as "not far," was thirty-five miles. In a northeasterly direction the distance to that river was less than fifteen miles.

May 25. Thick fog in the morning. Fair weather afterwards. Sent off six men and boys with 103 horses to Mr. McKay's Place. Owing to the fog it was late in the morning before the horses were all collected, and as it took some time to separate those which we are to take with us from the others, it was near noon before they started. They are directed to be here as early as they can tomorrow so that we may proceed on our journey. Kanata killed a deer. Kanata was listed among the employees of Hudson's Bay Company in 1821 as number 935. His name appears as Kanote, Kanota, Kanola, Kanotti and Kanato. He accompanied John Work in the Snake River country in 1831-32. This name and others are from the Hawaiian Islands, natives of which were brought here by the North West Company and the Hudson's Bay Company, following their first introduction by the Astors and the "Tonquin" in 1811. The name Owyhee in Eastern Oregon, is a relic of these people. For the name Knola and Kanotti, see "Quarterly of the Oregon Historical Society", XIV, 295, 309.

May 26. Fine weather. By the time the men who were sent with the horses yesterday, it was

near three o'clock and too late to raise camp. There was a good deal of trouble getting the horses down through the woods yesterday.

May 27. Overcast fine weather. Proceeded [187] on our journey at 8 o'clock & encamped near 2 at the 4th & last fork of the Faladin River near the mountains. We were delayed an hour & a half crossing the second fork where the horses had to be swam across, and the baggage carried across a bridge formed by a tree thrown across the river. The other forks were all fordable; the banks of all these forks are very steep & clayey. Our course today was S. S. W. about 18 miles. The soil has mostly the same appearance as where we left in the morning, but where we are encamped near the hills the soil is of a more reddish cast, and as not such a good appearance, and there are some gravel & stones in it.

To the Eastward of this there are some hills covered with wood. On the banks of the third fork there is some low, stony land, with longer grass & herbage than elsewhere. Some spots today are overgrown with fern, & the soil did not appear so good.

Camp, apparently, was between Dilley and Gaston, the "4th and last fork of the Faladin River" being either Scoggin Creek or South Fork of Tualatin River. The river crossings this day were probably of McKay Creek, Dairy Creek and Scoggin Creek. The difficult crossing probably was that of Dairy Creek. The "third fork" was probably Gale's Creek. The hills to the eastward of the camping place were Chehalem Mountains. The day's route passed the sites of Forest Grove and Dilley, in Washington County, Oregon.

May 28. Heavy rain in the night, and rain the most of the day. The unfavorable weather deterred us from raising camp, for the rain was not heavy during the day, yet the bushes were so loaded with water [188] that the baggage would have been wet. The hunters were out in the evening but without success. They saw some deer, but they were so shy that they could not be approached. There are a good many Indians about here, which causes the deer to be so wild. The Indians mentioned were probably either Yamhills or Tualatins, of the Kalapooian family.

May 29. Fair weather in the morning but continual heavy showers during the day afterwards. Raised camp & continued our route S. S. E. 4 miles [hours?] & about 15 miles. Encamped on a small creek at the head of an extensive plain. After leaving the river where we slept last night, the road lay through a point of woods, and two small plains of fine rich soil, but subject to be under water at times during the rainy season. Then over a few hills mostly covered with wood and bushes, and along an extensive plain of rich soil with a kind of swamp or lake running all along the West side of it. Parts of this plain are subject to be partially inundated. Before reaching the southern extremity we struck across to the Eastward over a portion of low hilly country covered with bushes and some trees, principally [189] oak to the head of the fine plain where we are encamped; which is some miles in length and breadth, composed of a rich soil covered with fine pasture; the lower part of it subject to be overflowed or rather covered with water in the rainy season. Passed some small rivulets during the day's march. After encamping I went to the Sand's encampment which is about 8 or 9 miles S. E., about half way through the plain we are encamped, and then through alternate small plains and points of woods to the Willamet.

My object in going here is to get some information from Depatty relative to the trade with the Umquah Indians, but though he had been there two years ago & as it was Gagnion who performed the trade, he could tell me very little about it. Kanota killed a deer & the men traded 3

from the Indians.

Camp was apparently on Chehalem Creek, west of the site of Newberg, and near the land of Ewing Young, who arrived there later in the same year (1834). The day's travel followed the east shore of Wapato Lake, whose overflow conditions John Work well describes. "Sand's Encampment" was Champoeg, otherwise known as "Campment du Sable, Camp au Sable" and "Sand Point". Depatty's house was near Champoeg and appears in the map of Nathaniel J. Wyeth (1832-33). See "Correspondence and Journals of Nathaniel J. Wyeth, 1831-36", edited by F. G. Young, Eugene, Oregon, 1899, p. 178. See also p. 233, "Duportes House." Gagnion was apparently J.B. Gagnion, or Gagnier, number 821 on the list of employees of the Hudson's Bay Company in 1821, where the name is given J. B. Gagmon. This employee was assigned to Fort Umpqua as interpreter in 1840. Lucius Gagnion, said to have opposed the American party at Champoeg in 1843, may have been the same. In Gustavus Hines' "Oregon", VI, 99, Gagnion is referred to as follows: "We were kindly received at the fort (Umpqua) by an old Frenchman, having charge of it, by the name of Goniea. \* \* \* \* \* The Frenchman, it is said, belongs to a wealthy and honorable family in Montreal, and though frequent efforts have been made to reclaim him from his wanderings, yet all have been unavailing. He lives with an Indian woman whom he claims as his wife." The Umpqua Indians, whose habitat was the river of that name, are classed as belonging to the Athapascan family.

May 30. Fine. Continued our route near 7 hours S 10 miles to Yamhill river which we crossed, & then S. S. W.; 8 miles up the Southside of the river a little below the Faladin fork, and encamped on a small creek. The road till we [190] reached the river lay along a fine valley not very wide, surrounded with a number of rising hills thickly covered with oak. The soil all the way is very rich and the pasture though not rank more luxuriant than in the large level plains. On the summit of the hills the soil inclines in some places to a reddish tile. On the South side of the river the road lay through an extensive plain of fine Soil, and different from the country we passed through three days past by being a dead level. It appears a fine rich soil.

The plain continues on without interruption except a few trees along some small streams, on to the mountains to the Westward and is capable of yielding pasture for immense herds of cattle, for in places it is several miles wide. On the North side of the river the plains also continue on to the mountains, as well as along the Faladin fork. The banks of the river are clothed with a little timber, principally pine with a mixture of oak & some other trees. This wood here & there juts in points out to the [191] Plain, and there are patches of oak here & there. To the Southward of this plain on the S side of the river, a range of low green hills extend, with a few oak trees upon them, and would be a fine pasturage for sheep. The river has generally steep clayey banks, & is difficult to approach on account of the Underwood, and can only be crossed at some places wherever traversed. It runs over a bed of soft rotten sandstone, and many of the horses fell descending the lower part of the sloping bank which is also composed of these stones. This & the river which we crossed yesterday morning are the only places we have seen stones since we started. Where we crossed there is a rapid, but from the formation of the river it would be difficult to make it secure for millstream[?] The hunters were out. P. Lagere killed a deer.

The party crossed Yamhill River probably near Dayton. Faladin (Tualatin) Fork probably was the

---

John Work's Journal

---

north fork of Yamhill River, which rises from the northerly direction of Tualatin River. The "small creek" upon which camp was made probably was Salt Creek, near the later village Amity. P. Lagere may be Baptismo Deguear and J. B. DeGuerre, frequently mentioned in "Ewing Young and His Estate," "Oregon Historical Society Quarterly", XXI, 171-315.

Sunday May 31. Fine & warm, cool at night & heavy (Dew in the morning. Continued our route 6 3/4 hours) about 24 miles S & S. S. W and encamped at the second fork from the Yamhill. The road for the first 16 lay through a fine uninterrupted [192] plain of fine soil, with some swampy places, with better pasturage than we have hitherto met with. There is also a small lake. On each side of us there were ranges of moderately elevated hills, some of them with little wood, the others thinly covered with oak, and here & there a patch of pine. Beyond these hills to the Eastward there are said to be other ranges of Plain country. Here we closed up pretty nearly with the mountains to the Westward, and crossed a small river the first from the Yamhill, when the road lay about 3 miles along a ridge of hills pretty well timbered with oak, & then along a marshy valley about 5 miles to the fork where we are encamped.

The Plain which we left beyond the first fork continues along the range of hills which run along East of the road. The river where we are camped is 10 or 12 yds wide. A fringe of woods runs along its banks, behind which a narrow plain extends towards the mountain on both sides, and also downwards. This river runs over a bottom of a rocky & gravelly nature, of a slatey [193] texture, but has steep clayey banks. The plains in places appear subject to be inundated in the rainy season. The first river which is a branch of this one runs over a gravelly bottom & the soil on its banks is for a short distance gravelly, which is the only place we have seen gravel since we started.

Camp apparently was on Luckiamute River, which the diary calls "second fork from the Yamhill." The first "fork" was Rickreall River. The route passed the sites of later McCoy, Dallas and Monmouth. The "lake" is one mile south of Perrydale.

June 1. Fine. Continued our route 7 hours, 24 miles. The first half of the way S. E. & then S. W. to the river at Sauvie [Laurie] where we camped. The road for the first 14 miles lay through a plain country for about 7 miles across a point to another fork which falls into the river we left in the morning & thence over low hills & across along plain 7 miles further to another creek. All the way there is fine soil, and the low grounds about the creeks superior pasture land and very extensive to the E. Some woods along the banks of the rivers. And on the high ground oaks here and there. The road for the next 4 miles lay along the base of some hills thickly timbered with oak and composed of rich tile soil & pretty well covered with grass. Large tracts of open ground extend to the E. The road now lay along [194] an extensive plain, some parts of it swampy, to Laurie river where we are camped not far from its discharge into a Channel of the Willamet. Here is an extensive plain on both sides of the river, and the mountains to the W. are nearly without wood. Clover was observed today both on the high and on the low ground. The soil & herbage has the same appearance as usual. Where we are camped at the usual traverse of the river is too high to be forded, but we learn from the Indians it is fordable a little higher up.

We met a party of Indians today who informed us that all Michell's party but himself and one man were killed by the Indians; that this report was received from an Indian who was coming from the Umquah with the news, but turned back. Passed some Indian huts at the rivers we passed. A few natives visited us in the evening. The hunters were out in the evening, but without

success.

Laurie River was Mary's River. This river is "Riviere des Souris" (Mice River) in Duflot de Mofras' "Exploration", II, 210. Apparently John Work's "Laurie" is Duflot's Souris. The day's crossing was the South Fork of Luckiamute River, which John Work calls "another fork which falls into the river we left in the morning." The next creek mentioned is probably the later Soap Creek. Camp apparently was near the site of the later Corvallis. "Michell's party" evidently refers to the party of Michel Laframboise, see under June 2, following. Laframboise is frequently referred to as "Michell" in this diary.

June 2. Fine. Proceeded 18 miles S & camped at the traverse at Sam [195] Tomeleaf [?] river. We were delayed some time in the morning fording a traverse where we camped last night, after which the road lay through an extensive plain, very level except place[s] & averaging from 5 to 7 miles wide. On our left or E side at a short distance lay first the small channel of the Willamet, then a long narrow lake like a canal & then the river where we camped. And to the W extends the chain of mountains, the first range of rising hills with little wood on them. The soil here is of the same description as that passed three days past, but from being mostly a dead level, considerable portions of it appear to have been under water in the rainy season. And in places the grass seems to be less luxuriant than we have observed hitherto, probably owing to the drought having rendered the ground hard & cracked. Along the banks of the lake some places are swampy. The river here is close to the mountains and runs over a bed of rocks over which there are steep clayey banks. On the E side of the [1961] river there are extensive plains.

By what we can learn from T. Mouria[?] the Islander the Companion of poor Mourio who was drowned coming with letters from M. Laframboise some time ago, it appears that it was somewhere about here that they embarked in the canoe to descend the river, and 2 days after (but he cannot make us understand when [where?]) the canoe came in contact with a stick or fallen tree that was in the river, & upset when the poor man was drowned & the letters & everything they had was lost, and he Morina barely saved himself by his good swimming and found his way to the settlement 2 days after nearly starved with cold & hunger. From the little information he can give us & the length of time elapsed since the important occurrence any attempt to find out the place, or anything relative to the accident would be fruitless. The hunters killed 1 deer.

Sam Tomeleaf River was Long Tom River. Camp probably was near the site of Monroe. The day 4 journey, apparently, followed the route of the later Southern Pacific Railroad. Michel Laframboise was a French Canadian voyageur and interpreter who arrived in Oregon on the "Tonquin" and established himself in later years on a farm at French Prairie. See Ross, "Oregon Settlers", p. 257; Franchere's "Narrative", pp. 29-30. In 1833-38 he was attached to the Umpqua expeditions. In 1839 and 1841-43 he was listed on the Bonaventura expedition. He served as guide for the Wilkes party. He is listed as an opponent of the American party at Champoege in 1843.

June 3. Chilly & rain. Continued our route 18 miles S S E & S. Crossed the [197] river in the morning when we continued up the E side of it to the commencement of the mountains, where we are camped on the same river. The road lay through an extensive plain, the greater part of the way quite level, bounded to the E by the Willamet. Considerable portions of the plain are subject to inundation & parts of it are not so well clothed with grass as some of those we have already

passed. Some places of it are also swampy. And parts of it gravelly which is the first soil of the kind we have seen since we started. This plain is 4 to 6 miles wide. The river here runs over a muddy bottom with steep clayey banks so much so that it is difficult to water the horses. Where we left this morning would be an eligible situation for a settlement. On the E side of the river would serve for pasturage & the high ground on the W side for tillage & sheep walks; and the river could easily be made navigable. The hunters were out but without success, except P. Legare who killed 2 deer. There are some deer, but [198] they are very shy. Some Indians visited us in the evening. The river crossing was that of the Long Tom near Monroe. The mountains were those at the head of Willamette River, southwest of Eugene, called Calapooya Mountains. The day's course was up Coyote Creek of long Tom River. Camp apparently was ten miles west of the site of Eugene. The Indians were probably Calapooyas.

June 4. Cloudy. Proceeded 20 miles, first S. S. W. & then S. S. E. through a hilly country. First up a narrow valley along the river where we are camped, & then across a range of hills and along another narrow valley, where we crossed some more hills to another valley which brought us to the Yangawa river where we camped at the foot of Elk Mountain.

This river at the foot of the mountain falls into the sea. Some spots of rocks are to be seen on the brows of some of the hills we passed today. Some parts of the valley we passed today are subject to inundation. There are also a few places marshy but all the rest of the way the soil appears very rich & clothed with a more luxuriant crop of herbage than we have met with since leaving the fort. There is a considerable quantity of clover among the long grass, which in many places is sufficiently rank & thick to be cut for hay, & most excellent hay it would make. [199] The ground appears highly susceptible of cultivation & would be superior pasture land, the low ground for cattle, the bare or partially wooded hills for sheep. The plain on the end of which we are camped is of considerable extent & has a pretty large swamp in the middle of it. The second valley through which we passed is watered by a fork of the river which we left in the morning. Through all the hilly country through which we passed the land on the sides of the hills and in the intervening valleys appears to be of a superior quality, or at least the vegetation is more luxuriant than on the low flat plains even where they do not appear subject to inundation. There is also some timothy grass similar to what we have from England. The clover is of the white or red kind & grows most luxuriantly on the border of swamp or on the plains, where the ground is a little damp & springy. The timber today was mostly oak & a few other trees, & pine on the higher hills.

Yangama River was Siuslaw River. Elk Mountain marks the divide between Siuslaw and Umpqua rivers. Camp probably was ten miles west of the site of Cottage Grove.

June 5. Rain. The unfavorable weather deterred us raising camp, as passing [200] the mountains through the thick woods & bushes which are loaded with water would have wet & spoiled and baggage and horse agnts [?] An Indian, Catarah joined us here & state that M. Laframboise had gone along the seacoast & that reports had been received that the Indians attempted to pillage them of their property which caused a quarrel in which 16 of the natives were slain, & that subsequently the Indians had assembled in great force & cut off all, or the greater part of M. Laframboise's party. This part of the story I do not think probable. The hunters were out but without success. There are but few tracks of animals, besides the weather was unfavorable.

June 6. Heavy rain. Did not raise camp on account of the bad weather. The hunters were out but

---

without success.

June 7. Fine. Proceeded 4 ½ hours, 15 miles, first S 8 miles across the Elk mountain to Elk river, & then S W. 7 miles down the N side [201] of the river to the traverse where we camped. We were an hour ascending the mountain on the N side, & 1½ in descending. All the way through a woody country until we came within a short distance of the river when the road lay down a fine sloping hill & across a plain clear of woods & covered with fine verdure on a rich soil. The road then lay along the declivity of the hills which are mostly clear of woods. The soil in the mountains appears good. I observed timothy at different places along the road. No stones during the day's journey, but the river here runs over a bed of loose stones and rocks. The wood in the mountains is chiefly pine and along the river & on the hillsides a mixture of pine, oak & other trees. Elk River was the later Elk Creek. The "traverse" and the camp probably were near Drain.

June 8. Cloudy & light rain. Left camp in the morning & proceeded with 3 men and an Indian down to the Vernon[?] (for some furs which Michell had traded in the winter) where we arrived after 9 hours about 40 miles, first S W then W. The road [202] through a very hilly country, several of the hills steep; thickly wooded; parts clear of wood. The road crosses the Elk river between our camp & its discharge into the Umquah which is about half way to the Vervor. The road then lies along the N bank of the Umquah which may be about 80 yds wide. No stones worth mentioning all the way; the river runs on a bed of soft slatey rock. The soil rich and clothed with fine pasture. A narrow valley runs along the north side of the river. Here is a most luxuriant growth of fern mixed with grass, clover, vegetables & flowers. The plain which may be from ¼ to ½ mile wide is bounded to the N by a range of bare hills with trees along their tops, and several rivulets intersect it on their way to the river. Joe the master of the only house that is here has a small patch of potatoes which appear in a most healthy & thriving condition. Some of the pines in the woody part of the country are of very large size. [203] We had put up close by the House in the grass for the night and had supper, but as there was an appearance of heavy rain Joe invited us to take shelter under his roof which we reluctantly did as we dread being infested with fleas. In other respects except the excessive heat of the house our quarters are very comfortable but a scarcity of provisions prevails here at the present season.

This Joe is a noted character among the natives by whom he is much feared, as the life of a fellow creature is held in little estimation by him. He has seven wives now in the house with him which is said to be but half of the number he possesses. He appears attentive to us. There are five packs of beaver here which Michell left, besides 2 belonging to his men. Joe it appears has also about a pack to trade. Here I received a letter from Mr. Laframboise addressed to Mr. C. F. McLoughlin dated 17th of April last. He & his party were then all well shortly previous to that date he had had a battle with the Indians on the S side of the Umquah mountain in which 11 of the [204] savages were slain & several wounded. None of the whites had received any hurt. The cause of the quarrel is not mentioned. He desires Mr. McLoughlin not to be uneasy about his safety.

"The Vernon" or Vervor appears to have been near the site of Scottsburg, on tidewater, and twenty miles west of Elkton and the later Fort Umpqua. The later fort was near the site of the later Elkton, on the south side of Umpqua River. Elkton is on the north side. The letter to "C. F. McLoughlin" was to Chief Factor John McLoughlin at Vancouver. "Michell" refers to Michel Laframboise. Fort Umpqua near Elkton, apparently did not exist in 1834. John Work camped near

John Work's Journal

---

there on June 9 and passed there June 8 without mentioning the fort. But he mentions "Umpqua old fort," which appears to have been established in 1832 on or near Calapooya Creek. See entry of June 11, following. See also Himes and Lang's "History of the Willamette Valley", p. 201. The Umpqua country is described by Ross' "Oregon Settlers", p. 257, as the "finest hunting ground on the Willamette."

June 9. Light showers. Had the furs arranged, & returned on our way to the camp accompanied by Joe & 2 other Indians with some beaver to trade, at the end of 7 hours march put up for the night as our horses were fatigued. The road very hilly. This must be a very bad road to pass in the winter season on account of the number of times the river & other small creeks have to be crossed, the country being so hilly & in many places so thickly wooded. Even now our eyes are like to be torn out with the thicketty branches. The party returned some twenty miles or half way to the camp on Elk Creek. This half-way place apparently was near the later site of Fort Umpqua, on Umpqua River, opposite Elkton.

June 10. Light rain. Continued our route & reached the camp at the end of 5 hours march. Traded Joe's beaver in the evening. Some more Indians, Old Grey Heads sons, arrived with some beaver. I saw some Indians on the way going down 2 days ago [205] coming up the Umquah in canoes & sent word with them that we were here for the purpose of trade. Since I have been off 3 deer were killed. The party arrived at the camp on Elk Creek.

June 11. Heavy rain. Traded what beaver the Indians had which with those received from Joe make 72 beaver & 25 otters. I find some of the Indians difficult to deal with. I have not a proper assortment of goods. Heyquales[?] are much asked for, and I have none of small green beads which are much in demand. I had only 4 or 5 pounds & they are all done. The other sorts of beads are in little repute. Nor are the other goods except ammunition in much demand except at very low prices. The Indians also complain that the goods are charged higher than they have hitherto got them, which in some things perhaps may be the case. But be it so or not the Indians are always apt to say so when a stranger comes among them for the first time. The most of these furs appear to be procured from along the seacoast, & there seems to be an opposition among the Indians who go there to trade, which causes the [206] beaver first to cost higher than they otherwise would do, & to induce the Indians to ask a higher price from us, in order to have a little profit.

Joe returned home. I sent a letter with him for Michelle & also sent a bag of corn, 5 Gall rice, 5 Gall flour, 1 lb. tea & ½ loaf of sugar. Should Michell be sick as was my case last year, these things would be a great acquisition to him. After Joe went off I learn that he & some of the other Indians are not on the best of terms. He is said to have killed 4 Indians during the winter & is represented as a very bad character & a great hand for taking other people's wives. The men set some traps since I went off; only 1 beaver taken; 2 deer killed.

June 12. Fine. Had arranged to proceed to the Umquah old fort where I understood the natives have a few beaver, but was deterred on account of a child of Champaign's which has been sick some time, being so sick that it was not expected to live out the day. By some Indians that were here I sent word to those on [207] the Umquah to meet me with what few beaver they may have to trade. Hunters out but no success, except Kanota killed two deer. "The Umpqua old fort" indicates there were two Forts Umpqua. The later fort of that name was opposite Elkton

---

on Umpqua River. Either the old or the later fort, probably the former, was established by Chief Trader John McLeod and Michel Laframboise in 1832. The "old fort," apparently, was on Calapooya Creek west of the sites of later Oakland and Sutherlin, perhaps at the junction of Calapooya Creek and Umpqua River, which place was the southernmost objective of this journey.

June 13. Overcast & chilly. F. Champaign's child continued so ill that it was not expected to live out the day, in consequence of which we did not raise camp. Hunters out, 2 deer killed. We got enough to serve the people so that they require to touch but little of their voyage provisions. Francois Campogna was an employee of the Hudson's Bay Company on the list of 1821-22 as number 638, and on the list of 1822-23 as number 509. See "Quarterly of the Oregon Historical Society", XIII, 367; XIV, 290.

June 14. Cloudy & fine. Proceeded 20 miles S. E. & S. to the second fork of the Umquah through a hilly country with intervening valleys of rich soil richly clothed with verdure. Found some Indians where we encamped, and about 20 men visited us in the evening. Two of the men crossed the mountains to the E. accompanied by an Indian as a guide to set some traps. Hunters had no success. The route was southerly from the camp near the site of Drain to Calapooya Creek, probably near the site of the town Oakland. The second fork of the Umpqua was Calapooya Creek, the first fork being Elk Creek.

June 15. Fine. Did not raise camp. Champaign's daughter died about noon. The old chief Latana accompanied by 2 other Indians visited us. There are a few beaver among his people which I mean to go down [208] that way to trade. I received a note from Mr. Laframboise dated 8th April. It contains no news but what was contained in the one I received a few days ago addressed to Mr. McLoughlin. Men off yesterday returned. Hunters out; an elk & a deer killed.

June 16. Fine. Proceeded down river to below its discharge into the Umquah 9 miles. The river which the road runs along runs through a valley enclosed by hills. Soil fine & clothed with pasturage, grass & clover. The old chief Satarna (opposite to whose house we are encamped) with several of his people visited us in the evening. The hunters had no success. The day's journey ended below the junction of Umpqua River and Calapooya Creek, probably the site of "Umpqua old fort."

June 17. Fine. Employed most of the day trading with the Indians & traded only 21 large beaver, 2 small do & 5 otters, which I believe is all they have. They are troublesome to deal with. They suppose, or affect to suppose, that they are harder dealt with than usual. News arrived again that Michell & his party were all killed. The Indian who brought this news had heard it from another, who had received the information from [209] a third far off; and again it is stated that our people have killed 25 more of the Indians. Most probably the whole story is a falsehood. The Umquah here is about 150 yds wide & runs over a rocky bottom of soft slaty rock & is not very deep. A horse can ford it at present. A little below our station, the mountains which are steep & ragged strike close into the river. Where we are encamped there are a few plains on both sides of the river. The rock on the high ground is a sort of a freestone.

June 18. Fine. Returned to our station of the 17th [15th?]. There we met a party of Indians from the head of the Willamet, headed by a man named Charles who had been formerly a slave, but obtained his liberty & is now a chief. From this man we learned that the head of the Willamette is so difficult to ascend that it can only be hunted with canoes, & that for a length of time no one has been up it (indeed no white man has ever been all the way to the head of it) and that

there are some beaver in it. I have [210] determined to go there & try what can be done as there is nothing to be got elsewhere that we can venture to go to. Old Satana & some of his men followed us up in the evening. The hunters out, P Legare killed a deer. Beginning the return, the party journeyed up Calapooya Creek to the camping place of June 15. A person named Charles is mentioned in "Ewing Young and his Estate," "Oregon Historical Society Quarterly", XXI, 219, 267, 280.

June 19. Fine with squalls. Charles has some business to settle with the Indians which requires this day, and as he is to guide us to the head of the Willamet across the mountain we did not raise camp. There is some disturbance & rumors of war among the Indians here. It appears that an Indian was bitten by a rattlesnake some time ago & died. His friends accuse a tribe above of having effected his death by conjuring, & threaten to avenge it if property is not paid for the body, which will probably have to be complied with as the conjurers are the weaker party. One deer killed.

June 20. Fine. There was a total eclipse of the moon last night, which continued a considerable time. Raised camp & proceeded 20 miles N. E. & N. to a fork of Elk river through a hilly country partially wooded [211] some valleys of fine rich land covered with pasturage. A number of Indians encamped near our station. Three hunters out, each killed a deer. Camp was on Elk Creek above the site of Drain, perhaps five miles northeast, and also a few miles northeast of the camping place of June 7, 10-13.

June 21. Fine. Proceeded 6 hours N. across the Elk mountain to a fork of the Willamet. Road across the mountains rugged & lies through thick woods. But on both sides places clear & covered with verdure. The soil more gravelly than we have seen for some time. The route crossed the divide between Elk Creek of Umpqua River and Coast Fork of Willamette, to a camp south of the site of Cottage Grove. The party had crossed this same divide, more to the westward, on June 7.

June 22. Fine. Continued our route 10 miles N down the river where we camped in order to send the hunters in quest of deer. The hunters had no success. Camp was near the site of Saginaw.

June 23. Fine. One of the men who was out hunting lost his horse & it was late when he found him, so that we could not raise camp. One deer.

June 24. Fine. Continued our route 16 miles N to the main or middle fork of the Willamet at the commencement of the mountains, or end of the plains or clear ground where we camped. The river here is 80 to 100 yds wide. From Indian information the upper part of this fork has never been visited by whites and beaver [212] are said to be numerous within a few days march of this place beyond the first range of mountains, where there is a valley, but from the mountainous nature of the country, thickly wooded, little or no grass, it would be very difficult to get to with horses & though the navigation is difficult, it is said to be practicable to ascend the river in canoes. I have determined therefore to send the people to try what can be done that way. The men were off & selected cedar trees to make canoes for the purpose and were afterwards getting their tools in readiness to commence making canoes tomorrow. Camp was near the site of Springfield. John Work proceeded to build canoes so as to enable members of his party to ascend Middle Fork in quest of beaver.

June 25. Fine. The tree is very large & pretty difficult to work. Several Indians visited us &

---

John Work's Journal

---

corroborate what we have before heard respecting beaver being in the upper part of the river, & that the navigation is practicable, tho' difficult. Traded 2 beaver. One of the men taken ill with fever. The [213] hunters were out but without success.

One of the Willamet freemen, Louis, paid us a visit. He has killed 7 beaver within a few days between the settlement & this; and from his account upward of 80 beaver have been in the river from this downwards since the spring, the most of which must have come from above during the high water.

June 26. Fine. The people still busy with the canoes. Hunters killed nothing.

June 27. Lowering weather, thunder & light rain. The canoes were brought out of the woods to the water side, but they are not finished yet. 1 deer killed.

28. Heavy rain. People busy finishing their canoes. F. Champaign still continues very ill.

29. Foggy with rain, The canoes 3 in number being ready, I sent off 6 men accompanied by 3 Indians to ascend to the head of this fork to trap beaver. They are allowed 2 months to be back here if they find wherewith to employ themselves so long. They will have some difficulty in [214] getting up but from the accounts the Indians give of beaver being numerous it is expected that they will get a good many. An Indian who is acquainted with that place & speaks the language of the natives there, the Melilish is engaged to accompany the people. Two men remain with the families to hunt for them, & take care of the horses. These men are to have a share of the hunt the same as those who have gone off. Champaigne who is ill with the fever also remains but he is not concerned in the partnership. Gave Kanota a few articles to trade any beaver he may find and make trifling presents to the Indians.

Some Indians arrived in the afternoon from McKenzies fork & brought a few pieces of salmon. Traded 2 beaver.

McKenzie's Fork was the later McKenzie River, named for Donald McKenzie. This river enters the Willamette some ten miles below, but the distance to the river from camp was not more than four miles. Donald McKenzie was described by Ross in "Fur Hunters" II, pp. 264-65, as "Perpetual Motion McKenzie." He was a Northwester but came overland with the Hunt party and returned in the employ of the North West Company in 1816. He was a notable figure in the early Snake River fur trade expeditions. After coalition of the North West and Hudson's Bay companies in 1821, he became governor of the Red River colony. He accumulated property in the fur trade and died at Mayville, New York in 1840. He was a kinsman of Alexander Mackenzie. He was a remarkable rifle shot, skilled in woodcraft and Indian warfare and was an able Indian trader.

June 30. Fine. Proceeded 10 miles N. W. to Mr. McKay's old house where I left the three men & Champaign & the men's families that are gone up the river, as this is said to be a better place for deer than where the canoes were made. [215] I then continued down the river 12 miles W. to the plain accompanied by De Champ, an Owyhee & an Indian on the way to the fort with the furs. The road lay through a hilly country, woods & clear ground, & the rest thinly timbered. The banks of the river are thickly wooded. A good deal of the soil is gravelly and of a poor quality, yet a good deal of pasture on the S. side of the hills. The herbage is being already dried up. Some parts of the road stoney. "McKay's old house" probably was at or near the confluence of Willamette and McKenzie rivers, some six miles north of the site of Eugene. From this place

the canoes would ascend McKenzie River. John Work then continued the day's journey to a place apparently west of the site of Harrisburg. "McKay's old house" indicates that an earlier trading party under leadership of Thomas McKay had a temporary trading post there.

July 1 Fine. Continued our course 24 miles W. & W. N. W. down the river & then across a plain to the traverse at Lamitambuff[?] Met 2 Indians & traded the meat of a deer; three other Indians passed us but made a very short stay & appeared to be much afraid of something. Parts of plain gravelly & soil poor, herbage getting dry & the ground has an arid appearance; on the lower spots grass luxuriant. Lamitambuff probably was Sam Tomeleaf River of June 2 (Long Tom River). Camp apparently was several miles northeast of the site of Monroe. "Longtabuff River," tributary of the Willamette, is mentioned in David Douglas' journal, printed in London, 1914, page 236. This is probably a form of the modernized Long Tom. The name has had many variations. Wilkes gives "Lumtumbuff" (1841), in "Narrative", V, 222.

July 2. Fine. Continued our course 6 ½ hours across the plain to River Lauries river where we camped. [216] The Indians set fire to the dry grass on the neighboring hill, but none of them came near us. The plain is also on fire on the opposite side of the Willamet. River Lauries was Mary's River. See under June 1.

July 3 Fine. Sent in the morning to an Indian village below to see if they had any beaver. 10 of them visited the camp & traded their beaver. These Indians are much alarmed lest they be attacked by the Umquahs. It seems some of their tribe a little ahead pillaged an Umquah Indian some time ago of a rifle, & that nation have threatened to come to war upon them. They also inform us that 4 men of Lautaude Indians have been killed & 3 children taken slaves a short time since, as they suppose by a party of Faladin or Yamhill Indians. It was 11 o'clock when we had settled with these Indians after which we proceeded on our journey and camped at our station of 31st May.

As we were coming on we found a party of 32 men all armed & ready for war, supposing that a party [217] of the Umquahs were coming upon them. The smoke made near our camp was made to apprise them that strangers were coming. It was these people that had taken the rifle alluded to above. One Indian who is an Umquah who accompanied us & who was commissioned to get the rifle, demanded it from them, and after a great deal of talk they gave it to him. Where we are camped we found 8 or 10 Indians with the meat of 2 deer. They gave us a little. They are now busy dancing & singing & making -merry with the produce of their chase.

July 4 Showery. Continued & camped. An Indian came some distance to trade 6 or 8 beaver & otters that he had, but he demanded such an exorbitant price that I did not trade. They will no doubt find their way to the fort. After 9 ½ hours march we camped on a small fork near Yamhill river not far from our station of 30th May. Several Yamhill Indians passed us going to their village which [218] is close by, on their way from the Willamet falls loaded with salmon which are now of an indifferent quality, having been carried 2 days in the sun. These people have no beaver, nor do they know of any Indians about here who have any. Part of a deer was obtained from an Indian today. Camp was near Amity. Willamette Falls were less than forty miles distant.

July 5. Cloudy. Proceeded 6 hours & camped not far from an Indian village opposite the Campment de Sauble. Traded a beaver & 8 otters from the Indians here. These people are preparing to go to war in a band of the same tribe a short way to the N. who killed one of their men a short

John Work's Journal

---

time ago without any cause. Camp was on west side of Willamette River opposite Champoeg. John Work had been here on May 29.

July 6. Fine. Continued on 5 ½ hours & camped on the 3rd fork from the N. of Faladin river. There are a number of Indians here which I suspect to be the people that killed the Indian above alluded to, though they deny it, as they are all armed & prepared for an attack. They have no beaver. Camp apparently was near South Fork of Tualatin River and Gaston, where the party camped May 27. This was the "fourth and last fork" of May 27, and the "third fork from the north fork" (McKay Creek) of Tualatin River.

July 7. Fine. Proceeded 4 ½ hours to the [219] N. fork of the Faladin river. We were delayed 1 ½ hours carrying the baggage across the middle fork which is too deep to ford. Owing to the constant marching our horses are much jaded. Camp was on McKay Creek, this being the "north fork" of Tualatin River. The "middle fork," which made delay, apparently was Dairy Creek, where the party encountered similar delay on May 27.

July 8. Fair. Continued our march & in 3 ½ hours crossed the mountain to the little Channel of the Umquah [Willamette] when we continued down the river to Mr. McKay's place which we reached in 6 hours. The road lay sometimes along the plain & sometimes along to the height of the water. We had to pass through the woods where the road was very bad & difficult to pass owing to the thickets & fallen timber. We had also to unload & carry the baggage across a creek deep with steep clayey banks. The horses could not cross loaded. There are immense meadows all the way down along the river, & if the grass were not injured would yield an immense quantity of pasturage & hay. Where the water has recently dried off there is a thick crop of grass so tall that it reaches to the horses' [220] shoulders.

Mr. McKay's place is in a beautiful situation. There is a plain of considerable extent surrounded by woods clothed with fine pasturage in which there is a considerable quantity of clover. The soil however is gravelly & appears of an inferior quality to the Faladin country. There is a considerable quantity of ground enclosed & under crop. One field of potatoes, 5 acres, has a fine appearance, but the wheat, barley, peas & Indian corn don't promise so abundant a crop. The house is built on the bank of a lake which communicates by channels with the small channel of the Willamette. The cattle & horses are in fine order. What a pity the low ground is subject to be inundated, for otherwise it would yield most abundant crops of every kind of grain.

The route was that of the mountain trail of May 24, as far as Willamette Slough or Multnomah Channel, near the site of Holbrook. Thence the route was northward to Scappoose plains where Thomas McKay lived. Travel was slow owing to the bad trail and the fagged condition of the horses.

July 9. Fine. Obtained a canoe from La Bonte and a boy as a guide & embarked at [221] 10 o'clock & after winding through a number of small channels reached the small or western channel of the Willamette which we ascended a considerable distance & crossed a lake (which now occupies a considerable portion of Wapitoe Island) and made a portage of 190 yds into the main channel of the Columbia which we ascended to opposite the upper fork of the Willamette where we encamped at sunset, as it would have been late in the night before we could have reached the fort. A canoe with people from the "Llama" passed us in the evening on their way to the fort.

John Work's Journal

---

Louis La Bonte provided the canoe for the journey to Fort Vancouver. Camp was six miles west of and below Fort Vancouver, on the Washington side, opposite the mouth of Willamette River. The "lake" was probably Sturgeon Lake in Sauvie Island, that being the later name of Wapato Island. The "upper fork" of the Willamette was the present main channel of that stream. The vessel Llama was owned by the Hudson's Bay Company, for whom it was operated by Captain William O'Neil for trading purposes. The vessel evidently was anchored down river, at Fort George (Astoria), and had sent a small boat to Fort Vancouver. Captain O'Neil sailed the vessel to Columbia River in 1832, and sold it to the Hudson's Bay Company in 1833. Louis La Bonte came to Oregon with the Hunt overland party in 1811-12. He was an employee of the company in 1821-23 as numbers 989 and 798.

July 10. Fine weather. Proceeded on our way by daylight as we were glad to get away from swarms of mosquitoes, and reached the fort for breakfast.

Afterwards had the furs all opened and examined & stood by.

The party arrived at Fort Vancouver.

Dear Brother,

You will think it is a long time before you hear from me but there has not been a company gone in expect one and at that time I was not able to move in bed I have had a severe spell of sickness worse than I ever had in my life and if it had not been for Mr Stanly I should have died for there was no Doctor here and not much medicine, and it is one of the meanest Countries to be sick in the world for there are no nourishments to be got, but I have got quite well again and enjoy good health which I hope you do the same and the Boys that is with you, David I have sent you in a draft of two hundred dollars by . . . Th. Bogs and I wish you to collect it as soon as possible for there is a great many drafts on the old man Pratt but I have no doubt but he will pay it at sight, you may think I ought to have sent in more money but it is out of my Power do it at Present it is not in the power of man to sell goods where there is no money I have bought up a large quantity of corn and wheat which I hope to sell it for cash in the spring or turn it into whiskey and that is cash or fur so you may expect one or the other in the spring. my chance was never more flattering than it is at present Chambers has been to St Louis and got the holy water put on his head and the Governor is a great friend of his he will assist us in any thing that we undertake so we have want you to get of Aberham Barns eighty gallon stills and some other articles which I will give you a list of, if you could do me the favour I shall be very glad for we are not on any uncertainty about it for we have got the stuff that will bring the money in the spring so that you and Mr Barns need not be the least afraid to get those articles but be shure never to name it to any person for they are contraband Articles, and I hope by this time that you have got that money from Johnson and Mc Keney if not make them pay if they have got it for they used me very bad Johnson is as mean a man as ever lived give me an exact account how you come on with them for I am afraid that you will have some trouble with them.

A list of the Articles

Two Eighty gallon stills, the caps to be of the goose neck kind

Six Brass cocks

Six falling axes

Two grubbing hoes

Irons for one tub mill

one inch and half Chisel

one inch ditto of the very strongest kind

Two Augers one inch and the other half inch

Two Mill picks, one stone hammer Iron

Twenty pounds of steels, One hundred lb of hoop

One Crane for Drawing water

twenty lb of Flouring nails.

One good strong Plantation Wagon

The things that I have named I want you and Aberham Barns to see to getting them if it is convenient, Mathew Kinkead and myself pays for half of them which I expect it will come to about eighty five dollars for each of us, Chambers pays for half and we the other half and perhaps you

W Workman Letter 1826

---

can get some of them with traid The goods that I named in my other letter I dont want you to send them but if any of the stores will credit me for five hundred yards of the Cheepest cind of Brown Domestic some narrow and some of the widest kind I will send them in the money this summer without fail and some tobacco if it can be got cheap, and one Blue settute coat made in the same fashion that my other on was but have it made a little larger so it will button easy on you and the ballance of my close I think I can make out except [shoes] and a hat you must send me two pair of shoes of . . . high quarter, and tell P. B. Ranys that he [must pick me] out a good hat, unfinished so that I can get it finished hear and I will send him the money or fur in the spring, there will be a very large company that will start from hear in march with about two thousand head of stock which they may calculate to loose half them I could have sent you in stock but it is so uncertain about them getting in for this reason I think that man in any Business that started with as little as I did ought to lie on a shoor futting, I have to furnish mule to Capt Brannin and you cant get one convenient I wish you to get one of M Kinkeads if they are not sould, I have sent you in twenty dollor by Thos Bogs to get us some Sugar and Coffee, and you must send me out colourd paper for lining Trunks and some saddlers tacks as as I did not bring any with me and some morocker Leather as mine was taken from me, I want you to send me out my tools such as eck planes and schels gouges holers and rounds and one male turning saw and my smool hammer so I reman, yours

W Workman

Mr Patton and myself tried our work in St ta Fee this winter and could sell nothing as for trunks I can Barter them of to a good advantage but their is very little money in Country and they thought that we would make them up and the would get them for nothing but be shoor to send me out that coulerd paper and nails and some locks of a better quality for their is half them that I brought is good for nothing and I want some good ones for some particular Persons in this country, Capt Brannin has to load his waggon with his goods and our Articles and if he cant fit it all of them Mr Thos Bogs has promised to bring them that we want, and if you can get some sassifress Bark . . . if you please, you will oblige yours

W Workman

OREGON;  
OR  
A SHORT HISTORY OF A LONG JOURNEY  
FROM THE  
ATLANTIC OCEAN TO THE REGION OF THE PACIFIC.  
BY LAND.  
DRAWN UP FROM THE NOTES AND ORAL INFORMATION  
OF  
JOHN B WYETH,  
ONE OF THE PARTY WHO LEFT MR NATHANIEL J WYETH,  
JULY 28TH, 1832, FOUR DAYS MARCH BEYOND THE RIDGE OF THE  
ROCKY MOUNTAINS,  
AND THE ONLY ONE WHO HAS RETURNED TO NEW ENGLAND  
CAMBRIDGE  
PRINTED FOR JOHN B. WYETH.  
1833.

A contented mind is a continual feast; but entire satisfaction has never been procured by wealth however enormous, or ambition however successful.

True happiness is to no place confin'd, But still is found in a contented mind.

OREGON EXPEDITION

In order to understand this Oregon Expedition, it is necessary to say, that thirty years ago (1803), PRESIDENT JEFFERSON recommended to Congress to authorize competent officers to explore the river Missouri from its mouth to its source, and by crossing the mountains to seek the best water communication thence to the Pacific Ocean. This arduous task was undertaken by Captain M. Lewis and Lieutenant W. Clarke of the first regiment of infantry. They were accompanied by a select party of soldiers, and arrived at the Missouri in May, 1804, and persisted in their novel and difficult task into the year 1806, and with such success as to draw from President Jefferson the following testimonial of their heroic services, viz. "The expedition of Messrs. LEWIS & CLARKE, for exploring the river Missouri, and the best communication from that to the Pacific Ocean, has had all the success which could be expected; and for which arduous service they deserve well of their country."

The object of this enterprise was to confer in a friendly manner with the Indian Nations throughout their whole journey, with a view to establish a friendly and equitable commerce with them, on principles emulating those that marked and dignified the settlement of Pennsylvania by William Penn. It was beyond doubt that the President and Congress sincerely desired to treat the Indians with kindness and justice, and to establish peace, order, and good neighbourhood with all the savage tribes with whom they came in contact, and not to carry war or violence among any of them who appeared peaceably disposed.

A few years before the period of which we have spoken, our government had acquired by purchase the vast and valuable Territory of Louisiana from the renowned NAPOLEON BONAPAR-

JOHN B WYETH OREGON

---

TE, at that time the Chief of the French Nation. Considering his previous intentions, and actual preparations under his famous General Bernadotte, nothing could be more fortunate for these United States than this purchase. Our possession of Louisiana was so grievous a sore to the very jealous Spaniards, that they have, till lately, done all in their power to debar and mislead us from pursuing discoveries in that quarter, or in the Arkansas, Missouri, or Oregon. Yet few or none of them probably believed that we should, during the present generation, or the next, attempt the exploration of the distant Oregon Territory, which extends from the Rocky Mountains to the shores of the Pacific Ocean, or in other words, from the Missouri and Yellow Stone rivers to that of the river Columbia or Oregon which pours into the Ocean by a wide mouth at the immense distance from us of about four thousand miles; yet one and twenty men, chiefly farmers and a few mechanics, had the hardihood to undertake it, and that too with deliberation and sober calculation. But what will not a New-England man undertake when honor and interest are the objects before him? Have not the people of that sand-bank, Nantucket, redeemed it from the ocean, and sailed round Cape Horn in pursuit of whales for their oil, and seals for their skins? A score of our farmers seeing that Nantucket and New Bedford had acquired riches and independence by traversing the sea to the distant shores of the Pacific, determined to do something like it by land. Their ardor seemed to have hidden from their eyes the mighty difference between the facility of passing in a ship with the aid of sails, progressing day and night, by skilfully managing the winds and the helm, and that of a complicated wagon upon wheels, their journey to be over mountains and rivers, and through hostile tribes of savages who dreaded and hated the sight of a white man.

This novel expedition was not however the original or spontaneous notion of Mr. Nathaniel J. Wyeth, nor was it entirely owing to the publications of Lewis & Clarke or Mackenzie. Nor was it entirely owing to the enterprise of Messrs. Barbell, Hatch, and Bulfinch, who fitted out two vessels that sailed from Boston in 1787, commanded by Captains Kendrick and Gray, which vessels arrived at Nootka in September, 1788. They were roused to it by the writings of Mr. Hall J. Kelly, who had read all the books he could get on the voyages and travels in Asia, Africa, Europe, and America, until he had heated his mind to a degree little short of the valorous Knight of La Mancha, that is to say, he believed all he read, and was firm in the opinion that an Englishman and an American, or either, by himself, could endure and achieve any thing that any man could do with the same help, and farther, that a New-England man or "Yankee," could with less. That vast region, which stretches from between the east of the Mississippi, and south of the Lakes Superior, Huron, Michigan, Erie, and Ontario, was too narrow a space for the enterprise of men born and bred within a mile or two of the oldest University in the United States. Whatever be the true character of the natives of New England, one thing must be allowed them, that of great and expansive ideas,-- beyond, far beyond the generality of the inhabitants of the small Island of Britain. I say small, for if that Island should be placed in the midst of these United States, it would hardly form more than a single member of our extended republic. That vast rivers, enormous mountains, tremendous cataracts, with an extent corresponding to the hugeness of the features of America, naturally inspire men with boundless ideas, few will doubt. This adventurous disposition, at the same time, will as naturally banish from the mind what the newlight doctrine of Phrenology calls the disposition bump of Inhabitiveness, or an inclination to stay at home, and in its place give rise to a roaming, wandering inclination, which, some how or other, may so affect the organs of

---

vision, and of hearing, as to debar a person from perceiving what others may see, the innumerable difficulties in the way. Mr. Hall J. Kelly's writings operated like a match applied to the combustible matter accumulated in the mind of the energetic Nathaniel J. Wyeth, which reflected and multiplied the flattering glass held up to view by the ingenious and well disposed schoolmaster.

Mr. Nathaniel J. Wyeth had listened with peculiar delight to all the flattering accounts from the Western regions, and that at a time when he was surrounded with apparent advantages, and even enviable circumstances. He was born and bred near the borders of a beautiful small Lake, as it would be called in Great Britain; but what we in this country call a large Pond; because we generally give the name of Lakes only to our vast inland seas, some of which almost rival in size the Caspian and Euxine in the old world. It seems that he gave entire credit to the stories of the wonderful fertility of the soil on the borders of the Ohio, Missouri, the river Platte, and the Oregon, with the equally wonderful healthfulness of the climate. We need not wonder that a mind naturally ardent and enterprising should become too enthusiastic to pursue the laborious routine of breaking up and harrowing the hard and stubborn soil of Massachusetts within four miles of the sea, where the shores are bounded and fortified by stones and rocks, which extend inland, lying just below the surface of the ground, while the regions of the West were represented as standing in need of very little laborious culture, such was the native vigor of its black soil. The spot where our adventurer was born and grew up, had many peculiar and desirable advantages over most others in the county of Middlesex. Besides rich pasturage, numerous dairies, and profitable orchards, and other fruit trees, it possessed the luxuries of well cultivated gardens of all sorts of culinary vegetables, and all within three miles of the Boston Market House, and two miles of the largest live-cattle market in New England. All this, and more too, had not sufficient attractions to retain Mr. Wyeth in his native town and county.

Besides these blessings, I shall add another. The Lake I spoke of, commonly called Fresh Pond, is a body of delightful water, which seems to be the natural head or source of all the numerous underground rivers running between it and the National Navy Yard at Charlestown, which is so near to the city of Boston as to be connected to it by a bridge; for wherever you sink a well, between the body of water just mentioned, you strike a pelucid vein of it at from nineteen to twenty-two feet depth from the surface. With the aforesaid Lake or Pond is connected another not quite so large, but equally beautiful. Around these bodies of inosculating waters, are well cultivated farms and a number of gentlemen's country-seats, forming a picture of rural beauty and plenty not easily surpassed in Spring, Summer, and Autumn; and when winter has frozen the lakes and all the rivers, this spot has another and singular advantage; for our adventurer sold the water of this pond; which was sent to the West-Indian Islands, Philadelphia, New Orleans, and other places south of this; which is so much of a singularity as to require explanation.

In our very coldest weather, January and February, the body of water we spoke of is almost every year frozen to the thickness of from eighteen inches to two feet,- sometimes less, and very rarely more. It is then sawed into cubes of the size just mentioned, and deposited in large store-houses, and carted thence every month in the year, even through the dog-days, in heavy teams drawn by oxen and horses to the wharves in Boston, and put on board large and properly constructed

vessels, and carried into the hot climates already mentioned. The heavy teams five, or six, or more, close following each other, day and night, and even through the hottest months, would appear incredible to a stranger. Here was a traffic without any drawback, attended with no other charge than the labor of cutting and transporting the article; for the pond belonged to no man, any more than the air which hung above it. Both belonged to mankind. No one claimed any personal property in it, or control over it from border to border. A clearer profit can hardly be imagined. While the farmer was ploughing his ground, manuring and planting it, securing his well-tended crop by fencing, and yet after all his labor, the Hessian-fly, the canker or slug worm, or some other destructive insect, or some untimely frost, as was the case last winter, might lay waste all his pains and cut off all his expectations. The only risk to which the Ice-merchant was liable was a blessing to most of the community; I mean the mildness of a winter that should prevent his native lake from freezing a foot or two thick. Our fishermen have a great advantage over the farmer in being exempt from fencing, walling, manuring, taxation, and dry seasons; and only need the expence of a boat, line, and hook, and the risk of life and health; but from all these the Ice-man is in a manner entirely exempted; and yet the Captain of this Oregon Expedition seemed to say, All this availeth me nothing, so long as I read books in which I find, that by only going about four thousand miles, over land, from the shore of our Atlantic to the shore of the Pacific, after we have there entrapped and killed the beavers and otters, we shall be able, after building vessels for the purpose, to carry our most valuable peltry to China and Cochin China, our seal-skins to Japan, and our superfluous grain to various Asiatic ports, and lumber to the Spanish settlements on the Pacific; and to become rich by underworking and underselling the people of Hindostan; and, to crown all, to extend far and wide the traffic in oil by killing tame whales on the spot, instead of sailing round the stormy region of Cape Horn.

All these advantages and more too were suggested to divers discontented and impatient young men. Talk to them of the great labor, toil, and risk, and they would turn a deaf ear to you: argue with them, and you might as well reason with a snow-storm. Enterprising young men run away with the idea that the farther they go from home, the surer they will be of making a fortune. The original projector of this golden vision first talked himself into the visionary scheme, and then talked twenty others into the same notion. Some of their neighbours and well-wishers thought differently from them; and some of the oldest, and most thoughtful, and prudent endeavoured to dissuade them from so very arduous and hazardous an expedition. But young and single men are for tempting the untried scene; and when either sex has got a notion of that sort, the more you try to dissuade them, the more intent they are on their object. Nor is this bent of mind always to be censured, or wondered at. Were every man to be contented to remain in the town in which he was born, and to follow the trade of his father, there would be an end to improvement, and a serious impediment to spreading population. It is difficult to draw the exact line between contentment, and that inactivity which approaches laziness. The disposition either way seems stamped upon us by nature, and therefore innate. This is certainly the case with birds and beasts - the wild geese emigrate late in the Autumn to a southern climate, and return again in the Spring to a northern one, while the owl and several other birds remain all their lives near where they were hatched; whereas man is not so much confined by a natural bias to his native home. He can live in all climates from the equator to very near the dreary poles, which is not the case with other animals;

---

and it would seem that nature intended he should live anywhere; - for whereas other animals are restricted in their articles of food, some living wholly on flesh, and others wholly on vegetables, man is capable of feeding upon every thing that is eatable by any creature, and of mixing every article together, and varying them by his knowledge and art of cookery, - a knowledge and skill belonging to man alone. Hence it appears that Providence, who directs everything for the best, intended that man should wander over the globe, inhabit every region, and dwell wherever the sun could shine upon him, and where water could be obtained for his use.

So far from deriding the disposition to explore unknown regions, we should consider judicious travellers as so many benefactors of mankind. It is most commonly a propensity that marks a vigorous intellect, and a benevolent heart. The conduct of the Spaniards, when they conquered Mexico and Peru with the sole view of robbing them of their gold and silver, and of forcing them to abandon their native religion, has cast an odium on those first adventurers upon this continent and their first enterprises in India have stigmatized the Dutch and the English; nor were our own forefathers, who left England to enjoy religious freedom, entirely free from the stain of injustice and cruelty towards the native Indians.- Let us therefore in charity, nay, in justice, speak cautiously of what may seem to us censurable in the first explorers of uncivilized countries; and if we should err in judgment, let it be on the side of commendation.

Mr. Wyeth, or as we shall hereafter call him, Captain Wyeth, as being leader of the Band of the Oregon adventurers, after having inspired twenty-one persons with his own high hopes and expectations (among whom was his own brother, Dr. Jacob Wyeth, and a gun-smith, a black-smith, two carpenters, and two fishermen, the rest being farmers and laborers, brought up to no particular trade) was ready, with his companions, to start off to the Pacific Ocean, the first of March, 1832, to go from Boston to the mouth of Columbia river by land.

I was the youngest of the company, not having attained my twentieth year; but, in the plentitude of health and spirits, I hoped every thing, believed every thing my kinsman, the Captain, believed and said, and all doubts and fears were banished. The Captain used to convene us every Saturday night at his house for many months previous to our departure, to arrange and settle the plan of our future movements, and to make every needful preparation; and such were his thoughtfulness and vigilance, that it seemed to us nothing was forgotten and every thing necessary provided. Our three vehicles, or wagons, if we may call by that name a unique contrivance, half boat, and half carriage, may be mentioned as an instance of our Captain's talents for snug contrivance. It was a boat of about thirteen feet long, and four feet wide, of a shape partly of a canoe, and partly of a gondola. It was not calked with tarred oakum, and payed with pitch, lest the rays of the sun should injure it while upon wheels; but it was nicely jointed, and dovetailed. The boat part was firmly connected with the lower, or axletree, or wheel part; - the whole was so constructed that the four wheels of it were to be taken off when we came to a river, and placed in the wagon, while the tongue or shaft was to be towed across by a rope. Every thing was as light as could be consistent with safety. Some of the Cambridge wags said it was a boat begot upon a wagon,- a sort of mule, neither horse nor ass,- a mongrel, or as one of the collegians said it was a thing amphibious, anatomically constructed like some equivocal animals, allowing it to crawl upon the land, or to

JOHN B WYETH OREGON

---

swim on the water; and he therefore thought it ought to be denominated an amphibium. This would have gone off very well, and to the credit of the learned collegian, had not one of the gang, who could hardly write his own name, demurred at it; because he said that it reflected not back the honor due to the ingenious, contriver of the commodious and truly original vehicle; and for his part, he thought that if they meant to give it a particular name, that should redound to the glory of the inventor, it ought to be called a Nat-wye-thium; and this was instantaneously agreed to by acclamation! Be that as it may, the vehicle did not disgrace the inventive genius of New England. This good-humored raillery, shows the opinion of indifferent people, merely lookers-on. The fact was, the generality of the people in Cambridge considered it a hazardous enterprise, and considerably notional. About this time there appeared some well written essays in the Boston newspapers, to show the difficulty and impracticability of the scheme, purporting to doubt the assertions of Mr. Hall J. Kelly respecting the value and pleasantness of the Oregon territory. The three vehicles contained a gross of axes, a variety of articles, or "goods" so called, calculated for the Indian market, among which vermilion and other paints were not forgotten, glass beads, small looking-glasses, and a number of tawdry trinkets, cheap knives, buttons, nails, hammers, and a deal of those articles, on which young Indians of both sexes set a high value, and white men little or none. Such is the spirit of trade and traffic, from the London and Amsterdam merchant, down to an Indian trader and a yankee tin-ware man in his jingling go-cart; in which he travels through Virginia and the Carolinas to vend his wares, and cheat the Southerners, and bring home laughable anecdotes of their simplicity and ignorance, to the temporary disgrace of the common people of the Northern and Eastern part of the Union, where a travelling tin-man dare hardly show himself, - and yet is held up in the South as the real New-England character, and this by certain white people who know the use of letters!

The company were uniform in their dress. Each one wore a coarse woollen jacket and pantaloons, a striped cotton shirt, and cowhide boots: every man had a musket, most of them rifles, all of them bayonets in a broad belt, together with a large clasped knife for eating and common purposes. The Captain and one or two more added pistols; but every one had in his belt a small axe. This uniformity had a pleasing effect, which, together with their curious wagons, was noticed with commendation in the Baltimore newspapers, as a striking contrast with the family emigrants of husband, wife, and children, who have for thirty years and more passed on to the Ohio, Kentucky, and other territories. - The whole bore an aspect of energy, good contrivance, and competent means. I forgot to mention that we carried tents, camp-kettles, and the common utensils for cooking victuals, as our plan was to live like soldiers, and to avoid, as much as possible, inns and taverns. The real and avowed object of this hardy-looking enterprise was to go to the river Columbia, otherwise called the river Oregon, or river of the West, which empties by a very wide mouth into the Pacific Ocean, and there and thereabouts commence a fur trade by trafficking with the Indians, as well as beaver and other hunting by ourselves. We went upon shares, and each one paid down so much; and our association was to last during five years. Each man paid our Leader forty dollars. Captain Wyeth was our Treasurer, as well as Commander; and all the expenses of our travelling on wheels, and by water in steam-boats, were defrayed by our Leader, to whom we all promised fidelity and obedience. For twenty free-born New-England men, brought up in a sort of Indian freedom, to be bound together to obey a leader in all things reasonable, without some-

thing like articles of war, was, to say the least of it, a hazardous experiment. The Captain and crew of a Nantucket whaling ship came nearest to such an association; for in this case each man runs that great risk of his life, in voluntarily attacking and killing a whale, which could not be expected from men hired by the day, like soldiers; so much stronger does association for gain operate, than ordinary wages. As fighting Indians from behind trees and rocks is next, in point of courage, to attacking a whale, the monarch of the main, in his own element, a common partnership is the only scheme for achieving and securing such dangerous purposes.

We left the city of Boston, 1st of March, 1832, and encamped on one of the numerous islands in its picturesque harbour, where we remained ten days, by way of inuring ourselves to the tented field; and on the 11th of the same month we hoisted sail for Baltimore, where we arrived after a passage of fifteen days, not without experiencing a snow-storm, severe cold, and what the landsmen considered a hard gale, at which I, who had been one voyage to sea, did not wonder. It made every man on board look serious; and glad were we to be set on shore at the fair city of Baltimore, in which are to be found a great number of merchants, traders, and mechanics from different parts of New England, and where of course there are none, or very few, of those ridiculous prejudices against what they call Yankees, that are observable in Virginia and the Carolinas.

At Baltimore our amphibious carriages excited great attention, and I may add, our whole company was an object of no small curiosity and respect. This, said they, is "Yankee all over!" - bold enterprise, neatness, and good contrivance. As we carefully avoided the expense of inns and taverns, we marched two miles out of Baltimore, and there encamped during four days; and then we put our wagons into the cars on the rail-road; which extends from thence sixty miles, which brought us to the foot of the Alleghany mountains. Quitting the rail-road at the foot of the Alleghany, we encountered that mountain. Here we experienced a degree of inhospitality not met with among the savages. The Innkeepers, when they found that we came from New England, betrayed an unwillingness to accommodate Yankees, from a ridiculous idea, that the common people, so nicknamed, were too shrewd at a bargain and trading, for a slow and straight-forward Dutchman; for the inhabitants of this mountainous region, were generally sons and grandsons of the Dutch and German first settlers; and it cannot be denied and concealed, that the New England land-jobbers were in their bargains too hard for the torpid Dutchman, who, it is true, loved money as much as any people, yet when they, or their fathers had been the sufferers from a set of roving sharpers, it is no wonder that an hereditary prejudice should descend with exaggeration and aggravation from father to son, and that their resentment should visit their innocent sons to the third and fourth generation. No one pretends to mention any fact or deed, in which those Dutch foreigners were defrauded of their rights and dues; and all that can be, with truth, said, was, that the land-speculators from Connecticut and Massachusetts were to New-England what Yorkshire men are thought to be to the rest of the people of England, a race more sharp and quick-sighted than their neighbours, and with a sort of constitutional good humor, called fun, they could twist that uneducated progeny of a German stock around their fingers; - hence their reluctance to have any thing to do with men, whose grand-fathers were too knowing for them. You never hear the French or the English complaining of the over-shrewdness of the New England people. They accord very well together, and very frequently intermarry. No, it is the Dutch, and the descendants

of transported convicts, who sneer at those they call Yankees, whom their fathers feared, and of course hated.

At one public house on the mountains near which we halted, the master of it, learning that we came from Boston, refused us any refreshment and lodging. He locked up his bar-room, put the key in his pocket, went out, and came back with four or five of his neighbours, when the disagreement ran so high, that the tavern-keeper and the Yankee Captain each seized his rifle. The latter pointing to the other's sign before his door, demanded both lodging and refreshment, as the legal condition of his tavern-license; and the dispute ended in our Captain's sleeping in the house with three of his party, well armed, determined to defend their persons, and to insist on their rights as peaceable and unoffending travellers, while the rest of the company bivouacked near their wagons, and reposed themselves, like veteran soldiers, in their tents and wagons.

We gladly departed from the inhospitable Alleghany or Apalachian mountains, which extend from the river St. Lawrence to the confines of Georgia, and which run nearly parallel to the sea-shore from sixty to one hundred and thirty miles from it, and dividing the rivers, which flow into the Atlantic on the east, from those that run into the lakes and into the Mississippi on the west. The part we passed was in the state of Pennsylvania. Our next stretch was for the river Monongahela, where we took the steamboat for - Pittsburg. This town has grown in size and wealth, in a few years, surprisingly. It is two hundred and thirty miles from Baltimore; three hundred from Philadelphia. It is built on a point of land jutting out towards the river Ohio, and washed on each side by the Alleghany and Monongahela, which rivers uniting are lost in the noble Ohio. It was originally a fortress built by the French, called Fort du Quesne; being afterwards taken by the English in 1759, it was called fort Pitt, in honor of the famous William Pitt, afterwards Earl of Chatham, under whose administration it was taken from the French, together with all Canada. On this spot a city has been reared by the Americans, bearing the name of Pittsburg, which has thriven in a surprising manner by its numerous manufactories in glass, as well as in all the metals in common use. To call it the Birmingham of America is to underrate its various industry; and to call the English Birmingham Pittsburg, would be to confer upon that town additional honor; not but what the British Birmingham is by far the most pleasant place to live in. Pittsburg is the region of iron and fossil coal, of furnaces, glass-works, and a variety of such like manufactures. This town has somewhat the color of a coal-pit, or of a black-smith's shop. The wonder is, that any gentleman of property should ever think of building a costly dwelling-house, with corresponding furniture, in the coal region of the western world; but there is no disputing *de gustibus - Cacun a son gout*. The rivers and the surrounding country are delightful, and the more so from the contrast between them and that hornet's nest of bustle and dirt, the rich capital. Thousands of miserable culprits are doomed to delve in deep mines of silver, gold, and quicksilver among the Spaniards for their crimes; but here they are all freemen, who choose to breathe smoke, and swallow dirt, for the sake of clean dollars and shining eagles. Hence it is that the Pittsburgh workmen appear, when their faces are washed, with the ruddiness of high health, the plenitude of good spirits, and the confidence of freemen.

From the busy city of thriving Pittsburg our next important movement was down the Ohio. We

---

accordingly embarked in a very large steam-boat called The Freedom; and soon found ourselves, bag and baggage very much at our ease and satisfaction, on board a truly wonderful floating inn, hotel, or tavern, for such are our steam-boats. Nothing of the kind can surpass the beauty of this winding river, with its fine back-ground of hills of all shapes, and colors, according to the advancement of vegetation from the shrubs to the tallest trees. But the romantic scenery on both sides of the Ohio is so various and so captivating to a stranger, that it requires the talents of a painter to give even a faint idea of the picture; and the effect on my mind was, not to estimate them as I ought, but to feed my deluded imagination with the belief that we should find on the Missouri, and on the Rocky Mountains, and Columbia river, object as much finer than the Ohio afforded, as this matchless river exceeded our Merrimac or Kennebeck; and so it is with the youth of both sexes; not satisfied with the present gifts of nature, they pant after the untried scene, which imagination is continually bodying forth, and time as constantly dissipating.

The distance from Pittsburg to the Mississippi is about one thousand miles. Hutchins estimated it at one thousand one hundred and eighty-eight, - Dr. Drake at only nine hundred and forty-nine. Wheeling is a town of some importance. Here the great national road into the interior from the city of Washington, meets that of Zanesville, Chillicothe, Columbus, and Cincinnati. It is the best point to aim at in very low stages of the water, and from thence boats may go at all seasons of the year. We passed Marietta, distinguished for its remarkable remains of mounds, and works, resembling modern fortifications, but doubtless the labor of the ancient aboriginals, of whom there is now no existing account; but by these works, and articles found near them, they must have belonged to a race of men farther advanced in arts and civilization than the present Indian in that region, - a people who, we may well suppose, were the ancestors of the Mexicans. Yet we see at this time little more than log-houses belonging to miserable tenants of white people. All the sugar used by the people here is obtained from the maple tree. Fossil coal is found along the banks. There is a creek pouring forth Petroleum, about one hundred miles from Pittsburg on the Alleghany, called Oil Creek, which will blaze on the application of a match. This is not uncommon in countries abounding in bituminous coal. Nitre is found wherever there are suitable caves and caverns for its collection. The people here are rather boisterous in their manners, and intemperate in their habits, by what we saw and heard, more so than on the other side of the river where slavery is prohibited. Indeed slavery carries a black moral mark with it visible on those whose skins are naturally of a different color; and Mr. Jefferson's opinion of the influence of slavery on the whites, justifies our remark.

We stopped one day and night at the flourishing town of Cincinnati, the largest city in the Western country, although, laid out so recently as 1788. It is twenty miles above the mouth of the Great Miami, and four hundred and sixty five miles below Pittsburg. It appears to great advantage from the river, the ground inclining gradually to the water. Three of us had an evidence of that by a mischievous trick for which we deserved Punishment. We were staring about the fine city that has risen up with a sort of rapid, mushroom growth, surprising to every one who sees it, and who considers that it is not more than forty years old. In the evening we went into a public house, where we treated ourselves with that sort of refreshment which inspires fun, frolic, and mischief. We remained on shore till so late an hour that every body appeared to have gone to bed, when

---

we set out to return to our steam-boat. In our way to it we passed by a store, in the front of which stood three barrels of lamp-oil, at the head of a fine sloping street. The evil spirit of mischief put it into our heads to set them a rolling down the inclined plane to the river. No sooner hinted, than executed. We set all three a running, and we ran after them; and what may have been lucky for us, they were recovered next day whole. Had there been legal inquisition made for them, we had determined to plead character, that we were from Boston, the land of steady habits and good principles, and that it must have been some gentlemen Southerners, with whose characters for nightly frolics, we, who lived within sound of the bell of the University of Cambridge were well acquainted. The owners of the oil came down to the steam-boat, and carried back their property without making a rigid examination for the offenders -, without suspecting that prudent New-England young men would indulge in a wanton piece of fun, where so much was at stake. But John Bull and Jonathan are queer fellows.

From Cincinnati to St. Louis, we experienced some of those disagreeable occurrences, that usually happen to democratical adventurers. Our Captain, to lessen the expenses of the expedition, had bargained with the Captain of the steam-boat, that we of his band should assist in taking on board wood from the shore, to keep our boilers from cooling. Although every one saw the absolute necessity of the thing, for our common benefit and safety, yet some were for demurring at it, as not previously specified and agreed upon. Idleness engenders mutiny oftener than want. In scarcity and in danger men cling together like gregarious animals; but as soon as an enterprising gang can sit down, as in a steam-boat, with nothing to do but to find fault, they are sure to become discontented, and discontent indulged leads to mutiny. Whatever I thought then, I do not think now that Captain Wyeth was to blame for directing his followers to aid in wooding; nor should the men have grumbled at it. I now am of opinion that our aiding in wooding the steam-boat was right, reasonable, and proper. Every man of us, except the surgeon of the company, Dr. Jacob Wyeth, ought, on every principle of justice and generosity, to have given that assistance.

Our navigation from Cincinnati to St. Louis was attended with circumstances new, interesting, and very often alarming. Passing the rapids of the Ohio, or falls as they are called, between the Indiana territory and Kentucky, was sufficiently appalling to silence all grumbling. These falls, or rapids are in the vicinity of Louisville, Jeffersonville, Clarksville, and Shipping-port, and are really terrific to an inexperienced farmer or mechanic. Our Hellgate in Long-Island Sound is a common brook compared with them; and when we had passed through them into the Mississippi, the assemblage of trees in the river, constituting snags and sawyers, offered themselves as a species of risk and danger, which none of us had ever calculated on or dreamt of. We knew that there was danger in great storms, of huge trees blowing down on one's head; and that those who took shelter under them in a thunder-storm, risked their lives from lightning; but to meet destruction from trees in an immense river, seemed to us a danger of life, which we had not bargained for, and entirely out of our agreement and calculation. We had braced ourselves up only against the danger of hostile Indians, and enraged beasts, which we meant to war against. Beyond that, all was smooth water to us. The truth of the matter is, - the men whom Captain Wyeth had collected were not the sort of men for such an expedition. They were too much on an equality to be under strict orders like soldiers. Lewis & Clarke were very fortunate in the men they had under them.

---

JOHN B WYETH OREGON

---

Major Long's company was, in a great degree military, and yet three of his soldiers deserted him at one time, and a fourth soon after.

On the 18th of April, 1832, we arrived at St. Louis. As we had looked forward to this town, as a temporary resting place, we entered it in high spirits, and pleased ourselves with a notion that the rest of our way till we should come to the Rocky Mountains would be, if not down hill, at least on a level: but we counted without our host.

St. Louis was founded by a Frenchman named Peter la Clade in 1764, eighty-four years after the establishment of Fort Creve-coeur on the Illinois river; and inhabited entirely by Frenchmen and the descendants of Frenchmen, who had carried on for the most part a friendly and lucrative trade with the Indians. But since the vast Western country has been transferred to the United States, its population has been rapidly increased by numerous individuals and families from different parts of the Union; and its business extended by enterprising mechanics and merchants from the New-England States; and its wealth greatly augmented. The old part of St. Louis has a very different aspect from that of Cincinnati, where every thing appears neat, and new, and tasteful; as their public buildings, their theatre, and spacious hotels, not forgetting Madam Trollope's bazar, or, as it is commonly called, "Trollope's Folly," as well as its spacious streets, numerous coaches, and other marks of rapid wealth, and growing luxury. As St. Louis has advanced in wealth, magnitude, and importance, it has gradually changed the French language and manners, and assumed the American. It however contains, I am told, many of the old stock that are very respectable for their literary acquirements and polished manners.

We shall avoid, as we have avowed, any thing like censure of Captain Wyeth's scheme during his absence; but when we arrived at St. Louis, we could not but lament his want of information, respecting the best means of obtaining the great objects of our enterprise. Here we were constrained to sell our complicated wagons for less than half what they originally cost. We were convinced that they were not calculated for the rough roads, and rapid streams and eddies of some of the rivers we must necessarily pass. We here thought of the proverb, "that men never do a thing right the first time." Captain Wyeth might have learned at St. Louis, that there were two wealthy gentlemen who resided at or near that place, who had long since established a regular trade with the Indians, Mr. M-, and a young person, Mr. S-, and that a stranger could hardly compete with such established traders. The turbulent tribe, called the Black-foot tribe, had long been supplied with fire arms and ammunition, beads, vermilion and other paints, tobacco and scarlet cloth, from two or three capital traders at, or near, St. Louis, and every article most saleable with the Indians. Both parties knew each other, and had confidence in each other; and having this advantage over our band of adventurers, it does not appear that Mr. Mackenzie, and Mr. Sublet felt any apprehensions or jealousy of the new comers from Boston; but treated them with friendship, and the latter with confidence and cordiality; the former gentleman being, in a manner, retired from business, except through numerous agents. He owns a small steam-boat called the Yellow Stone, the name of one of the branches of the Missouri river. Through such means the Indians are supplied with all they want; and they appeared not to wish to have any thing to do with any one else, especially the adventurous Yankees. These old established traders enjoy a friendly influence, or prudent command,

---

over those savages, that seems to operate to the exclusion of every one else; and this appeared from the manner in which they treated us, which was void of every thing like jealousy, or fear of rivalry. Their policy was to incorporate us with their own troop.

We put our goods, and other baggage on board the steamboat Otter, and proceeded two hundred and sixty miles up the Missouri river, which is as far as the white people have any settlements. We were obliged to proceed very slowly and carefully on account of the numerous snags and sawyers with which this river abounds. They are trees that have been loosened, and washed away from the soft banks of the river. They are detained by sandbanks, or by other trees, that have floated down some time before. Those of them whose sharp branches point opposite the stream are the snags, against which boats are often impelled, as they are not visible above water, and many are sunk by the wounds these make in their bows. The sawyers are also held fast by their roots, while the body of the tree whips up and down, alternately visible and concealed beneath the surface. These are the chief terrors of the Missouri and the Mississippi rivers. As to crocodiles they are little regarded, being more afraid of man than he of them. On account of these snags and sawyers, boatmen avoid passing in the night, and are obliged to keep a sharp look out in the day-time. The sawyers when forced to the bottom or near it by a strong current, or by eddies, rise again with such force that few boats can withstand the shock. The course of the boat was so tediously slow, that many of us concluded to get out and walk on the banks of the river. This, while it gave us agreeable exercise, was of some service in lightening our boat, for with other passengers from St. Louis, we amounted to a considerable crew. The ground was level, and free from under-wood. We passed plenty of deer, wild turkeys, and some other wild fowl unknown to us, and expected to find it so all the way.

We arrived at a town or settlement called Independence. This is the last white settlement on our route to the Oregon, and this circumstance gave a different cast to our peregrination, and operated not a little on our hopes, and our fears, and our imaginations. Some of our company began to ask each other some serious questions; such as, Where are we going? and what are we going for? and sundry other questions, which would have been wiser had we asked them before we left Cambridge, and ruminated well on the answers. But Westward ho! was our watchword, and checked all doubts, and silenced all expressions of fear.

Just before we started from this place, a company of sixty-two in number arrived from St. Louis, under the command of William Sublet, Esq., an experienced Indian trader, bound, like ourselves, to the American Alps, the Rocky Mountains, and we joined company with him, and it was very lucky that we did. Our minds were not entirely easy. We were about to leave our peaceable country-men, from whom we had received many attentions and much kindness, to go into a dark region of savages, of whose customs, manners, and language, we were entirely ignorant, - to go we knew not whither, - to encounter we knew not what. We had already sacrificed our amphibious wagons, the result of so much pains and cost. Here two of our company left us, named Kilham and Weeks. Whether they had any real cause of dissatisfaction with our Captain, or whether they only made that an excuse to quit the expedition and return home early, it is not for me to say. I suspect the abandonment of our travelling vehicles cooled their courage. We rested at Independ-

JOHN B WYETH OREGON

---

dence ten days; and purchased, by Captain Sublet's advice, two yoke of oxen, and fifteen sheep, as we learnt that we ought not to rely entirely upon transient game from our fire-arms for sustenance, especially as we were now going among a savage people who would regard us with suspicion and dread, and treat us accordingly. From this place we travelled about twenty-five miles a day.

Nothing occurred worth recording, till we arrived at the first Indian settlement, which was about seventy miles from Independence. They appeared to us a harmless people, and not averse to our passing through their country. Their persons were rather under size, and their complexion dark. As they lived near the frontier of the whites, they were not unacquainted with their usages and customs. They have cultivated spots or little farms, on which they raise corn and pumpkins. They generally go out once a year to hunt, accompanied by their women; and on killing the Buffalo, or Bison, what they do not use on the spot, they dry to eat through the winter. To prevent a famine, however, it is their custom to keep a large number of dogs; and they eat them as we do mutton and lamb. This tribe have imitated the white people in having fixed and stationary houses. They stick poles in the ground in a circular form, and cover them with buffalo skins, and put earth over the whole, leaving at the top an aperture for the smoke, but small enough to be covered with a buffalo-skin in case of rain or snow.- We found here little game; but honey-bees in abundance.

We travelled on about a hundred miles farther, when we came to a large prairie, which name the French have given to extensive tracts of land, mostly level, destitute of trees, and covered with tall, coarse grass. They are generally dreary plains, void of water, and rendered more and by the Indian custom of setting fire to the high grass once or twice a year to start the game that has taken shelter there, which occasions a hard crust unfavorable to any vegetable more substantial than grass. At this unpromising spot, three more of our company took French leave of us, there being, it seems, dissatisfaction on both sides; for each complained of the other. The names of the seceders were Livermore, Bell, Griswell. In sixteen days more we reached the River La Platte, the water of which is foul and muddy. We were nine days passing this dreary prairie. We were seven and twenty days winding our way along the borders of the La Platte, which river we could not leave on account of the scarcity of water in the dry and comfortless plains. Here we slaughtered the last of our live stock, and at night we came to that region where buffaloes are often to be found; but we suffered some sharp gnawings of hunger before we obtained one, and experienced some foretaste of difficulties to come.

The Missouri Territory is a vast wilderness, consisting of immense plains, destitute of wood and of water, except on the edges of streams that are found near the turbid La Platte. This river owes its source to the Rocky mountains, and runs pretty much through the territory, without enlivening or fructifying this desert. Some opinion may be formed of it by saying that for the space of six hundred miles, we may be said to have been deprived of the benefits of two of the elements, fire and water. Here were, to be sure, buffaloes, but after we had killed them we had no wood or vegetables of any kind wherewith to kindle a fire for cooking. We were absolutely compelled to dry the dung of the buffalo as the best article we could procure for cooking our coarse beef. That grumbling, discontent, and dejection should spring up amongst us, was what no one can be

JOHN B WYETH OREGON

---

surprised at learning. We were at times very miserable, and our commander could be no less so; but we had put our hands to the plough, and most of us were too stuffy to flinch, and sneak off for home without reaching the Rocky Mountains; still hunger is hunger, and the young and the strong feel the greatest call for food. Every one who goes to sea may lay his account for coming to short allowance, from violent storms, head winds, damaged vessel, and the like; but for a band of New-England men to come to short allowance upon land, with guns, powder, and shot, was a new idea to our Oregon adventurers, who had not prepared for it in the article of hard bread, or flour, or potatoes, or that snug and wholesome article, salt fish, so plenty at Marblehead and Cape Ann, and so convenient to carry. When the second company shall march from the seat of science, Cambridge, we would advise them to pack up a few quintals of salt fish, and a few pounds of ground sago, and salep, as a teaspoonful of it mixed with boiling water will make three pints of good gruel, and also a competent supply of portable soup.

Buffaloes were plenty enough. We saw them in frightful droves, as far as the eye could reach, appearing at a distance as if the ground itself was moving like the sea. Such large armies of them have no fear of man. They will travel over him and make nothing of him. Our company after killing ten or twelve of them, never enjoyed the benefit of more than two of them, the rest being carried off by the wolves before morning. Beside the scarcity of meat, we suffered for want of good and wholesome water. The La Platte is warm and muddy; and the use of it occasioned a diarrhoea in several of our company. Dr. Jacob Wyeth, brother of the Captain, suffered not a little from this cause.- Should the reader wonder how we proceeded so rapidly on our way without stopping to inquire, he must bear in mind that we were still under the guidance of Captain Sublet, who knew every step of the way, and had actually resided four years in different green valleys that are here and there in the Rocky Mountains. To me it seems that we must have perished for want of sustenance in the deserts of Missouri, had we been by ourselves. It may have been good policy in Sublet, to attach us to him. He probably saw our rawness in an adventure so ill provided for as ours actually was. But for him we should hardly have provided ourselves with live stock; and but for him we should probably never have reached the American Alps. By this time every man began to think for himself.

We travelled six days on the south branch of the La Platte, and then crossed over to the north branch, and on this branch of it, we travelled eighteen days. But the first three days we could not find sufficient articles of food; and what added to our distress was the sickness of several of our company. We noticed many trails of the savages, but no Indians. The nearer we approached the range of the mountains the thicker were the trees. After travelling twelve days longer we came to the Black Hills. They are so called from their thick growth of cedar. Here is the region of rattle snakes, and the largest and fiercest bears, - a very formidable animal, which it is not prudent for a man to attack alone. I have known some of the best hunters of Sublet's company to fire five and six balls at one before he fell. We were four days in crossing these dismal looking hills. They would be called mountains, were they not in the neighborhood of the Rocky Mountains, whose peaks overtop every thing, and elevate themselves into the region of everlasting frost and snow. Our sick suffered extremely in ascending these hills, some of them slipped off the horses and mules they rode on, from sheer weakness, brought on by the bowel complaint already mentioned; among

these was Dr. Wyeth, our Captain's brother, who never had a constitution fit to encounter such an expedition. And yet we could not leave them under the care of a man, or two or three men, and pass on without them, to follow us, when they were able. It was to me particularly grievous to think that he, who was to take care of the health of the company, was the first who was disabled from helping himself or others, and this one a blood relation. It required a man of a firmer make than Dr. Jacob Wyeth to go through such a mountainous region as the one we were in: a man seldom does a thing right the first time.

From the north branch we crossed over to what was called Sweet-water Creek. This water being cool, clear, and pleasant, proved a good remedy for our sick, as their bowel complaints were brought on and aggravated by the warm, muddy waters of the Missouri territory we had passed through. We came to a huge rock in the shape of a bowl upside down. It bore the name of Independence, from, it is said, being the resting-place of Lewis and Clarke on the 4th of July; but according to the printed journal of those meritorious travellers, they had not reached, or entered, the American Alps on the day of that memorable epoch. Whether we are to consider the rock Independence as fairly in the Rocky Mountains, let others determine. We had now certainly begun our ascent to those lofty regions, previous to which we had to pass the chief branch of the river La Platte; but we had no boat whatever for the purpose; and had we not been in the company of Captain Sublet, it is hard to say what we should have done short of going a great way round. Here I, and others were entirely convinced that we were engaged in an expedition without being provided with the means to accomplish it. Our boats and wagons we had disposed of at St. Louis, and here we were on the banks of a river without even a canoe. Captain Clarke brought his canoes to the foot of the range of mountains and there left them. The reader will understand that not only the Missouri river, but the Yellowstone river, the La Platte, and many other smaller ones commence by small beginnings in the Black Hills, and in the Rocky Mountains, and increase in size and depth as they proceed down to join the Arkansa, or the Canadian river, and finally the Mississippi, and so run into the vast salt ocean. Whether it was Captain Sublet's own invention, or an invention of the Indians, we know not, but the contrivance we used is worth mentioning. They called it a Bull-boat. They first cut a number of willows (which grow every where near the banks of all the rivers we had travelled by from St. Louis), of about an inch and a half diameter at the butt end, and fixed them in the ground at proper distances from each other, and as they approached nearer one end they brought them nearer together, so as to form something like the bow. The ends of the whole were brought and bound firmly together, like the ribs of a great basket; and then they took other twigs of willow and wove them into those stuck in the ground so as to make a sort of firm, huge basket of twelve or fourteen feet long. After this was completed, they sewed together a number of buffalo-skins, and with them covered the whole; and after the different parts had been trimmed off smooth, a slow fire was made under the Bull-boat, taking care to dry the skins moderately; and as they gradually dried, and acquired a due degree of warmth, they rubbed buffalo tallow all over the outside of it, so as to allow it to enter into all the seams of the boat, now no longer a willowbasket. As the melted tallow ran down into every seam, hole, and crevice, it cooled into a firm body capable of resisting the water, and bearing a considerable blow without damaging it. Then the willow-ribbed, buffalo-skin, tallowed vehicle was carefully pulled up from the ground, and behold a boat capable of transporting man, horse, and goods over a

pretty strong current. At the sight of it, we Yankees all burst out into a loud laugh, whether from surprise, or pleasure, or both, I know not. It certainly was not from ridicule; for we all acknowledged the contrivance would have done credit to old New-England.

While Captain Sublet and his company were binding the gunwale of the boat with buffalo-sinews, to give it strength and due hardness, our Captain was by no means idle. He accordingly undertook to make a raft to transport our own goods across the river. Sublet expressed his opinion that it would not answer where the current was strong; but Captain Wyeth is a man not easily to be diverted from any of his notions, or liable to be influenced by the advice of others; so that while Sublet's men were employed on their Bull-boat, Wyeth and a chosen few were making a raft. When finished, we first placed our blacksmith's shop upon it, that is to say, our anvil, and large vice, and other valuable articles belonging to blacksmithery, bar-iron, and steel traps, and alas! a cask of powder, and a number of smaller, but valuable articles. We fixed a rope to our raft, and with some difficulty got the other end of it across the river to the opposite bank by a man swimming with a rope in his mouth, from some distance above the spot he aimed to reach. We took a turn of it round a tree. Captain Sublet gave it as his opinion that the line would not be sufficient to command the raft. But our Leader was confident that it would; but when they had pulled about half way over, the rope broke, and the raft caught under the limbs of a partly submerged tree, and tipped it on one side so that we lost our iron articles, and damaged our goods and a number of percussion caps. This was a very serious calamity and absolutely irreparable. Almost every disaster has some benefit growing out of it. It was even so here. Two thirds of our company were sick, and that without any particular disorder that we can name, but from fatigue, bad water, scanty food, and eating flesh half raw. Add to this, worry of mind, and serious apprehensions of our fate when the worthy Captain Sublet should leave us; for he was, under Providence, the instrument of our preservation. Our own individual sufferings were enough for us to bear; but Captain Wyeth had to bear the like, and more beside, as the responsibility lay heavy upon him. Most men would have sunk under it. At this point of our journey we were sadly tormented by musquitoes, that prevented our sleep after the fatigues of the day. This little contemptible insect, which they call here a gnat, disturbed us more than bears, or wolves, or snakes.

The next day after we started from this unlucky place, we descried a number of men on horseback, approaching us at full speed. Various were our conjectures. Captain Sublet had an apprehension that they might be hostile Indians who fight on horseback; he therefore ordered every man to make fast his horse as quick as possible, and prepare for battle on foot. But on their near approach, we found them a body of white men called trappers, whose occupation is to entrap the beaver and other animals that have valuable furs. Captain Sublet has, for several years, had about two hundred of these trappers in his pay, in and around the Rocky Mountains, and this troop was a party of them. His place of rendezvous for them is at Pierre's Hole, by which name they call one of those deep and verdant valleys which are to be found in the Rocky Mountains from the eastern boundary of them to their extreme edge in the west, where the Oregon or Columbia river commences under the name of Clark's river, some branches of which inosculate with the mighty Missouri on the east. It is to Pierre's valley or Hole, that his trappers resort to meet their employer every summer. It is here they bring their peltry and receive their pay; and this traffic

JOHN B WYETH OREGON

---

has been kept up between them a number of years with good faith on both sides, and to mutual satisfaction and encouragement. When Sublet leaves St. Louis, he brings up tobacco, coffee, rice, powder, shot, paint, beads, handkerchiefs and all those articles of finery that please both Indian women and men; and having established that sort of traffic with his friends, the Indians on and in the vicinity of the Rocky Mountains, what chance was there that any small band from Boston, or even Cambridge, could supplant him in the friendship and confidence of his old acquaintance, the Shoshonees, the Black-feet, or any other tribe? He must have seen this at once, and been convinced that nothing like rivalry could rise up between him and the New-England adventurers. He therefore caressed them, and, in a manner, incorporated them with his troop. This gentleman was born in America of French parents, and partakes largely of those good-humored, polite, and accommodating manners which distinguish the nation he sprang from. The old French war, and wars on this continent since then, amply prove how much better Frenchmen conciliate the natives than the English. The English and the Americans, when they come in contact with the untutored savage, most commonly fight. But not so the French. They please and flatter the Indian, give him powder, and balls, and flints, and guns, and make a Catholic of him, and make out to live in friendship with the red man and woman of the wilderness. It is strange that such extremes of character should meet. Some have said that they are not so very far distant as others have imagined, - that the refined French people love war and the women paint their faces, grease their hair, and wear East India blankets, called shawls.- Captain Sublet possesses, doubtless, that conciliating disposition so characteristic of the French, and not so frequently found among the English or Americans; for the descendants of both nations bear strong marks of the stock they came from. The French have always had a stronger hold of the affections of the Indians than any other people.

The trappers kept company with us till we came to Pierre's Hole, or valley, which is twelve miles from the spot where we first met them. Three or four days after, we were fired on by the Indians about ten o'clock at night. They had assembled to about the number of three hundred. They stole five horses from us, and three from Sublet's company. About the first of July we crossed the highest part or ridge of the mountains. In addition to the mountain composed of earth, sand, and stone, including common rocks, there were certain peaks resembling a loaf of sugar, from a hundred to two hundred feet high; and some appeared much higher; I cannot guess their height. They were to us surprising. Their sides deviated but little from perpendicular. They looked at a distance like some light-houses of a conical form, or like our Cambridge glass manufactories; but how they acquired that form is wonderful. Subsiding waters may have left them so, after washing away sandy materials. But nature is altogether wonderful, in her large works as well as small. How little do we know of the first cause of any thing! We had to creep round the base of these steep edifices of nature. We now more clearly understand and relish the question of one of our Indians who was carried to England as a show, who, on being shown that elegant pile of stone, the cathedral of St. Paul, after viewing it in silent admiration, asked his interpreter whether it was by men's hands, or whether it grew there. We might ask the same question respecting these conical mountains. Had the scaffolding of St. Paul's remained, the surprise and wonder of the sensible savage had been less.

It was difficult to keep our feet on these highest parts of the mountains; some of the pack-horses

---

slipped and rolled over and over, and yet were taken up alive. Those that did not fall were sadly bruised and lamed in their feet and joints. Mules are best calculated, as we experienced, for such difficult travelling. They seem to think, and to judge of the path before them, and will sometimes put their fore feet together and slip down without stepping. They are as sagacious in crossing a river, where there is a current. They will not attempt to go straight over, but will breast the tide by passing obliquely upwards. One of our horses was killed by a fall down one of these precipices, and it was surprising that more of them did not share the like fate. Buffaloes were so scarce here, that we were obliged to feed on our dried meat, and this scarcity continued till after we had gained the head sources of the Columbia river. For the last five days we have had to travel on the Colorado of the West, which is a very long river, and empties into the gulph of California.

On the 4th of July, 1832, we arrived at Lewis's fork, one of the largest rivers in these rocky mountains. It took us all day to cross it. It is half a mile wide, deep, and rapid. The way we managed was this: one man unloaded his horse, and swam across with him, leading two loaded ones, and unloading the two, brought them back, for two more, and as Sublet's company and our own made over a hundred and fifty, we were all day in passing the river. In returning, my mule, by treading on a round stone, stumbled and threw me off, and the current was so strong, that a bush which I caught hold of only saved me from drowning. This being Independence-Day, we drank the health of our friends in Massachusetts, in good clear water, as that was the only liquor we had to drink in remembrance of our homes and dear connexions. If I may judge by my own feelings and by the looks of my companions, there was more of melancholy than joy amongst us. We were almost four thousand miles from Boston, and in saying Boston we mean at the same time our native spot Cambridge, as they are separated by a wooden bridge only. From the north fork of Lewis's river we passed on to an eminence called Teton mountain, where we spent the night. The next day was pleasant, and serene. Captain Sublet came in the evening to inquire how many of our company were sick, as they must ride, it being impossible for them to go on foot any farther. His kindness and attention I never can forget. Dr. Jacob Wyeth, the Captain's brother, George More, and Stephen Burdit, were too weak to walk. To accommodate them with horses, Captain Wyeth was obliged to dig a hole in the earth, and therein bury the goods which had been hitherto carried on horseback. In the language of the Trappers this hiding of goods was called *catcher* or hidden treasure, being the French term for 'to hide.' When they dig these hiding-holes they carefully carry the earth on a buffalo-skin to a distance, so as to leave no marks or traces of the ground being dug up or disturbed: and this was done to secure the cache from being stolen by the Indians or the white men. The goods so hidden are wrapt up in buffalo-skins to keep them dry, before the earth is put over them. Nor is this all; they make a fire over the spot, and all this to prevent the Indians from suspecting that treasure is cache, or hidden there, while the owner of it takes care to mark the bearing of the spot on some tree, or rock, or some other object that may lead him to recognise the place again. But I have my doubts whether they who hid the goods will ever return that way to dig up their hidden treasure. We did not meddle with it on our return with Captain Sublet.

On the 5th of July we started afresh rather low spirited. We looked with sadness on the way before us. The mountain was here pretty thickly timbered down its slopes, and wherever the ground is level. The pines and hemlock trees were generally about eighteen inches through. It had snowed,

and we were now at a height where the snow commonly lies all the year round. Which ever way we looked, the region presented a dreary aspect. No one could wonder that even some of us who were in health, were, at times, somewhat homesick. If this was the case with us, what must have been the feelings of our three sick fellow travellers. We passed through a snow bank three feet deep. We well ones passed on with Captain Sublet to the top of the mountain, and there waited until our sick men came up with us. George More fell from his horse through weakness. He might have maintained his seat on level ground, but ascending and descending required more exertion than he could call forth; and this was the case also with Dr. Wyeth. Burdit made out a little better. When we encamped at night, we endured a snow storm. Sublet's company encamped about two miles from us; for at best we could hardly keep up with his veteran company. They were old and experienced trappers, and we, compared with them, young and inexperienced soldiers, little imagining that we should ever have to encounter such hardships, in realizing our dreams of making a fortune. Ignorance of the future is not always to be considered among the calamities of man.

Captain Sublet's grand rendezvous, or Head Quarters, was about twelve miles from our encampment. He had there about two hundred trappers, or beaver-hunters; or more properly speaking, skimmers of entrapped animals; or peltry-hunters, for they chased but few of the captured beasts. To these were added about five hundred Indians, of the rank of warriors, all engaged in the same pursuit and traffic of the fur-trade. They were principally the Flat-heads, so called from their flattening the heads of their young children, by forcing them to wear a piece of wood, like a bit of board, so as to cause the skull to grow flat, which they consider a mark of beauty even among the females. They are otherwise dandies and belles in their dress and ornaments. This large body of horse made a fine appearance, especially their long hair; for, as there was a pleasant breeze of wind, their hair blew out straight all in one direction, which had the appearance of so many black streamers. When we met they halted and fired three rounds by way of salute, which we returned; and then followed such friendly greetings as were natural and proper between such high contracting powers and great and good allies. This parade was doubtless made by Sublet for the sake of effect. It was showing us, Yankee barbarians, their Elephants; - like General and Lord Howe's military display to our commissioners of Congress on Staten Island, when the British Brothers proposed that celebrated interview; and when Dr. Franklin, Mr. Adams, and some others of the deputation, whose names I do not now recollect, assumed all that careless indifference, very common with the Indians on meeting a white embassy; for the express purpose of conveying an idea, that we, though the weakest in discipline and numbers, are not awe-struck by your fine dress, glittering arms, and fullfed persons.

It was now the 6th of July, 1832, being sixty-four days since we left the settlements of the white people. Captain Sublet encamped his forces; and then pointed out to Captain Wyeth the ground which he thought would be most proper for us; and altogether we looked like a little army. Not but what we felt small compared with our great and powerful allies.

We were overjoyed to think that we had got to a resting place, where we could repose our weary limbs, and recruit the lost strength of our sick. While Sublet was finishing his business with his Indian trappers, they delivering their peltry, and he remunerating them in his way with cloth,

powder, ball, beads, knives, handkerchiefs, and all that gawdy trumpery which Indians admire, together with coffee, rice, and corn, also leather, and other articles, - we, being idle, had time to think, to reflect, and to be uneasy. We had been dissatisfied for some time, but we had not leisure to communicate it and systematize our grievances. I, with others, had spoken with Captain Sublet, and him we found conversable and communicative. Myself and some others requested Captain Wyeth to call a meeting of his followers, to ask information, and to know what we were now to expect, seeing we had passed over as we supposed the greatest difficulties, and were now nearly four thousand miles from the Atlantic, and within four hundred miles of the Pacific Ocean, the end and aim of our laborious expedition, the field where we expected to reap our promised harvest. We wished to have what we had been used to at home,- a town meeting,- or a parish meeting, where every freeman has an equal right to speak his sentiments, and to vote thereon. But Captain Wyeth was by no means inclined to this democratical procedure. The most he seemed inclined to, was a caucus with a select few; of whom neither his own brother, though older than himself, nor myself, was to be of the number. After considerable altercation, he concluded to call a meeting of the whole, on business interesting and applicable to all. We accordingly met, Captain Wyeth in the chair, or on the stump, I forget which. Instead of every man speaking his own mind, or asking such questions as related to matters that lay heaviest on his mind, the Captain commenced the business by ordering the roll to be called; and as the names were called, the clerk asked the person if he would go on. The first name was Nathaniel J. Wyeth, whom we had dubbed Captain, who answered - "I shall go on." - The next was William Nud, who, before he answered, wished to know what the Captain's plan and intentions were, whether to try to commence a small colony, or to trap and trade for beaver? To which Captain Wyeth replied, that that was none of our business. Then Mr. Nud said, "I shall not go on;" and as the names of the rest were called, there appeared seven persons out of the twenty one, who were determined to return home. Of the number so determined was, besides myself, Dr. Jacob Wyeth, the Captain's brother, whose strength had never been equal to such a journey. His constitution forbade it. He was brought up at College. Here were discontents on both sides; criminations and recriminations. A commander of a band of associated adventurers has a very hard task. The commanded, whether in a school, or in a regiment, or company, naturally combine in feeling against their leader; and this is so natural that armies are obliged to make very strict rules, and to pursue rigid discipline. It is so also on ship-board. Our merchant ships cannot sail in safety without exacting prompt obedience; and disobedience in the common seamen is mutiny, and mutiny is a high crime, and approximates to piracy. It is pretty much so in these long and distant exploring expeditions. The Captain cannot always with safety satisfy all the questions put to him by those under his command; and it would lead to great inconvenience to entrust any, even a brother, with any information concealed from the rest. There must be secrecy, and there must be confidence. We had travelled through a dreary wilderness, an infinitely worse country than Palestine; yet Moses himself could not have kept together the Israelites without the aid of miracles; and the history we have given of our boat-like arks, and the wreck of our raft, and the loss of our heaviest articles may lead most readers to suspect that our Leader to his Land of Promise was not an inspired man. In saying this, we censure no one, we only lament our common frailty. Reflect a moment, considerate reader! on our humble means, for an expedition of FOUR THOUSAND miles, compared with the ample means, rich and complete out-fit, letters of credit, and every thing deemed needful, given to Captains Lewis and Clarke,

JOHN B WYETH OREGON

---

under the orders of the government of the United States; and yet they several times came very near starving for the want of food and of fuel, even in the Oregon territory! In all books of voyages and travels, who ever heard of the utmost distress for want of wood, leaves, roots, coal, or turf to cook with? Yet all through the dreary wilderness of Missouri, we were obliged to use the dung of buffaloes, or eat raw flesh. The reader will scarcely believe that this was the case even at mouth of the Oregon river. Clarke and Lewis had to buy wood of the Indians, who had hardly enough for themselves. To be deprived of solid food soon ends in death; but we were often deprived of the two elements out of four, fire and water, and when on the Rocky mountains, of a third, I mean earth; for everything beneath our feet and around us was stone. We had, be sure, air enough, and too much too, sometimes enough almost to blow our hair off.

But to return to our dismal list of grievances. Almost everyone of the company wished to go no farther; but they found themselves too feeble and exhausted to think of encountering the risk of a march on foot of three thousand five hundred miles through such a country as we came. We asked Captain Wyeth to let us have our muskets and a sufficiency of ammunition, which request he refused. Afterwards, he collected all the guns, and after selecting such as he and his companions preferred, he gave us the refuse; many of which were unfit for use. There were two tents belonging to the company, of which he gave us one; which we pitched about a quarter of a mile from his. George More expressed his determination of returning home, and asked for a horse, which after considerable difficulty he obtained. This was July 10th. The Captain likewise supplied his brother with a horse and a hundred dollars.

On the 12th of July, Captain Wyeth, after moving his tent half a mile farther from ours, put himself under the command of Mr. Milton Sublet, brother of Captain William Sublet so often mentioned. This Captain Milton Sublet had about twenty men under his command, all trappers; so that hereafter as far as I know, it was Wyeth, Sublet and Co.; so that the reader will understand, that Dr. Jacob Wyeth, Palmer, Law, Batch, and myself concluded to retrace our steps to St. Louis in company with Captain William Sublet, while Captain Nathaniel J. Wyeth remained with Milton Sublet, and his twenty men. I have been unreasonably blamed for leaving my kinsman beyond the Rocky Mountains with only eleven of his company, and that too when we were within about four hundred miles of the mouth of the Columbia, alias Oregon river, where it pours into the boisterous Pacific Ocean, for such Lewis and Clarke found it to their cost.

The spot where we now were, is a valley, between two mountains, about ten miles wide, so lofty that their tops are covered with snow, while it was warm and pleasant where we pitched our tent. This agreeable valley is called by the trappers Pierre's-Hole, as if it were a dismal residence; and was the most western point that I visited, being about, we conjectured, four hundred miles short of the mouth of the Oregon river, whence the territory derives its name, which Mr. Hall J. Kelly has described as another paradise! O! the magic of sounds and inflated words! Whether Captain Wyeth's expedition was wise or imprudent we are not prepared to say; but under existing circumstances, half of his company having left him, and among them his own brother, the surgeon of the expedition, we cannot see what better he could have done than to ally himself to an experienced band of hunters, as a step necessary to his own preservation. He was three thousand and five

JOHN B WYETH OREGON

---

hundred miles from the Atlantic Ocean, with only eleven men, and half his goods lost or expended, and no resource of supply short of St. Louis, nineteen hundred miles from them. Had not the Sublets been with them from that place through the wilderness of Missouri and La Platte, it is hardly probable they would have ever reached the west side of the Rocky Mountains. In passing judgment on this strange expedition, we must take in, beside facts, probabilities and casualties.

On the 17th of July, Captain Wyeth and Captain Milton Sublet set out westward with their respective men to go to Salmon river to winter. The former had eleven beside himself: that river they computed at two hundred miles distance. Wyeth accordingly purchased twenty-five horses from the Indians, who had a great number, and those very fine, and high-spirited. Indeed the Western region seems the native and congenial country for horses. They were, however, delayed till the next day. But when they were about moving, they perceived a drove of something, whether buffaloes or men they could not determine with the naked eye; but when aided by the glass, they recognized them for a body of the Black-foot tribe of Indians, a powerful and warlike nation. As this movement was evidently hostile, Captain Milton Sublet dispatched two men to call on his brother, who was about eight miles off, for assistance; when Captain William Sublet ordered every man to get ready immediately. We had about five hundred friendly Indian warriors with us, who expressed their willingness to join in our defence.

As soon as we left Captain Wyeth we joined Captain Sublet, as he said that no white man should be there unless he was to be under his command; and his reason for it was that in case they had to fight the Indians, no one should flinch or sneak out of the battle. It seems that when the Black-foot Indians saw us moving in battle array, they appeared to hesitate; and at length they displayed a white flag as an ensign of peace; but Sublet knew their treacherous character. The chief of the friendly Flat-heads and Antoine rode together, and concerted this savage arrangement; to ride up and accost them in a friendly manner; and when the Black-foot chief should take hold of the Flat-head chief's hand in token of friendship, then the other was to shoot him, which was instantly done! and at that moment the Flat-head chief pulled off the Blackfoot's scarlet robe, and returned with the Captain to our party unhurt. As soon as the Black-foot Indians recovered from their surprise, they displayed a red flag, and the battle began. This was Joab with a vengeance,- Art thou in health, my brother?

The Black-foot chief was a man of consequence in his nation. He not only wore on this occasion a robe of scarlet cloth, probably obtained from a Christian source, but was decorated with beads valued there at sixty dollars. The battle commenced on the Prairie. As soon as the firing began on both sides, the squaws belonging to the Black-foot forces, retreated about fifty yards into a small thicket of wood, and there threw up a ridge of earth by way of entrenchment, having first piled up a number of logs cob-fashion, to which the men at length fell back, and from which they fired upon us, while some of their party with the women were occupied in deepening the trench. Shallow as it was, it afforded a considerable security to an Indian, who will often shoot a man from behind a tree near to its root, while the white man is looking to see his head pop out at man's height. This has taught the United States troops, to load their muskets while lying on their backs, and firing in an almost supine posture. When the Duke of Saxe-Weimer was in Cambridge, he noticed

---

JOHN B WYETH OREGON

---

this, to him, novel mode of firing, which he had never before seen, and this was in a volunteer company of militia.- I do not mean to say that the Indians fired only in a supine posture; when they had loaded they most commonly rose up and fired, and then down on the ground again to re-load. In this action with the formidable Black-foot tribe, Captain Nathaniel J. Wyeth's party had no concern. He himself was in it a very short time, but retired from the contest doubtless for good reasons. After contesting the matter with the warlike tribe for about six hours, Captain Sublet found it of little avail to fight them in this way. He therefore determined to charge them at once, which was accordingly done. He led, and ordered his men to follow him, and this proved effectual. Six beside himself first met the savages hand to hand; of these seven, four were wounded, and one killed. The Captain was wounded in his arm and shoulder blade. The Indians did not, however, retreat entirely, so that we kept up a random fire until dark; the ball and the arrows were striking the trees after we could see the effects of one and of the other. There was something terrific to our men in their arrows. The idea of a barbed arrow sticking in a man's body, as we had observed it in the deer and other animals, was appalling to us all, and it is no wonder that some of our men recoiled at it. They regarded a leaden bullet much less. We may judge from this the terror of the savages on being met the first time by fire arms,- a sort of thunder and lightning followed by death without seeing the fatal shot.

In this battle with the Indians, not one of those who had belonged to Captain Wyeth's company received any injury. There were, however, seven white men of Sublet's company killed, and thirteen wounded. Twenty-five of our Indians were killed and thirty-five wounded. The next morning a number of us went back to the Indian fort, so called, where we found one dead man and two women, and also twenty-five dead horses, a proof that the Black-foot were brave men. The number of them was uncertain. We calculated that they amounted to about three hundred. We guessed that the reason the three dead bodies were left at the entrenchment was, that they had not enough left to carry off their dead and wounded. This affair delayed Captain Wyeth three days, and Captain Sublet ten days. The names of those who left Captain Wyeth to return home, were Dr. Jacob Wyeth, John B. Wyeth, his cousin, William Nud, Theophilus Beach, R. L. Wakefield, Hamilton Law, George More, -Lane, and Walter Palmer. The names of those who remained attached to Captain Wyeth, and who went on with him to Salmon river, are J. Woodman, Smith, G. Argent, - Abbot, W. Breck, S. Burditt, - Ball, St. Clair, C. Tibbits, G. Trumbull, and - Whittier.

When they had gone three days journey from us, as they were riding securely in the middle of the afternoon, about thirty of the Black-foot Indians, who lay in ambush about twenty yards from them, suddenly sprang up and fired. The surprise occasioned the horses to wheel about, which threw off George More, and mortally wounded one of the men, Alfred K. Stevens. As the Indians knew that More could not get away from them, they passed him, and about twenty Indians were coming up the hill where they were. Eight or ten Indians followed up while only five trappers had gained the hill. They were considering how to save George More, when one of them shot him through the head, which was a better fate than if they had taken him alive, as they would have tortured him to death.

We have said that Captain Wyeth and the few who had concluded to go on with him, were ready

---

JOHN B WYETH OREGON

---

to begin their march for Salmon river. On this occasion Captain Milton Sublet escorted them about one hundred miles, so as to protect them from the enraged Black-feet, and then left them to take care of themselves for the winter; and this is the last tidings we have had of Captain Nathaniel J. Wyeth, and his reduced band of adventurers. If we have been rightly informed, their chief hope was residing on a pleasant river where there was plenty of salmon, and probably elk and deer, and water-fowl; and we hope fuel, for to our surprise, we learnt that wood for firing was among their great wants. I have since been well-informed that in the valley of Oregon, so much extolled for its fertility and pleasantness, wood to cook with is one among their scarcest and very dear articles of necessity. From all accounts, except those given to the public by Mr. Kelly, there is not a district at the mouth of any large river more unproductive than that of the Columbia, and it seems that this is pretty much the case from the tide water of that river to where it empties into the ocean.

The Flat-head Indians are a brave and we had reason to believe a sincere people. We had many instances of their honesty and humanity. They do not lie, steal, nor rob any one, unless when driven too near to starvation; and then any man black, white, or red will seize any thing to save himself from an agonizing death. The Flat-heads were well dressed. They wore buck-skin frocks and pantaloons, and moccasins, with seldom any thing on their heads. They draw a piece of fresh buffalo hide on their feet, and at night sleep with their feet not far from the fire, and in the morning find their shoes sitting as snug to their feet as if they had been measured by the first shoe-maker in Boston. It is probable that no people have so little shoepinching as these savages. I never heard any one complain of corns, or kibed-heels, severe as the weather is in winter. The women wear moccasins also, but whether made in the same extempore method as those of the men, I know not. I suspect they must experience some shoepinching. They wear a petticoat, and a frock of some of leather, according to fancy, but all decent and comfortable. In rainy weather, or when very cold, they throw a buffalo-skin over their shoulders, with the fur inside. They have no stationary wigwams; but have a sort of tent, which they fix down or remove with facility. In Major Long's book may be seen an engraved representation of them. Their mode of cooking is by roasting and boiling. They will pick a goose, or a brant, and run a stick through its body and so roast it, without taking out its entrails. They are, according to our notions, very nasty cooks.

I know not what to say of their religion. I saw nothing like images, or any objects of worship whatever, and yet they appeared to keep a sabbath; for there is a day on which they do not hunt nor gamble, but sit moping all day and look like fools. There certainly appeared among them an honor, or conscience, and sense of justice. They would do what they promised, and return our strayed horses, and lost articles. Now and then, but rarely, we found a pilferer, but not oftener than among the frontier white people. The Indians of all tribes are disposed to give you something to eat. It is a fact that we never found an Indian of any tribe disposed to treat us with that degree of inhospitality that we experienced in crossing the Alleghany Mountains, in the State of Pennsylvania.

The Black-foot tribe are the tallest and stoutest men of any we have seen, nearly or quite six feet in stature, and of a lighter complexion than the rest.

---

The Indian warriors carry muskets, bows, and arrows, the last in a quiver. The bows are made of walnut, about three feet long, and the string of the sinews of the buffalo, all calculated for great elasticity, and will reach an object at a surprising distance. It was to us a much more terrific weapon of war than a musket. We had one man wounded in the thigh by an arrow; he was obliged to ford a river in his hasty retreat, and probably took a chill, which occasioned a mortification, of which he died. The arrows are headed with flint as sharp as broken glass; the other end of the arrow is furnished with an eagle's feather to steady its flight. Some of these aboriginals, as we learn from Lewis, Clarke, and Major Long, especially the last, have shields or targets; some so long as to reach from the head to the ankle. Now the question is how came our North American Indians with bows and arrows? It is not likely that they invented them, seeing they so exactly resemble the bows and arrows of the old world, the Greeks and Romans. They are the same weapon to a feather. This is a fresh proof that our savage tribes of this continent emigrated from the old one; and I have learned from friend to whom I am indebted for several ideas, which no one could suppose to have originated with myself, that the Indian's bow goes a great way to settle a disputed point respecting what part of the old world the ancestors of our Indians came from, - whether Asia or Europe. Now the Asiatic bow and our Indian bow are of a different form. The first has a straight piece in the middle, like the crossbow, being such an one as is commonly depicted in the hands of Cupid; whereas our Indian bow is a section of a circle, while the Persian or Asiatic bow has two wings extending from a straight piece in the middle. Hence we have reason to conclude that the first comers from the old world to the new, came not from those regions renowned for their cultivation of the arts and sciences. The idea that our North American Indians came over from Scythia, that is, the northern part, so called, of Europe and Asia, whether it is correct to call them Scythians, Tartars, or Russians, I leave others to determine. We have many evidences that our Northern Indians have a striking resemblance in countenance, color, and person to the most northern tribes of Tartars, who inhabit Siberia, or Asiatic Russia. The Black-foot Indians who inhabit small rivers that empty into the Missouri, resemble in mode of living, manners, and character, the Calmuc Tartars. Both fight on horseback, both are very brave, and both inured to what we should consider a very hard life as it regards food. Both avoid as much as they can stationary dwellings, and use tents made with skins.

On this subject we ought not to omit mentioning that the Indians on all sides of the Rocky mountains have several customs both among men and the women, which might lead some to conclude that our Northern and Western Indians descended from the Israelites; and this similarity is certainly very remarkable; yet there is one very strong fact against that hypothesis, namely, there is not the least trace amongst our Indians of the eight-day rite of the Jewish males, which sore, and, to us, strange ceremony would hardly have been forgotten, had it been practiced by our Indians. If our idea be well-founded on this subject, the custom could have originated only in warm and redundant climates, so that had Moses marched first from the shores of the Baltic, as did the Goths, instead of the shores of the Red sea, the Jews never would have been subjected to the operation of circumcision.

After all, it is very likely that the Persians came from a different stock from that which peopled

---

JOHN B WYETH OREGON

---

the Western and Northern parts of America,- I mean from the warmer regions of Asia. They seem possessed of more delicate marks of person, and of mind than the fighting savages of the North. There appears to be a strong line of separation between them, as far as our information goes.

To return to our own story. After the battle at Pierre's Valley, I had an opportunity of seeing a specimen of Indian surgery in treating a wound. An Indian squaw first sucked the wound perfectly dry, so that it appeared white as chalk; and then she bound it up with a piece of dry buck-skin as soft as woollen cloth, and by this treatment the wound began to heal, and soon closed up, and the part became sound again. The sucking of it so effectually may have been from an apprehension of a poisoned arrow. But who taught the savage Indian that a person may take poison into his mouth without any risk, as the poison of a rattlesnake without harm, provided there be no scratch or wound in the mouth, so as to admit it into the blood?

Three of the men that left Captain Wyeth when I did, enlisted with Captain Sublet to follow the trapping business for the period of one year, namely, Wakefield, Nud, and Lane, leaving Dr. Jacob Wyeth, H. Law, T. Beach, W. Palmer, and myself. We accordingly set out on the twenty-eighth day of July, 1832 with Captain William Sublet, for home; and thus ended all my fine prospects and flattering expectations of acquiring fortune, independence, and ease, and all my hopes that the time had now come in the order of Providence, when that uncultivated tract, denominated the Oregon Territory, was to be changed into a fruitful field, and the haunt of savages and wild beasts made the happy abode of refined and dignified man. Mr. Hall J. Kelly published about two years since a most inflated and extravagant account of that western tract which extends from the Rocky Mountains to the shore of the Pacific Ocean. He says of it that no portion of the globe presents a more fruitful soil, or a milder climate, or equal facilities for carrying into effect the great purpose of a free and enlightened nation; - that a country so full of those natural means which best contribute to the comfort and conveniences of life, is worthy the occupancy of a people disposed to support a free representative government, and to establish civil, scientific, and religious institutions, and all this and much more to the same effect after Lewis and Clarke's history of their expedition had been published, and very generally read; yet this extravagant and fallacious account of the Oregon was read and believed by some people not destitute of a general information of things, nor unused to reading; but there were circles of people, chiefly among young farmers and journeymen mechanics, who were so thoroughly imbued with these extravagant notions of making a fortune by only going over land to the other side of the globe, to the Pacific Ocean, that a person who expressed a doubt of it was in danger of being either affronted, or, at least, accused of being moved by envious feelings. After a score of people had been enlisted in this Oregon expedition, they met together to feed and to magnify each other's hopes and visionary notions, which were wrought up to a high degree of extravagance, so that it was hardly safe to advise or give an opinion adverse to the scheme. When young people are so affected, it is in vain to reason with them; and when such sanguine persons are determined to fight, or to marry, it is dangerous to attempt to part them; and when they have their own way and get their belly full of fight, and of matrimony, there comes a time of cool reflection. The first stage of our reflection began at St. Louis, when we parted with our amphibious wagons, in which we all more or less took a pride. Every one there praised the ingenuity of the contrivance and construction of them for roads and rivers

---

JOHN B WYETH OREGON

---

such as at Cambridge, and other places near to Boston; but we were assured at St. Louis, that they were by no means calculated for our far distant journey. We were reminded that Lewis and Clarke carried canoes almost to the foot of the Rocky Mountains, by the route of Missouri river, but were obliged to leave them there, and ascend mountains so very steep, that sometimes their loaded horses slipped and rolled over and over, down into lower ground sixty or seventy feet. This may serve to show, among other things, how ill-informed Captain Wyeth and his company were of the true condition of the country through which they had to pass. We expected to support ourselves with game by our firearms, and therefore powder and shot were the articles we took the most care to be provided with. Nor were we followers undeceived before we were informed at St. Louis, that it would be necessary to take oxen and sheep to be slaughtered on the route for our support. We also found it advisable to sell at that place the large number of axes, great and small, with which we had encumbered our wagons. All these occurrences, following close after one another, operated to damp our ardor; and it was this probably that operated so powerfully on W. Bell, Livermore, and Griswold, that they cut and ran away before we entered upon the difficulties and hardships of our expedition.

Nothing of importance occurred for the first ten days after we left Pierre's Valley. Our huntsmen were abroad in pursuit of buffaloes, when they were alarmed at the sight of a large body of the Black-foot tribe who had been watching our movements. Captain Sublet was not a little alarmed, for he had with him his whole stock of furs, very large in quantity and valuable in quality, which we were told would be worth eighty thousand dollars in St. Louis. But all the world exaggerates; nor even were we of the Oregon expedition entirely free of it, although not to be compared with Hall Jackson Kelly, who never stops short of superlatives, if we may judge by his publications. But he says, by way of apology, that it is needful that the friends of the contemplated Oregon colony should possess a little of the active and vital principle of enthusiasm, that shields against disappointments, and against the presumptions opinions and insults of others. Now the fact is, the sanguine and enthusiastic Mr. Kelly was never in that country, nor nearer to it than Boston; and his zeal in the colonization of that dreary territory led him to believe what he wished, and to disbelieve every thing adverse to his favorite enterprise. He had a right to enjoy his opinion; but when he took unwearied pains to make ignorant people believe as he did, he was the remote cause of much misery and lasting regret in more than half the adventurers from Cambridge. If the blind lead the blind, we know what will be the consequence. But our business is not to censure from a disposition to find fault, but to warn others from falling into the errors and difficulties which attended me and my companions, and chiefly through the misinformation of persons who never saw the country.

Each man, when he left St. Louis, was allowed to carry but ten pounds' weight of his own private baggage, and not every one to encumber his march with whatever he chose; and we adhered to that order on our return. We were ten days in passing over the Rocky Mountains in going, and nine in returning; and I repeat it as my fixed opinion, that we never should have reached the western foot of the mountains had we not been under the guard and guidance of Captain Sublet, and his experienced company. He was acquainted with the best way, and the best mode of travelling. He knew the Indian chiefs and they knew him, and each confided in the other. An anecdote

will illustrate this. There was a hunters' fort or temporary place of defence occupied by about a dozen white beaver-trappers from St. Louis, where were deposited furs, and goods belonging to the troop of trappers, and that to a considerable amount. One day this small garrison was alarmed at the sight of about six hundred warriors approaching on horseback. Upon this they barred their gate, and closed every door and window against the Indians, but with faint hopes of repelling such a powerful host of well-armed savages; for they had no other idea but that they had come for their destruction. But when the Indians saw them shutting themselves up, they displayed the white flag, and made signs to the white men to open their fort, for they came to trade and not to fight. And the little garrison thought it better to trust to Indian honor than risk savage slaughter or captivity; and accordingly they unbarred their doors and let the chiefs in with every expression of cordiality and confidence. After remaining nine days, they departed in peace. And what ought to be recorded to their honor, the white people did not miss a single article, although axes, and utensils, and many other things were lying about, desirable to Indians. The savages did not consider, as white men too often do, - that "might is right." When I expressed my surprise at it, one of the white trappers replied, "Why, the word of these trading Indians is as good as the Bible."

We were surprised to find the Indians in the vicinity of the mountains, and all round Pierre's Valley, and the Black-foot tribe, and the Shoshonees, or Snake-tribe, so well provided with muskets, powder and ball, woollen cloth, and many other articles, until we were informed that Mr. Mackenzie, an established and wealthy Indian trader, had long supplied them with every article they desired. Had the Captain of our band been acquainted with this fact, and also been informed of the trading connexion between the Indians and the two brothers, William and Milton Sublet, before he started from home, we should have avoided a great deal of trouble, and he escaped a great deal of expense, and for aught I know, suffering; for the last we heard of him, he was to pass the winter at the Salmon river.

From all I could learn, St. Louis was the depot, or headquarters of the commerce with the Indians. Mackenzie, I was informed has a steam-boat called the Yellow-stone, by which he keeps up a trade with the natives inhabiting the region watered by the river of that name. The Yellow-stone is a noble river, being eight hundred and thirty seven miles from the point where Captain Clarke reached it to the Missouri, and is so far navigable for batteaux; and eight hundred and fifty feet wide at its confluence with the river just named. By all accounts, the superiority of the Yellow-stone river over the Columbia, or Oregon, for a settlement of New-England adventurers in point of fertility, climate, and pleasantness, is such as to impress one with regret that ever we extended our views beyond it; for the lamentable fact is, that the trade with the Indians all round the Rocky Mountains, and beyond it to the Oregon territory and Columbia river, is actually forestalled, or pre-occupied by wealthy, established, and experienced traders residing at, or near St. Louis, while we are more than twelve hundred miles in their rear, and very far behind them in time. Besides all these considerations, we may add another of great importance; I mean the fact, that Mackenzie's and Sublet's white trappers, or hunters, are a sort of half Indians in their manners and habits, and could assimilate with them, while we are strangers to the savages, and they to us, with all the dislikes natural to both sides. Captain Sublet, who appears to be a worthy character, and of sound judgment, perceived this, and must have seen, at once, that he had nothing to fear

JOHN B WYETH OREGON

---

from us, and therefore he paid us great attention, conciliated and made use of us, and while he aided us, he benefited his own concern, and all without the least spice of jealousy, when knowing the impossibility, under existing circumstances, that we could supplant him in the affection of the red men of Missouri and Oregon.

The white traders, and the Indians have, if we may so term it, an annual Fair, that has been found by experience profitable to both sides. It is true the white trader barter a tawdry bauble of a few cents value, for a skin worth fifty of it. And so have we in our India shawls, and, a few years since, in Leghorn hats, in which we were taxed as high as the white merchant taxes the equally silly Indian. Coffee was sold at two dollars a pound, and so was tobacco. Indeed some of us gave that price to Mr. Nathaniel J. Wyeth for the latter article, a luxury more coveted by men in our situation, anxious and fatigued as we were, than whisky or brandy. This was the case under Lewis and Clarke. When deprived of tobacco, they cut up the old handles of tomahawks, which had been used as pipes, and chewed the wood for the sake of its smell and smack. It is not a singular case. It has been experienced among sailors at sea. They have pined more for the lulling effects of that nauseous weed than for ardent spirits; and it has been known that men will mutiny sooner when deprived of their tobacco, than when deprived of their usual food and rum. There was no small grumbling on being obliged to buy tobacco out of what we thought common stock, at the rate above mentioned, being, as we thought, all members of a commonwealth.

The following may serve to show the knowledge or instinct of horses.

When marching on our return home in the troop of Captain Sublet, not far from the eastern declivity of the Rocky Mountains, we were met by a large body of Indians on horseback. Sublet generally kept seven videts about two miles ahead of his main body. The horses of this advance guard suddenly refused to go on, and turned round, and appeared alarmed, but the riders knew not the cause of it. Captain Sublet rode up, and said, that he knew by the behaviour of the horses that there was an enemy ahead. He said there was a valley several miles off where he apprehended we might be attacked. He therefore ordered every man to examine his arms, and be ready for action. After riding a few miles we discovered a large moving body of a living something. Some of us thought it was a drove of buffaloes; but the Captain said no, because they were of different colors, whereas bisons, or buffaloes appear all of one color. After viewing them through his glass, he said they were a body of the Black-foot tribe, who had on their war dresses, with their faces painted, bare heads, and other signs of hostility.

Their appearance was very singular, and, to some of us, terrible. There was a pretty fresh breeze of wind, so as to blow the long manes and tails of their horses out straight. Nor was this all: the wind had the same effect on the long black hair of the warriors, which gave them not only a grotesque but a terrific appearance. Added to all this, they kept up a most horrid yell or war-hoop. They rode up and completely surrounded us; and then all was silent. Captain Sublet rode up to the chief, and expressed his hope that all was peace. The savage replied that there should be peace on their part, on condition that Sublet should give them twenty-five pounds of tobacco, which was soon complied with, when the Indian army remounted their horses, and rode off at full speed as

they came on: and we pushed off with like speed, lest they should repent their bargain and return upon us, to mend it.

Who will say that this gallant body of cavalry were not wiser than the common run of white soldiers, to make peace for a quid? and thereby save their horses and their own skins? Out of what book did this corps of savage dragoons learn that discretion was the better part of valor? We answer, From out of that book of Nature which taught the videts' horses that an enemy was in the wind. The horse is the dumbest of all beasts. He is silent under torture. He never groans but once, and that is his last. Did they roar like bulls, or squeal like hogs, they would be useless in an army. That noble animal suffers from man a shameful weight of cruel usage in town and country.

The wild horses are a great curiosity. They traverse the country, and stroll about in droves from a dozen to twenty or thirty; and always appear to have a leader, like a gander to a flock of geese. When our own horses were feeding fettered around our encampments, the wild horse would come down to them, and seem to examine them, as if counting them; and would sometimes come quite up to them if we kept out of sight; but when they discovered us they would one and all give a jump off and fly like the wind.

There is a method of catching a wild horse, that may appear to many "a traveller's story." It is called creasing a horse. The meaning of the term is unknown to me. It consists in shooting a horse in the neck with a single ball so as to graze his neck bone, and not to cut the pith of it. This stuns the horse and he falls to the ground, but he recovers again, and is as well as ever, all but a little soreness in the neck, which soon gets well. But in his short state of stupefaction, the hunter runs up, and twists a noose around the skin of his nose, and then secures him with thong of buffalo-hide. I do not give it merely as a story related; but I believe it, however improbable it may appear, because I saw it done. I saw an admirable marksman, young Andrew Sublet, fire at a fine horse, and after he fell, treat him in the way I have mentioned; and he brought the horse into camp, and it turned out to be a very fine one. The marvel of the story is, that the dextrous marksman shall shoot so precisely as only to graze the vital part; and yet those who know these matters better than I do, say, that they conceive it possible.

After we had made peace with the large body of the Blackfoot Indians, for, as we may say, a quid of tobacco, nothing occurred worth relating until we arrived at the town of Independence, being the first white settlement in our way homewards. I would, however, here remark, that the warlike body just mentioned, though of the fierce Blackfoot tribe, hunted and fought independently of that troop with which we had a battle in the Rocky Mountains; and were most probably ignorant of that affair, in which a chief was treacherously shot by one Antoine, who was half Indian and half French, when bearing a white flag, and with which nefarious deed I believe Captain Sublet had no concern. But of all this I cannot speak with certainty, as I myself was half a mile distant, when the Black-foot chief was shot, and his scarlet robe tom off of him by the mongrel Indian, as a trophy instead of his scalp; for the Indians returned their fire so promptly, and continued fighting so long, even after dark, that there was no time nor opportunity of his securing that evidence of his savage blood and mode of warfare.

---

When we arrived at the town of Independence, Dr. Jacob Wyeth, Palmer, Styles, and myself bought a canoe, being tired of travelling by land, and impatient to get on, and this was the last of my money except a single six-cent piece. A thick fog prevented our early departure, as it would be dangerous to proceed on account of the snags and sawyers in the river. To pass away the tedious time, I strolled out around the town, and lost my direct way back. At length the fog cleared off, and after my companions had waited for me an hour, they pushed off and left me behind! They, be sure, left word that they would wait for me at the next town, Boonsville, twenty miles' distance. I hurried, however, as fast I could five miles down the banks of the river; when, finding that I could not overtake them, and being fatigued by running, I gave over the chase in despair. I was sadly perplexed, and vexed, at what I conceived worse than savage usage. In this state of mind, I saw a small skiff, with a pair of oars, when an heroic idea came into my half-crazed brain, and feeling my absolute necessities, I acted like certain ancient and some modern heroes, and jumped into the boat, cast off her painter, and pulled away for dear life down the stream. The owner of the boat discovered me when not much more than a quarter of a mile on my way. He and another man got into a canoe and rowed after me, and gained upon me; on perceiving which, I laid out all my strength, and although two to one, I distanced them, and they soon saw they could not overtake me. When I started it was twelve o'clock, and I got to the next town, Boonsville, the sun half an hour high, - the distance about twenty miles. When my skiff struck the shore my pursuers were about twenty rods behind me. I ran into the first barn of a tavern I could reach. They soon raised the neighbors, and placed a watch around the barn, one side of which opened into a cornfield. In searching for me they more than once trod over me, but the thickness of the hay prevented them from feeling me. I knew the severe effects of their laws, by which those who were too poor to pay the fine were to atone for their poverty by stripes, which were reckoned to be worth a dollar a stripe in that cheap country; and hence I lay snug in the hay two nights and one day without any thing to eat. Hunger at length forced me from my hiding-place, when I went into the tavern, where I found Dr. Jacob Wyeth, Walter Palmer, and Styles. I told the landlord I was starving for want of food, and he gave me supper; and then I went back into the barn again, where I slept that night.

The next morning I went into the tavern again, and there I found my pursuers, and they found their prisoner, whom they soon put under the custody of two constables, who ordered me breakfast, which having eaten with a good relish, I watched my opportunity, while they were standing thick around the bar, and crept unobserved out of the back-door into the extensive cornfield, and thence into the barn window out of which they threw manure, and regained my snug hiding-hole, where I remained one day and one night more. I now and then could see the constables and their posse prowling about the barn, through a crevice in the boards. In the midst of my fears, I was amused with the solemn, and concerned phizes of the two constables, and one or two others. In the morning very early, I ventured out again, and ran down to the river; and there spying a boat, and feeling heroic, I jumped into her and pushed across the river, and landed on the opposite bank, so as to elude the pursuit of the authorities, who I knew would be after me on the right bank of the river, while I marched on the left. When I came to the ferry near St. Louis, I had only a six-cent piece, which the ferryman took for his full fare which was twelve cents, and so I got

JOHN B WYETH OREGON

---

safe to St. Louis, but with scarcely clothing enough for decency, not to mention comfort: and yet I kept up a good heart, and never once despaired. My companions arrived a day before me; they on Thursday, I on Friday, at four o'clock in the afternoon; they in the steam-boat, like gentlemen, while I, the youngest in the whole Oregon company, like a runaway. But I do not regret the difference, seeing I have a story worth telling, and worth hearing.

Where to get a lodging that night I did not know, nor where to obtain a morsel of bread. I went up to a large tavern, and asked permission of the keeper to lodge in his barn that night, but he sternly refused. I then went to the other tavern, and made the like request, when the landlord granted it, saying that he never refused a man sleeping in his barn who was too poor to pay for a lodging in his house. I wish I knew his name. I turned in and had a very good night's rest. Should any one enquire how I came to leave my old companions, and they me, I need only say that I had a very serious quarrel with one of them, even to blows; and with that one too who ought to have been the last to treat me with neglect; "and further the deponent saith not."

The next morning I went round in search of work, but no one seemed disposed to hire me; nor do I much Wonder at it; for in truth I was so ragged and dirty, that I had nothing to recommend me; and I suffered more depression of spirits during the following six days of my sojourn at St. Louis, than in any part of my route. The steam-boats refused me and Dr. Wyeth started off for New Orleans before I could see him. Palmer let himself by the month on board a steamboat running between St. Louis and Independence, while I was left alone at the former place six days without employ, victuals, or decent clothing. I could not bear to go to people's doors to beg; but I went on board steam-boats and begged for food. I was such a picture of wretchedness that I did not wonder they refused to hire me. My dress was buck-skin moccasins, and pantaloons; the remains of a shirt I put on in the Rocky Mountains, the remnants of a kersey waistcoat which I had worn ever since I left Cambridge, and a hat I had worn all the time from Boston, but without any coat whatever, or socks, or stockings; and to add to the wretchedness of my appearance, I was very dirty, and I could not help it. My looks drew the attention of a great many spectators. I thought very hard of it then, but I have since reflected, and must say that when people saw a strong young man of eighteen in high health, and yet so miserable in appearance, it was natural in them to conclude that he must be some criminal escaped from justice, or some vagabond suffering under the just effects of his own crimes.

At length, wearied out by my ill fortune, I plucked up courage, and went to the Constitution steam-boat, Captain Tufts, of Charlestown, near Boston, and told him my name and family; and detailed to him my sufferings, and said that he must give me a passage, and I would work for it. To my great joy he consented, and he gave me shirt, pantaloons, &c.; and I acted at a fireman, or one who feeds the fire with pine wood under the steam-boilers. I forbear narrating the particulars of my sufferings for want of food during the six days I tarried at St. Louis. Suffice it to say, that I was in a condition of starvation, and all owing to my wretched appearance. When I at times went on board the steam-boats, I was glad to scrape up any thing after the sailors and firemen had done eating. At length I obtained employ in the steam-boat Constitution, and a passage to New-Orleans, on the condition of acting as one of the firemen, there being twelve in all, with five men as

JOHN B WYETH OREGON

---

sailors, and two hundred and forty passengers, party emigrants, but chiefly men belonging to the settlements on the Mississippi, going down to Natchez, and to New-Orleans to work. We tarried one night at the Natchez; but soon after we left it the cholera broke out among the passengers, eighty of whom died before we reached New Orleans, and two of our own firemen. A most shocking scene followed.

I felt discouraged. My miseries seemed endless. After trying day after day in vain to get a passage in a steam-boat, I was made happy in procuring one, though I paid for it, by working as a fireman, the hardest and most disagreeable occupation on board; still I was contented, as I had victuals enough to eat; and yet, after all, I saw men perishing every minute about me, and thrown into the river like so many dead hogs. It is an unexaggerated fact that I witnessed more misery in the space of eight months than most old men experience in a long life.

On arriving at New-Orleans, Captain Tufts sent off every man of the passengers, leaving those only who belonged to the boat. He gave me shirts and other clothing, and offered me twenty dollars a month, if I would go back to St. Louis with him. I remained on board about a week; and so desirous was I to get home, that I preferred going ashore, although I knew that the yellow fever and black vomit, as well as cholera were committing great havoc in the city. The shops, stores, taverns, and even the gambling houses, were shut up, and people were dying in-doors, and out of doors, much faster than they could be buried. More white people were seized with it than black; but when the latter were attacked, more died than the former. The negroes sunk under the disorder at once. When a negro gets very sick, he loses all his spirits, and refuses all remedies. He wishes to die, and it is no wonder, ff he believes that he shall go into a pleasant country where there are no white men or women.

I soon got full employ as a grave-digger, at two dollars a day, and could have got twice that sum had I been informed of the true state of things. In the first three days we dug a separate grave for each person; but we soon found that we could not clear the hearses and carts. I counted eighty-seven dead bodies uninterred on the ground. Yet where I worked, was only one of the three grave-yards belonging to the city, and the other two were larger. We therefore began on a new plan. There were twenty-five of us grave-diggers. We dug a trench fifty-seven feet long, eight feet wide, and four feet deep, and laid them as compactly as we could, and filled up the vacant spaces with children. It was an awful piece of business. In this large trench we buried about, perhaps, three hundred; and this business we carried on about a month. During this time, you might traverse the streets of New-Orleans, without meeting a single person, except those belonging to the hearses, and carts, loaded with the dead. Men were picked up in the morning who died after dark before they could reach their own houses. If you ask me ff they died with yellow fever, or cholera, I must answer that I cannot tell. Some said the one, and some the other. Every thing was confusion. If a negro was sent by his master to a carpenter, for what they called a coffin, which was only a rough board box, he was commonly robbed of it before he got home. I myself saw an assault of this kind, when the poor black slave was knocked down and the rude coffin taken from him. New-Orleans is a dreadful place in the eyes of a New-England man. They keep Sunday as we in Boston keep the 4th of July, or any other day of merriment and frolic. It is also a training day

every other Sunday for their military companies.

I was in part witness to a shocking sight at the marine hospital, where had been many patients with the yellow fever. When the doctors, and those who had the care of that establishment had deserted the house, between twenty-five and thirty dead bodies were left in it; and these were so offensive from putrefaction, that when the city corporation heard of it, they ordered the house, together with the bodies to be burnt up; but this was not strictly complied with. A number of negro slaves were employed to remove the bodies, which being covered with wood and other combustibles, were all consumed together.

At length I was attacked myself with symptoms of the yellow fever,- violent pain in my head, back, and stomach. I lived at that time in the family of a Frenchman, who, among his various occupations, pretended to skill in physic. He fed me on castor oil. I took in one day four wine glasses of it, which required as much resolution as I was master of: but my doctor assured me that he had repeatedly scared away the yellow fever at the beginning of it, by large and often repeated doses of that medicine. Its operation was not one way, but every way. I thought I should have no insides left to go home with. Yet it is a fact, and I record it with pleasure, that it carried off all my dreadful symptoms, and in a very few days, I had nothing to complain of but weakness, which a good appetite soon cured. I therefore recommend a man in the first stage of yellow fever to take down a gill of castor oil, made as hot as he can swallow it; and repeat the dose in eight hours.

I remained nine weeks in New-Orleans, a city so unlike Boston, in point of neatness, order, and good government, that I do not wonder at its character for unhealthiness. Stagnant water remains in the streets as green as grass, with a steam rising out of it that may be smelt at the distance of half a mile. Besides this, their population is so mixed, that they appear running against each other in the streets, every one having a different object and a different complexion. In one thing they seem to be agreed, and to concur in the same object, namely, gaming. In that delirious pursuit, they all speak the same language, and appear to run down the same road to ruin.

I am glad that it is in my power to support what I have said respecting the Marine Hospital, by the following public testimony, published by authority, taken from one of their newspapers.

“ NEW-ORLEANS.- The following report from a committee appointed to examine one of the hospitals, will account, in some degree, for the unprecedented mortality which has afflicted New-Orleans. The report is addressed to the mayor.

“The undersigned, standing committee named by the city council during the prevalence of the epidemic now desolating the city, have the honor to report, that, in consequence of information given by sundry respectable persons, relative to the condition of the hospital kept by Dr. M’Farlane, they repaired to-day, at half-past one o’clock, to said hospital; that in all the apartments they found the most disgusting filth; that all the night vessels were full, and that the patients have all declared that for a long time they had received no kind of succour; that in many of the apartments of the building they found corpses, several of which had been a number of days in putrefaction;

JOHN B WYETH OREGON

---

that thence they repaired to a chamber adjoining the kitchen, where they found the body of a negro, which had been a long time dead, in a most offensive state. They finally went to another apartment opposite the kitchen, which was equally filthy with the other rooms, and that they there found many corpses of persons a long time dead; that in a bed, between others, they found a man dying, stretched upon the body of a man many days dead.

“Finally, they declare that it is impossible for one to form an idea of what they have witnessed, without he had himself seen it; that it is indispensably necessary for the patients to evacuate this hospital, and above all, to watch lest the corpses in a state of putrefaction occasion pestilence in that quarter, and perhaps in the whole city.

“November 7. The standing committee has the honor to present the following additional report.

“In one of the apartments where were many living and dead bodies, they found under a bed a dead body partly eaten, whose belly and entrails lay upon the floor. It exhaled a most pestiferous odor. In a little closet upon the gallery there were two dead bodies, one of which lay flat upon the floor, and the other had his feet upon the floor and his back upon the bed forming a curve; the belly prodigiously swelled and the thighs green. Under a shed in the yard was the dead body of a negro, off which a fowl was picking worms. The number of corpses amounted to twelve or fourteen.

Signed,

E. A. CANNON, Chairman.

FELIX LABATUT, Alderman, Second Ward.

CHARLES LEE, Alderman, First Ward.”

I took passage in the ship Henry Thomson, Captain Williams, and arrived in Boston, January 2d, 1833, after an absence of ten months, having experienced in that time a variety of hardships.

#### CONCLUDING REFLECTIONS

The lesson to be collected from this short-history is the great danger in making haste to be rich, instead of relying upon patient industry, which never fails to give a man his just deserts. Making haste to become rich is the most “fruitful source of the calamities of life; for here cunning, contrivance, and circumvention, take the place of diligence. After the schemer’s plans have all failed, there seems only one tempting means left to obtain riches in a hurry, and that is by gaming, the most prosperous invention ever devised by the arch enemy of mankind; and when that fails, the next downward step to destruction, excepting drunkenness, is robbery, many instances of which we find recorded in the annals of Newgate and the records of the Old Bailey in London. Such atrocities have never, or very rarely, occurred in our own country, and never will so long as we are wisely contented with the fruits of patient industry, and so long as we believe that the diligent hand maketh rich. These reflections refer to extreme cases, and are not applicable, or meant to be personally applicable, to the unfortunate expedition in which we have been concerned. It is not meant to reprehend those enormous vices and crimes which are known in the old countries, but

only to correct a spirit of discontent in men well situated and circumstanced. "If you stand well, stand still," says the Italian proverb.

Some may say this doctrine, if put in practice, would check all enterprise. Not entirely so, provided the means and the end were cautiously adjusted. Christopher Columbus ran a great risk; yet he knew, from the reasonings of his capacious mind, that there must be "another and a better world" than that he was born in; and under that strong and irresistible impression he tempted the trackless ocean and found it. But what shall we say of our Oregon adventurers, who set out to pass over the Rocky Mountains, and thence down the Columbia river to the Pacific ocean, in boats upon wheels? and that too with a heavy load of goods, and those chiefly of iron. What renders the project more surprising is, that they should take with them the most ponderous articles of a blacksmith's shop, - anvils, and a large vice. It is more than probable that the old and long established wholesale Indian traders at St. Louis laughed in their sleeves, when they saw such a cargo fresh from the city of "notions," paraded with all the characteristic confidence of the unwavering Yankee spirit. After assuring them that their ingenious and well-constructed amphibious vehicles would not answer for travelling in such a rough country as they must go through, they purchased all three of them, and advised our leader to buy sheep and oxen to live on between the white settlements and the country of the savages, and not to trust to their guns for food. This turned out very wholesome advice, as they must have starved without that provision.

The party under Captains Lewis and Clarke, sent out by the government of the United States, consisted of nine young men from Kentucky, fourteen soldiers of the United States army who volunteered their services, two French watermen, - an interpreter and hunter, - and a black servant belonging to Captain Clarke. All these, except the last, were enlisted to serve as privates during the expedition, and three sergeants were appointed from amongst them by the captains. In addition to these, were engaged a corporal and six soldiers, and nine watermen, to accompany the expedition as far as the Mandan nation, in order to assist in carrying the stores, or repelling an attack, which was most to be apprehended between Wood river and that tribe. This select party embarked on board three boats. One was a keel-boat fifty-five feet long, drawing three feet of water, with a large square sail, and twenty-two oars, with a fore-castle and cabin, while the middle was covered by lockers, which might be raised so as to form a breast-work. There were beside two periogues, or open boats of seven oars each. They had two horses, for any purpose, which they led along the banks; and fourteen bales of goods, with a variety of clothing, working utensils, locks, flints, ammunition, and richly-laced coats, and other gay dresses, and a variety of ornaments suited to the taste of the Indians, together with knives, flags, tomahawks, and medals. Yet all these articles were exhausted, without any accident or particular loss. The party was led by two experienced military officers, and the men were under military regulations; which was not the case with the Cambridge adventurers, who were upon shares, and all on a level.

We are unwilling that our readers should rely entirely on our opinion of the inadequacy of the outfits for such a formidable undertaking as that of going from the Atlantic shore of New-England to the shore of the Pacific by land. We shall therefore subjoin the opinion of a sensible gentleman, who had spent some time in the Missouri territory, and traversed its dreary prairies, where no

JOHN B WYETH OREGON

---

tree appears, and where there is, during the greater part of the year, no fuel for cooking, nor water fit to drink. He says: "Do the Oregon emigrants seek a fine country on the Oregon river? They will pass through lands [to get to it] of which they may buy two hundred acres for less than the farther expenses of their journey." He tells us that a gentleman (Mr. Kelly) has been employing his leisure in advising schemes to better the condition of his fellow countrymen, and has issued advertisements, inviting the good people of New-England to leave their homes, their connexions, and the comforts of civilized society, and follow him across the continent to the shores of the Pacific. He tells those who may reach St. Louis, that they will find there many who have been to Oregon, and found no temptation to remain there; - that they may possibly charter a steamboat from St. Louis to the mouth of the river Platte, but no farther, as that stream is not navigable for steamboats unless during freshets. And after they reach the mouth of the Platte, they will have a thousand miles to go before they reach the Rocky Mountains; and the country through which the adventurers must pass is a level plain, where the eye seeks in vain for a tree or a shrub, - that in some places they must travel days and nights without finding wood or water, for that the streams only are scantily fringed with wood. Our Cambridge emigrants actually found this to be the case, as they had no other fuel for cooking their live stock than buffalo-dung. The writer says, (and he had been there), that the ground is covered with herbage for a few weeks in the year only, and that this is owing to the Indians burning the Prairies regularly twice a year, which occasions them to be as bare of vegetation as the deserts of Arabia. The same experienced traveller assures them that they could not take provisions with them sufficient for their wants, and that a dependence on their guns for support was fallacious, and the same uncertainty as to the buffaloes; - that sometimes those animals were plenty enough, and sometimes more than enough, so as to be dangerous. When they trot smartly off, ten thousand and more in a drove, they are as irresistible as a mountain torrent, and would tread into nothing a larger body than the Cambridge fortune-hunters. Their flesh is coarse beef, and the grisly bear's, coarse pork; but this kind of bear, called the horrible from his strength and ferocity, is a most terrific beast, and more disposed and able to feed on the hunter than the huntsman upon him. We can assure the emigrants, says the writer already quoted, from our own experience, that not one horse in five can perform a journey of a thousand miles, without a constant supply of something better than prairie-grass.

The journal of Lewis and Clarke to the Pacific ocean, over the Rocky Mountains, was a popular book in the hands of every body; and the Expedition of Major Long and company was as much read; and both of these works detail events and facts enough, one would suppose, to deter men from such an arduous enterprise; not to mention the hostile tribes of Indians through which they must pass. It seems strange, but it is true, that a theoretical man need not despair of making the multitude believe any thing but truth. They believed the enthusiastic Mr. Hall J. Kelley, who had never been in the Oregon territory, or seen the Rocky Mountains, or a prairie-dog, or a drove of buffaloes, and who in fact knew nothing of the country beyond some guess-work maps; yet they would not read, consider, or trust to the faithful records of those officers who had been sent by the government to explore the country and make report of it.

There is a passage in the essay written by W. J. S. which we shall insert here on his authority, as it cannot be supposed that we, at this distance, should be so well acquainted with the affairs in

JOHN B WYETH OREGON

---

Missouri, as one who had resided on the spot. We assume not to keep pace with the professed eulogist of Oregon, of its river, and its territory, its mild climate, its exuberant soil, and its boisterous Pacific, so inviting to the distressed poor in the neighbourhood of Boston; who are exhorted by him to pluck up stakes and courage, and march over the Rocky Mountains to wealth, ease, and independence. The passage we allude to reads thus: - "About twelve years since, it was discovered by a public-spirited citizen of St. Louis, that the supply of furs was not equal to the demand. To remedy this evil, he raised a corps of sharp-shooters, equipped them with guns, ammunition, steel-traps, and horses, and sent them into the wilderness to teach the Indians that their right was only a right of occupancy. They did the savages irreparable injury. They frightened the buffaloes from their usual haunts, -destroyed the fur-clad animals, and did more mischief than we have room to relate." He adds, sarcastically, that "the Indians were wont to hunt in a slovenly manner, leaving a few animals yearly for breeding. But that the white hunters were more thorough-spirited, and made root-and-branch work of it. When they settled on a district, they destroyed the old and young alike; and when they left it, they left no living thing behind them. The first party proving successful, more were fitted out, and every successive year has seen several armed and mounted bands of hunters, from twenty to a hundred men and more in each, pouring into the Indian hunting grounds; and all this has been done in open and direct violation of a law of the United States, which expressly forbids trapping and hunting on Indian lands. The consequence has been that there are now few fur-clad animals this side the mountains."

Lewis and Clarke, and some other travellers, speak of friendly Indians,- of their kindness and hospitality, and expatiate on their amiable disposition, and relate instances of it. Yet after all, this Indian friendship is very like the affection of the negroes in the Southern States for their masters and mistresses, and for their children,- the offspring merely of fear. There can be no friendship where there is such a disparity of condition. As to their presents, an Indian gift is proverbial. They never give without expecting double in return.

What right have we to fit out armed expeditions, and enter the long occupied country of the natives, to destroy their game, not for subsistence, but for their skins? They are a contented people, and do not want our aid to make them happier. We prate of civilizing and Christianizing the savages. What have we done for their benefit? We have carried among them rum, powder and ball, smallpox, starvation, and misery. What is the reason that Congress, -the great council of the nation, - the collected wisdom of these United States, has turned a deaf ear to all applications for establishing a colony on the Oregon river? Some of the members of that honorable house of legislation know that the district in question is a boisterous and inclement region, with less to eat, less to warm the traveller, and to cook with, than at the mouth of any other known river in the United States. We deem the mouth of the river St. Lawrence as eligible a spot for a settlement of peltry merchants as the mouth of the Columbia. When Lewis and Clarke were on that river, they had not a single fair day in two months. They were drenched with rain day and night; and what added to their comfortless condition was the incessant high winds, which drove the waves furiously into the Columbia river with the tide; and on its ebb, raised such commotion, and such a chopping sea, that the travellers dared not venture upon it in their boats; yet the Indians did, and managed their canoes with a dexterity which the explorers greatly admired, but could not imitate. The bois-

JOHN B WYETH OREGON

---

terous Pacific was among the new discoveries of our American adventurers. Had their expedition been to the warm climate of Africa, or to South America, they would have been sure of plenty to eat; but in the western region, between the Rocky Mountains and the great river of the West, the case is far otherwise.

It is devoutly to be wished that truth may prevail respecting those distant regions. Indeed the sacred cause of humanity calls loudly on its votaries to disabuse the people dwelling on these Atlantic shores respecting the Oregon paradise, lest our farmers' sons and young mechanics should, in every sense of the phrase, stray from home, and go they know not whither, - to seek they know not what. Or must Truth wait on the Rocky Mountains until some Indian historian, - some future Clavigero shall publish his annals, and separate facts from fiction? We esteem the "History of the Expedition under the command of Captains Lewis and Clarke to the Sources of the Missouri, thence across The Rocky Mountains, and down to the Pacific Ocean," substantially correct. Their conduct towards the Indians was marked throughout with justice and humanity; and the journal of that expedition will be a lasting monument of their judicious perseverance, and of the wisdom of the government of the United States.

Reader! The book you have in your hands is not written for your amusement merely, or to fill up an idle hour, but for your instruction, - particularly to warn young farmers and mechanics not to leave a certainty for an uncertainty, and straggle away over a sixth part of the globe in search of what they leave behind them at home. It is hoped that it may correct that too common opinion that the farther you go from home the surer you are of making your fortune. Agriculture gives to the industrious farmer the riches which he can call his own; while the indefatigable mechanic is sure to acquire a sufficiency, provided he "build not his house too high."

Industry conducted by Prudence is a virtue of so diffusive a nature that it mixes with all our concerns. No business can be managed and accomplished without it. Whatever be a man's calling or way of life, he must, to be happy, be actuated by a spirit of industry, and that will keep him from want, from dishonesty, and from the vice of gambling and lottery-dealing, and its long train of miseries.

The first and most common deviation from sober industry is a desire to roam abroad, or in one word, a feeling of discontent, - a making haste to be rich, without the patient means of it. These are reflections general and not particular, as it regards all such high hopes and expectations, as lead to our Oregon expedition and to its disappointments. The most that we shall say of it is, - that it was an injudicious scheme arising from want of due information, and the whole conducted by means inadequate to the end in view.

Oh happy - if he knew his happy state,  
The man, who, free from turmoil and debate,  
Receives his wholesome food from Nature's hand,  
The just return of cultivated land.

THE END

Nathaniel J. Wyeth's Expeditions to the Oregon Country  
First Expedition - 1832

---

Journal of Captain Nathaniel J. Wyeth's Expeditions to the Oregon Country  
First Expedition - 1832

[The book containing the journal has been mutilated. There are traces of the removal of four pages describing the early stages of the expedition. In its place, statements from a letter which Wyeth addressed to J.G. Palfrey in December, 1847 have been added, describing this part of his travels.]  
On the 10th of March 1832 I left Boston in a vessel with 20 men for Baltimore where I was joined by four more, and on the 27th left to Rail Road for Fredrick Md from thence to Brownsville we marched on foot, and took passage from that place to Liberty Mo. on various steamboats, which place we left for the prairies on the 12th of May with 21 men, three having deserted, and on the 27th of May three more deserted.

[June 6th, 1832.] gray and my face like a plumb pudding the skin is entirely bare entirely bare [?] of skin is off one of my ears On the bluf[f]s the ghnats are equally troublesome but they do not annoy us much except in the day. Geese appear here mated and I have seen some broods of gooselings. Some rain last night. still barren and grass bad our horses about the same our men troubled with the relax toward night found buffaloe killed one which made a scanty meal for all hands for supper made 25 miles

7th Started out hunting killed two antelope about 10 saw a herd of Buffaloe crossing the River waited til they rose the Bank and commenced slaughter killed 3 and wounded many more these afforded a timely supply to the party and we ate hearty. Saw today the first appearance of muskrat since leav the settlements also Pelicans. Last night in cutting a tree for fuel caught two young grey Eagles one of which we ate and found it tender and good also a Badger saw some rattlesnakes and some other kinds not known to me the men [horses?] appear a little better the men [horses?] about the same Thr. 90 deg. wind S.E. my face so swelled from the mosquitoes and ghnats that I can scarce see out of my eyes and aches like the tooth ache

9th I date this the same on abc of a mistake of a day hertofore made 30 miles and yesterday 25 arrived at the Chimney or Elk Prick the Indian name this singular object looks like a monument about 200 feet high and is composed of layers of sand and lime stone in layers the sand blowing out lets the lime rock fall down and this action has in time reduced what was once a hill to a spire of nearly the same dimensions at top and bottom it looks like a work of art and the layers like the ranges of stone it is scituated about 3 miles from the river. Rain and thunder at night wind strong S. E. river as muddy as ever the bluf[f]s for the last 20 miles have occasionally a few stinted trees apparently Pitch pine and cedar the small streams that here empty into the Platte are frequently dry near the river during the day while above they are running free while at night there is running water entirely to the river Party in better order Horses about the same we now judge ourselves within 4 days march of the Black Hills

10th 28 miles, 2 Buffaloe

11th 30 miles, 6 Buffaloe

12th Nothing remarkable crossed Wild Horse Creek coming in from the S.

13th Came in sight of the Black hills and crossed Larrimee fork of the Platte in getting over one of my rafts broke the tow line the raft went down stream lodged on a snag and upset wetting most of the goods on it and loosing two Horse loads as it lodged in the middle of the river and the stream very rappid the goods were with difficulty passed ashore here an alarm was occasioned by the appearance of 4 men on the bluf[f]s behind us and an attack was expected every moment which would have been bad as our party was much scattered in crossing They However proved to be a part of a party of 19 men in the employ of Gant & Blackwell. They last winter lost all but 3 of their animals and in going to Santa Fee got enclosed by snow in the mountains and nearly starved to Death, and at first they were hard to tell from Indians or devils they are now in good health having felt well for some time all of them joined Mr. Fitzpatrick's party and proceeded on foot with us to the mountains. Killed an antelope

14th started late and left the river at which we had encamped and proceeded 16 miles killed one antelope and one elk

15th went out for game killed one antelope, 2 deer 2 Buffaloe made this day 20 miles and passed the first of the Black hills the country is now thinly wooded with Box Elder ash Pitch pine cedar and cotton wood and a variety of small shrubs among which are the cherry, currant and thorn wild sage here almost covers the country and is a plant of many years groth

arrived in camp found the company had killed plenty of Buffaloe and were encamped on a small stream coming in from the S. 20 miles.

16th Warm in mng. cold and rainy in the afternoon a little hard snow on the Peak of the Black hills a white Bear was seen this day Black ones for some days past. The lime rock still continues primitive peb[b]les in the streams and on the knols the hills pointed up very sharp from the same cause as the Chimney

the country appears desolate and dreary in the extreme no one can conceive of the utter desolation of this region nevertheless the earth is decorated with a variety of beautiful flowers and all unknown to me hard travelling disenables our botanist to examine them we have on the whole meat enough but the supply is too unsteady. There are here two kinds of Rabbits the largest weighing about 15 lbs ears 6 inches long plover and other marsh birds [re] common and some 2 or 3 kinds of Gulls. Struck the Platte river again here about 100 yds wide the water high and rapid we here find a small kind of Parsnip the blossom yellow root about 5 inches long 1/2 inch thick of more than one years groth the men appear better Horses about the same made this day 20 miles

17th Wind high N.W. Ther 40 a drear[y] and cheerless day made 25 miles killed 3 buffaloe 1 antelope 1 Deer crossed 2 small streams from the Black hills running into the Platte saw some rabbits & white bears Hops.

18 reached the place for fording the platte

19th Passed over my goods during a severe wind without accident

20th Mr. Subblettee (sic) passed over his goods and at night mooved on about 3 miles

21st Made a long march of 30 miles during which one of my Horses gave out killed this day 3 Buffaloe and fired at a white bear arrived at camp at 11 ock at night. I have ommitted one day on the other side of the Platte I date this right we arrived at Rock Independence at noon after a march of 15 miles

23 Yesterday we left the Platte and struck the Sweet water on which this rock stands it is scitu-ated in a gorge within 30 feet of the stream and is granite today is warm last night frost and the two last days cold and disagreeable from this time to 2nd July frost each night and snow once our course lay in various directions from S.W. to N.W. following the Sweet water and leaving the first snowy mountains on the right hand on the 29th we crossed on to the head waters of the Colorado during all this time we found abundance of Buffalo the travelling good but the grass poor the streams all fordable but rapid five streams have been crossed to this time and we are now encamped on the 6th all running into the Colorado trout are found here also some beaver Some of my men talk of turning back and I give them all free liberty many of my horses have given out and the rest are failing fast and unless we soon come to better grass they will all die and leave me on foot the waters running into Lewis river are not more than 8 miles distant, on the creek where we are there are pine trees in shape lik[e] a Balsam tree leaves like a pitch pine Bark rough yellowish and scaly The mountains in this region are not conspicuous are isolated and admitting free passage between them in any direction the creeks are sufficiently numerous for watering but feed is poor the 1st July we rested all the afternoon a respite quite acceptable to our weary legs Our average during these days about 20 miles but in some cases quite circuitous White bears are seen but none have been killed. Wolves and antelopes plenty, King fishers Our hunters have just brought part of 4 Buffaloe At night encamped on the same creek that we passed this mng. and soon after were visited by 6 men from Dripps & Fontenelles concern who with 13 others are encamped 5 miles from this place. This night at about 12 ock. we were attacked by Indians probably the Blackfoot. They approached within 50 yds. and fired about 40 shots into the camp and some arrows they wounded three animals got 5 from Mr. Subblette One from an Independent hunter and 4 which I left out of camp for better feed mine were all poor and sore backed and useless

3rd Decamped and in company with the men above mentioned proceeded to their camp and passed on to our route which lay W. This night encamped on the waters of the Colorado 25 miles

4th Decamped and at noon crossed the divide and drank to my friends with mingled feelings from the waters of the Columbia mixed with alcohol and eat of a Buffaloe cow made this day 30 miles and 25 yesterday The snow clad mountains now entirely surround us the streams this side increase rapidly. One bear seen this day the grass much better and some fertile land here the earth in some places was frozen snow yesterday and today Three of my men are sick and I have no spare

animals for them.

5th We passed along a wooded River and through a very difficult road by its side so steep that one of my Horses loosing his foothold in the path was rooled down about 100 feet into the river he was recovered but so much injured as we had to leave him shortly after. Made this day 20 miles

6th We marched early and at 2 ock stoped on Lewis river and within 20 miles of the Trois Tetons three very conspicuous snow covered mountains visible in all this region this river here runs nearly S. and is divided over a bottom about 2 miles and into 8 streams very rapid and difficult these we forded which consumed the time until night and encamped after making 18 miles on the W. bank with no grass. in the morning of the 7th we proceed up a small brook coming from a gap of the mountains due south of the Trois Tetons and passed the range of mountains of this range without much difficulty it is a good pass for such a range and fresh animals would have no difficulty in passing through it On the highest point we had snow accompanied with heavy thunder and being out of meat fed upon the inner bark of the Balsam trees a tree similar if not the same with the Eastern Balsam At Night we encamped at the foot of the pass on the western side and at the commencement of a large valley with several streams running through it into Lewis River surrounded with high and snow clad mountains The weather is here warm in the day time but frost every night the grass is good the land ordinary. On the 8th we proceed into the plain and after a march of 10 miles arrived at the rendezvous of the hunters of this region here we found about 120 Lodges of the Nez Perces and about 80 of the Flatheads a company of trappers of about 90 under Mr. Dripps of the firm of Dripps & Fontenelle connected with the American Fur Co. Many independent Hunters and about 100 men of the Rocky Mountain Fur Co under Mess Milton Sublette and Mr. Frapp [Fraeb]. I remained at this encampment until the 17th during which time all my men but 11 left me to these I have such articles as I could spare from the necessities of my own Party and let them go. While here I obtained 18 Horses in exchange for those which were worn out and for a few toys such as Beads Bells red and Blue cloth, Powder and Balls fish hooks vermilion old Blanketts We also supplied ourselves with Buffaloe robes we have now a good outfit and here we found plenty of meat which can be had of the Indians for a trifle On the 17th we put out and stered S.E. in direction to a pass through the same mountains by which we entered the valley these Mts. run E. & W. and the pass I refer to is the next E. of the one refered to and through it the waters of this valley reach Lewis [Snake] River which is on the S. side of this range at night we encamped within about 8 miles of the commencement of the pass On the 18th we did not leave camp when near starting we observed 2 partys of Indians coming out of the pass about 200 in number with but few horses after securing our camp our riders went out to meet them and soon found them to be Blackfeet a little skirmish ensued one of the Blackfeet was killed and his Blankett and robe brought into camp on this the Indians made for the timber the women and children were seen flying to the mountains at this time only 42 men being the party of Mess Milton Sublette & Frapp mine and a few Independent Hunters were in sight and the Indians were disposed to give us their usual treatment when they meet us in small bodies but while the Indians we[re] making their preparations we sent an express to camp which soon brought out a smart force of Nez Perces Flatheads and whites the Indians finding they were caught fortified themselves in a masterly manner in the wood. We attacked them and continued the attack all day there were

probably about 20 of them killed and 32 horses were found dead They decamped during the night leaving most of their utensils lodges &c and many of the dead we have lost 3 whites killed 8 badly wounded among which is Mr Wm. Sublette who was extremely active in the battle about 10 of the Indians were killed or mortally wounded of the Nez Perces and Flatheads in the morning we visited their deserted fort they had dug into the ground to reach water and to secure themselves from our shot It was a sickening scene of confusion and Blood[s]head one of our men who was killed inside their fort we found mutilated in a shocking manner on the 19th we removed back to our former ground to be near our whole force and to recruit the wounded and bury the dead. We think that 400 lodges or about 600 warriors of the Blackfeet are on the other side of the pass and if they come they must be met with our whole force in which case the contest will be a doubtful one. We have mad[e] Horse pens and secured our camp in as good a manner as we can and wait the result this affair will detain us some days. On 24th we again moved out of the valley in the same direction as at first viz about S.E. and encamped at night in the gorge of it during the march I visited the scene of our conflict for the first time since the battle the din of arms was now changed into the noise of the vulture and the howling of masterless dogs the stench was extreme most of the men in the fort must have perished I soon retired from this scene of disgusting butchery On the 25th we proceeded through the pass which is tolerably good and in a direction of about S.W. by S. and encamped 15 miles on Lewis River (here concentrated into one rapid stream) and about 30 miles S. of where we crossed it in going into the valley we are now employed in making bull boats in order to cross it One Buffaloe and some antelope killed today 26 crossed the river in a bull boat without accident in 4 hours and moved on in a westerly direction about 4 miles when we struck into a deep ravine with a little water in it this ravine is bordered by high presipices on each side and is small 3 miles up this we encamped for the night this stream is called Muddy as there is several of this name it is requisite to distinguish this by the cognomen of Muddy that falls into "Lewis"

26th we moved up the Muddy until we found the forks of it then followed the Right hand say 3 miles then took a south direction and struck another stream (small) and running in the opposite direction this we followed about 5 mil[e]s making 15 this day and encamped

27th We moved down the stream until its junction with another called Grays creek which we crossed and assended a high bluff and travelled an average course of S.W. and encamped on a small creek making 15 miles this day 2 days since I first this side the mountain met with the prickly pear and since leaving the valley of the Rendezvous the fruit that was green one day is ripe the next. The nights are still frosty but the days are very warm as in N.E. at this time fruits we have 3 kinds currants one of gooseberry all different from those of the U.S. and Service berrys all the first are sour the latter sweet the country through which we have travelled for these two days past has a strong volcanic appearance the streams occupy what appear to be but the cra[c]ks of an over heated surface the rocks are blown up in blubbers like a smiths cinders some rocks ten feet through are but a shell being hollow. A substance abounds like bottle glass of about the same weight not so transparent about as brittle the fracture is smooth and glossy with the exception of the cracks as above the country is tolerably level for a mountainous country but excessively dry. During our first days march from Lewis River beside the ravine above mentioned we passed three

craters of small volcanoes (as I suppose) and I am told there is a boiling spring near the same place We here find buffaloe plenty and fat and entirely different from those met with in the Spring on the Platte it is preferable to the best beef. Our party have taken lice from the Indians they are a great trouble as well as the Musquitoes these last trouble us in the day but the frost seals their wings at night when the first relieve them until morning.

On the 28[th] we moved in a direction about S.W. and during the march took the bearing of the Trois Tetons which was N.E. by E. and I think 75 miles we made 7 miles and encamped on a little stream meandering through a valley of about 100 acres of fine Black land with the grass as good as the buffaloe and the cold weather could admit of. Here we found plenty of cows and more Bulls 13 of the first were killed they were fat and we stopped to make meat these cows were killed by running them down which is a dangerous method expensive in horses and Requiring much skill in Riding We of course were obliged to employ help for none could be got by approaching while they were Running them

29th We remained all day making meat with a hot sun this morning sent 3 men down the creek fishing they caught 21 Salmon Trout and returned at 10 this afternoon it rained hard and during the storm the squaw of one of the party was delivered of a Boy in the bushes whither she had retired for the purpose it[s] head was thickly covered with Black hair it was as white as is usual with the whites in less than an hour afterwards the squaw made her appearance in camp as well and able for a days travel as usual it continued raining all night and until 8 of the 30 on which abc. our march was deferred for the day which was afterward fine and our meat dried well. 4 Beavers were caught from about 12 traps last night during this day one of the party saw an indian which must have been a Blackfoot as otherwise he would have come to camp yesterday and today we had Thunder & Hail as well as rain.

1st. Augt I date this the 1st on abc. of having missed a day in the time past. This day we made about 15 miles in a S.W. direction and most of the way in a deep valley and encamped on a small creek running into one called Blackfoot this latter is the second stream we have passed which empties into S. fork of Lewis River the first was called Grays River and is also small (this since crossing Lewis River) Here we stopped until the 4th to make meat of which I made enough to eat and no more while the other two parties who had go[o]d buffaloe Riders and Horses made considerable while her[e] we lost one Horse while attempting to Run Buffaloe by throwing his Rider and Running among the Buffaloe and going off with them I sent out a party to get fish of two men they Returned with about a peck of craw fish and a dozen of trout these average about 1 lb and are fine eating. We have here the Sandhill Cranes in plenty. On the 4th we moved due south and crossed Blackfoot and struck over to a stream emptying into the same as Blackfoot called Portneuf from a man killed near it 18 miles here we found Buffalo in the bottom and the Hunters are now out Running them. Here we remained this day and the 5th when the men I had sent out to hunt the horse returned as I had expected them on the 4th I was much alarmed for their safty being in a dangerous country while here we made 7 bales meat On the 5th. we mooved S. down the valley 3 miles and encamped on a creek running into the valley on the 7th we made 21 miles first down the N. side of the valley and taking the first creek running out of the valley then in a

S.W. direction and encamped on it from the valley above mentioned rises Bear River running into the Big Salt Lake distant about S.E. 50 miles Currants and service berrys are now ripe. I have been sick from indigestion for some days more so than I ever was before. We have here the Sandhill Crane Turtle dove Robbin Blackbirds (Crow & Cow) Kingfishers Black & Mallard Ducks, Ge[e]se. We find meat making a tedious business. On the 8th we moved S.W. 15 miles following the main Portneuf out of the valley for about 12 miles then took one of its tributaries for about 3 miles and encamped on the S.W. side of the valey in which this branch runs here we cached 6 Horse loads of goods and remained on the 9th & 10th & 11th moved on in a S.W. direction not following any stream but passing the ridge bordering the valley in a low place near where a small run puts into the valley from a very rugged pass. We made this day 15 miles and encamped on a small run going into Portneuf.

12th We made in a S.W. direction about 6 miles not following any stream but encamped on a very small run with poor grass.

13th We made 24 miles in a west and by N. direction and met no water for this distance and encamped on a very small run issuing from a spring a few miles from Lewis River we are here in sight of the River running through an extensive valley in a S.W. direction here are the American falls the place may be known by several high and detached hills arising from the plain the falls at one place 22 feet and the Rapids extend a considerable distance down the River We found here plenty of Buffaloe sign and the Pawnacks [Bannocks] come here to winter often on account of the Buffaloe we now find no buffaloe there are here abundance of Service berrys now ripe during a short walk from camp this mng. I saw a buff colored fox with a white tip on his tail. Wolves here serenade us every night making more noise than 50 village dogs and better music for they keep in chord and display more science yesterday we parted from 16 men bound out trapping. We are now in a country which affords no small game and a precarious chance for Buffaloe

14th We made 30 miles in a S.W. direction and encamped on a creek called Casu [Raft] River it joins the main River below the Am. falls. This days Ride was through an excessively barren country with no water between the two last camps on the N. side of the Lewis River and about 50 miles distant from it is a range of snowy mounts. also two or three points in the chain of this side with snow on them.

15th We made along the banks of the Ocassia about 25 miles and encamped on the west bank of it. The valley of the Ocassia is about 4 miles wide and of a rich soil but the excessive cold and drouth of this country prevents vegetation from assuming a fertile character. The air is so dry that percussion caps explode without striking and I am obliged to put the caps on and fire immediately except in the night when we consider it safe to keep the caps on the guns we have in this country a large kind of black crickett 2 inches long said to be used as food by the Indians they are in great numbers and roost on the sage at noonday there are also in the streams abundance of craw-fish we see antelope and old buffalo sign

16th We made 25 miles up the same side of the Ocassia then crossed it and followed S.W. 3 miles

and encamped on a small mountain run making in all 28 miles in a W. by S. direction yesterdays march was in a direction W. by S.

17th We moved in a W. by S. direction about 15 miles to a creek [Goose] putting into Lewis River on which we found no beaver of consequence having been trap[p]ed out by the H.B.Co. some years before.

18th We moved out up the creek about 8 miles and still found no beaver saw one Pidgeon Woodpecker this creek runs through what are called cut rocks otherwise volcanic in this region I found one mountain of Mica Slate enclosing garnetts. The Basaltic rock appears to be the same formerly and the remains of the Garnetts are in some cases to be seen. also I have found here granite in small blocks there is also much white sandstone compact the clefts on each side creek are high and perpendicular but the bottom affords good grass for this country. There is no timber except willow and alder in the bottom and cedar on the hills this days course about S. along the creek

19th We moved up the creek about 12 miles in a S.W. direction there was still little beaver this afternoon I took 2 men and proceeded from camp about 8 miles about W. following the creek and slept there at sunrise on the 20th we moved up about 12 miles in a W. direction and while I was engaged in the brook setting a trap we found three Indians following us the two men were on the bank and were seen but myself in the creek was unnoticed when they crossed to go to the men I presented my pistol to the first one who made a precipitate retreat back while I made mine to my gun having got which I beconed them to come to me which they did we then went to camp which we found had moved this day about 10 miles in same direction these Indians were Snakes the first we had seen during the march the party passed a hot spring the country still volcanic.

21st We followed the creek in a N.W. direction about 5 miles when we met a village of the Snakes of about 150 persons having about 75 Horses they were poorly off for food and clothing but perfectly friendly they are diminutive in person and lean. We encamped to trade with them but did nothing except getting a few skins for moccasins this morning caught my first Beaver a large one.

22nd We followed the same creek about 2 mils and then struck into a ravine in a west direction and in about 6 miles came to a warm spring near a cold one which formed a run which we followed in a west by S. direction this we followed about 2 miles and encamped making this day 18 miles

22nd We proceed in a S.W. direction and struck the same stream on another branch about 2 mils from the junction about 15 mils this day these two streams unite and run in a N. direction through impassable cut rocks this night caught 2 Beaver and slept out of camp.

24th Proceed up the creek in a S.W. by W. direction about 18 miles then in a W. by N. direction about 6 miles. The last half of this days travel was through clefts of Scienite rock pretty well broke to pieces by heat apparently we have here 2 kinds of Lizards the one like that of the United States as far as I could see the other shorter and more sluggish here we find the banks of the streams

lined with Diggers Camps and Trails but they are shy and can seldom be spoken and then there is no one who could understand them and they appear to know little about the signs which afford other Indians a mode of intelligence from this region specimens No. 1 are obtained.

25th We made in a W. direction along the same creek 20 miles.

26th In a W by N. direction about 20 miles

27th In a S W direction toward a snowy mountain and leaving the last creek 24 miles and struck one here running S.E. Country desolate in the extreme most of the creeks which have water in them on the mountains dry up in the plains of this region

28th did not move more than 2 miles up.

29th About 5 miles in a S.W. Direction to cross a range of high hills until we struck a creek running in a N.W. direction which we followed 12 miles and encamped where the creek goes into the cut rocks this day we parted from Mr. Sublett[e]'s party with feeling of regret for this party have treated us with great kindness which I shall long remember.

30th We followed the creek in a N.W. direction about 12 miles through tremendous cut rocks I went ahead to look the route I passed the smoking fires of Indians who had just left 4 of whom I saw running up the mountain endeavored by signs to induce them to come to me but could not Soon after I came to another camp I happened to find their plunder this induced them to come to me 3 men one boy 4 women from these Indians I procured fresh Salmon Spawn which was very encouraging as we are nearly out of provisions and the country would afford us a scanty subsistence I gave these Indians a few small presents to convince them of our friendly disposition. This day for the first time in this country saw raspberrys these Indians gave me a cake made of service berrys quite good they had about a Dozen of spotted fish of a kind I had never seen resembling a Tomcod. These Indians are small about 120 [lbs.] of a good countenance they are Snakes or Soss-honees.

30th [repeats date] We followed the same creek and made about 15 [miles] in a N.N.W. direction through a continued defile in many places admitting just room for the water through which in many places we were obliged to make our way The mountains on each side are about 1000 feet above the creek which has a rapid descent here are a small fish about 1/4 lb. similar to a trout but with large dark spots. We meet here plenty of cherrys currants and gooseberrys the latter sour. The last of yesterdays and the first of todays route lay through Porphritic Granite rocks in their natural state the latter part of to days was through a stratified blue sandstone untouched by fire for a short distance then assumed a volcanic appearance. This day we assended the highest mountain in sight and found the exhibit an indescribable chaos the tops of the hills exhibit the same strata as far as the eye can reach and appear to [have] once form[ed] the level of the country and the vally to be formed by the sinking of the earth rather than the rising of the hills through the deep cracks and chasms thus formed the rivers and creeks of this country creep which renders them of

the most difficult character to follow in the brooks we have fresh water clams on which we look with some feeling for the small quantity of Buffaloe meat now remaining admonishes us look for some other means of living gave there is little and being obliged to travel prevents our hunting much. from this place the specimen in Bag No. 1 of vitrified quartz was taken.

31st We followed the same creek about 4 miles in a N. direction then took a dry ravine 2 miles in a S.E. then in a N. direction and then followed down another dry ravine about 1 mile when the rocks on each side closed over the top and formed a natural Bridge elevated about 50 feet while the sides approached to within 20 feet of each other and the bottom descended perpendicularly about 60 feet we of course returned on our trail and then stered a N.E. direction about 4 miles and encamped on a little ravine in which there was only a little water standing in deep places and barely enough for us and our horses. The first half mile of our route lay through the bed of the creek and among rocks from 1 foot to 3 or 4 in diameter this was a very difficult task and several of our horses fell in the water this day we lost two horses which gave out the country still bears the same appearance as for several days past.

2nd [1st] We left our camp in the ravine ascended to the height of land which we found to be a high level plain over which we marched in a N.N.W. direction and found during a 10 hours march 2 springs which as the day was warm were acceptable at the end of 30 miles we reached the creek which we left on the 31st We found rabbits plenty on the plain our camp was made surrounded by high and perpendicular cliffs say 800 feet bearing every mark of fire here we found little grass for our horses.

3rd [2nd] We lay at the same camp and got fish from the brook enough for breakfast after which I took [a] horse and followed the creek down about 1 mile and found another larger joining it a little below which there is a warm spring issuing from the bank about 40 feet above the stream it gives out smoke when it meets the air and discharges a large quantity of water about 2 miles farther down I found a small party of Indians from whom I obtained 8 fish weight about 4 lbs. each and looking like a salmon for these I have 4 Hooks they were friendly they advise me to follow the right hand trail but I have determined to take the left and shall perhaps repent it. The left heads N.W. which I think [is] my direction I returned to camp and three of the Indians with me. One of these Indians had a bad wound on the side of his head and from his signs and appearance was made with a poisoned arrow.

3rd We moved camp in the proposed direction viz N.W. 16 miles During which distance we found stagnant water once and encamped near about 15 Indians diggers 3 of our men we left at the last camp to set the traps at some signs there seen. These Indians are very poor and timid when I approached them alone on a gallop they all began to run but by moderating my pace and making signs the[y] suffered me to come to them they gave me some sweet root to eat for which I gave them 3 Hooks they had a young yellow legged eagle with them and most of the diggers we have met had a small kind of Hawk at their camps these they feed and tame this party also had a young bird tame resembling a King Bird this days travel was on a high plain and good going on an old trail these Indians had with them staves for fish spears so we presume they are going to

the river for fish and so think ourselves on the right trail. For three nights passed there has been no frost a thing which has not before happened for three nights in all since leaving rock Independence. Snow spit we had the 28th Aug. Today a slight sprinkle of Rain being the 2nd time since leaving the Rendezvous.

4th We left the camp early and proceeded over a high and pretty level plain gradually descending to the N.W. in a N.N.W. direction and after 20 miles travel without water came to ravines running E. and dry having gravelly and sandstone untouched by fire bluffs and in 5 miles more came to the creek we had left on morning of the 3rd. [on] the banks of which we found every 20 steps or thereabouts warm or hot springs and the creek though large and discharging a great quantity [of] water too warm to be palatable Here we found an Indian and family of whom for 2 fish Hooks we bought 7 salmon of about 4 lbs. weight each when green. they were split and dried. The two men left behind not having yet come up we intend halting here for them. The creek is here lined with volcanic rock today [we] saw the first fish Hawk in this country.

4th Lay at camp and repacked our goods and held a smoke with some Indians one of whom we engaged as a guide down the river and to Beaver smoked too much and made myself sick

5th Moved on about 5 miles N.N.W. and again struck the creek and good grass found Beaver sign very plenty and for the first time set all our traps at good sign had a mess of fresh clams for dinner after which 2 Indians came to us with 4 salmon which we bought for 2 Hooks This day heard what we all took for a cannon at about 10 miles distance time will determine whether we were mistaken. In this creek there are a great number of snakes about 3 feet long with a large head and of a brownish grey color about the proportion of the striped snake of N.E. They inhabit the water and I saw one catch a small fish within two feet of me while bathing at a warm spring which put into the main stream The bathing at these warm springs is delicious there are hundreds of them and some large enough to dive in Some gush out of the rocks at an elevation of 40 feet above the stream and discharge enough water for a mill I can perceive no unusual taste in the water.

6th Remained at same camp and were visited at 10 o'clock in the morning by two Indians with whom we held a smoke we can learn nothing of any white post by these Indians caught 7 Beaver

7th Remained at same camp and exchanged two horses with some Pawnack Indians three of whom visited us also about 10 Sohonees with Salmon of which they have plenty here we caught a N. England Sucker also a fish a little resembling pike of about 3 lbs weight but without teeth. Caught 3 Beaver. Ravens are here very plenty and tame they light on the perpendicular sides of the creek waiting for fish on which they live. Geese and ducks are also plenty as well as grouse. Some of the Indians have guns but most of them go unarmed The creek here for about 10 miles runs W.N.W.

8th Moved camp down the creek about 12 miles and came to the village under the escort of about 20 Indians on Horseback one of whom by the direction of the chief showed us the place for our camp where grass and water could be had here the chief harangued his people telling them

not to come into our lines nor steal from the white people He sent his squaws with wood for us and also sent salmon for us to eat I gave him a present of tobacco awls Hooks Powder vermilion knives etc. Here I traded a Beaver skin robe for two knives and six skins with many muskrat which are plenty here I found these Indians great thieves in the small line knives etc. Missing mine I went to one of the Sub chiefs and told him of it he made enquiry and pointed out the thief who refusing to open his robe I gently did it for him but insted of finding the knife found a coat of one of the men which he held upon until I drew a pistol on which he gave it up and caught up what he supposed to [be] one of our guns but it happened to be my covered fishing rod he was then held by the other Indians and sent to the village and I saw him no more

9th In morning went to see the Indians catch Salmon which is done by entangling them in their passage up the creek among dams which they erect and spearing them they catch an immense quantity the operation commences in the morning at a signal given by their chief. This chief is a good sized man and very intelligent and the president would do well if he could preserve the respect of his subjects as well or maintain as much dignity

10 Mooved down the main river in a S.W. [N.W.] direction which here runs through moderate banks in a moderate current We are told that the next creek has beaver by the chief and that it is 4 days march The main river is here full of salmon which continually jump above the surface like sturgeon.

10th Mooved camp along the Bank of the river 3 miles there the river diverging to the Northward we left it and followed the main trail the river here goes through cut rocks about 30 miles We made this day 20 mils in all in a W.N.W. Direction and encamped in poor grass on a small creek 1 mile from the main river during the march we crossed a small creek up which about 2 mils is a fine camp.

11th Moved at 3 a.m. and followed the trail 24 mils in a W.N.W. Direction and encamped on the bank of the main river which is here a fine stream about a 1/3 mile or over. I swam across it and found it over my head all the way here we found Indians and bought Beaver 3 skins for 1 shoe knife and 4 charges powder & lead we also got salmon of them the Basalt here occurs resting on sand and gravel in some places the rock is not more than 4 feet thick and appears to have suffered from intense heat the country is barren in the extreme there is usually a difference of 40 deg. between the day & night the heat at noonday about 75 to 85 deg. The Indians here have large nets made in the European manner of the hemp of the country. The trail on the river so far is fine and much used.

12 Move camp 15 miles on the trail in a W.N.W. direction and following the bank of the river which is here a gentle stream of about 4 miles and 1/2 mile wide. Gnats here trouble us much and the days are extremely hot about 85 deg. and the nights warm enough for comfort The river is full of salmon and a plenty of them are to be had of the indians whom we meet every few mils fishing on the banks of the stream Some of the grass is here so salt that it can be washed in a pot of water and enough seasoning for boiling obtained grass is generally poor. The banks are here generally

sand Many kinds of water fowl frequent the river here today we bought a fish of the Indians dried excessively fat and when alive a large fish. sturgeon probably

13th moved camp along the bank of the river and following the trail 24 miles only deviating from the river about 3 miles the last of the travel. The first 6 miles the river is W. the next 3 N.W. then S.W. 3 then taking a circular sweep round to N. by E. which was 9 miles then left the river and in 3 miles struck a creek [Owyhee River] about as large as Charles River at Watertown, where we found grass, salmon and Indians and the first timber we have seen since leaving the Mts. in sight on what appears to be a river coming in from the N. side this I mean to ascertain tomorrow and the next day I shall start to explore the creek for Beaver. This forenoon and yesterday forenoon were cloudy and the first cloudy weather for 2 months except as mentioned before. Wether still as warm as 80 deg. in day time buy salmon for a hook apiece.

14th Mooved camp in a N.N.W. Direction 5 miles and encamped on the main river being out of provisions I sent a man on a mule to buy some salmon he went up the river about 3 miles and called to some Indians on one of the Islands to bring some these he bought afterward another Indian came over with some the man thinking he had got nearly enough offered him a less price this displeased the Indian who slapped him in the face and at the same time hit the mule a kick which set him out on the run and the Indian ran quick enough to avoid vengeance the man came to camp much displeased having had to walk most of the way and carry his fish this day also visited by Indians from below with salmon

15th Sent 3 men and 4 animals to examine the small river for beaver this day a N.W. wind much like the N.E of the Atlantic with some little rain (at the same camp) this day took a ride down the river to examine for a camp

16th N.W. wind still took a ride up the river to find a camp where timber, fit for a raft which we propose to build to carry some of the loose baggage and some men who are on foot can be found, found none saw some beaver sign in trading for some salmon an Indian attempted to sna[t]ch a paper of fish hook[s] from me but he did not make out returned to camp and sent two men to trap for the beaver they left their horses and went into the willows to look [for] the sign during which time the Indians none of whom were in sight stole a cloak from Mr. Ball. They found the beaver had lately been trapped out say within 3 weeks next morning they returned to camp

17th Mooved camp N. by W. 16 miles and encamped on a creek [Malheur River] about as large as the last near a few lodges of Indians the main river about two miles to N.E. This creek appears to run S.W. The Inds. say there is beaver on it the main river here makes a considerable detour to the N. Yesterday had hail and rain & snow and today the Mts. to the Northward are white with it.

18th with 2 men I went up the creek this I followed about 50 miles and found its general course about W. by N. the first 15 miles S.W. then W. 20 then N.N.W. 15 where the cut rocks begin This is a large stream when the waters are high in the spring but now is sluggish here we got a few beaver It had been trapped by the H.B. 2 years before we saw no Indians on it during the 9 days I was up.

On the 10th day [Sept. 28th] I returned to where I left the party and feeling in the mood of banter I told the Indians at the mouth of the creek (the party having left) that I had eaten nothing for two days this to see if they would give me anything for charity sake One of them went and looked at my saddle and pointed to me the fresh blood of a beaver I had that morning caught and left with the two men I then bought 2 salmon for one awl afterward I told him I had three children at home he brought forward three tawny brats and his squaw who was big I backed out of story telling with Indians. I then proceeded on until the moon went down when seeing a light I made for it after traveling 5 miles I found it to be an Indian camp on the other side of the river I then unsaddled my horse and slept until 4 ock when I mounted and at 9 ock found where my party had camped the same night and a notice in the trail of their motions at 11 ock I overtook them with my horse lame and jaded. I found an Indian with the party who seems to know the route to Wallah Wallah and he intends going with us During my absence the three men sent up the creek above the one I went up returned without accident, and during the same time Mr. Sublette with Mr. Frapp & party joined our camp and crossed by fording to the other side of the river intending to divide into 3 parties and trap up three streams coming in opposite the upper one of which we thought to be salmon river it proves to be called Big Woody [Boise] on account of the timber on it. They attempted to come down on the creek above the one I ascended but after toiling long and wearing down their horses in a cruel manner they crossed to the one that we descended and arrived at the Indian village the day after we left it he left before I returned I regretted much not seeing this party. from Information gained here we suppose that we shall meet no Indians between this and the fort have therefore provided as much salmon as we could get and put ourselves on allowance. Sublette who went to 2 creeks further than I did saw a large stream running S.W. this must either turn and be some large river coming into Lewis below here or be the head water of some river going to the Gulph of California. After joining camp we proceed on to a creek [Burnt River] coming from the N.W. which is our route the river here being impracticable and taking a great bend to the N. and shall wait here until the two men who went up with me come to camp The river from where I left camp runs about N. 20 miles then west 10 miles then N. again into cut rocks found the party all well and the horses much recruited

29th We lay at same camp.

30th Mooved about 5 miles the creek running about W.

1 Oct Mooved camp along same creek about 5 miles still W.

2nd At same camp at this place the bears dung was plenty but we saw but one.

3rd Moved camp about 15 miles creek still west and trail good.

4th With an Indian and 4 men I left camp in order to explore this creek the N.W. trail here leaving it after leaving camp I proceed over bad hills about 18 miles and encamped among cut rocks on the same creek it here being W. by S. during the march we observed a range of high snowy mountains to the N. of us but w[h]ether on our side of the river or not could not determine.

5th Made about 5 miles through intolerable cut rocks some beaver

6th At same camp.

7th 5 miles on same creek which bears W. by S here left it. having sent a messenger to camp with orders to proceed on the route to Wallah Wallah and steering north passed some snow clad mounts. which we walked up with bare feet and after 25 miles struck a small run going into the next creek during this day we passed through an immense forest of pine of different kinds and unknown to us altho very similar to some of ours on these mountains we found unripe service berrys, cherrys and thorn apple all of which are gone on the rivers it snowed and rained most of the day many of the pines were 4 feet through

8th Moved 4 miles to the main creek and laid down cold and hungry and supperless hoping that our traps would give us beaver in the morning

9th Got 7 beaver and went to eating like good fellows moved this day 6 miles down creek here running about N.

10th Moved N. and down creek about 15 miles and found the rest of the party who had come on the main trail in an average N.W. direction about 45 miles This day rain this creek from where we struck it to this place runs in an extensive plain of fertile soil equal to the best I ever saw of about 5 miles average width here we raised a great smoke and am told by our Indian that the Nez Perces will see it and come to smoke with us

11th To the S.W. of us is a range of snow clad Mts. the Indian says it is 7 days to Wallah Wallah. This creek runs about N.E. by E.

11th [repeats date] stretch at 8 o'clock and moved about N.N.W. 30 miles over high ground of good soil

12th Left the party after killing a horse of the poorest kind for food in order to go ahead to find indians or whites or food The party here remained one day in a valley of about 20 miles long and 15 wide of a very fertile soil in this valley saw extensive camps of Indians about one month old here they find salmon in a creek running through it and dig the Kamas root but not an Indian was here at this time we put out in a N.W. direction and ascended the hills which soon became wooded with good timber our course this day was about N.N.W. and 40 miles I had with me an Indian and three men and a little horse meat we camped this night in the woods without water.

13th Arose early and continued our route until 9 o'clock and stopped for breakfast of bad Horse meat on a creek of some size where we found the red thorn apple and a few cherries after 3 hours stop we moved across the creek which runs West and is called Ottillah [Umatilla] on ascending the opposite bluff we saw a smoke about 20 miles down on it to which we went and found some poor

horses in charge of a squaw and some children the men were all out hunting they had no food but rose berrys of which we made our supper they were much frightened at our approach there having been some Indians of this tribe viz Walla Walla killed by the snakes above, and this family was murdered the night after we left them

In the morning of the 14th we put out about N. and arrived at fort Walla Walla about 5 ock in the evening distance 30 miles near the fort the river Walla Walla was crossed which is about 75 feet wide and about 2 feet deep current moderate the size of the last creek passed I was received in the most hospitable and gentlemanly manner by Peanbron [Pambrun] the agent for this post the fort is of no strength merely sufficient to frighten Indians mounting 2 small cannon having two bastions at the opposite corners of a square enclosure there were 6 whites here. My party arrived on the 18th having fared for food they passed my trail and went N. of it and struck the main river [Snake] above the fort they brough[t] in all the horses At the post we saw a bull and cow & calf, hen & cock, punkins, potatoes, corn, all of which looked strange and unnatural and like a dream. They gave me a decent change of cloth[es] which was very acceptable I took a ride up the river 9 miles to the junction of Lewis River which comes in from the S.E. and soon takes a S. course the Columbia comes here from the N.W.

On the 19th I took leave of my hospitable entertainer in one of the Cos. barges with my party leaving my horses in his charge at the fort and proceeded down the river about 4 mils and s[t]opped to tighten our boat the river forms fine eddies to work up with and about 3 mile current down the 2nd run of fish failed this year in the river and the Indians are picking up the most nauseous dead fish for food the course of the river [is] about S.W.

20th Left the beach at sunrise the River still S.W. and kept on until about noon when a furious wind arose from the S.W. and stopped our further progress the sand flew so as to obscure the air Here we traded a few fish from the natives for Hooks awls powder &c made 10 miles during which we passed some rapids of a bad character at which in times of high water portage is necessary the ge[e]se are numerous seated on the banks of the river. River W. by S. a large snowy mountain S.W. by W. ahead which the river leaves to the left called by the French "Montagne de Neige" [Mt. Hood] made 10 miles

21st Wind same but more moderate Put down the river still W by S. passed a large Island at the lower end of which we stopped for the night. Ther. 22 deg. Made 16 miles during the day out boatman bought a colt which we found fine eating shagg and ge[e]se plenty

22nd Made 30 miles wind moderate and no rapids of much difficulty stopped at night at a village where was a chief sick to whom our conductor administered some medicine and bled him his eyes were exceeding yellow and his blood after standing a short time was covered with a scum of yellowish green he gave us a horse to eat of which he had 260 in fine order and of good breed we found the meat equal to any beaf and quite different from the poor and sick old ones we had eaten. They here sell Horses for 100 loads amunition 1 Blankett and 1/4 lb tobacco.

23rd The chief much better and we left him Yesterday our people in search of wood of which there is none but drift here found a pile which they brought to our fire but were soon told by the natives that they had robbed the dead we will avoid the like mistake in the future we made this day 28 miles during which distance we passed one bad rapid and the river John Day from a trader of that name. This river is large but obstructed by rapids and enters from the S. is 79 miles below Walla Walla no rain as yet but we are informed that the rain is now constant below the falls we see Indians every few miles who come off to trade what little articles they have sometimes with nothing to beg a chew of tobacco sometimes with a little wood for fuel sometimes with two 3, one or 1/2 a fish a few berrys our conductor appears to have a wife at each stopping place 4 already and how many more sable beauties god only knows these Indians are tolerably honest but will steal a little.

24th Started about 9 and after about [6 miles written here but crossed out] passed the grand falls [Celilo] of the Columbia just above which a small river puts into the Columbia about the size of the small rivers above the Wallah [Wallah] for instance these falls now the water is low are about 25 feet when the water is high these falls are covered the water not having a sufficient vent below the water here rises about 40 feet just before arriving at the falls are considerable rapids the falls are easily passed in boats at high water we hired the Indians about 50 for a quid of tobacco each to carry our boat about 1 mile round the falls the goods we carried ourselves shortly after passing the falls we passed what are called the dalles (small) or where the river is damed up between the banks steep and high of not more than 100 feet apart through which the whole waters of the mighty Columbia are forced with much noise and uproar I passed through with some Indians while my men went round they not being good boatmen enough to trust and frightened withall. We are now camped at the Great Dalles which are still narrower and more formidable than the small having stoped after making 20 miles the wind being high and unfavorable for passing at the gorge of this pass the water rises by the mark on the rock at least 50 feet forming a complete lock to the falls above the back water covering them entirely. The Indians are thieves but not dangerous before us and apparently in the river rises the most formidable mountain we have seen the country ahead is clothed with forest to the river side which has not been the case before and the western horizon is covered by a dense cloud denoting the region of constant rain during the winter.

25th Made this day 6 miles and passed the great dalles similar to the small ones which we passed yesterday but still narrower being 75 feet about in width through this pass we went with an unloaded boat at an immense speed the goods and Baggage were carried past on the backs of my men and some Indians hired for that purpose my men not being good boatmen and timorous I hired Indians to work ours through going with them myself to learn the way during part of this day we had a fair wind the river still W. by S. here we saw plenty of grey headed seals we bought some bear meat from the Indians which we found very fine. We encamped for the first time on the river among timber among which I saw a kind of oak and ash. Indians Plenty one chief at whose lodge we stopped a short time gave me some molasses obtained from [the] fort below to eat He had a large stock of dried fish for the winter 4 tons I should think roots &c he was dressed in the English stile Blue frock pants. & vest comported himself with much dignity enquired my name particularly and repeated it over many times to impress it on his memory his sister was the squaw of an American of the name of Bache who established a post on the river below the great

dalles three years ago last fall and who was drowned in them with 11 others the following spring the remains of the fort I saw as also the grave of the woman who died this fall and was buried in great state with sundry articles such as capeau vest pantaloons shirts &c. A pole with a knob at the top is erected over her remains at the foot of the Dalles is an island called the Isle of the Dead on which there are many sepulchers these Indians usually inter their dead on the Islands in the most romantic scituations where the souls of the dead can feast themselves with the roar of the mighty an eternal waters which in life time aforded them sustenance and will to all eternity to their posterity.

26 After 30 miles of beautiful navigation with little current and fair strong wind and no rapids we arrived at the Cascade or lower obstruction of the river here it is necessary to carry the boat and the Indians are all dead only two women are left a sad remnant of a large number their houses stripped to their frames are in view and their half buried dead this portage will be a hard job during this day I went ashore to a small lake near the river I killed at one discharge of my double barrelled gun 5 of them which gave 5 of us a hearty supper no rain as yet but constant appearance of it ahead at these rapids are a great many seal it is a mystery to me how they assend them. The direction of the river is here about W by S. and a little snow on some of the highest of the hills this day we passed the high mountain covered with snow hertofore mentioned it is on the left of the river and is a more stupendous pile than any of the Rocky Mts. Always covered with snow and is called the Snowy mountain.

27th in the morning commenced carrying the boat and goods which we finished at 1 ock. and making 9 miles in all stopped to repair the boat which was leaky from damage sustained in carrying rained all this day and saw but two Indians

28th With a fair wind and a little rain we decended the river at a great rate on the route we killed a goose which dropped in the water a white headed Eagle from a distance seeing this took occasion to come he seized it and lifted it into the air a few feet but our near approach frightened him away made this day 26 miles and stopped at a saw mill belonging to the H.B. Co. under charge of a Mr. Cawning a gentleman who came here 22 years since with a Mr Hunt he is in the service of the Co. We were treated by him with the greatest kindness he gave us mocasins and food in plenty.

29th Started at 10 ock and arrived at the fort of Vancouver at 12, 4 miles Here I was received with the utmost kindness and Hospitality by Doct. McLauchland [McLoughlin] the acting Gov. of the place Mr McDonald Mr Allen and McMckay gentleman resident here Our people were supplied with food and shelter from the rain which is constant they raise at this fort 6000 bush. of wheat 3 of Barley 1500 potatoes 3000 peas a large quantity of punkins they have coming on apple trees, peach Do. and grapes. Sheep, Hogs, Horses, Cows, 600 goats, grist 2, saw mill 2. 24 lb guns powder magazine of stone the fort is of wood and square they are building a Scho. of 70 tons there are about 8 settlers on the Multnomah they are the old engages of the Co. who have done trapping. I find Doct. McLauchland a fine old gentleman truly philanthropic in his Ideas he is doing much good by introducing fruits into this country which will much facilitate the progress of its settlement (Indian corn 300 bush) The gentlemen of this Co. do much credit to their country and

concern by their education department and talents. I find myself involved in much difficulty on abc. of my men some of whom wish to leave me and whom the Co. do not wish to engage no[r] to have them in the country without being attached to some Co. able to protect them alledging that if any of them are killed they will be obliged to aveng it at an expense of money and amicable relations with the Indians. And it is disagreeable for me to have men who wish to leave me. The Co. seem disposed to render me all the assistance they can they live well at these posts they have 200 acres of land under cultivation the land is of the finest quality.

30th to 5th. Nov remained at Vancouver and except the last day rain.

6th started down the river to look with a view to the Salmon business we decended the river at about 4 mils per hour and accomplished the journey in parts of 4 days the river is full of islands but they are all too low for cultivation being occasionally overflowed as also the praries (what few there are) on the main land with the exception of these small levells the country is so rough that a great part of the earth must be inhabited before this but the soil is good and the timber is heavy and thick and almost impenetrable from underbrush and fallen trees the description of Mess. Lewis & Clark and others is fully borne out as to size and more also the river is so well known at this part of it that I will not insert any observations of my own there are a great number of fowl on this river at this time and there will be more as they saw soon there are large swan white ge[e]se a goose with a motled breast and yellow bill a trifle smaller than the goose of N.E. A white goose almost exactly like the domestic goose of N.E. yellow feet and legs as also the former there is another goose like that of N.E. but I think smaller there is the tame duck of N.E. with 19 tail feathers and a fine duck to eat there is the grey duck of N.E. green winged teel Buffle heads Cape Races Dippers of the Sea loons seal deer I killed one swimming the river I saw no elk but only tracks fort George now occupied as a trading post by the H.B. Co. is well scituated on a sloping bank of the river about 2 miles outside of Tongue point and 6 miles inside of Clatsop point Chinook point is opposite the latter and inside Chinook is a river of small size is also inside Tongue point above Tongue point about 6 miles are the Cathlametts they are an archipelago of reedy Islands overflown at high water Here are ducks innumerable. the Indians in this part of the river are of late much reduced they appear good and hospitable as far as an Indian ever is that is they are willing to sell provisions for all they can get for them they appear to live well and I believe any one may with plenty of powder and lead on this river either as a purchase or to shoot there are no beaver here We arrived at the Fort of V. on the 15th Nov having had no rain during this time. I must here mention the very kind gentlemanly conduct of Mr. Jas. Bernie superintendent of Ft. G. who assisted me to a boat and pilot for the outer harbor and acted the part of host to perfection I had much pleasure with a little liquor and a pipe in his company he has seen much of this country and is of the old N.W. concern I derived much information from him on my return to the fort my men came forward and unanimously desired to be released from their engagement with a view of returning home as soon as possible and for that end to remain here and work for a maint[en]ance until an opportunity should occur. I could not refuse they had already suffered much and our number was so small that the prospect of remuneration to them was very small I have therefore now no men these last were Mr. Ball Woodman Sinclair, Breck, Abbot, Tibbits they were good men and persevered as long as perseverance would do good I am now afloat on the great sea of

life without stay or support but in good hands i.e. myself and providence and a few of the H.B. Co. who are perfect gentlemen During my absence Guy Trumbul died on the 7th of Nov. of the Cholic an attack of which he had on the Platte of which he nearly died in this case he was taken in the evening and died early in the mng. His funeral was attended by all the Gentlemen at the place and prayers were said accord[ing] to the form of the Church of England for this attention to my affairs in my absense was considerate to my feelings and I hope will be duly appreciated service is here performed on sunday and on the days prescribed by the church of Eng. our excursion down the river was performed in an Indian canoe which we hired for a 3 1/2 point Blankett We found it very kittish but withall a good craft for sailing and easy to paddle but the men were exceedingly awkward.

19th From this to the 29th I remained at Fort Vancouver eating and drinking the good things to be had there and enjoying much the gentlemanly society of the place.

On the 29th. with Abbot and Woodman in an Indian canoe I started for a journey up the Wallamet or Multonomah River this river which is highest in the winter was so at this time but is not rapid until near the falls the subjoined scetch will shew its course as I made it distance by the river by my estimate 27 1/2 miles to the falls which are perpendicular about 20 feet past these we carried our canoe about 1/4 mile and launched above the falls the water though generally more rapid above would admit of the running of a steam boat. In this river at this time there is more water than in the Missouri and not of a more difficult character to navigate the tide flows to within 8 miles of the falls below the fall the banks of the river are not suitable for cultivation being overflowed as far as the bottom extends which is not far and beyond these the country rises into rocky hills unfit for tillage but producing very large timber mostly if not all of the pines On the bottoms there is considrable oak of a kind not found in the States but of excellent quality for ship building and its the only kind of oak found in the country of the Columbia I noticed but two streams coming into the river below the falls the river to within 6 mils of its junction with the Columbia runs along the N.E. side of a range of hills or as they would be called in N.E. mountains at the falls it passes through this range this river has two mouths the East one is the one I assended the west one follows the range of hills above described to their falling on the Columbia about 3 miles below the eastern entrance the mouth of this river is in Latt 45 deg. 36 min. 51 sec. Long. 122 deg. 48 min. Above the falls for 22 mils by estimate the banks of the river are high enough to prevent flowing but timbered and not fertile and rough and the country apparently not valuable except for timber which is here mostly of the pines except a small quantity of cotton wood and alder the latter is here a tree of sometimes a foot and a half through at the falls the H.B. Co. are erecting a saw mill to which they contemplate adding a grist mill the scituation for mill priviledges is beyond any thing I have ever seen 22 mils from the falls are 3 or 4 Canadians settled as farmers they have now been there one year have Hogs, Horses, Cows, have built barns, Houses, and raised wheat, barely, potatoes, turnips, cabages, corn punkins, mellons The country here becomes open, but still wood enough and a much greater proportion of oak prairies of from 1 to 30 miles in extent bound by a skirting of timber this country seems a valley between the mountains to the East and West of about 50 miles wide including both sides of the river and is very level of nearly uniform soil extremely rich equal to the best of the Missouri lands. Accounts vary much as to its southerly

extent I have seen it at least 75 miles in southwardly direction and from all I can learn I think it extends with but little interruption as far south as the valley of the Buneventura which is also of the same description of the country. and I have never seen country of equal beauty except the Kansas country and I doubt not will one day sustain a large population 10 miles by land above the first settlement and 30 by the river is another by a MrJervie [Joseph Gervais] which was a very fine beginning of one years standing of the same character and product as the one below in all about 9 settlers are on this river if this country is ever colonised this is the point to commence the river is navigable for canoes to its very sources but as I understand very circuitous deer abounds in this district and wolves one of which a large devil I shot these settlers I found exceeding attentive to my comforts especially MrJervai at whose house I slept 2 nights I was absent from the fort this time 10 days.

To the 4th Jany. [1833] the weather was little better than a continual rain now however a hard rain often but a drizzling uncomfortable air during December there fell 9 1/2 inches rain by a pluviometer on the 4th the wind came strong to N.N.E. with fair and cool weather Ther. averaging about 19 Deg. this continued to the 8th when there is much floating ice in the river and those here think that with two days more of this weather the river will close. The readiness w[ith] which the river freezes must arise from the water getting intensely cold in the upper country. During this month Mr. McKay gave our room a treat of Buffaloe meat salted and smoked and this being the first opportunity of comparing good Buffalo meat with other good meat was highly acceptable. I think it equal to the best meat ever eaten. Up to the 4th there was no frost in the ground and ploughing is commonly done all the winter during the latter part of January the River rose about 4 feet which must have arisen from the rains as there could be no melting of snow on the Mountains at this season these rains must have I think extended farther back than is described to be their range viz the falls at which the timbered country terminates. Carrots are here finer and larger than I have ever before seen one I think was 3 inches through and of fine flavor. There appears much sickness among the people here especially among the common people which I think arises from low diet and moist weather for as far as I can observe the gentlemen who live well are not much subject to disorders. the main disorder is an intermittent fever which has carried off all or nearly all the Indians who live even worse than the engages. The Lima which sailed a month since had not to the 1st Jany. got out of the river. I have been informed by Mr Douglas and Mr. Finlesson that vessels have laid off the bar 7 weeks before they could enter.

11th Jany. The River closed with ice and I am detained here until it opens. Last winter the river remained frozen 5 weeks there is yet no snow. Today heard by Mr Hermatinger of the death of Mr Vande[r]burg killed by the Blackfeet up to this time the weather continued clear and cold for this country the Ther. varying from 12 deg. to 20 deg.

On the 18th at 2 o'clock it commenced hailing and at day light the hail was about 2 inches on the ground the River closed on the 10th and so remains at present on the 14th I walked across the Columbia and found the ice about 6 inches thick where it lay smooth but it was much tumbled up edge wise afternoon of the 18th commenced Raining and on the 19th rains still the hail was at one time from 1 1/2 to 2 inches deep on the 18th.

19th after raining hard all night there is no snow left it is warm and showery to day Ther. 54 deg.

20th Raining stil and Ther. 52 deg. River not yet cleared ice stationary.

21st 22nd warm and Rainy.

23rd The river Broke up still warm Ther. 51 deg. I am informed by Mr Dav. Douglas that a Mr Woodard whom he saw in Calafornia was intending to come to the Columbia for SaImon he is a Brother-in-law to Capt. Ebbets and is from New York Mr. Douglass saw him in Calafornia in July 1832. I am informed by Doct. J. McGlaucland that he has seen strawberrys ripe here in Dec. and blossom in Jany. the weather warm up to the 28th with occasional rains there is now little ice on the river on the banks the wreck and rubbish of the breaking up of the river. The H.B. Co. are now making a fort at Nass. to counteract the Am. vessells on the coast.

28th Warm still and fair the Co. are about sending a party under Mr. [Donald] Manson to make a fort at Milbank Sound.

30th Today a party sent to enquire after another reported to be cut off beyond the Umquoi or near the Clammat River under a man by the name of of Duportt [Jean Baptiste Desportes] I requested to accompany him but the Gov. would not consent alledging the[y] would conceive that I came to avenge the death of Mr. Smiths party who was cut off by the Umquoi Indians, all which I interpreted into a jealousy of my motives this party brought back 200 skins which they had traded they did not go beyond the Umquoi. they were gone 2 months lost no men and but 2 horses which Died of Fatigue.

31st to the 3rd. Feb. we had warm and wet weather on the 3rd at 10 ock. we started for Wallah Walla I had with me two men and am in company with Mr Emmatinger of the H.B. Co. who has in charge 3 boats with 120 pieces of goods and 21 men. I parted with feelings of sorrow from the gentlemen of Fort Vancouver their unremitted kindness to me while there much endeared them to me more so than it would seem possible during so short a time Doct McGlaucland the Gov. of the place is a man distinguished as much for his kindness and humanity as his good sense and information and to whom I am so much indebted as that he will never be forgotten by me this day we came to the Prarie Du Li[s] 15 miles raining most of the day.

4th Left the prairie Du Li on the lower end of it this prairie is about 3 miles long and through it the River Du Li a small creek enters the Columbia we made but 2 miles when one of our boats ran foul of a rock and was stove it landed its cargo without wetting much this accident detained us till 1/4 before 12 ock when we started and kept on till 2 ock and stopped 20 minutes to dine then kept on till 1/2 past 5 ock making 17 mils this day this River is at medium water the rivers banks high precipitous and rocky from the Lea prairie in one place the bank on the N. side rises to 200 feet perpendicular I saw a hawk light on a projecting crag about half way up which gave me a good idea of the height of the rock from this rock a small stream casts itself into the Com. w[h]ether a

permanent one or not cannot say but should think not there are here many white headed Eagles one skunk we saw today the timber appears much smaller than below no rain but cloudy this day wind west and Ther. about 40 deg. now at 8 ock at night the full moon is looking down calmly upon us aparently thinking that the cares of us humble individuals concern her little.

5th We left camp at 7 ock and made 4 miles to breakfast and in 7 mils more the foot of the Cascades our breakfast was made on a small island abreast of a rock rising perpendicular from the bed of the river as I should think 400 feet high Lewis & Clark call it I think 700 feet this rock is nearly surrounded by the waters of the river

The Cascades occasion a portage of 100 rods our goods were carried across this day the river is here compressed into a very small place and the bed is full of rocks I should think the fall to be about 8 feet in the space of the 60 rods There are here two fishing villages both now deserted as the people here say from the inmates being all dead of the fever but I suspect some are dead and the rest and much larger part frightened away we made the portage by the North side on which is one of the above villages it is near the river on a little clear spot with a little lake in the rear here the Inds were once hostile and great caution was once used in passing now but little is requisite it rained all the latter part of the day and night and morning of the 6th finished the portage but our boats were so bruised that the rest of the day was taken to gum them took a look about me the rest of the day found that the tripe de roche grew on the rocks here but small here there are many petrifications of wood in a bank of gravell some of which are perfectly petrified and will not burn in the fire but others appear only half so and burn and cut freely they are found bedded in stone composed of rubble of some former world the gravel is cemented together by finer gravell the whole being volcanic and water worn.

7th At 1 1/2 mile above the Cascade is a small river from the N. and 4 1/2 above this a creek from the N. rained all the 6th and rains a little today and came in all 27 miles passed many Indian habitations on the river and canoes 15 mils above the Cascades is a Torrent that precipitates itself into the river from about 60 feet 17 mils from same on same side viz south is a creek both small one between them on the N. side timber growing gradually thinner.

8th We found that a Capeau and 2 blanketts had been stolen by some Inds. from one of our men and went to the village just below our camp to recover them they acknowledged the theft but the thieves had run off we took two canoes to our camp and breakfasted immediately after breakfast the man who had lost the articles took an ax and broke the worst canoe for which he was reprimanded by Mr Ermatinger the other he left and a little after we left I saw the Ind. come and take it we made 29 mils to the Dalles which are one mile or thereabouts long and encamped having passed two of the boats the other owing to some mistake had she[e]red out and forced the line from those who were towing and forced one Indian into the stream and was drowned he was in a bank about 15 feet high he swam until he got into a whirl pool and went down. Just below the Dalles the timber ceases there are here many Indians Tilky & Casineau are here the chiefs and very clever ones all this day we saw Indians on the banks the water passes even now at a furious rate and at high water it is impassible and boats are carried as much as two mils and all the goods

for assisting through this place a little tobacco is given the Inds. we gave the usual quantity and saw a personal struggle for the division of it.

9th Left the Great Dalls and in three miles came to the little dalles which we passed by towing in which we were delayed by reason of having only two lines one having been lost at the time the Indian was drowned in three miles more I arrived at the Shutes or falls of the Columbia which are not in this stage of the water more than ten feet perpendicular but much more than that including the rapids above and below in the immediate vicinity these falls once during the times the whites have been here have been sailed up owing as I suppose to the Dalles at such times affording a slow outlet to the accumulated waters and their being raised by this circumstance to above the level of the falls this day got our baggage and goods over at the G. Dalles I traded one horse which I sent on by Abbot at the Shutes we found about 150 to 200 Indians who were very troublesome [having] to pay for very trifling services however they stole nothing.

10th Passed over and gummed the boats and at 1/2 past 12 started up the river having traded another horse and sent it on by Woodman one mile above the river Aux Rapide comes from the south the size of the stream I cannot tell as I only saw the mouth of it here on the N. side of the river Abbot came to me having lost the horse entrusted to him I took Mr. Woodmans and gave [it to] Abbot with orders to wait until 10 ock tomorrow and then to come on whether he got the horse or not we came today 9 miles and 6 yesterday here we have to give a piece of tobacco for every stick of wood we get last night was the first frost I have seen since the river broke the grass is somewhat green this part of the river affords trout in small quantity.

11th Started at an early hour and made the mouth of a considerable stream coming from the S. called John Days River from a hunter of that name formerly in this country distant from our 1st camp 7 1/2 miles we camped 22 1/2 miles from this on the North side of the river having had a strong and fair wind all day one thing I observed in this part of the River is that the savages are civil and as much as one in ten has lost an eye as I suppose from the effects of the fine sand of the river being blown about or the violent wind for which this part of the river is noted we found some few roots and little game with the natives the night was windy and uncomfortabl but no frost but a little rain

12th At 1/2 past 6 we started and made 2 miles to breakfast on the N. side fair wind and clear one boat stove and must stop to repair and gum found two small logs of drift wood at 10 ock. recommenced our journey with a fair light wind and made in all this day 17 miles during the day had the satisfaction of seeing Abbot come up but without finding the lost horse.

13th Calm in mng. but after breakfast had a fair and midling strong wind at 1 ock passed the upper end of Grand Island an Indian to day brought me a pouch and horn stolen from one of my men going down but the balls and powder used up which I redeemed for a little tobacco last night a frost not severe made this day 25 miles found wood enough for use on the banks but it is a custom of the Indians to run along the beach and take possession of the wood there may be and sell it [to] you for tobacco which appears to be their greatest luxury a quid is pay for almost anything.

14th We started at 6 ock and in one mile passed the River Ottillah one mile above which rapids commence the[se] we passed one mile long making 3 to Dreakfast and started at 1/2 past 10 with a fair and strong wind and reached Walla Walla at 5 p.m. just befor[e] reaching this place the cut rocks close into the river in such a manner that there appears but a small perpendicular sided gap to look through past these and at W.W. both bank[s] fall down to a nearly levell plain we were again hospitably received by Mr. P.C. Pambrun we remained at this post until the 19th of Feb. the weather mild and clear but high S.W. winds W.W. is a place noted for high winds a little frost during the nights only gras[s] just getting green My horses in tolerable good order and all found eat horse meat all the time at this post On Sunday took a ride up the river W.W. found its bottoms good but not extensive and no wood the corn for this post 150 bushells last year was raised at least 3 miles from the fort none was stolen by the Indians a good test of their honesty as they are all most always starving. This place is kept by about 5 men Inds. are freely admitted inside of it about 1200 skins traded here it is kept up mostly for trading horses and the safty of the communication the course of the Wallah [Wallah] river is E. by N. near the fort when I saw it.

19th Just as we were leaving the fort an Indian brought in the horse which Abbot lost at the Dalles and a short time after leaving the fort an Indian sent by Mr. P. brought one other which had strayed from Abbot at this place we made this day 7 miles to a branch of the Wallah [Wallah] river here coming from the N. the space nearly a plain and barren and sandy but good grass this branch appears to be about half the Wallah [Wallah] river encamped a little after sundown and for 12 yards blue clths. 1 Blkt. 2 1/2 pt 50 balls & powder 2 knives 1 lb. Tobacco bunch beads, 10 fish Hooks traded a good horse this appears a fair price here.

20th We made a late start and after travelling 9 hours without water arrived at the Snake river here running W. our course was this day N. by E. 22 1/2 miles over a country which would be considered light sandy land with little sage grass good and in tufts very level except some trifling roundly swelling hills these make one think of gently swelling breasts of the ladies. Day warm and clear We in the first of the day followed the branch of the W.W. mentioned yesterday say four miles on which I saw blackbirds which Mr. Pambrun says stay at W.W. all winter.

21st No frost in morning. Crossed the [Snake] river to the mouth of a creek coming into the river from the N. for 10 miles which was the length of our march this day this creek is through cut rocks of moderate height for this country. We followed the stream on the east bank. These banks were about 300 feet high to the levell of the plain if that can be called a plain where the hills rise to an almost equal height and the gullies are abrupt and narrow. The soil was what would be called in N.E. a poor sandy soil producing good grass but still no wood Traded two horses this day at the usual rates The people who are most used to this country are so little afraid of the indians that they either travel without guns or with them unloaded.

22nd A pretty hard frost in the morning followed the river one mile on the North side then crossed it and made North 3 miles and crossed a branch of it coming from the N.W. Our course this day N. by E. and encamped at a little run of water running S.E. This is inconsiderable Saw

about 20 antelope this day in one herd at our camp this nigh[t] observed about 2 inches of frost in the ground this days ride over very rocky country the valleys of which are very good but small otherwise more sandy than common grass good Made 22 1/2 miles

23rd N. 17 miles over a rough and Rocky country with a few small bottoms which are good land at 9 miles from last camp passed some of the best specimens of Basaltic colum[n]s which I have seen They were 5 sided and about 50 feet high some standing independent others tumbled down to the foot of the wall like demolished Towers This days march [passed] many small lakes whether formed by the snow or not I can not say but I think some of them are permanent none larger than a few acres Camped at a stream coming from the N. and were visited by three Indians who report the road to Colville impassable for snow a hard frost last night and frost in the ground beside the lakes mostly frozen over but not thick these made me think of the old business of my life.

24th 20 miles N. through timber in the first of which we encamped last night the stream which we camped on here forks no game except two small prairie hens passed many little lakes one of which is as large Fresh Pond and one nearly so the rest smaller Patches of snow and one third of the trees prostrated last year by southerly gale their trunks much obstructed the path before us on the right are snow covered and moderately high Mts. found good wood at our camp by the light of which I now write the scene reminds me of my Ice men at work by torch light not frost enough in the ground to prevent driving tent stakes the little [rain] and snow made streams [which] run Southerly

25th in a N. direction 15 miles to Spokane River a stream now about half as large as the Snake River it is now high from the melting of the snow its sources are not distant and in a range of Mts. in sight this Range runs about N.W. which is here the general course of the stream but how far I cannot say as it is visible but a short distance at this place are the remains of the old Spokane House one Bastion of which only is now standing which is left by the Indians from respect to the dead one clerk of the Co. being buried in it the banks of this river are here rocky and precipitous I observed among the rocks of its bed Granite Green Stone Quartz sandstone Lava or Basalt the country on approaching this river from the South resembles the pine plains of N. Hampshire near Concord we passed the divide between the waters of this and the last river about 5 miles from our last nights Camp striking then after passing the isolated wood in which we had camped and a large plain devoid of wood a deep valley running N. Crossed the most of our baggage today

26th Arrived [at Spokane House] After perusing the enclosed loose papers I proceed

27th March due N.E. by N 24 miles we made this day This line cuts the Spokane river This point we turned but I call the course direct for convenience this course is through a tolerable fertile prairie the grass good and flowers plenty on the W. side are low range of rocky hills which are granite and a better development of the broken rock named yesterday I find it to be volcanic by its being [a word omitted] blending with porous rock on our left and about half way of the days march passed a mile distant a little lake 1/2 mile across to the E. by N. Of this is a lake 3 miles across from which the Spokane flows neither of these I have seen but take this from hearsay ar-

rived at our camp and all well and in better order I have forgot to mention that the stream [Little Spokane River] that comes into the Spokane near the House beings down pebbles of volcanic rock also that the streams near our present camp come from the hills enter the prairie of the Spokane River and disappear in the ground.

28 Made 18 miles N. through a level and wooded country and camped with only snow water and poor grass the rocks seen to day are boulders of granite and observed that the compass in one place would not Traverse this happened while going to Colville from Spokane and coming from there back also observed Today and yesterday the effects of some former gale in prostrated trees direction here S.W.

29 horses missing in mng. and not found till noon went N. 9 miles and struck Flat Head Rivers compass again refused to traverse through deep snow today and yesterday and thick young trees and fallen timber observed here the white pine and Hemlock snow and rain all yesterday found our people at the river with the boats.

30th Remained at the same place crossed the river I here saw an Indian who was entirely blind he seemed to be taken good care of by his relatives made him a small present for which he thanked me parted company with Mr Ermatinger he to go on with the goods by water myself with horses by land last night the coldest for some time today warm and pleasant

31st Moved early N. 7 miles passing a point and to little streams Excessively bad going in crossing the point from snow and brush E. two miles along the river N.N.E. 5 miles to the Lake [Pend Oreille] then a line to our camp cutting the lake 5 miles more N.N.E. This lake is about three miles broad and indeed the river so far resembles a long lake little or no current and 3/4 miles wide plenty of partridges, geese, and Duck and some deer meat of the Indians all clay country mountainous one Horse gave out and left him a good lodge made of Branches of Pine had almost made me forget that it had snowed and rained all day ourselves and goods were wet through we had no human comfort except meat enough to eat and good.

1st April E. 2, N 3, E by S. 3, and found that from this spot the place where I entered on the lake bore S.W.N. by E. 2, E. by S. 5 N. 3 and made the traverse of a large peninsular at one mile E. by N. struck the head of a creek which after 3 miles more led us back to the Lake at the entrance into it of the River Tete Plate. [Clark Fork] This Lake is a large and fine sheet of water it appears of a good depth There looks as if a large river entered on the S. side at the east end it is widest and there are two Islands it is surrounded by lofty and now snowy Mts. but their summits are timbered yesterday saw nothing but Granite today saw Slate and Sandstone not the least volcanic appearance in this part of the Country.

2nd Made E.S.E. 6 miles through a difficult swamp over a hill and to the main river again during which time we passed two small streams this swamp had the largest cedars apparently the same as those of the N.E. that I have ever seen I measured one at my height from the ground of 31 feet circumference and I presume some were larger no rocks to day but sandstone and slate camped

on acc. of my horses having had no feed lately the slate is tortuitous and I think mica slate here my Indian brought me in some onions and two kinds of trout some of the trout I have bought of the Indians as large as 10 lbs. they are plenty and taken with the hook there are plenty of ducks and ge[e]se the Ducks are the [same] as the tame ducks of N.E.

3d 10 mils almost due E. cutting a mountain and through almost impenetrable wo[o]d and deep snow much trouble and delay to keep the trail from the mountain 4 mils from last nights camp saw our last camp on this Lake which bore W. by N. to night we camped without grass but could not go further some of the horses strayed in the trail behind

4th Started our Indian early to find the strayed horses and started camp ahead 9 mils E. following the river the whole way altho the trail cuts off the point and encamped where the trail again strikes the river at this place there is a considerable [Bull River] coming from the E. by N. into the river here for the first time since reaching Walla Walla I saw fresh Beaver sign the Indian has not yet come up with the horses and little feed for those we have with us to day saw a small sized Bear but he was off to soon for a shot

5th 12 mils E.S.E. through deep snow and thick wood most of the way sometimes miry sometimes slippery with ice and always obstructed by the great quantity of fallen wood Last night late the Indian brought up all the lost horses

6th 9 mils E.S.E. trail better slate rock only Camped on the river last night in the mountains. Yesterday two horses gave out left a man to keep them and bring them up if possible to day one gave out which I will leave at this camp for same man

7th Arrived at the Flathead post kept by Mr. Rivi [Louis Rivet?] and one man after a ride of 17 mils E.S.E. through thick wood not very good trail and a snow storm which loaded the pines in such a manner as to bend them down to the ground frequently loading me with the snow as passing I disturbed the branches trees loaded down in this way and frozen so as to be firm constitute much of the difficulty of the route from Flathead or Ponderay Lake to this place want of grass at this time of the year the residue with some mire rock mica slate this place is situated on a fine prairie 2 mils long 1 wide and seems pleasant after coming through thick woods and mountains counting my horses found 32 of 47 with which I started but think I shall recover all but one left on the Lake having sent men and Indians in search of them Mr. E. came in the boats in 5 days I have now news by four Indians who came in on the 6th on foot the Nez Perces have lost all but 4 horses of their band of about 500 stolen by the Blackfeet The Flatheads expected in about 15 days on the 11th started out to see if there were many beaver in the country with intention of staying 12 days but was recalled by the arrival of the buffaloe Indians found few beaver and the country can only be trapped on foot plenty of pa[r]tridges to be found in this country arrived again at the post on tho 17th of April my route was back on the Flathead River.

18th to 20th remained at the post having now found all my horses started camp 2 miles East up the river and to the upper end of the prairie on which the house is built at this place is a large

creek coming from the N. [Thompson River]

21th rained hard last night and from the 17th to this day have had one or more slight showers each day the plain is now good grass we are much annoyed by the dogs of the Indian village which are numerous they eat all our cords and fur flesh they can get at in the night this is always a great trouble while travelling with Indians until you get to Buffaloe where they find better food for three nights no frost This valley is the most romantic place imaginable a level plain of two miles long by 1 wide on the N a range of rocky and snow clad Mts. on the S. the Flathead river a rapid current and plenty of good fishing running at the immediate base of another lofty Snowy and Rocky range of Mts. Above and below the vally the mountains of each range close upon the river so as apparently to afford no outlet either way about 200 horses feeding on the green plain and perhaps 15 Indian Lodges and numerous barking dogs with now and then a half breed on horse-back galloping gracefully with plenty of gingling bells attached to all parts of himself and horse it is really a scene for a poet nought but man is wanting to complete it

22nd Moved 8 miles E.N.E. along the river at 6 miles passed a very bad rock called le Roche Mauvais the mountains as yet closely follow the river on both sides but seem declining in height as we stopped early we spent the rest of the day in preparing to prevent the Blackfoot from stealing our horses they have never but once passed the bad rock and then the Flatheads gave them such a beating as keeps [them] since in better order they infest much the country we are now about entering

23d Moved 8 miles E.N.E. to Horse plain thence N.E. 5 miles cutting a hill and leaving the River which we had heretofore followed descending the Mts E.N.E. 6 miles to a large open valley in the hills with little timber and much grass opposite to our Camp is a mountain where 200 Flatheads Conterays [Kootenais] Ponderays and other Inds. were killed by the Blackfoot Inds. During the first part of the last division of the days march passed a small lake with many waterfowl and one sand hill crane. We are now fairly in the dangerous Country through Horse plain and into the R Flathead is a small brook to day 2 Indians arrived from the main Flathead Camp at Porte D'enfer [Hell Gate] with news that the Blackfoot have made 2 hauls of horses from them the Flathead Camp consists of men of various tribes

24 moved E. by S. down the valley to Flathead river then 4 miles E. following the river then Forded it and made 3 miles E. by N. and encamped on it at a place where last year a man by the name of La Couse was [killed] by the Blackfoot Inds. the river is not now high when so it is not fordable and is here a good sized stream the salts here whiten in the ground and the animals are almost crazy after it which makes them bad to drive the morning was sultry and I travelled without my coat but in the afternoon we had a fine shower with some thunder of good quality the valley we left today abounds with the finest Kamas I have yet seen as provisions are scarce in camp the women dug much of it

25th Moved Camp up the main river 12 miles E 12 N. then up a large but fordable branch 3 miles E. by S. trail fine grass good weather beautiful no frost for three nights the Climate appears

much as at Baltimore at this season

26th made E. along the creek last named 5 miles then crossed and followed it 4 miles S.E. then recrossed it and followed it E.S.E. 3 miles crossing a small branch then 2 miles recrossing the main creek again then followed 1 mile E S.E. and recrossed it and followed a small branch of it S.E. 1 mile crossed the branch and followed it 2 miles S.E. to Camp clear except 1 shower but only comfortably warm Country hilly but open E. lay a heavy pile of snowy Mts. 5 miles distant apparently running N. & S. the rocks for a few days have been Sandstone mica slate this day saw a white bear which we surrounded to kill but he broke through and escaped earth in some places whitened with salt which makes the horses bad to drive horses getting fat grass good as also the bottom lands which are tolerably extensive

27th Remained at same camp snowed a little this day the Indians went hunting and got one Deer

28th Abbot brought in one Beaver started Camp 2 miles S.E. 2 S.S.E. 2 S. 4 S. by W. thus far through woods and a defile crossing the divide between the creek which we were on and another going to that branch of the Flathead river to [which] we came this day. then into open plains snowy mts on each side 3 miles S.S.E. then 5 miles S E by E crossing two slews of the Flathead river and Camped on a third and large one which we shall be obliged to raft over I judge it twice as large as the one we crossed some days since the river here runs S.W. a little snow today quarrelled and parted with my man Woodman he appeared to think that as I had but two he might take liberties under such circumstances I will never yield an inch I paid him half as I conceive he had gone half the route with me here we met some Indians from the great Camp which they say is a moderate Camp distant

29th Forgot to mention in proper place that I saw Plumb trees at the place we left W. branch of the Flathead river these are said to be good about [one] inch through ripe in Sept. and found nowhere else but at this place I tried hard to get some stones but could not Moved this day S.S.W. we crossed by fording contrary to expectation by loading high and taking high horses at 8 miles struck another branch of same river as large as those already passed at 4 miles further a creek from opposite side ford tolerably good at 20 miles came to main Camp of 110 Lodges Containing upward of 1000 souls with all of which I had to shake hands the Custom in meeting these Indians is for the Coming party to fire their arms then the other does the same then dismount and form single file both sides and passing each other shake hands with men women and children a tedious job buffaloes have come here and even further but they are killed at once and do not get wanted here the racine amani or Spetulum [bitterroot] is found this Camp is on the river good grass river direct S.S.W. six nights since the Blackfoot stole horses from this Camp here I found three Canadians one of whom was one who came to us the night before we were fired on on the heads of the Spanish River this days march between two parallel ranges of Mts now Snowy but I think not always so there is much kamas in this region we find little meat in the Indian Camp and are therefore much shorted for food

30th went out to collect some flowers for friend Nuttall afterwards to see the Camp fine 120

lodges of us today some having arrived they are collecting to go to the Buffaloe in force to meet the Blackfeet looked at their games one is played by two men at a time a level place is made on the ground about 15 feet long by 3 feet wide with a small log of wood at each end to stop a small iron ring with one of them rools from one end of the ally to the other both following it each having an arrow which they endeavor to throw after and under it so that when stopped it will rest on one of them the one on whose arrow it is wins at least this is all I understand of the game the game is kept by a third by means of placing sticks on one side or the other another feat much in practice from the smallest to the largest in Camp is two with some arrows throw them so as to go as near the first thrown as possible advancing continually untill all are expended then throwing them back again in same manner another game is two or more opposite the one side having some small article in their hand keep changing it from one hand to the other as swift as possible accompanied by a tune and motion of body and limbs except feet (for they sit all the time) the get is for the other party to designate the hand in which it rema[i]ns at the last this is the most practised game and requires much dexterity on both sides it is kept with sticks as the first every morning some important indian addresses either heaven or his countrymen or both I believe exhorting the one to good conduct to each other and to the strangers among them and the other to bestow its blessings he finishes with "I am done[" the whole set up an exclamation in concord during the whole time Sunday there is more parade of prayer as above nothing is done Sunday in the way of trade with these Indians nor in playing games and they seldom fish or kill game or raise camp while prayers are being said on week days everyone ceases whatever vocation he is about if on horseback he dismounts and holds his horse on the spot until all is done Theft is a thing almost unknown among them and is punished by flogging as I am told but have never known an instance of theft among them the least thing even to a bead or pin is brought you if found and things that we throw away this is sometimes troublesome I have never seen an Indian get in anger with each other or strangers. I think you would find among 20 whites as many scoundrels as among 1000 of these Indians they have a mild playful laughing disposition and their qualities are strongly portrayed in their countenances. They are polite and unobtrusive and however poor never beg except as pay for services and in this way they are moderate and faithful but not industrious. they are very brave and fight the blackfeet who continually steal their horses and kill their straglers with great success beating hollow equal numbers They wear as little clothing as the weather will permit sometimes nothing on except a little thing to cover the privates and sometimes but rare this is omitted at play but not when there are women and allways at a race the women are closely covered and chaste never cohabiting promiscuously with the men the pox is not much and perhaps never known among them it dies here of itself when brought from the coast where it is rife the young women are good looking and with dress and cleanliness would be lovely today about 100 of them with their root diggers in their hands in single file went out to get roots they staid about two hours and returned in the same order each time passing the chiefs lodge it was evidently a ceremony but the import I could not learn in a lodge or other place when one speaks the rest pay strict attention When he is done another assents by "yes" or dissents by "no" and then states his reasons which are heard as attentively it is a practice when a woman has her courses to make a little lodge outside her husbands lodge and there remain until they are finished. The more peaceable dispositions of the Indians than the whites is plainly seen in the children I have never heard an angry word among them nor any quarrelling altho there are here at least 500 of them together

and at play the whole time at foot ball bandy and the like sports which give occasion to so many quarrells among white children

May 1st. Same camp the day reminds me of home and its customs it is a fine and almost summer day altho the nights have been frosty of late but the days are warm This morning the squaws left camp with their root diggers singing in good accord the tunes of their country Yesterd[ay] Mr. Ermatinger traded 29 beavers I find an Indian Camp a place of much novelty the Indians appear to enjoy their amusements with more zest than the whites altho they are simple they are great gamblers in proportion to their means bolder than the whites

2nd Moved Camp 2 miles S.E. by E. 4 miles S by E. over a hilly but open country and diverging a little from the main river to the Eastward and Camped on a small river going to the same river the two parallel ranges of Mts still continue on either side of the river It rained a little of the last night and some this morning the day is cloudy and moderately warm The absence of quarrells in an Indian Camp more and more surprises me when I come and see the various occasions which would give rise to them among the whites the crowding together of from 12 to 1800 horses which have to be driven into Camp at night to stake in mng. to load the starting of horses and turning of loads the seizing of fuel when scarce, often the case, the play of men and Boys &c. At the Camp yesterday saw the bones of a buffalo bull not old being the first sign of buffaloe yet seen.

3d. Same Camp.

4th Same Camp To day heard a sound like a heavy piece of ordonance and I suppose arising from the fall of some mighty fragment of rock from the mountains The sound seemed to come from the N. I suppose the sound heard in the Snake country arose from the same cause altho then no heavy mountains were in sight but there were cut rocks enough weather somewhat smokey but warm and clear A party of hunters who proposed to out for beaver deferred the thing on acc. of the water being too high to set a trap. A Thunder storm in the afternoon with high wind from the S.W. and Rain.

5th. Sunday according to our reconing there is a new great man no[w] getting up in the Camp and like the rest of the wrld covers his designs under the great cloak religion his followers are now dancing to their own vocal music in the plain perhaps 1-5 of the Camp follow him when he gets enough followers he will branch off and be an independent chief he is getting up some new form of religion among the Indians more simple than himself like others of his class he works with the fools women and children first while he is doing this the men of sense thinking it too foolish to do harm stand by and laugh but they will soon find that women fools and children form so large a majority that with a bad grace they will have to yield. These things make me think of the new lights and revivals of New England rains a little today

6th. Bright and clear found all of my horses three of which had been missing Moved 4 mils S. and encamped on a creek of the main river about 1 1/2 mils from the latter

7th. Same Camp cloudy all night and today but warm

8th. Same Camp last night had a false alarm Some Inds. of the camp who were gambling for a gun discharged it before laying [it] on the stakes This though a common occurrence gave the horses a fright and one frightens another in those cases until all are alarmed the running of those that have got loose the snorting stamping and rearing of those who cannot when there are at least 1500 the Howling of dogs men running with guns the contrast of firelights with the darkness of the night make altogether a scene of confusion to be recollected This day hunters went out 2 only one returned sun two hours high with one antelope the other at night with 4 To day a small boy broke his arm but as I understood that the Indians reduce fractures well and as I am quite ignorant I did not meddle with it

9th. Moved S. by E 6 miles and camped on the main river on the march saw two blackfeet who ran with all the speed of their horses to the mountains a little rain but warm high wind and somewhat dusty The rain does not seem to lay the dust in the least The country covered for the first time with sage and so far the same kind of minerals as near the Ponderay Lake This afternoon came to us a Snake a Nez Perce and a Flat head on foot they came from Salmon River and bring no news except that the Nez Perce Camp is at Salmon river and that they are mostly without horses

10th Moved 7 miles E. by E. rained a little shower but clear in the afternoon. This morning Chief Guineo is saying the usual afternoon prayers I observe that he first makes a long one which is responded to by the usual note in accord then a short one followed by the same note on horse back the whole time walking about the Camp hat on in an audible voice and directed as though addressing the men below rather than "him" above To day 11 Flatheads started on foot to steal horses from the Blackfeet

11th Started out early hunting for the first time this trip We are now short of provisions. The Camp moved 10 miles S. by E. and camped on the river the wide bottom of which is done it is now jammed in between the hills during this distance passed two small creeks big enough for beaver only saw four antelope killed nothing saw two olive green snakes about 2 1/2 feet long blunt tail but slender afternoon clear and warm

12th Being Sunday remained at same Camp the hills here are of Granite with large bed of quartz. Mica slate is common Gneiss also in some places the same rock as at Kettle falls observed in one place a black mineral like that found at Franconia [in New Hampshire], covering iron ore it looks like horse hair in a mass combed straight the hills are now well covered with grass the river is now at its highest but is fordable this morning long prayers in form as usual at some lodges the Inds. are singing as an act of devotion

13th Went out hunting killed one N.E. partridge only saw 4 cubs 4 deer Camp moved 6 miles S.S.E. and camped on the W. side we approach the head of this river fast

14th. remained at same Camp snow and sleet all day An Indian died in camp to day but I do not

think the Camp was delayed on this account it was a bad day which I think the reason his friends now singing over him according to their custom

15th made 6 miles S.S.E. and crossed the river and camped on a little creek crossing wo on the W. side all too small at low water for beaver. snowed last night and until 8 this mng. altho as much as 4 inches of snow has fallen it is at 11 oclock all gone except the hills which are white grass good Granite country and fertile in the bottoms and on the hills and mountain sides

16th made 9 mils S.E. following a creek of the main river about 1/3 the size of the same this we crossed 6 times during the day this morning 4 inches snow which fell during the night but all gone at 9 ock fair at 4 in afternoon this day finishes all our provisions in above distance river crooked.

17th. 2 miles S.E. 3 E and cutting a high mountain 1 mile S by E. and struck the river again in a large and fertile plain here crossed the main branch of it and followed 2 miles a creek running S by E at the place where we left the river it receives a small creek from the S and where we struck it again another quite small from the N. The main branch appears to run about E. from the plain when arrived at Camp finding no meat I took my traps out to catch beaver when returning saw the squaw bringing in moss and roots when I came in found the hunters had come it with one bear one Elk and several deer and 5 beaver this makes a timely supply Indians are gone ahead to see the mountain is passable This mountain divides us from the heads of the Missouri.

18th 2 miles up the creek S. by E. then assending the mountain S.E. 2 more S by E down the mountain and struck a little thread of water which during 28 mils increased gradually to a little river and S.E. to another coming from the S. and both go off together N. this is one of the heads of the Missouri we crossed it and camped here we found both Bulls and cows which makes all merry this pass is good going when there is no snow now there was about one foot in places drifted more we took 8 hours to pass there is a visible change in the appearance vegetation is not so forward the trees appear stunted and small the land poorer and covered with Sedge the other side there is little on the W. side all is granite as soon as I passed the divide I saw Pudding Stone we had showers of snow and rain this day but this I believe is constant in this region at this time of the year the Mt. is much higher the W. than the E. side This I observed also at the Trois Tetons The grass is poor and has started but little the prairie in some places has snow The vally runs N. and S. and is bounded E. and W. by a range of Mts. this day my horse keeper left me taking an offence at some misinterpretation about a horse. The 16th Woodman came to camp from his hunt for a beaver tired and famished having eated nothing for three days

19th Same Camp snowed by fits most of the day being Sunday the medicine chief had devotional exercises with his followers he formed them into a ring men women and children and after an address they danced to a tune in dancing the[y] keep the feet in the same position the whole time merly jumping up to the tune keeping the hands in front of them at intervals he addressed them at night Blackfeet were seen prowling about the camp at least so the Indians say erected myself a lodge for the first time in the country and paid a treat of rum &c to the whites in Camp and some

of the principal Indians to wet the same as it is called.

20th. Snowing hard in the morning one horse so lame that if we move Camp to day he will remain for the Blackfoot or wolves. Much the same. Started at half past 12 found the horse could be drove a little got him along about four miles shall return for him to morrow this day 9 miles E.S.E. over a level plain of rich deep soil wet and miry in the extreme saw our Indians running buffaloe ahead At 5 mile crossed a little brook running N by E and camped on a considerable creek running N. by E. and all falling in to the same as the creek we left At about the junction it doubles round a point of mountains and apparently takes a northeastwardly course rain snow and sunshine as usual today. 4 hunters left us to day to hunt beaver in the Blackfoot country, Pellew, Charloi, Narbesse, [Louis] Rivey.

21st. Same Camp sent back and brought the lame horse into Camp Went out to the mountain to cut log poles found a Blackfoot lodge recently occupied snow as usual saw the Indians cooking a root resembling the yellow dock, but not so yellow tasted like parsnip raw, informed by them that it is bad before being cooked suppose it is more or less poisonous

22nd Same camp Blue Devils all Day Turned in

23rd 6 miles S.S.E. and up the valley 3 S E by S. 3 S.E. This valley is all good land about four miles wide and perhaps 50 long and how much further it goes N. I cannot say. Went out to hunt buffaloe killed one Elk out of a large band mountains with snow each side of valley snowed a little as usual

24th A double portion of the usual weather viz. rain Hail snow wind rain and Thunder into the bargain we are so near where they make weather that they send it as if cost nothing Course S.E. 6 miles up the creek then by N.E. 3 cutting a height of land but low and perfectly good going to the head of another river running SE. down this two miles and camped hunted today killed one cow saw some hundreds

25th Followed the creek 5 miles S.S.E. then it turned round a point more eastwardly We continued same course 4 mils and struck a creek going into the same about 2 mils below the point spoken of rain snow & Hail today with sunshine grass better to day had a long ride before sunrise after the lame horse which I brought to Camp.

26th Same Camp A blackfoot Trail discovered in our vicinity a numerous camp of them better weather than usual to day Sunday according to our reconing. At night one of two Indians who started on an express to the Nez Perces Camp returned with three blankets one white shirt and tobacco and powder which articles they found buried with a Blackfoot Indian who was unscalped two bullets through his head and one through his body We apprehend that there has been a battle between the Blackfoot Indians and perhaps the whites.

27th 17 mils S. crossing two small forks of the Missouri and camping on the third of small size

near Camp found a red blanket Hat and some small articles but no body. soon after Camp arrived one Indian with news and soon after 2 more and three squaws comprising the only survivor of the battle which happened thus 21 Nez Perces 18 Flathead and two Iroquois and 1 Ponderai started with intent to steal horses from the Blackfeet near the head of Salmon River they saw 4 and some horses these they attacked just at this moment a horse threw one of the Flatheads he seized on one of the horses of the Blackfeet and ran after him up a mountain he looked back and saw a large number of Blackfeet killing his companions not one survived but himself he made the best of his way to the Nez Perce camp to tell the sad tale to the wives and children of the dead

in this Camp [where] the relatives of the deceased Flathead are there is weeping and wailing. Fair all day and comfortably warm. there were 46 lodges of the Blackfoot do not know if women were with it or not if not it is a much larger Camp than ours, the blankets &c found are accounted for in the practice that the Blkft. have of cutting a piece of flesh from near the shoulder tying it to an article and throwing it away to propitiate the Deity the circumstances of the flesh being tied with them I did not at first know.

28th Moved S. 8 miles following the left branch of the creek which forks at our last nights camp then S.S.W. 4 miles and camped on the same creek a little rain just after we came to camp a band of Buffaloe passed the camp which gave a fine chance to the Indians to run them one of them they chased into camp and then killed her a fine cow.

29th Moved S. by E. 6 miles cutting the divide of waters and struck a small creek going into Salmon river then 7 miles S by E. following the creek through high hills of lime rock on which we found plenty of sheep some of which were killed then 3 miles S.W. and struck Salmon River here a small creek running through a fine open plain valley about 6 miles wide and extending each way as far as the eye could reach the river runs here about W. by N. On the S. side is a high range of snowy mountains perhaps not covered the whole year this range is parrallel with the river. the country I should call for two days back volcanic flints are found in abundance some of the stones have a white crust on the outside of them whether of lime or Epsom salts can not say both abound the lime rock is mostly slate blue but is found in layers of all shades from white to deep blue and very much contorted and forming frequent caves and holes. It is the intention of the chiefs to remain at this camp until the Nez Perces come to us and then to move together. This morning left my wounded horse.

30th. Same Camp rained all last night and all day Went up into the mountains to hunt sheep wounded one but a snow storm coming on his trail was covered and I lost him Saw plenty it is surprising to view the places where they go no one would imagine it possible for an animal to climb the rocks they do Got nothing and hearing a firing hasted to the top of a hill to see if the Camp was attacked but found that the Nez Perces had arrived with 9 whites a Mr. Hodgskins [Hodgkiss] at their head. This party is 16 lodges and only escaped the Blkft. by the latter falling in with 31 Indians 30 of whom they killed I t is supposed the 30 killed about 50 of the Blkft. They mustered about 700 all men and were sufficient to cut off all our Camps if they would trade man for man.

31st Got news that 20 lodges of Blkft. are now camped at our camp of 21st Inst. and I think likely that these are the same who killed the 30 Indians and as usual 10 times over rated. This day moved 7 miles S.E. up the river and following a small creek near our camp of last night a creek comes in from the S. one which we followed coming from N.W. this one fro[m] the S.S.E. the main river S.E went into the mts. saw antelope killed nothing in the mountains heavy thunder with snow and hail storm and high wind.

June 1st Same Camp some snow on Mts. got wet.

2nd 17 miles S . E. 1 E. by N . through an open plain nearly level finished the streams of Salmon river and struck one called little Goddin it terminates near the three butes in a little lake here goes S.E. through the valley the mts. appear terminating on both sides a fair day the S. range comprises much more of a stone which I will call quartz the same as is found at Kettle falls there is also lime stone Blue and without organic remains.

3d 15 miles S.E. through the same vally gradually decending the stream became a rapid and pretty large one as large as some that pass 300 miles We camped at a narrow pass formed of low hills here is between the hills a slough of clay saturated with Epsom salts the hills are of Basaltic rock in collumns the first I have seen in this region lime rock is found here in pudding rock Killed plenty of Buffaloe here

4th. Moved through the valley following the river called as I am informed little Goddin in a S.E. by E. 6 miles during which space I found the lower hills of Basalt the mts. are of lime rock the same as passed hertofo[r] Wind high N.W. which brings warm weather here and clear grass very bad.

5th. Clear warm day moved S.E. by E. 8 miles went in search of Buffaloe found none Saw an old Blkft. Camp of 65 fires half as large as our present camp Saw several whirlwinds which raised the dust at a distance and appears much like smoke. Saw the three Butes come in sight one by one and then the Trois Tetons The Butes S.E. by S. 20 mils distant about so far this river rapid and little brush and no beaver grass worse and worse.

6th. Same Camp last night arrived 3 Kootenays with 25 beaver who left us on Flathead river being on foot the whole time last night sent out Indians to see in what direction were the most Buffaloe one came back this mng. reports cows to the S.

7th Moved E.N.E. 15 miles and without water the whole route the Trois Tetons bearing E. perhaps 90 miles distant over a level and dry plain without grass or extremely little in the afternoon had a gale from the S.W. which blew down the lodges accompanied with a little rain and enough dust to suffocate one on our left there is a range of high hills from which come numerous streams but they sink in the plain and are warm and muddy went out this evening to bring in the meat of a cow killed in the forenoon and found a horse extremely fat it is surprising how fat a horse gets by

being left to himself no grooming that I have ever seen will make a horse appear as beautiful as to be left to his own resources the Butes bear due S.

8th 5 miles N. following the same creek up which grows larger as we ascend had a fine rain & Hail and Thunder today which is Sunday. Water very muddy grass little and but a little.

9th. 10 miles N. and following the creek has some tolerable wild cotton wood and willow on it wind N. clear and windy country same Three Nez Perces arrived at camp Bring news that Payette is with four Nez Perce Chiefs. Capt Serrey [Michel Cerre] with 7 is detained by snow that the Blackfeet village is camped at the spot where we met the Nez Perces. We find that Payette will meet us at the forks Capt Serrey has got 31 horses this day a bull was run into camp which I shot at my lodge door To day an Indian was running bulls he turned the horse stopped and threw him the bull gored him into his chest so that his breath was made through the appature by the help of the women he reached camp. When Mr. Ermatinger dressed his wound he very composedly made his will by word of mouth the Indians responding in concord at the end of each sentence. He appeared not in the least intimidated by the approach of death. I think the Indians die better than the whites perhaps they have less superstition in regard to the future and argue that as the deity makes them happy here he will also hereafter if there is existence for them.

10th. Same camp another Indian came to camp who had been looking out for the Blkft. He was ambuscaded by two of them and narrowly escaped by the goodness of his horse being wounded slightly in the nose.

11th Same camp fresh news of the Blkft. Made horse pen that my horses might be safe. I do not apprehend any serious attack but only that they will come suddenly with a great noise of voices and guns and fright the horses on such occasions horses become wild one frights another they run over the lodges this increases the confusion and the yelling firing and running & snorting of 1200 Indians and 1800 horses is frightfull indeed. Sometimes a camp with as many horses as the above loose every one it is commonly whole or none. Day warm, clear fresh wind W.

12th. Same camp warm day The Blackft camp about 15 mils from this they are very numerous.

13th. Same camp cloudy and cool with high wind from S. E. Blakft. still near but have attempted nothing yet. Child died in camp yesterday remains to bury today. Find I have missed one day in my journal which has been done while laying at some camp and accordingly date tomorrow the 15th.

15th Last night some Blackfoot fired into our camp a ball passed through a lodge some straggler disappointed of stealing horses I suppose. Moved N.N.E. 5 miles and camped on a creek now almost dry and soon will be wholly. There is little but cotton wood on this creek.

16th. 8 miles N.E. by N. to a small creek which about a mile below this joins another larger one. Country nearly level day windy S.W. wind cool and cloudy Trois Tetons bear E.S.E. Today saw the

Indians carrying the man who was wounded by a Buffaloe no one could receive more attention, one person to carry water he was on a good bed made on poles the front of which like shafts were carried by a horse led by his wife the hinder part by 6 men and women on their shoulders the camp moved slower than usual for him these things give a favorable impression of the Indians.

17th. Same camp rained very hard all last night and until noon of today an alarm of Blkft last night but I believe little of these things in so large a camp when it is known that there are Blkft. near a man straying out of camp is enough to give rise to a report and a report once raised it gathers like a snow ball.

18th. Same camp Severe hail & snow yesterday afternoon and rain most of last night and until noon today. Camp about out of provisions so we are in hopes of moving soon. Nothing but necessity and that immediate will induce an Indian to do the least thing, any excuse serves to stop business with them and a small party of whites who are not strong enough to move alone will find in traveling with them occasion for all the patience they may have.

19th. 1 1/2 miles to the main river here going S.W. this we found quite deep enough to ford for horses the mules I was obliged to unload and put the loads on the horses 3 miles more passed

three slews of our stream joining the last river mentioned. 3 miles more camped on another branch of it making 10 1/2 miles N.E. by E. day clear snow in patches in shaded places but the country green with herbage and mostly in blossom. All rocks for some days past volcanic. This stream loses itself in the plain.

20th. Moved 11 miles E. by N. and camped on Kamas River so called from the abundance of that root in some spots it is so abundant as to exclude other vegetation. This Prairie is very extensive perhaps 15 miles each way and is intersected by numerous little streams which form one going to the S. and ends in a small lake on the plain between this and Lewis river day clear & cool frost last night snow on all the high hills Trois Tetons bear E.S.E. I should think about 80 miles distant found Buffaloe here the first for 10 days when we found the last I think at least 100 were killed in one day 42 tongues were given to Mr. E. and myself.

21st. Late last night arrived 5 hunters Pillew, Nasben, and Churboye and two Indians who left us on the head of the Missouri having seen plenty of recent sign of the Blkfeet but happily saw none they killed 94 Beaver. Today went out to hunt killed one Bull. forenoon showers and lowery Kamas in bloom the Indians are taking large quantities of it this plain is extensive but about 7 miles across of it only is rich and that is as good as any land I ever saw the main plain is much of it bare rock the surface of which looks like a pan of milk when you push together the cream evidently it was once a fiery and fluid plain or lake of lava, probably the whole plain between these mountains and the Trois Tetons the rock is porous like honey comb the surface shows plainly the heads of Basaltic colums and in some places the colums stand not perpendicular but at an angle of 50 degrees about, same camp.

22nd. Same camp arrived this mng. an express from Bonneville this express came from the forks in three days they saw Blkft. by the way this afternoon Mr. Hodge [Hodgkiss] left to go to Bonneville day clear and warm Buffaloe were run into camp.

23rd. Sunday Indians singing and dancing as usual day warm and clear. These Inds. do nothing on Sunday.

24th. Moved across the plain 3 miles N.E. Day warm and clear.

25th Yesterday at night some Inds. came in from hunting Buffaloe reported that they saw two Blkft. and fired on them at night we saw their fire in the Mts. Same camp fine clear warm day employed in making a saddle.

26th. Same camp went out hunting saw a few Buffaloe but killed nothing but a grouse as I had some dispute with Mr. David Douglass about the grouse of this country I subjoin a discription; the bird had 10 pointed drab colored, mottled with white. tail feathers the outer edge of the feathers are only mottled until you approach their end when both sides are mottled under the tail are 10 or 12 dark brown feathers 2/3 as long as the tail feathers white at the termination. The tail feathers are about 8 inches long. The wing feathers are nearly white underneath and dark drab outside. From the head of the breast bone to the tail are many black feathers above the breast and nearly on the neck is a place devoid of feathers of a dirty olive color each side and a little below this is a tuft of short sharp pointed dirty white feathers they look as if they had been clipped with a shears. The tail feathers look as though they had been burnt off leaving the stalk of the quill projecting. The bill is short and curved downwards above the bare spot on the neck are short mottled feathers cream, white and black. It is feathered to the toes which are three and a small one behind. The hinder part of the leg is not feathered from the knee downwards Tow nails short and obscure. its back pretty uniformly mottled with deep brown dirty white approaching dirty yellow and dun colored weight 4 1/2 lbs. Length from point of tail feathers to tip of bill 25 inches from tips of wings 3 1/2 ft. We were regaled by thunder shower on our return to camp saw Blkft. trail and a cow recently killed by them.

27th. Same camp nothing remarkable.

28th. Same camp nothing but lice and dirt. Cool today.

29th. Same camp as yesterday went out to hunt killed one Buffaloe which fell into the river and had to butcher him up to my middle in cold water. Some hunters who went out today came in with the news that they had seen the Blkft. camp on Tobacco river one of the heads of the of the Missouri they say it is larger than ours.

30th Same camp Sunday Indians praying, dancing & singing.

1st July. Moved S. 12 miles S. and down the creek clear moderately warm day the first for three

days nights have been frosty ice made in our pots & pails. Men came from Bonneville in the evening.

2nd. Moved S. 12 miles and camped on same creek on the way observed some fine luxuriant clover grass good about 9 miles down the creek which rapidly increases in size from numerous springs which are of fine cold water we camped in a cluster of large cotton wood large for this place about 10 inches through.

3rd. Last night a Bear made his way into camp among the horses and gave a considerable alarm but was off before guns could be got out. Today moved 16 miles S.S.W. and camped on same creek with Mr. Bonneville with about 40 men bound for Green river. I have heretofore forgot to mention that at our camp of 1st July we left about 40 lodges of the Flatheads country this days route dry and barren day warm.

4th. Same camp at night saw a band of Blackfeet a little above camp clear warm day.

5th Same camp.

6th Same camp very warm weather.

7th. This morning our camp forked in three directions Mr. Hodgkin for a trapping excursion with the Nez Percés, Mr. Ermatinger with the Ponderays to go to Flathead river, ourselves East 18 miles to Henrys fork here wooded with narrow leafed cotton wood our route over a very dry plain passing at about half the distance some low hills of pure sand with not the least appearance of vegetation. The party is 26 all told.

8th. Followed up the river where we were much annoyed by mosquitos about 8 miles N.N.E. there forded it about belly deep going E. by S. 5 miles to a large river which must be Lewis fork here we found Buffalo these two rivers form a junction about 15 miles from this point as I believe near two butes but some say not until you get as low as Three Butes on this river are not many mosquitos.

9th Made this day 22 1/2 miles due East toward the Trois Tetons at 8 miles struck a small creek with cut rock banks running N.W. and to the river last crossed, which is not Lewis fork. At 20 miles cut a mountain which rises and is wooded to the S W. and diminishes to the plain to the N.E. We entered Pierre's Hole and camped on the N.W. side of it. Here we found Buffalo.

10th. Moved 12 miles S.E. crossing a difficult swamp and camped about 2 miles from the battle ground of last year with the Gros Ventres Day warm and a great quantity of grasshoppers for several days past so much so as to discolor the ground in many places.

11th. Started early and made 3 miles E.S.E. to the foot of the mountains then 8 miles E.S.E. to the summit then 6 miles E. to Lewis fork and 1 mile E. across it at the same place we crossed last

year found it very high for fording but succeeded at last. Wind strong N.W. clear and moderately warm. Horses troubled with horse flies on the mountains but not in this plain found buffalo in the bottom also mosquitoes The river is here much choked up with islands and heaps of drift wood and a great quantity of mud in coming over the mountains lost one mule and sent a man back for it he has not returned yet [at] sundown got a wet jacket in the river trying to find a ford. There is the trail of about 8 men who have passed through this defile before us as I think about 14 days they marked a name on the trees and we suppose that they are men of Dripps & Fontenelle. We as yet see no appearance of the Blkft. except very old forts and lodges. Lewis fork here runs S.E. about 9 miles then turns S.

12th. This morning my man came back having been out all night he found the mule at our last camp. Made this day 9 miles S.E. along the river then 3 miles E.S.E. to a small creek running into the river. At this place 9 men under Capt. Stevens were attacked by about 30 Blkft. a little later than this time last year and several of them killed. Mr. Bonneville informs me that when he passed last year in August their bones were laying about the valley. I am apprehensive that More, a sick man whom I left in charge of Stevens, must be one of them. 6 miles more over a hilly broken limestone country S.E. to a considerable fork of Lewis river this stream is strongly impregnated with sulphur. This camp is almost without grass. In the first place this morning we moved 3 miles and crossed a creek putting into the river. At our camp of to night there is a small branch joining the creek from the S.E.

13th. East 5 miles N.E. 1/2 mile through bad cut rocks on the N. side of the river there is also a trail on the S. side then 1/2 mile E. then 1/4 mile S.E. then following a left hand fork of the river a few rods N.E. crossed it and made E. 3 miles to the right hand fork again which we followed E. 2 miles then S.E. 4 miles to camp crossing it several times a good trail most of the way one horse of the Indians killed by falling from the cut rock trail down to the river in the first of the cut rocks there is a handsome cave rock lime & sand a few boulders of granite seen today as also on the E. side of the mountains of Pierres hole. The river which we followed this day is rapid and too deep below the branches to ford during the last of the route several small forks from each side.

14th. Made 9 miles S.E. to the height of land between this river and Green river then 5 miles S.S.E. to a creek running into Green river. there are good trails all the way and to the divide much timber The creek on which we camped last night just above the camp divided into three forks. We followed the most southwardly for awhile then mounted the hill on the left side of it. There has been for two days a high range of Mts. on our left about 10 miles distant apparently of sand stone and milestone these [trend] E.S.E. & N.N.W. and on the divide between this and Wind river also on our right there have been a range of Mts. of same composition about 15 miles distant. Both ranges have snow in patches Many alarms today but still no enemys killed plenty of Buffaloe.

15th. Made E.S.E. 12 miles to Green river and to Mr. Bonneville's fort day clear and fine. Found here collected Capt. Walker, Bonneville, Cerry, of one Co. Dripps & Fontenelle of the Am. Fur co. Mr. Campbell just from St. Louis, Mess. Fitzpatric, Gervais, Milton Sublette of the Rocky Mountain Fur Co. and in all the Cos. about 300 whites and a small village of Snakes here I got letters

from home. During the last year among all the Cos there has been in all about 25 men killed two of my original party with them, viz Mr More & O'Neil.

16th. Same camp.

17th. Moved 10 miles down the river S.E. it is here a large and rapid stream and to be forded only in a few places. Here we were followed by the Snake village we encamped with the Rocky Mountain Fur Co.

18th to the 24 remained at the same camp during which time the weather was pleasant and warm for several nights we were annoyed by mad dogs or wolves which I cannot say but believe the latter as one was killed. I think one animal did the whole mischief as when men were bitten at one camp none were at the other about nine persons were bitten at Dripps & Fontenelles camp and three at ours. D. & Fs. camp is 4 miles above us on the same side of the river we hope he was not mad as no simtons have yet appeared.

24th. Moved E. 12 miles cutting a small divide came to a wide valley parallel with Wind river Mts. in which we crossed 3 large creeks and camped on the 4th. Which has much pine timber on it and is called Pine fork they all come into one quite soon by appearance and are not near as large as the main fork on which we first found the whites and which we have now crossed. In coming here it passed to our left that is up stream. Found plenty of Antelope and Bulls.

25th. Crossed the stream and moved E.S.E. 3 miles to a creek the same on which I made a cash last year and crossed at a good ford just below two stony hills then on 7 1/2 mile E.S.E. following a branch of the same creek and camped to noon. Buffaloe throwing the dust in the air in every direction and Antelope always in sight. This day a Mr. Worthington in running a bull fell from his horse, the Bull furious ran at the horse and passed him within 3 feet then turned again and passed him he having got up from the ground ran and escaped he killed the bull and found he had but one eye owing to which circumstance he escaped. Afternoon made S.E. 13 miles leaving the last creek of what is called New fork to which all the waters we have passed since leaving rendezvous belong the one we camped on last night heads in a lake about 1 1/2 miles over and not far from where we slept. We now struck the west fork of Sandy and camped at an old camp of last year at a place where Ball left his rifle Country covered with Buffaloe.

26th. Made S.E. 9 miles and camped on another fork of Sandy then S.E. by E. 15 miles to Sweet water all the country is granite from rendezvous so far Buffaloe quite plenty also Antelope Today shot a cow with a very young calf the calf ran after our mules for a long way until it found the difference.

27th. Made down the creek 1 1/2 miles E.S.E. then E. 8 miles to another branch of Sweet water then 6 miles E. by N. to another branch of same then down this branch S.E. 2 miles and camped. Saw one band of Elk and many Antelope plenty of Buffaloe.

28th. Made E. 2 miles to another Creek running S. by E. crossed made E. 6 miles E. by N. 4 miles at the creek a sort of slate prevailed but soon ran into a red sandstone passed at 11 miles a small pond to our right few Buffaloe today last night Capt. [William D.] Stewart had some sport with a bear near our camp in the willows which he wounded but did not kill He represented him as large as a mule. In the afternoon made E. by N. 6 miles to Sweet water river then N.E. 3 miles up it and camped. I came ahead and found a white bear in a thickett and after firing a pistol and throwing stones into it started him out he came as though he meant to fight us but I gave him the shot of my rifle through the body He then rushed on us and I ran as fast as I could Mr. Kamel [Campbell] snapped at him Mr Sublett ran also being on a mule the bear followed us no great distance and turned and ran up creek some horsemen followed and killed him after putting 4 more balls into him.

29th. Same camp, rained all day two men went out to hunt and at night one returned alone the other in the morning being still absent.

30th. Started out to hunt the man and in about 8 miles came to the place hunted the whole country and found nothing but a white bear the largest and the whitest I have yet seen run him about a mile and fired one shot but could not kill him. After a long ride returned to camp found the party had moved on followed them N.N.W. in 6 miles struck Popoise [Popo Agie] in a small rapid thread running through sandstone banks this we followed N. W. 3 miles then N. by E. 9 miles more thousands of Buffaloe in sight and the red bottom of the streams deep and muddy with recent rains and found camp a little after sundown. The afternoon of the 29th we found lime rock almost entirely today sand stone and a kind of glassy stone resembling Carnelian a course kind of which I think it is.

31st N.N.W. 8 miles through a muddy Bottom and little grass to some large willows found a party of 4 whites who have lost their horses and one of them wounded in the head with a Ball and in the body with an arrow very badly they suppose the Snakes did it but I think not. Little grass. In the afternoon moved N. 9 miles to the junction of Great Popoise river which comes from the S.W. then N. by E. 4 miles to the junction of Wind river which comes from the W. turning around as I suppose and running along Wind River Mountains which run N.W. Altogether they form a large and muddy river but fordable now which is after a heavy rain.

Aug. 1st. Same camp find Mr. Bonneville camped a few miles above us. On farther inquiry I changed my opinion expressed above in regard to the Indians who stole the horses I think they were 15 Snakes who left our camp at Green river a few days before we left that place. The case was this. Mr. Bridger sent 4 men to this river to look for us viz Mr. Smith, Thomson, [J.B.] Charboneau a half breed and Evans. Two days before it happened 15 Inds came to them and after smoking departed the second day after they were gone Thompson having been out hunting [tied] his horse to the others and thought he would sit down by them until it was time to water them and having been on guard much of the time previous fell asleep he was waked by a noise among the horses which he supposed to [be] his comrades come to water them raising his head and opening his eyes the first thing that presented itself to his sight was the muzzle of a gun in the

hands of an Indian it was immediately discharged and so near his head that the front piece of his cap alone saved his eyes from being put out by the powder the Ball entered the head outside of the eye and breaking the cheek bone passing downward and lodged behind the ear in the neck this stunned him and while insensible an arrow was shot into him on the top of the shoulder downward which entered about 6 inches, the Inds. got 7 horses all there were. Charboneau pursued them on foot but wet his gun in crossing a little stream and only snapped twice.

2nd. Found the river unfordable and ascended to west crossing Popoise & Wind river 5 miles up and made thence 20 miles N.E. by N. to a little creek going to Wind now on our right.

3rd. 11 miles N.N.E. to the summit of the mountains which are called little Wind River Mts. and run E. & W. then N. 5 miles to the river.

4th. 2 miles N. along the river to a clump of sweet cotton wood.

5th. 7 miles N. by W. to the River which between makes a considerable bend to the eastward camped in good grass and some large cotton wood trek this morning past beautiful camps afternoon N. by E. 12 miles 3 horses found this day and yesterday probably left by some party of Inds. who have passed this way saw the tracks of several more we think that when the Crows stole horses of the Snakes last winter they came this route and left their animals on account of giving out for want of food in the snow. Few Buffalo and those running indicates Indians near.

6th. N 10 miles to the River again to noon found little grass day cool afternoon 10 miles N.N.E. to the main river again. Since crossing the last Mts. we crossed a creek the second forenoon afternoon one yesterday 2 today 2 all small and I suppose sometimes dry

7th. 12 miles N.N.W and camped on Grey Bull River here I found a piece of about 5 lbs of Bituminous coal which burned freely It had in it some substance which I took to be Amber also an impression of wood It looked like and as good as Liverpool Coal. Its fracture was too perfect to have come far. 20 miles above and on the E. side comes in the River Travelled in afternoon 6 miles N.N.W. and again struck Wind river. Shell river comes in 3 miles below Grey Bull on the E. side and from the Mts. in the direction E. by N. Grey Bull is from the S.W. and much the largest stream on this side since Wind river. For three days have found no Buffalo and from the nature of the country think it is not often found in abundance along here except in the winter no antelope a few Elk and deer.

8th. W.N.W. 3 miles then 21 miles N.E. toward the right of two considerable Mts. where Wind river passes. We camped West of these hills on a river larger than Grey Bull called Stinking River coming from the S.W. This days travel was made between parrallel ridges of broken lime and sand rock some of it appeared cabined and much like fine caked salt. This day picked up some shell they are very numerous also found a round concretion which are found also on Cannon Ball River from which the name also a concretion of much the same substance but long pointed at one end with a core in the middle a hole at big end. During this space there was no water to our right

there is a range of Mts. running N.W. about 9 miles distant and the other side of Wind River.

9th. 10 miles N. striking a small stream of water This days travel and yesterday was over ground naked of vegetables in which the animals sank near six inches deep at every step perfectly dry and resembling, but of different color, lime in the operation of slacking full of holes down which the waters at the wet season sink the rock is sand and lime stone.

10th. N. 15 miles passing near but not exactly on the river and through rocky hills of no great height. The river here looks tranquil but flows between two perpendicular banks of stone of perhaps 5 to 800 feet high the chasm even at the top of no great width the rock of lime and sand this days march saw Plaster of Paris found for first time this year ripe Service berrys. Killed one mountain sheep which was all the meat killed this day for 48 men short commons. hard rains last night.

11 th. Went out hunting killed 2 Cows and 4 Bulls the camp made about a N. course at six miles crossed a small creek at 5 more another probably another branch of the same at 9 more a creek separate from the others but not large all these creeks have high perpendicular banks and are very bad to cross in the course of the day saw 4 Bears white. A fine grass country and a great many Buffaloe.

12th. 4 miles N.E. to Big Horn River this day went out to get Bull Hydres for boat got enough and employed the rest of the day in making a Boat this day followed down a little stream.

13th. Remained at same camp made a Bull Boat day fine.

14th. Same camp day fine.

15th. Made a start in our Bull Boat found it to answer the purpose well large enough runs well leaks a little made 3 miles N.E. stream rapid shoals at places 2 feet. Too much liquor to proceed therefore stopped.

16th. Made a start in our boat found travelling quite pleasant but requires much caution on account of some snags and bars. We frequently took one half of the river which dividing again gave too little water for our boat which draws 1 1/2 feet it is quite too much the [boat] ought to have been flatter We grounded about 6 times this forenoon it is surprising how hard a thump these bull Boats will stand ours is made of three skins is 18 feet long and about 5 1/2 wide sharp at both ends round bottom. Have seen on the banks of the river this forenoon 3 grisly bears and some Bulls in the river and on the banks they stare and wonder much the direction of this march was as near as I can judge N. by E. we went from 5 to 11 as I think about 6 miles per hour the indirection I suppose to be not more than 1/4. All feel badly today from a severe bout of drinking last night. Afternoon made 4 hours at a good 6 mile rate grounded three times saw a few elk and much Beaver sign all day there is here the best trapping that I have ever found on so large a river it is about 100 yards wide when all together but is much cut into slews which makes the navigation very dif-

ficult. The musquitoes have anoyed me much today they affect me almost as bad as a rattle snake this afternoons course about N.N.W. at 6 miles from our noon camp passed a place where we supposed the Little Horn River came in from the S.E. at least there is a considerable river at that place but it is difficult to tell a returning slew from a river this afternoon a severe thunderstorm which compelled us to put ashore until it was over

17th. This day the river made nearly a N. course and we made about 7 1/2 hours at the rate of about 6 miles the river winding about 1/4 of the distance we started at 5 ock. at about 9 ock. saw several persons ahead on the bank of the river which we at first supposed to be whites from the fort but soon found to be Crow Indians they informed us that the whole nation was behind we were anxious to avoid them but could not as the river afforded us no hiding place they showed us that they meant us to land very soon by stepping and swimming into the river seeing this we chose to land without further trouble in this way we were obliged to make the shore 6 times during the day we arrived at the Yellow Stone which was of clear water and did not mix with the waters of the Big Horn which was at this time dirty for some miles a bout 3 miles below the mouth of the Big Horn we found Fort Cass one of the Am. F. Co. at which post we traded about 10 packs of Beaver and 150 to 200 pack robes goods are brough[t] up in boats of about 15 tons burthen 2 of which are now laying here and one of them preparing to descend in two days we were treated with little or no ceremony by Mr. [Samuel] Tullock, who we found in charge which I attributed to sickness on his part well knowing that a sick man is never disposed to be over civil to others we therefore pushed on next morning. Just as we arrived we saw 31 Indians with two American flags come to the other side of the river they were Gros ventres du Baum the same we fought with last summer at the Trois Tetons they came to make peace with the Crows they were treated civily at the Fort and before night followed the river up to the Crow village where I expect their scalps will be taken for the Crows informed us that not long since a few Blkft. came and made peace with them shortly after three Crows went to the Blackfeet two of which they killed and they were determined to make no more peace with them.

18th. Started down the river made 3 hours with a hard wind about 4 miles an hour and put up to noon seeing some elk which we were in hopes to get to eat course about N. afternoon the river tended more Eastwardly and at last came to E.N.E. We made at the rate of 5 miles an hour for 3 1/2 hours and camped to fish and hunt having no meat on hand there is along this river pretty bottoms and great quantities of sweet cotton wood which would be fine for winter camps. We saw some large bands of elk but our hunters were more conceited than good which I have generally found to be the case with the hunters in this country they are not willing that a new hand should even try, and are far from good shots themselves and commonly have miserable flint guns which snap continually and afford an excuse for not killing. The river sometimes cuts blufs which are mostly of sand stone but the river brings down granite and porphry. Fort Cass is situated on the E. bank of the Yellow stone river is about 130 feet square made of sapling cotton wood pickets with two bastions at the extreme comers and was erected in the fall of 1832. The Yellow stone comes from the S.W. til it meets the Big Horn then the two go about N. until they bend to the eastward.

19th. Made 5 1/2 hours in a calm fine day I should think about 6 miles the hour the river going

E.N.E. stopped early to try a band of Buffaloe that we see on the left of us, at first we were careful to see if they were really Buffaloe for yesterday we were near approaching a band of Indians which I suppose were the residue of the Blackfeet which I saw at the fort as they appeared coming down from that way. Nooned in a fine cool place under the shade of a large Cotton wood in a large green bottom the musquitoes take much from the pleasure of the trip which is otherwise fine but I believe for a party like ours rather dangerous in afternoon 2 1/2 hours about 6 per H. River E. stopped on hearing the bellowing of Buffaloe on shore to get meat. Our hunters as usual having failed went myself and killed a cow got a good ducking from a shower and returned loaded with meat much fatigued. About 4 miles before we stopped we passed the mouth of Rose Bud a river coming from S.S.W.

20th. Started early and made this forenoon 6 hours at the rate of about 5 1/2 miles. River about E.N.E. last night a smart rain which wet our clothes much caught just at dusk last night plenty of Blue Catfish and a small one which resembles an Ale wife soon after started this morning found an immense herd of Buffaloe close to the river stopped and killed 2 fat cows and could have killed any number more but this was enough they keep up a continued grunting night and day now that we have fairly got into them in the afternoon made 5 1/2 hours current about 6 miles and E.N.E. at 5 hours found bad rapids but at this low stage of the water it is said to be better passing on account of the chanall being more visible we had a good joke on the old hands as they call them selves in distinction to those who have been a short time in the country two bald headed Eagles being perched on a tree on a point and ranged to the other side of the river our motion made them appear moving the old one cried out Les Sauvages others of them said on horseback with white scarfs I looked long but not supposing that they meant the eagles I said I saw nothing but the eagles they soon found out their mistake and we had a good laugh at them and a pleasant one as all the Indians we meet here we expect to fight. This day and yesterday whenever the river makes perpendicular banks we saw veins of poor bituminous coal in 5 to 7 veins horizontal from 3 ft. to 6 inches thick and 10 to 15 feet above each other rock sandstone.

21st. Made 5 hours river about E.N.E. passed the mouth of Powder River at 4 hours and half an hour below a bad and rocky rapid but without accident the coal still continues and thousands of Buffaloe day fine stopped to noon a little below the rapids in the afternoon made 5 hours current about 5 miles per hour in about E.N.E. direction no rapids of consequence the blufs have ceased these blufs are a part of the Black hills as I am informed the Black Hills I am also infomned make the Falls of Missouri at the Three Forks just on leaving the blufs the coal veins appeared thicker day fine. buffaloe plenty.

22nd. Made at 5 1/2 per hour 6 hours in forenoon using a sail which we found of little advantage and but a little course of the river N.N.E. and from the junction on the E. side of first Rose Bud then Tongue and then Powder River it is of about the color of the Missouri altho the Yellow stone above is of clear water quite so above the junction of the Big Horn. Our boat getting quite rotten in afternoon made 5 hours same course 5 miles per hour river better not so [many] bars and country not mountainous the coal appears to have given out.

23rd. Made in forenoon 4 hours at the [rate] of 5 [miles] per hour river about N.E. Day fine and hot plenty of Elks in herds afternoon made 4 hours N. then 2 1/2 hours E.N.E. current about 4 miles per hour saw but little game only 2 Elk river broad and shoal.

24th Made N.N.E. 2 hours with a heavy head wind about 4 miles per hour then the river turned Westwardly and when it enters the Missouri is running W. by S. this made one hour more when we found the Missouri which we ascended N.W. about 5 miles to Fort Union where we arrived about noon and were met with all possible hospitality and politeness by Mr. McKensie the Am. F. Co. agent in this country.

27th. This day at 1/2 past 10 oclock we took leave our hospitable entertainers and on the experience of a few days with prepossessions highly in their favor we found Mr. McKensie a most polite host I was particularly pleased with a Mr. J.A.] Hamilton and I am perhaps presumptuous in saying that I felt able to appreciate his refined politeness he is a man of superior education and an Englishman. I was here supplied with a peroque traded from the Blackfeet. A Mr. Patten shewed me a powder flask which he traded from the Blkft. I immediately knew it to be one of mine and on examination found No. 4 H.G.O.M. graven with a point on it. It was Mores flask who was kiDed in Little Jackson Hole last year on his return home after rendezvous. Fort Union is pleasantly scituated on the N. bank of the Missouri 6 miles above the junction of Yellow stone there is no timber on a high bank above the fort I am told that there is not enough moisture here to raise vegetables potatoes grass ect, Some corn is traded from the Inds. lower down the fort is of usual construction about 220 feet square and is better furnished inside than any British fort I have ever seen at Table we have flour Bread Bacon Cheese Butter they live well

I here saw a small sturgeon but they are very rare Cat fish are good and plenty they have cows and bulls milk etc. I saw lime burning also coal here they are beginning to distil spirits from corn traded from the Inds. below. This owing to some restrictions on the introduction of the article into the country. Above this we have met plumbs, grapes, cherrys, Currants, ash, elm. The river being already well laid down shall no longer give the course

we left the fort and went 2 hours and stopped for Mr. Sublette who remained behind to finish some business he came accompanied by the gentlemen of the fort

after leaving us we made 4 hours then supped and made one hour more and found Mr. Wm. L. Sublette at anchor with a large Bull boat this gentleman we had expected to have found on our arrival at the Missouri he is come to trade furs in opposition to the Am. F. Co. he treated us with much politeness his brother preferred to remain and come to the states with him we are therefore left without any one who has decended the Missouri but I can go down stream.

28th. Pulled one hour put by from wind and to regulate then pulled 6 hours and stopped to supper the banks continually falling in after supper we floated through the night 11 hours Calm

29 While breakfast was preparing went out to hunt killed one deer and found a severe time in the

thick swamp and mosquitoes pulled 8 1/2 hours and drifted 11 hours through the night which exposed me to much rain and wind from two thunder showers. I had much difficulty to keep the boat from bars and snaggs ran several times on to Bars all hands being asleep had to jump over board to get off In the night elk keep up a continual squeling it being now the commencement of the rutting season.

30th Day pulled 9 hours Saw three white Bears this day and some Elk and a herd of Buffaloe night floated 8 1/2 hours and were stopped by a gale from the S.E. not thinking it expedient to pull with a head wind and in the dark.

31st Blowing a gale. Made about 4 hours about the rate of 2 mils per hour and finding it too bad laid by at a considerable river coming from the S. entering by 2 mouths this I took to be the little Missouri as laid down in the maps. In this vicinity we find primitive pebles and bolders much petryfied wood other aluvial productions stopped all night on acc. of wind and rain which made our scituation uncomfortable in the extreme the weather had heretofore been very warm average as much as 90 deg this day cold like an Eastwardly storm.

[Sept] 1st. At seven the weather having abated a little made a start. At 3 o'clock found some of Sublettes men cutting timber for a fort and learned from them that the upper Mandan was 9 miles ahead we made it at 6 this day made only about 3 per hour this village was about 1 1/2 miles from the river taking my Indian and a man with me I went to it and was well received by Mr. Dorherty [John Dougherty], Mr. Subletes clerk and the Inds. Stopped about one hour with him and not seeing the fort and being afraid of passing it stopped for the night.

2nd. Pulled 1/2 hour arrived first on a high point at the village then immediately round the point found the fort and was well received by Mr. [James] Kipp. the Am. F. Co. agent for the Mandans Stopped 2 hours took breakfast the presented me some dry corn and some roasting ears. All these villages cultivate corn peas beans pumpkins ect. at 1/2 past 7 ock pulled a short distance when we had a good breeze and sailed until 5 ock then stopped to supper then floated from 6 until 12 ock then stopped owing to fog with head wind.

3rd. Floated 2 hours and stopped to Breakfast having found no game have lived much upon the stores we have taken from the forts above At the last place we were presented with some green corn which we are now roasting Makes us think of Old Lang Sine. We have had for four days rainy cloudy & foggy weather our bed clothes are wet and musty in consequence after Breakfast pulled 6 hours when I thought best to go on shore to cook I sent a man out to hunt in the meantime as soon as he assended the high bank he perceived horses on the other side we after counted 21 lodges and from the number of horses I have no doubt there might have been from 75 to 100. I immediately had the boat put into a little thicket and fortified as well as I could then went to fishing and spent the afternoon caught but two large catfish as soon as it was dark we proceeded forward with a high wind and a cloudy sky and no Moon all went well until we were just opposite the valley when we perceived lodges and fires on our side also On seeing this I ste[e]red the boat to the middle of the river but unluckly took ground on a sand bar here we worked for some time

to get off and had the Indians seen or heard us her[e] we were in distance for shot from both sides and could have made little resistance but they did not and after some time we got off and glad we were. We proceed in all 4 hours pulled, then stopped for the night these were probably the Ari-carey and would have scalped us. I feared much for my Nez Perce for we could not speak to any Indian on the river and all would without explanation have made some fuss and perhaps have killed him.

4th. With almost a gale of wind from the W. pulled 6 hours and then stopped to eat having twice nearly upset in carrying sail and wet all our things after drying and eating started on still blowing fresh and pulled 3 hours then floated through the night 11 hours It was a beautiful still night the stillness interrupted only by the neighing of the Elk the continual low of the Buffalo which we came to soon after starting the hooting of large owls and the screeching of small ones and occasionally the nearer noise of a beaver gnawing a tree or splashing into the water and even the gong like sound of the swan it was really poetical but sleep at last laid in his claim and I gave the helm to a man. Oak is now plenty in the Bottoms and for a few days past has been seen The upland along the river is here pretty good plumbs we occasionally see and have since we first took water on the Big Horn frequent squalls of rain yesterday.

5th. Pulled 7 hours stopped to eat pulled one more came to a deserted village on the S. bank fired two guns to see if there was any one in it but had no answer pulled one hour more then floated 7 hours more then pulled 3 to Breakfast saw in morning a bank of Elk playing like children in the water failed of killing any of them owing to the impatience of one of the men who fired too soon pulled through a dreadful rain 7 hours and camped wet and cold rained all night strong east wind.

6. In the morning made 8 hours pulling seeing an Elk on the sand Bar stopped and killed him very acceptable as we have had nothing to eat since yesterday noon and saved his horns for my best of friends Mr. F. Tudor of Boston pulled 2 hours more and the night being dark and appearance of a storm did not run.

7th. Last night about 11 ock was awakened by the water making a breach over the boat got her off the shore but was obliged to make the shore again on account of some of the men who were so frightened that if I had not they would have jumped overboard laid the rest of the night on a lee shore thundering in a loud strain and raining at no allowance spent a most uncomfortable night an rose in the morning benumbed with cold and all hands as dead as loggs started after eating at 8 ock and pulled until 2 ock when we had a fine breeze which gradually increased to a gale before which we scudded at a good rate almost despairing of seeing Fort Piere which we began to think we had passed at about sundown we saw people on the hills which we supposed to be Inds. therefore kept on they fired but we did not choose to hear about an hour after sundown we smelt the flavor of coal and landed and found people who had just burned a kiln who informed us that the fort was 3 mils ahead we though[t] to go to sleep at the fort but soon found that night and a gale of wind was a poor time for travelling and also that 3 miles was in fact 3 leagues after being near filled by the surf and running afoul of several sand bars and getting overboard to push off we

concluded to stop for the night which we did cold and tired and wet we spend the night as we best could one comfort plenty of elk meat stopped at 10 ock.

8. Made by sailing 3 miles and found Fort Piere pleasantly scituated on the right bank rather low but withal romantic were received with all hospitality imaginable by Mr. Laidlow [William Laidlaw] who is in charge of the Am. F. Co. post here. was much pleased by the order and regularity apparent about the place we stopped here for the day and visited Mr. and Mrs. Sublette who is scituated about one mile below we here saw melons of two kinds corn pork cows horses and stacks of hay.

9th. Remained at the fort until about 1 ock. when we made by pulling 2 hours an Island 9 miles below the fort on which the Co. have about 15 acres of ground under cultivation here I remained all this day eating and drinking of the good things afforded by the earth and the cellars of the Co. Found cucumbers water & musk mellons beets carrots potatoes onions corn and a good cabin and the Company of Mr. Laidlow and Doct.

10th. At 8 ock. began pulling the water has within two days risen about 2 feet in consequence of the rains which so anoyed me above and the surface of the water is covered with all manner of drift rubbish and the water as muddy as possible. Wind ahead all day but current much improved stopped at 6 ock. at the commencement of the great Bend and remained all night.

11th. Commenced pulling at 1/2 past 6 after having sent a hunter across the foot of the Bend and after 6 hours got past the Bend and found our hunters who had hid themselves in the brush being alarmed by seeing Inds. whom we also saw and gave some ammunion to took them in and in two hours more came to the agency for the Sioux & Poncas Mr. [Jonathan] Bean agent but not at the post we found it a miserable concern only three or four men but poorly fed and buildings out of order though new and shabbily built at best we were hospitably received by the young man in charge.

12. Pulled against a severe head wind 9 hours in hopes of finding White River but camped without seeing it got plenty of good plumbs which were an object to stop for as we are about out of food and the vicinity almost destitute of game.

13th Pulled against a severe head wind 3 1/2 hours finding we did not make much headway laid by for the day.

14th. Blowing still fresh ahead we started and made 15 hours night and day continuing until 12 ock at night it was dark and we were nearly upset by a snag but our fears of starvation impelled us to haste did not see an animal all day during the latter part of the night it rained in torrents and wet all our things and persons.

15th. Commenced pulling at 7 ock. Still blowing fresh ahead and raining a little about 3 ock cleared off and stopped to cook during meal time killed a fawn which was very good luck af-

ter supper pulled 5 hours more and found a keel boat of the Am. F. Co. alongside of which we stopped for the night in the morning of

16th. Put ahead with a fine wind not having been asked on board of her and immediately passed the Ponca village but I believe not in its usual place saw and delivered a message to Mr. Sublettes agt. here and gave the Chief some tobacco. Made with a wind which as usual soon died away and pulling 13 hours when we ran on a sand bar and was unable in the dark to extricate her and slept all night on it the musquitoes almost murder us rained most of the night.

17. Started at 5 ock. Pulled this day 10 hours rained some in the course of the day saw Powquet [Carolina parakeet] the first since leaving the states also mulberry trees Bass wood.

18th. Started early after a rainy night and pulled 10 hours saw wild Turkeys this evening but killed none nearly out of all kinds of provisions saw this day a herd of Elk tryed hard to get some but failed.

19th. Made with a strong and fine wind 12 hours and camped without meat supped on a little flour boiled in water Saw during the day 3 deer looked with folly at them and fired two shots and they ran off.

20th. Stopped until 1/2 past 6 to hunt caught one goose which we eat for breakfast afterward put ashore the hunters for game they were fortunate enough to kill a fat doe in which we feasted right merrily and having lost so much time we concluded to run until the moon went down altho we were before informed that it was not safe a few hours we got along well enough but at last went over a snag with limbs above which taking our mast and the boat swinging broadside she was taking in water at a jolly rate and in a little she would have gone with the suck under the rock I immediately had the mast cut away just in time to save her escaped from this I determined to try more we ran a little and were driven head foremost on a large tree lying across the river We stopped about midway and lay swinging like a pendulum with much danger and difficulty we extricated her not being yet discouraged we ran on but soon were driven into a large drift we narrowly escaped being carried under and half full of water and our oar broke we made the shore as soon as possible resolved to run no more nights, after making 10 1/2 hours.

21st. Made 9 hours with a head wind and camped at the old post of Council Bluffs it is now grown up with high weeds a memento of much money spent to little purpose it is a beautiful scituation the magazine and three or four chimneys only remain.

22nd. After 5 hours in a dead current we arrived at a trading post of the Am. F. Co. Mr. Josh Pilcher agent by whom we were entertained with the utmost hospitality I had met Mr. P. at St. Louis on my way out on this account I had much pleasure in stopping we found a good assortment of vegetables and a supply of such things as we wanted. dined with him and made three hours more and stopped to hunt Killed a fat deer and camped for the night.

23rd. Made 2 hours pulling and passed an agency 1/2 mile farther a trading post of Mrss. Dripps & Fontenelle. Made in all 13 hours and camped during the day killed one deer from the Boat from Council Bluffs to this have found the Hic[k]ory Shagbark Sicamore and Coffee Bean trees not seen above also Night Shade Brier Ducks Ge[e]se and Pelicans have been very numerous but shy for about 8 days stopped at the above trading post found only an old negro at home the rest out cutting wood.

24th. Made this day 10 1/2 hours Killed one goose saw plenty of deer

25th. Made 11 hours Killed one Turkey from the boat saw this day the first Pawpau fruit and trees wounded one deer from boat and stopped to search for him but without success

26th. Made 11 hours at 8 hours came to a trading house of the Am. F. Co. called Rubideau [Robidoux] Fort at the Black Snake hills and on the N. bank of the river on a little rise of ground in the rear of a beautiful bottom. Today saw the Black Locust for the first time the lands are here quite fine and the hills as far back as we can see clothed with timber and verdure of the most luxuriant appearance the country is one of the most pleasant I have ever seen

27th. After 7 hours pulling arrived at the Cantonment Leavenworth on the route we saw several Indian canoes with Squaws children ect. I had no letters of introduction at the fort and therefore could not expect any great extension of the laws of hospitality but was received with all the politeness that expected was offered all the stores which I might require by Leut. Richardson the officer of the day My boy Baptiste and the Indian wer[e] vacinated by Doct. Fellows. It was amusing to observe the actions of Baptiste [Payette] and the [Nez Perce] Indian when I went from the boat towards the Barracks the Boy followed me until I was hailed by the sentry at view of one so strangely attired and with a knife on the end of his gun he broke like a quarter Nag crying Pegoni [Blackfeet] and the Indian was only prevented from taking the run also by being assured that he would not be harmed. I took the two to Doct Fellows quarters to be vaccinated the Doct's wife and another lady happened to be present they were really beautiful women but the eyes of the two were riveted on the White Squaws Baptiste who speaks a little English told the other Boys when he returned to the boat that he had seen a white squaw white as snow and so pretty.

28th. Made about 45 miles to Liberty where I found Mr. E. M. Samuel an old acquaintance who received me with all hospitality supplied me w[ith] money and all that I wanted.

29th. Rained all day did not start

30. Went to the landing after breakfast a boat arrived going to the Garrison and joined her as I shall arrive at St Louis as soon by this means as any other and more comfortably

Shall close memorandum here with Boat I after returned to Leavenworth and was treated with great politeness by the officers of the garrison especially a Capt. Nichols who invited me to dinner.

Journal of Captain Nathniel J. Wyeth's Expeditions to the Oregon Country.  
Second Expedition - 1834

On the 5th of May having crossed the Kansas at the agency without accident and in one Half of a day and traded as many cuds and apishemas [saddle blankets] as I wanted and some deer skins for which I paid Bacon. We started with 3 less men 4 having deserted and one new one engaged. Made this day along the Kansas about 16 miles on a small stream having crossed one called the Lautrelle

6th. Moved along the Kansas and made about 12 miles to noon and took an observation found the Latt to be 39 deg 38' made this day about 18 miles

7th Made about 15 miles and camped on Little Vermillion

8th. In the morning Mr. [Milton] Sublette finding that his leg would not bear travelling turned back made this d[a]y about 15 miles This day left Kansas River

9th. Made about 20 miles and camped on a small river this day our hunter killed our first deer

10th. Made 15 miles to Big Vermillion and then 5 miles more and camped in the prairie with but little wood and a little stagnant water

11. Made 9 miles to a small run then lost the trail and crossed a sluggish muddy stream running N and recrossed the same it rounding and heading North and camped at noon this day Latt. 40deg 18'. Sent a man to hunt the trail.

12th. Spent the morning mending hobbles and endeavored to get an observation for Long. but it was too cloudy in afternoon started and in about 8 miles found a camp of [William] Sublettes for nooning and marched until dark and camped the horses having had nothing to eat all day did not tie them up at 1. Ock at night was awakened by a furious running & snorting of the animals who all broke from their hobbles and left camp running in their course over any thing opposed to them spent the night in looking them up and found all but two about sun one hour high three Otoes came to us who I suppose occasioned the fright and got the two horses.

13. Started and travelled 7 hours and camped on a fork of the Blue and found the Long. to be 96deg 7'.

14th. Made W.S.W. 21 miles and struck the main Blue

15th. Made about W. 9 miles and found our Lat. to be 40deg 17' then made 12 miles W. by N. over a very level prairie and again struck the main Blue and camped

16th. Made 10 miles about W. by N. to Dinner Latt. 40deg 23' and 12 more to the Pawnee trail to the head of the Arkansas and found that a very large party had passed it about 10 days before and a smaller one this morning.

17th. Made 3 miles up the stream crossing a very small run course W. by N. then struck out N.W. 3 miles and crossed a little run the same as passed in the morning then same course 6 miles and took an observation for Latt and found it to be 40deg 22' then 5 miles more same course and got sight of the Platte then W.N.W. 5 miles to the river and camped

18th. Raining in morning caught some Cat fish found fresh track of Indians a small party Rained hard all day moved camp 15 miles to a small grove of timber on the main land found our horses very skittish during the night.

19th. In the morning had just raised camp when we discovered two Indians who were shy of coming to us but after a while suffered us to approach them they said they were Pawnees but as we did not know the Pawnees this might be so or not perhaps Ricarees afterward saw several more on the blufs who did not come to us at noon found our Lat. 43deg 1' after traveling 13 miles W.N. in the afternoon traveled 13 miles W. and found our Long. to be 98deg 30' this night doubled guard.

20th. Moved camp from the pickett and 12 miles W. to breakfast fine clear weather old Buffaloe sign and antelope after dinner started and soon saw a band of elk one loose horse took fright at them and ran back on our trail there being no person mounted on a swift horse in camp I followed myself after going to a little creek where we nooned they struck out S. 15 miles to the heads of some little streams with timber probably the Blue where I overtook three of them my horse having failed I lost 2 fine horses. After riding about 12 miles found the Platte at our nights camp and followed it to the camp making in all a ride of about 50 miles arrived about midnight camp moved on 11 miles.

21st. Moved about N. 10 miles Lat. 40deg 33' afternoon 10 miles W. and camped after a little 3 Pawnee Scouts came to us and slept with us in the morning 12 more came and wished to persuade me to go to their camp 1 1/2 days travel N. Over the river which they forded here they stole some small things from us

22nd. Moved from the pickett and 15 miles W. about to Latt. just before nooning passed a little creek then West 11 miles and camped.

23rd. 20 miles W. to the crossing of the South fork of the Platte about 8 miles above the forks found Latt. to be 40deg 41'

24th. Crossed without difficulty and made up the N. side of the South Fork about 4 miles W. then struck N.W. about 1 mile to the North fork which is here the largest then made about W. by N. about 15 miles and near to some cut blufs which come close to the river

25th. W. by N. 12 miles passing another place where the blufs cut the river and here found much cedar on them and camped on the river in a wide bottom found no Buffaloe today killed one antelope. Afternoon 10 miles W.N.W. at night found the variation of the compass 1deg 30' west at

midnight our horses took fright but being strongly picketed and hobbled but few got out of camp.

26th. I date this the 26th having over noted one day heretofore in afternoon 12 miles W.N.W. passing some steep cut blufs which cut the river afternoon made 12 mils and camped still no buffalo Latt. 40deg 22' at night.

27th. Made this day 20 mils during a severe gale from the N.N.W. the sand cut like a knife and it was altogether a most disagreeable day this day saw a little timber on some hills to the south of the river about 5 miles distant also 2 bands of wild horses killed one Bull so poor as to uneatable.

28th. Killed Buffalo plenty today Came in sight of the chimney about noon made 22 mils wind still high N.N.W. One of our outriders saw six Indians mounted today.

29th. No[o]ned at the Chimney Lat. 41deg 51' After travelling this forenoon 11 miles afternoon 10 mils

30th. Passed through between two high blufs through a pretty good pass and avoided going between one of them and the river where there are bad ravines. Made this day 22 miles to Horse creek.

31st. Made after crossing Horse creek at starting about 20 miles.

June 1st. Made 15 miles to Laramies fork just before coming to which we made a cut off of about 3 miles over and about 5 miles by the river forded this fork with ease and made 8 miles up the Platte in afternoon. At the crossing we found 13 of Sublettes men camped for the purpose of building a forte he having gone ahead with his best animals and the residue of his goods he left about 14 loads.

2nd. Made along the river 5 miles then struck out into the hills about W.N.W. and made 12 miles to a little creek in the afternoon made 13 miles to pretty large creek and camped for the night the whole course this day about W.N.W. Left at Noon camp a bull and cow whose feet had worn out.

3rd Made 15 miles and nooned on the river this course N.W. by N. and cut over the hills about 1/2 the way the river taking a bend quite to the N. and passing through bad rocks. Afternoon made 6 miles cutting two very bad blufs but still following the river and camped on it

4th. Forded the river and made W.N.W. 17 miles along the river and camped on it Sublette one day ahead.

5th. Made along the river 24 miles along the River

6th. Made along the river 24 miles W. by N.

Captain Nathniel J. Wyeth's Expeditions to the Oregon Country.  
Second Expedition - 1834

---

7th. Made 12 miles along the river to the red Butes so called and is the place at which the river turns S.W. and we leave to strike for Sweet Water Sublette 2 days ahead weather chilly and windy. Poor grass for several days.

8th. This morning I had intended to have turned out the horses at 2 ock. and guarded them but during the night the horses appeared uneasy and appeared to think there were Indians about which induced me to keep them up until sunrise when we started W.S.W. from the Red Butes and made 18 miles to the high ridge of land and then one point more to the South and 12 miles more to a small creek with poor grass Several of the horses nearly done up for want of grass and from fatigue this day killed two grisly bears and many Buffaloe a little shower toward night

9th. Made S.W. 10 miles and made Rock Independence on which W.L. Sublette had noted that he had arrived on the 6th but I think he could not have done so before the 7th.<sup>39</sup> I noted my name then made S.W. along the creek 41,2 miles to a place where the creek puts through cut rocks each side perpendicular and about 60 feet high [Devils Gate] the trail goes through another place on a level and about 100 feet South of the river the rock intervening then made 6 miles W.S.W. between mountains but on a level and along the creek.

10th. General courses W.S.W. and along Sweet Water high granite hills on each side made 25 miles

11th. W. 10 mils then N.W. 9 mils to camp on Sweet Water

12th. S.W. forenoon a cut off of 10 miles to Sweet Water afternoon S.W. 9 miles along Sweet Water. Long. 110deg 30'

13th 3 miles along Sweetwater S.W. then took up a ravine to the W.N.W. about 1 mile then W. by S. 9 miles to a creek of Sweet Water runing into it about 8 miles off and S.E. then W. by S. 7 miles to another creek of Sweet Water running about S.E. and emtying into it at about 10 miles Sweet Water appears to run in cut rocks

15th. [14th.] Made due West 5 mils and crossed a small creek of Sweet Water which comes from a point of granite rocks about 2 miles from which we passed then W. 7 mils to a spring of good cold water and good grass. Wind river mountains now bear N.N.W. and a[re] covered with snow about 20 mils distant. Latt. 42deg 44 ' Afternoon made W. 6 miles to Sweet Water creek main body going about S.E. and coming out of cut rocks then W. by S. 16 miles over broken ground to one fork of Sandy running S. by E. here horses wer tired Buffaloe plenty.

15th. W.N.W. 9 miles to Big Sandy where we found Buffaloe plenty My hunters [Sansbury and Wilkins] not yet come in been out 4 days fearful they have been scalped.

16th. Made down the Sandy S.W. by W. 15 miles then 4 S.E. by E and camped on this stream so far the grass is miserable and the horses are starving and also at last nights camp they eat some-

thing that has made many of them sick. the same thing happened two year since on the next creek west.

17th. S.S.W. 10 miles down Sandy which makes here a bend to the right afternoon S. 9 miles passing at three miles the mouth of little Sandy and camped without any grass

18th. 12 miles in the forenoon S.S.W. making small cut off afternoon W.S.W. 7 miles camped in good grass.

19th. About S. by W. 8 miles and camped 1 mile above the mouth of Sandy on Green river or Seckkedee on the night of the 17th I left camp to hunt Fitzpatric and slept on the prairie in morning struck Green river and went down to the forks and finding nothing went up again and found rendezvous about 12 miles up and much to my astonishment the goods which I had contracted to bring up to the Rocky Mountain fur Co. were refused by those honorable gentlemen. Latt. 41deg 30'.

20th. Made W.S.W. 8 miles then S. by E. 15 miles to Hams Fork running here S.E. and a small stream.

21. Same camp.

22d. Same camp

27th. Moved up the river N.W.10 miles grass here pretty good but little timber and none but willows for the last 6 miles.

To 3rd. July. Same camp then up Hams fork 10 miles N.W. moved up the fork about W. by S. 12 miles to many Indians with us for comfort or safety they let their horses among ours so that it is impossible to guard any of them.

4th. Moved up the creek about 1 mile then leaving it made W. by N. over a divide and by a pass which occurs in the lowest part of a high range of hills 7 miles then W. 13 miles down a ravine which had a little water in it to its junction with another small run and the two are called Muddy here we celebrated the 4th I gave the men too much alcohol for peace took a pretty hearty spree myself. At the camp we found Mr. Cerry [Cerre] and Mr. Joseph R.] Walker who were returning to St. Louis with the furs collected by Mr. Bonneville's company about 10 pack and men going down to whom there is due \$10,000

5th. Made down Muddy 5 miles W. then N.W. cutting a divide into a small ravine which has a little water in it 8 miles then leaving the ravine cutting moderately high land to Bear river 4 miles. Then down Bear river N. by W. 4 miles to camp

6th. Made down the river N.N.W. 5 miles to Smiths Fork which is a short stream from the N.E. by

Captain Nathniel J. Wyeth's Expeditions to the Oregon Country.  
Second Expedition - 1834

---

N. and nearly as large as Bear river then same course 3 miles more then N.W. 5 miles here comes in Kamas creek from the N. then W.N.W. 3 and crossed Bear river three more and recrossed then cut over some high hills same course 8 miles more and struck the river again then down the river same course 1 mile to camp nothing to eat due south of this camp about 5 miles is the little lake [Bear Lake] so called which is about 20 miles long.

7th. Made 3 miles N.N.W. and passed a little creek the same course 6 miles along the river, then 3 miles N.W. to camp all day fine grass. During this day a multitude of fine springs coming into the river. today killed one bull.

8th. made N.W. 10 miles then 10 miles W.N.W. to a place where there is soda spring or I may say 50 of them. These springs throw out lime which deposits and forms little hillocks of a yellowish colored stone there is also here a warm spring which throws water with a jet which is like Bilge water in taste there is also here peet beds which sometimes take fire and leave behind a deep light ashes in which animals mire Killed one Bull today but so poor as to be hardly eatable having in the course of the day lost a horse will remain here to hunt him up

9th Same camp assended a mountain and from it could see that Bear river took a short turn round sheep rock about 2 miles below the spouting steam and goes south as far as I could see there are in this place many hundreds of mounds of yellowish stone with a crater on top formed by the deposits of the impregnated waters of this place. Killed one Buffaloe.

10th. Moved N. by W 3 mils cutting a range of hills then N.N.W. 17 miles to Blackfoot on which I found Boneville again and plenty of Buffaloe and killed 3 Grisly Bears during the day passed many small funnel shaped holes in the lava having the appearance of small craters.

11th. Made W. 6 miles cutting a range of hills then following in a valley formed by these hills and another range Made W.N.W. 10 miles to a little brook running N. by W. to camp Buffaloe today saw one Blackfoot on foot in the hills who ran like a good fellow.

12th. Made W. 3 miles and came upon a small creek which was said to be Portneuf it may possibly be the same water as that we camped on last night but running S. by E crossed this and a high range of hills and struck a stream which is said to be Ross creek this runs about W. after 9 miles more camped saw but few Buffaloe today.

13th. No Buffaloe saw elk on Snake River which we struck after 6 miles W. by N. in some small slew saw a great quantity of fine trout about 2 lbs. weight

14th. Went down the river about 3 miles and found a location for a fort and succeeded and killed a Buffaloe near the spot

15. Commenced building the fort and sent out 12 men to hunt to be gone 12 days and continued at work on the fort a few days and fell short of provisions and was obliged to knock off in order

Captain Nathniel J. Wyeth's Expeditions to the Oregon Country.  
Second Expedition - 1834

---

to obtain food sent out some men for Buffaloe they returned in two days with plenty. The 12 returned the 28th day at night. On the 26th a Frenchman named Kanseau was killed horse racing and the 27th was buried near the fort he belonged to Mr. McKays camp and his comrades erected a decent tomb for him service for him was performed by the Canadians in the Catholic form by Mr. Lee in the Protestant form and by the Indians in their form as he had Indian family. he at least was well buried.

30 Mr. McKay left us and Mr Jason] Lee and Capt. Stewart with him

6th. [Aug.] Having done as much as was requisite for safety to the Fort and drank a bale of liquor and named it Fort Hall in honor of the oldest partner of our concern we left it and with it Mr. Evans in charge of 11 men and 14 horses and mules and three cows we went down the river S.W. 4 miles and found a ford crossed and made N.W. 7 miles to the head of a spring and camped in all 29 strong. Fort Hall is in Latt. 43deg 14' Long. 113deg 35'

7th. Started at day light and traveled 10 hours as fast as possible N.W. by W. 30 miles to the Bute. being the most southwardly one and from it the other two Butes bear N.N.E. the farther about 20 miles off the other midway the Three Tetons about 100 miles off and bearing N.E. the day was hot and we suffered some for water and found but a small supply on the N. side of the Bute a miserable chance for our horses and not a good one for ourselves

8th. Started at sunrise and made N.W. 10 miles to Godins river then crossed it and made in the same direction 12 up the river and camped in fine grass where we struck the river there is no grass nor until we camped above I am told it is fine found no appearance of buffaloe

9th. Made due W. 16 miles striking for the N. side of it a pretty high hill and struck up the mountains close on the N. side of it then wound into the mountains in a S.W. course finding water at 5 miles this we followed 3 miles N.W. and struck a pretty large creek which we followed N.N.E. 1 mile and camped just at starting killed a Bull and separated from Abbot and a small party of trappers accompanied by Antoine Godin whom I sent out for Beaver.

10th. Made 7 miles down the creek N.N.E. to Godins river the same we left day before yesterday then N.W. 3 miles then West 14 miles today saw a large fire in the mountains on our left suppose them to be Diggers keeping for safety in the hills the Blackfeet trouble them even here saw one band of Buffaloe cows today killed one calf the party I parted from viz Antoine and Abbot are before us on this river.

11th. Made W. 9 miles then 18 SW the angle of the two courses occurs at what is called the Spring prairie which is about 10 miles over in the center of which there are three tolerable Butes these Butes when you approach from the East look like three but when from the West show as two this day killed an old Bull very strong

12th Moved 3 miles up the creek S.W. at which place the creek divides into about equal parts the

one going south I took by the advice of one [Thornburg] who said he had passed before followed this up one mile and a branch going E. 3 farther another E. 4 miles farther looked so bad camped took a horse to explore the route 1/2 mile above camp the stream branches the right at small distance heads in an amphitheater of inaccessible mountains followed the left 4 miles S. by E. and this also heads in an amphitheater. We drove 2 Bulls before us which we killed they being unable to pass. I climbed up the clefts an[d] in passing over the snow had liked to have been killed in the following manner passing over some snow and on which the water was running and being afraid of caving in I missed my foothold in a slippery place and went gradually sliding down to a precipice but succeeded at last in averting my progress to destruction by catching the only stone which projected above the icy snow I however reached the summit and looked into another defile running E. like the one I came up. Got to the bottom again and found one of our two mules gone and being in want of meat packed the other with part of one of the Bulls and walked barefoot to camp during the night through an infernal rough rocky prickly Bruisy swampy woody hole.

13th. Moved down creek back to the commencement of the South Fork then took the other about S.W. by W. at two miles up a creek from the N. forming about half of the stream then three miles farther where the rest divides into two parts very small passed the mountain in a south course between these last forks up a gentle fine trail and not more than 1 mile to the top then down by a very steep bad trail. South still along a branch of Malad 5 miles to tolerable grass and camped this last part of the route about the worst road that I ever passed.

14th. After shoeing some horses that were lamed yesterday started and made 9 miles S.S.W. at 2 of which got a small creek from the N.E. at the end of the 9 miles got a fork of about equal size to the one I came down from the S.W. then made S.E. by S. 10 miles and camped got a creek from the N.E. at 2 miles of it and at 7 one from the S.W. Saw no game today the dusky grouse plenty for three days past Horses much knocked up with sore feet.

15th. After crossing the stream passed up a ravine S.W. to its head then crossed some low grassy hills and at 12 miles crossed a small creek going S.E. this creek forks at this place then at two miles in all 14 miles S.W. crossed another which we followed two miles S.S.E. then left it on our left and cut a pretty high hill 4 miles S.S.W. and came down to the plain of Snake River then 3 miles W. to a creek with a fine bottom but no water except what remains in little pools, but excellent grass here found two lodges of Snake Indians.

16th. Made 28 miles W. following the main trail which is good perfectly level and distinct except in one place where it crosses several small branches which in the spring I presume are miry which occasions the traveller to go in no particular place during this days march I observed some low hills on the South side of us which gradually approach and at this camp are about 8 miles distant between us and them a little river appears to run to the W. which I am in hopes is Reeds other wise called Big Woody [Boise R.] Today the travelling was fine and many little streams of water cross the trail at this camp which is on a very small thread there commence small irregularities just enough to note the place.

Captain Nathniel J. Wyeth's Expeditions to the Oregon Country.  
Second Expedition - 1834

---

17th. Made 20 miles due West over a country with easy Hills good and distinct trail and often water in very little streams. Country mostly burnt out by the Indians who have passed here lately going up to Buffaloe. Killed some dusky grouse and dug some kamas which assisted our living a little also found some choke cherries and saw one Indian at a distance on Horse back who fled.

18th. Made over a hilly country 12 miles W. until we passed a high stony hill then bending N.W. made 10 miles more over a stony Hilly but distinct trail with not much water saw a track of a Bull made this morning altho there is very little old signs in this section. Camped on a nearly dry creek running W. today lost 2 Horses.

19th. Left the little run on which we camped last night going here N.N.W. on our right and put out as near as I could judge W. 10 miles the first three over a divide of high steep hills then taking a little run followed it out of the worst hills along this run were many little Indian camps we then left it and went W.N.W. 15 miles and struck Woody River in cut rocks at about 7 miles of this last course struck the run on which we camped last night at Woody we saw plenty of Salmon but had no means of catching any of them this day found a colt in the Rush probably left by the Indians on which I mean to Breakfast tomorrow morning being short of provant.

20th. Followed the river down W. by N. 22 miles in the course of the day traded of some Inds. enough salmon for a Lunch and consumed the remaining provisions

21st. No Breakfast. Feel very much purified in the flesh. 12 miles down the creek W. at noon found Indians of whom we traded enough Salmon with a dead one we picked up in the brook and a few birds for a dinner afterwards traded 2 Bals Salmon of the Inds.

22nd. Made 5 miles W. then the trail cut a point of higher ground of about 2 miles and again struck the river and crossed it made on the other side 7 miles W. in all this day 15 miles W.

23rd. Made West 9 miles and found a small village of Snakes of whom we could only trade a very few salmon then 5 more in all 14 miles along the Big Wood R. and arrived at Snake River which we forded by wetting our packs a little here we found a few lodges of very impudent Pawnacks of whom we traded a half Bale of Salmon afterward 4 miles N. along the W. side of Snake River and camped near a few lodges of Inds.

24th. 6 miles N. then made a cut off N.N.W. 4 miles to R. Malheur where we found but three or four Indians and consequently got but little Salmon and consequently may starve a little between this and Walla Walla afternoon 7 miles N. passing not far from the River. I had forgot to note that on Big Wood River the Indians attempted to steal some of our horses but the horse guards discovered them and they failed. Scorpions are here quite common two nights since I was just about laying down when on my Blkt I saw something move I folded it in the Blkt. and on carrying it to the fire found it to be a very good sized scorpion. This day at noon parted from Richardson and 8 men to go up Malheur and other creeks to trap there is something melancholy in parting with men with whom one has travelled so far in this uncertain country. Our party is now 17 boys

Indians literati and all.

25th. This days march was in many different courses but I average them at 23 miles N.W. and camped just before where the trail finally leaves the Snake river and at the same camp where I overtook two years since my men who without orders were leaving the country while I was up Malhuer trapping. Traded this day about 70 salmon which makes a tolerable supply of provisions for the cut to Walla Walla.

26th. Made about 20 miles in about a N.W. direction up Brule [Burnt River] Last night lost two Horses which I think were stolen and today two more gave out. I now think of leaving two men behind to bring up some of the worst animals otherwise I fear I shall loose many of them.

27th. After leaving Sunsbury [Nicholas Sansbury] and [Calvin] Briggs to bring up the worn out horses I left and making a cut off to the right going up a ravine across another and down a third came again upon Brule, at the open Prairie and camped for noon at the upper end of it on a little run and cashed 24 bars lead and 18 Traps general course N.W. 14 miles afternoon 9 miles N.W.W. following the little creek up and camped on a little prairie near the head of it of about 20 acres here there is two trails one N.W. the other N. the N.W. one I shall try.

28th. Here taking the left hand trail we followed it 12 miles N.W. when it disappeared I then took a N. course and at 8 miles came on Powder river which we followed down about 5 miles and camped this afternoon I shall go out to see where the trail crosses the river. This day killed an antelope and a Fawn and saw fresh Elk Track.

29th. Turned up the creek again and after arriving at where we first struck the river made 6 miles W. by N. then into cut rocks then W.N.W. 4 miles more and Nooned on a little water in a ravine during the forenoon two men whom I had left behind with the poor animals brough[t] up all but two also during the forenoon two men got lost and our hunter [Hubbard] got lost yesterday all missing tonight. Afternoon made 8 miles N.W. and camped in cut rocks on the main river at a place apparently not frequented either by Indians or whites but there are Salmon here but we have no means of catching any without waiting too long. I think by the looks there are Beaver here but will ascertain in the morning in order that my trip here may not be entirely lost.

30th. Made 8 miles up the creek through Cut Rocks during which time killed one Salmon and Two Otter so much provisions and Nooned on the Walla Walla trail West Fork the East being the one I descended on my first Tour afternoon made N.N.W. on the Trail. Here plain and good 15 miles at 5 of which crossed another Fork of Powder River but dry at 5 more a little water and at camp a little and but a little country rolling and soil good. At our camp two lodges of Kiuses

31st. Made 15 miles N.N.W. good soil and not very hilly and nooned at the Grand Ronde where I found some Kiuse Indians, Capt Bonneville and two of Mckays men and learned that Capt. Stewart and Mr. Lee passed two days before. Afternoon took the Walla Walla Trail N.N.W. 12 miles and camped at a very small Prairie with a little stream going N.W. Killed 5 Hens today. On

allowance still.

1 Sept. After about 5 miles descended a very bad mountain and followed a dry creek then ascended another bad mountain and nooned with out water at 8 miles of very bad going afternoon making along a ridge of mountain 16 miles arrived at the Ottilla [Umatilla] the trail plain the ground stony about N.W. course but indirect so far from the Three Butes every day has been thick smoke like fog enveloping the whole country last night we camped at 10 ock having found no water and the whole country burnt as black as my Hat affording as poor a prospect for a poor sett of Horses as need be.

2nd Left camp behind and proceed across the Utalla River to the N. and up a mountain then took a slight ravine going N.W. and crossing several trails until the ravine leads to a dry willowed creek going N.E. with a little water in puddles then N.W. up a ravine to the height of land which is a gentle slope then leaving the trail and going a few Hundred yards to the left followed a Dry ravine to the Walla Walla River 22 miles in all N.W. then down the Walla Walla W. by N. 10 miles to Fort Walla Walla where I found Mr. Pambrum [Pambrun] who did the honors of the Fort in his usual handsome stile also found Capt. Stewart and Mess Lees who arrived two days since. Mr. Mckay for some reason remained in the mountains.

3rd. Remained at Walla Walla this day and made arrangements for going down at night Capt Thing and the residue of the party came up.

4th. In morning left Walla Walla in a boat hired by Capt. Stewart after proceeding 4 miles obliged to come to land to tighten the canoe.

5 - 6 - 7th Down the river and landed to Hire canoes at the Dalles for the party still behind.

8th. Waiting at the Dalles for party

9th. Waiting at same place party arrived at night with news that they drowned one Horse and the Jackass in crossing the River I valued him more than 10 horses as a breeder.

10th. At noon having with Difficulty hired three canoes started down the river with three Indians on board. Wind high and soon increased to a gale swamped one of the canoes which frightened the Indians back. Obligated to lay by with two of the canoes behind.

11th. Walked back and brot up the two canoes. Gale still furious and finding that my people were not good boatsmen enough to follow me left the two boats in charge of Capt. Thing and at noon put ahead made about 10 miles and swamped the canoe.

12th. Gale still violent and canoe so leaky as to require one man to Bail the whole time kept on until noon and camped until night when it calmed and we put ahead and made to the Cascades the roar of which warned me to camp. Here overtook Capt. Stewart.

13th. Made our boat a little tighter with some pitch obtained of Capt. Stewart and made the portage of the Cascade carrying our things about 1 mile and letting our boat down with ropes raining hard made til 9 ock. at night when it rained so hard that with the leakage we could keep the boat free of water no longer and put ashore.

14th. At 2 ock in morning cleared up a little and we put on but it kept drizzling at 9 ock. made the Saw mill above the Fort and got some breakfast not having eaten since noon the day before at 12 ock arrived at Fort Vancouver where I found Doct. McLaughlin in charge who received us in his usual manner he has here power and uses it as a man should to make those about him and those who come in contact with him comfortable and happy.

15th. Early in the morning having hired another canoe put ahead and in a rainy day at about 12 ock. met the Bg [Brig] May Dacre in full sail up the River boarded her and found all well she had put into Valparaiso having been struck by Lightning and much damaged. Capt Lambert was well and brot me 20 Sandwich Islanders and 2 Coopers 2 Smiths and a Clerk.

16th. Kept on up the river in order to make Fort Vancouver and pay my respects to Doct. McLaughlin but the wind failed and we could not.

17th. Took the gig and went up to Tea Prairie to see about a location but found none.

18th. Came on board and put down the river for Oak point where we mean to examine for a location.

19th. Came too at Cameans [Casineau's Village] house and concluded to remain at least for the winter.

20th. After setting the forges at work and commencing a coal kiln houses etc. started up the river Wallamut in a gig the gig followed the Wallamut 1 mile then took a creek to the right and after 5 miles came to the farm of Mr. Thomas Mckay. where I was treated with great kindness by [Louis] LaBonte his foreman and of him procured horses and proceded by land until near night over hilly wooded country near night came out into large plains of good lands surrounded with good timber some oak and overtook Mess. Lees who had started the day before me and camped with them they are in search of a location.

21st. Put out in the morning days travell through good lands rolling sufficient and assorted timber and water. At 3 ock. came to crossed the Wallamut at Duportes [J.B. Desportes] House and from him got fresh Horses and proceed up on the E. side of the river to [Joseph] Jervais 10 miles.

22nd. Not suiting myself as to a farm returned to Duportes and went to look at a prairie about 3 miles below his place and concluded to occupy it it is about 15 miles long 7 wide surrounded with fine timber and a good mill stream on it.

22d Laid out a farm afternoon took a canoe and descended as far as falls.

23rd. Made the portage of the falls and was taken violently sick of vomiting and purging probably caused by having eaten some Lamprey Eels recovered toward night and arrived at Fort Vancouver and finished an arrangement in regard to trade.

24th. Went down the river to the vessel.

25th. Making preparation for sending out parties

26th. Do. & sent off Sunbury to trade Horses at the Dalles. Sent Stout up the Wallamut with 2 men and implements to commence farm and started myself up to Vancouver on business.

28th. Up the Wallamut with Mr. Nuttall and Townsend and Mr. Stout.

29th. Going up to the falls and went a small distance up the Clackamas River to look at a spot there found it would not do. Saw there a chalk formation

30th. Returning down the rivers.

31st [Oct. 1st.] At night reached the vessell at Carneans from this time until the 13th Oct. making preparation for a campaign into the Snake country and arrived on the 13th at Vancouver and was received with great attention by all there

14th. Made up the river 12 miles

15th. Made up the River 11 miles

16th. Made up the River 13 miles to the Cascades.

17, 18, 19. Delayed by strong winds and making portage on the last day at night sent a division off under charge of Capt. Thing

20, 21, 22nd. Same camp with nothing to eat but what we catch out of the river with our lines not liking to broach our stores for the voyage

23rd. At sundown our boats arrived from above and I immediately started up the river we pulled all night except stopping to cook at midnight

24th. After taking breakfast and giving the Kanackas [Hawaiians] two hours sleep we put up the river with a head wind day raw and chill

25th. Arrived at noon at the Dalles and found all the people well and but one horse traded.

26th. Started Capt. Thing with 12 Kanackas and 6 whites and all the best Horses [to Fort Hall.]

27th. Remained at same camp and traded 5 Horses at about \$5.00 of goods each

28th. Started the boats back and Hubbard down by land with 13 horses for the farm

29th. & 30th. Same camp traded 4 Horses.

31st. Started up the river Kanackas on foot for want of Horses and goods on miserably poor animals To the 7th Nov. moving slowly up the river during which time and before traded 18 Horses and 600 lbs dried Salmon which I have reserved for provisions after we leave the river when I know we shall get none and having hired a canoe for Walla Walla dispatched her with this salmon on 2 loads of traps one woman one Indian and two whites she sank once but we recovered all and suffered one days delay only to dry the fish we have lived chiefly on trash and dogs fearing to commence our stock of provisions expecting to get little or nothing all winter and I do not mean to starve except when I cant help it.

8th Traded one Horse a few drops of rain today and for more than two thirds of the days since the 1st of the month. Kept along the river traded 8 dogs today being a 2 days rations.

9th. Moved along the River Traded 1 dog but no Horses

10th. Left camp and went into Walla Walla found Mr. Pambrum well and good natured, and got the news that Capt. Things 12 Kanacas had deserted him and that he had gone in search of them on their trail.

11th. Went to Capt. Things camp and learned from Mr. [Abel] Baker that the Kanackas had taken about 2 bales of goods and 12 horses Returned to Walla Walla on the way met the men who went with Capt. Thing they had not been successful dispatched an interpreter Mr. Richardson and two other men down the River in a canoe to head the fellows.

12th. Moved camp up the river a small piece for grass having crossed yesterday no success in trading horses today the Indians appear to think their fortunes are to be made by an opposition but they will find their mistake today got word that the Kanackas had not touched the Columbia nor passed the Utalla River and that Richardson had got a party of Indians to accompany him and horses and had taken up pursuit on land.

13th. Richardson stil out At night dispatched 4 men after two Kanackas that have been seen by the Indians about 15 miles below Walla Walla on the main river.

14th. Robinson and Richardsons party returned with no success Robinson had seen the track of

shod Horses within 5 miles of Walla Walla

15th. At 10 [o]ck this morning dispatched Richardson and Robinson with two men to trace out the track seen by Robinson.

16th. An Indian brot in one shod horse which had been taken by the Kanackas he found it at the Utalla River and brot word that there saw two of the scamps had bot a canoe and gone down leav- ing no horse except that which they took and one alive which he brot in.

17th. Robinson & Richardson Returned no news yet of the rest.

18th. Finding there is no immediate hope of getting the kanackas I today dispatched Capt. Thing to Fort Hall having 19 men viz 4 Kanackas 10 white men and himself a fur [free] man and three Nez Perces 19 in all. This is a picked up lot and I have great fears they will commit Robbery and desertion to a greater extent than the Kanackas have done but I was obliged to trust to the chance it is late and the Blue Mounts. are now covered white with snow altho the grass is green here with- in 30 miles of them.

19th. Went up the Walla Walla River about 7 mils and raised a deposit of goods which I had made in the ground there fearing that some of Capt. Things men who knew where it was might desert and raise it and attempt to go to the Spanish Country. I am now quite sick with a fever but must keep doing.

20th. Spent the day arranging packs for a move Weather clear and cold with much hoar frost and mist.

21st. Deposited the spare goods on hand at Walla Walla fort

22nd. Finished arranging for moving and given up all the Horses still missing viz. 2.

23rd. Moved down the Walla Walla River and camped on the Columbia about 6 miles below the Walla Walla taking leave on the way of Mr. Pambrun the gentleman in charge of the fort Still not well.

24. Moved about 15 miles down the Columbia and camped without wood night quite cold near some bad rapids just above the mouth of the Utalla where I have a cash of traps which I intend to raise.

25. Moved about 15 mils down the river and camped I had forgot to mention that on the 23rd in the morning when I was about loading the horses I found that Ira Long, a sick and as we have supposed crazy Kanacka, was missing I then thought that he woud go at once to Walla Walla but do not hear of him yet I am at a stand to make up my mind wether he went out of camp and died suddenly or drowned in the river or ran off what he should run off for no one can conceive as no

duty had been required of him and he had tea and other luxurys given him on acct. of sickness that no one else had it is a very strange affair to me. Today I hear that one of the two Kanackas who went down the river in a canoe as per former report has been killed for killing horses by the Indians other reports say a Kanacka has killed an Indian. I also hear that 6 of the runaways are on the heads of John Days River the whole of which storys I take to be lies invented to tell me in the hopes of a small present of tobacco. We live on dogs chiefly good luck traded 4 today.

26th. Made about 12 mils down the river and during the day traded a young fat dog.

27th. Moved about 14 mils down the river traded one poor little dog and 4 dried salmon. We hear such contardictory and impossible accounts from the Indians of the Kanackes that I do not know what to believe.

28th. Moved down the River 15 miles traded nothing all day providentially killed one goose which made supper and breakfast for 5 of us. Snowed a little this day and of course not much comfort for a little cold and wet spoils all the comfort of our camps.

29th. 16 mils down the river killed nothing traded 2 dogs and some little deer meat dried. Snowed all the first part of the day and uncomfortably cold rains tonight very uncomfortable some of us have no coats men grumble.

30th. The rain of last night changed to snow and this morning the Earth is white and the weather cold made 12 miles and crossed John Days River then 3 more along the main River and camped with nothing but grass to cook our supper.

31st. Made today 12 miles the last of yesterdays and some of today's march pretty bad traveling for the horses owing to cut rocks camped one mile up the river of falls called by the French "Reviu des Shutes". I do not know if from the numerous rapids of this river or its proximity to the great falls of the Columbia which are about 3 miles below its mouth. There is here a small villege of Inds. from whom I understand by signs that the two Kanackes who decended the river stole horses here or killed Horses and in some wrangle with the chief concerning it one of the Kanackas shot him. I shall be sorry if this is true as in such case I shall be obliged to make a signal example of him both in order to quiet the Indians and prevent their rising upon the whites and as a terror to the other Kanackas.

Dec. 1st. After trading 4 dogs and a few salmon and roots and ascertained that there was no ford above or near us and that the road lay on the river we moved camp down to the mouth and crossed at a rapid and tolerable deep ford then assended the hill by a ravine and descending again struck a good sized Beaver Creek at 6 miles due South while on the divide could see far ahead of a dreary snowy exposed country without a stick of timber to relieve the eye except far in the distance a black looking mass like a cloud of pine timber.

2nd. Moved camp early and left the creek on which we camped by a ravine to the right running

Captain Nathniel J. Wyeth's Expeditions to the Oregon Country.  
Second Expedition - 1834

---

S.S.W. followed it to the height of land then down a ravine to the creek 3 miles S.S.W. then S.S.E. to the left of the creek by a ravine 5 more and camped We here find some little oak timber traded today about 30 lbs. dried deer meat.

3rd. Made 16 miles to the River des Shutes S.S.E. and camped near about 20 Lodges of Indians had to buy what little wood we used a thing I mortally detest last night about 12 sett in to snow before morning turned to rain which lasted all day the coldest I ever knew and blew a gale in our teeth this has been a miserable uncomfortable day the first part of it we ascended gradually until we reached a high ridge then descended suddenly to the river on the ridge considerable snow and the whole country covered with little round cones of earth denoting that the winds blow over this divide continually and strong. Grass is far as I could see pretty good.

4th. Moved camp S.S.W. 3 miles and camped on the fork of the River coming from timbered hills to the W.N.W. We hear that the two Kanackas have been followed by the Indians and killed in revenge for killing one of them and their Horses.

5th. Same camp trying to trade horses get none yet.

6th. Same camp

7th. Same camp

8th. Same camp

9th. Same camp During all this time traded but one Horse, but fared well enough for food as we obtained as many dogs as we could eat during the time Gully my Indian having lost his horse went out to hunt him and as I believe with a determination to quit me he found his horse and sent it to camp by an Indian with word to send his things with some trifling excuse but I kept the Horse and things the Indian whom he sent said he would go and take the Horse for which I gave him a flogging and he went off during this time we percussed 3 Rifles our powder being so badly damaged as to render flint locks useless. In this vicinity there are Elk and Deer as we trade their meat and skins of the Inds. in small quantities the grass here is good and here I cashed some goods our horses being to poor to carry them on.

10th. Moved but without our guide whom I had engaged who was among the missing when we started and I suppose engaged only to get something but without intending to start We took a S.S.W. course and crossed the fork on which we had camped for some days past and after mounting the small mountains which range along this fork found an extensive plain beyond which white and high rose a range of mountains disheartening to look at but ahead is the word and the spirit seems to raise with the occasion this range runs E. & W. made this day 11 miles to the foot of the range along which is a small stream here we cashed some provisions for our return route and some loads of dry goods which our horses are too weak to carry.

Captain Nathniel J. Wyeth's Expeditions to the Oregon Country.  
Second Expedition - 1834

---

11th. S.S.W. and mounted the mountains which we found much less formidable than they appeared to be the earth and trees are covered with a heavy hoar frost which at a distance made them look as if covered deep with snow of which there was but little these mountains have scattering groups of pine timber and some oak and the little plains in them have brown cedars similar to those of N.E. but still of a different sort but yet the robins in considerable number feed on the berries which reminded me of old pleasures and home where I have often been out to shoot these birds from the laving. but these are too painful to be indulged and the present evil is enough without calling up old joys to enhance it made this day 15 miles and camped on snow water with good pine wood day cloudy wind N.E. and cold Saw the first elk and deer sign for some time they say we cannot cross the divide to Clamat but I will go as far as I can.

12th. Engaged an Indian Guide last night but he too it seems has backed out as I cannot find him this morning Made one mile down the ravine in which we camped and came to a small creek running about E. then ascended the hills and after 5 miles came to a larger creek then 3 miles more where the trail gave out then courses S.S.W. then struck S. by E. 3 miles and crossed a small creek this and the last running E then 3 miles more and camped on a dry ravine all these last courses S. by E. grass this far pretty good and country timbered and prettily level today with small prairies. Saw much Elk and Deer signs but killed none.

13th. Made 5 miles S. by E. over level timbered with small openings country and came to a creek with very bad cut rock banks at least 400 feet high we had much difficulty in getting our horses down to the water and up the opposite bank but succeeded after laming several of our horses this creek is rapid tolerably large and runs N.E. we then made 3 miles S. by E. and camped the snow here covers the ground and the horses have to dig for their food. Saw today 12 deer and a great quantity of Elk and Deer sign and one bear track after camping went out to hunt but could kill nothing today the first clear day for four days the fog lifted a little and enabled us to see a range of snowy mts on the west side of us and one very high bearing S. W. distant about 25 miles should we have any considerable fall of snow now we should loose all our horses they could not subsist with much more than there is now all the dog meat which we have brot with us from the last Inds. is done and we have now to look to our guns to supply us or eat our horses. We have about 4 bushells of rice and flour in camp for cases of extremity and a little dog grease. Small game there is none we have but 10 lbs of powder along and that damaged Go ahead very cold for the 4 last days.

14th. Made S.E. 4 miles to a very small creek running in an immense chasm into which we got and camped the grass being good and our horses having had nothing last night except what they dug up from beneath several inches of snow saw many deer today but killed none sent our hunters out after camping all but one returned empty and him I suppose has lost himself in the forests as I heard a gun late at night and returned several shots weather still quite foggy and very cold.

15th. S.E. by E. 4 miles and down the ravine the snow growing less and less visibly in this direction got out of the woods and saw the country bare of snow here found a lodge of Indians who have 32 Horses traded one of them and have the promise of trading two more in the morning the

man missing last nigh came thi[s] mng.

16th. Traded the two horses one of which cost 82 1/2 cents of beads first cost. Made E. down the ravine 2 mils then struck a good trail crossing the ravine and going off S.S.W. which I followed over rocky high land 8 mils and came to a very large creek I should think it must be at least one-half of the River Des Shutes at least running in an immense chasm into which we decended and camped in good grass and plenty of dry wood which makes us very comfortable for the night is very cold during the march over the high land saw a chain of mts on our left and the other side of the river white with snow and partly wooded.

17th. Went up the creek W.S.W. 2 miles when it turned south and we forded it at a deep ford horses suffered much from the coldness of the water then wound S.W. up the opposite bank of the river very high and precipitous 2 miles more here saw many deer killed none after attaining the heigh[t] made 8 miles S.S.W. through timber and snow then S.S.E. 4 miles also through timber saw several places where deer had been killed by the wolves which are here numerous and very large camped at a little grass the first seen today where the horses can dig up a little food. The country ahead appears more open we have now a little rice to eat and no meat begin to look at the horses still cold.

18th. Made S.S.E. 12 miles to a small creek during this days march a snowy range of high mts. in points lay along our right and front stretching so that our course today just doubles their eastwardly termination at a place where probably a fork of the river Des Shutes passes this range runs N.E. & S.W. still farther on our left and apparently on the other side of the same river there is another range running N. by S. today saw a very great amt. of sign and deer and have concluded to stop and hunt tomorrow and rest the horses tonight a little snow squall.

19th. Same camp Went out hunting killed 2 deer and several wolves this day came to us 5 Walla Walla Inds. who are out hunting they camp with us tonight they say that the game comes down from the mts. in the winter on account of the snows which is the occasion of its being so plenty at this time one man out of camp tonight probably lost shall wait tomorrow for him if he does not come in the meantime and take another hunt for meat which is now quite a luxury.

20th. Same camp killed one deer found the lost man

21st. Made S.S.E. 15 miles toward the eastwardly termination of the range of mts which has for some time been visible on our right at this point we can see no mts. but a little farther on the left they commence again apparently the same range which we have seen for some time ranging on the E. side of the river. Killed no game today but saw plenty.

22nd. S.E. by E. 10 miles and struck a small creek which though very rapid was so hard frozen over that we crossed it on the ice then N.E. 1 1/2 mils and came to a very large creek which I take to be the main river it is about as large as the other fork which we crossed on the 17th inst. country a little more broken deer plenty but killed none today a little warmer than usual.

23rd. Started up the river E.S.E. and gradually in 4 miles travel rounded to a S.S.W. course and made 12 more the last 6 of which the snow increased in such a manner that tonight we find no grass for our Horses and being afraid to advance with them another days march I have determined to send them back and with 3 men I propose to build canoes and ascend as far as I can and ascertain if it is possible to get the horses through and if so to send back for them and if not to ascertain if there is beaver and if so trap it if not further advance this quarter is useless. Tonight set in to snow hard but soon turned to rain.

24th. Snowed and rained all last [night] and still snowing with a gale of wind from S.S.W. nearly all the horses gone astray about 12 having found all but one killed a poor Horse for food and send the party all but three back to find grass for the horses cut down two large pines and commenced two canoes gale all day with occasional snow and rain.

25th. Same camp gale S.S.W. Snow and rain all day a miserable Christmas worked what little we could on the canoes.

26th Day fair and calm warm go ahead making canoes

27th. Day fair calm and warm still at the canoes

28th. day fair calm and warm still at the canoes and eating horse meat

29th Fair weather and mild.

30th Fair weather and mild. Sick with indigestion

31st. Fair weather and mild all so far South wind myself better and finished the canoes and horse meat at the same time viz; this evening at supper the men have called our two boats Black Snake & Triton.

1835 Jany 1st. Started in the morning in the canoes about 5 miles by the river about 2 1/2 miles due south and came to a rapid in attempting to ascend which got filled with water and afterward in towing with the line she broke loose and went down stream we recovered her after a long run and ascended again to the rapid and it being near night camped killed today one fine fat goose warm south wind rain snow deeper as we proceed and is now about 2 feet country rough and covered with pines set 4 traps for beaver today and am in hopes to have one for breakfast.

2nd. Went to my traps found nothing then made snow shoes and set out with one man to explore the river took a due south course and in 3 or 4 miles came unexpectedly to the river there running smooth. I was happy to see it as I was entirely tired of this mode of travelling my shoes were too small and I frequently sunk into the snow and bothered me much to get out again sometimes I would tread on my shoes and fall down and on the whole I though[t] I could get along better

without them returned to camp killed three ducks for four of us small allowance with our men took our boat up to the rapids and spent the residue of the day in getting our canoe past the rapid most of the time up to my middle in this cold water had to make a portage at last of about 1/4 of a mile the river here makes a detour to the E. and around S. to west to the place where we take our things across.

3rd. Raised our traps and found one beaver caught the largest I ever saw I think he weighed 65 lbs. and killed one duck a very seasonable supply of food the residue of the day finished making the portage and sett 8 traps the other Boat also got setting above Snow today and rained hard last night nearly all night. Wind Strong N.W. the first wind beside S. since 10 days.

4th. Found but one beaver in our traps took a jaunt up the river at about 6 miles straight line S. the river forks into two apparently equal streams followed the left one about 2 miles S. by E. and returned to camp tired enough having found only sign enough in this distance to set 3 traps the river winds so that we have to paddle twice the real distance rained and snowed some during the day. Saw for the first time on this route swans they appear plenty here country still timbered but much more level.

5th. Caught 3 Beaver rained and snowed hard all last night and part of today raised camp and camped about 2 miles below the forks mentioned yesterday one of the beaver caught today would weigh I should think 70 lbs. and our fires look finely with sundry roasting sticks around full of meat the beaver are fat and we live finely again. Wind strong and south.

6th Rained all the forenoon and hail and snow all the afternoon caught no beaver saw very little sign heard a rapid or fall ahead killed 2 swans so fat that we could not eat all the grease a rear thing in this country to be troubled with fat Seems good to live well after poor horse meat and short supply Shall lay down the course tomorrow when I get it more accurately today being too thick to see and the river more winding than ever timber less plenty and very small and but little of the large kind of pine country as far as we can see very level with here and there a round conical mountain.

7th Started up the river to sett traps found sign for but one and returned to camp at the same place as last night killed one swan which would weigh I should think 35 lbs. to fat to eat one we eat yesterday yielded nearly 2 qts. of oil more than we could eat with it. These birds are delicious it is strange that one only does two of us two meals that is to say a day. They dont eat so in the states day pretty cold wind S.W. strong little snow today and some sun out the bed of the river is a soft white stone or hard clay the same as found on the Clacamas I think it is of the chalk formation.

8th Remained all day at same camp on account of a severe snow storm it snowed all day and fell about one foot Blew strong from the South which is almost constant wind here.

9th went down the river and raised some traps we had set there and returned to same camp The river from the last place [to] where I brought it runs S.E. 1 mile at which point a fork coming

from the Eastward but it was frozen up so we could not ascend it then south 5 miles to this camp.

10th. Snowed and rained all last night hard and today so we are blessed with about 8 inches of slush makes every thing very uncomfortable did not move camp.

11th. Last night grew cold and set in for a hard snow storm with a gale of wind from the W.S.W. which continued without intermission until sunset today so we did not move camp the cracking of the falling trees and the howling of the blast was more grand than comfortable it makes two individuals feel their insignificance in the creation to be seated under a blanket with a fire in front and 3 1/2 feet of snow about them and more coming and no telling when it will stop. tonight tis calm and nearly full moon it seems to shine with as much indifference as the storms blow and wether for weal or woe, we two poor wretches seem to be little considered in the matter. The thoughts that have run through my brain while I have been lying here in the snow would fill a volume and of such matter as was never put into one, my infancy, my youth, and its friends and faults, my manhoods troubled stream, its vagaries, its aloes mixed with the gall of bitterness and its results viz under a blanket hundreds perhaps thousands of miles from a friend, the Blast howling about, and smothered in snow, poor, in debt, doing nothing to get out of it, despised for a visionary, nearly naked, but there is one good thing plenty to eat health and heart.

12th. Started up stream and made S. 6 miles at which point there is a considerable creek coming in from W.S.W. water as warm as the main river and not frozen up. Then 3 miles S.S.E. and camped. Saw but little beaver sign today river not very rapid but winding saw only two swans could not kill them caught one yearling beaver spit snow all day at night set in to snow hard moderately cold wind S. but moderate.

13th. 6 miles W. by N. creek very winding and more rapid than usual and camped just below a severe rapid fine sun in the forenoon but cloudy and snow spits in the afternoon and this evening.

14th. Snowed about 4 inches last night. Today pretty cold passed the rapid on the south side of the south channel there being a small island at this place just above the island there is a raft of drift timber which extends across the whole river this we made a portage of for about 6 rods at the rapid I hauled the canoe wading in the water about waist deep and remaining in it about 3 hours and got quite numb but at last got through with it we then ascended the river 3 miles more in good water but very winding S.W. to make which I think we paddled 8 miles to another rapid not severe finding that it would take some time and being obliged to return to camp soon concluded not to pass this rapid and returned to the first rapid and set 6 traps day windy from S.W. and some snow and sunshine.

15th. Last night excessively cold the cracking of the trees kept me awake part of the night and night before I was kept up most of the night by a fever arising from indigestion today cold calm and clear as the sun got high it was extremely pleasant and this is the only day I have seen that would pass for a pleasant one in a good climate this winter went to the traps found nothing descended the rapid after another cold job in the water and returned to our camp of the 13th inst on

the way down saw 5 swan the first since the 12th but killed nothing but 3 ducks We are getting short of provisions again at evening very cold again.

16th Started down the stream and made the portage of the falls about one hour after sunset last night the ther. must have been 10 below zero and the river scum over with drift ice which made us make haste for if we should get frozen up here it would be hard times for food the water fowl and beaver would be done and other game there is absolutely none and to travel would be almost impossible there is four feet of snow however we could try snow shoes Killed 4 ducks and one swan today the latter would weigh at least 45 lbs. a very seasonable supply as all our food gave out this morning. Day calm sunny not very cold tonight strong south wind and rain.

17th. Moved camp down stream about a mile and found our other boat with Mr. Richardson & Rob[in]son the latter during the severe cold had frozen his toes and fingers and the former was unwell with a numbness in his hips they reported to me that the beaver on this creek had made them sick probably this was what was the matter with me there is plenty of wild parsnip here they raised camp with us and we stopped the canoes where we built them and made a portage of 1/4 of a mile this severe work in deep snow we then decended about 3 miles and came to rapids part of which we let our boats over by the line in about 1/2 mile more came to worse rapids and made a portage of about 1/3 mile then immediately let the boats down further rapids about 100 rods to do which I had to remain in the water the whole time it was after dark when I got through the other boat got nearly through and gave it up and I suppose have camped without fire or food. The river falls at each of these carrying places at least 50 feet Rained most all day.

18th. Went up above the last rapid to see the other boat found them comfortably camped they made a portage of their things and I attempted to run their boat empty just as I took the Shute the bow struck a rock I did not see she swung round filled at once and commenced whirling over like a top I hung to her and passed without further damage than mashing both of my feet severely between the boat and a rock was in much pain all this day but not very lame we run by the river about two miles and passed some bad rapids then made a portage of about a 1/4 mile into a slew of the river which we followed about 1/4 mile further then were forced to make a bad portage up a steep bank of lava about 100 feet this portage about 1/4 mile we then ran about two miles further and camped snow here not so deep as above and apparently diminishing fast men much tired and discouraged and wish to abandon the canoes which I do not mean to do until I am obliged to cashed at the first portage today 22 traps good weather today.

19th. Started down stream and ran a continuous rapid for about 2 miles we let our boats down about 1/4 mile then crossed the river and let the boats down a few rods and finding the river was pretty much all rapids and falls concluded to abandon the boats cashed all but our blankets books amunition axe and kettles and took it on foot with about 60 lbs each on our backs and 1 foot of hard snow into which we sank sometimes and sometimes not it however diminished as we proceeded we made about 6 miles and saw plenty of deer and camped killed one which was just in time as a little piece of swan was all the meat left in camp. I am very tired hungry but the deer will cure all this there is little snow at this place our camp I think can not be far off on the other side of

Captain Nathniel J. Wyeth's Expeditions to the Oregon Country.  
Second Expedition - 1834

---

the river I can see a grassy plain of about 30 miles long and about 5 wide bare of snow snowed a little this morning day fine tonight freezing a little.

20th. Started late sore footed but with a full belly and an addition of about 20 lbs of meat each we made about 6 miles and passed our camp of the 22nd and 23rd ult. about 1 mile further we crossed a small fork the one we before crossed on the ice then S. 2 miles and camped and tried hard for a deer but could not get one altho we saw a great many day fine this evening cool grass not much covered with snow see no sign of camp yet.

21st. Made 2 miles N. to the river and camped took a turn down the river about 5 miles to look for some sign of our camp found a little Indian sign of about the same age but nothing of our people. Afternoon went out to a high hill to the W. and made a large pile of brush and after dark set fire to it in order that if our people are near that they may see it and come to us sent a man over the river to look but he could not cross but he saw one of their camps shall go tomorrow and ascertain if it so killed nothing today so we shall have no breakfast in the morning day fine tolerable cool 1 inch of snow last night which went off today.

22nd Snowed part of last night and rained the residue and the forenoon of today snow the rest and part of the night in morning our hunter went out and wounded a deer which the wolves ran down but before he could find him they had eaten up all but enough for 2 meals this morning breakfasted on two beaver tails which I had laid by and forgotten so we have not yet on this trip lost a meal as yet myself in the morning made a raft and endeavored to cross the river but found I had selected a bad place and could not do it went above found a better place made another raft and succeeded found one of our camps so we now have some clew to camp and shall push for it after getting a small supply of meat beforehand wind strong southwardly camped this night in a cave of the rocks one mile W. of last nights camp.

23rd. Moved down to camp of 22nd inst and went out to hunt killed nothing myself but Mr Richardson killed a fawn so we have 2 meals ahead besides two nights supper Mr R. is sick of a bad cold in his chest and some biles on his neck and cannot carry his pack Rained steady all day.

24th. Made 12 miles N. by W. and using what looked like a fine ford I tried to wade the river but at first failed went a little lower and succeeded and got back safe but benumbed with cold and after warming myself at a fire which the rest had built took my things across and built a roaring fire to warm the others as they came over here found some beaver cuttings saw but little deer or sign today cold wind W. cloudy snow nearly gone.

25th. Made 10 miles N. and seeing a little deer sign stopped and our hunter went out during the march we heard a gun on the west side of the river we fired guns and were answered toward night a little Snake Indian came to us and induced us to go to their camp which was among the cedars about 5 miles N.E. we found them without meat but we bought of them a lean dog of which we made supper and enough left for breakfast so tis rub and go. there were three lodges they had no guns but had killed much deer as proved by the number of skins they had last night and this fore-

noon snowed about 5 inches today rained and melted most of it no water except snow and that dirty at this camp.

26th. Under the guidance of a Snake Indian we struck N.W. to the river 7 miles and forded it at a rapid and waist deep ford then W. by N. 4 miles and came to 8 lodges of Snakes here our guide I suppose heard that our camp had moved and backed out of his job by running away we then struck N.W. 8 miles and came to the small river on which we [camped] the 18th 19th and 20th ulto here we saw one Indian who ran from us who appeared to be a Snake. while we were debating which course to pursue we espied 4 Indians on the opposite side of the creek these we spoke and they Informed us where our camp was and one of them took my pack to it they had killed several deer but we thought to get to camp and did not take any we made from the creek N.N.W. up a very steep high hill 5 miles and coming very dark we camped for the first time this trip without supper and me without blanketts and tired enough.

27th. Got up and having no breakfast to cook or eat started the earlier and moved N.N.W. 2 miles and the rest refused to go further preferring to wait until some chance Indian should come along hunting to take them the right way to camp I having no pack started in quest of it and passing the N.N.W. course in 1 1/2 mile found it on a little thread of water running N. and deep snow during the time we had been gone they had Bled 20 deer and had not starved the Walla Walla Indians are here hunting. They go out on their horses and run them and as the deer get tired the Inds. get good shots at them but the number wounded is much greater than that killed on these the wolves feast at night and keep up a continual howl after these last comes the ravens for their share I found missing from yesterday 6 horses among which was my two fine riding horses and three others which have been stolen by the Snakes who are up to this kind of dealing today sent men to look for the 6 and they brot but one day fine for any country and warm tonight freezing cold.

28th. Sent out two men again for the 5 missing horses and after finding the residue which not until noon started N. by W. and after 12 miles struck the old trail on which I came up about 6 miles from our camp of 16 & 17 day very fine nothing to eat tonight but a little flour camped on a little stream made by the thawing of the snow.

29th Rose early and without any breakfast started down the valley on which we camped last night which joins a large fork of the Des Shutes in about 3 miles from this and leaving the old trail on which I came up to the left made N.N.E. 2 miles then leaving the valley to the left made 1 1/2 miles N.E. then going down a very steep and high cut rock bank E. 1 mile crossed the large fork of the Des Shutes about 2 miles below my camp of the 16th and 17th ulto. this ford is deeper and more rapid than the one I made before possibly the stream is higher on account of the thawing of the snow We are camped with about 12 lodges of Walla Wallas they have at this moment a good supply of meat deer which they are drying I presume they have not often so much on hand as they seem to value it highly on my arrival I made the chief a good present to induce him to influence his people to trade but as yet have traded of root and meat but about 3 days supply I intend waiting here three nights in order that they make another hunt and then perhaps I may get a sufficient supply to take me down. Tomorrow is Sunday and there will be neither trading nor hunting in

this camp this is my birthday but I have forgotten how old I am

30th This unless my reconing is wrong is Sunday at day dawn the chief called the Inds. to prayers which consist of a short recitation followed by a tune in which all join without words after which a note in accord to wind off this is repeated several times on Sunday and is a dayly practice at daylight to day the two men sent for the horses came in and brought 4 2 of which were my riding horses this day warm as June in N.E. and no snow in this valley.

31st The Inds. commence their meal with religious ceremonys and then come and beg a smoke the day is also closed with religious ceremonies traded about 2 days provisions of the Indians day fine as summer and the grass begins to start a little

Feb. 1st Started [from] camp early and made 8 miles N. by E. over a trail which we followed the latter part of the 16 ulto. I then laid the course S.S.W. to make our camp of the 16 & 17 which was about 1 mile above our last nights camp traded today about 2 days provisions looked at the rocks a little and as the country has been the same as far as I have been a description of the bluffs here will answer for the whole. There are some cut blufs of Basalt in its original position but they are chiefly a very coarse sand stone of an ash color in layers some of which are finer and some coarser it is soft and is composed of rubble stone of lava and primitive rocks it sometimes contains organic remains bones I have taken out of it in a fosil state a small piece of which I have preserved Today cloudy and on the high land over which we came today it was quite chilly but in the valley of the Small creek on which we are camped it is warm latter part of the day sunny.

2nd Moved camp N. by E. 8 miles over a plain and pretty good trail leaving entirely the route which I followed coming up the Indians killed some deer grass appears better day cloudy or foggy until about noon when the sun came out like April in N.E.

3rd This day the Indians concluded not to move camp I therefore requested the chief to call on his people to come and trade meat they traded about 6 days provisions and I left them following the trail N. by E. 8 miles to a creek which we crossed in our march of the 12th ulto. the Banks of this creek is of fine deep red clay and at this camp there is a hot spring too hot to bear the hand in long and smoking like a coal pit it tastes of sulphur and iron and deposits a whitish substance on the pebbles as it dries away we hear for the first time this season the croaking of the frogs trail good, grass good, day cloudy and chill. Ther in spring 191 deg.

4th. Early in mng. took my thermometer to ascertain the heat of the spring found it to be 134 deg and took a good bath by going a little distance down the stream to find a suitable temperature and this first time for a long while feel myself pretty clean. rose camp and crossed the little stream on which we camped and leaving the Indian trail struck N.N.E. and in 6 miles came to the main river Des Shutes along which we found a small trail we made 4 miles N. and camped during this distance the river could be run by a good boatman but it is almost a continued rapid the rocks of this march appear to be all shades between green and red similar to the earth it appears by being porous to be volcanic the first course of the march very miry the last firm and pretty good, grass

improving, day cloudy in morning sunny this afternoon. Saw much Big Horn and deer sign by the way.

5th. Made along the river 1 mile N. then west 2 miles up a mountain then N. 1 mile and down a ravine then E.N.E. 2 miles to the main river again and down a ravine then 7 miles N. by E. along the main river and camped trail plain all the way but very hilly and stony grass good, day at first cloudy and on the mountain much hoar frost in afternoon sunny the upper part of the mountain was of mica slate very much twisted this afternoon the rock was volcanic and in some places underlaid with green clay Saw today small bolders of a blackrock which from its fracture I took to be bituminous coal but its weight was about that of hornblende perhaps it might be Obsidian but I think was heavier than any I have ever seen river all this days march might be run if there is no bad place where I cut the mountain saw Big Horn trails but not the game.

6th Made along the river 4 miles N. by W. during which space saw nothing that might not be passed by a good boatman then mounted the W. bank of the river and came to a large cedar plain 3 miles N. by W. then N. by E. over the plain 6 miles more to tinkers camp in crossing at this camp wet my cases with all my papers by a horse falling in the river while fording day cloudy with a little snow found this branch some higher than when I passed up here we found and raised a small cash which I made on my way up and during the march sent two men to raise another which I made at the next camp above from these Indians I hear that [of] my runaway Kanackas 10 took the trail over the Blue one was drowned in crossing some ford one froze in the upper country that the residue rafted the Snake river one more died somehow about the falls that 7 are gone down to Vancouver tonight traded 8 dogs for their fat to kill the lice on my horses.

7th Early in the day the two men sent to raise the cash came in with its contents undamaged exchanged at this camp a poor little lame, mare for a tolerable horse in pretty good order traded for a knife each 6 dogs today used the grease of these dogs to kill the lice on my horses that are nearly covered with them day cloudy but not cold in the valley Mount Hood bears 1/2 point N. of N.W. sick myself of a bowell complaint cashed at this camp 1 1/3 bales corn and 7 setts shoes and nails.

8th N.N.W. 16 miles in the first place 2 miles to the top of an elevated range of woodless hills which skirt the west side of the creek on which we camped then down the slope of these hills 4 miles more during this space much snow then struck into a little creek which we followed 6 miles then the left bank of this creek to another and larger fork of the same 4 miles and camped in good grass This creek comes from the S.W. and is now as large as the small creek on which I camped the first night after leaving the mouth of the river Des Shutes on my way up there are several Indians with me who say that once there was much beaver on this creek but that the British Cos have trapped it out day cloudy a few drops of rain.

9th Moved camp early on a plain and good trail N.N.W. 10 miles to the Dalls after following on this trail 3 miles we came to a small creek coming from the W.S.W. and joining the one on which we camped last night and at 5 miles more another which either joins the same very near the Columbia or goes into the Columbia found Soaptilly [Tilki?] and a few more Chinooks at the river

Captain Nathniel J. Wyeth's Expeditions to the Oregon Country.  
Second Expedition - 1834

---

of whom I traded one horse and a canoe they report 7 Canackas gone down and that one was drowned at the falls and one froze in the mountains leaving one unaccounted for rained a little today.

10th Started early in a very leaky canoe which kept us bailing all the time and made 8 miles N.W. 5 W. and 3. S.W. 1 west and on account of high wind camped about noon a little rain as usual.

11th. At about sunsett last night the wind lulled a little and we made a start but the wind continued high and about 2 ock we arrived at the Cascades a little above which we camped this morning went to the Cascades and there found Mr Ermatinger with a brigade of 3 boats taking up the outfits for the upper forts also Capt. Stewart Mr Ray [William G. Rae] and one more gentleman made the portage and in 12 hours made the saw mill.

12th. In the morning made to Vancouver and found there a polite reception and to my great astonishment Mr Hall J. Kell[e]y he came in Co. with Mr [Ewing] Young from Monte El Rey [Monterey] and it is said stole between them a bunch of Horses Kelly is not received at the Fort on this account as a gentleman a house is given him and food sent him from the Gov. Table but he is not suffered to mess here I also found 7 of my runaway Kanackas they appear to be very sick of their job so I have concluded not to be severe with them I hear also that Fort Hall has traded 300 skins up to what time do not know or how true also that Tom Bule & Harry two more of the runaways are with some of McKays men on Snake River they will probably fall in at Fort Hall

13th Went down to the station at Carneaus and found all well and doing pretty well. This is Sunday and I have lost 3 days somewhere. During the residue of this month sent Mr. Richardson to the Dalles with supplies for the party which I left above trapping he had tempestuous weather and was gone 13 days myself took a trip up the Wallamut to look after the farm and my taylor who had deserted me during the winter after Richardson had gone I took a small canoe and proceeded up the Columbia and in my progress got filled with the violence of the wind and quantity of rain I arrived at Vancouver in the mornig 23rd Feb. and met a reception such as one loves to find in such a country as this

24th Started down the Columbia to the mouth of the Wallamut up which about 4 miles to the head of Wappatoo Islands here finding the canoe too deep to proceed against the rapid current of this river now very high we put down the west slew and crossed over the first bank of the river into the waters back and went to the Farm of Mr Thomas McKay and procured horses and went by land this took us all of the 25 & 26 both of which days it rained hard all the little streams made us swim our horses and some of the open prairies were swimming and much of them wading at night of the 26th arrived at Sandy camp just above which I had begun a farm.

27th Went to the farm and found the Taylor and Sloat [Stout?] the foreman gone down to see me they having heard of my return during the day went up to Mr Lees place in order to get Babtiste to school with him in which I succeeded

28th returned to Camp Sandy rain today

29th. [Mar 1] Started for McKay Farm during a hard rain and snow

30th. [Mar 2] Arrived at McKays farm

31st. [Mar 3] Back to station at Carneaus place and here found my runaway Taylor [Thornberg.]

Mar 1 [Mar 4] From this time until the 8th employed him in getting out coopers stuff and timber for a house boat which I intend to build.

Apl 13th Sunday I suppose employed in getting out stuff for the house boat in cutting 8000 hoop poles and in building a canoe 60 feet long wide and deep enough to chamber barrells of which she will take 25 she is clean of knotts shakes and almost of sap and 27 feet cut off the same tree of the same kind of stuff the whole tree was 242 feet long and this by no means the largest tree on Wappatoo Island this is of the Spruce kind today I am on my way down to Fort William where the Brig lay to regulate matters there I have just parted from Mr McLaughlin Esq. on his way to view the Fallatten [Tualatin] plains I suppose with some idea of making him a farm there some day I have now out of 21 people 7 sick and little work can be done after deducting from the remaining 14 a provision boat to trade food and enough to take care of the sick up to the first of this month it rained continually and about 1/4 of the time since I find the plows which I brought from the States of no use in the new lands here no news as yet from Bg. [Brig] or Capt Thing So far with much exertion we provided ourselves with food but the whites in this country are exhausted of all kinds.

1.

TO George Simpson  
York Factory  
Fort Colville March 12th 1833  
Sir

I am induced by gentlemen in this country to suppose that you would enter into some arrangement for a supply of goods and therefore send the enclosed proposal. I left the Boston in March last with 32 men with the intention of forming on the Columbia or south of it [a post] for collecting furs and salmon to be sent to the States by vessells ordered therefrom such vessells to bring out the goods required for the trade. My plan was based on the following grounds viz. that Salmon (worth in the States 16\$ per Bbl. of 30 gallons) would pay all the expenses that goods introduced by this route would be entitled to the drawback and this would be a consideration as they are nearly all foreign to the States and being coarse pay a heavy duty, that the saving made in the purchase of horses here instead of at St. Louis is at least 25\$ per head, that the danger of transporting this side of the mountains is infinitely less than on the other and the distance to the Fur country much less. In the first part of said undertaking I have completely failed. All my men have

---

left me and what goods and valuables I had with me have been expended or deposited where they will probably be lost to me. I am now on my return to the States for the purpose of forming new arrangements to carry my original plan into execution. In case I make no arrangement with the Co. I shall if I arrive in Boston by the 1st Nov. next come to the Columbia the following summer, if I arrive later I shall be delayed until the next.

It appears to me that as an American I possess some advantage that an Englishman would not inasmuch as I can visit parts of the country from which he is excluded and still not so remote in point of distance difficulty or expense as from St. Louis.

I have already lost largely from a capital at first small and am therefore desirous to proceed on a more secure plan even if it should offer less prospect of profit. I have to observe that in case of agreement being made I will give surety satisfactory to the Co. for fulfilling any part of the same or if required will deposit in their hands a sufficient sum for the same purpose. The only objection to the latter would be the difference in the rate of interest in the states and with you.

In case of an agreement for supply of goods the supply of men would still be a consideration. If men could come to this side of the Ry. Mts. as early as July a fall hunt might be made which is all that can be done from St. Louis. Canadians are to be had cheaper than Americans and are for some purposes better men. Their conveyance would not be so expensive as horses would be saved which cost 30\$ at St. Louis and the same set of animals are fit for a full hunt. I would not wish more than 15 Canadians. These might be procured by myself or agent or furnished me by the Co. as they might elect and the residue of the men required might be procured in the Mts. without the expense of bringing them into the country or learning them the ways of it. If no political difficulty exists there must be some advantage in using a few Canadians. Should you deem it for the interest of the Co. to close with me an agreement not essentially different from the enclosed proposal you would much oblige me by forwarding to my address care of Mess. Jarvis & Brown Merchants Baltimore Maryland a contract to the purpose which I will execute and immediately proceed to fulfill. I request this mode of procedure because I will have but one month after my arrival at Boston to prepare for a voyage to the Columbia, in case of failure of this negotiation with the Co.

Yrs &c N J W

Copy of the proposal enclosed in the two foregoing letters

[To Simpson and McLoughlin]

1st The Hon H.B.C. to furnish at their store at Vancouver to N.J.W. such goods as he may select at the same rate that the clerks of the said Co pay for the goods supplied them viz 50 pr ct on their original cost

2d The said Co to lay no obstruction in the way of the said Wyeths trading at any post or place for provisions or animals to be used in his business or to his trading furs anywhere south of the

Columbia and not within a 100 miles of their posts and generally in matters indifferent to their interest to forward his views and operations and to give him such information as may be in their power and not inconsistent with their immediate interest

3d The said Co to Cr the acc. of said Wyeth at the rate of \$5 for full Beavers and in proportion for kittens and yearlings and for all other furs and skins usually secured by the said Co. as merchandise at the same prop. to their market value in London or wherever that Co. dispose of their furs as 5\$ is to the market value of the Beaver skin.

4th The said Wyeth to deliver all Furs and skins of every description of which he may get possession to the Co.

5th Said Wyeth to continue the arrangement for five years and in case of his not doing so to be bound not to do a Fur business in any country to which the H.B. Co. have access.

6th In case said Wyeth faithfully performs this said agreement, then the H.B.Co. at the end of the time agreed on is to pay over to him any balance that may be due him in cash or goods as the said W. may elect and at all times he is entitled to claim from them in case any balance which may be due him over and above \$1000.

2.

To Captain Bonneville of Salmon River June 22d 1833.

Sir

I send you the following proposition for a mutual hunt in the country south of the Columbia river which I visited last autumn and winter. As to the prospect of Beaver there I will only say that I have no doubt of taking 300 skins fall and spring. As much sign as would give me this I have seen. I have little doubt much more might be found, but in that country a hunt cannot be made with horses alone, boats must be used. I have obtained some maps of the country beside my own observations in it, and I have little doubt but I can make my way through it without guides, who cannot be procured. As this country is distant an immediate answer is required. As it regards the mules Horses would do but are by no means so good for grass in some places is very bad. If the number required is a very great objection I would do but goods enough to buy 3 more must be given in their stead. The men that are wanted must be good, peaceable and industrious, but need not be trappers. I would prefer good men who have not been more than one year in the country. In case of agreement being made you are to engage to deliver what letters I wish to send home, a boy about 13 years old and about 25 lbs. sundrys. The expenses of the boy in the States my brother in N. York will pay to whom he is delivered. The boy will have a mule to carry him. With so many animals as I have and so few men I cannot come to the forks [Henry's Fork and Snake River] and I think these Indians will go no further than where in your route to Green River you strike the plain of the Three Buttes. There I hope to see you and in case you accede to the proposal, with all the things required in it, this hunt to be for one year to meet you at your rendezvous of next year

---

the furs to be equally divided between us and I to have the right to take mine at any time during the year yourself to have the right to send a man to see to your interests -

PROPOSITION.

TO BE FURNISHED BY MR. B.

9 men, armed, clothed for the year with saddles &c  
12 mules  
9 skins dressed for making boats  
40 good traps  
1 doz files  
4 doz knives  
20 lbs tobacco  
200 lbs grease, if possible  
3 bales Indian meat  
a few small tools  
3 axes  
12 pair Horse shoes (if you have them.)  
4 pack saddles and Harness.  
6 pair of lashes  
25\$ for cost of sundrys  
25 lbs. powder and lead with it.

TO BE FURNISHED BY MR. WYETH.

19 horses  
3 mules  
20 traps  
3 men with myself  
2 doz knives  
1 Lodge  
Cooking apparatus  
vermillion.  
fish Hooks a few sundrys.  
10 lbs powder and lead.  
14 pr. Horse shoes.  
4 pack saddles and Harness.

- said man to do duty the same as the other men and to have no other control than to secure your interest in the division of the skins. In case you are ready to make this arrangement you need make no doubt of my being ready to enter at once on it except that in the mean time I loose my animals.

You to have the liberty of sending a load of goods to pay off the men you furnish. All property at

---

the risk of its owner, neither to be responsible for the debts of the other.

Yrs &c.

[No signature.]

3.

Heads of Lewis River July 4th 1833

Mr. Thomas Nuttall (Cambridge)

Dear Sir

I have sent through my brother Leond of N. York a package of plants collected in the interior and on the western coast of America somewhere about Latt 46 deg. I am afraid they will be of little value to you. The rain has been so constant where I have been gathering them that they have lost their colors in some cases, and they will be liable to further accident on their route home.

I shall remain here one more year. You if in Camb. may expect to see me in about one year from the time you receive this. I shall then ask you if you will follow another expedition to this country in pursuit of your science. The cost would be less than living at home.

I have several times attempted to preserve birds to send you but have failed from the moisture and warmth. Excuse the shortness of this as I have many letters to write and little time to do it in.

Resply Yr. obt. servt. Nathl. J Wyeth

P. S. By the notes on the paper my journal will show the place from which the plant comes if kept in its proper sheet until I come home.

4.

["This letter sent by Mr. Ermatinger" written across the face.]

Dear Sir

Having arr[i]ved at the camp of Mr. Bonneville I take the liberty [of] writing you by this last opportunity to express how much I am under obligation to Mr. Ermatinger for the polite and agreeable manner in which he has dispensed your hospitality to me during the whole route.

I am here in a direct train for the States, and cannot without some extraordinary accident fail of reaching home in Oct. next. Should you visit the states I would feel myself highly honored by a visit or any intercourse which might be agreeable to you for which purpose I have enclosed my direction. Should any of your friends visit the States a letter would procure them any attention which may be in my power. It will be a pleasure to execute any business commands with which

you may entrust me. Models of Agricultural implements, seeds and other matters connected with your tastes or business.

Resply. yr. obt. Servt. Nathl. J. Wyeth

To Doct. McLaughland Fort Vancouver.

5.

Green River July 18th 1833

Mr. F. Ermatinger

Dear Sir

I arrived here on the 16th 9 days from your camp Saw no Indians but saw the bones of Mr More killed by the Blkfeet last year and buried them. He was one of my men who left me in Pier[r]es Hole last year. A Mr Nudd was also killed by them. All the rest arrived well in the States. I found here about 250 whites. A list of the Cos. and their Beaver which I have seen I subjoin. I should have been proud of my countrymen if you could have seen the American Fur Co. or the party of Mr. S. Campbell. For efficiency of goods, men, animals and arms, I do not believe the fur business has afforded a better example or discipline. I have sold my animals and shall make a boat and float down the Yellowstone and Missouri and see what the world is made of there. Mr. Wm Sublette and Mr Campbell have come up the Missouri and established a trading fort at each location of the posts of the Am. Fur Co. with a view to a strong opposition. Good luck to their quarrels. I have got letters from the States. The chief news are that the Cholera Morbus has swept through them killing 5000 people in N York and in proportion elsewhere. Genl. Jackson president an insurrection in the Southern States on acc. of the Tariff but quelled by Blocading their ports and the repeal of the most obnoxious parts of the same. About 25 Americans have been killed during the last year. A Snake village is here with us. I find Bonnevilles connections are responsible [A statement that he has a draft from B. for horses follows but is crossed out.] he being very short of them. He lost one entire party among the Crows that is the Horses and of course all the Beavers. A party under Bridger and Frapp also lost their horses by the Aricarees, also Harris party lost theirs by the same Inds. who have taken a permanent residence on the Platte and left the Missouri which is the reason I go by the last named river. Harris party did not interfere with any of my plans south of Snake River.

In my opinion you would have been Robbed of your goods and Beaver if you had come here altho it is the west side of the Mts. for Green River emtys into the head of the Gulph of California. I give you this as an honest opinion which you can communicate to the Co. There is here a great majority of Scoundrels. I should much doubt the personal safety of any one from your side of the house.

My Respects to Mr. Payette and believe me yr. sincere friend

Nathl J. Wyeth.

Drips and Fontenelle arrd July 8th 160 men a good supply of animals. Obtained 51 packs of 100 lbs ea. Beaver.

Rocky Mtn. Fur Co. 55 packs 55 men well supplied one party not in Beaver sent home by Mr. Campbell.

Mess. Bonneville & Co. 22 1/2 packs. Few goods few horses and poor Capt. Cerry goes home B. remains.

Harris party now in hand 7 packs Beaver and are on foot.

6.

Cambridge Nov. 8th 1833

Mr Henry Hall and Mess Tucker and Williams

Gent.

In order to understand the nature of that branch of the Fur trade in which I propose to operate I deem it requisite to enter into a short account of its size and progress. The statements which I shall make are such as I have heard and am confident are in the main true, but I do not pledge myself that every circumstance is so but only that I have heard them and believe them to be so and that the inferences are such as my best attention to the subject warrant.

About 12 years since Mr Wm H. Ashley engaged in the Indian trade essaying by various means to obtain furs. At the time he engaged in this undertaking he was bankrupt, but was a person of credit, which enabled him to get the requisite means. His first attempts were predicated upon the possibility of trading furs from the Indians in the interior for goods. In this he was not successful, and in the event became much reduced in means, and credit, but in the course of this business perceived that there was plenty of Beaver in the country to which he had resorted for trade, but great difficulty to induce the Indians to catch it. After many tryals of trading voyages he converted his trading parties into trapping parties. In the first establishment of this business he met with all the usual difficulties incident to new plans but still made something. About this time [1825] a Mr. Gardner one of his agents met a Mr. Ogden clerk of the H.B. Co. in the Snake Country at the head of a trapping party. Gardner induced the men of Ogdens party to desert by promises of supplyes and good prices for furs. The furs thus obtained amounted to about 130 packs or 13000 lbs. worth at that time about \$75000. The following year Ashley sold out to Smith Sublette & Jackson for about \$30000 and left the business, after paying up his old debts, worth about 50000\$. Smith Sublette & Jackson continued the business until 1829 and sold out to Milton Sublette Frapp Jervais Bridger and Thomas Fitzpatric, and in the stile of the Rocky Mountain Fur Co. for 30000\$, dividing among them about 60000\$ for I think three years business. This last firm has continued the business since have paid the purchase money and have cleared their stock of goods and animals requisite for the business in the country but not being business men and unknown where the goods are to be bought have been dependent upon others for their suplies for which they have paid enormously to Mr. Wm. L. Sublette brother to a member of their firm. They have been

---

together three years and have made two returns amounting to 210 packs of furs, value nett about 80000\$ and received two outfits of goods, first cost about 6000\$ for which they have paid about 30000\$ and for returning their furs about 8000\$ leaving them after paying the first purchase about 12000\$ some of which must be due to men who have not received their pay in goods leaving them with little property except their Horses Mules and Traps and a few goods, and unavailable property.

Since the commencement of this species of business severall persons have attempted it, but all are now out of the way except Mess Dripps & Fontenelle fitted out by the Am. Fur Co. and Mess. Bonneville & Co. fitted out by men in New York. Neither of these last named Companies as far as I can ascertain have made money to any great extent, owing to enormous prices paid for the goods. The country to which these parties resort is extensive and there is plenty of room for them and many more, and if they made a little money, I do think if proper means are used that much could be made. After this short account of the present state of the business I proceed to sum up the expense of conducting it, as it is now done, in order to shew where a saving may be made. I shall omit saying any thing about duties on coarse woolens and other goods, used in this trade, which have to be paid when goods are sent by way of St. Louis and which may be saved when sent around the Horn.

The dry goods for an overland trip are best found in New York and the other articles in St. Louis. A small charge must be added for transport to St. Louis for those bought in N. York, say on 4000 lbs. including

Ins & Sundrys \$ 160.00

Baling of the above and Sundrys bought at St. Louis 100.00

50 pack saddles and 50 Riding Do 250.00

Hobbles and Halters for 100 animals 150.00

Shoeing for 100 animals 50.00

Corn and sundry for Horses 50.00

Saddle Blankets 100.00

50 men for 5 months at 15 per month 3750.00

Provisions to Buffaloe 100.00

Pack covers 50.00

Text from Journals and Books of the Western Fur Trade

Selected Letters of Nathaniel J. Wyeth

---

Am[m]unition 100.00

100 animals 3000.00

Guns 300.00

First cost of goods 3000.00

Six months interest on all charges except wages 222.00

-----

\$11382.00

being the Cost of transporting goods (including the first cost) of the value of \$3000 from St. Louis to the Trois Titons Long 110 deg. west Latt. about 43, Air line distance 900 miles.

In making an estimate of the cost of transporting the same amt. of goods from the head of navigation on the Columbia I shall make the difference in time and force required which from some knowledge I think just and also cost of Harness and Horses.

50 pack Saddles and 15 Saddles and 15 riding do to be bought of the Inds for about 25 cts. ea in goods 17.00

Halters and Hobbles for 65 animals 17.00

Buffaloes for blkts 30.00

15 men for 4 months at 15 per month 900.00

Provisions 100.00

Pack covers 50.00

Ammunition 25.00

Guns 90.00

65 animals at \$5 ea 325.00

First cost of goods 3000.00

-----

---

\$4554.00

Interest for 10 months on all charges except wages of men 182.00

-----

\$4736.00

being a difference of \$6646.00 in fav of transporting goods from the first rapids on the Columbia to the Trois Tetons Long 110 deg. west, Latt. 43 deg N. (and 400 miles air line) over and above St. Louis.

I have assumed a calculation of \$3000.00 because I have contracted to supply that amt. of goods as per the enclosed copy of contract and not because it is all that is required for the interior. The amt. now consumed in the section of country with which I am conversant is about 12000.00\$ first cost in N York. Whether in the end I could supply all goods wanted may be a question and of which you can judge as well as myself, but that men can be employed to trap beaver and paid as far as their wants require in goods the same as is now done I feel now the least doubt and to almost any extent, and that it can be done to a profit is proved by the fact that the business is one of great profit even as it is now conducted from St. Louis.

I shall now detail what I think may be done in order to get the goods wanted to the Columbia and the Furs home in such manner as that no part of the expense of the vessell may be charged to them. Salmon have been brought from the Columbia to Boston and I think sold for about \$16 per bbl. but I believe in not the best order which I suppose arose from their having been caught too long before they were salted. This I was told by persons who saw them put up. And if salmon are traded from the Indians there will always be some difficulty in this respect, but if salmon will bring \$12 per bbl. they will pay all the expenses of the vessell and leave a large allowance for the expenses of the post, at which they are caught. I make no doubt that enough could be taken when once the proper mode is adopted, but I have not been on the Columbia below the first rapids in the Salmon season, and should feel doubtfull as to the expediency of ordering out a vessell before I have made a thorough examination at the proper time of the year. While there last winter I sounded the bottom to ascertain depth on the fishing grounds and if the bottom was clear of snaggs and rocks and found it favorable. I have every confidence when the proper mode is known and adopted that this branch of the business will pay all the expenses of the vessell and leave the fur trade free from all charges in the shape of freight. The prominent advantages of supplying my own or the trapping parties of other concerns from the Pacific instead of St. Louis are safty of the country traversed, and consequent saving of men, shortness of distance, and low price and abundance of Horses on the Columbia. The latter circumstance alone would enable any company doing their business by that route to make a proffit equal to all expenses of transporting. The Horses in the mountains are brought from St. Louis chiefly, and cost about \$30, and when you consider that a trapping party uses 3 at least to a man this alone is a large and continual saving in

the business.

I will now proceed to state what I propose to do if I can find the means, and for the security of such persons as shall furnish me, I can give such names as I believe would be satisfactory. These names I will bring forward at the proper time. The enclosed contract was made with Mr. Fitzpatrick and Mr. Sublette of the Rocky Mountain Fur Co. when I was in doubt whether I would be able to perform it but knew I would be able to pay the default. The contract as you will perceive will amt. to little more than carrying me into the Indian country free of expense and procuring the business of a very efficient concern, in this light I hold it to be valuable.

I propose to fulfill this contract. This done if the Rocky Mountain Fur Co will sell me their remaining furs at such rate as I can make money or will pay me for transporting them to St. Louis I will fit out a party sufficient to send them down with all other furs then on hand. That they will do so I believe because if I supply them with goods no other party will be there to do it, and they will not have the means of doing it themselves in the country. If they should not do so, then I will proceed to a safe country on the Columbia River where some furs may be traded and there leave them with a few men leaving some men and a trusty person to keep them and trade as many more as he can. The residue of my party (their apparatus having been brought out at the same time with Sublettes goods) will be employed in the trapping business. During the last of the salmon season of 1834 I will be on the Columbia in order to see in what mode the Salmon may be taken in such quantity as will do for a vessell and also endeavor to make returns by some vessell that may happen to be there. If no such opportunity should occur then the furs must either remain in the country until a vessell can come out to receive them such vessell bringing apparatus salt bbls. &c for taking home a cargo of salmon and bringing also goods to supply the parties or when the first outfit is exhausted the whole return, and afterwards commence the undertaking by sea. In the mean time a proposal has been made to the H.B. Co to supply goods in the country and receive the furs as per the enclosed copy of proposition. Should I have no partners in this business I might in case of their acceding to it deem it for my interest to close with them, if I had partners I should probably not. Should you agree to give me the requisite supplies and I should afterwards close with them then you shall be entitled to your commissions the same as though the affairs passed through your hands. Should you join me as partners you will of course exercise your judgement in regard to it, but I have no expectations that the Co. will accede to it and made it with a view to get their ideas on the subject as much as with any expectation that they would close with me.

In case you agree to supply me for commissions and Interest the amt. wanted will not be far from 8 to 10,000\$ and wanted some by the first of January and from that to 1st March and in any case the cash would be required at the same period but the amt might be varied if you took partnership according to your views but I deem the smallest investment the best until more experience is obtained.

I will in conclusion observe that I consider all the coast and country North of the Columbia completely occupied by the English, and all east of the mountains by the Americans. From these

---

countries I expect nothing, but all that country lying south of the Lewis Fork of the Columbia and west of the mountains as far south as the settled parts of the Mexican territory is yet unexplored or nearly so. Into this section of country I have been, and have myself taken more than a pack of beaver in less than a month, and the furs of this region are excellent from their color, and goodness, and without doubt are reasonably abundant. One reason why this country has been so much neglected is that in it there are no Buffaloe, and hunters cannot live in the luxury that they like. Still with good economy of food enough may be found from the beaver, Elk, deer, and goat, of which there are some. Otter are plenty and good. Furs in this country would be good except about three months in the summer and by approaching the sea coast where the climate is warmer the hunt might continue all winter and thus add a great amt. to the years hunt without adding any thing to the expense.

&c &c N.J.W.

Enclosing copy of contract with Fitzpatric and Sublette and proposal to the Hon. H.B. Co.

8.

Boston Nov 20th 1833

To Geo. Simson Esq

Sir

Since my last from Baltimore dated Oct. 26th 1833 I have ascertained that there was still time to forward a vessell to the Columbia to reach there by first of the salmon season and a vessell is now in a state of forwardness for this purpose, consequently all further negotiations for the present are at an end in regard to this subject. Had I been sure that you would have accepted I would have entered into no other arrangement but uncertain of this I could not let the opportunity pass. I regret that I have troubled you so much in this matter.

I am Yr. Obt. Servt. Nathl. J. Wyeth

9.

[Cambridge Nov 19th 1833]

Mr. M.G, Sublette

Sir

This is to inform you that I am now ready to fulfil the contract made with Mr. Fitzpatric and yourself on the 14th Augt 1833 at Big Horn River and to request that you will as soon as possible come to N. York where I will meet you. If by letter you inform me when you will be there please use this letter as an introduction to my Brother of the firm of Cripps and Wyeth Pearl St. N York importers of Lace goods, and leave with him directions where you may be found. I particularly wish to see you soon as I am about dispatching a vessell round Cape Horn to the mout[h] of the Columbia and would if possible wish to make contract to supply your Co. the following year.

I am &c. Nath. J. Wyeth

10.

Cambridge Nov 31st 1833

Leond Jarvis Esq (Ba[l]to.)

Dear Uncle

On my return from a journey eastward I found your very acceptable fav. of the 17th inst. In regard to the matter on which I asked advice I am happy to find that we agree. I did not ask your advice because I had any doubts as to the best course to pursue but because it was a matter in which the feelings of my friends were more concerned than my own. Had you advised different your advice would have been followed because I think one who has done so much for the respectability of his family has a right to be consulted in such matters. You say to all whose opinions you value on proper occasions vindicate your self. I value your good opinion much and will therefore explain a few circumstances of which Bells letters treat. John Wyeth tells many little lies but they

are of not much consequence. In Bells first letter to S.K. Livermore he says "One landing was at Point Comfort. Here our Captain was determined to make up lost time, and accordingly treated himself and some of the company very liberally to champagne and the usual effects of intemperate drinking succeeded." I deny none of these facts, but I deny the intended inference. Some of the men were worse of what they drank and Bell much more drunk than any other. If Bell had told that he threw a handkerchief full of eggs from the pier into the boat, or that I ste[e]red the boat to the vessell through a thick fogg about three miles with nothing to guide me but the stars he would have told the truth and the inference would have been somewhat plainer who "exhibited the effects of intemperate drinking." Beside this it is nonsense to suppose I had any lost time to make up. If I had had such a strong disposition to loose no time in drinking I might have carried a plenty of liquor with me. The fact that I carried some shews that there was no very strong desire for it. The facts out of which this very popular story was made are these. After a long and squally voyage during which most of the men had been sea sick and had lived very poor on salt beef and pork, we anchored off old Point Comfort and I went ashore with some five or six of the men to procure some oysters eggs &c. I ordered a supper for those with me and after supper I think two Bttles of Champagne and one of Made[i]ra were drank and I believe some ardent spirit. Afterward the landlord treated to some more I presume on acc. of the novelty of the Enterprise or some slight acquaintance with myself. Having got what stores I could for those on board and seeing that the frolic had gone far enough I returned on board with no more wine in my head than I have carried from your table. The answer to what Bell says of promises about purchase of Horses is all a lie. I never verbally or otherwise engaged to make other provision than what I might deem suitable and proper. All discession in this matter was reserved to myself by agreement, and the fact that they started is proof, that I did not. Can one man compel 24 men to go with him against their will, and would the men have started if I had broken my promises in the manner stated, or would they have gone at all if the equipment was evidently insufficient. The fact is that no other idea was ever held up to them except that of marching. If this was not the case why did they march across the Alegany. S.K. Livermore well knows this, for with him I corresponded on the subject of Thomas learning music for marching and in my letters to him dated Jany 23d & Feb 6th 1832 of which I have copy he will have the same expressed, the same in regard to hunting dresses &c. Tis all a lie that I made any promises on these subjects. The agreement states that the party shall be provided in the usual way and manner of trading parties, and this I can prove. Bell states that Weeks expressing a determination not to go I compelled him by put[t]ing him under arrest and afterward let him off on paying over to me all the money he had, and adds "leaving him almost destitute of means to accomplish his return" he might have said quite, if the first part of the statement was true.

The facts were these. The day before I left the last of the settlements I sent John Wyeth with a yoke of oxen and some sheep out to horse guard. He returned near night stating that the sheep strayed, and that he tied the oxen, and went after them, but when he returned they had broke loose and he could nowhere find them. I suspected all was not right, and sent a man to the place with John. This man returned and told me that John could shew no place where cattle had been tied, such place he would have known by the tracks (before morning they [were] found tied in a different direction). About this time Thomas Livermore told me that Johns gun was not in camp. I had the men called to arms. When it was discovered that Weeks and John Wyeth had no equipments

---

they we[re] called upon to produce them, and refused. I put them under guard, and a short time afterward Weeks offered to go and get them, and while out attempted to escape from the man sent with him, but finally produced the equipments. In the morning the Company was called together. I stated to them that I had no power to release any of the parties to our compact, that in regard to John he being a minor having been put under my charge by his father and having no means of satisfying the concern for the expenses incurred on his acc. I should carry him on, but this I would propose that Weeks should be released provided that he would indemnify for expenses incurred by the concern over and above what he had paid in. This passed by a vote according to form and by vote also it was provided that he might be released by paying \$40 and keep his cloths and equipments, which were Co. property This Weeks at first refused to do. I then told him that he should go if I tied him to the tail of a horse. Soon after he paid the \$40 and was released. The whole business was done by vote of the Co. and at the time recorded by the clerk of the same. Now if the Co. as Bell says had been deceived and abused could one man have exercised such control over them. The fact is that the Co. generally felt much insenced at this attemp[t] at desertion and seconded me fully and strongly in punishing it. The companion of Bells desertion, was the person who informed against those fellows viz. Livermore. In regard to the arbitrary conduct during the twelve days which Bell remained with me after this, I have only to say that I expected implicit obedience to my orders and was determined to enforce it at all hazards. Notice was given that those who lagged behind would be put on guard. They lagged to get rid of some work which is always to be done immediately on reaching camp, and those who avoided this labor I thought ought of right to make compensation by doing some other. Jacob was once put on guard for this offense. Livermore might have been but I do not recollect it. It was the business of any one sick or disabled to report himself to the Doct. and after examination he was entitled [to] and received any indulgence that the circumstances of the party would allow. Livermore complained of his feet once. I required to examine them, he refused and said his word was enough. I did not think so, and required him to do the same duty as the others. I had before experienced much impudence from Livermore. He at one time told me, I lied. I told him to prepare himself to return home from the next landing for that he should go no further with me. Before we got to the next landing he came and expressed a willingness to go before the whole Co. and make an apology. After this the matter was overlooked. His conduct was always bad. The night before we left Boston he and Bell were out all night and said they slept at a friends in Boston. When we arrived at Baltimore Bell had a clapp and this was the reason that he rode over the mountains at my expense. He takes care to tell none of these things and this was the tyranny to which he was subjected. Livermore spent on this trip beside the \$50 which his father gave him for his outfit near \$50 which he borrowed on various pretences of me, and something which you gave.

[“Insert here the Postscript” is written across the beginning of the following paragraph.]

The suggestions in your letter concerning family quarrels prevented me sending to Mr Livermore a letter which I had written not in anger but in a spirit of just rebuke for what I consider great meanness. I allude to his suffering a letter written to Bell to be published and Bells letters to be addressed to him. If these things were done without his consent he should have disclaim[ed] them, but he has aided in the dissemination of them and thereby made it a positive consent

---

instead of an implied one. I cannot overlook that as far as he is able he has assisted to get up an impression against me, when I had no chance to rebut it. If on the one hand I withhold an expression of my feelings for the course he has pursued on the other I shall withhold all explanations of things concerning which he might otherwise have enquired. I have enquired for Kendal at the Stables and Taverns, he appears not to be known at either place. My impression is favorable to him I hope he will turn out well, as much that you may get the suitable reward of your exertions for him as for his own good. In regard to my own plans I say that I would now entirely change my plan of life and as old as I am not deem success unattainable, could I once convince myself that my talents are as good as you seem to believe they are but in this matter every man must judge of himself and make up his own mind as to what he is most fitted for. I have never allowed myself to abandon any serious project that I had formed. Pursuant to this plan of life I have urged on from the beginning this western enterprise and I shall give it up only when I am convinced I am destitute [of] the means to pursue it. I have obtained the means of pursuing it and by relinquishing too much of the profit I have avoided responsibility beyond such extent as I am able to meet.

Please give my respects to my good aunt and accept for yourself the best wishes of - [Subscription written but crossed out.]

Postscript inserted in the body of the letter.

In regard to the fitness of the arrangements for the voyage There were purchased 34 animals. There were 19 loads of goods leaving 15 spare animals, beside two that were individual property and 24 persons started. I call all animals loaded with provisions spare ones because in less than 20 days they would all be released from their loads. If the men had took good care of the animals they could have rode half of the way but instead of this they lost or stole two horses before they left the settlements. Livermore stole three and I killed one more in trying to overtake him. Beside this some who were fearful to go on and disliked to back out endeavored to ruin the expedition by ruining the horses. Tin pots and picketts have been found under the pack saddles and the backs of many of the animals were soon ruined and in consequence we were all on foot except the sick or disabled or those who were hunting. It is not true that I rode the day before Livermore and others deserted. That day myself and Mr. Bache went out to hunt on foot. This fact I distinctly recollect from having found a horse that day. The day that they deserted I rode the newly found horse to hunt and being out of camp and able to go ahead of the party they were enabled to effect their intention, a thing they would not have dared attempt had I been in camp. The provisions carried with the party were one chest Tea pepper and salt, Corn meal 450 lbs. Bacon one yoke oxen sixteen sheep this to last until we should reach the Buffalo country which we did in 22 days.

N J W

Cambridge Dec 9th 1833

Mr Jas Worthington (Flonsante Co Missouri)

Dear Sir

I shall be going to the Mts. as early next spring as the grass will permit and shall be glad of your company with as many persons as you may have with you and such goods as you may choose to carry. I shall have a vessell sail for the mouth of the Columbia in about ten days with goods and if you should follow the business of Beaver catching I do not doubt that I could hereafter supply you with goods in the Mts. much cheaper than you could pack them up yourself.

You will know my movements from Mr. E.M. Samuel of Liberty. In the mean time I remain

Yr. Obt. Servt. NJ. Wyeth

If you write direct to Cambridge Massachusetts.

12.

Cambridge Jany 2d 1833[4]

Mr. M.G. Sublette

Dear Sir

Yr. esteemed fav of the 26 ulto. is at hand. I am at this moment much engaged in fitting out a vessell for the mouth of the Columbia. I have written to my brother to urge you to come at once to Boston as the gentlemen who are concemed with me are desirous of seeing you, but if haste renders this out of the question, I will come to N. York as soon as I know that you are there, of which I have requested my brother to inform me immediately on your arrival. If you cannot come to Boston and are in much haste you can select the goods that you want when you please, and I have requested my brother to assist you in this matter, I would prefer however that you would not begin until I come but in this do as you please.

I am Yr. Obt. Servt. Nathl J Wyeth

13.

Boston Jany 4th 1834

Mr M Sublette (N York)

Dear Sir

I have received a note from my brother informing one of your having arrived in N. York. I should come immediately to see you were it not that I have already written to urge your coming here and am afraid of passing you on the road. When I have got your answer whether you will come here or not I shall move to see you. In the meantime permit me to suggest that there are great advantages to be derived from an interview between yourself and the gentlemen who are concerned with me in this undertaking, among the most important of which is the establishing in your mind of a perfect confidence that any contract that may be entered into with you or your partners will be fulfilled. When you have arrived here you will be able to satisfy yourself in this matter. Also it is important that you make some arrangement for sending home your furs over

and above those which you pay us for the goods which we are to deliver to you. If you should wish to avail yourself of the opportunity afforded by our vessell an agreement for the same can be made here and also for transporting them to the vessell. If it is possible to come to any agreement on these subjects an insurance might be effected to cover the risk of the sea on such amt. as might be shipped. Beside the above reasons, there are many goods which can be purchased as well and some better here than in N. York. The great difficulty which your concern has encountered and the enormous expence in getting your supplies has induced me to suppose that you would avail yourself of any opportunity which on reasonable terms would obviate all the difficulties and much of the expense. Such opportunity is now within your reach. By means of our vessells employed in the salmon trade we can take out goods and bring home furs to any extent to the Columbia. These goods we can purchase cheaper than goods can be purchased to send over the mountains because on some of them we get the drawback of the duties. The packing up from the Columbia is neither difficult nor expensive, horses there are comparatively cheap and in that country there is little danger consequently few men are required. These advantages we are willing to divide with you, in order that by getting your goods on reasonable terms you may be able to monopolise in a great measure the trade of the mountains, and thus, much enlarge the amt. of goods which you will take from us. One other convenience of this route is that all your men which are wanted for camp keepers could be had from the islands these men would be better than those you get from the States for such purposes and much cheaper. One other advantage to be derived from pursuing the business through this route is that if you succeed in breaking up the other companies as you certainly can do, when you get your goods so much cheaper you will prevent the influx to [oft] small traders and others who by their competition continually injure your business and spoil your men. Should the above considerations strike your mind as they do mine you will I have no doubt you will see of how much importance it is that parties who in the course of events may have such large engagements with each other should meet and establish a mutual confidence which will afterward facilitate all business and in such case I shall expect to see you in Boston in the course of the week. I was in hopes that you would be able to spend the winter with me and go to St. Louis together in the spring, but if your business prevents we will let you go after you have spent a week with us.

I am Yr &c NJ.W. To M. Sublette Esq.

14.

St. Louis March 31st 1834

Dear wife (Cambridge)

Your fav. of 13th came to hand this morning and was very acceptable. I am glad to find you will take some care of the trees. Perhaps they will not grow for our use but some one will get the benefit and it will be pleasant to leave even such a memorial of our having once existed. It is true that Mr. Fitzpatric was robbed by the Crow Indians but I was in hopes that you would not hear of it. I knew it before I left Cambridge but did not wish to alarm you. I do not think there is much danger with so large party as I shall have.

Mr. Nuttall and Mr. Townsend another naturalist passed through this place to the rendezvous last week and their goods went by the vessell so there is no doubt of his going. The Missionarys came here this morning. Mr. Abbot is at the rendezvous taking care of the horses. Batiste and the Indian I have also sent up to the rendezvous. Batiste continues a pretty good boy. I shall think of your request for seeds and pretty stones while I am on my way out, and certainly shall not forget my promise to send for you if there is any chance of doing so with propriety but you must not be too sanguine a thousand circumstances may prevent it altho I desire it much. I feel as much as you can do the lonesomeness of my way of life itself to me and if I do fail in it they shall never say that it was for want of perseverance. But this is my last attempt and if I am not successfull I must come home and endeavor the best way I can to get a living and to pay the debts which will then be heavy. Still I am yet sanguine that I shall succeed. I will take good care of myself and perhaps the life which began in turmoil may yet end in quiet and peace and our sun go down from a clear sky. I should be desolate indeed if I thought that the residue of life was to be as unsettled as the past, and I cannot but reproach myself that I have made you in some measure a widow while you ought to be enjoying yourself. I am afraid that you will brood over hopes that have been blasted by me who should have been with you to fulfil them and at hand in time of need to cherish and support. These things make me melancholy and I half believe I have got the Blues.

Jacob writes me that he is about getting married. The people from Galena all say that he is doing well. I hope so but cant. help doubting whether it is permanent.

Good bye My Dear wife and may God bless you.

NJ. Wyeth

15.

One day this side the Blue May 12th 1834

Dear Sir

Wm Sublette having passed me here, I am induced to write to you by this opportunity and hope you will get it. You may expect me by the 1st July at the rendesvous named in your letter to Milton which you sent by Dr. Harrison who opened it and I presume told Wm Sublette of the place. I am not heavily loaded and shall travell as fast as possible and have a sufficient equipment of goods for you according to contract. Cerre will be much later than me and also the Am. Fur Co. Milton left me a few days since on account of his leg which is very bad.

To Thos Fitzpatric or Co.

In the Rocky Mountains.

I am yr obt. Servt. N. J. W.

P.S. I have sent a vessell around the Horn with such goods as you want and would like to give you a supply for winter rendesvous or next year on such terms as I know would suit you.

16.

Sweet Water June 9th 1834  
Mess Thomas Fitzpatric & Co.

Gent.

I send this to inform you of my approach with your goods. I am now two days behind Wm Sublette, who I presume is with you by this. Milton informed me that you would rendezvous near the mouth of the Sandy. In case you do not I wish you would immediately inform me by express. I am now one days march above rock Independence and shall continue to come on at a good rate and for the present follow the same route which I came by two years since. I wish that you would defer making any contract for carrying home any surplus furs that you have or for a further supply of goods untill I come as I have sent a vessell to the mouth of the Columbia with such goods as you want and am ready to give you a supply for winter rendezvous if you wish, or for next year, and also to send home by her, at a low rate, such furs as you may have and can make you advances in St. Louis on them to pay men &c.

I am yr. obt. Servt. Nathl. J. Wyeth.

17.

Hams Fork of the Colorado of the West July 1st 1834 Latt. 41 deg. 45 min. Long, 112 deg. 34 min.  
Mess Tucker & Williams

Gent.

I arrived here on the 17th inst. and Wm Sublette arrived two days before me. This he was enabled to do by leaving one half of his goods and horses on the route, which of course I could not do. On arrival the Rocky Mountain Fur Co. refused to receive the goods alledging that they were unable to continue business longer, and that they had disolved, but offered to pay the advances made to M.G. Sublette and the Forfeit. These terms I have been obliged to accept altho they would not even pay the interest on cash advances for there is no Law here. I have also sold a few goods at low prices. The proceeds of the Forfeit &c and Sales after deducting a small amt. for payment of wages of men who have gone home, from this place, I have forwarded to Mess. Von Phull & McGill of Saint Louis subject to your order, in one draft Four months from date July 1st 1834 for \$864.12 1/2 and for \$1002.81 same date 12 months both by Fitzpatric Sublette & Bridger, accepted by Sublette & Campbell of St Louis.

In addition to not fulfilling their agreement with me every exertion is made to debauch my men in which they have had some success, but I have hired enough of theirs to make up, and do not fear falling short of troops. These circumstances induce me to quit their neighborhood as soon as possible.

I shall proceed about 150 miles west of this and establish a fort in order to make sale of the goods which remain on my hands. I have sent out messengers to the Pawnacks, Shoshonees, Snakes,

Nez Perces and Flatheads to make robes and come and trade them at this Post. I am under the impression that these Indians will make a good quantity of Robes whenever they find they can sell them and I believe the Transportation will not be too expensive for the value of the article beside which I have no doubt that tolerable good returns of Beaver may be made at this post. I propose to establish it on a river called Portneuf on Snake or Lewis River.

I feel much disappointed that the contract was not complied with. Had M.G. Sublette been able to come I think it would have been. I much fear that the gentlemen at home will get discouraged if no returns are made the first year. I shall do the best I can but cannot now promise anything immediate. If I find on arrival at the mouth of the River that [Capt.] Lambert has not done much I shall think myself justified in detaining him another year.

I have drawn no drafts from these mountains.

Bonneville & Co. I have not seen, but he is not far from me on my proposed route. I fear that he has done nothing of consequence. I shall endeavor to take home his Beaver what there is of it if I can get an adequate price. I think his concern is finished.

I should forward you an Invoice of goods on hand and a memorandum of transactions here but have not time without delaying my march. Capt. Thing altho a first rate man is even a worse scribe than myself and it is all we can do to make the proper charges and to look after our men and Horses and having to lose some time in making a fort, time is the more precious. I think that I will be with the vessell about the 10th Sept. next and after arranging at the Post on the Columbia shall try my fortune at a winter Hunt for Beaver.

I have now with me 126 horses and mules in good order and 41 persons all told that are in the employ, and can hire as many more as I want. The amount due for wages is trifling. Almost all the men take up as fast as they earn, and would faster if I would let them, in goods at about 500 per ct. on the original cost. Our expenses after this year will be very small, and I have strong hopes as ever of success notwithstanding appearances so far.

I am yrs Nath. J. Wyeth

18.

Hams Fork July 1st 1834

Mr. [M.] G. Sublette

Dear Sir

I arrived at Rendesvous at the mouth of Sandy on the 17th June. Fitzpatric refused to receive the goods. he paid however, the forfeit and the cash advance I made to you this however is no satisfaction to me. I do not accuse you or him of any intention of injuring me in this manner when you made the contract but I think he has been bribed to sacrifice my interests by better offers from your brother. Now Milton, business is closed between us, but you will find that you have

only bound yourself over to receive your supplies at such price as may be inflicted and that all that you will ever make in the country will go to pay for your goods, you will be kept as you have been a mere slave to catch Beaver for others.

I sincerely wish you well and believe had you been here these things would not have been done. I hope that your leg is better and that you will yet be able to go whole footed in all respects.

I am Yr Obt. Servt. NJ. Wyeth

19.

Bear River July 5th 1834

Friend Ermatinger

Your esteemed fav. of 12th ulto. reached me by the politeness of Mr. [Robert] Newell on Hams fork of Green River. Mr. N. also informed me of the particulars of the battle with the Blkfeet. It must have been a capital mixture of Wine and Gunpowder. I am happy to hear that you had some success last year but am afraid that you will do but little this season.

I am quite happy to hear that the Doctor remains at Vancouver. I shall soon have the pleasure of seeing him. I suppose that Mckay has "thought of it" by this time and perhaps felt of it too, and you too seem to have done more than thought of it.

The latter part of your letter I shall answer when I see yhou, which will be, I think in the course of the year.

I am now on my way to meet a vessell that I sent from Boston to the mouth of the Columbia and hope to be there by the 1st Sept.

You have also enclosed a letter for Mr. Payette whose son is now with me.

I came up with goods and about 50 men 130 horses. The goods I will have to leave for sale somewhere her[e] abouts with part of the men. I have got no Beaver and have sold but little and that for Drafts which I hope are good.

I have again to repeat to you the advice which I before gave you not to come with a small party to the Am. Rendesvous. There are here a great collection of Scoundrels.

I have a great desire to see you and repay you in part for all the kindness which I received from you last year. Please give my respects to Mr. Horon [Francis Heron] and all my acquaintances that you may happen to see and believe me

yr obt. Servt and Friend Nath. J. Wyeth

20.

Bear River July 5th 1834

Mr Francis Payette

Dear Sir

I received your esteemed fav. of 14th May from Fort Nez Perces.

Your son [Baptiste] is now with me and will go to the mouth of the Columbia to arrive there about the 1st Sept. He has learned to speak English to read write and cypher tolerably well. He learns fast considering how broken his time has been. We teach him a little on the route but cannot do as much as I could wish. He is an active lad and appears contented. I should be pleased to hear from you at all times and especially good news. Letters addressed to the care of the Doctor at Vancouver would reach me.

I am yr obt Servt. N J Wyeth

21.

Sept. 1st 1834 (at Grand Ronde)

Capt. Bonneville

Dear Sir

Yours of this morning I have, and in answer can only say that I shall send a clerk and an outfit of goods up to the fort as soon as I get down, and shall come myself with it as far as where you now are, and probably be there in about 7 weeks from this time. I will enlarge the outfit a little so as to meet this trade, and will trade with them personally at your present camp, if they will be there, or I will send a clerk to them at any place they shall designate, provided they do so before my passing the Grande Ronde. The time and place must be designated in time in order that I may give the proper directions to the clerk.

I shall bring up goods so that in case you should alter your mind as to purchasing you could still get a supply. But if I could see you personally at the Grande Ronde when I return it is likely that we might make a joint business of it.

It is very like that I may detain the Brig until next summer, in which case I would like to freight home your furs, which I will do at 37 1/2 per lb. Insurance included and receive them at the Grand Ronde.

[No signature.]

22.

[No address given.] Sept. 1st 1834

Capt Bonneville

---

Dear Sir

I got your note of to day late this evening, and am obliged to you for the trouble you have taken. I will meet the Nez Perces at the A-show-to River within 8 weeks. I Hope to meet you before this, and would be pleased to make a joint affair of it much better than to proceed alone.

Your Beaver traded from the Skiuses [Cayuses] is so much seized from the common enemy in trade, so far so good.

Respectfully yrs. Nathl J. Wyeth

23.

Wappatoo Island Ap 3d 1835

Friend Weld

I write, but do not know when I will have an opportunity to send. I am in the mood which you know is always enough for me. If I were at Cambridge the wine would suffer to night and you pretty well know who would be the company. I have had a severe winter of it. All my men have been sick except myself and one man and nothing but pure obstinacy has kept me from being hauled up. It may be interesting to you to know a little of what I am doing. In the first place I got here somehow not worth relating. When here found my Brig not arived but outside the bar. Went down the river and met her coming up. This was on the 11th Sept. and entirely after salmon time. Her late arrival was occasioned by having been struck with lightening and being in consequence obliged to put in to Valparaiso to repair. After shaking hands, set about arranging a party to send to a Fort which I have built among the Rocky Mts. This party consisted of Capt. Thing 13 Sandwich Islanders and 8 whites. They proceeded about 200 miles up the Columbia inland at the same time I took a party of 4 Sandwich Islanders and 16 whites and followed inland 150 and got news that Capt Things Islanders had all run away from him. This obliged me to spare all my Islanders, and all but 6 of my whites to enable Capt. Thing to proceed to Fort Hall. With the residue I proceeded to look up the deserters. I struck south thinking that they might have started for Califomia. This was the middle of Nov. During Dec. Jany. and Feb. I got no news from them. About the first of march I heard that some of them were near the Columbia. On this I changed my route and struck that river where I learned from the Inds. that 7 of them had passed down five days before. I followed and overtook them about 80 miles from the mouth of the river 7 in number and took them to Fort William our establishment on Wappatoo Island about 75 miles up the Columbia at the mouth of the Multnomah. Two were killed by the Indians one was drowned and one froze to death in the Mts. and two are still unaccounted for as yet. On arriving here I set about preparing for fishing. Have commenced a house Boat 70 feet long for a conveyance about to the different fisherys. Have finished a canoe 60 feet long 3 feet wide 2 feet deep of one tree which has not a shake or not in it, and this after cutting off thirty feet of clear stuff from the same tree, and still this is by no means a large tree here. I think I could find trees here free from shakes or nots that would square 4 feet one hundred feet long. It is quite a job to make one of these canoes. I have heard to day that our Brig has arrived at the mouth of the river from the Sandwich Islands whither she went last winter with a cargo of Lumber, and I expect more business more company

and more provisions soon the last not the least desirable of the three. This Wappatoo Island which I have selected for our establishment is about 15 miles long and about average of three wide. On one side runs the Columbia and on the other the Multnomah. It consists of woodlands and prairie and on it there is considerable deer and those who could spare time to hunt might live well but a mortality has carried off to a man its inhabitants and there is nothing to attest that they ever existed except their decaying houses, their graves and their unburied bones of which there are heaps. So you see as the righteous people of New England say providence has made room for me and without doing them more injury than I should if I had made room for myself viz Killing them off. I often think of the old knot of cronies about the town with whom I used to spend so much time especialy of an evening. When I sit down in my lodge on the ground and contrast the past with the present and wonder if the future will give as much difference and which way the difference will be for better or worse?

It has rained almost continually from last Oct. to this time but still there has been no cold weather except in the mountains at great elevations.

Now I do not wish this letter published I do hate every thing in print.

I am yr Friend and Servt. Nathl. J. Wyeth

24.

Fort Vancouver 5th May 1836  
From Nathaniel Wyeth to  
John McLoughlin Esqr.

Sir

The following proposal is made with a view of establishing a permanent fur business on the Upper Waters of Snake River and countries to the Eastward and Southward, not much, if any frequented by your parties, it is not made with a view of eventually limiting the Supplies to the amount named, but to increase the same to any extent that may be found profitable. I wish to obtain some assurance from the Honble. Company of Supplies, in order to be able on my return to Boston to make my present partners an offer for the property we have in this Country, if you approve of the plan, & could yourself furnish any positive assurance of the Supplies before I arrive in Boston, it would assist me in my transactions there, or if you would place the subject before the Honble. Company in England so that I could receive their answer during the coming winter, it would effect the object. The proposal which I wish to make is as follows.

1st The Honble. Company to furnish Supplies at 75 p. Cent advance on prime Cost and Charges to the Amount of L700 deliverable at Vancouver.

2d The Hble. Co. to furnish the produce & manufactures of the Country at the Tariff of the Country, Horses not over Seventy five the first year, & afterwards according to the exigency of the

busniess at their Cost at Walla Walla, and men not exceeding fifteen the first year, and thereafter according to the wants of the Trade, at the Cost of their wages commencing from the time said men shall leave the place where they are hired, the honble. Co. to send the said men home free of charge on the termination of their contracts with N. Wyeth.

3d The Honble Co. to furnish one or more clerks if required charging their Wages.

4th N. Wyeth to deliver over at Vancouver all the furs and peltries that he may obtain, amd receive therefore a credit of L1 p.l merchantable Beaver of 1 lb. Weight, and all smaller to be considered as half Beaver, and for all other furs and peltries usually receive by the Co. at prices to be hereafter determined.

5th N. Wyeth to agree to abandon Fort Hall if required and in no case to trade or barter with any Indians or freemen below the scite of said Fort on the waters of Snake River, and also agree to establish no posts on the Columbia or any of its waters without the consent of the Honble. Company, but to pursue his trade on the waters of the Salt Lake, the Colorado, del Norte, and the Rivers of the Atlantic.

I am respectfully  
Your obedt. Sert.

Nathl. Wyeth
