Letter from William H. Ashley to Gen. Henry Atkinson

---

SAINT LOUIS, dec. 1, 1825.

DEAR SIR, Yours of the 23 November is at hand, and in compliance with the request therein contained, I herewith enclose you a sketch of the country over which I passed on my late tour across the Rocky mountains.

The following remarks relating to my journey have been cursorily put together, but as they afford some better information as to the practicability and means of traversing that region, at the season of the year presenting the greatest privations, they may not be uninteresting to you.

I left Fort Atkinson on the 3rd November, 1824.

On the afternoon of the fifth, I overtook my party of mountaineers (twenty-five in number), who had in charge fifty pack horses, a wagon and teams, etc. On the 6th we had advanced within miles of the villages of the Grand Pawney's, when it commenced snowing, and continued with but little intermission until the morning of the 8th. During this time my men and horses were suffering for the want of food, which, combined with the severity of the weather, presented rather a gloomy prospect. I had left Fort Atkinson under a belief that I could procure a sufficient supply of provisions at the Pawney villages to subsist my men until we could reach a point affording a sufficiency of game; but in this I was disappointed, as I learned by sending to the villages, that they were entirely deserted, the Indians having, according to their annual custom, departed some two or three weeks previous for their wintering ground. As the vicinity of those villages afforded little or no game, my only alternative was to subsist my men on horse meat, and my horses on cottonwood bark, the ground being at this time covered with snow about two feet deep. In this situation we continued for about the space of two weeks, during which time we made frequent attempts to advance and reach a point of relief, but, owing to the intense cold and violence of the winds, blowing the snow in every direction, we had only succeeded in advancing some ten or twelve miles, and on the 22nd of the same month we found ourselves encamped on the Loup fork of the river Platt within three miles of the Pawney towns. Cold and hunger had by this time killed several of my horses, and many others were much reduced from the same cause. On the day last named we crossed the country southwardly about fifteen miles to the main fork of the Platt, where we were so fortunate as to find rushes and game in abundance, whence we set out on the 24th and advanced up the Platt as expeditiously as the nature of things under such circumstances would admit. After ascending the river about one hundred miles, we reached Plumb point on the 3d December, where we found the encampment of the Grand Pawney Indians, who had reached that point (their usual crossing place) on their route to the wintering ground on the Arkansas river. At two or three of my encampments previous to arriving at Plumb point, I was visited by small parties of young warriors, who were exceedingly troublesome to my party and committed several thefts before leaving us, but on my arrival at the encampment, the chiefs and principal men expressed much friendship and manifested the same by compelling the thieves to return the articles stolen from me. From our encampment of the 24th to this place our hunters supplied us plentifully with provisions, and the islands and valleys of the Platt furnished a bountiful supply of

---

rushes and firewood, but I was here informed by the Indians that until I reached the vicinity the mountains, I should meet with but one place (the forks of the Platt) where a plentiful supply of fuel could be had, and but little food of any description for our horses. They urged me to take up winter quarters at the forks of the Platt, stating that if I attempted to advance further until spring, I would endanger the lives of my whole party.

The weather now was extremely cold, accompanied with frequent light snows. We advanced about eight miles further up the river, where we fell in with the tribe of Loup Pawneys and travelled in company with them to the forks of the Platt (their usual wintering place) where we arrived on the 12th day of December, and had so far found the Indians' information in relation to fuel and horse food to be correct. At this time my men had undergone an intense suffering from the inclemency of the weather, which also bore so severely on the horses as to cause the death of many of them.

This, together with a desire to purchase a few horses from the Loups and to prepare my party for the privations which we had reason to anticipate in travelling the next two hundred miles (described as being almost wholly destitute of wood), induced me to remain at the forks until the 23d December, the greater part of which time, we were favoured with fine weather, and, notwithstanding the uplands were still covered with from eighteen to twenty-four inches of snow, the valleys were generally bare and afforded a good range for my horses, furnishing plenty of dry grass and some small rushes, from the use of which they daily increased in strength and spirits.

The day after our arrival at the forks, the chiefs and principal men of the Loups assembled in council for the purpose of learning my wants, and to devise means to supply them. I made known them that I wished to procure twenty-five horses and a few buffalo robes, and to give my men an opportunity of providing more amply for the further prosecution of the journey, I requested that we might be furnished with meat to subsist upon while we remained with them, and promised that a liberal remuneration should be made for any services they might render me. After their deliberations were closed, they came to this conclusion: that, notwithstanding they had been overtaken by unusually severe weather before reaching their wintering ground, by which they had lost a great number of horses, they would comply with my requisition in regard to horses and other necessaries as far as their means would admit. Several speeches were made by the chiefs during the council, all expressive in the highest degree of their friendly disposition towards our government, and their conduct in every particular manifested the sincerity of their declarations.

On the 23d December, having completed the purchase of twenty-three horses and other necessary things, I made arrangements for my departure which took place on the next morning. The south fork of the river being represented as affording more wood than the north, I commenced ascending that stream. The weather was fine, the valleys literally covered with buffaloe, and everything seemed to promise a safe and speedy movement to the first grove of timber on my route, supposed to be about ten days' march. The Loup Pawneys were not at this time on very good terms with the Arapahoe and Kiawa Indians, and were anxious to cultivate a friendly understanding with them, to accomplish which, they concluded to send a deputation of five men with me to meet those tribes and propose to them terms of peace and amity. This deputation overtook me on the afternoon of the 25th.

Having now reached a point where danger might be reasonably apprehended from strolling war parties of Indians, spies were kept in advance and strict diligence observed in the duty of sentinels.

---

The morning of the 26th was cloudy and excessively cold. At 3 o'clock in the afternoon it began to snow and continued with violent winds until the night of the 27th. The next morning (28th) four of my horses were so benumbed with cold that they were unable to stand, although we succeeded in raising them on their feet. A delay to recruit them would have been attended with great danger, probably even to the destruction of the whole party. I therefore concluded to set forward without them. The snow was now so deep that had it not been for the numerous herds of buffaloe moving down the river, we could not possibly have proceeded. The paths of these animals were beat on either side of the river and afforded an easy passage to our horses. These animals were essentially beneficial to us in another respect by removing (in their search for food)

the snow in many places from the earth and leaving the grass exposed to view, which was the only nourishment our horses could obtain.

We continued to move forward without loss of time, hoping to be able to reach the wood described by the Indians before all our horses should become exhausted. on the 1st january, 1825, I was exceedingly surprised and no less gratified at the sight of a grove of timber, in appearance, distant some two or three miles on our front. It proved to be a grove of cottonwood of the sweet-bark kind suitable for horse food, situated on an island, offering among other conveniences, a good situation for defence. I concluded to remain here several days for the purpose of recruiting my horses, and made my arrangements accordingly. My Indian friends of the Pawne Loup deputation, believing this place to be nearly opposite to the Arrapahoe and other Indian camps on the Arkansas determined to proceed hence across the country. They prepared a few pounds of meat and with each a bundle of wood tied to his back for the purpose of fuel, departed the following morning on their mission. Being informed by the Pawneys that one hundred of my old enemies (the Arikara warriors) were encamped with the Arkansas Indians, and my situation independent of that circumstance, being rendered more vulnerable by the departure of the Indians, who had just left us, I was obliged to increase my guard from eight to sixteen men. This was much the most severe duty my men had to perform, but they did it with alacrity and cheerfulness as well as all other services required at their hands; indeed, such was their pride and ambition in the discharge of their duties, that their privations in the end became sources of amusement to them. We remained on this island until the cottonwood fit for horse food was nearly consumed, by which time our horses were so refreshed as to justify another move forward. We therefore made arrangements for our departure and resumed our march on the 11th january.

The weather continued extremely cold, which rendered our progress slow and very labourious. We procured daily a scanty supply of small pieces of driftwood and willow brush, which sufficed for our fuel, but we did not fall in with any cottonwood suitable for horse food until the 20th, when we reached another small island clothed with a body of that wood sufficient for two days subsistence. From this last mentioned island, we had a clear and distant view of the Rocky mountains bearing west, about sixty miles distant. Believing from the information of the Indians that it was impracticable to cross them at this time, I concluded to advance to their base with my whole party, and, after fortifying my camp, to proceed with a part of my men into the mountains, to ascertain if possible the best route to cross over, and at the same time, endeavour to employ my men advantageously until a state of things would allow me to proceed on my journey.

We advanced slowly to the point proposed, and had the good fortune to find on our way an abundance of wood for fuel as well as for horse food. on the 4th february, we approached near to

---

the base of the mountain and encamped in a thick grove of cottonwood and willows on a small branch of the river Platt. our situation here was distant six or eight miles north of a conspicuous peak of the mountains, which I imagined to be that point described by Major Long as being the highest peak and lying in latitude 40 N., longitude 29 W. On my route hither from our encampment of the 20th january, I was overtaken by three Arapahoe Indians. They stated to me that they had been informed by the Indians of the Pawney deputation (whom they had received and treated with friendship) of my journey up the Platt, and that they with 60 or 70 other warriors had started from their encampment on the Arkansas to join me, but the unusual depth of snow on the prairies had deterred all the party except themselves from proceeding further than their second day's encampment. I made them some presents, gave them advice in relation to the course of conduct they should pursue towards our citizens, and pointed out to them the advantages which a friendly understanding between them and the Pawneys would produce to both tribes. They acknowledged the correctness of my admonition and promised in future to pursue the line of conduct I had advised them to adopt. They then thanked me for the presents I had made them and departed to rejoin their tribe.

We were busily [engaged] on excursions in different directions from our camp until the 25th february. Although the last ten days had been pleasant weather partly accompanied with warm suns, the scene around us was pretty much the same as when we arrived, everything being enveloped in one mass of snow and ice, but, as my business required a violent effort to accomplish its object, notwithstanding the mountains seemed to bid defiance to my further progress, things were made ready, and on the 26th we commenced the doubtful undertaking.our passage across the first range of mountains, which was exceedingly difficult and dangerous, employed us three days, after which the country presented a different aspect. Instead of finding the mountains more rugged as I advanced towards their summit and everything in their bosom frozen and torpid, affording nothing on which an animal could possibly subsist, they assumed quite an altered character. The ascent of the hills (for they do not deserve the name of mountains) was so gradual as to cause but little fatigue in travelling over them. The valleys and south sides of the hills were but partially covered with snow, and the latter presented already in a slight degree the verdure of spring, while the former were filled with numerous herds of buffalo, deer, and antelope.

In my passage hither I discovered from the shape of the country, that the range of mountains twenty or thirty miles to the north of my route, was not so lofty or rugged and in all probability would afford a convenient passage over them. From here I pursued a W.N.W. course with such variations only as were necessary in selecting the smoothest route. The face of the country west and northwardly continued pretty much the same. Successive ranges of high hills gradually ascending as I advanced, with detached heaps of rock and earth scattered promiscuously over the hills several hundred feet higher than the common surface. On the south there appeared at the distance of fifteen or twenty miles a range of lofty mountains bearing east and west, entirely covered with snow and timbered with a thick growth of pine. We were able to procure but a scanty supply of fuel till we arrived on the 10th march at a small branch of the north fork of the Platte, where we found an abundance of wood. This stream is about one hundred feet wide, meandering northeastwardly through a beautiful and fertile valley, about ten miles in width. Its margin is partially wooded with large cottonwood of the bitter kind. The sweet cottonwood, such as affords food for horses, is nowhere to be found in the mountains; consequently our horses had to subsist

---

upon a very small allowance of grass, and this, too (with the exception of a very inconsiderable proportion) entirely dry and in appearance destitute of all nutriment. Yet my horses retained their strength and spirits in a remarkable degree, which with other circumstances, confirms me in the opinion that the vegetation of the mountains is much more nourishing than that of the plains.

On the 12th, I again set out and in the evening encamped at the foot of a high range of mountains covered with snow and bearing N.N.W. and S.S.E., which, as they appeared to present the same obstructions to my passage as far north as the eye could reach, determined me (after a day's examination) to attempt the continuation of my course W.N.W., hoping to be as successful as I had been in crossing the first range. My attempt, however, proved unsuccessful. After an unremitting and severe labour of two days, we returned to our old encampment with the loss of some of my horses, and my men excessively fatigued. We found the snow to be from three to five feet in depth and so firmly settled as to render our passage through it wholly impracticable. This mountain is timbered with a beautiful growth of white pine and from every appearance is a delightful country to travel over in the summer season. After remaining one day longer at the camp to rest my men and horses, I left it a second time and travelled northwardly along the base of the mountains. As I thus advanced, I was delighted with the variegated scenery presented by the valleys and mountains, which were enlivened by innumerable herds of buffalo antelope, and mountain sheep grazing on them, and what added no small degree of interest to the whole scene, were the many small streams issuing from the mountains, bordered with a thin growth of small willows and richly stocked with beaver. As my men could profitably employ themselves on these streams, I moved slowly along, averaging not more than five or six miles per day and sometimes remained two days at the same encampment.

On the 21st march, the appearance of the country justified another attempt to resume my former course W.N.W. The principal or highest part of the mountain having changed its direction to east and west, I ascended it in such manner as to leave its most elevated ranges to the south and travelled north west over a very rough and broken country generally covered with snow. My progress was therefore slow and attended with unusual labour until the afternoon of the 23d, when I had succeeded in crossing the range and encamped on the edge of a beautiful plain of a circular form and about ten miles in diameter. The next day (24th) we travelled west across the plain, which terminated at the principal branch of the north fork of the river Platt, on which we encamped for the night. on the two succeeding days we passed over an elevated rough country entirely destitute of wood and affording no water save what could be procured by the melting of snow. We used as a substitute for fuel an herb called wild sage. It resembles very much in appearance the garden sage but acquires a much larger growth and possesses a stock of from four to five inches in diameter. It burns well and retains fire as long as any fuel I ever used.

From the morning of the 27th to the night of the 1st april, we were employed in crossing the ridge which divides the waters of the Atlantic from those of the Pacific ocean. The first two days, the country we met with was undulating with a gradual ascent to the west Southwardly at the distance of twenty or thirty miles appeared a range of high mountains bearing east and west. Northwardly, at an equal distance, were several mountains or high hills irregularly seated over the earth, which I afterwards ascertained to surround the sources of a branch of the Platt called Sweet Water.

On the 3d, 4th and 5th days, we travelled over small ridges and valleys alternately, the latter much the most extensive and generally covered with water produced by the melting of the snow and

---

which appeared to have no outlet. This dividing ridge is almost entirely destitute of vegetation except wild sage with which the earth is so bountifully spread that it proved a considerable impediment in our progress. As my horses were greatly exhausted by the fatigue and hunger they had underwent, I advanced on the 2d april only two or three miles to a place where I had, on the preceding evening, discovered some grass. After my camp was arranged, I advanced with one of my men eight or ten miles on my route to a high hill for the purpose of taking a view of the adjacent country in the expectation of finding the appearance of water courses running westwardly. Nothing, however, was visible from which I could form an opinion with the exception of a huge craggy mountain, the eastern extremity of which, bearing from this hill due north, made nearly a right angle. The arm which extended northwardly divides (as I afterwards ascertained) the waters of the Yellow Stone and Bighorn from some of the headwaters of the Columbia, while the west arm separates the southern sources of Lewis's fork of the Columbia from what I suppose to be the headwaters of the Rio Colorado of the West. While on the mountain, I was discovered by a war party of Crow Indians, who were returning from an excursion against the southern Snake Indians. This party, unobserved by me, followed me to my camp and on the succeeding night stole seventeen of my best horses and mules. This outrage reduced me to a dreadful condition. I was obliged to burden my men with the packs of the stolen horses, and, after making the necessary arrangements, they were directed to proceed to the hill where I had been discovered the day previous by the Indians, while I, with one man, pursued the fugitives who travelled northwardly over the roughest parts of the country and with all possible expedition. In the course of the day we recovered three of the stolen horses, which were left on the way, and rejoined our party that night. on the next morning I dispatched nine men on the trail of the Indians, and with the residue of my party I proceeded in search of a suitable encampment at which to await their return. on the 6th we reached a small stream of water running north west. We deemed it about ten miles where it formed a junction with another rivulet of the same size, which headed northwardly in the range of mountains before described. This stream is clothed with a growth of small willows and furnishes the only constant running water we have met with since the 24th march and also the first wood we have seen in the same space of time. We continued at this camp until the 11th inst., on which day, the men sent in pursuit of the Indians came back without success. They had ascertained, however, from the direction of the trace and other circumstances that they belonged to the Crow nation. on the 12th we again proceeded on our journey, pursuing the meanders of the creek last mentioned in a south west direction; but the weather was so exceedingly bad, snowing a greater part of the time, that we were unable to advance more than six or eight miles per day until the 18th inst., when we left the creek and traveled west about fifteen miles to a beautiful river running south. This stream is about one hundred yards wide, of a bold current, and generally so deep that it presents but few places suitable for fording. Its margin and islands are wooded with large long leafed (or bitter) cottonwood, box-elder, willows, etc., and, judging from the quantity of wood cut on its banks, and other appearances, it once must have contained a great number of beaver, the major part of which (as I have been informed) were trapped by men in the service of the North West company some four or five years ago.

The country in this vicinity and eastwardly fifty miles is gently rolling. Some of the valleys afford a species of fine grass, but the uplands produce but little vegetation of any kind except a small growth of wild sage.

---

I have hitherto said but little in relation to the fertility of the soil on my route because that part of it lying east [of] the mountains has in two or three instances been described by gentlemen who have travelled over the country for that express purpose and further because the perfect sameness in the quality of the soil and its productions enabled me to describe them altogether and that in but few words. From this place to Plumb point on the river Platt, the proportion of arable land (which is almost entirely confined to the valleys of the mountains) is so inconsiderable that the whole country (so far as my observations extended) may be considered of no value for the purpose of agriculture. The surface generally either exhibits a bed of sand or a light coloured barren earth, which is in many places wholly destitute of the least semblance of vegetation. In relation to the subsistence of men and horses, I will remark that nothing now is actually necessary for the support of men in the wilderness than a plentiful supply of good fresh meat. It is all that our mountaineers ever require or even seem to wish. They prefer the meat of the buffaloe to that of any other animal, and the circumstance of the uninterrupted health of these people who generally eat unreasonable quantities of meat at their meals, proves it to be the most wholesome and best adapted food to the constitution of man. In the different concerns which I have had in the Indian country, where not less than one hundred men have been annually employed for the last four years and subsist altogether upon meat, I have not known at any time a single instance of bilious fever among them or any other disease prevalent in the settled parts of our country, except a few instances (and but very few) of slight fevers produced by colds or rheumatic affections, contracted while in the discharge of guard duty on cold and inclement nights. Nor have we in the whole four years lost a single man by death except those who came to their end prematurely by being either shot or drowned. In the summer and fall seasons of the year, the country will afford sufficient grass to subsist any number of horses in traversing it in either direction and even in the winter season, such is the nutritious quality of the mountain grass that, when it can be had plentifully, although perfectly dry in appearance, horses (moderately used) that partake of it, will retain in a great degree their flesh, strength, and spirits. When the round leaf or sweet-bark cottonwood can be had abundantly, horses may be wintered with but little inconvenience. They are very fond of this bark, and, judging by the effect produced from feeding it to my horses last winter, I suppose it almost, if not quite, as nutritious as timothy hay.

On my arrival at the point last described. I determined to relieve my men and horses of their heavy burdens, to accomplish which, I concluded to make four divisions of my party, send three of them by land in different directions, and, with the fourth party, descend the river myself with the principal part of my merchandise. Accordingly, some of the men commenced making a frame about the size and shape of a common mackinaw boat, while others were sent to procure buffaloe skins for a covering. On the 21 april, all things being ready for our departure, I dispatched six men northwardly to the sources of the river; seven others set out for a mountain bearing s.s.w. and N.N.E., distant about thirty miles; and six others were sent in a southern direction. After selecting one of the most intelligent and efficient of each party to act as partizans, I directed them to proceed to their respective points of destination and thence in such direction as circumstances should dictate for my interest. At the same time they were instructed to endeavor to fall in with two parties of men that were fitted out by me in the year previous, and who were then, as I supposed, beyond the range of mountains appearing westwardly. The partisans were also informed that I would descend the river to some eligible point about one hundred miles below, there de-

---

posit a part of my merchandise, and make such marks as would designate it as a place of general rendezvous for the men in my service in that country, and where they were all directed to assemble on or before the 10th july following.

After the departure of the land parties, I embarked with six men on thursday, the 21st april, on board my newly made boat and began the descent of the river. After making about fifteen miles, we passed the mouth of the creek which we had left on the morning of the 18th and to which we gave the name of Sandy. At 4 o'clock in the afternoon we encamped for the remainder of the day and night at a place distant about forty miles from where we embarked, finding from the movement of our boat in its day's progress that she was too heavily burthened, we began the construction of another, which was completed and launched on the morning of the 24th, when we again set out. As we advanced on our passage, the country gradually became more level and broken. The river bottom, which in point of soil, is but little better than the uplands, becomes narrower as we descended and has generally the appearance of being subject to inundation. Today we made 30 miles.

MONDAY, 25TH: the country today under our observation is mountainous on either side of the river for twenty miles, then it resumes its former appearance of elevated and broken heights. A beautiful bold running stream about fifty yards wide empties itself on the west side of the river bearing N.W. and S.E. Below this junction the river is one hundred and fifty yards wide, the valley narrow and thinly timbered. We encamped on an island after making about twenty-five miles. Thence we departed on the succeeding morning and progressed slowly without observing any remarkable difference in the appearance of the river or surrounding country until the 30th inst., when we arrived at the base of a lofty rugged mountain, the summit of which was covered with snow and bearing east and west. Here also a creek sixty feet wide discharges itself on the west side. This spot I selected as a place of general rendezvous, which I designated by marks in accordance with the instruction given to my men. So far, the navigation of this river is without the least obstruction. The channel in the most shallow places affords not less than four feet water. Game continues abundant, particularly buffaloe. There is no appearance of these animals wintering on this river; but they are at this time travelling from the west in great numbers.

SATURDAY, MAY 2d: we continued our voyage about half a mile below our camp, when we entered between the walls of this range of mountains, which approach at this point to the waters, edge on either side of the river and rise almost perpendicular to an immense height. The channel of the river is here contracted to the width of sixty or seventy yards, and the current (much increased in velocity) as it rolled along in angry submission to the serpentine walls that direct it, seemed constantly to threaten us with danger as we advanced. We, however, succeeded in descending about ten miles without any difficulty or material change in the aspect of things and encamped for the night. About two miles above this camp, we passed the mouth of a creek on the west side some fifteen yards wide, which discharged its water with great violence.

SUNDAY, 3RD: after progressing two miles, the navigation became difficult and dangerous, the river being remarkably crooked with more or less rapids every mile caused by rocks which had fallen from the sides of the mountain, many of which rise above the surface of the water and required our greatest exertions to avoid them. At twenty miles from our last camp, the roaring and agitated state of the water a short distance before us indicated a fall or some other obstruction of considerable magnitude. our boats were consequently rowed to shore, along which we cautiously

---

descended to the place from whence the danger was to be apprehended. It proved to be a perpendicular fall of ten or twelve feet produced by large fragments of rocks which had fallen from the mountain and settled in the river extending entirely across its channel and forming an impregnable barrier to the passage of loaded watercraft. We were therefore obliged to unload our boats of their cargoes and pass them empty over the falls by means of long cords which we had provided for such purposes. At sunset, our boats were reloaded and we descended a mile lower down and encamped.

MONDAY, 4TH: this day we made about forty miles. The navigation and mountains by which the river is bounded continues pretty much the same as yesterday. These mountains appear to be almost entirely composed of stratas of rock of various colours (mostly red) and are partially covered with a dwarfish growth of pine and cedar, which are the only species of timber to be seen.

TUESDAY, 5TH: after descending six miles, the mountains gradually recede from the water's edge, and the river expands to the width of two hundred and fifty yards, leaving the river bottoms on each side from one to three hundred Yards wide interspersed with clusters of small Willows. We remained at our encampment of this day until the morning of the 7th, when we descended ten miles lower down and encamped on a spot of ground where several thousand Indians had wintered during the past season. Their camp had been judiciously selected for defence, and the remains of their work around it accorded with the judgment exercised in the selection. Many of their lodges remained as perfect as when occupied. They were made of poles two or three inches in diameter, set up in circular form, and covered with cedar bark.

FRIDAY, THE 8TH: we proceeded down the river about two miles, where it again enters between two mountains and affording a channel even more contracted than before. As we passed along between these messy walls, which in a great degree exclude from us the rays of heaven and presented a surface as impassable as their body was impregnable, I was forcibly struck with the gloom which spread over the countenances of my men; they seemed to anticipate (and not far distant, too) a dreadful termination of our voyage, and I must confess that I partook in some degree of what I supposed to be their feelings, for things around us had truly an awful appearance. We soon came to a dangerous rapid which we passed over with a slight injury to our boats. A mile lower down, the channel became so obstructed by the intervention of large rocks over and between which the water dashed with such violence as to render our passage in safety impracticable. The cargoes of our boats were therefore a second time taken out and carried about two hundred yards, to which place, after much labor, our boats were descended by means of cords. Thence we descended fifty (50) miles to the mouth of a beautiful river emptying on each side, to which I gave the name of Mary's river. The navigation continued dangerous and difficult the whole way; the mountains equally lofty and rugged with their summits entirely covered with snow. Mary's river is one hundred yards wide, has a rapid current, and from every appearance very much confined between lofty mountains. A valley about two hundred yards wide extends one mile below the confluence of these rivers, then the mountain again on that side advances to the water's edge. Two miles lower down is a very dangerous rapid, and eight miles further the mountain withdraws from the river on the west side about a half mile. Here we found a luxurious growth of sweet-bark or round-leaf cottonwood and a number of buffaloe, and succeeded by narrow river bottoms and hills. The former, as well as several islands, are partly clothed with a luxuriant growth of round-leaf cottonwood and extend four miles down the river, where the mountains again close to the

---

water's edge and are in appearance more terrific than any we had seen during the whole voyage. They immediately produce bad rapids, which follow in quick succession for twenty miles, below which, as far as I descended, the river is without obstruction. In the course of our passage through the several ranges of mountains, we performed sixteen portages, the most of which were attended with the utmost difficulty and labor. At the termination of the rapids, the mountains on each side of the river gradually recede, leaving in their retreat a hilly space of five or six miles, through which the river meanders in a west direction about (70) seventy miles, receiving in that distance several contributions from small streams on each side, the last of which is called by the Indians Tewinty river. It empties on the north side, is about (60) sixty yards wide, several feet deep, with a bold current.

I concluded to ascend this river on my route returning, therefore deposited the cargoes of my boats in the ground near it, and continued my descent of the main river fifty miles to the point marked 5 on the topographical sketch sent you. The whole of that distance the river is bounded by lofty mountains heaped together in the greatest disorder, exhibiting a surface as barren as can be imagined. This part of the country is almost entirely without game. We saw a few mountain-sheep and some elk, but they were so wild, and the country so rugged that we found it impossible to approach them. On my way returning to Tewinty river, I met a part of the Eutau tribe of Indians, who appeared very glad to see us and treated us in the most respectful and friendly manner. These people were well dressed in skins, had some guns, but armed generally with bows and arrows and such other instruments of war as are common among the Indians of the Missouri. Their horses were better than Indian horses generally are east of the mountains and more numerous in proportion to the number of persons. I understood (by signs) from them that the river which I had descended, and which I supposed to be the Rio Colorado of the West, continued its course as far as they had any knowledge of it, southwest through a mountainous country. They also informed me that all the country known to them from south to west from Tewinty river was almost entirely destitute of game, that the Indians inhabiting that region subsist principally on roots, fish and horses. The Eutaus are part of the original Snake nation of Indians. They have no fixed place of residence but claim a district of country which (according to their representation) is about one hundred and fifty miles long by one hundred miles wide, to which their situation at that time was nearly central.

I purchased a few horses of the Eutaus, returned to Tewinty river and ascended to its extreme sources, distant from its mouth about seventy miles, in general bearing W.N.W. and S.S.E.; [it] runs through a mountainous sterile country. From the head waters of Tewinty river, I crossed a range of lofty mountains nearly E. and W., which divide the waters of the Rio Colorado from those which I have represented as the Beaunaventura. This range of mountains is in many places fertile and closely timbered with pine, cedar, quaking-asp, and a dwarfish growth of oak; a great number of beautiful streams issue from them on each side, running through fertile valleys richly clothed with grass. I proceeded down the waters of the Beaunaventura about sixty miles bordered with a growth of willow almost impenetrable. In that distance I crossed several streams from 20 to 60 yards wide running in various directions. All of them, as I am informed, unite in one in the course of 30 miles, making a river of considerable magnitude, which enters a few miles lower down a large lake, represented on your sketch as Lake Tempagono. This information was communicated to me by our hunters who (as I before told) had crossed to this region in the summer

---

of 1824 and wintered on and near the borders of this lake. They had not explored the lake sufficiently to judge correctly of its extent, but from their own observations and information collected from Indians, they supposed it to be about eighty miles long by fifty broad. They represented it as a beautiful sheet of water deep, transparent, and a little brackish, though in this latter quality the accounts differ; some insist that it is not brackish. I met several small parties of Eutaw Indians on this side of the last mentioned range of mountains, 100 miles long bearing about W.N.W. and S.S.E. [who said] that a large river flowing out of it on the west end runs in a western direction, but they know nothing of its discharge into the ocean or of the country any considerable distance west of the lake. I also conversed with some very intelligent men who I found with our hunters in the vicinity of this lake and who had been for many years in the service of the Hudson Bay Fur company. Some of them profess to be well acquainted with all the principal waters of the Columbia, with which they assured me these waters had no connection short of the ocean. It appears from this information that the river is not the Multnomah, a southern branch of the Columbia, which I first supposed it to be. The necessity of my unremitted attention to my business prevented me from gratifying a great desire to descend this river to the ocean, which I ultimately declined with the greatest reluctance. The country drained by these waters, which is about one hundred and twenty miles wide and bounded on the north, east and south by three principal and conspicuous mountains, is beautifully diversified with hills, mountains, valleys, and bold running streams and is in parts fertile. The northern part of it is well supplied with buffaloe, elk, bear, antelope, and mountain-sheep. The country east and a considerable distance north of these lakes, including the headwaters of the Rio Colorado of the West and down the same to Mary's river, is claimed by the Shoshone Indians. The men in my employ here have had but little intercourse with these people. So far they had been treated by them in the most friendly manner. They had, however, some time in the fall of 1824, attacked and killed several of our citizens who had crossed from Taus and were trading on the \_\_\_\_\_.

On the 1st day of July, all the men in my employ or with whom I had any concern in the country, together with twenty-nine, who had recently withdrawn from the Hudson Bay company, making in all 120 men, were assembled in two camps near each other about 20 miles distant from the place appointed by me as a general rendezvous, when it appeared that we had been scattered over the territory west of the mountains in small detachments from the 38th to the 44th degree of latitude, and the only injury we had sustained by Indian depredations was the stealing of 17 horses by the Crows on the night of the 2nd April, as before mentioned, and the loss of one man killed on the headwaters of the Rio Colorado, by a party of Indians unknown.

Mr. Jedediah Smith, a very intelligent and confidential young man, who had charge of a small detachment, stated that he had, in the fall of 1824, crossed from the headwaters of the Rio Colorado to Lewis fork of the Columbia and down the same about one hundred miles, thence northwardly to Clark's fork of the Columbia, where he found a trading establishment of the Hudson Bay company, where he remained for some weeks. Mr. Smith ascertained from the gentleman who had charge of that establishment, that the Hudson Bay company had then in their employment, trading with the Indians and trapping beaver on both sides of the Rocky mountains, about 80 men, 60 of whom were generally employed as trappers and confined their operations to that district called the Snake country, which Mr. Smith understood as being confined to the district claimed by the Shoshone Indians. It appeared from the account, that they had taken in the last four years within

---

that district eighty thousand beaver, equal to one hundred and sixty thousand pounds of furs. You can form some idea of the quantity of beaver that country once possessed, when I tell you that some of our hunters had taken upwards of one hundred in the last spring hunt out of streams which had been trapped, as I am informed, every season for the last four years.

It appears from Mr. Smith's account that there is no scarcity of buffalo as he penetrated the country. As Mr. Smith returned, he inclined west and fell on the waters of the Grand lake or Beaunaventura. He describes the country in that direction as admitting a free and easy passage and abounding in salt. At one place particularly hundreds of bushels might have been collected from the surface of the earth within a small space. He gave me some specimens, which equal in appearance and quality the best Liverpool salt. Mr. S. also says the buffaloe are very plenty as far as he penetrated the country over it in almost any direction.

On the 2nd day of July, I set out on my way homewards with 50 men, 25 of whom were to accompany me to a navigable point of the Big Horn river, thence to return with the horses employed in the transportation of the furs. I had forty-five packs of beaver cached a few miles east of our direct route. I took with me 20 men, passed by the place, raised the cache, and proceeded in a direction to join the other party, but, previous to joining them, I was twice attacked by Indians first by a party of Blackfeet about 60 in number. They made their appearance at the break of day, yelling in the most hideous manner and using every means in their power to alarm our horses, which they so effectually did that the horses, although closely hobbled, broke by the guard and ran off. A part of the Indians being mounted, they succeeded in getting all the horses except two, and wounded one man. An attempt was also made to take our camp, but in that they failed. The following night, I sent an express to secure horses from the party of our men who had taken a direct route. In two days thereafter, I received the desired aid and again proceeded on my way, made about ten miles, and encamped upon an eligible situation. That night, about 12 o'clock, we were again attacked by a war party of Crow Indians, which resulted in the loss of one of the Indians killed and another shot through the body, without any injury to us. The next day I joined my other party and proceeded direct to my place of embarkation just below the Big Horn mountain, where I arrived on the 7th day of August.

On my passage thither, I discovered nothing remarkable in the features of the country. It affords generally a smooth way to travel over. The only very rugged part of the route is in crossing the Big Horn mountain, which is about 30 miles wide. I had the Big Horn river explored from Wind River mountain to my place of embarkation. There is little or no difficulty in the navigation of that river from its mouth to Wind River mountain. It may be ascended that far at a tolerable stage of water with a boat drawing three feet water. The Yellowstone river is a beautiful river to navigate. It has rapids extending from above Powder river about fifty miles but I found about four feet water over the most.

END

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

John Ball (1794-1884) was member of Nathaniel Wyeth's 1832 expedition to the Rockies and the Pacific Northwest. Ball provides an account of: Sublette's expedition across the plains to the 1832 Pierre's Hole rendezvous, the famous battle with the Blackfeet that occurred there, the continuation of Wyeth's remaining men to Oregon, and the first settlements in Oregon.

This e-text is derived from the portion of Ball's rather lengthy autobiography that deals with his experiences in the West. It begins with the chapter where Ball meets up with Wyeth in Baltimore, and ends just before Ball sails for the Sandwich Islands, on his journey back to the East.

Ball apparently wrote this autobiography from diaries and notes. The manuscript was eventually compiled by his daughters, Kate Ball Powers, Flora Ball Hopkins, and Lucy Ball, and published as: Ball, John, Autobiography of John Ball, Grand Rapids, Mich., The Dean-Hicks company, 1925.

#### NEW PLANS

#### CHAPTER I

While in New York I sought out and found some of John Jacob Astor's Oregon men for the purpose of gaining information from them about that country. There were the Messrs. Seaton's who sailed around Cape Horn and to the Columbia River and assisted in establishing the trading post Astoria, and Ramsey Crooks, who conducted the land party for him across the continent, reaching Astoria the second year. They told me much of their experiences there. I then went to Philadelphia and Baltimore and made collections in each place for the oilcloth contracts, for my sister, and sent her back after my leaving, in all, some three thousand dollars.

#### Notables in Washington

Having the time, before the arrival from Boston of my Oregon traveling companions, I went for the first time to Washington. Put up at Brown's Hotel, standing there almost alone, on the Avenue, Washington then being comparatively but a village. General Ashley, who had long been in the fur trade from Missouri to the Mountains, was stopping at Brown's. So I took the liberty to call at his room and inform him of my intended journey and asking from him advice and information. He kindly answered many inquiries. But finally said, "Young man, it would be as difficult to tell all about it, all that may occur or be needed on such a journey, as for a carpenter to tell every blow he had got to strike on commencing to erect a house." He had sold out his fur business to William Sublette of St. Louis and others, and had been elected a member of Congress.

While thus spending a few days at Washington I took the opportunity with other things to attend the sitting of the United States Supreme Court. And then I listened to Chief Justice Marshall's celebrated decision of the Georgia and Cherokee case, with regard to the Cherokee lands. And, of course, attended the sitting of the houses of Congress, Calhoun, then Vice-President, presiding over the Senate, in which Benton, Clay, Webster and other celebrities were then members. As a presiding officer I have never seen Mr. Calhoun's equal, or a finer man to look on. And, as then constituted, it was indeed an august body and in the House were then Adams and Choate. The latter I knew well at College and there were others in both houses with whom I might without impropriety have claimed acquaintance. But no, I poked about as a stranger. And as such presumed to call on General Jackson at the White House without any introduction. He however received me kindly.

#### President Jackson

Then, as always through life, I neglected to make use of men in place and of notoriety, as I perhaps might have done to my great advantage. Had I then told the President and others of my proposed

---

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

journey they might have taken such interest, as to have given some aid, or more notoriety to my journey and personal advantage after its performance. But so it has always been, I have never felt much deference for men barely on account of holding office or claiming consequence. Had I studied to make use of such and shown them more regard and aid, who knows but some more notorious place might not have been mine. But there is this consolation, I have no less self respect, and may have escaped more severe troubles than have now been my lot.

Captain N. Wyeth

After spending a few days at Washington I returned to Baltimore and awaited the coming from Boston by sea of Mr. Wyeth and his party. And they in a few days arrived, numbering about twenty. Mr. Wyeth I found a man of some intelligence and great energy in his undertakings. He had been a shipper of ice from a pond, Clear pond, in Cambridge. But his men were such loafers and laborers mostly, as he had picked up in and about Boston by high representations of the pleasures of the journey and the fortune-making result of the enterprise, none of them, as time showed, at all understanding what they were going into. A Mr. Sinclair, myself and one other, I think, joined them here. While at Baltimore I stopped at Belsover's, where was one of the best tables I ever sat at. And I made the best of it, knowing when I left it, I should go into camp life. I had always liked Baltimore, so beautifully located and its fine fountains of water.

Leaves Baltimore

Having arranged matters for our journey, about the middle of March we left Baltimore on the Baltimore and Ohio Railroad for Frederick, sixty miles, by horse power. That sixty miles was then more than all the other railroads in the Union. It had been built at enormous labor, graded down and part of the way through the mountains to a dead level and the stringers, on which was riveted strap iron, were of cut granite rock. But they had been so moved out of place by the frost of the previous winter, that the cars moved roughly over them. From Frederick we took our journey on foot, having a wagon for our baggage. In fact commenced our camp life, sleeping at night under tents and cooking our grub at a fire by the roadside. And so for some days we trudged on. At Cumberland visited the coal mines, which to me were quite new and interesting as were many other things on our way, for I had never been before in these parts. And so we continued along on the National Cumberland road to Brownsville on the river Monongahela. There we took a steamboat for Pittsburgh, where on arrival we looked about to see its wonders; for from its history, its commanding location, at the junction of those two mountain streams to form the Ohio, and its coal and iron made it one of the most marked places in the country. In passing thus slowly the Alleghenies, I noticed with much interest the geology of the country.

Bound for St. Louis

From Pittsburgh we took passage in a steamboat bound for St. Louis. And as we descended the river I noticed its high bluffs, where at first the openings to the coal mines were high up the same, but as we sailed on, they gradually opened lower and lower, till the coal veins passed below the river. We stopped for a time at Cincinnati; which was then but a village, with few buildings hut of wood and these of no great pretensions. That spring the river had been so high as to flood much of the town, doing a good deal of damage. Among the passengers on the boat, bound to Cincinnati was the Reverend Lyman Beecher, and one pleasant day, as we were smoothly gliding down the stream, he and also Wyeth and myself were promenading the deck which had no bulwarks. We noticed that he turned many steps before he reached the stern of the boat, while we went so

---

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

near that our next step would have been overboard. My companion remarked, "How is it that Mr. Beecher is so much more cautious than we sinners?" Implying that Mr. Beecher doubtless claimed that all would be right with him should he be drowned, while with us we made no pretensions in that direction.

We had a pleasant sail down the river, running the rapids at Louisville, and stopping there and at a few other places, but not at Cairo, for there, all was swamp about the mouth of the Ohio. And when we entered the Mississippi we found it a muddy instead of a clear stream like the Ohio, and that we made much slower progress in stemming its current. The first sight of this mighty river strikes one as a thing almost sublime, thinking of the thousand streams so far away that make up its rushing volume. Arriving at St. Louis, I found it then but a village, mostly consisting of old French buildings along the levee and a street near the river, but few good buildings in the place. Draw a line then from there to, say Detroit and the entire white population beyond I do not think was ten, if five thousand. I saw a steamboat sail, while there to go up the Illinois River, with the United States soldiers to fight Black Hawk, who was overrunning the country about where Chicago now is.

#### ACROSS THE PLAINS

#### CHAPTER II

#### Sail up the Mississippi

Here we expected to settle about the manner of performing our further journey. We did not propose to undertake it, without guides or inducing some experienced mountaineers to join our party. And we learned that a Mr. William Sublette of St. Louis, successor with Smith & Jackson, of Gen. Ashley in the mountain fur trade business, was now fitting out in the upper part of the state for their annual trip. So thinking that we might probably join his party in the journey, we determined to go right on up the country. So took a steamboat for Lexington which is in the west part of the state and near where was then his party. So we sailed up the Mississippi in company with the boat with the United States soldiers to fight Black Hawk and parted with it at the entrance of the turbid waters of the Missouri into that river. It is a very interesting thing to observe long before you reach the junction, the clear waters of the Mississippi of the east side of the river and the turbid waters of the Missouri commingling with them, giving the riled look to the whole river.

#### The Missouri

The waters of the Missouri I have compared in color to that of your creamed coffee or kind of ash color. For the purpose of cookery and drinking if one chooses, the waters of the river are put into a cask and left to settle. But I noticed that the boatmen preferred it fresh from the river, drinking it down with apparent relish--and this though when left to settle in the bucket there would be an inch of sediment at the bottom. On drinking it raw I could perceive the grit between my teeth. It collies sweeping along for thousands of miles from the summit of the Rocky Mountains. The country to the foot of those mountains seems to the sight not to rise, still there is sufficient ascent to give a constant and rapid current to its waters, so rapid that we found our boat checked in its velocity the moment we entered the same. And we steamed on, day and night, varying our course to avoid snags and sand bars.

The country along the lower part of the river seemed well improved and occasionally a small village. And when we got a short distance above Jefferson we came to a bar that extended entirely across the river, with no place over three feet of water, and our boat drew six. And the way in such

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

cases is to run the boat's bow hard into the sand and when the water has washed it away about the same, push it in farther and in that way, in time, work through it. But some of us tiring of this slow navigation, quit the boat and journeyed on foot. And thus got to Lexington first. This gave us the opportunity to see more of the country and the ways of its inhabitants. The country seemed rich and then but thinly settled, woodland and prairie interspersed. There were but few taverns along the road, but when we called at the cabin, the most were constructed of logs, we were hospitably received and lodged and fed in their best manner and at a very reasonable rate. As to their mode of cookery I noticed one thing to me peculiar, they cooked thin bread as well as meat and vegetables at each meal. It was a corn hoe or Johnny Cake or wheat flour biscuit, and the Johnny Cake made only with salt and water. Some think such is not good but I do.

#### Joins Fur Traders

When all had arrived at Lexington, we went on to Independence, near which Mr. Sublette and his party were in camp. And on meeting him he readily consented that we might join them on this condition: that we should travel fully under his command and directions, and under the most strict military discipline; take our due part with his people in guarding camp and defense in case of attack by the Indians, which he rather expected, from a personal dislike they had to him. They charged him with leaving the year before a horse in the country packed with infected clothing, to give them the smallpox. I hardly think he could have been guilty of it. We then traversed the country and purchased horses and mules for our journey over the plains and mountains. Rigged them with saddles for riding and packing, made up those packs by sorting out the goods, for Wyeth's party had brought on much more than they could pack. But for myself I had brought but little so had nothing to throw away. But Wyeth would start with so much, that he had to drop some things by the way. Among them a small anvil and blacksmith's tools.

#### Order of March

A Mr. Campbell of St. Louis also with some men joined Mr. Sublette's party, making in all some eighty men and three hundred horses. For with the traders, each man had the care in camp and charge in marching of three horses, one to ride and two with packs. And besides they took an extra number to supply the place of any that might fail in strength or be stolen. And thus rigged and ready we started on our march from Independence, on what was then in much use, the Santa Fe road or trail, leading off in a southwest direction, crossing the west line of the state some twelve miles south of the Missouri. Our order of march was always double file, the horses led, the first attached to the rider's and the third to him. So when under way our band was more than a hundred horses long--Mr. Sublette always giving all orders and leading the band, and Mr. Campbell as lieutenant bringing up the rear and seeing that all kept their places and the loose animals did not stray away.

#### Leaves Last Settlement

Our last encampment, before crossing the west line of the state, was at a Mormon settlement. They had come and settled here the previous fall, on this extreme border of the settled world. We procured from them some milk and they otherwise treated us very kindly. They thought then that they had found a permanent home. But no, like all new religionists, they were doomed to much persecution. I remember when the Methodists were slighted. It was the 12th of May that we left this last settlement and continued our march on said Santa Fe road over a beautiful prairie country, some two or three days, then left it and turned to the northwest and in a few days more came

---

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

to the Kansas river, at a point I think near where is now Topeka. Here we found means to cross the river and swam our horses. For here was one white man, acting I think as a gunsmith for the Indians. He was the last white man we saw except of our own party.

#### Kansas River

We continued our march up the Kansas river along the edge of the prairie back of the timber bordering the river. For on most the larger western rivers and often on the smaller, as far as the land is moist, there is timber, but beyond grass. And in the spring or fall, the fire sweeping through this grass kills the timber on its border. But then it will, if the seasons are wet spring up again. So there was a constant warfare between the fires and the trees till these prairie fires were stopped by the settlers.

At this time I think the Indians were away, but we passed one of their villages where I noticed their mode of building. They dug holes in the dry ground some five or six feet deep and then built a roof of split plank, so made quite a warm winter house. When we had reached near the mouth of the Big Blue river, we left Kansas and traveled for days over the rolling prairies encamping at night on that stream. One day on this prairie march, with our band of packed horses, we overtook General or Captain Bonneville, who had also started out on a trading excursion, but with wagon, and with which he went all the way to the mountains, but with much difficulty. We halted for a few minutes to salute them and passed on, traveling with double the speed. The last time we encamped on the Blue, it was but a stagnant pool. And the next day's usual march, about 20 or 25 miles, brought us to the Platte about where is now Fort Kearney.

On this first part of our journey we did not depend at all on game for subsistence, but on supplies packed along on our horses. Mr. Sublette's party had also driven along cattle to slaughter on the way; as the horses never went faster than a walk, they could keep up. Then were some deer seen, but as yet no buffalo, so there was no reliance on game, or intended to be, till we should reach the buffalo. And now we continued our march over the smooth bottom of the turbid Platte river on the south side, the river riley, broad and rapid, no falls, but a sufficient descent in the country to give a rapid current--from a half to a whole mile wide and very shallow. It gives its full share of the mud of the Missouri--some timber on its islands and on its shores, bottoms broad and rich bounded by broken bluffs and all the country beyond rolling.

#### Hunting for Provisions

Our provisions were becoming nearly exhausted and we were daily expecting to see our future resource, the buffalo, but none were met with, till the day we reached the forks of the Platte, when nearly our last meal on hand had been consumed. And the same day too, we had the last shower of rain of any account. Up to this time, about the first of June, we had occasional rains, and the prairies had become green affording good feed for our animals and the wild ones too on their native range. Not far above the junction of the North and South Forks of the Platte our band forded the south branch without any serious difficulty, the depth of water not being so great as to come over the saddles or wet many of the packs. But there being some fears of a quicksand bottom, its safe accomplishment gave great satisfaction. A short ride over the bluffs brought us to the north and main branch, in all its characteristics like the main river below the junction.

#### Mode of Encampment

Now came a march of day after day up this North Platte of great sameness. The main band keeping straight on the way, when the buffalo were not met with crossing our tracks. A few of the best

---

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

hunters, each with two horses, one to ride and another on which to pack the meats, would leave the band and range the country back, kill and dress the animal and bring the meat to our night's encampment.

And I should have before described our mode of encamping. Mr. Sublette leading the band, always selected the ground, having reference in doing so to water, always encamping on the river or other stream, to feed for horses and the safety of the place for defense in case of an attack, which he seemed to rather expect. And if such place was reached by that time, he usually ordered "halt" by the middle of the afternoon, so as to give the horses time to feed and make full preparation for night. The horses were unpacked and men or messes arranged in a manner to leave a large hollow square, the stream forming one side. And then the horses were immediately hobbled, four feet tied together, and turned out of camp and a guard placed beyond them, to keep them from straying too far or drive them in if attacked. Then about sundown he would cry out "ketch up, ketch up" always repeating his order. Then each man would bring in the horses he had charge of, keep them still hobbled and tie them to short stakes carried with us, driven close into the ground, giving each one as much room as could be without interfering with others, so that they could feed also during the night. Then a guard, changed every three hours, sat for the night. As soon as light in the morning the order would be "turn out, turn out." And all would rise from their earthly beds, turn the horses out to bite, get a hearty breakfast, then the horses were saddled and packed and formed in line and the order given to "march." And as a reward for their expedition, the first ready took their place nearest to the commandant. In the middle of the day a stop was made, the horses unpacked to rest them, but not turned out, and a lunch taken by the men, if wished, of meat already cooked, and in half an hour pack up and march on.

#### Buffalo

We had now reached the region where there was no growing timber even along the river. And our fuel for cooking was the dry buffalo droppings. We usually in this part of our journey cooked our meat by boiling it in our camp kettles. And it was rather hard fare, for the buffalo were still lean in flesh, they getting quite reduced in flesh during the winter from their poor chance. The men felt the change from common food to this lean meat only and without even salt very severely, and rapidly grew weak and lean. The men would almost quarrel for any part of the animal that had any tallow, even the caul. But as soon as the buffalo improved in flesh and we got where there was wood to roast whole sides by, the men rapidly improved. I was a little surprised that I stood this change of life and living about as well as the mountaineers, and better than most of the new ones at it, and as to a camp life I rather enjoyed its ways. I had for bed purposes, the half of a buffalo robe, an old camlet cloak with a large cape, and a blanket. I spread the robe on the ground, wrapped the blanket about my feet and the cloak around me, throwing the cape loosely over my head to break off the moonshine, and a saddle for my pillow. And oh! I always slept most profoundly. We had tents, but it never raining and but little dew, we did not use them. I felt less discomfort from the change of life than I expected, and much enjoyed every day's march. For at every mile I met with much that to me was interesting, while Wyeth's men dwelt on the hardships and privations and cursed the day they were induced into the undertaking.

#### North Platte

At times we would not see a buffalo for a day or two, and then in countless numbers. One day we noticed them grazing on the opposite side of the river on the wide bottoms and the side bluffs

---

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

beyond like a herd of cattle in a pasture, up and down the country on that side as far as we could see, and continued the same during our twenty-five miles' march and no end to them ahead, probably, 10,000 seen in that one day. The greatest unevenness of the endless plain, the bottoms of the river over which we were marching, were the buffalo paths made by following one path, direct from some break in the bluff, back to the river. For they range far back for their feed, but must come to the river for their drink. We saw not a spring or crossed a stream in traveling hundreds of miles up the North Platte. But we crossed many what are called dry rivers--beds of gravel and sand--where torrents must have run at the melting of the snow in the spring. And after many days on the close-fed plain and bluffs of earth back we came to an interesting change. We saw a whole day's march ahead on the plain, what looked a big castle, or small mountain. But on nearing it, we saw that it was a big tower of sand-stone far detached like an island, from the bluffs back, which had now all become of that kind of rock, high and perpendicular, and strangely worn into many fantastic shapes. The detached mass first seen is called the Chimney Rock a striking, landmark in this prairie sea. The upper, perhaps 100 feet of naked rock and the lower 50 a spreading pedestal, well grassed over.

#### THE MOUNTAINS

#### CHAPTER III

#### Crossing the Laramie

Finally we came to a big, rapid, turbulent tributary, the Laramie from the mountains of the same name, and to a dead halt at the point where since has been Fort Laramie. For here we had to make what proved a serious undertaking, a crossing of said river. And fortunately here was plenty of timber, out of which we made rafts on which to take ourselves and our goods across, and made the horses swim the river. It was so broad, say half a mile, turbid and turbulent, they were unwilling to go in, but were drove in and then headed back until they were compelled to seek the other side, but were so swept down by the current they landed far below. And I do not know that we should have got them to head across at all had not two or three courageous men mounted some and made them swim ahead to give a lead to the rest. There was still snow in sight on the Laramie mountains, the melting of which made the high water of the river. With some difficulty we all got safely over, but some of the traders' goods were lost.

Now for two or three days' march there was a great change in the country, hilly, brooks of water, partially wooded, and better feed for horses. And we traveled back from the river. What we were crossing is a spur of the Black Hills, that extended to and far beyond the Platte toward the great bend of the main Missouri. It was a pleasant change from the monotonous plain. But we came again onto the river with its bottoms, but hills and mountains all the time in sight to the south. And after some more days' march we came to where it comes from the southwest, and our route required its crossing. And here we crossed it, but with less difficulty, in the same manner we had the Laramie. And the next day we reached the Sweet Water, a branch coming in from the northwest, and encamped at the Independence Rock, a granite boulder the size of two or three meeting houses, having got its name from some prior party having stopped here and celebrated the 4th of July on it. From it you behold a grand mountain and valley scene. And we now continued on our march up the valley of the Sweet Water, a beautiful, clear, cool stream, a great luxury as one may judge after quenching our thirst so long from the warmer, turbid waters of the Platte. It comes down a plain some few miles wide between high ridges of naked rocky mountains. And up this

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

valley we wound our way till the stream was but a rivulet that you could step across--and so high we overlooked all the mountains we had passed, and snowdrifts around, though the middle of the summer.

#### South Pass

Here we were at the celebrated South Pass of the Rocky Mountains, said by his political friends, when a candidate for President, though he was not there till ten years after, to have been discovered by General Fremont. And it was by no means then new to our fur traders. It has its name from Lewis and Clark and other early travelers always keeping on the main Missouri which led them to a crossing far north and more difficult. In two or three hours from our leaving this headwater of the Sweet Water that flows eastward to the Mississippi and to the Gulf of Mexico, we struck a small stream, a branch of the Colorado that falls into the Gulf of California. And here we were traveling over as level a prairie as I have ever seen, except bottom lands--stretching far away south and west with hundreds of buffalo feeding on the same. But stretching off to the northwest we looked out on the towering snowclad Wind River Mountains; the very crest of the Rocky Mountain range. For on the north of this, rise all the higher main branches of the Missouri; and on the west, branches of the Columbia river: and on the south, these waters of the Green and Colorado rivers.

And we continued our journey off northwest as near the foot of these mountains as the traveling was good, crossing the cool snow-formed streams of the Green river for perhaps one hundred or more miles. But our trappers now moderated their march, expecting before this to have heard from their mountain partners, who had passed the winter there or rather farther west, trapping and trading. For they knew the time they might expect Sublette out and the route he would come. And they were to send an express to meet him and inform him where they had rendezvoused to receive him. One of these days while we were laying over, a few of the party went out to hunt, and our horses were quietly feeding in the brook valley where we were, only a short distance from our camp. And these hunters, for mischief, as they came on the bluff gave an Indian whoop and fired, and the horses all came to camp for protection like scared children.

#### Indian Attack

One night in this part of our journey when we were encamped in the usual way, in messes all around, leaving quite a space within for our horses to feed, and the usual guard. But unperceived by the guard, Indians approached near camp and raised their whoop and fired guns and arrows, and so frightened the horses that they all broke loose from their fastenings and rushed by us out of camp. And all were instantly on their feet ready for fight. For myself the first consciousness I had, I found myself on my feet with my rifle in my hand. For always all were required to sleep with their rifles by their side, well loaded for action. But the Indians were not to be found. And we soon collected our horses and tied them and laid down to sleep. At least I did so, showing how a man will become, in a measure, indifferent to danger. I felt some fears before getting where there were Indians, but felt but little after. But this time we found in the morning, they so far did what they aimed at, had stolen some dozen or more of our best horses, those probably which ran farthest out.

#### Fremont's Trip

The only means I had to ascertain our altitude was the temperature of boiling water by my thermometer, and which I made in that way to be between 8,000 and 9,000 feet. But Mr. Fremont,

---

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

who was sent out by government, supplied with barometer and all needful instruments, made it something less. His account of that exploration is very interesting. He was an intelligent and industrious traveler, but sometimes too rash and venturesome. As in this case in crossing the Nevadas in the deep snow, and still worse when he was sent on a railroad exploration, and was caught in midwinter in the mountains and escaped into New Mexico.

No rain of any account in all this part of our journey. Sometimes a small cloud would form attended with thunder, and rain be seen falling part way to the ground, and all evaporate. Perhaps a few drops of rain or hail would reach it. Nights clear and cold, often below freezing and days, hot sun and up sometimes to 80 degrees. But on the 4th of July as we approached and arrived at the first waters of the Columbia, we had an hour or two of snow.

#### Hunger

Now we came into a rough and mountainous country, more difficult than any we had experienced. . And to add to our troubles our animals had become, from their long journey, much worn out, and the men though in like feeble condition had to walk. And food too became short, for we met but few buffalo, but some game of other kinds. And nothing came amiss. And we ate of everything that fell in our way, but the snakes, I think. Sublette had before this met with some of his mountain trappers who guided us on our way to their rendezvous. And in four days of hard working our way through ragged ravines and over steep ridges brought us out on to a fine grassy plain among the mountains, called Pierre's Hole and to the grand encampment, where they had for some time been awaiting our arrival.

#### Grand Rendezvous

Here we found not only Sublette's traders and trappers, -but a party of the American Fur Company, and hands of Nez Perce and Flat Head Indians, who had by appointment met the traders here with their furs and five or six hundred horses. Many of them they sold us to take the place of our lean ones. They would allow something for the lean ones for with them, in their slow way of journeying they would recruit. But the full price of a pony was but a blanket and a cheap knife. So we supplied ourselves with all we needed. These mountain horses are of the Arabian stock, brought to Mexico by the early Spanish settlers--light of limb and fleet. It was a grand sight to look on their immense herd out on the prairie of all colors from white to black and many spotted ones. For during the day they would send them out on to the open prairie to feed with the mounted guard with them, to run them into camp, if the Blackfeet, in whose country we were, should make a dash down the mountain side to steal them. At night they would bring them into camp where they would quietly remain among their owners tents till morning.

#### Pierre's Hole

Here in Pierre's Hole was for us a grand time of rest and recruit. The Indians had an abundance of good, dried buffalo meat which we bought of them and on which we feasted, took a bite of the fat part with the lean, eating it like bread and cheese, uncooked or slightly roasted on the coals as we chose. And I never witnessed such recuperation of men as during the two weeks we lay at our ease in this camp, feeding on the dried buffalo meat, and our drink the pure cool mountain creek, a branch of the Lewis river, on which we were encamped. And among us, a varied congregation of some two hundred white men and perhaps nearly as many Indians, there was quite a social time, and a great exchange of talk and interesting indeed, from the wide and varied experiences of the narrators. There were cultured men from city and country down to white men lower than the

---

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

Indian himself. Men of high-toned morals, down to such as had left their country for its good, or perhaps rather personal safety.

Some made the season s trip from the miasmatic air of the Mississippi and its city follies to recuperate their bodily and mental derangement. And it proved a grand specific. This mountain-pure air and ever-shining sun is a grand, helpful thing for both soul and body, especially when feeding on only meat and water.

And here we had the test of the honesty of the Indian. When we had purchased a horse and it had got back into the immense herd, we could never have reclaimed it, or perhaps known it if seen, but they would bring them back to us, and again and again, if needed. And if any of our property, tools or camp things seemed lost, they would bring them to us, were in all things orderly, peaceful, and kind. And the Flat Head chief used of an evening to mount his horse from which he would give his people a moral lecture. A white man who had been some years in their country and well understood their language told us what he said. And it was of a high, moral tone, telling them to be punctual in their dealings with us and orderly among themselves.

Here we were more than a thousand miles from the white settlements and had met no natives till now. And not having then ever seen much of them, I observed with much interest their ways. Their usual dress was a frock and leggings and moccasins made from dressed deer skin, and a well dressed buffalo skin with the hair on for a blanket, to ride on and sleep in. The frock of the women was longer than that of the men. Both had their dresses somewhat ornamented by a projecting edge of the leather, cut into a fringe, shells, feathers and beads, when to be had, worked into their dresses, or in their hair. The women, these mountain women were extremely diffident, would blush if looked at. And though they and their friends deemed it quite an honor to be married by a w trite man--one of these traders or trappers, who had passed years in their country--they, that is the father or nearest male relative, would never consent to any intercourse with these women, but for life. But I fear that the more virtuous and honorable Indian was sometimes betrayed into an alliance that the white man betrayed and annulled when he quit the country.

#### Sublette Returns

Mr. Sublette had here reached the end of his journey, and in a few days, but not till we left him, would commence his march back to St. Louis with his seventy horses packed with beaver, worth as he estimated, some \$50,000 in the New York market. No other fur was deemed worth packing so far, not even the otter. And the pressing question arose with us Yankees as to the manner and safe means of our future and further journey. Many of Mr. Wyeth's men had long before they got here become disheartened and disgusted, but they could not stop or return alone. But now they decided to return with Mr. Sublette's party. And all decided to go no farther, except twelve. For myself I never turned my face back for a moment and resolved to go on, if it was in the company of the Nez Pierces whose country was down near the mouth of the Lewis river. But a Mr. Frapp and Milton Sublette with a trapping party of Sublette s men were to go off trapping somewhere westward, so we resolved to go on, joined their party of some forty whites, half-breeds and Indians, and so keep on, thinking some way to bring out rightly.

#### JOURNEY CONTINUES WITH TRAPPERS

#### CHAPTER IV

Mr. Sublette had come out with arms, ammunition, traps, etc., for his business and new men to take the places of those whose term of service had expired, so there was much fixing up to sort

---

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

out the parties for the different purposes. And our party of trappers under Mr. Frapp one afternoon left the main camp and went out some seven or eight miles and encamped on a prairie near some timber on a little creek, as usually there is timber on the streams and mountainsides. We had a quiet night but in the morning, as we were about to commence our day's march, Indians were seen in line of march on horseback off across the prairie, say some two miles. And the trappers at once decided they must see who they were. So Frapp told Antoine, the half-breed, to take a good horse and have an Indian of the party go with him and go out and see who they were. As Antoine approached them he saw they were Blackfeet, and their chief left his party and came out in a friendly way to meet him. But his father having been killed by the Blackfeet, he was going to have his revenge. So he said to his companion, "I will appear to be friendly when we meet, but you watch your chance and shoot him." His plan was carried out. He was shot down. Antoine caught his robe, a square of blue and scarlet cloth, and turned and the Blackfeet fired after him, when they saw his treachery. He escaped and came into our camp, said they were Blackfeet, and that he had killed their chief and there was his robe in evidence. "All right" they said, "they would play friendly now but at night attack our camp." But we twelve could not appreciate the reasoning. But here we were in the company that thus decided. But as we watched to see what they would next do they seemed at first to break up and scatter, but soon we saw that a large band, the warriors, seemed coming directly towards us to make fight. So we immediately tied our horses to bushes near and put up our saddles as a kind of breastwork but before they reached us, they turned off into some timber on a stream, built a kind of fort of logs, bushes, their saddles and blankets, as a shade if we attacked them, and took their horses into the fort with them.

#### Fight with the Blackfeet

The moment that Antoine gave the information that they were Blackfeet, an express flew off back to the old camp to tell we had met the enemy, and in the time, it seemed to me, that race horses could have hardly gone over the ground, some of Sublette's men and the friendly Indians came rushing into our camp inquiring where were the Blackfeet. And on soon finding where they had fortified themselves, each white or Indian, as he felt that his gun was right, and all things ready for his part, would start off. And so they went helter skelter, each on his own hook to fight the common enemy. For the friendly Indians had their own wrongs to avenge. As they thus almost singly approached their brush and saddle fort, they could only see the defences whereas, they, the Blackfeet, could see everyone who approached them. They soon shot down some of the trappers and Flatheads, for the timber was not large enough to shelter a man. And soon wounded men were brought back to our camp.

We twelve Yankees felt that we had no men to spare to be killed or wounded that we were not called upon to go out of the way to find danger, but had they attacked our camp, we should have taken our full part, to save ourselves and horses. But we readily assisted in taking care of the wounded and in other ways aid, as far as we felt belonged to us. They kept up a firing at them at a safer distance, but did not rout them. Six trappers and as many friendly Indians were killed or mortally wounded. And as night approached it was determined to retreat. And the whites took a wounded man on a horse, others riding each side to hold him up. The Indians fixed long fills to a horse letting the ends draw on the smooth ground and fixed onto them a kind of hurdle, onto which they laid the wounded and drew them off easily over the smooth prairie. A better way than

---

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

ours.

When night came on we encamped in the best manner of defence we could, and the next day expecting surely an attack from them, built a high fence and strong pen for our horses in such case, and a guard on the open prairie to run them in if attacked, and then awaited the result. Their fort was finally visited and a number of dead horses found. But of course they had secreted any men they lost from scalping. We did not go back so far as the old camp.

#### Buried the Dead

The man who died in our camp we buried in the horse pen where the ground was so trodden that the enemy could not find the body to scalp it. Another badly wounded was sent to Sublette's camp on a bier suspended between two horses, one ahead of the other. And when we found that the enemy was not near, after a few days, we took up our line of march as originally intended. And after two or three days reached the main Lewis river. To cross its water, and such others as they could not ford, the trappers had packed along what they call a bull boat, green buffalo hides with the hair off, which they soak in water till limber, then stretch this hide over a temporary frame made from such saplings as could be bent into shape, and then turn their rude boat up to the sun to dry, and thus keep in shape long enough to cross two or three times, before so soaked as to be unmanageable. The men with the goods, traps etc., were crossed in these and horses swam.

And so we traveled on slowly in a pleasantly rising country back from the river, the trappers stopping to set their traps for beaver on the branches that showed signs of their residences in and on the same. Not far from this part was afterwards built what was known as Fort Hall. And we were at one time in sight of the American Falls, also of the Lewis river, and a man of our party, who had been there said at one time we were within twenty-five miles of the Salt Lake. And so we kept on southwesterly with a low ridge of mountains between us and the river. And finally came to a stream running to the south or southerly, the country apparently descending in that direction. The trappers had poor luck and said they would now quit and turn back. Sixteen free trappers, as they were called, men on their own hook, said they would go down that stream, I now know it to be the Humboldt, and go to California and get mules. None of our party had been so far in that country before and knew nothing of the country beyond in any direction. And for aught I know the free trappers are still going, Frapp and his party turned back, and we twelve turned northward to again get onto the Lewis river.

Other things I should have before said--one, the great clearness of the air of the Rocky Mountain region, from the dryness of the same, no mist or haze to prevent a distinct view of very distant objects. Objects, on our march, that seemed as though we should reach in a few hours, would perhaps take as many days, being accustomed to judge of distances through a humid atmosphere. We were soon now to pass the range of the buffalo. So while in the country where they ranged, say north of the Salt Lake, we halted a day or two to dry, in the sun and on hurdles over a slow fire, some of their meat to pack along for our future use, a wise forethought for game was scarce.

#### Birth of an Indian Baby

Mr. Frapp had an Indian wife who traveled along with him, and the Indians of the party, some of them, had their wives, these women as good horsemen as the men, always riding astride. One day we delayed our march, we knew not why, till after a time we heard an outcry for a few minutes from Frapp's wife, out to one side in some bushes. And we soon learned the cause of our laying over, was to give her the opportunity to lay in, give birth to a child in camp and not on our day's

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

march. But the very next day, she sat her newborn baby, feet down, into a deep basket that she hung to the pommel of her saddle, mounted her horse and rode on in the band as usual. And she had another child of two or three, who had his own horse. He was sat on the saddle and blankets brought around him so as to keep him erect, and his gentle pony went loose with the other pack horses, which kept along with those riding and never strayed from the common band. I mention these things to show something of the Indian ways in their own country, and that whites in their country readily from necessity and convenience, fall into like habits, and soon find but little inconvenience from the same. The Canadian Frenchman seems to adopt their life as readily as though raised in that way, and others the same after a little time.

#### Trapping for Beaver

I have been writing from recollection mostly. But on turning to the scant minutes I made at the time I find that there were the Trois Tetons and other snow mountains all the time in sight. The country we passed through zig-zag, as Milton Sublette, a brother of William, and Frapp were after the beaver, and went up and down the mountain streams hunting them, set their traps at night; and the second or more, if the game was found plenty, on the same ground. Three boys left our party soon after crossing the Lewis river to make a seasons trapping by themselves on the mountains to the left in the midst of the Blackfoot country, showing the strange, wild, fearless habits formed by these mountain trappers. The sixteen free trappers left us on the Humboldt, but Sublette and Frapp kept on westward and we parted with them on the creek that ran north and which we followed.

We were with these trappers more than a month, parting from them the 28th of August. I had during the time made many interesting observations of things around, the weather clear, and days hot and usually frost at night, ranging from say 30 to 80 degrees often. Soon after crossing the Lewis river I observed for the first strata of igneous or volcanic rock in conglomerate. And ever after met with it and saw beautiful white and variegated marble bowlders, and lime and granite rock partially melted down, but still showing the original rock. The vegetation was much diversified, timber of various kinds and extended prairies. Though but little or no rain, grass was often good and occasionally we met with fruit, which, you may well think, was very acceptable to us--a berry growing on a shrub they called a service berry, resembling what is called in New England the robin pear, and red and orange colored currants, all of an excellent quality. I brought the seeds home, but they did not grow.

#### TWELVE OF WYETH'S PARTY GO ON ALONE

##### CHAPTER V

The first day after leaving the trappers, we traveled over a rough country of all sorts of rock, burnt and unburnt, and encamped in what is now called a canyon, between high basaltic rocks. We twelve thus for the first time alone it seemed a little lonely. And though not fearful, there was something like a deep curiosity as to the future, what might happen to us in that unknown land. Our aim was to get back on to the Lewis river and follow that to its junction with the Columbia. And I now presume we were on the headwaters of the Owyhee, the east boundary of Oregon. And the next day and for days we kept on the same or near. We pursued it till so shut in that we had to leave it by a side cut and get onto an extended plain above, a plain with little soil on the basaltic rock, and streams in the clefts or canyons. One day we traveled 30 miles and found water but once, and in the dry atmosphere our thirst became extreme. On approaching the canyon we could

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

see the stream meandering along the narrow gorge 1,000 feet down, and on and on we traveled not knowing that we should survive even to reach it to quench our thirst. Finally before night we observed horse tracks and that they seemed to thicken at a certain point and lead down the precipitous bluff where it was partially broken down. So by a most difficult descent we reached the creek, dismounted and down its banks to quench our thirst. And our horses did not wait for an invitation, but followed in quick time. The bluffs were of the burnt rock, some places looking like an oven burned brick kiln, and others porous. And laying over the next day and going a short distance down the creek, we found Indians who had our future food, dried salmon. And getting out on the other side we traveled on and when we came again to the river we found it, though now quite a stream, decidedly warm, made so by hot springs gushing in from porous bluffs. Quite a stream came in of the temperature of 100 degrees.

#### Shoshone Indians

The creek finally comes out of the ravine into a better looking country, and here we met other Indians. They call themselves Shoshones and seemed very friendly and sold us their salmon for such of our goods as they seemed most to need-- awls of iron to prick their deer skins for sewing into garments, and knives, for they hardly possessed an article of our manufacture. They used a sharp bone for an awl, one flattened for a chisel, stone knives and hatchets. Ourselves and all we had seemed to them great curiosities. For their country being poor in furs it had not been visited by traders.

In some ten or twelve days after leaving the trappers, we reached the mouth of the creek where it joins the Lewis river. And here we found a large encampment of Indians, being a favorable site for fishing. The first thing on arriving the chief, in their usual hospitable manner, sent us a fine salmon for our dinner, and would have deemed it an insult to be offered pay for it. We were strangers and his guests.

#### Indian Fishing

Their manner of fishing was ingenious. The stream was shallow and they built a fence across it near its mouth and then some distance above, leaving weirs at one side, so that the fish coming down or going up would come in, but would not find their way out. They had spears with a bone point with a socket that fitted onto a shaft, and a hole through the point by which a string tied it to the handle. At sunrise at a signal from the chief they rushed in from both sides, struck the salmon through with the spear, the point came off, and held by the string to the shaft, they towed them to shore and so soon had hundreds on land.

Near, up the Lewis river, were bluffs of basaltic rock thirty feet high and resting on the sandy shore, the pentagonal columns tumbling down into the river as the earth was washed away, showing that there had been melted overflow of rock, which then cooled and crystallized into rock and in this form in blocks, one above another.

#### Beavers

As we occasionally saw the fresh marks of beaver on the streams, we set our traps and occasionally caught some, preserved and packed along their skins, knowing that they would be acceptable to the Hudson Bay people in exchange for such things as we should need from them. And at times we had nothing else to eat but their meat, which having nothing else, we relished right well. About the beaver building houses, they only do it when the land along the streams, where they are, is low. For when there are high banks they burrow up and make their nests in the earth, but always

---

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

have the mouths of their holes under the water, so even when the streams are frozen over they can come to the water under the ice. They subsist on the bark of small trees, but for winter's use cut with their chisel teeth, small trees into blocks and store them in the mud at the mouths of their burrows or in the same, as the squirrel does with his acorns. And the muskrat too makes his nest of grass or rushes in the swamp, raising it above the water. The beaver is an intelligent and interesting animal and so are all others, birds and all, each in his way.

#### Reckless of Danger

In this part of our journey we twelve were often very reckless of danger. For the purpose of this trapping we would separate, for a night or for more. When in full camp our horses were always picketed near us and some two or more always awake as a guard. But when two or three were away for a night's trapping, we slept with our horses' long halters tied to a bush near us or sometimes in our hand. One night when thus encamped I had my old camlet cloak stolen from my saddle and our horses' halters cut, but they, the horses, did not leave us, and we did not see by whom done. At another time we found the Indians about at night, for though generally friendly, they could not forego the attempt to steal away in a quiet manner, our horses, of which we had two to a man.

We traveled some days along or in the vicinity of the Lewis river after meeting Indians, and subsisting mostly on fresh or dried salmon bought or given us from them, and making short or long day's journeys and laying over to catch the beaver. They are a night animal.

At one night's encampment, we made the Indians understand that we were going to Walla Walla, the name of that place being the only word we had in common. All else was by signs, talk with the fingers. Inquiring the way, one of the Indians said that he had been to Walla Walla and made in the sand a map of the country. He said that such a mark meant the river and another the trail, that the road kept down the river three sleeps, always reckoning distances by day's journeys, or in two if we whipped up; that then the river went into mountains, it does pass through a canyon and for a hundred or two miles, and the road left the river and up a creek, and then we should go so many days and come to a mountain, go over that and encamp, then over another and encamp, then a plain and in two days Walla Walla.

I felt confident I understood him, though this all by signs, and it proved just as he had said, and of great help to us. But as we traveled on we met with no more Indians from whom to buy our fish, and we met with no game that we could kill. And not taking the precaution to pack along much, we soon got short of food. And we hurried on making thirty miles one day, crossing a most beautiful fertile plain surrounded by mountains, the same I think is called the Big Pound. And came to the mountains, the Indian described, the Blue Mountains. And here we were in a bad plight, our horses, some of them at least, exhausted by hard travel, and ourselves the same, having been some days on short allowance and now nothing left. So for food we killed an old horse. But hungry as we were, this did not relish well. But I will show that horse, in good condition is good food, for I afterwards tested it.

#### Wyeth Presses Ahead

Here, the next day, Wyeth took four of the men and the best horses and started off express for Walla Walla, requesting me the next day after to follow on and he would get food and send back for us. So the next day following I told the men they better pack along some of the horse meat they had dried, and some of them did so. And we ascended the mountain on the Indian trail and

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

found a quite level road along its ridge, and scattering pine and cedar timber on its sides. After many hours travel the road led down the mountain to the west into a valley where we found water and encamped. Here the men who would not pack along any of the horse, stole from those who did. As for myself, as each one looked out for himself, I had saved to this time some dried salmon, having eaten but one meal per day for many days.

#### Mount Hood

The next day we ascended another ridge and kept along the same, hour after hour. And it was a clear bright day except some cumulous, or thunder clouds as some call them, and I noticed one, on the western horizon, that seemed stationary. And after watching it an hour, I made up my mind that it was no cloud but white, snowy Mount Hood and called the attention of the men to it, and hailed it as the discovery of land--an object on which men had looked and of which they knew something of its locality. Just at night we came down to a creek and out of the mountains, and encamped, ourselves weary and our horses more so. An old pack mule turned round to me the moment I dismounted to be unpacked. Here for food we found a few blackthorn berries and rose berries.

The next day we started out onto the plain, but found so many trails we did not know which to take. But we traveled on the deepest worn, but not as proved the most direct one. Encamped at night and found some stagnant water and next day hard traveling brought us to a fine creek running west which proved to be the Walla Walla creek.

And now I proposed to the men, as we had been so long without food, to kill another horse and the best conditioned one in the lot, but they thought they could stand it another day, so we did not kill the horse. The next day we started early down the creek, for I thought that would bring us out right, and in a few hours we came to an Indian encampment, where we got some food. They had dried-bear and other meat and elderberries, and we bought and ate, for they had learned of the whites. For myself I did not eat so ravenous, but the men ate till I urged them to desist, for I feared the result. We soon after encamped, and the next day arrived at the fort, where we found Wyeth who had been there two or three days.

## OREGON

### CHAPTER VI

#### Fort Walla Walla

The said fort was a small stockade of upright timbers set in the ground some fifteen or eighteen feet high with stations or bastions at the corners for look-outs. And the company kept here for the purpose of trade a clerk and some half-dozen men. We were kindly received and here for the first time since leaving the forks of the Platte the first of June ate bread, being now the 18th of October. The fort is at the mouth of the creek on the Columbia nine miles below the mouth of the Lewis river. It was an interesting sight to look on the Columbia, after the long, long journey to see the same and to get to it.

The country about looked barren, for the fall rains, if they have them, had not commenced--little or no timber or shrubs, except the Artemisia, wild sage, which grows from one to five or six feet high, and is found everywhere on the mountain plains. It has an ash-colored leaf as bitter as the garden sage; still when nothing else can be found it is eaten by the buffalo and deer. I am informed that there is now cultivation in these parts and crops raised; but I presume it must be by means of irrigation. Here we decided to leave our faithful horses and descend the river by boat.

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

Oh! the horse is appreciated, when one for months has passed with him, his days and nights.

Down the Columbia

We procured at the fort a boat and two Canadians to take us down the river and started the day after our arrival. And in descending soon came into the high perpendicular basaltic bluffs with only river and a narrow shore on one or the other side, of grass and sand, the current of the clear water with a slight blue ocean shade sweeping swiftly on. And when we encamped at night, if we could find a place that we could ascend the bluff we found no timber, but a dry, grassy plain stretching far away to distant mountains, in the west the Cascade range and snow-clad Mount Hood. At one night's encampment the Indians, being acquainted with our boatmen, gave them a young horse to kill for our supper. And though we had received a plenty of food for our voyage at the fort, I tried the horse and found it as good meat as I had ever eaten, it being in better condition than the one killed by us at the Blue Mountains. And we voyaged on past the big falls and came to the Dalles and then stopped to see the Indians and found there had been great mortality among them. We walked by the wonderous chute or flume through which all the water rushes at its low stage, but passed the boat through it.

Saw the basaltic columns at places along the bluffs standing out prominently, or even singly, all pentagonal, blocks or sections piled one on the other, the upper side of the block dishing and the next fitted to it, and all as compact as iron. Lewis and Clark called them "high black rocks" as well they might. Finally we came to the cascade where the mighty river rushes for some miles through the break in the Cascade range of mountains, a continuation of the Nevada range of California. The mountain on the north side somewhat subsides giving a land pass way, but abrupt and thousands of feet high on the south side, down which leap from the immense height beautiful cascades. These passed we came to the tide waters of the Columbia. On the mountain is evergreen forest to the snow line, east of the mountains no timber on the plains but west, timber and prairie interspersed.

Fort Vancouver, 1832

Stopped over night at a sawmill of the company on a creek, and saw there, two strange looking men, saw at once they could be neither Caucasian, Indian or African. And so it proved, they were Kanakas, Sandwich Islanders, in the employ of the traders. And the mill was under the superintendence of one of Astor's men who had remained in the country. And the next day the 29th of October we arrived at Fort Vancouver, which is on the north side of the river, and so now in Washington territory. It was quite an extensive stockade enclosure, on a prairie, some little back from the river, with the store houses, the houses for the Governor and gentlemen, as partners and clerks were called, and quite a garden, and for the servants, the Canadian Frenchmen, little houses outside the fort. This was the main station of the Hudson Bay Company west of the mountains. And to this place came up their shipping, what they called 100 miles up the river.

Indian Burial

Though a hard looking set and unexpected, we were received very kindly and treated ever in the most hospitable way.

Some of us did not feel that we had reached the end of our journey till we had seen the Pacific. So a few days after, five of us took an Indian canoe and paddled down the river, passed the mouth of the Willamette river, found the country for miles level, prairie and timber, met a company's sloop, and often Indians singing as they paddled their canoes swiftly along.

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

Encamped one night near one of their burial places. Their way of burial here was to wrap their bodies in their clothing and mats, and place them in canoes, which they place on some conspicuous place on shore or on an island, one is called Coffin Island, then cover the boat with boards, split slabs, and load them down with stone so that the wolves or other animals could not get at the body and put the deceased's property in and about the canoe. To steal from a grave they view a great crime.

#### Fort George

After a time in descending the river the country becomes very broken and heavily timbered and after some days reach and encamp on Tongue Point, where we could look out to sea, and next day go to Fort Astoria, or as they called it, Fort George. We were there kindly received by the clerk and fur people. A fallen tree near the fort, one writer calls 45 feet in circumference and another seven fathoms, and I thought it no exaggeration.

And on going into the standing forest out towards Youngs Bay, the bay in which Lewis and Clark wintered, I saw many trees of enormous size, in girth and height. The whole forest was nearly 200 feet high, for the small trees had to grow so high to get the sun, and so dense that I should think more weight of timber on one acre than on four anywhere east that I have ever seen. And the brakes and other vegetation of annual growth were equally gigantic of their kind. Still on their little clearings about the fort, the potatoes and other things were small and the soil looked poor. We got a yawl and one of their men to sail it and crossed over to Chenook Point and returned across the broad boisterous bay to Clatsop Point on the inside and encamped. And I urged the men, or some of them at least, to accompany me around the point to the seashore, but they declined. So the tide being down, I alone footed some three miles, fairly around on the beach to where I could look out on the broad Pacific, with not an islet between me and Japan, look far down the coast and Cape Disappointment across the mouth to the northwest. Here I stood alone, as entranced, felt that now, I had gone as far as feet could carry me west, and really to the end of my proposed journey.

#### The Pacific

There to stand on the brink of the great Pacific, with the rolling waves washing its sands and seaweeds to my feet! And there I stood on the shore of the Pacific enjoying the happiest hour of all my journey, till the sun sank beneath its waters, and then by a beautiful moonlight returned on the beach to camp, feeling that I had crossed the continent. Cape Disappointment is in Lat. 46.19 N. and 123.59 W. Mount Saint Helens being due east, majestic and symmetrical in its form. This was the 9th of November and we had left Baltimore the 26th of March, seven and one-half months before. We returned slowly up the river, seeing something of the Indians, always peaceable in their ways, for these traders had the good sense and tact to keep a good understanding with them, though they had to deal with them quite in their own way, the Indian always knowing just how much he was to get for his furs in the articles he wanted. I should mention the fact that the Columbia in parts, as we passed, seemed alive and white with geese and ducks.

#### Death of One of the Twelve

When we got back to Fort Vancouver, we found that one of our fellows, and one who had stood all the hardships well, was dead and buried. He had eaten heartily of peas for his supper which gave him the colic and before morning he was dead. It was new food for him for we had lived on animal food. Mr. Wyeth as captain of the party and myself from some cause, were invited by Dr.

---

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

McLaughlin, the oldest partner and nominal governor, to his own table and given rooms in the fort, and the others of our men to quarters with his, out of the fort. And I soon gave him and Mr. Wyeth to understand I was there on my own hook, and that I had no further connection with the others, than that for the making of the journey. We were received at the fort as guests without talk of pay or the like, and it was acceptable, or else we should have had to hunt for subsistence.

First Teacher in Oregon, 1832-1833

But not liking thus to live gratis, I asked the doctor, as he was always called, being a physician, for some employment. He at first told me I was a guest and did not expect to set me to work. But after further urging, he said if I was willing he would like to have me teach his son and other boys about the fort. I, of course, gladly accepted the offer. So he sent the boys to my room to be instructed, all half-breed boys of course, for there was not then a white woman in Oregon. The doctor's wife was a Chippewa woman from Lake Superior, and the lightest woman, a Mrs. Douglas, a half-breed woman from Hudson Bay. Well, I found the boys docile and attentive and making good progress, for they are precocious and generally better boys than men. And the old doctor used to come in to see the school and seemed much pleased and well satisfied. And one time he said, "Ball, anyway you will have the reputation of teaching the first Academy in Oregon." And so I passed the winter. The gentlemen in the Fort were pleasant and intelligent, a circle of a dozen or more usually at the well provided table, where there was much formality. They consisted of partners, clerks, captains of vessels, and the like--men to wait on the table and probably cook, for we saw nothing or little of their women, except perhaps sometimes on Sundays out on a horse-back ride, at which they excelled.

The National boundary had not then been settled beyond the mountains, and these traders claimed that the river would be the boundary, and called the south side the American.

Hudson Bay Company

The fur trade was their business, and if an American vessel came into the river or onto the coast for trade they would at once bid up on furs to a ruinous price--ten to one above their usual tariff. And as the voyage around Cape Horn from England was so long to bring supplies, they got a bull and seven or six cows from California and in seven years had about 400 cattle. They had turned the prairies into wheat fields and had much beyond their wants, ground by ox power and made good flour. Salmon was so abundant that the men would throw it away to get some old imported salt beef, for they had not yet killed any of their own raising.

To show the climate, the wheat green all winter, for there was no snow, still spring and summer so cool that harvest did not come till last of July or August. Rained from middle of November till New Year's incessantly with the temperature day and night about 40 to 45 degrees, then rain and shine till May, frost, clear nights and vegetation nearly stationary, grass for the cattle, but cold for them out, the summer cool and dry, still the wheat first rate, the berry large and good, corn did not mature. Potatoes and vegetables seemed to do well, and were dug in winter as used.

Wyeth Returns East

In the spring Wyeth and two of his men returned home across the mountains, some way successfully. Others went into the company employ. I wrote to my friends in New Hampshire and New York and by the Hudson express that leaves Fort Vancouver on the 20th of March, goes up the North, the main branch of the Columbia, to about the latitude of 52 degrees and by men on snow shoes over the mountains in about two weeks to where they take bark canoes on the La

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

Bashe, that flows into the Arctic Ocean. Descend that a distance then make a short portage at Fort Edmonton to the Saskatchewan and down that to Lake Winnipeg, and by its outlet, the Nelson, to Hudson Bay and also up the said Lake to Lake Superior, etc., to Montreal, from which place my friends got my letters by September.

Thinking I might long stay in the country, believing after so much had been said on the subject, that others would come soon to settle though urged by Dr. McLoughlin to continue the school and stay at the fort, I determined to go to farming. And when I learned that some of the Company's men had turned farmers and gone up and settled on the Willamette river, I went there to see the country and found it very inviting. And when the doctor found that I was bent on going to farming, he kindly told me, he would lend me farming utensils, seeds for sowing and as many horses, as I chose to break in, for a team. So I took seed and implements by boat, getting help up the Willamette to the falls where the city of Oregon now is, passing the site where Portland stands, carried by the fall, boat and all. First stopped with one of the settlers, a half-breed, with two wives, his name J. B. Desportes. Yes, two wives, seven children, and cats and dogs numberless.

#### Farming

Caught from the prairie a span of horses only used to the saddle, made for them a harness and put them to work. Stuffed some deer skin sewed in due form for collars, fitted to them for harness crooked oak limbs, tied top and bottom with elk skin strings, then to these, straps of hide for tugs, which tied to the end of a stick for a whiffletree, and the center of this I tied to the drag, made from a crotch of a tree. And on this I drew out logs for a cabin, which when I had laid up and put up rafters to make the roof, I covered with bark peeled from cedar trees. And this bark covering was secured by poles across and tied with wood strings, withes, at the ends to the timbers below. And out of some split plank for no sawed boards, I made bedstead and table. And so I dwelt in a house of fir and cedar.

And with the aid of my neighbors and their teams I broke up quite a large field of rich prairie lands. Drew out fencing stuff with my own, to enclose the same, and sowed and planted my farm, a farm that butted half a mile on the river and extended back to California. My family consisted part of the time of a Mr. Sinclair, one of my mountain companions, a young wild native to catch my horses, and some of the time entirely alone. Got meal from the fort to make my bread, my meat some venison and some salmon from the falls, for being 60 feet high they could not jump them.

A rather primitive lonely life I found it and not seeing when it was likely to be less so, and having seen something of the country and experienced its climate, and the Hudson Bay people having entire control of the country, and no emigrants arriving, I began to think I might as well leave could I have the opportunity. Yes, this primitive life of the plains, mountains, and keeping house with only Indian neighbors, had lost its novelty and I wanted a change. To be sure the Willamette valley is a fine country, being a valley watered by a stream of that name, fifty miles wide and say one hundred and fifty long with a coast range on the west and towering Cascade range on the east, crowned by Mount Hood, in the bright summer days ever in sight. And I was near the river, handy for a summer bath, and out of its bank a short distance from my house was the fine cool spring from which I got my water.

#### Indian Customs

Near by was the graveyard of the Indians, and on one occasion I attended with them the burial

---

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

ceremony of one of their young men. They dug a grave as we would, put down some slabs at the sides and bottom, wrapped the body in his clothing and over these some mats, lowered it down to its place, put a board over and filled up with the earth. Then they built a fire on the grave and sat on the ground around and for an hour chanted a mournful dirge, all very orderly and impressive. And for a long time after his mother would come almost daily to place food in the earth at the head of the grave for his use on his journey to the other world. At the head of a man's grave they stuck a paddle and at the woman's a camas stick, a crooked pointed stick used by them to dig the camas root, with them a great article of food, the digging of which is woman's business, while paddling the canoe is that of the man.

The camas grown on the prairies is the size of an onion, a stem, say a foot high, having a blue blossom. It is as palatable and nutritious as the potato. The wapeto, another root they eat, is not so good but grows larger. It is the root of a kind of plant like the waterlily, which grows in the shallow waters of lakes and streams, and which they gather by wading in the water, often up to their arms, and break off with their toes, when it will rise to the surface. A common way of cooking these, as also sometimes meat, is to wrap in leaves and place in a hole in the ground, heated by a fire in it, then buried in same and a fire above, a very good way to cook.

#### Chenook Language

There was in use a mongrel language between the Indians and traders, called the Chenook; but unlike theirs, which was said by a man well acquainted with that and other Indian languages, to be the most copious of any. But this comprised hardly three hundred words, and probably not half of these theirs. but composed in part of words of other tribes, English and French. Things new to the Indians were called by their accustomed names. The hog had its French name, the ox the Indian name of the buffalo where the buffalo ranges in the mountains. The Indians on the Willamette, as most of the Indians, talked much by signs and sounds. One word was used for bird, for instance, then by imitating its cry, would express that it was the swan, goose or duck. One word meant growing vegetables; then by an adjective, or some motions, show whether grapes or trees were meant.

In enclosing my lands I fenced in a portion of their road or trail, and they went around, never crossing my fields. And in all things they were kind and just, as far as I observed, so I am disposed to ascribe our troubles with the Oregon Indians to injustice, or indiscretion, on the part of the whites. And this was the cause of the trouble, in most cases from the first settlement of the country.

#### Ague and Discouragement

I suffered much while residing on my farm from the ague, a disease said to be unknown to the Indians or traders, till within some four or five years. It first broke out among the Indians near the fort, and spread far into the country, except near the ocean. And with the natives it proved very fatal, sweeping off whole bands, partly probably owing to their plunging into the water when the fever came on, and other improper ways. Still they seemed wonderfully aided by the use of such medicines as they procured from the whites. As an instance, to show the fatal effect, a trader returning to the fort came to their lodges on the river, just below the mouth of the Willamette, and he found numbers dead and unburied. The only one alive was an infant child at its dead mother's breast. He carried it to the fort, and it was living when I was there. When the disease broke out, they seemed to think they must have it, and die from its effects, so gave up and died.

---

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

For myself, I had no superstitious fear about it, but I suffered severely, and the more so on account of my unfavorable condition to meet sickness, my living poor, and no nurse but my friend, Sinclair. And at one time I had to send him off to the fort for medicine, to be gone some three or four days, leaving me alone, and so poorly that I hardly knew whether it was day or night. But still I mustered strength, when I became very thirsty and out of water, to get out and down the bank of the river to my spring for more. And when the medicine came it helped me, and then I would be taken down again, and so kept in rather a feeble state of health.

LEAVES OREGON

CHAPTER VII

No immigrants arrived from the States, as I expected, and the Hudson Bay Company having control of the country, so I could do nothing but subsist in the way I was pursuing. And tiring of the life I was leading, I saw no object of staying longer in the country, than for an opportunity to get away by sea. For once crossing the mountains and plains, I thought enough. I had passed nearly a year there, and experienced its climate and seen its lands and waters, and become acquainted with the natives and traders. And the company being about to send a vessel to the bay of San Francisco and the Sandwich Islands, I exchanged my crop, now mostly harvested, for a passage in the same. So about the 20th of September, 1833, I quit my home on the Willamette with something of regret after all, but on the whole gladly went down the river by boat, and when I got to the falls an Indian boy of perhaps eighteen assisted us in carrying our boat by. On inquiring of him how his people were, he said, they were sick and dying, and when we came back, as he expected we would, he should be dead. Asking the chief of the band below the falls for two of his men to row us to the fort, for I was feeble and had with me only my friend, Sinclair, he answered that his men were all sick or dead, so he could not supply us. So we had wearily to paddle our own canoe.

Boards a Hudson Bay Company's Ship

After some days delay at Fort Vancouver, the ship Dryad made sail down the Columbia, with a Mr. Douglas, a botanist, a Mr. Finelson, a member of the Hudson Bay Company, myself, Sinclair, and two others of the Wyeth men. We stopped at Astoria, Fort George as they called it, and a long time in Baker's Bay, under the shelter of Cape Disappointment, which is a high promontory, the north cape at the mouth of the river, from which there is a splendid look out over the river and bays, the land and the ocean. There again I suffered severely with another attack of the ague, the chills lasting all day long.

On October 18, 1833, we sailed from Astoria, the wind having subsided, but we still found the swell in crossing the bar tremendous, and much of wind and storm as we sailed down the coast. So with the combined seasickness and ague I was not able to leave my berth for some days. But after a time both left me and I was able to look out on the sea, and occasionally the land. Still we kept at so respectful a distance that we saw little of it, and no harbor was then known between Columbia river and the bay of San Francisco.

Golden Gate

After a half month's voyage we neared the coast and on the 4th of November entered at the Golden Gate, but some fifteen years or more before it received that name.

The only buildings then seen about the bay were just at the turn, on the right, as you enter the same, called "The Presidio," which we passed and came to anchor some mile or so south, near the shore of little valleys and sand hills, all in their natural forest of bushes and trees. And here, and

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

hereabout, they say is now the city of San Francisco. Some mile or two beyond and back from the bay was a mission called Dolores, consisting of a few, small adobe buildings; and back on the opposite side of the bay were some farmers. For I recollect from them our vessel got some pumpkins and other vegetables. I met there but one resident not Spanish or Indian. This was a Mr. Forbes, a Scotchman, but who said he had resided in the United States. He seemed rather a shrewd man for as no one unless a Catholic could hold real estate, I noticed, when with them, he was a good one too. How often do we see that one's religion aids his business, a great thing with many for this world. Rather a digression.

#### Lassoing a Wild Bullock

And here our ship lay for many days. On one, I saw a Spaniard noose with his lasso a wild bullock on the shore, or rather two of them. And thus mounted on their horses, used to the business, one threw and caught him by his horns, and then wound his lasso around the high pommel of his strong, well girthed saddle, and the horse stood and held him. But they wishing to throw him down, so as to butcher him, the other man threw his so accurately that by his first move the ox stepped into the noose, which caught him by his foot. Then each turned their horses in opposite directions and starting up they laid him flat on the ground in a twinkling. And then the horses keeping their stand, one dismounted and cut his throat. All quicker done than said. The only vehicle I saw was a drag made from the crotch part of a tree. On this a man placed a barrel containing whiskey, perhaps, and to this drag he tied his lasso, mounted his horse and tied the other end to the pommel of his saddle, and so drew alone the barrel home on the drag, the lasso passing by the horse's side.

#### Dolores Mission

One day I went to the Mission on another through the woods and over the hills to the seashore, and up to the Gate where I found in the grass, dismounted, some three or four cannon, which were once probably used to guard the entrance to the bay. But the fatigue of this day's trip again brought on the ague, so I did not go much more, staying aboard the vessel.

Upper California was then, and till acquired by our war with our neighboring Republic, a Mexican territory. One day its governor came aboard the ship to dine. He had come, I suppose, all the way from Monterey, his capital, for that purpose. His name was Figueroa. There is much said of John Augustus Sutter, as an early settler in this country, but this was long before his time. The only trade to these parts seemed to be by vessels from the States with calico and the like to exchange for hides, their only product, the country being full of cattle, and vessels came in for that purpose while we were there. And not having heard from that country for nearly two years, I inquired with much interest for the news, but was much disappointed in not getting more. He knew that Jackson was still President, and that the nullification business was all settled, but there came the puzzle, what nullification was. I had never heard the term, and he could not define it any further than it was something about South Carolina.

And a whaler came in to get supplies from the Japanese Banks, as the fishing grounds were called, where they had been on a cruise. They told the time they had taken, which was very short for a well constructed sailer, whereas their ship was an old Gerard Philadelphia Square, built over forty years before, showing the constant prevalence of a westerly wind in that latitude on the Pacific and in fact the world around. And here all our Americans except myself quit our vessel and went aboard this whaler, it being of their own country, so to them attractive. I said all were Spanish ex-

The Autobiography of John Ball  
Across the Plains to Oregon, 1832

---

cept Mr. Forbes. No; I also met here Russians, who resided at some point up the coast, and raised wheat to supply their trading posts at Sitka and other places in Alaska.

When here I had somehow a presentiment that we should some day, by purchase or otherwise, become possessed of this splendid bay of San Francisco, and the surrounding country. Oregon I felt sure we should not relinquish to the English, and if we held that we also needed this. I thought those Hudson Bay men seemed to be very civil to their neighbors here, and that it was reciprocated by the call of the Governor, etc. All the trade that came to my notice was the purchase of some tallow from them. It was put up in hides sewed up into a kind of bag, and the melted tallow poured in, making a snug bale of goods. And if it be asked for what these traders wanted the tallow, it was mainly as a portion of the rations to their French and Indian employees, which with corn and other grain made their soup.

While we lay in the bay the weather was very pleasant, uniform, and of an agreeable temperature, being from 52 to 60 degrees. And we were a long time there, from the 4th to the 29th of November, with them probably a pleasant part of the year.

He came to the Lewiston Country in 1829--Craig Mountain Named in His Honor

(By Thomas J. Beall.)

To the Tribune--Will you please grant the space in your columns that I may inform your readers as to my early recollections of William Craig the trapper of the Rocky mountains, frontiersman and after whom Craig mountain was named. I first met Craig in the latter part of September, 1857. He was at The Dalles, Oregon, for the purpose of purchasing his winter supplies accompanied by several Nez Perce Indians, among them Chief Lawyer and Reuben. As I wanted to see the Walla Walla country, my cousin, Lloyd Brooke, of Vancouver, thought I would have an opportunity in so doing by joining Craig's party on his return trip to that country, so he gave me a letter of introduction to Craig which I tendered on my arrival at The Dalles.

Craig was the sub-Indian agent for the Nez Percés at that time and the agency was at Walla Walla. I was at The Dalles two days visiting the army officers stationed at the garrison. I was soon informed that Craig would not be able to return to the agency for several days and as I was anxious to proceed on my journey, I joined a party of Hudson Bay people who were on their way to Fort Colville and traveled with them as far as old Fort Walla Walla, now Wallula. I there severed my connection with the Hudson Bay people and proceeded to Cantonments Stevens in the Walla Walla valley, Occupied by two companies of the First Dragoons and two of the Ninth Infantry, U.S. army, under the command of Col. E. J. Steptoe. I was there nearly two months and saw a great deal of Craig nearly every day during my stay, and our intercourse with each other soon ripened into an ever lasting friendship.

In the fall of 1858 Craig was superseded by A.J. Cain as Indian agent for the Nez Perce Indians and the agency was at Cantonment Stevens, it being abandoned, and the U.S. troops were removed to the garrison built for them and now called Fort Walla Walla.

In the latter part of December, 1858, Mr. Cain received orders to move the agency on to the Nez Perce reservation, but it was not accomplished until the early spring of 1860. Craig then concluded that he would move to his old home on the Lapwal and I accompanied him also Jake Schultz. Nearly all of the old timers knew Jake, and that reminds me of a little incident that occurred in which Jake took a part. Craig had some hogs running up what is now called Mission creek. One evening Jake returned to the house and in a very excited manner accosted Craig, who was reading, and told him there was a cougar up the creek eating his hogs. Craig says: "Jake you ride back and tell that cougar I'll mess with him." The next morning the old man saddled his horse took his gun and dogs and went for Mr. Cougar, and it was not long until he returned with the hide of the cougar.

Craig was rather reticent as to his past life and not very communicative on that subject unless he was out in camp and then by the camp fire in the evening he became reminiscent and his stories and accounts of his exploits and travels in the mountains and on the plains were very interesting. There was no egotism in his recounting his exploits. He would invariably say, in speaking of his travels, "we" did so or "he" never "I."

It was in the fore part of the month of May, 1867, that Craig and a man by the name of Mike Mayer and myself took a trip to the headwaters of Potlatch creek for the purpose of hunting and prospecting. We departed from his old home at what is now called Jacques Spur on the Camas Prairie Railway and we intercepted the Clearwater river at Big Eddy, twenty-five miles above Lewiston, thence up the river to a point four miles above the present railway station at Lenore. It is not

---

necessary to give any details as to our trip from there on; suffice to say we crossed the river and traveled in a northerly direction to the head-waters of the Potlatch, remained there several days, passing the time in prospecting, hunting and fishing. It was on this trip that I learned a great deal of Craig's past life.

He was born in the Old Dominion, as he loved to call his native state (Virginia) in Green Brier county about the year 1799 or 1800. At the age of eighteen he became involved in an altercation or quarrel with one much older than he was and was forced to kill him in self-defense. Being quite young and somewhat alarmed at his act he made his "getaway" and he found himself in time in the city of St. Louis. This city at that time was the emporium for the fur traders, trappers and frontiersmen of the northwest. Craig soon joined a party of French Canadians who were on the eve of starting up the Missouri river on a trading expedition and their mode of transportation was with bateaus which made it a long tedious journey. When near Fort Benton they encountered a party of trappers, their destination being the Rocky mountains. Craig severed his connections with the Canadians, joined the trappers, and in time became a full-fledged trapper and plainsman.

The main rendezvous for the trappers, and Indians also, was at Fort Bridger on Green River, now Wyoming. It was there that Craig first met the Nez Perces who told him of the quantities of beaver and other fur animals there were in the waters of their country.

In the fall of the year 1829, William Craig, Joe Meek and Rob't Newell accompanied a party of Nez Perces from the rendezvous to their country to engage in trapping on the waters of the Clear-water and Salmon. I never knew how long they remained in their new field of operations, probably not more than two seasons.

It was here among the Nez Perces that they got their Indian wives and accompanied by them they returned to their old haunts east of the Rocky mountains.

At one time Craig in his reminiscent mood told me that in the year 1832 or 1833 a party of mountaineers were organized on Green river, now in Wyoming, for the purpose ostensibly of trapping for furs on the waters flowing from the Sierra Nevada mountains into the Pacific ocean. In fact the object was to steal horses from the Spaniards residing in California. In this party was Joe Walker, the headman; Joe Meek, Joe Gale, Bill Williams, Mark Head, Bob Mitchel, Alex Godey, Antoine Janise, William Craig and some others.

When they camped on a stream where the water would admit they usually stripped at their tepees or lodges and proceeded to the stream to take a plunge.

Now Craig tells this story: "The waters of the Humbolt river are of a milky cast, not clear, so one afternoon while camped on the said stream and being the first to strip, I started for the swimming hole and was just about to plunge in when I got a hunch that things were not as they should be and I had better investigate before taking a dive. I did so and found the water was about a foot and a half deep and the mud four, this condition being in the eddy. So I waded to where there was a current and found the water a little more than waist deep, no mud and good smooth bottom. In looking towards the camp I espied Joe Walker coming and he was jumping like a buck deer, and when he arrived at the brink he says to me: 'How is it?' 'Joe,' I replied 'it is just splendid.' With that he plunged head-first into that four and a half feet of blue mud.

Fearing trouble and not being interested in the subsequent proceedings, I made myself scarce by hiding in the brush on the opposite side and in so doing I ran into some rose brier bushes and scratched myself some, but I was so full of laughter I did not mind that. I peeped through the

---

bushes just in time to see him extricate himself from the mud. He then washed the mud off as well as he could, returned to the tepee, put on his clothes, shot his rifle off, cleaned it, then reloaded it and hollered at me and said: 'Now show yourself and I'll drop a piece of lead into you,' which I failed to do as I did not want to be encumbered with any extra weight especially at that time. I was compelled to remain in hiding nearly the whole afternoon. Before sundown I was told to come into camp and get my supper and leave, that I could not travel any further with that party.

I was very glad of the permit for it was rather monotonous out there in the brush with nothing but a blanket around me and nobody to talk to and my pipe in camp. I soon dressed myself and then it was time to chew. Our company was divided into messes and each mess was provided with a dressed buffalo hide. It was spread on the ground and the grub placed upon it. When supper was announced we sat down. I sat opposite to Walker and in looking at him I discovered some of that blue mud of the Humbolt on each side of his nose and just below his eyelids and I could not help laughing. He addressed me in an abrupt manner and said: 'What the h--l are you laughing at.' I told him that gentlemen generally washed before eating. With that the others observed the mud and they too roared with laughter in which Walker joined, but he threatened if ever I played another such trick on him he would kill me as sure as my name was Craig."

This place on the Humbolt river was ever afterward called by the mountain men. "Walker's Plunge," or "Hole." Craig says in this raid, Walker's party got away with five or six hundred head of the Spaniards horses and they drove them through what is now known as Walker's basin and Walker's pass of the Sierra Nevada mountains, which is south of the Truckee pass where the Central Pacific railway now traverses. The most of these horses were traded to the different tribes of Indians they encountered for furs, buffalo robes and such other things as they wished to barter, especially the mares and colts. I think that this was the only means by which the Indians east of the Rocky mountains acquired their ponies. They evidently came from California and New Mexico, either stolen from or traded by the Spainards. The tribes on the west side of the Rockies secured their horses from the Pacific coast by trading or raiding.

I once questioned Craig as to the bravest of the frontiersmen. He told me that actually Bill Williams was the bravest and the most fearless mountaineer of all: that the tribes from the Mexican border to the Canadian know him and feared him thinking perhaps he was some supernatural being. He never trapped in company with anyone else, always alone. His furs were the best dressed and he received more for them. He could speak the dialects of several tribes, especially the Osages and was proficient in what is termed the sign talk among the Indians, that is with the hands, hence he could go among any of the tribes and make himself understood.

Craig told me at one time that a missionary preacher came among the Osages to preach the gospel and Williams was to do the interpreting for him. It seems that Williams at one time was a minister of the gospel previous to his becoming a trapper and he asked the missionary from what part of the bible he'd select his text. He was told it would be from the book of Jonah. Than said Williams, "I will advise you not to mention that fish story for you will not get one of these Indians to believe you, but if you insist in telling about the big fish do so and I'll interpret for you." The missionary got no further in his discourse than reading the text, for one old chief arose and pointing his finger at the preacher said: "We have heard several of the white people talk and lie, we know they will lie, but, that is the biggest lie we ever heard." Then he gathered his blanket around him and proceeded to his tepee followed by the others to their respective places of abode, leaving

---

the missionary meditating on their conduct as predicted by Bill Williams. I am digressing from my subject, but the aforesaid story was told to me by Craig, hence I insert the same in writing my recollections of him.

The land on the Lapwai creek known as the Craig donation claim, was not donated by the government but by the Nez Perces. In the treaty of 1855 at Walla Walla between Governor J.J. Stevens of Washington territory on the part of the government on one side and the Nez Perces on the other, there was a stipulation in the said treaty that Craig or his heirs should have so much land (one section) on the reservation. I think this is on record in the department at Washington D.C. and Craig had the privilege of selecting it.

In 1862 I visited Craig who was then living on Mission creek, a half a mile from its junction with the Lapwai. After I had put up my horse he said to me: "See here Thomas, I am glad you came I have got some barley to deliver to Weingerber and Gamble at the brewery in Lewiston tomorrow and it will require two wagons to hold it all and I want someone to drive one of the teams." I told him I would assist him. He then proposed to load the wagons that evening so as to get an early start in the morning. He had two teams, one being mules. He asked me which I preferred. I told him either would be satisfactory. He then said: "I'll drive the mules." The next morning we had an early start and in due time arrived, delivered the barley, then put our teams up at the White Front stable. Craig went to the different stores to make his purchases, not forgetting Blue John (an appellation put on a one gallon blue keg) to have it replenished.

After dinner we went to the stable to hitch up and return home. While waiting for our teams to be harnessed he said to me: "See here, Thomas, I don't like this way of traveling." I knew what he meant so I told him I would hitch his mules to my wagon, it being the heaviest, put my horses in the lead and tie his wagon behind, then he could ride with me. This proposition was agreed on. I then hitched the mules to my wagon and drove to the different places where he had made his purchases. After collecting them I drove back to the stable hitched the other team in the lead and tied the other wagon behind mine and then started for home with Craig sitting beside me on my left. We were traveling along very nicely until we arrived at Mulkey's orchard, since called Lindsay's orchard. Mulkey had constructed an irrigating ditch, the waters of which were taken out of what is now known as Lindsay creek and the road was on the edge of this ditch for some distance. I was driving along telling some story and not paying much attention to the team when suddenly one of the fore wheels went into the ditch and Craig and I parted company - he fell on his back into that ditch. He got out of it, pulled off his coat, shook the mud off of it, then made the remark that: "if that was the way I drove a team he'd be --- if he would ride with me." I told him it was optional. He got into the trail wagon and laid down on the empty barley sacks. I drove along whistling and singing and I never thought to look behind till I was half way down Soldier canyon; then I observed that I had a wagon missing and I didn't know how far back it was to where I lost it. I tied my team to some trees dropped the tugs and went back in search of the lost one. Just at the head of the canyon I discovered the wagon silently approaching. I placed my optics on the form of my friend Craig in the arms of Morpheus I did not wish to disturb his peaceful slumbers so I picked up the tongue and started down the canyon. A short distance beyond was a rather steep piece of road and on approaching it I stopped and put on the brake, but I could not move the vehicle with the brake on and it would move too fast with it off. I took another peek at my sleeping friend and he seemed so comfortable: therefore, I did not feel inclined to wake him up, so I grasped the

---

tongue once more and proceeded on. This particular piece of road was about thirty feet long and steep, but I thought I could manage to get along. I soon discovered that the wagon wanted to go in advance and not wishing to be run over I jumped aside to let it proceed on but it did not do so, it ran off of the road and upset. I could hear Craig's muffled voice, he being covered with grain sacks, saying. "What the h--l does all this mean." It was an extremely ridiculous situation and I being in a hilarious mood I could not reply, but I approached the wagon, raised the body and let him crawl out. That being done he stood up, rubbed his eyes and took a reconnoissance of the situation, and in a solemn manner said: "Well I'll be d--m:" then exploded with laughter from which the canyon replied in echo.

In getting our wagon back on the road we were assisted by a young man passing by. We were now ready to move on and I asked Craig on which side he wished to work, off or nigh. He said he'd push. I told him I thought he had better work by my side, that we were well matched and made a good team hitched up together. He complied. We soon had our two wagons attached together and was ready to move on when Craig asked me if I did not think the incident just occurring demanded a sentiment. I told him it absolutely did. He then went to my wagon, resurrected Blue John and giving the usual salutation, "how," then passed John to my embrace and I followed suit by moistening my lips with John's tears.

In the year 1863 a portion of the territory of Washington was cut off and the territory of Idaho was created from it. A republican convention was held at Mt. Idaho to nominate a delegate to congress. Rob't Newell, a frontiersman, a companion of Craig, aspired to get the nomination, so he started for Mt. Idaho, accompanied by Craig. The first day they got as far as Durkeeville on Craig mountain.

This place was a road house established by a man named Durkee, afterwards called Masons, in fact he sold out to Harry Mason. There was quite a crowd at this place that evening whose destination was Mt. Idaho. Newell being tired, and not wishing to sit up, retired early. Some were reading, some conversing and others engaged in playing cards, in which pastime Craig participated. He soon became tired of card playing and concluded to retire. He and Newell were to sleep together, so when Craig came into the room he saw the prepared speech of Newell sticking out of his coat pocket. Craig took the speech and returned to the lower room and read to those there assembled and perhaps added some to it, for when Newell made his appearance next morning he was hailed as a good fellow, a brick and a fine old man. He was invited to have a drink and a cigar both of which he refused. They had their breakfast and by that time their team was ready to convey them on.

They had not proceeded very far when Newell says to Craig: "Bill, if I am the nominee at the convention as the delegate to congress, I'll go to congress and all h--l won't stop me." Says Craig: "See here, Bob, I'll tell you what I think." "Well what is that." "I think you'll go to h--l and all congress won't stop you." Newell made his speech but he was told in the convention that they had heard it before. In that convention Governor Wallace was the nominee.

In 1868 Craig received a paralytic stroke from which he never entirely recovered. I was contemplating on going to Moose creek and I paid him a visit before doing so and we sat up nearly the whole night talking of the pleasant hours spent together and when I bid him good bye, he said: "Thomas I'll never see you again on this earth." He invariably addressed me as Thomas.

I had been to Moose creek and on my return at Weippe I received a letter from Sam Phinney, his

---

son-in-law, informing me of his death which was in the latter part of September 1868. The Nez Perces always called him William; did not know him as Craig. He is buried at what is now known as Jacques Spur; also his wife, two sons and two daughters. He has one daughter living; her age is about seventy-five, and she lives at Theon, Umatilla county, Oregon.

Bartolar Mr Barker

Seur I have recvd the Lisance you granted me by the onrabel preste [priest] of santa Cruse Manuel Radar and will Comply with your orders and obay them punctaly. Thar is 10 of us to gether all amearican. Those men at Tous I Have Nothing to Dew with. What thaar going to Dew I Know not. As you Requested me to Let you know of any that wars goin to trape I Cante say wheather tha ar or not. Tha Have sum trapes with them. If any Cums within my notis I shal give you notis of them as you requesid it of me. I shal be in Next June if nothing Hapins to us. Your Exlantance wishus me to send you sum medison. I sende you sum Rubarb and sum Campher. The Rubarbe you Can take at any time what will Ly on the pinte [point] of a pocket Knif in sum shuger and a spunful of Cold warter. You May Eaeght or drinke any thing Hot or Cold. The Best time to take it is of a night when you go to Bed. It is not apecke [ipecac?] a gentil purge and wil futufy the Stumak when in Bad order. The Campor you can desolve in whiskey. Put a few dropes in a dram of whiskey in the morning will Help the stumake very much. I send you A few of the gusawit Barks. Put them in to a botel of whiskey I quart in [illegible] and let them stand in the sun for one or 2 Days and then drinke them as Biter in the morning what you Like of them. The preste of santa Clarar wishes to go to the united States with me next spring if it is agreabel to your Excelances. My Friend Mr. Lagrand will translat this to your oner. I shal Cum an see you when I Cum in from the woods. The winte[r] is aprochin so near I Cante [find] time to Cum now but all orders from you Shal be apentual [punctually?] obad [obeyed] by me from your oner Seur.

Your moste obedante umbil Sarvunte.

CAPT. WM. BECKNELL

Capt. Becknell's Tour

Mr. Patten,

If the following narrative of my late tour in the upper province of Mexico, is sufficiently interesting to deserve a place in your columns, you are at liberty to publish it.

On the 5th of November last, I left Santa Cruz with a party of nine men, employed in my service, with a view of trapping on the Green River, several hundred miles from Santa Fe.

In the course of my route towards the point of destination, I passed through the gap in a mountain, which was so narrow as greatly to resemble a gate-way. This mountain, which had the appearance of an artificial mound, was about three or four hundred feet high, and not more than ten feet in breadth at the base. The country here is poor, and only timbered with pine and cedar. I met in this vicinity, several parties of Indians, who were poor and inoffensive. It was, however, reported that some of the Indians who spent some time with us, afterwards committed murders upon the persons of some of the engages of Mr. Prevost of St. Louis, and robbed the remainder. We suffered every misery incident to such an enterprise in the winter season, such as hunger and cold-but were exempted from robbery. The flesh of a very lean horse, which we were constrained

---

regarding the early Southwestern trade.

---

to break our fast with, was at this time, pronounced excellent. But when his bones were afterwards served up, as a matter of necessity, they were not as well relished, but had nearly proved fatal to the whole party. We found to our cost, that our stomachs, although tolerably commodiously disposed, were not equal to the task of digesting bones. You can readily imagine, that we were in that deplorable condition where it would be justifiable to adopt the philosophy of the ancient Romans, and give odds to die. But such is not the practice of Missourians. Although we were forty days from settlements, the snow three or four feet deep, and our small stock of horses, our principal reliance for effecting a retreat, considered sacred, so that to have eaten them would have been like dining upon our own feet, we still contrived to supply our tables, if not with the dainties of life, with food of the most substantial kind. For instance, we subsisted two days on soup made of a raw hide we had reserved for sealing our moccasins; on the following morning the remains were dished up into a hash. The young men employed by me had seen better days, and had never before been supperless to bed, nor missed a wholesome and substantial meal at the regular family hour, except one, who was with me when I opened the road to Santa Fe. When afterwards we were enabled to procure indifferent bear meat, we devoured it in that style of eagerness, which, on a review of our operations at this time, very forcibly reminds us of the table urbanity of a prairie wolf.

While at our winter camp we hunted when we could, and the remainder of the time attempted to sleep, so as to dream of the abundance of our own tables at home, and the dark rich tenants of our smoke houses.

In the vicinity of our encampment, I discovered old diggings, and the remains of furnaces. There are also in this neighborhood the remains of many small stone houses, some of which have one story beneath the surface of the earth. There is likewise an abundance of broken pottery here, well baked and neatly painted. This was probably the scite of a town where the ancient Mexican Indians resided, as the Spaniards, who seldom visit this part of the country, can give no account of it. On our way back to the settlements, we halted at the encampment of a band of Indians, who shocked our feelings not a little by the disposition they were about to make of an infirm (and no longer useful) squaw. When the principal part of the band had left their camp, two of those remaining proceeded to lay the sick woman upon her face, by the side of some of her effects. They then covered her with a funeral pile of pine wood, to which they set fire, and thus made a Hindoo sacrifice of the patient old matron.

As the depth of the snow, and the immense cold of the season rendered trapping almost impracticable, we succeeded, on a third attempt, in making good our retreat from this inhospitable wilderness, and reached a Spanish village on the fifth of April, after an absence of five months.

It was reported in the Spanish settlements, by a man who had been employed by George Armstrong, of Franklin, who accompanied me to Santa Fe, that he had been murdered by the Indians; but I have good reason to believe, and I most sincerely hope, this may be only an idle fabrication. The trade to this province has been greatly injured by the reduction of prices—white domestics are only fifty cents per yard. An export duty of three per cent. is collected on all specie brought out of the province in this direction. Although my essays have been unfortunate speculations, I am disposed to make another experiment.

I travelled from the Spanish village of Taos, to Fort Osage, on the Missouri, in thirty-four days. I had supplied myself with provisions for the journey consisting of meat, beans & peas. By the route

---

Letters by Wm. Becknell  
regarding the early Southwestern trade.

---

which I travelled on my return, I avoided the so much dreaded sand hills, where adventurers have frequently been forced to drink the blood of their mules, to allay their thirst. Mr. Bailey Harde-  
man, of this county, was to have set out on his return, accompanied by a large party, on the first of  
the present month.

I cannot better conclude than by annexing this remark, that the toils endured, and the privations  
suffered in these enterprizes, very naturally give a tone and relish to the repose and plenty found  
at the civilized fire side.

Preface

BURIED amid the sublime passes of the Sierra Nevada are old men, who, when children, strayed away from our crowded settlements, and, gradually moving farther and farther from civilization, have in time become domiciliated among the wild beasts and wilder savages — have lived scores of years whetting their intellects in the constant struggle for self-preservation; whose only pleasurable excitement was found in facing danger; whose only repose was to recuperate, preparatory to participating in new and thrilling adventures. Such men, whose simple tale would pale the imaginative creations of our most popular fictionists, sink into their obscure graves unnoticed and unknown. Indian warriors, whose bravery and self devotion find no parallels in the preserved traditions of all history, end their career on the “war-path,” sing in triumph their death-song, and become silent, leaving no impression on the intellectual world.

Among the many men who have distinguished themselves as mountaineers, traders, chiefs of great Indian nations, and as early pioneers in the settlement of our Pacific coast, is James P. Beckwourth, whose varied and startling personal adventures would have found no record but for the accident of meeting with a wanderer in the mountains of California, interested in the man, and, patiently listening to his story, proceeded, as it fell from his lips, to put it upon paper. This autobiography was thus produced, and was the result of some months' labor in the winter of 1854-55. In prosecuting the task, the author has in no instance departed from the story of the narrator, but it was taken down literally as it was from day to day related. Beckwourth kept no journal, and, of course, relied upon his memory alone; consequently dates are often wanting, which it was impossible to give with accuracy when recurring to events transpiring in the course of very many years. Beckwourth is personally known to thousands of people “living on both sides of the mountains,” and also, from his service under the United States government, has enjoyed the acquaintance of many officers of the United States Army, who have been stationed in Florida, Mexico, and California. In his long residence with the Indians he adopted their habits, and was in every respect

The Life And Adventures  
Of James P. Beckwourth

---

conformed to their ways: the consequence was, from his great courage and superior mental endowments, he rose rapidly in their estimation, and finally became their chief. As an Indian, therefore, he speaks of their customs, and describes their characteristics; and probably, from his autobiography, we have more interesting particulars than were ever before given of the aborigines. Beckwourth, after ten thousand adventures, finally became involved in the stream that set toward the Pacific, and, almost unconsciously, he established a home in one of the pleasant valleys that border on Feather River. Discovering a pass in the mountains that greatly facilitated emigrants in reaching California, his house became a stopping-place for the weary and dispirited among them, and no doubt the associations thus presented have done much to efface his natural disposition to wander and seek excitement among the Indian tribes.

In person he is of medium height, of strong muscular power, quick of apprehension, and, for a man of his years, very active. From his neck is suspended a perforated bullet, with a large oblong bead each side of it, secured by a thread of sinew: this amulet is just as he wore it while chief among the Crows. With the exception of this, he has now assumed the usual costume of civilized life, and, in his occasional visits to San Francisco, vies with many prominent residents in the dress and manners of the refined gentleman.

It is unnecessary to speak of the natural superiority of his mind: his autobiography every where displays it. His sagacity in determining what would please the Indians has never been surpassed; for on the most trying occasions, where hundreds of others would have fallen victims to circumstances, he escaped. His courage is of the highest order, and probably no man ever lived who has met with more personal adventure involving danger to life, though in this respect he is not an exception to all mountaineers and hunters who early engaged in the fur trade and faced the perils of an unknown wilderness.

#### CHAPTER I.

Birth-place and Childhood.—Removal to St. Louis.

I WAS born in Fredericksburg, Virginia, on the 26th of April, 1798. My father's family consisted of thirteen children, seven sons and six daughters. I was the third child, having one sister and one brother older than myself.

My father had been an officer in the Revolutionary War, and had held a major's commission. He served throughout that glorious struggle which

“Raised the dignity of man,  
And taught him to be free.”

I well recollect, when a small boy, the frequent meetings of the old patriots at my father's house, who would sit down and relate the different battles in which they had taken part during “those days that tried men's souls.” According to the custom of those days, their meetings were occasionally enlivened with some good old peach brandy; the same kind, I presume, as that with which the old Tory treated M'Donald when he delivered his splendid charger “Selim” to him for presentation to Colonel Tarleton, which circumstance was very frequently spoken of by the old soldiers. Often during these reminiscences every eye would dim, and tears course down the cheeks of the old veterans, as they thus fought their battles o'er again, and recalled their sufferings during the struggles they had passed through.

My youthful mind was vividly impressed with the stirring scenes depicted by those old soldiers; but time and subsequent hardship have obliterated most of their narratives from my memory.

---

The Life And Adventures  
Of James P. Beckwourth

---

One incident I recollect, however, related by my father, when he formed one of a storming party in the attack on Stony Point made under General Wayne.

When I was but about seven or eight years of age, my father removed to St. Louis, Missouri, taking with him all his family and twenty-two negroes. He selected a section of land between the forks of the Mississippi and Missouri Rivers, twelve miles below St. Charles, which is to this day known as "Beckwourth's Settlement." At this early period of our history (1805-6) the whole region of country around was a "howling wilderness," inhabited only by wild beasts and merciless savages. St. Louis, at that time, was but a small town, its inhabitants consisting almost wholly of French and Spanish settlers, who were engaged in trafficking with the Indians the commodities of civilization, such as fire-water, beads, blankets, arms, ammunition, &c., for peltry.

For protection against the Indians, who were at that time very troublesome and treacherous, it became necessary for the whites to construct block-houses at convenient distances. These block-houses were built by the united exertions of the settlers, who began to gather from all quarters since the "Jefferson Purchase" had been effected from the French government. The settlers or inhabitants of four adjoining sections would unite and build a block-house in the centre of their possessions, so that in case of alarm they could all repair to it as a place of refuge from the savages.

It was necessary to keep a constant guard on the plantations, and while one portion of the men were at work, the others, with their arms, were on the alert watching the wily Indian. Those days are still fresh in my memory, and it was then that I received, young as I was, the rudiments of my knowledge of the Indian character, which has been of such inestimable value to me in my subsequent adventures among them.

There were constant alarms in the neighborhood of some of the block-houses, and hardly a day passed without the inhabitants being compelled to seek them for protection. As an illustration of our mode of life, I will relate an incident that befell me when about nine years old.

One day my father called me to him, and inquired of me whether I thought myself man enough to carry a sack of corn to the mill. The idea of riding a horse, and visiting town, possessed attractions which I could not resist, and I replied with a hearty affirmative. A sack of corn was accordingly deposited on the back of a gentle horse selected for the purpose, and "Young Jim" (as I was called) was placed upon the sack, and started for the mill two miles distant. About midway to the mill lived a neighbor having a large family of children, with whom I frequently joined in boyish sports. On my way I rode joyously up to the little fence which separated the house from the road, thinking to pass a word with my little playmates. What was my horror at discovering all the children, eight in number, from one to fourteen years of age, lying in various positions in the door-yard with their throats cut, their scalps torn off, and the warm life-blood still oozing from their gaping wounds! In the door-way lay their father, and near him their mother, in the same condition; they had all shared the same fate. I found myself soon back at my father's house, but without the sack of corn — how I managed to get it off I never discovered — and related the circumstance to my father. He immediately gave the alarm throughout the settlement, and a body of men started in pursuit of the savages who had perpetrated this fearful tragedy; my father, with ten of his own men, accompanying them. In two days the band returned, bringing with them eighteen Indian scalps; for the backwoodsman fought the savage in Indian style, and it was scalp for scalp between them.

---

The Life And Adventures  
Of James P. Beckwourth

---

The day when I beheld the harrowing spectacle of my little murdered playmates is still as fresh in my memory as at the time of its occurrence, and it never will fade from my mind. It was the first scene of Indian cruelty my young eyes had ever witnessed, and I wondered how even savages could possess such relentless minds as to wish to bathe their hands in the blood of little innocents against whom they could have no cause of quarrel. But my subsequent experience has better acquainted me with the Indian character, as the reader will learn in the course of the following pages.

I also recollect a large body of Indians assembling in their war costume on the opposite side of the Mississippi River, in what is now the State of Illinois. This was at Portage de Soix, twenty-five miles above St. Louis, and about two miles from my father's house; and their intention was to cut off all the white inhabitants of the surrounding country. The alarm was given; a large party of the settlers collected, crossed the river, and after a severe engagement defeated the Indians with great loss, and frustrated their bloody purposes.

Three days after this battle, a woman came into the settlement who had been three years captive among the Indians. She had made her escape during the confusion attending their defeat, and reached her friends in safety, after they had long supposed her dead. The name of this woman I do not remember, but I have no doubt there are old settlers in that region who yet recollect the circumstance, and the general rejoicing with which her escape was celebrated.

The news that she brought was of the most alarming nature. She related how several of the Indian tribes had held a grand council, and resolved upon a general attack upon St. Louis and all the surrounding country, with the view to butcher indiscriminately all the white inhabitants, French and Spanish excepted. This intelligence produced the greatest alarm among the inhabitants, and every preparation was made to repel the attack. New block-houses were erected, old ones repaired, and every thing placed in the best posture for defense. The Indians soon after appeared in great force opposite St. Louis. Blondo, an interpreter, was dispatched across the river to them, to inform them of the preparations made for their reception. He informed them of the intelligence communicated by the woman fugitive from their camp; and represented to them that the people of St. Louis were provided with numerous "big guns mounted on wagons," which, in case of attack, could not fail to annihilate all their warriors. They credited Blondo's tale, and withdrew their forces.

At the period of which I speak, the major part of the inhabitants of St. Louis were French and Spanish. These were on friendly terms with all the Indian tribes, and wished to confine their long established traffic with the Red men to themselves. For this reason they discountenanced the settlement of Americans among them, as they considered it an invasion of their monopoly of the traffic with the Indians; and St. Louis being the grand trading depot for the regions of the West and Northwest, the profits derived from the intercourse were immense. The Indians, too, thinking themselves better dealt with by the French and Spanish, united with the latter in their hostility to the influx of the Americans.

When about ten years of age I was sent to St. Louis to attend school, where I continued until the year 1812. I was then apprenticed to a man in St. Louis named George Casner, to learn the trade of blacksmith. (This man had a partner named John L. Sutton, who is yet a resident in St. Louis.) I took to the trade with some unwillingness at first, but becoming reconciled to it, I was soon much pleased with my occupation. When I had attained my nineteenth year, my sense of impor-

---

The Life And Adventures  
Of James P. Beckwourth

---

tance had considerably expanded, and, like many others of my age, I felt my self already quite a man. Among other indiscretions, I became enamored of a young damsel, which, leading me into habits that my boss disapproved of, resulted finally in a difficulty between us.

Being frequently tempted to transgress my boss's rules by staying from home somewhat late of an evening, and finding the company I spent my time with so irresistibly attractive that I could not bring myself to obedience to orders, I gave way to my passion, and felt indifferent whether my proceedings gave satisfaction or otherwise. One morning I was assailed by my principal in language which I considered unduly harsh and insulting, and on his threatening to dismiss me his house, I was tempted to reply with some warmth, and acknowledge that his doing so would exactly square with my wishes.

Provoked at this, he seized a hammer and flung at me. I dodged the missile, and threw it back at him in return. A scuffle then ensued, in which I, being young and athletic, came off master of the ground, and, accepting his polite dismissal, walked straight to my boarding-house. But a few moments elapsed before my assailant walked in and forbade my landlady to entertain me farther on his account.

I replied that I had plenty of money, and was competent to pay my own board.

This provoked him to a second attack, in which he again came off worsted.

Hereupon resolving to leave the house, I began to prepare for my departure; but, before I had completed my preparations, a one-armed constable presented himself at the stairs, and demanded to see me. Well knowing his errand, I took a well-loaded pistol in my hand, and went to meet him, assuring him that if he ascended the steps to capture me I would shoot him dead. In my exasperated state of mind, I really believe I should have executed my threat; the constable, perceiving my resolute bearing, after parleying a while, went away. Feeling confident that he had gone for another officer, who I feared might capture me, I expedited my departure, and, taking refuge in the house, of a friend, concealed myself for three days, and then shipped on board a keel-boat, proceeding to the mines on Fever River. But I was discovered by my boss and detained, he holding himself responsible for my appearance until my father's decision was learned.

Accordingly, I went home to my father, and related the difficulty I had recently had with my master. He counseled me to return to my apprenticeship, but I declared my determination never to be reconciled again. My father then wished me to set up in business in his settlement, but I expressed disinclination, and declared a growing wish to travel. Seeing my determination, my father finally consented to my departure. He admonished me with some wholesome precepts, gave me five hundred dollars in cash, together with a good horse, saddle, and bridle, and bade me God speed upon my journey.

Bidding adieu to all my friends, I proceeded to the boat and went on board. The object for which the boat was dispatched up the Fever River was to make a treaty with the Sac Indians, to gain their consent to our working the mines, at that time in their possession. The expedition was strictly of a pacific character, and was led by Colonel R. M. Johnson. A brother of the colonel's accompanied us, and several other gentlemen went in the boat as passengers.

## CHAPTER II.

Expedition to the Mines.—Am Hunter to the Party.—First Trip to New Orleans.—Sick with Yellow Fever.—Return Home.—First Trip to the Great West.

THE expedition consisted of from six to eight boats, carrying probably about one hundred men.

---

The Life And Adventures  
Of James P. Beckwourth

---

The party in our boat numbered some eight or ten men, among whom were Colonel Johnson, his son Darwin Johnson, Messrs. January, Simmes, Kennerley, and others, whose names have escaped me. I engaged in the capacity of hunter to the party.

We pushed off, and after a slow and tedious trip of about twenty days, arrived at our place of destination (Galena of the present day). We found Indians in great numbers awaiting our disembarkation, who were already acquainted with the object of our expedition. The two tribes, Sacs and Foxes, received us peaceably, but, being all armed, they presented a very formidable appearance. There was a considerable force of United States troops quartered in that region, under the command of Colonel Morgan, stationed in detachments at Prairie du Chien, Rock Island, St. Peter's, and Des Moines.

After nine days' parleying, a treaty was effected with them, and ratified by the signatures of the contracting parties. On the part of the Indians, it was signed by Black Thunder, Yellow, Bank, and Keokuk (father to the Keokuk who figured in the Black Hawk war). In the part of the United States, Colonels Morgan and Johnson attached their signatures. This negotiation concluded, the mines were then first opened for civilized enterprise.

During the settlement of the preliminaries of the treaty, there was great difficulty with the Indians, and it was necessary for each man of our party to be on his guard against any hostile attempts of the former, who were all armed to the teeth. On the distribution of presents, which followed the conclusion of the treaty, consisting of casks of whisky, guns, gunpowder, knives, blankets, &c., there was a general time of rejoicing. Pow-wows, drinking, and dancing diversified the time, and a few fights were indulged in as a sequel to the entertainment.

The Indians soon became very friendly to me, and I was indebted to them for showing me their choicest hunting-grounds. There was abundance of game, including deer, bears, wild turkey, raccoons, and numerous other wild animals. Frequently they would accompany me on my excursions (which always proved eminently successful), thus affording me an opportunity of increasing my personal knowledge of the Indian character. I have lived among Indians in the Eastern and Western States, on the Rocky Mountains, and in California; I find their habits of living, and their religious belief, substantially uniform through all the unmingled races. All believe in the same Great Spirit; all have their prophets, their medicine men, and their soothsayers, and are alike influenced by the appearance of omens; thus leading to the belief that the original tribes throughout the entire continent, from Florida to the most northern coast, have sprung from one stock, and still retain in some degree of purity the social constitution of their primitive founders.

I remained in that region for a space of eighteen months, occupying my leisure time by working in the mines. During this time I accumulated seven hundred dollars in cash, and, feeling myself to be quite a wealthy personage, I determined upon a return home.

My visit paid, I felt a disposition to roam farther, and took passage in the steam-boat Calhoun, Captain Glover, about to descend the river to New Orleans. My stay in New Orleans lasted ten days, during which time I was sick with the yellow fever, which I contracted on the way from Natchez to New Orleans. It was midsummer, and I sought to return home, heartily regretting I had ever visited this unwholesome place. As my sickness abated, I lost no time in making my way back, and remained under my father's roof until I had in some measure recruited my forces.

Being possessed with a strong desire to see the celebrated Rocky Mountains, and the great Western wilderness so much talked about, I engaged in General Ashley's Rocky Mountain Fur

---

The Life And Adventures  
Of James P. Beckwourth

---

Company. The company consisted of twenty-nine men, who were employed by the Fur Company as hunters and trappers.

We started on the 11th of October with horses and pack-mules. Nothing of interest occurred until we approached the Kansas village, situate on the Kansas River, when we came to a halt and encamped.

Here it was found that the company was in need of horses, and General Ashley wished for two men to volunteer to proceed to the Republican Pawnees, distant three hundred miles, where he declared we could obtain a supply. There was in our party an old and experienced mountaineer, named Moses Harris, in whom the general reposed the strictest confidence for his knowledge of the country and his familiarity with Indian life. This Harris was reputed to be, a man of "great leg,"\* \* i.e., a great traveler; able to go a great distance in a day. and capable, from his long so-journing in the mountains, of enduring extreme privation and fatigue.

There seemed to be a great reluctance on the part of the men to undertake in such company so hazardous a journey (for it was now winter). It was also whispered in the camp that whoever gave out in an expedition with Harris received no succor from him, but was abandoned to his fate in the wilderness.

Our leader, seeing this general unwillingness, desired me to perform the journey with Harris. Being young, and feeling ambitious to distinguish myself in some important trust, I asked leave to have a word with Harris before I decided.

Harris being called, the following colloquy took place:

"Harris, I think of accompanying you on this trip." "Very well, Jim," he replied, scrutinizing me closely, "do you think you can stand it?"

"I don't know," I answered, but I am going to try. But I wish you to bear one thing in mind: if I should give out on the road, and you offer to leave me to perish, as you have the name of doing, if I have strength to raise and cock my rifle, I shall certainly bring you to a halt."

Harris looked me full in the eye while he replied, "Jim, you may precede me the entire way, and take your own jog. If I direct the path, and give you the lead, it will be your own fault if you tire out."

"That satisfies me," I replied: "we will be off in the morning."

The following morning we prepared for departure. Each man loading himself with twenty-five pounds of provisions, besides a blanket, rifle, and ammunition each, we started on our journey. After a march of about thirty miles, I in advance, my companion bringing up the rear, Harris complained of fatigue. We halted, and Harris sat down, while I built a large, cheering fire, for the atmosphere was quite cold. We made coffee, and partook of a hearty supper, lightening our packs, as we supposed, for the following day. But while I was bringing in wood to build up the fire, I saw Harris seize his rifle in great haste, and the next moment bring down a fat turkey from a tree a few rods from the camp. Immediately reloading (for old mountaineers never suffer their guns to remain empty for one moment), while I was yet rebuilding the fire, crack went his rifle again, and down came a second turkey, so large and fat that he burst in striking the ground. We were thus secure for our next morning's meal. After we had refreshed ourselves with a hearty supper, my companion proposed that we should kill each a turkey to take with us for our next day's provision. This we both succeeded in doing, and then, having dressed the four turkeys, we folded ourselves in our blankets, and enjoyed a sound night's rest.

---

The Life And Adventures  
Of James P. Beckwourth

---

The following morning we breakfasted off the choicest portions of two of the turkeys, and abandoned the remainder to the wolves, who had been all night prowling round the camp for prey. We started forward as early as possible, and advanced that day about forty miles. My companion again complained of fatigue, and rested while I made a fire, procured water, and performed all the culinary work. The selected portions of last evening's turkeys, with the addition of bread and coffee, supplied us with supper and breakfast. After a travel of ten days we arrived at the Republican Pawnee villages, when what was our consternation and dismay to find the place entirely deserted! They had removed to their winter quarters. We were entirely out of provisions, having expected to find abundance at the lodges. We searched diligently for their caches (places where provisions are secured), but failed in discovering any. Our only alternative was to look for game, which, so near to an Indian settlement, we were satisfied must be scarce.

I would break my narrative for a while to afford some explanation in regard to the different bands of the Pawnee tribe; a subject which at the present day is but imperfectly understood by the general reader — the knowledge being confined to those alone who, by living among them, have learned their language, and hence become acquainted with the nature of their divisional lands.

The reader, perhaps, has remarked, that I related we were on a visit to Republican Pawnee villages. This is a band of the Pawnee tribe of Indians, which is thus divided

The Grand Pawnee Band.

Republican Pawnee Band.

Pawnee Loups or Wolf Pawnees.

Pawnee Pics or Tattooed Pawnees, and  
Black Pawnees.

The five bands constitute the entire tribe. Each band is independent and under its own chief, but for mutual defense, or in other cases of urgent necessity, they unite into one body. They occupy an immense extent of country, stretching from beyond the Platte River to south of the Arkansas, and, at the time I speak of, could raise from thirty thousand to forty thousand warriors. Like all other Indian tribes, they have dwindled away from various causes, the small-pox and war having carried them off by thousands. Some of the bands have been reduced to one half by this fatal disease (in many instances introduced designedly among them by their civilized brethren); a disease more particularly fatal to the Indians from their entire ignorance of any suitable remedy. Their invariable treatment for all ailments being a cold-water immersion, it is not surprising that they are eminently unsuccessful in their treatment of the small-pox. Horse-stealing, practiced by one band upon the other, leads to exterminating feuds and frequent engagements, wherein great numbers are mutually slain.

The following interesting episode I had from the lips of the interpreter:

Some thirty-two years ago, during Monroe's administration, a powerful Indian named Two Axe, chief counselor of the Pawnee Loup band, went to pay his "Great Father," the President, a visit. He was over six feet high and well proportioned, athletic build, and as straight as an arrow. He was delegated to Washington by his tribe to make a treaty with his Great Father.

Being introduced, his "father" made known to him, through the interpreter, the substance of his proposal. The keen-witted Indian, perceiving that the proposed treaty "talked all turkey" to the white man and "all crow" to his tribe, sat patiently during the reading of the paper. The reading finished, he arose with all his native dignity, and in that vein of true Indian eloquence in which

The Life And Adventures  
Of James P. Beckwourth

---

he was unsurpassed, declared that the treaty had been conceived in injustice and brought forth in duplicity; that many treaties had been signed by Indians of their "Great Father's" concoction, wherein they bartered away the graves of their fathers for a few worthless trinkets, and afterward their hearts cried at their folly; that such Indians were fools and women. He expressed his free opinion of the "Great Father," and all his white children, and concluded by declaring that he would sign no paper which would make his own breast or those of his people to sorrow. Accordingly, Two Axe broke up the council abruptly, and returned to his home without making any treaty with his "Great Father."

CHAPTER III.

Return from the deserted Pawnee Villages.—Sufferings on the Way. —Prospect of Starvation.—Fall in with the Indians most opportunely.—Safe Arrival at Ely's Trading-post at the mouth of the Kansas.

MY companion and myself took counsel together how to proceed. Our determination was to make the best of our way to the Grand Ne-mah-haw River, one of the tributaries of the Missouri. We arrived at that river after nine days' travel, being, with the exception of a little coffee and sugar, entirely without provisions. My companion was worn out, and seemed almost disheartened. I was young, and did not feel much the worse for the journey, although I experienced a vehement craving for food. Arrived at the river, I left Harris by a good fire, and, taking my rifle, went in quest of game, not caring what kind I met.

As Fortune would have it, I came across an elk, and my rifle soon sent a leaden messenger after him. We encamped near him, promising ourselves a feast. He was exceedingly poor, however, and, hungry as we were, we made a very unsavory supper off his flesh. The next morning we continued our journey down the Ne-mah-haw, traveling on for five days after I had killed the elk without tasting food. The elk had been so rank that we carried no part of him with us, trusting to find some little game, in which we were disappointed. We had thrown away our blankets to relieve ourselves of every burden that would impede our progress, which, withal, was extremely slow. On the fifth day we struck a large Indian trail, which bore evident marks of being fresh. My companion now gave entirely up, and threw himself to the ground, declaring he could go no farther. He pronounced our position to be thirty miles from the trading-post. I endeavored to arouse him to get up and proceed onward, but he could only advance a few rods at a time. I felt myself becoming weak; still, I had faith that I could reach Ely's, if I had no hinderance; if I lingered for Harris, I saw we should both inevitably perish. He positively declared he could advance not a step farther; he could scarcely put one foot before the other, and I saw he was becoming bewildered. In the dilemma I said to him, "Harris, we must both perish if we stay here. If I make the best of my way along this trail, I believe I can reach Ely's some time in the night" (for I was aware that the Indians, whose trail we were following, were proceeding thither with their peltry).

But Harris would not listen to it.

"Oh, Jim," he exclaimed, "don't leave me; don't leave me here to die! For God's sake, stay with me!" I did my best to encourage him to proceed; I assisted him to rise, and we again proceeded upon our journey.

I saw, by the progress we were making, we should never get on; so I told him, if I had to advance and leave him, to throw himself in the trail, and await my return on the following day with a good horse to carry him to the trading-post. We walked on, I a hundred yards in advance, but I

The Life And Adventures  
Of James P. Beckwourth

---

became convinced that if I did not use my remaining strength in getting to Ely's, we should both be lost.

Accordingly, summoning all my forces, I doubled my speed, determined to reach the post before I stopped. I had not proceeded half a mile ere I heard the report of two rifles, and, looking in the direction of the sound, I saw two Indians approaching with demonstrations of friendship.

On reaching me, one of them exclaimed, "You are dead-you no live!"

I explained to him that I had left my companion behind, and that we were both nearly starved to death. On this they spoke a few words to each other in their own language, and one started off like a race-horse, along the trail, while the other returned with me to my companion.

As we approached him I could hear him moaning, "Ho, Jim! come back! Come back! don't leave me!" We went up to him, and I informed him that we were safe; that I had met the Indians, and we should soon be relieved.

After waiting about three hours, the rattling of hoofs was heard, and, looking up, we discovered a troop of Indians approaching at tall speed. In another moment they were by our side. They brought with them a portion of light food, consisting of corn-meal made into a kind of gruel, of which they would give us but a small spoonful at short intervals. When Harris was sufficiently restored to mount a horse with the assistance of the Indians, we all started forward for the post. It appeared that the two Indians whom I had so fortunately encountered had lingered behind the main party to amuse themselves with target-shooting with their rifles. The one that started along the trail overtook the main body at a short distance, and, making our case known to them, induced them to return to our succor.

We encamped with them that night, and they continued the same regimen of small periodic doses of gruel. Several times a large Indian seized hold of an arm of each of us, and forced us into a run until our strength was utterly exhausted. Others of the party would then support us on each side, and urge us on till their own strength failed them. After this discipline, a spoonful or two of gruel would be administered to us. This exercise being repeated several times, they at length placed before us a large dish containing venison, bear-meat, and turkey, with the invitation to eat all we wanted. It is unnecessary to say that I partook of such a meal as I never remember to have eaten before or since.

Early the next day we arrived at the trading-post of Ely and Curtis, situate on the Missouri River, near the mouth of the Kansas. As I entered the house, I heard some one exclaim, "Here comes Jim Beckwourth and Black Harris," the name he went by where he was known.

Ely sprang up to welcome us. "Sure enough," said he, "it is they; but they look like corpses."

Another voice exclaimed, "Halloo, Jim! what is the matter with you? Is it yourselves, or only your ghosts? Come along and take some brandy, any way; living or dead, you must be dry."

We accepted the invitation, and took each a glass, which, in our greatly reduced state, quite overpowered us. Left to my reflections, I resolved that, if I survived my present dangers, I would return to civilized life. The extremities I had been reduced to had so moderated my resentments that, had I encountered my former boss, I should certainly have extended my hand to him with ready forgiveness.

The Indians we had so opportunely fallen in with belonged to the Kansas band of the Osage tribe, and were on the way, as we had surmised, to dispose of their goods at the trading-post. Their wares consisted principally of peltry, obtained by their sagacity in trapping, and their skill in

The Life And Adventures  
Of James P. Beckwourth

---

hunting the wild animals of the plains. In purchasing their skins of them, Messrs. Ely and Curtis rewarded the Indians very liberally with government stores for their humanity in succoring us when exhausted, and as an encouragement to relieve others whom they might chance to find similarly distressed.

After thoroughly recruiting at the trading-post, where I received every attention from Messrs. Ely and Curtis, I started for St. Louis. On my arrival at G. Chouteau's trading-post, I calculated the intervening distance to St. Louis, and abandoned my intention of proceeding thither, delaying my return till the spring, when the ice would break up in the Missouri. Mr. Chouteau engaged me to assist in packing peltries during the winter, at twenty-five dollars per month.

When the river was free from ice, I took passage in a St. Louis boat, and, after a quick run, arrived safe in the city early in the evening of the fifth day.

Shortly after my arrival I fell in with General Ashley, who had returned to the city for more men. The general was greatly surprised to see me, he having concluded that my fate had been the same with hundreds of others, engaged to fur companies, who had perished with cold and starvation. The general informed me that he had engaged one hundred and twenty men, who were already on their road to the mountains. He declared I was just the man he was in search of to ride after and overtake the men, and accompany them to the mountains, and added that I must start the next morning.

My feelings were somewhat similar to those of a young sailor on his return from his first voyage to sea. I had achieved one trip to the wild West, and had returned safe, and now I was desirous of spending a long interval with my father. I suffered the arguments of the old general to prevail over me, however, and I re-engaged to him, with the promise to start on the following morning. This afforded me short time to visit my friends, to whom I just paid a flying visit, and returned to the city in the morning.

After attending to the general's instructions, and receiving eight hundred dollars in gold to carry to Mr. Fitzpatrick (an agent of General Ashley then stationed in the mountains), I mounted a good horse, and put on in pursuit of the party, who were five or six days' journey in advance. I may here remark that the general had been recently married, and, feeling some reluctance to tear himself away from the delights of Hymen, he sent me on for the performance of his duties. The general followed after in about a week, and overtook the party at Franklin, on the Missouri. It was early May when I commenced my journey. Unfolding Nature presented so many charms that my previous sufferings were obliterated from my mind. The trees were clothing themselves with freshest verdure, flowers were unveiling their beauties on every side, and birds were caroling their sweetest songs from every bough. These sights and sounds struck more pleasantly upon my senses than the howl of the wolf and the scream of the panther, which assailed our ears in the forests and prairies of the wild West.

After being joined by our general, we proceeded up the Missouri to Council Bluffs, and thence struck out for the Platte country. Soon after our arrival on the Platte we had the great misfortune to lose nearly all our horses, amounting to about two hundred head, stolen from us by the Indians. We followed their trail for some time, but, deeming it useless to follow mounted Indians while we were on foot, our general gave up the pursuit. We could not ascertain what tribe the robbers belonged to, but I have since been convinced they were either the I-a-tans or the Arrapa-hos.

The Life And Adventures  
Of James P. Beckwourth

---

Our general then gave orders to return to the Missouri and purchase all the horses we needed, while he returned to St. Louis to transact some affairs of business, and possibly pay his devotions to his very estimable lady.

We succeeded in obtaining a supply of horses after retracing about two hundred miles of our journey, paying for them with drafts upon General Ashley in St. Louis. We then again returned to our camp on the Platte. This adventure occupied nearly the whole summer; and we guarded against a repetition of the misfortune by strictly watching the horses day and night. While a portion of the company were engaged in making purchase of our second supply of horses, the other portion remained on the ground to hunt and trap, and gather together a supply of provision for our consumption. They met with excellent success, and caught a great number of beavers and otters, together with a quantity of game.

General Ashley rejoined us in September, and by his orders Fitzpatrick and a Robert Campbell proceeded to the Loup fork, taking with them all the men, except eight, who remained behind with the general, to ascend the Platte in quest of the company he left there the preceding winter, from which Harris and myself had been detached on our expedition to the Pawnee camp.

After several days' travel we found the company we were seeking. They were all well, had been successful in trapping, and had made some good trades with straggling parties of Indians in the exchange of goods for peltry. They had fared rather hard a part of the time, as game, which was their sole dependence, was often difficult to obtain.

I should here mention that we found Harris in the course of our second trip, who rejoined our company, well and hearty.

Fur companies in those days had to depend upon their rifles for a supply of food. No company could possibly carry provisions sufficient to last beyond the most remote white settlements. Our food, therefore, consisted of deer, wild turkeys (which were found in great abundance), bear-meat, and, even in times of scarcity, dead horses. Occasionally a little flour, sugar, and coffee might last over to the mountains; but those who held these articles asked exorbitant prices for them, and it was but few who tasted such luxuries.

We were now in the buffalo country, but the Indians had driven them all away. Before we left the settlements, our party made free use of the bee-hives, pigs, and poultry belonging to the settlers; a marauding practice commonly indulged in by the mountaineers, who well knew that the strength of their party secured them against any retaliation on the part of the sufferers.

There were two Spaniards in our company, whom we one morning left behind us to catch some horses which had strayed away from the camp. The two men stopped at a house inhabited by a respectable white woman, and they, seeing her without protection, committed a disgraceful assault upon her person. They were pursued to the camp by a number of the settlers, who made known to us the outrage committed upon the woman. We all regarded the crime with the utmost abhorrence, and felt mortified that any of our party should be guilty of conduct so revolting. The culprits were arrested, and they at once admitted their guilt. A council was called in the presence of the settlers, and the culprits offered their choice of two punishments: either to be hung to the nearest tree, or to receive one hundred lashes each on the bare back. They chose the latter punishment, which was immediately inflicted upon them by four of our party. Having no cat-o'-nine-tails in our possession, the lashes were inflicted with hickory withes. Their backs were dreadfully lacerated, and the blood flowed in streams to the ground. The following morning the two Span-

---

The Life And Adventures  
Of James P. Beckwourth

---

iards, and two of our best horses, were missing from the camp; we did not pursue them, but, by the tracks we discovered of them, it was evident they had started for New Mexico.

CHAPTER IV.

Severe Sufferings in the Camp.—Grand Island.—Platte River.—Up the South Fork of the Platte.—The Dog, the Wolf, and the first Buffalo.

ON our arrival at the upper camp, related in the preceding chapter, we found the men, twenty-six in number, reduced to short rations, in weakly condition, and in a discouraged state of mind. They had been expecting the arrival of a large company with abundant supplies, and when we rejoined them without any provisions, they were greatly disappointed. General Ashley exerted himself to infuse fresh courage into their disconsolate breasts, well knowing himself, however, that, unless we could find game, the chances were hard against us.

We remained in camp three or four days, until we were well refreshed, and then deliberated upon our next proceeding. Knowing there must be game farther up the river, we moved forward. Our allowance was half a pint of flour a day per man, which we made into a kind of gruel; if we happened to kill a duck or a goose, it was shared as fairly as possible. I recalled to mind the incidents of our Pawnee expedition.

The third evening we made a halt for a few days. We had seen no game worth a charge of powder during our whole march, and our rations were confined to the half pint of flour per day.

We numbered thirty-four men, all told, and a duller encampment, I suppose, never was witnessed. No jokes, no fire-side stories, no fun; each man rose in the morning with the gloom of the preceding night filling his mind; we built our fires and partook of our scanty repast without saying a word.

At last our general gave orders for the best hunters to sally out and try their fortune. I seized my rifle and issued from the camp alone, feeling so reduced in strength that my mind involuntarily reverted to the extremity I had been reduced to with Harris. About three hundred yards from camp I saw two teal ducks; I leveled my rifle, and handsomely decapitated one. This was a temptation to my constancy; and appetite and conscientiousness had a long strife as to the disposal of the booty. I reflected that it would be but an inconsiderable trifle in my mess of four hungry men, while to roast and eat him myself would give me strength to hunt for more. A strong inward feeling remonstrated against such an invasion of the rights of my starving messmates; but if, by fortifying myself, I gained ability to procure something more substantial than a teal duck, my dereliction would be sufficiently atoned, and my overruling appetite, at the same time, gratified. Had I admitted my messmates to the argument, they might possibly have carried it adversely. But I received the conclusion as valid; so, roasting him without ceremony in the bushes, I devoured the duck alone, and felt greatly invigorated with the meal.

Passing up the stream, I pushed forward to fulfill my obligation. At the distance of about a mile from the camp I came across a narrow deer-trail through some rushes, and directly across the trail, with only the centre of his body visible (his two extremities being hidden by the rushes), not more than fifty yards distant, I saw a fine large buck standing. I did not wait for a nearer shot. I fired, and broke his back. I dispatched him by drawing my knife across his throat, and, having partially dressed him, hung him on a tree close by. Proceeding onward, I met a large white wolf, attracted, probably, by the scent of the deer. I shot him, and, depriving him of his meal, devoted him for a repast to the camp. Before I returned, I succeeded in killing three good-sized elk,

The Life And Adventures  
Of James P. Beckwourth

---

which, added to the former, afforded a pretty good display of meat.

I then returned near enough to the camp to signal to them to come to my assistance. They had heard the reports of my rifle, and, knowing that I would not waste ammunition, had been expecting to see me return with game. All who were able turned out to my summons; and when they saw the booty awaiting them, their faces were irradiated with joy.

Each man shouldered his load; but there was not one capable of carrying the weight of forty pounds. The game being all brought into camp, the fame of "Jim Beckwourth" was celebrated by all tongues. Amid all this gratulation, I could not separate my thoughts from the duck which had supplied my clandestine meal in the bushes. I suffered them to appease their hunger with the proceeds of my toil before I ventured to tell my comrades of the offense I had been guilty of. All justified my conduct, declaring my conclusions obvious. As it turned out, my proceeding was right enough; but if I had failed to meet with any game, I had been guilty of an offense which would, ever after, have haunted me.

At this present time I never kill a duck on my ranche, and there are thousands of teal duck there, but I think of my feast in the bushes while my companions were famishing in the camp. Since that time I have never refused to share my last shilling, my last biscuit, or my only blanket with a friend, and I think the recollection of that "temptation in the wilderness" will ever serve as a lesson to more constancy in the future.

The day following we started forward up the river, and, after progressing some four or five miles, came in sight of plenty of deer-sign. The general ordered a halt, and directed all hunters out as before. We sallied out in different directions, our general, who was a good hunter, forming one of the number. At a short distance from the camp I discovered a large buck passing slowly between myself and the camp, at about pistol-shot distance. As I happened to be standing against a tree, he had not seen me. I fired; the ball passed through his body, and whizzed past the camp. Leaving him, I encountered a second deer within three quarters of a mile. I shot him, and hung him on a limb. Encouraged with my success, I climbed a tree to get a fairer view of the ground. Looking around from my elevated position, I perceived some large, dark-colored animal grazing on the side of a hill, some mile and a half distant. I was determined to have a shot at him, whatever he might be. I knew meat was in demand, and that fellow, well stored, was worth more than a thousand teal ducks.

I therefore approached, with the greatest precaution, to within fair rifle-shot distance, scrutinizing him very closely, and still unable to make out what he was. I could see no horns; and if he was a bear, I thought him an enormous one. I took sight at him over my faithful rifle, which had never failed me, and then set it down, to contemplate the huge animal still farther.

Finally, I resolved to let fly; taking good aim, I pulled trigger, the rifle cracked, and I then made rapid retreat toward the camp. After running about two hundred yards, and hearing nothing in movement behind me, I ventured to look round, and, to my great joy, I saw the animal had fallen. Continuing my course on to the camp, I encountered the general, who, perceiving blood on my hands, addressed me, "Have you shot any thing, Jim?"

I replied, "Yes, sir."

"What have you shot?"

"Two deer and something else," I answered.

"And what is the something else?" he inquired. "I do not know, sir."

The Life And Adventures  
Of James P. Beckwourth

---

“What did he look like?” the general interrogated. “Had he horns?”

“I saw no horns, sir.”

“What color was the animal?”

“You can see him, general,” I replied, “by climbing yonder tree.”

The general ascended the tree accordingly, and looking through his spy-glass, which he always carried, he exclaimed, “A buffalo, by heavens!” and, coming nimbly down the tree, he gave orders for us to take a couple of horses, and go and dress the buffalo, and bring him into camp.

I suggested that two horses could not carry the load; six were therefore dispatched, and they all came back well packed with his remains.

There was great rejoicing throughout the camp at such bountiful provision, and all fears of starvation were removed, at least for the present. The two deer were also brought in, besides a fine one killed by the general, and ducks, geese, and such like were freely added by the other hunters, who had taken a wider circuit.

It appears strange that, although I had traveled hundreds of miles in the buffalo country, this one was the first I had ever seen. The conviction weighing upon my mind that it was a huge bear I was approaching had so excited me that, although within fair gun shot, I actually could not see his horns. The general and my companions had many a hearty laugh at my expense, he often expressing wonder that my keen eye could not, when close to the animal, perceive the horns, while he could see them plainly near two miles distant.

A severe storm setting in about this time, had it not been for our excellent store of provisions we should most probably have perished of starvation. There was no game to be procured, and our horses were beginning to die for want of nourishment. We remained in this camp until our provisions were all expended, and our only resource was the flesh of the horses which died of starvation and exposure to the storm. It was not such nutritious food as our fat buffalo and venison, but in our present circumstances it relished tolerably well.

Were General Ashley now living, he would recollect the hardships and delights we experienced in this expedition.

When the storm was expended we moved up the river, hoping to fall in with game. We, unfortunately, found but little on our course. When we had advanced some twenty miles we halted. Our position looked threatening. It was mid-winter, and every thing around us bore a gloomy aspect. We were without provisions, and we saw no means of obtaining any. At this crisis, six or seven Indians of the Pawnee Loup band came into our camp. Knowing them to be friendly, we were overjoyed to see them. They informed our interpreter that their village was only four miles distant, which at once accounted for the absence of game. They invited us to their lodges, where they could supply us with every thing that we needed; but on our representing to them our scarcity of horses, and the quantity of peltry we had no means of packing, they immediately started off to their village (our interpreter accompanying them in quest of horses, and speedily returned with a sufficient number. Packing our effects, we accompanied them to their village, Two Axe, of whom I have previously made mention, and a Spaniard named Antoine Behele, chief of the band, forming part of our escort.

Arrived at their village, which we found well provided with every thing we needed, the Indians gave us a hospitable reception, and spread a feast which, as they had promised, “made all our hearts glad.” Our horses, too, were well cared for, and soon assumed a more rotund appearance.

---

The Life And Adventures  
Of James P. Beckwourth

---

We purchased for our future use beans, pumpkins, corn, cured meat, besides some beaver-skins, giving them in exchange a variety of manufactured goods used in the Indian trade, of which we had a great plenty. We replaced our lost horses by purchasing others in their stead; and now, every thing being ready for departure, our general intimated to Two Axe his wish to get on.

Two Axe objected. "My men are about to surround the buffalo," he said; "if you go now, you will frighten them. You must stay four days more, then you may go."

His word was law, so we staid accordingly.

Within the four days appointed they made "the surround," and killed fourteen hundred buffaloes. The tongues were counted by General Ashley himself, and thus I can guarantee the truth of the assertion.

To the reader unacquainted with the Indian mode of taking these animals, a concise description may not be uninteresting.

There were probably engaged in this hunt from one to two thousand Indians, some mounted and some on foot. They encompass a large space where the buffaloes are contained, and, closing in around them on all points, form a complete circle. Their circle at first inclosed may measure perhaps six miles in diameter, with an irregular circumference determined by the movements of the herd. When "the surround" is formed, the hunters radiate from the main body to the right and left until the ring is entire. The chief then gives the order to charge, which is communicated along the ring with the speed of lightning; every man then rushes to the centre, and the work of destruction is begun. The unhappy victims, finding themselves hemmed in on every side, run this way and that in their mad efforts to escape. Finding all chance of escape impossible, and seeing their slaughtered fellows drop dead at their feet, they bellow with affright, and in the confusion that whelms them, lose all power of resistance. The slaughter generally lasts two or three hours, and seldom many get clear of the weapons of their assailants.

The field over, the "surround" presents the appearance of one vast slaughter-house. He who has been most successful in the work of devastation is celebrated as a hero, and receives the highest honors from the "fair sex," while he who has been so unfortunate as not to kill a buffalo is jeered and ridiculed by the whole band. Flaying, dressing, and preserving the meat next engages their attention, and affords them full employment for several weeks.

The "surround" accomplished, we received permission from Two Axe to take up our line of march. Accordingly, we started along the river, and had only proceeded five miles from the village when we found that the Platte forked. Taking the south fork, we journeyed on some six miles, when we encamped. So we continued every day, making slow progress, some days not advancing more than four or five miles, until we had left the Pawnee villages three hundred miles in our rear. We found plenty of buffalo along our route until we approached the Rocky Mountains, when the buffalo, as well as all other game, became scarce, and we had to resort to the beans and corn supplied us by the Pawnees.

#### CHAPTER V.

Sufferings on the Platte.—Arrive at the Rocky Mountains.—Fall out with General Ashley.—Horses again stolen by the Crow Indians.—Sickness of our General.—Rescue of the General from a wounded Buffalo.—Remarkable Rescue of the General from the Green River "Suck." NOT finding any game for a number of days, we again felt alarmed for our safety. The snow was deep on the ground, and our poor horses could obtain no food but the boughs and bark of the

The Life And Adventures  
Of James P. Beckwourth

---

cotton-wood trees. Still we pushed forward, seeking to advance as far as possible, in order to open a trade with the Indians, and occupy ourselves in trapping during the finish of the season. We were again put upon reduced rations, one pint of beans per day being the allowance to a mess of four men, with other articles in proportion. Here I had a serious difficulty with our general, which arose in the following manner. The general desired me to shoe his horse, which I cheerfully proceeded to do. I had finished setting three shoes, and had yet one nail to drive in the fourth, when, about to drive the last nail, the horse, which had been very restless during the whole time, withdrew his foot from me. My patience becoming exhausted, I applied the hammer several times to his belly, which is the usual punishment inflicted by blacksmiths upon unruly horses. The general, who was standing near, flew into a violent rage, and poured his curses thick and fast upon me. Feeling hurt at such language from the lips of a man whom I had treated like my own brother, I retorted, reminding him of the many obligations he owed me. I told him that his language to me was harsh and unmerited; that I had thus far served him faithfully; that I had done for him what no other man would do, periling my life for him on several occasions; that I had been successful in killing game when his men were in a state of starvation; and, warming at the recapitulation, I added, "There is one more nail to drive, general, to finish shoeing that horse, which you may drive for yourself, or let go undriven, for I will see you dead before I will lift another finger to serve you."

But little more was said on either side at that time.

The next morning the general gave orders to pack up and move on. He showed me a worn-out horse, which he ordered me to pack and drive along. I very well knew that the horse could not travel far, even without a pack.

Still, influenced by the harsh language the general had addressed to me on the previous day, I said, "General, I will pack the horse, but I wish you to understand that, whenever he gives out, there I leave him, horse and pack."

"Obey my orders, and let me have none of your insolence, sir," said the general.

I was satisfied this was imposed upon me for punishment. I, however, packed the horse with two pigs of lead and sundry small articles, and drove him along in the rear, the others having started a considerable time previous. The poor animal struggled on for about a mile, and then fell groaning under his burden. I unpacked him, assisted him to rise, and, repacking him, drove him on again in the trail that the others had left in the snow. Proceeding half a mile farther, he again fell. I went through the same ceremony as before. He advanced a few yards, and fell a third time. Feeling mad at the general for imposing such a task upon me, my hands tingling with cold through handling the snowy pack-ropes, I seized my hammer from the pack, and, striking with all my power, it penetrated the poor animal's skull.

"There," said I, "take that! I only wish you were General Ashley."

"You do, do you?" said a voice from the bushes on the side of the trail.

I well knew the voice: it was the general himself; and another volley of curses descended uninterruptedly upon my head.

I was not the man to flinch. "What I said I meant," I exclaimed, "and it makes no odds whether you heard it or not."

"You are an infernal scoundrel, and I'll shoot you;" and, suiting the action to the word, he cocked his piece and leveled it.

---

The Life And Adventures  
Of James P. Beckwourth

---

I cocked my rifle and presented it also, and then we stood at bay, looking each other direct in the eye.

“General,” I at length said, “you have addressed language to me which I allow no man to use, and, unless you retract that last epithet, you or I must surely die.”

He finally said, “I will acknowledge that it was language which never should be used to a man, but when I am angry I am apt to speak hastily. But,” he added, “I will make you suffer for this.”

“Not in your service, general,” I replied. “You can take your horse now, and do what you please with him. I am going to return to St. Louis.” The general almost smiled at the idea.

You will play —— going back to St. Louis,” he said, “when, in truth, you were afraid of being killed by the Indians, through being left too far behind with that old horse.”

I left general, horse, and pack, and started on to overtake the advanced party, in order to get my saddlebags before leaving them. Approaching the party, I advanced to Fitzpatrick (in whose possession they were) and addressed him: “Hold up, Fitzpatrick; give me my saddle-bags. I am going to leave you, and return to St. Louis.”

“What!” exclaimed he, “have you had more words with the general?”

“Yes,” I replied, “words that will never be forgiven — by me, at least, in this life. I am bound to return.”

Well,” said he, “wait till we encamp, a few hundred yards ahead. Your things are in the pack; when we stop you can get them.”

I accompanied them till they encamped; then, taking my goods from the pack, I was getting ready to return, when the general came up.

Seeing me about to carry my threat into execution, he addressed me: “Jim, you have ammunition belonging to me; you can not take that with you.”

Luckily, I had plenty of my own, so I delivered up all in my possession belonging to him.

“Sir,” I said, “as Fortune has favored me with plenty, I deliver up yours; but, if I had had none of my own, I would have retained a portion of yours, or died in the attempt. And it seems to me that you must have a very small soul to see a man turned adrift without any thing to protect him against hostile savages, or procure him necessary food in traversing this wide wilderness.”

He then said no more to me, but called Fitzpatrick, and requested him to dissuade me from leaving. Fitzpatrick came, and exerted all his eloquence to deter me from going, telling me of the great distance before me, the danger I ran, when alone, of being killed by Indians — representing the almost certain fact that I must perish from starvation. He reminded me that it was now March, and the snows were already melting; that Spring, with all its beauties, would soon be ushered in, and I should lose the sublime scenery of the Rocky Mountains.

But my mind was bent upon going; all my former love for the man was forfeited, and I felt I could never endure his presence again.

Fitzpatrick’s mission having failed, the general sent a French boy to intercede, toward whom I felt great attachment. He was named Baptiste La Jeunesse, and was about seventeen years of age. I had many times protected this lad from the abuse of his countrymen, and had fought several battles on his account, for which reason he naturally fled to me for protection, and had grown to regard me in the light of a father.

When this boy saw that I was in earnest about leaving, fearing that all attempts at persuasion would be useless, he hung his nether lip, and appeared perfectly disconsolate.

---

The Life And Adventures  
Of James P. Beckwourth

---

The general, calling this lad to him, desired him to come to me and persuade me from the notion of leaving. He pledged his word to Baptiste that he would say no more to displease me; that he would spare no efforts to accommodate me, and offered me free use of his horses, assigning as a reason for this concession that he was unwilling for word to reach the States that he had suffered a man to perish in the wilderness through a little private difficulty in the camp.

At this moment Le Pointe presented himself, manifesting by his appearance that he had something of importance to communicate.

“General,” said he, “more than half the men are determined to leave with Beckwourth; they are now taking ammunition from the sacks and hiding it about. What is to be done?”

“I will do the best I can.” Then turning to the lad, he said, “I took Jim’s ammunition, thinking to deter him from going; had he insisted upon going, I should have furnished him with plenty. Go now,” he added, “and tell him I want him to stay, but if he insists upon going, to take whatever he wants.”

Baptiste left the group which surrounded the general, and made his way to me, with his head inclined.

“Mon frère,” said the lad, addressing me as I sat, “the général talk much good. He want you stay. I tell him you no stay; dat you en colère. I tell him if mon frère go, by gar, I go too. He say, you go talk to Jim, and get him stay. I tell you vat I tink. You stay leettle longer, and if de général talk you bad one time more, den ve go, by gar. You take von good horse, me take von good horse too; ve carry our planket, ve take some viande, and some poudre — den ve live. Ve go now — ve take noting — den ve die.”

I knew that the boy gave good advice, and, foregoing my former resolve, I concluded to remain. My decision was quickly communicated to the whole camp, and the hidden parcels of ammunition were restored to their proper places. The storm in the camp ceased, and all were ready to proceed.

I have heard scores of emigrants (when stopping with me in my “hermitage,” in Beckwourth Valley, California) relate their hair-breadth escapes from Indians, and various hardships endured in their passage across the Plains. They would dwell upon their perilous nights when standing guard; their encounters with Indians, or some daring exploit with a buffalo. These recitals were listened to with incredulous ears; for there is in human nature such a love of the marvelous, that traditionary deeds, by dint of repetition, become appropriated to the narrator, and the tales that were related as actual experience now mislead the speaker and the audience.

When I recurred to my own adventures, I would smile at the comparison of their sufferings with what myself and other men of the mountains had really endured in former times. The forts that now afford protection to the traveler were built by ourselves at the constant peril of our lives, amid Indian tribes nearly double their present numbers. Without wives and children to comfort us on our lonely way; without well-furnished wagons to resort to when hungry; no roads before us but trails temporarily made; our clothing consisting of the skins of the animals that had fallen before our unerring rifles, and often whole days on insufficient rations, or entirely without food; occasionally our whole party on guard the entire night, and our strength deserting us through unceasing watching and fatigue; these are sufferings that made theirs appear trivial, and ours surpass in magnitude my power of relation.

Without doubt, many emigrants were subjected to considerable hardship, during the early part of

---

The Life And Adventures  
Of James P. Beckwourth

---

the emigration, by the loss of cattle, and the Indians came in for their full share of blame. But it was through extreme carelessness that so many were lost; and those who have charged their losses upon the Indians have frequently found their stock, or a portion of it, harnessed to wagons either far in advance of them, or lagging carelessly in their rear. The morality of the whites I have not found to exceed very much that of the red man; for there are plenty of the former, belonging to trains on the routes, who would not hesitate to take an ox or two, if any chance offered for getting hold of them.

But to return. At the time when I had concluded to proceed with the party, we were encamped in the prairie, away from any stream (having passed the fork of the Platte), and were again in a starving condition. Except an occasional hare or rabbit, there was no sign of supplying ourselves with any kind of game.

We traveled on till we arrived at Pilot Butte, where two misfortunes befell us. A great portion of our horses were stolen by the Crow Indians, and General Ashley was taken sick, caused, beyond doubt, by exposure and insufficient fare. Our condition was growing worse and worse; and, as a measure best calculated to procure relief, we all resolved to go on a general hunt, and bring home something to supply our pressing necessities. All who were able, therefore, started in different directions, our customary mode of hunting. I traveled, as near as I could judge, about ten miles from the camp, and saw no signs of game. I reached a high point of land, and, on taking a general survey, I discovered a river which I had never seen in this region before. It was of considerable size, flowing four or five miles distant, and on its banks I observed acres of land covered with moving masses of buffalo. I hailed this as a perfect Godsend, and was overjoyed with the feeling of security infused by my opportune discovery. However, fatigued and weak; I accelerated my return to the camp, and communicated my success to my companions. Their faces brightened up at the intelligence, and all were impatient to be at them.

The general, on learning my intelligence, desired us to move forward to the river with what horses we had left, and each man to carry a pack on his back of the goods that remained after loading the cattle. He farther desired us to roll up snow to provide him with a shelter, and to return the next day to see if he survived.

The men, in their eagerness to get to the river (which is now called Green River), loaded themselves so heavily that three or four were left with nothing but their rifles to carry. Though my feelings toward the general were still unfriendly (knowing that he had expressed sentiments concerning me that were totally unmerited), I could not reconcile myself to deserting him in his present helpless condition. Accordingly, I informed him that if he thought he could endure the journey, I would make arrangements to enable him to proceed along with the company.

He appeared charmed with the magnanimity of the proposal, and declared his willingness to endure any thing in reason. His consent obtained, I prepared a light litter, and, with the assistance of two of the unladen men, placed him upon it, in the easiest position possible; then, attaching two straps to the ends of the litter-bars, we threw them over our shoulders, and, taking the bars in our hands, hoisted our burden, and proceeded with all the ease imaginable. Our rifles were carried by the third man.

The anxiety of the general to remain with us prevented his giving utterance to the least complaint, and we all arrived in good season on the banks of Green River. We were rejoiced to find that our companions who preceded us had killed a fine buffalo, and we abandoned ourselves that

---

The Life And Adventures  
Of James P. Beckwourth

---

evening to a general spirit of rejoicing. Our leader, in a few days, entirely recovered, and we were thus, by my forethought in bringing him with us, spared the labor of a return journey.

We all feasted ourselves to our hearts' content upon the delicious, coarse-grained flesh of the buffalo, of which there was an unlimited supply. There were, besides, plenty of wild geese and teal ducks on the river — the latter, however, I very seldom ventured to kill.

One day several of us were out hunting buffalo, the general, who, by the way, was a very good shot, being among the number. The snow had blown from the level prairie, and the wind had drifted it in deep masses over the margins of the small hills, through which the buffalo had made trails just wide enough to admit one at a time. These snow-trails had become quite deep — like all snow-trails in the spring of the year — thus affording us a fine opportunity for lurking in one trail, and shooting a buffalo in another. The general had wounded a bull, which, smarting with pain, made a furious plunge at his assailant, burying him in the snow with a thrust from his savage-looking head and horns. I, seeing the danger in which he was placed, sent a ball into the beast just behind the shoulder, instantly dropping him dead. The general was rescued from almost certain death, having received only a few scratches in the adventure.

After remaining in camp four or five days, the general resolved upon dividing our party into detachments of four or five men each, and sending them upon different routes, in order the better to accomplish the object of our perilous journey, which was the collecting all the beaver-skins possible while the fur was yet valuable. Accordingly, we constructed several boats of buffalo hides for the purpose of descending the river and proceeding along any of its tributaries that might lie in our way.

One of our boats being finished and launched, the general sprang into it to test its capacity. The boat was made fast by a slender string, which snapping with the sudden jerk, the boat was drawn into the current and drifted away, general and all, in the direction of the opposite shore.

It will be necessary, before I proceed farther, to give the reader a description, in as concise a manner as possible, of this "Green River Suck."

We were encamped, as we had discovered during our frequent excursions, at the head of a great fall of the Green River, where it passes through the Utah Mountains. The current, at a small distance from our camp, became exceedingly rapid, and drew toward the centre from each shore. This place we named the Suck. This fall continued for six or eight miles, making a sheer descent, in the entire distance, of upward of two hundred and fifty feet. The river was filled with rocks and ledges, and frequent sharp curves, having high mountains and perpendicular cliffs on either side. Below our camp, the river passed through a canyon, or cañon, as it is usually written, a deep river-pass through a bluff or mountain, which continued below the fall to a distance of twenty-five or thirty miles. Wherever there was an eddy or a growth of willows, there was sure to be found a beaver lodge; the cunning creatures having selected that secluded, and, as they doubtless considered, inaccessible spot, to conceal themselves from the watchful eye of the trapper.

To return to the general. His frail bark, having reached the opposite shore, encountered a ledge of rocks, and had hardly touched, when, by the action of the rolling current, it was capsized, and he thrown struggling into the water. As Providence would have it, he reached the bluff on the opposite side, and, holding on to the crevices in the high and perpendicular cliff, sung out lustily for assistance. Not a moment was to be lost. Some one must attempt to save him, for he could not hold his present position, in such cold water, long. I saw that no one cared to risk his life amid

---

The Life And Adventures  
Of James P. Beckwourth

---

such imminent peril, so, calling to a Frenchman of the name of Dorway, whom I knew to be one of the best swimmers, to come to the rescue, I threw off my leggins and plunged in, supposing he would follow. I swam under water as far as I could, to avail myself of the under current (this mode is always practiced by the Indians in crossing a rapid stream). I struck the bluff a few feet above the general. After taking breath for a moment or two, I said to him (by the way, he was no swimmer), "There is only one way I can possibly save you, and I may fail in that; but you must follow my directions in the most minute degree, or we are certainly both lost."

"Any thing you say, James, I will follow," said he. "Then," I continued, "when I float down to you, place your hands on my shoulder, and do not take hold of my neck. Then, when I give you the word, kick out with all your might, and we may possibly get across."

I then let myself down to the general, who was clinging to the rocks like a swallow. He did as I had directed, and I started, he kicking in my rear like the stern-wheel of a propeller, until I was obliged to bid him desist; for, with such a double propelling power as we produced, I could not keep my mouth out of water. We swam to within a few yards of the opposite shore, where the main suck caught us, and, my strength becoming exhausted, we began slowly to recede from the shore toward inevitable death. At this moment Fitzpatrick thrust a long pole toward us, to the end of which he attached a rope which the party on shore retained possession of. I seized the pole with a death-grip, and we were hauled out of our perilous situation; a few moment's delay, and the world had seen the last of us.

After this rescue, the general remarked to Fitzpatrick, "That Beckwourth is surely one of the most singular men I ever met. I do not know what to think of him; he never speaks to me except when absolutely unavoidable; still, he is the first and only man to encounter peril on my behalf. Three times he has now saved my life when not another man attempted to succor me. He is a problem I can not possibly solve."

Agreeably to previous arrangement, on the following morning our company proposed to disperse in different directions. While preparing to leave our comfortable camp to take our chance in the mountains, I happening to be out among the stock, the general inquired for me, and I was pointed out to him where I stood.

"He is a singular being," he exclaimed; "he knows we are about to separate, yet he does not trouble himself to come and bid me good-by. I must go to him."

Approaching me, he said, "James, we are now about to part; these toilsome enterprises in the mountains are extremely hazardous; although I hope to see you again, perhaps we may never meet more. I am under great obligations to you. You have several times rescued me from certain death, and, by your skill in hunting, you have done great service to my camp. When my mind was irritated and harassed, I was betrayed into the use of language toward you which I regretted immediately after, and still regret. I wish you to forgive me, and desire to part in friendship. So long as you continue to use the same precaution you have hitherto used, I can securely hope you will escape all accident, and look forward to meeting you again under more auspicious circumstances;" and he concluded by bidding me good-by.

I bade him good-by, and we separated.

Previous to this, and after his rescue from the "Suck," he mentioned to Fitzpatrick that I ought to have the lead of a party, and that he believed I was as capable as any one in the company for it. Fitzpatrick told him he did not believe I would accept the responsibility. The general bade him

The Life And Adventures  
Of James P. Beckwourth

---

ask me. He came and communicated to me our general's wish, and asked me if I would take the leadership of one of our detached parties.

I declined the offer, assigning as my reason that I was too young to undertake the responsibilities of the charge; that this was my first trip to the mountains, and I had but little experience in trapping, and that there were older men better qualified for the duty.

The leadership of a party of a fur company is a very responsible post. Placed similarly to a captain of a whaling vessel, where all depends upon his success, if a captain is fortunate, and returns from a profitable voyage, of course, in the eyes of the owners, he is a first-rate officer, and stands well for the future. But if he has experienced unusual hardships, and returns more or less unsuccessful, he is disgraced in his command, and is thrust aside for a more fortunate man. It is just similar with trappers in the mountains; whatever is their fortune, good or bad, the leader is the person on whom the praise or blame falls.

#### CHAPTER VI.

We separate into six Detachments, and start out.—Trapping on Green River.—Narrow Escape from a Massacre by the Arrap-a-hos.—One Man murdered in Camp.—Retreat.—Fall in with a Detachment of our Company.—Great Joy at the Meeting.—Return of the Detachments to the Place of Rendezvous at the "Suck."

AFTER "caching" our peltry and goods by burying them in safe places, we received instructions from our general to rendezvous at the "Suck" by the first of July following. Bidding each other adieu, for we could hardly expect we should meet again, we took up our different lines of march. Our party consisted, led by one Clements, of six, among whom was the boy Baptiste, he always insisting on remaining with his brother (as he called me). Our route was up the river — a country that none of us had ever seen before — where the foot of the white man had seldom, if ever, left its print. We were very successful in finding beaver as we progressed, and we obtained plenty of game for the wants of our small party. Wherever we hauled up a trap, we usually found a beaver, besides a considerable number we killed with the rifle.

In moving up the river we came to a small stream — one of the tributaries of Green River — which we named "Horse Creek," in honor of a wild horse we found on its banks. The Creek abounded with the objects of our search, and in a very few days we succeeded in taking over one hundred beavers, the skins of which were worth ten dollars per pound in St. Louis. Sixty skins, when dried, formed a pack of one hundred pounds. After having finished our work on Horse Creek, we returned to the main river, and proceeded on, meeting with very good success, until we encountered another branch, which we subsequently named Le Brache Creek, from our comrade who was murdered by the Indians. Our success was much greater here than at any point since leaving the Suck, and we followed it up until we came to a deep cañon, in which we encamped. The next day, while the men were variously engaged about the camp, happening to be in a more elevated position than the others, I saw a party of Indians approaching within a few yards, evidently unaware of our being in their neighborhood. I immediately shouted, "Indians! Indians! to your guns, men!" and leveled my rifle at the foremost of them. They held up their hands, saying, "Bueno ! bueno !" meaning that they were good or friendly; at which my companions cried out to me, "Don't fire! don't fire! they are friendly — they speak Spanish." But we were sorry afterward we did not all shoot. Our horses had taken fright at the confusion and ran up the cañon. Baptiste and myself went in pursuit of them. When we came back with them we found sixteen Indians

---

The Life And Adventures  
Of James P. Beckwourth

---

sitting around our camp smoking, and jabbering their own tongue, which none of us understood. They passed the night and next day with us in apparent friendship. Thinking this conduct assumed, from the fact that they rather "overdid the thing," we deemed it prudent to retrace our steps to the open prairie, where, if they did intend to commence an attack upon us, we should have a fairer chance of defending ourselves. Accordingly, we packed up and left, all the Indians following us.

The next day they continued to linger about the camp. We had but slight suspicion of their motives, although, for security, we kept constant guard upon them. From this they proceeded to certain liberties (which I here strictly caution all emigrants and mountaineers against ever permitting), such as handling our guns, except the arms of the guard, piling them, and then carrying them together. At length one of the Indians shouldered all the guns, and, starting off with them, ran fifty yards from camp. Mentioning to my mates I did not like the manœuvres of these fellows, I started after the Indian and took my gun from him, Baptiste doing the same, and we brought them back to camp. Our companions chided us for doing so, saying we should anger the Indians by doubting their friendship. I said I considered my gun as safe in my own hands as in the hands of a strange savage; if they chose to give up theirs, they were at liberty to do so.

When night came on, we all lay down except poor Le Brache, who kept guard, having an Indian with him to replenish the fire. Some of the men had fallen asleep, lying near by, when we were all suddenly startled by a loud cry from Le Brache and the instant report of a gun, the contents of which passed between Baptiste and myself, who both occupied one bed, the powder burning a hole in our upper blankets. We were all up in an instant. An Indian had seized my rifle, but I instantly wrenched it from him, though, I acknowledge, I was too terrified to shoot. When we had in some measure recovered from our sudden fright, I hastened to Le Brache, and discovered that a tomahawk had been sunk in his head, and there remained. I pulled it out, and in examining the ghastly wound, buried all four fingers of my right hand in his brain. We bound up his head, but he was a corpse in a few moments.

Not an Indian was then to be seen, but we well knew they were in the bushes close by, and that, in all probability, we should every one share the fate of our murdered comrade. What to do now was the universal inquiry. With the butt of my rifle I scattered the fire, to prevent the Indians making a sure mark of us. We then proceeded to pack up with the utmost dispatch, intending to move into the open prairie, where, if they attacked us again, we could at least defend ourselves, notwithstanding our disparity of numbers, we being but five to sixteen.

On searching for Le Brache's gun, it was nowhere to be found, the Indian who had killed him having doubtless carried it off. While hastily packing our articles, I very luckily found five quivers well stocked with arrows, the bows attached, together with two Indian guns. These well supplied our missing rifle, for I had practiced so much with bow and arrow that I was considered a good shot.

When in readiness to leave, our leader inquired in which direction the river lay; his agitation had been so great that his memory had failed him. I directed the way, and desired every man to put the animals upon their utmost speed until we were safely out of the willows, which order was complied with. While thus running the gauntlet, the balls and arrows whizzed around us as fast as our hidden enemies could send them. Not a man was scratched, however, though two of our horses were wounded, my horse having received an arrow in the neck, and another being wound-

The Life And Adventures  
Of James P. Beckwourth

---

ed near the hip, both slightly. Pursuing our course, we arrived soon in the open ground, where we considered ourselves comparatively safe.

Arriving at a small rise in the prairie, I suggested to our leader that this would be a good place to make a stand, for if the Indians followed us we had the advantage in position.

“No,” said he, “we will proceed on to New Mexico.”

I was astonished at his answer, well knowing — though but slightly skilled in geography — that New Mexico must be many hundred miles farther south. However, I was not captain, and we proceeded. Keeping the return track, we found ourselves, in the afternoon of the following day, about sixty miles from the scene of murder.

The assault had been made, as we afterward learned, by three young Indians, who were ambitious to distinguish themselves in the minds of their tribe by the massacre of an American party.

We were still descending the banks of the Green River, which is the main branch of the Colorado, when, about the time mentioned above, I discovered horses in the skirt of the woods on the opposite side. My companions pronounced them buffalo, but I was confident they were horses, because I could distinguish white ones among them. Proceeding still farther, I discovered men with the horses, my comrades still confident I was in error; speedily, however, they all became satisfied of my correctness, and we formed the conclusion that we had come across a party of Indians. We saw by their manœuvres that they had discovered us, for they were then collecting all their property together.

We held a short council, which resulted in a determination to retreat toward the mountains. I, for one, was tired of retreating, and refused to go farther. Baptiste joining me in my resolve. We took up a strong position for defense, being a place of difficult approach; and having our guns, and ammunition, and abundance of arrows for defense, considering our numbers, we felt ourselves rather a strong garrison. The other three left as to our determination to fall together, and took to the prairie; but, changing mind, they returned, and rejoined us in our position, deeming our means of defense better in one body than when divided. We all, therefore, determined to sell our lives as dearly as possible should the enemy attack us, feeling sure that we could kill five times our number before we were overpowered, and that we should, in all probability, beat them off.

By this time the supposed enemy had advanced toward us, and one of them hailed us in English as follows

“Who are you?”

“We are trappers.”

“What company do you belong to?” “General Ashley’s.”

“Hurrah! hurrah! hurrah!” they all shouted, and we, in turn, exhausted our breath in replying.

“Is that you, Jim Beckwourth?” said a voice from the party.

“Yes. Is that you, Castenga?” I replied.

He answered in the affirmative, and there arose another hurrah.

We inquired where their camp was. They informed us it was two miles below, at the ford. Baptiste and myself mounted our horses, descended the bank, plunged into the river, and were soon exchanging salutations with another of the general’s old detachments. They also had taken us for Indians, and had gathered in their horses while we took up our position for defense.

The night was spent in general rejoicing, in relating our adventures, and recounting our various successes and reverses. There is as much heartfelt joy experienced in falling in with a party of

---

The Life And Adventures  
Of James P. Beckwourth

---

fellow-trappers in the mountains as is felt at sea when, after a long voyage, a friendly vessel just from port is spoken and boarded. In both cases a thousand questions are asked; all have wives, sweethearts, or friends to inquire after, and then the general news from the States is taken up and discussed.

The party we had fallen in with consisted of sixteen men. They had been two years out; had left Fort Yellow Stone only a short time previously, and were provided with every necessary for a long excursion. They had not seen the general, and did not know he was in the mountains. They had lost some of their men, who had fallen victims to the Indians, but in trapping had been generally successful. Our little party also had done extremely well, and we felt great satisfaction in displaying to them seven or eight packets of sixty skins each. We related to them the murder of Le Brache, and every trapper boiled with indignation at the recital. All wanted instantly to start in pursuit, and revenge upon the Indians the perpetration of their treachery; but there was no probability of overtaking them, and they suffered their anger to cool down.

The second day after our meeting, I proposed that the most experienced mountaineers of their party should return with Baptiste and myself to perform the burial rites of our friend. I proposed three men, with ourselves, as sufficient for the sixteen Indians, in case we should fall in with them, and they would certainly be enough for the errand if we met no one. My former comrades were too tired to return.

We started, and arrived at our unfortunate camp, but the body of our late friend was not to be found, though we discovered some of his long black hair clotted with blood.

On raising the traps which we had set before our precipitate departure, we found a beaver in every one except four, which contained each a leg, the beavers having amputated them with their teeth. We then returned to our companions, and moved on to Willow Creek, where we were handy to the caches of our rendezvous at the "Suck." It was now about June 1st, 1822.

Here we spent our time very pleasantly, occupying ourselves with hunting, fishing, target-shooting, footracing, gymnastic, and sundry other exercises. The other detachments now came in, bringing with them quantities of peltry, all having met with very great success.

#### CHAPTER VII.

Arrival of General Ashley and Party.—His Relation of their Sufferings after leaving the Rendezvous.—Their Excursion to Salt Lake.—Fall in with a Fur Company before unknown to the Mountaineers.—His final Fortune, and return to St. Louis.

SITTING in camp one beautiful summer morning — for the month of June is always lovely in northern latitudes — an Indian lass stepped up to me, and wished me to kill a deer or an antelope, and bring her the brains, wherewith to dress a deer-skin, offering me, in compensation, a handsome pair of moccasins. Thinking to save two dollars by a few minutes' exertion, I took my rifle and alone left camp. After traveling two miles, I obtained sight of a fine antelope, which had also seen me, and kept himself at a respectful distance. In following him up to get a fair shot, I at length found myself about ten miles from camp, with small prospect of getting either brains or moccasins.

While among the wild sage, still trying to approach the antelope, I observed a horse and rider coming in my direction. Feeling satisfied that the rider was an Indian, I at once made up my mind to run no farther after the antelope, but to shoot him, and take his brains to the squaw, as she would know no difference. I therefore concealed myself in the sage until he should come

The Life And Adventures  
Of James P. Beckwourth

---

within range of my rifle. Becoming impatient, at length, at his tardy approach, I raised my head to take a look, when, to my utter astonishment, I saw General Ashley in the act of mounting his horse at a few paces' distance. He had stopped to adjust something belonging to his saddle, and to this trifling circumstance he was indebted for his life. On seeing who it was, I became so excited at the narrow escape he had made, that my rifle fell from my hand. If I had shot him, it being well known in camp that I was not entirely reconciled to him, I should, most undoubtedly, have been charged with his murder. I told the general of the narrow escape he had just made. He was surprised at my mistaking him for an Indian, and inquired if I did not know that they never traveled singly.

I then inquired after his health, and the success he had met with, and then related to him our own losses and success generally. He inquired where the camp was. I told him it was close at hand. In conducting the general thither, he pronounced my "close at hand" rather distant.

Arrived at camp, the general related their adventures in descending the Green River over the rapids, through the Suck and cañon, in the following narrative:

"We had a very dangerous passage down the river, and suffered more than I ever wish to see men suffer again. You are aware that we took but little provision with us, not expecting that the cañon extended so far. In passing over the rapids, where we lost two boats and three guns, we made use of ropes in letting down our boats over the most dangerous places. Our provisions soon gave out. We found plenty of beaver in the cañon for some miles, and, expecting to find them in as great plenty all the way, we saved none of their carcasses, which constituted our food. As we proceeded, however, they became more and more scarce, until there were none to be seen, and we were entirely out of provisions. To retrace the river was impossible, and to ascend the perpendicular cliffs, which hemmed us in on either side, was equally impossible. Our only alternative was to go ahead. "After passing six days without tasting food, the men were weak and disheartened. I listened to all their murmurings and heart-rending complaints. They often spoke of home and friends, declaring they would never see them more. Some spoke of wives and children whom they dearly loved, and who must shortly become widows and orphans. They had toiled, they said, through every difficulty; had risked their lives among wild beasts and hostile Indians in the wilderness, all which they were willing to undergo; but who could bear up against actual starvation?

"I encouraged them all in my power, telling them that I bore an equal part in their sufferings; that I, too, was toiling for those I loved, and whom I yet hoped to see again; that we should all endeavor to keep up our courage, and not add to our misfortunes by giving way to despondency.

"Another night was passed amid the barren rocks. The next morning, the fearful proposition was made by some of the party for the company to cast lots, to see which should be sacrificed to afford food for the others, without which they must inevitably perish. My feelings at such a proposition can not be described. I begged of them to wait one day more, and make all the way they could meanwhile. By doing so, I said, we must come to a break in the cañon, where we could escape. They consented, and, moving down the river as fast as the current would carry us, to our inexpressible joy, we found a break, and a camp of trappers therein.

"All now rejoiced that they had not carried their fearful proposition into effect. We had fallen into good hands, and slowly recruited ourselves with the party, which was under the charge of one Provo, a man with whom I was well acquainted. By his advice, we left the river and proceeded in a northwesterly direction. Provo was well provided with provisions and horses, and he

The Life And Adventures  
Of James P. Beckwourth

---

supplied us with both. We remained with his party until we arrived at the Great Salt Lake. Here I fell in with a large company of trappers, composed of Canadians and Iroquois Indians, under the command of Peter Ogden, in the service of the Northwest Fur Company. With this party I made a very good bargain, as you will see when they arrive at our camp, having purchased all their peltry on very reasonable terms.”

The general concluded his narrative, and was congratulated by all present on his safe arrival. We were all rejoiced to hear that, during an absence of six or seven weeks, he had not lost a man. We then proceeded to uncache our goods, which we had buried at the “Suck,” and prepared to move up the river to a point where the Canadians and Indians had engaged to meet him with their peltry. The general appointed me captain of a party to meet the Canadians, and escort them to the rendezvous which he had proposed to them, while he and some few others remained to bring up the goods, consisting of flour, sugar, coffee, blankets, tobacco, whisky, and all other articles necessary for that region.

There were at this time assembled at our camp about two hundred men, besides many women and children — for many of the Frenchmen were accompanied with a squaw. I took with me eighty men, with their women, children, and effects, leaving for the general a strong guard of one hundred and twenty men, to escort the goods up the river.

Two days after we had started, being about a mile from the river, we stopped to dress a buffalo. While resting, a party of four hundred Indians passed at full speed between us and the river, driving a large number of horses. We mounted with all haste and started after them, but not in time to recapture the whole of the horses, which they had just stolen, or, rather, forced from the general in the presence of his men.

We fired on the Indians, and, after a smart skirmish, in which I received an arrow in the left arm, we recaptured twenty-seven of the animals, the Indians running off the remainder, amounting to seventy or eighty head; a severe loss, for we needed them to carry our peltry. We found three dead Indians on the field, whom we scalped, leaving them for the wolves to feed on. I ordered a camp to be formed wherein to leave the women and children, with a guard, and then, mustering all the horses, we took the return track to the camp, fearing that the party had been surprised and perhaps all massacred. On the road we met a party which the general had dispatched to us, he having similar apprehensions in regard to us. They informed us that the Indians had broken in upon them in broad daylight, unawares, and stampeded one hundred head of horses; that two of their men were wounded, of whom Sublet (since well known to the Western people) was one. It seems he was with the horses at the time the Indians rushed in upon them; he fired at one, but missed him; then clubbing his piece, he struck the Indian, nearly knocking him off his horse. The Indian rallied again and fired at Sublet, wounding him slightly. Both the wounded men were doing well. Arrived at the camp, we related our exploit to the general. He was overjoyed to hear that we had recaptured so many horses without the loss of a single man. This was my first engagement with Indians in the capacity of officer; and never did Generals Scott or Taylor feel more exultation at their most signal triumph than did I in this trifling affair, where a score or so of horses were captured at the expense of myself and two of my men receiving slight wounds.

We all moved on together, feeling ourselves a match for a thousand Indians, should they dare to assail us. On arriving at the rendezvous, we found the main body of the Salt Lake party already there with the whole of their effects. The general would open none of his goods, except tobacco,

The Life And Adventures  
Of James P. Beckwourth

---

until all had arrived, as he wished to make an equal distribution; for goods were then very scarce in the mountains, and hard to obtain.

When all had come in, he opened his goods, and there was a general jubilee among all at the rendezvous. We constituted quite a little town, numbering at least eight hundred souls, of whom one half were women and children. There were some among us who had not seen any groceries, such as coffee, sugar, &c., for several months. The whisky went off as freely as water, even at the exorbitant price he sold it for. All kinds of sports were indulged in with a heartiness that would astonish more civilized societies. The general transacted a very profitable trade with our Salt Lake friends. He purchased all their beaver, of which they had collected a large quantity, so that, with his purchases and those of our own collection, he had now one hundred and ninety-one packs, all in excellent order, and worth \$1000 per pack in St. Louis.

There lay the general's fortune in one immense pile, collected at the expense of severe toil, privation, suffering, peril, and, in some cases, loss of life. It was supposed the general was indebted in the mountains and elsewhere to the amount of \$75,000. The skins he had purchased of the Northwest Company and free trappers had cost him comparatively little; if he should meet with no misfortune on his way to St. Louis, he would receive enough to pay all his debts, and have an ample fortune besides.

In about a week the general was ready to start for home. The packs were all arranged; our Salt Lake friends offered him the loan of all the horses he wanted, and engaged to escort him to the head of Wind River, one of the branches of the Yellow Stone. The number selected to return with the general was twenty men, including my humble self; thirty men were to accompany us as a guard, and to return the horses we had borrowed.

The night previous to our departure, I and my boy Baptiste were sleeping among the packs, as were also some of the other men, when the sentinel came to me to tell me that he had seen something which he believed to be Indians. I arose, and satisfied myself that he was correct. I sent a man to acquaint the general, at the same time waking the boy and two men near me. We noiselessly raised ourselves, took as good aim as possible, and, at a signal from me, all four fired. We saw two men run. By this time the whole camp was aroused; the general asked me what I had fired at. I told him I believed an Indian.

"Very good," said he; "whenever you see an Indian about the camp at night, you do right to shoot him."

Our whole force was on guard from that time till the morning, when we discovered two dead Indians lying where we had directed our aim in the night. We knew they had been killed by our guns, for the other two men fired with shot-guns loaded with buck-shot. One had been killed with a ball through the arm and body; the other was shot through the head. We at first supposed that the two Indians belonged to the Black Feet, but we subsequently found they were Crows. One of them wore a fine pair of buckskin leg-gins, which I took from him and put on myself. We started with an escort of fifty men, following the Wind River down to the Yellow Stone, where we built our boats to descend the river. On the sixth day after leaving camp, while we were packing our effects for an early start, the alarm of "Indians!" was given, and, on looking out, we saw an immense body of them, well mounted, charging directly down upon our camp. Every man seized his rifle, and prepared for the living tornado. The general gave orders for no man to fire until he did. By this time the Indians were within half pistol shot. Greenwood (one of our party)

---

The Life And Adventures  
Of James P. Beckwourth

---

pronounced them Crows, and called out several times not to shoot. We kept our eyes upon our general; he pulled trigger, but his gun missed fire, and our camp was immediately filled with their warriors. Most fortunate was it for us that the general's gun did miss fire, for they numbered over a thousand warriors, and not a man of us would have escaped to see the Yellow Stone.

Greenwood, who knew the Crows, acted as interpreter between our general and the Indian chief, whose name was Ap-sar-o-ka Bet-set-sa, Sparrow - Hawk Chief.

After making numerous inquiries about our success in hunting, the chief inquired through the interpreter where we were from.

"From Green River," was the reply. "You killed two Black Feet there?" "Yes."

"Where are their scalps? My people wish to dance."

"Don't show them!" cried Greenwood to us. Turning to the Indian: "We did not take their scalps."

"Ugh! that is strange."

During this colloquy I had buried my scalp in the sand, and concealed my leggins, knowing they had belonged to a Crow. The chief gave orders to his warriors to move on, many of them keeping with us on our road to their camp, which was but a short distance off.

Soon after reaching there, an Indian woman issued from a lodge and approached the chief. She was covered with blood, and, crying in the most piteous tones, addressed the chief: "These are the men that killed my son on Green River, and will you not avenge his death?"

She was almost naked, and, according to their custom when a near relative is slain, had inflicted wounds all over her body in token of her deep mourning.

The chief, turning to the general, then said,

"The two men that were killed in your camp were not Black Feet, but my own warriors; they were good horse-thieves, and brave men. One of them was a son of this woman, and she is crying for his loss. Give her something to make her cease her cries, for it angers me to see her grief."

The general cheerfully made her a present of what things he had at hand, to the value of about fifty dollars.

"Now," said the chief to the woman, "go to your lodge and cease your crying." She went away seemingly satisfied.

During the day two other Indians came to the encampment, and, displaying each a wound, said, "See here what you white people have done to us; you shot us; white people shoot good in the dark."

These were the two whom we had seen run away after our night-discharge on the Green River. They had been wounded by the other two men's shot-guns, but their wounds were not serious. They said that their intention had been to steal our horses, but our eyes were too sharp for them. The general distributed some farther presents among these two men. Happening to look among their numerous horses, we recognized some that had been stolen from us at the time the general was sick, previous to our discovery of the Green River.

The general said to the chief, "I believe I see some of my horses among yours."

"Yes, we stole them from you."

"What did you steal my horses for?"

"I was tired with walking. I had been to fight the Black Feet, and, coming back, would have called at your camp; you would have given me tobacco, but that would not carry me. When we stole them they were very poor; they are now fat. We have plenty of horses; you can take all that

The Life And Adventures  
Of James P. Beckwourth

---

belong to you.”

The chief then gave orders for them to deliver up all the horses taken from our camp. They brought in eighty-eight — all in excellent condition — and delivered them up to the general, who was overjoyed at their recovery, for he had never expected to see his horses again.

On our issuing from their camp, many of the Indians bore us company for two days, until we came to a pass in the mountains called Bad Pass, where we encamped. Several of the party being out with their guns searching for game, a man by the name of Baptiste — not the boy — having a portion of a buffalo on his horse, came across a small stream flowing near the trail, when he halted to get a drink. While stooping to drink, a grizzly bear sprang upon him, and lacerated him in a shocking manner. Passing that way, I came across his dismounted horse, and, following his tracks down to the river, discovered the poor fellow with his head completely flayed, and several dangerous wounds in various parts of his body. I quickly gave the alarm, and procured assistance to carry him to the camp. Soon after reaching the camp we heard a great rush of horses, and, looking in the direction of the noise, perceived a party of our half-breeds charging directly toward our camp, and driving before them an other bear of enormous size. All the camp scattered and took to trees. I was standing by the wounded man at the time, and became so terrified that I hardly knew whether I was standing on the ground or was in a tree. I kept my eye on the bear, not supposing that he would enter our camp; but he held his course directly for me. I withdrew to look for a tree, but for some reason did not climb. Every man was calling to me, “To a tree, Jim! to a tree!” but by this time the bear was in camp, and the horsemen at his heels. On his seeing the wounded man lying there all covered with blood, he made a partial halt. I profited by the incident, and put a ball directly into his heart, killing his bearship instantly. The general fired at the same moment, his ball also taking good effect.

The next day we went through Bad Pass, carrying our wounded companion on a litter, who, notwithstanding his dreadful wounds, recovered. On arriving at the “Big Horn,” as it is called there, we set about preparing boats, which, after five days, were ready for launching. There were fur-trappers with us, who, having made a boat for themselves, went on in advance, intending to trap along down until we should overtake them. They accordingly started. When we went down we found their boat and traps, which had been broken, but no remains of the trappers. By the appearance of the ground, it was evident that the Indians had surprised and murdered them, and afterward removed their bodies. Nothing else of consequence occurred during our run down the Big Horn and Yellow Stone to the junction of the latter with the Missouri, thus running a distance of eight hundred miles in our boats.

In effecting a landing at the junction of these two rivers we unfortunately sunk one of our boats, on board of which were thirty packs of beaver-skins, and away they went, floating down the current as rapidly as though they had been live beavers. All was noise and confusion in a minute, the general, in a perfect ferment, shouting to us to save packs. All the swimmers plunged in after them, and every pack was saved. The noise we made attracted a strong body of U. S. troops down to the river, who were encamped near the place, and officers, privates, and musicians lined the shore. They were under the command of General Atkinson, then negotiating a treaty with the Indians of that region on behalf of the government. General Atkinson and our general happened to be old acquaintances, and when we had made every thing snug and secure, we all went into camp, and freely indulged in festivities. Hurrah for the Mountains!” rung through the camp again

---

The Life And Adventures  
Of James P. Beckwourth

---

and again.

The next morning we carried all our effects from the boats to the encampment, and our hunters went out in search of game. Not a day passed but we brought in great quantities of buffalo, venison, mountain-sheep, etc. Of the latter, we caught some very young ones alive, one of which I presented to Lieutenant (now General) Harney, which circumstance, I have no doubt, he still bears in mind.

After a stay of about a week, General Atkinson furnished us a boat of sufficient size to carry all our effects, and, breaking up the encampment, afforded us the pleasure of the company of all the troops under his command — we, gentlemen mountaineers, traveling as passengers. At our camping places we very willingly supplied the party with game.

At one of our encampments an amusing accident occurred. We were out hunting buffalo, and had succeeded in wounding a bull, who, furious with his wound, made, with the speed of lightning, directly for the camp, leaving a cloud of dust in his track. The troops, perceiving his approach, scattered in all directions as though an avalanche was bursting upon them. On went the buffalo, overturning tents, baggage, and guns — leaping every impediment that arrested his course; then, turning, he plunged into the river and gained the opposite prairie, leaving more than a hundred soldiers seared half to death at his visitation. They certainly discharged their pieces at him, but, for all the injury they inflicted, he will probably live to a good old age.

Previous to our arrival at Fort Clarke we met with another serious misadventure. The boat containing all our general's effects, running on a snag, immediately sunk. Again all our packs were afloat, and General Atkinson, witnessing the accident, ordered every man overboard to save the peltry, himself setting the example. In an instant, mountaineers, United States officers and soldiers plunged in to the rescue. Fortunately it was shoal water, not more than waist high, and all was speedily saved.

General Atkinson related a difficulty he had had with the Crow nation in the course of a treaty with them at Fort Clarke, on his way up the river. The Crows, in a battle with the Black Feet, had taken a half-breed woman and child, whom they had captured on the Columbia River some time previously. General Atkinson ordered them to liberate the captives, which they refused to do, saying that they had taken them from their enemies, the Black Feet, and that they clearly belonged to them. The general persisted in his demand, and the Indians refused to comply, even offering to fight about the matter. The general declined fighting that day, but desired them to come on the morrow and he would be prepared.

The next day the Indian force presented themselves for the onset, they bringing a host of warriors. One of the chiefs visited the military camp for a "talk." He had an interview with Major O'Fallen, who ordered him to give up the captives or prepare to fight. The chief boastfully replied, through Rose, the interpreter, that the major's party was not a match for the Crows; that he would whip his whole army. On this, the major, who was a passionate man, drew his pistol and snapped it at the chief's breast. It missed fire, and he then struck the Indian a violent blow on the head with the weapon, inflicting a severe gash. The chief made no resistance, but remained sullen. When this occurrence reached the ears of the Indian warriors, they became perfectly infuriated, and prepared for an instant attack. General Atkinson pacified them through Rose, who was one of the best interpreters ever known in the whole Indian country. During the hubbub, the Indians spiked the general's guns with wooden spikes, and stuffed them with grass.

The Life And Adventures  
Of James P. Beckwourth

---

Their principal chief, "Long Hair," then visited the camp, and addressed the general:

"White Chief, the Crows have never yet shed the blood of the white people; they have always treated them like brothers. You have now shed the first blood; my people are angry, and we must fight."

The general replied, "Chief, I was told by my friend, the great Red-haired Chief, that the Crows were a good people; that they were our friends. We did not come to fight the Crows; we came as their friends."

"The Red-haired Chief!" exclaimed Long Hair, in astonishment ; "are you his people?"

"Yes," replied the general.

"The Red-haired Chief is a great chief, and when he hears that you have shed the blood of a Crow, he will be angry, and punish you for it. Go home," he added, "and tell the Red-haired Chief that you have shed the blood of a Crow, and, though our people were angry, we did not kill his people. Tell him that you saw Long Hair, the Crow chief, to whom he gave the red plume many winters ago."

Long Hair and Rose then went out and harangued the warriors, who immediately withdrew, and soon the woman and child were brought into camp. The general made them a present of a great number of guns, and ammunition in abundance, at which they were highly delighted.

The reader who has perused "Lewis and Clarke's Travels" will please to understand that the "Red-haired Chief" spoken of above was none other than Mr. Clarke, whom the Crows almost worshiped while he was among them, and who yet hold his name in the highest veneration. He was considered by them to be a great "medicine man," and they supposed him lord over the whole white race.

The loss of the boat being supplied, and all to rights again, we continued our course down the Missouri, still in company with the troops, until we reached Fort Look-out, where we encamped for the night. There was a trading-post at this fort, belonging to the American Fur Company, in charge of Major Pitcher. The major made General Ashley present of a large grizzly bear for a plaything, and a pretty plaything we found him before we were done with him. He was made fast with a chain to the cargo-box on deck, and seemed to think himself captain; at any rate, he was more imperious in his orders than a commodore on a foreign station. He would suffer no one on deck, and seemed literally to apply the poet's words to himself,

"I am monarch of all I survey,

My right there is none to dispute."

We continued our course down the river, encamping on shore every night. We had a jovial time of it, telling stories, cracking jokes, and frequently making free with Uncle Sam's "O be joyful," of which there was great plenty for the supply of rations to the troops. The soldiers listened with astonishment to the wild adventures of the mountaineers, and would, in turn, engage our attention with recitals of their own experience.

At length we arrived at Council Bluffs, where we remained three days, feeling ourselves almost at home. We of course had a good time at the Bluffs, and the three days passed in continual festivities.

Providing ourselves with a good boat, we bade adieu to the troops, who stayed behind at the Bluffs, and continued our descent of the river. The current of the Missouri is swift, but to our impatient minds a locomotive would have seemed too tardy in removing us from the scenes of

The Life And Adventures  
Of James P. Beckwourth

---

hardship and privation we had just gone through to the homes of our friends, our sweethearts, our wives and little ones.

Those who reside in maritime places, and have witnessed the hardy tars step ashore in their native land, can form an adequate idea of the happy return of the mountaineers from their wanderings on the Plains to St. Louis, which is their great sea-port; or, if a pun is admissible, I may perhaps say see-port; for there we see our old friends, there we see our fun and merriment, and there we sometimes "see sights."

Arrived at St. Charles, twenty miles above St. Louis, the general dispatched a courier to his friends, Messrs. Warndorf and Tracy, to inform them of his great success, and that he would be in with his cargo the next day about noon.

When we came in sight of the city we were saluted by a piece of artillery, which continued its discharges until we landed at the market-place. There were not less than a thousand persons present, who hailed our landing with shouts which deafened our ears. Those who had parents, brothers and sisters, wives or sweethearts, met them at the landing; and such a rushing, crowding, pulling, hauling, weeping, and laughing I had never before witnessed. Every one had learned our approach by the courier.

My father, who had moved to St. Louis, was in the crowd, and was overjoyed to see me. He had lost a part of his property by being surety for other men, and I could see that age had left its traces upon him during the little time that I had been absent.

Our cargo was soon landed and stored, the men receiving information that they would be paid off that afternoon at the store of Messrs. Warndorf and Tracy. We accordingly repaired thither in a body to receive our pay. The full amount was counted out in silver to each man, except three, namely, La Roche, Pellow, and myself. To us the general gave twenty-five dollars each, telling us he would see us there again. I immediately thought of my difficulty with him in the mountains, and concluded that the remainder of my pay was to be withheld on that account. We took our twenty-five dollars each, and went away, asking no farther questions, though we took no trouble to conceal our thoughts. Before we left the counting-room, the general told us to repair to any hotel we chose, and have whatever we liked to call for until the next morning, and he would pay the bill.

Accordingly, we all repaired to Le Barras's hotel, and had a glorious time of it. The house was thronged with our friends besides, who all felt themselves included in the general's hospitality. General Ashley called on us the next morning, and, perceiving that we had "run all night," told us to keep on another day at his expense, adding that, if we wished to indulge in a ride, he would pay for carriages. We profited by his hint, and did not fail to take into our party a good share of lasses and mountaineers.

The next morning the general again visited us, and, seeing we were pretty sober, paid the bill (not a trifling matter), and desired us to call on him at the store at ten o'clock. We went as appointed, not knowing yet how he would treat us. When we were assembled, he paid us our wages in full, made us a present of three hundred dollars each, and desired us to purchase a first-rate suit of clothes each at his expense.

"I give you this extra," he said, "for your faithful services to me in the mountains; for your watchfulness over my property and interest while there; for your kindness in caring for me while sick and helpless, carrying me when unable to walk, and not leaving me to perish in the camp alone."

---

The Life And Adventures  
Of James P. Beckwourth

---

I forgot to mention the disembarkation of Grizzly at the proper time, but will do so here. After the peltry was all landed and stored, the bear still occupied his station. Hundreds were yet gazing at him, many of whom had never seen one of the kind before. The general said to me, "James, how, under the sun, are we to get that animal off the boat?" I, having a few glasses of "artificial courage" to back me, felt exceedingly valorous, and thought myself able to throw a mill-stone across the Mississippi. Accordingly, I volunteered to bring him ashore. I procured a light stick, walked straight up to the bear, and, speaking very sharp to him (as he had to us all the way down the river), deliberately unfastened his chain. He looked me in the eyes for a moment, and, giving a low whine, drooped his head. I led him off the boat along a staging prepared for the purpose, the crowd instantly falling back to a respectful distance. Landing him without accident, the general wished me to lead him to the residence of Major Biddle, distant a quarter of a mile from the landing. Courageous as ever, I led him on, though some of the time he would lead his leader, Bruin often looking round at the crowd that was following up at a prudent distance behind. I arrived safe at the residence, and made Grizzly fast to an apple-tree that stood there. I had scarcely got to the length of his chain, when he made a furious spring at me; the chain, very fortunately, was a strong one, and held him fast.

I then called at the major's house, and, delivering our general's compliments to him, informed him he had sent a pet for his acceptance. He inquired what kind of a pet, and, taking him to the tree where I had made fast the bear, I showed the huge beast to him. The major almost quaked with fear. While we stood looking at him, a small pig happened to pass near the bear, when Grizzly dealt him such a blow with his paw that he left him not a whole bone in his body, and piggy fell dead out of the bear's reach.

The major then invited me in, and, setting out some of his best, I drank his health according to the custom of those days, and left to rejoin my companions.

#### CHAPTER VIII.

Unexpected Return to the Rocky Mountains.—Camp removed.—Final Success in finding our party in the Mountains.—Joyful Meeting.—Horses stolen by the Pun-nak Indians.—A Battle, and six Indians killed.—We recapture our Horses.

I HAD been in St. Louis only one week, when Gen. Ashley came to me, and desired me to return to the mountains immediately, to carry dispatches to Mr. W. L. Sublet, captain of the trappers, and offering me the magnificent sum of one thousand dollars for the trip. I consented to go; La Roche and Pellow were to accompany me. A journey to the mountains was then called two thousand miles, through a country considered dangerous even for an army. I left St. Louis this time with extreme reluctance. It is a severe trial to leave one's friends; but the grief of separating from father and all other relatives sank into insignificance when contrasted with the misery of separating from one in particular—one in whom all my affections were reposed, and upon whom all my hopes of the future were concentrated. The contemplation of the anguish I was about to inflict by the announcement filled my heart with sorrow. One week more, and the happy event that would make one of two loving hearts would have been consummated.

The general's business was urgent, and admitted of no delay; after I had engaged, not a day, scarcely an hour was to be lost. The thousand dollars I was to receive looked large in my eyes; and that, added to what I already possessed, would the better prepare me for a matrimonial voyage. I comforted myself with the reflection that my services were confined to the mere delivering of the

The Life And Adventures  
Of James P. Beckwourth

---

dispatches; that service performed, I was free to return immediately.

I bid my aged father farewell — it was the last time I saw him. To my other friends I said cheerfully *au revoir*, expecting to return to them shortly.

But my greatest conflict was to come. I had encountered perils, privation, and faced death itself; I had fought savages and the wild beasts of the mountains; but to approach this tender heart, that had been affianced to my own for years, unmanned me. That heart that was then so light, so buoyant with hope, so full of confidence in the future, that I must plunge in utter darkness by the intelligence that in a few short hours I must leave her! Could I have communicated it to her by fighting a score of Indians, how much my pain would have been mitigated! But time was urgent, and the sacred obligation to the lady must be performed.

I called on my sweetheart; she looked more lovely than ever. She remarked my troubled looks.

“James,” she said, “you look saddened; what is the matter? Are you unwell?”

“No, Eliza, I am well; but —”

“But what, James? What has happened? Speak!”

Knowing that I had no time for delay, I felt it my duty to break the news to her at once.

“My dear girl,” I said, “I have loved you long and ardently. I have waited to see if the affection which you shared with me in childhood would stand the proof of maturer years. We are now both matured in years, and are capable of judging our own hearts. Through all my sufferings and dangers, my devotion to you has grown with my growth and strengthened with my strength. We have decided on the day for our indissoluble union. But, Eliza, I am yet young; my means of supporting you as I could wish are inadequate. I have just received a very tempting offer from General Ashley.”

“What to do, James?”

“He offers me one thousand dollars to carry dispatches to the mountains, which admits of my immediate return.”

“And are you going?”

“That is what I have come to inform you, Eliza. Understand my motive — it is solely to obtain the means to enable us to start the fairer in life.”

“I care not for money, James,” she said, bursting into a flood of tears.

My heart sought relief from its overcharged feeling in the same way. I left her amid her sobs, promising to make a speedy return, and that we would part no more till death should separate us. The general had furnished us with two good saddle-horses each, and one stout mule to carry our bedding. We mounted, and, leaving St. Louis, were soon some miles on our journey. We proceeded up the Missouri River, left the last white settlement, and issued out into the wilderness. We proceeded with the utmost caution; always halting before dark, we built a fire and ate our supper; then moving on farther to a secure camping-place, we lit no fire, to avoid attracting the Indians to us. On arriving at the forks of the Platte, we held a council, and resolved to follow up the north branch to its source, thence cross over to Green River, thus striking it much higher up than we had ever been on that stream before. We proceeded accordingly— crossed Green River, and held our course to the head of Salt River. Here we found a party belonging to the general’s company. Winter was now beginning to set in, and it was time for the whole company to go into winter quarters. As nearly as I can recollect, this was the end of October, 1823.

A place of rendezvous had been previously agreed upon, and as it was certain that the various

The Life And Adventures  
Of James P. Beckwourth

---

parties would soon assemble, I concluded to proceed to the rendezvous, and wait the arrival of Sublet, for the delivery of my dispatches, rather than undertake a search for him in the mountain wilderness. I and my companions, therefore, continued with the party until we reached the rendezvous. The parties, one after the other, came slowly in, and Sublet's was the last to arrive. It was now too late for me to return, and I had no alternative but to wait until spring.

Our present rendezvous was in Cache Valley, but Sublet gave orders for all to remove to Salt Lake, which was but a few miles distant, and then go into winter quarters. We accordingly moved to the mouth of "Weaver's Fork," and established ourselves there. When all were collected together for the winter, our community numbered from six to seven hundred souls (from two to three hundred consisting of women and children), all strong and healthy as bears, and all having experienced very good success.

Shortly after we had become well settled down, we had the misfortune to lose about eighty horses, stolen one dark, stormy night by the Pun-naks, a tribe inhabiting the head-waters of the Columbia River. On missing them the next day, we formed a party of about forty men, and followed their trail on foot—the ground was covered with snow at the time. I volunteered with the rest, although fortunately my horses were not among the missing. After a pursuit of five days we arrived at one of their villages, where we saw our own horses among a number of others. We then divided our forces, Fitzpatrick taking command of one party, and a James Bridger of the other. The plan resolved upon was as follows: Fitzpatrick was to charge the Indians, and cover Bridger's party, while they stampeded all the horses they could get away with. I formed one of Captain Bridger's party, this being the first affair of the kind I had ever witnessed. Every thing being in readiness, we rushed in upon the horses, and stampeded from two to three hundred, Fitzpatrick at the same time engaging the Indians, who numbered from three to four hundred. The Indians recovered a great number of the horses from us, but we succeeded in getting off with the number of our own missing, and forty head besides. In the engagement, six of the enemy were killed and scalped, while not one of our party received a scratch. The horses we had captured were very fine ones, and our return to the camp was greeted with the liveliest demonstrations.

We found, on our return from the above marauding expedition, an encampment of Snake Indians, to the number of six hundred lodges, comprising about two thousand five hundred warriors. They had entirely surrounded us with their encampments, adding very materially to our present population. They were perfectly friendly, and we apprehended no danger from their proximity. It appears this was their usual resort for spending the winter; and, after pitching their lodges, which are composed of skins, they proceeded to build a large "medicine lodge."

The word medicine (or, as they call it, Barchk-Parchk) signifies a prophet or dreamer, and is synonymous with the word prophet as employed in the Old Testament. The Indian form of government is a theocracy, and the medicine man is the high-priest. His dreams or prophecies are sacred; if his predictions are not verified in the result, the fault is with themselves; they had disregarded some of his instructions. When by accident his dreams are exactly verified, their confidence in their prophet exceeds all belief. The "medicine lodge" is the tabernacle of the wilderness, the habitation of the Great Spirit, the sacred ark of their faith.

Our long residence with the Snake tribe afforded us an excellent opportunity of acquainting ourselves with the domestic character of the Indians. They often invited us into their medicine lodge to witness their religious ceremonies and listen to their prophesying. The name of the old proph-

---

The Life And Adventures  
Of James P. Beckwourth

---

et was O-mo-qua, which in English means woman's dress. One evening he delivered a prophecy for us.

"I can see," said he, "white people on Big Shell (Platte River); I see them boring a hole in a red bucket; I see them drawing out medicine water (whisky); I see them fighting each other; but Fate (Sublet) has gone down on the other side of the river: he does not see them. He has gone to the white lodges. Where are you going?"

"We are going," answered Fitzpatrick, "to trap on Bear Head and the other small streams in the country of the Black Feet."

"No," said the prophet, "you will go to Sheep Mountain; there you will find the snow so deep that you can not pass. You will then go down Port Neif

to Snake River. If you are fortunate you will discover the Black Feet before they see you, and you will beat them. If they discover you first, they will rub you all out — kill you all. Bad Hand (Fitzpatrick), I tell you there is blood in your path this grass. If you beat the Black Feet, you will retrace your steps and go to Bear River, whose water you will follow until you come to Sage River. There you will meet two white men who will give you news."

To return to my narrative: Mr. Sublet, having left the camp in company with my old companion, Mr. Harris, before we returned, had left a letter of instructions for Fitzpatrick, desiring him to remove our camp as early in the spring as possible back to Cache Valley, and to repair to Weaver's Lake, where he would rejoin him. Sublet and Harris had parted for St. Louis, which they reached in safety after a journey in mid-winter.

We spent the winter very comfortably, and at the opening of spring we all moved — whites and Indians — back to Cache Valley. Soon after we arrived we commenced digging caches to secure seventy-five packs of beaver-skins in the possession of our party. While digging a cache in the bank, the earth caved in, killing two of our party, who were Canadians. The Indians claimed the privilege of burying them, which ceremony they performed by hoisting them up in trees. This has ever been the method of disposing of the dead with most, if not all, of the Rocky Mountain tribes. The body is securely wrapped in blankets and robes fastened with thongs, in which are inclosed the war implements, pipes, and tobacco of the deceased. If he had been a warrior, his war-horse is killed and buried, together with his saddle and other implements, at the foot of the same tree.

One more accident occurred, which at first occasioned us considerable alarm, before we quitted Cache Valley on our excursion. One of our men was out hunting, and coming across an antelope, as he supposed, fired at the animal's head, and killed it. On going to cut the animal's throat, to his surprise he found he had killed one of the Snake Indians, who had put on this disguise to decoy the antelopes near him. This was an accident that we deeply lamented, as the Snakes were very friendly toward us. Before the Indians discovered the accident, we held a council, and resolved to make a precipitate retreat, as we felt very distrustful of the consequences. While we were preparing to start, the chief came among us, and was greatly surprised at our sudden departure, especially as we had given him no previous notice. We excused ourselves by saying we were going to engage in hunting and trapping. He then asked what ailed us, saying we all looked terrified, and wished to know what had happened. Fitzpatrick at length told him what had taken place, and how it came to pass.

"Oh," said the chief, "if that is what you are alarmed at, take off your packs and stay. The Indian

The Life And Adventures  
Of James P. Beckwourth

---

was a fool to use a decoy when he knew the antelope came into the sage every day, and that the white men shoot all they see.”

He then made a speech to his warriors, telling them what had happened, and ordered some of his men to bring in the dead Indian. Then turning to us, he said, “You and the Snakes are brothers; we are all friends; we can not at all times guard against accident. You lost two of your warriors in the bank, the Snakes have just lost one. Give me some red cloth to wrap up the body. We will bury the fallen brave.”

We gave the chief a scarlet blanket, as he had desired, and all was well again.

CHAPTER IX.

The Company removes from Cache Valley on a Hunting and Trapping Excursion.—Discovery of a Band of Black Feet.—A Battle ensues with them.—Description of the Battle.—Return to Rendezvous.—Fulfillment of the Medicine Chief’s Prophecy.

THE peltry and other things not required in our expedition being all safely cached, our whole party — numbering two hundred and fifty, besides women and children — left Cache Valley for the country of the Black Feet, expecting to make a profitable hunt. I had engaged to the Fur Company for the spring hunt for the sum of five hundred dollars, with the privilege of taking for servant the widow of one of the men who had been killed in the bank. She was of light complexion, smart, trim and active, and never tired in her efforts to please me, she seeming to think that she belonged to me for the remainder of her life. I had never had a servant before, and I found her of great service to me in keeping my clothes in repair, making my bed, and taking care of my weapons.

We kept on till we came to Sheep-horn Mountain, but, finding it impassable for the snow, we changed our course, and proceeded down the Port Neif until we arrived at its junction with the Snake River, one of the main branches of the Columbia. No trappers having preceded us on the Port Neif, we met with excellent success all the way to the junction, a course which occupied us three weeks. An advanced party arriving at the junction before the main body came up, immediately upon landing discovered Indians coming down the Snake River. They were not perceived by the Indians, who were as yet at a considerable distance. Our whole force was soon prepared to meet them. Leaving one hundred men in camp, the remaining one hundred and fifty marched up the river, keeping in the timber; our policy being to retain our foes in the open prairie, while we kept the protection of the woods. At last they perceived us; but, seeing that we had the advantage of them, they made signs of great friendship.

Not wishing to be the aggressors, we contented ourselves with observing the enemy, and retired toward our camp, without any hostile demonstration on either side. Seeing signal-smokes arising on every side, we knew an attack on our little band was meditated by their thousands of mounted warriors. We therefore determined on a retreat as the safest course. There being many Indians about our camp, it required a strict watch to be maintained, every man having his gun constantly in hand, and the priming well looked to. We were able to converse with them, as many of our men could speak their language; but they still pretended to entertain toward us feelings of the “most distinguished consideration.” We encamped that night, keeping a strong guard, and saw all around us, as far as the eye could extend, numerous signal-fires.

At daylight one of our men shouted, “Stop the Indians! stop the Indians! My rope is cut!” On looking, we found that three of our best horses had been stolen, notwithstanding our unceas-

The Life And Adventures  
Of James P. Beckwourth

---

ing vigilance. The cry then passed around, "The ropes are cut! Shoot them down! shoot them down!" Rifles began to crack, and six of the Indians fell, five of whom were instantly scalped (for the scalps are taken off with greater ease while the bodies are warm); and the remaining Indian, having crawled into the river after receiving his wound, his scalp was lost. One of their chiefs was among the slain. He was shot in our camp before he had time to make his retreat with the others, who all ran as soon as our camp was alarmed.

Not a moment was then to be lost. We knew that their signal-fires would cover the whole prairie with savages, for we were in the very heart of their country. Packing up, in a few minutes we were on the retreat, which we pressed all day. We encamped the same night, as the Indians did not see fit to follow us.

Soon after this occurrence a party of fur-trappers, consisting of twelve men, under the charge of one Logan, left our company to try their fortune, but were never heard of afterward. Every exertion was subsequently made to obtain some clew to the cause of their disappearance, but nothing was ever learned of them. Beyond doubt, they fell victims to the treachery of the Black Feet.

Our party continued trapping up the Port Neif until we came to Sheep Mountain, which we passed without difficulty, the snow having by this time disappeared. We proceeded on to Bear River, and continued trapping upon that stream and its tributaries until we reached Sage River, where, very unexpectedly, and to our utter surprise, we met "two white men," Black Harris and my old friend Portuleuse.

This verification of the prediction of the old chief was, to say the least, a remarkable coincidence, and one not easily accounted for.

Our two friends informed us that they were from St. Louis, and had left General Ashley and Sublet but a short distance in the rear. We took up our traps and moved immediately to Weaver Lake, and formed a rendezvous to wait the arrival of the general and Sublet. While resting there, a party of sixteen Flat Heads came to our camp, and informed us that there were thirty white men, with women and children, encamped on a creek twelve or fifteen miles distant. They stated that the party had twenty-six guns, but that their ammunition was expended. Having some splendid horses, in the very best condition, I proposed to go and take them some ammunition, in the event of their having need for it on their way to our camp. Provo, Jarvey, and myself mounted three of our fleetest steeds, and found the party in camp. As we had expected, we found they were Campbell's party, among whom were many of our personal friends. They had met with very good fortune in their cruise, and had lost none of their men. We encamped with them that night, and escorted them to the rendezvous the next day.

On our way to the rendezvous we heard singing in our rear, and, looking in the direction of the noise, we discovered a party of five hundred mounted Indians coming directly toward us. "Flat Heads! Flat Heads!" was shouted; and, believing them to be such, I and my two friends wheeled to go and meet them. Approaching within a short distance, to our horror and surprise we discovered they were Black Feet — a tribe who prize white scalps very highly. Wishing to take us all together, probably, they ordered us back — an order we obeyed with alacrity, and we speedily gave the alarm. Placing the women and children in advance, and directing them to make all speed to a patch of willows six miles in front, and there to secure them selves, we formed to hold the Indians in check. The women made good time, considering the jaded state of their animals, for they were all accustomed to horseback-riding.

---

The Life And Adventures  
Of James P. Beckwourth

---

By this time the Indians had commenced charging upon us, not so furiously as was their wont, but they doubtless considered their prey sure, and, farther, did not care to come into too close proximity to our rifles. Situated as we were, it was impossible for them to surround us, for we had a lake on one side and a mountain on the other. They knew, however, that we must emerge into the open country, where their chance of attack would be improved. When they approached too near, we used our rifles, and always with effect; our women the mean while urging on their animals with all the solicitude of mothers, who knew that capture was certain death to their offspring.

The firing continued between both parties during the whole time of our retreat to the willows; in fact, it was a running fight through the whole six miles. On the way we lost one man, who was quite old. He might have saved himself by riding to the front, and I repeatedly urged him to do so, telling him that he could not assist us; but he refused even to spur on his horse when the Indians made their charges. I tarried with him, urging him on, until I found it would be certain death to delay longer. My horse had scarcely made three leaps in advance when I heard him cry, "Oh God, I am wounded!" Wheeling my horse, I called on my companions to save him. I returned to him, and found an arrow trembling in his back. I jerked it out, and gave his horse several blows to quicken his pace; but the poor old man reeled and fell from his steed, and the Indians were upon him in a moment to tear off his scalp. This delay nearly cost two more lives, for myself and Jarvey were surrounded with the Black Feet, and their triumphant yells told us they felt certain of their prey. Our only chance of escape was to leap a slough fifteen feet from bank to bank, which we vaulted over at full speed. One Indian followed us, but he was shot in the back directly upon reaching the bank, and back he rolled into the ditch. We passed on around the slough in order to join our companions, but in doing so were compelled to charge directly through a solid rank of Indians. We passed with the rapidity of pigeons, escaping without any damage to ourselves or horses, although a shower of arrows and bullets whistled all around us. As we progressed, their charges became more frequent and daring; our ammunition now grew very short, and we never used a charge without we were sure of its paying for itself.

At length we gained the willows. If our ammunition had been plenty, we would have fought them here as long as they might have wished. When all was gone, what were we to do with an enemy more than ten times our number, who never grants or receives quarter?

Eroquey proposed one bold charge for the sake of the women and children. "Let us put our trust in God," he exclaimed, "and if we are to die, let us fall in protecting the defenseless. They will honor our memory for the bravery they witnessed."

Sixteen of us accordingly mounted our horses, leaving the remainder to hold out to the last. Eroquey led the charge. In our fierce onset we broke through two ranks of mounted Indians, killing and overturning every thing in our way. Unfortunately, my beautiful horse was killed in his tracks, leaving me alone amid a throng of Indians. I was wounded with an arrow in the head, the scar of which, with many other wounds received since, I shall carry to my grave. My boy Baptiste, seeing my danger, called upon his comrades to assist him to save his brother. They charged a second time, and the Indians who surrounded me were driven back. At that moment Baptiste rode up to me; I sprang on the saddle behind him, and retreated in safety to the willows. The foe still pressed us sorely, but their shots produced little effect except to cut off the twigs of the bushes which formed our hiding-place; as for charging in upon us, they showed some disinclination.

---

The Life And Adventures  
Of James P. Beckwourth

---

To hold out much longer was impossible. Immediate assistance must be had, and it could come from no other place than our camp. To risk a message there seemed to subject the messenger to inevitable death; yet the risk must be encountered by some one. "Who'll go? who'll go?" was asked on all sides. I was wounded, but not severely; and, at a time so pressing, I hardly knew that I was wounded at all. I said, "Give me a swift horse, and I will try to force my way. Do not think I am anxious to leave you in your perilous position."

"You will run the greatest risk," said they. "But if you go, take the best horse."

Campbell then said that two had better go, for there might be a chance of one living to reach the camp. Calhoun volunteered to accompany me, if he had his choice of horses, to which no one raised any objection. Disrobing ourselves, then, to the Indian costume, and tying a handkerchief round our heads, we mounted horses as fleet as the wind, and bade the little band adieu. "God bless you!" shouted the men; the women cried, "The Great Spirit preserve you, my friends." Again we dashed through the ranks of the foe before they had time to comprehend our movement. The balls and arrows flew around us like hail, but we escaped uninjured. Some of the Indians darted in pursuit of us, but, seeing they could not overtake us, returned to their ranks. Our noble steeds seemed to fully understand the importance of the mission they were going on. When about five miles from the camp we saw a party of our men approaching us at a slow gallop. We halted instantly, and, taking our saddle-blankets, signaled to them first for haste, and then that there was a fight. Perceiving this, one man wheeled and returned to the camp, while the others quickened their pace, and were with us in a moment, although they were a mile distant when we made the signal. There were only sixteen, but on they rushed, eager for the fray, and still more eager to save our friends from a horrible massacre. They all turned out from the camp, and soon the road was lined with men, all hurrying along at the utmost speed of the animals they bestrode. My companion and I returned with the first party, and, breaking once more through the enemy's line, rode back into the willows, amid the cheers of our companions and the loud acclamations of the women and children, who now breathed more freely again. The Indians were surprised at seeing a re-enforcement, and their astonishment was increased when they saw a whole line of men coming to our assistance. They instantly gave up the battle and commenced a retreat. We followed them about two miles, until we came to the body of Bolliere — the old man that had been slain; we then returned, bringing his mangled remains with us.

On our side we lost four men killed and seven wounded. Not a woman or child was injured. From the enemy we took seventeen scalps, most of them near the willows; those that we killed on the road we could not stop for. We were satisfied they had more than a hundred slain; but as they always carry off their dead, we could not ascertain the exact number. We also lost two packs of beavers, a few packs of meat, together with some valuable horses.

After attending to our wounded, we all proceeded to camp, where the scalp-dance was performed by all the Half-breeds and women, many of the mountaineers taking part in the dance. The battle lasted five hours, and never in my whole life had I run such danger of losing my life and scalp. I now began to deem myself Indian-proof, and to think I never should be killed by them.

The reader will wonder how a contest could last that length of time when there were but thirty to oppose five hundred men, and we not meet with a greater loss. It is accounted for by the Indian mode of warfare. The Indian is a poor marksman with a gun, more especially on horseback, and, to kill with their arrows, they must be near their mark. They often shoot their arrows when their

The Life And Adventures  
Of James P. Beckwourth

---

horse is in full speed, and, unless they are very near their object, they seldom take effect. When they hunt the buffalo, their horses are trained to keep by the side of their destined victim until the arrow is discharged; then springing directly away, he escapes the charge of the infuriated animal, which becomes dangerous as soon as wounded. Unlike the Indians, we seldom discharged our guns unless sure of our man, for we had no ammunition to waste.

Our victory was considered, under the circumstances, a glorious one, and all who participated in the battle our companions lauded to the skies. The women, too, hailed us as the "bravest of the brave," knowing that we had preserved them from a captivity to which death were preferable. Two days after the battle we were again rejoined by our friends, the Snakes, to the number of four thousand. They all took part in our scalp-dance, and such a scene of rejoicing as we held has seldom been witnessed in the mountains. They deeply lamented that they had not come in season to take part in the battle, so that not one of the Black Feet could have escaped. Their wishes for battle, however, were soon after gratified.

The absent parties began to arrive, one after the other, at the rendezvous. Shortly after, General Ashley and Mr. Sublet came in, accompanied with three hundred pack mules, well laden with goods and all things necessary for the mountaineers and the Indian trade. It may well be supposed that the arrival of such a vast amount of luxuries from the East did not pass off without a general celebration. Mirth, songs, dancing, shouting, trading, running, jumping, singing, racing, target-shooting, yarns, frolic, with all sorts of extravagances that white men or Indians could invent, were freely indulged in. The unpacking of the medicine water contributed not a little to the heightening of our festivities.

We had been informed by Harris, previous to the arrival of the general, that General Ashley had sold out his interest in the mountains to Mr. Sublet, embracing all his properties and possessions there. He now intended to return to St. Louis, to enjoy the fortune he had amassed by so much toil and suffering, and in which he had so largely shared in person.

#### CHAPTER X.

Great Battle with the Black Feet.—Departure of General Ashley.—His Farewell Speech to the Mountaineers.—Removal of our Rendezvous.—Peace between the Flat Heads and Black Feet.—Trading-post at their Village.—I become Son-in-law to the Black Foot Chief.—Trouble in the Family.—Wife punished for Disobedience. —Troubled Waters finally stilled.

Two days after the arrival of the general, the tocsin again sounded through our whole camp, "The Black Feet! the Black Feet!" On they came, making the very earth tremble with the tramp of their fiery war horses. In their advance they surprised three men and two women belonging to the Snakes, who were out some distance from camp, gathering roots. The whole five were instantly overtaken, killed, and scalped. As soon as the alarm was given, the old prophet came to our camp, and, addressing Mr. Sublet, said,

"Cut Face, three of my warriors and two women have just been killed by the Black Feet. You say that your warriors can fight — that they are great braves. Now let me see them fight, that I may know your words are true."

Sublet replied, "You shall see them fight, and then you will know that they are all braves — that I have no cowards among my men, and that we are all ready to die for our Snake friends."

"Now, men," added he, turning to us, "I want every brave man to go and fight these Black Feet, and whip them, so that the Snakes may see that we can fight, and let us do our best before them

The Life And Adventures  
Of James P. Beckwourth

---

as a warning to them. Remember, I want none to join in this battle who are not brave. Let all cowards remain in camp.”

Every man was impatient to take part; but, seeing that his camp would be deserted and his goods exposed, he detained quite a number, as well to guard the goods as to keep the general company, he not wishing to take part in the battle.

There were over three hundred trappers mounted in a few moments, who, with Captain Sublet at their tread, charged instantly on the enemy. The Snake warriors were also on hand, thirsting to take vengeance on the Black Feet for the five scalps of their friends. After retreating before us about five miles, they formed in a place of great security, in a deep hollow on the border of the lake. At our arrival, the battle recommenced in good earnest. We and our allies fought them for about six hours, they certainly displaying great intrepidity, for they would repeatedly issue from their stronghold and make a bold sortie against us. When intrenched in their position, they had a great advantage over us, as it was difficult for a man to approach them without being shot, and to charge on them as they were situated would have occasioned us great loss of life. One Indian issuing from their position was shot through the back bone, thus depriving his legs of all power of motion. Seeing him fall, Sublet said to me, “Jim, let us go and haul him away, and get his scalp before the Indians draw him in.”

We went, and, seizing each a leg, started toward our lines with him: the wounded Indian grasping the grass with both hands, we had to haul with all our strength. An Indian, suddenly springing over their breast-work, struck me a heavy blow in the back with his gun, causing me to loose hold of my leg and run. Both I and my companion were unarmed; and I, not knowing how many blows were to follow, deemed discretion on this particular occasion the better part of valor. Sublet made a strong demonstration against my assailant with his fists, at the same time calling me back and cursing me for running. I returned, and, together, we dragged the Indian to one of our men, also wounded, for him to dispatch. But the poor fellow had not strength sufficient to perforate the Indian’s skin with his knife, and we were obliged to perform the job ourselves.

After six hours’ fighting, during which time a number of the enemy were slain, we began to want nourishment. Sublet requested our allies “to rub out” all their foes while we went and procured refreshment; but on our leaving, they followed us, and we all arrived in camp together. On our return to the field of battle we found the Black Feet were gone, having departed precipitately, as they had left a number of their dead, a thing unusual with the Indians. The fruits of our victory were one hundred and seventy-three scalps, with numerous quivers of arrows, war-clubs, battle-axes, and lances. We also killed a number of their horses, which doubtless was the reason of their leaving so many of their dead on the field of battle. The trappers had seven or eight men wounded, but none killed. Our allies lost eleven killed in battle, besides the five slain before; but none of those killed in battle were scalped.

Had this battle been fought in the open plain, but few of our foes could have escaped; and even as it was, had we continued to fight, not a dozen could have got away. But, considering that we were fighting for our allies, we did not exert ourselves.

As usual on all such occasions, our victory was celebrated in camp, and the exercises lasted several days, conformably to Indian custom.

General Ashley, having disposed of all his goods and completed his final arrangements, departed for St. Louis, taking with him nearly two hundred packs of beaver. Previous to his departure, he

The Life And Adventures  
Of James P. Beckwourth

---

summoned all the men into his presence, and addressed them, as nearly as I can recollect, in the following words:

“Mountaineers and friends! When I first came to the mountains, I came a poor man. You, by your indefatigable exertions, toils, and privations, have procured me an independent fortune. With ordinary prudence in the management of what I have accumulated, I shall never want for any thing. For this, my friends, I feel myself under great obligations to you. Many of you have served with me personally, and I shall always be proud to testify to the fidelity with which you have stood by me through all danger, and the friendly and brotherly feeling which you have ever, one and all, evinced toward me. For these faithful and devoted services I wish you to accept my thanks; the gratitude that I express to you springs from my heart, and will ever retain a lively hold on my feelings.

“My friends! I am now about to leave you, to take up my abode in St. Louis. Whenever any of you return thither, your first duty must be to call at my house, to talk over the scenes of peril we have encountered, and partake of the best cheer my table can afford you.

“I now wash my hands of the toils of the Rocky Mountains. Farewell, mountaineers and friends! May God bless you all!”

We were all sorry to part with the general. He was a man of untiring energy and perseverance, cheerfully enduring every toil and privation with his men. When they were short of food, he likewise hungered; he bore full share in their sufferings, and divided his last morsel with them. There was always something encouraging in his manner; no difficulty dejected him; kind and generous in his disposition, he was loved equally by all. If, which was seldom, he had any disagreement with them, if he discovered himself in fault, he would freely acknowledge his error, and ask forgiveness.

Before he left he had a word of advice for me. “James,” he commenced, “since I have been here I have heard much of your exploits. I like brave men, but I fear you are reckless in your bravery. Caution is always commendable, and especially is it necessary in encounters with Indians. I wish you to be careful of yourself, and pay attention to your health, for, with the powerful constitution you possess, you have many valuable years before you. It is my hearty desire to have you do well, and live to a good old age; correct your fault of encountering risks for the mere ostentatious display of your courage. Whenever you return home, come and see me, James; you will be a thousand times welcome; and, should you ever be in need of assistance, call on me first. Good-by.” He left the camp amid deafening cheers from the whole crowd. I did not see him again until the year 1836.

At the general’s departure, we broke up our camp and marched on to the country of the Flat Heads, on the Snake River. On our arrival at the new rendezvous, we were rejoiced to learn that peace existed between the two nations — the Flat Heads and Black Feet, and that they were in friendly intercourse together. This was very favorable for our purpose; for it is with Indian tribes as with civilized nations, when at war, various branches of business are impoverished, and it becomes inconvenient for those engaged in them to make more than trifling purchases, just for the supply of their immediate wants. Hostilities are still more destructive to Indian commerce than to that of civilized nations, for the reason, that the time and resources — of the whole community are engaged in their prosecution. The “sinews of war” with the Indian mean, literally, himself and his horse.

---

The Life And Adventures  
Of James P. Beckwourth

---

We spent the summer months at our leisure, trading with the Indians, hunting, sporting, and preparing for the fall harvest of beaver. We made acquaintance with several of the Black Feet, who came to the post to trade. One of their chiefs invited Mr. Sublet to establish a branch post in their country, telling him that they had many people and horses, and plenty of beaver, and if his goods were to be obtained they would trade considerably; his being so far off prevented his people coming to Mr. Sublet's camp.

The Indian appearing sincere, and there being a prospect of opening a profitable trade, Sublet proposed to establish a post among the Black Feet if any of the men were willing to risk their scalps in attending it. I offered to go, although I was well aware the tribe knew that I had contributed to the destruction of a number of their braves; but, to the Indian, the greater the brave, the higher their respect for him, even though an enemy. So, taking my boy Baptiste and one man with me, we packed up and started for Beaver River, which is a branch of the Missouri, and in the heart of the Black Foot country.

On our arrival, the Indians manifested great appearance of friendship, and were highly pleased at having a trading-post so conveniently at hand, I soon rose to be a great man among them, and the chief offered me his daughter for a wife. Considering this an alliance that would guarantee my life as well as enlarge my trade, I accepted his offer, and, without any superfluous ceremony, became son-in-law to As-as-to, the head chief of the Black Feet. As-as-to, interpreted, means heavy shield. To me the alliance was more offensive than defensive, but thrift was my object more than hymeneal enjoyments. Trade prospered greatly. I purchased beaver and horses at my own price. Many times I bought a fine beaver-skin for a butcher-knife or a plug of tobacco.

After a residence among them of a few days, I had slight difficulty in my family affairs. A party of Indians came into camp one day, bringing with them three white men's scalps. The sight of them made my blood boil with rage; but there was no help for it, so I determined to wait with patience my day of revenge. In accordance with their custom, a scalp-dance was held, at which there was much additional rejoicing.

My wife came to me with the information that her people were rejoicing, and that she wished to join them in the dance.

I replied, "No; these scalps belonged to my people; my heart is crying for their death; you must not rejoice when my heart cries; you must not dance when I mourn."

She then went out, as I supposed, satisfied. My two white friends, having a great curiosity to witness the performance, were looking out upon the scene. I reproved them for wishing to witness the savage rejoicings over the fall of white men who had probably belonged to our own company. One of them answered, "Well, your wife is the best dancer of the whole party; she out-dances them all."

This was a sting which pierced my very heart. Taking my battle-axe, and forcing myself into the ring, I watched my opportunity, and struck my disobedient wife a heavy blow in the head with the side of my battle-axe, which dropped her as if a ball had pierced her heart.

I dragged her through the crowd, and left her; I then went back to my tent.

This act was performed in such a bold manner, under the very noses of hundreds of them, that they were thunderstruck, and for a moment remained motionless with surprise. When I entered the tent, I said to my companions, "There, now, you had better prepare to hold on to your own scalps, since you take so much interest in a celebration over those of your murdered brethren."

The Life And Adventures  
Of James P. Beckwourth

---

Their countenances turned ashy pale, expecting instant death.

By this time the whole Indian camp was in a blaze. "Kill him! kill him! burn him! burn him!" was shouted throughout the camp in their own language, which I plainly understood. I was collected, for I knew they could kill me but once.

Soon I heard the voice of my father-in-law crying, in a tone which sounded above all, "Stop! hold! hold! warriors! listen to your chief."

All was hushed in an instant, and he continued "Warriors! I am the loser of a daughter, and her brothers have lost a sister; you have lost nothing. She was the wife of the trader; I gave her to him. When your wives disobey your commands, you kill them; that is your right. That thing disobeyed her husband; he told her not to dance; she disobeyed him; she had no ears; he killed her, and he did right. He did as you all would have done, and you shall neither kill nor harm him for it. I promised the white chief that, if he would send a trader to my people, I would protect him and return him unharmed; this I must do, and he shall not be hurt here. Warriors! wait till you meet him in battle, or, perhaps, in his own camp, then kill him; but here his life is sacred. What if we kill them all, and take what they have? It will last but a few suns; we shall then want more. Whom do we get sach-o-path (powder) from? We get it from the whites; and when we have expended what we have, we must do without, or go to them for more. When we have no powder, can we fight our enemies with plenty? If we kill these three men, whom I have given the word of a chief to protect, the white chief will send us no more, but his braves will revenge the death of their brothers. No, no; you shall not harm them here. They have eaten of our meat, and drunk of our water; they have also smoked with us. When they have sold their goods, let them return in peace."

At this time there were a great many Flat Heads at the Black Foot camp, as they were at peace with each other. After the speech of my father-in-law, a great brave of the Flat Heads, called Bad Hand, replied, "Hey! you are yourself again; you talk well; you talk like As-as-to again. We are now at peace; if you had killed these men, we should have made war on you again; we should have raised the battle-axe, never to have buried it. These whites are ours, and the Flat Heads would have revenged their deaths if they had been killed in your camp."

The chief then made a loud and long harangue, after which all became quiet. As-as-to next came to my camp and said, "My son, you have done right; that woman I gave you had no sense; her ears were stopped up; she would not hearken to you, and you had a right to kill her. But I have another daughter, who is younger than she was. She is more beautiful; she has good sense and good ears. You may have her in the place of the bad one; she will hearken to all you say to her." "Well," thought I, "this is getting married again before I have even had time to mourn."

But I replied, "Very well, my father, I will accept of your kind offer," well knowing, at the same time, that to refuse him would be to offend, as he would suppose that I disdained his generosity. My second wife was brought to me. I found her, as her father had represented, far more intelligent and far prettier than her other sister, and I was really proud of the change. I now possessed one that many a warrior had performed deeds of bloody valor to obtain; for it is a high honor to get the daughter of a great chief to wife, and many a bold warrior has sacrificed his life in seeking to attain such a prize.

During the night, while I and my wife were quietly reposing, some person crawled into our couch, sobbing most bitterly. Angry at the intrusion, I asked who was there.

The Life And Adventures  
Of James P. Beckwourth

---

“Me,” answered a voice, which, although well-nigh stifled with bitter sobs, I recognized as that of my other wife, whom every one had supposed dead. After lying outside the lodge senseless for some hours, she had recovered and groped her way to my bed.

“Go away,” I said, “you have no business here; I have a new wife now, one who has sense.”

“I will not go away,” she replied; “my ears are open now. I was a fool not to hearken to my husband’s words when his heart was crying, but now I have good sense, and will always hearken to your words.”

It did really seem as if her heart was broken, and she kept her position until morning. I thought myself now well supplied with wives, having two more than I cared to have; but I deemed it hardly worth while to complain, as I should soon leave the camp, wives and all.

It is a universal adage, “When you are among Romans, do as the Romans do.” I conformed to the customs of a people really pagan, but who regarded them selves both enlightened and powerful. I was risking my life for gold, that I might return one day with plenty, to share with her I tenderly loved. My body was among the Indians, but my mind was far away from them and their bloody deeds. Experience has revealed to me that civilized man can accustom himself to any mode of life when pelf is the governing principle — that power which dominates through all the ramifications of social life, and gives expression to the universal instinct of self-interest. By living with the savages, and becoming familiar with their deeds of injustice and cruelty — witnessing friends and companions struck down without a moment’s warning — if a man has feeling, in a short time it becomes callous toward the relentless savage, who can mock the dying struggles of the white man, and indulge his inhuman joy as he sees his warm life-blood saturate the earth, on which, a few moments since, his victim stood erect in seeming security. Many a companion have I seen fall in the wild prairie or the mountain forest, dying with some dear name upon his lips, his body left as food for the wild beasts, or his bones to whiten in the trackless wilderness.

It will be said, “He might have staid at home, and not have hazarded his life amid such dangers.” So it might be said of the hardy mariner, whose compass guides him through all parts of the pathless ocean. The same motive impels them both on their perilous career — self-interest, which, while it gratifies their individual desires, at the same time enriches and advances society, by adding its acquisitions to the mart of commerce.

We left the Black Foot country after a stay of twenty days, having purchased thirty-nine packs of beaver and several splendid horses at a sum trifling in real value, but what they considered as far exceeding the worth of their exchanges. The chief lent us an escort of two hundred and fifty mounted warriors, in addition to which nearly one hundred Flat Heads returned with us to our camp, whom we met the second day on our road (they having become alarmed for our safety, and being on the way to revenge our deaths, in the event of the Black Feet having proved treacherous). On our arrival we were greeted with the liveliest expressions of joy. Presents were made to our escort, and Mr. Sublet sent my father-in-law a valuable gift for his kindness to me, and as the assurance of his most distinguished consideration. I also sent some dress-patterns to my wives, in addition to the presents I had previously made them. The Black Feet, apparently well satisfied, returned to their homes.

#### CHAPTER XI.

Removal of our Rendezvous.—Battle with our Friends, the Black Feet. —A Race for dear Life.—Great Victory over the Grovan Band of Black Feet.

---

The Life And Adventures  
Of James P. Beckwourth

---

AFTER we had rested we departed for Snake River, making the Black Foot buttes on our way, in order to pass through the buffalo region. I received a severe lecture from Mr. Sublet for my rashness while at the trading post. The second day of our march, one of our men, while fishing, detected a party of Black Feet in the act of stealing our horses in the open day. But for the man, they would have succeeded in making off with a great number. The alarm was given, and we mounted and gave immediate chase. The Indians were forty-four in number, and on foot; therefore they became an easy prey. We ran them into a thicket of dry bush, which we surrounded, and then fired in several places. It was quite dry, and, there being a good breeze at the time, it burned like chaff. This driving the Indians out, as fast as they made their appearance we shot them with our rifles. Every one of them was killed; those who escaped our bullets were consumed in the fire; and as they were all more or less roasted, we took no scalps. None of our party were hurt, except one, who was wounded by one of our men.

On the third day we found buffalo, and killed great numbers of them by a "surround." At this place we lost six horses, three of them belonging to myself, two to a Swiss, and one to Baptiste. Not relishing the idea of losing them (for they were splendid animals), and seeing no signs of Indians, I and the Swiss started along the back track in pursuit, with the understanding that we would rejoin our company at the Buttes. We followed them to the last place of rendezvous; their tracks were fresh and plain, but we could gain no sight of our horses. We then gave up the chase, and encamped in a thicket. In the morning we started to return, and had not proceeded far, when, hearing a noise in our rear, I looked round, and saw between two and three hundred Indians within a few hundred yards of us. They soon discovered us, and, from their not making immediate pursuit, I inferred that they mistook us for two of their own party. However, they soon gave chase. They being also on foot, I said to my companion, "Now we have as good a chance of escaping as they have of overtaking us."

The Swiss (named Alexander) said, "It is of no use for me to try to get away: I can not run; save yourself, and never mind me."

"No," I replied, "I will not leave you; run as fast as you can until you reach the creek; there you can secrete yourself, for they will pursue me."

He followed my advice, and saved himself. I crossed the stream, and when I again appeared in sight of the Indians I was on the summit of a small hill two miles in advance. Giving a general yell, they came in pursuit of me. On I ran, not daring to indulge the hope that they would give up the chase, for some of the Indians are great runners, and would rather die than incur the ridicule of their brethren. On, on we tore; I to save my scalp, and my pursuers to win it. At length I reached the Buttes, where I had expected to find the camp, but, to my inconceivable horror and dismay, my comrades were not there. They had found no water on their route, and had proceeded to the river, forty-five miles distant.

My feelings at this disappointment transcended expression. A thousand ideas peopled my feverish brain at once. Home, friends, and my loved one presented themselves with one lightning-flash. The Indians were close at my heels; their bullets were whizzing past me; their yells sounded painfully in my ears; and I could almost feel the knife making a circuit round my skull. On I bounded, however, following the road which our whole company had made. I was scorching with thirst, having tasted neither sup nor bit since we commenced the race. Still on I went with the speed of an antelope. I kept safely in advance of the range of their bullets, when suddenly the

The Life And Adventures  
Of James P. Beckwourth

---

glorious sight of the camp-smoke caught my eye. My companions perceived me at a mile from the camp, as well as my pursuers; and, mounting their horses to meet me, soon turned the tables on my pursuers. It was now the Indians' turn to be chased. They must have suffered as badly with thirst as I did, and our men cut them off from the river. Night had begun to close in, under the protection of which the Indians escaped; our men returned with only five scalps. According to the closest calculation, I ran that day ninety-five miles. \* \* Concerning this great race for life, it may appear impossible to some for a human being to accomplish such a feat. Those who survive of Sublet's company, and who know the distances from point to point of my celebrated race, will please to correct me publicly if I am in error in the distance. I have known instances of Indian runners accomplishing more than one hundred and ten miles in one day. NARRATOR.

My heels thus deprived the rascally Indians of their anticipated pleasure of dancing over my scalp. My limbs were so much swollen the next morning, that for two or three days ensuing it was with great difficulty I got about. My whole system was also in great pain. In a few days, however, I was as well as ever, and ready to repay the Indians for their trouble.

The third day after my escape, my companion Aleck found his way into camp. He entered the lodge with dejection on his features.

"Oh!" he exclaimed, "I thank God for my escape, but the Indians have killed poor Jim. I saw his bones a few miles back. I will give any thing I have if a party will go with me and bury him. The wolves have almost picked his bones, but it must be he. Poor, poor Jim ! gone at last!"

"Ha!" said some one present, "is Jim killed, then ? Poor fellow ! Well, Aleck, let us go back and give him a Christian burial."

He had seen a body nearly devoured on the way, most likely that of the wounded Indian who had chased me in his retreat from our camp.

I came limping into the crowd at this moment, and addressed him before he had perceived me: "Halloo, Aleck, are you safe?"

He looked at me for a moment in astonishment, and then embraced me so tight that I thought he would suffocate me. He burst into a flood of tears, which for a time prevented his articulation. He looked at me again and again, as if in doubt of my identity.

At length he said, "Oh, Jim, you are safe! And how did you escape? I made sure that you were killed, and that the body I saw on the road was yours. Pshaw! I stopped and shed tears on a confounded dead Indian's carcass!"

Aleck stated that the enemy had passed within ten feet without perceiving him; that his gun was cocked and well primed, so that if he had been discovered there would have been at least one red skin less to chase me. He had seen no Indians on his way to camp.

I was satisfied that some (if not all) of my pursuers knew me, for they were Black Feet, or they would not have taken such extraordinary pains to run me down. If they had succeeded in their endeavor, they would, in subsequent years, have saved their tribe many scalps.

From this encampment we moved on to Lewis's Fork, on the Columbia River, where we made a final halt to prepare for the fall trapping season. Some small parties, getting tired of inaction, would occasionally sally out to the small mountain streams, all of which contained plenty of beaver, and would frequently come in with several skins.

I prepared my traps one day, thinking to go out alone, and see what my luck might be. I mounted my horse, and, on approaching a small stream, dismounted to take a careful survey, to see if there

The Life And Adventures  
Of James P. Beckwourth

---

were any signs of beaver. Carefully ascending the bank of the stream, I peered over, and saw, not a beaver, but an Indian. He had his robe spread on the grass, and was engaged in freeing himself from vermin, with which all Indians abound. He had not seen nor heard me; his face was toward me, but inclined, and he was intently pursuing his occupation.

“Here,” thought I, “are a gun, a bow, a quiver full of arrows, a good robe, and a scalp.”

I fired my rifle; the Indian fell over without uttering a sound. I not only took his scalp, but his head. I tied two locks of his long hair together, hung his head on the horn of my saddle, and, taking the spoils of the enemy, hurried back to camp.

The next morning our camp was invested by two thousand five hundred warriors of the Black Foot tribe. We had now something on our hands which demanded attention. We were encamped in the bend of a river — in the “horse-shoe.” Our lodges were pitched at the entrance, or narrowest part of the shoe, while our animals were driven back into the bend. The lodges, four deep, extended nearly across the land, forming a kind of barricade in front; not a very safe one for the inmates, since, being covered with buffalo hides, they were penetrable to bullet and arrow.

The Indians made a furious charge. We immediately placed the women and children in the rear, sending them down the bend, where they were safe unless we were defeated. We suffered the Indians for a long time to act on the offensive, being content with defending ourselves and the camp. I advised Captain Sublet to let them weary themselves with charging, by which time we would mount and charge them with greater prospect of victory; whereas, should we tire ourselves while they were fresh, we should be overwhelmed by their numbers, and, if not defeated, inevitably lose a great many men.

All the mountaineers approved of my advice, and our plans were taken accordingly. They drove us from our first position twice, so that our lodges were between the contending ranks, but they never broke our lines. When they approached us very near we resorted to our arrows, which all our half-breeds used as skillfully as the Indians. Finally, perceiving they began to tire, I went and ordered the women to saddle the horses in haste. A horse was soon ready for each man, four hundred in number. Taking one hundred and thirty men, I passed out through the timber, keeping near the river until we could all emerge and form a line to charge them, unobserved, in the rear. While executing this diversion, the main body was to charge them in front. While defiling through the timber we came suddenly upon ten Indians who were resting from the fight, and were sitting on the ground unconcernedly smoking their pipes. We killed nine of them, the tenth one making good his retreat.

Our manœuvre succeeded admirably. The Indians were unconscious of our approach in their rear until they began to fall from their horses. Then charging on their main body simultaneously with Captain Sublet’s charge in front, their whole force was thrown into irretrievable confusion, and they fled without farther resistance. We did not pursue them, feeling very well satisfied to have got rid of them as we had. They left one hundred and sixty-seven dead on the field. Our loss was also very severe; sixteen killed, mostly half breeds, and fifty or sixty wounded. In this action I received a wound in my left side, although I did not perceive it until the battle was over.

As usual, there was a scalp-dance after the victory, in which I really feared that the fair sex would dance themselves to death. They had a crying spell after ward for the dead. After all, it was a victory rather dearly purchased.

A few days after our battle, one of our old trappers, named Le Blueux, who had spent twen-

The Life And Adventures  
Of James P. Beckwourth

---

ty years in the mountains, came to me, and telling me he knew of a small stream full of beaver which ran into Lewis's Fork, about thirty miles from camp, wished me to accompany him there. We being free trappers at that time, the chance of obtaining a pack or two of beaver was rather a powerful incentive. Gain being my object, I readily acceded to his proposal. We put out from camp during the night, and traveled up Lewis's Fork, leisurely discussing our prospects and confidently enumerating our unhatched chickens, when suddenly a large party of Indians came in sight in our rear.

The banks of the river we were traveling along were precipitous and rocky, and skirted with a thick bush. We entered the bush without a moment's hesitation, for the Indians advanced on us as soon as they had caught sight of us. Le Blueux had a small bell attached to his horse's neck, which he took off, and, creeping to a large bush, fastened it with the end of his lariat, and returned holding the other end in his hand. This stratagem caused the Indians to expend a great amount of powder and shot in their effort to kill the bell; for, of course, they supposed the bell indicated the position of ourselves. When they approached near enough to be seen through the bushes, we fired one gun at a time, always keeping the other loaded. When we fired the bell would ring, as if the horse was started by the close proximity of the gun, but the smoke would not rise in the right place. They continued to shoot at random into the bushes without injuring us or our faithful animals, who were close by us, but entirely concealed from the sight of the Indians. My companion filled his pipe and commenced smoking with as much sang froid as if he had been in camp.

"This is the last smoke I expect to have between here and camp," said he.

"What are we to do?" I inquired, not feeling our position very secure in a brush fort manned with a company of two, and beleaguered by scores of Black Foot warriors.

In an instant, before I had time to think, crack went his rifle, and down came an Indian, who, more bold than the rest, had approached too near to our garrison. "Now," said Le Blueux, "bind your leggins and moccasins around your head."

I did so, while he obeyed the same order. "Now follow me."

Wondering what bold project he was about to execute, I quietly obeyed him. He went noiselessly to the edge of the bluff, looked narrowly up and down the river, and then commenced to slide down the almost perpendicular bank, I closely following him. We safely reached the river, into which we dropped our selves. We swam close under the bank for more than a mile, until they discovered us.

"Now," said my comrade, "strike across the stream in double quick time."

We soon reached the opposite bank, and found ourselves a good mile and a half ahead of the Indians. They commenced plunging into the river in pursuit, but they were too late. We ran across the open ground until we reached a mountain, where we could safely look back and laugh at our pursuers. We had lost our horses and guns, while they had sacrificed six or eight of their warriors, besides missing the two scalps they made so certain of getting hold of.

I had thought myself a pretty good match for the Indians, but I at once resigned all claims to merit. Le Blueux, in addition to all the acquired wiles of the Red Man, possessed his own superior art and cunning. He could be surrounded with no difficulties for which his inexhaustible brain could not devise some secure mode of escape.

We arrived safe at camp before the first guard was relieved. The following morning we received a

The Life And Adventures  
Of James P. Beckwourth

---

severe reprimand from Captain Sublet for exposing ourselves on so hazardous an adventure. As soon as the wounded were sufficiently recovered to be able to travel, we moved down the river to the junction of Salt River with Guy's Fork, about a mile from Snake River. The next day the captain resolved to pass up to Guy's Fork to a convenient camping-ground, where we were to spend the interval until it was time to separate into small parties, and commence trapping in good earnest for the season.

One day, while moving leisurely along, two men and myself proposed to the captain to proceed ahead of the main party to ascertain the best road, to reconnoitre the various streams — in short, to make it a trip of discovery. We were to encamp one night, and rejoin the main body the next morning. The captain consented, but gave us strict caution to take good care of ourselves.

Nothing of importance occurred that day; but the next morning, about sunrise, we were all thunderstruck at being roused from our sleep by the discharge of guns close at hand. Two of us rose in an instant, and gave the war-hoop as a challenge for them to come on. Poor Cotton, the third of our party, was killed at the first fire. When they saw us arise, rifle in hand, they drew back; whereas, had they rushed on with their battle-axes, they could have killed us in an instant. One of our horses was also killed, which, with the body of our dead comrade, we used for a breast-work, throwing up, at the same time, all the dirt we could to protect ourselves as far as we were able. The Indians, five hundred in number, showered their balls at us, but, being careful to keep at a safe distance, they did us no damage for some time. At length my companion received a shot through the heel, while carelessly throwing up his feet in crawling to get a sight at the Indians without exposing his body. I received some slight scratches, but no injury that occasioned me any real inconvenience.

Providence at last came to our relief. Our camp was moving along slowly, shooting buffalo occasionally, when some of the women, hearing our guns, ran to the captain, exclaiming, "There is a fight. Hark! hear the guns!"

He, concluding that there was more distant fighting than is common in killing buffalo, dispatched sixty men in all possible haste in the direction of the reports. We saw them as they appeared in sight on the brow of a hill not far distant, and sent up a shout of triumph. The Indians also caught sight of them, and immediately retreated, leaving seventeen warriors dead in front of our little fort, whom we relieved of their scalps.

We returned to camp after burying our companion, whose body was literally riddled with bullets. The next day we made a very successful surround of buffalo, killing great numbers of them. In the evening, several of our friends, the Snakes, came to us and told us their village was only five miles farther up, wishing us to move up near them to open a trade. After curing our meat, we moved on and encamped near the friendly Snakes. We learned that there were one hundred and eighty-five lodges of Pun-naks encamped only two miles distant, a discarded band of the Snakes, very bad Indians, and very great thieves. Captain Sublet informed the Snakes that if the Pun-naks should steal any of his horses or any thing belonging to his camp, he would rub them all out, and he wished the friendly Snakes to tell them so.

Two of our men and one of the Snakes having strolled down to the Pun-nak lodges one evening, they were set upon, and the Snake was killed, and the two of our camp came home wounded.

The morning volunteers were called to punish the Pun-naks for their outrage. Two hundred and fifteen immediately presented themselves at the call, and our captain appointed Bridger leader of

The Life And Adventures  
Of James P. Beckwourth

---

the troop.

We started to inflict vengeance, but when we arrived at the site of the village, behold! there was no village there. They had packed up and left immediately after the perpetration of the outrage, they fearing, no doubt, that ample vengeance would be taken upon them.

We followed their trail forty-five miles, and came up with them on Green River. Seeing our approach, they all made across to a small island in the river.

“What shall we do now, Jim?” inquired our leader. “I will cross to the other side with one half the men,” I suggested, “and get abreast of the island. Their retreat will be thus cut off, and we can exterminate them in their trap.”

“Go,” said he; “I will take them if they attempt to make this shore.”

I was soon in position, and the enfilading commenced, and was continued until there was not one left of either sex or any age. We carried back four hundred and eighty-eight scalps, and, as we then supposed, annihilated the Pun-nak band. On our return, however, we found six or eight of their squaws, who had been left behind in the flight, whom we carried back and gave to the Snakes.

On informing the Snakes of what had taken place, they expressed great delight. “Right!” they said “Pun-naks very bad Indians;” and they joined in the scalp-dance.

We afterward learned that the Pun-naks, when they fled from our vengeance, had previously sent their old men, and a great proportion of their women and children, to the mountains, at which we were greatly pleased, as it spared the effusion of much unnecessary blood. They had a great “medicine chief” slain with the others on the island; his medicine was not good this time, at least. We proceeded thence to a small creek, called Black Foot Creek, in the heart of the Black Foot country.

It was always our custom, before turning out our horses in the morning, to send out spies to reconnoitre around, and see if any Indians were lurking about to steal them. When preparing to move one morning from the last-named creek, we sent out two men; but they had not proceeded twenty yards from our corral before a dozen shots were fired at them by a party of Black Feet, bringing them from their horses severely wounded. In a moment the whole camp was in motion. The savages made a bold and desperate attempt to rush upon the wounded men and get their scalps, but we were on the ground in time to prevent them, and drove them back, killing four of their number.

The next day we were overtaken by the Snakes, who, hearing of our skirmish, expressed great regret that they were not present to have followed them and given them battle again. We seldom followed the Indians after having defeated them, unless they had stolen our horses. It was our policy always to act on the defensive, even to tribes that were known enemies. When the Snakes were ready, we all moved on together for the head of Green River. The Indians numbered six or seven thousand, including women and children; our number was nearly eight hundred altogether, forming quite a formidable little army, or, more properly, a moving city. The number of horses belonging to the whole camp was immense.

We had no farther difficulty in reaching Green River, where we remained six days. During this short stay our numberless horses exhausted the grass in our vicinity, and it was imperative to change position.

It was now early in September, and it was time to break up our general encampment, and spread

The Life And Adventures  
Of James P. Beckwourth

---

in all directions, as the hunting and trapping season was upon us. Before we formed our dispersing parties, a number of the Crows came to our camp, and were rejoiced to see us again. The Snakes and Crows were extremely amicable.

The Crows were questioning the Snakes about some scalps hanging on our lodge-poles. They gave them the particulars of our encounter with the Black Feet, how valiantly we had fought them, and how we had defeated them. The Crows were highly gratified to see so many scalps taken from their old and inveterate foes. They wished to see the braves who had fought so nobly. I was pointed out as the one who had taken the greatest number of scalps; they told them they had seen me fight, and that I was a very great brave. Upon this I became the object of the Crows' admiration; they were very anxious to talk to me and to cultivate my acquaintance; but I could speak very little of their language.

One of our men (named Greenwood), whose wife was a Crow, could speak their language fluently; he and his wife were generally resorted to by the Crows to afford full details of our recent victory. Greenwood, becoming tired of so much questioning, invented a fiction, which greatly amused me for its ingenuity. He informed them that White-handled Knife (as the Snakes called me) was a Crow.

They all started in astonishment at this information, and asked how that could be.

Said Greenwood in reply, "You know that so many winters ago the Cheyennes defeated the Crows, killing many hundreds of their warriors, and carrying off a great many of their women and children."

"Yes, we know it," they all exclaimed.

"Well, he was a little boy at that time, and the whites bought him of the Cheyennes, with whom he has staid ever since. He has become a great brave among them, and all your enemies fear him." On hearing this astonishing revelation, they said that I must be given to them. Placing implicit faith in every word that they had heard, they hastened to their village to disseminate the joyful news that they had found one of their own people who had been taken by the Shi-ans when a bar-car-ta (child), who had been sold to the whites, and who had now become a great white chief, with his lodge-pole full of the scalps of the Black Feet, who had fallen beneath his gun and battle axe. This excited a great commotion throughout their whole village. All the old women who remembered the defeat, when the Crows lost two thousand warriors and a host of women and children, with the ensuing captivity, were wondering if the great brave was not their own child; thereupon ensued the greatest anxiety to see me and claim me as a son.

I did not say a word impugning the authenticity of Greenwood's romance. I was greatly edified at the inordinate gullibility of the red man, and when they had gone to spread their tale of wonderment, we had a hearty laugh at their expense.

Our party now broke up; detachments were formed and leaders chosen. We issued from the camp, and started in all directions, receiving instructions to return within a certain day. There were a great many fur trappers with us, who hunted for their own profit, and disposed of their peltry to the mountain traders. The trappers were accompanied by a certain number of hired men, selected according to their individual preferences, the strength of their party being regulated by the danger of the country they were going to. If a party was going to the Black Foot country, it needed to be numerous and well armed. If going among the Crows or Snakes, where no danger was apprehended, there would go few or many, just as was agreed upon among themselves. But

The Life And Adventures  
Of James P. Beckwourth

---

each party was in strict obedience to the will of its captain or leader: his word was supreme law. My party started for the Crow country, at which I was well content; for, being a supposed Crow myself, I expected to fare well among them. It seemed a relief, also, to be in a place where we could rest from our unsleeping vigilance, and to feel, when we rose in the morning, there was some probability of our living till night.

CHAPTER XII.

Departure from the Rendezvous.—Trouble in Camp.—Leave the Party and Traps.—Arrival at the Crow Village.—Great Stir among the Crows.—Joyful Meeting with my Crow Parents, Brothers, and Sisters.—Three Years without seeing a White Man.

I NOW parted with very many of my friends for the last time. Most of the members of that large company now sleep in death, their waking ears no longer to be filled with the death-telling yell of the savage. The manly hearts that shrunk from no danger have ceased to beat; their bones whiten in the gloomy fastnesses of the Rocky Mountains, or moulder on the ever-flowering prairies of the far West. A cloven skull is all that remains of my once gallant friends to tell the bloody death that they died, and invoke vengeance on the merciless hand that struck them down in their ruddy youth.

Here I parted from the boy Baptiste, who had been my faithful companion so long. I never saw him again.

The party that I started with consisted of thirty-one men, most of them skillful trappers (Captain Bridger was in our party), and commanded by Robert Campbell. We started for Powder River, a fork of the Yellow Stone, and, arriving there without accident, were soon busied in our occupation.

A circumstance occurred in our encampment on this stream, trivial in itself (for trivial events sometimes determine the course of a man's life), but which led to unexpected results. I had set my six traps overnight, and on going to them the following morning I found four beavers, but one of my traps was missing. I sought it in every direction, but without success, and on my return to camp mentioned the mystery. Captain Bridger (as skillful a hunter as ever lived in the mountains) offered to renew the search with me, expressing confidence that the trap could be found. We searched diligently along the river and the bank for a considerable distance, but the trap was among the missing. The float-pole also was gone — a pole ten or twelve feet long and four inches thick. We at length gave it up as lost.

The next morning the whole party moved farther up the river. To shorten our route, Bridger and myself crossed the stream at the spot where I had set my missing trap. It was a buffalo-crossing, and there was a good trail worn in the banks, so that we could easily cross with our horses. After passing and traveling on some two miles, I discovered what I supposed to be a badger, and we both made a rush for him. On closer inspection, however, it proved to be my beaver, with trap, chain, and float-pole. It was apparent that some buffalo, in crossing the river, had become entangled in the chain, and, as we conceived, had carried the trap on his shoulder, with the beaver pendent on one side and the pole on the other. We inferred that he had in some way got his head under the chain, between the trap and the pole, and, in his endeavors to extricate himself, had pushed his head through. The hump on his back would prevent it passing over his body, and away he would speed with his burden, probably urged forward by the four sharp teeth of the beaver, which would doubtless object to his sudden equestrian (or rather bovine) journey. We killed the

The Life And Adventures  
Of James P. Beckwourth

---

beaver and took his skin, feeling much satisfaction at the solution of the mystery. When we arrived at camp we asked our companions to guess how and where we had found the trap. They all gave various guesses, but, failing to hit the truth, gave up the attempt.

“Well, gentlemen,” said I, “it was stolen.”

“Stolen!” exclaimed a dozen voices at once.

“Yes, it was stolen by a buffalo.”

“Oh, come, now,” said one of the party, “what is the use of coming here and telling such a lie?”

I saw in a moment that he was angry and in earnest, and I replied, “If you deny that a buffalo stole my trap, you tell the lie.”

He rose and struck me a blow with his fist. It was my turn now, and the first pass I made brought my antagonist to the ground. On rising, he sprang for his gun; I assumed mine as quickly. The bystanders rushed between us, and, seizing our weapons, compelled us to discontinue our strife, which would have infallibly resulted in the death of one. My opponent mounted his horse and left the camp. I never saw him afterward. I could have taken his expression in jest, for we were very free in our sallies upon one another; but in this particular instance I saw his intention was to insult me, and I allowed my passion to overcome my reflection. My companions counseled me to leave camp for a few days until the ill feeling should have subsided.

The same evening Captain Bridger and myself started out with our traps, intending to be gone three or four days. We followed up a small stream until it forked, when Bridger proposed that I should take one fork and he the other, and the one who had set his traps first should cross the hill which separated the two streams and rejoin the other. Thus we parted, expecting to meet again in a few hours. I continued my course up the stream in pursuit of beaver villages until I found myself among an innumerable drove of horses, and I could plainly see they were not wild ones. The horses were guarded by several of their Indian owners, or horse-guards, as they term them, who had discovered me long before I saw them. I could hear their signals to each other, and in a few moments I was surrounded by them, and escape was impossible. I resigned myself to my fate: if they were enemies, I knew they could kill me but once, and to attempt to defend myself would entail inevitable death. I took the chances between death and mercy; I surrendered my gun, traps, and what else I had, and was marched to camp under a strong escort of horse-guards. I felt very sure that my guards were Crows, therefore I did not feel greatly alarmed at my situation. On arriving at their village, I was ushered into the chief’s lodge, where there were several old men and women, whom I conceived to be members of the family. My capture was known throughout the village in five minutes, and hundreds gathered around the lodge to get a sight of the prisoner. In the crowd were some who had talked to Greenwood a few weeks before. They at once exclaimed, “That is the lost Crow, the great brave who has killed so many of our enemies. He is our brother.” This threw the whole village into commotion; old and young were impatient to obtain a sight of the “great brave.” Orders were immediately given to summon all the old women taken by the Shians at the time of their captivity so many winters past, who had suffered the loss of a son at that time. The lodge was cleared for the examining committee, and the old women, breathless with excitement, their eyes wild and protruding, and their nostrils dilated, arrived in squads, until the lodge was filled to overflowing. I believe never was mortal gazed at with such intense and sustained interest as I was on that occasion. Arms and legs were critically scrutinized. My face next passed the ordeal; then my neck, back, breast, and all parts of my body, even down to my feet,

---

The Life And Adventures  
Of James P. Beckwourth

---

which did not escape the examination of these anxious matrons, in their endeavors to discover some mark or peculiarity whereby to recognize their brave son.

At length one old woman, after having scanned my visage with the utmost intentness, came forward and said, "If this is my son, he has a mole over one of his eyes."

My eyelids were immediately pulled down to the utmost stretch of their elasticity, when, sure enough, she discovered a mole just over my left eye!

"Then, and oh then!" such shouts of joy as were uttered by that honest-hearted woman were seldom before heard, while all in the crowd took part in her rejoicing. It was uncultivated joy, but not the less heartfelt and intense. It was a joy which a mother can only experience when she recovers a son whom she had supposed dead in his earliest days. She has mourned him silently through weary nights and busy days for the long space of twenty years; suddenly he presents himself before her in robust manhood, and graced with the highest name an Indian can appreciate. It is but nature, either in the savage breast or civilized, that hails such a return with overwhelming joy, and feels the mother's undying affection awakened beyond all control.

All the other claimants resigning their pretensions, I was fairly carried along by the excited crowd to the lodge of the "Big Bowl," who was my father. The news of my having proved to be the son of Mrs. Big Bowl flew through the village with the speed of lightning, and, on my arrival at the paternal lodge, I found it filled with all degrees of my newly-discovered relatives, who welcomed me nearly to death. They seized me in their arms and hugged me, and my face positively burned with the enraptured kisses of my numerous fair sisters, with a long host of cousins, aunts, and other more remote kindred. All these welcoming ladies as firmly believed in my identity with the lost one as they believed in the existence of the Great Spirit.

My father knew me to be his son; told all the Crows that the dead was alive again, and the lost one was found. He knew it was fact; Greenwood had said so, and the words of Greenwood were true; his tongue was not crooked — he would not lie. He also had told him that his son was a great brave among the white men; that his arm was strong; that the Black Feet quailed before his rifle and battle-axe; that his lodge was full of their scalps which his knife had taken; that they must rally around me to support and protect me; and that his long-lost son would be a strong breastwork to their nation, and he would teach them how to defeat their enemies.

They all promised that they would do as his words had indicated.

My unmarried sisters were four in number, very pretty, intelligent young women. They, as soon as the departure of the crowd would admit, took off my old leggins, and moccasins, and other garments, and supplied their place with new ones, most beautifully ornamented according to their very last fashion. My sisters were very ingenious in such work, and they wellnigh quarreled among themselves for the privilege of dressing me. When my toilet was finished to their satisfaction, I could compare in elegance with the most popular warrior of the tribe when in full costume. They also prepared me a bed, not so high as Haman's gallows certainly, but just as high as the lodge would admit. This was also a token of their esteem and sisterly affection.

While conversing to the extent of my ability with my father in the evening, and affording him full information respecting the white people, their great cities, their numbers, their power, their opulence, he suddenly demanded of me if I wanted a wife; thinking, no doubt, that, if he got me married, I should lose all discontent, and forego any wish of returning to the whites. I assented, of course.

The Life And Adventures  
Of James P. Beckwourth

---

“Very well,” said he, you shall have a pretty wife and a good one.”

Away he strode to the lodge of one of the greatest braves, and asked one of his daughters of him to bestow upon his son, who the chief must have heard was also a great brave. The consent of the parent was readily given. The name of my prospective father-in-law was Black-lodge. He had three very pretty daughters, whose names were Still-water, Blackfish, and Three-roads.

Even the untutored daughters of the wild woods need a little time to prepare for such an important event, but long and tedious courtships are unknown among them.

The ensuing day the three daughters were brought to my father’s lodge by their father, and I was requested to take my choice. “Still-water” was the eldest, and I liked her name; if it was emblematic of her disposition, she was the woman I should prefer. “Stillwater,” accordingly, was my choice. They were all superbly attired in garments which must have cost them months of labor, which garments the young women ever keep in readiness against such an interesting occasion as the present.

The acceptance of my wife was the completion of the ceremony, and I was again a married man, as sacredly in their eyes as if the Holy Christian Church had fastened the irrevocable knot upon us.

Among the Indians, the daughter receives no patrimony on her wedding-day, and her mother and father never pass a word with the son-in-law after — a custom religiously observed among them, though for what reason I never learned. The other relatives are under no such restraint.

My brothers made me a present of twenty as fine horses as any in the nation — all trained war-horses. I was also presented with all the arms and instruments requisite for an Indian campaign.

My wife’s deportment coincided with her name; she would have reflected honor upon many a civilized household. She was affectionate, obedient, gentle, cheerful, and, apparently, quite happy. No domestic thunder-storms, no curtain-lectures ever disturbed the serenity of our connubial lodge. I speedily formed acquaintance with all my immediate neighbors, and the Morning Star (which was the name conferred upon me on my recognition as the lost son) was soon a companion to all the young warriors in the village. No power on earth could have shaken their faith in my positive identity with the lost son. Nature seemed to prompt the old woman to recognize me as her missing child, and all my new relatives placed implicit faith in the genuineness of her discovery. Greenwood had spoken it, “and his tongue was not crooked.” What could I do under the circumstances? Even if I should deny my Crow origin, they would not believe me. How could I dash with an unwelcome and incredible explanation all the joy that had been manifested on my return — the cordial welcome, the rapturous embraces of those who hailed me as a son and a brother, the exuberant joy of the whole nation for the return of a long-lost Crow, who, stolen when a child, had returned in the strength of maturity, graced with the name of a great brave, and the generous strife I had occasioned in their endeavors to accord me the warmest welcome? I could not find it in my heart to undeceive these unsuspecting people and tear myself away from their untutored caresses.

Thus I commenced my Indian life with the Crows. I said to myself, “I can trap in their streams unmolested, and derive more profit under their protection than if among my own men, exposed incessantly to assassination and alarm.” I therefore resolved to abide with them, to guard my secret, to do my best in their company, and in assisting them to subdue their enemies.

Of James P. Beckwourth

---

There was but one recollection troubled me, and that was my lonely one in St. Louis. My thoughts were constantly filled with her. I knew my affection was reciprocated, and that her fond heart beat alone for me; that my promise was undoubtedly confided in, and that prayers were daily offered for my safety, thus distant in the mountains, exposed to every peril. Repeatedly I would appoint a day for my return, but some unexpected event would occur and thrust my resolution aside. Still I hoped, for I had accumulated the means of wealth sufficient to render us comfortable through life; a fortunate return was all I awaited to consummate my ardent anticipation of happiness, and render me the most blessed of mortals.

Before proceeding farther with my Indian life, I will conduct the reader back to our camp the evening succeeding to my disappearance from Bridger. He was on the hill, crossing over to me as agreed upon, when he saw me in the hands of the Indians, being conducted to their village, which was also in sight. Seeing clearly that he could oppose no resistance to my captors, he made all speed to the camp, and communicated the painful news of my death. He had seen me in the charge of a whole host of Shi-ans, who were conducting me to camp, there to sacrifice me in the most improved manner their savage propensities could suggest, and then abandon themselves to a general rejoicing over the fall of a white man. With the few men he had in camp it was hopeless to attempt a rescue; for, judging by the size of the village, there must be a community of several thousand Indians. All were plunged in gloom. All pronounced my funeral eulogy; all my daring encounters were spoken of to my praise. My fortunate escapes, my repeated victories were applauded in memory of me; the loss of their best hunter, of their kind and ever-obliging friend, was deeply deplored by all.

“Alas! had it not been for that lamentable quarrel,” they exclaimed, “ he would still have been among us. Poor Jim! peace to his ashes!”

Bridger lamented that he had advised me to leave the camp, and again that he had separated from me at the Forks. “If we had kept together,” he murmured, “his fate might have been prevented, for doubtless one of us would have seen the Indians in time to have escaped.”

Thus, as I was afterward informed by some of the party, was my memory celebrated in that forlorn camp. Farther, having conceived a deep disgust at that vicinity, they moved their camp to the head waters of the Yellow Stone, leaving scores of beaver unmolested in the streams.

The faithful fellows little thought that, while they were lamenting my untimely fall, I was being hugged and kissed to death by a whole lodge full of near and dear Crow relatives, and that I was being welcomed with a public reception fully equal in intensity, though not in extravagance, to that accorded to the victor of Waterloo on his triumphal entry into Paris.

Bridger had never supposed that the Indians whom he saw leading me away were Crows, he being ignorant that he was so near their territory. His impression was that these were Cheyennes, hence I was given up for dead and reported so to others. My death was communicated to the rendezvous when the fall hunt was over, and there was a general time of mourning in mountain style. I say “mountain style” in contradistinction to the manner of civilized circles, because, with them, when the death of a comrade is deplored, his good deeds alone are celebrated; his evil ones are interred with his bones. Modern politics have introduced the custom of perpetuating all that is derogatory to a man’s fair fame, and burying in deep oblivion all that was honorable and praiseworthy. Hence I say, Give me the mountaineer, despite all the opprobrium that is cast upon his name, for in him you have a man of chivalrous feeling, ready to divide his last morsel with his

---

distressed fellow — ay, and to yield the last drop of his blood to defend the life of his friend.  
CHAPTER VIII.

War between the Crow Nation and other Indian Tribes.—My first Victory as a Crow Indian.—A Melancholy and Sentimental Indian.—Indian Masonry.—Return to Camp.—Great Rejoicing among my innumerable Relatives.—The Little Wife.

AFTER fêting for about ten days among my new neighbors, I joined a small war-party of about forty men, embodied for the ostensible purpose of capturing horses, but actually to kill their enemies. After advancing for three days, we fell in with a party of eleven of the Blood Indians, a band of the Black Foot tribe, immemorial enemies of the Crows. Our chief ordered a charge upon them. I advanced directly upon their line, and had struck down my man before the others came up. The others, after making a furious advance, that threatened annihilation to our few foes, curveted aside in Indian fashion, thus losing the effect of a first onset. I corrected this unwarlike custom. On this occasion, seeing me engaged hand to hand with the enemy's whole force, they immediately came to my assistance, and the opposing party were quickly dispatched. I despoiled my victim of his gun, lance, war-club, bow, and quiver of arrows. Now I was the, greatest man in the party, for I had killed the first warrior. We then painted our faces black (their mode of announcing victory), and rode back to the village, bearing eleven scalps. We entered the village singing and shouting, the crowds blocking up our way so that it was with difficulty we could get along. My wife met me at some distance from our lodge, and to her I gave my greatest trophy, the gun. My pretty sisters next presenting themselves for some share of my spoils, I gave them what remained, and they returned to their lodge singing and dancing all the way. Their delight was unbounded in their new-found relative, who had drawn the first blood. My companions told how I had charged direct upon the enemy, how I struck down the first Indian at a blow, what strength there was in my arm, and a great deal more in my commendation. Again I was lionized and fêted. Relatives I had not seen before now advanced and made my acquaintance. I was feasted by all the sachems and great braves of the village until their kindness nearly fatigued me to death, and I was glad to retire to my lodge to seek a season of quietude.

It was a custom rigidly observed by the Crows, when a son had drawn the first blood of the enemy, for the father to distribute all his property among the village, always largely recollecting his own kin in the proposed distribution. I saw that my achievement had ruined my poor old father. He seemed contented, however, to sacrifice his worldly goods to the prowess of his illustrious son. It was the Crows' religion, and he was thoroughly orthodox. Another traditional memento was to paint a chief's coat with an image of the sun, and hang that, together with a scarlet blanket, in the top of a tree, as an offering to the Great Spirit, to propitiate him to continue his favorable regards.

Several small bands of the village had a grand dance after the victory, each band by itself. I watched them for some time, to see which band or clique contained the most active men. Having singled one, I broke into the ring, and joined the performance with great heartiness. Then their shouts arose, "The great brave, the Antelope, has joined our band!" and their dancing increased in vehemence, and their singing became more hilarious. By the act of joining their clique I became incorporated with their number.

For the next three weeks I staid at home, spending much of my time in trapping round the village. I was accompanied in these excursions by a fine and intelligent Indian, who was without

---

The Life And Adventures  
Of James P. Beckwourth

---

a relative. He was very successful in trapping. One day we went to our traps as usual; he found eight fine beavers, but I had caught none. After flaying them, he offered me four of the skins. I looked at him in surprise, telling him they were caught in his traps—that they were his. Take them,” said he; “you are my friend: your traps have been unlucky to-day.” Previous to this, our success had been about equal.

Then he wished me to sit down and have a talk with him. I sat down by him, and he began. “My friend,” said he, “I am alone in the world all my kindred are gone to the land of the Great Spirit. I now want one good friend — a confidential bosom friend — who will be my brother. I am a warrior — a brave — and so are you. You have been far away to the villages of the white man; your eyes have seen much; you have now returned to your people. Will you be my friend and brother? be as one man with me as long as you live?”

I readily acceded to all his desires.

“It is well,” said he, and “we must exchange traps.” I agreed to it.

“Now we must exchange guns.” It was done.

So we went on until we had exchanged all our personal effects, including horse, clothing, and war implements.

“Now,” said he, “we are one while we live. What I know, you shall know; there must be no secret between us.”

We then proceeded to my father’s lodge, and acquainted him with the alliance we had entered into. He was much pleased at the occurrence, and ever after received my allied brother as his son; but the assumed relationship debarred his ever entering the family as son-in-law, since the mutual adoption attached him as by ties of consanguinity.

Shortly after, another war party was levied for an excursion after the enemy, or their horses, as occasion might offer. The party consisted of eighty or ninety warriors. My adopted brother inquired of me if I was going with the party. I told him I was, and asked the same question of him.

“No,” he said; “we are brothers; we must never both leave our village at once. When I go, you must stay; and when you go, I must stay; one of us must be here to see to the interests of the other. Should we both be killed, then who would mourn faithfully for the other?”

I was, as yet, but a private in the Crow army, no commission having been conferred upon me for what little service I had seen. We started in the night, as is their custom, leaving the village one or two at a time. My brother came to me in the evening, and expressed a wish to speak to me before I left, and pointed to a place where he wished me to meet him alone as we passed out of the village. I went as appointed, and found him there.

He first asked me if I had done any thing in the village.

I did not clearly see the import of his question, and I innocently answered “No.”

“Why, have you not been to war?” Yes.”

“Did the warriors not impart to you the war-path secret?”

“No.”

“Ah! well, they will tell it you to-morrow. Go on, my brother.”

We all assembled together and marched on. In the forenoon we killed a fine fat buffalo, and rested to take breakfast. The intestines were taken out, and a portion of them cleansed and roasted. A long one was then brought into our mess, which numbered ten warriors, who formed a circle, every man taking hold of the intestine with his thumb and finger. In this position, very solemn-

The Life And Adventures  
Of James P. Beckwourth

---

ly regarded by all in the circle, certain questions were propounded to each in relation to certain conduct in the village, which is of a nature unfit to be entered into here. They are religiously committed to a full and categorical answer to each inquiry, no matter whom their confession may implicate. Every illicit action they have committed since they last went to war is here exposed, together with the name of the faithless accomplice, even to the very date of the occurrence. All this is divulged to the medicine men on the return of the party, and it is by them noted down in a manner that it is never erased while the guilty confessor lives. Every new warrior, at his initiation, is conjured by the most sacred oaths never to divulge the war-path secret to any woman, on pain of instant death. He swears by his gun, his pipe, knife, earth, and sun, which are the most sacred oaths to the Indian, and are ever strictly observed.

We marched on until we came to the Missouri River, and I was greatly edified at the novel manner in which we crossed the stream. A sufficient number of robes were brought to the river bank, and a puckering-string run around the entire edge of one, drawing it together until it assumed a globulated form. Five or six guns, with other articles necessary to be kept dry, were put into it, together with a stone for ballast. An Indian would then attach one end of a string to the hide tub, and, taking the other end in his teeth, swim across with the novel bark in tow. When unfreighted on the opposite shore, every thing would be as dry as when embarked. Thus all our freight was conveyed across in a very short time, and we recommenced our march.

We had not proceeded far when our spies returned, and reported that they had discovered a village of the As-ne-boines on Milk River, about forty miles distant. We started for the village, intending to relieve them of a few of their horses, of which we thought they had more than their share. We reached there, and succeeded in driving off nearly three hundred head; but, in re-crossing the Missouri, we lost about one third of them by drowning, in consequence of our crossing over a sand-bar, in which, though covered with water, the animals became involved and perished. We reached home in safety with the remainder without being pursued; indeed, on our whole route we did not see an Indian.

Although we brought no scalps, there was great rejoicing at our success. I received, in the distribution, seventeen horses, which I gave to my friends, taking care to give my father a liberal share, in the place of those he had previously parted with on my account.

I had a month's interval at home. Visiting at my father's lodge one day, he asked me why I did not head a party myself, and go on some expedition as leader. By so doing, he informed me, I stood a better chance of gaining promotion. "Your medicine is good," said he, "and the medicine of both will bring you great success."

I replied that I had been domiciliated there so short a time that I did not wish to be too precipitate in pushing myself forward, and that I preferred to fight a while longer as a brave, rather than risk the responsibility of being leader.

He replied, "Here is your brother-in-law, take him; also your brothers will go with you. If they all get killed, so be it; I will cheerfully submit to old age without them, and die alone."

I reflected that, in order to advance by promotion, I must risk every thing; so I consented to follow his advice.

"Black Panther," my brother-in-law, was anxious to follow me, and there were seven young striplings, from ten to eighteen years old, that my father called his sons, though, in fact, half of them were what I called nephews. I put myself forward as the leader, the party comprising only

The Life And Adventures  
Of James P. Beckwourth

---

two men and the above-mentioned seven boys.

We departed from the village, and pressed on to the head-waters of the Arkansas, coming directly to the Arrap-a-ho and I-a-tan villages. At night we drove off one hundred and eighteen fine horses, with which we moved on in all possible haste toward home. We were then about three hundred miles from our village, and two hundred from the Crow country. In passing through the Park\* \* Formerly one of the greatest places for beaver in North America, and well known to the mountaineers. we discovered three Indians coming toward us, driving a small drove of horses. We concealed ourselves from their view by dropping back over the brow of a small hill directly in their route, until they had approached within ten steps of us. We raised the war-hoop, and rushed out on them, killing two of the three; the third was at a greater distance, driving the cattle, and when he saw the fate of his companions he mounted one of the fleetest, and was soon beyond pursuit. My company had achieved a great victory, the spoils of which were fourteen horses, in addition to those already in our possession, two scalps, one gun, two battle-axes, one lance, bow, quiver, etc. This trivial affair exalted my young brothers in their own esteem higher than the greatest veteran their village contained. During their return home they were anticipating with untiring tongues the ovation that awaited them.

We fell in with no more enemies on our way to the village. The horses we had captured from the three Indians had been stolen by them from the Crows, and as a recovery of lost horses is a greater achievement in Indians' eyes than the original acquisition, our merit was in proportion. We entered singing, with our faces blackened, bearing two scalps and other trophies, and driving one hundred and thirty-two fine horses before us. The whole village resounded with the shouts with which our brethren and kindred welcomed us. I was hailed bravest of the brave, and my promotion appeared certain.

My father and all his family rose greatly in popular favor. The Antelope's distinguished skill and bravery were reflected in lucent rays upon their names. "Great is the Antelope," was chanted on all sides, "the lost son of Big Bowl; their medicine is good and prosperous."

There is one trait in Indian character which civilized society would derive much profit by imitating. Envy is a quality unknown to the savages. When a warrior has performed any deed of daring, his merit is freely accorded by all his associate braves; his deeds are extolled in every public and private reunion, and his name is an incentive to generous emulation. I never witnessed any envious attempt to derogate from the merit of a brave's achievement. No damning with faint praise; none

"Willing to wound and yet afraid to strike;"

no faltering innuendoes that the man has not accomplished so much, after all. The same way with the women. When a woman's husband has distinguished himself, her neighbors, one and all, take a pride in rejoicing with her over her happiness. If a woman displays more ingenuity than common in ornamenting her husband's war-dress, or in adding any fancy work to her own habiliments, she at once becomes the pattern of the neighborhood. You see no flaws picked in her character because of her rising to note; no aspersions cast upon her birth or present standing. Such and such is her merit, and it is deserving of our praise; the fact perceived, it receives full acknowledgment. This leads to the natural conclusion that civilization, in introducing the ostentation of display which is too frequently affected without sufficient ground to stand upon, warps the mind from the charity that is natural to it, and leads to all the petty strifes, and scandalous

The Life And Adventures  
Of James P. Beckwourth

---

tales, and heartburnings that imbitter the lives of so many in civilized life.

I now engaged in trapping until the latter part of December. I celebrated Christmas by myself, as the Indians knew nothing about the birth of our Savior, and it was hard to make them understand the nature of the event. At this time a trading-party started from our village for the Grovan and Mandan country, where there was a trading-post established, for the purpose of buying our winter supply of ammunition, and tobacco, and other necessary articles. I sent thirty beaver-skins, with directions what to purchase with their value, and had marked my initials on all of the skins. These letters were a mystery to the trader. He inquired of the Crows who had marked the skins with those letters. They told him it was a Crow, one of their braves, who had lived with the whites. Kipp, the trader, then sent an invitation to me to visit him at his fort.

While our party was away, our village was attacked by a combined party of the Siouxs and Reke-rahs, numbering two thousand five hundred. So sudden was the attack that they inflicted considerable mischief upon us before we had a chance to collect our forces. But when we at length charged on them, it was decisive. We penetrated their ranks, throwing them into the direst confusion, and they withdrew, leaving two hundred and fifty-three dead on the field. Our loss was thirty-one killed, and one hundred and sixty wounded. They had supposed that nearly all the warriors had left the village, when but a small party had gone, and they met with such a reception as they little expected. I had three horses killed under me, and my faithful battle-axe was red with the blood of the enemy to the end of the haft; fourteen of the Siouxs had fallen beneath it.

Although we had taken such a number of scalps, there was no dancing or rejoicing. All were busied in attending the wounded, or mourning their relatives slain. Their mourning consists in cutting and hacking themselves on every part of the body, and keeping up a dismal moaning or howling for hours together. Many cut off their fingers in order to mourn through life, or, at least, to wear the semblance of mourning; hence the reason of so many Western Indians having lost one or more of their fingers, and of the scars which disfigure their bodies.

The Crows fasten the remains of their dead in trees until their flesh is decayed; their skeletons are then taken down and inhumed in eaves. Sometimes, but not frequently, they kill the favorite horse of the deceased, and bury him at the foot of the tree; but that custom is not followed so strictly with them as with most other tribes.

I was pacifically engaged in trapping during the ensuing winter, and the season being open and pleasant, I met with great success. Could I have disposed of my peltry in St. Louis, I should have been as rich as I coveted.

In the month of March (1826), a small war-party of twenty men left our village on an excursion, and not one of them ever came back, their pack-dogs (used for carrying extra moccasins when a party goes to war) alone returning to intimate their fate. Another party was quickly dispatched, of whom I was appointed leader, and we soon came upon the remains of the massacred party, which yet bore the marks of the weapons that had laid them low. There were also many fresh Indian tracks about the place, which led us to the inference that there were enemies near. We made immediate search for them, and had only marched about six miles when we came upon a village of nine lodges, which we instantly assaulted, killing every man but two. These were on a hill near by, and as they made off we did not follow them. My personal trophies in this encounter were one scalp and the equipments of its wearer; one young girl of about fourteen years, and a little boy. We killed forty-eight of the enemy, and took six women prisoners, together with a large drove

---

The Life And Adventures  
Of James P. Beckwourth

---

of horses, and a valuable stock of beaver, otter, and other skins, with which we returned to the village. There was great rejoicing again (not one of our party was scratched), and the beaver-skins, to the number of one hundred and sixty-three, were bestowed upon me for my skill in command. Before we made the assault we felt convinced that this was the party who had killed our missing friends, and our convictions were substantiated subsequently by recognizing several weapons in their possession which had formerly belonged to our braves; indeed, some of our women prisoners acknowledged that our departed brethren had killed many of their people.

The Crows treat the women whom they take prisoners much better than other tribes do. They do not impose upon them a harder lot than their own women endure, and they allow them to marry into the tribe, after which they are in equal fellowship with them. On finding themselves captives, they generally mourn a day, or two, but their grief quickly subsides, and they seem to care no farther for their violent removal from their own people.

At this time the Crows were incessantly at war with all the tribes within their reach, with the exception of the Snakes and the Flat Heads; and they did not escape frequent ruptures with them, brought about by the Indians' universal obtuseness as to all law relating to the right of property in horses.

The Crows could raise an army of sixteen thousand warriors, and, although there were tribes much more numerous, there were none could match them in an open fight. The Camanches and Apaches have tilted lances with them repeatedly, and invariably to their discomfiture. If the Crows ever suffered defeat, it was when overwhelmed by numbers. One principal cause of their marked superiority was their plentiful supply of guns and ammunition, which the whites always more readily exchanged to them on account of their well-proved fidelity to the white man. When other tribes were constrained to leave their fire-arms in their lodges for want of ammunition, the Crows would have plenty, and could use their arms with great effect against an enemy which had only bow and arrows to shoot with. Farther, they were the most expert horsemen of any Indian tribe, notwithstanding the great name bestowed upon the Camanches and Apaches — those two great terrors of Northern Mexico. I have seen them all, and consider myself in a position to judge, although some, perhaps, will say that I am prejudiced in favor of the Crows, seeing that I am one myself.

Previous to my going among the Crows, the smallpox had been ravaging their camp, carrying them away in thousands, until, as I was informed by themselves, their number was reduced by that fatal Indian scourge to little better than one half. None of their medicine would arrest its course.

After our last-mentioned victory, the Crows met with numerous reverses, which were attended with severe loss of life. In their small war-parties going out on marauding expeditions I had never much confidence, although, individually, they were good warriors; therefore I never took part with them until six or eight of their parties would come back severely handled, and many of their braves slain. Thus their reverses accumulated until the whole village was one scene of mourning, numbers of them being self-mangled in the most shocking manner, and the blood trickling from their heads down to the ground. Some had lost a father, some a brother, some a sweetheart; in short, their appearance was too fearful to look upon, and their cries were too painful to hear. When the last party came in, defeated with serious loss, I had just returned with a party from the pursuit of horse-thieves. We had brought in four scalps, and were performing the scalp-dance in

---

The Life And Adventures  
Of James P. Beckwourth

---

honor of the event. On hearing the disastrous news of the return of the defeated party, we arrested the dance, and I retired into my lodge. Soon, however, a crowd of women came and lifted it directly from over me, leaving me in the open air. They then threw before me immense quantities of all kinds of goods, leggins, moccasins, and other things, until I was nearly covered with their miscellaneous offerings.

I called out, "Enough! I am aroused. I will go with your warriors and revenge the death of your friends." They were all satisfied, and stood still. The news then circulated through the village that the Antelope was aroused, and himself going against the Cheyennes to revenge the death of their braves.

I had as yet met with no reverses since my translation. My medicine had always been good and true. I had never come home without scalps or spoils, and they began to associate my name with victory. The next day five hundred warriors rallied round me, among whom were some who had suffered recent defeat, and their minds were burning for revenge. I sent forward fifty spies, and moved cautiously on with the main body. My reputation was committed to my present success, and I took more than ordinary pains to vindicate the cause they had intrusted to my care. Every man was well armed and mounted, and I had full confidence in our ability to give a good account of double our number.

My command were very curious to learn my tactics. On one occasion, when they were completely harassing me with endless inquiries respecting my plan of attack, I told them, if they would bring me a silver-gray fox, unhurt, my medicine would be complete, and that we were sure of a great victory. In a moment they left me, and shortly returned with a live fox, which they had caught in a surround. I ordered them to choke it to death, and then flay it: it was done, and the beautiful skin was handed to me. I wrapped it round my medicine bow, and made a brief speech, informing them that the cunning of the fox had descended upon my head, and that my wiles would infallibly circumvent the enemy. Like another Alexander, I thus inspired confidence in the breasts of my soldiers, and the spirit I was infusing in others partly communicated itself to my own breast. Some of the spies now returned and informed me that they had discovered a village of Cheyennes containing thirty-seven lodges.

"Well," said I, after learning where it was, "now return and watch them strictly; if anything happens, acquaint me with it promptly."

Away they went, but soon returned again to report that the enemy had moved down the creek (which was then called Antelope Creek, a small tributary of the Missouri), had passed through the cañon, and were encamped at its mouth. I ordered them to send in all the spies except ten, and to direct those ten to keep a sharp look-out. I then determined to follow them down the cañon and attack them at the mouth, thus cutting off their retreat into the cañon; but again I was informed that the enemy had moved farther down, and had encamped in the edge of the timber, with the evident intention of remaining there.

I approached their village with great caution, moving a few miles a day, until I occupied a position on a hill near it, where I had an almost bird's-eye view of the village underneath. I then sent all my extra horses, together with the boys and women, to the rear; I divided the warriors into three parties, reserving the smallest division of fifty men to myself. I placed the two chief divisions in juxtaposition, out of view of the enemy, and, with my small party, intended to descend upon the horses, thinking to draw them after me; my two concealed divisions would then inclose

The Life And Adventures  
Of James P. Beckwourth

---

them as in a lane, and we, returning, would place them under a triple fire. I addressed them briefly, begging them to show the enemy they were Crows, and brave ones too, and that, if they would strictly obey my directions, we could retrieve all our recent reverses.

The two corps d'armée being in position, I was advancing with my small division, when we came suddenly upon two of the enemy, whom we instantly killed and scalped. We rode on, being in full sight of the enemy, but they made no offer to come out of their camp. We tried every means to provoke them to advance; we shook our two scalps at them, yet reeking with blood, and tantalized them all we could; but they would not move. To have charged them as they were situated would have entailed upon us severe loss. We had taken two scalps without loss of blood, more glorious in an Indian's estimation than to take one hundred if a single life was sacrificed. We had braved our foes; we had stamped them as cowards, which is almost equal to death; so, contenting myself with what was done, I concluded to draw off my forces and return home. We were received at the village with deafening applause. Every face was washed of its mourning-paint; gloom gave way to rejoicing; and the scalp-dance was performed with enthusiasm and hilarity. I was illustrated with the distinguished name of Big Bowl (Bat-te-sarsh), and hailed as a deliverer by all the women in the village.

A little girl, who had often asked me to marry her, came to me one day, and with every importunity insisted on my accepting her as my wife. I said, "You are a very pretty girl, but you are but a child; when you are older I will talk to you about it."

But she was not to be put off. "You are a great brave," she said, "and braves have a right to paint the faces of their wives when they have killed the enemies of the Crows. I am a little girl now, I know; but if I am your wife, you will paint my face when you return from the war, and I shall be proud that I am the wife of a great brave, and can rejoice with the other women whose faces are painted by their brave husbands. You will also give me fine things, fine clothes, and scarlet cloth; and I can make you pretty leggins and moccasins, and take care of your war-horses and war implements."

The little innocent used such powerful appeals that, notwithstanding I had already seven wives and a lodge for each, I told her she might be my wife. I took her to the lodge of one of my married sisters, told her that the little girl was my wife, and that she would make her a good wood-carrier, and that she must dress her up finely as became the spouse of a brave. My sister was much pleased, and cheerfully carried out all my requests. As I shall have occasion to speak of this little girl again, in connection with the medicine lodge, I shall say comparatively little of her at this time.

I spent the summer very agreeably, being engaged most of the time in hunting buffalo and trapping beaver. I had now accumulated three full packs, worth in market three thousand dollars. One day I took a fancy to hunt mountain sheep, and for company took my little wife with me. She was particularly intelligent, and I found by her conversation that she surpassed my other wives in sense. She was full of talk, and asked all manner of questions concerning my travels among the great lodges and villages of the white man; if the white squaws were as pretty as herself; and an endless variety of questions. I felt greatly pleased with her piquant curiosity, and imparted much information to her. Fixing her deep black eyes full upon mine, she at length said, "I intend, some time in my life, to go into the medicine lodge." I looked at her with astonishment. The dedication of a female to the service of the Great Spirit is a dangerous attempt. Like

all forms of imposture, it requires a peculiar talent and fitness in the candidate who seeks to gain admission into the sacred lodge. The war-path secret is associated with the ministration, with many other fearful ceremonies. The woman who succeeds in her ambitious project is an honored participant in the sacred service of the Deity through life; but where one succeeds numbers fail, and the failure entails instant death. Three years subsequent to this conversation, I shall have to relate how my little wife, in the breathless silence of ten thousand warriors, passed the fiery ordeal in safety, and went triumphantly into the lodge of the Great Spirit.

I had good success in hunting, killing a great number of sheep, and carried their skins with me to the village. On arriving, I called at the lodge of my allied brother, who insisted on my entering and taking a meal. I accepted his offer, while my little wife ran home to communicate my great success in hunting. Our meal consisted of strips of dried buffalo tongue, which, as the Indians did not half cook it, was a dish I never partook of. What was served me on this occasion, however, was well done, and I ate a hearty meal. Supper completed, I was praising the viands, and chanced to inquire what dish I had been eating. The woman replied that it was tongue, and expressed by her looks that I must have known what it was. My friend, knowing that I had departed from my rule, inferred that I had infringed my medicine, and he started up in horror, shouting, "Tongue! tongue! you have ruined his medicine! should our hero be slain in battle, you are a lost woman." The poor woman was half dead with fear, her features expressing the utmost horror.

I issued from the lodge, bellowing in imitation of the buffalo, protruding my tongue, and pawing up the ground like a bear in fury. This was in order to remove the spell that had settled over me, and recover the strength of my medicine. I recovered at length, and proceeded toward my lodge, commiserated by a large crowd, who all deplored the taking of the food as a lamentable accident. That same evening the village was notified by the crier that on the following day there would be a surround, and all were summoned to attend. I accompanied the party, and the surround was made, several hundred buffaloes being inclosed. On charging among them to dispatch them, we discovered seven Black Foot Indians, who, finding retreat cut off from them, had hastily provided themselves with a sand fort. I struck one of the victims with a willow I had in my hand, and retired thereupon, declaring I had wounded the first enemy. This, I believe I have before mentioned, is a greater honor than to slay any number in battle. I had retired to a short distance, and was standing looking at the fight, when a bullet, discharged from the fort, struck the dagger in my belt, and laid me breathless on the ground. Recovering immediately, I arose, and found myself bleeding at the mouth. Imagining the ball had penetrated some vital place, I gave myself up for dead. I was carried to the village by scores of warriors, who, with me, supposed my wound to be mortal, and were already deploring their warrior's fall. The medicine men surrounded me, and searched for my wound; but, behold! there was only a small discoloration to be seen; the skin was not perforated. The ball was afterward found where I fell, flattened as if struck with a hammer. It was then declared that would recover. The enemy's bullets flattened in contact with my person — my medicine was infallible — I was impenetrable to wound! I did not afford them any light on the matter.

As soon as the poor woman who had entertained me at supper heard that I was wounded, she left for another village, and was not seen again for six months. Supposing herself to have been instrumental in destroying my medicine, and knowing that, if I died, her life would pay the forfeit of her carelessness, she did not dare to return. She chanced to see me unharmed at the village where

The Life And Adventures  
Of James P. Beckwourth

---

she had taken refuge, and then she knew her life was redeemed.

While the doctor and medicine men were going through their spells and incantations previous to uncovering my wound, my relatives, in their solicitude for my life, offered profuse rewards if they would save me. Some offered twenty horses, some fifty, some more, in proportion as their wealth or liberality prompted. The doctors ransomed my life, and they received over five hundred horses for their achievement.

One day a slight dispute arose between one of the braves and myself about some trivial matter, and as both of us were equally obstinate in maintaining our views, we both became angry. My disputant remarked with great superciliousness, "Ugh! you pretend to be a brave, but you are no brave."

We drew our battle-axes at the same instant, and rushed at each other, but before either had an opportunity to strike, the pipe was thrust between us, compelling us to desist, to disobey which is instant death. This is the duty of certain Indians, who occupy the position of policemen in a city. They then said to my antagonist, "You said that 'Big Bowl' was no brave. You lied; we all know that he is brave; our enemies can testify to it, and you dare not deny it any more. Hereafter, if you wish to show which is the greatest brave, wait until you meet the enemy, then we can decide; but never again attempt to take each other's lives."

This interference procured peace. It was not long, however, before we both had a good opportunity to determine the question of our valor. A small party of thirty warriors was embodied, myself and my antagonist being of the number. After a short march we fell in with a war-party of eighteen Cheyennes, who, notwithstanding the disparity of numbers, accepted battle, well knowing that escape was impossible. I pointed out one of the enemy (who I could see by his dress and the peculiarity of his hair was a chief). "You see him?" I said. "Well, we can decide which is the best man now. You charge directly against him by my side."

This he readily assented to, but still I could detect in his countenance an expression which I deciphered, "I would rather not." I saw the Indian we were about to attack open the pan of his gun, and give it a slight tap with his hand to render its discharge certain. He presented his piece, and took the most deliberate aim as we advanced side by side to the attack. The death of one of us seemed inevitable, and I did not like the feeling of suspense. A few spurtings of our chargers, and we were upon him. I seized the muzzle of his gun at the very instant that it exploded, and cut him down with the battle-axe in my right hand. My left cheek was filled with the powder from the discharge, the stains of which remain to this day. My rival did not even strike at the Indian I had killed.

He then said to me, "You are truly a great warrior and a great brave; I was wrong in saying what I did. We are now good friends."

Our few enemies were quickly exterminated, the loss on our side being four wounded, including my powder-wound. My fame was still farther celebrated, for I had again struck down the first man, who was a great chief, and had actually charged up to the muzzle of his gun, what few Indians have the stamina to do. On our return with the spoils of victory we were warmly congratulated by the tribe, and I was still farther ennobled by the additional name of Bull's Robe, conferred on me by my father.

It was now the fall of the year. I had been a Crow for many moons. It was time to repair to the trading post to obtain what articles we needed. I determined to accompany the party, and at least

The Life And Adventures  
Of James P. Beckwourth

---

attend to the sale of my own effects. What peltry I had was worth three thousand dollars in St. Louis, and I was solicitous to obtain something like an equivalent in exchange for it.

We proceeded to Fort Clarke, on the Missouri. I waited until the Indians had nearly completed their exchanges, speaking nothing but Crow language, dressed like a Crow, my hair as long as a Crow's, and myself as black as a crow. No one at the post doubted my being a Crow. Toward the conclusion of the business, one of my tribe inquired in his own language for "be-has-i-pe-hish-a." The clerk could not understand his want, and there was none of the article in sight for the Indian to point out. He at length called Kipp to see if he could divine the Indian's meaning.

I then said in English, "Gentlemen, that Indian wants scarlet cloth."

If a bomb-shell had exploded in the fort they could not have been more astonished.

"Ah," said one of them, "you speak English! Where did you learn it?"

"With the white man."

"How long were you with the whites?" More than twenty years."

"Where did you live with them?"

"In St. Louis."

"In St. Louis! in St. Louis! You have lived twenty years in St. Louis!"

Then they scanned me closely from head to foot, and Kipp said, "If you have lived twenty years in St. Louis, I'll swear you are no Crow."

"No, I am not."

"Then what may be your name?"

"My name in English is James Beckwourth."

"Good heavens! why I have heard your name mentioned a thousand times. You were supposed dead, and were so reported by Captain Sublet."

"I am not dead, as you see; I still move and breathe."

"This explains the mystery," he added, turning to the clerk, "of those beaver-skins being marked 'J. B.' Well, well! if you are not a strange mortal!"

All this conversation was unintelligible to my Crow brethren, who were evidently proud to see a Crow talk, so fluently to the white man.

"Now," I said, "I have seen you transact your business without interposing with a word. You have cleared two or three thousand per cent of your exchanges. I do not grudge it you. Were I in your place I should do the same. But I want a little more liberal treatment. I have toiled hard for what I have obtained, and I want the worth of my earnings."

I set my own price upon my property, and, to the great astonishment of my Indian brethren, I returned with as large a bale of goods as theirs would all together amount to. But, as I have said, an Indian is in no wise envious, and, instead of considering themselves unfairly used, they rejoiced at the white man's profusion to me, and supposed the overplus he had given me was an indemnity for the captivity they had held me in.

On our return I made various presents to all my wives, some of whom I did not see for months together, and to many other relatives. I had still a good stock to trade upon, and could exchange with my brethren at any rate I offered. They placed implicit confidence in my integrity, and a beaver-skin exchanged with me for one plug of tobacco contented them better than to have exchanged it for two with the white man.

I had the fairest opportunity for the acquisition of an immense fortune that ever was placed in

The Life And Adventures  
Of James P. Beckwourth

---

man's way. By saying one word to the tribe I could have kept the white trader forever out of their territory, and thus have gained the monopoly of the trade of the entire nation for any term of years. That I am not now in possession of a fortune equal to that of an Astor or a Girard is solely the fault of my own indolence, and I do not to this moment see how I came to neglect the golden opportunity.

While returning from the trading-post, we fell in with a party of about two hundred and fifty Cheyenne warriors, to oppose whom we numbered but two hundred warriors, besides being encumbered with a still greater number of women. As good fortune would have it, they attacked us in the daytime, while we were moving; whereas, had they but waited till we were encamped, and our horses turned out, I do not see how we could have escaped defeat. In traveling, every warrior led his war-horse by his side, with lance and shield attached to the saddle.

The enemy was first seen by one of our scouts at some little distance from the main body. On seeing they were discovered, they gave chase to him, and continued on until they came upon our whole party. Every man transferred himself to his war-horse, and was instantly ready to receive them. They advanced upon our line, were received without wavering, and finally driven back. It was now our turn to attack. We charged furiously with our whole force, completely sweeping every thing from before us, and killing or disabling at least fifty of the enemy. They rallied and returned, but the reception they met with soon put them to rout, and they fled precipitately into the timber, where we did not care to follow them.

Our loss was severe: nine warriors killed and thirteen wounded, including myself, who had received an arrow in the head — not so serious, however, as to prevent me doing duty. We also lost one pack-horse, laden with goods, but no scalps. We took eleven scalps upon the field, and the Cheyennes afterward confessed to the loss of fifty-six warriors. When we lost a horse in the action, the women would immediately supply its place with a fresh one. We were nearly two hundred miles from home, and we carried our dead all the way thither.

On arriving at home, I found my father greatly irritated. He had lost two hundred and fifty head of horses from his own herd, stolen by the Black Feet, who had raised a general contribution from the whole village. His voice was still for war, and he insisted on giving immediate chase. I dissuaded him from his intention, representing to him his advanced years, and promising to go myself and obtain satisfaction for his losses. He reluctantly consented to this arrangement; but, four or five days after my departure on the errand, his medicine became so strong that he started off with a party, taking an opposite direction to the one I had gone on. My party consisted of two hundred and twenty good warriors, and my course lay for the head-waters of the Arkansas, in the Arrap-a-ho country.

We fell in with no enemies on our way until we arrived at a village which contained upward of one hundred lodges. We formed our plans for assaulting the place the next day, when we discovered four white men, whom we surrounded. The poor fellows thought their last day was come, and I was amused to overhear their conversation.

“They will surely kill us all,” said one.

In what manner will they kill us?” asked another.

“They may burn us,” suggested a third.

Then they communed among themselves, little thinking there was one overhearing them who sympathized with every apprehension they expressed.

---

The Life And Adventures  
Of James P. Beckwourth

---

They summed up their consultation by one saying, "If they attempt to kill us, let us use our knives to the best advantage, and sell our lives as dearly as possible."

"Gentlemen," said I, "I will spare you that trouble."

"Great God!" they exclaimed, "Mr. Beckwourth, is that you?"

"Yes," I replied, "that is my name. You are perfectly safe, but you must not leave our camp till tomorrow."

"For what reason?" they inquired.

"Because there is a village close by which we mean to assault at daybreak, and we do not wish our design to be known."

"Oh," said they, "we should not communicate your designs, and we did not even know of the village."

They then poured out before me a whole sea of misfortunes. They had been trapping — had met with very good success; the Indians had stolen their horses; in attempting to cross the river by means of a badly-constructed raft, the raft had fallen to pieces, and they had lost every thing — peltry, guns, and ammunition. They were now making their way to New Mexico, with nothing to eat and no gun to kill game with. They were among Indians, and were two or three hundred miles from the nearest settlements of New Mexico. I entertained them well while they staid, and, after our assault in the morning, I gave them two guns and twenty rounds of ammunition, and counseled them to take advantage of the surprise of the Indians to make good their escape. One of the four afterward informed me that they reached the settlements in safety, having killed a buffalo and a deer on the way.

We made the assault as appointed. We were mounted on horses we had taken from the village during the night, as Indians go on horse-stealing expeditions on foot. I divided my force into two bodies, giving my principal scout the command of one. I gave orders to run off their horses without risking a battle, if no opposition were offered; but, if they showed fight, to kill whatever came in their way. The Arrap-a-hos are very poor warriors, but on this occasion they defended themselves with commendable zeal and bravery. We were, however, compelled to kill fourteen of them, for our own security, before we could get their horses well started. On our side we had four wounded; and if they had not delayed to scalp the fallen Indians, that might have been avoided. We succeeded in driving away over sixteen hundred horses, all well conditioned, with which we arrived safely at home. My father also returned about the same time with near three thousand head, all superior animals. The Bull's Robe family had certainly done wonders, and we were entertained to the greatest feast I had ever seen. The whole village was illuminated with numerous feux de joie, and such dancing was never known before.

I received another addition to my list of titles in commemoration of this event, Is-ko-chu-e-chu-re, the Enemy of Horses.

A feud now broke out, which had been long brewing, between two different parties in our village, one of which worshiped foxes, and the other worshiped dogs. The warriors of the latter party were called Dog Soldiers, of which I was the leader; the other party was led by Red Eyes. The quarrel originated about the prowess of the respective parties, and was fostered by Red Eyes, on the part of the rival company, and by Yellow Belly (in Indian A-re-she-res), a man in my company. This A-re-she-res was as brave an Indian as ever trod the plain, but he was also a very bad Indian — that is, he was disagreeable in his manners, and very insulting in his conversation.

---

The Life And Adventures  
Of James P. Beckwourth

---

Red Eyes was equally brave, but of a different disposition. His was a reserved pride; the braggadocio of A-re-she-res offended him. This rivalry developed into an open rupture, and the pipemen were obliged to interfere to prevent open hostilities. At length it was proposed, in order to cement a final peace between the two warriors, that each should select from his own party a certain number of men, and go and wage common war against some enemy — the question of bravery to be decided by the number of scalps brought in on each side.

Red Eyes accordingly chose from his party eighteen of the best men, himself making the nineteenth — men who would suffer death rather than show their backs to the enemy. A-re-she-res, with his accustomed fanfaronade, said, "I can beat that party with less men; I will only take sixteen men, and bring in more scalps than they."

He came to me and said, "Enemy of Horses, I want you to go with me and die with me. It is of no use for you to stay with this people; they are not brave any longer. Come with me, and we will enter the spirit land together, where the inhabitants are all brave. There is better hunting ground in the country of the Great Spirit. Come!"

I replied I would rather not go on such an errand. I have women to live for, and defend against the enemies of the Crows; that when I fought I wished to destroy the enemy and preserve my own life. "That," said I, "is bravery and prudence combined."

"Ah !" answered he, "you a leader of the Dog Soldiers, and refuse to go! There are prettier women in the land of the Great Spirit than any of your squaws, and game in much greater abundance. I care nothing about my life: I am ready to go to the land of the Great Spirit. You must go with me; perhaps your medicine will save not only yourself, but all of us. If so, it will be so much the better."

I, not wishing to be thought cowardly, especially by A-re-she-res, at length consented to accompany him, on the condition that he would stifle all harsh feeling against our brethren, and, let our expedition result as it would, accept the decision in good faith, and never refer to the past.

"It is well," he said; let it be as your words speak."

The two parties started on different routes to the Cheyenne country. I regarded it as a foolhardy enterprise, but if it resulted in the establishment of peace, I was contented to take part in it, at whatever personal sacrifice. We used every precaution against a surprise, and A-re-she-res willingly adapted his movements to my counsel; for, though he was as brave as a lion, and fought with the utmost desperation, he was very inconsiderate of consequences, and had no power of calculating present combinations to come at a desired result.

After traveling about twenty days, we arrived at a considerable elevation, from whence we could see, at some distance on the prairie, about thirty of the enemy engaged in killing buffalo. We could also see their village at a distance of three miles.

"There is an opportunity," said A-re-she-res; now let us charge these Indians in the open prairie."

"No, no," I replied; "there are too many of them; the Cheyennes are brave warriors; if you wish to carry home their scalps, we must get into their path and waylay them; by that means we shall kill many of them, and run less risk of our own lives. We shall gain more honor by preserving the lives of our warriors, and taking back the scalps of the enemy, than by sacrificing our lives in a rash and inconsiderate charge."

"Your words are true," said he, "and we will do as you say."

"Then," added I, "turn your robes the hair side out, and follow me."

---

The Life And Adventures  
Of James P. Beckwourth

---

We wound our way down the trail through which they must necessarily pass to reach their village, and kept on until we reached a place where there were three gullies worn by the passage of the water. Through the centre gully the trail passed, thus leaving a formidable position on each side, in which an ambuscade had ample concealment. I divided my party, giving the command of one division to A-re-she-res. We took our stations in the ditches on each side the trail, though not exactly opposite to each other. I directed the opposite party not to fire a gun until they should hear ours, and then each man to take the enemy in the order of precedence. The unsuspecting Cheyennes, as soon as they had finished butchering and dressing the buffalo, began to approach us in parties of from three to eight or ten, their horses loaded with meat, which they were bearing to the village. When there were about a dozen abreast of my party, I made a signal to fire, and nine Cheyennes fell before our balls, and eight before those of A-re-she-res's party. Some few of the enemy who had passed on, hearing the guns; returned to see what the matter was, and three of them became victims to our bullets. We all rushed from our hiding-places then, and some fell to scalping the prostrate foe, and some to cutting the lashings of the meat in order to secure the horses, the remainder keeping the surviving enemy at bay. Having taken twenty scalps, we sprang upon the horses we had freed from their packs, and retreated precipitately, for the enemy was coming in sight in great numbers.

We made direct for the timber, and, leaving our horses, took refuge in a rocky place in the mountain, where we considered ourselves protected for a while from their attacks. To storm us in front they had to advance right in the face of our bullets, and to reach us in the rear they had to take a circuitous route of several miles round the base of the mountain. The enemy evinced the utmost bravery, as they made repeated assaults right up to the fortification that sheltered us. Their bullets showered around us without injury, but we could bring down one man at every discharge. To scalp them, however, was out of the question.

During the combat a great Cheyenne brave, named Leg-in-the-water, charged directly into our midst, and aimed a deadly thrust with his lance at one of our braves. The warrior assailed instantly shivered the weapon with his battle-axe, and inflicted a ghastly wound in his assailant's shoulder with a second blow. He managed to escape, leaving his horse dead in our midst.

By this time we were encompassed with the enemy, which induced the belief in our minds that retreat would be the safest course. None of our party was wounded except A-re-she-res, who had his arm broken with a bullet between the shoulder and elbow. He made light of the wound, only regretting that he could no longer discharge his gun; but he wielded his battle-axe with his left hand as well as ever.

When night came on we evacuated our fortress, unperceived by our enemies. They, deeming our escape impossible, were quietly resting, intending to assault us with their whole force in the morning, and take our scalps at all hazards. Moving with the stealth of a cat, we proceeded along the summit of a rocky cliff until we came to a cleft or ravine, through which we descended from the bluff to the bottom, which was covered with a heavy growth of timber. We then hastened home, arriving there on the twenty-eighth day from the time we left.

They had given us over for lost; but when they saw us returning with twenty scalps, and only one of our party hurt, their grief gave way to admiration, and we were hailed with shouts of applause. Our rival party, under Red Eyes, had returned five or six days previously, bringing with them seventeen scalps, obtained at the loss of one man. Our party was declared the victor, since we had

---

The Life And Adventures  
Of James P. Beckwourth

---

taken the greater number of scalps, with the weaker party, and without loss of life, thus excelling our rivals in three several points. Red Eyes cheerfully acknowledged himself beaten, good feeling was restored, and the subject of each other's bravery was never after discussed.

We had still another advantage, inasmuch as we could dance, a celebration they were deprived of, as they had lost a warrior; they, however, joined our party, and wanted nothing in heartiness to render our dance sufficiently boisterous to suffice for the purpose of both.

All the dancing is performed in the open air, with the solid ground for a floor. It consists of jumping up and down, intermixed with violent gestures and stamping; they keep time with a drum or tambourine, composed of antelope-skin stretched over a hoop, the whole party singing during the performance.

#### CHAPTER XIV.

Great Loss of Horses in the Mountains.—Destructive Battle with the Black Feet.—Storming of their Natural Fort.—Trouble with the Cheyennes.

WE went along without noteworthy occurrence until the following March, when we moved from the western to the eastern side of what was at that time called Tongue River Mountain, one of the peaks of the Rocky Mountain chain. The buffaloes had receded from the environs of our old camping-ground, and had been attracted to the region whither we removed in consequence of the grass being in a more forward state.

Our community numbered ten thousand souls — men, women, and children — together with an immense number of horses. In crossing the mountain, we found the snow to be of so great depth, being farther increased with a three days' recent storm, that the mountain was impassable. In this severe journey, which occupied three days, we had twelve hundred horses perish in the snow. Previously, the Black Feet had stolen eight hundred head, and we were in no condition to follow them, as we were all engaged in packing up for removal. We reached the prairie, on the eastern side of the mountain, after a toilsome journey, and found good camping-ground on Box Elder Creek. The morning following our arrival we started on a surround, in parties of fifty and upward, as our whole population was without meat. I rode a pack-horse, and three of my wives were with me, each leading a saddle-horse. I had not proceeded far before I heard a noise that sounded very much like a war-hoop. I stopped my horse to listen. Those near me said it was a signal from one of the parties, who had discovered buffalo, and we proceeded on our journey. Soon, however, I heard the yell again, and I became satisfied there was something more than buffalo astir. I rode to a small eminence close by, and descried a party of our hunters at a distance making signals for others to succor them. I turned back to my wives, and dispatched two of them to the village for my war instruments, and then galloped on to ascertain the cause of the alarm. Not more than fifty of our warriors were then before me.

I then learned that they had before them a party of one hundred and sixty Black Foot warriors, who had thrown themselves into an apparently impregnable fortress. It was a stronghold manifestly thrown up in some of Nature's grand convulsions, it would seem, for the very purpose to which it was now applied. It was a huge mass of granite, forming a natural wall in front of a graduated height, varying from twenty-five feet to six feet, the lowest part; it was solid, and nearly perpendicular all round.

There was in our camp a young Kentuckian named Robert Mildrum, naturally a brave fellow, though he seldom went out in the war parties; but when the village was assaulted, he always

The Life And Adventures  
Of James P. Beckwourth

---

fought like a tiger. He was a good trapper and a skillful blacksmith, and had been out in the employ of the American Fur Company. I met him while we were surveying the enemy's stronghold. I said to him, "Mildrum, if the adage is true, there is policy in war. These Indians make no question of our bravery; had we not better resign to them the brunt of this encounter, and not expose our lives in a cause that we have no concern in? How do you intend to act?"

As for me, "said Mildrum, "I must be in the fray. If we are to see any fun, I want my share of the entertainment."

"Well," said I, "I shall endeavor to keep by you."

The Indians had by this time assembled to the number of from five to seven hundred, and were watching the fort indecisively, awaiting instructions from the chief. Many had succeeded in running and sheltering under the wall, while several had been shot in making the attempt. I ran to the wall to reconnoitre it, and soon saw there were two ways in which it could be taken; one was by bombardment, and the other was by storm. Bombardment was out of the question, as our heaviest calibre was a rifle-bore. I waited to see what steps would be taken.

Long Hair, the head chief of the nation, said, "Warriors, listen! Our marrow-bones are broken; the enemy has chosen a strong fort; we can not drive them from it without sacrificing too many men. Warriors, retreat !"

I replied, "No; hold! Warriors, listen ! If these old men can not fight, let them retire with the women and children. We can kill every one of these Black Feet: then let us do it. If we attempt to run from here, we shall be shot in the back, and lose more warriors than to fight and kill them all. If we get killed, our friends who love us here will mourn our loss, while those in the spirit land will sing and rejoice to welcome us there, if we ascend to them dying like braves. The Great Spirit has sent these enemies here for us to slay; if we do not slay them, he will be angry with us, and will never suffer us to conquer our enemies again. He will drive off all our buffaloes, and will wither the grass on the prairies. No, warriors! we will fight as long as one of them survives. Come, follow me, and I will show you how the braves of the great white chief fight their enemies!"

"Enemy of Horses," exclaimed hundreds of the brave and impatient warriors who were crowded round me, "lead us, and we will follow you to the spirit land."

Accepting the charge, I stationed a large body of those who were never known to flinch on one side of the position, which I, with my followers, intended to scale. I thus thought to engage the attention of the enemy until we made good our entrance, when I felt no longer doubtful of success. I then told them as I threw up my shield the third time, and shouted "Hoo-ki-hi," they were to scale the wall as fast as possible, and beat down whatever resistance might be offered them.

I had divested myself of all my weapons except my battle-axe and scalping-knife, the latter being attached to my wrist with a string. I then made the signal, and when I raised the shout "Hoo-ki-hi," the party opposite began to hoist one another up. When I sprang for the summit of the wall, I found that my women were holding my belt; I cut it loose with my knife, and left it in their hands. I was the first on the wall, but was immediately followed by some scores of warriors. The enemy's whole attention, when we entered the arena, was directed to the opposite party, and we had time to cut numbers down before they were aware of our entrance. The carnage for some minutes was fearful, and the Black Feet fought with desperation, knowing their inevitable doom if taken. The clash of battle-axes, and the yells of the opposing combatants were truly appalling. Many leaped the wall only to meet their certain doom below, where hundreds of battle-axes and

---

The Life And Adventures  
Of James P. Beckwourth

---

lances were ready to drink their blood as soon as they touched ground. The interior surface of this huge rock was concave, and the blood all ran to the centre, where it formed a pool, which emitted a sickening smell as the warm vapor ascended to our nostrils. It was also a work of great difficulty to keep one's feet, as the mingled gore and brains were scattered every where round this fatal place. The blood of the Crow and the Black Foot mingled together in this common pool, for many of our warriors fell in this terrible strife.

All was silent within a few minutes after we had gained an entrance. Victims who were making away with their bowels ripped open were instantly felled with the battle-axe and stilled in death. The wounded were cared for by their friends, and the dead removed from sight. Upward of forty Crows were killed, and double the number wounded. There were engaged on the side of the Crows about twenty white men, and only one was wounded, though nearly all scaled the wall with the Indians. Mildrum was seriously injured by leaping from the heights after an Indian, but he soon recovered.

Our spoils were one hundred and sixty scalps, and an immense quantity of guns and ammunition, a large amount of dried meats, with arrows, lances, knives, in great abundance.

Here an incident happened with my little wife and mother worth mentioning. They were seated outside, and under the wall, when Owl Bear, one of the chiefs, happening to pass, asked the girl if she was not the wife of the Enemy of Horses. She answered that she was.

"I thought so," he said, "because you are such a pretty little squaw; but you have no husband now; he was shot through the head in the fort, and instantly killed; and here you are playing with sticks!"

The poor thing, together with her mother, screamed out at the intelligence, and, seizing a battle-axe, each cut off a finger. The girl then stabbed her forehead with a knife, and was instantly dripping with blood. The chief came laughing to me, and said, "That little wife of yours loves you better than any of your other wives."

"How do you know?" I inquired.

"Because I told them all you were dead, and she was the only one that cut off a finger;" and he laughed aloud as he passed on.

Soon, however, she climbed the wall, and forced her way into the fort, and came directly to me. She presented a sickening spectacle, and was covered entirely with blood. Seeing me, she burst into tears, and as soon as she could articulate, said, "Why, you are not dead, after all! Owl Bear told me you were killed, and I came to seek your body."

"Who are you mourning for?" I asked; "is your brother or father scalped?"

"No; I mourned because I thought you were killed; Owl Bear told me you were."

"You must not believe all you hear," I said; "some Indians have crooked tongues. But come and spread your robe, and carry this gun and spoils of my first victim to the village, and there wash your face and bind up your finger."

She did as I directed her, and departed.

As soon as we had collected all the trophies bequeathed us by our fallen foes, and gathered all our own dead, we moved back to the new camp. On our way, I exerted myself to the utmost to console the afflicted mourners. I told them that their friends were happy in the spirit land, where there were no enemies to fight, where all was everlasting contentment, and where they were happy in endless amusement. I said that in a few days I would avenge the fall of our warriors, and

The Life And Adventures  
Of James P. Beckwourth

---

depart for that peaceful land myself.

I could plainly see that this last promise afforded them more satisfaction than all my other consoling remarks; but I disliked to see their horrid fashion of mourning, and my promise of future victory speedily washed their faces of their present grief; for a promise from me was confided in by all the tribe. There was, of course, no dancing, for we had lost too many warriors; but in the evening there was great visiting throughout the village, to talk over the events of the day, and hear the statements of those who had taken part in the battle. Long Hair came to the lodge of my father to congratulate me on my great feat in scaling the wall, and to talk of the victory of his people achieved through my valor. All who were present related the deeds they had performed. As each narrated his exploits, all listened with profound attention. While this was going on, my little wife, who sat near by, crawled behind me, and, whispering in my ear, inquired if I had obtained any coos. These coos she inquired after are the same as counts in a game of billiards: the death of one warrior counts as one; of two warriors counts as two; every battle-axe or gun taken counts one to the victor's merit. I said I had not, at which she looked aghast. But when the question was put to me by the chief shortly after, I answered "Eleven." On this she administered eleven taps on my back with her finger, and again whispered, "Ah! I thought your tongue was crooked when you told me you had no coos." All the coos are registered in the great medicine lodge in favor of the brave who wins them.

I trust that the reader does not suppose that I waded through these scenes of carnage and desolation without some serious reflections on the matter. Disgusted at the repeated acts of cruelty I witnessed, I often resolved to leave these wild children of the forest and return to civilized life; but before I could act upon my decision, another scene of strife would occur, and the Enemy of Horses was always the first sought for by the tribe. I had been uniformly successful so far; and how I had escaped, while scores of warriors had been stricken down at my side, was more than I could understand. I was well aware that many of my friends knew of the life I was leading, and I almost feared to think of the opinions they must form of my character. But, in justification, it may be urged that the Crows had never shed the blood of the white man during my stay in their camp, and I did not intend they ever should, if I could raise a voice to prevent it. They were constantly at war with tribes who coveted the scalps of the white man, but the Crows were uniformly faithful in their obligations to my race, and would rather serve than injure their white brethren without any consideration of profit.

In addition to this, Self-interest would whisper her counsel. I knew I could acquire the riches of Cræsus if I could but dispose of the valuable stock of peltry I had the means of accumulating. I required but an object in view to turn the attention of the Indians to the thousands of traps that were laid by to rust. I would occasionally use arguments to turn them from their unprofitable life, and engage them in peaceful industry. But I found the Indian would be Indian still, in spite of my efforts to improve him.

They would answer, "Our enemies steal our horses; we must fight and get them back again, or steal in turn. Without horses we can make no surrounds, nor could we, to protect our lives, fight our foes when they attack our villages."

Of course these arguments were unanswerable. So long as they were surrounded with enemies, they must be prepared to defend themselves. The large majority of Indian troubles arise from their unrestrained appropriation of each other's horses. It is their only branch of wealth; like the

---

The Life And Adventures  
Of James P. Beckwourth

---

miser with his gold, their greed for horses can not be satisfied. All their other wants are merely attended to from day to day; their need supplied, they look no farther; but their appetite for horses is insatiable: they are ever demanding more.

Mildrum and myself had a long conversation on the subject while he was smarting with the injury he received in leaping from the fort. He would say, "Beckwourth, I am pretty well used to this Indian life; there is a great deal in it that charms me. But when I think of my old Kentucky home — of father, mother, and other friends whom I tenderly love, and with whom I could be so happy, I wonder at the vagabond spirit that holds me here among these savages, fighting their battles, and risking my life and scalp, which I fairly suppose exceeds in value ten thousand of these bloodthirsty heathen. How, in the name of all that is sacred, can we reconcile ourselves to it? Why don't we leave them?"

The medicine men held a council, and resolved to remove the village; the Great Spirit was displeased with the spot, and had therefore suffered all our warriors to be killed. We accordingly pulled up stakes and moved a short distance farther.

While we were busy moving, my little squaw angered me, and I drove her away. She not daring to disobey me, I saw no more of her until she supposed my anger was appeased. She then came to the lodge while I was conversing with my brothers, and, putting her childish head into the door, said humbly, "I know you are angry with me, but I want you to come and stay at our lodge tonight; we are outside the village, and my father and mother are afraid."

"Yes," said my brother, "she has no ears now; she is but a child; she will have ears when she grows older; you had better go and protect the old people."

I told her to run home, and I would soon follow.

I went to the lodge accordingly. In the night I heard the snorting of horses, which were tied near the lodge door. I crept softly out and looked carefully around. I then crawled, without the least noise, out of the lodge, and caught sight of an Indian, who I knew was there for no good purpose. He was using the utmost precaution; he had a sharp-pointed stick, with which he raised the leaves that lay in his way, so that his feet might not crush them, and thus alarm the inmates of the lodge. Every step brought him nearer to the animals, who, with necks curved and ears erect, gave an occasional snort at the approach of the Indian. This would bring him to a halt. Then again he would bring his stick into action, and prepare a place for another step, not mistrusting that he was approaching the threshold of death. The ropes were tied close to the lodge door, and to untie them he must approach within six feet of where I lay on the ground. I let him advance as near as I thought safe, when, with one bound, I grappled him, and gave the war-hoop. He was the hardest to hold that ever I had my arms around, but I had both his arms pinned in my embrace round his lithe and nimble body, and he could not release one so as to draw his knife. Instantly we were surrounded with fifty armed warriors; and when I saw a sufficient breastwork round about, I released my hold and stepped back. He was riddled with bullets in an instant, and fell without a cry. His scalp sufficed to wash off the mourning-paint from every face in the village, and all was turned into mirth, although this general change in feeling did not restore the dismembered fingers or heal their voluntary wounds. Greater than ever was the Enemy of Horses, and I received a still more ennobling appellation, Shas-ka-o-hush-a, the Bobtail Horse. The village exhausted itself in showing its admiration of my exploit; and my single scalp was greeted with as much honor as if I had slaughtered a hundred of the enemy.

---

CHAPTER XV.

Short Account of Pine Leaf, the Crow Heroine. —Twenty Days' Battle with the Cheyennes. —Return of the Village to the west Side of the Mountains. —Letter from M'Kenzie —Visit to his Trading-post at the Mouth of the Yellow Stone.

IN connection with my Indian experience, I conceive it to be my duty to devote a few lines to one of the bravest women that ever lived, namely, Pine Leaf — in Indian, Bar-chee-am-pe. For an Indian, she possessed great intellectual powers. She was endowed with extraordinary muscular strength, with the activity of the cat and the speed of the antelope. Her features were pleasing, and her form symmetrical. She had lost a brother in the attack on our village before mentioned — a great brave, and her twin brother. He was a fine specimen of the race of red men, and bade fair to rise to distinction; but he was struck down in his strength, and Pine Leaf was left to avenge his death. She was at that time twelve years of age, and she solemnly vowed that she would never marry until she had killed a hundred of the enemy with her own hand. Whenever a war-party started, Pine Leaf was the first to volunteer to accompany them. Her presence among them caused much amusement to the old veterans; but if she lacked physical strength, she always rode the fleetest horses, and none of the warriors could outstrip her. All admired her for her ambition, and as she advanced in years, many of the braves grew anxious for the speedy accomplishment of her vow. She had chosen my party to serve in, and when I engaged in the fiercest struggles, no one was more promptly at my side than file young heroine. She seemed incapable of fear; and when she arrived at womanhood, could fire a gun without flinching, and use the Indian weapons with as great dexterity as the most accomplished warrior.

I began to feel more than a common attachment toward her. Her intelligence charmed me, and her modest and becoming demeanor singled her out from her sex. One day, while riding leisurely along, I asked her to marry me provided we both returned safe. She flashed her dark eye upon mine, "You have too many already," she said. "Do you suppose I would break my vow to the Great Spirit? He sees and knows all things; he would be angry with me, and would not suffer me to live to avenge my brother's death."

I told her that my medicine said that I must marry her, and then I could never be vanquished or killed in battle. She laughed and said, "Well, I will marry you."

"When we return?"

"No; but when the pine-leaves turn yellow."

I reflected that it would soon be autumn, and regarded her promise as valid. A few days afterward it occurred to my mind that pine-leaves do not turn yellow, and I saw I had been practiced upon. When I again spoke to her on the subject, I said, "Pine Leaf, you promised to marry me when the pine-leaves should turn yellow: it has occurred to me that they never grow yellow."

She returned no answer except a hearty laugh.

"Am I to understand that you never intend to marry me?" I inquired.

"Yes, I will marry you," she said, with a coquettish smile.

"But when?"

"When you shall find a red-headed Indian."

I saw I advanced nothing by importuning her, and I let the matter rest. However, to help her on with her vow, I never killed an Indian if she was by to perform it for me, thinking that when her number were immolated there might be better chance of pressing my suit.

The Life And Adventures  
Of James P. Beckwourth

---

We frequently shifted our camping-ground, in order to keep up with the buffalo and furnish our horses with sufficient grass, for we had such an immense number that the prairie round our lodges in a few days had the appearance of a closely-mown meadow. Finally, we removed to the western side of the mountain again, and encamped on Little Horn River, one of the sources of the Yellow Stone. Shortly after our encampment, we found there was a village of Cheyennes about twelve miles distant, and an incessant warfare was maintained between the two villages for twenty days. Sometimes they would take three or four Crow scalps; in return, our party would retaliate by taking as many of theirs. Thus they went on, with varying fortune, during the whole twenty days.

I had never been engaged in these skirmishes; but one evening, I, with three others, among whom was Yellow Belly, resolved to go on an adventure. Accordingly, we started for the Cheyenne, arriving there the next morning, and unhesitatingly entered their village while the inmates were quietly reposing. After passing through one quarter of their village, we saw an Indian approaching, who, on perceiving us, wheeled his horse to escape. I shot an arrow into his back, but, before he fell, I rode up, cut him down with my battle-axe, and rode on. One of our party, not wishing to lose his scalp, dismounted to take it. In doing so he lost his horse, which followed us, leaving his rider on foot close to the enemy's village, whence the aroused warriors were issuing like hornets. Perceiving his danger, I rode back, and took him up behind me. We had to run for it; but we made good our escape, driving home before us seven horses captured from the enemy. This was considered a great achievement by our Crow brethren, and they again washed their faces. The enemy now charged on our village, killing six Crows, among whom was a brother-in-law of mine. His relatives appealed to me to avenge them. Supposing that the enemy would renew the attack the next day, I selected one hundred and thirty warriors, all well mounted, to waylay them. We posted ourselves midway between the belligerent villages, but the Cheyennes had passed within a few hundred yards before we were in ambush. Being there, the idea occurred to me to await their return. On their repulse from the village we would spring up and cut off their retreat, and, I made no doubt, succeed in killing a great number of their warriors.

It fell out as I had expected. The Crows drove them back with a loss to the enemy of four; and when they neared us, their horses were badly jaded, and our friends hotly in pursuit. We sprung up, cutting off their retreat, and they, sorely pressed in their rear, seeing our party in front cutting down right and left, became panic-struck, and fled in all directions.

We took sixteen scalps, with the horses and equipments of the fallen warriors, and returned home in triumph. This made twenty scalps taken in one day, which was considered by the Crows a glorious victory, and the scalp-dance was performed with unusual vivacity. In this battle the heroine was by my side, and fought with her accustomed audacity. I counted five coos, and she three, for three enemies killed with her lance. The Cheyennes, disconcerted with their misadventure, moved their village away from the Crow territory.

We also took up our line of march, and moved on to Clarke's Fork, a branch of the Yellow Stone, where we found abundance of buffalo and good grass. While encamped here I received a letter from Mr. M'Kenzie, written at Fort Union, at the mouth of the Yellow Stone, where he desired me to see him. It was delivered to me by Mr. Winters, who, in company with one man, had found his way unharmed. M'Kenzie wished me to see him immediately on business of importance, as he wished, through my influence, to establish a trade with the Crows.

---

The Life And Adventures  
Of James P. Beckwourth

---

On communicating my intention of performing the journey, all expostulated at my going. I gave them my positive word that I would return in eighteen suns if not killed on the way. It was a long and hazardous journey to undertake, having to traverse a distance of seven hundred and sixty miles, exposed to numerous bands of hostile Indians. I succeeded in reaching the fort in safety, where I found M'Kenzie with a great stock of miscellaneous goods. I arrived late in the afternoon, dispatched my business with him hastily, and started on my return in the morning. I took ten pack-horses laden with goods to trade with the Indians, in addition to which several boats were freighted and sent to me up the Yellow Stone. Two men accompanied me to the Crow country. We had no trouble on our way until we arrived within a few miles of our village (as I supposed it), when, as we were marching on, I remarked something unfamiliar in the appearance of the place. I ordered the two men to turn their animals up a little valley close by, while I took a nearer look at the village. A closer inspection confirmed my mistake; I saw the lodges were painted a different color from our own. I followed the packhorses, and found a trail which led to the Crow village, and concealed from the observation of the village we had approached. Soon after entering the trail, I discovered the fresh tracks of five Indians, going the direction that we were. I halted the pack-horses, and rode on to get a sight of them. At a short distance I perceived the five men, and, unobserved by them, I rode on and entered a low place until I approached within a few rods of them. I took a short survey of them, and concluded that they must be enemies belonging to the village we had just left. They were on foot, and I conceived myself a match for the whole five. I leveled my rifle, and was taking aim, when my horse moved his head and disconcerted any sight. I tried again, with precisely the same result. I then dismounted, and advanced two or three steps nearer my object. As I was about to fire, having the rein on my arm, the horse made another motion, thus spoiling my aim for the third time. At that moment one of them made a yawning expression in the Crow language, and I was so terrified at his narrow escape that the rifle dropped from my hand. I called to them, telling them the danger they had escaped.

"Why," said they, "you would not have attacked five of us?"

"Yes," I said, "and would have killed every one of you, had you been enemies."

They then informed me that they had lost two men that day near the village of the Black Feet, who were now, beyond doubt, dancing over their scalps. I did not wait to hear more, but directed them to return to my horses and assist the men in getting on to the Crow village as soon as possible. I rode forward to make my arrival known.

My return was welcomed with the liveliest demonstrations of joy by the whole tribe. But I delayed no time in ceremonial. I called a council forthwith, and informed them that the Black Feet were encamped ten miles distant, that two of our warriors had that day fallen by their hands, and that we must go and avenge their death. The chief assented; but, as a preliminary, directed me and another to count their lodges that night. I undertook the dangerous task, although extremely fatigued with my long journey. We succeeded in the object of our expedition, and found their lodges outnumbered ours by one. There are, as a general thing, from four to six warriors to a lodge; the Black Foot village comprised two hundred and thirty-three lodges; hence we could form a pretty accurate estimate of the number of warriors we had to contend with.

Their village was closely watched by our spies; every movement made by the enemy was promptly reported to our chief. During the night they appeared to sleep soundly, probably fatigued with a late dance. But in the morning they were astir betimes, and having packed up, started forward in

The Life And Adventures  
Of James P. Beckwourth

---

our direction, apparently unaware of our presence. On they came — men, women, and children — utterly unconscious of the terrible shock that awaited them. Our warriors were never better prepared for a conflict, and never more certain of victory. We were drawn up on a high table prairie, our whole force concealed from view at no greater distance than half pistol-shot.

Their chief led the van, and with him were several young squaws, who were laughing and dancing around him, evidently to his great amusement. They were near enough to launch the thunders of war upon them, and our chief gave orders to charge. The order was instantly carried into effect. The chief who, a moment before, was so joyous, surrounded by his tawny young squaws, was the first to fall beneath my battle-axe, and his attendants scattered like chaff before the wind. We were upon the warriors so unexpectedly that they had hardly time to draw their weapons before they were overthrown and put to flight. They were encumbered with women, children, and baggage. Our attention was directed solely to the men; the women were unharmed, except those who were overturned by our horses.

During the engagement, a powerful Black Foot aimed a blow at me with his battle-axe, which Pine Leaf deprived of its effect by piercing his body through with her lance. In a few moments the fighting was over, and after pursuing the flying enemy through the timber, we returned to collect the spoils of victory. We took one hundred and seventy scalps, over one hundred and fifty women and children, besides abundance of weapons, baggage, and horses. The Crows had twenty-nine wounded.

This was a severe blow to the Black Feet; such a slaughter is of rare occurrence in Indian warfare. Notwithstanding this sad defeat, they rallied their broken band, and attacked us again in the afternoon; but it amounted to nothing, and they fled in gloomy confusion beyond the Crow territory.

Pine Leaf never signalized herself more than on this occasion. She counted six coos, having killed four of the enemy with her own hand. She had but few superiors in wielding the battle-axe. My horse was killed by the blow which was aimed at my head by the Indian whom the heroine killed. I wore a superb head-dress, ornamented with eagles' feathers and weasels' tails — the labor of many days. Early in the action, three of these tails were severed by a bullet which grazed my head. "These Black Feet shoot close," said the heroine, as she saw the ornaments fall; "but never fear; the Great Spirit will not let them harm us."

I took a very pretty young woman prisoner, but was obliged to give her up to one of the braves, who had my promise before the battle that if I took one I would give her to him, and if he took one he should give her to me. When a warrior (of the Crow tribe) takes a woman prisoner, she is considered his sister, and he can never marry her. If she marries, her husband is brother-in-law to her captor. Our prisoners soon forgot their captivity; they even seemed pleased with the change, for they joined with great alacrity in our scalp-dance over the scalps of their own people.

All Indian women are considered by the stronger sex as menials: they are thoroughly reconciled to their degradation, and the superiority of their "lords and masters" is their chiefest subject of boast. They are patient, plodding, and unambitious, although there are instances in savage life of a woman manifesting superior talent, and making her influence felt upon the community.

During my visit at Fort Union I engaged to build a fort for M'Kenzie to store his goods in safety at the mouth of the Big Horn River, one of the branches of the Yellow Stone. Accordingly, I repaired to the place to select a good site and commence operations. On arriving at the spot, I

---

The Life And Adventures  
Of James P. Beckwourth

---

found the boats close by, but as there was no secure quay at the junction of the streams, I selected a site about a mile below. There were fifty men, who had arrived with the boats, hired to assist me in erecting the fort. The stipulated dimensions were one hundred and twenty yards for each front, the building to be a solid square, with a block-house at opposite corners. The fort was erected of hewn logs planted perpendicularly in the ground; the walls were eighteen feet high. As soon as the pickets were up, we built our houses inside, in order to be prepared for the approach of winter. When I had been engaged about six weeks upon its construction, four hundred lodges of Crows moved into our immediate vicinity, thus affording us plenty of company, and a sufficient force to protect us against the attacks of hostile tribes.

When we had completed our building we unloaded the boats, and commenced trading with the Indians. During the first year the company was very unsuccessful, sinking over seventeen thousand dollars in the undertaking. This, however, was principally attributable to the outlay upon the fort (the wages of the fifty men engaged in constructing it ran for twelve months), and to the number of presents which it is customary, on such occasions, to distribute among the Indians. After the Crows had removed to the fort, they were repeatedly annoyed with attacks from different hostile tribes. I was engaged in two small encounters during the winter, in both of which we were completely victorious. The Crows were fully occupied in protecting their own horses, or levying contributions upon their neighbors.

During the winter we accumulated a large amount of peltry, which in the spring I sent down to Fort Union in five Mackinaw boats, built by ourselves for the purpose. I sent a sufficient number of men to take good care of the boats, and to return up stream with a fresh supply of goods. I then left the fort in charge of Winters, leaving him thirty men for a guard. I also had provided an ample stock of dried meat, so that they might avoid the risk of hunting for provisions.

Early in May we commenced our march in search of summer quarters. We traveled by easy stages, and on a circuitous route, so that when we finally arrived at Rosebud Creek, a branch of the Yellow Stone, we found ourselves but twenty miles distant from the fort.

After we had remained about a week at our encampment, our village was invested by a large war-party of Black Feet. It happened very fortunately we were building a medicine lodge at the time, and our whole force was at home, which circumstance most probably preserved us from a disastrous defeat. Our enemies numbered about four thousand warriors, to oppose whom we had two thousand eight hundred practiced warriors, besides the old men, who always acted as village guards. At daybreak the enemy advanced upon our village with great impetuosity. Our war-horses being tied to our lodge doors, the first alarm found our defenders ready mounted to meet the assailants. We did not allow them to enter the village, but advanced on to the plain to meet them. The contest was severe for several minutes, and the clash of battle-axes and the fierce yells of the opposing forces made the whole prairie tremble. The two parties charged alternately, according to the Indian mode of warfare; but the Crows gained ground at every attack, for they fought with every thing at stake. The fight lasted for several hours. Early in the action we discovered a manœuvre of the enemy which would probably have resulted seriously for us had we not perceived it in time. About half their force was detached to attack us in the rear, and take possession of the village. I formed from fifteen to eighteen hundred warriors into a body, and rode down to meet their detachment as it wound around the foot of a small hill. They were in quick march to gain their position, and approached in seeming security. My warriors being formed

The Life And Adventures  
Of James P. Beckwourth

---

upon the brow of a hill under which the enemy was passing, I gave the order for a rush down the hill upon them. The attack was made with such irresistible force that every thing in our way was overthrown, and warriors and horses were knocked into promiscuous piles. We happened to burst upon their centre, thus severing them in two, and the confusion they became involved in was so irremediable that their only hope was to get back to their main body with as little delay as possible.

In the attack, a lance thrown by a Black Foot perforated my leggin, just grazing the calf of my leg, and entered the body of my horse, killing him on the spot. My ever-present friend, Pine Leaf, instantly withdrew it, releasing me from a very precarious situation, as I was pinned close to the horse, and his dying struggles rendered such proximity extremely unsafe. I sprang upon the horse of a young warrior who was wounded, and called to some of our women to convey the wounded man to a place of safety; the heroine then joined me, and we dashed into the conflict. Her horse was immediately after killed, and I discovered her in a hand-to-hand encounter with a dismounted Black Foot, her lance in one hand and her battle-axe in the other. Three or four springs of my steed brought me upon her antagonist, and, striking him with the breast of my horse when at full speed, I knocked him to the earth senseless, and before he could recover, she pinned him to the ground with her lance and scalped him. When I had overturned the warrior, Pine Leaf called to me, "Ride on; I have him safe now."

I rode on accordingly, but she was soon mounted again and at my side. The surviving Black Feet speedily dispersed, and they all retreated together, leaving the Crows master of the field. They left behind ninety-one killed, besides carrying off many dead with their wounded. We lost thirty-one killed, and a large number wounded. I had five horses killed under me, but received no wound. Our enemies, in their retreat, drove off sixteen hundred horses, among which were eighty of my own, but we had plenty left, and we considered these only lent to them. We had no dance, and the relatives of the slain went through their usual mourning.

A few days after this battle a messenger arrived from the fort with a request for me to return as quickly as possible, as the Black Feet were continually harassing the men, and they were in fear of a general attack. Accordingly, I returned in the latter part of June, and found affairs in a very serious condition. The Indians had grown very bold, and it was hazardous to venture outside the fort. One morning seven men were sent about one mile away to cut house-logs, it being supposed there were no Indians in the vicinity. Some time in the fore-noon I heard the report of a rifle close to our gate. I ran out, and just caught sight of the retreating Indians as they entered the bushes. They had shot and scalped one of our men as he was chopping only a few paces from the gate. The danger that the other men might be placed in then occurred to me, and, ordering the men to follow me, I mounted my horse and hastened to their rescue. I was followed by about one half the men, the remainder preferring the protection of the wooden walls. I soon discovered our men; they were surrounded by forty Indians, the chief of whom appeared to be addressing the sun, and was gesticulating with his battle-axe. On his raising his arm, I sent a ball through his body, and then shouted to the men to run to me. They started, but one of them was shot down before they reached me. The survivors were so terrified that they did not dare to stop when they reached me, but continued their course unslackened until they gained the fort. My followers, seeing their alarm, became fugitives in turn, and I was left alone within gunshot of the remaining thirty-nine Indians. Uttering deafening yells, they made a rush for me; my horse became fright-

---

The Life And Adventures  
Of James P. Beckwourth

---

ened, and I could scarcely mount him. However, by running by his side a few paces, I managed to leap on his back, and retreated at full speed, while their bullets and arrows flew around me like hail. When I approached the fort, a voice near me cried, "Oh, Jim! don't leave me here to be killed."

I wheeled round, and, with my double-barreled gun in my hand, made a charge toward the whole approaching party, who, seeing my resolute bearing, turned and scampered off. I rode up to the person who had called me, and found him an old man, who was unable to run, and had been abandoned by his valorous companions to the mercy of the savages. I assisted him on to my horse, and was about to spring on behind him, when the horse sprang forward, leaving the old man's gun behind, and carried him safely to the fort. By this time the Indians had returned upon me. I ran wherever a shelter offered itself; and, when closely pressed, would face round and menace them with my guns. Within a few hundred yards of the fort I came to a small covering which had been used as a shelter by the horse-guards, and I sprang into it, with the Indians at my heels. After expending the contents of my guns, I plied them with arrows to their hearts' content, until they gave up the fray and retired. This took place in fair view of the fort, when not one of its doughty inmates dare come to my assistance, and who even refused to resign their fire-arms to the women, who were anxious to come to my rescue.

When at length I succeeded in reaching the fort, I favored the men with my unreserved opinion of them. I had been the means of saving their lives even after the chief of the savages had returned thanks to the sun for their scalps, which he had already deemed secure. I really believe that with Pine Leaf and three other squaws I could have stormed and taken the fort from their possession.

These men were not mountaineers; they were nearly all Canadians, and had been hired in the East; they were unused to savage warfare, and only two of them had seen an Indian battle. If they had come out like men, we might have killed one half the Indians, and I should have been spared a great deal of hard feeling. They acknowledged, however, that I had flogged the Indians alone, and that six of them were indebted to me for their lives.

In July, after the arrival of the boats, the Crows again returned to the fort. They came to make purchases with what small means they possessed, as they had disposed of all their peltry on their previous visit. They, however, brought in a great quantity of roots, cherries, berries, etc., which they traded for articles of necessity; they also sold sixty horses, which we sent to M'Kenzie at the lower fort (Clarke).

It greatly charms the Indians to see new goods when they have the means to buy there is no end to their purchases. When the lances, battle-axes, and guns are spread before their eyes, glittering with their burnished steel, notwithstanding they may have a dozen serviceable weapons at home, they must infallibly purchase a new one. If one purchases, all must follow; hence there is no limit to their demand but the very important one imposed by the extent of their exchangeable commodities.

The newly-arrived boats were manned with Canadians, all strangers in the country, nearly all having been imported for boating, as they were willing to submit to the hardships of such a life for a smaller remuneration than men hired in the States. On their arrival, their brethren related a thousand tales about the Indians, and what feats I had performed against them single-handed. They listened to the marvelous tales, and gazed at me in wondering admiration.

The Life And Adventures  
Of James P. Beckwourth

---

When Canadians are fairly broken in, and have become familiar with Indian character, they make the best of Indian fighters, especially when put to it in defense of their own lives. They become superior trappers too, being constituted, like their native ponies, with a capacity to endure the extremest hardships and privations, and to endure starvation for an incredibly long period.

CHAPTER XVI.

Departure from Fort Cass. —Capture of Squaws. —Battle with the Black Feet; with the Cheyennes. —Great Success of the Crows in stealing Horses. —A successful Fall for Beaver. —Return to the Fort with Peltry.

AFTER having arranged every thing in the fort (which I have forgotten to mention we named after Mr. Cass), and given all needful instructions to Winters, who was in charge, I again left. My intention was to induce the Crows to devote their undivided attention to trapping, not alone for their own benefit, but for the interest of the company in whose service I was engaged. I well knew that if I was with them they would capture five beavers to one if left to themselves. I had obtained great influence in the medicine lodge, and could often exert it to prevent a war-party from making a useless excursion against their enemies. I would tell them in their council that my medicine told me not to go to war; that it was to their interest to employ their warriors in trapping all the beavers possible, so that they might have the means of purchasing ammunition and weapons for themselves, as well as beads, scarlet cloth, and blankets for the women; that by-and-by we should be attacked by the enemy, and be unprovided with the means of defense; that they would then kill all our warriors, and make captives of our women and children, as the Cheyennes had captured my mother when I was an infant, many winters gone; that they should save all their warriors against a time of need, and only engage in war when the safety of their village was at stake.

These representations would frequently dissuade them from their belligerent purpose, and beaver-skins would be brought into the village by the pack; but they would soon tire of their pacific occupation, and their enemies' horses would offer them temptations which they could not resist. Nearly all the Crows having left the fort before I did, only a few warriors remained to bear me company. I engaged to meet them at the mouth of the Little Horn within a given number of nights, and I knew I should be expected. We arrived in safety at the place appointed, and within the time I had specified.

Soon after our arrival, it was proposed to send out a war-party, not so much to fight as to reconnoitre; to see where horses could with least difficulty be procured, and gain a general intelligence of how matters stood. We set out, and had traveled slowly along for nearly two weeks, when our scouts returned to apprise us that there was a large crowd of women approaching toward us. We were then in a forest of plum-trees, bearing large red plums, which were fully ripe, and were very delicious. Feeling satisfied that the women were coming to gather fruit, we secreted ourselves, intending, at a given signal, to surround them while they were busily employed. Accordingly, we waited until they all set themselves about their task, they keeping up an incessant jabber among themselves like so many blackbirds or bob-o-links, and having no suspicion that the Crows would so soon come in for their share. At a sound from the whistle, they were entirely surrounded, and their merry chatter was hushed in an instant. We marched them to an open piece of ground, made them form a line, and proceeded to make selection. The aged, the ill-favored, and the matrons we withdrew from the body, telling them to return to the village, and depart without

The Life And Adventures  
Of James P. Beckwourth

---

clamor. They went away in sullenness, with their eyes flashing fire. The remainder, to the number of fifty-nine, very attractive looking young women, we carried along with us; and as we were but three miles distant from their village, and could plainly see the smoke of their lodges, we deemed it prudent to lose no time in making our way home. There were three warriors in the company of the women when first descried, but they were not inclosed in our surround, and we could find no traces of them in any direction.

On our return toward home the captives were, as usual, gloomy for an hour or two; but they very quickly brightened, and amused us with their smiles and conversation during the whole of the journey. In four days we reached the village, and were received with "thunders of applause." Four of the prisoners were adjudged my prizes, who, according to Indian customs, became my sisters. For my services in this expedition I was honored with the name of Boah-hish-a (Red Fish). Our prisoners were kindly received, and treated with becoming attention. I carried my four sisters to my lodge, and distributed them among my relatives. They were all married to Crow braves, and added materially to the strength of my band of relatives; for it is esteemed a great honor to marry the sister of a great brave, which appellation I had long borne.

Pine Leaf had captured two prisoners, and offered me one of them to wife. I answered, "You once told me I had already wives enough. I will not add to their number until I marry the heroine of the Crow nation."

"Ah, you have found the red-handed Indian, then," she said, laughing mockingly.

She always received my advances with this unsatisfactory nonchalance, that it was with some unpleasantness of feeling I approached the subject. But the more I saw of her lofty bearing, and witnessed the heroic deeds that she performed, the more ardent became my attachment to her. When she was by my side in battle, it seemed as if I had increased strength and courage; when she was away, which happened rarely, I felt a vacancy which no other warrior could supply. There was none bolder than herself, and she knew it; there were others of greater strength, but her deficiency in muscular power was more than indemnified by her cat-like agility, and she would kill her man while others were preparing to attack.

There was one thing that irritated the noble girl's curiosity, and that was the war-path secret. Having killed many in battle, having followed where any dared to lead, "Why am I debarred from that important communication?" she would ask. "Why am I sent off with the women and children, when that secret is told the warriors of but one battle?"

I would tell her that the misfortune of her sex rendered it impossible that she could ever have the secret unveiled to her; that, should she break her trust, she would surely pay the forfeit with her life. She would become angry at such representations, and her black eyes would glow like fire. Soon after this capture, a band of Black Feet made reprisals by breaking our enclosure and taking seven hundred horses. I immediately collected a small party and went in pursuit. We speedily overtook them, and recovered all the horses except sixty, bearing the enemy, who precipitately fled, leaving two of their party dead. On our return we were received with the usual demonstrations of joy, and the horse-dance was performed by the village, together with the scalp-dance, which lasted nearly all night.

About this time my allied friend raised a war-party, and went in quest of the enemy; the heroine, ever active and prepared, accompanying him. I staid behind. They returned in a few days, bringing eight scalps of the Coutnees — one of the bands of the Black Feet. They had lost two of their

The Life And Adventures  
Of James P. Beckwourth

---

warriors, much to the annoyance of the heroine, as she was prevented from dancing, although she had counted two coos. She then declared that she would go to war no more, except in my company; but she had to break her word, and the next time she engaged in fight she received a severe wound. She wished me to raise a force immediately, and go and kill an enemy, so that she could wash her face. I declined, however, on the ground that I was soon to go to the fort, and that I would engage in no hostile encounters until my return.

When a war party loses one of its members, the survivors are compelled to wear their mourning-paint, until that same party, or an individual member of it, has wiped out the blot by killing one of the enemy without incurring loss of life. Thus it not unfrequently happens, when no opportunity of avenging a loss occurs, that the mourners wear paint for months, regularly renewing it as it wears off.

Small parties were continually going out and returning with varying success. The grand total of horses stolen by the Crows from all other tribes during that year amounted to near six thousand head. During the same period, however, they lost a great number stolen from them.

I visited the fort again in October, with three hundred lodges of the Indians, the remainder following us in a few days. A great number of the Indians had been busy with their traps for about two months, and we took into the fort a great quantity of peltry, which procured for the Indians every thing they needed, besides finery for the women.

When I arrived, I was informed that the head-hunter of the fort had been killed during my absence.

“Now,” said Pine Leaf, “you will go to war for one of your people, and I will go with you, so that I can wash my face.”

The fort had been subject to alarms during the whole time of my absence, but had only lost the man here referred to.

As soon as the Indians had finished their trading, I directed them to move to the Yellow Stone, as far up as “Pompey’s Tower,” telling them that I would join them in four nights. Then, as soon as I could get ready, I loaded twelve pack-horses with goods for retail, and, taking two Canadians with me, I went on and joined the village at the appointed place.

This much performed, I then attended to the frequent solicitations of the heroine, by leading a party, and going in pursuit of the Black Feet to chastise them, as I told the Crows, for killing the white hunter. We were absent eleven days, and returned with only four scalps and seventy-four horses. I received an arrow in my head; and there were three other warriors wounded, but none killed. The heroine then washed her face of the mourning paint, which she had been grieving about so long.

At this time I was third counselor of the nation, having been fifth and fourth previously. In the Crow nation there are six counselors, and by them the nation is ruled. There are also two head chiefs, who sit with the counsel whenever it is in session. The office of first counselor is the highest in the nation, next to the head chiefs, whose authority is equal. If in any of these divisions, when a matter is brought to the vote, the suffrages are equal, one of the old pipe-men is summoned before the council, and the subject under discussion is stated to him, with the substance of the arguments advanced on both sides; after hearing this he gives his casting vote, and the question is finally settled.

When war is declared on any tribe, it is done by the council. If any party goes out without the

The Life And Adventures  
Of James P. Beckwourth

---

authority of the council, they are all severely whipped; and their whipping is no light matter, as I can personally testify. It makes no difference how high the offender ranks, or how great his popularity with the nation — there is no favor shown; the man who disobeys orders is bound to be lashed, and if he resists or resents the punishment, he suffers death.

We raised a war-party of three hundred men to act against the Cheyennes, having one of the head chiefs as leader. We moved on foot toward their country, which was about two hundred and fifty miles from our village. In this expedition I acted in the capacity of head spy, and was of necessity continually in advance of the main party. Being near the enemy, according to our calculations, I was some distance ahead, with four other spies, when we discovered five of the Cheyenne warriors in the act of dressing a buffalo, which they had just killed. We crept slyly up within gunshot of them, and each singled out his man and fired. Four fell at the discharge; the other mounted his horse and fled. I mounted one of the other horses, and pursued him within sight of his village, when I wheeled and returned to the camp, well knowing that we should be pursued immediately after the fugitive communicated his news. I found the camp readily, and acquainted the chief with what had happened, although it is against orders for spies to commence any attack. I told him that we were compelled to fight them to save our own lives, as the enemy had discovered us. "That is all right," he said, "but they will be soon after us, and we must retreat as fast as we can."

We returned on our steps without losing a moment, and traveled all night. It was very cold, with considerable snow on the ground. In the morning we built a fire, and as soon as we had warmed ourselves we moved on. One man, who was lame, lingered by the fire after we had left, and he rejoined us in great alarm, telling us that the Cheyennes were on our trail in great force, and were but a short distance behind us. We then put our boys and horses into a deep gully close by, and also stepped in ourselves, as soon as we had discharged one volley at our pursuers, who were then within short gunshot distance. They numbered from fifteen hundred to two thousand warriors, all mounted, while we were but a very few warriors, and had not more than a dozen horses in all. We were in a strong position, however, one which they dared not to storm, even with their whole force. Frequently a few more daring cavaliers would advance to the edge of the bank, and hurl their lances into our midst; but they rarely escaped our bullets. We had killed and wounded a great number in this manner, which taught our foe to be more cautious in his approaches; when our chief, losing heart, declared there was no hope for us, and that we infallibly should be all "rubbed out."

He addressed his son, a lad about sixteen years of age, in the following strain: "My son, we shall be all killed here. The Cheyennes are very brave, and they have a cloud of warriors before us. It must never be said that my son was killed by them, therefore I must kill you myself before I die. Die, my son, first!"

In an instant his son was a corpse, prostrate at the feet of his savage father. This, thought I, is the first time I ever saw a person killed to save his life. The actions of the old chief were wild throughout the whole proceeding. After killing his son, he rushed upon the top of the bank, and addressed himself to the enemy, an exposed mark to their arrows, as follows:

"Ho, Cheyennes! here I am! come and kill me! I am the great chief of the Crows. Come and kill me first, and then you can easily kill my warriors. Many of your braves have fallen by my hand; their scalps darken my lodge. Come! come and kill me!"

---

The Life And Adventures  
Of James P. Beckwourth

---

I was astonished at such rashness, and still more astonished at the enemy, who, on seeing him a fair mark for their bullets, even withdrew to a greater distance, and appeared to be perfectly paralyzed. After a while, our head chief descended, and took a long smoke at his pipe. The enemy retired without troubling us farther. In the night we decamped, and made all possible haste to our village, where we arrived in safety without any molestation from the enemy. The chief attributed our escape to the interposition of the Great Spirit, whom the sacrifice of his son had propitiated in our behalf.

We killed fourteen of the enemy while in our intrenchment, making eighteen, and wounded a great number. We had eight killed, including the chief's son, and ten or eleven slightly wounded. When we arrived at home there was great mourning, and we all assumed paint on our faces as usual. But we wore it only a short time before we took ample revenge. Pine Leaf did not accompany us on this expedition.

CHAPTER XVII.

Victory over the Cheyennes. — Treachery of the Snake Indians. — Loss of six Crow Warriors. — Victory over the Snakes and Utahs. — A Mountaineer killed. — Trouble in the Wigwam. — I am disgraced. — Great Sacrifice of my Father's Property. — Three Whippings for violating Crow Morals. — Great Battle with the Re-ka-ras.

FOUR days after our return, our chief, still smarting at the sacrifice he had made for the salvation of his people, burned for revenge. He selected a body of over two hundred warriors, and started forthwith in search of the enemy.

The night following his departure, I also raised two hundred men, and started in a contrary direction. We proceeded on until we came to Laramie Forks, where Fort Laramie has since been built, and were in sight of a Cheyenne village. While we were surveying the village, eleven of their men, laden with meat, came up and encamped within a few hundred yards of where we were. We immediately threw ourselves flat upon the ground, resolved to wait until the coming of night, in order to make secure work of our attack on them, and prevent any of their number escaping to alarm the village. At a late hour we silently approached their camp when they were all sound asleep; a dozen guns were discharged at them in a moment, and we rushed in with our battle-axes to complete the work. We took their scalps, and were soon on the retreat, bearing away all the meat we needed, besides nineteen horses, and the slain warriors' equipments. We returned to the village, and washed off the mourning-paint, making the whole village ring with our dancing and rejoicing. The additional name of Ar-ra-e-dish (the Bloody Arm) was conferred upon me.

The old chief came in three days subsequently, bringing fourteen scalps and equipments, without having lost a single man.

Many of my readers will doubtless wonder how a man who had been reared in civilized life could ever participate in such scenes of carnage and rapine. I have already related that I was brought up where similar outrages were committed upon the defenseless inhabitants of the new settlements. Impressed with the recollection of these early scenes, I hardly ever struck down an Indian but my mind reverted to the mangled bodies of my childish play-fellows, which I discovered on my way to the mill, barbarously murdered by the savages. In after years I have experienced the natural ferocity of the savage, who thirsts for the blood of the white man for no other purpose than to gratify the vindictive spirit that animates him. I have seen the paths of the trappers dyed with

The Life And Adventures  
Of James P. Beckwourth

---

their blood, drawn from their hearts by the ambushed savage, who never knew mercy, but remorsefully butchered all who came in his way. Such is Indian nature. When I fought with the Crow nation, I fought in their behalf against the most relentless enemies of the white man. If I chose to become an Indian while living among them, it concerned no person but myself; and by doing so, I saved more life and property for the white man than a whole regiment of United States regulars could have done in the same time.

Before I close this narrative, I shall take the liberty to express my opinions, and afford those having control of the War Department some counsel about the cheapest, most expeditious, and most certain method of quelling their Indian troubles, on which the newspapers are harping so much. I know that with five hundred men of my selection I could exterminate any Indian tribe in North America in a very few months. But so long as our government continues to enlist the offscouring of European cities into our army, and intrusts the command to inexperienced officers fresh from West Point, just so long will they afford food for the Indians in and about the Rocky Mountains. Encumbered as our army is with baggage-wagons and artillery, an Indian chief can move his whole community farther in one day than our soldiers can follow them in three.

When our victorious celebration was over, I started on a small trading expedition to the Snake Indians. I had received an invitation from their chief to trade among them, and I selected eight warriors to accompany me. On arriving at their village, I found that the Utahs had joined them, and a great number of them were thronging the village. Knowing that the Utahs and Crows were deadly enemies, I sedulously watched their movements, and very speedily felt distrust for the safety of myself and party, as the whole camp savored strongly of treachery. I mustered my little party around me, and found them without guns. On inquiring the cause, they informed me they had traded them away for horses. I suppose my looks expressed my disapprobation. Mistaking me, they said there was yet one fine horse left, which I could have at the price of my gun. I had finished my traffic, and had disposed of every thing except my gun, when the Snakes came to me and offered to trade for that. I said, "No; I never sell my gun, except when at home and among my own people." The Snakes then told us to go, that things were bad in their camp. We sprang upon our horses, and struck out at full speed; but we soon discovered a large party of Indians were in close pursuit. We then found they had not sold us their fastest horses, as they gained on some of my party, and shot and scalped them without our ability to defend them. I succeeded in reaching the mountain with two of my men, having lost six noble young warriors in my flight. I knew there would be terrible mourning and loss of fingers, until I could teach the Snakes a lesson which would serve them to remember for a long time.

After devoting a short space to bewailing my misfortune, I requested a council to be called, and never did I enlarge with such wrathful vehemence as I then fulminated against the Snakes, holding them up to the abhorrence of the fathers for their treachery in decoying our unsuspecting warriors into their camp, and then letting loose a pack of murderous savages at our heels, after we had, through their complicity, parted with our only means of defense. I demanded five hundred warriors to go and wipe out the stain, and inflict summary chastisement on the village for their duplicity.

My argument was listened to with the profoundest attention, and all I proposed was readily acceded to. "Let the Red Arm have all that he asks," was the unanimous voice of the assembly. My warriors rallied around me almost at a moment's notice, and we mounted our horses and

The Life And Adventures  
Of James P. Beckwourth

---

ped in the direction of the Snake country, on Green River. On the eighth day our scouts came in and reported that they had found a large number of the Snakes, scattered in small parties, who were engaged in killing buffalo. We held on until we came in sight of them. I distributed my warriors as the occasion suggested, ordering them to attack the various small camps, while I, with my party, should attack their main body. They were overthrown and dispersed by my brave warriors, with severe loss. We took over one hundred scalps, and a great quantity of guns and other warlike implements. We had sixteen men wounded, including myself (I received two slight wounds from arrows), but none of them dangerously. This blow brought the Snakes to their senses, and they immediately sent a deputation to our village to sue for peace.

A circumstance happened on the evening preceding our attack which caused me the deepest regret. While the spies were reconnoitering, they perceived two Indians, as they supposed, leave the enemy's camp, and proceed down the cañon. This circumstance they reported to me. I ordered them to return, and kill them if they could find them. They went in pursuit of the two stragglers, and when they came in sight of them they had their robes over their heads, and were kneeling down over a fire. They fired, and one of the two fell mortally wounded; the other sprang out of his robe, when, to their surprise, they saw he was a white man. They, however, took him prisoner, and brought him to my camp. I was absent at their return; but on the following morning I remarked a very dejected look on their countenances, and I asked them what was the matter.

"We have done very bad," said one; "we have reddened our hands with the blood of the white man."

"Well, how did it occur?" I inquired.

"Ask that white man, and he will tell you all."

I walked up to the unhappy prisoner, whose looks betrayed the keenest anguish, and addressed him in English.

"How are you, my friend?"

He started as if electrified, and looked me closely in the face.

"What brought you here?" I continued.

"I was brought here by these Indians, who killed my companion while we were building a fire to warm ourselves. I suppose I am brought here to be killed also?"

"No, my friend," I said, "you are safe. The Crows never kill white men."

"Are these Crows?" "Yes."

"Well, well! Then you must be Mr. Beckwourth?"

"Yes, that is my name. And now, without the least fear of danger, relate the occurrence fairly: if my warriors have killed a white man intentionally, they shall be punished."

He then related how he and his companion went into the cañon, and how they made a fire to render themselves comfortable away from the Indian camp; how that their robes were over their heads, entirely concealing their faces from view, and that he felt fully confident that my warriors, in firing upon them, had mistaken them for Indians.

"Well," I said, "since the mistake is so apparent, you will greatly serve me to make the same statement to your companions when you return to your camp; for the Crows are entirely innocent of any design to shed the blood of the white man, and it would be deplorable for any misunderstanding to arise in consequence of this lamentable occurrence."

"I shall make a fair statement of the fact," he said, "and should be very sorry to be the means of

The Life And Adventures  
Of James P. Beckwourth

---

any trouble.”

He then informed me that he and his late companion were trappers; that his party were in winter-quarters, and encamped with the main body of the Snakes; and that they had come out with this party after meat. I then gave him my reasons for attacking the Snakes, and begged him to commend me to all the old mountaineers.

“There is not a day passes,” he said, “but some one mentions you, to wonder where you are, and what you are now doing. I can tell them all that I have seen you, and conversed with you.”

I then told him he was at liberty to go at any time; that he could take all the horses belonging to him, and all else that he needed. We assisted him with the body of his unhappy friend upon the back of a horse, and, bidding me adieu, he departed.

The Snakes dispatched a deputation of forty warriors and a medicine chief to the Crows to negotiate peace. They attached all the blame of the late rupture to the Utahs, whom, they said, they could not control, and that the death of our six young warriors was entirely against their wish.

This we knew was false, for there were ten Snakes to one Utah in the camp at the time of the outrage. They also pleaded that they had tried for a long time to induce the Utahs to return home, knowing that they were enemies to the Crows. We at length adjusted the conditions of peace, smoked the calumet, and, after an exchange of presents, they returned to their home. About this time a brave, named Big Rain, was elected chief of the village for the term of six moons. His duties were to superintend all the village removals, to select sites for camps, order surrounds; in short, he was a kind of mayor, and alone subject to the head chief. Big Rain possessed the most beautiful squaw in the whole village; she was the admiration of every young brave, and all were plotting (myself among the rest) to win her away from her proud lord. I had spoken to her on several occasions, and, whenever opportunity offered, would tender her my most ceremonious obeisance; but she never favored me with any return. Not only was she beautiful, but she was very intelligent, and as proud as Lucifer; and the gorgeous dyes of the peacock were not more variegated or more showy than her attire. Since the elevation of her husband, I fancied that she assumed rather haughtier airs; and I determined to steal her from her lord, be the consequences what they might.

I went one evening to her brother's lodge, and acquainted him that there was a woman in our village that I loved, and that I must have her at all hazards.

“Well, warrior,” said he, “if it is any of my relatives, I will assist you all in my power. You are a great brave, and have gained many victories for us, and it is but right that your desires should be gratified.”

“Thank you,” said I; “but I will try alone first, and if I do not succeed, then I shall be very glad of your assistance.”

As an acknowledgment for the prompt tender of his services, I presented him with a quantity of tobacco. “Now,” added I, “I want you to call in all your neighbors to-night, and let them smoke as long as they please. After they are assembled, bar the door of your lodge, and amuse them as long as you can with the rehearsal of your adventures. In the mean time, I will be engaged.”

I then went to my bosom friend and brother, and made part to him of what I had in hand, which revelation greatly amused him. I requested him to act as sentry over the lodge where they were all smoking — Big Rain with the rest, for I had seen him enter — and remain there until he was satisfied they had filled their pipes for the last time, and then to call out to me, but to mislead

---

The Life And Adventures  
Of James P. Beckwourth

---

them in the place where he was addressing me. This he promised to perform, and we both started on our errands.

I went to Big Rain's lodge, dressed and painted in the extreme of the fashion, and saw the lady reclining, half asleep, upon her couch, and several of her female relatives asleep about the room. Nothing daunted, I strode to the couch of Mrs. Big Rain, and laid my hand gently on her brow. She started up, saying, "Who is here?" "Hush!" I replied; "it is I."

"What do you want here?"

"I have come to see you, because I love you."

"Don't you know that I am the chief's wife?"

"Yes, I know it; but he does not love you as I do. He never goes to war, but stays idly in the village. I am a great brave, and always go to war. I can paint your face, and bring you fine horses; but so long as you are the wife of Big Rain, he will never paint your face with new coos."

"My husband will kill you."

"Well, then the Crows will talk of you for many winters, and say that the great brave, 'The Bloody Arm,' died for a pretty woman."

"Your father," she said, "will lose all his horses, and all his other property, and will become poor in his old age. I respect your father, and all your relatives, and my heart would cry to see them poor."

"If my father loses his horses, I can steal more from our enemies. He would be proud to lose his horses if his son could get a wife as handsome as you are. You can go to war with me, and carry my shield. With you by my side, I could kill a great many enemies, and bring home many scalps. Then we could often dance, and our hearts would be made merry and glad."

"Go now," she pleaded; "for if my husband should return, and find you here, he would be very angry, and I fear he would kill you. Go! go! for your own sake, and for mine, and for the love you have for the Crows, go!"

"No," said I, "I will not go until you give me a pledge that you will be mine when an opportunity offers for me to take you away."

She hesitated for a moment, and then slipped a ring off her finger and placed it on mine. All I now had to do was to watch for a favorable chance to take her away with me on some of my excursions. Just as I was about to leave, my friend called me as though I had been three miles away. I went out and joined him. "What luck?" inquired he.

"Good," said I.

"Prove it to me, I will believe," said my friend. I held out my finger to him, displaying the ring.

"Enough," said he; "but I could not otherwise have believed it."

The following day, with six warriors in full costume, I visited Big Rain at his lodge.

"Ah!" said he, you are going on a war-excursion, my friend?"

"No," I answered. "We came to see which way you are going to move, how many days you will travel, and how far each day; so that we may find good places to encamp, and know where to find the village in case we should encounter the enemy."

"You are very kind," said he; "then you intend to be my spy. I have many brothers and other relatives among the braves, but not one has ever made me that offer."

"No," thought I, "they don't care as much about your wife as I do."

"Go," said he, "and the Great Spirit will protect you."

I then left, accompanied by my six warriors. The second day out, in the afternoon, as we were

The Life And Adventures  
Of James P. Beckwourth

---

traveling slowly along, I discovered, at about a mile distance, a party of twenty-seven Black Foot warriors, just emerging from the Bad Pass. We immediately retraced our steps toward home, and traveled all night, until we arrived within three miles of the village. When within sight, we telegraphed with the aid of a small looking-glass, which the Crow scouts usually carry, and every motion of which is understood in the village. I made a signal that I had discovered the enemy, and a second that they were approaching. In a moment I could discover a great stir in the village. When we arrived, I reported to his honor, Big Rain, how many we had seen, what tribe they were, where they had passed the previous night, and where they could then be found. The chief then ordered his madam to bring us some water, an order she complied with, smiling coquettishly at me the while.

I then retired to my lodge to change my dress, as portions of it were stained with our travel through the mountains. While I was in my lodge, madam came over with a splendid war-horse, which her husband had sent me, on which to return and fight the Black Feet I had just discovered. She said, "My husband has sent this war-horse to the Bloody Arm, and requests him to lead the Crows to the enemy."

I was soon on the road, with enough mounted warriors to eat the whole party of the enemy; for they were only a short distance from our village, and, desirous of excitement, every one wished to go. Judging where the enemy would encamp that night, we traveled on until we arrived near the anticipated encampment.

Previous to starting, my little wife, who, by being the wife of a great brave, was as good as any woman, wished to bear me company and carry my shield. But I refused her, alleging that the danger was too great, and promising to paint her face when I returned. One of my sisters then volunteered, and I accepted her offer, taking her with me to carry my shield and lead my war-horse. As soon as it was light enough in the morning, I sent out small parties in all directions to look for their trail, that we might track them to their den. In ten or fifteen minutes after the parties left, we heard the report of a gun, and the war-hoop raised. The Crows assembled in the direction of the report, all drawing toward a centre. When I arrived, I saw that the Black Feet had chosen a strong position, and that we had another fort to storm. It was built partly by nature, but human industry had improved the stronghold. It was low water, and there was a pile of drift on a naked sand-bar, and trees had been felled from the bank upon the drift-pile, forming quite a shelter. Over this position the enemy was placed, protected with a breast-work formed of timber taken from the drift. When I reached the ground, I saw two of our reckless braves talking carelessly under the enemy in this in closed space, as if they had been in a secure lodge. I regarded them for a moment, and, thinking to display as much bravery as they had, I dismounted and ran to the place, although several shots were fired at me from the fort, none of which took effect.

"What are you here for?" inquired one of them of me.

"In the first place," I said, "tell me what you are here for."

"Why we are old warriors, and you are not."

"If I am not an old warrior," I answered, "I will be one."

I then regarded the rough flooring over head, which separated us from our foes, and perceived an aperture hardly large enough to admit my fist. I stood under it a moment, and as the warriors were moving about, one of them stepped over the aperture and remained there. I thrust my lance up with my whole force, and drew it back reeking with blood.

---

The Life And Adventures  
Of James P. Beckwourth

---

“There, old warriors,” said I to my two companions, who has drawn the first blood now? Who struck them first? Old warriors, or a young brave? How do you like the look of my lance? Do you see it?”

“Yes, yes, we see it. You have done well, young brave!”

“Well,” said I, “you can stay here out of danger; but I am going out to my warriors, and then to storm the fort.”

I ran back with the same success that I had entered it, brandishing my dripping lance, and ordered a charge, which was obeyed as soon as given. In five minutes there was not a Black Foot left within alive. They made scarcely any defense, so sudden and overwhelming was the shock. We had one warrior killed by the first discharge of the enemy, and six wounded. We then returned home, and, notwithstanding our slain warrior, we celebrated a dance, and devoted the next day to mourning our loss. In robing his remains for the spirit land, we dressed him in the most costly manner, using trinkets, seam-embroidered cloth, and the most costly articles, to show the inhabitants of the spirit land that he was a great brave, and much respected on earth. Over all was wrapped the best of scarlet blankets, and his arms were enfolded therein.

Oh shroud him in his hunting-shirt,

And lay him in the glen,

Away, away from jealous foes,

Away from sight of men

With bow and painted arrow,

That never failed its aim,

When by his fleet and favorite steed

The bounding bison came.

Go, kill the warrior's favorite horse,

His crouching, lonely hound;

To shield so brave a warrior

In the happy hunting-ground.

While the villagers were crying and putting on a coat of mourning-paint for the departed warrior, I was busied in my domestic affairs. I sent my sister to madam with a large quantity of service-berries, which had been finely dried the preceding summer, together with some sweet potatoes, telling her to request madam to send me her extra moccasins, in order to lash them together with my own on my pack-dog, and to appoint a place to meet me that evening. My sister was astonished, and said, “Is it possible that you intend to take Ba-chua-hish-a (Red Cherry) with you? Why, we shall all become poor! We shall not have a horse to ride! But I don't care; she is a pretty woman, and will make a good robe-dresser.”

Away she hied, and soon returned with my lady's moccasins. Ah, ah! thought I, I am all right now! I expected that the course of true love would not run very smooth with me in the end, but would, on the contrary, carry me over breakers which would most probably break my neck; but I fortified myself with the old adage, “Faint heart never won fair lady,” and I determined to hazard all consequences.

The appointed time had arrived, and, on going to the place of assignation, I found my lady true to her word — in fact, she was there first. We joined the party, thirty-four in number, and traveled all night in the direction of the Black Foot country. On the sixth day, at nightfall, we arrived at

The Life And Adventures  
Of James P. Beckwourth

---

the Mussel Shell River, a little below the mouth of the Judith, and in sight of a village of the enemy. I looked out a good place for a reserve camp, and then, selecting eighteen of the most expert horse-thieves, we started for the village. We succeeded in capturing one hundred and seventeen horses without being discovered, and arrived safe with them at the camp. We all started immediately back for the village. The warriors took but two horses each, giving the rest to me and my new wife. Meanwhile, Big Rain made discovery of the loss of his wife, and was greatly disturbed in mind. My father, knowing the aggressor, commenced giving away to his near relatives all his choicest stock and other valuable property, until the storm should blow over.

When we rode in, the people came out to meet us, rejoicing at our success. Big Rain was out likewise; he took no part in the rejoicing, however, but ordered his wife and me to be surrounded. I was seized by Big Rain, together with half a dozen of his sisters, all armed with scourges, and they administered a most unmerciful whipping. I lay down to it, and received it with true Indian fortitude, though I certainly did think they would beat me to death. If I had resisted, they would have been justified in killing me; also, if they had drawn one drop of blood from me, I should have been justified in taking their lives. They laid it on so unmercifully, that I became angry, and hoped they would draw blood. After the flagellation was performed, the next penalty was, to strip my father and myself of all our horses and other effects (our war-implements excepted). My father was stripped of five hundred horses. I lost about eighty.

"Pretty dear for a very pretty woman," thought I. However, I soon had my horses made up to me by presents from my friends.

We performed the horse-dance that night, though I danced without owning one. During the amusement I conveyed word to the wife of Big Rain that I should go out again the next night, and should expect her company, appointing her to meet me at the same place as before. She returned a favorable answer. My little wife hauled me over the coals for stealing a married woman, when there were enough maidens in the village that I could select. I told her that I wished to have the Handsomest woman in the village for my lodge.

The appointed hour arrived, and Big Rain's wife was faithful to her promise. We started off with only seventeen warriors. We were gone four days, and returned with three scalps. We met a war-party of nine warriors, six of whom outstripped us and escaped. On my return I was again seized, and received another such a flogging as the first, laid on with equal good-will.

After my dressing, I retired to my lodge, when a woman approached me bearing some burden in her arms. She addressed me: "Here is something will gladden your heart; he will make as great a brave as his father: his name is Black Panther. Here, look at your child."

Sure enough, my little wife had presented me with a son, who is at this present time (1855) first counselor of the Crow nation.

Two nights afterward, I started on a third expedition with a party of sixty-three warriors, my new wife accompanying me for the third time. We took a southerly course toward the country of the Black Feet, and captured near two hundred head of horses, with which we returned home by way of the fort. On arriving at the fort, I found that my services were required, and that they were about to dispatch a courier after me on business of great importance. I told the commander that I must go home with my party, but that I would return to the fort with the least possible delay. Accordingly we started on. On the road we fell in with a small party of trappers, who were under the conduct of an old schoolmate of mine, David Adams. They seemed greatly dejected,

The Life And Adventures  
Of James P. Beckwourth

---

and I inquired of them the cause. Adams then related that he had been robbed of every thing he possessed by some of his men confederated with a number of my Indians, and that they had sent him off in the forlorn condition in which I now saw him. I asked him to describe the appearance of the Indians who took part in robbing him.

One of the party," said he, "was not an Indian, but a mulatto."

"There was no mulatto when I left," I answered, "and you must be mistaken."

"No," he replied, "I am not. You will find him there on your return."

"Well," said I, "get up and return to the village with me; I will sift this matter to the bottom."

He declined to accompany me. "They told me, if I returned," he urged, "that they would kill us all; and I dare not go back."

"Come with me," I said. "If there is any killing to be done, I will have a hand in it."

He at length consented to return with me. On gaining the village, I rode up to my father's lodge, and said, "How is this? You allow white men to be robbed in the village, directly under your eyes! Do you wish to call down the vengeance of the great white chief upon the Crows? Do you wish them to be made poor and miserable, like the other tribes? Have I not often told you of the immense number of white warriors; that they were like the sand of the prairie — as the leaves of the forest?"

"Hold, my son! I had nothing to do in the matter. My heart was sorrowful when I heard of the crime. It was High Lance who committed it."

"Then I will go and kill him, or be killed myself," said I; and away I sped to the lodge of High Lance.

"Go with him — go with him!" exclaimed my father to all my brothers and relatives around. "He is mad; go and protect him."

I advanced to High Lance, who was standing at his lodge, who, on seeing me approach, stepped in and shut his door. I dismounted, and tore his door down in an instant, and demanded of him what he had been doing. I remarked that his lodge was extremely well supplied with goods.

"High Lance," said I, in an authoritative tone, "restore to these men their horses without one moment's delay."

"I have taken no horses," said he, sullenly. "Send for them in an instant," said I.

By, this time my Dog Soldiers, the bravest men in the nation, were surrounding me.

"What does our chief want?" demanded they.

I told them that I wanted all the goods taken out of the lodge of High Lance, for that he had assisted to steal them from a white man, who was my friend. Instantly the lodge was hoisted, and torn into a thousand pieces, and High Lance, the mulatto, and eleven white men, were exposed to plain view.

I then accosted the mulatto: "What are you doing here, you black velvet-headed scoundrel? You come here in my absence to put the devil into the heads of the Indians, who are bad enough already? I will have your scalp torn off, you consummate villain!"

The poor fellow was frightened almost to death, and trembled in every joint. He replied, "The Crows gave me liberty to stay here and trap in their country, and —"

"Not another word," interrupted I; "though I will hang you, at any rate."

Then, turning to the eleven renegade white men, I said, "I give you just five minutes to leave the village; if you are longer in going, I will order my warriors to scalp every one of you. You assume

The Life And Adventures  
Of James P. Beckwourth

---

to be white men, and yet think no more of yourselves than to enter an Indian village and set such an example to the savages; whereas, if they were to treat you in such a manner, you would think death too light a punishment. You rob your own race, and forbid their return to the village under pain of death, allying yourselves with the worst Indian in the tribe. After stripping your victim, you forcibly deprive him of his few trusty followers, and bid him go through these trackless wilds, filled with murderous savages, who, had they come across him, would have murdered him before he reached the fort.”

I rated them thus soundly, but not one offered to lift his hand. The stolen horses were very quickly forthcoming, and the purloined property was readily produced. I restored it to my friend before them.

“Now,” I said, addressing the gang, “you can return to the fort with Mr. Adams; but if I hear that you offer to molest him in any way, your scalps shall pay for it.”

Then, turning to the mulatto, I said, “You have instigated all this mischief, and I should only be doing my duty to put my threat into execution, and hang you as I promised. However, you can go to the fort with these men. I shall be there about as soon as you will, and I will attend to your case then. I’ll see if I can not teach you better than to come among the Crows again.”

Mr. Adams belonged to Captain Bonneville’s company, and was leader of a party of about twenty men; he had come into the Crow country for the purpose of trading and trapping. The mulatto had arrived previously, and had brought a Canadian with him: the mulatto could speak the Crow language tolerably well. He had become acquainted with High Lance, who was a bad Indian, and had relations as bad as himself; and through this clique he had obtained permission to stay and trap in the country. On the arrival of Mr. Adams, the mulatto made himself very familiar with his men, representing to them that they were fools to travel for hire, when they could stay among the Crows with him and do so much better. By these arguments he induced eleven of Mr. Adams’s party to desert him, when, with the participation of High Lance and other bad Indians, they stripped him of all his goods. Mr. Adams expressed his warmest thanks to me for my interference. I told him I had only done my duty, as I always had done in like cases, and should continue to do as long as I remained with the Crows.

This business settled, I received a third sound thrashing from my new wife’s husband and relatives for again making free with his wife.

After the lapse of three days I left for the fort, again taking my friend’s lady. Her husband, finding that I was incorrigible, grew furious, and declared he only wished to have me in his power once more. My Dog Soldiers said to him, “You have whipped him three times, and you shall whip him no more, neither shall you do him any farther harm. Red Cherry loves him, and she does not love you; she will always go with him. You might as well try to turn Big Horn back to its mountain sources as to attempt to separate them, unless you kill them. You would not be so cowardly as to spill the blood of the pretty Red Cherry because she loves our chief. If you should fight him, he will kill you; and if you should assassinate him, we would avenge his death. No, no! Big Rain must not hurt our chief. But we will buy your claim to the Red Cherry, and give her to Red Arm for his own. You, a great chief, should despise to want a woman who loves another warrior better than you!”

Big Rain drooped his head on finding the Dog Soldiers were against him, and gave way to deep reverie. He loved the Red Cherry as children love the delicious fruit bearing the same name.

---

The Life And Adventures  
Of James P. Beckwourth

---

After weighing the matter well, he reluctantly acceded to the offer, and consented to resign all interest and title in Mrs. Big Rain for the consideration of one war-horse, ten guns, ten chiefs' coats, scarlet cloth, ten pairs of new leggins, and the same number of moccasins.

The stipulation was forthwith produced by my faithful Dog Soldiers, and I had the exclusive right to the Red Cherry, without the fear of a drubbing every time I returned.

Such acts are as common among the Rocky Mountain tribes as they have been among the whites in California since the discovery of gold there, though in the latter place, the penalty is frequently more severe than among the wild tribes of the mountains and prairies.

My new wife was the perfection of symmetry. Few of the Caucasian race could boast of handsomer features, and nothing but the rich olive color of the skin betrayed her Indian origin. Big Rain always regarded me with an evil eye after the transaction, and several times attempted to induce the lady to return to him. Many warriors, whose wives had played truant, had cut off their noses to deprive them of their attractions. I told Red Cherry that if ever she should return to Big Rain, he would surely serve her so. She never manifested any disposition to leave me; and my engagement to the American Fur Company enabled me to dress my wives better than any other woman in the whole nation.

It was now early spring, and I started for the fort. Before I left, I told the Crows what time I wished them to follow me with their peltry.

On my arrival, I was informed that a Mr. Johnson Gardner had bought quite a large lot of goods, which he had taken to his camp, eighteen miles down the river. The morning after my arrival, three men were dispatched from the fort to acquaint him that I had come. I had two hundred warriors with me; and on the night of our arrival we formed a camp and turned out the horses, not apprehending any danger. Early in the morning one of my followers went out to fetch up the horses, when he found them all missing, and the trail visible on which they had been taken away. The alarm was instantly given, and I ran to the top of the hill to take a general survey. I saw two objects on the ice, which appeared to me to be men; and this excited my apprehensions that they were two of the men dispatched from the fort, as they lay in the direction which they had taken. I collected my warriors instantly for the pursuit, placing all our women and children in the fort. I ordered some of the white men down on the ice to bring in the supposed bodies. Alas! my suspicions proved too true! All three men had been butchered, and when we rode up their bodies were scarcely cold. The eyes of the warriors flashed fire, and, without delaying a moment, on we swept in pursuit of revenge. We traveled about thirty miles (each man leading his war-horse), and our saddle-horses were beginning to tire, and we saw nothing of the enemy. Darkness would close over us, we feared, before we could overtake them. We then mounted our war-horses, which were as swift as the wind, and, leaving the saddle-horses behind, on we went faster than ever. Darkness was already upon us, when we came in sight of a large fire in the distance.

"Now, boys, we have them !" cried I.

We rode on until we neared the camp of the enemy, as we supposed, and then I examined their position previous to the onset. Just as I was about to give the order to charge, I heard a voice from the camp saying, "Throw them in! D—n them, throw them in!"

I then saluted the camp, shouting at the top of my voice, "Halloo the camp! Don't shoot, boys; we are Crows! I am Jim Beckwourth !"

I then rode up with my whole party, and found that they had taken two prisoners from the very

---

The Life And Adventures  
Of James P. Beckwourth

---

party we were in pursuit of, and under the following circumstances: The pursued party rode up to the camp, and several of them dismounted, among whom was Antoine Garro (a Canadian half-breed), well known in St. Louis. Garro could speak tolerably good English.

He accosted Gardner with "How d'do? You have got a good fire."

"Who are you," inquired Gardner, "that you speak English?"

"My name is Garro."

"What Indians are those with you?"

"Oh, they are good Indians; they will not hurt you."

Gardner discovered that too many were dismounting and crowding round his camp; and he perceived that many of them rode in the direction of his horses, and he became alarmed, as he well might be at his situation.

"Garro," said he, again, "tell me, what Indians are these?"

"They are Re-ka-ras," said he; "they have borrowed your horses, but they will bring them back again." He said this as he saw Gardner look in the direction of his horses.

"Re-ka-ras!" repeated Gardner. "To your guns, men; seize them!"

Old Garro stepped away with an accelerated pace, and two only of the Indians were arrested.

Garro stood off at a safe distance, and demanded the two Indians.

"You can not have them until you bring me my horses," said Gardner.

"Then we will have the tops of your heads," threatened the old rascal.

"Yes, you would have the tops of our heads; but come and take them, if you can."

They rode off, taking every horse that Gardner possessed; and if he had not been on the alert, they would have taken a few scalps as well.

These were the two prisoners that were in question when we rode up. They had bound them with trap-chains, and were in the act of throwing them into a tremendous log fire that was burning in the camp. They opened the logs on the top of the fire, and, swinging the two victims into the flames, rolled back the burning logs. There was a terrible struggle for a moment; then all was still. A blue flame towered high above the pile, and quickly subsided. My Indians begged the privilege of scalping them before they were burned; but Gardner told them he wished to burn them up clean. "You are going after their companions," he said, "and you can get plenty more scalps."

"Yes," they replied, "we will get plenty, and bring your horses back besides."

I really felt proud of my warriors in seeing them animated with so true a spirit. We breathed our horses for a few minutes, for they were in a perfect foam, and then started after them again in hot pursuit.

By next morning, we came within two gunshots' distance of the enemy without being perceived, as a roll in the prairie hid us from their view. We rested for a few moments, to refresh our horses and prepare them for the charge. We heard a continual firing, as if kept up by the enemy, and then a terrific explosion, which made the earth tremble; yells of the savages succeeded to this, and I then learned that there had been a battle between the Indians and traders, and that the whole stock of the traders' powder had exploded.

Now, thought I, is the time to charge; and I gave the word to my impatient warriors. We were among them like a thunder-bolt, even before they had time to mount their horses; for they had not yet recovered from the fright of the explosion. We cut down one hundred and seventy-two of them before they had time to fire twenty shots. The whole force of the enemy amounted to

The Life And Adventures  
Of James P. Beckwourth

---

four hundred men, and those who remained unhurt scattered in all directions. We did not pursue them, as our horses were so badly jaded.

Pine Leaf, who charged gallantly by my side, was wounded with a bullet, which broke her left arm just below the elbow. Placing her wounded arm in her bosom, she grew more desperate than ever, and three of the enemy met their death from the point of her lance after she received her wound. Becoming faint from loss of blood, she was constrained to retire.\* \* The heroine's arm was set in good style by Dr. Walton, at Gardner's camp, and in a few weeks it was sound again. The Indians have no bone-setters; when their bones get broken, they tie them up as well as possible, and trust in Providence for the result. We had twelve others wounded.

We recovered all our own horses, and recaptured those belonging to Gardner, besides a great number in the possession of the enemy. For spoils we gathered near two hundred scalps, and a vast amount of firearms and other equipments. After this signal victory we returned to Gardner's camp, reaching there the same evening.

Before leaving, however, we took three blackened and disfigured bodies, the remains of the trappers who had so heroically defended themselves, and who, to all appearance, had blown themselves up rather than fall into the hands of the enemy. This supposition was warranted by the appearance of the ground. Evidently the savages had set fire to the grass all round, thinking to burn them out; but it had not reached them. I surmised that the Indians had charged on them in a body, and, when near to the trappers, had been scattered with the ignition of three kegs of powder in the possession of the trappers, for some of the carcasses of the Indians were badly scorched. Our reception at the camp of Gardner was enthusiastic. "Beckwourth and his brave warriors forever!" rent the air in acclamations. They joined us, and went on to the fort with us. When we came in sight of the place we formed all in line, and displayed our scalps on the ends of sticks, and discharged our guns, and sung at the top of our voices. This brought every person out of the fort to look at us. We then opened our column, and I requested Gardner to drive all the horses with full speed to the fort. Just before he reached there we spurred our horses on to the front, and encircled the fort several times, still displaying our scalps, and singing the scalp-dance burden louder and louder, while all the occupants of the post joined in. There were hilarious times round the fort that night.

We had sent word to the village to summon the Crows to the trading-post, to help us mourn for the three white men who had recently been killed on the ice, and who were yet unburied. I omitted to mention in proper place that Glass's body was found near the fort — probably on his retreat after he had discovered the Indians. The whole village, accordingly, started to join us, while I and my party went out to meet them and acquaint them with our success. In consideration of my distinguished services, I was elevated to second counselor of the nation.

We met them about a day's ride from the fort, and had a great celebration over the communication of our victory. We returned together and buried the three men, amid the most terrible scenes that I had ever witnessed. The crying was truly appalling. The three men were well known, and highly esteemed by the Crows. When their bodies were lowered to their last resting-place, numberless fingers were voluntarily chopped off and thrown into the graves; hair and trinkets of every description were also contributed, and the graves were finally filled up.

I then set the men to work in building boats, to carry our peltry down to Fort Union, at the mouth of the Yellow Stone, whither I intended going as soon as the river was free from ice.

---

The Life And Adventures  
Of James P. Beckwourth

---

When completed, I put on board seven hundred packs of buffalo robes — ten robes in each pack — and forty-five packs of beaver. I forwarded orders for such goods as were wanted, and also word for another clerk in the place of poor Rose, who had lost his life in the service of the company.

CHAPTER XVIII.

Departure from the Fort with the Crows.—I am elected First Counselor of the Nation.—Death of the head Chief —I am appointed Successor.—Last Moments of the Chief.

THE Indians having made all their requisite purchases, moved on to the Little Horn River, six or eight days' travel from the fort. We encamped here for the purpose of planting tobacco, which is done by the prophets and medicine men; after which a great feast is provided, and a general time of dancing and rejoicing follows.

The tobacco-plant grows spontaneously in the Snake country, but it is cultivated by the Crows and several other tribes. It is a tolerably good substitute for the cultivated species, for the purpose of smoking, but it is unfit to chew. The plant very closely resembles garden sage, and forms into heads similar to the domestic flax.

At this camp the First Counselor made a speech to the warriors, and spoke in substance as follows "Warriors! Red Bird has served you faithfully many winters. He is now old. He can be young no more. His body has been made weak by the numerous wounds he has received in fighting the enemies of the Crows. He now wishes for repose, and not to be disturbed in his slumbers by being called into the council at all hours of the night, when his body, once so powerful, now requires rest. He is desirous of joining the medicine men, that he will not be compelled to go to war; but he will always be ready to defend his own village, the women and the helpless, and to give up his life for them. Red Bird's medicine in the warpath has grown weak; let the younger warriors, who are brave and active, have an opportunity to try their medicine. We have plenty who deserve to be promoted, who are as brave as the she-bear, and as swift as the antelope. Warriors, I now give up my position as first counselor. I have done."

Long Hair replied as follows:

"Red Bird, we feel that our hearts are sorry that you have seen fit to cease to be our first counselor. You have served our people long and faithfully. Your counsel has been good: under your wise direction we have prospered. We would rather that you had still directed us; but you say it is your desire to have repose. Be it so. We know that your body is weak. We know that you have received numerous wounds from the weapons of our enemies. We know that you never turned your back upon the foe. Now we need a sixth counselor, and must select one from the braves here present. Will you name him for us?"

"No," said the old man; "I have never had any enemies among my braves, and I do not wish to make them now. I should not know which to choose, were I to attempt it. They are all brave."

It was at length resolved that one of the medicine men should be blindfolded, and go among the most distinguished braves, and whoever he first placed his hand upon should take his seat as sixth counselor. The distinguished braves then gathered promiscuously together; a close bandage was placed over the eyes of the medicine man, and away he went among the crowd. The five counselors being among the braves, he placed his hand on one of them, and cried out, "Here is your sixth counselor."

"You are wrong," said Long Hair; "he is counselor already."

---

The Life And Adventures  
Of James P. Beckwourth

---

He then went through the crowd, and laid his hand upon another brave, crying out as before. Long Bow was therefore declared to be the choice of the people for sixth counselor of the nation. When the seat of the first counselor falls vacant, the others are elevated one degree, thus leaving the lowest station vacant.

The village now crossed the Big Horn on their way to Sun River Creek, a small tributary of the Yellow Stone. At Big Horn I took forty warriors, and started in quest of Black Feet and horses. After traveling two days, I was overtaken by the head chief, A-ra-poo-ash, with one hundred and seventy-five warriors. He was evidently chagrined about something. Not wishing him to go to war, as I expected nothing less than that he would rush in and throw away his life, I told him that I should avoid the war-path, that my medicine told me my war-path was bad, and I intended to return to the village. I started forthwith, and he followed me. On coming in sight of the village, we halted and encamped for the night.

I stole away in the night with seventy-five warriors, and made for the enemy's country, hoping that the old chief would return to the village. But he took my trail the next morning, and overtook me with his remaining followers.

He advanced to me, and said, "Bloody Arm, you are a great warrior; you do not wish me to go to war, but I will. I shall never return to the village. I am going to die. The Crows are fools. I have given them good counsel, and they would not listen to my words. I have fought for them during many years. I have shed much blood for them. I have tried to make them a great people, but they have closed their ears. I am going to the big village of the Great Spirit. If you do not wish to go in the path with me, you can go in another path; I will find the enemy alone, and die."

When he had finished speaking, he dismounted. Then, placing the edge of his shield on some buffalo chips, he said, "Warriors, you see my shield. If it rises, I shall die before I return to the village; if not, I shall return." He then addressed the sun for some minutes, after which he took his lance and made several motions with it. Then, giving a bound, the shield was raised as high as his head, and not a warrior saw him touch it. Then every one present believed his words, namely, that he would never return alive to the village. I knew that the shield must have some elevating agency, but it was concealed: my attention was so riveted upon the chief, that I did not discover the power that produced the seeming miracle.

The scouts now ran in to report that there were fourteen Black Feet but a short distance off, who were approaching us on foot. All was then bustle of preparation for a moment, and the trick of the shield was forgotten. Away we sped to find the enemy. We speedily found them, and they, perceiving escape was impossible, prepared to sell their lives as dearly as they could.

The old chief was the first to charge impetuously upon the scanty foe; as his steed plunged through them, he cut down one with his battle-axe; then, wheeling and again passing their line, he clove a second. Again turning to pass the enemy's line a third time, he had already raised his arm to strike, when an arrow entered his body just below the hip, and passed clean through, showing itself near the shoulder.

Every warrior paused in astonishment at seeing their chief thus furiously engaged; but when he fell a demon seemed suddenly to possess them, and the few surviving Black Feet were hewed to pieces in a moment. Every warrior gathered round the dying chief; his life-blood was fast draining from his mortal stroke.

"Warriors," he said, "I came here to die. My wish will soon be gratified. A-ra-poo-ash will lead

The Life And Adventures  
Of James P. Beckwourth

---

you no more to war. My home will soon be in the Spirit Land. My people were fools, and would not listen to my counsel. Bloody Arm, come to me. You must now take the place of A-ra-poo-ash. You are brave and wise. You fight the enemy, and vanquish them without losing our own warriors. Your medicine is powerful. Warriors, listen to your dying chief! You, Bloody Arm, are the only brave who can keep the nation together. The Crows disobeyed my orders, and I did not like to punish them for it. I loved my people too well; I was too kind to them for their own good. I was too indulgent. They all fear you, and will obey your words. If they obey you, they will increase and become a powerful people, as I have wished them to be; but if they disobey you, they will not be a nation two winters more. Their enemies are numerous and powerful, and they will rub out all the Crows unless they hearken to what you say. My eyes grow dim. Red Arm, are you listening? I can not see."

"I am listening to all you say," I replied.

"It is well. Then take this shield and this medal; they both belong to you. The medal was brought from our great white father many winters ago by the red-headed chief. When you die, it belongs to him who succeeds you. Listen. Tell Nam-i-ne-dishee, the wife that I have always loved, that if our child, yet unborn, shall be a son, to tell him who his father was. Red Arm, listen."

"I hear you," I said.

"Let my body be buried under this spot. Suffer no warrior to make a track on this war-ground for one season. Then come and seek my bones, and I will have something good for you.

"I can hear the voice of the Great Spirit. It sounds like the moaning of the mighty wind through the dark, gloomy forest. He calls for A-ra-poo-ash to come to the spirit land. I must go. Remember!"

The word "remember" expired on his lips as his soul winged its flight to the spirit land. Every warrior (except Yellow Belly, who was a brother of the old chief) immediately set up the most dismal cryings that I have ever heard in my life. I dispatched a herald to the village to inform them of the head chief's death, and then burying him according to his directions we slowly proceeded homeward. My very soul sickened at the contemplation of the scenes that would be enacted at my arrival. When we drew in sight of the village, we found every lodge laid prostrate. We entered amid shrieks, cries, and yells. Blood was streaming from every conceivable part of the bodies of all who were old enough to comprehend their loss. Hundreds of fingers were dismembered; hair, torn from the head, lay in profusion about the paths; wails and moans in every direction assailed the ear, where unrestrained joy had a few hours before prevailed. This fearful mourning lasted until evening of the next day.

The morning following I ordered the removal of the village in the direction of the Rose Bud. We there built a council-lodge, and all the prophets and medicine men in the village were assembled in it on its completion. The national records were read over, and, after a lengthy ceremony performed by the great men, it was unanimously declared that they had elected me First Counselor, and that, conjointly with Long Hair, I was head chief of the nation. Which pronunciamiento was recorded.

It then devolved upon me to deliver my inaugural address. As nearly as I can recollect, I spoke as follows "Brothers and warriors! The great A-ra-poo-ash is no more. He has met his fathers and kindred who preceded him to the Spirit Land. He has told all concerning you that yet survive on earth. He has related your deeds of bravery, which makes the spirits rejoice; he has also told

The Life And Adventures  
Of James P. Beckwourth

---

of your disobedience to your chief, which has made them cry and become dark. The Great Spirit becomes angry at you when he sees his heroes mourn. But, although you displeased A-ra-poo-ash by disobedience, and made his heart to mourn, he intercedes for you there, that, if you now obey the chiefs you have chosen to lead you, your war-paths may constantly be prosperous; your buffalo and beaver shall always abound, and you may become a great and powerful people.

“I am now your great chief. If you obey what I say to you, I can make you all you wish to be. By my long stay with the whites, I possess advantages which the chiefs of no other tribe possess. I can get twice as much for our robes and beavers as you ever got before. I came back to you. I can talk to our white brethren, and they understand all my words. They know that if they cheat my people I shall find it out.

“My medicine tells me that we must not make war on our enemies, unless they first kill our people or steal our horses: we must then attack them with many warriors, so that we may run no danger of being rubbed out. I shall never consent for our nation to have more than two villages at one time. Let those two villages keep their warriors, their wives, and their children together, and not subdivide, when they are sure to be attacked by the enemies. When our village is united, no enemy will ever dare to attack it.

My brother, Long Hair, is a very great brave, a wise chief. He will guide one village, and it will be my duty to guide the council and direct the other. I want all my warriors to lay aside the battle-axe and lance for a season, and turn their attention to hunting and trapping. Our streams are full of beaver, as also are our prairies with buffalo. Our squaws excel all others in dressing robes, for which the whites pay us a great price. Then let us get all the robes they can dress, and not keep them in idleness as mere playthings. If we keep them at work, they will be healthy, and strong, and brave, when they become warriors. They can also buy every thing they require, both for themselves and their children, while the beavers of the warriors will also supply our wants.

“Warriors! How can we do all this, if we scatter over the country in numerous little villages, subject to continual attacks from our enemies, who will cut us off, a few at a time, until we are all rubbed out? No; obey me, and keep yourselves undivided; and if enemies attack us, we can kill ten of them when they kill one Crow: thus my medicine says. But if you disobey me, and will not hearken to my words, then I shall surely leave you, and return to my white friends, not enduring to see the nation become weak, and flying before their enemies, and our women and children carried into captivity. Obey and assist me, then, and I will do my best in your behalf. Warriors, I have done.”

This oration was received with undisguised approval, and I received the name of Good War Road. A herald having been dispatched to our other village to acquaint them with the death of our head chief, and request them to assemble at the Rose Bud, in order to meet our village and devote themselves to a general time of mourning, there met, in conformity with this summons, over ten thousand Crows at the place indicated. Such a scene of disorderly, vociferous mourning no imagination can conceive, nor any pen portray. Long Hair cut off a large roll of his hair, a thing he was never known to do before. The cutting and hacking of human flesh exceeded all my previous experience; fingers were dismembered as readily as twigs, and blood was poured out like water. Many of the warriors would cut two gashes nearly the entire length of their arm; then, separating the skin from the flesh at one end, would grasp it in their other hand, and rip it asunder to the shoulder. Others would carve various devices upon their breasts and shoulders, and raise the skin

The Life And Adventures  
Of James P. Beckwourth

---

in the same manner, to make the scars show to advantage after the wound was healed. Some of their mutilations were ghastly, and my heart sickened to look at them; but they would not appear to receive any pain from them.

It was frequently asked of me why I did not mourn. I told them that my medicine forbade me to mourn in their manner, but that I mourned in my heart, and in painting my face. I would frequently represent to them the folly of maiming themselves, and appearing before the eyes of the Great Spirit so greatly disfigured; but I lost my labor. By torturing themselves their pagan minds supposed they were rendering acceptable sacrifices to the Great Spirit, and performing penance for offenses against his will. It was religion; and to interfere with their received opinions would have subjected me to the imputation of infidel, and perhaps have entailed upon me expulsion from my high office.

The mourning over, I selected seventy young warriors, and started out in search of feats of arms (according to their custom), to prove my fortune in my new office. I crossed the Missouri into the As-ne-boine country, where we fell in with fifteen Indians and four old women. We killed them all, and returned home with their scalps. There was but slight rejoicing on my return, on account of our recent affliction.

I should have mentioned that at the assembly of our two villages a grand council was held, wherein certain principles of action were deliberated and adjusted. On the death of a chief all his plans die with him, and it devolves upon his successor to come to an understanding with his confederate head chief. In this deliberation it is determined upon what rules the villages shall move, which direction each shall take, and what shall be the relations existing between them. There is generally a harmony preserved between the chiefs, and much method is shown in the preliminary adjustment of details. Long Hair and myself were the best of friends, and my allied brother was the elect to the office of Sixth Counselor, so that there was a promising indication of unanimity in our administration.

The villages then separated, with an understanding that they should again assemble at the fort in one moon. The attention of the nation was turned to trapping and killing buffalo, and the stock of accumulated peltry that fall was prodigious.

When I started on my excursion to the As-ne-boines, Pine Leaf begged to accompany me. Her arm was far from sound, and I refused to take her. However, soon after I had left, one of my leaders invaded the Cheyenne country, and, regardless of my wishes, she accompanied the expedition. She was brought home, as all supposed, mortally wounded. A ball had penetrated her left breast, just escaping the heart; it had passed through her body, coming out at the shoulder-blade, and tearing away a portion of it in its exit. On seeing her in this pitiable condition, I resigned all hope of her recovery. "So much," said I, "for disregarding my counsel. I would not allow you to go with me, in consideration of your wound; but you took advantage of my absence, and now you are done for."

"Well," she replied, "I am sorry that I did not listen to my chief; but I gained two coos."

The party accompanying her lost four warriors, wounded in rescuing her, and saving her scalp. She eventually recovered, but it was a long while before she could again go to war. The Cheyennes were defeated in the end, with the loss of three scalps, which were brought into camp.

The two villages met at the time appointed at the fort, and disposed of all their peltry. A Mr. Tulleck was sent up as clerk, and to him I intrusted full charge of the fort, promising him the

---

The Life And Adventures  
Of James P. Beckwourth

---

protection of the Crows for the winter, as I intended that one of our villages should take up their winter quarters in his vicinity. I was at this time salaried by the American Fur Company at three thousand dollars per annum, to reside with the Crows and procure their trade for the company. Our whole nation then crossed the Yellow Stone, and moved on to Mussel Shell River, whence we purposed to go and gather the remains of our late head chief, as the time he had specified for their removal had arrived. The Indians count four seasons in the year; namely, green grass, yellow grass, leaf falling, and snow falling. Our party destined to collect the bones consisted of seven or eight hundred persons of both sexes. On arriving at the grave, we discovered a new Indian trail passing directly over the spot, and we started in immediate pursuit. After a march of six miles, we came upon a Black Foot village of twenty-seven lodges, who were returning from the trading-post, having made extensive purchases. At sight of them, every warrior's breast kindled with revenge, they remembering the fall of their chief. We charged furiously upon them, killing and taking prisoners about one hundred and fifty of their party. While the warriors were engaged in the attack, our women attacked the Black Foot women, and killed many of them and their children before we could interfere to stop it. We captured quite a number of young women and little boys, with an abundance of horses, weapons, ammunition, scarlet cloth, beads, and sundries. We did not receive a scratch, as we attacked them with such overwhelming numbers that they offered trifling resistance, their chief endeavor being to save themselves by flight.

We took up the body of our chief and returned with it to the camp. Then there was another ceremony of cutting and maiming, and a body of two hundred lodges was sent to deposit the remains in the burial-ground of the chief's ancestors. While this party were away on their mission, those who remained with us busied themselves in collecting the various sorts of fruit with which the country abounded.

I now received my last name — for I was on the pinnacle of my fame, and they could ennoble me no farther — Nan-kup-bah-pah (Medicine Calf).

After tarrying about three weeks, we returned to the fort, where we again spent a short time, and then proceeded to the Big Horn, where we had engaged to meet Bear's Tooth, who had the conduct of the burial party.

While we were resting at the fort, a small party of twenty-three warriors, led by Little Gray Bull, stole from our camp at night, unknown to the chiefs, and when at a safe distance sent us word that they were going to the Cheyenne country in pursuit of spoils. They were the élite of our party, the braves des braves. Not one of that devoted band ever returned. What fate befell them remains to be shown.

#### CHAPTER XIX.

Departure from the Fort.—Arrival of Fitzpatrick and Party at the Crow Village.—Hair-breadth Escape from a Massacre.—Rescue and Restoration of Property to the Owners.—Departure of the Party.—My Return to the Fort.—Escape from Black Feet.—Defeat of the Crows.

WHILE staying at our camp on the Big Horn, a messenger arrived with the intelligence that Thomas Fitzpatrick was back upon the mountain, and that he wished me to visit him without loss of time. My affairs were in such a position that I could not possibly leave, but I sent my father and two of my best warriors to escort him into the village. The next morning they returned with Fitzpatrick and party, to the number of thirty-five men, and over two hundred horses. They encamped a short distance out. I visited the camp, and was received with a cordial welcome. I

---

The Life And Adventures  
Of James P. Beckwourth

---

was introduced to a Captain Stuart, an English officer, who had figured conspicuously, as I was informed, under the Iron Duke, and was now traveling the Far West in pursuit of adventure; also to a Dr. Harrison, a son of the hero of Tippecanoe, and to a Mr. Brotherton, with several other gentlemen, who were all taking a pleasure excursion.

While sitting in their quarters, I observed some of the Crows looking very wistfully at the horses belonging to our new friends. Knowing that the most incorruptible of Indians have a moral weakness for horses, I ordered some of my faithful Dog Soldiers to watch them. I then invited the gentlemen to the village, which invitation they readily accepted. The visitors left at an early hour, but Fitzpatrick remained to talk matters over until quite late in the evening. I offered him a bed in my lodge, but he preferred sleeping in his own quarters.

Shortly after his arrival, Fitzpatrick incidentally mentioned that the Cheyennes had killed an entire party of Crows (but he omitted all mention of the part his men had taken in the massacre), and that one of his men had been wounded in the affair. He had also a horse that had belonged to one of the fallen heroes, purchased by him of the Cheyennes. Had he acquainted me with this circumstance when he first saw me, the very unpleasant sequel that I am about to relate would have been avoided.

One of the Crow braves was son to a member of the party massacred, and he recognized his late father's horse. This discovery had occasioned the scrutiny which I had remarked early in the evening, but the cause of which I was in utter ignorance. On the retiring of Fitzpatrick I lay down for the night. I had not fallen asleep, when the murdered brave's son entered my lodge, and addressed me: "Medicine Calf, what must we do with these white men?"

"What must you do with them?" repeated I, not apprehending his meaning.

"Yes, I say so."

"Why, take them into your lodges and feast them, and give them beds to sleep on, if they wish it."

"No, no, that is not what I mean," he said; "you know these are the white men who killed my father. They have his horse here with them, and a wounded man — wounded in their fight with the Crows."

He then left me to go, as I supposed, to his lodge, and I thought no more of the matter. I soon fell asleep, and woke no more till morning. On awaking, I heard a great rush or trampling of horses, and, springing out of bed, I inquired of a squaw what was the matter in the village.

"Why, don't you know the whites are all dead?" she made reply.

"The whites are all dead!" repeated I, thunderstruck.

I ran out and ordered my war-horse to be got ready in a moment. I next ran to the lodge where Winters slept, and found it filled with Crows. I asked what all this uproar meant.

"I don't know," said he; "I have wished to go to your lodge to see you, but they would not let me leave. They have been clamoring about Thomas—Thomas—Thomas, all night."

At this moment Fitzpatrick rode up, with an Indian behind him.

"Fitz," said I, "what in the name of God does all this mean? Where are your men?"

"They are all dead, I expect, by this time," said he, blankly; "and I presume you have sent for me to murder me at your own discretion."

"When did you leave them? Were they alive when you left them?"

"They were going down the river, and a thousand Indians in hot pursuit after them," he said.

"Go over to my father's lodge," I said to him, "and stay till I return."

---

The Life And Adventures  
Of James P. Beckwourth

---

I then mounted my war-horse, being well armed, and addressed my father: "I am mad," I said; "I am going to die."

He gave the war-hoop so loud that my ears fairly tingled, as a signal for my relatives to follow me. They gathered round. "Go," said he, "and die with the Medicine Calf."

On I dashed, in mad career, for six or seven miles along the bank of the river, until I came in sight of the men. I seemed to have traveled the space in the same number of minutes, for the horse flew with lightning speed upon his errand. He dropped dead beneath me; in his prodigious exertions he had burst a blood-vessel.

I ran forward on foot, shouting to Fitzpatrick's men, "Run to me! Run to me quickly!"

They heard me, and hesitated at my summons. At length one started, and the others followed, running at their utmost speed toward me. A hill rose on each side the river, closing together and arching over the stream, at a short distance in advance of the party when I arrested their steps. In this pass the Crows had taken their position, intending to massacre the party as they attempted to force their passage.

As they reached me, I serried them around me, the Crows charging from the hills upon us at the same time. I now saw my band of relatives and friends approaching us from the village. As the exasperated Indians came surging on toward us, I advanced toward them, and ordered them to desist.

They arrested their course: "What do you want?" they asked; "do you wish those whites to live?" "After you have killed me," I said, "you can march over my dead body and kill them, but not before."

They then wheeled, and fell in with my party of relatives, who were fast arriving and encircling the whites. I then requested each man to mount horse behind my relatives, and return with us to the village. All did so except Stuart. I requested him also to mount. No," said he, "I will get on behind no d—d rascal; and any man that will live with such wretches is a d—d rascal."

"I thank you for your compliment," I returned; "but I have no time to attend to it here."

"Captain Stuart," said Charles A. Wharfield, afterward colonel in the United States army, "that's very unbecoming language to use at such a time."

"Come, come, boys," interposed Dr. Harrison, "let us not be bandying words here. We will return with them, whether for better or for worse."

After I had mounted the party, I borrowed a horse of one of my warriors, and led them back to the village. For temporary safety, I deposited the party in my father's lodge.

Fitzpatrick inquired of me, "Jim, what in the name of God are you going to do with us?"

"I don't know yet," I said; "but I will do the best possible for you."

I then called the Dog Soldiers to me, and commanded them, together with the Little Wolves, to surround the village, and not suffer a single person to go out. They all repaired to their stations. I next took fifty faithful men, and made a thorough search throughout the village, beginning at the extreme row of lodges. By this means I recovered all the goods, once in the possession of Fitzpatrick, in good condition, except his scarlet and blue cloths, which had been torn up for blankets and wearing apparel, but still not much injured for the Indian trade. I also recovered all his horses, with the exception of five, which had been taken to Bear's Tooth's camp. I had the goods well secured, and a strong guard of my relatives placed over them.

The reader may perhaps inquire what restrained the infuriated Crows from molesting the rescued

The Life And Adventures  
Of James P. Beckwourth

---

party on their way to the village. Simply this: when an Indian has another one mounted behind him, the supposition is that he has taken him prisoner, and is conducting him to head-quarters. While thus placed, the Indian having him in charge is responsible with his life for his security; if he fails to protect him, himself and all his kindred are disgraced; an outrage upon the prisoner is construed into pusillanimity on the part of the custodian. Prisoners are also safe while in custody in the village; their inviolability is then transferred to the responsibility of the chief. This is Indian morals.

I was informed subsequently that the Englishman, as soon as he approached me, cocked his gun, intending to shoot me. It was well for him, as well as his party, that he altered his mind; for, if he had harmed me, there would not have been a piece of him left the size of a five-penny bit. I was doing all that lay in my power to save the lives of the party from a parcel of ferocious and exasperated savages; his life depended by the slightest thread over the yawning abyss of death; the slightest misadventure would have proved fatal. At that moment he insulted me in the grossest manner. The language that he addressed to me extorted a look of contempt from me, but I had not time for anger. I was suspected of complicity with the Indians, or, rather, of having instigated the fiendish plot. No man of common sense could entertain such a suspicion, when he sees the part I took in the affair. Had I conspired the tragedy, I had but to rest in my bed until the deed was consummated. Every man would have been killed, and no one but the conspirators have known their fate. To be sure, I was in the service of the American Fur Company, and Fitzpatrick was trading upon his own account; but that could afford no motive to conspire his death. I had not the faintest objection to his selling every thing he had to the Crows. But they had nothing to buy with; they had disposed of all their exchangeable commodities but a short time since at the fort. Further, I was personally acquainted with Fitzpatrick, with whom I never had an ill word; and some of his party stood high in my regard. Dr. Harrison, if only for his noble father's sake, I would have defended at the risk of my own life. They were all bound to me with the ties of hospitality, and I have yet to hear of any action committed by me that would warrant the assumption of such deep perfidy. I have been informed that Captain Stuart offered one thousand dollars to a certain individual to take my life. I can hardly think the charge is true, for the individual thus said to be bribed has had many opportunities of earning his reward, and still I am alive.

After the goods were secured and the horses brought up, it was discovered that Captain Stuart's horse, a fine iron-gray, was missing. It was traced to the possession of High Bull, a very bad Indian, and I was informed that he had declared he would kill the first man that should come after him. Stuart valued his horse highly, as well he might, for he was a noble animal; he was, therefore, very anxious to obtain him. Fitzpatrick had acquainted Stuart that I was the only person in the nation that could procure the horse's restitution.

Accordingly, he visited me, and said, "Mr. Beckwourth" (he mistered me that time), "can you get my horse for me?"

I replied, "Captain Stuart, I am a poor man in the service of the American Fur Company, to sell their goods and receive the peltry of these Indians. The Indian who has your horse is my best customer; he has a great many relatives, and a host of friends, whose trade I shall surely lose if I attempt to take the horse from him. Should the agent hear of it, I should be discharged at once, and, of course, lose my salary."

"Well," said he, "if the company discharge you for that, I pledge you my word that I will give you

The Life And Adventures  
Of James P. Beckwourth

---

six thousand dollars a year for ten years.”

“Captain Stuart is a man of his word, and able to perform all he promises,” said Fitzpatrick.

“Well,” replied I, “I will see what I can do.”

I then dispatched an Indian boy to High Bull with the message that I wanted the gray horse he had in his possession. The boy delivered his message, and the Indian retorted with a “Ugh!” which startled the boy almost out of his skin, and he came bounding back again, saying the Indian was mad.

In a short time High Bull came riding his horse, and said, “Medicine Calf, did you send for this horse?”

“I did.”

“Well, here he is.”

“Take him back,” I said, “and keep him safe until I send for him.”

Stuart was wonder-stricken at this proceeding, as our discourse was unintelligible to him.

“If I could get my hand on that horse’s neck,” he said, “the whole village should not get him away from me.”

I was annoyed at this braggadocio, and was glad the Indians did not understand him.

Fitzpatrick requested Captain Stuart to remain quiet, saying, “Beckwourth has passed his word to you that you shall have your horse. He will be forthcoming when you want him.”

The next morning they prepared to leave the village. The horses were all packed, and every thing in readiness.

“Am I to have my horse?” said Captain Stuart. “He will be here in a moment, sir,” said I.

High Bull then rode the horse up to the party and dismounted, giving me the reins.

“Now, sir, you can mount your horse,” said I, delivering him into his owner’s possession.

He mounted, and the party started. I took one hundred and fifty of my choice Dog Soldiers, and escorted them a distance of fifteen miles. Before leaving them, I cautioned Fitzpatrick to keep on his journey for three days without stopping to encamp. I told him that the Indians were exasperated, and the two villages were together, and it was not in my power to keep them from following them. I was apprehensive they would dog them a considerable distance, but that a three days’ journey would place them in safety.

Instead of following my advice, he encamped the following afternoon. Within an hour after his delay, almost all his horses were taken by the Indians, not leaving him enough to pack his goods. I afterward learned that Stuart saved his gray horse. I saw the Crows had made free with my friends’ horses, for I saw several of them about the village subsequently. However, I was satisfied I had done my duty; I could not have done more to my own father or brother. Still my life was sought after, and my character basely assailed.

The fate of the Crow warriors I will mention episodically here, as I gathered it from Fitzpatrick, and afterward from the Cheyennes.

The party had encamped between two villages, having the Cheyennes on one side and the Siouxs on the other. They were in utter ignorance of their dangerous proximity. Being quickly discovered by one of the enemy, he returned and alarmed his village, and dispatched a messenger to the neighboring village; and in a few moments our small band was surrounded by a force of fifty times their number. Their position was a strong one, being chosen in a deep hollow or gully. They received the assault with unflinching intrepidity, and fought until they were all exterminated ex-

The Life And Adventures  
Of James P. Beckwourth

---

cept their chief — they killing thirty-four of their foes. The chief seemed to wear a charmed life; neither lead nor arrows could harm him. He advanced from his position and tantalized his foes. He invited them to come and kill him, saying that the scalps of his enemies made his lodge dark, and that he had ridden their horses till he was tired of riding. They were filled with admiration of his daring. They told him he was too great a brave to be killed; that he might go, and they would not hurt him.

“No,” said he, pointing to his dead companions; “you have killed all my warriors; they have gone to the land of the Great Spirit; now kill me, so that I may go with them. I am the Little Gray Bull; come and kill me. I ask not to live. My heart disdains your offers of mercy. My brothers and friends will avenge my death.”

He would frequently advance toward his swarming enemies; as he approached, they retired. He then returned toward his dead companions, and again defied them to come and kill him. He was eventually, shot down, probably by a bullet fired by one of Fitzpatrick’s men, who, being encamped with the Cheyennes, had joined them for the sport of shooting Indians. There were two small boys in the party of Crows, who went as moccasin-carriers. They were taken prisoners, and placed behind two warriors to be conveyed to the village. While on the way thither, each drew his knife and plunged it into the body of his custodian, each killing his man. The little fellows were cut to pieces in an instant, which was their own choice, rather than to be captive to the enemy.

When I returned from escorting Fitzpatrick, I informed the Crows of the fate of their party; but I withheld all mention of the participation of the whites. There upon ensued another dreadful time of mourning.

When I parted from Fitzpatrick and party, they all appeared very grateful for their deliverance, and, if they had not lost their horses when they encamped, I presume they never would have entertained other but friendly feelings toward me.

Shortly after this occurrence we held a grand council relative to certain national affairs. I then again proceeded, taking Winters and four warriors with me. When we had approached within a mile of the fort, I happening to be considerably in advance of the party, in ascending a small hill, when near the summit, I peered carefully over, and discovered a party of Black Feet, not more than three hundred yards distant, sitting by the roadside, smoking their pipes. I drew back my head, for I saw one Indian coming directly upon me, and motioned my men to a ravine close by. Then, dismounting, I crept back to the brow of the hill, and lay down flat until the Indian’s head came within sight. I sprang instantly to my feet, and shot him dead. In less than a minute I had his scalp; ran back and mounted my horse; then, riding to the summit of the hill, I displayed the scalp to the Indians, who were advancing at their topmost speed. As soon as they saw me they turned and fled, thinking, no doubt, that I had a strong force lying in wait. I rode on and overtook my party, and we reached the fort without molestation or pursuit. About two hours after, the Indians presented themselves before the fort, and challenged us to come out and fight. We hoisted the scalp I had just taken in answer to the invitation. I consider we may thank my acquired habit of caution for our escape, for, had the Indian surprised us instead of my surprising him, it is more than probable that every one of us would have been killed.

We were detained at the fort for the space of eight days, on account of the numbers of the Black Feet prowling about. They finally left, and as soon as we were satisfied that the way was clear, we loaded ten pack-horses with goods, and Winters and myself taking two men each — returned

---

The Life And Adventures  
Of James P. Beckwourth

---

to the Crow village. The villages had separated during our absence; Long Hair and his village having taken one direction, and mine having taken another. Winters took Long Hair's trail, with the goods; I followed my village through the Bad Pass, and overtook it at Black Panther Creek. I then went on to Wind River, trapping and hunting very successfully all the way, the journey occupying about a month. We went into winter quarters under Wind River Mountain, at the mouth of Po-po-on-che (Long Grass Creek). Here, after gathering a sufficient quantity of buffalo and elk horns, we supplied ourselves with a large outfit of fine new bows. The horns are thrown into hot springs which abound in that region, where they are kept until they are perfectly malleable; they are then taken out and straightened, and cut into strips of suitable width. It takes two buffalo horns to make a bow of sufficient length. They are pieced in the centre, and riveted; then they are bound strongly at the splice with sinew. Bows made of this material are equaled by none other except those made from the horn of the mountain sheep.

While we were encamped here, numerous small parties of Crows went to war without leave, and in almost every instance were defeated; on some excursions they were entirely destroyed. One party, consisting of thirty-nine warriors, led by the Constant Bird, a great war-chief, went to the Black Foot country, and every one of them was killed. They had killed and scalped one of the enemy, whom they met alone, and again journeyed on, when they came suddenly upon a whole village of Black Feet, and were themselves instantly discovered. To save themselves they resorted to an ingenious device, which certainly offered fair to save them. On being discovered, instead of retreating, they kept on and entered the enemy's village, pretending they came with authority to conclude a peace. The Indians, putting faith in their mission, concluded peace accordingly. While thus engaged proposing terms and smoking cozily, one of the Black Foot squaws stole a sack belonging to them. After the departure of the Crows, the sack was examined, and among its contents was found the identical scalp they had taken a short time previously. Raising the war-hoop, the Black Feet assembled in great numbers, and, making immediate pursuit after the Crows, they overtook them, and massacred every one. This intelligence was brought by express from Fort Maria, the Black Foot trading-post, to Fort Cass, the Crow trading-post. On receipt of this intelligence, there was another general scene of mourning and vowing vengeance. I used all the arguments that I could frame to prevent these mischievous guerilla expeditions, but they would steal off in the night in spite of my entreaties or my denunciations, and I did not like to resort to punishments.

Several of the high functionaries inquired of me to what cause I attributed such repeated disasters. I answered as follows: "Warriors! the causes are clear enough. My medicine tells me the causes. Firstly, you robbed my white friends, stealing their horses away, and even attempting to take their lives when they were under my protection, and when you knew it grieved my heart to have wrong done to them. A second cause: you are continually acting contrary to the wishes of A-ra-poo-ash, who went to the Spirit Land on account of your disobedience. I have also expressed the same wishes to you, telling you to apply yourselves to collecting skins, in order to have the wherewith to purchase the things that you need. These, my orders, are openly disobeyed, and the Great Spirit is very angry with the nation for their thieving, and disregard of the orders of their head chief."

They then inquired what they should do to appease the wrath of the Great Spirit. I answered again "Warriors! to appease the just anger of the Great Spirit, you must discontinue your

---

The Life And Adventures  
Of James P. Beckwourth

---

war-parties, and remain peaceably at home for one moon. You can then prepare a great sacrifice, and do penance for that time, and let the Great Spirit see that you really repent the evil you have committed. By so acting, you may recover the favor which the Great Spirit has evidently withdrawn from you; by continuing in your obstinate ways, you will assuredly be rubbed out as a nation.”

The sacrifices that they offer on such occasions are curious. One sacrifice is made by shaving the manes and tails of some of their best war-horses, and painting on their bodies a rude delineation of the sun. They then turn them out, but never drive them away; and if they follow the other horses, it is a sure sign that the Great Spirit is following them also.

I had become so sickened with their constant mourning, which was kept up through the whole village day and night, that I determined to take a small party and see if I could not change the face of affairs. Accordingly, I raised fifty warriors, and started for the Cheyenne village, near the site of the present Fort Laramie. The first night we encamped on the Sweet Water River. The morning ensuing was clear and cold, and we started across a plain twenty miles wide, with neither trees nor bushes in the whole distance. Across this plain was a mountain, which I wished to reach that night, in order to provide ourselves with fire-wood and have a warm camp. When we had traversed this desert about midway, a storm came on, which is called by the mountaineers a Pooder-ee. These storms have proved fatal to great numbers of trappers and Indians in and about the Rocky Mountains. They are composed of a violent descent of snow, hail, and rain, attended with high and piercing wind, and frequently last three or four days. The storm prevented our seeing the object for which we were directing our course. We all became saturated with the driving rain and hail, and our clothing and robes were frozen stiff; still we kept moving, as we knew it would be certain death to pause on our weary course. The winds swept with irresistible violence across the desert prairie, and we could see no shelter to protect us from the freezing blast. Eventually we came to a large hole or gully, from eighteen to twenty feet deep, which had been made by the action of water. Into this place we all huddled, and were greatly protected from the wind. Being exhausted with our exertions, we wrapped ourselves as well as we could in our frozen robes, and lay down. How long we lay there I could form no idea. When I attempted to stir, it required the exercise of all my strength to free myself from the mass of snow that had fallen upon me while asleep. I saw that if we tarried there it would be inevitable death to us all, and it was still storming furiously. I aroused my second in command, named “A Heap of Dogs,” and told him that we must arouse ourselves and bestir our warriors, or we should all perish.

“No,” said he; “it is too painful; let us stay here and all die together.”

I told him that I should go at all risks, and made a spring thereupon, he laying himself down again. I had not proceeded much more than three hundred yards when I came upon a gulch, or dry creek, in which was a drift pile composed of a large accumulation of dry wood. I made an opening and crawled in; then striking fire, I got it well burning, and returned to my perishing warriors to relate my discovery. They arose and shook off the loose snow from their robes, and essayed to proceed. But many of them were so weak and stiffened that they could but crawl along. After getting thawed and comfortably warmed before a blazing fire, I found there were two of our party missing. I returned with two or three others to search for them, and we had to dig away the snow to arrive at them; but the vital spark had fled — they were stiff in death. We staid by our fire, which increased in body and warmth, for two days, by which time the storm having sub-

The Life And Adventures  
Of James P. Beckwourth

---

sided, we returned home. The relatives of the lost warriors made a great mourning for them, while the friends of those who returned with me showered presents and blessings upon me for having been instrumental in saving their kinsmen's lives.

It was a time of intense cold. Our whole party were more or less frostbitten; my face and ears were severely frozen, and were sore for a long time. The wild buffalo approached so near to our fire that we could shoot them without stirring from our seats. As an excuse for my ill success, I informed the Crows that the wrath of the Great Spirit was not yet appeased.

Soon after this catastrophe, I informed my people that I wished to wander solitary for a space, to mourn for my two warriors who had perished in the snow. My real intention was to get to the fort, and thus have a respite from the unceasing crying and howling that was kept up throughout the village. On making my intention known, two white men, named Mildrum and Cross, who were staying in our village, desired to accompany me. We started accordingly, taking one squaw with us as servant. On our second day out, we were surprised by a party of two hundred and fifty Black Feet. We took shelter in a thicket of willows, resolved to make a brave stand, and sell our lives for all they were worth. The squaw showed herself a valuable auxiliary by taking good care of our horses, six in number, and building us a little fort of sand, behind which we stood in great security, watching our enemies as they ever and anon made their appearance. We were thus invested for thirty-six hours, the Indians hovering about, and losing one of their number at every discharge, without daring to rush in upon us, which had they ventured upon would have proved our inevitable destruction. We were situated so close to the river that we could be supplied with water at all times by the squaw without incurring danger.

The second night, our besiegers, having wearied of their exertions, gave us comparative repose. Availing ourselves of the lull, we muffled our horses' feet with our capotes, cut to pieces for the purpose, and, stealing gently down the slope of the bank, we forded the shallow stream, and made the best of our way home. We went whooping and galloping at full speed into the village, displaying nineteen scalps on various parts of our horses. Our victorious return created the most thrilling sensation throughout the village. Every face was washed, the scalp-dance was performed (the first time for two months), and the hilarity was universally indulged in. The Great Spirit's wrath was appeased, the tide had turned in favor of the Crows, and a continuation of victory was predicted from this brilliant achievement.

CHAPTER XX.

Excursion to the Fort.—Arrival of Long Hair's Village.—Building of a new Medicine Lodge.—Triumphant Entrance of my little Wife into the Lodge.—Attack on the Crow Village by the Siouxs.—Meeting of the two Crow Villages.—Visit of the Grovans.—Visit to the Grovans and Fort Clarke.

A PARTY of nine trappers happening to call at the village on their way to the fort, among whom was my old friend Harris, I proposed to accompany them. We started, and reached the fort without accident, except sustaining another siege from the Black Feet. After our departure, the whole village followed to purchase their spring supply of necessaries at the fort. They brought an immense stock of peltry, with which they purchased every thing that they stood in need of.

About a week after our arrival, the other Crow village, under Long Hair, encamped without the fort, all of them deep in mourning. The same ill luck had attended them in their excursions as we had suffered, and eighty warriors had fallen without one gleam of success. I availed myself

The Life And Adventures  
Of James P. Beckwourth

---

of this opportunity to impress upon the minds of Long Hair and his followers that the cause of their misfortune was owing to the conduct of the Crows toward Fitzpatrick and his party, which representation they all firmly believed.

When the two villages had finished their trading, we all moved back to the Big Horn, where we constructed a new medicine lodge for the medicine men, prophets, and dreamers to prophesy and hold their deliberations in. These lodges are erected every year — the first moon in May; the whole tribe is assembled at the festival, and the ceremonies are continued for seven days. Before the poles are raised, the medicine men select from the assembled multitude a warrior whom they deem qualified to assume the functions of a medicine chief. The man they select is compelled to serve; no excuse that he can frame is accepted as valid. He is then taken to a lodge-pole and lashed to one end; an eagle's wing is placed in each hand, and a whistle (similar to a boatswain's) placed between his lips. Thus equipped, he is hoisted a distance of forty feet, until the pole assumes its perpendicularity and is adjusted in its proper place. Raising the first pole is analogous to laying the first stone. The first one being hoisted, abundance of others are raised into their places, until the whole space is inclosed. They are then covered with green buffalo hides, descending to within six feet of the ground, the inclosure being left open at the top. About one hundred and twenty hides are generally required for the purpose, and a space is thus obtained capable of holding from seven to eight hundred persons.

I was the subject selected on this occasion; and when I was raised upon the pole in the manner I have just described, the officials declared that I was raised solely by the elevating power of my wings, whence they inferred that my medicine was very powerful.

When the lodge is completed, the medicine men and other functionaries assemble the most distinguished braves within the building for a rehearsal of their achievements and an enumeration of their coos. Each brave then gives an account of his exploits thus: "I killed one or more Cheyennes (as the case may be) on such a day, in such a place, and took such and such spoils. You know it, Crows." The medicine chief then exhibits his marks, pronounces the warrior's statement correct, and confirms it by his record. This ratification each warrior passes through, and there is seldom any discrepancy between his statement and the record. Sham battles are then fought in illustration of the manner in which the different trophies were acquired, the rehearsal reminding the civilized spectator of a theatrical representation, only that in this case the performance is more in earnest.

This examination gone through with, the lodge is then prepared for the medicine men, prophets, and dreamers to go through the ceremony of initiating a virtuous woman. The members of the conclave endure a total abstinence from food and water for seven days previous to the ceremony, unless any one faints from exhaustion, in which case some slight nourishment is afforded him.

The warriors are then drawn up in two lines, "inward face," a few feet apart, and the female candidate for "holy orders" presents herself at the lodge door. She harangues them when she first presents herself, and then marches between the extended lines of the dusky warriors. Here is the fearful ordeal. If she has ever been guilty of any illicit action, her declaration of innocence is refuted by a dozen voices, a thousand bullets riddle her body in a moment, and her flesh is hacked into morsels.

This is the fearful war-path secret. It will be remembered that my little wife had resolved to dedicate herself to this service; when only a child she had determined upon entering the medicine

The Life And Adventures  
Of James P. Beckwourth

---

lodge. On this occasion she was candidate for admission. She came to me to be dressed for the ceremony; she was robed in her best attire, and I painted her as the custom prescribes.

The warriors are in line, and the Sanhedrim in readiness. The herald announces that Nom-nedit-chee (The One that Strikes Three), wife of the head chief, Medicine Calf, offers herself for election. Intense excitement prevails through the assembly as her name is pronounced, and it is re-echoed through the lines of the warriors. She presented herself at the door of the lodge, and calmly met the concentrated gaze of thousands. A breathless silence prevailed.

She commenced her address. "Can it be said that there are no virtuous women among the Crows? Can it be true that our medicine men can not make medicine, nor our prophets prophesy, nor our dreamers dream, because so few of you are virtuous? Oh women! it is shameful to you to be so faithless. Our nation is disgraced because of your conduct, and the Crows will soon cease to be a people. The Great Spirit is angry with you, and has brought disgrace upon our warriors on account of your evil practices. Our prairies will become wastes like yourselves, producing no good thing; and our buffalo will bellow at you, and leave the hunting-grounds of the Crows, and go to the country of a more virtuous people."

Then addressing the warriors, she continued:

"Warriors! I have this day volunteered to carry the sand, the wood, and the elk-chips into the lodge. You are brave warriors, and I hope your tongues are not crooked. I have seen our women attempt to do it, and they have been cut to pieces. I am now about to try it myself. Before I start for the materials at the other end of your extended lines, if there be a warrior, or any other man under the sun, who knows any thing wrong in me, or injurious to my virtue, let him speak. I, too, am ready to go to the spirit land, for there is one there who knows me innocent of the bad deeds which disgrace the women of our country."

She then passed with a firm step between the lines of the warriors to the sand. Taking the bowl, she dipped a small quantity, and returned with it to the lodge, and then made two other trips for the wood and elk-chips. Returning for the third time, she received the vociferations of the assembled multitude. The functionaries came forth to meet her, and passed their bands over her head, shoulders, and arms, extolling her to the skies, and proclaiming there was one virtuous woman in the Crow nation. She was then presented with my medicine shield by the great medicine chief, to preserve and carry for me, no one but myself having authority to take it from her.

I trembled while she was passing this perilous ordeal, and its triumphant termination filled me with delight. She was a girl of superior endowments, and, if they had been fostered by a Christian education, I know no woman who would surpass her in worth, elegance, or attainments. Had she ever failed in her conduct, it would have been thundered in her ears when she stooped to gather the sand, and a cry would have arisen that she was polluting the medicine of the nation. If the candidate is killed during the inauguration ceremonies, nothing more is done in the same medicine lodge: it is immediately torn down, and the tribe moves to some other place, where it builds another lodge, and the same observances are again gone through with.

In the mean while, women are engaged cooking and preparing a sumptuous feast of every thing in season. All kinds of meats and dried berries, variously cooked, are spread before the partakers, which includes all who can obtain seats, except the medicine men, prophets, and dreamers. Their fast continues for seven days, during which time their inspiration is continually moving them.

There are plenty of warriors in attendance to convey messages and execute orders, like depu-

The Life And Adventures  
Of James P. Beckwourth

---

ty sheriffs in a justice's court; and as fast as an ordinance is dreamed out, prophesied upon, and medicined, the instructions are delivered to the messengers, and away they start, one party in this direction, and one party in another, to communicate the instructions and execute orders.

While we were yet at the lodge, a deputation of about a dozen Grovan warriors came to solicit our assistance against the Cheyennes and Siouxs, who had made a combined attack upon them, killing about four hundred of their warriors. In reply to the application, we told them that we had lost many warriors during the past winter, and that we must avenge our own men first; but that we would go and see them in the course of the summer, and hold a conference with them on the subject.

There are two bands of the Grovans: the Grovans of the Missouri, which the Crows sprung from, and whose language they speak, and the Grovans of the prairie, who form a band of the Black Feet. The Grovans of the Missouri were then a weak tribe or band, having, by their incessant wars with the surrounding tribes, been reduced to a very insignificant number of warriors. When the Crows separated from them, the nation was deemed too numerous. This separation was effected, according to their reckoning, above a century since. Those Grovans and the Crows have always been on very friendly terms, and even to this day consider themselves descendants of the same family. They do not move about, like many wandering tribes, but remain stationary and cultivate the ground. Their lodges are built of poles, filled in with earth; they are spacious, and are kept comparatively neat.

I would here remark that the name "Crow" is not the correct appellation of the tribe. They have never yet acknowledged the name, and never call themselves Crows. The name was conferred upon them many years ago by the interpreters, either through their ignorance of the language, or for the purpose of ridiculing them. The name which they acknowledge themselves by, and they recognize no other, is in their language Ap-sah-ro-kee, which signifies the Sparrowhawk people. The villages separated at this time. Long Hair went up the Yellow Stone, to Clarke's Fort, in order to kill buffalo and gather fruit when ripe, while I went with my village on a circuit, and finally rested on the banks of Powder River, a branch of the Yellow Stone. While busy killing buffalo, we were suddenly attacked by the Cheyennes to the number of two thousand warriors. I had been advised by my scouts of their contemplated attack, and was consequently prepared to receive them. They were seriously disappointed in charging upon our empty lodges; and, while they were in confusion, we thundered upon them from our concealment, driving them before us in all directions for upward of two miles. Our victory was complete. We took sixty-three scalps, besides horses and weapons in abundance. We had eighty warriors wounded, principally with lances and arrows, but every one recovered. The heroine did good service, having thoroughly recovered from her terrible wound. She had two horses killed under her, but escaped unhurt herself, using her lance as adroitly as ever.

The village moved on, directly after the battle, in the direction of our friends the Grovans; but, before we arrived, we rubbed out a party of eleven Cheyennes, who had been to the Grovan village on a war excursion, and we carried their scalps and presented them to the Grovans. When we arrived in sight of their villages — five in number — and halted with our whole force on a small hill which overlooked their towns, on perceiving us they were filled with alarm, believing us to be the Cheyennes, returned with a force sufficient to exterminate them. But they discovered us to be Crow friends, and their joy was now proportionate to their former despondency. We passed

---

The Life And Adventures  
Of James P. Beckwourth

---

through their villages two abreast, and all were out upon the tops of their lodges to welcome us as we rode through. The acclamations resounded on every side. They looked upon us as their deliverers and friends, who had come to protect the weak against the strong, that their wrongs might be avenged, and their faces be washed once more. From their villages we rode on to Fort Clarke through the Mandan villages, defiling before the fort in double columns. Every man in the fort was on the battlements, gazing at our long lines of mounted warriors. While defiling past, we were correctly counted by Mr. Kipp. Several alighted and visited the fort, and Mr. Kipp inquired for the Crow who spoke English. No one understood him until he came across a Mandan who spoke the Crow language fluently. They inquired of him for me. I replied he was somewhere about. I was dressed in full costume, and painted as black as a Crow, and neither the Mandan nor Kipp recognized me. The Mandan informed Kipp that I was present.

“Yes,” said I, “Beckwourth is present.”

“Well, well!” exclaimed Kipp, in astonishment; “is that you, Beckwourth?”

I replied that it was, indisputably.

“Then why did you not declare yourself when I was inquiring for you? I certainly should never have distinguished you from any other Indian.”

At this moment my wife entered, carrying my boy in her arms. A great interest was taken in him by all the inmates of the fort, greatly to the delight of his proud mother, and by the time the child had passed through all their hands he had received presents enough to load a pack-mule.

We staid with our friends ten days, part of which time was occupied in arranging a combined plan of defense against the Black Feet. When we departed, Long Hair presented us with an ample stock of corn and pumpkins. We passed the Yellow Stone, and traveled on by easy marches to the Mussel Shell River, killing and dressing buffalo during our whole journey. Here we encamped to await the arrival of Long Hair. Our spies kept us advised of the movements of the enemy, and intelligence was brought us that he was manifestly concentrating his forces at the Three Forks of the Missouri for a grand attack. I knew that we were also vigilantly watched by the enemy’s spies, and I determined to make no movement that would warrant the suspicion that their movements were known to us. Long Hair shortly joined us with his whole force, and I felt perfectly at ease now, notwithstanding the most strategical movements of our enemy.

After various demonstrations on either side, we feigned a division of our forces, and marched one half of them to a spot which concealed them from the tableland, thus leading the enemy to the belief that we were still ignorant of his intentions and his numbers.

At daybreak the following morning we heard the noise of their innumerable horse-hoofs, and shortly after they burst upon our tenantless lodges like a thunder-cloud. I suffered about one third of their warriors to become entangled in the village, and I then gave the order to charge.

The shock was irresistible; their advancing division was attacked on all sides, and the appearance of my concealed warriors sent a panic through the tribe. They fled precipitately without venturing to look round to see if they were pursued. It was a complete rout, and purchased at but slight cost to ourselves. We gathered over four hundred scalps, and took fifty women prisoners; we captured five hundred horses, one hundred guns, and weapons, blankets, and camp equipage beyond enumeration. Our loss was four killed and three hundred wounded, some of whom afterward died of their wounds.

Our wounded warriors attended to, and our spoils gathered, we moved on without delay to our

---

The Life And Adventures  
Of James P. Beckwourth

---

tobacco plantation, as it was now time to gather our crop. We journeyed by way of the fort, and on our road fell in with a party of fifteen Black Foot warriors, who were driving a large drove of horses they had stolen from the Snakes. We entrapped the enemy into a ditch and killed the whole party, and their recent acquisition came in very serviceably, as our stock of horses was greatly diminished. We found our crop excellent, and, as our numerous hands made light work, our harvest was soon gathered.

We then passed on at our leisure, killing more or less buffalo daily, until we arrived at Tongue River, about the new moon of Leaf Fall. On our way we lost nearly three hundred head of horses, which were stolen by the Black Feet. We did not trouble ourselves to pursue them, as we felt confident they were but lent them, and that they would shortly be returned with good interest. At Tongue River we confederated with our friends, the Grovans, in an attack upon the Cheyenne village; from thence we returned to the Yellow Stone, when I detached a party of one hundred and sixty warriors on an excursion to the Black Foot village, and they returned bringing six hundred fine horses with them. We then passed on to Fort Cass, where we witnessed much dejection and gloom, occasioned by a serious reverse which they had experienced since our last visit.

CHAPTER XXI.

Attacks of the Black Feet on the Fort.—Six White Men killed.—Abandonment of Fort Cass.—Fort constructed at the Mouth of the “Rose Bud”.—Removal of the Village.—Peace concluded with the As-ne-boines.—Hair-breadth Escape.—Death of Mr. Hunter, of Kentucky.

WHILE we were indulging in a display of our captured horses while encamped outside the fort, the Spotted Antelope, one of my relatives, came to me, and intimated that I had better visit the fort, as they had lost six men by the Black Feet. He was in mourning-paint for the victims, because the whites were his friends. I dismounted, and passed through the encampment on my way to the gate. As usual, I found my father’s lodge, in which my little wife resided, pitched nearest to the fort, with the other lodges of my various relatives grouped in a row, their contiguity to my parent’s lodge being graduated by their propinquity of kin. I found Pine Leaf seated by my wife, amusing herself with the Black Panther (whose civilized patronymic was Little Jim), while almost all the other women were dancing. I delayed a moment to inquire why these two women were not dancing with the others. Pine Leaf, with solemn air and quivering lip, said, “Your heart is crying, and I never dance when your heart cries.”

“Neither do I,” said the little woman.

This was a greater concession than the heroine had ever made to me before. She had told me that she would marry me, and she had frequently informed my sisters and my little wife of a similar intention; but this promise was always modified with a proviso — a contumacious “if,” which could never be avoided. “I will marry the Medicine Calf,” she would say, “if I marry any man.” A great many moons had waxed and waned since she first spoke of the pine leaves turning yellow, but they had not yet lost their verdure, and I had failed to discover a red-handed Indian.

In conversation with Mr. Tulleck, the commandant of the fort, I learned that they had been incessantly harassed by the Black Feet ever since our last visit, who had invested them on all sides, rendering it extremely dangerous for any of the inmates to venture outside the gate. He further informed me that he had had six men massacred and fifty-four horses stolen. He had sent for me, he said, to come and select a new site, where they would be liable to less molestation, and be less in fear of their lives.

The Life And Adventures  
Of James P. Beckwourth

---

I consulted with our chiefs and braves upon the selection of a more secure location for a new fort, and it was unanimously agreed upon that the mouth of the Rose Bud, thirty miles lower down the river, offered the best situation, as the country was fair and open all round, and afforded the hostile Indians no good places of concealment. There was also a fine grazing country there, and plenty of buffalo, so that a village of the Crows could winter under the fort, and afford them the protection of their presence.

As soon as the Crows had completed their purchases, I started them up the Big Horn on their way back, with the promise that I would rejoin them in a few days. I then took a boat filled with goods, and twenty men, and dropped down the river until we came across a beautiful location for the new fort. We then returned, and removed the effects of the present fort to the new site, and then immediately set about constructing a new post. We measured off one hundred and eighty yards square, which we inclosed as quickly as possible with hewn timber eighteen feet high, and of sufficient thickness to resist a rifle ball: all the houses required for the accommodation of the inmates were commodiously constructed inside.

Having finished the construction of the fort, I gave full instructions for the management of its affairs, and then departed for the village, where my presence was required to incite the Indians to devote themselves to trapping and hunting buffalo, for which service I was paid by the American Fur Company.

As I was about starting, a deputation of fifty As-ne-boines came to the post, leaving a letter from Mr. M'Kenzie at the lower fort addressed to me, requesting me to constrain the As-ne-boines into a treaty of peace with the Crows, in order that their incessant wars might be brought to a close, and the interests of the company less interfered with. Had they arrived earlier, while the village was present at the old fort, I would have immediately called a council of the nation, and had the business settled. I seriously regretted their inopportune arrival, as it not only delayed the conclusion of the proposed peace, which was in every way desirable, but it would have saved me a very hazardous and anxious journey with the whole deputation of hostile Indians on our way to the village, where I had but one companion as a guarantee for my security. I was aware that the Indians remembered many a horse-borrowing adventure wherein I had taken an active part, and I had had too much experience of Indian character not to appreciate to the full the imminent danger I incurred in trusting myself with this band of savages in our intended journey across the wilderness.

Mr. Kean, a native of Massachusetts, was my companion on this excursion. We started on foot, in company with the party of As-ne-boines. Every thing went well until our fourth day out. We were traveling leisurely along, the Indians in close conversation among themselves, of which I understood but little — not enough to make out the subject of their consultation, though I mistrusted I formed the matter of their discourse. One of the chiefs and his son were a few rods in advance, in close conversation. The party at length halted, and sat down on the grass to smoke. My companion, unsuspecting of evil, started on to kill buffalo while the party rested. The chief and his son, who were in advance, returned, and passed one on each side of me. I instantly heard a gun-click, which I felt certain was the sound of cocking it. I turned my head, and saw the chief's son with his piece leveled ready to shoot. I sprang to my feet, and grasped the barrel of his gun just as he discharged it, the load passing into the air. I drew my battle-axe, and raised it to strike the treacherous rascal down; but a chief arrested my arm, saying, as nearly as I could understand

---

The Life And Adventures  
Of James P. Beckwourth

---

him, "Hold! Don't strike him: he is a fool!"

A general melee then ensued among the party; high words were bandied, and there seemed an equal division among them on the propriety of taking my life. By this time I had withdrawn a few yards, and stood facing them, with my rifle ready cocked. On hearing the report, my companion ran back, and, seeing how matters stood, exclaimed, "There is a fort just ahead, let us run and get into it; we can then fight the whole parcel of the treacherous devils."

We started for it, but the Indians were ahead of us; they arrived there first, and took possession of it, and again had a long confab, while we remained at their mercy outside. The party opposed to killing me appeared greatly to predominate, and we were not again molested, though neither I nor Mr. Kean slept one moment during the ensuing night. In the morning we started on our way, but we kept strict watch on their movements. The following afternoon I discovered two Indians on the hill-side, and, although they were at a great distance, I conceived them to be Crows, most likely spies from the village, which proved to be the case. No one had seen them but myself, and I imparted my discovery to my friend. I then told the head chief, who well understood the Crow language, that we were near the Crow village, and that if any of them should visit our camp during the night, he must be sure to call me before he suffered any of his people to speak to them, or they would be all inevitably massacred. He accordingly issued orders to that purport to all his men, and erected his lodge in front of the party, so as to be the first inquired of by the Crows. I and my partner then lay down, and soon were sound asleep.

About midnight the chief shook me, and informed me the Crows were coming. A host of warriors swarmed around our encampment, and, pointing their guns at the camp, said, "What people are you? Bud-da-ap-sa-ro-kee" (we are Sparrowhawks).

"Go back," I replied; "I have other people with me, who are come to make peace."

On hearing my voice, which they readily recognized, they retired.

The next morning we moved on and met the village, who were approaching toward us. The Asne-boines, on seeing such a host, began to tremble. Our soldiers came driving along, my brave Dog Soldiers ineffectually striving to keep them back; for, as they restrained them in one place, they broke through in another, until the warriors rode almost upon the toes of their guests. A council was shortly called to listen to the arguments of the envoyé extraordinaire from the Asne-boine nation. Several of the council applied to me for my sentiments on the subject, but I deferred it to the collective wisdom of the nation.

When I had at first arrived, like many another foolish man, I mentioned to my wife the narrow escape of my life I had just made, and she, like many another foolish woman, unable to contain herself, related the information to Pine Leaf, who was her bosom friend. While the council were busy deliberating, and some explanatory statements had been listened to regarding a matter which I supposed would have afforded no food for discussion, the heroine entered the assembly. "Warriors!" she said, you are assembled here, I believe, to deliberate on peace or war with the Asne-boines. In coming to our village with the Medicine Calf, they attempted to take his life, and came very near accomplishing their end. Will you conclude peace with a people who possess such base hearts? I do not believe you will."

Such an instantaneous change of countenance in an assembly was never before seen. Pine Leaf, the nation's favorite, had spoken, and, as usual, had spoken to the purpose. Though a woman, her influence was every where strongly felt, even in council. She had a gift of speech which the

The Life And Adventures  
Of James P. Beckwourth

---

bravest warriors might well envy; she was ever listened to with admiration, and in truth, though young, her judgment on all important matters was generally guided by sound sense.

Every eye in the assembly flashed fire at the intelligence of this contemplated treachery, and was directed first upon me and then upon the As-ne-boines. I immediately arose and said,

“Warriors! I conducted these people to our village because they said they were anxious to make peace with us. While on the road, one young As-ne-boine, whom they declared to be a fool, attempted to shoot me, but the others interfered to prevent him, and were sorry for what he had done. This was no deliberate treachery; it was the folly of the young man, and the party showed their friendly intention by their prompt interference. Do not allow this to make any difficulty in the way of a peace with the As-ne-boines.”

My obligation to the Fur Company made it my duty to smooth the matter over, for at this moment the slightest whisper from me would have sufficed to hack the whole deputation to pieces in a moment.

The council held a short consultation together, and the first councilor arose and thus addressed himself to the chief of the As-ne-boines:

“As-ne-boines! you behold that chief (pointing to me)? Our women and all our warriors carry him here (holding out his left hand, and indicating the palm with a finger of his right hand); he is our chief; he is our great chief; he and his brother (Long Hair), who sits by him, are the two great chiefs of our nation. It is he who has made us great and powerful; it is he who has rendered us the terror of other nations; it is he who, by living with his white friends for many winters, and knowing them all, has brought us guns and ammunition, and taught our young men how to use them. It is he who has built us a fort, where we can at all times go and buy every thing we require. He loves the white man, and has made all the whites to love us. We fight for the whites, and kill their enemies, because they are the friends of our chief. If you had killed him, our nation would have mourned in blood.

“Listen, As-ne-boines ! If you had killed our chief, our whole nation would have made war on you, and we would have put out your last fire, and have killed the last man of your nation. We would have taken possession of your hunting-grounds; our women would have become warriors against you; we would have hunted you as we hunt the wild beasts. Now go! we will not harm you. Go! We will sleep to-night; but we will not make peace until we sleep, and our hearts have considered upon it. Come to us again when your hearts are clean: they are foul now; and when you come, you must have your tongues straight. You are poor; you have no horses. We have plenty, and will give you horses. I have done. Go!”

They made no reply, but went straightway out of the lodge. A horse was furnished to each man; those who were without guns received one, and several articles were presented to them by our women. “Go! go! go!” was dinned in their ears from all present; and, accordingly, they went.

They proceeded immediately to the trading-post, where they gave a stirring narrative of what they had seen. They told them they had seen many chiefs, but never one approaching to the great Crow chief; that all his people loved him; that when he entered the village, all the children ran up to him, and shook him by the hand; and that they had never seen a chief so much respected by his warriors and all his people. They told how, when I arrived, I was presented with the best war-horse they had ever seen; that he had two panther-skins on his saddle, and a collar about his neck trimmed with bears’ claws, and a bridle surpassing all they had ever heard of. They said that they

---

The Life And Adventures  
Of James P. Beckwourth

---

would all have been killed on their approach to the village, as the Crows came to the camp during the night; but that the great chief only spoke one word, and the tribe was stilled, and departed in a moment. Not a word did they mention about their attempt on my life. They merely said that the Crows would not make peace with them, but had wished to treat again with them at some future time. I suspect they must have told marvelous tales when they reached home, for we were not troubled with them any more for a long time.

The Crows have something of the Gallic temperament: they must have excitement, no matter whence derived, although the excitement of war suits them by far the best. They were again clamorous for war, they did not care against whom, and I alone must lead them, as my presence was a guarantee of success. Many of my friends opposed my going. My father's medicine told him that I should meet with a great disaster. My wife pleaded with me to remain. Even the heroine, who never before showed reluctance to engage in war, had forebodings of disaster, and earnestly entreated me to stay. But I had previously given my word to my warriors, and had selected one hundred and fifty-four of my best followers to engage in an expedition. I must confess that if I had obeyed my own feelings, or, rather, if I had attended to my own misgivings, I should certainly have staid at home. What motive prompted me to go? and what gain could possibly accrue to mixing with savages in their intestine broils with other savages?

However, we started. Little White Bear, as brave a warrior as ever drew bow-string, was my second in command, and Pine Leaf was one of the number. We started for the Black Foot territory, traveling by way of the fort, where we staid three days. They had already finished their pickets, and the work was progressing finely. There were fifty men employed upon it.

Mr. Tulleck inquired where I was going. I told him that my warriors wanted employment, and, to gratify them, I was going to the Black Foot country in quest of scalps or horses. He said, "For God's sake, do not go, Jim! I have a presentiment that a great calamity awaits you—that I shall never see you again. For your own safety, turn back to the village, or rest here."

Many of my friends, who were working at the fort, expressed the same sentiments; all mentioned a foreboding that, if I should venture into the Black Foot country with my little force, I should infallibly be cut to pieces. I thought such despondency only natural, since they had been so badly harassed with the enemy that their fears magnified the danger. Still it was singular that both civilized and savage should give way to such forebodings.

The morning for our departure came; my warriors were impatient to get on. Some had galloped on ahead, and were prancing and curveting, awaiting my departure. I prepared my going with a heavy heart, which ill fortified me against the representations of my friends. I started, Mr. Tulleck and several of my friends accompanying me a few rods. I bade them good-by: my friend Tulleck's eyes filled with tears. I was seized with momentary hesitation: what did all this portend? I looked round for my moccasin-bearer; he had gone on: this determined me; I dashed off to my warriors, resolved to listen to no such idle fears.

There was a young gentleman with me named Hunter, a Kentuckian, who, having a great curiosity to witness an Indian battle, insisted on joining in the expedition. The first night that we were encamped, being influenced by what I had heard all around me, and fearing some disaster might happen to him among us, I begged of him to go back to the fort and await our return there. He refused to listen to me. We then offered him as many of our best horses as he might wish to select after our return, as an inducement for him to be hired to go back. But all in vain. "I have

The Life And Adventures  
Of James P. Beckwourth

---

started with you," he said, "and I will go; if I am to lose my life, there is no help for it."

My warriors did not wish him to go, as they feared a white man might bring us bad luck. Some expressed a fear that he might be killed with us, and that I should then cry. He was a free trapper in the country, and much respected at the fort.

We continued our course until we arrived at Little Box Elder Creek. Here our spies discovered a Black Foot village, which, from a cursory examination, we concluded consisted of but few lodges. At midnight we abstracted a large drove of about seven hundred horses, and started directly upon our return. We did not drive so fast as is customary on such occasions, for we thought that the few Black Feet that the village contained could be easily disposed of, should they venture to molest us.

About ten the next morning, our spies, being about six hundred yards in advance of us, signaled to us to hasten, as they had discovered some men. We accelerated our speed, thinking there might be a chance of adding a few scalps to our present booty. Having advanced a few hundred yards, we discovered more Black Feet than we had bargained for, and I became aware that a terrible battle must ensue. The whole scene appeared alive with them, outnumbering us ten to one. There was not a moment to lose. I directed all the boys to drive on the horses with the utmost speed possible, and to await us two days at the fort; if we should not arrive during that time, to go home and report to the village that we were all slain. I also requested Mr. Hunter to select the best horse in the herd, and go with the boys. But he refused, saying, if there was any fighting in the wind, he wanted to have his hand in it. I then endeavored to persuade the heroine to go, but was answered with an emphatic "No!"

The boys started with the horses, but only succeeded in reaching the fort with about two hundred. We had a very poor chance for defending ourselves against such an overwhelming force as was then before us in an open field-fight. There was no fort, nor breast-work, nor rocks, nor bushes to protect us, but we were exposed to the storm of bullets and arrows that they poured upon us without ceasing. At last we discovered a large hole in front of a hill, and we all leaped into it for shelter. The enemy, confident of an easy victory, displayed great bravery for Black Feet. They charged up to the very brink of our intrenchment, discharging their volleys at us in lines, which, considering the advantage of their position, produced comparatively little effect. One of my warriors repeatedly ran out of the intrenchment alone, and drove all before him. Exasperated at my cursed misadventure, and absolutely sickening at the scene of mourning we should occasion at the village, I grew desperate, and lost all consideration of safety. I sprang from the gully, and rushed singly among a crowd of besiegers; wherever I advanced the enemy drew back. It was truly astonishing to see three or four hundred recede, and many of them fairly run, as often as two or three of us showed ourselves at the top of the bank, when they might have burned us to death with the powder from the muzzles of their guns. They seemed to be panic-struck or bewildered. The warrior who had charged so often among them had his thigh broken; he then sat down and tantalized them. He told them who he was, how many of their warriors' scalps he had taken, and at what times; how many of their squaws and horses he had captured; and then desired them to come and finish him, and take his scalp, for it had long been forfeit to them. He reminded me of the words of the poet, which I had read when at home:

"Remember the wood where in ambush we lay,  
And the scalps which we bore from your nation away;

The Life And Adventures  
Of James P. Beckwourth

---

Remember the arrows I shot from my bow,

And remember your chiefs by my hatchet laid low.”

He was soon killed, being pierced with numerous arrows and bullets.

An old brave in the pit exclaimed, “Let us not stay in this hole to be shot like dogs; let us go out and break through the ranks of the Black Feet. They can not kill us all; some will get away. I will go foremost; I can break through their ranks alone.”

Some hundreds of the enemy had climbed the hill, as they could not half of them get to the side of the pit, and thence they showered volleys of stones upon us, which annoyed us more than their bullets. At length, Little White Bear desired the old brave to lead, and we would follow and break through their line. I requested Hunter to keep as near the front as possible when we made the charge, as he would incur less danger of being cut down. He took his place accordingly. Out we rushed from the pit, the old warrior leading the way, and hewing down right and left, until the enemy finally opened their column and suffered us to pass through. We left twenty-four of our party behind, either killed in the pit, or cut down in forcing their column. I was near the rear, and, after passing a short distance from their line, I came upon poor Hunter, who had his back broken by a ball, and was in a dying condition. I asked him if he was badly hurt; he answered, “Yes, I am dying; go on and save yourself: you can do me no good.”

When the Little Bear came up to him, he sat down by his side and refused to leave him. He said, “I will die with my white friend, and go with him to the spirit land.”

I looked and saw him fall over upon the body of poor Hunter; he was also killed.

Pine Leaf had cut her way through in advance of me, and was dodging first one way and then the other, as she awaited for me to cut up.

“Why do you wait to be killed?” she inquired. “If you wish to die, let us return together; I will die with you.”

We continued our retreat for a few miles, but the enemy no longer molested us; he had not followed us more than two hundred yards. We had left all our robes behind us in the pit, that we might not be burdened with them in our charge. The weather was extremely cold, and we halted to build a large fire, which we rested by all night, warming one side at a time.

The old brave who led the assault lost a son in the strife; he continued to sing all the way until he became hoarse, and he could sing no more. He prayed to the Great Spirit to give him an opportunity to avenge his loss, which prayer was accorded several times over during the ensuing winter. The heroine lost one joint off the little finger of her right hand, amputated with a bullet; the little finger of her other hand she had cut off at the death of her twin-brother. Fortunately, I had saved my capote, and I gave it to her to wear, as she was suffering severely with the cold. We also killed several buffaloes on our way to the fort, and made wrappers of the raw hides for many of the men; still a number were badly frozen in their bodies and limbs.

This was my Russian campaign. I lost more men, and suffered more from the cold on this expedition, than in any other in which I had command either before or since.

The boys reached the fort with the horses before we did. They had more than enough to mount us all on our way home. There was great joy at the fort at our return in such numbers, as they had supposed it impossible for one of us to escape.

When I left the lamented Hunter upon the field, he said, “Jim, when you pass this way, I ask you to take my bones to the fort, and have them buried. Write home to my friends, and inform them

The Life And Adventures  
Of James P. Beckwourth

---

of my fate. Goodby! Now go and save yourself.”

“It shall be done,” I said; and the following spring it was done as I had promised.

We rested at the fort four or five days to recruit ourselves. While staying there, a party of thirty warriors from Long Hair’s village came to see how they were progressing with the fort. There were some in my party who belonged to that village, and they returned with them. They also informed us where our village was, as it had been removed during our absence. Having provided ourselves with robes in the place of those we had left behind, we started onward with dejected feelings, and in deep mourning.

On our arrival we found the village likewise in mourning. They had lost four warriors by the Black Feet while resisting an attempt to steal our horses. When informed of our disaster, there was a general renewal of their lamentations; more fingers were lopped, and heads again scarified. The Medicine Calf had been defeated, and for some hidden cause the Great Spirit was again wroth with the Crows.

CHAPTER XXII.

Meteoric Shower.—Its Effect upon the Indians.—Their Sacrifice to the Great Spirit.—Continued Hostilities with the Black Feet.—A Black Foot burned in the Crow Village.—Visit to the Fort.

IN case any captious “elders of the congregation” had been inclined to throw the blame of my recent disaster upon my shoulders, I was provided with a sufficient portent to screen me from consequences. After quitting the fort on our way to Little Box Elder (as before related), and while exhausting all my powers of persuasion to induce Mr. Hunter to return, we observed a remarkable meteoric shower, which filled us all (more particularly my followers) with wonder and admiration. This was at our first encampment after leaving the fort in the latter end of October, 1832. Although my warriors were ready to face death in any form, this singular phenomenon appalled them. It was the wrath of the Great Spirit showered visibly upon them, and they looked to me, in quality of medicine chief, to interpret the wonder. I was as much struck with the prodigious occurrence, and was equally at a loss with my untutored followers to account for the spectacle. Evidently I must augur some result therefrom, and my dejected spirits did not prompt me to deduce a very encouraging one. I thought of all the impostures that are practiced upon the credulous, and my imagination suggested some brilliant figures to my mind. I thought of declaring to them that the Great Spirit was pleased with our expedition, and was lighting us on our way with spirit lamps; or that these meteors were the spirits of our departed braves, coming to assist us in our forthcoming fight. But I was not sanguine enough to indulge in any attractive oratory. I merely informed them I had not time to consult my medicine, but that on our return to the village I would interpret the miracle to them in full.

On our arrival, I found the people’s minds still agitated with the prodigy. All were speaking of it in wonder and amazement, and my opinion was demanded respecting the consequences it portended. Admonished by my defeat, I had no trouble in reading the stars. I informed them that our people had evidently offended the Great Spirit; that it was because of his wrath I had suffered defeat in my excursion, and returned with the loss of twenty-three warriors. I thence inferred that a sacrifice must be made to appease the wrath of the Great Spirit, and recommended that a solemn assembly be convened, and a national oblation offered up.

I was fully confident that by thus countenancing such pagan superstitions I was doing very

The Life And Adventures  
Of James P. Beckwourth

---

wrong, but, like many a more prominent statesman in civilized governments, I had found that I must go with the current, and I recommended a measure, not because it was of a nature to benefit the country, but simply because it was popular with the mass.

The camp in which we then were was a mourning-camp, in which medicine would have no effect. Therefore we moved to Sulphur River, ten miles distant, in order to offer up our sacrifice. All the leading men and braves assembled, and I was consulted as to the kind of offering proper to make for the purpose of averting the wrath that was consuming us. I ordered them to bring the great medicine kettle, which was of brass, and capable of holding ten gallons, and was purchased at a cost of twenty fine robes, and to polish it as bright as the sun's face. This done, I ordered them to throw in all their most costly and most highly-prized trinkets, and whatsoever they cherished the most dearly. It was soon filled with their choicest treasures. Keepsakes, fancy work on which months of incessant and patient toil had been expended, trinkets, jewels, rings so highly prized by them that the costliest gems of emperors seemed poor by their side — all these were thrown into the kettle, along with a bountiful contribution of fingers, until it would hold no more. I then had weights attached to it, and had it carried to an air-hole in the ice where the river was very deep, and there it was sunk with becoming ceremony. Three young maidens, habited like May queens, carried the burden.

This great sacrifice completed, the minds of the people were relieved, and the result of the next war-party was anxiously looked forward to to see if our oblation was accepted. Their crying, however, continued unabated, so much to the derangement of my nervous system that I was fain to retire from the village and seek some less dolorous companionship. My bosom friend and myself therefore started off unnoticed, and traveled on without stopping until we came to a hill some seven or eight miles distant. He was pre-eminently a great brave, at all times self-possessed and unobtrusive. I always considered him as endowed with the most solid sense, and possessing the clearest views of any Indian in the nation. His spirits were generally somewhat dejected, but that I attributed to the loss of all his relatives. When I wished to enjoy a little converse or sober meditation, he always was my chosen companion, as there were qualities in his character which interested me and assimilated with my own. He never craved popularity, never envied the elevation of others, but seemed rather to rejoice at another person's success. He would listen to me for an entire day when I spoke of my residence with the whites, and told of their great battles, where thousands were slain on both sides; when I described their ships carrying immense guns capable of sweeping hundreds of men away at a discharge; and when I depicted to him their forts, to which our forts for size or strength were but as ant-hills. I then would tell him of the great Atlantic Ocean, and the millions of white men living beyond it; of countries where there was no summer, and others where there was no winter, and a thousand other marvels, of which I never spoke to other warriors, as their minds were too limited to comprehend me.

After listening to me with the deepest attention until I would grow tired of talking, he would seem to be perfectly amazed, and would be lost in a deep reverie for some time, as though endeavoring to raise his ideas to a level with the vast matters he had been listening to. Occasionally he would tell me of the traditions handed down from generation to generation in the Indian race, in which he was "elegantly learned." He told me of the mighty tribes of men who had once inhabited this vast continent, but were now exterminated by internecine wars; that their fathers had told them of a great flood, which had covered all the land, except the highest peaks of the

---

The Life And Adventures  
Of James P. Beckwourth

---

mountains, where some of the inhabitants and the buffaloes resorted, and saved themselves from destruction.

We were on a hill, as before mentioned, some seven or eight miles from the village, engaged in one of these long cosmographical discussions, when my companion, chancing to turn his head, descried some object at a great distance. Pointing it out to me with his finger, "There is a people," he exclaimed. I looked in the direction indicated, and saw a small party of Black Feet approaching.

"Sit still," said I, "and let us see where they encamp; we will have every one of them to-night."

We watched them until they halted at a couple of small Indian forts, with which the country abounds, and we saw they were soon joined by four or five others who came from another direction, and who were evidently scouts. From the direction which they came, I saw they had not discovered our village.

"Now," said I, "let us return; we will have that party. We will collect a few trusty warriors, and not mention our discovery to a living soul, not even telling our warriors the errand we are upon until we get within sight of the camp-fires of the enemy. Then we will return with their scalps, and put an end to this howling that deafens my ears."

We started on our way to the village. I desired him to select from his friends, and I would assemble my own.

"No," said he, "my friends are fools. I don't want them. But you collect your warriors, and I will be one of them."

Accordingly, I went to my father, and desired him to send for about seventy-five of my brothers and relatives, and tell them the Medicine Calf wished to see them; but I charged him not to tell them they were going away from the village. As they mustered one at a time, I acquainted them that I wanted them to leave the village singly and with the utmost secrecy, to meet me with their guns and battle-axes at a certain hour and in such a place, and in the mean time to answer no word to whatever question might be asked them.

At the appointed hour I repaired to the post, and found them all in readiness. I then marched them to the place of attack. When we arrived within sight of our foes we found them all very merry; they were singing the Wolf Song, or Song of the Spies, they having no suspicion that they were so near to the Crow village. We went cautiously up to the forts, which were but a few yards apart; and while they were yet singing we pointed our guns, and, at a signal given by me, all fired. The whole party were slain; their notes were cut short in death. Taking their scalps (nineteen in number) and guns, we reached our village by daylight, and entered it singing, dancing, and shouting.

The village was aroused, and men, women, and children came running from all directions to learn the cause of the disturbance. We displayed our nineteen scalps, and I took to myself full credit for the force of my medicine in divining where to find the foe, and cognizance was taken of the fact in the medicine lodge. We had five days' dancing to do full justice to this brilliant achievement, and I had become so tired of their continual mourning that their savage yells of delight seemed quite a luxury.

One night a party of Black Feet came to borrow some of our horses, and happened to be caught in the fact. The alarm was given, the marauders fired upon, and one of them had his leg broken by a ball. He was found the next morning, unable to get away; but he sat up and defended himself

The Life And Adventures  
Of James P. Beckwourth

---

until he had shot his last arrow. He was then brought into the village, and it was decided to burn him. A large fire was built, which was surrounded by hundreds, and when the fire was well burnt up the poor fellow was thrown in. This was the first act of the kind I had ever known the Crows to commit; but there was no preventing it. It is an appalling sight to behold a human being, or even an inferior animal, perish in the flames; I trust my eyes may never witness such another scene. To see the writhing agony of the suffering wretch when cast into the darting flames, and hear his piercing shrieks as the blaze gradually envelops his whole body, until the life is scorched out of the victim, and he falls prostrate among the logs, soon to become a charred mass of cinders undistinguishable from the element that consumed it — it is indeed a sight only fit for savages to look at.

I learned this one truth while I was with the Indians, namely, that a white man can easily become an Indian, but that an Indian could never become a white man. Some of the very worst savages I ever saw in the Rocky Mountains were white men, and I could mention their names and expose some of their deeds, but they have most probably gone to their final account before this.

Our village now moved on toward the fort to purchase our spring supplies. Both villages could only raise forty packs of beaver and nineteen hundred packs of robes; but for their continual wars, they could as easily have had ten packs for one. But it is impossible to confine an Indian to a steady pursuit — not even fighting; after awhile he will even tire of that. It is impossible to control his wayward impulses; application to profitable industry is foreign to his nature. He is a vagrant, and he must wander; he has no associations to attach him to one spot; he has no engendered habits of thrift or productiveness to give him a constant aim or concentration of purpose. Both villages at length assembled at the new fort, and our spring trading was briskly entered into. We rested for over a week, and I then proposed moving, as the time was approaching for our building a new medicine lodge. The night preceding our proposed departure, thieves were discovered among our horses; the alarm was given, and a party went in pursuit. They returned with six Sioux scalps, and two of our own men wounded. The remainder of the rascals succeeded in getting away with sixteen of our animals, we not considering them worth following after. We then postponed our departure four days, and devoted ourselves to noise and festivity. The welkin rung with our shouts, and the fort shook with the thunder of our earthquake step.

#### CHAPTER XXIII.

Removal to our Tobacco-ground.—Expedition to the Arrap-a-hos for Horses.—Discovered, and the Party scattered.—Wanderings for fourteen Months.—Return at last amid tremendous Rejoicing.

WE left the fort, and proceeded toward our tobacco-ground. We planted the seed, and spent a short time in festivity. It was deemed inexpedient to build a medicine lodge this season, as all the business could be transacted in a temporary one.

Our stock of horses being greatly diminished, we deemed this a fitting time to try and replenish it, and various small parties sallied out for that purpose. I left with only seventeen warriors for the country of the Arrap-a-hos, situated on the head-waters of the Arkansas. On arriving at their village we found a great number of horses, upon which we made a descent; but we were discovered before we could lay our hands on any, and had to scatter in all directions in our effort to escape. One of our party had his leg broken with a rifle ball, but he did not fall into the enemy's hands, as he crawled away and secreted himself. Two months subsequently he found his way home, with

The Life And Adventures  
Of James P. Beckwourth

---

his leg nearly healed. He stated that, after receiving his wound, he plunged into the river, which flowed close by, and swam to an island, there concealing himself in a thick brush. The enemy moved away the next day, and he swam back to their camping-ground, where he found an abundance of meat, which he carried over to his quarters; upon this he fared sumptuously until he was strong enough to walk; then he made his way home.

I saw the village move the next morning, and, gathering four of my scattered companions, I followed the enemy at a respectful distance until they encamped for the next night. We then made another descent upon their fold, and succeeded in obtaining each man a horse. We saw no more of the remains of our party until we returned to our village upward of a year subsequently.

We came to the resolution to quit the Arrap-a-hos, and pay the Snakes a visit. On reaching them we found horses in abundance, and could have levied upon them for any number; but, being at peace with the tribe, we contented ourselves with exchanging our jaded and foot-sore animals for five fresh ones from their drove. Here we dropped an arrow, and they recognized it for a Crow arrow readily; we also put on new moccasins, and left our old ones behind us. When the Snakes fell in with the Crows some time after, they charged them with stealing their horses, which charge the Crows strenuously denied. The Snakes persisted, and, to confirm their accusation, produced the arrow and the abandoned moccasins. This satisfied the Crows that it must be some of the Arrap-a-ho expedition, and hopes of our safety were revived.

From the Snakes we passed on to the Flat Head territory, where we found thousands of horses, but felt ourselves under the same moral restrictions as with the Snakes. Accordingly, we merely exchanged again, and again left five pairs of moccasins. Subsequently they made the same charge against the Crows, and accused them of infringing the treaty. The Crows again pleaded innocence, and again the moccasins convicted them of their guilt. They, however, resorted to diplomatic finesse, and an appeal to arms was averted. Again their hopes were rekindled of seeing us once more.

We then took a notion to pay the Coutnees a flying visit, where we made another exchange. We could have taken all the horses we wanted, but, to get home with them, we must have taken a wide circuit, or have passed through the territory of two hostile nations. We next moved to the As-ne-boine River, which empties into Hudson's Bay. Here we borrowed one hundred and fifty head of fine horses from the Blood Indians, and started on our way home. We arrived, without accident, at the Mussel Shell River, within one day's ride of our own people, where we encamped, intending to reach home the next day; but that night the Crows swept away every horse we had, not even leaving us one for our own use. We must have slept very soundly during the night; indeed, we were all greatly fatigued, for we did not hear a single movement. In getting our horses, they glorified themselves over having made a glorious haul from the Black Feet.

Not liking to be foiled in our resolution to return home with a respectable accompaniment of horses, we retraced our steps to the As-ne-boine River, intending to start another drove. On our return we found our friends had left, and had crossed to the other side of the mountain. We followed on, but delayed so long on the western slope, that the heavy snow-storms now falling cut off all possibility of returning home before spring; therefore we built a comfortable lodge in what was called Sweet Mountain, in a cañon, where we could kill a buffalo every day, the skins of which, covered entirely over our lodge, made a very agreeable abode for the winter. We also killed several large wolves, and dressed their skins in the nicest manner. We likewise took three

The Life And Adventures  
Of James P. Beckwourth

---

Black Foot scalps. The Indians whose horses we had been in pursuit of, after having roamed about considerably, had gone into winter quarters only twelve or fifteen miles distant; their smoke was visible from our lodge. On the return of spring we visited our neighbors' camp, and selected one hundred and twenty head of such horses as we thought would stand the journey. We then returned over the mountain, and reached as far as the Judith in safety, which was within three days' ride of the village. We were greatly fatigued, and halted to encamp for the night and rest our jaded horses. Again the Crows stripped us of every horse, leaving us on foot once more. Resolved not to be beat, we determined to try our luck a third time before we returned to our village. I told my four companions that my medicine promised me success, and that when we did eventually get home we should be able to see what amount of affection was felt toward us by our people, by ascertaining how much crying had been done for us.

I had no doubt we had been mourned as dead, for we had been absent above a year. During this time, we subsequently learned, there had been great mourning for us, and many had cut off their hair. My father, however, still persisted that I was alive, and would some day return, and he would allow none of his family to cut off their fingers for me. At the time the Flat Heads went in with their complaint, they were about to elect another chief to fill my place; but when they saw the five pairs of moccasins produced, they knew they must have had Crow wearers, and their hopes were revived of again seeing us, and the election ceremony was postponed. My father would have no steps taken toward filling my vacant place before the erection of the next medicine lodge. He said he did not know where his Calf had rambled, and it was his firm belief that in the course of time he would ramble home again.

When we reached the As-ne-boine for the third time, we found that our friends who had accommodated us with the two previous droves of horses had gone over the mountain, and passed down that river to Fort Row, one of the Hudson's Bay trading-posts. By the appearance of their trail we judged that they had been joined by other villages, probably from the Coutnees and Pa-gans, all on their way to the trading-post for the purchase of their spring supply of goods. We followed their trail for several days, which grew fresher and fresher, until one afternoon we came suddenly upon a horse. We were at that time in thick timber, with a dense growth of underbrush, and thousands of wild pea-vines about.

On seeing the horse we halted suddenly. On looking farther around, we discovered horses of all colors and stripes, ring-streaked and speckled. Shortly the sound of voices reached our ears. In an instant we stooped down and crept under the almost impenetrable vines, nor did we venture to move from our hiding-place until night. We could distinctly hear the chatter of men, women, and children around us, and some of the squaws came most dangerously near when gathering fire-wood for their camp-fires. We could occasionally peep out, and we saw in those glimpses that they had beautiful horses, and, besides, that they were in good traveling condition. We then felt no doubt that the Coutnees were in company, since they always prided themselves in spotted horses, as Jacob of old took pride in spotted cattle. In that encampment it so little entered into their heads to anticipate molestation that they had placed no horse-guards to keep watch.

The noise of the horses in tearing through the pea-vines assisted us materially in our nocturnal enterprise. We selected two hundred and eighty of their largest, strongest, and handsomest cattle, with which we lost no time in making direct for Crow-land; nor did we venture to give rest to their hoofs until a journey, continued through three days and nights, placed what we considered

The Life And Adventures  
Of James P. Beckwourth

---

a safe distance between us. We then ventured to encamp for the night, to afford to the poor tired-out animals an opportunity to rest for a while, but starting off at early dawn to preclude all possibility of recapture.

On the fifth day we discovered an Indian a short distance from our trail, who was coming in an oblique direction toward us. He stopped on the hill-side at some little distance off, and motioned for us to approach him. Supposing him to be a Crow, I desired my companions to drive on, while I went to see what he wanted. When I had approached within a few yards of him, he put on an air of surprise, and placed his hand to his shoulder with the intention of drawing his bow. I sprang upon him instantly and cut him down, and despoiled him of his scalp and quiver. When about to leave to overtake my companions, I perceived the distant smoke of a Black Foot village situated immediately in the direction that we were journeying, and it was beyond doubt that the Indian I had just killed was a spy belonging to that village. He must have mistaken us for some of his own tribe, and only discovered his mistake when I approached near enough for him to distinguish my features.

My companions returning to me, we altered our course, and passed over a mountain covered with deep snow, so hard, however, that we passed it without losing a horse. This was one of the spurs of the Rocky Mountains, and covered with perpetual snows.

After sixteen days of almost incessant travel day and night, we came in sight of our village just as the sun was sinking behind the distant mountains. We approached within a mile of the village, and encamped under a small hill, as yet unperceived by our people, for the hill in the shelter of which we lay was between ourselves and the village. It was now the latter end of June (I think), in the year 1834.

After resting a while, I thought to get some tobacco, to indulge in a smoke before making our grand entreé, at the same time requesting my companions to keep a sharp look-out, and see that the Crows did not steal our horses again. Finally, three of us entered incog., and smoked with several of the old men, not one of whom recognized us or once thought of us. We passed all through the village, looking leisurely about us; the streets were full of people, yet not one bestowed a thought on us. When it became somewhat late, and the inhabitants had principally retired, I dismissed my two companions to the camp, telling them I would get some tobacco, and rejoin them in a short time. I then entered the lodge of one of my wives, who was asleep in bed. I shook her by the arm, and aroused her.

Waking, she inquired, "Who is this in the lodge?" I answered, "It is your husband."

"I never had but one husband," she replied, "and he is dead."

"No," said I, "I am he."

"You are not dead, then, as we have believed?"

"No," I said; "I have been wandering a long while, and have only just returned."

"We all mourned you," she continued, "many moons ago, and we all mourn you now every day.

We believed that the enemy had killed you."

"No," I said, "I escaped. I have now brought home a large drove of beautiful spotted horses, and if you will do as I wish you, you shall have your choice of the whole drove, and you will become a medicine woman also."

"I will do what you wish me," she replied. "Well, I want you, when you get up in the morning, to request the village to refrain from crying for one sun. Tell them that you dreamed that I came

The Life And Adventures  
Of James P. Beckwourth

---

home riding a large and spotted horse, having the other four men with me; that we had nearly three hundred of the most beautiful horses you ever saw, and that we rode with large wolf-skins spread on our horses' backs, mine being as white as the drifted snow."

She agreed to do all as I had bidden her; I then left her lodge; but, before quitting the village, I called in at my father's lodge. All was still around, and, entering on tip-toe, I reached down the medicine shield, which no one but his wife or eldest son is privileged to handle, and, opening it, I took out all his medicine tobacco, carrying it back to the camp with me, and then replaced the shield upon its peg. I then returned to our camp, and enjoyed a good smoke with my companions, our spirits waxing elate at the surprise we had in store.

Early the next morning, the woman, true to her word, narrated her dream to the astonished inhabitants, with whatever additions her own fancy suggested. My father and mother listened attentively to her revelation; and, before she had got through with her narrative, she had quite a numerous auditory. We were watching the occurrence from the brow of the hill; and, knowing she would have to rehearse her vision several times before it was generally known throughout the village, we did not hurry to show ourselves.

My father and mother, having heard her through, turned and entered their lodge. Suddenly the medicine shield caught my mother's eye—it had evidently been moved. My father took it down and opened it — the tobacco was gone. This opened the —old gentleman's" eyes. "It is well," he said; "my son lives!" and he believed the substance of the dream as fervently as the prophetess who uttered it. The bystanders, seeing his medicine so strong, and he beginning to sing and dance, they all joined in, until the noise of their revelry reached us on our distant eminence.

Now was our time. We mounted our caparisoned steeds, and, forming ourselves in procession, we commenced our grand entreé, singing and shouting at the top of our voices. Our tones are heard, and the villagers gaze around in surprise. "Hark!" they exclaimed; "look yonder! there are five men mounted on large spotted steeds. Who are they?"

All was hushed as the grave in the village, each striving to catch the sound of our distant strains. The five horsemen disappeared as if by magic, and reappeared driving a large drove of horses before them of all colors. The horsemen again pause on the summit.

"Hark! listen! they sing again! Who can they be?"

Not a soul yet stirred from the village. We drove our horses down toward them, and left them there, while we took a circuit around, displaying our scalps, but still keeping over gunshot distance. The old men came out to us, carrying drums; each of us took one, and then we bounded away to the rear of our horses. We raised a well-known song, and all listened to the tones of the returning Medicine Calf. At length our wives and relatives broke away from the throng, and darted over the plain to meet us. They fairly flew over the intervening space to welcome us in their arms. A tall sister of mine outstripped the rest, and arrived first, and immediately after my little wife was also by my side. After a warm greeting exchanged with these, the warriors came up, and saluted us with a shout that would have aroused Napoleon's Old Guard from their graves. We were lifted from our horses, and almost denuded of our clothing, and carried by the impetuous throng into the village. My father had painted his face into an exact resemblance of Satan, in token of his joy at my happy return. I was kissed and caressed by my mother, sisters, and wives until I fairly gasped for breath.

Any person who has never beheld a real downright rejoicing among savages can form but a faint

---

The Life And Adventures  
Of James P. Beckwourth

---

conception of their unrestrained manifestations; words can convey no adequate idea of it. Being untutored and natural, and not restricted by any considerations of grace or propriety, they abandon themselves to their emotions, and no gesture is too exaggerated, no demonstration too violent for them to resort to.

My friend, with many others, had given me up for dead, and had adopted another in my place; so that there were now three of us who all knew one another's secrets. Pine Leaf was overjoyed at my return.

She had become confident of my death, and was only waiting to ascertain the nation that had killed me in order to revenge my loss, or be sacrificed to my manes. Couriers were immediately dispatched to the other village to acquaint them with our return, and to invite them to participate in the celebrations of the event. Long Hair returned for answer, "Tell my brother I will fly to see him." They lost six warriors on their way to our village, through carelessly straggling in detached parties, consequently they came to us in mourning for their loss.

The two droves of horses which the Crows had released us of were all religiously returned. Those that the captors had given away were promptly delivered up, so that we were now in possession of a very numerous drove. I distributed my share among my relatives, friends, wives, and wives' relatives, until I had only just enough for my own use. I gave my father an elegant steed, the largest in the whole drove. To the heroine I gave a spotted four-year-old, a perfect beauty, one that I had intended for her as we were driving them home. He proved to be a superior warhorse, and there were but few among the thousands that we possessed that could distance him with her upon his back. She was very proud of him, and would suffer no one but herself to ride him.

It took me a long time to rehearse all our adventures while away. I was required to do it very minutely and circumstantially — even to describe all our camping-grounds, and relate every minute occurrence that transpired during our long pilgrimage.

We had certainly incurred exceeding risk in the route we had traveled; in recurring to it I marveled at our escape. Any five men might start upon such an adventure, and not one party in ten would ever return. I reflected, however, that I was a little more sagacious than the Indians, and that I had my physical faculties as well developed as theirs. I could see fully as quick as they could, and ride as fast, if they undertook to chase me in the mountains.

I now found that I had thousands of friends, whether attracted by my fancy horses or not, and that I was the idol of my proud parents. The mother of Black Panther always lived with my father, and if both survive, I presume she does to this day. I gave him the child when it was quite young, to adopt as his son, in obedience to his reiterated solicitations.

#### CHAPTER XXIV.

Excursion to the Fort.—Great Battle with the Cheyennes on the Way. —Rejoicing on my Arrival at the Fort. —Horses stolen by the Cheyennes. —Pursuit and Battle with the Thieves. —Battle with the Black Feet. —Return to our Village.

WHEN the rejoicings were over, a council was called to deliberate on the future operations of the nation, wherein the resolution was taken to keep united until Leaf Fall. About the latter end of August I started for the fort, taking with me three hundred and fifty warriors, with as many women and children, among whom was my little wife. While on our way thither, we encamped one night on Fallen Creek, and lost upward of fifty horses, stolen by the Cheyennes. We pursued them with our whole force, and, soon overtaking them, a fight ensued between numbers about

The Life And Adventures  
Of James P. Beckwourth

---

equal. I had charged in advance of the line, and, as I was always dressed in full costume when on these excursions, I offered an excellent mark to any one skilled in shooting. I was proceeding at an easy canter, when my horse was shot through the head, the ball entering near the ear, and he fell, his last spring hurling me head foremost against a huge rock, which I struck with such force that I saw another dense meteoric shower, and the blood gushed from my mouth, nose, and ears. When I recovered my senses I found both parties over me, each struggling to obtain me. The Crows prevailed eventually, and my scalp was saved. My warriors were fully convinced of my death, as I lay so long motionless; but they were determined to preserve my scalp. The enemy, seeing our women and children approach, mistook them for a re-enforcement of Crow warriors, and they gave up the contest and fled precipitately, leaving us masters of the field, with all the horses they had just stolen from us, besides a great number of their own, which they had not time to drive off. We only obtained three scalps from the enemy, losing none ourselves, though we had several warriors wounded.

We then resumed our journey to the fort, reaching there without farther trouble. When we arrived within sight and hearing, we, as usual, struck up a song. All the women from the fort ran out, exclaiming, "Here comes a war-party of the Crows; they are singing! Look at their scalps: they come from the country of the Cheyennes; they have conquered our enemies. See, they are all painted!"

I had long been supposed dead at the fort. It was conjectured that Big Bowl (my father) had the conduct of the party, and there was no inquiry made for me. We entered amid a thousand How d'ye do's, and my wife and "Little Jim" were comfortably provided with the best quarters in the fort. I was standing among the busy throng, who had already fallen to admire the new goods, still feeling the effects of my severe shake, when I saw one of the female inmates eye me very inquiringly. She inquired of my wife who that Indian was. She answered, "He is my husband."

"What! are you married again?" the woman exclaimed, in astonishment.

"No, not again," she replied, in her very modest manner; "did you not know that the Medicine Calf was alive and had returned?"

"Then that surely is the Medicine Calf," the woman exclaimed, "now standing in the fort!" and ran to Mr. Tulleck to acquaint him with the news.

"Where is he? where is the Medicine Calf?", Mr. Tulleck called aloud, and looking among the throng without perceiving me.

I addressed him in English, calling him by name. I thought at first that he would fall to the ground; it was some seconds before he could speak, his astonishment was so overwhelming. At last he found tongue, and broke out in all kinds of expressions of joy and welcome. The men, too, attached to the fort, on hearing of my arrival, came running in with their utmost speed to welcome one whom they had all long since supposed dead. So heartfelt a welcome I could not have expected. Little Jim had been taken from his mother's hand before it was known that I was present. He was a general pet at the fort, and it usually took one good horse to carry all the presents bestowed upon mother and child. He was then near three years old, running every where, and was already looked upon by the Crows as their future chief.

We tarried at the fort a few days, engaged in hunting buffalo for its men and our own family. Our consumption was several carcasses a day. During my long absence the Crows had neglected their traps, and they had not dressed more than half the usual number of robes, which caused a

The Life And Adventures  
Of James P. Beckwourth

---

sensible falling off in the trade of the fort, and diminished very materially the profits derived by the company from Fort Cass. No reduction, however, was made in my salary on account of my absence, which I considered very liberal conduct on the part of the company.

My warriors, becoming uneasy at their inactive life, desired to be led against the Black Feet. To gratify them, I selected one hundred and six warriors, and sent the others back to the village with the women and children, except my wife, whom I requested to stay at the fort to await my return. We marched into the enemy's country, and in the daytime came suddenly upon one of their villages. There were lodges enough to contain three hundred warriors, but they were probably gone upon an expedition, for there were but few present to receive us. We unhesitatingly assaulted it, although we had but little fighting to do. We took upward of twenty scalps, and eighteen women and children prisoners. We captured two hundred and sixty horses, besides weapons, clothing, and other spoils. Here I succeeded in having a good joke at the heroine's expense, with which I plagued her for a long time. She was swifter on foot than any warrior, and we were on foot during this excursion. On seeing us advance, a young Indian, about sixteen, took to his heels, running like a deer. The heroine made after him with her antelope speed, certain to catch him. The Indian did his best, frequently turning his head, like a negro with an alligator at his heels. Seeing that his pursuer must overtake him, and not relishing the idea of having her lance transfix his body — for she was preparing to hurl it — he suddenly stopped and faced about, at the same time throwing his bow down and holding up both hands to beg for his life. She did what no other warrior in our party would have done — her woman's heart took pity on the poor fellow's pitiable condition — she spared his life, and marched him back captive.

He being her prisoner, no one had authority over his life but herself. He was a fine-looking young man, but when he was brought among the Crow warriors he trembled in every joint, expecting nothing less than to be killed.

I thought this too good an opportunity for a joke not to make use of it.

"I see," said I, addressing myself to Pine Leaf, "you have refused all our braves that you might win a husband from the enemy."

All the warriors shouted at the sally; but the poor girl was sorely perplexed, and knew not what to do or say. We rallied her so much on her conquest that she finally became quite spunky, and I did not know whether she would run her prize through with her lance or not. One day I told her I had talked with her prisoner about his capture. "Well," said she, "and what has he to say about it?"

"Why," I answered, "he says he could have killed you as well as not, but that you promised to marry him if he would spare your life."

She was fully practiced upon, and she flushed with anger. "He lies!" she exclaimed. "You know I can not speak to these Black Feet, or I would make him tell a different tale. I have often told you, as well as other warriors, that I do not wish to marry; my tongue was straight when I said so. I have told you often, and I have told your sisters and your wives, that, if ever I did marry, I would have you, and none other. So why do you trifle with my feelings?"

What she said was a genuine ebullition of feeling; for, although an Indian girl, her heart was as proud, as sensitive, and as delicate as ever beat in the breast of civilized woman. To soothe her ruffled temper, I told her I would intrust a secret to her. I had undertaken my prolonged journeying, when all supposed me dead, and she along with the rest, solely to search through the Rocky

---

The Life And Adventures  
Of James P. Beckwourth

---

Mountains for a "red-headed Indian." I had been unsuccessful in my search, and had returned with spotted horses.

She laughed immoderately at my invention.

We now returned to the fort with our trophies, where we had a joyous time. My warriors gave a horse to each man at the fort, about fifty in number, and every woman staying there also received one. I selected the best one I had, and made Little Jim present it to Mr. Tulleck, with which delicate attention he was greatly delighted. My boy could now speak quite plain. The men at the fort had taught him to swear quite fluently both in French, and English, much more to their satisfaction than to mine. But I trusted he would soon forget his schooling, as the Crows never drink whisky, nor use profane language.

We left the fort, and reached our village without accident. On our arrival we found the people in mourning for the loss of two warriors, killed in the village by an attack of the Cheyennes; and, notwithstanding my recent success, we had to take part in the crying, in obedience to their forms. The Cheyennes, in their late attack, used very good generalship; but the result was not so good as their design would seem to promise. They started with a force of three thousand warriors, and, dividing their army, five hundred marched directly over the Tongue River Mountain, where they were safe from molestation, while their main body passed round in another direction, placing themselves in ambush in a place agreed upon, so as to fall upon the Crows should they pursue their flying division. But the Crows were too wary for them, and their bright design failed.

The division of five hundred made a descent upon the horses, killing the two Crows that were among them, and unable to escape in time. It was in open day, and our stock was so immense that they actually did succeed in driving off about twelve hundred, of which our family owned about eighty. Many of our choice mares, with their foals, and a great number of our war-horses, seemed to have intelligence of the business in hand, and ran with full speed to the village, where the enemy did not care to follow them. Hundreds of our warriors were ready for the conflict, and were impatiently awaiting the order to attack; but their chiefs strictly forbade their advance, and even charged my faithful Dog Soldiers with the duty of enforcing their orders. There were in the village over four thousand warriors, a force sufficient to repel any attack; but the old heads seemed to suspect something at the bottom of their foes' audacity, and thus escaped the trap that was prepared for them. The horses we cared but little about, as it was easy to replace them at any time, without risking the lives of so many brave warriors.

On my return, all this was related to me by the council. They inquired my opinion of the policy they had acted upon, and I assented to the wisdom of all they had done. I further recommended that no war-party should leave the village for at least two weeks, but that all should devote themselves to trapping beaver, as a means better calculated to please the Great Spirit, and after that it was likely he would reward our excursions with more constant success.

My advice was approved of, and my medicine was pronounced powerful. Every trap in the village was accordingly brought to light, and a general preparation made for an active season of trapping: peltry-parties scattered for every stream containing beaver. My old friend and myself, with each a wife, composed one party; we took twelve traps, and in ten days collected fifty-five beaver-skins. All who went out had excellent success, as the streams had been but little disturbed for several months. Our two weeks' combined industry produced quite a number of packs.

It was now about the 1st of October. I had promised, after our two weeks' trapping, to lead a par-

The Life And Adventures  
Of James P. Beckwourth

---

ty in a foray upon the Cheyennes. I selected over four hundred warriors, and started in pursuit of something — whether horses or scalps was a matter of indifference. After an easy travel of twenty days, our spies keeping a vigilant look-out on the way, a large village was reported some few miles in advance. Knowing whom we had to deal with, I used my utmost caution, for we were beyond the reach of re-enforcement if I should fall into any difficulties. We ascended a hill which overlooked their village. We saw their cheerful-looking fires, and would have liked to warm ourselves by similar ones; but, although firewood was abundant, it seemed barely advisable to indulge in such a luxury. By the size of the village, it was evident we had a powerful enemy before us, and that he was brave we had learned by previous experience. After surveying it as well as we could by the gleam of the stars, I determined to go down into their village, and obtain a closer observation. I took three braves with me, and, turning our robes the hair side out, we descended the hill and entered the village.

We found they had recently built a new medicine lodge, and the national council was in session that night. We walked up to the lodge, where there were a number of Cheyennes smoking and conversing, but we could not understand a word they said. I passed my hand inside to reach for a pipe. One was handed to me; and after all four of us had taken a few whiffs, I handed it back to my accommodating lender. We then strolled leisurely through their town, and returned to our own camp somewhat late in the evening.

About midnight we visited their herd, and started out quite a large drove, which we found at daylight consisted of eight hundred head; with these we moved with all possible speed toward home, taking the directest route possible. We drove at full speed, wherever practicable, until the next day at noon; we then turned short round the point of a mountain, and awaited the arrival of our pursuers. Our animals were well rested when the enemy came up, and we had just transferred ourselves to the backs of some that we had borrowed from them. As soon as they had rounded the point — about two hundred and fifty in number — we issued out to attack them; and, although they were somewhat surprised to behold so large a force, they quickly formed and awaited the onset. We were soon upon them, killing several, and having a few of our own wounded. We withdrew to form another charge; but, before we were ready to fall on them again, they divided their line, and one half made a daring attempt to surround our horses, but we defeated their aim. They then retreated toward their village, they finding it necessary to re-enforce their numbers before they could either recover their animals or fight our party with any show of success. I afterward learned, when a trader in the Cheyenne nation for Sublet, that their main body, consisting of two thousand warriors, had started with them, but turned back when within four miles of our temporary resting-place. The smaller division traveled back as fast as possible in the endeavor to reach them, and bring them back to the attack. After proceeding two or three hours in their trail, they suddenly came in sight of them as they were resting to dress some buffalo. By means of couriers and signals, they soon had the whole army on the march again; but by this time we were “over the hills and far away,” having resumed our retreat immediately our pursuers left us. Those who are driving horses in a chase such as this have a great advantage over their pursuers, since the pursuer must necessarily ride one horse all the time, but those that are driving can change as often as they please, taking a fresh horse every half hour even, if occasion requires. In case there is great urgency with a drove, a number of warriors are sent in advance to lead them, while others are whooping and yelling behind. Under this pressure, the animals generally get over

---

Of James P. Beckwourth

---

the ground at a pretty good rate.

On our arrival at home with thirteen scalps, over eight hundred horses, and none of our party killed, it may be judged that we made much noise and shouting.

The trip we had just accomplished was a severe one, especially for the wounded, and none but Indians could have lived through such torment; but they all finally recovered. They begged to be left upon the road, urging that they must inevitably die, and it was a folly to impede our flight and jeopardize our lives; but I was determined, if possible, to get them in alive; for, had I lost but one, the village would again have gone into mourning, and that I was desirous to avoid.

CHAPTER XXV.

Visit of the whole Crow Nation to the Fort.—Seven Days' Trading and Rejoicing. —Separation of the Villages. —Expedition to the Camanches. —Narrow Escape from their Village. —Battle with the Black Feet. —The Whites assist us with their Cannon. —Captured by the Black Feet. —Recaptured by the Crows. —Final Victory.

HAVING now quite a respectable amount of peltry on hand, both of our villages started for the fort to purchase winter supplies. We carried upward of forty packs of beaver, and two thousand four hundred packs of robes, with which we were enabled to make quite an extensive trading. We loitered seven days in the vicinity of the fort; then the villages separated, for the purpose of driving the buffalo back to the Yellow Stone, where they would keep in good condition all winter. This required a considerable force of men, as those animals abounded by the thousand at that time where they are now comparatively scarce, and it is a conclusion forced upon my mind that within half a century the race of buffaloes will be extinguished on this continent. Then farewell to the Red Man! for he must also become extinct, unless he applies himself to the cultivation of the soil, which is beyond the bound of probability. The incessant demand for robes has slain thousands of those noble beasts of the prairie, until the Indians themselves begin to grow uneasy at the manifest diminution, and, as a means of conservation, each nation has adopted the policy of confining to itself the right of hunting on its own ground. They consider that the buffalo belongs to them as their exclusive property; that he was sent to them by the Great Spirit for their subsistence; and when he fails them, what shall they resort to? Doubtless, when that time arrives, much of the land which they now roam over will be under the white man's cultivation, which will extend inland from both oceans. Where then shall the Indian betake himself? There are no more Mississippis to drive him beyond. Unquestionably he will be taken in a surround, as he now surrounds the buffalo; and as he can not assimilate with civilization, the Red Man's doom is apparent. It is a question of time, and no very long time either; but the result, as I view it, is a matter of certainty.

The territory claimed by the Crows would make a larger state than Illinois. Portions of it form the choicest land in the world, capable of producing any thing that will grow in the Western and Middle States. Innumerable streams, now the homes of the skillful beaver, and clear as the springs of the Rocky Mountains, irrigate the plains, and would afford power for any amount of machinery. Mineral springs of every degree of temperature abound in the land. The country also produces an inconceivable amount of wild fruit of every variety, namely, currants, of every kind; raspberries, black and red; strawberries, blackberries, cherries; plums, of delicious flavor and in great abundance; grapes, and numberless other varieties proper to the latitude and fertile nature of the soil.

The Life And Adventures  
Of James P. Beckwourth

---

I am fully convinced that this territory contains vast mineral wealth; but, as I was unacquainted with the properties of minerals during my residence with the Crows, I did not pay much attention to the investigation of the subject. One thing, however, I am convinced of, that no part of the United States contains richer deposits of anthracite coal than the territory I am speaking of, and my conviction is thus founded. I one night surrounded a small mountain with a large force of warriors, thinking I had observed the fires of the enemy, and that I should catch them in a trap. But, to my great surprise, it proved to be a mountain of coal on fire, which had, I suppose, spontaneously ignited. I immediately drew off my forces, as I was fearful of an explosion. I could readily point out the place again.

It would be extremely hazardous to attempt any scientific explorations without first gaining the consent of the Crows. They have been uniformly friendly with the whites; still, they would be jealous of any engineering operations, as they would be ignorant of their nature. The Crows are a very reserved people, and it would be difficult to negotiate a treaty with them for the cession of any portion of their land. They have always refused to send a deputation to Washington, although repeatedly invited. Indeed, when I was their chief, I always opposed the proposition, as I foresaw very clearly what effect such a visit would produce upon their minds. The Crows, as a nation, had never credited any of the representations of the great wealth, and power, and numbers of their white brethren. In the event of a deputation being sent to Washington, the perceptions of the savages would be dazzled with the display and glitter around them. They would return home dejected and humiliated; they would confound the ears of their people with the rehearsal of the predominance and magnificence of the whites; feeling their own comparative insignificance, they would lose that pride in themselves that now sustains them, and, so far from being the terror of their enemies, they would grow despondent and lethargic; they would addict themselves to the vices of the weaker nations, and in a short time their land would be engulfed in the insatiable government vortex, and, like hundreds of other once powerful tribes, they would be quickly exterminated by the battle-axes of their enemies. These are the considerations that influenced me while I administered their affairs.

From the fort I started on foot with two hundred and sixty trusty warriors for the Camanche territory. We had reached their ground, and were traveling leisurely along upon a high, open prairie, when our spies suddenly telegraphed to us to lie flat down — an order which we promptly obeyed. We soon learned that there was a number of Indians, some distance beyond, engaged in running buffalo and antelope as far as we could see. There appeared to be an outlet to the prairie, through which we could see them emerging and disappearing like bees passing in and out of a hive. We found at night that it was a wide cañon, in which their village was encamped, extending over three miles, and must have contained several thousand warriors. They had just driven a host of horses into it, to have them ready, most probably, for the next day's chase. There were still thousands of horses scattered in every direction over the prairie, but I preferred to take those already collected. The Camanches, being seldom troubled by the incursions of their neighbors (as most of the tribes hold them in dread), take no precaution for the safety of their animals, for which reason they fell an easy prey to us.

At the usual time of night we paid a visit to their immense herd, and started an innumerable drove; we found it larger than we could successfully drive, and were therefore obliged to leave several hundreds of them on the prairie. We then placed a sufficient number of horse-guides ahead,

---

The Life And Adventures  
Of James P. Beckwourth

---

and, whipping up our rear, we soon had an immense drove under full speed for our own country, making the very earth tremble beneath their hoofs. We continued this pace for three days and nights, closely followed by our enemies, who, having discovered their loss the next morning, started after us in pursuit. They kept in sight of us each day, but we had the advantage of them, as we could change horses and they could not, unless they happened to pick up a few stragglers on the road.

On the third day I happened to be leading, and just as I rose to look over the summit of a hill on the Arkansas, I discovered a large village of the Cheyennes not far in advance, and lying directly in our course. In an instant we turned to the left, and continued on through a hollow with all our drove, the Camanches not more than two or three miles in our rear.

On our pursuers arriving at the spot where we had diverged to the left, they held their course right on, and, pouncing upon the astonished Cheyennes, conceived they were the party they were in pursuit of. We could distinctly hear the report of the guns of the contending parties, but did not slacken our pace, as our desire to get home in safety outweighed all curiosity to see the issue of the conflict. We afterward learned that the Cheyennes inflicted a severe beating upon their deluded assailants, and chased them back, with the loss of many of their warriors, to their own country. This was fine fun for us, and Fortune aided us more than our own skill, for we were saved any farther trouble of defending our conquest, and eventually reached home without the loss of a single life.

Our pursuers being disposed of, we allowed ourselves a little more ease. On the fifth day of our retreat we crossed the Arkansas, and, arriving on the bank of the Powder River (a branch of the south fork of the Platte), we afforded ourselves a rest. We drove all our horses into a cañon, and fortified the entrance, so that, in case of molestation, we could have repulsed five times our number. There was excellent pasture, affording our wearied and famishing horses the means of satisfying their hunger, and refreshing themselves with rest. We also needed repose, for we had eaten nothing on the way except what we happened to have with us, in the same manner as our horses would crop an occasional mouthful of grass while pursuing their flight.

After refreshing ourselves we resumed our journey, and, striking the Laramie River, we passed on through the Park, and then crossed the Sweet Water River into our own territory, where we were safe. We fell in with Long Hair's village before we entered our own, with whom we had a good time. Before parting we gave them five hundred horses. From thence we went down to the fort in quest of our own village, but learned they were about twenty miles out, encamped on the Rose Bud. The inmates of the fort thought it must have rained horses, for such a prodigious drove they never saw driven in before. We made them a present of a Camanche horse all round, and, having staid one night with them, the next morning we journeyed on to our village.

We found them all dancing and rejoicing over the success of the other war-parties, who had reached home before us, and our arrival increased their joy to such an extreme that there was no limit to their extravagant manifestations.

We had not parted from the fort more than two or three hours when Big Bowl called there, also in quest of the village, bringing two thousand seven hundred horses, which he had taken from the Coutnees.

Tulleck informed him that his son had but just left for the village with a large drove.

"Yes," said the old, man, "but I can laugh at him this time."

---

The Life And Adventures  
Of James P. Beckwourth

---

“No, no,” replied Tulleck, “he has beat you; he has twice as many as you.”

“Ugh!” exclaimed the old brave; “his medicine is always powerful.”

We must have started with five thousand horses, for many gave out on the way and were left behind, besides a number that must have straggled off, for the Cheyennes afterward informed me that they picked up a considerable number which had undoubtedly belonged to our drove.

My father, after presenting them with a horse all round at the fort, whipped his drove up, saying that he would yet overtake the Medicine Calf before he reached the village.

He arrived just before sunset, when the joy was at its height.

We had horses enough now to eat us out of house and home, about eight thousand head having been brought in during the last ten days.

When the rejoicing was through, I divided my village, sending two hundred lodges round to start the buffalo toward the mountain, while I took one hundred and seventy lodges, and made a circuit in the direction of the fort, encamping in the bottom close by. I had with me eight or nine hundred warriors, besides my division of the women and children.

While staying in the vicinity of the fort we were usually very careless, never apprehending any attack, but on the third day of our encampment here we were suddenly assailed by nearly fifteen hundred Black Foot warriors, who were probably aware that we had divided our village, and had followed us as the smallest party. Myself and several other warriors were in the fort when the attack was made, but we soon hastened to join our warriors. The contest became severe. The Black Feet fought better than I had ever seen them fight before. The Crows, being outnumbered by their enemies, were sorely pressed, and every man had to exert himself to the utmost to withstand the assault. The men at the fort, seeing our situation, brought out to our aid a small cannon on a cart. The enemy, seeing them bring it up, charged on it and carried it, the Frenchmen who had it in charge running back to the fort with all possible speed. The Crows, seeing what had happened, made a furious charge on the captors of the cannon, and succeeded in retaking it, though not without the loss of several killed and wounded in the conflict. The gun was loaded with musket-balls, and, when finally discharged, did no damage to the enemy.

I was in another quarter, encouraging my warriors to protect our lodges, and we at length succeeded in beating them off, although they drove away over twelve hundred head of our horses with them, without any possibility of our wresting them from them, at least at that time. We lost thirteen warriors killed, twelve of whom were scalped, and about thirty wounded. It is a wonder we did not suffer a loss three times more severe. But the Black Feet are not steady warriors; they become too much excited in action, and lose many opportunities of inflicting mischief. If bluster would defeat a foe, their battles would be a succession of victories. Had we in the least mistrusted an attack, by being in readiness we could have repulsed them without the least effort. But they caught us totally unprepared; there was not a man at his post until they were about to fall upon us. The enemy lost forty-eight scalps in the encounter, besides a number of dead and wounded they carried away with them without our being able to lay hands upon them. They had also over one hundred horses shot under them.

We suffered a severe loss in the death of the veteran brave Red Child, the hero of a hundred fights, who was killed and scalped at his lodge door. His wife, who was by, struck the Indian who scalped him with a club, but she did not strike him hard enough to disable him. The loss of the old brave was severely felt by the whole nation. The crying and mourning which ensued pained

The Life And Adventures  
Of James P. Beckwourth

---

me more than the loss of our horses. After spending the night in mourning, we moved on to the other division, to carry the wofultidings of our reverse. When we rejoined them there was a general time of crying. I took a great share of the blame to myself, as it was upon my proposition that the village had been divided and the disaster sustained. I suggested it with a view to facilitate business, never dreaming of an attack by such an overwhelming force. When the excitement had subsided, I determined to wash their faces or perish in the attempt. I ordered every one that could work to engage in the erection of a fort in the timber, sufficiently large to hold all our lodges, laying out the work myself, and seeing it well under way. I directed them, when they had finished the construction, to move their lodges into it, and remain there till my return, for, thus protected, they could beat off ten times their number.

I then took nearly seven hundred of our best warriors, and started for the Black Feet, resolved upon revenge, and careless how many I fell in with.

A small party had recently come in with two scalps, which they had obtained near the head of Lewis's Fork, Columbia River. They reported a large village of eight hundred lodges, from which numerous war-parties had departed, as they had crossed their trails in coming home. They knew the direct road to the village, how it was situated, and all about it, which was of great service to me. I therefore took them with me, and employed them as scouts. Every warrior was well provided for hard service; each man had a riding-horse, and led his war-horse by his side.

On the seventh day we came in view of their village, but we deferred our attack till the next day. The enemy had chosen a very good position; they were encamped on a large bend of the river, at that time shallow and fordable every where. I detached fifty of my warriors for a feint, while I stole round with the main body to the high ground, taking care to keep out of sight of the enemy. Having gained my position, I signaled to the light division to feign an attack, while my men were so excited I could hardly restrain them from rushing out and defeating my purpose. My plan succeeded admirably. The Black Feet, having suffered themselves to be decoyed from their position by the flight of the fifty warriors, I sounded a charge, and my men rushed upon the unprotected village like a thunderbolt. We swept every thing before us; the women took to the bush like partridges; the warriors fled in every direction. They were so paralyzed at our unexpected descent that no defense was attempted. I threw myself among the thickest group I could see, and positively hacked down seventeen who pretended to be warriors without receiving a scratch, although my shield was pretty well cut with arrows. If my warriors had all come to their work according to the example that even the heroine set them, not one of the Black Feet who ventured to show fight would have escaped. The heroine killed three warriors with her lance, and took two fine little boys prisoners. We found but about a thousand warriors to oppose us, while there were lodges enough to contain three times the number. We only took sixty-eight scalps after all our trouble — a thing I could not account for. We took thirty women and children prisoners, and drove home near two thousand head of horses, among which were many of our own.

As I had never seen the Black Feet fight so well as at the fort, I expected an equal display of valor on this occasion, but they offered nothing worthy the name of defense. I learned from my prisoners that my old father-in-law was in that village, whose daughter I had nearly killed for dancing over the scalps of the white men. We had only one warrior wounded, who was shot through the thigh; but it was not broken, and, like all Indian wounds, it soon got well. We reached home in less than four days; and, after our arrival, singing and dancing were kept up for a week.

---

The Life And Adventures  
Of James P. Beckwourth

---

In taking prisoners from an enemy we gain much useful information, as there are always more or less of their tribe domiciliated with us, to whom the captives impart confidence; these relate all that they hear to the chiefs, thus affording much serviceable information that could not otherwise be obtained. The women seem to care but little for their captivity, more particularly the young women, who have neither husbands nor children to attach them to their own tribe. They like Crow husbands, because they keep them painted most of the time with the emblems of triumph, and do not whip them like their Black Foot husbands. Certain it is that, when once captured by us, none of them ever wished to return to their own nation. In our numerous campaigns that winter we also took an unusual number of boys, all of whom make excellent Crow warriors, so that our numbers considerably increased from our prisoners alone. Some of the best warriors in the Crow nation had been boys taken from the surrounding tribes. They had been brought up with us, had played with our children, and fought their miniature sham-battles together, had grown into men, become warriors, braves, and so on to the council, until they were far enough advanced to become expert horse-thieves.

That winter was an exceedingly fortunate one for the Crow nation; success crowned almost every expedition. Long Hair's warriors achieved some great triumphs over the Black Feet, and in one battle took nearly a hundred scalps.

When Long Hair heard of our misfortune at the fort, he sent a messenger to our village to offer some of his warriors to assist us in retrieving our reverse. But before the arrival of the messenger we had been and returned, and were all in the height of rejoicing. He hastened back to his village to impart the glad tidings, in order that they might rejoice with us.

We then engaged in trapping beaver and hunting buffalo for the next three weeks, during which time we suffered no molestation from any of our enemies.

#### CHAPTER XXVI.

Deputation from the As-ne-boines.—Characteristic Speech of Yellow Belly.—Visit to the Fort.—Visit to Fort Union.—Rescue of Five White Men from Starvation.—Arrival at Fort Cass.—Departure for the Village.—Visit of the Snakes to the Crows.

WE received another deputation from the As-ne-boines to sue for a renewal of peace. We had lost a warrior and two women, who had been massacred when away from the village, and on discovery of the bodies we followed the trail of the perpetrators in the direction of the Black Foot country. We eventually discovered that many petty outrages, which we had charged upon the Black Feet, were in reality committed by the treacherous As-ne-boines. On their return from their thievish inroads they were in the habit of proceeding very near to a Black Foot village, with which they were at peace, and then, turning obliquely, would cross the Missouri into their own country. Becoming acquainted with this oft-repeated ruse, we determined to chastise them. I accordingly crossed the Missouri with a force of eight hundred and fifty men, and invaded their territory with the determination to inflict upon them such a chastisement as should recall them to a sense of decency. We encountered a small village, only numbering forty lodges, on their way to Fort Union, and within a few hundred yards of the fort. Seeing our approach, they intrenched themselves in a hollow, rendering our assault a work of danger. But we stormed their position, and killed twenty-six warriors (all of whom we scalped); the remainder we could not get at, as we found their position impregnable.

Admonished by this chastisement, they sent another deputation to us to treat for the re-estab-

The Life And Adventures  
Of James P. Beckwourth

---

ishment of peace. But their propositions were unfavorably received, and Yellow Belly favored them with his sentiments in the following rather unpalatable and characteristic strain: "No," said he, in answer to their representations, "we make peace with you no more. You are dogs — you are women-slayers — you are unworthy of the confidence or notice of our people. You lie when you come and say that you want peace. You have crooked and forked tongues: they are subtle like the tongue of the serpent. Your hearts are corrupt: they are offensive in our nostrils. We made peace with you before because we pitied you; we looked upon you with contempt, as not even worthy to be killed by the Sparrowhawks. We did not wish for your scalps: they disgrace our others; we never mix them even with those of the Black Feet. When we are compelled to take them from you on account of your treachery, we give them to our pack-dogs, and even they howl at them. Before, we gave you horses to carry you home, and guns to kill your buffalo; we gave you meat and drink; you ate, and drank, and smoked with us. After all this, you considered yourselves great braves in scalping two of our women. Our women would rub out your nation and put out all your fires if we should let them loose at you. Come and steal our horses when you think best, and get caught at it if you want to feel the weight of our tomahawks. Go! we will not make peace with you; go!"

After this very cordial reception, we had no more intercourse with the As-ne-boines for some time.

Shortly after the departure of this delegation, we set out for the fort to trade away our peltry, which amounted to a considerable number of packs. On arriving there, I found a letter from a Mr. Halsey, who then had charge of Fort Union, the head-quarters of the American Fur Company. The letter was couched in rather strong terms, and was evidently written when he was under the influence of temper. The company had their trading-posts among every tribe with which the Crows were at war, and for many months past there had been a great falling off in trade. The Indians had brought in but little peltry, and the universal complaint among all was that it took all their time to defend themselves against the Crows. The Crows had killed scores of their warriors; the Crows had stolen all their horses; the Crows had captured their women and children; the Crows had kept them mourning and crying; their trappers dare not go out to trap for fear of the Crows; their hunters dare not, and could not, kill buffalo for fear of the Crows; in short, by this letter it appeared that the poor Crows were the constant terror of all the surrounding tribes. He concluded his epistle, "For —'s sake, do keep your d—d Indians at home, so that the other tribes may have a chance to work a little, and the company may drive a more profitable business." I knew perfectly well that these incessant wars were very prejudicial to the company's interest, but it was impossible for me to remedy the evil. Other tribes were continually attacking the Crows, killing their braves, and stealing their horses, and, of course, they were bound to make reprisals. In justice to the Crows I must say, that other tribes were generally the aggressors, until the policy was forced upon me of endeavoring to "conquer a peace." I thought, if I could make the Crow nation a terror to all their neighbors, that their antagonists would be reduced to petition for peace, and then turn their battle-axes into beaver-traps; and their lances into hunting-knives. Our villages, having made their purchases, left the fort, but staid in the vicinity, engaged in trapping and making robes. The letter I had just received from Halsey requested my attendance on him that spring. I left my people, and went down the river to Fort Union. On arriving, I found a large body of the As-ne-boines encamped near the fort. Their chiefs immediately came to me,

The Life And Adventures  
Of James P. Beckwourth

---

wishing me to conclude peace with them as representative of the Crow nation. They attempted to palliate their late misdeeds by throwing the blame on a few As-ne-boine desperadoes, who had acted without the authority or the cognizance of the national council, and that they had been severely punished by the tribe for their excesses.

In answer, I told them that I had no authority to conclude peace; that, even if I had, they would not observe a peace longer than one moon; that I thought the Crows would throw difficulties in the way of entertaining their propositions, but that they could apply to the council again, and learn how they were inclined. Mr. Halsey and all the sub-traders present interceded with me to exert myself in establishing a peace between the two nations, which request I promised to comply with. The chiefs inquired whether we would take their lives in the event of their visiting us on such a mission. I assured them that the Crows would hold their lives sacred; that they were not dogs, as many nations were, but that they were a great and magnanimous nation, whose power was predominant, and who killed no enemies but in battle.

I remained at the fort about three weeks, and, as most of the sub-traders, clerks, and interpreters were in, we had a glorious time. It was at least three or four years since I had last visited there; for, though I fought a battle outside its walls lately, I did not see fit at that time to make them a call. The boats being ready to return, I started with them, but their progress was so slow and wearisome on their way up to the Yellow Stone that I leaped ashore, intending to make my way over dry land. I have always rejoiced that I was prompted to take that step, for I became instrumental thereby in performing a merciful deed among so many that might be termed unmerciful.

I had not traveled more than three miles when I came across a white man, named Fuller, in a famishing condition. I had a companion with me, whom I started off to the boats to bid them prepare something suitable to recover the poor fellow, and to order them to touch on shore when they came to where he lay. Fuller was quite delirious. I had discovered him just in the nick of time, as he could not have survived many hours longer. My companion was not long in performing his errand, and, when the boat touched for him, we carried him on board, and gave him tea and warm restoratives. He shortly revived, and then gave me to understand, in a very incoherent manner, that he had four companions in a similar condition near to where I had found him.

At this intelligence we went on shore again to succor them also. We had a long hunt before we succeeded in finding them, and when we at last discovered them, we found them picking and eating rosebuds, or, rather, the pods containing seed of last year's growth. When they saw us approaching they attempted to run, supposing us to be Indians; but, their strength failing them, they sought to conceal themselves in the bushes. We made known our errand to them, and invited them on board the boat. Our opportune offer of service seemed so providential, that the fortitude of the poor famishing fellows could not sustain them, and they all gave way to a plentiful flood of tears. We conveyed them on board the boat, and furnished them with food adapted to their emaciated condition.

When in some measure restored, they informed us that they had been trapping in the mountains, their party originally consisting of eleven men; that they were on their road to Fort Cass, with their pack-horses and four packs of beaver, when they were set upon by the Black Feet, who killed six of their party, and despoiled them of every article they had, and it was by a miracle that they escaped from their hands. When they had supposed themselves near the fort, they saw a great number of Indians, whom they took for Black Feet; to avoid them, they took a wide circuit

The Life And Adventures  
Of James P. Beckwourth

---

through the prairie. The Indians whom they mistook for Black Feet were a party of Crows, and if they had gone up to them and made their case known, the Crows would have escorted them to the fort, and probably have pursued the Black Feet, and have retaken their property. On returning from their circuit, they struck the river a great distance below the fort, and were still traveling down the river in search of it. They had nothing to eat, and nothing to kill game with to relieve their wants. They went on with the boats, while I and my companion resumed our "over-land route."

We reached the fort several days in advance of the boats. I only rested one night there, and then proceeded directly on to my Indian home. Shortly after my arrival there, the villages moved on up the river, proceeding leisurely, and killing buffalo and dressing robes on the way. We finally reached the mountain streams, and, as it was now near September, the beaver were getting to be in fine condition for trapping.

We had at this time a visit from eight hundred lodges of the Snakes, who came for the purpose of trading, as they had no trading-post of their own. They remained with us several weeks, and we had a very agreeable time together. This furnished me with an opportunity of enlarging to the Crows upon the superior delights of peace. We could visit the lodges of our Snake friends, and they could visit ours without cutting each other's throats. Our women could chatter together, our children gambol and have their sham-battles together, while the old veterans could talk over their achievements, and smile at the mimic war-hoops of their children. They could also trade together, and derive mutual benefit from the fair exchange of commodities. I contrasted this with the incessant butcheries that distinguished their intercourse with some tribes, and asked them which relation was the more desirable.

The Crows had many things to trade away which they had no need for, or, if they had needed them, they could replace them with a fresh supply from the fort. The nation was desirous that their guests should see the trading-post, where all their goods were stored beyond the reach of their enemies, and whence they drew their supplies as often as they had need of them; for the simple Crows supposed that the posts, with their contents, were the property of the nation, and that the whites who were in charge there were their own agents. To gratify their natural pride, I led a party to the fort, among whom were two hundred of our Snake visitors. On entering the fort, and looking over the store-house, they were struck dumb with astonishment; they could not comprehend the vastness of the wealth that was displayed before them. They had never before seen a depôt of goods, and this exceeded all they had any previous experience of. The rows of guns highly polished, the battle-axes, lance-blades, scarlet cloth, beads, and many curiosities they had never seen before, filled them with admiration; they could not gaze sufficiently at these indications of our wealth.

They inquired of the Crows whether our nation made all those articles there. They told them that they did not; that they were made at our great fort below, in comparison with which this was but a small lodge; that all our supplies were manufactured there, and brought up the river in great boats by our white friends.

They then inquired by what means they had gained the alliance of the whites; that, instead of killing them and banishing them from their hunting-ground, as they did to many nations, they should give themselves the great trouble to serve them with their boats, and bring them such immense supplies.

The Life And Adventures  
Of James P. Beckwourth

---

The Crows informed them that their great chief, the Medicine Calf, had been instrumental in accomplishing all this. By his long residence with the whites, after his sale to them by the Cheyennes when he had become a great brave, he had gained surprising influence with the great white chief, who loved the Medicine Calf, and had taught him to make forts, and had suffered him to come back to his people in order to teach them to become great, and overcome all their enemies. The Snakes were wonder-stricken at such marvels. The unassailable fort (which a single bomb-shell would have blown to atoms), filled with an inexhaustible store of rich goods; our great fort down the river, in comparison with which this was but a small lodge, and where all these marvelous products of our ingenuity were manufactured; our mysterious connection with the whites, which procured us the advantage of their unremunerated services, and shielded us with the irresistible succor of the great white chief — all this overpowered their imagination. The wealth and power of the Crow nation exceeded all conception, and to oppose them in war was to incur unavoidable destruction.

After the Snakes had traded off their stock of peltry, obtaining large supplies in exchange, we returned to the village. They had wonderful narratives of the big fort and wealth of the Crow nation to spin to their fellow-villagers. In fact, they were so impressed with the idea of our superiority that two hundred lodges of the Snakes joined our nation, and never separated from them. They had a chief of their own, but conformed to our laws and regulations, proving themselves faithful fellow-citizens, and emulating our best warriors in battle. This coalition increased our force to the number of five hundred warriors — more than we had lost in battle for four years preceding. They intermarried with our women, and in a few years were so completely transformed that they had quite forgotten their Snake origin. On our return, the remainder of our friends left us.

During our absence the Black Feet had invaded our dominion, and made off with upward of three thousand of our horses, very greatly to our detriment. The Snakes were anxious to pursue them, or, at least, to assist their hosts in recapturing their stolen property, but Long Hair declined their proffered service. He said, "No, I am too old to run after them, and the warriors must have some one to direct them. Should any accident befall my people, the medicine chief would be grieved. We must wait his return from the fort; if he then deems it proper to punish them, he will not be long without the means."

Our villages still remained together, and we moved on to the head-waters of the Yellow Stone. We had several war-parties out, and some endeavoring to retrieve our equine losses, while those who remained in the village applied themselves to trapping and hunting. The Snake women were very skillful in dressing robes — far superior to our own, as they had been more engaged in it. My warriors were again burning with the desire for war and Horse-raids, although our prairies were alive with animals. Inaction seemed to consume them. In spite of my prohibition, they would steal away in parties during the night. When convicted, I would inflict severe floggings upon them by my Dog Soldiers (who did not spare the lash); but it was to little purpose. In fact, they took it as honorable distinction to receive a lashing, inasmuch as it indicated their overruling ardor for war; and the culprit who received a flogging this morning for disobedience of orders, was sure to be off at night again. An old warrior despises the sight of a trap; hunting buffalo, even, does not afford him excitement enough. Nothing but war or a Horse-raid is a business worth their attending to, and the chief who seeks to control this predilection too far loses popularity.

---

The Life And Adventures  
Of James P. Beckwourth

---

Accordingly, I gave way to the general desire of my warriors. I selected one hundred and sixty trusty braves, intending "to lay alongside" my old friends the Black Feet, and wipe out one or two old scores I had marked against them. I invaded their territory with my little force, and marched on, admonishing my spies to extreme vigilance. We came in sight of a village, and secreted ourselves till the proper hour of night. On our march we discovered a single Indian. Some of the party called him to them, and clubbed him down and scalped him. He had mistaken us for his own people.

At midnight we visited their herd, and drove out six hundred and forty head. A number of their best cattle were tied at the doors of their lodges and in their corrals. I arrived home safe with my booty, and, as I had taken one scalp, we had a great dance. All our other parties were very successful, excepting one. That was one that had gone on an expedition against the Arrap-a-hos. Pine Leaf was in the number. They had taken about a thousand horses, and, having reached a distance that they supposed safe, they slackened their pace, and were proceeding carelessly along. Suddenly their pursuers came in sight — a strong posse comitatus — and retook all their animals except those that bore the fugitives, and killed three of their comrades. The heroine came back in mourning, looking like the last of her race.

One of our victorious parties brought back fifty boys and girls whom they had captured while gathering fruit. Since the loss of our three thousand horses to the Black Feet we had captured six thousand, two thousand five hundred of which had been recovered from the Black Feet.

We now moved on to the Yellow Stone, and crossed it, the villages still keeping together. We then journeyed on slowly in the direction of the fort, trapping and hunting all the way. We kept a vigilant eye upon our prisoners, for fear they might attempt an escape to their own tribes, and thus bring upon us a foe when we had no time to attend to him.

This was a very productive fall for peltry, and we sent in great quantities to the fort in advance of our arrival. I remained at the trading-post nearly the whole of the winter. In the early spring the Crows sent for me to rejoin them. I went, accordingly, and found that their long-continued good fortune had suffered a reverse. They had grown careless in their expeditions, and had lost some of their warriors. They wished my aid to revenge their deaths and wash their faces.

I required them to defer their retaliation until their robes were dressed and sent to the fort. They took hold of the business in good earnest, and every robe was soon ready for market.

It was now time to plant our tobacco, and we all moved in the direction of our planting-ground. The seed was put in, and the attending ceremonial gone through with. Our pacific business thus completed, the warriors began to prepare for war. Our horses had been but little used during the winter, and they were all fat and in high condition.

I took three hundred and sixty warriors and went against the Cheyennes. We discovered a moving village of sixty lodges, charged on it, and bore away nine scalps, with considerable booty, without losing one drop of blood. Pine Leaf was in my party, and being so unfortunate as not to count one coo, she was greatly out of humor, and blamed me for depriving her of the opportunity of killing an enemy. The truth is, we had no time to favor her, as I was desirous to secure our booty and get off without endangering the loss of a man.

Her young Black Foot prisoner had become quite a warrior; he went to war constantly, and bid fair to equal his captor in valor. He was already a match for an ordinary Sioux warrior, and took great pride in his sister Pine Leaf.

The Life And Adventures  
Of James P. Beckwourth

---

All our war-parties returned without loss, and the nation resumed its customary good spirits. I then returned to the fort, where I rested all the summer.

My thoughts had for a long time past reverted to home. Year after year had rolled away, and now that I had attained middle life, they seemed to pass me with accelerated pace, and the question would intrude upon my mind, What had I done? When I abandoned myself seriously to reflection, it seemed as if I had slumbered away the last twelve years. Others had accomplished the same toils as myself, and were now enjoying the fruits of their labor, and living in luxury and ease. But what had been my career? and what advance had I made toward this desirable consummation? I had just visited the Indian territory to gratify a youthful thirst for adventure; I had narrowly escaped starvation in a service in which I had no interest; I had traversed the fastnesses of the far Rocky Mountains in summer heats and winter frosts; I had encountered savage beasts and wild men, until my deliverance was a prevailing miracle. By the mere badinage of a fellow-trapper I had been adopted among the savages, and had conformed my superior habits to their ruthless and untutored ways; I had accompanied them in their mutual slaughters, and dyed my hand crimson with the blood of victims who had never injured me; I had distinguished myself in my barbarian seclusion, and had risen to supreme command in the nation I had devoted myself to. And what had I to show for so much wasted energy, and such a catalogue of ruthless deeds? I had been the means of saving many a fellow-creature's life. Did they still owe me gratitude? Possibly some few did, while others had forgotten my name. In good truth, when I sought the results of my prolonged labors, I found I had simply wasted my time. I had bestowed years upon others, and only moments upon myself.

However, I still lived, and there was yet time to take more heed unto my ways. I resolved to go home and see my friends, and deliver myself from this present vagabond life. The attachments I had formed during my savage chieftainship still retained some hold upon my affections, and it was barely possible I might return to them, and end my days among my trusty braves. There at least was fidelity, and, when my soul should depart for the spirit land, their rude faith would prompt them to paint my bones, and treasure them until I should visit them from my ever-flowing hunting ground, and demand them at their hands.

Such sober thoughts as these occupied my mind during my summer residence at the fort. I had brought with me all the peltry we had accumulated, in order to be in season for the boats, which were soon to start for the lower fort. I had directed the village to follow along with whatever peltry they might collect before the departure of the boats.

In obedience to this instruction, about two hundred and fifty warriors came down, bringing their commodities with them; but the boats had gone, and I still was waiting at the fort.

One day a party of my men were out to hunt buffalo for our own use, when they accidentally scared up eleven Black Feet, who were lurking about on the look-out for horses. They chased them into our old camping-ground, and the fugitives had taken refuge in our old temporary fort. I was sitting at the fort the while, busily conversing with persons present; I heard the report of their guns, and supposed, if the affair proved serious, I should be promptly sent for. Bad Hand, one of my leaders, finally said, "They are fighting out yonder, and I don't suppose they can do any thing without we are with them. Let us go."

We each threw on a chief's coat, and went down to see how matters stood. I found the Black Feet fortified in their position, and our men ineffectually firing upon them. I ordered an immediate as-

The Life And Adventures  
Of James P. Beckwourth

---

sault, placing myself at their head. We advanced a few paces at a rapid rate, when I fell senseless, with the blood gushing from my mouth in a stream. All supposed me mortally wounded, and I was carried into the fort to breathe my last.

The boats had left, and Tulleck happened to be starting after them just as I was carried in. Seeing my wounded condition, and every one pronouncing me in a dying state, he reported me as being dead at the lower fort, whence the news traveled to my friends in St. Louis that I had been killed in a fight with the Indians.

In an hour or two it was discovered that there was still life in me, and that I was reviving. I was examined: there was no bullet-wound on my body, and again it was proved that my broad-bladed hunting-knife (though not the same one) had averted the blow. It had been struck with an ounce of lead impelled with the full force of gunpowder. I speedily recovered, but continued sore for a long time.

Every Black Foot was killed by my men, who scaled their defense and leaped upon them in such numbers that they almost smothered them. Only four of my warriors were wounded. Intelligence of my injury was sent to the village, which was three weeks in reaching them. One thousand warriors instantly set out for the fort, all my wives accompanying them; but I had recovered before their arrival.

Our party had scarcely encamped outside the fort, when the Black Feet, who were always haunting us, stole about eight hundred head of horses. On discovering the theft, a large party started on their trail up the river. The depredators would have to cross the river to get home, and there was no crossing for horses nearer than fifteen miles, after which they had to go on to the Mussel Shell, a distance of twenty miles farther, and only ten from the fort. I knew that this would be the route of the fugitives, because it was their regular beat. I had had no thought of going until it suddenly occurred to me that the party in pursuit would most likely fail to overtake the thieves, while I had so admirable an opportunity to catch them on the Mussel Shell. I took a party, therefore, forded the river near the fort, and went on straight to the Mussel Shell, where I posted my men. Our unsuspecting victims came up, singing in great merriment, and driving our horses before them, all of which were jaded. I suffered them to approach close upon us, and then gave the word to charge. Never was a party taken more by surprise; they were too dumbfounded to offer resistance, and all we had to do was to chop them down. We had their twenty-four scalps in little more than the same number of seconds.

When the other party came up and found the work done, they thought we had been rained down there. They knew they had left us at the fort, and we had not passed them on the way, and where did we come from?

Pine Leaf was with the party, and she was ready to blow me off my horse. It was unfair to take the job out of their hands, after they had almost run their horses off their legs in the chase. I expressed my regret at the fortunate turn affairs had taken, and promised never to offend in the same manner again; but it was a long while before I could banter her into good humor.

I remained at the fort all the summer (as before stated), intending to go down the river on my way to St. Louis with the last boats in the fall. While idling there, I found the five men whom I had rescued from starvation in a penniless condition, and unable to go to work again. It seemed the company had issued orders to their agents to furnish no more outfits to free trappers on their personal credit, as the risk was too great, from their extreme liability to be killed by the Indians.

---

The Life And Adventures  
Of James P. Beckwourth

---

To engage to work for the company at the price they were paying hands was only perpetuating their poverty; for they were running the same risk of their lives as if trapping for themselves, and their remuneration was but as one to ten. They were down-hearted, and knew not what to do. Considering their sad condition, I determined to befriend them, and risk the chances. I therefore offered to give them an excellent outfit, and direct them to the best beaver-ground in the Crow nation, where they would be protected from all harm by my Crow warriors as my friends, my interest to be one half of the proceeds.

This offer was cheerfully accepted by the five men, and they were highly elated at the prospect. I then acquainted the Crows that those men were my friends; that they were the remains of a party of eleven, of whom six had been killed by the Black Feet, who had despoiled them of every thing they had, and that I had found these in the prairie almost famished to death. I had engaged them to stay in the nation and trap for me, and I wished my faithful Crow braves to protect them in their pursuit, and suffer none to offer them molestation. This they all readily promised to do, and were even pleased with the trust; for it was a belief with the Crows that the beavers in their streams were too numerous ever to be diminished. My bosom friend offered to remain with them, to show them the best streams, and render them all the assistance in his power. He was a most valuable auxiliary, as his skill in trapping I never saw excelled. They went to work, and met with extraordinary success; my share of their labors of less than three months amounted to five thousand dollars.

CHAPTER XXVII.

Departure for St. Louis.—Visit Fort Union.—Fort Clarke.—Descend to the A-rick-a-ra Country.—Am taken Prisoner.—Extraordinary Means of Release.—Reach St. Louis.—Scarcely recognized by my Sisters.—Changes.—Estrangement of Friends.—Sigh for my Indian Home.

THE Sparrowhawk nation was all assembled at the fort, to take leave of the Medicine Calf for several moons. The boats had arrived filled with a fresh stock of goods, and the nation made purchases to the amount of many thousands of dollars. The boats being now ready to return again, I made a short address to my people before I bade them adieu.

“Sparrowhawks!” I said, “I am going to leave you for a few moons, to visit my friends among the white men. I shall return to you by Green Grass, when the boats come back from the country of the whites. While I am away, I desire you to remember the counsel I have often given you. I wish you to send out no war-parties, because you want for nothing, and your nation is feared by all the neighboring tribes. Keep a good look-out over your horses, so as to afford the enemy no opportunity of stealing them. It is through carelessness in the horse-guards that one half the horses are lost, and it is the loss of horses that leads to half the battles that you fight. It is better not to have your horses stolen in the first place, than to steal more in the place of those you have lost.

“I also commend Mr. Tulleck to your care, as well as all the inmates of the fort. Visit them often, and see that they are not besieged or starved out by their enemies. Do not let the Black Feet or any other bad Indians harm them. Behave yourselves as becomes my faithful Crows. Adieu!”

They all promised obedience to my instructions, and I was soon on board. The boats were cast loose, and we were borne rapidly down stream by the swift current of the Yellow Stone.

We called at Fort Union, and I staid there three days. Here I had a fine canoe built, and two oarsmen furnished me to carry me to St. Louis. I was bearer of a large package of letters; and when my little craft was finished, I stepped on board and launched out upon the swift-rolling current of

The Life And Adventures  
Of James P. Beckwourth

---

the Missouri. After the brilliant opportunities I had had of realizing a princely fortune, my only wealth consisted of an order upon the company for seven thousand eight hundred dollars. Arriving at Fort Clarke, we made another short stay. The A-rick-a-ras, whose country was some hundred and fifty miles farther down, had just stolen nearly all the horses belonging to the fort. Bellemaire, the interpreter of the fort, proposed to me to go after them, and see if we could recover some of the horses. I consented, and we went down to their village in my canoe, and on our arrival there found them all dancing. Antoine Garro, with two relatives, were in the number. On seeing our approach, one shouted, "Here come white men!" and Garro and his brother instantly sprang toward us and pushed us into a lodge, where we were apparently prisoners. A council was summoned to decide upon our fate, and I had but slight hopes of ever seeing St. Louis. A young Indian came at that moment, and mentioned in a whisper to Peter that there was a large boat approaching. He made a long harangue before the others, in which he earnestly and energetically declaimed against taking the lives of white men. He concluded his oration by saying, "You have now my opinion, and remember, if you decide upon taking these white men's lives, I stay with you no longer." He then left the council and went down to the boat, where he advised the occupants to cross to the other side of the river, as the Indians were at that moment deliberating upon the fate of Bellemaire and three others. Garro's father happened to be on board, who was a great man among the Indians, and, on learning what business was in hand, he provided himself with a club, and entered the village with his son Peter. He then set about the council, and administered to all the members such a hearty thrashing, laying about him as if fighting wild bulls, that I thought he must surely slay some of them.

"There!" exclaimed the old man, after having belabored them till he was out of breath, "I'll teach you to deliberate on the lives of white men, dogs as ye are!"

The Indians offered no resistance, and said not a word. We remained all night with old Garro's company, and returned to the fort in the morning. Bellemaire recovered his own horses, but could obtain none belonging to the fort. We called at all the forts that lay in our way, to collect what dispatches they had to send, making but brief stay, however, as I was impatient to be getting on. At Fort Canaille I obtained a passenger, a son of Mr. Pappen, who was going to St. Louis, and I received reiterated charges to be very careful of him.

Soon after our departure from the fort there came on a cold rain-storm, which lasted several hours; the storm raged fiercely, and we had to make fast to a snag in the middle of the river to save ourselves from driving ashore. I had my Indian fire-striker, and, amid all the wind and rain, I repeatedly lit my pipe. My young passenger was astonished at the performance. "If you can strike a fire," he exclaimed, "in such a storm as this, I do not fear perishing."

When the storm had somewhat abated, we landed to encamp. I shot two fat wild turkeys, which were quite a rarity to me, after having lived so many years on buffalo-meat, there being no turkeys in the Crow country. On arriving at Jefferson City I felt quite sick, and showed symptoms of fever; but I was anxious to reach home without laying up. A steamboat coming down the river, I went on board, canoe and all, and was soon landed on the dock of St. Louis.

It was fourteen years since I had last seen the city, and what a difference was observable in those few years! But I was too sick to take much notice of things, and hastened to my sister's house, accompanied by the carpenter of the boat.

He rapped; the door was opened by my younger sister; I was supporting myself against the wall.

The Life And Adventures  
Of James P. Beckwourth

---

Greetings passed between them, for my companion was acquainted with my family; and he then informed her that he was the bearer of sad news — her brother James was dead.

My sister Louise began to cry, and informed him they had learned the news some weeks since. Then turning to me, he said, “Come in, Jim, and see your sister cry for you.”

I advanced, and addressed her in my old familiar manner, “How do you do, Lou?”

I must have been a curious looking object for an affectionate sister to recognize. All my clothing consisted of dressed antelope, deer, and the skins of mountain sheep, highly ornamented by my Indian wives. My long hair, as black as the raven’s wing, descended to my hips, and I presented more the appearance of a Crow than that of a civilized being.

She gazed at me for a moment with a searching look, and then exclaiming, “My God, it is my brother!” she flew into my arms, and was for some time unable to speak.

At length she said, “We received a letter informing us of your death, and that Mr. Tulleck had seen you borne into Fort Cass dead.”

My elder sister, Matilda, was up stairs, entertaining a few female friends, and Lou bounded up stairs to acquaint her that her brother James wished to speak to her.

Thinking her to be jesting, she said, “Are you not ashamed of yourself to jest on such a subject?” and she shed tears at thus having me recalled to remembrance.

Louise asseverated her earnestness, and Matilda reproved her for her wantonness, but would not budge to go and see for herself. At length a Mrs. Le Fevre said,

“Matilda, I believe she is in earnest, and if you do not go and see, I will.”

She had been a child with me, and we used to repeat our catechism together; now she was married, and the mother of several children.

She came tripping down stairs into my sister’s apartment, making a ceremonious courtesy as she entered. My sister introduced her to me, asking me if I did not recollect my commère (for we were baptized together). I had forgotten her, but the mention of this circumstance recalled her to my mind, and there was another embracing.

Her faith being thus confirmed, my sister Matilda was called down, and my reception from her was even more cordial than from the preceding friends. She was a woman of great warmth of feeling, and her heart was full to overflowing with the emotions my name had called up. She was the eldest of the family, and since our mother’s death she had been at once mother and sister to us all. Although I was the vagrant of the family, I still lived in her sisterly heart, and the supposition that my earthly career was closed had only hallowed my memory in her affections.

This was my second reception by my relatives after I had been supposed dead. One by my savage friends, who, in welcoming me as their long-lost child, exhibited all the genuine emotions of untutored nature; and this second by my civilized friends, who, if less energetic in their demonstrations of attachment, showed equal heartfelt joy, equal sincerity, and far superior decorum.

The following morning I visited the company’s office and delivered my letters. I became too weak to walk home, and Mr. Chouteau very obligingly drove me back in his carriage. I was compelled to take to my bed, where I was confined for several days, under good medical attendance, and most assiduously attended by my relatives.

Their answers to my many inquiries confounded me entirely.

“Where is my father?”

He went back to Virginia, and died there many years ago.”

The Life And Adventures  
Of James P. Beckwourth

---

“Where are my brothers?”

They are scattered about the country.” “Where is such and such a friend?”

“In his grave.” Where is Eliza?”

“She was married a month ago, after receiving intelligence of your certain death.”

I ceased my querying, and averted my eyes from my sister’s gaze.

And this, I mused, is my return home after years of bright anticipations of welcome! This is my secure and sunshiny haven, after so long and dangerous a voyage! My father dead, my brothers dispersed, my friends in their graves, and my loved one married! She did well — I have no right to complain — she is lost to me forever! If a man’s home exists in the heart of his friends, with the death and alienation of those friends his cherished home fades away, and he is again a wanderer upon the earth.

I do not know whether it was disappointment at so much death, mutation, and estrangement, or whether I bore the disease immediately in my own heart, but I was disappointed in my return home; the anticipations I had formed were not realized — a feeling of cynicism passed over me. I thought of my Indian home, and of the unsophisticated hearts I had left behind me. Their lives were savage, and their perpetual animosities repulsive, but with this dark background there was much vivid coloring in relief. If the Indian was unrelenting, and murdered with his lance, his battle-axe, and his knife, his white brother was equally unfeeling, and had ways of torturing his victim, if less violent, not the less certain. The savage is artless, and when you win his admiration there is no envious reservation to prompt him to do injustice to your name. You live among them honored; and on your death, your bones are stored religiously in their great cave along with others of preceding generations, to be each year visited, and painted, and reflected on by a host of devoted companions. There is not the elegance there, the luxury, the refined breeding, but there is rude plenty, prairies studded with horses, and room to wander with out any man to call your steps in question. My child was there, and his mother, whom I loved; a return there was in no way unnatural. I had acquired their habits, and was in some manner useful to them. I had no tie to hold me here, and I already almost determined upon returning to my Indian home.

Such thoughts as these, as I lay on my sick-bed, passed continuously through my mind. A few of my early friends, as they heard of my return, came one after the other to visit me; but they were all changed. The flight of time had wrought furrows upon their smooth brows, and the shadow of the wings of Time was resting upon the few fair cheeks I had known in my younger days.

#### CHAPTER XXVIII.

Disagreeable Rencounters in St. Louis.—Messenger arrives from Fort Cass.—Imminent Peril of the Whites from the Infuriated Crows.—The Cause.—Immediate Return.—Incidents of my Arrival.—Pine Leaf substituted for Eliza.—Last Battle with the Black Feet.—Final Adieu to the Crows.

IT now comes in the order of relation to describe two or three unpleasant rencounters I had with various parties in St. Louis, growing out of the misunderstanding (already related) between the Crows and Mr. Fitzpatrick’s party. I had already heard reports in the mountains detrimental to my character for my supposed action in the matter, but I had never paid much attention to them. Friends had cautioned me that there were large sums of money offered for my life, and that several men had even undertaken to earn the rewards. I could not credit such friendly intimations; still I thought, on the principle that there is never smoke but there is fire, that it would be as well

The Life And Adventures  
Of James P. Beckwourth

---

to keep myself a little on my guard.

I had recovered from my sickness, and I spent much of my time about town. My friends repeatedly inquired of me if I had seen Fitzpatrick. Wondering how so much interest could attach to my meeting with that man, I asked one day what reason there was for making the inquiry. My friend answered, "I don't wish you to adduce me as authority; but there are strong threats of taking your life for an alleged robbery of Fitzpatrick by the Crow nation, in which you were deeply concerned."

I saw now what to prepare for, although I still inclined to doubt that any man, possessed of ordinary perceptions, could charge me with an offense of which I was so manifestly innocent. True, I had met Fitzpatrick several times, and, instead of his former cordial salutation, it was with difficulty he addressed a civil word to me.

Shortly after this conversation with my friend I went to the St. Louis Theatre. Between the pieces I had stepped to the saloon to obtain some refreshments, and I saw Fitzpatrick enter, with four other not very respectable citizens. They advanced directly toward me. Fitzpatrick then pointed me out to them, saying, "There's the Crow."

"Then," said the others, "we are Black Feet, and let us have his scalp."

They immediately drew their knives and rushed on me.

I then thought of my friend's salutary counsel to be on my guard, but I had no weapon about me. With the agility of a cat I sprung over the counter, and commenced passing tumblers faster than they had been in the habit of receiving them. I had felled one or two of my assailants, and I saw I was in for a serious disturbance.

A friend (and he is still living in St. Louis, wealthy and influential) stepped behind the bar, and, slapping me on the shoulder, said, "Look out, Beckwourth, you will hurt some of your friends."

I replied that my friends did not appear to be very numerous just then.

"You have friends present," he added; and, passing an enormous bowie-knife into my hand, stepped out again.

Now I was all right, and felt myself a match for the five ruffians. My practice with the battle-axe, in a case where the quickness of thought required a corresponding rapidity of action, then came into play.

I made a sortie from my position on to the open floor, and challenged the five bullies to come on; at the same time (which, in my excited state, was natural enough) calling them by the hardest names.

My mind was fully made up to kill them if they had only come at me; my arm was nervous; and my friends, who knew me at that time, can tell whether I was quick-motivated or not. I had been in situations where I had to ply my battle-axe with rapidity and precision to redeem my own skull. I was still in full possession of my belligerent powers, and I had the feeling of justice to sustain me.

I stood at bay, with my huge bowie-knife drawn, momentarily hesitating whether to give the Crow war-hoop or not, when Sheriff Buzby laid hands on me, and requested me to be quiet. Although boiling with rage, I respected the officer's presence, and the assassins marched off to the body of the theatre. I followed them to the door, and defied them to descend to the street with me; but the sheriff becoming angry, and threatening me with the calaboose, I straightway left the theatre.

The Life And Adventures  
Of James P. Beckwourth

---

I stood upon the steps, and a friend coming up, I borrowed a well-loaded pistol of him, and moved slowly away, thinking that five men would surely never allow themselves to be cowed by one man. Shortly after, I perceived the whole party approaching, and, stepping back on the side-walk in front of a high wall, I waited their coming up. On they came, swaggering along, assuming the appearance of intoxication, and talking with drunken incoherency.

When they had approached near enough to suit me, I ordered them to halt, and cross over to the other side of the street.

“Who are you?” inquired one of them.

“I am he whom you are after, Jim Beckwourth; and if you advance one step farther, I will blow the tops of your heads off.”

“You are drunk, ar’n’t you?” said one of the party. “No, I am not drunk,” I replied; “I never drink any thing to make a dog of me like yourselves.”

I stood during this short colloquy in the middle of the side-walk, with my pistol ready cocked in one hand and my huge bowie-knife in the other; one step forward would have been fatal to any one of them.

“Oh, he’s drunk,” said one; “let’s cross over to the other side.” And all five actually did pass over, which, if any of them is still living and has any regard for truth, he must admit to this day.

I then proceeded home. My sister had been informed of the rencounter, and on my return home I found her frightened almost to death; for Forsyth (one of the party) had long been the terror of St. Louis, having badly maimed many men, and the information that he was after me led her to the conclusion that I would surely be killed.

A few days after I met two of the party (Forsyth and Kinney), when Forsyth accosted me, “Your name is Beckwourth, I believe?”

I answered, “That is my name.”

“I understand that you have been circulating the report that I attempted to assassinate you?”

“I have told that you and your gang have been endeavoring to murder me,” I replied, “and I repeat it here.”

“I will teach you to repeat such tales about me,” he said, fiercely, and drew his knife, which he called his Arkansas tooth-pick, from his pocket.

The knife I had provided myself with against any emergency was too large to carry about me conveniently, so I carried it at my back, having the handle within reach of my finger and thumb. Seeing his motion, I whipped it out in a second.

“Now,” said I, “you miserable ruffian, draw your knife and come on! I will not leave a piece of you big enough to choke a dog.”

“Come,” interposed Kinney, “let us not make blackguards of ourselves; let us be going.” And they actually did pass on without drawing a weapon.

I was much pleased that this happened in a public part of the city, and in open day; for the bully, whom it was believed the law could not humble, was visibly cowed, and in the presence of a large concourse of men. I had no more trouble from the party afterward.

In connection with this affair, it is but justice to myself to mention that, when Captain Sublet, Fitzpatrick, and myself happened to meet in the office of Mr. Chouteau, Captain Sublet interrogated Fitzpatrick upon the cause of his hostility toward me, and represented to him at length the open absurdity of his trumping up a charge of robbery of his party in the mountains against me.

The Life And Adventures  
Of James P. Beckwourth

---

Being thus pressed, Fitzpatrick used the following words: "I never believed the truth of the charge myself; but when I am in the company of sundry persons, they try to persuade me into the belief of it, in order to raise trouble. I repeat, it is not my belief at this present moment, and I will not be persuaded into believing it again." Then turning to me, he said, "Beckwourth, I have done you a great injustice by ever harboring such a thought. I acknowledge it freely, and I ask your forgiveness for the same. Let us be as we formerly were, friends, and think no more about it." Friends we therefore mutually pledged ourselves, and friends we have since remained up to this day. While in town I called on General Ashley, but he happened to be away from home. I was about leaving the house, when a melodious voice invited me in to await the general's return. "My husband will soon be back," the lady said, "and will be, doubtless, pleased to see you."

I turned, and really thought I was looking on an angel's face. She moved toward me with such grace, and uttered such dulcet and harmonious sounds, that I was riveted to the spot. It was the first time I had seen the lady of General Ashley.

I accepted her invitation, and was shown into a neat little parlor, the lady taking a seat at the window to act as my entertainer until the return of the general.

"If I mistake not," she said "you are a mountaineer?"

I put on all the airs possible, and replied, "Yes, madam, I was with General Ashley when he first went to the mountains."

Her grace and affability so charmed me that I could not fix my ideas upon all the remarks she addressed to me. I was conscious I was not showing myself off to advantage, and she kept me saying "Yes, madam" and "No, madam," without any correct understanding of the appropriateness, until she espied the general approaching.

"Here comes the general," the lady said; "I knew he would not be long away."

Shortly the general entered the lodge, and fixed his eye upon me in an instant, at the same time whipping his pantaloons playfully with his riding-whip.

Rising from a better chair than the whole Crow nation possessed, I said, without ceremony,

"How do you do, general?"

"Gracious heavens! is this you, Beckwourth?" and he seized my hand with the grip of a vice, and nearly shook off my scalp, while his lady laughed heartily at the rough salutation of two old mountaineers.

"My dear," said the general, "let me introduce you to Mr. Beckwourth, of whom you have heard me so often make mention. This is the man that saved my life on three different occasions in the Rocky Mountains; had it not been for our visitor, you would not have been Mrs. Ashley at this moment. But you look sickly, James; what is the matter?"

I replied, "I had been confined to my bed since my arrival in St. Louis."

We had a long conversation about the mountains and my residence with the Crow nation. I was very hospitably entertained by my former commander and his amiable lady, and when I left, the promise was extorted from me to make repeated calls upon them so long as I remained in the city.

About the latter end of March a courier arrived from Fort Cass, bringing tidings of a most alarming character. He had come alone through all that vast extent of Indian territory without being molested. It seemed as though a special providence had shielded him.

He found me in the theatre, and gave me a hasty rehearsal of the business. It seems that a par-

The Life And Adventures  
Of James P. Beckwourth

---

ty of trappers, who had heard of my departure for St. Louis, having fallen in with a number of Crows, had practiced upon them in regard to me.

“Your great chief is gone to the white nation,” said the trapper spokesman.

“Yes, he has gone to see his friend, the great white chief.”

“And you will never see him again.”

“Yes, he will come back in the season of green grass.”

“No, the great white chief has killed him.”

“Killed him!”

“Yes.”

“What had he done that he should kill him?”

He was angry because he left the whites and came to live with the Indians — because he fought for them.”

It is the greatest wonder in the world that every one of the trapper party did not lose their scalps on the spot. If the Indians had had any prominent leader among them, they infallibly would have been all killed, and have paid the penalty of their mischievous lying. Unfortunately for the Crows, they believe all the words of a white man, thinking that his tongue is always straight. These trappers, by their idle invention, had jeopardized the lives of all the white men in the mountains.

The Indians said no more, but dashed off to the village, and carried the news of my death.

“How do you know that he is dead?” they inquired.

“Because the whites told us so, and their tongues are not forked. The great white chief was angry because he staid with our people, and he killed him.”

A council was immediately held to decide upon measures of vengeance. It was determined to proceed to the fort and kill every white man there, and divide all the goods, guns, and ammunition among themselves; then to send out parties in every direction, and make a general massacre of every white man. Innumerable fingers were cut off, and hair without measure, in mourning for me; a costly sacrifice was then made to the Great Spirit, and the nation next set about carrying out their plans of vengeance.

The village moved toward the fort. Many were opposed to being too hasty, but all agreed that their decisions should be acted upon. The night before the village reached the fort, four women ran on in advance of the village to acquaint Mr. Tulleck of the sanguinary intention of the Crows. Every precaution was taken to withstand them — every gun was loaded. The village arrived, and, contrary to all precedent, the gates of the fort were closed.

The savages were infuriated. The whites had heard of the death of the Medicine Calf, and had closed the gates to prevent the anticipated vengeance. The inmates of the fort were in imminent peril; horror was visible on their countenances. They might hold their position for a while, but an investment by from ten to fifteen thousand savages must reduce it eventually. Tulleck was seated on the fort in great perplexity. Many of the veteran Crow warriors were pacing to and fro outside the inclosure. Yellow Belly was provisional head chief during my absence. Tulleck called him to him.

He rode up and inquired, “What is the matter? Why are your gates shut against us?”

“I had a dream last night,” replied Tulleck, and my medicine told me I had to fight my own people to-day.” “Yes, your bird told you truth; he did not lie. Your chief has killed the Medicine Calf, and we are going to kill you all.”

The Life And Adventures  
Of James P. Beckwourth

---

“But the Medicine Calf is not dead; he will certainly come back again.”

“Yes, he is dead. The whites told us so, and they never lie. You need not try to escape by saying he is not dead, for we will not believe your words. You can not escape us; you can neither dig into the ground, nor fly into the air; if you attempt to run, I will put five thousand warriors upon your trail, and follow you to the white chief: even there you shall not escape us. We have loved the whites, but we now hate them, and we are all angry. You have but little meat in the fort, and I know it; when that is gone, you die.”

My son, “little Jim,” was standing near the fort, and Mr. Tulleck called him to him. The child’s answer was, “Away! you smell bloody!”

Mr. Tulleck, however, induced him to approach, and said, “Black Panther, I have always loved your father, and you, and all the warriors. Have I ever told you a lie?”

“No.”

“They have told you that your father is dead, but they have lied; he lives, and will come back to you. The white chief has not killed him. My words are true. Do you believe your friend, and the friend of your father?”

“Yes. I love my father; he is a great chief. When he is here, I feel happy — I feel strong; but if he is dead, I shall never feel happy any more. My mother has cried four suns for him, and tells me I shall see him no more, which makes me cry.”

“Your father shall come back, my son, if you will listen to what I now say to you.”

“I will listen.”

“Go, then, and ask Yellow Belly to grant me time to send for your father to the country of the white men, and if he be not here by the time the cherries shall have turned red, I will then lay down my head, and you may cut it off, and the warriors may kill us all, for we will not fight against them. Go and tell the chief that he must grant what I have told you for your sake, and if he does not listen to you, you will never see your father any more. Go!”

The child accordingly went to Yellow Belly, and begged him to grant one request. The chief, supposing that he was about to request permission to kill a particular man at the fort, said, “Certainly, my son; any request you make shall be granted. Speak! what is it?”

The child then informed Yellow Belly what the Crane had said — that he would have his father back by the time the cherries turned red, or that he would suffer his head to be cut off, and deliver up his whites to the Crows, and would not fight.

“It shall be so, my son,” Yellow Belly assented; “go and tell the Crane to send for your father, for not a warrior shall follow the trail of the white runner, or even look upon it. If he does as he says, the whites shall all live; if he fails, they shall all die. Now go and harangue the people, and tell all the warriors that the Crane is going to send for your father, and the warrior who follows the runner’s trail shall die. Yellow Belly has said it.”

He mounted a horse, and did as the chief had directed.

Joseph Pappen volunteered to deliver the message to me: it was encountering a fearful hazard. His inducement was a bonus of one thousand dollars.

The morning following the receipt of this intelligence I saw Mr. Chouteau, who was in receipt of a letter from Mr. Tulleck by the same messenger. He was in great uneasiness of mind. There was over one hundred thousand dollars’ worth of goods in the fort, and he urged me to start without delay. The distance from St. Louis was estimated at two thousand seven hundred and fifty miles,

The Life And Adventures  
Of James P. Beckwourth

---

and the safety of the men rendered the greatest expedition necessary. Any sum I might ask would be willingly paid me.

“Go!” said he; “engage as many men as you wish; purchase all the horses you require: we will pay the bills.” He also furnished me with instructions to all the agents on the way to provide me with whatever I inquired for. The price I demanded for my services was five thousand dollars, which was, without scruple, allowed me. I hired two men to accompany me (Pappen being one), to whom I gave fifteen hundred and one thousand dollars respectively.

Our horses being procured, and every necessary supplied us, away we started upon our journey, which occupied us fifty-three days, as the traveling was bad. Our last resting-place was Fort Clarke. Thence we struck directly across through a hostile Indian country, arriving in safety within hailing distance of the fort before the cherries were ripe, although they were very near it. I rested on a gentle rise of ground to contemplate the mass of people I saw before me. There they lay, in their absorbing devotedness to their absent chief; day and night, for long months, they had staid by that wooden inclosure, watching for my return, or to take fearful vengeance upon their prey. They had loved the whites, but those whites had now killed their chief because he had returned to his own people to fight for his kindred and nation — the chief who had loved them much, and made them rich and strong. They were now feared by their enemies, and respected by all; their prairies were covered with thousands of horses, and their lodges were full of the wealth derived from the whites. For this the white chief had killed him, and a war of extermination was denounced against them. The fort and its inmates were within their grasp; if the Crane would redeem his pledge and produce their missing chief, all were well; but if the appointed time passed by, and he were not forthcoming, it was fearful to contemplate the vengeance they would inflict. When I thought of those contemptible wretches, who, merely to wanton with the faith that the artless savages reposed in them, could fabricate a lie, and arouse all this impending danger, I felt that a death at the stake would not transcend their deserts.

I put my horse into speed, and rode in among the Indians. I made the usual salutation on arriving before them, and, riding through their ranks sullenly,

I repeated two or three times, “I am angry!” Every eye was turned on me, but not a warrior stirred; the women seized their children and ran into lodges. The Medicine Calf had arrived, but he was angry.

I advanced to the strong and well-secured gate of the fort, and struck it a heavy blow with my battle-axe. “Halloo, boys!” I shouted; “open your gate, and admit a friend.”

“Jim Beckwourth! By heavens, Jim Beckwourth!” was repeated from tongue to tongue. The gates flew open upon their massive hinges, and, as I rode through, I said, “Leave the gates open, boys; there is no longer danger.”

I exchanged but a few words with Mr. Tulleck, as I had a difficult business before me. The people I had to mollify were subject to strange caprices, and I had not resolved what policy to adopt toward them.

I went and sat down sullenly, hanging my head so low that my chin rested upon my breast: this was a token of my great displeasure. The braves came round me slowly. My wives all formed themselves in a circular line, and marched round me, each one pausing as she passed to place her hand on the back of my neck.

The brave old Yellow Belly was the first one to speak, and what he said was to the purpose.

---

The Life And Adventures  
Of James P. Beckwourth

---

“What is the matter with our chief?” he inquired; “who has angered the Medicine Calf?”

“Did I not tell you,” I said, “that I left you in charge of the Crane and these other whites during my absence? And what do I behold on my return?”

“Yes, I told you I would take care of the Crane and these other whites while you were gone, and I have done so. My warriors have killed buffalo for them to eat, and our women have brought them wood and water for their use, and they are all alive. Look! Yonder is the Crane; and his white people are all with him — are they dead?”

“No; but you intended to kill them.”

“Yes; but listen: if you had not returned before the cherries turned red, we should have killed them all, and every other white man besides that we could have found in the Am-ma-ha-bas (Rocky Mountains). Now hear what I have to say:

“Suppose I am now going to war, or I am going to die. I come to you and say, ‘My friend, I am going to die yonder; I want you to be a kind friend to my children, and protect them after I depart for the land of the Great Spirit.’ I go out and die. My wives come to you with their fingers cut off, their hair gone, and the warm blood pouring from their bodies. They are crying mournfully, and your heart pities them. Among the children is a son in whom you behold the image of your friend who is no more. The mother of that child you know to be good and virtuous. You have seen her triumphant entry into the medicine lodge, where you have beheld so many cut to pieces in attempting the same. You say, Here is the virtuous wife of my friend; she is beloved and respected by the whole nation. She asks you to revenge her loss — the loss that has deprived her of her husband and the child of its father. In such a case, what would you do?’ Speak!”

“I should certainly take my warriors,” I replied, “and go and avenge your loss.”

“That is just what I was going to do for your relatives, friends, and nation. Now punish me if I have done wrong.”

I had nothing to say in answer, and my head again fell — the spell was not yet broken. The Crow Belt, an old and crafty brave, whispered to a young warrior, who rose in silence, and immediately left the fort.

Mrs. Tulleck shortly presented herself, and commenced tantalizing the Crows.

“What are your warriors waiting for, who have been thirsting so many suns to kill the whites? You have been brave for a long while; where is all your bravery now? The gates are set wide open, and only three have joined the few whites whom you thirsted to kill; why don’t you begin? What are you afraid of?”

She continued in this aggravating strain, the warriors hearing it all, although they did not appear to notice her. The woman’s voice was agreeably relieved by tones uttered outside the gate, which at that moment fell upon my ear, and which I readily recognized as the voice of Pine Leaf. She was haranguing her warriors in an animated manner, and delivering what, in civilized life, would be called her valedictory address.

“Warriors!” she said, “I am now about to make a great sacrifice for my people. For many winters I have been on the war-path with you; I shall tread that path no more; you have now to fight the enemy without me. When I laid down my needle and my beads, and took up the battle-axe and the lance, my arm was weak; but few winters had passed over my head. My brother had been killed by the enemy, and was gone to the hunting-ground of the Great Spirit. I saw him in my dreams. He would beckon for his sister to come to him. It was my heart’s desire to go to him,

The Life And Adventures  
Of James P. Beckwourth

---

but I wished first to become a warrior, that I might avenge his death upon his foes before I went away.

“I said I would kill one hundred foes before I married any living man. I have more than kept my word, as our great chief and medicine men can tell you. As my arm increased in strength, the enemy learned to fear me. I have accomplished the task I set before me; henceforward I leave the war-paths of my people; I have fought my last battle, and hurled my last lance; I am a warrior no more.

“To-day the Medicine Calf has returned. He has returned angry at the follies of his people, and they fear that he will again leave them. They believe that he loves me, and that my devotion to him will attach him to the nation. I therefore bestow myself upon him; perhaps he will be contented with me, and will leave us no more. Warriors, farewell!”

She then entered the fort, and said, “Sparrowhawks, one who has followed you for many winters is about to leave your war-path forever. When have you seen Bar-chee-am-pe shrink from the charge? You have seen her lance red with the blood of the enemy more than ten times ten. You know what her vow was, and you know she has kept her word. Many of you have tried to make her break her word, which you knew she had passed to the Great Spirit when she lost her brother. But you found that, though a woman, she had the heart of a warrior.

“Do not turn your heads, but listen. You have seen that a woman can keep her word. During the many winters that I have followed you faithfully in the war-path, you have refused to let me into the war-path secret, although you tell it to striplings on their second excursion. It was unfair that I could not know it; that I must be sent away with the women and children, when the secret was made known to those one battle braves. If you had seen fit to tell it to me, it would have been secret until my death. But let it go; I care no farther for it.

“I am about to sacrifice what I have always chosen to preserve — my liberty. The back of my steed has been my lodge and my home. On his back, armed with my lance and battle-axe, I knew no fear. The medicine chief, when fighting by my side, has displayed a noble courage and a lofty spirit, and he won from my heart, what no other warrior has ever won, the promise to marry him when my vow was fulfilled. He has done much for our people; he has fought their enemies, and spilled his blood for them. When I shall become his wife, I shall be fond and faithful to him. My heart feels pure before the Great Spirit and the sun. When I shall be no more on the war-path, obey the voice of the Medicine Calf, and you will grow stronger and stronger; we shall continue a great and a happy people, and he will leave us no more. I have done.”

She then approached me, every eye being intently fixed upon her. She placed her hand under my chin, and lifted my head forcibly up. “Look at me,” she said; “I know that your heart is crying for the follies of the people. But let it cry no more. I know you have ridden day and night to keep us from evil. You have made us strong, and your desire is to preserve us strong. Now stay at home with us; you will not be obliged to go to war more than twice in twelve moons. And now, my friend, I am yours after you have so long been seeking me. I believe you love me, for you have often told me you did, and I believe you have not a forked tongue. Our lodge shall be a happy one; and when you depart to the happy hunting-ground, I will be already there to welcome you. This day I become your wife — Bar-chee-am-pe is a warrior no more.”

This relieved me of my melancholy. I shook the braves by the hand all round, and narrated much of my recent adventures to them. When I came to my danger in the A-rick-a-ra country, they

---

The Life And Adventures  
Of James P. Beckwourth

---

were almost boiling with wrath, and asked my permission to go and exterminate them. Pine Leaf left the fort with my sisters to go and dress for the short marriage ceremony. She had so long worn the war costume that female apparel seemed hardly to become her; she returned so transformed in appearance that the beholder could scarcely recognize her for the same person. When I visited her lodge in the evening I found her dressed like a queen, with a lodge full of her own and my relatives to witness the nuptials. She was naturally a pensive, deep-thinking girl; her mind seemed absorbed in some other object than worldly matters. It might be that her continual remembrance of her brother's early fall had tinged her mind with melancholy, or it might be constitutional to her; but for an Indian girl she had more of that winning grace, more of those feminine blandishments — in short, she approached nearer to our ideal of a woman than her savage birth and breed would seem to render possible.

This was my last marriage in the Crow nation. Pine Leaf, the pride and admiration of her people, was no longer the dauntless and victorious warrior, the avenger of the fall of her brother. She retired from the field of her glory, and became the affectionate wife of the Medicine Calf.

The difficulty being now entirely removed, we quitted our encampment, and went on a hunting excursion. We were away but a few days, and then returned to the fort. One morning it was discovered a large drove of horses was missing. A party was dispatched along the trail, which conducted them precisely the same route they took before. I raised a party, and again struck across the Mussel Shell, and, finding I was before the fugitives, I secreted my warriors as before. We had waited but a few moments, when I saw the enemy emerge from the pines, not more than a mile distant. Pine Leaf and my little wife were with me. My new bride, as she saw the enemy approach, lost all recollection of her new character; her eye assumed its former martial fire, and, had she had her former war equipments, beyond all doubt she would have joined in the dash upon the foe.

The pursued, which was a party of Black Feet, were hard pressed by their pursuers in the rear, but very shortly they were harder pushed in the van. When within proper distance, I gave the word Hoo-ki-hi (charge), and every Black Foot instantly perished. So sudden was our attack, they had not time to fire a gun. I struck down one man, and, looking round for another to ride at, I found they were all dead. The pursuers did not arrive in time to participate in the fight. We took thirty-eight scalps, and recovered one thousand horses, with which we returned to the fort. This was my last battle in the Crow nation; the scalp I relieved the Black Foot of was the last I ever took for them. Before my sudden recall from St. Louis I had entered into negotiations which I now felt I would like to complete. I had informed the Crows, after my marriage with Pine Leaf, that I must return to the country of the whites, as they had called me away before I had had time to finish my business. When the boats were ready to go down stream I stepped on board, and proceeded as far as Fort Union. Previous to departing, I informed the Crows that I should be back in four seasons, as I at that time supposed I should. I told them to credit no reports of my death, for they were all false; the whites would never kill me. Pine Leaf inquired if I would certainly come back. I assured her that, if life was preserved to me, I would. I had been married but five weeks when I left, and I have never seen her since.

I was disappointed in my expectation of entering into a satisfactory engagement to the agent of the company, so I kept on to St. Louis. In good truth, I was tired of savage life under any aspect. I knew that, if I remained with them, it would be war and carnage to the end of the chapter, and

The Life And Adventures  
Of James P. Beckwourth

---

my mind sickened at the repetition of such scenes. Savage life admits of no repose to the man who desires to retain the character of a great brave; there is no retiring upon your laurels. I could have become a pipe-man, but I did not like to descend to that; and, farther, I could not reconcile myself to a life of inactivity. Pine Leaf and my little wife would have excited their powers of pleasing to procure me happiness; but I felt I was not doing justice to myself to relapse irretrievably into barbarism.

It certainly grieved me to leave a people who reposed so much trust in me, and with whom I had been associated so long; and, indeed, could I have made an engagement with the American Fur Company, as I had hoped to do, I should have redeemed my promise to the Crows, and possibly have finished my days with them. But, being mistaken in my calculations, I was led on to scenes wilder and still more various, yet dignified with the name of greater utility, because associated with the interests of civilization.

CHAPTER XXIX.

Return to St. Louis.—Interview with General Gaines.—The Muleteers' Company.—Departure for Florida.—Wreck of the "Maid of New York."—Arrival at Fort Brooke.—Tampa Bay.—Bearer of Dispatches to General Jessup.—Battle of O-ke-cho-be.—Anecdotes and Incidents.

I HAD speedy passage to St. Louis, and arrived there after an absence of five months. I mentioned that I had left some business unsettled at the time of my sudden leave. This was none other than an affair matrimonial; but on my return I had some misunderstanding with my fair dulcinea, and the courtship dropped through.

At this time the Florida war was unfinished. General Gaines was in St. Louis for the purpose of raising a company of men familiar with Indian habits. Mr. Sublet had spoken to him about me, and had recommended me as being particularly well acquainted with Indian life. The general sent a request that I would call upon him at his quarters. I went accordingly, and was introduced by Sublet.

The general inquired of me how I would like to go to Florida to fight the Indians. I replied that I had seen so much of Indian warfare during the last sixteen years that I was about tired of it, and did not want to engage in it again, at least for the present. He remarked that there was a good opportunity there for renown. He wished, he said, to raise a company which would go down as muleteers; that their duties would be light, and so on through the stereotyped benefits peculiar to a soldier's life.

Sublet recommended me to engage. Florida, he said, was a delightful country, and I should find a wide difference between the cold region of the Rocky Mountains and the genial and salubrious South.

The general then inquired if I could not raise a company of mountain-boys to go with me. I replied that I thought I could, or that, at any rate, I would make the effort.

The trapping business was unusually dull at that time, and there were plenty of unoccupied men in the city ready to engage in any enterprise. I went among my acquaintance, and soon collected a company of sixty-four men. I went and reported my success to the general. He wished to see the men. I brought them all forward, and had their names enrolled. I was appointed captain of the company, with three lieutenants elected from the men.

On the ninth day of my stay in St. Louis, we went on board a steamer going down stream, and were quickly, on our way to the Seminole country. We had a delightful journey to New Orleans,

---

The Life And Adventures  
Of James P. Beckwourth

---

where we were detained five days in waiting for a vessel to transport us to the fields of "renown." While waiting in New Orleans I fell in with several old acquaintances, who gave me an elegant parting dinner. I then sported the commission of captain in the service of Uncle Sam. Our vessel, the Maid of New York, Captain Carr, being at length ready for sea, my soldiers, with their horses, were taken on board, and we set sail for Tampa Bay. I now, for the first time in my life, saw salt water, and the sickness it produced in me led me to curse General Gaines, and the trappings of war to boot. Our vessel stranded on a reef, and there she remained snug enough, all efforts to dislodge her proving fruitless. There was one small island in sight to leeward; in every other direction there was nothing visible but the heaving ocean. Wreckers, who seemed to rise from the sea-foam, flocked instantly around us, and were received by our captain with a ready volley of nautical compliment. The vessel had settled deeply into a bed of sand and rock; the water was rapidly gaining in her hold, and my commission, together with my gallant companions in arms, seemed, at that moment, to have a slim chance of ever serving our respected uncle in the "fields of renown." I ascended the rigging to take a survey of the country. Many a time an elevated prospect had delivered me from difficulties, if dissimilar, yet not less imminent, than those that now menaced me. Still I felt that, could those ratlines I was now ascending be transformed into the back of my Indian war-steed, this ocean be replaced with a prairie, and that distant speck which they called an island be transmuted into a buffalo, I would give my chance of a major-generalship in purchase of the change; for the sensations of hunger I began to feel were uncomfortably acute, and I saw no immediate prospect of alleviating the pain. Suddenly I saw a long line of black smoke, which I thought must be from a prairie fire. I reported my discovery to the captain, and he hoisted our colors at half-mast, to signal for assistance. A small steamer came in sight, and made toward us, and finally ranged up under our stern. She took off all my men except myself and twelve others. I wrote to the commandant at Tampa Bay to inform him of our situation, and asking him for immediate assistance. After twelve days' stay on the reef, two small brigs came out to us, and received on board ourselves, with our horses and forage, conveying us to Tampa Bay, where they cast anchor. Major Bryant sent for me to his quarters, and I forthwith presented myself before him.

This officer gave me a very cordial welcome, congratulating the service on having an experienced mountaineer, and saying several other very complimentary things. At length he said, "Captain Beckwourth, I wish to open a communication between this port and the head-quarters of Colonel Jessup, distant about one hundred miles. I have received no dispatches from there, although nine couriers have been dispatched by Colonel Taylor."

I replied, "Sir, I have no knowledge of the country; I know nothing of its roads or trails, the situation of its posts, nor do I so much as know the position of Colonel Jessup's command. To attempt to convey dispatches while so little prepared to keep out of harm's way, I very much fear, would be to again disappoint the service in the delivery of its messages, and to afford the Seminoles an additional scalp to those they have already taken."

He pooh-poohed my objections. "A man," said Major Bryant, "who has fought the Indians in the Rocky Mountains the number of years that you have, will find no difficulty here in Florida."

"Well," I assented, "furnish me with the bearings of the country, and direct me to the colonel's camp, and I will do my best to reach there."

Accordingly, the major furnished me with all the necessary instructions, and I started alone on

---

my errand.

It was my acquired habit never to travel along any beaten path or open trail, but rather to give such road a wide berth, and take the chances of the open country. I observed my invariable custom on this occasion, merely keeping in view the bearings of the position I was steering for. I started from Major Bryant's post about sunrise, and reached the colonel's head-quarters at nightfall the following day. I passed through the camp without seeing it; but the sound of a bugle falling on my ear, I tacked about, and finally alighted upon it.

As I rode up I was hailed by a sentinel,

"Who come dere?"

"An express."

"Vat you vant in dish camp?"

"I wish to see Colonel Jessup. Call the officer of the guard."

"Vat for you come from dat way vere ish de Schimynoles?"

"Call your officer of the guard," said I, impatiently. The officer of the guard at length appeared.

"What are you here again for?" he inquired of me. "I wish to see the commanding officer," I replied. "Yes, you are always wishing to see the commanding officer," he said; "but he will not be troubled with you much longer; he will soon commence hanging you all."

"I demand to be shown to the commanding officer, sir," I reiterated.

"Who are you, then?"

"I am a bearer of dispatches."

"Give them to me."

"I was not instructed to give them to you. I shall not do it, sir."

"I believe you came from the Seminoles; you came from that direction."

"You believe wrong, sir. Will you show me to Colonel Jessup, or will you not?"

This very cautious officer of the guard then went to the marquee of the colonel, and addressed him: "Here is another of those Seminoles, sir, who says he has dispatches for you. What shall I do with him?"

The colonel came out, and eyed me scrutinizingly. "Have you brought dispatches for me?" he inquired. "I have, sir."

"From where?"

"From Tampa Bay, sir."

"He came from the Seminoles, colonel," interposed the officer of the guard.

"You are mistaken again, sir," I said, giving him the look of a Crow in the midst of a battle; for I was not yet hireling enough not to feel aggravated at being called by implication a liar.

"Let me see your dispatches," said the colonel.

I handed him the documents; he took them, and passed into his tent.

This did not suit me. I resolved to return instantly. I had not been treated with common civility; no inquiries had been made about my appetite; I was not even invited to alight from my horse. I had neither eaten nor slept since I left Tampa Bay. I was on the point of turning my horse's head, secretly resolving that these were the last dispatches I would bear in that direction, when the colonel called,

"Captain Beckwourth, alight! alight, sir, and come into my quarters. Orderly, have Captain Beckwourth's horse taken immediate care of. You must be hungry, captain."

---

Of James P. Beckwourth

---

“What I need most now is sleep,” I said; “let me have a little repose, and then I shall feel refreshed, and will not refuse to sit down to a meal.”

The colonel bowed assent, and, raising a canvas door, pointed out to me a place for repose, at the same time promising me I should not be disturbed. When I awoke, I presented myself, and was regaled with a good substantial supper. This recruited me, and I was again fit for service.

The colonel made many inquiries of my past service. Major Bryant had made very favorable mention of me in his dispatches, which seemed to have inspired quite an interest in the colonel’s mind. He asked me if I was a native of Florida, where I had spent my early days, and my reason for entering the army. I answered all his questions as briefly as possible, mentioning that I had been tempted among the Seminoles by the promise held out by General Gaines of my gaining “renown.” The colonel thought my company of mountaineers a valuable acquisition to the service, and he made no doubt we should achieve great credit in ferreting out the hiding-places of the Indians.

He soon had his papers ready; they were delivered to me, and I departed. On the way I stopped at a fort, the name of which I forget, and took a fresh horse. I finally arrived at the Bay without seeing an Indian.

I staid with my company for two or three weeks at Fort Brooke, during which time we were engaged in breaking-in mules. We were then placed under the command of Colonel Taylor, afterward General, and President of the United States, whose force was composed of United States troops and volunteers, some of the latter being from Missouri. The colonel advanced southward with sixteen hundred men, erecting, as we advanced, a fort at the interval of every twenty-five miles.

On the morning of Christmas-day (1837) our camp was beleaguered by a large force of Indians, and Colonel Taylor ordered an advance upon them. The spot was thickly grown with trees, and numbers of our assailants were concealed among the branches; as our line advanced, therefore, many were singled out by the enemy, and we lost fearfully in killed and wounded. The yelling was the most deafening I ever heard, for there were many negroes among the enemy, and their yells drowned those of the Red Men. I soon found we had a different enemy from the Black Feet to fight, and different ground to fight on. The country lost several valuable lives through this slight brush with the Indians. The gallant Colonel Gentry, of the Missouri volunteers, was shot through the head; Colonel Thompson, and several other officers, were also among the slain. The enemy had made an excellent choice of ground, and could see our troops while remaining concealed themselves.

I placed myself behind a tree, and Captain Morgan, of the Missouri Spies, was similarly sheltered close by. We were surrounded with Indians, and one was watching, on the opposite side of the tree that protected me, for a chance to get my scalp. A Missourian picked off a fine fat negro who had ensconced himself in a live oak tree. As he fell to the ground it shook beneath him: the fruit was ripe, but unfit for food.

Seeing the men dropping around, Major Price ordered a retreat. The order was instantly countermanded by Colonel Davenport, who, by so doing, saved many lives.

Colonel Foster had taken a very exposed position on the bough of a tree, where he was visible to all. He ordered his men to lie low and load their muskets; he waited till he saw a favorable opportunity, and then shouted, “Fire, boys, and pour it into the red and black rascals!”

The Life And Adventures  
Of James P. Beckwourth

---

A charge with bayonets was finally ordered, and the Indians, not relishing the look of the sharp steel, retreated; however, not before they had seized a sergeant-major and a private from our line, and scalped them alive.

This was the battle of O-ke-cho-be, which lasted four hours. We lost over a hundred in killed and wounded; the enemy left nine Indians and a negro dead upon the field. Sam Jones, the half-breed, was only eight miles distant, with a force of a thousand warriors; most providentially he had been dissuaded by the negroes from advancing, who assured him that the whites would not fight on Christmas-day.

It was reported that Colonel Taylor was uncontrollably angry during the battle, and that his aids and other officers had to hold him by main force to prevent him from rushing among the enemy, and meeting certain death. I do not know what truth there was in this, for I saw nothing of it, nor, indeed, did I see the colonel during the whole of the four hours' fighting.

On the conclusion of the action Colonel Taylor wished to send dispatches to Tampa Bay. He requested Captain Lomax to take his company and go with them. The captain refused, for the reason that he and his men would infallibly be massacred. The colonel remarked then, "Since you are all afraid, I will go myself." He sent for me, and demanded if I could raise a sufficient number of brave men among my mountaineers to carry dispatches to the Bay.

I answered, certainly, if I could have his favorite horse, which was the fleetest one in the whole army, and such excellent bottom that he was as fresh after a journey as before. I considered that, if I had to run the gauntlet through a host of Seminoles and infuriated negroes, the best horse was none too good, and was, indeed, my only means of salvation.

When ready to start, I applied for the dispatches.

"Where are your men?" asked the colonel.

"My men are in their quarters, colonel," I said. "I am going to carry those dispatches by myself."

"They must go through," he remarked, "and I want them to go well guarded."

"I am not going to fight, colonel," I replied, "I am going to run; and one man will make less noise than twenty. If I am not killed the dispatches shall arrive safe; my life is certainly worth as much to me as the charge I am intrusted with, and for personal safety I prefer going alone."

In our progress out the troops had cut their way through several hummocks, and had thrown the bushes up on both sides. I had to pass through some of these lanes. It was night when I started, and as I was riding through one of these excavations at a good pace, I heard a sudden noise in the brush. I saw myself in a trap, and my hair bristled up with affright. I was greatly relieved, however, by the speedy discovery that it was only a deer I had scared, and which was scampering away at its utmost speed. I continued on, resting a short time at each fort, until I arrived in sight of Fort Brooke. As soon as I arrived within hailing distance, I shouted "Victory! victory!" which brought out officers and men, impatient to hear the news. I could not see that O-ke-cho-be was much of a victory: indeed, I shrewdly suspected that the enemy had the advantage; but it was called a victory by the soldiers, and they were the best qualified to decide.

On my return, I found Colonel Taylor, soon after the battle, had retrograded to Fort Bassinger. We lay at that fort a long while; spies were vigilantly on the look-out, but nothing very encouraging was reported. I and my company of mountaineers did not encamp with the other troops, but took up our quarters at a considerable distance from the main guard. We were quite tired of inactivity, and wanted to go somewhere or do something. Being quartered by ourselves, we were not

The Life And Adventures  
Of James P. Beckwourth

---

subjected to the restrictions and military regulations of the camp; we had our own jollifications, and indulged in some little comforts which the camp did not enjoy. We always would have a large fire when there was need for it, for it destroyed the millions of musquitoes and other vermin that annoyed us; and, as some of our company were always about, the Indians never molested us.

There was a large hummock about four miles distant from the fort which the Indians infested in great numbers, but, as they could not be dislodged without great loss, our colonel was constrained to content himself with closely watching them. One day I proposed to my men to take a stroll, and they fell with great alacrity into the proposition. We passed down to the interdicted hummock, where we shot two deer, and found quite an assortment of stock. We drove them all to the camp before us, to the great admiration of the officers and men present. We had captured quite a drove of hogs, several head of cattle, and a good sprinkling of Seminole ponies. We saw no Indians at the hummock, though certainly we did not search very diligently for them.

During our stay at the fort, the communication between that post and Charlotte's Harbor was closed, and one messenger had been killed. The quartermaster inquired of me if I would undertake the trip. I told him I would; and set one hundred dollars as the price of the undertaking, which he thought quite reasonable. I started with the dispatches, and proceeded at an easy gallop, my eye glancing in every direction, as had been my wont for many years. In casting a look about two gun-shots ahead, I felt sure that I saw some feathers showing themselves just above the palmettos, and exactly in the direction that I was bending my steps. I rode a short distance farther, and my suspicion was confirmed. I immediately stopped my horse and dismounted, as though for the purpose of adjusting my saddle, but in reality to watch my supposed foes. In a minute or two several heads appeared, looking in my direction, and withdrew again in an instant. Immediately the heads declined behind the grass, I sprang upon my horse, and reined him out of the road, taking a wide circuit round them, which I knew would carry me out of danger. I then looked after them, and tantalized them with my gestures in every manner possible, motioning them to come and see me; but they seemed to be aware that their legs were not long enough to reach me, so they digested their disappointment, and troubled me no farther. I arrived safe at the Harbor that same day, delivered my dispatches, and was back at the fort the following night.

We now experienced a heavy rain, which deluged the entire country, and prevented any farther operations against the Indians. The colonel ordered a retreat to Tampa Bay, and, as there was no danger of molestation on the way, many of the officers obtained liberty to gallop on in advance of the army. Colonel Bryant rode a very valuable black charger, acknowledged to be the best horse in camp. After traveling on a while, the colonel said, "I have a notion to ride on and get in to-day, as my presence is required; you can get in to-morrow at your leisure." A number said, "If you can get in to-day, we can, and finally the whole party proposed starting off together.

We at length came to a swampy place in the road, which spread over five miles, and in many places took our horses off their feet. This place forded, there was then a narrow stream, and after that it was all dry land. Having passed the swamp and the stream, and got fairly on to dry land again, I took the saddle off my mule, which example all followed, and, with the assistance of a brother officer, wrung the saddle-blanket as dry as possible, and then spread it out fairly in the sun to dry. In the mean while, the horses helped themselves to a good feed of grass, and we all partook of a hearty lunch likewise.

Thus refreshed, we saddled up and proceeded again. After a few miles travel we discovered the

---

The Life And Adventures  
Of James P. Beckwourth

---

rear of Bryant's party, who were toiling slowly along, and goring their animals' flanks in the vain endeavor to urge them into speed. We passed them with a hearty cheer. We journeyed on until within three miles of the fort, where there was a short bend in the road, and a foot-trail across, which saved about a hundred yards. "Now, gentlemen," said I, "let us raise a gallop, and pass every body on the road." The work was at once accomplished, some of my men deriding those left behind on account of their miserable progress. We then all struck into a gallop, and soon reached the fort, and several of our company found time to get quite intoxicated before the quarter-master arrived. He, however, soon recovered his equanimity of temper, and begged a solution of the mystery how we could come in with our animals fresh, while his and his companions' horses were jaded to death. He was referred by all to the captain of the mountaineers.

I said, "A horse, colonel, is only flesh and blood, and his system requires greater care than that of almost any other animal. We beat your powerful steed with inferior animals by affording them a short rest, with a mouthful or two of grass on the road, and by wringing our blankets after we had passed the water."

Now we had another long interval of inactivity, and I began to grow tired of Florida, with its inaccessible hummocks. It seemed to me to be a country dear even at the price of the powder that would be required to blow the Indians out of it, and certainly a poor field to work in for renown. My company and I, its commander, had nothing to do except to carry an occasional dispatch, and I wanted excitement of some kind — I was indifferent of what nature, even if it was no better than borrowing horses of the Black Feet. The Seminoles had no horses worth stealing, or I should certainly have exercised my talents for the benefit of the United States.

The last dispatches that I carried in Florida I bore from Fort Dade to Fort Brooke. In accomplishing this, I traveled with my customary caution, avoiding the trail as much as possible. In a part where I anticipated no danger, I took the trail, and fell asleep on my horse, for I had ridden four days and nights without rest, except what I had snatched upon horseback. Suddenly my horse sprang aside, instantly awaking me. I found I had been sleeping too long, for I had passed the turning-point, and was now near a hummock. To return would cost me several miles travel. My horse's ears informed me there was something in motion near by. I pondered my position, and ultimately resolved to take the chances and go ahead. The road through the hummock was just wide enough to admit the army wagons to pass. I bid my horse go, and he sprung forward with tremendous bounds. He had not reached through this dark and dangerous pass when I saw the flash of several guns, and the balls whizzed harmlessly past me. I discharged my pistols at the lair of my foes, and traveled on in safety to the fort.

I grew tired of this, and informed Colonel Bryant that I wished to resign my task. "Why?" said he; "every body who undertakes it gets killed, while you never see any Indians. What are we to do?"

When in camp, I had frequently seen men come running in half dead with alarm, saying that they had seen Indians, or had been fired upon by Indians. I remarked that they were always ridiculed by the officers; even the privates disbelieved them. Seeing this, I determined to say nothing about my adventure; for, if they had received my assertion with incredulity, it might have led to an unpleasant scene in the wigwam.

I was determined to return to the "home of the free and the land of the brave," for I felt that the mountains and the prairies of the Great West, although less attended with renown, at least would

The Life And Adventures  
Of James P. Beckwourth

---

afford me more of the substantial comforts of life, and suit my peculiar taste better than the service of Uncle Sam in Florida.

The commander of the fort, after reading the dispatch, indorsed on it, "Beckwourth fired on by a party of Indians when near this post." He then returned it to me, and I rode on to Fort Brooke. Colonel Bryant, having read the dispatch, said, "Ah, Beckwourth, you have been fired on, I see! why did you not tell us so on your arrival?"

I informed him of my reasons, as before stated.

He smiled. "Your word would have been believed by us all," he said; "it is these stupid foreigners that we discredit, who do not know an Indian from a stump; they have deceived us too often for us to put further faith in them."

A Seminole came into the fort a few days subsequent to this, to give himself up, his arm being broken. When questioned about it, he said that a white man had broken it in such a hummock, on such a night. I then knew that my pistols, which I fired at random, had done the mischief. Alligator, the Seminole Chief, shortly after came in, and informed Colonel Taylor that he and his tribe had concluded to remove to their new home, and requested the colonel to send down wagons to transport their women and children.

"I have fought you a long time," said the Red Man, "but I can not beat you. If I kill ten of your warriors, you send a hundred to replace them; I am now ready to go, and save the rest of my people."

"Yes," the colonel answered, "your talk is good. You can now go to your new home, and be happy. There is a man (pointing to me) who is a great chief of a great nation; you will, for aught I know, be neighbor to his people; he and his people will teach you to hunt the buffalo, and I hope you will be good friends."

While I was with the army a tragedy occurred, which I have never seen in any public print, and I deem it of sufficient interest to make mention of it here. A young private, of very respectable connexions, had been tried for some offense, and sentenced to receive a flogging, which was carried unmercifully into effect. After he had recovered, the surgeon bade him go and report himself fit for duty.

"I will go," said he, "but it will be my last duty."

Accordingly, he fixed his bayonet and repaired to the officers' quarters, where he found the captain and first lieutenant of his company. He advanced upon them, and saying, "You have disgraced me with an inhuman flogging — die!" he shot the captain dead, and plunged his bayonet through the body of the lieutenant, also killing him on the spot.

He straightway gave himself up, was tried by court-martial, and sentenced to be shot. The execution of the sentence was withheld by Colonel Taylor, who had forwarded the particulars of the trial to the department at Washington, and was waiting the result of official investigation. The case was found worthy of executive interference; a pardon was signed by the President and sent on, and the young man was liberated from confinement.

Such inhuman treatment as this poor young soldier received at the hands of his officers has resulted, I have no shadow of doubt, in the death of many an officer on the battle-field.

I remember, at the battle of O-ke-cho-be, a young lieutenant riding up to Colonel Foster, and saying, "Colonel, I have been shot at twice, and not by the enemy either."

"It was by no friend, I will swear," said the colonel; "you can leave the field, and learn to treat your

The Life And Adventures  
Of James P. Beckwourth

---

men well in future.”

This I witnessed myself; but whether the young “buckskin” profited by the sharp cut of the colonel I am unable to say.

There was a Tennessean in camp, a great foot-racer, who was incessantly boasting about his wonderful pedestrian powers. He had a valuable horse, which he offered to stake against any person in the camp for a race of sixty yards. As he was considered a “great leg” by all, no one ventured to take up his offer.

I offered myself as a competitor, but all sought to dissuade me. “Don’t run against him,” said they; “that fellow will outrun Lucifer himself. He has beat every man who has run against him in Florida.”

However, I staked a hundred dollars against his horse, and entered the lists. We started together; but, as I did not see my antagonist either ahead of me or by my side, I looked around, and saw him coming-up. I went out a good distance ahead of him, and did not exert myself either.

The enemy having submitted to the government, there was nothing more for us to do, and I asked for a furlough to return to St. Louis. I and my company were enlisted for a year; ten months of this time had been served, and I obtained a furlough for the remaining two months. We embarked for New Orleans, Colonel Gates and his regiment taking passage in the same ship. Arriving at my place of destination in safety, I staid but one night in the “Crescent City,” and then took the steamer to St. Louis, where we had a good time while steaming up, and I was very well satisfied to jump ashore once again at my old home. My company all returned but two, one of whom died in New Orleans, the other was killed by the Seminoles after I left.

#### CHAPTER XXX.

Departure for the Mountains.—Severe Sickness on the Way.—Arrival at Bent’s Fort.—Arrival at Sublet’s Fort.—Interview with the Cheyennes.—Difficulty with a Sioux Warrior.—His Death.—Successful Trade opened with various Tribes.—Incidents.

I STAID but five days in St. Louis, which time I devoted to a hasty visit among my friends. I entered into service with Messrs. Sublet and Vasques to return to the mountains and trade with any tribes I might find on the head-waters of the Platte and Arkansas rivers. This country embraces the hunting-grounds of the Cheyennes, the Arrap-a-hos, the Sioux, and the I-a-tans.

All preliminaries being arranged, which are of no interest to the reader, I bade my friends once more adieu; and, stepping on board a steam-boat bound up the Missouri, we were soon breasting its broad and turbid current. We spent the Fourth on board, amid much noise, revelry, and drunken patriotism. We were landed in safety at Independence, where we received our wagons, cattle, etc., with which to convey the immense stock of goods I had brought through the Indian country. We were very successful in escaping accident in our progress over the plains, until we reached the ridge which passes between the Arkansas and Platte rivers. While ascending this ridge, accompanied with Mr. Vasques, I was sun-struck. We were at that time twenty miles from water; I was burning with thirst, the heat was intolerable, and hostile Indians were before us. After incredible suffering we reached the river bank, and crossed the stream to an island, where I lay me down to die. All our medicines were in the wagons, and two days’ journey in our rear. My fatigue and suffering had thrown me into a fever; I became delirious, and grew rapidly worse. I requested my companion to return to the wagons and procure me some medicine; but he refused to leave me, lest I might die in his absence.

---

The Life And Adventures  
Of James P. Beckwourth

---

I said to him, "If you stay by me I shall certainly die, for you can not relieve me; but if you go, and nature holds out till you return, there is some chance of my gaining relief. Go," I added, "and hasten your return."

He left me at my entreaties, but filled all our vessels with water before he started. I speedily fell asleep, and I know not how long I remained unconscious. When I at length awoke, I drank an inordinate quantity, which caused me to perspire copiously; this relieved me, and my recovery commenced from that moment, although I still suffered from a severe headache. The third day of my friend's absence I could walk about a little, and the fourth day, at noon, I kept a good lookout in the direction I expected succor. Suddenly I saw a head appear, and another, and then another, until four showed themselves. They are Indians, I said to myself; but if there are only four, I stand a passable chance with them, so let them come on. I saw they had discovered me, so I arose and showed myself. With joyous shouts they flew toward me. It was my companion, with three others, who had come either to bury me or to assist me to the wagons. Their joy on beholding me so miraculously restored was unbounded, while my delight at seeing them was almost as great. We remained on the island that night, and the following morning started for the wagons, which we found in two days.

In going for assistance, my friend had a narrow escape. He came suddenly upon a party of Pawnees, and one made a rush for his horse. He discharged his rifle hastily, and missed his mark. He then had to trust to his horse's heels; but, as he was jaded, he did not make very good speed. The Indians were on foot, and gave close chase, but, when they saw his rifle reloaded, they fell back to a wider distance, and plied him with arrows until he was out of reach.

I was placed in a wagon, and attended on as far as our circumstances would admit, until I recovered my accustomed health. We staid one night at Burt's Fort, on the Arkansas, and then moved on to our destination on the South Fork of the Platte. Here we erected suitable buildings within the fort for our proposed trading, and, among others, a barn, which we proceeded to fill with hay for the coming winter.

While staying at the fort, a man inquired of Sublet his reason for bringing up such a rascally fellow as I, to prompt the Indians into rising and massacring all the whites.

"Murray," said Sublet — for that was the man's name — "it is unsafe for you to express such sentiments in relation to Beckwourth; should they reach his ears, he would surely make you rue it. I have heard these foul aspersions upon his character before, and I am in a position to know that they are all unfounded. Had I the least suspicion of his integrity, I should be the last man to take him in my employ."

This conversation was reported to me at some distance from the fort, where Murray was perfectly safe. But these foul reports annoyed me exceedingly. They were like stabs in the dark, for no one ever accused me to my face of such misdeeds.

After having placed things to rights, we were dining together within the fort, when Mr. Sublet rose and said,

"Traders and clerks, you have come here to the mountains to work for me, and I expect every man to do his best. If I am prospered, I will do well by all of you. I desire a regular system established in my business out here, that my interests may be placed upon a secure footing. I am now going to deliver the key of my entire stock of goods to one man among you, in whom I have implicit confidence, and whose long experience and intimate acquaintance with the Indian char-

The Life And Adventures  
Of James P. Beckwourth

---

acter pre-eminently entitle him to the trust. This man will have full command of the fort, and full charge of its affairs. I wish you to receive him as a representative of myself, and, whatever orders you receive from him, obey them cheerfully and to the very letter.”

All present promised ready acquiescence to the wishes of our chief.

He then delivered the key to me, saying, “Beckwourth, I place this trust in your keeping, believing you to be as morally worthy of the confidence I repose in you, as you are practically qualified to advance my interests. I abandon my affairs to your keeping. Do your best, and I shall be satisfied.”

I was so entirely unprepared for this distinguished mark of confidence, that for a moment I was unable to reply. After a momentary irresolution, I said, “Mr. Sublet, you have other men present who are better able to discharge this trust. I thank you for the flattering reference, but I beg to be excused from assuming the responsibility.”

“I engaged you,” he answered, “to serve me in this capacity, and I wish you to accept the charge.”

“In that case,” I said, “I will do my best to promote your interest.”

Shortly after, he called me apart, and said, “Beckwourth, I am deeply in debt. I have been losing for a long time. If you can replace me in one year, you shall be substantially rewarded, and I shall feel sincerely grateful for your service.”

“How much do you owe?” I inquired.

“Over seventeen thousand dollars.”

“Well,” said I, “if the men co-operate with me, and carry out my instructions, I feel confident of working you straight.”

I forthwith set about establishing sub-posts in various places, with the Siouxs, Arrap-a-hos, I-a-tans, and Cheyennes, and selected the best men at hand to attend them. I placed one at the mouth of Crow Creek, which I called my post, but left a man in charge of it, as I was at present fully occupied in traveling from one post to another.”

We had not, as yet, found any customers; but, as we were in the Cheyenne country, I knew some of that nation could not be very far off. I sent three different messengers in search of them to invite them to trade, but they all returned without having discovered the whereabouts of the Indians. Tired of these failures, I took a man with me, and started in the direction of the Laramie mountain. While ascending the mount, I cast my eyes in the direction of a valley, and discovered buffalo running in small groups, which was sufficient evidence that they had been chased recently by Indians. We went no farther, but encamped there, and at nightfall we saw fires. The next morning a dense smoke hung like a cloud over the village of the Cheyennes; we ate a hasty meal, and started to pay them a visit.

As we approached the village we saw William Bent, an interpreter, entering before us. He visited the chief’s lodge; we followed him in, and seated ourselves near him. He looked aghast, and addressed me: “My God! Beckwourth, how dare you come among the Cheyennes? Don’t you know that they will kill you if they discover you?”

I replied that I thought not.

He had come on the same errand as ourselves, namely, to induce a portion of the village to remove to the Platte, as buffalo were abundant in that region. After a conversation was held between Bent and a chief, the latter inquired of Bent who we were. He informed him that we were Left Hand’s (Sublet’s) men.

“What do they want here?” he asked.

The Life And Adventures  
Of James P. Beckwourth

---

“They come for the same purpose that I have,” Bent answered, “to have you move on to the Platte.”

Bent then inquired of me what account I wished to give of myself, as he would interpret for me; but, preferring to interpret for myself, I asked if there was a Crow among them that I could speak to. At the word “Crow” they all started, and every eye was riveted upon me.

One stepped forward, and said, “I am a Crow.”

“You a Crow?”

“Yes.”

“How long have you been away from them?”

“Twenty winters.”

Bent was in the greatest perplexity. “You are not surely going to tell them who you are, Jim? If you do, you’ll cost your friends nothing for your funeral.”

This apprehension on the part of Bent proved to me that, although he had lived long among the Indians, he had still much to learn of their real character. I therefore requested him to quiet his fears and bide the result.

Turning to the Crow, I then said, “Tell the Cheyennes that I have fought them many winters, that I have killed so many of their people that I am buried with their scalps; I have taken a host of their women and children prisoners; I have ridden their horses until their backs were sore; I have eaten their fat buffalo until I was full; I have eaten their cherries, and the other fruits of their land, until I could eat no more. I have killed a great Crow chief, and am obliged to run away, or be killed by them. I have come to the Cheyennes, who are the bravest people in the mountains, as I do not wish to be killed by any of the inferior tribes. I have come here to be killed by the Cheyennes, cut up, and thrown out for their dogs to eat, so that they may say that they have killed a great Crow chief.”

He interpreted this unreserved declaration faithfully to the chief, and I observed Bent ready to fall from his seat at what he deemed my foolhardy audacity.

“You are certainly bereft of your senses,” he remarked; “the Indians will make sausage-meat of you.”

Old Bark, the patriarch of the Cheyennes, rose and said: “Warrior, we have seen you before; we know you; we knew you when you came in; now we know you well. We know you are a great brave. You say you have killed many of our warriors; we know you do not lie. We like a great brave, and we will not kill you; you shall live.”

I answered, “If you will not kill me, I will live with you; if you become poor, like some of the other tribes; and you need warriors to help you against your enemies, my arm is strong, and perhaps I will assist you to overcome them; but I will not at this time give you my word that I will do so. If you do not kill me, I am going to trade with you for many moons. I will trade with you fairly; I will not cheat you, as some of the traders have cheated you. I have a great many goods over on the Platte, such as you want, more than would fill many of your lodges. They are new, and look well. But, mind you, you must trade fairly with me. I have heard that you sometimes treat your traders badly; that you take away their goods, and whip them, and make them run out of your country to save their lives. Your people must never serve me in that manner; they must pay me for all they get; and if any one strikes me, I shall kill him, and thereby show you that I am brave. If any one should strike me, and I should not kill him, you would call me a woman, and say I was no brave.”

---

The Life And Adventures  
Of James P. Beckwourth

---

They then asked me, through the Crow interpreter, if I was in such and such a battle between their nation and the Crows, all of which questions I answered truthfully.

“Do you remember that in such a battle we lost such a brave?” describing him.

“Yes.”

“Who killed him?”

“I did.” Or, if I did not kill him, I would tell them the name of the Crow who did.

“Did he fight well?”

“Yes, he fought well.”

“He died like a brave man, then!” they would ejaculate.

“Were you in such a battle?” asked another.

“Yes.”

“Did you see such a warrior fall?”

“Yes.”

“Did he fight strong like a brave?”

“No, he did not fight well.”

“Ugh! he was no brave; he deserved to be killed.”

In battle every warrior has his personal device painted on his shield, chosen according to his fancy. My “armorial bearing” was a crescent, with a green bird between the horns, and a star on each side the field. I described my novel device, and there was a great movement among them, for most of them distinctly recollected that shield, and I saw myself rising in their estimation. Their brave hearts rejoiced to have a true warrior before them, for they esteemed me as brave as themselves.

One of their great chiefs, named the Bob-tailed Horse, arose, and asked me if I remembered the battle on Pole Creek. I replied that I did.

“You killed me there,” he said, “but I did not die;” and he pointed out two scars upon his chest, just below the lower rib, where the balls from my gun entered, and which must have killed any body but an Indian.

“Where did I hit you?” he asked.

“Ugh!” said I; “you missed me.”

Old Bark then said, “Warrior, you killed me once too: look here;” and he withdrew the hair from his right temple, and I saw that his cheek had been badly torn, and his ear was entirely missing.

“But,” he added, “I did not die. You fought bravely that day.”

Had I gone among the Pawnees, the Siouxs, or many other tribes, and held this talk, I should have been hewn to pieces in a moment; but the Cheyennes were great braves themselves, and admired the quality in others, the Crows being their only equals.

While I sat talking thus, one of my men entered the village bearing two ten-gallon kegs of whisky. He requested me to take one and sell it out, while he went to the other end of the village, where the Siouxs were encamped, to sell the other. I had hitherto always opposed the sale of liquor to the Indians, and, during my chieftainship of the Crows, not one drop had ever been brought into the village; but now I was restrained by no such moral obligation. I was a mere trader, hazarding my life among the savages to make money for my employers. The sale of liquor is one of the most profitable branches of a trader’s business, and, since the appetite for the vile potion had already been created, my personal influence in the matter was very slight. I was no

The Life And Adventures  
Of James P. Beckwourth

---

lawgiver; I was no longer in a position to prohibit the introduction of the white man's fire-water; if I had refused to sell it to the Indians, plenty more traders would have furnished it to them; and my conscientious scruples would benefit the Indians none, and would deprive my embarrassed employer of a very considerable source of profit.

Running these things hurriedly over in my own mind, I took the proffered keg, and dealt it all out within two hours. Certainly the rate of profit was high enough; if a man wants a good price for the sale of his soul to his satanic majesty, let him engage in the liquor business among the nations of the Rocky Mountains. Our liquor was a choice article. One pint of alcohol, costing, I suppose, six cents, was manufactured into five times the quantity of whisky, and this was retailed to our insatiate customers at the rate of one pint for each buffalo robe. If the robe was an extra fine one, I might possibly open my heart, and give two pints. But I felt no particular inducement to liberality in my dealings, for I thought the greatest kindness I could show my customers was to withhold the commodity entirely.

Before I had got through with my keg I had a row with an Indian, which cost him his life on the spot. While I was busy in attending the tap, a tall Sioux warrior came into my establishment, already the worse for liquor, which he had obtained elsewhere. He made some formidable strides round and near me, and then inquired for the Crow. I was pointed out to him, and, pot valiant, he swaggered up to me.

"You are a Crow?" he exclaimed.

"Yes."

"You are a great Crow brave?"

"Yes."

"You have killed a host of Siouxs?"

"No; I have killed a host of Cheyennes, but I have only killed fourteen Siouxs with my own hand."

"Look at me," said he, with drunken gasconade; "my arm is strong; I am the greatest brave in the Sioux nation. Now come out, and I will kill you."

"No," I said, "I did not come here to be killed or to kill; I came here to trade. I could kill you as easily as I could kill a squaw, but you know that you have a host of warriors here, while I am alone. They would kill me after I had killed you. But if I should come in sight of your village with twenty of my Crow warriors, you would all run and leave your lodges, women, and children. Go away; I want nothing to do with you. Your tongue is strong, but you are no brave."

I had told the Cheyennes but a few moments previously that I had been among all the nations in the country, and that it had ever been my invariable rule, when struck by a Red Man, to kill him. I was determined to prove the truth of my declaration in this instance. I had my battle-axe hanging from my wrist, and I was ready at a moment's warning. The Sioux continued his abuse of me in his own tongue, which I paid no attention to, for I supposed that, like his white brethren, he might utter a great deal of provocation in his cups, and straightway repent it when he became sober.

Finally, he became so importunate that I saw it was time to take an active part. I said, "You want to kill me, eh?" I would fight with you, only I know I should be killed by the Siouxs afterward, and I should have you for my waiter in the spirit land. I would rather kill a good brave, if I kill any."

The Life And Adventures  
Of James P. Beckwourth

---

This was a very opprobrious speech, for it is their faith that when an Indian is slain who has previously slain a foe, the first-killed warrior becomes waiter in the spirit land to the one who had laid him low. In deed, it was more than he could endure. He jerked off the cloth that was fastened round his hips, and struck me in the face with it. I grasped my battle-axe, but the blow I aimed was arrested by a lodge pole, which impended over his head, and saved him from immediate death. The lodge pole was nearly severed with the blow. I raised my arm again, but it was restrained by the Cheyennes, who had been sitting round with their heads declined during the Sioux's previous abuse.

The Sioux chief, Bull Bear, was standing near, and was acquainted with the whole particulars of the difficulty. He advanced, and chopped his warrior down, and hacked him to pieces after he fell. "Ugh!" grunted he, as coolly as possible, "you ought to have been killed long ago, you bad Indian!" This demonstration on my part had a good effect. The Indians examined the cut inflicted by the edge of my axe on the lodge pole, and declared mine a strong arm. They saw I was in earnest, and would do what I had threatened, and, except in one single instance, I had no farther trouble. Influenced by my persuasions, two hundred lodges of the Cheyennes started for the Platte, Bent and myself accompanying them. On our way thither we met one of my wagons, loaded with goods, on its way to the North Fork of the Platte. There was a forty-gallon cask of whisky among its contents, and, as the Indians insisted on having it opened, I brought it out of the wagon, and broached it. Bent begged me not to touch it, but to wait till we reached the fort. I was there for the purpose of making money, and when a chance offered, it was my duty to make the most of it. On that, he left me, and went to the fort. I commenced dealing it out, and, before it was half gone, I had realized sixteen horses and over two hundred robes.

While I was busy in my traffic, the Indians brought in four trappers whom they had chanced to pick up. The poor fellows appeared half frightened to death, not knowing what their fate would be. I addressed them in English. "How are you, boys? Where are you bound?"

"These Indians must decide that," they replied. "Are they good Indians?"

"Yes," I replied. "They will not harm you." They informed me that they were returning from the mountains with twelve packs of beaver, and, while encamped one night, the Crows had stolen their horses. They had cached their peltry, and now wanted to buy more horses to carry it to some fort.

I made a bargain with them for their beaver, and, taking some horses, went with them myself to their late encampment, for I could not trust them alone for fear they would take their skins to some other post. We disinterred the peltry, and with it reached the fort without accident. The trappers staid with us two or three weeks, and then, purchasing their outfit and horses, they again started for the mountains.

We had a prosperous fall and winter trade, and accumulated more peltry than our wagons could transport, and we had to build boats to convey it to St. Louis. At the settlement of accounts, it was found that we had cleared sufficient to pay Mr. Sublet's debts, and enough over to buy a handsome stock of goods for the next season's trade.

I spent the summer at the fort, while Sublet and Fitzpatrick went on with the peltry to St. Louis. I had but little to do, as the Indians had removed to their summer retreats, and I spent my time very agreeably with the few men remaining behind, in hunting buffalo for our own use. About the last of August our goods arrived, and we set ourselves to work again at business. I put up at

The Life And Adventures  
Of James P. Beckwourth

---

the North Fork of the Platte, and had a busy fall and winter trade, making many very profitable bargains for the company. The Cheyennes thought me the best trader that ever visited them, and would not allow any other company to traffic with their villages. This sorely vexed my rival traders, and once or twice I had my life attempted in consequence. When others came to ask permission to open a trading-post, the Cheyennes would say, "No; we do all our trading with the Crow. He will not cheat us. His whisky is strong."

When I found I had obtained the confidence of the nation, I told the Cheyennes that if they allowed other traders to come in I should leave them, and they would be cheated by those who sold poor whisky, that would not make them merry half so soon as mine. This may be considered selfish; but I knew that our company was keenly competed with by three or four rival companies, and that the same representations that I used to keep the trade in my hands were freely urged by others to attract it from me. There was also a farther inducement for the Cheyennes to do their business with me, which was founded upon their respect for me as a great brave, who had killed a number of their countrymen. Whether there was diplomatic finesse enough in their minds to reflect that, while I was harmlessly engaged with them, I could not be fighting in the bands of their enemies, and adding to my present number of scalps, I can not pretend to say.

CHAPTER XXXI.

Invitation to visit the Outlaws.—Interview with "the Elk that Calls."—Profitable Trade with the Outlaws.—Return to the Post.—Great Alarm among the Traders.—Five Horses killed at the Fort.—Flight from the Siouxs.—Safe arrival at the Fort.—Trade with the Arrapa-hos.—Attacked by a Cheyenne Warrior.—Peace restored.

WHILE in the midst of my occupations, a messenger was dispatched to me by the chief of a Cheyenne village, at that time encamped about twenty miles distant, with an invitation to visit them and trade there. This village was composed of outlaws from all the surrounding tribes, who were expelled from their various communities for sundry infractions of their rude criminal code; they had acquired a hard name for their cruelties and excesses, and many white traders were known to have been killed among them. The chief's name was Mo-he-nes-to (the Elk that Calls), and he was a terror to all white people in that region. The village numbered three hundred lodges, and could bring from twelve to fifteen hundred warriors into the field — the best fighters of the nation. We called it the City of Refuge.

The messenger arrived at my post, and inquired for the Crow.

"I am the Crow," I answered.

"The great chief, Mo-he-nes-to, wants the Crow to come to his lodge."

"What does he want with me?"

"He wants to trade much."

"What does he want to trade?"

"He wants much whisky, much beads, much scarlet, much kettles," and he enumerated a list of articles.

"Have your people any robes by them?"

"Wugh! they have so much robes that they can not move with them."

"Any horses?"

"Great many-good Crow horses."

"Well," said I, "I will go straightway, and you must show me the way."

The Life And Adventures  
Of James P. Beckwourth

---

“Who will go to the village of the Elk that Calls?” I asked; “I want two men.”

Peterson and another volunteered to accompany me; but by this time the matter in hand had reached Sublet’s ears, and he came forward and said,

“You are not going to the village of the Outlaws, Beckwourth?”

“Yes,” I replied, “I am.”

“Don’t you know that they kill whites there?”

“Yes, I know that they have killed them.”

“Well, I object to your going.”

“Captain Sublet,” I said, “I have promised the Indian that I will go, and go I must. There has been no trader there for a long time, and they are a rich prize.”

He saw that I was resolved, and, having given me the control of affairs, he withdrew his objection and said no more.

I accordingly prepared for the journey. Ordering the horses, I packed up my goods, together with twenty gallons of whisky, and issued forth on the way to uncertain destruction, and bearing with me the means of destruction certain.

The Indian conducted me to the chief’s lodge. I dismounted, my two men following my example. The chief came to us, and passed the usual compliments. He desired me to take off my packs, at which request I immediately remounted my horse.

“What is the matter?” inquired the chief.

“When I send for my friends to come and see me,” I said, “I never ask them to unpack their horses or to guard them, but I have it done for them.”

“You are right, my friend,” said he; “it shall be done. Get off your horse, and come into my lodge.”

I dismounted again, and was about to follow him. My men, who did not understand our conversation, arrested my path to inquire what was in the wind. I bade them keep quiet, as all was amicable, and then entered the lodge. We held a long conversation together, during which the chief made many inquiries of a similar nature to those addressed me at the first village. In recounting our achievements, I found that I had stolen his horses, and that he had made reprisals upon the Crows, so that we were about even in the horse trade.

At length he wished me to broach the whisky. “No,” said I, “my friend, I will not open the whisky until you send for your women to come with their robes, and they have bought what goods they want first. They work hard, and dress all your robes; they deserve to trade first. They wish to buy many fine things to wear, so that your warriors may love them. When they have traded all they wish, then I will open my whisky, and the men can get drunk. But if the men get drunk first, your women will be afraid of them, and they will take all the robes, and the women will get nothing.”

“Your words are true, my friend,” said the chief; “our women shall trade before the men get drunk; they dress all our robes: it shall be according to your words.”

Accordingly, he sent for all the women who had robes and wished to sell, to come and trade with the Crow. They were not long in obeying the summons. Forward they came, some with one robe and some with two. Two was the most that any of them had, as the men had reserved the most to purchase whisky. The trading was expeditiously effected; we did not have to take down and open all our goods, and then sell a skein of thread, and be informed by our customer that she would look elsewhere first, and perhaps call again, which is the practice of many young ladies, especially where there is an attractive shopman. We could hardly hand out things fast enough.

---

The Life And Adventures  
Of James P. Beckwourth

---

We served all the women to their entire satisfaction, and closed out our stock of dry-goods. We then proceeded to the whisky. Before opening the kegs, I laid down my rules to the chief. I told him that his people might spree as long as they chose, but that they must not obstruct my business, or interfere with me. As the liquor was served out to them, they must carry it out of the lodge, and not stay to be in my way and give me trouble. This was readily assented to, and the sales began.

Whisky will have the same effect every where, and if a man will traffic in the "cursed stuff," he must submit to his share of the mischief he creates. My understanding with the chief was productive of no effect. He came into the lodge, saying, "I have killed an Indian;" I looked, and saw that his battle-axe was dripping with blood. Yells and tumult increased outside; the chief was again making his way toward the lodge, protected by a host of friends, while behind him, and striving to get at him, was an infuriated throng, fighting and yelling like devils. My store in an instant was filled to overflowing with opposing parties, composed of outlaws from a dozen tribes. I sprang to secure my gun; and my companions, mistaking my movement, supposed I had started to run, and they broke out at the back of the lodge, and did not stop until they reached our post on the Platte.

Battle-axes and knives fairly rung through the lodge during the continuance of the fight; but it was over in a few minutes, and they withdrew to the place outside, and renewed it to greater advantage. At the restoration of peace, some ghastly wounds were shown to me, but, singular to say, none of the belligerents were killed.

Mo-he-nes-to, after a short interval, returned, without having received a single scratch, and said all was quiet again, and they wanted more whisky. The women wished to get some also, he informed me. I knew that, if the women were going to join in, I must have another supply, and I told the chief I had not enough left to get the women drunk.

"Send for more, then," said he. "Our women are buried up and smothered with robes, and will buy very much."

I soon found a volunteer to run to the post to carry an order to Sublet to send me twenty gallons more of whisky.

My assistants, after making their hasty exit from the back of the chief's lodge, reported at the post the state of affairs at the village of the Outlaws at the time they left. Guns were being fired, they said, and, beyond all doubt, Beckwourth was killed. No one dared to go and ascertain the result. Sublet was in great trouble. "I did my utmost to prevent his going," he consoled himself by saying, "but he went in opposition to all orders and advice; so, if he is killed, the responsibility does not rest upon me."

By-and-by my messenger arrived with the order for more whisky. Sublet took the letter and read it. "Ho!" said he, "Jim is not dead yet. He has sent for more fire-water. Who will take it to him?" Four men volunteered for the errand, and arrived with it next day. The Indians took their horses away from them, and they became alarmed; but when they shortly after saw me up to my neck in buffalo robes, their fear subsided. These two kegs went off as actively as the preceding, and the robes fairly poured in. The whole village moved on toward the post, singing, dancing, and drinking, and, when I had approached within five miles, I had to send for two kegs more.

In short, the sixty gallons of fire-water realized to the company over eleven hundred robes and eighteen horses, worth in St. Louis six thousand dollars.

---

The Life And Adventures  
Of James P. Beckwourth

---

This trading whisky for Indian property is one of the most infernal practices ever entered into by man. Let the reader sit down and figure up the profits on a forty-gallon cask of alcohol, and he will be thunderstruck, or rather whisky struck. When disposed of, four gallons of water are added to each gallon of alcohol. In two hundred gallons there are sixteen hundred pints, for each one of which the trader gets a buffalo robe worth five dollars! The Indian women toil many long weeks to dress these sixteen hundred robes. The white trader gets them all for worse than nothing, for the poor Indian mother hides herself and her children in the forests until the effect of the poison passes away from the husbands, fathers, and brothers, who love them when they have no whisky, and abuse and kill them when they have. Six thousand dollars for sixty gallons of alcohol! Is it a wonder that, with such profits in prospect, men get rich who are engaged in the fur trade? or is it a miracle that the poor buffalo are becoming gradually exterminated, being killed with so little remorse that their very hides, among the Indians themselves, are known by the appellation of a pint of whisky?

The chief made me a gratuity of forty robes. On two subsequent visits I paid him on his invitation, he made me further presents, until he had presented me with one hundred and eighty-five robes without receiving any equivalent. The extent of his "royal munificence" seriously alarmed Sublet. It was just this same profuse spirit, he said, that had bred disputes with other traders, often resulting in their losing their lives. It is as well a savage custom as civilized, to expect a commensurate return for any favors bestowed, and an Indian is so punctilious in the observance of this etiquette, that he will part with his last horse and his last blanket rather than receive a favor without requital.

Mo-he-nes-to, without intending it, was rather troublesome on this point. When he became sober after these drunken carousals, he would begin to reflect seriously on things. He would find his robes all gone; his women's labor — for it would take months of toil in dressing and ornamenting these robes — thrown unprofitably away; his people had nothing to show for their late pile of wealth, and their wants would remain unsupplied. They would have no guns or ammunition to fight the Crows, who were always well supplied, and their whole year's earnings were squandered. These reflections would naturally make him discontented and irritable, and he would betake himself to the post for reparation.

"White man," he would say, "I have given you my robes, which my warriors have spent months in hunting, and which my women have slaved a whole year in dressing; and what do you give me in return? I have nothing. You give me fire-water, which makes me and my people mad; and it is gone, and we have nothing to hunt more buffalo with, and to fight our enemies."

The generality of traders will endeavor to make it apparent to him that there was a fair exchange of commodities effected, and that he had the worth of his wares, and they can do no more for him.

This angered him, and in his disappointment and vexation he would raise the war-hoop, his warriors would rush to him, he would harangue them for a moment, an assault would be made upon the trading-post, the goods would be seized, and, in many instances, the trader would be massacred and scalped.

I saw the necessary relation between all these events, and knew that simple justice in exchanges would avoid all such catastrophes. I therefore told Sublet to feel no uneasiness, as I could arrange matters so as to afford general satisfaction.

The Life And Adventures  
Of James P. Beckwourth

---

“Well,” said he, “go your own way to destruction.”

A day or two after this, Sublet came to inform me that Mo-he-nes-to was on his way to the fort. I looked out, and saw the chief and his wife both approaching on horseback. As he entered, I received him with great ceremony, taking him by the hand, and bidding him welcome to the fort. I had his horses well attended to, a sumptuous supper for himself and wife served up, and, while the meal was preparing, entertained him with liquors fit to make any toper’s mouth water. After supper he got gloriously fuddled, and went to bed, ignorant of what was passing in the world around him.

In the morning I inquired of him how he felt. “Wugh ! Much bad! head ache strong!”

I then gave him another whisky punch, well-flavored with spices; he and his lady drank deeply, and then partook of a hearty breakfast. He then felt well again. I next led him into the store, where we had a large assortment of every Indian novelty. I knew he had children, as well as how many; so I selected a five-striped Hudson’s Bay blanket for himself, another for his wife, and one for each of his children, besides an extra scarlet blanket for his eldest son, a young warrior. To his wife I also gave a two-gallon brass kettle, and beads enough to last her for a year or two. In fact, I selected more or less of every description of article that I thought would be useful to them, or that I thought an Indian eye could covet. These presents I ceremoniously laid upon the counter, until I had two or three large piles of quite attractive-looking goods.

The chief and his wife had watched me laying all these goods before them. I then asked them if they saw any thing more any where in the store that they thought they would like.

Mo-he-nes-to opened his eyes wide with surprise. “What!” he exclaimed, “are all those things for us?” “Yes,” I said, “they are for you, your wife, and your children — something for you all. When I have a friend, I like to be liberal in my gifts to him. I never rob the Red Men; I never take all their robes and give them nothing but whisky. I give them something good for themselves, their wives, and their children. My heart is big; I know what the Red Men want, and what their families want.”

“My friend, your heart is too big; you give me much more than I ever had before; you will be very poor.”

“No,” I said; “I have many things here, all mine. I am rich, and when I find a good friend, I make him rich like me.”

I then bade him look the store carefully through, to see if there was any thing more that he would like. He looked, but saw nothing more that he needed. I then made the same request of his wife, whose satisfaction beamed all over her face, but she too was fully supplied.

I then stepped into another room, and returned with a fine new gun, with a hundred rounds of ammunition, and a new, highly-finished, silver-mounted battle-axe. This was the comble de bienfaits. I thought he would not recover from the shock. He took the battle-axe in his hand, and examined it minutely, his face distorted with a broad grin all the while.

“Hugh!” said he; “you give me too much. I gave you no robes, but you have proved that you are my friend.”

When they were ready to start, there was an extra horse for him, and a fine mare for his wife, ready waiting at the door.

“There, my friend,” said I, “is a good horse for you; he is swift to run the buffalo. Here is a fine mare for you,” I said to his wife. “Indian women love to raise handsome colts. I give her to you,

The Life And Adventures  
Of James P. Beckwourth

---

and you must not let the Crows steal her from you.”

She displayed every tooth in her head in token of her satisfaction, and she mounted to return home. The chief said as he left, “I am going on a war-party, and then to kill buffalo. I will come back again in a few moons. I will then come and see you, and I will kill you — I will crush you to death with robes.” And away they went, never better satisfied in their lives.

Now is it to be supposed that the company lost any thing by this liberality? That chief, whose hands were stained with the blood of so many traders, would have defended my life till the last gasp. While I was in his country, no other trader could have bartered a plug of tobacco with him or his people. The company still derived great profits from his trade. Besides the immense returns derived from my transactions with the village, I cleared over five hundred dollars from my exchanges with the chief alone, after the full value of my munificent presents had been deducted. One day the Cheyenne Dog Soldiers were to have a dance and count their coos. I called all the Crows who were in the band, and asked them if the regulations would admit of my joining in the dance.

“Certainly,” said they; “nothing will please them more; they will then believe that you have joined them.”

Accordingly, I painted myself, and put on a uniform, including a chief’s coat, new from the shelves, and painted my white leggins with stripes, denoting a great number of coos; when ready, I walked toward them as great a man as any. On seeing me approach, there was a general inquiry, “Who is that? Where did he come from?” When the ceremonies commenced, I joined in, and danced as hard as any of them. The drum at length sounded, to announce the time to begin to count.

I stepped forward first, and began. “Cheyennes, do you remember that you had a warrior killed at such a place, wearing such and such marks of distinction?”

“Yes, we know it.”

“I killed him; he was a great brave.”

There was a tap on the drum, and one coo was counted. I proceeded until I had counted my five coos, which is the limited number between the dances.

Next in turn the Bob-tailed Horse counted his five on the Crows, and to his various allusions I assented with the customary “I remember.”

This betrayed who I was, and they were delighted to see one of the Dog Soldiers of the Crows join their band. The Bob-tailed Horse made me a valuable present, and I returned to the fort with six splendid warhorses and thirty fine robes, presented to me at that dance, as my initiation gifts, or bounty-money, I suppose, for joining their army. I was then a Dog Soldier in the picked troop of the Cheyennes, compelled to defend the village against every enemy until I died, like Macbeth, with harness on my back.

The Crows had been informed by sundry persons in the employ of the American Fur Company that I had joined their inveterate enemies. They were satisfied with my proceeding. “The Medicine Calf is a cunning chief,” they said; “he best knows how to act. He has joined the Cheyennes to learn all about their numbers, the routes of their villages, and so forth. When he has learned all that he wants, he will return to us, and then we can fight the Cheyennes to greater advantage.”

I was now in my second winter with Sublet in the Cheyenne and Sioux country. He had succeeded far beyond his expectation, and he still continued to make money by thousands. We had

The Life And Adventures  
Of James P. Beckwourth

---

curtailed the number of sub-posts, and thereby materially reduced his expenses; indeed, they were now less than half what they were the preceding winter.

Leaving Sublet's, I went down to the South Platte, distant one hundred and fifty miles, and indulged in a short rest, until I heard that the Cheyennes of the Arkansas — those that I first visited — were about to make their spring trade, and I went over to meet them, and bring them to our fort. I found them; all appeared to be glad to see me, and they returned with me. In crossing the divide, or ridge between the two rivers, our spies in advance discovered a party of Pawnees, and a charge was immediately made upon them. We only killed three of the enemy. I counted a coo by capturing a rifle. The victim who abandoned it had been already killed.

While we engaged the enemy the village went into camp, and I proposed to my fellow-warriors to return to the village after the manner of the Crows, which was agreed to. There were several in the party, so we could easily raise a good Crow song, and the Cheyenne warriors could join in. We struck up merrily, and advanced toward the village. As soon as the women heard our voices, they ran out to see who were coming. There were several captive Crows among the Cheyennes, who, I supposed, had lived among them ever since I had been sold to the whites. These recognized our stave, and exclaimed, "Those are Crows coming; we know their song." This brought out the whole village, who stood waiting our arrival, in surprise and wonderment. As we drew near, however, they distinguished me in the party, and the mystery was solved. "The Crow is with the Cheyennes."

We performed all kinds of antics; made a circuit round the village, going through evolutions and performances which the Cheyennes had never before seen, but with which they were so highly pleased, that they adopted the dance into the celebrations of their nation. That night the scalp-dance was performed, which I took part in, as great a man as any. I sung the Crow song, to the especial admiration of the fair sex.

The next morning we resumed our journey to the fort, which we reached after three days' travel. The village had brought a great number of robes, together with some beaver, and a great trade was opened with them. At this time I had a difficulty with a Cheyenne, the only one I ever had with any of the tribe. I was eating dinner one day, when a great brave came in and demanded whisky. I repaired to the store with him to supply his want, when I found he had no robe to pay for it, and was, besides, intoxicated. I refused to give him the whisky, telling him he must first go and bring a robe. This probably aggravated him, and he made a sudden cut at me with his sword, which I very fortunately dodged, and before he could raise his weapon again I had him between my feet on the ground. I had left my battle-axe on my seat at the table, and I called out for some one to bring it to me, but no one came with it. I at length released him, and he went hooping away, to obtain his gun to shoot the Crow. I seized my own, and waited for him at the door, while all the inmates of the fort begged of me not to shoot him. After some little delay, he appeared, gun in hand; but three Cheyenne warriors interfered to stop him, and he returned into his lodge.

The day following he sent for Sublet and myself to go and dine with him, and we went accordingly. Sublet was apprehensive of mischief from my visit, and endeavored to dissuade me from going; but I foresaw no danger, and knew, farther, that it would be a cause of offense to the Indian to neglect his invitation. When we entered his lodge he was glad to see us, and bade me be seated on a pile of robes. I sat down as desired, and our host, after holding a short conversation with Sublet, turned to me and spoke as follows:

---

The Life And Adventures  
Of James P. Beckwourth

---

“O-tun-nee” (Crow), “I was a fool yesterday. You spared my life. I do not want you to be angry with me, because I am not angry with you. I was drunk; I had drunk too much of your whisky, and it made my heart black. I did not know what I was doing.”

“Very well,” said I; “I am not angry with you. When you attempted to kill me I was angry, and if my battle-axe had been in my hand, I should have killed you. You are alive, and I am glad of it.”

“Take those robes,” he rejoined, “and hereafter you shall be my brother, and I will be your brother. Those robes will make your heart right, and we will quarrel no more.”

I took the robes with me, ten in number, and found my heart perfectly mollified.

Messrs. Sublet and Vasques, having realized immense profits during their three years of partnership, disposed of all their interest and effects in the Rocky Mountain fur business, and returned to St. Louis. This threw me entirely out of business, when Messrs. Bent and Saverine wished to engage me in their employ. After some little negotiation with them, I concluded a bargain, and entered into their service in the latter part of the summer of 1840. We immediately proceeded to establish sub-posts in various directions, and I repaired to Laramie Fork.

As soon as it was known among the Indians that the Crow was trading at Bent’s post, they came flocking in with their robes. Old Smoke, the head chief of another band of Outlaws, known as Smoke’s Band, but claimed by no particular nation or tribe, visited me, with his village, and commenced a great spree. I gave them a grand entertainment, which seemed to tickle their tastes highly. They kept up their carousal until they had parted with two thousand robes, and had no more remaining. They then demanded whisky, and I refused it. “No trust,” the motto we see inscribed on every low drinking-saloon in St. Louis, is equally our system in dealing with the Indians.

They became infuriated at my refusal, and clamored and threatened if I persisted. I knew it was no use to give way, so I adhered to my resolution. Thereupon they commenced firing upon the store, and showered the bullets through every assailable point. The windows were shot entirely out, and the assailants swore vengeance against the Crow. According to their talk, I had my choice either to die or give them whisky to drink. I had but one man with me in the store. There had been several Canadians in the fort, but on the first alarm they ran to their houses, which were built around the fort, within the pickets, to obtain their guns; but on the Indians informing them that they would not hurt them, that it was only the Crow that they were after, the Canadians staid within doors, and abandoned me to my fate.

I and my companion sat with our rifles ready cocked, well prepared to defend the entrance to the fort. We had plenty of guns at hand ready loaded, and there must a few have fallen before they passed the gate. At dusk I closed the door, but we lay upon our arms all night. The Indians kept up a great tumult and pother, but attempted nothing.

Messrs. Bent and Saverine arrived in the morning, and wanted to be informed of the cause of the disturbance. I acquainted them, and they approved my conduct. They were astonished at my immense pile of robes, and applauded my fortitude.

When the Outlaws became sobered, they expressed contrition for what they had done, and charged their excesses upon John Barleycorn, which plea I admitted. At the same time, it appeared quite inconsistent that I, who was that celebrated gentleman’s high-priest, should be set upon and almost murdered by his devotees.

Nothing noteworthy occurred until the following January, when the Indians, being again on the

---

The Life And Adventures  
Of James P. Beckwourth

---

spree, once more attempted my life. I fled to a post in the Arrap-a-ho country, in charge of Mr. Alex. Wharfield, now a colonel in the army; he resigned the post to me, and took my place at Bent's post. I had but little trouble with the Indians here. Cut Nose, an old brave, who, it seems, had been in the habit of obtaining his drams of Wharfield gratis, expected to be supplied by me on the same terms. I resisted this invasion, and seriously ruffled the feathers of the old chief thereby. He left at my refusal, and did not return again that day. During the ensuing night the Pawnees came, and stole both his horses and mine. The old man raised a party, went in pursuit, recaptured all the horses, took two scalps, and returned in high spirits.

He visited the store, and informed me what he had done.

"Well," said I, "that is because I gave you no whisky yesterday. If I had given you whisky, you would have drunk too much, and been sick this morning in consequence. Then you would not have been able to pursue the Pawnees, and you would have lost your horses."

However, I gave him some whisky then in honor of his achievement. This, as I had expected, pleased the old fellow, and he restored me my horses, and charged me nothing for their recapture. As soon as the spring trade was over, I abandoned that post and returned to the Arkansas. Saverine desired me to go and see if I could open a trade with a village of Arrap-a-hos which he had heard was en-camped at forty miles distance. I accordingly started in their direction, accompanied by two men. We journeyed on until we had arrived within a short distance of the village, when we discovered on our road a band of three or four hundred traveling Indians. I saw they were Camanches, and I bade the two men to run for their lives, as I knew the Camanches would kill them. I directed them to the Arrap-a-ho village, and bade them shout their loudest when they came in sight of it. They left me, and ascended a slight eminence a little distance in advance, and then, shouting to the extent of their lungs, they put their horses down at the best speed. I rode up after them, and telegraphed with my blanket to the village to have them come quickly. They obeyed my motions, and fell in with the Camanches on their way to me. The two tribes proved to be friends, and my companions were safe. On arriving at the village I found abundance of robes, and opened a very successful trade with the people. This finished, I returned to the fort, and assisted the other employés in loading the wagons for their trip to St. Louis.

#### CHAPTER XXXII.

First Trip to New Mexico.—Return to the Indians with Goods.—Success in Trade.—Enter into Business in St. Fernandez.—Get Married.—Return to the Indians.—The fortunate Speculation.—Proceed to California with Goods.

I HAD now accumulated a considerable sum of money, and thought I might as well put it to some use for my own profit, as risk my life in the service of others, while they derived the lion's share from my industry. It was now about three years since I had left St. Louis on my present excursion, and I began to weary of the monotony of my life. I was within five days' journey of New Mexico, and I determined upon going to take a look at the northern portion of this unbounded territory.

I had but one man with me, named Charles Towne, when I started upon my new exploration. On our road thither we passed near to a Utah village, and two or three of their warriors presented themselves before us to hold a parley, while the chief sat down on a log close by. They said, as we reined in our horses for a moment, "You make our paths bad by coming into our country; you will go back and tell the Cheyennes and Arrap-a-hos where we are; they will then come and kill us,

The Life And Adventures  
Of James P. Beckwourth

---

and steal our horses. Come here! our chief wants to see you.”

This was spoken in tolerably good Spanish.

“Come on,” said I, addressing my companion; “let us not be annoyed by these trifling Indians;” and I urged my horse against the Indian spokesman, knocking him into the dirt. He arose, exclaiming, “Wugh! Shawnee!” We then rode on without further molestation, they evidently mistaking me for a Shawnee. They had robbed several white men, and, after beating them savagely, had liberated them. I had no manner of fear of them, for I knew them to be great cowards; with one hundred and fifty good Crow warriors I would have chased a thousand of them.

We passed on into St. Fernandez, and found quite a number of American traders there, established in business, and supplying both mountaineers and Indians with goods. Here I encountered an old acquaintance, named Lee, with whom I entered into partnership. We purchased one hundred gallons of alcohol, and a stock of fancy articles, to return to the Indian country, and trade for robes and other peltry. We visited the Cheyennes on the South Fork of the Platte. We passed Bent’s fort on our way thither. He hailed us, and inquired where we were going. I informed him that we were on our way to the Cheyenne village. He begged me not to go, as I valued my safety. It was only the day previous, he said, that he had traded with them, and bought eighteen horses from their village. They came the next morning and took them forcibly back, and threatened him with their guns if he said a word against their proceedings. I replied to him that I anticipated no danger, and left him to pass on to their village.

The Indians were delighted at my arrival. I had heard that the hooping-cough was very prevalent among the children, and, as we happened to have several bushels of corn, and beans, and a large quantity of dried pumpkins, we could not have come at a more opportune moment. I told the Indians, in answer to their welcome, that I had come back to see there be cause I had heard their children were all sick. I called attention to my stock of vegetable esculents, as being best adapted for food for their children, and the best calculated to restore them to health. “Besides,” I added, “I have brought a little whisky along, to put good life into your hearts.”

They were then in their sobered feelings, which will return to them after their carousals, and which present so dangerous a time to the trader. Their horses were all away, their robes were gone, and they had nothing to show in return for them. Their children were sick and dying, their wives mourning and half distracted, and they could obtain nothing at the fort to alleviate their sufferings. I could understand the whole corollary of incidents. Like their intemperate white brethren, who will occasionally review matters after a prolonged spree, and who will see the effects of their dissipation in their desolate homes, their heart-broken wives, and their ragged and starving children, what are their feelings at such a contemplation? Unquestionably hostility against the cause of this destitution, whether they recognize it in themselves, the willing instruments, or the liquor that infatuated them, or the dealer that supplied it to them. The Indians seem to have one circle of reasoning, and invariably vent their spleen upon the trader. It was this reactionary feeling that had led the Indians to recover, by force of arms, the horses they had parted with previously. I knew better how to manage them.

I deposited my goods at Old Bark’s lodge, who felt highly honored with the trust. The villagers collected round, and a dispute arose among them whether the whisky should be broached or not. Porcupine Bear objected, and Bob-tailed Horse, his brother-in-law, strongly advocated my opening the kegs. This led to a warm altercation between the two warriors, until the disputed question

---

The Life And Adventures  
Of James P. Beckwourth

---

was to be decided by the arbitrament of battle. They both left the lodge to prepare for the combat, and returned in a few minutes fully armed and equipped.

Porcupine Bear argued his cause in the following strain: "Cheyennes, look at me, and listen well to my words. I am now about to fight my brother; I shall fight him, and shall kill him if I can. In doing this, I do not fight my brother, but I fight the greatest enemy of my people.

"Once we were a great and powerful nation: our hearts were proud, and our arms were strong. But a few winters ago all other tribes feared us; now the Pawnees dare to cross our hunting-grounds, and kill our buffalo. Once we could beat the Crows, and, unaided, destroyed their villages; now we call other villages to our assistance, and we can not defend ourselves from the assaults of the enemy. How is this, Cheyennes? The Crows drink no whisky. The earnings of their hunters and toils of their women are bartered to the white man for weapons and ammunition. This keeps them powerful and dreaded by their enemies. We kill buffalo by the thousand; our women's hands are sore with dressing the robes; and what do we part with them to the white trader for? We pay them for the white man's fire-water, which turns our brains upside down, which makes our hearts black, and renders our arms weak. It takes away our warriors' skill, and makes them shoot wrong in battle. Our enemies, who drink no whisky, when they shoot, always kill their foe. We have no ammunition to encounter our foes, and we have become as dogs, which have nothing but their teeth.

"Our prairies were once covered with horses as the trees are covered with leaves. Where are they now? Ask the Crows, who drink no whisky. When we are all drunk, they come and take them from before our eyes: our legs are helpless, and we can not follow them. We are only fearful to our women, who take up their children and conceal themselves among the rocks and in the forest, for we are wolves in our lodges; we growl at them like bears when they are famishing. Our children are now sick, and our women are weak with watching. Let us not scare them away from our lodges, with their sick children in their arms. The Great Spirit will be offended at it. I had rather go to the great and happy hunting-ground now than live and see the downfall of my nation. Our fires begin to burn dim, and will soon go out entirely. My people are becoming like the Pawnees: they buy the whisky of the trader, and, because he is weak and not able to fight them, they go and steal from his lodge.

"I say, let us buy of the Crow what is useful and good, but his whisky we will not touch; let him take that away with him. I have spoken all I have to say, and if my brother wishes to kill me for it, I am ready to die. I will go and sit with my fathers in the spirit land, where I shall soon point down to the last expiring fire of the Cheyennes, and when they inquire the cause of this decline of their people, I will tell them with a straight tongue that it was the fire-water of the trader that put it out."

Old Bark then advanced between the two belligerents and thus spoke: Cheyennes, I am your great chief; you know me. My word this day shall be obeyed. The Crow has come among us again, and has brought us good things that we need; he has also brought us a little whisky. He is poor, while we are yet strong, and we will buy all he has brought with him. This day we will drink; it will make us merry, and feel good to one another. We will all drink this once, but we will not act like fools; we will not quarrel and fight, and frighten our women and children. Now, warriors, give me your weapons."

This fiat admitted no appeal; it was law and gospel to his people; disobedience to his command

---

The Life And Adventures  
Of James P. Beckwourth

---

subjected the offender to immediate death at the hands of the Dog Soldiers. The warriors delivered up their battle-axes, and the old chief handed them tome. "Crow," said he, "take these weapons that I have taken from my two children. Keep them until we have drunk up your whisky, and let no one have them till I bid you. Now, Crow, we are ready."

Slim Face and Gray Head, two Dog Soldiers, then harangued the village, and desired all who wished to trade to come and bring their robes and horses to Old Bark's lodge, and to remember that they were trading with the honest Crow, and not with white men, and that what they paid him was his.

They answered the summons in flocks, the women first, according to my established rule. My corn, beans, and pumpkins "exhaled like the dew," and I received in exchange their beautiful fancy robes. The women served, the men next came in for whisky. I sold on credit to some. When one wanted thus to deal, he would tell me what kind of a horse or mule he had: I would appeal to Old Bark for confirmation of the statement; if he verified it, I served the liquor. They all got drunk, Porcupine Bear, the temperance orator, with the rest; but there was not a single fight; all passed off harmoniously.

I received over four hundred splendid robes, besides moccasins and fancy articles. When I was ready to leave, thirty-eight horses and mules, a number corresponding to what I had marked, were brought forward. I packed up my peltry, and sent my partner on in advance with every thing except the horse I rode, telling him I would overtake him shortly.

I had reserved a five-gallon keg of whisky unknown to all, and when about to start I produced it and presented it to the crowd. They were charmed, and insisted on making me a return. They brought me over forty of their finest robes, such as the young squaws finish with immense labor to present to their lovers. Old Bark gave me a good mule to pack them, and another chief gave me a second. I then took my leave, promising to return by Leaf Fall.

When I passed Bent at his post he was perfectly confounded. He had seen one train pass belonging to me, and now I was conducting another, when, at the same time, he had supposed that there was not a robe in the village.

"Beckwourth," said he, "how you manage Indians as you do beats my understanding."

I told him that it was easily accounted for; that the Indians knew that the whites cheated them, and knew that they could believe what I said. Besides that, they naturally felt superior confidence in me on account of my supposed affinity of race. I had lived so much among them that I could enter into their feelings, and be in every respect one of themselves: this was an inducement which no acknowledged white trader could ever hope to hold out.

I rode on, and overtook my partner in advance. He had had an adventure. A party of Cheyennes, led by a chief named Three Crows, had met him, and rifled him of a three-gallon keg of whisky, which we had reserved for our own use on our way to St. Fernández. The chief stopped him, and said, "I smell whisky, and we must have some."

My partner told him that he had none.

"Wugh! my nose don't lie, but your tongue does. I smell it strong, and, if you do not hand it out, we shall unpack all your horses and find it."

"Well," said the man, "I have a little, but it belongs to the Crow, and he wants it himself."

Give it me," said the chief, "and tell him that Three Crows took it."

There was no alternative, and he gave him the keg. They carried it along until they came to a

The Life And Adventures  
Of James P. Beckwourth

---

creek, where they sat down and had a jollification. I passed them while they were in the midst of it, but did not see them, although they saw me. When I met the chief some time subsequently, and charged him with the larceny, he gave me ten robes and a good horse to compound the felony.

We shot several buffalo on our way, enough to load all our horses with meat and tallow. We exchanged our effects in Santa Fé for goods, and carried them to St. Fernández, a distance of sixty miles. Here we established a store as our head-quarters for the Indian trade, where I resided some time, living very fast and happily, according to the manner of the inhabitants. Among other doings, I got married to Senorita Louise Sandeville.

In the fall I returned to the Indian country, taking my wife with me. We reached the Arkansas about the first of October, 1842, where I erected a trading-post, and opened a successful business. In a very short time I was joined by from fifteen to twenty free trappers, with their families. We all united our labors, and constructed an adobe fort sixty yards square. By the following spring we had grown into quite a little settlement, and we gave it the name of Pueblo. Many of the company devoted themselves to agriculture, and raised very good crops the first season, such as wheat, corn, oats, potatoes, and abundance of almost all kinds of vegetables.

When the spring trade was over, I sent all my peltry to Independence, and bought with the proceeds three thousand dollars worth of articles, suitable for the trade in New Mexico. But, on the arrival of the goods, the whole country was in a ferment on account of Colonel Cook's expedition from Texas, which resulted so disastrously for the parties concerned. This affected the minds of the New Mexicans unfavorably for my interest, inasmuch as their former preference for United States novelties was now turned into strong repugnance for every thing American. I therefore could obtain no sale for my goods, and determined to return to my Indian friends. I bought a load of whisky to trade for horses to pack my goods to California, where I intended removing. I succeeded in my adventure, and obtained forty horses and mules, upon which I packed my merchandise, and quickly found myself on the way to the "golden state."

I started with fifteen men, three of whom were Mexicans. When I reached the Utah country, I found that the Indians were waging exterminating war upon the Mexicans, but I did not learn it in time to save the lives of my three unhappy followers, who, lagging too far in the rear, were set upon by the Indians and slain. In passing through their country I did considerable trading, exchanging my merchandise for elk, deer, and antelope skins, very beautifully dressed.

I arrived in Pueblo de Angeles (California) in January, 1844. There I indulged my new passion for trade, and did a very profitable business for several months. At the breaking out of the revolution in 1845, I took an active part against the mother country, of which I will furnish some details in my next chapter.

#### CHAPTER XXXIII.

The Californian Revolution.—Rifle Corps.—Position of the two Armies.—Colonel Sutter.—Cannonade.—Flight of Sutter.—His Return.—Trial and subsequent Release.

THE Upper Californians, on account of their great distance from the Mexican government, had long enjoyed the forms of an independent principality, although recognizing themselves as a portion of the Mexican Republic. They had for years past had the election of their own officers, their governor inclusive, and enjoyed comparative immunity from taxes and other political vexations. Under this abandonment, the inhabitants lived prosperous and contented; their hills and

---

The Life And Adventures  
Of James P. Beckwourth

---

prairies were literally swarming with cattle; immense numbers of these were slaughtered annually for their hides and tallow; and, as they had no "Armies of Liberation" to support, and no costly government to maintain in extravagance, they passed their lives in a state of contentment, every man sitting under his own vine and his own fig-tree.

Two years prior to my arrival all this had been changed. President Santa Anna had appointed one of his creatures, Torrejon, governor, with absolute and tyrannical power; he arrived with an army of bandits to subject the defenseless inhabitants to every wrong that a debasing tyranny so readily indulges in. Heavy taxes were imposed for the support of the home government, and troops were quartered to the great annoyance and cost of the honest people. The lives of the inhabitants were continually in danger from the excesses of the worthless vagabonds who had been forced upon them; their property was rifled before their eyes, their daughters were ravished in their presence, or carried forcibly to the filthy barracks. The people's patience became at length exhausted, and they determined to die rather than submit to such inflictions. But they were ignorant how to shake off the yoke: they were unaccustomed to war, and knew nothing about political organizations. However, Providence finally raised up a man for the purpose, General José Castro, who had filled the office of commander under the former system, but who had been forced to retire into privacy at the inauguration of the reign of terror. He stepped boldly forth, and declared to the people his readiness to lead them to the warfare that should deliver their country from the scourge that afflicted them, he called upon them to second his exertions, and never desert his banner until California were purified of her present pollution. His patriotic appeal was responded to by all ranks. Hundreds flocked to his standard; the young and the old left their ranches and their cattle-grounds, and rallied round their well-trying chief.

There was at that time quite a number of Americans in the country, and, according to their interests and predilections, they ranged themselves upon opposing sides. Our present worthy and much-respected citizen, General Sutter, was at that time, if I mistake not, a colonel in the forces of the central government, and at the outbreak of the revolution he drew his sword for Santa Anna, and entered into active service against the rebels in Pueblo de Angeles.

There was an American, long resident in the country, named J. Roland, who sought my co-operation in the popular cause. He said that every American who could use a rifle was a host against the invaders, and besought me to arm in defense, and to influence my men likewise to espouse the cause. I replied to his solicitations by promising him my active co-operation, and also that I would represent his arguments to the men living with me. Accordingly, I informed my people that I intended to shoulder my rifle in the defense of life and property, and they were unanimous in their resolution to accompany me. Hence there were thirteen riflemen instead of one. We shortly after received an accession of sixty more good frontiersmen, and mustered ourselves for service. The company elected me captain, but I declined the office. Mr. Bell finally assumed the command, with the promise of my unflinching support in extremities. Our company steadily increased in number until we had one hundred and sixty men, including native Californians, who joined us with rifles.

General Castro's first movement was against Pueblo. He entered the place at the head of his forces, and took the fort, arsenal, with all the government arms, ammunition, and stores, with the slight loss of one officer wounded. This enabled the rebels to arm themselves, and he was shortly at the head of a small but well-appointed army. The general highly extolled the rifle battalion, and

---

The Life And Adventures  
Of James P. Beckwourth

---

he looked upon it as a powerful support.

Castro then took a detachment of rebel troops, and proceeded northward to reconnoitre the enemy's position, our main body also moving in the direction of the enemy as far as Monterey, where were the governor's head-quarters. On first hearing the intelligence of the outbreak, the governor had put his forces in motion, and issued orders to shoot the rebels wherever met, and destroy their property of whatever kind. General Castro, having proceeded as far as Santa Barbara, a distance of ninety-six miles, and having obtained full information concerning the movements of the governor, returned and joined the main body. During his expedition he captured five Americans in the Mexican service. He disarmed them, telling them that he had no disposition to injure Americans, and that he would return their arms as soon as he had expelled the enemies of the people.

Our forces were concentrated in a large open prairie, the enemy being stationed at no great distance, likewise on the prairie. I ascended, one morning, the summit of a mountain, which would afford me a fair view of the enemy's camp, just to discover their numbers and strength of position. On my road I encountered two Americans, who were serving in the capacity of spies to the enemy. I accosted them, and expressed surprise to see them in the service of such an old rascal as Torrejon, and recommended them to join the popular cause; but they seemed to have an eye to the promised booty of the rebels, and my arguments could not influence them. I dispatched one of them with a letter to Gant, an American who held the commission of captain in the governor's army, offering him, as we did not wish to fight against our American brethren, to withdraw all the Americans from the rebel ranks, if he would do the same on the side of the governor, and leave the Mexicans and Californians, who were most interested in the issue, to measure their strength. Some Germans who were with us also made the same proposal to Colonel Sutter. Our messenger conveyed the dispatches, and delivered the German's letter to Colonel Sutter, who read both that and our letter to Captain Gant. He returned for answer that, unless the Americans withdrew from the insurgent army immediately, he would shoot us every one by ten o'clock the next morning. This embittered us the more against the barbarity of the opposing power, and we resolved to make their leaders, not excepting Setter, feel the effects of our rifles as soon as they placed themselves within range.

On the following morning a weak and ineffective cannonade commenced on both sides. We lay low, awaiting the enemy's charge. As their riflemen had not shown themselves, and we were desirous to obtain a sight of them, myself, with seven or eight others, advanced cautiously in search of them. On our way we discovered a small cannon which the enemy had loaded and was about to discharge upon our ranks. Had there been a gunner among them, it must have done us great injury. We advanced within a few yards of the piece, and had raised ourselves up to shoot the artillerymen, when one of our party arrested our aim by suddenly exclaiming, "Don't shoot! don't shoot!" He then pointed out the enemy's riflemen carefully emerging from a hollow, with the intention of stealing upon our flank and saluting us with a volley of lead.

I laid down my rifle, and hailed them to halt. I recognized a number of mountaineers among them, with some of whom I had intimate acquaintance, and I urged them to adopt the cause of the people, for the side they had now espoused was one no American should be seen to defend. They heard me through, and all, or nearly all the Americans were persuaded by my arguments, and returned with me to join our battalion. This assured us of victory. The cannonade was per-

The Life And Adventures  
Of James P. Beckwourth

---

fectly harmless: some of the balls passed three hundred feet over our heads; others plowed up the prairie as near to their ranks as ours. All the damage we received was one wagon shivered to pieces, and a horse killed under Colonel Price, which animal had been captured by us at Pueblo, and was now serving in the rebel forces with the same rank he had held under government. The desertion of the riflemen seriously affected the enemy's prospects of victory. Ten o'clock had passed, and Colonel Sutter had not put his threat into execution. The enemy finally retired from the field, and marched in the direction of Pueblo. I took a party, and ascended a mountain to watch the progress of the retiring foe; we staid out some hours, with the view to learn where they encamped. While thus employed, a courier, sent from our commander, brought us orders to return immediately. We instantly obeyed, and found the army gone, with only one man remaining to direct our steps. On coming up with our forces, we found that our colonel had made a movement which cut off all retreat from the enemy, and which must bring him to an engagement, or an unconditional surrender. In the morning, I again took a party with me, and mounted an eminence to reconnoitre the enemy's position. We approached to within five hundred yards of their camp, where we shot a bullock, which we quietly proceeded to dress. While we were thus engaged, I perceived an officer approaching from the enemy's camp to ascertain who we were. I took my rifle, and dodged among the bushes, eager to get a shot at him; but, before I could do so, one of my men prematurely fired, and missed his mark. The officer had dismounted in order to get a nearer view of us, and this admonitory shot warned him back into camp. Myself and another advanced to within fifty rods of it, and boldly seized the officer's horse, and they did not fire a shot at us. We saw their camp was hemmed in on all sides. Our artillery was placed in battery, matches lighted, and men in position — all was ready for action. The enemy, perceiving their desperate condition, sent a flag of truce for a negotiation. Articles of capitulation were eventually drawn up and signed, to the effect that the governor and his forces should immediately lay down their arms, and leave for Acapulco as soon as their embarkation could be accomplished. Accordingly, they laid down their arms, and marched under escort to the Embaradara, distant twenty miles from Pueblo. The governor was not permitted to return to Monterey, but his lady was sent for to the Embaradara, where she rejoined her husband, and they quit the country together. Colonel Sutter, on the day of embarkation, left his detachment of naked Indians with the army, and proceeded, as we supposed, to his fort on the Sacramento; but he returned the next day, and gave himself up to us. His force of Indians were very well drilled, but would have been far better employed in raising cabbages on his farm than in facing rebel riflemen on the battle-field. A trial was held upon the colonel, which resulted in his full acquittal, with the restoration of all his property fallen into our hands, such as cannon and other military effects, by the surrender of the government forces. The Americans, in jest probably, seemed very desirous to have the prisoner shot, which produced great alarm in his mind, and recalled to his recollection his recent threat to shoot all the Americans in our army.

Our countrymen were almost carried on the shoulders of the Californians, in gratitude for their participation in the revolution; for, although the victory had been a bloodless one, they attributed their easily-won success to the dread inspired by the name of their American confederates. After seeing the departure of the government troops, the rebel army returned to Pueblo, where they elected Colonel Pico governor; Colonel, now General Castro, commander of the forces; and filled other less important offices. Fandangoes, which were continued for a week, celebrated our

---

The Life And Adventures  
Of James P. Beckwourth

---

success; and these festivities over, the insurgents returned to their various homes and occupations. Some few weeks after, a small proportion of the inhabitants sought to displace our newly-elected chiet magistrate, and appoint some other in his place. I was sent for during the night to guard the governor's palace with my corps of rifles, and we succeeded in capturing the leading conspirators, who were tried and sent to Acapulco in irons. I had a quarrel with the alcalde shortly after this service, and he put me in irons for cursing him. As soon as the governor heard of my misfortune, he had me immediately discharged from confinement.

I now resumed my business, and dispatched my partner, Mr. Waters, after a fresh supply of goods; but, before he had time to return, fresh political commotions supervened. There still seemed to exist in the minds of the majority a strong hankering for the domination of Mexico, notwithstanding they had so recently sided with the Revolutionists in shaking off the yoke of the national government. Among other causes of excitement, too, the American adventurers resident there had raised the "Bear Flag," and proclaimed their intention of establishing an independent government of their own. This caused us to be closely watched by the authorities, and matters seemed to be growing too warm to be pleasant.

In the midst of this gathering ferment, news reached us from Mazatlan of the declaration of war between the United States and Mexico, and I deemed it was fully time to leave. Colonel Fremont was at that juncture approaching from Oregon with a force, if combined with the Americans resident there, sufficient to conquer the whole country, and I would have liked exceedingly to join his forces, but to have proceeded toward him would have subjected me to mistrust, and consequent capture and imprisonment. If I looked south the same difficulties menaced me, and the west conducted me to the Pacific Ocean.

I had but little time to deliberate. My people was at war with the country I was living in; I had become security to the authorities for the good behavior of several of my fellow-countrymen, and I was under recognizances for my own conduct. The least misadventure would compromise me, and I was impatient to get away. My only retreat was eastward; so, considering all things fair in time of war, I, together with five trusty Americans, collected eighteen hundred stray horses we found roaming on the Californian ranchos, and started with our utmost speed from Pueblo de Angeles. This was a fair capture, and our morals justified it, for it was war-time. We knew we should be pursued, and we lost no time in making our way toward home. We kept our herd jogging for five days and nights, only resting once a day to eat, and afford the animals time to crop a mouthful of grass. We killed a fat colt occasionally, which supplied us with meat, and very delicious meat too — rather costly, but the cheapest and handiest we could obtain. After five days' chase our pursuers relaxed their speed, and we ourselves drove more leisurely. We again found the advantage that I have often spoken of before of having a drove of horses before us, for, as the animals we bestrode gave out, we could shift to a fresh one, while our pursuers were confined to one steed.

When we arrived at my fort on the Arkansas, we had over one thousand head of horses, all in good condition. There was a general rejoicing among the little community at my safe arrival, the Indians also coming in to bid me welcome. I found my wife married again, having been deceived by a false communication. Her present husband had brought her a missive, purporting to be of my inditing, wherein I expressed indifference toward her person, disinclination to return home, and tendering her a discharge from all connubial obligation. She accepted the document

The Life And Adventures  
Of James P. Beckwourth

---

as authentic, and solaced her abandonment by espousing her husband's messenger. My return acquainted her with the truth of the matter. She manifested extreme regret at having suffered herself to be imposed upon so readily, and, as a remedy for the evil, offered herself back again; but I declined, preferring to enjoy once more the sweets of single blessedness.

I left the fort on a visit to San Fernández. I found business very dull there on account of the war, and great apprehensions were felt by my friends in regard to the result. Perceiving that was no very desirable place to remove to, I returned to my community. General Kearney was just then on his march to Santa Fé. I took a drove of my horses, and proceeded down the Arkansas to meet him on his route; for it was probable there might be an opportunity of effecting some advantageous exchanges. The general came up, and found me in waiting with my stock; we had been acquainted for several years, and he gave me a very cordial reception.

"Beckwourth," said the general, you have a splendid lot of horses, really; they must have cost you a great sum of money."

"No, general," I replied, "but they cost me a great many miles of hard riding."

"How so?" he inquired.

"Why, I was in California at the time the war broke out, and, not having men enough at my command to take part in the fighting, I thought I could assist my country a little by starting off a small drove of the enemy's horses, in order to prevent their being used against us."

"Ah, Beckwourth, you are truly a wonderful man to possess so much forethought," and he laughed heartily. "However," added he, "trade them off as quickly as possible, for I want you to accompany me. You like war, and I have good use for you now."

I informed him that I was ready for service; and, accordingly, I sent all my remaining horses back to my plantation, and went on with the general to Santa Fé, which place submitted without firing a shot. The general sent me immediately back to Fort Leavenworth with dispatches. This was my service during the war. The occupation was a tolerably good one, and I never failed in getting my dispatches through. I enjoyed facilities superior to almost any other man, as I was known to almost all the Indians through whose country I passed.

My partner and I had purchased a hotel in Santa Fé, and we transacted a very profitable business there. My associate attended to the business of the hotel, while I carried dispatches, and Santa Fé was generally my starting-place. Many messengers lost their lives on the route, as at times there were dispatches to be sent, and I would not be at head-quarters to carry them. The distance from Santa Fé to Fort Leavenworth is nine hundred and thirteen miles. I have frequently made the trip in from twenty to twenty-five days; my shortest trip I accomplished in eighteen. I well knew that my life was at stake every trip that I made, but I liked the employment; there was continual excitement in it, indeed sometimes more than I actually cared about, more particularly when I fell in with the Pawnees. The service furnished an escort of fifteen or twenty-five men, but I always declined the company of troops, as I considered myself safer without them. If I had taken troops with me, it would have led to incessant fights with the Indians; and if they had seen me with white soldiers, they would have been very apt to kill me the first opportunity. Another thing: I did not think the United States regular troops good for any thing against the Indians, for I knew that the Camanches would stand and fight them almost man for man.

I chanced to fall in with Kit Carson one day, as I was about to start from New Mexico to Fort Leavenworth, and he proposed going with me, as he wished to learn my route. I was very much

---

The Life And Adventures  
Of James P. Beckwourth

---

pleased with his proposal, as I thought that with Kit and his men I should go through strong handed. I told him that I should rest at Taos one day to get my horses shod, and that he could easily come up with me there, or on the road thither. I left with two men, and staid at Taos as appointed, but he failed to rejoin us. I rode on as far as my ranch; still he did not appear. I built a large fire before proceeding into the Indian country, thinking to attract him by the smoke, and thus bring him on to our trail, but I saw no more of him, and it was supposed he was lost until he eventually turned up in the City of Washington. We both had a narrow escape from Indians on that trip. I had, contrary to my usual practice, encamped one night in the prairie, and was to start in the morning, when we heard buffalo running close to our camp. On looking out, I saw a great number chased by the Pawnees, although the Indians were not yet in sight. We made all possible haste to the timber, threw our horses on their sides, gagged them and fastened them to the ground, and then secreted ourselves in the willows. The Indians flocked round, busied in their pursuit, and some of the buffaloes they dressed within gunshot of our secret camp. I thought that day the longest I had lived through, and I expect the poor animals thought so too, for they lay in one position the whole time, without food or water, and without being permitted to whisper a complaint. At night we made good our escape, and arrived at the fort without further difficulty. When I was ready to return to Santa Fé, I could find no one willing to accompany me. The weather was intensely cold, and no inducement that I could offer was sufficient to tempt men to leave their comfortable fires, and encounter the perils of the Indians and Jack Frost in the prairies. Many men had been frozen to death on the route, and a general shudder ran through the company when I proposed the journey to them. I could have been furnished with soldiers in plenty, but I was unwilling to take them, as it imposed so much trouble on the road to stay to bury every man that perished with the hardships of the journey. Important dispatches had arrived from Washington which must go through, and I looked fruitlessly round for a man hardy enough to go with me. At length a boy — a Kentuckian — volunteered. He had followed the army to the fort, and had lived about the barracks until he had become well accustomed to the privations of a camp life. He was an intelligent lad, but, unfortunately, had a malformation of one of his feet, which seriously impeded his walking. However, I liked his “pluck” in proposing, and eventually consented to take him. I went with him to the sutler’s store, and procured him the warmest clothing I could, and then bade him repair to my boarding-house, and stay there until I was ready to start.

When I was prepared for departure, I furnished him with a good horse, and, taking an extra one between us, we started on the long journey. I gave him particular directions that if he should become very cold he was to acquaint me, and I would stay and build a fire to warm him by wherever there was any wood; but the proposition he declined.

Three days after we reached the Arkansas, and encamped. Isaac was busied in preparing supper, while I walked to an eminence close by in order to survey the country. I perceived an immense number of Indians approaching directly toward us, and at not more than three or four hundred yards distance. I shouted to Isaac to catch the horses quickly and tether them, and I hastened back to the camp. He inquired what the matter was, and I told him there were a thousand Indians coming after us.

The approaching individuals belonged to the Camanche tribe, and numbered over a thousand warriors. They were in full speed. They dashed through the Arkansas with such precipitation that

The Life And Adventures  
Of James P. Beckwourth

---

I thought they would throw all the water out of the channel and hurl it on to the bank. I ran in front of the advance, and challenged them to stop. They halted for a moment, and asked me who I was. I told them the Crow. Thereupon they grabbed me up like a chicken, and carried me into our little camp. They had nine white men's scalps, which, to appearance, were hardly yet cold, and they said they must kill my white boy, and his scalp would just make ten. I told them the boy was my nephew, and that they must not kill him — that great braves never killed boys. They then conversed among themselves a minute or two, and finally said, "He, being your nephew, may live. Tell him to make us some good black soup."

I foresaw that my coffee and sugar must suffer, for by black soup they meant coffee. I directed Isaac to set about making it, but to secrete a little for our selves, if he could do so unperceived. The Camanches have a great fondness for coffee, and I never fell in with them without having to part with all I had, and I sometimes imagined they preferred my coffee and sugar to my scalp. The same day, just before dusk, while jogging steadily along, the boy discovered a small party of Pawnees. I hastily dismounted, and tied the heads of our three horses together, to prevent them running, and directed the boy to see that they did not move. I then took his gun and my own, and went away from the horses. As I was leaving, the boy inquired if he should fire too. I told him no, not unless I was killed, and then to defend himself as he best could. I took a secure position and fired. An Indian fell. I fired again, and killed a second. They cracked away at me, but did no harm. I reloaded, and fired again, until I had leveled five of them, they retreating at every discharge. When the fifth warrior fell, the whole party fell back to cry. I knew that, after they had cried for a few minutes, they would make a rush for revenge. Therefore I shouted to the boy to cut the animals loose, and mount in haste. He did so; I sprung on my horse instantly, and we flew away, leaving the mourners to their lamentations. At every foe I shot the boy would ejaculate, "Whoop! you fetched him; he's got his gruel," and other sayings, thereby displaying more bravery than many men would have shown under similar circumstances. Ever afterward he considered that we were a match for any number of Pawnees; and as for the Camanches, I could beat them off with "black soup."

We traveled on for several miles, and then encamped. In the morning I started along a ravine for our horses, which had strayed away. I returned toward the camp, where I found that they had taken themselves up another small ravine, and that I had passed them. While thus pursuing the stray animals, the boy came to acquaint me that he had seen a great number of Indians. I led the horses to the camp, and then mounted a little rise of ground, from whence I descried a large village. I did not know what tribe they belonged to, though I knew they were not Pawnees, for that tribe never visited this country except on war excursions. I took the boy, and walked with him up to the village, but their faces were all strange to me; nor did I like their appearance and movements. On perceiving one at a little distance wrapped in his robe, I thought he might possibly be a chief, and I approached him. He addressed me in Crow, "Ah! my friend, what brought you here?"

I replied that, as I was passing through, I had thought it well to call on him.

"I am glad to see you," said he; "enter my lodge; my warriors are bad to-day."

The Indians were Apaches, and the chief was named Black Shield, an old and intimate acquaintance.

He insisted on my spending the night in the village, which I consented to. He was perfectly rabid toward the whites, and stated his intention to manure the prairie with their bodies the forth-

The Life And Adventures  
Of James P. Beckwourth

---

coming season he would not leave one in the country. I applauded his intention, telling him the whites were unable to fight. Seeing that I was on his side — that is, if my words made me so — he continued, “I have plenty of warriors, and plenty of guns and balls, but I am a little short of powder. When will you return?”

I informed him as nearly as I could calculate, but I added that my return was uncertain.

“Will you bring me some powder?” he inquired. “I will,” I said; “but I shall return by way of the Eagle’s Nest Hill.”

“That is the very place I am going to from here,” he rejoined; and, if I am not there myself, some of my warriors will be, and they can take it of you.”

This afforded me no put-off, and I accordingly promised to furnish him with the powder. If the reader will indulge me in a witticism, I beg to assure him that I carried the powder to the old chief in a horn! In the morning he furnished me with meat enough to subsist us for a week, together with new moccasins, and sundry other articles. We then bade him adieu, and proceeded on our journey, arriving at Santa Fé without any farther noteworthy adventure.

On reaching my destination, I informed some of my friends of my promise to the Black Shield, and where they could find him to deliver the powder, to enable him to carry out his commendable resolution. A party started to meet him at the appointed spot; but in delivering the powder they managed to explode it, and he and his warriors only received the bullets, of which they already had plenty.

#### CHAPTER XXXIV.

Affairs at Santa Fé.—Insurrection at Taos.—Discovery of the Plot.—Battle at the Cañon.—Battles at Lambida, at Pueblo, and at Taos. —A Mexican Woman redeemed from the Indians.—Return to Santa Fé.

ON my arrival at Santa Fé I found affairs in a very disturbed state. Colonel Doniphan had just gained the battle of Brasito, and was carrying all before him in that section of the country. He had forwarded orders to Santa Fé for a field battery, in order to make a demonstration against Chihuahua. Major Clarke was intrusted with the duty of conveying the artillery to the colonel. Scarcely had he departed when we received intelligence of an insurrection in Taos. The information was first communicated by an Indian from a village between Santa Fé and Taos, who reported to General Price that the Mexicans had massacred all the white inhabitants of that place, and that a similar massacre was contemplated in Santa Fé, of which report full information could be obtained by the arrest of a Mexican who was then conveying a letter from the priest in Taos to the priest in Santa Fé. A watch was immediately set upon the priest’s house, and a Mexican was seen to enter. The guard approached the door to arrest the man as he issued, but he, being apprised of the action of the authorities, left the house by another door, and escaped.

At night there came a violent rapping at my gate, and on going to open it I perceived my friend, Charles Towne, who, on being admitted, clasped me round the neck, and gave vent to uncontrolled emotion. Perceiving that something alarming had occurred, I invited him into the house, spread refreshments before him, and allowed him time to recover himself. He then informed me that he had escaped almost by a miracle from Taos, where all the American residents had been killed. He was a resident, there, having married a girl of New Mexico, and his wife’s father had apprised him that he had better effect his escape, if possible, for if he was caught he would be inevitably massacred. His father-in-law provided him with a good horse, and he retreated into the

The Life And Adventures  
Of James P. Beckwourth

---

woods, where, after considerable risk and anxiety, he providentially eluded the assassins. On receiving this alarming information, I lost no time in repairing to the head-quarters of General Price, accompanied by my informant, who related the above particulars. General Price immediately adopted the most effective measures. He assembled his officers, and instructed them to set a close watch upon the house of every Mexican in the city, and to suffer no person to pass in or out; he also ordered that every American should hold himself in readiness for service during the night. Before morning several of the most influential Mexican citizens were placed under arrest. In searching them, important conspiracies were brought to light. Correspondence, implicating the most considerable residents, was read, and a plot was detected of subjecting Santa Fé to the same St. Bartholomew massacre as had just been visited upon Taos. The city was placed under martial law, and every American that could shoulder a musket was called into immediate service. All the ox-drivers, mule-drivers, merchants, clerks, and commissariat-men were formed into rank and file, and placed in a condition for holding the city. Then, placing himself at the head of his army, four hundred strong, General Price marched toward Taos. On arriving at Canjarra, a small town about twenty miles from Santa Fé, we found the enemy, numbering two thousand Mexicans and Indians, were prepared to give us battle. The enemy's lines were first perceived by our advanced guard, which instantly fell back upon the main body. Our line was formed, and an advance made upon the enemy, the mountaineer company, under Captain Saverine, being placed in charge of the baggage. As soon as battle was begun, however, we left the baggage and ammunition wagons to take care of themselves, and made a descent upon the foe. He fled precipitately before the charge of our lines, and we encamped upon the field of battle. The next day we advanced to Lamboda, where the enemy made another stand, and again fled on our approach. We marched on until we arrived at Taos, and the barbarities we witnessed there exceeded in brutality all my previous experience with the Indians. Bodies of our murdered fellow-countrymen were lying about the streets, mutilated and disfigured in every possible way, and the hogs and dogs were making a repast upon the remains. Among the dead we recognized that of Governor Bent, who had been recently appointed by General Kearney. One poor victim we saw, who had been stripped naked, scalped alive, and his eyes punched out: he was groping his way through the streets, beseeching some one to shoot him out of his misery, while his inhuman Mexican tormentors were deriving the greatest amusement from the exhibition. Such scenes of unexampled barbarity filled our soldiers' breasts with abhorrence: they became tiger-like in their craving for revenge. Our general directed the desecrated remains to be gathered together, and a guard to be placed over them, while he marched on with his army in pursuit of the barbarians. Late in the afternoon we arrived at Pueblo, where we found the enemy well posted, having an adobe fort in their front. No attack was attempted that evening, and strict orders were issued for no man to venture out of camp.

In the evening I was visited by a man, who informed me that he had a brother at Rio Mondo, twelve miles distant, whom, if he was not already killed, he wished to save from massacre. I determined to rescue him, if possible, and, having induced seven other good and trusty mountaineers to aid me in the attempt, we left the camp unperceived, and proceeded to the place indicated. On our arrival we found two or three hundred Mexicans, all well armed; we rode boldly past them, and they dispersed, many of them going to their homes. We reached the door of the Mexican general Montaja, who styled himself the "Santa Anna of the North," and captured him. We then

---

The Life And Adventures  
Of James P. Beckwourth

---

liberated the prisoner we were in quest of, and returned to Taos with our captive general. At Taos we found our forces, which had retired upon that place from Pueblo, after having made an unsuccessful attempt to dislodge the enemy. We informed our general of our important capture, and he affected great displeasure at our disobedience of orders, although it was easy to see that, in his eyes, the end had justified the means. The following morning a gallows was erected, and Montaja was swung in the wind. The correspondence that had been seized in Santa Fé had implicated him in some of the blackest plots, and we thought that this summary disposal of his generalship would relieve us from all further danger from his machinations.

Having procured artillery to bombard the enemy's position, our commander returned to Pueblo. We cannonaded in good earnest, but the pieces were too small to be of much service; but we cut a breach with our axes half way through the six-foot wall, and then finished the work with our cannon. While engaged in this novel way of getting at the enemy, a shell was thrown from a mortar at the fort; but our artillerymen, not being very skillful in their practice, threw the shell outside the fort, and it fell among us. A young lieutenant seized it in his hands, and cast it through the breach; it had not more than struck before it exploded, doing considerable damage in the fort. We then stormed the breach, which was only big enough to admit one man at a time, and carried the place without difficulty.

The company of mountaineers had fallen back midway between the fort and mountain, in order to pick off any Mexican who should dare to show himself. We killed fifty-four of the defenders as they were endeavoring to escape, upon the person of one of whom, an officer, we found one hundred and sixty doubloons. Some of the enemy fired upon us from a position at one corner of the fort, through loop-holes; and while looking about for a covert to get a secure shot at them, we discovered a few of the enemy hidden away in the brush. One of them, an Indian, ran toward us, exclaiming, "Bueno! bueno! me like Americanos." One of our party said, "If you like the Americans, take this sword, and return to the brush, and kill all the men you find there."

He took the proffered sword, and was busy in the brush for a few minutes, and then returned with his sword-blade dripping with gore, saying, "I have killed them."

"Then you ought to die for killing your own people," said the American, and he shot the Indian dead.

The battle lasted through the whole day, and a close watch was set at night to prevent the escape of those yet occupying the fort. The assault was renewed the following morning, and continued during that day also. Toward night several white flags were raised by the enemy, but were immediately shot down by the Americans, who had determined to show no quarter. On the third morning all the women issued from the fort, each bearing a white flag, and kneeled before the general to supplicate for the lives of their surviving friends. The general was prevailed upon, and gave orders to cease firing. The enemy lost severely through their disgraceful cowardice. Our company lost but one man through the whole engagement. Nine of the most prominent conspirators were hanged at Taos, and seven or eight more at Santa Fé. It was about this time that the report reached us of the butchery of Mr. Waldo, with eight or ten other Americans, at the Moro.

After the insurrection was suppressed I started again for Fort Leavenworth. On my way back from the fort I again fell in with Black Shield and his Apaches. I said to him, "You told me false. You said that you would meet me at the Eagle's Nest, but when I went there you were not to be found. I had to throw the powder away that I brought for you, and run for my life; for the whites

The Life And Adventures  
Of James P. Beckwourth

---

discovered my errand, and were close at my heels.”

“I know it, my friend,” said the Black Shield. “We saw your kegs there, but the whites had taken all the powder out. I am sorry they came upon you so suddenly, for we had to run as well as you.” The second day after we left the Apaches we discovered an object in the distance which I at first took for a stump, but still thought it singular that there should be a stump where there were no trees near. As we approached the object moved, and we at length discovered it to be a man of the name of Elliott Lee, who had been wounded by the Apaches three or four days previously, and had not tasted food since. He had belonged to a party of seventeen or eighteen mountaineers, on their way to Santa Fé. They had stopped to rest on the bank of a creek, and were suddenly set upon by the Indians. Several of the party were killed, among whom was my friend Charles Towne, and all the rest were more or less severely wounded. Some few had succeeded in getting away, notwithstanding their wounds; but Mr. Lee had been shot in the thigh, and was unable to crawl along. When we picked him up he was delirious, and his wound was greatly swollen and inflamed. We gave him food, and carried him along with us, until we fortunately came up with his wagons. We then gave him into the keeping of his friends, and proceeded on our way.

On my arrival home I disposed of all my property in Santa Fé, and started to buy horses of the Indians to dispose of to the discharged troops. I had arrived within a short distance of my ranch, when I met a man who advised me to conceal myself. Two rewards had been offered for my apprehension: one of a thousand dollars by Colonel Price, and another of five hundred dollars by Mr. Kissack, Quarter-master. I was accused of confederating with rebels and Indians, and assisting them in stealing horses from the whites, and leading the hostile bands in their warfare upon the American troops.

I listened to his information, and was astonished at the invention. “That is news indeed,” I said. “But they shall not have the profit all to themselves; I will immediately go and deliver myself up, and obtain the rewards.”

“I advise you, as a friend, not to go,” rejoined my interlocutor, “for they will assuredly hang you directly they lay hands upon you.”

“Well, hang or not hang,” I answered, “I am resolved to go, for I have not been a month absent from Santa Fé, and I can give account of every day and night I have since spent.”

At the time I met with my informant, I had an order from Captain Morris, of the United States Army, in my pocket, authorizing me to pick up all the government horses that I might find in my rambles, and bring them in; but up to the time that I was informed of the charges against me, I had found but one horse, the property of Captain Saverine, and it I had restored to the owner. Accordingly, I returned without delay to Taos, where I saw Colonel Willock, who was lieutenant under Colonel Price. Him I acquainted with my determination to proceed to Santa Fé, to deliver myself up for the rewards that were offered for my apprehension, but he urgently requested me not to go. He was about to start with an expedition against the Apaches, and wished to engage me as spy, interpreter, and guide. He promised to forward an exculpatory letter to Santa Fé that should set me all right with the authorities. The letter was sent, but not delivered, as the messenger was shot on the way.

I concluded to accompany the colonel, and aid him to the extent of my ability in the object of his expedition. We started with a small battalion of volunteers for the Apaches. The first day in camp, the common soldier's fare was spread for dinner, which at that time I felt but little appetite for. I

The Life And Adventures  
Of James P. Beckwourth

---

informed the colonel that I would go out and kill an antelope.

“Why,” said he, “there is not an antelope within ten miles around; the soldiers have scoured the whole country without seeing one.”

I told him I felt sure I could find one, and took up my rifle and was about to start.

“Hold on!” cried the colonel; I will go with you, and will further engage to pack on my back all you kill.” We started, and kept on the road for about half a mile, when I discovered the tracks of three antelopes which had just crossed our path, and gone in the direction of a hill close by. The colonel did not see the tracks, and I did not point them out to him. We passed on a few rods farther, when I suddenly stopped, threw my head back, and began to sniff like a dog scenting his prey.

“What the dickens are you sniffing so for?” asked the colonel.

“I am sure that I smell an antelope,” said I.

“You smell antelope!” and the colonel’s nostrils began to dilate; “I can smell nothing.”

“Well, colonel,” I said, “there are antelopes close by, I know, for my smellers never yet deceived me; and now,” added I, “if you will start carefully up that hollow, I will go up on the other side, and I am confident that one of us will kill one.”

I knew that if the animals were in the hollow they would start at the approach of the colonel, and most probably in my direction, and thus afford me an opportunity of getting a shot at one. I proceeded cautiously along, until, raising my head over a knoll, I saw the three antelopes which had crossed us. Two had already lain down, and the third was preparing to do so, when I sent a leaden messenger which brought him down involuntarily.

The colonel shouted to inquire what I had shot at. “Antelope,” I answered; and he came running at his best speed. There was the very beast, beyond all dispute, to the utter astonishment of the colonel, who regarded for some moments first the game and then the hunter

“And you smelled them!” he pondered; “well, I must confess, your olfactory nerves beat those of any man I ever yet fell in with. Smell antelope! Humph! I will send my boy to carry him in.”

“But that was not the bargain, colonel,” I said; “you engaged to pack in on your back all I should kill. There is your burden; the distance is but short.”

But the colonel declined his engagement. We finally hung the antelope on a tree, and the colonel, on our return to camp, dispatched his servant to fetch it in. He never could get over my smelling antelope, and we have had many a hearty laugh at it since.

The following morning, at daylight, I took five or six men with me, and proceeded on my duty as spy, while the colonel moved on with the troops, we returning to camp every evening at dusk. We frequently saw signs of Indians, but we could make no discovery of the Indians themselves. We continued our chase for nearly a month; our coffee and sugar had given out, and our provisions were getting low; the soldiers could kill no game, and there was a general disposition, especially among the officers, to return.

In leaving the camp, as usual, one morning, I directed the colonel to a camping-ground, and started on my search. Late in the afternoon, I discovered what I supposed to be a large party of Indians moving in our direction. I ran with all possible speed to communicate the information; but, in ascending a small point of land which was in my way, I found a strange encampment of United States troops lying before me. I knew it was not Colonel Willock’s command, for these had tents, wagons, and other appointments, which we were unprovided with. When I was first

The Life And Adventures  
Of James P. Beckwourth

---

perceived, some of the men pointed me out to their companions; "There's Beckwourth! there's Jim Beckwourth!" I heard whispered around. I found it was a detachment commanded by Colonel Edmondson, who had just returned from Santa Fé with a re-enforcement, having been defeated in an engagement with the Apaches some time previously. When the colonel saw me, he inquired of me my errand.

"I have come after horses," I replied, en plaisantant; "but I see you have none."

"Beckwourth," said a Captain Donohue, "I have been defending your character for a long time, and I now want you to clear up matters for yourself."

I found I was not in very good savor among the parties present, owing to a mistake in my identity made by one of the soldiers during their late engagement with the Indians. It was supposed I had entered their camp, hurled my lance through a soldier, and challenged another out to fight, telling him he was paid for fighting, and it was his duty to engage me. This suspicion, added to flying reports of evil doings, which derived their origin in the Crow village from my adventure with Fitzpatrick, had associated me in the soldiers' minds with all the horse-raids and white massacres they heard rumors of, and I was regarded by them all as a desperate, lawless character, who deserved hanging to the first tree wherever met.

At this moment two men came running toward the camp at full speed, shouting, "To arms! to arms!" as though the whole Apache nation were behind them.

"Where is your party?" asked Colonel Edmondson of me.

"Coming yonder, sir," I replied, pointing in the direction of the two approaching heralds; for I supposed it was Colonel Willock's command they had seen, and whom, in their fright, they had mistaken for Indians.

Immediately there was a bustle of preparation to receive the coming foe: muskets were snatched up, and the men fell into line; but in a few moments the real character of the approaching company was ascertained, and the colonel advanced to greet them. At the junction of the two parties, both engaged on the same errand, matters were discussed by the two colonels, and it was resolved to abandon the expedition, for it was manifest that the Indians were too much on the alert to be taken. I was dispatched to Santa Fé with a letter to Colonel Price from Colonels Edmondson and Willock, while they resolved to march back with their detachments, Colonel Edmondson to Santa Fé, and Colonel Willock to Taos.

The morning following I again set out for Fort Leavenworth, having for companion M'Intosh, who, by the way, was a Cherokee, and known as such to the Indians whom we fell in with on the road. We reached the fort without any accident, and delivered our dispatches safe. On our return we overtook Bullard and Company's trains of wagons, which were on their way to Santa Fé with supplies for the army. Bullard and his partner proposed to leave their charge and go-in with us, if I thought we would be able to keep up with them. I answered that we would try and keep their company as far as possible, but that they would be at liberty to proceed at any time that they considered we retarded them. They went with us as far as the Moro, two days' ride from Santa Fé, where we were compelled to leave them, as they were tired out, and had already detained us two full days.

My next engagement in the service of Uncle Sam was a trip to Chihuahua to convey dispatches; but, previous to starting, Captain Morris wished to engage me as guide in an expedition against the Utah Indians; so, preferring the latter service, I transferred my trust to my brave and faithful

The Life And Adventures  
Of James P. Beckwourth

---

friend, M'Intosh, and accompanied Captain Morris. The expedition consisted of ninety men: the object was a treaty of peace with the Utahs. We succeeded in finding the Indians; but, as they supposed our only object was to fight, it was some time before we could get up to them. We at length surprised them in a gap in the mountain, when we succeeded in taking a number of prisoners, among whom were some chiefs. We explained our object; they, then frankly informed us where their village was; we all repaired to it, and concluded terms of peace. Our approach greatly alarmed the village at first, for they knew that, in conjunction with the Apaches, they had been guilty of many depredations, although it had been their policy to throw all the blame of the mischief upon their allies. Our mission performed, we returned to Taos.

I remained some weeks inactive. Taos was convulsed with continual alarms from reports that Cortez was approaching against us with a great force. The troops were all away at Santa Fé; though, had he visited us, we could have improvised a warm reception. We had a small piece of cannon, with plenty of grape and canister, with which we could have swept the streets. We tried its effect one day, just to satisfy the curiosity of the Mexicans: we put in a heavy charge of grape-shot, and discharged it down the street. The tawny Mexicans were wonder-stricken: they thought an army would stand but a poor chance before such a volcanic belching of iron missiles.

Poultry in the vicinity of Taos became exceeding scarce: it was a rare matter to hear a cock crow. When we did by chance hear the pleasing sound, we would listen for the repetition of it, in order to learn from which direction it proceeded. We would then visit the tell-tale's quarters after dark, as we could obtain our poultry cheaper at night than in the day-time. Orders had been issued to take nothing from the enemy without paying for it, which orders were evidently based upon the assumption that we had money to pay with. Those without money did not feel themselves bound by the injunction. The authorities that issue similar commands in future would do well to insert some clause binding on the moneyless, otherwise these orders are all moonshine.

From Taos I proceeded to Santa Fé. I again started, for the last time, to Fort Leavenworth; M'Intosh, having safely returned from Chihuahua, again accompanying me. When we arrived at the Wagon Mound we heard shots fired, and immediately after met a train of mule-teams approaching at their quickest pace. The drivers advised us to return, as they had been attacked by the Apaches, and if we proceeded we could not escape being killed. I thought that my companion and I knew the Indians better than the mule-drivers did, and we bade them good-by and started on. We intended to avoid the Indians by making a circuit away from where we expected they would be, but in so doing we came directly upon the village. We staid all night with them, were well treated, and resumed our journey in the morning. We met a party of Americans who had been attacked by the Camanches, and lost one horse, but we saw no more Indians until we reached the fort.

Many times wonder has been expressed how I could always travel the road in safety while other men were attacked and killed. The only way in which I could account for the marvel was that I knew how to act the "wolf," while the others did not. Of all the dispatches I ever carried, I never lost one; while numbers who have undertaken to bear them lost, not alone the dispatches, but their lives; for, whenever they fell in with the Indians, they were sure to be killed. The Indians knew perfectly well what my business was. They knew that I was conveying orders backward and forward from the great white chief to his war chiefs in New Mexico. They would frequently ask me what the orders were which I had with me. Sometimes I would tell them that the great chief

---

The Life And Adventures  
Of James P. Beckwourth

---

at Washington was going to send on a great host of warriors to rub them all out. They would laugh heartily at the supposition, for they conceived that all the American forces combined would hardly be a circumstance before them. I promised to apprise them when the white warriors were to advance against them, which promise they confidently relied upon. I had to say something to keep on good terms with them, and answer their inquiries to satisfy them, and then proceed with my business. The war between the great white chief and the great Mexican chief interested the Indians but little, though their conviction was that the Mexican chief would be victorious. Their sympathy was with the latter, from motives of self-interest. They were now able to go at any time and drive home all the horses, cattle, and sheep that they wanted, together with Mexican children enough to take care of them. If the white chief conquered, they supposed he would carry all the horses, cattle, and sheep home with him, and thus leave none for them.

The Camanches and Apaches have a great number of Mexicans, of both sexes, among them, who seldom manifest much desire to return home. The women say that the Indians treat them better than they are treated at home. I never met but one exception to this rule, and that was a young Mexican woman captive among the Camanches. She told me that her father was wealthy, and would give me five thousand dollars if I could procure her restoration. I bought her of the chief, and conveyed her to my fort, whence I sent information to her father to acquaint him where he could find his daughter. In a few days her father and her husband came to her. She refused to have any thing to say to her husband, for she said he was a coward. When the Indians attacked the village, he mounted his horse and fled, leaving her to their mercy. Her father proffered me the promised sum, but I only accepted one thousand dollars, which returned me a very good profit on the cost of the goods I had given to the Indians for her ransom. The woman returned home with her father, her valorous husband following them. Shortly after this I returned to Santa Fé.

CHAPTER XXXV.

Departure for California.—Meeting with the Apaches.—Hostile Threats.—Trouble with the Utahs.—Most terrible Tragedy.—Society in California.—Adventures with Grizzly Bears.

THE last dispatches I bore from Fort Leavenworth were addressed to California, and I had undertaken to carry them through. At Santa Fé I rested a week, and then, taking an escort of fifteen men, I started on my errand. On our arrival at the village of Abbeger, we found a large party of Apaches, who were in the midst of a drunken carousal. We encamped inside the corral, that being as safe a place as we could select. Little Joe, an Apache Chief, inquired of me what I was going to do with these whites.

“I am going to take them to California,” I told him. “No,” said he, “you shall never take them nearer to California than they are now.”

“Well, I shall try,” said I.

He held some farther conversation with me of a denunciatory character, and then left me to return to the liquor-shop.

Foreseeing what was likely to result if more liquor was obtained, I visited every place in town where it was kept, and informed every seller that, if another drop was sold to the Indians, I would hang the man that did it without a minute’s delay; and I would have been as good as my word, for they were all Mexicans, and I had felt no great liking for them since the awful tragedy at Taos. “But the priest—” began one or two, in expostulation.

But I cut them short. “I’ll hang your priest just as soon as any of you,” I said, “if he dares to inter-

The Life And Adventures  
Of James P. Beckwourth

---

ferre in the matter.”

I suppose they intended to urge that their priest had authorized them to sell liquors to the Indians. My interdict stopped them, for there was no more sold while I was there.

The next day I saw Little Joe in one of the low saloons; the stimulus of the liquor had left him, and he had what toppers call the horrors. He begged me to let him have one dram more, but I refused.

“Whisky,” I said, “puts all kinds of nonsense into your head; you get drunk, and then you are ripe for any mischief.”

When he had become perfectly sober, he came to me, and again asked if it were true that I intended taking those whites to California with me.

I told him that it was perfectly true.

“Well,” said Joe, “if you attempt it we will kill your whole party, and you with them. You will never listen to us: your ears are stopped. We all love you, but we have told you many times that we hate the whites, and do not want you to lead them through our hunting-grounds, and show them our paths; but you will not listen to us. And now, if you undertake to pass through that cañon, we will, without fail, kill you all.”

“Well,” I replied, I shall certainly go, so you had better get your warriors ready.”

We packed our animals, and I directed my men to travel slowly while I went through the cañon. If I wished them to advance, I would climb up and show myself to them as a signal for them to rush through, and reach me as soon as possible. I then went on all alone, as I knew that, if I encountered Indians in the cañon, they would not kill me by myself. I passed through without meeting any, and I signaled to the men to come on; they soon joined me, and we issued upon the open prairie. Here we discovered three hundred Apaches, each man leading his war-horse. We numbered eighteen, two of whom were Mexicans. They did not offer to attack us, however, and we continued our route unmolested, although they kept on our trail for twenty miles. A little before dark we rested to take supper, starting again immediately after the meal was finished. We saw no more of the Apaches.

The following afternoon a Utah came to us. I asked him where his village was. He did not know, he said, as he had been away some time. I was going out to shoot game at the time, and I took the Indian with me, lending him a gun belonging to one of my men. I had killed two or three wild turkeys, when my Indian, discovering deer some distance off, went in pursuit. I returned to the camp, but the fellow had not arrived. When we started in the morning he had not shown himself. The second day after the disappearance of the Indian with my gun, I was some distance in advance of the party, when, on ascending a hill, I saw a large party of Utahs ahead. They were looking down, and examining the trail very closely, to see if we had passed. This convinced me that the Indian fugitive had lied to me; that he knew well where his village was, and had, no doubt, been sent out from it as a spy. We held on our way till we came up with them, and, it being then about noon, we halted to take a long rest. The Indians soon came flocking round us, but I gave strict orders to the men to keep a good look-out, and upon no account to let them touch the fire-arms. They swarmed round the camp, entering it one at a time, and I determined to make the first troublesome advance an excuse for getting rid of them.

We packed up, and moved on through the whole mass of Indians, but they did not venture an attack, although it had been their intention to do so if they could have got any advantage over

---

The Life And Adventures  
Of James P. Beckwourth

---

us through our negligence. They were embittered against the whites at that time, on account of a severe whipping that had been recently inflicted upon two of their warriors by Chouteau, who had just passed through them, for a theft from his camp. To receive a whipping, especially at the hands of a white man, is looked upon by them as a lasting infamy, and they would prefer death to the disgrace. The next morning they overtook us again, and the Indian returned me my gun. I mollified them with a few trifling presents, and they finally left us on apparently good terms. The next hostile country that lay upon our road was that of the Navajo tribe. They followed us through their whole strip of territory, shouting after us, and making insulting gestures; but they took the precaution to keep out of gun-shot range, and I did not think it worth my while to chastise them.

The next tribe on our route was the Pi-u-ches, which is also the last before you reach Pueblo in California. The first Pi-u-ches that we came across were an Indian and his squaw engaged in digging roots. On seeing us approach, the Indian took to his heels, leaving the squaw to take care of herself. I rode up to her and asked where her village was. She pointed in the direction of it, but I could not see it. The next one that I saw stooped and concealed himself in the grass immediately he found himself observed; but I rode up to him, and made him show himself, not wishing to have him think that he could escape our notice so easily. He accompanied me for a short distance, until another of the tribe shouted to him from a hill, and he then left me.

We encamped that night upon the prairie. At dusk we observed the smoke of camp-fires in every direction, and shortly we were visited by hundreds of Indians, who entirely hemmed us in; but, on their finding that we were not Mexicans, they did not offer to molest us. They were hostile on account of the continual abductions of their squaws and children, whom the Mexicans employ as domestic slaves, and treat with the utmost cruelty.

We reached our destination in safety, and I delivered my dispatches. I was now inactive for some time again, and occupied my leisure in rambling about the environs of Monterey. I then engaged in the service of the commissariat at Monterey, to carry dispatches from thence to Captain Deny's ranch, where I was met by another carrier. On my road lay the mission of St. Miguel, owned by a Mr. Reed, an Englishman; and, as his family was a very interesting one, I generally made his home my resting-place. On one of my visits, arriving about dusk, I entered the house as usual, but was surprised to see no one stirring. I walked about a little to attract attention, and no one coming to me, I stepped into the kitchen to look for some of the inmates. On the floor I saw some one lying down, asleep, as I supposed. I attempted to arouse him with my foot, but he did not stir. This seemed strange, and my apprehensions became excited; for the Indians were very numerous about, and I was afraid some mischief had been done. I returned to my horse for my pistols, then, lighting a candle, I commenced a search. In going along a passage, I stumbled over the body of a woman; I entered a room, and found another, a murdered Indian woman, who had been a domestic. I was about to enter another room, but I was arrested by some sudden thought which urged me to search no farther. It was an opportune admonition, for that very room contained the murderers of the family, who had heard my steps, and were sitting at that moment with their pistols pointed to the door, ready to shoot the first person that entered. This they confessed subsequently. Thinking to obtain farther assistance, I mounted my horse and rode to the nearest ranch, a distance of twenty-four miles, where I procured fifteen Mexicans and Indians, and returned with them the same night to the scene of the tragedy. On again entering the house, we found eleven

---

The Life And Adventures  
Of James P. Beckwourth

---

bodies all thrown together in one pile for the purpose of consuming them; for, on searching further, we found the murderers had set fire to the dwelling, but, according to that Providence which exposes such wicked deeds, the fire had died out.

Fastening up the house, we returned immediately back to the ranch from which I had started with my party, making seventy-two miles I rode that night. As soon as I could obtain some rest, I started, in company with the alcalde, for St. Louis Obispo, where, it was believed, we could get assistance in capturing the murderers. Forty men in detached parties, moving in different directions, went in pursuit. It was my fortune to find the trail, and with my party of six men I managed to head off the suspected murderers so as to come up with them in the road from directly the opposite direction from Reed's house. When I came opposite, one of the men sang out, "Good-day, señors." I replied, but kept on riding in a lope.

The bandits, thrown entirely off their guard, insisted upon entering into conversation; so I had a fair opportunity of marking them all, and discovering among them a horse belonging to the unfortunate Reed. I then rode to Santa Barbara, a distance of forty miles, and, with a party of twenty men, started boldly in pursuit. After much hard travel, we finally came upon the gang, encamped for the night. Without a moment's hesitation, we charged on them, and gave a volley of rifles, which killed one, and wounded all the others, save an American named Dempsey. The villains fought like tigers, but were finally mastered and made prisoners.

Dempsey turned state's evidence. He stated that, on the night of the murder, his party stopped at Reed's; that Reed told them that he had just returned from the mines, whereupon it was determined to kill the whole family and take his gold, which turned out to be the pitiful sum of one thousand dollars. After the confession of Dempsey, we shot the murderers, along with the "state's evidence," and thus ended the lives of two Americans, two Englishmen, and ten Irishmen, they having committed the most diabolical deed that ever disgraced the annals of frontier life.

I continued in this service of carrying dispatches some four months, varying my route with an occasional trip to San Francisco. At this time society in California was in the worst condition to be found, probably, in any part of the world, to call it civilized. The report of the discovery of gold had attracted thither lawless and desperate characters from all parts of the earth, and the government constituted for their control was a weaker element than the offenders it had to deal with. The rankest excesses were familiar occurrences, and men were butchered under the very eyes of the officers of justice, and no action was taken in the matter. What honest men there were became alarmed, and frequently would abandon the richest placers for the mere security of their lives, and leave a whole community of rowdies to prey upon each other. Disorder attained its limit, and some reactionary means would naturally be engendered as a corrective to the existing evils. The establishment of "Vigilance Committees" among the better order of citizens operated as a thunderbolt upon the conniving civil officers and the rank perpetrators of crime. Scores of villains were snatched from the hands of these mock officers, and summarily strung up to the limb of the nearest tree. Horse and cattle thieves had their necks disjoined so frequently that it soon became safe for a man to leave his horse standing in the street for a few moments, while he stepped into a house to call upon his friend, and that widely-practiced business was quickly done away with. Such sudden justice overtook murderers, robbers, and other criminals, that honest people began to breathe more freely, and acquired a sense of security while engaged in their ordinary pursuits. The materiel for crime still existed, and is yet present in California to an alarming extent; but

---

The Life And Adventures  
Of James P. Beckwourth

---

order may be considered as confirmed in the supremacy, though inevitably many social evils still exist, which time alone will remedy.

In the month of April, 1849, the steamship California touched at Monterey, she being the first steam-vessel that had visited there from the States. I, with a party of fifteen others, stepped on board, and proceeded as far as Stockton, where we separated into various parties. I left with one man to go to Sonora, where we erected the first tent, and commenced a business in partnership. I had carried a small lot of clothing along with me, which I disposed of to the miners at what now seems to me fabulous prices. Finding the business thus profitable, I sent my partner back to Stockton for a farther supply, and he brought several mules laden with goods. This lot was disposed of as readily as the first, and at prices equally remunerative. This induced us to continue the business, he performing the journeys backward and forward, and I remaining behind to dispose of the goods and attend to other affairs. Sonora was rapidly growing into a large village, and our tent was replaced with a roomy house. I had a corps of Indians in my employ to take charge of the horses left in my care by miners and other persons, sometimes to the number of two hundred at once. I also employed Indians to work in the mines, I furnishing them with board and implements to work with, and they paying me with one half of their earnings. Their general yield was from five to six ounces a day each man, a moiety of which they faithfully rendered to me. Among my earliest visitors was a party of eighteen United States dragoons, who came to me to be fitted out with citizen's clothing, as they had brought to a sudden period their service to their country. It was an impossible thing at that time to retain troops in California, for the produce of the mines held out a temptation to desert that none seemed able to resist, as more gold could be dug sometimes in one day than would pay a private for a year's service in the army; even officers of considerable rank not unfrequently threw aside epaulette and sash, and shouldered the pick to repair to the diggings.

While at Sonora I learned that Colonel Fremont was at Mariposa, and I made a journey over there for the purpose of seeing him. I was disappointed in my expectation, and started to return home again. While proceeding quietly along, having left the main road and taken up a hollow, I perceived two men approaching me from the opposite direction, running at the top of their speed, and a crowd of Indians after them in pursuit. When they came up, they shouted to me to turn and fly for my life, or the Indians would certainly massacre me. I bade them stop, and quiet their fears. Seeing my self-possession, notwithstanding the near approach of the Indians, they at length halted, and approached close to me for protection against their pursuers. I then commanded the Indians to stand, telling them that they were my men. They said they were not aware of that, or they should not have chased them. The Indians I was acquainted with; they had been frequently to my house to invite me to their village. They wished to purchase goods of me, and had promised me a mule-load of gold dust if I would only supply them with what they were in need of. I accompanied them to their village, but my two rescued companions were not admitted into their lodges. They then renewed their promise of the mule-load of gold dust if I would bring out the goods they wanted. I never went to them, although it was remiss in me, for they had a great quantity of gold dust. I left after a brief visit, and rejoined the two men. They could not sufficiently express their gratitude to me for their deliverance, as they considered my opportune appearance alone saved their lives.

Becoming tired of my business in Sonora, for inactivity fatigued me to death, I disposed of my

---

The Life And Adventures  
Of James P. Beckwourth

---

interest in it for six thousand dollars, and went on to Sacramento City with the money in my pocket. From this place I traveled on to Murderer's Bar, which lies on the middle fork of the American River; here I found my old friend Chapineau house-keeping, and staid with him until the rainy season set in. Thence I proceeded to Greenwood Valley to establish my winter quarters, but I was seized with an attack of inflammatory rheumatism, and I had a nice time of it that winter. Before I was able to get about, I was called on by the inhabitants to go several miles to shoot a grizzly bear, and as I was unable to walk the distance, several of them volunteered to carry me. The bear was in the habit of walking past a row of cabins every morning on his return to his den, he having issued forth the preceding night to procure his evening meal. They had fired several shots at Bruin as he passed, but he had never deigned to pay any attention to the molestation. I mounted a horse, and rode some distance along his customary path, until I came to a tree which offered a fair shelter to await his approach. I placed my back against it as a support while I awaited his coming, the neighbors drawing off to a safe distance to witness the sport. By-and-by Grizzly came in sight, walking along as independently as an alderman elect. I allowed him to approach till he was within twenty paces, when I called out to him; he stopped suddenly, and looked around to ascertain whence the sound proceeded. As he arrested himself, I fired, and the ball entered his heart. He advanced ten or fifteen paces before he fell; the observers shouted to me to run, they forgetting in their excitement that I had not strength to move. The bear never stirred from where he fell, and he expired without a groan. When dressed, he weighed over fourteen hundred pounds. The grizzly bear is a formidable animal, and has acted a prominent part among the settlers of California. They are seldom known to attack a man unless wounded; in that case, if a tree is by, the hunter had better commence climbing. They are very plenty from the Sierra Nevada to the coast range of mountains. I have, in the course of my sojourn in the country, killed a great many of them, and met with some singular adventures.

On one occasion, while I was with the Crow Indians, there was a man of the name of Coe who was trapping in one of the neighboring streams, and I became alarmed for his safety, as Black Foot parties were skulking about in all directions, and were sure to kill him if they should find his camp. I found Coe, and told him my fears. He instantly gathered up his traps, and, mounting his horse, started toward me. When within fair gun-shot, an old bear sprang from a thicket, and landed upon the flanks of his horse, applying his teeth to the roots of the poor animal's tail, and holding him as if in a vice. Coe leaned over his horse's neck, and cried out, "Shoot, Jim! shoot quick!"

I could not help laughing to have saved my life, as he turned from side to side, though his situation was a critical one. I soon got in a favorable position, and put a ball in the animal's head, just behind the ear, when he liberated the horse and his rider, falling on his back apparently stone dead.

There is a story, remembered by the mountaineers, of a person named Keyere. He was a man who never exceeded one hundred pounds in weight, but was clear grit, what little there was of him. He went out one day alone, and his horse came back in the evening without his rider, and we thought that the Indians had made sure of poor Keyere's scalp. The next morning a small party of us started on the horse's trail, and found Keyere lying beside a large dead grizzly bear. Keyere was horribly mutilated and insensible, but still alive, and must have soon died if no one had come to his rescue.

---

The Life And Adventures  
Of James P. Beckwourth

---

We took him to camp, and nursed him with all possible care. When he recovered sufficiently to tell his tale, his story was received with shouts of laughter, and was rehearsed as a wonderful joke from camp to camp. Keyere stated that, when he saw the grizzly, he got from his horse to shoot him, but unfortunately only wounded the animal. The bear (so Keyere says) caught hold of him, and commenced a regular rough-and-tumble fight; finally Keyere got a good lick at the bear's head, knocked him down with his fist, and then attempted to run away. The bear, however, was too quick, when Keyere, becoming desperate, seized the beast by the tongue, drew his knife, and stabbed the creature to the heart!

Improbable as is the tale, it was a singular fact, that, when Keyere was found, his knife was up to the maker's name in the bear's side, and the body showed the effects of other severe stabs; but whether a man weighing ninety pounds could knock down the best of boxers, weighing twelve hundred, the reader can decide; but Keyere ever told the same tale, and became known far and near as the man that whipped the grizzly in a stand-up fight. Probably no man ever recovered who received so many wounds as did Keyere in this unequal combat.

CHAPTER XXXVI.

Discovery of Beckwourth's Pass.—No pecuniary Reward for public Services. —Transformation. — A new Character. — Emigrants at Home and at their Journey's End.—Description of the Happy Valley.—Interesting Reminiscence.

THE next spring I engaged in mining and prospecting in various parts of the gold region. I advanced as far as the American Valley, having one man in my company, and proceeded north into the Pitt River country, where we had a slight difficulty with the Indians. We had come upon a party who manifested the utmost friendship toward us; but I, knowing how far friendly appearances could be trusted to, cautioned my partner on no account to relinquish his gun, if the Indians should attempt to take it. They crowded round us, pretending to have the greatest interest in the pack that we carried, until they made a sudden spring, and seized our guns, and attempted to wrest them from our grasp. I jerked from them, and retreated a few steps; then, cocking my gun, I bade them, if they wished to fight, to come on. This produced a change in their feelings, and they were very friendly again, begging caps and ammunition of us, which, of course, we refused. We then walked backward for about one hundred and fifty yards, still keeping our pieces ready should they attempt further hostilities; but they did not deem it prudent to molest us again.

While on this excursion I discovered what is now known as "Beckwourth's Pass" in the Sierra Nevada. From some of the elevations over which we passed I remarked a place far away to the southward that seemed lower than any other. I made no mention of it to my companion, but thought that at some future time I would examine into it farther. I continued on to Shasta with my fellow-traveler, and returned after a fruitless journey of eighteen days.

After a short stay in the American Valley, I again started out with a prospecting party of twelve men. We killed a bullock before starting and dried the meat, in order to have provisions to last us during the trip. We proceeded in an easterly direction, and all busied themselves in searching for gold; but my errand was of a different character: I had come to discover what I suspected to be a pass.

It was the latter end of April when we entered upon an extensive valley at the northwest extremity of the Sierra range. The valley was already robed in freshest verdure, contrasting most delightfully with the huge snow-clad masses of rock we had just left. Flowers of every variety and

The Life And Adventures  
Of James P. Beckwourth

---

hue spread their variegated charms before us; magpies were chattering, and gorgeously-plumaged birds were caroling in the delights of unmolested solitude. Swarms of wild geese and ducks were swimming on the surface of the cool crystal stream, which was the central fork of the Rio de las Plumas, or sailed the air in clouds over our heads. Deer and antelope filled the plains, and their boldness was conclusive that the hunter's rifle was to them unknown. Nowhere visible were any traces of the white man's approach, and it is probable that our steps were the first that ever marked the spot. We struck across this beautiful valley to the waters of the Yuba, from thence to the waters of the Truchy, which latter flowed in an easterly direction, telling us we were on the eastern slope of the mountain range. This, I at once saw, would afford the best wagon-road into the American Valley approaching from the eastward, and I imparted my views to three of my companions in whose judgment I placed the most confidence. They thought highly of the discovery, and even proposed to associate with me in opening the road. We also found gold, but not in sufficient quantity to warrant our working it; and, furthermore, the ground was too wet to admit of our prospecting to any advantage.

On my return to the American Valley, I made known my discovery to a Mr. Turner, proprietor of the American Ranch, who entered enthusiastically into my views; it was a thing, he said, he had never dreamed of before. If I could but carry out my plan, and divert travel into that road, he thought I should be a made man for life. Thereupon he drew up a subscription-list, setting forth the merits of the project, and showing how the road could be made practicable to Bidwell's Bar, and thence to Marysville, which latter place would derive peculiar advantages from the discovery. He headed the subscription with two hundred dollars.

When I reached Bidwell's Bar and unfolded my project, the town was seized with a perfect mania for the opening of the route. The subscriptions toward the fund required for its accomplishment amounted to five hundred dollars. I then proceeded to Marysville, a place which would unquestionably derive greater benefit from the newly-discovered route than any other place on the way, since this must be the entrepôt or principal starting-place for emigrants. I communicated with several of the most influential residents on the subject in hand. They also spoke very encouragingly of my undertaking, and referred me, before all others, to the mayor of the city. Accordingly, I waited upon that gentleman (a Mr. Miles, and brought the matter under his notice, representing it as being a legitimate matter for his interference, and offering substantial advantages to the commercial prosperity of the city. The mayor entered warmly into my views, and pronounced it as his opinion that the profits resulting from the speculation could not be less than from six to ten thousand dollars; and as the benefits accruing to the city would be incalculable, he would insure my expenses while engaged upon it.

I mentioned that I should prefer some guarantee before entering upon my labors, to secure me against loss of what money I might lay out.

"Leave that to me," said the mayor; "I will attend to the whole affair. I feel confident that a subject of so great importance to our interests will engage the earliest attention."

I thereupon left the whole proceeding in his hands, and, immediately setting men to work upon the road, went out to the Truchy to turn emigration into my newly-discovered route. While thus busily engaged I was seized with erysipelas, and abandoned all hopes of recovery; I was over one hundred miles away from medical assistance, and my only shelter was a brush tent. I made my will, and resigned myself to death. Life still lingered in me, however, and a train of wagons came

---

The Life And Adventures  
Of James P. Beckwourth

---

up, and encamped near to where I lay. I was reduced to a very low condition, but I saw the drivers, and acquainted them with the object which had brought me out there. They offered to attempt the new road if I thought myself sufficiently strong to guide them through it. The women, God bless them! came to my assistance, and through their kind attentions and excellent nursing I rapidly recovered from my lingering sickness, until I was soon able to mount my horse, and lead the first train, consisting of seventeen wagons, through "Beckwourth's Pass." We reached the American Valley without the least accident, and the emigrants expressed entire satisfaction with the route. I returned with the train through to Marysville, and on the intelligence being communicated of the practicability of my road, there was quite a public rejoicing. A northern route had been discovered, and the city had received an impetus that would advance her beyond all her sisters on the Pacific shore. I felt proud of my achievement, and was foolish enough to promise myself a substantial recognition of my labors.

I was destined to disappointment, for that same night Marysville was laid in ashes. The mayor of the ruined town congratulated me upon bringing a train through. He expressed great delight at my good fortune, but regretted that their recent calamity had placed it entirely beyond his power to obtain for me any substantial reward. With the exception of some two hundred dollars subscribed by some liberal-minded citizens of Marysville, I have received no indemnification for the money and labor I have expended upon my discovery. The city had been greatly benefited by it, as all must acknowledge, for the emigrants that now flock to Marysville would otherwise have gone to Sacramento. Sixteen hundred dollars I expended upon the road is forever gone, but those who derive advantage from this outlay and loss of time devote no thought to the discoverer; nor do I see clearly how I am to help myself, for every one knows I can not roll a mountain into the pass and shut it up. But there is one thing certain: although I recognize no superior in love of country, and feel in all its force the obligation imposed upon me to advance her interests, still, when I go out hunting in the mountains a road for every body to pass through, and expending my time and capital upon an object from which I shall derive no benefit, it will be because I have nothing better to do.

In the spring of 1852 I established myself in Beckwourth Valley, and finally found myself transformed into a hotel-keeper and chief of a trading-post. My house is considered the emigrant's landing-place, as it is the first ranch he arrives at in the golden state, and is the only house between this point and Salt Lake. Here is a valley two hundred and forty miles in circumference, containing some of the choicest land in the world. Its yield of hay is incalculable; the red and white clovers spring up spontaneously, and the grass that covers its smooth surface is of the most nutritious nature. When the weary, toil-worn emigrant reaches this valley, he feels himself secure; he can lay himself down and taste refreshing repose, undisturbed by the fear of Indians. His cattle can graze around him in pasture up to their eyes, without running any danger of being driven off by the Arabs of the forest, and springs flow before them as pure as any that refreshes this verdant earth.

When I stand at my door, and watch the weary, way-worn travelers approach, their wagons holding together by a miracle, their stock in the last stage of emaciation, and themselves a perfect exaggeration of caricature, I frequently amuse myself with imagining the contrast they must offer to the tout ensemble and general appearance they presented to their admiring friends when they first set out upon their journey.

The Life And Adventures  
Of James P. Beckwourth

---

We will take a fancy sketch of them as they start from their homes. We will fancy their strong and well-stored wagon, bran-new for the occasion, and so firmly put together that, to look at it, one would suppose it fit to circumrotate the globe as many times as there are spokes in the wheels; then their fat and frightened steers, so high-spirited and fractious that it takes the father and his two or three sons to get each under the yoke; next, the ambitious emigrant and his proud family, with their highly-raised expectations of the future that is before them: the father, so confident and important, who deems the Eastern States unworthy of his abilities, and can alone find a sufficiently ample field in the growing republic on the Pacific side; the mother, who is unwilling to leave her pleasant gossiping friends and early associations, is still half tempted to believe that the crop of gold that waits their gathering may indemnify her for her labors; so they pull up stakes, and leave town in good style, expecting to return with whole cart-loads of gold dust, and dazzle their neighbors' eyes with their excellent good fortune.

The girls, dear creatures! put on their very best, as all their admiring beaux assemble to see them start, and to give them the last kiss they will receive east of the Nevada Mountains; for their idea is that they will be snatched up and married the moment they step over the threshold into California by some fine young gentleman who is a solid pile of gold, and they joyously start away, in anticipation of the event, their hats decked with ribbons, their persons in long-flowing riding-dresses, their delicate fingers glittering with rings, and their charming little ankles incased in their fashionable and neatly-laced gaiters.

At the close of day, perhaps amid a pelting rain, these same parties heave wearily into sight: they have achieved the passage of the Plains, and their pleasant Eastern homes, with their agreeable, sociable neighbors, are now at a distance it is painful to contemplate. The brave show they made at starting, as the whole town hurraed them off, is sadly faded away. Their wagon appears like a relic of the Revolution after doing hard service for the commissariat: its cover burned into holes, and torn to tatters; its strong axles replaced with rough pieces of trees hewn by the wayside; the tires bound on with ropes; the iron linchpins gone, and chips of hickory substituted, and rags wound round the hubs to hold them together, which they keep continually wetted to prevent falling to pieces. The oxen are held up by the tail to keep them upon their legs, and the ravens and magpies evidently feel themselves ill treated in being driven off from what they deem their lawful rights.

The old folks are peevish and quarrelsome; the young men are so headstrong, and the small children so full of wants, and precisely at a time when every thing has given out, and they have nothing to pacify them with. But the poor girls have suffered the most. Their glossy, luxuriant locks, that won so much admiration, are now frizzled and discolored by the sun; their elegant riding-habit is replaced with an improvised Bloomer, and their neat little feet are exposed in sad disarray; their fingers are white no longer, and in place of rings we see sundry bits of rag wound round, to keep the dirt from entering their sore cuts. The young men of gold, who looked so attractive in the distance, are now too often found to be worthless and of no intrinsic value; their time employed in haunting gaming-tables or dram-shops, and their habits corrupted by unthrift and dissipation.

I do not wish to speak disparagingly of my adopted state, and by no means to intimate the slightest disrespect to the many worthy citizens who have crossed the Plains. I appeal to the many who have witnessed the picture for the accuracy of my portraiture. So much good material constant-

---

The Life And Adventures  
Of James P. Beckwourth

---

ly infused into society ought to improve the character of the compound, but the demoralizing effects of transplantation greatly neutralize the benefits.

Take a family from their peaceful and happy homes in a community where good morals are observed, and the tone of society exercises a salutary influence over the thoughts of both old and young, and put them in such a place as this, where all is chaotic, and the principles that regulate the social intercourse of men are not yet recognized as law, and their dignity of thought and prestige of position is bereft from them. They have to struggle among a greedy, unscrupulous populace for the means of living; their homes have yet acquired no comfort, and they feel isolated and abandoned; and it is even worse upon the children; all corrective influence is removed from them, and the examples that surround them are often of the most vicious and worst possible description. All wholesome objects of ambition being removed, and money alone substituted as the reward of their greed, they grow up unlike their fathers; and it is only those in whom there is a solid substratum of correct feeling that mature into good citizens and proper men.

The girls, too, little darlings, suffer severely. They have left their worthy sweethearts behind, and can not get back to them; and those who now offer themselves here are not fit to bestow a thought upon. Every thing is strange to them. They miss their little social reunions, their quilting-parties, their winter quadrilles, the gossip of the village, their delightful summer haunts, and their dear paternal fireside. They have no pursuits except of the grosser kinds, and all their refinements are roughed over by the prevailing struggle after gold.

Much stock is lost in crossing the Plains, through their drinking the alkali water which flows from the Sierra Nevada, becoming impregnated with the poisonous mineral either in its source or in its passage among the rocks. There are also poisonous herbs springing up in the region of the mineral water, which the poor, famishing animals devour without stint. Those who survive until they reach the Valley are generally too far gone for recovery, and die while resting to recruit their strength. Their infected flesh furnishes food to thousands of wolves, which infest this place in the winter, and its effect upon them is singular. It depilates their warm coats of fur, and renders their pelts as bare as the palm of a man's hand. My faithful dogs have killed numbers of them at different times, divested entirely of hair except on the extremity of the nose, ears, and tail. They present a truly comical and extraordinary appearance.

This general loss of cattle deprives many of the poor emigrants of the means of hauling their lightened wagons, which, by the time they reach my ranch, seldom contain any thing more than their family clothing and bedding. Frequently I have observed wagons pass my house with one starveling yoke of cattle to drag them, and the family straggling on foot behind. Numbers have put up at my ranch without a morsel of food, and without a dollar in the world to procure any. They never were refused what they asked for at my house; and, during the short space that I have spent in the Valley, I have furnished provisions and other necessaries to the numerous sufferers who have applied for them to a very serious amount. Some have since paid me, but the bills of many remain unsettled. Still, although a prudent business man would condemn the proceeding, I can not find it in my heart to refuse relief to such necessities, and, if my pocket suffers a little, I have my recompense in a feeling of internal satisfaction.

My pleasant valley is thirty-five miles at its greatest breadth. It is irrigated by two streams, with their various small tributaries. These form a junction about ten miles from my house up the valley, which, as you remount it, becomes the central fork of the Feather River. All these streams abound

The Life And Adventures  
Of James P. Beckwourth

---

with trout, some of them weighing seven or eight pounds. In the main one there are also plenty of otter. Antelopes and deer are to be found the entire year, unless the winter is unusually severe, when they cross the mountains to the eastern slope. Grizzly bears come and disappear again, without asking leave of any man. There are wolves of every species, together with foxes, hares, rabbits, and other animals. Of the feathered tribe, we have wild geese, ducks, sage-hens, grouse, and a large variety of smaller birds. Service-berries and cherries are the only kinds of fruit that grow from nature's cultivation.

The growth of timber about the valley is principally pitch-pine, although there is a considerable intermixture of cedar. I have never yet sown any grain, but I have cultivated a small kitchen-garden, and raised cabbages, turnips, and radishes of great size. I have never known the snow to fall to a greater depth than three feet, and when the storms are over it dissolves very rapidly, notwithstanding the elevation is many thousand feet above the level of the Pacific. The snow clings to the mountain peaks that overlook the valley to the eastward the year round, and as it is continually melting and feeding the streams, it keeps the water icy cold all the summer through. About a mile and a half distant from my house there is a large sulphur spring, and on the eastern slope, in the desert, there are copious hot springs, supplying the traveler with boiling water for his coffee without the cost of fuel.

The Truchy rises on the summit of the Sierra Nevada, opposite the head-waters of the Yuba, and runs in an easterly direction until it loses itself in Pyramid Lake, about fifty miles east of this valley. This lake is a great natural curiosity, as it receives not alone the waters of the Truchy, but numerous other streams, and has no visible outlet; its surcharge of water probably filtering into the earth, like St. Mary's River, and some others I have met with. There is no place in the whole state that offers so many attractions for a few weeks' or months' retirement; for its charms of scenery, with sylvan and piscatorial sports, present unusual attractions. During the winter season my nearest neighbors are sixteen miles away; in the summer they are within four miles of my house, so that social broils do not much disturb me.

There is a pleasant historical incident associated with St. Mary's River, which, as it can be familiar to but few of my readers, I will relate here. The St. Mary's River is known to most persons as the River Humboldt, since that is the name that has been since conferred upon it, in honor of the distinguished European traveler. I prefer the former name, as being more poetical, though less assuming. An Indian woman, the wife of a Canadian named Chapineau, who acted as interpreter and guide to Lewis and Clarke during their explorations of the Rocky Mountains, was suddenly seized with the pains of labor, and gave birth to a son on the banks of this mysterious river. The Redheaded Chief (Clarke) adopted the child thus rudely issued into the world, and on his return to St. Louis took the infant with him, and baptized it John Baptist Clarke Chapineau. After a careful culture of his mind, the boy was sent to Europe to complete his education. But the Indian was ineffaceable in him. The Indian lodge and his native mountain fastnesses possessed greater charms than the luxuries of civilized life. He returned to the desert and passed his days with his tribe. Mary, the mother of the child, was a Crow, very pleasing and intelligent, and may have been, for aught I know, connected with some of my many relatives in that tribe. It was in honor of this event, and to perpetuate her memory, that the river received its original name, St. Mary's, and, as such, is still known to the mountaineers.

CHAPTER XXXVII.

---

The Life And Adventures  
Of James P. Beckwourth

---

Mistakes regarding the Character of the Indian.—Extent of the Western Tribes.—Their Character.—How a War against them should be conducted.—Reflections.—Closing Address to the Indian Heroine.

As an American citizen, a friend of my race, and a sincere lover of my country, and also as one well acquainted with the Indian character, I feel that I can not properly conclude the record of my eventful life without saying something for the Red Man. It should be remembered, when judging of their acts, that they consider the country they inhabit as the gift of the "Great Spirit," and they resent in their hearts the invasion of the immigrant just as much as any civilized people would, if another nation, without permission, should cross their territory. It must also be understood, that the Indians believe the buffalo to be theirs by inheritance, not as game, but in the light of ownership, given to them by Providence for their support and comfort, and that, when an immigrant shoots a buffalo, the Indian looks upon it exactly as the destruction by a stranger of so much private property.

With these ideas clearly in the mind of the reader, it can be understood why the Indian, in destroying a cow belonging to white people, or stealing a horse, considers himself as merely retaliating for injuries received, repaying himself, in fact, for what he has lost. For this act on the part of the Red Man, the United States troops are often turned indiscriminately upon his race; the innocent generally suffer, and those who have raised the storm can not understand of what crime they can be guilty.

But if the government is determined to make war upon the Western tribes, let it be done intelligently, and so effectually that mercy will temper justice. To attempt to chastise Indians with United States troops is simply ridiculous; the expense of such campaigns is only surpassed by their inefficiency. The Indians live on horseback, and they can steal and drive off the government horses faster than it can bring them together. The Indians having no stationary villages, they can travel faster, even with the incumbrance of their lodges, women, and children, subsisting themselves on buffalo slain on the way, than any force, however richly appointed, the country could send against them. An army must tire out in such a chase before summer is gone, while the Indians will constantly harass it with their sharpshooters, and, should several powerful tribes unite — not an unusual occurrence — many thousand men would make no impression.

It should also be recollected by our officers sent to fight in the Rocky Mountains, that the Indians have a mode of telegraphing by the aid of robes and mirrors, and thus, by having their spies stationed at convenient distances, they convey intelligence of the movements of their enemies at great distances and in a very few minutes, thus informing villages whether it would be best to retreat or not. Some tribes telegraph by fires at night, and by smoke in the daytime. An officer might hear of a band of warriors encamped at a certain place; he immediately makes a forced march, and when his troops arrive at their destination, those same warriors may be many miles in his rear, encamped on his trail.

A village of three hundred lodges of Crows or Cheyennes could, within thirty minutes after receiving an order to move, have all their lodges struck, the poles attached to the horses, and their men, women, and children going at full speed, and could thus outstrip the best dragoons sent in their pursuit.

I have seen enough of Indian treaties and annuities to satisfy me that their effects for good are worse than fruitless. The idea formed by the Indians is that the annuities are sent to them by the

The Life And Adventures  
Of James P. Beckwourth

---

great white chief because he is afraid of them, and wishes to purchase their friendship. There are some of the tribes — a very few — who would keep a treaty sacred; but the majority would not be bound by one, for they can not understand their nature. When caught at a disadvantage, and reduced to enter into a compact, they would agree to any proposals that were offered; but when the controlling power is withdrawn, and they can repeat their depredations with apparent impunity, no moral obligation would restrain them, and the treaty that was negotiated at so much cost to the country proves a mere delusion.

The officer having charge of an expedition against the Indians should rightly understand which band of a tribe he is commissioned to punish. The Siouxs, for instance, which, a few years ago, could raise thirty thousand warriors, are divided into many bands, which, at times, are hundreds of miles apart. One band of that tribe may commit a depredation on the emigrant road, and the other bands not even have heard of it they do not hold themselves amenable for the misdeeds of another body totally distinct from them in social relations, and to inflict chastisement upon them in such a case would be a manifest injustice. But in a case of extreme danger all these bands coalesce.

Other tribes have the same divisions into distinct bands, and many are hence led into the belief that each band is a tribe. The Siouxs range over a territory upward of a thousand miles in extent from north to south, and their country embraces some of the most beautiful spots in the world, as well for natural scenery as for extreme productiveness of soil. The Crows have but one band proper, although they are generally divided into two villages, as being a more convenient arrangement to afford pasture for their immense herds of horses, and also to hunt the buffalo. But these two villages are seldom more than three hundred miles apart, generally much nearer; they come together at least once a year, and have frequent accidental coalitions in the course of their wanderings. They speak the Grovan language, from which nation they are an offshoot.

The Pawnees are probably the most degraded, in point of morals, of all the Western tribes; they are held in such contempt by the other tribes that none will make treaties with them. They are a populous nation, and are inveterate against the whites, killing them wherever met. A treaty concluded with that nation at night would be violated the next morning. Those who engage in warfare with the Western Indians will remember that they take no prisoners except women and children. It has generally been believed that the Siouxs never kill white men, but this is a mistake; they have always killed them. I have seen white men's scalps in their hands, and many still fresh hanging in the smoke of their lodges.

The Western Indians have no hummocks or everglades to fight among, but they have their boundless prairies to weary an army in, and the fastnesses of the Rocky Mountains to retreat to. Should a majority of those powerful nations coalesce in defense against one common enemy, it would be the worst Indian war — the most costly in blood and treasure that the national government has ever entered into. The coalition tribes could bring two hundred and fifty thousand warriors against any hostile force, and I know I am greatly within the limits of truth in assigning that number to them.

If it is the policy of government to utterly exterminate the Indian race, the most expeditious manner of effecting this ought to be the one adopted. The introduction of whisky among the Red Men, under the connivance of government agents, leads to the demoralization and consequent extermination, by more powerful races, of thousands of Indians annually. Still, this infernal agent

The Life And Adventures  
Of James P. Beckwourth

---

is not effectual; the Indians diminish in numbers, but with comparative slowness. The most direct and speedy mode of clearing the land of them would be by the simple means of starvation — by depriving them of their hereditary sustenance, the buffalo. To effect this, send an army of hunters among them, to root out and destroy, in every possible manner, the animal in question. They can shoot them, poison them, dig pit-falls for them, and resort to numberless other contrivances to efface the devoted animal, which serves, it would seem, by the wealth of his carcass, to preserve the Indian, and thus impede the expanding development of civilization.

To fight the Indians *vi et armis*, the government could employ no such effectual means as to take into its service five hundred mountaineers for the space of one year, and any one tribe of Indians that they should fall foul of could never survive the contest. Such men, employed for that purpose, would have no encumbrance from superfluous baggage to impede them in a pursuit or a retreat over their illimitable plains. The mode of life of a mountaineer just fits him for an Indian fighter, and if he has to submit to privation, and put up with an empty commissariat, he has the means of support always at hand. He is so much an Indian from habit that he can fight them in their own way: if they steal his horses, he can steal theirs in return; if they snatch a hasty repose in the open air, it is all he asks for himself, and his health and spirits are fortified with such regimen. It is only by men possessing the qualities of the white hunter, combined with Indian habits, that the Indians can be effectually and economically conquered.

I have now presented a plain, unvarnished statement of the most noteworthy occurrences of my life, and, in so doing, I have necessarily led the reader through a variety of savage scenes at which his heart must sicken. The narrative, however, is not without its use. The restless youthful mind, that wearies with the monotony of peaceful every-day existence, and aspires after a career of wild adventure and thrilling romance, will find, by my experience, that such a life is by no means one of comfort, and that the excitement which it affords is very dearly purchased by the opportunities lost of gaining far more profitable wisdom. Where one man would be spared, as I have been, to pass through the perils of fasting, the encounters with the savage, and the fury of the wild beasts, and still preserve his life, and attain an age of near threescore, it is not too much to say that five hundred would perish, with not a single loved one near to catch his last whispered accent, would die in the wilderness, either in solitude, or with the fiendish savage shrieking in revolting triumph in his ear.

I now close the chapter of my eventful life. I feel that time is pressing; and the reminiscences of the past, stripped of all that was unpleasant, come crowding upon me. My heart turns naturally to my adopted people. I think of my son, who is the chief; I think of his mother, who went unharmed through the medicine lodge; I think of Bar-chee-am-pe, the brave heroine. I see her, tearful, watching my departure from the banks of the Yellow Stone. Her nation expects my return, that I may be buried with my supposed fathers, but none looks so eagerly for the great warrior as

PINE LEAF, THE INDIAN HEROINE.

I've seen her in her youthful years;  
Her heart was light and free,  
Her black eyes never dimm'd with tears,  
So happy then was she.

The Life And Adventures  
Of James P. Beckwourth

---

When warriors from the fight return'd,  
And halted for display,  
The trophies that the victors won  
She was first to bring away.  
I've seen her kiss her brother's cheek  
When he was called to go  
The lurking enemy to seek,  
Or chase the buffalo.  
She loved him with a sister's love  
He was the only son;  
And "Pine Leaf" prized him far above  
The warriors' hearts she'd won.  
I've seen her in her mourning hours  
That brother had been slain  
Her head, that oft was decked with flowers,  
Now shed its crimson rain;  
Her bleeding head and bleeding hand  
Her crimson, clotted hair  
Her brother's in the spirit land,  
And hence her keen despair.  
I've heard her make a solemn vow  
"A warrior I will be  
Until a hundred foes shall bow,  
And yield their scalps to me;  
I will revenge my brother's death —  
I swear it on my life,  
Or never, while I draw a breath,  
Will I become a wife."  
I've seen her on her foaming steed,  
With battle-axe in hand,  
Pursuing at her utmost speed  
The Black Foot and Shi-an.  
I've seen her wield her polished lance  
A hundred times and more,  
When charging fierce in the advance  
Amid the battle's roar.  
I've seen her with her scalping-knife  
Spring on the fallen foe,  
And, ere he was yet void of life,  
Make sure to count her coo.  
I've seen her, at full speed again,  
Oft draw her trusty bow,  
Across her arrow take good aim,

The Life And Adventures  
Of James P. Beckwourth

---

And lay a warrior low.  
I've heard her say, "I'll take my shield,  
My battle-axe, and bow,  
And follow you, through glen or field,  
Where'er you dare to go;  
I'll rush amid the blood and strife  
Where any warrior leads:"  
Pine Leaf would choose to lose her life  
Amid such daring deeds.  
I've heard her say, "The spirit land  
Is where my thoughts incline,  
Where I can grasp my brother's hand,  
Extended now for mine.  
There's nothing now in this wide world  
No ties that bid me stay;  
But, a broken-hearted Indian girl,  
I weep both night and day.  
" He tells me in my midnight dreams  
I must revenge his fall,  
Then come where flowers and cooling streams  
Surround their spirits, all.  
He tells me that the hunting-ground,  
So far away on high,  
Is filled with warriors all around  
Who nobly here did die.  
"He says that all is joy and mirth  
Where the Great Spirit lives,  
And joy that's never known on earth  
He constantly receives.  
No brother to revenge his wrongs —  
The war-path is my road  
A few more days I'll sing his songs,  
Then hie to his abode."  
I've heard her say, "I'll be your bride;  
You've waited long, I know;  
A hundred foes by me have died,  
By my own hand laid low.  
'Tis for my nation's good I wed;  
For I would still be free  
Until I slumber with the dead;  
But I will marry thee."  
And when I left the heroine,  
A tear stood in her eye

The Life And Adventures  
Of James P. Beckwourth

---

As last I held her hand in mine,  
And whispered a good-by.  
“Oh, will you soon return again?”  
The heroine did say;  
“Yes, when the green grass decks the plain,”  
I said, and came away.  
THE END.

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

CHAPTER 1

MR. MANUEL LISA, of whom I have spoken in the "Views," was chosen by the company, to take the management of its affairs on the Missouri, and endeavor to retrieve them if possible. The profits expected, owing to a variety of unforeseen misfortunes, had not been realized; indeed, it appeared to be a prevailing opinion, that the situation of the company was desperate. Besides the loss by fire, at the Sioux establishment, and the hostility of the Blackfoot Indians, the remnant of the company's men, under Mr. Henry, had crossed the Rocky mountains, and it was not known what had become of them. To ascertain this, was therefore another object of the expedition, and if possible, to carry them assistance. Mr. Lisa, also, privately entertained the hope of being able to make peace with the Blackfoot Indians, and to be permitted to remain quietly in the country, which offered the greatest advantages to the company.

A person better qualified for this arduous undertaking, could not have been chosen. Mr. Lisa is not surpassed by any one, in the requisite experience in Indian trade and manners, and has few equals in perseverance and indefatigable industry. Ardent, bold and enterprising, when any undertaking is begun, no dangers, or sufferings are sufficient to overcome his mind. I believe there are few men so completely master of that secret of doing much in a short space of time, which arises, from turning every moment to advantage, as will appear in the course of the Journal. This panegyric is due to Mr. Lisa, and it would be unjust in me to withhold it, after the many marks of attention I received from him. Unfortunately, however, from what cause, I know not, the majority of the members of the company have not the confidence in Mr. Lisa, which he so highly merits; but on this occasion; he was intrusted with the sole direction of their affairs, in some degree, from necessity, as the most proper person to conduct an expedition, which appeared little short of desperate. The funds of the company were at so low an ebb, that it was with some difficulty a barge of twenty tons could be fitted out, with merchandise to the amount of a few thousand dollars, and to procure twenty hands and a patron. The members were unwilling to stake their private credit, where prospects were so little flattering. This was also the last year appointed for the continuance of the association, and there was no certainty of its being renewed.

With respect to myself, I must own to the reader, that I had no other motive for undertaking a tour of several thousand miles, through regions but seldom marked, even by the wandering footsteps of the savage, than the mere gratification of what he will term an idle curiosity: and I must confess that I might have employed my time more beneficially to myself, and more usefully to the community. Would that I were able to make some amends, by describing the many interesting objects which I witnessed, in such a manner as to enable the reader to participate in the agreeable parts of my peregrinations.

We set off from the village of St. Charles, on Tuesday the 2d of April, 1811, with delightful weather. The flood of March, which immediately succeeds the breaking up of the ice, had begun to subside, yet the water was still high. Our barge was the best to ever ascended this river, and manned with twenty stout oars-men. As Mr. Lisa had been a sea captain, he took much pains in rigging his boat with a good mast, and main and top sail; these being great helps in the navigation of this river. Our equipage, chiefly composed of young men, though several have already made a voyage to the upper Missouri, of which they are exceedingly proud, and on that account claim a kind of precedence over the rest of the crew. We are in all, twenty-five men, well armed, and completely prepared for defense. There is, besides, a swivel on the bow of the boat, which, in case of attack,

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

would make a formidable appearance; we have also two brass blunderbusses in the cabin, one over my birth, and the other over that of Mr. Lisa. These precautions were absolutely necessary from the hostility of Sioux bands, who, of late had committed several murders and robberies on the whites, and manifested such a disposition that it was believed impossible for us to pass through their country. The greater part of the merchandise, which consisted of shrouding, blankets, lead, tobacco, knives, guns, beads, &c. was concealed in a false cabin, ingeniously contrived for the purpose; in this way presenting as little as possible to tempt the savages. But we hoped, that as this was not the season for the coming on the river of the wandering tribes 2, the fall being the usual time, we might pass unnoticed. Mr. Wilson P. Hunt had set off with a large party, about twenty-three days before us, on his way to the Columbia; we anxiously hoped to overtake him before he entered the territory of the Sioux Nation; for this purpose it was resolved to strain every nerve, as upon it, in a great measure depended the safety of our voyage.

Having proceeded a few miles above St. Charles, we put to shore, some of our men still remaining at the village. It is exceedingly difficult to make a start on these voyages, from the reluctance of the men to terminate the frolic with their friends, which usually precedes their departure. They set in to drinking and carousing, and it is impossible to collect them on board. Sometimes they make their carousels at the expense of the Bourgeois 3; they are credited by the tavern keeper, who knows that their employer will be compelled to pay, to prevent the delay of the voyage. Many vexations are practiced in these cases. It was found impossible to proceed any further this evening; the men in high glee from the liquor they had drank before starting; they were therefore permitted to take their swig.

We had on board a Frenchman named Charbonet 4, with his wife, an Indian woman of the Snake Nation, both of whom had accompanied Lewis and Clark to the Pacific, and were of great service. The woman, a good creature, of a mild and gentle disposition greatly attached to the whites, whose manners and dress she tries to imitate, but she had become sickly, and longed to revisit her native country; her husband, also who had spent many years amongst the Indians, was become weary of a civilized life. So true, it is, that the attachment to the savage state of nature, (with which appellation is has commonly been dignified,) is much stronger than to that of civilization, with all its comforts, its refinements and its security.

Wednesday April 3d. About two o'clock in the afternoon, having at length succeeded in getting all hands on board, we proceeded on our voyage. Found an excessive current, augmented by the state of the waters. Having come about six miles, encamped. In the course of this evening, had as much reason to admire the dexterity of our Canadians and Creoles, as I had before to condemn their frivolity. I believe an American could not be brought to support with patience the fatiguing labors, and submission, which these men endure. At this season, when the water is exceedingly cold, they leap in without a moment's hesitation. Their food consists of lied corn homony for breakfast, a slice of fat pork and a biscuit for dinner, and a pot of mush for supper, with a pound of tallow in it. Yet this is better than the common fair; but we were about to make an extraordinary voyage, the additional expense was not regarded.

Thursday 4th. Last night we were completely drenched by rain; the whole party, the bank itself, in a bad condition this morning. Weather somewhat cloudy -- clearing up. -- A Short distance from out encampment, the hills approach the river N.E. side 5; they are not high, but rocky, and so not continue more than a mile, when the alluvium again commences. -- About 8 a fine breeze S.E. --

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

sailed until 12 -- passed several plantations S.W. side 6. The bottoms very extensive on the lower part of this river, the banks high, far above the reach of inundation. Timber, principally cotton wood; a few of the trees intermixed with it, are beginning to vegetate. The red-bud, the tree which blooms earliest in our woods, and so much admired by those who descend the Ohio early in the spring, appears in a few places. Passed an island where the river widens considerably; the current rapid, obliged to abandon oars and poles, and take the towing line. Above the island the high land again approaches the river; there is a brownish colored rock, with a few dwarf cedars growing on the top of the clefts. In going too near shore, we had the misfortune to have our top mast broken by the projecting limb of a tree. Encamped some distance. This evening serene and beautiful; the sand-bars begin to appear; several deer seen. I observed on the sand-bars, a kind of scaffolds, ten or fifteen feet in height, which I was informed were erected by the neighboring settlers for the purpose of shooting the deer by moon light, which usually come of the thickets at this time, to avoid the misquotes and to sport on the smooth beach; the hunter ascends the scaffold, and remains until the deer approaches. Came this day about twenty miles; navigation comparatively easy.

Friday 5th. Wind S.E. this morning, enabling us to set off under sail -- continued until ten, when it forsook us. Passed several plantations 6, and two islands. The bluffs disappear on the N.E. side, and are seen on the S.W. for the first time since our leaving St. Charles. They rise about two hundred feet, and are faced with rock, in masses separated by soil and vegetation. These are called the Tavern Rocks 7, from the circumstance of a cave in one of them affording a stopping place for voyagers ascending, or returning to their homes after a long absence. The Indians seem to have had some veneration for the spot, as it is tolerably well scratched over with their rude attempts at representing birds and beasts. From this place, through a long reach, or straight part of the river, we have a distant view of the terminating bluffs N.E. side. A violent storm of rain, wind and thunder, compelled us to put to shore, having passed a very dangerous and difficult place. The number of trees which had lately fallen into the river, and the danger to be apprehended from others, which seemed to have but a slender hold, rendered our situation disagreeable. Towards evening, a canoe with six or seven men passed on the other side, but we were unable to distinguish them. At this place I measured a cotton-wood tree, which was thirty-six feet in circumference; they grow larger on the lower parts of this river, than perhaps any where else in America. The bluffs, in the course of this day appeared higher, but not so abrupt or rocky.

Saturday 6th. Having passed a small willow island, we got beyond the hills on the S.W. side. At 11 o'clock, the wind became so high, that we were compelled to stop, as it blew directly down the river. This is near Boon's settlement -- About sixty miles from St. Charles 8. A number of plantations at the edge of the bottom 9. The wind having abated in the evening, we proceeded a few miles further, and encamped.

Sunday 7th. Water rising. Crossed to the S.W. side, and encountered a very swift current at the head of the willow island. The difficulty of this navigation is not easily described. Made Point Labadie 10, so called from a French trader, who formerly wintered there. Forty years ago this was thought a distant point on the Missouri, at present there are tolerable plantations every where through the bottom. The carcasses of several drowned buffaloes passed by us; it is said that an unusual number of them has been drowned this year. -- Some have been seen floating on the river at St. Louis. A gentleman lately described, declares that he counted forty on the head of an island.

---

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

Immediately below Point Labadie, the river contracts its breadth, and is confined to a channel of three or four hundred yards wide. Passed between an island and the main shore; a very narrow channel, but the current and distance less. A channel of this sort is often taken in preference, and it is one of the means of facilitating the ascending of this uncommonly rapid river; but there is sometimes danger of the upper end being closed with logs and billets of wood matted together, as it turned out in the present instance; fortunately after the labor of an hour we were able to remove the obstacles, else we should have been compelled to return. Opposite the head of the island there is a tolerable log house, and some land cleared; the tenant, a new comer, with a wife and six children, had nothing to give or sell. Here the banks fall in very much; the river more than a mile wide. A great impediment in opening lands on this river, is the dilapidation of the banks, which immediately ensue when the trees are cut away, from the rapid current upon the light soil of a texture extremely loose. It will be found absolutely necessary to leave the trees to stand on the borders of the river. The river exceedingly crooked in the course of this day. A number of plantations on both sides. Having made about fourteen miles, we put to shore, after passing a very difficult embarras 11. This word needs some explanation. Independent of the current of that vast volume of water rolling with great impetuosity, the navigation is obstructed by various other impediments. At the distance of every mile or two, and frequently at less distant intervals, there are embarras, or rafts, formed by the collection of trees closely matted. and extending from twenty to thirty yards. The current vexed by these interruptions, rushes round them with great violence and force. We may now judge what a boat encounters in grappling round these rafts. When the oars and grappling books were found insufficient, the towing line was usually resorted to with success. There is not only difficulty here, but considerable danger, in case the boat should swing round. In bends where the banks fall in, as in the Mississippi, trees lie for some distance out in the river. In doubling points, in passing sawyers, difficulties are encountered. The water is generally too deep to admit of poling; it would be absolutely impossible to stem the current further out than a few yards; the boat usually passes about this distance from the bank. Where the bank has not been washed steep, which is most usually the case, and the ground newly formed, the young trees, of the willow, cotton-wood &c. which overhang the stream, afford much assistance in pulling the boat along with the hands.

Monday 8th. The water fell last night as much as it had risen. About ten came in sight of a little village N.E. side called Charette 12. There are about thirty families here, who hunt, and raise a little corn. A very long island lies in the bend in which this village is situated. Above this island, passed under a gentle breeze, some very handsome bluffs, S.W. side to the isle aux Boeufs 13; they are about one hundred feet high, and excepting in a few places where rocks appear, covered with oak and other timber. At this place, the river makes a considerable bend. Instead of taking the main channel, we entered a smaller one between the island and the shore, which will shorten the distance; the current not so strong. The channel is about fifty yards wide, and very handsome, having clean even banks, and resembling a small river. -- It is about four miles in length.

Through all these islands, and on the Missouri bottoms, there are great quantities of rushes, commonly called scrub grass. (This is the case for several hundred miles up the Missouri) They grow from four to five feet high, and so close, as to render it very disagreeable, as well as difficult, to pass through the woods. The cattle feed upon the winter, answering the same purpose as cane on the Mississippi.

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

At the upper end of the isle aux Boeufs, we were compelled, about five o'clock in the evening, to put to shore, on account of a violent storm, which continued until after dark. In the badly constructed cabin of our boat, we were wet to the skin; the men were better off in their tents, made by a blanket stretched over twigs.

We have been accompanied for these two days past by a man 14 and two lads, ascending in a canoe. This evening they encamped close by us, placing the canoe under shelter of our boat. Unsheltered, except by the trees on the bank, and a ragged quilt drawn over a couple of forks, they abode "the pelting of the pitiless storm," with apparent indifference. These people are well dressed in handsome home made of cotton cloth. The man seemed to possess no small share of pride and self importance, which, as I afterwards discovered, arose from his being a captain of militia. He borrowed a kettle from us, and gave it to one of his boys. When we were about to sit down to supper, he retired, but returned when it was over; when asked, why he had not staid to do us the honor of supping with us; "I thank you gentlemen," said he, licking his lips with satisfaction, "I have just been eating an excellent supper." -- He had scarcely spoken, when the patron (The Patron is the fresh-water sailing-master) 15 came to inform Mr. Lisa, the boys were begging him for a biscuit 16, as they had eating nothing for two days! our visitant was somewhat disconcerted, but passed it off with, "Poh! I'm sure they can't be suffering!"

He resides on the Gasconade; was the second family which settled in that quarter, about three years ago. He has present about 250 men on his muster-roll. We were entertained by him with a long story of his having pursued some Pottawatomise, who had committed robberies on the settlements some time last summer; he made a narrow escape, the Indians having attacked his party in the night time, and killed four of his men after desperate resistance. The captain had on board a barrel of whiskey to set up tavern 17 with, a bag of cotton for his wife to spin, and a couple of kittens, for the purpose of augmenting his family; these kept up such doleful serenades, during the night, that I was scarcely able to close my eyes.

CHAPTER II

Tuesday 9th. Set off this morning with a light breeze, which continued to augment until ten, when from a change in the course of the river, it was unfavorable for two or three miles. Passed a number of plantations on both sides, and isle a la loutre 18, which is about twelve miles long, and two wide, near the N.E. side; it has a compact settlement. In the course of the day we lost sight of our captain of the Gasconade, who was not able to keep up with us in his canoe.

Passed at four o'clock, the Gasconade, a considerable river, S.W. side, which rises with the Maramek, and has been ascended upwards of one hundred miles, in canoes; but its channel is rocky and rough. It is ninety miles from the mouth of the Missouri. The lands on its borders are broken and hilly, and badly wooded. Before reaching the Gasconade, we passed a long range of bluffs, or rather hills, well covered with wood, but terminating at the entrance of the river in rocky precipices; this range appears again on the other side of the Gasconade. -- There is a very long reach here, of fifteen or twenty miles; the Gasconade hills, on the S.W. side, are washed by the Missouri the whole of this distance. This day was sufficient to prove the efficacy of our sails, in navigating this river; we passed with ease, places much worse than any we had encountered since leaving St. Charles. Encamped six miles above 19 the Gasconade; heavy rains last night.

Wednesday 10th. Cloudy -- crossed to the bluffs, N.E. side, which are high and rocky. Passed Montburn's tavern and river 20; another stopping place for voyagers. Passed an embarras, N.E.

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

side, the most difficult since we started. There are wide bottoms above these bluffs, on both sides of the river. The wind against us throughout the whole of this day. The verdure is observed to be rapidly increasing; the smaller trees and shrubs are already in gay green. From the color of the water on the S.W. side, it appears that the Osage river is paying the annual tribute.

Thursday 11th. A fine morning. Current so strong S.W. side, from the waters of the Osage, that we were compelled to cross to an island. Hills on the N.E. side, not high of rocky; continued on this side to ascend throughout the day, though with difficulty, on account of numerous embarras, and falling in of the banks. This is a fine country; the lands extremely rich, and covered with a great variety of trees. Stopping a few moments at the cabin of a Frenchman, who is beginning to open a plantation. In company with the interpreter, I proceeded by land, across a point, about two miles to the village of cote sans dessein 21, where we arrived nearly three hours before the barge. We inquired with eagerness after the party of Mr. Hunt 22, we were informed that he had passed this place twenty-one days ago. Thus far, it appears that we have gained but two days upon him.

Friday 12th. Weather fine. -- a gentle breeze on the river from the S.E. Remained here until eleven, engaged in repairing our cabin. Mr. Lisa here employed a famous hunter, named Castor, a Kansas Indian, who had been brought up from infancy amongst the whites.

Cote sans dessein, is a beautiful place, situated on the N.E. side of the river, and in sight of the Osage. It will in time become a considerable village. The beauty and fertility of the surrounding country cannot be surpassed. It is here that we met with the first appearance of prairie, on the Missouri, but it is handsomely mixed with woodland. The wooded country on the N.E. extends at least thirty miles, as far up as this place, and not less than fifteen on the other side. The name is given to this place, from the circumstance of a single detached hill filed with limestone, standing on the bank of the river, about six hundred yards long, and very narrow. -- The village has been established about three years; there are thirteen French families, and two or three of Indians. They have handsome fields in the prairie, but their time is spent in hunting. From their eager inquiries after merchandise, I perceived we were already remote from the settlements.

We continued under way, with a light breeze, but scarcely sufficient to waft the barge of itself, without the aid of oars.-- Handsome wooded upland, S.W. side, gently sloping to the river, and not recall. For many reasons, I would prefer these situations to the bottom, where the soil is richer. Passed the Great Osage river, one hundred and thirty-three miles from the mouth of the Missouri, and navigable about six hundred miles. There is much fine land immediately on its borders, but the prairies stretch out on either side, and to the westward are almost boundless. The Osage villages are situated about two hundred miles up.

Passed a long island, called l'isle à cedar, Cedar Island 23. A number of islands on the Missouri bear this name, from the growth of cedar upon them, in this particular, differing from the islands of the Mississippi. In this island the best part of the wood had been cut down, and rafted to St. Louis, to supply the settlement with this wood, of which there is a great consumption.

Throughout the course of this day, we found the navigation less arduous and painful; owing principally to the falling of the waters, and to our having passed one of those rivers which add to the current of the Missouri. The sand bars, begin to present a pleasing appearance; several miles in length, clean and smooth. Instead of ascending along either side, we pursued the middle of the river, along the sand bars. Encamped N.E. side, just above the Cedar island. The bars and the sides of the river are everywhere marked with deer tracks.

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

Saturday 13th. A fine morning -- somewhat cool -- set off with a favorable breeze. Passed hills on the S.W. side -- saw five or six deer sporting on a sand bar. Passed the Manitoo rocks, S.W. side, a la Bonne Femme creek 24. The country hereabout, is delightful; the upland sloping gently to the river, timbered with oak, hickory, ash, &c. The lands on this stream are said not to be surpassed by any in the territory.

After having had a favorable wind the greater part of the day, encamped at the Roche Percee, perforated rock; a high craggy cliff on the N.E. side. This is the narrowest part of the river I have yet seen; it is scarcely two hundred yards wide. -- Made in the course of this day about twenty-eight miles, for which we were indebted to the favorable wind. Some of us considered this good fortune, a reward for the charity which was manifested by us yesterday, in spending an hour to relieve a poor ox, which was swamped near the bank. The poor creature had remained here ten or twelve days, and the sand into which he had sunk, was become hard and solid. The wolves had paid him friendly visits from time to time, to inquire after his health, while buzzards, crows, and eagles, tendered their salutations from the boughs of the neighboring trees.

Sunday 14th. Violent wind all night -- hoisted sail before daylight, in order to take advantage of the wind. Passed the Manitou on the N.E. side, and high rocks. A delightful country. Wind slackened about ten. At twelve, came in sight of the hills of the Mine river, resembling those of the Gasconade. At three, the wind again rose -- passed the Mine river, S.W. side. This river is not navigable more than ten or twelve miles. Valuable saltworks are established here. The whole of this day we found rich and extensive bottoms, N.E. side, and beautiful sloping upland, S.W. on this side of the river some beautiful situations for farms and plantations. The hills rise with a most delightful ascent from the waters edge, to the height of forty or fifty feet; the woods open and handsome. The lands on the Mine river, reputed excellent. The bottoms on the N.E. side the Missouri, uncommonly fine. There is a flourishing settlement here. As this is Sunday, the good people were dressed out in their best clothes, and came in groups to the bank to gaze upon us, as we passed under sail. We put to shore, at the farm of Braxton Cooper 25, a worthy man, who has the management of the saltworks. The settlement is but one year old, but is already considerable, and increasing rapidly; it consists of seventy-five families, the greater part living on the bank of the river, in the space of four or five miles. There are, generally, persons in good circumstances, most of them have slaves. Mr. Cooper informed me that the upland, back, is the most beautiful ever beheld. He thinks that from the mouth of the Missouri to this place, the country for at least forty miles from the river, may bear the character of rich woodland; the prairies forming but trifling proportions. This place is two hundred miles up. We inquired for the party of which we were in chase -- they had passed by nineteen days before us.

Monday 15th, Rain last night, but without lightning -- from this it is prognosticated that the wind will continue favorable to day. Set off with a fair wind, but the course of the river became unfavorable. At half past seven, again fair -- continued under sail until twelve. Passed handsome upland S.W. side, and the two Chareton rivers N.E. Had to oppose in the course of the day some very difficult places -- the river extremely crooked. While the men were towing, they chased a she bear into a hollow tree; we set about chopping the tree, while several stood with guns presented to the hole at which she had entered, about twenty feet up. In a short time she put out her head and shoulders, but on receiving a volley, instantly withdrew. The chopping was renewed; madam Cuff again appeared, and was saluted as before, but without producing the same effect,

---

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

as she leisurely crawled down the tree, and attempted to make off, amidst the shouts of fifteen or twenty barbarians, who were bent on the destruction of a mother and her little family. She was killed with a stroke of an axe, having been previously severely wounded. In the hollow sycamore, there were found three cubs. At five, hoisted sail, and continued until seven, having this day made twenty-eight miles. Towards evening, passed beautiful undulating hills, gently sloping to the river. What charming situations for seats and farms.

Tuesday 16th. Set off without wind -- the river rising. At eleven, the wind so much against us that we were obliged to lie by. At three we continued our voyage, and as it was resolved to tow, I set out with my rifle, expecting to meet the boat at the head of a long bend. This is the first expedition I have made into the country. I passed through the bottom with great difficulty, on account of the rushes, which grow as high as a mans head, and are matted with vines and briars. The beauty of the upland in some degree recompensed. Clean and open woods, growth, oak, hickory, &c.; the grass beginning to appear green. Saw several deer, and abundance of turkeys. We are now in a country which abounds with game. I came late in the evening to the boat, I having been supposed lost in the woods. Our hunter had been more successful than I, having killed a she bear with four cubs. The river very crooked in the course of this day. -- Passed some places of thin woods -- not quite prairie, on the bank of the river.

Wednesday 17th. Breakfast under sail. Passed the Grand river, N.E. side. It is two hundred yards wide at its mouth; a very long river, navigable six or eight hundred miles, and takes its waters with the river Des Moines. The traders who were in the habit of visiting the Mahas, six hundred miles above this on the Missouri, were formerly compelled to ascend this river in order to avoid the Kansas Indians, who were then the robbers of the Missouri. There is a portage of not more than a couple of days, from the Grand river to the Mahas.

At the confluence on the lower side, there is a beautiful situation. The bottom is a handsome prairie, which is seen extending for the first time on the Missouri, to the water's edge, and about a mile in width; the upland then rises with a gentle ascent, with here and there a few clumps of trees. Immediately at the point of junction, there are about fifty area of well timbered land. Here is a delightful situation for a village 26; the distance about two hundred and forty miles from the mouth of the Missouri. There is some beautiful country lying on the Grand river, but deficient in wood. In fact, this river may almost be considered the boundary of the wooded upland on that side of the river.

Here the wind failed us. The Missouri very wide; a large bar in the middle. The beautiful green hills on the Little Osage in sight. But for the single defect of the dilapidating banks of the Missouri, the country boarding on it, thus far, would not be surpassed by any in the world. Spring has already cast her green mantle over the land; and the scenery every where assumes a more enlivened appearance. After an arduous navigation, came this day about twenty miles.

Thursday 18th. Heavy rain last night, accompanied by unusual thunder and lightning. Set off at six, weather apparently clearing up. About ten, compelled by heavy rain to put to shore until three, when we again shoved off, came a few miles and encamped, N.E. side.

Friday 19th. Continued our voyage at daylight, and came through a long channel, between an island and the shore. The wind S.E. but the course of the river such as to disable us from profiting by it. A drizzling rain, and the weather disagreeable. Wind favorable for an hour. Passed handsome upland and prairie S.W. side. There was formerly a village of the Little Osages here, but from

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

the frequent attacks of the Ayuwas, they were compelled to go higher up the river. The situation is fine. At a distance, the deep green herbage on this open ground had much the appearance of a wheat field.

Encamped late, after having got through a channel with considerable difficulty. The slowness with which we have advanced for several days past, forms a contrast with those which preceded. Water rising.

Saturday 20th. A cold disagreeable morning. The men drenched by the heavy rain of last night. Hoisted sail about six, but the wind served us but a short distance. -- Weather clearing up -- put to shore for an hour to dry our effects. Handsome hills on the S.W. side. Got underway at three, along the N.E. side. One of the finest tracts of land I have ever seen -- a great proportion of the timber is walnut, poplar, and cotton wood of enormous size. Entered a channel, at the upper end of which, fired upon a flock of several pelicans, standing on a shoal. These birds abound very much on the Missouri, but are shy. -- We daily kill wild fowl, ducks, geese, brandt, &c. -- which ascend the river at this season of the year, to breed. Their eggs are found at every moment, on the sand bars.

Sunday 21st. A delightful morning, though somewhat cool. Got under way early -- passed through the channel, and crossed over to the S.W. side. Had some difficultembarras, but no great current. After breakfast, took my gun, and struck into the woods. On ascending the hills about two hundred feet in height, I had a fine view up and down the river. On the other side (N.E.) there is an extensive prairie bottom, apparently four or five miles wide; and a level plain of vast extent stretching out on either hand, of rich alluvium soil, from appearance of the luxuriant herbage. There is a singular contrast of the sward which has remained unburnt, and the extensive tracts of deep green of the grass of this spring 27. Beyond the plain, the prairie rises into upland, of abrupt elevation, and in a thousand fantastic forms, but without a shrub, and apparently covered with but a thin coat of vegetation.

On this side (S.W.) I found the soil of the upland of an excellent quality -- and notwithstanding the ravages committed by fire, the woods, principally, hickory, oak, walnut, ash, &c. -- were tolerably close.

Returned to the boat about four in the evening. We spent an hour and a half this evening, in grappling around some rocks of free stone, the distance of a few hundred yards. The swiftness of the current on the other side rendered it impossible to attempt it there, encamped some distance above and encampment of Mr. Hunt, which appeared not more than ten or twelve days old.

Monday 22d. Continued until eleven, with cordelle, or towing line -- the banks being favorable. The hills, or bluffs, are here, about one hundred feet high, and rise abruptly from the river. Wind from the S.S.W. becoming too strong, were compelled to lie by until three. Crossed to the N.E. side, and endeavored to ascend between the shore and an island, but found a sand bar running across, at the upper end, so that we were obliged to back, and camp nearly opposite the place of starting 28.

Tuesday 23d. Very high wind this morning. Doubled the island which had been the scene of so much vexation. Endeavored to proceed on the outside, but met with so many difficulties, that we were compelled to cross to the S.W. side. Towed to Ibar's channel and Island 29 -- then re-crossed to the N.E. side, and found ourselves about two miles above our last night's encampment. Remained here until three, when the wind somewhat abated its violence. Having arrived opposite

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

the Wizzard's island, 30 (L'isle du Sorcier) crossed over and encamped. The superstitious boatmen believe that a wizzard inhabits this island; they declare that a man has been frequently seen on the sand beach, at the point, but that he suddenly disappears, on the approach of anyone. These few days have been in a manner lost, from contrary winds, and bad weather. Heavy rain this evening -- Musketoos begin to be troublesome, for the first time during our voyage.

Wednesday 24th. Attempted a ripple this morning, and were driven back five times -- we had once got within half the boat's length of being through; the oars and poles were insufficient; ten of our men leaped into the water with the cordelle, while the rest of us exerted ourselves with the pole; and thus by perseverance became conquerors. This ripple, like all others of the Missouri, is formed by high sand bars, over which the water is precipitated, with considerable noise. This bar has been formed within two or three years. The bend formerly almost impassable from the swiftness of the current, is now tolerable. There is seldom any great current on both sides; the falling in of the banks indicates the current to be there. Wherever the river has a wider channel than ordinary, there is usually a sand bar in the middle. This extraordinary river sometimes pursues a straight course for ten or fifteen miles, then suddenly turns to every point of the compass. In other places, the whole volume of its waters is compressed into a channel of three hundred yards; again suddenly opening to the width of one, or even two miles, with islands and sand bars scattered though the space.

Passed a canoe with four men, who had wintered up the Kansas (river), about five hundred miles; they had beaver, and other furs. They could give no information respecting Hunt's party; -- we conclude he must have passed that river before they came out of it.

From the violence of the wind, made but a few miles. While Castor was out, he saw a white turkey, but was not so fortunate as to kill it. I am told that they have sometimes been seen of this color; but I suspect it is:

*Rara avis in terris, nigroque simillima cygno.*

Thursday 25th. Contrary winds, but not such as to prevent us from continuing our voyage tolerably well. About eleven, came in sight of Fort Osage, situate on a bluff, three miles off 31, on a commanding eminence. We stopped at the clearing of Mr. Audrain, who is about opening a farm below the fort. A number of Indians of the Osage Nation of all ages, and sexes, were scattered along the bank, attracted by curiosity -- some with old buffaloe robes thrown over their shoulders, others dressed out in the gayest manner. They gathered round us in crowds, and manifested an idle curiosity, very different from the Indians who live east of the Mississippi, one of whose characteristics, is a studied indifference, as to everything strange which transpires around them. On landing at the fort, on a very rocky shore, a soldier under arms, who waited for us at the water's side, escorted Mr. Lisa and myself to the fort, where we were politely received by the commanding officer.

While Mr. Lisa was transacting some business, accompanied by Mr. Sibley 32, the factor, and an interpreter, I went to deliver a pipe to Sans Oreille, (a warrior, and head man of this tribe) sent to him by General Clark 33. He received us, seated on a mat, and after smoking in the usual manner, requested the interpreter to inform me 'that he was the friend of the Americans and that he was flattered with this proof of Gen. Clark's good will towards him.' He was surround by a number of young warriors, who appeared to look upon him with great respect. This man, though not a chief, is evidently intriguing to be the head of his tribe, and has great influence with them; the chief,

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

Young White Hairs 34, having but little to entitle him to respect from his own character, being extremely young, and of a gentle disposition. Sans Oreille, as is usual with the ambitious amongst these people, is the poorest man in the Nation; to set the heart upon goods and chattels, being reckoned indicative of a mean and narrow soul; he gives away everything he can obtain, in order to procure popularity. Such is ambition! Little know they of this state of society, who believe that it is free from jealousies, envy, detraction, or guilty ambition. No demagogue -- no Cataline, ever used greater art and finesse, or displayed more policy than this cunning savage. The arts of seducing the multitude are nearly the same everywhere, and the passion for the power and distinction, seems inherent in human nature. He is a tall fine looking man, possesses very superior abilities, and esteemed the best warrior of the village.

The fort is handsomely situated about one hundred feet above the level of the river, which makes an elbow 35 at this place, giving an extensive view up and down the river. Its form is triangular; this fort is small, not calculated for more than a company of men 36. A group of buildings is formed by the factory, suttler's house, &c. The lodges of the Little Osage, are sixty in number, and within gun shot of the fort; but they are about to remove their village to a prairie, three miles off. Their lodges are a circular form, not more than ten or fifteen feet in diameter, constructed by placing of course rushes, over forks and poles.

All three of the Osage bands, together with some Kansas, were lately camped here for the purpose of trading, to the number of fifteen hundred warriors. The officer informed me, that about ten days ago, serious apprehensions had been entertained from them. A war party, of about two hundred, having scalped a few women and children, of the Ayuwas, their enemies, had returned to slated with this exploit, that they insulted the people of the fort. One of these warriors defied a centinel on his post; the centinel was commanded to fire over his head, this produced no effect, he was seized by a file of men. This he at first treated with indifference, declaring, that if he was confined, he would get some of the whitemen's bread; his tune was changed, however, by a liberal application of the cat o'nine tails to his back. Great commotions amongst the Indians were excited; they rushed forward with their arms; but the soldiers no sooner paraded and made ready a few pieces of cannon, than they thought proper to retreat. They maintained a threatening attitude for some days, and to give vent to their spite, killed a pair of the fine oxen, belonging to Mr. Audrain 37. The officer sent for the chiefs, and told them, that unless two others were given for the oxen, he would instantly fire upon their village. This spirited deportment had the desired effect, and after some consoling, the pipe was smoked, all matters adjusted.

Mr. Sibley informed me, that he was just setting out on a tour towards the Arkansas, to visit the salines 38, on that river, and also to the Kansas and Platte, to see the Pani Nation 39.

These Indians are not to be compared to the nations east of the Mississippi; although at war with most of their neighbors, they are a cowardly race. One good trait, however, deserves to be mentioned; they have rarely, if ever, been known to spill the blood of a white man:--When a white hunter is found on their lands, they take away his furs and his arms, he is then beaten with ram-rods, and driven off.

Thus far we have gained about one hundred miles upon the party of Hunt -- we are in good spirits, and will renew the pursuit with augmented vigor.

This place is something better than three hundred miles up the Missouri, in lat. 38 deg. 40'.

CHAPTER III

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

Friday, 26th April. Heavy rains last night, our situation extremely uncomfortable. This morning we were awakened about daylight, by the most hideous howlings I ever heard. -- They proceeded from the Osages, among whom this is a custom. On inquiry, I found that they were unable to give any satisfactory reason for it; I could only learn that it was partly religious, and if it be true, as is supposed by many, that they offer their worship only to the Evil Spirit, the orison was certainly not unworthy of him. I was told, also, that it arises from another cause; when any one, on awaking in the morning, happens to think of a departed friend, even of some valued dog or horse, which has been lost, he instantly begins this doleful cry, and all the others hark in, as soon as it is heard. About eleven o'clock, clearing up, but wind strong from the S.W. we set off with it, blowing directly in our faces. -- About twelve we put to shore and remained for more than two hours. Crossed to the N.E. side, and continued our voyage. -- Towards evening the weather moderated. Passed a small encampment of hunters. The Missouri is now what the Ohio was once, the paradise of hunters. Made nine miles to day. The water is at a good stage for ascending; the navigation becomes more agreeable. Weather somewhat cool.

We have now passed the last settlement of whites, and probably will not re-visit them for several months. This reflection caused us all to think seriously of our situation. I almost repented of having undertaken this voyage, without an object in view, of importance. Our men were kept from thinking too deeply, by the cheering songs, which were encouraged by Mr. Lisa, and the splashing of the oars, which kept time with them. So far removed, I seemed to look back, as from an eminence; thus abstracted, I faced that I contemplated my country with more accuracy than I could while protected in its bosom I heaved a sigh, when I reflected that I might never see it, or my friends again; that my bones might be deposited on some dreary spot, far from my home, and the haunts of civilized man; but this last, suggested a consolation, there is no spot however distant, where I may be buried, but will in time, be surrounded by the habitations of Americans, the place will be marked, and approached with respect, as containing the remains of one of the first who ventured into these distant and solitary regions 40 !

Saturday 27th. We are once more to be somewhat favored. This is a delightful morning, though cool. Set off at daylight, and at six, had a light breeze from the east. Passed Vincent's Island 41, above which the river is extremely narrow, and hills S.W. side. About eleven, met a party of traders in tow canoes lashed together, which form a kind of raft, heavily laden with furs, and skins. They came from the Sioux, who, they say, are peaceably disposed. They met Hunt's party, five days ago, at the Little Nimeha 42; it proceeds slowly, and had two days of contrary winds. -- The traders think we shall be able to overtake them at the river Platte. -- Hunt informed them that they would meet us below the Grand river. Wind fell shortly after leaving this party. The good news we have heard, animates our men very much.

Towards evening, passed Benito's Island 43, and sand bar, S.W. side, so called, from a trader of that name having been robbed by the Ayuwas of his peltry, and he, with his men, forced to carry enormous burdens of it on their backs to the river Des Moines. Instances of such insults were formerly very usual; several spots have been shown to me where like acts have been committed, and even accompanied with murder. Having come within two leagues of the Kansas river, we encamped. Large sand bars begin everywhere to appear 44.

Sunday 28th. A cool morning, and somewhat foggy on the river -- A light breeze from the east, but not sufficient to enable us to carry sails. Passed high land N.E. side, with some rocks on the

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

shore; we are delighted with the gentle hills, or rather elevated upland of the Missouri. On a large sand bar, saw nearly thirty deer. They are very numerous in this part of the river.

Passed the Kansas, a very large river which enters on the S.W. side. It heads between the Platte and the Arkansas. -- The country on its borders, is entirely open. The river can be ascended with little difficulty, more than twelve hundred miles. The Kansas nation of Indians reside upon it.

In the evening we passed the little river Platte, navigable with canoes fifty of sixty miles, and said to abound with beaver. We are encamped near a mile above it, having made about fifteen miles.

In the course of this day, we find the river, in most places, extremely narrow, and the sand bars very extensive.

Monday 29th Somewhat cloudy this morning -- A light breeze from the S.E. At seven, breakfasted under sail. At nine, reached a beautiful island, called Diamond island 45, fifteen miles, above the Kansas. From this, there is a long reach of six or eight miles. The weather is fine -- the breeze still continuing.

At three o'clock we had made twenty-four miles. The wind, from the change of the course of the river, could not serve us. We lost two hours in passing of the most difficult places I have ever seen on the river; after which, we had a fair wind again, until night.

Passed in the course of this day, some beautiful country on both sides; the upland chiefly S.W. and a greater proportion of prairie than we have yet seen. The river generally narrow, and the sand bars of great extent.

Having made about thirty miles, we encamped a short distance below Buffaloe Island 46, opposite a range of hills, and at the upper end of a long view. During the whole of the day, we saw astonishing quantities of game on the shore; particularly deer and turkeys. The buffaloe or elk are not yet seen.

Tuesday 30th. Last night there was much thunder and lightning, but little rain. At day light embarked with a favorable wind, which continued until seven, when, from the course of the river, the wind failed us for an hour. The river extremely crooked. Mr. Lisa and myself went on shore, and each killed a deer. There were great numbers of them sporting on the sand bars. There are great quantities of snipes<sup>47</sup>, of a beautiful plumage, being a curious mixture of dove color, and white. I saw one of a different kind, which was scarlet underneath the wings <sup>48</sup>.

At two o'clock we hoisted sail at the beginning of a long reach, to the great joy of the whole company. High prairies S.W. side -- continued under sail through another long reach, and had a view of the old Kansas village, at the upper end of it. It is a high prairie; smooth waving hills, perfectly green, with a few clumps of trees in the hollows. But for the scarcity of timber this would be a delightful situation for a town. At this place, the bend of the river rendered the wind unfavorable. -- Continued under oars about 3 miles further, having in the course of this day made thirty three miles.

Wednesday 1st. of May. Very high wind all last night. Embarked this morning about daylight, and continued under sail until six o'clock. Upland N.E. side, thinly timbered. It may be remarked, that the hills of the Missouri are not so high as those of the Ohio, seldom rocky, and rise more pleasantly from the waters edge. Continued under sail until eleven, when we were brought off by a considerable bend in the river. Passed St. Michael's prairie 49, a handsome plain in front, with variegated hills in the back ground, and but little wood. At two o'clock we came to a very great bend in the river, but did not get through until evening. The river from being narrow, changes to

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

an unusual width, and very shallow. We were detained about an hour, having so unlucky as to run aground.

Saw but one or two deer to day, as we approached the open country their numbers will be found to diminish, there being no thickets to shelter them. They are to lessen perceptibly from Nowawa river, upwards.

In the evening, the weather, which has been for some days cloudy, cleared up, and the wind abated entirely; the Missouri and its scenery appeared in their natural state. The wind also became calm, and harmonized with nature. The river is falling fast, approaching to a low stage of water -- came to day twenty-seven miles.

Thursday 2d. Embarked at daylight, the river unruffled by a breeze; the birds, as if rejoicing that the strife of the elements had ceased, tuned their sweetest notes.

At seven o'clock, breakfast opposite some bluffs N.E. side. A very large mass appeared at no distant period, to have slipped into the river, leaving a clay precipice fifty or sixty feet high. A little above, there are rocks of freestone 50 at the edge of the water. Below this place, there is an extensive prairie, partly river bottom, and partly upland, with a considerable rivulet passing through it. What a delightful situation for a farm, or even a town 51! Description of such a country as this, can give no idea of its peculiar character. The hills, or bluffs, begin to appear, thinly wooded with dwarf trees, principally oak or ash.

In the evening arrived at Nodawa channel, on the N. E. side, and about five miles in length.

Friday 3d. A beautiful morning; set off at daylight as usual, and passed the wintering ground of Crooks and McClelland, some distance above Nodawa.

High hills on the S. W. side, with some bold places, and fine land on the N.E. side. In the afternoon passed Wolf river 54, fourteen miles from Nodawa. Shortly after this, a breeze from N.E. enabled us, from the course of the river, to sail four or five miles. Passed a large prairie S.W. side, and encamped at the commencement of another. In these places there is not even a shrub to the water's edge, the bottom of considerable width, the grass very luxuriant.

Saturday 4th. Heavy rain last night, and drizzling this morning. Passed an extensive lowland prairie, above our encampment. At half past eight, passed an encampment of Hunt. In the evening passed the Nimeba and Tarkio creeks<sup>55</sup>, and encamped a short distance above.

I overheard this evening, with considerable chagrin, while warming myself at the fire, some bitter complaints on the part of the men; they declared that it was impossible for them to stand it long, that they had never so severe a voyage. This discontent was of course excited by some Thersites<sup>56</sup> of the party. -- Great exertions have certainly been made and no moments lost; in advancing our voyage, but much of the time we were carried along by the wind, when there was no need for any labor on the part of the men. The weather is now fine, and their labor diversified, when there is no wind, by pole, the oars, or cordelle, which is little more than a promenade along the sand bars. I represented these things to them as well as I could, and endeavored to quiet their minds<sup>57</sup>.

Sunday 5th. Passed an encampment of Hunt this morning. The sun shone out, but the air was cool. -- wind from N.E. but not so hard as to form any great obstacle. In the evening hailed two men descending in a bark canoe; they had been of Hunts party, and had left him on the 2d of May, two days above the Platte, at Boyer's river<sup>58</sup>. They had fair wind it seems all the way up. Thus, it seems we have gained upon them as much as we expected.

The weather very fine throughout the day, encamped in the evening at the upper end of a hand-

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

some prairie, opposite a large sand bar.

Monday 6th. About ten this morning, passed a river called Nis-na-botona 59, after which there are some long reaches very favorable for sailing. At four o'clock arrived at the little Nameha 60; the course of the river here is for a considerable distance nearly N.E. -- Wind being N.W. were enabled to hoist sail, but having proceeded about a mile, a squall suddenly sprung up from the N. we were compelled with all dispatch to take in the sail, and gain the shore S.W. side. Here a dreadful storm raged during the remainder of the evening, and the greater part of the night.

Our encampment is at the edge of a large prairie, but with a fringe of wood along the bank of the river. The greater part of the country, particularly on the S.W. side, is now entirely open. The grass is at this time about six inches high 61.

Tuesday 7th. Continued our voyage at daylight, the weather fine, though somewhat cool. Wind still continues N.W. -- Passed an island and sand bar, and towed along a prairie S. side for nearly a mile. This prairie is a narrow, bounded by hills somewhat broken and stony.

At ten o'clock arrived at L'isle à beau soleil 62; the wind here became so high that we proceeded with great difficulty. In the evening, arriving at the head of the island, were compelled to put to shore. Mr. Lisa seized this opportunity of replanting his mast, by a young oak which he found in the wood along the shore. All hands were set to work on it, in order that it might be ready the next day. This was rendered necessary on account of the old one having given way.

I took this opportunity of making an excursion into the country. Ascended the hills of bluffs, which, through steep, are not much more than two hundred feet above the river, and command prospects of great extent. I could see the meandering course of the river, between the two ranges of hills, or more properly of high land, for thirty or forty miles. Some of these hills are cut into precipices forty or fifty feet high, without any appearance of stone. It is a light yellow colored earth, with a considerable mixture of sand. There is an immense extent of prairie on both sides of the river. The hills are not always abrupt, but in many places rise gently, and are extremely beautiful. The river hereabout is very crooked; in following the hills, along which there is an Indian path, I could go to a point up the river, which will probably be our place of encampment to morrow night.

On my return to the boat, killed some pigeons and wild ducks, and saw a flock of turkeys. 63

Wednesday 8th. Last night having finished our mast, we had it put up this morning before day, and set off on our voyage. Weather cool, but no wind, and the sun apparently regaining his empire.

Passed through a country in the course of the day, chiefly open, with very little wood. The river very wide; In one places it appeared to me nearly two miles. Encamped at the falling in banks, or grand eboulment. Wind has entirely abated.

Thursday 9th. Set off at daylight -- continued a short distance under sail with a light breeze.

Several of the men are sick; one has a pleurisy, and others slight fevers and coughs, from frequent exposure in the water.

There appears to be no hills or bluffs on the north east side, the whole distance to the Platte.

Encamped some distance above a hill, called Loeil effroi, from an Indian chief who was scaffolded here some years ago.

Friday 10th. A dreadful storm raged during the whole of last night. Set off this morning under sail, in expectation of reaching the Platte before twelve, but in the course of an hour it failed us,

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

and changed to N.W. At ten, it became so violent that we were compelled to put to shore, where we remained until towards evening, and again attempting to proceed, but finding the wind too strong, again landed and encamped, having passed the mouth of the Platte. At the mouth of this river there is so great a number of bars and small islands, that its entrance is scarcely perceptible. The river enters by a number of channels or mouths; the color of its water is the same with that of the Missouri. The country hereabouts is entirely open, excepting in some spots along the river, where there are groves of cotton wood, and on the hills a few scattered dwarf oaks.

Saturday 11th. The wind continues to high to proceed. This morning we advanced about three miles, and encamp until near noon -- very cold.

Set off with my gun to take a walk into the country. Traversed the prairie which had been burnt, and reached the high land about three miles distant; the high land rises gradually to the height of about two hundred feet, the company then becomes waving. The other side of the Missouri appears extremely bare. I wandered toward the Platte, or rather to the point of the upland between this river and the Missouri, which commands a very extensive prospect. I discovered a great extent of open country, gently rising grounds, with a soil everywhere extremely rich. The Platte is full of islands and sand bars, and appears as wide as the Missouri. On my return, I saw several Indian mounds.

On reaching camp I found that the wind had abated, and that the river was rising fast.

The river Platte is regarded by the navigators of the Missouri as a point of much importance, as the equinoctial line amongst mariners. All those who had not passed it before, were required to be shaved, unless they could compromise the matter by a treat. Much merriment was indulged on the occasion. From this we enter what is called the Upper Missouri; Indeed the change is perceptible and great.

CHAPTER IV

Sunday 12th. Weather pleasant -- the river rising rapidly; the drift wood descends in great quantities, and the current seems to argument every moment. This may possibly be the annual flood. We were enabled to ascend the greater part of this morning with the towing line.

In the afternoon, some distance above the old Otto Village 64 S.W. side, I went on shore, and wandered several miles through scrubby hills, and saw several elk and deer, without being able to approach them. Towards evening I entered a charming prairie, and of the richest soil. Followed a rivulet until it formed a lake in the river bottom, its banks for six or eight feet a rich black earth 65. In pursuing the upland I might have fallen upon the Missouri six miles above, in the distance of a mile, the river forming here a considerable bend. The prairies or meadows to the water's edge, enabled us to continue the greater part of this day with the line.

Monday 13th. Water falling -- continued with the towing line. At ten, a fine breeze springing up, hosted sail. Passed the river à Boyer 66, and the houses of M'Clelland, who wintered here 67. Some woody country hereabouts; but that on the upland is very inferior, chiefly scrubby oak. A short distance above this place we encountered a very difficult and rapid current, but being luckily a little aided by the sail, we passed tolerably well -- We have now reached the highest point to which settlements will probably extend on the western side for many years.

In the evening passed high clean meadows, called the Council Bluffs, from the circumstance of Lewis and Clark having held a council with the Otto and Missouri Indians, when ascending this river. It is a beautiful place -- Encamped four miles above this place on a large sand bar. In the

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

course of this day found the river crooked and narrow; it appeared in one place almost closed up by drift wood and sawyers.

Tuesday 14th. Set off with a slight breeze -- compelled by heavy rain to put to shore for some hours, after which, continued under a fine wind that lasted throughout the day; but from the winding course of the river, we were not much benefited by it.

In some of the bends of the river, the timber, principally cotton wood, is heavy, but the prairies and upland are entirely bare of trees. The prairies compose more than two-thirds of the margin of the stream -- the soil extremely rich; for the three first feet, generally a light mound, another stratum is a deep black, almost approaching the color of coal, but not hard or stiff; the lower stratum is marle. I have no doubt that these natural meadows would yield surprisingly -- Encamped at the beginning of a great bend of the river 68, twelve miles round, and not more than three hundred paces across.

Wednesday 15th. Although the wind is favorable, it was of no use to us, from the sudden turns of the river. At twelve hoisted sail, and passed the Soldiers' river, a small stream. After doubling some points we came into a reach of some extent; wind here became very violent, and blew almost a tempest; with our sail reduced to half its size we easily encountered the strongest current. The storm became at length so serious that it was deemed imprudent to continue under way. The air was darkened by clouds of sand, and we found ourselves at the upper end of the reach, in the midst of sawyers and planters 69, our situation dangerous in the extreme. We fortunately escaped safely to the shore, where we remarked until evening, the wind abating we proceeded a few miles further.

Thursday 16th. A tremendous storm of thunder and lightning last night -- being fortunately in a good harbor we suffered but little. Were not able to get under weigh this morning until late. A fine serene morning, strangely contrasted with the turbulence of last night. Came in sight of the hills S.W. every one bitterly regretting that the wind of yesterday could not serve us here, where there is a view of twelve miles up the river. There appears to reign an unusual calm, the sky cloudless, the river as smooth as a mirror. Words cannot convey what I feel, and it is only the lover of nature who could understand me.

The points are tolerably wooded -- At the upper end of the long reach we saw an encampment of Hunt, where there were appearances of his having remained one or two days. The hoards of buffaloe which they have killed were strewed about. If it be their encampment at the time we were at the river Platte, it is not more than six days since they were here. The reaches before described are now rarely seen -- the woods more free from undergrowth. Encamped before sunset on a sand bar below la coupe à L'Oiselle. 70

Friday 17th. A charming morning-- slight indication of wind from the S.E. Passed la coupe à L'Oiselle. This name originated, in the circumstance of a trader having made a narrow escape, being in the river at the very moment that this cutoff was forming. It was a bend of fifteen miles round, and perhaps not more than a few hundred yards across, the neck, which was suddenly cut through by the river, became the main channel. This was effected in a few hours.

While remaining a short time at a sand bar in the river, a curious phenomenon occurred; the sand began to dissolve, and every instant diminish like melting of snow, it was thought prudent to embark immediately. This I am informed is not infrequent. Bars are sometimes formed during the continuance of a single flood, but being principally of loose sand, without any thing to unite, as

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

soon as the waters begin to rise again, is entirely carried off. 71

At ten passed a similar cut-off called la coupe à Jacque. At twelve continued under sail, made several long reaches -- passed the Yellow banks, and encamped within a few miles of the Black-bird hill. 72 Through out this day the river border is chiefly wood.

Saturday 18th. A fine breeze S.W.-- At seven arrived at the Black-bird hill. As this is one of the curiosities of the Missouri, a description may be amusing. It rises on the common range to the height of four or five hundred feet. The Missouri at its base, begins a strange winding course, several times returning upon its steps, and at length coming within nine hundred yards of where it is first approached; so that in a course of thirty miles the Black-bird hill is still near us. It takes its name from a celebrated chief of the Mahas, who caused himself to be interred on the top; a mound has been erected on the pinnacle, with a branch stuck in it, a flag was formerly attached to it.-- He was buried, sitting erect on horse back; the reason why he chose this spot, was to enable him to see the traders as they ascended. This chief was as famous in his lifetime amongst all the nations in this part of the world, as Tamerlane of Bajeet were in the planes of Asia; a superstitious awe is still paid to this grave. Yet, the secret of his greatness was nothing more nor less than a quantity of arsenic, which he procured from some trader. He denounced death against any one who displeased him, or opposed his wishes; it is therefore not surprising, that he, who held at his disposal the lives of others, should possess unlimited power, and excite universal terror. The proud savage, wherever this terrible being appeared, rendered the homage of a slave. The gods and heroes of antiquity, were, perhaps, little better. We may learn this lesson, that ignorant and savage man, can only be ruled through means of fear. 73

At four o'clock, boat through the last bend, and hoisted sail, with a fine wind -- sailed along some hills, S.W. side, and encamped amongst some cotton wood, in a low bottom.

Sunday 19th. Continued our voyage this morning at daylight, with sanguine expectations of overtaking the party of Hunt, at the Maha village. Passed the bluffs; some of them very curious, faced with sand rock, of variegated and fantastic hues; at the first glance, it resembles the decorations of a theater. Continued with little interruption, under sail, and arrived about twelve at some trading houses, near which, the Maha village is situated, about two miles from the river. We saw a few Indians on the bank, and several traders with them, men who were on the point of setting off with their peltries. Hunt set out from this on the 15th, under sail.

Remaining here as short a time as possible, we continued our voyage, having sent our interpreter and an Indian by land, to the Poncas, to request Hunt to wait for us. The wind continued until towards evening, when it gradually sled away. Encamped near Floyds bluff, and river, fourteen miles above the Mahas. Sergeant Floyd, one of the party of Lewis and Clark, was buried here; the place is marked by a cross 74.

The appearance of the river is much changed -- it continues a handsome width, with a diminished current. The banks low, and the trees much smaller in size; we now rarely see a large tree. The bluffs and upland on the N.E. side, are not high, and without any appearance of trees and shrubs. Monday 20th. Passed at daylight, the Great Sioux river, which takes its rise in the plains, between the Missouri, and the waters of lake Winiec 75; it is five or six hundred miles in length. I ascended the bluffs, high clay banks of sixty, or an hundred feet. The current is here very strong. Hailed a trader, descending in a large canoe, made of skins of the buffaloe 76, upwards of twenty feet in length, who wintered at the river à Jaque. He met Hunt eight leagues below that river, proceeding

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

with a fair wind, and is by this time, at the Qui Courre. -- These skin canoes are stretched over the red willow, and require to be frequently exposed to the sun, and dried, as they would otherwise become too heavy, from the quantity of water absorbed. We are now nearly half way to the place of our destination.

Perceive a sudden rise of the water. Sand bars are nearly all covered, and banks, in places, overflowed.

Tuesday 21st. This morning fine, though somewhat cool. Wind increasing from the N.E. Current rapid, but for the eddies in the bends, it would be almost impossible to ascend.-- There are but few embarras, or collections of trees, &c. The sand bars are fringed with a thick growth of willows, immediately behind which, there are young cotton wood trees, forming a handsome natural avenue, twenty or thirty feet wide. The banks are very low, and must be inundated every season.

Passed in the evening, a rapid, of frightful appearance, the water foaming and rolling in waves, as if agitated by violent wind in the middle of the river, while on either side it was calm. We were compelled to pass along the sand bar, and through the willows. It was with difficulty that we could obtain dry land this evening, the water, in most places, flows into the woods.-- In the night, the water had risen so much, that the men were compelled to abandon their encampment, and sleep on board.-- Very little prairie in the course of this day, but the timber of a small size.

Wednesday 22d. A delightful day-- the water has risen to its utmost height, and presents a vast expanse-- the current uniformly rapid, in some places rolling with the most furious and terrific violence. One of these places, below Vermilion creek, was sufficient to appall the stoutest heart; the river forms an elbow at the termination of some bluffs, the water, compressed between them and the sand bar, dashes against the opposite rocks. The middle of the river appeared several feet higher than the sides. The distance to cross, before we could reach the opposite eddy, was no more than twice the length of the boat, but we were not able completely to effect it, being swept down the rapidly of flight, but fell into the current of the opposite side, before it had gained its full force, and were able, with great difficulty, to gain the eddy.

The high waters enable us to cut off points, which is no small saving of the distance. The water begins to fall, though great quantities of drift wood descending, and thirty or forty drowned buffaloes pass every day.

I observe a much greater variety of trees and shrubs, than below, and some altogether new to me. There is a shrub which the French call *graisse de boeuf*, bearing a red berry, of a pungent taste; its leaves, though smaller and delicate, bear a resemblance to those of a pear tree. In the hollows, clumps of trees are usually found, but what surprises me, they are very low, through some of the oaks and ash are eighteen or twenty inches in diameter, they look like orchard trees, and have much greater resemblance to regular than wild woods.

Thursday 23d. Water falling rapidly.-- a fine breeze S.E. sailed until eleven -- passed the Hot, or Burning Bluffs, on the S.W. side Here I observed enormous masses of pumice, and other matter, which appeared to have undergone the action of heat, of a very high degree. I saw what was the fragment of a hill, the greater part at present composed of pumice. From not being able to discover other volcanic appearances, I concluded these appearances to have produced by the burning of coal 77.

About noon, espied a number of persons on a sand bar, which we at first supposed to be Indians, but on a nearer approach, recognized to be whites, amongst them, a Mons. Benit, factor of the

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

Missouri Company 78, at the Mandan village. These men were descending in a small boat, with some peltries. He tells us that the Indians are ill disposed to the whites every where on the Missouri. Mr. Henry 79 is in a distressed situation over the Rocky mountains. The Crow Indians are supposed to be inimical -- and the Sioux have broken out into open hostilities, and have killed several whites. Mr. Benit and crew were fired upon last night, by what they supposed to be Sioux, and returned it. They did not see the boats of Hunt.

Proceeded on our voyage at three o'clock, not a little disheartened at this intelligence. Mr. Benit and one other of the company returned with us. Passed some beautiful upland N.E. side, but without wood, an immense level plain stretches out, I am informed, for about an hundred miles 80. We observed a Sioux lodge or tent, of a conical shape, made of skins -- it appears to be the custom of these people, to leave their dead in lodges of this kind, until it be convenient for them to gather up their remains.

Friday 24th. Set off early -- weather warm. The water is falling very fast-- there is still a very strong current. Passed bluffs of a chalky appearance, perhaps limestone. A piece of ice floated by us this morning, probably from the breaking up of some of the northern rivers, which have contributed to the present rise. In putting off from a bluff on the S.W. side, to cross over, my attention was called to an object which attracted the notice of the company. A large buffaloe bull made his appearance on the top of the bluff, standing at the edge of the precipice, and looking down upon us. It was the first we had seen. Long and matted wool hung over his head, and covered his large shoulders, while his body was smooth, as also the tail, except a tuft at the end. It was a striking and terrific object; he eyed us with the ferocity of the lion, seemed at length to "sniff the tainted gale," threw his head into the air, wheeled round, and trotted off.

Had a fine breeze towards evening -- which enabled us to make five or six miles more than we expected.

Saturday 25th. This morning ran a ground, and were detained several hours. Passed the river à Jaque; the principal rendezvous of the traders with the Yankton Sioux. It is a large handsome stream, tolerably well suited for a small settlement.

It is becoming very warm. Went out on a delightful prairie, the grass short, of a deep blue, intermixed with a great variety of beautiful flowers. I am forbidden to wonder far, on account of the Indians, who it is thought may be near. We discovered this morning, a great deal of smoke up the river -- we supposed this to be a notification of the Indian spies, of our approach. We are now in the open country -- no woods are to be seen, except some slender cotton wood trees in the points, and some clumps in the hollows of the upland. The beauty of the scenery, this evening exceeds any thing I ever beheld.-- The sky as clear as in a Chinese painting, the country delightful. Convert the most beautiful parts of England or France, into one meadow, leaving a trifling proportion of wood, and some idea may be formed of this. But there appears to be a painful void -- something wanting -- it can be nothing else than a population of animated beings. It were vain to describe the melancholy silence which reigns over these vast plains. Yet they seem to give a spring to the intellectual faculties. One never feels his understanding so vigorous, or thinks so clearly. Were it safe, with what delight would I roam over these lovely meads!

The water has fallen, and the current is much lessened.

Sunday 26th. At daylight, discovered a canoe descending with two men, who prove to be sent by us, to Hunt. They bring information that he has agreed to wait for us at the Poncas village 81,

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

where he intends to remain some days.

Saw some buffaloe to day, and with Mr. Lisa, went several miles in pursuit of them, but without success.

Passed a beautiful island l'isle à bon homme, upon which there is the remains of an ancient fortification 82. In the evening our hunter killed a buffaloe, upon which we all feasted.

Monday 27th. Had to oppose a contrary wind, until eleven. At one, arrived at the Poncas village, where we remained until five. On our approach, we found the whole village crowded on the bank, and several had waded up to the waist in the water.-- The greater part of the men were naked; the women and children filthy and disgusting. According to custom, had a talk with the chiefs, to whom we made some trifling presents. Hunt had not waited for us, according to promise. Saw two men, who had probably deserted from him, they informed us that as soon as he heard of our approach, which was quite unexpected, he had determined to exert himself to the utmost, to get out of our reach. The fact is, there does not exist the greatest confidence between the two commanders. Ours seems to think, that it is the intention of Hunt, to pass the Sioux, who may wish to detain him, by telling them that their trader is coming on with goods for them. While on the other hand, Hunt may believe that Lisa intends to pass him, and tell the same story. It is therefore determined to push our voyage, if possible, still more than before.

Encamped above the Qui Courre river 83-- A most beautiful country, but very little wood. The country is much more hilly.

Tuesday 28th. Weather smoky, and extremely warm. High land on both sides of the river, with some dwarf trees in the hollows, principally cedar. At ten, a fine breeze springing up, we continued under sail the rest of the day, and the greater part on the night, determining to strain every nerve, in order to overtake Hunt. There is scarcely any bottoms from the Qui Courre.

Wednesday 29th. After lying a few hours, at one o'clock, again continued under sail -- but the moon disappearing, and it becoming dark, it was thought advisable to lie by until daylight. The hills hereabouts, high and broken, and little or no river bottom on either side. At two o'clock, arrived at a beautiful island, called Little Cedar island 84, on which grows fine cedar, the trees uncommonly large. This is a delightful spot, the soil of the island is rich, and it may contain about three thousand acres -- the middle of the island is a beautiful prairie -- the adjacent country is bleak and barren. At the point of the island, discovered an encampment of Hunt, and on examination, we discovered, to the great joy of the company, that the fire was not yet extinguished; it is therefore but a few days since they were here. Continued under sail until 11 at night, having in little better than twenty-four hours, made seventy five miles.

Thursday 30th. This morning, favored with a continuance of the fair wind. The country is exceedingly rough and broken -- the greater part without the least vegetation. The hills have a very singular appearance. Near the top they look black, and seem to have been burnt. About noon, saw some tracks, which we supposed to be of yesterday.

In the evening, passed a very fine river, called White river 85, about three hundred yards at the mouth. There is some bottom land, and wood points; the hills covered with grass. -- Heard several gun shots, which we supposed to have been from the party of Hunt. This evening the wind abated.

Friday 31st. This morning, contrary wind, and some rain. Proceeded with the cordelle. In the course of the day, saw a large flock of antelopes -- they appear to be numerous in this part of the country. Observed in the sand, a number of Indian tracks, and a place, where it appeared that the

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

boats of Mr. Hunt had stopped with the Indians some time. One of our men discovered a curious place, contrived by the Indians, for taking fish, it was something like a large fish basket -- we found two fine catfish in it.

When about to put into the river, to cross, to a point, we discovered three buffaloe, swimming towards us, and contrary to the precautions we had agreed to observe, in making no noise, least we should be discovered by the Indians, who were probably in the neighborhood, a firing was commenced upon the poor animals, which continued half an hour. The report of the guns, as might have been foreseen, brought an Indian to the top of the hill, but we were too far in the river, to return to him, or to be heard.

Towards evening, the boat having received some injury, was compelled to stop -- went in pursuit of a buffaloe calf -- on my return found the party somewhat uneasy on account of the length of my stay, having been drawn by the eagerness of pursuit to a considerable distance.

Saturday, June 1st. 1811. At daylight heard a number of guns fired on the hills below us on the other side of the river. We now concluded that all our precaution and labor had been vain. That we should be robbed or killed, or at least compelled to return. They soon arrived opposite to us, with an American flag, and fired one or two guns. There was but one thing to be done, which was to cross over to them at once, and meet the worst, every man preparing himself for defence. Each rower had his gun by his side -- Mr. Lisa and myself, besides our knives and rifles, had each one a pair of pistols in our belts. On reaching the shore we discovered twelve or thirteen Indians on a log. Mr. Lisa and I, leaped on shore and shook hands with them.-- We supposed that the principal body was concealed behind in the woods, so as to be at hand if necessary. Having no interpreter at this critical juncture, we were fearful of not being understood; however, with the aid of signs, a language with which Mr. Lisa was well acquainted, he was enabled to communicate tolerably well. He told them that he was their trader, but that he had been very unfortunate, all the peltires which he had collected amongst them having been burnt, and his young men, who had passed 2 years before to go to the head of the Missouri, were attacked and distressed by the Indians of those parts, who are bad people. That he was now poor, and much to be pitied; that he was going to bring back his young men, having resolved to confine himself to the lower country. He so concluded, by telling them that he intended to return in three months to establish a trading house at the Cedar island, and requested the chief to send word of it to all the Sioux bands. This story, together with a handsome present, produced the desired effect, though not without some reluctance. We remained here as short a time as possible, and re-crossed the river. The chief is a fine looking Indian, the others were very young men, nearly naked, with long bands of hair hanging down their foreheads; they are the best looking people I have seen. It is two days since Hunt passed here. We did not cease to use every exertion, considering it still possible that we might be stopped.

About twelve reached the great bend 86, twenty-one miles around, and only one and an half across. Two men were sent to notify the boats of our near approach. In the evening a strong wind from the N.E. which would hardly have been favorable in any other part of the river, enabled us to hoist sail, and what is singular, continued changing to suit the running of the river. We by this means made fifteen miles -- some part of the time it blew with violence, accompanied by rain.

Sunday 2d. Set out with my gun early this morning, on the S.W. side of the river -- walked about four miles along the river hills and with much satisfaction perceived at a distance the boats of Mr.

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

Hunt. I returned immediately to give the joyful intelligence to our people. On coming opposite the place where I had seen the boats, we discovered a great number of Indians, who beckoned to us to cross; but supposing them to be Sioux, we determined to continue on until we should overtake the party before us. We suffered them to shout, to gallop their horses, and to wave their robes unnoticed. Some distance above, our men came to us, they had been with Hunt, the Indians we had just past, were a party of three hundred Arikaras, who, on hearing of our approach, had come for the purpose of enabling us to ascend. It appears also, that we have passed all the Sioux bands, who had been seen by Hunt, but probably finding his party too strong, they had resolved to stop and plunder ours, that we must have past them in the night or under sail, as they did not expect to hear from us so soon.

At eleven o'clock we overtook Hunt's party, to the great satisfaction of our little company. It was with real pleasure I took my friend Bradbury 87 by the hand; I have reason to believe our meeting was much more cordial than that of the two commanders. Continued under sail in company the rest of the day, forming a handsome little fleet of five sail. Encamped in the evening opposite the larger Cedar island 88, twelve hundred miles from the mouth of the Missouri.

CHAPTER V

Monday June 3d, 1811. A strong wind from the N.E. this morning, compelled us, after proceeding a few miles, to encamp for the remainder of the day. Took my gun, and set off to make an excursion. The country is altogether open, excepting some groves of cotton wood in the bottom. The upland rises into considerable hills, about one-third covered with a very short grass, intermixed with a great variety of plants and flowers, the rest consists of clay, bare of almost every kind of vegetation. On the tops of the higher hills, at some distance from the river, there are masses of granite, of several tons weight, and great quantities of pebbles. In the course of my ramble, I happened on a village of barking squirrels, or prairie dogs, they have been called. My approach was announced by an incessant barking, or rather chirping, similar to that of a common squirrel, though much louder. The village was situated on the slope of a hill, and appeared to be at least two miles in length; the holes were seldom at a great distance from each other than twenty or thirty paces. Near each hole, there was a small elevation of earth, of six or eight inches, behind which, the animal posted himself, and never abandoned it, or ceased his demonstrations of alarm, "insignificantly fierce", until I approached within a few paces. As I proceeded through the village, they disappeared, one after another, before me. There was never more than one at each hole. I had heard that the magpie, the Missouri rattle snake, and the horn frog, were observed to frequent these places; but I did not see any of them, except the magpie. The rattle snake of the prairies, is about the same length with the common rattle snake, but more slender, and the color white and black.

Mr. Bradbury has met with great success in his pursuit.-- He has found nearly an hundred undescribed plants. Within a few days he has found a great number, which he calls Mexican. The country thus far, has offered nothing remarkable as to minerals. There is in company, a gentleman of the name of Nuttall 89, engaged in the same pursuits, to which he appears singularly devoted; it seems to absorb every thought, so as to be troublesome to the company, which has sometimes to wait for him; it appears to have done away every regard of personal safety.-- To the ignorant Canadian boatmen, who are unable to appreciate the science, it affords a subject of merriment; le fou, the fool, is the name by which he is commonly known. No sooner does the boat touch the

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

shore, than he leaps out, and when his attention is arrested by a plant of flower, every thing else is forgotten. The inquiry is sometimes made, *ou est le fou?* where is the fool? *il est après ramasser des racines*, he is gathering roots. He is a young man of genius, and very considerable acquirements, but unfortunately too much devoted to his favorite study. A sarcastic anecdote of this gentleman was related to me, by Mr. Miller 90, who commanded one of the boats, and shows to what astonishing degree the pursuit of natural history had taken possession of his mind, to the exclusion of every thing else. The day after passing the Sioux tribes, they met, as I have before mentioned, three hundred Arikara Indians, these were so delighted to see them, that a number rushed into the river, to swim or wade to the boats; the party supposing them to be inimical, was on the point of firing; while every one was in momentary expectation that this would take place; Nuttall, who appeared to have been examining them very attentively, turned to Miller, "sir," said he, "don't you think these Indians much fatter, and more robust than those of yesterday."

In the course of the evening, had an opportunity of seeing the manner in which the antelope is hunted in these open plains, where there is no possibility of approaching by insidious means. A handkerchief is placed on the end of a ramrod, and waved in the air, the hunter lying flat on the ground. If any of the animals be in sight, they run instantly to the place, and perform a circuit around, approaching often within twenty or thirty yards, which gives an opportunity of firing on them.

The party of Mr. Hunt consists of about eighty men, chiefly Canadians; the rest are American hunters.

Tuesday 4th. Set off at seven -- wind contrary, though not as strong as yesterday. After doubling a point, we found that from the course of the river the wind would be favorable, and accordingly sailed for eight or ten miles. We saw at the mouth of a small creek, a herd of buffaloe, of several hundred. The appearance of the country has varied but little for several days past. Bleak and dreary -- the bottoms narrow; in some places none at all, and clay bluffs.

Wednesday 5th. This morning, after proceeding a short distance, we were compelled, by rain, to put to shore, where we remained until the afternoon, and finding no appearance of the weather clearing up, crossed to the S.W. side, where Mr. Hunt was encamped.

I took a walk with Mr. Bradbury -- in the course of which, I saw a number of antelopes, buffaloe, and villages of prairie dogs. At some distance from the river, there is not the least appearance of a tree or shrub. The country appears to rise gradually. There was something picturesque in the appearance of herd of buffaloe, slowly winding round the sides of the distant hills, disappearing in some hollow, and again emerging to view. The whole extent of the plain is covered with ordure, as in a pasture ground. Wide and beaten roads are every where to be seen.

On my return, I found that a disagreeable misunderstanding had taken place between the two chiefs of the parties. The interpreter of Mr. Hunt, had been in the employment of the company, and was indebted to it. Mr. Lisa had several times mentioned to him the impropriety of his conduct, and perhaps had made him some offers, in order to draw him from his present service. This was certainly imprudent, and placed him in the power of a worthless fellow, who, without doubt retailed the conversation to his master, with some additions. This evening, while in Hunt's camp, to which he had gone on some business, he was grossly insulted by the interpreter, who struck him several times, and seized a pair of pistols belonging to Hunt; -- that gentleman did not seem to interest himself much in the affair, being acquitted by feelings of resentment, at the attempt to

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

inveigle his man. On my return to our camp, I found Mr. Lisa furious with rage, buckling on his knife, and preparing to return; finding that I could not dissuade, I resolved to accompany him. It was with the greatest difficulty I succeeded in preventing the most serious consequences. I had several times to stand between him and the interpreter, who has a pistol in each hand. I am sorry to say, that there was but little disposition on the part of Mr. Hunt, to prevent the mischief that might have arisen. I must, in justice to him, declare however, that it was through him that Mr. M'Clelland 91 was induced not to put his threat in execution having pledged his honor to that effect. (A mortal enmity existed on the part of Mr. M'Clelland, towards Lisa, in consequence of some conduct of the latter, in the trade -- and he had declared, that he ever fell in with Lisa, in the Indian country, he would shoot him. Those who knew M'Clelland, would not be surprised that such a threat should be put in execution.) I finally succeeded in bringing Lisa off to his boat. When it is recollected that this was at the distance of thirteen hundred miles from all civil authority, or power, it will be seen that there was but little to restrain the effects of animosity. Having obtained in some measure, the confidence of Mr. Hunt, and the gentleman who were with him, and Mr. Bradbury, that of Mr. Lisa, we mutually agreed to use all the arts of mediation in our power, and if possible, prevent any thing serious.

Thursday 6th. Weather clearing up. The water rising very fast -- supposed the annual flood. This morning passed the ruins of an Indian village 92, there were great piles of buffaloe bones, and quantities of earthen ware. The village appears to have been scattered round a kind of citadel, or fortification, enclosing four or five acres, and of an oval form. The earth is thrown up about four feet, there are a few cedar palisades remaining. Probably, in cases of siege, the whole village was crowded into this space.

Friday 7th. Continued under way as usual. All kind of intercourse between the leaders has ceased. In the evening, passed several old villages, said to be of the Arikara nation. The bottoms, or points, become wider, and the bluffs of a less disgusting appearance; there are but a few clay hills, the country being generally covered with grass.

Saturday 8th. Contrary wind to day -- though delightful weather. This morning, passed a large and handsome river, called the Chienne 93, S.W. side. It appears as large at the mouth as the Cumberland or Tennessee. Saw at this place, the ruins of an old village, and fortification 94. The country hereabouts is fine, and better wooded than any I have seen for the last three hundred miles. A tolerable settlement might be supported here. Game is very abundant -- elk, deer, and buffaloe, without number.

Encamped a few miles above the Chienne river, in a beautiful bottom. No art can surpass the beauty of this spot; trees of different kinds, shrubs, plants, flowers, meadow, and upland, charmingly disposed. What coolness and freshness breathes around! The river is bordered with cotton wood, and a few elms, there is then an open space of 30 or 40 paces, after which begins a delightful shrubbery of small ash trees, the grasse de boeuf 95, the gooseberry, currant, &c... forming a most delightful avenue. We all remark, that the singing of the birds is much sweeter than in the forests of the states 96. This is fancifully accounted for by Mr. Bradbury, from the effects of society; from the scantiness of the woods, they are compelled to crowd on the same tree, and in the same grove, and in this way impart improvement to each other. Assuming it as a fact, that birds of Europe sing better than those of America, he asks, can it be owing to any other reason than this? The Musketoos have been exceedingly troublesome for several days past. They disappear in the

---

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

evenings, which are cool, or with the slightest wind.

Sunday 9th Got under way this morning, with fine weather. Discovered great numbers of buffaloe; on the N.W. side, and extensive level meadow. Numbers began to swim across the river, as the party of Hunt, who were before us, got opposite; they waited, and killed as many as they wished; a number which were started from an island, swam towards us, and we killed several also.

Mr. Bradbury and I went out on the N.W. side, where the buffaloe had been first seen, and walked several miles. A very beautiful and extensive meadow, at least a mile wide, but without a tree or a shrub -- the upland equally bare. Passed a Sioux encampment of last fall -- from appearances there must have been three or four hundred here. Amongst other things, our curiosity was attracted, by a circular space, about twenty feet in diameter, enclosed with poles in the middle, painted red, and at some distance, a buffaloe head placed upon a little mound of earth. We are told, this is a place where an incantation of the buffaloe plenty, had been performed.-- Amongst other ceremonies, the pipe is presented to the head.

At four o'clock hoisted sail with a favorable wind. Passed a surprising number of buffaloe in the course of this day, some herds on the sides of the hills, not less than a thousand. Towards evening we saw a great number crowded on the sand beach at the foot of an island, proceeding with caution, we approached under sail within twenty or thirty yards, and selecting the fattest, we fired upon him at once; and notwithstanding that he had received several wounds, he endeavored to make off.-- We pursued him into the island, the animal had now become ferocious from his wounds, and it was dangerous to approach him. It was not until he had received the contents of ten or twelve guns, that he was brought to the ground. The island is beautiful. It is completely surrounded by cotton wood and cedar trees, but the space within is a beautiful clear meadow. On the edges of the woods in the inside, there are great quantities of currant and gooseberry bushes; these islands are much alike in this respect. They are more beautiful than any I have seen.

Monday 10th. During the whole of this day had a fine wind which enabled us to make thirty-five miles. Encamped opposite a handsome stream, called Ser-war-cerna, N.W. 97

The country wears a handsome aspect; the hills gently swelling and some delightful prairie on the river. There is but little wood. In the course of the day we saw great numbers of buffaloe, in herds of several hundred each.

Tuesday 11th. Continued our voyage with a slight wind. The country much the same as that of yesterday. Encamped some distance below the island on which the Arikara village was situated some years ago -- they have removed some miles further up. This evening I went to the camp of Mr. Hunt to make arrangements as to the manner of arriving at the village, and of receiving two chiefs. This is the first time our chiefs have had any intercourse directly or indirectly since the quarrel.-- Mr. Lisa appeared to be suspected, they supposed his intention to be, to take advantage of his influence with the Arikara nation, and do their party some injury in revenge. I pledged myself that this should not be the case.

Wednesday 12th. Heavy rains accompanied by thunder and lightning last night.

At nine o'clock two of the chiefs with the interpreter employed by the company, came on board our boat. They are both fine looking men, much above the common size, and with much fairer complexions than any Indians I have seen. At ten we put to shore opposite the village, in order to dry our baggage, which was completely wet. The leaders of the party of Hunt were still suspicious that Lisa intended to betray them.-- McClelland declared that he would shoot him the moment he

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

discovered any thing like it. In the mean time, the chief spoke across the river, which is here about a half mile wide, we understood that he was giving orders to prepare the council lodge. The village appeared to occupy about three quarters of a mile along the river bank, on a level plain, the country behind it rising into hills of considerable height. There are little or no woods any where to be seen. The lodges are of a conical shape, and look like heaps of earth. A great number of horses are seen feeding in the plains around, and on the sides of the hills. I espied a number of squaws, in canoes, descending the river and landing at the village. The interpreter informed me, that they were returning home with wood. These canoes are made from a single buffaloe hide, stretched over osiers and are of a circular form 98. There was one woman in each canoe, who kneeled down, and instead of paddling sideways, places the paddle before; the load is fastened to the canoe. The water being a little rough these canoes sometimes almost disappeared between the waves, which produced a curious effect; the squaws with the help of a little fancy, might be supposed, mermaids sporting on the billows; the canoe rising and sinking with them, while the women were visible from the waist upwards.

About two o'clock fourteen of us crossed over, and accompanied the chief to his lodge. Mats were laid around for us to sit on, while he placed himself on a kind of stool or bench. The pipe was handed around, and smoked; after which, the herald, (every chief or great man, has one of them ascended the top of the lodge and seated himself near an open place, and began to bawl out like one of our town criers; the chief every now and then addressing something to him through the aperture before mentioned. We soon discovered the object of this, by the arrival of the other chiefs, who seemed to drop in, one after the other, as their names were called.

When all were seated, the pipe was handed to the chief, who began as is usual on solemn occasions, by blowing a wiff upwards as it were to the sky, then to the earth, and after to the east and west, after which the pipe was sent round. A mark of respect in handling the pipe to another, is to hold it until the person has taken several whiffs. After this ceremony, Mr. Lisa addressed a speech to the chiefs, in which, after common place which would be expected, he observed, that the strangers in company with him were going a long journey to the great Salt lake to the west, and ought to be treated well, that any injury done to them, he should consider as done to himself; that in this respect they were as one people. A number of speeches were as usual made on the occasion. The chief on the proposal of trading, required time to give an answer -- with this the council concluded. The boats were ordered over, and encamped a little distance below the village. A guard of Indian warriors was placed to keep off the populace and prevent pilfering.

CHAPTER VI

Thursday, June 13th, 1811. This morning, found ourselves completely drenched by heavy rains, which continued the whole night. The chief has not given his answer as to the conditions of the trade. It is for him, usually to fix the price, on a consultation with his subordinate chiefs, to this, the whole village must conform.-- The Indian women and girls, were occupied all this morning, in carrying earth in baskets, to replace that which the rains had washed off their lodges. Rambled through the village, which I found excessively filthy, the "villainous smells," which every where assailed me, compelled me at length, to seek refuge in the open plain. The lovers of Indian manners, and mode of living, should contemplate them at a distance. The rains had rendered their village little better than a hog pen; the police appeared to me, in some particulars, extremely negligent. Some of the ancient cities of the old world, were probably like this village, inattentive to that

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

cleanliness so necessary to health, where a great mass of beings are collected in one place; and we need not be surprised at the frequency of desolating plagues and pestilence. The village is swarming with dogs and children. I rank these together, for they are inseparable companions. Wherever I went, the children ran away, screaming, and frightened at my outré and savage appearance.

Let us not flatter ourselves with the belief, that the effect of our civilization and refinement, is to render us agreeable and lovely to the eyes of those whom we exclusively denominate savages! The dogs, of which every family has thirty or forty, pretended to make a show of fierceness, but on the least threat, ran off.-- They are of different sizes and colors. A number are fattened on purpose to eat, others are used to draw their baggage.-- It is nothing more than the domesticated wolf. In wandering through the prairies, I have often mistaken wolves for Indian dogs. The larger kind has long curly hair and resembles the shepherd dog. There is the same diversity amongst the wolves of this country. They may be more properly said to howl than bark.

The lodges are constructed in the following manner: Four large forks of about fifteen feet in height, are placed in the ground, usually about twenty feet from each other, with hewn logs, or beams across; from these beams, other pieces of wood are placed slanting; smaller pieces are placed above, leaving an aperture at the top, to admit the light, and to give vent to the smoke. These upright pieces are interwoven with osiers, after which, the whole is covered with earth, through not sodded. An opening is left at one side, for a door, which is secured by a kind of projection of ten or twelve feet, enclosed on all sides, and forming a narrow entrance, which might be easily defended. A buffaloe robe suspended at the entrance, answers as a door. The fire is made in a hole in the ground, directly under the aperture at the top. Their beds elevated a few feet, are placed around the lodge, and enclosed with curtains of dressed elk skins. At the upper end of the lodge, there is a kind of trophy erected; two buffaloe heads, fantastically painted on a little elevation; over them are placed, a variety of consecrated things, such as shields, skins of a rare or valuable kind, and quivers of arrows. The lodges seem placed at random, without any regularity or design, and are so much alike, that it was for some time before I could learn to return to the same one. The village is surrounded by a palisade of cedar poles, but in a very bad state. Around the village, there are little plats enclosed by stakes, entwined with osiers, in which they cultivate maize, tobacco, and beans; but their principal field is at the distance of a mile from the village, to which, such of the females whose duty it is to attend to their culture, go and return morning and evening. Around the village they have buffaloe robes stuck up on high poles. I saw one so arranged as to bear a resemblance to the human figure, the hip bone of the buffaloe represented the head, the sockets of the thigh bones looked like eyes.

Friday 14th. It rained again last night, which prevented the trade from commencing until sometime in the day. Mr. Lisa sent a quantity of goods to the lodge of the principal chief before mentioned, called Le Gauchée, and Hunt to the one who accompanied him to meet us, La Gros, the principal war chief. The price of a horse was commonly ten dollars worth of goods first cost. Hunt had resolved to purchase horses at this price and proceed by land to the Columbia, being assured by some hunters, who met him before his arrival here, that this would be his best route.

Mr. Bradbury and I, took a walk into the upper village, which is separated from the lower by a stream about twenty yards wide.-- Entered several lodges, the people of which received us with kindness, placed mats and skins for us to sit on, and after smoking the pipe, offered us something to eat; this consisted of fresh buffaloe meat served in a wooden dish.-- They had a variety

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

of earthen vessels, in which they prepared their food, or kept water. After the meat, they offered us homony made of corn dried in the milk, mixed with beans, which was prepared with buffaloe marrow, and tasted extremely well; also pounded and made into gruel. The prairie turnip, is a root very common in the prairies, with something of the taste of the turnip but more dry; this they eat dried and pounded, made into gruel. Their most common food is hominy and dried buffaloe meat. In one of the lodges which we visited, we found the doctor, who was preparing some medicine for a sick lad.-- He was cooling with a spoon a decoction of some roots, which had a strong taste and smell, not unlike jalap 99. He showed us a variety of samples which he used. The most of them were common plants with some medicinal properties, but rather harmless than otherwise. The boy had a slight pleurisy. The chief remedy for their diseases, which they contrive to be owing to a disorder of the bowels, is rubbing the belly and sides of the patient, sometimes with such violence, as to cause fainting. When they become dangerous, they resort to charms and incantations, such as singing, dancing, blowing on the sick, &c. They are very successful in the treatment of wounds. When the wound becomes very obstinate, they commonly burn it, after which it heals more easily.

Saturday 15th. Fine weather-- Took a walk with Mr. Bradbury through the country, which is entirely open, and somewhat hilly. Large masses of granite were usually found on the highest knobs. We saw a great variety of plants, and some new ones-- One or two of the valleys are beautiful, and a few dwarf plum trees scattered along a rivulet.

On our return in the evening, an alarm prevailed in the village, which appeared to be all in commotion. We were informed that the Sioux, their enemies, were near. This was probably all preconcerted. I was shown, at the distance of about two miles horsemen on the top of a hill, at full gallop, passing and repassing each other; this I understand is the signal given by the scouts, some of whom are constantly on the alert, of the approach of an enemy. To give intelligence of the appearance of a herd of buffaloe, instead of crossing each other, they gallop backward and forward abreast. Presently the warriors issued from the village with great noise and tumult, some on foot, others on horse back, and pursued the direction in which the signals were made, down the river, and past an encampment. They observed no regular march, but ran helter skelter, like persons on one of our towns to extinguish a fire -- and keeping up a continued hallooing to encourage each other. Some of them were dressed in their most splendid manner. The tops of the lodges were crowded with women and children, and with the old men who could give no assistance, but by their lungs, which were kept busily employed; yet there were several who sallied forth, almost half bent with the weight of years. I counted upwards of five hundred in all. They soon after returned; whether they had chased away the enemy, or the alarm had turned out false, I never learned.

Sunday 16th. In the course of the day several parties arrived from different directions. According to custom they were met by warriors and conducted to be the council lodge, where they gave an account of what had occurred, which was afterwards announced to the village by heralds. These contribute to enliven the village; though independent, they continually present a busy and animated scene. Great numbers of men are engaged in the different games of address and agility, others judging, or looking on, and many employed in a variety of other ways. There are a great number of women constantly at work in dressing buffaloe robes, which are placed on frames before the lodges. One of the parties which arrived to day came from the Snake 100, where they had stolen horses. This arrested their employments for a moment, the immediate friends and relations

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

of each as returned, spent the evening in rejoicing, while several females who had lost a relation, retired to the hills behind the village, where they continued to cry the whole afternoon.

In the evening they usually collect on the tops of the lodges, where they sit and converse; every now and then the attention of all was attracted by some old men who rose up and declaimed aloud, so as to be heard over the whole village. There was something in this like a quaker meeting. Adair labors to prove the Indian tribes to be descended from the Jews 101, I might here adduce this as an argument in favor of these people being a colony of quakers.

Monday 17th. This day arrived a deputation from the Chienne nation, to announce that these people were on their march to this village, and would be here in fifteen days. I sometimes amused myself with the idea of forming a gazette of the daily occurrences. We here see an independent nation, with all the interests and anxieties of the largest; how little would its history differ from that, of one of the Grecian states! A war, a treaty, deputations sent and received, warlike excursions, national mourning or rejoicing, and a thousand other particulars, which constitutes the chronicle of the most celebrated people.

In the evening, about sundown, the women cease from their labors, and collect into little knots, and amuse themselves with a game something like jack-stones; five pebbles are tossed up in a small basket, with which they endeavor to catch them again as they fall.

Tuesday 18th. Confidence had been somewhat restored between the leaders of the two parties since the council in the village. Mr. Hunt having resolved to start from this village, a bargain was made with Mr. Lisa, for the sale of Hunt's boats and some merchandise; in consequence of which, we crossed the river, in order to make the exchange, after which we returned and encamped. We are to set off to-morrow to the Mandan villages 102.

Before I bid adieu to Arikara, I must note some general matters relating to their character and manners.

The men are large and well proportioned, complexion somewhat fairer than Indians commonly are. Generally go naked; the dress they sometimes put on, seems more for ornament than any advantage it is to them; this consists of a sort of cassock or shirt, made of the dressed skin of the antelope, and ornamented with porcupine quills, died a variety of colors; a pair of leggings, which are ornamented in the same way. A buffaloe hide dressed with the hair on, is then thrown over the right shoulder, the quiver being hung on the other, if he be armed with a bow (A warrior is seldom seen without his arms, even in the village. -- His bow, spear, or gun, is considered part of his dress, and to appear in public without them, is in some measure disgraceful.) 103.-- They generally permit their hair to grow long; I have, in one or two instances, seen it reach to their heels; they sometimes increase it by artificial means; commonly with horse hair. It is divided into a number of locks, matted at intervals, with a braid of white earth, a substance resembling putty. Some times it is rolled up in a ball, and fixed on the top of the head. They always have a quantity of feathers about them, those of the black eagle are most esteemed 104. They have a kind of crown made of feathers 105, such as we see represented in the usual paintings of Indians, which is very beautiful. The swan is in most estimation for this purpose. Some ornament the neck with necklace made of the claws of the white bear 106. To their heels they sometimes fasten fox tails, and on their leggings suspend deers hoofs, so as to make a rattling noise as they walk. On seeing a warrior dressed out in all this finery, walking with his wife, who was comparatively plain in her dress of ornaments, I could not but think this was following the order of nature, as in the pea-

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

cock, the stag, and almost all animals, the male is lavishly decorated while the female is plain and unadorned, I intend this as a hint to some of our petit maitres. The dress of the female consists of a long robe made of the dressed skins of the elk, the antelope, or the agolia, and ornamented with blue beads, and strips of ermine, or in this place, of some white skin. The robe is girded round the waist with a broad zone, highly ornamented with porcupine quills, and beads. They are no better off than were the Greeks and Romans, in what we deem at present to essential, but like them, they bathe themselves regularly, twice a day. The women are much fairer than the men; some might be considered handsome anywhere -- they are much more numerous than the men, the consequence of the wars in which the nation is constantly engaged. Polygamy is general, they have often four or five wives. Their courtship and marriage resemble that of most Indian nations; if the parties are mutually agreeable to each other, there is a consultation of the family, if this be also favorable, the father of the girl, or whosoever gives her in marriage, makes a return for the present he had previously received from the lover -- the match is than concluded.

They display considerable ingenuity of taste in their works of art; this observation applies to all the American nations, from the Mexicans to the most savage. Their arms, household utensils, and their dresses, are admirably made. I saw a gun which had been completely stocked by an Indian. A curious instance of native ingenuity which came under my notice, ought not to be omitted. I was told one day, of an old Indian who was making a blanket; I immediately went to see him. To my surprise, I found an old man, perfectly blind, seated on a stool before a kind of frame, over which were drawn coarse threads, or rather twists of buffaloe wool, mixed with wolf's hair; he had already made about a quarter of a yard of a very coarse rough cloth.-- He told me that it was the first the had attempted, and that it was in consequence of a dream, in which he thought he had made a blanket like those of the white people. Here are the rudiments of weaving. They make beautiful jugs or baskets with osier, so close as to hold water.

I observed some very old men amongst them -- the country is so exceedingly healthy, that they arrive to a very great age.-- About twenty years ago, the small pox destroyed a great number of them. One day, in passing through the village, I saw something brought out of a lodge in a buffaloe robe, and exposed to the sun; on approaching, I discovered it to be a human being, but so shrivelled up, that is had nearly lost the human physiognomy; almost the only sign of life discernible, was a continual sucking its hands. On inquiring of the chief he told me, that he had seen it so ever since he was a boy. He appeared to be at least forty-five. It is almost impossible to ascertain the age of an Indian when he is above sixty; I made inquiries of several, who appeared to me little short of an hundred, but could form no satisfactory conjecture. Blindness is very common, arising probably from the glare of the snow, during a great part of the year. I observed the goitre, or swelled neck, in a few instances.

Their government is oligarchical, but great respect is paid to popular opinion 107. It is utterly impossible to be a great man amongst them, without being a distinguished warrior, though respect is paid to birth, but this must be accompanied by other merit, to procure much influence. They are divided into different bands or classes; that of the pheasant, which is composed of the oldest men; that of the bear, the buffaloe, the elk, the dog &c.. Each of these has its leader, who generally takes the name of the class, exclusively. Initiation into these classes, on arriving to the proper age, and after having given proofs of being worthy of it, is attended with great ceremony. The band of dogs, is considered the most brave and effective in war, being composed of young

---

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

men under thirty. War parties are usually proposed by some individual warrior, and according to the confidence placed in him, his followers are numerous or otherwise. In these excursions they wander to a great distance, seldom venturing to return home without a scalp, or stolen horses.-- Frequently when unsuccessful, they "cast their robes," as they express it, and vow to kill the first person they meet, provided he not be of their nation. In crossing the river, they use canoes made of the buffaloe hide, or a few pieces of wood fastened together. They usually have some token, as a stake, which is so as to convey some idea of their numbers, the direction which they have taken, &c. To avoid surprise, they always encamp at the edge of a wood; and when the party is small, they construct a kind of fortress, with wonderful expedition, of billets of wood, apparently piled up in a careless manner, but so arranged as to be very strong, and are able to withstand an assault from a much superior force. They are excellent horsemen -- they will shoot an arrow at full speed, and again pick it up from the ground without stopping; sometimes they will lean entirely upon one leg, throwing their bodies to that side, so as to present nothing but the leg and thigh, on the other.-- In pursuit of the buffaloe, they will gallop down steep hills, broken almost into precipices. Some of their horses are very fine, and run swiftly, but are soon worn out, from the difficulty of procuring food for them in winter, the smaller branches of the cotton wood tree being almost the only fodder which they give them. Their hunting is regulated by the warriors chosen for the occasion, who urge on such as are tardy, and repress often with blows, those who would rush on too soon. When a herd of buffaloe is discovered, they approach in proper order, within a half a mile, they separate and dispose themselves, so as, in some measures, to surround them, when at the word, they rush upon them at full speed, and continue as long as their horses can stand it; a hunter usually shoots two arrows into a buffaloe, and then goes in pursuit of another; if he kills more than more than two in the hunt, he is considered having acquitted himself well, The tongue is the prize of the person who has slain the animal; and he that has the greater, is considered the best hunter of the day. Their weapons consist of guns, war clubs, spears, bows, and lances. They have two kinds of arrows, one for the purpose of the chase, and the other for war; the latter differs in this particular, that the barb or point is fastened so slightly, that when it enters the body, it remains in, and cannot be drawn out with the wood; therefore, when it is not in a vital part, the arrow is pushed entirely through. They do not poison them. Their bows are generally very small; an elk's horn, or two ribs of a buffaloe, often constitute the materials of which they are made. Those of wood are willow, the back covered with sinews. Their daily sports, in which, when the weather is favorable, they are engaged from morning till night, are principally of two kinds. A level piece of ground appropriated for the purpose, and beaten by frequent use, is the place where they are carried on. The first is played by two persons, each armed with a long pole; one of them rolls a hoop, which after having reached about two-thirds of the distance, is followed at half speed, and as they perceive it about to fall, they cast their poles under it; the pole on which the hoop falls, so as to be nearest to certain corresponding marks on the hoop and pole, gains for that time. This game excites great interest, and produces gentle, but animated exercise. The other differs from it in this, that instead of poles, they have short pieces of wood, with barbs at one end, and a cross piece at the other, held in the middle with one hand; but instead of the hoop before mentioned, they throw a small ring, and endeavor to put the point of the barb through it. This is a much more violent exercise than the other.

With respect to their religion, it is extremely difficult, particularly from the slight acquaintance

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

I had with them, to form any just idea. They have some notion of a Supreme Being, whom they call "The Master of Life," but they offer him no rational worship, and have but indistinct ideas of a future state. Their devotion manifests itself in a thousand curious tricks, of slight of hand, which they call magic, and which the vulgar amongst them believe to be something supernatural. They are very superstitious. Besides their public resident lodge, in which they have a great collection of magic, or sacred things, every one has his private magic in his lodge about his person 108. Anything curious, is immediately made amulet, or a talisman; and is considered as devoted or consecrated, so as to deprive them of the power of disposing of it. The principal war chief lately took advantage of this, ingeniously enough. He obtained a very fine horse, which he was desirous of keeping, but fearing that some one might ask him as a gift, and to refuse would be considered as evincing a narrowness of mind unbecoming a great man, who ought not to set his heart upon a matter of so little importance, he announced that he had given him to his magic.-- Some parts of their religious exercises are the most barbarous that can be imagined. I observed a great number whose bodies were scarred and cut in the most shocking manner; I was informed that this was done in their devotion; that to show their zeal, they sometimes suspend themselves by the arms or legs, or the sides, by hooks. I was shown a boy, who had drawn two buffaloe heads by cords drawn through the fleshy part of his sides, nearly a quarter of a mile 109. I might enumerate a variety of other particulars, in which this strange self punishment is carried to the greatest lengths. They have frequent holy days, when the greater part of the village appears to desist from labor, and dress out unusually fine. On these occasions, each one suspends his private magic on a high pole before his door; the painted shields, quivers of a variety of colors, scarlet cloth, and highly ornamented buffaloe robes, which compose those trophies, produce a very lively effect. I several times observed articles of some value, suspended in the woods. I was told they often leave their property in this manner, without being under any apprehension that any of the same tribe will touch it, provided that there be the least sign to show that it is not lost. A kind of superstition similar to that of the Druids 110, which protected their offerings hung up in the woods. Since the affair of Lieut. Prior 111, who commanded the party dispatched by the United States, to take home the Mandan chief, these people have been friendly to the whites. They speak of the occurrence with regret, and declare that it was done by bad people whom they could not restrain 112.

To give an account of the vices of these people would be to enumerate some of the more gross, prevalent amongst us.-- The savage state, like the rude uncultivated waste, is contemplated to most advantage at a distance. They have their rich and their poor, their envious, their proud, overbearing, their mean and groveling, and the reverse of these. In some respects they appear extremely dissolute and corrupt -- whether the result of refinement, or vice, or the simplicity of nature, I am not able to say. It is part of their hospitality, to offer the guest, their wife, sister, or maid servant, according to the estimation in which the guest is held, and to refuse, is considered as treating the host with contempt. It appeared to me while we remained at the village, that their females had become mere articles of traffic; I have seen fathers bring their daughters, brothers their sisters, and husbands their wives, to be disposed of for a short time, to the highest bidder. I was unable to account for this strange difference from all other people I had ever read of, unless from the inordinate passion which seized them for our merchandise. Chastity appeared to be unknown as a virtue. Yet this may not have been universal; a more minute acquaintance with these people,

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

might have enabled to explain this strange phenomenon. From the remnant of a singular custom which prevails amongst them, one might suppose that this had not always been the case. On a certain occasion, a great number of young girls were collected before the medicine lodge or temple, prizes were exhibited, and a cedar bough was stuck on the lodge; the old men who reside in the temple, proclaimed, that whoever was yet a virgin, should come forward and touch the bough, and take the pier; that is was in vain to think of deceiving, the manitou would reveal every thing; the young men were moreover required to declare against any one who should attempt it, all they knew. A young metiff, daughter of the interpreter, a beautiful girl of sixteen, came forward, but before she could ascend to touch the bough, a young fellow stepped out and bade her remember a certain place! She withdrew, confused and abashed. There was a pause for a considerable time; I began to tremble for the maiden of Arikara, when a girl of seventeen, one of the most beautiful in the village, walked forward and asked, "where is the Arikara who can boast of having received favors from me?" then touched the bough, and carried off the prize. I feel a pleasure in adding, for the honor of the ladies of Arikara, that others followed, though I did not take the trouble of noting the number.

Seeing the chief one day in a thoughtful mood, I asked him what was the matter-- "I was wondering" said he "whether you white people have any women amongst you." I assured him in the affirmative. "Then" said he, "why is it that your people are so fond of our women, one might suppose they had never seen any before?" 113

CHAPTER VII

Wednesday 19th. It was resolved this morning by Mr. Lisa to leave one of his men to continue the trade with the Arikaras, and continue his voyage. As part of the price of the goods bought from Mr. Hunt, was to be paid in horses, a party was sent by land to the Mandan fort, for the purpose of bringing them. Mr. Bradbury being desirous of seeing the interior of the country, accompanied them.

Set off from the village about eleven o'clock, the wind favorable, but the weather rainy and disagreeable. Having made about fifteen miles, we encamped. The musketoes are more troublesome than I have known them. I am informed that this is not the case every year.

Thursday 20th. Weather more pleasant, but the wind for a part of the afternoon contrary. The river is rising rapidly, it is at present at a very high stage. Having made five points, encamped.

Friday 21st. Set off under sail, with a fine breeze, which continued the whole of the day. Made upwards of forty miles. The country improves -- handsome green hills, and fine bottoms.

Saturday 22d. A continuance of favorable wind, but the river crooked. At ten, landed to kill some buffaloe -- they are numerous on the sides of the hills.

Sunday 23d. Bad weather -- contrary wind, and violent storms. In the evening it cleared up; the wind continuing so as to prevent us from proceeding, we landed and went in pursuit of some buffaloe. The whole surface of the country appeared covered with them. I continued the chase four or five miles from the river, in the middle of a very romantic country.

Monday 24th. Proceeded this morning with delightful weather, the sky clear, and of a most enchanting blue. Continued the greater part of the day, with the cordelle, along the prairie. The country on either side, of a very pleasant appearance, and a number of wooded points.

Tuesday 25th. Sailed this morning with a slight breeze.-- At ten, passed an old Mandan village; and at some distance above, saw a great number of Mandan Indians on their march along the

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

Prairie. They sometimes go on hunting parties by whole villages, which is the case at present; they are about five hundred in number, some on horseback, some on foot, their tents and baggage drawn by dogs. On these great hunting parties, the women are employed in preserving the hides, drying the meat, and making a provision to keep. Very little of the buffaloe is lost, for after taking the marrow, they pound the bones, boil them, and preserve the oil. This evening the Mandan chief, She-he-ke, who was in the United States, came to us with his wife. Hearing of our approach, he had set off for the purpose. Encamped on a prairie of very rich soil. The country is very fine on both sides of the river. There are some high hills.

Wednesday 26th. In the course of the day, passed by the Mandan villages, with a favorable wind, and arrived late at night, at the fort of the company, 1640 miles from the mouth of the Missouri. We remained here until the sixth of July. Mr. Bradbury had already arrived. He describes the country at the distance of eight or ten miles from the river, as very handsome; a continued succession of meadows, with some wood along the water courses; on approaching the river, it becomes more broken and hilly.

We made several excursions to the villages below, and to the interior of the country, but as they afford but little new, I shall not give any detail of them. In the neighborhood of the fort there are a number of clay hills, washed into the most curious shapes, by the frequent rains, generally of a whitish color, though intermixed with strata of various hues. Some of them resemble clouds, being circular, and detached; at first glance they look like buildings. On some of them there is a beautiful creeping vine, or evergreen, which Mr. Bradbury informs me, is described by Michaux 114, as growing on the lakes. There are great quantities of petrified wood scattered about; I traced a whole tree; the stump was more than three feet high, and at least four in diameter. This is a very extraordinary fact, in a country where the trees are everywhere small. 115

On the fourth day of July, we had something like a celebration of the day; the two principal chiefs happened to be with us.-- The borgne is one of the most extraordinary men I ever knew. The description of Abelino 116 might give some idea of this man. He sways with unlimited control, all these villages, and is sometimes a cruel and abominable tyrant. In stature he is a giant, and his one eye seems to flash with fire. I saw him on one or two occasions, treat She-he-ke with great contempt -- Mr. Lisa citing something which She-he-ke expressed, "what" says the other, "does that bag of lies pretend to have any authority here?" She-he-ke is a fat man, not much distinguished as a warrior, and extremely talkative, a fault much despised amongst the Indians.

On a visit to the village, I saw a great number of small scaffolds scattered over the prairie, on which human bodies were exposed. The scaffolds are supported with four forks, and sufficiently large to receive one or two bodies. They are covered with blankets, cloth of different colors, and a variety of offerings. In this they are different from the Arikaras, who bury their dead as we do. On the sixth of July, we set off from the fort, to return to the Arikara village, where we arrived two days after, without any remarkable occurrence. On our arrival, we found Mr. Hunt waiting the arrival of the Chiennes, to complete his supply of horses. We continued here about ten days, Mr. Manuel Lisa having concluded to send two of his boats, with peltries, Mr. Bradbury who was desirous of returning, gladly embraced the opportunity. The boats 117 were accordingly put under my command, with six men in each.

Two mornings before our departure, a great commotion was heard in the village, before daylight. We rose to discover the cause, and found that the war party, of which about three hundred men,

---

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

were within a short distance of the village, on their return, after a battle with the Sioux the evening before, in which two or three were killed, and as many wounded. All the relations of those engaged, came out of the village to meet them. I accompanied them about a mile and an half. They advanced in a kind of procession, which moved slowly, with some regularity; each band separate, and sung its song. Some carried the scalps on poles, others the sacred standards, which consisted of a large bow and a spear, both beautifully ornamented. The scene which took place, would be worthy the pen of a Fenelon 118; the meeting of those connected by the most tender relations, was truly affecting. The whole would baffle description; I was touched with the tenderness of a woman, who ran to meet her son, a youth badly wounded, but who exerted himself to keep on his horse, and from his countenance, one would have supposed nothing had been the matter. The young man died almost as soon as he arrived at the temple, for it is the custom to carry those who have been wounded on these occasions to this place, to be taken care of at the public expence. As they approached the village, the old men who could hardly walk, whose voices were extremely shrill, came out singing their songs also, and rubbing the warriors with their hands. The following day we spent in festivity by the village in general, and in grief by those who had lost their relations.

Towards the last of July, with glad hearts, we set off, to return once more to civilized life, after more than four months absence from it. My orders were to go day and night if possible, and not stop for any Indians. The water was extremely high, and with the assistance of six oars, we were able to make little short of twelve miles an hour. The first day we passed the Chienne river, and went some time after night, but considering this something dangerous, I landed and continued until daylight. The next morning we reached the Great Bend, a vast number of buffaloe were seen on all sides, and the most tremendous bellowing from the bulls, as this was about the time of their mixing with the herds of cows, for they generally stay in separate herds. The country this far is beautiful, the points sufficiently wooded, and the bottoms fine. The wind becoming high, we were compelled to lie by the whole of the afternoon, in the Great Bend. On the north west side, it is bounded the whole of the way by buffaloe nearly bare, affording but a scanty vegetation of sand cherries, gooseberries, and dwarf plum trees. The next day we passed White river, where the black bluffs begin -- a barren and miserable country nearly as hundred miles; there are scarcely any bottoms, and the bluffs in most places without even grass. In some places the hills rise to the height of mountains; it frequently afforded me amusement to see the herds of buffaloe ascending these hills by a winding path. In the evening we were compelled to land in a little recess of the bluffs, there being appearances of an approaching storm; we were not disappointed. The continued and vivid flashes of lightening, and peals of thunder, shaking the solid earth, were succeeded by a tremendous storm. The winds blew with such violence, as to threaten our boats; for an hour, we were obliged to protect the sides with wet blankets, to prevent them from filling, while it rained on us incessantly the whole night. The next day we passed the Poncas village. The Indians were absent in the plains. The islands are generally fine thus far, and excepting the tract between the White river, and the Qui Courre 119, there are many delightful spots, though the bottoms are mostly prairie, and the upland with little or no wood.

In the evening, near a point above isle a Bon Homme 120, our attention was awakened by a tremendous noise. On landing, we discovered the woods literally swarming with buffaloe, a heard of males had come amongst a number of females. The noise which they made is truly undescribable.

---

JOURNAL OF A VOYAGE UP THE MISSOURI RIVER, IN 1811

Henry Marie Brackenridge Cramer, Spear and Eichbaum. Pittsburgh. 1814.

---

On the hills in every direction, they appeared by thousands. Late in the evening we saw an immense herd running along the sides of the hills in full speed; their appearance had something in it, which, without incurring ridicule, I might call sublime -- their footsteps resembled the roaring of distant thunder.

The next day we passed the Maha village, and had a most extraordinary run of forty-five leagues, from sun to sun. From the Qui Corre, to the Mahas, the bottoms are wider and better wooded than above, but the upland much of the same. We found them almost everywhere overflowed; we were obliged to encamp on some driftwood -- the musketoes tormented us the whole night.

The following day we passed the Blackbird Hill, and the river Platte. The navigation in this part is much more dangerous than above, from the number of trees fixed in the bottom. The bottoms are much wider than above, and better wooded; in some places for twenty miles and upwards, we were out of sight of the high lands; but the low grounds were everywhere overflowed. The water rushed into the woods with great velocity, and in bends it poured over the gorge into the river again; a sheet of water sometimes for a mile, flowed over the bank.

In something better than two days afterwards, we arrived at Fort Clark, having come a thousand miles in eight or nine days, without meeting a living soul. Here we were treated politely by the officers. Mr. Sibley, the factor, had returned but a few days before, from a journey to the interior, and showed us specimens of salt, which he had procured at the salines 121, on the Arkansas.

We arrived at St. Louis early in August, having made fourteen hundred and forty miles in little better than fourteen days 122.

1819.

PREFACE

WHEN I undertook to travel in Louisiana, it was intended that I should make New Orleans my principal place of residence, and also the place of deposit for the result of my researches. This intention I made known to Mr. Jefferson, during my stay at Monticello, when he immediately pointed out the want of judgment in forming that arrangement, as the whole of the country round New Orleans is alluvial soil, and therefore ill suited to such productions as were the objects of my pursuit. In consequence of his representations, I changed my intentions, and proceeded to St. Louis, one thousand four hundred miles above Orleans by the course of the Mississippi, where I employed myself, during the winter of 1810, in making such preparations as I deemed necessary for the preservation of what might be collected during the ensuing summer. In my subsequent journey up the Missouri, although every facility was afforded me that the nature of the expedition would allow, yet the necessity of conforming to the rules laid down to secure the safety of the party during the voyage, added to the known or supposed proximity of the hostile Indians, during a considerable part of our route, caused me to lose a great many opportunities, which, had my exertions been free, I should not have done. Besides these impediments, I lost the opportunity of collecting a great number of new plants on my return, through the breach of faith towards me by Mr. Lisa, who agreed that his boats should land me at different places; which promise he neither did, nor intended to, perform. For these reasons, I am persuaded that much yet remains to be done in that interesting country. When the whole of my collection was embarked on the Missouri, at the Aricara nation, it was extensive; but being then two thousand nine hundred miles from New Orleans, the losses by the way, and during my subsequent sickness at St. Louis, greatly diminished it. Immediately after my return to the United States, and before I could make any arrangement, either for my return to England, or for the publication of the plants I collected, the war broke out with this country:- I waited for its termination, and made some arrangements which caused a necessity for my stay some time longer.

I have made the above statement, because I think, that whoever undertakes a mission of the

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

nature which I did, where the duty is to be performed in a wilderness, ought to give an account how he performed it, even in his own defence; as it often happens that men are found, who, from interested or malignant motives, will vilify his character. I had intended that this should have been accompanied by a description of the objects collected, that had not been before discovered; but on my return to England, I found that my design was frustrated, by my collection having been submitted to the inspection of a person of the name of Pursh, who has published the most interesting of my plants in an appendix to the *Flora Americae Septentrionalis*.

As my chief object has been to convey information and to write the truth, I have not been particular in the choice of words; if, therefore, the style meets with criticism, I shall neither be surprised nor disappointed. A catalogue of some of the more rare plants in the neighbourhood of St. Louis, and on the Missouri, is added, together with their habitats. To many it will be of no value; but as it may be of some use to naturalists who may visit those parts hereafter, I have thought proper to insert it. In what relates to the country west of the Alleghanies, I have been brief, because a more dilated account would have swelled the work much beyond the limits I had prescribed to myself. A second visit to those parts, in which my movements shall be less circumscribed, may enable me to give a more finished picture. In what has been said on those countries, I disclaim any design to encourage emigration; and may be credited in the assertion, because I can have no possible interest in promoting it. I have told the truth, and I can see no reason why it should have been suppressed.

Liverpool, August 1, 1817

SECOND EDITION

SHORTLY after the publication of the first Edition of this Work, Mr. Bradbury returned to America, and is now residing at St. Louis. The rapid sale of the first Edition, and its favourable reception by the Public, have induced the publication of a second, to which a Map of the United States has been added, carefully collated from the one published by Mr. Mellish.

Mr. Bywater's ingenious speculations on animalculae, which were published in the first Edition, in a letter addressed by him to Mr. Bradbury, are omitted in the second, at the request of the author, who, on reconsidering the subject, wishes to make some alterations, that he does not feel himself at liberty to publish in Mr. Bradbury's Work, without previously consulting him.

Liverpool, 1819.

ON the 31st December, 1809, I arrived at St. Louis, in Upper Louisiana; intending to make that town or neighbourhood my principal place of residence, whilst employed in exploring the interior of Upper Louisiana and the Illinois Territory, for the purpose of discovering and collecting subjects in natural history, either new or valuable. During the ensuing spring and summer, I made frequent excursions alone into the wilderness, but not farther than eighty or a hundred miles into the interior. In the autumn of 1810, I dispatched for Orleans, in seven packages, the result of my researches; but had the mortification, soon after, to hear that the boat containing my collection had been driven ashore and damaged, on an island near St. Genevieve, sixty miles below St. Louis. As soon as I received this information I went thither, but learned that the boat had been repaired, and had proceeded on her voyage. On my return to St. Louis, I was informed that a party of men had arrived from Canada, with an Intention to ascend the Missouri, on their way to the Pacific Ocean, by the same route that Lewis and Clarke had followed, by descending the Columbia River. I soon became acquainted with the principals of this party, in whom the manners and accom-

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

plishments of gentlemen were united with the hardihood and capability of suffering, necessary to the backwoodsmen. As they were apprised of the nature and object of my mission, Mr. Wilson P. Hunt, the leader of the party, in a very friendly and pressing manner invited me to accompany them up the River Missouri, as far as might be agreeable to my views. I had intended to remove from St. Louis to Ozark, (or more properly Aux-arcs) on the Arkansas, and to spend the remaining summer on that river; but considering this opportunity for exploring the Missouri too valuable to be lost, I gladly accepted the invitation, to which an acquaintance with Messrs. Ramsey Crooks and Donald M'Kenzie, also principals of the party, was no small inducement. As it would not be practicable to ascend the Missouri until the breaking up of the ice in spring, Mr. Hunt concluded, that to avoid the expense of supporting his party at St. Louis, it would be better to station them during the winter on some part of the Missouri, at a considerable distance above its mouth, as, at any point on that river above the settlements, five or six hunters can easily provide for forty or fifty men. The party therefore quitted St. Louis, and proceeded to the mouth of the Naduet, which falls into the Missouri 450 miles from the Mississippi. In the beginning of March Mr. Hunt returned to St. Louis in a boat with ten oars, and on the morning of the 12th, having completed his arrangements, he again embarked for the Missouri. As the post was expected to arrive the morning following, I put my trunks on board the boat, and determined to wait until that time, and meet the party at St. Charles. I must here observe, that the post to St. Louis is dispatched from Louisville, in Kentucky, a distance of more than 300 miles, through a wilderness, and from various causes is often retarded for several weeks, as had been the case at that period. In the evening I was informed by a gentleman in St. Louis, that a writ for debt had been taken out against Dorion, (whom Mr. Hunt had engaged as interpreter) by a person whose object was to defeat the intentions of the voyage. Knowing that the detention of Dorion would be of serious consequence to the party, I left St. Louis at two O'clock the following morning, in company with a young Englishman of the name of Nuttall, determined to meet the boat previous to its arrival at St. Charles, which I effected; and Dorion was sent into the woods, his squaw accompanying him. We arrived at St. Charles about noon, and soon after Mr. Samuel Bridge, a gentleman from Manchester, then living at St. Louis, arrived also, with letters for me from Europe, the post having come in as was expected. We slept on board the boat, and in the morning of the 14th took our departure from St. Charles, the Canadians measuring the strokes of their oars by songs, which were generally responsive betwixt the oarsmen at the bow and those at the stem: sometimes the steersman sung, and was chorused by the men. (1) We soon met with Dorion, but without his squaw, Whom it was intended should accompany us. They had quarrelled, and he had beaten her, in consequence of which she ran away from him into the woods, with a child in her arms, and a large bundle on her back. A Canadian of the name of St. Paul was sent in search of her. The day was very rainy, and we proceeded only nine miles, to Bon Homme Island, where we encamped, and St. Paul arrived, but without the squaw. I observed in the broken banks of this island, a number of tuberous roots, which the Canadians call pommes de terre. They are eaten by them, and also by the Indians, and have much of the consistence and taste of the Jerusalem artichoke: they are the roots of *glycine apios*.

15th.- About two hours before day, we were hailed from the shore by Dorion's squaw, who had been rambling all night in search of us. She was informed, that we would cross over to her at daybreak, which we did, and took her on board. I walked the greater part of this day on the north

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

side of the river, which is partly bounded by rocks of secondary lime-stone; at the foot of which I observed crystals of quartz and calcareous spar, or carbonate of lime. We encamped opposite the remains of the village of St. Andrew, which is now abandoned.

16th.- We this day passed the Tavern Rocks, so called from a large cave therein, level with the surface of the river. These rocks are nearly three hundred feet high, and are of the same nature as those we passed yesterday, but more abundantly filled with organ remains, consisting of anomiae and entrochii. On the islands which we passed there is abundance of equisetum hyemale, called rushes by the settlers, by whom this plant is held in high estimation, on account of its affording winter food for their cattle. On the first settlement of Kentucky, the borders of the river were found to be thickly set with cane, (*arundinaria macrosperma* of Michaux) and it was one of the strongest inducements with the first settlers to fix on a spot if cane was abundant. On the Missouri, the rushes are equally valuable, affording to the first settler winter food for his cattle for several years, after which they perish, being destroyed if fed on during the winter. We this night arrived at Point L'Abaddie, where we encamped.

17th.- Early this morning I walked along the river, and was much struck with the vast size to which the cotton wood tree<sup>(2)</sup> grows. Many of those which I observed this day exceed seven feet in diameter, and continue with a thickness very little diminished, to the height of 80 or 90 feet, where the limbs commence. After breakfast, we crossed to the north side of the river, and in the afternoon landed at a French village, name Charette. In the woods surrounding this place I observed a striking instance of the indolence of the inhabitants. The rushes in the neighbourhood had been already destroyed by the cattle, and from the neglect of the owners to provide winter food for their horses, they had been reduced to the necessity of gnawing the bark off the trees, some hundreds of which were stripped as far as these animals could reach. The cotton wood, elm, mulberry, and nettle trees (*celtis crassifolia*) suffered the most. On leaving Charette, Mr. Hunt pointed out to me an old man standing on the bank, who, he informed me, was Daniel Boone, the discoverer of Kentucky. As I had a letter of introduction to him, from his nephew Colonel Grant, I went ashore to speak to him, and requested that the boat might go on, as I intended to walk until evening. I remained for some time in conversation with him. He informed me, that he was eighty-four years of age; that he had spent a considerable portion of his time alone in the back woods, and had lately returned from his spring hunt, with nearly sixty beaver skins. On proceeding through the woods, I came to the river Charette, which falls into the Missouri about a mile above the village, and was now much swelled by the late rains. As the boat had disappeared behind an island, and was at too great a distance to be hailed, I got across by swimming, having tied my clothes together, and inclosed them in my deer skin hunting coat, which I pushed before me. I overtook the boat in about three hours, and we encamped at the mouth of a creek called Boeuf, near the house of one Sullens. I enquired of Sullens for John Colter, one of Lewis and Clarke's party, whom General Clark had mentioned to me as being able to point out the place on the Missouri where the petrified skeleton of a fish, above forty feet long, had been found. Sullens informed me that Colter lived about a mile from us, and sent his son to inform him of our arrival; but we did not see him that evening.

18th.- At day-break Sullens came to our camp, and informed us that Colter<sup>(3)</sup> would be with us in a few minutes. Shortly after he arrived, and accompanied us for some miles, but could not give me the information I wished for. He seemed to have a great inclination to accompany the expe-

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

dition; but having been lately married, he reluctantly took leave of us. I walked this day along the bluffs, which were beautifully adorned with anemone hepatica. We encamped near the lower end of Lutre (Otter) Island.

The 19th commenced and continued rainy.- When we had passed the lower settlements, we began to see the river and its borders in a state of nature. The rushes, equisetum hyemale, were so thick and tall, that it was both painful and difficult to walk along, even at a very slow pace.

20th.- The river on the south side, during this day's travel, is mostly bounded by bluffs, or rocks, of whitish limestone: their appearance is very picturesque; the tops are crowned with cedar, and the ledges and chinks are adorned with mespilus Canadensis, now in flower. We encamped this night seven miles above the mouth of Gasconade River.

21st.- The rain, which had been almost incessant since our departure from St. Charles, had now ceased.

I went ashore, after breakfast, intending to walk along the bluffs, and was followed by Mr. Nuttall. We observed that the boat immediately passed over to the other side of the river, on account of its being more easy to ascend. As this sometimes happened several times in a day, we felt no concern about it, but proceeded on our researches. In the forenoon we came to a creek or river, much swelled by the late rains: I was now surprised to find that Mr. Nuttall could not swim. As we had no tomahawk, nor any means of constructing a raft, and were certain that the boat was before us, we looked for no alternative but to cross the creek by fording it. We therefore continued to ascend, and in about half an hour arrived at a place where a tree had fallen in on the opposite side of the river, which reached about half way across it. I stripped, and attempted to wade it, but found it impracticable. I then offered to take Nuttall on my back, and swim over with him; but he declined, and we continued our route. About a league further up, we found a raft of drift-wood, which had been stopped by a large tree that had fallen into the river; this we crossed and with some difficulty overtook the boat. We arrived at a French village, called Cote sans Dessein, about two miles below the mouth of Osage River. After we had formed our camp, the interpreter went into the village, where he had some acquaintance. On his return, he informed us that there was a war party of Indians in the neighbourhood, consisting of the Ayauwais, Potowatomies, Sioux, and Saukee nations, amounting to nearly three hundred warriors.

He had learned, that this party were going against the Osages; but having discovered that there was an Osage boy in the village, they were waiting to catch and scalp him. He also informed us, that we might expect to fall in with other war parties crossing the Missouri higher up. This was unpleasant news to us, as it is always desirable that white men should avoid meeting with Indian war parties: for if they are going to war, they are generally associated in larger parties than can subsist by hunting, from which they refrain, to prevent being discovered by their enemies, wherefore they are almost certain to levy contributions of provisions or ammunition on all they meet. When they return from war, the danger is still greater; for, if successful, they often commit wanton ravages; and if unsuccessful, the shame of returning to their nation without having performed any achievement, often induces them to attack those whom they would, in other circumstances, have peaceably passed. As we were sixteen men, well armed, we were determined to resist any act of aggression, in case of a rencontre with them.

22nd, 23rd, and 24th.- Almost incessant rain. Our bread was now becoming very mouldy, not having been properly baked. Mr. Hunt anxiously waited for a fine day to dry it, together with the

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

rest of the baggage.

25th.- Met a boat with sixteen oars coming from Fort Osage to St. Louis, for supplies: news had arrived at the fort, that the Great Osages had lately killed an American at their village.

26th.- It rained nearly the whole of this day: the flats near the river still continue to be so thickly covered with rushes, that it is almost impossible to travel over them.

27th.- The north bank of the river now assumes a most interesting appearance: it consists of a range of rocks, nearly perpendicular, from 150 to 300 feet high; they are composed of a very white limestone, and their summits are covered to the edge with cedar. The length of this range is about six miles, and at the upper end they assume a semi-circular form. These are called the Manitou Rocks, a name given to them by the Indians, who often apply this term Manitou to uncommon or singular productions of nature, which they highly venerate. On or near these Manitous, they chiefly deposit their offerings to the Great Spirit or Father of Life. This has caused some to believe that these Manitous are the objects that they worship; but this opinion is erroneous. The Indians believe that the Great Spirit either inhabits, or frequently visits, these manifestations of his power; and that offerings deposited there, will sooner attract his notice, and gain his auspices, than in any other place. These offerings are propitiatory, either for success in war or in hunting, and consist of various articles, of which the feathers of the war eagle (*falco melanoetos*) are in the greatest estimation. On these rocks several rude figures have been drawn by the Indians with red paint: they are chiefly in imitation of buffalo, deer, &c. One of these, according with their idea of the Great Spirit, is not unlike our common representation of the devil. We encamped this night a little above the mouth of the Bonne Femme, a small river on the north side, where the tract of land called Boone's Lick settlement commences, supposed to be the best land in Western America for so great an area: it extends about 150 miles up the Missouri, and is near fifty miles in breadth.

28th.- I left the boats early, intending to walk to the Lick settlements, which are the last on the river, excepting those occupied by one or two families near Fort Osage. After travelling eight or ten miles, I was surprised in the woods by a severe thunder storm. Not knowing whether I could reach the settlements before night, I returned to meet the boat, and found our two hunters, who had sheltered themselves in a hollow tree: they had killed a buck, on a part of which we dined, and carried the remainder to the boat, and soon after we arrived at the first house, belonging to a planter named Hibband. This evening we had a most tremendous thunder storm; and about nine o'clock, a tree, not more than fifty yards from our camp, was shivered by lightning. Mr. Hunt, Mr. Nuttall, and myself, who were sitting in the tent, sensibly felt the action of the electric fluid.

29th.- As Mr. Hunt had some business with one of the settlers, we walked to his house, where we heard that war had already commenced between the Osages and the confederate nations, and that the former had killed seven of the Ayauways. This determined us to continue our practice of sleeping on our arms, as we had done since the 21st. We slept this night about a league above the settlements.

30th.- We were now beyond all the settlements, except those at Fort Osage, and Mr. Hunt resolved to send the hunters out more frequently, as game might now be expected in abundance. I accompanied them, and we killed a buck and a doe. I found the country, three or four miles from the river, very broken or stony. The almost incessant rains had now raised the Missouri to within a few feet of its annual flood, which rendered the navigation very difficult.

31st.-The morning was rainy, and was succeeded by a strong north wind, which caused a sudden

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

change in the temperature of the weather: the 30th had been warm, but this night the water, in a tin cup of a pint measure, that had been left full in the boat, was found to be nearly all solid ice on the morning of the first of April.

April 1st.- After breakfast I went ashore with the two hunters, Harrington and Mears, but soon separated from them in order to visit the bluffs. In the evening I descended into the valley, and on my way to find the boat, observed a skunk(4), (*Viverra mephitis*) and being desirous of procuring the skin, fired at it, but with shot only, having that day taken out my fowling-piece instead of my rifle. It appeared that I had either missed entirely, or only slightly wounded it, as it turned round instantly, and ran towards me. Being well aware of the consequence if overtaken, I fled, but was so closely pursued, that I was under the necessity of re-loading whilst in the act of running. At the next discharge I killed it; but as it had ejected its offensive liquor upon its tail, I could not touch it, but cut a slender vine, of which I made a noose, and dragged my prize to the boat. I found that the Canadians considered it as a delicacy, and were desirous of procuring it to eat: this enabled me to obtain the skin without having to perform the disgusting operation of taking it off myself. Soon after my arrival, Harrington came in, and brought the intelligence that they had killed a large bear about four miles off. He had left Mears engaged in skinning it, and came to request that one or two men might be sent to assist in fetching it in. As it was near night, Mr. Hunt determined to stop, and two of the Canadians were sent along with Harrington; I also accompanied them. Although our course lay through a very thick wood, Harrington led us with great precision towards the place, and when he supposed himself near it, he stopped, and we gave a shout. In a few seconds afterwards we heard the discharge of a rifle, and also a shout from Mears, who was within two hundred yards of us. On joining him we were surprised to find that he had two bears. He informed us, that after the departure of Harrington he re-loaded his rifle, and laid it beside him whilst he was skinning and cutting up the bear: he had nearly completed this operation, when he heard a rustling, as if an animal was coming towards him. To defend himself, he seized his piece, and at the moment we shouted, a bear appeared in view. Not seeing Mears, he laid his fore paws on the trunk of a fallen tree, and turned his head to look back. Mears could not have wished for a better opportunity; he shot him through the head. The bears were very large, and as the night had set in before the latter was skinned and cut up, it was too late to send to the boat for assistance: I therefore offered to carry a part, provided they would allot to me the skins, as they were the only clean part of the spoil. This proposition was agreed to, and we set out. Before we had proceeded far, it became quite dark, which caused us to take a wrong direction, that led to a swamp. In addition to our difficulties, the underwood consisted chiefly of the prickly ash, (*zanthoxylon clava Hercules*) by which our faces and hands were continually scratched: there was also an abundance of small prickly vines entwined among the bushes, of a species of smilax. These were easily avoided during day-light, but they were now almost every instant throwing some of us down. Whilst we were deliberating whether it would not be advisable to stop, make a fire, and remain there during the night, we heard the report of a gun, which we thought proceeded from the boat: we therefore steered our course in the direction of the sound. Shortly afterwards we perceived before us a light glimmering through the trees, and in less than half an hour we had a full view of it. Mr. Hunt, from our long delay, had become apprehensive of what had really happened, viz. that we had lost our way, and having observed near the camp a very large cotton-wood tree, which was dead, and evidently hollow, he caused a hole to be cut into the cavity near the root, and a quantity

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

of dry weeds being put in, it was set on fire. The trunk was at least seventy or eighty feet in length before the broken limbs commenced; several of these projected eight or ten feet, and were also hollow. The flames, impelled by so long a column of rarefied air, issued from the top, and from the ends of the limbs, with a surprising force, and with a noise equal to that of a blast furnace. Although smarting with pain, weary, wet, and hungry, not having eaten any thing since morning, I sat down to enjoy the scene, and have seldom witnessed one more magnificent. On relating to the hunters this evening that I had been pursued by a skunk, they laughed heartily, and said it was no uncommon thing, having been often in the same predicament themselves.

2nd.- We this day passed the scite of a village on the north-east side of the river, once belonging to the Missouri tribe. Four miles above it are the remains of Fort Orleans, formerly belonging to the French; it is 240 miles from the mouth of the Missouri." We passed the mouth of La Grande Riviere, near which I first observed the appearance of prairie(5) on the alluvion of the river. Our hunters went out, but soon returned without attempting to kill any thing, having heard some shots fired, which they discovered proceeded from Indians in pursuit of elk. The navigation had been very difficult for some days, on account of the frequent occurrence of, what is termed by the boatmen, embarras. They are formed by large trees falling into the river, where it has undermined the banks. Some of these trees remain still attached by their roots to the firm ground, and the drift-wood being collected by the branches, a dam of the length of the tree is formed, round the point of which the water runs with such velocity, that in many instances it is impossible to stem it. On account of these obstacles, we were frequently under the necessity of crossing the river. This day the carcasses of several drowned buffaloes passed us.

3rd.-I walked the greatest part of the day, but found it troublesome, being much annoyed by the prickly ash. In the evening we had another severe thunder storm.

4th.-The navigation became less difficult, as the river had fallen four feet.

5th.-Went out with the hunters, who shot nothing but a goose, (*anas Canadensis*) that was sitting on a tree beside its nest, in which was the female. Observed for the first time that the rocks bordering the river were sandstone. In these I found nodules of iron ore imbedded.

6th.-Walked all day, and in the afternoon -met the hunters, who had found a bee tree,(6) and were returning to the boat for a bucket , and a hatchet to cut it down. I accompanied them to the tree. It contained a great number of combs, and about three gallons of honey. The honey bees have been introduced into this continent from Europe, but at what time I have not been able to ascertain. Even if it be admitted that they were brought over soon after the first settlement took place, their increase since appears astonishing, as bees are found in all parts of the United States; and since they have entered upon the fine countries of the Illinois and Upper Louisiana, their progress westward has been surprisingly rapid. It is generally known in Upper Louisiana, that bees had not been found westward of the Mississippi prior to the year 1797.(7)They are now found as high up the Missouri as the Maha nation, having moved westward to the distance of 600 miles in fourteen years. Their extraordinary progress in these parts is probably owing to a portion of the country being prairie, and yielding therefore a succession of flowers during the whole summer, which is not the case in forests. Bees have spread over this continent in a degree, and with a celerity so nearly corresponding with that of the Anglo-Americans, that it has given rise to a belief, both amongst the Indians and the Whites, that bees are their precursors, and that to whatever part they go the white people will follow. I am of opinion that they are right, as I think it as impossible to

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

stop the progress of the one as of the other. We encamped this night at the bottom of an island. 7th.- This morning I went upon the island, accompanied by one of the Frenchmen named Guardepee, to look for game. We were wholly unsuccessful in our pursuit, although the island is of considerable extent. On arriving at the upper end of it, we perceived a small island, of about two acres, covered with grass only, and separated from the large one by a narrow channel, the mouth of which was covered with drift timber. We passed over, and walked through the grass, and having given up all hopes of game, we were proceeding to the river to wait for the boat, when my companion, who was before me, suddenly stopped, fired, and jumped aside, crying out, "Voila, O diable, tirez," at the same time pointing towards the grass a few steps before him. I looked, and saw a bear not five yards from us. I immediately fired, and we retired to a short distance to reload, but on our return found the animal expiring. It was a female, with three small cubs in her bed, about two yards from where she was killed. She had heard us approach, and was advancing to defend them. I took one of the cubs in my arms. It seemed sensible of its misfortune, and cried at intervals. It was evident that whenever it uttered a cry, the convulsions of the dying mother increased, and I really felt regret that we had so suddenly cut the ties of so powerful an affection.(8) Whilst we breakfasted the bear was cut up, and, with the young ones, taken on board. We encamped this night about twelve miles below Fort Osage.

8th.- About ten o'clock we came in sight of the fort, about six miles distant. We had not been long in sight before we saw the flag was hoisted, and at noon we arrived, when we were saluted with a volley as we passed on to the landing place, where we met Mr. Crooks, who had come down from the wintering station at the mouth of the river Naduet to meet us. There were also collected at the landing place about 200 Indians, men, women, and children, of the Petit Osage nation, whose village was then about 300 yards from the fort. We passed through them to pay our respects to Lieutenant Brownson, who then commanded in the absence of Captain Clemson. He received us very politely, and insisted that we should eat at his table during our stay. I had with me an introductory letter to Dr. Murray, physician to the garrison, whom I found disposed to give me every information relative to the customs and manners of the Osage nation, and from him also I received a vocabulary of a considerable number of words in that language.(9) He walked with me down to the boats, where we found several squaws assembled, as Dr. Murray assured me, for the same purpose as females of a certain class in the maritime towns of Europe crowd round vessels lately arrived from a long voyage, and it must be admitted with the same success. Towards evening an old chief came down, and harangued the Indians assembled about the boats, for the purpose of inviting the warriors of the late expedition to a feast prepared for them in the village. I was told it was intended that the dance of the scalp should be performed, on the occasion of the war party having brought in seven scalps from the Ayauwais, a village belonging to whom they had destroyed, and killed two old men and five women and children. All the rest had fled at their approach; but as rain came on the dance was not performed. At evening Dr. Murray proposed that we should walk into the village, which I found to consist of about one hundred lodges of an oblong form, the frame of timber, and the covering mats, made of the leaves of flag, or typha palustris. On our return through the town, we called at the lodge belonging to a chief named Waubuschon, with whom Dr. Murray was particularly acquainted. The floor was covered with mats, on which they sat; but as I was a stranger, I was offered a cushion. A wooden bowl was now handed round, containing square pieces of cake, in taste resembling gingerbread. On inquiry I

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

found it was made of the pulp of the persimon, (*diospyros Virginiana*) mixed with pounded corn. This bread they called staninca. Shortly afterwards some young squaws came in, with whom the doctor (who understood the Osage language) began to joke, and in a few minutes they seemed to have overcome all bashfulness, or even modesty. Some of their expressions, as interpreted to me, were of the most obscene nature. The squaw of our host laughed heartily, and did all in her power to promote this kind of conversation. I expressed my surprise to Dr. Murray, but was informed by him that similar conduct would have been pursued at any other lodge in the village. We left the lodge of Waubuschon, and went to that of the chief. On the roof the seven scalps were placed, tied to sticks ornamented with racoons' tails. We were shewn to the upper end of the lodge, and sat down on the ground. I learned that the chief was not present; that he was a boy of six years of age, his name Young White Hair, and that the tribe was now governed by a regent. Immediately a warrior came in, and made a speech, frequently pointing to the scalps on the roof, as they were visible through the hole by which the smoke escaped. I understood that he had distinguished himself in the late expedition against the Ayauways. After shaking hands with all round, we left the lodge, and in our return to the boat we met the squaw belonging to our interpreter, who being of the Ayauway nation, appeared to be much afraid of the Osages during our passage up the river, and it was thought with reason, as on our first interview with the commandant, it had been debated whether or not it would be prudent to send a file of men to conduct her from the boat to the fort during our stay. On inquiry we found that she had been invited up to the village by some of the Osages, and of course, according to Indian custom, would be as safe with them as in the fort. I inquired of Dr. Murray concerning a practice which I had heard prevailed among the Osages, of rising before day to lament their dead. He informed me that such was really the custom, and that the loss of a horse or a dog was as powerful a stimulus to their lamentations as that of a relative or friend; and he assured me, that if I should be awake before day the following morning, I might certainly hear them. Accordingly on the 9th I heard before day that the howling had commenced; and the better to escape observation, I wrapped a blanket round me, tied a black handkerchief on my head, and fastened on my belt, in which I stuck my tomahawk, and then walked into the village. The doors of the lodges were closed, but in the greater part of them the women were crying and howling in a tone that seemed to indicate excessive grief. On the outside of the village I heard the men, who, Dr. Murray had informed me, always go out of the lodges to lament. I soon came within twenty paces of one, and could see him distinctly, as it was moonlight: he also saw me, and ceased, upon which I withdrew. I was more successful with another, whom I approached nearer unobserved. He rested his back against the stump of a tree, and continued for about twenty seconds to cry out in a loud and high tone of voice, when he suddenly lowered to a low muttering, mixed with sobs: in a few seconds he again raised to the former pitch.(10) We breakfasted with the commandant, and afterwards walked out to view some improvements he had made in the fort. In our walk we observed what, on the first view, appeared to be two squaws carrying a tub of water, suspended on a pole. Mr. Crooks desired me to notice them, which I did, and remarked that one of them had more the appearance of a man than of a woman. He assured me that it was a man, and that there were several others in the village, who, like the one we saw, were condemned for life to associate with the squaws, to wear the same dress, and do the same drudgery. I now learned, that when the Osages go to war, they keep a watchful eye over the young men who are then making their first essay in arms, and such as appear to possess the necessary qualifications

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

are admitted to the rank of warriors, or, according to their own idiom, brave men. But if any exhibit evident proofs of cowardice, on the return of the party they are compelled to assume the dress and character of women, and their doom is fixed for life, as no opportunity is afterwards afforded them to retrieve their character.(11) The men do not associate with them, nor are they suffered to marry, or have any intercourse with the women: they maybe treated with the greatest indignity by any warrior, as they are not suffered to resent it. I found, on inquiry, that the late war party had not been conducted by any of the principal chiefs, a circumstance which often happens, as any of the noted warriors may lead a party, provided he can obtain adherents, and he finds no difficulty in procuring the sanction of the chiefs; but in this case he must travel without mock-asons, or even leggings. He goes the foremost of the party, makes the fire at night, and stands to keep watch whilst the party lie down to sleep, nor can he lie down unless a warrior rises and takes his place. This indulgence he must not require, but may accept, if voluntarily offered. In pursuing the object of the expedition, his commands are absolute, and he is obeyed without a murmur. The Osages are so tall and robust as almost to warrant the application of the term gigantic: few of them appear to be under six feet, and many are above it. Their shoulders and visages are broad, which tend to strengthen the idea of their being giants. On our return from viewing the improvements in the fort, I was introduced to Mr. Sibly, the Indian agent there, who is the son of Dr. Sibly of Natchitoches.” He informed me that he purposed shortly to attend the Petits Osages in their annual journey for salt, and invited me to accompany him, offering as an inducement, to procure two horses from the Indians for my own use. Learning that the place where the salt is procured is that which has occasioned the report of a salt mountain existing in Upper Louisiana, I was very much inclined to accept his invitation; but finding Mr. Hunt unwilling to release me from my promise to attend him, I declined it. I accompanied Mr. Sibly and Dr. Murray in the evening, to see the dance of the scalp. The ceremony consisted in carrying the scalps elevated on sticks through the village, followed by the warriors who had composed the war party, dressed in all their ornaments, and painted as for war.

On the 10th we again embarked on the river, although it rained very hard. Our number was now augmented to twenty-six by the addition of Mr. Crooks and his party. We had not proceeded more than two miles, when our interpreter, Dorion, beat his squaw severely; and on Mr. Hunt inquiring the cause, he told him that she had taken a fancy to remain at the Osages in preference to proceeding with us, and because he had opposed it, she had continued sulky ever since. We were obliged to encamp early this day, as the rain became excessive.

11th, 12th, 13th, and 14th.-We had a fair wind, and employed our sail, wherefore I could not go ashore without danger of being left behind. During these days the bread was examined, and being found wholly unfit for use, it was thrown overboard.

15th.-We passed the scite of a village which formerly belonged to the Kansas Indians- I had an opportunity of going ashore, and found the soil to have the appearance of the greatest fertility. On the sides of the hills I noticed abundance of the hop plant (*humulus lupulus*.)

16th.- We began to notice more particularly the great number of drowned buffaloes that were floating on the river; vast numbers of them were also thrown ashore, and upon the rafts, on the points of the islands. The carcasses had attracted an immense number of turkey buzzards, (*vultur aura*) and as the preceding night had been rainy, multitudes of them were sitting on the trees, with their backs towards the sun, and their wings spread out to dry, a common practice with these

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

birds after rain.

17th.- Arrived at the wintering houses, near the Naduet River, and joined the rest of the party.

18th.- I proceeded to examine the neighbouring country, and soon discovered that pigeons (*columba migratoria*) were in the woods. I returned, and exchanged my rifle for a fowling-piece, and in a few hours shot two hundred and seventy-one, when I desisted. I had an opportunity this day of observing the manner in which they feed: it affords a most singular spectacle, and is also an example of the rigid discipline maintained by gregarious animals. This species of pigeon associates in prodigious flocks: one of these flocks, when on the ground, will cover an area of several acres in extent, and the birds are so close to each other that the ground can scarcely be seen. This phalanx moves through the woods with considerable celerity, picking up, as it passes along, every thing that will serve for food. It is evident that the foremost ranks must be the most successful, and nothing will remain for the hindermost. But that all may have an equal chance, the instant that any rank becomes the last, it rises, and flying over the whole flock, alights exactly ahead of the foremost. They succeed each other with so much rapidity, that there is a continued stream of them in the air; and a side view of them exhibits the appearance of the segment of a large circle, moving through the woods. I observed that they cease to look for food a considerable time before they become the last rank, but strictly adhere to their regulations, and never rise until there is none behind them.

19th.- On the bluffs (12) under which the wintering house was placed, there is a considerable number of flat stones. On examining one, I found beneath it several snakes, in a half torpid state, arising probably from the cold state of the weather, and I found on further examination, that the number of snakes under these stones was astonishing. I selected this day eleven species, and killed a great number.

20th.- It was this day arranged, by the desire of Mr. Donald M'Kenzie, that I should travel in his boat, and preparations were made for our departure the succeeding morning. I was employed in continuing my researches, and had a narrow escape from a rattlesnake; it darted at me from the top of a small rock, at the base of which I was gathering plants. The noise of its rattle just gave me sufficient notice to withdraw my head.

21st.- We again embarked in four boats. Our party amounted to nearly sixty persons: forty were Canadian boatmen, such as are employed by the North West Company, and are termed in Canada Engages or Voyageurs. Our boats were all furnished with masts and sails, and as the wind blew pretty strong from the south-east, we availed ourselves of it during the greater part of the day.

22d, 23d, 24th.- The wind continuing favourable, we sailed almost the whole of these three days, and made considerable progress.

25th.- Went ashore with the hunters, and collected a new species of rattle-snake, and a bird of the genus *recurvirostra*. The hunters killed two elks, but they were so lean that we left them for the vultures: at all times their flesh is much inferior to that of deer.

26th.- The wind had changed to the north-west, and blew so strong, that we were obliged to stop during the whole day. When I found this measure determined on, I resolved to avail myself of the opportunity to quit the valley of the Missouri, and examine the surrounding country. After travelling about three miles, I ascended the bluffs, and found that the face of the country, soil, &c. were entirely changed. As far as the eye could reach, not a single tree or shrub was visible. The whole of the stratum immediately below the vegetable mould, is a vast bed of exceedingly hard yellow clay.

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

In the valleys, the land floods, during the rainy season, have worn channels so deep, and with the sides so precipitous, that a traveller is often under the necessity of proceeding a mile or two along one of these ravines before he can cross it. In the bottoms of several I observed evident indications of coal.

27th.- The night had been very cold, and before we had been long on the river, the sides of the boats and the oars were covered with ice, although we were not farther north than 40 deg. After breakfast, I went out with the hunters, and found my hopes of a change in the vegetation realized. The bluffs forming the bounds of the river are no longer in part rocks, but a continued chain of rounded knobs of stiff clay: under these is a fine bed of bituminous coal, rendered visible wherever the river has washed away the base. This day I collected several new species of plants.

28th.- We breakfasted on one of the islands formed by La Platte Riviere, the largest river that falls into the Missouri. It empties itself into three channels, except in the time of its annual flood, when the intervening land is overflowed; it is then about a mile in breadth. We noticed this day the skeleton or frame of a skin canoe, in which the river had been crossed by Indians: we saw also other indications of war parties having been recently in the neighbourhood, and observed in the night the reflection of immense fires, occasioned by burning the prairies. At this late season, the fires are not made by the hunters to facilitate their hunting, but by war parties; and more particularly when returning unsuccessful, or after a defeat, to prevent their enemies from tracing their steps. As the ash discontinues to grow on the Missouri above this place, it was thought expedient to lay in a stock of oars and poles; and for that purpose, we stopped in the forenoon, about a league above the mouth of Papillon Creek, and I availed myself of this opportunity to visit the bluffs four or five miles distant from us, on the north-east side. On approaching them I found an extensive lake running along their base, across which I waded, the water in no part reaching higher than my breast. This lake had evidently been in former times the course of the river: its surface was much covered with aquatic plants, amongst which were *nelumbium luteum* and *hydropeltis purpurea*: on the broad leaves of the former a great number of water snakes were basking, which on my approach darted into the water. On gaining the summit of the bluffs, I was amply repaid by the grandeur of the scene that suddenly opened to my view, and also by the acquisition of a number of new plants. On looking into the valley of the Missouri from an elevation of about two hundred and fifty feet, the view was magnificent: the bluffs can be seen for more than thirty miles, stretching to the north-eastward in a right line, their summits varied by an infinity of undulations. The flat valley of the river, about six or seven miles in breadth, is partly prairie, but interspersed with clumps of the finest trees, through the intervals of which could be seen the majestic but muddy Missouri. The scene towards the interior of the country was extremely singular: it presents to the view a countless number of little green hills, apparently sixty or eighty feet in perpendicular height, and so steep, that it was with much difficulty I could ascend them; some were so acutely pointed, that two people would have found it difficult to stand on the top at the same time. I wandered among these mountains in miniature until late in the afternoon, when I recrossed the lake, and arrived at the boats soon after sun-set.

29th.- Being informed that the oars and poles would not be finished before noon, Mr. M'Kenzie obliged me by sending his boat to carry me across the river. I found the bluffs to be of a nature similar to those on the north-east side. I met the boats in the afternoon, and we encamped about fourteen miles below the wintering house belonging to Mr. Crooks, who proposed to me that we

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

should walk to it the following morning, along the bluffs; as the distance was much less by that route than by the course of the river .

30th.- I set out with Mr. Crooks at sunrise, for the wintering house, and travelled nearly a mile on a low piece of ground, covered with long grass: at its termination we ascended a small elevation, and entered on a plain of about eight miles in length, and from two and a half to three miles in breadth. As the old grass had been burned in the autumn, it was now covered with the most beautiful verdure, intermixed with flowers. It was also adorned with clumps of trees, sufficient for ornament, but too few to intercept the sight: in the intervals we counted nine flocks of elk and deer feeding, some of which we attempted to approach near enough to fire at, but without success. On arriving at the termination of the plain, our route lay along a series of the most rugged clay bluffs: some of them were in part washed away by the river, and exhibited perpendicular faces at least a hundred feet in height. At noon we arrived at the wintering house, and dined on dried buffaloe. In the evening the boats came up.

May 1st.- This day was employed in embarking some articles necessary for the voyage, together with Indian goods, and in the evening Mr. Crooks informed me that he intended to set out the next morning on foot, for the Ottoes, a nation of Indians on the Platte River, who owed him some beaver- From the Ottoes he purposed travelling to the Maha nation, about two hundred miles above us on the Missouri, where he should again meet the boats. I immediately offered to accompany him; he seemed much pleased, and we proceeded to cast bullets, and make other arrangements necessary for our journey.

2d.- At day-break we were preparing to depart, as also were the rest of the party, when an occurrence took place that delayed us until sunrise, and created a considerable degree of confusion. Amongst our hunters were two brothers of the name of Harrington, one of whom, Samuel Harrington, had been hunting on the Missouri for two years, and had joined the party in autumn: the other, William Harrington, had engaged at St. Louis, in the following March, and accompanied us from thence. The latter now avowed that he had engaged at the command of his mother, for the purpose of bringing back his brother, and they both declared their intention of abandoning the party immediately. As it had already been intimated to us at the Osage nation, that the Nodowessie, or Sioux Indians, intended to oppose our progress up the river, and as no great dependence was placed on our Canadians in case of an attack, the loss of two good riflemen was a matter of regret to us all. Mr. Hunt, although a gentleman of the mildest disposition, was extremely exasperated; and when it was found that all arguments and entreaties were unavailing, they were left, as it was then imagined, without a single bullet or a load of powder, four hundred miles at least from any white man's house, and six hundred and fifty from the mouth of the river. As soon as the final issue of this affair was known, Mr. Crooks and myself set out for the Otto village, attended by, two of the Canadians, one named Guardépée, the other La Liberté. Our equipments were, a blanket, a rifle, eighty bullets, a full powder horn a knife, and tomahawk, for each. Besides these, I had a large inflexible portfolio, containing several quires of paper, for the purpose of laying down specimens of plants; we had also a small camp-kettle, and a little jerked buffaloe meat. In half an hour we left the valley of the Missouri, and entered on the vast plain. We took our course S. S. E. which we held for some hours, and travelled at a great rate, hoping to reach the Platte that night, although estimated at forty-five miles from the place of our departure. A little before noon we saw four large animals at a great distance, which we supposed to be elk, but on crossing their footsteps

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

some time afterwards, we found to our great satisfaction that they were buffaloe. In the afternoon we crossed two branches of Papillon Creek, and an hour before gun-set arrived at the Come du Cerf River, a deep clear stream, about eighty yards in breadth: it falls into the Platte about twenty miles below. As our Canadians could not swim, it was necessary to construct a raft, and we concluded to remain here for the night.

This arrangement was very agreeable to me, as I was much exhausted, which Mr. Crooks considered was, in a great measure, owing to my having drank water too copiously during the day. Although we had not eaten any thing from the time of our departure, I was unable to eat at supper, and lay down immediately.

3d.- We arose at day break. I found myself completely refreshed. Our raft being ready at sun-rise, we crossed the river, and in two hours arrived at the Platte, exactly opposite the Otto village. The river is here About eight hundred yards in breadth, but appears to be shallow, as its name indicates. The southern bank is wholly divested of timber, and as the village is situated on a declivity near the river, we could see the lodges very distinctly, but there was no appearance of Indians. We discharged our rifles, but the signal was not answered from the village: in about five minutes we heard the report of a gun down the river, and immediately proceeded towards the place. At the distance of half a mile, we arrived opposite to an island, on the point of which a white man was standing, who informed us that we could cross over to him by wading: we did not stop to take off our clothes, but went over immediately, the water reaching to our arm-pits. This man proved to be an American, of the name of Rogers, and was employed as an interpreter by a Frenchman from St. Louis, who was also on the island with a few goods. They informed us that they had been concealed for some days on the island, having discovered a war party hovering round, belonging, as they supposed, to the Loup, or Wolf nation, who had come in order to surprise the Ottoes. They had nothing to give us as food, excepting some beaver flesh, which Rogers obtained by trapping on Come du Cerf, or Elk Horn River; as it was stale, and tasted fishy, I did not much relish it, but there was no alternative but to eat it or starve. We remained all day concealed on the island, and on the morning of the 4th, before daylight, Rogers set out to look at his traps, on Elk Horn River, distant to the eastward not more than five miles. I accompanied him, and on crossing the channel of the Platte, found that in the same place where the day before it reached to our arm-pits, it did not now reach to our waists, although the river had not fallen. Such changes in the bottom of this river, Rogers told me were very frequent, as it is composed of a moving gravel, in which our feet sank to a considerable depth. We arrived at the Elk Horn River about sun-rise, but found no beaver in the traps. After our return to the island, I expressed a wish to visit the Otto village, which was in sight; and Rogers, who had a canoe concealed in the willows that surrounded the island, landed me on the other side of the river. I found the village to consist of about fifty-four lodges, of a circular form, and about forty feet in diameter, with a projecting part at the entrance, of ten or twelve feet in length, in the form of a porch. At almost every lodge, the door or entrance was closed after the manner which is customary with Indians when they go on hunting parties, and take their squaws and children with them. It consists in putting a few sticks across, in a particular manner, which they so exactly note and remember, as to be able to discover the least change in their position. Although anxious to examine the internal structure of the lodges, I did not violate the injunction conveyed by this slight obstruction, and after searching some time, found a few that were left entirely open. On entering one, I found the length of the porch to be an inclined

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

plane to the level of the floor, about two and a half or three feet below the surface of the ground: round the area of the lodge are placed from fifteen to eighteen posts, forked at the top, and about seven feet high from the floor. In the centre, a circular space of about eight feet in diameter is dug to the depth of two feet; four strong posts are placed in the form of a square, about twelve feet asunder, and at equal distances from this space: these posts are about twenty feet high, and cross pieces are laid on the tops. The rafters are laid from the forked tops of the outside posts over these cross pieces, and reach nearly to the centre, where a small hole is left for the smoke to escape: across the rafters small pieces of timber are laid; over these, sticks and a covering of sods, and lastly earth. The fire is made in the middle of the central space, round the edges of which they sit, and the beds are fixed betwixt the outer posts. The door is placed at the immediate entrance into the lodge: it is made of a buffalo skin, stretched in a frame of wood, and is suspended from the top. On entering, it swings forward, and when let go, it falls to its former position. On my return to the island, Mr. Crooks informed me that he had resolved to send Rogers to find the Ottoes, who were hunting about twenty miles from us, in order to collect his debts, or to procure horses for us, to facilitate our journey to the Maha nation.

5th.-In the morning early, Rogers set out on his expedition, and returned on the 6th, without having obtained any beaver or horses, excepting one horse belonging to Mr. Crooks. This night I procured from Rogers what information I could relative to the Otto nation, and was informed that the Missouris are incorporated with them; that they are their descendants, and speak the same language. They call themselves Wad-doké-tah-tah, and can muster one hundred and thirty or one hundred and forty warriors. They are now at war with the Loups or Wolf Indians, the Osages, and the Sioux. He said they furnish a considerable quantity of bear, deer, and beaver skins, and are very well disposed towards their traders, who may safely credit them. They do not claim the property of the land on which they live, nor any other tract. A very considerable part of the surrounding country formerly belonged to the Missouris, who were once the most powerful nation on the Missouri river, but have been reduced by war and the small pox to be dependent on the Ottoes, by whom they are treated as inferiors. Rogers had with him a squaw of the Maha nation, with her child, whom he wished to send with us to her father. To this Mr. Crooks consented, and early on the morning of the 7th we set out, putting the squaw and her child on the horse. Having crossed over from the island, we steered a due north course, and came to the Elk Horn River, after travelling about ten miles. Mr. Crooks immediately stripped, to examine if the river was fordable, and found that, excepting about twenty yards in the middle, we might wade it. I offered to carry the child, but the squaw refused, and after stripping herself, she gave me her clothes, put the child on her neck, and swam over, the little creature sticking to her hair. After assisting our Canadians across, we continued along the bank, in expectation of arriving at the creek, distant about five miles, which comes in a direction from the north. We observed, that as our distance from the island increased, the reluctance of the squaw to proceed also increased, and soon after we had crossed the river, she began to cry, and declared she would go no farther. Mr. Crooks, who understood the language, remonstrated with her; but finding it in vain, he ordered Guardépée to take her back, and we encamped to wait his return.

8th.- About two o'clock in the morning Guardépée returned with the horse, and at day-light we set out. In about an hour we came to the creek, and continued along its banks, and found ourselves in a short time on a most beautiful prairie, along which the creek flowed, without having a

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

single tree on its border, or even a shrub, excepting a few widely scattered plum bushes. We shot this day two prairie hens, (*tetrao umbellus*) on which we supped, having dined on some jerked buffalo, brought by Rogers from the Ottoes. We slept on the border of the creek, but not so comfortably as usual, as the dew was so copious, that before morning our blankets were wet through. 9th.- We continued to pursue our course along the creek, but with great trouble, as our mockasons, being of untanned skins, became so soft as to render it difficult to keep them on our feet. We shot a prairie hen, and prepared to breakfast, having first relieved the horse from the baggage, and turned him out to graze. Whilst we were collecting some dry stalks of plants to boil our kettle, a herd of elk, nineteen in number, appeared marching towards the creek, and Guardépée immediately ran to put himself in such a position that he might fire at them, when the horse took fright, broke his tie, and galloped off. Guardépée fired, but only wounded one so slightly that it ran off with the rest, and escaped. The horse took the direct route back towards the Ottoes, and was followed by Mr. Crooks and Guardépée; but in vain: they gave up the chase, finding it impossible to recover him. After we had breakfasted, we threw the saddle and every thing belonging to the horse into the creek; each man took his share of the baggage, and we again set out, and travelled without stopping until evening, when we arrived at the head of the creek, and came to what is called a dividing ridge (13). We passed over it, and came to the head of a creek, running in a N. E. direction. This we supposed to be Blackbird Creek, which falls into the Missouri, near the monument of a famous chief of the Mahas, named Blackbird. At the distance of about two miles, we saw a small clump of trees on the border of the creek, and resolved to remain there during the night, hoping to find fuel to boil a small portion of jerked buffalo, being all we had left. Whilst the supper was preparing, I walked back to an eminence, to collect some interesting plants, having noticed them in passing. I had not been long employed in that way, when I saw a distant flash of lightning in the south, and soon after others in quick succession. As these and other appearances indicated the approach of a violent storm, I hastened back to recommend precautions for the security of our arms and ammunition. Having boiled our meat, which amounted to a few morsels each, we secured our powder horns and some tow in our camp kettle, which we inverted, and discharged our rifles. Excepting the sound of distant thunder, which was continual, an awful silence prevailed, and the cloud which had already spread over one half of the visible horizon, was fast shutting out the little remains of daylight. As the trees afforded us no fuel, and in a few minutes would become no shelter, but might endanger our safety, I recommended that we should go to the open prairie, which we did, and lay down in our blankets: I put my plants under me. For several hours the thunder, lightning, and rain were incessant, and such rain as I have seldom witnessed. In half an hour after the storm commenced, we had nothing more to fear from it, excepting the cold occasioned by the torrents that fell on us. At the approach of morning the rain ceased: we saw a few stars, and with joy noticed the first appearances of day. We arose, and wrung the water out of our blankets, and finding ourselves very much benumbed, we walked about to restore the circulation: when it was sufficiently light, we put our rifles in order, which was attended with considerable difficulty, as our hands were almost without sensation. Having arranged our arms, we set out, but were extremely uncomfortable, as our clothes, being made of dressed skins, stuck so close to our bodies as to make our march very unpleasant. We proceeded at a brisk pace to warm ourselves, and in about two hours came to a small ridge, which we ascended, and when near the top, Guardépée preceded us, to examine if any game was in sight. He gave the signal for us to

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

remain quiet and soon afterwards fired at two buffalo cows, with their calves. One of the cows he wounded, and they ran off with so much speed, that the calves could not keep up with them. Perceiving this, I immediately pursued the calves, one of which I killed. The rest of the party followed the cows for a short distance, but finding the inutility of it, they soon returned: and notwithstanding my remonstrances, Guardépée killed the other calf. As we had eaten but little the day before, we were very glad of this supply, and taking what we thought proper, proceeded on our journey. We soon began to perceive that the face of the country was changing in its appearance. From the Elk Horn River, our course had hitherto been over a most beautiful prairie, with scarcely a tree or shrub, but covered with grass and flowers: we now began to observe a more broken country to the eastward, and some scattered bushes in the valleys. From an eminence, we soon after perceived a hill, that had a heap of stones on the summit: Mr. Crooks assured me that this was the monument of Blackbird(14), the famous Maha chief, and that it was one of the bluffs of the Missouri: we judged it was about fifteen miles N. E. of us. Satisfied that we were now near the boats, and having arrived at some small timber, where we could procure fuel, we dined on our veal; and although without bread or salt it was to us a luxury, as we had long been unaccustomed to those articles. We halted about three hours before sunset, at about five miles from the monument of Blackbird, to which place Mr. Crooks despatched Guardépée to look for a letter, as Mr. Hunt had promised to leave one there on passing the place. At night he returned, but without a letter, and we concluded that the boats had not yet arrived.

11 th.- We set off early, and soon fell in with the trace from the Maha village to the monument : along this we travelled, and about ten o'clock arrived at the town, where we met one of the Canadians belonging to the boats. He informed us that they arrived the day before, and were stationed about four miles from the village. As we were in want of food, we did not stop, but proceeded to the boats, where we found a considerable number of Indians assembled to trade. They gave jerked buffalo meat, tallow, corn, and marrow; and in return they received tobacco in carottes, vermilion, blue beads, &c. There, also, we found Mr. James Aird, an old and respectable trader, with whom I had become acquainted at St. Louis. He informed me that he should go to the United States in a few days; I therefore availed myself of this opportunity to forward letters, and was employed in writing until the 12th at noon. Immediately after, I set out on an excursion to the bluffs, and in my way passed through the village, where the great number of children playing about the lodges, entirely naked, drew my attention. I soon attracted their notice also, and they began to collect around me. Some of the boldest ventured to touch my hand, after which they ran back a few paces, but soon again resumed their courage. When about fifty or sixty had assembled, I came to where three young squaws were repairing one of the stages erected for the purpose of exposing the buffalo skins to dry, whilst they are in preparation. The squaws, seeing the children run after me, spoke to them in a commanding tone, when they instantly stopped, and not one followed me afterwards. I doubt much if such a crowd of children, in any European city, would have obeyed with such promptness, had such a phenomenon appeared among them, as they must have considered me. On arriving at the summit of the bluffs, I had a fine view of the town below. It had a singular appearance. The frame work of the lodges consists of ten or twelve long poles, placed in the periphery of a circle of about sixteen feet in diameter, and are inclined towards each other, so as to cross at a little more than half their length from the bottom; and the tops diverging with the same angle, exhibit the appearance of one cone inverted on the apex of another. The lower cone

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

is covered with dressed buffalo skins, sewed together, and fancifully painted; some with an undulating red or yellow band, of ten or twelve inches in breadth, surrounding the lodge at half its height; in others, rude figures of horses, buffaloe or deer were painted; others again with attempts at the human face, in a circle, as the moon is sometimes painted; these were not less than four feet in diameter. I judged there were not fewer than eighty lodges. I did not remain long on the summit of the bluffs, as I perceived, from the heaps of earth, some of these recent, that it was the burial ground, and I knew the veneration they have for the graves of their ancestors. I proceeded along the bluffs, and was very successful in my researches, but had not been long employed, when I saw an old Indian galloping towards me. He came up and shook hands with me, and pointing to the plants I had collected, said, "Bon pour manger?" to which I replied, "Ne pas bon." He then said, "Bon pour medicine?" I replied "Oui." He again shook hands and rode away, leaving me somewhat surprised at being addressed in French by an Indian. On my return through the village, I was stopped by a group of squaws, who invited me very kindly into their lodges, calling me wakendaga, or as it is pronounced, wa-ken-da-ga (physician.) I declined accepting their invitation, showing them that the sun was near setting, and that it would be night before I could reach the boats. They then invited me to stay all night: this also I declined, but suffered them to examine my plants, for all of which I found they had names. On my way to the boats, I met a number of Indians returning to the village, all of whom shook hands with me. Two of them informed me that they had seen me at St. Louis, and at the same time gave me satisfactory proofs of it(15). I did not reach the boats until it was dark.

13th.- In the forenoon of this day, Mr. Hunt was waited upon by two chiefs, who were contending for the sanction of the government of the United States, to determine their claim to kingly power. Mr. Hunt declined interfering, not being vested with the powers to act. The names of these two chiefs were the Big Elk and the White Cow, the former of whom ultimately succeeded, and has since signalized himself by a fine specimen of Indian eloquence, at the funeral of a Sioux chief, in the Missouri territory(16). The Mahas seem very friendly to the whites, and cultivate corn, beans, melons, squashes, and a small species of tobacco (*nicotiana rustica*.) In 1802 they were visited by the small-pox, which made dreadful havoc, and destroyed at least two thirds of the whole nation. At present they muster nearly two hundred warriors, and from the great number of children, I judge that they are again increasing. In stature they are much inferior to the Osages, although I noticed several whom I thought would reach to six feet. Their hunting ground is from their village to L'Eau qui Court, and along that river.

14th.- This day three Sioux Indians arrived, of the Yanktoon Alma tribe, who reported that several nations of the Sioux were assembling higher up the river, with an intention to oppose our progress. This news was concealed as much as possible from the voyageurs, and we prepared for our departure on the following morning.

15th.- We embarked early, and passed Floyd's Bluffs, so named from a person of the name of Floyd (one of Messrs. Lewis and Clarke's party) having been buried there. In the course of this day, I was informed by Mr. M'Kenzie, that in the night of the 7th instant, during our journey to the Ottoes, eleven Sioux Indians, who had given or devoted their clothes to the medicine(17), ran into the camp with their tomahawks in their hands, and were instantly surrounded and taken prisoners. The leader, finding the party on their guard, and much stronger probably than he expected, immediately cried out to his followers in their language, " My children, do not hurt the

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

white people." As the party were fully apprized of the murderous intentions of these miscreants, the general voice was for putting them to death; but Mr. Hunt would not consent to it, and ordered that they should be conveyed over the river in one of the boats, at the same time informing them, that if they were again caught by the party, every man should be sacrificed. From a coincidence of time and circumstances, it appeared almost certain that it was this party that had crossed the Missouri, near the mouth of the river Platte, in the canoe of which we saw the skeleton on the 28th of April; and that it was also this party that was discovered by Rogers hovering about the Otto village, as the Sioux are at war with the Ottoes: it therefore appeared that Mr. Crooks and myself had run a greater risk than we were sensible of at the time.

16th, 17th, and 18th.- We had a fair wind, and made considerable progress up the river; few opportunities were therefore afforded for walking. I regretted this circumstance, as the bluffs had a very interesting appearance. During a short excursion, I was enabled to ascertain that the lower part of the bluffs was impregnated with sulphur, mixed with sulphate of iron and selenite crystals.

19th.- About nine o'clock we observed three buffalo cows and a calf swimming across the river. Two of them and the calf were killed; but we found them to be so poor that we only preserved the calf.

20th.- We were stopped all day by a strong head wind. I availed myself of this circumstance, and was very successful in my researches. We found that the river was rising rapidly; it rose during this day more than three feet: we therefore concluded that this was the commencement of the annual flood of the Missouri, occasioned by the melting of the snow on the Rocky Mountains.

21st.- The river continued to rise, and the current to increase in rapidity: the navigation was therefore rendered very difficult. I walked the greatest part of the day, chiefly on the bluffs, and found the summits for the most part covered with gravel, containing tumblers of feldspar, granite, and some porphyry.

22d.- In the morning our hunters killed three buffaloe and two elks on an island; and as we were now arriving at the country of our enemies, the Sioux, it was determined that they should in a great measure confine themselves to the islands, in their search for game. We dined at the commencement of a beautiful prairie; afterwards I went to the bluffs, and proceeded along them till near evening. On regaining the bank of the river, I walked down to meet the boats, but did not find them until a considerable time after it was dark, as they had stopped early in the afternoon, having met with a canoe, in which were two hunters of the names of Jones and Carson, who had been two years near the head of the Missouri. These men agreed to join the party, and were considered as a valuable acquisition; any accession of strength being now desirable. This day, for the first time, I was much annoyed by the abundance of the prickly pear. Against the thorns of this plant I found that mockasons are but a slight defence. I observed two species, cactus opuntia and mamillaris.

23d.- When on the bluffs yesterday, I observed in the river an extensive bend, and determined to travel across the neck. I therefore did not embark with the boats, but filled my shot pouch with parched corn, and set out, but not without being reminded by Mr. Hunt that we were now in an enemy's country. In about two hours I had entirely passed the range of hills forming the boundary of the Missouri; and as I had before experienced, I found the soil and face of the country to improve very much as we proceed from the river. The hills here are only gentle swellings, and, together with the intervening valleys, were covered with the most beautiful verdure. At a small

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

distance from my route I noticed a space, of several acres in extent, of a more vivid green than the surrounding prairie, and on my nearer approach it had the appearance of a rabbit burrow. From the previous descriptions given by the hunters, I immediately conceived it to be, what it proved, a colony of the prairie dog(18). The little animals had taken the alarm before I reached their settlement, and were sitting singly on the small hillocks of earth at the mouth of their holes. They were very clamorous uttering a cry which had some resemblance to a shrill barking. I fired at several, but at the instant of the flash, they darted with surprising quickness into their holes, before the shot could reach them. I soon found the impossibility of procuring one with shot only, as unless they are instantaneously killed, they are certain to get into their holes, from the edges of which they never wander if a man is in sight. I continued to travel through this charming country till near the middle of the afternoon, when I again came to the bluffs of the Missouri, where, amongst a number of new plants, I found a fine species of ribes, or currant. As it was now time to look for the boats, I went to the river and proceeded down the bank, in the expectation of meeting them. I had probably travelled about two miles, when suddenly I felt a hand laid upon my shoulder, and turning round, saw a naked Indian with his bow bent, and the arrow pointed towards me. As I had no expectation of meeting any Indians excepting the Sioux, and as with them the idea of danger was associated, I took my gun from my shoulder, and by a kind of spontaneous movement put my hand towards the lock, when I perceived that the Indian drew his bow still farther. I now found myself completely in his power; but recollecting that if an enemy, he would have shot me before I saw him, I held out my hand, which he took, and afterwards laid his hand on my breast, and in the Osage language said "Moi-he ton-ga de-ah," literally in English, "Big Knife you ?"(19) which I luckily understood and answered, "Hoya," (Yes) and laying my hand on his breast, said, "Nodo-wessie de-ah," (Sioux you.) He replied, "Honkoska ponca we ah.." (No, Poncar me.) He then pointed up the river, and I saw two other Indians running towards us, and not more than fifty yards distant. They soon came up, and all the three laid hold of me, pointing over the bluffs, and making signs that I should go with them. I resisted and pushed off their hands. As the river had overflowed where we stood, I pointed to a sand-hill a small distance from us, to which we went and sat down. I amused them with my pocket compass for some time, when they again seized me, and I still resisted, and took out a small microscope. This amused them for some time longer, when on a sudden one of them leaped up and gave the war whoop. I laid hold of my gun, with an intention to defend myself, but was instantly relieved from apprehension by his pointing down the river, and I perceived the mast of one of the boats appear over the willows. The Indians seemed very much inclined to run away, but I invited them to accompany me to the boats, and shewed them by signs that I would give them something to drink, which they complied with, but soon after disappeared. We travelled very late this evening, and encamped above the mouth of a small creek. It appeared that the three Indians went to inform their nation, as in the morning a number of them came to our camp and also a white man, with a letter to Mr. Hunt from Mr. Lisa, one of the Missouri Fur Company, for whom he was agent. Mr. Lisa had arrived at the Mahas some days after we left, and had dispatched this man by land. It appeared he had been apprised of the hostile intentions of the Sioux, and the purport of the letter was to prevail on Mr. Hunt to wait for him, that they might, for mutual safety, travel together on that part of the river which those blood thirsty savages frequent. It was judged expedient to trade with the Indians for some jerked buffalo meat, and more than 1000 lbs. was obtained for as much tobacco as cost two dollars.

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

About noon we set out, and at the distance of a league passed the mouth of the river called L'Eau qui Court, or Rapid River.

25th.- It was discovered early this morning, that two men who had engaged at the Mahas, and had received equipments to a considerable value, had deserted in the night. As it was known that one of them could not swim, and we had passed a large creek about a league below, our party went in pursuit of them, but without success.

26th.- Whilst at breakfast on a beautiful part of the river, we observed two canoes descending on the opposite side. In one, by the help of our glasses, we ascertained there were two white men, and in the other only one. A gun was discharged, when they discovered us, and crossed over. We found them to be three men belonging to Kentucky, whose names were Robinson, Hauberk, and Reesoner. They had been several years hunting on and beyond the Rocky Mountains, until they imagined they were tired of the hunting life; and having families and good plantations in Kentucky, were returning to them; but on seeing us, families, plantations, and all vanished; they agreed to join us, and turned their canoes adrift. We were glad of this addition to our number, as the Poncars had confirmed all that we had heard respecting the hostile disposition of the Nodowessies, or Sioux, towards us, with the additional information, that five nations or tribes had already assembled, with a determination to cut us off. Robinson was sixty-six years of age, and was one of the first settlers in Kentucky. He had been in several engagements with the Indians there, who really made it to the first settlers, what its name imports, "The Bloody Ground." In one of these engagements he was scalped, and has since been obliged to wear a handkerchief on his head to protect the part. The wind being fair, we this day made considerable progress, and had many fine views of the bluffs, along which, from the L'Eau qui Court, we observed excellent roads made by the buffaloes. These roads I had frequent opportunities of examining, and am of opinion that no engineer could have laid them out more judiciously.

27th.- The weather continues fine, as it has been for the last fortnight, and is delightful. For some days past it has been very warm, and the carcasses of drowned buffaloes on the islands and shores of the river become extremely offensive. We had a fine breeze from the S. E. and made all the sail the extreme cowardice of our Canadians would permit, in order to reach Little Cedar Island(20), as it was intended that we should stop there to procure new masts, some of our old ones being defective. Late in the evening we accomplished our purpose to the joy of our voyageurs, who frequently in the course of the day, when the boats heeled, cried out in agony, "O mon Dieu! abattez le goile." As we had now in our party five men who had traversed the Rocky Mountains in various directions, the best possible route in which to cross them became a subject of anxious enquiry. They all agreed that the route followed by Lewis and Clarke was very far from being the best, and that to the southward, where the head waters of the Platte and Roche Jaune rivers rise, they had discovered a route much less difficult. This information induced Mr. Hunt to change his plan, which had originally been to ascend the Missouri to the Roche Jaune river, one thousand eight hundred and eighty miles from the mouth, and at that place to commence his journey by land. It was now concluded that it would be more adviseable to abandon the Missouri at the Aricara Town, four hundred and fifty miles lower down the river.

28th.- We arose at day-break, and the men soon found trees suitable for masts. Whilst they were preparing them, I employed myself in examining this delightful spot. The island is about three quarters of a mile in length, and five hundred yards in width. The middle part is covered with

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

the finest cedar, round which there is a border from sixty to eighty yards in width, in which were innumerable clumps of rose and currant bushes, mixed with grape vines, all in flower, and extremely fragrant. The currant is a new and elegant species, and is described by Pursh(21) as *ribes aureum*. Betwixt the clumps and amongst the cedars, the buffaloes, elks, and antelopes had made paths, which were covered with grass and flowers. I have never seen a place, however embellished by art, equal to this in beauty. In a few hours the masts were completed, and we proceeded on our voyage with a fine breeze in our favour. Since our departure from L'Eau qui Court I noticed that the bluffs had gradually continued to change in appearance. The quantity of alluvion on the border of the river decreased as we proceeded, and has now entirely vanished. The bluffs continue in a regular declivity from their summits to the edge of the river, and the narrowness of the valley indicates a country formed of such hard materials as to oppose considerable resistance to the abrasion of the river. On these bluffs, and at about half the distance from the summit to the river, I began to notice a number of places of a deep brown colour, apparently divested of vegetation. They occurred on both sides of the river, with an exact correspondence in altitude and breadth, and exhibited the appearance of two interrupted lines running as far as the bluffs could be seen. As we were now in an enemy's country, it was with reluctance Mr. Hunt suffered me to land a little before dinner, when I proceeded to examine one of these spots. I found it almost entirely covered with iron ore, of that species called by Kirwan compact iron stone; in Waller Syst. 2, p. 144, *haematitis solidus*. Its specific gravity is 3.482. The oxidation of the ore had so changed the earth, that it resembled Spanish brown, and nothing grew on it but a few scattered shrubs of a species of *artemisia*, apparently a non-descript. I hastened to the boats, in which we kept our sails up the rest of the day, the bodies of ore becoming longer and more frequent as we proceeded. We travelled eighteen miles, and encamped one hour after sunset.

29th.- Some arrangements being necessary, the boats did not set out so early as usual, and daylight opened to our view one of the most interesting prospects I had ever seen. We had encamped at the commencement of a stretch of the river, about fifteen miles in length, as we judged, and nearly in a right line. The bluffs on both sides formed, as before, a gentle slope to the river, and not a single tree was visible. The body of iron ore had now become continuous on both sides of the river, and exhibited the appearance of two dark brown stripes, about one hundred yards in breadth, and fifteen miles long. The exact conformity of the two lines, and the contrast of colour produced by the vivid green which bounded them, formed a *coup d'oeil* which I have never seen paralleled. I lamented much that the wind was fair, but availed myself of the short delay, and hastened up the bluff to the vein of ore, where, although the soil was so strongly impregnated with iron as to resemble rust, I observed a number of large white flowers on the ground, belonging to a new species of *aenothera*, having neither stem nor scape, the flower sitting immediately on the root. On a signal being given from the boats, I was obliged to return, and had no further opportunity to examine this enormous body of ore, without doubt sufficient to supply the whole of North America with iron for thousands of years: and if we combine in the same view the abundance of coal on the Missouri, it warrants a presumption that in some future age it will become an object of vast national importance.

30th.- We set out this morning with a favourable wind, which continued during the whole of the day; and the course of the river being less crooked than usual, we made thirty miles, and slept on an island.

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

31st.- Before breakfast this morning we discovered two Indians on a bluff on the north-east side of the river: we stopped opposite to them to breakfast, during which they frequently harangued us in a loud tone of voice. After we had breakfasted, Mr. Hunt crossed the river to speak to them, and took with him Dorion, the interpreter. We noticed, that when he landed, one of the Indians went away, but immediately after re-appeared on horseback, and went at full speed over the bluffs. Mr. Hunt informed us on his return, that these Indians belonged to the Sioux nations; that three tribes were encamped about a league from us, and had two hundred and eighty lodges. They were the Yangtons Ahnah, the Tetons Bois Brule, and the Tetons Min-na-kine-azzo. The Indian informed Mr. Hunt that they had been waiting for us eleven days, with a decided intention of opposing our progress, as they would suffer no one to trade with the Ricaras, Mandans, and Minateres, being at war with those nations. It is usual to reckon two warriors to each lodge; we therefore found that we had to oppose near six hundred savages, with the character of whom we were well acquainted;(22) and it had also been stated by the Indian that they were in daily expectation of being joined by two other tribes, Tetons Okandandas and Tetons Sahone. We proceeded up the river, and passed along an island, which for about half an hour intercepted our view of the northeast side of the river. On reaching the upper point we had a view of the bluffs, and saw the Indians pouring down in great numbers, some on horseback, and others on foot. They soon took possession of a point a little above us, and ranged themselves along the bank of the river. By the help of our glasses, we could perceive that they were all armed and painted for war. Their arms consisted chiefly of bows and arrows, but a few had short carbines: they were also provided with round shields. We had an ample sufficiency of arms for the whole party, which now consisted of sixty men; and besides our small arms, we had a swivel and two howitzers. Any attempt to avoid the Indians would have been abortive, as a boat, in ascending the Missouri, can only effect it by going along the edges of the river, it being wholly impossible to stem the middle current; and as the banks are in many places high and perpendicular, we must inevitably be frequently in their power, as they might several times in the course of a day shower a volley of arrows upon us, and retire unseen. Our alternative, therefore, was, as we supposed, either to fight them or return. The former was immediately decided on, and we landed nearly opposite to the main body. Our first care was to put all the arms in complete order: afterwards the swivel and the howitzers were loaded with powder only, and fired to impress them with an idea that we were well prepared. They were then heavily loaded, and with as many bullets as it was supposed they would bear, after which we crossed the river. When we arrived within about one hundred yards of them, the boats were stationed, and all seized their arms. The Indians now seemed to be in confusion, and when we rose up to fire, they spread their buffaloe robes before them, and moved them from side to side. Our interpreter called out, and desired us not to fire, as the action indicated, on their part, a wish to avoid an engagement, and to come to a parley. We accordingly desisted, and saw about fourteen of the chiefs separate themselves from the crowd who were on the summit of the bank, and descend to the edge of the river, where they sat down on the sand, forming themselves into a portion of a circle, in the centre of which we could see preparations making to kindle a fire, evidently with a design to smoke the calumet with us, and signs were made, inviting us to land. Mr. Hunt requested that Messrs. Crooks, M'Kenzie, Miller, and M'Clellan would attend him in his boat, and I accompanied Mr. M'Kenzie. The object was to consider whether it was advisable to put so much confidence in so ferocious and faithless a set, as to accept the invitation. It did not

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

require much deliberation, as we found ourselves under the necessity of either fighting or treating with them; it was therefore determined to hazard the experiment of going ashore. The party who remained in the boats were ordered to continue in readiness to fire on the Indians instantly, in case of treachery, and Messrs. Hunt, M'Kenzie, Crooks, Miller, and M'Clellan, with the interpreter and myself, went ashore. We found the chiefs sitting where they had first placed themselves, as motionless as statues; and without any hesitation or delay, we sat down on the sand in such a manner as to complete the circle. When we were all seated, the pipe was brought by an Indian, who seemed to act as priest on this occasion: he stepped within the circle, and lighted the pipe. The head was made of a red stone, known by mineralogists under the term of killas, and is often found to accompany copper ore: it is procured on the river St. Peter's, one of the principal branches of the Mississippi. The stem of the pipe was at least six feet in length, and highly decorated with tufts of horse hair, dyed red. After the pipe was lighted, he held it up towards the sun, and afterwards pointed it towards the sky in different directions.

He then handed it to the great chief, who smoked a few whiffs, and taking the head of the pipe in his hand, commenced by applying the other end to the lips of Mr. Hunt, and afterwards did the same to every one in the circle. When this ceremony was ended, Mr. Hunt rose, and made a speech in French, which was translated as he proceeded into the Sioux language, by Dorion. The purport of the speech was to state, that the object of our voyage up the Missouri was not to trade; that several of our brothers had gone to the great salt lake in the west, whom we had not seen for eleven moons; that we had come from the great salt lake in the east, on our way to see our brothers, for whom we had been crying ever since they left us; and our lives were now become so miserable for the want of our brothers, that we would rather die than not go to them, and would kill every man that should oppose our passage: that we had heard of their design to prevent our passage up the river, but we did not wish to believe it, as we were determined to persist, and were, as they might see, well prepared to effect our purpose; but as a proof of our pacific intentions, we had brought them a present of tobacco and corn. About fifteen carottes of tobacco, and as many bags of corn, were now brought from the boat, and laid in a heap near the great chief, who then rose and began a speech, which was repeated in French by Dorion. He commenced by stating that they were at war with the Ricaras, Mandans, and Gros Ventres or Minaterees, and that it would be an injury to them if these nations were furnished with arms and ammunition; but as they found we were only going to our brothers, they would not attempt to stop us: that he also had brothers at a considerable distance northward, whom he had not seen for a great many moons, and for whom he also had been crying. He professed himself satisfied with our present, and advised us to encamp on the other side of the river, for fear his young men should be troublesome. When the speech was ended, we all rose, shook hands, and returned to the boats. During the conference, I had an opportunity of noticing these Indians, a great number of whom were assembled on the bank above us, and observed that they are in stature considerably below the Osages, Mahas, and Poncars, and much less robust. They are also more deficient in clothing and ornaments, a considerable number being entirely naked, but all armed. Several of our party were acquainted with these tribes, and represent them much as described by Lewis. Although the squaws are very ill treated by all Indians, it is said they are treated much worse by the Sioux than any other tribe, whence it follows that mothers frequently destroy their female children, alleging as a reason, that it is better they should die than continue a life so miserable as that to which they

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

are doomed. Amongst the Sioux women, it is also said, suicide is not unfrequent, and the mode which they adopt to put an end to their existence, is, by hanging themselves. They are of opinion that suicide is displeasing to the Father of Life, and believe it will be punished in the land of spirits by their ghosts being doomed for ever to drag the tree on which they hung themselves: for this reason they always suspend themselves to as small a tree as can possibly sustain their weight. In the course of the afternoon we met a chief who belonged to a party of Teton Okandandas, which consisted, he said, of thirty lodges. He requested to have a passage in the boats for the remainder of the day. It was granted to him, and he remained with us during the night.

June 1.- This morning the old chief was conveyed over the river, and landed on the opposite side, as he said he expected to meet his people, but we did not see him again. In the afternoon we entered upon the Great Bend, or, as the French call it, the Grand Detour, and encamped about five miles above the lower entrance. This bend is said to be twenty-one miles in circuit by the course of the river, and only nineteen hundred yards across the neck.

2d.- In the morning early we discovered two Indians standing on the bluffs, who upon discovering us, spread their buffalo robes to denote that they were amicably inclined towards us. We crossed over the river, and when we approached them, they extended their arms in a horizontal position. This action, I was informed, was an appeal to our clemency. When we landed they showed evident symptoms of alarm. This was soon accounted for by Messrs. Crooks, M'Clellan, and Miller, who informed us that they knew these fellows, and that they were chiefs of the Sahonies and Okanandans, who the year preceding had behaved extremely ill, by plundering and otherwise maltreating them, in such a manner as to render it necessary for their safety to escape down the river in the night, and abandon the trade with the upper Indians for that year, which had been a great loss to them. They seemed very apprehensive that Mr. Crooks would now resent their conduct; but after we had smoked with them they became more tranquil. During the smoking, Mr. Hunt asked them why they killed white men, as he heard that they had killed three during the last summer? They replied, because the white men kill us: that man (pointing to Carson) killed one of our brothers last summer. This was true. Carson, who was at that time among the Ricaras, fired across the Missouri at a war party of Sioux, and it was by a very extraordinary chance he killed one of them, as the river is full half a mile in breadth, and in retaliation the Sioux killed three white men. I observed that, as before, in smoking the pipe they did not make use of tobacco, but the bark of *cornus sanguinea*, or red dog wood, mixed with the leaves of *rhus glabrum*, or smooth sumach. This mixture they call kinnikineck. After we had smoked, they spoke of the poverty of their tribes, and concluded by saying they expected a present. A few carottes of tobacco and bags of corn were laid at their feet, with which they appeared satisfied. As these were the last of the Sioux tribes we expected to meet, I now determined to walk all day, and was much pleased that the restraint imposed on me by the proximity of these vagabonds was removed. I therefore proceeded up the bluffs nearly abreast of the boats. In about a quarter of an hour afterwards two other Indians rode hastily past me, and overtook the boats. I observed that they had a short conference with Mr. Hunt, when they turned their horses about, and again rode past me, seemingly in a rage. Mr. Hunt called to me, and requested that I would come on board instantly, when he informed me that these fellows were also chiefs, and had seen our presents, with which they were much dissatisfied, and in consequence had followed the boats to extort more. In reply to their insolent demands, Mr. Hunt informed them that "he had given all he

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

intended to give, and would give no more," adding, "that he was much displeas'd by their importunity, and if they or any of their nation again followed us with similar demands, he would consider them as enemies, and treat them as such." As we were not exactly acquainted with the strength of these two tribes, and expected that, in consequence of the disappointment in their rapacious demands, they would attack us, it was arranged that the large boat should ascend on the N. E. side of the river, and the three small boats on the S. W. as the bluffs on either side of the river can be seen much better from the opposite side; and it was agreed that the signal on seeing Indians should be two shots fired in quick succession. As we had not much apprehension of being attacked on the S. W. side, I went ashore after dinner, and continued along the river nearly on a line with the boats, and about four o'clock heard the signal given of Indians being seen. I instantly ran towards the boats, and arrived as they were preparing to quit the shore to aid Mr. Hunt and his party in the large boat, who were then apparently in the most imminent danger. They had passed betwixt a large sand bar and the shore, and it was evident to us that at that juncture they found the water too shallow at the upper end, and were under the necessity of turning back. The sand bar prevented the possibility of putting out into the river, and we saw with horror that at least a hundred Indians had arrived on the bank at the lower end of the bar: we could also perceive that they were a war party, as they were painted with black and white stripes, and all had shields.(23) We had every reason to conclude that these were the Teton Okandandas and the Teton Sahonies, and our anxiety for the safety of Mr. Hunt and the party in the large boat was indescribable when we saw large bodies of Indians every moment arrive at the point near which he must unavoidably pass, before we could possibly give him any assistance: but our anxiety was changed to surprise on seeing the boat pass within a short distance of them unmolested; soon after which the Indians ran along the bank to the upper end of the sand bar, threw down their arms, their shields, and their buffalo robes, and plunged into the river in crowds to meet us; and before we could reach the sand bar, they were round our boats, holding up their hands in such numbers, that it became tiresome to shake hands with so many. We now found that this was a war party, consisting of Aricaras, Mandans, and Minetarees, or Gros Ventres, who were coming against the Sioux, and having discovered us, had determined for the present to abandon the enterprise, expecting that on our arrival at the Arrears Town they should obtain a supply of fire arms and ammunition, which would give them a superiority over their enemies. During the ceremony of shaking hands we were joined by the large boat, and it was agreed that we should encamp at the first convenient place. We soon found one that was suitable, and the Indians fixed their camp about one hundred yards from ours. I now ascertained that the party consisted of nearly three hundred warriors. As we had plenty of provisions, a supply was given to the Indians, who prepared their supper, after which the chiefs and principal warriors came to our tents. In Mr. M'Kenzie's tent there were seven of them, none of whom appeared to me to be lower than five feet ten inches, and some were more than six feet. Most of them had very good countenances, differing from the heavy face of the Osage, and the keen visage of the Sioux. One of them who had an aquiline nose, had a scarified line running along each arm, which met on his stomach. This our interpreter informed us was done to show his grief for the death of his father. Whilst I was endeavouring to converse with him, an Indian boy came into the tent, and handed water round to the chiefs in a gourd shell tied to the end of a stick. He spoke to the boy, who went out, but soon returned with a new pair of ornamented mockasons, and handed them to the warrior, who it then

BY JOHN BRADBURY, F.L.S. LONDON

---

appeared had observed that mine were dirty and much worn, as he took them off my feet, and put on the new pair, which he tied himself. Observing that he had a short carbine and powder flask, I begged to look at the latter, and finding it only contained a very small quantity of powder, I immediately filled it from my own flask. He was greatly pleased with the acquisition of so much powder, and informed me that he was a Ricara, and should meet me at their town, where we should be brothers. We were interrupted by one of the chiefs crying "How," which signifies among the Indians, "Come on, " or "let us begin." This occasioned silence, and he began to strike on one hand with a war club which he held in the other. It had a globular head, on one side of which was fixed the blade of a knife, five or six inches in length. The head was hollow, and contained small bits of metal, which made a jingling noise as he struck it in quick time. The singing now commenced, and continued at intervals until past midnight. The song is very rude, and it does not appear that they combine the expression of ideas and music, the whole of their singing consisting in the repetition of the word ha six or seven times in one tone, after which they rise or fall a third, fourth, or fifth, and the same in quick time. I observed that their voices were in perfect unison, and although, according to our ideas of music, there was neither harmony nor melody, yet the effect was pleasing, as there was evidently system, all the changes of tone being as exactly conformable in point of time, as if only one voice had been heard. Whenever their performance ceased, the termination was extremely abrupt, by pronouncing the word how in a quick and elevated tone . On the morning of the 3d, the chiefs declared to Mr. Hunt their intention of immediately returning to their nation, where they expected to arrive in three days, although they had been sixteen days in coming out. They also demanded some arms and ammunition. This demand, being conformable to the custom of war parties, had been foreseen, but was not complied with, Mr. Hunt informing them, that when we arrived at their nation, we should furnish abundance. After we had left them, the chief overtook us on horseback, and said that his people were not satisfied to go home without some proof of their having seen the white men. Mr. Hunt could not now resist, and gave him a cask of powder, a bag of balls, and three dozen of knives, with which he was much pleased. Whilst the articles were delivering to him, an Indian came running up, and informed us that there was a boat in sight, coming up the river. We immediately concluded that it was the boat belonging to Manuel Lisa, and after proceeding five or six miles, we waited for it. I was much pleased on the boat's joining us, to find that Mr. Henry Brackenridge was along with Mr. Lisa; I became acquainted with him at St. Louis, and found him a very amiable and interesting young man. Mr. Lisa had made the greatest possible exertions to overtake us, being well apprised of the hostile disposition of the Sioux. He had met a boat, which, it appeared, had passed us in the night, and the people informed him that they had been fired upon by the Indians. As the conjunct party now consisted of ninety men, and we were approaching the nations that were at war with the Sioux, our fears almost subsided; for myself, I was much gratified on finding the restraints removed which had so long circumscribed my motions. In the early part of this day the wind was fair, but after we had proceeded some miles, it changed to north-east, and blew so strong, that we could not stem the torrent, which was increased by the rising of the river. I went to the bluffs, which in this part are of considerable elevation, but rise in a gentle slope from the river: near the summit is a stratum of deep brown-coloured earth, from two to three hundred feet in breadth, on the declivity of the hill. This earth appears mostly to consist of decomposed iron ore, and is evidently a continuation of that seen near Little Cedar Island, although distant from it near

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

a hundred miles in a right line. I observed, that uniformly the flat tops of the hills were almost covered with masses of stone, chiefly breccia. There was something so singularly constant in this appearance, that I was tempted to attend to a particular examination, and became convinced that these groupes of stone were the passive cause of the hills. If the group was of an oblong form, the hill was a ridge; if it was nearly circular, the hill was a cone. It would be difficult to describe the sensations occasioned by a view at once of these hills and the valley of the Missouri. The mind is irresistibly impressed with the belief that the whole surface of the surrounding country was once at least on a level with the tops of these hills; and that all below has been carried away by the erosion of water, from which it has been protected in the parts where these stones were collected.

(24) I remarked this day, that the wolves were more numerous and more daring than in any former part of our voyage. Within the last week we frequently saw a few every day, but now, some of them were almost constantly in sight, and so fearless, as frequently to stand at no great distance to gaze. For the present, they were protected by their worthlessness, their skins being out of season. It appears that in a natural state, the wolf is a diurnal animal; but in the neighbourhood of condensed and stationary population its habits change, and it becomes nocturnal.(25) On my route this day I saw numerous colonies of the prairie dog; and from the frequency of the occurrence, I noticed that my approach to their burrows was announced by the screams of a species of curlew. I shot one, and ascertained it to be a variety of scolopax arquata; and perceived, after I noticed the fact, that the alarm was invariably given. On my return to the boats, I found that some of the leaders of our party were extremely apprehensive of treachery on the part of Mr. Lisa, who being now no longer in fear of the Sioux, they suspected had an intention of quitting us shortly, and of doing us an injury with the Aricaras. Independent of this feeling, it had required all the address of Mr. Hunt to prevent Mr. M'Clellan or Mr. Crooks from calling him to account for instigating the Sioux to treat them ill the preceding year. Besides, it was believed by all, that although apparently friendly, he was anxiously desirous that the expedition should fail. Lisa had twenty oars, and made much greater expedition than we could; it was evident, therefore, that he had it in his power to leave us, and it was determined to watch his conduct narrowly.

4th.- The boats did not make much way, and I walked chiefly on and beyond the bluffs, which I found of the same description as those observed yesterday, and on still farther examination, became more confirmed in my opinion regarding the origin of the hills. On the summit of one I found some fragments of bones in a petrified state, apparently belonging to the buffalo. I had for some time past noticed on the declivities circular spaces of about six or seven feet in diameter, wholly divested of every kind of vegetation, and covered with small gravel. The frequent occurrence of these this day attracted my more particular attention, and I found that they were caused by a large species of black ant, hundreds of which were running in every direction within the area with astonishing activity. On finding a large beetle, I put it in the centre of one of these areas, when it was instantly seized by those nearest to it. For a short time the ants were dragged along with ease; but by some unknown and surprising faculty the intelligence was immediately spread throughout the whole space: the ants ran from every direction towards the centre, and in a few seconds the poor beetle became completely covered, and escape was impossible.

5th.- We had not proceeded more than four miles before a very heavy rain commenced, and we were compelled to stop and fix up the tents. I went as usual to the bluffs, and on my return to secure some interesting specimens of plants, found that Lisa had encamped about one hun-

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

dred yards above us. After I had dried my clothes, I again visited the bluffs in company with Mr. Brackenridge. We discovered on the bank of a small creek the remains of an Indian encampment, which had apparently been occupied by a considerable number, and for some time, as there was a great quantity of bones spread on the ground, and the marks where the wigwams stood were numerous. We agreed that the situation was judiciously chosen to prevent surprise. On ascending the hills, and looking over the summit, we observed near us a small herd of buffaloes, consisting of two cows and three bulls. We immediately drew back, and taking advantage of a ravine, approached within thirty or forty yards, and fired. We wounded one of the cows, which Mr. Brackenridge pursued. Several other herds of buffaloes were in view, and some antelopes or cabri. I found the hills all capped with stones, and was still more confirmed in my opinion respecting their formation by observing some large detached blocks, each lying on a small pyramid of clay. After Mr. Brackenridge joined me, we saw a large hare, *lepus variabilis*, the first I had noticed, and also a number of wolves in several directions, and returning through an extensive colony of prairie dogs, we regained the boats. Immediately on my return to our camp, a circumstance happened that for some time threatened to produce tragical consequences. We learned that, during our absence, Mr. Lisa had invited Dorion, our interpreter, to his boat, where he had given him some whiskey, and took that opportunity of avowing his intention to take him away from Mr. Hunt, in consequence of a debt due by Dorion to the Missouri Fur Company, for whom Lisa was agent. Dorion had often spoken to us of this debt, and in terms of great indignation at the manner in which it had been incurred, alleging, that he had been charged the most exorbitant prices for articles had at Fort Mandan, and in particular ten dollars per quart for whiskey. Some harsh words having passed betwixt him and Lisa, he returned to our camp. On the instant of my arrival, Mr. Lisa came to borrow a cordeau, or towing-line, from Mr. Hunt, and being perceived by Dorion, he instantly sprang out of his tent, and struck him. Lisa flew into the most violent rage, crying out, "O mon Dieu! ou est mon couteau!" and ran precipitately to his boat. As it was expected he would return armed, Dorion got a pair of pistols, and took his ground, the party ranging themselves in order to witness the event. Soon after Mr. Lisa appeared without pistols; but it was observed that he had his knife in his girdle. As Dorion had disclosed what had passed in Lisa's boat, Messrs. Crooks and M'Clellan were each very eager to take up the quarrel, but were restrained by Mr. Hunt, until an expression from Lisa, conveying an imputation upon himself, made him equally desirous of fighting. He told Lisa that the matter should be settled by themselves, and desired him to fetch his pistols. I followed Lisa to his boat, accompanied by Mr. Brackenridge, and we with difficulty prevented a meeting, which, in the present temper of the parties, would certainly have been a bloody one.

The river had risen considerably during the night, and we were now convinced that the floods we had before encountered, and which were of short duration, were only partial, and caused by the rising of the tributary streams that have their sources in the lower regions. The periodical flood is occasioned by the melting of the snows on the Rocky Mountains, and the plains at their feet. The boats ascended with difficulty, which gave opportunities for walking the whole of the day. In the early part, we passed the remains of an old Aricara village. The scite was indicated by an embankment, on which there had been pallisadoes, as the remains were still visible. Within the area, the vestiges of the lodges were very apparent, and great quantities of bones and fragments of earthenware were scattered in every part. The wolves are still numerous, and are mostly of a light grey

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

colour, with a few black hairs intermixed on the hind part of the back: they are seen singly, and although not timid, show no disposition to attack. Happening to come on one this day suddenly and unperceived, I shot him. He was large, and appeared to be old, as his teeth were much worn. The country beyond the bluffs continues still very fine, but cut up in many places by deep ravines, occasioned by torrents during heavy rains. The sides of these ravines uniformly exhibited an under stratum of hard yellow clay, of an indeterminate depth.

7th.- Went out early on the S. W. side, with some of the hunters, and on reaching the summit of the bluffs, observed, in a westwardly direction, a range of high hills, apparently at the distance of thirty or forty miles. These, I was informed by the hunters, bounded the Chien or Chayenne River. Two buffaloes were killed, and one cabri, or antelope. The hunter who killed the last assured me that he had allured it by putting a handkerchief at the end of his ramrod, and lying down, continued to wave it, whilst he remained concealed. The animal, it seems, after a long contest betwixt curiosity and fear, approached near enough to become a sacrifice to the former.

8th.- Since the affair of the 5th, our party have had no intercourse with that of Mr. Lisa, as he kept at a distance from us, and mostly on the opposite side of the river. This deprived me of the society of my friend Brackenridge. I regretted this circumstance, and purposed to join him this morning, but was prevented by our stopping on an island to breakfast, where our hunters killed two buffaloe and two elks. Of the former we had for some days past seen a great number of herds, consisting of from fifty to a hundred in each. On expressing my surprise at seeing so many, the hunters assured me, that so far from its being extraordinary, they had been in the expectation of seeing them in much greater numbers. Some of the hunters, who had been six or eight years about the head of the Missouri, said they had seen them during their annual migrations from north to south in autumn, and to the northward in spring; and agreed in stating, that at these times they assemble in vast herds, and march in regular order. Some asserted that they had been able to distinguish where the herds were even when beyond the bounds of the visible horizon, by the vapour which arose from their bodies. Others stated that they had seen herds extending many miles in length. It appeared also to be a well known fact among them, that in these periodical migrations, they are much less fearful of the hunter. I must observe of the hunters, that any accounts which I heard from them, and afterwards had an opportunity to prove, I found to be correct;(26) and when the great extent of this plain, and its fertility in grass are considered, we cannot but admit that the number of animals it is capable of containing must be immense. In the forenoon we passed the mouth of Chayenne River, where it is four hundred yards in width. It is described by the hunters as being a very fine river, and navigable for several hundred miles. We encamped this night in a beautiful grove, ornamented with a number of rose and currant bushes, entwined with grape vines, now in bloom.

9th.- Mr. M'Clellan, with two of our men, and three belonging to Lisa, were despatched to the Aricaras, to apprise them of our coming, and to see how far it was practicable to procure horses for the journey by land. Soon after we set out, we saw a great number of buffaloe on both sides of the river, over which several herds were swimming. Notwithstanding all the efforts made by these poor animals, the rapidity of the current brought numbers of them within a few yards of our boats, and three were killed. We might have obtained a great many more, but for once we did not kill because it was in our power to do so; but several were killed from Lisa's boat. In the evening Mr. Lisa encamped a little above us, and we were informed by his party, that about sun-set they

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

had seen six Indians.

10th. - A fine breeze sprang up early in the day, and we proceeded rapidly. About noon Mr. M'Clellan and his party appeared on the bank of the river, having found that they could not reach the Aricara nation before the boats. About the middle of the afternoon, we met a canoe with three Indians. They had come from the Aricaras, where intelligence of our approach had been brought by the war party that met us on the 1st. They had made a great parade of the presents, which they received from us, and of the exploit which they had achieved in discovering the white men coming. They reported that the Mandans, who were of the party, had urged an attack on Mr. Hunt's boat, when it was in the situation already described, which they (the Aricaras) had prevented. They also stated, that the Minetarees, or Gros Ventres Indians, had killed two white men on the river above the Missouri Fur Company's fort. We encamped three miles above the mouth of the river Cer-wer-cer-na, after travelling thirty-five miles.

11th.- We hoped this day to arrive at the Aricaras, but did not derive so much benefit from the wind as we expected; and after passing the river Ma-ra-pa, encamped about six miles below the town, near an island on which they were formerly settled.

12th.- During this night we had a severe thunder storm, accompanied by torrents of rain, so that our beds were completely wet. We set out early, and about half way to the town, met a canoe with two chiefs, and an interpreter, who is a Frenchman, and has lived with this tribe more than twenty years. He married a squaw, and has several children. The chiefs were good looking men: one of them is called the head chief, or king, and is named by the French Le Gauche, being left-handed; the other is the war chief, and called the Big Man. The interpreter informed us that the chiefs had come to a resolution to oppose our farther progress up the river, unless a boat was left to trade with them. Mr. Hunt explained to the chiefs the object of his voyage, and that he would willingly trade for horses. About ten o'clock we landed on the north side, opposite the town, or rather towns, as there are two distinct bands, and their villages are about eighty yards apart. Our first care was to spread out the beds and baggage to dry. Whilst the men were occupied in this business, the chief informed us, from the other side of the river, that he would be ready to meet us in council when we should chuse to come over. As the river is here at least eight or nine hundred yards in breadth, it may appear surprising that he could make himself understood at so great a distance; but to those who have heard the Indian languages spoken, and who are acquainted with the Indians, it will appear very credible. In all the Indian languages which I have heard, every syllable of the compound words is accented; as, for instance, the primitive name of this nation, Star-rahe they pronounce Str-r-h. In addition to this construction of their languages, the Indians have remarkably loud voices. The leaders of our two parties had not yet spoken to each other since the affair of the 5th; nor had any communication, except through the medium of Mr. Brackenridge or myself. It was evident that Lisa was still suspected; and M'Clellan, in particular, carefully watched his motions, determined to shoot him if he attempted to cross the river before us, to attend the council of the Indians, contrary to what had been previously agreed upon with Mr. Brackenridge on his behalf. Soon after noon Mr. Hunt manned the large boat, and with Messrs. M'Kenzie and M'Clellan, went over the river; Lisa also attended in his barge. Mr. Brackenridge and myself were of the party. On landing, amongst a crowd of Indians, we were conducted to the council lodge by some chiefs who met us; where we sat down on buff aloe skins prepared for us, and spread on the ground. I noticed that this lodge was constructed in a manner similar to those already described,

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

belonging to the Ottoes. An old Indian lighted the pipe, and handed it to the chief; after which he squatted himself on his hams, near the entrance of the lodge. Although there were nearly twenty present, I learned from Dorion, (near whom I had placed myself) that several of the chiefs were not yet assembled. After we had smoked for a short time, Le Gauche, the chief, spoke to the old Indian at the door, who went out of the lodge: he soon after appeared on the top, and was visible to us through the hole left for the smoke. What the chief dictated to him from within, he bawled out aloud, with the lungs of a stentor. I understood that his object was to summon the chiefs to council, and it was promptly obeyed, as in ten minutes all were assembled. I learned that although we had smoked, the council pipe had not yet been lighted: this was now done by the same old Indian, who it seems was both priest and herald. Le Gauche made the customary appeal to the Great Spirit, by puffing the smoke in different directions towards heaven and earth; after which the pipe was applied to the lips of each assembled, the chief still holding it. He then opened the council by a short speech: in the first place he spoke of their poverty, but said that they were very glad to see us, and would be still more glad to trade with us. Lisa replied, and expressed his intention to trade, if they did not rate their buffaloe and beaver too highly. He then mentioned Mr. Hunt and his party as his friends, and said he should join them in resenting and repelling any injury or insult. Mr. Hunt declared that the object of his journey was not to trade, but to see our brothers, at the great salt lake in the west; for that undertaking he should now want horses, as he purposed to go thence by land, and that he had plenty of goods to exchange, if they would spare the horses. Mr. Lisa and Mr. Hunt accompanied their speeches by suitable presents of tobacco. Le Gauche spoke, and expressed the satisfaction of his people at our coming, and their attachment to the white men. In respect to the trade with Mr. Lisa, he wished for more time to fix the price of dried buffaloe skins, (usually called buffaloe robes) being an article they had most of: his present idea of the price was thirty loads-of powder and ball for each robe. Respecting Mr. Hunt's proposition, he was certain they could not spare the number of horses that he understood he wanted; and that he did not think they ought to sell any horses. Les Yeux Gris, another chief, replied to the latter part of his speech, by stating that they might easily spare Mr. Hunt a considerable number of horses, as they could readily replace them by stealing or by smoking.(27) These arguments governed the opinions of the chiefs, and it was determined to open a trade for horses, when they were satisfied with the price Mr. Hunt purposed to give. The council now broke up, and Messrs. Hunt, M'Kenzie, M'Clellan, Dorion, and myself were conducted to the lodge of one of their chiefs, where there was a feast of sweet corn, prepared by boiling, and mixing it with buffaloe grease. Accustomed as I now was to the privation of bread and salt, I thought it very palatable. Sweet corn is corn gathered before it is ripe, and dried in the sun: it is called by the Americans green corn, or corn in the milk. I quitted the feast, in order to examine the town, which I found to be fortified all round with a ditch, and with pickets or pallsadoes, of about nine feet high. The lodges are placed without any regard to regularity, which renders it difficult to count them, but there appears to be from a hundred and fifty to a hundred and sixty of them. They are constructed in the same manner as those of the Ottoes, with the additional convenience of a railing on the eaves: behind this railing they sit at their ease and smoke. There is scarcely any declivity in the scite of the town; and as little regard is paid to cleanliness, it is very dirty in wet weather. I spent the remainder of the day in examining the bluffs, to ascertain what new plants might be collected in the neighbourhood; having now, for the first time in the course of our voyage, an opportunity to preserve living specimens. During

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

this time the rest of the boats crossed over the river, and a camp was formed about two hundred yards below the town. Lisa's party was nearer to it than our's.

13th.- The morning being rainy, no business was done in the village until the afternoon, when Mr. Hunt exhibited the kind and quantity of goods he purposed to give for each horse. These were placed in the lodge of Le Gauche, for general inspection, and proved to be satisfactory. This day I employed myself in forming a place for the reception of living specimens, a little distance below our camp, and near the river, for the convenience of water.

14th.- I understood that Lisa and the chiefs had agreed that the price of a buffalo robe should be twenty balls, and twenty loads of powder. He removed a part of his goods to the lodge of Le Gauche, and, Mr. Hunt began to trade at the lodge of the Big Man. The trade for horses soon commenced: the species of goods most in demand were carbines, powder, ball, tomahawks, knives, &c. as another expedition against the Sioux was meditated. During this traffic, I walked with Mr. Brackenridge to the upper village, which is separated from the lower one by a small stream. In our walk through the town, I was accosted by the Medicine Man, or doctor, who was standing at the entrance of a lodge into which we went. It appeared that one of his patients, a boy, was within, for whom he was preparing some medicine. He made me understand that he had seen me collecting plants, and that he knew me to be a Medicine Man. He frequently shook hands with us, and took down his medicine bag, made of deer skin, to show me its contents. As I supposed this bag contained the whole materia medica of the nation, I examined it with some attention. There was a considerable quantity of the down of reedmace, (*typha palustris*) which I understood was used in cases of burns or scalds: there was also a quantity of a species of artemisia, common on the prairies, and known to the hunters by the name of hyssop; but the ingredient which was in the greatest abundance, was a species of wall-flower: in character it agrees with *cheiranthus erysimoides*: besides these, I found two new species of astragalus, and some roots of *rudbeckia purpurea*. After examining the contents of the bag, I assured the doctor it was all very good, and we again shook hands with him, and went into several other lodges, where we were very hospitably received. Although they sit on the ground round the fire, buffalo robes were always spread for us, and the pipe was invariably brought out, whilst the squaw prepared something for us to eat: this consisted of dried buffalo meat, mixed with pounded corn, warmed on the fire in an earthen vessel of their own manufacture. Some offered us sweet corn, mixed with beans (*phaseolus*.) The squaws were particularly attentive to us, and took every opportunity to examine such parts of our dress as were manufactured, and not of skins. After our return, I went to the trading house, and found that the trade for horses went on very briskly. The instant a horse was bought, his tail was cropped, to render him more easily distinguished from those belonging to the Indians, which are in all respects as nature formed them. On my return to our camp, I found the warrior there with whom I had become acquainted on the 1st instant. He insisted so much on my going to his lodge, that I went with him; where he spread a very finely painted buffalo robe for me to sit on, and shewed me by signs that it was now mine. In return I gave him a pair of silver bracelets, with ornaments for the ears and hair, having brought a considerable quantity of those articles from St. Louis. With these he was so much pleased, that he requested me to sleep at his lodge during our stay, and informed me that his sister should be my bedfellow. This offer I declined, alleging as an excuse, that I had voluntarily engaged to assist in keeping guard round our camp. I found, on my return, that the principals of our party were engaged in a very serious consultation on our present situation. All

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

our fresh provisions were exhausted, and of the dried buffaloe bought from the Poncars, not more remained than was thought necessary to reserve for the journey by land: of Indian corn we had left only a few bags, which it was thought expedient to parch, grind, and mix with sugar, in order to apply it to the same object. It had been this day ascertained that the Aricaras could not spare us any provisions, as the excessive rains had penetrated into their caches,(28) and spoiled the whole of their reserved stock, so that they expected to be in want themselves before the harvest would come in. In addition to our difficulties, a rumour had been spread this afternoon, and it was believed, that the Sioux had followed us, and were now in the neighbourhood, to the amount of four or five hundred. Whether this was true or not, the consequences were the same to us, as our hunters could not, with any degree of prudence, be suffered to go out; nor indeed were they willing. In this dilemma, no means could be thought of for the removal of our difficulties, but to purchase from the Indians some of their spare dogs, particularly those employed in dragging their sledges, and this measure was resolved on. It may here be remarked, that horses and dogs are the only animals which the Indians domesticate: of the latter they have two varieties: one of these they employ in hunting; the other appears to be of a stupid and lazy nature, always remaining about the village, and employed as above mentioned.

15th.-In conformity with the measure determined upon last evening, a number of dogs were purchased this morning, brought to the camp, and shot for breakfast. I went out to collect, accompanied by Mr. Brackenridge, and proceeded farther into the interior than I had before done. I was rewarded by finding several new species of plants, and by an additional confirmation of the geological formations, as the hills situated at a distance from the river have uniformly flat summits, covered with fragments of rock, mixed with smaller stones and gravel. On our return, when about three miles from the camp, we saw Indians pouring out from the village, some on horseback, others on foot, and all at full speed. They went in a direction to our right, towards some hills, five or six miles distant down the river. A young Indian, soon after, in passing us at some distance, changed his course, and came up to me. He spoke with great earnestness, frequently pointing to the hills, on the tops of which I observed some horsemen apparently meeting each other, and after passing, turn back, and continue galloping. I at length comprehended that enemies were near, and that seeing me only armed with a pistol, he wished me to hasten to the camp. When we came nearer the town, I observed that the tops of the lodges were crowded with women, children, and old men, all looking earnestly towards the hills, and considerable numbers were still running past our camp. I now enquired the cause of the tumult, and found that a signal had been given, indicating the appearance of a war party of the Sioux. The noise and confusion were such as I have not often witnessed: the war whoop was heard in every direction, and even the old men in the village were busily employed in animating the warriors. Some aged Nestors tottered along with the crowd, raising their shrill voices to encourage the young and vigorous to exert themselves in repelling the foe. If any enemy really appeared, they had immediately fled on being discovered; a thing not at all unlikely, as it is conformable to their customs, and in this instance the more probable, as the Sioux would naturally expect that our party would join their adversaries. At all events, the party soon returned in as much disorder as they went out. I observed, that amongst the warriors of this and the other nations, several had foxes' tails attached to the heels of their mock-asons, and I am informed by Captain Winter, who resided some time at Michillimakinac, that the same custom prevails among the tribes in Upper Canada, and that this honour is only permitted

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

to such warriors as have killed an enemy on his own ground.

16th.-I went into the village, and found that the chiefs were assembled to hear from the warriors an account of what had passed the preceding day. As they were not in the habit of printing newspapers, the news was carried through the village by heralds, who attend at the door of the council-lodge, and from time to time go through the village to give information. On my return to the camp, I found that Mr. Hunt and Mr. Lisa were negotiating respecting the boats belonging to our party, which were no longer of any use to us. Mr. Hunt was willing to exchange them with Mr. Lisa for horses, who had a considerable number of them at the Fort belonging to the Missouri Fur Company, about two hundred miles higher up the river. Mr. Hunt, some days previous to this, presented to me the smallest boat, which was a barge built at Michillimakinac; and three American hunters, whom we found at the Aricara nation, agreed to assist me in navigating it down the river, when I should be disposed to return. The three other boats, and some Indian goods, were finally exchanged with Mr. Lisa. In consequence of this arrangement, I found that a party were to be dispatched in a few days to the Fort for the horses, and I resolved to accompany them, if permitted. After an excursion to collect plants, I walked into the village in the evening, and found that a party had arrived, who had been on an expedition to steal horses, in which they were successful. This event, and the return of the war party, caused an unusual bustle: the tops of the lodges were crowded with men, women, and children. Several of the old men harangued them in a loud voice. The subject I understood to be an exhortation to behave well towards the white people, and stating the advantages they derived by an intercourse with them. Notwithstanding all this tumult, some of the women continued their employment in dressing buffaloe skins, which are stretched on frames, and placed on stages, erected both for this purpose, and to dry or jerk the flesh of animals cut into thin slices.

17th.-It was arranged that Mr. Crooks should go to the Company's Fort for the horses; and as more than thirty had been bought from the Aricaras, the men who were to accompany him began to select from amongst them such as they thought the best able to perform the journey. Notwithstanding I had resolved to accompany them, I neglected taking the same precaution, which occasioned me afterwards much vexation. I had already expressed my wish to undertake the journey, and although Mr. Hunt had not absolutely refused to permit me, yet he tried by arguments to dissuade me from it, in representing the danger which the party ran of being cut off by the Sioux, the fatigue of riding on an Indian saddle, &c. I therefore did not for the present press the subject, and spoke of it only to Mr. Crooks, who, knowing my determination, was much pleased with it. After devoting the greatest part of the day to the increasing of my collection, I went into the village, and found that some Indians had arrived from the Chayenne nation, where they had been sent to inform the Aricaras of their intention to visit them in fifteen days. One of these Indians was covered with a buffalo robe, curiously ornamented with figures worked with split quills, stained red and yellow, intermixed with much taste, and the border of the robe entirely hung round with the hoofs of young fawns, which at every movement made a noise much resembling that of the rattlesnake when that animal is irritated. I understood that this robe had been purchased from the Arapahoes, or Big Bead Indians, a remote tribe, who frequent the Rocky Mountains. I wished much to purchase the robe, and offered him such articles in exchange as I thought most likely to induce him to part with it; but he refused. The day following it was purchased by Mr. M'Clellan, who gave it to me for silver ornaments and other articles, which amounted to about ten dollars.

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

As these Indians could not speak the Aricara language, they had need of an interpreter, whose place was supplied by one of the Aricaras that could speak their language. They were tall and well proportioned men, but of a darker complexion than the Aricaras. This nation has no fixed place of residence, but resort chiefly about the Black Hills, near the head of Chayenne River, having been driven by the Sioux from their former place of residence, near the Red River of Lake Winnipeg. Their number is now inconsiderable, as they scarcely muster one hundred warriors. On my return to the camp, I found it crowded with Indians and squaws, as it had been for the two preceding evenings. Travellers who have been acquainted with savages, have remarked that they are either very liberal of their women to strangers, or extremely jealous. In this species of liberality no nation can exceed the Aricaras, who flocked down every evening with their wives, sisters, and daughters, anxious to meet with a market for them. The Canadians were very good customers, and Mr. Hunt was kept in full employ during the evening, in delivering out to them blue beads and vermilion, the articles in use for this kind of traffic. This evening I judged that there were not fewer than eighty squaws, and I observed several instances wherein the squaw was consulted by her husband as to the quantum sufficit of price; a mark of consideration which, from some knowledge of Indians, and the estimation in which their women are held, I had not expected.

18th.- Went early to the bluffs to the south-westward of the town, on one of which I observed fourteen buffalo skulls placed in a row. The cavities of the eyes and the nostrils were filled with a species of artemisia common on the prairies, which appears to be a nondescript. On my return, I told our interpreter to inquire into the reason of this, and learned that it was an honour conferred by the Indians on the buffaloes which they had killed, in order to appease their spirits, and prevent them from apprising the living buffaloes of the danger they run in approaching the neighbourhood. After my return, I walked into the village with Mr. Donald M'Kenzie, who wore a green surtout. This attracted very much the attention of the squaws, and from the surprise they shewed, I believe it is a colour with which they were unacquainted. They were so anxious to obtain a part of it, that several offered him favours as an equivalent for a piece which they marked out. This occasioned much mirth betwixt us, and on my part a pretended alarm lest his coat should become a spencer. We amused ourselves sometime by watching a party who were engaged in play. A place was neatly formed, resembling a skittle alley, about nine feet in breadth and ninety feet long: a ring of wood, about five inches in diameter, was trundled along from one end, and when it had run some distance, two Indians, who stood ready, threw after it, in a sliding manner, each a piece of wood, about three feet long and four inches in breadth, made smooth on one edge, and kept from turning by a cross piece passing through it, and bent backwards so as to resemble a cross bow. The standers by kept an account of the game, and he whose piece, in a given number of throws, more frequently came nearest the ring after it had fallen, won the game.

19th.- We breakfasted early, having killed the dogs the night before, and ten horses were brought into the camp for the party appointed to go to the Fort, beyond the Mandans, to escort the horses agreed for with Mr. Lisa, and I now declared to Mr. Hunt that, unless he absolutely refused me the privilege, I was determined to accompany them. With his accustomed kindness he consented, and a man was dispatched to catch a horse for me on the prairie. As the party had cast their bullets, and made every other preparation the preceding night, we were all ready, when the man returned with a very bad horse. He was small, and apparently weak; but being unwilling to delay the party, I fixed my saddle, and we set out, having previously agreed with one of the men to take care of my

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

plants in my absence. We had for our guide a person of the name of Jones, who was acquainted with the whole of the country betwixt the Mandans and Aricaras; and after passing the villages, kept as much as possible in the ravines and valleys, to avoid being seen by the Sioux Indians, who we had reason to think were still lurking about the country; as we knew that if they discovered us, they would, almost to a certainty, cut us off. There being no provisions to spare in the camp, except a little dog's flesh, we took nothing with us to eat, nor made the least attempt to look for game, as our safety perhaps depended on the celerity and silence of our march. We continued at a smart trot until near eight o'clock in the evening, having only stopped once to give the horses an opportunity to feed. Our course lay nearly north, and we kept the river in sight the whole of the day, being sometimes very near it, and at other times five or six miles distant. We encamped on the border of a creek, not more than a mile from the Missouri, on the open prairie. We found this place so much infested with mosquitoes, that scarcely any of us slept. In the latter part of the day I discovered the insufficiency of my horse, as it was with difficulty I could keep up with the rest. The reflections on my situation, combined with the pain occasioned by mosquitoes, kept me from closing my eyes; in addition to this, I had already painfully experienced the effects of an Indian saddle, which I shall describe. It consists of six pieces of wood: two of these are strong forked sticks, one of which is formed to fix on the shoulders of the horse; the other is adapted to the lower part of the back: they are connected by four flat pieces, each about four inches in breadth: two of these are so placed as to lie on each side of the backbone of the horse, which rises above them; the two others are fastened to the extremities of the forked sticks, and the whole is firmly tied by thongs. Two strong slips of buffalo hide are doubled over each of the upper connecting pieces, for the purpose of holding the stirrup, which is formed of a stick about two feet long, and cut half way through in two places, so as to divide it into three equal parts: at these places it is bent, and when the two ends are strongly tied, it forms an equilateral triangle. The conjunct end of the foremost forked stick rises to the height of eight or ten inches above the back of the horse, and serves to fasten on it the coiled end of the long slip of dried skin intended to serve as a bridle: this slip is also made use of to fasten the horse at night, to allow him sufficient space wherein to graze, and is mostly fifty or sixty feet long. Under the saddle is laid a square piece of buffalo skin, dressed with the hair upon it, and doubled four-fold, and on the saddle the rider fixes his blanket.

20th. - We were on horseback on the first appearance of day, and immediately abandoned the river, passed over the bluffs, and struck into the interior of the country. Besides my rifle and other equipments, similar to those of the rest of the party, I had a portfolio for securing specimens of plants. I had contrived already to collect some interesting specimens, by frequently alighting to pluck them, and put them into my hat. For these opportunities, and to ease my horse, I ran many miles alongside of him. Notwithstanding this, about noon he seemed inclined to give up, and I proposed to Mr. Crooks that I should turn back: this he would by no means agree to, but prevailed on the lightest man in company to exchange horses with me for the rest of the day. Soon after noon, we observed some deer grazing at a distance; we therefore halted in a small valley, suffered the horses to graze, and dispatched one of the men to look after the deer, who soon returned, having killed one. As we had not eaten any thing from the morning of the preceding day, this news was very acceptable, and some were sent to fetch the meat, whilst others gathered dry buffaloe dung to boil our kettle. This opportunity afforded me the pleasure of adding to my little collection, besides securing in my portfolio what I had before gathered. It is perhaps needless to

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

observe that the men were not slow in bringing the meat, nor that we were equally expeditious in our cooking. We were so confident of finding game, that we did not take any part of the remains of our feast, but proceeded, in the hope of being able to reach Cannon-ball River(29), intending to encamp on its banks. In the course of the afternoon we perceived innumerable herds of buffalo; and had we wished to hunt, we might have killed great numbers; but we avoided them as much as possible, for fear of disturbing them, as it might have been the means of enabling some lurking war party to discover us. It is well known to the hunters and the Indians, that a herd of buffalo, when frightened, will often run ten, fifteen, or even twenty miles before they stop. About five o'clock we perceived before us the valley of Cannon-ball River, bounded on each side by a range of small hills, visible as far as the eye can reach; and as they appear to diminish regularly, in the proportion of their distance, they produce a singular and pleasing effect. In the evening, as we considered the danger from the Sioux much decreased, we ventured to kill a buffalo: each man cut what he thought proper, and the remainder was left for the wolves, who doubtless picked the bones before the morning. On descending into the valley of the river, some deer were observed, feeding near the bank, whilst others were lying down near them. Some of our men stole cautiously round a grove, and shot two of the poor animals, although we had no great occasion for them. The Cannon-ball River was muddy at this time; but whether it is constantly so or not, I could not learn. It is here about one hundred and sixty yards wide, but so shallow that we crossed it without swimming, but not without wetting some of the blankets on our saddles. We encamped on a very fine prairie, near the river, affording grass in abundance, nearly a yard high, in which we stationed our horses. The alluvion of the river is about a mile in breadth from bluff to bluff, and is very beautiful, being prairie, interspersed with groves of trees, and ornamented with beautiful plants, now in flower. Amongst others which I did not observe before, I found a species of flax, resembling that which is cultivated: I think it is the species known as *linum perenne*. I rambled until it was quite dark, and found my way to the camp by observing the fire.

21st.- We arose before day. Each man cooked his own breakfast, cutting what suited him from the venison, and fixing it on a stick set in the ground, which inclined over the fire. At break of day we were on horseback, and soon after ascended the bluffs, and proceeded on our route. I noticed a sensible change in the face of the country after we had left the river. We now found some of the more elevated places covered with small stones, and divested of herbage, and throughout the soil was of less depth, and the grass shorter and more scanty. About ten o'clock we again found the country to assume the same fertile appearance as on the preceding day, and saw herds of buffalo in every direction: before mid-day two were killed, but very little was taken, except the marrow-bones: each man who chose to take one, hung it to his saddle. In the course of this forenoon we observed three rattlesnakes, of an entirely new and undescribed species: one of them I killed, and carried in my shot-pouch, and during the time we stopped to feed our horses, I secured the skin. We passed very close to several herds of buffalo during the afternoon, near which we always observed a number of wolves lurking. I perceived that those herds which had wolves in their vicinity, were almost wholly females with their calves; but noticed also, that there were a few bulls with them, and that these were always stationed on the outside of the herd, inclosing the cows with their calves within. We came suddenly on one of these herds, containing, as we judged, from six to eight hundred buffaloes: they immediately galloped off. One of our party rode after them, and overtook a calf which could not keep pace with the rest: he instantly dismounted, caught it

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

by the hind leg, and plunged his knife into its body. We took what we wanted, and rode on. This afternoon I noticed a singularly formed hill on our right, in the direction of the Missouri, apparently about ten miles from us. It is of an oblong shape, nearly perpendicular at the ends, and level at the top, so as to resemble a regular building; near the centre there rises a pic, very steep, which seems to be elevated at least one hundred feet above the hill on which it stands. We rode this day almost without intermission, and late in the evening arrived at Riviere de Coeur, or Heart River, and encamped on its banks, or, more properly, lay down in our blankets. I found that my horse did not get worse, although he showed a great disposition to lag behind; a certain proof of his being very much tired, as the Indian horses, when on a journey, have an aversion to be separated from their companions.

22nd.- Although the distance from this place to the Missouri Fur Company's Fort was estimated at about sixty miles, we determined if possible to reach it this day, and were, as usual, on horseback at day-break, having previously breakfasted on veal. I observed the preceding days a sufficient number of buffaloes to induce me to credit the hunters in their reports of the vast numbers they had seen; but this day afforded me ample confirmation. Scarcely had we ascended the bluffs of Heart River, when we discerned herds in every direction; and had we been disposed to devote the day to hunting, we might have killed a great number, as the country north of Heart River is not so uniform in its surface as that we had passed. It consists of ridges, of small elevation, separated by narrow valleys. This renders it much more favourable for hunting, and although we did not materially deviate from our course, five were killed before noon. Mr. Crooks joined me in remonstrating against this waste; but it is impossible to restrain the hunters, as they scarcely ever lose an opportunity of killing, if it offers, even although not in want of food. About two o'clock we arrived on the summit of a ridge more elevated than any we had yet passed. From thence we saw before us a beautiful plain, as we judged, about four miles across, in the direction of our course, and of similar dimension from east to west. It was bounded on all sides by long ridges, similar to that which we had ascended. The scene exhibited in this valley was sufficiently interesting to excite even in our Canadians a wish to stop a few minutes and contemplate it. The whole of the plain was perfectly level, and, like the rest of the country, without a single shrub. It was covered with the finest verdure, and in every part herds of buffalo were feeding. I counted seventeen herds; but the aggregate number of the animals it was difficult even to guess at: some thought upwards of ten thousand. We descended into the plain, and each having two marrow bones hung to his saddle, we resolved to dine wherever we could first find water. In descending into the plain, we came upon a small herd feeding in a valley. One buffalo was shot by our party before we could possibly restrain them. At about half the distance across the plain we reached a small pond, where we halted, and having collected a sufficient quantity of dry buffalo's dung, we made a fire, in which we disposed our bones, and although the water was stagnant, we made free use of it. During our stay here a very large herd of buffalo continued to feed within a quarter of a mile of us. Some of them I observed gazing at us; but as they were to the windward, they had not the power of discovering what we were by the sense of smelling. I found, on inquiry from some of our party who were well acquainted with the habits of these animals, that they seem to rely chiefly on that sense for their safety. Around this herd we counted fifteen wolves, several of which stood for some minutes looking at us, without exhibiting any signs of fear: and as we did not think them worth shooting, we left them unmolested. On gaining the summit of the ridge forming the north-

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

ern boundary of the plain, we noticed a chain of hills on our right hand, at the distance of about six miles. Jones, our guide, assured us they were the bluffs of the Missouri, and although we might not arrive at the Fort that night, yet he was certain of our being able to go to the Mandan village. About four o'clock we fell into a trace that Jones said was one of the roads which the Mandans usually followed when they went out to hunt. We resolved to keep along it, as we found it led towards the bluffs, at which we arrived in about an hour, and passed through a narrow valley, bounded on each side by some small rocks of secondary limestone. On turning an angle in the valley, we came suddenly in view of the Missouri, at no great distance from us. The sight of the river caused much joy in our party; but no one had so much occasion as myself to be pleased with it, as it was with the greatest difficulty I could keep up with the party, my horse being so tired, that Dorion and others of the party occasionally rode after me, to beat him forward. The trace turned up a long and very fine plain, betwixt the bluffs and the river. The plain continued to increase in breadth as we advanced, and had on it a sufficiency of clumps of cotton woods, so interspersed as to prevent our seeing its upper termination. We had not been on this plain more than half an hour, when we suddenly saw an Indian on horseback, galloping down the bluffs at full speed, and in a few minutes he was out of sight, having proceeded nearly in the same direction we were pursuing. We considered this as a certain proof that we were not far from the Mandan town, and shortly after, on turning round the point of a large grove, we came in full view of it. We could perceive that the Indian had already given notice of our approach, as the tops of the lodges were crowded with people; and as we advanced, we saw crowds coming from the town to meet us. From the time the first of the Indians met us till we arrived in the town, we were continually employed in shaking hands, as every one was eager to perform that ceremony with the whole party, and several made us understand that they had seen us before, having been of the war party which we had met at the Great Bend. They conducted us to the lodge of She-he-kè, the chief, where we alighted. He met us at the door, and after shaking hands with us, said, to my great surprise in English, "Come in house." I was again surprised, on entering the lodge, to see a fine dunghill cock. On inquiry I found that She-he-kè had brought it with him from the United States, at the time he accompanied Messrs. Lewis and Clarke, where also he learnt his English." It appeared that immediately on the centinel announcing our approach, the squaw had set on the pot. The victuals being ready before we had done smoking, and Mr. Crooks expressing a determination to proceed to the Missouri Fur Company's Fort this evening, we soon finished our meal, which consisted of jerked flesh of buffaloe and pounded corn. The sun was setting when we mounted, and several of our horses appeared much jaded, but mine in particular. I therefore proposed to remain at the Mandans; but the party, and in particular Mr. Crooks, wished me to go on. With some reluctance I consented, and we pushed on our horses, in order to reach Knife River before it was quite dark, which by much exertion we effected, and arrived opposite to the third village of the Minetaree, or Gros Ventres Indians, as the night was closing in. On hallooing, some Indians came down to the bank on the other side of the river, and immediately ran back to the village. In a few minutes we saw them returning along with six squaws, each of whom had a skin canoe on her back, and a paddle in her hand. Whilst we unsaddled our horses they crossed the river in their canoes, and the Indians swam over, and all shook hands with us. The squaws put our saddles in their canoes, -where we also placed ourselves, and left the Indians to drive our horses over the river, which they managed with much address, by placing themselves in such a

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

way as to keep them in a compact body. This river is not rapid, but it has the appearance of being deep, and is about eighty yards wide at this place. After saddling our horses, and giving the squaws three balls and three loads of powder for each man, being the price of ferriage, we passed through the village, having seven miles still to travel in order to reach the Fort. We could not now make our horses exceed a walk. On the hill above the town I imperfectly distinguished something that had the appearance of cavalry, which Jones told me were the stages whereon the Indians deposit the bodies of their dead. About eleven o'clock we reached the Fort, after having travelled this day more than eighteen hours, with very little intermission. We were received in a very friendly manner by Mr. Reuben Lewis, brother to Captain Lewis, who travelled to the Pacific Ocean: the mosquitoes were much less friendly, and were in such numbers, and so troublesome, that notwithstanding our excessive fatigue, it was next to impossible to sleep.

23rd.-We went early to look at the horses. The greater part were lying down, and appeared to have scarcely moved from the place where they had been left the preceding night, seeming to prefer rest to food. In consequence of their jaded state, Mr. Crooks resolved to remain at the Fort four or five days, that they might recruit themselves. On our return to breakfast, we found that the Fort was but ill supplied with provisions, having little of any thing but jerked meat; but as that, or any other accommodation the place afforded, was accompanied by kindness and the most polite attention from Mr. Lewis, we were much pleased with our reception. The bluffs here have a very romantic appearance, and I was preparing to examine them after breakfast, when some squaws came in belonging to the uppermost village of the Minetarees, with a quantity of roots to sell. Being informed that they were dug on the prairie, my curiosity was excited, and on tasting found them very palatable, even in a raw state. They were of the shape of an egg: some of them were nearly as large as those of a goose; others were smaller. Mr. Lewis obligingly caused a few to be boiled. Their taste most resembled that of a parsnip, but I thought them much better. I found no vestige of the plant attached to them, and anxious to ascertain the species, I succeeded in obtaining information from the squaws of the route by which they came to the Fort, and immediately set out on the search. After much pains I found one of the places where they had dug the plants, and to my surprise discovered, from the tops broken off, that the plant was one I was well acquainted with, having found it even in the vicinity of St. Louis, where I had first discovered it, and determined it to be a new species of psoralea, which is now known as psoralea esculenta. On enquiry I was informed that this root is of the greatest importance, not only to the Indians, but to the hunters, who, in case of the failure of other food, from the want of success in hunting, can always support life by resorting to it; and even when not impelled by want, it cannot but be extremely grateful to those who otherwise must exist on animal food alone, without bread or salt; at least I then thought it so. I found the country about the Fort, and especially the bluffs, extremely interesting. It chiefly consists of argillaceous schistus, and a very tenacious and indurated yellow clay, exhibiting in many places the appearance of coal. The land floods from the country behind the bluffs had cut through them, and left large bodies of clay standing up, with the sides perpendicular, and resembling in appearance towers, or large square buildings, which it was impossible to ascend. The incumbent soil appears to be of excellent quality, and was at this time covered with fine grass and a number of beautiful plants. The roots and specimens of these I collected with the greatest assiduity, not having yet determined to remain any longer than until our party returned. I soon found the number to increase so much, as I lengthened my excursions, that I resolved to re-

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

main at the Fort until Mr. Lisa came up with his boat, and obtain a passage with him down to the Aricaras, and this resolution I announced to Mr. Crooks. The Missouri had overflowed its banks some time before our arrival, and on receding had left numberless pools in the alluvion. In these the mosquitoes had been generated in numbers inconceivably great. In walking it was necessary to have one hand constantly employed to keep them out of the eyes; and although a person killed hundreds, thousands were ready to take their place. At evening the horses collected in a body round the Fort, waiting until fires were made, to produce smoke, in which they might stand for protection. This was regularly done, and a quantity of green weeds thrown on each fire to increase the smoke. These fires caused much quarrelling and fighting, each horse contending for the centre of the smoke, and the place nearest the fire. In the afternoon we were visited by She-he-kè, the Mandan chief, who came dressed in a suit of clothes brought with him from the United States. He informed us that he had a great wish to go my regret that he had no potatoes. "Oh!" said he, "that does not signify; we can soon have them; there is plenty just over the way." I did not think the man was serious; but on mentioning the circumstance to Mr. Lewis, he told me that there really were potatoes at an English Fort on the river St. Peter's, distant only from two to three hundred miles.

24th.- This morning I was informed by Jussum that the squaw dance would be performed in the afternoon, and he promised to have horses ready for us by mid-day. I packed up a few beads for presents, and spent the fore part of the day in my usual way, but took a more extended range into the interior from the river, as the air was calm, having discovered that the mosquitoes remain almost entirely in the valley of the river, where during calm weather it was nearly impossible to collect. On the top of a hill, about four miles from the Fort, I had a fine view of a beautiful valley, caused by a rivulet, being a branch of Knife River, the declivities of which abound in a new species of *oleagnus*, intermixed with a singular procumbent species of cedar (*juniperus*.) The branches are entirely prostrate on the ground, and never rise above the height of a few inches. The beautiful silvery hue of the first, contrasted with the dark green of the latter, had a most pleasing effect; and to render the scene more interesting, the small alluvion of the rivulet was so plentifully covered with a species of lily, (*lilium catesbaei*) as to make it resemble a scarlet stripe as far as the eye could trace it. I returned to the Fort much gratified, and prepared to accompany Jussum to the dance. On our approach some fields of Indian corn lay betwixt us and the village, which I wished to avoid, and proposed that we should change our route, as the corn was now nearly a yard high.<sup>(30)</sup> This proposal was absolutely refused by Jussum, and we rode on through the corn till we came to where some squaws were at work, who called out to us to make us change our route, but were soon silenced by Jussum. I suspected that he committed this aggression to show his authority or importance. On our arrival at the village we went into several of the lodges, which were constructed exactly in the same form as those of the Aricaras. We smoked at every lodge, and I found by the bustle among the women that they were preparing for the dance, as some of them were putting on their husbands' clothes, for which purpose they did not retire into a corner, nor seem in the least discomposed by our presence. In about half an hour the dance began, which was performed in a circle, the dancers moving round, with tomahawks in their hands. At intervals they turned their faces all at once towards the middle of the circle, and brandished their weapons. After some time one of them stepped into the centre of the ring, and made an harangue, frequently brandishing her weapon, whilst the rest moved round her. I found that the nature of all the

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

speeches was the same, which was to boast of the actions of their husbands. One which made Jussum smile I requested he would interpret. He briefly informed me, that she had said her husband had travelled south-west to a country inhabited by white people, which journey took him twenty days to perform: that he went to steal horses, and when he came to the white people's houses, he found one where the men were gone out, and in which he killed two women, and stole from them a number of horses. She corrected herself, by denying that they were women whom her husband had killed, and the reasons she assigned to prove they were not, was what caused Jussum to smile. The dance did not last more than an hour, and I was informed by Jussum that it would be followed by a feast of dog's flesh, of which it was expected I should partake. I excused myself by saying I wished to collect some plants, and set out alone. In my way to the Fort I passed through a small wood, where I discovered a stage constructed betwixt four trees, standing very near each other, and to which the stage was attached, about ten feet from the ground. On this stage was laid the body of an Indian, wrapt in a buffalo robe. As the stage was very narrow, I could see all that was upon it without much trouble. It was the body of a man, and beside it there lay a bow and quiver with arrows, a tomahawk, and a scalping knife. There were a great number of stages erected about a quarter of a mile from the village, on which the dead bodies were deposited, which, for fear of giving offence, I avoided; as I found, that although it is the custom of these people thus to expose the dead bodies of their ancestors, yet they have in a very high degree that veneration for their remains which is a characteristic of the American Indians. I arrived at the Fort about sunset. Soon afterwards we heard the report of a swivel down the river, which caused us all to run out, and soon saw the boat belonging to Mr. Lisa turning a point about two miles below us. We returned the salute, but he did not arrive that night, as the side on which we were, to within half a mile of the Fort, consisted of high perpendicular bluffs, and his men were too much exhausted to reach us by the river.

25th.- This morning I had the pleasure of again meeting Mr. Brackenridge, and of finding that it was the intention of Mr. Lisa to stay at least a fortnight at the Fort. I was very glad to have so good an opportunity of examining this interesting country. I received by the hands of Mr. Brackenridge some small articles for trade, which I had delivered to him at the Aricaras. This enabled me to reward the gardener for his civility in offering me a place in the garden where I could deposit my living plants, and of this I availed myself during my stay.

27th.- The business relative to the horses having been arranged betwixt Mr. Lisa and Mr. Crooks, he set out early this morning on his return to the Aricara nation; and as he was not without his fears that the Gros Ventres Indians, headed by Le Borgne, or One Eyed, would attempt to rob him of his horses, he determined to proceed with as much celerity as we had travelled to the Fort, and kept his departure as secret as possible. I was much pleased to see this chief at the Fort in a few hours afterwards, being satisfied that Mr. Crooks was now out of his reach. As it may give some idea of the tyrannic sway with which the chiefs sometimes govern these children of nature, I shall relate an instance of cruelty and oppression practised by this villain. He had a wish to possess the wife of a young warrior of his tribe, who was esteemed beautiful. She resisted his offers, and avoided him. He took the opportunity of the absence of her husband, and carried her off forcibly. The husband was informed on his return of the transaction, and went to the lodge of Le Borgne to claim his wife. The monster killed him. The young man had no father: his mother only was living, and he was her only son. The shock deprived her of reason, and she reviles the wretch whenever

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

er she meets him, and often seeks him to procure the opportunity of doing so. Even amongst those we term savages, the horror which the deed has occasioned is so great, and the pity which the situation of the poor maniac has excited so prevailing, that he dares not kill her. How much then ought Christians to detest a similar deed. He has a most savage and ferocious aspect, and is of large stature. He is chief of one of the villages of the Minetarees, or, as the French call them, Gros Ventres, and assumes a dominion over both, although there are several other chiefs. It is stated by Mr. Lewis that the two villages or bands can raise six hundred warriors, but the number at this time is probably much less. The object of this wretch in visiting the Fort was to make professions of friendship, and to obtain a present. Mr. Lisa knew very well the value of his professions, but, notwithstanding, he gave him some, with which he appeared satisfied. Having selected some silver ornaments which I purposed, presenting to She-he-kè, Mr. Brackenridge agreed to accompany me to the Mandan village. We obtained horses from Mr. Lewis for the journey, and about ten o'clock set off. We crossed Knife River at the lower of the Minetaree villages, and paid the accustomed price to the squaw who ferried us over; which was, for each of us, three balls and three charges of powder. Before we left the village, we were invited into the lodge belonging to the White Wolf, one of the chiefs of this village, with whom we smoked. I was surprised to observe that his squaw and one of his children had brown hair, although their skins did not appear to be lighter coloured than the rest of the tribe. As the woman appeared to be above forty years of age, it is almost certain that no intercourse had taken place betwixt these people and the whites at the time she was born. I should have been less surprised at the circumstance had they been one of those tribes who change their places of residence; but they have not even a tradition of having resided in any other place than where the present village stands. The White Wolf appeared to be much pleased with our visit, and by signs invited us to call at his lodge whenever we came that way. He shook hands very cordially with us at parting. In our way to the Mandans we passed through the small village belonging to the Ahwahhaways, consisting of not more than eighteen or twenty lodges. This nation can scarcely muster fifty warriors, and yet they carry on an offensive war against the Snake and Flathead Indians. On our arrival at the Mandans, She-he-kè, as before, came to the door of his lodge, and said, "come in house." We had scarcely entered when he looked earnestly at us, and said, "whiskey." In this we could not gratify him, as we had not thought of bringing any. I presented the silver ornaments to him, with which he seemed much pleased, and after smoking we were feasted with a dish consisting of jerked buffalo meat, corn, and beans boiled together. I mentioned to him my wish to purchase some mockasons, and he sent out into the village to inform the squaws, who flocked into the lodge in such numbers, and with so plentiful a supply, that I could not buy a tenth part of them. I furnished myself with a dozen pair at a cheap rate, for which I gave a little vermilion, or rather red lead, and a few strings of blue beads. During our stay, She-he-kè pointed to a little boy in the lodge, whom we had not before noticed, and gave us to understand that his father was one of the party that accompanied Mr. Lewis, and also indicated the individual. On our return we crossed Knife River at the upper village of the Minetarees. The old squaw who brought the canoe to the opposite side of the river, to fetch us over, was accompanied by three young squaws, apparently about fourteen or fifteen years of age, who came over in the canoe, and were followed by an Indian, who swam over to take care of our horses. When our saddles were taken off, and put into the canoe, Mr. Brackenridge and myself stepped in, and were followed by the old squaw, when the three young ones instantly stripped,

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

threw their clothes into the canoe, and jumped into the river. We had scarcely embarked before they began to practice on us a number of mischievous tricks. The slow progress which the canoe made enabled them to swim round us frequently, sometimes splashing us, then seizing hold of the old squaw's paddle, who tried in vain to strike them with it; at other times they would pull the canoe in such a manner as to change the direction of its course; at length they all seized hold of the hind part, and hung to it. The old squaw called out to the Indian that was following our horses, who immediately swam down to our assistance, and soon relieved us from our frolicksome tormentors, by plunging them successively over head, and holding them for a considerable time under water. After some time they all made their escape from him, by diving and swimming in different directions. On landing, by way of retaliation, we seized their clothes, which caused much laughing betwixt the squaw and the Indian. We had many invitations to stay and smoke; but as it was near sunset, and we had seven miles to ride, they excused us.

29th and 30th.- I continued adding to my stock, and the latter day observed a vein of fine coal, about eighteen inches thick, in the perpendicular bluff below the Fort. On shewing specimens of it to some of the hunters in the Fort, they assured me that higher up the river it was a very common substance, and that there were places in which it was on fire. As pumice is often found floating down the Missouri, I made frequent inquiries of the hunters if any volcano existed on the river or its branches, but could not procure from them any information that would warrant such a conclusion. It is probable, therefore, that this pumice stone proceeds from these burning coal beds.

1st July.- I extended my researches up the river, along the foot of the bluffs; and when at the distance of three or four miles from the Fort, and in the act of digging up some roots, I was surprised by an Indian, who was within a few yards of me before I perceived him. He had a short gun on his shoulder, and came close to me. He shewed me by signs that he knew very well I was collecting those roots and plants for medicine, and laying hold of my shirt, made the motion usual when traffic or exchange is proposed. It consists in crossing the two fore fingers one over the other alternately. On his pointing to a little distance from us, I perceived a squaw coming up, followed by two dogs, each of which drew a sledge, containing some mockasons and other small articles. The signs which he afterwards made were of a nature not to be misunderstood, and implied a wish to make a certain exchange for my shirt, wherein the squaw would have been the temporary object of barter. To this proposition I did not accede, but replied, in the Osage language, honkoska (no) which he seemed to understand, and immediately took hold of my belt, which was of scarlet worsted, worked with blue and white beads, and repeated his proposition, but with the same success. After looking at me fiercely for a few moments, he took his gun from his shoulder, and said in French, *sacre crapaud*, which was also repeated by the squaw. As I had foreseen that he would be offended at my refusal, I took care, on the first movement which he made with his gun, to be beforehand with him, by placing my hand on the lock of mine, which I held presented to him. In this situation we gradually withdrew from each other, until he disappeared with his squaw and the dogs.

2nd.-Mr. Brackenridge and I made an excursion into the interior from the river, and found nothing interesting but what has already been noticed, excepting some bodies of argillaceous schist, parts of which had a columnar appearance. They were lying in a horizontal position, and resembled in some degree the bodies of trees.

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

4th.- This day being the anniversary of the independence of the United States, Mr. Lisa invited us to dine on board of his boat, which was accepted by Messrs. Brackenridge, Lewis, Nuttall, and myself; and as Le Borgne and the Black Shoe, the two Minetaree chiefs, called at the Fort before dinner, they were invited also. They ate with moderation, and behaved with much propriety, seeming studiously to imitate the manners of white people. After dinner Mr. Lisa gave to each of them a glass of whiskey, which they drank without any hesitation; but on having swallowed it, they laid their hands on their stomachs, and exhibited such distortion of features, as to render it impossible to forbear laughing. As Jussum was present, I asked him the meaning of some words which they spoke to each other, who informed me that they called the whiskey fire water. Mr. Lisa having announced to us his intention to depart on the 6th for the Aricaras, I employed myself during the 5th in packing up carefully my collection, and on the morning of the 6th we set out. Our progress down the river was very rapid, as it was still in a high state. We did not land until evening, after making in the course of the day more than one hundred miles. In the evening and during the night the mosquitoes were exceedingly troublesome, which rendered it almost impossible to sleep.

7th.- We passed Cannon-ball River about ten o'clock, and stopped a short time at its mouth, where I noticed and procured some additional specimens. In the evening I had the pleasure of meeting my former companions, and was rejoiced to find that Mr. Crooks arrived safely with the horses, and that Mr. Hunt had now obtained nearly eighty in all. Soon after my arrival, Mr. Hunt informed me of his intention to depart from the Aricaras shortly. I therefore purposed returning down the river; and as the Canadians would not be permitted to take their trunks, or, as they termed them, their caissettes, by land, I purchased from them seventeen, in which I intended to arrange my living specimens, having now collected several thousands. It had been a custom with us to keep a guard round our camp during the night, since our arrival at the Aricaras. Four of the party were stationed for this purpose until midnight, and were then relieved by four others, who remained on guard until morning. On the morning of the 10th, at day-break, some Indians came to our camp from the village, among whom was my friend the young warrior. As I happened to be on guard, he came to me, and by signs invited me to go and breakfast with him. Whilst we were sitting together, he suddenly jumped up, and pointed to the bluffs, at the distance of three or four miles down the river. On looking, I observed a numerous crowd of Indians. He gave me to understand that it was a war party on their return, and immediately ran to the village. In a few minutes the tops of the lodges were crowded with Indians, who appeared much agitated. Soon after an Indian galloped past our camp, who I understood was a chief. In a few minutes afterwards parties began to come out of the village, on their way to meet the warriors, or rather to join them, as it is the custom for a war party to wait at a distance from the village, when a victory has been gained, that their friends may join in the parade of a triumphal entry; and on such occasions all their finery and decorations are displayed: some time also is requisite to enable the warriors at home and their friends to paint themselves, so as to appear with proper eclat. During the time that elapsed before the arrival of the procession, I walked into the village, where a universal stillness prevailed. No business seemed to be going on, excepting the preparing of something for the warriors to eat on their return. The squaws were thus employed in all the lodges into which I entered(31), and I noticed that not one of the poor creatures seemed in the least solicitous about her own person; as they are too insignificant to be thought an appendage to a triumph. It was near

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

the middle of the day before the procession came in sight, when I went to meet it, in order that my view might be prolonged. A number of the old men and squaws were also moving down from the town to meet it. At the head of the procession were four standard bearers, followed by a band of warriors on foot; after which came a party on horseback: to these succeeded two of the principal chiefs, betwixt whom was a young warrior, who I understood had been severely wounded. Then came two other standard bearers, who were succeeded by another band of foot and horse; this order was observed until the four bands of which the party consisted had passed. They were about three hundred in number: each man carried a shield; a few were armed with guns, some with bows,(32) and others with war clubs. They were painted in a manner that seemed as if they had studied to make themselves hideous. Many of them had the mark which indicates that they had drunk the blood of an enemy. This mark is made by rubbing the hand all over with vermilion, and by laying it on the mouth, it leaves a complete impression on the face, which is designed to resemble and indicate a bloody hand. With every band some scalps were carried, elevated on long sticks; but it was easy to perceive, on a close examination, that the scalps had been divided, to increase the apparent number. The enemy that were killed we suppose did not exceed in number seven or eight, and they had themselves lost two, so that this engagement had not been a very bloody one. As the body approached the town, the squaws and old men met them, and, excepting the lamentations of those whose relatives had been killed or wounded, the expressions of joy became general, but without disturbing in the least the order of the procession. I walked into the village, which assumed a busy air. On the entrance of the party, the warriors were conducted to the different lodges, that they might refresh themselves; and the old men went among them, shaking hands with some, and seemingly bestowing praises on others, who had conducted themselves well in the battle. As the time fixed on for the departure of Mr. Hunt and his party by land was now approaching, I quitted this scene of festivity, in order to resume my employment, and returned to the camp, where I found the party busily employed in preparing for their departure, by parching and grinding corn, mixing it with sugar, and putting it in bags. I now learned that the three men who had promised to accompany me down the river had changed their minds, and on account of the now determined and inveterate hostility of the Sioux, they could not be prevailed on to venture, although I made them liberal offers. Two of them had determined to join the expedition: the other, Amos Richardson, was very anxious to descend the river, four years having elapsed since he had seen the house of a white man; but we two would not have been sufficient to navigate the boat. Notwithstanding this I commenced filling the caissettes with plants, and placed them in my boat, and in the evening again walked up to the village, where I met Mr. Brackenridge, who had amused himself during the afternoon by attending to the proceedings consequent on the return of the war party. I was also met by my friend the young warrior, who invited me into his lodge, and repeated his request that I would be his guest during my stay. I gave him a few yards of printed calico and some gunpowder. In return he pressed me to accept a bow and a quiver-full of arrows. Whilst we were smoking, his sister prepared some buffalo meat with hominy, of which we ate, and after shaking hands with him, I joined Mr. Brackenridge. In the village all kind of labour among the women was suspended: the old men were going from lodge to lodge, probably enquiring the particulars of the engagement, and bestowing praises on those who had behaved well. The tops and entrances of the lodges were adorned with the shields and arms of the warriors, and all seemed joy and festivity, with the exception of those squaws who were mourning

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

the loss of the killed. It may not be amiss to observe that these people had more reason to rejoice for this victory, than many European nations have had for those of infinitely more importance in appearance. For although it had not been attended with so much bloodshed as some battles in Europe have, yet it had for the present driven away an enemy, who for two or three weeks had been hovering round, and threatened us all with starvation. This enemy is the oldest and the most implacable they have, and has already succeeded so far in effecting their extermination, that they are reduced from composing ten large tribes to their present number. These miscreants have been constantly their oppressors, and rob and murder them sometimes with impunity. The present number which the two villages contain is estimated at two thousand, and the warriors at five hundred, but I think it overrated. They are derived from the Parties, and are stout and well built. The men go mostly naked in summer, and when disposed to make use of a covering, it consists of only a part of a buffalo skin thrown over the shoulders, with a hole for the right arm to pass through. This can be thrown off in an instant. They scarcely ever appear without arms beyond the limits of the town. As the nature of the country renders it necessary that they should pursue their game on horseback, frequent practice renders them not only good horsemen, but also teaches them to handle their bows and strike an object with precision with their arrows, when at full speed They chiefly subsist on the buffalo, and when a herd is discovered, a considerable number of the hunters dispose themselves in a manner so as to approach as near as possible unperceived by them. This must always be done with due regard to the direction of the wind, on account of the exquisite degree in which this animal possesses the sense of smelling. The instant they are perceived by the herd, they dash in amongst them, each singling out one. The horse is taught to understand and obey the wishes of his rider, although conveyed to him by the slightest movement. When he has overtaken a buffalo, he does not offer to pass it, but continues at an even pace until the arrow is discharged, when the rider singles out another immediately, if he thinks the first arrow has effected his purpose. If the horse has sufficient strength and wind to enable his rider to kill three buffaloes, he is held in great estimation. None of these would be sold by the Aricaras to Mr. Hunt. After the horses are out of breath, they pursue the wounded animals at leisure, as they separate from the herd on being wounded, and are soon left behind from weakness, occasioned by loss of blood. To produce a more copious discharge, the heads of the arrows designed to be used in hunting are much broader than those intended for war. The heads of both are flat, and of the form of an isosceles triangle; the length of the two equal sides is three times that of the base. (33) In neither does the shaft of the arrow fill up the wound which the head has made; but the shaft of the hunting arrow is fluted, to promote a still greater discharge of blood. On these occasions they often kill many more than they can possibly dispose of, and it has already been observed that hunting parties are frequently followed by wolves, which profit by this wanton destruction.

The Aricaras do not provide for their horses any better than the other nations of the Missouri. They cut down the cotton wood, (*populus angulosa*) and the horses feed on the bark and smaller branches. I have seen instances exhibiting proofs that these poor animals have eaten branches two inches in diameter. The women, as is the custom with Indians, do all the drudgery, and are excellent cultivators. I have not seen, even in the United States, any crop of Indian corn in finer order, or better managed, than the corn about these villages. They also cultivate squashes, beans, and the small species of tobacco (*nicotiana rustica*.) The only implement of husbandry used by them

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

is the hoe. Of these implements they were so destitute before our arrival, that I saw several of the squaws hoeing their corn with the blade bone of a buffalo, ingeniously fixed in a stick for that purpose.

I am not acquainted with any customs peculiar to this nation, except that of having a sacred lodge in the centre of the largest village. This is called the Medicine Lodge, and in one particular corresponds with the sanctuary of the Jews, as no blood is on any account whatsoever to be spilled within it, not even that of an enemy; nor is any one, having taken refuge there, to be forced from it. This lodge is also the general place of deposit for such things as they devote to the Father of life: but it does not seem absolutely necessary that every thing devoted shall be deposited here; for one of the chiefs, availing himself of this regulation, devoted his horse, or, in their mode of expressing it, "gave it to his medicine," after which he could not, according to their rules, give him away. This exempted him, in respect to that particular object, from the tax which custom lays on the chiefs of this nation and most of the other nations. This will be explained by stating that generosity, or rather an indifference for self, forms here a necessary qualification in a chief. The desire to acquire and possess more than others, is thought a passion too ignoble for a brave man: it often happens, therefore, that a chief is the poorest man in the community.

In respect to their general policy as regards property, they seem to have correct ideas amongst themselves of the *meum* and *tuum*; and when the generally thievish character of those we call savages is considered, the Indians of the Missouri are superlatively honest towards strangers. I never heard of a single instance of a white man being robbed, or having any thing stolen from him in an Indian village. It is true, that when they find white men trapping for beaver on the grounds which they claim, they often take from them the furs they have collected, and beat them severely with their wiping sticks; but so far is this from being surprising, that it is a wonder they do not kill them, or take away their rifles.

The chief part of their riches consists in horses, many of which are obtained from the nations southwest of them, as the Chayennes, Poncars, Panies, &c. who make predatory excursions into Mexico, and steal horses from the Spaniards. A considerable number of those bought from the Aricaras were branded, and were doubtless brought from Mexico, as the Indians do not practice branding.

There is nothing relating to the Indians so difficult to understand as their religion. They believe in a Supreme Being, in a future state, and in supernatural agency. Of the Great Spirit they do not pretend to give any account, but believe him to be the author and giver of all good. They believe in bad spirits, but seem to consider them rather as little wicked beings, who can only gratify their malignity by driving away the game, preventing the efficacy of medicine, or such petty mischief. The belief in a future state seems to be general, as it extends even to the Nodowessies or Sioux, who are the furthest removed from civilization, and who do not even cultivate the soil. It is known, that frequently when an Indian has shot down his enemy, and is preparing to scalp him, with the tomahawk uplifted to give the fatal stroke, he will address him in words to this effect: "My name is Cashegra. I am a famous warrior, and am now going to kill you. When you arrive at the land of spirits, you will see the ghost of my father; tell him it was Cashegra that sent you there." He then gives the blow.

In respect to laws, I could never find that any code is established, or that any crime against society becomes a subject of inquiry amongst the chiefs, excepting cowardice or murder. The last is,

---

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

for the most part, punished with death, and the nearest of kin is deputed by the council to act the part of executioner. In some tribes, I am told, this crime may be commuted. It scarcely requires to be observed, that chastity in females is not a virtue, nor that a deviation from it is considered a crime, when sanctioned by the consent of their husbands, fathers, or brothers: but in some tribes, as the Potowatomies, Saukies, Foxes, &c. the breach of it, without the consent of the husband, is punished severely, as he may bite off the nose of his squaw if she is found guilty.

No people on earth discharge the duties of hospitality with more cordial good-will than the Indians. On entering a lodge I was always met by the master, who first shook hands with me, and immediately looked for his pipe: before he had time to light it, a bear-skin, or that of a buffalo, was spread for me to sit on, although they sat on the bare ground. When the pipe was lighted, he smoked a few whiffs, and then handed it to me; after which it went round to all the men in the lodge. Whilst this was going on, the squaw prepared something to eat, which, when ready, was placed before me on the ground. The squaw, in some instances, examined my dress, and in particular my mockasons: if any repair was wanting, she brought a small leather bag, in which she kept her awls and split sinew, and put it to rights. After conversing as well as we could by signs, if it was near night, I was made to understand that a bed was at my service; and in general this offer was accompanied by that of a bedfellow.

The two men, Jones and Carson, whom we met descending the Missouri on the 22nd of May, had remained with the Aricaras during the winter, and on our return, Carson was desirous of rewarding the Indian with whom he had boarded during that period. For that purpose he obtained some articles from Mr. Hunt, and offered them to the savage, who refused to accept them, and as a reason for it, observed, that "Carson was poorer than himself."

I breakfasted with Mr. Lisa the day following, and found that he intended to send two of the boats purchased from Mr. Hunt to St. Louis, with skins and furs, and that Mr. Brackenridge purposed to descend with them. I knew also that in a week our party would take their departure for the Pacific Ocean. Messrs. Hunt, Crooks, and M'Kenzie invited me to go to the Pacific, and in the first instance I was inclined to accept the invitation; but finding that they could not assure me of a passage from thence to the United States by sea, or even to China, and considering also that I must sacrifice my present collection by adopting that measure, and that in passing over the Rocky Mountains, I should probably be unable to preserve or carry my specimens, I declined. There was now something of uncertainty whether Mr. Lisa would return to St. Louis in autumn, or remain during the winter.

On duly weighing all these circumstances, I resolved to return in the boats which were intended to be dispatched down the river, although it did not exactly suit my views, as I had noticed a great number of species of plants on the river, that, from the early state of the season, could not then be collected advantageously. These I had reserved for my descent; but as no man would accompany me but Richardson, I applied to Mr. Lisa, informing him of my wish to descend in his boats; and on consideration of being permitted to land at certain places which I pointed out, I offered to give him my boat as a compensation. To this he readily agreed, and I commenced preparing for my departure.

It had been a matter of surprise to me on my return from Fort Mandan, to find plenty of fresh buffalo meat in our camp, although the fear of the Sioux had not yet subsided. On enquiry, I found that Mr. Hunt had hit upon an expedient which proved successful. This was to dispatch a

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

boat up the river in the night to some miles distant, which afforded an opportunity to the hunters to procure food. This boat returned with a plentiful supply, and secured the party from starving, as a considerable portion of the Indian dogs were already consumed. I was not less surprised on learning that at least two-thirds of our Canadians had experienced unpleasant consequences from their intercourse with the squaws, notwithstanding which the traffic before mentioned continued. I had been informed by Jones and Carson of the existence of this evil, but found it was of the mildest description, and that here, where the natives do not use spirituous liquors nor salt, it is not feared. I found some of the Canadians digging up roots, with which I understood they made a decoction, and used it as a drink. They mostly preferred the roots of *rudbeckia purpurea*, and sometimes they used those of *houstonia longifolia*.

This morning a circumstance came to our knowledge which gave serious alarm to Mr. Hunt and the leaders of the party. During the night a cask of gunpowder belonging to me had been stolen from amongst the baggage, and from the security of our situation, and the precautions we had taken, it was impossible the Indians could have stolen it. Our camp was situated immediately on the bank of the river; the tents, together with the men sleeping in their blankets, surrounded the baggage, and four men were constantly on guard during the night, walking round the camp in sight of each other. I had been on guard in the fore part of the night, and Mr. Crooks on the latter watch. No collusion could therefore be suspected; these and other circumstances concurred in producing a belief that some of the party intended to desert, and on examination I found that one of my trunks had been opened, and a pistol, some flints, my belt, and a few shirts, taken out. In confirmation of our opinions, John Day, one of the hunters, informed Mr. Hunt of his having overheard some of the Canadians murmuring at the fatigues they had already undergone, and expressing an opinion that they should all be murdered in the journey they were going to undertake. As the safety of the party depended, in a great measure, on its strength, a diminution in the number, if considerable, might therefore defeat the enterprize; a search was made in all the neighbourhood of the camp, and even in the bank of the river, but without effect. As my boat might facilitate a desertion, I caused it to be removed to Mr. Lisa's camp, who moored it in safety with his own boats; and I employed myself, for the remainder of the day, in filling some boxes.

On account of my constant attention to plants, and being regularly employed in collecting, I was considered as the physician of the party by all the nations we saw; and generally the medicine men amongst them sought my acquaintance. This day, the doctor, whom Mr. Brackenridge and I saw in the upper village, and who showed me his medicine bag, came to examine my plants. I found he understood a few French words, such as *bon*, *mal*, &c. I presented him with some small ornaments of silver, with which he appeared to be very much pleased, and requested me to go to his lodge and smoke with him. When I entered, he spread a fine new buffalo robe for me to sit on, and showed me that it was a present, which he wished me to accept. I smoked with him, and regretted much that we could only converse by signs, and he seemed also to feel the same regret. He showed me a quantity of a plant lately gathered, and by signs informed me that it cured the choleric. It was a new species of *amorpha*. I returned to the camp, accompanied by the doctor, who very politely carried the buffalo robe for me.

On the 17th I took leave of my worthy friends, Messrs. Hunt, Crooks, and M'Kenzie, whose kindness and attention to me had been such as to render the parting painful; and I am happy in having this opportunity of testifying my gratitude and respect for them: throughout the whole voyage,

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

every indulgence was given me, that was consistent with their duty, and the general safety. Mr. Lisa had loaded two boats with skins and furs, in each of which were six men. Mr. Brackenridge, Amos Richardson, and myself were passengers. On passing our camp, Mr. Hunt caused the men to draw up in a line, and give three cheers, which we returned; and we soon lost sight of them, as we moved at the rate of about nine miles per hour. I now found, to my great surprise, that Mr. Lisa had instructed Mr. Brackenridge not, on any account, to stop in the day, but if possible, to go night and day. As this measure would deprive me of all hopes of adding to my collection any of the plants lower down the river, and was directly contrary to our agreement, I was greatly mortified and chagrined; and although I found that Mr. Brackenridge felt sensibly for my disappointment, yet I could not expect that he would act contrary to the directions given by Lisa: I had in consequence the mortification during the day, of passing a number of plants that may probably remain unknown for ages.

Our descent was very rapid, and the day remarkably fine; we had an opportunity, therefore, of considering the river more in its tout ensemble than in our ascent, and the changes of scenery came upon us with a succession so quick, as to keep the eye and the mind continually employed. We soon came in sight of the bluffs which border the Chayenne River, stretching as far as the eye could reach, and visible only through the low intervals in those bordering the Missouri. Before night we passed the Chayenne, and during a few moments had a view of its stream, for two or three miles above its junction with the Missouri. It is one of the largest rivers that falls into it, being at least four hundred yards wide at its mouth, and navigable to a great distance. The banks appear to be more steep than those of the Missouri, and are clothed with trees to the water's edge. On both sides of the river we saw numberless herds of buffaloes, grazing in tranquillity, some of them not a quarter of a mile from us when we passed them. We continued under way until late in the evening, and encamped on an island; a measure we determined to pursue when practicable, as we knew that to fall into the hands of the Sioux would be certain death.

18th.- We set out early, and continued under way during the whole of the day without interruption, and encamped on Great Cedar Island, where a French trader, named L'Oiselle, formerly had a post or trading house. This island is about two miles in length, and chiefly covered with very fine cedar, and some rose and currant bushes, considerably overrun with vines, on which some of the grapes were already changing colour.

19th.- In the early part of the day we arrived at the upper part of the Great Bend, and continued to see innumerable herds of buffaloes on both sides of the river. I now found that although our patron, or steersman, who conducted the first boat, and directed our motions, was determined to obey strictly the orders of Lisa as regarded expedition, yet from his timidity I had some hope of opportunities to collect.

Before we entirely passed the Great Bend a breeze arose, which ruffled the surface of the river: He put ashore, not daring to proceed, and we lay to during the remainder of the day, having descended about two hundred and eighty miles in two days and a half. I determined not to lose this opportunity to add a few species to my collection, and was accompanied in my excursion by Mr. Brackenridge, who employed himself in keeping a good look out for fear of a surprise by the Sioux, a precaution necessary to my safety, as the nature of my employment kept me for the most part in a stooping posture. The track of land which is inclosed in the Bend probably contains about forty square miles, nearly level, and the soil excellent. It was at this time covered with fine

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

grass and scattered groves of trees, betwixt which many herds of buffaloes were quietly grazing: we did not wish to disturb them, for fear of thereby enabling the Sioux to discover us.

20th.- About nine o'clock we discovered some buffaloes grazing near the edge of the river, about half a mile below us, and in such a position that we might apparently approach very near them without being discovered. We landed a little above them, and approached within about sixty yards, when four of the party fired. It appeared that two were wounded, one of which fled towards the river, into which it plunged, and was immediately pursued by one of the boats, whilst the party ashore followed the other, among whom I ran, but I was much less intent on obtaining the buffalo, than on procuring some plants which I knew were to be had on the bluffs, and actually succeeded. In about half an hour the party gave up the pursuit, being unsuccessful, and returned discouraged to the place where they had left me. But as I had not gone over the bluffs, and had observed what had passed in the river, I gave them the pleasing intelligence that the boat had overtaken the other buffalo, and that the men were now employed in dragging the carcase ashore. We soon joined them, and in a few minutes the animal was skinned and cut up. It was by much the fattest we had seen, and the tallow it contained was very considerable.(34)

We soon passed White River, which is inferior both in magnitude and beauty to the Chayenne, if we may judge from its mouth, where it is not more than three hundred yards wide. Soon after we passed the river, we saw a buffalo running over the bluff towards the Missouri, which put us on our guard, as we considered it a certain indication of Indians being near. Immediately below the river the vast vein of iron ore commences which has been before mentioned. I again noticed its exact conformity on both sides of the river, in point of elevation and thickness of the vein.

As the evening approached we noticed a succession of flashes of lightning, just appearing over the bluffs, on the opposite side of the river. This did not for some time excite much attention, as it was by no means an uncommon occurrence; but we soon began to apprehend impending danger, as we perceived that the storm advanced with great rapidity, accompanied with appearances truly terrific. The cloud was of a pitchy blackness, and so dense as to resemble a solid body, out of which, at short intervals, the lightning poured in a continued stream for one or two seconds. It was too late to cross the river, and, unfortunately for us, the side on which we were was entirely bounded by rocks. We looked most anxiously for some little harbour, or jutting point, behind which we might shelter ourselves; but not one appeared, and darkness came on with a rapidity I never before witnessed. It was not long that any choice was left us. We plainly heard the storm coming. We stopped and fastened our boats to some shrubs, (*amorpha fruticosa*) which grew in abundance out of the clefts of these rocks, and prepared to save ourselves and our little barks if possible. At each end of the boats there was a small deck: under these we stowed our provisions, &c.: next to the decks were piled the packs of skins, secured by ropes, and in the middle a space of about twelve feet long was left for the oarsmen. Fortunately for us, we had some broad boards in each boat, designed as a defence against arrows, in case of an attack by the Sioux. These boards we placed on the gunwale of the boats, and crammed our blankets into such parts as the lightning enabled us at intervals to see did not fit closely. Before we had time to lash our boards the gale commenced, and in a few minutes the swell was tremendous. For nearly an hour it required the utmost exertion of our strength to hold the boards to their places, and before the storm abated we were nearly exhausted, as also were those who were occupied in baling. As the river is in this place nearly a mile in breadth, and being on the lee shore, the waves were of considerable mag-

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

nitide, and frequently broke over the boats. Had our fastenings given way, we must inevitably have perished. When the wind abated the rain increased, and continued for the greater part of the night, during which my friend Brackenridge and myself lay on the deck, rolled up in our wet blankets, congratulating ourselves on our escape. For myself I felt but little: two years, in a great measure spent in the wilds, had inured me to hardships and inclemencies; but I felt much for my friend Brackenridge. Poor young man, his youth, and the delicacy of his frame, ill suited him for such hardships, which, nevertheless, he supported cheerfully.

In the morning the sun rose unobscured, which was to us extremely welcome, as its heat soon rendered us comparatively comfortable. We passed the river L'Eau qui Court, and shortly afterwards the place where we met the Poncar Indians, and as the wind began to blow fresh, we stopped five or six miles lower down, nearly at the place where I met the three Indians on the 24th of May. This enabled me to procure roots of the new species of currant, although with much pain and difficulty, having four miles at least to wade through water and mud, as the river had recently overflowed its banks. On my return to the boats, as the wind had in some degree abated, we proceeded, and had not gone more than five or six miles before we were surprised by a dull hollow sound, the cause of which we could not possibly imagine. It seemed to be one or two miles below us; but as our descent was very rapid, it increased every moment in loudness, and before we had proceeded far, our ears were able to catch some distinct tones, like the bellowing of buffaloes. When opposite to the place from whence it proceeded, we landed, ascended the bank, and entered a small skirting of trees and shrubs, that separated the river from an extensive plain. On gaining a view of it, such a scene opened to us as will fall to the lot of few travellers to witness. This plain was literally covered with buffaloes as far as we could see, and we soon discovered that it consisted in part of females. The males were fighting in every direction, with a fury which I have never seen paralleled, each having singled out his antagonist. We judged that the number must have amounted to some thousands, and that there were many hundreds of these battles going on at the same time, some not eighty yards from us. It will be recollected that at this season the females would naturally admit the society of the males. From attentively observing some of the combats nearest to us, I am persuaded that our domestic bull would almost invariably be worsted in a contest with this animal, as he is inferior to him both in strength and ferocity. A shot was fired amongst them, which they did not seem to notice. Mr. Brackenridge joined me in preventing a volley being fired, as it would have been useless, and therefore wanton; for if we had killed one of these animals, I am certain the weight of his carcase in gold would not have bribed us to fetch him. I shall only observe farther, that the noise occasioned by the trampling and bellowing was far beyond description. In the evening, before we encamped, another immense herd made its appearance, running along the bluffs at full speed, and although at least a mile from us, we could distinctly hear the sound of their feet, which resembled distant thunder.

The morning of the next day was very fine. We saw some buffaloes swimming, at which the men fired, contrary to our wishes, as we did not intend to stop for them. The stream was very rapid. We passed the Sulphur bluffs, and stopped a short time at Floyd's grave: shortly afterwards we arrived at the trading house opposite the Maha village, but saw no one, nor did we wish it, as Mr. Lisa had not called on the Big Elk when he ascended, who might probably be offended at his neglect. We encamped on some drift wood from necessity, not being able to get ashore. The navigation of the river had now become much more difficult, and we had in the two succeeding

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

days some very narrow escapes. The river was considerably higher than at any former period, and from the Mahas to the River Platte, is more crooked than in any other part. At every sudden turn the momentum of the boats had a continual tendency to throw them ashore on the outer bank, which it required all the skill of the steersman, and strength of the oarsmen, to prevent. In two instances we were very near being carried into the woods, in places where the river overflowed its banks. We arrived at Fort Osage, now Fort Clark, on the 27th in the afternoon, and were very politely received by Major Brownson. I had the pleasure to find that Mr. Sibley had returned a few days before from his tour to the Arkansas, to examine the vast body of salt in the neighbourhood of that river. He very politely furnished us with extracts from his journal, which are as follows: "After giving a number of medals to the Panie chiefs, and having various counsels with them, I left their villages on the 4th of June, and proceeded to the little Osage Camp, on the Arkansas, about seventy-five miles south, and sixteen east from the Panies, where I safely arrived on the 11th. I remained several days with the Osages, who had abundance of provisions, they having killed two hundred buffaloes within a few days. Where they had their camp, the Arkansas was about two hundred yards wide, the water shallow, rapid, and of a red colour. On the 16th, the Indians raised their camp, and proceeded towards the hilly country, on the other side of the Arkansas. I continued with them about fifty miles west and thirty miles east, when we fell in with some men of the Chanier's Band, who informed us that their camp was at no great distance, and the camp of the Big Osage still nearer. In consequence, I determined to pass through both on my way to the Grand Salines. On the 21st I rode south forty miles, east thirty, to the Big Osage camp; nearly all the warriors were at war, or abroad hunting. I was remarkably well treated by young White Hair and family; I however remained but one night with them. On the 22d I rode twenty miles south, fifteen east, to the Chanier's camp, where we arrived about one o'clock. We were well treated by the head men; and indeed, this is one of the tribes most attached to the Americans. The chief's name is Clermont. From hence it is forty miles to the Grand Salines, which we reached early on the morning of the 24th. I hasten to give you a description of this celebrated curiosity. "The Grand Saline is situated about two hundred and eighty miles south-west of Fort Osage, between two forks of a small branch of the Arkansas, one of which washes its southern extremity; and the other, the principal one, runs nearly parallel, within a mile of its opposite side. It is a hard level plain, of reddish coloured sand, and of an irregular or mixed figure. Its greatest length is from north-west to south-east, and its circumference full thirty miles. From the appearance of drift-wood that is scattered over, it would seem that the whole plain is at times inundated by the overflowing of the streams that pass near it. This plain is entirely covered in hot dry weather, from two to six inches deep, with a crust of beautiful clean white salt, of a quality rather superior to the imported blown salt: it bears a striking resemblance to a field of brilliant snow after a rain, with a light crust on its top. On a bright sunny morning, the appearance of this natural curiosity is highly picturesque: it possesses the quality of looming, or magnifying objects, and this in a very striking degree, making the small billets of wood appear as formidable as trees. Numbers of buffaloes were on the plain. The Saline is environed by a stripe of marshy prairie, with a few scattered trees, mostly of cotton wood; behind these is a range of sand hills, some of which are perfectly naked, others thinly clothed with verdure and dwarf plum bushes, not more than thirty inches in height, from which we procured abundance of the most delicious plums I ever tasted. The distance to a navigable branch of the Arkansas is about eighty miles, the country tolerably level, and the wa-

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

tercourses easily passed. About sixty miles south-west of this, I came to the Saline, the whole of this distance lying over a country remarkably rugged and broken, affording the most romantic and picturesque views imaginable. It is a tract of about seventy-five miles square, in which nature has displayed a great variety of the most strange and whimsical vagaries. It is an assemblage of beautiful meadows, verdant ridges, and rude, mis-shapen piles of red clay, thrown together in the utmost apparent confusion, yet affording the most pleasant harmonies, and presenting us in every direction an endless variety of curious and interesting objects. After winding along for a few miles on the high ridges, you suddenly descend an almost perpendicular declivity of rocks and clay, into a series of level, fertile meadows, watered by some beautiful rivulets, and here and there adorned with shrubby cotton wood trees, elms, and cedars. These meadows are divided by chains formed of red clay and huge masses of gypsum, with here and there a pyramid of gravel: one might imagine himself surrounded by the ruins of some ancient city, and that the plain had sunk, by some convulsion of nature, more than one hundred feet below its former level; for some of the huge columns of red clay rise to the height of two hundred feet perpendicular, capped with rocks of gypsum, which the hand of time is ever crumbling off, and strewing in beautiful transparent flakes along the declivities of the hills, glittering, like so many mirrors, in the sun."

Mr. Sibly also showed me a letter from his father, Dr. Sibly, of Natchitoches, informing him of a mass of native iron having been brought down the Red River, which weighed about two thousand five hundred pounds. In the fort we saw the young bears which we left there in passing up the river; they had grown surprisingly, and were quite tame, except whilst feeding, when all bears are more fierce than at other times.

28th.- After breakfasting at the fort, we set off, and encamped near where Fort Orleans formerly was situated.

29th.- About noon we came in sight of a white man's house, at Boon's Lick, when our boatmen immediately set up a shout. Soon after, some men appeared at the edge of a field of Indian corn, close to the river: they invited us ashore, and we willingly complied. In passing through the corn, I was much struck with its luxuriance: I judged it to be not less than fourteen feet high, and the ears were far above my head. It was Sunday, and when we arrived at the house, we found three women there, all dressed in clean white gowns, and being in other respects very neat, they formed a pleasing contrast to the squaws whom we had of late been in the habit of seeing. They soon spread the table for us, and produced bread, milk, and preserved fruits, which I thought the most delicious that I ever tasted. We arrived at St. Louis in safety, where I had the pleasure of shaking hands with my worthy friend, Mr. Abraham Gallatin, at whose house I slept. Early the next day, I called at the post-office, and found letters from England, informing me of the welfare of my family. This pleasing intelligence was damped by a letter from my son, who informed me that those who had agreed to furnish me with the means of prosecuting my tour, and to whom I had sent my former collection, had determined to withhold any farther supply. Early in the forenoon, my worthy and respected friend, Mr. S. Bridge, from Manchester, came to St. Louis, and invited me to take up my residence for the present with him. He informed me that during my absence he had bought a considerable quantity of land, on which he had built a house. He sent his waggon for my plants, and allotted me a piece of ground, which, with much labour, I prepared in a few days, got it surrounded by a fence, and transplanted the whole of my collection. I found the situation of Mr. Bridge's house extremely pleasant, and his plantation of the first quality of land. Within

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

a hundred and fifty yards of his house was a small vein of coal, from twelve to eighteen inches in thickness, and rising to the surface. For this land he had paid one dollar, sixty-five cents per arpent(35) , or French acre.

In about ten days after my arrival I was attacked by a bilious fever, which confined me to my bed. Its violence left me little hope of recovery. In about a month it became intermittent, and continued until the beginning of December.

During my illness a circumstance occurred, an account of which will tend to show the almost unconquerable attachment to the hunting life in those accustomed to it. It will be remembered that a man named Richardson accompanied us down the Missouri, and that it has been related of him that he had been several years in the wilderness. He had there suffered more than common hardships, having been often ill treated by the Indians, and once severely wounded by an arrow. This man, during our descent, seemed to look forward with great anxiety to the time when we should arrive in the settlements, and often declared his intention never again to adopt the hunting life. When I had been sick about three weeks, he came to see me, and after some conversation, reminded me of my having mentioned a design to ascend the Arkansas River, and requested that I would admit him as my companion, if I persisted in my intention. I spoke of my doubts whether I should ever recover, and expressed my surprise at so sudden a change in his intentions. He replied, "I find so much deceit and selfishness amongst white men, that I am already tired of them. The arrow head which is not yet extracted, pains me when I chop wood, whiskey I can't drink, and bread and salt I don't care about: I will go again amongst the Indians."

Towards the latter end of November, I received a remittance from those who had previously determined to withhold it, together with a letter from the person(36) who managed the Botanic Garden at Liverpool, informing me that he had received my former collection, out of which he had secured in pots more than one thousand plants, and that the seeds were already vegetating in vast numbers. As I had now so far recovered as to be able to ride to St. Louis, I visited my friend Mr. Gallatin, and remained with him some days, during which period I often saw a young gentleman from Philadelphia, Mr. H W. Drinker, who had frequently called to see me in my sickness, and whose talents and amiable manners had created in me a strong attachment to him. In a tour through the country west of the Alleghanies, he visited St. Louis, and pleased with the beauty of the place, had resided there for some months. Finding that I was determined to descend the Mississippi to New Orleans, he invited me to take my passage with him, as he purposed taking a boat down to that place, loaded with lead, of which he had a sufficient quantity. This was a very favourable opportunity, and I made every exertion my weak state would admit of, to be in readiness. A short time afterwards Mr. Drinker ascertained that some debts due to him, and contracted to be paid in lead, could not be collected until the ensuing spring: he therefore found himself necessitated to remain at St. Louis until that period. But aware of the impossibility of my detaining what yet remained of my collection till that season, he offered to buy a boat, load it with lead, and commit it to my care, with liberty to sell the lead at Orleans, or store it for his account. This kind and generous offer I gladly accepted, and in a few days a boat was procured, and her cargo put on board, amounting to about thirty thousand pounds weight of lead. Her crew consisted of five French Creoles, four of whom were oarsmen, and the fifth, who steered the boat, is called the patron.

On the evening of the 4th of December we were in perfect readiness, when I took leave of my

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

friends at St. Louis, several of whom, from their polite attention to me, I have reason to hold in lasting remembrance; and in addition to those I have already mentioned, I ought not to omit Mr. Josh. Charless, editor of the Missouri Gazette, whose disposition and manners gain him the esteem of all who know him: mine he will always retain. I find that I omitted stating, that in November Mr. Lisa arrived at St. Louis, and delivered me a letter from Mr. Hunt, who informed me, that after my departure from the Aricaras, whilst the men were still assembled to watch our boats descend, he addressed them on the subject of my cask of powder, which was stolen, and with such effect, that one of the Canadians came privately to his tent the night following, and informed him where it was buried in the bank of the river. Mr. Hunt caused a search to be made the day after, and found it. As Mr. Lisa was in want of powder, he bought it, and paid me for it on his return. On the 5th of December I set off from St. Louis on the voyage to New Orleans, a distance of about one thousand three hundred and fifty miles. I was accompanied by Mr. John Bridge, whom I admitted as a passenger at the request of his brother. He purposed sailing from Orleans to the eastern states. We arrived at St. Genevieve in the evening, and slept at the mouth of Gabarie, a small creek near the village, where boats trading to that place usually stop. Having some business to transact at St. Genevieve, I was detained till the afternoon of the following day. During my stay here, I became acquainted with a gentleman of the name of Longprie, a native of St. Domingo. He had a boat, in part loaded with lead, intended for Orleans. It was much wished by both of us that we should descend in company, as in case of an accident happening to one, assistance might be rendered by the other; but as he could not be ready in less than two days, I set out, intending to travel leisurely, that he might overtake me. It may be necessary to remark in this place, that the navigation of the Mississippi is attended with considerable danger, and in particular to boats loaded with lead. These, by reason of the small space occupied by the cargo, in case of striking against a planter or a sawyer, sink instantly. That these terms may be understood, it must be observed that the alluvion of the Mississippi is almost in every part covered with timber close to the edge of the river, and that in some part or other encroachments are continually made, and in particular during the time of the floods, when it often happens that tracts of some acres in extent are carried away in a few days. As in most instances a large body of earth is attached to the roots of the trees, it sinks those parts to the bottom of the river, whilst the upper parts, more buoyant, rise to the surface in an inclined posture, generally with the heads of the trees pointing down the river. Some of these trees are fixed and immovable, and are therefore termed planters. Others, although they do not remove from where they are placed, are constantly in motion: the whole tree is sometimes entirely submerged by the pressure of the stream, and carried to a greater depth by its momentum than the stream can maintain. On rising, its momentum in the other direction, causes many of its huge limbs to be lifted above the surface of the river. The period of this oscillatory motion is sometimes of several minutes duration. These are the sawyers, which are much more dangerous than the planters, as no care or caution can sufficiently guard against them. The steersman this instant sees all the surface of the river smooth and tranquil, and the next he is struck with horror at seeing just before him the sawyer raising his terrific arms, and so near that neither strength nor skill can save him from destruction. This is not figurative: many boats have been lost in this way, and more particularly those descending. From these and other risks, it is common for those carrying lead, to have a canoe with them, in which they may save themselves in case of any accident happening to the boat.

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

Until the 14th, no occurrence happened worth noticing, excepting that we saw on the bank of the river four Indians, who beckoned to us to stop: we accordingly landed near them, and found they were Choctaws, who wanted to sell some venison and turkies. As they were acquainted with the use of money, I bought from them three turkies and two hind quarters of venison for three quarters of a dollar, being the sum they asked.

In the evening of the 14th, we arrived at New Madrid, and having occasion for some necessaries, I bought them in the morning. I was much disappointed in this place, as I found only a few straggling houses, situated round a plain of from two to three hundred acres in extent. There are only two stores, which are very indifferently furnished. We set off about nine o'clock, and passed the Upper Chickasaw Bluffs; these bluffs are of soft sand-stone rock, of a yellow colour, but some parts being highly charged with oxyd of iron, the whole has a clouded appearance, and is considered as a curiosity by the boatmen. At the lower end of the bluffs we saw a smoke, and on a nearer approach, observed five or six Indians, and on the opposite side of the river, but lower down, we heard a dog howling. When the Indians perceived us, they held up some venison, to show us that they wished to dispose of it. Being desirous of adding to our stock of fresh meat, I hastily got into the canoe, and took with me one of the men, named La France, who spoke the Chickasaw language, as I supposed the Indians to be of that nation. We very imprudently went without arms an omission that gave me some uneasiness before we reached them; especially as the boat, by my direction, proceeded leisurely on.

We found that the Indians had plenty of deer's flesh, and some turkies. I began to bargain for them, when the people in the boat fired a shot, and the dog on the other side of the river instantly ceased howling. The Indians immediately flew to their arms, speaking all together, with much earnestness. La France appeared much terrified, and told me that they said our people in the boat had shot their dog. I desired him to tell them that we did not believe that our people had done so, but if they had, I would pay them any price for him. They seemed too much infuriated to hearken to him, and surrounded us with their weapons in their hands. They were very clamorous amongst themselves, and, as I was afterwards told by La France, could not agree whether they should immediately put us to death, or keep us prisoners until we could procure goods from the boat to pay for the dog, on which it appeared they set high value. Most fortunately for us, the dog, at this instant began to bark opposite to us, having run a considerable distance up the river after the shot was fired.

The tomahawks were immediately laid aside, and I bargained for half a deer, for which I gave them a quarter dollar and some gunpowder. I was not very exact in measuring the last, being rather anxious to get away, and could perceive that La France had no desire to stay any longer. On reaching our canoe we seized our paddles, and being told by La France that we were not yet out of danger, we made every exertion to get out of their reach. When we conceived ourselves safe, we relaxed, and he told me that even when we were leaving them, they were deliberating whether they should detain us or not; some of them having remarked that the dog might be wounded. We had been so long delayed by this adventure, that it was more than an hour before we overtook the boat. I blamed the boatmen much for firing, and charged them with having fired at the dog: this, however, appeared not to have been the case, as they fired at a loon, (*mergus merganser*.) In the course of this day, we passed no fewer than thirteen arks, or Kentucky boats, going with produce to Orleans; all these we left a considerable distance behind, as they only float with

BY JOHN BRADBURY, F.L.S. LONDON

---

the stream, and we made considerable head-way with our oars. In the evening we came in view of the dangerous part of the river, called by the Americans the Devil's Channel, and by the French *Chenal du Diable*. It appears to be caused by a bank that crosses the river in this place, which renders it shallow. On this bank, a great number of trees have lodged; and, on account of the shallowness of the river, a considerable portion of the branches are raised above the surface; through these the water rushes with such impetuosity as to be heard at the distance of some miles. As it would require every effort of skill and exertion to pass through this channel in safety, and as the sun had set, I resolved to wait until the morning, and caused the boat to be moored to a small island, about five hundred yards above the entrance into the channel. After supper we went to sleep as usual; and in the night, about ten o'clock, I was awakened by a most tremendous noise, accompanied by so violent an agitation of the boat that it appeared in danger of upsetting. Before I could quit the bed, or rather the skin, upon which I lay, the four men who slept in the other cabin rushed in, and cried out in the greatest terror, "O mon Dieu! Monsieur Bradbury, qu'est ce qu'il y a?" I passed them with some difficulty, and ran to the door of the cabin, where I could distinctly see the river agitated as if by a storm; and although the noise was inconceivably loud and terrific, I could distinctly hear the crash of falling trees, and the screaming of the wild fowl on the river, but found that the boat was still safe at her moorings. I was followed by the men and the patron, who, in accents of terror, were still enquiring what it was: I tried to calm them by saying, "Restez vous tranquil, c'est un tremblement de terre," which term they did not seem to understand. By the time we could get to our fire, which was on a large flag, in the stern of the boat, the shock had ceased; but immediately the perpendicular banks, both above and below us, began to fall into the river in such vast masses, as nearly to sink our boat by the swell they occasioned; and our patron, who seemed more terrified even than the men, began to cry out, "O mon Dieu! nous perirons!" I wished to consult with him as to what we could do to preserve ourselves and the boat, but could get no answer except "O mon Dieu! nous perirons!" and "Allons à terre! Allons à terre!" As I found Mr. Bridge the only one who seemed to retain any presence of mind, we consulted together, and agreed to send two of the men with a candle up the bank, in order to examine if it had separated from the island, a circumstance that we suspected, from hearing the snapping of the limbs of some drift trees, which were deposited between the margin of the river and the summit of the bank. The men, on arriving at the edge of the river, cried out, "Venez à terre! Venez à terre!" and told us there was a fire, and desired Mr. Bridge and the patron to follow them; and as it now occurred to me that the preservation of the boat in a great measure depended on the depth of the river, I tried with a sounding pole, and to my great joy, found it did not exceed eight or ten feet. Immediately after the shock we observed the time, and found it was near two o'clock. At about nearly half-past two, I resolved to go ashore myself, but whilst I was securing some papers and money, by taking them out of my trunks, another shock came on, terrible indeed, but not equal to the first. Morin, our patron, called out from the island, "Monsieur Bradbury! sauvez vous, sauvez vous!" I went ashore, and found the chasm really frightful, being not less than four feet in width, and the bank had sunk at least two feet. I took the candle to examine its length, and concluded that it could not be less than eighty yards; and at each end, the banks had fallen into the river. I now saw clearly that our lives had been saved by our boat being moored to a sloping bank. Before we completed our fire, we had two more shocks, and others occurred during the whole night, at intervals of from six to ten minutes, but they were slight in comparison with the first and second.

---

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

At four o'clock I took a candle, and again examined the bank, and perceived to my great satisfaction that no material alteration had taken place; I also found the boat safe, and secured my pocket compass. I had already noticed that the sound which was heard at the time of every shock, always preceded it at least a second, and that it uniformly came from the same point, and went off in an opposite direction. I now found that the shock came from a little northward of east, and proceeded to the westward. At day-light we had counted twenty-seven shocks during our stay on the island, but still found the chasm so that it might be passed. The river was covered with foam and drift timber, and had risen considerably, but our boat was safe. Whilst we were waiting till the light became sufficient for us to embark, two canoes floated down the river, in one of which we saw some Indian corn and some clothes. We considered this as a melancholy proof that some of the boats we passed the preceding day had perished. Our conjectures were afterwards confirmed, as we learned that three had been overwhelmed, and that all on board had perished. When the daylight appeared to be sufficient for us, I gave orders to embark, and we all went on board. Two men at breakfast, and a third as we were preparing to re-embark. In the last, Mr. Bridge, who was standing within the declivity of the bank, narrowly escaped being thrown into the river, as the sand continued to give way under his feet. Observing that the men were still very much under the influence of terror, I desired Morin to give to each of them a glass of spirits, and reminding them that their safety depended on their exertions, we pushed out into the river. The danger we had now to encounter was of a nature which they understood: the nearer we approached it, the more confidence they appeared to gain; and indeed, all their strength, and all the skill of Morin, was necessary; for there being no direct channel through the trees, we were several times under the necessity of changing our course in the space of a few seconds, and that so instantaneously, as not to leave a moment for deliberation. Immediately after we had cleared all danger, the men dropped their oars, crossed themselves, then gave a shout, which was followed by mutual congratulations on their safety.

We continued on the river till eleven o'clock, when there was another violent shock, which seemed to affect us as sensibly as if we had been on land. The trees on both sides of the river were most violently agitated, and the banks in several places fell in, within our view, carrying with them innumerable trees, the crash of which falling into the river, mixed with the terrible sound attending the shock, and the screaming of the geese and other wild fowl, produced an idea that all nature was in a state of dissolution. During the shock, the river had been much agitated, and the men became anxious to go ashore: my opinion was, that we were much safer on the river; but finding that they laid down their oars, and that they seemed determined to quit the boat for the present, we looked out for a part of the river where we might moor in security, and having found one, we stopped during the remainder of the day.

At three o'clock, another canoe passed us adrift on the river. We did not experience any more shocks until the morning of the 17th, when two occurred; one about five and the other about seven o'clock. We continued our voyage, and about twelve this day, had a severe shock, of very long duration. About four o'clock we came in sight of a log-house, a little above the Lower Chickasaw bluffs. More than twenty people came out as soon as they discovered us, and when within hearing, earnestly entreated us to come ashore. I found them almost distracted with fear, and that they were composed of several families, who had collected to pray together. On entering the house, I saw a bible lying open on the table. They informed me that the greatest part of the inhabitants

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

in the neighbourhood had fled to the hills, on the opposite side of the river, for safety; and that during the shock, about sun-rise on the 16th, a chasm had opened on the sand bar opposite the bluffs below, and on closing again, had thrown the water to the height of a tall tree. They also affirmed that the earth opened in several places back from the river. One of the men, who appeared to be considered as possessing more knowledge than the rest, entered into an explanation of the cause, and attributed it to the comet that had appeared a few months before, which he described as having two horns, over one of which the earth had rolled, and was now lodged betwixt them: that the shocks were occasioned by the attempts made by the earth to surmount the other horn. If this should be accomplished, all would be well, if otherwise, inevitable destruction to the world would follow. Finding him confident in his hypothesis, and myself unable to refute it, I did not dispute the point, and we went on about a mile further. Only one shock occurred this night, at half past seven o'clock. On the morning of the 18th, we had two shocks, one betwixt three and four o'clock, and the other at six. At noon, there was a violent one of very long duration, which threw a great number of trees into the river within our view, and in the evening, two slight shocks more, one at six, the other at nine o'clock.

19th.- We arrived at the mouth of the river St. Francis, and had only one shock, which happened at eleven at night.

20th.- Detained by fog, and experienced only two shocks, one at five, the other at seven in the evening.

21st.- Awakened by a shock at half past four o'clock: this was the last, it was not very violent, but it lasted for nearly a minute.

On the 24th in the evening, we saw a smoke, and knowing that there were no habitations on this part of the river, we made towards it, and found it to be the camp of a few Choctaw Indians, from whom I purchased a swan, for five balls and five loads of powder.

25th.- Monsieur Longpre overtook us, and we encamped together in the evening. He was about two hundred miles from us on the night of the 15th, by the course of the river, where the earthquakes had also been very terrible. It appeared from his account, that at New Madrid the shock had been extremely violent: the greatest part of the houses had been rendered uninhabitable, although, being constructed of timber, and framed together, they were better calculated to withstand the shocks than buildings of brick or stone. The greatest part of the plain on which the town was situated was become a lake, and the houses were deserted.

The remainder of our voyage to Natchez was very pleasant, with the exception of two very narrow escapes from planters in the river. Without any occurrence that would excite much interest, we arrived at the port of Natchez on the afternoon of the 5th of January, and went to the city, which is situated about three quarters of a mile from the river, on the level behind the bluffs. The port consists of thirty or forty houses, and some stores: for the size of it, there is not, perhaps, in the world a more dissipated place. Almost all the Kentucky men stop here on the way to Orleans, and as they now consider all the dangers and difficulties of their voyage as past, they feel the same inclination to dissipation as sailors who have been long out of port, and generally remain here a day or two to indulge it. I spent a pleasant evening in the city, in company with Dr. Brown, whom I found to be a very agreeable and intelligent man.

In the morning of the 6th instant I went on board the steam boat from Pittsburg; she had passed us at the mouth of the Arkansas, three hundred and forty-one miles above Natchez; she was a

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

very handsome vessel, of four hundred and ten tons burden, and was impelled by a very powerful steam engine, made at Pittsburg, whence she had come in less than twenty days, although nineteen hundred miles distant. About eighty miles above New Orleans, the sugar plantations commenced, some of which I visited, accompanied by Mr. Longpre, who assured me that he had not seen the cane in higher perfection in any part of the West Indies. Many fields yet remained, from which the cane had not been got in: they were now covered with snow, an occurrence, as I was informed, very uncommon. From this part to New Orleans, groves of orange trees of great extent are seen on both sides of the river, and at this season, loaded with ripe fruit.

On the 13th we arrived at New Orleans, where I consigned the lead to the agent of Mr. Drinker, again met with my friend Brackenridge, and on the 20th set sail for New York.

Notes

1. A few verses of one of their most favourite songs is annexed; and to show its frivolity to those unacquainted with the language, an imitation in English is added.

2. *Populus angulosa* of Michaux, called by the French Liard.- BRADBURY.

3. This man came to St. Louis in May, 1810, in a small canoe, from the head waters of the Missouri, a distance of three thousand miles, which he traversed in thirty days. I saw him on his arrival, and received from him an account of his adventures after he had separated from Lewis and Clarke's party: one of these, from its singularity, I shall relate. On the arrival of the party on the head waters of the Missouri, Colter, observing an appearance of abundance of beaver being there, he got permission to remain and hunt for some time, which he did in company with a man of the name of Dixon, who had traversed the immense tract of country from St. Louis to the head waters of the Missouri alone. Soon after he separated from Dixon, and trapped in company with a hunter named Potts; and aware of the hostility of the Blackfeet Indians, one of whom had been killed by Lewis, they set their traps at night, and took them up early in the morning, remaining concealed during the day. They were examining their traps early one morning, in a creek about six miles from that branch of the Missouri called Jefferson's Fork, and were ascending in a canoe, when they suddenly heard a great noise, resembling the trampling of animals; but they could not ascertain the fact, as the high perpendicular banks on each side of the river impeded their view. Colter immediately pronounced it to be occasioned by Indians, and advised an instant retreat; but was accused of cowardice by Potts, who insisted that the noise was caused by buffaloes, and they proceeded on. In a few minutes afterwards their doubts were removed, by a party of Indians making their appearance on both sides of the creek, to the amount of five or six hundred, who beckoned them to come ashore. As retreat was now impossible, Colter turned the head of the canoe to the shore; and at the moment of its touching, an Indian seized the rifle belonging to Potts; but Colter, who is a remarkably strong man, immediately retook it, and handed it to Potts, who remained in the canoe, and on receiving it pushed off into the river. He had scarcely quitted the shore when an arrow was shot at him, and he cried out, "Colter, I am wounded." Colter remonstrated with him on the folly of attempting to escape, and urged him to come ashore. Instead of complying, he instantly levelled his rifle at an Indian, and shot him dead on the spot. This conduct, situated as he was, may appear to have been an act of madness; but it was doubtless the effect of sudden, but sound reasoning; for if taken alive, he must have expected to be tortured to death, according to their custom. He was instantly pierced with arrows so numerous, that, to use the language of

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

Colter, "he was made a riddle of." They now seized Colter, stripped him entirely naked, and began to consult on the manner in which he should be put to death. They were first inclined to set him up as a mark to shoot at; but the chief interfered, and seizing him by the shoulder, asked him if he could run fast? Colter, who had been some time amongst the Kee-kat-sa, or Crow Indians, had in a considerable degree acquired the Blackfoot language, and was also well acquainted with Indian customs. He knew that he had now to run for his life, with the dreadful odds of five or six hundred against him, and those armed Indians; therefore cunningly replied that he was a very bad runner, although he was considered by the hunters as remarkably swift. The chief now commanded the party to remain stationary, and led Colter out on the prairie three or four hundred yards, and released him, bidding him to save himself if he could. At that instant the horrid war whoop sounded in the ears of poor Colter, who, urged with the hope of preserving life, ran with a speed at which he was himself surprised. He proceeded towards the Jefferson Fork, having to traverse a plain six miles in breadth, abounding with the prickly pear, on which he was every instant treading with his naked feet. He ran nearly half way across the plain before he ventured to look over his shoulder, when he perceived that the Indians were very much scattered, and that he had gained ground to a considerable distance from the main body; but one Indian, who carried a spear, was much before all the rest, and not more than a hundred yards from him. A faint gleam of hope now cheered the heart of Colter: he derived confidence from the belief that escape was within the bounds of possibility; but that confidence was nearly being fatal to him, for he exerted himself to such a degree, that the blood gushed from his nostrils, and soon almost covered the fore part of his body. He had now arrived within a mile of the river, when he distinctly heard the appalling sound of footsteps behind him, and every instant expected to feel the spear of his pursuer. Again he turned his head, and saw the savage not twenty yards from him. Determined if possible to avoid the expected blow, he suddenly stopped, turned round, and spread out his arms. The Indian, surprised by the suddenness of the action, and perhaps at the bloody appearance of Colter, also attempted to stop; but exhausted with running, he fell whilst endeavouring to throw his spear, which stuck in the ground, and broke in his hand. Colter instantly snatched up the pointed part, with which he pinned him to the earth, and then continued his flight. The foremost of the Indians, on arriving at the place, stopped till others came up to join them, when they set up a hideous yell. Every moment of this time was improved by Colter, who, although fainting and exhausted, succeeded in gaining the skirting of the cotton wood trees, on the borders of the fork, through which he ran, and plunged into the river. Fortunately for him, a little below this place there was an island, against the upper point of which a raft of drift timber had lodged. He dived under the raft, and after several efforts, got his head above water amongst the trunks of trees, covered over with smaller wood to the depth of several feet. Scarcely had he secured himself, when the Indians arrived on the river, screeching and yelling, as Colter expressed it, "like so many devils." They were frequently on the raft during the day, and were seen through the chinks by Colter, who was congratulating himself on his escape, until the idea arose that they might set the raft on fire. In horrible suspense he remained until night, when hearing no more of the Indians, he dived from under the raft, and swam silently down the river to a considerable distance, when he landed, and travelled all night. Although happy in having escaped from the Indians, his situation was still dreadful: he was completely naked, under a burning sun; the soles of his feet were entirely filled with the thorns of the prickly pear; he was hungry, and had no means of killing game, although he

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

saw abundance around him, and was at least seven days journey from Lisa's Fort, on the Bighorn branch of the Roche Jaune River. These were circumstances under which almost any man but an American hunter would have despaired. He arrived at the fort in seven days, having subsisted on a root much esteemed by the Indians of the Missouri, now known by naturalists as *psoralea esculenta*.- BRADBURY.

4. This animal in its defence discharges a few drops of a liquid so foetid that the stench can scarcely be endured by any animal. Clothes on which the smallest particle has fallen, must be buried in the earth for at least a month before they can be worn. This liquor is highly inflammable, and is secreted in a gland beneath the tail, from which it is thrown with a force that will carry it to the distance of three or four yards. Only a very few of the American dogs can be induced to attack it, and those are so powerfully affected by the horrid stench, that they continue to howl for a considerable time afterwards, and instinctively relieve themselves by scratching holes in the earth, into which they put their nose.- BRADBURY.

5. Prairie is the term given to such tracts of land as are divested of timber. In travelling west from the Alleghanies they occur more frequently, and are of greater extent as we approach the Mississippi. When we proceed to the distance of two or three hundred miles west of that river, the whole country is of this description, which continues to the Rocky Mountains westward, and from the head waters of the Mississippi to near the Gulf of Mexico; an extent of territory which probably equals in area the whole empire of China.- BRADBURY.

6. The term given in America to a hollow tree, containing a swarm of bees.- BRADBURY.

7. At that time the natural history of the bee was not very well known at St. Louis. They relate there, that a French lady of that place having received a present of honey from Kaskaskias, was much delighted with it, and being told it was produced by a kind of fly, she sent a negro with a small box to Kaskaskias (60 miles) to get a pair of the flies, in order that she might obtain the breed.- BRADBURY.

8. The great attachment which the she bear has for her young is well known to the American hunter. No danger can induce her to abandon them. Even when they are sufficiently grown to be able to climb a tree, her anxiety for their safety is but little diminished. At that time, if hunted and attacked by dogs, her first care is to make her young climb to a place of safety. If they show any reluctance, she beats them, and having succeeded, turns fearlessly on her pursuers. Perhaps in animal economy maternal affection is almost always commensurate with the helplessness of the young. -BRADBURY.

9. See Appendix, No. I.- BRADBURY.

10. I have been informed, that when the Osages were in the habit of robbing the white settlers, it was customary with them, after they had entered the house, and before they proceeded to plunder, to blacken their faces, and cry. The reason they gave for this was, that they were sorry for the people whom they were going to rob.- BRADBURY.

11. It is customary amongst the Missouri Indians to register every exploit in war, by making a notch for each on the handle of their tomahawks, and they are estimated as being rich or poor in proportion to the number of notches. At their war dances, any warrior who chuses may recount his exploits. This is done by pointing to each notch, and describing the particular act that entitled him to it. The Nodowessies, or Sioux, fix up a post near the war fire, to represent the enemy of each warrior in succession whilst he is recounting his deeds. During his harangue, he strikes the

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

post when in the act of describing how he struck his enemy, and, like Alexander, “fights his battles o’er again.” Mr. Crooks informed me, that the day before our arrival at the fort, he saw an Osage beating and kicking another, who suffered it patiently. Mr. Crooks asked him why he did not defend himself? “Oh!” said he, shewing the handle of his tomahawk, “I am too poor; he is richer than I am.” - BRADBURY.

12. As the term bluff may not be understood, an explanation will render the application more intelligible. The alluvion of the great rivers west of the Alleghannies is considerably lower than the surrounding country, and is of a breadth nearly in the ratio of the magnitude of the river; that of the Missouri is from two to six or eight miles in breadth, and is for the most part from a hundred and fifty to three hundred feet below the general level of the country. The ascent from this valley into the country is precipitous, and is called “the Bluff;” it may consist of rock or clay. Betwixt these bluffs the river runs in a very crooked channel, and is perpetually changing its bed, as the only permanent bounds are the bluffs. It may here be remarked, that a view of the vast channel bounded by these bluffs, connected with the idea that all which it contained has been carried away by the river, would induce us to believe that this globe has existed longer than some people imagine.- BRADBURY.

13. A term given to any elevation that separates the head waters of one creek from those of another- BRADBURY.

14. This chief, called by the French, Oiseau Noir, ruled over the Mahas with a sway the most despotic. He had managed in such a manner as to inspire them with the belief that he was possessed of supernatural powers: in council no chief durst oppose him - in war it was death to disobey. It is related of him at St. Louis, that a trader from that town arrived at the Mahas with an assortment of Indian goods: he applied to Blackbird for liberty to trade, who ordered that he should first bring an his goods into his lodge, which order was obeyed. Blackbird commanded that all the packages should be opened in his presence, and from them he selected what goods he thought proper, amounting to nearly the fourth part of the whole: he caused them to be placed in a part of the lodge distinct from the rest, and addressed the trader to this effect: - “Now, my son, the goods which I have chosen are mine, and those in your possession are your own. Don’t cry, my son; my people shall trade with you for your goods at your own price.” He then spoke to his herald, who ascended to the top of the lodge, and commanded, in the name of the chief, that the Mahas should bring all their beaver, bear, otter, muskrat, and other skins to his lodge, and not on any account to dispute the terms of exchange with the trader, who declared, on his return to St. Louis, that it was the most profitable voyage he had ever made. Mr. Tellier, a gentleman of respectability, who resided near St. Louis, and who had been formerly Indian agent there, informed me that Blackbird obtained this influence over his nation by the means of arsenic, a quantity of that article having been sold to him by a trader, who instructed him in the use of it. If afterwards any of his nation dared to oppose him in his arbitrary measures, he prophesied their death within a certain period, and took good care that his predictions should be verified. He died about the time that Louisiana was added to the United States; having previously made choice of a cave for his sepulchre, on the top of a hill near the Missouri, about eighteen miles below the Maha village. By his order his body was placed on the back of his favourite horse, which was driven into the cave, the mouth of which was then closed up with stones. A large heap was afterwards raised on the summit of the hill.- BRADBURY.

15. The Indians are remarkable for strength of memory in this particular. They will remember a man whom they have only transiently seen, for a great number of years, and perhaps never during their lives forget him. I had no recollection of these Indians, but they pointed down the river to St. Louis: afterwards they took up the corner of the buffalo robe, held it before their faces, and turned it over as a man does a newspaper in reading it. This action will be explained by relating that I frequented the printing-office of Mr. Joseph Charless, when at St. Louis, to read the papers from the United States, when it often happened that the Indians at that place on business came into the office and sat down. Mr. Charless, out of pleasantry, would hand to each a newspaper, which, out of respect for the custom of the whites, they examined with as much attention as if they could read it, turning it over at the same time that they saw me turn that with which I was engaged.- BRADBURY.

16. See Appendix, No. II.- BRADBURY.

17. When a party on a war excursion are entirely foiled in their object, a dread of the scoffs which may be expected from their tribe, renders them furious; and it often happens in such cases, that they throw away their clothes, or devote them to the Great Spirit, with an intention to do some desperate act. Any white man, or any party of whites, whom they meet and can overcome, is almost certain to be sacrificed in this case.- BRADBURY.

18. A species of sciurus or squirrel, not described in the Syst. Natura. - BRADBURY.

19. The Americans are called "the Big Knives" by the Indians of the Missouri- BRADBURY.

20. One thousand and seventy-five miles from the mouth of the Missouri. - BRADBURY.

21. This man has been suffered to examine the collection of specimens which I sent to Liverpool, and to describe almost the whole, thereby depriving me both of the credit and profit of what was justly due to me.- BRADBURY.

22. In the statistical account of the Missouri, by Lewis, read before Congress in February, 1806, the character of these Indians is thus described: - "These are the vilest miscreants of the savage race, and must ever remain the pirates of the Missouri, until such measures are pursued by our government as will make them feel a dependence on its will for their supply of merchandize. Unless these people are reduced to order by coercive measures, I am ready to pronounce that the citizens of the United States can never enjoy, but partially, the advantages which the Missouri presents. Relying on a regular supply of merchandize through the channel of the river St. Peter's, they view with contempt the merchants of the Missouri, whom they never fail to plunder when in their power. Persuasion or advice with them is viewed as supplication, and only tends to inspire them with contempt for those who offer either. The tameness with which the traders of the Missouri have heretofore submitted to their rapacity, has tended not a little to inspire them. with a poor opinion of the white persons who visit them through that channel. A prevalent idea, and one which they make the rule of their conduct, is, that the more harshly they behave towards the traders, the greater the quantity of merchandize they will bring them, and that they will obtain the articles they wish on better terms. They have endeavoured to inspire the Aricaras with similar sentiments, but happily without effect." - BRADBURY.

23. It may be observed here, that all the Indians who inhabit the prairie use shields in war; but to those who inhabit a woody region they are wholly unknown: as in action, excepting in close fight, each man conceals himself behind a tree. The shields made use of are circular, and are nearly thirty inches in diameter. They are covered with three or four folds of buffalo skin, dried hard in the

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

sun, and are proof against arrows, but not against a bullet.- BRADBURY.

24. An enquiry into the length of time which it has required to produce this effect, might be a matter of great interest to the Chinese philosophers. BRADBURY.

25. During the autumn, whilst the Indians are employed in killing game for their winter's stock, the wolves associate in flocks, and follow them at a distance to feed on the refuse of the carcasses; and will often sit within view, waiting until the Indians have taken what they chuse, and abandoned the rest.- BRADBURY.

26. During our voyage, I often associated with the hunters, to collect information from their united testimony, concerning the nature and habits of animals, with which no men are so well acquainted. This knowledge is absolutely necessary to them, that they may be able to circumvent or surprise those which are the objects of chase, and to avoid such as are dangerous; and likewise to prevent being surprised by them. They can imitate the cry or note of any animal found in the American Wilds, so exactly, as to deceive the animals themselves. I shall here state a few of what I certainly believe to be facts; some I know to be so, and of others I have seen strong presumptive proofs. The opinion of the hunters, respecting the sagacity of the beaver, goes much beyond the statements of any author whom I have read. They state that an old beaver, who has escaped from a trap, can scarcely ever afterwards be caught, as travelling in situations where traps are usually placed, he carries a stick in his mouth, with which he probes the sides of the river, that the stick may be caught in the trap, and thus saves himself.

They say also of this animal, that the young are educated by the old ones. It is well known that in constructing their dams, the first step the beaver takes, is to cut down a tree that shall fall across the stream intended to be dammed up. The hunters in the early part of our voyage informed me, that they had often found trees near the edge of a creek, in part cut through and abandoned; and always observed that those trees would not have fallen across the creek, and that by comparing the marks left by the teeth on those trees, with others, they found them much smaller; and therefore not only concluded that they were made by young beavers, but that the old ones, perceiving their error, had caused them to desist. They promised to show me proofs of this, and during our voyage I saw several, and in no instance would the trees, thus abandoned, have fallen across the creek.

I have myself witnessed an instance of a doe, when pursued, although not many seconds out of sight, so effectually hide her fawn, that we could not find it although assisted by a dog. I mentioned this fact to the hunters, who assured me that no dog, nor perhaps any beast of prey, can follow a fawn by the scent, and showed me in a full grown deer, a gland and a tuft of red hair, situated a little above the hind part of the fore foot, which had a very strong smell of musk. This tuft they call the scent, and believe that the route of the animal is betrayed by the effluvia proceeding from it. This tuft is mercifully withheld until the animal has acquired strength. What a benevolent arrangement! -BRADBURY.

27. It was not difficult to comprehend that horses might be obtained by stealing, but how they could be procured by smoking I did not then understand. On the first opportunity, I enquired from Mr. Crooks, who is remarkably well acquainted with Indian customs: from him I learned, that it is a practice with tribes in amity to apply to each other in cases of necessity. When one tribe is deficient in any article of which the other has abundance, they send a deputation, who smoke with them, and inform them of their wants. It would be a breach of Indian courtesy to send them

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

away without the expected supply.- BRADBURY.

28. The nations on the Missouri, always liable to be surprised and plundered by the Teton villains, annually conceal a quantity of corn, beans, &c. after harvest, in holes in the ground, which are artfully covered up. These hoards are called by the French caches, from the verb cacher, to hide. BRADBURY.

29. Cannon-ball River derives its name from the singularly round form of the stones which are found in its bed. These are of all sizes, from one to twelve inches in diameter, or sometimes more: they are of a brownish sand-stone, and before they were rounded by attrition, must have been formed in cubes.- BRADBURY.

30. This is about the full height to which the maize grows in the Upper Missouri, and when this circumstance is connected with the quickness with which it grows and is matured, it is a wonderful instance of the power given to some plants to accommodate themselves to climate. The latitude of this place is about forty-seven degrees geographically, but geologically many degrees colder, arising from its elevation, which must be admitted to be very considerable, when we consider that it is at a distance of more than three thousand miles from the ocean by the course of a rapid river. This plant is certainly the same species of *zea* that is cultivated within the tropics, where it usually requires four months to ripen, and rises to the height of twelve feet. Here ten weeks is sufficient, with a much less degree of heat. Whether or not this property is more peculiar to plants useful to men, and given for wise and benevolent purposes, I will not attempt to determine. -BRADBURY.

31. I noticed over their fires much larger vessels of earthenware than any I had before seen, and was permitted to examine them. They were sufficiently hardened by the fire to cause them to emit a sonorous tone on being struck, and in all I observed impressions on the outside, seemingly made by wicker work. This led me to enquire of them by signs how they were made? when a squaw brought a basket, and took some clay, which she began to spread very evenly within it, shewing me at the same time that they were made in that way. From the shape of these vessels, they must be under the necessity of burning the basket to disengage them, as they are wider at the bottom than at the top. I must here remark, that at the Great Salt Lick, or Saline, about twenty miles from the mouth of the Wabash, vast quantities of Indian earthenware are found, on which I have observed impressions exactly similar to those here mentioned. From the situation of these heaps of fragments, and their proximity to the salt works, I am decidedly of opinion that the Indians practised the art of evaporating the brine, to make salt, before the discovery of America. - BRADBURY.

32. The bows are short, but strong. Those which are esteemed the best, are made of the horns of the animal called by the French *gros corne*. This animal inhabits the Rocky Mountains, and is gregarious. All who have seen it, represent its agility in leaping from rock to rock as one of the most surprising things they ever beheld. The Americans call it the mountain sheep; but the probability is that it belongs to the genus *antelope*. The horns are exceedingly large for the size of the animal. The bows are made of three pieces, very neatly joined together by a long splice, and wound round with sinew in a very exact manner. The next in value, and but little inferior, are made of a yellow wood, from a tree which grows on Red River, and perhaps on the Arkansas. This wood is called *bois jaune*, or *bois d'arc*. I do not think the tree has yet been described, unless it has been found lately in Mexico. I have seen two trees of this species in the garden of Pierre Chouteau, in St. Lou-

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

is, and found that it belongs to the class dioecia; but both of the trees being females, I could not determine the genus. The fruit is as large as an apple, and is rough on the outside. It bleeds an acrid milky juice when wounded, and is called by the hunters the Osage orange. The price of a bow made from this wood at the Aricaras is a horse and a blanket. Many of the war clubs are made of the same kind of wood, and have the blade of a knife, or some sharp instrument, fastened at the end, and projecting from four to six inches, forming a right angle with the club.- BRADBURY.

33. Before the Indians had any intercourse with the whites, they made the heads of their arrows of flint or horn stone. They now purchase them from the traders, who cut them from rolled iron or from hoops.- BRADBURY.

34. I am informed by the hunters, that in autumn the quantity of tallow or fat in the buffalo is very great. It of course diminishes when food becomes scarce. As the same thing obtains in a number of animals, by climate and habit ordained to procure abundance of food in summer, and to suffer great privation in winter, this collection of fat seems to be a kind of reservoir, containing the means of existence, which is drained by absorbent vessels, and returned into the system when necessary- BRADBURY.

35. The arpent is to the statute acre nearly in the proportion of eighty-three to one hundred.- BRADBURY.

36. This man's name is Shepherd.- BRADBURY.

Letter 1

Lewis' Fork, July 18th, 1832.

(A tributary of Columbia river, foot of the Three Teton Mountains.)

DEAR BROTHER,

- A year has nearly elapsed since we parted, and the Fates,- my wayward disposition, - or both combined, have placed us at a distance of some thousand miles from each other. You, in the enjoyment of peace and security; while I, with a small band of hardy trappers, am in the midst of our old enemies the Black Feet Indians - who if they had a chance would take pleasure in "dancing my scalp." Be that as it may, yours is an enviable lot, when compared with mine. You can retire to rest, without apprehensions of midnight alarms; and can walk forth during the day without fear of an assassin : - whilst I am compelled to recline on the "green sward," with the Heavens for a canopy; my arms by my side - and a strong guard keeping watch over our lives and property. Such are our different situations, and such must they remain for at least another year, when I fervently hope to be enabled to quit forever, a pursuit which has little besides danger and privation connected with it.

---

Leaving the boundary line of Missouri, our company, consisting in all of about 60 men, proceeded up the Blue river, which empties into the Kansas; and from thence up the Platte river. Our trip was more prosperous than usual, having taken every precaution which past experience had taught us to provide for every emergency.

We had two steers and fifteen sheep, besides the usual supplies of bacon, meal, flour, &c. to meet our wants, until we reached the Buffalo. In former letters, I told you that this noble, and (to the hunter and Indian) most useful animal, has been gradually retiring from the haunts of civilized men; and is not met with, at any great distance east of the Black hills. To those, who are not amply

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

provided with supplies, the dreary journey from the boundary line to the Buffalo range, must be attended with great danger and privation.

On 11th June we came in view of the Black hills, and since then have never been out of the sight of snow. Our clothing requires to be as warm as yours in the coldest winter. During the last three weeks we have had frost every night, and have frequently encamped by snow banks; yet such a complaint as a cold is unknown among our men!

---

19th July. - I was yesterday interrupted in describing our route, by the cry of "Black Feet!" - Instantly I threw down my pen, and hastily preparing for a conflict with those savages, I proceeded in the direction pointed out by the express, in company with my friend S. - In Indian warfare, we do not marshall our forces; nor approach the scene of conflict in any regular order. Each person goes "on his own hook," if I may be allowed the expression; and in this way our party, with the exception of a few left in charge of the camp, proceeded down the ravine at full gallop. Mr. S. and I, without being aware of the cause or nature of the approaching contest, felt convinced we were about entering on a perilous engagement, in which one, or both of us might fall. We therefore briefly directed each other as to the disposition of our property, or in other words, made our wills, appointing each other sole executor. So far as I have known, (and I have known too many instances,) the utmost respect is paid to the disposal of property in this manner, amongst the hunters; - and I question whether the dying wishes of your fellow citizens, - guarded as they are, by salutary laws, - are better, or more correctly fulfilled, than amongst our mountain traders.

On reaching the party that gave the alarm, we found them debating on the propriety of attacking the enemy, who were strongly fortified in a willow swamp about a mile distant. The information derived from our friends, was given in a few sentences; for at such times "our words are few and full of meaning." No one waits to answer questions, and he who has not a quick ear and ready comprehension, must go to the battle without news. We learned that a small party leaving our encampment on the day previous, had suddenly encountered a band of Black Feet warriors - and, that coming to a halt, a parley ensued; our friends sending two half bred Indians to meet the chief of the Black Feet, who rode out in advance. A few signs (for their languages were unknown to each other) soon satisfied the parties of the irreconcilable enmity existing; an enmity that originated on the part of the Black Feet, with the first visit of Lewis and Clarke to this region and continues, unabated to the present day. This interview took place in sight of both whites and Indians. On a signal given, the latter immediately retired to the swamp where they constructed a fortification of logs, hanging their lodge skins around - by way of masked battery - to conceal their position more effectually. Their number was estimated at 250 warriors.

Our force consisted of from 40 to 50 whites - a few half breeds - and two small bands of friendly Indians, from the Pierced Nose and Flat Head tribes. Mr. S. - (brave as a lion) addressed a few words to the whites, telling them that the enemy was near, and that if at the commencement of the season we did not show a bold front, our prospects in the mountains would be blasted. He concluded his brief but energetic address, by remarking "and now boys, here are the Black Feet who have killed so many of your companions; - who have probably been prowling around us for several days, waiting a favorable chance of attacking us, when they believed us unprepared; - and who are at this moment daring the palefaces to the onset. Some of us may fall; but we die in a good cause; for whose life or property will be secure if the foe be encouraged by refusing their

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

challenge?" Addressing my old friends the Flat Heads, I told them our determination to assail their enemies, in their strong hold, and that we knew we should have their assistance. Then raising the war whoop, Mr. S. and myself, with about twenty others, dashed off at full speed towards the willows. Drum, fife and trumpet, are as nothing when compared with the effect of the war whoop. The yell, the action, and their effect, perhaps, in banishing reflection for the time being, prepare us better for entering into battle than all the "pomp and circumstance" of the best martial music. On reaching the willows we fastened our horses in a thicket, a short distance above where the Black Feet were fortified. Our little party was then formed in two divisions; one under Mr. M.; S. approached along the creek; while Mr. S. his brother A. four other Americans and myself, kept towards where we knew the Indians were waiting for us. We were soon within a few steps of their rude but formidable breastwork - and here "the boldest held his breath for a time." We approached according to the usage in Indian warfare, on our hands and knees; and while in this attitude Mr. S. and myself a little in advance, - a shot from behind the breastwork mortally wounded a brave fellow named St. Clair, who was within two feet of me. Poor fellow! he had a brother in our company, to whom he was greatly attached, and feeling death approach rapidly, he called to us. "I am shot! - oh God - take me to my brother." These were his last words - and we gave immediate directions that they should be obeyed. A few steps further and another of our men, named Phelps, was wounded in the thigh. One of the men was directed to carry him off, and we were thus left within 10 or 15 steps of the fort with only a party of four effective men, opposed to hundreds!

Perhaps you will call it madness to continue an attack under such circumstances; but you must remember that on entering the thicket we expected our example would be followed by more of our men and by the friendly Indians. Even should our course deserve the name of rashness, a retreat would be attended with greater danger than maintaining our ground; for by crawling cautiously along we more effectually avoided the bullets which were now "hailing" around us, than by exposing our backs to an Indian's aim. We continued to keep up a steady fire, never rising higher than our knee to take aim, and never losing a shot by firing without an object. While thus engaged on one occasion, with my left heel touching the right knee, and taking deliberate aim at a rascal who was peeping out between the lodge skins, a bullet whistled by so near my leg, as to induce the belief that I was wounded. I soon found it was a false alarm, and am since then grateful that my legs are not larger; -for it requires a centre shot to hit there. In the mean time another brave fellow, quickly, received a bullet in his head - gave one spring from where he stood, leaning against Mr. S. and me and fell down a corpse! Either the same ball, or one fired at the same time, struck Mr. S. on the left arm, fracturing the bone, and passing out under the shoulder blade. He remarked that he was wounded, and continued the attack for a short time, but the loss of blood, and thirst which succeeded, obliged him to call on me for assistance.

By this time the Pierced Nose and Flat Head Indians began to join us, and the fire on the Fort became more formidable and deadly. I assisted Mr. S. from the scene to the creek, where I probed the wound, and dressed it as well as the means within reach admitted of. We then made a litter and carried him back to the encampment, where I am happy to say he seems to be recovering. To return, however, to the field of battle; our men, and the friendly Indians continued the assault from the time we left (late in the afternoon) until dark, without being able to enter the fortress. The Black Feet defended their position (which was well chosen) with obstinate bravery. During

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

the night our men drew off, and took such stations around the spot as to detect the enemy in case of an attempt to escape. Notwithstanding all their precautions, the Black Feet effected a retreat, so quietly that it was not discovered until this morning. I have just returned from the battle field; - the sight was distressing; - two of our brave men were killed - two more are I fear mortally - and four seriously wounded. Of the friendly Indians I saw the bodies of five braves who -  
“Could lightly wheel the bright claymore, And send the whistling arrow far:”  
- dressed and painted for burial; and then laid in one grave. Two or three others I am told have died since morning.

The loss of the enemy I am unable to ascertain. You are aware that it is their custom to carry off the slain, when in their power. We found on examination that we had killed of their horses, which were within the enclosure and conjectured from their trail that there was an equal number in killed and wounded amongst their warriors.

In giving these details of an encounter with savages, while the incidents are yet fresh on my memory. I fear I shall only add to your antipathy of the mode of life that necessity and choice have caused me to adopt. To confess the truth I am sick of it. In the course of a few days I hope to begin my return trip to St. Louis - from whence I may give some further details of “Mountain perils.”  
Yours, &c. &c.

Letter II

Green River, Rocky Mountains, July 10, 1833.

DEAR BROTHER.

- I am now on my route from the head of Columbia river, to the mouth of the Yellow Stone, where it empties into the Missouri. You can have no idea of the anxiety and toil of such a march. With “returns” of some value, our party are traversing a country frequented by bands of Indians, whose friendship can only be depended on, when our vigilance and strength sets hostility at defiance. From our point of destination, we will send our beaver, &c. by water to St. Louis, - and I will probably build a fort, and establish a trading station in the vicinity.

Yesterday I met a party of the Shoshonee or Snake Indians, with their principal chief “The Iron Wristband.” We had a smoke and talk, as is usual on such occasions; in the course of which I discovered that my new friend wished to employ me in the capacity of ambassador extraordinary and minister plenipotentiary, on a mission to the Crow Indians; through whose country I intend to pass. Much as I have been accustomed to the tact and shrewdness of Indian chiefs, I have seldom seen stronger proofs of political cunning, than on this occasion.

The Iron Wristband had lately succeeded his father “Petticoat,” as chief of the nation. It seems that a misunderstanding had arisen between the Snakes and Crows, - not so serious as to lead to immediate open hostilities, - yet sufficient to render it doubtful whether they could meet as friends. To ascertain the views of the Crows; and if hostile, to deliver a suitable defiance, were to be the objects of my mission.

After some preliminary conversation, the chief made me a speech, in which were condensed his final instructions. I took notes of it at the time, and herewith give you the substance. The sententious brevity and emphatic point, would have put some of your long winded orators to the blush; - and few of them could convey their meaning with more accuracy.

“Write a letter,” said he “to the Crows. Let it be in two parts. Tell them my people wish to know

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

their intentions. We are anxious to go to war with the Black Feet Indians (common enemies to the Crows and Snakes). We do not wish to fight with our former friends and allies - the Crows; - nor to divide our strength by keeping some war parties at home to protect our squaws. No - we wish to be friends with the Crows; we wish to join them, against the Black Feet ; - we wish to smoke, trade and intermarry with their people. If they will agree to this, we will be happy; - we will love them as neighbours - as friends - as allies.

“Should the Crow Indians reject these offers of peace, then the Snakes hurl defiance at them. Let them come. There are many heroes among us, who have never known fear. We will meet them with as much ferocity as enemies as we could have cordially greeted them as friends. We are not afraid. We will call on our friends the Shians, Aripahoes, Utaws and Navahoes, before the snow comes, and will grind them to death!

“Let this be your letter. Divide it into two parts. If the offer of peace be accepted, then destroy the other. If not, then give them our defiance, and tell them to come on.”

“Eight years ago, when we first saw the long knife (Gen. A\_\_y) there had been war between us and the Crows. We had killed many of them. They were as children in our hands. Your friend, the Long Knife, offered to make peace. He gave us large presents. We consented; and since then, the tomahawk has been buried. Our wish is still for peace. Let their answer be frank and candid. Peace or war, is the same to us; only let them say which they prefer.”

I listened with much attention, and no small share of admiration to this brief harangue. Were you familiar with the position of the parties, you would see in every sentence, evidence of deep policy, and consummate political skill. The Snakes were deeply apprehensive of the effects if a war with the Crows; for they could not wage war with that nation, and the Black Feet: yet an Indian well knows the danger of admitting weakness; or asking as a boon, what he knows can only be held by his rifle. On parting, I promised the chief to write and deliver the letter “in two parts” according to his wishes; - and hope to succeed in establishing peace between those nations.

Yours, &c. &c.

### Letter III

Fort William, Nov. 16th, 1833.

(the mouth of the Yellow Stone river.)

DEAR BROTHER,

- My time has been so much occupied during the last five weeks, preparing our winter quarters, that I have been obliged to omit my usual monthly letter. You have never built a fort? Then pray Heaven you never may; for of all the trouble and annoyance I have ever experienced, that gives the most. A few days more will enable me to complete the outside of our accommodations, with the exception of an ice house and provision store. We can finish the interior at our leisure. Our fort is 130 by 150 feet - strongly built, with only one well guarded entrance - and inclosing all our houses, stores, &c.

The trade has scarcely commenced; but we, and our rivals, are electioneering hard for it; - a business that would puzzle one of your most noisy politicians. Intrigue, bribery and corruption are the order of the day. The Indians feel their importance and maintain it.

Amongst those who lately visited me, was a part of the tribe of Creek [Cree?] Indians, accompanied by their chief Sonnant (anglice “Rattle.”) He is a man above the common size, and of very

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

remarkable appearance. When you look at an Indian, you generally try to discover his character from his eye; but the optics of this chief defied scrutiny. They were so embedded between high cheek bones, a hawk nose that exceeds belief, and large shaggy eye brows; that no man, even in your prying and starring city, could tell their colour, without such a look as an Indian brooks not; while my new friend Sonnant could peer into your very soul, without appearing to be looking at you.

His forehead was prominent, - and such were the general developments of his cranium, that without being much of a phrenologist you would at once attribute to him, resolution, to sustain his purposes; implacable hatred and deadly revenge on those who crossed him. His head surmounted by a huge mass of hair, tied in a knot before, not unlike the mode adopted by some belles among the "white folks," (bless them) but with this difference - the hair was all his own. - His full chest and brawny arms, were tattooed with blue stripes, very regularly laid on; and indeed handsome, after your eye became familiar with it; although at first sight, you would condemn the taste that could admire such horrible and disgusting ornaments. The easy, dignified and elastic step of this chief, proved that he was "born to command." His apparel was simple, but comfortable. A Buffalo robe enveloped him from head to knee. Leggins of Antelope skin ensconced his legs; and plain moccasins protected his feet.

Sonnant - or "the Rattle," as I shall call him, has seven brothers, all of whom are chiefs of subordinate rank in the nation. To their influence, no less than his own savage bravery, is he indebted for the great and powerful ascendancy he maintains among his people. He has several wives, the youngest of whom, scarcely fifteen years of age, was amongst the party who visited me, and evidently proud of her lord and master. He seems to be fully sensible of his important standing; but he has one fault which materially lessened his claims on my respect: - namely, a most sacrilegious contempt for the rules laid down by the temperance society; not one of which will he observe; shame on him! - In other words he is a beastly drunkard.

Such as he was, however, he came to see me; and we had a talk on politics - or trade; which with us are synonymous terms. When we advised peace between nations, it is with a view to our benefit, in traffic: - when we advise war (a thing by the way, we have never done) our motives would be equally selfish. I could make some handsome compliments to myself, on recommending sobriety, when I had no spirits to sell; and very strongly deprecating the use of the "fire water" by our friends the "red skins." The advice was certainly good, be the motive as it may. Indeed such is the world, with all its attempts to dissemble. Self interest predominates; and the only difference in its exercise, in savage and civilized life, is that in the former we acknowledge; in the latter you conceal your motives.

Our smoke and talk, ended like all of a similar character, by me giving him some tobacco, ammunition, and vermilion, in return for many fair promises. He then begged me for something to drink, which he said should be strong, as he was accustomed drinking like his "white fathers." I ordered a pint of wine for himself and suite (enough, of the description we have, to make you and I tipsy) when lo! the old sinner swallowed the whole at a single draught! It was amusing to see his companions looking at him imploringly during the act, and very significantly smelling the empty cup. "The Rattle" soon began to make a noise, and became very troublesome from his loquacity. I paced the apartment with some degree of impatience; and to his solicitations for more drink, gave a flat denial; at the same time leaving the house. - The old fellow (for he has seen nearly

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

sixty snows) in great good humour, paced through the room with his hands on his sides (Buffaloe robes have no pockets) observing that he too was a chief and a "medicine man;" and that he would walk as his father (meaning me) had done. The old rascal had seen enough moons to be my grandfather. His conduct and remarks were irresistibly comic. Our clerks and men, were so highly amused that another bumper was allowed his majesty, who departed greatly pleased with his interview; vowing everlasting friendship; which being interpreted; means, as long as I had wine and goods to give, and he had robes and beaver to trade.

Letter IV

Fort William, Dec. 8th, 1833.

(the Mouth of the Yellow Stone River, about 2000 miles above St. Louis.)

DEAR BROTHER

- You have often asked me for a description of the Indians that I have been amongst, and particularly my impressions at the first interview. I confess until now, I was not sufficiently aware of the difference between first impressions, and those formed after we become familiar. You were right - first impressions are the only impressions that can be satisfactory to one who wishes to have a correct idea of Indian character.

After our arrival here, thirty lodges of the Assenaboine Indians came in to the American Fur Company's Fort to trade dressed Buffalo skins, and after finishing their trade they came to our encampment, and stopped a night with us. Their arrival being on the Sabbath, I had the better opportunity of observing the difference between these and the Indians I had formerly been amongst, which resulted to the disadvantage of my new friends as you will perceive.

We discovered them at about a mile distance, issuing out of a little ravine where they had stopped to paint themselves before appearing amongst "The Long Knives," as they term the Americans. They were in number about sixty; all men capable of wielding the merciless tomahawk, or sending the shaft of death; and woe to the retreating foe they pursued - the deer is but little swifter, and a hound not more durable than these sinewy sons of the north, who esteem a horse fit only to pack the fruits of the chase. I might say their appearance was grand - 'twas certainly imposing. Imagine to yourself, sixty able warriors walking abreast, some with spears fantastically ornamented with scarlet cloth, and the feathers of the war eagle, others carrying the war club, not less beautiful, (horrid should I say?) and all armed with guns, or bows and arrows. When they advanced so near as to be heard by us, they commenced a song expressive of their satisfaction at their arrival at the white man's camp - in their songs they generally make the words suit the occasion, which one chants, and all the others join in chorus. When they got within two hundred yards of us they made a halt, and their song ceased; the chief then advanced six paces in front of the rear rank, and at mid distance immediately behind him stopped three or four braves, who ranked next in authority. This halt was a signal for me to approach - I accordingly took my interpreter along, and went up to them; I gave my hand to the chap, which he grasped firmly, and ejaculated how! (I may here observe an Indian has no goodmorrow how dy'e, or any of our nonsensical greetings, but if you try you will find his how! relieves the heart of that pleading sensation we feel on meeting a friend, better than our salutation). He was a fine noble looking fellow, as large as Mr. Sublette, and possessed of the easy manners common to an Indian chief, who ranks himself second to none

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

that walks the earth. I invited them to proceed, and set the example - the march was resumed, every gun was discharged in the air, and the song recommenced, which ended only when we stopped to form a circle to smoke; here the same respect to rank was observed as in the march - the plebeians seated themselves in the outer ring - the braves in an inner one, and the chief still nearer the centre. I entered and took my seat vis a vis his greatness, my interpreter setting to my left. A glance at the motley group was amusing; their dress was plain - it was yet summer, and they had a Buffalo skin (without the hair) to protect them from the sun, as they wore no shirts - their leggins generally like their mockasons, were plain - excepting a few who had rings painted around the leggins, one leg red, the other black - recording some feats they had performed. Long fringes hanging on each side, and a few ornamented with hair, was what constituted their simple dress. They were all painted; some had the face all red except the tip of the nose, others painted with vermilion leaving little spots on the forehead and cheek, which were painted lead color, a few had their eyes painted white and all the other part red; and others again were painted as black as a negro. These last having been to war, and killed some of the enemy were privileged to paint themselves, as an honorary mark of distinction between them, and those who had not sought glory in the paths of danger (the privilege extends to their wives and daughters, who are more strict in its observance). Every one paints according to his taste, as you may any day see pretty girls dressed in Philadelphia, (pardon the comparison) each consulting his complexion. After we had lighted a few pipes of tobacco mixed with kinekinuk, and had each taken a few ambrossial whiffs in dead silence, I commenced and made them a speech, the substance of which was, that we came here to build a fort and trade with them - the sole object we had in view was benefitting them (I had almost said ourselves): yes, that we came here, our sole object to better their condition - that we had a large quantity of merchandise in our boat, and hoped we would find them disposed to trade with us, and reciprocate our good feelings. I then presented them with 300 charges ammunition, 60 plugs tobacco, a doz. knives, and other kick-shaws, which I had brought forward, as my discourse ended in order to produce effect. - I told them this was a small present as earnest of our future conduct, and which I wished them to accept as such.

My plan succeeded, the chief sent forth a murmur of applause, which was responded by his followers - he then said they were poor! He was grateful for the present, and for the words I had spoken, which should not enter our ear and pass out at the other - No! they would carry my words under their left arm (next the heart) and when they found the balance of their nation they would glad their hearts by a recital what I had said. - He then wound up by promises of lasting amity. The present was laid at the feet of the chief, and as yet untouched. He now commenced, assisted by his commissary, to distribute amongst his followers according to their station, but retained nothing for himself; and in this manner a chief gains popularity and influence, and if he distinguishes himself in war, and uses sufficient liberality amongst his adherents, there is no degree of eminence in the nation to which he may not aspire. Each having received his portion they all arose, and went to their several lodges which by this time had arrived.

After their lords, at a respective distance, came the women in Indian file, between each family a space of a few rods. The principal squaw took the lead, and was followed by her joint partners in the affections of the husband, the dogs followed dragging along all the effects of the day. They fasten together at one end two poles eight foot long - this end is tied on a little saddle fastened on the dogs shoulders, and a strap passing under the neck to haul by - immediately behind the dog,

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

is a hoop worked like a sifter, and fastened to the poles to keep them firm and apart, on this is put 50, 60 or 80 lbs. baggage, which these poor animals haul a day's march. What would you say to see a child 2 or 3 years old fastened on one of these drags, enjoying his ride seemingly as much as one of our little urchins of the same age would a ride in a gig or carriage? The howling of the poor dogs, and scolding of the women produced such a disagreeable noise, that I was glad to see the place selected for the encampment, and the squaws set about their several duties of unloading the dogs, pitching the lodges, collecting wood and carrying water; and finally (all being arranged) sitting down on the sweet scented floors of their wigwam, raised and provided in the short space of half an hour. The dress of the women was well adapted to their situation. Short frocks of antelope skin, reaching just below the knee, (as most suitable for walking) worked with porcupine quills. Leggings of the same material, ornamented with beads, and an envelope of a Buffalo skin, or blanket to wrap in by day or sleep in by night, was all that these ladies require.

The men (and women too) are careless of their hair - it is wore long and matted - very ugly. An Assenaboine village, though in my eyes wanting the greatest ornament, fine houses, is more beautiful than you can imagine, and I am certain it would make a handsome view through a magnifying glass at the museum, than the arrival of the Pilgrims at Mecca. Some of their lodges have painted on them the likeness of bears, wolves, dogs, or horses, and some have men with the blood issuing from the wounds, as when the owner of the lodge dealt the death blow - occasionally a man was represented "trimmed off at the shoulders," which looks awkward, as I have witnessed a moment after the operation. You would avoid that lodge, I dare say, that contained the man of blood, but nine times in ten he is the most generous and hospitable you meet.

The lodges when erected looked really fine, and at once reminded me of days by-gone, where I have seen on a handsome meadow, bordering one of our enchanting mountain streams, a village of two thousand lodges (more gracefully proportioned than your finest houses) sprung up as it were by magic, and one to two thousand horses feeding luxuriantly, where but an hour before, the deer startled by the tainted gale, announcing the approach of the enemy man, had fled from the pasture it had long occupied apparently secure from the stealthy steps of the prowling hunter.

Letter V

Rocky Mountains, July 12, 1836.

Dear Brother.

- Feeling a disposition to write, and having met with no incident worth notice, for some days past, I have concluded to give you some details connected with the Sioux Indians, - a nation, perhaps the most numerous, and occupying the most extensive range of country, of any tribe in North America. They have no permanent villages, like their neighbours, the Pawnees, Rees, Mandans and Gros-vants; nor do they, like them, cultivate the soil, but depend for subsistence solely on game, moving about with their leathern lodges from place to place, as their wants or wishes may prompt them.

Their immense numbers rendering unity of purpose and action almost impossible, they are subdivided into tribes, having independent chiefs, occupying distinct portions of territory, and known by different names: Thus we have the Sioux of St. Peters, on the Mississippi; the Sioux of Missouri; the Yanhtoneys, and the Assinnaboines. The two latter tribes are sometimes at war with

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

each other, but it is generally of short duration. At present they are firm and friendly allies; waging war with their neighbours, the Mandans and Gros-vants.

The Assinnaboines, who occupy the northern portion of Sioux territory, call themselves E-ao-ka or Nar-ko-ta. When the white man first visited this country, they were called by their neighbours, the Cree Indians, Assin-poinee, (or the Stone Roasters,) which for sake of easier pronounciation, we have slightly changed. They are the poorest of the Sioux bands, having no horses - an important item of Indian wealth.

Nearly all their baggage is transported by dogs, and I have known 60, 80 or even 100 lb. to be hauled by these poor animals, a days march, with no great apparent fatigue. The Assinnaboines, are not, however insensible to the value of horses; for it is no uncommon occurrence to see one of them offer a horse, in the fall season, for half a gallon of whiskey, which he will buy in the following spring, at the rate of thirty Buffalo robes; and all this difference in consequence of the difficulty of wintering horses in their cold and inhospitable climate. Their principal trading points, are with the British on North Red River, and at the American fur company's post at the mouth of Yellow Stone. The former is visited in the summer, where they dispose of light peltries; and the latter in the fall and winter, where their robes, and other articles of a heavy description, find a better market.

I was forcibly struck with the remarkable similarity which some of their traditions respecting creation, bear to divine revelation. One of their prophets gave me a long history of the formation of things "animate and inanimate," the substance of which I now record for your amusement - and I may as well premise, that as yet, these people have never had either missionary or other instructor amongst them.

The Assinnaboines believe that at a very remote period, the Great Spirit, formed the earth out of a confused mass. He then made a Fox out of clay, which he sent forth to see if the world was large enough. The Fox returned from the survey and reported it too small. By a sudden convulsion, the Great Spirit then made it larger; and again the Fox went forth, but did not return to report the dimensions; from which it was known that the earth was sufficiently capacious. Trees were then made, and when they grew large enough, a man and a woman were made of the timber. Every other living thing was made of clay - male and female of its kind - and all were sent forth, with a command to multiply. It seems the work of creation was done, on the borders of a lake, and amongst the most absurd portion of the creed, is a belief that a fish swam to the shore, - offered itself as a sacrifice - and told the newly created pair, to boil and eat it all, except the scales and bones, which they were directed to bury in the earth. From this sprang up powder, balls, fuzees, knives and other implements of warfare.

In the course of time men had become very numerous. Amongst them were two brothers - great chiefs - who were formed for skill and bravery. One of them was slain by an enormous animal, (for which they have no name) and the other, to revenge his brother's death, afterwards attacked and killed it. This animal was a great favourite with the Great Spirit, and in order to shew his disapprobation of the act, he determined to drown all mankind. The surviving brother heard this, and built himself a large raft, on which he placed a male and female of every animal. The rain poured down, and the earth was covered, over the top of the highest mountain; but the raft floated in security. The chief at length becoming tired of sailing, determined to make land for himself - for he was "strong medicine," and knew every thing. All he wanted was a little earth, or mud.

TRAVELS IN THE INTERIOR OF AMERICA, IN THE YEARS 1809, 1810, AND 1811  
BY JOHN BRADBURY, F.L.S. LONDON

---

A Beaver went out, but soon returned, reporting (as sailor's say) "no bottom." Another was next sent, with no better success. Last of all, a musk rat was employed, and after some time returned with a mouth full of mud. From this our earth, as we have it, was formed - which accounts for it being no better than it is.

Yours, &c.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

---

LETTER -- No. 1

As the following pages have been hastily compiled, at the urgent request of a number of my friends, from a series of Letters and notes written by myself during several years' residence and travel amongst a number of the wildest and most remote tribes of the North American Indians, I have thought it best to make this page the beginning of my book; dispensing with preface, and even with dedication, other than that which I hereby make of it, with all my heart, to those who will take the pains to read it.

If it be necessary to render any apology for beginning thus unceremoniously my readers will understand that I, had no space in these, my first volumes, to throw away; nor much time at my disposal, which I could, in justice, use for introducing myself and my works to the world.

Having commenced thus abruptly then, I will venture to take upon myself the sin of calling this one of the series of Letters of which I have spoken; although I am writing it several years later, and placing it at the beg-inning of my book; by which means I will be enabled briefly to introduce myself to my readers (who, as yet, know little or nothing of me), and also the subjects of the following epistles, with such explanations of the customs described in them, as will serve for a key or glossary to the same, and prepare the reader's mind for the information they contain.

Amidst the multiplicity of books which are, in this enlightened age, flooding the world, I feel it my duty, as early as possible, to beg pardon for making a book at all; and in the next (if my readers should become so much interested in my narrations, as to censure me for the brevity of the work) to take some considerable credit for not having trespassed too long upon their time and patience. Leaving my readers, therefore, to fine! out what is in the book, without promising them anything, I proceed to say -- of myself, that I was born in Wyoming, in North America, some thirty or forty years since, of parents who entered that beautiful and famed valley soon after the close of the revolutionary war, and the disastrous event of the "Indian massacre."

The early part of my life was whiled away, apparently, somewhat in vain, with books reluctantly held in one hand, and a rifle or fishing-pole firmly and affectionately grasped in the other.

At the urgent request of my father, who was a practicing lawyer, I was prevailed upon to abandon these favorite themes, and also my occasional dablings with the brush, which had secured already a corner in my affections; and I commenced reading the law for a profession, under the direction of Reeve and Gould, of Connecticut. I attended the lectures of these learned judges for two years -- was admitted to the bar -- and practiced the law, as a sort of Nimrodical lawyer, in my native land, for the term of two or three years; when I very deliberately sold my law library and all (save my ride and fishing-tackle), and converting their proceeds into brushes and paint pots; I commenced the art of painting in Philadelphia, without teacher or adviser.

I there closely applied my hand to the labors of the art for several years; during which time my mind was continually reaching for some branch or enterprise of the art, on which to devote a whole life-time of enthusiasm; when a delegation of some ten or fifteen noble and dignified-look-

ing Indians, from the wilds of the "Far West," suddenly arrived in the city, arrayed and equipped in all their classic beauty, -- with shield and helmet, -- with tunic and manteau, tinted and tasselled off, exactly for the painter's palette!

In silent and stoic dignity, these lords of the forest strutted about the city for a few days, wrapped in their pictured robes, with their brews plumed with quills of the war-eagle, attracting the gaze and admiration of all who beheld them. After this, they took their leave for Washington City, and I was left to reflect and regret, which I did long and deeply, until I came to the following deductions and conclusions.

Black and blue cloth and civilization are destined, not only to veil, but to obliterate the grace and beauty of Nature. Man, in the simplicity and loftiness of his nature, unrestrained and unfettered by the disguises of art, is surely the most beautiful model for the painter, -- and the country from which he hails is unquestionably the best study or school of the arts in the world: such I am sure, from the models I have seen, is the wilderness of North America. And the history and customs of such a people, preserved by pictorial illustrations, are themes worthy the life-time of one man, and nothing short of the loss of my life, shall prevent me from visiting their country, and of becoming their historian.

There was something inexpressibly delightful in the above resolve, which was to bring me amidst such living models for my brush; and at the same time, to place in my hands again, for my living and protection, the objects of my heart above-named; which had long been laid by to rust and decay in the city, without the remotest prospect of again contributing to my amusement.

I had fully resolved -- I opened my views to my friends and relations, but got not one advocate or abettor. I tried fairly and faithfully, but it was in vain to reason with those whose anxieties were ready to fabricate every difficulty and danger that could be imagined, without being able to understand or appreciate the extent or importance of my designs, and I broke from them all, -- from my wife and my aged parents, -- myself my only adviser and protector.

With these views firmly fixed--armed, equipped, and supplied, I started out in the year 1832, and penetrated the vast and pathless wilds which are familiarly denominated the great "Far West" of the North American Continent, with a light heart, inspired with an enthusiastic hope and reliance that I could meet and overcome all the hazards and privations of a life devoted to the production of a literal and graphic delineation of the living manners, customs, and character of an interesting race of people, who are rapidly passing away from the face of the earth--lending a hand to a dying nation, who have no historians or biographers of their own to portray with fidelity their native looks and history; thus snatching from a hasty oblivion what could be saved for the benefit of posterity, and perpetuating it, as a fair and just monument, to the memory of a truly lofty and noble race.

I have spent about eight years already in the pursuit above-named, having been for the most of that time immersed in the Indian country, mingling with red men, and identifying myself with them as much as possible, in their games and amusements; in order the better to familiarize myself with their superstitions and mysteries, which are the keys to Indian life and character.

It was during the several years of my life just mentioned, and whilst I was in familiar participation with them in their sports and amusements, that I penned the following series of epistles; describing only such glowing or curious scenes and events as passed under my immediate observation; leaving their early history, and many of their traditions, language, &c. for a subsequent and much

more elaborate work, for which I have procured the materials, and which I may eventually publish.

I set out on my arduous and perilous undertaking with the determination of reaching, ultimately, every tribe of Indians on the Continent of North America, and of bringing home faithful portraits of their principal personages, both men and women, from each tribe; views of their villages, games, &c. and full notes on their character and history. I designed, also, to procure their costumes, and a complete collection of their manufactures and weapons, and to perpetuate them in a Gallery unique, for the use and instruction of future ages.

I claim whatever merit there may have been in the originality of such a design, as I was undoubtedly the first artist who ever set out upon such a work, designing to carry his canvass to the Rocky Mountains; and a considerable part of the following Letters were written and published in the New York Papers, as early as the years 1832 and 1833; long before the Tours of Washington Irving, and several others, whose interesting narratives are before the world.

I have, as yet, by no means visited all the tribes; but I have progressed a very great way with the enterprise, and with far greater and more complete success than I expected.

I have visited forty-eight different tribes, the greater part of which I found speaking different languages, and containing in all 400,000 souls. I have brought home safe, and in good order, 310 portraits in oil, all painted in their native dress, and in their own wigwams; and also 200 other paintings in oil, containing views of their villages -- their wigwams -- their games -- religious ceremonies -- their dances -- their ball plays -- their buffalo hunting, and other amusements (containing in all, over 3000 full-length figures); and the landscapes of the country they live in, as well as a very extensive and curious collection of their costumes, and all their other manufactures, from the size of a wigwam down to the size of a quill or a rattle.

A considerable part of the above-named paintings, and Indian manufactures, will be found amongst the very numerous illustrations in the following pages; having been, in every instance, faithfully copied and reduced by my own hand, for the engraver, from my original paintings; and the reader of this book who will take the pains to step in to "CATLIN'S NORTH AMERICAN INDIAN GALLERY", Will find nearly every scene and custom which is described in this work, as well as many others, carefully and correctly delineated, and displayed upon the walls, and every weapon (and every "Sachem" and every "Sagamore" who has wielded them) according to the tenor of the tales herein recited.

So much of myself and of my works, which is all that I wish to say at present.

Of the Indians, I have much more to say, and to the following delineations of them, and their character and customs, I shall make no further apology for requesting the attention of my readers.

The Indians (as I shall call them), the savages or red men of the forests and prairies of North America, are at this time a subject of great interest and some importance to the civilized world; rendered more particularly so in this age, from their relative position to, and their rapid declension from, the civilized nations of the earth. A numerous nation of human beings, whose origin is beyond the reach of human investigation -- whose early history is lost -- whose term of national existence is nearly expired--three-fourths of. whose country has fallen into the possession of civilized man within the short space of 250 years -- twelve millions of whose bodies have fattened the soil in the mean time; who have fallen victims to whiskey, the small-pox and the bayonet; leaving at this time but a meager proportion to live a shore time longer, in the certain apprehension of

soon sharing a similar fate.

The writer who would undertake to embody the whole history of such a people, with all their misfortunes and calamities, must needs have much more space than I have allotted to this epitome; and he must needs begin also (as I am doing) with those who are living, or he would be very apt to dwell upon the preamble of his work, until the present living remnants of the race should have passed away; and their existence and customs, like those of ages gone by, become subjects of doubt and incredulity to the world for whom his book was preparing. Such an historian also, to do them justice, must needs correct many theories and opinions which have, either ignorantly or maliciously, gone forth to the world in indelible characters; and gather and arrange a vast deal which has been but imperfectly recorded, or placed to the credit of a people who have not had the means of recording it themselves; but have entrusted it, from necessity, to the honesty and punctuality of their enemies.

In such an history should be embodied, also, a correct account of their treatment, and the causes which have led to their rapid destruction; and a plain and systematical prophecy as to the time and manner of their final extinction, based upon the causes and the ratio of their former and present declension.

So Herculean a task may fall to my lot at a future period, or it may not: but I send forth these volumes at this time, fresh and full of their living deeds and customs, as a familiar and unstudied introduction (at least) to them and their native character; which I confidently hope will repay the readers who read for information and historical facts, as well as those who read but for amusement.

The world know generally, that the Indians of North America are copper coloured; that their eyes and their hair are black, &c.; that they are mostly uncivilized, and consequently un-Christianized; that they are nevertheless human beings, with features, thoughts, reason, and sympathies like our own; but few yet know how they live, how they dress, how they worship, what are their actions, their customs: their religion, their amusements, &c. as they practice them in the uncivilized regions of their uninvited country, which it is the main object of this work, clearly and distinctly to set forth.

It would be impossible at the same time, in a book of these dimensions, to explain all the manners and customs of these people; but as far as they are narrated, they have been described by my pen, upon the spot, as I have seen them transacted; and if some few of my narrations should seem a little too highly coloured I trust the world will be ready to extend to me that pardon which it is customary to Yield to all artists whose main faults exist in the vividness of their colouring, rather than in the drawing of their pictures; but there is nothing else in them, I think, that I should ask pardon for, even though some of them should stagger credulity, and incur for me the censure of those critics, who sometimes, unthinkingly or unmercifully, sit at home at their desks, enjoying the luxury of wine and a good cigar, over the simple narration of the honest and weather-worn traveler (who shortens his half-starved life in catering for the world), to condemn him and his work to oblivion, and his wife and his little children to poverty and starvation; merely because he describes scenes which they have not beheld, and which, consequently, they are unable to believe. The Indians of North America, as I have before said, are copper-coloured, with long black hair, black eyes, tall, straight, and elastic forms -- are less than two millions in number -- were originally the undisputed owners of the soil, and got their title to their lands from the Great Spirit

who created them on it, -- were once a happy and flourishing people, enjoying all the comforts and luxuries of life which they knew of, and consequently cared for: -- were sixteen millions in numbers, and sent that number of daily prayers to the Almighty, and thanks for his goodness and protection. Their country was entered by white men, but a few hundred years since; and thirty millions of these are now scuffling for the goods and luxuries of life, over the bones and ashes of twelve millions of red men; six millions of whom have fallen victims to the small-pox, and the remainder to the sword, the bayonet, and whiskey; all of which means of their death and destruction have been introduced and visited upon them by acquisitive white men; and by white men, also, whose forefathers were welcomed and embraced in the land where the poor Indian met and fed them with ears of green corn and with pemican." Of the two millions remaining alive at this time, about 1,400,000, are already the miserable living victims and dupes of white man's cupidity degraded, discouraged and lost in the bewildering maze that is produced by little use of whiskey and its concomitant vices; and the remaining number are yet unroused and unenticed from their wild haunts or their primitive modes, by the dread or love of white man and his allurements. It has been with these, mostly, that I have spent my time, and of these, chiefly, and their customs, that the following Letters treat. Their habits (and their's alone) as we can see them transacted, are native, and such as I have wished to fix and preserve for future ages.

Of the dead, and of those who are dying, of those who have suffered death, and of those who are now trodden and kicked through it, I may speak more fully in some deductions at the close of this book; or at some future time, when I may find more leisure, and may be able to speak of these scenes without giving offence to the world, or to any body in it.

Such a portrait then as I have set forth in the following pages (taken by myself from the free and vivid realities of life, instead of the vague and uncertain imagery of recollection, or from the haggard deformities and distortions of disease and death), I offer to the world for their amusement, as well as for their information; and I trust they will pardon me, if it should be thought that I have over-estimated the Indian character, or at other times descended too much into the details and minutiae of Indian mysteries and absurdities.

The reader, then, to understand me rightly, and draw from these Letters the information which they are intended to give, must follow me a vast way from the civilized world; he must needs wend his way from the city of New York, over the Allegheny, and far beyond the mighty Missouri, and even to the base and summit of the Rocky Mountains, some two or three thousand miles from the Atlantic coast. He should forget many theories he has read in the books of Indian barbarities, of wanton butcheries and murders; and divest himself, as far as possible of the deadly prejudices which he has carried from his childhood, against this most unfortunate and most abused part of the race of his fellow man.

He should consider, that if he has seen the savages of North America without making such a tour, he has fixed his eyes upon and drawn his conclusions (in all probability) only from those who inhabit the Frontier; whose habits have been changed -- whose pride has been cut down -- whose country has been ransacked--whose wives and daughters have been shamefully abused--whose lands have been wrested from them -- whose limbs have become enervated and naked by the excessive use of whiskey -- whose friends and relations have been prematurely thrown into their graves -- whose native pride and dignity have at last given way to the unnatural vices which civilized cupidity has engrafted upon them, to be silently nurtured and magnified by a burning sense

of injury and injustice, and ready for that cruel vengeance which often falls from the hand that is palsied by refined abuses, and yet unrestrained by the glorious influences of refined and moral cultivation. That if he has laid up what he considers well-founded knowledge of these people, from books which he has read, and from newspapers only, he should pause at least, and withhold his sentence before he passes it upon the character of a people, who are dying at the hands of their enemies, without the means of recording their own annals -- struggling in their nakedness with their simple weapons, against guns and gunpowder -- against whiskey and steel, and disease, and mailed warriors who are continually trampling them to the earth, and at last exultingly promulgating from the very soil which they have wrested from the poor savage, the history of his cruelties and barbarities, whilst his bones are quietly resting under the very furrows which their ploughs are turning.

So great and unfortunate are the disparities between savage and civil, in numbers-in weapons and defenses -- in enterprise, in craft, and in education, that the former is almost universally the sufferer either in peace or in war; and not less so after his pipe and his tomahawk have retired to the grave with him, and his character is left to be entered upon the pages of history, and that justice done to his memory which from necessity, he has intrusted to his enemy.

Amongst the numerous historians, however, of these strange people, they have had some friends who have done them justice; yet as a part of all systems of Justice whenever it is meted to the poor Indian, it comes invariably too late, or is administered at an ineffectual distance; and that too when his enemies are continually about him, and effectually applying the means of his destruction.

Some writers, I have been grieved to see, have written down the character of the North American Indian, as dark, relentless, cruel and murderous in the last degree; with scarce a quality to stamp their existence of a higher order than that of the brutes: -- whilst others have given them a high rank, as I feel myself authorized to do, as honorable and highly-intellectual beings; and others, both friends and foes to the red men, have spoken of them as an "anomaly in nature"!

In this place I have no time or inclination to reply to so unaccountable an assertion as this; contenting myself with the belief, that the term would be far more correctly applied to that part of the human family who have strayed farthest from nature, than it could be to those who are simply moving in, and filling the sphere for which they were designed by the Great Spirit who made them,

From what I have seen of these people I feel authorized to say, that there is nothing very strange or unaccountable in their character; but that it is a simple one, and easy to be learned and understood, if the right means be taken to familiarize ourselves with it. Although it has its dark spots, yet there is much in it to be applauded, and much to recommend it to the admiration of the enlightened world. And I trust that the reader, who looks through these volumes with care, will be disposed to join me in the conclusion that the North American Indian in his native state, is an honest, hospitable, faithful, brave, warlike, cruel, revengeful, relentless, -- yet honorable, contemplative and religious being.

If such be the case, I am sure there is enough in it to recommend it to the fair perusal of the world, and charity enough ill all civilized countries, in this enlightened are to extend a helping hand to a dying race; provided that prejudice and fear can be removed, which have heretofore constantly held the civilized portions in dread of the savage -- and away from that similar and

friendly embrace, in which alone his true native character can be justly appreciated.

I am fully convinced, from a long familiarity with these people, that the Indian's misfortune has consisted chiefly in our ignorance of their true native character and disposition, which has always held us at a distrustful distance from them; inducing us to look upon them in no other light than that of a hostile foe, and worthy only of that system of continued warfare and abuse that has been for ever waged against them.

There is no difficulty in approaching the Indian and getting acquainted with him in his wild and unsophisticated state, and finding him an honest and honorable man; with feelings to meet feelings, if the above prejudice and dread can be laid aside, and any one will take the pains, as I have done, to go and see him in the simplicity of his native state, smoking his pipe under his own humble roof, with his wife and children around him, and his faithful dogs and horses hanging about his hospitable tenement. So the world may see him and smoke his friendly pipe, which will be invariably extended to them; and share, with a hearty welcome, the best that his wigwam affords for the appetite, which is always set out to a stranger the next moment after he enters.

But so the mass of the world, most assuredly, will not see these people; for they are too far off, and approachable to those only whose avarice or cupidity alone lead them to those remote regions, and whose shame prevents them from publishing to the world the virtues which they have thrown down and trampled under foot.

The very use of the word savage, as it is applied in its general sense, I am inclined to believe is an abuse of the word, and the people to whom it is applied. The word, in its true definition, means no more than wild, or wild man; and a wild man may have been endowed by His Maker with all the humane and noble traits that inhabit the heart of a tame man. Our Ignorance and dread or fear of these people, therefore, have given a new definition to the adjective; and nearly the whole civilized world apply the word savage, as expressive of the most ferocious, cruel, and murderous character that can be described.

The grizzly bear is called savage, because he is blood-thirsty, ravenous and cruel; and so is the tiger, and they, like the poor red man, have been feared and dreaded (from the distance at which ignorance and prejudice have kept us from them, or from resented abuses which we have practiced when we have come in close contact with them), until Van Amburgh shewed the world, that even these ferocious and unreasoning animals wanted only the friendship and close embrace of their master, to respect and to love him.

As evidence of the hospitality of these ignorant and benighted people, and also of their honesty and honor, there will be found recorded many striking instances in the following pages. And also, as an offset to these, many evidences of the dark and cruel, as well as ignorant and disgusting excesses of passions, unrestrained by the salutary influences of laws and Christianity.

I have roamed about from time to time during seven or eight years, visiting and associating with, some three or four hundred thousand of these People, under an almost infinite variety of circumstances; and from the very many and decided voluntary acts of their hospitality and kindness, I feel bound to pronounce them, by nature, a kind and hospitable people. I have been welcomed generally in their country, and treated to the best that they could give me, without any charges made for my board; they have often escorted me through their enemies' country at some hazard to their own lives, and aided me in passing mountains and rivers with my awkward baggage; and under all of these circumstances of exposure, no Indian ever betrayed me, struck me a blow, or

stole from me a shilling's worth of my property that I am aware of.

This is saying a great deal, (and proving it too, if the reader will believe me) in favour of the virtues of these people; when it is borne in mind, as it should be, that there is no law in their land to punish a man for theft -- that locks and keys are not known in their country -- that the commandments have never been divulged amongst them; nor can any human retribution fail upon the head of a thief, save the disgrace which attaches as a stigma to his character, in the eyes of his people about him.

And thus in these little communities, strange as it may seem, in the absence of all systems of jurisprudence, I have often beheld peace and happiness, and quiet, reigning supreme, for which even kings and emperors might envy them. I have seen rights and virtue protected, and wrongs redressed; and I have seen conjugal, filial and paternal affection in the simplicity and contentedness of nature. I have unavoidably, formed warm and enduring attachments to some of these men which I do not wish to forget -- who have brought me near to their hearts, and in our final separation have embraced me in their arms, and commended me and my affairs to the keeping of the Great Spirit.

For the above reasons, the reader will be disposed to forgive me for dwelling so long and so strong on the justness of the claims of these people; and for my occasional expressions of sadness, when my heart bleeds for the fate that awaits the remainder of their unlucky race; which is long to be outlived by the rocks, by the beasts, and even birds and reptiles of the country they live in; -- set upon by their fellow-man, whose cupidity, it is feared, will fix no bounds to the Indian's earthly calamity, short of the grave.

I cannot help but repeat, before I close this Letter, that the tribes of the red men of North America, as a nation of human beings, are on their wane; that (to use their own very beautiful figure) "they are fast traveling to the shades of their fathers, towards the setting sun"; and that the traveler who would see these people in their native simplicity and beauty, must needs be hastily on his way to the prairies and Rocky Mountains, or he will see them only as they are now sees on the frontiers, as a basket of dead game, -- harassed, chased, bleeding and dead; with their plumage and colours despoiled; to be gazed amongst in vain for some system or moral, or for some scale by which to estimate their true native character, other than that which has too often recorded them but a dark and unintelligible mass of cruelty and barbarity.

Without further comments I close this Letter, introducing my readers at once to the heart of the Indian country, only asking their forgiveness for having made it so long, and their patience whilst traveling through the following pages (as I journeyed through those remote realms) in search of information and rational amusement; in tracing out the true character of that "strange anomaly" of man in the simple elements of his nature, undissolved or compounded into the mysteries of enlightened and fashionable life.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

LETTER No. 2.

MOUTH OF YELLOWSTONE, UPPER MISSOURI, 1838.

I arrived at this place yesterday on the steamer "Yellow Stone," after a voyage of nearly three months from St. Louis, a distance of two thousand miles, the greater part of which has never before been navigated by steam ; and the almost insurmountable difficulties which continually oppose the voyageur on this turbid stream, have been by degrees overcome by the indefatigable zeal of Mr. Chouteau, a gentleman of great perseverance, and part proprietor of the boat. To the politeness of this gentleman I am indebted for my passage from St. Louis to this place, and I had also the pleasure of his company, with that of Major Sanford, the government agent for the Missouri Indians.

The American Fur Company have erected here, for their protection against the savages, a very substantial Fort, 300 feet square, with bastions armed with ordnance; and our approach to it under the continued roar of cannon for half an hour, and the shrill yells of the half-affrighted savages who lined the shores, presented a scene of the most thrilling and picturesque appearance. A voyage so full of incident, and furnishing so many novel scenes of the picturesque and romantic, as we have passed the numerous villages of the "astonished natives", saluting them with the puffing of steam and the thunder of artillery, would afford subject for many epistles; and I cannot deny myself the pleasure of occasionally giving you some little sketches of scenes that I have witnessed, and am witnessing; and of the singular feelings that are excited in the breast of the stranger traveling through this interesting country. Interesting (as I have said) and luxurious, for this is truly the land of Epicures; we are invited by the savages to feasts of dog's meat, as the most honorable food that can be presented to a stranger, and glutted with the more delicious food of beaver tails, and buffaloe tongues. You will, no doubt, be somewhat surprised on the receipt of a Letter from me, so far strayed into the Western World; and still more startled, when I tell you that I am here in the full enthusiasm and practice of my art. That enthusiasm alone has brought me into this remote region, 3500 miles from my native soil; the last 2000 of which have furnished me with almost unlimited models, both in landscape and the human figure, exactly suited to my feelings. I am now in the full possession and enjoyments of Ghose conditions, on which alone I was induced to Pursue the art as a Profession; and in anticipation of which alone, my admiration for the art could ever have been kindled into a pure flame. I mean the free use of nature's undisguised models, with the privilege of selecting for myself. If I am here losing the benefit of the fleeting fashions of the day, and neglecting that elegant polish, which the world say an artist should draw from a continual intercourse with the polite world; yet have I this consolation, that in this country, I am entirely divested of those dangerous steps and allurements which beset an artist in fashionable life; and have little to steal my thoughts away from the contemplation of the beautiful models that are about me. If, also, I have not here the benefit of that feeling of emulation, which is the life and spur to the arts, where artists are associates together; yet am I surrounded by living models

---

of such elegance and beauty, that I feel an unceasing excitement of a much higher order -- the certainty that I am drawing knowledge from the true source. My enthusiastic admiration of man in the honest and elegant simplicity of nature, has always fed the warmest feelings of my bosom, and shut half the avenues to my heart against the specious refinements of the accomplished world. This feeling, together with the desire to study my art, independently of the embarrassments which the ridiculous fashions of civilized society have thrown in its way, has led me to the wilderness for a while, as the true school of the arts.

I have for a long time been of opinion, that the wilderness of our country afforded models equal to those from which the Grecian sculptors transferred to the marble such inimitable grace and beauty; and I am now more confirmed in this opinion, since I have immersed myself in the midst of thousands and tens of thousands of these knights of the forest; whose whole lives are lives of chivalry, and whose daily feats, with their naked limbs, might vie with those of the Grecian youths in the beautiful rivalry of the Olympian games.

No man's imagination, with all the aids of description that can be given to it, can ever picture the beauty and wildness of scenes that may be daily witnessed in this romantic country; of hundreds of these graceful youths, without a care to wrinkle, or a fear to disturb the full expression of pleasure and enjoyment that beams upon their faces -- their long black hair mingling with their horses' tails, floating in the wind, while they are flying over the carpeted prairie, and dealing death with their spears and arrows, to a band of infuriated buffaloes; or their splendid procession in a war-parade, arrayed in all their gorgeous colours and trappings, moving with most exquisite grace and manly beauty, added to that bold defiance which man carries on his front, who acknowledges no superior on earth, and who is amenable to no laws except the laws of God and honour.

In addition to the knowledge of human nature and of my art, which I hope to acquire by this toilsome and expensive undertaking, I have another in view, which, if it should not be of equal service to me, will be of no less interest and value to posterity. I have, for many years past, contemplated the noble races of red men who are now spread over these trackless forests and boundless prairies, melting away at the approach of civilization. Their rights invaded, their morals corrupted, their lands wrested from them, their customs changed, and therefore lost to the world; and they at last sunk into the earth, and the ploughshare turning the sod over their graves, and I have flown to their rescue--not of their lives or of their race (for they are "doomed" and must perish), but to the rescue of their looks and their modes, at which the acquisitive world may hurl their poison and every besom of destruction, and trample them down and crush them to death; yet, phoenix-like, they may rise from the "stain on a painter's palette," and live again upon canvass, and stand forth for centuries yet to come, the living monuments of a noble race. For this purpose, I have designed to visit every tribe of Indians on the Continent, if my life should be spared; for the purpose of procuring portraits of distinguished Indians, of both sexes in each tribe, painted in their native costume; accompanied with pictures of their villages, domestic habits, games, mysteries, religious ceremonies, &c. with anecdotes, traditions, and history of their respective nations. If I should live to accomplish my design, the result of my labours will doubtless be interesting to future ages; who will have little else left from which to judge of the original inhabitants of this simple race of beings, who require but a few years more of the march of civilization and death, to deprive them of all their native customs and character. I have been kindly supplied by the, Commander-in-Chief of the Army and the Secretary of War, with letters to the commander of every

---

military post, and every Indian agent on the Western Frontier, with instructions to render me all the facilities in their power, which will be of great service to me in so arduous an undertaking. The opportunity afforded me by familiarity with so many tribes of human beings in the simplicity of nature, devoid of the deformities of art; of drawing fair conclusions in the interesting sciences of physiognomy and phrenology; of..... and customs, rites, ceremonies, &c.; and the opportunity of examining the geology and mineralogy of this western, and yet unexplored country, will enable me occasionally to entertain you with much new and interesting information, which I shall take equal pleasure in communicating by an occasional Letter in my clumsy way.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

---

LETTER -- No. 3.

MOUTH OF YELLOW STONE, UPPER, MISSOURI.

Since the date of my former Letter, I have been so much engaged in the amusements of the country, and the use of my brush, that I have scarcely been able to drop you a line until the present moment.

Before I let you into the amusements and customs of this delightful country however, (and which, as yet, are secrets to most of the world), I must hastily travel with you over the tedious journey of 2000 miles, from St. Louis to this place; over which distance one is obliged to pass, before I can reach this wild and lovely spot.

The Missouri is, perhaps, different in appearance and character from all other rivers in the world; there is a terror in its manner which is sensibly felt, the moment we enter its muddy waters from the Mississippi. From the mouth of the Yellow Stone river, which is the place from whence I am now writing, to its junction with the Mississippi, a distance of 2000 miles, the Missouri, with its boiling, turbid waters, sweeps off, is one unceasing current; and in the whole distance there is scarcely an eddy or resting-place for a canoe. Owing to the continual falling in of its rich alluvial banks, its water is always turbid and opaque; having, at all seasons of the year, the colour of a cup of chocolate or coffee, with sugar and cream stirred into it. To give a better definition of its density and opacity, I have tried a number of simple experiments with it at this place, and at other points below, at the results of which I was exceedingly surprised. By placing a piece of silver (and afterwards a piece of shell, which is a much whiter substance) in a tumbler of its water, and looking through the side of the glass, I ascertained that those substances could not be seen through the eighth part of an inch; this, however, is in the spring of the year, when the freshet is upon the river, rendering the water, undoubtedly, much more turbid than it would be at other seasons; though it is always muddy and yellow, and from its boiling and wild character and uncommon colour, a stranger would think, even in its lowest state, that there was a freshet upon it.

For the distance of 1000 miles above St. Louis, the shores of this river (and, in many places, the whole bed of the stream) are filled with snags and raft, formed of trees of the largest size, which have been undermined by the falling banks and cast into the stream; their roots becoming fastened in the bottom of the river, with their tops floating on the surface of the water, and pointing down the stream, forming the most frightful and discouraging prospect for the adventurous voyageur. Almost every island and sand-bar is covered with huge piles of these floating trees, and when the river is flooded, its surface is almost literally covered with floating raft and drift wood which bid positive defiance to keel-boats and steamers, on their way up the river.

With what propriety this "Hell of waters" might be denominated the river "Styx", I will not undertake to decide; but nothing could be more appropriate or innocent than to call it the river of Sticks.

The scene is not, however, all so dreary; there is a redeeming beauty in the green and carpeted

---

shores, which hem In this huge and terrible deformity of waters. There is much of the way though, were the mighty forests of stately cotton wood stand, and frown in horrid dark and coolness over the filthy abyss below; into which they are ready to plunge headlong, when the mud and soil in which they were germed and reared have been washed out from underneath them, and with the rolling current ale mixed, anti oil their way to the ocean.

The greater part of the shores of this liver, however, are without timber, where the eye is delightfully relieved by wandering over the beautiful prairies; most of the way gracefully sloping down to the water's edge, carpeted with the deepest green, and, in distance, softening into velvet of the richest hues, entirely beyond the reach of the artist's pencil. Such is the character of the upper part of the river especially; and as one advances towards its source, and through its upper half, it becomes more pleasing to the eye, for snags and raft are no longer to be seen; yet the current holds its stiff and onward turbid character.

It has been, heretofore, very erroneously represented to the world, that the scenery on the river was monotonous, and wanting in picturesque beauty. This intelligence is surely incorrect, and that because it has been brought perhaps, by men who ale not the best judges in the world, of nature's beautiful works; and if they were, they always pass them by, in pain or desperate distress, in toil and trembling fear for the safety or their furs and peltries, or fur their lives, which are at the mercy of the yelling savages who, inhabit this delightful county.

One thousand miles or more of the upper part of the river, was, to my eye, like fairy-land; and during our transit through that part of our voyage, I was most of the time riveted to the deck of the boat, indulging my eyes in the boundless and tireless pleasure of roaming over the thousand hills, and bluffs, and dales, and ravines; where the astonished herds of buffaloes, of elks, and antelopes, and sneaking wolves, and mountain-goats, were to be seen bounding up and down and over the green fields; each one and each tribe, band, and gang, taking their own way, and using their own means to the greatest advantage possible, to leave the sight and sound of the puffing of our boat; which was, for the first time, saluting the green and wild shores of the Missouri with the din of mighty steam.

From St. Louis to the falls of the Missouri, a distance of 2600 miles, is one continued prairie; with the exception of a few of the bottoms formed along the bank of the river, and the streams which are falling into it, which are often covered with the most luxuriant growth of forest timber.

The summit level of the great prairies stretching off to the west and the east from the river, to an almost boundless extent, is from two to three hundred feet above the level of the river; which has formed a bed or valley for its course, varying in width from two to twenty miles. This channel or valley has been evidently produced by the force of the current, which has gradually excavated, in its floods and gorges, this immense space, and sent its debris into the ocean. By the continual overflowing of the river, its deposits have been lodged and left with a horizontal surface, spreading the deepest and richest alluvion over the surface of its meadows on either side; through which the river winds its serpentine course, alternately running from one bluff to the other, which present themselves to its shores in all the most Picturesque and beautiful shapes and colours imaginable--some with their green sides gracefully slope down in the most lovely groups to the water's edge; Whilst others, divested of their verdure, present themselves in Immense masses of clay of different colours, which arrest the eye of the traveler, with the most curious views is the world.

These strange and picturesque appearances have been produced by the rains and frosts, which are

continually changing the dimensions, and varying the thousand shapes of these denuded hills, by washing down their sides and carrying them into the river.

Amongst these groups maybe seen tens and hundreds of thousands of different forms and figures, of the sublime and the picturesque; in many places for miles together, as the boat glides along, there is one continued appearance, before and behind us, of some ancient and boundless city in ruins -- ramparts, terraces, domes, towers, citadels and castles may be seen -- cupolas, and magnificent porticoes, and here and there a solitary column and crumbling pedestal, and even spires of clay which stand alone -- and glistening in distance, as the sun's rays are refracted back by the thousand crystals of gypsum which are imbedded in the clay of which they are formed. Over and through these groups of domes and battlements (as one is compelled to imagine them), the sun sends his long and gilding rays, at morn or in the evening; giving life and light, by aid of shadows cast, to the different glowing colours of these clay-built ruins; shedding a glory over the solitude of this wild and pictured country, which no one can realize unless he travels here and looks upon it.

It is amidst these wild and quiet haunts that the mountain-sheep, and the fleet-bounding antelope sport and live in herds, secure from their enemies, to whom the sides and slopes of these bluffs (around which they fearlessly bound) are nearly inaccessible.

The grizzly bear also has chosen these places for his abode; he sullenly sneaks through the gulphs and chasms, and ravines, and frowns away the lurking Indian; whilst the mountain-sheep and antelope are bounding over and around the hill tops, safe and free from harm of man and beast. Such is a hasty sketch of the river scenes and scenery for 2000 miles, over which we tugged, and puffed, and blowed, and toiled for three months, before we reached this place. Since we arrived here, the steamer has returned and left me here to explore the country and visit the tribes in this vicinity, and then descend the river from this place to St. Louis; which Tour, if I live through it, will furnish material for many a story and curious incident, which I may give you in detail in future epistles, and when I have more leisure than I have at the present moment. I will then undertake to tell how we astonished the natives, in many an instance, which I can in this Letter but just hint at and say adieu. If anything did ever literally and completely "astonish (and astound) the natives", it was the appearance of our steamer, puffing and blowing, and paddling and rushing by their villages which were on the banks of the liver.

These poor and ignorant people for the distance of 2000 miles, had never before seen or heard of a steam-boat, and in some places they seemed at a loss to know what to do, or how to act; they could not, as the Dutch did at Newburgh, on the Hudson River, take it to be a "floating saw-mill" -- and they had no name for it -- so it was, like every thing else (with them), which is mysterious and unaccountable, called medicine (mystery). We had on board one twelve-pound cannon and three or four eight-pound swivels, which we were taking up to arm the Fur Company's Fort at the mouth of Yellow Stone; and at the approach to every village they were all discharged several times in rapid succession, which threw the inhabitants into utter confusion and amazement -- some of them laid their faces to the ground, and cried to the Great Spirit -- some shot their horses and dogs, and sacrificed them to appease the Great Spirit, whom they conceived was offended -- some deserted their villages and ran to the tops of the bluffs some miles distant; and others, in some places, as the boat landed in front of their villages, came with great caution, and peeped over the bank of the river to see the fate of their chiefs, whose duty it was (from the nature of their of-

face) to approach us, whether friends or foes, and to go on board. Sometimes, in this plight, they were instantly thrown 'neck and heels' over each other's heads and shoulders -- men, women and children, and dogs-sage, sachem, old and young -- all in a mass, at the frightful discharge of the steam from the escape-pipe, which the captain of the boat let loose upon them for his own fun and amusement.

There were many curious conjectures amongst their wise men, with regard to the nature and powers of the steam-boat. Amongst the Mandans, some called it the "big thunder canoe"; for when in distance below the village, they saw the lightning flash from its sides, and heard the thunder come from it; others called it the "big medicine canoe with eyes"; it was medicine (mystery) because they could not understand it; and it must have eyes, for said they, "it sees its own way, and takes the deep water in the middle of the channel." They had no idea of the boat being steered by the man at the wheel, and well they might have been astonished at its taking the deepest water. I may (if I do not forget it) hereafter give you an account of some other curious incidents of this kind, which we met with in this voyage; for we met many, and some of them were really laughable.

The Fort in which I am residing was built by Mr. McKenzie, who now occupies it. It is the largest and best-built establishment of the kind on the river, being the great or principal head-quarters and depot of the Fur Company's business in this region. A vast stock of goods is kept on hand at this place; and at certain times of the year the numerous out-posts concentrate here with the returns of their season's trade, and refit out with a fresh supply of goods to trade with the Indians. The site for the Fort is well selected, being a beautiful prairie on the bank near the junction of the Missouri with the Yellow Stone rivers; and its inmates and its stores well protected from Indian assaults.

Mr. McKenzie is a kind-hearted and high-minded Scotchman; and seems to have charge of all the Fur Companies' business in this region, and from this to the Rocky Mountains. He lives in good and comfortable style, inside of the Fort, which contains some eight or ten log-houses and stores, and has generally forty or fifty men, and one hundred and fifty horses about him.

He has, with the same spirit of liberality and politeness with which Mons. Pierre Chouteau treated me on my passage up the river, pronounced me welcome at his table, which groans under the luxuries of the country; with buffaloe meat and tongues, with beavers' tails and marrow-fat; but sans coffee, sans bread and butter. Good cheer and good living we get at it however, and good wine also; for a bottle of Madeira and one of excellent Port are set in a pail of ice every day, and exhausted at dinner.

At the hospitable board of this gentleman I found also another, who forms a happy companion for mine host; and whose intellectual and polished society has added not a little to my pleasure and amusement since I arrived here.

The gentleman of whom I am speaking is an Englishman, by the name of Hamilton, of the most pleasing and entertaining conversation, whose mind seems to be a complete store-house of ancient and modern literature and art; and whose free and familiar acquaintance with the manners and men of his country gives him the stamp of a gentleman, who has had the curiosity to bring the embellishments of the enlightened world, to contrast with the rude and the wild of these remote regions.

We three bons vivants form the group about the dinner-table, of which I have before spoken, and crack our jokes and fun over the bottles of Port and Madeira, which I have named; and a con-

siderable part of which, this gentleman has brought with great and precious care from his own country.

This post is the general rendezvous of a great number of Indian tribes in these regions, who are continually concentrating here for the purpose of trade; sometimes calling, the whole tribe together, in a mass. There are now here, and encamped about the Fort, a great many, and I am continually at work with my brush; we have around us at this time the Knisteneaux, Crows, Assinneboins and Blackfeet, and in a few days are to have large accessions.

The finest specimens of Indians on the Continent are in these regions; and before I leave these parts, I shall make excursions into their respective countries, to their own native fire-sides; and there study their looks and peculiar customs; enabling me to drop you now and then an interesting Letter. The tribes which I shall be enabled to see and study by my visit to this region, are the Ojibbeways, the Assinneboins, Knisteneaux, Blackfeet, Crows, Shiennes, Grosventres, Mandans, and others; of whom and their customs, their history, traditions, costumes, &C., I shall in due season, you further and minute accounts.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

LETTER--No. 4.

MOUTH OF THE YELLOWSTONE.

The several tribes of Indians inhabiting the regions of the Upper Missouri, and of whom I spoke in my last Letter, are undoubtedly the finest looking, best equipped, and most beautifully costumed of any on the Continent. They live in a country well-stocked with buffaloes and wild horses, which furnish them an excellent and easy living; their atmosphere is pure, which produces good health and long life; and they are the most independent and the happiest races of Indians I have met with: they are all entirely in a state of primitive wildness, and consequently are picturesque and handsome, almost beyond description. Nothing in the world, of its kind, can possibly surpass in beauty and grace, some of their games and amusements -- their gambols and parades, of which I shall speak and paint hereafter.

As far as my travels have yet led me into the Indian country, I have more than realized my former predictions that those Indians who could be found most entirely in a state of nature, with the least knowledge of civilized society, would be found to be the most cleanly in their persons, elegant in their dress and manners, and enjoying life to the greatest perfection. Of such tribes, perhaps the Crows and Blackfeet stand first; and no one would be able to appreciate the richness and elegance (and even taste of), with which some of these people dress, without seeing them in their own country. I will do all I can, however, to make their looks as well as customs known to the world; I will paint with my brush and scribble with my pen, and bring their plumes and plumage, dresses, weapons, &c., and every thing but the Indian himself, to prove to the world the assertions which I have made above.

Every one of these red sons of the forest (or rather of the prairie) is a knight and lord -- his squaws are his slaves; the only things which he deems worthy of his exertions are to mount his snorting steed, with his bow and quiver slung, his shield upon his arm, and his long lance glistening in the war-parade; or, divested of all his plumes and trappings, armed with a simple bow and quiver, to plunge his steed amongst the flying herds of buffaloes, and with his sinewy bow, which he seldom bends in vain, to drive deep to life's fountain the whizzing arrow.

The buffalo herds, which graze in almost countless numbers on these beautiful prairies, afford them an abundance of meat; and so much is it preferred to all other, that the deer, the elk, and the antelope sport upon the prairies in herds in the greatest security; as the Indians seldom kill them, unless they want their shins for a dress. Tilt: buffalo (or more correctly speaking bison) is a noble animal, that roams over the vast prairies, from the borders of Mexico on the south, to Pludson's Bay on the north. Their size is somewhat above that of our common beef, and their flesh of a delicious flavor, resembling and equaling that of fit beef. Their flesh which is easily procured, furnishes the savages of these vast regions the means of a wholesome and good subsistence, and they live: almost exclusively upon it -- converting the skins, horns, hoofs and bones, to the construction of dresses, shields, bows, &c. The buffalo bull is one of the most formidable and frightful looking an-

---

imals in the world when elicited to resistance; his long shaggy mane hangs in great profusion over His neck and shoulders, and often extends quite down to the ground. The cow is less in stature, and less ferocious; though not much less wild and frightful in her appearance.

The mode in which these Indians kill this noble animal is spirited and thrilling in the extreme; and I must in a future epistle, give you a minute account of it. I have almost daily accompanied parties of Indians to see the fun, and have often shared in it myself; but much oftener ran my horse by their sides, to see how the hunt was done--to study the modes and expressions of these splendid scenes, which I am enthusiastically putting on the canvas.

They are all (or nearly so) killed with arrows and the lance, while at full speed; and the reader may easily imagine, that these scenes after the most spirited and picturesque views of the sporting kind that can possibly be seen.

At present, I will give a little sketch of a hit of fun I joined in yesterday, with Mr. McKenzie and a number of his men without the company or aid of Indians.

I mentioned the other day, that McKinzie's table from day to day groans under the weight of buffalo tongues and beavers' tails, and other luxuries of this western land. He has within his Fort a spacious ice-house, where he preserves his meat fresh for any length of time required; and sometimes, when his larder runs low, he starts out, rallying some five or six of his best hunters (not to hunt, but to "go for meat"). He leads the party, mounted on his favorite buffalo horse (i.e. the horse amongst his whole group which is best trained to run the buffalo), trailing a light and short gun in his hand, such an one as he can most easily reload whilst his horse is at full speed.

Such was the condition of the ice-house yesterday morning which caused to cast their eyes with a wishful look over the prairies such was the plight in which our host took the lead, and I, and then Mons. Chardon, and Batiste Defonde and Tullock (who is a trader amongst the Crows, and is here at this time, with a large party of that tribe), and there were several others whose names I do not know.

As we were mounted and ready to start, McKenzie called up some four or five of his men, and told them to follow immediately on our trail, with as many one-horse carts, which they were to harness up, to bring home the meat; "ferry them across the river in the scow," said he, "and following our trail through the bottom, you will find us on the plain yonder, between the Yellow Stone and the Missouri rivers, with meat enough to load you home. My watch on Gender bluff has just told us by his signals, that there are cattle a plenty on that spot, and we are going there as fast as possible." We all crossed the river, and galloped away a couple of miles or so, when we mounted the bluff; and to be sure, as was said, there was in full view of us a fine herd of some four or five hundred buffaloes, perfectly at rest, and in their own estimation (probably) perfectly secure. Some were grazing, and others were lying down and sleeping; we advanced within a mile or so of them in full view, and came to a halt. Mons. Chardon "tossed the feather" (a custom always observed, to try the course of the wind), and, he commenced: "stripping" as it is termed (i.e. every man strips himself and his horse of every extraneous and unnecessary appendage of dress, &c. that might be an incumbrance in running): hats are laid off, and coats -- and bullet pouches; sleeves are rolled up, a handkerchief tied tightly around the head, and another around the waist -- cartridges are prepared and placed in the waistcoat pocket, or a half dozen bullets "thrown into the mouth," &c., &c., all of which takes up some ten or fifteen minutes, and is not, in appearance or in effect, unlike a council of war. Our leader lays the whole plan of the chase, and preliminaries all fixed, guns

charged and ramrods in our hands, we mount and start for the onset. The horses are all trained for this business, and seem to enter into it with as much enthusiasm, and with as restless a spirit as the riders themselves. While "stripping" and mounting, they exhibit the most restless impatience; and when "approaching" -- (which is, all of us abreast, upon a slow walk, and in a straight line towards the herd, until they discover us and run!, they all seem to have caught entirely the spirit of the chase, and the laziest nag amongst them prances with an elasticity in His step -- champing] his bit -- his ears erect -- his eyes strained out of his head, and fixed upon the game before him, whilst he trembles under the saddle of his rider. In this way we carefully and silently marched, until within' some forty or fifty rolls; when the herd discovering us, wheeled and laid their course in a mass. At this instant we started! (and all must start, for no one could check the fury of those steeds at that moment of excitement,) and away all sailed, and over the prairie flew in a cloud of dust which was raised by their trampling hoofs. McKinzie was foremost in tire throng, and soon dashed off amidst the dust and was out of sight -- he was after the fattest and the fastest. I had discovered a huge bull whose shoulders towered above the whole band, and I picked my way through the crowd to cut alongside of him. I went not for "meat", but for a trophy; I wanted his head and horns. I dashed along through the thundering mass, as they swept away over the plain, scarcely able to tell whether I was on a buffalo's back or my horse -- hit, and hooked, and jostled about, till at length I found myself alongside of my game, when I gave him a shot, as I passed him. I saw guns flash in several directions about me, but I heard them not. Amidst the trampling throng, Mons. Chardon had wounded a stately bull, and at this moment was passing him again with his piece leveled for another shot; they were both at full speed and I also, within the reach of the muzzle of my gun, when the bull instantly turned and receiving the horse upon his horns, and the ground received poor Chardon, who made a frog's leap of some twenty feet or more over the bull's back, and almost under my horse's heels. I wheeled my horse as soon as possible and rode back, where lay poor Chardon, gasping to start his breath again; and within a few paces of him his huge victim, with his heels high in the air, and the horse lying across him. I dismounted instantly, but Chardon was raising himself on his hands, with his eyes and mouth full of dirt, and feeling for his gun, which lay about thirty feet in advance of him. "Heaven spare you ! are you hurt, Chardon ?" " hi--llic--- hic ---h ic ---hic---h i c----- n o, -----hic-----no---no, I believe not. Oh-no! This is not much, Mons. Cataline -- this is nothing new -- but this is a d---d hard pied of ground here -- hic -- oh! Hic!" At this the poor fellow fainted, but in a few moments arose, picked up his gun, took his horse by the bit; which then opened its eyes, and with a hic and a UGH! -- UGH! Sprang upon its feet -- shook off the dirt -- and here we were, all upon our legs again, save the bull, whose life had been more sad than that of either.

I turned my eyes in the direction where the herd had gone, and our companions in pursuit, and nothing could be seen of them, nor indication, except the cloud of dust which they left behind them. At a little distance on the right, however, I beheld lily huge victim endeavouring to make as much head-way as he possibly could, from this dangerous ground, upon three legs. I galloped off to him, and at my approach he wheeled around -- and bristled up for battle; he seemed to know perfectly well that he could not escape from me, and resolved to meet his enemy and death as bravely as possible.

I found that my shot had entered him a little too far forward, breaking one of his shoulders, and lodging in his breast, and from his very great weight it was impossible for him to make much

---

advance upon me. As I rode up within a few paces of him, he would ristle up with fury enough in his looks alone, almost to annihilate me; and making one lunge at me, would fall upon his neck and nose, so that I found the sagacity of my horse alone enough to keep me out of reach of danger: and I threw from my pocket my sketch-book, laid my gun across my lap, and commenced taking his likeness. He stood stiffened up, and swelling with awful vengeance, which was sublime for a picture, but which he could not vent upon me. I rode around him and sketched him in numerous attitudes, sometimes he would lie down, and I would then sketch him; then throw my cap at him, and rousing him on his legs, rally a new expression, and sketch him again.

In this way I added to my sketch-book some invaluable sketches of this grim-visaged monster, who knew not that he was standing for his likeness.

No man on earth can imagine what is the look and expression of such a subject before him as this was. I defy the world to produce another animal than call look so frightful as a huge buffalo bull, when wounded as Ire was, turned around for battle, and swelling with rage; -- his eyes bloodshot, and his long shaggy mane hanging to the ground, -- his mouth open, and his horrid rage hissing in streams of smoke and blood from his mouth and through his nostrils, as Ire is bending forward to spring upon his assailant.

After I had had the requisite time and opportunity for using my pencil, McKinzie and his companions came walking their exhausted horses back from the chase, and in our rear came four or five carts to carry home the meat. The party met from all quarters around me and my buffalo bull, whom I then shot in the head and finished. And being seated together for a few minutes, each one took a smoke of the pipe, and recited his exploits, and his "coups" or deaths; when all parties had a hearty laugh at me, as a novice, for having aimed at an old bull, whose flesh was not suitable for food, and the carts were escorted on the trail, to bring away the meat. I rode back with Mr. McKenzie, who pointed out five cows which he had killed, and all of them selected as the fattest and slickest of the herd. This astonishing feat was; performed within the distance of one mile -- all were killed at full speed, and every one shot through the heart. In the short space of time required for a horse under "full whip", to run the distance of one mile, he had discharged his gun five, and loaded it four times -- selected his animals, and killed at every shot! There were six or eight others killed at the same time, which altogether furnished, as will be seen, abundance of freight for the carts; which returned, as well as several packhorses, loaded with the choicest parts which were cut from the animals, and the remainder of the carcasses left a prey for the wolves. Such is the mode by which white men live in this country -- such the way in which they get their food, and such is one of their delightful amusements -- at the hazard of every bone in one's body, to feel the fine and thrilling exhilaration of the chase for a moment, and then as often to upbraid and blame himself for his folly and imprudence.

From this scene we commenced leisurely wending our way back; and dismounting at the place where we had stripped, each man dressed himself again, or slung his extra articles of dress, &c. across his saddle, astride of which Ire sat; and we rode back to the Fort, reciting as we rode, and for twenty-four hours afterwards, deeds of chivalry and chase, and hair's-breadth escapes which each and either had fought and run on former occasions. McKinzie with all the true character and dignity of a leader, was silent on these subjects; but smiled, while those in his train were reciting for him the astonishing and almost incredible deeds of his sinewed arms, which they had witnessed in similar scenes; from which I learned (as well as from my own observations), that he was

reputed (and actually was) the most distinguished of ail the white men who have flourished in these regions, in the pursuit and death of the buffalo.

On our return to the Fort, a bottle or two of wine were set forth upon the table, and around them a half dozen parched throats were soon moistened, and good cheer ensued. Batiste Defonde, Chardon, &c., retired to their quarters, enlarging smoothly upon the events of our morning's work; which they were reciting to their wives and sweethearts; when about this time the Fort was thrown open, and the procession of carts and paclihorses laden with buffalo meat made its entrke; gladdening the hearts of a hundred women and children, and tickling the noses of as many hungry dogs and puppies, who were stealing in and smelling at the tail of the procession. The door of the ice-house was thrown open, the meat was discharged into it, and I being fatigued, went to sleep.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

---

LETTER--No. 5.

Letter 5

MOUTH OF THE YELLOW STONE, UPPER MISSOURI.

In my former epistle, I told you there were encamped about the Fort a host of wild, incongruous spirits -- chiefs and sachems-warriors, braves, and women and children of different tribes -- or Crows and Blackfeet -- Ojibbeways -- Assinneboins -- and Crees or Knisteneaux. Amongst and in the midst of them am I, with my paint pots and canvass, snugly ensconced in one of the bastions of the Fort, which I occupy as a painting-room. My easel stands before, and the cool breech of a twelve-pounder makes me a comfortable seat, whilst her muzzle is looking out at one of the port-holes. The operations of my brush are mysteries of the highest order to these red sons of the prairie, and my room the earliest and latest place of concentration of these wild and jealous spirits, who all meet here to be amused and pay me signal honours; but gaze upon each other, sending their sidelong looks of deep-rooted hatred and revenge around the group. However, whilst in the Fort, their weapons are placed within the arsenal, and naught but looks and thoughts can be breathed here; but death and grim destruction will visit back those looks upon each other, when these wild spirits again are loose and free to breathe and act upon the plains.

I have this day been painting a portrait of the head chief of the Blackfoot nation; he is a good-looking and dignified Indian, about fifty years of age, and superbly dressed; whilst Sitting for his picture he has been surrounded by his own braves and warriors, anti also gazed at by his enemies, the Crows and the Knisteneaux, Assinneboins and Ojibbeways; a number of distinguished personages of each of which tribes, have laid all day around the sides of my room; reciting to each other the battles they have fought, and pointing to the scalp-locks, want as proofs of their victories, and attached to the seams of their shirts and leggings. This is a curious scene to witness, when one sits in the midst of such inflammable, and combnstible materials, brought together, unarmed, for the first time in their lives; peaceably and calmly recounting over the deeds of their lives, and smoking their pipes upon it, when a few weeks or days will bring them on the plains ajiain, where the war-cry will be raised, and their deadly bows will again be drawn on each other. The name of this dignitary, of whom I have just spoken, is Stumick-o-such (the buffalo's back fat), i. e. the "hump" or "fleece", the most delicious part of the buffalo's flesh. I have also painted, of the Blackfeet, Pe-toh-pee-kiss (the eagle ribs), and Mix-ke-mote-skin-na (The Iron Horn), and Wun-nes-tou (the white buffalo), and Teha-aes-sa-ko-mah-pee (The Bear's Child), and In-ne-ocose (The Buffalo's Child), and half-a-dozen others, and all in rich and costly dresses.

There is no tribe, perhaps, on the Continent, who dress more comfortably, and more gaudily, than the Blackfeet, unless it be the tribe of Crows. There is no great-difference, however, in the costliness or elegance of their costume; nor in the materials of which they are formed; though there is a distinctive mode in each tribe, of stitching or ornamenting with the porcupine quills, wlllich constitute one of the principal ornaments to all their fine dresses; and which can be easily recognized,

by any one a little familiar with their modes, as belonging to such or such a tribe. The dress, for instance of the chief whom I have just mentioned, and whose portrait I have just painted, consists of a shirt or tunic, made of two deer skins finely dressed, and so placed together with the necks of the skins downwards, and the skins of the hind legs stitched together, the seams running down on each arm, from the neck to the knuckles of the hand; this seam is covered with a band of two inches in width, of very beautiful embroidery of porcupine quills, and suspended from the under edge of this, from the shoulders to the hands, is a fringe of the locks of black hair, which he has taken from the heads of victims slain by his own hand in battle. The leggings are made also of the same material; and down the outer side of the leg, from the hip to the feet, extends also a similar band or belt of the same width; and wrought and fringed with scalp locks. These locks of hair are ornaments from scalps and worn as trophies.

The wife (or squaw) of this dignitary Eeh-nis-kin (the crystal stone), I have also placed upon my canvass; her countenance is rather pleasing, which is an uncommon thing amongst the Blackfeet -- her dress is made of skins, and being the youngest of a bevy of six or eight, and the last one taken under his guardianship, was smiled upon with great satisfaction, whilst he exempted her from the drudgeries of the camp; and keeping her continually in the halo of his own person, watched and guarded her as the apple of his eye. The grandson also of this sachem, a boy of six years of age, and too young as yet to have acquired a name, has stood forth like a tried warrior; and I have painted him at full length, with his bow and quiver slung, and his robe made of a racoon skin. The history of this child is somewhat curious and interesting; his father is dead, and in case of the death of the chief, of whom I have spoken, he becomes hereditary chief of the tribe. This boy has been twice stolen away by the Crows by ingenious stratagems and twice re-captured by the Blackfeet, at considerable sacrifice of life, and at present is lodged with Mr. McKenzie, for safe keeping and protection, until he shall arrive at the proper age to take the office to which he is to succeed, and able to protect himself.

The scalp of which I spoke above, is procured by cutting out a piece of the skin of the head, the size of the palm of the hand or less, containing the very centre or crown of the head, the place where the hair radiates from a point, and exactly over what the phrenologists call self-esteem. This patch then is kept and dried with great care, as proof positive of the death of an enemy, and evidence of a man's claims as a warrior: and after having been formally "danced", as the saying is, (i.e. after it has been stuck up upon a pole or held up by an "old woman", and the warriors have danced around it for two or three weeks at intervals,) it is fastened to the handle of a lance, or the end of a war-club, or divided into a great many small locks and used to fringe and ornament the victor's dress. When these dresses are seen bearing such trophies, it is of course a difficult matter to purchase them of the Indian, for they often hold them above all price. I shall hereafter take occasion to speak of the scalp-dance; describing it in all its parts, and giving a long Letter, at the same time on scalps and scalping, an interesting and general custom amongst all the North American Indians.

In the chief's dress, which I am describing, there are his moccasins, made also of buckskin, and ornamented in a corresponding manner. And over all, his robe, made of the skin of a young buffalo bull, with the hair remaining on; and on the inner or flesh side, beautifully garnished with Porcupine quills, and the battles of his life very ingeniously, though rudely, portrayed in pictorial representations. In his hand he holds a very beautiful pipe, the stem of which is four or five feet

long, and two inches wide, curiously wound with braids of the porcupine quills of various colours; and the bowl of the pipe ingeniously carved by himself from a piece of red steatite of an interesting character, and which they all tell me is procured somewhere between this place and the Falls of St. Anthony, on the head waters of the Mississippi.

This curious stone has many peculiar qualities, and has, undoubtedly, but one origin in this country, and perhaps in the world. It is found hut in the hands of the savage, and every tribe, and nearly every individual in the tribe has his pipe made of it. I consider this stone a subject of great interest, and curiosity to the world; and I shall most assuredly make it a point, durin Indian rambles, to visit the place from whence it is brought. I have already got a number of most remarkable traditions and stories relating to the "sacred quarry"; of pilgrimages performed there to procure the stone, and of curious transactions that have taken place on that ground. It seems, from all I can learn, that all the tribes in these regions, and also of the Mississippi and tlie Lakes, have been in the habit of going to that place, and meeting their enemies there, whom they are obliged to treat as friends, under an injunction of the Great Spirit.

So then is this sachem (the buffalo's back fat) dressed; and in a very similar manner, and almost the same, is each of the others above named; and all armed with bow and quiver, lance and shield. These north western tribes are all armed with the bow and lance, and protected with the shield or arrow fender, which is carried outside of the left arm, exactly as the Roman and Grecian shield was carried, and for the same purpose.

There is an appearance purely classic in the plight and equipment of these warriors and "knights of the lance". They are almost literally always on their horses' backs, and they wield these weapons with desperate effect upon the open plains; where they kill their game while at full speed, and contend in like manner in battles with their enemy. There is one prevailing custon in these respects, amongst all the tribes who inhabit the great plains or prairier of these western regions. These plains afford them an abundance of wild ane fleet horses, which are easily procured: and on their backs at full speed, they can come alongside of any animal, which they easily destroy.

The bow with which they are armed is small, and apparently an insignificant weapon, though one of great and almost incredible power in the handt of its owner, whose sinews have been from childhood habituated to its usi and service. The length of these bows is generally about three feet, ane sometimes not more than two and a half. They have, ne doubt, studied to get the recjquisite power in the smallest compass possible as it is more easily and handily used on horseback than one of greater length. The greater number of these bows are made of ash, or of "bois d'arc" (as the French call it), and lined on the back with layers of buffalo or deer? Sinews, which are inseparably attached to them, and give them great elasticity. There are very many also (amongst the Blackfeet and the Crows) which are made of bone, and others of the horn of the mountain-sheep. Those made of bone are decidedly the most valuable, and cannot in this country be procured of a good cjnality short of the price of one or two horses. About these there is a mystery yet to be solved, and I advance my opinion against all theories that I llave heard in the coluntry where they are used and made. I have procured several very fine specimens, and when purchasing them have inquired of the Indians, what bone they were made of? nod in every instance, the answer was, "That's medicine", meaning tllat it was a mystery to them, or that they did not wish to be questioned about them. The bone of which they are made is certainly not the bone of any animal now ranging on the prairies, or in the mountains between this place and the Pacific Ocean; for some of

---

these bows are three feet in length, of; one solid piece of horn, and that as close-grained -- as hard -- as white, and as highly polished as any ivory; it was elks' horn (as some have supposed), which is of a dark colour and porous: or it come from the buffalo. It is my opinion, therefore, that the Indians on the Pacific coast procure the bone from the jaw of the sperm whale, which is stranded on that coast, and bringing the bone into the mountains, trade it to the Blackfeet and Crows, will manufacture it into these bows without knowing any more than we do, from what source it has been found.

One of these little bows in the hands of an Indian, on a feet and welltrained horse, with a quiver of arrows slung on his back, is a most effective and powerful weapon in the open plains. No one can easily credit the force with which these missiles are thrown, and the sanguinary effects produced by their wounds, until he has rode by the side of a party of Indians in chase of a herd of buffaloes, and witnessed the apparent ease and grace with which their supple arms have drawn the bow, and seen these huge animals tumbling down and gushing out their hearts' blood from their mouths and nostrils.

Their bows are often made of bone and sinews, and their arrows headed with flints or with bones, of their own construction, or with steel, as they are now chiefly furnished by the Fur Traders quite to the Rocky mountains. The quiver, which is uniformly carried on the back, and made of the panther or otter skins is a magazine of these deadly weapons, and generally contains two varieties. The one to be drawn upon an enemy, generally poisoned, and with long flukes or barbs, which are designed to hang the blade in the wound after the shaft is withdrawn, in which they are but slightly glued; -- the other to be used for their game, with the blade firmly fastened to the shaft, and the flukes inverted; that it may easily be drawn from the wound, and used on a future occasion.

Such is the training of men and horses in this country, that this work of death and slaughter is simple and easy. The horse is trained to approach the animals on the tight side, enabling its rider to throw his arrows to the left; it runs and approaches without the use of the halter, which is hanging loose upon its neck bringing the rider within three or four paces of the animal, when the arrow is thrown with great ease and certainty to the heart; and instances sometimes occur, where the arrow passes entirely through the animal's body.

An Indian, therefore, mounted on a fleet and well-trained horse, with his bow in his hand, and his quiver slung on his back, containing an hundred arrows, of which he can throw fifteen or twenty in a minute, is a formidable and dangerous enemy. Many of them also ride with a lance of twelve or fourteen feet in length, with blades of polished steel; and all of them (as a protection for their vital parts), with a shield or arrow fender made of the skin of the buffalo's neck, which has been smoked, and hardened with glue extracted from the hoofs. These shields are arrow-proof, and will glance off a rifle shot with perfect effect by being turned obliquely, which they do with great skill. This shield or arrow-fender is, in my opinion, made of similar materials, and used in the same way, and for the same purpose, as was the clypeus or small shield in the Roman and Grecian cavalry. They were made in those days as a means of defence on horseback only -- made small and light, of bull's hides; sometimes single, sometimes double and tripled. Such was Hector's shield, and of most of the Homeric heroes of the Greek and Trojan wars. In those days also were darts or javelins and lances; the same were also used by the Ancient Britons; and such exactly are now in use amongst the Arabs and the North American Indians.

---

In this way then, are all of these wild red knights of the prairie, armed and equipped -- and while nothing can possibly be more picturesque and thrilling than a troop or war-party of these fellows, galloping over these green and endless prairies; there can be no set of mounted men of numbers, so effective and so invincible in this country as they would be, could they be inspired with confidence of their own powers and their own superiority; yet this never can be done; -- for the Indian, as far as the name of white man has travelled, and long before he has to try his strength with him, is trembling with fright and fear of his approach; he hears of white man's arts and artifice -- his tricks and cunning, and his hundred instruments of death and destruction, he dreads his approach, shrinks from him with fear and trembling his heart sickens, and his pride and courage wither, at the thoughts of contending with an enemy, whom he thinks may war and destroy with weapons of medicine or mystery.

Of the Blackfeet, whom I mentioned in the beginning of this letter, and whose portraits are now standing in my room, there is another of whom I must say a few words; Pe-toh-pee-kiss, (the eagle ribs). This man is one of the extraordinary men of the Blackfoot tribe; though not a chief, he stands here in the Fort, and deliberately boasts of eight scalps, which he says he has taken from the heads of trappers and traders with his own hand. His dress is really superb, almost literally covered with scalp-locks, of savage and civil.

I have painted him at full length, with a head-dress made entirely of ermine skins and horns of the buffalo. This custom of wearing horns beautifully polished and surmounting the head-dress, is a very curious one, being worn only by the bravest of the brave; by the most extraordinary men in the nation. Of their importance and meaning, I shall say more in a future epistle. When he stood for his picture, he also held a lance and two "medicine-bags" in his hand; of lances I have spoken, -but "medicinebags" and "medicine" will be the text for my next Letter.

Besides the chiefs and warriors above-named, I have also transferred to my canvass the "looks and very resemblance" of an aged chief, who combines with his high office, the envied title of mystery or medicine-man, ie. doctor -- magician -- prophet -- soothsayer -- or high priest, all combined in one person, who necessarily is looked upon as "Sir Oracle" of the nation. The name of this distinguished functionary is Wun-nes-tou, (the white buffalo); and on his left arm he presents his mystery drum or tambour, in which are concealed the hidden and sacred mysteries of his healing art.

And there is also In-ne-o-cose, the iron-horn, at full length, a splendid dress, with his "medicine-bag" in his hand; and Ah-kay-eepix-en, the woman who strikes many, in a beautiful dress of the mountain-goats' skin, and her robe of the young buffalo's hide.

LETTER--No. 6.

MOUTH OF YELLOW STONE, UPPER MISSOURI.

Now for medicines or mysteries -- for doctors, high-priests, for hocus pocus, witchcraft, and animal magnetism!

In the last Letter I spoke of Pe-toh-pee-kiss (the eagle ribs), a Blackfoot brave, whose portrait I had just painted at full length, in a splendid dress. I mentioned also, that he held two medicine-bags in his hand; as they are represented in the picture; both of them made of the skins of otters, and curiously ornamented with ermine, and other strange things.

I must needs stop here -- my painting and every thing else, until I can explain the word "medicine", and "medicine-bag;" and also some medicine operations, which I have seen transacted at this place within a few days past. "Medicine" is a great word in this country; and it is very necessary that one should know the meaning of it, whilst he is scanning and estimating the Indian character, which is made up, in a great degree, of mysteries and superstitions.

The word medicine, in its common acceptation here, means mystery, and nothing else; and in that sense I shall use it very frequently in my Notes on Indian Manners and Customs.

The Fur Traders in this country, are nearly all French; and in their language, a doctor or physician, is called "Medicine". The Indian country is full of doctors; and as they are all magicians, and skilled, of profess to be skilled, in many mysteries, the word "medecin" has become habitually applied to every thing mysterious or unaccountable; and the English and Americans, who are also trading and passing through this country, have easily and familiarly adopted the same word, with a slight alteration, conveying the same meaning; and to be a little more explicit, they have denominated these personages "medicine-men", which means something more than merely a doctor or physician. These physicians, however, are all medicine-men, as they are all supposed to deal more or less in mysteries and charms, which are aids and handmaids in their practice. Yet it was necessary to give the word or phrase a still more comprehensive meaning as there were many personages amongst them, and also amongst the white men who visit the country, who could deal in mysteries, though not skilled in the application of drugs and medicines; and they all range now, under the comprehensive and accommodating phrase of "medicine-men". For instance, I am a "medicine-man of the highest order amongst these superstitious people, on account of the art which I practice; which is a strange and unaccountable thing to them, and of course, called the greatest of "medicine". My gun and pistols, which have percussion-locks, are great medicine; and no Indian can be prevailed on to fire them off, for they say they have nothing to do with white man's medicine.

The Indians do not use the word medicine, however; but in each tribe they have a word of their own construction, synonymous with mystery or mystery-man .

The "medicine-bag" then, is a mystery-bag; and its meaning and importance necessary to be understood, as it may be said to be the key to Indian life and Indian character. These bags are

constructed of the skins of animals, of birds, or of reptiles, and ornamented and preserved in a thousand different ways, as suits the taste or freak of the person who constructs them. These skins are generally attached to some Part of the clothing of the Indian, or carried in his hand--they are oftentimes decorated in such a manner as to be exceedingly ornamental to his person, and always are stuffed with grass, or moss, or something of the kind; and generally without drugs or medicines within them, as they are religiously closed and sealed, and, seldom, if ever, to be opened. I find that every Indian in his primitive state, carries his medicine-bag in some form or other, to which he pays the greatest homage, and to which he looks for safety and protection through life--and in fact, it might almost be called a species of idolatry; for it would seem in some instances, as if he actually worshipped it. Feasts are often made, and dogs and horses sacrificed, to a man's medicine; and days and even weeks, of fasting and penance of various kinds are often suffered, to appease his medicine, which he imagines he has in some way offended.

This curious custom has principally been done away with along the frontier, where white men laugh at the Indian for the observance of so ridiculous and useless a form: but in this country it is in full force, and every man in the tribe carries this, his supernatural charm or guardian, to which he looks for the preservation of his life, in battle or in other danger; at which times it would be considered ominous of bad luck and an ill fate to be without it.

The manner in which this curious and important article is instituted is this: a boy, at the age of fourteen or fifteen years, is said to be making or (forming his "medicine", when he wanders away from his father's lodge, and absents himself -- if for the space of two or three, and sometimes even four or five, days; lying on the ground in some remote or secluded spot, crying to the Great Spirit, and fasting the whole time, a period of peril and abstinence, when he falls asleep, the first animal, bird, or reptile, of which he dreams (or pretends to have dreamed, perhaps), he considers the Great Spirit has designated for his mysterious protector through life. He then returns home to his father's lodge, and relates his success; and after allaying his thirst, and satisfying his appetite, he searches for with weapons or traps, until he can procure the animal or bird, the skin of which he reserves entire, and ornaments it according to his own fancy, and carries it with him through life, for "good luck" (as he calls it); as his strength in battle -- and in death his guardian spirit, that is buried with him, and which is to conduct him safe to the beautiful hunting grounds, which he contemplates in the world to come.

The value of the medicine-bag to the Indian is beyond all price; for to sell it, or give it away, would subject him to such signal disgrace in his tribe, that he could never rise above it; and again, his superstition would stand in the way of any such disposition of it, for he considers it the gift of the Great Spirit. An Indian carries his medicine-bag into battle, and trusts to it for his protection; and if he loses it thus, when fighting ever so bravely for his country, he suffers a disgrace scarcely less than that which occurs in case he sells or gives it away; his enemy carries it off and displays it to his own people as a trophy; whilst the loser is cut short of the respect that is due to other young men of his tribe, and forever subjected to the degrading epithet of "a man without medicine", or "he who has lost his medicine", until he can replace it again; which can only be done, by rushing into battle and plundering one from an enemy whom he slays with his own hand, this done, his medicine is restored, and he is reinstated again in the estimation of his tribe; and even higher than before, for this is called the best of medicine, or "medicine honourable".

It is a singular fact, that a man can institute his mystery or medicine, but once in his life; and

equally singular that he can reinstate himself by the adoption of the medicine of his enemy; both of which reful-tonns are strong and violent inducements for him to tight bravely in battle: the first, that he may protect and preserve his medicine; and the second, in case he has been so unlucky as to lose it, that he may restore it, and his reputation also, while he is desperately contending for the protection of his community.

During my travels thus far, I have been unable to buy a medicine-bag of an Indian, although I have offered them extravagant prices for them; and even on the frontier, where they have been induced to abandon the practice, though a white man may induce an Indian to relinquish his medicine, yet cannot bring it of him, the Indian, in such case will bury it, to please a white man, and save it from his sncrileious touch; or he will linger around the site and at regular times his visit to it -- may pay it his devotions, as long as he lives.

These curious appendages to the persons or wardrobe of an individual, are sometilues made of the skin of an otter, a beaver, a musk-rat, a weazel, a racoon, a polecat sabbie, a frog, a toad, a bat, a mouse, a mole, a hawk, an eagle, a magpie, or a sparrow: -- sometimes of the skin of an animal so large as a wolf; and at others, of the skins of the lesser animals, so small that they are hidden under the dress, and very difficult to be found, even if searched for.

Such then is the medicine-bag -- such its meaning and importance; and when its owner dies, it is placed in his grave and decays with his body.

In the case of the portrait of which I spoke in the beginning of this Letter, there are seen two medicine-bags in the hand of Pe-toh-pee-kiss; the one was of his own instituting, and the other was taken from his enemy, whom he had slain in battle; both of these he has a right to display and boast of on such an occasion. This is but the beginning or incipient stage of "medicines", however, in this strange and superstitious country; and if you have patience, I will carry you a few degrees further into the mysteries of conjuration, before I close this Letter. Sit still then and read, until I relate a scene of a tragic, and yet of the most grotesque character, which took place in this Fort a few days since, and to all of which I was an eye-witness. The scene I will relatk as it transpired precisely; and call it the story of the "doctor", or the "Blackfoot medicine-man."

Not many weeks since, a party of Knisteneaux came here from the north, for the purpose of making their summer's trade with the Fur Company; and, whilst here, a party of Blackfeet, their natural enemies (the same who are here now), came from the west, also to trade. These two belligerent tribes encamped on different sides of the Fort, and had spent some weeks here in the Fort and about it, in apparently good feeling and fellowship; unable in fact to act otherwise, for, according to a regulation of the Fort, their arms and weapons were all locked up by McKenzie in his "arsenal", for die purpose of preserving die peace amongst these fighting-cocks.

The Knisteneaux had completed their trade, and loitered about the premises, until all, both Indians and white men, were getting tired of their company, wishing them quietly off. When they were ready to start, with their goods packed upon their backs, their arms were given them, and they started; bidding everybody, both friends and foes, a hearty farewell. They went out of the Fort, and though the party gradually moved off, one of them undiscoveretl, loitered about the Fort, until he got an opportunity to poke the muzzle of his Sun through between the picluets; when he fired it at one of the chiefs of the Blackfeet, who stood within a few paces, talking with Mr. McKenzie, and shot him with two musket bullets through the centre of his body! The Blackfoot fell, and rolled about upon the ground in the ngonies of death. The Blackfeet who were in the

Fort seized their weapons and ran in a mass out of the Fort, in pursuit of the Knisteneaux, who were rapidly retreating to the bluffs. The Frenchmen in the Fort, also, at so flagrant and cowardly an insult, seized their guns and ran out, joining the Blackfeet in the pursuit. I, at that moment, ran to my painting-room in one of the bastions overlooking the plain, where I had a fair view of the affair; many shots were exchanged back and forward, and a skirmish ensued which lasted half an hour; the parties, however, were so far apart that little effect was produced; the Knisteneaux were driven off over the bluffs, having lost one man and had several others wounded. The Blackfeet and Frenchmen returned into the Fort, and then, I saw what I never before saw in my life -- I saw a "medicine-man" performing his mysteries over a dying man. The man who had been shot was: still living, though two bullets had passed through the centre of his body, about two inches apart from each other; he was lying on the ground in the agonies of death, and no one could indulge the slightest hope of his recovery; yet the medicine-man must needs be called (for such a personage they had in their party), and hocus pocus applied to the dying man, as the dernier resort, when all drugs and all specifics were useless, and after all possibility of recovery was extinct!

I have mentioned that all tribes have their physicians, who are also medicine (or mystery) men. These professional gentlemen are worthies of the highest order in all tribes. They are regularly called and paid as physicians, to prescribe for the sick; and many of them acquire great skill in the medicinal world, and gain much celebrity in their nation. Their first prescriptions are roots and herbs, of which they have a great variety of species; and when these have all failed, their last resort is to "medicine" or mystery; and for this purpose, each one of them has a strange and unaccountable dress, conjured up and constructed during a life-time of practice, in the wildest fancy imaginable, in which he arrays himself, and makes his last visit to his dying patient, -- dancing over him, shaking his frightful rattles, and singing songs of incantation, in hopes to cure him by a charm. There are some instances, of course, where the exhausted patient unaccountably recovers, under the application of these absurd forms; and in such cases, this ingenious son of Indian Esculapius will be seen for several days after, on the top of a wigwam, with his right arm extended and waving over the gaping multitude, to whom he is vaunting forth, without modesty, the surprising skill he has acquired in his art, and the undoubted efficacy of his medicine or mystery. But if, on the contrary, the patient dies, he soon changes his dress, and joins in doleful lamentations with the mourners; and easily, with his craft, and the ignorance and superstition of his people, protects his reputation and maintains his influence over them; by assuring them, that it was the will of the Great Spirit that his patient should die, and when sent for, his feeble efforts must cease.

Such was the case, and such the extraordinary means resorted to in the instance I am now relating. Several hundred spectators, including Indians and traders, were assembled around the dying man, when it was announced that the "medicine-man" was coming; we were required to "form a ring", leaving a space of some thirty or forty feet in diameter around the dying man, in which the doctor could perform his wonderful operations; and a space was also opened to allow him free room to pass through the crowd without touching any one. This being done, in a few moments his arrival was announced by the death-like "hush-----sh---" through the crowd; and nothing was to be heard, save the light and casual tinkling of the rattles upon his dress, which was scarcely perceptible to the ear, as he cautiously and slowly moved through the avenue left for him; which at length brought him into the ring, in view of the pitiable object over whom his mysteries were to be performed.

Readers! you may have seen or read of the witch of Elder -- or you may imagine all the ghosts, and spirits, and furies, that ever ranked amongst the "rank and file" of demonology; and yet you must see my painting of this strange scene before you can form a just conception of real frightful ugliness and Indian conjuration -- yes, and even more: you must see the magic dress of this Indian "Le big bug" (which I have this day procured in all its parts), placed upon the back of some person who can imitate the strides, and swells, the grunts, and spring the rattles of an Indian magician.

His entrise and his garb were somewhat thus :-he approached the ring with his body in a crouching position, with a slow and tilting step-his body and head were entirely covered with the skin of a yellow bear, the head of which (his own head being inside of it) served as a mask; the huge claws of which also, were dangling on his wrists and ankles; in one hand he shook a frightful rattle, and in the other brandished his medicine-spear or magic wand; to the rattling din and discord of all of which, he added the wild and startling jumps and yelps of the Indian, and tire horrid and appalling grunts, and snarls, and growls of the grizzly bear, in ejaculatory and guttural incantations to the Good and Bad Spirits, in behalf of his patient; who was rolling and groaning in the agonies of death, whilst he was dancing around him, jumping over him, and pawing him about, and rolling him ill every direction.

In this wise, this strange operation proceeded for half an hour, to the surprise of a numerous and death-like silent audience, until the man died; and the medicine-man danced off to his quarters, and packed up, and tied and secured from the sight of the world, his mystery dress and equipments.

This dress, in all its parts, is one of the greatest curiosities in the whole collection of Indian manufactures which I have yet obtained in the Indian country. It is the strangest medley and mixture, perhaps of the mysteries of the animal and vegetable kingdoms that ever was seen. Besides the skin of the yellow bear (which being almost an anomaly in that country, is out of the regular order of nature, and, of course, great medicine, and converted to a medicine use), there are attached to it the skins of many animals, which are also anomalies or deformities, which render them, in their estimation, medicine; and there are also the skins of snakes, and hogs, and bats, weasels and tails of bird, -- hoofs of deer, goats, and antelopes; and, in fact, the odds and ends," and fag ends, and tails, and tips of almost everything that swims, flies, or runs, in this part of the wide world.

Such is a medicine-man or a physician. And such is one of his wild and ridiculous manures, which I have just witnessed in this strange country.

These men, as T before remarked, are valued as dignitaries in the tribe, and the greatest respect is paid to them by the whole community; not only for their skill in their "materia medicine"; but more especially for their tact in magic and mysteries, in which they all deal to a very great extent. I shall have much more to say of these characters and their doings in future epistles, and barely observe in the present place, that no tribe is without them -- that in all tribes their doctors are conjurers -- are magicians -- are sooth-sayers, and I had like to have said, high-priests, inasmuch as they superintend and conduct all their religious ceremonies -- they are looked upon by all as oracles of the nation. In all councils of war and peace, they have a seat with the chiefs -- are regularly consulted before any public step is taken, and the greatest deference and respect is paid to their opinions.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

---

LETTER No. 7.

MOUTh OF YELLOW STONE, UPPER MISSOURI.

The Letter which I gave you yesterday, on the subject of “medicines” and ‘L medicine-men,” has somewhat broken the “thread of my discourse;” and left my painting-room (in the bastion), and all the Indians in it, and portraits, and buffalo hunts, and landscapes of these beautiful regions, to be taken up and discussed; which I will now endeavour to do, beginning just where I left (or digressed) off.

I was seated on the cool breech of a twelve-pounder, and had my easel before me, and Crows and Blackfeet, and Assinneboins, whom I was tracing. And so I have been doing to-day, and shall be for several days thereafter.

My painting-room has become so great a lounge, and I so great a “medicineman”, that all other amusements are left, and all other topics of conversation and gossip are postponed for future consideration. The chiefs have had to plant “dog soldiers” (as they are called) at my door, with spears in hand to protect me from the throng, who otherwise would press upon me; and none but the worthies are allowed to come into my medicine apartments, and none to be painted, except such as are decided by the chiefs to be worthy of so high an honour.

The Crows and Blackfeet who are here together, are enemies of the most deadly kind while out on the plains; but here they sit and smoke quietly together, yet with a studied and dignified reserve. The Blackfeet are, perhaps, one of the most (if not entirely the most) numerous and warlike tribes on the Continent. They occupy the whole of the country about the sources of the Missouri, from this place to the Rocky Mountains; and their numbers, from the best computations, are something like forty or fifty thousand -- they are (like all other tribes whose numbers are sufficiently large to give them boldness) warlike and ferocious, i. e. they upon the canvass. ral days to come ranging through every part of the Rocky Mountains, and carrying war and moulistering their enemies, who are, of course, every tribe who inhabit the country about them.

The Crows who live on the head waters of Yellow Stone. and extend from this neighbourhood also to the base of the Rocky Mountains, are similar in the above respects to the Blackfeet; roaming about a great part of the year -- and seeking their enemies wherever they can find them.

They are a much smaller tribe than the Blackfeet, with whom they are always at war, and from whose great numbers they suffer prodigiously in battle; and probably will be in a few years entirely destroyed by them.

The Crows have not, perhaps, more than 7000 in their nation, and probably not more than eight hundred warriors or fighting men. Amongst the more powerful tribes, like the Sioux and Blackfeet, who have been enabled to Preserve their warriors, it is a fair calculation to count one in five as warriors; but among the Crows and Minatarees, and Puncachs, and several other small but warlike tribes, this proportion cannot exist; as in some of these I have found two or three women to a man in the nation; in consequence of the continual losses sustained amongst their men in war,

and also whilst pursuing the buffaloes on the plains for food, where their lives are exceedingly exposed.

The Blackfeet and the Crows, like the Sioux and Assinneboins, have nearly the same mode of constructing their wigwam or lodge; in which tribes it is made of buffaloe skins sewed together, after being dressed, and made into the form of a tent; supported within by some twenty or thirty pine poles of twenty-five feet in height, with an apex or aperture at the top, through which the smoke escapes and the light is admitted. These lodges, or tents, are taken down in a few minutes by the squaws, when they wish to change their location, and easily transported to any part of the country where they wish to encamp; and they generally move some six or eight times in the course of the summer; following the immense herds of buffaloes, as they range over these vast plains, from east to west, and north to south.

They hunt the Buffalo for objects for which they do this are two-fold -- to procure and dress their skins, which are brought in, in the fall and winter, and sold to the Fur Company, for white man's luxury; and also for the purpose of killing and drying buffalo meat, which they bring in from their hunts, packed on their horses' backs, in great quantities; making pemican, and preserving the marrow-fat for their winter quarters; which are generally taken up in some heavy-timbered bottom, on the banks of some stream, deep imbedded within the surrounding bluffs, which break off the winds, and make their long and tedious winter tolerable and supportable. They then sometimes erect their skin lodges amongst the timber, and dwell in them during the winter months; but more frequently cut logs and make a miserable and rude sort of log cabin, in which they can live much warmer and better protected from the assaults of their enemies, in case they are attacked; in which case a log cabin is a tolerable fort against Indian weapons.

The Crows, of all the tribes in this region, or on the Continent, make the most beautiful lodge. As I have before mentioned, they construct them as the Sioux do, and make them of the same material; yet they often times dress the skins of which they are composed almost as white as linen, and beautifully garnish them with porcupine quills, and paint and ornament them in such a variety of ways, as renders them exceedingly picturesque and agreeable to the eye. I have procured a very beautiful one of this description, highly-ornamented, and fringed with scalp-locks, and sufficiently large for forty men to dine under. The poles which support it are about thirty in number, of pine, and are cut in the Rocky Mountains, having been some hundred years, perhaps, in one. Their tent, when erected, is about twenty-five feet high, and has a very pleasing effect; with the area or Good Spirit painted on one side, and the Evil Spirit on the other. If I can ever succeed in transporting it to New York and other eastern cities, it will be looked upon as a beautiful and exceedingly interesting specimen.

The manner in which an encampment of Indians strike their tents and transport them is curious, and to the traveller in this country a very novel and unexpected sight, when he first beholds it. Whilst ascending the river to this place, I saw an encampment of Sioux, consisting of six hundred of these lodges, struck, and all things packed and on the move in a very few minutes. The chief sends his runners or criets (for each, all chiefs keep in their employment) through the village, a few hours before they are to start; announcing his determination to move, and the hour fixed upon, and the necessary preparations are in the meantime making; and at the time announced, the lodge of the chief is seen sapping in the wind, a part of the poles having been taken out: from under it; this is the signal, and in one minute, six hundred of them (on a level and beautiful prairie)

rie), which before had been strained tight and fixed, were seen waving and happing in the wind, and in one minute more all were flat upon the ground. Their horses and dogs, of which they had a great number, had all been secured upon the spot, in readiness; and each one was speedily loaded with the burthen allotted to it, and ready to fall into the grand procession.

This strange cavalcade, preparation is made in the following manner: the poles of a lodge are divided into two bunches, and the little ends of each bunch fastened upon the shoulder or with end of a horse, leaving the big ends to drag behind on the ground on either side. Just behind the horse, a brace or pole is tied across, which keeps the poles in their respective place; and then upon that and the poles behind the horse, is placed the lodge or tent, which is rolled up, and also numerous other articles of household and domestic furniture, and on the top of all, two, three, and even (sometimes) four women and children. Each one of the horses has a conductor, who sometimes walks before and leads it, with a tremendous pack upon her own back; and at often she rides astride on its back, with a child, perhaps, at her breast, and another astride of the horse's back behind her, clinging to her waist with one arm, while it affectionately embraces a sneaking dog-pup in the other.

In this way five or six hundred wigwams, with all their furniture, may be seen drawn out for miles, creeping over the grass-covered plains of this country; and three times that number of men, on good horses, strolling along in front or on the flank; and, in some tribes, in the rear of this heterogeneous caravan, at least five times that number of dogs, which within this the skins to be smoked are placed, and in this condition the tent will stand a day or so, enclosing the heated smoke: and by some chemical process or other, which I do not understand, the skins thus acquire a quality which enables them, after being ever so many times wet, to dry soft and pleasant as they were before, which secret I have never yet seen practiced in my own country; and for the lack of which, all of our dressed skins when once wet, are, I think, chiefly spoiled.

An Indian's dress of deer skins, which is wet a hundred times upon his back, dries soft; and his lodge also, which stands in the rains, and even through the severity of winter, is taken down as soft and as clean as when it was first put up.

A Crow is known wherever he is met by his beautiful white dress, and his tall and elegant figure; the greater part of the men being six feet high. The Blackfeet on the other hand, are more of the Herculean make -- about middling stature, with broad shoulders, and great expansion of chest; and the skins of which their dresses are made, are chiefly dressed black, or of a dark brown colour; from which circumstance, in all probability, they having black leggings or moccasins, have got the name of Blackfeet.

The Crows are very handsome and gentlemanly Indians in their personal appearance: and have been always reputed, since the first acquaintance made with them, very civil and friendly.

These people to be sure, have in some instances plundered and robbed trappers and travellers in their country; and for that I have sometimes heard them called rascals, slid thieves, and rogues of the first order, &c.; yet they do not consider themselves such; for thieving in their estimation is a high crime, and considered the most disgraceful act that a man can possibly do. They call this certulping, where they sometimes run off a Trader's horse and make their boast of it; considering it a kind of retaliation or summary justice, which they think it right and honourable that they should administer. And why not for the unlicensed trespass committed through their country from one end to the other, by mercenary white men, who are destroying the game, and catching all the

beaver and other rich and valuable furs out of their country, without paying them an equivalent, or, in fact, anything at all, for it; and this too, when they have been warned time and again of the danger they would be in, if they longer persisted in the practice. Reader, I look upon the Indian as the most honest and honourable race of people that I ever lived amongst in my life; and in their native state, I pledge you my honour they are the last of all the human family to pilfer or to steal, if you trust to their honour; and for this never-ending and boundless system of theft and plunder, and debauchery, that is practiced off upon these rightful owners of the soil, by acquisitive white men, I consider the infliction, or retaliation, by driving off and appropriating a few horses, but a lenient punishment, which those persons at least should expect; and which, in fact, none but a very honourable and high-minded people could inflict, instead of a much severer one; which they could easily practice upon the few white men in their country, without rendering themselves amenable to any law.

Mr. McKinzie has repeatedly told me, within the four last weeks, while in conversation relative to the Crows, that they were friendly and honourable in their dealing with the whites, and that he considered them the finest Indians of his acquaintance.

I recollect whilst in St. Louis, and other places at the East, to have heard it often said, that the Crows were a rascally and thieving set of vagabonds, big highway robbers, &c. &c.; and I have been told since, that this information has become current in the world, from the fact that they made some depredations upon the camp of Messrs. Crooks and Hunt of the American Fur Company; and drove off a number of their horses, when they were passing through the Crow country, on their way to Astoria. This was no doubt true; and equally true, would these very Indians tell us, was the fact, that they had a good and sufficient reason for it.

These gentlemen, with their party, were crossing the Crow country with a large stock of goods, of guns, and ammunition, of knives, and spears, arrowheads, &c. and stopped for some time and encamped in the midst of the Crow country (and I think wintered there), when the Crows assembled in large numbers about them, and treated them in a kind and friendly manner; and at the same time proposed to trade with them for guns and ammunition, &c. (according to these gentlemen's own account, of which they were in great want, and for which they brought a great many horses, and offered them repeatedly in trade; which they refused to take, persisting in their determination of carrying their goods to their destined place, across the mountains; thereby disappointing these Indians, by denying them the arms and weapons which were in their possession, whilst they were living upon them, and exhausting the game and food of their country. No doubt, these gentlemen told the Crows, that these goods were going to Astoria, of which place they knew nothing; and of course, it was enough for them that they were going to take them farther west; which they would at once suppose was to the Blackfeet, their principal enemy, having eight or ten warriors to one of the Crows; where they supposed the white men could get a greater price for their weapons, and arm their enemies in such a way as would enable them to turn upon the Crows, and cut them to pieces without mercy. Under these circumstances, the Crows rode off, and to show their indignation, drove off some of the Company's horses, for which they have ever since been denominated a band of thieves and highway robbers. It is a custom, and a part of the system of jurisprudence amongst all savages, to revenge upon the person or persons who give the offence, if they can; and if not, to let that punishment fall upon the head of the first white man who comes in their way, provided the offender was a white man. And I would not be surprised,

therefore, if I get robbed of my horse; and you too, readers, if you go into that country, for that very (supposed) offence.

Messrs. Sublette and Campbell, two gentlemen of the highest respectability, who have traded with the Crows for several years, and they tell me they are one of the most honourable, honest, and high-minded races of people on earth; and with Mr. Tulloch, also, a man of the strictest veracity, who is now here with a party of them; and, he says, they never steal, -- have a high sense of honour, and being fearless and proud, are quick to punish or retaliate.

So much for the character of the Crows for the present, a subject which I shall assuredly take up again, when I shall have seen more of them myself.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

---

LETTER--No. 8.

MOUTH OF THE YELLOWSTONE, UPPER MISSOURI.

SINCE my last Letter, nothing of great moment has transpired at thi place; but I have been continually employed in painting my portraits an making notes on the character and customs of the wild folks who are about me. I have just been painting a number of the Crows, fine looking an noble gentlemen. They are really a handsome and well-formed set of me as can be seen in any part of the world. There is a sort of ease and grac added to their dignity of manners, which gives them the air of gentlemen ; once. I observed the other day, that most of them were over six teet high and very many of these have cultivated their natural hair to such an almo incredible length, that it sweeps the ground as they walk; there are frequel instances of this kind amongst them, and in some cases, a foot or more it will drag on the grass as they walk, giving exceeding grace and beauty their movements. They usually oil their Lair with a profusion of bear grease every morning, which is no doubt one cause of the unusual length which their hair extends; though it cannot be the sole cause of it, for tl other tribes throughout this country use the bear's grease in equal profusic without producing the same result. The Mandans, however, and the Sioux of whom I shall speak in future epistles, have cultivated a very great growth of the hair, as many of them are seen whose hair reaches near to the ground.

This extraordinary length of hair amongst the Crows is confined to the men alone; for the women, though all of them with glossy and beautif hair, and a great profusion of it, are unable to cultivate it to so great length; or else they are not allowed to compete with their lords in a fashion so Ornamental (and on which the men so highly pride themselves), and a obliged in many easer, to cut it short off.

The fashion of long hair amongst the men, prevails throughout all the Western and North West-ern tribes, after passing the Sacs and Foxes; ar the Pawnees of the Platte, who, with two or three other tribes only, a in the habit of shaving nearly the whole head.

The present chief of the Crows, who is called "Long-hair", and he received his name as well as his office from the circumstance of having the longest hair of any man in the nation, I have not yet seen: but I hope I may. Here I leave this part of the country. This extraordinary man known to several gentlemen with whom I am acquainted, and particular to Messrs. Sublette and Campbell, of whom I have before spoken, who told me they had lived in his hospitable lodge for months together; and assured me that they had measured his hair by a correct means, and found it to be ten feet and seven inches in length; closely inspecting every part of it at the same time, and satisfying themselver that it war the natural growth.

On ordinary occasions it is wound with a broad leather strap, from his head to its extreme end, and then folded up into a budget or block, of some ten or twelve inches in length, and of some pounds weight; which when he walks is carried under his arm, or placed in his bosom, within the folds of His robe; but on any great parade or similar occasion, his pride is to unfold it, oil it with

bear's grease and let it drag behind him, some three or four feet of it spread out upon the grass, end black and shining like a raven's wing.

It is a common custom amongst most of these upper tribes, to splice or add on several lengths of hair, by fastening them with glue; probably for the purpose of imitating the Crows, upon whom alone Nature has bestowed this conspicuous and signal ornament.

Amongst the Crows of distinction now at this place, I have painted the portraits of several, who exhibit some striking peculiarities. Amongst whom is Chah-ee-chopes, the fourwolves; a fine looking fellow, six feet in stature, and whose natural hair sweeps the grass as he walks; he is beautifully clad, and carries himself with the most graceful and manly men -- he is in mourning for a brother; and according to their custom, has cut off a number of locks of his long hair, which is as much as a man can well spare of so valued an ornament, which he has been for the greater part of his life cultivating; whilst a woman who mourns for a husband or child, is obliged to crop her hair short to her head, and so remained till it grows out again; ceasing gradually to mourn as her hair approaches to its former length.

Duhlr-pits-a-bo-shee, the red bear, a distinguished warrior; and Oo-je-en-a-he-ha, the woman who lives in the bear's den. I have also painted Pa-ris-ka-roo-pa (two crows) the younger, one of the most extraordinary men in the Crow nation; not only for his looks, from the form of his head, which seems to be distortion itself -- and curtailed of all its fair proportions; but from his extraordinary sagacity so a counsellor and orator, even at an early stage of his life.

There is something very uncommon in this outline, and sets forth the striking peculiarity of the Crow tribe, though rather in an exaggerated form. The semilunar outline of the Crow head, with an exceedingly low and retreating forehead, is certainly a very peculiar and striking characteristic; and though not so strongly marked in most of the tribe as in the present instance, is sufficient for their detection whenever they are met; and will be subject for further comment in another place. The Crow women (and Blackfeet also) are not handsome, and I shall at present say but little of them. They are, like all other Indian women, the slaves of their husbands: being obliged to perform all the domestic work and drudgeries of the tribe, and not allowed to join in their religious rites or ceremonies, nor in the dance or other amusements.

The women in all these upper and western tribes are decently dressed and many of them with great beauty and taste; their dresses are all of deer or goat skins, extending from their chins quite down to the feet; the dresses are in many instances trimmed with ermine, and ornamented with porcupine quills and beads with exceeding ingenuity.

The Crow and Blackfeet women, like all others I ever saw in any Indian tribe, divide the hair on the forehead, and paint the separation or crease with vermilion or red earth. For what purpose this little, but universal, custom is observed, I never have been able to learn.

The men amongst the Blackfeet tribe, have a fashion equally simple, and probably of as little meaning, which seems strictly to be adhered to by every man in the tribe; they separate the hair in two places on the forehead; leaving a lock between the two, of an inch or two in width, which is completely straightened down on to the bridge of the nose, and there cut square off. It is more than probable that this is done for the purpose of distinction that they may thereby be free from the epithet of effeminacy, which might otherwise attach to them.

These two tribes, whom I have spoken of connectedly, speak two distinct and entirely dissimilar languages; and the language of each is different and radically so, from that of all other tribes about

them. As these people are always at war, and have been, time out of mind, they do not intermarry or hold converse with each other, by which any knowledge each other's language could be acquired. It would be the work of man's life-time to collect the languages of all the different tribes which I am visiting; and I shall, from necessity, leave this subject chiefly to others, who have the time to devote to them, to explain them to the world I have, however, procured a brief vocabulary of their words and sentences in these tribes; and shall continue to do so amongst the tribes I all visit, which will answer as a specimen or sample in each; and which, in a sequel to these Letters (if they should ever be published), will probably be arranged.

The Blackfeet are, perhaps, the most powerful tribe of Indians on this Continent; and being sensible of their strength, have stubbornly resisted traders in their country, who have been gradually forming an acquaintance with them, and endeavouring to establish a permanent and profitable system of trade. Their country abounds in beaver and buffalo, and most of the fur-bearing animals of North America; and the American Fur Company with an unconquerable spirit of trade and enterprise, has pushed its establishments into their country; and the numerous parties of trappers tracing up their streams and rivers, rapidly destroying the beavers which Indian languages of North America can all be traced to two or three roots. The language of the Dohcotas is entirely and radically distinct from that of the Mandans, and theirs equally so from the Blackfoot and the Crows. And from the lips of Mr. Brazeau, a gentleman of education and strict observation, who has lived several years with the Blackfeet and Shiennes, and who speaks the language of tribes on either side of them, assures me that these languages are radically distinct and dissimilar, as I have above stated; and also, that although he has been several years amongst those tribes, he has not been able to trace the slightest resemblance between the Cree, Dohcotas, and Blackfoot, and Shienne, and Crow, and Mandan tongues; and from a great deal of corroborating information, which I have got from other persons acquainted with these tribes, I am fully convinced of the correctness of his statements.

Besides the Blackfeet and Crows, whom I told you were assembled at this place, are also the Knisteneaux (or Crees, as they are commonly called), a very pretty and pleasing tribe of Indians, of about 3000 in number, living on the north of this, and also the Assinneboins and Ojibbeways; both of which tribes also inhabit the country to the north and north-east of the mouth of Yellow Stone.

The Knisteneaux are of small stature, but well-built for strength and activity combined; are a people of wonderful prowess for their numbers, and have waged an unceasing warfare with the Blackfeet, who are their neighbours and enemies on the west. From their disparity in numbers, they are rapidly thinning the ranks of their warriors, who bravely sacrifice their lives in contentions with their powerful neighbours. This tribe occupy the country from the mouth of the Yellow Stone, in a north-western direction, far into the British territory, and trade principally at the British N. W. Company's forts.

The Assinneboins of seven thousand, and the Ojibbeways of six thousand, occupy a vast extent of country, in a north-eastern direction from this; extending also into the British possessions as high north as Lake Winnepeg; and trading principally with the British Company. These three tribes are in a state of nature, living as neighbours, and are also on terms of friendship with each other. This friendship, however, is probably but a temporary arrangement, brought about by the Traders amongst them; and which, like most Indian peace establishments, will be of short duration.

The Ojibbeways are, undoubtedly, a part of the tribe of Chippeways, with whom we are more familiarly acquainted, and who inhabit the south-west shore of Lake Superior. Their language is the same, though they are separated several hundred miles from any of them, and seem to have on knowledge of them, or traditions of the manner in which, or of the time when, they became severed from each other.

The Assinneboins are a part of the Dohcotas, or Sioux, undoubtedly; for their personal appearance as well as their language is very similar.

At what time, or in what manner, these two parts of a nation got strayed away from each other is a mystery; yet such cases have often occurred, of which I shall say more in future. Large parties who are, straying off in pursuit of game, or in the occupation of war, are oftentimes intercepted by their enemy; and being prevented from returning, are run off to a distant region, where they take up their residence and establish themselves as a nation.

There is a very curious custom amongst the Assinneboins, from which they have taken their name; a name given them by their neighbours, from a singular mode they have of boiling their meat, which is done in the following manner -- when they kill meat, a hole is dug in the ground about the size of a common pot, and a piece of the raw hide of the animal, as taken from the back, is put over the hole, and then pressed down with the hands close around the sides, and filled with water. The meat to be boiled is then put in this hole or pot of water; and in a fire, which is built near by, several large stones are heated to a red heat, which are successively dipped and held in the water until the meat is boiled; from which singular and peculiar custom, the Ojibbeways have given them the appellation of Assinneboins or stone boilers.

This custom is a very awkward and tedious one, and used only as an ingenious means of boiling their meat, by a tribe who was too rude and ignorant to construct a kettle or pot.

The Traders have recently supplied these people with pots; and even long before that, the Mandans had instructed them in the secret of manufacturing very good and serviceable earthen pots; which together have entirely done away the custom, excepting at Public festivals; where they seem, like all others of the human family, to take pleasure in cherishing and perpetuating their ancient customs.

Of these three tribes, I have also lined my painting-room with a number of very interesting portraits of the distinguished and brave men; and also representations of their games and ceremonies, which will be found in my INDIAN GALLERY, if I live, and they can be preserved until I get home.

The Assinneboine, or stone boilers, are a fine and noble looking race of Indians; bearing, both in their looks and customs, a striking resemblance to the Dohcotas or Sioux, from whom they have undoubtedly sprung. The men are tall, and graceful in their movements; and wear their pictured robes of the buffalo hide with great skill and pleasing effect. They are good hunters, and tolerably supplied with horses; and living in a country abounding with buffaloes, are well supplied with the necessaries of Indian life, and may be said to live well. Their games and amusements are many, of which the most valued one is the ball-play; and in addition to which, they have the game of the moccasin, horse-racing, and dancing; some one of which, they seem to be almost continually practicing, and of all of which I shall hereafter give the reader (as well as of many others of their amusements) a minute account.

Their dances, which were frequent and varied, were generally exactly the same as those of the

Sioux, of which I have given a faithful account in my Notes on the Sioux, and which the reader will I meet with. There was one of these scenes, however, that I witnessed the other day, which appeared to me to be peculiar to this tribe, and exceedingly picturesque in its effect; which was described to me as the pipe-dance, and was as follows -- On a hard-trodden pavement in front of their village, which place is used for all their public meetings, and many of their amusements, the young men, who were to compose the dance, had gathered themselves around a small fire, and each one seated on a buffalo-robe spread upon the ground. In the centre and by the fire, was seated a dignitary, who seemed to be a chief (perhaps a doctor or medicine-man), with a long pipe in his hand, which he lighted at the fire and smoked incessantly, grunting forth at the same time, in half-strangled gutturals, a sort of song, which I did not get translated to my satisfaction, and which might have been susceptible of none. While this was going on, another grim-visaged fellow in another part of the group, commenced beating on a drum or tambourine, accompanied by his voice; when one of the young men seated, sprang instantly on his feet, and commenced singing in time with the taps of the drum, and leaping about on one foot and the other in the most violent manner imaginable, In this way he went several times around the circle, bowing and brandishing his fists in the faces of each one who was seated, until at length he grasped one of them by the hands, and jerked him forcibly up upon his feet; who joined in the dance for a moment leaving the one who had pulled him up, to continue his step and his song in the centre of the ring; whilst he danced around in a similar manner, jerking up another, and then joining his companion in the centre; leaving the third and the fourth, and so on to drag into the ring, each one his man, until all were upon their feet; and at last joined in the most frightful gesticulations and yells that seemed almost to make the earth quake under our feet. This strange manoeuvre, which I did but partially understand, lasted for halfer three-quarters of an hour; to the great amusement of the gaping multitude who were assembled around, and broke up with the most piercing yells and barks like those of so many affrighted dogs.

The Assinneboins, somewhat like the Crows, cultivate their hair to a very great length, in many instances reaching down nearly to the ground; but in most instances of this kind, I find the great length is produced by splicing or adding on several lengths, which are fastened very ingeniously by means of glue, and the joints obscured by a sort of paste of red earth and glue, with which the hair is at intervals of every two or three inches tilled, and divided into locks and slabs of an inch or so in breadth, and falling straight down over the back to the heels have painted the portrait of a very distinguished young man, and son of the chief, his dress is a very handsome one, and in every respect answers well to the descriptions I have given above. The name of thir man is Wi-jun-jon (the pigeon's egg head), and by the ride of him & his wife, Chin-cha-pee (the fire bug that creeps), a fine looking squaw, in a handsome dress of the mountainsheep skin, holding in her band 8 stick curiously carved, with which every woman in this country is supplied; for the purpose of digging up the "Pomme Blanche", or prairie turnip, which is found in great quantities in these northern prairies, and furnishes the Indians with an abundant and nourishing food. The women collect these turnips by striking the end of the stick into the ground, and prying them out; after which they are dried and preserved in their wigwams for use during the season.

I have just had the satisfaction of seeing this travelled-gentleman (Wi-jun-jon) meet his tribe, his wife and his little children; after an absence of a year or more, on his journey of 6000 miles to Washington City, and back again (in company with Major Sanford, the Indian agent); where, he

has been spending the winter amongst the fashionables in the polished circles of civilized society. And I can assure you, readers, that his entrance amongst his own people, in the dress and with the airs of a civilized beau, was one of no ordinary occurrence; and produced no common sensation amongst the red-visaged Assinneboins, or in the minds of those who were travellers, and but spectators to the scene.

On his way home from St. Louis to this place, a distance of 2000 miles, I travelled with this gentleman, on the steamer Yellow-Stone; and saw him step ashore (on a beautiful prairie, where several thousands of his people were encamped), with a complete suit in military a colonel's uniform of blue, presented to him by the President of the United States, with a beaver hat and feather, with epaulettes of gold -- with sash and belt, and broad sword; with high-heeled boots -- with a keg of whiskey under his arm, and a blue umbrella in his hand. In this plight and metamorphose, he took his position on the bank, amongst his friends. His wife and other relations; not one of whom exhibited, for an half-hour or more, the least symptoms of recognition, although they knew well who was before them. He also gazed upon them -- upon his wife and parents, and little children, who were about, as if they were foreign to him, and he had not a feeling or thought to interchange with them. Thus the mutual gazings upon and from this would-be-stranger, lasted for full half an hour; when a gradual, but cold and exceedingly formal recognition began to take place, and an acquaintance ensued, which ultimately and smoothly resolved itself, without the least apparent emotion, into its former state; and the mutual kindred intercourse seemed to dow on exactly where it had been broken off, as if it had been but for a moment, and nothing had transpired in the interim to check or change its character or expression.

Such is one of the stoic instances of a custom which belongs to all the North American Indians, forming one of the most striking features in their character; valued, cherished and practiced, like many others of their strange notions for reasons which are difficult to be learned or understood; and which probably will never be justly appreciated by others than themselves.

This man, at this time, is creating a wonderful sensation amongst his tribe, who are daily and nightly gathered in gaping and listless crowds around him, whilst he is descanting upon what he has seen in the fashionable world; and which to them is unintelligible and beyond their comprehension; for which I find they are already setting him down as a liar and impostor.

What may be the final results of his travels and initiation into the fashionable world, and to what disasters his incredible narrations may yet subject the poor fellow in this strange land, time only will develop.

He is now in disgrace, and spurned by the leading men of the tribe, and rather to be pitied than envied, for the advantages which one might have supposed would have flown from his fashionable tour. More of this curious occurrence and of this extraordinary man, I will surely give in some future epistles.

The women of this tribe are often comely, and sometimes pretty; the dresses of the women and children, which are usually made of the skins of the mountain-goat, and ornamented with porcupine's quills and rows of elk's teeth.

The Knisteneaux (or Crees, as they are more familiarly called in this country) are a very numerous tribe, extending from this place as high north as the shorer of Lake Winnipeg; and even much further in a north-westerly direction, towards, and even through, a great part of the pocky Mountains.

I have before said of these, that they were about 3000 in numbers -- be that, I meant but a small part of this extensive tribe, who are in the habit of visiting the American Fur Company's Establishment, at this place, to do their trading; and who themselves, scarcely know anything of the great extent of country over which this numerous and scattered family range. Their customs may properly be said to be primitive, as no inroads of civilized habits have been as yet successfully made amongst them. Like the other tribes in these regions, they dress in skins, and gain their food, and conduct their wars in a very similar manner. They are a very daring and most adventurous tribe; roaming vast distances over the prairies and carrying war into their enemy's country. With the numerous tribe of Blackfeet, they are always waging an uncompromising warfare; and though fewer in numbers and less in stature, they have shewn themselves equal in sinew, and not less successful in mortal combats.

Amongst the foremost and most renowned of their warriors, is Bro-cas-sit?, the broken arm, in a handsome dress; and by the side of him, his wife, a simple and comely looking woman. In a sketch, will be seen the full length portrait of a young woman with a child on her back, shewing fairly the fashion of cutting and ornamenting the dresses of the females in this tribe; which, without further comment, is all I shall say at this time, of the valorous tribe of Crees or Kniteneaur. The Ojibbeways I have briefly mentioned in a former place, and of them should say more; which will be done at a proper time, after I shall have visited other branches of this great and scattered family.

The chief of that part of the Ojibbeway tribe who inhabit these northern regions, and whose name is Sha-co-pay (the Sir), is a man of huge size; with dignity of manner, and pride and vanity, just about in proportion to his bulk. He sat for his portrait in a most beautiful dress, fringed with scalp locks in profusion; which he had snatched, in his early life from his enemies' heads, and now wears as proud trophies and proofs of what his arm has accomplished in battles with his enemies. His shirt of buckskin is beautifully embroidered and painted in curious hieroglyphics, the history of his battles and charts of his life. This, and also each and every article of his varied dress, had been manufactured by his wives, of which he had several; and one, though not the most agreeable. I have much to see of these people yet, and much consequently to write; so for the present I close my book.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

LETTER--No. 9.

MOUTH OF THE YELLOWSTONE, UPPER MISSOURI.

SINCE the dates of my other Letters from this place, I have been taking some wild rambles about this beautiful country of green fields; jolted and tossed about, on horseback and on foot, where pen, ink, and paper never thought of going; and of course the most that I saw and have learned, and would tell to the world, is yet to be written. It is not probable, however, that I shall again date a letter at this place, as I commence, in a few days, my voyage down the river in a canoe; but yet I may give you many a retrospective glance at this fairy land and its amusements.

A traveler on his tour through such a country as this, has no time to write, and scarcely time enough to moralize. It is as much as he can well do to "look out for his scalp," and "for something to eat." Impressions, however, of the most vivid kind, are rapidly and indelibly made by the fleeting incidents of savage life; and for the mind that can ruminate upon them with pleasure, there are abundant materials clinging to it for its endless entertainment in driving the quill when he gets back. The mind susceptible of such impressions catches volumes of incidents which are easy to write -- it is but to unfold a web which the fascinations of this shorn country and its allurements have spun over the soul -- it is but to Paint the splendid panorama of a world entirely different from anything seen or painted before; with its thousands of miles, and tens of thousands of grassy hills and dales, where nought but silence reigns, and where the soul of a contemplative mould is seemingly lifted up to its Creator. What man in the world, I would ask, ever ascended to the pinnacle of one of Missouri's green-carpeted bluffs, a thousand miles severed from his own familiar land, anti giddily gazed over the interminable and boundless ocean of grass-covered hills anti valleys which lie beneath him, where the gloom of silence is complete -- where not even the voice of the sparrow or cricket ill heard -- without feeling a sweet melancholy come over him, which seemed to drown his sense of everything beneath and on a level with him?

It is but to paint a vast country of green fields, where the men are all red -- where meat is the staff of life -- where no laws, but those of honour, are known -- where the oak and the pine give way to the cotton-wood and peccan -- where the buffaloes range, the elk, mountain-sheep, and the fleet-bounding antelope -- where the magpie and chattering parroquettes supply the place of the red-breast and the blue-bird -- where wolves are white and bears grizzly -- where pheasants are hens of the prairie, and frogs have horns! Where the rivers are yellow, and white men are turned savages in looks. Through the whole of this strange land the dogs are all wolves -- women all slaves-men all lords. The sun and rats alone (of all the list of old acquaintance, could be recognized in this country of strange metamorphose. The former shed everywhere his familiar rays; and Monsr. Ratapon was hailed as an old acquaintance, which it gave me pleasure to meet; though he had grown a little more savage in his look.

In traversing the immense regions of the classic West, the mind of a philanthropist is filled to the brim with feelings of admiration; but to reach this country, one is obliged to descend from

the light and glow of civilized atmosphere, through the different grades of civilization, which gradually sink to the most deplorable condition along the extreme frontier; thence through the most pitiable misery and wretchedness of savage degradation; where the genius of natural liberty and independence have been blasted and destroyed by the contaminating vices and dissipations introduced by the immoral part of civilized society. Through this dark and sunken vale of wretchedness one hurries, as through a pestilence, until he gradually rises again into the proud and chivalrous pale of savage society, in its state of original nature, beyond the reach of civilized contamination; here he finds much to fix his enthusiasm upon, and much to admire. Even here, the predominant passions of the savage breast, of ferocity and cruelty, are often found; yet restrained, and frequently subdued, by the noblest traits of honor and magnanimity, -- a race of men who live and enjoy life and its luxuries, and practice its virtues, very far beyond the usual estimation of the world, who are apt to judge the savage and his virtues from the poor, degraded, and humbled specimens which alone can be seen along our frontiers. From the first settlements of our Atlantic coast to the present day, the bane of this blasting frontier has regularly crowded upon them, from the northern to the southern extremities of our country I and, like the fire in a prairie, which destroys everything where it passes, It has blasted and sunk them, and all but their names, into oblivion, wherever it has travelled. It is to this tainted class alone that the epithet of "poor, naked, and drunken savage", can be, with propriety, applied; for all those numerous tribes which I have visited, and are yet uncorrupted by the vices of civilized acquaintance, are well clad, in many instances cleanly, and in the full enjoyment of life and its luxuries. It is for the character and preservation of these noble fellows that I am an enthusiast; and it is for these uncontaminated people that I would be willing to devote the energies of my life. It is a sad and melancholy truth to contemplate, that all the numerous tribes who inhabited our vast Atlantic States have not "fled to the West:" -- that they are not to be found here -- that they have been blasted by the fire which has passed over them -- have sunk into their graves, and everything but their names travelled into oblivion.

The distinctive character of all these Western Indians, as well as their traditions relative to their ancient locations, prove beyond a doubt, that they have been for a very long time located on the soil which they now possess; and in most respects, distinct and unlike those nations who formerly inhabited the Atlantic coast, and who (according to the erroneous opinion of a great part of the world), have fled to the West.

It is for these inoffensive and unoffending people, yet unvisited by the vices of civilized society, that I would proclaim to the world, that it is time, for the honor of our country -- for the honor of every citizen of the republic -- and for the sake of humanity, that our government should raise her strong arm to save the remainder of them from the pestilence which is rapidly advancing upon them. We have gotten from them territory enough, and the country which they now inhabit is most of it too barren of timber for the use of civilized man; it affords them, however, the means and luxuries of savage life; and it is to be hoped that our government will not acquiesce in the continued wilful destruction of these happy people.

My heart has sometimes almost bled with pity for them, while amongst them, and witnessing their innocent amusements, as I have contemplated the inevitable bane that was rapidly advancing upon them; without that check from the protecting arm of government, and which alone could shield them from destruction.

What degree of happiness these sons of Nature may attain to in the world, in their own way; or in what proportion they may relish the pleasures of life, compared to the sum of happiness belonging to civilized society, has long been a subject of much doubt, and one which I cannot undertake to decide at this time. I would say thus much, however, that if the thirst for knowledge has entailed everlasting miseries on mankind from the beginning of the world; if refined and intellectual pains increase in proportion to our intellectual pleasures, I do not see that we gain much advantage over them on that score; and judging from the full-toned enjoyment which beams from their happy faces, I should give it as my opinion, that their lives were much more happy than ours; that is, if the word happiness is properly applied to the enjoyments of those who have not experienced the light of the Christian religion. I have long looked with the eye of a critic, into the jovial faces of these sons of the forest, unfurrowed with cares -- where the agonizing feeling of poverty had never stamped distress upon the brow. I have watched the bold, intrepid step-the proud, yet dignified deportment of Nature's man, in fearless freedom, with a soul unalloyed by mercenary lusts, too great to yield to laws or power except from God. As these independent fellows are all joint-tenants of the soil, they are all rich, and none of the steepings of comparative poverty can strangle their just claims to renown. Wile (I would ask) can look without admiring, into a society where peace and harmony prevail -- where virtue is cherished -- where rights are protected, and wrongs are redressed -- with no laws, but the laws of honor, which are the supreme laws of their land. Trust the boasted virtues of civilized society for awhile, with all its intellectual refinements, to such a tribunal, and then write down the degradation of the "lawless savage", and our transcendent virtues.

As these people have no laws, the sovereign right of summary redress lies in the breast of the party (or friends of the party) aggrieved; and infinitely more dreaded is the certainty of cruel revenge from the licensed hands of an offended savage, than the slow and uncertain vengeance of the law. If you think me enthusiast, be it so; for I deny it not. It has ever been the predominant passion of my soul to seek Nature's wildest haunts, and give my hand to Nature's men. Legends of these, and visits to those, filled the earliest page of my juvenile impressions.

The tablet has stood, and I am an enthusiast for God's works as He left them.

The sad tale of my native "valley", has been beautifully sung; and from the flight of "Gertrude's" soul, my young imagination closely traced the savage to his deep retreats, and gazed upon him in dreadful horror, until pity pleaded, and admiration worked a charm.

A journey of 4000 miles from the Atlantic shore, regularly receding from the center of civilized society to the extreme wilderness of Nature's original work, and back again, opens a book for many an interesting tale to be sketched; and the mind which lives, but to relish the works of Nature, reaps a reward on such a tour of a much higher order than can arise from the selfish expectations of pecuniary emolument. Notwithstanding all that has been written and said, there is scarcely any subject on which the knowing people of the East, are yet less informed and instructed than on the character and amusements of the West: by this I mean the "Far West;" -- the country whose fascinations spread a charm over the mind almost dangerous to civilized pursuits. Few people even know the true definition of the term "West;" and where is its location? -- phantom-like it flies before us as we travel, and on our way is continually gilded, before us, as we approach the setting sun.

In the commencement of my Tour, several of my travelling companions from the city of New

York, found themselves at a frightful distance to the West, when we arrived at Niagara Falls; and hastened back to amuse their friends with tales and scenes of the West. At Buffalo a steam-boat was landing with 400 passengers, and twelve days out -- "Where from?" "From the West". In the rich state of Ohio, hundreds were selling their farms and going to the West. In the beautiful city of Cincinnati, people said to me, "Our town has passed the days of its most rapid growth, it is not far enough West." -- In St. Louis, 1400 miles west of New York, my landlady assured me that I would be pleased with her boarders, for they were nearly all merchants from the "West." I there asked,--" Whence come those steam boats, laden with pork, honey, hides, &c.?"

From the West.

Whence those ponderous bars of silver, which those men have been for hours shouldering and putting on board that boat?

They come from Santa Fee, from the West.

Where goes this steam-boat so richly laden with dry goods, steam-engines?

She goes to Jefferson city.

Jefferson city? -- Where is that?

Far to the West.

And where goes that boat laden down to her gunnels, the Yellow Stone ?

She goes still farther to the West " Then," said I, "I'll go to the West."

I went on the Yellow Stone --

Two thousand miles on her, and we were at the mouth of the Yellow Stone river -- at the West.

What! invoices, bills of strange looking, long-haired gentlemen, who have just arrived, and are

And those relating the adventures of their long- and tedious journey. Who are they?

Oh ! they are some of our merchants just arrived from the West.

And that keel-boat, that Mackinaw-boat, and that formidable all of which are richly laden with goods.

These, Sir, are outfits starting for die West.

Going to the West, ha?" Then," said I, "I'll try it again. I will try and see if I can go to the West."

What, a Fort here, too?

Oui, Monsieur -- oui, Monsieur (as a dauntless, and semi-barbarian-looking, jolly fellow, dashed forth in advance of his party on his wild horse to meet me.)

What distance are you west of Yellow Stone here, my good fellow? Comment ?

What distance? -- (stop) -- quel distance?

Pardon, Monsieur, je ne sais pas, Monsieur.

Ne parlez vous ]'Anglais?

Non, Monsr. I speaks de French and de Americaine; mais je ne parle pas l'Anglais.

"Well then, my good fellow, I will speak English, and you may speak Americaine."

Pardon, pardon, Monsieur.

Well, then we will both speak Americaine.

Val, sare, je suis bien content, pour for I see dat you speaks putb coot Americaine.

What may I call our name?

Baptiste, Monsieur

What Indians are those so splendidly dressed, and with such fine horses, encamped on the plain yonder?

Ils sont Corbeaux.

Crows, ha?

Yes, sare, Monsieur.

We are then in the Crow country?

Non, Monsieur, not putty exact; we are in de coontrae of de dam Pieds noire.

Blackfeet, ha?

Oui.

What blue mountain is that which we see in the distance yonder?

Ha, quel Montaigne? cela est la Montaigne du (pardon).

Du Rochers, I suppose?

Oui, Monsieur, de Rock Montaigne.

You live here, I suppose?

Non, Monsieur, I comes fair from de West.

What, from the West ! Where under the heavens is that?

Wat, diable! de West? well you shall see, Monsieur, he is putty fair off, suppose. Monsieur Pierre Chouteau can give you de histoire de ma vie--, il bien salt que je prends les castors, very fair in de West.

You carry goods, I suppose, to trade with the Snake Indians beyond the mountains, and trap beaver also?

Oui, Monsieur.

Do you see anything of the "Flat-heads" in your country?

Non, Monsieur, ils demeurent very, very fair to de West.

Well, Ba'tiste, I'll lay my course back again for the present, and at some future period, endeavor to go to the "West." But you say you trade with the Indians and trap beavers; you are in the employment of the American Fur Company, I suppose?

Non, Monsieur, not quite exact; mais, suppose, I am "free Tappare," free, Monsr. free Free trapper, what's that? I don't understand you, Ba'tiste.

Well, Monsr. suppose he is easy pour understand -- you shall know all. In de first place, I am enlist for tree year in de Fur Comp in St. Louis-for bounte -- pour bounte, eighty dollare (understand, ha?) den I am go for wages, et I ave come de Missouri up, et I am trap castors putty much for six years, you see, until I am learn very much; and den you see, Monsr. McKenzie is give me tree horse -- one pour ride, et two pour pack (mais he is not buy, him not give, he is lend), and he is lend twelve trap; and I ave make start into de Rocky Montaigne, et I am live all Qlone on de leet rivares pour prendre les castors. Sometime six months -- sometime five month, and I come back to Yel Stone, et Monsr. M'Kenzie is give me coot price pour all.

So Mr. McKenzie fits you out, and takes your beaver of you at a certin price ?

Oui, Monsr. oni.

What price does he pay you for your beaver, Ba'tiste

Ha! Suppose one dollare pour one beavare.

A dollar per skin, ah ?

Oui.

Well, you must live a lonesome and hazardous sort of life; can you make anything by it?

Oh! oui, Monsr. putty coot, mais if it is not pour for de dam rascalitk Riccaree, et de dam Pieds

noirs, de Blackfoot Ingin, I am make very much monnair, mais (sacrk), I am rob--rob--rob too much!

What, do the Blackfeet rob you of your furs?

Oui, Monsr. rob, suppose, five time! I am been free trappare seven year, et I am rob five time -- I am someting left not at all -- he is take all; he is take all de horse -- he is take my gun -- he is take all my clothes -- he is takee de castors-et I am come back with foot. So in de Fort, some cloths is cost putty much monnair, et some whiskey is give sixteen dollares pour gall; so you see I am owe de Fur Comp 600 dollare, by Car!

Well, Ba'tiste, this then is what you call being a free trapper is it?

Oni, Monsr. "free trappare," free!

You seem to be going down towards the Yellow Stone, and probably have been out on a trapping excursion.

Oui, Monsr. c'est vrai.

Have you been robbed this time, Ba'tiste?

Oui, Monsr. by de dam Pieds noirs -- I am loose much; I am loose all -- very all ----- eh bien -- pour le dernier -- c'est le dernier fois, Monsr. I am go to Yellow Stone -- I am go le Missouri down, I am go to St. Louis.

Well, Ba'tiste, I am to figure about in this part of the world a few weeks longer, and then I shall descend the Missouri from the mouth of Yellow Stone, to St. Louis; and I should like exceedingly to employ just such a man as you are as a voyageur with me -- I will give you good wages, and pay all your expenses; what say you?

Avec tout mon cour, Monsr. remercie, remercie.

It's a bargain then, Ba'tiste; I will see you at the mouth of Yellow Stone.

Oui, Monsr. in de Yel Stone, bon soir, bon soir, Monsr.

But stop, Ba'tiste, you told me those were Crows encamped yonder.

Oui, Monsieur, oui, des Corbeaux.

And I suppose you are their interpreter?

Non, Monsieur.

But you speak the Crow language?

Ouis, Monsieur.

Well then, turn about; I am going to pay them a visit, and you call render me a service. -- Bien, Monsieur, allons.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

---

LETTER--No. 10.

MANDAN VILLAGE, UPPER MISSOURI.

Soon after the writing of my last Letter, which was dated at the Mouth of Yellow Stone, I embarked on the river for this place, where I landed safely; and have resided for a couple of weeks, a guest in this almost subterraneous city -- the strangest place in the world; where one sees in the most rapid succession, scenes which force him to mirth -- to pity and compassion -- to admiration -- disgust; to fear and astonishment. But before I proceed to reveal them, I must give you a brief sketch of my voyage down the river from the Mouth of the Yellow Stone river to this place, a distance of 200 miles; and which my little note-book says, was performed somewhat in the following manner:

When I had completed my rambles and my sketches in those regions, and Ba'tiste and Bogard had taken their last spree, and fought their last battles, and forgotten them in the final and affectionate embrace and farewell (all of which are habitual with these game-fellows, when settling up their long-standing accounts with their fellow-trappers of the mountain streams); and after Mr. McKenzie had procured for me a snug little craft, that was to waft us down the mighty torrent; we launched off one fine morning, taking our leave of the Fort, and the friends within it; and also, for ever, of the beautiful green fields, and hills, and dales, and prairie bluffs, that encompass the enchanting shores of the Yellow Stone.

Our canoe, which was made of green timber, was heavy and awkward; but our course being with the current, promised us a fair and successful voyage. Ammunition was laid in abundance--a good stock of dried buffalo tongues-a dozen or two of beavers' tails-and a good supply of pemican. Bogard and Ba'tiste occupied the middle and bow, with their paddles in their hands; and I took my seat in the stern of the boat, at the steering oar. Our larder was as I have said; and added to that, some few pounds of fresh buffalo meat.

Besides which, and ourselves, our little craft carried several packs of Indian dresses and other articles, which I had purchased of the Indians; and also my canvass and easel, and our culinary articles, which were few and simple; consisting of three tin cups, a coffee-pot -- one plate -- a frying-pan -- and a tin kettle.

Thus fitted out and embarked, we swept off at a rapid rate under the shouts of the savages, and the cheers of our friends, who lined the banks as we gradually lost sight of them, and turned our eyes towards St. Louis, which was 2000 miles below us, with nought intervening, save the widespread and wild regions, inhabited by the roaming savage.

At the end of our first day's journey, we found ourselves handily encamping with several thousand Assinneboins, who had pitched their tents upon the bank of the river, and received us with every mark of esteem and friendship.

In the midst of this group, was my friend Wi-jun-jon (the pigeon's egg head), still lecturing on the

manners and customs of the "pale faces." Continuing to relate without any appearance of exhaustion, the marvelous scenes which he had witnessed amongst the white people, on his tour to Washington City.

Many were the gazers who seemed to be the whole time crowding around him, to hear his recitals; and the plight which he was in rendered his appearance quite ridiculous. His beautiful military dress, of which I before spoke, had been so shockingly tattered and metamorphosed, that his appearance was truly laughable.

His keg of whiskey had dealt out to his friends all its charms -- his frock-coat, which his wife had thought was of no earthly use below the waist, had been cut off at that place, and the nether half of it supplied her with a beautiful pair of leggings; and His silver-laced hat-band had been converted into a splendid pair of garters for the same. His umbrella the poor fellow still affectionately held on to, and kept spread at all times. As I before said, his theme seemed to be exhaustless, and he, in the estimation of his tribe, to be an unexampled liar.

Of the village of Assiniboins we took leave on the following morning, and rapidly made our way down the river. The rate of the current being four or five miles per hour, through one continued series of picturesque grass-covered bluffs and knells, which everywhere had the appearance of an old and highly-cultivated country, with houses and fences removed.

There is, much of the way, on one side or the other, a bold and abrupt precipice of three or four hundred feet in elevation, presenting itself in an exceedingly rough and picturesque form, to the shore of the river; sloping down from the summit level of the prairies above, which sweep off from the brink of the precipice, almost, level, to an unknown distance.

It is along the rugged and wild fronts of these cliffs, whose sides are generally formed of hard clay, that the mountain-sheep dwell, and are often discovered in great numbers. Their habits are much like those of the goat; and in every respect they are like that animal, except in the horns, which resemble those of the ram; sometimes making two entire circles in their coil; and at the roots, each horn is, in some instances, from five to six inches in breadth.

On the second day of our voyage we discovered a number of these animals skipping along the sides of the precipice, always keeping about quite distant between the top and bottom of the ledge; leaping and vaulting in the most extraordinary manner from point to point, and seeming to cling actually, to the sides of the wall, where neither man nor beast could possibly follow them.

We landed our canoe, and endeavored to shoot one of these sagacious animals; and after he had led us a long and fruitless chase, amongst the cliffs, we thought we had fairly entrapped him in such a way as to be sure bring him, at last, within the command of our rifles; when he suddenly bounded from his narrow foot-hold in the ledge, and tumbled down a distance of more than a hundred feet, amongst the fragments of rocks and lay, where I thought we must certainly find his carcass without further trouble; when, to my great surprise, I saw him bounding off, and he was almost instantly out of my sight.

Bogard, who was an old hunter, and well acquainted with these creatures, shouldered his rifle, and said to me -- "the game is up; and you now see the use of those big horns: when they fall by accident, or find it necessary to quit their foot-hold in the crevice, they fall upon their head at a great distance unharmed, even though it should be on the solid rock."

Being on shore, and our canoe landed secure, we whiled away the greater part of this day amongst the wild and ragged cliffs, into which we had entered; and a part of our labours were vainly spent

in the pursuit of a war-eagle. This noble bird is the one which the Indians in these regions, value so highly for their tail feathers, which are used as the most valued, plumes for decorating the heads and dresses of their warriors. It is a beautiful bird, and, the Indians tell me, conquers all other varieties of eagles in the country; from which circumstance, the Indians respect the bird, and hold it in the highest esteem, and value its quills. I am unable so say to what variety it belongs; but I am sure it is not to be seen in any of our museums; nor is it to be found in America (I think), until one gets near to the base of the Rocky Mountains. This bird has often been called the calumet eagle and war-eagle; the last of which appellations I have already accounted for; and the other has arisen from the fact, that the Indians almost invariably ornament their calumets or pipes of peace with its quills.

Our day's loitering brought us through many a mild scene; occasionally cross the tracks of the grizzly bear, and, in sight merely of a band of buffaloes; "which got the wind of us," and were out of the way, leaving us to return to our canoe at night, with a mere speck of good luck. Just before we reached the river, I heard the crack of a rifle, and in a few moments Bogard came in sight, and threw down from his shoulders a fine antelope; which added to our larder, and we were ready to proceed. We embarked and travelled until nightfall, when we encamped on a beautiful little prairie at the base of a series of grass-covered bluffs; and the next morning cooked our breakfast and ate it, and rowed on until late in the afternoon; when we stopped at the base of some huge clay bluffs, forming one of the most curious and romantic scenes imaginable. At this spot the river expands itself into the appearance somewhat of a beautiful lake; and in the midst of it, and on and about its sand-bars, floated and stood, hundreds and thousands of white swans and pelicans. Though the scene in front of our encampment at this place was placid and beautiful; with its flowing water -- its wild fowl -- and its almost endless variety of gracefully sloping hills and green prairies in the distance; yet it was not less wild and picturesque in our rear, where the rugged and various coloured bluffs were grouped in all the wildest fancies and rudeness of Nature's accidental varieties.

The whole country behind us seemed to have been dug and thrown up into huge piles, as if some giant mason had been there mixing his mortar and paints, and throwing together his rude models for some sublime structure of a colossal city; -- with its walls -- its domes -- its ramparts -- its huge porticos and galleries -- its castles -- its fosses and ditches; and in the midst of his progress, he had abandoned his works to the destroying hand of lime, which had already done much to tumble them down, and deface their noble structure; by jostling them together, with all their vivid colours, into an unsystematic and unintelligible mass of sublime ruins.

To this group of clay bluffs, which line the river for many miles in distance, the voyageurs have very appropriately given the name of "the Brickkilns;" owing to their red appearance, which may be discovered in a clear day at the distance of many leagues.

By the action of water, or other power, the country seems to have been graded away; leaving occasionally a solitary mound or bluff, rising in a conical form to the height of two or three hundred feet, generally pointed or rounded at the top, and in some places grouped together in great numbers; some of which having a tabular surface on their top, and covered with a green turf. This fact (as all of those which are horizontal on their tops, and corresponding exactly with the summit level of the wide-spreading prairies in distance) clearly shows, that their present isolated and rounded forms have been produced by the action of waters: which have carried away the inter-

vening earth, and left them in the picturesque shapes in which they are now seen.

A similar formation (or deformation) may be seen in hundreds of places on the shores of the Missouri river, and the actual progress of the operation by which it is produced; leaving yet for the singularity of this place, the peculiar feature, that nowhere else (to my knowledge) occurs; that the superstratum, forming the tops of these mounds (where they remain high enough to support anything of the original surface) is composed, for the depth of fifteen feet, of red pumice; terminating at its bottom, in a layer of several feet of sedimentary deposits, which is formed into endless conglomerates of basaltic crystals.

This strange feature in the country arrests the eye of a traveller suddenly, and as instantly brings him to the conclusion, that he stands in the midst of the ruins of an extinguished volcano.

As will be seen in the drawings, a near view, and, distant view), the sides of these conical bluffs (which are composed of strata of different coloured clays), are continually washing down by the effect of the rains and melting of the frost; and the superincumbent masses of pumice and basalt are crumbling off, and falling down to their masses; and from thence, in vast quantities, by the force of the gorges of water which are often cutting their channels between them--carried into the river, which is close by; and wafted for thousands of miles, floating as light as a cork upon its surface, and lodging in every pile of drift-wood

from this place to the ocean.

The upper part of this layer of pumice is of a brilliant red; and when the sun is shining upon it, is as bright and vivid as vermilion. It is porous and open, and its specific gravity but trifling. These curious bluffs must be seen as they are in nature; or else in a painting, where their colours are faithfully given, or they lose their picturesque beauty, which consists in the variety of their vivid tints. The strata of clay are alternating from red to yellow -- white -- brown and dark blue; and so curiously arranged, as to form the most pleasing and singular effects.

During the day that I loitered about this strange scene, I left my men stretched upon the grass, by the canoe; and taking my rifle and sketch-book in my hand, I wandered and clambered through the rugged defies between the bluffs; passing over and under the immense blocks of the pumice, that had fallen to their bases; determined, if possible, to find the crater, or source, from whence these strange phenomena had sprung; but after clambering and squeezing about for some time, I unfortunately came upon the enormous tracks of a grizzly bear, which, apparently, was travelling in the same direction (probably for a very different purpose) but a few moments before me; and my ardour for exploring was instantly so cooled down, that I hastily retraced my steps, and was satisfied with making my drawings, and collecting specimens of the lava and other minerals in its vicinity.

After strolling about during the day, and contemplating the beauty of the scenes that were around me, while I sat upon the pinnacles of these pumice-capped mounds; most of which time, Bogard and Ba'tiste laid enjoying the pleasure of a "mountaineer's nap" -- we met together -- took our coffee and dried buffalo tongues -- spread our buffalo robes upon the grass, and enjoyed during the night the luxury of sleep, that belongs so peculiarly to the tired voyageur in these realms of pure air and dead silence.

In the morning, and before sunrise, as usual, Bogard (who was a Yankee and a "wide-awake-fellow," just retiring from a ten years' siege of hunting and trapping in the Rocky Mountains,) thrust his head out from under the robe, nibbling his eyes open, and exclaiming as he grasped for

his gun, "By darn, look at old Cale! will you!" Ba'tiste, who was more fond of his dreams, snored away, muttering something that I could not understand when Bogard seized him with a grip, that instantly shook off his iron slumbers. I at the same time, and all eyes were turned at once upon Caleb (as the grizzly bear is familiarly called by the trappers in the Rocky Mountains -- or more often "Cale," for brevity's sake), who was sitting up in the dignity and fury of her sex, within a few rods, and gazing upon u, with her two little cubs at her side! Here was a "fix", and a subject for the painter; but I had no time to sketch it -- I turned my eyes to the canoe which had been fastened at the shore a few paces from us; and saw that everything had been pawed out of it, and all eatables had been without ceremony devoured. My packages of dresses and Indian curiosities had been drawn out upon the bank, and deliberately opened and inspected. Every thing had been scraped and pawed out, to the bottom of the boat; and even the rawhide thong, with which it was tied to a stake, had been chewed, and no doubt swallowed, as there was no trace of it remaining. Nor was this peep into the secrets of our luggage enough for her insatiable curiosity -- we saw by the prints of her huge paws, that were left in the ground, that she had been perambulating our humble mattresses, smelling at our toes and our noses, without choosing to molest us; verifying a trite saying of the country, "That man lying down is medicine to the grizzly bear"; though it is a well-known fact, that man and beast, upon their feet, are sure to be attacked when they cross the path of this grizzly and grim monster, which is the terror of all this country; often growing to the enormous size of eight hundred or one thousand pounds.

Well -- whilst we sat in the dilemma which I have just described, each one was hastily preparing his weapons for defense, when I proposed the mode of attack; by which means I was in hopes to destroy her -- capture her young ones, and bring her skin home as a trophy. My plans, however, entirely failed, though we were well armed; for Bogard and Ba'tiste both remonstrated with a vehemence that was irresistible; saying that the standing rule in the mountains was "never to fight Caleb, except in self-defense." I was almost induced, however, to attack her alone, with my rifle in hand, and a pair of heavy pistols; with a tomahawk and scalping-knife in my belt; when Ba'tiste suddenly thrust his arm over my shoulder and pointing in another direction, exclaimed in an emphatic tone, "Voila ! voila un corps de reserve -- Monsr. Cataline -- voila sa mari! allons -- allons! descendons la riviere toute de suite! toute de suite! Nonsr." To which Boeard added. "these darned animals are too much for us, and we had better be off;" at which my courage cooled, and we packed up and re-embarked as fast as possible; giving each one of them the contents of our rifles as we drifted off in the current; which brought the she-monster, in all her rage and fury, to the spot where we, a few moments before, had passed our most prudent resolve.

During the rest of this day, we passed on rapidly, gazing upon and admiring the beautiful shores, which were continually changing, from the high and ragged cliffs, to the graceful and green slopes of the prairie bluffs; and then to the wide expanded meadows, with their long waving grass, enameled with myriads of wild flowers.

The scene was one of enchantment the whole way; our chief conversation was about grizzly bears and hair's-breadth escapes; of the histories of which my companions had volumes in store. -- Our breakfast was a late one--cooked and eaten about five in the afternoon; at which time our demolished larder was luckily replenished by the unerring rifle of Bogard, which brought down a fine antelope, as it was innocently gazing at us, from the bank of the river. We landed our boat, and took in our prize; but there being no wood for our fire, we shoved off, and soon ran upon the

head of an island, that was covered with immense quantities of raft and drift wood, where we easily kindled a huge fire and ate our delicious meal from a clean peeled log, astride of which we comfortably sat, making it answer admirably the double purpose of chairs and a table. After our meal was finished, we plied the paddles, and proceeded several miles further on our course; leaving our fire burning, and dragging our canoe upon the shore, in the dark, in a wild and unknown spot; and silently spreading our robes for our slumbers, which it is not generally considered prudent to do by the side of our fires, which might lead a war-party upon us, who often are prowling about and seeking an advantage over their enemy.

The scenery of this day's travel, as I have before said, was exceedingly beautiful; and our canoe was often run to the shore, upon which we stepped to admire the endless variety of wild flowers," wasting their sweetness on the desert air," and the abundance of delicious fruits that were about us. Whilst wandering through the high grass, the wild sun-flowers and voluptuous lilies were constantly taunting us by striking our faces; whilst here and there, in every direction, there were little copses and clusters of plum trees and gooseberries, and wild currants, loaded down with their fruit; and amongst these, to sweeten the atmosphere and add a charm to the effect, the wild rose bushes seemed planted in beds and in hedges, and everywhere were decked out in all the glory of their delicate tints, and shedding sweet aroma to every breath of the air that passed over them. In addition to these, we had the luxury of service-berries, without stint; and the buffalo bushes, which are peculiar to these northern regions, lined the banks of the river and defiles in the bluffs, sometimes for miles together; forming almost impassable hedges, so loaded with the weight of their fruit, that their boughs were everywhere gracefully bending down and resting on the ground.

This last shrub (sheppfrdia), which may be said to be the most beautiful ornament that decks out the wild prairies, forms a striking contrast to the rest of the foliage, from the blue appearance of its leaves, by which it can be distinguished for miles in distance. The fruit which it produces in such incredible profusion, hanging in clusters to every limb and to every twig, is about the size of ordinary currants, and not unlike them in colour and even in Aavour; being exceedingly acid, and almost unpalatable, until they are bitten by the frost of autumn, when they are sweetened, and their flavour delicious; having, to the taste, much the character of grapes, and I am inclined to think, would produce excellent wine.

The shrub which bears them resembles some varieties of the thorn, though (as I have said) differs entirely in the colour of its leaves. It generally grows to the height of six or seven feet, and often to ten or twelve; and in groves or hedges, in some places, for miles in extent. While: gathering the fruit, and contemplating it as capable of producing good wine, I asked my men this question, "Suppose we three had ascended the river to this point in the spring of the year, and in a timbered bottom had pitched our little encampment; and one of you two had been a boat-builder, and the other a cooper -- the one to have got out your staves and constructed the wine casks, and the other to have built a mackinaw-boat, capable of carrying fifty or a hundred casks; and I had been a good hunter, capable of supplying the little encampment with meat; and we should have started off about this time, to float down the current, stopping our boat wherever we saw the finest groves of the buffalo bush, collecting the berries and expressing the juice, and putting it into our casks for fermentation while on the water for two thousand miles; how many bushels of these berries could you two gather in a day, provided Watched the boat and cooled your meals? And how

many barrels of good wine do you think we could offer for sale in St. Louis when we should arrive there?"

This idea startled my two men exceedingly, and Baptiste gabbled so fast in French, that I could not translate; and I am almost willing to believe, that but for the want of the requisite tools for the enterprize, I should have lost the company of Bogard and Baptiste; or that I should have been under the necessity of submitting to one of the unpleasant alternatives which are often regulated by the majority, in this strange and singular wilderness.

I at length, however, got their opinions on the subject; when they mutually agreed that they could gather thirty bushels of this fruit per day; and I gave it then, and I offer it now, as my own also, that their estimate was not out of the way, and judged so from the experiments which we made in the following manner:-We several times took a large mackinaw blanket which I had in the canoe, and spreading it on the ground under the bushes, where they were the most abundantly loaded with fruit; and by striking the stalk of the tree with a club, we received the whole contents of its branches in an instant on the blanket, which was taken up by the corners, and not unfrequently would produce us, from one blow, the eighth part of a bushel of this fruit; when the boughs relieved of their burden, instantly hew up to their native position.

Or this beautiful native, which I think would form one of the loveliest ornamental shrubs for a gentleman's park or pleasure grounds, I procured a number of the roots; but which, from the many accidents and incidents that our unlucky bark was subjected to on our rough passage, I lost them (and almost the recollection of them) as well as many other curiosities I had collected on our way down the river.

On the morning of the next day, and not long after we had stopped and taken our breakfast, and while our canoe was swiftly gliding along under the shore of a beautiful prairie, I saw in the grass, on the bank above me, what I supposed to be the back of a fine elk, busy at his grazing. I let our craft float silently by for a little distance, when I communicated the intelligence to my men, and slyly ran in to the shore. I pricked the priming of my firelock, and taking a bullet or two in my mouth, stepped ashore, and trailing my rifle in my hand, went back under the bank, carefully crawling up in a little ravine, quite sure of my game; when, to my utter surprise and violent alarm, I found the elk to be no more nor less than an Indian pony, getting his breakfast! And a little beyond him, a number of others grazing; and nearer to me, on the left, a war-party reclining around a little fire; and yet nearer, and within twenty paces of the muzzle of my gun, the naked shoulders of a brawny Indian, who seemed busily engaged in cleaning his gun. From this critical dilemma, the reader can easily imagine that I vanished with all the suddenness and secrecy that was possible, bending my course towards my canoe. Bogard and Baptiste correctly construing the expression of my face, and the agitation of my hurried retreat, prematurely unmoored from the shore; and the force of the current carrying them around a huge pile of drift wood, threw me back for some distance upon my own resources; though they finally got in, near the shore, and I into the boat, with the steering oar in my hand; when we plied our sinews with effect and in silence, till we were wafted far from the ground which we deemed critical and dangerous to our lives; for we had been daily in dread of meeting a war-party of the revengeful Riccarees, which we had been told was on the river, in search of the Mandans. From and after this exciting occurrence, the entries in my journal for the rest of the voyage to the village of the Mandans, wore as follows :

Saturday, fifth day of our voyage from the mouth of Yellow Stone, at eleven o'clock. -- landed our

canoe in the Grand Detour (or Big Bend) as it is called, at the base of a stately clay mound, and ascended, all hands, to the summit level, to take a glance at the picturesque and magnificent works of Nature that were about us. Spent the remainder of the day in Painting a view of this grand scene; for which purpose Baptiste and Bogard carried my easel and canvass to the top of a huge mound, where they left me at my work; and I painted my picture, whilst they amused themselves with their rides, decoying a flock of antelopes, of which they killed several, and abundantly added to the stock of our provisions.

Scarcely anything in nature can be found, I am sure, more exceedingly picturesque than the view from this place; exhibiting the wonderful manner in which the gorges of the river have cut out its deep channel through these walls of clay on either side, of two or three hundred feet in elevation; and the imposing features of the high table-lands in distance, standing as a perpetual anomaly in the country, and producing the indisputable, though astounding evidence of the fact, that there has been at some ancient period, a super surface to this country, corresponding with the elevation of these tabular hills, whose surface, for half a mile or more, on their tops, is perfectly level; being covered with a green turf, and yet one hundred and fifty or two hundred feet elevated above what mag now be properly termed the summit level of all this section of country; as will be seen stretching off at their base, without furnishing other instances in hundreds of miles, of anything rising one foot above its surface, excepting the solitary group which is shewn in the painting. The fact, that there was once the summit level of this great valley, is a stubborn one, however difficult it may be to reconcile it with reasonable causes and results; and the mind of feeble man is at once almost Paralyzed in endeavoring to comprehend the process by which the adjacent country, from this to the base of the Rocky Mountains, as well as in other directions, could have been swept away; and equally so, for knowledge of the place where its mighty deposits have been carried.

I recollect to have seen on my way up the river, at the distance of six or eight hundred miles below, a place called "the Square Hills," and another denominated "the Bijou Hills;" which are the only features on the river, seeming to correspond with this strange remain, and which, on my way down, I shall carefully examine; and not fail to add their testimonies (if I am not mistaken in their character) to further speculations on this interesting feature of the geology of the great valley of the Missouri. Whilst my men were yet engaged in their sporting excursions, I left my easel and travelled to the base and summit of these tabular hills; which, to my great surprise, I found to be several miles from the river, and a severe journey to accomplish getting back to our encampment at nightfall. I found by their sides that they were evidently of an alluvial deposits, composed of a great variety of horizontal layers of clays of different colours -- of granitic sand and pebbles (many of which furnished me beautiful specimens of agate, jasper and carnelians), and here and there large fragments of pumice and cinders, which gave, as instances above-mentioned, evidences of volcanic remains. The mode by which Bogard and Baptiste had been entrapping the timid and sagacious antelopes was one which is frequently and successfully practiced in this country; and on this day had afforded them fine sport.

The antelope of this country, I believe to be different from all other known varieties, and forms one of the most pleasing, living ornaments to this western world. They are seen in some places in great numbers sporting and playing about the hills and dales; and often, in flocks of fifty or a hundred, will follow the boat of the descending voyageur, or the travelling caravan, for hours

together; keeping off at a safe distance, on the right or left, galloping up and down the hills, snuffing their noses and stamping their feet; as if they were endeavoring to remind the traveller of the wicked trespass he was making on their own hallowed ground.

This little animal seems to be endowed, like many other gentle and sweet breathing creatures, with an undue share of curiosity, which often leads them to destruction; and the hunter who wishes to entrap them, saves himself the trouble of travelling after them. When he has been discovered, he has only to elevate above the tops of the grass, his red or yellow handkerchief on the end of his gun-rod, which he sticks in the ground, and to which they are sure to advance, though with great coyness and caution; whilst he lies close, at a little distance, with his rifle in hand; when it is quite an easy matter to make sure of two or three at a shot, which he gets in range of his eye, to be pierced with one bullet.

On Sunday, departed from our encampment in the Grand Detour; and having passed for many miles, through a series of winding and ever-varying bluffs and fancied ruins, like such as have already been described, our attention was more than usually excited by the stupendous scene, called by the voyageurs "the Grand Dome", which was lying in full view before us.

Our canoe was here hauled ashore, and a day whiled away again, amongst these clay built ruins. We clambered to their summits and enjoyed the distant view of the Missouri for many miles below, wending its way through the countless groups of clay and grass-covered hills; and we wandered back on the plains, in a toilsome and unsuccessful pursuit of a herd of buffaloes, which we discovered at some distance. Though we were disappointed in the results of the chase; yet we were in a measure repaid in amusements, which we found in paying a visit to an extensive village of prairie dogs, and of which I should render some account

I have subjoined a sketch of one of these sub-terra communities; though it was taken in a former excursion, when my party was on horseback, and near the mouth of the Yellow Stone River; yet it answers for this place as well as any other, for their habits are one and the same wherever they are found; their houses or burrows are all alike, and as their location is uniformly on a level and desolate prairie, without timber, there is little room for variety or dissimilarity.

The prairie dog of the American Prairies is undoubtedly a variety of the marmot; and probably not unlike those which inhabit the vast Steppes of Asia. It bears no resemblance to any variety of dogs, except in the sound of its voice, when excited by the approach of danger, which is something like that of a very small dog, and still much more resembling the barking of a grey squirrel. The size of these curious little animals is not far from that of a very large rat, and they are not unlike in their appearance. As I have said, their burrows, are uniformly built in a lonely desert; and away, both from the proximity of timber and water. Each individual, or each family, dig their hole in the prairie to the depth of eight or ten feet, throwing up the dirt from each excavation, in a little pile, in the form of a cone, which forms the only elevation for them to ascend; where they sit, to bark and chatter when an enemy is approaching their village. These villages are sometimes of several miles in extent containing (I would almost say) myriads of their excavations and little dirt hillocks, and to the ears of their visitors, the din of their barkings is too confused and too peculiar to be described.

In the present instance, we made many endeavors to shoot them, but finding our efforts to be entirely in vain. As we were approaching them at a distance, each one seemed to be perched up, on his hind feet, on his appropriate domicil, with a significant jerk of his tail at every bark, pos-

itively disputing our right of approach. I made several attempts to get near enough to “draw a bead” upon one of them; and just before I was ready to fire (and as if they knew the utmost limits of their safety), they sprang down into their holes, and instantly turning their bodies, shewed their ears and the ends of their noses, as they were peeping out at me; which position they would hold, until the shortness of the distance subjected their scalps to danger again, from the aim of a ride; when they instantly disappeared from our sight and all was silence thereafter, about their premises, as I passed them over; until I had so far advanced by them, that their ears were again discovered, and at length themselves, at full length, perched on the tops of their little hillocks and threatening as before; thus gradually sinking and rising like a wave before and behind me.

The holes leading down to their burrows, are four or five inches in diameter, and run down nearly perpendicular; where they undoubtedly communicate into something like a subterraneous city (as I have formerly learned from fruitless endeavors to dig them out), undermined and vaulted; by which means, they can travel for a great distance under the ground, without danger from pursuit.

Their food is simply the grass in the immediate vicinity of their burrows, which is cut close to the ground by their flat, shovel teeth; and, as they sometimes live twenty miles from any water, it is to be supposed that they get moisture enough from the dew on the grass, on which they feed chiefly at night; or that (as is generally supposed) they sink wells from their under-ground habitations, by which they descend low enough to get their supply. In the winter, they are for several months invisible; existing, undoubtedly, in a torpid state, as they certainly lay by no food for that season -- nor can they procure any. These curious little animals belong to almost every latitude in the vast plains of prairie in North America; and their villages, which I have sometimes encountered in my travels, have compelled my party to ride several miles out of our way to get by them; for their burrows are generally within a few feet of each other, and dangerous to the feet and the limbs of our horses.

The sketch of the bluffs denominated “the Grand Dome”, of which I spoke but a few moments since, is a faithful delineation of the lines and character of that wonderful scene; and the reader has here a just and striking illustration of the ruin-like appearances, as I have formerly described, that are so often met with on the banks of this mighty river.

This is, perhaps, one of the most grand and beautiful scenes of the kind to be met with in this country, owing to the perfect appearance of its several huge domes, turrets, and towers, which were everywhere as precise and as perfect in their forms as they are represented in the illustration. These stupendous works are produced by the continual washing down of the sides of these clay-formed hills; and although, in many instances, their sides, by exposure, have become so hardened, that their change is very slow; yet they are mostly subjected to continual phases, more or less, until ultimately their decomposition ceases, and their sides becoming seeded and covered with a green turf, which protects and holds them (and will hold them) unalterable: with carpets of green, and enamelled with flowers, to be gazed upon with admiration, by the hardy voyageur and the tourist, for ages and centuries to come.

On Monday, the seventh day from the mouth of the Yellow Stone River, we floated away from this noble scene; looking back again and again upon it, wondering at its curious and endless changes, as the swift current of the river, hurried us by, and gradually out of sight of it. We took a sore of melancholy leave of it -- but at every bend and turn in the stream, we were introduced to others --

and others -- and yet others, almost as strange and curious. At the base of one of these, although we had passed it, we with difficulty landed our canoe, and I ascended to its top, with some hours' labour; having to cut a foot-hold in the clay with my hatchet for each step, a great part of the way up its sides. So curious was this solitary bluff, standing alone as it did, to the height of 250 feet, with its sides washed down into hundreds of variegated forms -- with large blocks of indurated clay, remaining upon pedestals and columns as it were, and with such a variety of tints; that I looked upon it as a beautiful picture, and devoted an hour or two with my brush, in transferring it to my canvass.

In the after part of this day we passed another extraordinary scene, which is denominated "the Three Domes", forming an exceedingly pleasing group, though requiring no further description for the reader, who is now sufficiently acquainted with these scenes to understand them.

On this day, just before night, we landed our little boat in front of the Mandan village; and amongst the hundreds and thousands who flocked towards the river to meet and to greet us, was Mr. Kipp, the agent of the American Fur Company, who has charge of their Establishment at this place. He kindly ordered my canoe to be taken care of, and my things to be carried to his quarters, which was at once done; and I am at this time rearing the benefits of his genuine politeness, and gathering the pleasures of his amusing and interesting society.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

---

LETTER--No. 11

MANDAN VILLAGE, UPPER MISSOURI.

I SAID that I was here in the midst of a strange people, which is literally true; and I find myself surrounded by subjects and scenes worthy the pens of Irving or Cooper--of the Pencils of Raphael or Hogarth; rich in legends and romances, which would require no aid of the imagination for a book or a picture.

The Mandans (or See-pohs-kah-nu-mah-kah-kee, "people of the pheasants," as they call themselves), are perhaps one of the most ancient tribes of Indians in our country. Their origin, like that of all the other tribes is from necessity, involved in mystery and obscurity. Their traditions and peculiarities I shall casually recite in this or future epistles; which when understood, will at once, I think, denominate them a peculiar and distinct race. They take great pride in relating their traditions, with regard to their origin; contending that they were the first people created on earth. Their existence in these regions has not been from a very ancient period; and, from what I could learn of their traditions, they have, at a former period, been a very numerous and powerful nation; but by the continual wars which have existed between them and their neighbours, they have been reduced to their Present numbers.

This tribe is at present located on the west bank of the Missouri, about 1800 miles above St. Louis, and 200 below the Mouth of Yellow Stone river. They have two villages only, which are about two miles distant from each other; and number in all (as near as I can learn), about 2000 souls. Their present villages are beautifully located, and judiciously also, for defense against the assaults of their enemies. The site of the lower (or principal) town, in particular, is one of the most beautiful and pleasing that can be seen in the world, and even more beautiful than imagination could ever create. In the very midst of an extensive valley (embraced within a thousand graceful swells and parapets or mounds of interminable green, changing to blue, as they vanish in distance) is built the city, or principal town of the Mandans. On an extensive plain (which is covered with a green turf, as well as the hills and dales, as far as the eye can possibly range, without tree or bush to be seen) are to be seen rising from the ground, and towards the heavens, domes--(not "of gold" but) of dirt -- and the thousand spears (not "spires") and scalp-poles, &c, &c., of the semi-subterraneous village of the hospitable acid gentlemanly Mandans. These people formerly (and within the recollection of many of their oldest men) lived fifteen or twenty miles farther down the river, in ten contiguous villages; the marks or ruins of which are yet plainly to be seen. At that period, it is evident, as well from the number of lodges which their villages contained, as from their traditions, that their numbers were much greater than at the present day.

There are other, and very interesting, traditions and historical facts relative to a still prior location and condition of these people, of which I shall speak more fully on a future occasion. From these, when they are promulged, I think there may be a pretty fair deduction drawn, that they formerly occupied the lower part of the Missouri, and even the Ohio and Muskingum, and have gradually

made their way up the Missouri to where they now are.

There are many remains on the river below this place (and, in fact, to be seen nearly as low down as St. Louis), which shew clearly the peculiar construction of Mandan lodges, and consequently carry a strong proof of the above position. While descending the river, however, which I shall commence in a few weeks, in a canoe, this will be a subject of interest; and I shall give it close examination.

The ground on which the Mandan village is at present built, was admirably selected for defense; being on a bank forty or fifty feet above the greater part of this bank is nearly perpendicular, and of solid rock. The river, suddenly changing its course to a right-angle, protects two sides of the village, which is built upon this promontory or angle; they have therefore but one side to protect, which is effectually done by a strong piquet, and a ditch inside of it, of three or four feet in depth. The piquet is composed of timbers of a foot or more in diameter and eighteen feet high, set firmly in the ground at sufficient distances front each other to admit of guns and other missiles to be fired between them. The ditch (unlike that of civilized modes of fortification) is inside of the piquet, in which their warriors screen their bodies from the view and weapons of their enemies, whilst they are reloading and discharging their weapons through the piquets.

The Mandans are undoubtedly secure in their villages, from the attacks of any Indian nation, and have nothing to fear, except when they meet their enemy on the prairie. Their village has a most novel appearance to the eye of a stranger; their lodges are closely grouped together leaving but just room enough for walking and riding between them; and appear from without to be built entirely of dirt; but one is surprised when he enters them, to see the neatness, comfort, and spacious dimensions of these earth-covered dwellings. They all have a circular form, and are from forty to sixty feet in diameter. Their foundations are prepared by digging some two feet in the ground, and forming the door of earth, by leveling the requisite size for the lodge. These floors or foundations are all perfectly circular, and varying in size in proportion to the number of inmates, or of the quality or standing of the families which are to occupy them. The superstructure is then produced, by arranging, inside of this circular excavation, firmly fixed in tire ground and resting against the bank, a barrier or wall of timbers, some eight or nine inches in diameter, of equal height (about six feet) placed on end, and resting against each other, supported by a formidable embankment of earth raised against them outside; then, resting upon tire tops of these timbers or piles, are others of equal size and equal in numbers, of twenty or twentyfive feet in length, resting firmly against each other, and sending their upper or smaller ends towards the centre and top of the lodge; rising at an angle of forty-five degrees to the apex or sky-light, which is about three or four feet in diameter, answering as a chimney and a sky-light at the same time. The roof of the lodge being thus formed, is supported by beams passing around the inner part of the lodge about the middle of these poles or timbers, and themselves upheld by four or five large posts passing down to the floor of the lodge. On the top of, and over the poles forming the roof, is placed a complete mat of willow-boughs, of half a foot or more in thickness, which protects the timbers from the dampness of the earth, with which the lodge is covered from bottom to top, to the depth of two or three feet; and then with a hard or tough clay, which is impervious to water, and which with long use becomes quite hard, and a lounging place for the whole family in pleasant weather -- for sage -- for wooing lovers -- for dogs and all; an airing place -- a look-out -- a place for gossip and mirth -- a seat for the solitary gaze and meditations of the stern warrior, who sits and contemplates the

peaceful mirth and happiness that is breathed beneath him, fruits of his hard-fought battles, on fields of desperate combat with bristling Red Men.

The floors of these dwellings are of earth, but so hardened by use, and swept so clean, and tracked by bare and moccassined feet, that they have almost a polish, and would scarcely soil the whitest linen. In the centre, and immediately under the sky-light is the fire-place -- a hole of four or five feet in diameter, of a circular form, sunk a foot or more below the surface, and curbed around with stone. Over the fireplace, and suspended from the apex of diverging props or poles, is generally seen the pot or kettle, filled with buffalo meat; and around it are the family, reclining in all the most picturesque attitudes and groups, resting on their buffalo-ropes and beautiful mats of rushes. These cabins are so spacious, that they hold from twenty to forty persons -- a family and all their connexions. They all sleep on bedsteads similar in form to ours, but generally not quite so high; made of round poles rudely lashed together with thongs. A buffalo skin, fresh stripped from the animal, is stretched across the bottom poles, and about two feet from the floor; which, when it dries, becomes much contracted, and forms a perfect sacking-bottom. The fur side of this skin is placed uppermost, on which they lie with great comfort, with a buffalo-robe for a pillow, and others drawn over them instead of blankets. These beds, as far as I have seen them (and I have visited almost every lodge in the village), are uniformly screened with a covering of buffalo or elk skins, oftentimes beautifully dressed and placed over the upright poles or frame, like a suit of curtains; leaving a hole in front, sufficiently spacious for the occupant to pass in and out, to and from his or her bed. Some of these coverings or curtains are exceedingly beautiful, being out tastefully into fringe, and handsomely ornamented with porcupine's quills and picture writings or hieroglyphics.

From the great number of inmates in these lodges, they are necessarily very spacious, and the number of beds considerable. It is no uncommon thing to see these lodges fifty feet in diameter inside (which is an immense loom), with a row of these curtained beds extending quite around their sides, being some ten or twelve of them, placed four or five feet apart, and the space between them occupied by a large post, fixed quite firm in the ground, and six or seven feet high, with large wooden pegs or bolts in it, on which are hung and grouped, with a wild and startling taste, the arms and armour of the respective proprietor; consisting of his whitened shield, embossed and emblazoned with the figure of his protecting medicine (or mystery), his bow and quiver, his war-club or battle-axe, his dart or javelin -- his tobacco pouch and pipe -- his medicine-bag -- and his eagle -- ermine or raven headdress; and over all, and on the top of the post (as if placed by some conjuror or Indian magician, to guard and protect the spell of wildness that reigns in this strange place), stands forth and in full relief the head and horns of a buffalo, which is, by a village regulation, owned and possessed by every man in the nation, and hung at the head of his bed, which he uses as a mask when called upon by the chiefs, to join in the buffalo-dance, of which I shall say more in a future epistle.

This arrangement of beds, of arms, &c., combining the most vivid display and arrangement of colours, of furs, of trinkets -- of barbed and glistening points and steel -- of mysteries and hocus pocus, together with the: sombre and smoked colour of the roof and sides of the lodge; and the wild, and rude and red -- the graceful (though uncivil) conversational, garrulous, story telling and happy, though ignorant and untutored groups, that are smoking their pipes -- wooing their sweet-hearts, and embracing their little ones about their peaceful and endeared fire-sides; together with

their pots and kettles, spoons, and other culinary articles of their own manufacture, around them; present altogether, one of the most picturesque scenes to the eye of a stranger, that can be possibly seen; and far more wild and vivid than could be imagined.

Reader, I said these people were garrulous, story-telling and happy; this is true, and literally so; and it belongs to me to establish the fact, and correct the error which seems to have gone forth to tire world on this subject. As I have before observed, there is no subject that I know of, within the scope and reach of human wisdom, on which the civilized world in this enlightened ape are more incorrectly informed, than upon that of the true manners and customs, and moral condition, rights and abuses, of the North American Indians; and that, as I have also before remarked, chiefly on account of the difficulty of our cultivating a fair and honourable acquaintance with them, and doing them the justice, and ourselves the credit, of a fair anti impartial investigation of their true character. The present age of refinement and research has brought every thing else that I know of (and a vast deal more than the most enthusiastic mind ever dreamed of) within the scope and fair estimation of refined intellect and of science; while the wild and timid savage, with his interesting customs and modes has vanished, or his character has become changed, at the approach of the enlightened and intellectual world; who follow him like a phantom for awhile, and in ignorance of his true character at last turn back to the common business and social transactions of life. Owing to the above difficulties, which have stood in the way, the world have fallen into many egregious errors with regard to the true modes and meaning of the savage, which I am striving to set forth and correct in the course of these epistles. Rnd amongst them all, there is none more common, nor more entirely erroneous, nor more easily refuted, than the current one, that "the Indian is a sour, morose, reserved and taciturn man." I have heard this opinion advanced a thousand times and I believed it; but such certainly, is not uniformly nor generally the case.

I have observed in all my travels amongst the Indian tribes, and more particularly amongst these unassuming people, that they are a far more talkative and conversational race than can easily be seen in the civilized world. This assertion, like many others I shall occasionally make, will somewhat startle the folks at the East, yet it is true. No one call look into the wigwams of these people, or into any little momentary group of them, without being at once struck with the conviction that small-talk, gossip, garrulity, and story-telling, are the leading passions with them, who have little else to do in the world, but to while away their lives in the innocent and endless amusement ut' the exercise of those talents with which Nature has liberally endowed them, for their mirth and enjoyment.

One has but to walk or ride about this little town and its environs for a few hours in a pleasant day, and overlook the numerous games and gambols, where their notes and yelps of exultation are unceasingly vibrating in the atmosphere; or peep into their wigwams (and watch the glistening hill that's beaming from the noses, cheeks, and chins, of the crouching, crosslegged, and prostrate groups around the fire; where the pipe is passed, and jokes and anecdote, and laughter are excessive) to become convinced that it is natural to laugh and be merry. Indeed it would be strange if a race of people like these, who have little else to do or relish in life, should be curtailed ii, thnt source of pleasure and amusement; and it rvould be also strange, if a life-time of indulgence and practice in eo innocent and productive a mode of amusement, free from the cares and anxieties of business or professions, should not advance them in their modes, and enable them to draw far greater pleasure from such sources, than we in the civilized and business world can possibly feel.

If the uncultivated condition of their minds curtails the number of their enjoyments; yet they are free from, and independent of, a thousand cares and jealousies, which arise from mercenary motives in the civilized world; and are yet far a-head of us (in my opinion) in the real and uninterrupted enjoyment of their simple natural faculties.

They live in a country and in communities, where it is not customary to look forward into the future with concern, for they live without incurring the expenses of life, which are absolutely necessary and unavoidable in the enlightened world; and of course their inclinations and faculties are solely directed to the enjoyment of the present day, without the sober reflections on the past or apprehensions of the future.

With minds thus unexpanded and uninfluenced by the thousand passions and ambitions of civilized life, it is easy and natural to concentrate their thoughts and their conversation upon the little and triing occurrences of their lives. They are fond of fun and good cheer, and can laugh easily and heartily at a slightjoke, of which their peculiar modes of life furnish them an inexhaustible fund, and enable them to cheer their little circle about the wigwam fire-side with endless laughter and garrulity.

It may be thought, that I am taking a great deal of pains to establish this fact, and I am dwelling longer upon it than I otherwise should, inasmuch as I am opposing an error that seems to have become current through the world; and which, if it be once corrected, removes a material difficulty which has always stood in the way of a fair and just estimation of the Indian character. For the purpose of placing the Indian in a proper light before the world, as I hope to do In many respects, it is of importance to me -- it is but justice to the savage-and justice to my readers also, that such points should be cleared up as I proceed; and for the world who enquire for correct and just information, they must take my words for the truth, or else come to this country and look for themselves, into these grotesque circles of never-ending laughter and fun, instead of going to Washington City to gaze on the poor embarrassed Indian who is called there by his "Great Father," to contend with the sophistry of the learned and acquisitive world, in bartering away his lands with the graves and the hunting grounds of his ancestors. There is not the proper place to study the Indian character; yet it is the place where the sycophant and the scribbler go to gaze and frown upon him -- to learn his character, and write his history! and because he does not speak, and quaffs the delicious beverage which he receives from white men's hands, "he's a speechless brute and a drunkard." An Indian is a beggar in Washington City, and a white man is almost equally so in the Mandan village. An Oidian in Washington is mute, is dumb and embarrassed; and so is a white man (and for the very same reasons) in this place -- he has nobody to talk to.

A wild Indian, to reach the civilized world, must needs travel some thousands of miles in vehicles of conveyance, to which he is unaccustomed -- through latitudes and longitudes which are new to him -- living on food that he is unused to -- stared and gazed at by the thousands and tens of thousands whom he cannot talk to -- his heart grieving and his body sickening at the exhibition of white men's wealth and luxuries, which are enjoyed on the land, and over the bones of his ancestors. And at the end of his journey he stands (like a caged animal) to be scanned -- to be criticised -- to be pitied -- and heralded to the world as a mute -- as a brute, and a beggar.

A white man, to reach this village, must travel by steam-boat -- by canoes -- on horseback and on foot; swim rivers -- wade quagmires -- fight mosquitoes -- patch his moccasins, and patch them again and again, and his breeches; live on meat alone -- sleep on the ground

the whole way, and think and dream of his friends he has left behind; and when he gets here, half-starved, and half-naked, and more than half sick, he finds himself a beggar for a place to sleep, and for something to eat ; a mute amongst thousands who flock about him, to look and to criticise, and to laugh at him for his jaded appearance, and to speak of him as they do of all white men (without distinction) as liars. These people are in the habit of seeing no white men in their country but Traders, and know of no other deeming us all alike, and receiving us all under the presumption that we come to trade or barter; applying to us all, indiscriminately, the epithet of “liars” or Traders.

The reader will therefore see, that we mutually suffer in each other’s estimation from the unfortunate ignorance, which distance has chained us in; and (as I can vouch, and the Indian also, wile has visited the civilized world) that the historian who would record justly and correctly the character and customs of a people, must go and live among them.

LETTER -- No. 12.

MANDAN VILLAGE, UPPER MISSOURI.

In my last, I gave some account of the village, and the customs, and appearances of this strange people, -- and I will now proceed to give further details on that subject.

I have this morning, perched myself upon the top of one of the earth covered lodges, which I have before described, and having the whole village beneath and about me, with its sachems -- its warriors -- its dogs -- and its horses in motion -- its medicines (or mysteries) and scalp-poles waving over my head -- its piquets -- its green fields and prairies, and river in full view, with the din and bustle of the thrilling panorama that is about me. I shall be able, I hope, to give some sketches more to the life than I could have done from any effort of recollection.

I said that the lodges or wig-wams were covered with earth -- were of forty or sixty feet in diameter, and so closely grouped that there was but just room enough to walk and ride between them, that they had a door by which to enter them, and a hole in the top for the admission of light, and for the smoke to escape, -- that the inmates were at times grouped upon their tops in conversations and other amusements, ect.; and yet you know not exactly how they look, nor what is the precise appearance of the strange world that is about me. There is really a newness and rudeness in every thing that is to be seen. There are several hundred houses or dwellings about me, and they are purely unique--they are all covered with dirt--the people are all red, and yet distinct from all other red folks I have seen. The horses are wild--every dog is a wolf--the whole moving mass are strangers to me: the living, in everything, carry an air of intractable wildness about them and the dead are not buried, but dried upon scaffolds.

The groups of lodges around me present a very curious and pleasing appearance, resembling in shape (more nearly than anything else I can compare them to) so many potash-kettles inverted. On the tops of these are to be seen groups standing and reclining, whose wild and picturesque appearance it would be difficult to describe. Stern warriors, like statues, standing in dignified groups, wrapped in their painted robes, with their heads decked and plumed with Quills of the war-eagle; extending their long arms to the east or the west, the scenes of their battles, which they are recounting over to each other. In another direction, the wooing lover, softening the heart of his fair Taih-nah-tai-a with the notes of his simple late. On other lodges, and beyond these, groups are engaged in games of the "moccasin", or the "platter". Some are to be seen manufacturing robes and dresses, and others, fatigued with amusements or occupations, have stretched their limbs to enjoy the luxury of sleep, whilst basking in the sun. With all this wild and varied medley of living beings are mixed their dogs, which seem to be so near an Indian's heart, as almost to constitute a material link of his existence.

In the center of the village is an open space, or public area, of 150 feet in diameter, and circular in form, which is used for all public games and festivals, shews and exhibitions; and also for their "annual religious ceremonies," which are soon to take place, and of which I shall hereafter give

some account. The lodges around this open space front in, with their doors towards the center; and in the middle of this circle stands an object of great religious veneration, as I am told, on account of the importance it has in the conduction of those annual religious rites.

This object is in form of a large hogshead, some eight or ten feet high, made of planks and hoops, containing within it some of their choicest medicines or mysteries, and religiously preserved unhacked or scratched, as a symbol of the "Big Canoe", as they call it.

One of the lodges fronting on this circular area, and facing this strange object of their superstition, is called the "Medicine Lodge", or council house. It is in this sacred building that these wonderful ceremonies, in commemoration of the hood, take place. I am told by the Traders that the cruelties of these scenes are frightful and abhorrent in the extreme; and that this huge wigwam, which is now closed, has been built exclusively for this grand celebration. I am every day reminded of the near approach of the season for this strange affair, and as I have not yet seen any thing of it, I cannot describe it; I know it only from the relations of the Traders who have witnessed parts of it; and their descriptions are of so extraordinary a character, that I would not be willing to describe until I can see for myself, -- which will, in all probability, be in a few days.

In ranging the eye over the village from where I am writing, there is presented to the view the strangest mixture and medley of unintelligible trash (independent of the living beings that are in motion), that can possibly be imagined. On the roofs of the lodges, besides the groups of living, are buffaloes' skulls, skin canoes, pots and pottery; sleds and sledges -- and suspended on poles, erected some twenty feet above the doors of their wigwams, are displayed in a peasant day, the scalps of warriors, preserved as trophies; and thus proudly exposed as evidence of their warlike deeds. In other parts are raised on poles the warriors' pure and whitened shields and quivers, with medicine-bags attached; and here and there a sacrifice of red cloth, or other costly stuff, offered up to the Great Spirit, over the door of some benignant chief, in humble gratitude for the blessings which he is enjoying. Such is a part of this strange medley that is before and around me; and amidst them and the blue streams of smoke that are rising from the tops of these hundred "coal-pits," can be seen in distance, the green and boundless, treeless, bushless prairie; and on it, and contiguous to the piquet which encloses the village, a hundred scaffolds, on which their "dead live", as they term it.

These people never bury the dead, but place the bodies on slight scaffolds just above the reach of human hands, and out of the way of wolves and dogs; and they are there left to moulder and decay. This cemetery, or place of deposits for the dead, is just back of the village, on a level prairie; and with all its appearances, history, forms, ceremonies, &c. is one of the strangest and most interesting objects to be described in the vicinity of this peculiar race.

Whenever a person dies in the Mandan village, and the customary honours and condolence are paid to his remains, and the body dressed in its best attire, painted, oiled, feasted, and supplied with bow and quiver, shield, pipe and tobacco -- knife, flint and steel, and provisions enough to last him a few days on the journey which he is to perform; a fresh buffalo's skin, just taken from the animal's back, is wrapped around the body, and tightly bound and wound with thongs of raw hide from head to foot. Then other robes are soaked in water, till they are quite soft and elastic, which are also bandaged around the body in the same manner, and tied fast with thongs, which are wound with great care and exactness, so as to exclude the action of the air from all parts of the body.

There is then a separate scaffold erected for it, constructed of four upright posts, a little higher than human hands can reach; and on the tops of these are small poles passing around from one post to the others; across which a number of willow-rods just strong enough to support the body, which is laid upon them on its back, with its feet carefully presented towards the rising sun.

There are a great number of these bodies resting exactly in a similar way; excepting in some instances where a chief, or medicine-man, may be seen with a few yards of scarlet or blue cloth spread over his remains, as a mark of public respect and esteem. Some hundreds of these bodies may be seen reposing in this manner in this curious place, which the Indians call, “the village of the dead;” and the traveller, who visits this country to study and learn, will not only be struck with the novel appearance of the scene; but if he will give attention to the respect and devotions that are paid to this sacred place, he will draw many a moral deduction that will last him through life: he will learn, at least, that filial, conjugal, and paternal affection are not necessarily the results of civilization; but that the Great Spirit has given them to man in his native state; and that the spices and improvements of the enlightened world have never refined upon them.

There is not a day in the year in which one may not see in this Place evidences of this fact, that will wring tears from his eyes, and kindle in his bosom a spark of respect and sympathy for the poor Indian, if he never felt it before. Fathers, mothers, wives, and children, may be seen lying under these scaffolds, prostrated upon the ground, with their faces in the dirt, howling forth incessantly the most piteous and heart-broken cries and lamentations for the misfortunes of their kindred; tearing their hair--cutting their flesh with their knives, and doing other penance to appease the spirits of the dead, whose misfortunes they attribute to some sin or omission of their own, for which they sometimes indict the most excruciating selftorture.

When the scaffolds on which the bodies rest, decay and fall to the ground, the nearest relations having buried the rest of the bones, take the skulls, which are perfectly bleached and purified, and place them in circles of an hundred or more on the prairie--placed at equal distances apart (some eight or nine inches from each other), with the faces all looking to the center; where they are religiously protected and preserved in their precise positions from year to year, as objects of religious and affectionate veneration.

There are several of these “Golgothas” or circles of twenty or thirty feet in diameter, and in the center of each ring or circle is a little mound of three feet high, on which uniformly rest two buffalo skulls (a male and female); and in the center of the little mound is erected a “medicine pole”, about twenty feet high, supporting many curious articles of mystery and superstition, which they suppose have the power of guarding and protecting this sacred arrangement. Here then, to this strange place do these people again resort, to evince their further affections for the dead- not in groans and lamentations however, for several years have cured the anguish; but fond affections and endearments are here renewed, and conversations are here held and cherished with the dead. Each one of these skulls is placed upon a bunch of wild sage, which has been pulled and placed under it. The wife knows (by some mark or resemblance) the skull of her husband or her child, which lies in this group; and there seldom passes a day that she does not visit it, with a dish of the best cooked food that her wigwam affords, which she sets before the skull at night, and returns for the dish in the morning. As soon as it is discovered that the sage on which the skull rests is beginning to decay, the woman cuts a fresh bunch, and places the skull carefully upon it, removing that which was under it.

Independent of the above-named duties, which draw the women to this spot, they visit it from inclination, and linger upon it to hold converse and company with the dead. There is scarcely an hour in a pleasant day, but more or less of these women may be seen sitting or laying by the skull of their child or husband -- talking to it in the most pleasant and endearing language that they call use (as they were wont to do in former days) and seemingly getting an answer back. It is not unfrequently the case, that the woman brings her needle-work with her, spending the greater part of the day, sitting by the side of the skull of her child, chatting incessantly with it, while she is embroidering or garnishing a pair of moccasins; and perhaps, overcome with fatigue, falls asleep, with her arms encircled around it, forgetting herself for hours; after which she gathers up her things and returns to the village.

There is something exceedingly interesting and impressive in these scenes, which are so strikingly dissimilar, and yet within a few rods of each other; the one is the place where they pour forth the frantic anguish of their souls-and afterwards pay their visits to the other, to jest and gossip with the dead.

The great variety of shapes and characters exhibited in these groups of crania, render them a very interesting study for the chronologist and phrenologist; but I apprehend that it would be a matter of great difficulty (if not of impossibility) to procure them at this time, for the use and benefit of the scientific world.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

LETTER -- No. 13.

MANDAN VILLAGE, UPPER MISSOURI.

In several of my former Letters I have given sketches of the village, and some few of the customs of these peculiar people; and I have many more yet in store; some of which will induce the readers to laugh, and others almost dispose them to weep. But at present, I drop them, and introduce a few of the wild and gentlemanly Mandans themselves; and first, Ha-natah-nu-mauh, the wolf chief. This man is head-chief of the nation, and familiarly known by the name of "Chef de Loup", as the French Traders call him; a haughty, austere, and overbearing man, respected and feared by his people rather than loved. The tenure by which this man holds his office, is that by which the head-chiefs of most of the tribes claim, that of inheritance. It is a general, though not an infallible rule amongst the numerous tribes of North American Indians, that the office of chief belongs to the eldest son of a chief; provided he shews himself, by his conduct, to be equally worthy of it as any other in the nation; making it hereditary on a very proper condition -- in default of which requisites, or others which may happen, the office is elective.

The dress of this chief was one of great extravagance, and some beauty; manufactured of skins, and a great number of quills of the raven, forming his stylish head-dress.

The next and second chief of the tribe, is Mah-to-toh-pa (the four bears). This extraordinary man, though second in office is undoubtedly the first and most popular man in the nation. Free, generous, elegant and gentlemanly in his deportment -- handsome, brave and valiant; wearing a robe on his back, with the history of his battles emblazoned on it; which would fill a book of themselves, if properly translated. This, readers, is the most extraordinary man, perhaps, who lives at this day, in the atmosphere of Nature's noblemen; and I shall certainly tell you more of him anon. After him, there are Mah-tahp-ta-ha, he who rushes through the middle; Seehk-hee-da, the mouse-coloured feather; Sanja-ka-ko-kah (the deceiving wolf); Mah-to-he-ha (the old bear), and others, distinguished as chiefs and warriors -- and there are belies also; such as Mi-neek-e-sunk-te-ca, the mink; and the little grayhaired Sha-ko-kn, mint; and fifty others, who are famous for their conquests, not with the bow or the javelin, but with their small black eyes, which shoot out from under their unfledged brows, and pierce the oldest, fiercest chieftain to the heart.

The Mandans are certainly a very interesting and pleasing people in their personal appearance and manners; differing in many respects, both in looks and customs, from all other tribes which I have seen. They are not a warlike people; for they seldom, if ever, carry war into their enemies' country; but when invaded, shew their valeur and courage to be equal to that of any people on earth. Being a small tribe, and unable to contend on the wide prairies with the Sioux and other roaming tribes, while they are ten times more numerous; they have very judiciously located themselves in a permanent village, which is strongly fortified, and ensures their preservation. By this means they have advanced further in the arts of manufacture; have supplied their lodges more abundantly with the comforts, and even luxuries of life, than any Indian nation I know of. The consequence

---

of this is, that this tribe have taken many steps ahead of other tribes in manners and retinements (if I may be allowed to apply the word refinement to Indian life); and are therefore familiarly (and correctly) denominated, by the Traders and others, who have been amongst them, "the polite and friendly Mandans".

There is certainly great justice in the remark; and so forcibly have I been struck with the peculiar ease and elegance of these people, together with the diversity of complexions, the various colours of their hair and eyes; the singularity of their language, and their peculiar and unaccountable customs, that I am fully convinced that they have sprung from some other origin than that of the other North American tribes, or that they are an amalgam of natives with some civilized race.

Here arises a question of very great interest and importance for discussion; and, after further familiarity with their character, customs, and traditions, if I forget it not, I will eventually give it further consideration. Suffice it then, for the present, that their personal appearance alone, independent of their modes and customs, pronounces them at once, as more or less, than savage.

A stranger in the Mandan village is first struck with the different shades of complexion, and various colours of hair which he sees in a crowd about him; and is at once almost disposed to exclaim that "these are not indians".

There are a great many of these people whose complexions appear as light as half breeds; and amongst the women particularly, there are many whose skins are almost white, with the most pleasing symmetry and proportion of features; with hazel, with grey, and with blue eyes, -- with mildness and sweetness of expression, and excessive modesty of demeanour, which render them exceedingly pleasing and beautiful.

Why this diversity of complexion I cannot tell, nor call they themselves account for it. Their traditions, so far as I have yet learned them, afford us no information of their having had any knowledge of white men before the visit of Lewis and Clarke, made to their village thirty-three years ago. Since that time there have been but very few visits from white men to this place, and surely not enough to have changed the complexions and the customs of a nation. And I recollect perfectly well that Governor Clarke told me, before I started for this place, that I would find the Mandans a strange people and half white.

The diversity in the colour of hair is also equally as great as that in the complexion; for in a numerous group of these people (and more particularly amongst the females, who never take pains to change its natural colour, as the men often do), there may be seen every shade and colour of hair that can be seen in our own country, with the exception of red or auburn, which is not to be found.

And there is yet one more strange can probably be seen nowhere else accounted for, other than it is a freak or order of Nature, for which she has not seen fit to assign a reason. There are very many, of both sexes, and of every age, from infancy to manhood and old age, with hair of a bright silvery grey; and in some instances almost perfectly white.

This singular and eccentric appearance is much oftener seen among the women than it is with the men; for many of the latter who have it, seem ashamed of it, and artfully conceal it, by filling their hair with glue and black and red earth. The women, on the other hand, seem proud of it, and display it often in an almost incredible profusion, which spreads over their shoulders and falls as low as the knee. I have ascertained, on a careful enquiry, that about one in ten or twelve of the whole tribe are what the French call "cheveux gris", or greyhairs; and that this strange and un-account-

able phenomenon is not the result of disease or habit; but that it is unquestionably a hereditary character which runs in families, and indicates no inequality in disposition or intellect. And by passing this hair through my hands, as I often have, I have found it uniformly to be as coarse and harsh as a horse's mane; differing materially from the hair of other colours, which amongst the Mandans, is generally as fine and as soft as silk.

The reader will at once see, by the above facts, that there is enough upon the faces and heads of these people to stamp them peculiar, -- when he meets them in the heart of this almost boundless wilderness, Presenting such diversities of colour in the complexion and hair; when he knows from what he has seen, and what he has read, that all other primitive tribes known in America, are dark copper-coloured, with jet black hair.

From these few facts alone, the reader will see that I am amongst a strange and interesting people, and know how to pardon me, if I lead him through a maze of novelty and mysteries to the knowledge of a strange, yet kind and hospitable, people, whose fate, like that of all their race is sealed; -- and unaccountable peculiarity, which on earth; nor on any rational grounds whose doom is fixed, to live just long enough to be imperfectly known, and then to fall before the fell to disease or sword of civilizing devastation.

The stature of the Mandans is rather below the ordinary size of man, with beautiful of form and proportion, and wonderful suppleness and elasticity; they are pleasingly erect and graceful, both in their walk and their attitudes; and the hair of the men, which generally spreads over their backs, falling down to the hams, and sometimes to the ground, is divided into Plaits or slabs of two inches in width, and filled with a profusion of glue and red earth or vermillion, at intervals of an inch or two, which becoming very hard, remains in and unchanged from year to year.

This mode of dressing the hair is curious, and gives to the Mandans the most singular appearance. The hair of the men is uniformly all laid over from the forehead backwards; carefully kept above and resting on the ear, and thence falling down over the back, in these flattened bunches, and painted red, extending oftentimes quite on to the calf of the leg, and some times in such profusion as almost to conceal the whole figure from the person walking behind them. In the portrait of San-ja-ka-ko-kall (the deceiving wolf), where he is represented at full length, with several others of His family around him in a group, there will be seen a fair illustration of these and other customs of these people.

The hair of the women is also worn as long as they can possibly cultivate it, oiled very often, which preserves on it a beautiful gloss and shows its natural colour. They often braid it in two large plaits, one falling down just back of the ear, on each side of the head; and on any occasion which requires them to "put on their best looks", they pass their fingers through it, drawing it out of braid, and spreading it over their shoulders. The Mandan women observe strictly the same custom, which I observed amongst the Crows and Blackfeet (and, in fact, all other tribes I have seen, without a single exception), of parting the hair on the forehead, and always keeping the crease or separation filled with vermilion or other red paint. This is one of the very few little (and apparently trivial) customs which I have found amongst the Indians, without being able to assign any cause for it, other than that "they are Indians", and that this is an Indian fashion.

In mourning, like the Crows and most other tribes, the women are obliged to crop their hair all off; and the usual term of that condolence is until the hair has grown again to its former length. When a man mourns for the death of a near relation the case is quite different; his long, valued

tresses, are of much greater importance and only a lock or two can be spared. Just enough to tell of his grief to his friends, without destorying his most valued ornament, is doing just reverence and respect to the dead.

To repeat what I have said before, the Mandans are a pleasing and friendly race of people, of whom it is proverbial amongst the Traders and all who ever have known them, that their treatment of white men in their country has been friendly and kind ever since their first acquaintance with them -- they have ever met and received them, on the prairie or in their villages, with hospitality and honour.

They are handsome, straight and elegant in their forms -- not tall, but quick and graceful; easy and polite in their manners, neat in their persons and beautifully clad. When I say "neat in person and beautifully clad", however, I do not intend my readers to understand that such is the case with them all, for among them and most other tribes, as with the enlightened world, there are different grades of society -- those who care but little for their personal appearance, and those who take great pains to please themselves and their friends. Amongst this class of personages, such as chiefs anti braves, or warriors of distinction, and their families, and dandies or exquisites (a class of beings of whom I shall take due time to speak in a future Letter), the strictest regard to decency, and cleanliness and elegance of dress is observed; and there are few people, perhaps, who take more pains to keep their persons neat and cleanly than they do.

At the distance of half a mile or so above the village, is the customary place where the women and girls resort every morning in the summer months, to bathe in the river. To this spot they repair by hundreds, every morning at sunrise, where, on a beautiful beach, they can be seen running and glistening in the sun, whilst they are playing their innocent gambols and leaping into the stream. They all learn to swim well, and the poorest swimmer amongst them will dash fearlessly into the boiling, and eddying current of the Missouri, and cross it with perfect ease. At the distance of a quarter of a mile back from the river, extends a terrace or elevated prairie, running north from the village, and forming a kind of semicircle around this bathingplace; and on this terrace, which is some twenty or thirty feet higher than the meadow between it and the river, are stationed every morning several sentinels, with their bows and arrows in hand, to guard and protect this sacred ground from the approach of boys or men from any directions.

At a little distance below the village, also, is the place where the men and boys go to bathe and learn to swim. After this morning ablution, they return to their village, wipe their limbs dry, and use a profusion of bear's grease through their hair and over their bodies.

The art of swimming is known to all the American Indians; and perhaps no people on earth have taken more pains to learn it, nor any who turn it to better account. There certainly are no people whose avocations of life more often call for the use of their limbs in this way; as many of the tribes spend their lives on the shores of our vast lakes and rivers, paddling about liorn their childhood in their fragile bark canoes, which are liable to continual accidents, which often throw the Indian upon His natural resources for the preservation of his life.

There are many times also, when out upon their long marches in the prosecution of their almost continued warfare, when it becomes necessary to plunge into and swim across the wildest streams and rivers, at times when they have no canoes or craft in which to cross them. I have as yet seen no triie where this art is neglected. It is learned at a very early age by both sexes, and enables the strong and hardy muscles of the squnws to take their child upon the back, and successfully to pass

any river that lies in their way.

The mode of swimming amongst the Mandans, as well as amongst most of the other tribes, is quite different from that practiced in those parts of the civilized world, which I have had the pleasure yet to visit. The Indian, instead of parting his hands simultaneously under the chin, and making the stroke outward, in a horizontal direction, causing thereby a serious strain upon the chest, throws his body alternately upon the left and the right side, raising one arm entirely above the water and reaching as far forward as he can, to dip it, whilst his whole weight and force are spent upon the one that is passing under him, and like a paddle propelling him along; whilst this arm is making a half circle, and is being raised out of the water behind him, the opposite arm is describing a similar arch in the air over his head, to be dipped in the water as far as he can reach before him, with the hand turned under, forming a sort of bucket, to act most effectively as it passes in its torn underneath him.

By this bold and powerful mode of swimming, which may want the grace that many would wish to see, I am quite sure, from the experience I have had, that much of the fatigue and strain upon the breast and spine are avoided, and that a man will preserve his strength and his breath much longer in this alternate and rolling motion, than he can in the usual mode of swimming, in the polished world.

In addition to the modes of bathing which I have above described, the Mandans have another, which is a much greater luxury, and often resorted to by the sick, but far more often by tire well and sound, as a matter of luxury only, or perhaps for the purpose of hardening their limbs and preparing them for the thousand exposures and vicissitudes of life to which they are continually liable. I allude to their vapour baths, or sudatories, of which each village has several, and which seem to be a kind of public property-accessible to all, and resorted to by all, male and female, old and young, sick and well.

In every Mandan lodge is to be seen a crib or basket, much in the shape of a bathing-tub, curiously woven with willow boughs, and sufficiently large to receive any person of the family in a reclining or recumbent posture; which, when any one is to take a bath, is carried by the squaw to the sudatory for the purpose, and brought back to the wigwam again after it has been used.

These sudatories are always near the village, above or below it, on the bank of the river. They are generally built of skins (in form of a Crow or Sioux lodge which I have before described), covered with buffalo skins sewed tight together, with a kind of furnace in the centre; or in other words, in the centre of the lodge are two walls of stone about six feet long and two and a half apart, and about three feet high; across and over this space, between the two walls, are laid a number of round sticks, on which the bathing crib is placed. Contiguous to the lodge, and outside of it, is a little furnace something similar, in the side of the bank, where the woman kindles a hot fire, and heats to a red heat a number of large stones, which are kept at these places for this particular purpose; and having them all in readiness, she goes home or sends word to inform her husband or other one who is waiting, that all is ready; when he makes his appearance entirely naked, though with a large buffalorobe wrapped around him. He then enters the lodge and places himself in the crib or basket, either on his back or in a sitting posture (the latter of which is generally preferred), with his back towards the door of the lodge; when the squaw brings in a large stone red hot, between two sticks (lashed together somewhat in the form of a pair of tongs) and, placing it under him, throws cold water upon it, which raises a profusion of vapour about him. He is at once

enveloped in a cloud of steam, and a woman or child will sit at a little distance and continue to dash water upon the stone, whilst the matron of the lodge is out, and preparing to make her appearance with another heated stone: or he will sit and dip from a wooden bowl, with a ladle made of the mountain-sheep's horn, and throw upon the heated stones, with his own hands, the water which he is drawing through his lungs and pores, in the next moment, in the most delectable and exhilarating vapours, as it distils through the mat of wild sage and other medicinal and aromatic herbs, which he has strewed over the bottom of his basket, and on which he reclines.

During all this time the lodge is shut perfectly tight, and he quaffs this delicious and renovating draught to his lungs with deep drawn sighs, and with extended nostrils, until he is drenched in the most profuse degree of perspiration that can be produced; when he makes a kind of strangled signal, at which the lodge is opened, and he darts forth with the speed of a frightened deer, and plunges headlong into the river, from which he instantly escapes again, wraps his robe around him and "leans" as fast as possible for home. Here his limbs are wiped dry, and wrapped close anti tight within the fur of the buffalo robes, in whid he takes his nap, with his f'et to the fire; then oils his limbs and hair with bear's grease, dresses and plumes himself for a visit -- a feast -- a parade, or a council; or slicks down his long hair, and rubs his oiled limbs to a polish, with a Piece of soft buckskin, prepared to join in games of ball or Tchung-kee.

Such is the sudatory or the vapour bath of the Mandans, and, as I before observed, it is resorted to both as an every-day luxury by those who have the time and energy or industry to indulge in it; and also used by the sick as a remedy for nearly all the diseases which are known amongst them. Fevers are very rare, and in fact almost unknown amongst these people: but in the few cases of fever which have been known, this treatment has been applied, and without the fatal consequences which we would naturally predict. The greater part of their diseases are inflammatory rhenmatisms, and other chronic diseases; and for these, this mode of treatment, with their modes oflife, does admirably well. This custom is similar amongst nearly all of these Missouri Indians, and amongst the Pawnees, Omahas, and Punchas and other tribes, while have suffered with the small-pox (the dread destroyer of the Indian race), this mode was practiced by the poor creatures, who fled by hundreds to the river's edge, and by hundreds died before they could escape from the waves, into which they had plunged in the heat and rage of a burning fever. Such will yet be the scourge, and such the misery ofthese poor unthinking people, and each tribe to the Rocky Mountains, as it has been with every tribe between here and the Atlantic Ocean. White man's whiskey -- tomehawks -- scalping knives -- guns, powder and ball -- small-pox -- debauchery -- extermination.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

LETTER No. 14.

MANDAN VILLAGE, UPPER MISSOURI.

The Mandans in many instances dress very neatly, and some of them splendidly. As they are in their native state, their dresses are all of their own manufacture; and of course, altogether made of skins of different animals belonging to those regions. There is, certainly, a reigning and striking similarity of costume amongst most of the North Western tribes; and I cannot say that the dress of Mandans is decidedly distinct from that of the Crows or the Blackfeet, the Assiniboins or the Sioux; yet there are modes of stitching or embroidering, in every tribe, which may at once enable the traveller, who is familiar with their modes, to detect or distinguish the dress of any tribe. These differences consist generally in the fashions of constructing the head-dress, or of garnishing their dresses with the porcupine quills, which they use in great profusion.

Amongst so many different and distinct nations, always at war with each other, and knowing nothing at all of each other's languages; and amongst whom, fashions in dress seldom if ever change; it may seem somewhat strange that we should find these people so nearly following, or imitating each other, in the forms and modes of their dress and ornaments. This must however, be admitted, and I think may be accounted for in a manner, without raising the least argument in favour of the theory of their having all sprung from one stock or one family; for in their continual warfare, when chiefs or warriors fall, their clothes and weapons usually fall into the possession of the victors, who wear them; and the rest of the tribe would naturally more or less often copy from or imitate them; and so also in their repeated councils or treaties of peace, such articles of dress and other manufactures are customarily exchanged, which are equally adopted by the other tribe; and consequently, eventually lead to the similarity which we find amongst the modes of dress, &c. of the different tribes.

The tunic or shirt of the Mandan men is very similar in shape to that of the Blackfeet -- made of two skins of deer or mountain-sheep, strung with scalp-locks, beads, and ermine. The leggings, like those of the other tribes, of whom I have spoken, are made of deer skins, and shaped to fit the leg, embroidered with porcupine quills, and fringed with scalps from their enemies heads. Their moccasins are made of buckskin, and neatly ornamented with porcupine quills--over their shoulders (or in other words, over one shoulder and passing under the other), they very gracefully wear a robe from the young buffalo's back, oftentimes cut down to about half its original size, to make it handy and easy for use. Many of these are also fringed on one side with scalp-locks; and the flesh side of the skin curiously ornamented with pictured representations of the creditable events and battles of their lives.

Their head-dresses are of various sorts, and many of them exceedingly picturesque and handsome; generally made of war-eagles' or ravens quills and ermine. These are the most costly part of an Indian's dress in all this country, owing to the difficulty of procuring the quills and the fur. The war-eagle being the "rara avis", and the ermine the rarest animal that is found in the country. The

tail of a war-eagle in this village, provided it is a perfect one, containing some six or eight quills, which are denominated first-rate plumes, and suitable to arrange in a head-dress, will purchase a tolerable good horse (horses, however, are much cheaper here than they are in most other countries). I have had abundant opportunities of learning the great value which these people sometimes attach to such articles of dress and ornament, as I have been purchasing a great many, which I intend to exhibit in my Gallery of Indian Paintings, that the world may examine them for themselves, and thereby be enabled to judge of the fidelity of my works, and the ingenuity of Indian manufactures.

In these purchases I have often been surprised at the prices demanded by them; and perhaps I could not recite a better instance of the kind, than one which occurred here a few days since: -- One of the chiefs, whom I had painted at full length, in a beautiful costume, with head-dress of war eagles' quills and ermine, extending quite down to his feet; and whom I was soliciting for the purchase of his dress complete, was willing to sell to me all but the head-dress; saying, that "he could not part with that, as he would never be able to get quills and ermine of so good a quality to make another like it." I agreed with him, however, for the rest of the dress, and importuned him, from day to day, for the head-dress, until he at length replied, that, if I must have it, he must have two horses for it; bargain was instantly struck -- the horses were procured of Traders at twenty-five dollars each, and the head-dress secured for my Collection.

There is occasionally, a chief or a warrior of so extraordinary renown, that he is allowed to wear horns on his head-dress, which give to his aspect a strange and majestic effect. These we made of about a third part of the horn of a buffalo bull; the horn having been split from end to end, and a third part of it taken and shaved thin and light, and highly polished. These are attached to the top of the head-dress on each side, in the same place that they rise and stand on the head of a buffalo; rising out of a mat of ermine skins and tails, which hang over the top of the head-dress, somewhat in the form that the large and profuse locks of hair hang and fall over the head of a buffalo bull. The same custom I have found observed amongst the Sioux, -- the Crows -- the Blackfeet and Assinneboins, and it is one of so striking a character as needs a few more words of observation. There is a peculiar meaning or importance (in their estimation) to this and many other curious and unaccountable appearances in the habits of Indians, upon which the world generally look as things that are absurd and ridiculous, merely because they are beyond the world's comprehension, or because we do not stop to enquire or learn their uses or meaning..

I find that the principal cause why we underrate and despise the savage, is generally because we do not understand him; and the reason why we are ignorant of him and his modes, is that we do not stop to investigate--the world have been too much in the habit of looking upon him as altogether inferior-as a beast, a brute; and unworthy of more than a passing notice. If they stop long enough to form an acquaintance, it is but to take advantage of his ignorance and credulities -- to rob him of the wealth and resources of his country;-to make him drunk with whiskey, and visit him with abuses which in his ignorance he never thought of. By this method his first visitors entirely overlook and never understand the meaning of his thousand interesting and characteristic customs; and at the same time, by changing his native modes and habits of life, blot them out from the view of the enquiring world for ever.

It is from the observance of a thousand little and apparently trivial modes and tricks of Indian life, that the Indian character must be learned; and, in fact, it is just the same with us if the subject

were reversed: excepting that the system of civilized life would furnish ten apparently useless and ridiculous trifles to one which is found in Indian life; and at least twenty to one which are purely nonsensical and unmeaning.

The civilized world look upon a group of Indians, in their classic dress, with their few and simple oddities, all of which have their moral or meaning, and laugh at them excessively, because they are not like ourselves -- we ask, " why do the silly creatures wear such great bunches of quills on their heads? -- Such loads and streaks of paint upon their bodies -- and bear's grease? abominable!" and a thousand other equally silly questions, without ever stopping to think that Nature taught them to do so--and that they all have some definite importance or meaning which an Indian could explain to us at once, if he were asked and felt disposed to do so -- that each quill in his head stood, in the eyes of his whole tribe, as the symbol of an enemy who had fallen by his hand--that every streak of red paint covered a wound which he had got in honorable combat -- and that the bear's grease with which he carefully anoints his body every morning, from head to foot, cleanses and purifies the body, and protects his skin from the bite of mosquitoes, and at the same time preserves him from colds and coughs which are usually taken through the pores of the skin.

At the same time, an Indian looks among the civilized world, no doubt, with equal. If not much greater, astonishment, at our apparently, as well as really, ridiculous customs and fashions; but he laughs not, nor ridicules, nor questions, -- for his natural good sense and good manners forbid him,-until he is reclining about the fire-side of his wigwam companions, when he vents forth his just criticisms upon the learned world, who are a rich and just theme for Indian criticism and Indian gossip.

An Indian will not ask a white man the reason why he does not oil his skin with bears' grease, or why he does not paint his body--or why he wears a hat on his head, or why he has buttons on the back part of his coat, where they never can be used -- or why he wears whiskers, and a shirt collar up to his eyes -- or why he sleeps with his head towards the fire instead of his feet -- why he walks with his toes out instead of turning them in -- or why it is that hundreds of white folks will flock and crowd round a table to see an Indian eat -- but he will go home to his wigwam fire-side, and "make the welkin ring" with jokes and fun upon the ignorance and folly of the knowing world. A wild Indian thrown into the civilized atmosphere will see a man occasionally moving in society, wearing a cocked hat; and another with a laced coat and gold or silver epaulettes upon his shoulders, without knowing or enquiring the meaning of them, or the objects for which they are worn. Just so a white man travels amongst a wild and untaught tribe of Indians, and sees occasionally one of them parading about their village, with a head-dress of eagles' quills and ermine, and elevated above it a pair of beautifully polished buffalo horns; and just as ignorant is he also, of their meaning or importance; and more so, for the first will admit the presumption that epaulettes and cocked hats amongst the civilized world, are made for some important purpose,-but the latter will presume that horns on an Indian's head are nothing more nor less (nor can they be in their estimation), than Indian nonsense and stupidity.

This brings us to the "corned crest" again, and if the poor Indian scans epaulettes and cocked hats, without enquiring their meaning, and explaining them to his tribe, it is no reason why I should have associated with the noble dignitaries of these western regions, with horns and ermine on their heads, and then to have introduced the subject without giving some further clue to their importance and meaning. For me, this negligence would be doubly unpardonable, as I travel, not

to trade but to herald the Indian and his dying customs to posterity.

This custom then, which I have before observed belongs to all the northwestern tribes, is one no doubt of very ancient origin, having a purely classic meaning. No one wears the head-dress surmounted with horns except the dignitaries who are very high in authority, and whose exceeding valor, worth, and power is admitted by all the nation.

He may wear them, however, who is not a chief; but a brave, or warrior of such remarkable character, that he is esteemed universally in the tribe, as a man whose "voice is as loud in council" as that of a chief of the first grade, and consequently his power as great.

This head-dress with horns is used only on certain occasions, and they are very seldom. When foreign chiefs, Indian agents, or other important personages visit a tribe; or at war parades, at the celebration of a victory, at public festivals, &c. they are worn; but on no other occasions-unless, sometimes, when a chief sees fit to lead a war-party to battle, he decorates his head with this symbol of power, to stimulate his men; and throws himself into the foremost of the battle, inviting his enemy to concentrate their shafts upon him.

The horns on these head-dresses are but loosely attached at the bottom, so that they easily fall back or forward, according as the head is inclined forward or backward; and by an ingenious motion of the head, which is so slight as to be almost imperceptible -- they are made to balance to and fro, and sometimes, one backward and the other forward like a horse's ears. giving a vast deal of expression and force of character, to the appearance of the chief who is wearing them.

This, reader, is a remarkable instance (like hundreds of others), for its striking similarity to Jewish customs, to the kerns ;or keren, in Hebrew), the horns worn by the Abyssinian chiefs and Hebrews, as a symbol of power and command; worn at great parades and celebrations of victories.

"The. false prophet Zedekiah, made him horns of iron" (I Kings xxii. II). " Lift not your horns on high; speak not with a stiff neck".

This last citation seem?; so exactly to convey to my mind the mode of raising and changing the position of the horns by a motion of the head, as I have above described, that I am irresistibly led to believe that this custom is now practiced amongst these tribes very nearly as it was amongst the Jews; and that it has been, like marry other customs of which I shall speak more in future epistles, handed down and preserved with very little innovation or change from that ancient people. The reader will see this custom exemplified in the portrait of Mah-totoh-pa. This man, although the second chief, was the only man in the nation who was allowed to wear the horns; and all, I found, looked upon him as the leader, who had the power to lead all the warriors in time of war; and that, in consequence of the extraordinary battles which Ire had fought.

LETTER--No. 15.

MANDAN VILLAGE, UPPER MISSOURI.

A WEEK Or more has elapsed since the date of my last Letter, and nothing as yet of the great and curious event -- or the Mandan religious ceremony. There is evidently much preparation making for it, however; and from what I can learn, no one in the nation, save the medicine-men, have any knowledge of the exact day on which it is to commence. I am informed by the chiefs, that it takes place as soon as the willow-tree is in full leaf; for, say they, "the twig which the bird brought in was a willow bough, and had full-grown leaves on it." So it seems that this celebration has some relation to the Flood.

This great occasion is close at hand, and will, undoubtedly, commence in a few days; in the meantime I will give a few notes and memorandums, which I have made since my last.

I have been continually at work with my brush, with fine and picturesque subjects before me; and from the strange, whimsical, and superstitious notions which they have of an art so novel and unaccountable to them, I have been initiated into many of their mysteries -- have witnessed many very curious incidents, and preserved several anecdotes, some of which I must relate.

Perhaps nothing ever more completely astonished these people than the operations of my brush.

The art of portrait-painting was a subject entirely new to them, and of course, unthought of; and my appearance here has commenced a new era in the arcana of medicine or mystery. Soon after arriving here, I commenced and finished the portraits of the two principal chiefs. This was done without having awakened the curiosity of the villagers, as they had heard nothing of what was going on, and even the chiefs themselves seemed to be ignorant of my designs, until the pictures were completed. No one else was admitted into my lodge during the operation; and when finished was exceedingly amusing to see them mutually recognizing each other's likeness, and assuring each other of the striking resemblance which they bore to the originals. Both of these pressed their hand over their mouths awhile in dead silence (a custom amongst most tribes, when anything surprises them very much); looking attentively upon the portraits and myself, and upon the palette and colors with which these unaccountable effects had been produced.

They then walked up, to me in the most gentle manner, taking me In turn by the hand, with a firm grip: with head and eyes inclined downwards, and in a tone a little above a whisper--pronounced the words "te-hope-nee Wash-ee!" and walked off.

Readers, at that moment I was christened with a new and a great name--one by which I am now familiarly hailed, and talked of in this village; and no doubt will be, as long as traditions last in this strange community.

That, moment conferred an honour on me, which you as yet do not understand. I took the degree (not of Doctor of Laws, nor Bachelor of Arts) of Master of Arts -- of mysteries -- of magic, and of hocus pocus. I was recognized in that short sentence as a "great medicine white man"; and since that time, have been regularly installed medicine or mystery, which is the most honorable degree

---

that could be conferred upon me here; and I now hold a place amongst the most eminent and envied personages, the doctors and conjurati of this titled community. Te-ho-pe-nee Wash-ee (or medicine white man) is the name I now go by, and it will prove to me, no doubt, of more value than gold, for I have been called upon and feasted by the doctors, who are all mystery-men; and it has been an easy and successful passport already to many strange and mysterious places; and has put me in possession of a vast deal of curious and interesting information, which I am sure I never should have otherwise learned. I am daily growing in the estimation of the medicine-men and the chiefs; and by assuming all the gravity and circumspection due from so high a dignitary (and even considerably more); and endeavoring to perform now and then some art or trick that is unfathomable, I am in hopes of supporting my standing, until the great annual ceremony commences; on which occasion, I may possibly be allowed a seat in the medicine-lodge by the doctors, who are the sole conductors of this great source and fountain of all priestcraft and conjuration in this country.

After I had finished the portraits of the two chiefs, and they had returned to their wigwams, and deliberately seated themselves by their respective fire-sides, and silently smoked a pipe or two (according to an universal custom), they gradually began to tell what had taken place; and at length crowds of gaping listeners, with mouths wide open, thronged their lodges; and a throng of women and girls were about my house, and through every crack and crevice I could see their glistening eyes, which were piercing my hut in a hundred places, from a natural and restless propensity, a curiosity to see what was going on within. An four or more passed in this way, and the soft and silken throng continually increased, until some hundreds of them were clung, and piled about my wigwam like a swarm of bees hanging on the front and sides of their hive.

During this time, not a man made his appearance about the premises -- after awhile, however, they could be seen, folded in their robes, gradually siding up towards the lodge, with a silly look upon their faces, which confessed at once that curiosity was leading them reluctantly, where their pride checked and forbade them to go. The rush soon after became general, and the chiefs and medicine-men took Possession of my room, placing soldiers (braves with spears in their hands) at the door, admitting no one, but such as were allowed by the chiefs, to come in.

Monsr. Kipp (the agent of the Fur Company, who has lived here eight years, and to whom, for his politeness and hospitality, I am much indebted), at this time took a seat with the chiefs, and, speaking their language fluently, he explained to them my views and the objects for which I was painting these portraits; and also expounded to them the manner in which they were made, -- at which they seemed all to be very much pleased. The necessity at this time of exposing the Portraits to the view of the crowds who were assembled around the house, became imperative, and they were held up together over the door, so that the whole village had a chance to see and recognize their chiefs. The effect upon so mixed a multitude, who as yet had heard no way of accounting for them, was novel and really laughable. The likenesses were instantly recognized, and many of the gaping multitude commenced yelping; some were stamping off in the jarring dance--others were singing, and others again were crying -- hundreds covered their mouths with their hands and were mute; others, indignant, drove their spears frightfully into the ground, and some threw a reddened arrow at the sun, and went home to their wigwams.

The pictures seen, -- the next curiosity was to see the man who made them, and I was called forth. Readers! if you have any imagination, save me the trouble of painting this scene.

I stepped forth, and was instantly hemmed in the throng. Women were gaping and gazing -- and warriors anti braves were offering me their hands, -- whilst little boys and girls, by dozens, were struggling through the crowd to touch me with the ends of their fingers; and whilst I was engaged, from the waist upwards, in fending off the throng and shaking hands, my legs were assailed (not unlike the nibbling of little fish, when I have been standing in deep water) by children, who were creeping between the legs of the bystanders for the curiosity or honor of touching me with the end of their finger. The eager curiosity and expression of astonishment with which they gazed upon me, plainly shewed that they looked upon me as some strange and unaccountable being. They pronounced me the greatest medicine-man in the world ; for they said I had made living beings,--they said they could see their chiefs alive, in two places -- those that I had made were a little alive -- they could see their eyes move -- could see them smile and laugh, and that if they could laugh they could certainly speak, if they should try, and they must therefore have some life in them.

The squaws generally agreed, that they had discovered life enough in them to render my medicine too great for the Mandans; saying that such an operation could not be performed without taking away from the original something of his existence, which I put in the picture, and they could see it move, could see it stir.

This curtailing of the natural existence, for the purpose of instilling life into the secondary one, they decided to be an useless and destructive operation, and one which was calculated to do great mischief in their happy community I and they commenced a mournful and doleful chant against me, crying and weeping bitterly through the village, proclaiming me a most "dangerous man"; one who could make living persons by looking at them; and at the same time, could, as a matter of course, destroy life in the same way, if I chose. That my medicine was dangerous to their lives, and that I must leave the village immediately. That bad luck would happen to those whom I painted -- that I was to take a part of the existence of those whom I painted, and carry it home with me amongst the white people, and that when they died they would never sleep quiet in their graves." In this way the women and some old quack medicine-men together, had succeeded in raising an opposition against me; and the reasons they assigned were so plausible and so exactly suited for their superstitious feelings, that they completely succeeded in exciting fears and a general panic in the minds of a number of chiefs who had agreed to sit for their portraits, and my operations were, of course, for several days completely at a stand. A grave council was held on the subject from day to day, and there seemed great difficulty in deciding what was to be done with me and the dangerous art which I was practicing; and which had far exceeded their original expectations. I finally got admittance to their sacred conclave, and assured them that I was but a man like themselves, -- that my art had no medicine or mystery about it, but could be learned by any of them if they would practice it as long as I had -- that my intentions towards them were of the most friendly kind, and that in the country where I lived, brave men never allowed their squaws to frighten them with their foolish whims and stories. They all immediately arose, shook me by the hand, and dressed themselves for their pictures. After this, there was no further difficulty about sitting; all were ready to be painted,--the squaws were silent, and my painting-room a continual resort for the chiefs, and braves, and medicine men; where they waited with impatience for the completion of each one's picture, -- that they could decide as to the likeness as it came from under the brush; that they could laugh, and yell, and sing a new song, and smoke a fresh pipe to the health and

success of him who had just been safely delivered from the hands and the mystic operation of the "white medicine".

In each of these operations, as they successfully took place, I observed that a pipe or two were well filled, and as soon as I commenced painting, the chiefs and braves, who sat around the sides of the lodge, commenced smoking for the success of the picture (and probably as much or more so for the safe deliverance of the sitter from harm while under the operation); and so they continued to pass the pipe around until the portrait was completed.

In this way I progressed with my portraits, stopping occasionally very suddenly as if something was wrong, and taking a tremendous puff or two at the pipe, and streaming the smoke through my nostrils, exhibiting in my looks and actions an evident relief; enabling me to Proceed with more facility and success, - by flattering and complimenting each one on his good looks after I had got it done, and taking them according to rank, or standing, making it a matter of honor with them, which pleased them exceedingly, and gave me and my' art the stamp of respectability at once.

I was then taken by the arm by the chiefs, and led to their lodges, where feasts were prepared for me in elegant style, i.e. in the bat manner which this country affords; and being led by the arm, and welcomed to them by gentlemen of high and exalted feelings, rendered them in my estimation truly elegant.

I was waited upon, in due form and ceremony by the medicine-men, who received me upon the old adage, "Similis simili gaudet." I was invited to a feast, and they presented me a she-shee-quoi, or a doctor's rattle, and also a magical wand, or a doctor's staff, strung with claws of the grizzly bear, with hoofs of the antelope -- with ermine -- with wild sage and hats, wings -- and perfumed withal with the choice and savory odor of the pole-cat -- a dog was sacrificed and hung by the legs over my wigwam, and I was therefore and thereby initiated into (and countenanced in the practice of) the arcana of medicine or mystery, and considered a Fellow of the Extraordinary Society of Conjurati.

Since this signal success and good fortune in my operations, things have gone on very pleasantly, and I have had a great deal of amusement. Some altercation has taken place, however, amongst the chiefs and braves, with regard to standing or rank, of which they are exceedingly jealous; and they must sit (if at all) in regular order, according to that rank; the trouble is all settled at last, however, and I have had no want of subjects, though a great many have become again alarmed, and are unwilling to sit, for fear, as some say, that they will die prematurely if painted; and as others say, that if they are painted, the picture will live after they are dead, and they cannot sleep quiet in their graves.

I have had several most remarkable occurrences in my painting-room, of this kind, which have made me some everlasting enemies here; though the minds and feelings of the chiefs and medicine-men have not been affected by them. There has been three or four instances where proud and aspiring young men have been in my lodge, and after gazing at the portraits of the head chief across the room (which sits looking them in the eyes), have raised their hands before their faces and walked around to the side of the lodge, on the right or left, from whence to take a long and fair side-look at the chief, instead of staring him full in the face (which is a most unpardonable offence in all Indian tribes); and after having got in that position, and cast their eyes again upon the portrait which was yet looking them full in the face, have thrown their robes over their heads

and bolted out of the wigwam, filled equally with astonishment and indignation; averring, as they always will in a sullen mood, that they "saw the eyes move", that as they walked around the room "the eyes of the portrait followed them". With these unfortunate gentlemen, repeated efforts have been made by the Traders, and also by the chiefs and doctors, who understand the illusion, to convince them of their error, by explaining the mystery; but they will not hear to any explanation whatever; saying, that "what they see with their eyes is always evidence enough for them;" that they always "believe their own eyes sooner than a hundred tongues, "and all efforts to get them a second time to my room, or into my company in any place, have proved entirely unsuccessful. I had trouble brewing also the other day from another source; one of the "medicines" commenced howling and haranguing around my domicil, amongst the throng that was outside, proclaiming that all who were inside and being painted were fools and would soon die; and very materially affecting thereby my popularity. I however sent for him and called him in the next morning, when I was alone, having only the interpreter with me; telling him that I had had my eye upon him for several days, and had been so well pleased with his looks, that I had taken great pains to find out his history, which had been explained by all as one of a most extraordinary kind, and his character and standing in his tribe as worthy of my particular notice; and that I had several days since resolved that as soon as I had practiced my hand long enough upon the others, to get the stiffness out of it (after paddling my canoe so far as I had) and make it to work easily and successfully, I would begin on his portrait, which I was then prepared to commence on that day, and that; I felt as if I could do him justice. We shook me by the hand, giving me the "Doctor's grip", and beckoned me to sit down, which I did, and we smoked a pipe together. After this was over, he told me, that" he had no inimical feelings towards me, although he had been telling the chiefs that they were all fools, and all would die who had their Portraits painted -- that although he had set the old women and children all crying, and even made some of the young warriors tremble, yet he had no unfriendly feelings towards me, nor any fear or dread of my art." I know you are a good man (said he), I know you will do no harm to any one, your medicine is great and you are a great medicine-man. I would like to see myself very well -- and so would all of the chiefs ; but they have all been many days in this medicine-house, and they all know me well, and they have not asked me to come in and be made alive with paints -- my friend, I am glad that my people have told you who I am -- my heart is glad -- I will go to my wigwam and eat, and in a little while I will come, and you may go to work" -- another pipe was lit and. smoked, and he got up and went off. I prepared my canvass and palette, and whistled away the time until twelve o'clock, before he made his appearance; having used the whole of the fore-part of the day at his toilette, arranging his dress and ornamenting his body for his picture.

At that hour then, bedaubed and streaked with paints of various colors, with bear's grease and charcoal, with medicine-pipes in his hands and foxes tails attached to his heels, entered Mah-to-he-hah (the old bear), with a train of his own profession, who seated themselves around him; and also a number of boys, whom it was requested should remain with him, and whom I supposed it possible might have been pupils, whom he was instructing in the mysteries of materia medica and hoco poca. He took his position in the middle of the room, waving his eagle calumets in each hand, and singing his medicine-song which he sings over his dying patient, looking me full in the face until I completed his picture. Which I painted at full length. His vanity has been completely gratified in the operation; he lies for hours together, day after day, in my room, in front of his

picture, gazing intensely upon it; lights my pipe for me while I am painting -- shakes hands with me a dozen times on each day, and talks of me, and enlarges upon my medicine virtues and my talents, wherever he goes: so that this new difficulty is now removed, and instead of preaching against me, he is one of my strongest and most enthusiastic friends and aids in the country. There is yet to be described another sort of personage, that is often seen stalking about in all Indian communities, a kind of nondescript, with whom I have been somewhat annoyed, and still more amused, since I came to this village, of whom (or of which) I shall give some account in my next epistle.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

LETTER--No. 16.

MANDAN VILLAGE, UPPER MISSOURI.

Besides chiefs, and braves and doctors, of whom I have heretofore spoken, there is yet another character -of whom I must say a few words before I proceed to other topics. The person I allude to, is the one mentioned at the close of my last Letter, and familiarly known and countenanced in every tribe as an Indian beau or dandy. Such personages may be seen on every pleasant day, strutting and parading around the village in the most beautiful and unsoiled dresses, without the honorable trophies however of scalp locks and claws of the grizzly bear, attached to their costume, for with such things they deal not. They are not peculiarly anxious to hazard their lives in equal and honorable combat with the one, or disposed to cross the path of the other; but generally remain about the village, to take care of the women, and attire themselves in the skins of such animals as they can easily kill, without seeking the rugged cliffs for the war-eagle, or visiting the haunts of the grizzly bear. They plume themselves with swan's-down and quills of ducks, with braids and plaits of sweet-scented grass and other harmless and unmeaning ornaments, which have no other merit than they themselves have, that of looking pretty and ornamental.

These clean and elegant gentlemen, who are very few in each tribe, are held in very little estimation by the chiefs and braves; inasmuch as it is known by all, that they have a most horrible aversion to arms, and are denominated " faint hearts" or "old women" by the whole tribe, and are therefore but little respected. They seem, however, to be tolerably well contented with the appellation, together with the celebrity they have acquired amongst the women and children for the beauty and elegance of their personal appearance; and most of them seem to take and enjoy their share of the world's pleasures, although they are looked upon as drones in society.

These gay and tinselled bucks may be seen in a pleasant day in all their plumes, astride of their pied or dappled ponies, with a fan in the right hand, made of a turkey's tail -- with whip and a fly-brush attached to the wrist of the same hand, and underneath them a white and beautiful and soft pleasure saddle, ornamented with porcupine quills and ermine, parading through and lounging about the village for an hour or so, when they will cautiously bend their course to the suburbs of the town, where they will sit or recline upon their horses for an hour or two, overlooking the beautiful games where the braves and the young aspirants are contending in manly and athletic amusements;-when they are fatigued with this severe effort, they wend their way hack again, lift off their fine white saddle of doe's-skin, which is wadded with buffalo's hair, turn out their pony -- take a little refreshment, smoke a pipe, fan themselves to sleep, and doze away the rest of the day. Whilst I have been painting, from day to day, there have been two or three of these fops continually strutting and taking their attitudes in front of my door; decked out in all their finery, without receiving other benefit or other information, than such as they could discover through the cracks and seams of my cabin. The chiefs, I observed, passed them by without notice, and of course, without inviting them in; and they seemed to figure about my door from day to day in their best

---

dresses and best attitudes, as if in hopes that I would select them as models, for my canvass. It was natural that I should do so, for their costume and personal appearance was entirely more beautiful than anything else to be seen in the village. My plans were laid, and one day when I had got through with all of the head men, who were willing to sit to be painted, and there were two or three of the chiefs lounging in my room, I stepped to the door and tapped one of these fellows on the shoulder, who took the hint, and stepped in, well-pleased and delighted with the signal and honorable notice I had at length taken of him and his beautiful dress. Readers, you cannot imagine what was the expression of gratitude which beamed forth in this poor fellow's face, and how high his heart beat with joy and pride at the idea of my selecting him to be immortal, alongside of the chiefs and worthies whose portraits he saw arranged around the room; and by which honor he, undoubtedly, considered himself well paid for two or three weeks of regular painting, and pleasing, and dressing, and standing alternately on one leg and the other at the door of my premises.

Well, I placed him before me, and a canvass on my easel, and "chalked him out" at full length. He was truly a beautiful subject for the brush, and I was tilled with enthusiasm -- his dress from head to foot was of the skins of the mountain-goat, and dressed so neatly, that they were almost as soft and; as white as Canton crape -- around the bottom and the sides it was trimmed with ermine, and porcupine quills of beautiful dyes garnished it in a hundred parts; -- his hair which was long, and spread over his back and shoulders, extending nearly to the ground, was all combed back and parted on his forehead like that of a woman. He was a tall and fine figure, with ease and grace in his movements, that were well worthy of a man of better caste. In his left hand he held a beautiful pipe -- and in his right hand he plied his fan, and on his wrist was still attached his whip of elk's horn, and his fly-brush, made of the buffalo's tail. There was nought about him of the terrible, and nought to shock the finest, chastest intellect.

I had thus far progressed, with high-wrought feelings of pleasure, when the two or three chiefs, who had been seated around the lodge, and whose portraits I had before painted, arose suddenly, and wrapping themselves tightly in their robes, crossed my room with a quick and heavy step, and took an informal leave of my cabin. I was apprehensive of their displeasure, though I continued my work; and in a few moments the interpreter came furiously into my room, addressing me thus: -- "My God, Sir! this never will do; you have given great offence to the chiefs -- they have made complaint of your conduct to me -- they tell me this is a worthless fellow -- a man of no account in the nation, and if you paint his picture, you must instantly destroy theirs; you have no alternative, my dear Sir -- and the Quicker this chap is out of your lodge the better."

The same matter was explained to my sitter by the interpreter, when he picked up his robe, wrapped himself in it, plied his fan nimbly about his face, and walked out of the lodge in silence, but with quite a consequential smile, taking his old position in front of the door for awhile, after which he drew himself quietly off without further exhibition. So highly do Mandan braves and worthies value the honor of being painted; and so little do they value a man, however lavishly Nature may have bestowed her master touches upon him, who has not the pride and noble bearing of a warrior.

I spoke in a former Letter of Mah-to-toh-pa (the four bears), the second chief of the nation, and the most popular man of the Mandans -- a high-minded and gallant warrior, as well as a polite and polished gentleman. Since I painted his portrait, as I before described, I have received at his

hands many marked and signal attentions; some of which I must name to you, as the very relation of them will put you in possession of many little forms and modes of Indian life, that otherwise might not have been noted.

About a week since, this noble fellow stepped into my painting-room about twelve o'clock in the day, in full and splendid dress, and passing his arm through mine, pointed the way, and led me in the most gentlemanly manner, through the village and into his own lodge, where a feast was prepared in a careful manner and waiting our arrival. The lodge in which he dwelt was a room of immense size, some forty or fifty feet in diameter, in a circular form, and about twenty feet high -- with a sunken curb of stone in the center, of five or six feet in diameter and one foot deep, which contained the fire over which the pot was boiling. I was led near the edge of this curb, and seated on a very handsome robe, most ingeniously garnished and painted with hieroglyphics; and he seated himself gracefully on another one at a little distance from me; with the feast prepared in several dishes, resting on a beautiful rush mat, which was placed between us.

The simple feast which was spread before us consisted of three dishes only, two of which were served in wooden bowls, and the third in an earthen vessel of their own manufacture, somewhat in shape of a bread-tray in our own country. This last contained a quantity of pem-I-can and marrow fat; and one of the former held a fine brace of buffalo ribs, delightfully roasted; and the other was filled with a kind of paste or pudding, made of the flour of the "pomme hlanche", as the French call it, a delicious turnip of the prairie, finely flavored with the buffalo berries, which are collected in great quantities in this country, and used with divers dishes in cooking, as we in civilized countries use dried currants, which they very much resemble.

A handsome pipe and a tobacco-pouch made of the otter skin, filled with k'nick-k'neck (Indian tobacco), laid by the side of the feast; and when we were seated, mine host took up his pipe, and deliberately filled it; and instead of lighting it by the fire, which he could easily have done, he drew from his pouch his flint and steel, and raised a spark with which he kindled it. He drew a few strong whiffs through it, and presented the stem of it to my mouth, through which I drew a whiff or two while he held the stem in his hands. This done, he laid down the pipe, and drawing his knife from his belt, cut off a very small piece of the meat from the ribs, and pronouncing the words "Ho-pe-ne-chee wa-pa-shee" (meaning a medicine sacrifice), threw it into the fire.

He then (by signals) requested me to eat, and I commenced, after drawing out from my belt my knife (which it is supposed that every man in this country carries about him, for at an Indian feast a knife is never offered to a guest). Reader, be not astonished that I sat and ate my dinner alone, for such is the custom of this strange land. In all tribes in these western regions it is an invariable rule that a chief never eats with his guests invited to a feast; but while they eat, he sits by, at their service, and ready to wait upon them; deliberately charging and lighting the pipe which is to be passed around after the Feast is over. Such was the case in the present instance, and while I was eating, Mah-to-toh-pa sat cross-legged before me, cleaning his pipe and preparing it for a cheerful smoke when I had finished my meal. For this ceremony I observed he was making unusual preparation, and I observed as I ate, that after he had taken enough of the k'nick-k'neck or bark of the red willow, from his pouch, he rolled out of it also a piece of the "castor," which it is customary amongst these folks to carry in their tobacco-sack to give it a flavor; and, shaving off a small quantity of it, mixed it with the bark, with which he charged his pipe. This done, he drew also from his sack a small parcel containing a fine powder, which was made of dried buffalo dung, a little of

which he spread over the top, (according also to custom,) which was like tinder, having no other effect than that of lighting the pipe with ease and satisfaction. My appetite satiated, I straightened up, and with a whiff the pipe was lit, and we enjoyed together for a quarter of an hour the most delightful exchange of good feelings, amid clouds of smoke and pantomimic signs and gesticulations.

The dish of pemican and marrow-fat, of which I spoke, was thus -- the first, an article of food used throughout this country, as familiarly as we use bread in the civilized world. It is made of buffalo meat dried very hard, and afterwards pounded in a large wooden mortar until it is made nearly as fine as sawdust, then packed in this dry state in bladders or sacks of skin. and is easily carried to any part of the world in good order. "Marrow-fat" is collected by the Indians from the buffalo bones which they break to pieces, yielding a prodigious quantity of marrow, which is boiled out and put into buffalo bladders which have been distended; and after it cools, becomes quite hard like tallow, and has the appearance, and very nearly the flavor, of the richest yellow butter. At a feast, chunks of this marrow fat are cut off and placed in a tray or bowl, with the pemican, and eaten together; which we civilized folks in these regions consider a very good substitute for (and indeed we generally so denominate it) "bread and butter." In this dish laid a spoon made of the buffalo's horn, which was black as jet, and beautifully polished; in one of the others there was another of still more ingenious and beautiful workmanship, made of the horn of the mountain-sheep, or "Gros corn", as the French trappers call them; it was large enough to hold of itself two or three pints, and was almost entirely transparent.

I spoke also of the earthen dishes or bowls in which these viands were served out; they are a familiar part of the culinary furniture of every Mandan lodge, and are manufactured by the women of this tribe in great quantities, and modeled into a thousand forms and tastes. They are made by the hands of the women, from a tough black clay, and baked in kilns which are made for the purpose, and are nearly equal in hardness to our own manufacture of pottery; though they have not yet got the art of glazing, which would be to them most valuable secret. They make them so strong and serviceable, however, that they hang them over the fire as we do our iron pots, and boil their meat in them with perfect success. I have seen some few specimens of such manufacture, which have been dug up in Indian mounds and tombs in the southern and middle states, placed in our Eastern Museums and looked upon as a great wonder, when here this novelty is at once done away with, and the whole mystery; where women can be seen handling and using them by hundreds, and they can be seen every day in the summer also, moulding them into many fanciful forms, and passing them through the kiln where they are hardened.

Whilst sitting at this feast the wigwam was as silent as death, although we were not alone in it. This chief, like most others, had a plurality of wives, and all of them (some six or seven) were seated around the sides of the lodge, upon robes or mats placed upon the ground, and not allowed to speak, though they were it readiness to obey his orders or commands, which were uniformly given by signs-manual, and executed in the neatest and most silent manner.

When I arose to return, the pipe through which we had smoked was presented to me; and the robe on which I had sat, he gracefully raised by the corners and tendered it to me, explaining by signs that the paintings which were on it were, the representations of the battles of his life, where he had fought and killed with his own hand fourteen of his enemies; that he had been two weeks engaged in painting it for me, and that he had invited me here on this occasion to present it to me.

The robe, readers, which I shall describe in a future epistle, I took upon my shoulder, and he took me by the arm and led me back to my painting-room.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

---

LETTER--No. 17.

MANDAN VILLAGE, UPPER MISSOURI.

I mentioned in the foregoing epistle, that the chiefs of the Mandans frequently have a plurality of wives. Such is the custom amongst all or these North Western tribes, and a few general remarks on this subject will apply to them all, and save the trouble of repeating them.

Polygamy is countenanced amongst all of the North American Indians, so far as I have visited them; and it is no uncommon thing to find a chief with six, eight, or ten, and some with twelve or fourteen wives in his lodge. Such is an ancient custom, and in their estimation is right as well as necessary. Women in a savage state, I believe, are always held in a rank inferior to that of the men, in relation to whom in many respects they stand rather in the light of menials and slaves than otherwise; and as they are the "hewers of wood and drawers of water," it becomes a matter of necessity for a chief (who must be liberal, keep open doors, and entertain, for the support of his popularity) to have in his wigwam a sufficient number of such handmaids or menials to perform the numerous duties and drudgeries of so large and expensive an establishment.

There are two other reasons for this custom which operate with equal, if not with greater force than the one above assigned. In the first place, these people, though far behind the civilized world in acquisitiveness, have still more or less passion for the accumulation of wealth, or, in other words, for the luxuries of life; and a chief, excited by a desire of this kind, together with a wish to be able to furnish his lodge with something more than ordinary for the entertainment of his own people, as well as strangers who all upon his hospitality, sees fit to marry a number of wives, who are kept at hard labor during most of the year; and the avails of that labour enable him to procure those luxuries, and give to his lodge the appearance of respectability which is not ordinarily seen. Amongst those tribes who trade with the Fur Companies, this system is carried out to a great extent, and the women are kept for the greater part of the year, dressing buffalo robes and other skins for the market; and the brave or chief, who has the greatest number of wives, is considered the most affluent and envied man in the tribe; for his table is most bountifully supplied, and his lodge the most abundantly furnished with the luxuries of civilized manufacture, who has at the year's end the greatest number of robes to vend to the Fur Company.

The manual labour amongst savages is all done by the women; and as there are no daily laborers or persons who will "hire out" to labour for another, it becomes necessary for him who requires more than the labour or services of one, to add to the number by legalizing and compromising by the ceremony of marriage, his stock of laborers; who can thus, and thus alone, be easily enslaved, and the results of their labour turned to good account.

There is yet the other inducement, which probably is more effective than either; the natural inclination which belongs to man, who stands high in the estimation of his people and wields the scepter of power -- surrounded by temptations which he considers it would be unnatural to resist, where no law or regulation of society stands in the way of his enjoyment. Such a custom amongst

savage nations can easily be excused too, and we are bound to excuse it, when we behold man in a state of nature, as he was made, following a natural inclination, which is sanctioned by ancient custom and by their religion, without a law or regulation of their society to discountenance it; and when, at the same time, such an accumulation of a man's household, instead of quadrupling his expenses (as would be the case in the civilized world), actually becomes his wealth, as the results of their labour abundantly secure to him all the necessaries and luxuries of life.

There are other and very rational grounds on which the propriety of such a custom may be urged, one of which is as follows: -- as all nations of Indians in their natural condition are unceasingly at war with the tribes that are about them, for the adjustment of ancient and never-ending feuds, as well as from a love of glory, to which in Indian life the battle-field is almost the only road, their warriors are killed off to that extent, that in many instances two and sometimes three women to a man are found in a tribe. in such instances I have found that the custom of polygamy has kindly helped the community to an evident relief from a cruel and prodigious calamity.

The instances of which I have above spoken, are generally confined to the chiefs and medicine-men; though there is no regulation prohibiting a poor or obscure individual from marrying several wives, other than the personal difficulties which lie between him and the hand which he wishes in vain to get, for want of sufficient celebrity in society, or from a still more frequent objection, that of his inability (from want of worldly goods) to deal in the customary way with the fathers of the girls whom he would appropriate to his own household.

There are very few instances indeed, to be seen in these regions, where a poor or ordinary citizen has more than one wife; but amongst chiefs and braves of great reputation, and doctors, it is common to see some six or eight living under one roof, and all apparently quiet and contented; seemingly harmonizing, and enjoying the modes of life and treatment that falls to their lot.

Wives in this country are mostly treated for with the father, as in all instances they are regularly bought and sold. In many cases the bargain is made with the father alone, without ever consulting the inclinations of the girl, and seems to be conducted on his part as a mercenary contract entirely, where he stands out for the highest price he can possibly command for her. There are other instances to be sure, where the parties approach each other, and from the expression of a mutual fondness, make their own arrangements, and pass their own mutual vows, which are quite as sacred and inviolable as similar assurances when made in the civilized world. Yet even in such cases, the marriage is never consummated without the necessary form of making presents to the father of the girl.

It becomes a matter of policy and almost of absolute necessity, for the white men who are Traders in these regions to connect themselves in this way, to one or more of the most influential families in the tribe, which in a measure identifies their interest with that of the nation, and enables them, with the influence of their new family connexions, to carry on successfully their business transactions with them. The young women of the best families only can aspire to such an elevation; and the most of them are exceedingly ambitious for such a connexion, inasmuch as they are certain of a delightful exemption from the slavish duties that devolve upon them when married under other circumstances; and expect to be, as they generally are, allowed to lead a life of ease and idleness, covered with mantles of blue and scarlet cloth--with beads and trinkets, and ribbons, in which they flounce and flirt about, the envied and tinselled belles of every tribe.

These connexions, however, can scarcely be called marriages, for I believe they are generally en-

tered into without the form or solemnizing ceremony of a marriage, and on the part of the father of the girls, conducted purely as a mercenary or business transaction; in which they are very expert, and practice a deal of shrewdness in exacting an adequate price from a purchaser whom they consider possessed of so large and so rich a stock of the world's goods; and who they deem abundantly able to pay liberally for so delightful a commodity.

Almost every Trader and every clerk who commences in the business of this country, speedily enters into such an arrangement, which is done with as little ceremony as he would bargain for a horse, and just as unceremoniously do they annul and abolish this connexion when they wish to leave the country, or change their positions from one tribe to another; at which time the woman is left, a fair and proper candidate for matrimony or speculation, when another applicant comes along, and her father equally desirous for another horse or gun, &c. which he can easily command at her second espousal. From the enslaved and degraded condition in which the women are held in the Indian country, the world would naturally think that theirs must be a community formed of incongruous and unharmonizing materials; and consequently destitute of the fine, reciprocal feelings and attachments which flow from the domestic relations in the civilized world; yet it would be untrue, and doing injustice to the Indians, to say that they were in the least behind us in conjugal, in filial, and in paternal affection. There is no trait in the human character which is more universal than the attachments which flow from these relations, and there is no part of the human species who have a stronger affection and a higher regard for them than the North American Indians.

There is no subject in the Indian character of more importance to be rightly understood than this, and none either that has furnished me more numerous instances and more striking proofs, of which I shall make use on a future occasion, when I shall say a vast deal more of marriage -- of divorce -- of polygamy -- and of Indian domestic relations. For the present I am scribbling about the looks and usages of the Indians who are about me and under my eye; and I must not digress too much into general remarks, lest I lose sight of those who are near me, and the first to be heralded.

Such, then, are the Mandans -- their women are beautiful and modest, -and amongst the respectable families, virtue is as highly cherished and as inapproachable, as in any society whatever; yet at the same time a chief may marry a dozen wives if he pleases, and so may a white man; and if either wishes to marry the most beautiful and modest girl in the tribe, she is valued only equal, perhaps, to two horses, a gun with powder and ball for a year, five or six pounds of beads, a couple of gallons-of whiskey, and a handful of awls.

The girls of this tribe, like those of most of these north-western tribes, marry at the age of twelve or fourteen, and some at the age of eleven years; and their beauty, from this fact, as: well as from the slavish life they lead, soon after marriage vanishes. Their occupations are almost continual, and they seem to go industriously at them, as if from choice or inclination, without a murmur. The principal occupations of the women in this village, consist in procuring wood and water, in cooking, dressing robes and other skins, in drying meat and wild fruit, and raising corn (maize). The Mandans are somewhat of agriculturists, as they raise a great deal of corn and some pumpkins and squashes. This is all done by the women, who make their hoes of the shoulder-blade of the buffalo or the elk, and dig the ground over instead of ploughing it., which is consequently done with a vast deal of labour. They raise a very small sort of corn, the ears of which are not

longer than a man's thumb. This variety is well adapted to their climate, as it ripens sooner than other varieties, which would not mature in so cold a latitude. The green corn season is one of great festivity with them, and one of much importance. The greater part of their crop is eaten during these festivals, and the remainder is gathered and dried on the cob, before it has ripened, and packed away in "caches" (as the French call them), holes dug in the ground, some six or seven feet deep, the insides of which are somewhat in the form of a jug, and tightly closed at the top. The corn, and even dried meat and pemican, are placed in these caches, being packed tight around the sides, with prairie grass, and effectually preserved through the severest winters.

Corn and dried meat are generally laid in the fall, in sufficient quantities to support them through the winter. These are the principal articles of food during that long and inclement season; and in addition to them, they oftentimes have in store great quantities of dried squashes and dried "pommes blanches", a kind of turnip which grows in great abundance in these regions, and of which I have before spoken. These are dried in great quantities, and pounded into a sort of meal, and cooled with the dried meat and corn. Great quantities also of wild fruit of different kinds are dried and laid away in store for the winter season, such as buffalo berries, service berries, strawberries, and wild plume.

The buffalo meat, however, is the great staple and "staff of life" in this country, and seldom (if ever) fails to afford them an abundant and wholesome means of subsistence. There are, from a fair computation, something like 250,000 Indians in these western regions, who live almost exclusively on the flesh of these animals, through every part of the year. During the summer and fall months they use the meat fresh, and cook it in a great variety of ways, by roasting, broiling, boiling, stewing, smoking, &c.; and by boiling the ribs and joints with the marrow in them, make a delicious soup, which is universally used, and in vast quantities. The Mandans, I find, have no regular or stated times for their meals, but generally eat about twice in the twenty-four hours. The pot is always boiling over the fire, and any one who is hungry (either of the household or from any other part of the village) has a right to order it taken off, and to fall to eating as he pleases. Such is an unvarying custom amongst the North American Indians, and I very much doubt, whether the civilized world have in their institutions any system which can properly be called more humane and charitable. Every man, woman, or child in Indian communities is allowed to enter any one's lodge, and even that of the chief of the nation, and eat when they are hungry, provided misfortune or necessity has driven them to it. Even so can the poorest and most worthless drone of the nation; if he is too lazy to hunt or to supply himself, he can walk into any lodge and everyone will share with him as long as there is anything to eat. He, however, who thus begs when he is able to hunt, pays dear for his meat, for he is stigmatized with the disgraceful epithet of a poltroon and a beggar.

The Mandans, like all other tribes, sit at their meals cross-legged, or rather with their ancles crossed in front of them, and both feet drawn close under their bodies; or, which is very often the case also, take their meals in a reclining posture, with the legs thrown out, and the body resting on one elbow and fore-arm, which are under them. The dishes from which they eat are invariably on the ground or door of the lodge, and the group resting on buffalo robes or mats of various structure and manufacture.

The position in which the women sit at their meals and on other occasions is different from that of the men, and one which they take and rise from again, with great ease and much grace, by

merely bending the knees both together, inclining the body back and the head and shoulders quite forward, they squat entirely down to the ground, inclining both feet either to the right or the left. In this position they always rest while eating, and it is both modest and graceful, for they seem, with apparent ease, to assume the position and rise out of it, without using their hands in any way to assist them.

These women, however, although graceful and civil, and ever so beautiful or ever so hungry, are not allowed to sit in the same group with the men while at their meals. So far as I have yet travelled in the Indian country, I never have seen an Indian woman eating with her husband. Men form the first group at the banquet, and women, and children and dogs all come together at the next, and these gormandize and glut themselves to an enormous extent, though the men very seldom do.

It is time that an error on this subject, which has gone generally abroad in the world, was corrected. It is everywhere asserted, and almost universally believed, that the Indians are "enormous eaters;" but comparatively speaking, I assure my readers that this is an error. I venture to say that there are no persons on earth who practice greater prudence and self-denial, than the men do (amongst the wild Indians), who are constantly in war and in the chase, or in their athletic sports and exercises; for all of which they are excited by the highest ideas of pride and honour, and every kind of excess is studiously avoided; and for a very great part of their lives, the most painful abstinence is enforced upon themselves, for the purpose of preparing their bodies and their limbs for these extravagant exertions. Many a man who has been a few weeks along the frontier, amongst the drunken, naked and beggared part of the Indian race, and run home and written a book on Indians, has, no doubt, often seen them eat to beastly excess; and he has seen them also guzzle whiskey (and perhaps sold it to them) till he has seen them glutted and besotted, without will or energy to move; and many and thousands of such things can always be seen, where white people have made beggars of them, and they have nothing to do but lie under a fence and beg a whole week to get meat and whiskey enough for one feast and one carouse; but amongst the wild Indians in this country there are no beggars -- no drunkards -- and every man, from a beautiful natural precept, studies to keep his body and mind in such a healthy shape and condition as will at all times enable him to use His weapons in self-defense, or struggle for the prize in their manly games.

As I before observed, these men generally eat but twice a day, and many times not more than once, and those meals are light and simple compared with the meals that are swallowed in the civilized world; and by the very people also, who sit at the festive board three times a day, making a jest of the Indian for his eating, when they actually guzzle more liquids, besides their eating, than would fill the stomach of an Indian.

There are, however, many seasons and occasions in the year with all Indians, when they fast for several days in succession; and others where they can get nothing to eat; and at such times (their habits are such) they may be seen to commence with an enormous meal, and because they do so, it is an insufficient reason why we should for ever remain under so egregious an error with regard to a single custom of these people.

I have seen so many of these, and lived with them, and travelled with them, and oftentimes felt as if I should starve to death on an equal allowance, that I am fully convinced I am correct in saying that the North American Indians, taking them in the aggregate, even where they have an

abundance to subsist on, eat less than any civilized population of equal numbers, that I have ever travelled amongst.

Their mode of curing and preserving the buffalo meat is somewhat curious, and in fact it is almost incredible also; for it is all cured or dried in the sun, without the aid of salt or smoke!

The method of doing this is the same amongst all the tribes, from this to the Mexican Provinces, and is as follows:-- The choicest parts of the flesh from the buffalo are cut out by the squaws, and carried home on their backs or on horses, and there cut "across the grain," in such a manner as will take alternately the layers of lean and fat; and having prepared it all in this way, in strips about half an inch in thickness, it is hung up by hundreds and thousands of pounds on poles resting on crotches, out of the reach of dogs or wolves, and exposed to the rays of the sun for several days, when it becomes so effectually dried, that it can be carried to any part of the world without damage. This seems almost an unaccountable thing, and the more so, as it is done in the hottest months of the year, and also in all the different latitudes of an Indian country.

So singular a fact as this can only be accounted for, I consider, on the ground of the extraordinary rarity and purity of the air which we meet with in these vast tracts of country which are now properly denominated "the great buffalo plains," a series of exceedingly elevated plateaus of steppes or prairies, lying at and near the base of the Rocky Mountains.

It is a fact then, which I presume will be new to most of the world, that meat can be cured in the sun without the aid of smoke or salt; and it is a fact equally true and equally surprising also, that none of these tribes use salt in any way, although their country abounds in salt springs; and in many places, in the frequent walks of the Indian, the prairie may be seen, for miles together, covered with an incrustation of salt as white as the drifted snow.

I have, in travelling with Indians, encamped by such places, where they have cooked and eaten their meat, when I have been unable to prevail on them to use salt in any quantity whatever. The Indians cook their meat more than the civilized people do, and I have long since learned, from necessity, that meat thus cooked can easily be eaten and relished too, without salt or other condiment.

The fact above asserted applies exclusively to those tribes of Indians which I have found in their primitive state, living entirely on meat; but everywhere along our Frontier, where the game of the country has long since been chiefly destroyed, and these people have become semi-civilized, raising and eating, as we do, a variety of vegetable food, they use (and no doubt require), a great deal of salt; and in many instances use it even to destructive excess.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

LETTER No. 18.

MANDAN VILLAGE, UPPER MISSOURI.

The Mandans, like all other tribes, lead lives of idleness and leisure; and of course, devote a great deal of time to their sports and amusements, of which they have a great variety. Of these, dancing is one of the principal, and may be seen in a variety of forms: such as the buffalo dance, the boasting dance, the begging dance, the scalp dance, and a dozen other kinds of dances, all of which have their peculiar characters and meanings or objects.

These exercises are exceedingly grotesque in their appearance, and to the eye of a traveller who knows not their meaning or importance, they are an uncouth and frightful display of starts, and jumps, and yelps, and jarring gutturals, which are sometimes truly terrifying. But when one gives them a little attention, and has been lucky enough to be initiated into their mysterious meaning they become a subject of the most intense and exciting interest. Every dance has its peculiar step, and every step has its meaning; every dance also has its peculiar song, and that is so intricate and mysterious oftentimes, that not one in ten of the young men who are dancing and singing it, know the meaning of the song which they are chanting over. None but the medicine-men are allowed to understand them; and even they are generally only initiated into these secret arcana, on the payment of a liberal stipend for their tuition, which requires much application and study. There is evidently a set song and sentiment for every dance, for the songs are perfectly measured, and sung in exact time with the beat of the drum; and always with an uniform and invariable set of sounds and expressions, which clearly indicate certain sentiments, which are expressed by the voice, though sometimes not given in any known language whatever.

They have other dances and songs which are not so mystified, but which are sung and understood by every person in the tribe, being sung in their own language, with much poetry in them, and perfectly metered, but without rhyme. On these subjects I shall take another occasion to say more; and will for the present turn your attention to the style and modes in which some of these curious transactions are conducted.

My ears have been almost continually ringing since I came here, with the din of yelping and beating of the drums; but I have for several days past been peculiarly engrossed, and my senses almost confounded with the stamping, and grunting, and bellowing of the buffalo dance, which closed a few days since at sunrise (thank Heaven), and which I must needs describe to you.

Buffaloes, it is known, are a sort of roaming creatures, congregating occasionally in huge masses, and strolling away about the country from east to west, or from north to south, or just where their whims or strange fancies may lead them; and the Mandans are sometimes, by this means, most unceremoniously left without any thing to eat; and being a small tribe, and unwilling to risk their lives by going far from home in the face of their more powerful enemies, are oftentimes left almost in a state of starvation. In any emergency of this kind, every man musters and brings out of his lodge his mask (the skin of a buffalo's head with the horns on), which he is obliged to keep in

---

readiness for this occasion; and then commences the buffalo dance, of which I have above spoken, which is held for the purpose of making "buffalo come" (as they term it), of inducing the buffalo herds to change the direction of their wanderings, and bend their course towards the Mandan village, and graze about on the beautiful hills and bluffs in its vicinity, where the Mandans can shoot them down and cook them as they want them for food.

For the most part of the year, the young warriors and hunters, by riding out a mile or two from the village, can kill meat in abundance; and sometimes large herds of these animals may be seen grazing in full view of the village. There are other seasons also when the young men have ranged about the country as far as they are willing to risk their lives, on account of their enemies, without finding meat. This sad intelligence is brought back to the chiefs and doctors, who sit in solemn council, and consult on the most expedient measures to be taken, until they are sure to decide upon the old and only expedient which "never has failed".

The chief issues his order to his runners or criers, who proclaim it through the village -- and in a few minutes the dance begins. The place where this strange operation is carried on is in the public area in the center of the village, and in front of the great medicine or mystery lodge. About ten or fifteen Mandans at a time join in the dance, each one with the skin of the buffalo's head (or mask) with the horns on, placed over his head, and in His hand his favorite bow or lance, with which he is used to slay the buffalo.

I mentioned that this dance always had the desired effect, that it never fails, nor can it, for it cannot be stopped (but is going incessantly day and night) until "buffalo come." Drums are beating and rattles are shaken, and songs and yells incessantly are shouted, and lookers-on stand ready with masks on their heads, and weapons in hand, to take the place of each one as he becomes fatigued, and jumps out of the ring.

During this time of general excitement, spies or "lookers" are kept on the hills in the neighborhood of the village, who, when they discover buffaloes in sight, give the appropriate signal, by "throwing their robe", which is instantly seen in the village, and understood by the whole tribe. At this joyful intelligence there is a shout of thanks to the Great Spirit, and more especially to the mystery-man, and the dancers, who have been the immediate cause of their success! There is then a brisk preparation for the chase -- a grand hunt takes place. The choicest pieces of the victims are sacrificed to the Great Spirit, and then a surfeit and a carouse.

These dances have sometimes been continued in this village two and three weeks without stopping an instant, until the joyful moment when buffaloes made their appearance. So they never fail; and they think they have been the means of bringing them in.

Every man in the Mandan village (as I have before said) is obliged by a village regulation, to keep the mask of the buffalo, hanging on a post at the head of his bed, which he can use on his head whenever he is called upon by the chiefs, to dance for the coming of buffaloes. The mask is put over the head, and generally has a strip of the skin hanging to it, of the whole length of the animal, with the tail attached to it, which, passing down over the back of the dancer, is dragging on the ground. When one becomes fatigued of the exercise, he signifies it by bending quite forward, and sinking his body towards the ground; when another draws a bow upon him and hits him with a blunt arrow, and he falls like a buffalo is seized by the bye-standers, who drag him out of the ring by the heels, brandishing their knives about him and having gone through the motions of skinning and cutting him up, they let him off, and his place is at once supplied by another, who

dances into the ring with his mask on; and by this taking of places, the scene is easily kept up night and day, until the desired effect has been produced, that of "making buffalo come."

The day before yesterday however, readers, which, though it commenced in joy and thanksgiving to the Great Spirit for the signal success which had attended their several days of dancing and supplication, ended in a calamity which threw the village of the Mandans into mourning and repentant tears, and that at a time of scarcity and great distress. The signal was given into the village on that morning from the top of a distant bluff, that a band of buffaloes were in sight, though at a considerable distance off, and every heart beat with joy, and every eye watered and glistened with gladness.

The dance had lasted some three or four days, and now, instead of the doleful tap of the drum and the begging chants of the dancers, the stamping of horses was heard as they were led and galloped through the village -- young men were throwing off their robes and their shirts, -- were seen snatching a handful of arrows from their quivers, and stringing their sinewy bows, glancing their eyes and their smiles at their sweethearts, and mounting their ponies.

A few minutes there had been of bustle and boasting, whilst bows were twanging and spears were polishing by running their blades into the ground -- every face and every eye was filled with joy and gladness -- horses were pawing and snuffing in fury for the outset, when Louison Frenie, an interpreter of the Fur Company, galloped through the village with his rifle in his hand and his powder-horn at his side; his head and waist were bandaged with handkerchiefs, and his shirt sleeves rolled up to his shoulders -- the hunter's yell issued from his lips and was repeated through the village; he hew to the bluffs, and behind him and over the graceful swells of the prairie, galloped the emulous youths, whose hearts were beating high and quick for the onset.

In the village, where hunger had reigned, and starvation was almost ready to look them in the face, all was instantly turned to joy and gladness. The chiefs and doctors who had been for some days dealing out minimum rations to the community from the public crib, now spread before their subjects the contents of their own private caches, and the last of every thing that could be mustered, that they might eat a thanksgiving to the Great Spirit for his goodness in sending them a supply of buffalo meat. A general carouse of banqueting ensued, which occupied the greater part of the day; and their hidden stores which might have fed an emergency for several weeks, were pretty nearly used up on the occasion -- bones were half picked, and dishes half emptied and then handed to the dogs. I was not forgotten neither, in the general surfeit; several large and generous wooden bowls of pemican and other palatable food were pent to my painting-room, and I received them in this time of scarcity with great pleasure.

After this general indulgence was over, and the dogs had licked the dishes, their usual games and amusements ensued-and hilarity and mirth, and joy took possession of, and reigned in, every nook and corner of the village; and in the midst of this, screams and shrieks were heard ! and echoed everywhere. Women and children scrambled to the tops of their wigwams, with their eyes and their hands stretched in agonizing earnestness to the prairie, whilst blackened warriors ran furiously through every winding maze of the village, and issuing their jarring gutturals of vengeance, as they snatched their deadly weapons from their lodges, and struck the reddened post as they furiously passed it by! Two of their hunters were bending their course down the aides of the bluff towards the village, and another broke suddenly out of a deep ravine, and yet another was seen dashing over and down the green hills, and all were goading on their horses at full speed!

and then came another, and another, and all entered the village amid shouts and groans of the villagers who crowded around them; the story was told in their looks, for one was bleeding, and the blood that flowed from his naked breast had crimsoned his milk white steed as it had dripped over him; another grasped in his left hand a scalp that was reeking in blood--and in the other his whip -- another grasped nothing, save the reins in one hand and the mane of the horse in the other, having thrown his bow and his arrows away, and trusted to the fleetness of his horse for his safety; yet the story was audibly told, and the fatal tragedy recited in irregular and almost suffocating ejaculations -- the names of the dead were in turns pronounced and screams and shrieks burst forth at their recital -- murmurs and groans ran through the village, and this happy little community were in a moment smitten with sorrow and distraction.

Their proud band of hunters who had started full of glee and mirth in the morning, had been surrounded by their enemy, the Sioux, and eight of them killed. The Sioux, who had probably reconnoitered their village during the night, and ascertained that they were dancing for buffaloes, laid a stratagem to entrap them in the following manner: -- Some six or eight of them appeared the next morning (on a distant bluff, in sight of their sentinel) under the skins of buffaloes, imitating the movements of those animals whilst prating; and being discovered by the sentinel, the intelligence was telegraphed to the village, which brought out their hunters as I have described. The masked buffaloes were seen grazing on the top of a high bluff, and when the hunters had approached within half a mile or so of them, they suddenly disappeared over the hill. Louison Frenie, who was leading the little band of hunters, became at that moment suspicious of so strange a movement, and came to a halt "Look!" (said a Mandan, pointing to a little ravine to the right, and at the foot of the hill: from which suddenly broke some forty or fifty furious Sioux, on fleet horses and under full whip, who were rushing upon them); they wheeled, and in front of them came another band more furious from the other side of the hill! they started for home (poor fellows), and strained every nerve; but the Sioux were too fleet for them; and every now and then, the whizzing arrow and the lance were heard to rip the flesh of their naked backs, and a grunt and a groan, as they tumbled from their horses. Several miles were run in this desperate race; and Frenie got home, and several of the Mandans, though eight of them were killed and scalped by the way.

So ended that day and the hunt; but many a day and sad, will last the grief of those whose hearts were broken on that unlucky occasion.

This day, though, my readers, has been one of a more joyful kind, for the Great Spirit, who was indignant at so flagrant an injustice, has sent the Mandans an abundance of buffaloes; and all hearts have joined in a general thanksgiving to Him For his goodness and justice.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

LETTER No. 19.

MANDAN VILLAGE, UPPER MISSOURI

In my last Letter I gave an account of the buffalo dance, and in future epistles may give some descriptions of a dozen other kinds of dance, which these people have in common with other tribes; but in the present Letter I shall make an endeavor to confine my observations to several other customs and forms, which are very curious and peculiar to the Mandans.

Of these, one of the most pleasing is the sham-fight and sham scalp-dance of the Mandan boys, which is a part of their regular exercise, and constitutes a material branch of their education.

During the pleasant mornings of the summer, the little boys between the age of seven and fifteen are called out, to the number of several hundred, and being divided into two companies, each of which is headed by some experienced warrior, who leads them on, in the character of a teacher; they are led out into the prairie at sunrise, where this curious discipline is regularly taught them. Their bodies are naked, and each one has a little bow in his left hand and a number of arrows made of large spears of grass, which are harmless in their effects. Each one has also a little belt or girdle around his waist, in which he carries a knife made of a piece of wood and equally harmless -- on the tops of their heads are slightly attached small tufts of grass, which answer as scalps, and in this plight, they follow the dictates of their experienced leaders, who lead them through the judicious evolutions of Indian warfare -- of feints -- of retreats -- of attacks -- and at last to a general fight. Many manoeuvres are gone through, and eventually they are brought up face to face, within fifteen or twenty feet of each other, with their leaders at their head stimulating them on. Their bows are bent upon each other and their missiles flying, whilst they are dodging and fending them off.

If any one is struck with an arrow on any vital part of his body, he is obliged to fall, and His adversary rushes up to him, places his foot upon him, and snatching from his belt his wooden knife, grasps hold of his victim's scalp-lock of grass, and making a feint at it with his wooden knife, twitches it off and puts it into his belt, and enters again into the ranks and front of battle.

This mode of training generally lasts an hour or more in the morning, and is performed on an empty stomach, affording them a rigid and wholesome exercise, whilst they are, instructed in the important science of war. Some five or six miles of ground are run over during these evolutions, giving suppleness to their limbs and strength to their muscles, which last and benefit them through life.

After this exciting exhibition is ended, they all return to their village, where the chiefs and braves pay profound attention to their vaunting, and applaud them for their artifice and valor.

Those who have taken scalps then step forward, brandishing them and making their boast as they enter into the scalp-dance (in which they are also instructed by their leaders or teachers), jumping and yelling -- brandishing their scalps, and reciting their sanguinary deeds, to the great astonishment of their tender aged sweethearts, who are gazing with wonder upon them.

---

The games and amusements of these people are in most respects like those of the other tribes, consisting of ball plays -- game of the moccasin, of the platter--feats of archery -- horse-racing, &c.; and they have yet another, which may be said to be their favorite amusement, and unknown to the other tribes about them. The game of Tchung-kee, a beautiful athletic exercise, which they seem to be almost unceasingly practicing whilst the weather is fair, and they have nothing else of moment to demand their attention. This game is decidedly their favorite amusement, and is played near to the village on a pavement of clay, which has been used for that purpose until it has become as smooth and hard as a Boor. For this game two champions form their respective parties, by choosing alternately the most famous players, until their requisite numbers are made up. Their bettings are then made, and their stakes are held by some of the chiefs or others present. The play commences with two (one from each party), who start off upon a trot, abreast of each other, and one of them rolls in advance of them, on the pavement, a little ring of two or three inches in diameter, cut out of a stone; and each one follows it up with his "tchung-kee" (a stick of six feet in length, with little bits of leather projecting from its sides of an inch or more in length), which he throws before him as he runs, sliding it along upon the ground after the ring, endeavoring to place it in such a position when it stops, that the ring may fall upon it, and receive one of the little projections of leather through it, which counts for game, one, or two, or four, according to the position of the leather on which the ring is lodged. The last winner always has the rolling of the ring, and both start and throw the tchung-kee together; if either fails to receive the ring or to lie in a certain position, it is a forfeiture of the amount of the number he was nearest to, and he loses his throw; when another steps into his place. This game is a very difficult one to describe, so as to give an exact idea of it, unless one can see it played -- it is a game of great beauty and fine bodily exercise, and these people become excessively fascinated with it; often gambling away every thing they possess, and even sometimes, when everything else was gone, have been known to stake their liberty upon the issue of these games, offering themselves as slaves to their opponents in case they get beaten.

Feasting and fasting are important customs observed by the Mandans, as well as by most other tribes, at stated times and for particular purposes. These observances are strictly religious and rigidly observed. There are many of these forms practiced amongst the Mandans, some of which are exceedingly interesting, and important also, in forming a correct estimate of the Indian character; and I shall at a future period take particular pains to lay them before my readers.

Sacrificing is also a religious custom with these people, and is performed in many different modes, and on numerous occasions. Of this custom I shall also speak more fully hereafter, merely noticing at present, some few of the hundred modes in which these offerings are made to the Good and Evil Spirits. Human sacrifices have never been made by the Mandans, nor by any of the north western tribes (so far as I can learn), excepting the Pawnees of the Platte; who have, undoubtedly, observed such an inhuman practice in former times, though they have relinquished it of late. The Mandans sacrifice their fingers to the Great Spirit, and of their worldly goods, the best and the most costly; if a horse or a dog, it must be the favorite one; if it is an arrow from their quiver, they will select the most perfect one as the most effective gift; if it is meat, it is the choicest piece cut from the buffalo or other animal; if it is anything from the stores of the Traders, it is the most costly--it is blue or scarlet cloth, which costs them in this country an enormous price, and is chiefly used for the purpose of hanging over their wigwams to decay, or to cover the scaffolds

where rest the bones of their departed relations.

Of these kinds of sacrifices there are three of an interesting nature, erected over the great medicine-lodge in the center of the village—they consist of ten or fifteen yards of blue and black cloth each, purchased from the Fur Company at fifteen or twenty dollars per yard, which are folded up so as to resemble human figures, with quills in their heads and masks on their faces. These singular-looking figures, like “scare crows”, are erected on poles about thirty feet high, over the door of the mystery-lodge, and there are left to decay. There hangs now by the side of them another, which was added to the number a few days since, of the skin of a white buffalo, which will remain there until it decays and falls to pieces.

This beautiful and costly skin, when its history is known, will furnish a striking proof of the importance which they attach to these propitiatory offerings. But a few weeks since, a party of Mandans returned from the mouth of the Yellow Stone, two hundred miles above, with information that a party of Blackfeet were visiting that place on business with the American Fur Company; and that they had with them a white buffalo robe for sale. This was looked upon as a subject of great importance by the chiefs, and one worthy of public consideration. A white buffalo robe is a great curiosity, even in the country of buffaloes, and will always command an almost incredible price, from its extreme scarcity; and then, from its being the most costly article of traffic in these regions, it is usually converted into a sacrifice, being offered to the Great Spirit, as the most acceptable gift that can be procured. Amongst the vast herds of buffaloes which graze on these boundless prairies, there is not one in an hundred thousand, perhaps, that is white; and when such an one is obtained, it is considered great medicine or mystery.

On the receipt of the intelligence above-mentioned, the chiefs convened in council, and deliberated on the expediency of procuring the white robe from the Blackfeet; and also of appropriating the requisite means, and devising the proper mode of procedure for effecting the purchase. At the close of their deliberations, eight men were fitted out on eight of their best horses, who took from the Fur Company’s store, on the credit of the chiefs, goods exceeding even the value of their eight horses; and they started for the Mouth of the Yellow Stone, where they arrived in due time, and made the purchase, by leaving the eight horses and all the goods which they carried; returning on foot to their own village, bringing home with them the white robe, which was looked upon by all eyes of the villagers as a thing that was vastly curious, and containing (as they express it) something of the Great Spirit. This wonderful anomaly laid several days in the chief’s lodge, until public curiosity was gratified; and then it was taken by the doctors or high-priests, and with a great deal of form and mystery consecrated, and raised on the top of a long pole over the medicine-lodge; where it now stands in a group with the others, and will stand as an offering to the Great Spirit, until it decays and falls to the ground.

This Letter, as I promised in its commencement, being devoted to some of the customs peculiar to the Mandans, and all of which will be new to the world, I shall close, after recording in it an account of a laughable farce, which was enacted in this village when I was on my journey up the river, and had stopped on the way to spend a day or two in the Mandan village.

Readers, did you ever hear of “Rain Makers”? If not, sit still, and read on; but laugh not -- keep cool and sober, or else you may laugh in the beginning, and cry at the end of my story. Well, I introduce to you a new character -- not a doctor or a high-priest, yet a medicine-man, and one of the highest and most respectable order, a “Rain Maker” Such dignitaries live in the Mandan

nation, aye, and “rain stoppers” too; and even those also amongst their conjurati, who, like Joshua of old, have even essayed to stop the sun in his course; but from the inefficiency of their medicine or mystery, have long since descended into insignificance.

Well, the story begins thus: -- The Mandans, as I have said in a former Letter, raise a great deal of corn ; and sometimes a most disastrous drought will be visited on the land, destructive to their promised harvest. Such was the case when I arrived at the Mandan village on the steam-boat, Yellow-Stone. Rain had not fallen for many a day, and the dear little girls and the ugly old squaws, altogether (all of whom had fields of corn), were groaning and crying to their lords, and imploring them to intercede for rain, that their little respective patches, which were now turning pale and yellow, might not be withered, and they be deprived of the pleasure of their customary annual festivity, and the joyful occasion of the “roasting ears,” and the “green corn dance”.

The chiefs and doctors sympathized with the complaints of the women, and recommended patience. Great deliberation, they said, was necessary in these cases; and though they resolved on making the attempt to produce rain for the benefit of the corn; yet they very wisely resolved that to begin too soon might ensure their entire defeat in the endeavor; and that the longer they put it off, the more certain they would feel of ultimate success. So, after a few days of further delay, when the importunities of the women had become clamorous, and even mournful, and almost insupportable, the •medicine-men assembled in the council-house, with all their mystery apparatus about them -- with an abundance of wild sage, and other aromatic herbs, with a fire prepared to burn them, that their savory odors might be sent forth to the Great Spirit. The lodge was closed to all the villagers, except some ten or fifteen young men, who were willing to hazard the dreadful alternative of making it rain, or suffer the everlasting disgrace of having made a fruitless essay.

They, only, were allowed as witnesses to the hocus pocus and conjuration devised by the doctors inside of the medicine-lodge; and they were called up by lot, each one in his turn, to spend a day upon the top of the lodge, to test the potency of his medicine; or, in other words, to see how far his voice might be heard and obeyed amongst the clouds of the heavens I whilst the doctors were burning incense in the wigwam below, and with their songs and prayers to the Great Spirit for success, were sending forth grateful fumes and odors to Him” who lives in the sun and commands the thunders of Heaven. “Wah-kee (the shield) was the first who ascended the wigwam at sunrise; and he stood all day, and looked foolish, as he was counting over and over his string of mystery-beads -- the whole village were assembled around him, and praying for his success. Not a cloud appeared -- the day was calm and hot; and at the setting of the sun, he descended from the lodge and went home -- “his medicine was not good”, nor can he ever be a medicine-man.

Om-pah (the elk) was the next; he ascended the lodge at sunrise the next morning. His body was entirely naked, being covered with yellow clay. On his left arm he carried a beautiful shield, and a long lance in his right; and on his head the skin of a raven, the bird that soars amidst the clouds, and above the lightning’s glare -- he flourished his shield and brandished his lance, and raised his voice, but in vain; for at sunset the ground was dry and the sky was clear; the squaws were crying, and their corn was withering at its roots.

War-rah-pa (the beaver) was the next; he also spent his breath in vain upon tire empty air, and came down at night -- and Wak-a-dah-ha-hee (the white buffalo’s hair) took the stand the next morning. He is a small, but beautifully proportioned young man. He was dressed in a tunic and leggings of the skins of the mountain-sheep, splendidly garnished with quills of the porcupine,

and fringed with locks of hair taken by his own hand from the heads of his enemies. On his arm he carried his shield, made of the buffalo's hide -- its boss wore the head of the war-eagle -- and its front was ornamented with "red chains of lightning". In his left hand he clenched his sinewy bow and one single arrow. The villagers were all gathered about him; when he threw up a feather to decide on the course of the wind, and he commenced thus: -- "My friends! people of the pheasants! you see me here a sacrifice -- I shall this day relieve you from great distress, and bring joy amongst you; or I shall descend from this lodge when the sun goes down, and live amongst the dogs and old women all my days. My friends! You saw which way the feather; flew, and I hold my shield this day in the direction where the wind comes -- the lightning on my shield will draw a great cloud, and this arrow, which is selected from my quiver, and which is feathered with the quill of the white swan, will make a hole in it. My friends! this hole in the lodge at my feet, shows me the medicine-men, who are seated in the lodge below me and crying to the Great Spirit; and through it comes and passes into my nose delightful odors, which you see rising in the smoke to the Great Spirit above, who rides in the clouds and commands the winds ! Three days they have sat here, my friends, and nothing has been done to relieve your distress. On the first day was Wahkee (the shield), he could do nothing: he counted his beads and came down -- his medicine was not good -- his name was bad, and it kept off the rain. The next was Om-pah (die elk); on his head the raven was seen, who flies above the storm, and he failed. War-rah-pa (the beaver) was the next, my friends; the beaver lives under the water, and he never wants it to rain. My friends! I see you are in great distress, and nothing has yet been done; this shield belonged to my father the White Buffalo; and the lightning you see on it is red; it was taken from a black cloud, and that cloud will come over us to-day. I am the white buffalo's hair -- and I am the son of my father." In this manner flourished and manoeuvred Wak-a-dah-ha-hee (the white buffalo's hair), alternately addressing the audience and the heavens--and holding converse with the winds and the "je-bi" (spirits) that are floating about in them -- stamping his foot over the heads of the magi, who were involved in mysteries beneath him, and invoking the spirits of darkness and light to send rain, to gladden the hearts of the Mandans.

It happened on this memorable day about noon, that the steam-boat Yellow Stone, on her first trip up the Missouri River, approached and landed at the Mandan Village, as I have described in a former epistle. I was lucky enough to be a passenger on this boat, and helped to fire a salute of twenty guns of twelve pounds caliber, when we first came in sight of the village, some three or four miles below. These guns introduced a new sound into this strange country, which the Mandans at first supposed to be thunder; and the young man upon the lodge, who turned it to good account, was gathering fame in rounds of applause, which were repeated and echoed through the whole village; all eyes were centered upon him -- chiefs envied him -- mothers' hearts were beating high whilst they were decorating and leading up their fair daughters to offer him in marriage, on his signal success. The medicine-men had left the lodge, and came out to bestow upon him the envied title of "medicine-man", or "doctor," which he had so deservedly won -- wreaths were prepared to decorate his brows, and eagle's plumes and calumets were in readiness for him; his friends were all rejoiced--his enemies wore on their faces a silent gloom and hatred; and his old sweethearts, who had formerly cast him off, gazed intensely upon him, as they glowed with the burning fever of repentance.

During all this excitement, Wak-a-dah-ha-hee kept his position, assuming the most command-

ing and threatening attitudes; brandishing his shield in the direction of the thunder, although there was not a cloud to be seen, until he (poor fellow), being elevated above the rest of the village, espied, to his inexpressible amazement, the steam-boat ploughing its way up the windings of the river below; puffing her steam from her pipes, and sending forth the thunder from a twelve-pounder on her deck!

The White Buffalo's Hair stood motionless and turned pale, he looked awhile, and turned to the chief and to the multitude, and addressed them with a trembling lip -- "My friends, we will get no rain I -- there are, you see, no clouds; but my medicine is great -- I have brought a thunder boat ! look and see it! The thunder you hear is out of her mouth, and the lightning which you see is on the waters!"

At this intelligence, the whole village flew to the tops of their wigwams, or to the bank of the river, from whence the steamer was in full view, and ploughing along, to their utter dismay and confusion.

In this promiscuous throng of chiefs, doctors, women, children and dogs, was mingled Wak-adah-ha-hee (the white buffalo's hair), having descended from his high place to mingle with the frightened throng.

Dismayed at the approach of so strange and unaccountable an object, the Mandans stood their ground but a few moments; when, by an order of the chiefs, all hands were ensconced within the piquets of their village, and all the warriors armed for desperate defense. A few moments brought the boat in front of the village, and ail was still and quiet as death; not a Mandan was to be seen upon the banks. The steamer was moored, and three or four of the chiefs soon alter, walked boldly down the bank and on to her deck, with a spear in one hand and the calumet or pipe of peace in the other. The moment they stepped on board they met (to their great surprise and joy) their old friend, Major Sanford, their agent, which circumstance put an instant end to all their fears. The villagers were soon apprized of the fact, and the whole race of the beautiful and friendly Mandans was paraded on the bank of the river, in front of the steamer.

The "rain maker", whose apprehensions of a public calamity brought upon the nation by his extraordinary medicine, had, for the better security of his person from apprehended vengeance, secreted himself in some secure place, and was the last to come forward, and the last to be convinced that this visitation was a friendly one from the white people; and that his medicine had not in the least been instrumental in bringing it about. This information, though received by him with much caution and suspicion, at length gave him great relief, and quieted his mind as to his danger. Yet still in his breast there was a rankling thorn, though he escaped the dreaded vengeance which he had a few moments before apprehended as at hand; as he had the mortification and disgrace of having failed in his mysterious operations. He set up, however (during the day, in his conversation about the strange arrival), his medicines, as the cause of its approach; asserting everywhere and to everybody, that he knew of its coming, and that he had by his magic brought the occurrence about. This plea, however, did. not get him much audience; and in fact, everything else was pretty much swallowed up in the guttural talk, and bustle, and gossip about the mysteries of the "thunder-boat", and so passed the day, until just at the approach of evening, when the "White Buffalo's Hair" (more watchful of such matters on this occasion than most others) observed that a black cloud had been jutting up in the horizon, and was almost directly over the village ! In an instant his shield was on his arm, and his bow in his hand, and he again upon the lodge! Stiffened and

---

braced to the last sinew, he stood, with his face and his shield presented to the cloud, and his bow drawn. He drew the eyes of the whole village upon him as he vaunted forth his super-human powers, and at the same time commanding the cloud to come nearer, that he might draw down its contents upon the heads and the corn-fields of the Mandans! In this wise he stood, waving his shield over his head, stamping his foot and frowning as he drew his bow and threatened the heavens, commanding it to rain -- his bow was bent, and the arrow drawn to its head, was sent to the cloud, and he exclaimed, (I My friends, it is done ! Wak-a-dahIra-hee's arrow has entered that black cloud, and the Mandans will be wet with the water of the skies!" His predictions were truer--in a few moments the cloud was over the village, and the rain fell in torrents. He stood for some time wielding his weapons and presenting His shield to the sky, while he boasted of his power and the efficacy of his medicine, to those who had been about him, but were now driven to the shelter of their wigwams. He, at length, finished his vaunts and his threats, and descended from his high place (in which he had been perfectly drenched), prepared to receive the honours and the homage that were due to one so potent in his mysteries; and to receive the style and title of "medicine-man". This is one of a hundred different modes in which a man in Indian countries acquires the honorable appellation.

This man had "made it rain," and of course was to receive more than usual honours, as he had done much more than ordinary men could do. All eyes were upon him, and all were ready to admit that he was skilled in the magic art; and must be so nearly allied to the Great or Evil Spirit, that he must needs be a man of great and powerful influence in the nation, and well entitled to the style of doctor or medicine-man.

Headers, there are two facts relative to these strange transactions, which are infallibly true, and should needs be made known. The first is, that when the Mandans undertake to make it rain, they never fail to succeed, for their ceremonies never stop until rain begins to fall. The second is equally true, and is this: that he who has once "made it rain", never attempts it again; his medicine is undoubted -- and on future occasions of the kind, he stands aloof, who has once done it in presence of the whole village, giving an opportunity to other young men who are ambitious to signalize themselves in the same way.

During the memorable night of which I have just spoken, the steam-boat remained by the side of the Mandan village, and the rain that had commenced falling continued to pour down its torrents until midnight; black thunder roared, and livid lightning flashed until the heavens appeared to be lit up with one unceasing and appalling glare. In this frightful moment of consternation, a flash of lightning buried itself in one of the earth-covered lodges of the Mandans, and killed a beautiful girl. Here was food and fuel fresh for their superstitions; and a night of vast tumult and excitement ensued. The dreams of the new-made medicine-man were troubled, and he had dreadful apprehensions for the coming day -- for he knew that he was subject to the irrevocable decree of the chiefs and doctors, who canvass every strange and unaccountable event, with close and superstitious scrutiny, and Let their vengeance fall without mercy upon its immediate cause.

He looked upon his well-earned fame as likely to be withheld from him; and also considered that his life might perhaps be demanded as the forfeit for this girl's death, which would certainly be charged upon him. He looked upon himself as culpable, and supposed the accident to have been occasioned by his criminal desertion of his post, when the steam-boat was approaching the village. Morning came, and he soon learned from some of his friends, the opinions of the wise

men; and also the nature of the tribunal that was preparing for him; he sent to the prairie for his three horses, which were brought in, and he mounted the medicine-lodge, around which, in a few moments the villagers were all assembled. "My friends! (said he) I see you all around me, and I am before you; my medicine, you see, is great -- it is so great -- I am young, and I was too fast -- I knew not when to stop. The wigwam of Mah-sish is laid low, and many are the eyes that weep for Ko-ka (the antelope) Wak-a-dah-ha-hee gives three horses to gladden the hearts of those who weep for Ko-ka: his medicine was great -- his arrow pierced the black cloud, and the lightning came, and the thunder-boat also ! who says the medicine of Wak-a-dah-ha-hee is not strong?" At the end of this sentence an unanimous shout of approbation ran through the crowd, and the "Hair of the White Buffalo" descended amongst them, where he was greeted by shakes of the hand: and amongst whom he now lives and thrives under the familiar and honorable appellation of the "Big DOUBLE MEDICINE".

LETTER--No. 20.

MANDAN VILLAGE. UPPER MISSOURI.

This day has been one of unusual mirth and amusement amongst the Mandans, and whether on account of some annual celebration or not, I am as yet unable to say, though I think such is the case; for these people have many days which, like this, are devoted to festivities and amusements. Their lives, however, are lives of idleness and ease, and almost all their days and hours are spent in innocent amusements. Amongst a people who have no office hours to attend to -- no professions to study, and of whom but very little time is required in the chase, to supply their families with food, it would be strange if they did not practice many games and amusements, and also become exceedingly expert in them.

I have this day been a spectator of games and plays until I am fatigued with looking on; and also by lending a hand, which I have done; but with so little success as only to attract general observation, and as generally to excite the criticisms and laughter of the squaws and little children.

I have seen a fair exhibition of their archery this day, in a favorite amusement which they call the "game of the arrow", Where the young men who are the most distinguished in this exercise, assemble on the prairie at a little distance from the village, and having paid, each one, his "entrance-fee", such as a shield, a robe, a pipe, or other article, step forward in turn, shooting their arrows into the air, endeavoring to see who can get the greatest number flying in the air at one time, thrown from the same bow. For this, the number of eight or ten arrows are clenched in the left hand with the bow, and the first one which is thrown is elevated to such a degree as will enable it to remain the longest time possible in the air, and while it is flying, the others are discharged as rapidly as possible; and he who succeeds in getting the greatest number up at once, is "best", and takes the goods staked.

In looking on at this amusement, the spectator is surprised; not at the great distance to which the arrows are actually sent; but at the quickness of fixing them on the string, and discharging them in succession: which is no doubt, the result of great practice, and enables the most expert of them to get as many as eight arrows up before the first one reaches the ground.

For the successful use of the bow, as it is used through all this region of country on horseback, and that invariably at full speed, the great object of practice is to enable the bowman to draw the bow with suddenness and instant effect; and also to repeat the shots in the most rapid manner. As their game is killed from their horses' backs while at the swiftest rate -- and their enemies fought in the same way; and as the horse is the swiftest animal of the prairie, and always able to bring his rider alongside, within a few paces of his victim ; it will easily be seen that the Indian has little use in throwing his arrow more than a few paces; when he leans quite low on his horse's side, and drives it with astonishing force, capable of producing instant death to the buffalo, or any other animal in the country. The bows which are generally in use in these regions I have described in a former Letter, and the effects produced by them at the distance of a few paces is almost beyond relief,

---

considering their length, which is not often over three,-and sometimes not exceeding two and a half feet. It can easily be seen, from what has been said, that the Indian has little use or object in throwing the arrow to any great distance. And as it is very seldOIPP that they can be seen shooting at a target, I doubt very much whether their skill in such practice would compare with that attained to in many parts of the civilized world; but with the same weapon, and dashing Forward at fullest speed on the wild horse, without the use of the rein, when the shot is required to be made with the most instantaneous effect, I scarcely think it possible that any people can be found more skilled, and capable of producing more deadly effects with the bow.

The horses which the Indians ride in this country are invariably the wild horses, which are found in great numbers on the prairies; and have, unquestionably, strayed from the Mexican borders, into which they were introduced by the Spanish invaders of that country; and now range and subsist themselves, in winter and summer, over the vast plains of prairie that stretch from the Mexican frontiers to Lake Winnipeg on the North, a distance of 3000 miles. These horses are all of small stature, of the pony order; but a very hardy and tough animal, being able to perform for the Indians a continual and essential service. They are taken with the laso, which is a long halter or thong, made of raw-hide, of some fifteen or twenty yards in length, and which the Indians throw with great dexterity; with a noose at one end of it, which drops over the head of the animal they wish to catch, whilst running at full speed -- when the Indian dismounts from his own horse, and holding to the end of the laso, choaks the animal down, and afterwards tames and converts him to his own use.

Scarcely a man in these regions is to be found, who is not the owner of one or more of these horses; and in many instances of eight, ten, or esen twenty, which he values as his own personal property.

The Indians are hard and cruel masters; and, added to their cruelties the sin that is familiar in the Christian world, of sporting with the liml and the lives of these noble animals. Horse-racing here, as in all mon enlightened communities, is one of the most exciting amusements, and or of the most extravagant modes of gambling.

I have been this day a spectator to scenes of this kind, which have bee enacted in abundance, on a course which they have, just back of the village; and although I never had the least taste for this cruel amusemer in my own country, yet, I must say, I have been not a little amused an pleased with the thrilling effect which these exciting scenes have produce amongst so wild and picturesque a group.

I have made a sketch of the ground and the group, as near as I could; shewing the manner of “starting” and coming out, “which vary a little from the customs of the Knowing world; but in other respecte I believe, a horse-race is the same all the world over.

Besides these, many have been the amusements of this day, to whicl I have been an eye-witness; and since writing the above, I have learnec the cause of this unusual expression of hilarity and mirth; which was no more nor less than the safe return of a small war-party, who had been al long out without any tidings having been received of them -- that they hac long since been looked upon as sacrificed to the fates of war and lost. This party was made up of the most distinguished and desperate youn! men of the tribe, who had sallied out against the Riccarees, and taken the most solemn oath amongst themselves never to return without achieving; victory. They had wandered long and faithfully about the country, following the trails of their enemy; when they were

attacked by a numerou party, and lost several of their men and all their horses. In this condition to evade the scrutiny of their enemy, who were closely investing the natura route to their village; they took a circuitous range of the country, to enable them to return with their lives, to their vil-  
lage.

In this plight, it seems, I had dropped my little canoe alongside of them while descending from the Mouth of Yellow Stone to this place, not man weeks since; where they had bivouacked or halted, to smoke and consul on the best and safest mode of procedure. At the time of meeting them not knowing anything of their language, they were unable to communicate their condition to me, and more probably were afraid to do so even if they could have done it, from apprehension that we might have given some account of them to their enemies. I rested my canoe an hour or so with them during which time they treated us with an indifferent reserve, yet respectfully : and we passed on our way, without further information of them or their plan! than the sketch that I there made, and which I shall preservt and value as one of the most pleasing groups I ever have had the pleasun to see. Seated on their buffalo robes, which were spread upon the grass with their respective weapons laying about them, and lighting their pipes at a little fire which was kindled in the centre -- the chief or leader of the party, with his arms stacked behind him, and his long head-dress of war-eagles' quills and ermine falling down over his back, whilst he sat in a contemplative and almost desponding mood, was surely one of the most striking and beautiful illustrations of a natural hero that I ever looked upon.

These gallant fellows got safely home to their village, and the numerous expressions of joy for their return, which I have this day witnessed, have so much fatigued me that I write brief, and close my Letter here.

LETTER -- No. 22

MANDAN VILLAGE, UPPER MISSOURI.

OH! "horrible visu -- et mirabile dictu!" "Thank God, it is over, that I have seen it, and am able to tell it to the world.

The annual religious ceremony, of four days, of which I have so often spoken, and which I have so long been wishing to see, has at last been enacted in this village; and I have, fortunately, been able to see and to understand it in most of its bearings, which was more than I had reason to expect; for no white man, in all probability, has ever been before admitted to the medicine-lodge during these most remarkable and appalling scenes. Well and truly has it been said, that the Mandans are a strange and peculiar people; and most correctly had I been informed, that this was an important and interesting scene, by those who had, on former occasions, witnessed such parts of it as are transacted out of doors, and in front of the medicine-lodge.

Since the date of my last Letter, I was lucky enough to have painted the medicine-man, who was high-priest on this grand occasion, or conductor of the ceremonies, who had me regularly installed doctor or "medicine;" and who, on the morning when these grand refinements in mysteries commenced, took me by the arm, and led me into the medicine-lodge, where the Fur Trader, Mr. Kipp, and his two clerks accompanied me in close attendance for four days; all of us going to our own quarters at sun-down, and returning again at sun-rise the next morning.

I took my sketch-book with me, and have made many and faithful drawings of what we saw, and full notes of everything as translated to me by the interpreter; and since the close of that horrid and frightful scene, which was a week ago or more, I have been closely ensconced in an earth-covered wigwam, with a fine sky-light over my head, with my palette and brushes, endeavouring faithfully to put the whole of what we saw upon canvass, which my companions all agree to be critically correct, and of the fidelity of which they have attached their certificates to the backs of the paintings. I have made four paintings of these strange scenes, containing several hundred figures, representing the transactions of each day; and if I live to get them home, they will be found to be exceedingly curious and interesting.

I shudder at the relation, or even at the thought of these barbarous and cruel scenes, and am almost ready to shrink from the task of reciting them after I have so long promised some account of them. I entered the medicine-house of these scenes, as I would have entered a church, and expected to see something extraordinary and strange, but yet in the form of worship or devotion; but alas! little did I expect to see the interior of their holy temple turned into a slaughter-house, and its floor strewn with the blood of its fanatic devotees. Little did I think that I was entering a house of God, where His blinded worshippers were to pollute its sacred interior with their blood, and propitiatory suffering and tortures-surpassing, if possible, the cruelty of the rack or the inquisition; but such the scene has been, and as such I will endeavour to describe it.

The "Mandan religious ceremony" then, as I believe it is very justly denominated, is an annual

---

transaction, held in their medicine-lodge once a year, as a great religious anniversary, and for several distinct objects, as I shall in a few minutes describe; during and after which, they look with implicit reliance for the justification and approval of the Great Spirit.

All of the Indian tribes, as I have before observed, are religious -- are worshipful -- and many of them go to almost incredible lengths (as will be seen in the present instance, and many others I may recite) in worshipping the Great Spirit; denying and humbling themselves before Him for the same purpose, and in the same hope as we do, perhaps in a more rational and acceptable way. The tribes, so far as I have visited them, all distinctly believe in the existence of a Great (or Good) Spirit, an Evil (or Bad) Spirit, and also in a future existence and future accountability, according to their virtues and vices in this world. So far the North American Indians would seem to be one family, and such an unbroken theory amongst them; yet with regard to the manner and form, and time and place of that accountability -- to the constructions of virtues and vices, and the modes of appeasing and propitiating the Good and Evil Spirits, they are found with all the changes and variety which fortuitous circumstances, and fictions, and fables have wrought upon them.

If from their superstitions and their ignorance, there are oftentimes obscurities and mysteries thrown over and around their system, yet these affect not the theory itself, which is everywhere essentially the same -- and which, if it be not correct, has this much to command the admiration of the enlightened world, that they worship with great sincerity, and all according to one creed. The Mandans believe in the existence of a Great (or Good) Spirit, and also of an Evil Spirit, who they say existed long before the Good Spirit, and is far superior in power. They all believe also in a future state of existence, and a future administration of rewards and punishments, and (so do all other tribes that I have yet visited) they believe those punishments are not eternal, but commensurate with their sine.

These people living in a climate where they suffer from cold in the severity of their winters, have very naturally reversed our ideas of Heaven and Hell. The latter they describe to be a country very far to the north, of barren and hideous aspect, and covered with eternal snows and ice. The torments of this freezing place they describe as most excruciating; whilst Heaven they suppose to be in a warmer and delightful latitude, where nothing is felt but the keenest enjoyment, and where the country abounds in buffaloes and other luxuries of life. The Great or Good Spirit they believe dwells in the former place for the purpose of there meeting those who have offended him; increasing the agony of their sufferings, by being himself present, administering the penalties. The Bad or Evil Spirit they at the same time suppose to reside in Paradise, still tempting the happy; and those who have gone to the regions of punishment they believe to be tortured for a time proportioned to the amount of their transgressions, and that they are then to be transferred to the land of the happy, where they are again liable to the temptations of the Evil Spirit, and answerable again at a future period for their new offences. Such is the religious creed of the Mandans, and for the purpose of appeasing the Good and Evil Spirits, and to secure their entrance into those "fields Elysian", or beautiful hunting grounds, do the young men subject themselves to the horrid and sickening cruelties to be described in the following pages.

There are other three distinct objects (yet to be named) for which these religious ceremonies are held, which are as follow:

First, they are held annually as a celebration of the event of the subsiding of the Flood, which they call Mee-nee-ro-Ka-ha-sha, (sinking down or settling of the waters.)

Second[y, for the purpose of dancing what they call, Bel-lohck-na-pic (the bull-dance); to the strict observance of which they attribute the coming of buffaloes to supply them with food during the season; and Thirdly and lastly, for the purpose of conducting all the young men of the tribe, as they annually arrive to the age of manhood, through an ordeal of privation and torture, which, while it is supposed to harden their muscles and prepare them for extreme endurance, enables the chiefs who are spectators to the scene, to decide upon their comparative bodily strength and ability to endure the extreme privations and sufferings that often fall to the lots of Indian warriors; and that they may decide who is the most hardy and best able to lead a war-party in case of extreme exigency.

This part of the ceremony, as I have just witnessed it, is truly shocking to behold, and will almost stagger the belief of the world when they read of it. The scene is too terrible and too revolting to be seen or to be told. Were it not an essential part of a whole, which will be new to the civilized world, and therefore worth their knowing.

The bull-dance, and many other parts of these ceremonies are exceedingly grotesque and amusing, and that part of them which has a relation to the Deluge is harmless and full of interest.

In the centre of the Mandan village is an open, circular area of 150 feet diameter, kept always clear, as a public ground, for the display of all their public feasts, parades, &c. and around it are their wigwams placed as near to each other as they can well stand, their doors facing the centre of this public area.

In the middle of this ground, which is trodden like a hard pavement, is a curb (somewhat like a large hogshead standing on its end) made of planks (and bound with hoops); some eight or nine feet high, which they religiously preserve and protect from year to year, free from mark or scratch, and which they call the "big canoe" -- it is undoubtedly a symbolic representation of a part of their traditional history of the Flood; which it is very evident, from this and numerous other features of this grand ceremony, they have in some way or other received, and are here endeavouring to perpetuate by vividly impressing it on the minds of the whole nation. This object of superstition, from its position, as the very centre of the village is the rallying point of the whole nation. To it their devotions are paid on various occasions of feasts and religious exercises during the year; and in this extraordinary scene it was often the nucleus of their mysteries and cruelties, as I shall shortly describe them, and becomes an object worth bearing in mind, and worthy of being understood.

This exciting and appalling scene, then, which is familiarly (and no doubt correctly) called the "Mandan religious ceremony", commences, not on a particular day of the year, (for these people keep no record of days or weeks), but at a particular season, which is designated by the full expansion of the willow leaves under the bank of the river; for according to their tradition," the twig that the bird brought home was a willow bough, and had fullgrown leaves on it," and the bird to which they allude, is themourning or turtle-dove, which they took great pains to point out to me, as it is often to be seen feeding on the sides of their earth-covered lodges, and which, being, as they call it, a medicine-bird, is not to be destroyed or harmed by any one, and even their dogs are instructed not to do it injury.

On the morning on which this strange transaction commenced, I was sitting at breakfast in the house of the Trader, Mr. Kipp, when at son-rise, we were suddenly startled by the shrieking and screaming of the women, and barking and howling of dogs, as if an enemy were actually storming

their village.

“Now we have it !” (exclaimed my host, as he sprang from the table,) the grand ceremony has commenced -- drop your knife and fork, Monsr. and get your sketch-book as soon as possible, that you may lose nothing, for the very moment of commencing is as curious as anything else of this strange affair.” I seized my sketch-book, and all hands of us were in an instant in front of the medicine-lodge, ready to see and to hear all that was to take place. Groups of women and children were gathered on the tops of their earth-covered wigwams, and all were screaming, and dogs were howling, and all eyes directed to the prairies in the West, where was beheld at a mile distant, a solitary individual descending a prairie bluff, and making his way in a direct line towards the village! The whole community joined in the general expression of great alarm, as if they were in danger of instant destruction; bows were strung and thumbed to test their elasticity -- their horses were caught upon the prairie and run into the village -- warriors were blackening their faces, and dogs were muzzled, and every preparation made, as if for instant combat.

During this deafening din and confusion within the piquets of the village of the Mandans, the figure discovered on the prairie continued to approach with a dignified step and in a right line towards the village; all eyes were upon him, and he at length made his appearance (without opposition) within the piquets, and proceeded towards the centre of the village, where all the chiefs and braves stood ready to receive him, which they did in a cordial manner, by shaking hands with him, recognizing him as an old acquaintance, and pronouncing his name Nu-mohk-muck-a-nah (the first or only man). The body of this strange personage, which was chiefly naked, was painted with white clay, so as to resemble at a little distance, a white man; he wore a robe of four white wolf skins falling back over his shoulders; on his head he had a splendid head-dress made of two ravens' skins, and in his left hand he cautiously carried a large pipe, which he seemed to watch and guard as something of great importance. After passing the chiefs and braves as described, he approached the medicine or mystery lodge, which he had the means of opening, and which had been religiously closed during the year except for the performance of these religious rites.

Having opened and entered it, he called in four men whom he appointed to clean it out, and put it in readiness for the ceremonies, by sweeping it and strewing a profusion of green willow-boughs over its floor, and with them decorating its sides. Wild sage also, and many other aromatic herbs they gathered from the prairies, and scattered over its floor; and over these were arranged a curious group of buffalo and human skulls, and other articles, which were to be used during this strange and unaccountable transaction.

During the whole of this day, and while these preparations were making in the medicine-lodge, Nu-mohk-muck-a-nah (the first or only man! travelled through the village, stopping in front of every man's lodge, and crying until the owner of the lodge came out, and asked who he was, and what was the matter? To which he replied by relating the sad catastrophe which had happened on the earth's surface by the overflowing of the waters, saying that “he was the only person saved from the universal calamity: that he landed his big canoe on a high mountain in the west, where he now resides; that he had come to open the medicine-lodge, which must needs receive a present of some edged-tool from the owner of every wigwam, that it may be sacrificed to the water; for he says, “if this is not done, there will be another flood, and no one will be saved, as it was with such tools that the big canoe was made.”

Having visited every lodge or wigwam in the village, during the day, and having received such a

present at each, as a hatchet, a knife, &c. (which is undoubtedly always prepared and ready for the occasion), he returned at evening and deposited them in the medicine-lodge, where they remained until the afternoon of the last day of the ceremony, when, as the final or closing scene, they were thrown into the river in a deep place, from a bank thirty feet high, and in presence of the whole village; from whence they can never be recovered, and where they were, undoubtedly, sacrificed to the Spirit of the Water.

During the first night of this strange character in the village, no one could tell where he slept; and every person, both old and young, and dogs, and all living things were kept within doors, and dead silence reigned every where. On the next morning at sunrise, however, he made his appearance again, and entered the medicine-lodge; and at his heels (in "Indian file", i.e. single file, one following in another's tracks) all the young men who were candidates for the self-tortures which were to be inflicted, and for the honours that were to be bestowed by the chiefs on those who could manfully endure them. There were on this occasion about fifty young men who entered the lists, and as they went into the sacred lodge, each one's body was chiefly naked, and covered with clay of different colours; some were red, others were yellow, and some were covered with white clay, giving them the appearance of white men. Each one of them carried in his right hand his medicine-bag -- on his left arm, his shield of the bull's hide -- in his left hand, his bow and arrows, with his quiver slung on his back.

When all had entered the lodge, they placed themselves in reclining postures around its sides, and each one had suspended over his head his respective weapons and medicine, presenting altogether, one of the most wild and picturesque scenes imaginable.

Nu-mohk-muck-a-nah (the first or only man) was in the midst of them, and having lit and smoked his medicine-pipe for their success; and having addressed them in a short speech, stimulating and encouraging them to trust to the Great Spirit for His protection during the severe ordeal they were about to pass through; he called into the lodge an old medicine or mystery-man, whose body was painted yellow, and whom he appointed master of ceremonies during this occasion, whom they denominated in their language O-Ree-pah Ka-se-kah (Keeper or Conductor Of The Ceremonies). He was appointed, and the authority passed by the presentation of the medicine-pipe, on which they consider hangs all the power of holding and conducting all these rites. After this delegated authority had thus passed over to the medicineman; Nu-mohk-muck-a-nah shook hands with him, and bade him good bye, saying "that he was going back to the mountains in the west, from whence he should assuredly return in just a year from that time, to open the lodge again." He then went out of the lodge, and passing through the village, took formal leave of the chiefs in the same manner, and soon disappeared over the bluffs from whence he came. No more was seen of this surprising character during the occasion: but I shall have something yet to say of him and his strange office before I get through the Letter.

To return to the lodge, -- the medicine or mystery-man just appointed, and who had received his injunctions from Nu-mohk-muck-a-nah, was left sole conductor and keeper; and according to those injunctions, it was his duty to lie by a small fire in the centre of the lodge, with his medicine-pipe in his hand, crying to the Great Spirit incessantly, watching the young men, and preventing entirely their escape from the lodge, and all communication whatever with people outside, for the space of four days and nights, during which time they were not allowed to eat, to drink, or to sleep, preparatory to the excruciating self-tortures which they were to endure on the

fourth day.

I mentioned that I had made four paintings of these strange scenes, and the first one exhibits the interior of the medicine-lodge at this moment; with the young men all reclining around its sides, and the conductor or mystery-man lying by the fire, crying to the Great Spirit. It was just at this juncture that I was ushered into this sacred temple of their worship, with my companions, which was, undoubtedly, the first time that their devotions had ever been trespassed upon by the presence of pale faces; and in this instance had been brought about in the following strange and unexpected manner.

I had most luckily for myself painted a full-length portrait of this great magician or high-priest, but a day previous to the commencement of the ceremonies (in which I had represented him in the performance of some of His mysteries), with which he had been so exceedingly pleased as well as astonished (as "he could see its eyes move"), that I must needs be, in his opinion, deeply skilled in magic and mysteries, and well-entitled to a respectable rank in the craft, to which I had been at once elevated by the unanimous voice of the doctors, and regularly initiated, and styled Te-hopee-nee-wash-ee-waska-pooslia, the white medicine (or Spirit) painter.

With this very honourable degree which had just been conferred upon me, I was standing in front of the medicine-lodge early in the morning, with my companions by my side, endeavouring to get a peep, if possible, into its sacred interior; when this master of ceremonies, guarding and conducting its secrets, as I before described, came out of the door and taking me with a firm professional affection by the arm, led me into this sanctum sanctorum, which was strictly guarded from, even a peep of a gaze from the vulgar, by a vestibule of eight or ten feet in length, guarded with a double screen or door, and two or three dark and frowning centinels with spears or war-clubs in their hands. I gave the wink to my companions as I was passing in, and the potency of my medicine was such as to gain them a quiet admission, and all of us were comfortably placed on elevated seats, which our conductor soon prepared for us.

We were then in full view of everything that transpired in the lodge, having before us the scene exactly, which is represented in the first of the four pictures. To this seat we returned every morning at sunrise, and remained until sun-down for four days, the whole time which these strange scenes occupied.

In addition to the preparations and arrangements of the interior of this sanctuary, as above described, there was a curious, though a very strict arrangement of buffalo and human skulls placed on the floor of the lodge, and between them (which were-divided into two parcels), and in front of the reclining group of young candidates, was a small and very delicate scaffold, elevated about five feet from the ground, made of four posts or crotches, not larger than a gun-rod, and placed some four or five feet apart, supporting four equally delicate rods, resting in the crotches; thus forming the frame of the scaffold, which was completed by a number of still smaller and more delicate sticks, transversely resting upon them. On the centre of this little frame rested some small object, which I could not exactly understand from the distance of twenty or thirty feet which intervened between it and my eye. I started several times from my seat to approach it, but all eyes were instantly upon me, and every mouth in the assembly sent forth a hush! Which brought me back to my seat again; and I at length quieted my stilled curiosity as well as I could, upon learning the fact, that 90 sacred was that object, and so important its secrets or mysteries, that not I alone, but even the young men, who were passing the ordeal, and all the village, save the conductor of

the mysteries, were stopped from approaching it, or knowing what it was.

This little mystery-thing, whatever it was, had the appearance from where I sat, of a small tortoise or frog lying on its back, with its head and legs quite extended, and wound and tasselled off with exceedingly delicate red and blue, and yellow ribbons or tassels, and other bright coloured ornaments; and seemed, from the devotions paid to it, to be the very nucleus of their mysteries -- the sanctissimus sanctorum, from which seemed to emanate all the sanctity of their proceedings, and to which, all seemed to be paying the highest devotional respect.

This strange, yet important essence of their mysteries, I made every enquiry about; but got no further information of, than what I could learn by my eyes, at the distance at which I saw it, and from the silent respect which I saw paid to it. I tried with the doctors, and all of the fraternrly answered me, that that was "great medicine", assuring me that it "could not be told". So I quieted my curiosity as well. as I could, by the full conviction that I had a degree or two yet to take before I could fathom all the arcana of Indian superstitions; and that this little, seemingly wonderful, relic of antiquity, symbol of some grand event, or "secret too valuable to be told", might have been at last nothing but a silly bunch of strings and toys, to which they pay some great peculiar regard; giving thereby to some favourite Spirit or essence an ideal existence, and which, when called upon to describe, they refuse to do so, calling it "Great Medicine", for the very reason that there is nothing in it to reveal or describe.

Immediately under the little frame or scaffold described, and on the floor of the lodge was placed a knife, and by the side of it a bundle of splints or skewers, which were kept in readiness for the infliction of the cruelties directly to be explained. There were seen also, in this stage of the affair, a number of cords of rawhide hanging down from the top of the lodge, and passing through its roof, with which the young men were to be suspended by the splints passed through their flesh, and drawn up by men placed on the top of the lodge for the purpose, as will be described in a few moments.

There were also four articles of great veneration and importance lying on the floor of the lodge, which were sacks, containing in each some three or four gallons of water. These also were objects of superstitious regard, and made with great labour and much ingenuity; each one. of them being constructed of the skin of the buffalo's neck, and most elaborately sewed together in the form of a large tortoise lying on its back, with a bunch of eagle's quills appended to it as a tail; and each of them having a stick, shaped like a drum-stick, lying on them, with which, in a subsequent stage of these ceremonies, as will be seen, they are beaten upon by several of their mystery-men, as a part of the music for their strange dances and mysteries. By the side of these sacks which they call Eeh-teeh-Ra, are two other articles of equal importance, which they call Eeh-na-dee (rattles), in the form of a gourd-shell made also of dried skins, and used at the same time as the others, in the music (or rather noise and din) for then dances, &c.

These four sacks of water have the appearance of very great antiquity; and by enquiring of my very ingenious friend and patron, the medicilze-mun, after the ceremonies were over, he very gravely told me, that "those four tortoises contained the waters from the four quarters of the world -- that these waters had been contained therein ever since the settling down on the waters!" I did not think it best to advance any argument against so ridiculous a theory, and therefore could not even enquire or learn, at what period they had been instituted, or how often, or on what occasions, the water in them had been changed or replenished.

I made several propositions, through my friend Mr. Kipp, the trader and interpreter, to purchase one of these strange things by offering them a very liberal price; to which I received in answer that these, and all the very numerous articles used in these ceremonies, being a society property were medicine, and could not be sold for any consideration; so I abandoned all thoughts of obtaining anything, except what I have done by the medicine operation of my pencil, which was applied to everything, and even upon that they looked with decided distrust and apprehension, as a sort of theft of sacrilege.

Such then was the group, and such the appearance of the interior of the medicine-lodge during the three first, and part of the fourth day also, of the Mandan religious ceremonies. The medicine-man with a group about him, of young aspirants who were under his sole control, as was every article and implement to be used, and the sanctity of this solitary and gloomy looking place, which could not be trespassed upon by any man's presence without his most sovereign permission. During the three first days of this solemn conclave, there were many very curious forms and amusements enacted in the open area in the middle of the village, and in front of the medicine-lodge, by other members of the community, one of which formed a material part or link of these strange ceremonials. This very curious and exceedingly grotesque part of their performance, which they denominated *Bel-Eohck nah-pick* (the bull-dance) of which I have before spoken, as one of the avowed objects for which they held this annual feast; and to the strictest observance of which they attribute the coming of buffaloes to supply them with food during the season -- is repeated four times during the first day, eight times on the second day, twelve times on the third day, and sixteen times on the fourth day; and always around the curb, or "big canoe", of which I have before spoken.

This subject I have selected for my second picture, and the principal actors in it were eight men, with the entire skins of buffaloes thrown over their backs, with the horns and hoofs and tails remaining on; their bodies in a horizontal position, enabling them to imitate the actions of the buffalo, whilst they were looking out of its eyes as through a mask.

The bodies of these men were chiefly naked and all painted in the most extraordinary manner, with the nicest adherence to exact similarity; their limbs, bodies and faces, being in every part covered, either with black, red, or white paint. Each one of these strange characters had also a lock of buffalo's hair tied around his ankles--in his right hand a rattle, and a slender white rod or staff, six feet long, in the other; and carried on his back, a bunch of green willow boughs about the usual size of a bundle of straw. Where eight men, being divided into four pairs, took their positions on the four different sides of the curb or big canoe, representing thereby the four cardinal points; and between each group of them, with the back turned to the big canoe, was another figure, engaged in the same dance, keeping step with them, with a similar staff or wand in one hand and a rattle in the other, and (being four in number) answering again to the four cardinal points. The bodies of these four young men were chiefly naked, with no other dress upon them than a beautiful belt (or quartz-quaw), around the waist, made of eagles quills and ermine, and very splendid head-dresses made of the same materials. Two of these figures were painted entirely black with powdered charcoal and grease, whom they called the "firmament or night", and the numerous white spots which were dotted all over their bodies, they called "stars". The other two were painted from head to foot as red as vermilion could make them; these they said represented the day, and the white streaks which were painted up and down over their bodies, were "ghosts which the

morning rays were chasing away.”

These twelve are the only persons actually engaged in this strange dance, which is each time repeated in the same form, without the slightest variation. There are, however, a great number of characters engaged in giving the whole effect and wildness to this strange and laughable scene, each one acting well his part, and whose offices, strange and inexplicable as they are, I will endeavour to point out and explain as well as I can, from what I saw, elucidated by their own descriptions. This most remarkable scene, then, which is witnessed more or less often on each day, takes place in presence of the whole nation, who are generally gathered around, on the tops of the wigwams or otherwise, as spectators, whilst the young men are reclining and fasting in the lodge as above described. On the first day, this “bull-dance” is given once to each of the cardinal points, and the medicine-man smokes his pipe in those directions. On the second day, twice to each; three times to each on the third day, and four times to each on the fourth. As a signal for the dancers and other characters (as well as the public) to assemble, the old man, master of ceremonies, with the medicine-pipe in hand, dances out of the lodge, singing (or rather crying) forth a most pitiful lament, until he approaches the big canoe, against which he leans, with the pipe in his hand, and continues to cry. At this instant, four very aged and patriarchal looking men, whose bodies are painted red, and who have been guarding the four sides of the lodge, enter it and bring out the four sacks of water, which they place near the big canoe, where they seat themselves by the side of them and commence thumping on them with the mallets or drumsticks which have been lying on them; and another brandishes and shakes the eeh-na-dees or rattles, and all unite to them their voices, raised to the highest pitch possible, as the music for the bull-dance, which is then commenced and continued for fifteen minutes or more in perfect time, and without cessation or intermission. When the music and dancing stop, which are always perfectly simultaneous, the whole nation raise the huzza, and a deafening shout of approbation; the master of ceremonies dances back to the medicine-lodge, and the old men return to their former place; the sacks of water, until all rest as before, until by the same method, they are again called into a similar action. The supernumeraries or other characters who play their parts in this grand spectacle, are numerous and well worth description. By the side of the big Canoe are seen two men with the skins of grizzly bears thrown over them, using the skins as a mask, over their heads. These ravenous animals are continually growling and threatening to devour everything before them and interfering with the forms of their religious ceremony. To appease them, the women are continually bringing and placing before them dishes of meat, which are as often snatched up and carried to the prairie, by two men whose bodies are painted black and their heads white, whom they call bald eagles, who are darting by them and grasping their food from before them as they pass. These are again chased upon the plains by a hundred or more small boys, who are naked, with their bodies painted yellow and their heads white, whom they call Cabris or antelopes; who at length get the food away from them and devour it; thereby inculcating (perhaps) the beautiful moral, that by the dispensations of Providence, his bountiful gifts will fall at last to the hands of the innocent. During the intervals between these dances, all these characters, except those from the medicine-lodge, retire to a wigwam close by, which they use on the occasion also as a sacred place, being occupied exclusively by them while they are at rest, and also for the purpose of painting and ornamenting their bodies for the occasion.

During each and every one of these dances, the old men who beat upon the sacks and sing, are

earnestly chanting forth their supplications to the Great Spirit, for the continuation of his influence in sending them buffaloes to supply them with food during the year; they are administering courage and fortitude to the young men in the lodge, by telling them, that "the Great Spirit" has opened his ears in their behalf -- that the very atmosphere all about them is peace -- that their women and children can hold the mouth of the grizzly bear -- that they have invoked from day to day O-ke-hee-de (the Evil Spirit) -- that they are still challenging him to come, and yet he has not dared to make his appearance."

But alas! in the last of these dances, on the fourth day, in the midst of all their mirth and joy, and about noon, and in the height of all these exultations, an instant scream burst forth from the tops of the lodges!--meu, women, dogs and all, seemed actually to howl and shudder with alarm, as they fixed their glaring eye-balls upon the prairie bluff, about a mile in the west, down the side of which a man was seen descending at full speed towards the village! This strange character darted about in a zig-zag course in all directions on the prairie, like a boy in pursuit of a butterfly, until he approached the piquets of the village, when it was discovered that his body was entirely naked, and painted as black as a negro, with Pounded charcoal and bear's grease; his body was therefore everywhere of a shining black, except occasionally white rings of an inch or more in diameter, which were marked here and there all over him; and frightful indentures of white around his mouth, resembling canine teeth. Added to his hideous appearance, he gave the most frightful shrieks and screams as he dashed through the village and entered the terrified group, which was composed (in that quarter) chiefly of females, who had assembled to witness the amusements which were transpiring around the "big canoe".

This unearthly looking creature carried in his two hands a wand or staff of eight or nine feet in length, with a red ball at the end of it, which he continually slid on the ground a-head of him as he ran. All eyes in the village, save those of the persons engaged in the dance, were centred upon him, and he made a desperate rush towards the women, who screamed for protection as they were endeavouring to retreat; and falling in groups upon each other as they were struggling to get out of his reach. In this moment of general terror and alarm there was an instant check! and all for a few moments were as silent as death.

The old master of ceremonies, who had run from his position at the big canoe, had met this monster of fiends, and having thrust the medicine-pipe before him, held him still and immovable under its charm! This check gave the females an opportunity to get out of his reach, and when they were free from their danger, though all hearts beat yet with the instant excitement, their alarm soon cooled down into the most exorbitant laughter and shouts of applause at his sudden defeat, and the awkward and ridiculous posture in which he was stopped and held. The old man was braced stiff by his side, with his eye-balls glaring him in the face, whilst the medicine-pipe held in its mystic chains his Satanic Majesty, annulling all the powers of his magical wand, and also depriving him of the powers of locomotion! Surely no two human beings ever presented a more striking group than these two individuals did for a few moments, with their eye-balls set in direct mutual hatred upon each other; both struggling for the supremacy, relying on the potency of their medicine or mystery. The one held in check, with his body painted black, representing (or rather assuming to be) his sable majesty, O-kee-hee-de (the Evil Spirit); frowning everlasting vengeance on the other, who sternly gazed him back with a look of exultation and contempt, as he held him in check and disarmed under the charm of his sacred mystery-pipe.

When the superior powers of the medicine-pipe (on which hang all these annual mysteries) had been thus fully tested and acknowledged, and the women had had requisite time to withdraw from the reach of this fiendish monster, the pipe was very gradually withdrawn from before him, and he seemed delighted to recover the use of his limbs again, and power of changing his position from the exceedingly unpleasant and really ridiculous one he appeared in, and was compelled to maintain, a few moments before; rendered more superlatively ridiculous and laughable, from the further information, which I am constrained to give, of the plight in which this demon of terror and vulgarity made his entree into the midst of the Mandan village, and to the centre and nucleus of their first and greatest religious ceremony.

Then, to proceed: I said that this strange personage's body was naked--was painted jet black with charcoal and bear's grease, with a wand in his hands of eight feet in length with a red ball at the end of it, which he was nibbling about on the ground in front of him as he ran.

In this plight, in which I have not dared fully to represent him in the picture, he pursued the groups of females, spreading dismay and alarm wherever he went, and consequently producing the awkward and exceedingly laughable predicament in which he was placed by the sudden check from the medicine-pipe, as I have above stated, when all eyes were intently fixed upon him, and all joined in rounds of applause for the success of the magic spell that was placed upon him; all voices were raised in shouts of satisfaction at his defeat, and all eyes gazed upon him; of chiefs and of warriors--matrons and even of their tender-aged and timid daughters, whose education had taught them to receive the moral of these scenes without the shock of impropriety, that would have startled a more fastidious and consequently sensual-thinking people.

After repeated attempts thus made, and thus defeated in several parts of the crowd, this blackened monster was retreating over the ground where the buffalo-dance was going on. and having (apparently, par accident) swaggered against one of the men placed under the skin of a buffalo and engaged in the "bull dance," he started back, and placing himself in the attitude of a buffalo,-- "hi ung ee a wahkstia, chee a nahk s tammee ung s towa; se ung ee aht gwaht ee o nunghths tcha ho a, tummee ozt no ah, ughstono ah hi en en ah nahxt gwi aht gahtch gun ne. Gwee en on doatclrt chee en arc gunne how how en ahzst fchtl!"

After this he paid his visits to three others of the eight, in succession, receiving as before the deafening shouts of approbation which pealed from every mouth in the multitude, who were all praying to the Great Spirit to send them buffaloes to supply them with food during the season, and who attribute the coming of buffaloes for this purpose entirely to the strict and critical observance of this ridiculous and disgusting part of the ceremonies.

During the half hour or so that he had been jostled about amongst man and beasts, to the great amusement and satisfaction of the lookers-on, he seemed to have become exceedingly exhausted, and anxiously looking out for some feasible mode of escape.

In this awkward predicament he became the laughing-stock and butt for the women, who being no longer afraid of him, were gathering in groups around, to tease and tantalize him; and in the midst of this dilemma, which soon became a very sad one -- one of the women, who stole up behind him with both hands full of yellow dirt -- dashed it into his Face and eyes, and all over him, and his body being covered with grease, took instantly a different hue. He seemed heart-broken at this signal disgrace, and commenced crying most vehemently, when, an instant, another caught his wand from his hand, and broke it across her knee. It was snatched for by others, who broke

it still into bits, and then threw them at him. His power was now gone -- his bodily strength was exhausted, and he made a bolt for the prairie -- he dashed through the crowd, and made his way through the piquets on the back part of the village, where were placed for the purpose, an hundred or more women and girls, who escorted him as he ran on the prairie for half a mile or more, beating him with sticks, and stones, and dirt, and kicks, and cuffs, until he was at length seen escaping from their clutches, and making the best of his retreat over the prairie bluffs, from whence he first appeared.

At the moment of this signal victory, and when all eyes lost sight of him as he disappeared over the bluffs, the whole village united their voices in shouts of satisfaction. The bull-dance then stopped, and preparations were instantly made for the commencement of the cruelties which were to take place within the lodge, leaving us to draw, from what had just transpired, the following beautiful moral:--

That in the midst of their religious ceremonies, the Evil Spirit (O-kee-hee-de) made his entree for the purpose of doing mischief, and of disturbing their worship -- that he was held in check, and defeated by the superior influence and virtue of the medicine-pipe, and at last, driven in disgrace out of the village, by the very part of the community whom he came to abase.

At the close of this exciting scene, preparations were made, as above stated, by the return of the master of ceremonies and musicians to the medicine-lodge, where also were admitted at the same time a number of men, who were to be instruments of the cruelties to be indicted; and also the chief and doctors of the tribe, who were to look on, and bear witness to, and decide upon, the comparative degree of fortitude, with which the young men sustain themselves in this most extreme and excruciating ordeal. The chiefs having seated themselves on one side. of the lodge, dressed out in their robes and splendid head-dresses -- the band of music seated and arranged themselves in another part; and the old master of ceremonies having placed himself in front of a small fire in the centre of the lodge, with his "big pipe" in his hands, and having commenced smoking to the Great Spirit, with all possible vehemence for the success of these aspirants, presented the subject for the third picture, which they call "polk-hong", the cutting scene. Around the sides of the lodge are seen, still reclining, as I have before mentioned, a part of the group, whilst others of them have passed the ordeal of self-tortures, and have been removed out of the lodge; and others still are seen in the very act of submitting to them, which were inflicted in the following manner: -- After having removed the sanctissimus sanctorum, or little scaffold, of which I before spoke, and having removed also the buffalo anti human skulls from the floor, and attached them to the posts of the lodge; and two men having taken their positions near the middle of the lodge, for the purpose of inflicting the tortures -- the one with the scalping-knife, and the other with the bunch of splints (which I have before mentioned) in his hand; one at a time of the young fellows, already emaciated with fasting, and thirsting, and waking, for nearly four days and nights, advanced from the side of the lodge, and placed himself on his hands and feet, or otherwise, as best suited for the performance of the operation, where he submitted to the cruelties in the following manner: -- An inch or more of the flesh on each shoulder, or each breast was taken up between the thumb and finger by the man who held the knife in his right hand; and the knife, which had been ground sharp on both edges, and then hacked and notched with the blade of another, to make it produce as much pain as possible, was forced through the flesh below the fingers, and being withdrawn, was followed with a splint or skewer, from the other, who held a bunch of such in

---

his left hand, and was ready to force them through the wound. There were then two cords lowered down from the top of the lodge (by men who were placed on the lodge outside, for the purpose), which were fastened to these splints or skewers, and they instantly began to haul him up; he was thus raised until his body was suspended from the ground where he rested, until the knife and a splint were passed through the flesh or integuments in a similar manner on each arm below the shoulder (over the brachialis eztemus), below the elbow (over the *extensor carpi radialis*), on the thighs (over the *vastus externus*), and below the knees (over the *peroneus*).

In some instances they remained in a reclining position on the ground until this painful operation was finished, which was performed, in all instances, exactly on the same parts of the body and limbs; and which, in its progress, occupied some five or six minutes.

Each one was then instantly raised with the cords, until the weight of his body was suspended by them, and then, while the blood was streaming down their limbs, the bystanders hung upon the splints each man's appropriate shield, bow and quiver, &c.; and in many instances, the skull of a buffalo with the horns on it, was attached to each lower arm and each lower leg, for the purpose, probably, of preventing by their great weight, the struggling, which might otherwise have taken place to their disadvantage whilst they were hung up.

When these things were all adjusted, each one was raised higher by the cords, until these weights all swung clear from the ground, leaving his feet, in most cases, some six or eight feet above the ground. In this plight they at once became appalling and frightful to look at -- the flesh, to support the weight of their bodies, with the additional weights which were attached to them, was raised six or eight inches by the skewers; and their heads sunk forward on the breasts, or thrown backwards, in a much more frightful condition, according to the way in which they were hung up. The unflinching fortitude, with which every one of them bore this part of the torture surpassed credulity; each one as the knife was passed through his flesh sustained an unchangeable countenance; and several of them, seeing me making sketches, beckoned me to look at their faces, which I watched through all this horrid operation, without being able to detect anything but the pleasantest smiles as they looked me in the eye, while I could hear the knife rip through the flesh, and feel enough of it myself, to start involuntary and uncontrollable tears over my cheeks.

When raised to the condition above described, and completely suspended by the cords, the sanguinary hands, through which he had just passed, turned back to perform a similar operation on another who was ready, and each one in his turn passed into the charge of others, who instantly introduced them to a new and improved stage of their refinements in cruelty.

Surrounded by imps and demons as they appear, a dozen or more, who seem to be concerting and devising means for his exquisite agony, gather around him, when one of the number advances towards him in a sneering manner, and commences turning him around with a pole which he braces in his hand for the purpose. This is done in a gentle manner at first; but gradually increased, when the brave fellow, whose proud spirit could control its agony no longer, burst out in the most lamentable and heart-rending cries that the human voice is capable of producing, crying forth a prayer to the Great Spirit to support and protect him in this dreadful trial; and continually repeating his confidence in his protection. In this condition he is continued to be turned, faster and faster -- and there is no hope of escape from it, nor chance for the slightest relief, until by fainting, his voice falters, and his struggling ceases, and he hangs, apparently, a still and lifeless corpse! When he is, by turning, gradually brought to this condition, which is generally done with-

in ten or fifteen minutes, there is a close scrutiny passed upon him among his tormentors, who are checking and holding each other back as long as the least struggling or tremor can be discovered, lest he should be removed before he is (as they term it) "entirely dead".

When brought to this alarming and most frightful condition, and the turning has gradually ceased, as his voice and his strength have given oath, leaving him to hang entirely still, and apparently lifeless; when his tongue is distended from his mouth, and his medicine-bag, which he has affectionately and superstitiously clung to with his left hand, has dropped to tire ground; the signal is given to the men on top of the lodge, by gently striking the cord with the pole below, when they very gradually and carefully lower him to the ground.

In this helpless condition he lies, like a loathsome corpse to look at, though in the keeping (as they call it) of the Great Spirit, whom he trusts will protect him, and enable him to get up and walk away. As soon as Ire is lowered to the ground thus, one of the bystanders advances, and pulls out the two splints or pins from the breasts and shoulders, thereby disengaging him from the cords by which he has been hung up; but leaving all the others with their weights, &c. hanging to His flesh.

In this condition he lies for six or eight minutes, until he gets strength to rise and move himself, for no one is allowed to assist or offer him aid, as he is here enjoying the most valued privilege which a Mandan can boast of, that of "trusting hid life to the keeping of the Great Spirit", in this time of extreme peril.

As soon as he is seen to get strength enough to rise on his hands and feet, and drag his body around the lodge, he crawls with the weights still hanging to his body, to another part of the lodge, where there is another Indian sitting with a hatchet in his hand, and a dried buffalo skull before him; and here, in the most earnest and humble manner, by holding up the little finger of his left hand to the Great Spirit, he expresses to Him, in a speech of a few words, his willingness to give it as a sacrifice; when he lays it on the dried buffalo skull, where the other chops it off near the hand, with a blow of the hatchet!

Nearly all of the young men whom I saw passing this horrid ordeal, gave in the above manner, the little finger of the left hand; and I saw also several, who immediately afterwards (and apparently with very little concern or emotion), with a similar speech, extended in the same way, the fore finger of the same hand, and that too was struck off; leaving on the left hand only the two middle fingers and the thumb; all which they deem absolutely essential for holding the bow, the only weapon for the left hand.

One would think that this mutilation had thus been carried quite far enough; but I have since examirred several of the head chiefs and dignitaries of the tribe, who have also given, in this manner, the little finger of the right hand, which is considered by them to be a much greater sacrifice than both of the others; and I have found also a number of their most famous men, who furnish me incontestible proof, by five or six correspond ding scars on each arm, and each breast, and each leg, that they had so many times in their lives submitted to this almost incredible operation, which seems to be optional with them; and the oftener they volunteer to go through it, the more famous they become in the estimation of their tribe.

No bandages are applied to the fingers which have been amputated, nor any arteries taken up; nor is any attention whatever, paid to them or the other wounds; but they are left (as they say) "for the Great Spirit to cure, who will surely take good care of them." It is a remarkable fact (which

I learned from a close inspection of their wounds from day to day) that the bleeding is but very slight and soon ceases, probably from the fact of their extreme exhaustion and debility, caused by want of sustenance and sleep, which checks the natural circulation, and admirably at the same time prepares them to meet the severity of these tortures without the same degree of sensibility and pain, which, under other circumstances, might result in humiliation and death.

During the whole of the time of this cruel Part of these most extraordinary inflictions, the chiefs and dignitaries of the tribe are looking on, to decide who are the hardiest and "stoutest hearted" -- who can hang the longest by his flesh before he faints, and who will be soonest up, after he has been down; that they may know whom to appoint to lead a war party, or place at the most honorable and desperate post. The four old men are incessantly beating upon the sacks of water and singing the whole time, with their voices strained to the highest key, vaunting forth, for the encouragement of the young men, the power and efficacy of the medicinepipe, which has disarmed the monster O-kee-hee-de (or Evil Spirit), and driven him from the village, and will be sure to Protect them and watch over them through their present severe trial.

As soon as six or eight had passed the ordeal as above described, they were led out of the lodge, with their weights hanging to their flesh, and dragging on the ground, to undergo another, and a still more appalling mode of suffering in the center of the village, and in presence of the whole nation, in the manner as follows:

The signal for the commencement of this part of the cruelties was given by the old master of ceremonies, who again ran out as in the buffalo dance, and leaning against the big canoe, with his medicine-pipe in his hand, began to cry. This was done several times in the afternoon, as often as there were six or eight who had passed the ordeal just described within the lodge, who were then taken out in the open area, in the presence of the whole village, with the buffalo skulls and other weights attached. to their flesh, and dragging on the ground! There were then in readiness and prepared for the purpose, about twenty young men, selected of equal height and equal age; with their bodies chiefly naked, with beautiful (and similar) head-dresses of war-eagles' quills, on their heads, and a wreath made of willow boughs held in the hands between them, connecting them in a chain or circle in which they ran around the big canoe, with all possible speed, raising their voices in screams and yelps to the highest pitch that was possible, and keeping the curb or big canoe in the center, as their nucleus.

Then were led forward the young men who were further to suffer, and being placed at equal distances apart, and outside of the ring just described, each one was taken in charge of two athletic young men, fresh and strong, who stepped up to him, one on each side, and by wrapping a broad leather strap around his wrists, without tying it, grasped it firm underneath the handle, and stood prepared for what they call Eh-ke-nah-ka-nah-pick (the last race). This, the spectator looking on would suppose was most correctly named, for he would think it was the last race they could possibly run in this world.

In this condition they stand, pale and ghastly, front abstinence and loss of blood, until all are prepared, and the word is given, when all start and run around, outside of the other ring; and each poor fellow, with His weights dragging on the ground, and his furious conductors by his side, who hurry him forward by the wrists, struggles in the desperate emulation to run longer without "dying" (as they call it) than his comrades, who are fainting around him and sinking down, like himself, where their bodies are dragged with all possible speed, and often with their faces in the

dirt. In the commencement of this dance or race they all start at a moderate pace, and their speed being gradually increased, the pain becomes so excruciating that their languid and exhausted frames give out, and they are dragged by their wrists until they are disengaged from the weights that were attached to their flesh, and this must be done by such violent force as to tear the flesh out with the splint, which (as they say) can never be pulled out endwise, without greatly offending the Great Spirit and defeating the object for which they have thus far suffered. The splints or skewers which are put through the breast and the shoulders, take up a part of the pectoral or trapezius muscle, which is necessary for the support of the great weight of their bodies, and which, as I have before mentioned, are withdrawn as soon as he is lowered down-but all the others, on the legs and arms, seem to be very ingeniously passed through the flesh and integuments without taking up the muscle, and even these, to be broken out, require so strong and so violent a force that most of the poor fellows fainted under the operation, and when they were freed from the last of the buffalo skulls and other weights, (which was often done by some of the bystanders throwing the weight of their bodies on to them as they were dragging on the ground) they were in every instance dropped by the persons who dragged them, and their bodies were left, appearing like nothing but a mangled and a loathsome corpse! At this strange and frightful juncture, the two men who had dragged them, fled through the crowd and away upon the prairie, as if they were guilty of some enormous crime, and were fleeing from summary vengeance.

Each poor fellow, having thus patiently and manfully endured the privations and tortures devised for him, and (in this last struggle with the most appalling effort) torn himself loose from them and his tormentors, he lies the second time, in the "keeping (as he terms it) of the Great Spirit," to whom he issues his repeated prayers, and entrusts his life: and in whom he reposes the most implicit confidence for his preservation and recovery. As an evidence of this, and of the high value which these youths set upon this privilege, there is no person, not a relation or a chief of the tribe, who is allowed, or who would dare, to step forward to offer an aiding hand, even to save his life; for not only the rigid customs of the nation, and the pride of the individual who has entrusted his life to the keeping of the Great Spirit, would sternly reject such a tender; but their superstition, which is the strongest of all arguments in an Indian community, would alone, hold all the tribe in fear and dread of interfering, when they consider they have so good a reason to believe that the Great Spirit has undertaken the special care and protection of his devoted worshipers.

In this "last race", which was the struggle that finally closed their sufferings, each one was dragged until he fainted, and was thus left, looking more like the dead than the living: and thus each one laid, until, by the aid of the Great Spirit, he was in a few minutes seen gradually rising, and at last reeling and staggering, like a drunken man, through the crowd (which made way for him) to his wigwam, where his friends and relatives stood ready to take him into hand and restore him.

In this frightful scene, as in the buffalo-dance, the whole nation was assembled as spectators, and all raised the most piercing and violent yells and screams they could possibly produce to drown the cries of the suffering ones, that no heart could even be touched with sympathy for them. I have mentioned before, that six or eight of the young men were brought from the medicine-lodge at a time, and when they were thus Passed through this shocking ordeal, the medicine-men and the chiefs returned to the interior, where as many more were soon prepared, and underwent a similar treatment; and after that another batch, and another, and so on, until the whole number, some forty-five or fifty had run in this sickening circle, and, by leaving their weights, had opened

the flesh for honorable scars. I said all, but there was one poor fellow though (and I shudder to tell it), who was dragged around and around the circle, with, the skull of an elk hanging to the flesh on one of his legs, several had jumped upon it, but to no effect, for the splint was under the sinew, which could not be broken. The dragging became every instant more and more furious, and the apprehensions for the poor fellow's life, apparent by the piteous howl which was set up for him by the multitude around; and at last the medicine-man ran, with his medicine-pipe in his hand, and held them in check, when the body was dropped, and left upon the ground, with the skull yet hanging to it. The boy, who was an extremely interesting and fine-looking youth, soon recovered his senses and his strength, looking deliberately at his torn and bleeding limbs; and also with the most pleasant smile of defiance, upon the misfortune which had now fallen to his peculiar lot, crawled through the crowd (instead of walking, which they are never again at liberty to do until the flesh is torn out, and the article left) to the prairie, and over which, for the distance of half a mile, to a sequestered spot, without any attendant, where he laid three days and three nights, yet longer, without food, and praying to the Great Spirit, until suppuration took place In the mound, and by the decaying of the flesh the weight was dropped, and the splint also, which he dare not extricate in another way. At the end of this, he crawled back to the village on His hands and knees, being too much emaciated to walk, and begged for something to eat, which was at once given him, and he was soon restored to health.

These extreme and difficult cases often occur, and I learn that in such instances the youth has it at his option to get rid of the weight that is thus left upon him, in such way as he may choose, and some of those modes are far more extraordinary than the one which I have just named. Several of the Traders, who have been for a number of years in the habit of seeing this part of the ceremony, have told me that two years since, when they were looking on, there was one whose flesh on the arms was so strong that the weights could not be left, and he dragged them with his body to the river by the side of the village, where he set a stake fast in the ground on the top of the bank, and fastening cords to it, he let himself half down a perpendicular wall of rock, of twenty-five or thirty feet, where the weight of hip body was suspended by the two cords attached to the flesh of his arms. In this awful condition he hung for several days, equal distant from the top of the rock and the deep water below, into which he at last dropped and saved himself by swimming ashore!

I need record no more of these shocking and disgusting instances, of which I have already given enough to convince the world of the correctness of the established fact of the Indian's superior stoicism and power of endurance, although some recent writers have, from motives of envy, from ignorance, or something else, taken great pains to cut the poor Indian short in everything, and in this, even as if it were a virtue.

I am ready to accord to them in this particular, the palm; the credit of outdoing anything and everybody, and of enduring more than civilized man ever aspired to or ever thought of. My heart has sickened also with disgust for so abominable and ignorant a custom, and still I stand ready with all my heart, to excuse and forgive them for adhering so strictly to an ancient celebration, founded in superstitions and mysteries, of which they know not the origin, and constituting a material part and feature in the code and forms of their religion.

Reader, I will return with you a moment to the medicine-lodge, which is just to be closed, and then we will indulge in some general reflections upon what has passed, and in what, and for what purposes this strange batch of mysteries has been instituted and perpetuated.

After these young men, who had for the last four days occupied the medicine-lodge, had been operated on, in the manner above described, and taken out of it, the old medicine-man, master of ceremonies, returned, (still crying to the Great Spirit) sole tenant of that sacred place, and brought out the “edged tools”, which I before said had been collected at the door of every man’s wigwam, to be given as a sacrifice to the water, and leaving the lodge securely fastened, he approached the bank of the river, when all the medicine-men attended him, and all the nation were spectators; and in their presence he threw them from a high bank into very deep water, from which they cannot be recovered, and where they are, correctly speaking, made a sacrifice to the water. This part of the affair took place just exactly at sun-down, and closed the scene, being the end or finale of the Mandan religious ceremony.

The reader will forgive me for here inseting the Certificates which I have just received from Mr. Kipp, of the city of New York, and two others, who were with me; which I ask for the satisfaction of the world, who read the above account.

“We hereby certify, that we witnessed, in company with Mr. Catlin, in the Mandan Village, the ceremonies represented in the four paintings, and described in his Motes, to which this Certificate refers; and that he has therein faithfully represented those scenes as we saw them transacted, without any addition or exaggeration.

The strange country that I am in -- its excitements -- its accidents and wild incidents which startle me at almost every moment, prevent me from any very elaborate disquisition upon the above remarkable events at present; and even had I all the time and leisure of a country gentleman, and all the additional information which I am daily procuring, and daily expect to procure hereafter in explanation of these unaccountable mysteries, yet do I fear that there would be that inexplicable difficulty that hangs over most of the customs and traditions of these simple people, who have no history to save facts and systems from falling into the most absurd and disjointed fable and ignorant fiction.

What few plausible inferences I have as yet been able to draw from the above strange and peculiar transactions I will set forth, but with some diffidence, hoping and trusting that by further intimacy and familiarity with these people I may yet arrive at more satisfactory and important results.

That these people should have a tradition of the Flood is by no means surprising; as I have learned from every tribe I have visited, that they all have some high mountain in their vicinity, where they insist upon it the big canoe landed; but that these people should hold an annual celebration of the event, and the season of that decided by such circumstances as the full leaf of the willow, and the medicine-lodge opened by such a man as Nu-mohk-muck-a-nah (who appears to be a white man), and making his appearance "from the high-mountains in the West"; and some other circumstances, is surely a very remarkable thing, and requires some extraordinary attention.

This Nu-mohk-muck-a-nah (first or only man) is undoubtedly some mystery or medicine-man of the tribe, who has gone out on the prairie on the evening previous, and having dressed and painted himself for the occasion, comes into the village in the morning, endeavoring to keep up the semblance of reality; for their tradition says, that at a very ancient period such a man did actually come from the West -- that his body was of the white colour, as this man's body is represented -- that he wore a robe of four white wolf skins -- his head-dress was made of two raven's skins -- and in his left hand was a huge pipe. He said, "he was at one time the only man -- he told them of the destruction of every thing on the earth's surface by water -- that he stopped in His big canoe on a high mountain in the West, where he landed and was saved."

"That the Mandans, and all other people were bound to make yearly sacrifices of some edged-tools to the water, for of such things the big canoe was made. That he instructed the Mandans how to build their medicine lodge, and taught them also the forms of these annual ceremonies; and told them that as long as they made these sacrifices, and performed their rites to the full letter, they might be assured of the fact, that they would be the favorite people of the Almighty, and would always have enough to eat and drink; and that so soon as they should depart in one tittle from these forms, they might be assured, that their race would decrease, and finally run out; and that they might date their nation's calamity to that omission or neglect."

These people have, no doubt, been long living under the dread of such an injunction, and in the fear of departing from it; and while they are living in total ignorance of its origin, tire world must remain equally ignorant of much of its meaning, as they needs must be of all Indian customs resting on ancient traditions, which soon run into fables, having lost all their system, by which they might have been construed.

This strange and unaccountable custom, is undoubtedly peculiar to the Mandans; although, amongst the Minatarees, and some others of the neighboring- tribes, they have seasons of abstinence and self-torture, somewhat similar, but bearing no other resemblance to this than a mere feeble effort or form of imitation.

It would seem from their tradition of the willow branch, and the dove, that these people must have had some proximity to some part of the civilized world; or that missionaries or others have been formerly among them, inculcating the Christian religion and the Mosaic account of the Flood; which is, in this and some other respects, decidedly different from the theory which most natural people have distinctly established of that event.

There are other strong, and almost decisive proofs in my opinion, in support of the assertion, which are to be drawn from the diversity of colour in their hair and complexions, as I have before described, as well as from their tradition just related, of the "first or only man," whose body was white, and who came from the West, telling them of the destruction of the earth by water, and instructing them in tire forms of these mysteries: and, in addition to the above, I will add the two following very curious stories, which I had from several of their old and dignified chiefs, and which are, no doubt, standing and credited traditions of the tribe.

The Mandans (people of the pheasants) were the first people created in tire world, and they originally lived inside of the earth; they raised many vines, and one of them had grown up through a hole in the earth, over head, and one of their young men climbed up it until he came out on the top of the ground, on the bank of the river, where the Mandan village stands. He looked around, and admired the beautiful country and prairies about him -- saw many buffaloes -- killed one with his bow and arrows, and found that its meat was good to eat. He returned, and related what he had seen; when a number of others went up the vine with him, and witnessed the same things. Amongst those who went up, were two very pretty young women, who were favorites of the chiefs, because they were virgins ; and amongst those who were trying to get up, was a very large and fat woman, who was ordered by the chiefs not to go up, but whose curiosity led her to try it as soon as she got a secret opportunity, when there was no one present. When she got part of the way up, the vine broke under the great weight of her body, and let her down. She was very much hurt by the fall, but did not die. The Mandans were very sorry about this; and she was disgraced for being the cause of a very great calamity, which she had brought upon them, and which could never be averted; for no more could ever ascend, nor could those descend who had got up; but they built the Mandan village, where it formerly stood, a great ways below on die river; and the remainder of the people live under ground to this day." The above tradition is told with great gravity by their chiefs and doctors or mystery-men; and the latter profess to hear their friends talk through the earth at certain times and places, and even consult them for their opinions and advice on many important occasions-

The next tradition runs thus :-

"At a very ancient period, O-kee-hee-de (the Evil Spirit, the black fellow mentioned in the religious ceremonies) came to the Mandan village with Nu-mohk-muck-a-nah (the first or only man) from the West, and sat down by a woman who had but one eye, and was hoeing corn. Her daughter, who was very pretty came up to her, and the Evil Spirit desired her to go and bring some water; but wished that before she started, she would come to him and eat some buffalo meat. He told her to take a piece out of his side, which she did and ate it, which proved to be buf-

---

falo-fat. She then went for the water, which she brought, and met them in the village where they had walked, and they both drank of it -- nothing more was done.

"The friends of the girl soon after endeavored to disgrace her, by telling her that she was enciente, which site did not deny. Site declared her innocence at the same time, and boldly defied any man in the village to come forward and accuse her. This raised a great excitement in the village, and as no one could stand forth to accuse her, she was looked upon as great medicine. She soon after went off secretly to the upper Mandan village, where the child was born.

"Great search was made for her before she was found ; as it was decided that the child would also be great medicine or mystery, and of great importance to the existence and welfare of the tribe. They were induced to this belief from the very strange manner of its conception and birth, and were soon confirmed in it from the wonderful things which it did at an early age. They say, that amongst other miracles which he performed, when the Mandans were like to starve, he gave them four buffalo bulls, which filled the whole village -- leaving as much meat as there was before they had eaten; saying that these four bulls would supply them for ever. Nu-mobli-mucka-nah (the first or only man) was bent on the destruction of the child, and after making many fruitless searches for it, found it hidden in a dark place, and put it to death by throwing it into the river.

"When O-kee-hee-de (the Evil Spirit) heard of the death of this child, he sought for Nu-mohk-muck-a-nah with intent to kill him. He traced him a long distance, and at length found him at Heart River, about seventy miles below the village, with the big medicine-pipe in his hand, the charm or mystery of which protects him from all of his enemies. They soon agreed, however, to become friends, smoked the big pipe together, and returned to the Mandan village. The Evil Spirit was satisfied; and Numohli-muck-a-na told the Mandans never to pass Heart River to live, for it was the center of the world, and to live beyond it would be destruction to them; and he named it Nat-com-pa-sa-hah (heart or center of the world)."

Such are a few of the principal traditions of these people, which I have thought proper to give in this place, and I have given them in their own way, with all the imperfections and absurd inconsistencies which should be expected to characterize the history of ail ignorant and superstitious people who live in a state of simple and untaught nature, with no other means of perpetuating historical events, than by oral traditions.

I advance these vague stories then, as I have done, and shall do in other instances, not in support of any theory, but merely as I have heard them related by the Indians; and preserved them, as I have everything else that I could meet in the Indian habits and character, for the information of the world, who may get more time to theorize than I have at present; and who may consider better than I can, how far such traditions should be taken as evidence of the facts, that these people have for a long period preserved anti perpetuated an imperfect knowledge of the Deluge -- of the appearance and death of a Savior -- and of the transgressions of mother Eve.

I am not yet able to learn from these people whether they have any distinct theory of the creation; as they seem to date nothing further back than their own existence as a people; saying (as I have before mentioned), that they where the first people created; involving the glaring absurdities that they were the only people on earth before the Flood, and the only one saved was a white man; or that they were created inside of the earth, as their tradition says; and that they did not make their appearance on its outer surface until after the Deluge. When an Indian story is told, it is like all other gifts, "to be taken for what it is worth", and for any seeming inconsistency in their traditions

---

there is no remedy; for as far as I have tried to reconcile them by reasoning with, or questioning them, I have been entirely defeated; and more than that, have generally incurred their distrust and ill-will. One of the Mandan doctors told me very gravely a few days since, that the earth was a large tortoise, that it carried the dirt on its back -- that a tribe of people, who are now dead, and whose faces were white, used to dig down very deep in this ground to catch badgers; and that one day they stuck a knife through the tortoise-shell, and it sunk down so that the water ran over its back, and drowned all but one man. And on the next day while I was painting his portrait, he told me there were four tortoises, -- one in the North -- one in the East -- one in the South, and one in the West : that each one of these rained ten days, and the water covered over the earth.

These ignorant and conflicting accounts, and both from the same man, give as good a demonstration, perhaps, of what I have above mentioned, as to the inefficiency of Indian traditions as anything I could at present mention. They might, perhaps, have been in this instance however the creeds of different sects, or of different priests amongst them, who often advance diametrically opposite theories and traditions relative to history and mythology.

And however ignorant and ridiculous they may seem, they are yet worthy of a little further consideration, as relating to a number of curious circumstances connected with the unaccountable religious ceremonies which I have just described.

The Mandan chiefs and doctors, in all their feasts, where the pipe is lit and about to be passed around, deliberately propitiate the good-will and favour of the Great Spirit, by extending the stem of the pipe upwards before they smoke it themselves; and also as deliberately and as strictly offering the stem to the four cardinal points in succession, and then drawing a whiff through it, passing it around amongst the group.

The annual religious ceremony invariably lasts four days, and the other following circumstances attending these strange forms, and seeming to have some allusion to the four cardinal points, or the "four tortoises", seem to me to be worthy of further notice. Four men are selected by Numohkmuck-a-nah (as I have before said), to cleanse out and prepare the medicine lodge for the occasion -- one he calls from the north part of the village -- one from the east -- one from the south, and one from the west. The four sacks of water, in form of large tortoises, resting on the floor of the lodge and before described, would seem to be typical of the same thing; and also the four buffalo, and the four human skulls resting on the floor of the same lodge -- the four couples of dancers in the "bull-dance", as before described; and also the four intervening dancers in the same dance, and also described.

The bull-dance in front of the medicine-lodge, repeated on the four days, is danced four times on the first day, eight times on the second, twelve times on the third, and sixteen times on the fourth; (adding four dances on each of the four days,) which added together make forty, the exact number of days that it rained upon the earth, according to the Mosaic account, to produce the Deluge. There are four sacrifices of black and blue cloths erected over the door of the medicine-lodge -- the visits of Oh-kee-hee-de (or Evil Spirit) were paid to four of the buffaloes in the buffalo-dance, as above described; and in every instance, the young men who underwent the tortures before explained, had four splints or skewers run through the flesh on their legs -- four through the arms and four through the body.

Such is a brief account of these strange scenes which I have just been witnessing, and such my brief history of the Mandans. I might write much more on them, giving yet a volume on their

L. CRAWFORD, Clerk. "Mandan Village", July 20, 1833. ABRAHAM BOGARD

---

stories and traditions; but it would be a volume of fables, and scarce worth recording. A nation of Indians I, their primitive condition, where there are no historians, have but temporary historical existence, for the reasons above advanced, and their history, what can be certainly learned of it, may be written in a very small compass.

I have dwelt longer on the history and customs of these people than I have or shall on any other tribe, in all probability, and that from the fact that I have found them a very peculiar people, as will have been seen by my notes.

From these very numerous and striking peculiarities in their personal appearance--their customs -- traditions and language, I have been led conclusively to believe that they are a people of decidedly a different origin from that of any other tribe in these regions.

From these reasons, as well as from the fact that they are a small and feeble tribe, against whom the powerful tribe of Sioux are waging a deadly war with the prospect of their extermination; and who with their limited numbers, are not likely to hold out long in their struggle for existence, I have taken more pains to portray their whole character, than my limited means will allow me to bestow upon other tribes.

From the ignorant anti barbarous and disgusting customs just recited, the world would naturally infer, that these people must be the most cruel and inhuman beings in the world -- yet, such is not the case, and it becomes duty to say it; a better, more honest, hospitable and kind people, as a community, are not to be found in the world. No set of men that ever I associated with have better hearts than the Mandans, and none are quicker to embrace and welcome a white man than they are -- none will press him closer to his bosom, that the pulsation of his heart may be felt, than a Mandan; and no man in any country will keep his word and guard his honour more closely.

The shocking and disgusting custom that I have just described, sickens the heart and even the stomach of a traveller in the country, and he weeps for their ignorance--he pities them with all his heart for their blindness, and laments that the light of civilization, of agriculture and religion cannot be extended to them, and that their hearts which are good enough, could not be turned to embrace something more rational and conducive to their true happiness.

Many would doubtless ask, whether such a barbarous custom could be eradicated from these people? And whether their thoughts and tastes, being turned to agriculture and religion, could be made to abandon the dark and random channel in which they are drudging, and made to flow in the light and life of civilization?

To this query I answer yes. Although this is a custom of long standing, being a part of their religion; and probably valued as one of their dearest rights; and notwithstanding the difficulty of making inroads upon the religion of a people in whose country there is no severance of opinions, and consequently no division into different sects, with different creeds to shake their faith; I still believe, and I know, that by a judicious and persevering effort, this abominable custom, and others, might be extinguished, and the beautiful green fields about the Mandan village might be turned into productive gardens, and the waving green bluffs that are spread in the surrounding distance, might be spotted with lowing kine, instead of the sneaking wolves and the hobbled war-horses that are now stalking without them.

All ignorant and superstitious people, it is a well-known fact, are the most fixed and stubborn in their religious opinions, and perhaps the most difficult to divert from their established belief, from the very fact that they are the most difficult to reason with. Here is an ignorant race of

L. CRAWFORD, Clerk. "Mandan Village", July 20, 1833. ABRAHAM BOGARD

---

human beings, who have from time immemorial been in the habit of worshiping in their own way, and of enjoying their religious opinions without ever having heard any one to question their correctness; and in those opinions they are quiet and satisfied, and it requires a patient, gradual, and untiring effort to convince such a people that they are wrong, and to work the desired change in their belief, and consequently in their actions.

It is decidedly my opinion, however, that such a thing can be done, and I do not believe there is a race of wild people on earth where the experiment could be more successfully made than amongst the kind and hospitable Mandans, nor any place where the Missionary labours of pious and industrious men would be more sure to succeed, or more certain to be rewarded in the world to come.

I deem such a trial of patience and perseverance with these people of great importance, and well worth the experiment. One which I shall hope soon to see accomplished, and which, if properly conducted, I am sure will result in success. Severed as they are from the contaminating and counteracting vices which oppose and thwart most of the best efforts of the Missionaries along the frontier, and free from the almost fatal prejudices which they have there to contend with: they present a better field for the labours of such benevolent teachers than they have yet worked in, and a far better chance than they have yet had of proving to the world that the poor Indian is not a brute -- that he is a human and humane being, that he is capable of improvement -- and that his mind is a beautiful blank on which anything can be written if the proper means be taken.

The Mandans being but a small tribe, of two thousand only, and living all in two villages, in sight of each other, and occupying these permanently, without roaming about like other neighboring tribes, offer undoubtedly, the best opportunity for such an experiment of any tribe in the country. The land about their villages is of the best quality for ploughing and grazing, and the water just such as would be -desired. Their villages are fortified with piquets or stockades, which protect them from the assaults of their enemies at home; and the introduction of agriculture (which would supply them with the necessaries and luxuries of life, without the necessity if continually exposing their lives to their more numerous enemies on the plains, when they are seeking in the chase the means of their subsistence) would save them from the continual wastes of life, to which in their wars and the chase they are continually exposed, and which are calculated soon to result in their extinction.

I deem it not folly nor idle to say that these people can be saved, nor officious to suggest to some of the very many excellent and pious men, who are almost throwing away the best energies of their lives along the debased frontier, that if they would introduce the ploughshare and their prayers amongst these people, who are so far separated from the taints and contaminating vices of the frontier, they would soon see their most ardent desires; accomplished and be able to solve to the world the perplexing enigma, by presenting a nation of savages, civilized and Christianized (and consequently saved), in the heart of the American wilderness.

LETTER -- No. 23.

MINATAREE VILLAGE, UPPER MISSOURI.

Soon after witnessing the curious scenes described in the former Letters, I changed my position to the place from whence I am now writing -- to the village of the Minatarees, which is also located on the west bank of the Missouri river, and only eight miles above the Mandans. On my way down the river in my canoe, I passed this village without attending to their earnest and, clamorous invitations for me to come ashore, and it will -- thus be seen that I am retrograding a little, to see all that is to be seen in this singular country.

I have been here some weeks, and am able already to say of these people as follows: --

The Minatarees (people of the willows) are a small tribe of about 1500 souls, residing in three villages of earth-covered lodges, on the banks of Knife river; a small stream, so called, meandering through a beautiful and extensive prairie, and uniting its waters with the Missouri.

This small community is undoubtedly a part of the tribe of Crows, of whom I have already spoken, living at the base of the Rocky Mountains, who have at some remote period, either in their war or hunting excursions, been run off by their enemy, and their retreat having been prevented, have thrown themselves upon the hospitality of the Mandans, to whom they have looked for protection, and under whose wing they are now living in a sort of confederacy, ready to intermarry and also to join, as they often have done, in the common defense of their country.

In language and personal appearance, as well as in many of their customs, they are types of the Crows; yet having adopted and so long lived under its influence, the system of the Mandans, they are much like them in many respects, and continually assimilating to the modes of their patrons and protectors. Amongst their vague and various traditions they have evidently some disjointed authority for the manner in which they came here; but no account of the time. They say, that they came poor -- without wigwams or homes -- were nearly all women, as their warriors had been killed off in their flight; that the Mandans would not take them into their village, nor let their come nearer than where they are now living, and there assisted them to build their villages. From these circumstances their wigwams have been constructed exactly in the same manner as those of the Mandans, which I have already described, and entirely distinct from any custom to be seen in the Crow tribe.

Notwithstanding the long familiarity in which they have lived with the Mandans, and the complete adoption of most of their customs, yet it is almost an unaccountable fact, that there is scarcely a man in the tribe who can speak half a dozen words of the Mandan language; although on the other hand, the Mandans are most of them able to converse in the Minataree tongue; leaving us to conclude, either that the Minatarees are a very inert and stupid people, or that the Mandan language (which is most probably the case) being different from any other language in the country, is an exceedingly difficult one to learn.

The principal village of the Minatarees which is built upon the bank of the Knife river, contains

---

forty or fifty earth-covered wigwams, from forty to fifty feet in diameter, and being elevated, overlooks the other the other two, which are on lower ground and almost lost amidst their numerous corn fields and other profuse vegetation which cover the earth with their luxuriant growth.

The scenery along the banks of this little riser, from village to village is quite peculiar and curious; rendered extremely so by the continual wild and garrulous groups of men, women, and children, who are wending their way along its winding shores, or dashing and plunging through its blue waves, enjoying the luxury of swimming, of which both; sexes seem to be passionately fond. Others are paddling about in their tub-like canoes, made of the skins of buffaloes; and every now and then, are to be seen their sudatories, or vapour-baths, where steam is raised by throwing water on to heated stones; and the patient jumps from his sweating-house and leaps into the river in the highest state of perspiration, as I have more fully described whilst speaking of the bathing of the Mandans.

The chief sachem of this tribe is a very ancient and patriarchal looking man, by the name of Eeh-tohk-pah-shee-pee-shah (the black moccasin), and counts, undoubtedly, more than an hundred snows. I have been for some days an inmate of his hospitable lodge, where he sits tottering with age, and silently reigns sole monarch of his little community around him, who are continually dropping in to cheer his sinking energies, and render him their homage. His voice and his sight are nearly gone; but the gestures of his hands are yet energetic and youthful, and freely speak the language of his kind heart.

I have been treated in the kindest manner by this old chief; and have painted his portrait as he was seated on the floor of his wigwam, smoking his pipe, whilst he was recounting over to me some of the extraordinary feats of his life, with a beautiful Crow robe wrapped around him, and his hair wound up in a conical form upon his head, and fastened with a small wooden pin, to keep it in its place.

The man has many distinct recollections of Lewis and Clarke, who were the first explorers of this country, and who crossed the Rocky Mountains thirty years ago. It will be seen by reference to their very interesting history of their tour, that they were treated with great kindness by this man; and that they in consequence constituted him chief of the tribe, with the consent of his people; and he has remained their chief ever since. He enquired very earnestly for "Red Hair" and "Long Knife" (as he had ever since termed Lewis and Clarke), from the fact, that one had red hair (an unexampled thing in his country), and the other wore a broad sword which gained for him the appellation of "Long Knife".

I have told him that "Long Knife" has been many years dead; and that "Red Hair" is yet living in St. Louis, and no doubt, would be glad to hear of him; at which he seemed much pleased, and has signified to me that he will make me bearer of some peculiar dispatches to him. The name by which these people are generally called (Grosventres) is one given them by the French Traders, and has probably been applied to them with some degree of propriety or fitness, as contradistinguished from the Mandans amongst whom these Traders were living; and who are a small race of Indians, being generally at or below the average stature of man; whilst the Minatarees are generally tall and heavily built. There is no tribe in the western wilds, perhaps, who are better entitled to the style of warlike, than the Minatarees; for they, unlike the Mandans, are continually carrying war into their enemies' country; oftentimes drawing the poor Mandans into unnecessary broils, and suffering so much themselves in their desperate warexcursions, that I find the proportion of

women to the number of men as two or three to one, through the tribe.

The son of Black Moccasin, whose name is Ee-a-chin-che-a (the red thunder), and who is reputed one of the most desperate warriors of his tribe, I have also painted at full length, in his war-dress, with his bow in his hand, his quiver slung, and his shield upon his arm. In this plight, sans head-dress, sans robe, and sans everything that might be an useless incumbrance -- with the body chiefly naked, and profusely bedaubed with red and black paint, so as to form an almost Perfect disguise, the Indian warriors invariably sally forth to war; save the chief, who always plumes himself, and leads on his little band, tendering himself to his enemies a conspicuous mark, with all his ornaments and trophies upon him; that his enemies, if they get him, may get a prize worth the fighting for.

Besides chiefs and warriors to be admired in this little tribe, there are many beautiful and voluptuous looking women, who are continually crowding in throngs, and gazing upon a stranger; and possibly shedding more bewitching smiles from a sort of necessity, growing out of the great disparity in numbers between them and the rougher sex, to which I have before alluded.

From the very numerous groups of these that have from day to day constantly pressed upon me, overlooking the operations of my brush; I have been unable to get more than one who would consent to have her portrait painted, owing to some fear or dread of harm that might eventually ensue in consequence; or from a natural coyness or timidity, which is surpassing all description amongst these wild tribes, when in presence of strangers.

The one whom I have painted is a descendant from the old chief; and though not the most beautiful, is yet a fair sample of them, and dressed in a beautiful costume of the mountain-sheep skin, handsomely garnished with porcupine quills and beads. This girl was almost compelled to stand for her picture by her relatives who urged her on, whilst: she modestly declined, offering as her excuse that "she was not pretty enough, and that her picture would be laughed at." This was either ignorance or excessive art on her part; for she was certainly more than comely, and the beauty of her name, Seet-se-be-a (the midday sun) is quite enough to make up for a deficiency, if there were any, in the beauty of her face.

I mentioned that I found these people raising abundance of corn or maize; and I have happened to visit them in the season of their festivities, which annually take place when the ears of corn are of the proper size for eating. The green corn is considered a great luxury by all those tribes who cultivate it; and is ready for eating as soon as the ear is of full size, and the kernels are expanded to their full growth, but are yet soft and pulpy. In this green state of the corn, it is boiled and dealt out in great profusion to the whole tribe, who feast and surfeit upon it whilst it lasts; rendering thanks to the Great Spirit for the return of this joyful season, which they do by making sacrifices, by dancing, and singing songs or thanksgiving. This joyful occasion is one valued alike, and conducted in a similar manner, by most of the tribes who raise the corn, however remote they may be from each other. It lasts but for a week or ten days; being limited to the longest term that the corn remains in this tender and palatable state; during which time all hunting, and all war-excursions, and all other avocations, are positively dispensed with; and all join in the most excessive indulgence of gluttony and conviviality that can possibly be conceived. The fields of corn are generally pretty well stripped during this excess; and the poor improvident Indian thanks the Great Spirit for the indulgence he has had, and is satisfied to ripen merely the few ears that are necessary for his next year's planting, without reproaching himself for his wanton lavishness, which has laid

waste his fine fields, and robbed him of the golden harvest, which might have gladdened his heart, with those of his wife and little children, through the cold and dreariness of winter.

The most remarkable feature of these joyous occasions is the "green corn-dance", which is always given as preparatory to the feast, and by most of the tribes in the following manner :---

At the usual season, and the time when from outward appearance of the stalks and ears of the corn, it is supposed to be nearly ready for use, several of the old women who are the owners of fields or patches of corn (for such are the proprietors and cultivators of all crops in Indian countries, the men never turning their hands to such degrading occupations) are delegated by the medicine-men to look at the corn fields every morning at sun-rise, and bring into the council-house, where the kettle is ready, several ears of corn, the husks of which the women are not allowed to break open or even to peep through. The women then are from day to day discharged and the doctors left to decide, until from repeated examinations they come to the decision that it will do; when they dispatch runners or criers, announcing to every part of the village or tribe that the Great Spirit has been kind to them, and they must all meet on the next day to return thanks for his goodness. That all must empty their stomachs, and prepare for the feast that is approaching.

On the day appointed by the doctors, the villagers are all assembled, and in the midst of the group a kettle is hung over a fire and filled with the green corn, which is well boiled, to be given to the Great Spirit, as a sacrifice necessary to be made before any one can indulge the cravings of his appetite. Whilst this first kettle full is boiling, four medicine-men, with a stalk of the corn in one hand and a rattle (she-she-quoi) in the other, with their bodies painted with white clay, dance around the kettle, chanting a song of thanksgiving to the Great Spirit to whom the offering is to be made. At the same time a number of warriors are dancing around in a more extended circle, with stalks of the corn in their hands, and joining also in the song of thanksgiving, whilst the villagers are all assembled and looking on. During this scene there is an arrangement of wooden bowls laid upon the ground, in which the feast is to be dealt out, each one having in it a spoon made of the buffalo or mountain-sheep's horn.

In this wise the dance continues until the doctors decide that the corn is sufficiently boiled; it then stops for a few moments, and again assumes a different form and a different song, whilst the doctors are placing the ears on a little scaffold of sticks, which they erect immediately over the fire where it is entirely consumed, as they join again in the dance around it.

The fire is then removed, and with it the ashes, which together are buried in the ground, and new fire is originated on the same spot where the old one was, by friction, which is done by a desperate and painful exertion by three men seated on the ground, facing each other and violently drilling the end of a stick into a hard block of wood by rolling it between the hands, each one catching it in turn from the others without allowing the motion to stop until smoke, and at last a spark of fire is seen and caught in a piece of spunk, when there is great rejoicing in the crowd. With this a fire is kindled, and the kettle full of corn again boiled for the feast, at which the chiefs, doctors, and warriors are seated; and after this an unlimited licence is given to the whole tribe, who surfeit upon it and indulge in all their favorite amusements and excesses, until the fields of corn are exhausted, or its ears have become too hard for their comfortable mastication.

Such are the general features of the green corn festivity and dance amongst most of the tribes; and amongst some there are many additional forms and ceremonies gone through, preparatory to the

indulgence in the feast.

Some of the southern tribes concoct a most bitter and nauseating draught, which they call asceola (the black drink), which they drink to excess for several days previous to the feast; ejecting everything from their stomachs and intestines, enabling them after this excessive and painful purgation, to commence with the green corn upon an empty and keen stomach.

LETTER -- No. 24.

MINATAREE VILLAGE, UPPER MISSOURI,

EPISTLES from such a strange place as this, where I have no desk to write from, or mail to send them by, are hastily scribbled off in my notebook, as I can steal a little time from the gaze of the wild group that is continually about me; and instead of sending them, Keeping them to bring with me when I make my retreat from the country.

The only place where I can satisfactorily make these entries is in the shade of some sequestered tree, to which I occasionally resort, or more often from my bed (from which I am now writing), enclosed by a sort of curtains made of the skins of elks or buffaloes, completely encompassing me, where I am reclining on a sacking-bottom, made of the buffalo's hide; making my entries and notes of the incidents of the past day, amidst the roar and unintelligible din of savage conviviality that is going on under the same roof, and under my own eye, whenever I feel disposed to apply it to a small aperture which brings at once the whole interior and all its inmates within my view.

There are at this time some distinguished guests, besides myself, in the lodge of the Black Moccasin; two chiefs or leaders of a party of Crows, who arrived here a few days since, on a visit to their ancient friends and relatives. The consequence has been, that feasting and carousing have been the "order of the day" here for some time; and I have luckily been a welcome participator in their entertainments. A distinguished chief of the Minatarees, with several others in company, has been for some months past on a visit to the Crows and returned, attended by some remarkably fine looking fellows, all mounted on fine horses. I have said something of these fine specimens of the human race heretofore; and as I have been fastening more of them to the canvass within the few days past, I must use this occasion to add what follows :
